**SOC 526 Causal Approach to Theory Building and Data Analysis (3)** Theory construction and testing from a causal models perspective. Path analysis, standardized versus unstandardized measures, feedback models, identification problems, estimation in overidentified models, difference equations, differential equations, stability conditions. Multiplicative models as alternatives to additive ones. Causal approach to measurement error.

**SOC 527 Measurement of Basic Sociological Concepts (3)** Conceptualization and measurement prob-

lems in sociology, using major concepts as illustrations of basic issues. Causal approach to measurement to deal with problems of indirect measurement, cross-level measurement problems, aggregation and disaggregation. Consequences of crude measurement for data analyses. Prerequisite: 424; recommended: 426.

**SOC 528 Seminar on Selected Statistical Problems in Social Research (3)** *Costner, Raftery* Prerequisite: 426.

**SOC 529 Multiple Indicators in Social Measurement (3)** *Costner* Repeated measures, alternate measures and multiple observers in estimating the reliability, assessing the validity, and analyzing conceptual and indicator problems in social measurement. Implications of measurement error for research conclusions. Prerequisites: 424, 426.

**SOC 530 Advanced Human Ecology (3)** Human population distribution and migration patterns. Causes and consequences of world urbanization. Spatial and social patterns in the metropolis. Aggregate population movements and selectivity of migrants.

**SOC 531 Demography: Fertility and Mortality (3)** *Lye* Theories of fertility and mortality, demographic transitions, individual variations. Specific analytic approaches. Familiarity with basic fertility and mortality measures, and with the life table, is assumed.

**SOC 533 Research Methods in Demography (3)** *Lye, McCann* Basic measures and models used in demographic research. Sources and quality of demographic data. Rate construction, standardization, the life table, stable population models, migration models, population estimation and projection, measures of concentration and dispersion, measures of family formation and dissolution.

**SOC 534 Demographic Issues in Asia (3-5)** *Lavelly* Contemporary Asian countries face a number of issues with demographic components, including environmental and resource issues, ethnic rivalries, international migration, and public health. This seminar addresses a set of these issues by focusing on the demography of one or more countries in Asia. Joint with SISEA 564.

**SOC 536 Log-Linear Modeling and Logistic Regression for the Social Sciences (3)** *Raftery* Log-linear modeling of multidimensional contingency tables. Logistic regression. Applications to social mobility, educational opportunity, and assortative marriage. Applied and computing focus. Joint with STAT 536. Prerequisite: 425 or STAT 395 or permission of instructor.

**SOC 539 Selected Topics in Demography and Ecology (3, max. 9)** Specialized problems in demography or ecology are covered; for example, migration, fertility, mortality, language, race and ethnic relations, metropolitan community. See quarterly announcement for specific problem to be covered.

**SOC 542 Selected Topics in Group Processes (3)** *Cook, Schmitt* Theories, methodology, and studies in the area of small-group research. May be repeated for credit. Prerequisite: permission of instructor for nonmajors.

**SOC 544 Seminar on Social Power (3)** Examination of basic principles concerning power, influence, and authority in small groups, organizations, and communities. Recommended: 240, 415, 460.

**SOC 546 Seminar on Symbolic Interaction (3)** Focuses on several key areas in, and related to, the symbolic interactionist perspective (e.g., language, the self, the dramaturgic perspective, ethnomethodology, stigma, the social construction of social problems). Prerequisite: permission of instructor for nonmajors.

**SOC 547 Social Cognition and Attribution (3)** Theories and research on social cognition and attribution. Theoretical and methodological debates on cognition. Sociological aspects of attribution. Prerequisite: 514 or equivalent.

**SOC 550 Changing Patterns of Family Organization (3)** *Schwartz* History of the family with emphasis on changes in European and American families since 1600. Concomitant changes in other institutions and their relation to changes in the family.

**SOC 551 Family and Gender Relations (3)** *Lye, Schwartz* Overview of major research findings on marriage and the family, including demographic trends, the place of children in society, courtship, divorce, and gender roles.

**SOC 554 Seminar in the Sociology of Religion (3)** Survey of significant and active areas of theory and research in contemporary social scientific studies of religion.

**SOC 555 Methods in Macro, Comparative, and Historical Sociology (3)** *Chiot*

**SOC 556 The Evolution of the Family (3)** *Sp van den Berghe* Biological evolution of species-specific behaviors and forms of sociality linked to human mating, reproduction, and parenting. Cultural evolution of human systems of kinship and marriage as fitness-maximizing adaptations to a wide range of habitats. Prerequisite: upper-division course in evolutionary theory, population genetics, behavioral ecology, primatology, or animal behavior. Joint with ANTH 556.

**SOC 559 Seminar on Gender Roles (3)** Theoretical issues concerning gender and society. Current state of empirical knowledge on the sociology of gender and strategies for research. Cross-cultural variations in gender roles, how these develop in people, how gender roles develop in society and their effects on social structure, social institutions, and interaction. Prerequisite: graduate standing in a social science. (Offered alternate years.)

**SOC 561 Society, Chronic Illness, and Disability (3)** Critical examination and discussion of sociological approaches—methodological, theoretical, and empirical—in the health-care field. Attention to applied studies in the field and, more broadly, to the implications for decision making from the sociological perspective. Joint with HSERV 583. Prerequisite: permission of instructor.

**SOC 562 Seminar in Comparative Race Relations (3)** *van den Berghe* Cross-cultural approach to race and ethnic relations, including case studies from Africa and Latin America. Prerequisite: graduate standing in social sciences.

**SOC 563 Advanced Seminar in Medical Sociology (3)** *Cook* Development and testing of theories related to illness behavior, health occupations and professions, and the organization of health services. Emphasis given to provider-patient relationships and the sociology of health-care-delivery organizations. Joint with HSERV 579. Prerequisite: admission to health services doctoral opportunities program or graduate status in sociology, or permission of instructor.

**SOC 566, 567 Seminar in Complex Organizations (3,3)** *Wager* Special topic seminars in the field of complex organizations or industrial sociology.

**SOC 568 Social Mobility (3)** Description and measurement of social mobility. Determinants of mobility and cross-national comparisons. Consequences of mobility for social behaviors. Emphasizes movement from the socioeconomic position of family of origin to adult position. Prerequisite: 518.

**SOC 569 Demographic Studies of Stratification (3)** *A. Guest, Hirschman* Overview of development of models of socioeconomic achievement ("status attainment" paradigm) in the field of stratification. Begins with work of Blau and Duncan. Covers elaboration of basic models to include race and ethnicity, social psychological variables, class, school and labor market effects, and other structural variables. Prerequisites: 513, 518.

**SOC 574 Seminar on Methods of Criminological Research (3)** *Bridges, Weis* Provides training in the

technical analysis of published research in criminology; designs and processes studies in parole prediction, prediction of prison adjustment, and prediction of treatment effect.

**SOC 581 Special Topics in Theory and the History of Sociological Thought (3, max. 9)** Examination of current topics in theory and the history of sociological thought. Content varies according to recent developments in the field and the interests of the instructor.

**SOC 582 Special Topics in Research Methods and Statistical Analysis in Sociology (3, max. 9)** Examination of current topics in research methods and statistical analysis in sociology. Content varies according to recent developments in the field and the interests of the instructor.

**SOC 583 Special Topics in Demography and Ecology (3, max. 9)** Examination of current topics in demography and ecology. Content varies according to recent developments in the field and the interests of the instructor.

**SOC 584 Special Topics in Social Psychology (3, max. 9)** Examination of current substantive topics in social psychology. Content varies according to recent developments in the field and the interests of the instructor.

**SOC 585 Special Topics in Marriage and Family (3, max. 9)** Examination of current substantive topics in marriage and the family. Content varies according to recent developments in the field and the interests of the instructor.

**SOC 586 Special Topics in Organization and Industrial Sociology (3, max. 9)** Examination of current substantive topics in organizational and industrial sociology. Content varies according to recent developments in the field and the interests of the instructor.

**SOC 587 Special Topics in Deviance and Social Control (3, max. 9)** Examination of current substantive topics in deviance and social control. Content varies according to recent developments in the field and the interests of the instructor.

**SOC 588 Special Topics in Stratification and Race Relations (3, max. 9)** Examination of current substantive topics in stratification and race relations. Content varies according to recent developments in the field and the interests of the instructor.

**SOC 589 Special Topics in Macrosociology (3, max. 9)** Examination of current substantive topics in macrosociology. Content varies according to recent developments in the field and the interests of the instructor.

**SOC 590 Special Topics in Sociology (3, max. 9)** Examination of current substantive topics in sociology. Content varies according to recent developments in the field and the interests of the instructor. Topics covered in courses with this number lie outside those covered by other special topics courses numbered 581 through 589.

**SOC 591 Political Sociology (3)** *A* Introduction to political sociology, considering the rise of the modern state, power, political organization, social movements, and other related topics.

**SOC 600 Independent Study or Research (\*)** *AWSp*

**SOC 700 Master's Thesis (\*)** *AWSp*

**SOC 800 Doctoral Dissertation (\*)**

## Southeast Asian Studies

See *International Studies*.

## Speech and Hearing Sciences

203 Eagleson

The speech and hearing sciences concern the processes and disorders of verbal communication. The undergraduate programs include the study of normal language development, speech acoustics, speech physiology and perception, hearing, the nature of language, speech and hearing disorders in children and adults, and the clinical processes involved in identification, prevention, and remediation of those disorders.

## Undergraduate Program

Director of Student Services  
Rae Jean Sielen  
205 Eagleson

### Bachelor of Science Degree

**Admission Requirements:** 2.50 overall GPA. Recommended preparation includes high school physics or equivalent; introductory exposure to human learning, sensory, perceptual, and cognitive processes, general physiology and the physiology of behavior, and college mathematics.

**Core requirements for all options:** 29 credits in the following courses—SPHSC 201, 250, 303, 307, 310, 311. Students following Options II, III, or IV below must have a 3.00 GPA in courses that make up the common core. Students following Options III or IV must meet additional grade-point requirements to participate in clinical practicum.

### OPTION I, GENERAL ACADEMIC

Intended to provide broad perspectives of the field, but not to prepare students for professional careers in the speech and hearing sciences.

**Major Requirements:** Core requirements listed above; 25 credits in courses dealing with normal and abnormal language, speech, and hearing taken from the following: SPHSC 315, 330, 332, 370, 380, 401, 402, 410, 411, 416, 420, 430, 431, 444, 499; PHYS 114 and 117, or 207; ZOOL 118.

### OPTION II, BASIC SCIENCES

Intended for students who wish to continue graduate study in speech and hearing that leads to university teaching and research careers, but does not include clinical training in audiology or speech pathology.

**Major Requirements:** Core requirements listed above; 28-37 credits, including SPHSC 401, 402, 410, 416, 420, 499, and 6 credits in the speech pathology or clinical audiology areas; 28-30 credits outside the department, including a mathematics course that deals with calculus; one course each in statistics, psychology (learning, memory, or cognition), and human physiology; PHYS 114 and 117, or 207; ZOOL 118.

### OPTION III, CLINICAL SCIENCES—AUDIOLOGY

Intended for students who wish to continue graduate study and to obtain clinical training in audiology.

**Major Requirements:** Core requirements listed above; 36 credits, including SPHSC 315, 330, 332, 350, 370, 380, 401, 420, 431, 451 (audiology); at least 9 credits outside the department, in psychology (deviant personality, cognitive development, developmental psychology, neural and sensory bases of behavior), educational psychology (behavior measurement and

## South Asian Studies

See *International Studies*.

management, statistics); PHYS 114 and 117, or 207; ZOOL 118.

#### OPTION IV, CLINICAL SCIENCES—SPEECH/LANGUAGE PATHOLOGY

Intended for students who wish to continue graduate study and to obtain clinical training in speech/language pathology.

**Major Requirements:** Core requirements listed above; 36 credits, including SPHSC 315, 330, 332, 350, 370, 380, 451 (audiology), 401, 430, 431; two courses in developmental psychology or deviant personality; PHYS 114 and 117, or 207; ZOOL 118.

### Graduate Program

The Department of Speech and Hearing Sciences offers the Master of Science and Doctor of Philosophy degrees. The program consists of a wide range of course work and seminars providing opportunities for the development of scholarly and professional competence in various areas of specialization: language acquisition; phonology; speech production and transmission; hearing; psychoacoustics; speech perception; computer recognition and generation of meaningful speech; and human communication disorders related to language, speech, and hearing and the clinical procedures involved in their identification, prevention, and remediation. To complement departmental curricula in various specialization areas, close interdisciplinary relationships are maintained with other University departments and off-campus centers. Advanced degrees in the speech and hearing sciences equip the student to do research, to teach at the college and university level, and to provide clinical services to the communicatively impaired.

**Special Requirements:** Prospective candidates for advanced degrees are expected to have earned 50-60 credits in the speech and hearing sciences at the undergraduate level, depending upon the specific area of graduate specialization chosen. The M.S. (thesis) degree requires a minimum of 30 credits of approved course work, plus an acceptable thesis (9 credits). This degree program is recommended for students who plan to continue graduate study for the Ph.D. degree. The M.S. (non-thesis) degree is intended primarily for students who desire careers as speech and hearing clinicians, but who do not intend to continue study for the Ph.D. degree. A minimum of 45 credits is required, of which 23 must be at the 500 level or above in this program. Students also complete the academic and practical experience requirements for the Certificate of Clinical Competence of the American Speech-Language-Hearing Association. These requirements necessitate more than the minimum 45-credit program for most students. A thesis is not required. For the Ph.D. degree, individually tailored programs of study are developed to focus on specialized areas of interest within speech science, experimental and clinical audiology, and speech/language pathology.

#### Financial Aid

A number of teaching and research assistantships are available for qualified graduate students. In addition, the department has traineeships/fellowships supported by the U.S. Department of Education, the National Institutes of Health, and the Department of Veterans Affairs.

#### Research Facilities

The department's research laboratories, as well as those of the Virginia Merrill Bloedel Hearing Research Center, contain sophisticated equipment for the collection and analysis of data related to the study of human communication and its disorders. The University Speech and Hearing Clinic and the Child Development and Mental Retardation Center also provide laboratories to support applied research in communication processes and remedial procedures.

### Faculty

#### Chair

Wesley R. Wilson

#### Professors

Kuhl, Patricia K., \* 1976, (Psychology, Otolaryngology), M.A., 1971, Ph.D., 1973, Minnesota; speech perception.

Miner, Adah L., 1965, (Emeritus), M.A., 1948, Washington; Ph.D., 1962, Wisconsin; speech pathology, clinical supervision.

Minifie, Fred D., \* 1971, M.A., 1962, Ph.D., 1963, Iowa; speech science.

Olswang, Lesley B., \* 1978, M.A., 1971, Illinois; Ph.D., 1978, Washington; language development and disorders.

Palmer, John M., \* 1952, (Emeritus), (Prosthodontics), † M.A., 1950, Washington; Ph.D., 1952, Michigan; disorders of voice and orofacial deformities.

Prins, David, \* 1969, M.A., 1957, Ph.D., 1961, Michigan; stuttering.

Stoel-Gammon, Carol, \* 1983, M.A., 1968, Ph.D., 1974, Stanford; developmental phonology and phonetics.

Thompson, Gary, \* 1966, M.A., 1955, Iowa; Ph.D., 1967, Minnesota; pediatric audiology, clinical evaluation.

Thompson, Marie D., \* 1979, ‡(Education), M.A., 1968, Ph.D., 1970, Washington; early childhood and hearing impaired.

Tiffany, William R., 1951, (Emeritus), M.A., 1947, Washington; Ph.D., 1951, Iowa; phonetics and speech sciences, clinical evaluation.

Wilson, Wesley R., \* 1969, M.A., 1961, Redlands; Ph.D., 1969, Washington; audiology, infant assessment.

Yantis, Phillip A., \* 1965, (Emeritus), M.A., 1952, Ph.D., 1955, Michigan; audiology, clinical evaluation.

Yorkston, Kathryn, 1978, ‡(Rehabilitation Medicine), M.A., 1972, Ph.D., 1975, Oregon; medical speech-language pathology.

#### Associate Professors

Burns, Edward M., \* 1984, M.S., 1966, Arizona; Ph.D., 1977, Minnesota; psychoacoustics.

Carpenter, Robert L., \* 1970, M.A., 1965, Ph.D., 1969, Northwestern; language and language disorders.

Coggins, Truman E., \* 1974, M.S., 1971, Redlands; Ph.D., 1976, Wisconsin; language disorders in children.

Cooker, Harry S., \* 1976, M.A., 1961, Ph.D., 1963, Iowa; speech science.

Dale, Philip S., \* 1968, ‡(Linguistics, Psychology), M.A., 1964, M.S., 1966, Ph.D., 1968, Michigan; language development.

Folsom, Richard C., \* 1977, M.S., 1970, Portland State; Ph.D., 1979, Washington; electrophysiologic audiology.

Mateer, Catherine A., \* 1980, (Research), M.S., 1972, Wisconsin (Madison); Ph.D., 1977, Western Ontario; neuropsychology and neurolinguistics.

Norton, Susan J., 1991, ‡(Otolaryngology), M.S., 1973, Purdue, Ph.D., 1982, Washington; audiology and hearing sciences.

Reich, Alan R., \* 1977, M.A., 1969, Connecticut; Ph.D., 1975, Iowa; speech physiology and voice disorders.

Werner, Lynne Ann, 1986, (Otolaryngology), M.A., 1978, Ph.D., 1980, Loyola University of Chicago; auditory development.

#### Assistant Professors

Stone, Judith R., 1990, (Research), M.A., 1977, Illinois, Ph.D., 1986, Washington; language development and disorders, counseling.

Strand, Edythe A., 1991, (Rehabilitation Medicine), M.A., 1973, Pacific, Ph.D., 1987, Wisconsin; neurogenic speech/language disorders.

#### Lecturers

Alarcon, Nancy B., 1988, M.S., 1981, Wisconsin; speech/language disorders, adult.

Branson, Cynthia W., 1974, M.A., 1970, Northwestern; language disorders, dysarthria.

Coggins, Kathleen, 1985, M.S., 1974, Wisconsin; speech/language disorders, child.

Grigg, Carol A., 1991, M.S., 1981, Wisconsin; voice disorders.

Labiak, James A., 1974, M.A., 1971, Washington; audiology.

Oblak, Susan B., 1977, M.S.P.A., 1973, Washington; speech/language disorders, child.

Sanborn, E. Sue, 1988, M.A., 1967, Ph.D., 1971, Washington; audiology.

### Course Descriptions

#### Courses for Undergraduates

**SPHSC 100 Voice and Articulation Improvement (3) AWSps Stoel-Gammon** Only for persons for whom English is the primary language. Voice production and the sound system of standard American speech. Speech standards, regional and social dialects, voice quality and basic language-oriented characteristics. Practice for improving speech style.

**SPHSC 111 The American English Sound System (2, max. 4) AWSps Stoel-Gammon** For persons for whom English is not the primary language. Speech sounds of American English. Practice in listening and using American phonetic features. Prerequisite: college-level reading knowledge of English.

**SPHSC 201 Anatomy of the Speech and Hearing Mechanisms (5) Asp** Anatomy and functional coordination of those parts of the human body associated with phonation, articulation, resonance, and hearing. Required for majors; open to nonmajors.

**SPHSC 250 Human Communication and Its Disorders (5) WS** Normal and disordered oral communication. Includes speech, language, and hearing disorders as well as normal processes. Required for majors, open to nonmajors.

**SPHSC 300 Speech Science (5) AWSps Cooker** Basic physiological and acoustical attributes of normal speech and hearing. For nonmajors.

**SPHSC 303 Language Science (5) A Stoel-Gammon** Introduction to techniques of linguistic analysis in the areas of phonetics, phonology, morphology, syntax, and semantics.

**SPHSC 307 Speech and Language Development (4) WSp T. Coggins, Olswang** Study of the normal acquisition of speech and language in children. Required for majors. Prerequisites: 250, 303; or permission of instructor.

**SPHSC 310 Introduction to Hearing Science (5) AW Folsom, Wilson** Acoustic properties of simple and complex sounds; description of normal audition; elementary structure and function of the hearing mechanism. Required for majors.

**SPHSC 311 Speech Science: Speech Production (5) Asp Cooker, Minifie, Reich** Physiological, acous-

tical, and perceptual aspects of speech production. Examples and laboratory work directed toward students with interests in speech pathology and audiology. Required for majors and open only to them. Prerequisites: 201 and 310; 310 may be taken concurrently.

**SPHSC 315 Survey of Hearing Impairment (3) ASp** *Sanborn, G. Thompson, Wilson* Causes of hearing impairment and their psychological, social, and educational/vocational effects on the individual. Prerequisite: 310.

**SPHSC 330 Disorders of Articulation (3) ASp** *Stoel-Gammon, Stone* Patterns of normal development; nature, assessment, and treatment of phonological disorders. Prerequisites: 250, 303, 307.

**SPHSC 332 Clinical Processes I: Assessment (4) ASp** *Olswang, Stone* Principles and procedures for the assessment of speech and language disorders. Prerequisites: 307; 330, which may be taken concurrently.

**SPHSC 350 Clinical Processes II: Treatment (4) WS** *Olswang, Stone* Principles and procedures for planning the effective treatment of speech and language disorders. Prerequisites: 330, 332, and permission of undergraduate adviser.

**SPHSC 370 Basic Audiometry (5) WS** *G. Thompson* Theory and practice of the assessment of hearing function, including standard pure-tone audiometry, speech audiometry, and basic impedance audiometry. Prerequisites: 315 and permission of undergraduate adviser.

**SPHSC 380 Introduction to Aural Rehabilitation (4) SpS** *Sanborn* Principles and methods of using auditory and visual cues and communication strategies to improve communication functioning. Prerequisite: 370.

**SPHSC 391 Practicum in Audiology (1-4, max. 10) AWSpS** *Sanborn* Guided experiences in audiological assessment and aural rehabilitation of children and adults. Prerequisite: permission of instructor.

**SPHSC 401 Neural Bases of Speech and Language (4) AS** *Strand* Neuroanatomical and neurophysiological bases of motor speech production and language processes. Laboratory. Prerequisite: 201 or permission of instructor.

**SPHSC 402 Advanced Phonetic Analysis (2) W** *Stoel-Gammon* Transcriptional and acoustic features of speech; includes languages other than English. Prerequisite: 303 or equivalent introductory phonetics course or permission of instructor.

**SPHSC 410 Psychology and Physiology of Audition (4) A** *Burns* Physiological and behavioral bases of hearing. Correlation of human hearing with acoustic, anatomic, and physiological factors.

**SPHSC 411 Perceptual Development (5) A** *Kuhl, Meltzoff* Origins, development of perception in human infancy; nature-nurture controversy as applied to perceptual development. Topics from visual, auditory domains. Development of object and face perception; auditory pattern perception; speech perception; categorization; perception of three-dimensional space; auditory localization; cross-modal relations among touch, vision, audition. Joint with PSYCH 411.

**SPHSC 416 Speech Acoustics and Perception (3) ASp** *Kuhl, Minifie* Historical perspectives and current research on speech acoustics and perception: neurophysiology and brain organization underlying speech and language; machine recognition of speech; animal communication; speech evolution; implications for people with impaired communication skills.

**SPHSC 420 Instrumentation for Speech and Hearing Sciences (3) A** *Wilson* General problems in design and application of electronic equipment used in the speech and hearing sciences. Laboratory problems and demonstrations.

**SPHSC 430 Nature of Stuttering (3) ASp** *Prins* Major theories of stuttering are studied in light of research concerning the characteristics of stutterers and their symptoms. Prerequisite: 250 or permission of instructor.

**SPHSC 431 Language Disorders of Children (4) ASp** *Carpenter, Coggins* Consideration of descriptions and theories, both historical and contemporary, of disordered language in children and related problems. Prerequisites: 250, 303, 307.

**SPHSC 449 Special Studies in Speech Pathology and Audiology (\*) AWSpS** Selected special problems in speech pathology and audiology. Prerequisite: permission of instructor.

**SPHSC 451 Speech Pathology-Audiology Practicum in the Schools (1-10, max. 10) AWSp** Special projects in clinical practicum, offered only in the school setting. Provides an opportunity for students to extend practicum experiences in this special environment; does not fulfill requirements for teaching practicum in the College of Education. Prerequisites: 350 and permission of undergraduate adviser.

**SPHSC 453 Communication Augmentation for Non-Speaking Individuals (3) S** Communication needs of nonspeaking individuals. Interdisciplinary approaches to the evaluation, selection, and implementation of aided and unaided communication augmentation systems. Joint with REHAB 458. Prerequisite: basic course work in either speech and hearing sciences, physical therapy, occupational therapy, or engineering, or permission of instructor.

**SPHSC 470 Hearing and Aging (3) W** *Yantis* Consequences of hearing impairment on speech recognition and perception in older adults. Emphasis on information important to the speech-language pathologist regarding assessment and management. Not open to audiology majors except by permission. Prerequisite: 370 or permission of instructor.

**SPHSC 479 Pediatric Audiology (3) Sp** *G. Thompson* Assessment of auditory disorders in infants and young children. Emphasis on behavioral and electrophysiologic techniques and on the role of the audiologist in the clinical management of the young hearing-impaired child. Prerequisite: 370 or equivalent.

**SPHSC 499 Undergraduate Research (1-5, max. 15) AWSpS** Prerequisite: permission of instructor.

### Courses for Graduates Only

**SPHSC 502 Advanced Anatomy of Speech and Hearing Structures (2) AWSp** *Palmer* Directed independent dissection and study of selected anatomic structures of the speech or hearing mechanisms. Prerequisites: 201 and permission of instructor.

**SPHSC 503 Current Issues in Speech and Hearing Sciences (3)** Application of experimental methods to research in speech science.

**SPHSC 504 Research Methods in Speech and Hearing Science (3) AW** *Minifie* Introduction to empirical methods in the speech and hearing sciences.

**SPHSC 505 Clinical Research in Communication Disorders (3) W** *Olswang* Introduction to clinical research. Methodological issues concerning the evaluation of treatment for speech, hearing, and language disorders. Primary emphasis on time series designs. Prerequisite: 504 or permission of instructor.

**SPHSC 510 Physiological Acoustics (3) W** *Burns* Study of pertinent literature and experimental techniques incident to the scientific study of the normal and abnormal auditory system. Prerequisites: 410 and familiarity with algebra and trigonometry. (Offered alternate years.)

**SPHSC 511 Psychoacoustics (3) Sp** *Burns* Review of significant literature and theory pertinent to normal auditory sensitivity, pitch, loudness, and other attributes of auditory sensation. Prerequisites: 410 or

permission of instructor, and MATH 120 or equivalent. (Offered alternate years.)

**SPHSC 512 Auditory System Development (3)** Review of the anatomical, physiological, and behavioral development of the auditory system. Consideration of literature dealing with both human and nonhuman systems, with emphasis on general principles of auditory development. Prerequisite: 410 or permission of instructor.

**SPHSC 514 Speech Physiology (3) A** *Cooker* Study of the physiological parameters of acoustic speech production. Prerequisites: 310, 311; or permission of instructor. (Offered alternate years.)

**SPHSC 515 Speech Acoustics (3) W** *Minifie* Study of the acoustical correlates of the distinctive parameters of speech. Prerequisites: 310, 311, 514; or permission of instructor. (Offered alternate years.)

**SPHSC 516 Speech Perception (3) Sp** *Kuhl* Study of the perceptual and linguistic parameters of speech perception. Prerequisites: 310, 311, 515; or permission of instructor. (Offered alternate years.)

**SPHSC 519 Seminar in Speech Science (2, max. 6)**

**SPHSC 520 Advanced Instrumentation for Speech and Hearing Sciences (3) WS** *Cooker* Design and use of electronic and electroacoustic devices in the speech and hearing sciences. Four hours of laboratory required each week. Prerequisite: 420.

**SPHSC 525 Speech Signal Processing (3) Sp** *Belcher* Theory, evaluation, and use of speech signal processing algorithms such as sampling, filtering, spectral analysis, autocorrelation, and speech synthesis. Laboratory assignments develop skills in using a set of signal analysis and synthesis software applied to normal and pathological speech.

**SPHSC 531 Neurogenic Motor Speech Disorders (4) Sp** *Strand* The nature of dysarthria and apraxia of speech and the evaluation and treatment of those disorders. Prerequisite: 401 or permission of instructor.

**SPHSC 532 Neurogenic Language Disorders (4) W** *Strand* Nature of aphasia and other neurogenic language disorders; evaluation and treatment of those disorders. Prerequisite: 401 or permission of instructor.

**SPHSC 533 Speech Pathology in a Medical Setting (3) Sp** For speech pathology students who intend to work in a hospital. Prerequisites: 531 and 532; or permission of instructor.

**SPHSC 534 Dysphagia and Associated Disorders (3) Sp** Anatomophysiological bases of function and dysfunction associated with speech-language disorders. Mastication and swallowing problems, their causes, assessments, and management. Prerequisites: 201, 401.

**SPHSC 535 Voice Disorders (4) WS** *Reich* Physiology, acoustics, and perception of the normal and disordered human voice. Etiology, evaluation, and treatment of phonatory disorders.

**SPHSC 536 Assessment of Language Impairment in Children (5) AS** *Carpenter, Coggins* Principles and procedures used in the assessment of speech- and language-disordered children and adolescents. Prerequisites: 332, 431, and permission of instructor.

**SPHSC 537 Treatment of Stuttering (4) W** *Prins* Description and evaluation of therapy systems for children and adults who stutter. One hour per week of clinical observation is integrated with class material. Prerequisites: 350 and 430; or permission of instructor.

**SPHSC 540 Phonological Development (3) W** *Stoel-Gammon* Selected topics in the developmental sequence of phonological systems in normal-speaking children. Relationships between possible phonological inventories and rule systems in different languages. Joint with LING 540. Prerequisites: LING 451, 452, or permission of instructor.

**SPHSC 541 Syntactic and Semantic Development (3) Sp Dale** Advanced topics in the study of first-language acquisition by children, including cognitive bases of language, cross-linguistic research, early semantic systems and their reorganization, learnability theory, and other theories of acquisition. Joint with LING 541. Prerequisite: PSYCH 457 or LING 447 or permission of instructor.

**SPHSC 550 Intervention with Communication Disorders in the School Setting (2) W** Study of administrative and clinical issues in implementation of programs to remediate communication disorders in the school-aged population. Field experiences and professional issues. Open only to graduate students in speech and hearing sciences.

**SPHSC 551 Advanced Practicum in Speech Pathology Evaluation (1-9, max. 10) AWSpS** Laboratory experience in the evaluation of speech and language disorders. Prerequisites: 536 and permission of instructor.

**SPHSC 552 Advanced Practicum in Speech Pathology Management (1-9) AWSpS** Laboratory experience in the management of speech and language disorders. Prerequisite: permission of instructor.

**SPHSC 555 Preinternship (1-9) AWSpS** Practicum in speech pathology or audiology designed to teach the clinical regimen of a participating professional center prior to assuming a full internship assignment. Prerequisite: 150 hours of supervised practicum.

**SPHSC 566 Seminar in Speech-Language Development (2, max. 6)** Prerequisites: 307, 431.

**SPHSC 569 Seminar in Speech-Language Pathology (2, max. 6)**

**SPHSC 570-571 Assessment of Auditory Dysfunction I, II (5-5) A,W** Strategies and procedures in the auditory evaluation of hearing-impaired adults. Laboratory required. Prerequisite: 370 or equivalent.

**SPHSC 573 Electrophysiologic Assessment of Auditory Function (3) Sp Folsom** Consideration of electrophysiologic techniques that may be used to evaluate the normal and disordered auditory system. Outside laboratory required. Prerequisite: 310 or permission of instructor.

**SPHSC 575 Medical Backgrounds in Audiology (3) A Snyder** Diseases and injuries of the ear resulting in reduced audition. Prerequisite: -571 or permission of instructor.

**SPHSC 581 Management of Hearing-Impaired Children (3) S M. Thompson** Management of hearing-impaired children, including identification of target behaviors and methods for modification such as individualized therapy programs and parent and teacher involvement.

**SPHSC 582 Hearing Aid Amplification (4) W** Acoustic amplification and methods of determining electroacoustic characteristics. Includes earmold technology. Prerequisites: 370, 380; or permission of instructor.

**SPHSC 583 Hearing Aid Selection (4) Sp** Consideration of strategies utilized in selecting acoustic amplification for the hearing impaired, including review of pertinent research literature. Prerequisite: 582 or permission of instructor.

**SPHSC 584 Industrial and Community Hearing Conservation (2) W** Psychophysiological effects of environmental noise on man. Techniques of noise measurement and attenuation, including the planning of hearing conservation programs in industry and in the community. Prerequisite: 370 or permission of instructor. (Offered alternate years.)

**SPHSC 588 Proseminar (1, max. 3) Asp** Consideration of professional issues and student/faculty research in specific areas of interest.

**SPHSC 589 Seminar in Audiology (2, max. 6)** Prerequisite: permission of instructor.

**SPHSC 591 Advanced Practicum in Audiology (1-9, max. 10) AWSpS** Prerequisite: forty hours of practicum.

**SPHSC 599 Research Practicum (\*, max. 12) AWSpS** Supervised laboratory experience in experimental approach to problems in speech and hearing sciences. Prerequisite: permission of instructor.

**SPHSC 600 Independent Study or Research (\*) AWSpS** Prerequisite: permission of instructor.

**SPHSC 601 Internship (3-9, max. 9) AWSpS** Prerequisite: 150 hours of supervised practicum.

**SPHSC 602 Internship in the Schools (3-9, max. 9) AWSpS** Supervised field experience in a public school setting. Prerequisite: 150 hours of supervised clinical practicum.

**SPHSC 700 Master's Thesis (\*) AWSpS**

**SPHSC 800 Doctoral Dissertation (\*) AWSpS**

## Speech Communication

205 Raitt

Speech communication is the study of the ways people share meanings and make their ideas known to each other in face-to-face interaction. The major in speech communication is designed to enable students to analyze and evaluate their own and others' communication behavior, to understand speech as a form of behavior and a social process, and to become better communicators themselves.

## Undergraduate Program

Advisers  
Robert M. Post  
Beatrice Restoule

206B Raitt

Students in the department begin their study in introductory courses in public speaking, interpersonal communication, oral interpretation, and small-group decision making. In advanced courses, students study and analyze specialized forms of communication—persuasion, argumentation, small-group facilitation, and communication in instructional settings and large organizations.

### Bachelor of Arts Degree

**Admission Requirements:** A minimum of 30 quarter credits completed and a minimum 2.50 overall GPA (2.50 guarantees consideration, but not acceptance). Recommended courses include 10 credits in quantitative and symbolic reasoning; 10 credits in history, literature, and philosophy; and 10 credits in English composition (see department for list of recommended courses). Students submit an application packet that includes (1) application form; (2) current class schedule; (3) copies of transcripts and grade reports; (4) original statement. Applications are due the end of the third week of the quarter. Admission is once a quarter—autumn, winter, and spring.

**Major Requirements:** 60 approved credits, which include 32-33 credits of core requirements (students should consult departmental adviser upon entering the program regarding distribution of core requirements), and 27-28 elective credits, of which 15 credits must be in courses at the 400 level, excluding 499. For core requirements, students should complete 10 credits from SPCH 103, 140, 220; 5 credits from 334, 373; 14-15 credits from 270, 305, 310, 476; and 400. A 2.50 overall GPA in all speech courses taken is required.

## Graduate Program

Barbara P. Warnick, Graduate Program Coordinator

Graduate study is guided by the principle that speech communication is a unified discipline concerned with the ways persons share meanings and how shared meanings affect, and are affected by, persons and society at large. Specialty areas include communication theory; interpersonal, small-group, organizational, instructional, cultural, and developmental communication; communication education; oral interpretation; freedom of speech; argument; rhetorical theory; criticism; and public address. Emphasis is on both "social scientific" and "humanistic" methods of scholarly inquiry.

The M.A. program with thesis requires at least 31 credits of approved course work and a thesis (9 credits). The M.A. program without thesis: 45 credits, including a creative project.

The Ph.D. program usually requires four to five years of study beyond the baccalaureate degree.

### Special Research Facilities

A laboratory complex accommodates studies on individuals and groups of varying sizes and includes one-way mirrors, as well as audio and video capabilities. A computer lab houses several personal computers, terminals, and printers that are linked to the University's computer systems. An instructional resource center provides support for the development and use of electronic and print materials for teaching and research.

### Admission Qualifications

A background of academic work adequate for pursuit of the degree sought is required. Applicants for the Ph.D. are normally expected to have an M.A. in speech communication or communications. A GPA and Graduate Record Examination scores that give promise of success in the department's graduate program are required.

### Financial Assistance

The department annually awards a number of teaching assistantships.

### Correspondence and Information

Graduate Program Coordinator  
205 Raitt, DL-15

## Faculty

### Chairperson

Ann Q. Staton

### Professors

Baskerville, Barnet, 1948, (Emeritus), M.A., 1944, Washington; Ph.D., 1948, Northwestern; public address, rhetorical criticism.

Bosmajian, Haig A., \* 1965, M.A., 1951, Pacific; Ph.D., 1960, Stanford; rhetoric, freedom of speech.

Crowell, Laura L., 1949, (Emeritus), M.A., 1940, Ph.D., 1948, Iowa; public address, discussion.

Nilsen, Thomas R., \* 1950, (Emeritus), M.A., 1948, Washington; Ph.D., 1953, Northwestern; contemporary rhetorical theory, ethics of rhetoric.

Scheidel, Thomas M., \* 1976, M.A., 1955, Ph.D., 1958, Washington; communication theory and research, small-group processes.

Staton, Ann Q., \* 1977, M.A., 1973, Baylor; Ph.D., 1977, Texas; instructional communication.

### Associate Professors

Campbell, John A., \* 1968, M.A., 1967, Ph.D., 1968, Pittsburgh; modern rhetorical theory, British public address.

Parks, Malcolm R.,\* 1978, M.A., 1975, Ph.D., 1976, Michigan State; communication theory, interpersonal communication, research methods.

Philipsen, Gerry F.,\* 1978, Ph.D., 1972, Northwestern; ethnography of communication.

Post, Robert M.,\* 1960, M.A., 1958, Ph.D., 1961, Ohio; oral interpretation of literature.

Stewart, John R.,\* 1969, M.A., 1964, Northwestern; Ph.D., 1970, Southern California; philosophy of qualitative research and interpersonal communication.

Warnick, Barbara P.,\* 1980, M.A., 1972, Marshall; Ph.D., 1977, Michigan; rhetorical theory and criticism.

#### Assistant Professors

Bauman, Isabelle,\* 1990, M.A., 1988, Ph.D., 1990, Wisconsin; language and cognition, communication theory.

Black, Alex K., 1991, M.A., 1987, Ph.D., 1990, Victoria; discourse analysis, research methods.

Eliasoph, Nina, 1991, M.A., 1986, Ph.D., 1992, California (Berkeley); qualitative research methods, public communication, gender communication.

Purcell, William M.,\* 1988, M.A., 1983, Ph.D., 1986, Indiana; classical and medieval rhetorical theory, American public address.

#### Lecturers

Hogan, Michael, 1949, (Emeritus), M.A., 1950, Washington; oral interpretation.

Nyquist, Jody D., 1967, M.A., 1967, Washington; communication education.

## Course Descriptions

### Courses for Undergraduates

**SPCH 102 Speech, the Individual, and Society (5) AWSp** Philipsen, Stewart Provides a basic understanding of human speech communication. Covers three major areas: (1) the nature of human communication, including models, principles, settings; (2) elements of verbal and nonverbal communication; and (3) approaches to, and functions of, human communication including persuasion, interpersonal communication, argument, propaganda, free speech.

**SPCH 103 Interpersonal Communication (5) AWSp** Stewart Emphasizes analyzing and understanding communication variables affecting human relationships, such as person perception, feedback, idea development, nonverbal cues. Focus on informal communication settings.

**SPCH 140 Oral Interpretation of Literature (5) AWSp** Post Analysis and critical study of imaginative literature through the medium of oral performance. Includes verse, prose, and drama.

**SPCH 203 Communication in the Classroom (5) AWSp** Staton Theory and practice of interpersonal communication in instructional settings. Designed to prepare prospective teachers to employ communication effectively as a medium of teaching and learning, to create a classroom communication environment in which interaction is open and productive. Recommended for all teacher candidates in any discipline.

**SPCH 220 Introduction to Public Speaking (5) AWSp** Campbell Emphasizes choice and organization of material, sound reasoning, audience analysis, oral style, and delivery. Overview of history of rhetoric. Classroom speeches followed by conferences with instructor.

**SPCH 222 Speech Communication in a Free Society (3) Bosmajian** Problems and arguments related to freedom of speech; early English writers on freedom of expression; background of freedom of speech in the United States; contemporary freedom of speech issues.

**SPCH 235 Parliamentary Procedure (3) Bosmajian** Principles and practice: a study of the historical bases and contemporary uses of parliamentary procedure; methods and practice in organizing and conducting public meetings.

**SPCH 270 Introduction to Empirical Research in Speech Communication (5) Black, Parks** Basic research principles in speech communication science; survey of substantive research findings. Recommended: any 100- or 200-level speech communication course.

**SPCH 301 Interviewing (5) Warnick** Interviewing principles and practices, with emphasis on information gathering and persuasive interviews. Purposes and types of interviews, structure of interviews, and influence of communication patterns on interview outcomes.

**SPCH 305 Perspectives on Language in Speech Communication (5) Bauman, Black** Study of language and meaning, and survey of several influential modern approaches, including the semantic, general semantic, behavioral, and analytic philosophical. Relates theories of language and meaning to the study of speech communication.

**SPCH 308 Humanistic Approaches to Interpersonal Communication (5) Stewart** Exploration of several humanistic approaches to interpersonal speech communication, emphasizing the theorists' philosophical orientations.

**SPCH 310 The Rhetorical Tradition in Western Thought (5) Purcell, Warnick** Analysis of the major theories that prescribe and describe the use of symbols to change attitudes and behavior. Principal emphasis is placed upon defining the nature and scope of rhetoric and upon analyzing the art's underlying assumptions about human beings as symbol users. Some background in history, philosophy, and literature is desirable. Recommended: junior standing.

**SPCH 320 Public Speaking (5)** Practice in preparation and presentation of a variety of types of public speeches based on study of their structure and form; emphasis on organization and delivery. Recommended: 220.

**SPCH 329 Rhetoric of Social and Political Movements (5) Bosmajian** Inquiry into the rhetoric of social and political movements; emphasis on investigation of persuasive discourse; examination of the nonverbal symbols of persuasion.

**SPCH 334 Essentials of Argument (5) AWSp** Purcell, Warnick Argument as a technique in the investigation of social problems; evidence, proof, refutation, persuasion; training in argumentative speaking.

**SPCH 335 Methods of Debate (5) Warnick** Debate as a method of advocacy, with emphasis on the analysis of value and policy questions. Prerequisite: 220 or 334.

**SPCH 341 Oral Interpretation of Children's Literature (3) Post** Study and performance of children's literature, emphasizing oral interpretation as a method of teaching literature in the elementary school.

**SPCH 349 Readers Theatre (2, max. 10) Post** Preparation and public presentation of programs of literary works. Prerequisites: 140 and permission of instructor.

**SPCH 368 Small-Group Facilitation (3)** Methods for facilitating discussion in small groups formed for the purposes of instruction. Emphasis is on each student's practical application of the insights derived. Prerequisites: permission of instructor, concurrent registration in 369; recommended: 102.

**SPCH 369 Small-Group Facilitation Practicum (2)** Implementation of the theoretical principles taught in 368. Emphasis on direct application of those principles to an assigned group of students from 102. Prerequisite: concurrent registration in 368.

**SPCH 373 Principles of Group Discussion (5) Philipsen** Discussion as an everyday community activity, with emphasis on the informal cooperative decision-making methods of committee, conference, and roundtable groups.

**SPCH 375 Ethics in Interpersonal and Public Speech Communication (5)** Ethical problems in interpersonal and public speech communication. Alternative ways of evaluating and responding to moral problems in a variety of communication situations.

**SPCH 384 Cultural Codes in Communication (5) Eliasoph, Philipsen** Social and cultural codes in interpersonal communication, with special reference to contemporary American subcultural groups and their communication patterns.

**SPCH 385 Fieldwork in Communication Studies (5) Eliasoph, Philipsen** Theory and practice of participant observation, intensive interviewing, and discourse analysis in the study of communicative practices.

**SPCH 400 Theoretical Backgrounds in Speech Communication (3) W. Bauman** Speech viewed as a form of individual and social behavior, with emphasis on the function of symbols in speech communication in informal and societal settings. The development of speech as a field of study and its contemporary emphases.

**SPCH 421 Advanced Speech Composition (5) Bosmajian** Preparation and delivery of public speeches with emphasis on style, thought organization, and proof. Analysis of model speeches. Recommended: 220 or 320.

**SPCH 424 Rhetorical Perspectives in Intellectual Revolutions (5) Campbell** Rhetorical investigation of selected major writings. Examines the rhetorical dimension in the progress of ideas through analysis of documents of major intellectual revolutions as persuasive works. Relates principal revolutions in Western thought to contemporary controversy. Examines *Rights of Man*, *Communist Manifesto*, *The Origin of Species*.

**SPCH 425 American Public Address (5) Campbell** Historical and critical study of rhetorical discourse and movements and of their relationship to American political, social, and intellectual life. Examines the discourse of the American revolution, debates on the ratification of the federal constitution, the slavery question, Reconstruction, populism, imperialism.

**SPCH 426 American Public Address (5) Campbell, Purcell** Historical and critical study of rhetorical discourse and movements and of their relationship to American political, social, and intellectual life. Examines Lyceum and Chautauqua movements, progressive era, World War I, the New Deal, isolationism, the Cold War era, civil rights movement, anti-nuclear movement. Recommended: 425.

**SPCH 428 British Public Address (5) Campbell** Historical and critical analysis of significant speeches and speakers and of their relationship to British social, political, and religious life. Historical overview of the major periods of British oratory and of the unique role of the oration in each as a means of exhortation and advocacy.

**SPCH 434 Argumentation Theory (5) Warnick** Theory and research on the structure and properties of argument, argument fields, argument modeling, the influence of audience, argument criticism, and related topics. Prerequisite: 220 or 334.

**SPCH 440 Oral Interpretation of Poetry (3) Post** Study of forms of verse through analysis and oral presentation. Recommended: 140.

**SPCH 442 Oral Interpretation of Fiction (3) Post** Analysis and oral interpretation of narrative perspectives in the novel and the short story. Recommended: 140.

**SPCH 444 Oral Interpretation of Modern Dramatic Literature (3)** *Post* Study of dramatic literature from Ibsen to the present for purposes of developing understanding, appreciation, and ability to communicate its meaning. Recommended: 140.

**SPCH 455 Communication in Children's Environments (4)** *Nyquist, Staton* Study of the communication capacity of children with emphasis on the analysis of the communication process in formal and informal learning environments. Includes examination of communication-based educational approaches and instructional strategies.

**SPCH 456 Communication in Youth Environments (4)** *Nyquist, Staton* Study of the communication process in youth environments with a primary focus on formal and informal learning. Includes critical analysis of communication in contemporary instructional settings and the development of communication strategies for teaching and learning.

**SPCH 471 Persuasion (3)** Analysis of the ways in which beliefs, values, attitudes, and behavior are deliberately influenced through communication. Recommended: junior standing.

**SPCH 472 Empirical Approaches to Interpersonal Communication (5)** *Parks* Examination of major theoretic positions and empirical research findings in current speech communication literature on interpersonal influence. Emphasis on the insights that such theory and research provides on human speech communication behavior in common interpersonal situations. Recommended: junior standing.

**SPCH 473 Problems of Discussion Leadership (3)** *Scheidel* Critical analysis of leadership in committee and conference, with emphasis on the development of speech effectiveness in the cooperative achievement of goals. Recommended: 373.

**SPCH 474 Communication, Conflict, and Cooperation (5)** *Parks, Philipson* Role of communication in resolving informal conflicts and in facilitating interpersonal and intergroup cooperation. Review of empirical literature. In-class simulations and exercises. Prerequisite: 373.

**SPCH 475 Organizational Communication (5)** Role of communication in organizations, the types of problems arising, and approaches to their resolution. Communication in the human relations and productivity of organizations. Applying communication skills in various organization roles. Recommended: junior standing.

**SPCH 476 Models and Theories in Speech Communication (4)** *Bauman, Stewart* Examination of selected theories and models of speech communication from the behavioral sciences, as well as of criteria applicable to them. Emphasis on the nature and function of theories and models, especially as these relate to basic principles underlying the scientific study of speech communication phenomena. Recommended: junior standing.

**SPCH 498 Special Topics in Speech Communication (2-5, max. 15)** *AWSp* Lecture, seminar, and/or team study. Topics vary.

**SPCH 499 Undergraduate Research (1-5, max. 10)** *AWSpS* Prerequisite: permission of instructor.

### Courses for Graduates Only

**SPCH 501 Introduction to Graduate Research in Speech Communication (3)** *A Philipson, Scheidel*

**SPCH 510 Rhetoric in Society (3)** *A Campbell, Warnick* Selected works of major rhetorical theorists such as Aristotle, Cicero, Augustine, Campbell, Whately, Perelman, and Burke. Examines how rhetorical themes are responsive to and symptomatic of societal conditions and values.

**SPCH 521 Studies in Greek and Roman Rhetoric (5)** *Purcell* Development of the Greek tradition in rhetorical theory, criticism, and pedagogy from Homer to

Augustine; analysis of the contributions of major figures and works to that tradition.

**SPCH 522 Studies in Medieval Rhetoric (5)** *Purcell* Critical analysis of selected persons, works, and topics related to the development of rhetorical theory during the Middle Ages.

**SPCH 523 Studies in Renaissance and Modern Rhetoric (5)** *Campbell, Warnick* Development of rhetorical theory from the mid-sixteenth to early nineteenth centuries. Examines the contributions of Wilson, Ramus, Bacon, Port Royalists, Vico, Campbell, Blair, and Whately.

**SPCH 524 Studies in Contemporary Rhetoric (5)** *Warnick* Critical analysis of theories of twentieth century rhetoric.

**SPCH 525 Rhetorical Criticism (5)** *Campbell* History and method of rhetorical criticism. Application of critical standards to notable British and American speeches.

**SPCH 530 Philosophical Issues in Rhetorical and Communication Theory (5)** *Stewart* Survey of selected philosophical controversies among speech communication theorists, and analysis of one philosopher's approach to communication. Topics include paradigm descriptions of communication, rhetoric and knowledge, linguistic analysis and communication, hermeneutics and dialogue. Prerequisite: graduate standing.

**SPCH 540 History of Oral Interpretation (3)** *Post* Critical analysis of writings by Sheridan, Walker, Rush, Delsarte, Bell, Curry, Emerson, and others.

**SPCH 550 Instructional Design in Speech Communication (4)** *Staton* Research, theory, and practice relevant to instructional design in speech communication. Instructional models, writing instructional objectives, strategies, and evaluative measures.

**SPCH 555 Instructional Communication (5)** *Staton* Communication in instructional environments. Nature of instructional communication, paradigms for instructional communication research, quantitative and qualitative approaches to instructional communication, verbal and nonverbal classroom interaction.

**SPCH 560 Social Scientific Perspectives on Interpersonal Communication (5)** *A Parks* Social scientific research and theory on the role of communication in developing and maintaining interpersonal relationships. Nature of interpersonal communication, relationship change processes, interpersonal control through communication, and personal communication networks.

**SPCH 570 Organizational Communication (5)** Examination of social scientific theory and research on communication in organizations. Topics include quantitative and qualitative approaches to process of organizational communication, function and structure of macro networks, superior-subordinate relationships, and the role of communication in organizational change, development, and effectiveness. Prerequisite: graduate standing in the social sciences.

**SPCH 572 Theories of Human Communication (5)** *Bauman* Description and evaluation of theoretical approaches to the study of human communication. Exploration of their applications to specific subject areas.

**SPCH 575 Philosophy of Interpretive Research in Communication (5)** *Stewart* Introduces interpretive researchers to foundations of this approach in Dilthey, Gadamer, Schutz, Weber, Wittgenstein, and others. Emphasizes Gadamer's philosophical hermeneutics.

**SPCH 576 Research Methods in Speech Communication (5)** *Black, Parks* Application of behavioral research principles to problems in quantification, design, and analysis of data in speech communication research.

**SPCH 577 Research Problems in Speech Communication (3-6, max. 12)** *Eliasoph, Philipson* Applica-

tion of methodology and design principles to research problems in speech communication.

**SPCH 581 Advanced Research Methods in Speech Communication (4)** *Black, Parks* Application of social scientific methods to problems in quantification, design, and analysis of communication data. Emphasis on advanced data collection concerns, multivariate data analysis, and computer operation. Prerequisite: 576.

**SPCH 584 Ways of Speaking (5)** *Eliasoph, Philipson* Theory and literature of the ethnography of communication, with special emphasis on the descriptive-comparative approach to culturally patterned styles of communicative conduct. Joint with ANTH 584.

**SPCH 588 Small-Group Communication (5)** *Philipson, Scheidel* Major small-group theories relevant to communicative behavior. Descriptive and experimental research findings in current speech communication literature. Prerequisite: 473.

**SPCH 590 Seminar in Theory of Speech Communication (3-4, max. 12)**

**SPCH 592 Seminar in Public Address (3-4, max. 12)**

**SPCH 593 Seminar in Rhetorical Theory (3-4, max. 12)**

**SPCH 594 Seminar in Oral Interpretation (2, max. 6)** *Post*

**SPCH 595 Seminar in Speech Communication Education (3-4, max. 12)**

**SPCH 597 Seminar in Interpersonal Communications (3-4, max. 12)** Examination of experimental literature on selected topics. Subject changes from year to year; topics include conflict resolution, information processing, communication networks, feedback systems, audience composition research, communication effects.

**SPCH 598 Small-Group Discussion and Communication (3-4, max. 12)** Introduction to study of communication within small problem-solving groups. Theoretical as well as methodological dimensions of selected studies. Emphasis on role communication in decision-making process. From a communication viewpoint, examines such topics as conformity, consensus, interpersonal attraction, and emergent phases of discussion.

**SPCH 600 Independent Study or Research (\*)** *AWSpS*

**SPCH 700 Master's Thesis (\*)** *AWSpS*

**SPCH 800 Doctoral Dissertation (\*)** *AWSpS*

## Statistics

B313 Padelford

Probability provides the conceptual foundation and mathematical language for the logic of uncertainty and induction. Statistics is concerned with procedures for the acquisition management, exploration, and use of information, in order to learn from experience in situations of uncertainty and to make decisions under risk. Statistical practice includes: design of experiments and of sampling surveys; exploration, summarization, and display of observational data; drawing inferences, and assessing their uncertainty; building mathematical models for systems with stochastic components.

By means of joint faculty appointments, courses, and seminars, the Department of Statistics maintains active academic contacts with the School of Business Administration; the College of Engineering; the Departments of Applied Mathematics, Atmospheric Sciences, Computer Science, Economics, Genetics, Geological Sciences, Mathematics, Psychology, Radiology, Sociol-

ogy, and Zoology; the Center for Quantitative Science; the Applied Physics Laboratory; and the Applied Statistics Division of the Boeing Company. The department has an especially close relationship with the Department of Biostatistics.

## Undergraduate Program

### Bachelor of Science Degree

The Bachelor of Science program offers broad-based, flexible educational pathways emphasizing the theoretical, practical, or computational aspects of probability and statistics. The program serves the needs of future statisticians in science, industry, business, and government, as well as providing the necessary background and stimulation for graduate study; it also offers excellent opportunities for double-majoring in statistics and either mathematics or computer science.

**Admission Requirements:** (1) Completion of 45 credits, including MATH 124, 125, 126, one linked set of courses toward the College of Arts and Sciences 20-credit requirement in the natural sciences, and one course from STAT 220, 301, 311, 390, or an approved substitute; (2) minimum grade of 2.0 in each of the above listed prerequisites and a cumulative GPA of 2.80 for these courses. Students wishing to declare a statistics major must apply by bringing transcripts which include completed prerequisites to B309 Padelford during any quarter.

**Major Requirements:** MATH 124, 125, 126; 307, 308, 309; 324, 325 (the honors sequences in calculus may replace the corresponding regular sequences); ENGR/CSE 142, CSE 143; one course from STAT 220, 301, 311, 390, or approved substitute; 341, 342, 421, 423 and two other upper-division statistics courses chosen with prior approval of the statistics adviser. Electives (9 credits): one upper-division course in mathematics, statistics, or computer science, plus two upper-division courses in any discipline (including but not limited to mathematics, statistics, and computer science), all subject to prior approval by the statistics adviser. The first elective gives an opportunity to define the flavor of the major within interrelated fields, and the other two give a chance to broaden the basis of the major into a special interest area, chosen from the full range of upper-division courses offered at the University. Grades of 2.0 or better in all courses used to satisfy major requirements. Cumulative GPA of 2.50 in required statistics courses.

## Graduate Programs

The graduate programs emphasize both the theory and application of statistics, including probability theory, mathematical statistics, data analysis, statistical computing, and scientific applications. An ongoing statistical consulting program provides the students with practical experience in using statistics and in communicating with clients. Under faculty supervision, participants in the program assist members of the University community in applying statistical methodology. The department offers Master of Science and Doctor of Philosophy degrees.

### Admission Requirements

Background in mathematics, statistics, or a quantitative field, with 30 or more quarter credits in mathematics and statistics, to include a year of advanced (second year) calculus, one course in linear algebra, and one course in probability theory; Graduate Record Examination scores, including the Advanced Mathematics subject test; three letters of recommendation from appropriate former or current faculty.

### Master of Science Degree

**Graduation Requirements:** At least twelve approved courses numbered 400 or above with a value of 36 credits or more; of these, at least six courses must be numbered in the 500 series (exclusive of 512, 513) with

a value of 18 credits or more, and with a coherent theme. Approved proficiency in statistical computing. Satisfactory participation in statistical consulting and the departmental seminar. Passage of an appropriate final master's examination. Successful completion of a master's thesis can count as up to three courses worth 9 credits, but cannot replace any of the six courses in the 500 series mentioned above. All programs must be approved in advance by the departmental graduate program coordinator.

### Doctor of Philosophy Degree

**Graduation Requirements:** Appropriate training in statistics and related sciences. Appropriate General Examination of basic graduate-level knowledge in statistics and probability (including two preliminaries). Satisfactory performance in STAT 570, 571, 572; STAT 581, 582, 583; and STAT 521, 522, 523. (In some circumstances, other graduate-level mathematical science courses may be used as a substitute.) Approved performance in statistical consulting (typically STAT 598 and 599). Demonstration of proficiency in computing. 1 credit of STAT 590 per quarter. Demonstration of ability to read technical literature in French, German, or Russian. Dissertation. Final Examination.

### Computing Facilities

Computing facilities in the Department of Statistics rank among the best of any statistics programs in the country and reflect the department's expertise in the field of statistical computing. For graduate instruction, the department relies primarily on the Mathematical Sciences Computing Center's laboratory of Unix and Macintosh workstations. For research purposes, the department has a network of approximately thirty-five DEC, IBM, Macintosh, and Sun workstations. Support is provided by a systems programmer, an applications programmer, and a systems administrator.

### Financial Aid

The department annually awards a limited number of teaching and research assistantships for the support of new and continuing graduate students on the basis of academic promise.

### Correspondence and Information

Undergraduate or Graduate Program Coordinator  
Department of Statistics, GN-22

## Faculty

### Chairperson

Elizabeth A. Thompson

### Professors

Bass, Richard F.\* 1977, ‡(Mathematics), Ph.D., 1977, California (Berkeley); probability theory, Markov processes, statistics.

Besag, Julian,\* 1989, B.S., 1968, Birmingham (United Kingdom); spatial statistics, with applications to epidemiology, image analysis, and agriculture; Bayesian inference, Monte Carlo tests.

Birnbaum, Z. W.\* 1939, (Emeritus), (Mathematics), † LL.M., 1925, Ph.D., 1929, John Casimir (Poland); nonparametric statistics, reliability theory, competing risks.

Felsenstein, Joseph,\* 1967, ‡(Genetics, Zoology), Ph.D., 1968, Chicago; estimation of phylogenies, long-term evolutionary processes, theoretical population genetics.

Fleming, Thomas R.\* 1984, (Biostatistics), † M.A., 1974, Ph.D., 1976, Maryland; survival analysis, clinical trials, sequential analysis.

Ford, E. David,\* 1985, (Biostatistics, Quantitative Ecology and Resource Management), (Fisheries, Forest Resources), † Ph.D., 1968, University College (London); modeling plant response to environment, interpreting ecological processes from spatial patterns,

statistical inference for complex models, measurement theory for ecological processes, time-series analysis.

Kronmal, Richard A.\* 1964, (Biostatistics), † (Quantitative Ecology and Resource Management), Ph.D., 1964, California (Los Angeles); nonparametric density estimation, computer algorithms, cardiovascular data analysis.

Lunneborg, Clifford E.\* 1962, (Emeritus), (Psychology), † M.S., 1957, Ph.D., 1959, Washington; applied multivariate analysis, linear models, educational and psychological measurement.

Martin, R. Douglas,\* 1969, (Quantitative Ecology and Resource Management), M.S.E., 1965, Washington; Ph.D., 1969, Princeton; robust methods, time series, data analysis.

Nelson, Charles R.\* 1975, ‡(Economics), M.A., 1967, Ph.D., 1969, Wisconsin; econometrics, time-series analysis, monetary economics.

Perlman, Michael D.\* 1979, M.S., 1965, Ph.D., 1967, Stanford; multivariate analysis, decision theory.

Raftery, Adrian E.\* 1986, (Sociology), † M.Sc., 1977, Trinity (Dublin); Ph.D., 1980, Université de Paris VI; time series, spatial statistics, population estimation, model selection, Bayesian statistics, applications in sociology.

Scholz, Friedrich W.\* 1981, (Affiliate), Ph.D., 1971, California (Berkeley); theory of estimation, large sample theory, nonparametric statistics, software reliability, quantile estimation, risk analysis, bootstrap.

Shorack, Galen R.\* 1966, (Mathematics), M.A., 1962, Oregon; Ph.D., 1965, Stanford; empirical processes, robustness, nonparametric statistics.

Siegel, Andrew F.\* 1983, ‡(Management Science), (Finance and Business Economics), M.S., 1975, Ph.D., 1977, Stanford; statistics, data analysis, computing, finance.

Stuetzle, Werner,\* 1984, (Computer Science), Ph.D., 1977, Eidgenössische Technische Hochschule (Switzerland); graphical methods in multivariate analysis, nonparametric curve estimation, computer vision.

Thompson, Elizabeth A.\* 1985, (Biostatistics), † (Quantitative Ecology and Resource Management), M.A., 1974, Ph.D., 1974, Cambridge; statistical analysis of human genetic data, population genetics, statistics of conservation biology.

Wellner, Jon A.\* 1983, (Biostatistics), † Ph.D., 1975, Washington; large-sample theory, asymptotic efficiency, empirical processes, semiparametric models.

### Associate Professors

Altschul, Roberto, 1985, (Affiliate), Ph.D., 1973, Case Western Reserve; reliability models, fault trees for phased missions, stochastic models for fault tolerant systems.

Burdzy, Krzysztof, 1988, ‡(Mathematics), Ph.D., 1984, California (Berkeley); probability theory.

Guttorp, Peter,\* 1980, (Quantitative Ecology and Resource Management), M.A., 1976, Ph.D., 1980, California (Berkeley); point processes, stochastic models, applications to hydrology and geophysics.

Mason, David, 1991, (Affiliate), Ph.D., 1977, Washington; nonparametric statistics, order statistics, extreme value theory, limit theorems, goodness-of-fit tests, empirical and quantile processes, and strong approximations.

McDonald, John A.\* 1985, (Research), (Computer Science and Engineering), Ph.D., 1982, Stanford; scientific computing, interactive graphics, human interfaces, visualization.

O'Sullivan, Finbarr,\* 1987, (Biostatistics), † Ph.D., 1983, Wisconsin; nonparametric curve estimation, inverse problems, computational aspects of these.

Sampson, Paul D.\* 1981, (Research), (Quantitative Ecology and Resource Management), Ph.D., 1979, Michigan; applied multivariate analysis, spatial statistics in environmetrics, statistical consulting.

Zeh, Judith E.\* 1982, (Research), (Quantitative Ecology and Resource Management), Ph.D., 1979, Washington; population size estimation, population dynamics, robust statistical methods, statistical computing.

#### Assistant Professors

Kooperberg, Charles L.\* 1991, Ph.D., 1991, California (Berkeley); spatial statistics, image reconstruction, density estimation, splines.

Madigan, David,\* 1990, Ph.D., 1990, Trinity (Dublin); expert systems, probabilistic influence networks, computational efficiency of network modeling.

Possolo, Antonio, 1984, (Affiliate), Ph.D., 1983, Yale; spatial statistics, image analysis, point processes.

Riskin, Eve A., 1990, ‡(Computer Science, Electrical Engineering), Ph.D., 1990, Stanford; data compression, image processing, signal processing, neural networks.

#### Research Associate

Percival, Donald B.\* 1985, Ph.D., 1983, Washington; time series analysis, computational environments, statistics of atomic clocks.

#### Senior Lecturer

Morita, June G., 1982, (Management Science), † Ph.D., 1982, California (Berkeley); survey sampling, data analysis.

## Course Descriptions

### Courses for Undergraduates

**STAT 111 Lectures in Applied Statistics (1) Sp** Weekly lectures illustrating the importance of statisticians in a variety of fields, including medicine and the biological, physical, and social sciences. Contact instructor for information on emphasized fields of applications. Joint with BIOS 111.

**STAT 220 Basic Statistics (5) AWSpS** Objectives and pitfalls of statistical studies. Structure of data sets, histograms, means, and standard deviations. Correlation and regression. Probability, binomial and normal. Interpretation of estimates, confidence intervals, and significance tests. (Students may receive credit for only one of 220, 301, 311, and ECON 311.) Prerequisite: 1½ years of high school algebra.

**STAT 301 Basic Statistics with Applications (5) W** Objectives, pitfalls of statistical studies. Structure of data sets, histograms, means, standard deviations. Correlation, regression. Probability, binomial and normal. Interpretation of estimates, confidence intervals, significance tests. Application to problems in student's major field. (Students may receive credit for only one of 220, 301, 311.) Prerequisites: 1½ years of high school algebra.

**STAT 311 Elements of Statistical Methods (5) AWSpS** Elementary concepts of probability and sampling; binomial and normal distributions. Basic concepts of hypothesis testing, estimation, and confidence intervals; t-tests and chi-square tests. Linear regression theory and the analysis of variance. (Students may receive credit for only one of 220, 301, 311, and ECON 311.) Prerequisite: MATH 111 or 120.

**STAT 316 Regression Analysis and Design of Experiments (3) W** Introduction to the analysis of data from planned experiments. Analysis of variance and regression analysis with applications in engineering. Joint with INDE 316. Prerequisite: INDE 315 or permission of instructor.

**STAT 341, 342 Introduction to Probability and Statistical Inference I, II (4,4) AW, WSp** Sample spaces, random variables, probability. Distributions: binomial, normal, Poisson, geometric. Expectation, variance, moment generating functions. Central limit theorem. Basic concepts of estimation, testing and confidence intervals. Maximum likelihood estimators and likelihood ratio tests; efficiency. Introduction to regression

and analysis of variance. (Students may not receive credit for both 341 and 481.) Prerequisite: 311, MATH 126.

**STAT 390 Probability and Statistics in Engineering and Science (4) AWSpS** Concepts of probability and statistics. Conditional probability, independence, random variables, distribution functions. Descriptive statistics, transformations, sampling errors, confidence intervals, least squares and maximum likelihood. Exploratory data analysis and interactive computing. Joint with MATH 390. (Students may not receive credit for both 390 and 481.) Prerequisites: MATH 126 and MATH 205 or 308.

**STAT 394 Probability I (3) AWS** Sample spaces; basic axioms of probability; combinatorial probability; conditional probability and independence; binomial, Poisson and normal distributions. Joint with MATH 394. Prerequisite: MATH 324.

**STAT 395 Probability II (3) WSpS** Random variables; expectation and variance; laws of large numbers; normal approximation and other limit theorems; multidimensional distributions and transformations. Joint with MATH 395. Prerequisite: 394.

**STAT 396 Probability III (3) Sp** Characteristic functions and generating functions; recurrent events and renewal theory; random walk. Joint with MATH 396. Prerequisite: 395 or 511.

**STAT 403 Introduction to Data Analysis (4) Sp** Philosophy, methods of exploratory data analysis, robustness, statistical graphics. Structure in data sets: groups of numbers, several groups, bivariate, time series, two-way tables. Includes plotting, transformation, outlier identification, regression, smoothing, median polish. May not be taken for credit if credit received for 503. Prerequisite: 220 or 311 or QMETH 201 or ECON 311.

**STAT 421 Applied Statistics and Experimental Design (4) A** Computer-aided data analyses using comparisons between batches, analysis of variance and regression. Evaluation of assumptions, data transformation, reliability of statistical measures (jackknife, bootstrap). Fisher-Gosset controversy. Prerequisites: 342, 390, 481, or grade of 3.0 in 311 plus MATH 126 or permission of instructor.

**STAT 423 Applied Regression and Analysis of Variance (4) W** Regression analysis. Problems in interpreting regression coefficients. Estimation, including two-stage least squares. Guided regression: building linear models, selecting carriers. Regression residuals. Analysis of variance. Nonparametric regression. Factorial designs, response surface methods. Prerequisites: 342, 390, 421, 481, or grade of 3.0 in 311 plus MATH 126, or permission of instructor.

**STAT 425 Introduction to Nonparametric Statistics (3)** Overview of nonparametric methods, such as rank tests, goodness of fit tests, 2x2 tables, nonparametric estimation. Useful for students with only a statistical methods course background. Joint with BIOS 425. Prerequisites: 311, BIOS 473, 511, or permission of instructor.

**STAT 427 Introduction to Analysis of Categorical Data (4) Sp** Techniques for analysis of count data. Log-linear models, logistic regression, and analysis of ordered response categories. Illustrations from the behavioral and biological sciences. Computational procedures. Prerequisites: 362, 421, or permission of instructor. (Offered alternate years.)

**STAT 428 Multivariate Analysis for the Social Sciences (4) Sp** Multivariate techniques commonly used in the social and behavioral sciences. Linear models for dependence analysis (multivariate regression, MANOVA, and discriminant analysis) and for interdependence analysis (principal components and factor analysis). Techniques applied to social science data using computer statistical packages. Prerequisites: 362, 421, or permission of instructor. (Offered alternate years.)

**STAT 480 Sampling Theory for Biologists (3) Sp** Simple random sampling, stratified random sampling, ratio estimates, regression estimates, systematic sampling, cluster sampling, sample size determinations, applications in fisheries and forestry. Sampling plant and animal populations, sampling distributions, estimation and statistical treatment of data. Joint with Q SCI 480. Prerequisites: Q SCI 482, 483, or permission of instructor. (Offered even-numbered years.)

**STAT 481 Introduction to Mathematical Statistics (5) A** Probability, generating functions; the  $\delta$ -method, Jacobians, Bayes theorem; maximum likelihoods, Neyman-Pearson, efficiency, decision theory, regression, correlation, bivariate normal. Joint with ECON 481. (Students receiving credit for either 341 or 390 may not receive credit for 481.) Prerequisites: 311, ECON 311 or equivalent; MATH 124, 125, 126; and a course in linear algebra, which may be taken concurrently.

**STAT 486 Experimental Design (3) Sp** Topics in analysis of variance and experimental designs; choice of designs, comparison of efficiency, power, sample size, pseudoreplication, factor structure. Joint with Q SCI 486. Prerequisite: Q SCI 483 or equivalent, matrix algebra.

**STAT 491, 492 Introduction to Stochastic Processes (3,3) A,W** Random walks, Markov chains, branching processes, Poisson process, point processes, birth and death processes, queueing theory, stationary processes. Joint with MATH 491, 492. Prerequisites: 396 for 491; 491 for 492.

**STAT 488 Special Topics (1-5, max. 15)** Reading and lecture course intended for special needs of students. Prerequisite: permission of instructor. (Offered when demand is sufficient.)

**STAT 499 Undergraduate Research (1-5, max. 15)** Prerequisite: permission of instructor.

### Courses for Graduates Only

**STAT 503 Practical Methods for Data Analysis (3) A** Basic exploratory data analysis with business examples. Groups of numbers, multivariate data, time series, multiway tables. Techniques, include plotting, transformation, outlier identification, cluster analysis, smoothing, regression, median polish, and robustness. Joint with QMETH 503. May not be taken for credit if credit received for 403. Prerequisite: 342 or QMETH 500 or equivalent, or permission of instructor.

**STAT 506 Applied Probability Models (4) Sp** Overview of probability models, random variables, independence and conditional probability, Markov chains, stationary time series. Joint with AMATH 506. Prerequisites: some advanced calculus and linear algebra; familiarity with elementary discrete probability models.

**STAT 512, 513 Statistical Inference (4,4) A,W** General theory of statistical inference; estimation and hypothesis testing; multivariate theory; regression, correlation, and analysis of variance. Prerequisites: 395 and 421, 423, or BIOS 512 (concurrent registration permitted for these three) for 512; 512 for 513.

**STAT 516-517 Stochastic Modeling of Scientific Data (4-4) A,W** Markovian and semi-Markovian models, point processes, cluster models, queueing models, likelihood methods, estimating equations. Prerequisites: 511 or 396 for 516; 516 for 517.

**STAT 519 Time Series Analysis (3) A** Descriptive techniques. Stationary and nonstationary processes, including ARIMA processes. Estimation of process mean and autocovariance function. Fitting ARIMA models to data. Statistical tests for white noise. Forecasting. State space models and the Kalman filter. Robust time series analysis. Regression analysis with correlated errors. Statistical properties of long memory processes. Prerequisite: 513.

**STAT 520 Spectral Analysis of Time Series (4) W** Estimation of spectral densities for single and multiple

time series. Nonparametric estimation of spectral density, cross-spectral density, and coherency for stationary time series, real and complex spectrum techniques. Bispectrum. Digital filtering techniques. Aliasing, prewhitening. Choice of lag windows and data windows. Use of the fast Fourier transform. The parametric autoregressive spectral density estimate for single and multiple stationary time series. Spectral analysis of nonstationary random processes and for randomly sampled processes. Techniques of robust spectral analysis. Joint with E E 520. Prerequisite: one of 342, 390, 481, or permission of instructor.

**STAT 521, 522, 523 Advanced Probability (3,3,3) A,W,Sp** Measure theory and integration, independence, laws of large numbers. Fourier analysis of distributions, central limit problem and infinitely divisible laws, conditional expectations, martingales. Joint with MATH 521, 522, 523. Prerequisite: MATH 426.

**STAT 524 Design of Medical Studies (3)** Emphasis on randomized controlled clinical trials. Bias elimination, controls, treatment assignment and randomization, precision, replication, power and sample size calculations, stratification, and ethics. Suitable for students in biostatistics and other scientific fields. Joint with BIOST 524. Prerequisites: BIOST 511 or equivalent, and one of 421, 423, BIOST 513 or EPI 512; or permission of instructor. (Offered even-numbered years.)

**STAT 529 Sample Survey Techniques (3) Sp** Design and implementation of selection and estimation procedures. Emphasis on human populations. Simple, stratified, and cluster sampling; multistage and two-phase procedures; optimal allocation of resources; estimation theory; replicated designs; variance estimation; national samples and census materials. Joint with BIOST 529 and QMETH 529. Prerequisites: 421, 423, QMETH 500 or BIOST 511 or equivalent; or permission of instructor.

**STAT 533 Classical Theory of Linear Models (3) Sp** Introduction to one-, two-way analysis of variance; randomized blocks; fixed, random effects, multiple comparisons. Statistical distribution theory for quadratic forms of normal variables. Fitting of the general linear model by least squares. Joint with BIOST 533. Prerequisites: 421 or 423; and 513, BIOST 513, and a course in matrix algebra.

**STAT 534 Statistical Computing I (3) W** Computational methods in statistics: sorting, searching and calculation of order statistics, data interpolation and approximation, numerical methods for least squares and principal components, computational geometry, calculation of probabilities, data structures, and database management. Joint with BIOST 534.

**STAT 535 Statistical Computing II (3) Sp** Computational methods in statistics: generation of pseudo random numbers, Monte Carlo quadrature, variance reduction techniques, design of Monte Carlo studies, nonlinear optimization, nonlinear least squares, selected special topics. Joint with BIOST 535.

**STAT 536 Log-Linear Modeling and Logistic Regression for the Social Sciences (3)** Log-linear modeling of multidimensional contingency tables. Logistic regression. Applications to social mobility, educational opportunity, and assortative marriage. Applied and computing focus. Joint with SOC 536. Prerequisite: 395 or SOC 425 or permission of instructor.

**STAT 542 Multivariate Analysis (3) Sp** Multivariate normal distribution; partial and multiple correlation; Hotelling's  $T^2$ ; Bartlett's decomposition; various likelihood ratio tests; discriminant analysis; principal components. Prerequisite: 582 or permission of instructor. (Offered alternate years.)

**STAT 544 Bayesian Statistical Methods (3)** Statistical methods based on the idea of a probability distribution over the parameter space. Coherence and utility. Subjective probability. Likelihood principle. Conjugate families. Structure of Bayesian inference. Limit theory for posterior distributions. Sequential ex-

periments. Exchangeability. Bayesian nonparametrics. Empirical Bayes methods. Prerequisite: 513 or permission of instructor. (Offered alternate years.)

**STAT 548 Robust Statistical Methods (3)** Robust statistical methods: algorithms, data analysis, and theory. Basic robustness concepts. Robust estimation techniques for the following estimation problems: location, scale, correlation, covariance matrices, regression. Use of robust methods for exploratory data analysis and outlier detection diagnostics. Nonlinear optimization and root-finding algorithms for computing robust estimates. Prerequisite: 513 or permission of instructor.

**STAT 561, 562, 563 Special Topics in Applied Statistics (1-5, max. 15; 1-5, max. 15; 1-5, max. 15) A,W,Sp** Data analysis, spectral analysis or robust estimation, etc. Prerequisite: permission of instructor.

**STAT 565 Inference in Stochastic Processes (3)** Methods for statistical inference from dependent observations. Emphasis on one or more of the following: Markov chains in discrete or continuous time; diffusion processes; point processes; asymptotic theory; filtering and smoothing of linear models. Prerequisite: 581 or permission of instructor.

**STAT 570, 571, 572 Advanced Applied Statistics and Linear Models (4,4,4) A,W,Sp** Quality measures, robustness, variability, and randomization. Regression; multiple predictors; multiple linear regression. Analysis of residuals; model building; errors in variables; missing data; additive models; recursive partitioning; classification; generalized linear models; censored and truncated data; design of experiments; blocking; patterned covariance matrices. Multivariate analysis. Joint with BIOST 570, 571, 572. Prerequisites: 421, 423 or BIOST 512, 513 or 533 and a course in matrix algebra for 570; 570 for 571; 571 for 572.

**STAT 573 Statistical Methods for Categorical Data (3) Sp** Exact and asymptotic methods for 2x2 contingency tables. Maximum likelihood estimation of logistic regression models for binary response. Examples in epidemiologic and clinical research. Theory and applications of log-linear models for discrete data. Selected special topics. Joint with BIOST 573. Prerequisites: 571 and 581; or permission of instructor. (Offered alternate years.)

**STAT 574 Multivariate Statistical Methods (3) W** Use of multivariate normal sampling theory, linear transformations of random variables, one- and two-sample tests, profile analysis, partial and multiple correlation, multivariate ANOVA and least squares, discriminant analysis, principal components, factor analysis, robustness, and some special topics. Some computer use included. Joint with BIOST 574. Prerequisite: 570 or permission of instructor. (Offered alternate years.)

**STAT 576 Statistical Methods for Survival Data (3)** Statistical methods for censored survival data. Covers parametric and nonparametric methods, Kaplan-Meier survival curve estimator, comparison of survival curves, log-rank test, regression models including the Cox proportional hazards model, competing risks. Joint with BIOST 576. Prerequisites: 581 and either 423, BIOST 513, or Q SCI 483, or equivalent. (Offered alternate years.)

**STAT 577 Advanced Design and Analysis of Experiments (3)** Concepts important in experimental design: randomization, blocking, confounding. Application and analysis of data from randomized blocks designs, Latin and Greco-Latin squares, incomplete blocks designs, split-plot and repeated measures, factorial and fractional replicates, response surface experiments. Joint with BIOST 577. Prerequisite: 570 or 421 (minimum grade 3.0), or permission of instructor.

**STAT 578 Special Topics in Advanced Biostatistics (\*, max. 3)** Advanced-level topics in biostatistics offered by regular and visiting faculty members. Joint with BIOST 578. Prerequisite: permission of instructor.

**STAT 579 Advanced Data Analysis (4)** Resampling methods; jackknife, bootstrap, cross-validation. Smoothing techniques; local averages; projection-pursuit regression; recursive partitioning regression. Selected aspects of linear regression. Robust-resistant methods. Density estimation. Clustering techniques. The EM-algorithm. Graphical exploratory methods. Prim-81. Joint with BIOST 579. Prerequisites: 513; one of 571, 421, 423; or permission of instructor.

**STAT 581, 582, 583 Advanced Theory of Statistical Inference (4,4,4) A,W,Sp** Limit theorems, asymptotic methods, asymptotic efficiency and efficiency bounds for estimation, maximum likelihood estimation, Bayes methods, asymptotics via derivatives of functionals, sample-based estimates of variability: (bootstrap and jackknife); robustness; estimation for dependent data, nonparametric estimation and testing. Prerequisites: 513 and either prior or concurrent registration in MATH 425, 426, 427 for 581; 570 and 581 for 582; 582 for 583.

**STAT 590 Statistics Seminar (\*, max. 15) AWSp** Prerequisite: permission of graduate program coordinator.

**STAT 591, 592, 593 Special Topics in Statistics (1-5, max. 15; 1-5, max. 15; 1-5, max. 15) A,W,Sp** Distribution-free inference, game and decision theory, advanced theory of estimation (including sequential estimation), robustness, advanced probability theory, stochastic processes or empirical processes, etc. Prerequisite: permission of instructor.

**STAT 598 Techniques of Statistical Consulting (3)** Instruction and practice in planning studies, analyzing data, writing reports, and interacting with clients. Includes applied statistics and consulting literature not covered elsewhere in graduate curriculum. Significant data analysis projects and critiques of actual consulting sessions. Prerequisites: two or more courses in the application of statistical methods.

**STAT 599 Statistical Consulting (\*, max. 12) AWSps** Consulting experience in data analysis, applied statistics, etc. Student required to provide consulting services to students and faculty three hours per week. Prerequisite: permission of graduate program coordinator.

**STAT 600 Independent Study or Research (\*) AWSps** Prerequisite: permission of graduate program coordinator.

**STAT 700 Master's Thesis (\*) AWSps** Prerequisite: permission of graduate program coordinator.

**STAT 800 Doctoral Dissertation (\*)** Prerequisite: permission of graduate program coordinator.

## Women Studies

B110 Padelford

Women Studies is an interdisciplinary department that offers students the opportunity for intensive, cross-cultural and theoretical study of women. Students select a variety of courses offering breadth in women studies scholarship while pursuing concentrated study in a particular track, such as women and the arts; gender, race, and ethnicity; and women and public policy.

## Undergraduate Program

### Bachelor of Arts Degree

(Approval pending.)

**Major Requirements:** WOMEN 200 or equivalent; 5 additional lower-division credits in women studies (excluding 290); one course dealing with race and ethnicity; 300; 400; 493; 497; 15 additional upper-division credits in women studies (excluding 490, 495, 497, 499). Also required: 25 additional upper-division

credits which may be satisfied by one of two core option sequences: (1) 25 credits in a women studies track (one of several approved series of interdisciplinary courses); (2) 25 credits in an individual course of study arranged between the student and a women studies adviser, with approval by the director.

## Faculty

### Director

Sydney J. Kaplan

### Professors

Bereano, Philip L.,\* 1975, ‡(American Ethnic Studies, Technical Communication), J.D., 1965, Columbia; M.R.P., 1971, Cornell; social management of technology, women and technology.

Blake, Kathleen A.,\* 1971, ‡(English), M.A., 1967, California (Los Angeles); Ph.D., 1971, California (San Diego); women and literature, feminist literary criticism and theory, Victorian literature.

Deyrup-Olsen, Ingrid J.,\* 1964, (Emeritus), ‡(Zoology), Ph.D., 1944, Columbia; general physiology.

Eastman, Carol M.,\* 1967, ‡(Anthropology, Linguistics), Ph.D., 1967, Wisconsin; language and culture.

Gerstenberger, Donna,\* 1960, ‡(English), M.A., 1952, Ph.D., 1958, Oklahoma; feminist criticism.

Gottlieb, Naomi,\* 1970, (Emeritus), ‡(Social Work), M.S.W., 1949, D.S.W., 1970, California (Berkeley); women and mental health.

Graham, Katherine J.,\* 1988 ‡(Nursing), M.N., 1967, M.A., 1972, Ph.D., 1978, Washington; community health nursing, public policy, quality of life.

Kaplan, Sydney J.,\* 1971, (English), ‡ M.A., 1966, Ph.D., 1971, California (Los Angeles); women writers, feminist criticism.

McElroy, Colleen W.,\* 1972, ‡(English), M.A., 1963, Kansas State; Ph.D., 1973, Washington; women writers.

Pollak, Vivian R.,\* 1986, ‡(English), M.A., 1961, Ph.D., 1969, Brandeis; American women writers, nineteenth-century American literature, biography.

Russ, Joanna,\* 1977, ‡(English), M.F.A., 1960, Yale; fiction writing.

Schwartz, Pepper J.,\* 1972, ‡(Psychiatry and Behavioral Sciences, Sociology), M.A., 1968, Washington (St. Louis); Ph.D., 1974, Yale; family, human sexuality.

Teller, Davida Y.,\* 1965, ‡(Physiology and Biophysics, Psychology), Ph.D., 1965, California (Berkeley); psychology.

Woods, Nancy F.,\* 1978, ‡(Nursing, Social Work), M.N., 1969, Washington; Ph.D., 1978, North Carolina; women's health.

### Associate Professors

Allen, Carolyn R. J.,\* 1972, ‡(English), M.A., 1966, Claremont; Ph.D., 1972, Minnesota; women writers, feminist theory.

Allen, David G.,\* 1988, ‡(Nursing), M.A., 1971, Ph.D., 1975, Iowa; M.S.N., 1981, Wisconsin; application of critical and feminist theories to nursing.

Butler, Johnella,\* 1988, ‡(American Ethnic Studies, English), M.A.T., 1969, Johns Hopkins; Ed.D., 1979, Massachusetts (Amherst); Afro-American literature, multicultural studies.

Cauce, Ana Mari,\* 1986, ‡(Psychology), M.S., 1979, Ph.D., 1984, Yale; social support and networks, at-risk adolescents, community psychology, minority populations.

Clatterbaugh, Kenneth C.,\* 1966, ‡(Philosophy, Psychology), Ph.D., 1966, Indiana; social philosophy, history and theories of masculinity, philosophy of science.

Cummings, Katherine,\* 1985, ‡(English), M.A., 1979, Montclair State; Ph.D., 1985, Wisconsin (Madison); feminist, psychoanalytical, and literary theory, modern and contemporary literature.

DiStefano, Christine,\* 1985, ‡(Political Science), Ph.D., 1984, Massachusetts (Amherst); political and feminist theory.

Hartsock, Nancy,\* 1984, (Political Science), ‡ M.A., 1967, Ph.D., 1972, Chicago; philosophy of feminism, feminist theory, political theory.

Howard, Judith A.,\* 1982, ‡(Sociology), M.A., 1976, M.A., 1977, Oregon; Ph.D., 1982, Wisconsin; social psychology, gender roles.

Jacobs, Sue Ellen,\* 1974, ‡(Anthropology), M.A., 1966, Ph.D., 1970, Colorado; anthropological studies of women, sociocultural and applied anthropology, ethnohistory, North America.

Jeffords, Susan,\* 1985, ‡(English), M.A., 1977, Ph.D., 1981, Pennsylvania; feminist and literary theory, novel.

Kenney, Nancy J.,\* 1976, (Psychology), ‡ M.A., 1972, Ph.D., 1975, Virginia; psychobiology of women.

Magyary, Diane L.,\* 1982, ‡(Nursing), M.N., 1977, Ph.D., 1981, Washington; parent interactions with high-risk infants and children.

Palomo, Dolores J., 1971, ‡(English), M.A., 1966, Wayne State; Ph.D., 1972, State University of New York (Buffalo); women writers.

Rhodes, Lorna A.,\* 1984, ‡(Anthropology, Health Services), M.A., 1971, Ph.D., 1973, Cornell; medical anthropology, symbolic anthropology, South Asia religion, psychiatry.

Richey, Cheryl A.,\* 1973, ‡(Social Work), M.S.W., 1971, D.S.W., 1974, California (Berkeley); gender issues in practice and research, social support intervention.

Silberstein, Sandra V.,\* 1982, ‡(English, Linguistics), M.A., 1971, Ph.D., 1982, Michigan; gender, ethnicity, and language; feminist critical theory.

Steele, Cynthia,\* 1986, ‡(Romance Languages and Literature), M.A., 1979, Ph.D., 1980, California (San Diego); Latin American women writers, Mexican women artists and photographers.

Yarbro-Bejarano, Yvonne M.,\* 1974, ‡(Romance Languages and Literature, Comparative Literature), M.A., 1971, Ph.D., 1976, Harvard; feminist analysis of sixteenth- and seventeenth-century literature of Spain, women writers, Chicana literature and culture, feminist theory.

### Assistant Professors

Dubrow, Gail L.,\* 1989, ‡(Urban Design and Planning), B.Arch., M.A., 1980, Oregon; research methods, social relations of gender, race, class and ethnicity in the built environment.

Eliason, Leslie C.,\* 1988, ‡(Political Science, Public Affairs), M.A., 1985, Ph.D., 1988, Stanford; comparative public policy, focusing on education and health care.

Frankenberg, Ruth, 1988, (Anthropology), M.A., Cambridge (England); Ph.D., 1988, California (Santa Cruz); feminist theory and research methods, white women and racism, multiracial women's studies curriculum.

Salas, Elizabeth, 1987, ‡(American Ethnic Studies), M.A., 1977, Alabama State; Ph.D., 1987, California (Los Angeles); United States women's history; Chicana history.

Shanley, Kathryn W. S.,\* 1985, ‡(American Indian Studies, Anthropology, English), M.A., 1982, Ph.D., 1987, Michigan; American and Native American literature, feminist theory.

Stygall, Gail, 1990, ‡(English), Ph.D., 1989, Indiana; feminist rhetorical theory and gender and language.

Ward, Deborah H.,\* 1987, ‡(Nursing), M.S., 1977, Yale, Ph.D., 1987, Boston; equity of health care, care of elderly women.

Yee, Shirley,\* 1988, (History), M.A., 1983, Ph.D., 1987, Ohio; U.S. women's history, Afro-American history, nineteenth-century United States social history.

## Course Descriptions

### Courses for Undergraduates

**WOMEN 200 Introduction to Women Studies (5)**  
**AW Frankenberg** Feminist study of women, society, and culture, looking at how gender, race, class, and sexuality create similarities, differences, and connection across women's experience. Topics include women's histories and identities, family, sexual choices, work, violence against women, creativity, empowerment, and social change.

**WOMEN 206 Philosophy of Feminism (5)**  
**Hartsock** Philosophical analysis of the concepts and assumptions central to feminism. Theoretical positions within the feminist movement; view of the ideal society, goals and strategies of the movement, its relation to racial liberation, and ethical issues. Joint with PHIL 206 and POL S 212.

**WOMEN 257 Psychology of Sex Differences (5) A**  
**Kenney** Major psychological theories of sex-role development; biological and environmental influences that determine and maintain sex differences in behavior; sex roles in children, sex differences in aggression, cognitive abilities, achievement motivation, affiliation, sexuality. Joint with PSYCH 257. Not open for credit to students who have taken GIS 244. Recommended: PSYCH 101 or 102.

**WOMEN 283 Introduction to Women's History (5)**  
**A Yee** Includes units on American, European, and Third World women that examine centers of women's activities, women's place in male-dominated spheres (politics), women's impact on culture (health, arts), and the effect of larger changes on women's lives (technology, colonization). Joint with HST 283.

**WOMEN 290 Special Topics in Women Studies (2-5, max. 15)** Offered occasionally by visitors or resident faculty.

**WOMEN 300 Research Methods in Women Studies (5)**  
**Jacobs, Kenney, Yee** Selected methods in women studies research. Use of historical documents, literary texts, interviews, and computerized data sets in research on human problems and women's roles. Computer applications in women studies research. Includes drafting proposal for senior thesis project. Prerequisites: 200, 206, or permission of instructor.

**WOMEN 310 Women and the Law (5) A** Focus on the status of women and the law; the legal status of single and married women, the rationale of protective legislation, and the effect of the legal changes such as the Civil Rights Act of 1964 and Equal Rights Amendment. Current cases on abortion, child care, tax laws, Social Security benefits, lesbianism, prostitution, etc. Not open for credit to students who have taken GIS 355.

**WOMEN 313 Women in Politics (5)** Political theory, historical and contemporary, including writings of the women's liberation movement on the political role of women in society. Empirical studies of the "apolitical" woman; process of political socialization in various cultural contexts; women's participation in political decision making. Joint with POL S 313. Prerequisite: 200 or a political science course.

**WOMEN 321 History of Afro-American Women and the Feminist Movement (5)** "Feminist Movement" from early nineteenth century to present. Treats relationship between Black and White women in their struggle for independence, at times together and at times apart. Discusses the reasons, process, and results of collaboration as well as opposition. Examines recent and contemporary attempts at cooperation. Joint with AFRAM 321.

**WOMEN 322 Race and Gender: Historical Perspectives (5) Sp Yee** The intersection of race and

gender in the lives of women of color in the United States from historical and contemporary perspectives. Topics include racism, sexism, activism, sexuality, and inter-racial dynamics between women of color groups. Joint with AES 322.

**WOMEN 323 African-American Women's History (5) W Yee** Survey of African-American women's experience in United States, 1600 to present. Includes: social, political, economic status of Afro-American women in slavery, freedom, education, activism, Civil Rights, women's rights, other social movements. Explores individual and collective interactions with African-American men, white men and women, other people of color. Joint with AFRAM 323.

**WOMEN 339 Women Writers in English Translation (3)** Feminist analysis of selected contemporary texts in English or English translation by Chicana/Latina writers in the United States; or by Spanish-American, Luso-Brazilian and/or Spanish women writers, in their specific socio-historical context. Joint with SPAN 339.

**WOMEN 353 Anthropological Studies of Women (5) Jacobs** Cross-cultural and comparative survey of the varieties of women's cultural experiences, statuses, and roles in cultural context and the anthropological theories used to account for them. Topics include: biological factors, studies of primates, woman the gatherer, work in preindustrial and industrial societies, patriarchy and matrilineal kinship, childbirth, and women's roles in economic development. Joint with ANTH 353. Prerequisites: 200 and ANTH 202, or permission of instructor.

**WOMEN 354 Lesbianism (3)** Position and concerns of lesbians in our society; the biological, cross-cultural, and psychosocial evidence. Historical and current information and discussion on the nature of lesbianism. Prerequisite: 200 or 257; or ANTH 100 or 353; or PSYCH 101 or 210 or 257 or 305; or SOC 110 or 271 or 347; or permission of instructor.

**WOMEN 355 Gender and Masculinity (5) Clatterbaugh** Social development of masculinity in American society. Definition of masculinity at different times in history; how men are socialized today; differences in the social development of masculinity for Black men, gay men, physically disabled. Individual and collective efforts at altering masculinity (e.g., critically examines the "men's movement").

**WOMEN 357 Psychobiology of Women (5) W Kenney** Physiological and psychological aspects of women's lives: determinants of biological sex; physiological and psychological events of puberty, menstruation, and menopause; sexuality; pregnancy, childbirth; the role of culture in determining the psychological response to the physiological events. Joint with PSYCH 357. Prerequisite: 200 or 257 or PSYCH 101 or 102 or 257.

**WOMEN 364 Women in the Social Structure (5)** Gender and social institutions; the family, politics, education, medicine, law, the labor force. Intersection of gender with other minority statuses such as race, age, socioeconomic status, and sexual orientation. Structural, ideological, and historical determinants of gender relations. Joint with SOC 364.

**WOMEN 374 Methods in Life History Research (5) Jacobs** Techniques and procedures for constructing life histories: use of diaries, letters, photography, and personal interviews. Technical instruction in use of tape recorder; indexing, cataloging, and writing summaries of tapes; use of cameras for copying documents and photography. Each student completes one life history per quarter. Prerequisite: 200.

**WOMEN 383 Social History of American Women (5) W Yee** Multi-racial, multi-cultural study of United States women, sixteenth century to present: emphasis on women's unpaid work; participation in paid labor force; charitable, reform activities; feminist movements of the nineteenth, twentieth centuries. Use of primary materials, i.e., diaries, letters, speeches, artifacts. Joint

with HSTAA 373. Prerequisite: 200 or 283 or HSTAA 201 or permission of instructor.

**WOMEN 392 Asian American Women (5)** History of and contemporary issues related to Asian American women in the United States. Joint with AAS 392. Prerequisite: 206.

**WOMEN 400 Senior Seminar in Women Studies (3) Sp** Part of the senior thesis requirement in Women Studies. Must be taken concurrently with G ST 493. Prerequisites: senior standing, General Studies major concentrating on Women Studies, and permission of adviser.

**WOMEN 415 Sexism in American Schools (3) A** Implications of sex-role stereotyping in American education, kindergarten through grade 12, and development of insights into experiences as students, educators, and parents. Includes image of women and girls in curriculum materials, socialization and career counseling, teacher behavior, effects of Title IX and affirmative action on present school policy, and practical alternatives and skills useful for changing attitudes about sex roles. Prerequisite: 200 or 15 credits in education or Women Studies.

**WOMEN 416 Sexist Language and Education (3)** How language reflects or determines sexist attitudes, particularly in current educational institutions. Includes male and female language use, systematic lexical syntactic distinctions based on sex, derogatory references to women, influences of classroom language on sex roles, and effects of language of sex differences on learning. Prerequisite: 200 or 15 credits in education or Women Studies.

**WOMEN 439 Women Writers (5)** Feminist analysis of selected texts by Chicana/Latina writers in the United States as well as by Spanish-American, Luso-Brazilian and/or Spanish women writers in their specific socio-historical contexts. Joint with SPAN 439. Prerequisites: SPAN 303, SPAN 320, and one additional 300-level course beyond 303.

**WOMEN 446 Theories and Tactics of the Women's Movement (3)** History of the women's movement and its current philosophies and tactics used to achieve change in women's status. Recommended: background in status of women and philosophies of women movements. Joint with SOC 446. Prerequisites: 200 or SOC 110, and junior or senior standing.

**WOMEN 453 Women in Evolutionary Perspective (5) Jacobs** Critical appraisal of major theories accounting for evolution of sex and gender roles and status differences; cross-cultural testing of sociobiological, biocultural, cultural materialist, structural, and symbolic explanations for "female power and male dominance." Joint with ANTH 483. Prerequisite: 353 or permission of instructor.

**WOMEN 454 Women, Words, Music, and Change (5) Sp Jacobs** Comparative analysis of use of myths, tales, music, and other forms of expressive culture to account for, reinforce, and change women's status and roles; cross-cultural analysis of planned change and development. Joint with ANTH 454. Prerequisite: 353 or permission of instructor.

**WOMEN 455 Contemporary Feminist Theory (5) Frankenberg, Hartsock** Recent work on study of women, focusing on social science research that has challenged our fundamental suppositions about organization of family, nature of moral development, definition of political behavior, conceptualization of time in history, and division of labor in market place. Recommended: 200, 206, or course in social theory.

**WOMEN 456 Feminism, Racism, and Anti-Racism (5) Frankenberg** Builds on examination of the historically shifting meanings of race and racism. Asks how all U.S. women's daily lives and consciousness are shaped by racial oppression or race privilege. Examines steps being taken towards specifically feminist anti-racist theories and practices. Prerequisites: 200 and 206 or permission of instructor.

**WOMEN 464 Chicana Expressive Culture (5)** Expressive culture of Mexican women in United States. Cultural and artistic practices in home, film, literary (print, oral), performing and visual arts. Focuses on ways Chicana visual artists re-vision traditional iconography. Joint with CHSTU/SPAN 464. Prerequisites: SPAN 303, 322, one additional 300-level course beyond 303 or permission of instructor.

**WOMEN 467 Spanish Women (5)** Women's culture in Spain, focusing on women's experience during Civil War; persecution and censorship of women activists, artists, intellectuals during Franco years; changes in women's culture brought about by reintroduction of democracy; major issues addressed by contemporary Spanish feminists. Joint with SPAN 467. Prerequisites: SPAN 303, SPAN 321, and one additional 300-level course beyond 303.

**WOMEN 468 Latin American Women (5)** Issues in women's culture from various Latin American countries, social classes, ethnic groups. Includes female creativity, relationship between female artists and the male tradition, women's exploitation of women, relationship of middle-class to popular feminism, connections between feminism and social change. Joint with SPAN 468. Prerequisites: SPAN 303, SPAN 321, and one additional 300-level course beyond 303.

**WOMEN 490 Special Topics in Women Studies (2-5, max. 15)** Exploration of specific problems and issues relevant to the study of women. Offered by visiting or resident faculty members. Primarily for upper-division and graduate students.

**WOMEN 495 Tutoring Women Studies (5)** Trains students to serve as tutors in designated courses. Tutors facilitate weekly group discussions, assist with writing assignments, explain course materials. Prerequisites: 200 or 206; junior or senior standing; one or more upper-division course relevant to Women Studies; prior completion of the course (or equivalent) to be tutored; permission of instructor.

**WOMEN 497 Fieldwork in Women Studies (3-5, max. 15) AWSps** Internships in local agencies. Allows development of specific skills in area of specialization. Prerequisites: 200, junior standing, or permission of instructor.

**WOMEN 499 Undergraduate Research (1-5, max. 10) AWSps** Independent study and research supervised by a faculty member with appropriate academic interest. Prerequisite: permission of instructor and adviser.

## Courses for Graduates Only

**WOMEN 501 Interdisciplinary Feminist Theory (5)** Uses contemporary feminist writings, discusses feminist theories and methods. Addresses silences and invisibilities such as those of women of color in developing theories. Raises questions about the nature of feminist theory.

**WOMEN 502 Feminist Research and Methods of Inquiry (5)** Explores appropriate research methodologies for interdisciplinary work. Asks how scholarship is related to feminism as a social movement and to the institutions in which we work. Focuses on how similar objects of study are constituted in different disciplines for feminist scholars.

## Zoology

106 Kincaid

Zoology is a natural science concerned primarily with animals: their development, structure, and function, and their relationship with their environments.

Zoology field courses are offered both at the main campus and at the Friday Harbor Laboratories. See individual course listing for location.

## Undergraduate Program

### Advisers

Joyce Fagel, Chris Gaul  
318 Hitchcock

The department offers two degree programs: Bachelor of Science, designed for students planning graduate work, and Bachelor of Arts, a program with minimal stated requirements.

### Bachelor of Science Degree

**Major Requirements:** A total of 90 credits distributed as follows: (1) BIOL 201, 202, 203. (2) A minimum of 25 credits from the following, with at least two courses from each of the three groups (two courses must be laboratory courses from two different groups): Group I. *Cell Biology, Development, Gene Action:* ZOOL 403, 455, 456, 457, BIOL 401, 402, GENET 365 (or 360); Group II. *Morphology, Physiology:* ZOOL 301, 432, 433, 434, 438, 439, 440, 448, 449, 451, 453, 467, 468, 478, 488, 489; Group III. *Ecology, Natural History, Evolution, Organisms:* ZOOL 220, 330, 362, 409, 410, 423, 430, 435, 444, 445, 464, 465, BIOL 454, 472, 473, 474, 475, BOT 445. (3) 16 credits in electives from the above or from other biological departments, selected in consultation with the zoology adviser. (4) Additional requirements: first-year chemistry; CHEM 223, 224 (or 237, 238, 239); two courses from PHYS 114, 115, 116; one of the following sets of mathematics courses: MATH 124 and 125; Q SCI 291 and 292; Q SCI 482 and 483. A statistics course such as Q SCI 381 or STAT 311 is recommended in addition to a calculus series. Students are encouraged to exceed the college language requirement. A grade of 2.0 or higher is required for each course taken to fulfill requirements (1), (2), and (3), above. An overall GPA of 2.00 or higher is required for supporting course work in chemistry, physics, and mathematics, shown in (4), above.

### Bachelor of Arts Degree

**Major Requirements:** A minimum of 75 credits, distributed as follows: (1) 50 credits in biology and zoology courses, with not more than 20 in lower-division courses, to include BIOL 201, 202, 203, plus a program of upper-division courses in the major areas of biology to be selected in consultation with the zoology adviser. (2) Additional requirements: CHEM 140, 150, 160; 223, 224 (or 237, 238, 239); GENET 360, if the student has not taken BIOL 201, 202, 203; STAT 311, or Q SCI 381, or MATH 124 and 125, or Q SCI 291 and 292. PHYS 114, 115, 116 recommended. A 2.00 GPA is required in all courses taken in zoology and the related biological disciplines, and for all supporting courses, shown in (1) and (2) above.

## Graduate Program

Programs of study leading to the degree of Doctor of Philosophy are available in the areas of cell biology, developmental biology, developmental genetics, ecology, evolution, behavior, invertebrate and vertebrate morphology, comparative physiology, endocrinology, and neurobiology, as well as mathematical approaches to the above topics. Interdisciplinary programs are offered in developmental biology, cell and molecular biology, and neurobiology.

### Research Facilities

The laboratories of the department in Kincaid Hall are equipped with modern instruments and special facilities needed for advanced instructional and research purposes. The natural history collections at the Burke Museum are also available for study. The extensive facilities of the Friday Harbor Laboratories on San Juan Island are available for research. Departmental graduate students often carry on an extensive part of their research there or at other field stations.

### Special Requirements

Entering students should have preparation in several of the areas listed above, organic chemistry, physical chemistry in some cases, two quarters of college physics, and mathematics through calculus. All students are required to gain some teaching experience regardless of the source of support.

### Financial Aid

Normally all prospective candidates for M.S. and Ph.D. degrees are supported by teaching or research assistantships or by fellowships or traineeships from national or private agencies. Summer appointments are available both on the Seattle campus and at the Friday Harbor Laboratories on San Juan Island.

### Application Date

Completed applications for entry in the autumn quarter must be received by January 15.

### Correspondence and Information

Graduate Program Coordinator  
106 Kincaid, NJ-15

## Faculty

### Chairperson

Robert T. Paine

### Professors

Boersma, P. Dee,\* 1974, (Environmental Studies),† Ph.D., 1974, Ohio State; ecology and conservation biology, reproductive strategies, colonial seabird biology.

Cloney, Richard A.,\* 1961, M.A., 1954, Humboldt; Ph.D., 1959, Washington; invertebrate embryology, histology, morphogenetic movements, metamorphosis, biology of ascidians

Daniel, Thomas L.,\* 1984, M.S., 1978, Wisconsin; Ph.D., 1982, Duke; functional morphology, biomechanics, mechanics and energetics of animal locomotion.

Deyrup-Olsen, Ingrid J.,\* 1964, (Emeritus), (Women Studies), Ph.D., 1944, Columbia; general physiology, cell-membrane phenomena.

Edmondson, W. Thomas,\* 1949, (Emeritus), (Quaternary Research Center), Ph.D., 1942, Yale; ecology, limnology with emphasis on productivity of lakes.

Edwards, John S.,\* 1967, (Forest Resources), M.Sc., 1956, Auckland (New Zealand); Ph.D., 1960, Cambridge (England); arthropod neurobiology, insect physiology and development, tundra and alpine biology.

Felsenstein, Joseph,\* 1967, ‡(Genetics, Statistics), Ph.D., 1968, Chicago; evolutionary inferences, statistics, modeling species selection.

Gorbman, Aubrey,\* 1963, (Emeritus), M.S., 1936, Wayne State; Ph.D., 1940, California (Berkeley); endocrinology and neuroendocrinology, mechanisms of actions of hormones; evolutionary, adaptive, and behavioral aspects of endocrine systems.

Hauschka, Stephen D.,\* 1967, ‡(Biochemistry), Ph.D., 1966, Johns Hopkins; developmental biology, cell culture studies of muscle and nerve differentiation.

Herring Susan W.,\* 1990, (Orthodontics, Oral Biology), Ph.D., 1971, Chicago; functional morphology of vertebrates.

Huey, Raymond B.,\* 1977, M.A., 1969, Texas (Austin); Ph.D., 1975, Harvard; evolutionary and physiological ecology, herpetology, behavior.

Illg, Paul L.,\* 1952, (Emeritus), M.A., 1941, California (Berkeley); Ph.D., 1952, George Washington; invertebrate zoology and systematics, symbiosis.

Kareiva, Peter M.,\* 1983, (Quantitative Ecology and Resource Management), M.S., 1976, California

(Irvine); Ph.D., 1981, Cornell; theoretical ecology, conservation biology, agricultural ecology, plant-insect interactions.

Karr, James R.,\* 1991, (Environmental Studies), M.S., 1967, Ph.D., 1970, Illinois (Urbana); aquatic ecology, tropical forest ecology, conservation biology, population and community ecology of birds, land use and watershed management.

Kenagy, George J.,\* 1976, Ph.D., 1972, California (Los Angeles); ecology, behavior and physiology, daily and seasonal rhythms, reproductive cycles, physiological ecology, biology of mammals.

Kingsolver, Joel G.,\* 1986, (Quantitative Ecology and Resource Management), M.S., 1978, Wisconsin; Ph.D., 1981, Stanford; role of morphological variation, functional performance, selection in the evolution of structure and function in insects.

Kohn, Alan J.,\* 1961, (Environmental Studies, Quaternary Research Center), Ph.D., 1957, Yale; invertebrate zoology, ecology and functional morphology of marine invertebrates, evolutionary biology of mollusks.

Kozloff, Eugene N.,\* 1961, (Emeritus), M.A., 1946, Ph.D., 1950, California (Berkeley); biology of lower invertebrates.

Laird, Charles D.,\* 1971, (Genetics), Ph.D., 1966, Stanford; cell and developmental biology, human genetics.

Martin, Arthur W., 1937, (Emeritus), Ph.D., 1936, Stanford; comparative invertebrate physiology.

Moody, William J.,\* 1982, Ph.D., 1977, Stanford; single-celled electrophysiology

Murray, James D.,\* 1988, ‡(Applied Mathematics), Ph.D., 1956, St. Andrews (England), M.A., 1961, D.Sc., 1968, Oxford (England); mathematical models of pattern formation in morphogenesis and ecology.

Odell, Garrett M.,\* 1985, Ph.D., 1972, Johns Hopkins; mathematical modeling of biological phenomena at the cellular and organismic levels.

Orians, Gordon H.,\* 1960, (Environmental Studies),† Ph.D., 1960, California (Berkeley); ecology and conservation biology, vertebrate social systems and community structure, ecology and evolution of rare species.

Paine, Robert T.,\* 1962, M.S., 1958, Ph.D., 1961, Michigan; experimental ecology, organization and structure of marine communities.

Palka, John M.,\* 1969, Ph.D., 1965, California (Los Angeles); neurophysiology, sensory physiology, developmental neurobiology.

Pietsch, Theodore W.,\* 1978, ‡(Fisheries), M.S., 1969, Ph.D., 1973, Southern California; systematics, distribution, behavior and functional morphology of teleostean fishes.

Pinter, Robert B.,\* 1964, ‡(Electrical Engineering), M.S., 1960, Ph.D., 1964, Northwestern; neurophysiology, physiology of the retina and visual system.

Rausch, Robert L.,\* 1977, (Pathobiology, Comparative Medicine),† D.V.M., 1945, Ohio State; M.S., 1946, Michigan State; Ph.D., 1949, Wisconsin; biology and taxonomy of helminths in their mammalian hosts with emphasis on the Arctic.

Reeder, Ronald H.,\* 1978, (Affiliate), Ph.D., 1965, Massachusetts Institute of Technology; regulation of ribosomal gene transcription in *Xenopus*, DNA sequences and protein factors involved in transcription initiation and termination by RNA polymerase I.

Riddiford, Lynn M.,\* 1973, Ph.D., 1961, Cornell; hormonal control of insect development, invertebrate endocrinology, mechanisms of hormone action.

Rohwer, Sievert A.,\* 1973, M.A., 1970, Ph.D., 1971, Kansas; ecology and evolution of social behavior, avian biology and systematics.

Schroeder, Thomas E.,\* 1974, (Research), Ph.D., 1968, Washington; fine structure and biochemistry of cellular contractile systems.

Schubiger, Gerold A.,\* 1972, (Genetics), Ph.D., 1967, Zurich; developmental genetic control of *Drosophila* embryos, pattern formation in imaginal discs.

Snyder, Richard C.,\* 1949, (Emeritus), A.M., 1941, Ph.D., 1948, Cornell; comparative and functional vertebrate anatomy, vertebrate biology.

Steiner, Robert A.,\* 1977, (Obstetrics and Gynecology, Physiology and Biophysics), Ph.D., 1975, Oregon; neuroendocrine control of the onset of puberty in the monkey, ultradian and circadian reproductive hormone rhythms.

Strathmann, Richard R.,\* 1973, M.S., 1966, Ph.D., 1970, Washington; larval ecology and developmental strategies of marine invertebrates.

Svihla, Arthur, 1938, (Emeritus), M.S., 1928, Ph.D., 1931, Michigan; zoology.

Truman, James W.,\* 1973, M.A., 1969, Ph.D., 1970, Harvard; hormones and behavior, insect neural development, circadian rhythms.

Ward, Peter D.,\* 1985, ‡(Geological Sciences), M.S., 1973, Washington; Ph.D., 1976, McMaster; invertebrate paleontology, paleobiology.

Weintraub, Harold M.,\* 1979, (Affiliate), Ph.D., 1971, M.D., 1973, Pennsylvania; gene regulation and chromosome structure.

Whiteley, Arthur H.,\* 1947, (Emeritus), M.A., 1939, Wisconsin; Ph.D., 1945, Princeton; comparative developmental physiology of invertebrates, gene action in normal and hybrid sea urchin development, fertilization.

Willows, A. O. Dennis,\* 1969, Ph.D., 1967, Oregon; invertebrate neurophysiology, neural mechanisms underlying behavior.

Wingfield, John C.,\* 1985, Ph.D., 1973, University College of North Wales; experimental and hormonal control of avian reproductive cycles.

Yao, Meng-Chao,\* 1986, (Affiliate), Ph.D., 1975, Rochester; gene amplification and DNA rearrangement during development.

#### Associate Professors

Bakken, Aimee H.,\* 1973, Ph.D., 1970, Iowa (Iowa City); developmental and cell biology, chromosome structure and function in oogenesis and embryogenesis, developmental genetics.

Griffiths, Mary, 1961, (Emeritus), M.A., 1942, Ph.D., 1953, California (Berkeley); zoology.

Hille, Merrill B.,\* 1976, Ph.D., 1965, Rockefeller; cell and developmental biology of echinoderms, membrane adhesion receptors and their roles in the gastrulation of sea urchin embryos, mRNA, initiation factors, translational regulation during meiosis and fertilization.

Osterud, Kenneth L., 1949, (Emeritus), Ph.D., 1941, New York; zoology.

Wakimoto, Barbara T.,\* 1984, (Genetics), Ph.D., 1981, Indiana; developmental genetics, structure and regulation of heterochromatic genes, chromosome organization in *Drosophila*.

#### Assistant Professors

Brenowitz, Eliot A.,\* 1987, ‡(Psychology), Ph.D., 1982, Cornell; neural and hormonal mechanisms of animal behavior, ecology of animal communication.

Cooper, Mark S.,\* 1991, Ph.D., 1985, California (Berkeley); signal transduction, membrane turnover and cytoskeletal dynamics in developing tissues.

Kot, Mark,\* 1990, ‡(Applied Mathematics), Ph.D., 1987, Arizona; population ecology, mathematical biology.

Wright, Robin,\* 1990, (Genetics), Ph.D., 1985, Carnegie-Mellon; biogenesis of membranes, yeast cell biology.

## Course Descriptions

### Courses for Undergraduates

**ZOOL 114 Evolution (2)** *Kingsolver* Evolutionary biology for nonmajors. Evolutionary history of the earth and various theories of evolution.

**ZOOL 118 Survey of Physiology (5)** *AWSpS Truman* Human physiology, for nonmajors and health sciences students.

**ZOOL 119 Elementary Physiology Laboratory (1)** Prerequisite: concurrent or previous enrollment in 118.

**ZOOL 220 Diversity in Animals (5)** *Huey* Morphological, functional, and ecological diversity within the major phyla of animals. Prerequisite: high school biology or permission of instructor.

**ZOOL 301 Introductory Physiology (4)** Fundamentals of physiology: biochemistry of cell constituents, environment of the cell, bioenergetics, membranes, control mechanisms. Laboratory project required. Prerequisites: chemistry through organic, one year of college physics, 10 credits in biological sciences.

**ZOOL 330 Natural History of Marine Invertebrates (5)** *Kohn* Field and laboratory course emphasizing the habits, habitats, adaptations, and interrelationships of marine animals. Students may be required to share a portion of the transportation costs of field trips.

**ZOOL 362 Natural History of Vertebrates (5)** Field and laboratory course on the classification, ecology, adaptations, and natural history of fishes, amphibians, reptiles, birds, and mammals. Students may be required to share a portion of the transportation costs of field trips. Prerequisite: permission of instructor.

**ZOOL 403 Comparative Vertebrate Histology (5)** *Cloney* Microscopic and submicroscopic anatomy of vertebrates. Emphasis on mammals. Light microscopy and interpretation of ultrastructure. Functions of basic tissue types and organs as related to structure. Prerequisite: BIOL 202.

**ZOOL 408 Mechanisms of Animal Behavior (4)** Comparative exploration of physiological and perceptual mechanisms that control behaviors necessary for survival and reproduction in animal species. Model systems, i.e., animal communication, mate choice, escape behavior, learning, memory, orientation, biological rhythms, foraging behavior. Joint with PSYCH 408. Prerequisites: PSYCH 101, PSYCH 200 or BIOL 101, 102, or permission of instructor.

**ZOOL 409 Sociobiology (4)** *Rohwer* Biological bases of social behavior, emphasizing evolution as a paradigm. Topics are: individual versus group selection, kin selection, altruism, group versus individual living, mating systems, parental care of offspring, and competitive strategies. Joint with PSYCH 409. Prerequisites: BIOL 202 and 203 or PSYCH 200, or equivalent.

**ZOOL 410 Ethology and Ecology Laboratory (4)** *Sp Boersma, Paine* Field projects on foraging and social behavior, species interactions and structure of terrestrial and marine communities, including special student research problems. Students may be required to share a portion of the transportation costs of field trips. Prerequisite: permission of instructor.

**ZOOL 430 Marine Zoology (8)** *Sp Strathmann* Survey of groups of invertebrate animals represented in marine environments; natural history, ecology, distribution, habitat, adaptation, and trophic interrelationships. Offered at Friday Harbor Laboratories. Concurrent registration in BOT 445 required at Friday Harbor. Prerequisites: 20 credits in biological sciences and permission of Director of Friday Harbor Laboratories.

**ZOOL 432 Marine Invertebrate Zoology (9)** *S* Comparative morphology and biology of marine invertebrates. Laboratory study covers the structure and interrelationships among marine invertebrate animals.

Representatives of all major and most minor phyla are collected, observed alive, and studied in some detail. Offered at Friday Harbor Laboratories. Not open for credit to students who have taken 433 or 434. Prerequisites: BIOL 202 or equivalent and permission of Director of Friday Harbor Laboratories.

**ZOOL 433, 434 Invertebrate Zoology (5,5)** *A,W Kohn* Comparative morphology and biology of invertebrates. Laboratories emphasize structures and functions. Not open to students who have taken 432. Prerequisites: BIOL 202; 433 for 434.

**ZOOL 435 Parasitology (5)** General course covering the principles of parasitism and the major groups of animal parasites. Prerequisite: 20 credits in biological sciences or permission of instructor.

**ZOOL 438 Comparative Endocrinology (3)** *Wingfield* Hormonal integration of living processes at all levels in animals: molecules, cells, organs, organisms, populations. Prerequisite: one year of biology; recommended: a 400-level course in physiology, biochemistry, or histology.

**ZOOL 439 Comparative Endocrinology Laboratory (2)** *Wingfield* A broad introduction to endocrine techniques with appropriate experiments to accompany and enlarge on material presented in 438. Prerequisites: 438 and permission of instructor.

**ZOOL 440 Biomechanics (4)** *Daniel* Physical biology emphasizing a mechanical approach to ecological, evolutionary, and physiological questions. Basic principles underlying fluid and solid mechanics to explore responses of animals to flows, loads, and motions. Recommended: some familiarity with calculus and introductory physics.

**ZOOL 444 Entomology (3)** *Sp Edwards* Biology of terrestrial arthropods, with emphasis on insects. Structure, classification, physiology, and ecology of insects. Interrelationships of insects and man. Prerequisite: 15 credits in biological sciences or permission of instructor.

**ZOOL 445 Entomology Laboratory (2)** *Sp Edwards* Structure and function of arthropods, with emphasis on insects. Field studies and taxonomy of important insect groups. Students may be required to share a portion of the transportation costs of field trips. Prerequisites: concurrent registration in 444 and permission of instructor.

**ZOOL 448 Concepts of Nervous System Function (3)** *Palka* Broad examination of integrative mechanisms in central nervous system function, with emphasis on sensory processing, plasticity, and control of behavior. Examples are taken from a variety of animal groups.

**ZOOL 449 Concepts of Nervous System Function Laboratory (2)** *Palka* Experiments to accompany material presented in 448. Prerequisites: 408, 448, or other courses with a strong neuroscience component.

**ZOOL 451 Vertebrate Zoology (5)** *A Kenagy* Integrated exploration of the biology of vertebrate animals, emphasizing their diversity, adaptations, life styles, and evolutionary history. Introduces aspects of behavior, physiology, morphology, and ecology that emerge from the comparative study of vertebrates. Laboratory includes local field trips, films, and writing workshop. Prerequisites: BIOL 201, 202, 203.

**ZOOL 453 Comparative Anatomy of Vertebrates (5)** *W* Comparison of the structure of vertebrates with emphasis on functional morphology, evolution, and biomechanics. Prerequisite: BIOL 202; recommended: 451.

**ZOOL 455 Developmental Biology of Animals (4)** *Schubiger* Embryology and subsequent development of vertebrate and invertebrate animals, including frogs, mammals, chicks, insects, echinoderms. Morphological changes in developing animals; experimental analysis of developing systems; underlying genetic and biochemical regulation of development. Prerequisite: BIOL 202 or equivalent.

sites: BIOL 201, 202, 203, or permission of instructor; recommended: some genetics, cell biology, or biochemistry.

**ZOOL 456 Developmental Biology of Animals Laboratory (3)** *Shellenbarger* Normal development of living embryos (frog, chick, insect, echinoderm). Internal anatomy of embryos on prepared slides. Comparisons between vertebrate and invertebrate animals. Prerequisites: 455 or equivalent; permission of instructor.

**ZOOL 457 Methods and Problems in Development (3)** *Bakken, Schubiger, Wakimoto* Special topics in development. Integrating classical and current approaches. Developmental genetics, experimental embryology, molecular mechanisms of developmental regulation, and gene function in cell determination and cell differentiation in animal systems. Prerequisites: 455 or equivalent and permission of instructor.

**ZOOL 464 Natural History of Birds (5) Sp** *Rohwer, Wingfield* Field, lecture, and laboratory study of birds framed in biological theory rather than taxonomy. Breeding systems, brood parasitism, appearance, molt, migration, orientation, social behavior, song, and flight are emphasized. Includes Saturday and weekend field trips for which students are required to share a portion of transportation costs. Prerequisites: BIOL 201, 202, 203 or equivalent, and permission of instructor.

**ZOOL 465 Natural History of Mammals (5)** *Kenagy* Field, lecture, and laboratory course introducing mammals in a general biological context, emphasizing ecology, evolution, behavior, morphology, and adaptation to the environment. Fieldwork focuses on rodent populations and their habitats in Washington State. Includes weekend field trips, for which students may be required to share a portion of transportation costs. Prerequisites: BIOL 201, 202, 203, and permission of instructor; recommended: 453 and BIOL 472.

**ZOOL 467 Comparative Animal Reproduction (3)** *Ramenofsky, Wingfield* Reproductive mechanisms, environmental influences on reproductive endocrinology, physiology, behavior, ecology of vertebrates. Discussions extend from organismal to cellular level, and focus on diversity of reproductive patterns among vertebrates. Prerequisite: one year of college-level biology; recommended: biochemistry and physiology.

**ZOOL 468 Comparative Animal Reproduction Laboratory (2)** *Ramenofsky, Wingfield* Laboratory and field studies on animal reproduction involving endocrinology, anatomy, behavior, and ecology. Accompanies, supplements, and extends material presented in 467. Prerequisites: 467 or 469, may be taken concurrently, and permission of instructor.

**ZOOL 470 Techniques for Mathematical Biology (3)** *Odel* Equips students to use, rather than prove, many applied mathematics techniques essential in mathematical biology. Includes instruction to use symbolic computation software (Mathematica, Macsyma) to do by computer the kind of mathematical formula manipulation that mathematicians formerly performed by hand. Prerequisite: calculus; recommended: linear algebra.

**ZOOL 471 Models in Biology (4)** *Kareiva* Explores use of models in biology in a wide range of topics, including morphogenesis, nerve signals, ecological in-

teractions, population biology, and evolutionary theory. Emphasis on the biological insights models can provide rather than mathematical techniques. Prerequisites: MATH 124, 125.

#### **ZOOL 475 Zoogeography (3)**

**ZOOL 483 Histological Research Methods (5) Sp** *Cloney* Preparation and analysis of tissues for light and electron microscopy. Students consult appropriate literature, analyze tissue samples, prepare micrographs, and present oral reports on individual projects. Prerequisites: 403 or 433, 434 with permission of instructor.

**ZOOL 488, 489 Animal Physiology (5,5)** *Huey, Riddiford, Truman* Physiology at levels of organisms and behavior, organ systems, and cells—an ecological and evolutionary perspective. Energy relations, temperature effects, movement, circulation, respiration, water and solute regulation, membranes, neural and hormonal function, biological rhythms, reproduction. Experimental design and techniques; data analysis; written reports. Prerequisites: introductory biology, chemistry, and physics.

**ZOOL 490 Undergraduate Seminar (3, max. 6)** Supervised reading and group discussion on selected concepts of zoology. Prerequisites: 20 credits in zoology and permission of instructor.

**ZOOL 491 Topics in Zoological Research (1, max. 3)** Undergraduate seminar on research problems currently under investigation by department faculty members. Includes discussions and laboratory demonstrations of aims, techniques, and results of zoological research. Prerequisites: upper-division standing and permission of instructor.

**ZOOL 498 Special Problems in Zoology (1-5, max. 15) AWSpS** Prerequisite: permission of instructor.

#### **Courses for Graduates Only**

**ZOOL 506 Topics in Developmental Biology (1-2, max. 15)** Seminars and discussions of aspects of growth of special current interest. Prerequisite: permission of instructor.

**ZOOL 509 Topics in Animal Behavior (1-3, max. 9)** *Orians, Rohwer* Detailed consideration of topics in behavioral integration, communication, and social organization. Prerequisite: 409 or PSYCH 409 or equivalent.

**ZOOL 517 Analytical Development Physiology (9)** Modern analysis of oogenesis, fertilization, embryonic organization and differentiation from an experimental and comparative point of view, and other advanced topics. Laboratory emphasizes experimental study of metabolic, biochemical, and biophysical properties, structural and mechanical features, subcellular localization, and microscopic organization of gametes and embryos of various marine invertebrates. Prerequisite: permission of instructor.

**ZOOL 520, 521, 522 Seminar (1,1,1) A,W,Sp**

**ZOOL 528 Advanced Topics in Physiology (1-3, max. 15)** Recent developments. Prerequisite: at least one 400-level course in physiology.

**ZOOL 529 Advanced Topics in Physiology (1-3, max. 15)** Recent developments. Prerequisite: one 400-level course in physiology.

**ZOOL 533 Advanced Invertebrate Zoology (9) SpS** Invertebrate fauna of the San Juan Archipelago. Topic changes from year to year. Individual research projects are emphasized. Offered at Friday Harbor Laboratories. Prerequisites: 10 credits in invertebrate zoology or equivalent and permission of Director of Friday Harbor Laboratories.

**ZOOL 536 Comparative Invertebrate Embryology (9) SpS** Morphological and experimental studies of development of selected types of marine invertebrates. Offered at Friday Harbor Laboratories. Prerequisites: 433, 434, 456, and permission of Director of Friday Harbor Laboratories.

**ZOOL 538 Advanced Invertebrate Physiology (9) Sp** General and comparative aspects of nerve and muscle physiology with particular emphasis upon neuronal control of behavior, neuronal interactions, and other advanced topics determined by visiting faculty. Extensive laboratory experience, including intracellular and extracellular stimulating and recording techniques. Offered at Friday Harbor Laboratories. Recommended: background in cellular physiology and invertebrate morphology.

**ZOOL 556 Insect Development (3)** *Edwards, Riddiford, Schubiger* Characterizes developmental processes and their adaptations in diverse insect groups. Emphasizes hormonal control mechanisms in metamorphosis, polymorphism and diapause, regeneration and genetic analysis of development. Prerequisites: 456 or equivalent, BIOL 202 or equivalent, or permission of instructor.

**ZOOL 568 Chemical Integration (2, max. 6)** *Wingfield* Graduate seminar dealing with current problems in endocrinology and neuroendocrinology. Prerequisite: permission of instructor.

**ZOOL 572 Topics in Ecology (1-3, max. 15)** *Kareiva, Kingsolver, Kohn, Orians, Paine* Graduate seminar on modern problems in ecology. Prerequisites: BIOL 472 or equivalent, and permission of instructor.

**ZOOL 573 Physiological Ecology (1-3, max. 15)** *Huey, Kenagy, Kingsolver* Perspectives and principles of research in the physiology and behavior of animals in an ecological and evolutionary context, emphasizing whole animals and integration with diverse levels of biological organization. Prerequisite: permission of instructor.

**ZOOL 574 Ecology of Marine Communities (3)** *Paine* Lecture course emphasizing the ecological structure and functioning of marine communities. Topics include population interactions and dynamics, distributional patterns, bioenergetics, stability, and species diversity. Prerequisites: BIOL 472 or equivalent, and permission of instructor.

**ZOOL 578 Advanced Ecology (5)** *Kareiva* Strategies of reproduction, habitat selection, foraging and spacing; theory of competition and predator-prey interactions; niche theory and community structure. Prerequisites: BIOL 472 or equivalent, and permission of instructor.

**ZOOL 600 Independent Study or Research (\*) AWSpS**

**ZOOL 700 Master's Thesis (\*) AWSpS**

**ZOOL 800 Doctoral Dissertation (\*) AWSpS**

# School of Business Administration

## Dean

Robert S. Leventhal

## Senior Associate Dean

Gerhard G. Mueller  
114 Mackenzie

Men and women embarking on business careers will have the opportunity to influence many of the social, political, and economic forces in today's world. The School of Business Administration prepares students for professional careers in management and related disciplines in both the private and public sectors.

The School of Business Administration offers an undergraduate program leading to the degree of Bachelor of Arts in Business Administration and graduate programs leading to the degrees of Master of Business Administration, Master of Professional Accounting, and Doctor of Philosophy.

Business Administration became an independent unit within the University system in 1917. It has been accredited by the American Assembly of Collegiate Schools of Business since 1921.

## Facilities and Services

Most business administration classes and activities are in two buildings. Balmer Hall, named for Thomas Balmer, former president of the University Board of Regents, contains classrooms, the business administration library, and the business administration computer users center. Mackenzie Hall, named in memory of Prof. Donald Mackenzie, Chairperson of the Department of Accounting from 1949 to 1955, contains the Dean's office, the Office of Graduate Programs, the Office of Undergraduate Programs, faculty offices, and other business administration program offices.

To serve the continuing education needs of business persons, the School of Business Administration offers a number of short programs, either University-initiated or cosponsored with various community and industry organizations. The eight-month management program for middle- to upper-level managers strengthens understanding and skills in all areas of management and provides an opportunity for successful managers to learn from each other. Several residential programs are offered on campus, including the engineering management program and the aerospace industry manufacturing seminar. The schools co-sponsor the Pacific Coast Banking School and the Pacific Rim Bankers Program. Short courses and workshops are offered throughout the year in all areas of management, including marketing strategy, sales management, managing change, finance and accounting for non-financial executives, marketing research, tax clinic for small business, and the entrepreneurship symposium. In addition, the schools develop and run in-house training programs under contract with individual companies. Information on continuing education programs may be obtained from the Office of Executive Programs, 543-8560.

## International Business Programs

International business programs are coordinated and developed by the school's Center for International Business Education and Research (CIBER). These activities include special graduate and undergraduate certificate programs, seminars, special guest speaker programs, and graduate foreign exchange programs.

Each of the five academic departments within the school maintain faculty with special international teaching and research expertise. Internationally-oriented courses are offered by each department.

At the undergraduate level, the school offers the Certificate of International Studies in Business (CISB) Program. Students in the program complete the same demanding business curriculum as other students and enhance this training with foreign language study, area studies, and an international experience. The program requires that students have a solid foundation in one of six language tracks: Chinese, French, German, Japanese, Russian, and Spanish; a seventh custom track for other languages is also an option.

The M.B.A.-level International Management Fellows Program (IMFP) gives a small group of selected students a rigorous curriculum that integrates their graduate course work with advanced foreign language and area studies, an overseas business internship, and a foreign study program. As fellows in this intensive twenty-four-month program, students spend a total of nine months outside the United States and may specialize in one of four language tracks: Chinese, German, Japanese, or Spanish.

Questions regarding these programs may be directed to the Associate Director, CIBER, 106 Mackenzie, (206) 685-3432; FAX: (206) 685-9392.

## Business Career Center

202 Lewis

### Director

JoAnne Starr

### Associate Director

Janelle LaFond

The Business Career Center serves as a resource for business students. Among the services provided to all business students are the A.S.K. (Alumni Sharing Knowledge) mentoring program and a job listing service for career, internship, and part-time positions. Undergraduate business placement and career counseling is provided by the UW Center for Career Services in 301 Loew.

All M.B.A. and M.P.Acc. career services are coordinated through the Business Career Center, including M.B.A. career counseling and career management workshops, the administration of special career events for M.B.A. students, such as firm nights, company presentations, and on-campus M.B.A. recruitment. Questions regarding these programs and services may be directed to the Director, 685-2410.

## Honor Societies

Beta Gamma Sigma is the national scholastic honor society in the field of business. Election to membership is available to both undergraduate and graduate students in business. Selection is based upon outstanding scholastic achievement.

Beta Alpha Psi is the accounting honor society. Membership is based primarily on scholastic achievement, but some community service is also required. Beta Alpha Psi provides a mechanism for students, professionals, and educators to meet on both formal and informal bases.

## Student Organizations

Chapters of Alpha Kappa Psi, Association of Black Business Students, Hispanic Business Association, Pacific Northwest Personnel Management Association, International Association of Students in Economics and Business Management, American Marketing Association, the Accounting Society, Native American Business Organization, National Association of Black Accountants, Washington Software Association Student Chapter, Phi Beta Lambda, and Student Advisory Council provide opportunities for undergraduate students to meet informally and to participate in a variety of projects and events.

The goals and interests of graduate students are served by the M.B.A. Association, Graduate Women in Management, the Center for Entrepreneurship, Challenge for Charity, Data Processing Management Association, Graduate Consulting Club, Finance Club, International Business Association, and the Doctoral Association.

