Nature of Business or Organization:			
HiveBrain Software makes applications for the iPhone and other mobile devices. We have published over 20 applications for the iPhone and are also working on a web based marketplace for developers.			
Duties and Responsibilities:			
We are looking for someone that truly loves computers and software. The job can be tailored to your skill set, but generally we are looking for people with programming or graphic arts talents. The company is very small, so the job would involve all types of activities related to product development. Typical projects could include (i) programming components or portions of iPhone apps in development, (ii) designing user interface elements for applications, (iii) assisting with the development of the web site, (iv) web research related to the web site, (v) marketing or PR efforts.			
Minimum Qualifications:			
Applicants need to be very familiar with computers. Programming experience is not necessary, but applicants should be proficient with computers running Apple's OSX operating system and have a natural fascination with software, product design, and generally making computers do cool stuff. Strong understanding of web site creation / ruby on rails (or similar web development environments) is a plus.			
Educational Benefits:			
This position offers an opportunity to work with an experienced developer of iPhone applications and learn the business and technical elements of developing mobile applications. The company is very small, so the position would involve a wide variety of tasks and provide experience in a variety of business roles (e.g., design, technology, marketing).			
If the applicant is proficient in programming in a language other than Objective-C, this position would include mentoring on how to develop for the iPhone and translate those other programming skills to Apple's platform.			

(For Work Study Office Use)