# Undergraduate Program

## Undergraduate Office

137 Mackenzie

### Acting Director

Patsy Wosepka

The School of Business Administration, with admission at the junior level, offers a two-year program leading to the degree of Bachelor of Arts in Business Administration. The curriculum, building upon a basic foundation in the arts and sciences, provides an exposure to a wide range of functional business areas and the opportunity for study in selected areas in some depth. About forty percent of the 1,450 students in business administration study accounting, which is the only formal undergraduate concentration. Other students may choose to follow informal concentrations (e.g., finance, marketing, human resources management, and operations management) based upon suggested guidelines offered by departments. The Undergraduate Program Office has handouts describing each concentration, the faculty members who specialize in the area, and potential career applications.

## Minority Program

137 Mackenzie

### Assistant Director

Jeffrey Hedgepeth

Special advising, support services, and scholarship information are available for underrepresented minority students. Both pre-business and undergraduate business majors of Black, Hispanic, and Native American ancestry are eligible for the program. Black, Hispanic, and Native American business student groups also provide academic and social support. Academic advisers in 137 Mackenzie have information on the Minority Program.

## Academic Advisers

Nola-Jean Bamberg

Holly Bauman

Susan DeCroix

Elaine G. Miller

Academic advisers are available to help with selecting classes, adding and dropping classes, long-range planning, applying for graduation, making referrals to other campus resources and programs, and providing any needed general assistance. The Undergraduate Office publishes a weekly newsletter that provides information to majors and premajors.

## Bachelor of Arts in Business Administration Degree

**Specific School Admission Requirements:** A minimum of 90 credits to include the following (or equivalents): 20 credits in natural sciences, including 5 credits in calculus (MATH 112 or 124); most students need precalculus before taking college calculus (most precalculus courses qualify for natural science distribution); 20 credits in social sciences, including 10 credits in microeconomics and macroeconomics (ECON 200 and 201); 10 credits in humanities; 10 additional credits in humanities or 10 credits from part B of the social science list; the required completed linked sets, which are usually the precalculus and calculus courses and the macro- and microeconomics courses (if precalculus is not taken, another linked set must be completed by graduation); 5 credits in English composition;

ACCTG 210, 220, 230; QMETH 201; OE 200; electives to complete 90 credits. Students may not count credit for more than one introductory statistics course. These general education courses must be selected from the College of Arts and Sciences distribution list. Students from community colleges in Washington should check the *Transfer Guide* for equivalent courses. (Students from other four-year schools should see an adviser at their school.)

Qualified applicants who meet the University and School of Business Administration requirements at the time they transfer are eligible to be placed directly in the school; those with at least 45 credits and a minimum 2.85 GPA who meet the University entrance requirements, but not the business administration requirements, are eligible to be placed in the College of Arts and Sciences as pre-business majors.

For admission to the School of Business Administration, a School of Business application, together with all supporting materials, must be on file by the following quarterly deadlines: for summer or autumn quarters, April 10; winter quarter, October 10; spring quarter, January 10. Records of all course work completed by these deadlines must be submitted at the time of application. Since eligible applicants exceed the space available, acceptance is competitive. Admission will be based on evaluation of four factors: (1) overall scholastic record; (2) grades in pre-business courses (accounting, statistics, and law) and required economics courses plus any upper-division business courses or approved substitutes the candidate may have completed; (3) written communications skills; and (4) evidence of leadership skills, community activities, and the promise of achievement in a business or professional career. In addition, the School of Business is committed to the University's affirmative action policy. Consideration will therefore be given in the admissions process to creating ethnic diversity. No student will be admitted with a cumulative GPA less than 2.50 for all college credits or less than 2.50 for all required business administration courses. A student who has previously attended this university also must have GPAs of at least 2.50, both UW cumulative and in UW business administration courses (including approved substitutes and required economics courses). The GPA for admission will usually be higher.

**Specific Upper-Division School Requirements:** B ECN 300, 301; MKTG 301; I S 300; I BUS 300; OPMGT 301; FIN 350; HRMOB 400; OE 302, 440; B POL 470 or 471 or 480; and a minimum of 14 credits of 300- or 400-level business administration electives (or area of concentration); minimum of 4 credits in an approved writing course, or two "W" courses.

**Accounting Concentration:** The notation "Accounting" will be included on the permanent record, or transcript, of a student who graduates with a degree of Bachelor of Arts in Business Administration and who completes with a cumulative GPA of at least 2.00 the following courses: ACCTG 301, 302, 303, 311, 330, 411, 421, and 6 elective credits in 400-level accounting courses, except 401 and 499. Students who have completed ACCTG 505 may not apply to the accounting concentration. Students who have completed ACCTG 303 may not receive credit for ACCTG 375.

**Specific School Graduation Requirements:** No more than 7 lower-division business elective credits; a minimum of 72 non-business administration credits, including those listed under Specific School Admission Requirements, and 72 business administration credits, including those listed under the preceding requirements sections; a cumulative GPA of at least 2.50 in all business administration credits earned at the University; and a cumulative GPA of 2.50 for all University credits. Students must complete six of the eleven upper-division core courses, including Business Policy, and 35 of the 54 required upper-division business credits at the University of Washington. Students who have taken more than five of the eleven upper-division core business courses at another school will not usually be admitted to the School of Business Administration.

### **Double Baccalaureate Degrees and Second Baccalaureate Degree**

Students who wish to earn more than one baccalaureate degree should consult an academic adviser in the business administration undergraduate office, either during or before the junior year. Persons seeking a second baccalaureate should apply at the University's Office of Undergraduate Admissions. To be considered, applicants must complete by quarter of entry the same prerequisites for admission as applicants for the first baccalaureate degree. Since the number of eligible applicants exceeds that for which space is available, acceptance will be competitive, based on the criteria listed above for selection of first baccalaureate degree applicants. The School of Business will use the GPA for the last 90 credits earned.

## **Graduate Program**

### **Graduate Office**

110 Mackenzie

Gary L. Sundem, Associate Dean

Peter A. Frost, Director,  
Ph.D. Program, Graduate Program Coordinator

Leighanne Harris, Director,  
M.B.A. Program,  
Alternate Graduate Program Coordinator

Roland E. Dukes, Chairman,  
M.P.Acc. Program Committee

Nina Sanders, Director, E.M.B.A. Program

### **Admission**

Qualified students who are graduates of the University of Washington or of other accredited colleges or universities may be admitted autumn quarter to graduate degree programs. GPA, Graduate Management Admission Test score, work experience, educational and professional objectives, and other factors are considered in the admission process. Inquiries concerning the details of admission should be made to the specific degree program of interest, University of Washington, Graduate School of Business Administration, Mackenzie Hall, DJ-10, Seattle, Washington 98195.

### **Application Procedure**

Applications to graduate programs are considered in the winter and spring of each year for entry in the autumn quarter. The formal deadlines for application are: February 15 for the Ph.D. program, March 1 for the full-time M.B.A. and M.P.Acc. programs, and April 15 for the Executive M.B.A. Program.

The Graduate School of Business Administration offers programs of study leading to the advanced degrees of Master of Business Administration, Master of Professional Accounting, and Doctor of Philosophy.

### **Master of Business Administration Degree**

The Master of Business Administration degree program has been designed for students with varied academic backgrounds (e.g., arts and sciences, engineering, business administration) who are preparing for a professional career in management. A period of two academic years, or 72 academic credits, is required for most students to complete the M.B.A. program. The program consists of 36 credits of required first-year courses, 3 credits of required second-year business policy, and 33 elective credits. The student may take no more than 18 credits in any elective area. An elective course in management information systems and in international business are also required.

Since the autumn of 1983, the Executive M.B.A. Program has provided an additional pathway to the Master of Business Administration degree. The E.M.B.A. Program provides an intensive executive development experience to a select group of midcareer managers

who continue to work fulltime while pursuing the M.B.A. degree. Candidates for this two-year program should have seven or more years of increasingly successful work experience and currently hold mid- or top-level management positions. They are typically sponsored by their organizations and have been identified as employees with high potential to advance as general managers. Students are selected to ensure diversity of industry, functional areas and organizational size. Classes meet all day on alternate Fridays and Saturdays during the academic year. In addition, students attend spring and fall residence sessions each year. While the curriculum scope is comparable to that of the regular M.B.A. program, the pace is more intense and the perspective is that of a general manager. There are nineteen required courses and no electives. Applications are accepted throughout the year; with an application deadline of April 15 for the class beginning each autumn. Late applications are handled on a space available basis.

### **Master of Professional Accounting Degree**

The Master of Professional Accounting degree program prepares individuals for high-level careers in the specialized fields of professional accounting and taxation. The M.P.Acc. degree provides an opportunity for graduate study in accounting beyond the typical undergraduate accounting major and in greater depth than that offered by an accounting concentration in an M.B.A. program. The newly developed M.P.Acc. (Taxation) degree track is an intensive detailed study of federal taxation that is designed to provide a working knowledge of tax law in both a transactional and theoretical framework. Both the professional accounting track and the taxation track are designed to be completed in two years for individuals without prior study in accounting or business. For those who have an undergraduate degree in accounting or an M.B.A., the M.P.Acc. degree program may be completed in one calendar year.

### **Doctor of Philosophy Degree**

The Doctor of Philosophy degree in Business Administration is designed primarily for students who wish to pursue academic careers, although the training is also useful for students oriented toward research positions in business or other institutions. Students must select a major area of concentration and two or three minor supporting areas. Major areas of concentration include financial and managerial accounting, business economics, business policy, finance, human resource management and organizational behavior, information systems, international business, marketing, operation management, organization and environment, and quantitative methods. All students must take research methods as a minor area. The other minor areas can be chosen from the above list or from other areas in the University outside the School of Business Administration, such as economics, psychology, statistics, mathematics, and computer science. The minor areas should support and complement the major area.

**Graduation requirements:** Each Ph.D. student must successfully complete course work in the major and minor areas and satisfy the schools breadth requirement, pass area examinations, successfully defend the thesis proposal in the General Examination, and finally, defend the completed dissertation in the Final Examination.

Doctoral students with strong backgrounds can complete the doctoral program in three years, but most students take four to five years. The school's goal is to make financial aid available, in the form of research and teaching assistantships, to all of its doctoral students. In addition to service appointments, fellowships are available on a competitive basis to support students engaged in their dissertation research during the final part of their programs.

### **Special Requirements**

Applicants to graduate business programs are required to submit scores on the Graduate Management Admission Test. Those admitted to the M.B.A. program

must demonstrate understanding of the fundamental concepts of calculus and proficiency in the use of computers.

#### **Financial Aid**

The Graduate School of Business Administration offers a number of teaching assistantships and predoctoral teaching associate appointments each year. A limited number of scholarships and fellowships also are available.

## **Accounting**

Accounting involves development and communication of financial and operational information for business and nonprofit economic entities. The curriculum coverage includes understanding accounting information systems, using accounting information in managerial decision-making, preparing and auditing financial statements under generally accepted accounting and auditing standards, and understanding the fundamental aspects of personal and corporate taxation. Elective courses provide in-depth instruction in managerial and financial accounting, not-for-profit accounting, and taxation. Courses provide a foundation for careers in accounting (public, industrial, private, governmental, or institutional), for a general business career, or for other professions such as law.

Alkire, Durwood L., 1973, (Emeritus), B.A., 1935, Washington; tax accounting.

Berg, Kenneth B., \* 1950, (Emeritus), M.S., 1941, Ph.D., 1952, Illinois; financial and managerial accounting.

Biddle, Gary C., \* 1984, M.B.A., 1976, Ph.D., 1980, Chicago; financial accounting.

Bowen, Robert M., \* 1978, M.B.A., 1971, Washington (St. Louis); Ph.D., 1978, Stanford; financial and managerial accounting.

Dukes, Roland E., \* 1980, M.B.A., 1970, Ph.D., 1974, Stanford; financial and managerial accounting.

Heath, Loyd C., \* 1962, M.B.A., 1953, Northwestern; Ph.D., 1965, California (Berkeley); financial accounting.

Jiambalvo, James, \* 1977, M.A.S., 1973, Illinois; Ph.D., 1977, Ohio; auditing, managerial accounting.

Mueller, Fred J., \* 1956, (Emeritus), M.A., 1954, Washington; Ph.D., 1956, Ohio State; auditing, not-for-profit, tax accounting.

Mueller, Gerhard G., \* 1960, M.B.A., 1957, Ph.D., 1961, California (Berkeley); Director, Master of Professional Accounting Program; financial accounting and reporting, international accounting.

Noreen, Eric W., \* 1976, M.B.A., 1974, Ph.D., 1976, Stanford; managerial accounting.

Ramanathan, Kavasseri V., \* 1971, M.B.A., 1962, Ph.D., 1969, Northwestern; managerial accounting.

Sundem, Gary L., \* 1971, M.B.A., 1969, Ph.D., 1971, Stanford; managerial accounting.

Walker, Lauren M., 1946, (Emeritus), M.B.A., 1943, Washington; financial and international accounting.

#### **Associate Professors**

Burgstahler, David C., \* 1980, Ph.D., 1981, Iowa; auditing, financial and managerial accounting.

Kelly, Lauren, \* 1983, M.B.A., 1973, Bridgeport; Ph.D., 1976, Alabama; financial and managerial accounting.

Sefcik, Stephan E., \* 1987, M.A.S., 1976, Ph.D., 1983, Illinois (Urbana-Champaign); financial accounting.

Shevlin, Terrence J., 1985, M.Ec., 1981, Monash; Ph.D., 1986, Stanford; financial and managerial accounting.

#### **Assistant Professors**

Hemmer, Thomas, 1991, M.B.A., 1986, Ph.D., 1990, Odense; financial and managerial accounting.

Kennedy, S. Jane, 1991, M.B.A., 1977, Alberta; Ph.D., 1992, Duke; financial and managerial accounting.

McDaniel, Linda F., 1987, M.S., 1982, Florida; Ph.D., 1988, Michigan; auditing, financial accounting.

Moyer, Susan E., 1987, M.S., 1985, Ph.D., 1989, Rochester; financial accounting.

Shores, Donna J., 1986, M.S., 1980, Wisconsin; Ph.D., 1986, Stanford; financial and managerial accounting.

Soderstrom, Naomi S., 1988, M.S., 1985, Ph.D., 1990, Northwestern; accounting information systems, managerial accounting.

Stinson, Christopher H., 1991, M.B.A., 1984, Washington; Ph.D., 1992, Stanford; financial and tax accounting.

#### **Lecturers**

Faas, A. Stanley, 1987, B.A., 1962, Washington; managerial accounting.

Gerboth, Dale L., 1990, B.S., 1959, Kansas; financial and managerial accounting.

Hubbard, Quinn D., 1991, M. Tax., 1989, Denver; tax accounting.

Resler, William M., 1979, J.D., 1972, Washington; LL.M., 1973, New York; tax accounting.

Rice, Steven J., 1987, M.S., 1972, Oklahoma State; Ph.D., 1974, Texas (Austin); tax accounting.

## **Finance and Business Economics**

Finance and business economics address the financial and economic aspects of decision making. The finance curriculum focuses on teaching sound principles of financial management and on the behavior of the financial markets within which firms and individual investors operate. Business economics courses concern the economic behavior of firms, including factors that determine costs and prices, and the real and monetary forces (such as government policies) that affect the national and international economic environment.

Neal, Robert S., 1987, M.A., 1985, Ph.D., 1987, Chicago; finance, securities markets.

Son, Gunsang, 1991, M.A., 1983, Seoul National University; corporate finance, financial markets.

Wheatley, Simon, \* 1984, M.A., 1979, Simon Fraser (Canada); Ph.D., 1986, Rochester; international finance.

#### **Lecturers**

Hadjimichalakakis, Karma G., 1970, M.A., 1968, Ph.D., 1974, Rochester; business economics.

Tarhouni, Ali, 1985, M.A., 1977, Ph.D., 1983, Michigan State; economics.

## **Management and Organization**

Management and organization provides an understanding of the processes and structures of organizations through three distinct programs. The human resource management and organizational behavior courses address personnel and industrial relations topics such as selection, performance appraisal, compensation, and negotiations, as well as behavioral topics such as leadership, motivation, and group dynamics. They prepare students for managing an organization's human resources effectively. The organization and environment courses examine organization theory, organization design, and management of technology and innovation, as well as the social, political, legal, and ethical environments in which organizations operate. They give students the knowledge, perspective, and analytical tools to deal effectively with organization-environment interactions. The business policy courses focus on organizational effectiveness from the viewpoint of top management. Emphasis is placed on an integrated view through strategic management and control, planning, decision making, and entrepreneurship.

Saxberg, Borje O., 1957, M.S., 1953, Ph.D., 1958, Illinois; organization and environment, administrative theory, organizational behavior and theory.

Schrieber, Albert N., 1948, (Emeritus), M.B.A., 1947, Harvard; business policy.

Scott, William G., 1966, M.S.I.R., 1952, Loyola; D.B.A., 1957, Indiana; organization and environment, administrative theory, organizational behavior and theory, public policy.

Summer, Charles E., 1969, (Emeritus), M.B.A., 1948, Pennsylvania; Ph.D., 1957, Columbia; business policy and administrative theory.

Sutermeyer, Robert A., 1949, (Emeritus), M.A., 1942, Washington; personnel and organizational behavior.

Vesper, Karl H., 1969, (Mechanical Engineering, Marine Affairs), M.B.A., 1960, Harvard; M.S., 1966, Ph.D., 1969, Stanford; business policy, mechanical engineering, marine studies.

Wheeler, Bayard O., 1941, (Emeritus), M.A., 1930, Washington; Ph.D., 1942, California (Berkeley); urban economics.

### Associate Professors

Beard, Donald W., 1975, M.B.A., 1961, Harvard; Ph.D., 1975, Nebraska; business policy.

Bell, Cecil H., 1968, (Psychology), M.A., 1959, Ph.D., 1970, Boston; human resources management and organizational behavior, social psychology.

Buck, Vernon E., 1968, M.S., 1960, Ph.D., 1963, Cornell; human resources management and organizational behavior, administrative theory.

Butler, John E., 1985, M.B.A., 1980, LaSalle; M. Phil., 1982, Ph.D., 1985, New York; business policy.

Gist, Marilyn E., 1987, M.B.A., 1982, Ph.D., 1985, Maryland; human resources management and organizational behavior, strategic management.

Hill, Charles W. L., 1988, Ph.D., 1983, Manchester; business policy, corporate strategy, multinational enterprise.

Huber, Vandra L., 1987, M.S., 1978, Utah; M.B.A., 1981, D.B.A., 1982, Indiana; human resources management and organizational behavior, social psychology.

Kienast, Philip K., 1970, M.L.I.R., 1966, Ph.D., 1972, Michigan State; human resources management.

Lee, Thomas, 1983, (Psychology), M.A., 1977, Bowling Green; Ph.D., 1984, Oregon; human resources management and organizational behavior, social psychology.

Strong, Dennis F., 1967, (Emeritus), Ph.D., 1959, Washington; organization and environment, business history.

Wickman, James A., 1955, (Emeritus), M.B.A., 1954, D.B.A., 1961, Washington; risk control and insurance.

Woodworth, Robert T., 1961, M.B.A., 1956, Ph.D., 1963, Northwestern; human resources management and organizational behavior, administrative theory, strategic management.

### Assistant Professors

Collins, Paul D., 1990, M.A., 1976, Oklahoma; Ph.D., 1985, Rutgers; organization and environment, technology management.

Hansen, Gary S., 1984, M.B.A., 1980, Ph.D., 1987, Michigan; business policy.

Illich, Anne Y., 1991, M.A., 1973, Northwestern; Ph.D., 1991, North Carolina (Chapel Hill); strategic management and business policy, industrial economics.

Stout, Suzanne, 1991, M.B.A., Southern Methodist; Ph.D., 1991, Stanford; organizational learning and interorganizational relationships, collective action problems and strategic choice, organization theory.

Thomas, Tom E., 1988, M.P.P., 1979, Michigan; M.B.A., 1985, Ph.D., 1989, Berkeley; organization and environment, corporate political strategy, strategic management in regulated industries.

### Lecturers

Berger, Robert H., 1985, J.D., 1967, M.B.A., 1983, California (Berkeley); law.

Brucker, Thomas H., 1983, LL.B., 1960, Columbia; law.

## Management Science

Management science consists of three subareas: information systems, operations management, and quantitative methods. The information systems area is concerned with the analysis, design, and management of computer-based information/decision systems. The operations management area deals with the functional part of an organization that produces goods, services, or both; some topics covered include materials management, location and logistics, production scheduling, and manufacturing strategy. The quantitative methods area focuses on quantitative and statistical

models that have been developed to assist managers to better analyze and understand business problems; courses in this area cover business statistics and operations research.

## Faculty

### Assistant Professors

Arreola-Risa, Antonio, 1988, M.S., 1980, Georgia Institute of Technology; Ph.D., 1989, Stanford; operations management.

DeCroix, Greg, 1991, Ph.D., 1991, Stanford; quantitative methods.

Koushik, Murlidhar V., 1986, M.B.A., 1972, Calcutta; Ph.D., 1987, Iowa; information systems.

Langford, Joseph D., 1988, M.S., 1984, Clemson; Ph.D., 1990, Rochester; information systems.

Mannino, Michael V., 1991, M.S., 1981, Ph.D., 1983, Arizona; information systems.

Mookerjee, Vijay S., 1991, M.B.A., Calcutta; Ph.D., 1991, Purdue; information systems.

### Senior Lecturers

Burrows, William, 1979, M.B.A., 1972, Washington; information systems.

Morita, June G., 1983, (Statistics), M.A., 1978, Ph.D., 1985, California (Berkeley); quantitative methods.

### Lecturers

Lou, Cheryl F., 1991, M.S., 1984, Wyoming; information systems.

Pilcher, Martha G., 1987, (Health Services), M.S., 1978, Ph.D., 1985, Georgia Institute of Technology; quantitative methods, operations management.

## Marketing and International Business

Marketing provides knowledge of concepts and relationships in the areas of consumer behavior, channels of distribution, measurement and analysis of markets, pricing, physical movement of goods, product development, promotion, and sales administration. Marketing careers may involve specialization in product or

brand management, advertising, sales management, marketing research, retailing, wholesaling, and international marketing for a wide spectrum of firms and industries. International business includes trade, payments, and multinational corporate systems and activities. The area prepares students for international responsibilities in domestic business firms, governmental agencies, and overseas business. Courses in business communications stress the writing dimension as it relates to business; also included are theory and techniques of effective communication in interpersonal relationships.

Ralston, Jerry W., 1984, Ph.D., 1969, Geneva; international business.

Whelan, John F., 1986, M.A., 1977, Yale; business communications.

## Course Descriptions

### Accounting

#### Courses for Undergraduates

**ACCTG 210 Introduction to Accounting (3)** Nature and social setting of accounting; uses of accounting information; introduction of basic accounting concepts, and some basic accounting procedures. Prerequisite: sophomore standing or above.

**ACCTG 220 Fundamentals of Financial Accounting (3)** Principal procedures and concepts utilized in contemporary financial accounting and reporting. Preparation and interpretation of financial statements. Prerequisite: 210.

**ACCTG 230 Fundamentals of Managerial Accounting (3)** Analysis and evaluation of accounting information as part of the managerial processes of planning, decision making, and control. Concentrates on types of economic decision making in enterprises and on accounting information useful to enterprise managers. Prerequisite: 220.

**ACCTG 301, 302, 303 Intermediate Accounting I, II, III (3,3,3)** Concepts and principles of financial accounting. Analysis of controversies and problems related to the measurement of enterprise income and asset and liability valuation. Prerequisites: 230 and admission to accounting major for 301; 301 for 302; 302 for 303.

**ACCTG 311 Cost Accounting (3)** Introduction to the theory of cost accounting; job order, process, and standard cost systems; overhead accounting; problems in accumulation and allocation of costs; decision making with cost data. Prerequisite: 301.

**ACCTG 330 Introduction to Accounting Information Systems (3)** Concepts of accounting information systems in organizations. Processes of analyzing and designing accounting information systems, with emphasis on those using computer facilities. Internal controls and auditing considerations. Prerequisites: 302, I S 300.

**ACCTG 371 Auditing or Industrial Internship (2)** One quarter's internship with a certified public accounting firm, industrial organization, or government agency. Credit/no credit only. Prerequisite: prior departmental approval.

**ACCTG 375 Topics in Financial Reporting (4)** Critical examination of the uses and limitations of general purpose financial statements that have been prepared in accordance with generally accepted ac-

counting principles. Not open for credit to students who have completed 303. Prerequisite: 230; not open to accounting majors.

**ACCTG 401 Federal Income Tax Factors in Business Decisions (3)** Service course in taxation recommended for the junior year for non-accounting majors. May also be taken by M.B.A. students for graduate credit. Prerequisite: 230; not open to accounting majors.

**ACCTG 411 Auditing Standards and Principles (3)** Intensive introduction to the attest function in society today. The environment, the process, and the report of the public auditor are analyzed. Potential extensions of the attest function are examined. Prerequisites: 303, 311, 330.

**ACCTG 421 Tax Effects of Business Decisions (3)** Issues in taxation, including tax considerations in business decision making, tax effects of business transactions, taxation of compensation, fringe benefits, capital gains, fixed asset transactions, disposition of business distribution from corporations. Prerequisite: 303 or permission of undergraduate office.

**ACCTG 450 Business Taxation (3)** Issues of taxation for entities other than individuals, including corporations, subchapter S corporations, partnerships, estates and trusts. Includes corporate distributions, liquidations, and reorganizations. Prerequisite: 421.

**ACCTG 451 Individual Income Taxation (3)** Political, economic, and social forces influencing federal income taxation, role of taxation in personal decisions. Coverage of individual income tax matters, including business and investment income, business and personal deductions, property transactions, and tax issues of employees. Prerequisite: 421.

**ACCTG 460 Advanced Cost Accounting (3)** Advanced analysis of cost and management accounting problems; special applications of cost accounting techniques for management planning and control; current developments in cost accounting. Prerequisite: 311.

**ACCTG 470 Case Studies in Auditing (3)** Application of the theory, standards, and principles to a simulated audit engagement. Guest lecturers discuss the broad-ranging audit involvement. Prerequisite: 411.

**ACCTG 471 Internal Auditing (3)** Independent appraisal function established within an organization. Role and nature of internal auditing; intensive review of internal control; management effectiveness audits; and financial audits from the point of view of the internal auditor. Prerequisite: 411.

**ACCTG 480 Accounting for Not-for-Profit Organizations (3)** Fund and budgetary accounting as applied to public sector organizations, such as governments, foundations, hospitals, and colleges. Prerequisite: 303.

**ACCTG 485 Advanced Financial Accounting (3)** Accounting for partnerships, accounting for business combinations, parent-subsidiary and branch relationships, foreign exchange. Prerequisite: 303.

**ACCTG 490 Special Topics in Accounting (3)** Special topics of current concern to faculty and students. Offered only when faculty is available and student interest is sufficient. Class is announced in advance of scheduled offerings.

**ACCTG 495 Advanced Accounting Theory (3)** Theory of accounting related to income measurement, assets, and equities. Prerequisites: 303 and senior standing.

**ACCTG 499 Undergraduate Research (3, max. 9)** Arranged and supervised by individual members of the faculty. Prerequisite: permission of undergraduate office.

### Courses for Graduates Only

*Approval of graduate business program office required. Entry code required for nonmajors.*

**ACCTG 500 Financial Accounting (3)** Introduction to concepts and procedures underlying determination and presentation of information for financial decisions by investors and other decision makers outside the business enterprise. Study of problems of valuation, income determination, and financial reporting.

**ACCTG 501 Managerial Accounting (3)** Study of the generation and the use of accounting information within the firm for purposes of planning and controlling operations. Topics covered include cost concepts, responsibility accounting systems, cost control, and the use of accounting information in short- and long-term management decision problems. Prerequisite: 500.

**ACCTG 505 Intensive Analysis of Accounting Principles and Practices (15) S** Intensive covering of subjects in required core for undergraduate accounting majors: intermediate accounting, cost accounting, auditing, and tax accounting. Available to M.B.A. students, but credits will not count toward M.B.A. degree. Prerequisites: 210, 220, 230 or equivalent, or permission of instructor.

**ACCTG 510 Problems In Financial Reporting (3)** Extension of 500 emphasizing financial reporting from user's perspective. Alternative approaches to recognition, valuation, and measurement of assets, equities, and income. Choice of accounting methods and effects on the firm of accounting policy regulation. Prerequisites: 500, 501, or permission of instructor.

**ACCTG 511 Problems in Managerial and Cost Accounting (3)** Discussion and analysis of costing techniques, use of accounting data in planning and evaluating managerial performance, and use of accounting data in short- and long-run decisions. Issues in human behavior involved in cost allocation, budgeting, and performance evaluation. Prerequisites: 500, 501, or permission of instructor.

**ACCTG 513 Tax Effects of Business Decisions (3)** Importance of tax considerations in making business decisions. Relationship of taxable income to accounting and economic concepts of income, and the economic, political, and social background of important tax provisions. Prerequisite: 500 or 501 or permission of instructor.

**ACCTG 520 Seminar In Financial Statement Analysis (3)** Emphasizes use of published financial reports by decision makers external to the firm (e.g., investors, creditors). Within each decision context, traditional models and recent empirical research in accounting and finance. Project required as an application of course subject matter. Prerequisites: 500, 501, or permission of instructor.

**ACCTG 521 Seminar In Financial Control Systems (3)** Design and administration of formal information systems to aid the planning and control process in large organizations; formulation of divisional financial goals and control criteria; measurement of divisional performance and problems of goal congruence; administration of new investment programs. Prerequisites: 501 and O E 550 or permission of graduate office.

**ACCTG 524 Seminar In International Accounting (3)** Introduction to the conceptual, managerial, professional, and institutional issues of international accounting. Comparative and empirical studies. Current interest topics (e.g., standard setting and transnational financial reporting). Research paper required. Prerequisites: 500, 501, or permission of instructor.

**ACCTG 530 Tax Issues In Property Ownership (4)** Analysis of gain and loss realization, recognition, and characterization of such. Detailed exploration of statutory and case law regarding acquisition, ownership, and disposition of assets. Treatment of capital and ordinary gains and losses. Timing issues regarding deferral transactions and installment reporting are ana-

lyzed Prerequisite: undergraduate accounting concentration or equivalent.

**ACCTG 531 Timing and Periods of Taxation (3)** Analysis of the cash and accrual methods of accounting, choice of taxable period and multi-period transaction analysis. Consideration of statute of limitations and mitigation thereof. Details of passive activity losses. Prerequisite: undergraduate accounting concentration or equivalent.

**ACCTG 534 Fundamentals of Corporate Taxation (3)** Detailed analysis of contribution of assets to corporations. Calculation of recognized gains and basic effects of asset contributions. Treatment of income and deduction items of corporate operations. Analysis of distribution of assets to shareholders with respect to their stock. Prerequisite: undergraduate accounting concentration or equivalent.

**ACCTG 550 Communications In Professional Accounting (4)** Introduction to communications forms and to practices of professional accountants and accounting managers. Development of effective written and oral skills employed in accounting presentations, such as audit reports and consultants' reports. Study of results of organizational communications research applicable to accounting firms and/or units within firms. Prerequisite: undergraduate accounting concentration or permission of instructor.

**ACCTG 551 Management Information Systems (4)** Develops the professional accountant's responsibilities in designing and operating management information systems with an emphasis on accounting systems. Data organization and management, effects on accounting functions, responsibilities for controls and security, and planning and acquisition of system resources. Prerequisites: 330, IS 320, 504, or equivalent.

**ACCTG 552 Conceptual Framework for Financial Accounting (4)** Analysis of the process and politics of financial accounting standards. Examination of the development, the content and the influence of the FASB conceptual framework, recent FASB, SEC, and AICPA efforts in financial accounting standards. Prerequisite: undergraduate accounting concentration or equivalent.

**ACCTG 555 Statistical Methods In Professional Auditing (4)** Comparative analysis of the methods of statistical inference used in auditing and incorporation of these methods in the auditor's decision processes. Prerequisite: undergraduate accounting concentration or equivalent.

**ACCTG 557 Tax Consulting, Planning, and Research (4)** Decision-making processes in relation to problems of taxation. Tools of tax analysis and research and the communication of conclusions flowing from professional tax work. Role of the professional accountant in client business transactions and in negotiations with taxing authorities is highlighted and simulated on the basis of actual case histories. Prerequisite: undergraduate accounting concentration or equivalent.

**ACCTG 558 Current Financial Accounting and Reporting Issues (4)** Develops professional-level ability to understand, analyze, and report upon selected political, economic, social, and legal dimensions of current financial accounting and reporting issues. Issues vary each year. Prerequisite: undergraduate accounting concentration or equivalent.

**ACCTG 559 Advanced Auditing Problems and Cases (4)** Analysis of current developments in auditing and comprehensive case studies. Designed to extend knowledge of audit decision making and advanced techniques. Topics covered vary depending upon current issues facing professional auditors. Prerequisite: undergraduate accounting concentration or equivalent.

**ACCTG 560 Special Topics In Professional Accounting (4) Sp** Lectures, discussion, and case analyses dealing with special current topics relevant to professional accounting. Satisfies the professional ac-

counting elective requirement for the M.P.Acc. degree program. Prerequisite: permission of instructor.

**ACCTG 569 Management and Organization of Professional Accounting (4) Sp** Principles of managing the accounting function in private and public sector enterprises; organization, planning, and control of the public practice of professional accounting.

**ACCTG 571-572 Research Reports (3-3)** Independent study in business administration; critical evaluation of business analysis and research methods. Effective communication of ideas is emphasized. Methods and content of independent research studies subjected to critical evaluation. Open only to M.B.A. non-thesis students. Prerequisites: instructor's approval of preliminary research topic outline for 571-; 571- for -572.

**ACCTG 580 Seminar In Financial Accounting (3)** Critical examination of conceptual and practical issues in financial accounting. Specific topics may change from quarter to quarter to include applications of behavioral and economic models to financial accounting issues. Prerequisite: 510 or permission of instructor.

**ACCTG 581 Seminar In Managerial Accounting (3)** Critical examination of conceptual and practical issues of cost and managerial accounting. Specific topics may change from quarter to quarter, and they include application of behavioral, quantitative, and economic models to managerial accounting problems. Prerequisite: 511 or permission of instructor.

**ACCTG 590 Special Topics In Accounting (3)** Accounting topics of current concern to faculty and students. Offered only when faculty are available and sufficient student interest exists. Seminar content announced in advance of scheduled offering. Prerequisite: permission of instructor.

**ACCTG 595 Introduction to Accounting Research (3) A** Examination of research problems and techniques in accounting. Interdisciplinary nature of accounting research emphasized. Work in finance, economics, and psychology may be used to develop current trends in accounting research. Prerequisite: admission to doctoral program.

**ACCTG 596 Seminar In Financial Accounting Research (3, max. 6) Sp** Review and critical analysis of research strategies and methods applied to problems in financial reporting practice and financial accounting standard setting. May be repeated for credit with permission. Prerequisite: doctoral standing and 580 or equivalent or permission of graduate office.

**ACCTG 597 Seminar In Managerial Accounting Research (3, max. 6) A** Critical analysis of current managerial accounting research, both published and unpublished. May be repeated for credit with permission. Prerequisite: doctoral standing and 581 or equivalent or permission of graduate office.

**ACCTG 599 Doctoral Seminar In Accounting (3)** Study and research in advanced topics of accounting. The seminar is generally concerned with unpublished areas of research as well as research methodology and philosophy. It is conducted by departmental faculty and occasional distinguished visiting faculty. For doctoral students only.

**ACCTG 600 Independent Study or Research (\*)**

## Administration

*Approval of graduate business program office required. Entry code required.*

### Course for Graduates Only

**ADMIN 510 Integrative Administration (5, max. 15) AWSps LeBreton** Includes materials basic to the study and analysis of administration in organizations: organization theory and administrative behavior; human resources management; resource allocation, accounting, and financial control; systems operation and

analysis; marketing; governmental-societal framework; policy formulation; and strategic planning. Faculty team-teaching approach. Not open to business administration majors. Credit/no credit only. Prerequisite: permission of Graduate School of Business Administration.

## Business Administration

### Courses for Undergraduates

**B A 300 Foreign Study—Business Administration (3-5, max. 15)** For participants in approved foreign-study programs where equivalent UW business administration courses are not available. Prerequisite: permission of undergraduate adviser.

### Courses for Graduates Only

*Approval of the graduate business program office required. Entry code required.*

**B A 800 Doctoral Dissertation (\*)**

## Business Administration Research Methods

### Courses for Graduates Only

*Approval of the graduate business program office required. Entry code required for nonmajors.*

**BA RM 510 Applied Econometrics I (3)** Emphasizes the application of econometric methods rather than the mathematical proofs of statistical procedures. Introduction to the linear regression model, interpretation of summary statistics, bias and precision of regression estimates, analysis of the residuals. Prerequisites: STAT 342, or 395, or 481, or permission of instructor.

**BA RM 511 Applied Econometrics II (3)** Continuation of 510. Hypothesis testing, distributed lags, serial correlation models, simultaneous equation models. Prerequisite: 510.

**BA RM 520 Behavioral Research Methods—Theory and Design (3)** Philosophy of science, development of scientific method, and meaning of behavioral research. Historical perspective of scientific investigation and the evaluation of research. The development of theory and its relationship to research. Various strategies and designs in behavioral research. Prerequisites: STAT 361, 362, or permission of instructor.

**BA RM 521 Behavioral Research Methods—Approaches and Applications (3)** Considers alternative research approaches, such as laboratory and field experimentation, simulation, and surveys, with data-gathering techniques appropriate for each approach. It is primarily concerned with developing alternative approaches to research problems and with discussing specific applications. It builds upon a background of specific statistical tools and techniques and an understanding of theory development and research design. Prerequisites: STAT 361, 362, or permission of instructor.

## Business Communications

### Courses for Undergraduates

**B CMU 301 Basic Written Business Communications (4)** Broad analytical approach to written communications as a management tool. Analysis of the psychology, semantics, planning, and principles of effective business writing. Practical application through messages that inform and persuade, grant and refuse; plus short business reports and applications for positions. Prerequisite: junior standing or above.

**B CMU 410 Business Reports and Other Specialized Communications (5)** Covers both internal and external communications that businessmen and busi-

nesswomen write on the job. Emphasis is on various types of internal reports, ranging from short informal memos to the more complex formal reports. Also covered are specialized external types of communications directed to customers. Prerequisite: junior standing or above.

**B CMU 510 Business Communications for Managers (3) Sp** Seeks to develop understanding of communications and related theories, to describe strategies for planning managerial communications, and to build skills in oral and written reporting and persuading. Prerequisite: approval of graduate business office. Entry code required for nonmajors.

## Business Economics

### Courses for Undergraduates

**B ECN 300 Managerial Economics (3)** Analysis of economic factors affecting decisions made by business firms. Demand and cost analysis, and alternative policies from the firm's point of view. Prerequisites: ECON 200, admission to business administration or permission of undergraduate office.

**B ECN 301 Money, National Income, and Prices (4)** Measurement and analysis of business activity in the commodity and money markets; static and dynamic models of income and interest rate determination; problems and policies in the stabilization of business conditions. Prerequisites: ECON 200, 201, admission to business administration or permission of undergraduate office.

**B ECN 420 Financial Markets (4)** Analysis of the structure and functions of the money and capital markets; the saving-investment process and financial intermediaries; supply and demand for lendable funds and the level and structure of interest rates, role of Federal Reserve and Treasury in money market developments. Prerequisite: 301.

**B ECN 427 International Finance (4)** Asset choice and institutional operations in international finance; foreign-exchange problems; the impact of international financial problems and operations on business; short- and long-term international financing. Prerequisite: 301.

**B ECN 439 Business Forecasting (4)** Analysis of basic variations affecting general business conditions as a background for business and investment decisions; appraisal of proposals for controlling cycles and of forecasting techniques. Prerequisites: 301, QMETH 201.

**B ECN 490 Special Topics in Business Economics (4)** Study and research on topics of current concern to faculty and students. Only offered when allowed by faculty availability and sufficient student interest. Seminar content to be announced in advance of scheduled offerings.

**B ECN 499 Undergraduate Research (3, max. 6)** Research in selected areas of business economics. Prerequisites: 300, 301, permission of undergraduate office.

### Courses for Graduates Only

*Approval of the graduate business program office required. Entry code required for nonmajors.*

**B ECN 500 Business Economics I (3)** Factors underlying the determination of cost and prices for the industry and the firm, demand and supply analysis and firm behavior. The relation of the economic environment to the microeconomic decisions of the firm.

**B ECN 501 Business Economics II (3)** Analysis of real and monetary factors affecting the national and international economic environment, supply and demand for money, interest rates, stabilization problems and policies, in relation to government and policy effects on business and individual affairs. Prerequisite: 500.

**B ECN 513 Forecasting the Economic Environment of the Firm (3)** Survey, evaluation, and synthesis of techniques available to forecast supply and demand conditions at the macro and industry levels. Emphasis on understanding macro forecasts and converting them to industry forecasts. Prerequisite: 501.

**B ECN 520 Financial Markets (3)** Analysis of the functions and the structure of money markets; the saving-investment process and financial intermediaries; supply and demand for lendable funds and the level and structure of interest rates, role of the Federal Reserve and Treasury in the money markets. Prerequisite: 501.

**B ECN 527 International Finance and Investments (3)** Study of selected problems in financing, international trade, investment, and foreign business operations; international aspects of money markets; problems of evaluation of foreign investments. Prerequisites: 501, FIN 502.

**B ECN 528 International Financial Management (3)** Analysis of financial problems facing United States businesses engaged in international activities: financing foreign investment, financial control of foreign operations and working capital management, including foreign-exchange positions, using cases and readings.

**B ECN 571-572 Research Reports (3-3)** See ACCTG 571-572 for description.

**B ECON 590 Special Topics in Business Economics (3)** Business economics topics of current concern to faculty and students. Offered only when faculty are available and sufficient student interest exists. Seminar content announced in advance of scheduled offerings. Prerequisite: permission of instructor.

**B ECN 599 Doctoral Seminar in Business Economics (3)** Study and research in advanced topics of business economics. The seminar is generally concerned with unpublished areas of research, and is conducted by visiting professors and departmental faculty. May be repeated for credit. For doctoral students only.

**B ECN 600 Independent Study or Research (\*)**

## Business Policy

### Courses for Undergraduates

**B POL 470 Business Policy (4)** Policy making and administration from a general management point of view. Emphasis is on problem analysis, the decision-making process, administration and control, and continuous reappraisal of policies and objectives. This course integrates and builds upon the work of the core curriculum. Prerequisites: admission to business administration, senior standing or above, and FIN 350, MKTG 301, OPMGT 301, and HRMOB 400, or permission of undergraduate office.

**B POL 471 Small Business Management (4)** Policy formulation and implementation in smaller firms from the top manager's point of view. Integrates and builds upon work of the core curriculum. Includes analysis of cases and field projects related to small firms. Prerequisites: admission to business administration, senior standing or above, and FIN 350, MKTG 301, OPMGT 301, and HRMOB 400, or permission of undergraduate office.

**B POL 480 Business Simulation (5)** Critical analysis of integrated business policy formulation in a complex and dynamic industrial environment by means of simulation (business gaming). Prerequisites: admission to business administration, senior standing or above, and FIN 350, MKTG 301, OPMGT 301, and HRMOB 400, or permission of undergraduate office.

**B POL 490 Special Topics in Business Policy (4)** Study and research topics of current interest to faculty and students. Offered only when faculty is available

and student interest is sufficient. Class is announced in advance of scheduled offerings.

**B POL 499 Undergraduate Research (3, max. 9)**  
Prerequisite: permission of undergraduate office.

### Courses for Graduates Only

*Approval of the graduate business program office required. Entry code required for nonmajors.*

**B POL 505 Business Policy and Strategy (3)**  
Policy decisions and strategic leadership from the general management point of view. Determination of corporate product-service objectives, development of a network of internal operating policies and methods to achieve objectives at a cost satisfactory to the consumer and to society. Prerequisites: all first-year required courses in M.B.A. curriculum.

**B POL 530 Entrepreneurship (3)**  
Entrepreneurship, both in the form of (1) establishment of new independent businesses owned largely by those who manage them and (2) initiation of new enterprises having exceptional autonomy within larger organizations that finance and own them. Basic knowledge in accounting, marketing, and finance is assumed.

**B POL 545 Management Strategy Simulation (3)**  
Simulation practice to make decisions at general management level. Integrates concepts of marketing, finance, operations, administration, and control in company decisions. Uses computer simulation or other approaches. Students should check with advising office before enrolling. Prerequisites: ACCTG 500 and 501, HRMOB 501, FIN 502, MKTG 502, OPMGT 502, or permission of instructor.

**B POL 570 Strategic Planning Systems (3)**  
Formal institutional procedures for involving the entire organization in strategic planning and quantitative methods for doing such planning. These are applied to analyzing strategy and firm performance, predicting long-range industry and national environments, formulating corporate-level and business-level strategies, and integrating planning models into the planning process. Prerequisites: ACCTG 500 and 501, HRMOB 501, FIN 502, MKTG 502, OPMGT 502, or permission of graduate office.

**B POL 571-572 Research Reports (3-3)** See ACCTG 571-572 for description.

**B POL 575 Strategic Decision Making (3)**  
Focuses on (1) role of strategic leadership in success of organizations, (2) conceptual-logical methods for doing strategic planning, (3) organization-wide experience methods for formulating policies, and (4) decision methods for use within the strategic coalition. Prerequisites: ACCTG 500 and 501, FIN 502, MKTG 502, or permission of graduate office.

**B POL 590 Special Topics in Business Policy (3)**  
Topics of current concern to faculty and students. Offered only when allowed by faculty availability and sufficient student interest. Content announced in advance of scheduled offerings.

**B POL 599 Doctoral Seminar in Business Policy (3)**  
Study and research in advanced topics of business policy. The seminar is generally concerned with unpublished areas of research and is conducted by visiting professors and departmental faculty. May be repeated for credit.

**B POL 600 Independent Study or Research (\*)**

## Finance

### Courses for Undergraduates

**FIN 350 Business Finance (4)**  
Sources, uses, cost, and control of funds in business enterprises. Internal management of working capital and income sources and cost of long-term funds; capital budgeting; financing of the growth and expansion of business enterprises; government regulation of the financial process.

Prerequisites: B ECN 300 and admission to business administration or permission of undergraduate office.

**FIN 423 Banking and the Financial System (4)**  
Role of banks and nonbank financial institutions in the financial system; asset choices of banks and nonbank financial institutions; problems in the management of financial institutions with emphasis on commercial banks. Prerequisites: 350, B ECN 420.

**FIN 450 Problems in Corporation Finance (4)**  
Case problems in corporate financial management. Includes cases on management of current assets, obtaining short-term loans, raising long-term capital, capital budgeting, and dividend policy. The management point of view is stressed. Prerequisites: 350, ACCTG 375.

**FIN 453 Financial Theory and Analysis (4)**  
Determination of liquidity needs subject to firm constraints and longer-term capital budgeting problems involving cost of capital and capital rationing considerations; analytical approach. Prerequisites: 350, QMETH 201.

**FIN 460 Investments (4)**  
Introduction to the nature, problems, and process of evaluating particular securities and portfolio construction and administration. Special attention is directed to the risk and rate-of-return aspects of particular securities portfolios, and total wealth. Prerequisites: 350, senior standing.

**FIN 461 Financial Futures and Options Markets (4)**  
Introduction to financial futures and options markets. Instructional aspects and social functions of these markets, pricing of options and futures, and risk shifting by hedging. Prerequisite: 460.

**FIN 490 Special Topics in Finance (4)**  
Study and research topics of current concern to faculty and students. Only offered when faculty availability and sufficient student interest. Seminar content to be announced in advance of scheduled offerings.

**FIN 499 Undergraduate Research (3, max. 6)**  
Research in selected areas of business finance, money and banking, or investments. Prerequisites: 350, permission of undergraduate office.

### Courses for Graduates Only

*Approval of the graduate business program office required. Entry code required for nonmajors.*

**FIN 502 Business Finance (3)**  
Financial management of the firm, including capital budgets, working capital analysis, and financing policy. Prerequisites: ACCTG 500, B ECN 500, QMETH 500.

**FIN 513 Finance, Taxes, and Business Decisions (3)**  
Integrates finance and tax concepts. Covers basics of Federal income tax system and financial analysis of problems involving taxes. Examines interrelationship between taxes and many decision areas including financing, capital budgeting, leasing, mergers, asset valuation. Prerequisites: 550 and ACCTG 500 or ACCTG 501, or permission of instructor. Concurrent registration in ACCTG 513.

**FIN 530 Financial Management of Banks (3)**  
Analysis of problems in the financial management of commercial banks and other financial institutions. Loan and investment policies, liability management, capital policies, and other selected issues are discussed. Prerequisite: B ECN 520 or permission of graduate office.

**FIN 550 Advanced Business Finance (3)**  
Systematic coverage of the theory of financial management. Application of quantitative analysis to financial problems of the firm, including the investment and financial decisions, lease analysis. Prerequisite: 502.

**FIN 551 Problems in Business Finance (3)**  
The application of financial principles and techniques to problems in financial management. Topics include cash management, credit management, problems in short- and long-term financing, and capital budgeting. Prerequisite: 502.

**FIN 552 Seminar in Business Finance (3)**  
Study of the financing of the corporation, including recent theoretical and institutional developments. Extensive reading and discussion in designated areas covering problems relating to financial management and to the social and economic implications of the financial process. Prerequisite: 550.

**FIN 553 Capital Investment Planning (3)**  
Capital investment planning by a multiproduct company organized into strategic business units. Determinants of the company's value, diversification by acquisition, diversification by start-up, divestiture analysis, tests for choosing the best market share-growth policy in each strategic business unit, problems in applying these tests. Prerequisite: 502.

**FIN 560 Investments (3)**  
Introduction to the nature, problems, and process of evaluating particular securities and portfolio construction and administration. Special attention is directed to the risk and rate-of-return aspects of particular securities, securities portfolios, and total wealth. Prerequisite: 502 or permission of graduate office.

**FIN 561 Financial Futures and Options Markets (3)**  
Pricing of options and futures contracts are analyzed and available empirical evidence is examined. Particular attention is given to the ways these instruments can be used to reduce an investor's or a firm's exposure to risk. Prerequisite: 560.

**FIN 571-572 Research Reports (3-3)** See ACCTG 571-572 for description.

**FIN 580 Doctoral Seminar in Capital Market Theory (3)**  
Decision making under uncertainty, information and capital market efficiency, portfolio theory, capital asset pricing model, arbitrage pricing model, and options pricing model. For doctoral students or by permission. Prerequisites: ECON 500, 517.

**FIN 581 Doctoral Seminar in Corporate Finance (3)**  
Principles of intertemporal choice, alternative valuation models, theory of investment under uncertainty, impact of dividend and financing decisions on firm valuation in perfect and imperfect markets, and theory of firm organization and agency costs. For doctoral students or by permission. Prerequisite: 580.

**FIN 582 Doctoral Seminar in Financial Research (3)**  
Empirical research in finance with emphasis on methodology and scientific method. Empirical research in market efficiency, capital asset pricing model, options pricing model, and impact of firm's dividend and financing decisions on firm value. For doctoral students or by permission. Prerequisites: 580, 581, BA RM 510.

**FIN 590 Special Topics in Finance (3)**  
Finance topics of current concern to faculty and students. Offered only when faculty are available and sufficient student interest exists. Seminar content announced in advance of scheduled offerings. Prerequisite: permission of instructor.

**FIN 599 Doctoral Seminar in Finance (1-1-1, max. 9)**  
Study and research in advanced topics of finance. Generally concerned with unpublished areas of research, conducted by visiting professors and departmental faculty. For doctoral students only.

**FIN 600 Independent Study or Research (\*)**

## Human Resources Management and Organizational Behavior

### Courses for Undergraduates

**HRMOB 301 Personnel Systems and Industrial Relations (3)**  
The personnel/industrial relations function from a managerial perspective. Selection, compensation, performance appraisal, and training and development. Special emphasis on union-manage-

ment relations and relevant behavior science research. Prerequisite: junior standing or above.

**HRMOB 400 The Management of Organizational Behavior (4)** Behavioral aspects of management in organizations, with emphasis on leadership, motivation, communication, conflict resolution, group dynamics, and organization development. Prerequisite: admission to business administration or permission of undergraduate office.

**HRMOB 410 Staffing (4)** Affirmative action, recruitment, testing, interviewing, placement, promotion, and overall human resource planning. Prerequisite: junior standing or above.

**HRMOB 415 Performance Appraisal and Compensation (4)** The various kinds of systems used by organizations to evaluate and reward employee performance. Job analysis, job evaluation, setting performance standards, giving appraisal feedback, designing incentive systems, administering a salary plan. Prerequisite: junior standing or above.

**HRMOB 420 Collective Bargaining and Arbitration (4)** Labor-management relations. The legal context, union organizing, grievance administration, collective bargaining. Individual and group simulations used. Prerequisite: junior standing or above.

**HRMOB 450 Leadership and Decision Making (4)** The manager as leader and decision maker. Various leadership theories, styles, and behaviors. Decision-making models and techniques. Prerequisite: junior standing or above.

**HRMOB 460 Negotiations (4)** The art and science of negotiations with the goal of making students more effective negotiators in a variety of business situations, such as budget negotiations, buying and selling, contracts, and merger negotiations. Concept and skill development. Prerequisite: junior standing or above.

**HRMOB 470 Motivation and Performance (4)** Various strategies for influencing employee motivation and performance. Reward systems, goal-setting procedures, and various techniques to enlarge and enrich one's job. Effects of these formal and informal strategies on job attitudes. Prerequisite: junior standing or above.

**HRMOB 475 Organization Development and Change (4)** Provides a conceptual understanding of organization development theory, practice, and research. Organization development is an umbrella term for a collection of behavioral science techniques for increasing individual, group, and organizational effectiveness. Prerequisite: junior standing or above.

**HRMOB 490 Special Topics in Human Resources Management and Organizational Behavior (4)** Topics of current interest to faculty and students. Offered when allowed by faculty availability and sufficient student interest. Content announced in advance of scheduled offerings. Prerequisite: junior standing or above.

**HRMOB 499 Undergraduate Research (3, max. 9)**

## Courses for Graduates Only

*Approval of the graduate business program office required. Entry code required for nonmajors.*

**HRMOB 500 The Management of Organizational Behavior (3)** Behavioral aspects of management with emphasis on leadership, motivation, and decision making. May include communication, conflict management, group dynamics, and organizational change.

**HRMOB 501 Human Resources Management (3)** Fair employment practice, job analysis, selection, performance appraisal, and training. May include compensation and labor relations.

**HRMOB 510 Staffing (3)** Systems related to manpower planning, recruitment, interviewing, placement, and development. Advanced techniques, with emphasis on validating predictive measures of performance. Criteria development, psychological testing, validation

procedures, and cost effectiveness of personnel research.

**HRMOB 515 Performance Appraisal and Compensation (3)** Strategies, procedures, and problems in evaluating and rewarding employees. Performance measurement methods, different appraisal systems, and ways of coaching employees. Ways to integrate performance appraisal into compensation systems.

**HRMOB 520 Collective Bargaining (3)** Traditional labor-management relations in private, public, and nonprofit sectors with special emphasis on grievance arbitration and collective bargaining processes. Simulations and case studies.

**HRMOB 525 Dispute Settlement and Labor-Management Cooperation (3)** Goes beyond traditional collective bargaining and grievance arbitration to examine the role of third parties and mediators, interest arbitrators, and fact finders. New forms of labor-management cooperation, such as gain sharing, quality of work life programs and labor-management commitments.

**HRMOB 530 Managerial Behavior in Cross-Cultural Settings (3)** The role of culture as it impacts managerial values and behavior in diverse national settings, including the United States, western Europe, Latin America, and Japan.

**HRMOB 550 Leadership (3)** Various theories of leadership. Trait theories, leader behavior theories, and situational theories. Concept of leadership within the broader framework of power—how power is gained, lost, and distributed within organizations.

**HRMOB 555 Employee Attachment to the Organization (3)** Theory, research, and practice on selected topics, such as employee turnover, absenteeism, organizational commitment, job involvement, socialization, career management, and organizational climate. These concepts discussed from standpoint of prediction, understanding, and control.

**HRMOB 560 Negotiations (3)** Strategy used in negotiations other than labor-management bargaining to develop skills necessary to devise a negotiating strategy appropriate to situation. Negotiation of contracts in simulated business settings, case studies, readings.

**HRMOB 565 Decision Making (3)** Individual and group decision-making strategies and techniques. Learning to match decision problems with an appropriate strategy and to understand cognitive and social processes that influence decisions. Expected value, simple rules, decision trees, delphi, nominal group, participative methods.

**HRMOB 570 Motivation (3)** Approaches that emphasize people's needs, effects of reward systems, and goal setting, as well as topics that show how the social environment and the task itself influence motivation. Different motivational techniques to be used under various conditions.

**HRMOB 571-572 Research Reports (3-3)** See ACCTG 571-572 for description.

**HRMOB 575 Theory and Practice in Organizational Development (3)** Theory, practice, and research in organizational development—the applied discipline that seeks to improve organizational effectiveness, efficiency, and morale through causing changes in managerial practices and organizational dynamics. History of the field, intervention techniques, diagnostic methods, and client-consultant relations. Concepts and skill development.

**HRMOB 590 Special Topics in Human Resources Management and Organizational Behavior (3)** In-depth study and research on topics of special interest to faculty members and students in the fields of human resources management and organizational behavior. Offered on an *ad hoc* basis. Content announced before scheduled offering.

**HRMOB 599 Doctoral Seminar in Human Resources Management and Organizational Behavior (1-3, max. 12)** Advanced topics in the fields of human resources management and organizational behavior. May be used by visiting faculty members to present topics of interest to students. For doctoral students only. May be repeated for credit.

**HRMOB 600 Independent Study or Research (\*)**

## Information Systems

### Courses for Undergraduates

**IS 300 Management Information Systems (4)** Fundamentals of information systems, what they are, how they affect organizations. Technical and organizational foundations of information systems, building information systems, managing information system resources. Laboratory emphasizes using computer to analyze, coordinate, solve organizational decision-making problems. Prerequisite: admission to School of Business Administration or permission of undergraduate office.

**IS 320 Data Structure and File Systems (4)** Concepts of data and file management. Data types and data structures; organizing data on external storage devices; sequential, direct, and indexed access methods; multilist and inverted files; sorting and searching algorithms. Instruction in, and use of, a programming language using structured techniques to implement these concepts. Prerequisites: 300 and junior standing or above.

**IS 409 Applications Programming for Information Systems (4)** Introduction to business systems concepts. Use of structured design and programming techniques. Application system development using COBOL for creating and managing sequential, indexed, and relative files. Sorting, merging, and table processing. Report generation. Introduction to screen management programming. Prerequisite: 320.

**IS 460 Systems Analysis and Design I (4)** First course in analysis and design of business information systems. Concentrates on analysis phase of systems development. Systems development life cycle, the feasibility study, analysis of user requirements, and the development of a logical model for the system under study. Prerequisites: 320 and junior standing or above.

**IS 461 Systems Analysis and Design II (4)** Second course in analysis and design of business information systems. Concentrates on design and implementation phases of systems development. Translation of logical system model into physical model, design of modules, file design, testing, implementation. Includes a project using third- and fourth-generation software development tools. Prerequisites: 409, 460, and junior standing or above.

**IS 480 Data-Base Management (4)** Concepts of physical and logical data-base organization. Physical file structures used in data management. Logical data models, including hierarchical, network, relational. Data-base design, data dictionaries, data manipulation languages. Exercises in design, implementation, and use of data-base systems. Survey of commercial data-base management systems. Prerequisites: 320 and junior standing or above.

**IS 490 Selected Topics in Information Systems (1-5, max. 20)** Topics of current concern to faculty and students. Potential topics include networks and distributed information-processing systems, office automation, artificial intelligence and knowledge-based systems, new approaches to systems development, fourth- and fifth-generation languages, economics of information systems. Prerequisites: 320 and junior standing or above.

**IS 499 Undergraduate Research (1-4, max. 12)** Selected problems in information systems and computer applications. Prerequisite: permission of undergraduate office.

## Courses for Graduates Only

*Approval of the graduate business program office required. Entry code required for nonmajors. Students interested in probability and statistics are also urged to consider BA RM 500 and 501.*

**IS 504 Computer-Based Information Systems for Management (3)** Information systems and computer technology for students with little or no prior course work or experience in this area. Concepts for information use in decision making. Use of decision-support problem-solving tools (e.g., spread sheet, data-base software). Management's responsibility in defining, developing, using information systems is focal point.

**IS 520 Data Structures and File Systems (3)** Concepts of data and file management. Data types and data structures; organizing data on external storage devices; sequential, direct, and indexed access methods; list processing; multilist and inverted files, sorting and searching algorithms; search trees. Concepts are supplemented by programming languages. Prerequisites: 504 and knowledge of programming language.

**IS 530 Management of Information Systems Resources (3)** Topics include general control problem in organizations; performance evaluation of data processing managers; technology and cost trends; software cost estimation; capacity planning; short term utilization; queueing and associated externalities; issues in centralization and decentralization of the information system facilities. Prerequisite: 504 or equivalent.

**IS 560 Systems Development I (3)** First course in analysis and design of business information systems. Concentrates on analysis phase of systems development. Includes systems development life cycle, feasibility study, analysis of user requirements, development of logical model for the system under study. Prerequisites: 504 and introductory knowledge of programming languages.

**IS 561 Systems Development II (3)** Second course in analysis and design, which concentrates on the design and implementation phases of systems development. Translation of logical system model into physical model, design of modules, file design, testing, implementation, and information system administration. Prerequisite: 560.

**IS 571-572 Research Reports (3-3)** See ACCTG 571-572 for description.

**IS 580 Database Management (3)** Concepts of physical, logical database organization. Physical file structures used in data management. Logical data models, including hierarchical, network, relational. Database design. Data dictionaries. Data manipulation languages. Exercise in design, implementation, use of several database management systems. Survey of commercial database management systems. Database administrator's role. Prerequisites: 504 and introductory knowledge of a programming language.

**IS 590 Selected Topics in Information Systems (1-5, max. 20)** Topics of current concern to faculty and students. Potential topics include networks and distributed information-processing systems, office automation, artificial intelligence and knowledge-based systems, new approaches to systems development, fourth- and fifth-generation languages, economics of information systems. Prerequisite: 504.

**IS 599 Doctoral Seminar ((1-1)-1, max. 12)** Advanced topics of information systems. Generally concerned with unpublished areas of research and conducted by visiting professors and departmental faculty. Doctoral students only.

**IS 600 Independent Study or Research (\*)**

## International Business

### Courses for Undergraduates

**IBUS 300 The International Environment of Business (3)** Prepares students to understand the most important aspects of the international political economy. Emphasis on the important relationships among nations and business and economic institutions that influence students' performances as managers, consumers, and citizens. Prerequisites: ECON 200, 201, admission to business administration or permission of undergraduate office.

**IBUS 330 Business Environment in Developing Nations (4)** The international environment for transnational trade, investment, and operations in the less-developed countries; survey of the economics of underdevelopment; analysis of foreign economic, cultural, and political environments and their impact on international business; foreign investment in the development process; case studies. Prerequisites: 300 or equivalent and junior standing or above.

**IBUS 340 Business Environment in Industrial Countries (4)** Factors and conditions affecting business operations and behavior in developed countries, international integration, business relations among nation states and integrated supranational systems, direct investment and multinational industrial activities, analysis of sources and causes of international change. Prerequisites: 300 or equivalent and junior standing or above.

**IBUS 440 Business in Japan (4)** Major aspects of the Japanese business environment and how Japanese enterprises are managed. Problems and opportunities of foreign corporations in Japan. Prerequisite: 300 or 550 or permission of instructor.

**IBUS 470 Management of International Trade Operations (4)** Applicable for students interested in exporting and importing activities, but especially relevant to small companies. Management of import-export operations and the application of relevant functional tools. Cases and class projects are drawn from service companies as well as from manufacturers. Prerequisites: 300 and junior standing or above.

**IBUS 480 Multinational Operations Management (4)** Case studies in foreign operations management: planning international objectives and strategies; developing multinational company structures and executives; adapting administrative practices and operating policies to international diversities. Prerequisites: 300, 470, and junior standing or above.

**IBUS 490 Special Topics in International Business (4, max. 12)** Students and faculty focus on current topics of concern. Offered when faculty, student interest, and availability allow. Prerequisites: 300 or permission of instructor and junior standing or above.

**IBUS 499 Undergraduate Research (3, max. 9)** Prerequisite: permission of undergraduate office.

### Courses for Graduates Only

*Approval of the graduate business program office required. Entry code required for nonmajors.*

**IBUS 550 International Business Environment (3)** Understanding the underlying economic, political, and social forces in the international business environment and assessing impact of these forces on international trade and investment. Theories of international trade, foreign investment, international monetary relations and economic integration, and national policy response to international market forces. May be taken first year of M.B.A. program, preferably after student has had B ECN 500 and 501, or equivalent.

**IBUS 560 Multinational Business Management (3)** Managerial responses to problems of international business organizations and operations. Strategy formulation in an international context; design and control

of multinational organization; adaptation of management systems and policies to different economic, sociocultural, and political environments. Prerequisite: 550 or equivalent, or course in international economics or trade or international finance, or permission of graduate office.

**IBUS 570 International Business in Less-Developed Countries (3)** Understanding the economic, sociocultural, and political environment in the less-developed countries. Problems of international trade and investment, north-south relations, commodities, technology transfer, foreign aid, and capital flows. Prerequisites: 550 or equivalent, a course in international economics or trade or international finance, or permission of graduate office.

**IBUS 571-572 Research Reports (3-3)** See ACCTG 571-572 for description.

**IBUS 580 International Business in Industrialized Countries (3)** Understanding the economic, sociocultural, and political environment in developed, industrialized countries. Problems of international trade and payments relations, economic integration, national policies, and supranational organizations' impact on managerial environments. Prerequisite: 550 or equivalent, or course in international economics or trade or international finance, or permission of graduate office.

**IBUS 590 Seminar: Special Topics in International Business (3)** Application of international business principles to the analysis of a specific issue in trade or resource transfer, or to the business conditions in a particular country. Japan and other Pacific Rim countries are frequent topics. Prerequisite: 550 or permission of instructor.

**IBUS 595 Business Studies Abroad (\*, max. 18)** Research and study of foreign business problems in the country or countries where the firms are located. Limited to students who have the approval of their major adviser and a faculty member who has agreed to direct their work in accordance with a definite program of studies.

**IBUS 599 Doctoral Seminar in International Business (3)** Study and research in advanced topics of international business. The seminar is generally concerned with unpublished areas of research and is conducted by visiting professors and departmental faculty. May be repeated for credit. For doctoral students only.

**IBUS 600 Independent Study or Research (\*)**

## Marketing

### Courses for Undergraduates

**MKTG 301 Marketing Concepts (4)** Tools, factors, and concepts used by management in planning, establishing policies, and solving marketing problems. Marketing concepts, consumer demand and behavior, location analysis, marketing, functions, institutions, channels, prices, and public policy. Prerequisites: ECON 200 and admission to business administration or permission of undergraduate office.

**MKTG 310 Product and Price Policies (4)** Important aspects of product planning and development, product line decisions, packaging, brand policies, guarantees, and services. Price theory is considered but emphasis is placed on special pricing policies and problems and legal constraints on pricing activity. Prerequisites: 301, B ECN 300, and junior standing or above.

**MKTG 330 Sales Force Management (4)** Sales and distribution planning; sales organization and training; management of the sales force; methods of sales, cost, and performance analysis. Prerequisites: 301 and junior standing or above.

**MKTG 340 Advertising (4)** Management of the advertising function and its integration with other forms of promotion. Planning the program, determining the

most effective approach, evaluation of media and budget, advertising research, advertising institutions, economic and social aspects. Prerequisites: 301 and junior standing or above.

**MKTG 370 Retailing (4)** Profit planning and business control; buying, stock control, pricing, promotion; store location, layout, organization, policies, systems; coordination of store activities. Prerequisites: 301 and junior standing or above.

**MKTG 450 Consumer Behavior (4)** Theory and practice pertinent to marketing decisions of individuals and business firms; utilization of theories from behavioral sciences in marketing research; theories of fashion, characteristics of goods, shopping behavior, product differentiation, market segmentation, and opinion leadership; application of concepts to management of advertising, personal selling, pricing, and channels of distribution. Prerequisites: 301 and junior standing or above; recommended: QMETH 201.

**MKTG 460 Marketing Research (4)** Marketing research process; preliminary steps and research design, questionnaires, secondary and primary data, sampling, processing and interpreting data, evaluation and effective presentation of findings. A class research project provides practical application of methods studied. Prerequisites: 301, QMETH 201, or equivalent, and junior standing or above.

**MKTG 465 Marketing Research Topics (4)** Topics such as experimental design, market analysis, positioning and segmentation research, advertising research, forecasting, and new product research covered in varying depths, depending on instructor's emphasis. Prerequisite: 460.

**MKTG 475 Retail Structure and Strategy (4)** Analysis of the nature and scope of competition within and between sectors of retail trade. Emphasis is placed on the importance of demographic, environmental, and legal differences between geographical areas in determining the level of competition. Prerequisites: 301 and senior status; recommended 370.

**MKTG 480 Advanced Marketing Management (4)** Introduction to advanced marketing management through the application of various decision-making models and selected computer routines to such marketing problems as advertising budgeting, media planning, sales forecasting, sales-force allocation, and pricing. Applications include market simulation, Bayesian approaches, and linear programming. Prerequisites: 301, MATH 157, or equivalent, and junior standing or above.

**MKTG 485 Cases in Marketing Management (4)** Analysis of managerial marketing cases involving market trends, marketing research, product planning, distribution channels, pricing, promotion, and social trends. Prerequisites: 301 and senior standing.

**MKTG 490 Special Topics and Issues in Marketing (4, max. 8)** Contemporary topics and issues in marketing: marketing in nonprofit organizations, marketing of services, marketing in the public sector, and marketing in an economy of scarcity. Ordinarily only one topic area is addressed in any one quarter. Course content reflects contemporary developments and the current interests of instructors and students. Prerequisites: 301 and junior standing or above.

**MKTG 499 Undergraduate Research (3, max. 9)** Prerequisite: permission of undergraduate office.

### Courses for Graduates Only

*Approval of the graduate business program office required. Entry code required for nonmajors.*

**MKTG 501 Marketing Management (3)** Analysis and management of customer satisfaction in goods and services markets by profit and nonprofit organizations. Buyer behavior, market segmentation and product positioning, product policy, pricing, distribution, sales force and advertising management, and market

research in the contexts of strategy development, decision making, implementation, and control.

**MKTG 510 Product and Price Management (3)** Identification of market opportunities, choice of which goods and services in what combinations to market, and prices at which to offer them. Considers product and price interrelationships in product-line management; product differentiation; the marketing mix; and multiple-market, oligopoly, and monopoly contexts. Includes policy considerations. Prerequisite: 501.

**MKTG 520 Distribution Management (3)** Location and distribution decisions for goods and services in profit and nonprofit organizations. Considers methods of optimizing the number and quality of institutions and activities employed in dealing with exchange, and space and time aspects of distribution. Relates distribution questions to the marketing mix and organizational objectives. Prerequisite: 501.

**MKTG 525 Strategic Retail Management (3)** Emphasis on strategic planning decisions faced by senior management in a wide range of retail industries. Taught exclusively by the case method. Prerequisite: 501.

**MKTG 530 Management of Sales Operations (3)** Management of personal selling activities within a marketing program. Setting objectives, determining sales strategies; recruiting, selection, and training of sales representatives; allocation of effort, supervision, compensation, and control. Emphasis on case studies. Prerequisite: 501.

**MKTG 540 Advertising and Promotion Management (3)** Management of advertising and promotional activities; their integration with other elements of the marketing mix. Topics include: understanding the communication process, analyzing markets, working with suppliers, establishing objectives, determining budgets, selecting media, measuring and evaluating effectiveness, using publicity and promotions. Legal, social, and economic consequences are considered. Prerequisite: 501.

**MKTG 550 Consumer Behavior (3)** Analysis of current research in consumer behavior. Topics include consumer decision-making processes, models of buyer behavior, and contributions from the behavioral sciences. Prerequisite: 501.

**MKTG 560 Research for Marketing Decisions (3)** Methods and applications of marketing research incorporating analytical procedures and relevant concepts from behavioral and quantitative sciences. Deals with various aspects of research: problem definition, research design, questionnaire construction, sampling, and data analysis. Introduces promising new developments: multivariate techniques of data analysis, laboratory and field experimentation, and demand analysis in both business and public environments. Prerequisites: 501, QMETH 500.

**MKTG 565 Analysis of Multivariate Marketing Data (3)** Methods of analyzing multivariate data in such marketing research problems as market segmentation and product positioning. The analytical procedures include factor, cluster, and discriminant analysis, multidimensional scaling, and conjoint measurement. Prerequisites: 501, QMETH 500.

**MKTG 570 International Marketing (3)** Analysis of the marketing strategies and tactics of multinational corporations. Choice of entry strategies for foreign markets, analyzing international competition at home and abroad, and developing global marketing strategies. Prerequisite: 501; recommended: one international business course.

**MKTG 571-572 Research Reports (3-3)** See ACCTG 571-572 for description.

**MKTG 580 Strategic Market Management (3)** Marketing dimensions of strategic planning with emphasis on identifying market opportunities and implementing appropriate competitive-advantage strategies. Includes strategies to stimulate brand demand; defend

one's market position; manage the behavior of competitors; manage the behavior of suppliers; and increase the market orientation of one's business. Prerequisites: 501, B POL 505.

**MKTG 590 Special Topics in Marketing (3, max. 9)** Marketing topics of current concern to faculty and students. Offered only when allowed by faculty availability and sufficient student interest. Seminar content to be announced in advance of scheduled offerings. Prerequisite: 501.

**MKTG 599 Doctoral Seminar in Marketing (3)** Study and research in advanced topics of marketing. The seminar is generally concerned with unpublished areas of research and is conducted by visiting professors and departmental faculty. May be repeated for credit. For doctoral students only.

**MKTG 600 Independent Study or Research (\*)**

## Operations Management

### Courses for Undergraduates

**OPMGT 301 Principles of Operations Management (3)** Introduces application of quantitative analysis to problems in planning, operating, and controlling production function. Problems of distribution and allocation, management of inventory systems, production scheduling, improvement curves, and service systems. Uses computer and quantitative models in formulating managerial problems. Prerequisites: QMETH 201 and admission to business administration or permission of undergraduate office.

**OPMGT 401 Administration of Operations (4)** Analysis of case studies in the management of operations. Uses analytical techniques to derive solutions for actual situations. Strategic resource allocation, project planning, scheduling, quality assurance and the management of quality, and international production planning. Prerequisite: 301 or equivalent.

**OPMGT 443 Inventory and Materials Management (4)** Production and inventory management decisions for manufacturing and distribution firms. Techniques for forecasting demand for finished product items; role of inventories and aggregate planning in production process. Integrated materials requirements planning (MRP) and capacity planning. Prerequisite: 301 or equivalent.

**OPMGT 450 Operations Scheduling (4)** Continuous flow, intermittent, and project production processes and tools for managing these processes. Assembly-line balancing, job shop scheduling, project planning and control (PERT and CPM), improvement curves, work-force scheduling, and vehicle scheduling. Prerequisite: 301 or equivalent.

**OPMGT 490 Special Topics in Operations Management (4)** Operations management topics of current concern to faculty and students. Potential topics are: logistics management, project scheduling, manufacturing strategy, site and location analysis, management of service operations. May be repeated for credit as topics change. Prerequisite: 301.

**OPMGT 499 Undergraduate Research (3, max. 9)** Prerequisite: permission of undergraduate office.

### Courses for Graduates Only

*Approval of the graduate business program office required. Entry code required for nonmajors.*

**OPMGT 502 Introduction to Operations Management (3)** Production of goods or services in any type of organization or institution. Managerial decision making in operations problems, including application of quantitative analysis and use of computers. Inventory management, scheduling, facility location, management of service systems, and quality assurance. Prerequisites: QMETH 500, 501 or equivalent.

**OPMGT 517 Materials Management and Production Scheduling (3)** Managing materials and information flows in manufacturing and distribution firms. Cost analysis, quantity, quality, timing, control, and vendor selection. Demand forecasting, production scheduling, inventory management (including materials requirements planning), capacity planning, and procurement. Prerequisite: 502.

**OPMGT 530 Facility Layout and Location (3)** Quantitative models used to analyze problems in the layout and location of economic facilities. Location problems in both the public and private sectors, including specific applications. Current research. Prerequisite: 502.

**OPMGT 535 Logistics/Physical Distribution Management (3)** Management of distribution process, including all activities involved in physically moving raw materials, in-process inventory, and finished goods inventory from point of origin to point of consumption. Includes warehousing, location, order processing, materials management, and strategic planning in physical distribution organizations. Prerequisite: 502.

**OPMGT 540 Manufacturing Strategy (3)** Develops a general framework for creating and analyzing a strategy for domestic and international manufacturing-based companies and industries. Identifying and integrating those categories of manufacturing decisions that have a strategic impact. Work-force management, capacity planning, and organization of the manufacturing function. Course based substantially on case studies. Prerequisite: 502.

**OPMGT 550 Project Management (3)** Management of complex projects, and tools and techniques (e.g., CPM and PERT) developed to aid planning, scheduling, and control of projects. Includes work breakdown structures, precedence networks, Gantt charts, resource leveling and allocation, and the use of micro-computer programs. Prerequisite: 502.

**OPMGT 571-572 Research Reports (3-3)** See ACCTG 571-572 for description.

**OPMGT 577 System Dynamics (3)** Analysis of feedback structure and dynamic behavior of management decision and information systems. Dynamics of management decision making from an overall systems point of view. Interaction of separate components of an enterprise. Organizational control and growth of firms and other social, economic, and environmental systems viewed as feedback systems. Construction of continuous-flow computer simulation models using a specialized language such as DYNAMO. Prerequisite: 502.

**OPMGT 587 Advanced Topics in Inventory Management (3)** Survey of literature in inventory/production control with emphasis on current research. Topics include single-echelon deterministic and probabilistic models and multi-echelon stochastic models. For doctoral and advanced masters students. Prerequisites: 517, and STAT 516 or STAT 491.

**OPMGT 590 Special Topics in Operations Management (1-5, max. 20)** Major topics in operations management and systems analysis. Emphasis on research and, where appropriate, application of quantitative analysis and computer. Topics vary, including work-force planning, project management, research and development management, quality assurance, technology planning and forecasting, systems analysis of complex organizations, and urban systems analysis. May be repeated for credit. Prerequisite: 502.

**OPMGT 599 Doctoral Seminar in Operations Management (1-1, max. 12)** Study and research in advanced topics of operations management. The seminar is generally concerned with unpublished areas of research and is conducted by visiting professors and departmental faculty. May be repeated for credit.

**OPMGT 600 Independent Study or Research (\*)** AWPSP

## Organization and Environment

### Courses for Undergraduates

**O E 200 Introduction to Law (5)** Legal institutions and processes; law as a system of social thought and behavior and a frame of order within which rival claims are resolved and compromised; legal reasoning; law as a process of protecting and facilitating voluntary arrangements in a business society. Prerequisite: sophomore standing or above.

**O E 302 Organization and Environment (4)** Political, social, and legal environment of business. Critical managerial issues from historical, theoretical, ethical perspectives; their impact on organization. Corporate political power, boards of directors, capitalism, industrial policy, business ethics and social responsibility, alternative corporate roles in society. Prerequisite: admission to business administration or permission of undergraduate office.

**O E 310 Political and Regulatory Environment of Business (5)** Managerial implications of restrictions imposed by government on corporations from legal point of view. Constitutional law impacting business managers; antitrust, administrative, and regulatory issues; environmental law, product liability law, and securities law. Not a business or commercial law course. Prerequisite: junior standing or above.

**O E 314 Historical Development of the Business-Government Relationship (3)** Business-government relationships in American history, with aim of defining and explaining patterns in attitudes and behavior rather than detailing events. Discussions organized in terms of policy areas (e.g., national banking, transportation, agriculture, energy, industry in wartime, trade, and research). Prerequisite: junior standing or above.

**O E 316 Business Ethics and Corporate Social Responsibility (3)** Philosophical and pragmatic perspectives, including values and social/ethical premises in organizational decision making. Several issues covered in depth; investments abroad, hazardous products, bribery, industry practices, and others. Prerequisite: junior standing or above.

**O E 403 Commercial Law (5)** Principles of the law of contracts, agency, property, sales, negotiable instruments, and security transactions. Prerequisites: 200, junior standing or above.

**O E 440 Organization Structure (3)** Concepts of formal organization structures, power, authority, and influence; delegation and decentralization, strategic planning, decision making; philosophy and values in management, the organization in the context of the environment and its impact on the organization's sub-systems. Prerequisites: HRMOB 400 and admission to business administration or permission of undergraduate office.

**O E 441 Advanced Organization Theory (3)** Current research, measuring of organizational effectiveness, planning for alternate structural relationships, developments in related disciplines, and current issues. Prerequisite: 440.

**O E 490 Special Topics and Issues in Organization and Environment (4)** Topics and issues of business organization and a changing environment. Content reflects interests of faculty members and students not otherwise covered in the curriculum. Prerequisite: junior standing or above.

**O E 499 Undergraduate Research (3, max. 9)** Selected problem areas or issues in consultation among faculty members and students. Prerequisite: permission of the undergraduate office.

### Courses for Graduates Only

*Approval of the graduate business program office required. Entry code required for nonmajors.*

**O E 502 Organization and Environment (3)** Business organization's political, social and legal environments. Critical managerial issues from historical, theoretical, and social/ethical perspectives. Corporate political power, corporate boards of directors, industrial power, social responsibility, business ethics, roles of the corporation in society, themes of change.

**O E 510 Legal and Regulatory Constraints on Business (3)** Managerial implications of restrictions imposed by government on corporations from legal point of view. Employment law, environmental law, product liability law, securities law, campaign finance law. Not a business or commercial law course.

**O E 512 The Politics of Business Legislation and Regulation (3)** The politics of legislation and regulation affecting business. Political processes (how the rules are made) rather than substance (what the rules are). Academic and managerial perspectives. Legislative politics, regulatory politics, trade associations, lobbying, and campaign financing.

**O E 516 Business Ethics and Corporate Responsibility (3)** Business ethics and corporate social responsibility from philosophical, theoretical, and pragmatic perspectives. Ethical theories and the role of values in business. Ethics and social responsibility put into a framework useful for practicing managers.

**O E 523 Commercial Law (3)** Principles of the law of property sales, negotiable instruments, and security transactions.

**O E 550 Organization and Management (3)** Integrates management as practice, theory, and research. Concepts and values, alternative theories, organizational rationality, cooperative and coordinated systems, bureaucracy and classical organization theory, executive function, accountability and legitimacy; manager's role in matching environment, culture goals, strategy, structure, technology, and control systems.

**O E 560 Seminar in Organization Design (3)** Top managers can choose among alternative organizational forms. Each is dependent on the current stage in the organization's life cycle, the organization's strategy, and internal organization practices. Conditions that lead to effective organization design.

**O E 571-572 Research Reports (3-3)** See ACCTG 571-572 for description.

**O E 587 Seminar in Advanced Organization Theory (3)** Major issues and problems in the design and conduct of organization theory research. Organizational philosophy, structural congruence with environment, goals and effectiveness, culture and values, power and politics, information and control, and structure and bureaucracy.

**O E 589 Seminar in Management of Technology and Innovation (3)** Critical issues relating to the management of technology and innovation. How to design innovative organizations in terms of strategy, structure, and process. The innovation process, creativity, management of professionals, technical and strategic leadership, entrepreneurship, intrapreneurship, and matrix management.

**O E 590 Special Topics in Organization and Environment (3, max. 9)** Topics of current concern to faculty members and students. Offered only when faculty members are available and there is sufficient student interest.

**O E 599 Doctoral Seminar in Organization and Environment (1-3, max. 12)** Open only to Organization and Environment majors and minors in the doctoral program. Attendance of Organization and Environment majors is mandatory in consultation with area supervisor.

**O E 600 Independent Study or Research (\*)**

## Quantitative Methods

### Courses for Undergraduates

#### Statistics

**QMETH 201 Introduction to Statistical Methods (4)** Survey of principles of data analysis and their applications for management problems. Elementary techniques of classification, summarization, and visual display of data. Applications of probability models for inference and decision making are illustrated through examples. Prerequisites: MATH 157 or equivalent, and sophomore standing or above.

**QMETH 301 Data Analysis for Management (4)** Applied statistical linear models: simple and multiple regression, analysis of variance. Prerequisites: 201 and junior standing or above.

#### Business Mathematics and Operations Research

**QMETH 300 Quantitative Analysis for Business (4)** Introduction to mathematical tools utilized for analysis of business problems; appreciation of the use of these tools in business situations; calculus; linear algebra. Prerequisites: MATH 157 and junior standing or above.

**QMETH 424 Simulation (4)** Discrete-event simulation methodology emphasizing model formulation and construction, statistical base for simulation modeling, and computer languages. Applications to industrial and manufacturing problems. Laboratory illustrates model architecture, inference, and optimization. Joint with INDE 424. Prerequisites: 201 or INDE 315, IS 300, or equivalents.

**QMETH 450 Operations Research—Deterministic Models (4)** Formulation and solution of business problems of primarily deterministic nature through use of operations research tools. Techniques of mathematical programming, dynamic programming, network algorithms. Prerequisites: 300 or equivalent and junior standing or above.

**QMETH 490 Special Problems in Quantitative Analysis (1-5, max. 20)** Specialized quantitative techniques useful for solving business problems. Topics from operation research, statistics, computer methods. Emphasis on application. Prerequisites: 401, 450, depending on topic, and junior standing or above.

**QMETH 499 Undergraduate Research (3, max. 9)** Research in selected problems in business statistics, operations research, decision theory, and computer applications. Prerequisite: permission of undergraduate office.

### Courses for Graduates Only

*Approval of the graduate business program office required. Entry code required for nonmajors. Students interested in probability and statistics are also urged to consider BA RM 500 and 501.*

**QMETH 500 Statistical Data Analysis for Management (3)** Introduction to statistical techniques useful for aiding management decisions. Use of interactive computer methods in basic business problems. Random sequences, probability distributions, linear regression, and elementary time series analysis. Prerequisite: 300 or equivalent preparation in elementary calculus.

**QMETH 501 Decision Support Models (3)** Introduction to computer-based modeling techniques for management decision making. Linear programming, networks, decision analysis, and simulation. Formulation and interpretation. Prerequisite: 300 or equivalent preparation in elementary calculus.

**QMETH 503 Practical Methods for Data Analysis (3)** Basic exploratory data analysis with business examples. Groups of numbers, multivariate data, time series, multiway tables. Techniques include plotting, transformation, outlier identification, cluster analysis, smoothing, regression, median polish, and robustness. Joint with STAT 503. May not be taken for credit if credit received for 403. Prerequisite: 500 or STAT 342 or equivalent or permission of instructor.

**QMETH 520 Statistical Applications of Linear Models (4)** Exploration and inference using linear models. Advanced treatment of simple and multiple regression, use of dummy variables, analysis of covariance, and selection of variables to be included in the equation. Prerequisite: 500.

**QMETH 529 Sample Survey Techniques (3)** Design and implementation of selection and estimation procedures in sample surveys. Sampling of human populations, although principles apply to other sampling problems. Simple, stratified, and cluster sampling, multistage and two-phase procedures, optimal allocation of resources; estimation theory, replicated designs, variance estimation, national samples, and census materials. Joint with STAT 529 and BIOST 529. Prerequisites: 500, BIOST 511, STAT 421 or 423, or equivalent, or permission of instructor.

**QMETH 530 Stochastic Series Analysis and Forecasting (4)** Introduction to modern time series analysis and forecasting. Autoregressive, moving average, and mixed models. Practical methods for model identification, estimation, diagnostic checking, and adaptive forecasting. Oriented toward real data and application. Prerequisite: 500; strongly recommended: 520 or equivalent.

**QMETH 540 Statistical Decision Theory (4)** Application of utility theory and probability theory to decision making under conditions of uncertainty. Bayesian methods—prior-to-posterior, preposterior analysis, design of optimal experiments. Prerequisite: 500 or equivalent.

**QMETH 551 Linear and Integer Programming (4)** Advanced modeling in linear and integer programming. Linear programming includes formulations, simplex method and variations, duality theory, sensitivity and parametric analysis, quadratic and separable programming; integer programming includes formulations and algorithms (branch and bound and cutting planes). Application areas include production, scheduling, distribution, marketing, finance. Prerequisite: 501 or equivalent.

**QMETH 552 Dynamic Programming and Networks (4)** Methods for solving problems involving sequential decisions. Backward and forward recursions. Shortest route, maximum flow, and stochastic path formulations. Applications include project management, job shop scheduling, inventory lot sizing, equipment replacement, contract management. May be taken prior to, or concurrent with 551. Prerequisite: 501 or equivalent.

**QMETH 571-572 Research Reports (3-3)** See ACCTG 571-572 for description.

**QMETH 590 Special Topics in Quantitative Methods (1-5, max. 20)** Operations research and applied business statistics of current concern to faculty and students. Potential topics include applications and extensions of mathematical programming, stochastic processes, discrete programming, network models, and application of statistical techniques. Topics and prerequisites vary.

**QMETH 599 Doctoral Seminar in Quantitative Methods (1-1-1, max. 12)** Study and research in advanced topics of quantitative methods. The seminar is generally concerned with unpublished areas of research and is conducted by visiting professors and departmental faculty. May be repeated for credit. For doctoral students only.

**QMETH 600 Independent Study or Research (\*)**

# School of Dentistry

## Dean

Karl Åke Ornell  
D322 Health Sciences

"The School of Dentistry, in concert with the overall mission of the University of Washington; preserves, develops and disseminates knowledge. Its educational, research and service programs are a regional resource that augments the capacity and capability of the dental profession. As an integral part of the Health Services Center, the School provides exemplary undergraduate, predoctoral, postdoctoral and advanced education to students of all races and ethnic backgrounds and socio-economic circumstances, primarily from the State of Washington and other Western states. Its clinics constitute an oral health care center of excellence. Students, staff and faculty are committed to the idea that excellent care entails the simultaneous application of clinical, behavioral and managerial skills. The School fosters an environment that facilitates personal development and learning for students, staff and faculty, leading to a strong sense of self-worth. It provides an environment where objectivity and imaginative inquiry can flourish and which enhances the free exchange of facts and diverse ideas. Its organization design facilitates close communication with other components of the University, other dental schools, state and federal agencies, and the practicing community." (School of Dentistry Mission Statement, December 1984.)

The School of Dentistry offers courses leading to the degrees of Bachelor of Science with a major in dental hygiene, Doctor of Dental Surgery, Master of Science in Dentistry, Master of Science, and Doctor of Philosophy, as well as postgraduate certificate programs and residency training in specific areas. Opportunities to earn other degrees concurrently (M.S. or Ph.D. in other schools) may be arranged on an individual basis. The school is accredited by the Commission on Dental Accreditation and is a member of the American Association of Dental Schools.

The following departments participate in the curriculum for the school's programs: *Dental Public Health Sciences* is concerned with the social, legal, political, economic, and psychological aspects of dental health-care delivery as well as the epidemiology of oral diseases and the application of biostatistical methods in studying them. *Endodontics* offers training in the diagnosis and treatment of disease of the tooth pulp. *Oral and Maxillofacial Surgery* trains students in the procedures used for all types of operations in the oral cavity and all phases of dental pain control. *Oral Biology* encompasses the study of basic biological mechanisms in normal and diseased oral tissues and structures. *Oral Medicine* provides training in diagnostic techniques, so students learn to correlate information gained in various departments and to plan treatment for the patient. *Orthodontics* provides training in the prevention and correction of malocclusion of the teeth. *Pediatric Dentistry* provides students with a broad understanding of the growth and development of the child and teaches students the principles of preventive dentistry, allowing them to develop the skills necessary for maintenance of optimal oral health in children. *Periodontics* offers training relative to the periodontium in health and disease, diagnosis of periodontal disease, and treatment of diseases that affect the periodontal tissues. *Prosthodontics* provides instruction in the fabrication and maintenance of removable, complete, and partial dentures. *Restorative Dentistry* offers training in the restoration or replacement of tooth structure and study of the form and function of the masticatory structures.

## Undergraduate Program

### Bachelor of Science Degree

The School of Dentistry offers a Dental Hygiene Degree Completion Program for graduates of associate degree or certificate/diploma programs in dental hygiene. The basic goal of accredited associate degree and certificate/diploma programs in dental hygiene is to prepare competent clinicians capable of providing dental hygiene clinical services. The scope of the Dental Hygiene Degree Completion Program extends beyond this clinical focus and provides educational opportunities to prepare its graduates to function professionally as dental hygienists who can broadly understand oral health issues affecting society, dental hygiene, and dentistry. To qualify for the Bachelor of Science degree in the School of Dentistry, students must complete the general education and proficiency requirements of the University, three sequenced dental hygiene core courses, and one dental hygiene pathway. The program of study includes theory, methods, and applications from which students obtain critical thinking, problem solving, and pragmatic experiences. University and affiliated sites provide the settings for projects. Majors may be eligible to participate in study abroad programs, that focus on oral health issues, following the completion of prerequisite courses.

Completion of the required major and University requirements takes one to two years. Students planning to graduate in one year must have a faculty approved plan of study within the first quarter of enrollment. Students planning a two-year program must have a faculty approved plan of study within the first two quarters of enrollment. All students must meet with a program adviser yearly and are encouraged to meet with a program adviser quarterly. The completion of courses that fulfill graduation requirements is the responsibility of the student.

### Major Requirements

#### Core Requirement

Students must complete three courses (9 credits) which form the core of this program. These courses are designed to improve the student's skills in computer-access to scientific information, English language usage, and scientific investigative methods. The core courses must be taken in sequence beginning autumn quarter: D HYG 465, D HYG 492, and D HYG 493.

#### Path Requirement

Students must select one of four pathways to fulfill the path requirement. The options are:

**Educator/Clinician with Emphasis on Dental Hygiene Care in Special Populations.** This path prepares dental hygienists as entry-level teachers who have knowledge of fundamental principles of education and who have experience in dental hygiene management of special populations. Major requirements for this path include a minimum of 12 credits beyond the core: at least 6 in education, of which 2 must be in teaching methods (D HYG 494 or MEDED 520), 2 in evaluation of learning (MEDED 521), and 2 in educational internship (D HYG 595); and 6 in care of special populations, of which 2 must be in ORALM 404 and the remaining either D HYG 404, D HYG 466, DPHS 449, ORALM 460, or an approved substitute.

**Oral Health Promotion in Public Health.** This path prepares dental hygienists to function as oral health promoters in public health settings. It focuses on national and international health goals and on oral health promotional strategies. Major requirements for this path include a minimum of 10 credits beyond the core: 2 in educational methods (D HYG 494 or MEDED 520), 3 in health care goals and delivery systems (D HYG 402 or an approved substitute), 3 in health promotion strategies (D HYG 403 or an approved substitute), and 2 in community health services (D HYG 404 or G ST 350).

**Oral Health Services Administration.** This path is for dental hygienists who want to increase their knowledge of how effective administrators function in complex organizations, or who want to advance their career in marketing, business or management. Students study organizational theory and administrative behavior, human resources management, resource allocation, systems operations and analysis, marketing, policy formulation, and strategic planning. Major requirements for this path require a minimum of 17 credits beyond the core: 15 in ADMIN 510, and a minimum of 2 in an oral health services related internship (D HYG 595 or G ST 350).

**Biological and Behavioral Sciences.** This path is for students seeking entry into a graduate school program or a professional school while earning the Bachelor of Science degree in dental hygiene. Major requirements for this path include: the core, 5 credits in technical writing (TC 400, TC 401, or other approved writing courses), plus a sufficient number of credits for admission eligibility to a graduate or professional degree program.

### Academic Standards

The School of Dentistry requires that a minimum numerical grade of 2.5 be earned in dental hygiene courses which are to be counted toward satisfaction of graduation requirements with a dental hygiene major. Graduation with a dental hygiene major also requires a minimum cumulative GPA of 2.50. A student whose cumulative GPA falls below 2.50 in any quarter will be placed on academic probation. The status of academic probation shall be removed when the cumulative GPA is 2.50 or above. While on probation, the student must attain at least a 2.50 GPA for each succeeding quarter's work until the cumulative GPA is raised to 2.50.

### Admission Requirements

**U.S. or Canadian Applicants.** The student must meet the admission requirements and standards of the University. In addition, the student must possess an associate degree or certificate/diploma in dental hygiene from a program accredited by the Commission on Dental Accreditation of the American Dental Association and a license to practice dental hygiene in at least one state or province.

**Other Applicants.** The student must meet the admission requirements and standards of the University. The student must possess a certificate or diploma in dental hygiene granted by an officially recognized educational institution. In addition, the student must submit verification that the practice of dental hygiene is authorized by the government of the home country. Students whose native language is not English must submit a score of 580 or higher on the Test of English as a Foreign Language (TOEFL).

**Admissions Schedule.** Students are admitted into the program summer and autumn quarters. The deadline for submitting an application to the program and to the University for U.S. and Canadian applicants is May 15 for summer quarter and July 1 for autumn quarter. The deadline for submitting an international application to the program and to the University for summer quarter or autumn quarter is March 1.

**Application Information.** For information on admission criteria and application process, contact the Dental Hygiene Program, Department of Dental Public Health Sciences, SM-35, School of Dentistry, University of Washington, Seattle, Washington 98195 USA. Telephone: (206) 543-5820. FAX: (206) 685-4258.

## Professional Programs

### Doctor of Dental Surgery

The Doctor of Dental Surgery (D.D.S.) curriculum provides opportunities to learn the fundamental principles significant to the entire body of dental knowledge. Students are expected to learn fundamentals of basic health sciences, to attain proficiency in clinical skills, to develop an understanding of professional and ethical principles, and to develop reasoning and critical decision-making skills that will enable implementation of the dental knowledge base. The first year is divided among lecture, laboratory and preclinical activities in basic sciences, dental anatomy and dental materials. In the second year students develop further preclinical skills, learn how basic science principles are applied to the clinical setting and begin clinical treatment. In the third and fourth years students concentrate on providing clinical treatment and attend lectures which refine technical and diagnostic skills.

"The goal of the predoctoral program for the School of Dentistry is to graduate a competent practitioner of general dentistry who will become a responsible member of the professional community. In pursuit of this goal, the student should acquire the knowledge and abilities necessary for the integration of scientific and behavioral elements into effective, ethical patient management. To attain this capability, the following educational accomplishments are considered essential for each graduate: (1) acquire basic medical and behavioral science principles, (2) acquire a broad range of technical and clinical skills, (3) develop an ability to analyze problems and implement solutions relating to prevention, diagnosis, and treatment, (4) develop an ability to evaluate and assimilate new information for the continuing improvement of patient care, (5) develop an ability to communicate with empathy and respect, (6) develop professional, personal, and community responsibility, (7) develop the organizational and personnel skills for the management of an effective dental practice." (Doctor of Dental Surgery Curriculum End Product Statement, April 1984.)

The curriculum extends for forty-two months or fourteen quarters, including two summer quarters. If needed, students may be allowed additional time to complete required course work.

### Admission

To be considered for admission to the school, a student will need to have completed the *required courses* listed below, have taken the Dental Admission Test and attend a personal interview. Firm predoctoral requirements are: general chemistry—2 quarters or 1 semester; organic chemistry—2 quarters or 1 semester; physics—1 year; introductory biology or zoology—1 year. Highly recommended are developmental biology and vertebrate zoology. Equally important is a background in the social sciences and the humanities. No preference is given to a particular undergraduate major field; in fact the Admissions Committee encourages diversity in majors. Although a majority of entering students have a baccalaureate degree, students with outstanding academic qualifications are considered for admissions after only three years of undergraduate work. See Early Scholars Program below.

In Admissions Committee deliberations, the following six areas are considered, with the first two areas receiving the most weight in assessing the student's merits as a candidate: (1) grades, (2) Dental Admission Test scores, (3) level of preprofessional education, (4) dental knowledge, (5) unique life experiences, (6) personal attributes, (7) ethnically underrepresented or disadvantaged status.

Women, ethnically underrepresented groups and economically disadvantaged persons are encouraged to apply. See Dental Upward Bound Program below.

The school belongs to the American Association of Dental Schools Application Service (AADSAS), the national application service used by most U.S. dental schools. The school has established December 1 as its AADSAS priority filing deadline. Only those applications received in the AADSAS Washington, D.C. office (1625 Massachusetts Avenue NW, Washington, D.C. 20036, phone: 202-667-1886) by the priority filing date will be forwarded to the University of Washington for consideration by its Admissions Committee.

The school will request the following materials to complete the University of Washington application: (1) a supplementary application which includes an autobiographical essay, (2) a nonrefundable application fee of \$35, (3) three letters of recommendation, (4) Dental Admission Test scores, (5) transcripts from all higher education institutions attended, (6) a list of current and future courses.

**Early Scholars Program:** Although the majority of entering students have a bachelor's degree, students with outstanding academic qualifications will be considered for admission after only two or three years of predoctoral undergraduate work. This program is designed to meet the career goals of the highly motivated undergraduate student or the mature student seeking a career change.

**Advanced Standing Applicants:** Transfer students from U.S. and Canadian dental schools are considered at the end of the regular admissions cycle. Class standing and courses completed at current school will be considered when determining the placement within the new curriculum. Application materials must reach the school by March 1 of the year prior to requested entry.

**Foreign Applicants:** Applications from foreign students are considered for entry into the first year. Foreign students whose first language is not English will be required to present TOEFL (Test of English as a Foreign Language) scores of 600 or higher. A written statement from a banking or lending institution indicating financial support to complete the program is required for foreign applicants on nonresident visas.

**Dental Upward Bound Program:** The school is committed to diversity within the student body and the profession of dentistry. To achieve this goal the school has instituted the Dental Upward Bound Program, an admissions and retention program to increase enrollment of ethnically underrepresented groups and economically disadvantaged students. This program provides an individually paced curriculum and individual support systems (tutoring, counseling, faculty mentoring) to enhance retention. Applicants enrolled under this program must meet the same graduation criteria, but are offered additional time in which to complete all requirements. For example, a student enrolled under these special admissions criteria would take two enrollment years to complete the first year of curriculum,

moving to the full curriculum in subsequent years, as individual needs dictate. The program has increased the number of students from ethnically underrepresented groups and disadvantaged backgrounds. These graduates have become a source of referral for applicants from similar backgrounds and have added to the nucleus of dentists who return to practice dentistry in underserved areas.

To add to the number of applicants from ethnically underrepresented groups, the school also participates in and provides funding for the Health Sciences Minority Student Summer Enrichment Program. This six-week program provides activities for minority students in their junior and senior year of college who wish to enhance the academic skills necessary for their successful admission to professional schools in the health sciences. In addition, the School of Dentistry administers an HCOP grant which provides apprenticeships for minority high school students who wish to participate in summer research.

**Western Interstate Commission for Higher Education (WICHE):** The school participates in a program administered by WICHE for students who reside in Western states not served by a dental school (Alaska, Arizona, Hawaii, Montana, Nevada, New Mexico, and Wyoming). Such students should seek requests for certification from the WICHE commission office in their state of residence. Students who enroll in the school under the WICHE program pay in-state tuition rates, the difference being paid by the member state that sponsors the student.

Information regarding AADSAS application, supplementary application materials, selection criteria, and selection process is available from the University of Washington, School of Dentistry, Office of Student Services, SC-62, D323 Health Sciences, Seattle, Washington 98195, or the College of Arts and Sciences Advising Office, 9 Communications, DS-60. Information on the Dental Admission Test is available from both of the above and the American Dental Association, 211 East Chicago Avenue, Chicago, Illinois 60611.

Effective autumn quarter 1992 quarterly tuition for full-time dental students is \$1,916 for residents and \$4,873 for nonresidents. Additional costs for dental students include textbooks, materials, supplies, and equipment for use in laboratory and preclinical courses (see below). A rental fee (see table below) is charged for instruments used during the four years and returned. Nonrental instruments belong to the student, so should be considered a long-term investment and not part of the expendable educational costs.

Information on loans and scholarships may be obtained from the Office of Student Services, D323 Health Sciences, SC-62. Also available in this office is information relating to student life, including the Student Dress Code, Academic Regulations Manual, and Student Ethics Code.

	First Year	Second Year	Third Year	Fourth Year
Projected Costs	1992-93	1992-93	1992-93	1992-93
Tuition*	\$5,748	\$7,664	\$7,664	\$5,748
Supplies Rental	83	770	0	0
Nonrental Items	3,005	3,943	800	21
Issue Total	3,088	4,713	800	21
Textbooks	537	467	57	0
Miscellaneous Items	198	300	100	446
Total Educational Costs†	\$9,571	\$13,144	\$8,621	\$6,215

(All costs subject to change)

\*Tuition calculated at 1992-93 schedule for Washington residents at \$1,916 per quarter. For nonresident costs, calculate \$4,873 per quarter.

†Total Educational Costs do not include living and personal expenses.

## Graduate Programs

Through their respective departments, the graduate faculty members of the school offer programs leading to the degree of Master of Science in Dentistry, Master of Science, and Doctor of Philosophy, as well as postgraduate certificate programs.

### *Master of Science in Dentistry Degree/Postgraduate Certificates*

Fields of study for the M.S.D. programs are endodontics, oral biology (oral pathology), oral medicine, orthodontics, periodontics, and prosthodontics. The programs are planned to prepare students to think independently, to evaluate their own services and the literature of the programs, and to develop their clinical operative skills to a level to permit the successful practice of their chosen specialty. Emphasis is placed on the basic principles of diagnosis and treatment that compose one of the clinician's most valuable assets. The purpose of the programs is not only to train students in the art of their respective specialties but also to encourage possible preparation for academic careers or for research. Research may be undertaken in basic or applied science. Opportunities for collaborative research are available with the cooperation of other colleges, schools, or departments of the University.

Applicants for admission to the M.S.D. and certificate programs must be graduates of a school of dentistry approved by the Commission on Dental Accreditation of the American Dental Association or a university dental school located outside the North American continent whose curriculum and admission requirements are similar to those of the UW School of Dentistry. Applications must be submitted to the appropriate department, on or before November 1 for consideration for entrance in the following autumn quarter (October 1 for oral medicine and orthodontics for consideration for entrance in the following summer quarter). A concurrent Application for Admission to the Graduate School also must be filed. International students must submit financial statements before the November 1 deadline and must demonstrate competency in the English language, for which TOEFL scores may be required as evidence. Applicants who have not received dental degrees from an institution within the United States will be required to supply Graduate Record Examination scores for admission to the University of Washington Graduate School (graduates of U.S. institutions are not required to submit GRE scores). Requests for information or application forms may be forwarded to the department of the specialty field, School of Dentistry, University of Washington, Seattle, Washington 98195.

A minimum of eight consecutive full-time quarters of residence is required. Students in the prosthodontic program may choose one of two curricular pathways. The first includes two years of clinical and didactic work followed by a third year of clinical care and research. The second pathway emphasizes periodontal prosthodontics through three years. For the graduate program to be continuous, registration is required during the summer quarter that conforms to the University schedule. Foreign-language study is not required for graduation.

Although a student may enroll in a postgraduate certificate program only, students enrolled in the M.S.D. program also will be awarded a postgraduate certificate in the specialty. Postgraduate certificate programs are not administered by the Graduate School, and no thesis is required. The course content may vary somewhat from the M.S.D. program, although the same academic standards are applied in both programs. Tuition and fees are assessed at the graduate level for both programs.

### *Master of Science, Doctor of Philosophy Degrees*

Curriculums for the M.S. and Ph.D. programs are offered through the Department of Oral Biology.

Oral biology is concerned with the nature of the oral and paraoral tissues and with the applicability of basic scientific knowledge to oral tissues in health and disease. The courses and research programs in the department deal with the origin, growth and development, structure, and functions of oral tissues, as well as with the etiology and pathogenesis of oral diseases and malfunctions. By its nature, oral biology overlaps the basic medical sciences and clinical dental sciences.

The department contains well-equipped laboratories actively engaged in various aspects of research involving the following approaches: biochemical, including studies on protein synthesis and secretion and the structure of salivary macromolecules; physiological, such as studies on ion fluxes in secretory tissues; microbiological, including studies on the nature of oral pathogens and the effects of salivary factors on the oral microbiota; embryological, such as studies on the formation of the oral and paraoral structures, and developmental anomalies, such as palatal and lip clefting; and morphological, including various studies on oral tissues at the light and electron microscopic levels.

Several programs are available through the Department of Oral Biology to accommodate students with different educational objectives.

A program of study and research leading to the Doctor of Philosophy degree is available for those students desiring extensive research training as well as in-depth course work in oral biology. In addition to the courses offered by this department, students in the Ph.D. program are expected to gain proficiency in one of the biomedical sciences.

A separate program of study and research leading to the Master of Science degree is available for those students who want less training than the Ph.D. program affords.

A nonthesis option exists in the Master of Science program for the purpose of training dental hygiene educators to instruct in certain basic and applied sciences as well as in the clinic.

For the more clinically oriented students, the school offers a program leading to the degree of Master of Science in Dentistry with specialization in oral pathology. Students enrolled in this program receive training that includes experience in the school's extensive biopsy service, participation in the teaching of oral pathology to dental students, participation in a residency program, and enrollment in a series of advanced courses in general and oral pathology.

Clinical specialty training (e.g., oral pathology, oral medicine, periodontics) can also be obtained in conjunction with either the M.S. or Ph.D. programs.

Applicants for all programs must have either a baccalaureate or professional degree from a dental or medical school. Acceptance into the programs requires approval of both the Department of Oral Biology and the Graduate School. For information or application materials, contact the graduate program adviser, Department of Oral Biology, B224 Health Sciences, SB-22, University of Washington, Seattle, Washington 98195.

United States Public Health Service traineeships may be available to students who are United States citizens or permanent residents. These begin at \$18,600 at the postdoctoral level. An allowance for tuition and fees is normally included. Applicants may also seek support via the individual Dentist-Scientist Awards from the National Institutes of Health, which provide up to five years of stipend support for dental graduates seeking a combined clinical specialty-Ph.D. degree course of study. The M.S. and Ph.D. programs, including the nonthesis M.S. for dental hygienists, are identified as WICHE Regional Graduate Programs, making students from WICHE-participating states eligible to receive support while pursuing these degree programs.

### *Residency Training*

Residency training programs are available in oral and maxillofacial surgery and the general practice of dentistry. Both programs provide for rotation through several of the University-affiliated hospitals. Each is a fully accredited program which grants a certificate upon successful completion of the training. Stipends are provided.

The Oral and Maxillofacial Surgery Program is at least four years in duration and provides broad exposure to all aspects of the practice of oral and maxillofacial surgery. Application, selection, and administration of this training program is provided through the Department of Oral and Maxillofacial Surgery. Further information can be obtained by contacting Dr. O. Ross Beirne, Department of Oral and Maxillofacial Surgery, SB-24, School of Dentistry, University of Washington, Seattle, Washington, 98195.

The General Practice Residency is a one-year training program that emphasizes the general dentist's role in a hospital and the management of medically, physically, and mentally compromised patients. Application, selection, and administration of the General Practice Residency is provided through the Division of Hospital Dentistry. Further information can be obtained by contacting Dr. Barton S. Johnson, Division of Hospital Dentistry, SC-62, School of Dentistry, University of Washington, Seattle, Washington, 98195.

### *Postdoctoral Fellowships*

Postdoctoral training fellowships are available in behavioral or public health research in dentistry. Programs vary in duration and many accommodate degree-seeking or research fellows pursuing an academic career. NIH-sponsored full tuition and a stipend for up to three years are provided for U.S. citizens, noncitizen nationals, and those foreign nationals with permanent residency status in the United States. Members of ethnic minorities and women are especially invited to apply. Application, selection, and administration of the program are provided through the Department of Dental Public Health Sciences.

### *Graduate Training in Dental Public Health*

Opportunities exist for pursuing graduate degrees in public health which emphasize applications to research in dentistry. Master of Public Health (M.P.H.) programs in the Departments of Epidemiology and Health Services of the School of Public Health and Community Medicine can be pursued in conjunction with postdoctoral training in the School of Dentistry's Department of Dental Public Health Sciences. Didactic course work is taken in the School of Public Health and Community Medicine, augmented with independent study and thesis research on selected topics in the School of Dentistry. Similar opportunities exist for pursuing the Ph.D. in epidemiology with an emphasis on research in dentistry. Further information may be obtained from the Department of Dental Public Health Sciences, SM-35, School of Dentistry, University of Washington, Seattle, Washington 98195.

## Dental Hygiene

### Course Descriptions

**D HYG 401 Professional Issues (3)** Identification and critique of current responsibilities and behaviors with respect to professional ethics and jurisprudence.

**D HYG 402 Global Perspectives in Oral Health (3)** Disease patterns and their impact on oral health care delivery systems. Cultural, demographic, economic, and political factors affecting the efficacy of various systems.

**D HYG 403 Oral Health Educational Strategies (3)** Planning, preparing, and evaluating educational strategies for oral health promotion. Assessment of needs,

development of objectives, creation of communication messages, review of behavioral and educational theories, mechanisms of evaluation.

**D HYG 404 Field Experience in Delivery of Oral Health Care (2, max. 12)** Field observations of oral health services. Students spend three hours per week at an approved health care agency. Accompanying seminars and written assignments focus on professional need of service, consumer needs and demands, societal obligations, and availability of services.

**D HYG 465 Theoretical and Scientific Basis for Dental Hygiene Practice (3)** Lecture-discussion on the scientific proof for theories, procedures, and techniques used in clinical dental hygiene practice. Includes field experience at selected practice sites. Students use the University of Washington reference library and catalog system to search and retrieve information essential to making oral and written reports. Prerequisite: dental hygiene major or permission of instructor.

**D HYG 466 Advanced Preventive Dental Hygiene Patient Care (3, max. 9)** Continuation of 465 to enhance clinical skills in patient management, curettage, and root planing. Seminars concentrate on planning patient dental hygiene treatment and patient evaluation. Credit/no credit only. Prerequisites: 465 and permission of instructor.

**D HYG 475 Orientation to Hospital Dentistry for Dental Hygienists (4)** Operation of dental profession within hospital setting. Hospital rounds, surgical observation, participation in emergency dental treatment, clinic operations and management, and clinical dental hygiene. Prerequisite: 465.

**D HYG 480 Restorative Dentistry for Dental Auxiliaries (3)** First in a series of courses designed to broaden the base of knowledge in the area of restorative dentistry. Selected theoretical concepts, research findings, and laboratory application of isolation, matrices/wedges, material manipulation, cavity liners, medicaments, and bases. Prerequisite: permission of instructor.

**D HYG 481 Restorative Dentistry for Dental Hygienists (3)** Continuation of 480. Selected theoretical concepts, research findings, and laboratory application of temporaries, sealants, amalgams, and tooth-colored restorations. Prerequisite: 480 or permission of instructor.

**D HYG 482 Local Anesthesia for Dental Hygienists (2)** Techniques of local anesthesia and initial management of emergencies in the dental office.

**D HYG 483 Clinical Practice of Restorative Dentistry for Dental Hygienists (3)** Clinical application of 480 and 481. Seminars on patient management included. Credit/no credit only. Prerequisite: 481.

**D HYG 491 Issues in Professional Education (3)** Seminar and discussions on topics influencing dental education. Academic freedom, accreditation, interdisciplinary relationships, legislation, licensure, tenure.

**D HYG 492 Principles of Scientific Investigation for Oral Health Professionals (3)** Introduction to principles of scientific investigation, biostatistics and their application to relevant literature.

**D HYG 493 Review of Literature for Oral Health Professionals (3)** Application of modern methods of library search and critical analysis of relevant literature. Includes technical writing and oral reporting as a means of integrating knowledge and skills acquired in 465 and 492. Prerequisites: 465 and 492 or permission of instructor.

**D HYG 494 Principles of Teaching for Oral Health Professionals (3)** Application of principles of learning to teaching methods and techniques used in education, with opportunity for course planning, demonstration, and practice teaching.

**D HYG 495 Alternative Settings for Oral Health Professionals (3)** Creative and innovative employment options for oral health professionals. Surveys the responsibilities involved. Considers the special talents required: personal, intellectual, clinical, and managerial.

**D HYG 497 Directed Studies for Oral Health Professionals (\*, max. 14)** Based on student interest in special areas. Independent study and tutorial student-faculty relationships. Credit/no credit only. Prerequisite: permission of instructor.

**D HYG 565 Theoretical and Scientific Basis for Dental Hygiene Practice (3)** Lecture-discussion on the scientific proof for theories, procedures, and techniques used in clinical dental hygiene practice. Includes field experience at selected practice sites. Students use the University of Washington reference library and catalog system to search and retrieve information essential to making oral and written reports.

**D HYG 594 Principles of Teaching for Oral Health Professionals (3)** Application of principles of learning to teaching methods and techniques used in education, with opportunity for course planning, demonstration, and practice teaching. Prerequisite: graduate program admission.

**D HYG 595 Educational Internship (\*, max. 12)** Clinical and/or didactic teaching experience or program administration. Teaching and administration responsibilities assigned according to student's previous experience, education needs, and interest. Seminar required. Prerequisites: 494 or 594 and permission of instructor.

## Dental Public Health Sciences

### Faculty

#### Chairperson

Timothy A. DeRouen

#### Professors

Conrad, Douglas A.,\* 1977, (Finance and Business Economics), (Health Services),† M.H.A., 1973, Washington; M.B.A., 1976, Ph.D., 1978, Chicago; economics and finances.

DeRouen, Timothy A.,\* 1975, (Biostatistics),† M.S., 1969, Ph.D., 1971, Virginia Polytechnic; applications of biostatistics to clinical epidemiology of oral and infectious diseases.

Fales, Martha H.,\* 1959, (Emeritus), M.A., 1968, Ph.D., 1975, Michigan; dental hygiene.

Milgrom, Peter M.,\* 1974, (Health Services), D.D.S., 1972, California (San Francisco); management of fearful and phobic dental patients, quality of dental care.

Weinstein, Philip,\* 1972, (Pediatric Dentistry, Psychology),† M.A., 1968, Ph.D., 1971, Kentucky; dental behavioral science, treatment and prevention of fear and pain.

#### Associate Professors

Beaton, Randal D.,\* 1977, (Research), ‡(Psychosocial Nursing), Ph.D., 1972, Washington; assessment and treatment of temporomandibular joint pain and dysfunction.

Cameron, Cheryl A., 1979, M.S.Ed., 1978, Kentucky; Ph.D., 1986, Washington; dental hygiene.

Chapko, Michael K.,\* 1978, (Research), (Health Services),† M.A., 1970, Hunter; Ph.D., 1972, City University of New York; diffusion of health technologies, cost-effectiveness in health care.

Domoto, Peter K., 1968, ‡(Pediatric Dentistry), D.D.S., 1964, California (San Francisco); M.P.H., 1975, Washington; pediatric dentistry.

Grembowski, David E., 1981, (Health Services),† (Sociology), M.A., 1975, Washington State; Ph.D., 1982, Washington; dental care demand, fluoridation, dental health services research.

Sharp, Lawrence J., 1962, M.A., 1959, Ph.D., 1964, Washington State; research methods, statistics.

Wells, Norma J., (Oral Biology), 1960, M.P.H., 1966, California (Los Angeles); international dental health.

#### Assistant Professors

Fiset, Louis O., 1979, (Research), D.D.S., 1970, Washington; research and management of dental phobia.

Leroux, Brian G., 1991, (Research), (Biostatistics),† M.Sc., 1985, Ph.D., 1989, British Columbia; design and analysis of studies in health sciences.

Ramsay, Douglas S.,\* 1991, ‡(Orthodontics, Pediatric Dentistry), (Psychology), D.M.D., 1983, Pennsylvania; Ph.D., 1988, M.S.D. 1990, Washington; dental behavioral science, pain, conditioned drug effects.

Whitney, Coralyn W., 1990, (Research), Oral Medicine),† M.S., Florida State; Ph.D., Washington; statistical analysis of longitudinal studies.

## Course Descriptions

**DPHS 201 Planning a Career in Dentistry for the Future (2) Sp** Future-oriented overview of important concepts in dental science, contemporary modes of patient treatment, and dental-care delivery systems. Provides firsthand exposure to practice of dentistry and prerequisite materials in oral anatomy, epidemiology, and other basic science subjects. Open to first-, second-, and third-year undergraduate students throughout the University.

**DPHS 449P Directed Studies in Dental Public Health Sciences (\*) AWSpS** Students and faculty with common academic interests pursue them together within the curriculum by means of independent study and a tutorial student-faculty relationship. Credit/no credit only. Prerequisite: permission of instructor.

**DPHS 535P Professional Issues: Scientific Literature in Clinical Decision Making (1) Sp** Introduction to critical reading of individual articles in professional journals and integrating the findings of several articles. Use of the literature to assist the practicing dentist in making clinical decisions.

**DPHS 541P Professional Issues: Policy Issues in Financing, Regulating, and Organizing Dental Care (2) W** Provides information on private and public involvement in financing, regulating, and organizing dental care. Stresses analysis of public policy matters directly influencing professional environment of the practicing dentist.

**DPHS 550P Directed Studies in Dental Public Health Sciences (\*, max. 6)** Students and faculty members who have common academic interests can pursue them together within the curriculum by means of independent study and a tutorial student-faculty relationship. Credit/no credit only.

**DPHS 575 Behavioral Dental Research (1) AWSpS** Survey of behavioral science research and methodology in dentistry and related fields. Emphasis in various quarters varies: literature review, research design, instrumentation, data analysis. Designed for advanced students who plan a research career. Credit/no credit only. Prerequisite: doctoral degree or permission of instructor.

**DPHS 640P Professional Issues: Clinical Management of the Fearful and Phobic (1) AWSpS** Introduction to assessment process and treatment strategies for successful management of anxious, fearful, or phobic patient, combined with clinical observation of diagnostic and treatment appointments of active patients.

**DPHS 660 Dental Fear Clinic (2) AWSpS** Clinical instruction in the care of the severely anxious or phobic adult or child. Strategies from behavioral and cognitive psychology. Credit/no credit only. Prerequisite: graduate standing in dentistry or permission of instructor.

## Dentistry

### Course Descriptions

**DENT 520P Clinical Practice Management 1 (1)** Designed to provide the student with the knowledge required to manage a patient pool during the clinical program and in future dental practice including: obtaining a patient pool, authorized treatment planning, patient management in accordance with professional codes, risk management strategies, patient financial account management, and contemporary biohazardous materials guidelines.

**DENT 534P Geriatric Dentistry (1, max. 2) WSp** Special needs of older persons seeking dental care: oral health, psychology of aging, socioeconomic problems, effective communications, dental management, special problems in home health care, and problems with institutional and long-term care. Credit/no credit only.

**DENT 537P Hospital Dentistry (1) Sp** Introductory course presenting hospital procedures and protocol and specific patient types.

**DENT 550P Special Studies in Dentistry (\*, max. 12) AWSpS** Series of courses offered by the various departments from which students may elect study in areas of special interest to them. These courses include subject matter applicable to all phases of dentistry. Credit/no credit only.

**DENT 551P,552P,553P,554P,555P,556P,557P Clinical Practice Management 2 (1)** Designed to provide the student with the knowledge required to manage a patient pool during the clinical program and in future dental practice including: obtaining a patient pool, authorized treatment planning, patient management in accordance with professional codes, risk management strategies, patient financial account management, and contemporary biohazardous materials guidelines.

**DENT 564 Data Entry Through SPSS (1)** Introduction to entering and managing experimental or clinical alphanumeric and numeric data through the save-file capabilities of SPSS, utilizing SPSS control cards, data transformations, and documentation.

**DENT 565 Dental Photography (2)** Provides student with sufficient knowledge and experience to select and use correct photographic equipment for photographing patients (facial and interoral), casts, instruments, x-rays, charts, and objects.

**DENT 568 Biostatistics and Research Design (2) Sp** Instruction in basic biostatistics, emphasizing the integration of statistics with research design and including measures of central tendency, regression, correlation, Chi-square, and comparison of samples. Credit/no credit only.

**DENT 569 Design and Interpretation of Dental Research (3)** Basic introduction to the usage, application, and interpretation of nonparametric and parametric statistical tests in dental research. Statistical package for the social sciences is used to provide examples of the statistical tests discussed. Prerequisite: permission of instructor.

**DENT 640P Extramural Clinics in Geriatric Dentistry (2) AWSpS** Extramural geriatric clinical experience, including choice of hospital, nursing home, community clinic, and brief didactic component.

**DENT 645P Hospital Rotation (2) AWSpS** Clinical experience that puts into practice the material presented in 537P. The student is involved in hospital procedures and protocol and in dental care of the hospital patient.

**DENT 650P Extramurals (\*, max. 12) AWSpS** Extramural sites arranged to provide dental students, at varying levels of their education, with opportunities to treat a wide variety of patients in the delivery systems outside the school. Credit/no credit only. Prerequisite: permission of instructor.

**DENT 651P Anesthesia Rotation (6) AWSpS** 1½-month rotation in anesthesia at one of three local hospitals. Objectives: administration of anesthesia, management of emergency situations and airway problems, familiarization with pharmacology of anesthetic drugs; increased efficiency with venipuncture. Credit/no credit only.

**DENT 652P Clinical Medicine Clerkship (4) AWSpS** One-month clinical rotation in clinical medicine at a local hospital. Objective is to increase the student's ability in physical evaluation of patients as well as to give in-depth knowledge of hospital procedures and commonly prescribed medications. Credit/no credit only.

**DENT 660 Temporomandibular Joint Diagnosis and Treatment (2, max. 8) A** Seminar and clinic sequence for comprehensive examination, diagnosis, and treatment of patients with temporomandibular joint problems. Includes management of dysfunction and morphologic alterations in associated muscles and occlusion. Prerequisite: permission of instructor.

**DENT 700 Master's Thesis (\*)**

## Endodontics

### Faculty

#### Chairperson

David L. Pitts

#### Professors

Harrington, Gerald W.,\* 1969, D.D.S., 1959, St. Louis; M.S.D., 1969, Washington; endodontics.

Natkin, Eugene,\* 1962, D.D.S., 1957, New York; M.S.D., 1962, Washington; endodontics.

#### Associate Professor

Pitts, David L.,\* 1977, D.D.S., 1972, Indiana; M.S.D., 1977, Washington; endodontics.

#### Senior Lecturer

Steiner, James C., 1992, D.D.S., 1956, Western Reserve; M.S.D., 1966, Washington; endodontics.

### Course Descriptions

**ENDO 520P Introduction to Endodontics (2) Sp** Lecture course dealing with the differential diagnosis and the treatment of pulp pathosis and associated periapical pathosis.

**ENDO 531P Endodontic Technique (4) A** Lecture-laboratory course in root canal therapy in terms of present-day concepts, with emphasis on a definite simplified technique. Treatment of extracted teeth as practice for clinical cases.

**ENDO 534P Endodontics (1) W** Lecture course dealing with diagnosis and treatment of impact injuries to teeth; treatment of endodontic emergencies; surgical management of endodontic problems.

**ENDO 535P Clinical Management of Endodontic Treatment Problems (1) Sp** Management of a variety

of technical problems frequently encountered in the treatment of endodontic cases.

**ENDO 550P Directed Studies in Endodontics (\*, max. 6) AWSp** See DPHS 449 for course description and prerequisite.

**ENDO 560 Advanced Endodontic Diagnosis and Treatment (2) W** Current concepts are presented and discussed relating to the diagnosis and treatment of pulpal and periapical pathology. Criteria for evaluation of success or failure of root canal therapy are presented.

**ENDO 562 Advanced Endodontic Treatment Planning (2) Sp** Diagnosis and treatment of acute symptoms of dental origin, surgical endodontic therapy, traumatic dental injuries, and the relationship between periodontal and pulpal pathology, including differential diagnosis and appropriate treatment planning, are discussed.

**ENDO 563 Radiographic Interpretation (2) A** Various aspects of radiographic interpretation of particular relevance to endodontics, including interpretation of normal structures, acquired and developmental abnormalities, infection, cysts, benign tumors, and diseases other than tumors.

**ENDO 566 Advanced Radiographic Interpretation (2) W** Various aspects of radiographic interpretation of particular relevance to endodontics, including malignant lesions, benign tumors, diseases other than tumors, temporomandibular joint disease, sialoliths and other soft-tissue calcifications, radiographic technique, and radiation safety.

**ENDO 580, 581, 582, 583, 584, 585, 586, 587 Endodontic Seminar (2,2,2,2,2,2,2) A,W,Sp,S** Continuous weekly seminar devoted to review of endodontic and related literature and discussion of research methods.

**ENDO 590 Treatment Planning Seminar (2, max. 16) AWSpS** Weekly seminar to discuss controversial treatment problems and difficult diagnostic cases.

**ENDO 593 Clinical Practice Teaching (1, max. 3) AWSp** Closely supervised experience in teaching clinical endodontics to the undergraduate dental student.

**ENDO 597, 598 Endodontics Teaching Seminar (2,2) W,W** Weekly seminars devoted to an examination of general problems of teaching and learning and specific problems of endodontics teaching.

**ENDO 600 Independent Study or Research (\*) AWSpS** Prerequisite: permission of graduate program adviser.

**ENDO 630P Clinical Endodontics (1-, max. 7) AWSpS** Student is required to complete endodontic treatment of anterior, premolar, and molar teeth. In addition to conservative treatment of several endodontic cases, the student assists in a periapical surgery. Student must complete at least six quarters of 630P and all course requirements before any grade is awarded.

**ENDO 659P Endodontics Extended Learning (\*, max. 4) S** Supplemental work in endodontics to correct an area of student deficiency. Credit/no credit only.

**ENDO 660 Clinical Endodontics (4, max. 32) AWSpS** Clinical diagnosis and treatment of pulpal pathosis and related sequelae.

## Oral Biology

### Faculty

#### Chairperson

Murray R. Robinovitch

#### Professors

Altman, Leonard C.,\* 1975, (Clinical) (Medicine),† M.D., 1969, Harvard; mechanisms of oral epithelia.

Binder, Marc D.,\* 1978, ‡(Physiology and Biophysics), M.S., 1972, Ph.D., 1974, Southern California; neurophysiology of the head and neck.

Dale, Beverly A.,\* 1972, (Periodontics),† Ph.D., 1968, Michigan; keratin biochemistry.

Eyre, David R.,\* 1985, ‡(Orthopaedics), Ph.D., 1969, Leeds (England); biomineralization.

Herring, Susan,\* 1990, ‡(Orthodontics, Zoology), Ph.D., 1971, Chicago; craniofacial biology.

Izutsu, Kenneth T.,\* 1971, (Oral Medicine),† Ph.D., 1970, Washington; salivary gland physiology and pathophysiology.

Keller, Patricia J.,\* 1955, (Emeritus), Ph.D., 1953, Washington (St. Louis); protein structure and function.

Robinovitch, Murray R.,\* 1966, (Periodontics), D.D.S., 1961, Minnesota; Ph.D., 1967, Washington; salivary biochemistry and saliva-bacterial interactions.

Tamarin, Arnold,\* 1961, (Emeritus), D.D.S., 1951, Illinois; M.S.D., 1960, Washington; oral embryology and histology, electron microscopy.

Verdugo, Pedro J.,\* 1975 ‡(Bioengineering, Biological Structure), M.S., 1958, M.D., 1965, State University of Chile; bioengineering.

Watson, Eileen L.,\* 1972, Ph.D., 1970, Utah; salivary gland pharmacology and regulation.

#### Associate Professors

Anderson, Leigh C.,\* 1989, D.D.S., 1977, Ph.D., 1979, Minnesota; hormonal regulation of salivary glands.

Lee, Minako Y.,\* 1977, (Research), (Biological Structure), (Medicine), M.D., 1976, Tokyo Women's College (Japan); immunology.

Morton, Thomas H.,\* 1975, (Oral Medicine),† D.D.S., 1972, Creighton; M.S.D., 1975, Washington; oral pathology.

Oda, Dolphine,\* 1985; M.Sc., 1981, Manitoba; oral pathology.

Wells, Norma J.,\* 1960, ‡(Dental Public Health Sciences), M.P.H., 1966, California (Los Angeles); dental hygiene.

#### Assistant Professor

Lamont, Richard J.,\* 1989, Ph.D., 1985, Aberdeen (Scotland); oral microbiology.

### Course Descriptions

**ORALB 449 Undergraduate Research Topics in Oral Biology (\*) AWSpS** Individual research on topics selected in collaboration with a faculty member. Credit/no credit only. Prerequisite: permission of instructor.

**ORALB 510P Development, Structure, and Function of Oral Tissues (3-3) W,Sp** Development, microscopic and submicroscopic structure, functional aspects of hard and soft oral tissues. Embryonic development of head and neck; morphodifferentiation of face and oral structures. Structure-function relationships in descriptions of development and histology-ultrastructure of oral tissues by integration of traditional oral histology and oral physiology topics.

**ORALB 520P Oral Microbiota, Disease and Asepsis (3) A** Applies students' background knowledge in basic sciences to an understanding of specific microbiology of various niches in oral cavity, formation and metabolic activity of dental plaque, and etiology, pathogenesis, histopathology, and clinical characteristics of dental diseases. Principles involved in prevention of cross-contamination and diagnosis of clinical infections.

**ORALB 521P Oral Pathology (5) AW** Survey of the diseases of the oral-facial regions in lecture and laboratory sessions. Among the conditions discussed are diseases of teeth and their supporting structures and diseases of the oral and paraoral soft tissues and bones. Correlations between clinical findings, etiologic factors, and histopathologic features are stressed. Attendance in the laboratory is required.

**ORALB 540P CPC: Oral Biology (2) Sp** Seminar stressing basic science aspects and clinical findings of various oral lesions through exploration of etiology, pathogenesis, histopathology, and treatment modalities for oral pathology cases drawn from files of the Division of Oral Pathology.

**ORALB 550P Directed Studies in Oral Biology (\*, max. 12) AWSpS** Selected readings and seminars on a topic chosen by individual arrangement in collaboration with a faculty member. May be repeated for credit. Credit/no credit only. Prerequisite: permission of instructor.

**ORALB 560 Dental Plaque and Oral Disease (3) A** Series of lectures and review of current literature pertaining to the formation and microbiological and biochemical characteristics of dental plaque, and the relationship, etiologically, of dental plaque to dental caries, periodontal disease, and the sequels of these conditions.

**ORALB 561 Oral Tissue Development, Structure, and Function (4-3) WSp** Embryonic development of head, neck; emphasis on morphodifferentiation of face and oral structures. Development and microscopic anatomy of enamel, dentin, dental pulp, cementum, periodontal membrane, alveolar bone, oral mucous, membrane, maxillary sinus, temporomandibular articulation, other oral and paraoral structures. Correlation of physiological-structural form with function. Prerequisite: permission of instructor.

**ORALB 562 Supervised Teaching in Oral Biology (1-5, max. 10) AWSp** Directed and guided experience in selected topics in teaching techniques, teaching philosophy, and course design of courses given by the Department of Oral Biology. Students are required to participate in lecture and laboratory teaching under the supervision of the course director. Prerequisite: permission of instructor.

**ORALB 565 Clinical Oral Pathology (1-3, max. 10) AWSpS** Presentation of interesting oral lesions from the dental school and the University of Washington Medical Center and the correlation of the clinical findings with the underlying morphologic and biochemical changes in the tissues. The relation of these oral lesions to systemic disease is stressed. Primarily designed for students with D.D.S., M.D., or D.V.M. degrees. Prerequisite: permission of instructor.

**ORALB 566 Surgical Oral Pathology (2-4, max. 16) AWSpS** Students are trained to interpret microscopic slides of lesions from the oral cavity and related areas, and to correlate these with the clinical findings. Each student is responsible for the grossing of specimens and the preparation of histology reports. Primarily designed for students with D.D.S., M.D., or D.V.M. degrees. Prerequisite: permission of instructor.

**ORALB 568 Biomineralization (2) A** Ontogeny, microscopic, and submicroscopic organization and chemistry of bones and teeth in mammals. Mineral metabolism, crystallographic structure, mechanical properties, and experimental models of biomineralization. For graduate students and advanced stu-

dents in dentistry and medicine; senior undergraduates with permission of instructor.

**ORALB 569 Periodontal Microbiology (2)** Viral, bacterial classification; physiology; toxicity mechanisms reviewed. Formation and composition of plaque and calculus, and chemical methods of control discussed. Specific microbial floras of acute and chronic gingivitis, early onset forms of periodontitis, and adult periodontitis studied. Principles of antibiotic use reviewed. Joint with PERIO 574.

**ORALB 570 Seminar in Oral Pathology (1-3, max. 9) AWSpS** Consists of in-depth studies of specific oral diseases through use of seminar and discussion. Students are required to present literature reviews and to act as discussion leaders. Primarily designed for students with D.D.S., M.D., or D.V.M. degrees. Prerequisite: permission of instructor.

**ORALB 572 Oral Pathology (5) AW** Survey of the diseases of the oral facial regions in lecture and laboratory sessions. Diseases of teeth and their supporting structures and diseases of the oral and paraoral soft tissues and bones. Correlations between clinical findings and histopathologic features. Attendance in the laboratory is required.

**ORALB 574 Clinical Stomatology (3) Sp** Diseases of the oral cavity and jaw are presented as the practitioner encounters them—detailed clinical pictures, laboratory tests, radiographic findings, surgical exploration for the establishment of a therapeutic diagnosis.

**ORALB 575 Oral Biology Seminar (1-3, max. 10) AWSp** Presentation and discussion of current research problems by members of the staff, investigators from other departments in the University, visiting scientists, and trainees. Prerequisite: permission of instructor.

**ORALB 578 Research Techniques in Oral Biology (2-4, max. 15) AWSpS** Introduction to biochemical, analytical, or morphological techniques employed in biochemical cytology or molecular pathology as well as in vitro techniques of tissue and organ culture. Prerequisite: permission of instructor.

**ORALB 581-582-583 Secretory Process in Exocrine Glands (1-3)-(1-3)-(1-3) A,W,Sp** Biostructural, physiological, and biochemical aspects of individual secretory systems as integrated units. Faculty members with appropriate expertise participate in discussions and presentations during each of the three quarters.

**ORALB 600 Independent Study or Research (\*) AWSpS** Prerequisite: permission of instructor.

**ORALB 700 Master's Thesis (\*) AWSpS**

**ORALB 800 Doctoral Dissertation (\*) AWSpS**

## Oral and Maxillofacial Surgery

### Faculty

#### Chairperson

Philip Worthington

#### Professors

Gehrig, John D.,\* 1954, (Emeritus), (Biological Structure),† D.D.S., 1946, M.S.D., 1951, Minnesota; oral and maxillofacial surgery and biological structure.

Kiyak, Asuman H.,\* 1977, (Architecture, Psychology), M.A., 1974, Ph.D., 1977, Wayne State; clinical psychology and geriatric dentistry.

Myall, Robert W. T.,\* 1977, (Biological Structure), B.D.S., 1964, London (England); M.D., 1975, British Columbia (Canada); oral and maxillofacial surgery.

Worthington, Philip, 1976, M.B.Ch.B., 1956, B.D.S., 1959, Liverpool (England); M.D., 1980, Washington; oral and maxillofacial surgery.

#### Associate Professors

Beirne, O. Ross, 1985, D.M.D., 1972, Harvard; Ph.D., 1976, California (San Francisco); oral and maxillofacial surgery.

Bloomquist, Dale S.,\* 1972, D.D.S., 1969, Washington; M.S., 1972, Georgetown; oral and maxillofacial surgery.

Rothwell, Bruce R., 1980, D.M.D., 1973, Oregon; M.S.D., 1977, Washington; oral medicine and hospital dentistry.

#### Assistant Professors

Crinzi, Richard A., 1983, D.D.S., 1972, Washington; oral and maxillofacial surgery.

Egbert, Mark A., 1986, D.D.S., 1981, Washington; oral and maxillofacial surgery.

Trimble, L. Douglas, 1979, D.M.D., 1973, M.D., 1977, Manitoba (Canada); oral and maxillofacial surgery.

#### Lecturers

Carlson, Mark D., 1987, D.D.S., 1981, Washington; M.S., 1977, Washington State; oral and maxillofacial surgery.

Evans, John R., 1982, D.D.S., 1975, Washington; oral and maxillofacial surgery.

## Course Descriptions

**O S 520P Local Anesthesia and Emergencies (2) W** Techniques of local anesthesia, introduction to diagnosis, and initial management of emergencies in the dental office.

**O S 522P Sedation and Pain Control (2) A** Techniques of sedation (oral, inhalational, intravenous) and pain control.

**O S 530P- Oral Surgery (Didactic) (2-, max. 6) AWS** Theory of major and minor oral surgery, using a medicated autotutorial approach covering extraction of teeth, impaction surgery, preprosthetic surgery, medications, surgical complications and postoperative care, biopsy, infections and principles of incision and drainage, bone cysts, maxillary sinus, salivary glands, treatment of facial trauma and deformities.

**O S 550P Directed Studies In Oral Surgery (\*, max.16) AWSps** See DPHS 449 for course description and prerequisite.

**O S 560 Dental Sedation (2) A** For graduates of the various dental specialties on the theory, application, and techniques of dental sedation. All forms of sedation, including oral, intramuscular, intravenous, and inhalation, are covered. Clinical experience is provided in the second half of the quarter.

**O S 630P- Oral Surgery Clinic (1-, max. 3) AWSps** Clinical application of 530P-.

**O S 651P Harborview Clerkship (2-10) AWSps** Six-week rotation at Harborview Medical Center, including intensive instruction in oral surgery procedures and observing and assisting oral and maxillofacial surgery in the operating room. Credit/no credit only. Prerequisite: permission of department Chairperson.

**O S 652P Smith Hospital, Texas, Rotation (2-12) AWSps** Six-week rotation at John Peter Smith Hospital in Fort Worth, Texas, including intensive instruction in oral surgery procedures and observing and assisting oral and maxillofacial surgery in the operating room. Credit/no credit only. Prerequisite: permission of department Chairperson.

## Oral Medicine

### Faculty

#### Chairperson

Edmond L. Truelove

#### Professors

Dworkin, Samuel F.,\* 1974, (Psychiatry and Behavioral Sciences), D.D.S., 1958, Cert. Ortho., 1963, Ph.D., 1969, New York; dentistry and clinical psychology, pain, psychosomatic and illness-related behavior.

Hollender, Lars G.,\* 1988, D.D.S., Royal Dental School (Malmo); 1958, D.Odont., 1964, Lund (Sweden); oral radiology.

Izutsu, Kenneth T.,\* 1971, (Oral Biology),† Ph.D., 1970, Washington; salivary gland function in health and disease.

Omnell, Karl-Åke,\* 1981, D.D.S., 1950, Royal Dental School (Stockholm); D.Odont., 1957, Lund (Sweden); oral radiology.

Truelove, Edmond L.,\* 1972, D.D.S., 1967, M.S.D., 1971, Indiana; oral medicine.

#### Associate Professors

LeResche, Linda A.,\* 1983, (Research), Sc.D., 1977, Johns Hopkins; nonverbal behavior (facial expression) related to pain; pain epidemiology.

Morton, Thomas H.,\* 1975, (Oral Biology),† D.D.S., 1972, Creighton; M.S.D., 1975, Washington; oral pathology.

Schubert, Mark M.,\* 1974, (Otolaryngology), D.D.S., 1974, M.S.D., 1981, Washington; oral medicine.

Stiefel, Doris J.,\* 1972, D.D.S., 1954, M.S., 1971, Washington; dental, care of disabled, oral medicine.

#### Assistant Professor

Middaugh, Dan G., 1967, D.D.S., 1961, Minnesota; M.P.A., 1972, Washington; oral medicine.

#### Lecturers

Miller, Rosalie R., 1973, (Emeritus), D.D.S., 1951, Meharry; Cert., 1957, Iowa; M.P.H., 1972, Washington; oral medicine.

Sommers, Earl E.,\* 1972, D.D.S., 1971, Indiana; M.S.D., 1977, Washington; oral medicine.

## Course Descriptions

**ORALM 404 Considerations In Care of the Patient With a Disability (\*, max. 6) AWSps** Stiefel Role of auxiliaries in dental treatment of the special patient, including psychosocial issues, communication techniques, wheelchair transfers; dental prevention, medical and dental management of specific disabilities; drug therapy, sedation, and anesthesia. Prerequisite: permission of instructor.

**ORALM 460 Clinical Management of Patients With Disabilities (\*, max. 10) AWSps** Stiefel Participation in chair/bedside dental treatment of a broad range of disabled populations, including homebound and institutionalized patients. Prerequisites: 404, permission of instructor.

**ORALM 525P- Detection and Management of Human Disease (1-13-, max. 17) AWSps** Interviewing, history-taking, physical diagnostic techniques, use of medications, physical therapy, and clinical nonsurgical management and treatment of patients in dental setting. Medical factors in treatment of dental and specific oral diseases and chronic pain. Treatment planning of oral, medical, and behavioral problems.

**ORALM 531P, 532P, 533P Special Clinical Topics: Acute and Chronic Pain (1,1,2) A,W,Sp** Essential clinical and technical information and skills for diagnosis and treatment of acute and chronic pain, including differential diagnosis, behavioral factors.

**ORALM 540P Clinical Pathological Conference: Oral Medicine Clinical Conference (2) AW** Clinical conference devoted to case presentations of patients with dental treatment needs and complicating medical problems.

**ORALM 545P- Clinical Pathologic Conference (1-, max. 2) AW** Clinical pathologic conference utilizing interdisciplinary approach to patient care and emphasizing basic science application.

**ORALM 550P Directed Studies In Oral Diagnosis (\*, max. 12) AWSps** See DPHS 449 for course description and prerequisite.

**ORALM 560 Advanced Diagnostic Techniques (2) A** Advanced diagnostic procedures used to identify oral and perioral diseases. Included are in-depth discussions of history analysis, methods for psychologic evaluation, soft and hard tissue diagnostic procedures, neurologic, salivary gland, and other tissue analyses requiring special procedures.

**ORALM 564 Dental Care of the Disabled (DECODE) I (\*, max. 10) AWS** Advanced topics in rehabilitation dentistry including psychosocial issues; characteristics and needs of patients with specific disabilities; patient management and use of portable equipment; drug therapy, sedation and anesthesia; dental prevention, and emergency procedures. Seminars and self-directed study. Prerequisite: permission of instructor.

**ORALM 565 Oral Medicine Clinical Conference (\*, max. 16) AWSps** Clinical conference in which diagnostic data concerning patients seen in the oral medicine clinic are presented for evaluation. When possible, the patient is present with laboratory findings, radiographs, and the results of special tests.

**ORALM 567 Behavioral Management of Acute and Chronic Orofacial Pain (1) AWSps** Overview of psychosomatic concepts, as related to acute and chronic pain. Behavioral management strategies for acute and chronic pain integrated into clinical care provided by primary dentist. Review biofeedbacks, relaxation, hypnosis, placebos, and related psychophysiological approaches. Open to graduate students, postdoctoral fellows, residents in dentistry, medicine, psychology.

**ORALM 570- Oral Medicine and Therapy (2-, max. 6) AW** Lecture directed toward the presentation and discussion of oral diseases and oral manifestations of systemic disease. Primarily the clinical manifestations' relationship to generalized disease processes and patient management with in-depth discussions of therapy.

**ORALM 576 Oral Medicine Literature Review (1) AWSps** Seminar analyzes the recent literature concerning the area of oral medicine, diagnosis, and therapy for oral disease.

**ORALM 580 Current Concepts In Oral Radiology (2)** Lecture/seminar covering current concepts in oral radiology including technical factors, radiation risks, observer characteristics and variation, radiographic localization, interpretation, and overview of current extraoral techniques.

**ORALM 584 Dental Care of the Disabled (DECODE) III (\*, max. 10) AWSps** Field practice in community outreach to facilities and agencies serving disabled populations. Includes observation, dental screenings, patient education and in-service training of direct care staff. Prerequisite: 404 or 664.

**ORALM 600 Independent Study or Research (\*, AWSps)** Credit/no credit only.

**ORALM 620P Introduction to Clinical Diagnosis and Oral Medicine (1) S** Clinical patient diagnosis

and treatment planning, including emergency care, physical diagnosis, case planning, and use of special radiographic procedures, nonsurgical diagnostic and therapeutic protocols.

**ORALM 630P- Clinical Diagnosis and Oral Medicine (1- or 2-, max. 3) AWSpS** Opportunity for examining, performing x-ray survey, and planning treatment for less-involved patients. Students also participate in rendering diagnosis and emergency treatment.

**ORALM 640P- Advanced Clinical Diagnosis and Oral Medicine (1- or 2-, max. 3) AWSp** Advanced instruction in diagnosis and in the examination and handling of patients. Students are in block assignment and perform radiographic surveys, oral diagnosis, and treatment plans for prospective patients.

**ORALM 650P Oral Medicine Clinical Elective (\*, max. 12) AWSpS** Opportunities for students to work in various clinical activities at local hospitals or other sites outside the school. Credit/no credit only. Prerequisite: permission of instructor.

**ORALM 660 Rotations in Medical Disciplines (1-4, max. 24) AWSpS** Clinic, oriented to the hospital practice of oral medicine, deals with examination and nonsurgical therapy of hospital patients. The conditions treated include primary oral diseases, oral manifestations of systemic diseases, and oral defects resulting from medical treatment of serious systemic disease. Credit/no credit only.

**ORALM 663 Introduction to Educational Methods in Dentistry (2)** Principles of teaching and learning, their applications in dental education. Basic principles include learning theory and cognitive processing, identifying prerequisite knowledge of learners, determining objectives of outcomes of learning, selecting appropriate methods and materials, using evaluation procedures. Increases understanding of instruction process to provide a sound foundation for teaching.

**ORALM 664 Dental Care of the Disabled (DECOD) II (\*, max. 10) AWSpS** Practicum in chair/bedside delivery of dental care to different disabled populations. Includes rotations to institutions, long-term care facilities, and homebound service, using mobile equipment. Prerequisites: 564 and permission of instructor.

**ORALM 665 Clinical Oral Medicine (\*, max. 33) AWSpS** Clinic involving the diagnostic evaluation of patients with difficult and unusual oral diseases. The student diagnoses and treats the patient. Types of therapy include medications and chemical agents, functional physical therapy, and counseling.

**ORALM 670 Clinical Oral Medicine Teaching (1-4, max. 16) AWSpS** Clinic designed to give the student experience and instruction in the teaching of clinical oral diagnosis. Treatment of emergency dental problems as well as routine and special diagnostic procedures is emphasized.

## Orthodontics

### Faculty

#### Chairperson

Peter A. Shapiro

#### Professors

Herring, Susan W.,\* 1990, (Oral Biology, Zoology), Ph.D., 1971, Chicago; anatomy.

Kokich, Vincent G.,\* 1974, D.D.S., 1971, M.S.D., 1974, Washington; orthodontics.

Little, Robert M.,\* 1969, D.D.S., 1966, Northwestern; M.S.D., 1970, Ph.D., 1974, Washington; orthodontics.

Moffett, Benjamin C.,\* 1964, Ph.D., 1952, New York; anatomy.

Moore, Alton W., 1948, (Emeritus), D.D.S., 1941, California (San Francisco); M.S., 1948, Illinois; orthodontics.

Newell, Laura L.,\* 1979, ‡(Anthropology), M.A., 1957, Northwestern; Ph.D., 1970, Washington; primatology growth and development, human biology, evolutionary aspects of dermatoglyphics.

Riedel, Richard A.,\* 1949, (Emeritus), D.D.S., 1945, Marquette; M.S.D., 1948, Northwestern; orthodontics.

Shapiro, Peter A.,\* 1973, D.D.S., 1970, Howard; M.S.D., 1973, Washington; orthodontics.

#### Associate Professors

Artun, Jon, 1988, D.D.S., 1969, D.Odont., 1987, Norway; orthodontics.

Joondeph, Donald R.,\* 1969, D.D.S., 1967, M.S., 1969, Northwestern; orthodontics.

#### Assistant Professor

Ramsay, Douglas S.,\* 1990, (Pediatric Dentistry), ‡(Dental Public Health Sciences, Psychology), D.M.D., 1983, Pennsylvania; Ph.D., 1988, M.S.D., 1990, Washington; dental behavioral science, pain, conditioned drug effects.

## Course Descriptions

**ORTHO 449 Directed Studies In Orthodontics (\*, AWSp** See DPHS 449 for course description and prerequisite. Credit/no credit only.

**ORTHO 520P Craniofacial Growth and Development In Orthodontic Diagnosis and Treatment (4) Sp** Basic principles of pre- and postnatal growth and development integrated with the recognition, analysis, and treatment planning of problems encountered in dental and skeletal malocclusions.

**ORTHO 522P Beginning Adjunctive Orthodontics (2) S** Lecture/laboratory instruction in indications for, and techniques of, simple orthodontic tipping, rotational and extrusive movements often necessary in preparation for restorative and periodontal therapy. Prerequisite: 520P.

**ORTHO 550P Directed Studies In Orthodontics (\*, max. 6) S** See DPHS 449 for course description and prerequisite.

**ORTHO 560 Orthodontics Seminar (1-5, max. 25) AWSpS** Methods of diagnosis, analysis, and treatment planning of malocclusion; analysis of methods and theoretical principles used in the treatment of malocclusion. The student presents a detailed case analysis and plan of treatment for each clinical patient supervised.

**ORTHO 562, 563, 564, 565, 566, 567 Orthodontic Theory (2,2,2,2,2,2) A,W,Sp,S** Lecture-seminar sequence dealing with interpretation and application of orthodontic principles and concepts. Pertinent literature, research findings, and current orthodontic theory are analyzed in depth.

**ORTHO 570 Roentgenographic Cephalometry (2) A** Basic principles, history, and techniques of roentgenographic cephalometry.

**ORTHO 575 Post-Retention Seminar (1, max. 2) AW** Each student is required to locate one or more former orthodontic patient(s) with at least ten years postretention. Complete orthodontic records must be obtained, analyzed, and discussed in the seminar. The instructor critiques the presentation and offers similar or contrasting cases for comparison.

**ORTHO 580 Orofacial Biology (\*, max. 8) AW** Comprehensive evaluation seminar of the literature relative to the growth and development of the craniofacial complex. Anthropology, embryology, morphogenesis, genetics, and anatomy are integrated to give the student an appreciation of facial development. Outside reading assignments by the student are discussed and critiqued during the seminar discussion.

**ORTHO 582 Orthodontic Diagnosis and Treatment Planning for the Adult Dental Patient (3) AWSpS** Seminar and clinic for orthodontic, periodontic, and restorative dentistry graduate students in comprehensive, integrated diagnosis, treatment planning, and treatment of the dental problems of the adult patient.

**ORTHO 585 Surgical Orthodontic Diagnosis and Treatment Planning (3) AWSpS** Seminar and clinic for orthodontic graduate students and oral surgery residents in comprehensive, integrated diagnosis, and treatment planning for patients with major facial deformities.

**ORTHO 584 Clinical Management of Cleft Lip and Palate and Craniofacial Anomalies (2)** Management of these complex patients involves members of a dedicated, highly specialized multidisciplinary team. Insight gained into specific evaluation and treatment modalities of each discipline through lectures, seminars, assigned readings. Integrated approach to management is illustrated by attendance at craniofacial staffing and clinics. Prerequisite: graduate students in orthodontics.

**ORTHO 590 Scientific Methodology in Dental Research (2) W** Review of the scientific method. Evaluation of dental literature. Discussion of proposed master's degree research projects. Procedure in scientific writing. Formulation and discussion of hypothetical research projects related to orthodontics.

**ORTHO 597,598,599 Preclinical Technique (\*, max. 3; \*, max. 3; \*, max. 3)** Techniques of construction and manipulation of the edgewise arch mechanism.

**ORTHO 600 Independent Study or Research (\*, AWSpS** Prerequisite: permission of instructor.

**ORTHO 630P- Orthodontic Clinic (1-, max. 6) AWSpS** Direct clinical application of principles of orthodontic diagnosis and treatment planning for simple orthodontic appliances to modify tooth position in preparation for definitive restorative and/or periodontal therapy. Prerequisite: 522P.

**ORTHO 660P Clinical Orthodontics (1-6, max. 24) AWSpS** Clinical application of the techniques in the treatment of malocclusion.

## Pediatric Dentistry

### Faculty

#### Chairperson

Peter K. Domoto

#### Professors

Lewis, Thompson M.,\* 1955, D.D.S., 1950, Northwestern; M.S.D., 1955, Washington; pediatric dentistry.

Weinstein, Philip,\* 1972, ‡(Dental Public Health Sciences, Psychology), M.A., 1968, Ph.D., 1971, Kentucky; dental behavioral science, treatment and prevention of fear and pain.

#### Associate Professors

Davis, John M.,\* 1966, D.D.S., 1961, M.S.D., 1967, Washington; pediatric dentistry.

Domoto, Peter K., 1968, (Dental Public Health Sciences), D.D.S., 1964, California (San Francisco); M.P.H., 1975, Washington; pediatric dentistry, dental behavioral science.

Peterson, Devereaux,\* 1982, D.M.D., 1975, M.Ed., 1975, M.S.D., 1977, Ph.D., 1980, Pittsburgh; pediatric dentistry.

**Assistant Professors**

Barriga, Bertha, 1966, D.M.D., 1966, Oregon; M.S.D., 1971, Washington; pediatric dentistry.

Ramsay, Douglas S.,\* 1990, (Orthodontics),† (Dental Public Health Sciences, Psychology), D.M.D., 1983, Pennsylvania; Ph.D., 1988, M.S.D., 1990, Washington; dental behavioral science, pain, conditioned drug effects.

**Course Descriptions**

**PEDO 520P Pediatric Dentistry (4) S** Introduction to clinical pediatric dentistry, including behavior management, oral diagnosis, preventive dentistry, dental anomalies, radiography, anesthesia, restorative procedures, pulpal therapy, interceptive orthodontics, and traumatic dental injuries of the child patient.

**PEDO 523P Professional Issues: Communication Skills I (1) A** Introductory communication skills with emphasis on interviewing, presented in seminar format. Credit/no credit only.

**PEDO 524P Professional Issues: Communication Skills II (1) A** Continuation of basic communication skills. Credit/no credit only.

**PEDO 525P Professional Issues: Management of Pediatric Patient Behavior (1) W** Introduction to selected theories of child development and application in dental setting; pediatric cognitive, affective, and social development and introduction to problematic child behaviors; use of social systems approach to overview child psychosocial development for the dentist. Credit/no credit only.

**PEDO 550P Directed Studies in Pediatric Dentistry (\*, max. 6) AWSpS** See DPHS 449 for course description and prerequisite.

**PEDO 600 Independent Study or Research (\*)** Prerequisite: permission of instructor.

**PEDO 630P- Clinical Pediatric Dentistry (1-, max. 7) AWSpS** Educational experiences in comprehensive clinical pediatric dentistry. Students register third and fourth years for 24 sessions in the pediatric dentistry clinic, a 3-day rotation at a community clinic, computer assisted clinical simulations, behavioral change projects, and a written analysis of videotaped patient/student clinic encounters.

**PEDO 650P Pedodontics Extramurals (\*, max. 12) AWSpS** Structured fieldwork in the comprehensive treatment of the disabled child. Credit/no credit only. Prerequisite: permission of instructor.

**Periodontics****Faculty****Chairperson**

Robert H. Johnson

**Professors**

Ammons, William F.,\* 1970, D.D.S., 1959, Texas; M.S.D., 1970, Washington; periodontics.

Dale, Beverly A.,\* 1972, (Biochemistry, Medicine), (Oral Biology),† Ph.D., 1968, Michigan; keratin biochemistry.

Engel, L. David,\* 1974, D.D.S., 1967, Minnesota; M.S., 1969, Ph.D., 1976, Washington; cellular immunology, regulation of three lymphocyte responses.

Johnson, Robert H.,\* 1981, D.D.S., 1962, McGill; M.S.D., 1964, Indiana; periodontics.

Page, Roy C.,\* 1967, (Pathology),† D.D.S., 1957, Maryland; Ph.D., 1967, Washington; periodontics.

Robinovitch, Murray R.,\* 1966, †(Oral Biology), D.D.S., 1961, Minnesota; Ph.D., 1967, Washington; salivary biochemistry and saliva-bacterial interactions.

Yuodelis, Ralph A.,\* 1963, †(Restorative Dentistry), D.D.S., 1955, Alberta; M.S., 1964, Washington; periodontics.

**Associate Professors**

Baob, David A.,\* 1980, D.D.S., 1970, Ohio State; M.S.D., 1975, Washington; periodontics.

Bordin, Sandra,\* 1981 (Research), Ph.D., 1966, Ferrara; chemistry, physiology, cell biology, embryology, anatomy.

Persson, G. Rutger,\* 1985, D.D.S., 1967, Ph.D., 1978, Lund.

Selipsky, Herbert,\* 1972, M.S.D., 1973, Washington; periodontics.

**Assistant Professors**

Johnson, Bradley,\* 1989, D.D.S., 1982, M.S.D., 1985, Washington; periodontics.

Spektor, Michael D.,\* 1979, D.D.S., 1975, Illinois; periodontics.

Weinberg, Aaron,\* 1991, D.M.D., 1981, Ph.D., 1988, Hebrew; hematology and microbiology.

**Course Descriptions**

**PERIO 449 Directed Studies in Periodontics (\*) AWSpS** See DPHS 449 for course description and prerequisite.

**PERIO 525P-526P Prevention/Periodontics (2-2) W,Sp** Overview of preventive dentistry, introduction to periodontal therapy.

**PERIO 527P Introduction to Periodontics (1) S** Clinical, histopathologic, and radiographic features of various periodontal diseases and principles of preventive periodontics and initial examination of periodontium.

**PERIO 530P-531P- Periodontics (2-2-) AW** Principles of examination, consultation, instrumentation, occlusal therapy, and treatment planning of the periodontal patient.

**PERIO 541P Professional Issues: Ethics in Dentistry (1) W** Designed to improve ethical reasoning, sensitivity skills; to convey ethical standards and values of the profession through small-group discussions. Standardized tests of moral reasoning and ethical sensitivity given at the beginning and end of course. Credit/no credit only. (Formerly DENT 541P.)

**PERIO 550P Directed Studies in Periodontics (\*, max. 6) AWSp** See DPHS 449 for course description and prerequisite.

**PERIO 561- Periodontal Case Management (2-, max. 6) AW** Didactic presentation of clinical periodontics to provide a comprehensive view of the field and a grasp of modern therapeutics.

**PERIO 565 Periodontal Surgical Anatomy (2) Sp** Lecture and dissection course in intraoral anatomy (maxilla and mandible only) from a periodontal surgical approach. Prerequisite: graduate standing in periodontics.

**PERIO 566 Practice Management (1) W** Aspects of setting up and administering a private periodontal practice. Financing, insurance, office design, equipment, employees, professional forms, marketing strategies, and patient management. Prerequisite: 561.

**PERIO 574 Periodontal Microbiology (2) A** Viral, bacterial classification; physiology; toxicity mechanisms reviewed. Formation and composition of plaque and calculus, and chemical methods of control discussed. Specific microbial floras of acute and chronic gingivitis, early onset forms of periodontitis, and adult

periodontitis studied. Principles of antibiotic use reviewed. Joint with ORALB 569.

**PERIO 575 Immunologic Aspects of Oral Diseases (2) W** Lecture course designed to acquaint students with basic concepts of immunology and immunopathology. Topics include cellular immunology, antibody structure and function, complement system, immunopathologic mechanisms, tumor immunology and immunologic manifestations in mucocutaneous oral lesions as well as immunology of caries and periodontal disease.

**PERIO 576 The Molecular and Cellular Biology of the Periodontium (2) Sp** Nucleic acid, protein, and carbohydrate biochemistry reviewed. Roles of collagens and proteoglycans in gingival tissues and the organization of oral epithelia discussed. Structures of human and animal periodontal lesions compared. Cellular and molecular inflammatory and immunological mechanisms in periodontal disease discussed. History, classification, and epidemiology of periodontal diseases described.

**PERIO 577 Review of Literature (2, max. 14) AWSpS** Continuous weekly seminar devoted to review of periodontic and related literature and the discussion of teaching methods and philosophy of teaching and treatment.

**PERIO 582- Periodontic Treatment Planning Seminar (1-, max. 8) AWSpS** Weekly seminar involved with the presentation, discussion, and tentative solution of moderate to complex problems in diagnosis and treatment.

**PERIO 585- Periodontal Therapy Seminar (1-, max. 8) AWSpS** Weekly seminar utilizing the case review method and dealing with the treatment of moderate to advanced periodontal disease.

**PERIO 586- Longitudinal Evaluation of Periodontal Therapy (1-, max. 8) AWSp** Close examination of case progress from initial therapy to most recent maintenance visits to determine efficacy of method, demands upon patient, and temporal effect of therapy and survival.

**PERIO 587 Periodontal Diseases Research Seminar (1, max. 12) AW** Weekly seminar devoted to advances in periodontal research. Topics include research design, methodology, and data derived from recent and/or ongoing periodontal research. Credit/no credit only.

**PERIO 592 Prescription Surgery (1-1-1) AWSpS** Clinical course in periodontal surgery in which surgical procedures are performed on prescription basis for patients undergoing therapy in the undergraduate dental clinic. Exposes student to a wider spectrum of patients and to stimulate an environment in which the student can encounter the problems in communication and patient management that occur in the private sector.

**PERIO 600 Independent Study or Research (\*) AWSpS** Prerequisite: permission of graduate program adviser.

**PERIO 620P Introduction to Clinical Periodontics (1) S** Clinical periodontics, with emphasis on examination and assessment.

**PERIO 630P-631P-632P Clinical Periodontics (1-1-1) A,W,Sp** Clinical experience in examination, preventive periodontics, instrumentation, and treatment planning of periodontal therapy in patients with mild to moderate periodontal disease.

**PERIO 640P-641P-642P Advanced Clinical Periodontics (1-1-2) A,W,Sp** Treatment of patient with more complex periodontal involvement. Development of skill in comprehensive treatment planning and execution by the individual student. Allowance made for surgical periodontics and experience in assisting in the treatment of advanced cases.

**PERIO 659P Periodontics Extended Learning (\*, max. 4) S** Supplemental work in periodontics to correct an area of student deficiency. Credit/no credit only.

**PERIO 660- Clinical Periodontics (2-6, max. 48) AWSpS** Clinical experience in diagnosis and treatment of periodontal disease.

**PERIO 663 Pre-Prosthodontics Clinical Periodontics (\*) AWSpS** Clinical diagnosis and treatment of periodontal disease for nonperiodontics student. Prerequisite: permission of department chairperson.

**PERIO 665 Clinical Practice Teaching (\*) AWSpS** Supervised experience in teaching clinical periodontics to undergraduate dental students.

**PERIO 685 Hospital Periodontics (1) Sp** Preparation in periodontics to practice in hospital situations, including experience in operation of nitrous oxide analgesia, general anesthesia, intravenous premedication, treating of out- and inpatients.

## Prosthodontics

### Faculty

#### Chairperson

Richard P. Frank

#### Professors

Bolender, Charles L.,\* 1959, D.D.S., 1956, M.S., 1957, Iowa; removable prosthodontics.

Brudvik, James S.,\* 1979, D.D.S., 1957, Minnesota; removable prosthodontics.

Frank, Richard P.,\* 1971, D.D.S., 1962, Iowa; M.S.D., 1968, Washington; removable prosthodontics.

Palmer, John M.,\* 1952, (Emeritus), (Speech and Hearing Sciences),† M.A., 1950, Washington; Ph.D., 1952, Michigan; disorders of voice and orofacial deformities.

Smith, Dale E.,\* 1960, (Emeritus), D.D.S., 1952, Pittsburgh; M.S.D., 1962, Washington; removable prosthodontics.

#### Associate Professor

Toolson, L. Brian,\* 1970, D.D.S., 1967, M.S.D., 1977, Washington; removable prosthodontics.

#### Assistant Professors

Faine, Mary P., 1982, M.S., 1975, Washington; nutrition.

Ma, Tsun,\* 1988, D.M.D., 1978, Washington (St. Louis); M.S., 1985, Michigan; prosthodontics.

Rubenstein, Jeffrey E.,\* 1989, D.M.D., 1975, Tufts; M.S., 1980, Texas; prosthodontics.

Stern, Mitchell A., 1977, D.D.S., 1975, Washington; prosthodontics.

## Course Descriptions

**PROS 510P Introduction to Dental Nutrition (3) Sp** Basic principles of normal human nutrition, including nutrient requirements at various ages, assessment of nutritional status, nutritive values of foods, with special emphasis on the role of diet in development and maintenance of oral tissues.

**PROS 520P Introduction to Complete Dentures—Lecture (3) A** Didactic course in the treatment of completely edentulous patients. Instruction is provided in diagnostic procedures, complete denture construction, and maintenance care.

**PROS 521P Management of Immediate Denture Patients (1) Sp** Lecture course describing and illus-

trating the clinical management of immediate denture patients (typical and overdenture). (Formerly 530P.)

**PROS 523P Removable Partial Denture Design (2) W** Lectures in the basic principles of removable partial denture design; more advanced designs are discussed in seminars; certain technical aspects of design procedures are done in the classroom.

**PROS 525P Removable Partial Denture Clinical Preparatory Course (4) Sp** Lecture-laboratory course dealing with those procedures the dentist must perform in order to fabricate a physiologically acceptable removable partial denture. The student gains experience via clinically simulated laboratory exercises prior to beginning prosthodontic treatment of a partially edentulous patient.

**PROS 532P Special Topics in Prosthodontics (1) Sp** Lecture describing and illustrating the following topics: relining procedure, management of difficult patients, maxillofacial prosthesis, and quality-control problems in private practice.

**PROS 542P Special Topics in Prosthodontics (1) Sp** Lecture describing and illustrating the following topics: relining procedure, management of difficult patients, maxillofacial prosthesis, and quality-control problems in private practice.

**PROS 550P Directed Studies in Prosthodontics (\*, max. 6) AWSpS** See DPHS 449 for course description and prerequisite.

**PROS 560 Complete Dentures (2) W** Lecture/seminar devoted to the diagnosis and treatment of the completely edentulous patient, with emphasis on management of patients with difficulties in treatment.

**PROS 562 Removable Partial Dentures (2) A** Lecture/seminar concentrating on factors peculiar to fabrication of immediate dentures, with emphasis on management of combined fixed and removable therapy.

**PROS 563 Maxillofacial Prosthetics I (2) S** Introductory lecture/seminars with emphasis on pertinent literature, case reports, and the reliance of maxillofacial prosthetics on sound prosthodontic principles.

**PROS 564 Maxillofacial Prosthetics II (2) A** Lecture/seminar augments 563. Diagnosis and detailed treatment planning, procedures for patients with anatomic or neurologic deficits of head and neck.

**PROS 571 Prosthodontics Seminar (2, max. 12) AWSp** Continuous weekly seminar devoted to the review of prosthodontic and related literature.

**PROS 572 Special Topics Related to Prosthodontics (1) WSp** Lecture-seminar dealing with subjects having a bearing on comprehensive treatment of the maxillofacial and regular prosthodontic patient. Topics include surgery, speech, orthodontics, psychology, gerontology, and sociology.

**PROS 574 Prosthodontic Visual Aids (1-1) AS** Lecture/seminar covering principles of preparation and presentation of essays before dental audiences; emphasis on audiovisual aids. Practical application during Autumn Quarter.

**PROS 580 Prosthodontic Dental Materials (2) A** Study of common materials utilized in the fabrication of dental appliances. Emphasis on resin systems and various precious and base-metal alloys.

**PROS 600 Independent Study or Research (\*) AWSpS** Prerequisite: permission of graduate program adviser.

**PROS 620P Clinical Complete Dentures (3) A** Clinical course dealing with the basic principles of complete denture fabrication as well as the diagnosis and treatment of a completely edentulous patient.

**PROS 621P Complete Denture Prosthodontics (1) W** Clinical course that uses the didactic material presented in 620P. The student manages a second complete-denture patient during Winter Quarter with

less supervision than in 620P, and also provides follow-up care to the 620P and 621P patients during Winter Quarter and Spring Quarter.

**PROS 630P Clinical Prosthodontics (1-2-1) AWSpS** Clinical course involving the diagnosis and management of completely and partially edentulous patients. Removable partial dentures and immediate dentures are fabricated. Follow-up care provided for patients previously treated.

**PROS 640P Clinical Prosthodontic Maintenance (1-1-1) AWSp** Clinic involving the relining or rebasing of dentures previously made.

**PROS 650P Extramurals in Prosthodontics (\*, max. 12) AWSpS** Elective clinical experiences, including Foss Nursing Home or clinical practice teaching. Credit/no credit only. Prerequisite: permission of instructor.

**PROS 659P Prosthodontics Extended Learning (\*, max. 4) S** Supplemental work in prosthodontics to correct an area of student deficiency. Credit/no credit only.

**PROS 660 Clinical Prosthodontics (2, max. 6) AWSp** Practical application of material covered in 560 and 562.

**PROS 663 Clinical Maxillofacial Prosthetics I (1-1) AS** Clinical/laboratory providing exposure to treatment of maxillofacial prosthetic patients.

**PROS 664 Clinical Maxillofacial Prosthetics II (1-1) WSp** Clinical/laboratory expanding upon 663, including extensive patient treatment.

**PROS 665- Clinical Practice Teaching (1-, max. 4) AWSp** Supervised experience in teaching clinical prosthodontics to the undergraduate dental student.

**PROS 670 Advanced Clinical Prosthodontics (4, max. 16) AWSpS** Continuation of 660. Patients who present more difficult clinical problems are assigned.

## Restorative Dentistry

### Faculty

#### Chairperson

David J. Bales

#### Professors

Canfield, Robert C.,\* 1951, (Emeritus), D.D.S., 1951, Washington; restorative dentistry.

Hamilton, A. Ian,\* 1949, (Emeritus), M.A., 1958, Washington; D.D.S., 1936, Toronto; Ph.D., 1968, London; restorative dentistry.

Powell, L. Virginia, 1986, D.M.D., 1982, Mississippi Medical Center; restorative dentistry.

**Assistant Professors**

Anderson, Maxwell H., 1990, D.D.S., 1976, Nebraska; M.S., 1983, Michigan; restorative dentistry/operative.

Gordon, Glenn E., 1985, D.D.S., 1962, Michigan; M.S., 1969, Texas; general dentistry/restorative dentistry.

Stoddard, James W., 1965, D.D.S., 1961, Washington; restorative dentistry.

Weaver, James D., 1970, D.D.S., 1965, Ohio; restorative dentistry.

**Lecturers**

Anderson, J. Martin, 1966, D.D.S., 1965, Washington; restorative dentistry.

Strand, Harvey, 1967, D.D.S., 1957, Washington; restorative dentistry.

Townsend, John D., 1977, D.D.S., 1967, McGill; M.S.D., 1973, Washington; restorative dentistry.

**Course Descriptions**

**RES D 410 Dental Anatomy (3) W** Lecture and laboratory exercises on the morphology and nomenclature of individual human adult and primary teeth. Introduction to function, internal tooth morphology, and the influence of tooth anatomy on selected clinical procedures. For dental hygiene students; others by permission of associate dean.

**RES D 449 Directed Studies in Restorative Dentistry (\*)** See DPHS 449 for course description and prerequisite.

**RES D 510P Introduction to Dental Materials (2) A** Physical and chemical properties of dental materials.

**RES D 511P Applied Dental Materials (4) W** Lecture/laboratory in use of dental materials relative to restorative dentistry. Clinical application and student self-evaluation of laboratory work emphasized.

**RES D 515P Dental Anatomy (3) A** Lecture and laboratory on the morphology and nomenclature of individual teeth of the adult human dentition. Introduction to tooth histology and function and the influence of tooth anatomy on clinical dental procedures.

**RES D 516P Introduction to Occlusion (3) W** Lecture/laboratory in the functional determinants of occlusal morphology. Preparation and waxing techniques for developing opposing quadrants by the additive waxing technique.

**RES D 517P Functional Analysis of Occlusion (3) Sp** Clinical and laboratory experiences in examination and charting of patient's occlusion, record-taking for analysis of occlusion on a dental articulator, and preclinical diagnostic correction of problems of occlusion on articulated clinical casts. Provides basic background or technique information relative to laboratory and clinical experiences.

**RES D 519P Operative Dentistry (1) Sp** Lecture series introducing operative dentistry. Nomenclature, cavity classification, instrumentation, pulp protection, and principles of cavity preparation.

**RES D 520P, 521P, 522P, 523P Introduction to Operative Dentistry Technique (3,3,3,2)** Introduces processes of restoring diseased or damaged tooth structure to proper health, form, function, and esthetics. Emphasis on basic principles of cavity preparation, preparation and restoration design, proper selection and use of restorative materials, and clinical considerations for restorative treatment planning. Following demonstration of competence in didactic and practical aspects. Limited opportunity available for introduction to restorative care.

**RES D 525P, 526P, 527P Fixed Prosthodontics (3,3,3) A,W,Sp** Serve as introduction to area of restorative dentistry dealing with indirect restorations. Preclinical experience provided in tooth preparation and restoration, fabrication for various crown designs, singly and in conjunction with various pontic types to serve as fixed partial denture prostheses. Projects emphasize single-tooth preparation/restoration, multiple-tooth preparation/restoration, and esthetic veneer restorations.

**RES D 530P, 531P, 532P Restorative Dentistry (2,2,2) A,W,Sp** Lecture series related to 630P presenting restorative dentistry principles, including supportive material on clinical procedures.

**RES D 540P, 541P Advanced Restorative Dentistry (2,2) A,W** Broadens base of restorative procedures. Introduction of new techniques and preparation for state board examination.

**RES D 542P New Developments in Dental Materials (1) Sp** Dental materials recently introduced to dental profession reviewed, compared to current materials, and clinically demonstrated.

**RES D 550P Directed Studies in Restorative Dentistry (\*, max. 6) AWSps** See DPHS 449 for course description and prerequisite.

**RES D 570 Review of Literature Seminar (1, max. 6) AWSps** Continuous weekly seminar devoted to a review of restorative and related literature, and discussion of teaching methods, philosophy of teaching and treatment.

**RES D 580- Restorative Treatment Planning Seminar (1-, max. 8) AWSps** Continuous weekly seminar to discuss controversial treatment problems and difficult diagnostic cases selected for graduate students.

**RES D 581- Comprehensive Treatment Planning (2-, max. 4) WSp** Seminar devoted to the diagnosis and treatment of comprehensive dental cases with special emphasis given to the relationship of periodontics to restorative dentistry.

**RES D 588 Masticatory Functional Analysis and Occlusal Adjustment (2) A** Lecture/seminar and clinical sessions in the study of the physiology of occlusion. Pertinent literature reviewed and discussed from the multidisciplinary viewpoint. The clinical sessions include training in masticatory functional analysis and treatment of occlusally related diseases.

**RES D 589 Review of Literature in Occlusion (2) W** Seminar to review pertinent literature in occlusion.

**RES D 590- Fundamentals of Fixed Prosthodontics (2-, max. 4) AW** Lecture/laboratory/clinical sessions in the study of gnathological principles and procedures as they pertain to the treatment of comprehensive cases assigned to the students. Use and application of several fully adjustable articulators.

**RES D 600 Independent Study or Research (\*) AWSps** Prerequisite: permission of graduate program adviser.

**RES D 620P Introduction to Clinical Restorative Dentistry (1) S** Orientation to clinical operations, administrative procedures associated with restorative clinical, initial treatment plan, and limited treatment of patients.

**RES D 630P- Clinical Restorative Dentistry (1 or 2 or 3-, max. 9) AWSp** Clinical training in fundamental restorative dentistry procedures, including diagnostic, treatment planning, and therapeutic aspects of operative dentistry, fixed prosthodontics, and occlusal treatment.

**RES D 640P- Advanced Clinical Restorative Dentistry (1-3-, max. 12) AWSp** Clinical training in restorative dentistry procedures, including diagnostic, treatment planning, and therapeutic aspects of operative dentistry, fixed prosthodontics, and occlusal treatment.

**RES D 645P Professional Issues: Applied Dental Practice (1- or 3) AWSp** Lecture, seminar, and clinical application of material to stimulate a dental practice, including communication with staff, delegation, body mechanics, efficient work systems, practice management knowledge, and skill development.

**RES D 659P Restorative Dentistry Extended Learning (\*, max. 4) S** Supplemental work in restorative dentistry to correct an area of student deficiency. Credit/no credit only.

**RES D 660- Oral Rehabilitation (2-6-, max. 32) AWSps** Clinical course to provide experience in diagnosis and treatment of patients requiring restorative procedures from single restorations to complex oral rehabilitative methods. Special emphasis is directed toward the integration of periodontics and occlusion as they relate to restorative dentistry.

**RES D 665 Clinical Practice Teaching (1, max. 4) AWSp** Supervised experience in teaching clinical fixed prosthodontics to undergraduate dental students.

# College of Education

## Dean

Allen D. Glenn  
222 Miller

## Associate Deans

Stephen T. Kerr  
Richard S. Neel

The mission of the College of Education is reflected in the following goals: (1) to conduct systematic study and research on problems, concerns, and policies of education; (2) to conduct programs that will attract and prepare those who will provide leadership for the schools; (3) to experiment, innovate, and develop models for improved training of school personnel; (4) to generate new ideas for the improvement of education; (5) to become intimately involved in cooperative and coordinated research and service activities with the educational enterprise; and (6) to develop systematic procedures for ensuring adequate attention to education for minority groups.

## Programs

In order to achieve its mission, the College of Education has two clusters of programs: (1) professional studies and (2) graduate studies. Each cluster is administered by an associate dean. The professional studies programs lead to a Bachelor of Arts degree or to any of a number of professional certificates in the field of education. The various graduate programs lead to the Master of Education, Doctor of Education, or Doctor of Philosophy degrees.

## Special Facilities and Services

The College of Education maintains a number of special facilities to assist in the fulfillment of its goals. Among these are the Office of Teacher Education Advising and Certification, the Office of Graduate Studies and Research, and the Experimental Education Unit. In addition, the College of Education maintains formal relationships with a number of school districts in the area to provide research and field experience opportunities for the students in the various programs. Individuals interested in teacher certification should contact the Office of Teacher Education Advising and Certification.

# Professional Certification Programs

Stephen T. Kerr  
Associate Dean  
201 Miller, DQ-12

Teacher Education Advising and Certification  
211 Miller, DQ-12

The College of Education is authorized by the State Board of Education to offer professional certificate programs in education for administrators, educational staff associates, and teachers. Academic counselors are available in the Office of Teacher Education Advising and Certification to help with pre-program counseling, applications, long-range planning, continuing certificate needs, referrals to other campus resources, general program advising, and registration.

## Administrator Certificates

Administrator certificate preparation programs for superintendents, principals, and program administrators are offered in the College of Education. Information concerning admission and requirements for these programs is available from the Area of Educational Leadership and Policy Studies, M219 Miller.

## Educational Staff Associate Certificates

Educational staff associate certificate preparation programs are offered for the communication disorders specialist, occupational therapist, school counselor, school psychologist, and social worker. These programs are offered in various departments of the University or in the College of Education. Information concerning requirements and admission may be obtained as follows: communication disorders specialist—Department of Speech and Hearing Sciences, 203 Eagleson, JG-15, University of Washington, Seattle, Washington 98195; occupational therapist—Department of Rehabilitation Medicine, CC-902 University of Washington Medical Center, RJ-30, Seattle, Washington 98195; school counselor and school psychologist—Area of Educational Psychology, College of Education, 312 Miller, DQ-12, University of Washington, Seattle, Washington 98195; social worker—School of Social Work, JH-30, University of Washington, Seattle, Washington 98195.

## Teaching Certificates

The College of Education is authorized by the State Board of Education to prepare and recommend individuals for Initial and Continuing Teaching Certificates. The Teacher Education Program is accredited by the National Council for the Accreditation of Teacher Education and by the National Association of State Directors of Teacher Education and Certification. Graduates are qualified for certification in all states party to the Interstate Certification Compact and in other states as well.

### Initial Teaching Certification Program

The initial certification program at the University of Washington is a performance-based, field-oriented program. The program is four quarters for elementary and three quarters for secondary, plus a summer quarter if needed. In addition to taking courses on campus, students are placed in the field every quarter and work under close supervision in schools in the Seattle metropolitan area.

For information on the certification program, prerequisites, specific admission criteria, applications, and deadlines, contact the Office of Teacher Education Advising and Certification.

The Initial Teaching Certificate is the first level of certification in Washington. Certificates may be endorsed for K-8 elementary education, for grade 4-12 subject areas, and for K-12 specializations. Students in the program may be undergraduates in the College of Arts and Sciences or in the College of Education, or may be postbaccalaureate students who are returning to the University specifically to complete work for the certificate. Admission to the program also requires admission to the University. Since the University of Washington is a research-oriented institution, students are expected to participate, within reason, in approved research projects conducted by faculty members or other authorized individuals.

**Majors and Minors Approved for Teacher Certification.** Listed below are the approved subject areas for teaching majors and/or minors (not all areas have both majors and minors). Current course lists are available in the Office of Teacher Education Advising and Certification, and in each College of Arts and Sciences departmental advising office. It is the student's responsibility to consult the selected department regarding any changes in the required course work.

Areas of study in the College of Arts and Sciences include Afro-American studies, American Indian stud-

ies, anthropology, art, Asian American studies, biology, chemistry, Chinese, classical studies, comparative literature, computer science, drama, earth sciences (emphases available in geological sciences, astronomy, atmospheric sciences, natural science), economics, English, French, geography, German, history, international studies (emphases available in general studies, or Canadian, China, Japan, Korea, Russian and East European, South Asia, Southeast Asian studies), Japanese, journalism, Latin, linguistics, mathematics, music, Norwegian, physics, political science, psychology, Russian, social studies, society and justice, sociology, Spanish, speech communication, Swedish. Bilingual/bicultural teacher education, English as a second language, and natural science are available through the College of Education.

**Application Procedures and Deadlines.** Admission to the initial teacher certification program is competitive. Admissibility is based on evaluation of the general admission requirements, written and oral communication skills, life and work experience, and interviews with University faculty members and public school personnel. In addition the College of Education is committed to the University's affirmative action policy. Consideration will therefore be given in the admissions process to creating a student body that reflects the diverse needs of the teacher education program and the teaching profession. Final selection occurs after students are accepted for placement in a school. The application deadline is the first Friday of the quarter preceding the desired quarter of entry. There is no summer quarter admission. Application forms are available in 211 Miller and must be returned, with all supporting materials, to 211 Miller by the specified deadline.

General admission requirements include 60 hours of evaluated experience at the appropriate level (elementary or secondary); a GPA of at least 2.50 for the most recent 60 graded, transferable credits; satisfactory scores on a specified language and mathematics skills test; SPEAK test of English fluency if not a native speaker of English; grades of at least 2.0 in each course specifically required for the certificate; clearance on the Washington State Patrol and Moral Character supplements; completion of all program prerequisites; and acceptance in a field placement.

Applicants must also either hold a baccalaureate degree or have completed all general Arts and Sciences degree requirements for the bachelor's degree, and have completed 90% of an approved teaching major prior to beginning the program. Applicants to the elementary program with non-approved majors may submit that major if they have 30 quarter credits in a state-approved endorsement area. Applicants to the secondary program must be recommended by the appropriate academic department and field committee. Recommendation deadlines vary among departments.

Students who believe they have met any of the stipulated requirements through previous experience or course work may see an education adviser for evaluation of transfer courses or assistance in petitioning. Courses in professional education completed more than ten years before admission or readmission to the Teacher Education Program are not applicable.

**General Requirements for the Initial Certificate.** To qualify for an Initial Teaching Certificate, a student must hold a baccalaureate degree, complete an academic teaching major (and minor, if required), and complete the certification program. Teaching certificates may be earned by students registered in colleges of the University other than Education, provided all requirements for both the teaching certificate and their degree are met.

The Initial Teaching Certificate at the elementary level requires completion of an approved academic major and the professional minor in elementary education. Course work for the elementary certificate includes five prerequisite courses (MUSIC 200, ART 109, MATH 170, a 5-credit laboratory science course, and a 5-credit geography course), and the following profes-

sional courses: EDC&I 317, 319, 324, 353, 355, 360, 365, 370, 375, 494 (Abuse), 495 (Classroom Management); EDPSY 304, 308; EDLP 479; EDUC 423 plus one other socioethnic course, plus four quarters of EDUC field practicums.

At the secondary level, the Initial Teaching Certificate for science, social science, and mathematics majors requires completion of an academic minor. Students with other majors are encouraged to broaden their teacher preparation by completing one or more minors although minors are not required. Course work for the secondary certificate includes: EDC&I 354, 494 (Abuse), 495 (Classroom Management), 462 (for language arts, social sciences, natural sciences, and mathematics majors), subject area methods course(s); EDPSY 304, 308; EDLP 479; EDUC 423 plus one other socioethnic course, plus three quarters of EDUC field practicums.

#### **Bachelor of Arts Degree**

The teaching certificate is a separate entity from a bachelor's degree. Undergraduate students pursuing a teaching certificate may earn the baccalaureate degree either in the College of Arts and Sciences or in the College of Education. Choice of major and course work determines which college grants the degree. Many undergraduate students in the certification program complete an arts and sciences major approved by the College of Education, then receive a B.A. or B.S. degree through the College of Arts and Sciences. Some students complete academic majors offered only in the College of Education; they receive a B.A. in their academic major from the College of Education. There is no education major at the University of Washington. Students may be admitted to the College of Education after they have been accepted into the Teacher Education Program.

To qualify for the Bachelor of Arts degree in the College of Education, students must complete the same proficiency, writing, and distribution requirements as in the College of Arts and Sciences, and an approved subject area teaching major. Students must also have completed at least 10 credits in education courses following admission to the college, with a minimum of 2.00 GPA in all education courses taken. A minimum 2.00 cumulative GPA is required for the degree.

Students completing secondary-level certification may not use courses required for their academic major to satisfy distribution requirements. However, students completing elementary-level certification may include such courses to satisfy distribution requirements.

#### **Continuing Teaching Certificates**

Teachers may obtain an initial renewal or a continuing certificate either through a state-approved teaching institution or directly through the Office of the Superintendent of Public Instruction. For information on the OSPI guidelines, contact OSPI directly (Office of Professional Licensure and Certification, OSPI, FG-11, Old Capitol Building, Olympia, Washington 98504). Teachers who wish to be recommended for the certificate by the University of Washington may obtain information from the Office of Teacher Education Advising and Certification, 211 Miller.

Persons interested in working toward a master's degree should contact the Office of Graduate Studies and Research, 206 Miller, or the department from which they plan to obtain a graduate degree. All candidates who wish to be recommended for the Continuing Teaching Certificate through the University of Washington, whether postbaccalaureate or graduate students, should consult an adviser in the Office of Teacher Education Advising and Certification regarding certificate requirements.

#### **Endorsements on Teaching Certificates**

Individuals holding an initial or continuing teaching certificate under the 1988 guidelines may add endorsements to their certificates which will qualify them

to teach subjects and at grade levels in addition to those in which they were originally endorsed. For information on state requirements and on endorsement course work through the University of Washington, contact the Office of Teacher Education Advising and Certification, 211 Miller, or UW Extension, GH-21, Seattle, Washington 98195. The Office of the Superintendent of Public Instruction and Educational Service Districts can also provide applications and information on requirements. Teachers may also apply for endorsements directly through OSPI.

## **Graduate Degree Programs**

Richard S. Neel, Associate Dean for Graduate Studies and Research, Graduate Program Coordinator

The College of Education offers three advanced degrees: Master of Education, Doctor of Education, and Doctor of Philosophy. Graduate students may specialize their degree studies in curriculum and instruction; educational psychology; educational leadership and policy studies; or special education. Questions regarding graduate study in education should be directed to the Office of Graduate Studies and Research, 206 Miller, DQ-12, College of Education, University of Washington, Seattle, Washington 98195.

#### **Master of Education Degree**

The Master of Education degree requires a minimum of 45 credits, including at least 15 credits in a specialized area of study in education; 9 credits related to but outside of the specialization, some course work outside education; 9 thesis credits or, for the nonthesis option, 9 credits in a field study or other approved project; and a final examination.

#### **Doctor of Education Degree**

The Doctor of Education degree is designed to prepare professionals whose primary interest is to deal directly with problems of educational practice. The program of study leading to the Doctor of Education degree, as a professional degree, focuses on the utilization of research knowledge and practitioners' knowledge, rather than on the production of research knowledge. Those who aspire to positions as master teachers, curriculum designers, or learning resource specialists, for example, would appropriately seek the Doctor of Education degree.

This professional degree requires at least two years of resident study, a program of specialized study with credit in education and related fields, sufficient preparation in research methodology to interpret research findings for use in practice, an internship and leadership training, a General Examination, a dissertation on a problem of educational practice, and a Final Examination.

#### **Doctor of Philosophy Degree**

The Doctor of Philosophy degree in education is specifically a research degree. While the typical recipient of the Doctor of Education degree becomes an educational practitioner in the schools or other educative agencies, the holder of the Doctor of Philosophy degree is prepared for a career of research on issues fundamental to the conduct of education—issues that range from fairly narrow questions about human learning to macroquestions regarding the form of societies' educational institutions. The scope of the Ph.D. degree in education is a broad one. It is possible to pursue a degree organized around traditional study areas such as educational psychology, curriculum and instruction, special education, or educational leadership. A student may develop a course of study that integrates various elements of more than one study area (e.g., multiethnic education, literacy).

Degree requirements include minimally two years of resident study, a program of specialized study with

credits both in education and in other academic units, preparation in research methodology adequate to design and assess research in the field of specialization, sufficient study in cognate fields inside and outside of education to ensure that the candidate can place the specialized research in a broader context, a General Examination, a research dissertation, and a Final Examination.

#### **Accreditation**

The College of Education has the following formal accreditation: American Psychological Association (APA) for the Ph.D. program in school psychology; National Council for the Accreditation of Teacher Education (NCATE) for all certification programs in teaching and administration.

#### **Admission Requirements**

Admission to graduate degree programs in education is competitive, with space limited by faculty size and facilities. To be considered in the competition for admission to the Master of Education degree programs, the applicant should have earned a baccalaureate degree from an accredited institution and present a 3.00 GPA on the last 90 graded quarter hours, or 60 semester hours, of course work taken, must have submitted a score on the Graduate Record Examination general test, and must have satisfied any additional prerequisites specified by the area of specialization.

Consideration for admission to either doctoral program requires a master's degree or equivalent preparation in a field appropriate to the area of specialization, usually at least a 3.50 GPA in the master's program, satisfaction of special prerequisites specified by the area of specialization, and completion of the application steps outlined in the appropriate doctoral program document (available in the Office of Graduate Studies and Research, 206 Miller, DQ-12).

#### **Financial Aid**

Research and teaching assistantships in the College of Education are available on a competitive basis. To be considered for an appointment, the graduate student must show exceptional academic promise. Doctoral applicants are given priority.

Specific information on the various types of remunerative appointments for graduate students in education, amounts of stipends, application procedures, and deadlines may be obtained from the University of Washington College of Education, Office of Graduate Studies and Research, 206 Miller, DQ-12, Seattle, Washington 98195.

#### **Special Research Facilities**

Within the College of Education are opportunities for students to gain research experience through four organizations. The Clinical Training Laboratory, operating under the aegis of Educational Psychology, offers research facilities ranging from observation rooms equipped with videorecorders to central computer terminals, microcomputers, and a library. The world-renowned Experimental Education Unit offers an interdisciplinary approach to research, training, and service provision for handicapped children and their families. The Institute for the Study of Educational Policy, which promotes interdisciplinary research that bears on education policy, provides a point of contact between the University and the educational policy researchers and analysts throughout the state. The Teacher Education Research Center assists faculty members and graduate students in conducting research and evaluation on teacher education.

## Faculty

### Professors

Abbott, Robert D.,\* 1975, M.S., 1968, Ph.D., 1970, Washington; measurement, statistics, and research design.

Affleck, James Q.,\* 1967, M.A., 1963, San Francisco State; Ed.D., 1968, Columbia; special education (mental retardation, special education administration).

Anderson, Robert A.,\* 1965, (Emeritus), Ph.D., 1964, Minnesota; educational administration.

Banks, James A.,\* 1969, M.A., 1967, Ph.D., 1969, Michigan State; social studies and multicultural education.

Billingsley, Felix F.,\* 1978, M.A., 1966, Western Washington; Ph.D., 1974, Washington; special education (severe disabilities).

Bolton, Dale L.,\* 1962, (Emeritus), M.S., 1953, Oklahoma State; Ph.D., 1958, Wisconsin; educational administration.

Borgatta, Edgar F.,\* 1981, ‡(Sociology), M.A., 1949, Ph.D., 1952, New York; Director, Institute on Aging; methodology, social psychology, demography-ecology.

Boroughs, Homer, Jr., 1948, (Emeritus), M.A., 1947, Ph.D., 1949, Washington; history and philosophy of education.

Brammer, Lawrence M.,\* 1964, (Emeritus), M.A., 1948, Ph.D., 1950, Stanford; counseling, adult development.

Briggs, J. Robert,\* 1952, (Emeritus), M.A., 1950, Ed.D., 1954, Washington; business education.

Brown, Frances A., 1953, (Emeritus), M.A., 1950, Columbia; business education.

Burgess, Charles O.,\* 1964, (Emeritus), (History), M.S., 1958, Ph.D., 1962, Wisconsin; history of education.

Butterfield, Earl C.,\* 1981, (Engineering, Psychology), Ph.D., 1963, George Peabody; human development and cognition.

Dohner, Charles W.,\* 1967, (Medical Education), † M.S., 1957, Kansas State (Pittsburgh); Ph.D., 1966, Ohio State; educational psychology/research in medical education.

Doi, James I.,\* 1979, (Emeritus), M.A., 1950, Ph.D., 1952, Chicago; finance and management of colleges and universities.

Driscoll, John P.,\* 1967, (Emeritus), M.S., 1950, California (Los Angeles); Ph.D., 1957, Pennsylvania State; educational communications.

Edgar, Eugene B.,\* 1972, M.A., 1968, Ph.D., 1972, George Peabody; special education.

McCartin, Rosemarie E.,\* 1965, (Emeritus), M.A., 1960, Immaculate Heart; Ph.D., 1964, Southern California; school psychology/human development and cognition.

Meacham, Merle L.,\* 1966, (Emeritus), M.S., 1956, Washington; Ed.D., 1965, Washington State; school psychology.

Mizokawa, Donald T.,\* 1973, M.Ed., 1969, Hawaii; Ph.D., 1974, Indiana; human development and cognition.

Morishima, James K.,\* 1972, Ph.D., 1967, Washington; human development and cognition.

Morris, Arval A.,\* 1955, ‡(Law), M.A., 1953, J.D., 1955, Colorado; LL.M., 1958, Yale; LL.D., 1972, Colorado College; educational policy studies, law.

Neel, Richard S.,\* 1972, M.S., 1971, Ph.D., 1972, Southern California; special education.

Nelson, Thomas O., 1971, ‡(Psychology) M.A., 1966, Ph.D., 1970, Illinois; educational psychology, human memory, metacognition, research methodology, philosophy of science.

Odegaard, Charles E.,\* 1974, (Emeritus), A.M., 1933, Ph.D., 1937, Harvard; higher education.

Olstad, Roger G.,\* 1964, (Environmental Studies), M.A., 1959, Ph.D., 1963, Minnesota; science education, teacher education.

Olswang, Steven G.,\* 1977, J.D., 1971, Illinois; Ph.D., 1977, Washington; higher education administration and policy, law, faculty governance, collective bargaining.

Peckham, Percy D.,\* 1968, (Emeritus), M.A., 1955, Denver; Ph.D., 1968, Colorado; measurement, statistics, and research design.

Reitan, Henry M.,\* 1967, (Emeritus), Ph.D., 1950, North Dakota; higher education.

Ryckman, David B.,\* 1969, A.M., 1961, Chicago; Ed.D., 1966, Illinois; human development and cognition.

Sax, Gilbert,\* 1966, (Psychology), † M.A., 1956, California (Los Angeles); Ph.D., 1958, Southern California; measurement, statistics, and research design.

Sebesta, Sam L.,\* 1963, M.A., 1960, Northwestern; Ed.D., 1963, Stanford; reading/language arts.

Sirotnik, Kenneth A.,\* 1985, M.A., 1966, M.A., 1967, Ph.D., 1969, California (Los Angeles); measurement, statistics, research design and evaluation, organizational change and school improvement.

Standal, Timothy C.,\* 1976, M.Ed., 1974, Western Washington; Ph.D., 1976, Minnesota; reading/language arts.

Stowitschek, Joseph J.,\* 1986, (Research), M.S., 1969, Oregon College of Education (Monmouth); Ed.D., 1973, Utah State; vocational and social development, service program policies regarding disabled youth.

Strayer, George D., Jr.,\* 1949, (Emeritus), M.A., 1928, Ph.D., 1934, Columbia; educational administration.

Sulzbacher, Stephen I., 1972, (Psychiatry and Behavioral Sciences, Pediatrics), A.M., 1964, Hollins; Ph.D., 1971, Washington; special education.

Thompson, Marie D.,\* 1979, (Speech and Hearing), M.A., 1968, Ph.D., 1970, Washington; special education (hearing impaired).

Torkelson, Gerald M.,\* 1965, (Emeritus), Ph.M., 1945, Wisconsin; Ed.D., 1953, Pennsylvania State; educational communications.

Tostberg, Robert E.,\* 1962, (Emeritus), M.A., 1958, Ph.D., 1960, Wisconsin; philosophy of education.

White, Owen R.,\* 1981, M.A., 1970, Ph.D., 1971, Oregon; special education (severely handicapped, mildly handicapped).

Williams, Donald T., Jr.,\* 1969, M.A., 1957, Ph.D., 1963, Stanford; higher education.

Williams, Richard C.,\* 1990, M.A., 1963, Ph.D., 1966, Minnesota; educational leadership and policy studies; Director, Puget Sound Educational Consortium.

Winn, William D.,\* 1985, M.A., 1970, Indiana; M.A., 1972, Oxford (England); Ph.D., 1972, Indiana; educational technology.

**Associate Professors**

Beal, Jack L.,\* 1973, M.S., 1962, Kansas; Ph.D., 1972, Nebraska; secondary mathematics education.

Berninger, Virginia W.,\* 1986, M.Ed., 1970, Pittsburgh; Ph.D., 1981, Johns Hopkins; reading acquisition, reading and writing disabilities, developmental neuropsychology, school psychology.

Brown, Robert L.,\* 1965, M.Ed., 1956, Trinity; Ed.D., 1961, Arkansas; school psychology.

Dimmitt, Norma M.,\* 1969, (Emeritus), M.Ed., 1963, Washington; Ed.D., 1970, Stanford; teacher education/curriculum.

Forster, Jerald R.,\* 1966, Ph.D., 1966, Minnesota; counseling.

Frerichs, Alberta J., 1955, (Emeritus), M.Ed., 1951, Nebraska; business education.

Gehrke, Nathalie J.,\* 1979, M.A., 1972, Northwestern; Ph.D., 1976, Arizona State; curriculum.

Goldblatt, Steven M., 1982, (Architecture, Building Construction, Civil Engineering), J.D., 1977, Golden Gate; educational facilities.

Gray, Carol Ann,\* 1971, (Parent and Child Nursing), M.Ed., 1968, Western Washington; Ph.D., 1971, Washington; school psychology/human development and cognition.

Grossman, Pamela L.,\* 1987, M.A., 1981, California (Berkeley); Ed.S., 1987, Stanford; Ph.D., 1988, Stanford; curriculum and teacher education.

Hansen-Krening, Nancy M.,\* 1974, M.Ed., 1973, Ph.D., 1974, Oregon; reading/language arts.

Kelly, Samuel E.,\* 1973, (Emeritus), M.A., 1960, Marshall; Ph.D., 1971, Washington; higher education.

Knapp, Michael S.,\* 1990, M.Ed., Harvard; M.A., 1979, Ph.D., 1981, Stanford; educational leadership and policy studies.

Malen, Betty L.,\* 1990, M.A., 1973, North Dakota; Ph.D., 1983, Minnesota; educational leadership and policy studies.

McCutchen, Deborah,\* 1986, M.A., 1978, Youngstown State; M.S., 1981, Ph.D., 1985, Pittsburgh; cognitive processes underlying reading and writing.

Nolen, Patricia A.,\* 1971, (Emeritus), M.S., 1968, Ph.D., 1970, Washington; school psychology/human development and cognition.

Ostrander, Kenneth H.,\* 1968, M.S., 1959, Purdue; M.P.A., 1965, Kansas; Ed.D., 1968, Tennessee; educational administration.

Parker, Walter C.,\* 1985, M.A., 1978, Colorado; Ph.D., 1982, Washington; social studies.

Smith, John P.,\* 1969, M.Ed., 1963, Missouri; Ed.D., 1969, Stanford; science education.

Thalberg, Stanton P.,\* 1965, M.A., 1959, Ph.D., 1964, Iowa; school psychology.

Valencia, Sheila D.,\* 1987, M.Ed., 1976, State University of New York (Buffalo); Ph.D., 1978, Colorado; curriculum and instruction.

Vasquez, James A.,\* 1975, M.Div., 1961, Fuller Theological Seminary; M.A., 1971, Ph.D., 1973, California (Los Angeles); learning (minority youth)/bilingual education.

Zumeta, William M.,\* 1985, (Public Affairs), M.P.P., 1973, Ph.D., 1978, California (Berkeley); public management, policy analysis, education and manpower policies, regulation.

#### Assistant Professors

Bamburg, Jerry D.,\* 1990, (Research), M.Ed., 1974, Seattle Pacific; Ed.D., 1989, Washington; educational leadership and policy studies.

Bashey, Husain I., 1969, M.A., 1955, Bombay (India); M.A., 1960, MacMurray College; Ph.D., 1975, Oregon; counseling.

Burgess, Donna M., 1988, (Research), M.A., 1980, Washington State; Ph.D., 1987, Washington; special education.

Cohen, Marilyn A., 1991, (Research), M.Ed., 1967, Ph.D., 1975, Washington; educational psychology.

James, William H., 1989, (Research), M.S., 1977, Ph.D. 1979, Massachusetts; educational psychology.

Keating, Pamela J.,\* 1981, (Research), M.Ed., 1976, Ph.D., 1981, Washington; policy, governance, and administration.

Kerdeman, Deborah,\* 1990, M.A., 1988, Ph.D., 1990, Stanford; philosophy.

Kubota, Carole Ann, 1988, (Research), M.Ed., 1978, Ph.D., 1985, Washington; curriculum and instruction.

LeBrasseur, Michele, 1991, (Research), M.S., 1974, Wisconsin; Ph.D., 1987, Indiana (Bloomington); curriculum and instruction.

Mukhopadhyay, Swapna, 1991, Ph.D., 1989, Syracuse; curriculum and instruction.

Nelson, Mary Lee,\* 1990, M.A., 1978, California State (Chico); Ph.D., Oregon; educational psychology.

Nolen, Susan B.,\* 1990, M.Ed., 1976, Lewis and Clark; Ph.D., 1986, Purdue; cognition.

Schwartz, Ilene S.,\* 1991, M.A., 1986, Ph.D., 1989, Kansas; special education.

Semrud-Clikeman, Margaret E.,\* 1991, M.S., 1975, Wisconsin; Ph.D., 1990, Georgia; educational psychology.

Smith, Albert J., Jr., 1991, (Research), M.Ed., 1968, Seattle; Ph.D., 1983, Washington; educational leadership and policy studies.

Taylor, Catherine S., 1991, M.S.E., 1978, Ph.D. 1986, Kansas; educational psychology.

Theobald, Neil D.,\* 1988, M.Ed., 1986, Ph.D., 1988, Washington; policy, governance, and administration.

Wineburg, Samuel S.,\* 1989, Ph.D., 1989, Stanford; educational psychology.

## Course Descriptions

### Education Curriculum and Instruction

**EDC&I 317 Art in Childhood Education (3)** *Koenig* Provides the general elementary student with a theoretical and practical background for teaching art to children. Prerequisites: ART 109, and admission to the Teacher Certification Program. Materials fee required.

**EDC&I 318 Drama in Childhood Education (3)** Provides the student with a theoretical and practical introductory background of fundamentals for teaching drama to children as a creative process and mode of learning. Prerequisite: DRAMA 200.

**EDC&I 319 Music in Childhood Education (3)** Provides the student with a theoretical and practical introductory background to the fundamentals of music and for teaching music to children as a creative process and mode of learning. Prerequisites: MUSIC 200 and admission to the Teacher Certification Program.

**EDC&I 324 Physical Education and Health in the Schools (2)** Techniques and procedures for teaching physical education and health in elementary and secondary schools. Prerequisite: admission to the Teacher Certification Program.

**EDC&I 329 Teaching Foreign Language in the Schools (2)** Basic course in the methods of teaching foreign languages in the K-12 school. Prerequisite: EDPSY 304.

**EDC&I 330 The Teaching of French (3)** Elementary, junior high, and senior high emphases. Prerequisites: EDPSY 304 and demonstration of language proficiency.

**EDC&I 333 The Teaching of Spanish: Secondary Emphasis, Elementary and Junior High School Emphasis, Elementary Emphasis (3)** Prerequisite to teaching practicum. Elementary, junior high, and secondary emphases. Prerequisites: EDPSY 304 and demonstration of language proficiency.

**EDC&I 336 The Teaching of German in Secondary Schools (3)** Taught concurrently with GERM 576. Prerequisites: EDPSY 304, GERM 303, or permission of instructor.

**EDC&I 338 The Teaching of Russian (2)** Special methods in the teaching of Russian to acquaint prospective teachers with materials, methods, and problems. Prerequisites: EDPSY 304 and permission of instructor.

**EDC&I 339 The Teaching of Scandinavian (Norwegian, Swedish) (2)** Special methods in the teaching of Norwegian and Swedish to acquaint prospective teachers with materials, methods, and problems. Prerequisites: EDPSY 304 and permission of instructor.

**EDC&I 341 The Teaching of Art in the Secondary School (3)** For majors in secondary art education planning to teach on the junior or senior high school level. Prerequisite: EDPSY 304. Materials fee required.

**EDC&I 344 Materials and Methods of Teaching Asian Languages (3)** Methods specifically pertaining to the teaching of Asian languages are discussed. Existing textbooks reviewed. Each student is required to write a lesson, draw up a teaching plan, and teach a class before the end of the quarter. Prerequisites: EDPSY 304, and three years of target language, or equivalent.

**EDC&I 353 Teaching in the Elementary School (3)** Emphasizes selected teaching modes; lesson planning; classroom management procedures; grouping to

accommodate pupils with special needs; utilization of learning resources; evaluation of teaching. Attention also given to school culture. Prerequisite: admission to the Teacher Certification Program.

**EDC&I 354 Teaching in the Secondary School (3)** Development of basic skills in instructional methods, lesson planning, classroom management procedures, evaluation of teaching. Attention also given to school culture. Prerequisite: admission to the Teacher Certification Program.

**EDC&I 355 Language Arts in the Elementary School (3)** *Hansen-Krening, Valencia* Basic course in planning and teaching elementary language arts: listening and speaking, written composition, handwriting, spelling, creative and practical writing. Prerequisites: EDPSY 304 and admission to the Teacher Certification Program.

**EDC&I 356 The Teaching of English (3)** Combines theoretical understanding of teaching with specific techniques and materials for literature, language, composition, and mass media at the secondary level; coordinated with concurrent experience in schools. Prerequisites: EDPSY 304 and admission to the Teacher Certification Program.

**EDC&I 357 The Teaching of Speech (3)** *Staton* Special methods course in the teaching of speech communication at the elementary and secondary levels. Prerequisites for majors in speech communication: EDPSY 304, at least 20 credits in speech communication; for nonmajors: permission of instructor.

**EDC&I 360 Reading in the Elementary School (3)** Basic course in methods, techniques, and materials used the teaching reading through decoding, comprehension, strategies, and literature in primary and intermediate grades. Prerequisites: EDPSY 304 and admission to the Teacher Certification Program.

**EDC&I 361 Basic Skills in Reading (3)** *Sebesta, Standal, Valencia* Developmental readiness for reading; diagnostic teaching of reading in the classroom; reading instruction for bilingual learners; reading for special learners; developing the least restrictive environment; teaching functional reading and study skills; and materials and approaches for teaching reading. Prerequisites: 360 and EDPSY 304.

**EDC&I 365 Social Studies in the Elementary School (3)** *Banks, Kaltsounis, Parker* Basic course in the planning and teaching of social studies in the elementary school. Prerequisites: EDPSY 304 and GEOG 100 and admission to the Teacher Certification Program.

**EDC&I 366 The Teaching of Social Studies in Secondary Schools (3)** *Kaltsounis, Parker* Application of educational principles and methods to the teaching of social studies on the junior and senior high school levels. Prerequisite: EDPSY 304.

**EDC&I 370 Science in the Elementary School (3)** *Kubota, Smith* Basic course in the teaching of science in the elementary school with special emphasis on the nature of science as a process of inquiry. Prerequisites: EDPSY 304 and 5 credits in an approved laboratory natural science course (biology, chemistry, or physics), and admission to the Teacher Certification Program.

**EDC&I 371 Teaching Science in the Secondary School (3)** *Olstad* Basic course in the teaching of science in the secondary school with special emphasis on the nature of science as a process of inquiry. Prerequisites: EDPSY 304 and admission to the Teacher Certification Program.

**EDC&I 372 The Teaching of Biology (2)** Prerequisites: 371, EDPSY 304, and 25 credits in biology.

**EDC&I 373 The Teaching of Chemistry (3)** Prerequisites: 371, EDPSY 304, and at least 20 credits in college chemistry.

**EDC&I 375 Mathematics in the Elementary School (3)** *Beal, Mukhopadhyay* Examination of the learning and teaching of elementary mathematics, in light of recent theoretical and pedagogical developments. Prerequisites: EDPSY 304, MATH 170, and admission to the Teacher Certification Program.

**EDC&I 378 Teaching Mathematics in the Secondary School (3)** *Beal, Mukhopadhyay* Basic course in the teaching of mathematics in the secondary school for preservice teachers. Prerequisites: EDPSY 304 or permission of instructor, and admission to the Teacher Certification Program.

**EDC&I 424 Multicultural Curriculum and Instruction (3)** *Banks* Primarily for preservice and in-service teachers who have little or no previous exposure to issues related to ethnicity and schooling. Designed to help teachers better understand the school's role in the ethnic education of students and acquire the insights, understandings, and skills needed to design and implement curricular and instructional strategies that reflect ethnic diversity. Prerequisite: admission to Teacher Education Program, teaching experience, or permission of instructor.

**EDC&I 425 Instructional Strategies for Minority Students (3)** Designed to equip educators with appropriate skills in effective teaching of culturally and socioeconomically different students. Attention is directed to understanding how these students differ from mainstream youth and what the implications are for instructional strategies in the classroom. No credit given for students who have completed EDPSY 513/536.

**EDC&I 434 Introduction to Computers in the Classroom (3)** Overview of the uses of computers in education. Uses of computers in instruction, classroom management (gradebooks, utilities), evaluation of software, overview of programming, and word processing. Prior experience not required.

**EDC&I 435 Uses of LOGO in the Classroom (3)** Logo programming in the classroom. Uses of Logo as an environment for exploring problem-solving, programming, and mathematical concepts. Topics and applications developed for elementary and secondary settings, based on students' needs and desires. Prerequisite: 434 or equivalent.

**EDC&I 436 Design and Authoring of CAI (3)** Introduction to the design of computer-assisted-instructional programs. Types of learning, characteristics of effective instruction. Students design and produce CAI programs using authoring systems for computers.

**EDC&I 437 Uses of Computer Application Packages in Schools (3)** Introduction to the instructional and management uses of application programs. Topics may include: databases, spreadsheets, word processing, graphics packages, graphing utilities, telecommunication, desktop publishing. Emphasis is on K-12 setting. Prerequisites: 434 or equivalent and word processing skills.

**EDC&I 438 Improvement of Teaching: Latin (5)** Examination and evaluation of the various methods of teaching Latin; audiovisual aids; testing materials; textbooks; relation of Latin to other languages. Latin derivatives in English vocabulary. Joint with LAT 475.

**EDC&I 439 Caesar and Vergil for High School Teachers (5)** Interpretation of the works of Caesar and Vergil with special reference to the problems of high school teaching. Joint with LAT 476.

**EDC&I 443 Improvement of Teaching: Elementary School Music (3)** Advanced studies in the teaching of music in the elementary school. Prerequisite: teaching experience.

**EDC&I 445 Theory and Practice of Kindergarten and Primary Teaching (3)** Systematic treatment of the content, teaching processes, and learning resources appropriate to kindergarten and primary education with particular emphasis on current research and developments. Prerequisite: EDPSY 304 or permission.

**EDC&I 453 Teaching the Bilingual-Bicultural Student (3)** *Vasquez* Educational needs of bilingual students: research findings, special programs, materials, and methodologies that bilingual-bicultural education can provide to meet those needs. Cultural combinations of bilingual populations in American culture; historical, social, and linguistic factors affecting their K-12 education.

**EDC&I 454 Cooperative Learning in the Classroom (3)** Theory and research on cooperative learning and current practices of managing such learning. Team learning activities and opportunities to plan and try out lessons and materials using several different cooperative strategies. Prerequisite: student teaching, which may be done concurrently.

**EDC&I 455 The Language Arts: Instructional Problems and Practices in the Elementary School (3)** *Hansen-Krening, Valencia* Study of important and recent research in elementary school language arts and consideration of its practical implications for teaching. Prerequisite: teaching experience.

**EDC&I 456 Workshop in Instructional Improvement: Language Arts (1-6, max. 15)** Individual or group study projects on the improvement of instruction in language arts.

**EDC&I 457 Methods in Teaching English as a Second Language (3)** Prepares preservice and in-service teachers to teach English as a second language and to meet the educational and linguistic needs of students who have little or no English language skills. Emphasis on a survey of first- and second-language acquisition research and its educational implications, as well as instructional strategies consistent with the audiolingual, cognitive, and creative construction approaches to second-language learning. Includes diagnostic-prescriptive strategies for classroom application.

**EDC&I 459 Workshop in Instructional Improvement: Reading (1-6, max. 15)** Projects on the improvement of instruction in reading. Prerequisite: minimum of one course in methods of teaching reading.

**EDC&I 460 The Teaching of Reading (3)** *Hansen-Krening, Sebesta, Valencia* Improvement of teaching reading in the elementary school, including comprehension and decoding, reading in the content fields, motivation of voluntary reading and teaching of literature. Prerequisite: teaching experience or prior course work in the teaching of reading.

**EDC&I 461 Materials for Teaching Reading (3)** *Hansen-Krening, Sebesta, Valencia* Designed to provide acquaintance with materials used in the teaching of reading. Trade books and materials from content areas are examined. Prerequisite: one prior course in the teaching of reading.

**EDC&I 462 Reading in the Secondary School (3)** *Standal* Teaching of reading in the secondary schools, including vocabulary development, comprehension, reading in the content fields, and organization of reading programs at the secondary level. Prerequisite: teaching experience or concurrent internship.

**EDC&I 464 Educating Native American Youth (3)** Assists students in understanding the North American Indian child from cultural, socioeconomic, and psychological points of view. Provides opportunities for the student to apply knowledge and skills gained in other courses to prepare programs and learning aids relevant to the educational situation of the Indian child.

**EDC&I 465 Social Studies Education: Elementary School Programs and Practices (3)** *Banks, Katsounis, Parker* Stresses curriculum patterns, instructional procedures, resource materials, and the selection of content in social studies. For elementary and middle school teachers. Prerequisite: teaching experience.

**EDC&I 466 Social Studies Education: Secondary School Programs and Practices (3)** *Katsounis, Parker* Stresses curriculum patterns, instructional pro-

cedures, resource materials, and a selection of content in social studies for middle, junior, and senior high school teachers. Prerequisite: teaching experience.

**EDC&I 467 Geography in the Social Studies Curriculum (3)** Discussion of the concepts and content of geography essential to effective social studies curricula. Joint with GEOG 467.

**EDC&I 468 Workshop in Instructional Improvement: Social Studies (1-6, max. 15)** Individual or group study projects on the improvement of instruction in social studies.

**EDC&I 469 Educating the Black Inner-City Child (3)** *Banks* Intensive analysis and review of the research and literature, both theoretical and empirical, relevant to curriculum patterns and programs designed especially for Black inner-city children. Special attention is given to the implications of the research reviewed for devising effective teaching strategies for Black inner-city children.

**EDC&I 470 Science Education: Elementary School Programs and Practices (3)** *Olstad, Smith* Designed for classroom teachers with reference to the teaching and learning of science from kindergarten through grade 6. Emphasis is placed on objectives, methods, and materials as related to the concepts and processes of science. Prerequisite: teaching experience.

**EDC&I 471 Science Education: Secondary School Programs and Practices (3)** *Olstad, Smith* Survey of the status and potential role of science in education; trends and their implications for the teaching of both biological and physical sciences in the junior and senior high schools; representative curricula and related teaching procedures; the psychology of concept formation and problem solving; and organization of science programs. Prerequisite: teaching experience.

**EDC&I 472 Environmental Education for Teachers (3)** *Smith* Status, selected problems, and role of environmental education in program of elementary, middle, and junior high schools. Opportunity to examine and receive instruction in use of existing environmental education instructional materials. Instruction is in the spirit of inquiry/discovery. Prerequisite: teaching experience.

**EDC&I 473 Workshop in Instructional Improvement: Science (1-6, max. 15)** *Olstad, Smith* Individual or group study projects on the improvement of instruction in science.

**EDC&I 474 Multi-Ethnic Studies: Methods, Content, and Materials (3)** *Banks* Designed to help preservice and in-service teachers identify content and materials and devise methods for implementing ethnic studies programs and for incorporating ethnic content into regular K-12 social studies, language arts, and humanities curricula. Special attention is given to teaching about American Indians, Mexican-Americans, African Americans, Asian Americans, Puerto Rican-Americans, and White ethnic groups. Prerequisite: admission to Teacher Education Program or teaching experience.

**EDC&I 475 Improvement of Teaching: Elementary School Mathematics (3)** *Beal, Mukhopadhyay* Designed for elementary teachers. Emphasis is placed on the contributions of research to the improvement of the teaching of mathematics in the elementary school. Prerequisite: teaching experience.

**EDC&I 476 Improvement of Teaching: Junior High School Mathematics (5)** Exploration of mathematical concepts for the purpose of improving the teaching of middle school mathematics.

**EDC&I 477 Improvement of Teaching: Secondary School Mathematics (5)** Exploration of mathematical concepts for the purpose of improving the teaching of secondary-school mathematics. Prerequisite: teaching experience.

**EDC&I 478 Special Topics in Mathematics for Teachers (2-9)** Study of selected areas of mathematics. Designed for the improvement of teachers of mathematics. Joint with MATH 497.

**EDC&I 479 Workshop in Instructional Improvement: Mathematics (1-6, max. 15)** Individual or group study projects for the improvement of instruction in mathematics.

**EDC&I 480 Introduction to Graduate Study in Educational Technology (3)** Introduction to the theoretical and practical aspects of educational technology. Introduces the history, conceptual orientation, and research of the field. The practical application of theory and research through the procedures of instructional design and development are also examined.

**EDC&I 481 Introduction to Instructional Design (3)** Students design a unit of instruction that relies upon a technology for its delivery. Steps in the design process discussed and practiced, and principles that guide selection of methods and materials applied.

**EDC&I 482 Educational Technology in Schooling (3)** Introduction to the application of technologies (computers, telecommunications, interactive video) in schools. Designed primarily for pre- and in-service teachers, but of interest to anyone involved in technology in education.

**EDC&I 483 Basic Motion Picture Production (4)** Basic motion-picture techniques, emphasizing cinematography and editing.

**EDC&I 485 Workshop in Instructional Improvement: Educational Communication and Technology (2-6)** Individual or group study projects on the improvement of instruction through use of educational communication and technology. Prerequisite: 480.

**EDC&I 488 Educational Technology and Learning in Alternative Settings (3)** How educational technology can be used to encourage learning in nonschool environments, such as museums, radio and television broadcasts, parks and recreation centers, and distance education programs. Students investigate one of these areas and prepare a project.

**EDC&I 490 Single Camera System School Television Production (3)** Techniques of TV production utilizing a single camera. Includes TV hardware theory and vocabulary, experience in connecting and handling equipment, planning, scripting, production, and editing techniques. Credit/no credit only.

**EDC&I 491 Small Studio Television Production (3)** Techniques of TV production utilizing a two-camera simple studio. Includes TV equipment theory and vocabulary, experience in planning, scripting, equipment operation, lighting, final production. Emphasis on utilization of nonbroadcast standard facilities. Credit/no credit only.

**EDC&I 494 Workshop in Improvement of Curriculum (1-6, max. 15)** Stresses the application of procedures for curriculum development, maintenance, and evaluation. Opportunities furnished to develop and perfect strategies for program development with occasions given to utilize the strategies in master plan and materials preparation for simulated or real school situations. Specific focus of workshop is determined by instructor or by arrangement with district. Prerequisite: permission of instructor.

**EDC&I 495 Workshop in Improvement of Teaching: Selected Topics, Issues, or Problems (1-6, max. 15)** Individual or group projects to help teachers adapt instruction to selected topics, issues, or problems and to identify the approaches and instructional resources that will provide the soundest learning experiences.

**EDC&I 496 Workshop in Instructional Improvement (2-6, max. 6)** Individual or group study projects on the improvement of instruction with attention to designing instructional plans.

**EDC&I 497 Dealing Effectively with the Disruptive Student (3)** Several approaches to discipline. Using research, theory, and practice, participants develop individual action plans for classroom management, create formats to identify disruptive behavior, develop strategies for intervention of disruptive behavior, and devise means for evaluating the effectiveness of teacher interventions. Prerequisite: student teaching, which may be done concurrently.

**EDC&I 499 Undergraduate Research (2-5, max. 5)** Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program.

**EDC&I 500 Field Study (3 or 6, max. 9)** Individual study of an educational problem in the field under the direction of a faculty member. Prerequisites: approved plan of study and permission of the instructor must be filed in the Office of Curriculum and Instruction in the College of Education.

**EDC&I 501 Curriculum for the Gifted (3)** Investigation of curriculum and instruction appropriate for gifted students of the elementary- or secondary-school level. Prerequisite: teaching experience.

**EDC&I 502 Seminar in Gifted Curriculum (3, max. 6)** Study of curricula differentiated to accommodate the special needs of gifted learners. Prerequisites: 501 or equivalent and experience in teaching gifted learners.

**EDC&I 505 Seminar in Curriculum and Instruction (1-3, max. 15)** Seminar on advanced topics in curriculum and instruction. Critical examination of current research and practice. Content varies, check quarterly *Time Schedule* for topics to be covered. Prerequisite: permission of instructor.

**EDC&I 520 Current Models in Early Childhood Education (3)** *Hansen-Krening* In-depth analysis of current program models for the education of young children, with an emphasis on specification of objectives, practices, and evaluation of model effectiveness. Models emphasized are those developed in this country, but the course also includes a study of models developed in other countries as they have influenced practice here.

**EDC&I 521 Problems and Issues in Early Childhood Education (3)** *Hansen-Krening* Study of issues currently facing the field of early childhood education, emphasizing the rationale, impact, and management of child-care programs. Relationship of local child-care programs to state and federal agencies is included. Prerequisite: 520 or permission of instructor.

**EDC&I 522 Practicum in the Training of Early Childhood Instructional Personnel (3)** *Hansen-Krening* Directed experience in educational training conducted in the field. Design and implementation of a training program for early childhood education instructional personnel. Prerequisites: graduate standing and permission of instructor.

**EDC&I 524 Seminar in Teacher Education (3)** *Gehrke, Grossman* Focus on recent trends, issues, and proposals for future development in teacher education and certification. Prerequisite: permission of instructor. Alternating offerings will focus on either preservice or inservice issues.

**EDC&I 530 Seminar in Analysis of Approaches for Teaching Reading (3)** *Sebesta, Valencia* Designed to aid experienced teachers who possess background in the teaching of reading, this course presents a variety of approaches and actual analysis of approaches. Prerequisites: teaching experience and a basic course in the teaching of reading.

**EDC&I 531 Seminar: Analysis of Reading Materials (3)** *Sebesta, Valencia* Students formulate and apply criteria for assessing materials, with emphasis on linguistic, cultural, and psychological factors; instruction effectiveness, interest level; and educational

objectives. Prerequisites: teaching experience and one basic course in the teaching of reading.

**EDC&I 532 Seminar in Research in Reading (3)** *Sebesta, Standal, Valencia* Primary focus on those aspects of the reading process that are of concern in a developmental reading program. Emphasis is on research design, evaluation of research, and research findings dealing with factors influencing reading ability, problems in skill development, and recreational reading. Course work includes group and individual analysis of studies with attention to research design and measurement. Prerequisite: permission of instructor.

**EDC&I 533 Seminar: Conducting Research in Reading (3, max. 6)** *Sebesta, Standal* Students design and conduct original research studies in the field of reading. Emphasis on research rationale, choice of productive research types, and reporting of research results and implications. Prerequisite: 532.

**EDC&I 534 Seminar in the Reading of Literature (3)** *Hansen-Krening, Sebesta* Reading of literature and its effect on reading skills, language development, social values, and literary judgment of children and adolescents. Emphasis on analysis of research in these areas and on the development of action research designed to study response to literature. Prerequisite: one 400- or 500-level education curriculum and instruction course in reading or language arts or one graduate course in literature for children or young adults.

**EDC&I 535 Seminar: Conducting Research in Response to Literature (3, max. 6)** *Hansen-Krening, Sebesta* Students design, conduct, and interpret original research studies in the field of reading literature within the context of the school curriculum. Emphasis on the analysis of literary content and structure and the relationship of those qualities to the literary experience. Prerequisite: 534.

**EDC&I 541 Seminar in Bilingual Education: Organization and Structure (4)** Study of the structure and organization of bilingual programs. Includes study of the developmental and organizational factors affecting bilingual education. Assists graduate students in reviewing the historical antecedents in bilingual education and in developing a personal philosophy about bilingual education.

**EDC&I 542 Seminar in Bilingual Education: Instructional Foundations and Issues (4)** *Vasquez* Study of the theoretical foundations and instructional implications of psychology and linguistics as they apply to bilingual education. Assists graduate students in exploring learning styles of bilingual children and in becoming familiar with the crucial issues in bilingual education.

**EDC&I 543 Seminar in Bilingual Education: Instructional Strategies (4)** *Vasquez* Study of instructional factors affecting bilingual education. Particular emphasis is given to research related to the variables involved in teaching in a bilingual environment. Assists graduate students in exploring instructional methodologies and formats as they apply to bilingual education and in becoming familiar with the current issues in bilingual education.

**EDC&I 550 Educational Technology Research (3)** *Kerr, Winn* Analysis, critique, and practical experience with research studies of all types (experimental, ethnographic, evaluation) concerning questions of interest to educational technologists. Prerequisite: 480, a research methods course, or permission of instructor.

**EDC&I 551 Design of Computer-Based Training (3)** *Winn* Examination of the issues surrounding the design of computer-based training for use in business and industry. Exploration of the implications of these issues by means of the development and testing of CBT units. Prerequisites: 436, 481.

**EDC&I 555 Educational Futures (3)** *Hunkins* Concept of alternative futures stressing manageability of the future. Attention is given to current and future

events that can or might impact education. Basic future studies methods are considered with opportunities to apply such methods within educational arena. Prerequisite: prior graduate course work or experience in education.

**EDC&I 556 Elementary School Curriculum (3)** Hunkins Study of elementary school curriculum, its design, rationale, and delivery. Current trends and issues affecting elementary school curriculum analyzed.

**EDC&I 558 Secondary School Curriculum (3)** Gay, Gehrke Systematic analysis of current curriculum practices, with particular emphasis on the social and historical forces affecting secondary-school curriculum.

**EDC&I 559 Principles and Procedures of Curriculum Development (3)** Hunkins, Gay, Gehrke Intensive study of basic principles and procedures utilized in development of curricula. Participants have opportunities to apply such procedures in class activities. Attention given to curriculum foundations.

**EDC&I 561 Seminar in Language Arts (3)** Hansen-Krening Study of language with special attention to research pertaining to the social context of language in the classroom. Course work includes group and individual analysis of language arts studies with attention to research design and measurement. Prerequisite: 455.

**EDC&I 562 Seminar in Reading and Language Arts: Secondary Emphasis (3)** Standal Study of recent research in listening, oral language, reading, and written language, emphasizing psychological and interrelated aspects. Prerequisite: permission of instructor.

**EDC&I 563 Current Issues in Language Arts Education (1-3, max. 6)** Hansen-Krening Discussion of problems and issues of current interest and importance in language arts education. Prerequisite: 561

**EDC&I 564 Seminar: Issues in American Indian/Alaskan Native Education (3)** Current social and political issues as they relate to American Indian/Alaskan native education. Educational implications of state and federal legislation, judicial decisions, and politically controversial issues. Prerequisite: 464 or permission of instructor.

**EDC&I 565 Seminar in Social Studies Education: Elementary Emphasis (3)** Banks, Kaltsounis, Parker Intensive study of the social studies curriculum, with particular emphasis on current literature and research. Prerequisite: 465 or equivalent.

**EDC&I 566 Seminar in Social Studies Education: Secondary Emphasis (3)** Banks, Kaltsounis, Parker Intensive study of the social studies curriculum, with particular emphasis on current literature and research. Prerequisite: 466 or equivalent.

**EDC&I 567 Current Issues in Social Studies Education (1-3, max. 6)** Kaltsounis, Parker Discussion of problems and issues of current interest and importance in social studies education.

**EDC&I 568 Seminar on Instruction and Curriculum for Minority Youth (3)** Vasquez Examines research related to curriculum and instruction for minority youth for purpose of preparing teachers, administrators, and other educators working with students who differ from mainstream students in value and motivational systems, learning styles, and socialization practices. Prerequisite: 591, or permission of instructor.

**EDC&I 569 Educating Ethnic Minority Youths (4)** Banks Intensive analysis and review of the research and curricular programs related to the social, psychological, and political factors that influence the school experiences of ethnic minority youths. Special attention given to instructional and curricular programs for African American, American Indian, Mexican-American, Puerto Rican-American, and Asian-American stu-

dents. Prerequisite: graduate standing or permission of instructor.

**EDC&I 570 Seminar in Science Education: Elementary Emphasis (3)** Olstad, Smith Investigation of curriculum and instruction in science at elementary-school levels, with particular emphasis on current literature and research. Prerequisite: 470 or equivalent.

**EDC&I 571 Seminar in Science Education: Secondary Emphasis (3)** Olstad, Smith Investigation of curriculum and instruction in science at secondary-school levels, with particular emphasis on current literature and research. Prerequisite: 471 or equivalent.

**EDC&I 572 Current Issues in Science Education (1, max. 6)** Olstad, Smith Discussion of topics and problems of current interest and importance in science education. Prerequisite: graduate standing.

**EDC&I 575 Seminar in Mathematics Education: Elementary Emphasis (3)** Beal, Mukhopadhyay Investigation of curriculum and instruction in mathematics at the elementary-school level; review of research and preparation of proposals. Prerequisite: graduate standing.

**EDC&I 576 Seminar in Mathematics Education: Secondary Emphasis (3)** Beal, Mukhopadhyay Investigation of curriculum and instruction in mathematics at the secondary-school level; review of research and preparation of proposals. Prerequisite: graduate standing.

**EDC&I 577 Current Issues in Mathematics Education (1, max. 6)** Beal, Mukhopadhyay Discussion of problems and issues of current interest and importance in mathematics education. Prerequisite: graduate standing.

**EDC&I 578-579 Qualitative Methods of Educational Research (3-3)** Grossman, Wineburg Survey of various qualitative research methods from a variety of disciplinary perspectives (anthropology, cognitive psychology, policy analysis and evaluation) with intensive experience in collection, analysis, and reporting of data. Joint with EDPSY 586-587. Prerequisites: second year doctoral standing and one course in statistics. Students must enroll for both quarters.

**EDC&I 580 Seminar in Educational Communication and Technology (3)** History, basic assumptions, and current controversies of the field. Discussion of appropriate research, theory, and practice for educational technologists. Prerequisite: 480 or permission of instructor.

**EDC&I 581 Management of Educational Technology Programs (3)** Factors contributing to effective management of programs incorporating educational technology and microcomputers. Manager's role as agent of instructional change and processes leading to successful adoption and long-term implementation of a new instructional system. Prerequisite: 480 or permission of instructor.

**EDC&I 582 Seminar on Instructional Systems Development (3)** Critical analysis of processes involved in the development of instructional systems. Prerequisites: 481 or permission of instructor.

**EDC&I 583 Message Design (3)** Research and theory on design of instructional messages in various modalities (visual, auditory), and in various formats (pictorial, verbal, graphic). Prerequisite: 480 or permission of instructor.

**EDC&I 584 Instructional Graphics for Microcomputers (3)** Winn Study of current research on instructional uses of computer graphics. Development, selection, and application of design principles for graphically-based instructional and training programs. Prerequisites: 436, 481.

**EDC&I 585 Technology and the Culture of Education (3)** Social impact of technology on education in the United States and elsewhere: social, political, and cultural factors affecting educational communication

and technology; roles and relationships among instructors and learners; appropriate technology in developing countries; technology's long-term influence on thought and values. Prerequisite: 480 or permission of instructor.

**EDC&I 586 Current Issues for Computers in the Classroom (1, max. 6)** Addresses many of the current topics in computer-related education. Issues and research related to computer uses in curriculum, instruction, and management of instruction.

**EDC&I 587 Design of Interactive Instructional Systems (3)** Theoretical and empirical questions involved in design of interactive instructional systems using such technologies as videodisc, and CAI. Specific problems inherent in design of complex learning environments: control, branching, structure and sequence of material, way-finding, help systems. Prerequisites: 481 or 582, and 436; or permission of instructor.

**EDC&I 588 Seminar: Computers in Education (3)** Provides opportunity for graduate students to analyze, discuss, and design research in areas of computers in education. Includes historical development of research in this area as well as a platform for the development of research proposals and refinement of ongoing research. Prerequisite: 434 or 436.

**EDC&I 589 Current Issues in Educational Communications (1, max. 9)** Discussion of problems and issues of current interest and importance in the field of educational communications. Serves also as a forum for discussion of doctoral research. Designed for master's and doctoral candidates in educational communications. Credit/no credit only. Prerequisite: graduate standing.

**EDC&I 590 Seminar in Elementary Education (3)** Hunkins Exploration of the philosophy, history, purposes, curriculum, methods, and school organization of elementary education. Prerequisites: elementary-school teaching experience, 556.

**EDC&I 591 Seminar in Curriculum Research (3)** Gehrke, Hunkins Analysis of past and current empirical, historical, ethnographic research, and philosophical analysis of the curriculum field. Studies considered include research in curriculum development, the curriculum plan, contextual characteristics, and factors related to curriculum participants. Group and individual analyses focus on theory generation and practical applications of research. Prerequisite: 559 or permission of instructor.

**EDC&I 592 Seminar in Secondary Education (3)** Gehrke Research and study of secondary education. Primary focus on factors involving change in secondary-school curriculum and organization. Prerequisite: 558.

**EDC&I 593 Seminar in Curriculum: Theory and Practice (3)** Hunkins Investigation of curriculum theory and practice. Consideration is given to theoretical models that explain and/or describe the relationships between various curricular variables. These theoretical models are related to curricular practices and innovations. Prerequisite: 559.

**EDC&I 594 Seminar in Curriculum: Issues, Systems, Models (3)** Hunkins Emphasis, from a systems and futuristic view, on the current approaches to curriculum, curriculum innovation, and major educational issues as they affect curricular activity. Prerequisite: 559.

**EDC&I 595 Seminar in Analysis of Teaching (3)** Gehrke, Grossman, Hunkins Investigation of the ways in which classroom teaching has been analyzed from a variety of disciplinary perspectives. Focus on methods, findings, and implications of research on teaching. Prerequisite: teaching experience.

**EDC&I 596 Seminar in Strategies of Instruction (3)** Grossman, Hunkins Various instructional models applicable to all levels of schooling. Theoretical and philosophical bases for these instructional models are considered.

**EDC&I 597 Curriculum Evaluation Seminar (3, max. 6)** *Smith* Focuses on the evaluators' roles, evaluation theory and models, and selected curricular evaluations. Examples are drawn from the several disciplines commonly offered in the elementary and secondary schools. Students are expected to identify an evaluation problem and to develop an evaluation design that can be implemented as a practical solution to the problem. Prerequisites: 559 and permission of instructor.

**EDC&I 599 Independent Studies in Education (\*)** Independent studies or readings of specialized aspects of education. Prerequisite: permission of instructor.

**EDC&I 600 Independent Study or Research (\*)** Prerequisite: permission of instructor.

**EDC&I 601 Internship (3-9, max. 9)** Credit/no credit only. Prerequisites: graduate standing and permission based on approval of proposal submitted during quarter preceding the internship.

## Leadership and Policy Studies

**EDLPS 444 Constitution and American Public Education (3-6, max. 6)** Emphasis on the principles, processes, and content of constitutional law in an effort to provide new insights and new tools with which school administrators and teachers may examine questions involving political and civil rights in the United States, especially as these affect the conduct of education. Specific topics on constitutional freedom include the obligation to go to school; legal controls over curriculum, teachers, and students; and racial integration and equal financing of public schools. Open to law students and to nonlaw students enrolled as graduate students or as upper-division undergraduates. Joint with LAW 444. Satisfactory/not satisfactory option available to nonlaw students only.

**EDLPS 458 History of American Education to 1865 (3)** Development of American education in cultural context; colonial period, influence of Enlightenment, and common school movement. Joint with HSTAA 458.

**EDLPS 459 History of American Education Since 1865 (3)** Development of American education in cultural context: progressive education, recent criticism, continuing issues and trends. Joint with HSTAA 459.

**EDLPS 479 Crucial Issues in Education (3)** *AWSpS* Selected educational issues, policies, and contexts. Evolution of the American education enterprise, legal issues, professionalism, finance, and other vital educational concerns. Prerequisite: admission to the Teacher Certification Program or permission of instructor.

**EDLPS 496 Workshop: Educational Programs and Problems (1-6, max. 12)** Study of such topics as planning, development, supervision, organization, operation, or evaluation of current or emerging programs or problems in education.

**EDLPS 499 Undergraduate Research (\*)** Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program. Prerequisite: permission of instructor.

**EDLPS 501 Introduction: Leadership Beyond the Classroom (3-6, max. 6)** *S* First course in principal certification program; explores Washington State laws, legal principles, context of public schools, multicultural issues, changing population. Essential skills of leadership: communication, human relations, strategies for shared decision making, and dealing with conflict. (Open only to students admitted to the EDLPS Principal/Program Administrator Preparation Program.)

**EDLPS 502 Leadership Core I (3-6, max. 6)** *A* An exploration of leadership in creating an inquiring

school culture capable of meaningful change. Different modes of inquiry, qualitative and quantitative, are considered. Different views of organizations and moral dimensions of leadership are examined. (Only for students admitted to the EDLPS Principal/Program Administrator Preparation Program.)

**EDLPS 503 Leadership Core II (3-6, max. 6)** *W* Curriculum and instructional leadership: foundations, curriculum development, monitoring and evaluation, curriculum and shared decision-making, future challenges. Reviews history of school change and improvement, and discusses the school as a center of change. (Only for students admitted to the EDLPS Principal/Program Administrator Preparation Program.)

**EDLPS 504 Leadership Core III (3-6, max. 6)** *Sp* Explores issues in policy and systems for: facilities, pupil/personnel, technology, school/community relations, special programs. Focuses on evaluating and improving existing programs. Considers school funding, bond and levy elections, apportionment, budgets. (Only for students admitted to the EDLPS Principal/Program Administrator Preparation Program.)

**EDLPS 505 Transition to Leadership (3-6, max. 6)** *S* Development and administration of systems for selection, evaluation and clinical supervision of certificated and classified personnel. Focuses on leadership models and transition to a leadership role, including opening a school or program and dealing with student/school crises. (Only for students admitted to the EDLPS Principal/Program Administrator Preparation Program.)

**EDLPS 507 Reflective Seminar (3-6, max. 6)** Integration of theory and internship experience; group process laboratory and peer feedback and review of written work, oral presentations, and journals. Reading and discussion of crucial issues. (Only for students admitted to the EDLPS Principal/Program Administrator Preparation Program.)

**EDLPS 509 Planning, Organizing, and Decision Making (3)** Application of principles utilized in planning, organizing, and decision making in districts and schools. Formation of policy and procedures; formal and informal organization; power, authority, and responsibility; utilization of people, time, and space.

**EDLPS 510 School Finance (3)** Financial practices and problems in districts and schools considered, including state and federal support plans, school plant planning, school business management, resource allocation, and budgeting and educational accountability.

**EDLPS 511 School-Community Relations (3)** Examines the dynamics of the interface between the public schools and the community. Special attention is given to the findings of research in relation to school-community power, types, and organizational influences.

**EDLPS 512 Seminar in Personnel Administration and Development (3)** Major emphasis on the analysis of factors to be considered in the selection and evaluation of teachers and administrators and considerations in staff development.

**EDLPS 513 Seminar in Instructional Development and Supervision (3)** Theory of the process of supervising instructionally effective school personnel, including an analysis of the techniques of supervision, theory of leadership and group process, interpersonal relations, and evaluation of teacher effectiveness.

**EDLPS 514 School Law (3)** Impact of school law on administrative roles and processes, including due process in districts and school settings.

**EDLPS 515 Management of Labor Relations in Education (3)** Examination of procedures and techniques pertinent to the management of organizational conflict. Among the areas covered are collective bargaining, grievance procedures, mediation, fact finding, and arbitration.

**EDLPS 516 Special Education and the Law (3)** Overview of major state and federal laws affecting the operation and management of special education programs in public schools. Emphasis upon procedural and substantive rights of children with disabling conditions. Joint with EDSPE 504. Students should sign up for only one course, i.e., EDSPE 504 or EDLPS 516.

**EDLPS 517 Seminar in Administration: Facilities (3)** Contemporary issues, problems, and techniques of educational facility administration. Emphasis placed on such factors as planning, financing, development, design, construction, operation, liabilities, property management, state regulation.

**EDLPS 518 Reflective seminar: The Superintendency (1-6, max. 6)** Integration of theory and internship experience. Readings and discussion of crucial issues, presentations by local school superintendents: district budgeting processes, personnel, staff relations and collective bargaining, superintendent-board relations, bond issues, facilities planning, superintendent as instructional leader. Credit/no credit only.

**EDLPS 519 Special Problems in Educational Leadership (1-3, max. 9)** Readings, lectures and discussions pertaining to significant topics of special and current interest to educators. Focus is on issues of particular concern to K-12 administrators and other educators in leadership roles in districts and schools. Problems vary; check *Time Schedule* for topic(s) to be covered.

**EDLPS 520 Education as a Moral Endeavor (3)** *A* An exploration of fundamental questions that have faced educational leaders in the past and most likely will continue to face them in the future. Foundational studies in history, philosophy, and sociology provide the basis for discussion and writing about these fundamental questions. Credit/no credit only.

**EDLPS 521 Philosophy of Education (3)** Philosophy of education considered as a study of the conceptual basis for educational policy and practice. Emphasis on relationships between enduring educational problems and fundamental philosophic issues; concepts that feature centrally in educational discourse; and conceptual analysis as a means for clarifying decisions regarding educational policy and practice.

**EDLPS 522 Contemporary Philosophies of Education (3)** Intensive study of the writings of selected contemporary philosophers of education.

**EDLPS 523 Analysis of Educational Concepts (3)** Selected concepts central to conduct and understanding of education.

**EDLPS 524 Seminar in Philosophy of Education: Modes of Inquiry (3, max. 6)** Philosophical examination of ways in which education might be studied. Uses and limits of conventional scientific approaches in education inquiry. Consideration of alternatives.

**EDLPS 525 Educational Inquiry: Introduction to Methods (3)** First course in the sequence provides doctoral students with an overview of various methods currently used in conduct of educational inquiry; gives examples of ways those methods are typically employed; and acquaints students with major strengths and weaknesses associated with those methods. Prerequisite: doctoral status in education. Credit/no credit only.

**EDLPS 526 Educational Inquiry: Explication of Methods (1)** Second course in this sequence provides a forum where students and faculty become acquainted and discuss recent inquiry projects undertaken by faculty members. Faculty and projects are selected to illustrate and explicate the various methods introduced in 525. Prerequisite: doctoral status in education and 525. Credit/no credit only.

**EDLPS 527 Educational Inquiry: Methodological Issues (2)** Final course in sequence provides general understanding of epistemological issues underlying the several schools of thought or "families" of inquiry. Methods discussed earlier revisited in terms of as-

sumptions regarding nature of knowledge, purpose of inquiry. Students develop and justify an inquiry proposal. Prerequisite: doctoral status in education and 526. Credit/no credit only.

**EDLPS 530 History of Educational Thought (3)** An overview of the influence of cultural context on educational theory and practice from classical times to the present.

**EDLPS 531 History of American Higher Education (3)** Examination of the historical development of the American higher education enterprise, including pre-colonial origins. Includes attention to the colonial colleges, the rise of new institutions in the nineteenth century, and the further development of American colleges and universities in the twentieth century. Leaders in these developments are identified.

**EDLPS 532 Seminar: American Education in the Twentieth Century (3, max. 6)** Selected problems in American education over the last century, with special emphasis on contemporary issues and trends.

**EDLPS 533 Seminar in Educational Classics (3)** Analysis in depth and in the context of the relevant history of several major works in educational thought from Plato to Dewey.

**EDLPS 534 History of the Modern University (3)** Growth of the modern university with attention to intellectual trends as well as organizational and curricular changes. Special attention is given to nine American universities in the twentieth century.

**EDLPS 535 Seminar: Research in History of Education (3, max. 6)** Research procedures in the history of education to include the employment of bibliographic resources, the use of the computer, the elements of a research proposal, the review of research literature, and the role of theory.

**EDLPS 540 Sociology of Education (3)** Examination of education and educational institutions by using the major conceptual tools of sociology. Emphasis on sociological thought and findings that have particular bearing on the understandings and judgments of educators.

**EDLPS 541 Comparative Education (3)** International efforts in education, including the role of the United States in overseas programs. Analysis of the relation of education and society in foreign areas, stressing social change and conflict.

**EDLPS 542 Seminar in Educational Sociology (3)** Application of sociological principles to school problems; individual problems and investigations. For teachers, administrators, and those using educational sociology as a field for advanced degrees.

**EDLPS 543 Seminar: Research in Educational Sociology (3)** Theory, concept, and method of sociological inquiry as applied to problems in education.

**EDLPS 549 Special Problems in Educational Studies (1-3, max. 9)** Readings, lectures, and discussions pertaining to significant and enduring ideas in the philosophy, history and sociology of education. Specific topics are critically examined in light of contemporary problems in education. Problems vary; check *Time Schedule* for topic(s) to be covered.

**EDLPS 550 The Dynamics of Educational Organizations (3) W** Exploration of the literature in organizational theory and leadership, the assumptions that underlie the development of various approaches to organizational theory and how these approaches are applied, and an acquaintance with different conceptual frames that can be used to determine how to improve and change organizations. Credit/no credit only.

**EDLPS 551 Foundational Studies In Complex Organizations (3)** Examination of conceptual and theoretical bases for complex organizations, characterized by problematic goals, knotty decision-making processes, and fluid participation. Impact of information, power, beliefs, resources, organizational structure,

and environment. Although issues discussed are generic, examples focus on educational organizations.

**EDLPS 552 Organizational Change in Education (3)** Change and innovation in educational organizations. Theoretical approaches include socio-psychological, rational planning, political perspectives, and those associated with notion of organized anarchies. Specific topics related to change and innovation (e.g., roles of beliefs, symbols and norms, diffusion of innovations, and research issues).

**EDLPS 553 Human Resources in Educational Organizations (3)** Analysis of factors involved in human resource problems related to operation of educational organizations. Motivation, perception, communication, role analysis, and dynamics of groups are studied through use of cases and seminal literature.

**EDLPS 560 Perspectives on Policy & Policy Making in Education (3) Sp** This course introduces a variety of theoretical perspectives that can be used to analyze policy content, processes and outcomes. Includes a consideration of the power and limits of policy and a discussion of the many ways people in different positions in organizations can influence policy. Credit/no credit only.

**EDLPS 561 Education Policies in Political Context (3)** Systematic consideration of the structure and function of educational policies and problems of research in political context.

**EDLPS 562 Education and the Law (3)** Examination of court cases associated with the rights of individuals and groups in educational organizations. Attention is given to the understanding of administrative due process requirements and to the growing body of administrative law affecting student and personnel management.

**EDLPS 563 Public and Educational Policy Issues in the Development of Human Talent (3, max. 9)** Three (noncumulative) courses on policy issues involving education, training, the economy, and the development of the nation's human resources. Relationship between education, training, and work; underutilized workers; race and gender discrimination issues; and the role of education/training in economic development. Joint with PB AF 571, 572, 573.

**EDLPS 564 Seminar in Economics of Education (3)** Current problems in school finance, including costs, ability to support schools, and financial implications of educational principles. The economics of public education. Problems of federal, state, and local school support. Financing capital outlay, research, and public relations.

**EDLPS 579 Special Problems in Organizational & Policy Analysis (1-3, max. 9)** Readings, lectures and discussions pertaining to significant topics of special and current interest to educators. Focus is on issues related to the analysis of educational organizations, policies, and policy making. Problems vary; check *Time Schedule* for topic(s) to be covered.

**EDLPS 580 The American College and University (3)** Introduction to contemporary United States higher education, with special emphasis on emerging trends, roles of the several kinds of institutions, the composition and character of student bodies and faculty, and the state coordination of colleges and universities.

**EDLPS 581 Principles and Practices of Adult and Continuing Education (3)** History and development of adult and continuing education in the United States: component parts of the field; issues, theory, and research; program planning for adults; professionalization of the field.

**EDLPS 582 Seminar in the History and the Organization of Higher Education (3)** Advanced seminar in the history and the organization of higher education.

**EDLPS 583 Higher Education and the Law (3)** Legal implications of university operations and an explanation of the legal and constitutional rights of students,

faculty, and staff within the university. Special attention given to faculty employment and termination decisions; student protections, including due process; and university liabilities.

**EDLPS 584 Academic Governance and Collective Bargaining in Higher Education (3)** Explores the concept and operation of collective bargaining in higher education: its origin; the reasons for its growing popularity as a governance mechanism; the legal framework within which it operates; the rights, powers, and duties subsumed under its operation; and its relationship to the traditional form of faculty governance mechanisms.

**EDLPS 585 Resource Allocation in Higher Education (3)** After attention to the basic tools of economic analysis, focus is on application of those tools to specific topics in higher education (e.g., access, budgeting, finance and policies, and funding alternatives).

**EDLPS 586 Seminar in the Administration of Colleges and Universities (3)** Study of the internal administration and organization of four-year colleges and universities with emphases on practice and theory. Instruction largely by the case or problem method.

**EDLPS 587 Seminar in Teaching and Learning in Higher Education (3, max. 9)** Theory and practice of instruction and learning in higher education. May be repeated with permission of instructor.

**EDLPS 588 Seminar in Administration of Community Colleges (3)** For students preparing for administrative positions in community colleges. Principles and practices in organization and administration of community colleges.

**EDLPS 589 The Community College (3)** Intensive study of the community college—its history and present and future status. Curriculum, instruction, financial, and governance issues are also discussed.

**EDLPS 598 Special Problems in Higher Education (1-3, max. 9)** Readings, lectures, and discussions pertaining to significant topics of special and current interest to educators. Focus is on issues related to education in community colleges, four-year colleges and universities. Problems vary; check for topic(s) to be covered.

**EDLPS 600 Independent Study or Research (\*)** Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed, and which with permission of the instructor, must be filed with the Office of Leadership & Policy Studies in the College of Education. Prerequisite: permission of instructor.

**EDLPS 601 Internship (1-9, max. 9)** Name of faculty member responsible for supervising the student should be indicated on program of studies. Credit/no credit only. Prerequisite: permission of Supervisory Committee chairperson or graduate program adviser.

## Educational Psychology

**EDPSY 304 Educational Psychology (5)** Human learning in the educational setting. Cognition, development, learning, motivation, affective processes, and socialization. Emphasis on skills in influencing classroom learning and discipline. Prerequisites: admission to Teacher Certification Program and concurrent enrollment in EDUC 302. Entry code required.

**EDPSY 308 Evaluation in Education (3)** Fundamentals of measurement, construction of achievement tests, selection and administration of standardized tests and scales, and evaluation and application of test results. Prerequisite: admission to Teacher Certification Program. Entry code required.

**EDPSY 408 Stress Management for Teachers and Administrators (3)** Principles and methods of stress management for school personnel and students. Designed to help teachers handle the stress associated

with teaching. The principles also apply to management of students' stress.

**EDPSY 425 Reading Disability: Remedial Techniques (3)** Evaluation of methods for diagnosing and minimizing reading retardation. Descriptions of in-class and clinical procedures. Prerequisite: EDC&I 360 or equivalent.

**EDPSY 431 Strategies for Classroom Research and Evaluation (5) S** Techniques and strategies for the design and implementation of studies of classroom instruction. Directed toward classroom teachers as consumers of instructional research and as evaluators in their own classrooms. Prerequisite: 308 or equivalent.

**EDPSY 447 Principles of Guidance (3)** Study of guidance programs in elementary and secondary schools. Attention is given the roles of specialists with emphasis on the role of the classroom teacher in school guidance programs. This course is designed for teachers, administrators, and prospective teachers.

**EDPSY 449 Laboratory in Educational Psychology (2-6, max. 6)** Special studies for counselors, teachers, administrators, and others concerned with student personnel and psychological services in schools and colleges. The course focuses on special topics that have either local or contemporary significance. (Not offered every year; check quarterly Time Schedule.)

**EDPSY 471 Neuropsychology of School Learning and Behavioral Problems (5)** The microstructure, macrostructure, and structural and functional development of the brain are reviewed with a focus on the educational relevance of developmental neuropsychology. We read and critique articles in four areas: Hemispheric differences and integration; neurological soft signs, attention deficit, and hyperactivity; language, reading, and learning disabilities; and medical syndromes.

**EDPSY 490 Basic Educational Statistics (3)** Measures of central tendency and variability, point and interval estimation, linear correlation, hypothesis testing.

**EDPSY 499 Undergraduate Research (\*)** Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program. Entry code required.

**EDPSY 500 Field Study (\*)** Individual study of an educational problem in the field under the direction of a faculty member. Prerequisites: approved plan of study and permission of the instructor must be filed in the Office of Educational Psychology in the College of Education. Entry code required.

**EDPSY 501 Human Learning and Educational Practice (3)** Systematic examination of current research about human learning and instructional psychology, including the study of motivation, human abilities, and learning, the learning process, and performance assessment. Prerequisite: 304 or equivalent.

**EDPSY 502 Developmental Foundations of Early Learning (3)** Perceptual-motor, language, and overall cognitive development in children from birth through primary-school age. Emphasis on basic learning processes and guidelines for assessment of developmental status and their implications for parents and professionals. Field-based course projects may be required. Prerequisites: background in child development and 501 or equivalent.

**EDPSY 503 Theories of Intelligence (3) Butterfield** Reading and discussion of theoretical and research papers from the extensive literature on Piagetian, psychometric, and information processing conceptions of intelligence. An historical approach to the topic is followed by analysis of current writings on intelligence and its measurement. Prerequisites: 501 and graduate status in education or psychology.

**EDPSY 506 Instructional Theory (3)** Sources, current state, and utility of prescriptive instructional theories with emphasis upon theories having a potential for guiding the design of instruction. Prerequisite: 501 or equivalent.

**EDPSY 507 Reading, Writing, and Arithmetic: Educational Assessment and Consultation (5)** Students administer and interpret tests of reading, writing, arithmetic, and related developmental skills; integrate test, observational, interview, and portfolio information in staffings and written reports, and consult with teachers regarding educational interventions.

**EDPSY 508 Clinical Supervision—Practicum (2-6, max. 12)** Practicum in supervising counseling, group counseling, diagnostic activities, and remedial academic therapy. Prerequisites: advanced graduate standing. Entry code required.

**EDPSY 509 Educational Issues in Human Development (5)** Human development theories. Educational implications of theory, methodology, and application. Current research complements the historical antecedents of current practice. Age range covered varies as function of current issues in professional literature. Prerequisites: 15 credits in educational psychology or psychology.

**EDPSY 510 Educational Issues in Human Learning (3)** Contemporary issues and trends in human learning from the perspective of major psychological theories of learning. Both classic and emerging viewpoints on issues about learning theory for educational practice, including counseling and special programs. Prerequisite: 501 or equivalent.

**EDPSY 511 Seminar in Applied Educational Psychology (1, max. 6)** Designed for graduate students in educational psychology. Applications of theoretical constructs to particular problems encountered in school counseling, practice. Entry code required.

**EDPSY 519 Communication and Language in Young Exceptional Children (3)** Review and discussion of theories of language acquisition as they relate to communication and language in young children. Review of research of language environments that relate to early literacy and education and how to use this information to modify environments for special needs children. Jointly offered with EDSPE 521. Students should sign up for only one course, i.e., 519 OR EDSPE 521.

**EDPSY 520 Psychology of Reading (3)** Reading and perception, word recognition, concept development and meaning in reading, psychology of reading interests and skills. Prerequisite: 501 or equivalent. Entry code required.

**EDPSY 521 Psychology of Writing (3)** Examines writing as a cognitive process and reviews current empirical research on writing, emphasizing primarily studies from a psychological perspective. Explores both developmental differences and individual differences in writing skills, together with instructional implications. Prerequisite: 501 or equivalent. Entry code required.

**EDPSY 522 Reading Disability Clinic (3-5)** Supervised practicum in diagnosis and remediation of reading disabilities. Prerequisites: 425, or equivalent; 507 and EDC&I 360 and 460; and permission of instructor. Entry code required.

**EDPSY 524 Problem Solving and Critical Thinking in Education (3)** Study of the classic and contemporary research literature concerned with human problem solving and critical thinking with emphasis upon applications to educational practice and further research. Prerequisite: 501 or equivalent.

**EDPSY 525 Creativity and Education (3)** Study of the classic and contemporary research literature about creativity with emphasis upon applications to educational practice, evaluation of strategies to promote creativity in the schools, and further research. Prerequisite: 501 or equivalent.

**EDPSY 526 Seminar on Metacognition (3)** Students read and discuss theoretical and research papers from the extensive literature on metacognition. Focuses on defining the concept of metacognition, establishing its range of applicability to educational matters, and becoming familiar with excellent examples of metacognitive research. Prerequisites: graduate status in education or psychology and permission of instructor.

**EDPSY 527 Transfer of Teaching (3) Butterfield** Students read and discuss a representative sample of theoretical and research papers from extensive literature on teaching to promote transfer of what students learn to non-teaching environments. Historical approach to the topic is followed by analysis of current writings on transfer. Prerequisites: 501 and graduate status in education or psychology.

**EDPSY 531 Socialization of School-Age Children (3)** Study of personal social development and behavior from preschool age through preadolescence. Socialization theory and research are reviewed to include such topics as aggression, achievement, motivation, moral development, social cognition, and applicable socialization influences.

**EDPSY 532 Adolescence and Youth (3)** Includes middle school, senior high, and early college years, with implications for helping professions. Developmental processes and patterns examined with major theoretical and current research themes from behavioral sciences. Educational issues, social problems associated with adolescence in Western culture. Prerequisite: 501 or equivalent.

**EDPSY 533 Current Research in Adolescence (3)** Contemporary trends and patterns of adolescent research are examined with emphasis upon theoretical foundations, contrasting methodologies, and implications for further research. Exemplary studies and integrative reviews of research on adolescence are featured. Prerequisites: 532 and 591 or equivalents.

**EDPSY 534 School Problems of Adolescence (3)** Study of the classic, contemporary, and emerging school problems of secondary school age youth with emphasis upon problem solving strategies for educators and associated youth service personnel. Includes problems of academic achievement, interpersonal relations, and social deviancy in the schools. Prerequisite: 532 or equivalent.

**EDPSY 535 Education and the Highly Capable Learner (3)** Examination of major issues and problems in study and nurturance of highly capable children and youth in the educational setting. Emphasis placed on contributions of theory and research to educational problem solving for multiple aspects of advanced human capacity. Prerequisite: 501 or equivalent.

**EDPSY 536 Learning Variables of Minority Children: Instructional Implications (3)** Provides students with data base regarding (1) four variables (language/dialect, cognitive style, locus of control, and motivational systems) that affect learning among minority students, and (2) teaching strategies appropriate for these cultural socioeconomic variables. No credit given for students who have completed EDC&I 425. (Formerly 513.)

**EDPSY 540 Individual Testing (5)** Study of assessment of human intelligence with supervised training in the administration, scoring, and interpretation of individual intelligence tests with emphasis on Stanford-Binet and Wechsler scales. Prerequisite: 490. Entry code required.

**EDPSY 541 Group Tests in Counseling (5)** Emphasis on the utilization of objective measures in counseling. Prerequisite: 490 or equivalent. Entry code required.

**EDPSY 542 Career Development (3)** Emphasis on vocational development theory and research. Psychological, social, and economic determinants of vocational development and choice are examined as a

basis for vocational counseling. Prerequisite: graduate standing or permission of instructor.

**EDPSY 543 Facilitating Career Development (3)** Theory and practice in exploring, clarifying, and articulating individual goals and career plans. Entry code required.

**EDPSY 544 Counseling (5)** Emphasis on the theory and practice of counseling.

**EDPSY 545 Practicum in Counseling (3-6, max. 6)** Supervised practice in counseling. Prerequisite: 544. Entry code required.

**EDPSY 547 Organization and Administration of Student Personnel Programs (3)** Basic considerations in planning, organizing, and operating school student personnel programs; analysis of issues and problems encountered in formulating policy; supervising and evaluating services.

**EDPSY 548 Educational Implications of Personality Theory (5)** Study of personality development and personality theories with continuous attention to the meaning of these in educational practice, testing, and counseling. Prerequisites: 15 credits of psychology and educational psychology.

**EDPSY 549 Seminar in Consultation Methods (3)** Theory and practice of process consultation in educational settings. Field practice in teams with clients. Entry code required.

**EDPSY 550 Family Counseling (3)** Introduction to family counseling theory and practice, emphasizing family dynamics and communication analysis. Prerequisite: 544 or permission of instructor.

**EDPSY 555 Seminar in Counseling Specialty (1-2, max. 6)** Oriented toward the role of a counselor as a professional worker. Entry code required.

**EDPSY 561 Group Process Laboratory (3)** Experience in small-group process. Collateral discussions of process and independent study. Entry code required.

**EDPSY 564 Practicum in School Psychology (1-6, max. 6)** Practicum in appraisal and counseling, emphasizing diagnosis and counseling with behavior and learning disabilities, and focusing on techniques acquired in 540, 545, and 565. Entry code required.

**EDPSY 565 Personality Appraisal (5)** Study of personality evaluation with a supervised laboratory emphasizing work with children and their families. Prerequisites: 540, 548. Entry code required.

**EDPSY 566 Case Study Seminar (1, max. 4)** Integrating theoretical concepts with practice/service issues. Cases selected for discussion represent a wide range of problems and agency settings, including school and child problems. Entry code required.

**EDPSY 568 Seminar in Professional Issues and Ethics (2)** A Professional ethics codes and cases, history of counseling or school psychology, legal problems, credentialing issues, conditions of practice, continuing education, publishing, and presenting research papers.

**EDPSY 569 Seminar in Counseling Psychology Research (2)** Methodological and professional issues related to research in counseling and psychological services. Counseling psychology research literature with focus on content and methods. Prerequisite: 591 or equivalent.

**EDPSY 570 Seminar in School and Community Psychology (2, max. 4)** Current issues in professional psychology practice and research. Limited to graduate students in school psychology. Entry code required.

**EDPSY 571 Educational Applications of Neuropsychology: Assessment and Intervention (5)** A Students observe and administer neuropsychological tests and plan and carry out educational interventions for children with neuropsychological disorders. Con-

tent focuses on various neuropsychological disorders for which school psychologists can provide assessment and consultation. Prerequisites: 540 or equivalent course in individual testing, and 471 or permission of the instructor.

**EDPSY 573 Psychological Assessment of Pre-school Children (3)** *Berninger, Gray* Students learn to give and interpret five tests of intellectual development to assess language, play, and social/emotional functioning, and to write psychological assessment reports for infants, toddlers, and preschoolers. Prerequisite: 502 or equivalent early childhood course. Entry code required.

**EDPSY 580 Seminar: The Emergence of Educational Psychology (3)** Examination of documents by selected contributors to the field of educational psychology. Special focus on period from mid-nineteenth century to early twentieth century. Prerequisite: graduate standing.

**EDPSY 581 Seminar in Educational Psychology (1-3, max. 15)** Seminar on advanced topics in educational psychology. A critical appraisal of current research. Prerequisite: advanced degree work in educational psychology. (Check quarterly *Time Schedule* for subject listings, which vary from quarter to quarter.)

**EDPSY 582 Seminar in Development and Socialization (3, max. 15)** Advanced seminar on selected topics concerned with human development and socialization processes. Emphasis placed upon empirical research and its theoretical underpinnings in such areas as cognitive development, moral development and education, self-concept development, and related concerns. Entry code required.

**EDPSY 583 Seminar in Learning and Thinking (3, max. 15)** Seminar in the psychology of learning language and language learning. Each seminar is offered with predesignated emphasis in one of the following topics: linguistics, phonology, pragmatics, psycholinguistics, semantics. Entry code required.

**EDPSY 584 Seminar in Quantitative Methods (3, max. 15)** Seminar on such topics as measurement techniques, research design, psychometrics, and statistics. Entry code required.

**EDPSY 586-587 Qualitative Methods of Educational Research (3-3)** *Grossman, Wineburg* Survey of various qualitative research methods from a variety of disciplinary perspectives (anthropology, cognitive psychology, policy analysis, and evaluation) with intensive experience in collection, analysis, and reporting of data. Joint with EDC&I 578-579. Prerequisites: second year doctoral standing and one course in statistics. Students must enroll for both quarters.

**EDPSY 588 Survey Research Methodology and Theory (3)** Survey research, research, theory, and methodology. Probability theory, sampling, human subjects considerations, instrumentation, and analysis techniques. Review and critique by students of theoretical issues in survey research and development of a survey instrument. Prerequisite: 490 or equivalent.

**EDPSY 590 Computer Utilization in Educational Research (3)** Computer utilization in solution of research problems, data reduction to forms amenable to computer solution, appropriate framing of problems for solutions by computer. Using an interactive system, editors, and program packages. Prerequisite: 490.

**EDPSY 591 Methods of Educational Research (3)** Introduction to educational research. Primary focus on hypothesis development, experimental design, use of controls, data analysis and interpretation. Prerequisite: 490. Entry code required.

**EDPSY 592 Advanced Educational Measurements (3)** Theory of measurement; an examination of assumptions involved in test theory, errors of measurement, factors affecting reliability and validity, and item analysis. Joint with PSYCH 516. Prerequisite: 490.

**EDPSY 593 Experimental Design and Analysis (5)** Experimental design with emphasis on the analysis of variance. Prerequisites: 490 or equivalent, and 591 or permission of instructor.

**EDPSY 594 Advanced Correlational Techniques (5)** Multivariate analysis, including regression and multiple correlation; matrix algebra; factor analysis. Prerequisite: 490 or equivalent.

**EDPSY 595 Measurement and Evaluation in Human Development and Education (3)** Measurement strategies and evaluation research in developmental psychology and education. Overview of major childhood intervention studies and procedures established and experimental measurement techniques, and problems of measurement and evaluation. Skill in evaluating measurement and evaluation design. Prerequisite: 308 or 490.

**EDPSY 596 Program Evaluation (3)** Advanced course in evaluation research emphasizing nontraditional designs, especially those that impose severe ecological constraints on the evaluators. Prerequisites: 593, 594, EDC&I 597, or permission of instructor.

**EDPSY 597 Test Development (3)** Principles of test construction, including criterion and norm-referenced tests, item writing and sampling, test administration, preparation, scoring, and item evaluation techniques; problems of scaling and norming of cognitive and affective measures. Prerequisites: 592 and 594, or permission of instructor.

**EDPSY 599 Independent Studies in Education (\*)** Independent studies or readings of specialized aspects of education. Entry code required.

**EDPSY 600 Independent Study or Research (\*)** Prerequisite: permission of instructor. Entry code required.

**EDPSY 601 Internship (3-9, max. 9)** Entry code required.

## Special Education

**EDSPE 404 Exceptional Children (3)** Atypical children studied from the point of view of the classroom teacher.

**EDSPE 414 Introduction to Early Childhood Special Education (3)** Provides students with a comprehensive overview of major aspects of the field of early childhood special education. Theoretical foundations and program development and implementation are presented in an approach that integrates theory, research, and practice.

**EDSPE 418 Vocational Development of Handicapped Children and Youth (3)** Curricular aspects of vocational training relevant to each age level in the education of children with disabilities. Application of programmed instructional techniques to breaking down of the occupational task. Emphasis on familiarizing school personnel with interdisciplinary services and community resources available to assist them in facilitating the maximal vocational development of children and youth with disabilities.

**EDSPE 419 Interventions for Families of Children with Disabilities (3)** Upper-division course for professionals and paraprofessionals working with families of children with disabilities enrolled in special education or integrated programs.

**EDSPE 420 Classroom Management of the Physical Problems of Individuals With Severe or Profound Disabilities (3)** Overview of physical management of pupils with severe or profound disabilities in educational settings. Principles of normal motor development, positioning, and handling are applied to the development of classroom strategies. Effects of abnormal motor development on educational programming.

**EDSPE 435 Principles and Practice of Manual English (3)** Nature of manual communication is intro-

duced with an identification of its specific modes: American sign language, signed English, total communication, finger spelling, and manual English. Discussions center on the linguistic structure of signs, the psycholinguistic effects of signs on young children, and a review of the pertinent literature. Laboratory sessions emphasize manual English.

**EDSPE 436 Manual Communication for the Hearing Impaired (3)** Intermediate course in manual conversation stressing fluency in both receptive and expressive manual English. Grammatical system of Ameslan introduced and practiced. Prerequisite: 435 or equivalent preparation.

**EDSPE 475 Recreation and Leisure Activities for the Handicapped (3)** Acquaints the student with the philosophy of specialized recreation and leisure activities for the disabled: community, state, and national organizations providing leisure activities; adaptive devices and how to organize various activities; and the need to integrate and coordinate recreation, education, and service organizations working with the disabled. Observation, practical experience, guest speakers, films, and lectures.

**EDSPE 498 Workshop in Special Education (1-9, max. 15)** Demonstration, observation, and/or participation with groups of disabled children in laboratory or controlled classroom settings. Prerequisite: permission of instructor. Entry code required.

**EDSPE 499 Undergraduate Research (2-5, max. 5)** Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program. Prerequisite: permission of instructor. Entry code required.

**EDSPE 500 Field Study (1-6, max. 6)** Individual study of an educational problem in the field under the direction of a faculty member. Prerequisites: approved plan of study and permission of the instructor. Entry code required.

**EDSPE 504 Special Education and the Law (3)** Overview of major state and federal laws affecting the operation and management of special education programs in public schools. Emphasis on procedural and substantive rights of children with disabling conditions. Jointly offered with EDLPS 516. Students should sign up for only one course, i.e., 504 or EDLPS 516.

**EDSPE 505 Curriculum Development of Students with Moderate to Severe Disabilities (3)** Addresses issues and practices in the development of appropriate curricula for students with moderate to severe or profound disabilities. Includes curriculum models, methods for the selection of appropriate skills for inclusion in Individualized Education Plans, and establishing priorities for instruction.

**EDSPE 507 Instructional Methods for Students with Moderate to Severe Disabilities (3)** Details a systematic instructional process for the education of students with moderate to severe or profound disabilities. Includes instructional methods and materials designed to promote the development of functional skills and reduce challenging behaviors.

**EDSPE 508 Administration of Special Education (3)** Research and trends in administrative organization, programs, personnel assignments, and instructional groupings for the education of exceptional students as these relate to the total school program, pupil personnel services, community agency services, and state and federal legislation.

**EDSPE 509 Seminar in Mental Retardation (3, max. 9)** Research, theory, and/or contemporary practice in the education and habilitation of mentally retarded individuals. The synthesis of findings and their application to the educational environment. Prerequisites: 505, 507, 542.

**EDSPE 510 Behavioral Measurement and Management in the Classroom (3)** Response measurement in the classroom; use of data analysis for instructional decisions and behavior management; instructional programming for children with disabilities.

tional decisions and behavior management; instructional programming for children with disabilities.

**EDSPE 511 Methods of Applied Behavior Analysis Research (3)** Characteristics of applied behavior analysis are presented: direct, daily measurement, and the systematic investigation of important variables. Representative studies from various applied situations are discussed in terms of dependent and independent variables, research design, reliability, validity, and data analysis. Prerequisite: 510 or equivalent preparation.

**EDSPE 512 Evaluation of Instructional Materials for Exceptional Children (3)** Introduction to techniques of determining the quality of instructional materials in terms of (1) the systems of specific matter organization and (2) specified instructional outcomes.

**EDSPE 513 Clinical Appraisal of Exceptional Children (3)** Diagnostic instruments used in the clinical appraisal of exceptional children. Theoretical and measurement considerations are used to buttress practical experiences in appraisal related to intervention.

**EDSPE 514 Fundamentals of Reading for Children with Disabilities (3)** Emphasis on basic prereading and reading skills, such as phonics and structural analysis, specifically for the disabled child. Acquisition of comprehension skills by the disabled. Diagnosis of reading problems, published materials appropriate for children with disabilities, material modification.

**EDSPE 515 Problems and Issues in Special Education (3, max. 9)** Intensive examination of the issues pertinent to special education, such as legislation, interdisciplinary functions, and the role of special education in general education and placement practices.

**EDSPE 516 Developing Instructional Materials for Exceptional Children (3)** Theory and basic concepts underlying the writing of instructional materials for exceptional children. Basic review of the literature in programming research and methodology. Students write, field test, and rewrite a unit of instructional materials for a specific population of exceptional children.

**EDSPE 517 Practicum in Research Design and Analysis in Special Education (1-3, max 9)** Critical analysis of current research in special education and related fields serves as background for designing applied research projects. Projects are examined, evaluated, and revised in seminar discussion. Prerequisites: EDPSY 490 and 591 or equivalent and permission of instructor.

**EDPSE 518 Seminar in Special Education Research (1-3, max. 9)** Designed for doctoral students in special education during their first year of residency. Each candidate selects a dissertation problem and submits a proposal. Topics such as the procurement of subjects, the reporting and communication of research findings, and the evaluation of research are stressed. The seminar leads to the evolution of a viable dissertation proposal. Credit/no credit only.

**EDSPE 520 Seminar in Applied Special Education (1-12, max. 12)** Designed for graduate students in special education. Focus on contemporary topics relating to the application of the theoretical constructs to special education.

**EDSPE 521 Communication and Language in Young Exceptional Children (3)** Review and discussion of theories of language acquisition as they relate to communication and language in young exceptional children. Review of research of language environments that relate to early literacy and education and how to use this information to modify environments for special needs children. Jointly offered with EDPSY 519. Students should sign up for only one course, i.e., 521 or EDPSY 519.

**EDSPE 522 Seminar on the Education of Students with Severe Disabilities (3)** Advanced graduate seminar arranged to study and discuss the essential

components of providing a comprehensive approach to the identification and education of infants, children, adolescents, and young adults with severe disabilities.

**EDSPE 525 Educating Students with Autism or Severe Behavior Disorders (3)** Consideration of the identification, etiology, education, and progress of individuals with autism or other severe behavior disorders.

**EDSPE 530 The Hearing Impaired (3)** Consideration of problems of deaf individuals from social, economic, and educational points of view; history of education of the hearing-impaired learner.

**EDSPE 541 Education of Children with Behavior Disorders (3)** Introductory course covering characteristics of children with behavior disorders; introduction to the various theoretical approaches to education practices.

**EDSPE 542 Introduction to Mental Retardation (3)** Introductory course on intellectual disabilities and the challenges they present to individuals with such disabilities, the community, the schools, and society.

**EDSPE 543 Learning Disabilities (3)** Analysis of major theoretical approaches to the study of children with learning disabilities. Adaptation of various approaches to educational settings.

**EDSPE 545 Instructional Modifications for the Education of the Mildly Disabled (3)** In-depth analysis and application of several modifications of instructional techniques necessary for the education of students with mild disabilities.

**EDSPE 546 Seminar in Educating the Socially and Emotionally Disturbed (3, max. 9)** Advanced-level seminars focus on contemporary research topics relating to the effective education of children with serious behavior disorders. Students analyze and review research pertinent to the chosen topics and prepare a scholarly manuscript for dissemination.

**EDSPE 548 Special Topics in the Education of the Learning Disabled (3, max. 12)** In-depth analysis of empirical findings in the specialty of learning disabilities with focus on the synthesis of research findings and their application to the educational environment. A paper suitable for publication required. Prerequisite: course in learning theory, introductory course in learning disabilities, or equivalent preparation.

**EDSPE 561 Educational Assessment of Preschool Special Needs Children (3)** Special standardized and educational measurement and evaluation procedures for use with young children with a variety of disabling conditions. Administration, evaluation, and programming strategies are discussed in combination with practical application of the skills within an educational framework.

**EDSPE 562 Curricula for Preschool Children with Disabilities (3)** Basic theoretical models and approaches to curricula for preschoolers with disabilities. Promote specific preschool curricula and develop skills to assist students in critiquing and evaluating curricula. How to adapt materials for specific populations and to plan a program for exceptional preschoolers.

**EDSPE 563 Issues in Working with Families of Young Special Needs Children (3)** Adjustment of parents to the birth of an infant with disabilities. Transactions that occur between parents and their infant, procedures that facilitate the infant's development through these interactions. How to assist families in interacting with professionals in the assessment, IFSP process.

**EDSPE 565 Seminar: Early Childhood Education for Children with Disabilities (3)** Advanced seminar on early childhood education for the disabled. Historical and current research from appropriate specialties in special education reviewed; research from related fields is reviewed in terms of its application to the education of young children with disabilities.

**EDSPE 566 Current Research in Early Childhood Special Education (2, max. 6)** Introduces students to theory and current research related to early intervention with infants and toddlers and how to evaluate research articles. Selected topics cover typical and atypical development in the areas of cognitive, social communication, and social development, as well as issues in assessment, curricula, and intervention strategies.

**EDSPE 599 Independent Studies in Education (\*)** Independent studies or readings of specialized aspects of education. Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed. Entry code required.

**EDSPE 600 Independent Study or Research (\*)** Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed. Entry code required.

**EDSPE 601 Internship (3-9, max. 9)** Prerequisites: graduate standing and permission based on prearrangement of internship placement and approval by adviser. Entry code required.

## Independent Study, Research, and Field Experiences

**EDUC 301 Introductory Practicum in Community Service Activity (3)** Observation and participation in a variety of activities in a K-12 classroom, placement made according to participant interests and needs. Sixty hours of scheduled participation plus scheduled seminars are required. Prerequisites: application during quarter prior to participation, permission of instructor, and junior standing.

**EDUC 302 Introductory Practicum in Classroom Teaching and Management (3-6, max. 9)** Initial participation experience in classroom teaching and management. Assignment is for twenty hours per credit in a specific school situation, level as requested. Scheduled seminars required. Prerequisite: admission to Teacher Education Program.

**EDUC 401 Practicum in Community Service Activity (3-18)** Tutoring and teaching experiences in a school or community service organization, placement made according to participant interests and needs. Approximately twenty hours of participation on a predetermined schedule plus scheduled seminars are required for each credit earned. Prerequisites: application during quarter prior to participation and permission of instructor.

**EDUC 402 Practicum in Classroom Teaching and Management: Early Childhood, Kindergarten, Primary (Through Grade 3) (3-36)** Student teaching practicum in an assigned school. Approximately twenty hours of participation on a predetermined schedule plus scheduled seminars are required for each credit earned. Placement is made by the Office of Teacher Education. Prerequisites: 302 and permission of instructor.

**EDUC 403 Practicum in Classroom Teaching and Management: Intermediate Grades, Middle School (Grades 4-8) (3-36)** Student teaching practicum in an assigned school. Approximately twenty hours of participation on a predetermined schedule plus scheduled seminars are required for each credit earned. Placement is made by the Office of Teacher Education. Prerequisites: 302 and permission of instructor.

**EDUC 404 Practicum in Classroom Teaching and Management: Secondary School (Grades 6-12) (3-36)** Student teaching practicum in an assigned school. Approximately twenty hours of participation on a predetermined schedule plus scheduled seminars are required for each credit earned. Placement is made by the Office of Teacher Education. Prerequisites: 302 and permission of instructor.

**EDUC 423 Educating Diverse Groups (3)** Banks, Gay, Lowenbraun, Vasquez Background information is provided on socioethnic/cultural diversity; its impact on school structure, programming, administration. Focuses on social class groups, people of color, gender and groups with disabilities. Educational implications of discrimination based on these factors are emphasized. Prerequisite: admission to Teacher Education Program or teaching experience.

**EDUC 501 Advanced Practicum in Community Service Activity (3-18)** Selective, in-depth participation and teaching experiences for postbaccalaureate students in a community service organization. Approximately twenty hours of participation plus scheduled seminars are required for each credit earned. Participants wishing to use advanced community service experience to satisfy, in part, graduate program requirements should make such arrangements prior to enrollment with their faculty adviser and the Director of Certification. Prerequisites: application during quarter prior to participation and permission of instructor.

**EDUC 502 Advanced Practicum in Classroom Teaching and Management (3-18)** Designed to provide postbaccalaureate students with student teaching and certificated teachers with selective, in-depth classroom participation experiences. Participants wishing to use the advanced teaching practicum to satisfy, in part, graduate program requirements should make such arrangements prior to enrollment with their adviser and the Director of Certification. Prerequisites: application during quarter prior to participation and permission of instructor.

**EDUC 700 Master's Thesis (\*)** Prerequisites: permission of supervisory committee chairperson and graduate program coordinator.

**EDUC 800 Doctoral Dissertation (\*)** Prerequisites: permission of Supervisory Committee chairperson and graduate program coordinator.

# College of Engineering

## Dean

J. Ray Bowen  
371 Loew

## Associate Deans

Ashley F. Emery  
Keith A. Holsapple  
Paul R. Young  
Gregory L. Zick

Engineering is an increasingly critical societal enterprise. More than ever before, the engineer is challenged both to design products whose value is high by social and economic measures and to provide for efficient manufacture of such products within constraints of environmental protection and diminishing raw material resources. Requirements imposed on the transportation system and other elements of society's physical infrastructure pose analogous challenges. At the same time, improvements in computer cost and sophistication are dramatically impacting both the products and processes designed by the engineer and the actual practice of engineering.

An engineer with the baccalaureate degree is adequately prepared for many challenging technical assignments in government and industry. Students who plan to engage in research or college teaching, however, should undertake graduate study leading to either a master's or doctoral degree.

At the undergraduate level, the College of Engineering offers a flexible curriculum that accommodates varied student needs, both in established departmental programs and interdisciplinary studies. The college also offers active educational and research programs, both departmental and interdisciplinary, at the graduate levels. (See Interdisciplinary Engineering Studies Program for interdisciplinary undergraduate and graduate programs.)

The College of Engineering has been a major unit of the University since 1899; the first engineering degrees were authorized in mining engineering and metallurgical engineering in 1898. Degrees were added for civil engineering (1901), electrical engineering (1902), mechanical engineering (1906), chemical engineering (1907), ceramic engineering (1919), aeronautical engineering (1929), industrial engineering (1986), computer engineering (1987), computer science (1978), and technical communication (1991). In 1991, 1,682 upper-division undergraduate majors and 1,332 graduate students were enrolled in engineering programs taught by a faculty of about 190 members.

## College Facilities

Teaching and research activities of the college are conducted in thirteen major campus buildings (and portions of others), which contain the college's offices, classrooms, and research and teaching laboratories. The Engineering Library, a branch of the University Libraries, provides outstanding collections of books, periodicals, technical reports, and patents of interest to engineers. Computers and terminals are available in all departments and at the University's Academic Computer Center.

## Student Organizations and Activities

All of the major professional engineering societies have student chapters on campus, and every engineering student is encouraged to join the chapter that represents his or her field of interest. The college also has student chapters of the Society of Women Engineers, American Indian Science and Engineering Society,

National Society of Black Engineers, and the Society of Hispanic Professional Engineers. The Pre-Engineering Student Association (PESA) is the major college-wide organization for all students enrolled in a pre-engineering course of study but not yet admitted to a department. The Engineering Student Council, comprising student representatives from all departments and professional societies, is the major college-wide student organization and participates actively in college affairs. Honor societies open to engineering students are Tau Beta Pi and Sigma Xi.

Students serve with faculty members on engineering policy committees, which make recommendations concerning teacher evaluation, curriculum revisions, advising, grading systems, and other matters of interest to students and faculty.

## Financial Aid

The college offers financial assistance to undergraduates through industrial scholarships and loan funds. Scholarship information is available at the College Advising Center, 353 Loew, at the Office of Academic Affairs, 356 Loew, and at the Office of Student Financial Aid, 105 Schmitz. Most scholarships are given after a year or more in residence by the student.

## Foreign Study

Given the increased likelihood that engineering students will have overseas work experiences or will do business with foreign clients and competitors, the college encourages students to study foreign languages in addition to their engineering course work, and to take advantage of opportunities for study in foreign universities either at the undergraduate or graduate level. The college has active exchange agreements with approximately thirty-eight universities in eighteen countries. Foreign language courses at the third-quarter level or above (e.g., GERM 103) may be applied toward humanities distribution. Students may contact the Office of Academic Affairs, 356 Loew, for information about opportunities for foreign study.

## Undergraduate Program

The College of Engineering provides curricula that offer a variety of educational experiences to its students. The curricula also facilitate transfer from community colleges and from other four-year colleges and universities.

Students planning to major in engineering begin as pre-science majors in the College of Arts and Sciences. This status allows the student to take mathematics, chemistry, physics, English composition, and humanities/social science courses. In addition to these courses, there are engineering fundamentals courses required for admission to engineering departments. To have priority in registration for engineering fundamentals courses, pre-engineering status is required.

To receive pre-engineering status, students must meet a specified GPA in seven courses: MATH 124, 125, 126; English composition; and three courses from CHEM 140, 150, 160; PHYS 121, 122, 123. The minimum GPA in these seven courses to achieve pre-engineering status is determined and published annually by the College of Engineering. The minimum GPA for 1991-92 was 2.50. A minimum grade of 2.0 must be achieved in each course. Pre-science majors must complete a pre-engineering application form available from the College of Arts and Sciences Central Advising Office, 9 Communications.

## Admission

After completion of the prerequisite courses for an engineering departmental program and at least 64 credits applicable to the degree program, students must apply to be considered for admission to an engineering department. In general, the prerequisite courses are: one year of calculus, differential equations, one or two quarters of inorganic chemistry, two to three quarters of physics, English composition, and two to four courses

in engineering fundamentals (e.g., programming, statistics, thermodynamics, etc.). The Engineering Advising Center or the individual department may be consulted for a listing of specific entrance requirements.

All engineering departments have enrollment quotas, and admission is on a competitive basis. The criteria by which applicants are judged vary from department to department, but are based primarily on the GPA earned in technical subjects.

## Admission for the Disadvantaged

While the sole purpose of the admission requirement is to limit enrollment to a number that can be taught well with the resources available, the college recognizes that this may eliminate some disadvantaged students whose potential is high but who, through extenuating background circumstances, have had limited access to early education that provides adequate experience in abstract reasoning. For purposes of special consideration for admission, a disadvantaged student is defined as one who (1) is economically disadvantaged as shown by eligibility for a Basic Need Grant on the National Financial Aid Program, or (2) is educationally disadvantaged, having attended a school without a full and available complement of college preparatory work, or (3) has ethnic minority status with a group showing historic underrepresentation in the field of engineering. These students are encouraged to apply for admission to departments and to attach to their application a letter to the admissions committee that provides information on the applicant that is relevant to the admission decision.

## Recommended High School Preparation

Substantial high school preparation in mathematics, physical science, and communication is essential for entrance to engineering studies. Required and recommended courses may be determined from the Engineering Advising Center.

## Engineering Advising Center

353 Loew

The Engineering Advising Center assists any student interested in planning the initial portion of an engineering degree program, and distributes information about prerequisites for application for admission to one of the nine departments in the college. A student who is interested in engineering is urged to identify engineering as his or her intended major while still in the College of Arts and Sciences and to seek advice in the advising center.

Students are urged to contact the Engineering Advising Center for program, course, or career information and discussion. A first-year, career-planning course (ENGR 110) is available for students who wish more information on career alternatives.

## Types of Programs

The college offers three basic programs leading to Bachelor of Science degrees:

**Departmental Major.** This program leads to a Bachelor of Science degree in a designated field of engineering (e.g., Bachelor of Science in Civil Engineering). It is designed for students who intend to practice as professional engineers in a standard branch of engineering or who plan to undertake graduate study in that field. The curricula for these degrees are accredited by the Accreditation Board for Engineering and Technology, (ABET), the principal engineering accrediting agency in the United States. Accreditation requirements stipulate certain course distribution requirements for the undergraduate degree. A description of how each of the accredited baccalaureate programs meets the ABET requirements is available from the department office and from the Engineering Advising Center. Accredited four-year curricula leading to baccalaureate degrees are offered in aeronautics and astronautics and in ceramic, chemical, civil, computer, electrical, industrial, mechanical, and metallurgical engineering.

Application to a department program at the upper-division level is made at the time that lower-division requirements are satisfied. Currently, enrollment limits imposed by faculty size and laboratory/classroom space available are such that entry into a specific department may be competitive. In general, a student applicant must demonstrate scholastic aptitude, as evidenced by the attainment of grades whose average is 2.5 or above (depending upon the program) in mathematics, natural science, English composition, and engineering fundamentals. The student is urged to plan ahead by learning his or her future department's requirements and particularly by noting which requirements must be fulfilled by the time the application is made. The larger departments permit entry for autumn or spring quarters. Others permit only autumn quarter entry.

**Nondepartmental Professional Program.** This program leads to a Bachelor of Science in Engineering degree and is designed for students who have well-defined, special educational objectives that departmental programs do not satisfy. Graduates can practice as professional engineers in newly developing fields, or they may embark on graduate study in these or allied fields (see Engineering Interdepartmental Curricular Program).

**Nonprofessional Program.** Leading to a Bachelor of Science degree, this program is intended for students who wish to have significant exposure to science and engineering courses, but who do not plan to engage in professional engineering practice (see Engineering Interdepartmental Curricular Program).

**General Requirements for Graduation.** To graduate, students must meet or exceed the requirements of the University, the college, and their particular program or department. College requirements are listed in this section, and program or departmental requirements are given in the specific section that describes that program or department.

All departments of the college have continuation policies that specify a minimum rate of progress as well as minimum academic performance levels. These policies may be more restrictive than those generally applied by this university and may change in time. Information on current policy is available at the departmental offices.

Selecting courses that fulfill graduation requirements is the responsibility of each individual. Students are urged to check carefully the course and credit requirements of the program in which they are enrolled.

The college requires a minimum number of credits within certain areas of study and some specific courses within certain areas. All programs require:

#### **MATHEMATICS: 24 CREDITS**

Specific courses required are MATH 124, 125, 126, 307 and 308. The remaining 3 credits are specified or recommended by the engineering department.

#### **NATURAL SCIENCE: 25 CREDITS**

Chemistry (10 credits): CHEM 140, 141, 150, and 151; and physics (15 credits): PHYS 121, 122, 123 and 131, 132, 133 are required.

#### **ENGINEERING FUNDAMENTALS: 24 CREDITS**

ENGR 142, Computer Programming for Engineers (4 credits), is required. The remaining credits are to be selected from the following areas of study: engineering science, graphics, numerical and computational techniques, engineering economics, and systems engineering.

Each department specifies part or all of the Engineering Fundamentals course work (see individual departmental requirements). Such courses are intended to provide the student with a strong background for the chosen major field of study.

At least 16 of the required 24 credits in Engineering Fundamentals must be completed within the first 144 credits earned, unless a waiver has been granted.

#### **WRITTEN AND ORAL COMMUNICATION: 12 CREDITS**

A basic English composition (5 credits) is required, followed by ENGR 231, Introduction to Technical Writing (3 credits), and ENGR 333, Advanced Technical Writing and Oral Presentations (4 credits, or department approved alternative). Courses selected from the UW Arts and Sciences English composition list will satisfy the English composition requirement.

#### **HUMANITIES AND SOCIAL SCIENCES: 30 CREDITS**

Humanities include courses in literature, art, music, drama, philosophy, etc., which stress the essential qualities of individual forms of expression. Language courses must be concerned with literature, not skills; similarly, art or music courses must be devoted to music or art forms, not development of students' performing skills. Social sciences include courses in history, economics, psychology, sociology, etc., which stress the social nature of mankind and the development and analysis of societies and/or social institutions. A minimum of 10 credits is required in each area. In addition, two linked sets are required and one course from the Society and Technology list is recommended.

#### **UPPER-DIVISION ENGINEERING COURSES OF STUDY: 77 CREDITS**

Major departments or specific programs will require at least 77 credits in their curricula. At least 24 credits must have a design component.

#### **Special Programs**

Cooperative Education and Minority Internship Program  
353 Loew  
Director, Helene Beaver

The Cooperative Education and Minority Internship Program provides the opportunity for pre-engineering students and all departmental students to combine practical, full-time, on-the-job engineering experience with alternate periods of full-time academic study. Advantages of participation in this program include assistance for the student in deciding which branch of engineering to follow; additional income to help defray college expenses; relevance and motivation for study based on real engineering work; and work experience and employment contacts that may result in a higher starting salary after graduation.

Information may be obtained from the Director of Cooperative Education, College of Engineering, FH-10.

### **Continuing Education Programs**

Engineering noncredit short courses, conferences, televised instructional programs, and late-afternoon credit classes are offered to the professional community. These offerings range from refresher courses, which assist engineers who are planning for professional registration, to credit courses leading to a graduate degree. In general, the offering of noncredit and credit continuing education programs is based on need or demand. Courses are announced in *Spectrum*, by special announcements, professional society newsletters, and news media.

### **Special Facilities**

#### **OFFICE OF ENGINEERING RESEARCH**

Coordinator, Vicky Palm  
372 Loew

The Office of Engineering Research attempts to promote, stimulate, and coordinate research in all fields of engineering. Its primary role is to maintain records of grant and contract proposals and awards. It also allocates limited resources to college units to increase the number and quality of research grants and contracts in the College of Engineering.

#### **AEROSPACE AND ENERGETICS RESEARCH PROGRAM**

Director, Abraham Hertzberg  
120 Aerospace Research and Engineering Laboratory

The Aerospace and Energetics Research Program is directed toward high-technology engineering research and teaching through research. The program has the task of anticipating, and even trying to outpace, the critical technology needs of our nation. The research and teaching programs of this laboratory, therefore, emphasize those engineering skills that both match the requirements of the present and future and develop in students a broad understanding of the impact of technology on society. Suitable programs are designed to develop in the student through his particular research program the imagination and, more importantly, the willingness to respond to the complex and rapidly changing future of engineering. This ideal directs the faculty's efforts and creates within the principal investigators, research faculty, and students the concept of engineering as an adventure.

The program is marked by a catholic approach to research, with programs covering many fields, usually centered on energy or aerospace. Active research programs are available in plasma engineering related to fusion power, space and terrestrial solar energy systems, laser bioengineering experiments, studies of the basic technology of high-power laser systems, advanced gas dynamics research involving new propulsive concepts, and the use of shock waves to process chemicals, which represent some of the interests of the principal investigators working together in the Aerospace and Energetics Research Program.

## **Interdisciplinary Engineering Studies Program**

356 Loew

The College of Engineering directly administers non-departmental undergraduate and graduate degree programs, all of the college's lower-level courses, and upper-level courses not encompassed by regular departmental offerings. These courses are designated ENGR; in general, ENGR courses are supervised and taught by regular departmental faculty members.

### **Undergraduate Programs**

358 Loew  
Coordinator, Dianne F. Cline

The Interdisciplinary Engineering Studies (IES) Program is intended for students whose desired course of study does not fall within one of the traditional engineering departments. An interdisciplinary program combines in-depth course work from two or more departments. Although course work may involve departments outside the College of Engineering, the major thrust must be in engineering.

The IES Program offer a nonprofessional degree program leading to the Bachelor of Science (B.S.) and a professional degree program for the Bachelor of Science in Engineering (B.S.E.).

Due to the unique originality of each interdisciplinary student's program of studies, the B.S. and B.S.E. degrees are not accredited by the American Board of Engineering and Technology (ABET). The experience requirement to obtain a professional engineering license is two years longer for a B.S.E. graduate, except in surveying, than for a graduate of an accredited program. A B.S. graduate is not eligible for a professional engineering license.

Interdisciplinary students develop personal programs of study approved by a faculty adviser with similar in-

terests. Programs are reviewed and approved by the Interdisciplinary Committee which oversees all interdisciplinary study programs. Contact the Office of Academic Affairs at 543-8590 for information on established procedures and applications for entry into the B.S.E. and B.S. programs. Entrance requirements and the continuation policy for participation in these programs are consistent with those of other departments in the college.

#### **Bachelor of Science in Engineering Degree**

A typical B.S.E. program could: combine course work from civil and mechanical engineering and oceanography for a program in ocean engineering; course work from civil and chemical engineering to form a program in environmental engineering; or course work from one or more of the engineering programs and from physics for a program in engineering physics. Admission into this program (usually after completion of 90 credits) is competitive with a GPA of at least 2.80 in technical courses required for entry. A minimum of 75 credits must be completed after entering the program before a B.S.E. degree is awarded.

#### **Bachelor of Science Degree**

The nonprofessional Bachelor of Science degree provides greater flexibility than does the Bachelor of Science in Engineering degree. It can be an excellent base of subsequent professional studies in law, medicine, or business. It may also be the primary educational objective in such fields as technical writing, engineering sales, or environmental studies. Detailed requirements are available from the coordinator in the Office of Academic Affairs.

## **Graduate Programs**

The college also offers graduate programs leading to the Master of Science in Engineering, Master of Engineering, and Master of Science degrees, without designation of a specific major.

Approved programs lead to the M.S.E. degree in civil, mechanical, electrical, chemical, and inter-engineering; an approved program leads to the M.Eng. degree in aeronautics and astronautics; and approved programs lead to the M.S. degree in civil engineering, interengineering, and materials science and engineering. Admission requires a B.S. degree in engineering, mathematics, or physical science and evidence of aptitude for graduate study. Submission of scores on the Graduate Record Examination is required.

#### **Master of Science in Engineering Degree**

The Interengineering Master of Science in Engineering (M.S.E.) and Master of Science (M.S.) program is intended for students whose desired course of study includes two or more engineering departments and may also include study in departments outside the College of Engineering. Applications and files of students entering the M.S./M.S.E. option are handled in the office of the Associate Dean for Academic Affairs. Admission to the interengineering option requires a statement describing the applicant's objectives. This statement should state why students want to enter the M.S./M.S.E. program rather than one of the traditional engineering graduate programs. Applicants to the M.S./M.S.E. program must have well-defined educational objectives which cannot be satisfied by established engineering programs. Graduation and entrance requirements, which differ for the various programs, may be obtained from the Office of the Dean for Academic Affairs, College of Engineering, 543-8590.

## **Course Descriptions**

### **Courses for Undergraduates**

**ENGR 110 Career Planning I (1) AW** Presentations by various faculty and staff members, students, and recent graduates offer an introduction to the College of Engineering, curricular options, fields of engineering,

interdisciplinary programs, and information of general interest. Credit/no credit only. Limited to freshmen, sophomores, or transfer juniors.

**ENGR 111 Engineering Problems (5) WSp** Introduction to solving problems in statics and dynamics. Applications of vectors and calculus to rectilinear motion, statics, momentum, work and energy, and rotational motion. Designed to develop the ability to analyze and solve engineering problems. Prerequisites: MATH 124 and permission of instructor.

**ENGR 123 Introduction to Engineering Graphics (4) AWSps** Freehand sketching, lettering, scales, use of instruments, layout drawings, orthogonal projection, descriptive geometry, pictorials, and basic dimensioning. Communicating technical information in engineering design and research. Introduction to computer-aided design drafting.

**ENGR 142 Computer Programming for Engineers and Scientists I (4) AWSps Patis** Computer programming in a high-level language. Emphasizes algorithmics (variables, expressions, statements); abstraction (data types, subprograms, packages, generics); analysis (correctness, efficiency, numerics). Program design and analysis: specification, coding, documentation, testing, debugging, evaluation (mostly in Ada, including FORTRAN). Using software tools. Joint with CSE 142.

**ENGR 170 Fundamentals of Materials Science (4) AWSps** Fundamental principles of structure and properties of materials utilized in the practice of engineering. Properties of materials are related to atomic, molecular, crystalline structure. Metals, ceramics, multiphase systems, and polymeric materials. Relationships between structure and electrical, mechanical, thermal, chemical properties. For advanced freshmen and sophomores. Prerequisite: CHEM 150 or permission of instructor.

**ENGR 171 Materials Science Laboratory (1) AWSps** Experiments in materials science designed to illustrate fundamentals related to the structure and the properties of engineering materials; optical microscopy, x-ray diffraction, mechanical properties, electrical conductivity, crystal growth, solid-state reactions. Prerequisite: 170, which may be taken concurrently.

**ENGR 197 Engineering Problem Solving (1, max. 12) AWSp** Lectures and problem sessions in mathematics, chemistry, and physics with engineering applications. Enrollment restricted to Minority Science and Engineering Program (MSEP) students.

**ENGR 199 Special Projects (1-3, max. 3) AWSps** Students propose problems to solve to an engineering faculty member. The problems may be selected from the student's own experiences and interests, from the interest of the faculty member, or from other sources such as faculty or graduate students doing research projects, or from personnel in the physical medicine area, occupational therapy, hospital, industry, government, etc. Corroboration by an engineering faculty member is required. Project suggestions are available.

**ENGR 202 Special Projects (1-3) AWSps** Projects on topics of current interest in engineering. Prerequisite: permission of instructor.

**ENGR 210 Engineering Statics (4) AWSps** Principles of statics, basic concepts, parallelogram law, Newton's law, resultants, force-couple relationships, equilibrium diagrams, equilibrium analysis, three-dimensional structures, two-dimensional frames, trusses, beams, and friction. Vector algebra used throughout the course. Prerequisites: MATH 126, PHYS 121; recommended: graphics background.

**ENGR 215 Fundamentals of Electrical Engineering (4)** Introduction to electrical engineering. Basic circuit and systems concepts. Mathematical models of components. Kirchhoff's laws. Resistors, sources, capacitors, inductors, and operational amplifiers. Solution of first and second order linear differential equations associated with basic circuit forms. Prerequisites: PHYS 122 and MATH 126.

**ENGR 220 Introduction to Mechanics of Materials (4) AWSps** Introduction to the concepts of stress, deformation, and strain in solid materials. Development of basic relationships between loads on structural and machine elements such as rods, shafts, and beams, and the stresses, deflections, and load-carrying capacity of these elements under tension, compression, torsion, bending, and shear forces, or combinations thereof. Prerequisite: 210.

**ENGR 230 Kinematics and Dynamics (4) AWSps** Kinematics of particles, systems of particles, and rigid bodies; moving reference frames; kinetics of particles, systems of particles, and rigid bodies; equilibrium, energy, linear momentum, angular momentum, Euler equations, and special problems (e.g., central force motion, vibration). Prerequisite: 210.

**ENGR 231 Introduction to Technical Writing (3) AWSps** Principles of organizing, developing, and writing technical information. Report forms and rhetorical patterns common to scientific and technical disciplines. Technical writing conventions such as headings, illustrations, style, and tone. Numerous written assignments required. Required for all engineering majors. Prerequisite: one 5 credit composition course.

**ENGR 250 Fundamentals of Engineering Economy (4) AWSps** Introduction to industrial cost analysis. Basics of industrial cost accounting. Application of interest computations to engineering decision making. Analysis of engineering alternatives based on use of interest computations, valuations, depreciation, and cost estimates in process and product manufacturing. Use of spreadsheets.

**ENGR 260 Thermodynamics (4) AWSps** Introduction to the basic principles of thermodynamics from a macroscopic point of view. Emphasis on the First and Second Laws and the State Principle, problem solving methodology. Prerequisites: MATH 126, PHYS 121, and CHEM 140.

**ENGR 275 Fundamentals of Computer Organization and Operation (4) AWSp** Concepts of multi-level machines and computer system organization. Introduction to digital logic. Machine language including instruction formats and addressing. Microprogramming. Operating system principles including virtual memory and I/O. Assembly language concepts. Advanced architectures (RISC and parallel). Prerequisite: 142.

**ENGR 280 Introduction to System Engineering (4) AWSp** Concepts of system approach, system hierarchies, functional analysis, requirements, trade studies, and other concepts used to define and integrate complex engineering systems. Prerequisite: 142.

**ENGR 301 Creating the Future (3) W Douthwaite** Examines the concept of alternative individual and societal futures and the opportunities for creating them. Many authors are reviewed, a number of scenarios for the future are explored, and several methods of forecasting are investigated.

**ENGR 310 Social Constraints on Engineering Design (3) Sp** Ways in which social goals affect engineering design decisions. Social values and public policy issues that generate design criteria using engineering cases such as space travel, energy conservation, nuclear waste disposal. For students from any discipline. Prerequisite: junior standing or permission of instructor.

**ENGR 315 Probability and Statistics for Engineers (3) AWSp** Application of probability theory and statistics to engineering problems, distribution theory and discussion of particular distributions of interest in engineering, statistical estimation and data analysis. Illustrative statistical applications may include quality control, linear regression, analysis of variance, and experimental design. Prerequisite: MATH 307.

**ENGR 321- Engineering Cooperative Education (2-, max. 16) AWSps** Engineering practicum; integration of classroom theory with on-the-job training. Periods of full-time work alternate with periods of full-time

study. Open only to students who have been admitted to the Engineering Cooperative Education Program. Requires subsequent completion of ENGR 322 to obtain credit. Credit/no credit only.

**ENGR 322 Engineering Cooperative Education Postwork Seminar (0) AWSpS** Reporting and evaluation of co-op work experience, and discussion of current topics in engineering. To be taken during the first quarter in school following each work session. Credit/no credit only.

**ENGR 323- Engineering Cooperative Education—Parallel (1-, max. 12) AWSpS** Engineering practicum; integration of classroom theory with on-the-job training. Part-time work concurrent with study. Open only to students who have been admitted to Engineering Cooperative Education Program. Requires subsequent completion of ENGR 322 to obtain credit. Credit/no credit only.

**ENGR 332 Technical Briefings and Presentations (3) AWSpS** Technical information for different audiences and different purposes. Includes analyzing the professional situation, preparing the presentation, and the role and use of visuals. For students in engineering and similar professions and for those in the natural, social, and health sciences. Concentrates on professional papers, management briefings, and public presentations. Prerequisite: junior standing or permission of instructor.

**ENGR 341 Computer Applications of Numerical Methods (3) AWSpS** Development and application of numerical methods and algorithms to solve problems in engineering. Simultaneous equations, curve fitting, root-finding algorithms, Taylor series analysis, numerical integration, ordinary differential equations. Joint with AMATH 341. Prerequisites: 141 or equivalent and MATH 307, which may be taken concurrently.

**ENGR 351 Inventions and Patents (1) Sp** Law and procedures for patenting inventions, employer-employee relationship, and trademarks. Primarily for engineering students. Prerequisite: junior standing.

**ENGR 360 Introductory Acoustics (3) Sp** Introduction to propagation of acoustical waves; emphasis on propagation of sound waves in air, but material is applicable to propagation of sound waves in liquids, including underwater acoustics, and to propagation of stress waves in solids. Includes a historical development of acoustics, terminology, and units employed. Prerequisite: PHYS 123, MATH 307.

**ENGR 401 Methods In Applied Mathematics I (4) Asp** Emphasis on acquisition of solution techniques; ideas illustrated, specific example problems arising in science and engineering. Applications of vector differential calculus, complex variables. Line, surface integrals; integral theorems; Taylor and Laurent series, contour integration. Joint with AMATH 401. Prerequisites: MATH 205; MATH 328 or A A 370, and AMATH 351 or MATH 307 or permission of instructor.

**ENGR 402 Methods In Applied Mathematics II (4) AW** See 401. Applications of ordinary differential equations; review of elementary concepts for first and second order equations; power series and Frobenius solutions. Laplace transforms; systems of differential equations, eigenvalues. Joint with AMATH 402. Prerequisites: MATH 205; MATH 328 or A A 370, and AMATH 351 or MATH 307 or permission of instructor.

**ENGR 403 Methods In Applied Mathematics III (4) WSp** See 401. Application of partial differential equations; linear and quasilinear first order equations, characteristics; classification of linear second order equations; basic solution techniques for parabolic, elliptic, and hyperbolic equations; Green's functions and integral transform methods. Joint with AMATH 403. Prerequisite: 402 or permission of instructor.

**ENGR 450 Gas Discharges for Plasma Processing and Other Applications (3) Ribe, Viases** Lectures and demonstrations on direct-current and radio-frequency electrical discharges for sputtering, plasma

etching and other plasma processing applications. Prerequisites: MATH 307, PHYS 122 or E E 231.

**ENGR 490 Reliability and Risk Analysis (3)** Principles of reliability and safety analysis, including Markov models and fault-tree/event-tree construction; introduction to fundamental concepts in probabilistic risk analysis (PRA); examples of PRA for energy production technologies and site-specific chemical plant applications; introduction to value-impact tradeoff analysis and acceptance of risk by society. (Formerly NUC E 490.)

**ENGR 493 System Engineering Project (3)** A system engineering project course that develops requirements and specifications and management systems for system development. Integration of simulation optimization, control and decision theory methods to the system engineering of large complex projects. Prerequisite: senior standing, permission of instructor.

**ENGR 498 Special Topics In Engineering (1-5, max. 6) AWSpS**

**ENGR 499 Special Projects In Engineering (1-3, max. 6) AWSpS**

## Aeronautics and Astronautics

206 Guggenheim

Aeronautics and Astronautics deals with atmospheric and space flight and a broad spectrum of related engineering science. Established in 1930, the department offers a full complement of degree programs and is unique in the Pacific Northwest.

## Undergraduate Program

Reiner Decher, Undergraduate Program Coordinator

The department offers the Bachelor of Science in Aeronautical and Astronautical Engineering degree, based on a program of study of engineering science with emphasis on the design and development of vehicles operating within the atmosphere or space. The program is accredited by the Accreditation Board for Engineering and Technology, and all graduates must meet certain specific distribution requirements.

### Admission

Entrance into the department requires the equivalent of at least 75 applicable credits and a 2.50 GPA in specified courses. These are minimum requirements; admission is competitive. Details of the entrance requirements, application deadlines, application forms, and advising literature may be obtained from the department office.

### Technical Preparation

The department has the following recommendations and requirements for technical preparation beyond those courses required of all engineering students. In natural science, PHYS 225 is required. In engineering science, ENGR 210, 230, and 260 are required prior to admission to the department. In addition, EE 306 (4 credits) is required in the junior year, but is recommended to be taken prior to entering the department.

### Professional Courses

The department program begins in the autumn quarter of the junior year. Exceptions are very unusual and must be coordinated with the undergraduate adviser. Required junior courses: A A 300, 301, 302, 310, 311, 312, EE 306; A A 321, 322, 330, 331, 332, 370. Required senior courses: A A 41C-411 or 420-421, 460, 498 and 21 credits of senior technical electives, with at least 18 chosen from department offerings.

Additional free electives may be needed to meet the 192 credits required for graduation. Appropriate technical electives include electronics, automatic control, mathematics, applied mathematics, computer science, physics, and astronomy. Senior programs should be planned with the assistance of the faculty adviser.

## Graduate Program

Walter H. Christiansen, Graduate Program Coordinator

The Department of Aeronautics and Astronautics offers programs that provide a foundation in the engineering sciences and study in various engineering applications. These lead to the degrees of Master of Science in Aeronautics and Astronautics, Master of Engineering, or Doctor of Philosophy.

### Master of Science in Aeronautics and Astronautics Degree

The program of study is tailored to the needs and interests of the student. Each program must be approved by the department graduate committee and must provide breadth through a variety of subjects, depth through extensive study of a specialized field, and analytical strength. Minimum programs consist of either 39 credits of course work, or 30 credits of course work and a 9-credit thesis.

### Master of Engineering Degree

The Master of Engineering program is intended to provide course work and research beyond that for the degree of Master of Science in Aeronautics and Astronautics. The student must complete an approved program of study and research, which usually consists of a prior Master of Science degree, followed by a minimum 30 credits of course work and a 9-credit thesis.

### Doctor of Philosophy Degree

The doctoral program consists of lectures, seminars, discussions, and independent study, enabling the student to master and to make original contributions to a particular field. In addition to the formal steps for obtaining the degree listed in the Graduate School section of this catalog, the student must complete an approved program of study consisting of 30 credits of course work, and is expected to be in continuous full-time residence for one academic year after advancement to Candidate standing.

### Research Activities

Research facilities include the Kirsten 8x12-foot low-speed wind tunnel, a water tunnel, blow-down tunnels, shock tunnels and Ludwig tubes, a projectile accelerator, material and structural test machines, a dynamic fracture laboratory, a composite material laboratory, a twin-engine aircraft, and various fusion, research, and engineering physics laboratories. A variety of computer facilities are available, including a computational fluid dynamics laboratory and a new controls laboratory. A close relationship is maintained with the Aerospace and Energetics Research Laboratory, where interdisciplinary research is conducted.

Externally funded research is carried out by faculty members and students on such topics as buoyant flows, separation control, combustor mixing, 3-D shear layers, computational fluid dynamics, internal flows, hypersonic reacting flows, ram accelerators, free-electron lasers, space energy systems, space system design, control system design and engineering, robust and optimal control, rotorcraft control, wing optimization, impact mechanics, cylinder failure, composite material structure and fracture, plasma science, and controlled-fusion.

### Admission

Students who have earned a baccalaureate degree in an accredited program of aeronautics and astronautics or closely related field are eligible for the Master of Science program. Backgrounds in related fields require review on a case-by-case basis, and preparatory

courses may be required, depending on the student's previous studies and educational objectives. Admission is competitive, with the equivalent of a 3.00 GPA in previous technical study a minimum standard. Submission of verbal, quantitative, and analytical scores on the Graduate Record Examination is required.

Admission to the Doctor of Philosophy program is based on satisfactory performance on a departmental qualifying examination. Admission to that examination is based on evidence of superior academic ability.

#### Additional Information

Students who intend to work toward advanced degrees must apply for admission to the Graduate School. Most students are financially supported by their employers or by the department as teaching or research assistants. For further information on this or other aspects of department programs, contact the Graduate Program Coordinator, 206 Guggenheim, FS-10.

## Faculty

#### Chairperson

David A. Russell

#### Professors

Bollard, R. John H.,\* 1961, M.E., 1949, Canterbury (New Zealand); Ph.D., 1954, Purdue; mechanics of materials, structural mechanics, aeroelasticity, design and crash-worthiness of aircraft.

Bruckner, Adam P.,\* 1972, (Bioengineering), M.A., 1968, Ph.D., 1972, Princeton; biomedical applications of lasers, ultra short-pulse optical phenomena, space power and propulsion, solar energy.

Christiansen, Walter H.,\* 1967, M.S.A.E., 1957, Ph.D., 1961, California Institute of Technology; gas dynamics and gas physics, gas lasers, energy conversion.

Clark, Robert N.,\* 1966, (Electrical Engineering),† M.S.E., 1951, Michigan; Ph.D., 1969, Stanford; dynamics and control.

Decher, Reiner,\* 1967, S.M., 1962, Ph.D., 1968, Massachusetts Institute of Technology; aircraft propulsion, fluid mechanics, energy conversion.

Eastman, Fred H., 1927, (Emeritus), M.S., 1929, Massachusetts Institute of Technology; aeronautics and astronautics.

Fyfe, Ian M.,\* 1959, M.M.E., 1954, Delaware; Ph.D., 1958, Stanford; structural dynamics, impact induced failure.

Ganzer, Victor M., 1947, (Emeritus), B.S.A.E., 1941, Washington; aeronautics and astronautics.

Hertzberg, Abraham,\* 1966, M.Ae.E., 1949, Cornell; high-power lasers, fusion research, solar energy, space and energy systems.

Holsapple, Keith A.,\* 1965, M.S.E., 1964, Ph.D., 1965, Washington; solid and continuum mechanics, finite elements methods, impact mechanics.

Jarboe, Thomas R.,\* 1989, Ph.D., 1974, California (Berkeley); plasma physics and controlled fusion, especially magnetic reconnection and relaxation.

Joppa, Robert G.,\* 1947, (Emeritus), M.S., 1951, Washington; M.A., 1962, Ph.D., 1972, Princeton; aircraft flight mechanics, stability and control, V/STOL testing.

Kevorkian, Jirair,\* 1964, (Applied Mathematics),† M.S., 1956, Georgia Institute of Technology; Ph.D., 1961, California Institute of Technology; mathematical fluid mechanics, nonlinear wave propagation, resonance phenomena, perturbation methods, applied mathematics.

Kurosaka, Mitsuru,\* 1987, M.S., 1961, Tokyo; Ph.D., 1968, California Institute of Technology; propulsion, turbomachinery, thermofluid mechanics, heat transfer, acoustics.

Lin, Kuen Y.,\* 1984, M.S., 1973, Ph.D., 1977, Massachusetts Institute of Technology; composite materials, structural mechanics, finite element methods.

Parmerter, R. Reid,\* 1963, M.S., 1959, Ph.D., 1963, California Institute of Technology; structures, solid mechanics, fracture mechanics.

Pearson, Carl E.,\* 1965, (Applied Mathematics),† Ph.D., 1949, Brown; wave propagation, fluid mechanics, numerical analysis.

Russell, David A.,\* 1967, M.Sc., 1957, Ph.D., 1961, California Institute of Technology; fluid mechanics and gas physics, aerodynamics, shock processes.

Street, Robert E., 1948, (Emeritus), M.A., 1934, Ph.D., 1939, Harvard; aeronautics and astronautics.

Vagners, Juris,\* 1967, M.Sc., 1963, Ph.D., 1967, Stanford; optimal control and estimation theory, applications to aircraft, space, and biological systems.

#### Associate Professors

Breidenthal, Robert E. Jr.,\* 1980, M.S., 1974, Ph.D., 1978, California Institute of Technology; turbulence, mixing, combustion, vorticity.

Mattick, A. Thomas,\* 1975, M.S., 1971, Ph.D., 1975, Massachusetts Institute of Technology; energy conversion, gas lasers, gas physics.

Rae, William H. Jr.,\* 1956, M.S., 1959, Washington; experimental low-speed aerodynamics.

#### Assistant Professors

Eberhardt, Scott,\* 1986, M.S., 1981, Ph.D., 1984, Stanford; computational fluid dynamics, numerical analysis.

Livne, Eliezer,\* 1990, M.Sc., 1982, Ph.D., 1990, California (Los Angeles); structural dynamics, aeroelasticity, structural optimization, multidisciplinary optimization of aerospace systems.

Ly, Uy-Loi,\* 1988, M.S., 1976, California Institute of Technology; Ph.D., 1983, Stanford; multivariable control, flight control synthesis.

## Course Descriptions

### Courses for Undergraduates

**A A 300 301, 302 Aerodynamics I, II, III (4,4,4) A,W,Sp Breidenthal, Decher, Rae** Aerodynamics as applied to the problems of performance of flight vehicles in the atmosphere. Kinematics and dynamics of flow fields; incompressible flow about bodies. Thin airfoil theory; finite wing theory. Compressible fluids; one-dimensional compressible flow; two-dimensional supersonic flow. Viscous flows; boundary layers. Prerequisites: junior standing or permission of instructor for 300; MATH 307 and ENGR 260 for 301; 301 for 302. A A majors only.

**A A 310 Orbital and Space Flight Mechanics (3) A Clark, Fyfe, Vagners** Review of kinematics and particle dynamics. Dynamics of systems of particles. Gravitational field of the earth. Keplerian motion. Application to orbital transfer problems. Torque-free motion, spacecraft stability. A A majors only.

**A A 311 Atmospheric Flight Mechanics (3) W Clark, Fyfe, Vagners** Aircraft flight 'envelope', minimum and maximum speeds, climb and glide performance. Range and endurance, take-off and landing performance, using both jet and propeller power plants. Longitudinal static stability and control, wing downwash, stabilizer and elevator effectiveness, power effects. Lateral and directional static stability and control. A A majors only.

**A A 312 Structural Vibrations (3) Sp Bollard, Fyfe, Parmerter** Vibration theory. Characteristics of single and multidegree-of-freedom linear systems with forced inputs. Approximate methods for determining principal frequencies and mode shapes. Application to simple aeroelastic problems. Prerequisite: 311. A A majors only.

**A A 320, 321, 322 Junior Laboratory I, II, III (2,2,2) A,W,Sp Breidenthal, Bruckner, Christiansen, Clark, Fyfe** The design and conduct of experimental inquiry with consequent introduction to experimental equipment and techniques relative to the general field of mechanics with emphasis in the applied fields of aeronautics and astronautics. Student registers for the entire three-quarter sequence. A A majors only.

**A A 330, 331, 332 Structural Analysis I, II, III (4,4,4) A,W,Sp Bollard, Holsapple, Parmerter** Development of the equations of elasticity, viscoelasticity, and plasticity. Plane stress, plane strain; torsion, bending, and stability of rods and beams; virtual work, potential energy, Castigliano's theorem; statically indeterminate structures; bending of plates and shells. Prerequisite: 331 for 332. A A majors only.

**A A 370 Introduction to Applied Analysis (3)** Advanced calculus, from applications point of view. Review of ordinary differential equations. Fourier series and integrals. Laplace transformation. Bessel functions, Legendre polynomials. Review of vector analysis. Line, surface, and volume integrals. Prerequisite: MATH 307. A A majors only.

**A A 400 Gas Dynamics (3) A Christiansen, Eberhardt, Russell** Review of thermodynamics. Introduction to kinetic theory and free molecule flows. One-dimensional gas dynamics: one-dimensional wave motion, waves in supersonic flow, flow in ducts and wind tunnels. Prerequisite: ENGR 260 or permission of instructor.

**A A 401 Fluid Mechanics (3) Sp Christiansen, Eberhardt, Kurosaka, Russell** Inviscid equations of motion, incompressible potential flows, vortex flows, small perturbation flows, bodies of revolution, similarity laws. Method of characteristics. Equations with viscosity and heat conductivity. Boundary layer flows. Prerequisites: 302 and ENGR 260, or permission of instructor.

**A A 402 Viscous Flow (3) Sp Christiansen, Russell** Equations of motion including viscosity and heat conductivity. Exact solutions of Navier Stokes equations. Laminar boundary-layer equations, similar solutions, integral methods. Compressibility. Instability. Turbulent boundary layers. Prerequisites: 302 and ENGR 260 or permission of instructor.

**A A 410-411 Aircraft Design I-II (4-4) W** Preliminary design of a modern airplane to satisfy a given set of requirements. Estimation of size, selection of configuration, weight and balance, and performance. Satisfaction of stability, control, and handling qualities requirements. Prerequisite: 302; recommended: 440.

**A A 412 Aerospace Structural Design (3) Sp Bollard, Lin** The process of structural design; loads estimation, material selection, environmental effects; preliminary design, optimization of geometry and materials, final configuration, design for static strength, durability, damage-tolerance and manufacturing, structural allowables, margins of safety; secondary or local effects analysis, flexibility effects, final performance estimates. Prerequisite: 410 or 420.

**A A 419 Aerospace Heat Transfer (3)** Concentrates on conductive and radiative heat transfer, with application to thermal management in space systems. Prerequisite: senior standing in aeronautics and astronautics.

**A A 420- Spacecraft and Space Systems Design I (-4-) W Bruckner, Hertzberg** Expanding role of space has created a new technology with unique components and systems. The methodology will be developed for treating the special power, transportation, attitude control, etc., systems required for current and anticipated spacecraft. Applications extend from communications to solar power from space. Prerequisite: senior standing.

**A A 421 Spacecraft and Space System Design II (-4-) Sp Bruckner, Hertzberg** Design of spacecraft and/or space power systems for advanced near-Earth and interplanetary missions. Nuclear and solar power systems, thermal management, space structures, re-entry physics, advanced propulsion systems, orbital

mechanics, and other aspects of space engineering needed for general capability in space systems. Prerequisite: 420.

**A A 430 Finite Element Structural Analysis (3) A** Holsapple, Lin, Parmerter Introduction to the finite element method and application. One- and two-dimensional problems including trusses, beams, box beams, plane stress and plane strain analysis, and heat transfer. Use of finite element software. Prerequisite: 332 or equivalent.

**A A 431 Plates and Shells (3) W** Bollard, Lin, Parmerter Introduction to the theory of plates and shells. Membrane theory of shells of revolution, cylindrical and conical shells. Axisymmetric bending of shells of revolution. Stability of structures. Prerequisite: 332.

**A A 432 Composite Materials for Aerospace Structures (3) Sp** Bollard, Holsapple, Lin Introduction to analysis and design of aerospace structures utilizing filamentary composite materials. Basic elastic properties and constitutive relations of composite laminates. Failure criteria, buckling analysis, durability, and damage tolerance of composite structures. Aerospace structure design philosophy and practices. Prerequisite: 332 or permission of instructor.

**A A 440, 441 Flight Mechanics I, II (3,3) A,Sp** Rae Calculation of aerodynamic characteristics of aircraft and components including stability derivatives. Relation to wind tunnel and flight data. Vehicle equations of motion within the atmosphere, characteristics of propulsion systems and components including propellers. Prediction of performance, stability and control characteristics for a specific aircraft. Determination in flight of performance, stability, and control characteristics; and comparison with predicted and wind tunnel results. Prerequisites: 302 for 440; 440 for 441.

**A A 450, 451 Control in Aerospace Systems I, II (3,3) A,Sp** Clark, Vagners Review of linear, ordinary differential equations. Linearization of mathematical models for aircraft and spacecraft, state space models. Laplace transformation, stability criteria, frequency domain and time-domain techniques. Feedback control and compensation methods using root locus techniques coupled with computer aided analysis. Prerequisites: MATH 307 and ENGR 230; recommended: 311, 312.

**A A 460, 461 Propulsion I, II (3,3) A,W** Bruckner, Decher, Kurosaka Study of the aero- and thermodynamics of rocket engines. Rocket vehicle performance. Introduction to space propulsion. Air-breathing engines as propulsion systems. Turbojets, turbofans, turboprops, ramjets, hybrid engines. Aerodynamics of gas-turbine engine components. Prerequisites: 302, ENGR 260 for 460; 460 for 461.

**A A 462 Rocket Propulsion (3) Sp** Physical and performance characteristics of rocket propulsion devices. Mission requirements, chemical rockets, archjets, electrostatic and electromagnetic thruster. Prerequisite: AA program senior or permission of instructor.

**A A 470 Analytical Problems in Aeronautics (3) W** Numerical methods for algebraic and differential equations. Transforms. Introduction to perturbations, eigenvalues, nonlinearities. Probability and statistics. Variational idea. Prerequisites: MATH 307, ENGR 141.

**A A 480 Systems Dynamics (3) W** Bollard, Fyfe, Parmerter Equations of motion and solutions for selected problems; natural frequencies and mode shapes; response of simple systems to applied loads. Prerequisite: senior standing.

**A A 481 Elementary Aeroelasticity (3) Sp** Bollard, Fyfe Discussion of aeroelastic problems in aircraft design; elementary development of static and dynamic aeroelastic problems. Prerequisites: 330, 331, 332; 311, 312; recommended: 480.

**A A 488 Special Topics in Aeronautics and Astronautics (0-1, max. 2) AWSp** Lectures and discus-

sions on topics of current interest in aviation and space engineering. Two quarters required for credit.

**A A 499 Special Projects (2-5, max. 10) AWSp** Investigation on a special project by the student under the supervision of a faculty member. A maximum of 6 credits may be applied toward senior technical electives. Prerequisite: senior standing.

## Courses for Graduates Only

**A A 501 Physical Gasdynamics I (3) A** Christiansen, Mattick Equilibrium kinetic theory; chemical thermodynamics; thermodynamic properties derived from quantum statistical mechanics; reacting gas mixtures; applications to real gas flows and gas dynamics. (Offered odd-numbered years.)

**A A 502 Physical Gasdynamics II (3) W** Christiansen Introduction to vibrational relaxation and nonequilibrium chemistry. Nonequilibrium physics applied to flow. Brief introduction to nonequilibrium kinetic theory. Application to a variety of research and development areas such as high-temperature energy systems and gas lasers. Prerequisite: 501 or permission of instructor. (Offered even-numbered years.)

**A A 504 Fluid Mechanics (3) A** Review of thermodynamics; vectors and dyads. Derivation of the Navier-Stokes equations, stream functions and potential functions; integrals of the equations of motion. Boundary conditions and discontinuity surfaces in fluids. Exact solutions. Dimensional analysis. Highly viscous flows.

**A A 505 Fluid Mechanics of Inviscid Flow I (3) W** Christiansen, Decher, Kurosaka, Pearson, Russell Ideal incompressible flow; potential and stream functions. Airfoil theory and lifting line theory. Introduction to nonsteady flow; sound waves and surface waves; special topics. (Offered even-numbered years.)

**A A 506 Fluid Mechanics of Inviscid Flow II (3) Sp** Breidenthal, Decher, Kurosaka, Pearson, Russell Ideal compressible flow; supersonic airfoils; shock waves; slender-body theory; lifting surface theory; approximate methods. Transonic flow; similarity; special topics. Prerequisite: 505. (Offered even-numbered years.)

**A A 507 Aerodynamics of Viscous Fluids I (3) W** Kurosaka, Russell Introduction to viscous flow; exact solutions of the laminar equations of motion; approximate equations. Exact solutions for laminar boundary-layer equations. Approximate methods for compressible laminar boundary layers. (Offered odd-numbered years.)

**A A 508 Aerodynamics of Viscous Fluids II (3) Sp** Breidenthal, Kurosaka, Russell The phenomena of turbulence; transition prediction; Reynolds stresses; turbulent boundary-layer equations. Approximate methods for turbulent boundary layers. Prerequisite: 507 or permission of instructor. (Offered odd-numbered years.)

**A A 509 Computational Fluid Dynamics I (3) W** Eberhardt Numerical approximation of the inviscid compressible equations of fluid dynamics. Analysis of numerical accuracy, stability, and efficiency. Use of explicit, implicit, and flux split methods. Discussion of splitting, approximate factorization, discrete point, and finite volume approaches. Applications to the solution of simple hyperbolic systems of equations and the Euler equations.

**A A 510 Computational Fluid Dynamics II (3) Sp** Eberhardt Numerical approximation of equations of compressible viscous flow. Mesh requirements for resolving viscous effects in high Reynolds number flows. Analysis of numerical accuracy, stability, and efficiency. Use of explicit and implicit methods, boundary condition procedures. Applications to solution of the Navier-Stokes equations. Prerequisite: 509 or permission of instructor. (Offered odd-numbered years.)

**A A 513 Gas Laser Theory and Practice (3) Sp** Christiansen, Hertzberg, Mattick Physics and fluid mechanics of high-power lasers, emphasis on perfor-

mance of modern gas dynamic lasers, flowing chemical lasers, and gaseous electric lasers. Techniques of obtaining population inversions, power extraction, basic thermodynamics, and the interaction of optical radiation with matter. Applications of high-power lasers also are emphasized. (Offered even-numbered years.)

**A A 516 Stability and Control of Flight Vehicles I (3) A** Static and dynamic stability and control of flight vehicles in the atmosphere. Aerodynamics for stability derivatives. Response to control inputs and external disturbances. Effect of stability derivatives on flight characteristics. Handling qualities. Introduction to automatic control.

**A A 517 Stability and Control of Flight Vehicles II (3) W** Ly, Vagners Specification of flight vehicle performance objectives. Control system components, sensor characteristics, choice of system models. Compensator design, frequency domain design of stability augmentation systems, single/multiple loop autopilot design and evaluation. Use of computer-aided control design packages. Prerequisite: 516.

**A A 518 Stability and Control of Flight Vehicles III (3) Sp** Ly, Vagners Introduction to Linear-Quadratic-Gaussian (LQG) optimal control theory. Synthesis of stability augmentation systems and autopilot control laws using LQG methodology. Relationship of LQG results to frequency domain criteria. Reduced-order controller synthesis, digital design and implementation. Use of computer-aided control design packages. Prerequisite: 517.

**A A 520-521-522 Seminar (0-0-1) A,W,Sp** Topics of current interest in aerospace engineering.

**A A 523 Special Topics in Fluid Physics (3) AWSp**

**A A 524 Aerothermodynamics of Aircraft Gas Turbine Engines I (3) W** Decher, Kurosaka Aircraft gas turbine engine cycle analysis. Component performance measures. Preliminary design of engines, including component losses. Off-design performance. Variable geometry engines. (Offered even-numbered years.)

**A A 525 Aerothermodynamics of Aircraft Gas Turbine Engines II (3) Sp** Decher, Kurosaka Estimation of component performances. Inlets, description of flow distortion. Aerodynamics of turbines and compressors. Radial equilibrium theory, through-flow theory, the cascade transformation. Behavior of mixers. Prerequisite: 524. (Offered even-numbered years.)

**A A 526 Aerothermodynamics of Aircraft Gas Turbine Engines III (3) A** Decher, Kurosaka Aircraft engine noise. Description and measurement of noise, correlation functions, power spectra. Elementary duct acoustics, rotor-stator interaction, effect of design blade loading. Turbine noise, core noise, acoustic linings. Jet noise, Lighthill theory, scaling laws. (Offered odd-numbered years.)

**A A 527 Energy Conversion I (3) A** Decher Energy sources: resource magnitude estimates. Heat generation by advanced reactors, combustion, solar collection. Analysis of power systems for space and advanced commercial power generation. High-temperature cycles. (Offered even-numbered years.)

**A A 528 Energy Conversion II (3) W** Decher Heat exchangers, energy storage, heat rejection. Direct conversion of heat to electricity. Electrochemical processes. Recommended: 527. (Offered odd-numbered years.)

**A A 529 Space Propulsion (3) Sp** Decher Nuclear, and heat transfer of nuclear-heated rockets. Electrothermal, electromagnetic, and electrostatic thrusters. Prerequisite: permission. (Offered odd-numbered years.)

**A A 530 Mechanics of Solids (3) A** Bollard, Fyfe General concepts and theory of solid mechanics. Behavior of elastic, viscoelastic, and plastic solids. Linear theory of elasticity and thermoelasticity. Wave propagation in solids.

**A A 531 Structural Reliability and Damage (3) W** *Fyfe, Parmerter* Theory of plasticity, yield surfaces, flow rules, limit theorems. Concepts of failure and fatigue in aerospace structures, residual strength, cumulative damage, probability aspects and case histories. Prerequisite: 530 or equivalent or permission of instructor. (Offered odd-numbered years.)

**A A 532 Mechanics of Composite Materials (3) Sp** *Holsapple, Lin* Analyses and design of composite materials for aerospace structures. Anisotropic elasticity. Laminated plate theory. Viscoelastic behavior and wave propagation in composites. Prerequisite: 530 or permission of instructor. (Offered odd-numbered years.)

**A A 535 Analysis of Shells (3) Sp** *Parmerter* Nonlinear equations of shallow shells. Solution of the linearized equations for shells of revolution and other shapes. Composite shells; buckling. Postbuckling deformation of shells. (Offered even-numbered years.)

**A A 540 Finite Element Analysis I (3) W** *Fyfe, Holsapple, Lin* Formulation of the finite element method using variational and weighted residual methods. Element types and interpolation functions. Application to elasticity problems, thermal conduction, and potential flow.

**A A 541 Finite Element Analysis II (3) Sp** *Fyfe, Holsapple, Lin* Advanced concepts of the finite element method. Hybrid and boundary element methods. Nonlinear, eigenvalue, and time-dependent problems. Prerequisite: 540 or permission of instructor.

**A A 548 Linear Multivariable Control (3)** Single loop feedback control theory; poles, zeros, Nyquist stability, performance, robustness of multivariable systems; multivariable control synthesis: Linear-Quadratic-Gaussian methods, loop transfer recovery, Youla parametrization, H-infinity techniques, parameter optimization design. Joint with E E 548. Prerequisite: E E 584 or ME 575; E E 446 or AA 451 or ME 471 or equivalent.

**A A 549 Estimation and System Identification (3)** Review of system models, model structure, model parametrization; review of stochastic processes; state estimation; observers, the Kalman-Bucy filter, numerical issues in filter design and implementation; system identification: linear regression, least squares, maximum likelihood, instrumental variable techniques. Joint with E E 549. Prerequisites: E E 505 or AMATH 506 or STAT 506; recommended: 548 or E E 548.

**A A 550 Nonlinear Optimal Control (3)** Calculus of variations for dynamical systems, definition of the dynamic optimization problem, constraints and Lagrange multipliers, the Pontryagin Maximum Principle, necessary conditions for optimality, the Hamilton-Jacobi-Bellman equation, singular arc problems, computational techniques for solution of the necessary conditions. Joint with E E 550. Prerequisite: graduate standing; recommended: AA 548 or E E 548.

**A A 553 Vibrations of Aerospace Systems (3) Sp** *Bollard, Fyfe* Natural frequencies and modal analysis; forced vibrations and motion-dependent forces. Structural damping; composites and periodic structures. Measurements for structural dynamic testing. Prerequisite: 571 or equivalent. (Offered odd-numbered years.)

**A A 567 Analysis in Engineering and Science I (3)** A Complex variable and associated topics. Branch cuts, series and product expansions. Contour integration, numerical implications. Harmonic functions. Complex potential (and singularities) in physical problems. Conformal mapping; applications and examples. Fourier and Laplace transforms and applications. Joint with AMATH 567. Recommended: 401 or equivalent.

**A A 568 Analysis in Engineering and Science II (3) W** Survey of practical solution techniques for ordinary differential equations. Linear systems of equations including nondiagonalizable case. Linear difference equations. Nonlinear systems; stability phase plane analysis. Poincaré maps. Asymptotic expansions. Regular

and singular perturbations. Some computer work may be assigned. Joint with AMATH 568. Prerequisite: 402 or equivalent.

**A A 569 Partial Differential Equations (3) Sp** Analytical solution techniques for linear partial differential equations, discussion of how these arise in engineering and science. Transform and Green's function methods. Classification of second-order equations, theory and applications of method of characteristics. Joint with MATH 569 and AMATH 569. Prerequisite: 403, 568 or MATH 428 or permission of instructor.

**A A 571 Principles of Dynamics I (3) A** *Fyfe, Ly, Vagners* Review of rigid-body dynamics; calculus of variations. Lagrangian mechanics. The canonical equations of Hamilton; canonical transformations. Hamilton-Jacobi theorem; Hamiltonian perturbation theory. Periodic and quasiperiodic motion. Stability of dynamical systems; resonance in dynamical systems.

**A A 575 Continuum Mechanics I (3) W** *Holsapple, Parmerter* General foundation of the fundamental concepts of motion, stress, energy, and electromagnetism for a continuum. General equations of conservation of mass, momentum, and energy. Linear and nonlinear elastic, viscous, and inelastic materials. Joint with CESM 521. (Offered even-numbered years.)

**A A 583 Special Topics in Solid Mechanics (3) AWSp**

**A A 584 Applied Linear Algebra and Introductory Numerical Methods (3) A** *Pearson, Vagners* Applied linear algebra: matrix operations, linear systems, matrix factorization, eigenvalues, numerical methods, applications to optimization, circuits, differential equations. Surveys of numerical methods: nonlinear systems, curve fitting, ordinary differential equations, quadrature, basic ideas in partial differential equations. Joint with AMATH 584.

**A A 585, 586 Approximate Numerical Analysis II, III (3,3) W,Sp** Advanced topics in numerical analysis. More detailed consideration of topics in 584. Emphasis on methods for partial differential equations, integral equations, finite elements, stability and accuracy, mesh generation, adaptive meshes, sparse matrices, variational methods. Postmaster's sequence. Joint with AMATH 585, 586. Prerequisites: 567, 584, and 568, 569, or equivalent. (Offered even-numbered years.)

**A A 590 Special Topics in Applied Analysis (3) AWSp**

**A A 599 Special Projects (1-5, max. 15) AWSp** Investigation on a special project by the student under the supervision of a faculty member.

**A A 600 Independent Study or Research (\*) AWSp**

**A A 700 Master's Thesis (\*) AWSp**

**A A 800 Doctoral Dissertation (\*)**

## Bioengineering

309 Harris Hydraulics Laboratory

The Center for Bioengineering provides a multidisciplinary program of collaborative research and training designed to accelerate the application of new engineering technologies to clinical practice and research. Major areas of current bioengineering research include bioinstrumentation, biomaterials, biomechanics, controlled drug-release systems, imaging, micro-sensors, bioelectromagnetics, molecular bioengineering, microcirculation, cell mechanics, muscle, and simulation of biosystems. There are options for study leading to master's and doctoral degrees with different levels of specialization. Detailed information on Bioengineering, its faculty and courses appears in the Interschool or Intercollege Programs section of this catalog.

## Chemical Engineering

105 Benson

Chemical engineering is concerned with processes for transforming raw materials into energy and into a great variety of consumer products, such as gasoline, pulp and paper, fertilizers, rubber, polymers and composites, pharmaceuticals, and electronic materials. Chemical engineers work on research and development of these materials and on the processes for making them, as well as on the design and operation of chemical plants and equipment by which production is achieved. This must be done with efficiency, economy, and concern for society and the environment. Some chemical engineers are employed by government agencies. Few other professions can match the diversity of job opportunities available to graduates in chemical engineering.

Chemical engineers employ the skills of mathematics, physics, chemistry, and, increasingly, biology. The chemical engineer develops competence in the use of fundamental tools for engineering analysis and design: thermodynamics, chemical kinetics and reactor design, fluid mechanics, heat and mass transfer, process control, and economics. At the University, the student studies intensively in these fields to acquire knowledge and skills applicable in a variety of specialized fields and industries. Flexibility, in fact, is the hallmark of the chemical engineer. Graduates of the department are given thorough grounding in the three main pillars of a liberal education—science, technology, and the humanities and social sciences.

## Undergraduate Program

### Bachelor of Science in Chemical Engineering Degree

The Bachelor of Science in Chemical Engineering degree offered by the department is an accredited, professional program. Its completion should enable the graduate either to find employment in industry or to continue on to graduate school.

Information on degree requirements is available in detail from the department. In brief, the required 192 credits are to be distributed in accordance with the following minimum number of credits in each component: mathematics, 24; physics, 12; chemistry, 38; communication skills, 12; engineering fundamentals, 12; humanities and social sciences, 30; chemical engineering, 44; engineering science, 8; and electives, 12. An optional 9-credit specialty area allows each student to develop special competence in a selected subject by taking a minimum of three courses in that area. Engineering science and free electives may be used for this purpose. The areas are biotechnology; polymers, composites, colloids, and interfaces; computers applied to chemical engineering; and environmental engineering. A minimum GPA of 2.00 in chemical engineering courses, based on the first time each course is taken, is required for graduation.

Students can participate in the Cooperative Education Program of the college. However, most department courses are taught only once each year, necessitating careful schedule planning by those who wish to participate in the program. The student should consult an adviser.

### Advising in the Department

All students, including freshmen and sophomores, who are considering chemical engineering as a major may, and are encouraged to, be advised in the department.

### Admission Requirements

Admission to the department is limited, and application requirements are subject to change. Students should consult an adviser about current requirements. Applications from women and minorities are encouraged. The applicant must have completed at least 12 credits

at this university and the following courses: MATH 124, 125, 126, 307 (18 credits); CHEM 140, 141, 150, 160, 223 (or 237), 241 (21); PHYS 121, 122 (8), ENGR 142, 260 (8); one 5-credit English course selected from the University-approved list for English proficiency. In addition, it is strongly recommended that students complete PHYS 123 and CHEM 224 (or 238). Students with a GPA lower than 2.50 for these specified courses or an overall GPA lower than 2.50 for all courses applicable to the B.S.Ch.E. degree seldom succeed in the department. Historically, a minimum GPA of 2.80 in these categories is required for admission to and success in the department. Admission is on a space-available or competitive basis.

Factors included in the admissions decision include the course record as indicated above and qualitative considerations such as difficulty of completed courses, frequency of incomplete or withdrawal grades, number of repeated courses, applicable work experience and maturity of attitude, record of honors, and a demonstrated ability to take at least 12 credits per quarter.

#### **Application Procedure and Timing**

Application is made by filling out an application form available in the department office. Students may apply for admission as soon as they meet the admission requirements, and are invited to consult with the departmental adviser. Students must apply by July 1 for autumn quarter admission.

#### **Admission for the Disadvantaged**

While the sole purpose of the admission requirement is to limit enrollment to a number that can be taught well with the resources available, the department recognizes that this may eliminate some disadvantaged students whose potential is high but who, through extenuating circumstances of their background, have had limited access to early education that provides adequate experience in abstract reasoning. For purposes of special consideration for admission, a disadvantaged student is here defined as one who (1) is economically disadvantaged as shown by eligibility for a Basic Need Grant on the National Financial Aid Program, or (2) is educationally disadvantaged, having attended a school without a full and available complement of college preparatory courses, or (3) has ethnic minority status with a group showing historic underrepresentation in the field of engineering. These students are encouraged to apply for admission and to attach to their application a letter to the admissions committee that provides information on the applicant that is relevant to the admission decision.

#### **Entrance to Chemical Engineering Courses**

Entrance into most chemical engineering courses is ordinarily limited to majors in chemical engineering, pulp and paper technology, and the B.S.E. program. Other students who wish to take departmental courses must meet the admission requirements of the department, have the course prerequisites, and fill out a chemical engineering course request form.

#### **Continuation Policy**

The department policy on continuation is consistent with the continuation policy of the college. Details may be obtained from the department.

## **Graduate Program**

The department offers studies leading to the degrees of Doctor of Philosophy, Master of Science in Chemical Engineering, and Master of Science in Engineering. The doctoral degree is centered on the dissertation with a foundation in course work; it is generally completed in four to five years beyond the baccalaureate degree.

In the master's program primary emphasis is placed on course work, and the degree generally requires between fifteen and eighteen months of study. Thesis and

nonthesis options are available, with the former requiring both course work and research.

The program of study normally includes basic subjects of importance to all chemical engineers, such as thermodynamics, transport phenomena, kinetics, and applied mathematics. In addition, students are invited to take more specialized courses in chemical engineering or in other departments. Students usually take four courses during their first quarter. Subsequently, less time is spent on course work and more on research.

The department has about seventy full-time graduate students, roughly one-fourth of whom are working toward the M.S. degree and three-fourths toward the doctorate. They study and collaborate with members of the faculty in an atmosphere that is informal, friendly, and intellectually vigorous. The range of interests among the faculty members is quite broad, so students in courses and in research work have access to a variety of fields while receiving individual attention and guidance.

#### **Research Facilities**

The department is fortunate in having outstanding facilities. The chemical engineering building, Benson Hall, is supplied with much new research equipment. The building contains classrooms, offices, stockrooms, a well-staffed machine shop, laboratories, and a variety of specialized research equipment, including VAXstations (model 3200), as well as seven Apollo work stations and many microcomputers. Each graduate student is provided desk space in a small laboratory or office as well as access to larger laboratories in the building. Students also may use the services of the Academic Computer Center, the glassblowing shop, and the Chemistry-Chemical Engineering Library.

#### **Admission Requirements**

A student is accepted for admission to the Graduate School as a chemical engineering major by joint action of the Graduate School and the department after consideration of a formal application. Most students applying for admission as graduate students have a Bachelor of Science degree in chemical engineering. If a student has an undergraduate degree in chemistry, physics, mathematics, or another branch of engineering, he or she may obtain a graduate degree in chemical engineering by meeting certain additional requirements.

The Graduate Record Examination (GRE), not including the advanced test, is generally required of all applicants. In addition, applicants who do not have a baccalaureate degree in chemical engineering from an accredited university in the United States must take the advanced test in chemistry or engineering.

#### **Financial Aid**

The department has various sources of support for qualified graduate students. Prospective students interested in applying for admission and support should request application forms from the department. The completed forms and reference letters should be received in the department office by January 31, if possible, and by March 15 at the latest. Offers of admission with financial support are usually made in February and March.

Graduate Program Coordinator  
Department of Chemical Engineering, BF-10

## **Faculty**

#### **Chairperson**

Bruce A. Finlayson

#### **Professors**

Allan, G. Graham,\* 1966, (Forest Resources),† Ph.D., 1956, Glasgow; D.Sc., 1970, Strathclyde; fiber and polymer science, creativity and innovation.

Babb, Albert L.,\* 1952, (Emeritus), (Nuclear Engineering),† M.S., 1949, Ph.D., 1951, Illinois; nuclear engineering, solvent extraction molecular diffusion, biomedical engineering.

Berg, John C.,\* 1964, Ph.D., 1964, California (Berkeley); interfacial phenomena, surface and colloid science.

Bowen, J. Ray,\* 1981, M.S., 1957, Massachusetts Institute of Technology; Ph.D., 1963, California (Berkeley); combustion.

David, Morton M., 1953, (Emeritus), D.Eng., 1950, Yale; chemical engineering.

Davis, E. James,\* 1983, Ph.D., 1960, Washington; transport in porous media, microparticle physics and chemistry, surface and colloid science.

Finlayson, Bruce A.,\* 1967, M.S., 1963, Rice; Ph.D., 1965, Minnesota; modeling of chemical reactors, polymer flow, flow through porous media.

Garlid, Kermit L.,\* 1960, (Nuclear Engineering),† Ph.D., 1961, Minnesota; nuclear fuel cycles, radioactive waste management, process dynamics.

Heideger, William J.,\* 1957, (Bioengineering), M.S.E., 1956, Ph.D., 1959, Princeton; interfacial mass transfer, biomedical transport phenomena.

Hoffman, Allan S.,\* 1970, (Bioengineering),† M.S., 1955, Sc.D., 1957, Massachusetts Institute of Technology; application of polymers in medicine and biotechnology.

Horbett, Thomas A.,\* 1973, (Bioengineering),† Ph.D., 1970, Washington; interfacial proteins, cell interactions, insulin delivery systems.

Johanson, Lennart N.,\* 1951, (Emeritus), M.S., 1943, Ph.D., 1948, Wisconsin; chemical engineering.

McCarthy, Joseph L.,\* 1941, (Emeritus), (Forest Resources),† M.S., 1936, Idaho; Ph.D., 1938, McGill; thermodynamics, lignin and cellulose chemistry, pulp and paper science, biochemical engineering.

McKean, William T.,\* 1979, (Forest Resources),† Ph.D., 1968, Washington; pulp and paper science, mass transfer in wood and fibers, unit operations in papermaking.

Moulton, R. Wells, 1941, (Emeritus), M.S., 1934, Ph.D., 1938, Washington; chemical engineering.

Pilat, Michael J.,\* 1967, ‡(Civil Engineering), M.S.Ch.E., 1963, Ph.D., 1967, Washington; air resources engineering (design of air-pollution-control equipment).

Ratner, Buddy D.,\* 1972, (Bioengineering),† Ph.D., 1972; Polytechnic Institute of Brooklyn; polymer surfaces, interaction of polymeric materials with biological systems.

Ricker, N. Lawrence,\* 1978, M.S., 1972, Ph.D., 1978, California (Berkeley); chemical process design, simulation, and control.

Seferis, James C.,\* 1977, Ph.D., 1977, Delaware; polymeric composites, polymer science and engineering.

Sleicher, Charles A.,\* 1960, (Emeritus), S.M., 1949, Massachusetts Institute of Technology; Ph.D., 1955, Michigan; fluid mechanics, heat transfer.

Woodruff, Gene L.,\* 1965, (Environmental Studies), (Nuclear Engineering),† M.S., 1963, Ph.D., 1966, Massachusetts Institute of Technology; neutronics experiments, fusion reactor technology.

#### **Associate Professors**

Gustafson, Richard R.,\* 1986, ‡(Forest Resources), Ph.D., 1982, Washington; pulping and bleaching, process simulation and control.

Hodgson, Kevin T.,\* 1991, ‡(Forest Resources), M.S., 1980, Carnegie-Mellon; Ph.D., 1986, Washington; surface and colloid science aspects of papermaking.

Holt, Bradley R.,\* 1984, Ph.D., 1984, Wisconsin; process control, process design.

Krieger-Brockett, Barbara B., \* 1975, M.S., 1972, Ph.D., 1975, Wayne State; reaction engineering, chemical kinetics and catalysis simulation.

Rogers, J. W. Jr., \* 1990, Ph.D., 1979, Texas (Austin); thin film surface science.

Stuve, Eric M., \* 1985, M.S., 1979, Ph.D., 1984, Stanford; catalytic and electrochemical surface science.

#### Assistant Professors

Baneyx, François, 1992, Ph.D., 1991, Texas (Austin); biotechnology, protein technology, biochemical engineering.

Castner, David G., \* 1986, (Research), Ph.D., 1979, California (Berkeley); surface analysis.

Schwartz, Daniel T., \* 1991, M.S., 1985, Ph.D., 1989, California (Davis); electrochemical engineering.

Wedgewood, Lewis E., \* 1990, Ph.D., 1988, Wisconsin; kinetic theory of polymers.

## Course Descriptions

### Courses for Undergraduates

**CH E 309 Creativity and Innovation (2)** *Allan* Understanding creativity and creative thinking; its challenges and dynamics through knowledge, judgment, planning, and observation. Techniques of creative thinking. Design and development of creative games. Computer-aided creative thinking. Creation, protection, and exploitation of a useful idea, including bargaining and negotiations. Joint with FPE 309. Prerequisite: junior standing or permission of instructor.

**CH E 310 Material and Energy Balances (4)** *A* Chemical and physical process calculations: steady- and unsteady-state material and energy balances with specific examples in vapor-liquid contact operations and multiphase extraction, and introductory thermodynamics. Prerequisite: ENGR 260.

**CH E 326 Chemical Engineering Thermodynamics (4)** *W* Phase equilibria and chemical equilibria in multicomponent systems; theories of solution; chemical reaction analysis. Prerequisites: 310; CHEM 456 or ENGR 260.

**CH E 330 Transport Processes I (4)** *W* Diffusive transport of momentum, heat and mass; general aspects of fluid flow; the Navier-Stokes equations; one-dimensional flow with engineering applications. Prerequisites: 310 and MATH 307.

**CH E 340 Transport Processes II (4)** *Sp* Heat transfer, basic principles, and applications. Conduction, convection, and radiation. Prerequisite: 330.

**CH E 400 Methods of Engineering Analysis (3)** *A* Applications of mathematics to problems in chemical engineering; vector calculus; properties and methods of solution of first and second order partial differential equations; similarity transforms, separation of variables, Laplace and Fourier transforms. Joint with AMATH 400. Prerequisites: MATH 205, MATH 307, MATH 328, or permission of instructor.

**CH E 435 Transport Processes III (4)** *Sp* Mass transfer, basic principles, and applications to equipment design. Physical separation processes. Prerequisites: 326, 340.

**CH E 436 Chemical Engineering Laboratory I (3)** *A* Lectures on experimental design, instrumentation, laboratory safety, and report writing; laboratory experiments on fluid mechanics and heat transfer. Emphasis on experimental planning, procedures, and report writing. Prerequisites: 326, 340.

**CH E 437 Chemical Engineering Laboratory II (3)** *W* Continuation of 436. Laboratory investigation of chemical engineering principles applied to equipment design with emphasis on mass transfer operations and chemical reactors. Prerequisites: 435, 436, 465.

**CH E 450 Solid State Materials and Chemical Processes (3)** *Seferis* Fundamentals of solid state including process analysis, mechanical properties; heterogeneity; anisotropy; liquid/solid transformations; rate processes; thermal analysis; viscoelasticity; microscopy; molecular characterization techniques. Application of fundamentals in examining polymers, metals and ceramics as used in the electronics and aviation industries. Prerequisites: 330, 340, and 465, or permission of instructor.

**CH E 455 Surface and Colloid Science Laboratory (3)** *Sp Berg* Laboratory techniques, equipment, and underlying fundamentals in surface and colloid science. Experiments in the measurement of surface tension, adsorption, wetting and spreading, colloid properties, emulsion preparation and stability, electrophoresis, and interfacial hydrodynamics. Prerequisites: 326, 330, CHEM 461.

**CH E 456 Physical Chemistry (3)** Chemical thermodynamics. Laws of thermodynamics presented with applications to phase equilibria, chemical equilibria, and solutions. Honors section available Autumn Quarter. Joint with CHEM 456. May be taken without CHEM 455. Prerequisites: CHEM 150 or 155, MATH 126, and college physics. Recommended: MATH 308.

**CH E 458 Surface Analysis (3)** Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials science, wear, and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger); ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Joint with BIOEN 492.

**CH E 462 Application of Chemical Engineering Principles to Environmental Problems (3)** Environmental problems in chemical engineering. Team taught; topics vary from year to year. Includes: geomechanics, flow and dispersion through porous media, water flow in dry soils, chemistry of radioactive waste, in situ site cleanup, ex situ site cleanup, colloid and surface science. Prerequisite: 330.

**CH E 465 Reactor Design (3)** *A* Application of principles of chemical kinetics to the design of commercial-scale chemical reactors; characterization of batch and flow reactors in homogeneous and heterogeneous systems. Prerequisites: 326, 340.

**CH E 467 Biochemical Engineering (3)** Application of basic chemical engineering principles to biochemical and biological process industries such as fermentation, enzyme technology, and biological waste treatment. Rapid overview of relevant microbiology, biochemistry, and molecular genetics. Design and analysis of biological reactors and product recovery operations. Joint with BIOEN 467. Prerequisites: 340, organic chemistry; recommended: 465.

**CH E 468 Air-Pollution Control Equipment Design (3)** Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption of gaseous pollutants; electrostatic precipitation and filtration of particulate pollutants. Actual case studies. Joint with CIVE 494 and ME 468. Prerequisite: senior standing or permission of instructor.

**CH E 470 Chemistry of Wood (3)** *A* Chemical and physical properties of cellulose, lignin, hemicellulose, and extractives; wood as a raw material for the chemical industry. Prerequisite: CHEM 102 or 238 or permission of instructor.

**CH E 471 Pulping and Bleaching Processes (3)** *W* Conversion of wood to mechanical and chemical pulps. Kraft, sulfite, and semichemical pulping processes. Chemical recovery systems. Bleaching of mechanical and chemical pulps. Joint with FPE 476.

**CH E 472 Papermaking Processes (3)** *Sp* Fiber sources and properties. Secondary fibers. Stock preparation, sheet forming, water removal, finishing.

Coating, lamination, and printing. Paper products. Joint with FPE 477.

**CH E 473 Pulp and Paper Laboratory (2)** Laboratory experiments in chemical and semichemical pulping of wood. Bleaching of chemical and high-yield pulps. Physical and chemical characteristics of pulp fibers. Joint with FPE 478. Prerequisite: FPE 476.

**CH E 475 Computer Analysis in Chemical Engineering (3)** Model building/simulation of chemical engineering processes: reactor design, fiber spinning, electrochemistry, biotech processes. Numerical methods include integrating ordinary differential equations as initial and boundary-value problems; finite difference, collocation, Galerkin methods. For each model the appropriate tool is developed.

**CH E 480 Process Dynamics and Control (4)** *W* Analysis of the dynamics of simple chemical process units and systems; applications to stability, control, and instrumentation of such processes. Weekly two-hour laboratory included. Prerequisites: 435, 465.

**CH E 481 Process Optimization (3)** *Sp* Concepts and techniques of optimizing chemical engineering processes and systems, including classical and direct methods of search, linear and nonlinear programming, dynamic programming, statistical experimental design, and evolutionary operation. Prerequisite: 485.

**CH E 482 Advanced Topics in Process Control (3)** *Sp Holt, Ricker* Current topics in process control design and analysis. Possible topics include robustness analysis and design, time delay compensation, modern frequency response techniques, discrete control, adaptive control, model-based control, and nonlinear control. Prerequisite: 480.

**CH E 485 Process Design I (3)** *W* Applied economics in chemical engineering design and operations; market survey and plant location; introduction to plant and process design. Prerequisite: 480.

**CH E 486 Process Design II (6)** *Sp* Comprehensive design of a specific process, including economic feasibility studies, utilization of market survey and plant location studies, process equipment design and optimization, and overall plant integration and layout. Prerequisite: 485.

**CH E 490 Engineering Materials for Biomedical Applications (3)** *W Hoffman* Combined application of the principles of physical chemistry, biochemistry, materials engineering, mass transfer, and fluid mechanics to biomedical problems. Case studies include considerations of the selection of materials, the design and the operation of instruments, components of, or entire, artificial organs (heart, kidney, lung) and artificial structural elements (bone, teeth, skin), all for use in contact with body fluids. Joint with BIOEN 490. Prerequisite: organic chemistry or permission of instructor. (Offered even-numbered years.)

**CH E 491 Controlled Release Systems—Principles and Applications (3)** *W Hoffman* Mechanisms or controlled release of active agents and the development of useful systems for this purpose. Release mechanisms include diffusive, convective, or erosive driving forces. Applications to the biomedical, agricultural, forestry, and oceanography fields. Some special case studies covered in detail. Joint with BIOEN 491. Prerequisite: permission of instructor. (Offered odd-numbered years.)

**CH E 495 Physicochemical Transport Phenomena (3)** Low Reynolds number hydrodynamics for flow around solid and fluid spheres and near surfaces. Convective diffusion in liquids within capillary tubes and outside the flat plate, the rotating disk, the sphere. Flow and convective diffusion in porous media. Electrokinetic phenomena, including electrophoresis, electroosmosis, streaming potential. Applications to electrochemistry. Prerequisite: 330.

**CH E 498 Special Topics in Chemical Engineering (1-4, max. 6)** Topics of current interest in the field.

Subject matter changes from year to year. Prerequisite: permission of instructor.

**CH E 499- Undergraduate Research (1-6, max. 12) AWSp** Independent research projects in chemical engineering. Prerequisites: GPA of 3.0 in Chemical Engineering courses and permission of instructor.

## Courses for Graduates Only

**CH E 510 Mathematical Foundations of System Theory (4)** Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert space. Applications to engineering systems stressed. Joint with A A, E E, and ME 510. Prerequisite: graduate standing or permission of instructor.

**CH E 523 Seminar in Chemical Engineering (0-1) AWSp** Topics of current interest in chemical engineering. Credit/no credit only.

**CH E 525 Chemical Engineering Thermodynamics (4) A** Review of principles of thermodynamics. Applications to problems in multiphase and multicomponent systems; theories of solutions. Prerequisite: undergraduate thermodynamics.

**CH E 526 Topics in Thermodynamics (3)** Classical and molecular thermodynamics of phase equilibria, solution theory, thermodynamic stability, and critical phenomena. Prerequisite: 525 or permission of instructor.

**CH E 530 Momentum, Heat, and Mass Transfer I (4) A** Derivation of the differential equations for mass, energy, and momentum transport. Principles of fluid mechanics; creeping flow, turbulence, boundary-layer theory.

**CH E 531 Momentum, Heat, and Mass Transfer II (4)** Continuation of 530. Flows of fluid-particle systems; convective heat transfer, natural convection. Prerequisite: 530.

**CH E 532 Separation Processes (3)** Design of industrial processes for separation and purification of materials. Covers classification and selection of separation techniques, efficiency of separators, energy conservation concepts, and methods for design calculations.

**CH E 533 Mass Transfer (3)** Molecular mass transport; single-phase mixing; age distributions and residence time analysis; transfer across interfaces; coupled heat and mass transfer; effects of chemical reaction; design considerations.

**CH E 543, 544 Fluid Turbulence (3,3) W,Sp** Methods of characterizing fluid turbulence; spatial, temporal velocity correlations; energy spectra; probability concepts; isotropic, nonisotropic turbulence; hot-wire measurement techniques; phenomenological turbulence models; higher-order closure models; local equilibrium concepts; recent advances in modeling techniques. Joint with ME 543, 544. Prerequisite: 6 credits of graduate fluid mechanics or permission of instructor. (Offered even-numbered years.)

**CH E 555 Interfacial Phenomena (4) Sp Berg** Surface tension, capillary statics, wetting and spreading phenomena; thermodynamics of capillary systems, adsorption, surfactant monolayers and micellar solutions; capillary hydrodynamics, interfacial turbulence and applications in distillation, absorption, and extraction. Prerequisites: 525, 530, or permission of instructor. (Offered even-numbered years.)

**CH E 556 Principles and Applications of Colloidal Materials (3 or 4) Sp Berg, Hoffman** Preparation, stabilization, properties, and destruction of important colloidal materials. The theory and structure of the electrical double layer, electrokinetics. Includes selected case studies pertinent to air and water pollution, biological fluids, industrial processes. (Offered odd-numbered years.)

**CH E 558 Surface Analysis (3) W Ratner** Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials science, wear, and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger); ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Joint with BIOEN 592.

**CH E 560 Reactions at Solid Surfaces (3) Stuve** Fundamental studies of adsorption systems and reactions that occur at surfaces with application toward heterogeneous catalysis, electrochemistry, etching, and corrosion. Analysis of reaction poisons and promoters, acid-base theory of metal surfaces, jellium theory of metals, and water and ion adsorption, plus other topics of current interest. Recommended: 558 or CHEM 560.

**CH E 562 Hazardous Air Pollution (3)** Control of emission of hazardous or toxic air pollutants. Government regulations, determination of needed control efficiency. Emission control by thermal incineration, catalytic incineration, flares, condensation, carbon adsorption, and adsorption (wet and dry). Hazardous waste incinerators. Case studies. Joint with CEWA 562.

**CH E 564 Applications of Chemical Kinetics (3)** Fast reactions and highly energetic reactions with applications to combustion, explosions, and lasers. Coupling of transport processes and reaction rates, photochemical kinetics, intermolecular energy transfer, free radical, and chain reaction kinetics. Rate plasmas, flames, and biological systems.

**CH E 565 Kinetics and Catalysis (3) Finlayson, Krieger, Stuve** Homogeneous and heterogeneous systems with emphasis on chemical engineering principles applied to industrial reactor design. Prerequisite: 525.

**CH E 566 Control of Gaseous Air Pollutants (3) Sp Pilat** Physical and chemical processes used to control gaseous air pollutants. Absorption into liquids. Aqueous spray dryer scrubbers. Adsorption beds. Control of sulfur oxide and nitrogen oxide. Case studies of control systems. Joint with CEWA 566. Prerequisite: 435 or 468 or permission of instructor. (Offered even-numbered years.)

**CH E 567 Control of Particulate Air Pollutants (3) Sp Pilat** Processes used to control emissions of particulate air pollutants. Use of settling chambers, cyclones, fabric filters, wet scrubbers, and electrostatic precipitators to control aerosol particles. Case studies of particulate air-pollutant control systems. Joint with CEWA 567. Prerequisite: 468 or permission of instructor. (Offered odd-numbered years.)

**CH E 570 Chemistry of High Polymers (3, max. 6) Allan** Fundamentals of high polymer chemistry, including kinetics of addition and condensation polymerization, the determination of average molecular weights and chain length distributions, solution properties and the relationship between molecular structure and plastic film and fiber properties of various polymers. Prerequisite: an undergraduate sequence in organic chemistry.

**CH E 571 Polymer Physics and Engineering (3) Sp Seferis** Description and analysis of methods for processing polymeric materials. Introduction to solid polymer physics with emphasis on the coupling of structure morphology and properties. Development of structure-property models for quantitative description and control of properties in synthetic and natural polymers and composite materials.

**CH E 572 Advanced Polymeric Composites (3) Seferis** Design, manufacture, and properties of organic and inorganic particle and fiber-reinforced polymers. Advanced techniques for characterization of processing and properties, including anisotropic elasticity/viscoelasticity theory, polymerization and network formation of matrices, theory of reinforcement,

environmental and chemical effects. Prerequisite: 571 or MSE 423 or permission of instructor.

**CH E 575 Nonlinear Analysis in Chemical Engineering (3) Sp Finlayson** Comparison of numerical techniques: similarity, perturbation, finite difference, Galerkin, orthogonal collocation methods as applied to nonlinear chemical engineering problems. (Offered odd-numbered years.)

**CH E 580 Topics in Chemical Engineering Design (3, max. 9)** Lectures and seminars on current design methods in chemical engineering, including technical and economic feasibility of processes, design and optimization of process equipment, and environmental and social constraints. Prerequisite: undergraduate chemical engineering design, admission to chemical engineering nonthesis master's program, or permission of instructor.

**CH E 582 Advanced Topics in Process Control (3) Sp Holt, Ricker** Current topics in process control design and analysis. Possible topics include robustness analysis and design, time delay compensation, modern frequency response techniques, discrete control, adaptive control, model-based control, and nonlinear control. Prerequisites: undergraduate control class and graduate standing.

**CH E 590 Advanced Topics in Biomaterials (3)** Major, controversial issues in application of synthetic materials to medical problems. Blood compatibility, bioadhesion, intraocular lenses, contact lenses, polyurethanes, biodegradation, protein adsorption, corrosion, bone fixation, new materials, artificial heart, medical device regulation. Joint with BIOEN 590. Prerequisite: 490 or BIOEN 490.

**CH E 599 Current Topics in Chemical Engineering (1-3, max. 12)** Readings or lectures and discussions of topics of current interest in the field of chemical engineering. Subject matter changes from year to year. Prerequisite: permission of instructor.

**CH E 600 Independent Study or Research (\*) AWSps**

**CH E 700 Master's Thesis (\*) AWSps**

**CH E 800 Doctoral Dissertation (\*) AWSps**

## Civil Engineering

201 More

Civil engineering is a profession which interfaces closely with society in the planning, design, construction, and management of facilities serving the needs of people. These activities include all transportation modes: highways, aerospace, rivers, and harbors; water resources, hydraulics, and coastal engineering; structures, mechanics, and geotechnical engineering; surveying, mapping, and photogrammetry; urban planning and development; water supply, wastewater treatment, and water-quality management; solid- and hazardous-waste disposal; and quality control and management of the air resource.

A civil engineer may specialize in one or several of these activities and may further specialize in a particular function, such as design or management. The work frequently provides close associations with the legal profession, urban and regional planners, economists, public officials, biologists, chemists, financial consultants, architects, and system analysts. Education and practice requires a consideration not only of the technological-science aspects of a particular problem but also of its relationship to social, economic, political, and environmental constraints.

To accommodate these wide interests, the department is organized into three academic programs: Structural and Geotechnical Engineering and Mechanics; Transportation, Surveying, and Construction Engineering; Environmental Engineering and Science.

## Undergraduate Program

Admission to the department is usually at the junior level. Enrollment in the department is limited; students who desire entrance must formally apply to, and be accepted by, the departmental admissions committee. The primary admission criterion is degree of qualification for probable success in the engineering degree program as evidenced by academic performance, work experience, and other factors. Specific courses required are: MATH 124, 125, 126, 308; CHEM 140; PHYS 121, 122; ENGL 131; and ENGR 142, 210, 220, 230. Prospective students should obtain a copy of the departmental undergraduate advising guide and the departmental application form, both of which are available in 201 More.

### Bachelor of Science in Civil Engineering Degree

The minimum number of credits required for graduation with the Bachelor of Science in Civil Engineering degree is 192. The requirements of the College of Engineering apply to a specified 115-credit minimum in mathematics, natural sciences, engineering fundamentals, written and oral communication, humanities, and social sciences. Upper-division requirements in civil engineering include a common core of specified courses taken in the junior year.

## Graduate Program

G. S. Rutherford  
Graduate Program Coordinator

The Department of Civil Engineering offers courses leading to the degrees of Master of Science in Civil Engineering and Doctor of Philosophy. The department also provides authorized options leading to the college-wide Master of Science and Master of Science in Engineering degrees.

The three master's programs are intended to accommodate the needs of three categories of students: the M.S.C.E. for those who have completed an undergraduate degree in civil engineering and plan to continue with their professional training; the college-wide M.S.E. for other engineering graduates who wish to do graduate work in civil engineering; and the college-wide M.S. for those whose Bachelor of Science degrees are not in engineering, but who desire to apply their training in science to the solution of problems in some specific sector related to civil engineering. The nonengineer may take additional course work to obtain an M.S.E. degree.

Graduate work is offered in most fields of civil engineering. To accommodate these wide areas of interest, the department is organized into three academic graduate programs: Structural and Geotechnical Engineering and Mechanics; Transportation, Surveying, and Construction Engineering; and Environmental Engineering and Science.

Priority for admission is based on an applicant's apparent ability to progress satisfactorily in a graduate degree program. The applicant's scholastic record is of major importance; usually, at least a B, or 3.00 GPA in the junior and senior years is required. Consideration is also given to the Graduate Record Examination scores and other information.

### Degree Requirements

The requirement for the master's degree is a minimum of 39 credits, of which 30 must be in formal course work and 9 in thesis. A nonthesis program is available, requiring a minimum of 45 credits, of which at least 3 credits will be individual study with the advisory committee chairperson. For all master's degrees, at least 3 credits must be from outside the major field of study.

Students working for the Ph.D. degree must complete an approved program of studies and research normally requiring an additional two or three years beyond the master's degree.

### Financial Aid

Fellowships and scholarships are available. Most graduate students who receive financial assistance are research assistants. The number of positions depends upon the current level of funding. Additionally, some students are supported as teaching assistants.

### Research Facilities

More Hall and Wilcox Hall have structural, concrete, and bituminous materials, soil mechanics, surveying and photogrammetry, computer, water-quality, solid-wastes, and air-quality laboratories as well as an air-monitoring station and equipment for fieldwork in the construction, water, air, and solid-waste programs. Facilities for experimental studies in hydraulics and coastal engineering and in fluid mechanics are located in the Harris Hydraulics Laboratory.

## Faculty

### Chairperson

John F. Ferguson

### Professors

Banerjee, Sunirmal,\* 1981, M.S., 1973, Rutgers; Ph.D., 1978, California (Berkeley); foundation and geotechnical engineering, soil mechanics.

Benjamin, Mark M.,\* 1977, M.S., 1973, M.S., 1975, Ph.D., 1979, Stanford; chemistry of natural waters, chemical and biological treatment of water and wastewater.

Bogan, Richard H.,\* 1954, M.S., 1952, Sc.D., 1954, Massachusetts Institute of Technology; water and air resources, environmental engineering.

Brown, Colin B.,\* 1969, Ph.D., 1962, Minnesota; structural engineering and systems.

Burges, Stephen J.,\* 1970, M.S., 1968, Ph.D., 1970, Stanford; surface and groundwater hydrology, water resource systems analysis and design.

Carlson, Dale A.,\* 1955, (Emeritus), M.S.C.E., 1951, Washington; Ph.D., 1960, Wisconsin; water resources and solid-waste management.

Clanton, Jack R., 1948, (Emeritus), M.S.C.E., 1939, Pittsburgh; structural engineering.

Colcord, Josiah E.,\* 1949, (Emeritus), M.S.C.E., 1949, Minnesota; surveying engineering.

Dunn, Walter L., 1954, (Emeritus), M.P.H., 1953, California (Berkeley); transportation planning.

Elias, Ziad M.,\* 1969, Ingénieur, 1958, Paris (France); Sc.D., 1963, Massachusetts Institute of Technology; engineering mechanics.

Evans, Roger J.,\* 1966, (Emeritus), Sc.M., 1959, Brown; Ph.D., 1965, California (Berkeley); engineering mechanics, structural engineering.

Ferguson, John F.,\* 1974, M.S., 1964, Ph.D., 1970, Stanford; chemical and biological processes in water and waste treatment and in natural water systems.

Hammer, Vernon B., 1947, (Emeritus), M.S., 1941, Harvard; solid-waste management.

Hartz, Billy J.,\* 1955, (Emeritus), M.S., 1954, Ph.D., 1955, California (Berkeley); engineering mechanics, structural mechanics.

Hennes, Robert G., 1934, (Emeritus), M.S., 1928, Massachusetts Institute of Technology; transportation engineering.

Hinze, Jimmie W.,\* 1984, M.S., 1972, Texas; Ph.D., 1976, Stanford; construction engineering and management.

Holtz, Robert D. II,\* 1988, M.A., 1962, Minnesota; Ph.D., 1970, Northwestern; soil mechanics and highway engineering.

Larson, Timothy V.,\* 1976, M.S., 1972, Ph.D., 1976, Washington; airborne particles, air-quality modeling, and instrument development.

Lettenmaier, Dennis P.,\* 1976, M.S., 1973, George Washington; Ph.D., 1975, Washington; systems analysis and water resources planning.

Mahoney, Joe P.,\* 1978, M.S.C.E., 1970, Ph.D., 1979, Texas A&M; construction materials, pavement systems.

Manning, Fred L.,\* 1986, M.S., 1979, Purdue; Ph.D., 1983, Massachusetts Institute of Technology; traffic flow theory, networks, econometric methods, equilibrium in transportation markets.

Mar, Brian W.,\* 1967, (Technical Communication, Quantitative Ecology and Resource Management), M.S., 1956, Ph.D., 1958, M.S.C.E., 1967, Washington; system engineering, environmental management, interdisciplinary management.

Mattock, Alan H.,\* 1964, (Emeritus), M.Sc., 1949, Ph.D., 1955, London; structural behavior and design.

Meese, Richard H., 1946, (Emeritus), S.M., 1941, Harvard; soil mechanics and foundations.

Nece, Ronald E.,\* 1959, M.S.C.E., 1951, Lehigh; Sc.D., 1958, Massachusetts Institute of Technology; hydraulic and coastal engineering.

Nihan, Nancy L.,\* 1974, M.S.C.E., 1967, Ph.D., 1970, Northwestern; transportation planning and systems analysis.

Palmer, Richard N.,\* 1979, M.S., 1973, Stanford; Ph.D., 1979, Johns Hopkins; civil engineering systems, computer methods, water resources planning and management.

Pilat, Michael J.,\* 1967, (Chemical Engineering), M.S.Ch.E., 1963, Ph.D., 1967, Washington; air resources engineering (design of air-pollution-control equipment).

Richey, Eugene P., 1954, (Emeritus), M.S., 1947, M.S.C.E., 1948, California Institute of Technology; Ph.D., 1955, Stanford; hydraulic engineering.

Roeder, Charles W.,\* 1977, M.S., 1971, Illinois (Urbana); Ph.D., 1977, California (Berkeley); structures and materials.

Rossano, August T. Jr., 1963, (Emeritus), S.M., 1941, Sc.D., 1954, Harvard; air resources.

Sawhill, Roy B.,\* 1956, (Emeritus), M.S.E., 1952, California (Berkeley); transportation engineering, traffic engineering and traffic safety.

Schneider, Jerry B.,\* 1968, (Environmental Studies, Urban Design and Planning), M.C.P., 1961, California (Berkeley); Ph.D., 1966, Pennsylvania; planning and programming, major public utilities.

Seabloom, Robert W.,\* 1954, (Emeritus), M.S.C.E., 1956, Washington; water-quality and solid-waste management.

Stanton, John F.,\* 1978, M.S., 1975, Cornell; Ph.D., 1978, California (Berkeley); structural engineering, analysis and design.

Stensel, H. David,\* 1984, M.E., 1968, Ph.D., 1971, Cornell; water pollution, sanitary engineering.

Sylvester, Robert O., 1947, (Emeritus), S.M., 1941, Harvard; water resources.

Terrel, Ronald L.,\* 1970, (Emeritus), M.S.C.E., 1961, Purdue; Ph.D., 1967, California (Berkeley); pavement design and construction materials.

Vasarhelyi, Desi D., 1950, (Emeritus), Dr.Ingr., 1944, Technical University (Budapest); structural engineering.

Veress, Sandor A.\* 1965, M.S., 1956, Sopron (Hungary); Ph.D., 1969, University de Laval (Quebec); photogrammetry.

Welch, Eugene B.\* 1968, (Environmental Studies), M.S., 1959, Michigan State; Ph.D., 1967, Washington; water resources and aquatic biology.

Wenk, Edward Jr.\* 1970, (Emeritus), (Public Affairs), † M.S., 1947, Harvard; Dr.Eng., 1950, Johns Hopkins; structural mechanics, marine technology affairs, decision analysis, futures and science policy.

Zerbe, Richard O.\* 1976, ‡(Public Affairs), Ph.D., 1969, Duke; economics, economics of regulation and pollution-control strategies.

#### Associate Professors

Chenoweth, Harry H., 1946, (Emeritus), M.S.C.E., 1957, Washington; engineering mechanics and hydraulic engineering.

Covert, David S.\* 1975, (Research), ‡(Environmental Health), M.S., 1971, Ph.D., 1974, Washington; environmental health aspects of aerosols and ambient monitoring.

Goldblatt, Steven M., 1982, ‡(Architecture, Building Construction, Education), J.D., 1977, Golden Gate; construction law.

Harrison, Halstead.\* 1971, ‡(Atmospheric Sciences, Environmental Studies, Geophysics), Ph.D., 1960, Stanford; atmospheric chemistry.

Horner, Richard R.\* 1981, (Research), M.S., 1966, Pennsylvania; Ph.D., 1978, Washington; effects of human activities on aquatic ecosystems, non-point-source water pollution, environmental impact assessment, aquatic ecosystem monitoring.

Janssen, Don J.\* 1985, M.S., 1980, Ph.D., 1985, Illinois; construction materials, pavements.

Kent, Joseph C.\* 1952, (Emeritus), M.S., 1948, Stanford; Ph.D., 1952, California (Berkeley); hydraulic engineering.

Konichek, Dorland H., 1954, (Emeritus), B.S.C.E., 1930, North Dakota State; general engineering.

Kramer, Steven L.\* 1984, M.Eng., 1979, Ph.D., 1984, California (Berkeley); soil mechanics, foundation engineering, geotechnical earthquake engineering.

Miller, Gregory R.\* 1983, M.S.C.E., 1981, Ph.D., 1984, Northwestern; structural materials, solid mechanics, nonlinear dynamics.

Miller, William M.\* 1951, (Emeritus), M.S.C.E., 1952, Washington; materials.

Reed, Dorothy A.\* 1983, M.S.E., 1977, Ph.D., 1980, Princeton; structural and wind engineering and expert systems.

Rutherford, G. Scott.\* 1981, M.S.C.E., 1968, Washington State; Ph.D., 1974, Northwestern; transportation planning and engineering.

Spyridakis, Dimitris E.\* 1970, M.S., 1959, Ph.D., 1965, Wisconsin; soil and water chemistry.

Strausser, Howard S.\* 1955, (Emeritus), M.S.E., 1950, Johns Hopkins; hydraulic engineering.

Yeh, Harry H.\* 1983, M.S., 1977, Washington State; Ph.D., 1983, California (Berkeley); fluid mechanics, wave motions.

#### Assistant Professors

Eberhard, Marc O.\* 1989, M.S., 1986, Ph.D., 1989, Illinois (Urbana); structural engineering.

Jahren, Charles T.\* 1987 M.B.A., 1983, Ph.D., 1987, Purdue; construction engineering and management, especially waterfront and marine construction and temporary structures.

Massmann, Joel W., 1992, M.S.C.E., 1981, Ohio State; Ph.D., 1987, British Columbia; subsurface transport of multiphase fluids, decision and risk analysis, modeling contaminant transport, environmental site remediation.

Turkiyyah, George, 1991, M.S.C.E., 1986, Ph.D., 1990, Carnegie-Mellon; automated modeling, computational design, scientific computing, parallel programming methodologies.

## Course Descriptions

### Courses for Undergraduates

#### Core Courses

**CIVE 250 Environmental Pollution: Assessing Problems and Solutions (5) Sp Carlson, Welch** Problems in air, water, land environment caused by increasing demands on resources; their definition, control or prospects for control from engineering viewpoint. Ecological cycles, quantity/quality of wastes, biological effects of pollutants, energy, legislation and policy. Joint with ENV S 250.

**CIVE 306 Construction Engineering I (3) WSp Hinze, Jahren** Introduction to construction engineering, planning, scheduling, methods, contracts, and specifications. Production estimates; equipment selection; ownership and operating costs; role of the engineer in construction and cost estimating. Prerequisite: civil engineering students only or by departmental permission.

**CIVE 316 Surveying Engineering (4) Asp Veress** Application of geodesy to engineering surveys. Modern measurement and mapping techniques. Computer adjustment of measurements and analysis of error. Plane coordinate systems and transformation. Horizontal and vertical curve computations and layout. Leveling and datum considerations. Introduction to photogrammetry, cadastral surveys and construction surveys. Prerequisites: ENGR 142, linear algebra; recommended: statistics.

**CIVE 320 Transportation Engineering I (3) AW Manner** Review of operating characteristics of vehicles, review of methods used to predict travel demand and capacity supply; study of basic geometric fundamentals and their relationship to design with emphasis on highways, and management of transportation systems. Prerequisite: 316, which may be taken concurrently.

**CIVE 342 Fluid Mechanics (4) Asp Nece** Elementary mechanics of incompressible fluids. Hydrostatics. Continuity, energy, and momentum equations. Introduction to potential flow. Resistance phenomena for laminar and turbulent flows. Dynamic similitude. Prerequisites: ENGR 210, 230, and civil engineering students only or by departmental permission.

**CIVE 345 Hydraulic Engineering (4) AW Nece** Extension and application of fluid mechanics principles to hydraulic engineering problems. Open channel flow, pipeline systems, turbomachinery, unsteady flow in pipes, diffusion and mixing processes, groundwater, surface water hydrology. Prerequisites: 342 and civil engineering students only or by departmental permission.

**CIVE 350 Environmental Engineering—Water and Air Quality (4) AW Benjamin, Ferguson, Spyridakis** Description of water and air resources and parameters that characterize their quality, how their use alters their properties. Emphasis on effects of civil engineering projects; significance to engineer/scientist and society. Laboratory sessions stress water-quality analysis techniques and significance. Prerequisite: civil engineering students only or by departmental permission.

**CIVE 351 Water Supply and Waste Management (3) WSp Benjamin, Stensel** Fundamentals of water supply: surface- and ground-water sources, demand, and system design. Municipal sewerage systems: wastewater quantity and quality, and fundamentals of engineering design for collection, treatment, and disposal. Solid wastes: characteristics and quantities, collection, treatment, and disposal. Prerequisites: 345, which may be taken concurrently, 350, and civil engineering students only or by departmental permission.

**CIVE 363 Constructional Materials (4) Asp Mahoney, Miller** General treatment of physical and mechanical properties and engineering behavior of metallic and nonmetallic materials. Steel, aluminum, concrete, wood. Laboratory testing, instrumentation, and investigation into macrobehavior. Correlation with microstructure and various aspects of materials science. Prerequisites: ENGR 220 and civil engineering students only or by departmental permission.

**CIVE 366 Basic Soil Mechanics (4) WSp Banerjee, Holtz, Kramer** Introduction to basic soil properties, soil classification, volumetric relationships, compaction, consolidation, soil rheology, shear strength, bearing capacity, and lateral stresses against retaining structures. Prerequisites: ENGR 220 and civil engineering students only or by departmental permission.

**CIVE 379 Elementary Structures I (3) Asp Elias** Review of engineering theory of beams, combined stresses, beam deflections, indeterminate beams, principle of virtual work, application to beams, unsymmetrical bending, shear center, torsion of open and thin-walled sections, composite beams, inelastic bending of beams, elastic stability, beam-columns, column design formulas. Prerequisites: ENGR 220, civil engineering student status; or permission of instructor.

**CIVE 380 Elementary Structures II (3) AW Elias** Classification and idealization of structures. Theorem of virtual work. Unit load method for beams, frames, and trusses. Matrix formulation of theorem of virtual work. Force method for statically determinate and indeterminate method. Moment distribution for beams and frames including sway analysis. Prerequisites: 379, civil engineering student status; or permission of instructor.

**CIVE 381 Concepts of Structural Design (3) WSp Brown, Matlock, Reed, Stanton** Planning, design, and constructional aspects of structures. Criteria for structural adequacy and efficiency. Examination of the design process. Introduction to design of components. Use of influence lines. Prerequisites: 380, civil engineering student status; or permission of instructor.

**CIVE 390 Civil Engineering Systems (3) WSp Mar, Nihan, Palmer** Introduction to civil engineering system processes. Decision methods, economic considerations, and optimization. Examples illustrating quantitative and subjective aspects of civil engineering practice. Prerequisite: civil engineering students only or by departmental permission.

**CIVE 400 Computer-Aided Design (3) A Schneider** Review and evaluation of computer-aided design hardware, software, and applications in civil engineering. Use of interactive graphic software to solve complex, multiobjective design problems. Prerequisite: ENGR 123 or equivalent.

**CIVE 405 Construction Planning and Scheduling (3) W Hinze, Jahren** Principles of construction planning and scheduling, including network analysis of construction activities, examination of arrow and precedence diagrams, time-cost tradeoffs, resource leveling, resource allocation, PERT, integrated cost/schedule systems, computer applications, and a CPM project.

**CIVE 406 Construction Engineering II (3) A Hinze, Jahren** Heavy construction equipment. Equipment economics, contractor equipment policies, equipment specifications, selection and performance of equipment, estimating productivity of construction equipment, and engineering support for construction operating. Prerequisite: 306 or permission of instructor.

**CIVE 407 Contracts and Specifications (3) WSp Hinze** Construction industry, forms of organizations, real property laws, and bidding procedures. Basic elements of contracts, types of specifications, general conditions of standard construction contracts, legal disputes related to construction contract provisions, surety bonds and construction insurance. Prerequisite: 306 or permission of instructor.

**CIVE 410 Traffic Engineering Fundamentals and Surveys (3) A Nihan** General review of the fundamentals of traffic engineering, including their relationship to transportation operations management and planning, with special emphasis on traffic engineering field surveys and data analysis. Prerequisite: 320 or permission of instructor.

**CIVE 411 Highway and Traffic Engineering—Geometric Design (3-5) W Mannering** Factors and elements in geometric design of arterials, intersections, freeways, interchanges, including problem solution. Prerequisites: 320 and graduate standing in civil engineering.

**CIVE 412 Traffic Flow Theory (3) Sp Mannering** Introduction to traffic flow theory, characteristics. Measurement, statistical representation of traffic characteristics. Speed-flow-concentration models and relationship to level of service, highway capacity. Application of queuing theory to traffic events; introduction to traffic flow simulation. Prerequisites: 320 and senior standing in civil engineering.

**CIVE 413 Transportation Technologies and Systems (3) Sp Schneider** Review and evaluation of conventional and innovative vehicle systems, fuel types, command and control systems, and information systems. Technology forecasting and assessment techniques. Alternative futures for the role of transportation system in society. Prerequisite: 320 or permission of instructor.

**CIVE 416 Urban Transportation Planning and Design (3) A Nihan, Rutherford** Brief review of major issues in urban transportation planning. Planning process discussed and transportation models introduced. Uses a systems framework, including goals and objectives, evaluation, implementation, and monitoring. A design term project, individual or small groups, utilizes material presented on a contemporary problem. Prerequisites: senior standing and 320 or graduate standing and permission of instructor.

**CIVE 417 Urban Transportation Demand Forecasting (3) W Nihan, Rutherford** The urban transportation planning process and its traditional travel demand modeling components, including trip generation, trip distribution, mode choice, and route assignment techniques. Quick response method, sketch planning, and other alternatives to the conventional modeling process. Prerequisites: senior standing and 390.

**CIVE 418 Computer-Aided Planning of Urban Systems (3) W Schneider** Survey of on-line planning applications; use of various on-line systems to solve urban systems design problems; investigations of hardware/software tradeoffs; human factors in man-computer systems design theory as it relates to problem-solving activity. Joint with URBPD 429. Prerequisite: 390 or permission of instructor.

**CIVE 421 Pavement Design (3) AW Janssen, Mahoney** Current and developing procedures for the structural thickness design of pavements. Bituminous and concrete pavements for highways, airports, and special heavy loading. Elastic layered systems, slab theory. Performance evaluation for maintenance and overlay design. Prerequisite: senior or graduate standing in civil engineering.

**CIVE 422 Construction Materials II (4) ASp Janssen** Types, sources, uses, performance behavior from construction point of view of aggregates; asphalt products and mixtures; Portland cement, concrete, and other materials the civil engineer is responsible for selecting and manufacturing on job site. Includes laboratory work. Prerequisites: 363 or equivalent, senior or graduate standing in civil engineering.

**CIVE 423 Heritage of Civil Engineering (3 or 4) W** Contribution of civil engineering to civilization based on the lives and projects of prominent engineers and cultures. Incidents and individuals from prehistory to the nineteenth century give the student an awareness of the profession and its influence on society. Industrial

archaeology and historic sites are considered. An additional 1 credit may be earned by participating in a special project. Emphasis on the control of elements and the methodology, planning, objectives, and reasons for the project. May be used as social science distribution. Prerequisite: junior standing.

**CIVE 425 Photogrammetry and Remote Sensing (3 or 4) A Veress** Geometrical characteristics of images and imaging systems. Image acquisition, stereoscopic theory and image measurement. Control design and photogrammetry instrumentation for mapping. Image analysis and target signatures and aberrations for visual, thermal, and radar systems. Photogrammetry and R/S applications in engineering site analysis and evaluation. Prerequisite: 316 or permission of instructor.

**CIVE 426 Boundary Surveys and Plat Design (3) W** System of public lands. Boundary and riparian law and case discussion. Survey record research, recordation, surveying and cost considerations. Site and subdivision planning and design. GIS and multipurpose cadastre ownership and infrastructure inputs. Prerequisite: CIVE 316 or permission of instructor.

**CIVE 427 Construction Survey Control (3) Sp Jahren** Surveying specifications, instrumentation and calibration, infrastructure design and layout considerations; curves, sewer, building and slope staking. Project control and monitoring. As built surveys. Prerequisites: CIVE 306 and 316, or equivalent; or permission of instructor.

**CIVE 430 Ethics in Engineering (2-3)** Professional engineering code of ethics from a perspective of contemporary Western ethical theories. Expansion of the moral community, environmental ethics. Case studies relating to professionalism and to environmental consequences of engineering projects. Prerequisite: senior standing in engineering or permission of instructor; recommended: PHIL 240.

**CIVE 431 Seismology and Earthquake Engineering (3)** Presents an overview of earthquake processes and details of the characteristics of destructive ground motion; illustrates the effects of such motion on engineering structures; reviews current practice in estimating earthquake hazards for important structures such as nuclear power plants. Joint with GPHYS 431. Prerequisite: MATH 307 or permission of instructor.

**CIVE 436 Foundation Design (3) WSp Banerjee, Holtz, Kramer** Design considerations for foundations and retaining structures. Subsurface investigations and determination of soil properties for design. Design of shallow and deep foundations and retaining structures. Foundations and soil considerations for waterfront structures. Prerequisite: 366.

**CIVE 437 Soil Mechanics (3) A Banerjee, Holtz, Kramer** Elementary seepage theory. Seepage through earth embankments and toward wells. Soil strength review. Mechanics of landslides. Selection of parameters and methods of analysis for slope stability. Control and correction of slope failures. Prerequisites: 351, 366.

**CIVE 441 Advanced Structures I (3) AW Elias, Evans, Reed, Roeder** The displacement method in matrix form with programming applications. Fundamentals of modeling of various types of structures. Prerequisite: 380.

**CIVE 442 Advanced Structures II (3) AW Miller, Roeder, Stanton** Introduction to stability, including a consideration of elastic and inelastic buckling with applications to beam-columns and plates. Introduction to plastic analysis. Prerequisite: 379.

**CIVE 443 Advanced Structural Mechanics (3) Sp Brown, Elias, Evans** Formulation and solution of the basic equations of elasticity. Applications in 2-D stress analysis, torsion, thermal stresses, and beams on elastic foundation. Plate theory optional. Prerequisite: 379.

**CIVE 451 Design of Metal Structures (3) AWSp Brown, Miller, Roeder, Stanton** Introduction to the de-

sign and behavior of metal structures using LRFD concepts. Application of design methods and codes to columns, beams, frames, connections, and tension members. Prerequisite: 381; recommended: 474, 475.

**CIVE 452 Design of Reinforced Concrete Structures (3) AWSp Brown, Eberhard, Mattock, Stanton** Fundamentals of design of buildings in reinforced concrete in accordance with current codes and practices. Prerequisite: 381.

**CIVE 453 Prestressed Concrete Design (3) ASP Mattock, Stanton** Analysis, design, and construction of prestressed concrete structures. Prerequisite: 452 or graduate standing.

**CIVE 454 Design of Timber Structures (3) WSp Eberhard, Evans, Miller** The design and construction of timber structures, using elements made of sawn wood, glued-laminated wood, and plywood. Prerequisite: 381.

**CIVE 455 Structural Unit Masonry (3) W Lebert, Mattock** Structural behavior and design of reinforced brick, tile, and unit concrete masonry structures. Joint with ARCH 426. Prerequisite: 381 or permission of instructor.

**CIVE 456 Design Project (3)**

**CIVE 461 Biological Problems in Water Pollution (3 or 5)** Ecological risk assessment of toxic chemicals and problems associated with electrical power production emphasized. Risk assessment considers exposure and toxicity, and the effects on individuals, populations, and communities. The laboratory covers invertebrate toxicity tests, microcosms, and field trips to electrical power plants. Joint with FISH 430. Prerequisite: senior or graduate standing in fisheries, engineering, or related fields.

**CIVE 462 Ecological Effects of Waste Water (3 or 5) A Welch** Principles of aquatic ecology that relate to causes and effects of water quality problems in lakes and streams. Includes population growth kinetics, nutrient cycling, eutrophication, acidification, oxygen/temperature requirements, and effects of various wastes on aquatic animals. Joint with FISH 434. Prerequisite: senior or graduate standing in engineering or science.

**CIVE 463 Physiological Effects of Water Pollutants (3) Sp Brown** Physiological effects of water pollutants on economically important or endangered fishes, especially with respect to wastewater. Types of industrial, urban, and agricultural entities that contribute wastes to natural waters. Monitoring procedures and assessment of changes in fisheries as a consequence of waste effluents. Joint with FISH 435. Prerequisites: upper-division or graduate standing, organic chemistry, and some background in any of the following: general physiology, cell biology, biochemistry, chemical biology, sanitary engineering.

**CIVE 472 Introduction to Hydraulics in Water Resources (3) A Nece** Physics of water movements in natural freshwater bodies and inshore marine waters. Brief review of some essential fluid mechanics. Flow in rivers and streams; motions in lakes, reservoirs, and estuaries. Some aspects of diffusion. Not open to students with undergraduate civil engineering backgrounds. Prerequisites: senior or graduate standing and permission of instructor. (Offered even-numbered years.)

**CIVE 473 Coastal Engineering I (3) W Yeh** Linear theory of water waves, wave transformations due to boundary conditions, sediment motion, elementary tidal theory; applications illustrated by laboratory experiments and selected case histories. Prerequisite: CIVE 342.

**CIVE 474 Computational Hydraulics (3) A Chu** Introduction to unsteady hydraulic problems in open channels and pressure conduits; their solutions by numerical techniques. Existing models used to analyze problems in hydraulic flood routing, tidal river hydraulics, transient flows in pipes, unsteady transport phe-

nomena. Practical applications emphasized. Prerequisites: 345, MATH 307, and senior standing in civil engineering.

**CIVE 475 Analysis Techniques for Groundwater Flow (3) W Burges** Development of appropriate equations to describe saturated groundwater flow, and application of numerical methods for solving groundwater flow problems and flow to wells. Participants required to solve specific problems using numerical techniques developed during the course. Prerequisite: 342 or equivalent.

**CIVE 476 Physical Hydrology (3) A Burges** Global water picture, data sources and data homogeneity, precipitation, evapotranspiration, hydrographs. Hydrologic data frequency analysis. Hydrologic design: flood mitigation, drainage. Introduction to deterministic and stochastic models. Prerequisite: senior standing or permission of instructor.

**CIVE 477 Open-Channel Engineering (3) ASP Nece, Yeh** Water flow in natural and constructed channels. Analysis and design of canals, transitions, energy dissipators, and similar structures. Analysis of surface profiles and effect of nonlinear alignment on flow. Introduction to river mechanics. Design-oriented problems. Prerequisite: 345.

**CIVE 478 Water Resources and Hydraulic Engineering Design (3) ASP Burges, Nece, Yeh** Opportunity to effect design solutions for projects or major project components in areas of water resources engineering or hydraulic and coastal engineering. Problems include irrigation, multiple- or single-purpose reservoirs (e.g., flood, water supply, hydroelectric), hydraulic structures, and coastal facilities. Prerequisites: senior standing in civil engineering and permission of instructor.

**CIVE 481 Environmental Engineering Design (3) AW Bogan** Introduction to the theory and the practice of planning and design of urban water supply, sewerage, solid wastes, and drainage collection systems. Evaluation of service areas and service requirements and their relationships to urban and regional planning activities. Engineering methods and computer programs for designing basic system elements. Prerequisite: 351.

**CIVE 482 Water and Wastewater Treatment (3) W Bogan, Carlson, Stensel** Objectives of water and wastewater treatment; associated physical, chemical, and biological phenomena; design of common treatment systems. Prerequisite: 351 or permission of instructor.

**CIVE 483 Environmental Engineering Design Studies (3) WSP Bogan, Stensel** Individual and group design studies involving environmental engineering water and wastewater treatment facilities. Topics include proposal preparation, engineering reports, alternative evaluations, process equipment design, and environmental engineering projects. Presentation of engineering reports on selected design problems. Prerequisites: 351, 345.

**CIVE 484 On-Site Wastewater Disposal (3) Sp Seabloom, Spyridakis** Latest information on design, construction, operation, maintenance of individual and small community wastewater disposal systems. Conventional water carriage septic tank soil absorption systems considered with new alternatives, such as mounds, evapotranspiration systems, anaerobic filters, pressure drainfields, sand filters. Nonwater carriage methods studied. Pressure and vacuum sewers introduced. Prerequisite: senior standing.

**CIVE 485 Aquatic Chemistry (3) ASP Benjamin, Ferguson, Spyridakis** Principles of chemical equilibrium relevant to natural water systems; the nature and effect of chemical interactions of domestic and industrial waste effluents on natural water systems; chemical principles involved in the treatment of water and wastewaters. Prerequisite: one year of general chemistry or equivalent.

**CIVE 486 Water-Quality Analysis (3) W Spyridakis** Laboratory evaluation of chemical quality of natural and wastewaters. Theory and application of instrumentation used in water-quality measurement. Prerequisite: senior or graduate standing.

**CIVE 487 Solid-Waste Disposal (3) W Bogan, Carlson** Describes sources and handling of municipal and industrial solid waste, with examination of collection, processing, recycling and resource recovery, and disposal alternatives. Public policy issues, local agencies and solid waste facilities, the legal and regulatory framework are all addressed in context of solid waste engineering.

**CIVE 488 Hazardous Wastes Engineering (3) Sp Stensel** Classification of hazardous wastes; resource conservation, Recovery Act regulations; characteristics and behavior of toxic organics; superfund; groundwater contamination, solutions. Hazardous waste site remedial action; case histories; sampling; landfill design. Stabilization and processing technologies, including incineration, carbon adsorption, emerging techniques. Prerequisite: 351 or permission of instructor.

**CIVE 489 Water and Air Quality Sampling (2) Sp Larson, Spyridakis, Welch** Samples collected from lakes, streams, precipitation, and air and resulting (and supplemental) data interpreted for cause-effect and statistical inference. Design for water and air quality monitoring programs. Prerequisite: CEWA 434 or permission of instructor.

**CIVE 490 Air-Pollution Control (3) ASP Larson, Pilat** Fundamental concepts of air pollution. Emission sources, atmospheric dispersion, ambient concentrations, adverse effects, governmental regulations, emission standards, air-quality standards, processes and equipment for controlling emissions. Joint with ENVH 461. Prerequisite: senior standing.

**CIVE 491 Deterministic Systems (3) A Mar, Palmer** Development of quantitative methods for mathematical problem solving with emphasis on computer applications. Linear programming, mathematics of the simplex algorithm, sensitivity analysis, dynamic programming, systems simulation, and goal programming. Class project required. Prerequisite: 390 or equivalent or permission of instructor.

**CIVE 492 Stochastic Systems (3) W Mar, Palmer** Introduction to probability distributions and statistics useful in systems analysis, conditional distributions, queuing theory and applications, Monte Carlo simulation, chance-constrained mathematical programming, and stochastic dynamic programming. Emphasis on application of the techniques to civil engineering systems problems, including transportation, water resources, and structures. Prerequisite: 491 or permission of instructor.

**CIVE 493 Air-Pollution Source Testing and Equipment Evaluation (3) Sp Larson, Pilat** Engineering evaluation of air pollutant sources and air control equipment. Air-pollutant source testing and stack sampling. Analysis of equipment and source emissions in the field and in the laboratory. Prerequisite: senior standing or permission of instructor.

**CIVE 494 Air-Pollution Control Equipment Design (3) W Pilat** Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption of gaseous pollutants; electrostatic precipitation and filtration of particulate pollutants. Actual case studies. Joint with CHE 468 and ME 468. Prerequisite: senior standing or permission of instructor.

**CIVE 498 Special Topics (1-5, max. 6)** Special topics in civil engineering offered as course with lecture and/or laboratory. Maximum of 6 credits in combination of 498 and 499 may be applied toward an undergraduate degree. Prerequisites: senior standing in civil engineering and permission of instructor.

**CIVE 499 Special Projects (1-5, max. 6) AWSpS** Individual undergraduate research projects. Maximum of 6 credits in combination of 498 and 499 may be applied toward an undergraduate degree. Prerequisites: any 400-level course, which may be taken concurrently, and permission of instructor.

## Environmental Engineering and Science

**CEWA 466 Air-Quality Modeling (3) W Larson** Air-quality models relating air pollution emissions to environmental concentrations. Meteorological dispersion model "fingerprinting" of sources. Current problems. Joint with ATM S 466.

## Courses for Graduates Only

**CIVE 700 Master's Thesis (\*) AWSpS**

**CIVE 800 Doctoral Dissertation (\*) AWSpS**

## Transportation, Surveying, and Construction Engineering

**CETS 506 Design of Temporary Structures in Construction (3) Hinze, Jahren** Fundamental criteria to be considered in the design of various temporary structures in construction. Temporary structures include rock crushing plants, belt conveying systems, concrete forms, cellular fill cofferdams, braced cofferdams. Manual and computer-aided design approaches. Prerequisites: 406, which may be taken concurrently; CESSM 486 or equivalent; or permission of instructor.

**CETS 507 Heavy Construction Estimating (3) W Hinze, Jahren** Principles and procedures for estimating and bidding heavy construction projects. Site investigation, methods analysis, breakdown of project into common construction operations, quantity take-off, cost analysis, cost distribution, cost summarization, and bid preparation.

**CETS 508 Construction Administration (3) Hinze, Jahren** Conceptual estimating and detailed estimating. Estimating as it applies to labor, materials, equipment, and overhead. Cost control for construction operations. Quality control. Accounting and taxation in construction. Managing project security, subcontractors, submittals, change orders, correspondence, testing, and start-up.

**CETS 509 Construction Productivity (3) Hinze** Work improvement techniques applied to construction operations. Review of major contributions in behavioral science that may be applicable to the construction industry. Case studies. Innovative productivity programs successfully implemented on construction projects. Safety on construction projects, especially as influenced by managerial practices.

**CETS 511 Traffic Systems Operations (3) Sp Nihan** Operational planning, management of arterial and freeway traffic systems. Review of transportation system management strategies to achieve more efficient use of existing infrastructure, including improved and innovative traffic control systems and demand management policies, measures of effectiveness, impact assessment, traveler response. Introduction to use of relevant computer models and packages.

**CETS 513 Survey Adjustment and Analysis (4) A Veress** Concept of survey data errors and distributions. Least square a priori analysis of photogrammetry and survey design systems. Data analysis and computer adjustment computations of classical and hybrid systems, in surveying, geodesy, and photogrammetry. Prerequisite: permission of instructor.

**CETS 514 Engineering and Industrial Photogrammetry (4) W Veress** Metric and nonmetric cameras. Mathematics of close range photogrammetry. Applications of deformation monitoring, industrial quality control. Analytical instruments and measurements. Aerial photographic model geometry. Design of photogrammetric projects for engineering applications such as highways, dams, and environmental site mapping. Prerequisite: 414.

**CETS 517 Engineering Geodesy (4) W Colcord** Earth models, geodetic reference systems. Classical geodetic ellipsoid computations, observations. Inertial, EDM systems. Gravity theory, observation. World and state plane coordinate systems, coordinate transformation. Basic observation astronomy, satellite orbit geometry. Control leveling, datums. Application of GPS systems for static and dynamic control of engineering projects. Prerequisite: 418 or CIVE 316 or permission of instructor.

**CETS 518 Photo Geodesy and Digital Mapping (4) Sp Veress** Coordinate systems. Mathematical principle of aero-triangulation. Establishing mathematical models for combined photogrammetric and global positioning systems. Design of combined system. Analysis and practical applications for digital mapping. Prerequisite: 514. (Offered alternate years.)

**CETS 520 Seminar (1, max. 6) AWSp** Prerequisite: permission of thesis supervisor.

**CETS 529 Urban Region Geocoding and Land-Based Information Systems (3)** Multipurpose street network and land-based information systems. The United States Census geocoding system, automated map overlay systems, and cadastral file information use. Applications to land surveying, urban and transportation planning, and geographic analysis. Joint with GEOG 529 and URBPD 529.

**CETS 532 Satellite Geodesy (4) Sp** Reference frames. Keplerian and Cartesian orbital elements. Satellite orbit dynamics. Long-arc and short-arc orbit determination. Use of satellite observations for determination of positions and of the earth's gravity field. Applications of the NAVSTAR GPS and TRANSIT satellite systems in surveying and navigation. Prerequisite: 517 or permission of instructor.

**CETS 541 Transit Systems Planning (3) W Rutherford** Planning, operational methods for urban public transportation. Review of technological, operating characteristics of vehicles and systems; financing, management, institutional aspects. Paratransit. Short-range planning, operational strategies, revenue-fare structures. Service monitoring. Mode choice, transit demand relating to service. Computer-aided methods for planning, design of transit systems. Prerequisite: graduate standing or permission of instructor.

**CETS 543 Airport Engineering (3) Sp Mahoney** Definitions and terminology relating to airport engineering. Characteristics of aircraft, air traffic control, and resulting impact upon design process. Airport capacity, configuration, and planning associated with terminal design. Emphasis on geometric and structural design of pavements and airside. Design projects relating to airport engineering required. Prerequisite: permission of instructor.

**CETS 564 Soil and Site Improvement (3) W Janssen** Development, improvement, and utilization of marginal natural earth materials through compaction and stabilization using chemicals, portland cement, lime, asphalt, salt, and others. Includes discussion, design, and evaluation of materials for pavement subgrades, slope protection, dust palliation, and general site improvement. Prerequisite: 464 or permission of instructor; recommended: 424.

**CETS 570 Land Use/Transportation Models (3) A Schneider** Review of theoretical basis of several existing models used to forecast urban growth patterns and their associated land use, transportation, and energy requirements. Model validation studies in relation to empirical studies of urban growth and change. Environmental implications of alternative urban growth patterns. Joint with URBPD 530.

**CETS 571 Analytical Methods in Transportation (3) Nihan** Application of analytical and statistical methods to transportation planning problems. Analysis of probability distributions that describe variables. Development of statistical models for predicting transportation phenomena. Elementary sampling theory hypothesis testing, regression analysis, time series

analysis, applied to transportation data. Prerequisite: graduate standing or permission of instructor.

**CETS 572 Transportation Data Collection and Analysis (3) Sp Mannering** Data collection methods, survey sampling, experimental design in transportation planning and engineering. Preliminary planning, sampling methods, sources of errors, sample size, survey instruments, survey administration, data processing. Analysis of variance, experimental design. Illustrative examples drawn from various branches of transportation planning and engineering. Prerequisite: graduate standing or permission of instructor.

**CETS 573 Transportation Systems Evaluation (3) Schneider** Principles and concepts of alternatives analysis and evaluation in relation to decision-making processes of large-scale transportation projects. Estimation of capital, operating/direct user costs, benefit/cost concepts, impact identification, forecasting/assessment, equity/financing considerations, methods for improving decision-making process. Prerequisite: graduate standing or permission of instructor.

**CETS 574 Advanced Travel Demand Theory and Applications (3) Sp Rutherford** New methods for estimating and forecasting travel demand. Individual as economic, psychological decision-making unit. Theoretical background to models, model structures, model specification, attitudinal measurement, empirical estimation, market segmentation, aggregation issues, model transferability, parameter updating. Practical applications, directions of present and future research. Prerequisite: graduate standing or permission of instructor.

**CETS 599 Special Topics: Transportation, Construction, and Geometrics (2-5, max. 15) AWSpS** Prerequisites: permission of instructor and department Chairperson.

**CETS 600 Independent Study or Research (\*) AWSpS**

### Structural and Geotechnical Engineering and Mechanics

**CESM 501 Structural Mechanics I—Statics (6) A Evans, Miller** Equations of a continuum for small displacements, applications to linear elasticity. Kirchhoff plate theory, problems in advanced strength of materials. Virtual work, minimum potential energy, force and displacement methods of structural analysis. Direct stiffness method. Approximate solutions, geometric stiffness matrix. Linearized buckling.

**CESM 502 Structural Mechanics II—Dynamics (3) W Miller, Reed** Lagrange's equations. Free vibrations of linear, single, and multiple degree of freedom systems. Damping. Mode superposition. Forced vibrations by time history and by response spectrum methods. Free and forced vibrations of continuous systems. Wave propagation in rods and beams. Prerequisite: 501.

**CESM 503 Materials (3) A Brown, Miller, Roeder** Behavior of materials used in civil engineering structures. Yield and failure surfaces. Physical and phenomenological models of plastic and viscoelastic behavior. Fracture mechanics. Fatigue models and predictions. Damping and friction. Behavior of anisotropic and composite materials.

**CESM 504 Finite Element Methods in Structural Mechanics (3) Sp Elias** Extension of the matrix methods of structural analysis to the solution of elasticity, plate, and shell problems by use of finite element approximations. Discussion of convergence and bounding and extension to investigation of stability and finite deformations. Prerequisite: 501 or permission of instructor.

**CESM 511 Advanced Reinforced Concrete Design (3) W Eberhard, Mattock, Stanton** Behavior and design of reinforced concrete members and structures. Members subject to torsion and torsion combined with flexure and shear; members with small shear span/depth ratios, slabs.

**CESM 512 Advanced Prestressed Concrete Design (3) W Eberhard, Mattock, Stanton** Prestress loss. Design of statically indeterminate prestressed concrete structures; continuous beam, frame, and slab structures (cast in place or assembled from precast units). Prerequisite: 482 or equivalent.

**CESM 513 Advanced Steel Design (3) W Roeder** Factors influencing strength and serviceability of steel structures; LRFD limit state design procedures. Use of theories of plasticity and stability in development of design methods and specifications, bolted and welded connections, temperature effects, and effect of different fabrication methods on behavior of structure. Prerequisites: 501, 503.

**CESM 514 Design for Earthquakes I (3) Sp Roeder, Stanton** Linear elastic analysis for prediction of structural behavior in earthquakes. Ground-shaking and earthquake mechanism. Factors affecting severity and frequency of shaking. Ductility and multilevel design approach. Response spectra and design codes such as UBC and ATC, and evaluation of rationale for these specifications. Design problem. Prerequisites: 501, 502.

**CESM 515 Design for Earthquakes II (3) Roeder, Stanton** Nonlinear structural behavior in evaluation of seismic performance of structures. Structural ductility for steel and concrete structures. Effects of stability on ductility. Prediction of structural performance using nonlinear-analysis computer programs. Discussion of design concepts such as base isolation and random nature of earthquake excitation. Prerequisites: 511, 513, 514.

**CESM 516 Design for Wind (3) Sp Reed** Wind effects on structures, including atmospheric boundary layer flow, bluff body aerodynamics, structural dynamics, and aeroelasticity; development and use of ANSI standards; estimation of along-wind, across-wind, and torsional response of tall buildings; design strategies for avoiding wind-induced discomfort in humans. Fundamentals of wind-tunnel testing. Prerequisites: 501, 502.

**CESM 520 Seminar (1, max. 6) AWSp** Required for doctoral students. Prerequisite: permission of thesis supervisor.

**CESM 521 Continuum Mechanics I (3) Elias, Evans, Miller** General foundation of fundamental concepts of motion, stress, and energy for a continuum. General equations of conservation of mass, momentum, and energy. Linear and nonlinear elastic, viscous, and inelastic materials. Joint with A A 575. Prerequisite: 501.

**CESM 522 Continuum Mechanics II (3) Elias, Evans, Miller** Development of classical and nonclassical constitutive theories relating to real materials. Applications in metals, concrete, ice, wood, rock, soils, and composites. Prerequisite: 521.

**CESM 523 Reliability and Design (3) Brown, Reed** Introduction to theory of structural reliability and its application to design procedures in civil engineering, including probability theory; assessment of uncertainties; code specification (first-order, second-moment format) and the related concept of risk and the influence of socioeconomic factors; loads, load combinations, and probabilities of damage.

**CESM 524 Random Vibrations of Structures (3) Sp Reed** Random vibration theory, emphasis on estimation and analysis of dynamic response of civil engineering structures, including probability theory; analysis of stationary random processes in time and frequency domains; statistics of narrow-band processes; modeling of stationary and nonstationary signals, such as wind velocity and earthquake acceleration data. Prerequisites: 501, 502.

**CESM 531 Special Structures (3, max. 6)** Special topics such as shells; inflated structures, suspended structures, or other specialized forms of civil engineering structures. May be repeated for credit, providing topics differ.

**CESM 561 Advanced Geotechnical Engineering I (3) A Banerjee, Holtz, Kramer** Advanced topics of geotechnical engineering, including theories of lateral earth pressure, bearing capacity, stress distribution, and consolidation. Application to design of retaining structures and shallow foundations, calculation of settlement rate and distribution. Prerequisite: CIVE 366 or equivalent.

**CESM 562 Advanced Geotechnical Engineering II (3) A Banerjee, Holtz, Kramer** Advanced topics of geotechnical engineering, emphasizing shear strength of soils. Strength and stress-strain behavior of sands and clays under various loading and drainage conditions. Laboratory and in situ strength-testing methods. Stress path concepts and application of normalized strength parameters. Prerequisite: 467 or equivalent.

**CESM 563 Advanced Geotechnical Engineering III (3) W Banerjee, Holtz, Kramer** Topics of particular importance to geotechnical consulting engineering practice. Analysis and design of deep retained excavations, control of settlement of facilities, pile and pier foundations. Case studies and performance evaluation of practical projects. Prerequisite: 561 or equivalent.

**CESM 564 Seepage and Slope Stability (3) WSp Banerjee, Holtz, Kramer** Analysis of groundwater flow and seepage through dams using analytical and numerical techniques. Various one- and two-dimensional methods of analysis of soil slopes under static and seismic conditions. Computer application of stability analysis methods to slope-stability problems. Prerequisite: 467 or equivalent or permission of instructor.

**CESM 565 Soil Dynamics and Earthquake Engineering (3) Sp Banerjee, Kramer** Wave propagation in elastic, homogeneous, isotropic medium. Layered ground response by wave propagation analysis. Nature of earthquake shaking; ground motion attenuation; soil conditions' influence on ground motion; dynamic soil properties. Soil liquefaction, settlement; soil-structure interaction; effect on lateral pressures, slope stability. Prerequisite: 467 or equivalent, or permission of instructor.

**CESM 599 Special Topics: Structures and Mechanics (2-5, max. 15) AWSpS** Prerequisites: permission of instructor and department Chairperson.

**CESM 600 Independent Study or Research (\*) AWSpS**

### Environmental Engineering and Science

**CEWA 518 Microbial Degradation of Toxic Contaminants (3) Sp Herwig, Staley, Stensel, Strand** Detailed survey of current understanding of microbiology and degradative pathways of industrial organic compounds, pesticides, plastics, oil, and metals. Microbial requirements for bioremediation. Methods of scientific investigation of microbial transformations. Requires basic understanding of metabolism and organic chemistry. Joint with FRM 518 and MICRO 518. Prerequisite: biological science course.

**CEWA 520 Seminar (1, max. 6) AWSp** Required of all graduate students in Environmental and Engineering Science each quarter.

**CEWA 525 Seminar—Topics in Atmospheric Chemistry (1-3, max. 6) W Charlson, Harrison** Seminar for atmospheric scientists, chemists, engineers in problems associated with the chemical composition of the atmosphere. Covers wide variety of topics, ranging from the natural system to urban pollution and global atmospheric change. Faculty lectures, student participation. Joint with ATM S 525. Prerequisite: ATM S 301 or permission of instructor.

**CEWA 540 Hydrodynamics (4) A Nece, Yeh** Applications of the equations of motion to the flow of ideal and real fluids. Fundamentals of fluid potential motion. Viscous flows; Navier-Stokes equations and some exact solutions. Boundary-layer theory. Introduction to turbulence. Two- and three-dimensional examples, including free surface flows. Applications of field equa-

tions to problems of engineering significance. Prerequisite: CIVE 342 or equivalent.

**CEWA 541 Hydrodynamics in Water Quality (3) W Nece** Theoretical, field study, and laboratory model approaches to diffusion in transport problems of concern to water resources engineers. Prerequisite: CIVE 342 or permission of instructor.

**CEWA 544 Water Wave Mechanics (3) Sp Yeh** Theory of water waves. Classical water wave problem and approximate solution techniques. Evolution equations for and their solutions wave systems. Viscous damping effects and mass transport. Nonlinear shallow-water waves and the Korteweg-deVries equation. Waves on beaches. Joint with AMATH 544. Recommended: graduate-level course in fluid mechanics.

**CEWA 545 Advanced Computational Hydraulics (4) Sp Chu** Review of hydrodynamic and transport equations for hydraulic engineering application; numerical solution methods; implementation and practice with existing two- and three-dimensional numerical models; numerical model calibration and verification techniques; case studies. Theoretical and civil engineering decision makers aspects. Prerequisites: 445, 540, 541 or permission of instructor.

**CEWA 547 Advanced Hydrology (3) W Burges** Detailed treatment of statistical methods used in hydrologic analysis. Stochastic hydrology, detailed examination and use of a deterministic watershed model (e.g., Stanford Watershed Model). Prerequisite: graduate standing in civil engineering or permission of instructor.

**CEWA 550 Microbiological Process Fundamentals (3) A Ferguson, Stensel** Fundamental concepts for microbial processes including organic chemical structure, nomenclature and environmental properties, principles of microbial metabolism, study of specific types of bacteria important to environmental engineering and their metabolism and development of microbial kinetic equations including substrate utilization, energetics, and stoichiometry. Prerequisite: permission of instructor.

**CEWA 551 Biological Treatment Systems (3)** Basic reactions, design principles, models, and operational considerations for biological treatment systems in environmental engineering. Applications include activated sludge, bulking sludge control, fixed film reactors, nitrification, nitrogen removal, phosphorus removal, anaerobic treatment, and toxic organics removal. Prerequisite: 550.

**CEWA 552 Physical-Chemical Treatment Processes (4)** Principles and design of major physical-chemical unit processes used in water, wastewater, and hazardous waste treatment. Processes include chemical and reactor kinetics, filtration, chemical coagulation, ion exchange, adsorption, and gas transfer. Development of mathematical models, laboratory demonstrations, and evaluation of current design practice. Prerequisite: 456 or permission of instructor.

**CEWA 553 Topics in Ecological Effects of Wastewater (3) W Welch** Application of ecological concepts for analysis and interpretation of bioenvironmental problems and data (eutrophication, acid rain, and toxicity). Students participate in presentation and discussion of current research. Prerequisite: 434, or BIOL 473 or permission of instructor.

**CEWA 554 Advanced Topics in Environmental Engineering, Chemistry, and Biology (3) Benjamin, Ferguson** Special topics of current importance in environmental engineering. Application of fundamental chemical and biological principles to the study of such phenomena as the behavior of aqueous colloids, corrosion processes, bacterial metabolism in chemically complex solutions, and acid precipitation. May be taken more than once for credit. Prerequisites: 550, 551.

**CEWA 555 Lake Management (2) Sp Welch** Application of recognized techniques/approaches to restore and manage eutrophic lakes. Includes critiques

of restoration proposals. Joint with ENV S 555. Prerequisites: CEWA/FISH 434, BIOL 473, or permission of instructor.

**CEWA 556 Industrial Waste Treatment (3) Sp Benjamin, Ferguson, Stensel** Survey of laws and regulations governing industrial waste discharge. Sources, amounts, and characteristics of wastes from various industries. Specialized treatment processes, case studies, and site visits. Prerequisite: 550 or 551 or permission of instructor.

**CEWA 557 Water Resources Management (3) W Mar** Engineering, social, and economic factors involved in water resource development and management; water policies, programs, and administration; use relationships and conflicts; considerations for regional water resource systems.

**CEWA 558 Water-Quality Management (3) Sp Mar, Palmer** Application of biological, ecological, and chemical processes to modeling of water quality and use of such models in appropriate management of water resource systems. Includes units on the modeling of temperature, BOD, nutrient, phytoplankton, zooplankton, and other processes in lakes, streams, and estuaries. Recommended: 434, 447, 456, and CIVE 491.

**CEWA 559 Water Resources System Management (3) A Burges, Mar, Palmer** A readings course in recent literature related to the modeling and management of water resources. Topics include drought management, expansion of existing water supplies, hydro-power production, streamflow forecasting, water demand forecasting, regional water planning, climate change, and other topical issues. Recommended: 557, 558.

**CEWA 560 Topics in Environmental Health (3) A Larson** Introduction to human biology, including physiology, epidemiology, and toxicology. Study of contemporary environmental health problems and practices as they relate to radiological health, solid-waste disposal, occupational health, biometeorology, and bioengineering.

**CEWA 562 Hazardous Air Pollution (3) W Pilat** Control of emissions of hazardous or toxic air pollutants. Government regulations, determination of needed control efficiency. Emission control by thermal incineration, catalytic incineration, flares, condensation, carbon adsorption, and absorption (wet and dry). Hazardous waste incinerators. Case studies. Joint with CH E 562.

**CEWA 563 Air Resources Management (3) A Larson, Pilat** Technical, administrative, and legal aspects of air conservation. Current case studies involving engineering analysis, air-quality modeling, and regulatory aspects at local, state, and federal governmental levels.

**CEWA 566 Control of Gaseous Air Pollutants (3) Sp Larson, Pilat** Physical and chemical processes used to control gaseous air pollutants. Absorption into liquids. Aqueous spray dryer scrubbers. Adsorption beds. Control of sulfur oxide and nitrogen oxide. Case studies of control systems. Joint with CH E 566. Prerequisite: 468 or CH E 435 or permission of instructor. (Offered even-numbered years.)

**CEWA 567 Control of Particulate Air Pollutants (3) Sp Pilat** Processes used to control emissions of particulate air pollutants. Use of settling chambers, cyclones, fabric filters, wet scrubbers, and electrostatic precipitators to control aerosol particles. Case studies of particulate air-pollutant control systems. Joint with CH E 567. Prerequisite: 468 or permission of instructor. (Offered odd-numbered years.)

**CEWA 577 Risk Assessment for Environmental Health Hazards (3) A Omerni** Context, methodologies, types of data, uncertainties and institutional arrangements for risk assessment. Both qualitative and quantitative approaches to the identification, characterization, and control of environmental hazards to health emphasized through didactic and case studies.

Joint with ENV S 577, ENVH 577, and PB AF 577. Prerequisites: ENV S 515, BIOST 511, EPI 511, or permission of instructor.

**CEWA 599 Special Topics: Water and Air Resources (2-5, max. 15) AWSpS** Prerequisites: permission of instructor and department Chairperson.

**CEWA 600 Independent Study or Research (\*) AWSpS**

## Computer Science and Engineering

114 Sieg

A Bachelor of Science in Computer Engineering degree is offered by the Department of Computer Science and Engineering, and is administered through the College of Engineering. The Department of Computer Science and Engineering also offers a Bachelor of Science degree in computer science administered through the College of Arts and Sciences. More information concerning the B.S. degree in computer science can be found under Computer Science in the College of Arts and Sciences section of this catalog.

Computer science is the study of information and algorithms in the context of real and abstract computing devices. Computer scientists study the representation and storage of information; programming and mathematical languages to express algorithms; and hardware and software processors to execute algorithms. These concerns lead both to theoretical investigations and to practical developments in computer technology and applications.

Computer engineering is a closely related field that concerns itself with the design and practical application of computer hardware and software systems to the solution of technological, economic, and societal problems. The computer engineer analyzes a problem and selects from a variety of tools those most appropriate for its solution. A computer engineer can expect to be involved in hardware design, software creation and systems integration. The program provides an in-depth education in computer engineering while retaining strong foundations in traditional electrical engineering and computer science. The computer engineering program involves digital hardware, software, and architecture. Mathematics, engineering design, laboratory work, and communication skills development are emphasized. A course including a project must be completed during the senior year.

### Instructional and Special Research Facilities

The Computer Science Laboratory provides powerful, state-of-the-art facilities for undergraduate, graduate and faculty research and instruction, including a VAX 8550, a DECsystem 5810, a 20-processor Sequent, numerous VAXstation, DECstation, and SUN workstations, as well as more specialized processors for research in artificial intelligence, graphics, image processing, and symbolic and parallel computing. These machines are networked together and connected to the Internet CSNET, USENET, BITNET and other national and international networks. Other facilities are also available on campus.

## Undergraduate Programs

### Bachelor of Science Degree

See Computer Science in the College of Arts and Sciences section of this catalog.

### Bachelor of Science in Computer Engineering Degree

114 Sieg

Because resources are limited, students must apply for admission to the computer engineering program. Ap-

plication forms and a comprehensive booklet, *The Computer Engineering Handbook for Undergraduates*, can be obtained from the Undergraduate Adviser in 114 Sieg. To be considered for admission to the program the student must have completed 64 credits applicable to the degree, including MATH 124, 125, 126, 307; PHYS 121, 122, 123, 131, 132, 133; CHEM 140, 141; ENGR 142; and at least 5 credits of composition from the UW composition list.

*Major Requirements (in addition to those imposed by the College of Engineering):* (1) Core Component (55 credits): CSE 143, 321, 326, 341, 370, 378, 451, 477; EE 233, 331, 332, 471. (2) Computer Engineering Elective Component (21 credits): Selected from the approved list of computer engineering electives in the undergraduate handbook. To graduate, a student must earn a total of 192 credits with a grade of at least 2.0 in all required or elective computer engineering courses taken. The engineering design credits must total at least 26, while the engineering science credits must total at least 50. For a complete description of the current requirements, please consult the undergraduate handbook.

## Graduate Program

Richard E. Ladner, Graduate Program Coordinator

The Department of Computer Science and Engineering offers programs of study leading to the degrees of Master of Science and Doctor of Philosophy. Individual programs can be designed to provide considerable breadth of knowledge, as well as depth in an area of specialization. An M.S. degree can usually be completed in one to two years, and a Ph.D. degree can be completed in four to five years. It is not necessary to complete an M.S. program before entering the Ph.D. program. Degree requirements are outlined in *The Computer Science and Engineering Graduate Program Brochure*, available from the department.

The department has thirty faculty members with appointments in Computer Science and Engineering and eighteen affiliated faculty members from other disciplines. Research opportunities exist for graduate students in the following ongoing projects and in other areas: VLSI, computer-aided design, computer architecture, operating systems, networks, programming environments, parallel and distributed computing, programming languages, compilers, performance analysis, artificial intelligence, image analysis, computer graphics, computer vision, computational complexity, analysis of algorithms, and biomedical computing.

### Application Requirements

Most entering graduate students are expected to have a solid background in computer science, including programming, machine organization, data structures, discrete mathematics, automata theory, and programming systems (e.g., the equivalent of 378, 326, 321, 322, and either 401 or 451). Some exceptions to these requirements are made for otherwise-promising students. Graduate Record Examination scores are required; GRE subject test score (not necessarily in computer science) is recommended. Scores should be earned within the preceding five years. *The Computer Science and Engineering Graduate Program Brochure* gives full details of application procedures.

Complete applications must be received by February 1 for autumn quarter admission.

### Assistantships

Some research assistantships are available in the Computer Science Laboratory and through research grants. Teaching assistantships are also available. In general, this support is allocated on the basis of scholastic excellence and potential. Students who are applying for assistantships to start in autumn quarter should have all applications to the Graduate School and the department completed by February 1.

The application packet contains all the necessary forms for applying to the Graduate School and to the Graduate Program in Computer Science and Engineering and for consideration for assistantships.

## Faculty

### Chairperson

Jean-Loup Baer

### Professors

Baer, Jean-Loup,\* 1969, (Electrical Engineering), Doctorat 3e Cycle, 1963, Grenoble; Ph.D., 1968, California (Los Angeles); parallel processing, system architecture.

Golde, Helmut,\* 1959, (Emeritus), (Electrical Engineering), M.S., 1955, Ph.D., 1959, Stanford; computer networks, compilers.

Haralick, Robert M.,\* 1968, ‡(Bioengineering, Electrical Engineering), M.S.E.E., 1967, Ph.D., 1969, Kansas (Lawrence); computer vision, artificial intelligence, image processing, pattern recognition, expert systems, parallel computer architecture.

Holden, Alistair D. C.\* 1958, ‡(Electrical Engineering), † M.Eng., 1958, Yale; Ph.D., 1964, Washington; artificial intelligence and applications, speech understanding, neural networks, knowledge-based systems.

Hunt, Earl, 1966, ‡(Psychology), Ph.D., 1960, Yale; human and artificial intelligence, computer applications in teaching, individual differences in intelligence.

Kehl, Theodore H.,\* 1961, (Physiology and Biophysics), † M.S., 1958, Ph.D., 1961, Wisconsin; real-time hardware and software systems, computer design, VLSI.

Kim, Yongmin,\* 1982, (Bioengineering), ‡(Electrical Engineering), Ph.D., 1982, Wisconsin; imaging systems, medical imaging, digital imaging networks, parallel computer architecture and systems design.

Klee, Victor,\* 1953, ‡(Mathematics), Ph.D., 1949, Virginia; Dr.Lic., 1984, Liege; convex sets, functional analysis, analysis of algorithms, linear programming, combinatorics.

Ladner, Richard E.,\* 1971, Ph.D., 1971, California (Berkeley); theory of distributed and parallel computing, computational complexity, design and analysis of algorithms, computer communication theory, computers to aid disabled persons.

Lazowska, Edward D.,\* 1977, M.Sc., 1974, Ph.D., 1977, Toronto; computer systems: modeling and analysis, design and implementation, distributed and parallel systems.

MacKay, Pierre A.,\* 1966, ‡(Classics, Comparative Literature, Near Eastern Languages and Civilization), M.A., 1959, Ph.D., 1964, California (Berkeley); multilingual text editing and typesetting (especially Arabic script), graphics, peripheral design.

Noe, Jerre D.,\* 1968, (Emeritus), (Electrical Engineering), Ph.D., 1948, Stanford; distributed computer systems, operating systems, simulation and performance evaluation.

Ruzzo, Walter L.,\* 1977, Ph.D., 1978, California (Berkeley); computational complexity, parallel computation.

Shapiro, Linda G.,\* 1986, (Electrical Engineering), † M.S., 1972, Ph.D., 1974, Iowa; computer vision, artificial intelligence, robotics, pattern recognition, intelligent information systems.

Shaw, Alan C.,\* 1971, M.S., 1962, Ph.D., 1968, Stanford; operating systems, software specifications, real-time systems.

Snyder, Lawrence,\* 1983, Ph.D., 1973, Carnegie-Mellon; the theory, algorithm, language, architecture, and VLSI issues of parallel computation.

Tanimoto, Steven L.\* 1977, (Electrical Engineering), M.S.E., 1973, M.A., 1974, Ph.D., 1975, Princeton; image analysis, computer graphics, artificial intelligence, educational technology.

Tomba, Martin,\* 1978-84, 1989, M.Sc., 1975, Ph.D., 1978, Toronto; computational complexity.

Young, Paul,\* 1983, Ph.D., 1963, Massachusetts Institute of Technology; computational complexity, computability, and connections with mathematical logic.

Zahorjan, John,\* 1980, M.Sc., 1976, Ph.D., 1980, Toronto; computer systems, performance analysis, parallel system programming models, scheduling, and runtime support.

Zick, Gregory L.\* 1974, ‡(Electrical Engineering), M.S., 1972, Ph.D., 1974, Michigan; computer engineering, sorting, I/O subsystems.

#### Associate Professors

Adams, Loyce M.\* 1985, ‡(Applied Mathematics), M.S., 1978, Ph.D., 1983, Virginia; parallel processing, numerical linear algebra.

Anderson, Richard J.\* 1986, Ph.D., 1985, Stanford; parallel algorithms, computational geometry, combinatorial optimization.

Allas, Les,\* 1983, ‡(Electrical Engineering), M.S., 1978, Ph.D., 1983, Stanford; neural networks, digital signal processing, speech processing, auditory science.

Borning, Alan H.\* 1980, M.S., 1974, Ph.D., 1979, Stanford; programming languages and environments, user interfaces, computers and society.

Dekker, David B., 1948, (Emeritus), (Mathematics), ‡ M.S., 1943, Illinois Institute of Technology; Ph.D., 1948, California (Berkeley); numerical analysis, curve fitting, numerical solution of differential equations.

DeRose, Anthony D.\* 1985, Ph.D., 1985, California (Berkeley); computer-aided geometric design and modeling, graphic user interfaces, high-resolution computer graphics.

Kalet, Ira J.\* 1982, ‡(Radiation Oncology), M.A., 1966, Ph.D., 1968, Princeton; medical applications of artificial intelligence, computer graphics, interface design, process control systems, distributed computing applications.

Levy, Henry M.\* 1983, M.S., 1981, Washington; computer architecture, operating systems, distributed and parallel systems, object-oriented systems.

McDonald, John A.\* 1985, (Research), ‡(Statistics), Ph.D., 1982, Stanford; interactive graphical statistics.

Notkin, David S.\* 1984, Ph.D., 1984, Carnegie-Mellon; software engineering, evolution, environments, and systems; parallel systems and environments.

Somani, Arun K., 1985, (Electrical Engineering), ‡ Ph.D., 1985, McGill; computer architecture, fault-tolerant computing, interconnection networks.

Stuetzle, Werner,\* 1984, ‡(Statistics), Ph.D., 1977, Eidgenössische Technische Hochschule (Switzerland); computational and graphical methods in multivariate analysis.

#### Assistant Professors

Beame, Paul W.\* 1987, M.S., 1982, Ph.D., 1987, Toronto; computational complexity, parallel computation, circuit-based complexity, cryptography.

Borriello, Gaetano,\* 1987, M.S., 1981, Stanford; Ph.D., 1988, California (Berkeley); computer-aided design and synthesis of digital circuits, VLSI design and architecture.

Brinkley, James F. III,\* 1988, (Research), ‡(Biological Structure), M.D., 1974, Washington; Ph.D., 1984, Stanford; constraint satisfaction, expert systems, model-based vision, biomedical applications of computers.

Burns, Steven, 1991, M.S., 1987, Ph.D., 1991, California Institute of Technology; design of asynchronous circuits, VLSI, CAD, programming multicomputers.

Chambers, Craig, 1991, S.B., 1986, Massachusetts Institute of Technology; Ph.D., 1991, Stanford; object-oriented language design and implementation.

Ebeling, W. H. Carl,\* 1986, M.S., 1976, Southern Illinois; Ph.D., 1986, Carnegie-Mellon; VLSI architectures, computer-aided design.

Eggers, Susan J.\* 1989, Ph.D., 1989, California (Berkeley); parallel architectures and parallel program behavior, compiler-directed parallelization, uniprocessor code and thread scheduling, trace-driven methodology, runtime code generation.

Etzioni, Oren,\* 1991, M.Sc., 1988, Ph.D., 1990, Carnegie-Mellon; artificial intelligence: machine learning, integrated architectures, planning.

Hanks, Steve,\* 1989, M.S.E., M.B.A., 1983, Pennsylvania; Ph.D., 1990, Yale; automated planning, temporal reasoning, and decision making under uncertainty; logic as a tool for artificial intelligence.

Riskin, Eve A., 1990, ‡(Electrical Engineering, Statistics), M.S.E.E., 1985, M.S.O.R., 1986, Ph.D., 1990, Stanford; data compression, image and signal processing; information theory.

Salesin, David, 1991, Sc.B., 1983, Brown; Ph.D., 1991, Stanford; computer graphics, user interfaces, computational geometry.

Weld, Daniel S.\* 1988, M.S., 1984, Ph.D., 1988, Massachusetts Institute of Technology; artificial intelligence, qualitative and causal reasoning, automated design, diagnosis, and planning.

#### Lecturer

Pattis, Richard, 1984, M.S., 1984, Stanford; understanding programming through formal and heuristic methods, debugging.

## Course Descriptions

### Courses for Undergraduates

**CSE 142 Computer Programming for Engineers and Scientists I (4)** Computer programming in high-level language. Emphasizes algorithmics (variables, expressions, statements); abstraction (data types, subprograms, packages, generics); analysis (correctness, efficiency, numerics). Program design and analysis: specification, coding, documentation, testing, debugging, evaluation (mostly in Ada, including FORTRAN). Using software tools. Joint with ENGR 142.

**CSE 143 Computer Programming II (5)** Continuation of 142. New topics include analyzing algorithms; using/writing standard software components (queues, stacks, and tables) implemented by private types, generic packages, and dynamic data structures (lists and trees); recursive data- and control structures. The last two weeks survey topics in computer science. Prerequisite: 142.

### Courses for Nonmajors

*The following courses are intended to give a technical introduction to fundamental topics in computer science to non-computer science majors who are likely to use computers as tools in their own disciplines.*

**CSE 373 Data Structures and Algorithms (3)** Fundamental algorithms and data structures for implementation. Techniques for solving problems by programming. Linked lists, stacks, queues, directed graphs. Trees: representations, traversals. Searching (hashing, binary search trees, multiway trees). Garbage collection, memory management. Internal and external sorting. Not open for credit to students who have completed 326 or E E 374. Prerequisite: 211.

**CSE 410 Computer Systems (3)** Structure and components of hardware and software systems. Machine organization, including central processor and

input-output architectures; assembly language programming; operating systems, including process, storage, and file management. Not open for credit to students who have completed 378 or 451. Prerequisite: 373.

**CSE 413 Programming Languages and Their Implementation (3)** Concepts and implementation strategies for ALGOL-class languages, including Pascal, Modula, ALGOL 60, Ada. Compilers for ALGOL-class languages. Languages with late binding times, including LISP, APL, Smalltalk. Not open for credit to students who have completed 341 or 401. Prerequisite: 373.

**CSE 415 Introduction to Artificial Intelligence (5)** Principles and programming techniques of artificial intelligence: LISP, symbol manipulation, knowledge representation, logical and probabilistic reasoning, learning, language understanding, vision, expert systems, and social issues. Not open for credit to students who have completed 473. Prerequisites: 373, or 211 and permission of instructor.

### Courses for Majors

*All 300- and 400-level courses below are for majors. Nonmajors may petition for entry codes.*

**CSE 321 Discrete Structures (4)** Fundamentals of set theory, graph theory, enumeration, and algebraic structures, with applications in computing. Prerequisites: 211 and MATH 126.

**CSE 322 Introduction to Formal Models in Computer Science (3)** Finite automata and regular expressions; context-free grammars and pushdown automata; nondeterminism; Turing machines and the halting problem. Emphasis on understanding models and their applications and on rigorous use of basic techniques of analysis. Induction proofs, simulation, diagonalization, and reduction arguments. Prerequisite: 321.

**CSE 326 Data Structures (4)** Data types, abstract data types, and data structures. Efficiency of algorithms. Sequential and linked implementation of lists. Binary tree representations and traversals. Searching: dictionaries, priority queues, hashing. Directed graphs, depth-first algorithms. Garbage collection. Dynamic storage allocation. Internal and external sorting. Not open for credit to students who have completed 373 or E E 374. Prerequisite: 321.

**CSE 341 Programming Languages (5)** Designed to make the student reasonably fluent in several radically different languages, such as LISP, ICON, PROLOG, Smalltalk-80. Not open for credit to students who have completed 413. Prerequisite: 211.

**CSE 370 Introduction to Digital Design (4)** Introductory course in digital logic and its specification, simulation, and testing. Boolean algebra, combinational and sequential digital circuits including arithmetic circuits and programmable logic devices. Laboratory sessions, three hours per week, to design, simulate, construct, and debug circuits based on concepts presented in lectures. Prerequisite: 321 or permission of instructor.

**CSE 374 Data Structures for Engineers (3)** Fundamental algorithms, and data structures for their implementation. Techniques for solving problems by programming. Sorting, searching, linked lists, binary search trees, balanced trees, hashing. Prerequisite: ENGR 142 or equivalent knowledge of programming.

**CSE 378 Machine Organization and Assembly Language (5)** Differences and similarities in machine organization. Central processors. Fundamentals of machine language and addressing. Assembly language programming, including macros. Operating system interfaces. Not open for credit to students who have completed 410. Prerequisite: 211.

**CSE 401 Introduction to Compiler Construction (3)** Fundamentals of compilers and interpreters for Algol-derivative languages; lexical analysis, syntax

analysis, semantic analysis, code generation, run time organization, and simple optimizations. Prerequisites: 326, 341, and 378.

**CSE 421 Introduction to Algorithms (3)** Techniques for design and analysis of efficient algorithms. Methods for showing lower bounds on computational complexity. Particular algorithms for sorting, searching, set manipulation, arithmetic, graph problems, pattern matching, etc. Prerequisites: 322, 326.

**CSE 431 Introduction to Theory of Computation (3)** Models of computation, computable and noncomputable functions, space and time complexity, tractable and intractable functions. Prerequisite: 322.

**CSE 440 Computer Based Simulation (3)** Discrete-event simulation, including Monte Carlo simulation. Design of appropriate simulation experiments and interpretation of their results. Generation of stochastic inputs and analysis of stochastic results. Students implement simulations using C, an object-oriented language. Prerequisites: 326 and familiarity with basic concepts of probability theory.

**CSE 444 Introduction to Data-base Systems (3)** Fundamental concepts, system organization, and implementation of data-base systems. Relational, hierarchical, and network data models; file organizations and data structures; query languages; query optimization; data-base design; concurrency control; security; issues involving distributed data-base systems. Prerequisite: 326.

**CSE 451 Introduction to Operating Systems (4)** Principles of operating systems. Process management, memory management, auxiliary storage management, resource allocation. Not open for credit to students who have completed 410 or E E 474. Prerequisites: 326, 378.

**CSE 457 Computer Graphics (3)** Techniques of computer image synthesis, including both hardware and software. Line drawing and color raster graphics. Homogeneous coordinates, hidden surface, and smooth shading algorithms. Prerequisite: 326.

**CSE 461 Introduction to Computer-Communication Networks (3)** Computer network architectures, protocol layers. Transmission media, encoding systems, error detection, multiplexing, switching. Data link, multiple access channel protocols. Methods for network routing, congestion control, flow control. End-to-end transport services, protocols. Network security, privacy. Applications including electronic mail, virtual terminals, distributed operating systems. Joint with E E 461. Prerequisite: senior standing.

**CSE 470 Computer Design (4)** Fundamental gating circuits. are developed into large-logic gating structures. The use of these structures in the design of central processing units, memories, and peripheral equipment is illustrated. Prerequisite: 378.

**CSE 472 Introduction to Computational Linguistics (3)** Introduction to computer applications of linguistic theory, including syntactic processing, semantic, and pragmatic interpretation and natural language generation. Joint with LING 472. Prerequisite: LING 461 or permission of instructor.

**CSE 473 Introduction to Artificial Intelligence (3)** Principal ideas and developments in artificial intelligence: theorem proving, problem-solving methods, representation of knowledge, natural language analysis and synthesis, programming languages for artificial intelligence. Not open for credit to students who have completed 415. Prerequisite: 326; recommended: 341.

**CSE 477 Digital System Design (5)** Provides students with a complete design experience. Uses laboratory to design, simulate, construct, and debug a substantial project of their choosing. Lectures focus on issues in composing large digital systems ranging from memory subsystems and interface logic to communication protocols and controllers. Prerequisites: 370 and assembly language programming.

**CSE 490 Special Topics in Computer Science and Engineering (3)** Lectures and discussions on topics of current interest in computer science and engineering not covered by other CSE undergraduate courses. Prerequisite: senior standing in Computer Science or Computer Engineering.

**CSE 498- Senior Project (1-9, max. 9)** A report (and perhaps demonstration) describing a development, survey, or small research project completed by the student in an area in computer science or an application to another field. Objectives are: (1) integrating material from several courses, (2) introducing the professional literature, (3) gaining experience in writing a technical document, and (4) showing evidence of independent work. The work normally extends over more than one quarter, for a maximum of 6 credits for 498- and a maximum of 9 credits for 498H-. Prerequisite: senior standing in computer science major.

**CSE 499 Reading and Research (1-24, max. 24)** Available in special cases for advanced computer science majors to do reading and research in the field. Credit/no credit only. Usable as a free elective, but not in place of a core course or computer science elective. Prerequisites: senior standing and permission of instructor.

### Courses for Graduates Only

*All graduate courses are primarily for computer science graduate students. Others must petition for entry codes.*

**CSE 500 Computers and Society (2)** Study of the impact of computer technology on present and future society, including political, economic, cultural, social, and moral issues. Seminar includes frequent guest lecturers and discussion leaders. Each student is required to complete a term project. Prerequisite: graduate standing in computer science or permission of instructor. (Offered alternate years.)

**CSE 501 Compiler Construction (3)** Design of compilers for block-structured general-purpose programming languages. Automatic generation of lexical analyzers and parsers. Error detection and correction. Code optimization. Prerequisites: 401, 505.

**CSE 503 Software Engineering (3)** Specification, implementation, and testing of large, multiperson, software systems. Topics include abstraction, information hiding, software development environments, and formal specifications. Prerequisites: 322, 326, 378, or equivalents. (Offered alternate years.)

**CSE 505 Concepts of Programming Languages (3)** Data structures, types, control structures. Languages in the ALGOL family; functional, object-oriented, and logic programming languages. Prerequisites: 401 and a working knowledge of Pascal and LISP.

**CSE 506 Advanced Topics in Programming Languages (3)** May include functional, object-oriented, parallel, and logic programming languages; semantics for languages of these kinds; type declaration, inference, and checking (including polymorphic types); implementation issues, such as compilation, lazy evaluation, combinators, parallelism, and various optimization techniques. Implementation project required. Prerequisites: 501, which may be taken concurrently, and 505.

**CSE 519 Computer Science Research Seminar (1, max. 3)** Weekly presentations on current research activities by members of the department. Only computer science graduate students may register, although others are encouraged to attend.

**CSE 520 Computer Science Colloquium (1, max. 9)** Weekly public presentations on topics of current interest by visiting computer scientists.

**CSE 521 Design and Analysis of Algorithms I (3)** Principles of design of efficient algorithms: recursion, divide and conquer, balancing, dynamic programming, greedy method, data structure selection. Cor-

rectness and analysis of algorithms. Examples drawn from problems in sorting, searching, set manipulation, pattern matching, graphs, matrices, polynomials, and integers. Prerequisite: 326 or equivalent.

**CSE 522 Design and Analysis of Algorithms II (3)** Analysis of algorithms more sophisticated than those treated in 521. Content varies and may include such topics as algebraic algorithms, combinational algorithms, techniques for proving lower bounds on complexity, and algorithms for special computing devices such as networks or formulas. Prerequisite: 521.

**CSE 523 Computational Geometry (3)** Algorithms for discrete computational geometry. Geometric computation, range searching, convex hulls, proximity, Voronoi Diagrams, intersection. Application areas include VLSI design and computer graphics. Prerequisites: 521; recommended: 457 or equivalent.

**CSE 524 Parallel Algorithms (3)** Design and analysis of parallel algorithms: fundamental parallel algorithms for sorting, arithmetic, matrix and graph problems and additional selected topics. Emphasis on general techniques and approaches used for developing fast and efficient parallel algorithms and on limitations to their efficacy. Prerequisite: 521.

**CSE 531 Automata, Computability, and Complexity (3)** Computational models including finite automata, regular expressions, context free grammars, pushdown automata, Turing machines, and techniques for analyzing them. Basic computability theory and undecidability. Fundamentals of computational complexity theory and NP-completeness. Prerequisite: CSE majors only.

**CSE 532 Complexity Theory (3)** Deterministic, nondeterministic, alternating, and probabilistic Turing machines. Time and space complexity, complexity classes, complexity hierarchies, and provably intractable problems. Prerequisite: 531.

**CSCI 533 Advanced Topics in Complexity Theory (3)** Topics in computational complexity more sophisticated than those treated in 532. Topics are expected to vary from year to year, but might typically focus on such areas as parallel complexity, probabilistic complexity, circuit- or automaton-based complexity, or logic.

**CSE 536 Theory of Distributed Computing (3)** Formal approaches to distributed computing problems. Topics vary, but typically include models of distributed computing, agreement problems, impossibility results, mutual exclusion protocols, concurrent reading while writing protocols, knowledge analysis of protocols, and distributed algorithms.

**CSE 540 Discrete System Simulation (3)** Principles of simulation of discrete, event-oriented systems. Model construction, simulation and validation. Distributed and parallel simulation techniques. Basic statistical analysis of simulation inputs and outputs. Use of C, an object-oriented language, and S, a statistical analysis package. Prior familiarity with the concepts of probability and statistics desirable.

**CSE 542 Central Processor Architecture (3)** Several central processing units are examined at the gate level. Included are the logic structures of: I/O bus, memory bus, ALU, address modification, control logic, combinatorial and multiphase instructions, access priority, cycle stealing, etc. Prerequisite: 470.

**CSE 543 Computer System Performance (3)** Emphasizes the use of analytic models as tools for evaluating the performance of centralized, distributed, and parallel computer systems. Prerequisite: 451; computer science majors only.

**CSE 544 Fundamentals of Stochastic Models of Computer Systems (3)** Mathematical and computational properties of analytic performance models of computer systems. Markov stochastic processes, single congestion point queueing theory, separable and nonseparable networks, and formal and heuristic approaches to the analysis of these models. Prerequisite:

sites: 543 and some familiarity with concepts from basic probability theory. (Offered alternate years.)

**CSE 548 Computer Systems Architecture (3)** Notations for computer systems. Processor design (single chip, look-ahead, pipelined, data flow). Memory hierarchy organization and management (virtual memory and caches). Microprogramming. I/O processing. Multiprocessors (SIMD and MIMD). Prerequisites: 451 and 470, which may be taken concurrently.

**CSE 549 High-Performance Computer Architectures (3)** Algorithm design, software techniques, and computer organizations for high-performance computing systems. Selected topics from: VLSI complexity for parallel algorithms, compiling techniques for parallel and vector machines, large MIMD machines, interconnection networks, reconfigurable systems, memory hierarchies in multiprocessors, algorithmically specialized processors, data-flow architectures. Prerequisite: 548 or permission of instructor.

**CSE 551 Operating Systems (3)** Operating systems design and construction techniques. Concurrent programming, operating system kernels, correctness, deadlock, protection, transaction processing, design methodologies, comparative structure of different kinds of operating systems, and other topics. Prerequisite: 451; computer science majors only.

**CSE 552 Distributed and Parallel Systems (3)** Principles, techniques, and examples related to the design, implementation, and analysis of distributed and parallel computer systems. Prerequisite: 551.

**CSE 553 Real-time Systems (3)** Design and construction of software for real-time computer systems. Software architecture. Requirements and specification methods. Scheduling algorithms and timing analysis. Real-time operating systems. Real-time programming languages. Selected case studies. Prerequisites: 451; graduate majors in computer science only.

**CSE 557 Computer Graphics (3)** Generation and interpretation of pictures by computer with or without human interaction. Graphics hardware. Display programming. Picture transformation. Representations of pictures and their attributes. Curve and surface design and generation. Input methods. Graphics programming languages and systems. Laboratory project required.

**CSE 558 Computer Aided Geometric Design (3)** Surveys the basic issues, theory, and techniques in the computer-assisted design of geometric shapes. Emphasizes parametric curve and surface descriptions of the variety found in automotive and aeronautics design. Prerequisite: 523 or 557 or permission of instructor. (Offered alternate years.)

**CSE 561 Computer Communication and Networks (3)** Fundamentals of data transmission: coding, message formats, and protocols. Organization of computer networks. Examples of network implementations. Prerequisite: 451 or equivalent; computer science and electrical engineering graduate majors only.

**CSE 563 Fault Tolerant Computing (3)** Faults and their manifestation, issues, theory, and techniques of reliable systems design, testing, design for testability, self-checking and fail-safe circuits, coding techniques, system-level fault diagnosis, fault-tolerant communication, reliable software design, and evaluation criteria. Joint with E E 563. Prerequisite: basic knowledge of digital systems design or permission of instructor.

**CSE 567 Principles of Digital Systems Design (3)** Principles of logic design, combinational and sequential circuits, minimization techniques, structured design, methods, CMOS technology, complementary and ratioed gates, delay estimation and performance analysis, arithmetic circuits, memories, clocking methodologies, synthesis and simulation tools, VLSI processor architecture. Prerequisite: basic knowledge of logic design.

**CSE 568 Advanced VLSI Laboratory (3)** Advanced topics on MOS technology and CAD software; students

design a large chip (more than 10K transistors) to be fabricated at end of term; laboratory activities include circuit and logic design, graphic layout of a chip, extraction, checking, and simulation. Prerequisite: 567 or permission of instructor.

**CSE 573 Artificial Intelligence I (3)** Introduction to computational models of thought and construction of intelligent information systems. Topics include search algorithms, data dependencies and truth-maintenance systems, approaches to knowledge representation, automated deduction, reasoning under uncertainty, and machine learning. Prerequisites: 421 or equivalent; exposure to logic, and LISP programming experience; computer science majors only.

**CSE 574 Artificial Intelligence II (3)** Advanced topics in artificial intelligence. Subjects include planning, natural language understanding, qualitative physics, machine learning, and formal models of time and action. Students are required to do projects. Prerequisite: 573; computer science graduate majors only.

**CSE 576 Image Understanding (3)** Overview of computer vision, emphasizing the middle ground between image processing and artificial intelligence. Image formation, preattentive image processing, boundary and region representations, and case studies of vision architectures. Joint with E E 576. Prerequisites: 573 or E E 562, or permission of instructor.

**CSE 577 Mathematical Morphology (3)** Theory of mathematical morphology and its application in various commercial, industrial, medical, and research applications. Contents include binary and grayscale morphologic dilation, erosion, opening, and closing, morphological sampling theorem, structuring element decomposition, thinning, skeletonizing, and relational shape description. Group project. Joint with E E 577. Prerequisite: 576 or E E 568 or permission of instructor.

**CSE 581 Parallel Computation in Image Processing (3)** Parallel architectures, algorithms, and languages for image processing. Cellular array, pipelined and pyramid machines, instruction sets, and design issues. Parallel implementations of filtering, edge detection, segmentation, shape, stereo, motion, relaxation algorithms, multiresolution methods, and iconic-to-symbolic transforms. Students write and debug programs for parallel computers. Prerequisite: permission of instructor.

**CSE 590 Special Topics in Computer Science (\*)** Several offerings each quarter, on topics of current interest. Prerequisite: permission of instructor.

**CSE 600 Independent Study or Research (\*)** Credit/no credit only.

**CSE 700 Master's Thesis (\*)** Credit/no credit only.

**CSE 800 Doctoral Dissertation (\*)** Credit/no credit only.

## Electrical Engineering

### 211 Electrical Engineering

Electrical engineering is concerned with the understanding and utilization of electricity, including the electric and magnetic properties of matter, to provide society with useful, efficient, and economic products and services. The scope of activity is wide-ranging and diversified, covering such topics as the planning, design, implementation, and maintenance of large-scale systems for worldwide communication and regional power generation and distribution; microelectronic and photonic devices; applying signal and image processing in all branches of the physical and life sciences and engineering; computer systems and their applications; instrumentation and control systems. In electrical engineering, rapid technological innovation is the rule rather than the exception. Preparation for a

professional career in the field builds on a solid foundation in mathematics and the physical sciences, plus practice in the application of these basic principles to real-world problems. In addition, the important role of science and technology in contemporary society requires significant emphasis in the humanities and social sciences.

The department's undergraduate program provides the intellectual tools, analytical and laboratory skills, and humanistic-social values for professional work in the field. The program also forms a basis for further professional development in graduate school, and through continuing education programs or through independent study. The core curriculum consists of required courses in the college and department that focus on mathematical and physical principles and on modern techniques that have applications to real-world problems. Technical electives offer the opportunity to obtain breadth and depth in such areas as electronic materials, devices and circuits, power systems and energy conversion, electrophysics, computers and information systems, communication systems, automatic controls, robotics, and signal processing.

## Undergraduate Program

### Bachelor of Science in Electrical Engineering Degree

*The electrical engineering undergraduate program course requirements and departmental prerequisites will change during the term of this catalog. Prospective students should consult the department advising office for the requirements in effect when they seek admission.*

Due to the large demand for professional training in electrical engineering in the face of limited space and resources, the Department of Electrical Engineering is unable to accept all qualified applicants for its undergraduate program. Consequently, a separate application is required for admission to the undergraduate program in electrical engineering. Deadlines for submitting applications are the same as the closing dates that are given in the Academic Calendar at the front of this catalog for all new and former student applications. Students may only enter the degree program of the department autumn or spring quarters. To be eligible for consideration for admission, a student must satisfy the following conditions: (1) have applied and be admissible to the University or already be a student in good standing; (2) have completed a minimum of 45 credits (i.e., sophomore standing) with a cumulative GPA of 2.50 or higher; (3) have successfully completed a year of college calculus (MATH 124, 125, 126), a quarter of differential equations (MATH 307), three quarters of physics using calculus (PHYS 121, 122, 123), a quarter of college chemistry (CHEM 140), a quarter of computer programming (ENGR 142), a quarter of computer operations and organization (ENGR 275), and 5 quarter credits of composition selected from ENGR 130; ENGL 111, 121, 131, 182, 197, 198, 199, 271; or C LIT 240. The cumulative GPA in these courses must be 2.50 or higher.

In addition to the overall post-high school GPA and the minimum grade requirement in the courses mentioned above, the selection process considers grades in other technical courses taken. The above are minimum requirements, and meeting all of them does not guarantee admission to the program.

Copies of the *Undergraduate Handbook*, which contains detailed curriculum requirements and suggestions for the design of an effective sequence of elective courses, are available in 215 Electrical Engineering (Advising Office) or in the Engineering Advising Center.

In addition to the College of Engineering requirements, the following courses are required for the electrical engineering program: a core of 35 credits of specified electrical engineering courses normally taken in the junior year and 32 credits of electrical engineering electives. To graduate, a student must earn a total of

192 credits with a minimum cumulative GPA of 2.00 in all electrical engineering courses, with no grade below 1.0 in any of these courses. In addition, it is required that each student's program of study conform with the Accreditation Board for Engineering and Technology (ABET) requirement of at least 48 credits in engineering science and 24 credits in engineering design.

The departmental policy on continuation is consistent with the continuation policy of the college but also includes supplementary requirements specific to the department. Details may be obtained from the department advising office.

Many scholarships specifically for electrical engineering majors, based on merit and financial need, are awarded each year. Students interested in applying for these and other College of Engineering scholarships may obtain information from the Department of Electrical Engineering Scholarship Award Committee chairperson.

## Graduate Program

The Department of Electrical Engineering offers graduate programs leading to the degrees of Master of Science in Electrical Engineering and Doctor of Philosophy. Graduate courses and research programs are offered in electromagnetics, radio science, optics, acoustics, microsensors, electronic materials and devices, microelectronics, VLSI design, computers and information systems, digital systems, computer architecture, computer networks and distributed systems, software engineering, operating systems, microprocessors, energy systems, power electronics and electric drives, control systems, circuits and network theory, neural networks, telecommunications, signal processing, image and speech processing, machine vision, and biosystems. Opportunities also exist for participation in research on medical instrumentation in the bioengineering program and in marine acoustics and instrumentation systems at the Applied Physics Laboratory.

A minimum of 45 credits is required for graduation with the M.S.E.E. degree. Students writing a thesis receive 9 to 12 credits for its preparation, while those selecting a project-based degree program must complete a one-term project. The remaining credits must be earned in course work selected, with faculty supervisory committee approval, to prepare the student in an area of specialization. If more flexibility is desired than allowed by the M.S.E.E. requirements, the interdisciplinary degree of Master of Science in Engineering is suggested.

The M.S.E.E. degree is also offered to part-time students employed in local industries through the Televised Instruction in Engineering (TIE) program. Regular graduate courses are offered over cable television or by videotape to enable working engineers to participate in the program without traveling to campus.

To graduate with the Ph.D. degree, a student must pass the departmental qualifying examination, pass an advanced General Examination, pursue an original research problem, and report the results of that research in a dissertation that is a significant new contribution to knowledge. At least one year of course work beyond completion of the M.S.E.E. degree is usually necessary.

### Research Facilities

Facilities in the Electrical Engineering Department include laboratories for study of solid-state materials and devices, computer technology, microsensors, optics, electromagnetics, computer systems, machine vision, analog and digital electronics, energy systems, power electronics and electric drives, bioelectronics, control systems, and statistical data analysis. Also available are extensive computer, integrated circuit and sensor fabrication, and characterization facilities.

### Admissions Qualifications

In addition to meeting Graduate School admission requirements, the Graduate Record Examination (GRE) general test is required of all students. Official test scores must be submitted, along with a formal application and a minimum of two reference letters. Although most applicants have baccalaureate degrees in electrical engineering, applicants with degrees in other branches of engineering, the physical sciences, computer science, or mathematics often are able to pursue graduate study in electrical engineering following some additional preparation.

### Financial Aid

Research assistantships, teaching assistantships, scholarships, and graduate fellowships are available to qualified graduate students in all areas of electrical engineering. Most awards include a monthly stipend plus payment of tuition and fees.

### Correspondence and Information

Graduate Program Coordinator  
Department of Electrical Engineering, FT-10

## Faculty

### Chairperson

Thomas A. Seliga

### Professors

Afromowitz, Martin A.,\* 1975, (Bioengineering), M.S., 1966, Ph.D., 1969, Columbia; integrated-circuit fabrication, microtechnology, bioengineering instrumentation, sensors, fiber optics.

Albrecht, Robert W.,\* 1961, (Nuclear Engineering),† M.S., 1958, Ph.D., 1961, Michigan; stochastic and dynamic analysis of physical systems, microwave device for sodium-level measurements, autonomous mobile robots.

Alexandro, Frank J.,\* 1964, M.S.E.E., 1959, Eng. Sc.D., 1964, New York; control systems, failure detection methods, robot control.

Andersen, Jonny,\* 1967, M.S., 1962, Ph.D., 1965, Massachusetts Institute of Technology; circuit design, modeling, CAD/CAM, computer graphics.

Baer, Jean-Loup,\* 1969, ‡(Computer Science and Engineering), Doctorat 3e Cycle, 1963, Grenoble; Ph.D., 1968, California (Los Angeles); computer science, parallel processing, computer system architecture, data structures.

Bergseth, F. Robert, 1947, (Emeritus), S.M., 1938, Massachusetts Institute of Technology; electric power systems.

Bjorkstam, John L.,\* 1955, (Emeritus), M.S.E.E., 1952, Ph.D., 1958, Washington; materials science and engineering, fundamentals and technological applications of magnetic resonance.

Cheung, Peter W.,\* 1984, (Bioengineering),† M.S., 1969, Puget Sound; Ph.D., 1973, Washington; microsensors and microelectronics, microprocessor-based biomedical instrumentation.

Clark, Robert N.,\* 1957, (Aeronautics and Astronautics),† M.S., 1951, Michigan; Ph.D., 1969, Stanford; automatic control systems, fault detection in dynamic systems.

Damborg, Mark J.,\* 1969, M.S., 1963, Ph.D., 1969, Michigan; control systems theory and applications, power system dynamics and control, data-base methods in computer-aided engineering, expert systems applications.

Dow, Daniel G.,\* 1968, M.S., 1953, Michigan; Ph.D., 1958, Stanford; microwaves, physical electronics, semiconductor devices, sensors.

El-Sharkawi, Mohamed A.,\* 1980, M.A.Sc., 1977, Ph.D., 1980, British Columbia; power system dynamics and control; electric drives and power electronics, artificial neural networks applied to power systems.

Golde, Hellmut,\* 1959, (Emeritus), ‡(Computer Science and Engineering), M.S., 1955, Ph.D., 1959, Stanford; computer science, compilers and languages.

Guilford, Edward C.,\* 1959, (Emeritus), M.A., 1950, Utah; Ph.D., 1959, California; electronics, computers.

Guy, Arthur W.,\* 1965, (Emeritus), (Bioengineering, Rehabilitation Medicine), M.S.E.E., 1957, Ph.D., 1966, Washington; biological effects and medical applications of electromagnetic fields.

Haralick, Robert M.,\* 1986, (Bioengineering, Computer Science and Engineering), M.S.E.E., 1967, Ph.D., 1969, Kansas; computer vision, artificial intelligence, image processing, pattern recognition, expert systems, parallel computer architecture.

Holden, Alistair D. C.,\* 1958, (Computer Science and Engineering),† M.Eng., 1958, Ph.D., 1964, Washington; computer engineering, speech recognition, computer-aided design, artificial intelligence.

Hsu, Chih-Chi,\* 1958, M.S., 1948, Michigan; Ph.D., 1951, Ohio State; control systems and cybernetics.

Ishimaru, Akira,\* 1956, (Applied Mathematics), Ph.D., 1958, Washington; electromagnetics, optics, acoustics, applied mathematics, scattering theory.

Johnson, David L.,\* 1955, (Emeritus), Ph.D., 1955, Purdue; digital design, artificial intelligence (models of learning systems).

Kim, Yongmin,\* 1982, (Bioengineering, Computer Science and Engineering), M.S., 1979, Ph.D., 1982, Wisconsin (Madison); image processing, computer graphics, parallel processing, microcomputer applications, medical instrumentation.

Lauritzen, Peter O.,\* 1965, M.S., 1958, Ph.D., 1961, Stanford; power electronics, semiconductor devices, modeling and simulation.

Lewellen, Thomas K.,\* 1987, ‡(Radiology, Bioengineering), Ph.D., 1972, Washington; medical imaging, positron emission tomography, magnetic resonance imaging, detector development, reconstruction algorithm development.

Lewis, Laurel J., 1946, (Emeritus), E.E., 1935, Ph.D., 1947, Stanford; circuits and systems.

Liu, Chen-Ching,\* 1983, M.S., 1978, National Taiwan; Ph.D., 1983, California (Berkeley); planning and operation of power systems, expert systems, power electronics.

Lytle, Dean W.,\* 1958, M.S., 1954, Ph.D., 1957, Stanford; communication and stochastic systems analysis, marine acoustics.

Marks, Robert J. II,\* 1977, M.S., 1973, Rose-Hulman Institute of Technology; Ph.D., 1977, Texas Tech; optical processing, signal analysis, neural networks.

Meditch, James S.,\* 1977, S.M., 1957, Massachusetts Institute of Technology; Ph.D., 1961, Purdue; communications networks; architectures and protocols, high speed switching, broad band integrated services networks.

Moritz, William E.,\* 1973, M.S., 1966, Ph.D., 1969, Stanford; microcomputer applications, computer-aided manufacturing.

Noe, Jerre D.,\* 1968, (Emeritus), (Computer Science and Engineering), Ph.D., 1948, Stanford; operating systems, computer measurement and evaluation, distributed computer networks, simulation.

Noges, Endrik,\* 1958, M.S., 1956, Ph.D., 1959, Northwestern; automatic control systems, nonlinear and discontinuous control.

Pearsall, Thomas P.,\* 1989, (Materials Science and Engineering) M.Sc., London, 1970; Ph.D., Cornell, 1973; solid-state device physics and technology, optoelectronics, materials science.

Peden, Irene C.,\* 1961, M.S., 1958, Ph.D., 1962, Stanford; subsurface remote sensing, applied electromagnetics.

Pinter, Robert B.,\* 1964, (Zoology), M.S., 1960, Ph.D., 1964, Northwestern; cybernetics, robotics, biophysics.

Porter, Robert P.,\* 1985, M.S., 1966, Massachusetts Institute of Technology; Ph.D., 1970, Northeastern; signal processing, underwater acoustics, electromagnetic and acoustic wave propagation, inverse scattering.

Rogers, Walter E., 1946, (Emeritus), M.S.E.E., 1948, Washington; electromagnetics.

Seliga, Thomas A.,\* 1990, M.S., 1961, Ph.D., 1965, Pennsylvania State; electromagnetics, wave propagation, remote sensing and applications to atmospheric sciences.

Shapiro, Linda G.,\* 1986, (Computer Science and Engineering),† M.S., 1972, Ph.D., 1974, Iowa; computer vision, artificial intelligence, robotics, pattern recognition, intelligent information systems.

Siglmann, Rubens A.,\* 1959, M.S., 1961, Ph.D., 1963, Washington; bioengineering, ultrasonics, propagation, acoustics.

Smith, George S., 1921, (Emeritus), E.E., 1921, Washington; instrumentation, high voltage technique.

Soma, Mani,\* 1982, (Bioengineering), M.S.E.E., 1977, Ph.D., 1980, Stanford; computer-aided design, device modeling, IC technology and design, bioengineering.

Spelman, Francis A.,\* 1961, (Research), ‡(Bioengineering, Otolaryngology), M.S.E.E., 1968, Ph.D., 1975, Washington; biomedical instrumentation, cochlear implants for the profoundly deaf, cardiovascular control systems, biological image processing.

Spindel, Robert C., 1987, (Oceanography), M.S., 1966, Ph.D., 1970, Yale; ocean acoustics, signal processing, acoustic navigation systems, acoustic tomography.

Tanimoto, Steven L.,\* 1977, ‡(Computer Science and Engineering), M.S.E., 1973, M.A., 1974, Ph.D., 1975, Princeton; image analysis, artificial intelligence, computer graphics.

Tsang, Leung,\* 1983, M.S., 1973, Ph.D., 1976, Massachusetts Institute of Technology; wave propagation and scattering, remote sensing, optics.

Venkata, Subrahmanyam S.,\* 1979, M.S., 1965, Indian Institute of Technology (India); Ph.D., 1971, South Carolina; energy and power, transmission and distribution, computer applications, expert systems.

Yee, Sinclair S.,\* 1966, M.S., 1961, Ph.D., 1965, California (Berkeley); physical electronics, semiconductor integrated optic devices, microsensors.

Zick, Gregory L.,\* 1974, (Computer Science and Engineering), M.S., 1972, Ph.D., 1974, Michigan; computer engineering, operating systems, expert data-base systems, I/O subsystems.

#### Associate Professors

Atlas, Les E.,\* 1983, (Computer Science and Engineering), M.S., 1978, Ph.D., 1983, Stanford; speech recognition and processing, digital signal processing, auditory sciences, neural networks.

Darling, Robert B.,\* 1985, M.S., 1982, Ph.D., 1985, Georgia Institute of Technology; semiconductor devices, solid state, optoelectronics, microelectronics.

Helms, Ward J.,\* 1968, M.S., 1963, Ph.D., 1968, Washington; VLSI analog and digital circuit design, integrated circuits, acoustics and audio, silicon compilers.

Jackson, Darrell R.,\* 1976, (Research), M.S.E.E., 1963, Ph.D., 1966, Washington; Ph.D., 1977, California Institute of Technology; signal processing, underwater acoustics, wave scattering.

Katz, Philip L.,\* 1984, (Research), M.S.E., 1965, Ph.D., 1970, Michigan; imaging processing, feature extraction classification, underwater acoustics, acoustics signature analysis, dynamic modeling and optimization.

Kuga, Yaso, 1991, M.S.E.E., 1979, Ph.D., 1983, Washington; remote sensing, electromagnetics, optics.

Kuhn, Kellin,\* 1987, (Materials Science and Engineering), M.S.E.E., 1985, Ph.D., 1985, Stanford; molecular beam epitaxy.

Patton, Jesse C.,\* 1989 (Research) ‡(Bioengineering), Ph.D., 1972, West Virginia (Morgantown); micro-sensors including chemical and biosensors.

Redeker, Charles C., 1964, (Emeritus), M.S.M.E., 1964, Washington; computer programming languages.

Ritcey, James A.,\* 1985, M.S.E.E., 1980, Syracuse; Ph.D., 1985, California (San Diego); detection, estimation, and signal processing.

Somani, Arun K.,\* 1985, (Computer Science and Engineering),† M.S., 1983, Ph.D., 1985, McGill; computer architecture, fault-tolerant computing, parallel processing, computer networks, VLSI systems.

Thorsos, Eric I., 1990, (Research), M.S., 1966, California (Davis); Ph.D., 1972, Massachusetts Institute of Technology; numerical simulation of rough surface scattering theory, back scattering enhancement.

#### Assistant Professors

Belcher, Edward O.,\* 1979, (Research), M.A., 1970, Stanford; Ph.D., 1976, Washington; signal processing, artificial intelligence, underwater acoustics.

Chan, Chi H.,\* 1989, M.S., 1982, Ohio State; Ph.D., 1987, Illinois (Urbana); computational electromagnetics, scattering, antennas, bioengineering.

Christie, Richard D.,\* 1989, M.E., 1974, Rensselaer Polytechnic Institute; Ph.D., 1989, Carnegie-Mellon; power system operation, expert systems, software engineering.

Dailey, Daniel J., 1988, (Research), M.S.N.E., 1982, Ph.D., 1988, Washington; time series modeling of physical phenomena, networking and distributed computing.

Hannaford, Blake,\* 1989, M.S., 1982, Ph.D., 1985, California (Berkeley); telerobotics, neurological control systems, man-machine systems, bioengineering.

Hwang, Jenq-Neng,\* 1989, M.S., 1981, National Taiwan; Ph.D., 1988, Southern California; parallel array processors, signal processing, neural networks.

Luby, James C., 1987, (Research), M.S., 1978, Colorado State; Ph.D., 1984, Washington; signal processing, detection, estimation, underwater acoustics.

Music, Wayne,\* 1991, (Research), M.S.E.E., 1976, Washington; Ph.D., 1983, Southern Methodist; adaptive signal processing, modulation, detection, estimation and receiver design.

Riskin, Eve A.,\* 1990, (Computer Science, Statistics), M.S.E.E., 1985, M.S.O.R., 1986, Ph.D., 1990, Stanford; image processing and compression, data compression, decision free design and applications.

Sahr, John, 1991, Ph.D., 1990, Cornell; radar remote sensing.

Winebrenner, Dale P., 1986, (Research), M.S.E.E., 1980, California (San Diego); Ph.D., 1985, Washington; wave scattering, remote sensing.

Yang, Andrew T.,\* 1989, M.S., 1986, Ph.D., 1989, Illinois; modeling and simulation of semiconductor devices, high-speed circuits, VLSI CAD.

#### Lecturer

Potter, William W., 1970, (Emeritus), M.S., 1959, Monterey; electronics.

## Course Descriptions

### Courses for Undergraduates

**E E 231 Introduction to Electrical Circuits and Systems (4) AWSp** Basic principles of modern circuits and systems theory in circuit analysis. Resistors, sources, and simple circuits, resistance networks; ca-

pacitors and inductors, first-order circuits; second- and higher-order circuits; solutions of linear differential equations representing equilibrium equations of networks by time-domain techniques. Prerequisites: MATH 307, which may be taken concurrently, and PHYS 122.

**E E 233 Circuit Theory (5)** Electric circuit theory. Analysis of circuits with sinusoidal signals. Phasors, system functions, and complex frequency. Frequency response. Computer analysis of electrical circuits. Power and energy. Two port network theory. Laboratory in basic electrical engineering topics. Prerequisite: 231 or ENGR 215.

**E E 235 Signal Analysis (4) AWSps** Introduction to continuous and discrete time signal analysis. Basic signals including impulses, pulses, and unit steps. Periodic signals. Convolution of signals. Fourier series and transforms in discrete and continuous time. Computer illustrations. Prerequisites: PHYS 122, 132, and concurrent registration in MATH 307.

**E E 299 Special Topics in Electrical Engineering (1-5) AWSps** New and experimental approaches to basic electrical engineering. May include design and construction projects. Prerequisite: permission of department Chairperson.

**E E 306 Elements of Electrical Engineering (3-5) AWSp** Introductory course for non-electrical engineering majors covering circuit analysis, electronic devices, and rotating machinery. 3-credit portion covers circuit analysis and electronics. 4th credit contains two laboratories to introduce electronic instrumentation and device operation. 5th credit covers machinery with additional laboratory. Prerequisites: PHYS 122, MATH 126.

**E E 310 Electronics Laboratory I (3) AWSp** Fundamentals of laboratory practices; fundamentals of instrumentation; switches, elementary gates, and flip-flops; elementary amplifiers, input and output impedances; use of integrated circuits and devices to typical applications, such as regulated power supplies, multipliers, operational amplifiers, and oscillators. Prerequisite: 231; recommended: concurrent registration in 333 and 355.

**E E 312 Electrophysics Laboratory (2) AWSp** One three-hour laboratory period each week; experiments on solid-state devices, properties of materials, generation and guiding of electromagnetic waves. Prerequisites: 310, 381, 383, which may be taken concurrently.

**E E 331 Devices and Circuits I (5)** Fundamentals of electrons and holes in semiconductors; physical processes of drift, diffusion, recombination; structure, characteristics of pn-junction diodes; use and analysis of junction diodes in nonlinear circuit applications; structure, characteristics of field-effect transistors; use and analysis of field-effect transistors in nonlinear circuit applications. Weekly laboratory. Prerequisite: ENGR 233.

**E E 332 Devices and Circuits II (5) AWSp** Structure, characteristics of bipolar transistors; nonlinear circuit applications of bipolar transistors; small-signal analysis and models for field-effect, bipolar transistors; linear circuit applications including differential amplifiers, current sources and mirrors, gain stages, output stages; internal circuitry of opamps; opamp configurations; frequency response, compensation. Weekly laboratory. Prerequisites: ENGR 331.

**E E 333 Circuits and Systems II (4) AWSp** Continuation of 231. System functions, complex frequency, and pole-zero properties. The sinusoidal steady-state. Energy and power. Frequency response of systems. One-sided Laplace transform with applications to circuit analysis and design. Prerequisites: 231, MATH 307.

**E E 335 Linear Systems Analysis I (4) AWSp** Analysis of linear systems in continuous and discrete time. Fourier analysis of continuous and discrete signals and systems. The sampling theorem and its rami-

fications. Laplace transforms and Z-transforms and their utilization. Prerequisite: 333.

**EE 341 Linear Systems Analysis (5) AWSpS** Continuous and discrete time signals and systems, impulse response, convolution, Laplace and Z-transforms, transient and steady-state response. Probability in systems analysis. Computer laboratory. Prerequisites: 235, MATH 307.

**EE 351 Energy Systems (5) AWSp** Introduction to theory and methods of analysis in the use of typical apparatus to generate, transmit, utilize energy in electrical form. Includes conventions of circuit description, balanced polyphase circuits, complex power concept, transformer, fundamentals of electromechanical energy conversion, practical synchronous induction and commutator machines, an introduction to power electronics circuits.

**EE 355 Electronics I: Introduction to Digital and Analog Electronics (4) AWSp** Analysis and design of logic circuits using p-n junctions, MOS, and bipolar transistors. Design tradeoffs between logic families. Prerequisites: 231, 383, and concurrent registration in 310, 333.

**EE 356 Electronics II: Analog Integrated Circuits (4) AWSp** Analog integrated circuit (IC) technology, input stages, bipolar and FET, current sources, output stages, frequency response, feedback fundamentals and stability analysis, applications. Includes weekly laboratory. Prerequisites: 310, 333, 355.

**EE 361 Applied Electromagnetics (5)** Introductory electromagnetic field theory and Maxwell's equation in integral and differential forms; uniform plane waves in linear medium; boundary conditions and reflection and transmission of waves; guided waves; transmission lines and Smith chart; electrostatics and magnetostatics. Prerequisites: 233, MATH 328.

**EE 370 Introduction to Digital Systems and Computers (4) AWSp** Digital logic, Boolean algebra, combinational and sequential circuits, design and operation of digital computers including ALU, memory, I/O, and control. Computer operation and organization, including instruction formats, addressing, and stacks.

**EE 371 Digital Circuits and Systems (5)** Introductory course in digital logic. Boolean algebra, combinational and sequential circuits, combinational and sequential logic design, programmable logic devices, and design and operation of digital computers, including ALU and memory. Four-hour laboratories every other week. Prerequisites: ENGR 142 and ENGR 275.

**EE 372 Introduction to Microprocessor Systems (4) AW** Utilizing microprocessors, digital computer studied at assembly language level with emphasis on concepts of central processor architecture, memory organization, input/output, and interrupts. Assembly language programming concepts applied to solution of various laboratory problems. Prerequisites: 370, ENGR 142 and ENGR 275.

**EE 374 Data Structures (3) AWSp** Fundamental algorithms and data structures for their implementation. Techniques for solving problems by programming. Sorting, searching, linked lists, binary search trees, balanced trees, hashing. Prerequisites: ENGR 275, ENGR 142 or equivalent knowledge of programming.

**EE 381 Applied Electromagnetics (4) AWSp** Electromagnetic waves in linear media; some effects of boundaries; transmission lines; electrostatic and magnetostatic fields. Prerequisite: 333, which may be taken concurrently; recommended: MATH 328.

**EE 383 Semiconductor Materials and Devices (4) AWSp** Introduction to the basic electronic properties of semiconductor materials and devices. Energy bands, dynamics of electrons and holes, equilibrium statistics, carrier mobility and recombination. Electrostatics of p-n junction FETs, capacitors, and MOSFETs. I-V characteristics of p-n junctions and bipolar transistors. Prerequisites: 231.

**E E 399 Special Topics in Electrical Engineering (1-5) AWSpS** New and experimental approaches to current electrical engineering problems. May include design and construction projects. Prerequisite: permission of department.

**E E 400 Advanced Topics in Electrical Engineering (1-4, max. 8) AWSp** Contemporary topics at the advanced undergraduate elective level. Faculty presents advanced elective topics not included in the established curriculum. Prerequisite: permission of instructor.

**E E 411 Introductory Network Synthesis (3) A** Network representations in the complex frequency domain, realizability criteria for driving-point and transfer functions, canonical forms, and application of the digital computer in synthesis procedures. Prerequisites: 333 and senior standing.

**E E 415 Computer-Aided System Analysis and Design (3) Sp** Concepts, principles, and techniques concerned with the design, testing, and application of general-purpose problem-oriented computer programs for analyzing large-scale systems. Prerequisites: ENGR 142 and senior standing.

**E E 417, 418 Introductory Communication Theory I, II (4,3) W,Sp** Techniques of analog and digital communications. Elementary concepts of probability, random variables, and processes. Signals, spectra, random signals, and noise. Base-band communication by digital and analog methods. Modulation techniques including AM, FM, PM, PAM, PCM, etc. Information theory, channel capacity, and error-control coding. Prerequisites: 335 and STAT 390 or permission of instructor for 417; 417 for 418.

**E E 421 Electroacoustics (4) A** Fundamentals of acoustics and the electroacoustical aspects of electromechanical systems. Characteristics of transducers. Design of acoustic devices. Includes laboratory to be arranged. Prerequisite: 383 or permission of department.

**E E 433 Analog Circuit Design (5)** Design of analog circuits and systems applying modern integrated circuit technology: operational amplifiers, differential amplifiers, active filters, voltage references and regulators. Prerequisite: 356.

**E E 436 Medical Instrumentation (4) Sp Spelman** Introductory course in the application of instrumentation to medicine. Topics include transducers, signal-conditioning amplifiers, electrodes and electrochemistry, ultrasound systems, electrical safety, and the design of clinical electronics. Laboratory included. Joint with BIOEN 436. For upper-division and first-year graduate students who are preparing for careers in bioengineering—both research and industrial. Prerequisite: 433 or permission of department.

**E E 440 Linear Systems Analysis II (4) A** Development of advanced Fourier methods, concentration on applications to engineering problems. Analog and digital filters; applications of discrete Fourier transform, including aliasing, short data sets, average transforms, system identification; orthogonal functions for boundary-value problems, two-dimensional Fourier transforms with application to image processing and aperture antennas. Prerequisite: 335.

**E E 442 Digital Signals and Filtering (3) W** Methods and techniques for digital signal processing. Review of sampling theorems, A/D and D/A converters. Demodulation by quadrature sampling. Z-transform methods, system functions, linear shift-invariant systems, difference equations. Signal flow graphs for digital networks, canonical forms. Design of digital filters, practical considerations, IIR and FIR filters. Digital Fourier transforms and FFT techniques. Prerequisite: 335 or permission of department.

**E E 443 Design and Application of Digital Signal Processors (5) Sp** Design of signal processing systems in digital computer circuitry and their use in various commercial, industrial, and research applications. Digital signal microprocessors, digitization and analog

reconstruction, design of digital filters and fast Fourier transform systems, case studies of applications in communications and audio. Weekly lab, group design project. Prerequisites: 372, 442.

**E E 445 Nonlinear Systems Analysis (4) A** Dynamic analysis of nonlinear circuits, neural networks and of other simple systems. Exact methods, graphical methods, approximate methods, including linearization and numerical and analog computer solutions. Stability. Forced oscillations. Prerequisite: 333 or permission of department.

**E E 446 Control System Analysis I (4) AWSp** Linear servomechanism theory and design principles. Pole-zero analysis, stability of feedback systems by root-locus and real-frequency response methods. Design methods of Bode and Nichols. Introduction to advanced topics in automatic control theory. Prerequisite: 335 or permission of department.

**E E 447 Control System Analysis II (3) Sp** State-space formulation of multivariable feedback control system problems. Dynamic performance, including stability evaluation, by vector-matrix methods. Application of discrete time methods of feedback control problems. Introduction to nonlinear feedback system analysis including state-space methods, Lyapunov stability theory, and describing functions. Prerequisite: 446 or permission of department.

**E E 449 Design of Automatic Control Systems (4)** Design problems in electromechanical feedback systems, aerospace and hydrospace vehicles, systems with unstable plants, lightly damped dynamic modes, or nonminimum phase plants, nonlinear plants. Computer aided simulation and design emphasized, team effort encouraged. Frequent design reviews and oral presentations required. Prerequisites: 446 or AA 451 or ME 471 or equivalent.

**E E 452 Power Electronics Design (4) A** Laboratory oriented design and performance problems in power electronics. Solutions require effective use of electronic components, application of circuit theory, and the development of analytical tools for efficient electronic conversion, control, and conditioning of electric power. Prerequisites: 344, 356; either of which may be taken concurrently.

**E E 453 Electric Drives (5) A** Elements of drive systems, speed-torque characteristics of electric motors and industrial loads, solid-state converter. Starting and braking methods of loaded motors. Speed control of electric motors. Solid-state drives. Transient analysis of loaded motors. Special forms of individual- and multimotor drives. Prerequisite: 344 or permission of instructor.

**E E 454 Power System Analysis I (4) A** Introduction to methods of analyzing power systems. Includes symmetrical components, calculation of line parameters, representation of transmission lines and power components, and power flow control. Prerequisite: 344 or permission of instructor.

**E E 455 Power System Analysis II (4) W** Analysis of symmetrical and unsymmetrical power systems' networks, fault analysis, and stability studies. Prerequisite: 344 or permission of department.

**E E 456 Computer-Aided Design in Power Systems (4) Sp** Design-oriented course in power system engineering. Students are assigned a project concerning system operation and planning, steady-state and dynamic behaviors of power systems, or distribution systems. Each involves formulation of design criteria, development of approach, application of existing software. Prerequisite: 454 or 455 or 457, or permission of instructor.

**E E 457 Electric Energy Distribution Systems (4) Sp** Introduction to electric utility distribution systems. Primary and secondary network analysis and design, distribution substation problems, distribution transformers, capacitor application, overcurrent and over-voltage protection. System planning and reliability. Prerequisite: 344 or permission; background in system analysis desirable.

**EE 462 Mobile Robots I: Vehicles (4) A** Principles of autonomous vehicles and environments in which they operate. CAD modelling of environments, knowledge base development of environments, vehicle performance by teleoperation, coordinate transformations, and generation of trajectories for vehicle drive and steering. Characteristics of sensors including sonar, laser range, infra-red, tactile, and video. Prerequisites: 230 and senior standing.

**EE 463 Mobile Robots II: Intelligent Control (4) W** Autonomous vehicles operating in semi-structured environments. Expert system modelling of the interaction of vehicles and environments through sensors to perform tasks autonomously. Knowledge base development of robotic behaviors and environments. The principles of computer vision as applied to mobile robots. Prerequisites: 462 and senior standing.

**EE 484 Mobile Robots III: Integration and Projects (4) Sp** Application of principles of autonomous navigation and control to actual vehicles in semi-structured laboratory environments. Projects to demonstrate autonomous behavior. Prerequisites: 463 and senior standing.

**EE 465 Fiber Optics, Devices, and Applications (4) Sp** Wave propagation in optical waveguiding structures, signal distortion, coupling of modes, modulation, sources and detectors, fabrication and measurement methods, communication and sensor systems. Prerequisite: 381; recommended: 383.

**EE 466 Design in Electromagnetics, Optics, and Acoustics (4) Sp** Design of electromagnetic, optical, and acoustic (EDA) devices and systems. Measurements of material properties and system characteristics. Utilization of software for simulation of propagation, interaction and devices in optics, microwave, millimeter wave, acoustic, and ultrasound. A list of projects available prior to registration. Prerequisites: 356, 381, and senior standing.

**EE 467 Antennas and Remote Sensing (3) Sp** *Peden, Tsang* Radiation and radio science; antenna fundamentals and applications; wave propagation and earth's environments; remote sensing. Prerequisites: 335, 381.

**EE 488 Introduction to Fourier Optics and Holography (4) W** Development of optical systems from an engineering viewpoint. Two dimensional systems theory, diffraction, lenses, elementary optical processing, foundations of optical image formation, angular spectra, photographic film and holography. Prerequisites: 335 and 381.

**EE 469 Transmission Lines and Wave Propagation (4) A** Guided waves on two-conductor transmission lines; steady-state and transient considerations; lossy transmission lines. Mode structures in guided waves and hollow conductors and dielectrical rods; surface-wave propagation on coated conductors and dielectrics. Wave propagation in material media of practical importance. Emphasis on problem-solving approaches in electromagnetics; applications to radio science, microwaves, optics, and bioengineering. Prerequisite: 381.

**EE 471 Computer Design and Organization (5)** Introduction to computer architecture, algorithms, hardware design for various computer subsystems, CPU control unit design, hardwired and microprogrammed control, memory organization, cache design, virtual memory, I/O organization, and I/O hardware design. Prerequisites: 370, 372, or equivalent with permission of instructor.

**EE 473 Wave Shaping (4) Sp** Design of circuits for the generation and transmission of special wave forms. Design of oscillators, AM circuits, FM circuits, D/A and A/D circuits. Prerequisites: 355 and 356.

**EE 474 Fundamentals of Operating Systems (5) AW** Introduction to operating systems. Hardware/software interface, process management, primary and secondary, storage management, processor management, performance, networks, and case studies of current operating systems. Prerequisites: 370, 374.

**EE 476 Computer-Aided Design of Digital Systems (3) WSp** An elementary knowledge of combinational logic and sequential machines is assumed. More advanced topics in the above subjects are covered. VHDL and APL are used as a digital design and simulation languages to represent and assist in the design of arithmetic functions, machine control, storage, and communication between system components. Prerequisite: 370.

**EE 478 Design of Computer Subsystems (5) AW** Design of digital computer subsystems and systems, using SSI, MSI, and LSI digital components. Combinational logic, sequential logic, ALU and control-unit designs, memory hardware design, I/O hardware and interface designs, data-acquisition system design, and digital troubleshooting. One four-hour laboratory each week. Prerequisites: 355, 370, 372, and permission of department.

**EE 479 Microcomputer System Design (5) WSp** Intensive course covering microprocessor architecture and operation, assembly language instructions and programming, system design criteria and techniques for integrating hardware and software into actual systems. Principal emphasis on system design and documentation. Weekly laboratory and a design project included. Prerequisites: 370, 372, and permission of department; highly recommended: 478, which may be taken concurrently.

**EE 481 Microwave Electronic Design (4) W** Design of microwave circuits using S-parameter techniques. Measurement techniques, CAD of microwave systems. Includes design, fabrication, and evaluation of a microwave functional component. Prerequisites: 356, 381, and senior standing.

**EE 485 Semiconductor Devices (3) A** Physics of homo-hetero junctions and semiconductor surfaces; operating principles of various semiconductor devices. Development of small-signal and switching circuit models. Includes junction transistors, field effect transistors, microwave, photonic, and integrated circuit devices. Prerequisite: 383 or equivalent.

**EE 486 Fundamentals of Integrated Circuit Technology (3) W** *Aframowitz* Processing physics, chemistry, and technology, including evaporation, sputtering, epitaxial growth, diffusion, ion implantation, laser annealing, oxidation, chemical vapor deposition, photoresists. Design considerations for bipolar and MOS devices, material and process characterization. Future trends. Prerequisite: 485 or permission of department.

**EE 487 MOS Transistor Physics and Modeling (3) Sp** Physics and modeling of MOS transistors and capacitors; scaling factors and various operating conditions. Development of device parameters and characteristics and models. Prerequisite: 383 or equivalent.

**EE 488 Laser Electronics (4) A** Analysis and design of laser systems. Basic resonator design, Gaussian beams, longitudinal and transverse modes, rate equations, oscillation, gain, Q-switching, mode-locking, and important non-linear processes. Design concepts underlying various laser systems discussed. Prerequisites: 381, 383.

**EE 497 Design in Electronics Industry (3) Sp** The work environment of design engineers in the electronics industry. Product definition, the design process, support of manufacturing. Design for both big systems and commercial products. Most of the instruction is by lecturers from industry. Prerequisite: senior standing in electrical engineering.

**EE 498 Control System Components and Measurements (3) Sp** Study of control system components and formulation of their mathematical models. Amplifiers, servomotors, synchros, gyroscopes, and fluid-power devices. Experimental determination of dynamic parameters, and behavior of closed-loop systems. Two three-hour laboratories per week. Prerequisite: 446 or permission of department.

**EE 499 Special Projects (2-5, max. 10) AWSps** Assigned construction or design projects carried out

under the supervision of the instructor. Prerequisite: permission of department.

### Courses for Graduates Only

**EE 500 Graduate Seminar (1, max. 3) AWSps** Weekly seminars on current topics in electrical engineering. More than one section may be offered in a given quarter. No more than 3 credits can be applied to meet departmental graduation requirements.

**EE 505 Introduction to Probability and Random Processes (4) A** *Lytle, Ritley* Foundations for the engineering analysis of random processes: set theoretic fundamentals, basic axioms of probability models, conditional probabilities and independence, discrete and continuous random variables, multiple random variables, sequences of random variables, limit theorems, models of stochastic processes, noise, stationarity and ergodicity, Gaussian processes, power spectral densities. Prerequisite: graduate standing.

**EE 506, 507 Communication Theory I, II (3,3) W,Sp** *Lytle, Ritley* Review of stochastic processes. Communication system models. Channel noise and capacity. Optimum detection, modulation and coding, convolutional coders and decoders. Typical channels, random and fading channels. Waveform communication, optimum filters. Prerequisite: 505 or equivalent.

**EE 508 Stochastic Processes (3) W** *Lytle, Ritley* Modeling and analysis of random processes encountered in engineering applications. Stationarity and ergodicity. Harmonic analysis, power spectral densities, Karhunen-Loeve expansions. Poisson, Gaussian, and Markov processes. Stochastic integrals and differential equations. Prerequisite: 505 or permission of instructor.

**EE 509 Engineering Applications of Linear Graphs (3) W** *Andersen* Elementary theory of linear graphs, incidence, cut-set and circuit matrices, matrix formulation of loop, node, and state equations, topological analysis and synthesis of networks, signal flow graphs, applications to switching circuits, automata and communication nets. Prerequisite: graduate standing or permission of instructor.

**EE 510 Mathematical Foundations of System Theory (4) A** *Damborg* Mathematical foundations for system theory presented from an engineering viewpoint. Include set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert space. Applications to engineering systems stressed. Joint with A A, CH E, ME 510. Prerequisite: graduate standing or permission of instructor.

**EE 511 Principles of Network Synthesis (3) W** *Andersen* Network representation in the complex frequency domain, realizability criteria, synthesis of driving point and transfer impedance and coupling networks for prescribed transfer characteristics, canonical forms, and network equivalents, frequency and time domain aspects of approximating response functions. Prerequisite: graduate standing or permission of instructor.

**EE 513 Active Circuit Theory (3) Sp** *Andersen* Principles of analysis and synthesis of linear active circuits. Emphasis on general principles, including conservation theorems, invariants, performance limitations in the presence of parasitic elements and realizability conditions. Illustrative applications related to negative resistance amplifiers, feedback amplifiers, and active filters. Prerequisite: 335 or permission of instructor.

**EE 517 Introduction to System Optimization (3) W** *Hsu* Systems engineering and optimization; classical optimization techniques; equality constraints and inequality constraints. Kuhn-Tucker conditions; linear inequalities and linear programming; nonlinear optimization and programming; Fibonacci, Golden-section, and minimax search; gradient search; method of Davidson, Fletcher, and Powell; method of conjugate gradients; elements of quadratic and geometric programming; applications to engineering systems. Prerequisite: 510 or permission of instructor.

**E E 518 Digital Signal Processing (4) A** *Atlas* Digital representation of analog signals. Frequency domain and Z-transforms of digital signals and systems design of digital systems; IIR and FIR filter design techniques, fast Fourier transform algorithms. Sources of error in digital systems. Analysis of noise in digital systems. Prerequisites: knowledge of Fourier analysis techniques and graduate standing, or permission of instructor.

**E E 519 Stochastic Analysis of Data From Physical Systems (4) W** *Albrecht* Computer systems for acquisition and processing of stochastic signals. Calculation of typical descriptors of such random processes as correlation functions, spectral densities, probability densities. Interpretation of statistical measurements made on a variety of physical systems (e.g., electrical, mechanical, acoustic, nuclear). Lecture plus laboratory. Prerequisite: 505 or equivalent.

**E E 520 Spectral Analysis of Time Series (4) A** Estimation of spectral densities for single and multiple time series. Basic theory for nonparametric estimation of spectral density, cross-spectral density and coherence for stationary time series, real and complex spectrum techniques. Bispectrum. Digital filtering techniques. Aliasing, prewhitening. Choice of lag windows and data windows. Use of the fast Fourier transform in spectral estimation and computation of correlation functions. The parametric autoregressive spectral density estimate for single and multiple stationary time series. Spectral analysis of nonstationary random processes, and for randomly sampled processes. Techniques of robust spectral analysis. Joint with STAT 520. Prerequisite: one of STAT 342, 390, 481, E E 505, or permission of instructor.

**E E 521 Multidimensional Signal Processing (3) A** *Marks* Multidimensional (MD) signals and systems, MD sampling theorem, sample dependence in higher dimensions, MD FIR filter design using windows and the McClellan transform, MD IIR filter stability and design. Current topics in MD signals and systems. Prerequisite: 442 or 518 or equivalent. (Offered odd-numbered years.)

**E E 522 Shannon Sampling and Interpolation Theory (4)** Historical overview of Shannon sampling theorem; fundamentals of the cardinal series; generalizations including those of Papoulis, Kramer, and Lagrange; effects of jitter, truncation and data noise on interpolation; continuous sampling restoration using prolate spheroidal wave functions and the Papoulis-Gerschberg algorithm. Prerequisite: 508. (Offered odd numbered years.)

**E E 525 Acoustics in Engineering I (3) W** *Sigelmann* Acoustic wave transmission, reflection, refraction, and diffraction in solids, liquids, and gases. Includes review of continuum mechanics and examples from electromechanical systems. Joint with M E 525. Prerequisite: graduate standing in electrical or mechanical engineering or permission of instructor.

**E E 526 Acoustics in Engineering II (3) Sp** *Sigelmann* Continuation of 525. Material differs each year, covering such topics as scattering, moving media, ultrasonics, acoustic holography, optoacoustics, transducer propagation in anisotropic medium, etc. Joint with M E 526. Prerequisite: 525 or permission of instructor.

**E E 527 Solid-State Laboratory Techniques (4) Sp** *Darling, Kuhn, Pearsall* Principles and laboratory techniques used in solid-state electronics research. Basic familiarity with practices and equipment used on-campus. Laboratory safety; materials handling, storage and disposal; clean room use; photoresist characteristics; mounting, bonding, and probing; wet chemical etching; vacuum evaporation; patterning of metal films using photoresist. Extensive laboratory with limited enrollment. Prerequisites: graduate standing and permission of instructor.

**E E 528 Advanced Semiconductor Fundamentals (4) A** *Fromowitz, Kuhn, Tsang, Yee* Limits of classical physics, Schrodinger's equation, eigenvalues of

simple systems; postulates of quantum mechanics, matrix methods, Dirac notation, operator methods; basic crystallography, real and reciprocal lattices, Brillouin zones, phonons, E(k) diagrams, band structure calculations in solids; effective mass equation, spin-orbit splitting; application to quantum wells, superlattices, tunneling devices.

**E E 529 Semiconductor Optics and Optical Devices (4) Sp** *Fromowitz, Kuhn, Pearsall, Yee* Perturbations of energy states in semiconductors; direct and indirect transitions; absorption processes; optical constants; absorption spectroscopy; radiative and nonradiative transitions; processes occurring at p-n junctions; junction devices; LEDs and lasers, photovoltaics; self-electro-optic effect device; modern laser structures. Prerequisite: 528 or permission of instructor.

**E E 530 Quantum Electronics (4) W** *Bjorkstam, Darling, Kuhn, Tsang, Yee* Application of quantum mechanics principles and mathematical techniques to interactions of electrons, phonons, and photons. Electron states, transitions and selection rules; field quantization; coherent and incoherent interactions of radiation with matter. Prerequisite: 528 or permission of instructor.

**E E 531 Transport Properties of Semiconductors (4) Sp** *Darling, Kuhn, Pearsall, Yee* The theory of electron transport in crystalline solids. Includes the kinetic theory of the electron gas and solutions to Boltzmann's equation in the relaxation time approximation, electron motion in k-space, electron scattering processes, low and high field transport, cyclotron resonance, and magnetoresistance. Prerequisite: 528 or permission of instructor.

**E E 532 Power Semiconductor Devices (4) Sp** *Lauritzen* Device principles needed for modeling and circuit simulation of semiconductor devices used in power electronic applications. Includes diode, BJT, MOSFET, SCR, GTO, IGBT, SiThy, power IC device types. Design and simulation of device drive and protection circuits. Failure modes, thermal simulation also included. Prerequisites: graduate standing; recommended: 485 and 487. (Offered alternate years.)

**E E 533 Advanced Semiconductor Devices (4) Sp** *Darling, Yee* Analysis of selected structures with emphasis on III-V compound semiconductors and extreme operating conditions of bias, temperature, and frequency; includes metal-semiconductor contacts, heterojunctions, field-effect transistors, photoconductors, tunneling structures, and modern modeling techniques. Prerequisite: permission of instructor.

**E E 534 Power Electronics (4) W** *Lauritzen* Detailed study of DC-to-AC inverters, pulse-width modulated and resonant DC-to-DC converter topologies; drive and protection circuits for efficient switching of semiconductor devices. Computer-aided simulation techniques and integrated circuit controllers. Prerequisite: graduate standing.

**E E 535 Design of Digital Integrated Circuits and Systems (4) Sp** *Helms, Soma* Design of digital VLSI: system specifications, architectures, synthesis, simulation, and layout. Covering CMOS technologies with minor emphasis on ECL, GaAs. Prerequisites: 355 or equivalent and graduate standing in electrical or computer engineering, or permission of instructor.

**E E 536 Design of Analog Integrated Circuits and Systems (4) Sp** *Helms, Soma* Design of analog VLSI: specifications, design, simulation, layout. Covering CMOS and Bi CMOS technologies. Prerequisites: 433 or equivalent and graduate standing in electrical or computer engineering, or permission of instructor.

**E E 537 Electronic Amplification Devices and Applications (3) A** *Yang* Present state-of-the-art linear integrated circuits are reviewed and foreseeable future developments anticipated, with the objective of providing a timely introduction to analog circuit design at the graduate level. Focus is on both the internal design and operation of integrated devices to prompt under-

standing of limitations, and the application of standardized modules to electronic systems design. Prerequisite: graduate standing or permission of instructor.

**E E 538 Topics in Electronic Circuit Design (1-5) AW** *Atlas, Guilford, Helms, Lauritzen, Soma* Topics of current interest in electronic circuit and system design. Course content varies from year to year, based on current professional interests of the faculty member in charge. May be repeated for credit by permission. Prerequisite: permission of instructor.

**E E 539 Advanced Topics in Solid-State Electronics (1-5, max. 5) AWSp** *Bjorkstam, Yee* Lectures or discussions of topics of current interest in the field of solid-state electronics for advanced graduate students having adequate preparation in solid-state theory. Subject matter may vary according to the interests of students and faculty. Prerequisite: permission of instructor.

**E E 540 VLSI Testing (3) A** *Soma* VLSI testing and design-for-test techniques. Reliability predictions and characterizations for integrated circuits and systems. Circuits fabricated in 536 are tested as laboratory work. Prerequisites: 535, 536.

**E E 546 Advanced Topics in Control System Theory (1-5) AWSp** *Bjorkstam, Yee* Lectures or discussions of topics of current interest in the field of control system theory for advanced graduate students with adequate preparation in linear and nonlinear system theory. Prerequisite: permission of instructor. (Offered when adequate enrollment develops prior to close of advance registration.)

**E E 547 Neural Communication and Control in Biological Systems (3) W** Neural processing of the visual image and communication between levels of the central nervous system. Feedback and its role in movement by organisms. Description and analysis of the means by which electrochemical events generate, modulate, and demodulate neuronal signals, and the parallel interaction between these signals in transduction of images and other information. Prerequisite: advanced graduate standing or permission of instructor.

**E E 548 Linear Multivariable Control (3)** Single loop feedback control theory; poles, zeros, Nyquist stability, performance, robustness of multivariable systems; multivariable control syntheses: Linear-Quadratic-Gaussian methods, loop transfer recovery, Youla parametrization, H-infinity techniques, parameter optimization design. Joint with A A 548. Prerequisite: 584 or ME 575; 446 or AA 451 or ME 471 or equivalent.

**E E 549 Estimation and System Identification (3)** Review of system models, model structure, model parametrization; review of stochastic processes; state estimation: observers, the Kalman-Bucy filter, numerical issues in filter design and implementation; system identification: linear regression, least squares, maximum likelihood, instrumental variable techniques. Joint with AA 549. Prerequisites: E E 505 or AMATH 506 or STAT 506; recommended: 548 or A A 548.

**E E 550 Nonlinear Optimal Control (3)** Calculus of variations for dynamical systems, definition of the dynamic optimization problem, constraints and Lagrange multipliers, the Pontryagin Maximum Principle, necessary conditions for optimality, the Hamilton-Jacobi-Bellman equation, singular arc problems, computational techniques for solution of the necessary conditions. Joint with AA 550. Prerequisite: graduate standing; recommended: A A 548 or E E 548.

**E E 551 Power System Protection (4)** The protection of electric power systems from overcurrents and overvoltages. Analysis and design of overcurrents resulting from faults, lightning induced or otherwise, or from excessive loads or power swings. Analysis and design of overvoltages resulting from switching transients or lightning. Principal concern is with relays and lightning arrestors as protection means. Prerequisite: 455 or equivalent.

**E E 552 Power Systems Dynamics and Control (4) A** *El-Sharkawi* Advanced computer modeling and

analysis of power systems. Application of modern systems and control theories. Prerequisites: 344 and 455 or permission of instructor. (Offered alternate years.)

**E E 554 Large Electric Energy Systems Analysis (4) A Venkata** Deals with problems whose solution depends upon the inversion of sparse matrices that occur in the planning and operational studies of large interconnected energy systems. Application studies include system model development, state estimation, and load flow. Prerequisite: 456 or permission of instructor. (Offered even-numbered years.)

**E E 555 Power Systems Reliability Analysis (4) W** Reliability considerations that influence planning and operation of electric power systems. Applications include reliability calculations to determine desired reserves (static an spinning) and reliability of power supply. Required foundation in probability methods is included. Prerequisite: 455 or permission of instructor. (Offered even-numbered years.)

**E E 559 Special Topics in Electrical Energy Systems (1-5) AWSpS Damborg, El-Sharkawi, Liu, Venkata** Topics of current interest in electrical power and energy devices and systems. Content varies from year to year, based on current professional interests of faculty member in charge. May be repeated for credit by permission. Prerequisite: permission of instructor.

**E E 562 Artificial Intelligence for Engineers (3) W Holden, Johnson** Covers main areas of artificial intelligence (AI) without need for extensive prerequisites. Programming languages for AI; problem solving; representations; control strategies; searching strategies; predicate calculus; rule-based deduction; goal-directed planning; knowledge-based systems. Prerequisites: 370, 374, or equivalents.

**E E 563 Fault-Tolerant Computing (3)** Faults and their manifestation, issues, theory, and techniques of reliable systems design, testing, design for testability, self-checking and fail-safe circuits, coding techniques, system-level fault diagnosis, fault-tolerant communication, reliable software design, and evaluation criteria. Joint with CSE 563. Prerequisite: basic knowledge of digital systems design or permission of instructor.

**E E 564 Parallel Computer Systems (3) W Hwang, Kim, Somani** Pipelined and vector processors; interconnection network for parallel processing, array and associative processors; multiprocessors; data-flow machines; systolic arrays and impact of the VLSI technology on parallel processors and processing. Prerequisites: 471, permission of instructor.

**E E 565, 566 Computer-Communication Networks I, II (3,3) W, Sp Meditch** Computer-communication network concepts and principles; queueing systems and applications; network architectures and protocols; modeling, performance analysis, and design of terrestrial networks; multiaccess techniques; satellite, ground-radio, and local area networks. Prerequisites: 505 or equivalent for 565; 565 for 566.

**E E 567 Electronic Materials: Preparation and Properties (3)** Physics and technology of molecular beam epitaxy. Physics of growth, quantum wells, superlattices, strained layers. High vacuum technology and III-V characterization techniques. Includes extensive laboratory. Students design, grow, and characterize and MBE structure relevant to their M.S. or Ph.D. thesis. Limited enrollment. Joint with MSE 567. Prerequisite: permission of instructor.

**E E 568 Image Processing Computer Systems (4) Haralick, Kim** All components of digital image-processing computer systems. Two-dimensional filtering and optimal filter design as well as basic image processing operations. Selected advanced image processing topics. Individual student project. Joint with BIOEN 568. Prerequisite: permission of instructor.

**E E 570 Antenna Engineering (3) W Peden** Theory of radiation; impedance characteristics and radiation patterns of thin linear antenna elements; antenna arrays; pattern synthesis; aperture antennas. Prerequisite: graduate standing or permission of instructor.

**E E 571 Applications of Finite Difference and Finite Element Methods in Fields and Waves (4) W** General principles of finite difference and finite element methods; finite difference and finite element discretization schemes; finite-difference time-domain method; Galerkin's method and functional minimization; construction of FEM matrices for electromagnetic problems; absorbing boundary conditions; sparse matrix solvers. Prerequisite: 572 or permission of instructor.

**E E 572 Electromagnetic Theory and Applications I (4) A Ishimaru, Sigelmann, Tsang** Electromagnetic waves in layered media; complex waves, leaky and slow waves, waves in periodic structures, optical fibers, ionosphere and other guiding structures; transients and dispersive medium; waveguides and cavities; eigenfunctions and eigenvalues. Prerequisite: graduate standing or permission of instructor.

**E E 573 Electromagnetic Theory and Applications II (4) W Ishimaru, Sigelmann, Tsang** Scattering and absorption of electromagnetic waves, Rayleigh scattering, Born approximations, Green's functions, integral equations, numerical techniques and moment method, finite element method, high- and low-frequency approximations, saddle-point method, and variational principle. Prerequisite: 572 or permission of instructor.

**E E 574 Electromagnetic Theory and Applications III (4) Sp Ishimaru, Sigelmann, Tsang** Geometric theory of diffraction, wave fluctuations, antenna noise temperature, data-processing antennas, remote-sensing techniques and tomography applications, diffraction and scattering, discontinuities. Prerequisite: 573 or permission of instructor.

**E E 575 Waves in Random Media (4) Sp Ishimaru, Sigelmann, Tsang** Propagation and scattering of electromagnetic, optical, and acoustic waves in turbulence and random media, scattering from rough surfaces and randomly distributed particles. Atmospheric turbulence, fog, rain, smog, clear-air turbulence detection, remote sensing, terrain scattering, scattering from blood cells and tissues, scattering by ocean waves. Applications to atmospheric sciences, bioengineering, geoscience, ocean engineering. Prerequisite: graduate standing or permission of instructor.

**E E 576 Image Understanding (3) Sp Haralick, Shapiro, Sloane, Tanimoto** Overview of computer vision, emphasizing middle ground between image processing and artificial intelligence. Image formation, preattentive image processing, boundary and region representation, matching, case studies of vision systems. Joint with CSE 576. Prerequisites: 562 or CSE 573 and CSE 557, or equivalent, or permission of instructor.

**E E 577 Mathematical Morphology (3) Haralick** Theory of mathematical morphology and its application in various commercial, industrial, medical, and research applications. Contents include binary and grayscale morphologic dilation, erosion, opening, and closing, morphological sampling theorem, structuring element decomposition, thinning, skeletonizing, and relational shape description. Group project. Joint with CSE 577. Prerequisite: 568 or 576 or permission of instructor.

**E E 578 Tomographic and Holographic Imaging in Acoustics and Electromagnetics (3) A Porter** Imaging problems including holographic shape determination, inverse source problems, diffraction tomography. Holographic tomography as a general imaging method for weak scatterer. Applications in ultrasound, geophysics, oceanography, optics, medicine. Methods that simplify experimental techniques and computer reconstructions. Prerequisite: graduate standing.

**E E 579 Advanced Topics in Electromagnetics, Optics, and Acoustics (1-5) AWSp** Topics of current interest in electromagnetics, optics, and acoustics. Content varies from year to year, based on current professional interests of faculty member in charge. May be repeated for credit. Prerequisite: permission of instructor.

**E E 580 Volterra and Wiener Nonlinear Systems (3) Sp Pinter** Methods of the Volterra and Wiener integral series for input-output description of nonlinear systems. Generalization of the linear convolution integral to multiple convolutions, transforms of kernels, derivation of kernels from parametric (differential equation) models. Orthogonalization of series. Applications. Prerequisite: 335.

**E E 583 Nonlinear Control Systems (4) Sp Nages** Dynamic analysis of nonlinear control systems. Analytical, graphical, numerical, and simulation techniques for solving continuous and discontinuous nonlinear control system problems. Phase space. Describing functions, Popov and Lyapunov and contraction mapping methods are employed for stability evaluation of dynamic systems. Prerequisite: 584 or permission of instructor. (Offered odd-numbered years.)

**E E 584 Continuous and Discrete State Variable Methods (3) AW Alexandro, Clark, Hsu** Dynamic analysis of automatic control systems using state variable methods. Vector space concepts, modeling of physical systems in state space format, canonical forms for continuous and discrete time systems, controllability and observability, full-state feedback, state estimators, eigenstructure design. Prerequisite: graduate standing or permission of instructor.

**E E 585 Digital and Sampled-Data Systems (3) Sp Hsu** Sampling process and data holds, state variables and state transition equations for sampled-data systems, frequency domain and time domain analysis of sampled-data systems, stability of sampled-data systems, digital compensation of sampled-data systems. Prerequisite: 584.

**E E 586 Advanced Computer Applications I (3) A Holden** Basic analytical methods related to man-machine communication by voice and vision. State-of-the-art review of speech, and image understanding systems. Each student does a self-chosen project. Prerequisite: graduate standing or permission of instructor.

**E E 590 Advanced Topics in Digital Computers (2-5, max. 15) AWSp Hannaford, Haralick, Holden, Johnson, Kim, Lin, Meditch, Shapiro, Somani, Zick** Lectures or discussions of topics of current interest in the field of digital systems. Subject matter may vary from year to year. Prerequisite: permission of instructor.

**E E 595 Advanced Topics in Communication Theory (1-5) AWSp Lytle** Extension of 507, 508, 518, 519, 520. Material differs each year, covering such topics as: detection theory, decision theory, game theory, adaptive communication systems, nonlinear random processes, etc. May be repeated for credit by permission. Prerequisite: permission of instructor.

**E E 599 Selected Topics in Electrical Engineering (\*) AWSpS** Prerequisite: permission of instructor.

**E E 600 Independent Study or Research (\*) AWSpS**

**E E 700 Master's Thesis (\*) AWSpS**

**E E 800 Doctoral Dissertation (\*) AWSpS**

## Industrial Engineering

141 Aerospace Engineering Research

Industrial engineering focuses on the science and technology of the industrial environment and on the analysis and design of systems that efficiently produce goods and services. The curriculum pays particular attention to the physical process involved in manufacturing and the decision-making components of industry. Industrial engineering provides a basic engineering foundation for understanding the interaction between technology and management.

## Undergraduate Program

### Bachelor of Science in Industrial Engineering Degree

Admission to the program is usually at the junior level. Enrollment is limited; students who desire entrance must formally apply to, and be accepted by, the program admissions committee. The primary admission criterion is degree of qualification for probable success in the engineering degree program as evidenced by academic performance, work experience, and other factors. Specific courses required for application are: MATH 124, 125, 126, 307; CHEM 140, 141, and 150; PHYS 121, 122, 131, 132; ENGR 142, 210, 220, 230; 5 credits of English composition from the approved University list.

The *Industrial Engineering Undergraduate Advising Guide* contains a typical pre-industrial engineering program.

The professional program consists of courses listed in the *Industrial Engineering Undergraduate Advising Guide*. Typical courses are statistics, operations research, engineering economy, human factors, workplace and work design, manufacturing processes, planning and scheduling, reliability, simulation quality control, industrial management, computer-integrated production, and robotics and artificial intelligence.

The professional component comprises 95 credits. A total of 192 applicable credits is required for graduation, with a GPA of at least 2.00 to be maintained in all engineering courses in the program. Courses counting toward the B.S.I.E. degree may not be taken on a satisfactory/not satisfactory basis.

### Correspondence and Information

All inquiries concerning the industrial engineering program should be addressed to the Industrial Engineering Undergraduate Adviser, 141 Aerospace Engineering Research, FU-20.

## Graduate Program

Faculty members in the industrial engineering program participate in offering the authorized interengineering degree option within the college-wide Master of Science in Engineering degree program. Students may earn a Ph.D. by enrolling in the mechanical engineering doctoral program and specializing in industrial engineering. Areas of faculty expertise include manufacturing, operations research, large-scale systems, experimental statistics, production planning and quality, reliability engineering, integrated manufacturing, artificial intelligence, robotics, human factors, and community health.

A proposal to offer the specific degrees of Master of Science in Industrial Engineering and Doctor of Philosophy in Industrial Engineering is now under review.

### Correspondence and Information

Graduate Adviser  
Industrial Engineering, FU-20

## Faculty

### Director

Scott C. Iverson

### Professors

Furness, Thomas A. III, 1989, Ph.D., 1981, Southampton (Southampton); display systems engineering, human factors, computer graphics.

Kapur, Kailash C., 1992, M.S., 1967, Ph.D., 1969, California (Berkeley); quality and reliability engineering, system design and optimization, total quality management.

### Associate Professors

Barfield, Woodrow,\* (Technical Communication), 1987, M.A., 1980, California State; Ph.D., 1986, Purdue; interactive computer graphics, human factors in computer systems.

Druil, Albert B.,\* 1959, (Emeritus), M.S.I.E., 1957, Washington (St. Louis); industrial engineering, human factors.

Iverson, Scott C.,\* 1983, (Health Services), M.S., 1972, San Jose State; M.Sc., 1979, Trinity (Dublin); Ph.D., 1974, Colorado; operational research and systems theory applied to manufacturing automation, decision making, community health.

Roberts, Norman H.,\* 1968, Ph.D., 1958, Washington; reliability and probability theory.

Storch, Richard L.,\* 1977, M.S., 1968, Massachusetts Institute of Technology; Ph.D., 1978, Washington; statistical quality control, scheduling, group technology, shipbuilding, marine safety.

### Assistant Professors

Chapman, Bruce L.,\* 1986, (Mechanical Engineering), M.B.A., 1981, South Carolina; Ph.D., 1986, Texas; application of artificial intelligence to manufacturing and computer-aided manufacturing implementation.

Noble, James S., 1991, M.S.I.E., 1988, Ph.D., 1991, Purdue; manufacturing systems modeling, design economics and organization, material flow systems.

Zabinsky, Zeldia B.,\* 1985, M.S., 1984, Ph.D., 1985, Michigan; operations research in industrial engineering, optimization with stochastic elements.

## Course Descriptions

### Courses for Undergraduates

#### Industrial Engineering

**IND E 316 Regression Analysis and Design of Experiments (3) W Barfield** Introduction to the analysis of data from planned experiments. Analysis of variance and regression analysis with applications in engineering. Joint with STAT 316. Prerequisite: 315.

**IND E 317 Work Systems Design (3) W** Work design and measurement principles; time utilization, flow and operations studies, principles of motion economy, time study principles and practices, physiological and psychological aspects of work. Lectures and studies in local industry as laboratory.

**IND E 324 Engineering Applications of Linear Programming (3) A Iverson, Zabinsky** Optimization of linear systems, mathematical model design, simplex methods, primal-dual algorithms, parametric programming, network theory, integer and goal programming. Design aspects of models with applications involving transportation, allocation, and total industrial systems. Prerequisites: MATH 308, ENGR 141.

**IND E 325 Nonlinear Programming and Stochastic Models (3) W Iverson, Zabinsky** Optimization of nonlinear and stochastic systems analysis to industrial engineering problems. Linear approximation methods, geometric and risk programming, inventory, queuing, game and decision theories, simulation, and Markov chains. Prerequisites: 315, 324.

**IND E 326 Methodology of Operations Research (3) Sp Iverson** Fundamental concepts of mathematical systems theory. Application of general systems approach for specification of requirements, analysis, design, implementation of industrial engineering, and information systems. Generalized techniques and applications common to industrial, mechanical engineers, and management scientists. Class project concerning analysis of large-scale systems problem utilizing operational research. Prerequisite: 325.

**IND E 351 Human Factors in Design (3) W Barfield** Engineering considerations of the abilities and limitations of the human aspect in the design of operational

systems and components. Functional, psychological, physiological, and environmental considerations. Studies with local industry used as laboratory exercises. Prerequisite: 315.

**IND E 352 Human Factors: Workstation Design (3)** Extension of the material on the fundamentals of human factors; biomechanics, workstation design, controls, anthropometrics, environmental factors such as noise and vibration, temperature, and humidity are discussed. Concentration on design. Prerequisites: 351, ENGR 315.

**IND E 419 Plant Layout and Material Handling (4) W Storch** Design of new or expanding industrial facilities. Consideration of work organization and layout. Study of basic design of plant systems, including plumbing, electrical, HVAC, illumination, acoustics, and waste handling. In depth coverage of material handling system design and equipment choices.

**IND E 420 System Safety and Reliability Engineering (3) Sp Roberts** Applications of statistical and algebraic techniques to system reliability. Derivation and discussion of failure distributions; quality control; analysis of reliability test data; maintenance policies and Monte Carlo simulation techniques. Prerequisite: 315.

**IND E 424 Simulation (4) A Chapman, Iverson** Discrete-event simulation methodology emphasizing model formulation and construction, statistical base for simulation modeling, and computer languages. Applications to industrial and manufacturing problems. Laboratory illustrates model architecture, inference, and optimization. Joint with QMETH 424. Prerequisites: 315 or QMETH 201, IS 200, or equivalents.

**IND E 430 Manufacturing Scheduling and Inventory (3) Sp Storch** Manufacturing scheduling and inventory control for different work organizations. Coverage of workforce scheduling, job shop scheduling, assembly line balancing, MRP, just-in-time, OPT, and large project scheduling. Prerequisites: 325, ENGR 315.

**IND E 451 Statistical Quality Control (3) A Storch** Design of quality-control systems. Use of statistical process controls and acceptance sampling methods. Process capability analysis and methods for establishing specifications and tolerances. Prerequisite: 315.

**IND E 455 User Interface Design (3) A Barfield, Furness** Design oriented to cover fundamentals of user interface design; models on human computer interaction, software psychology, input devices, usability, cognitive and perceptual aspects of human-computer interaction, advanced interface, and research methodologies are discussed. Joint with TC 455. Prerequisites: 315, 316 or equivalents, or permission of instructor.

**IND E 481 Application of Computer-Aided Manufacturing Techniques (3) A Chapman** Production management systems, computer control systems, numerical control. Materials requirements planning, computer-based process and quality control, and APT programming for NC machines. Prerequisite: ME 304.

**IND E 482 Robotics and Artificial Intelligence (3) W Chapman** Application of robots and other flexible manufacturing equipment. Sensors, mechanization of parts handling, automatic production and assembly, types of industrial robots, and industrial implementation. Introduction to artificial intelligence. Prerequisite: 481.

**IND E 483 Manufacturing Optimization (3) Sp Chapman** Design and optimization of manufacturing systems. Computer-assisted manufacture. Sensing and control methods for efficient use of automation. Managing the automated factory. Tool and production planning. Laboratory exercises and applications in local industrial plants. Prerequisite: 482 or permission of instructor.

**IND E 494 Theory of Industrial Engineering Design (3) W Noble, Storch** Theory of design consider-

ing manufacturing implications. Topics include design for production, design for assembly, design organization, the design process, technology assessment in design and ethics. Prerequisites: 330, 481, ENGR 250, ENGR 315.

**IND E 495 Industrial Engineering Design (3) Sp** *Drui* Design seminar laboratory involving identification and synthesis of engineering factors to plan and achieve specific project goals. Current literature and recommended texts are used as reference sources. Lecture and/or laboratory. Prerequisite: 494.

**IND E 498 Special Topics in Industrial Engineering (3)** Lecture and/or laboratory. Maximum of 9 credits may be applied toward an undergraduate degree. Prerequisite: permission of instructor.

**IND E 499 Special Projects (2-5, max. 9)** Prerequisite: permission of department Chairperson.

## Materials Science and Engineering

302 Roberts

Materials science and engineering is an interdisciplinary field that addresses the scientific fundamentals of materials, their processing, and their engineering design for technological applications. Basic principles of chemistry and physics are applied to provide an understanding of the structure of materials and the manner in which the structure determines the properties. Scientific processing is then applied to yield the necessary properties, which then can be integrated with, and designed to accommodate, the needs of modern technology.

## Ceramic Engineering

Ceramic materials are high-temperature resistant, chemically durable, strong, and rigid. The ceramic engineering program provides students with an understanding of the chemical, electrical, optical, mechanical, and thermal properties of ceramics; of processing methods and their effects on the structure and properties; and of the feasibility and economics of manufacture of ceramic materials for engineering applications. The study of electronic and optical materials is also available in the program.

## Undergraduate Program

### *Bachelor of Science in Ceramic Engineering Degree*

Entrance to the program requires the equivalent of at least 64 credits earned at the University of Washington, or their transfer equivalent, with a 2.00 GPA and attainment of 2.0 in specified courses. Due to competitive admissions, attaining the minimum GPA does not ensure admission; in recent years a 2.50 GPA has been required. Entrance requirement details may be obtained from the department or the University's Office of Admissions. Application forms to enter the program are available from the department office. Continuation in the program is subject to the policy defined by the College of Engineering.

Lower-division courses required in addition to the minimum college requirements are: ENGR 123, 170, 210, 220, 250; E E 306 and ENGR 331 or equivalent. The upper-division professional program consists of 72 credits of required courses including courses in materials structure and properties, analysis techniques, and thermodynamics, plus a 4-credit senior problem or design alternate. Courses in ceramic processing and properties are designed to develop technical expertise applicable to modern ceramic engineering practice. Additional courses must be completed for a total of 199 credits for the B.S.Cer.E. degree.

### *Other Sources of Information*

A variety of financial aid is available to students in ceramic engineering. In addition to need-based aid provided through the University's Office of Financial Aid, companies and individuals with interest in developing ceramic engineering students have provided scholarships for students at all levels who have been admitted to the program. Specific information and application forms are available in the department office, 302 Roberts.

## Metallurgical Engineering

Metallurgical engineering is concerned with the processing, fabrication, and utilization of metals, alloys, and other engineering materials. Extractive metallurgy relates to the processing and refining of metals and their compounds. Physical metallurgy is concerned with the structure and properties of materials, the development of new materials with improved properties, and the application and performance of materials in modern engineering systems and design. The study of electronic and optical materials is also available in the program.

## Undergraduate Program

### *Bachelor of Science in Metallurgical Engineering Degree*

Entrance to the program requires the equivalent of at least 64 credits earned at the University of Washington, or their transfer equivalent, with a 2.00 GPA and attainment of 2.0 in specified courses. Due to competitive admissions, attaining the minimum GPA does not ensure admission; in recent years a 2.50 GPA has been required. Entrance requirement details may be obtained from the department or the University's Office of Admissions. Application forms to enter the program are available from the department office. Continuation in the program is subject to the policy defined by the College of Engineering.

Lower-division courses required for graduation in addition to the minimum college requirements are ENGR 170, 210, 220, 250, and 331 or equivalent; EE 306. Remaining lower-division courses are selected from among those recommended. Metallurgy majors must complete a 6-credit, upper-level science requirement, chosen with the adviser's approval. Recommended courses to fulfill this requirement include CHEM 223, 224; 350, 351; 455, 456; or PHYS 224, 225. The design requirement includes a minimum of 7 credits of design-related courses; 6 credits of technical electives are also required. The design and technical elective courses must meet standards specified in the advising guide. A 4-credit senior problem or design alternate is required. In addition to the college and departmental requirements specified above, additional courses must be completed to satisfy the minimum graduation requirement of 199 credits.

### *Other Sources of Information*

A variety of financial aid is available to students in metallurgical engineering. In addition to need-based aid provided through the University's Office of Financial Aid, companies and individuals with interest in developing metallurgical engineering students have provided scholarships for students at all levels who have been admitted to the program. Specific information and application forms are available in the department office, 302 Roberts.

## Graduate Program

Thomas F. Archbold, Graduate Program Coordinator

The Department of Materials Science and Engineering offers programs of study leading to the degree of Master of Science in Materials Science and Engineering with defined options in ceramic engineering, metallurgical engineering, and materials science. The Doctor of Philosophy program is offered with defined pathways in ceramic engineering, metallurgical engineering, and materials science.

Ceramic engineering graduate programs are designed to develop a fundamental understanding of the physical, chemical, and structural relationships that influence the properties and applications of ceramic materials. Processing, the development of microstructure, and the relationships of microstructure to properties are considered from a basic viewpoint that is applicable to a broad range of materials. Special interdisciplinary courses are offered in structural applications of brittle materials that combine mechanics and materials in a practice-oriented engineering design program.

Graduate programs in metallurgical engineering encompass a variety of courses and research programs that are related to the physical and chemical aspects of metals, alloys, and related engineering materials. Programs in the physical metallurgy and materials science areas include the structure and properties of alloys, phase transformations, biomaterials, lattice defects, the optical properties of nonmetallic solids, failure analysis, x-ray diffraction, and the mechanical behavior of materials. Programs in the area of extractive metallurgy and minerals processing include metallurgical thermodynamics, rate phenomena, extractive process design, and carbothermic reduction processes.

The materials science option or pathway is a course of study that combines the basic elements of understanding ceramics, metals, polymers, composites and electronic materials. Many specialized courses, including engineering fracture mechanics, semiconductor devices, and polymer chemistry, may be taken in other departments to provide a broad, yet basic, materials study program.

In addition, the department is authorized to supervise an option in materials science and engineering that leads to the College of Engineering Master of Science degree. This degree program is intended to accommodate students who have a strong science background but lack an undergraduate engineering degree. The required courses are the same for all of the above degrees. Students with deficiencies in their intended area of engineering specialization may be required to take undergraduate courses in addition to the normal graduate course requirements.

### *Master of Science in Materials Science and Engineering and Master of Science Degrees*

For these master's degrees, a minimum of 30 credits of course work and the satisfactory completion of an M.S. thesis research problem are required. Fifteen of the course credits are specified to include courses on chemical kinetics, diffusion, crystal structure and imperfections, microstructure and phase transformations, and graduate seminar. Other courses may be required for specific program options. The residence and grading requirements follow those of the Graduate School.

### *Doctor of Philosophy Degree*

Students who have completed one year of graduate work must take the Ph.D. qualifying examination the next time it is offered to determine whether the faculty will advise continued study proceeding to the General Examination for the degree of Doctor of Philosophy. A critical examination of the applicant's complete academic record, recommendations, and proposed course of study will be pertinent to this decision. In addition to course work, each student is required to pass the General Examination, which is sufficiently comprehensive to demonstrate the student's ability to deal with broad aspects of materials science, as well as with a specialized subject area. Proficiency in basic research is of paramount importance. Each prospective candidate is required to present a written dissertation that makes an original and independent contribution to knowledge of the student's field of specialization.

### *Research Facilities*

The research laboratories in the Department of Materials Science and Engineering have been newly renovated and are well equipped for a variety of research

endeavors. Facilities include equipment for electron and optical microscopy, x-ray diffraction, high-temperature heat treatment and mechanical testing, specialized processing equipment, including hot and cold isostatic presses, nitrogen reaction furnaces, and automated TGA, DTA analysis systems. Equipment for analyses of particle size, surface area, and pore size is also available. Students have liberal access to the large University mainframe computers, as well as local mini and microcomputers.

#### Financial Aid

A limited number of teaching assistant and research assistant appointments are available. Early application and direct correspondence or interviews with faculty members who may have open positions on research projects are encouraged. Requests for application forms and financial aid should be directed to the graduate program coordinator.

#### Correspondence and Information

Graduate Program Coordinator

## Faculty

#### Chairperson

Thomas G. Stoebe

#### Professors

Aksay, Ilhan A.,\* 1983, M.S., 1969, Ph.D., 1973, California (Berkeley); ceramic processing, powder consolidation, ceramic-metal composites, phase equilibria in ceramic systems.

Archbold, Thomas F.,\* 1961, M.S., 1957, Ph.D., 1961, Purdue; corrosion, thermal diffusion, substructure characterization, fatigue.

Fischbach, David B.,\* 1969, (Emeritus), M.S., 1951, Ph.D., 1955, Yale; structure and properties of carbons, graphite, other nonoxide ceramics and composite materials.

Ghose, Subrata,\* 1972, ‡(Geological Sciences, Geophysics), M.S., 1959, Ph.D., 1959, Chicago; lattice dynamics, structural and magnetic phase transitions, thermal expansion.

Kalonji, Gretchen,\* 1990, Ph.D., 1982, Massachusetts Institute of Technology; theory of defects in crystalline solids, atomistic computer simulation techniques in materials science, rapid solidification of ceramics.

Pearsall, Thomas P.,\* 1989, ‡(Electrical Engineering), M.S., 1970, Ph.D., 1973, Cornell; compound semiconductor materials development, semiconductor physics and device technology.

Polonis, Douglas H.,\* 1955, Ph.D., 1955, British Columbia; physical and mechanical metallurgy, phase transformations, strengthening mechanisms, alloy design, structure-property relation in materials.

Rao, Y. Krishna,\* 1976, Ph.D., 1965, Pennsylvania; reaction kinetics, catalysis and thermodynamics in materials systems and electronic materials processing.

Scott, William D.,\* 1965, M.S., 1959, Ph.D., 1961, California (Berkeley); optical and electron microscopy of high-performance ceramics, alumina and electronic materials.

Stoebe, Thomas G.,\* 1966, ‡(Nuclear Engineering), M.S., 1963, Ph.D., 1965, Stanford; lattice defects and luminescence in solids, electronic and optical materials and devices, solid-state radiation dosimetry.

Taya, Minoru,\* 1987, ‡(Mechanical Engineering), Ph.D., 1977, Northwestern; composite materials, elasticity and plasticity, impact physics, fracture theory.

Whittemore, Osgood J.,\* 1964, (Emeritus), M.S., 1941, Washington; Cer.E. (Professional), 1950, Iowa State; ceramic processing, sintering, mercury porosimetry, refractories.

#### Associate Professors

Bordia, Rajendra K., 1992, M.S., 1981, Ph.D., 1986, Cornell; mechanical properties, densification and microstructural development in ceramics and ceramic compounds.

Kuhn, Kellin J.,\* 1987, ‡(Electrical Engineering), M.S., 1985, Ph.D., 1985, Stanford; molecular beam epitaxy of AlGaAs/GaAs on GaAs, InGaAs/GaAs on GaAs, and InGaAs/GaAs on InP superlattices and quantum wells.

Miller, Alan D.,\* 1957, Ph.D., 1967, Washington; chemical bonding, high-temperature equilibria, environmental effects on mechanical properties, high-temperature processing.

Ohuchi, Fumio, 1992, M.S., 1974, Ph.D., 1981, Florida; nucleation and growth of thin film layered materials, structure-property relationships at interfaces, surface science, glass, device applications.

Sarikaya, Mehmet,\* 1984, M.S., 1979, Ph.D., 1982, California (Berkeley); phase transformations; microstructure, crystallography, and spectroscopy of metals, ceramics, and composites by HREM techniques; biocrystallization; structure-property relations.

Stang, Robert G.,\* 1973, M.S., 1965, California (Los Angeles); Ph.D., 1972, Stanford; elastic and plastic deformation of materials, high-temperature creep in metals and ceramics, substructure effects.

#### Assistant Professors

Brush, Lucien N., 1990, M.E., 1984, Ph.D., 1988, Carnegie-Mellon; modeling of physical systems in materials science and related fields including crystal growth relating to both the stability of growing crystals and the evolution of nonlinear growth forms; directional solidification of single crystal alloys in the presences of electric fields; radiative melting of thin silicon films; and coarsening.

Liu, Jun, 1991 (Research), M.S., 1986, Ph.D., 1990, Washington; high resolution electron microscopy.

Viney, Christopher,\* 1987, ‡(Bioengineering) M.A., 1984, Ph.D., 1983, Cambridge (England); microstructure/property relationships in liquid crystalline polymers.

Yan, Hong, 1991, (Research), M.S., 1988, Ph.D., 1991, Michigan; surface and interface modeling.

Yoo, Hyungmo, 1991, (Research), M.S., 1987, Ph.D., 1990, Oregon; molecular beam epitaxy.

## Course Descriptions

### Courses for Undergraduates

#### Ceramic Engineering

**CER E 198 Career Planning (1) Asp** Career opportunities in ceramic engineering and the required educational curricular planning. Credit/no credit only.

**CER E 330 Introduction to Ceramic Raw Materials and Processes (4) A** Raw materials, fabrication processes, and process control of interest to ceramic engineers. Natural and synthetic raw materials, forming, drying, firing, temperature measurement, physical measurements.

**CER E 333 Ceramic Processing: Methods (5) Sp** Technology of ceramic fabrication processes. Material characterization at processing stages for control. Laboratory study of all operations in the manufacture of selected ceramic products.

**CER E 336 Ceramic Engineering Excursion (1)** Plant inspection trip. Credit/no credit only. 2 credits required.

**CER E 401 Equipment and Plant Design (3) Sp** The design process and its application in ceramic engineering. Design projects. Prerequisite: MSE 302.

**CER E 411 Vitreous State (4) Sp** Chemistry and physics of glass, glazes, and porcelain enamels; struc-

ture, properties and processing of vitreous materials. Prerequisite: MSE 316 or permission of instructor.

**CER E 413 Physical Ceramics: Mechanical Properties (3) A** Mechanical properties, elasticity, strength, thermal shock, and high temperature effects relative to structural design. Fracture mechanics and notch sensitivity of brittle materials. Environmental effects, plastic flow, and high temperature deformation. Prerequisite: ENGR 220.

**CER E 414 Electrical Properties of Ceramics (3) W** Ionic and electronic conduction in crystalline and non-crystalline inorganic solids. Dielectric and ferroelectric behavior, magnetic properties of ferrimagnetic materials, optical properties of dielectrics. Undergraduate ceramic engineering majors must take 415 concurrently. Prerequisite: E E 306.

**CER E 415 Electrical Properties of Ceramics/Laboratory (1) W** Ionic and electronic conduction in crystalline and noncrystalline inorganic solids. Dielectric and ferroelectric behavior, magnetic properties of ferrimagnetic materials, optical properties of dielectrics. Prerequisite: concurrent enrollment in 414.

**CER E 416 Mechanical Properties Laboratory (1)** Measurements of the mechanical properties of ceramics: strength, fracture, toughness, thermal shock damage. Use of Weibull statistics to characterize strength and failure. Prerequisites: 413 which may be taken concurrently, ENGR 220.

**CER E 420 Colloidal Ceramics (3)** Properties and surface chemistry of ceramic colloids. Topics include absorption, adsorption, gels and their contributions to cementitious bonding, ion exchange, rheological properties, and analytical techniques applicable to these studies.

**CER E 441 Undergraduate Seminar (1, max. 3) AWSp** Employment selection, resume writing and correspondence, personnel contacts, interview planning and job-selection campaign. Individual technical presentations.

**CER E 450 Introduction to Carbon Materials (3)** Nature and capabilities of crystalline and disordered forms of pure carbon as engineering materials. Influence of structure on behavior. Preparation methods, structure and properties of diamond; synthetic and natural graphites; glassy, coke, pyrolytic, black, and fiber carbons.

**CER E 470 Refractories (3)** Chemical and mineralogical composition; processing methods; thermal, physical, and chemical properties and tests; application in high-temperature processes.

#### Materials Science and Engineering

**MSE 301 Optical Microscopy (3) A** Use of the optical microscope as a tool for the observation and analysis of the microstructure of materials. Light, interaction of light with matter, and principles of image formation and image interpretation using both reflected and transmitted light techniques.

**MSE 302 Materials Processing: Transport (4) W** Transport in materials processing systems; fluid flow, heat flow, mixing and application to high-temperature processing.

**MSE 305 Phase Equilibria (4) W** Phase equilibria in ceramic and metal systems of one, two, and three components. Use and determination of phase equilibrium diagrams. Prerequisite: 322 or ENGR 260.

**MSE 314 Crystal Chemistry and Crystallography (4) A** Principles of crystallography and structure of solids. Lattice structure, reciprocal lattice, crystal indices, stereographic projections. Applications in metals and alloys, ceramics, semiconductors and polymers. Prerequisite: ENGR 170.

**MSE 315 Kinetic Processes and Transformations in Materials (5) W** Applications of thermodynamic and kinetic principles to the study of transformations and

reactions in engineering materials. Thermal activation and rate equations; solid state diffusion; nucleation and growth; phase transformations; examples of important reactions including crystal growth, recrystallization, precipitation in solids, sintering, and devitrification. Prerequisites: 314, ENGR 170.

**MSE 316 Mechanical Behavior of Materials (5) Sp** Influence of structure on the mechanical properties of ideal and real solids. Mechanical behavior in metallic and ceramic systems. Prerequisite: 315.

**MSE 322 Thermodynamics in Materials Systems (4) A** Quantitative applications of thermodynamics to systems of interest to metallurgical and ceramic engineers. Detailed review of thermodynamic quantities and equations of state.

**MSE 399 Introduction to Research and Design (1) Sp** Research planning and design in materials science and engineering introduced by the faculty to facilitate student selection of senior project topic.

**MSE 421 Thermodynamics of Solids (3) W** Applications of thermodynamics to the solid state. Statistical interpretation of entropy. Heterogeneous equilibria. Theories of solutions. Thermodynamics of surfaces and of defects in solids. Prerequisite: 322 or equivalent.

**MSE 423 Fiber Composite Materials (3) W** Introduction to the materials science of composites composed of strong fibers in polymer, metal, or ceramic matrices. Properties of the individual phases and of the fiber/matrix interface; micromechanisms of load transfer from matrix to fiber; fabrication, and elastic and failure properties of the composites. Prerequisite: ENGR 170 or permission of instructor.

**MSE 442 Seminar in Ethics and Safety (1) W** Deals with issues of engineering ethics and industrial safety within the context of materials science and engineering. Prerequisite: senior standing.

**MSE 443 Senior Seminar (1) Sp** Consists of student reports of their senior projects.

**MSE 444 Nuclear Materials (3) Sp** Structure, properties, and performance of materials in nuclear reactor applications; engineering requirements and selection of materials for reactors; technology of materials for reactor fuels, moderators, shields, control elements, and structural components; corrosion and oxidation; effects of radiation on the structure and properties of materials. Joint with NUC E 444. Prerequisite: ENGR 170 or equivalent.

**MSE 455 Characterization Methods in Materials Science (4) A** Principles and applications of analytical techniques for materials characterization: X-ray, neutron, and electron diffraction; scanning and transmission electron microscopy; Auger electron spectroscopy. Prerequisite: 314.

**MSE 456 Experimental Techniques in Materials Science (3)** Analysis of measurement uncertainty and error; data analysis and plotting; vacuum technology; production and measurement of high temperatures; experiment and apparatus design; selected other measurement technique topics.

**MSE 466 Physical Properties of Materials (4) A** Introduction to elementary solid-state concepts in materials. Atom bonding, statistical mechanics, free electron and band theories, thermal properties. Application of principles to conduction in metals, insulators, semiconductors, and to magnetic and optical processes in solids.

**MSE 467 Electronic Materials Processing (3) Sp** Materials and processes used in the manufacture of electronic components. Basic principles of crystal growth, deposition, doping, diffusion, component delineation, and packaging as they apply to hybrid and integrated circuits and devices.

**MSE 498 Special Topics (1-5, max. 8) AWSpS** Special topics in materials science and engineering of-

fered as a course with lectures, conferences, or laboratory. Prerequisite: senior standing or above and permission of faculty member.

**MSE 499- Special Project (\*-, max. 5) AWSpS** Materials science and engineering field or laboratory investigations on independent basis. Prerequisite: 399.

## Metallurgical Engineering

**MET E 188 Career Planning in Metallurgy (1) W** Introduction to the field of metallurgical engineering. Includes interdisciplinary aspects of the field, lecture-demonstrations, introduction to laboratory tools and techniques, and discussions of curriculum and career opportunities with current students.

**MET E 320 Practical Metallurgy (2)** Laboratory oriented course providing an introduction to metal and alloy systems. Micro- and macro-structure properties processing relationships. Laboratory experiments include solidification, phase diagram determination, recrystallization, microstructure, properties of metals.

**MET E 321 Metallurgical Processing (4) Sp** Principles and applications of techniques used to process metals and alloys including solidification and casting, heat treating, forming, joining and machining and their effects on microstructure and properties. Prerequisite: ENGR 170.

**MET E 432 Corrosion of Engineering Materials (4) Sp** Applications of physical chemical principles to the reaction of materials with their environments. Prevention and control of corrosion and oxidation processes. Corrosion problems in materials applications.

**MET E 461 Engineering Physical Metallurgy (3) A** Phase transformations and strengthening mechanisms in ferrous and nonferrous alloys; heat treatment and microstructure control; physical metallurgy of carbon and alloy steels, aluminum and titanium alloys; microstructure-property relationships and alloy design.

**MET E 462 Mechanical Behavior of Metals (4) W** Theories of elastic and plastic deformation in materials. Application of these theories in design, stress and strain, tensile and compression loading, yielding and plastic deformation, fracture, introduction to fracture mechanics, creep and fatigue.

**MET E 463 Reliability and Design in Metallurgical Systems (4) Sp** Metallurgical design problems and failure analysis. Properties of commercially important engineering alloys. Prerequisite: MSE 316 or equivalent.

**MET E 464 Extractive Process Analysis (3) Sp** Extractive processes analyzed by the methods of material and energy balances, computational thermodynamics, process kinetics and reactor theory. Introduction to process optimization. Prerequisite: MSE 322 or equivalent.

**MET E 468 Undergraduate Seminar (1, max. 3) AW**

## Courses for Graduates Only

### Materials Science and Engineering

**MSE 501 Ceramic Processing (3)** Technology of ceramic fabrication processes. Characterization of ceramic materials at stages of processing. Prerequisite: CER E 333 or equivalent or permission of instructor.

**MSE 510 Bonding, Symmetry, and Crystallography (4) A** Atomic bonding, coordination; structures, stability of organic and inorganic compounds in the solid-state. Reciprocal lattice concept, its vectorial basis. Crystallography of solids, emphasis on point and space group symmetries. Structures of complex organic, inorganic compounds. Introduction to physical properties described by tensors: elasticity, optical magnetic, electrical, thermal properties.

**MSE 511 Advanced Theory of X-ray Diffraction (3)** Use of the reciprocal lattice concept and Fourier analysis in the study of atomic arrangements in crystals. Line

shape and diffuse scattering analysis. Analytical interpretation of diffraction patterns. Prerequisite: MSE 305 or equivalent.

**MSE 512 Experimental Transmission Electron Microscopy (3) W** Fundamentals of electron optics as applied to microscopy; applications of contrast theories and electron diffraction with emphasis on defects and multiphase structures in crystalline solids. Prerequisite: 510.

**MSE 513 Transmission Electron Microscopy Laboratory (2) WSp** One four-hour laboratory and one two-hour discussion/demonstration per week; metallic, ceramic, electronic biological sample preparation techniques; diffraction, imaging, and spectroscopy techniques in electron microscopy. Prerequisite: 512 which may be taken concurrently.

**MSE 515 Advanced Transmission Electron Microscopy (3) Sp** Principles of image formation in crystalline and amorphous materials at the atomic resolution level; high spatial resolution electron diffraction with emphasis on convergent beam electron diffraction; quantitative elemental compositional and chemical analysis with energy dispersive x-ray spectroscopy and electron energy loss spectroscopy; high voltage electron microscopy. Prerequisite: 512 and 513. (Offered even-numbered years.)

**MSE 518 Advanced Mineralogy (3)** Crystal symmetry: point groups, space groups. Mathematical description of crystal structures; group theory and irreducible representations; tensor description of physical properties; stress, strain, piezoelectricity, elasticity; structural and magnetic phase transition, Landau theory, deformation and creep in crystals; elasto-viscous properties of Earth's mantle, crystal chemistry and solid state reactions.

**MSE 520 Seminar (1, max. 6) AWSp** Review of research problems in recent literature. Registration required for all graduate students. Credit/no credit only.

**MSE 521 Mechanical Behavior of Ceramics (3)** Dislocation structures in ceramics; influence of dislocations on the deformation and fracture of single crystals and polycrystalline ceramics; brittle fracture and theoretical strength. Prerequisite: 511 or permission of instructor.

**MSE 523 Advanced Extractive Metallurgy (3)** Physical chemistry of solutions, mattes, fused salts, and slags. Discussion of papers from current literature. Prerequisite: basic course in thermodynamics or physical chemistry or permission of instructor.

**MSE 524 Applied Rate Phenomena (3) W** Introduction to rate theory and transport processes. The principal thrust is on applications in ceramics and metallurgy. Prerequisite: basic course in transport phenomena or permission of instructor.

**MSE 525 Thermodynamic Topics in Materials Science (3)** Selected topics in application of classical and statistical thermodynamics to systems of current interest.

**MSE 526 Dynamic Behavior of Metallurgical Systems (3)** Interpretation of the behavior of systems by application of the methods of process analysis and control theory; modeling of systems, exploration of their characteristics by stimulus-response, and review of current industrial control processes. Prerequisite: graduate standing in engineering or permission of instructor.

**MSE 541 Theoretical Structural Metallurgy (3) A** Detailed study of the general properties and effects of point, line, and surface defects in crystalline solids. Prerequisite: MET E 462.

**MSE 551 Diffusion in Solids (3) W** Theories and principles of diffusion in solids; phenomenological and atomistic concepts; equilibrium defects; impurity, chemical potential gradient, grain boundary and dislocation effects in metals and nonmetals.

**MSE 561 Phase Transformations in Material Systems (3) Sp** Thermodynamics and kinetics of solid state reactions; phase stability, transition phases, theories of nucleation and spinodal decomposition, growth models, phase morphology and microstructure development, precipitation from solid solutions, examples of specific transformation types.

**MSE 562 High Temperature Composites (3) Sp** Thermo-mechanical behavior and environmental degradation of high temperature composites (metal, ceramic, and intermetallic matrix composites) and carbon/carbon composites addressed. Covers related topics such as processing (primary and secondary). Joint with M E 562. Recommended: 423 or M E 450. (Offered odd-numbered years.)

**MSE 565 Electron Theory of Materials (3)** Solid-state concepts of materials. Atomic bonding, statistical mechanics, Brillouin zone theory. Applications to conduction, optical, and magnetic properties of metals, semiconductors, and insulators. Prerequisite: 466.

**MSE 566 Superconductors and Magnetic Materials (3)** Theories of magnetic phenomena: dia-, para-, ferri-, and ferromagnetism; theories of superconductivity. Applicants in current technology superconductor materials and magnetic devices. Prerequisite: 466 or equivalent. (Formerly MET E 566.)

**MSE 567 Electronic Materials: Preparation and Properties (3) W** Physics and technology of molecular beam epitaxy. Physics of growth, quantum wells, superlattices, strained layers. High vacuum technology and III-V characterization techniques. Includes extensive laboratory. Students design, grow, and characterize MBE structures relevant to their M.S. or Ph.D. thesis. Limited enrollment. Joint with E E 567. Prerequisite: permission of instructor. (Offered even-numbered years.)

**MSE 599 Special Topics in Materials Science (1-5, max. 5) AWSpS** Studies of special advanced topics in materials science. Prerequisite: permission of instructor.

**MSE 600 Independent Study or Research (\*) AWSpS**

**MSE 700 Master's Thesis (\*) AWSpS**

**MSE 800 Doctoral Dissertation (\*) AWSpS**

## Mechanical Engineering

143 Mechanical Engineering

Mechanical engineering is a branch of the engineering profession, encompassing the design, analysis, economics, manufacture, and control of mechanical devices and systems. Major subfields of mechanical engineering include: (1) utilization of thermal energy for motive power and human comfort; (2) design, analysis, and fabrication (cutting, forming, welding) of mechanical devices; (3) analysis of vibration and failure of machines and their components; and (4) the management and control of systems of men and machines, including robots and robotic systems.

The undergraduate program in mechanical engineering requires a sound educational basis in the mathematical, chemical, and physical sciences, and in computational, graphical, and written communication skills.

## Undergraduate Program

### Bachelor of Science in Mechanical Engineering Degree

Entrance into the department is by application and is limited in number to a quota assigned by the College of Engineering consistent with enrollment limits imposed

by the state. The minimum entrance requirements are 45 credits in courses applicable to the degree, a minimum GPA of 2.50 in specific preparatory courses, and an overall GPA of 2.00. The current entrance requirements may be obtained from the department or the Engineering Advising Office.

In addition to satisfying College of Engineering requirements, each applicant must have completed MATH 124, 125, 126, and 307; CHEM 140, 141, and 150; PHYS 121, 122, and 131, 132; ENGR 142, 210, 220, 230; and one 5-credit English course selected from the University-approved list for English proficiency.

Students entering the department in autumn quarter 1993 or later will be required to have a minimum GPA of 2.00 in all core courses, and will be required to take ENGR 231 before admission to the department.

For graduation, the student must complete the remaining requirements in the college preparatory program plus 61 credits of department-required courses and 12 credits of mechanical engineering option courses (400 level). A minimum total of 192 applicable credits are required for graduation. A minimum cumulative GPA of 2.00 must be maintained as well as a minimum GPA of 2.00 in all engineering courses.

### Continuation Policy

The department policy on continuation is consistent with the continuation policy of the college. Details may be obtained from the department.

### Correspondence and Information

All inquiries concerning the mechanical engineering program should be addressed to the Undergraduate Program Adviser, Department of Mechanical Engineering, FU-10.

## Graduate Program

The Department of Mechanical Engineering offers graduate programs leading to the degrees of Master of Science in Mechanical Engineering and Doctor of Philosophy. The department also provides an authorized option leading to the college-wide Master of Science in Engineering degree. These provide a balanced combination of formal instruction and independent research or design experience. Individual projects may be drawn from a wide spectrum of topics, which include mechanical and energy conservation systems, heat transfer, combustion, fluid mechanics, applied mechanics, including computational mechanics, computer-aided design and manufacturing, production systems, materials behavior, robotics, and applications of mechanical engineering science to a variety of such interdisciplinary fields as bioengineering, ocean engineering, and acoustics. Flexible requirements for course work provide opportunities both for a broad scientific and professional background and for specialty training.

### Research Facilities

The department has well-equipped laboratories for pursuing research in various disciplinary fields in mechanical engineering and for constructing specialized research equipment. These include experimental stress analysis; materials testing; synthesis and simulation of electromechanical control systems; foundry, welding, and other metal fabrication operations; computer facilities for CAD/CAM research; wind tunnels for boundary-layer and high-speed flow analysis; combustion systems performance, air-pollution control, and laser diagnosis; acoustics, vibration, and dynamic testing and measurements and modal analysis; radiation, conduction, and convection (including multiphase) heat transfer analysis, and a bioengineering flow facility.

### Financial Aid

Financial aid is offered to full-time graduate students so far as funds permit. This aid may be in the form of a research assistantship for sponsored programs, a fel-

lowship provided by the University or industry, or a teaching assistantship.

### Correspondence and Information

Graduate Program Coordinator  
143 Mechanical Engineering, FU-10

## Faculty

### Chairperson

Richard C. Corlett

### Professors

Alexander, Daniel E., 1954, M.S., 1954, Washington; Ph.D., 1977, Washington State; engineering design.

Balise, Peter L.,\* 1950, S.M., 1950, Massachusetts Institute of Technology; systems analysis and control.

Chalupnik, James D.,\* 1964, M.S.M.E., 1960, Ph.D., 1964, Texas; sound and vibration, wave propagation.

Childs, Morris E.,\* 1954, (Emeritus), M.S.M.E., 1947, Ph.D., 1954, Illinois; fluid mechanics, gas dynamics, turbulent boundary layers.

Corlett, Richard C.,\* 1964, M.M.E., 1958, Rensselaer Polytechnic Institute; Ph.D., 1963, Harvard; energy systems and combustion.

Daly, Colin H.,\* 1967, (Bioengineering), Ph.D., 1966, Strathclyde (Scotland); bioengineering, materials.

Day, Emmett E.,\* 1947, (Emeritus), M.S., 1947, Massachusetts Institute of Technology; materials, experimental stress analysis.

Depew, Creighton A.,\* 1960, M.S., 1957, Ph.D., 1960, California (Berkeley); heat transfer, fluid mechanics.

Emery, Ashley F.,\* 1961, (Architecture), M.S., 1958, Ph.D., 1961, California (Berkeley); bioengineering, energy conservation in buildings and air conditioning.

Firey, Joseph C., 1954, (Emeritus), M.S.M.E., 1941, Wisconsin; combustion, lubrication.

Galle, Kurt R.,\* 1960, (Emeritus), M.S.M.E., 1949, Ph.D., 1951, Purdue; instrumentation, controls, bioengineering.

Garbini, Joseph L.,\* 1979, M.S., 1973, Ph.D., 1977, Washington; manufacturing automation, instrumentation, systems and controls.

Gessner, Fred B.,\* 1967, M.S., 1960, Ph.D., 1964, Purdue; fluid mechanics, turbulence.

Hyman, Barry I.,\* 1975, (Public Affairs),† M.S., 1961, St. Louis; Ph.D., 1965, Virginia Polytechnic Institute; solar energy, energy conservation, science policy.

Jorgensen, Jens E.,\* 1967, (Forest Resources), M.S., 1963, Sc.D., 1969, Massachusetts Institute of Technology; systems analysis, manufacturing, automation and controls, forest engineering.

Kippenhan, Charles J.,\* 1963, (Emeritus), M.S. M.E., 1946, Ph.D., 1948, Iowa; energy conservation in buildings, heating, ventilating, and air conditioning, heat transfer, fluid mechanics.

Kobayashi, Albert S.,\* 1958, M.S., 1952, Washington; Ph.D., 1958, Illinois Institute of Technology; fracture mechanics, bioengineering.

Kosáry, George,\* 1983, (Nuclear Engineering),† Ph.D., 1974, Budapest; reactor dynamics (especially noise), two-phase flow characterization, applications of theory of stochastic processes in physics and engineering.

Love, William J.,\* 1970, (Emeritus), M.S., 1948, Colorado; Ph.D., 1952, Illinois; design, mechanics, power systems.

Malte, Philip C.,\* 1979, M.S.E., 1966, Ph.D., 1971, Michigan; combustion, thermodynamics, fluid mechanics.

McCormick, Norman J.,\* 1966, (Nuclear Engineering),† M.S., 1961, Ph.D., 1965, Michigan; reliability and risk analysis, reactor physics, neutron and photon transport.

McFeron, Dean E.,\* 1958, (Emeritus), M.S.M.E., 1948, Colorado; Ph.D., 1956, Illinois; heat transfer and thermal power processes.

Mills, Blake D. Jr., 1946, (Emeritus), M.S.M.E., 1935, Massachusetts Institute of Technology; mechanics and materials.

Morrison, James B.,\* 1946, (Emeritus), M.S.M.E., 1954, Washington; design, dynamics.

Murphy, Stanley R.,\* 1968, (Emeritus), Ph.D., 1959, Washington; ocean engineering, acoustics.

Pratt, David T.,\* 1981, M.Sc., 1962, Ph.D., 1968, California (Berkeley); turbulent combustion, computer simulation.

Riley, James J.,\* 1983, (Applied Mathematics), Ph.D., 1971, Johns Hopkins; fluid mechanics, especially turbulence.

Taggart, Raymond,\* 1959, (Emeritus), Ph.D., 1956, Queen's (Belfast); mechanical metallurgy.

Taya, Minoru,\* 1986, (Materials Science and Engineering), M.S., 1973, Ph.D., 1977, Northwestern; properties of advanced composites, mechanics and failure analysis.

Vesper, Karl H.,\* 1969, (Management and Organization, Marine Affairs),† M.B.A., 1960, Harvard; M.S., 1966, Ph.D., 1969, Stanford; design, ocean engineering, entrepreneurship.

Wolak, Jan,\* 1965, (Emeritus), M.S., 1960, Washington (St. Louis); Ph.D., 1965, California (Berkeley); mechanics of materials, manufacturing processes.

#### Associate Professors

Adee, Bruce H.,\* 1970, M.S., 1968, Ph.D., 1972, California (Berkeley); naval architecture, ocean engineering.

Bodoia, John R.,\* 1964, (Emeritus), M.S., 1957, Ph.D., 1959, Carnegie Institute of Technology; fluid mechanics, heat transfer, solar energy.

Calkins, Dale E.,\* 1979, M.S., 1969, San Diego State; D.Eng., 1976, California (Berkeley); dynamics of marine systems, marine fluid dynamics.

Chalk, William S., 1957, (Emeritus), M.S.M.E., 1961, Washington; design graphics.

Ford, Paul W.,\* 1957, (Emeritus), M.S.M.E., 1959, Washington; manufacturing processes, metal casting.

Forster, Fred K.,\* 1979, M.S., 1968, Ph.D., 1972, Stanford; bioengineering, application of ultrasound in medicine, physiologic fluid flow, cardiovascular dynamics, large deformation elasticity.

Holt, Richard E.,\* 1954, (Emeritus), M.S.M.E., 1957, Washington; manufacturing processes, welding.

Kielling, William C.,\* 1956, (Emeritus), M.S.M.E., 1959, Washington; design, dynamics, and kinematics.

Kramlich, John C., 1991, M.S., 1975, Ph.D., 1980, Washington State; combustion systems.

Marshall, Frank R., 1970, (Emeritus), M.A., 1953, Montana; quantitative science.

Messer, Rowland E., 1949, (Emeritus), B.S.M.E., 1935, Washington; graphics.

Ramulu, Mamidala,\* 1982, M.T., 1976, Indian Institute of Technology; Ph.D., 1982, Washington; manufacturing processes, production engineering, applied mechanics, fatigue and fracture mechanics.

Reinhall, Per G.,\* 1982, M.S., 1978, Ph.D., 1982, California Institute of Technology; nonlinear dynamics, vibrations.

Sandwith, Collin J.,\* 1966, (Research), Ph.D., 1966, Oregon State; corrosion, material science, design, manufacturing.

Sherrer, Robert E.,\* 1960, (Emeritus), M.S., 1953, Ph.D., 1978, Wisconsin; solid mechanics.

Storti, Duane W.,\* 1983, (Applied Mathematics), M.S., 1981, Ph.D., 1983, Cornell; nonlinear dynamics and vibrations, perturbation theory.

Tuttle, Mark E.,\* 1985, M.S.E.M., 1978, Michigan Technological; Ph.D., 1984, Virginia Polytechnic Institute; experimental stress analysis, composite materials, adhesion mechanics.

#### Assistant Professors

Berg, Martin C.,\* 1986, M.S., 1978, Washington; Ph.D., 1986, Stanford; automation and motion control systems (robotics), modern control systems analysis, computer control and manufacturing automation.

Chapman, Bruce L.,\* ‡(Industrial Engineering), 1986, M.B.A., 1981, South Carolina; Ph.D., 1986, Texas; application of artificial intelligence to manufacturing and computer-aided manufacturing implementation.

Ganter, Mark A.,\* 1986, M.S., 1981, Ph.D., 1985, Wisconsin; kinematics, solid modeling, computer graphics, automated manufacturing.

Haralddottir, Aslaug, 1989, M.S., 1982, Oklahoma State; Ph.D., 1987, Michigan; multi-variable control system design and analysis, simulation, dynamic modeling.

Kumar, Vipin, 1988, M.S.M.E., 1970, M.B.A., 1974, Rhode Island; Ph.D., 1988, Massachusetts Institute of Technology; process synthesis, manufacturing processes.

Murray, William R., 1989, M.S., 1976, Texas (Austin); M.S., 1989, Ph.D., 1988, Massachusetts Institute of Technology; system dynamics and control.

Nevrinceanu, Cornelius, 1987, Dipl.-Eng., 1975, Traian Vuia Polytechnic (Romania); Ph.D., 1987, Minnesota; computer-aided engineering, artificial intelligence, design.

## Course Descriptions

### Courses for Undergraduates

#### Mechanical Engineering

**M E 304 Manufacturing Processes (3) AWSps Ramulu** Study of manufacturing processes, including interrelationships between the properties of the material, the manufacturing process, and the design of component parts. Prerequisite: 343.

**M E 323 Thermodynamics (4) AWSp Depew** Applications of thermodynamic principles: properties of pure substances from an advanced point of view, nonreactive gas mixtures, energy analysis of reactive mixtures, chemical equilibria, combustion, power, and refrigeration cycle analysis. Prerequisite: ENGR 260.

**M E 331 Introduction to Heat Transfer (4) AWSp Corlett** Study of heat transfer by conduction, radiation, and convection; elementary heat-exchanger design. Prerequisites: ENGR 260, and 333 or CIVE 342.

**M E 333 Introduction to Fluid Mechanics (4) AWSps Gessner** Introduction to the basic fluid laws and their application. Conservation equations, dynamic similarity, potential flow, boundary-layer concepts, effects of friction, compressible flow, fluid machinery, measurement techniques. Prerequisites: ENGR 260, and MATH 307.

**M E 343 Behavior of Engineering Materials (4) AWSp Daly** Study of the nature, properties, and behavior of engineering materials, involving strength, deformation, fracture, impact, creep, fatigue, and corrosion. Lecture and laboratory. Prerequisite: ENGR 220 or permission of instructor; recommended: ENGR 170.

**M E 352 Mechanics of Solids (3) AWSp Kumar** Development of relationships among loads, stresses, and deformations in the elastic behavior of machine or structural elements in tension, compression, bending, or torsion. Prerequisite: ENGR 220.

**M E 353 Machine Design Analysis (4) AWSps Nevvanceanu** Analysis, design, and selection of mechanical subsystems and elements, such as gears, linkages, cams, and bearings. Lecture and laboratory. Prerequisites: 343, 352.

**M E 373 Introduction to System Dynamics (4) AW Jorgensen** Mathematical modeling, analysis and design of physical dynamic systems involving energy storage and transfer by lumped-parameter linear elements. Time-domain response via analytical methods and numeric simulation. Prerequisites: MATH 307, ENGR 230.

**M E 374 Systems Dynamic Analysis and Design (4) WSp Jorgensen** Extension of 373. Frequency response analysis, generalized impedance concepts and applications, Fourier series analysis and Laplace transform techniques. Laboratory experiments and design projects. Prerequisite: 373.

**M E 395 Introduction to Mechanical Design (4) AWSps Calkins** Design process and methodology; decision making; optimization techniques; project planning; engineering economics; probabilistic and statistical aspects of mechanical design; ethical and legal issues. Lecture and laboratory. Prerequisites: 352, 373, ENGR 123, 260, IND E 315.

**M E 403 Material-Removal Processes (3) A Ramulu** Cutting and noncutting processes for material removal in the shaping of manufactured products. Study of forces and of power consumption and relative costs in the various processes. Prerequisites: 304 and 343, or permission of instructor.

**M E 406 Corrosion and Surface Treatment of Materials (3) W Sandwith** Corrosion fundamentals and forms (galvanic, crevice, pitting, stress corrosion, erosion, hydrogen and leaching). Principles of design, materials selection, cathodic protection and surface treatments (coatings, carburizing, nitriding and plating) applied to reduce corrosion. Failure analysis applied to case studies.

**M E 409 Introduction to Numerical Control and Computer-Aided Manufacturing (3) Sp Ramulu** Control system fundamentals, numerical control (NC) machine control systems, and the design aspect of NC machine tools, programming methods of NC machines, computer-aided manufacturing, CNC, DNC, and process optimization. Prerequisites: 304, 374, or permission of instructor.

**M E 422 Microscopic Thermodynamics (4) W Malte** Introduction to kinetic theory and statistical thermodynamics. A preliminary treatment of transport phenomena, mathematical probability statistics and relevant mathematical procedures. Prerequisite: ENGR 260. (Offered odd-numbered years.)

**M E 424 Combustion Systems (4) Sp Corlett, Malte, Pratt** Flame and combustion theory, including chemical kinetics, mixing/diffusion, and heat transfer. Flame types. Combustion chamber theory, design concepts, and performance. Pollutant control by combustion modification and flame additives. Lectures and laboratory demonstrations. Prerequisite: 323 or permission of instructor. (Offered even-numbered years.)

**M E 425 Air Conditioning (4) Sp Depew** Air conditioning, heating, and ventilating of buildings. Comfort and health, psychometric processes, load calculations, fluid distribution systems, simultaneous heat and mass transfer devices, controls. Design calculations involving these criteria, devices and systems. Prerequisites: 323, 331.

**M E 426 Solar Energy Engineering (4) Sp Bodoia** Fundamental principles of heat transfer, thermodynamics, and fluid mechanics are directed toward the analysis of devices for the collection and storage of solar energy, and of the syntheses of such devices into energy-delivery systems. Prerequisite: 331 or permission of instructor.

**M E 428 Noise Control (3) W Chalupnik** Introduction to design for noise control. Includes summary of acoustical phenomena as they pertain to noise control and measurement. Noise rating schemes, particularly in relation to machine noise in the work environment. Prerequisite: junior standing in engineering.

**M E 430 Thermal Environmental Engineering (4) W Emery** Fundamentals of thermodynamics, heat transfer, fluid mechanics and engineering measurements applied to practical thermal systems. Measurements of temperature, heat fluxes, energy fluxes, psychrometry, solar energy; refrigeration systems: air conditioning; effects of thermal environment on human beings. Prerequisites: 323, 331.

**M E 431 Advanced Fluid Mechanics (4) W Forster, Riley** Advanced topics in fluid mechanics, including kinematics, potential theory and vortex dynamics, viscous flow, turbulence, experimental and numerical methods, and design. Prerequisite: 333.

**M E 432 Gas Dynamics (3) Sp Gessner** Dynamic and thermodynamic relationships for the flow of a gas. Application of thermodynamic processes involving nozzles, diffusers, compressors, and turbines. Prerequisites: ENGR 260 and 333 or CIVE 342.

**M E 433 Turbomachinery (4) W Pratt** Thermodynamics, gas dynamics, and fluid mechanics of axial and centrifugal compressors, pumps, and turbines. Design and selection of components for engineering applications.

**M E 434 Advanced Mechanical Engineering Laboratory (3) AWSps Depew** Introduction to engineering measurement problems and techniques including interpretation of experimental data based upon the theories of probability and statistics. Experiments in all areas of mechanical engineering using single-component and multicomponent systems. Prerequisites: 323, 331, 333, 343, 374, and IND E 315.

**M E 436 Friction and Lubrication (3) Sp Kumar** Fundamental principles of friction and lubrication with applications to rolling and hydrodynamic bearing design. Prerequisites: 333, 353, or permission of instructor.

**M E 440 Mechanical Behavior of Solids (3) W Tuttle** Mechanics of deformable bodies; transformation of stress and strain; yield criteria; equations of compatibility; elastic constants of crystalline and polycrystalline solids. Application to design and manufacturing. Prerequisite: 343 or permission of instructor.

**M E 445 Introduction to Fracture Mechanics (3)** Deformation processes leading to fracture, and the linear elastic fracture mechanics. Fatigue crack propagation. Fracture control and failure analysis. Prerequisite: 343 or permission of instructor.

**M E 450 Introduction to Composite Materials and Design (3) A Taya, Tuttle** Stress and strain analysis of continuous fiber composite materials. Orthotropic elasticity, lamination theory, failure criteria, design philosophy, and joining techniques, as applied to composites. Prerequisite: 352.

**M E 460 Kinematics and Linkage Design (3) AW Ganter** Synthesis of linkage-type mechanisms using graphical and computer methods. Prerequisite: senior standing in engineering or permission of instructor.

**M E 468 Air-Pollution Control Equipment Design (3) W Pilat** Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption of gaseous pollutants; electrostatic precipitation and filtration of particulate pollutants. Actual case studies. Joint with CHE 468 and CIVE 494. Prerequisite: senior standing or permission of instructor.

**M E 469 Applications of Dynamics in Engineering (4) AWSps Storti** Application of the principles of dynamics to selected engineering problems, such as suspension systems, gyroscopes, electromechanical devices. Includes introduction to energy methods, Hamilton's principle and Lagrange equations and the design of dynamic system. Prerequisite: 374, ENGR 230 or permission of instructor.

**M E 470 Mechanical Vibrations (3) Sp Reinhall** Single-degree-of-freedom linear systems techniques. Matrix techniques for multi-degree-of-freedom linear systems. Applications in vibration isolation, transmission, and absorption problems and instrumentation. Prerequisite: 373 or permission of instructor.

**M E 471 Automatic Control (4) Asp Berg, Garbini, Jorgensen** Dynamic system modeling; control system stability and performance analysis; compensator design by Bode and root-locus methods. Prerequisite: 374 or permission of instructor.

**M E 473 Instrumentation (3) W Garbini** Principles and practice of industrial measurement. Dynamics of instrument response; theory of transducers for temperature, pressure, flow, and other measurements. Lecture and laboratory. Prerequisite: 374 or permission of instructor.

**M E 474 Systems Modeling and Simulation (3) W Murray** Unified approach to modeling of systems, and computer simulation of systems behavior. Selecting system variables; writing state, loop, and node equations; modal response and state transition response; system functions and convolution; analogs. Applications to control, vibrations, and other problems. Prerequisite: 374.

**M E 477 Microcomputers in Mechanical Systems (4) WSp Garbini** Analysis of electromechanical systems employing microcomputers for control or data acquisition. Microcomputer architecture, memory organization, assembly language programming, interfaces, and communications. Particular emphasis on design of hardware and software interfaces for real-time interaction with mechanical systems. Weekly laboratory. Prerequisites: 373, 374, E E 306, or permission of instructor.

**M E 478 Finite Element Analysis (4) ASP Reinhall** Development of theory and concepts of finite element analysis. Applications in all areas of mechanical engineering, including mechanics of solids, heat transfer, and design of dynamical systems. Weekly computer exercises. Prerequisites: 352, 374, MATH 205 or 302.

**M E 480 Introduction to Computer-Aided Technology (4) ASP Calkins** Principles of computer-aided technology. Computer-aided design, engineering, drafting, and manufacturing; computer-aided design systems, geometry, computer graphics, hardware, computer-aided vehicle/system design synthesis. System demonstrations, laboratories, and site visits. Prerequisites: ENGR 123, 141.

**M E 481 Internal Combustion Engines (4 or 5) A Malte** Spark ignition and diesel engines. Thermodynamic cycles, fuels, carburetion and injection, ignition, combustion, friction, turbocharging, and performance of engines. Lecture (4 credits) and laboratory (1-credit option). Prerequisite: 323 or permission of instructor.

**M E 490 Naval Architecture (3) A Adey** Theory of naval architecture; ship's lines, hydrostatic curves, intact and damaged stability, launching. Prerequisite: junior standing in engineering or permission of instructor.

**M E 491 Naval Architecture (3) W Adey** Theory of naval architecture; strength, ABS rules, water waves, ship and platform motions. Prerequisite: junior standing in engineering or permission of instructor.

**M E 492 Naval Architecture (3) Sp Adey** Theory of naval architecture; dimensional analysis, resistance, model testing, propellers, steering. Prerequisite: junior standing in engineering or permission of instructor.

**M E 495 Mechanical Engineering Design (4) AWSps Hyman** Design laboratory involving the identification and synthesis of engineering factors to plan and achieve specific project goals. Current literature and prerequisite texts are used as reference sources. Lecture and laboratory. Prerequisites: 331, 353, 374, 395.

**M E 498 Special Topics in Mechanical Engineering (1-5, max. 6) AWSp** Lecture and/or laboratory. Maximum of 6 credits may be applied toward an undergraduate degree. Prerequisite: permission of instructor.

**M E 499 Special Projects (2-5, max. 9) AWSps** Written report required. Prerequisite: permission of department Chairperson.

## Courses for Graduates Only

### Mechanical Engineering

**M E 506 Friction and Wear (3) Sp Kumar** Nature of the processes of friction and wear. Temperature rise at contact surfaces during sliding. Boundary friction. Tribological properties of materials. Prerequisite: graduate standing in engineering or permission of instructor. (Offered even-numbered years.)

**E E 510 Mathematical Foundations of System Theory (4) A Damborg** Mathematical foundations for system theory presented from an engineering viewpoint. Include set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert space. Applications to engineering systems stressed. Joint with A A, CH E, E E 510. Prerequisite: graduate standing or permission of instructor.

**M E 518 -519-520 Seminar (0-0-1, max. 6) Credit/no credit only.**

**M E 521 Thermodynamics (3) A Depew, Emery, Malte, Pratt** Fundamental concepts of temperature, thermodynamic properties, and systems. The first, second, and combined laws. Development of the relations of classical thermodynamics. Prerequisites: 323 and graduate standing in mechanical engineering or permission of instructor. (Offered odd-numbered years.)

**M E 522 Thermodynamics (3) W Corlett, Depew, Emery, Malte, Pratt** Topics from statistical thermodynamics, including the Boltzmann, Bose-Einstein, and Fermi-Dirac statistics. Solutions of the Schrodinger wave equation and evaluation of the partition function for translation, rotation, and vibration. Prerequisite: 521 or permission of instructor. (Offered even-numbered years.)

**M E 524 Combustion (3) Sp Corlett, Malte, Pratt** Chemical and physical processes of combustion with applications to design of combustors, fuel selection, and consideration of environmental effects. Prerequisite: graduate standing in mechanical engineering or permission of instructor. (Offered odd-numbered years.)

**M E 525 Acoustics in Engineering I (3) W Chalupnik, Forster** Acoustic wave transmission, reflection, refraction, and diffraction. Review of continuum mechanics and examples from electromechanical systems. Joint with E E 525. Prerequisite: graduate standing in mechanical or electrical engineering, or permission of instructor.

**M E 526 Acoustics in Engineering II (3) Sp Chalupnik, Forster** Continuation of 525. Material differs each year, covering such topics as scattering, moving media, ultrasonics, acoustic holography, optoacoustics, transducer design, propagation in anisotropic medium, etc. Joint with E E 526. Prerequisite: 525 or permission of instructor.

**M E 530 Radiative Heat Transfer (3) W Corlett, Depew, Emery, Malte** Fundamentals of thermal radiation for black, gray, nongray, diffuse, and specular surfaces. Gaseous radiation and special applications of thermal radiation. Prerequisite: graduate standing in mechanical engineering or permission of instructor.

**M E 531 Conductive Heat Transfer (3) A Corlett, Depew, Emery** Analysis of steady-state and transient heat conduction in single- and multidimensional systems by mathematical, graphical, numerical, and analytical methods. Prerequisite: graduate standing in

mechanical engineering or permission of instructor. (Offered odd-numbered years.)

**M E 532 Convective Heat Transfer (3) Sp** *Corlett, Depew, Emery* Introduction to fluid flow and boundary-layer theory as applicable to forced- and natural-convection heat transfer. Condensation and boiling heat transfer. Prerequisite: graduate standing or permission of instructor.

**M E 533, 534 Fluid Mechanics (3,3) W,Sp** *Corlett, Gessner, Kosály, Riley* Basic conservation laws and kinematics of fluid flow, two-dimensional inviscid flow, wave motion and shock waves in inviscid compressible flow, exact solutions and boundary layer analyses of laminar and turbulent viscous flow, analysis of non-Newtonian flow, applications. Prerequisite: 533 or permission of instructor for 534.

**M E 535 Computational Techniques in Heat Transfer (3) A** *Emery, Pratt* Advanced heat transfer studies of interest to mechanical engineers. Subject coverage varies from year to year. Prerequisite: permission of instructor.

**M E 537 Topics in Fluid Mechanics (3) A** *Corlett, Emery, Gessner, Pratt, Riley* Selected fluid mechanics research topics relevant to current advances in mechanical engineering practice. Topics selected vary with faculty and student interest, but are drawn predominantly from the general areas of energy conversion, energy management, and manufacturing processes. (Offered even-numbered years.)

**M E 538 Turbulent Boundary Layer Theory (3) A** *Gessner, Riley* Characteristic features of turbulent boundary layers; development of the turbulent boundary layer equations; equilibrium boundary layers; integral methods of solution based on power law and wall-wake velocity profiles; methods of solution based on higher order constitutive equations; application to diffuser flows and free shear flows; new developments and physical models. (Offered odd-numbered years.)

**M E 541 Fatigue of Materials (3)** Macro and micro aspects of fatigue of metals and fatigue mechanisms. Analytical methods for fatigue and life assessment in advanced materials.

**M E 543, 544 Fluid Turbulence (3,3) W,Sp** *Gessner, Riley* Methods of characterizing fluid turbulence; spatial, temporal velocity correlations; energy spectra; probability concepts; isotropic, nonisotropic turbulence; hot-wire measurement techniques; phenomenological turbulence models; higher-order closure models; local equilibrium concepts; recent advances in modeling techniques. Joint with CH E 543, 544. Prerequisite: 6 credits of graduate fluid mechanics or permission of instructor. (Offered even-numbered years.)

**M E 551 Elasticity I: Elastostatics (3)** Elastostatics, including general formulations of 2D and 3D elastostatic problems (stress function method, complex variable method, displacement potential method). Eshelby's method is emphasized and used to solve 2D and 3D problems with special application to composite materials.

**M E 552 Elasticity II: Viscoelasticity and Elastodynamics (3)** Elastodynamics includes wave propagation in linear elastic and linear viscoelastic solids where solids are monolithic materials, composite materials. Viscoelasticity part includes the stress-strain equations in terms of convolution integral, Fourier transform and Laplace transform modes. Simple and fundamental problems are solved by several techniques as demonstration.

**M E 553 Adhesion Mechanics (3) Sp** *Tuttle* Introduction to adhesive systems and test/evaluation techniques. Stress/strain analysis methods used with adhesive joints. Examples of practical applications. Prerequisite: graduate student status or permission of instructor. (Offered even-numbered years.)

**M E 555 Thermoelasticity (3) W** *Emery* Basic equations of thermoelasticity for isotropic elastic solids.

Analysis of disks, cylinders, spheres, beams, and plates under steady temperature and sudden and slow heating and cooling. Introduction to thermoelastic stability. Prerequisite: 551 or permission of instructor. (Offered even-numbered years.)

**M E 556 Experimental Stress Analysis I (3) A** *Tuttle* Theory and practice of experimental techniques including brittle coatings, strain gages, thermocouples, LVDT's, and transducer design. Lecture and laboratory. Prerequisite: graduate standing or permission of instructor.

**M E 557 Experimental Stress Analysis II (3) W** *Tuttle* Theory and practice of optical mechanics, including 2- and 3-dimensional photoelasticity, birefringent coatings, moiré, interferometry, and holography. Lecture and laboratory. Prerequisite: graduate standing or permission of instructor.

**M E 559 Fracture Mechanics I (3) W** *Kobayashi, Ramulu* Applications of linear fracture mechanics to failure analysis and fracture control based on actual case studies. Fracture toughness and fatigue testing techniques, crack initiation and propagation fatigue life prediction of mechanical components subjected to environmental effects.

**M E 560 Fracture Mechanics II (3) Sp** *Kobayashi* Theories of linear fracture mechanics, fracture dynamics, ductile fracture, stable crack growth and mixed mode fracture. Discussion of advanced topics from recent literature. Prerequisite: 559 or permission of instructor. (Offered even-numbered years.)

**M E 562 High Temperature Composites (3) Sp** *Taya* Thermo-mechanical behavior and environmental degradation of high temperature composites (metal, ceramic, and intermetallic matrix composites) and carbon/carbon composites addressed. Covers related topics such as processing (primary and secondary). Joint with MSE 562. Recommended: 450 or MSE 423.

**M E 564 Mechanical Engineering Analysis (3) A** *Storti* Application of mathematical methods to the description and analysis of systems in mechanical engineering. Analogies in heat transfer, fluid flow, stress distribution, dynamics, and feedback control. Prerequisite: graduate standing in mechanical engineering or permission of instructor.

**M E 565 Mechanical Engineering Analysis (3) W** *Storti* Applications of vectors, matrices, and partial differential equations to mechanical engineering systems, including computational techniques and analogies. Prerequisite: graduate standing in mechanical engineering or permission of instructor.

**M E 566 Introduction to Random Processes (3) A** *Kosály, Reinhall* Probability and random variables. Ensemble averaging, probability density function, auto- and cross-correlation functions. Brownian motion, Poisson process. Ergodicity. Frequency domain analysis, auto- and cross-spectrum, transfer function. Fundamentals of digital spectral analysis. Applications in fluid mechanics, acoustics and vibrations.

**M E 571 Digital Control I (3) W** *Berg, Garbini, Murray* Discrete-time dynamic system analysis. Sampled data systems. Controller design via discrete-time equivalents to continuous-time transfer function; via root loci and Bode plots; and via state feedback and observers. Prerequisites: 575 or permission of instructor.

**M E 572 Digital Control II (3) Sp** *Berg, Garbini, Murray* Quantization effects. Parameter identification. LQR optimal control. Discrete-time stochastic processes. The Kalman filter. LQG optimal control. Sample rate selection and antialiasing filter design. Advanced topics in MIMO controller design. Prerequisite: 571 or permission of instructor.

**M E 575 Systems Theory (3) A** *Berg* State-space representations. Solution of the state equation; state transition matrix. Controllability and observability. State feedback, observer design; the separation principle. Zeros and poles of MIMO systems; Smith McMillan

form. Inverse systems. Matrix fraction descriptions. Prerequisite: 471 or equivalent or permission of instructor.

**M E 579 Fluid Power Systems (3) W** *Jorgensen* Design, analysis, and control of fluid power systems. Steady-state analysis of valves, actuators, and transmissions. Dynamic modeling, response, stability, and control analysis via linear element representation and computer simulation. Prerequisite: graduate standing in mechanical engineering or permission of instructor.

**M E 584 Combustion in Airbreathing Propulsion (3)** Principles of analysis and design of gas turbine, ramjet and scramjet engine combustors, with emphasis on computer simulation.

**M E 588 Dynamics and Vibrations (3) A** *Reinhall, Storti* Variational techniques, Hamilton's principle, Lagrange's equations applied to dynamics of particles and rigid bodies. Vibration analysis of multi-degree-of-freedom and continuous systems. Prerequisite: graduate standing in engineering or permission of instructor.

**M E 589, 590 Vibrations (3,3) W,Sp** *Reinhall, Storti* Study of systems with nonlinear damping and restoring forces excited by deterministic or random inputs. Applications in measurement, testing, and design of mechanical systems. Nonlinear systems are emphasized in 589 and random inputs in 590. Prerequisite: 588 or permission of instructor. (Offered even-numbered years.)

**M E 598 Topics in Research (1) AWSp** Doctoral seminar. May be repeated for credit. Credit/no credit only.

**M E 599 Special Projects (1-5, max. 9) AWSpS** Written report required. Prerequisite: permission of department Chairperson.

**M E 600 Independent Study or Research (\*) AWSpS** Written report required.

**M E 700 Master's Thesis (\*) AWSpS**

**M E 800 Doctoral Dissertation (\*) AWSpS**

## Mechanical Engineering Industrial Engineering

**MEIE 511 Management Decision Models (3) W** *Iverson* A quantitative approach, using decision models, for engineering and management problems in increasing the output per hour of work. Concepts of management decisions, deterministic models, probabilistic models, and in-depth study of an actual work situation. Capacity measures, allocation and scheduling resources, and time-money evaluation of alternatives recognizing risk. Prerequisites: IND E 311 and IND E 315, or equivalent, or permission of instructor.

**MEIE 513 Advanced Topics in Operations Research (3) W** *Iverson, Zabinsky* Revised simplex and decomposition methods for computer management of large-scale linear programming problems; stochastic models in queuing theory and in inventory theory; introduction to methods used in nonlinear programming; simulation modeling.

**MEIE 516 Advanced Topics in Engineering Statistics (3) Sp** *Roberts, Zabinsky* Topics are flexible and tailored to the needs of the particular student group involved. Topics usually considered: regression, correlation, experimental design, Monte Carlo techniques, Markov processes, extreme value theory, time-series analysis. Prerequisite: graduate standing or permission of instructor.

**MEIE 599 Special Projects in Industrial Engineering (1-5, max. 9) AWSpS** Prerequisite: permission of industrial engineering program director.

## Nuclear Engineering

303 Benson

*A proposal to eliminate the Department of Nuclear Engineering has been made by the faculty of the department and by the College of Engineering. This proposal is currently under review by the University and no new students are being admitted.*

The Department of Nuclear Engineering offers a program of instruction and research based on applied physics and engineering science, on the controlled release of nuclear energy, and on interactions of radiation with matter, including their present and potential applications. The program has a diverse, multidisciplinary faculty with strength in engineering and applied science. Specific research activities include the design of inherently safe fission reactors, random signal analysis, robotics, biotechnology, fusion technology, plasma physics, laser-plasma interactions, two-phase flow and heat transfer, reacting turbulent flows, reliability and risk analysis, photon and neutron scattering interactions with material, nuclear reactor safety, environmental effects of radiation, and nuclear-waste management.

### Undergraduate Program

#### Bachelor of Science in Engineering Degree

The Department of Nuclear Engineering coordinates programs of study leading to the Bachelor of Science in Engineering degree with an emphasis either in engineering science or in nuclear engineering. Curricular requirements are available in detail at the department, but are outlined below.

#### Admission Requirements

To be admitted to the Bachelor of Science in Engineering program, a student usually must have a 2.80 GPA and have completed at least 42 credits of specific pre-engineering, mathematics, and science courses or their equivalent. These courses are ENGR 141 and 260; MATH 124, 125, 126, and 307; CHEM 140; and PHYS 121, 122, and 123. The college admits students into the B.S.E. program twice each year; application deadlines are July 1 for autumn quarter admission and February 1 for spring quarter admission.

Department faculty members will gladly advise and assist students in preparing applications for admission and work with them in planning a course of study that meets their objectives.

#### Graduation Requirements

##### ENGINEERING SCIENCE EMPHASIS

The B.S.E. degree with an engineering science emphasis provides excellent preparation for engineering practice or for postgraduate study in one of the engineering disciplines, in the natural sciences, or in medicine. The curriculum emphasizes areas where engineering and science meet and are common to several engineering disciplines. Typical areas include plasma processing, applied superconductivity, random processes in engineering, reliability and risk analysis, non-destructive examination of systems and devices, mobile robotics, and detection and use of nuclear radiation. The curriculum also emphasizes a more thorough grounding in mathematics, science, and engineering fundamentals than provided by most departmental curriculums. Fundamental knowledge of this type does not become obsolete when technology changes.

70 upper-division credits in mathematics, physics, and engineering courses is required, with specific requirements in various areas: 30 credits minimum in engineering mathematics and natural sciences, 18 credits minimum in a specific area of engineering emphasis, and 22 credits in engineering or science electives that are chosen to complete an integrated program of study.

### NUCLEAR ENGINEERING EMPHASIS

The B.S.E. with a nuclear engineering emphasis provides a background in applied mathematics, physics, and engineering science needed for nuclear energy applications. It also provides an introduction to nuclear technology appropriate for either advanced study in nuclear engineering or employment at the baccalaureate degree level and for study in a complementary area of engineering.

Course requirements are similar to those described above for engineering science, except that the 18 credits required in an area of engineering emphasis are in the specific area of nuclear engineering and technology.

### Graduate Program

#### Admission Requirements

The Department of Nuclear Engineering offers graduate programs leading to the Master of Science in Nuclear Engineering and Doctor of Philosophy degrees. Because the department operates under an enrollment quota, admission to the Graduate School as a nuclear engineering major is competitive. Specific requirements for admission will vary from year to year. An applicant must have an undergraduate degree in engineering, physical science, or mathematics (note that an undergraduate degree in nuclear engineering is not required); present scores on the quantitative, verbal, and analytical tests of the Graduate Record Examination; and have an undergraduate GPA of at least 3.00 or its equivalent. Students from nations where English is not the native language are required to submit scores on the Test Of English As A Foreign Language (TOEFL) or on the Michigan Test. International students applying for teaching assistantships also should present scores on the Test of Spoken English (TSE).

#### Major Requirements

The M.S.N.E. is generally completed in four or five quarters (twelve to fifteen months) of full-time study. The required total of 46 quarter credits consists of 9 credits of thesis and 37 credits of acceptable course work and seminars. Required courses or seminars total 22 credits. The remaining 15 course credits are elective and are usually earned in courses chosen to meet specific objectives of individual students. Of the 15 elective credits, 6 must be in advanced nuclear engineering courses.

The Ph.D. degree is primarily a research degree. As such, it has no specific course requirements other than Graduate School requirements for all doctoral degrees, although advanced courses in the area of a student's research are normally recommended. Formal requirements for the degree include passing the departmental qualifying examinations, completing a course of study approved by the student's Supervisory Committee, passing the General Examination, and preparing and defending a doctoral dissertation that must make a significant contribution to knowledge and be based on original research conducted by the candidate.

Typical research areas include: plasma physics, fusion reactor physics and design, inverse photon and neutron scattering; noise (random signal) analysis of neutron detector signals; development of inherently safe nuclear reactors; development of autonomous mobile robots; analysis of nuclear-waste systems; turbulent reacting systems; and space nuclear systems.

#### Research Facilities

Fusion reactor research is conducted principally with a three-meter-long, low-density, staged theta-pinch facility, called the high-beta Q-machine. This is a sophisticated  $\theta$  system, designed to accommodate various experiments. Other specialized equipment includes a two-meter-by-forty-centimeter coaxial field-reversed configuration device, a large CO<sub>2</sub> pulsed laser, and

several smaller pulsed plasma devices for studies of compact toroids and laser-plasma interactions. All systems have computerized data-acquisition equipment.

Fission energy facilities include a one-hundred-kilowatt Argonaut reactor with access ports for irradiation and activation analysis, automatic sample changers, a Harshaw-2080 glow curve analysis system for radiation dosimetry, an array of radiation-sensitive detectors and measuring instruments, and computers appropriate for data processing. An autonomous mobile robotics laboratory is being developed.

Off-campus, the department has access to nuclear engineering experimental facilities at the Hanford laboratory operation near Richland, Washington and to supercomputers at the San Diego Supercomputer Center and the Magnetic Fusion Energy Computation Center at the Lawrence Livermore National Laboratory in Livermore, California.

#### Financial Aid

The department can offer financial support to well-qualified graduate students. Traineeships, scholarships, fellowships, research assistantships, and teaching assistantships are awarded to aid students in meeting the expenses of study and research. Applications for financial support should be submitted directly to the department.

#### Correspondence and Information

Kermit L. Garlid

#### Professors

Albrecht, Robert W.,\* 1961, (Electrical Engineering), M.S., 1958, Ph.D., 1961, Michigan; reactor dynamics and stochastic processes, innovative nuclear reactors, reactor instrumentation, robotics.

Babb, Albert L.,\* 1952, (Emeritus), (Bioengineering), (Chemical Engineering),† M.S., 1949, Ph.D., 1951, Illinois; reactor engineering, bioengineering.

Garlid, Kermit L.,\* 1960, (Chemical Engineering),† Ph.D., 1961, Minnesota; nuclear fuel processing, radioactive-waste management, process dynamics.

Jarboe, Thomas R.,\* 1989, Ph.D., 1974, California (Berkeley); plasma physics and controlled fusion, especially magnetic reconnection and relaxation.

Kosáry, George,\* 1983, (Mechanical Engineering),† Ph.D., 1974, Budapest; reactor dynamics (especially noise), two-phase flow characterization, theory of turbulent flow, applications of theory of stochastic processes in physics and engineering.

McCormick, Norman J.,\* 1966, (Mechanical Engineering),† M.S., 1961, Illinois; Ph.D., 1965, Michigan; reliability and risk analysis, reactor physics, neutron and photon transport.

Ribe, Fred L.,\* 1977, (Emeritus), Ph.D., 1951, Chicago; experimental and theoretical plasma physics, fusion reactor studies.

Robkin, Maurice A.,\* 1967, (Environmental Health),† Ph.D., 1961, Massachusetts Institute of Technology; radiation dosimetry, environmental radioactivity, radioactive-waste management, health physics.

Stoebe, Thomas G.,\* 1966, (Materials Science and Engineering), M.S., 1963, Ph.D., 1965, Stanford; physics of solids, electronics, optical properties.

Woodruff, Gene L.,\* 1965, (Environmental Studies), (Chemical Engineering),† M.S., 1963, Ph.D., 1966, Massachusetts Institute of Technology; neutronics experiments, fusion reactor technology.

**Assistant Professors**

Brooks, Robert D., \* 1981, (Research), Ph.D., 1979, Washington; fusion and plasma physics, laser interaction with matter, plasma diagnostics.

Nelson, Brian A., \* 1987, (Research), M.S., 1981, Ph.D., 1987, Wisconsin (Madison); magnetic fusion plasma physics, plasma processing, plasma diagnostic development.

**Course Descriptions****Courses for Undergraduates**

**NUC E 342 Energy: Nuclear and Solar Power (3)** Technology of nuclear power, especially fission power, and the major forms of solar power, including hydroelectric power, photovoltaic power, wind power, and biomass. Consideration given to the factors limiting the utilization of the sources. Joint with PHYS 342. Prerequisites: PHYS 121, 122, 123 or equivalent; recommended: PHYS 341.

**NUC E 343 Environmental Radioactivity (3)** Sources of radioactivity in the environment, including both natural sources, especially radon, and manmade sources, especially nuclear power and nuclear explosions. Emphasis given to methods for determining radiation doses from the significant sources. Joint with PHYS 343. Prerequisites: PHYS 121, 122, 123 or equivalent.

**NUC E 444 Nuclear Materials (3) Sp** Structure, properties, and performance of materials in nuclear reactor applications; engineering requirements and selection of materials for reactors; technology of materials for reactor fuels, moderators, shields, control elements, and structural components; corrosion and oxidation; effects of radiation on the structure and properties of materials. Joint with MSE 444. Prerequisite: ENGR 170 or equivalent or permission of instructor.

**NUC E 484 Introduction to Nuclear Engineering (4) A** Introductory course in nuclear engineering for seniors, graduate students, and practicing engineers. The course is designed to demonstrate the application of the principles of nuclear science to the processes associated with the release, control, and utilization of all forms of energy from nuclear sources, including nuclear reactors; elementary nuclear reactor theory; control of nuclear reactors; thermonuclear reactions. Prerequisite: MATH 307 or permission of instructor.

**NUC E 485 Nuclear Instruments (3) W** Principles, measurements, and detection of various types of radiations encountered in nuclear energy systems. Demonstrations include the use of Geiger, proportional, and scintillation detectors; ionization chambers; analog-digital data logging equipment; and multichannel analyzers. Sources of radiation include the University's nuclear reactor and pulsed neutron generators. Prerequisite: junior standing.

**NUC E 486 Nuclear Power Plants (3) Sp** Applications of nuclear energy to power generation. Various types of nuclear reactor systems, including pressurized water, boiling water, high-temperature gas-cooled, as well as innovative converter and breeder reactors. Problem of world and United States energy resources and the role of nuclear energy. Prerequisite: senior standing; recommended: 484.

**NUC E 488 Nuclear Engineering Design (4)** Design laboratory involving the identification and synthesis of engineering factors to plan and achieve certain project goals. Design topics may include, but are not limited to, energy producing systems, expert systems, mixed-waste treatment systems, advanced nuclear reactor systems, and space propulsion systems. Prerequisite: 484 or permission of instructor.

**NUC E 488 Special Topics in Nuclear Engineering (1-6, max. 6) AWSps** Discussions, conferences, and lectures on topics of current interest in nuclear fission and fusion engineering. Prerequisite: permission of department Chairperson.

**NUC E 499 Undergraduate Research Projects (1-6, max. 6) AWSps** Independent research projects in nuclear engineering. Prerequisite: permission of department Chairperson.

**Courses for Graduates Only**

**NUC E 500 Nuclear Reactor Theory (5) A** Nuclear reactor theory covering interactions of neutrons with matter; chain reaction concepts, the angle-dependent transport equation and its reduction to specialized forms; multigroup, multiregion diffusion theory; slowing down theory; solution methods and cell parameter calculations; variational and perturbation methods. Prerequisites: PHYS 327, MATH 307, or equivalent.

**NUC E 506 Nuclear Engineering Laboratory (4) Sp** Advanced laboratory course in which experimental research is conducted. Selected experiments are performed that involve the use of such equipment as the reactor as a neutron and gamma-ray source, pulsed neutron generator, pile-noise analysis equipment, time-of-flight equipment, and laser interferometry and fusion plasma diagnostic equipment. Prerequisite: 485 or permission of instructor.

**NUC E 510 Nuclear Reactor Engineering (3) A** Advanced course in engineering analysis of nuclear reactor systems. Utilization of nuclear energy for power production; heat generation and distribution; nuclear fuel performance; thermal-hydraulics; thermal power limits; computer methods of analysis and core design; reactor safety analysis and licensing procedures. Prerequisite: 500, which may be taken concurrently, or permission of instructor.

**NUC E 512 Nuclear System Design (4) W** Design laboratory involving synthesis of fusion or fission reactor theory, engineering analysis, material specifications, and economics in conceptual and preliminary designs of systems, facilities, or processes associated with nuclear fission and fusion devices. Projects selected from current topics and one is usually engaged by team effort. Prerequisite: 510 or permission of instructor.

**NUC E 513, 514 Health Physics I, II (3,3) W,Sp** Physical basis of the quantification of the exposure to ionizing radiation. Includes mathematics and physics of sources, interactions, spectrometry and dosimetry of ionizing radiation.

**NUC E 521, 522, 523 Graduate Seminar (1,1,1) A,W,Sp** Offered on credit/no credit basis only.

**NUC E 524 Seminar in Nuclear Systems Analysis (1) AWSps** Studies of recent advances in nuclear systems analysis with students, faculty, and visiting scientists and engineers reporting on recent research and publications. Open only to students with a master's degree or equivalent. Offered on credit/no credit basis only.

**NUC E 530 Nuclear Reactor Statics (4) Sp** Emphasis on methods for calculation of neutron and gamma-ray distributions in nuclear reactors and shields. Covers the linear Boltzmann equation and the spherical harmonics, discrete ordinate, and Monte Carlo techniques. Prerequisite: 500 or permission of instructor.

**NUC E 542 Environmental Impact of Radioactivity (3) A** Dispersion, rate, and environmental significance of radionuclides released into environment. Includes dispersion, deposition, environmental transport, uptake, biological effects, protection from, and regulations relating to, radionuclides released into environment. Examples taken from academic, research, and industrial sources with emphasis on central station nuclear power plants.

**NUC E 556 Introduction to Plasma Theory (4) W** Review of electromagnetic theory, dynamics of charged particles in electromagnetic fields, development of plasma fluid equations from kinetic theory, plasma transport theory, with examples drawn principally from the field of controlled nuclear fusion.

**NUC E 557 Plasma Theory II (3) Sp** Magnetohydrodynamic equilibrium and stability, waves in plasmas, heating techniques. Applications primarily to magnetic fusion research. Prerequisite: 556 or permission of instructor.

**NUC E 558 Plasma Kinetic Theory (3) A** Collisionless Boltzmann (Vlasov) equations, and instabilities in homogeneous and inhomogeneous plasmas, quasilinear diffusion, wave-particle interactions, collisional Boltzmann (Fokker-Planck) equation, transport problems of fully ionized plasmas. Prerequisites: 556, 557, or permission of instructor. (Offered even-numbered years.)

**NUC E 560 Nuclear Reactor Dynamics I (4) W** Nuclear reactor dynamic equations, delayed neutron representations, response of reactors to various perturbations, nuclear reactor feedback mechanisms and equations, operational techniques of system analysis, stability criteria. Prerequisites: 500, MATH 427, 428, or permission of instructor.

**NUC E 565 Fusion Reactor Fundamentals (3) A** Introduction to the basic engineering features of fusion power plants. Brief description of basic fusion physics and discussion of power plants for the leading thermonuclear concepts. Engineering problems: blanket, shield neutronics; materials, thermal hydraulics; tritium, superconducting systems; and magnet design considerations. Prerequisite: senior standing or permission of instructor.

**NUC E 566 Fusion Reactor Engineering (4) Sp** Physical and technological aspects of large fusion experiments and conceptual reactors based on the Tokamak, magnetic-mirror, pinch, stellarator, and inertial fusion concepts. One hour per week devoted to computer instruction, with application to a significant fusion reactor problem. Prerequisites: 556 or equivalent, 565, or permission of instructor.

**NUC E 588 Nuclear Fuel Management (3) Sp** Technical, economic, and environmental aspects of nuclear fuel selection, production, and use. Fuel cycles and costs, separation and purification processes, processing of irradiated fuel, spent-fuel storage and disposal. Prerequisite: 484 or permission of instructor.

**NUC E 599 Special Topics in Nuclear Engineering (\*) AWSps** Discussions and readings of topics of current interest in the field of nuclear engineering research. Subject matter may include reactor fuels and materials, reactor dynamics and control, instrumentation, thermonuclear processes, direct conversion problems. Prerequisite: permission of department Chairperson.

**NUC E 600 Independent Study or Research (\*) AWSps**

**NUC E 700 Master's Thesis (\*) AWSps** Offered on credit/no credit basis only.

**NUC E 800 Doctoral Dissertation (\*) AWSps** Offered on credit/no credit basis only.

**Technical Communication**

Technical communicators use their language, visual, and analytical skills, as well as training and research in electronic and other media, to create and enhance communication in scientific and technical environments. The Department of Technical Communication prepares students to design, write, edit, and evaluate technical and scientific materials. The department also provides course work in the development of online support systems and in electronic information presentations. Other major interests of the department are the human-computer interface, hypermedia, communications technology, the rhetoric of technical discourse, publications and communications management,

policy analyses of technological systems, and research and testing.

## Undergraduate Program

Technical communication offers a Bachelor of Science in Technical Communication (B.S.T.C.). Entrance to the program requires at least 60 college credits, 38 of which must be distributed as follows: 10 approved mathematics or statistics credits, 15 approved natural science credits, and 13 approved written and oral communications credits (including ENGR 231, which is 3 credits). The applicant must have an overall GPA of 3.00 in the 13 required written and oral communications credits.

For graduation, the student must complete 180 credits, distributed according to the following minimum number of credits in each component: 50 credits in mathematics and science (with a minimum of 15 credits in mathematics and/or statistics and 20 credits in natural science), 13 credits of written and oral communications (including ENGR 231), 24 credits of engineering fundamentals, 35 credits of humanities and social sciences (with two linked sets), 26 credits of required TC courses, 20 credits of approved electives that demonstrate a coherent and relevant area of specialization, and 12 credits of free electives.

### Admissions Schedule

Students are admitted into the department only in autumn and spring quarters.

July 1 is the deadline for application for autumn quarter, and February 1 is the deadline for application for spring quarter.

Students should apply for admission to the program in the last quarter of their sophomore year or the first quarter of their junior year. Those applying for admission in their senior year will be expected to spend a minimum of four quarters in the degree program.

### Course Registration Sequence

The department recommends that students register for the required technical communication courses in the following sequence: TC 400 (3) and 401 (3) the first quarter, TC 310 (3) and 402 (3) the second quarter, TC 415 (5) the third quarter, and TC 403 (3), TC 407 (3), and TC 495 (3-5) in subsequent quarters. As a rule, this required-course sequence takes four or five quarters to complete, which allows students time to grow, to develop the necessary skills, and to integrate the knowledge necessary to enter the profession. Students are expected to complete their other courses while they follow this sequence.

For more information, contact the Undergraduate Adviser, 14 Loew.

## Graduate Program

Technical communication offers a Master of Science (M.S.) in technical communication. A total of 45 credits is required for the M.S. degree, including 36 credits of course work and either 9 credits of thesis or a 9-credit combination of 5 credits of internship and 4 credits of graduate project. The 36 credits of course work include 17 credits of required TC courses: TC 501, Theoretical Dimensions of Technical Communication (3); TC 505, Computer-Assisted Communication (4); TC 510, Information Design (3); TC 520, Technical Communication Management (3); and TC 521, Seminar: Current Issues in Technical Communication (1); plus one of the following: TC 515, Designing Natural Language Interfaces (3); TC 516, Research Theory and Application in Technical Communication (3), or TC 517, Usability Testing (3); 12-15 credits of technical courses; and 4-7 credits of free electives.

In addition to meeting the requirements of the Graduate School, students admitted to the technical communication M.S. program must hold a baccalaureate de-

gree in some branch of engineering or related science or in some other way present evidence of adequate preparation for graduate study in technical communication. Students with baccalaureate degrees in fields other than engineering or science may be admitted into the program if they have a minimum of three years of professional technical communication experience and undergraduate training relevant and applicable to the solution of problems in the field of technical communication. A limited number of undergraduate courses may be required.

### Research Facilities

Technical communication students enjoy access to a variety of computer systems and work directly with a state-of-the-art publications facility. They have the opportunity to participate in the development of new document formats, new insights into human information processing, and new publications practices and technologies. Technical communication also currently supports the following specialized laboratories: the Hypermedia Lab, Laboratory for Usability Testing and Evaluation (LUTE), and the Technical Japanese Lab.

For more information, contact the Graduate Adviser, 14 Loew.

### Financial Aid

A limited number of teaching and research assistantships and scholarships are available for the financial support of graduate students in technical communication. More information and application forms can be obtained by contacting the department.

Botting, David C., 1955, (Emeritus), M.A., 1947, Washington; Ph.D., 1950, Chicago; history and social ecol-

ogy of technology.

Coney, Mary B.,\* 1976, M.A., 1964, Illinois; Ph.D., 1973, Washington; writing and theories of technical discourse.

Douthwaite, Geoffrey K., 1961, (Emeritus), M.S.E.E., 1963, Washington; computer applications of engineering mathematics, statics and dynamics, technology and its impact on society.

Farkas, David K.,\* 1983, M.A., 1969, Chicago; Ph.D., 1976, Minnesota; information design in the print and electronic media, advisory interface of computer systems, and hypermedia.

Higbee, Jay A., 1952, (Emeritus), M.A., 1949, Washington; D.S.S., 1955, Syracuse; human rights, impact of technology on society, contemporary affairs and the media.

Ramey, Judith A.,\* 1983, M.A., 1971, Ph.D., 1983, Texas; computer documentation, online documentation, user interface design, and usability testing.

Tsutsui, Michio, 1990, M.A., 1980, Ph.D., 1984, Illinois; technical Japanese, Japanese as a second language, linguistics, computer-assisted language learning.

### Assistant Professors

Spyridakis, Jan H.,\* 1977, M.A.T., 1972, Ph.D., 1986, Washington; comprehension and usability, document design, research methods.

Williams, Thomas R.,\* 1977, M.C., 1981, Ph.D., 1988, Washington; cognitive science, document design, visual media.

## Course Descriptions

**TC 300 Practice in Technical Reporting (1-2, max. 2) A** Application of the fundamentals of technical reporting to the specific reporting activity of students who are enrolled in a jointly designated engineering, scientific, or technical course.

**TC 310 The Computer in Technical Communication (3) AW** Functions of, and relationships among, computer applications, systems software, and computer hardware in technical publications and communication. Required of technical communication majors. Prerequisites: TC major or permission of instructor.

**TC 400 Scientific and Technical Communication (3) Asp** Principles and practices of writing to communicate scientific and technical information to a variety of readers, including the expert, general scientific and technical reader, manager, and general public. Required of technical communication majors. Prerequisite: junior standing or permission of instructor.

**TC 401 Style in Scientific and Technical Writing (3) Asp** Coney, Spyridakis Grammatical structures and stylistic strategies within specific professional contexts. Achieving clarity and conciseness through word choice and placement, using a variety of sentence structures for appropriate emphasis, handling details, establishing effective tone. Required of technical communication majors. Prerequisite: junior standing or permission of instructor.

**TC 402 Scientific and Technical Editing (3) AW** Underwood, Williams Editorial responsibilities and practice in the communication of scientific and technical information; the editor's role both as editor and as supervisor of publication groups. Required of technical communication majors. Prerequisite: 401 or permission of instructor.

**TC 403 Publication Project Management (3) WSp** Responsibilities and practice in managing publication projects in scientific and technical organizations. Project design, coordination, production, and evaluation, including planning, organizing, staffing, and directing. Required of technical communication majors. Prerequisite: TC major or permission of instructor; recommended: 415.

**TC 406 Understanding Research in Technical Communication (3) Sp** *Spyridakis* Provides a basis for integrating knowledge acquired in other technical communication courses. Students examine the research literature of various disciplines that impact technical writing. Structured around theoretical and empirical literature as it relates to different textual issues in technical writing.

**TC 407 Computer Documentation (3) ASp** *Farkas, Ramey* Writing documentation for computer hardware, software, and integrated systems. Examines kinds of documentation needed for computer products; introduces use of the computer in its own documentation and resulting innovations in the field. Prerequisite: 310 or equivalent, upper-division standing.

**TC 408 Public Documents: Proposals, EIS's, Assessments (3) W** *Bereano* Analyzing special documents of public character: proposals, EISs, questionnaires, technology assessments. Understanding socio-political milieu in which they are planned, organized, written; the specialized audiences (e.g., agencies with their missions, guidelines, constituencies; citizen groups; commercial interests) they serve. Documents, the decision-making process. Prerequisite: upper-division standing or permission of instructor.

**TC 409 Writing for Publication (3) W** *Coney* Writing for professional and trade periodicals in science, engineering, and technology: examination of the publication process, including the roles of author, editor, and reviewer; selecting the appropriate periodical; organizing and writing the article. Prerequisite: upper-division standing or permission of instructor.

**TC 411 Visual Media in Technical Communication (3) W** *Williams* Use of visuals in print and electronic communication of technical matter. Topics include the human visual system, theories of perception and attention, effects of visuals on learning from text, competing theories of memory for visuals, use of visuals in conjunction with prose, and the impact of new visual display media.

**TC 415 Production Editing (5) WSp** *Ramey, Williams* The editorial role in the preparation of text and visual materials for production. The editor's responsibilities and prerogatives as they relate to those of other professionals in the production phase of the publications field. Prerequisite: TC major or permission of the instructor.

**TC 420 Introduction to Technology as a Social and Political Phenomenon (3 or 5) A** *Bereano* Introductory survey presenting some of the issues pertaining to technology and social change, technology and values, etc. Emphasis on the social, political, and economic aspects of current problems that have important technological components. Prior technical background not required; readings from diverse sources.

**TC 425 Technology Assessment Methods and Analysis I (3 or 5) W** *Bereano* In-depth analysis of the concept, practice, and methods of technology assessment (policy analysis that concentrates on social consequences of technological development): social, po-

litical, economic, and environmental impacts of new technologies; options for channeling these developments; and relevant decision-making institutions and processes.

**TC 454 Alternative Technology (3) A** *Bereano* Exploration of the evolution of technological forms that are small-scaled, decentralized, etc., emphasizing the public policy aspects of these developments. Topics include the relationship between alternative technologies and worker-controlled enterprises, community planning, the politics of technological change, the Third World, and decentralized development. Background in engineering or technical design is not required.

**TC 455 User Interface Design (3) A** *Barfield* Design oriented to cover fundamentals of user interface design; models on human computer interaction, software psychology, input devices, usability, cognitive and perceptual aspects of human-computer interaction, advanced interface, and research methodologies are discussed. Joint with IND E 455. Prerequisites: IND E 315 and 316 or equivalent, or permission of instructor.

**TC 495 Professional Practice (3-5, max. 10) AWSps** Supervised internship in a publications organization approved by the faculty adviser. A minimum of one internship is required of students majoring in technical communication. Credit/no credit only. Prerequisites: TC major or permission of instructor.

**TC 498 Special Topics (1-5, max. 10)** Special topics in technical communication to be offered occasionally by permanent or visiting faculty members. May be repeated for credit.

**TC 499 Special Projects (2-5, max. 10) AWSps** Individual undergraduate projects in technical communication. Prerequisite: permission of instructor.

### Courses for Graduates Only

**TC 501 Theoretical Dimension of Technical Communication (3) A** *Coney* Theories and research drawn from a variety of fields that inform such topics as the historical and social context of technical communication, the aims of technical discourse, readability, invention and audience, audience analysis, technical style, and graphics. Prerequisite: admission to an engineering master's program or permission of instructor.

**TC 505 Computer-Assisted Communication (4) A** *Ramey* Introduction to the concepts of information theory; information management in the larger context of computerized publishing (both procedures and technologies internal to the publishing unit and electronic media for external dissemination of information). Prerequisite: 501 or permission of instructor.

**TC 510 Information Design (3) W** *Farkas* Examination of the design principles and procedures underlying the creation of both print and electronic information presentations. Topics include: print vs. electronic media, designing for the page and screen, information topologies, and hypermedia. Seminar includes a design project. Prerequisite: 501 or permission of instructor.

**TC 515 Designing Natural Language Interfaces (3)** *Haselkorn* Relationship between formal and natural languages. Application of this relationship to designing interface languages that allow users to access machine functionality using natural language. Prerequisite: upper-level course in logic, semantics, computer languages or permission of instructor.

**TC 516 Research Methods in Technical Communication (3) W** *Spyridakis* Introduction to research methods in technical communication. Students examine the relationship between theory and research, hypothesis testing, experimental designs, modes of observation, sampling, validity, and data analysis and interpretation. Prerequisite: introductory statistics course.

**TC 517 Usability Testing (3) W** *Ramey* Discusses the human-computer interface (HCI) as the communicative aspect of a computer system. Analyzes usability issues in HCI design, explores design-phase methods of predictability, and introduces evaluative methods of usability testing. Prerequisite: substantial experience with computers and graduate standing, or permission of instructor.

**TC 520 Technical Communication Management (3) Sp** Emphasizes the role and function of communication as a key to understanding organizational frameworks and managerial practices. Traditional and innovative approaches to viewing and managing technical communication. Roles, responsibilities, impact of technology.

**TC 521 Seminar: Current Issues in Technical Communication (1-2, max. 3) ASp** Presentations on current issues in technical communication. Credit/no credit only. Prerequisite: TC graduate student status or permission of instructor.

**TC 525 Assessing Communications Technologies (3) Sp** *Bereano* Analysis of development, deployment of new communication technologies; emphasis on public policy issues they present (e.g., videotelephone, mobile telephoning, hypermedia, electronic message transfer, virtual reality). Impacts explored include: access, privacy, civil liberties; power of elites; changes in social organization. Prerequisite: 425 or other background in policy analysis, technology, and society.

**TC 598 Special Topics (1-5, max. 6)** Prerequisite: permission of instructor.

**TC 599 Special Projects (1-5) AWSps** Written report required. Prerequisite: permission of program director.

**TC 600 Independent Study or Research (\*) AWSps** Written report required. Prerequisite: permission of program director.

**TC 601 Internship (3-9, max. 9) AWSps** Written report required. Prerequisite: permission of program internship adviser.

**TC 700 Master's Thesis (\*)** Prerequisite: permission of thesis adviser.

# College of Forest Resources

## Dean

David B. Thorud  
102A Anderson

## Associate Dean

Dale W. Cole  
107B Anderson

Founded in 1907, when professional forestry education was in its infancy, the college holds a position of national and international leadership in both instruction and research. Its location in one of the world's largest forest regions provides unique opportunities for field classes and research, actual management of forested lands, exposure to wood-based industries, and awareness of resource-use issues. Enrolled in the college are approximately one hundred fifty undergraduate and two hundred graduate students, taught by more than fifty faculty members. Thus, students enjoy small classes and close association with faculty, as well as the diversity and superior facilities of a large university.

## College Facilities

The college occupies three buildings: Alfred H. Anderson Hall, the Hugo Winkenwerder Forest Sciences Laboratory, and Julius H. Bloedel Hall. In addition, the Center for Urban Horticulture occupies a building complex at Union Bay. Thus, the college has excellent areas and equipment for scientific laboratories, classrooms, seminar rooms, special collections, and administrative offices.

The Forest Resources Library, a branch of the University's Suzzallo Library, houses more than twenty-six thousand bound volumes and thirty-three thousand pamphlets, reports, and monographs. It also has an excellent collection of approximately twenty-five hundred periodicals and many indexes to current literature in forestry and supporting sciences. Under the nationwide Farmington Plan, sponsored by the Special Library Association, the Forest Resources Library has assumed responsibility for collecting foreign material published in the fields of forestry and pulp and paper technology, providing an unusual opportunity for academic research. The Center for Urban Horticulture also maintains a library. Its herbarium supplements forest resources students' fieldwork in dendrology. Containing representative plant material from all parts of the United States, the collection includes dried, mounted specimens of shrubs, hardwood trees, and conifers. Fruit specimens and a complete cone collection of American conifers are maintained apart from the mounted collection. Another herbarium, complete in range plants and maintained by the Department of Botany, is available for use by forest resources students.

The laboratory facilities of the college represent an extensive array of modern equipment for research. The many available research tools include optical equipment, electronic instrumentation for a wide variety of uses, gas chromatographs, spectrophotometers, and physical test equipment. Specific laboratories are designed to study soil chemistry and soil physics, hydrology, polymer chemistry, meteorology, tree physiology, genetics, wood and extractives chemistry, physics of fibrous composites, applied mechanics, wood process technology, pathology, entomology, recreation, horticultural physiology, and horticultural plant materials. The college computing facilities include a remote input-output connection with the main University computers, microcomputer systems dedicated to a spe-

cific research area, and a microcomputer student laboratory.

## Institute of Forest Resources

### Director

David B. Thorud  
102A Anderson

### Associate Director

Dale W. Cole  
107B Anderson

The overall research program of the college is administered by the Institute of Forest Resources. Because of the size and complexity of this program, the institute assumes a broad scope of responsibility and provides vital support to the college administration, faculty, staff, and students. Major functions include administering all research projects funded by federal, state, and private agencies, monitoring the McIntire-Stennis research program, ensuring college compliance with federal reporting requirements, and producing college publications and special reports.

Institute staff coordinate and facilitate the submission of research proposals for the faculty with the University administration and numerous funding agencies. Students earn research and thesis credit toward advanced degrees by working on major forest resources problems supported by grants or contracts. Graduate and undergraduate employment related to research is arranged by the institute office.

Areas of current and future research include a broad array of topics including forest policy analysis, stand management, streamside and riparian zone management, forest ecosystem analysis, international trade in forest products, forest biotechnology, wildlife science, forestry engineering, wood science and technology, and pulp and paper science. Topics of study are selected not only to foster the interests of individuals and groups in the region, but also to promote the scientific community at large. Research projects include studies by individual faculty, as well as interdisciplinary programs, which combine the interests of college faculty with those from other academic units of the University.

The college also collaborates with Cooperative Extension of Washington State University to undertake and promote continuing education for citizens of the state, particularly in the nonindustrial forestry area.

The Institute Publications Office provides a wide range of services in producing college research publications: technical editing, desktop publishing systems, format and layout design, computer graphics, printing/publishing coordination, distribution, advertising, and sales. College publications are distributed to national and international institutions and libraries, as well as to forestry professionals, to organizations in the private sector, and to the general public.

## Field Research Areas and Facilities

The college field facilities include two major forested areas covering more than four thousand acres, an arboretum, a reserve, and several cooperative research centers and stations. These lands offer a wide variety of terrestrial and aquatic characteristics favorable to a full range of scientific investigations. They also provide a general natural science laboratory for the many disciplines in the college specifically related to, or concerned with, the research and teaching of natural resources behavioral patterns and management.

The Charles Lathrop Pack Demonstration Forest of approximately forty-two hundred acres, is located sixty-five miles south of the University, near Eatonville. This forested property is the focal point for on-the-ground academic work in forest management, resource science, and forest engineering, both at the undergraduate and graduate levels. Broad forest and soil diversity has led to extensive biological, management, and engineering research, much of which may be characterized as a "pioneering effort." A full-time

resident staff manages this facility, harmonizing its demonstration objectives with academic and research objectives. Rustic, but comfortable, facilities which provide housing and support to academic and research programs also are used extensively for conferences both within and outside the University.

The Lee Memorial Forest, of approximately one hundred sixty acres, is located about twenty-two miles northeast of the University near Maltby. This forested property provides valuable academic and research opportunities near the campus. Characterized by forest types and soils common to western Washington lowlands, Lee Forest is used extensively for part-day trips and for research and demonstration projects especially useful in a land base where long-term study commitments are difficult to achieve.

The Allan H. Thompson Research Center and the Joe E. Monahan Findley Lake Reserve and Research Area in the Cedar River watershed are utilized by the college in cooperation with the water department of Seattle for studies in forest hydrology and mineral cycling in the forest ecosystem.

The Washington Park Arboretum, a two-hundred-acre collection of trees and shrubs growing in a naturalistic setting, is only a fifteen-minute walk from the University campus. Managed and operated by the Center for Urban Horticulture, under an agreement with the City of Seattle Department of Parks and Recreation, the Arboretum contains some fifty-two hundred different kinds of woody plants that are available for research and academic study. The Arboretum was established in 1934 and many of its original specimens are now approaching maturity. Classes in botany, dendrology, horticulture, and landscape architecture make use of the collections, while the grounds are used for studies in soil science, ecology, and various research projects. The Arboretum also serves as an important public service area to the University, offering various formal and informal classes for the general public and, in addition, serving the community as a public park and as open space.

The Union Bay facility, a fifty-five-acre tract adjacent to Lake Washington and the main campus, is devoted to research and teaching in the Center for Urban Horticulture. It includes a research nursery area, research arboretum, and a large ecological grassland.

## Forest Resources Management Division

### Chairperson

James K. Agee  
123J Anderson

Courses included in the Forest Resources Management Division are basic and applied subject matter in social sciences, management techniques, forest biology, and quantitative sciences for all curricula, as well as specific curricula in forest resources management. Basic subjects in ecology, including plants, animals, climate, and soils, also are included in the teaching responsibility of this program.

The Division of Forest Resources Management offers three undergraduate curricula leading to the Bachelor of Science in Forest Resources: forest resources management (student-specific and wildland recreation options), wildlife science, and conservation of wildland resources. Forest resources management emphasizes professional land management from a multiple-use perspective; wildlife science focuses on the application of ecological knowledge to environmental problem-solving, with the intent to prepare students for graduate education in wildlife science; conservation of wildland resources focuses on terrestrial ecosystem ecology and the interactions of natural ecosystems with society.

Graduate programs leading to the Master of Science and Doctor of Philosophy degrees include ecosystems analysis, social sciences, forest economics, silviculture and forest protection, wildlife science, and quantitative resources management. Practice-oriented degrees leading to the Master of Forest Resources are also available.

## Forest Products and Engineering Division

### Chairperson

Gerard F. Schreuder  
296 Bloedel

Courses for which the Forest Products and Engineering Division is responsible include those in pulp and paper processing, pulping chemistry, wood and fiber utilization and their properties, wood chemistry, working with forest products, forest products marketing and international trade in forest products, and the engineering principles of harvesting.

The division administers two undergraduate curricula in the areas of pulp and paper science and forest engineering. The four graduate curricula include pulp and paper science, forest products (including marketing, wood science, and operations research), forest engineering, and forest hydrology.

## Center for Urban Horticulture

### Acting Chairperson

Clement W. Hamilton  
119 Merrill

The Center for Urban Horticulture is concerned with the utilization of plants to create, maintain, and enhance the quality of urban environments. Faculty members participate in research, education, and public service programs and teach students in the undergraduate urban forestry curriculum as well as in the graduate programs in urban horticulture which are administered by the center.

The faculty of the center offers competence in horticultural physiology, including plant propagation, nutrition, growth regulation, and tree physiology; stress physiology; horticultural taxonomy and plant materials; urban ecology and wetlands management; and continuing education, especially education techniques and programming and horticultural curriculum development. Research facilities include greenhouses and laboratories, an outdoor growing area and research arboretum at Union Bay, as well as the Washington Park Arboretum, and a world-famous collection of mature woody plants.

## Undergraduate Program

In addition to the University's general admission requirements, students who plan to enter the College of Forest Resources should have completed Algebra III (Intermediate), trigonometry, and at least one unit each of biological and physical science.

The College of Forest Resources offers six undergraduate curricula leading to a Bachelor of Science in Forest Resources degree: forest resources management, wildlife science, conservation of wildland resources, forest engineering, pulp and paper science, and urban forestry.

The first two years of study emphasize general preparation, followed by an upper-division professional program. Each curriculum contains a number of elective credits selected at the student's discretion. Students are encouraged to take a number of these credits outside the college to broaden their preparation.

In addition to University regulations concerning requirements and grading, college regulations state that no required course may be taken on a satisfactory/not satisfactory basis. Some classes include field trips, laboratory supplies, or material duplication at extra expense to the students.

Students interested in forest resource management or wildlife science should note that senior-level course work may be taken only after completion of the required field camp at Pack Forest.

Students planning to enter the college from community colleges or from other universities should check with their advisers to ensure their prior programs of study include the proper prerequisites.

Student advising is the joint responsibility of the college's Office of Student Services, 116 Anderson, and the divisions. Student files are centrally located in the Office of Student Services.

### Pack Forest Residential Field Classes

Students enrolled in the forest resource management, wildlife science, and forest engineering curricula must attend the Pack Forest program. This program is typically completed during the spring of the junior year for forest resource management and wildlife science students and during the spring of the senior year for forest engineering students. Courses are conducted as part of the field residential program at the Charles Lathrop Pack Demonstration Forest near LaGrande, sixty-five miles from Seattle.

Students taking course work at Pack Forest must live at the field residential station, paying room-and-board charges in addition to regular tuition. Information is available from the Office of Student Services, 116 Anderson.

### Scholarships and Financial Aid

Information about undergraduate scholarships and awards that are available specifically to students in the College of Forest Resources may be obtained from the Office of Student Financial Aid, 105 Schmitz, or from the Office of Student Services, 116 Anderson. The Washington Pulp and Paper Foundation, Inc., provides scholarships for students in the pulp and paper science curriculum, with awards based on professional promise and scholastic achievement. The foundation is supported by companies of the pulp and paper industry and by supplier companies. Information may be obtained from Prof. William T. McKean, 344 Bloedel.

### Accreditation

The curricula in forest resource management and forest engineering are accredited by the Society of American Foresters (SAF). SAF is the specialized accrediting body recognized by the Council on Postsecondary Education and the U.S. Department of Education as the accrediting agency for forestry in the United States. Other curricula include electives that may be used toward qualifications for SAF and the Forester rating for the United States Civil Service. Students should consult with advisers in planning their schedules to include the specific class requirements for SAF and civil service qualifications.

### Employment

The college provides the Office of Professional Opportunities to assist its students in obtaining summer employment while in school and permanent employment upon graduation. Summer work may be available through federal and state agencies and in the numerous private companies in the wood-using industry of the region. Although field experience is not required for graduation, students are strongly urged to seek sum-

mer employment relevant to their major and career goals. As in any applied technical field, practical experience is as important as academics in preparing for a professional career.

## Bachelor of Science in Forest Resources Degree

In the description of courses of study listed below, explanations for footnotes are found at the end of the curricula listing.

### Urban Forestry Curriculum

#### LOWER-DIVISION REQUIREMENTS

*Mathematics, Statistics, and Computer Science*—Q SCI 291-292, Calculus with Analytical Geometry (4-4 credits) or MATH 124-125 (5-5); Q SCI 340, Application of Computers to Natural Resources Problems (2) or CAUP 270, Computers in Environmental Design and Planning (3); Q SCI 381, Introduction to Probability and Statistics (5). *Humanities*—ENGL 131, Composition: Exposition (5); one approved 5-credit writing or composition course (5); SPCH 220, Introduction to Public Speaking (5). *Physical Sciences*—CHEM 100, Chemical Science (5); CHEM 102, General and Organic Chemistry (5); PHYS 114, General Physics (4); PHYS 117, General Physics Laboratory (1). *Earth Science*—GEOL 101, Introduction to Geological Sciences (5). *Social Sciences*—ECON 200, Introduction to Microeconomics (5); POL S 202, Introduction to American Politics (5). *Botany and Biological Sciences*—BIOL 101, General Biology (5); BIOL 102, General Biology (5); BOT 113, Plant Identification (5); UHF 331, Landscape Plant Recognition (3). *Electives*—(10-12).

#### UPPER-DIVISION REQUIREMENTS

*Urban Horticulture and Forestry*—UHF 431, Landscape Plant Selection (3 credits); UHF 445, Landscape Plant Management (5); UHF 449, Urban Forestry Seminar (3); UHF 451, Urban Plant Protection (4); UHF 471, Ecological Concepts and Urban Ecosystems (3); UHF 495, Senior Project (5). *Forest Resources*—FRM 210, Introductory Soils (3); FRM 311, Soils and Land Use (3); FRM 471, Forest Planning and Project Management (3); FPE 319, Microclimatology (3). *Botany*—BOT 371, Elementary Plant Physiology (3); BOT 354, Introduction to Plant Ecology (5). *Landscape Architecture*—L ARC 322, Introduction to Planting Design (3); L ARC 341, Site Planning (3). *Directed Electives*—(22); *Free Electives*—(19).

### Forest Resources Management Curriculum

#### LOWER-DIVISION REQUIREMENTS

*Forest Resources*—FRM 100, Introduction to Forest Resources Management (5 credits). *Mathematics, Statistics, and Computer Science*—Q SCI 291-292, Calculus with Analytical Geometry (4-4) or MATH 124-125 (5-5); Q SCI 340, Application of Computers to Natural Resources Problems (2); Q SCI 381, Introduction to Probability and Statistics (5). *Humanities*—ENGL 111, Composition: Literature (5); ENGL 131, Composition: Exposition (5); SPCH 220, Introduction to Public Speaking (5). *Physical Sciences*—CHEM 100, Chemical Science (5); CHEM 102, General and Organic Chemistry (5); PHYS 114, General Physics (4); PHYS 117, General Physics Laboratory (1). *Earth Science*—GEOL 101, Introduction to Geological Sciences (5). *Social Sciences*—ECON 200, Introduction to Microeconomics (5); POL S 202, Introduction to American Politics (5). *Biological Sciences*—BIOL 101, General Biology (5); BIOL 102, General Biology (5). *Electives*—(14-16).

#### UPPER-DIVISION REQUIREMENTS

*At Pack Forest (spring quarter, junior year)*—FRM 323, Silviculture (6 credits); FRM 362, Field Measurements (4); FPE 345, Forest Transportation (5). *Core Upper-Division*—FRM 310, Physical Aspects of the Forest Environment (5); FRM 321, Dendrology and Autecology (6); FRM 322, Forest Ecosystems (3); FRM 324, Forest Protection (3); FRM 350, Wildlife Biology and

Conservation (4); FRM 360, Forest Management and Economics I (4); FRM 370, Social Functions of Forest Ecosystems (3); FRM 461, Forest Management and Economics II (4); FRM 468, Forest Measurements (4); FRM 470, Forest Policy and Law (5); FRM 471, Forest Planning and Project Management (4); FRM 481, Management of Wildland Recreation and Amenities (3); FRM 495, Senior Project (5). *Electives*—(23).

#### Student-Specific Option

Students wishing to pursue an individually-defined option within forest resources management, forest/fisheries interactions, timber management, silviculture, etc. should discuss their interests with faculty. Upon sponsorship by a faculty member, the student should submit a proposed program of study consisting of 23 credits of course work to the Forest Resources Management Division Chairperson. Upon approval, a copy of the approved program is filed in the student's academic file in the Office of Student Services. This program is binding as a graduation requirement. All other requirements of the forest resources management curriculum, including the curriculum core and the senior project, must be completed.

#### Wildland Recreation Option

This option is similar to the student-specific option except that certain elective courses appropriate to wildland recreation are pre-defined for students. Specific course requirements may be obtained from the Office of Student Services, 116 Anderson.

#### Wildlife Science Curriculum

##### LOWER-DIVISION REQUIREMENTS

*Forest Resources*—FRM 101, Introduction to Wildlife Science (1 credit). *Physical Sciences*—CHEM 140, General Chemistry (4); CHEM 150, General Chemistry (4); CHEM 160, General Chemistry (4); PHYS 114, General Physics (4); PHYS 117, General Physics Laboratory (1); PHYS 115, General Physics (4); PHYS 118, General Physics Laboratory (1). *Biological Sciences*—BIOL 201-202-203, Introductory Biology (5-5-5); BOT 113, Plant Identification (5). *Humanities*—ENGL 131, Composition: Exposition (5); one approved 5-credit writing or composition course (5); SPCH 220, Introduction to Public Speaking (5). *Social Sciences*—ECON 200, Introduction to Microeconomics (5). *Mathematics, Statistics, and Computer Science*—Q SCI 291-292, Calculus with Analytical Geometry (4-4) or MATH 124-125 (5-5); Q SCI 340, Application of Computers to Natural Resources Problems (2); Q SCI 381, Introduction to Probability and Statistics (5). *Electives*—(7).

##### UPPER-DIVISION REQUIREMENTS

*At Pack Forest (spring quarter, junior year)*—FRM 323, Silviculture (6 credits); FRM 326-327, Range and Wildlife Habitat (5); FRM 351, Wildlife Field Techniques (3). *Core Upper-Division*—FRM 321, Dendrology and Autecology (6); FRM 322, Forest Ecosystems (3); FRM 350, Wildlife Biology and Conservation (4); FRM 370, Social Functions of Forest Ecosystems (3); FRM 450, Human Culture and Wildlife Conservation (5); FRM 451-452, Biology and Conservation of Birds (3-2); FRM 455, Wildlife Seminar (taken twice) (1-1); FRM 495, Senior Research Project (5); FRM 496, Senior Thesis (3); Q SCI 477, Quantitative Assessment of Wildlife Populations (5); Q SCI 482-483, Statistical Inference (5-5). *Directed Electives*—Biology/Zoology (12); Forest Resources (3); Environmental Studies/Humanities (3); Ocean and Fishery Sciences (5); Social Sciences (5).

#### Conservation of Wildland Resources Curriculum

##### LOWER-DIVISION REQUIREMENTS

*Forest Resources*—FRM 102, Introduction to Wildland Conservation (5 credits); FRM 202, Global Change and Forest Biology (3). *Mathematics, Statistics, and Computer Science*—Q SCI 291-292, Calculus with Analytical Geometry (4-4) or MATH 124-125 (5-5); Q SCI 340, Application of Computers to Natural Resources Prob-

lems (2); Q SCI 381, Introduction to Probability and Statistics (5). *Humanities*—ENGL 111, Composition: Literature (5); ENGL 131, Composition: Exposition (5); SPCH 220, Introduction to Public Speaking (5). *Physical Sciences*—CHEM 100, Chemical Science (5); CHEM 102, General and Organic Chemistry (5); PHYS 114, General Physics (4); PHYS 117, General Physics Laboratory (1). *Earth Science*—GEOL 101, Introduction to Geological Sciences (5). *Social Sciences*—ECON 200, Introduction to Microeconomics (5); POL S 202, Introduction to American Politics (5). *Biological Sciences*—BIOL 101, General Biology (5); BIOL 102, General Biology (5). *Electives*—(10-12).

##### UPPER-DIVISION REQUIREMENTS

*Core Upper-Division*—FRM 310, Physical Aspects of the Forest Environment (5 credits); FRM 321, Dendrology and Autecology (6); FRM 322, Forest Ecosystems (3); FRM 350, Wildlife Biology and Conservation (4); FRM 370, Social Functions of Forest Ecosystems (3); FRM 470, Forest Policy and Law (5); FRM 495, Senior Project (5). *Electives*—Free Electives (9-11); Directed Electives: Resource Economics (3-5); Forest Resources (15); Life Sciences (15); Arts/Social Sciences (15). Acceptable directed elective requirements are available from the Office of Student Services.

#### Pulp and Paper Science Curriculum

##### LOWER-DIVISION REQUIREMENTS

*Chemistry*—CHEM 140, General Chemistry (4 credits); CHEM 150, General Chemistry (4); CHEM 151, General Chemistry Laboratory (2); CHEM 160, General Chemistry (4); CHEM 237, Organic Chemistry (4); CHEM 238, Organic Chemistry (4); CHEM 241, Organic Chemistry Laboratory (3). *Mathematics*—MATH 124, 125, 126, Calculus With Analytic Geometry (5, 5, 5); MATH 307, Elements of Differential Equations (3); Q SCI 381, Introduction to Probability and Statistics (5). *Physics*—PHYS 121, Mechanics (4); PHYS 122, Electromagnetism and Oscillatory Motion (4); PHYS 123, Waves (4). *Engineering*—ENGR 141, Introductory FORTRAN Programming (4); ENGR 260, Thermodynamics (4). *Forest Resources*—FPE 302, Introduction to Pulp and Paper Technology (4); FPE 306, Pulp and Paper Processes Analysis (3). *Social Sciences/Humanities*—ENGL 131<sup>1</sup>, Composition: Exposition (5); ECON 200, Introduction to Microeconomics (5). *Electives*<sup>2</sup>—(9).

##### UPPER-DIVISION REQUIREMENTS

*Chemistry*—CHEM 350, Elementary Physical Chemistry (3 credits); CHEM 351, Elementary Physical Chemistry (3). *Chemical Engineering*—CH E 310, Material and Energy Balances (4); CH E 330, Transport Processes I (4); CH E 340, Transport Processes II (4); CH E 436, Chemical Engineering Laboratory I (3). *Forest Resources*—FPE 400, Wood and Fiber Structure (5); FPE 402, Paper Properties and Additives (3) or FPE 403, Fibrous Structure and Rheology I (3); FPE 406, Wood Chemistry I (3); FPE 407, Wood Chemistry I Laboratory (2); FPE 476, Pulping and Bleaching Processes (3); FPE 477, Papermaking Processes (3); FPE 478, Pulp and Paper Laboratory I (2); FPE 479, Pulp and Paper Laboratory II (2); FPE 480, Pulp and Paper Process Control (3); FPE 481, Pulp and Paper Unit Operations (3); FPE 482, Pulp and Paper Process Design and Economics (3); FPE 485, Undergraduate Research—taken three times—(1-1-1); FPE 483, Paper Coating and Converting (3) or FPE 488, Polymer Chemistry (3); FPE 497, Pulp and Paper Internship I (1); FPE 498, Pulp and Paper Internship II (1). *Electives*<sup>2</sup>—(28).

#### Forest Engineering Curriculum

##### LOWER-DIVISION REQUIREMENTS

*Computer Science*—ENGR 141, Introduction to FORTRAN Programming (4 credits). *Mathematics*—MATH 124, 125, 126, Calculus With Analytic Geometry (5, 5, 5); Q SCI 381, Introduction to Probability and Statistics (5). *Humanities*—SPCH 220, Introduction to Public Speaking (5); ENGL 131<sup>1</sup>, Composition: Exposition (5); ENGL 182, The Research Paper (5); Humanities elective (5). *Physical Sciences*—CHEM 100, Chemical Sci-

ence (5); PHYS 121, Mechanics (4); PHYS 122, Electromagnetism and Oscillatory Motion (4); PHYS 123, Waves (4); PHYS 131, 132, 133, Experimental Physics (1, 1, 1). *Social Sciences*—ECON 200, Introduction to Microeconomics (5); ECON 201, Introduction to Macroeconomics (5). *Electives*—(16).

##### UPPER-DIVISION REQUIREMENTS

*Forest Resources*—FPE 243, Mechanics in Forestry (4 credits) or ENGR 210, Engineering Statics (4); FPE 377, Materials Science in Forestry (4) or ENGR 220, Mechanics of Solids (4); FPE 342, Forest Road Engineering (5); FPE 343, Introductory Soil Mechanics (4) or CIVE 366, Basic Soil Mechanics (4); FRM 468, Forest Measurement (4); FPE 430, Aerial Photos/Remote Sensing in Natural Resources (3); FPE 344, Hydraulics for Forest Roads (4) or CIVE 342, Fluid Mechanics (4); FPE 341, Forest Harvesting (5); FRM 461, Forest Management and Economics II (4); FRM 424, Forest Stand Dynamics (3); FRM 430, Forest Chemicals (3); FRM 490, Undergraduate Studies (1); FRM 491, Undergraduate Studies (2); FPE 441, Forest Access Policy and Planning (5); FPE 440, Construction Management and Administration (5); FPE 446, Senior Forest Engineering Field Studies—Analysis of Social Factors (2); FPE 447, Senior Forest Engineering Field Studies—Multiple Use and Harvest Planning (5); FPE 448, Senior Forest Engineering Field Studies—Road Location and Construction Surveys (5); FPE 449, Senior Forest Engineering Field Studies—Bio-Physical Resources Evaluation (3). *Engineering*—ENGR 123, Introduction to Engineering Graphics (3); FPE 340, Plane Surveying (3); FPE 339, Plane Surveying Laboratory (2). *Biological Sciences*—UHF 331, Plant Recognition (3). *Student-specific studies*—(8).

#### Explanation of Requirements

1. Or from ENGL 111, 121, or ENGR 231, 331.
2. A minimum of 21 credits must be taken in the humanities and/or social sciences, as well as 16 credits of approved sciences and engineering (technical) electives, of which 6 must be in laboratories.

## Graduate Programs

Dale W. Cole, Graduate Program Coordinator

Graduate programs in forest resources are designed to accommodate a wide range of education and career objectives. A student may concentrate on development of advanced professional skills and knowledge or on exploration of sciences basic to forest resources.

Graduate programs offered in forest resources lead to degrees of Master of Forest Resources, Master of Science, and Doctor of Philosophy. Graduate students may center their graduate study in one of the special fields of study within the college divisions.

#### Master of Forest Resources Degree

The Master of Forest Resources degree is a professional degree offered for the student who desires to acquire a greater competence in a specific subject area of forest resources. This is a nonthesis option open to professionals who are returning to study and obtain expertise in areas such as: natural ecosystems analysis, silviculture, and urban horticulture. Interested persons should contact the graduate program coordinator to determine eligibility for this degree program.

#### Master of Science Degree

The Master of Science degree is a learned degree, often precursory to the Doctor of Philosophy degree. Both thesis and nonthesis options are available. The nonthesis program requires at least 6 credits of research and the thesis program requires a minimum of 9 credits of research. A foreign language is not required. Students must complete a set of core courses prescribed for the major area of study.

### **Doctor of Philosophy Degree**

The Doctor of Philosophy degree may be preceded by education in either forest resources or another discipline. The program comprises an appropriate selection of core courses in forest resources and in the related natural and social sciences. The program requires passage of the General Examination in forest resources, the necessary research, and completion of the dissertation. A minimum of two years of residence at the University also is required. The time necessary to complete the degree requirements depends upon the thoroughness and applicability of prior course work. Reading proficiency in one foreign language may be required by the Supervisory Committee when the language is essential to the student's program of study.

### **Mid-Career Education**

The college has established a certificate program in silviculture to provide mid-career education for forestry professionals. Participants in the mid-career program take courses to prepare themselves for new or broader responsibilities in their current career. In this certificate program, courses can be taught in a more flexible time arrangement to meet the specific career and scheduling needs of participants. Interested forestry professionals should contact the College of Forest Resources Continuing Education Office.

### **Graduate Areas**

Graduate education is offered through the academic divisions of Forest Resources Management, Forest Products and Engineering, and the Center for Urban Horticulture. Program areas of study and emphasis areas include: pulp and paper science (pulp and paper engineering, wood chemistry, polymer and fiber science); forest engineering; forest products (wood science, forest products marketing, operations research); forest hydrology (hydrology, water quality, erosion and sedimentation); forest economics; forest ecosystem analysis (forest ecosystems, forest ecology, forest genetics, forest microclimatology, forest soils/mineral cycling, streamside/riparian management, tree physiology); quantitative resources management (biometry, quantitative management, aerial photogrammetry/remote sensing); silviculture and forest protection (silviculture, forest entomology, fire management, forest pathology); social sciences (forest land use planning, forest policy and law, environmental interpretation and outdoor recreation, forest sociology and leisure studies); wildlife science; urban horticulture (environmental horticulture, horticultural taxonomy, horticultural physiology, wetlands management, urban forestry).

In all areas of study, the college maintains a close working relationship with faculties of other colleges and schools throughout the University, including service on graduate committees. Faculty advisers assist graduate students in determining those courses in other departments on campus which will lend to students' intended areas of expertise.

### **Admission Qualifications, Background**

A student who intends to work toward an advanced degree must apply for admission to the Graduate School and must meet the requirements set forth by the Graduate School and the College of Forest Resources.

Basic requirements for admission to the Graduate School are a baccalaureate degree from an institution of recognized standing, a minimum GPA of 3.00 in the junior and senior years of college work, approval of the Dean of the Graduate School, and approval of the college.

In addition to requesting admission forms from the Graduate Admissions Office, an applicant should obtain supplemental admission and reference forms from the College of Forest Resources. The Graduate Record Examination general test is required, and test scores must be submitted to the college by the applicant.

Upon enrollment, the student is assigned a graduate program committee that is responsible for guidance in the early stages of the graduate program, to be fol-

lowed by more formal committees as the student's program develops.

Applicants for the college are considered quarterly within the enrollment limitations for the college and the available faculty and workload limitations within the specific program area selected. Students with both undergraduate forestry degrees and other related fields are considered, although a prior forestry degree is normally expected of applicants for the professional Master of Forest Resources degree.

### **Financial Aid**

The college has available a limited number of appointments as research assistants. Teaching and research responsibilities allow time to pursue a full academic load. Fellowships and scholarships without teaching or research obligations are also available. Requests for financial aid should be submitted by February 1 for priority consideration for the following academic year.

### **Correspondence and Information**

Office of Student Services  
116 Anderson, AR-10

## **Research Centers**

### **Center for Quantitative Science in Forestry, Fisheries, and Wildlife**

#### **Director**

E. David Ford

The Center for Quantitative Science in Forestry, Fisheries, and Wildlife is an intercollege academic unit sponsored by the College of Forest Resources and the School of Fisheries of the College of Ocean and Fishery Sciences. The center offers a comprehensive program of study in mathematics and statistical methods as applied to problems in ecology and natural resources management. The faculty of the center include members of the College of Forest Resources and the School of Fisheries, and many are also adjunct members of the Department of Biostatistics.

### **Center for International Trade in Forest Products**

#### **Director**

Bruce R. Lippke

The Center for International Trade in Forest Products (CINTRAFOR) was established in 1984 to respond to opportunities and problems relating to the export and import of wood products. Through programs of research, education, and outreach, the CINTRAFOR works to improve knowledge of export trade and to train professionals competent in the analysis and interpretation of trade problems, issues, and policies. The center serves as a focal point for dissemination of information on world trade in forest products by means of seminars, conferences, workshops, and publications.

CINTRAFOR activities involve the cooperative effort of the forest products industry, state and federal organizations, and the joint efforts of the College of Forest Resources, the School of Law, the School of Business Administration, the Jackson School of International Studies, and the College of Architecture and Urban Planning. The research undertaken by CINTRAFOR includes country market analyses, global competitive models, new product and market opportunities, the linkages between global forest products trade and environmental impacts and socioeconomic stability, and policy impact analyses.

Students interested in participating in specific research activities sponsored by CINTRAFOR may enroll for study in graduate programs in one of the college's three academic divisions or in programs offered by other academic divisions on campus.

## **Center for Streamside Studies**

#### **Director**

Robert J. Naiman

The Center for Streamside Studies (CSS) was established in 1987 as a joint effort of the College of Forest Resources, the College of Ocean and Fishery Sciences, and the Center for Quantitative Science in Forestry, Fisheries, and Wildlife. CSS provides information for the resolution of management issues related to the production and protection of forest, fish, wildlife, and water resources associated with the streams and rivers in the Pacific Northwest.

The center conducts research activities related to the understanding of ecological and physical processes and their relation to governmental regulations. Projects are solution-oriented, centering around biological, physical, and social aspects of management issues. Cooperative projects are undertaken with state and federal agencies, tribes, private industry, and national and international research institutions, and involve faculty and students of the College of Forest Resources, the College of Ocean and Fishery Sciences, and the Center for Quantitative Science in Forestry, Fisheries, and Wildlife.

To provide interdisciplinary training necessary to deal with the management of interacting resources, CSS conducts symposia, workshops, conferences, and seminar series as forums for resource conflict discussion and resolution. Students interested in participating in specific research activities sponsored by CSS may enroll for study in graduate programs in one of the College of Forest Resources' three academic divisions or in programs offered by other academic divisions on campus.

## **Faculty**

#### **Dean**

David B. Thorud

#### **Associate Dean**

Dale W. Cole

#### **Professors**

Agee, James K.,\* 1978, M.S., 1968, Ph.D., 1973, California (Berkeley); management of natural systems, forest ecology, fire ecology.

Allan, G. Graham,\* 1966, (Chemical Engineering),† Ph.D., 1956, Glasgow; D.Sc., 1971, Strathclyde; fiber composites, polymer sciences, creativity.

Ammirati, Joseph F.,\* 1979, ‡(Botany), M.A., 1967, San Francisco; Ph.D., 1972, Michigan; mycology, taxonomy, and ecology of fleshy fungi.

Bare, B. Bruce,\* 1969, (Biostatistics, Fisheries, Quantitative Ecology and Resource Management), M.S., 1965, Minnesota; Ph.D., 1969, Purdue; harvest scheduling, biometry, forest land management, taxation, finance, management science.

Bethel, James S.,\* 1962, (Emeritus), M.F., 1939, D.F., 1947, Duke; wood science, wood energy, tropical wood utilization, forest products management, international trade.

Bradley, Gordon A.,\* 1972, M.L.A., 1972, California (Berkeley); Ph.D., 1972, Michigan; forest land use planning, recreation site planning and design.

- Briggs, David G.,\* 1980, (Quantitative Ecology and Resource Management), M.F., 1968, Yale; Ph.D., 1980, Washington; operations research in forest products industries.
- Brubaker, Linda B.,\* 1973, (Quaternary Research Center), M.S., 1967, Ph.D., 1973, Michigan; dendrochronology, forest ecology, Quaternary paleoecology.
- Bryant, Benjamin S.,\* 1949, (Emeritus), M.S.F., 1948, Washington; D.F., 1951, Yale; wood utilization technology, wood gluing, plywood and board technology.
- Cole, Dale W.,\* 1960, M.S., 1957, Wisconsin; Ph.D., 1963, Washington; mineral cycling in a forest ecosystem, forest soils.
- Dowdle, Barney,\* 1962, (Quantitative Ecology and Resource Management), M.F., 1958, Ph.D., 1962, Yale; development of forest products industries, public forest land management.
- Driver, Charles H.,\* 1965, (Emeritus), M.S.F., 1950, Georgia; Ph.D., 1954, Louisiana State; processes of wood decay, forest diseases, range ecology.
- Edmonds, Robert L.,\* 1973, M.S.F., 1968, Ph.D., 1971, Washington; forest soil microbiology, biology of forest diseases, aerobiology.
- Edwards, John S.,\* 1967, ‡(Zoology), M.Sc., 1956, Auckland, (New Zealand); Ph.D., 1960, Cambridge (England); arthropod neurobiology, insect physiology and development, tundra and alpine biology.
- Erickson, Harvey D., 1947, (Emeritus), Ph.D., 1937, Minnesota; wood science and technology.
- Ford, E. David,\* 1985, (Fisheries), †(Biostatistics, Quantitative Ecology and Resource Management, Statistics), Ph.D., 1968, London (England); spacial processes in ecology, forest productivity, and plants' response to environmental change.
- Franklin, Jerry F.,\* 1986, M.S., 1961, Oregon State; Ph.D., 1966, Washington State; structure and function of forest ecosystems, ecology of Pacific Northwest trees.
- Fritschen, Leo J.,\* 1966, (Architecture, Atmospheric Sciences), M.S., 1958, Kansas State; Ph.D., 1960, Iowa State; biometeorology, micrometeorology, measurement and instrumentation of the environment.
- Gara, Robert I.,\* 1968, M.S., 1962, Ph.D., 1964, Oregon State; bark beetle ecology, forest insect behavior, international forestry.
- Gessel, Stanley P.,\* 1948, (Emeritus), Ph.D., 1950, California (Berkeley); forest soil classification, mineral cycling, tree nutrition and forest soil fertility, tropical forest soils, forest productivity.
- Harr, R. Dennis,\* 1988, Ph.D., 1967, Colorado State; forest hydrology, water quality, slope stability, fish habitat.
- Hatheway, William H.,\* 1969, (Emeritus), S.M., 1952, Chicago; M.F., 1954, Ph.D., 1956, Harvard; quantitative ecology, physiological ecology, tropical forestry.
- Hinckley, Thomas M.,\* 1980, Ph.D., 1971, Washington; forest tree physiology and autecology, forest biotechnology, water stress problems.
- Hrutford, Bjorn F.,\* 1965, Ph.D., 1959, North Carolina; wood extractive chemicals, air and water quality in forest products industries.
- Johnson, Jay A.,\* 1984, (Quantitative Ecology and Resource Management), M.S., 1970, State University of New York (Syracuse); Ph.D., 1973, Washington; mechanical and physical properties of wood and wood composite materials, wood quality.
- Jorgensen, Jens E.,\* 1968, ‡(Mechanical Engineering), M.S., 1963, Sc.D., 1969, Massachusetts Institute of Technology; systems analysis, manufacturing, automation and controls, forest engineering.
- Lee, Robert G.,\* 1978, M.F.S., 1969, Yale; Ph.D., 1973, California (Berkeley); forest sociology, multiresource management, development and change of forestry institutions.
- Leney, Lawrence, 1960, (Emeritus), Ph.D., 1960, New York State; wood anatomy, microtechniques, machining wood, photomicrography, seasoning and preservation of wood.
- Leopold, Estella B.,\* 1976, ‡(Botany), (Environmental Studies, Geological Sciences, Quaternary Research Center), M.S., 1950, California (Berkeley); Ph.D., 1955, Yale; paleoecology, forest history, Cenozoic palynology.
- Lettenmaier, Dennis P.,\* 1976, ‡(Civil Engineering), M.S., 1973, George Washington; Ph.D., 1975, Washington; systems analysis and water resources planning.
- Lippke, Bruce R., 1990, M.S., 1966, California (Berkeley); international trade in forest products, economics of forest industry.
- Manuwal, David A.,\* 1972, M.S., 1968, Montana; Ph.D., 1972, California (Los Angeles); effect of forest management on birds and mammals, characteristics of high-elevation bird communities.
- McKean, William T.,\* 1979, (Chemical Engineering), † Ph.D., 1967, Washington; pulp and paper technology, chemical engineering.
- Naiman, Robert J.,\* 1988, (Fisheries), †(Quantitative Ecology and Resource Management), Ph.D., 1974, Arizona State; ecological management of streams and riparian systems, nutrient dynamics, GIS applications in landscape-level processes.
- Oliver, Chadwick D.,\* 1975, M.F.S., 1970, Ph.D., 1975, Yale; silviculture and forest ecology, development, manipulation and culture of single- and mixed-species forest stands.
- Pickford, Stewart G.,\* 1976, (Quantitative Ecology and Resource Management), M.S.F., 1966, Ph.D., 1972, Washington; forest fire science and wildland fire management.
- Robertson, James C. H., 1945, (Emeritus), M.S.F., 1933, California; Ph.D., 1947, Duke; forest resources.
- Schaeffer, Walter H., 1952, (Emeritus), Ph.D., 1952, Washington; forestry.
- Schiess, Peter,\* 1975, Ph.D., 1975, Washington; residue transport and utilization, micrometeorology, forest engineering, small-log harvesting, biomass production.
- Schreuder, Gerard F.,\* 1971, (Quantitative Ecology and Resource Management), M.S., 1960, Wageningen; M.S., 1967, North Carolina State; Ph.D., 1968, Yale; statistical analysis in resource economics, systems analysis and modeling, use of aerial photos in resource planning and management.
- Scott, David R. M.,\* 1955, (Emeritus), M.F., 1947, Ph.D., 1950, Yale; forest ecology and silviculture.
- Sharpe, Grant W.,\* 1967, (Emeritus), M.F., 1951, Ph.D., 1955, Washington; wildland recreation, interpretation and management of recreation areas.
- Sprugel, Douglas G.,\* 1984, (Research), Ph.D., 1974, Yale; community and ecosystem ecology, canopy architecture, ecology of natural disturbances.
- Stenzel, George, 1949, (Emeritus), M.F., 1939, Yale; logging engineering, timber harvesting, logging safety.
- Stettler, Reinhard F.,\* 1963, Ph.D., 1963, (Biology Teaching), California (Berkeley); genetic control of morphogenesis in higher plants, reproductive biology of forest trees, experimental induction of haploidy, biotechnology, poplar fiber production.
- Taber, Richard D.,\* 1968, (Emeritus), M.S., 1949, Wisconsin; Ph.D., 1951, California (Berkeley); biology and conservation of birds and mammals, wildlife and human culture.
- Thomas, David P., 1950, (Emeritus), M.F., 1948, Washington; economics and technology of utilizing forest crops, kiln drying and seasoning of lumber.
- Thorud, David B.,\* 1981, M.S., 1960, Ph.D., 1964, Minnesota; forest hydrology and watershed management, international trade in forest products, international forest policy and development.
- Tukey, Harold B., Jr.,\* 1980, M.S., 1956, Ph.D., 1958, Michigan State; urban horticulture, horticultural physiology.
- Wagar, J. Alan,\* 1986, (Research), M.F., 1956, Ph.D., 1961, Michigan; urban forestry, outdoor recreation.
- Waggener, Thomas R.,\* 1966, M.F., 1963, M.A., 1965, Ph.D., 1966, Washington; policy and economics, regional impact analysis, international trade in forest products.
- Wissmar, Robert C.,\* 1972 (Fisheries), † M.S., 1968, Ph.D., 1972, Idaho; ecology.
- Wott, John A.,\* 1981, M.S., 1966, Ph.D., 1968, Cornell; ornamental horticulture, extension programs in urban horticulture.

### Associate Professors

- Chappell, H. Nixon,\* 1983, (Research), Ph.D., 1979, North Carolina State; forest soil management, tree nutrition, cooperative research in silviculture.
- Conquest, Loveday L.,\* 1978, ‡(Fisheries), (Biostatistics), M.S., 1972, Stanford; Ph.D., 1975, Washington; sampling and experimental design for environmental monitoring studies, especially spatial and temporal aspects; statistical methods for timber, fish, and wildlife studies; global monitoring of the environment; general biometry.
- Cundy, Terrance W.,\* 1983, M.S., 1980, Minnesota; Ph.D., 1983, Utah State; hydrology and watershed management.
- Fridley, James L.,\* 1988, M.S., 1981, Michigan State; Ph.D., 1984, Washington; forest engineering, engineering design.
- Greulich, Francis E.,\* 1977, (Quantitative Ecology and Resource Management), M.S., 1967, Ph.D., 1976, California (Berkeley); forest engineering statistics, operations research.
- Grue, Christian E.,\* 1989, ‡(Fisheries), M.S., 1974, Northern Arizona; Ph.D., 1977, Texas A&M; wildlife toxicology and wildlife science.
- Gustafson, Richard R.,\* 1986, Ph.D., 1982, Washington; process simulation and dynamics, development of high-tensile carbon fibers.
- Hamilton, Clement W.,\* 1985, (Botany), Ph.D., 1985, Washington (St. Louis); systematics of horticultural plants, plant population biology, tropical biogeography and conservation.
- Hanley, Donald P.,\* 1983, M.S.F., 1973, Montana; Ph.D., 1981, Idaho; extension forestry, small-forest management, forestry continuing education.
- Hodgson, Kevin P.,\* 1991, M.S., 1980, Carnegie-Mellon; Ph.D., 1986, Washington; surface and colloid science, flow in fiber networks.
- Maguire, Douglas A.,\* 1986, (Quantitative Ecology and Resource Management), M.S., 1979, Rutgers; M.S., 1986, Ph.D., 1986, Oregon State; growth and yield modeling, forest biometrics, crown development.
- Peterson, David L.,\* 1989, M.S., 1977, Ph.D., 1980, Illinois; effects of environmental stress on tree growth and forest ecosystems.
- Raedeke, Kenneth J.,\* 1979, (Research), Ph.D., 1979, Washington; wildlife biology and conservation, population dynamics.
- Ricker, N. Lawrence,\* 1978, ‡(Chemical Engineering), M.S., 1972, Ph.D., 1978, California (Berkeley); chemical process design, simulation and control.
- Rustagi, Krishna P.,\* 1973, (Quantitative Ecology and Resource Management), M.Sc., 1953, Agra (India); M.F., 1971, Ph.D., 1973, Yale; operations research and statistical applications in resource management, forest inventory, growth and yield.
- Shannon, Margaret A., 1992, M.S., 1977, Ph.D., 1989, California (Berkeley); wildland resource sociology, policy and law, philosophy of science and qualitative methodology.

Strand, Stuart E.,\* 1982, (Research), M.S., 1975, Ohio State; Ph.D., 1982, Pennsylvania State; forest biotechnology, microbiology.

West, Stephen D.,\* 1979, M.S., 1974, Alaska; Ph.D., 1979, California (Berkeley); population dynamics, natural history and systematics of mammals, wildlife ecology and management.

#### Assistant Professors

Ewing, Kern,\* 1990, M.S., 1978, Ph.D., 1982, Washington; wetland ecology and vegetation management; urban ecology.

Halpern, Charles B.,\* 1991, (Research), Ph.D., 1987, Oregon State; biomass accumulation, tree demography, dynamics of forest ecotones in montane and subalpine ecosystems.

Harrison, Robert B.,\* 1986, M.S., 1980, New Hampshire; Ph.D., 1985, Auburn; forest soil chemistry, acid deposition effects, nutrient cycling.

Perez-Garcia, John M., 1990, (Research), M.S., 1982, Puerto Rico (Mayaguez); Ph.D., 1991, Yale; analysis of trade policy, global trade modeling.

## Course Descriptions

### Forest Products and Engineering

*Students taking undergraduate and graduate courses, structured or unstructured, that require field trips, special laboratory supplies, or special material duplications are required to pay appropriate amounts to cover such expenses. If a student fails to pay, the transcript may be withheld and the degree may not be conferred.*

#### Courses for Undergraduates

**FPE 243 Mechanics In Forestry (4) A** Principles of statics with application in forestry. Basic concepts, parallelogram law, Newton's laws, equilibrium diagrams and analysis. Treatment of structural systems and systems with friction. Prerequisite: MATH 125 or Q SCI 292, which may be taken concurrently.

**FPE 300 Timber Harvesting Management (3) Sp** Dowdle Timber harvesting methods and planning procedures. Logging costs and production. Safety and environmental considerations. For forest managers and other nonengineering majors.

**FPE 302 Pulp and Paper Technology (4) A** Hrutford Sources of pulpwood. Mechanical and chemical pulping processes. Conversion of pulp to paper. Laboratory study of raw material, mechanical pulping and paper making.

**FPE 306 Pulp and Paper Processes Analysis (3) W** Hrutford, McKean Inorganic chemistry of pulping and bleaching inclusive of sulfur, chlorine, and oxygen-based chemicals, reactivities, and chemical analysis. Wood raw material and conversion to mechanical pulps. Computer-aided material balances on mechanical separation processes.

**FPE 309 Creativity and Innovation (2) Sp** Allan Understanding creativity and creative thinking; its challenges and dynamics through knowledge, judgment, planning, and observation. Techniques of creative thinking. Design and development of creative games. Computer-aided creative thinking. Creation, protection, and exploitation of a useful idea, including bargaining and negotiations. Joint with CH E 309. Prerequisite: junior standing or permission of instructor.

**FPE 319 Microclimatology (3) A** Fritschen Interaction of biological and meteorological processes with applications to forestry, recreation, wildlife, landscape design, and architecture. Surface energy balances in terms of evaporation, radiation exchange, air and soil temperature, wind speed, and humidity in the lower

layer of the atmosphere. Joint with ATM S 319. Prerequisite: ATM S 101 or 301; permission of instructor.

**FPE 339 Plane Surveying Laboratory (2) A** Fridley, Pickford Plane surveying practice including field and office techniques; involves the use of staff compass, transit theodolite, surveyor's and engineer's chain, EDM, abney and self-leveling level; uses computer-assisted computations and graphics as applied to traversing, topographic mapping, and volume calculations. Prerequisite: logging engineering students only or by departmental permission.

**FPE 340 Plane Surveying (3) A** Fridley, Pickford Introduction to the concepts of plane surveying and basic engineering procedures in the collection, reduction, and presentation of data; includes an introduction to the public land survey system. Prerequisite: logging engineering students only or by departmental permission.

**FPE 341 Forest Harvesting (5) A** Greulich Timber harvesting methods and planning procedures. Logging cost and production control. Environmental and safety considerations as related to logging and road construction. Prerequisite: 342.

**FPE 342 Forest Road Engineering (5) W** Schiess Theory combined with strong emphasis on field practice. Engineering activities from reconnaissance through construction staking discussed in context of class project involving location, field survey, and design of a forest road. Engineering design theory covered includes horizontal and vertical curves (including spirals), earthwork, minor drainage structures. Prerequisite: 340.

**FPE 343 Introductory Soil Mechanics (4) W** Greulich Soil mechanics background necessary for the design of logging roads and structures. Soil properties and classification, soil hydraulics, soil strength and failure, soil behavior in structural design, soil modification techniques, and slope stability analysis. Application of basic laboratory and field testing procedures. Prerequisites: 243 and permission of instructor. Entry code required.

**FPE 344 Hydraulics for Forest Roads (4) Sp** Cundy Fundamentals of fluid mechanics, open- and closed-conduit flow and hydrologic prediction. Analysis and design of drainage ditches and culverts for logging roads. Prerequisites: 10 credits in physics, 8 credits in mathematics. Prerequisite: permission of instructor. Entry code required.

**FPE 345 Forest Surveying and Transportation (5) Sp** Schiess Concepts of timber harvesting requirements, road-access planning, and forest land surveying. Basic elements of road design principles, processes, and practical application of field road location. Review of basic road drainage design, overview of road construction techniques, maintenance principles plus special topics. A concentrated field experience taught at Pack Forest.

**FPE 377 Materials Science in Forestry (4) W** J. Johnson Introduction to the concepts of stress, deformation, and strain in solid materials, including the unique properties of wood. Development of those equations that relate these variables in structures. Laboratory session emphasizes theory. Prerequisites: 243 or ENGR 210 and permission of instructor. Entry code required.

**FPE 400 Wood and Fiber Structure (5) A** Briggs Development, growth, and anatomy of wood and bark. Relationship of anatomy to physical and mechanical properties of wood. Formation and influence of defects on properties. Identification of wood and fibers of commercial North American species. Prerequisite: permission of instructor. Entry code required.

**FPE 401 Wood Physics (4) W** Equilibrium physical properties of solid wood and wood products. Density calculations and variations, equilibrium moisture content, shrinkage and swelling, flow mechanisms and thermal, electrical and nuclear properties. Entry code required. (Offered odd-numbered years.)

**FPE 402 Paper Properties and Additives (4) A** Johnson, McKean Material science of paper and paperboard. Measurement and characterization of structural, mechanical, and optical properties of paper. Standard testing methods, paper colorants, effect of additives on paper properties, and relationship of fundamental paper properties to end use requirements.

**FPE 403 Fibrous Structure and Rheology I (3) A** Allan Review of the synthetic and natural fibers and their chemical, physical, microscopic, and submicroscopic properties. The bonding behavior of fibers in networks. Analysis of the structure of fiber networks with reference to nonwovens and paper.

**FPE 404 Fibrous Structure and Rheology II (3) Sp** Allan Behavior of fibers in fluid suspensions and properties of webs formed therefrom. Physics and chemistry of fiber-polymer interactions and adhesion. Fiber modification by physical and chemical processes and theory and design of fiber composite materials. Prerequisite: 403.

**FPE 406 Wood Chemistry I (3) A** Hrutford Chemical and physical properties of cellulose, lignin, hemicellulose, and extractives. Wood as a raw material for the chemical industry.

**FPE 407 Wood Chemistry I Laboratory (2) W** Hrutford Laboratory to supplement 406.

**FPE 409 Wood Extractives Chemistry (2) Sp** Hrutford Nature, origin, and occurrence of the extraneous components of wood, their influence on pulp and paper preparation, and their utilization. (Offered odd-numbered years.)

**FPE 410 Specifications and Manufacturing of Solid Wood Products: I (4) W** Briggs Unit operations of harvesting, lumber manufacturing, and plywood manufacturing industries. Measurement and grading systems for raw materials and finished products. Hardwood and softwood industries in the Pacific Northwest. Laboratory emphasizes visits to representative manufacturers. (Offered odd-numbered years.)

**FPE 411 Specifications and Manufacture of Solid Wood Products: II (4) Sp** Briggs, Johnson Unit operations of composite products industries based on chips or fibers as raw materials. Important secondary manufacturing industries, such as prefabricated housing, furniture, laminated beams, pallets. Measurement and grading systems for raw materials and finished projects. Laboratory includes visits to representative manufacturers. Prerequisite: 410 or permission of instructor. (Offered odd-numbered years.)

**FPE 412 Forest Products Marketing (3) Sp** Examination of forest products markets, industry structure and strategic management issues. Includes product management, distribution channels, promotion, pricing, marketing research, export markets, and case studies to understand decision making in the forest products industry.

**FPE 415 Economics of Forest Products Industries (3) A** Waggener Market structure and economic organization of major forest-related industries. Global supply and demand of commercial forest products. Economic factors affecting production, distribution and marketing of forest products, including international, interregional, and intraregional competition. Prerequisites: ECON 200, 201, or MKTG 300.

**FPE 425 Wetland Hydrology (4) W** Cundy Introduction to the hydrologic cycle and basic hydrologic methods as applied to wetlands. Effects of forest management activities on hydrologic processes.

**FPE 426 Snow Hydrology (4) Sp** Cundy Snow from formation to melt as it relates to the hydrologic response of watersheds. Measurement of snowpack properties, energy and mass balances, effects of vegetation manipulation on accumulation and melt, role of snowmelt in hydrologic modeling. Prerequisites: one course in hydrology and one course in meteorology. (Offered odd-numbered years.)

**FPE 427 Hillslope Stability and Land Use (4) Sp Cundy** Effects of land management, especially forest land management, on slope stability. Forest harvesting, road construction, and species conversion. Slope stability analyzed on both large (landscape) and small (hillslope) spatial scales. Prerequisites: 343, 425 or equivalent.

**FPE 428 Hillslope Hydrology (3) Sp Cundy** Runoff processes from hillslopes and small drainage basins. Processes of infiltration, overland flow, and subsurface flow described mathematically. Solutions to resulting differential equations. Prerequisites: 425, MATH 307 or equivalent. (Offered even-numbered years.)

**FPE 430 Aerial Photos/Remote Sensing Natural Resources (3) Sp Schreuder** Principles of photogrammetry, interpretation, and remote sensing; and their application to management of natural resources and wildlands. Uses for watersheds, forest resources, wildlife, point and nonpoint pollution, land-use planning, and outdoor recreation.

**FPE 435 Soil Physics (4) Sp Fritschen** Physical properties of soil and water. Thermodynamic properties of soil-water mixtures and osmotic effects. Darcy's law and application to the movement of the water table. Horizontal and vertical unsaturated flows: rain infiltration, capillary rise, soil evaporation, water redistribution and hysteresis, heterogeneous soils and instability. Soil-plant-atmosphere continuum: water balance in the root zone; movement through the plant. Prerequisite: integral and differential calculus.

**FPE 440 Construction Management and Administration (5) W Fridley** Construction engineering as applied to special conditions encountered in mountainous terrain. Developing relationship between engineering design and construction technology associated with forest structures and roads. Prerequisite: 377.

**FPE 441 Forest Access Policy and Planning (5) W Grellich** Planning the logging operation: logging methods, route projection, selection of landings and settings, logging cost control. Prerequisites: 341, 342.

**FPE 446, 447, 448, 449 Senior Forest Engineering Field Studies (2,5,5,3) Sp Schiess** Courses given concurrently, on-location in cooperation with a public or industrial landowner. Students formulate a resource, harvest, and transportation plan for a large, forested area. Skills are developed and applied in areas of computer technology (GIS/CAD), heavy construction and harvesting equipment, road location and design, environmental assessment, and business administration. Prerequisites: 342, 441.

**FPE 472 Wood Manufacturing Operations I (4) A Johnson** Machining, combustion, and energy generation. Analysis of cutting process: orthogonal cutting, peripheral milling, sawing, veneer cutting, chipping, flaking. Combustion and energy section covers wood combustion mechanisms, use of energy in the forest products industry, physical and chemical properties, firing methods, material and energy balances. (Offered odd-numbered years.)

**FPE 473 Wood Manufacturing Operations II (4) W Johnson** Wood drying and degradation processes. Analysis of moisture-related degradation mechanisms for wood products and preventive techniques. Fundamentals of moisture removal techniques for lumber, veneer and particles, drying techniques, industrial procedures, and economic considerations. Prerequisite: 472 or permission of instructor. (Offered even-numbered years.)

**FPE 474 Wood Manufacturing Operations III (4) Sp Johnson** Gluing, coating, and preservation of wood. Nature of adhesion; factors influencing wood adhesion, types of wood adhesives and binders. Principles of finishing; types of coatings for wood products. Preservatives, fire retardants and their effectiveness. Prerequisite: 473 or permission of instructor. (Offered even-numbered years.)

**FPE 475 Structural Wood Design (4) Sp Johnson** Principles of design for wood; allowable stresses for structural wood and wood-based components; analysis of beams, columns, panels, trusses, I-beams, and laminated beams; behavior of fasteners and connectors; reliability concepts. Prerequisite: 377 or ENGR 220 or permission of instructor. (Offered even-numbered years.)

**FPE 476 Pulping and Bleaching Processes (3) W Gustafson, McKean** Conversion of wood to mechanical and chemical pulps. Kraft, sulfite, and semichemical pulping processes. Chemical recovery systems. Bleaching of mechanical and chemical pulps. Joint with CH E 471.

**FPE 477 Papermaking Processes (3) W Hodgson** Fiber sources and properties. Secondary fibers. Stock preparation, sheet forming, water removal, finishing. Coating, lamination, and printing. Paper products. Joint with CH E 472.

**FPE 478 Pulp and Paper Laboratory (2) Sp Gustafson** Laboratory experiments in chemical and semichemical pulping of wood. Bleaching of chemical and high-yield pulps. Physical and chemical characteristics of pulp fibers. Joint with CH E 473. Prerequisite: 476.

**FPE 479 Pulp and Paper Laboratory II (2) Sp McKean** Paper testing, paper additives, flocculation, drainage, retention, heat transfer, and fluid dynamics in papermaking. Sensors and process control. Prerequisite: 477.

**FPE 480 Pulp and Paper Process Control (3) Sp Boyle** Control of pulp and paper processes. Sensors, actuators, interface equipment, and computer control strategies common to this industry. Prerequisites: 476, 477, or permission of instructor.

**FPE 481 Pulp and Paper Unit Operations (3) W Gustafson** Unit operations of particular interest in the pulp and paper industry in addition to those covered in CH E 330 and 340. Prerequisite: CH E 340.

**FPE 482 Pulp and Paper, Process Design and Economics (3) Sp Hodgson** Analysis of industrial pulping, bleaching, papermaking, recovery, and steam and power operations, using systems analysis approach. Material and energy balances, process economics, process control, and design calculations. Prerequisites: 406, 476, 477, 481, or permission of instructor.

**FPE 483 Paper Coating and Converting (3) W Barlow** Coatings and their preparation, rheology, process equipment, drying, and product evaluation. Prerequisite: 477.

**FPE 484 Secondary Fiber (4) Sp Hrutfiord, McKean** Recycling of paper. Sources of secondary fiber. Processing methods for contaminants and ink removal. Properties and uses of recycled fiber. Prerequisites: 406, 476, 477. (Offered even-numbered years.)

**FPE 485 - Undergraduate Research (1-1-1) AWSp Gustafson** Undergraduate research or independent study project under the supervision of the faculty; usually one credit per quarter. Prerequisite: senior standing in Wood and Paper Division.

**FPE 488 Polymer Chemistry (3) W Allan** Fundamental review of synthetic and natural polymers, including kinetics of formation, molecular weight distributions, and solid-state and solution properties.

**FPE 490, 491, 492 Undergraduate Studies (1-5, 1-5, 1-5)** Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. The courses are offered in all quarters, and credits can vary from 1 to 5, and, with the permission of the instructor, each course may be repeated for credit. Credits are individually arranged for each course. Entry code required.

**FPE 497 Pulp and Paper Internship I (1, max. 2) McKean** Technical and economic analysis of commercial pulp and paper installations. Structured visits to

industrial operations to observe technical aspects of pulp and paper curriculum in practice. Preparation of visitation reports and analysis in seminar setting. Prerequisites: 406, 476, 477, 481, or permission of instructor.

**FPE 498 Pulp and Paper Internship II (1, max. 2) McKean** Technical and economic analysis of commercial pulp and paper installations. Structured visits to industrial operations to observe technical aspects of pulp and paper curriculum in practice. Preparation of visitation reports and analysis in seminar setting. Continuation of 497. Prerequisite: 497 or permission of instructor.

## Courses for Graduates Only

**FPE 503 Pulp and Paper Technology and Industry Analysis (5) A Hrutfiord** Characteristics, sources and supply of raw material, chemical and mechanical pulping processes. Paper manufacturing products and grades. Pulp and paper industry organization, including key firms, strategies, and issues. Includes international perspectives and case study analysis.

**FPE 508 Advanced Wood Chemistry (3) A Hrutfiord** Biogenesis of lignins and isotope labeling methods. Oxidative coupling phenols. Carbonium ion intermediates in acid-catalyzed processes. Protodeturation and reactions with chlorines. Oxidation by inorganic agents and enzymes. Structure of cellulose microfibrils, acid- and enzyme-catalyzed hydrolysis, and alkaline degradation of polysaccharides. Prerequisite: 406. (Offered even-numbered years.)

**FPE 517 Soil Plant-Atmospheric Relations (3) W Fritschen** Principles of mass and energy exchange between the earth and the atmosphere with special emphasis on the state and movement of water in soils, energy balance of the vegetated surface and individual leaves, and methods of evapotranspiration determination. Prerequisites: MATH 126, PHYS 123, ATM S 319. (Offered odd-numbered years.)

**FPE 518 Environmental Instrumentation (5) W Fritschen** Practical aspects of measuring such environmental variables as radiation, temperature, soil heat flux, humidity, precipitation, and wind speed and direction. Fundamentals of measurements and design and function of basic circuits and measuring instruments. Proper instrument use emphasized in laboratory exercises. (Offered even-numbered years.)

**FPE 525 Advanced Wildland Hydrology (4) W Cundy** Advanced treatment of hydrologic cycle and basic hydrologic methods as applied to wildlands. Effects of forest management activities on hydrologic processes. Graduate focus on a detailed field or modeling hydrologic analysis.

**FPE 526 Advanced Snow Hydrology (4) Sp Cundy** Advanced treatment of snow from formation to melt as it relates to the hydrologic response of watersheds. Measurement of snowpack properties, energy and mass balances, effects of vegetation manipulation on accumulation and melt. Graduate focus on modeling some aspects of snow accumulation and/or melt. (Offered odd-numbered years.)

**FPE 527 Advanced Hillslope Stability (4) Sp Cundy** Advanced exposure to the effects of land management, especially forest land management, on slope stability. Forest harvesting, road construction, and species conversion. Focus on modeling slope stability in space and time.

**FPE 528 Advanced Hillslope Hydrology (3) Sp Cundy** Advanced treatment of runoff processes from hillslopes and small drainage basins. Processes of infiltration, overland flow, and subsurface flow described mathematically. Focus on linking soil water and runoff processes in a computer model. (Offered even-numbered years.)

**FPE 529 Current Topics in Wildland Hydrology (1) AWSp Cundy** Students present detailed analysis of research papers on selected topics in wildland hydrology. Topics cover measurement techniques, experimental data, and theoretical models of hydrologic pro-

cesses. Credit/no credit only. Prerequisites: senior or graduate standing and permission of instructor.

**FPE 535 Advanced Soil Physics (4) Sp Fritschen** Advanced exposure to physical properties of soil and water. Thermodynamic properties of soil-water mixtures and osmotic effects. Darcy's law and application to the movement of the water table. Focuses on an area of soil physics of interest to the student.

**FPE 541 Advanced Forest Engineering (5) W Fridley, Greulich, Schiess** Logging organization and management; logging cost analysis and budgeting.

**FPE 542 Advanced Logging Engineering (3) Sp Greulich** Detailed consideration of problems of logging planning and truck road engineering, including the preparation and field layout of logging plans; location, design, and construction of forest roads.

**FPE 572 Wood Chemistry and Analysis (3-5) W Hrutford** Application of instrumental methods of analysis to wood, wood products, and forest products processing effluents. Emphasis on separation systems, including gas and liquid chromatography, and on spectral analysis. Entry code required. (Offered odd-numbered years.)

**FPE 576 Photomicrography of Woody Tissues (3) Sp** Theory and method in microscopy and photomicrography of woody tissues. Entry code required.

**FPE 577 Wood and Paper Science Seminar (1-5, max. 5) AWSp McKean** Discussion of current topics in the science of wood and its various composites in the form of composition board, laminates, and paper. Credit/no credit only.

**FPE 579 Specifications for Forest Products in World Trade (3) W Johnson** Compares forest product specifications, standards, testing, and quality procedures between countries and evaluates their role as trade barriers. Examines cultural and trading partners to minimize their impact on trade. (Offered odd-numbered years.)

**FPE 580 World Woods and Their Utilization (3) W Briggs** Principal species, forms, and end-uses of wood in world trade. Evaluation of future demands to identify changes in end-use requirements. Examination of technical utilization issues related to plantations, underutilized species, and tropical forests in meeting these uses. Solid wood, panel, fiber, and wood fuel products. (Offered even-numbered years.)

**FPE 589 Wood Biosynthesis (3) Sp Hrutford** Biosynthesis of carbohydrates, phenolic and terpenoid compounds in forest trees, and biochemistry of wood degradation. Prerequisite: 406. (Offered even-numbered years.)

**FPE 590 Graduate Studies (1-5)** Study in fields for which there is not sufficient demand to warrant the organization of regular courses. Entry code required.

**FPE 591 Graduate Teaching Practicum (\*, max. 5) AWSp** Principles of teaching and learning applied to undergraduate instruction in forest products and engineering. Development, delivery, and evaluation of actual lectures and homework assignments in the student's area of expertise are required. Prerequisite: permission of instructor.

**FPE 600 Independent Study or Research (\*)**

**FPE 700 Master's Thesis (\*)**

**FPE 800 Doctoral Dissertation (\*)**

## Tutorial Study

*Tutorial study designed to meet individual requirements is available to graduate students in the graduate studies courses listed below. Such study may include literature review and field and laboratory work. The courses are offered in all quarters, and credits can vary from 1 to 5, and, with the permission of the instructor, each course may be repeated for credit. Credits are individually arranged for each course. Prerequisites include graduate standing and permission.*

**FPE 515 Graduate Studies in Forest Influences (1-5) Cundy**

**FPE 516 Graduate Studies in Forest Meteorology (1-5) Fritschen**

**FPE 540 Graduate Studies in Logging Engineering (1-5) Fridley, Greulich, Schiess**

**FPE 570 Graduate Studies in Forest Products (1-5) Allan, Briggs, Fridley, Greulich, Gustafson, Hrutford, Johnson, Schiess**

## Forest Resources Management

### Courses for Undergraduates

*Students taking undergraduate and graduate courses, structured or unstructured, that require field trips, special laboratory supplies, or special material duplications are required to pay appropriate amounts to cover such expenses. If a student fails to pay, the transcript may be withheld and the degree may not be conferred.*

**FRM 100 Introduction to Forest Resources Management (5) A Gara** Survey of human beings' use of forest resources and the impact of social and cultural institutions on resources management. History and the development of forest conservation and forest utilization practices and policies in the United States. Changing patterns of resource use and methods of resolving conflicts among management alternatives.

**FRM 101 Introduction to Wildlife Science (1) A Manuwal** Survey of historical development, present status and future of professional field of wildlife science and how it interacts with other disciplines. Natural resource agency speakers discuss how their agencies work and administer wildlife conservation programs. Students discuss wildlife science with faculty and graduate students. Credit/no credit only.

**FRM 102 Introduction to Wildland Conservation (5) Sp Edmonds** Human population growth and its effects on wildland resources. Economics, politics, and ethics of resource use and management. Ecological processes. Conservation of air, water, and soil resources. Management and conservation of forest, rangeland, and wildlife resources. One Saturday field trip.

**FRM 200 Trees in Our Environment (5) Sp Brubaker, Stettler** Intended for nonscience majors; may not be taken for credit by forest resource majors. Form and function of fifty-sixty tree species; principles and concepts of biology; developing an awareness for science; lectures; laboratory demonstrations, and field studies in the Arboretum.

**FRM 202 Global Changes and Forest Biology (3 or 5) W Hinckley** Ecological and biological effects of atmospheric pollutants, acid precipitation, and climate change on forest trees and ecosystems. Potential climate changes are compared to current and historical climates. Students taking this course for five credits must enroll in optional laboratory which introduces major tree species, old-growth forests, small group problem analysis.

**FRM 210 Introductory Soils (4) A** Physical, chemical, and biological properties that affect distribution and use patterns of this important ecosystem component. Includes soil morphology and genesis, plant nutrition and nutrient cycling, soil water, microbiology, and application of soil properties to environmental concerns. One Saturday field trip.

**FRM 300 Professional Forestry Internship (3-5, max. 8) AWSps** Comprehensive examination of an acceptable experience in professional forestry within a public or private agency, including operational policies and procedures. Preparation of professional assessment report and presentation of seminar based on internship in forest management in broad aspects. Prerequisites: 323, 362, FPE 345 and permission of instructor. Entry code required.

**FRM 304 Biological Concepts for the Forest Manager (6) A Hinckley** Aspects and concepts in soils, microclimatology, hydrology, stream ecology, terrestrial ecology, wildlife ecology, and physiology and anatomy related to forests and forest ecosystems. Credit/no credit only. Prerequisites: at least five years of experience in natural resource management or equivalent, introductory biology.

**FRM 305 Management Concepts for the Forest Land Manager (6) W Oliver** Basic managerial concepts and practices in forest management, including problem solving and decision making, communications, forest economics, forest mensuration, and preparation of silvicultural prescriptions for regeneration and stand management offered through intensive training format only. Credit/no credit only. Prerequisites: five years of professional employment in forestry or related sector, introductory economics and statistics.

**FRM 310 Physical Aspects of the Forest Environment (5) A Harrison** Micrometeorology (radiation, energy budgets), fire physics, soils (weathering, soil formation, physics, chemistry, water flow), and forest hydrology (watersheds, water budgets, runoff). Relationships to forest productivity. Five laboratories, five field trips.

**FRM 311 Soils and Land Use (3) W Harrison** Intended for students concerned with environmental problems in the Puget Sound basin; also for those who intend to become professionally involved in land-planning decisions. Focus is on the significance of soils in understanding environmental problems and in promoting intelligent land-use decisions. Basic concepts of soil systems are presented, stressing those aspects important in making land-planning decisions.

**FRM 321 Dendrology and Autecology (6) A Brubaker, Stettler** Introduction to the systematics, identification, life histories, genetics, and physiological ecology of forest trees and shrubs. Field trips to regional forest ecosystems. Includes one hour of technical writing instruction per week.

**FRM 322 Forest Ecosystems (3) W Edmonds** Introduction to forest ecosystems, principles of forest ecology, vegetation classification, history of development of Pacific Northwest vegetation, succession, competition, nutrient cycling, ecology and classification of decomposers and insects, use of ecological information in forest management. Two Saturday field trips.

**FRM 323 Silviculture (6) Sp Oliver** Silviculture techniques, including nursery practices, clear-cutting, seed trees, shelterwood, selection cutting, site preparation, regeneration methods, thinning, fertilization, chemicals, and regional silviculture in the Northeast, Southeast, Midwest, Rocky Mountains, California, Pacific Northwest, and Alaska. Taught at Pack Forest. Multiple-use field trips.

**FRM 324 Forest Protection (3) A Agee, Edmonds, Gara** Effects of fire, diseases, and insects on forest ecosystems, fire ecology and management, abiotic and biotic diseases, disease management, effects of defoliators, bark beetles and wood boring insects, pests of intensive forest management and principles of insect management.

**FRM 326 Range and Wildlife Habitat (3) Sp Raedeke** Theory and practice of range ecology as the basis for studying (1) the effects of domestic animals and wildlife use on plant habitats and (2) human beings' control on these plant community effects from the past, present, and future of natural resources management points of view.

**FRM 327 Field Studies in Range and Wildlife Habitats (2) Sp Raedeke** Four weekend field trips related to range and wildlife habitats of Washington with application of materials presented in 326. For majors in wildlife science and forest management only. Prerequisite: permission of instructor.

**FRM 328 Forestry-Fisheries Interactions (4) W Wissmar** Characteristics of forestry-fisheries interactions in terrestrial and aquatic landscapes. Effects of changes in landforms on forest and aquatic communities. River basin and watershed features. Forest stand dynamics, forest hydrology, fish and wildlife histories and behavior. Resource conflicts and resolution. Joint with FISH 328. Recommended: general biology and ecology. (Offered even-numbered years.)

**FRM 350 Wildlife Biology and Conservation (4) W Manuwal, West** Wildlife ecology and population biology, and interrelationships between wild animals and human beings, including encouragement of wildlife population growth and productivity, control of pest populations, and preservation of endangered species with emphasis on forest environments and forest faunas. Open to nonmajors. Prerequisite: junior standing.

**FRM 351 Wildlife Research Techniques (3) Sp Manuwal, Raedeke, West** Scientific approaches to the field study of wildlife populations, including basic considerations in experimental design and development of scientific papers. Emphasis on direct experience with current field techniques used in study of vertebrate populations. Offered only at Pack Forest. Prerequisite: junior standing in Wildlife Science.

**FRM 360 Forest Management and Economics I (4) W Dowdle** Basic concepts of production theory, accounting, investment analysis, supply and demand, and their application to the management of forested properties. Prerequisites: ECON 200, Q SCI 292, or equivalent.

**FRM 362 Field Measurements (4) Sp Maguire** Basic field measurement skills, interpretation of aerial photos, measurement of vegetation, including stand examination and timber cruising. Concentrated field experience taught at Pack Forest. Prerequisites: Q SCI 340 and Q SCI 381 or equivalent.

**FRM 366 Quantitative Methods in Forest Resource Management (3) W Bare** Survey, discussion, and critique of the application of quantitative methods to forest resource management, planning, and decision making. Emphasis on methods utilized in management science, econometric, and computer science currently used by resource planners. Topics include introduction to systems analysis, linear programming, computer simulation, goal programming, forecasting, statistical techniques, and computer information systems. Joint with Q SCI 366. Prerequisites: Q SCI 340, Q SCI 381.

**FRM 370 Social Functions of Forest Ecosystems (3) A Lee** Introduction to structure and function of forest ecosystems; resources as social functions; role of social institutions in modifying ecosystem structure and processes; multiresource case studies and field trips.

**FRM 377 Environmental Impact Assessment and Regulation in Forest Resource Management (3) W Bradley** Current environmental, forest resource, and land-use legislation affecting resource management; origin and evolution of federal, state, and local legislation and their relationship to forest resource planning and management; environmental impact assessment and its relationship to forest practices. Selected case studies of prepared forest land use plans and environmental impact statements.

**FRM 383 Interpreting the Environment (5) W** Role of interpretive specialist in heritage and natural resource areas. Increasing visitor enjoyment, encouraging thoughtful use to reduce human impact, and promoting public understanding of agency programs. Interpretive media selection, personal and nonpersonal services, supporting activities, and professional development. Prerequisite: permission of instructor.

**FRM 387 Wildland Recreation Internship (5) AWSps** Comprehensive field examination of a recreation agency policy, procedure and operation. Preparation of professional assessment report and oral presentation based on internship experience in park man-

agement, planning and interpretation. Prerequisites: completion of one approved cooperative education work experience, junior standing, permission of instructor.

**FRM 400 Forestry in Washington (5) S Wagar** Examines the components of contemporary forestry practices and issues and their importance to the economy and quality of life in Washington state. For education majors, selected laboratory sessions provide hands-on experience for classrooms K-12 using the *Project Learning Tree* activity guides. One all-day field trip. Prerequisite: senior or graduate standing.

**FRM 406 Advanced Forest Management Concepts (6) W Oliver** Advanced concepts and practices in forest management, including land management, planning, investment analysis, adaptive management, decision analysis, and public involvement in decision making. Case study emphasizes integration. Offered through intensive training format only. Prerequisites: five years of professional employment in forestry or related sector, managerial experience; courses in silviculture, economics, statistics.

**FRM 411 Forest Soil Microbiology (4) Sp Edmonds** Soil organisms in forest ecosystems, decomposition, nutrient cycling. N transformation, mycorrhizae, effects of forest management. Prerequisites: general biology, basic soils, or permission of instructor.

**FRM 412 Soil Genesis (5) W** Soil, the excited skin of the earth. Processes of soil formation and weathering distribution of major soils in the world. Prerequisites: CHEM 145, GEOG 205.

**FRM 414 Forest Soil Fertility and Chemistry (3) Sp Harrison** Tree growth depends, in part, on the interaction between chemical and biological activities within a given soil: the biological and chemical parameters that influence the growth; soil solution chemistry and surface reactions; reactions and processes that control essential plant nutrient levels and forms in soil solutions. Prerequisite: 310.

**FRM 421 Dendrochronology (4) W Brubaker, Peterson** Analysis of important physiological and environmental factors controlling annual tree-ring growth and a critical review of the applications of tree-ring analysis to study forest productivity, watershed hydrology, forest fires, insect epidemics, etc., in relation to yearly weather conditions. Laboratory and field exercises construct tree-ring chronologies to study environmental histories of selected forest stands. Prerequisites: introductory botany and senior or graduate standing. (Offered odd-numbered years.)

**FRM 424 Forest Stand Dynamics (3) A Oliver** Forest stand development and manipulation response. Forest stand dynamics and stand structure in pure and mixed species forests, response to minor and major disturbances, interactive changes with time, and patterns and response to manipulation. Prerequisite: previous course work in ecology.

**FRM 425 Advanced Silviculture (3) W Oliver** Advanced silviculture examines the changing, current topics, and practices in silviculture. Topics include plantation establishment and management, stand structure manipulation, objectives, broad area management, decision keys and guides, logistics and implementation and research. Prerequisite: 323 or equivalent.

**FRM 427 Forest Genetics (3) W Stettler** Genetic theory as applied to the biological manipulation of forest trees. Principles of genetics and organic evolution are discussed and related to management strategy and silvicultural practices. Prerequisite: 321. (Offered odd-numbered years.)

**FRM 429 Intermediate Operations in Silviculture (3) Oliver** For advanced undergraduate and graduate students in silviculture. Includes those operations designed to direct an existing forest into the desired form such as cleaning, weeding, thinning, irrigating, and fertilizing; all-day field trips required. Prerequisite: 322 or equivalent.

**FRM 430 Forest Chemicals (3) W Gara** Covers all aspects of the use of forest chemicals in forestry: laws, safety, application techniques, and biological effects. Specific chemicals are discussed as to formulations, toxicity, timing, application rates, carriers, and unique safety problems. Prerequisite: junior standing in forest resources curriculum or permission of instructor.

**FRM 435 Forest Entomology (3) A Gara** Introduction to general entomology, characteristics, life histories, ecological relations, prevention, and control of forest insects.

**FRM 436 Laboratory in Forest Entomology (2) A Gara** Introduction to the insect orders; identification of forest insects and their damage. One field trip to study insect problems required. Prerequisite: 435, which may be taken concurrently.

**FRM 441 Landscape Ecology (3) W Franklin** Basic landscape ecology concepts, including patches, corridors, networks, spatial dynamics; island biogeographic principles; landscape analysis methods; landscape models. Applications of landscape ecology in resources management (e.g., cumulative effects, cutting, patterns, anadromous fisheries, management of wildlife populations, and open-space planning). Prerequisites: upper-division ecology courses or permission of instructor.

**FRM 450 Human Culture and Wildlife Conservation (5) W Manuwal** Human customs, attitudes, and institutions as they affect wild bird and mammal populations, including relations of range, forest, and farm management to wildlife conservation. Emphasis on Europe and North America. Prerequisite: 350.

**FRM 451 Biology and Conservation of Birds (3) A Manuwal** Major principles of avian population biology; reproductive biology and conservation strategies for both game and nongame birds. Emphasis on the Pacific Northwest. Prerequisite: introductory biology.

**FRM 452 Biology and Conservation of Birds, Laboratory (2) A Manuwal** Taxonomy and identification of birds. Laboratory and field trips are required, and students may be asked to share travel costs. Prerequisite: introductory biology, which may be taken concurrently.

**FRM 455 Wildlife Seminar (1, max. 4) AW Manuwal, West** Discussion of current research and application in wildlife biology and conservation. Credit/no credit only. Prerequisite: 350 or equivalent.

**FRM 461 Forest Management and Economics II (4) A Bare** Basic concepts of timber harvest scheduling, sustained-yield models, contemporary analytical techniques, timber supply, and forest product markets. Prerequisites: 360, Q SCI 340, or equivalent.

**FRM 464 Economics of the Forest Use (3) Sp Dowdle** Application of economic concepts to use of forest lands and the allocation of lands to alternate forest uses, including outdoor recreation and other nonconsumption uses. Consideration of institutional factors as determinants of land allocation in public and private sector. Trends in forest land use and impact of public policy on growth and development of resource-based economic sections. Prerequisite: 360 or ECON 200.

**FRM 465 Forest Finance and Accounting (3) W Dowdle** Basic concepts of finance and accounting used in forestry. Introduction to principles of book-keeping and measurement of income. Essentials of cost accounting and taxation. Treatment of property and income taxes and accounting for fixed assets. Use of ratio analysis and financial statements in decision making. Prerequisite: 360.

**FRM 466 Economics of Timber Production (3) Sp Dowdle** Application of basic economic concepts to the production of timber as a commercial land use. Analysis of timber investments, alternative management programs, and regulation models. Prerequisite: 360.

**FRM 467 Advanced Forest Mensuration (3) W Maguire, Rustagi** Forest tree and stand models. Studies of forest tree and stand parameters. Estimation processes. Growth and yield analysis. Prerequisites: 361, Q SCI 381 or STAT 311. (Offered odd-numbered years.)

**FRM 468 Forest Measurements (4) A Rustagi** Measurement of trees and forest stands; sampling methods for timber, recreation, wildlife and ecological attributes; aerial-photo measurement and interpretation; use of photos in estimation of timber volumes. Prerequisites: Q SCI 381 and Q SCI 340 or equivalent. (Formerly 361.)

**FRM 470 Forest Policy and Law (5) A Shannon** Analysis of forest policy processes and laws. Stages of policy making/problem solving: law and public policy; natural resource politics; public ownership and management; public policy and private forest land; forest product policies; review of current forest laws and regulations. Includes one hour of writing instruction per week.

**FRM 471 Forest Planning and Project Management (4) W Bradley** Basic concepts of resource planning and project management applied to forest land management. Related processes in formation of resource programs; planning process as a systematic method for problem solving and plan implementation. Evaluation of selected public and private sector forest resource planning cases and development of project management schedules.

**FRM 480 Natural Resources Law Enforcement (2) W Butterworth** Criminal, administrative, and regulatory law provisions and practices covered from the perspective of the land manager dealing with recreational, environmental, and public concerns. Issues involve federal, state, and private approaches to utilizing available judicial and executive power for decision making and problem resolution. (Offered even-numbered years.)

**FRM 481 Management of Wildland Recreation and Amenities (3) W** The wildland recreation movement in America. Agency history and objectives. Integrating recreation with other land uses. Water, forestry, wildlife, and wilderness resources for recreation. Role of private enterprise. Topics of current interest.

**FRM 482 Sociology of Leisure and Wildland Recreation (3) W Johnson** Focuses upon an understanding of human behavior in leisure settings. An examination of basic sociological concepts as well as contemporary theories concerning leisure behavior; research techniques and problems of measurement in leisure research. Implications for the management of recreational areas provide an applied orientation and integration of substantive material. Prerequisite: SOC 110. (Offered odd-numbered years.)

**FRM 484 Advanced Park and Recreation Management (3) Sp** Examination of the recreation enterprise: its administration, its resource, use and protection. Details of park structure, policy, and politics. The role of the manager in planning, maintenance, law enforcement, vandalism, conflicts, care of visitors, and other managerial details. Prerequisite: 481 or permission of instructor.

**FRM 485 Advanced Wildland Recreation Site Planning and Design (5) A Bradley** Integrated consideration of resource base, social factors, and management objectives in providing wildland recreation opportunities. Determining recreational need, development of environmental information systems, and allocation of recreational use, based on user-resource requirements. Case study approach. Prerequisite: permission of instructor. (Offered even-numbered years.)

**FRM 486 Wilderness Preservation and Management (3) Sp** Review of American wilderness philosophies, concepts, and values. Development of the Wilderness Act. Examination of current wilderness-management policies, problems, trends in use, issues and controversies, wilderness research, social costs, and

benefits of wilderness. Prerequisite: permission of instructor. (Offered even-numbered years.)

**FRM 487 Advanced Wildland Recreation Internship (10) AWSpS** Advanced field-related course given in conjunction with a park/recreation agency. Develop proficiency in one of three subject areas: park interpretation, park planning, park management. Preparation of professional assessment report and oral presentation based on field experience. Prerequisites: 387, senior standing in wildland recreation option.

**FRM 488 Case Studies in Wildland Recreation (5) Bradley** Consideration of the natural resources bases, social factors, and management objectives in providing regional forest recreation opportunities. Emphasis on the forecasting of recreation demands, the development of environmental information systems, and the allocation of recreational use based on user-resource requirements. Case study approach. Prerequisite: senior standing in wildland recreation option or permission of instructor.

**FRM 490, 491, 492 Undergraduate Studies (1-5, 1-5, 1-5)** Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. The courses are offered in all quarters, and credits can vary from 1 to 5, and, with the permission of the instructor, each course may be repeated for credit. Credits are individually arranged for each course. Entry code required.

**FRM 495 Senior Project (5) AWSpS** Individual study of a forest resources management problem under direction of a faculty member. Prerequisites: 471, approved plan of study and permission of major adviser; generally take in last quarter of residence. Entry code required.

**FRM 496 Wildlife Senior Thesis (3) AWSpS Manuwal, Raedeke, West** Statistical analysis, presentation of research results and discussion of results and senior research project. Students work with faculty advisors to complete field or laboratory research and then prepare the senior thesis. Prerequisite: 495. Entry code required.

### Courses for Graduates Only

**FRM 500 Graduate Orientation Seminar (2) A Agee** Discussion of current issues and problems of graduate study in forestry and forestry research. Credit/no credit only.

**FRM 501 Forest Ecosystems—Community Ecology (5) A Brubaker** Community ecology of forest ecosystems. Quantitative methods of community description. Role of limiting factors, competition and disturbance in determining community composition, structure and stability. Introduction to forest ecosystem productivity. History and application of successional theory. Prerequisite: basic ecology course or permission of instructor.

**FRM 502 Structure and Function of Forest Ecosystems (5) Sp Franklin** Behavior of forest ecosystems: carbon, nutrient, and hydrologic cycling; factors controlling paths and flow rates of materials; contrasts in ecosystem structure and function among forest types.

**FRM 503 Advanced Forest Stand Dynamics (3) A Oliver** Emphasizes current research and sources of knowledge about forest stand development and responses to manipulations. Development of pure and mixed species forests, even-aged and uneven-aged stands. Responses to disturbances, interactive changes with time, patterns and responses to manipulation, growth and yield quantification. Prerequisite: previous ecology courses.

**FRM 504 Research Processes in Forest Resources (4) W Lee** Comprehensive survey of research processes for entering graduate students. Diagnostic and prescriptive evaluation of student research capabilities. Problem and hypothesis formulation, study design, multimethod strategies for gathering and analyzing data, and interpretation and presentation of results. Prerequisite: graduate standing.

**FRM 505 Forest Statistics I (4) W Maguire** Applications stressed in depth include: growth and yield models, individual tree *versus* whole-stand models; regeneration survey methods such as stock quadrat and random sampling techniques; concepts of productivity; data collection and analysis techniques used in forest resources management; basic statistics; regression analysis. For midcareer students. Prerequisite: Q SCI 381 or equivalent.

**FRM 506 Graduate Ecosystems Seminar (1) Sp Edmonds, Sprugel** Formal seminar presentations by graduate students in ecosystems and related programs. Information is given on how to give effective seminar presentations and prepare slides. Credit/no credit only.

**FRM 508 Silvicultural Prescription Preparation (4) S Oliver** Advanced course in silviculture as applied to purposes other than wood production and in the preparation of silvicultural prescriptions. For midcareer students.

**FRM 509 Review of Forest Autecology (4) A Hinckley, Stettler** Review of concepts of soil formation, soil fertility, microclimate, hydrology, tree anatomy and morphology, physiology, water relations, mineral nutrition, and genetic and evolutionary mechanisms, as they relate to the adaptation and manipulation of forest-tree populations. For midcareer students.

**FRM 511 Advanced Forest Soil Microbiology (5) Sp Edmonds** Detailed examination of microbial processes in forest ecosystems; types of organisms, biomass, decomposition and nutrient cycling, microbial transformations of N, impacts of management—clear-cutting, fertilization, pesticide addition. Graduate project required. Prerequisites: general biology, basic soils or permission of instructor.

**FRM 513 Soil Distribution and Classification (5) Sp** Study of the morphology, distribution, and classification of soils in relation to environmental factors. Soils and survey procedures examined by field trips throughout the unique terrestrial ecosystems of the state of Washington. Emphasis on application to forest land use and planning.

**FRM 514 Forest Influences (4)** Study of the interacting effects of climate, soil, and plants as a basis for understanding the hydrologic cycle. Places special emphasis on disposition and movement of water in forest ecosystems. Prerequisite: graduate standing.

**FRM 515 Advanced Soil and Plant Analysis (3) Sp Harrison** Plants and animals must acquire nutrient elements from their environment. Quantifying the composition of samples is the first step in understanding the processes in natural and managed systems. Sampling, handling, preparation, storage, and analysis stressed. Prerequisites: one botany or plant science course, instrumental analysis, soils.

**FRM 516 Advanced Forest Soil Fertility and Chemistry (4) Sp Harrison** Chemical properties of soil, nutrient and toxic elements; supply, retention, and loss of nutrients in soils; utilization of geochemical and ecosystem models such as GEOCHEM, MAGIC, TRICLE-DOWN, and ILWAS in developing a quantitative understanding of the chemical function of forest ecosystems. Prerequisites: general chemistry and geology of soils.

**FRM 517 Biotransformations of Hazardous Compounds (1) ASp Strand** Presentation and discussion of the current literature in biotransformation and biological degradation of organic and inorganic compounds, particularly in the microbial environment. Credit/no credit only.

**FRM 518 Microbial Degradation of Toxic Contaminants (3) Sp Herwig, Staley, Stensel, Strand** Detailed survey of current understanding of microbiology and degradative pathways of industrial organic compounds, pesticides, plastics, oil, and metals. Microbial requirements for bioremediation. Methods of scientific investigation of microbial transformations. Requires

basic understanding of metabolism and organic chemistry. Joint with CEWA 518 and MICRO 518. Prerequisite: biological science course.

**FRM 519 Forest Soils Seminar (1) Sp Harrison** Discussion by invited speakers on current research related to forest soils, plant nutrition, and mineral cycling. Credit/no credit only.

**FRM 521 Current Problems in Forest Ecology (2, max. 6) AWSp Brubaker, Franklin, Hinckley** Consideration of current literature and topics in forest ecology and tree physiology. Entry code required.

**FRM 522 Current Topics in Silviculture/Protection (2, max. 6) AWSp Edmonds, Gara, Maguire, Oliver** Detailed study of current issues, information, and literature in silviculture/protection. Entry code required.

**FRM 524 Tree Physiology I: Growth and Development (3) W** Review of major developmental processes in trees, concentrating on regulatory mechanisms. Role of genetic, hormonal, mechanical, environmental, and ecological mechanisms in regulation of shoot, diameter, root, and reproductive development examined in lecture-discussion format. Seniors in forestry, botany, or related fields may enroll. (Offered even-numbered years.)

**FRM 525 Tree Physiology II: Stress (4) Sp Hinckley** Review of principles and examples of stress physiology concentrating on processes impacted and mechanisms of resistance. Stress and stress resistance defined and following examples examined: high, low temperature, radiation, anoxia, and pollutants. Prerequisite: 524.

**FRM 527 Advanced Forest Genetics (3) W Stettler** Discussion course relating concepts of quantitative and population genetics to forest-tree populations, both natural and artificial. Credit/no credit only. Prerequisite: 427 or equivalent. (Offered even-numbered years.)

**FRM 528 International Silviculture (3) W Gara, Oliver** Background of biological, social, and economic basis for silvicultural practices in different areas; case examples of silvicultural practices in different localities; consideration of selected international issues in silviculture. Prerequisite: permission of instructor.

**FRM 529 Ecosystems Seminar (1) A Edmonds, Franklin, Sprugel** Discussion by invited speakers on current research related to ecosystems. Credit/no credit only.

**FRM 531 Forest Fire Science Seminar (2) Sp Pickford** Presentation and discussion of current issues in forest fire prevention, control, use, and discussion of ongoing fire research. Credit/no credit only. Prerequisite: permission of instructor.

**FRM 532 Planning, Management, and Analysis of Forest Fire Control Systems (3) Pickford** The forest fire control system. Study of plans, service, finance, line, and command functions. Forest fire control and production economics, techniques of operations research and computer sciences applicable to planning and analyzing forest fire control systems. Prerequisite: permission of instructor.

**FRM 533 Forest Fire Thermophysics (3) Pickford** Principles of combustion and heat transfer. Basic processes of ignition and flame spread; high-intensity fires. Emphasis is on free-burning fires in cellulose fuels. Credit/no credit only. Prerequisites: MATH 105, PHYS 114, 115, or permission.

**FRM 534 Fire Behavior and Wildland Fuels (5) Sp Pickford** Estimating wildland fire spread and intensity; influence of fuel bed characteristics, moisture, wind, and slope on ignition, spread, intensity, and control of wildland fires. Modeling fire growth; extreme behavior. Use of fire behavior modeling in fire management fire danger rating; fire hazard appraisal. Fuel modification techniques; evaluating fuel treatment projects.

**FRM 535 Fire Ecology (3) Sp Agee** Fire regime concept as applied to fire ecology. Methodology for fire history research. History and function of forest fire in western United States with emphasis on Pacific Northwest. One weekend field trip. Prerequisite: permission of instructor.

**FRM 536 Advanced Forest Entomology (3) W Gara** Insect-host interactions and how these can be exploited for pest management program. To compare and contrast previous and current insect ecology concepts that apply to forestry. Lectures, seminars, guest speakers, and student papers presented. One field trip. Prerequisite: permission of instructor.

**FRM 539 Forestry-Fisheries Interactions: Case Studies (3) A Wissmar** Case studies of streamside management situation at the watershed and basin level. Topics include resource conflict resolution, current and future management alternatives, landscape dynamics, role of disturbance, and policy options. Joint with FISH 539. Prerequisite: graduate standing in forestry, fisheries, or related field; undergraduates by permission of instructor. (Offered odd-numbered years.)

**FRM 541 Readings in Silviculture (1-5, max. 6) AWSp Oliver** Detailed study of national and international literature pertaining to silviculture.

**FRM 542 Graduate Silviculture (3) W Oliver** Examines evolution, current status, and future of silviculture practices in a changing society. Topics such as plantation management, stand structure manipulation, silviculture from various objectives, managing landscapes, logistics, implementation, and role of research are examined. Occasional field trips. Prerequisite: permission of instructor.

**FRM 545 Principles of Forest Entomology (3) A Gara** Historical perspective of the discipline, introduction to general entomology and taxonomy, forest insect ecology, integrated pest management concepts for defoliators, bark beetles, wood borers, and urban forestry pests. Prerequisites: general biology, botany, zoology or permission of instructor.

**FRM 547 Stream and River Ecology (4) Sp Naiman** Characterizations of stream and river ecosystems from a watershed perspective. Emphasis on fundamental processes affecting the structure and dynamics of aquatic communities and the riparian zone. Resource conflicts, new technologies, field trips, and class projects. Joint with FISH 547. Recommended: general ecology, forestry-fisheries interactions.

**FRM 548 Special Topics in Streamside Studies (2, max. 6) AWSpS Naiman** Contemporary problems and issues in forestry, fisheries, and wildlife management in watersheds. Topics vary, yet focus on interactions of land and water resources in the forests of the Pacific Northwest. Joint with FISH 548. Prerequisite: permission of instructor.

**FRM 550 Advanced Human Culture and Wildlife Conservation (5) W Manuwal** Advanced work in human customs, attitudes, and institutions as they affect wild bird and mammal populations, including relations of range, forest, and farm management to wildlife conservation. Emphasis on Europe and North America. Prerequisites: graduate standing and permission of instructor.

**FRM 551 Birds in the Forest Environment (5) A Manuwal** Relationships between forests and bird populations. Focus on integrating avian ecology with forest ecology and silviculture. Mandatory field trips. Prerequisite: ZOO 464 or equivalent. (Offered odd-numbered years.)

**FRM 554 Wildlife Seminar (1-2, max. 10) AW Manuwal, West** Discussion of current research and application in wildlife biology and conservation. Prerequisite: permission of instructor.

**FRM 557 Topics in Wildlife Science (2, max. 6) AWSp West** Graduate seminar on applied and basic topics in wildlife ecology and conservation. Different topics selected each offering.

**FRM 560 Decision Methods in Natural Resources Management (3) A Rustagi** Formulation and optimization of management planning and resource allocation in forestry, fisheries, and wildlife. Importance of quantitative data needs in decision making. Solution procedures for both linear and nonlinear formulations. Term project required. Joint with Q SCI 560. Prerequisite: Q SCI 391 or equivalent or permission of instructor.

**FRM 561 Multiobjective Programming in Resource Management (3) W Rustagi** Concepts and philosophy of goal programming as a tool in the evaluation of resource allocation among multiple, conflicting, often incommensurate objectives (goals). LP and GP computer programs are used to study impact of changes in relative importance of difficult goals. Goal programming applications in natural resource areas are discussed. Joint with Q SCI 561. Prerequisites: familiarity with linear programming and permission of instructor. (Offered even-numbered years.)

**FRM 562 Advanced Forest Resources Management (3) A Bare** Overview of concepts and procedures involved in managing forested lands for the production of commodity and amenity values. Use of systems analysis techniques for evaluating alternative land-use programs and manipulations of the forest ecosystem. Prerequisites: graduate standing and permission of instructor. (Offered odd-numbered years.)

**FRM 564 Advanced Forest Biometry (3 or 5) W Ford, Maguire** Classical problems in analysis of forest populations and growth theory, and principles of parametric analysis and estimation processes in forest biometry. (Offered odd-numbered years.)

**FRM 567 Forest Products Economics (3) Sp Dowdle** Economic analysis of the forest products industries; market structure, regional impact of forest products industries, current problems in forest products economics. (Offered odd-numbered years.)

**FRM 569 Economics of Forest Products Trade (3) Sp** Structure and trends in world forest products trade, trade barriers, trade policies, and methods of modeling and forecasting international forest products markets. Prerequisite: permission of instructor.

**FRM 571 Forest Policy Analysis (3) Sp Shannon** Legal and political contexts in which forest management and use take place. Rationales for forest policies, how policies actually develop, and consequences of government actions. Cases related to students' management and/or research interests. Prerequisite: graduate standing.

**FRM 573 Forest Environmental Resource Planning (3) A Bradley** Origins and evolution of environmental planning in the forest environment. Discussion of the planning process and methodologies for environmental management and planning; selected case studies of environmental resource plans. Prerequisite: graduate standing. (Offered odd-numbered years.)

**FRM 574 Urban Forest Interface Studies Seminar (2) A Bradley** Overview of contemporary issues in the management of forest lands in environments influenced by human settlement. Discussion of legal, political, and administrative basis for land use decisions and the effects of land use change; evaluation of selected case studies and field visits to example study areas. (Offered even-numbered years.)

**FRM 575 Advanced Natural Resources Sociology (3) A Lee** Comparative study of institutional and organizational aspects of natural resources management, with special attention to forest resources. Development, persistence, and change of selected institutions in the context of preindustrial, industrial, and advanced industrial societies. Implications for policy formulation, decision making, and technology transfer.

**FRM 576 Current Topics in Forest Policy and Management (1-2) AWSp Lee** Contemporary problems in forest policy and management. Topics vary but focus on the development of specific political or philosophical issues; empirical questions of concern to the forestry profession; or the development of new tools for management, planning, or policy analysis. Credit/no credit only. Prerequisite: permission of instructor.

**FRM 577 Forest Resource Economics: Supply (3) Sp** Economic analysis of forest resource and forest products production decisions. Problems of optimal management at stand and forest level. Models of timber supply from public and private lands. Production and supply characteristics of secondary forest products processing. Prerequisites: ECON 400, 401, and permission of instructor. (Offered odd-numbered years.)

**FRM 578 Forest Resource Economics: Demand and Markets (3) Sp** Origin and characteristics of demand for forest products and services including amenities, analysis of markets for products, log and stumpage. Intensive review of current literature. Prerequisites: ECON 400, 401, and permission of instructor. (Offered even-numbered years.)

**FRM 581 Current Problems in Outdoor Recreation (3) Sp** Seminar approach to investigating, examining, and discussing contemporary issues and controversies in outdoor recreation. Prerequisites: graduate standing and permission of instructor. (Offered odd-numbered years.)

**FRM 582 Advanced Sociology of Leisure (3) W Johnson** Advanced study of human behavior in outdoor leisure and recreation settings. Analytical examination of sociological and social psychological theories concerning leisure behavior. Critical analysis of the application of sociological and social psychological knowledge to the management of outdoor leisure places. Paper and research proposal required. (Offered odd-numbered years.)

**FRM 583 Advanced Interpretation (5) Sp** Interpretive inventory and site analysis. Interpretation for special populations. Interpretive programming and research techniques. Individual project required. Prerequisite: 383 or equivalent.

**FRM 589 Public Relations and Communications for Resource Managers (2) A** Principles and tools of public relations. Communications techniques for working with public. Interpersonal, print, and electronic media. Planning for special events and emergency information services. Aimed toward the mid- and upper-level natural resource professional. Prerequisite: permission of instructor. (Offered odd-numbered years.)

**FRM 590 Graduate Studies (1-5)** Study in fields for which there is not sufficient demand to warrant the organization of regular courses. Entry code required.

**FRM 591 Graduate Teaching Practicum (1-5, max. 5) AWSp** Principles of teaching and learning applied to undergraduate instruction in Forest Resources Management. Development, delivery, and evaluation of actual lectures and homework assignments are required in the student's area of expertise. Credit/no credit only. Prerequisite: permission of instructor. Entry code required.

**FRM 600 Independent Study or Research (\*)**

**FRM 601 Internship (3-9, max. 9) AWSpS** Prerequisite: permission of instructor. Credit/no credit only.

**FRM 700 Master's Thesis (\*)**

**FRM 800 Doctoral Dissertation (\*)**

## Tutorial Study

*Tutorial study designed to meet individual requirements is available to graduate students in the graduate studies courses listed below. Such study may include literature review and field and laboratory work. The courses are offered in all quarters, and credits can vary from 1 to 5, and, with the permission of the instructor, each course may be repeated for credit. Credits are individually arranged for each course. Prerequisites include graduate standing and permission.*

**FRM 510 Graduate Studies in Forest Soils (1-5) Cole, Harrison**

**FRM 520 Graduate Studies in Forest Ecology and Silviculture (1-) Franklin, Oliver**

**FRM 523 Graduate Studies in Range and Wildlife Habitats (1-5) Manuwal** Prerequisite: 326 or permission of instructor.

**FRM 526 Graduate Studies in Forest Genetics (1-5) Stettler**

**FRM 530 Graduate Studies in Forest Fire Control (1-5) Pickford**

**FRM 537 Graduate Studies in Forest Entomology (1-5) Gara**

**FRM 538 Graduate Studies in Forest Pathology (1-5) Edmonds**

**FRM 555 Graduate Studies in Wildlife Management (1-5) Manuwal, Raedeke, West**

**FRM 556 Graduate Studies in Forest Zoology (1-5) West**

**FRM 563 Graduate Studies in Forest Mensuration (1-5) Maguire, Rustagi**

**FRM 565 Graduate Studies in Forest Management (1-5) Bare, Schreuder, Waggener**

**FRM 566 Graduate Studies in Forest Photogrammetry (1-5) Pickford, Schreuder**

**FRM 568 Graduate Studies in Forest Economics (1-5) Dowdle, Schreuder, Waggener**

**FRM 570 Graduate Studies in Forest Policy Analysis (1-5) Shannon, Waggener**

**FRM 572 Graduate Studies in Forest Resource Planning (1-5) Bradley**

**FRM 579 Graduate Studies in Forest Sociology (1-5) AWSpS Lee**

**FRM 580 Graduate Studies in Forest Recreation (1-5) R. Clark**

## Urban Horticulture

### Courses for Undergraduates

**UHF 331 Landscape Plant Recognition (3) SpS Hamilton, Tsukada** Field recognition of important groups of woody and herbaceous landscape plants, emphasizing diversity at the genus and family levels. Cultivated plant nomenclature. Plant descriptive characters evident in the field with eye and hand lens. Hardiness and landscape applications. Joint with BOT 331. Recommended BOT 113.

**UHF 406 Curatorial Practices in Public Gardens (3) Sp Hohn** Techniques of curatorial practice relevant to living collections of plants. Includes developing and using collections policies, collection documentation, plant acquisition and conservation programs, display methods, exchange programs and procedures, and plant introduction programs. Recommended: three credits in urban horticulture or museology.

**UHF 431 Landscape Plant Selection (3) A Hamilton, Robertson** Landscape plant selection principles. Factors and basic relevant ecophysiology: climate (hardiness classification), microhabitat (soil parameters, local temperature, light), pest susceptibility and special conditions (slope, pollution). Design parameters: functional categories, vegetative and reproductive features. Field trips to local plantings. Prerequisite: 331 or equivalent.

**UHF 445 Landscape Plant Management (5) A** Principles and practices of plant management in cultivated situations. Review of landscape design from the horticultural perspective, management schedules and budgets, arboricultural practices, and care of specialized plant materials. Prerequisite: 331 or equivalent knowledge of woody plants.

**UHF 449 Urban Forestry Seminar (1-3, max. 9) AWSp Bradley, Wagar** Discussion of current practice and research for managing trees in urban and suburban environments and in forested environments with substantial human use. Prerequisite: permission of instructor.

**UHF 451 Urban Plant Protection (4) Sp Edmonds, Gara** Working knowledge on insects and diseases of plants growing in the urban environment. Emphasis placed on pest and damage recognition, control methods, and integrated pest management systems. Prerequisites: CHEM 101, 102; BIOL 101, 102 or equivalents.

**UHF 461 Public Outreach in Urban Horticulture (3) W Wott** Aspects of establishing and implementing programs of public urban horticulture outreach (extension) education in university, public institutions, and private contexts. Includes quantitative audience assessment, organization, objective building, lecture and class management, publications, interpretation for diverse audiences, funding, volunteers, and evaluation techniques. Recommended: three credits in urban horticulture.

**UHF 471 Ecological Concepts and Urban Ecosystems (3) W Ewing** Ecological concepts into an urban context with emphasis on autoecological relationships of plant in an urban environment. General framework for development of urban ecological concepts followed by case studies and exploring applications in new areas. Prerequisite: general ecology, plant physiology, or permission of instructor.

**UHF 475 Wetland Ecology and Management (3) A Ewing, Harrison** Wetland types and functions, global and North American distribution, wetland plant types, soil chemistry. The influence of stresses on wetland composition and form. Autecology of wetland plants; response to and detection of stresses. Impacts of urbanization; management techniques. Prerequisites: BOT 371; BOT 354 or BIOL 472; or permission of instructor.

**UHF 495 Senior Project in Urban Forestry (5) AWSpS Bradley, Hamilton** Individual study of an urban forestry problem under direction of a faculty member. Prerequisites: FRM 471, approved plan of study, and permission of major advisor.

**Courses for Graduates Only**

**UHF 501 Urban Horticulture Profession (2) A Tukey, Wott** Describes the emerging profession of urban horticulture and forestry, its history and significance, and the attitudes, knowledge, and skills necessary for success in the profession. Guest lecturers and student participation discuss and evaluate opportunities. Prerequisites: MFR-UH candidates and others by permission of instructor.

**UHF 531 Seminar in Horticultural Taxonomy and Landscape Plant Selection (1-3, max. 12) AWSp Hamilton** Special topics in horticultural taxonomy (nomenclature and systematics of cultivated plants, evolution of diverse genera and families, methods of analysis) and landscape plant selection (natural ecology and biogeography of landscape plants, plant exploration, introduction and testing. Recommended: 331 and 431.

**UHF 549 Urban Horticulture Seminar (1, max. 6) A Hamilton** Discussion by invited speakers on current topics in urban horticulture. Credit/no credit only (Formerly FRM 549.)

**UHF 561 Public Presentation in Urban Horticulture (2) W Wott** Students learn to make public presentations in scientific, professional and popular contexts and to interpret technical information for professional and lay audiences. Support materials, such as audiovisuals and graphics discussed.

**UHF 572 Urban Ecosystem Management Seminar (1-3, max. 9) AWSp Ewing** Graduate seminar in urban ecosystem management. Special topics of current importance in urban ecosystem management. Ecological aspects of ecosystem conservation, restoration, and management. Students participate in presentation and discussion of current work. Prerequisites: 471, 475.

**UHF 590 Graduate Studies (\*, max. 15) AWSpS Ewing, Hamilton, Tukey, Wott** Study in fields for which there is not sufficient demand to warrant the organization of regular courses.

**UHF 600 Independent Study or Research (\*) AWSpS Ewing, Hamilton, Tukey, Wott**

**UHF 601 Internship (3-9, max. 9) AWSpS** Prerequisite: permission of graduate program adviser. Credit/no credit only.

**UHF 700 Master's Thesis (\*) AWSpS Ewing, Hamilton, Tukey, Wott**

**UHF 800 Doctoral Dissertation (\*) AWSpS Ewing, Hamilton, Tukey, Wott**

# Interdisciplinary Graduate Degree Programs

*These programs are administered by interdisciplinary groups of the Graduate School. Certain courses carrying the particular program prefix appear below; other courses with the same prefix appear elsewhere as indicated. Other courses included in these programs are selected from many disciplines throughout the University and carry the prefix of the respective discipline.*

## Biology Teaching

John S. Edwards, Graduate Program Coordinator

The Graduate School Biology Teaching Group offers an interdisciplinary program that leads to the degree of Master of Arts for Teachers in the field of biological science. Designed specifically for biology teachers in secondary schools and community colleges, the program emphasizes broadening the student's understanding of the various fields of biological science, with improvement of the student's effectiveness as a teacher as the primary goal. The program offers opportunities for course work within the departments of the University in biological science and science education. Each student is asked to perform an in-depth study of a biological problem in the context of its relevance to the teaching of biological science. Facilities and guidance are provided by a sponsoring professor and advisory committee drawn from the Biology Teaching Group and the several biological science departments of the University.

### Special Requirements

Prospective candidates for the degree must have an initial or continuing certificate for teaching biology at the secondary level.

Assistantships and fellowships are not provided under the aegis of this program.

### Correspondence and Information

Graduate Program Coordinator  
Biology Teaching, KB-05

## Faculty

### Chairperson

John S. Edwards

### Professors

Ammirati, Joseph F.,\* 1979, (Botany, Forest Resources), M.A., 1967, San Francisco State; Ph.D., 1972, Michigan.

Deyrup-Olsen, Ingrid J.,\* 1964, (Emeritus), (Women Studies, Zoology), Ph.D., 1944, Columbia.

Edwards, John S.,\* 1967, (Forest Resources, Zoology), M.Sc., 1956, Auckland (New Zealand); Ph.D., 1960, Cambridge (England).

Halperin, Walter,\* 1968, (Botany), M.S., 1961, Southern Connecticut State; Ph.D., 1965, Connecticut.

Kohn, Alan J.,\* 1961, (Environmental Studies, Quaternary Research Center, Zoology), Ph.D., 1957, Yale.

Laird, Charles D.,\* 1971, (Genetics, Zoology), Ph.D., 1966, Stanford.

Leopold, Estella B.,\* 1976, (Botany, Environmental Studies, Forest Resources, Geological Sciences, Quaternary Research Center), M.S., 1950, California (Berkeley); Ph.D., 1955, Yale.

Meeuse, Bastiaan J. D.,\* 1952, (Emeritus), (Botany), M.S., 1939, Leiden (Holland); Ph.D., 1943, Delft (Holland).

Nester, Eugene W.,\* 1962, (Microbiology), Ph.D., 1959, Western Reserve.

Olstad, Roger G.,\* 1964, (Education, Environmental Studies), M.A., 1959, Ph.D., 1963, Minnesota.

Stettler, Reinhard F.,\* 1963, (Forest Resources), Ph.D., 1963, California (Berkeley).

Whisler, Howard C.,\* 1963, (Botany), Ph.D., 1961, California (Berkeley).

### Associate Professor

Hille, Merrill B.,\* 1976, (Zoology), Ph.D., 1965, Rockefeller.

### Assistant Professor

Van Volkenburgh, Elizabeth,\* 1985, (Botany), Ph.D., 1980, Washington.

## Health Services Administration

Mary Richardson, Graduate Program Coordinator

The Health Services Administration Group offers a two-year program of studies leading to the degree of Master of Health Administration. It provides preparation for careers in management, planning, and policy analysis in ambulatory-care organizations, hospitals, long-term-care facilities, mental-health-care organizations, government agencies, planning agencies, and other organizational settings in the health field. The curriculum is designed to be interdisciplinary, with a faculty drawn not only from the School of Public Health and Community Medicine, but also from the graduate schools of Business Administration and Public Affairs. A student's program of studies may vary according to his or her concentration of study and career objectives. In addition to academic work, students are required to participate in an internship experience in a health facility or agency under the preceptorship of the administrator or director of that organization. Also, a two-quarter analytical project under the supervision of a faculty adviser is required in the second year.

The program has developed a unique opportunity for concentration in health policy and managed care. A concurrent degree program combining the M.H.A. and M.B.A. degrees also is offered. This curriculum requires three years of intensive academic study and culminates in a joint M.H.A.-M.B.A. degree.

Course listings may be found under the School of Public Health and Community Medicine, Department of Health Services.

### Special Requirements

Applicants must submit, in addition to Graduate School admission requirements, at least three letters of recommendation and scores from either the Graduate Record Examination or Graduate Management Admission Test. A narrative statement of objectives is also required, and interviews by members of the program faculty may be required. Relevant health field experience is preferred. In general, applicants are accepted only for autumn quarter of each year. The application deadline is February 1.

### Financial Aid

A limited number of fellowships, assistantships, scholarships and loans are available each year. The M.H.A. Alumni Association sponsors a fund-raising phonathon from which some of the proceeds go toward program scholarships. The Foster G. McGaw Scholarship, ad-

ministered by the Association of University Programs in Health Administration, may be awarded. A scholarship sponsored by the Association of Medical Group Administrators is available for students concentrating in ambulatory care management. Group Health Cooperative of Puget Sound sponsors a Graduate Research Association position for an under-represented minority student (particularly Black, Hispanic, or Native American). Health Education Assistance Loans (HEAL) monies are also available to graduate students in health services. However, students admitted should be prepared to utilize their own resources to finance their graduate education.

### Research Facilities

In addition to utilizing University facilities, the program makes extensive use of community health facilities and agencies for research and training.

### Correspondence and Information

Graduate Program Coordinator  
F361 Health Sciences, SC-37

## Faculty

### Director

Douglas A. Conrad

### Professors

Conrad, Douglas A.,\* 1977, (Health Services, Dental Public Health Sciences, Finance and Business Economics), M.H.A., 1973, Washington; M.B.A., 1976, Ph.D., 1978, Chicago; economic regulation in hospitals, health-care finance, cost effectiveness.

Klasterin, Theodore D.,\* 1974, (Management Science, Health Services), Ph.D., 1973, Texas (Austin); operations management.

Perrin, Edward B.,\* 1962, (Health Services, Biostatistics), M.A., 1956, Columbia; Ph.D., 1961, Stanford; health-information systems, stochastic modeling, health-manpower analysis, health-care outcomes.

### Associate Professors

Grembowski, David, 1988, (Dental Public Health Sciences), M.A., 1975, Washington State; Ph.D., 1982, Washington; utilization of health care/prevention.

Madden, Carolyn Watts,\* 1975, (Economics, Health Services, Public Affairs), M.A., 1974, Ph.D., 1974, Johns Hopkins; regulation insurance, health policy.

Martin, Diane K.,\* 1978, (Epidemiology, Health Services), M.A., 1972, Temple; Ph.D., 1979, Washington; health-care organization and behavior.

### Assistant Professors

Ehret, Jennifer L.,\* 1987, (Health Services), M.H.A., 1983, Ph.D., 1987, Washington; health policy analysis, organizational effectiveness, hospital and health administration.

Hoare, Geoffrey A.,\* 1986, Ph.D., 1984, Pennsylvania; organization and management in health-care organizations.

Wickizer, Thomas M., 1988, (Health Services), M.P.H., 1979, M.A., 1987, Ph.D., 1989, Michigan; health promotion evaluation.

Richardson, Mary, 1978, (Health Services), M.H.A., 1978, Ph.D., 1984, Washington; leadership training.

## Nutritional Sciences

Bonnie Worthington-Roberts,  
Graduate Program Coordinator

The Nutritional Sciences Program offers an interdisciplinary graduate program of study leading to a Master of Science or a Doctor of Philosophy degree. Training

is provided in advanced nutrition, foods, and application of these sciences to the field of clinical dietetics through both didactic and clinical experiences. Four types of students are best served by this program: (1) the individual with a strong science background who wishes to pursue advanced training in nutritional sciences; (2) the individual who wishes to complete academic requirements (ADA-approved Plan V) for becoming a registered dietitian; (3) the individual with an undergraduate background in nutrition, dietetics and foods who wishes to pursue additional education in nutritional sciences while obtaining the supervised clinical experience required for registered dietitian status (ADA-approved AP-4); and (4) the individual who is a registered dietitian and wishes to pursue an advanced degree in nutritional sciences.

Principal areas of study include clinical nutrition, community nutrition, maternal and child nutrition, nutritional biochemistry, and experimental foods. Supportive course work in related fields is provided through the schools of Medicine, Public Health, Pharmacy, and Nursing and the Division of Food Science in the College of Ocean and Fishery Sciences. Relevant courses are also provided by the departments of Anthropology, Genetics, Psychology, and Zoology in the College of Arts and Sciences.

Each individual program of study is designed by the student in consultation with, and with the approval of, a supervisory committee. Not only will appropriate course work be carefully defined, but collaboration between student and faculty in appropriate thesis research will begin as early in the graduate experience as possible. Those students receiving supervised clinical experience will work closely with the coordinator of clinical activities, so an individual program of experiences can be designed to fit with the career goals of the student.

#### Research Facilities

Support facilities are available in the form of libraries, laboratories, a nutrient data base, computer facilities, a human metabolic unit, a vivarium, and a sensory evaluation complex. Additional support is available through the Clinical Research Center, the Clinical Nutrition Research Unit, the Northwest Lipid Research Center, and the Nutrition Division of the Department of Laboratory Medicine in the School of Medicine. Clinical facilities available for supervised clinical experience include University of Washington Medical Center, Harborview Medical Center, Fred Hutchinson Cancer Research Center, Northwest Kidney Center, Children's Hospital and Medical Center, Pacific Medical Center, and the Child Development and Mental Retardation Center.

#### Admission Requirements

Students may enter the graduate degree program after completing a bachelor's and/or master's degree in the biological sciences; background in human physiology and biochemistry is especially desirable. Those students who wish to pursue registration status with the Commission on Dietetic Registration must complete ADA-approved Plan 4 or Plan 5 academic requirements prior to pursuing the supervised clinical experience program (AP-4). Students who wish to pursue the Ph.D. degree should correspond with the Director of the Nutritional Sciences Group for detailed admission requirements.

Bonnie S. Worthington-Roberts

#### Professors

Albers, John J.,\* 1971, (Research), (Medicine, Pathology), M.S., 1967, Ph.D., 1969, Illinois; research in lipids and lipoproteins.

Benedetti, Thomas J.,\* 1979, (Obstetrics and Gynecology), M.D., 1973, Washington; perinatal medicine.

Bierman, Edwin L.,\* 1962, (Medicine), M.D., 1955, Cornell; metabolism and endocrinology, clinical nutrition.

Brown, Zane A.,\* 1977, (Obstetrics and Gynecology), M.D., 1966, Temple; perinatal medicine.

Brunzell, John D.,\* 1969, (Medicine), M.D., 1963, Washington; metabolism and endocrinology, clinical nutrition.

Chait, Alan,\* 1977, (Medicine), M.B.Ch.B., 1967, Capetown (South Africa); M.Sc., 1973, London (England); M.D., 1974, Cape Town (South Africa); metabolism and endocrinology, clinical nutrition.

Chesnut, Charles H. III,\* 1973, (Medicine, Radiology), M.D., 1966, Florida; nuclear medicine, bone disease.

Emanuel, Irvin,\* 1966, (Epidemiology, Pediatrics), M.A., 1956, Arizona; M.D., 1960, Rochester; M.S.P.M., 1966, Washington; child development and mental retardation.

Ensinn, John W.,\* 1960, (Medicine), M.D.C.M., 1956, McGill; metabolism and endocrinology.

Fujimoto, Wilfred Y.,\* 1970, (Medicine), M.D., 1965, Johns Hopkins; metabolism and endocrinology.

Halver, John E.,\* 1958, (Emeritus), (Fisheries), M.S., 1948, Washington State; Ph.D., 1953, Washington; fish nutrition and comparative nutrition.

Henderson, Maureen M.,\* 1975, (Epidemiology, Medicine), M.B.B.S., 1949, D.P.H., 1956, Durham (England); epidemiology of chronic diseases.

Kiyak, Asuman H.,\* 1977, (Oral and Maxillofacial Surgery, Psychology), M.A., 1974, Ph.D., 1977, Wayne State; geriatric dentistry, behavioral aspects of health care.

Knopp, Robert H.,\* 1974, (Medicine, Obstetrics Gynecology), M.D., 1964, Cornell; obstetrics and gynecology, clinical nutrition.

Kronmal, Richard A.,\* 1964, (Biostatistics), Ph.D., 1964, California (Los Angeles); nonparametric density estimation, computer algorithms, cardiovascular data analysis.

Labbe, Robert F.,\* 1957, (Laboratory Medicine, Pediatrics), M.S., 1949, Ph.D., 1951, Oregon State; nutritional biochemistry.

Monsen, Elaine R.,\* 1963, (Medicine), M.S., 1959, Ph.D., 1961, California (Berkeley); nutrition, dietetics.

Pigott, George M.,\* 1963, (Fisheries), M.S., 1955, Ph.D., 1963, Washington; food engineering.

Porte, Daniel Jr., 1963, (Medicine), M.D., 1957, Chicago; metabolism and endocrinology.

Samson, Herman H.,\* 1977 (Psychiatry and Behavioral Sciences, Psychology), M.A., 1965, McMaster; Ph.D., 1968, Waterloo; behavioral pharmacology, addictive processes.

Saunders, David R.,\* 1965, (Medicine), M.D., 1957, McGill; gastroenterology.

Scott, C. Ronald,\* 1965, (Pediatrics), M.D., 1959, Washington; pediatric genetics.

Whorton, James C.,\* 1970, (Medical History and Ethics), Ph.D., 1969, Wisconsin; history of American medicine, public health, alternative healing, pharmacy, biochemistry.

Woods, Stephen C.,\* 1972, (Medicine, Psychology), Ph.D., 1970, Washington; appetite regulation, obesity.

Worthington-Roberts, Bonnie S.,\* 1971, (Epidemiology), M.S., 1967, Ph.D., 1971, Washington; maternal and child nutrition.

#### Associate Professors

Beresford, Shirley A.,\* 1987, (Epidemiology), M.A., 1973, Cambridge (England); Ph.D., 1981, London (England); cancer control and health promotion.

Brannon, Charlene S.,\* 1969, (Fisheries), M.S., 1966, Iowa State; Ph.D., 1974, Washington; foods, sensory evaluation.

Childs, Marian T.,\* 1968, (Emeritus), (Medicine), Ph.D., 1950, California (Berkeley); nutrition.

Dellinger, E. Patchen,\* 1977, (Surgery), M.D., 1970, Harvard; general surgery.

Eimer, Gary W.,\* 1971, (Medicinal Chemistry), M.S., 1967, Connecticut; Ph.D., 1970, Rutgers; pharmacognosy.

Lipkin, Edward W.,\* 1985, (Medicine), Ph.D., 1977, M.D., 1978, Case Western Reserve; metabolism and clinical nutrition.

Pearlman, Robert A.,\* 1981, (Medicine), M.D., 1975, Boston; M.P.H., 1980, Washington; gerontology.

Schwartz, Robert S.,\* 1982, (Medicine), M.D., 1974, Ohio State; internal medicine and geriatrics.

Wood, Francis C. Jr.,\* 1961, (Medicine), M.D., 1954, Harvard; metabolism and endocrinology.

Yamanaka, William K.,\* 1974, (Epidemiology), Ph.D., 1969, California (Berkeley); nutrition.

#### Assistant Professors

Cheney, Carrie, 1990, (Affiliate), (Epidemiology), Ph.D., 1990, Washington; cancer etiology and prevention; cancer treatment.

Kestin, Mark, 1990, (Epidemiology), Ph.D., 1989, Flinders; M.P.H., 1990, Harvard; cardio-vascular disease and cancer prevention.

Kristal, Alan R., 1990, (Epidemiology), Dr.P.H., 1983, Columbia; cancer etiology and prevention.

LeBoeuf, Renee C.,\* 1988, (Research), M.S., 1973, Ph.D., 1977, State University of New York; genetic and nutritional regulation of proteins involved in lipid transport.

#### Lecturers

Faine, Mary P., 1982, (Prosthodontics), M.S., 1975, Washington; nutrition.

Karkeck, Joan, 1979, M.A., M.S., 1970, Case Western Reserve; nutrition and dietetics.

Lucas, Betty L., 1974, (Parent and Child Nursing), M.P.H., 1969, California (Berkeley); maternal and child nutrition.

Pipes, Peggy L., 1984, (Parent and Child Nursing), M.A., 1952, Columbia; M.P.H., 1966, Michigan; maternal and child nutrition.

Rees, Jane M., 1973, (Pediatrics), M.S., 1972, Washington; maternal and child nutrition.

Trahms, Cristine M., 1973, (Pediatrics), M.S., 1972, Washington; maternal and child nutrition.

Valerio, Nina L., 1974, M.S., 1971, State University of Iowa; Ed.D., 1991, Washington; nutrition education and clinical dietetics.

## Course Descriptions

### Courses for Undergraduates

**NUTR 300 Nutrition for Today (3)** Basic and applied nutrition and food science. Includes identification and physiological roles of nutrients, nutritional requirements, problems with over- and undernutrition, and nutritional and food-related diseases. Food additives,

processing, safety, and their effects on overall nutrition. Current issues of public significance. Joint with FD SC 300.

**NUTR 301 Nutrition and Nursing (3)** *Worthington-Roberts* Basic principles of nutrition and their relationship to health problems. Normal nutrition needs of individuals at various age levels; environmental influences on nutrition; assessment of nutritional status; nutritional values of foods; dietary modifications as appropriate in the nutritional component of medical treatment. Prerequisite: organic chemistry.

**NUTR 441 Food Structure and Preparation (3)** *Brannon* Review of relationships between food quality and food handling. Principles of food science integrated with laboratory sessions that observe the effects of various parameters on food composition and quality. Prerequisite: organic chemistry.

**NUTR 445 Food Service Management (3)** *Brannon* Objectives of management in a food service system; purchasing systems currently in use, receiving systems, inventory control, menu planning, cost control, service styles, and sanitation requirements. Prerequisite: 441.

**NUTR 461 Diet Therapy (4)** *Karreck* Nutrition in the etiology and treatment of disease and in the maintenance of health. Various organ systems are discussed: pathology, medical/surgical treatment and dietary management, with emphasis on counseling skills. Prerequisites: basic nutrition and P BIO 405-406 or CONJ 340-341-342.

### Courses for Graduates Only

**NUTR 500 Graduate Seminar in Human Nutrition, Diet, and Foods (1, max. 3)** Current literature in the field of human nutrition, dietetics, and foods.

**NUTR 520 Protein and Carbohydrate Nutrition (3)** *Monsen, Yamanaka* Metabolic and physiologic concepts related to protein and carbohydrate nutrition. Areas addressed include composition of foods, requirements through the life cycle, quality of protein, vegetarianism, protein deficiency, low carbohydrate diets, glycemic response to foods, carbohydrates and dental caries, inborn errors in carbohydrate and protein metabolism. Prerequisite: biochemistry.

**NUTR 521 Lipid Nutrition (3)** *Monsen, Yamanaka* Normal lipid components of animal fluids and tissues, with review of their metabolism and physiological functions. Effect of diet and the normal development during the life span on these lipid metabolism. Changes of lipids with various types of disease states and means of nutritional modification of these changes. Prerequisite: biochemistry.

**NUTR 522 Vitamin and Mineral Nutrition (3)** *Monsen, Yamanaka* Advanced study of biologically essential minerals and vitamins. To include absorption, transport, function, storage, excretion; imbalance, deficiency and toxicity; dietary sources; role of these nutrients in preventing diseases directly or indirectly (such as cancer, dental caries,); role of modern food technology on availability of these nutrients in our food supply. Prerequisite: biochemistry.

**NUTR 525 Evaluation of Nutritional Status (3)** *Monsen* Dietary, clinical, and biochemical-biophysical components in the assessment of nutritional status. Interrelationships of nutrients and effects of varying levels of nutrient intake. Critical appraisal of nutritional status surveys. Experimental design and dietary methodology. Prerequisites: human nutrition and biochemistry.

**NUTR 526 Maternal and Infant Nutrition (3)** *Worthington-Roberts* Influence of nutrition on fertility and on the course and outcome of pregnancy. Nutritional management of high-risk pregnancy. Nutritional needs during lactation and effect of maternal diet on milk composition. Breast-feeding versus bottle-feeding; fundamentals of infant nutrition. Nutritional management of high-risk infants. Prerequisites: human nutrition and human physiology.

**NUTR 527 Nutrition: Childhood Through Adolescence (3)** *Worthington-Roberts* Influence of nourishment on growth, development, and behavior of children, toddlers through adolescents. Critical evaluation of normative data, special problems, and intervention strategies. Prerequisites: human nutrition and human physiology.

**NUTR 528 Nutrition in Aging (3)** *Karreck* Physiological, psychological, social, cultural, and economic factors affecting nutrition in the middle and later years. Prerequisites: human nutrition and human physiology.

**NUTR 531 National and International Nutrition (3)** *Yamanaka* Nutritional problems in United States, surveillance strategies and nutrition programs designed to improve status of high-risk populations. Review of major nutritional problems in developing countries, causes of malnutrition, international agencies on food and nutrition, prospects and probable solutions to major nutrition problems. Prerequisite: course in general nutrition.

**NUTR 532 Fieldwork in Public Health Nutrition (2-12, max. 12)** Observation and participation in community agency nutrition programs.

**NUTR 535 Laboratory Methods in Nutrition (3)** *Yamanaka* Techniques used in nutrition research. Spectroscopy, isotopes, ultracentrifugation, chromatography; vitamin, lipid, and mineral analysis; methods for animal and human research. Prerequisites: laboratory experience in chemistry, biochemistry.

**NUTR 536 Nutrition Education Principles and Practice (3)** *Brannon* Integrated course designed to prepare students for the practical application of nutrition education theories and principles in diverse teaching-learning settings for a variety of learner-population groups. Prerequisite: permission of instructor.

**NUTR 537 Laboratory Rotation (1-4, max. 6)** *AWSpS Yamanaka* Exposure to research being conducted in the laboratories of the graduate nutrition faculty. Provides hands-on experience in laboratory research. Introduces the student to on-going research for preparation of dissertation topics. Prerequisites: 535, permission of graduate adviser.

**NUTR 538 Nutritional Epidemiology (3)** *Beresford* Application of epidemiology methods to current studies of nutrition and disease. Special methodological problems of importance in nutritional epidemiological studies. Diet and heart disease, and diet and cancer relationships. Enables students to plan studies in nutritional epidemiology. Joint with EPI 538. Prerequisite: permission of instructor.

**NUTR 539 Seminar in Nutrition (1-3, max. 9)** Library research and seminar on selected topics in recent developments in the field of nutrition. Prerequisite: advanced nutrition.

**NUTR 540 Recent Developments in Foods (3)** *Brannon* Development of new technology in food production and product development. Design of low-sodium, caffeine-free, and low-calorie food products and other special types. A review of government regulations concerning new developments in foods, including food contamination and food additives. Prerequisites: basic foods and nutrition.

**NUTR 550 Nutrition, Metabolism and Disease: Update (3)** *Worthington-Roberts* Update of recent developments in the field of nutrition, especially as related to human health maintenance and disease prevention. Focus placed on topics receiving active research attention or substantial public attention. Intended for graduate students in fields related to health/disease. Prerequisites: basic chemistry and biology.

**NUTR 560 Practicum in Dietetic Education (1-5)** *AWSpS Karreck* Supervised instructional experiences for dietetic education in both classroom and clinical situations. Individually arranged.

**NUTR 561 Advanced Clinical Nutrition Fieldwork (1-3, max. 9)** *Valerio* Participation in a health-care

team assessing nutrition status and needs, designing care plans to optimize nutritional support of patients, and establishing appropriate criteria for the evaluation of the nutrition care provided. Supervised clinical experiences provided in a variety of local health-care institutions. Prerequisite: permission of instructor.

**NUTR 562 Advanced Clinical Nutrition I (4)** *Karreck* Epidemiology and pathophysiology of acute and chronic diseases related to nutrition (e.g., cardiovascular, endocrinologic, and hematologic diseases). Nutritional interventions and their relationship to medical, surgical, and pharmacologic treatment. Prerequisite: diet therapy.

**NUTR 563 Advanced Clinical Nutrition II (4)** *Karreck* Assessment of the nutritional demands and hypermetabolic responses of trauma, surgery, acute and neoplastic diseases; determination of the appropriate amounts and sources of nutrients supplied through enteral and/or parenteral routes. Prerequisite: diet therapy.

**NUTR 564 Management of Nutrition Services (3)** *Karreck* Administrative processes affecting health care, specific focus on management of nutritional support. Includes productivity and cost effectiveness of nutrition care, establishing and achieving quality of care, peer review, budgeting, working with other health-care professionals and varying health-care systems. For clinical nutritionists working in standard health-care systems.

**NUTR 565 Seminar in Clinical Nutrition Practice (1-3)** *Valerio* Selected topics and learning experiences in nutritional care delivery. Prepares students for practical application of nutritional concepts in diverse clinical settings. Prerequisites: concurrent registration in 561 and permission of instructor.

**NUTR 600 Independent Study or Research (\*)**

**NUTR 700 Master's Thesis (\*)**

**NUTR 800 Doctoral Dissertation (\*)** *AWSpS* Credit/no credit only. Prerequisite: permission of program adviser.

## Physiology-Psychology

Albert F. Fuchs, Director

This interdisciplinary Doctor of Philosophy degree program administered by the Physiology-Psychology Group of the Graduate School provides intensive training in behavioral neuroscience. The program accepts only two or three students a year. In the first two years, students take didactic course work in the Department of Physiology and Biophysics and the Department of Psychology, as well as three laboratory rotations. During this time students are supported by a University research assistantship. By the third year, students select a research laboratory and are supported by a variety of funding resources until the completion of the Ph.D. program, usually two to four additional years. Graduates of the program are employed in University departments of Psychology, Physiology, Neuroscience, and Zoology, and in various School of Medicine departments.

Because physiological psychology and modern neurobiology are strongly developed at the University, graduate students can find the latest concepts, research techniques, and instrumentation in both fields. In addition to the research facilities of the two parent departments, students may work with laboratory primates at the Regional Primate Center located on campus and interact with neurobiologists from other departments such as Zoology, Pharmacology, or Biological Structure.

### Correspondence and Information

G424 Health Sciences, SJ-40

## Faculty

### Director

Albert F. Fuchs

### Professors

Anderson, Marjorie E.,\* 1971, (Physiology and Biophysics, Rehabilitation Medicine), Ph.D., 1969, Washington; neural control of movement.

Beecher, Michael D.,\* 1978, (Psychology), M.A., 1965, Ph.D., 1970, Boston; animal communication, animal behavior.

Bernstein, Ilene L.,\* 1972, (Psychology), M.A., 1967, Columbia; Ph.D., 1972, California (Los Angeles); taste preference and development, appetite, conditioned food aversions.

Fetz, Eberhard E.,\* 1969, (Physiology and Biophysics), Ph.D., 1966, Massachusetts Institute of Technology; motor system physiology, cellular firing mechanisms, neural modeling.

Fuchs, Albert F.,\* 1969, (Physiology and Biophysics), M.S., 1961, Drexel; Ph.D., 1966, Johns Hopkins; neural control of eye movements.

Rubel, Edwin W.,\* 1986, (Physiology and Biophysics, Otolaryngology), M.S., 1967, Ph.D., 1969, Michigan State; developmental neurobiology, development of sensory systems, experiential influences on brain development.

Schwartzkroin, Philip A.,\* 1978, (Neurological Surgery, Physiology and Biophysics), Ph.D., 1972, Stanford; neurological surgery, physiology and biophysics, neural plasticity, hippocampal electrophysiology.

Smith, Orville A. Jr.,\* 1959, (Physiology and Biophysics), M.A., 1950, Ph.D., 1953, Michigan State; neural-behavioral control of circulation.

Steiner, Robert A.,\* 1977, (Obstetrics and Gynecology, Physiology and Biophysics, Zoology), Ph.D., 1975, Oregon; neuroendocrine regulation of pituitary function in reproductive system.

Teller, Davida Y.,\* 1965, (Psychology, Physiology and Biophysics, Women Studies), Ph.D., 1965, California (Berkeley); vision, visual development.

Woods, Stephen C.,\* 1972, (Medicine, Psychology), Ph.D., 1970, Washington; body weight control, stimulus property of drugs.

### Associate Professor

Diaz, Jaime,\* 1978, (Psychology), M.A., 1972, Ph.D., 1975, California (Los Angeles); developmental neuroscience.

### Assistant Professors

Brenowitz, Elliot A.,\* 1987, (Psychology, Zoology), Ph.D., 1982, Cornell; neuroethology, neuroanatomy, neuroendocrinology, animal behavior.

Olavarria, Jaime F.,\* 1991, (Psychology), M.D., 1974, Chile (Santiago); Ph.D., 1984, California (Berkeley); structure, function, and development of mammalian visual system.

## Course Description

### P PSY 800 Doctoral Dissertation (\*)

## Quantitative Ecology and Resource Management

B. Bruce Bare, Graduate Program Coordinator

The graduate program offered by the Quantitative Ecology and Resource Management (QERM) interdisciplinary group provides a unique opportunity for students to study the application of statistical, mathematical, and decision sciences to a broad array of terrestrial and marine ecology, natural resource management, biometrical, and mathematical biology problems. The QERM program of study leads to Master of Science and Doctor of Philosophy degrees, and is designed to attract mathematically trained students interested in working on contemporary ecological or resource management problems from a quantitative perspective.

Faculty associated with this interdisciplinary program come from fourteen campus units, including statistics, applied mathematics, forest resources, fisheries, zoology, engineering, biostatistics, and marine affairs. This pool of faculty talent is available to enrich the academic experience of all QERM students.

### Degree Requirements

Students entering the QERM program are expected to have either a strong mathematical or biological (ecological) background. Master of Science course work requirements include two courses in statistical theory; one course in optimization theory; one applied statistical methods course; two courses in either applied quantitative ecology or quantitative resource management; a seminar in quantitative ecology; plus approved electives. All master's degree holders must pass a first-year qualifying examination, prepare and defend a thesis, take a total of at least 45 graded quarter credits, and satisfy all Graduate School requirements.

Students passing the first-year qualifying examination at the Ph.D. level are eligible to enter the doctoral program of study. Course requirements equivalent to the master's program also must be completed. Doctor of Philosophy degree requirements include a minimum of 36 credits of graded course work beyond the master's; a minimum of 27 credits of dissertation research; and satisfaction of all Graduate School requirements. The 36 credits of course work must be taken from an approved list of courses and varies by one of the following three options: (a) systems analysis in ecology, (b) resource management, or (c) biometrical studies.

### Admission Requirements

Students entering this graduate program are expected to perform well on the quantitative and analytical sections of the Graduate Record Examination. Background in a biological or ecological field is also highly desirable. To enter the Ph.D. program, students must pass the first-year qualifying examination at the Ph.D. level. In addition, all course requirements equivalent to the master's program must be completed. At least three letters of recommendation and a brief narrative statement of objectives must accompany each application for admission. Applications are accepted only for autumn quarter. The application deadline is March 1.

### Financial Aid

Fellowships, teaching assistantships, and research assistantships are available each year. These come from either the Graduate School or one of the campus units contributing faculty to the QERM program. They generally cover the nine-month academic year, although provisions can be made for summer support. Tuition is normally included as part of the financial package. Funding decisions are made yearly, but attempts are made to continue support for students making satisfactory progress.

### Research Facilities

The major space allocation in support of the QERM program is located in the Center for Quantitative Science in Forestry, Fisheries, and Wildlife. This intercollege unit offers student desk space, a small library, and modern UNIX-based workstations for conducting quantitative research. Additional field support is available from supporting colleges, schools, and departments such as fisheries, forest resources, and zoology. Existing research is conducted in concert with several federal, state, and local agencies spread throughout the state.

## Faculty

### Chairperson

B. Bruce Bare

### Professors

Bare, B. Bruce,\* 1969, (Biostatistics, Fisheries, Forest Resources), M.S., 1965, Minnesota; Ph.D., 1969, Purdue; harvest scheduling, biometry, forest land management, taxation, finance, management science.

Bassingthwaite, James B.,\* 1975, (Radiology, Bioengineering), M.D., 1955, Toronto; Ph.D., 1964, Minnesota; cardiovascular mass transport and ion exchanges, simulation analysis of integrated systems, PET imaging, cardiac metabolism, fractal physiology.

Bell, Earl J.,\* 1966, (Urban Design and Planning), Ph.D., 1965, California (Berkeley); application of geographic information systems to urban and regional planning problems, quantitative methods, water resources.

Briggs, David G.,\* 1980, (Forest Resources), M.F., 1968, Yale; Ph.D., 1980, Washington; operations research in forest products industries.

Brown, Gardner M. Jr.,\* 1965, (Economics, Environmental Studies), Ph.D., 1964, California (Berkeley); resource economics.

Dowdle, Barney,\* 1962, (Forest Resources), M.F., 1958, Ph.D., 1962, Yale; development of forest products industries, public forest land management.

Faaland, Bruce H.,\* 1971, (Management Science), M.S., 1968, Ph.D., 1971, Stanford; quantitative methods.

Felsenstein, Joseph,\* 1967, (Genetics, Statistics, Zoology), Ph.D., 1968, Chicago; estimation of phylogenies, long-term evolutionary processes, theoretical population genetics.

Ford, E. David,\* 1985, (Biostatistics, Fisheries, Forest Resources, Statistics), Ph.D., 1968, University College (London); analysis of ecological systems.

Francis, Robert C.,\* 1980, (Fisheries, Marine Affairs, Oceanography), M.S., 1966, Ph.D., 1970, Washington; ground fish and tuna ecology research and management, population dynamics of salmon.

Gallucci, Vincent F.,\* 1972, (Biostatistics, Fisheries, Forest Resources), M.S., 1966, State University of New York (Buffalo); Ph.D., 1971, North Carolina State; biomathematics and population dynamics.

Hilborn, Ray W.,\* 1987, (Fisheries), Ph.D., 1974, British Columbia; stock assessment, population dynamics, fisheries policy.

Johnson, Jay A.,\* 1984, (Forest Resources), M.S., 1970, State University of New York (Syracuse); Ph.D., 1973, Washington; mechanical and physical properties of wood and wood composite materials, wood quality.

Kareiva, Peter M.,\* 1983, (Zoology), M.S., 1976, California (Irvine); Ph.D., 1981, Cornell; theoretical ecology.

ogy, conservation biology, agricultural ecology, plant-insect interactions.

Kingsolver, Joel G., \* 1986, (Zoology), M.S., 1978, Wisconsin; Ph.D., 1981, Stanford; role of morphological variation, functional performance, selection in the evolution of structure and function in insects.

Kronmal, Richard A., \* 1964, (Biostatistics, Statistics), Ph.D., 1964, California (Los Angeles); nonparametric density estimation, computer algorithms, cardiovascular data analysis.

Mar, Brian W., \* 1967, (Civil Engineering, Technical Communication), M.S., 1956, Ph.D., 1958, M.S.C.E., 1967, Washington; system engineering, environmental management, interdisciplinary management.

Martin, R. Douglas, \* 1969, (Statistics), M.S.E., 1965, Washington; Ph.D., 1969, Princeton; robust methods, time series, data analysis.

Mathews, Stephen B., \* 1969, (Fisheries), M.A., 1962, California (Berkeley); Ph.D., 1967, Washington; quantitative fishery management.

Murray, James D., \* 1988, (Applied Mathematics, Zoology), Ph.D., 1956, St. Andrews (England); M.A., 1961, D.Sc., 1968, Oxford (England); reaction-diffusion phenomena, bifurcation, mathematical biology, epidemic theory, mathematical ecology.

Naiman, Robert J., \* 1988, (Fisheries, Forest Resources), Ph.D., 1974, Arizona State; ecological management of streams and riparian systems, nutrient dynamics, GIS applications in landscape-level processes.

Pickford, Stewart G., \* 1976, (Forest Resources), M.S.F., 1966, Ph.D., 1972, Washington; forest fire science and wildland fire management.

Schemske, Douglas W., \* 1989, (Botany), M.S., 1972, Ph.D., 1977, Illinois (Urbana); plant population biology, evolutionary significance of plant mating systems, genetic and ecological studies in temperate and tropical habitats.

Schreuder, Gerard F., \* 1971, (Forest Resources), M.S., 1960, Wageningen; M.S., 1967, North Carolina State; Ph.D., 1968, Yale; statistical analysis in resource economics, systems analysis and modeling, use of aerial photos in resource planning and management.

Swartzman, Gordon L., \* 1973, (Research), (Fisheries), M.S.E.E., 1965, Ph.D., 1969, Michigan; ecological modeling, quantitative natural resource management.

Thompson, Elizabeth A., \* 1985, (Biostatistics, Statistics), M.A., 1974, Ph.D., 1974, Cambridge; statistical analysis of human genetic data, population genetics, statistics of conservation biology.

van Belle, Gerald, \* 1974, (Biostatistics, Environmental Health), M.A., 1964, Ph.D., 1967, Toronto; clinical trials, applied statistics, screening, epidemiology.

#### Associate Professors

Anderson, James J., \* 1981, (Fisheries), Ph.D., 1977, Washington; fisheries and oceanography.

Conquest, Loveday L., \* 1978, (Biostatistics, Fisheries, Forest Resources), M.S., 1972, Stanford; Ph.D., 1975, Washington; sampling and experimental design for environmental monitoring studies, especially spatial and temporal aspects; statistical methods for timber, fish, and wildlife studies; global monitoring of the environment; general biometry.

Greulich, Francis E., \* 1977, (Forest Resources), M.S., 1967, Ph.D., 1976, California (Berkeley); forest engineering statistics, operations research.

Guttorp, Peter, \* 1980, (Statistics), M.A., 1976, Ph.D., 1980, California (Berkeley); point processes, stochastic models, applications to hydrology and geophysics.

Huppert, Daniel D., \* 1989, (Economics, Marine Affairs), M.A., 1972, Ph.D., 1975, Washington; economics of fisheries management, natural resource economics.

Leschine, Thomas M., \* 1983, (Marine Affairs), M.A., 1970, Ph.D., 1975, Pittsburgh; marine pollution management, ocean policy studies.

Maguire, Douglas A., \* 1986, (Forest Resources), M.S., 1979, Rutgers; M.S., 1986, Ph.D., 1986, Oregon State; growth and yield modeling, forest biometrics, crown development.

Pikitch, Ellen K., \* 1987, (Fisheries), M.S., 1982, Ph.D., 1983, Indiana; marine fisheries, population dynamics, fisheries management.

Rustagi, Krishna P., \* 1973, (Forest Resources), M.Sc., 1953, Agra (India); M.F., 1971, Ph.D., 1973, Yale; operations research and statistical applications in resource management, forest inventory, growth and yield.

Sampson, Paul D., \* 1981, (Research), (Statistics), Ph.D., 1979, Michigan; applied multivariate analysis, spatial statistics in environmetrics, statistical consulting.

Skalski, John R., \* 1987, (Fisheries), M.S., 1976, Oregon State; M.S., 1978, Ph.D., 1985, Cornell; population estimation, environmental sampling, effective assessment.

Zeh, Judith E., \* 1982, (Research), (Statistics), Ph.D., 1979, Washington; population size estimation, population dynamics, robust statistical methods, statistical computing.

#### Assistant Professor

Kot, Mark, \* 1990, (Applied Mathematics, Zoology), Ph.D., 1987, Arizona; mathematical ecology, population biology.

## Course Descriptions

### Courses for Graduates

**QERM 600 Independent Study or Research (\*)**

**QERM 700 Master's Thesis (\*)**

**QERM 800 Doctoral Dissertation (\*)**

# Interschool or Intercollege Programs

## Bioengineering

309 Harris Hydraulics Laboratory

The Center for Bioengineering provides a comprehensive, multidisciplinary program of education and research. The concepts and techniques of engineering are applied to the challenges in biology and medicine. Major areas of current bioengineering research include bioinstrumentation, biomaterials, biomechanics, controlled drug-release systems, imaging, microprocessors, bioelectromagnetics, molecular bioengineering, microcirculation, cell mechanics, muscle, and simulation of biosystems.

## Undergraduate Program

The undergraduate bioengineering program at the University of Washington is an honors program tailored for students bound for an M.D.-Ph.D. academic career with a Ph.D. component in bioengineering. It is designed to bridge the gap in emphasis and curriculum that has traditionally alienated students in biology and in engineering. The curriculum leads to a B.S.E., and consists of a blend of engineering and biological sciences that provides students with unusual opportunities and qualifications for a future biomedical-bioengineering research career. This program is administered by the Center for Bioengineering via the Interdisciplinary Engineering Studies Program of the College of Engineering. Admission is restricted to a small number of highly motivated individuals with an outstanding track record of academic performance. Applicants must have completed at least one year of pre-engineering course work with a minimum GPA of 3.50.

## Graduate Program

The Center for Bioengineering offers programs of study which lead to the Master of Science (M.S.), Master of Science in Engineering (M.S.E.), and Doctor of Philosophy (Ph.D.) degrees.

### Master of Science Degree

The Master of Science degree program provides essential training in the engineering sciences, which aids students with strong biological sciences backgrounds to prepare for careers in research and development in either basic medical sciences or clinical investigations. A thesis is required.

### Master of Science in Engineering Degree

The Master of Science in Engineering degree program provides essential training in the life sciences that assists students with sound engineering backgrounds to prepare for careers in academic, industrial, or hospital environments. A thesis is required.

### Doctor of Philosophy Degree

The objective of the Ph.D. program is to train individuals for careers in bioengineering research and teaching. The training has three major components: (1) acquisition of a breadth of knowledge about engineering and medicine and the interdisciplinary interface between these quite disparate fields; (2) development of a depth of knowledge and expertise in a particular scientific specialty; (3) development of a potential for indepen-

dent research that can be demonstrated. The objectives are fulfilled through use of a combination of research and teaching experiences. The program is designed to be rigorous while maintaining sufficient flexibility regarding specific requirements to accommodate qualified students with diverse backgrounds. Entrance to the Ph.D. program may be made directly after the B.S. or following completion of the M.S. or M.S.E.

### Medical Scientist Program

A Medical Scientist Program exists for the support of individuals interested in coordinated graduate school-medical school study leading to both the M.D. and Ph.D. degrees. Students entering this highly competitive program are given an opportunity to pursue a flexible, combined course of study and research. Early inquiry regarding this program is urged since admission to the Graduate School and to the School of Medicine must be secured independently.

### Research Facilities

Offices and laboratories are located in the College of Engineering and the School of Medicine. Students have access to the University of Washington Medical Center, vivarium, primate center, computer center, and libraries, as well as to all engineering and health sciences departments and facilities. A wide range of technologies and virtually all aspects of biomedical science are available. State-of-the-art facilities are available to support both research and instructional activities. Computer resources are especially abundant, and their use is an integral part of most laboratory and course work.

### Admission Requirements

Applicants for the M.S. degree should have a baccalaureate degree in a science or the equivalent; applicants for the M.S.E. degree should have a baccalaureate degree in engineering or the equivalent. Preparation for both programs must include, at a minimum, one year each of calculus, physics, and chemistry. Applicants to the Ph.D. program should have strong academic credentials, a bachelor's degree in science or engineering, and demonstrated potential for advanced study. Admission to the program is highly selective.

In addition to completing the application requirements for the Graduate School, an applicant should also forward the following items to the Graduate Program Coordinator, Center for Bioengineering, WD-12, University of Washington, Seattle, WA 98195:

- 1) A one- or two-page written statement outlining academic and professional goals;
- 2) Official copies of Graduate Record Examination scores for the general tests;
- 3) Three letters of recommendation from persons acquainted with the applicant's background (no specific form required).

### Financial Aid

Financial aid is available to qualified graduate students in the form of traineeships, fellowships, and assistantships. Funding is derived from federal research and training programs, the Graduate School Research Fund, and programs sponsored by private agencies. Information concerning these fellowships is available from the Center for Bioengineering.

## Faculty

### Director

Lee L. Huntsman

### Professors

Afromowitz, Martin A.,\* 1975, ‡(Electrical Engineering), M.S., 1966; Ph.D., 1969, Columbia; optical fiber sensors and biomedical instrumentation.

Bassingthwaite, James B.,\* 1975, (Radiology, Quantitative Ecology and Resource Management) M.D., 1955, Toronto; Ph.D., 1964, Minnesota; cardiovascular mass

transport and ion exchanges, simulation analysis of integrated systems, PET imaging, cardiac metabolism, fractal physiology.

Bruckner, Adam P.,\* 1972, (Research), ‡(Aeronautics and Astronautics), M.A., 1968, Ph.D., 1972, Princeton; ocular holography, optical biosensors, scattering of ultrashort light pulses in dense biological media, laser effects on biological tissue.

Callis, James B.,\* 1972, ‡(Chemistry), Ph.D., 1970, Washington; instrumentation development, process analytical chemistry, noninvasive clinical chemistry.

Cheung, Peter W.,\* 1984, (Electrical Engineering), ‡ M.S., 1969, Puget Sound; Ph.D., 1973, Washington; semiconductor materials and devices, microcircuit design, processing and fabrication, microprocessors for clinical applications.

Daly, Colin H.,\* 1967, ‡(Mechanical Engineering), Ph.D., 1966, Strathclyde (Scotland); bioengineering materials.

Foster, David M.,\* 1979, (Research), M.Sc., 1965, San Diego State; Ph.D., 1969, British Columbia; biomathematics and modeling methodology, simulation analysis, lipid and lipoprotein metabolism, gluconeogenesis.

Guy, Arthur W.,\* 1965, (Emeritus), M.S.E.E., 1957, Ph.D., 1966, Washington; biological effects and medical applications of electromagnetic fields.

Haralick, Robert M.,\* 1986, ‡(Electrical Engineering), M.S.E., 1967, Ph.D., 1969, Kansas; computer vision, applications to medical imaging.

Heideger, William J.,\* 1957, ‡(Chemical Engineering), M.S.E., 1956, Ph.D., 1959, Princeton; biomedical transport phenomena.

Hlastala, Michael P.,\* 1970, ‡(Medicine, Physiology and Biophysics), Ph.D., 1969, State University of New York (Buffalo); respiratory physiology, inert gas analysis of respiratory function.

Hoffman, Allan S.,\* 1970, (Chemical Engineering), ‡ M.S.Ch.E., 1955, Sc.D., 1957, Massachusetts Institute of Technology; synthesis, characterization, and biological interaction of biomaterials, polymers, immobilized biomolecules, and cells.

Hood, Leroy E.,\* 1992, (Molecular Biotechnology, Immunology), ‡ M.D., 1964, Johns Hopkins; Ph.D., 1968, California Institute of Technology; T cell receptor/MHC recognition; tolerance, autoimmunity, and genetic predispositions; T cell development; genome sequencing of T cell receptor loci.

Horbett, Thomas A.,\* 1973, (Chemical Engineering), ‡ Ph.D., 1970, Washington; interactions of cells and proteins with foreign materials, insulin-delivery devices, glucose sensors.

Huntsman, Lee L.,\* 1968, Ph.D., 1968, Pennsylvania; mechanics of heart and heart muscle, cardiovascular system assessment, new measurement techniques.

Johnson, Dale E.,\* 1976, M.S., 1967, Ph.D., 1971, Chicago; biological microanalysis, development of analytical electron microscopy.

Kim, Yongmin,\* 1982, ‡(Electrical Engineering), M.S., 1979, Ph.D., 1982, Wisconsin (Madison); computer architecture, parallel processing, digital imaging network, advanced imaging and graphics workstations, image processing, biomedical instrumentation, microprocessor applications, modeling.

Kushmerick, Martin J.,\* 1988, ‡(Radiology, Physiology and Biophysics), M.D., 1963, Ph.D., 1966, Pennsylvania; magnetic resonance imaging, muscle biophysics.

Lewellen, Thomas K.,\* 1972, ‡(Radiology), Ph.D., 1972, Washington; medical imaging physics.

Martin, Roy W.,\* 1975, (Research), (Anesthesiology), ‡ M.S., 1970, Southern California; Ph.D., 1975, Washington; bioinstrumentation, ultrasonic Doppler, echo, tissue characterization, signal processing, 3D ultrasonic imaging and reconstruction.

Matsen, Frederick A. III,\* 1974, ‡(Orthopaedics), M.D., 1968, Baylor; shoulder and elbow kinematics, pathobiology.

Moritz, William E.,\* 1973, ‡(Electrical Engineering), M.S., 1966, Ph.D., 1969, Stanford; bioinstrumentation.

Nelson, James A.\* 1986, ‡(Radiology), M.D., 1965, Harvard; MRI contrast agents: development and testing; interventional radiography: development, design, testing new devices and applications.

Pollack, Gerald H.\* 1968, Ph.D., 1968, Pennsylvania; muscular contraction, cardiac dynamics, optical image processing.

Pollack, Sylvia B.\* 1973, (Research), ‡(Biological Structure), Ph.D., 1967, Pennsylvania; cell biology, tumors, metastasis.

Ratner, Buddy D.\* 1972, (Chemical Engineering), ‡ Ph.D., 1972, Polytechnic Institute of Brooklyn; synthesis and characterization of polymeric biomaterials for cardiovascular, ophthalmologic, and drug-delivery applications, surface analysis by ESCA, SIMS, STM, FTIR-ATR, drug-delivery systems.

Rushmer, Robert F.\* 1947, (Emeritus), M.D., 1939, Chicago; biomedical instrumentation, health-care systems.

Schwartz, Stephen M.\* 1974, ‡(Pathology), M.D., 1967, Boston; Ph.D., 1973, Washington; mechanisms controlling cell growth in vessel wall, abnormal growth control role in atherosclerosis and hypertension, image analysis.

Soma, Mani,\* 1982, ‡(Electrical Engineering), M.S.E.E., 1977, Ph.D., 1980, Stanford; cochlear prosthesis, VLSI.

Spelman, Francis A.\* 1977, M.S.E.E., 1968, Ph.D., 1975, Washington; local control of peripheral circulation, biophysics of the implanted cochlea, bioinstrumentation for primate research.

Verdugo, Pedro J.\* 1975, (Biological Structure, Oral Biology), M.S., 1958, M.D., 1965, State University of Chile; microrheology and control of ciliary and flagellar motion, polymer physics of mucin secretion, instrumentation in dynamic laser scattering spectroscopy.

#### Associate Professors

Bashein, Gerard,\* 1978, ‡(Anesthesiology), M.S., 1964, Ph.D., 1969, Carnegie-Mellon; M.D., 1974, New Mexico; automation techniques in anesthesia, transesophageal ultrasonic cardiac assessment for operating-room monitoring.

Beach, Kirk W.\* 1976, (Research), ‡(Surgery), M.S.Ch.E., 1968, Ph.D., 1971, California (Berkeley); M.D., 1976, Washington; diagnosis and treatment of vascular diseases.

Graham, Michael M.\* 1980, ‡(Radiology, Radiation Oncology), M.A., 1969, Ph.D., 1973, California (Berkeley); M.D., 1976, California (San Francisco); nuclear medicine.

Kalet, Ira J.\* 1982, ‡(Radiation Oncology), M.A., 1967, Ph.D., 1968, Princeton; particle physics.

Lai, Henry C.\* 1981, (Research), ‡(Pharmacology), Ph.D., 1978, Washington; cellular effects of electromagnetic fields.

Patton, Jesse C.\* 1989, (Research), (Electrical Engineering), Ph.D., 1972, West Virginia (Morgantown); microsensors for detection of chemical and biological entities, solid-phase chemical synthesis.

Richards, Todd L.\* 1985, ‡(Radiology), Ph.D., 1984, California (Berkeley); nuclear magnetic resonance imaging, spectroscopy of the brain in demyelinating diseases.

Sidles, John A.\* 1984, ‡(Orthopaedics), Ph.D., 1983, Washington; orthopaedic biomechanics.

Tencer, Allan C.\* 1988, ‡(Orthopaedics), Ph.D., 1981, McGill (Canada); orthopaedic biomechanics.

Yager, Paul,\* 1987, (Chemistry), Ph.D., 1980, Oregon; physical chemistry and applications of biomembranes.

#### Assistant Professors

Barrett, P. Hugh, 1991, (Research), Ph.D., 1989, Australia; biomathematics and modeling methodology, simulation analysis, lipid and lipoprotein metabolism.

Burns, David H.\* 1985, (Research), Ph.D., 1984, Washington; biomedical spectroscopy, multidimensional optical microscopy, multiwavelength analysis.

Goodsitt, Mitchell M.\* 1986, ‡(Radiology), M.S., 1976, Ph.D., 1982, Wisconsin (Madison); medical physics, bone mineral analysis, body composition, computed tomography, ultrasound.

Kroll, Keith,\* 1991, Ph.D., 1983, Washington; cardiac metabolism, coronary transport.

Kunzelman, Karyn S.\* 1991, (Research), ‡(Surgery), Ph.D., 1991, Texas; finite element analysis, mechanical behavior analysis of biological tissue.

Lybrand, Terry P.\* 1990, Ph.D., 1984, California (San Francisco); molecular modeling.

Pagliari, Leonard J.\* 1991, Ph.D., 1986, Wesleyan; metabolic organization in living cells, microscopic imaging and photobleaching, *in vivo* enzymology, high pressure cell biology.

Ramon, Ceon, 1992, Ph.D., 1973, Utah; bioelectromagnetics, biomagnetic tomography.

Rowberg, Alan H.\* 1987, ‡(Radiology), M.D., 1970, Washington; computers in medical imaging.

Sanders, Joan E.\* 1992, M.S.M.E., 1985, Ph.D., 1991, Washington; tissue mechanics, external prosthetics, novel measurement techniques, tissue adaptation to mechanical stress.

Stayton, Patrick S.\* 1992, Ph.D., 1989, Illinois; protein engineering, design proteins for biosensors.

Viney, Christopher,\* 1990, Ph.D., 1983, Cambridge (United Kingdom); polymeric, liquid crystalline, and biological materials, microstructure-property relationships, phase transformations.

Vogel, Viola,\* 1990, Ph.D., 1987, Frankfurt (Germany); molecular assemblies, surface modification, Langmuir-Blodgett technique, microscopy, nonlinear optics.

## Course Descriptions

### Courses for Undergraduates

**BIOEN 299 Introduction to Bioengineering (1) Asp Verdugo** Lectures on the various aspects of bioengineering; orientation in bioengineering studies and practice. Credit/no credit only.

**BIOEN 401 Engineering Analysis of Cell Function (3) A Verdugo** For engineers with no previous experience in the biological sciences, this course introduces the fundamentals of cell biology in an engineering-oriented framework. Includes structure, energetics, information processing, transduction, and biological engines.

**BIOEN 436 Medical Instrumentation (4) Sp Spelman** Introduction to the application of instrumentation to medicine. Topics include transducers, signal-conditioning amplifiers, electrodes and electrochemistry, ultrasound systems, electric safety, and the design of clinical electronics. Laboratory included. For juniors, seniors, and first-year graduate students who are preparing for careers in bioengineering, both research and industrial. Joint with E E 436. Prerequisite: some knowledge of human physiology and electronics or instrumentation or permission of instructor. Recommended: 535, E E 433.

**BIOEN 467 Biochemical Engineering (3)** Application of basic chemical engineering principles to biochemical and biological process industries such as fermentation, enzyme technology, and biological waste treatment. Rapid overview of relevant microbiology, biochemistry, and molecular genetics. Design and analysis of biological reactors and product recovery operations. Joint with CH E 467. Prerequisites: CH E 340, organic chemistry; recommended: CH E 465.

**BIOEN 490 Engineering Materials for Biomedical Applications (3) Hoffman** Combined application of the principles of physical chemistry, biochemistry, materials engineering, mass transfer, and fluid mechanics to biomedical problems. Case studies include considerations of the selection of materials, design, and the operation of instruments, components of, or entire, artificial organs (heart, kidney, lung) and artificial structural

elements (bone, teeth, skin), all for use in contact with body fluids. Joint with CH E 490. Prerequisite: organic chemistry or permission of instructor.

**BIOEN 491 Controlled-Release Systems: Principles and Applications (3) Hoffman** Mechanisms for controlled release of active agents and the development of useful systems for this purpose. Release mechanisms include diffusive, convective, or erosive driving forces. Applications to the biomedical, agricultural, forestry, and oceanography fields. Some special case studies covered in detail. Joint with CH E 491. Prerequisite: permission of instructor. (Offered odd-numbered years.)

**BIOEN 492 Surface Analysis (3)** Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials, science wear, and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger): ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Joint with CH E 458.

**BIOEN 499 Special Projects (2-6, max. 6) AWSpS** Individual undergraduate bioengineering projects under the supervision of an instructor. In addition, classes on selected topics of current interests as announced. Prerequisite: permission of instructor. Entry Code required.

### Courses for Graduates Only

**BIOEN 508 Physical Aspects of Medical Imaging (4)** Quantitative physical principles of medical imaging are presented for electromagnetic and sonic radiation. Methods of image formation and analysis are discussed for conventional film radiography, CT, DSA, PET, B-mode ultrasound and Doppler ultrasound. Joint with RADGY and RAD S 508.

**BIOEN 510 Bioengineering Seminars (2-1, max. 3)** Topics of current bioengineering interests presented by resident and visiting faculty members and students. Graduate students actively involved in bioengineering research are eligible to enroll for credit and can be expected to attend regularly, participate in discussions, and make presentations.

**BIOEN 511 Biomaterials Seminar (1) Hoffman, Horbett, Ratner** Presentation of student research results. Credit/no credit only. Prerequisite: permission of instructor.

**BIOEN 512 Biomechanics Seminar (1)** Designed to expose students to current research topics in the area of biomechanics and permit them the opportunity to present their work for discussion. Subjects include presentations of on-going laboratory research, as well as related topics, journal article review, and summaries of national meetings.

**BIOEN 515 Introduction to Clinical Medicine for Engineers (3)** Introduction to concepts and methods used in clinical medicine for students with engineering and physical science backgrounds. How and where engineering principles and methodologies can be applied to health-care problems. Prerequisite: basic physiology or permission of instructor.

**BIOEN 531, 532, 533 Electron Microscopy (1-5, 1-5, 1-5) Luft** Theoretical and applied aspects of microscopy in biology, including newer methods. Light microscopy and electron optics, the electron microscope in detail, and methods for preparation of biological specimens. Joint with B STR 531, 532, 533. Credit/no credit only. Prerequisite: permission of instructor. (Offered alternate years, beginning with even-numbered Autumn quarters.)

**BIOEN 534 Introduction to Biomedical Instrumentation (Analog) (4) Spelman** Techniques of biological systems analysis using Fourier and Laplace transforms. Electronic circuit analysis techniques applied to biological problems. Operational amplifiers as interfaces to transducers and as signal processors. Computer-aided design used in both homework and weekly laboratory. Prerequisites: MATH 307, PHYS 121-123, or equivalents.

**BIOEN 535 Introduction to Biomedical Instrumentation (Digital) (4)** *Martin* Instrumentation systems (power supplies, transducers, amplifiers, recording and display devices); techniques of signal/noise enhancement (grounding, shielding, averaging); digital logic and instrumentation; A/D and D/A conversion; use of laboratory computers and laboratory experience in these areas. Biomedical applications. Prerequisite: permission of instructor.

**BIOEN 540 Problem Solving in Bioengineering (3)** *Foster* Introduction to techniques of mathematical modeling. How to use computer methods to solve selected bioengineering problems in data analysis and modeling, and use models to test hypotheses. Hands-on computer experience. Prerequisite: permission of instructor. (Offered even-numbered years.)

**BIOEN 550 Mass Transport and Exchange in Biological Systems (3)** *Bassingthwaite* Review of basic mechanisms of transport; transport through vascular system and blood-tissue exchange processes in organs; integrated systems analysis of closed systems and applications to physiological regulation, medical imaging, and pharmacokinetics. Prerequisites: calculus, introduction to differential equations; cardiovascular physiology; E E network analysis or systems analysis, chemical engineering transport.

**BIOEN 555 Introduction to Biomechanics (3)** *Daly, Luft, Pollack* Mechanical properties of biological tissues, with emphasis on the underlying histological bases. Bones, joints, cartilage, blood vessels, connective tissue, muscle, heart. Many laboratory sessions. (Offered odd-numbered years.)

**BIOEN 560 Ultrasound in Bioengineering (4)** *Martin* Fundamentals of ultrasonic generation, formation, reception, and treatment of absorption, scattering, and transmission. Conventional and new methodology. (A, B, T-M mode, imaging, Doppler, tissue characterization, and nonlinear effects.) Credit/no credit only. Prerequisite: ME 525 or EE 525 for nonbioengineering students or permission of instructor.

**BIOEN 561 Biomedical Optics (4)** *Burns* Advanced theories of optical and spectroscopic measurement with emphasis on biomedical laser applications. Laser principles, instrumentation, and current practice in various biomedical uses, covering such areas as medicine, surgery, and biology. Prerequisite: E E 381 or permission of instructor.

**BIOEN 562 Bioelectromagnetics (4)** Interaction of radio-frequency electromagnetic fields with biological systems: history, quantities and units, theoretical analysis, instrumentation and measurements, biological effects, medical applications, including cancer detection and therapy, major energy sources, public controversies, public and occupational health protection, international and national safety standards. Prerequisite: E E 381, or permission of instructor.

**BIOEN 568 Image-Processing Computer Systems (4)** *Haralick, Kim* Components of digital processing computer systems. Two-dimensional filtering and optimal filter design as well as basic image-processing operations. Selected advanced image-processing topics introduced. Individual student project. Joint with E E 568. Prerequisite: permission of instructor.

**BIOEN 590 Advanced Topics in Biomaterials (3)** Major, controversial issues in application of synthetic materials to medical problems. Blood compatibility, bioadhesion, intraocular lenses, contact lenses, polyurethanes, biodegradation, protein adsorption, corrosion, bone fixation, new materials, artificial heart, medical device regulation. Joint with CH E 590. Prerequisite: 490 or CH E 490.

**BIOEN 592 Surface Analysis (3)** *Ratner* Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials science, wear and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger); ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Joint with CH E 558.

**BIOEN 599 Special Topics in Bioengineering (1-6, max. 15)** *AWSPs* Offered at a graduate level periodically by faculty members within the Center for Bioengineering; concerns areas of research activities with current and topical interest to bioengineers. Prerequisites: undergraduate or graduate courses (or equivalent) determined individually for each special topic. Entry code required.

**BIOEN 600 Independent Study or Research (\*)** *AWSPs* Credit/no credit only.

**BIOEN 700 Master's Thesis (\*)** *AWSPs* Credit/no credit only.

**BIOEN 800 Doctoral Dissertation (\*)** *AWSPs* Credit/no credit only.

## Interdisciplinary Molecular and Cellular Biology

### Graduate Program

The University of Washington offers an interdisciplinary program in molecular and cellular biology leading to a Ph.D. degree in the respective sponsoring departments. Approximately 160 faculty members are drawn from the departments of Biochemistry, Biological Structure, Botany, Environmental Health, Genetics, Immunology, Microbiology, Pathobiology, Pathology, Physiology and Biophysics, Pharmacology, and Zoology, and the Center for Bioengineering. The UW faculty at Fred Hutchinson Cancer Research Center participate through their departmental affiliations.

The goals of the program are to provide students with a sound background in molecular and cellular biology and broad access to research expertise of faculty members and laboratories involved in research in this area. The program includes a three-quarter core course, a two-quarter literature review course, three or more quarter-long laboratory rotations, advanced courses in molecular and cellular biology (elected), and a series of informal workshops and seminars. Critical evaluation of pertinent literature, exposure to current research methods, and creative thinking through independent research are stressed. Students are expected to begin active research in their first year, through their laboratory rotations.

The faculty members who participate in the program are leaders in developing and using molecular and cellular biological approaches to the understanding of basic biological processes. A brochure of participating faculty members and their specific research interests is mailed to students who inquire about the program. In general, the faculty's research interests encompass both prokaryotic and eukaryotic (animal and plant) organisms and include such areas as cell structure; cell-cell interactions; cell signaling and cellular messages; cell-matrix interactions; cell, tissue, and organ development and differentiation; membrane biogenesis and cytoskeletal structure and function; chromosome structure and function; protein synthesis and compartmentalization; gene structure and regulation; and the mechanisms by which normal processes are altered in disease states. Such techniques as recombinant DNA analysis, gene transfer, monoclonal antibody production and use, peptide and oligonucleotide synthesis, and microinjection are used in conjunction with the classical methods of biochemistry, microbiology, genetics, cell culture, and light and electron microscopy. A wide variety of research facilities is available to program participants.

#### Financial Aid

The program offers a first-year stipend plus tuition. Students with satisfactory academic progress can anticipate funding for the duration of their programs through their home departments.

#### Application Process

Students who have emphasized the biological or physical sciences in their undergraduate careers are encouraged to apply. Required application materials include official copies of all college and/or university transcripts, GRE scores (general and advanced) and three letters of recommendation. Students are strongly advised to request letters from individuals who can knowledgeably assess their potential for a research career. The application deadline is January 2, and students enter the program in autumn quarter.

### SCHOOL OF MEDICINE

#### Biochemistry

##### Professors

Bornstein, Paul,\* 1967, (Medicine),† M.D., 1958, New York; structure, function, and regulation of synthesis of connective tissue macromolecules; role of connective tissue in morphogenesis and development; disordered macromolecular structure and function in heredity and acquired connective tissue disorders.

Dale, Beverly A.,\* 1972, ‡(Medicine, Periodontics, Oral Biology), Ph.D., 1968, Michigan; differentiation of specific proteins in epidermis and oral epithelia.

Eisenman, Robert N., 1976, (Affiliate), Ph.D., 1971, Chicago; function of nuclear-acting oncogenes, control of retrovirus replication.

Eyre, David R., 1985, ‡(Orthopaedics), Ph.D., 1969, Leeds (England); connective tissue biochemistry, inborn skeletal diseases and cartilage pathology.

Glomset, John A.,\* 1960, (Medicine),† M.D., 1960, Uppsala (Sweden); structure and function of cell membranes, mechanism of receptor-mediated stimulus transduction, regulation of cell proliferation and differentiation.

Gordon, Milton P.,\* 1959, (Microbiology), Ph.D., 1953, Illinois; molecular basis of plant tumors, genetic engineering of plants.

Hauschka, Stephen D.,\* 1967, (Zoology), Ph.D., 1966, Johns Hopkins; mechanism of embryonic cellular interactions, especially sequential biochemical changes accompanying muscle differentiation; growth factor regulation and gene expression.

Morris, David R.,\* 1966, Ph.D., 1964, Illinois; control of eukaryotic cell growth with emphasis on T-lymphocytes, regulation of proliferation-specific gene expression, biosynthesis and biological function of polyamines.

Palmiter, Richard D.,\* 1974, Ph.D., 1968, Stanford; molecular endocrinology, regulation of gene expression in transgenic mice.

Parson, William W.,\* 1967, Ph.D., 1965, Western Reserve; bioenergetics, with particular emphasis on photosynthesis.

Petra, Philip H.,\* 1966, (Obstetrics and Gynecology),† M.S., 1962, Ph.D., 1966, Tulane; molecular basis of steroid-protein interaction, chemical structure and physiological role of the plasma sex steroid-binding protein SBP.

Reid, Brian R.,\* 1980, (Chemistry),† M.A., 1960, Cambridge (St. Johns); Ph.D., 1965, California (Berkeley); nucleic acid-protein recognition processes in the genetic code; analysis of transfer RNA structure, function, and dynamics using high-resolution nuclear magnetic resonance.

Saari, John C.,\* 1974, (Ophthalmology),† M.S., 1963, Minnesota; Ph.D., 1970, Washington; metabolism and transport of vitamin A, structure and function of photoreceptor membranes.

Teller, David C.,\* 1965, Ph.D., 1964, California (Berkeley); physical chemistry of macromolecules, association reactions of proteins.

Walsh, Kenneth A.,\* 1958, M.S., 1953, Purdue; Ph.D., 1959, Toronto; amino acid sequence; function, evolution, and regulation of proteins.

Young, Elton T.,\* 1969, (Genetics), Ph.D., 1967, California Institute of Technology; regulation of gene activity and protein transport into mitochondria in the yeast *Saccharomyces cerevisiae*.

#### Associate Professors

Gelb, Michael H.,\* 1985, ‡(Chemistry), Ph.D., 1982, Yale; molecular enzymology, selective enzyme inhibitors of pharmacological interest, lipid biochemistry.

Herriott, Jon R.,\* 1969, Ph.D., 1967, Johns Hopkins; X-ray crystallography of macromolecules, protein structure and function.

Hurley, James B.,\* 1985, Ph.D., 1979, Illinois (Urbana); molecular biology of guanyl nucleotide binding proteins involved in signal transduction in eukaryotic cells.

Klevit, Rachel E.,\* 1986, D.Phil., 1981, Oxford (England); protein structure and changes in conformation related to function as studied by magnetic resonance spectroscopy.

Sandell, Linda J., 1987, ‡(Orthopaedics), M.S., 1971, Denver; Ph.D., 1980, Northwestern; biochemistry and molecular biology of connective tissue extracellular matrix molecules.

#### Assistant Professors

Cooper, Jonathan C.,\* 1987, (Affiliate), Ph.D., 1976, Warwick (Coventry); cellular regulation by tyrosine kinases.

Davis, Trisha N.,\* 1987, Ph.D., 1983, Yale; function of calcium-binding proteins in cell growth.

Kimelman, David,\* 1989, Ph.D., 1985, Harvard; molecular biology of early development.

Roberts, James, 1989, (Affiliate), M.D., Ph.D., 1984, Columbia; regulation of DNA replication in mammalian cells.

### Bioengineering

#### Professors

Bassingthwaite, James B.,\* 1975, (Radiology, Quantitative Ecology and Resource Management), M.D., 1955, Toronto; Ph.D., 1964, Minnesota; cardiovascular mass transport and ion exchanges, simulation analysis of integrated systems.

Hoffman, Allan S.,\* 1973, (Chemical Engineering), † M.S.Ch.E., 1955, Sc.D., 1957, Massachusetts Institute of Technology; synthesis, characterization, and biological interaction of biomaterials, mechanics of neural tissues, applied polymers.

Horbett, Thomas A.,\* 1973, (Chemical Engineering), † Ph.D., 1970, Washington; interactions of cells and proteins with foreign materials, insulin-delivery devices.

Pollack, Gerald H.,\* 1968, Ph.D., 1968, Pennsylvania; molecular mechanisms of muscular contraction.

Ratner, Buddy D.,\* 1972, (Chemical Engineering), † Ph.D., 1972, Polytechnic Institute of Brooklyn; synthesis and characterization of polymeric biomaterials for cardiovascular, ophthalmologic, and drug-delivery applications; surface analysis by ESCA, drug-delivery systems, silane treatment of surfaces.

Verdugo, Pedro J.,\* 1975, (Biological Structure, Oral Biology), † M.S., 1958, M.D., 1965, State University of Chile; microrheology and control of ciliary and flagellar motion, biomechanics of cervical and respiratory mucus, instrumentation in laser scattering.

#### Assistant Professor

Pagliari, Leonard J.,\* 1991, Ph.D., 1986, Wesleyan; metabolic organization in living cells, microscopic imaging and photobleaching, *in vivo* enzymology, high pressure cell biology.

### Biological Structure

#### Professors

Adman, Elinor T.,\* 1971, (Research), M.A., 1964, Ph.D., 1967, Brandeis; structure of blue copper proteins, iron sulfur proteins, electron transport, molecular structure.

Clark, John I.,\* 1982, Ph.D., 1974, Washington; structural basis of cataracts, applications of computer technology to biochemical education, cellular and developmental biology, morphometrics and computer modeling.

Holbrook, Karen A.,\* 1972, (Medicine), M.S., 1966, Wisconsin; Ph.D., 1972, Washington; structure, function, and development of human skin in normal fetuses and as modified by inherited skin disease; cellular and developmental biology.

Rosse, Cornelius,\* 1967, M.B.Ch.B., 1964, M.D., 1974, D.Sc., 1983, Bristol (England); differentiation of hematopoietic cells and lymphocytes, experimental immunology and hemopoiesis.

Sage, E. Helene,\* 1980, Ph.D., 1977, Utah; vascular biology, connective tissue proteins, extracellular matrix, cellular and developmental biology.

#### Associate Professors

Lee, Minako Y.,\* 1977, (Research), (Medicine, Oral Biology), M.D., 1976, Tokyo Women's College (Japan); cell differentiation and production in the hematopoietic system, experimental immunology and hemopoiesis.

Nameroff, Mark A.,\* 1970, M.D., 1965, Ph.D., 1966, Pennsylvania; cell differentiation of skeletal muscle, cellular and developmental biology.

Prothero, John W.,\* 1965, Ph.D., 1960, Western Ontario; morphometrics and computer modeling in diverse biological systems.

Reh, Thomas A.,\* 1989, Ph.D., 1981; Wisconsin; neurobiology, neuroanatomy.

Stenkamp, Ronald E.,\* 1981, M.Sc., 1971, Ph.D., 1975, Washington; crystallographic and structure analysis of macromolecules, molecular dynamics calculations, computer graphics related to macromolecular structure, molecular structure, morphometrics and computer modeling.

Yablonka-Reuveni, Zipora,\* 1982, (Research), Ph.D., 1979, Windsor; stem cells in skeletal muscle, cellular and developmental biology.

Yoshimura, Fayth K.,\* 1980, (Research), Ph.D., 1972, Yale; retroviral transformation of hematopoietic cells, experimental immunology and hemopoiesis.

### Immunology

#### Professors

Bevan, Michael J.,\* 1990, Ph.D., 1972, Nat'l Inst. for Med. Res. (London); Class I MHC restricted antigen presentation to cytotoxic T cells; selection of the T cell receptor repertoire.

Clark, Edward A.,\* 1984, ‡(Microbiology), Ph.D., 1977, California (Los Angeles); molecular and cellular immunology, emphasizing lymphocyte surface molecules and immunologic disease.

Greenberg, Philip D.,\* 1978, (Medicine), † (Microbiology), M.D., 1971, State University of New York (Downstate); oncology, cellular and molecular immunology; regulation and expression of T cell responses to viral and tumor antigens.

Perlmutter, Roger M.,\* 1984, (Biochemistry, Medicine), † M.D./Ph.D., 1979, Washington (St.Louis); genetics of immune recognition, chromosomal translocations and oncogenesis.

Pious, Donald A.,\* 1964, (Pediatrics), † (Genetics), M.D., 1956, Pennsylvania; developmental biology, HLA molecules, regulation of HAL transcription, antigen processing, genetics and pathogenesis of insulin dependent diabetes and other autoimmune diseases.

Wilson, Christopher B.,\* 1979, (Pediatrics), † M.D., 1972, California (Los Angeles); infectious disease, expression of lymphokines by T lymphocytes, macrophage activation.

#### Associate Professor

Farr, Andrew G.,\* 1982, ‡(Biological Structure), Ph.D., 1975, Chicago; cell interactions governing lymphocyte production and function, experimental immunology and hemopoiesis.

#### Assistant Professor

Fink, Pamela J., 1990, Ph.D., 1981, Massachusetts Institute of Technology; T cell differentiation and molecular analysis of murine T cell receptor repertoire.

### Microbiology

#### Professors

Champoux, James J.,\* 1972, Ph.D., 1970, Stanford; DNA replication, tumor virology.

Linial, Maxine L.,\* 1974, (Affiliate), Ph.D. 1970, Tufts; retroviral-host cell interactions, retroviral mediated transfection.

Nester, Eugene W.,\* 1962, Ph.D., 1959, Case Western Reserve; bacteria-plant interactions, plant molecular biology.

Staley, James T.,\* 1971, (Environmental Studies), M.S., 1963, Ohio; Ph.D., 1967, California (Davis); general microbiology; biology of budding, prosthecate, and gas-vacuolated bacteria; aquatic microbial ecology.

#### Associate Professors

Katze, Michael G.,\* 1987, M.S. 1978, Ph.D., 1980, Hahnemann Medical; regulation of viral gene expression at the translational level.

Leigh, John A.,\* 1985, M.S., 1979, Ph.D., 1983, Illinois; bacterial physiology, genetics, and biochemistry; bacteria-plant interactions.

Lory, Stephen,\* 1984, Ph.D., 1980, California (Los Angeles); biochemistry and genetics of microbial virulence factors.

Moseley, Stephen L.,\* 1985, (Pediatrics), M.S., 1978, Catholic University of America; Ph.D., 1981, Washington; molecular basis of pathogenesis in *E. coli* diarrhea.

Wong, Timothy Chee-Hing,\* 1983, Ph.D., 1979, Texas (Dallas); pathogenesis of slow viruses, tumor virology.

#### Assistant Professors

Hughes, Kelly T.,\* 1989, Ph.D., 1984; Utah; genetics, gene regulation, microbial physiology and metabolism.

Overbaugh, Julie M.,\* 1988, (Research), Ph.D., 1983, Colorado; retroviral pathogenesis.

### Pathology

#### Professors

Benditt, Earl P.,\* 1957, (Emeritus), M.D., 1941, Harvard; atherosclerosis, diabetes mellitus, amyloidosis, inflammation.

Byers, Peter H.,\* 1977, (Medicine), † M.D., 1969, Case Western Reserve; extracellular matrix synthesis, genetic disorders of collagen metabolism, secretion of collagen.

Galloway, Denise A.,\* 1982, (Research), Ph.D., 1976, City (New York); herpes viruses transformation and latency.

Groudine, Mark T.,\* 1979, ‡(Radiation Oncology), M.D., 1975, Ph.D., 1976, Pennsylvania; cellular differentiation.

Loeb, Lawrence A.,\* 1978, (Biochemistry), M.D., 1961, New York; Ph.D., 1967, California (Berkeley); fidelity of DNA replication, molecular basis of mutagenesis, and chemical carcinogenesis.

Martin, George M.,\* 1957, (Genetics), M.D., 1953, Washington; somatic-cell genetics, pathobiology of aging.

McDougall, James K.,\* 1979, (Research), M.Sc., 1970, Ph.D., 1971, Birmingham (England); virology, neoplasia.

Narayanan, A. Sampath,\* 1971, (Research), M.Sc., 1963, Ph.D., 1967, Madras (India); connective tissue, acquired diseases.

Neiman, Paul E.,\* 1968, (Medicine), M.D., 1964, Washington; oncology, leukemia, viro-oncogenesis.

Norwood, Thomas H.,\* 1974, M.D., 1968, Maryland; somatic cell genetics, pathobiology of aging, mitotic cell cycle regulation.

Ross, Russell,\* 1962, (Biochemistry), D.D.S., 1955, Columbia; Ph.D., 1963, Washington; atherosclerosis, growth regulatory molecules, inflammation.

Schwartz, Stephen M.,\* 1974, (Bioengineering), M.D., 1967, Boston; Ph.D., 1973, Washington; vascular cell biology, atherosclerosis, hypertension, molecular development biology.

Smith, Gerald R.,\* 1983, (Affiliate), Ph.D., 1970, Massachusetts Institute of Technology; molecular biology of genetic recombination and regulation of gene expression.

Wight, Thomas N.,\* 1978, M.S., 1968, Ph.D., 1972, New Hampshire (Durham); connective tissue biology and pathology, proteoglycan metabolism.

Wolf, Norman S.,\* 1968, (Comparative Medicine), D.V.M., 1953, Kansas State; Ph.D., 1960, Northwestern; hematopoiesis control, stem-cell biology, tumor biology.

#### Associate Professors

Bowen-Pope, Daniel F.,\* 1982, Ph.D., 1979, California (Berkeley); developmental biology, growth factors and receptors.

Disteche, Christine,\* 1980, Ph.D., 1976, Liege (Belgium); molecular genetics, human and mouse cytogenetics.

Miller, Arthur D.,\* 1984, (Affiliate), Ph.D., 1982, Stanford; gene transfer for treatment of human genetic disease and retrovirus biology.

Monnat, Raymond J.,\* 1982, M.D., 1976, Chicago; somatic mutation, somatic cell and molecular genetics.

Rabinovitch, Peter S.,\* 1981, M.D., 1979, Ph.D., 1980, Washington; cell cycle alterations in cellular aging and neoplasia, flow cytometry.

#### Pharmacology

##### Professors

Beavo, Joseph A.,\* 1977, Ph.D., 1970, Vanderbilt; mechanism of action of cyclic nucleotides, roles of cyclic nucleotide phosphodiesterase isozymes in regulating cyclic nucleotide action and metabolism.

Catterall, William A.,\* 1977, Ph.D., 1972, Johns Hopkins; molecular basis of electrical excitability; biochemical studies of purified components of electrically excitable membranes; nerve and muscle cells in culture; molecular biology of ion channels.

Dorsa, Daniel M.,\* 1979, (Medicine),† (Psychiatry and Behavioral Sciences), Ph.D., 1977, California (Davis); neuropeptide pharmacology and neurochemistry with special emphasis on vasopressin and endorphinergic neuronal systems of the brain.

Juchau, Mont R.,\* 1969, M.S., 1963, Washington State; Ph.D., 1966, Iowa; developmental pharmacology, drug metabolism.

Krebs, Edwin G.,\* 1948, (Emeritus), (Biochemistry),† M.D., 1943, Washington (St. Louis); regulation of cellular functions by protein phosphorylation-dephosphorylation, mechanism of action of growth factor receptor protein kinases; protein kinase structure-function relations.

McKnight, G. Stanley,\* 1979, Ph.D., 1976, Stanford; molecular events that modulate the transcription of specific genes, protein kinase gene function in transfected cells and transgenic mice.

Nathanson, Neil M.,\* 1979, Ph.D., 1975, Brandeis; molecular studies of neurotransmitter functions, regulation and function of neurotransmitter receptors and effector proteins, expression and regulation of receptors and coupling proteins.

Storm, Daniel R.,\* 1978, M.S., 1967, Washington; Ph.D., 1971, California (Berkeley); regulation of cyclic nucleotide metabolism, mechanism for hormonal stimulation of adenylate cyclase; structure and function of biological membranes.

Vincenzi, Frank,\* 1967, M.S., 1962, Ph.D., 1965, Washington; membranes and membrane transport of calcium and the effects of drugs on these processes; use of human red blood cells as models of normal cellular function and abnormal function in disease.

Watson, Eileen L.,\* 1972, ‡(Oral Biology), Ph.D., 1970, Utah; mechanisms of salivary gland secretion with emphasis on intracellular messengers calcium cAMP and cGMP, bacterial cell physiology.

#### Associate Professors

Chavkin, Charles,\* 1984, Ph.D., 1982, Stanford; neurophysiology of opioid receptors, electrophysiology and neurochemistry of opioid receptor function, opioid receptor diversity and regulation of function.

Moon, Randall T.,\* 1985, Ph.D., 1982, Washington; mechanisms leading to segregation of mRNAs to distinct intracellular regions, dissecting the functions of cytoskeletal proteins by overexpression, inhibition of expression by anti-sense RNA; molecular neurobiology.

Omielinski, Curtis J.,\* 1983, ‡(Environmental Health), Ph.D., 1980, Washington; molecular biology of enzyme systems involved in bioactivation and detoxification of xenobiotics; developmental and tissue-specific regulation of expression of these enzymes.

#### Assistant Professor

Tempel, Bruce L.,\* 1988, (Medicine),† Ph.D., 1983, Princeton; molecular biology of potassium channel; cloning expression and regulation of potassium channel genes from *Drosophila* and mammalian nervous systems.

#### Physiology and Biophysics

##### Professors

Bothwell, Mark A.,\* 1985, Ph.D., 1975, California (Berkeley); molecular and cellular physiology of nerve growth factors.

Detwiler, Peter B.,\* 1976, Ph.D., 1970, Georgetown; signal transduction in photoreceptors.

Gordon, Albert M.,\* 1964, Ph.D., 1961, Cornell; mechanisms of calcium regulation of muscle contraction.

Hille, Bertil,\* 1968, Ph.D., 1967, Rockefeller; ion channels of excitable membranes, receptors and modulation.

Kushmerick, Martin J.,\* 1988, (Bioengineering), (Radiology),† M.D., 1963, Ph.D., 1966, Pennsylvania; muscle contraction and metabolism.

Stahl, William L.,\* 1967, (Medicine),† Ph.D., 1963, Pittsburgh; structure and function of Na, K-ATPase.

Steiner, Robert A.,\* 1977, (Obstetrics and Gynecology),† (Zoology), Ph.D., 1975, Oregon; regulation of neuropeptide gene expression in the brain.

Stirling, Charles E.,\* 1968, Ph.D., 1966, State University of New York (Upstate); properties of transport proteins in *Xenopus* oocytes injected with mRNA from mammalian cells.

#### Associate Professor

Carlson, Steven S.,\* 1985, Ph.D., 1975, California (Berkeley); identification and study of nerve terminal anchorage proteins during nerve regeneration and development.

#### Assistant Professor

Howard, Jonathon,\* 1989, Ph.D., 1983, Australian National; physiology of molecular motors in neurons and muscle.

#### COLLEGE OF ARTS AND SCIENCES

##### Botany

##### Professors

Bendich, Arnold J.,\* 1970, (Genetics), Ph.D., 1969, Washington; molecular genetics of mitochondria and chloroplasts, plant genetic engineering.

Cattolico, Rose Ann,\* 1975, M.A., 1968, Temple; Ph.D., 1973, State University of New York at Stony Brook; mo-

lecular evolution of chloroplast DNA, topoisomerases; transformation of macroalgae.

Cleland, Robert E.,\* 1964, Ph.D., 1957, California Institute of Technology; control of ATPase activity of H<sup>+</sup>-excretion in plant cells by hormones; control of cell-wall mechanical properties.

#### Associate Professor

Comai, Luca,\* 1990, Ph.D., 1980, California (Davis); plant molecular biology, genetic engineering, gene expression and regulation in meristem development.

#### Assistant Professors

Mandoli, Dina F., 1988, (Research), Ph.D., 1982, Stanford; genetics and physiology of light regulation and pattern formation during development of *Acetabularia* and *acetabulum*.

Reynolds, Ann E., 1989, (Research), Ph.D., 1983, Tufts; analysis of gene regulation in ocean environments, similarity of Rubisco, the major CO<sub>2</sub> fixing enzyme in algae and chemoautotrophic bacteria.

Van Volkenburgh, Elizabeth,\* 1985, Ph.D., 1980, Washington; growth and development of leaves relating to effects of light on membrane electrophysiology.

#### Genetics

##### Professors

Byers, Breck E.,\* 1970, (Biochemistry), M.A., 1963, Ph.D., 1967, Harvard; mechanism of spindle formation and function in yeast mitosis; meiotic pairing and recombination in yeast.

Fangman, Walton L.,\* 1967, Ph.D., 1965, Purdue; molecular genetics: control of replication of yeast chromosomes, and mitochondrial genome.

Gallant, Jonathan A.,\* 1961, Ph.D., 1961, Johns Hopkins; molecular genetics, control mechanisms in bacteria, accuracy of translation.

Gartler, Stanley M.,\* 1957, (Medicine),† Ph.D., 1952, California (Berkeley); mammalian somatic cell genetics with emphasis on the mechanism of X-chromosome inactivation.

Hall, Benjamin D.,\* 1963, (Botany), A.B., 1954, Ph.D., 1958, Harvard; genetic studies of the eukaryotic transcription apparatus emphasizing yeast, use of DNA markers in plant breeding.

Hartwell, Leland H.,\* 1968, Ph.D., 1964, Massachusetts Institute of Technology; genetic analysis of the yeast cell cycle and cell-cell communication; genetic techniques to identify functions that coordinate events in cell division and permit morphogenesis of cells toward one another during conjugation.

Motulsky, Arno G.,\* 1953, (Medicine),† M.D., 1947, Illinois; human and medical genetics, delineation of mechanisms of disease susceptibility, molecular genetics of lipid disorders, pharmacogenetics, color vision pigment genes.

Sibley, Carol H.,\* 1976, M.A., 1966, M.S., 1969, Rochester; Ph.D., 1974, California (San Francisco); mammalian cell genetics: function, structure, and regulation of cell membrane receptors; molecular parasitology, mechanisms of drug resistance in protozoan parasites.

#### Associate Professor

Furlong, Clement E.,\* 1977, (Research), (Medicine),† Ph.D., 1968, California (Davis); human biochemical genetics; genetics of pesticide metabolism in humans, genetics of hypertension, protein-based microbiosensors, protein secretion in prokaryotes.

#### Assistant Professors

Berg, Celeste A.,\* 1990, Ph.D., 1986, Yale; molecular genetics; analysis of genes involved in cell-cell communication and cell migration during *Drosophila* oogenesis.

Thomas, James H.,\* 1988, Ph.D., 1984, Massachusetts Institute of Technology; genetic and molecular analysis of cell interactions during development, analysis of neural control of behavior in the nematode *C. elegans*.

Zakian, Virginia,\* 1982, (Affiliate), (Pathology), 1975, Yale; control of chromosomal replication and segregation in yeast, telomere structure and function.

## Zoology

### Professors

Cloney, Richard A.,\* 1961, M.A., 1954, Humboldt; Ph.D., 1959, Washington; invertebrate embryology, histology, morphogenetic movements, metamorphosis, biology of ascidians.

Edwards, John S.,\* 1967, (Forest Resources), M.Sc., 1956, Auckland (New Zealand); Ph.D., 1960, Cambridge (England); insect neurobiology, regeneration, glial function and development.

Laird, Charles D.,\* 1971, (Genetics), Ph.D., 1966, Stanford; cell and developmental biology, *Drosophila* and human chromosomes, human fragile-X syndrome.

Moody, William J.,\* 1982, Ph.D., 1977, Stanford; single-cell electrophysiology.

Odell, Garrett M.,\* 1985, Ph.D., 1972, Johns Hopkins; mathematical modeling of biological phenomena at the cellular and organismic levels.

Palka, John M.,\* 1969, Ph.D., 1965, California (Los Angeles); neurophysiology, sensory physiology, developmental neurobiology.

Reeder, Ronald,\* 1981, (Affiliate), Ph.D., 1965, Massachusetts Institute of Technology; transcription of *Xenopus* ribosomal RNA and its control during development, promoter structure and activating factors.

Riddiford, Lynn M.,\* 1973, Ph.D., 1961, Cornell; hormonal control of insect development.

Schroeder, Thomas E.,\* 1974, (Research), Ph.D., 1968, Washington; fine structure and biochemistry of contractile systems.

Schubiger, Gerold A.,\* 1972, (Genetics), Ph.D., 1967, Zurich; developmental biology of insects, embryonic determination in *Drosophila*, pattern formation in imaginal disks.

Truman, James W.,\* 1973, M.A., 1969, Ph.D., 1970, Harvard; hormones and invertebrate behavior, insect physiology, circadian rhythms.

Weintraub, Harold M.,\* 1979, (Affiliate), Ph.D., 1971, M.D., 1973, Pennsylvania; assembly, structure, and functioning of the eukaryotic chromosome in normal and transformed cells, control of gene expression during early development.

Willows, A. O. Dennis,\* 1969, Ph.D., 1967, Oregon; invertebrate neurophysiology, neural mechanisms underlying behavior.

Wingfield, John C.,\* 1985, Ph.D., 1973, University College of North Wales; environmental regulation of reproduction, hormonal bases at cellular and organismal levels.

Yao, Meng-Chao,\* 1988, (Affiliate), Ph.D., 1975, Rochester; gene amplification and rearrangement, chromosome breakage and telomere formation, ribosomal RNA synthesis and function in *Tetrahymena*.

### Associate Professors

Bakken, Aimee H.,\* 1973, Ph.D., 1970, Iowa; developmental and cell biology, RNA gene regulation, chromosome structure and embryogenesis, developmental genetics.

Hille, Merrill B.,\* 1976, Ph.D., 1965, Rockefeller; cell and developmental biology, RNA and protein synthesis, fertilization and embryogenesis of echinoderms, cell-cell adhesion and morphogenesis in early embryos.

Wakimoto, Barbara T.,\* 1984, (Genetics), Ph.D., 1981, Indiana; developmental biology; relationship of gene function and chromosome organization using *Drosophila*.

## SCHOOL OF PUBLIC HEALTH AND COMMUNITY MEDICINE

### Environmental Health

#### Associate Professors

Costa, Lucio G.,\* 1983, Dott. Pharm., 1977, Milano; neurotoxicology, signal-transduction systems in developmental neurotoxicity; molecular mechanisms and biological markers of neurotoxicity.

Eaton, David L.,\* 1979, (Environmental Studies), Ph.D., 1978, Kansas Medical Center; biochemical toxicology, mechanisms of chemical carcinogenesis, metabolism of toxic chemicals.

Faustman, Elaine M.,\* 1983, Ph.D., 1980, Michigan State; molecular mechanisms of teratogenesis, developmental and reproductive toxicology, N-nitroso compounds, risk assessment methodology.

Lucht, Daniel L.,\* 1972, Ph.D., 1969, Washington; electron microscopy, cell biology, lung anatomy and pathophysiology of air pollutants at cellular level, fiber toxicology.

Omiecinski, Curtis J.,\* 1983, (Pharmacology), Ph.D., 1980, Washington; molecular toxicology, genetic regulation/expression of drug and chemical metabolizing enzymes.

#### Assistant Professor

Kavanagh, Terrance J.,\* 1989, (Research), (Medicine), Ph.D., 1985, Michigan State; glutathione metabolism, analytical cytology, *in vitro* toxicology, toxicology of oxygen free radicals.

### Pathobiology

#### Professors

Carter, William G.,\* 1981, Ph.D., 1974, California (Davis); membrane biochemistry and glycoproteins.

Hakomori, Sen-itiroh,\* 1967 (Biochemistry, Chemistry), (Microbiology), Ph.D., 1951, D.Med.Sci., 1956, Tohoku (Japan); membrane biochemistry and glycoproteins.

Kenny, George E.,\* 1961 (Microbiology), M.S., 1957, North Dakota; Ph.D., 1961, Minnesota; antigenic structure and mycoplasmas.

Kuo, Cho-chou,\* 1971, M.D., 1960, National Taiwan, Ph.D., 1970, Washington; chlamydiae.

#### Associate Professors

Campbell, Lee Ann,\* 1985, M.S., 1979, Ph.D., 1982, Pennsylvania State; molecular biology and infectious diseases.

Parsons, Marilyn,\* 1986 (Research), Ph.D., 1979, Stanford; molecular biology, eukaryotic cells.

Roberts, Marilyn C.,\* 1981, M.S., 1977, Ph.D., 1978, Washington; molecular biology and infectious diseases.

Thouless, Margaret E.,\* 1980, (Comparative Medicine), M.Sc., 1967, Ph.D., 1974, Birmingham (England); rotaviruses and simian immunodeficiency viruses.

## Neurobiology

202B Hitchcock

### Graduate Program

The departments of Physiology and Biophysics, Pharmacology, Biochemistry, and Biological Structure of the School of Medicine and the Department of Zoology of the College of Arts and Sciences offer an interdepartmental training program in neurobiology. The program leading to a Ph.D. degree provides a broad background in basic neurobiology, in-depth experience in one of the participating academic disciplines, and extensive training in the application of modern experimental methods to fundamental problems in neurobiology.

Upon admission to the program, students perform three to four laboratory rotations in two or more of the departments participating in the program. Students must fulfill basic core course requirements for the graduate program in neurobiology along with their designated departmental requirements for neurobiology students in order to receive the Ph.D. degree. At the end of the first year, students choose a dissertation mentor and are usually then affiliated with the mentor's department. Exceptional students whose objectives are not met within the departmental pathways in neurobiology may develop an individual Ph.D. program with the guidance of the program's faculty.

A broad series of courses that spans the various disciplines of neurobiology is offered as part of the interdisciplinary program. Critical evaluation of the original literature and exposure to current experimental methods are stressed. Students are expected to begin active research during their first year. Research opportunities for students encompass many areas of neurobiology. Participating in the program are more than forty faculty members, who are active in the areas of vertebrate and invertebrate neurophysiology, membrane biophysics, neuropharmacology, molecular neurobiology, neuroanatomy, neurochemistry, and developmental neurobiology.

### Application Process

Students who have emphasized either biological or physical sciences in their undergraduate careers are invited to apply. Applicants are requested to send a copy of their academic record; GRE scores, including, if possible, scores on the subject test in chemistry, physics, or biology; and three letters of recommendation from the persons who can best evaluate their potential for success in graduate study. New students enter the graduate program September 15. Applications are considered and students are accepted between February 1 and March 1. Applications received after March 1 are considered only in unusual circumstances.

### Research Facilities

Sponsoring departments are located in the Health Sciences Center and in the College of Arts and Sciences. Because the program is interdepartmental, extensive research facilities in all areas of neurobiology are available to the student. The member departments maintain electronics shop, machine shop, instrumentation for synthesis and sequence determination of proteins and nucleic acids, and computer facilities, and equipment for ultrastructural studies is readily available. Students also may employ the resources of the Regional Primate Research Center and the Friday Harbor Laboratories.

### Financial Aid

The program offers full stipend and tuition support to students through traineeships derived from NIH training grants and private foundation support and through research assistantships supported by the University or research grant monies. Students with satisfactory academic progress can anticipate that funding will continue for the duration of their program.

### Correspondence and Information

Dr. Neil M. Nathanson  
c/o Department of Pharmacology, SJ-30

## Faculty

### Director

Neil M. Nathanson

### Professors

Almers, Wolfhard,\* 1974, (Physiology and Biophysics), Ph.D., 1971, Rochester; ion channels in muscle, calcium regulation of secretion and contraction.

Anderson, Marjorie E.,\* (Physiology and Biophysics, Rehabilitation Medicine), Ph.D., 1969, Washington; CNS control of movement and posture.

Baskin, Denis G.,\* 1979, (Research), (Biological Structure, Medicine), Ph.D., 1969, California (Berkeley); neuroendocrinology, CNS functions of neuropeptides and peptide hormones, localization of peptide receptors.

Beavo, Joseph A.,\* 1977, (Pharmacology), Ph.D., 1970, Vanderbilt; cyclic nucleotides in visual coupling, cyclic nucleotide phosphodiesterases.

Berger, Albert J.,\* 1977, (Physiology and Biophysics), M.A., 1965, Ph.D., 1967, Princeton; Ph.D., 1976, California (San Francisco); neural control of respiration.

Binder, Marc D.,\* 1978, (Physiology and Biophysics, Oral Biology), M.S., 1972, Ph.D., 1974, Southern California; control of motor function.

Bothwell, Mark A.,\* 1985, (Physiology and Biophysics), Ph.D., 1975, California (Berkeley); nerve growth factor and its receptors, genes encoding nerve growth factor receptor.

Byers, Margaret R.,\* 1971, (Research), (Anesthesiology, Biological Structure, Endodontics), Ph.D., 1969, Harvard; structure and function of sensory receptors, particularly those mediating dental touch and pain.

Catterall, William A.,\* 1977, (Pharmacology), Ph.D., 1972, Johns Hopkins; molecular basis of electrical excitability, biochemistry, cellular and molecular biology of ion channels and their genes.

Crill, Wayne E.,\* 1967, (Medicine, Physiology and Biophysics), M.D., 1962, Washington; electrophysiology of CNS neurons, mechanisms of epilepsy.

Detwiler, Peter B.,\* 1976, (Physiology and Biophysics), Ph.D., 1970, Georgetown; physiology of sensor receptors, light transduction by photoreceptors.

Dorsa, Daniel M.,\* 1979, (Medicine, Pharmacology, Psychiatry and Behavioral Sciences), Ph.D., 1977, California (Davis); neuropeptide pharmacology, vasopressin as a neurotransmitter in brain.

Edwards, John S.,\* 1967, (Zoology), M.Sc., 1956, Auckland (Australia); Ph.D., 1960, Cambridge; development, function, and evolution of the insect nervous system, axonal guidance, cell lineage.

Fetz, Eberhard E.,\* 1969, (Physiology and Biophysics, Physiology-Psychology), Ph.D., 1966, Massachusetts Institute of Technology; functional organization of primate motor cortex.

Fuchs, Albert F.,\* 1969, (Physiology and Biophysics), M.S., 1961, Drexel; Ph.D., 1966, Johns Hopkins; CNS control of eye movement.

Hendrickson, Anita E.,\* 1965, (Biological Structure, Ophthalmology), Ph.D., 1964, Washington; neuroanatomical development of the primate visual system including retina, thalamus, and visual cortex.

Hille, Bertil,\* 1968, (Physiology and Biophysics), Ph.D., 1967, Rockefeller; ion channels in nerve and muscle, pharmacology of excitable membranes.

Horita, Akira,\* 1954, (Pharmacology, Psychiatry and Behavioral Sciences), M.S., 1951, Ph.D., 1954, Washington; psychoactive drugs, thyrotropin-releasing hormone as a neurotransmitter in brain.

McKnight, G. Stanley,\* 1979, (Pharmacology), Ph.D., 1976, Stanford; regulation of gene expression, cAMP-dependent protein kinases in neurons.

Moody, William J.,\* 1982, (Zoology), Ph.D., 1977, Stanford; ion channels in oocytes and developing embryos, electrophysiology of early neural development.

Nathanson, Neil M.,\* 1979, (Pharmacology), Ph.D., 1975, Brandeis; receptors for neurotransmitters, regulation of muscarinic acetylcholine receptors.

Paika, John M.,\* 1969, (Zoology), Ph.D., 1965, California (Los Angeles); arthropod neurobiology, synaptic neurobiology and development in insects.

Riddiford, Lynn M.,\* 1973, (Zoology), Ph.D., 1961, Cornell; invertebrate endocrinology, developmental neurobiology of insects.

Rubel, Edwin W.,\* 1986, (Neurological Surgery, Physiology and Biophysics, Psychology, Otolaryngology), M.S., 1967, Ph.D., 1969, Michigan State; developmental physiology and anatomy of the auditory system.

Schwartzkroin, Philip A.,\* 1978, (Neurological Surgery, Physiology and Biophysics), Ph.D., 1972, Stanford; electrophysiology and pharmacology of hippocampus, mechanisms of epilepsy.

Schwindt, Peter C.,\* 1978, (Physiology and Biophysics), M.S., 1965, Massachusetts Institute of Technology; Ph.D., 1972, Washington; electrophysiology of CNS neurons.

Smith, Orville A., Jr.,\* 1959, (Physiology and Biophysics, Physiology-Psychology), M.A., 1950, Ph.D., 1953, Michigan State; CNS control of cardiovascular system.

Stahl, William L.,\* 1967, (Medicine, Physiology and Biophysics), Ph.D., 1963, Pittsburgh; Na, K-ATPase in neurons and glia, protein-lipid interactions.

Steiner, Robert A.,\* 1977, (Obstetrics and Gynecology, Physiology and Biophysics, Zoology), Ph.D., 1975, Oregon; neuroendocrine regulation of pituitary function in the reproductive system.

Storm, Daniel R.,\* 1978, (Pharmacology), M.S., 1967, Washington; Ph.D., 1971, California (Berkeley); cyclic AMP and Ca<sup>2+</sup> regulation in the brain, molecular properties of adenylate cyclase.

Towe, Arnold L.,\* 1957, (Physiology and Biophysics), Ph.D., 1953, Washington; physiology of CNS, pyramidal system and somatosensory system.

Truman, James W.,\* 1973, (Zoology), M.A., 1969, Ph.D., 1970, Harvard; hormones and invertebrate behavior, insect neurobiology, circadian rhythms.

Westrum, Lesnick E.,\* 1966, (Biological Structure, Dentistry, Neurological Surgery), M.D., 1963, Washington; Ph.D., 1966, University College (London); synaptic ultrastructure in neural development and plasticity, trigeminal-dental projections.

Willows, A. O. Dennis,\* 1969, (Zoology), Ph.D., 1967, Oregon; invertebrate neurophysiology, neural mechanisms underlying invertebrate behavior.

Winn, H. Richard,\* 1983, (Neurological Surgery, Physiology and Biophysics), M.D., 1968, Pennsylvania; regulation of the cerebral vasculature by neurotransmitters and neuromodulators.

#### Associate Professors

Carlson, Steven S.,\* 1985, (Physiology and Biophysics), Ph.D., 1975, California (Berkeley); synaptic function, extracellular matrix molecules in synapse specificity.

Chavkin, Charles,\* 1984, (Pharmacology), Ph.D., 1982, Stanford; endogenous opioid peptide effects on neuronal physiology and opioid receptor regulation.

Harris, Roger M.,\* 1982, (Biological Structure), Ph.D., 1975, Washington; cellular neuroanatomy of the mammalian thalamus.

Moon, Randall T.,\* 1985, (Pharmacology), Ph.D., 1982, Washington; roles of *wnt* proto-oncogenes (related to *int-1*, wingless) in embryonic development, signal transduction and communication during formation of the nervous system; molecular and cellular aspects of the cytoskeleton in embryos.

Reh, Thomas A.,\* 1989, (Biological Structure), Ph.D., 1981, Wisconsin; cellular and molecular mechanisms of neuronal differentiation in retinal development and regeneration.

Sherk, Helen A.,\* 1982, (Biological Structure), Ph.D., 1978, Massachusetts Institute of Technology; functional neuroanatomy of mammalian visual cortex.

#### Assistant Professors

Brenowitz, Eliot A.,\* 1987, (Psychology, Zoology), Ph.D., 1982, Cornell; behavioral ecology, neuroethology, animal communication, evolutionary biology, neuroendocrinology.

Howard, Jonathon,\* 1989, (Physiology and Biophysics), Ph.D., 1983, Australian National; transduction of chemical to mechanical energy; force-generating motor proteins such as kinesin; force-sensitive ion channels of hair cells in the inner ear.

Tempel, Bruce L.,\* 1988, (Pharmacology, Medicine), Ph.D., 1983, Princeton; molecular biology of potassium

channels; cloning, expression, and regulation of cytochrome *c*; structure and function of biological membranes.

## Quantitative Science

The Center for Quantitative Science in Forestry, Fisheries, and Wildlife is an intercollege academic unit sponsored by the College of Forest Resources and the School of Fisheries of the College of Ocean and Fishery Sciences. The center offers a comprehensive program of study in mathematics and statistical methods as applied to problems in ecology and natural resources management. The faculty of the center includes members of the College of Forest Resources and the School of Fisheries, and many are also adjunct members of the Department of Biostatistics.

## Faculty

### Director

E. David Ford

### Professors

Bare, B. Bruce,\* 1969, (Forest Resources, Fisheries, Quantitative Ecology and Resource Management), M.S., 1965, Minnesota; Ph.D., 1969, Purdue; systems analysis, operations research, computer modeling, forest land management, forest valuation and taxation.

Bevan, Donald E.,\* 1959, (Emeritus), (Fisheries, Marine Affairs), Ph.D., 1959, Washington; resource management, computer simulation, biometrics.

Chapman, Douglas G.,\* 1949, (Emeritus), (Fisheries), M.A., 1940, Ph.D., 1949, California (Berkeley); biometrics, population dynamics.

Dowdle, Barney,\* 1962, (Economics, Forest Resources), M.F., 1958, Ph.D., 1962, Yale; growth and development of forest products industries, public forest land management.

Ford, E. David,\* 1985, (Fisheries, Forest Resources, Biostatistics, Statistics, Quantitative Ecology and Resource Management), Ph.D., 1968, University College (London); simulation of plant physiological and ecological processes, analysis of spatial processes.

Gallucci, Vincent F.,\* 1972, (Fisheries, Biostatistics, Forest Resources, Quantitative Ecology and Resource Management), M.S., 1966, State University of New York (Buffalo); Ph.D., 1971, North Carolina State; biomathematics and population dynamics.

Hatheway, William H.,\* 1969, (Emeritus), (Forest Resources), S.M., 1952, Chicago; M.F., 1954, Ph.D., 1956, Harvard; tropical forest ecology, biometrics, dendrology and model building, cold hardiness.

Mathews, Stephen B.,\* 1969, (Fisheries, Quantitative Ecology and Resource Management), M.A., 1962, California (Berkeley); Ph.D., 1967, Washington; quantitative fishery management.

Pickford, Stewart G.,\* 1976, (Forest Resources, Quantitative Ecology and Resource Management), M.S.F., 1966, Ph.D., 1972, Washington; forest fire science, wildland fire management, remote sensing and photogrammetry, computer modeling.

Schreuder, Gerard F.,\* 1971, (Forest Resources, Quantitative Ecology and Resource Management), M.S., 1960, Wageningen; M.S., 1967, North Carolina State; Ph.D., 1968, Yale; photogrammetry and management of economics and statistics.

Swartzman, Gordon L.,\* 1973, (Research), (Fisheries, Quantitative Ecology and Resource Management), M.S.E.E., 1965, Ph.D., 1969, Michigan; ecological modeling, quantitative natural resource management.

### Associate Professors

Anderson, James J.,\* 1981, (Research), (Fisheries, Quantitative Ecology and Resource Management), Ph.D., 1977, Washington; biomathematics, ecological modeling, fisheries and oceanography.

Briggs, David G.,\* 1980, (Forest Resources), M.F., 1968, Yale; Ph.D., 1980, Washington; wood utilization, computer applications in wood processing.

Conquest, Loveday L.,\* 1978, (Fisheries, Biostatistics, Forest Resources, Quantitative Ecology and Resource Management), M.S., 1972, Stanford; Ph.D., 1975, Washington; sampling and experimental design for environmental monitoring studies, especially spatial and temporal aspects; statistical methods for timber, fish, and wildlife studies; global monitoring of the environment; general biometry.

Cundy, Terrance W.,\* 1983, (Forest Resources), M.S., 1980, Minnesota; Ph.D., 1983, Utah State; hydrology and watershed management.

Greulich, Francis E.,\* 1977, (Forest Resources, Quantitative Ecology and Resource Management), M.S., 1967, Ph.D., 1976, California (Berkeley); logging engineering.

Johnson, Jay A.,\* 1984, (Forest Resources, Quantitative Ecology and Resource Management), M.S., 1970, State University of New York (Syracuse); Ph.D., 1973, Washington; mechanical and physical properties of wood and wood composite material.

Rustagi, Krishna P.,\* 1973, (Forest Resources, Quantitative Ecology and Resource Management), M.Sc., 1953, Agra (India); M.F., 1971, Ph.D., 1973, Yale; statistical and operations research applications in forest inventory, growth modeling, management planning.

Skalski, John R.,\* 1987, (Fisheries, Quantitative Ecology and Resource Management), M.S., 1976, Oregon State; M.S., 1978, Ph.D., 1985, Cornell; biometry, environmental monitoring, parameter estimation, mark recapture theory, design and analysis of environmental investigations in fisheries and wildlife.

#### Assistant Professor

Maguire, Douglas A.,\* 1986, (Forest Resources, Quantitative Ecology and Resource Management), M.S., 1979, Rutgers; M.S., 1986, Ph.D., 1986, Oregon State; growth and yield modeling, forest biometrics, crown development.

## Course Descriptions

### Courses for Undergraduates

**Q SCI 291, 292 Analysis for Biologists (4,4) AW** Differentiation; integration, including multiple integrals and partial derivatives. Numerical and computing techniques in analysis. Emphasis on biological problems, particularly in ecology. Prerequisites: MATH 105 for 291; 291 or MATH 124 for 292.

**Q SCI 340 Applications of Computers to Natural Resource Problems (2) A Pickford** A first course in computing for undergraduates in fisheries and forestry emphasizing use of personal computers. Use of existing software for spread sheet analysis data base concepts, graphics, routine statistical analysis, and text processing. Introduction to simulation. Joint with FISH 340. Prerequisite: 381 or equivalent introductory statistics course.

**Q SCI 341 Applied Computer Programming (3) Sp Briggs** Emphasizes solving complex resource management problems using modular programming techniques. The design of algorithms to solve specific problems is implemented using a higher-level programming language.

**Q SCI 366 Quantitative Methods in Forest Resource Management (3) W Bare** Survey, discussion, and critique of the application of quantitative methods to forest resource management, planning, and decision making. Methods utilized in management science and in econometric and computer science that are currently used by resource planners. Introduction to systems analysis, linear programming, computer simulation, goal programming, forecasting, statistical techniques, and computer information systems. Joint with FRM 366. Prerequisite: 381.

**Q SCI 381 Introduction to Probability and Statistics (5) AWSpS** Elementary concepts of probability

and statistical inference. Sample space, set theory, random variables, expectations, variances, covariance; binomial, normal, hypergeometric, Poisson, chi square, "t" and "F" distributions. Point and confidence interval estimation, basic concepts of hypothesis testing; applications to biological problems. Prerequisite: MATH 105 or equivalent.

**Q SCI 392 Techniques of Applied Mathematics in Biology I (3) A** Ordinary differential equations—linear and nonlinear; systems of differential equations; approximation techniques, numerical solution techniques; applications to biological processes. Prerequisite: 292 or MATH 126, or permission of instructor.

**Q SCI 393 Techniques of Applied Mathematics in Biology II (3) W** Applications of advanced ordinary differential equations, special functions, and partial differential equations to descriptions of biological phenomena. Particular emphasis on transport in biological systems, including diffusion and fluid flow. Prerequisite: 392 or permission of instructor.

**Q SCI 456 Fundamentals of Fish Population Dynamics and Management (4) A Piktich** Conveys fundamental concepts of fish population dynamics and fishery management within concept of real-world fisheries problems. Lectures discuss notation, terminology, mathematical models, fisheries principles, and case studies. Laboratory time devoted to practical applications, problems. Joint with FISH 456. Prerequisites: 291 and 292, or MATH 124 and 125, or equivalent.

**Q SCI 457 Methods of Abundance Estimation (4) W Gunderson, Mathews** Methods of estimating fish abundance by direct sampling and indirectly from tagging, catch, and effort analysis. Confidence limits and bias adjustments. Design of marine fishery surveys using statistical sampling principles. Laboratory work with real fishery data and data collected during trawl sampling survey. Joint with FISH 457. Prerequisites: 291, 292, 381, 456; or equivalents. (Formerly 458.)

**Q SCI 458 Fisheries Stock Assessment (4) Sp Hilborn** Emphasizes quantitative analysis of fisheries data to determine how the fishery would respond to alternative management actions. Major topics include production models, stocks and recruitment, catch at age analysis, and formulation of harvest strategies. Joint with FISH 458. Prerequisite: 456 or permission of instructor. (Formerly 457.)

**Q SCI 477 Quantitative Wildlife Assessment (5) A Skalski** Focuses on wildlife sampling techniques for estimating animal abundance, home range, and survival rates in terrestrial populations. The design of wildlife investigations for the purposes of impact assessment, research, and resource management is integrated with estimation schemes and demographic models in a quantitative framework. Prerequisites: 291, 292, 482.

**Q SCI 480 Sampling Theory for Biologists (3) Sp Gallucci, Rustagi** Theory and applications of sampling finite populations including: simple random sampling, stratified random sampling, ratio estimates, regression estimates, systematic sampling, cluster sampling, sample size determinations, applications in fisheries and forestry. Other topics include sampling plant and animal populations, sampling distributions, estimation of parameters and statistical treatment of data. Joint with STAT 480. Prerequisites: 482, 483, or permission of instructor. (Offered even-numbered years.)

**Q SCI 482, 483 Statistical Inference in Applied Research (5,5) AW,WSp** Analysis of variance and covariance; chi square tests; nonparametric procedures multiple and curvilinear regression; experimental design and power of tests. Application to biological problems. Use of computer programs in standard statistical problems. Prerequisites: 381, or permission of instructor for 482; 482 for 483.

**Q SCI 486 Experimental Design (3) Sp** Topics in analysis of variance and experimental designs: choice of designs, comparison of efficiency, power, sample size, pseudoreplication, factor structure. Joint with

STAT 486. Prerequisite: 483 or equivalent, and matrix algebra. Entry code required.

**Q SCI 499 Undergraduate Research (1-5, max. 5) AWSpS** Special studies in quantitative ecology and resource management for which there is not sufficient demand to warrant the organization of regular courses. Credit/no credit only. Prerequisite: permission of instructor.

### Courses for Graduates Only

**Q SCI 502 Statistical Consulting for the Life Sciences (1-4) AWSp Conquest, Rustagi** Consulting experience in data analysis, applied statistics, experimental design, parameter estimation, and sampling. For graduate students in Quantitative Ecology and Resource Management. Student provides consultation services to students and faculty. Students spend one classroom hour per week under faculty supervision discussing problems encountered. Prerequisites: 482, 483, STAT 421, 423, or BIOST 514, 515, or equivalents, and permission of instructor. Entry code required.

**Q SCI 514 Analysis of Ecological and Environmental Data I (3) Sp Conquest, Skalski** Factors affecting optimal growth of individuals in their habitat. Estimation of growth and mortality parameters. Response of organisms to changes in environment (bioassay, environmental monitoring). Stochastic viewpoint emphasized. Research design issues for ecological or environmental studies. Analysis of unwieldy data sets. Prerequisites: STAT 512 or STAT 341, 342; and knowledge of calculus.

**Q SCI 515 Analysis of Ecological and Environmental Data II (3) A Conquest** Complex models for population growth and parameter estimation. Habitat preferences of organisms; study design and data analysis. Nonparametric methods for ecological studies and environmental monitoring. Complications including nonlinear response, redundant ecological information, censored data, sample size limitations. Multiple lines of inquiry; well-defined experiments versus ecological realism. Prerequisite: 514.

**Q SCI 521 Scientific Method in Resource Management (2) W Ford** Process of scientific discovery and strategies used for different problems in ecology and natural resources management. Relationship between growth of objective knowledge and use made of that knowledge in natural resources management. Joint with FISH 521. (Winter Quarter 1993 last quarter offered.)

**Q SCI 550 Applied Ecological Modeling (4) A Ford, Kot** Methods of applied ecological modeling at individual community and ecosystem levels. Systems of ordinary differential equations, population growth models, linear compartment models, and Monte Carlo event-oriented models. (Winter Quarter 1993 last quarter offered.)

**Q SCI 551 Modeling Organism Dynamics (3) W Anderson** Application of techniques of stochastic differential equations, time series analysis, simulating dynamic processes to plant and animal growth. Prerequisites: 482, 483, 550, or permission of instructor. (Offered even-numbered years.) (Winter Quarter 1993 last quarter offered.)

**Q SCI 552 Spatial Processes in Ecology (3) A Ford, Ribic** Spatial distribution of organisms, the mechanisms that produce different distributions, and how they may be described mathematically and modeled. Spatial distribution of communities, how this arises, and what its consequences are. Prerequisites: 482, 483, 550. (Offered odd-numbered years.) (Winter Quarter 1993 last quarter offered.)

**Q SCI 556 Mathematical Analysis in Fisheries Stock Assessment (3) A Gallucci** Analytic approaches to stock assessment and population management applications of parent-progeny models and logistic models; biological and economic yields of natural populations; analysis of population data on computers. Joint with FISH 556. Prerequisites: 292, 392, 456, 483; or permission of instructor.

**Q SCI 557 Estimation of Population Parameters (4) W Skalski** Statistical analysis of population data; design and analysis of mark-recapture experiments on natural populations; laboratory work on computers. Joint with FISH 557. Prerequisites: 292, 483, and probability theory.

**Q SCI 558 Advanced Analysis in Fisheries Stock Assessment (3) Sp Hilborn** Deterministic and stochastic representations of age-dependent and size-dependent models for stock assessment; analysis of multi-species models; risk analysis and uncertainty in fisheries management strategies; analysis of population data on computers. Joint with FISH 558. Prerequisite: 393, 556 or permission of instructor; recommended: 557.

**Q SCI 560 Decision Methods in Natural Resources Management (3) A Rustagi** Formulation and optimization of management planning and resource allocation in forestry, fisheries, and wildlife. Importance of quantitative data needs in decision making. Solution procedures for both linear and nonlinear formulations. Term project required. Joint with FRM 560. Prerequisite: 391 or equivalent or permission of instructor.

**Q SCI 561 Multi-Objective Programming in Resource Management (3) W Rustagi** Concepts and philosophy of goal programming as a tool in the evaluation of resource allocation among multiple, conflicting, often incommensurate objectives (goals). L.P. and G.P. computer programs are used to study impact of changes in relative importance of difficult goals. Goal programming applications in natural resource areas are discussed. Joint with FRM 561. Prerequisites: familiarity with linear programming and permission of instructor.

**Q SCI 565 Quantitative Resource Management (3) W Bare, Mathews** Formulation, solution, and interpretation of fisheries, forestry, and other natural resource problems, using mathematically based models. Principles of resource management from a quantitative perspective. (Winter Quarter 1993 last quarter offered.)

**Q SCI 597 Seminar in Quantitative Ecology (2) AWSp** Current topics in quantitative ecology and resource management. Fisheries, forestry, and marine resources.

**Q SCI 598 Special Topics in Quantitative Resource Management (1-3, max. 12)AWSpS** Population and community ecology, systems ecology, and physical processes in ecosystems. Prerequisite: permission of instructor. Entry code required.

**Q SCI 599 Research in Quantitative Resource Management (\*, max. 12)AWSpS** Topics can be theoretical in nature or combined theory and experiment. Research might be a prelude to thesis or dissertation research. Credit/no credit only. Entry code required.

in the context of modern surface processes, which include historical changes, prehistoric postglacial environments, and Ice Age events; (2) to serve as an effective catalyst in fostering interdisciplinary studies in the fields of atmospheric sciences, archaeology/anthropology, botany, engineering, fisheries, forestry, geology, geophysics, oceanography, pedology, and zoology; (3) to provide a scientific perspective on the scale of modern and man-made environmental changes, including those of climate, in the context of recent earth history; (4) to conduct a curriculum jointly with other disciplines in the training of graduate students in Quaternary-oriented studies; and (5) to seek applications of Quaternary studies to modern environmental problems that will help predict consequences of policy decisions.

#### Graduate Program

Students associated with the center obtain their degrees through cooperating departments. Students interested in graduate work at the center should apply to the department of their choice but plan to do their research in a Quaternary-related subject.

#### Research Facilities

The research laboratories of the center provide an array of modern facilities for investigation of Quaternary problems:

**Quaternary Isotope Laboratory.** The work emphasizes use of carbon and oxygen isotopes to study various aspects of the carbon and hydrological cycles. A major interest is also in radiocarbon dating as applied to time-scale calibration and the study of climate change.

**Periglacial Laboratory.** The laboratory contains cold rooms equipped for manipulating and studying the freezing and thawing of soils, rocks, and building materials. A large, unique tilt table permits the study of soils under controlled conditions of slope, temperature, and moisture. Research stress is placed on frost action in arctic and alpine environments.

**Quaternary Palynology and Paleocology Laboratories.** These facilities foster studies of the biotic environment through time and of the uses of plant and animal fossils in Quaternary environmental and ecological reconstruction. Studies of vegetational changes are supported by an extensive modern pollen and plant reference collection from Asia and western North America.

**Tephrochronology Collection.** Volcanic ash deposits of unknown origin are characterized petrographically and are identified by being matched against tephra of known source and composition. A reference collection of tephra from source areas around the world is being developed.

## Quaternary Research Center

19 Johnson

Quaternary studies focus on the processes that presently shape the natural environment and have operated over approximately the past two million years (Quaternary Period). A knowledge of Quaternary events facilitates an understanding of earth history in relation to the modern environment and has predictive value with regard to present-day and future environmental changes.

Quaternary research is typically interdisciplinary, and thus it commonly involves related interests of two or more academic units. The Quaternary Research Center was established in 1967 to foster such interdisciplinary studies on a cooperative basis.

The center has as goals: (1) to understand environments and climate changes of the past two million years

mentological and pedological aspects of archaeology; excavations in northwest coastal United States, Kentucky, Michigan, Greece, Peru, and Belize.

Warren, Stephen G., 1982, (Atmospheric Sciences, Geophysics), A.M., 1969, Ph.D., 1973, Harvard; radiation and climate, solar and infrared radiative properties and climate effects of snow and clouds.

#### Assistant Professors

Shen, Glen T., 1992, (Oceanography), Ph.D., 1986, Massachusetts Institute of Technology; chemical oceanography, paleochemical indicators of climatic change, coral geochemistry.

## Course Descriptions

**QUAT 417 Quaternary Glacial Ages (3) S Porter** Physical, biological evidence of climatic change during Quaternary Period, emphasizing stratigraphy and chronology. Impact of alternating glacial/interglacial cycles on earth's terrestrial, marine environments. Use of these data to assess theories on causes of climatic variation. Joint with GEOL 417. Prerequisite: introductory course in earth science and biological science.

**QUAT 501 Seminar in Quaternary Environments (1, max. 6) WSp** Interdisciplinary seminar or conference in the changing natural environments of the Quaternary Period, with emphasis on climatic changes and their effects. Speakers from the University and elsewhere present lectures on their specialties, followed by discussion. Credit/no credit only.

**QUAT 502 Interdisciplinary Quaternary Investigations (2, max. 6) WSp** Research course for interdisciplinary investigation of Quaternary problems. Student attends sessions of 501 and pursues a problem-oriented case study concurrently under faculty direction. Required paper on case study. Credit/no credit only. Prerequisite: graduate standing.

**QUAT 504 Special Topics in Quaternary Sciences (1-3)** Environments and climate changes of past two million years (Quaternary Period) in context of modern surface processes, including historical changes, prehistorical environments of postglacial period, and Ice Age events. Provides scientific perspective on scale of modern and man-made environmental changes, including those of climate, in context of recent earth history. Credit/no credit only. Prerequisites: background courses in earth sciences and ecology.

## University Conjoint Courses

Each of the following courses is administered by two or more schools or colleges within the University. No degree program is offered.

### Courses for Undergraduates

**UCONJ 100 Introduction to Health Professions (1) AWSp May, Strandjord** Opportunities in health professions. Information on educational requirements, professional/patient interaction, interprofessional roles, licensing, registering for practice in profession, salaries, and career opportunities.

**UCONJ 411 Psychology of Aging (3) W Kiyak** Focuses on developing the skills necessary for critically evaluating current psychological theories of aging, research findings in this area, and the implications of findings on the aging person. Special consideration given to the effects of socioeconomic, sex, and ethnic differences in the psychology of aging. Open to upper-division undergraduates and beginning graduate students interested in the field of gerontology.

**UCONJ 420 Biological Safety Practices (1) A Kenny** General introduction to appropriate laboratory

procedures used for handling potentially hazardous biological agents. Particular focus on laboratory safety and appropriate protocols that should be employed by those engaged in infectious disease and recombinant DNA research. Credit/no credit only.

**UCONJ 422 Sexually Transmitted Diseases: An Overview (2) A Elmer, Holmes** Clinically oriented course designed to provide a knowledge base for upper division health science students to participate effectively in community outreach programs for the prevention of sexually-transmitted diseases. Offered cooperatively by the departments of Medicinal Chemistry, and Medicine. Credit/no credit only.

**UCONJ 440 Biological Aspects of Aging (3) A** Introductory course on aspects of the biology of human aging and of functional changes associated with normal aging and with those illnesses that may be present in the elderly. Focus on the relationship between changes in physical function, environment, and quality of life. Includes theoretical perspective on aging as well as the aging process in specific physiological systems. Designed for upper-level undergraduate students with an interest in aging. Prerequisite: introductory course in biology or permission of instructor.

**UCONJ 442 Social and Cultural Aspects of Aging (3) Sp** Involves faculty members from the various social science fields examining the range and variation of relationships among age-linked attitudes and cultural values related to aging; the social and economic factors that influence the elderly in contemporary society; the effects of ethnic and sex differences in sociocultural aging. Open to upper-division undergraduates and beginning graduate students interested in gerontology. Entry code required.

**UCONJ 443 Interdisciplinary Seminar on Aging (1-6, max. 15) Borgatta** Interdisciplinary examination of the contemporary theoretical literature on gerontology and long-term care. For upper-level undergraduate and graduate students with an interest in aging. Quarterly offerings available from the Institute on Aging. Prerequisites: 411, 440, 442, or permission of instructor.

**UCONJ 490 Social Sensitivity in Health Care (3) AWSp** Multidisciplinary course for health professions students. Health professionals' roles in dealing with social, cultural, and physical barriers to health care of low-income groups and ethnic people of color. Personal involvement through field experiences and faculty drawn from affected communities as well as health sciences, social work schools. Prerequisite: permission of instructor.

**UCONJ 497 Health Care in a Rural Community (3) Sp** Critical analysis built upon concepts relative to interdisciplinary health-care delivery in a rural community. Students develop an organizational model for rural health care and study innovative ways of mobilizing community resources and support for a comprehensive rural health-care system. Pharmacy students, nurses, and other health professionals study application of theory in an appropriate clinical setting within the conceptual framework of each student's professional field.

### Courses for Graduates Only

**UCONJ 501, 502, 503 International Health Education (1,1,1)** Weekly one-and-one-half hour session provides basic skills and knowledge necessary to function in health-related positions in third world countries. Involves use of guest speakers and case studies; a problem solving format; practical skills and tools relevant to clinical epidemiological, and laboratory needs. Sessions formatted and prepared by an organized student group.

**UCONJ 504, 505, 506 Cell and Molecular Biology and Disease (3,3,3) A,W,Sp** 504: nucleus: chromatin structure, recombination, RNA processing, and gene expression. 505: cytoplasm: protein synthesis targeting and secretion, organelles, extracellular matrix. 506: plasma membrane: membrane structure, ion channels, transmembrane signaling. Prerequisite: genetics or biochemistry or permission of instructor.

**UCONJ 510 Seminar in Neurobiology (0.5) AWSp** Biweekly seminar on current topics in neuroscience. Recommended for students in the Graduate Program in Neurobiology and required for students supported on Graduate Neuroscience Program Training Grant. Physiology and Biophysics responsible.

**UCONJ 511 Issues in Home Health Care Delivery (3)** Service delivery issues relevant to provision of health care services across the life span in the home setting. Home health care as an important component in health care system. Individual and multidisciplinary practice of health care disciplines. Emphasis on research literature. Prerequisite: graduate student standing, upper division with permission of instructor.

**UCONJ 513 Dynamics of Patient Management: Diabetes Mellitus (2) Sp** Analysis of advanced knowledge related to interdisciplinary management of diabetes. Commonalities and differences in provider approaches, recent research and its effect on management practices, collaborative communication, knowledge application. Brief interactive presentations, decision-making opportunities, discussion. Prerequisites: graduate standing in pharmacy, dietetics, nursing; third- or fourth-year medical student; or permission of instructor.

**UCONJ 514, 515 Molecular and Cellular Biology Literature Review (2,2) A,W Morris** Emphasizes critical evaluation of the original literature orally and in writing. Subject matter coordinated with 504 and 505. Open only to first year students in the Interdisciplinary Molecular and Cellular Biology Program.

**UCONJ 517 Topics in Molecular and Cellular Biology (1-3)** Advanced in-depth coverage of specific areas of molecular and cellular biology of current interest. Lectures by University of Washington faculty involved in research in this area and lectures by invited speakers. A basic knowledge of principles of molecular and cellular biology assumed. Prerequisites: 504,505,506, or equivalent.

**UCONJ 520 Molecular Biophysics Research Seminar (1) AWSp Drobny, Herriott, Reid** A series of research seminars for faculty and students involved with the molecular biophysics program.

**UCONJ 525 Overview of Faculty Research in Neurobiology (1)** Reviews research topics currently being studied in neurobiology. Student preparation consists of reading pertinent articles published on each topic. Prerequisite: first year graduate student in neurobiology.

**UCONJ 526 Introduction to Laboratory Research in Neurobiology (4)** Students become familiar with, and assist in, the performance of research on ongoing projects in designated laboratories. Emphasis on employed methodology and techniques. Prerequisite: first year graduate students in neurobiology.

**UCONJ 584 Plant Tumors (1, max. 9) M. Gordon** Discussion of the literature of plant tumors and current research work being carried on in this area at the University. Offered cooperatively by the departments of Biochemistry, Botany, and Microbiology and Immunology. Credit/no credit only. Prerequisite: offered only to persons actively pursuing work in this area.

**UCONJ 599 Introduction to Research in Molecular and Cellular Biology (\*, max. 20) AWSpS Morris** The student rotates through one research laboratory involved in the Interdisciplinary Molecular and Cellular Biology Program per quarter. Open only to first-year students in the IMCBP.

# School of Law

## Dean

Wallace D. Loh  
326 Condon

## Associate Deans

Robert H. Aronson  
338 Condon

Thomas R. Andrews  
304 Condon

## Assistant Dean

Sandra E. Madril  
334 Condon

Established in 1889, the School of Law is a member of the Association of American Law Schools and is on the American Bar Association's list of approved law schools. Graduates of the school are prepared to practice law anywhere in the United States. Additional information about the school is contained in the current *School of Law* catalog.

## Facilities and Services

The School of Law is housed in Condon Hall, adjacent to the University's main campus. It is equipped with classroom, library, lounge, and office facilities.

The Marian Gould Gallagher Law Library is one of the finest law libraries in the country. Its collection, among the largest university law collections on the West Coast, currently numbers more than 435,000 volumes. In addition to the extensive main collection, it houses important materials that support the Asian and marine law graduate programs and serves as a federal depository for selected United States government documents. An experienced audiovisual staff directs the use of video equipment in the trial advocacy and moot court programs. The library is equipped with the latest in microreaders and printers in order to make full use of the growing microform collection. The library is a subscriber to LEXIS, WESTLAW, and the Western Library Network, and other research databases.

## Juris Doctor Program

### Juris Doctor Degree

The Juris Doctor degree is conferred upon a student who has met the residence requirements, consisting of nine quarters of at least 12 credits each, and has earned at least 135 credits satisfactory to the School of Law.

As in most law schools of the United States, the first-year courses are required and are designed to introduce students to basic legal skills, foundational subject matter, and the variety of public and private processes with which the profession is concerned. Those courses deal with contracts, torts, property, civil procedure, criminal law, administrative law, and basic legal skills.

Except for a required course in professional responsibility and an analytical writing requirement, courses in the second and third years are elective. Therefore, a student may choose a program designed to suit his or her interests and needs.

### Admission

New students may enter the School of Law only in autumn quarter. Instruction begins for first-year students a few days earlier than the time set for upper-class students. Beginning students must have received a baccalaureate degree from an accredited college or university prior to commencing the study of law.

All applicants are required to take the Law School Admission Test (LSAT) and to register for the Law School Data Assembly Service (LSDAS). Registration packets and test information are available at most law schools and from Law School Admission Services, Box 2000, Newtown, Pennsylvania 18940.

No specific prelaw course is required or recommended, and the School of Law subscribes to the remarks set forth on prelaw preparation in the *Prelaw Handbook—Official Guide to U.S. Law Schools*. Applications for admission to the next entering class must be received by January 15. To be assured of consideration for admission, an applicant must cause complete credentials, including the LSDAS report, to be filed in the School of Law by February 1. An application fee (at this writing, \$35) also is required.

### Transfer Applicants

Students who have completed at least one year at a member school of the Association of American Law Schools may apply to this school for admission with advanced standing with credit for no more than one year of such work. A student who has completed or expects to complete at least two years of work at a member school of the Association of American Law Schools and who expects to graduate from that member school may apply to this school for admission as a non-degree candidate.

Applicants should request application forms and instructions from the admissions office in time to permit filing of the application by July 15. To be assured of consideration, the applicant must complete his or her application file by August 1.

Applications are considered only if vacancies exist. Selection of the applicants is based on evidence either (1) that the candidate can produce above-average work at this law school, or (2) that the candidate will contribute to the diversity of the student body.

Students working on law degrees to be conferred by the University have priority over non-degree candidates in the selection of courses. This policy is in accordance with the general University policy on the registration of nonmatriculated students.

### Inquiries

A more detailed statement on admission policy and application procedure is available in the School of Law. Requests for application materials and the University law school bulletin should be addressed to Law School Admissions, Condon Hall, JB-20, University of Washington, Seattle, Washington 98195.

### Financial Aid

Students in need of financial assistance may receive University aid, School of Law aid, federal loans, or aid from all of these sources. To be considered for aid, applicants must submit the College Scholarship Service Financial Aid Form (FAF) to Princeton, New Jersey by March 1. FAFs are available in December in most college financial aid offices, or may be obtained by writing or calling the Office of Student Financial Aid, 105 Schmitz Hall, PE-20, University of Washington, Seattle, Washington 98195, (206) 543-6101. Applicants for admission should not wait until they have been admitted before applying for financial aid.

School of Law grants are awarded primarily on the basis of financial need, although scholarship, minority status, or other factors may be considered with regard to certain awards. Inquiries concerning School of Law aid should be addressed to: Kathleen Smith, Financial Aid Coordinator, School of Law, Condon Hall, JB-20, University of Washington, Seattle, Washington 98195.

## Graduate Program

Thomas R. Andrews  
Graduate Program Coordinator

In addition to the professional law program leading to the Juris Doctor degree, the law faculty offers graduate

programs leading to the Master of Laws (LL.M.) in law and marine affairs, Asian and comparative law, international environmental law, and law of sustainable international development. The School of Law offers the Doctor of Philosophy (Ph.D.) degree in Asian and comparative law only. The requirements for each program are as follows:

**Asian Law Program.** The Master of Laws degree program in Asian and comparative law is designed for students with career and research interests in one or more of the legal systems of East Asia, with particular emphasis on that of Japan, as well as for lawyers from East Asia seeking advanced comparative study of American law. The Asian law program is structured around extensive course offerings involving comparative study of basic areas of United States and East Asian law and tutorials in areas of special interest to each student.

Admission to the LL.M. degree program in Asian and comparative law is limited to language-qualified applicants who have received the first degree in law and who have a record of superior academic achievement. Graduates of American law schools must have a degree from an ABA-accredited institution. The applicant must be competent in an East Asian language (or, in the case of foreign students, in English). Students without the required competence may be admitted to the program, but must successfully complete an approved program of intensive study of an East Asian language before beginning their studies. The program contemplates one year in residence, at least 36 credits, and an acceptable major research undertaking.

Admission to the Ph.D. program in law is limited to exceptional scholar-lawyers who are fluent in English and in either Japanese, Chinese, or Korean. Prospective Ph.D. students must normally complete the LL.M. program before being accepted as Ph.D. students. The core of the program is a major creative research project using Asian-language sources as well as English-language sources. At least two, and usually three, years in residence are necessary in order to accomplish the work that must be done in order to pass the General Examination that precedes candidacy for the doctoral degree. An acceptable dissertation must thereafter be submitted to complete the requirements for the degree. The Candidate may spend a year abroad while working on the dissertation but must be in residence during the quarter in which the degree is to be conferred.

**Law and Marine Affairs Emphasis.** Students who have acquired a first degree in law can become prospective candidates for the LL.M. degree in law and marine affairs. Graduates of American law schools must have a degree from an ABA-accredited school. Particular emphasis is placed on interdisciplinary aspects of marine affairs and coastal zone management. Attainment of the LL.M. degree with specialization in law and marine affairs requires satisfactory completion of 40 credits of course and research work, at least 15 of which must be in the School of Law. In the School of Law, courses include Law of the Coastal Zone, International Law of the Sea, Ocean Policy and Resources, United States Law and the Marine Environment, and Admiralty. Pertinent courses are also offered in the schools of Fisheries, Marine Affairs, and Oceanography, the Graduate School of Public Affairs, the College of Engineering, and the departments of Economics and Geography.

**International Environmental Law Emphasis.** Assuming acquiescence by the American Bar Association, beginning in the 1992-93 academic year, students may earn an LL.M. degree in international environmental law. This LL.M. degree option is open to students with a first degree in law. Graduates of American law schools must have a degree from an ABA-accredited school. Emphasis is placed on the interdisciplinary study of environmental problems, and students may earn more than half of their credits in courses outside of the School of Law, including courses offered by the schools of Fisheries and Marine Affairs, the Institute for Environmental Studies, the Graduate School of Public Affairs, the colleges of Engineering and Forest Re-

sources, and the departments of Atmospheric Sciences, Economics, Environmental Health, and Geography. Courses offered in the School of Law include Environmental Law: Pollution Control, Natural Resources: Energy, U.S. Law and the Marine Environment, International Environmental Law, and Land Use Planning. To earn the LL.M. degree, students must satisfactorily complete 40 credits of course and research work, at least 15 of which must be in the School of Law. Students must take LAW A 527, Environmental Law: Pollution Control and LAW A 574, The International Legal Process unless they have had equivalent courses; and one course on international environmental law. As part of their course work or an independent study project, students must write one substantial paper.

**Law of Sustainable International Development Emphasis.** Assuming acquiescence by the American Bar Association, beginning in the 1992-93 academic year, students may earn an LL.M. degree in the law of sustainable international development. This LL.M. degree option is open to students with a first degree in law. Graduates of American law schools must have a degree from an ABA-accredited school. Emphasis is placed on the interdisciplinary study of sustainable international development, and students may earn more than half their credits in courses outside the School of Law, including courses offered by the schools of International Studies and Public Health, the Institute for Environmental Studies, and the departments of Economics, Political Science, and Sociology. In the School of Law, courses offered include Legal Problems of Economic Development (required), International Environmental Law (required), Public Land Law, International Commercial Law, and Land, American Culture, and the Law. Attainment of the LL.M. degree with specialization in the law of sustainable international development requires satisfactory completion of 40 credits of course and research work, at least 15 of which must be in the School of Law, and the taking of courses in at least three other departments other than law. As part of their work, students must write one substantial paper.

#### Inquiries

Requests for applications and program brochures for all School of Law LL.M. programs, as well as information regarding application procedures should be addressed to Barbara Kinner, Law School Graduate Admissions, Condon Hall, JB-20, University of Washington, Seattle, Washington 98195, U.S.A.

#### Financial Aid

Scholarship funds for graduate students in law are quite limited. Inquiries should be made to Law School Graduate Admissions, Condon Hall, JB-20, University of Washington, Seattle, Washington 98195, U.S.A.

Hicks, Gregory A., 1984, J.D., 1978, Texas; torts, securities regulation.

Hjorth, Roland L.,\* 1964, LL.B., 1961, New York; transnational tax, Common Market, federal taxation.

Hume, Linda S.,\* 1972, J.D., 1970, California (Los Angeles); commercial transactions, property, equal rights.

Huston, John C.,\* 1967, J.D., 1952, Washington; LL.M., 1955, New York; federal taxation.

Jay, Stewart M.,\* 1980, J.D., 1976, Harvard; civil procedure, theories of justice, constitutional law.

Johnson, Ralph W.,\* 1955, (Environmental Studies), LL.B., 1949, Oregon; natural resources, legislation, Indian law.

Junker, John M.,\* 1964, J.D., 1962, Chicago; criminal law and procedure.

Kummert, Richard O.,\* 1964, M.B.A., 1955, Northwestern; LL.B., 1961, Stanford; business planning, corporations, federal tax.

Loftus, Elizabeth F.,\* 1973, ‡(Psychology), M.A., 1967, Ph.D., 1970, Stanford; cognition, long-term memory, eye-witness testimony, psychology and law.

Loh, Wallace D.,\* 1974, (Psychology), M.A., 1968, Cornell; Ph.D., 1971, Michigan; J.D., 1974, Yale; contracts, criminal procedure, social science and the courts.

Meisenholder, Robert,\* 1954, (Emeritus), J.D., 1939, S.J.D., 1942, Michigan; federal courts and federal systems, procedure.

Morris, Arval,\* 1955, (Education), M.A., 1952, J.D., 1955, Colorado; LL.M., 1958, Yale; LL.D., 1972, Colorado; constitutional law, jurisprudence.

Peck, Cornelius J.,\* 1954, LL.B., 1949, Harvard; administrative law, labor law, torts.

Price, John R.,\* 1969, LL.B., 1961, New York; estate planning, taxation, property.

Prosterman, Roy L.,\* 1965, LL.B., 1958, Harvard; international law.

Rieke, Luvern V.,\* 1949, (Emeritus), LL.B., 1949, Washington; LL.M., 1953, Chicago; LL.D., 1959, Pacific Lutheran; contracts, domestic relations.

Roddie, Richard S. L.,\* 1968, J.D., 1954, California (Berkeley); insurance.

Rodgers, William H., Jr.,\* 1967, J.D., 1965, Columbia; legislation, environmental law, resource management.

Rombauer, Marjorie D.,\* 1960, J.D., 1960, Washington; creditor and debtor, personal property.

Shattuck, Warren L., 1935, (Emeritus), LL.B., 1934, Washington, J.S.D., 1936, Yale; commercial law.

Smith, Charles Z.,\* 1973, (Emeritus), LL.B., 1955, Washington; evidence, judicial administration.

Smith, Frank W., Jr.,\* 1985, J.D., 1962, Richmond; LL.M., 1968, Harvard; commercial law.

Stoebuck, William B.,\* 1967, M.A., 1953, Indiana; J.D., 1959, Washington; S.J.D., 1973, Harvard; property, land use, legal history.

Trautman, Philip A.,\* 1956, J.D., 1954, Washington; conflict of laws, procedure.

Vaughn, Lea,\* 1984, J.D., 1978, Michigan; labor law, administrative law.

Wolcher, Louis E., 1986,\* J.D., 1973, Harvard; contracts and restitution.

Zerbe, Richard O.,\* 1976, ‡(Public Affairs), Ph.D., 1969, Duke; law and economics.

#### Assistant Professors

Bodansky, Daniel M., 1989,\* J.D., 1984, Yale; international law.

Clarke, Donald C., 1988,\* J.D., 1987, Harvard; Chinese law, property.

Foot, Daniel H., 1989, J.D., 1981, Harvard; Japanese law, labor law, criminal justice.

Jecker, Nancy S.,\* 1990, (Medical History and Ethics), Ph.D., 1986, Washington; philosophy, medical ethics.

Kirtley, Alan, 1984, J.D., 1972, Indiana; University Civil Clinic.

Levins, Annemarie, 1992, Ph.D., 1982, Princeton; J.D., 1983, Maine; trial advocacy.

Townsend, Michael E., 1992, M.A., 1978, Ph.D., 1982, Michigan; J.D., 1989, Yale; intellectual property.

#### Lecturers

Maranville, Deborah, 1989, J.D., 1975, Harvard; Civil Clinic.

McMurtrie, Jacqueline, 1989, J.D., 1983, Michigan; Criminal Clinic.

Sullivan, John J., 1979, LL.B., 1949, Washington; trial practice.

## Course Descriptions

### Courses for Undergraduates

**LAW 442 Land Law and the Urban Environment (3)** Examination of the major legal tools available to shape the urban environment by controlling the use of land. Considers zoning, subdivision controls, urban renewal, private land-use restrictions, and the rules of nuisance law. Credit/no credit only. Open to law and nonlaw students. (Not offered every year.)

**LAW 443 The Legal Process I (3 or 5)** Open only to nonlaw students. The system of law and its functions rather than substantive law pertaining to any particular subject or discipline. Credit/no credit only.

**LAW 444 Constitution and American Public Education (3-6, max. 6)** Examines the relationships between the Constitution of the United States and the American system of public education, excluding higher education, in areas of constitutional freedom and legal controls, racial desegregation, and equal educational opportunity, including equal financing of the public schools. Joint with EDPGA 444. (Not offered every year.)

**LAW 445 Major Issues in American Constitutional Law (3)** Significant themes in American constitutional law. Doctrine of judicial review, application of the Bill of Rights to the states, Supreme Court's recognition of fundamental rights, the Equal Protection clause, the Religion clauses, freedom of speech, and Presidential powers. Open to law and nonlaw students.

**LAW 446 Race, Age, and Sex Discrimination in Employment (3)** What constitutes race, age, and sex

discrimination in employment, and related prohibited practices that limit employment opportunities. Methods of proving such discrimination and establishing that a practice should be prohibited. Remedies for violations considered. Open to law and nonlaw students.

**LAW 447 Copyright Law for the Lay Person (3)** Introductory survey of federal copyright law. Protection of original works, fair use, required formalities, and related issues. Open to law and nonlaw students.

**LAW 467 American Law and the American Indian (3)** Relationship between Indians and the United States from 1789 to the present. Significant constitutional, legislative, and judicial actions. Legal events explored within their political, military, social, and cultural contexts. Comparisons with other minority-group experiences. Joint with HSTAA 416.

**LAW 495 Introduction to Law: A Social Science Perspective (4)** Policy-oriented, interdisciplinary study of uses and limits of social science in the law-making process on appeal and fact-finding process at trial. Critical perspectives on roles of social science, especially social psychology, in adjudication. Joint with PSYCH 495. Open to upper-division undergraduates and graduate students only.

### First-Year Courses

*The courses below are intended for law students; other students are admitted only rarely with special permission of the Dean. Only the course titles are given. For complete course descriptions, see the School of Law Bulletin.*

- LAW A 500 Administrative Law (4)**
- LAW A 501- Contracts ((2-8)-, max. 8)**
- LAW A 502- Civil Procedure I ((2-6)-, max. 6)**
- LAW A 503- Property I ((2-8)-, max. 8)**
- LAW A 504- Torts ((2-8)-, max. 8)**
- LAW A 505- Criminal Law ((2-5)-, max. 5)**
- LAW A 506- Basic Legal Skills ((1-6)-, max. 6)**
- LAW A 507 Constitutional Law I: Constitutional Structures of Government (4)**

### Second- and Third-Year Courses

- LAW A 508 Payment Systems (4)**
- LAW A 510 Sales: A Comparative Perspective (4)**
- LAW A 511 Transmission of Wealth (5)**
- LAW A 512 Secured Transactions (3)**
- LAW A 513- Creditor-Debtor Law ((2-3)-, max. 5)**
- LAW A 514 Corporations (3 or 4)**
- LAW A 515 Business Organizations (5)**
- LAW A 516 Legal Accounting (4)**
- LAW A 517 Securities Regulations (4)**
- LAW A 518 Restitution (3)**
- LAW A 520- Property II ((2-8)-, max. 8)**
- LAW A 521 Community Property (3)**
- LAW A 522 Copyright (3)**
- LAW A 523 Real Property Security (3)**
- LAW A 524 Private Land Development (3)**
- LAW A 525 Water Law (3)**
- LAW A 526 Copyrights, Patents, and Trademarks (4)**
- LAW A 527 Environmental Law: Pollution Control (3)**
- LAW A 528 Natural Resources: Energy (3)**

- LAW A 529 Public Land Law (3)**
- LAW A 530- Basic Income Tax ((2-6)-, max. 6)**
- LAW A 531 Death and Gift Taxation (2-5)**
- LAW A 532 Federal Income Taxation of Business Enterprise (5)**
- LAW A 533 Partnership Taxation (3)**
- LAW A 534 Federal Tax Procedures (3)**
- LAW A 535 Trademarks and Unfair Competition (2)**
- LAW A 536 Deferred Compensation (3)**
- LAW A 537- Business Planning ((2-6)-, max. 6)**
- LAW A 538 Estate Planning Workshop (4)**
- LAW A 539- Federal Tax Policy ((1-3)-, max. 3)**
- LAW A 540 Land Use Planning (3)**
- LAW A 541 Transnational Tax (5)**
- LAW A 542 Oil and Gas Law (3)**
- LAW A 543 Business Reorganization Under the Bankruptcy Code (3)**
- LAW A 544 Advanced Commercial Law (3)**
- LAW A 548- Civil Rights ((2-6)-, max. 6)**
- LAW A 550- Constitutional Law ((2-8)-, max. 8)**
- LAW A 551 Constitution and American Public Education (3-6, max. 6)** (No credit given if LAW/EDPGA 444 taken previously.)
- LAW A 552- Antitrust ((2-5)-, max. 5)**
- LAW A 553 Feminist Legal Theory (4)**
- LAW A 554- Labor Relations and the Law ((1-5)-, max. 5)**
- LAW A 555 Labor Relations in the Public Sector (3)**
- LAW A 556- Employment Discrimination ((2-4)-, max. 4)**
- LAW A 557 Equal Rights (3)**
- LAW A 558- Jurisprudence and Legal Philosophy ((2-4)-, max. 4)**
- LAW A 559 Legal Method (3)**
- LAW A 560 Income Maintenance Legislation (3)**
- LAW A 561 Law and Economics (3)** Joint with PB AF 532.
- LAW A 562 Employment Law (3 or 4)**
- LAW A 563 Urban Government (4)**
- LAW A 564 Legal History (3)**
- LAW A 565 American Indian Law (3)**
- LAW A 566- Theories of Justice ((2-4)-, max. 4)**
- LAW A 567 Disabled and the Law (2)**
- LAW A 568 Collective Bargaining and Labor Arbitration (4)**
- LAW A 569 Law and Social Science (3 or 4)**
- LAW A 571 International Organizations (3)**
- LAW A 572 International Legal Order (3)**
- LAW A 573 Arms Control and Disarmament: The Legal Perspective (3)**
- LAW A 574 The International Legal Process (2-4, max. 4)**
- LAW A 575 United States Legal History (3)**

- LAW A 577 Immigration Law (3 or 4)**
- LAW A 578- International Commercial Law ((1-4)-, max. 4)**
- LAW A 579 Children and the Law (3)**
- LAW A 580 Family Law (4)**
- LAW A 583 Insurance I (3)**
- LAW A 584 Insurance II (3)**
- LAW A 585 Admiralty (3)**
- LAW A 587 Computer Law (3)**
- LAW A 591 Constitutional Law: Freedom of Expression (3)**
- LAW A 593 Constitutional Law: The Constitution and the Economy (3)**
- LAW A 598 Legal Bibliography (3)** Joint with LIBR 544.
- LAW A 599 Advanced Legal Bibliography (4)** Joint with LIBR 557.
- LAW B 500 Civil Procedure II (3)**
- LAW B 501 Criminal Procedure IV (4)**
- LAW B 502- Criminal Procedure VI ((2-6)-, max. 6)**
- LAW B 503- Evidence ((2-6)-, max. 6)**
- LAW B 506- Conflict of Laws ((2-6)-, max. 6)**
- LAW B 507 Federal Courts and the Federal System (3 or 4)**
- LAW B 508 Injunctions (4)**
- LAW B 510- Problems of Professional Responsibility (2-4, max. 4)**
- LAW B 513 Evidence IV (4)**
- LAW B 516 International Contracting: Negotiations and Drafting (2-4, max. 4)**
- LAW B 520- Trial Advocacy ((2-6)-, max. 6)**
- LAW B 521- Appellate Advocacy ((1-3)-, max. 3)**
- LAW B 522 Mediation of Disputes (3)**
- LAW B 523 Negotiation: Dispute Settlement and Planning (3)**
- LAW B 524 Litigation, Negotiation, and Alternative Methods of Dispute Resolution (3)**
- LAW B 525 Alternative Dispute Resolution (3)**
- LAW B 527 Criminal Law Clinic (7)**
- LAW B 528 Civil Law Clinic (2-8, max. 8)**
- LAW B 530- Judicial Externship ((1-15)-, max. 15)**
- LAW B 532- Supervised Analytic Writing ((1-3)-, max. 3)**
- LAW B 533 Interviewing and Counseling for Lawyers (3)**
- LAW B 535- Legislative Externship ((1-15)-, max. 15)**
- LAW B 536 Introduction to Legal Drafting (3)**
- LAW B 538- Agency Externship ((1-15)-, max. 15)**
- LAW B 539 Public Interest Law Externship ((1-15)-, max. 15)**

### Asian and Comparative Law

- LAW B 540 Law in East Asia: Japan (3)** Joint with SISEA 540.
- LAW B 541 Law in East Asia: China (3)** Joint with SISEA 543.

**LAW B 542** Law in East Asia: Korea and Southeast Asia (3)

**LAW B 544** Transnational Litigation: United States/Japan (2-4, max. 4)

**LAW B 545-** United States-Japanese Contract and Sales Problems ((2-4)-, max. 4)

**LAW B 546** United States-Japanese Corporate Relations (2-4, max. 4)

**LAW B 547** United States-Japanese Tax Problems (3 or 4)

**LAW B 548** Japanese Administrative Law (3) Joint with SISEA 548.

**LAW B 549** Government Regulation of Business in Japan (3) Joint with SISEA 549.

**LAW B 550-** Legal Analysis and Research for Students Not Trained in the Common-Law System ((1-4)-, max. 4)

**LAW B 551-** Comparative Law Seminar ((2-6)-, max. 6)

**LAW B 552-** Tutorial in Comparative Law ((1-4)-, max. 4)

**LAW B 553** Chinese Legal Tradition (3) Joint with SISEA 553.

**LAW B 554** Survey of Soviet Law (3)

**LAW B 555** Roman Law (3)

## Law and Marine Affairs

**LAW B 561** International Law of the Sea (4) Joint with SMA 506.

**LAW B 563-564** Ocean Policy and Resources Seminar (3-3)

**LAW B 565** U.S. Law and the Marine Environment (3) Joint with SMA 515.

**LAW B 566** Principles of Coastal Zone Management (3) Joint with SMA 509.

## Seminars

**LAW B 573-** Federal Tax Policy Seminar ((1-6)-, max. 6)

**LAW B 575-** The Supreme Court and the Constitution ((2-6)-, max. 6)

**LAW B 577** Law and Literature Seminar ((1-6)-, max. 6)

**LAW B 578-** Seminar on Legal Problems of Economic Development ((1-6)-, max. 6)

**LAW B 579-** Federal Tax Seminar ((2-6)-, max. 6)

**LAW B 581** Land, American Culture, and the Law: Perspectives on the Use and Ownership of the Natural Environment ((1-6)-, max. 6)

**LAW B 582** Parents, Children, and Dissolution (1-6, max. 6)

**LAW B 584-** Indian Law Seminar ((2-6)-, max. 6)

**LAW B 588-** Advanced Antitrust Seminar ((1-4)-, max. 4)

**LAW B 589-** Intellectual Property Law Seminar ((1-4)-, max. 4)

**LAW B 590-** Social Security Act Seminar ((1-3)-, max. 3)

**LAW B 591** Seminar: The Legal Orders of North-east Asia: an Historical Perspective (2-6, max. 6)

**LAW B 592-** Seminar on the Legal Rights of Handicapped Persons ((1-4)-, max. 4)

**LAW B 594-** Public Land Law Seminar ((2-6)-, max. 6)

**LAW B 595-** Mental Health Law Seminar ((1-4)-, max. 4)

**LAW B 596** International Protection of Human Rights Seminar (2-2, max. 4)

**LAW B 597** History of the Formation of the United States Constitution Seminar (2-6, max. 6)

**LAW B 598-** Advanced Research and Writing in Property Seminar ((1-4)-, max. 4)

**LAW B 599-** Special Topics ((1-12)-, max. 12)

**LAW 600** Independent Study or Research (\*)

**LAW 800** Doctoral Dissertation (\*)

# Graduate School of Library and Information Science

## Director

133 Suzzallo

## Graduate Program

A 63-credit course of study leads to the Master of Librarianship degree, which prepares graduates for professional positions in information management in libraries and a variety of other environments. The school's curriculum incorporates a significant number of courses in the organization, storage, retrieval, and management of information through the use of diverse technologies. Foundation courses provide the theoretical base for the program. Technical and advanced courses are organized around five areas of concentration: managerial tools, organization of resources, information resources and retrieval, design and provision of information services, and environments of information service.

The law librarianship program requires a J.D. degree for admission and may be completed in one calendar year. This specialized course of study prepares lawyers to serve as law librarians in courts, federal and state governmental agencies, schools of law, corporations, and law firms.

## Special Research Facilities

The school's computer laboratory provides a dedicated facility for research and instruction in the design and utilization of information systems. Microcomputers, laser disc drives, and allied equipment support a broad variety of data bases, applications software, and programming capabilities, as well as providing access to the University's computer network and off-campus bibliographic utilities and information services.

## Admission Requirements

Admission is subject to the approval of the school's admissions committee. A complete application file includes: application for admission; official transcripts; Graduate Record Examination scores, general test section (an exception is made for those who have completed a Ph.D. program); three letters of recommendation; and a statement of educational and professional goals. International students (except those from English-speaking countries) are required to take the Test of English as a Foreign Language (TOEFL) examination. Students may be admitted any quarter, though most choose to begin autumn quarter. Completed applications for admission for summer or autumn quarters must be received prior to May 15, for winter quarter prior to November 1, and for spring quarter prior to February 1. Students are strongly advised to complete their applications early.

In addition to the above requirements, an applicant for the law librarianship program must hold a degree from an accredited American law school or from a law school in one of the common-law countries.

The Graduate School of Library and Information Science brochure gives full details of application procedures.

## Financial Aid

The school has funding available each year for one staff assistantship. In addition, fellowships/scholarships from the Cobb, Finley Multiethnic, Henry, Koon, McAlpin, and Page endowment funds are awarded each year. The amount of assistance and number of awards varies from year to year. All awards have financial need as one criterion, which is based on the figures the applicant provides on the Financial Aid Form. This form is available from the Financial Aid Office in mid-December and must be submitted by February 28 each year. The school is unable to offer financial assistance to international students. Other fellowships are described in *Financial Assistance for Library Education*, available from the American Library Association, 50 East Huron Street, Chicago, Illinois 60611.

## Faculty

### Professors

Ahlers, Eleanor E., 1966, (Emeritus), M.A., 1957, Washington; librarianship.

Benne, Mae M., \* 1965, (Emeritus), M.S., 1955, Illinois; children's literature, public library services for children.

Bevis, L. Dorothy, 1947, (Emeritus), M.A., 1951, Washington; librarianship.

Chisholm, Margaret E., \* 1975, M.Lib., 1958, Ph.D., 1966, Washington; school library media programs, organization and administration, library education.

Hiatt, Peter, \* 1974, M.L.S., 1957, Ph.D., 1963, Rutgers; adult services, special populations, library education, staff development, continuing education.

Lieberman, Irving, 1956, (Emeritus), M.A., 1950, Ed.D., 1955, Columbia; librarianship.

Shaw, Spencer G., \* 1971, (Emeritus), B.L.S., 1941, Wisconsin; librarianship.

### Associate Professors

Brooks, Terrence A., \* 1986, M.L.S., 1971, McGill; M.B.A., 1975, York; Ph.D., 1981, Texas (Austin); information storage and retrieval, data-base design, bibliometrics, statistical methodology, artificial intelligence.

Fidel, Raya, \* 1982, M.L.S., 1976, Hebrew (Jerusalem); Ph.D., 1982, Maryland; information storage and retrieval systems, systems analysis, data base design, classification research.

Mignon, Edmond, \* 1970, M.A., 1952, Syracuse; M.Lib., 1959, Washington; Ph.D., 1976, California (Berkeley); information retrieval, bibliographic organization, health information, government statistics.

Skelley, Grant T., \* 1969, M.A., 1952, M.Lib., 1952, Washington; Ph.D., 1968, California (Berkeley); bibliography and reference, history of the book, preservation of library materials.

Turner, Mabel A., 1941, (Emeritus), M.S.L.S., 1959, Columbia; librarianship.

### Assistant Professors

Doll, Carol A., \* 1988, M.L.S., 1974, Western Michigan; Ph.D., 1980, Illinois (Urbana); print and nonprint materials for children and young adults, library services to children and young adults, storytelling.

Nelson, Jerold A., \* 1971, M.A., 1964, Minnesota; Ph.D., 1971, California (Berkeley); interpersonal relations in libraries, intellectual freedom.

Soper, M. Ellen, \* 1972, M.S., 1963, Ph.D., 1972, Illinois; technical services, organization of library materials, cataloging, subject analysis.

## Course Descriptions

**LIBR 450 Survey of Children's Literature (3)** *Doll* Designed for educators, librarians, and others interested in the selection and utilization of children's books for family, school, and library enrichment. Not open to librarianship majors. Prerequisite: junior or higher standing.

**LIBR 451 Young Adult Materials: Evaluation and Use (3)** *Doll* Reading and appraisal of literature appropriate to the needs, interests, and abilities of young adults. For the general student as well as the teacher. Not open to librarianship majors. Prerequisite: junior or higher standing.

**LIBR 470 History of the Book (3)** *Skelley* Survey of the development of the book from hieroglyphics and clay tablets to the present, with emphasis on the printed book in the Western world since Gutenberg. The book as a physical object and the processes and materials of its production, viewed in the context of changing technologies and various cultural, esthetic, economic, and trade influences. Includes aspects of book collecting. Credit/no credit only. Prerequisite: junior or higher standing.

**LIBR 471 Storytelling: Art and Techniques (3)** *Doll* Storytelling, past and present, noting its development as an art form. Reading and analyzing storytelling materials (folk literature and literary forms) used by storytellers throughout historical periods. Learning essential techniques necessary to maintain this artistic skill in a professional field. Planning storytelling programs for various age and interest groups and situations, utilizing folk, classic, and contemporary literature. Not open to librarianship majors. Prerequisite: junior or higher standing.

**LIBR 497 Learning Resources Endorsement Topics (3, max. 6)** School library media center subject matter presented in seminar, workshops or other appropriate formats. Topics meet the Learning Resources Endorsement areas of study required for the learning resources endorsement. Credit/no credit only. Not open to Librarianship majors. Prerequisite: junior or higher standing.

**LIBR 498 Special Topics (1-5, max. 15)** Library service and information science subject matter in seminars, workshops, or other appropriate formats. Topics vary and may be repeated for credit. Credit/no credit only. Prerequisite: junior or higher standing.

**LIBR 500 Society, Users, and Libraries (4)** *Hiatt, Nelson* Technological, societal change as it relates to information. Society's information processes, ways individuals use information in their environments. Skills basic to other courses developed, including awareness of resources for study of library and information science. Intellectual context of librarianship as service profession. Prerequisite: major standing.

**LIBR 501 Bibliographic Control (4)** *Mignon, Skelley, Soper* Survey of the major types of instruments for the bibliographic control of the various kinds of library materials and of the conventions used in describing them. Basic concepts, historical background, and theoretical and practical aspects of bibliographic control; evaluation and methodology. Prerequisite: major standing.

**LIBR 502 Introduction to Information Science (3)** *Fidel, Mignon* Theory, understanding, and perspectives for the analysis of design and operation of information retrieval systems. Systems analysis applied to the process of information transfer. Consideration of user needs assessment, performance evaluation, and control of terminology.

**LIBR 503 Bibliographic Data Bases (4)** *Brooks, Mignon* Concepts and conventions of bibliographic record structure, file organization, and search protocols. Elementary techniques in the use of bibliographic utilities and on-line search services. Prerequisite: major standing.

**LIBR 510 Management for Librarianship (3)** *Brooks* Management concepts critical to provision of library services. The planning process applied to library problems and opportunities. Communications awareness and skills in the professional environment. Organizational concerns, including personnel, budgeting, control techniques, theories of management, and evaluation of effectiveness.

**LIBR 511 Library Administration Skills (3)** Provides practice in the administrative skills related to personnel selection, supervision, and management, and to planning and budgeting processes in the library setting. Topics include work specification, performance evaluation, personnel policy formulation, budget types, and budget preparation and control.

**LIBR 512 Community Analysis and Library Change (3)** *Hiatt* Review of the concepts, strategies, and tools for study of the community, response to community change, and promotion of desired library change. Includes experiential exercises, analysis of case studies, and investigation of the literature of relevant fields. Prerequisite: 500 or permission of instructor.

**LIBR 513 Management of Automated Systems in Libraries (3)** Developing criteria for selection and design of computer systems for libraries and information centers. Applying criteria in evaluation of hardware and software. Examining related management challenges such as vendor relations, financing options, personnel requirements, and design of auxiliary activities. Credit/no credit only. Prerequisites: 501, 503, or permission of instructor.

**LIBR 520 Organization of Library Materials: Introduction (3)** *Soper* Principles and techniques of standard methods of organizing library materials for use. Includes fundamentals of descriptive cataloging, primary systems of subject analysis, and developments in technical services. Prerequisites: 501, 503, or permission of instructor; recommended: 500.

**LIBR 522 Descriptive Cataloging (3)** *Soper* Continuation of 520, with emphasis on rules of descriptive cataloging for monographic print materials of all kinds and nonbook materials. Includes applications of automation to bibliographic control of library materials. Prerequisite: 520 or permission of instructor.

**LIBR 523 Subject Analysis of Library Materials (3)** *Soper* Continuation of 520, with emphasis on subject analysis of library materials. Includes work with Library of Congress and Dewey decimal classifications, Sears and Library of Congress subject headings, and other systems used in libraries today. Prerequisite: 520 or permission of instructor.

**LIBR 525 Organization and Use of Serials (3)** *Soper* Management of serials, including acquisition and replacement, control, subject access, preservation, and use of all types in all kinds of libraries. Includes application of new technology and international developments as they affect serials. Credit/no credit only. Prerequisite: 522 or permission of instructor.

**LIBR 526 Indexing and Abstracting (3)** *Fidel* Techniques of vocabulary control and thesaurus construction as applied to indexing and abstracting processes. Design, selection, and evaluation of indexing systems. Computerized methods for free text, full text, and controlled vocabulary procedures. Application of methods to information retrieval systems. Prerequisites: 501, 503, or permission of instructor.

**LIBR 527 Construction of Index Languages (3)** *Fidel* Explanations of design options, features of index languages or thesauri, and criteria to use in their selection. After completing the thesaurus construction project, students are prepared to design index languages, plan and implement a design project, and evaluate index languages. Credit/no credit only. Prerequisite: 501, 502, 503 or permission of instructor.

**LIBR 528 Literature Searching (3)** *Brooks, Mignon* Concepts and techniques of professional literature searches, using a variety of standard search lan-

guages on representative types of bibliographic data bases and on-line reference resources. Analysis and evaluation of data bases. Prerequisite: 503 or permission of instructor; recommended: 501.

**LIBR 531 Organization of Retrieval Systems (3)** *Fidel* Preliminary design of data bases for decision-support systems. Introduces methods of collecting user requirements, requirement analysis, data dictionary, the entity-relationship model, methods for database integration, preparation for data collection, and evaluation. Credit/no credit only. Prerequisites: 501, 503, or permission of instructor.

**LIBR 533 Bibliographic Knowledge Bases (3)** *Brooks* Practical application of appropriate software for design of bibliographic databases and knowledge bases. Emphasis on creation of real working systems. Focus on bibliographic data structures, creation of indices and user interfaces. Considers approaches to artificial intelligence and expert systems with bibliographic data. Credit/no credit only. Prerequisite: 503.

**LIBR 540 Materials for General Information Needs (3)** *Nelson* Consideration of the individual in the generalized information environment. Interdisciplinary sources for the selection of library materials. Forms of materials for nonspecialized information retrieval and referral. Development of skills in question negotiation and search strategy. Prerequisite: 501, or permission of instructor; recommended: 500, 503.

**LIBR 541 Information Access in the Humanities (3)** *Nelson* Description and analysis of information problems and information sources in the humanities. Fields considered are philosophy, religion, visual arts, performing arts, language, and literature. Prerequisite: 501 or permission of instructor; recommended: 500, 503.

**LIBR 542 Information Access in the Social Sciences (3)** *Skellay* Description and analysis of information problems and information sources in the social sciences. Fields considered are anthropology, business economics, education, geography, history, political science, psychology, and sociology. Prerequisites: 501, 503, or permission of instructor.

**LIBR 543 Information Access in Science and Technology (3)** *Skellay* Covers the following topics as they apply in the literature of the natural sciences and engineering: nature of information transfer; characteristics and organization of bibliographic and reference sources; information retrieval from manual and computer on-line sources; search strategy; practice with specific data bases and manual sources. Prerequisites: 501, 503, or permission of instructor; recommended: 528.

**LIBR 544 Legal Bibliography (3)** *Hazelton* Introduction to legal bibliography and law librarianship. Basic primary and secondary legal bibliographic tools. Integration of manual and computer resources for effective legal research. Joint with LAW A 598. Prerequisite: law librarianship major or 501 and 503 for non-law librarianship major.

**LIBR 545 Government Publications (3)** *Nelson* Government publications of the United States and foreign countries, their acquisition, organization, and use. Credit/no credit only. Prerequisites: 501, 503, or permission of instructor; recommended: 500.

**LIBR 546 Business Information Resources (3)** *Skellay* Survey of the extent and nature of business information and its sources, and of business information producers and consumers. Study and use of both print and on-line sources. Prerequisites: 501, 503, or permission of instructor.

**LIBR 547 Evaluation and Selection of Audiovisual Materials (3)** *Doll* Develops competency in applying criteria to the evaluation, selection, and use of audiovisual materials and their accompanying technologies. Focuses on previewing the full range of audiovisual formats found in all types of libraries.

**LIBR 549 Children's Materials: Evaluation and Use (3)** *Doll* Study of library materials for children with emphasis on literature in its various forms. Attention also given to criteria used in evaluation, issues in selection, and use of materials with children.

**LIBR 550 Youth Materials: Bibliography and Resources (3)** *Doll* Sources of information about youth materials. Includes reviewing journals, selection aids, general and subject bibliographies, books of readings and criticism, textbooks, and biographical tools. Emphasis on the critical evaluation of these sources. Includes brief history of children's literature and the function of special collections. Prerequisite: 503.

**LIBR 551 Young Adult Materials: Evaluation and Use (3)** *Doll* Reading, evaluation, and sharing of literature currently appropriate to the needs, interests, and abilities of young adults, ages twelve through twenty. Application of criteria to the assessment of young-adult reading materials and consideration of the uses of these materials with young people.

**LIBR 553 Information Access in Health Sciences (3)** *Mignon* Characteristics of users of biomedical literature. Information resources in health sciences and health-care planning. Use of information retrieval systems, emphasizing services of National Library of Medicine. Organization of medical, hospital libraries. Problems of information policy, professional standards, certification. Credit/no credit only. Prerequisite: 528 or permission of instructor; recommended: 543.

**LIBR 555 Socioeconomic Data Resources (3)** *Mignon* Utilization of public data bases of economic and demographic statistics for information retrieval, with special attention to services of Bureau of the Census. Application of on-line data files to library reference services. Credit/no credit only. Prerequisites: 528 and 599 or knowledge of inferential statistics, or permission of instructor.

**LIBR 557 Advanced Legal Bibliography (4)** *Hazelton* Legal bibliographic tools that answer more complex legal research problems, such as federal legislative histories, sources of administrative law, specialized research (e.g., tax, securities). Builds on skill, techniques utilized in 544. Extensive work with computer-assisted legal retrieval. Joint with LAW A 599. Prerequisite: major standing in law librarianship, 544, or permission of instructor.

**LIBR 558 Selection and Processing of Law Library Materials (3)** *Hazelton* Study of tools for collection development and collection development plans in law libraries. All law library technical processes, including acquisitions, budgeting, cataloging, and serials. Credit/no credit only. Prerequisite: 544 or permission of instructor.

**LIBR 560 Information Needs, Uses, and Users (3)** *Nelson* Study of the factors and influences, both individual and social, associated with human beings needing, using, and acting on information. Information theory, human information processing, information flow among social and occupational groups, and research on information needs and uses. Prerequisite: 500 or permission of instructor.

**LIBR 561 Serving Individual Information Needs (3)** *Nelson* Training in awareness and skills for perceiving and responding to the information requests of users. Effective strategies for meeting information needs are learned through use of simulations, role playing, experiential exercises, discussion, and practice. Credit/no credit only. Prerequisite: 500 or permission of instructor.

**LIBR 562 Planning for Library and Information Services (3)** *Hiatt* Principles underlying library and information services, and the selection and design of services to meet user needs in all types of libraries and information centers. Emphasis on adult clientele in academic, public, and special libraries, but attention given to school library media centers and all age levels. Prerequisite: 500 or permission of instructor; recommended: 501.

**LIBR 563 Services for Special Groups (3)** *Hiatt* Needs analysis and design of library services for the blind and visually handicapped, deaf and hearing impaired, institutionalized, mentally and physically handicapped, functionally illiterate, minorities, and aging. Skills, insights, and knowledge to work with these groups. Current research, practice, and experimental programs. Prerequisite: 500 or permission of instructor; recommended: 562.

**LIBR 566 Special Librarianship (3)** *Hiatt* Seminar in the practice of special librarianship in business and industrial firms, government agencies, and the freelance sector. User services and information resources. Credit/no credit only. Prerequisites: 24 credits in Master of Librarianship program.

**LIBR 567 Public Library Services for Youth (3)** *Doll* Administration of youth departments in public libraries; planning and promoting programs and services; evaluation of library collections; community and professional roles of the youth librarian. Prerequisite: 500 or permission of instructor.

**LIBR 568 Administration of the School Library Media Program (3)** Develops competency in administering materials, equipment, and services of the library media program as an integral part of the educational process of the school. Focuses on developing skills in acquiring, organizing, and managing the full range of learning resources for access and use, and communicating the program to users. Required for school library media specialists.

**LIBR 571 Storytelling: Art and Techniques (3)** *Doll* Storytelling, past and present, noting its development as an art form. Reading and analyzing storytelling materials (folk literature and literary forms) used by storytellers throughout historical periods. Learning essential techniques necessary to maintain this artistic skill in a professional field. Planning storytelling programs for various age and interest groups and situations, utilizing folk, classic, and contemporary literature.

**LIBR 572 Archival and Manuscript Services (3)** Selection, organization, and uses of archival and manuscript collections. Emphasis on the principles and techniques; some attention to the administration of

state archival and historical institutions' collections. Lecture, demonstration, and laboratory. Prerequisite: 501, or permission of instructor.

**LIBR 577 Law Library Administration (4)** *Hazellon* Administration in law libraries, including organization, personnel, and management issues (e.g., interviewing, hiring, firing), communications, library planning, and bookkeeping. Credit/no credit only. Prerequisite: 544 or permission of instructor.

**LIBR 581 Intellectual Freedom in Libraries (3)** *Nelson* Analysis of issues related to intellectual freedom, with particular attention to implications for libraries and librarians. Includes consideration of the current legal climate, conformity versus freedom in the modern world, the librarian as censor, social responsibility and individual freedom, the intellectual freedom of children, prospects for the future. Credit/no credit only. Prerequisite: 500 or permission of instructor.

**LIBR 583 Cooperative Information Systems (3)** *Mignon* Analysis of cooperative information systems found among all types of libraries and information centers. Emphasis on developments in the United States and also treatment of foreign and multinational systems, with assessment of their contributions. Prerequisite: 500 or permission of instructor; recommended: 501.

**LIBR 584 Information Policy (3)** Review of efforts to develop national information policy and assessment of where we are in process. Consideration of legislation and issues pertinent to national information policy (e.g., freedom of information, privacy, copyright, management of government information, telecommunications, transborder data flow, and satellite technology). Prerequisites: 500, 503, or permission of instructor; recommended: 501, 545.

**LIBR 585 Information in the Public Policymaking Process (3)** Demystifying information base for policymaking in a democracy. Review of theoretical needs and opportunities for input of information associated with three branches of government and each phase of policy-making. Focus on actors who bring information to policymakers. Federal, state, and local comparison. Credit/no credit only. Prerequisite: 500 or permission of instructor; recommended: 501, 503.

**LIBR 590 Directed Fieldwork (4-)** Library and information science majors only. A minimum of 200 hours of professional, supervised fieldwork in a library or professional information agency. May be taken in one quarter or as many as three consecutive quarters. Credit/no credit only. Prerequisite: 33 credits in Master of Librarianship program.

**LIBR 592 Aspects of Publishing (3)** *Skelley* Examination of selected topics and figures relating to book and periodical publishing, primarily from the Renaissance to the present. Focus on publishing practices, processes, and strategies considered in given economic, cultural, and social contexts. Does not cover the arts, crafts, materials, and technical means involved in producing the published product, but the combination of activities, entrepreneurial or otherwise, that constitute publishing. Credit/no credit only.

**LIBR 594 Collection Development (3)** *Hiatt* Access to materials as context for development and management of library collections in academic, public, school libraries. Community analysis, library mission; collection development policies, criteria, principles, levels, responsibilities; aids to selection; collection evaluation, use studies; controversial, difficult materials. Major issues, research, trends. Credit/no credit only. Prerequisites: 500, 501, 503, or permission of instructor; recommended: course in 540 sequence.

**LIBR 598 Special Topics in Librarianship (3)** Seminar dealing with various topics in librarianship. Offered by visitors or resident faculty. Topics are changed from quarter to quarter. May not be offered every quarter. May be repeated for credit. Credit/no credit only. Prerequisite is determined by specific course.

**LIBR 599 Methods of Research in Librarianship (3)** *Brooks* Introduction to research methods commonly used in library and information science. Emphasis on problem selection, study design, data interpretation, and dissemination of results.

**LIBR 600 Independent Study or Research (\*)** Credit/no credit only.

**LIBR 700 Master's Thesis (\*)** Credit/no credit only.

# School of Medicine

## Dean

Philip J. Fialkow  
A300 Health Sciences

## Associate Deans

Benjamin H. Belknap  
Bruce C. Gilliland  
Karen A. Holbrook  
D. Daniel Hunt  
Eric B. Larson  
James P. LoGerfo  
John M. Neff  
Charles B. Smith

## Assistant Deans

Joseph Chu  
Carol F. MacLaren  
Werner E. Samson

## WAMI Coordinators / Assistant Deans

Michael J. Dimino, University of Alaska  
Stephen J. Guggenheim, Montana State University  
Michael B. Laskowski, University of Idaho and Washington State University

## WAMI Program

Established in 1946, the School of Medicine is the only medical school directly serving the states of Washington, Alaska, Montana, and Idaho. Located in the Warren G. Magnuson Health Sciences Building, the school operates a decentralized program of medical education (WAMI) via a network of teaching affiliates throughout the Pacific Northwest.

The school's basic science departments provide educational opportunities for students from all schools and colleges within the University. Clinical teaching programs are conducted at the University of Washington Medical Center, Harborview Medical Center, Children's Hospital and Medical Center, and the Seattle Veterans Administration Medical Center, as well as at other clinical affiliates in Seattle and throughout the WAMI states.

The school admits 165 medical students to its first-year class and has a total enrollment of about seven hundred students pursuing the Doctor of Medicine degree. The full-time faculty numbers more than one thousand members. The affiliated University residency training network enrolls approximately six hundred house officers. Enrollment in the graduate programs in the basic sciences exceeds two hundred students, and approximately four hundred postdoctoral fellows are enrolled in various advanced training programs. The school has baccalaureate and graduate programs in occupational therapy, physical therapy, prosthetics and orthotics, and medical technology. It participates in training a broad spectrum of other allied health professionals.

## Academic Programs

### Doctor of Medicine Degree

Upon completion of the curriculum of the School of Medicine, the M.D. degree is awarded to those candidates who (1) have given evidence of good moral character, (2) have satisfactorily completed the requirements of the curriculum, (3) have fulfilled all special requirements, and (4) have discharged all indebtedness to the University.

### Bachelor of Science Degree

Programs leading to a baccalaureate degree with a major in microbiology are offered through the College of Arts and Sciences. Those programs are described in the College of Arts and Sciences section of this catalog.

### Bachelor of Science in Medical Technology Degree

A curriculum in medical technology is offered by the Department of Laboratory Medicine. This program provides study in the basic sciences plus clinical laboratory training designed to prepare competent laboratory scientists for varied employment opportunities. Information concerning admission to the medical technology program appears under Laboratory Medicine in this catalog.

### Bachelor of Science in Occupational Therapy Degree

A curriculum in occupational therapy is offered by the Department of Rehabilitation Medicine. It provides professional training in the basic sciences and, in the clinical use of occupational therapy modalities, and procedures. Information concerning admission to the occupational therapy program appears under Rehabilitation Medicine in this catalog.

### Bachelor of Science in Physical Therapy Degree

A curriculum in physical therapy is offered by the Department of Rehabilitation Medicine. It provides professional education in the basic sciences and in the clinical use of physical therapy evaluation and management strategies in the treatment or prevention of neuromusculoskeletal dysfunction. Information concerning admission to physical therapy appears under Rehabilitation Medicine in this catalog.

### Bachelor of Science in Prosthetics and Orthotics Degree

A curriculum in prosthetics and orthotics leading to the degree of Bachelor of Science is offered by the Department of Rehabilitation Medicine. It provides professional training in the basic sciences and the clinical application, design, and fabrication of prostheses and orthoses. Information concerning admission to the curriculum in prosthetics and orthotics may be found under Rehabilitation Medicine in this catalog.

### Master of Science and Doctor of Philosophy Degrees

Work leading to master's and doctoral degrees is offered, in accordance with the requirements of the Graduate School, in the departments of Biochemistry, Bioengineering, Biological Structure, Immunology, Microbiology, Pathology, Pharmacology, and Physiology and Biophysics. Master's degree programs are offered by the departments of Laboratory Medicine, Medical History and Ethics, and Rehabilitation Medicine.

Students may work toward these degrees concurrently with the M.D. degree, taking additional years beyond the typical four-year medical curriculum. To expedite the training of physicians who wish to specialize in public health and community medicine, the school has available a program that leads simultaneously to the degrees of Doctor of Medicine and Master of Public Health. The program usually requires the addition of a fifth year to the medical education process. The quarters of the fifth year may be taken sequentially or interspersed with medical training in a variable pattern, subject to appropriate academic approval. Students may elect concentration in any of four departments of the School of Public Health and Community Medicine: Biostatistics, Environmental Health, Epidemiology, or Health Services.

Concurrent degrees are possible in many other departments and colleges of the University. Recent graduates have pursued concurrent degrees in education and engineering, as well as in the basic sciences of medicine and the School of Public Health and Community Medicine. A student who intends to work toward a graduate degree should confer with the Chairperson of the department in which graduate study is to be pursued and with the Associate Dean for Academic Affairs of the School of Medicine. Specific requirements for

admission to work for advanced degrees appear in the Graduate School: Graduate Study section of this catalog. Permission to pursue advanced degrees is granted to medical students only if they are progressing normally in the medical curriculum and show evidence of being able to take on this additional work load.

## Admissions

(These procedures and policies described are subject to change. Information regarding changes is available from the School of Medicine Admissions Office.)

### Selection Factors

Candidates for admission to the University of Washington School of Medicine are considered comparatively on the basis of academic performance, motivation, maturity, personal integrity, and demonstrated humanitarian qualities. A knowledge of and exposure to the needs of individuals and society and an awareness of health care delivery systems are desired. Extenuating circumstances in an applicant's background are evaluated as they relate to these selection factors.

Applicants must submit scores from the Medical College Admission Test (MCAT). This exam must be taken no later than the autumn of the year before possible matriculation. Scores will not be accepted from exams that were taken prior to spring 1991. MCAT registration blanks are available through premedical advisers or through the Office of Admissions. Under exceptional circumstances, to be determined by the Admissions Committee, the GRE may be considered during the admissions process, however, if accepted, the applicant will be required to take the MCAT prior to matriculation.

The premedical course requirements must be completed before matriculation but preferably should be completed by the time of application. They are:

A total of 32 semester hours or 48 quarter hours of undergraduate science courses divided into:

a) *Chemistry*, 12 semester/18 quarter hours, which can be satisfied by taking any combination of inorganic, organic, biochemistry or molecular biology courses.

b) *Physics*, 4 semester/6 quarter hours

c) *Biology*, 8 semester/12 quarter hours

d) *Other ("open") science subjects*, 8 semester/12 quarter hours which can be met by taking other courses in any of the three categories above.

Under exceptional circumstances certain course requirements may be waived for individuals who present unusual achievements and academic promise. All candidates must demonstrate substantial academic ability in their major field as well as in the required science courses. Candidates should be proficient in the use of the English language and basic mathematics and are expected to have a basic understanding of personal computing and information technologies. It is strongly recommended that an understanding of the concepts underlying biochemistry or molecular biology be acquired prior to entering medical school. Those offered positions for the fall of 1991 had a mean GPA of 3.56 and the following mean MCAT scores: Biology, 10.6; Chemistry, 10.7; Physics, 10.8; Science Problems, 10.9; Reading, 9.9; and Quantitative, 10.1.

Completion of three years of course work at an accredited college or university is the minimum required before possible matriculation; however, 99 to 100 percent of entrants in recent years have earned bachelor's degrees. No specific major is advised. A broad background in the humanities and liberal arts is encouraged, indeed expected.

### Application Procedure

The University of Washington participates in the American Medical College Application Service (AMCAS). The deadline for submitting an application to AMCAS is

November 1. After receiving the application from AMCAS, the School of Medicine will ask qualified individuals to submit a \$35 application fee and supplemental application materials. Every attempt will be made to notify applicants of the final action by the end of March.

Preference is given to legal residents of Washington, Alaska, Montana, and Idaho. Out-of-region African Americans, American Indians, Mexican Americans, and mainland Puerto Ricans are encouraged to apply and to contact the Minority Affairs Program for additional information regarding student support services. Medical Scientist Training Program applicants will also be considered. Non-U.S. citizens, in addition to the above, also must have a permanent resident's visa. Applications from persons who have failed to meet minimum standards in another medical or dental school will not be considered.

The deadline for submitting the additional application materials is January 15. These supplemental materials include:

(1) a supplemental application form. This will be sent to the applicant after the School of Medicine has received the AMCAS application.

(2) a 300-word autobiographical statement in which the candidate describes the origin and development of his or her motivation to be a physician, the reasons for desiring to attend the University of Washington School of Medicine, and any other issues of importance to the candidate. The applicant may request that the Personal Comments section of the AMCAS application be used to fulfill this requirement.

(3) a premedical committee letter of recommendation or three letters from instructors from whom the candidate has taken courses. These letters should be critical evaluations of the candidate's academic ability, strengths and weaknesses, the difficulty of course work undertaken, motivation for medicine, personal maturity, and special attributes and assets.

(4) a \$35 fee. This will automatically be waived for those who have qualified for AMCAS fee waivers. Others seeking a waiver of this fee should submit their requests directly to the School of Medicine Office of Admissions.

Candidates from Alaska, Montana, and Idaho will be required to submit residency certifications from their respective state certifying officers. Proof of legal residence for Washington residents also may have to be furnished. Determination of state of legal residence is not made by the School of Medicine; specific instructions regarding this requirement are furnished at the time of application. Those who enter as residents of Alaska, Montana, and Idaho are expected to spend their first year at the university site in their particular state. Twenty Washington students begin their medical education by spending the first year at Washington State University. Offers of acceptance, therefore, are conditional upon agreement to participate in the WAMI Program.

Inquiries, address changes, or other information regarding the application should be transmitted in writing and directed to the University of Washington, School of Medicine, Office of Admissions, SM-22, Committee on Admissions, Seattle, Washington 98195.

## Minority Affairs Program

The Minority Affairs Program assists students from minority and/or disadvantaged backgrounds who are pursuing M.D. or M.D.-Ph.D. degrees. The program nurtures interests in medical careers by providing a variety of support services and enrichment activities in the areas of recruitment, education, admission, retention, and professional development.

The school actively recruits underrepresented ethnic minority applicants and encourages students to contact the Minority Affairs Program for assistance during

the admissions and application process. In addition, the program offers counseling and advocacy, referrals to University and community resources, tutoring, financial aid information, and numerous opportunities to interact with other minority health care professionals within the community.

The Northwest Consortium Minority Medical Education Program (MMEP) offers undergraduate and some qualified postbaccalaureate students a six-week summer academic enrichment program that includes science, mathematics, writing, study skills, and MCAT preparation. Structured clinical and research activities are also offered. Housing, stipends, and travel assistance are available.

A six-week Prematriculation Program for entering minority and disadvantaged medical students is offered during the summer. The program is designed to facilitate students' entry into medical school by providing instruction in histology as well as enrichment activities in areas such as study skills, stress management, test-taking skills, research, clinical practice, and community health. Stipends and travel assistance are available to students who qualify.

During the regular school year, the Minority Affairs Program serves as a general information resource for both the academic and nonacademic needs of students and facilitates students' access to the multiple resources in the School of Medicine, the WAMI region, and the community. Annual events include a Pre-Admission Workshop and a Cross-Cultural Medicine Workshop. A program of early acceptance called PATHWAYS has been established for outstanding minority and disadvantaged students from the WAMI region. PATHWAYS acceptance enables students to be accepted to the UW School of Medicine as early as their sophomore year in college.

Inquiries and requests for additional information may be obtained by contacting the Minority Affairs Program, SM-22, School of Medicine, University of Washington, Seattle, Washington 98195; telephone (206) 685-2489.

## Medical Scientist Training (M.D.-Ph.D.) Program

A limited number of highly qualified candidates who wish to pursue both the M.D. and Ph.D. degrees are considered annually. Medical scientist trainees must be accepted by the School of Medicine for the M.D. degree and by the Graduate School for the Ph.D. degree. They are permitted a wide choice of research specializations from among numerous disciplines and interdisciplinary areas of biomedical sciences. The program emphasizes continuity of both clinical and basic sciences exposure. Among participating graduate departments and interdepartmental disciplines are biochemistry, bioengineering, biological structure, biomathematics and biostatistics, environmental health, epidemiology, genetics, immunology, the interdisciplinary molecular and cellular biology program, microbiology, molecular biotechnology, neurobiology, pathology, pharmacology, physiology and biophysics, and zoology.

Applicants should correspond directly with the Director of the Medical Scientist Training Program, D525 Health Sciences, SM-30, University of Washington, Seattle, Washington 98195, as well as proceed with the regular School of Medicine application.

Applicants who wish to be considered for the M.D.-Ph.D. program must submit the Medical Scientist Training Program application as quickly as possible. Both the application and any supplemental material requested must be complete by January 15. This application form is sent to all eligible applicants together with acknowledgment of receipt of their medical school application. Serious consideration is rarely given to applicants with either a cumulative GPA of less than 3.50 and/or MCAT scores of less than 10.

## Transfer Students

Residents of Washington, Alaska, Montana, and Idaho who are attending other medical schools are eligible to apply for transfer for clinical training into the third-year class only. Students interested in transferring from other medical schools should direct their inquiries to the Admissions Office of the School of Medicine for the latest information. It should be noted that transfers can be accepted only if there are adequate clinical facilities to accommodate them, and this has been a severely limiting factor since the increase in class size over the past decade.

## Financial Information

### Fees and Other Charges

All fees and extra service charges are payable in United States dollars and due at the time specified for such fees and charges. The University reserves the right to change any of its fees and charges without notice. Resident tuition presently is \$1,916 per quarter. Nonresident tuition presently is \$4,873 per quarter.

### Financial Assistance

All financial aid is based on the demonstrated need of the student. All applicants for aid from the school must submit data for an analysis of need (Financial Aid Form) by the College Scholarship Service. This requires full disclosure of resources available to the student from individual and family sources. The Guaranteed Student Loan—Stafford, the National Direct Student Loan—Perkins, the Supplemental Loans for Students, and the Health Professions Loan are the primary sources of aid.

Partial scholarships are available through the School of Medicine scholarship fund. These awards are limited to students of exceptional financial need and require financial information from the student and the student's parents, regardless of dependency status.

Financial aid information is distributed to all accepted applicants. Application forms for financial aid may be obtained from the Office of Student Financial Aid, School of Medicine. The deadline for receipt of the application is March 1. Applicants are advised to meet this deadline regardless of the status of their admission file. In case of emergency or special need, an application for financial assistance may be made at any time.

Outside employment is discouraged while the student is enrolled in medical school course work.

## Medical Curriculum

### Basic Curriculum (122 Credits)

The first two years (six quarters) of the medical student curriculum is identified as the *Basic Curriculum*. It consists of three phases, or groups, of courses in the human biology series: pre-organ system courses in the sciences basic to medicine, organ systems taught by basic and clinical disciplines, and introduction to clinical medicine and health care. The first phase is designed to provide the background in basic disciplines required for the organ system courses. In the second phase, the student is concerned with learning the normal and pathophysiologic properties of the several human organ systems. Emphasis is placed upon correlating these properties with clinical methods of data collection and problem formulation. Students pursue the Introduction to Clinical Medicine course throughout all six quarters, learning to interview patients, obtain a medical history, and perform physical examinations. In the course Medicine, Health, and Society, they also study the health-care system and problems of providing medical care to populations.

Students are expected to pursue the Basic Curriculum during their first six quarters in the School of Medicine. The academic demands of the Basic Curriculum are

scaled so that most students also will be able to take elective courses. Electives are used to broaden the student's background.

#### FIRST QUARTER (AUTUMN)

HUBIO 510P Microscopic Anatomy (Histology)  
HUBIO 511P Gross Anatomy and Embryology  
HUBIO 512P Mechanisms in Cell Physiology  
HUBIO 513P Introduction to Clinical Medicine  
HUBIO 514P Biochemistry I-A  
HUBIO 516P Systems of Human Behavior I-A

#### SECOND QUARTER (WINTER)

HUBIO 520P Cell and Tissue Response to Injury  
HUBIO 521P Natural History of Infectious Disease and Chemotherapy I-A  
HUBIO 522P Introduction to Clinical Medicine  
HUBIO 523P Introduction to Immunology  
HUBIO 524P Biochemistry I-B  
HUBIO 526P Systems of Human Behavior I-B

#### THIRD QUARTER (SPRING)

HUBIO 530P Epidemiology  
HUBIO 531P Head, Neck, Ear, Nose, and Throat  
HUBIO 532P Nervous System  
HUBIO 534P Natural History of Infectious Disease and Chemotherapy I-B  
HUBIO 535P Introduction to Clinical Medicine

#### FOURTH QUARTER (AUTUMN)

HUBIO 540P Cardiovascular System  
HUBIO 541P Respiratory System  
HUBIO 542P Introduction to Clinical Medicine  
HUBIO 543P Principles of Pharmacology I  
HUBIO 544P Endocrine System  
HUBIO 546P Systematic Pathology  
HUBIO 554P Genetics  
HUBIO 567P Skin System

#### FIFTH QUARTER (WINTER)

HUBIO 550P Introduction to Clinical Medicine  
HUBIO 551P Gastrointestinal System  
HUBIO 552P Hematology  
HUBIO 553P Musculoskeletal System  
HUBIO 555P Medicine, Health, and Society

#### SIXTH QUARTER (SPRING)

HUBIO 560P Introduction to Clinical Medicine  
HUBIO 562P Urinary System  
HUBIO 563P Systems of Human Behavior II  
HUBIO 564P Principles of Pharmacology II  
HUBIO 565P Reproduction

#### Clinical Curriculum (144 Credits)

The clinical curriculum is pursued predominantly in the third and fourth years of medical school. It includes three elements: prescribed clerkships to be completed by all students (72 credits or thirty-six weeks in medicine, obstetrics and gynecology, pediatrics, psychiatry, surgery); a clinical selective series requiring a minimum number of credits (24) in three clinical areas (family medicine, rehabilitation medicine/chronic care, and emergency care/trauma); and a minimum of 48 credits of clinical clerkships elected by the student.

Education in the clinical curriculum utilizes the case-study method. Students gain clinical knowledge and gradually increase their clinical problem-solving abilities while working as junior members of a medical-care team. Each such team is headed by a faculty clinician working in one of the medical school-affiliated hospitals or practice units.

#### Independent Study in Medical Science

In addition to the basic and clinical curricula, each student must complete 10 credits in courses, independent study, and investigation in one or more of the biological, behavioral, sociocultural, or epidemiologic sciences basic to medicine. The purpose of this requirement is that the student gain an understanding of the philosophy and methods of science. Of the 10 credits, 6 are earned by the satisfactory completion of a project in independent study in medical science (ISMS), that includes a written paper. The remaining 4 may be satisfied by taking 500-level courses in a variety of subjects at any time during the student's enrollment in the M.D. program.

#### WAMI Program

The WAMI Program was initiated in 1971 as an experiment in decentralized medical education to provide a broader range of educational opportunities for students, and to address the need for primary-care physicians oriented toward rural practice. It is an integral part of the undergraduate medical curriculum and is a fully accredited program of the School of Medicine. The WAMI Program is named for the four states (Washington, Alaska, Montana, and Idaho) that share resources and responsibilities in the regional educational program. Funds appropriated to the WAMI Program by Alaska, Montana, and Idaho legislatures assure each state of positions in the freshman medical class each year for its students.

#### First-Year Training

In the first year of the WAMI Program, approximately forty percent of the students admitted to the University's School of Medicine receive the first year of medical school training at Washington State University, University of Alaska, Montana State University, or the University of Idaho. Washington State University positions not filled by volunteers are assigned by lottery. Every Washington resident applicant should recognize the possibility of assignment to Washington State University during the first year. Alaskans, Montanans, and Idahoans attend their home-state institutions. While in one of these institutions, they enroll in basic science courses taught by the science faculty and are provided supplemental resources from this university's School of Medicine faculty. These students join their classmates at the University's campus in Seattle for the second year of medical studies.

#### Third-Year Training

At the conclusion of the second year, students enter that portion of the curriculum that is predominantly clinical. As part of the clinical training, they complete clerkships at the University of Washington, at its affiliated hospitals, or at twenty-three Community Clinical Units located in the four-state region. At these sites, physicians in practice serve as School of Medicine clinical faculty members to provide supervised clinical training in five specialties: family medicine, internal medicine, obstetrics and gynecology, pediatrics, and psychiatry. The WAMI Community Clinical Units are also used for a portion of the residency training in the respective disciplines. Training experiences at the WAMI Community Clinical Units include outpatient contact at local physicians' private offices, hospital rounds, follow-through inpatient care, emergency room duty, service at local community special clinics, lectures, and didactic and participatory discussions. Clerkships in family medicine are offered at Boise and Pocatello, Idaho; Anchorage, Seward, and Ketchikan, Alaska; Whitefish and Havre, Montana; and Anacortes, Omak, Spokane, and Tacoma, Washington. Clerkships in obstetrics and gynecology are offered at Tacoma and Spokane, Washington; Anchorage, Alaska; and Boise, Idaho. Psychiatric clerkships are offered at Anchorage, Alaska. Pediatrics clerkships are available in Pocatello, Idaho; Great Falls, Montana; and Tacoma and Spokane, Washington. Clerkships in internal medicine are offered at Boise, Idaho; Billings and Missoula, Montana; and Wenatchee and Spokane, Washington.

By capitalizing on the resources of neighboring state universities, the clinical expertise of community practi-

tioners, and the medical center, the WAMI Program has been able to expand medical school admissions for students from all four states, to enlarge clinical training opportunities in the primary-care disciplines, and to address the shortage of physicians in rural areas.

## Enrichment Opportunities

Students may enhance their medical education through a variety of sponsored activities that offer students an opportunity to explore areas of special interest, such as working in rural or urban clinics that serve medically underserved communities, undertaking medical research projects or clinical investigations, or participating in an international exchange program with a developing country. Brief descriptions of three of the more formally structured programs follow. Information on other opportunities may be obtained from the Academic Affairs Office.

#### Rural/Underserved Opportunities Program (RUOP)

This program exposes students to rural medicine and utilizes clinical training sites in all four states. For one month during the summer between the first and second year, students work with physicians in small communities, offering a chance to better understand the challenges and opportunities in these settings. Students receive a stipend supported by the Family Health Foundation, the Academy of Family Physicians, Area Health Education Centers, and the School of Medicine.

#### Medical Student Research Training Program

Research opportunities are offered to UW medical students interested in gaining valuable experience from training in medical research. The purpose of the program is to actively encourage students to participate in a research project as part of their medical education. This research is planned and carried out under the supervision of a faculty sponsor and may be undertaken during any quarter. Student trainees in the program receive a stipend supported largely by a special fund from the School of Medicine. The project is expected to be twelve weeks, full-time, on a working schedule of forty hours per week, and the student may not be enrolled in courses for credit during this time.

#### Medical Thesis Program

The medical thesis program of the School of Medicine is voluntary, and participation is initiated by the student. Often a student will develop a special interest in

some particular field in medicine. This interest will create a desire to learn more about the field or to do special work in it. The thesis program is a means of fulfilling that desire. Prizes are awarded for the best theses submitted each year, and certain departments offer prizes for the best thesis written under that department's supervision. The preparation of a satisfactory thesis may carry with it honors at graduation. Additional information concerning the thesis program can be obtained from the chairperson of the Medical Thesis Committee or from the School of Medicine Academic Affairs Office.

## Student Evaluation and Promotion

The awarding of the Doctor of Medicine degree is contingent upon satisfactory completion of academic and non-cognitive requirements. The latter includes the acquisition of behavior, patterns and attitudes consistent with the oath that all students take at the time of graduation. As such, student evaluation is based upon the faculty's observation of the student's behavior and conduct as well as papers and examinations. Every student is required to pass Steps 1 and 2 of the United States Medical Licensing Examination, all University of Washington examinations, and complete an approved Independent Study in Medical Science project before receiving the Doctor of Medicine degree. Periodic review of student performance is conducted by the School's Student Progress Committee. Students are informed of their deficiencies and the remedial requirements, if any, for these deficiencies. Dismissal from the school may occur if the student fails to maintain an acceptable academic record, fails to follow academic directives provided by the school's committees, or fails to develop attitudes and behavior patterns appropriate to a career in medicine. The Faculty Council on Academic Affairs reviews the Student Progress Committee's actions, and the Dean of the School of Medicine has final approval of the committee's recommendations. A review mechanism is available within this process. Once dismissal or withdrawal from the school has occurred, readmission requires the approval of the Faculty Council on Academic Affairs. Readmission will not be considered without substantial evidence that the problems causing the dismissal or withdrawal have been resolved. Only one readmission petition through the Faculty Council on Academic Affairs is allowed. Subsequent requests for admission must be directed through the standard admissions procedures.

### Grading System

The grades awarded in each course in the M.D. curriculum are Honors, Satisfactory, or Not Satisfactory. The school's goal is to provide a curriculum that defines the competencies to be achieved by the student at each level. Therefore, grading usually signifies satisfactory or not satisfactory accomplishment of these competencies at the end of each course. However, a pattern of documented evaluator concerns about a student's performance may indicate not satisfactory performance when the record is viewed as a whole, even though passing grades have been assigned. Honors may be awarded in a course on predetermined criteria that may involve additional work in the subject as selected by the student. The grading system precludes the ranking of students in class standing by a grade-point average.

The School of Medicine reserves the right to revise or modify the curriculum, system of evaluation, or graduation requirements.

### Honors

A charter as Alpha of Washington was granted to the School of Medicine in 1950 by Alpha Omega Alpha, the honorary medical society. Members are elected by the membership of Alpha Omega Alpha on the basis of high scholarship and good moral character.

### Graduation With Honor

A degree of Doctor of Medicine with honor may be awarded to students with high achievement who, in addition, have demonstrated initiative and success in clinical and scholarly pursuits related to medicine. Candidates for graduation with honors are nominated by the departments each year and are selected on the basis of an Honors and Awards Committee review of academic records.

## Postgraduate Medical Education

### Internships and Residencies

Postgraduate clinical training programs are available at University-affiliated hospitals: University of Washington Medical Center, Harborview Medical Center, Seattle Veterans Administration Medical Center, Pacific Medical Center, Children's Hospital and Medical Center, Providence Hospital, Swedish Hospital, Group Health Cooperative of Puget Sound, and Boise Veterans Administration Hospital. All clinical departments cooperate with one or more of these institutions. A University network of affiliated family practice residencies includes training programs based in Seattle, Tacoma, Renton, Spokane, and Boise, Idaho, and in a military program at Madigan Army Medical Center. Training programs are available in anesthesiology, family medicine, general surgery, internal medicine, laboratory medicine, neurological surgery, neurology, nuclear medicine, obstetrics and gynecology, ophthalmology, orthopaedic surgery, otolaryngology, pathology, pediatrics, psychiatry, radiation therapy, radiology, rehabilitation medicine, and urology. Residency programs vary in duration from three to five years and are integrated, providing for rotation through several of the University-affiliated hospitals during this period of training.

### Postdoctoral Fellowships and Traineeships

Postdoctoral fellowships and traineeships are available in all departments. They are designed to provide additional research, teaching and clinical experience for advanced students who already have obtained the Ph.D. or M.D. degree.

## Continuing Medical Education

The Division of Continuing Medical Education, School of Medicine, offers a wide variety of programs for physicians and health care professionals and in the Pacific Northwest, Alaskan communities, and throughout the nation. While the vast majority of these programs are offered at the School of Medicine, a number are offered at remote site locations.

Programs include short courses, of one to three days, conferences, one- to two-week board review courses, workshops, visiting professorships, preceptorships, and mini-residencies. Programs in the community include lecture series, video tape presentations, self-directed instructional materials, and other educational activities as requested by members of the medical community throughout the region.

All physicians are invited to participate in continuing medical education programs and in the clinical department grand rounds, and regular conference series, or at the affiliated hospital facilities.

The University of Washington School of Medicine is accredited by the Accreditation Council for Continuing Medical Education to sponsor Continuing Medical Education for physicians. All programs sponsored by the Division of Continuing Medical Education are applicable to physician relicensure requirements of the Washington Board of Medical Examiners for category I credit of the Physician's Recognition Award of the American Medical Association. Prescribed credit for the American Academy of Family Physicians is requested for all applicable programs. Other forms of

accreditation are included in the program offerings where appropriate.

Descriptive brochures and calendars for short courses and conferences are published during the academic year. Specific program information in the way of a brochure or program announcement, is made available throughout the twelve to fifteen weeks prior to the scheduled course. Information concerning Continuing Medical Education programs may be obtained from the University of Washington School of Medicine, Division of Continuing Medical Education, XF-01, or the following street address: 1325 4th Ave. Suite 2000, Seattle, Washington 98101. Telephone number: (206) 543-1050 or 1-800-869-2633.

## Anesthesiology

BB1459 Health Sciences

The Department of Anesthesiology maintains an active program of teaching and research for the specialist and nonspecialist. Medical students are introduced to the principles of anesthetic management and the effects of anesthetic agents on circulatory and respiratory physiology. The clinical clerkship program provides basic training in airway management and care of the unconscious patient. A four-year residency program, including an internship year, is available for physicians who desire specialty training in anesthesiology. In addition, advanced clinical and research training is offered in several major subspecialty areas (cardiac anesthesia, neuroanesthesia, pediatric anesthesia, obstetrical anesthesia, pain management). Opportunities for collaborative research are available to undergraduate and graduate students. The department conducts a regular series of clinical conferences, didactic lectures, and research seminars. Questions regarding clinical clerkships may be directed to Dr. Brian Ross at 543-4070. Other training questions may be directed to the Residency Coordinator at 543-2672.

Strauss, Susan G., 1988, (Acting), M.D., 1984, Chicago.

## Course Descriptions

*Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.*

**ANEST 488 Undergraduate Thesis (\*) AWSpS Ross** By special arrangement. Time and credit to be arranged.

**ANEST 499 Undergraduate Research (\*) AWSpS Ross** Specific research problems relating to pulmonary, cardiovascular, renal, obstetric, and central nervous system functions, and their alteration by anesthetic techniques and agents. (Six weeks, full-time. Limit: two students.)

**ANEST 501P Preceptorship in Anesthesiology (1) AWSpS Ross** An opportunity for first- and second-year medical students to gain experience with medical practice situations by observing clinical faculty members in their offices. Prerequisite: permission of instructor.

**ANEST 680P Basic Anesthesia Clerkship (4) AWSpS Ross** Introduction to the principles of airway management, ventilatory support, use of local anesthetics, techniques of patient monitoring and fluid therapy. Skills taught include airway management, venipuncture, lumbar puncture and endotracheal intubation. Prerequisite: third- or fourth-year student. (Two weeks, full-time. Limit: five students each two-week period.) Affiliated hospitals.

**ANEST 681P Advanced Clerkship in Anesthesiology (8) AWSpS Ross** Clerkship for students desiring greater exposure to anesthesiology as a specialty. Individual programs can be arranged in the following areas: surgical anesthesia, obstetrical anesthesia, and pain clinic. Prerequisite: 680P or permission of instructor. (Four weeks, full-time. Limit: one student per period.) Affiliated hospitals.

**ANEST 697P Anesthesiology Special Electives (\*, max. 24) AWSpS Ross** Special clerkships, externships, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain a special assignment form from the Dean's office at least one month before advance registration. Prerequisite: permission of instructor. (Six to twelve weeks, full-time.)

## Biochemistry

J405 Health Sciences

James Hurlay, Graduate Program Coordinator

Modern biochemistry involves the study of biological processes at a molecular level. Specific research projects may entail study in such diverse fields as molecular biology, molecular biophysics, genetics, microbiology, immunology, developmental biology, organic chemistry, pharmacology, and physiology. Graduate students enrolled in the Department of Biochemistry engage in studies and research that prepare them for the challenging opportunities open to the professional biochemist in colleges and universities, research institutes, medical schools and hospitals, government laboratories, and the laboratories of chemical, biotechnology, and pharmaceutical industries.

The course of advanced study is designed to give each student a firm foundation upon which to base further professional progress. In the first year of academic work, students attend courses in biochemistry and molecular biology, and in related fields such as chemistry, biophysics, genetics, cell biology, and microbiology. In the second and succeeding years, an increasing amount of time is devoted to research and independent study. For the Ph.D. degree, each student is required to gain teaching experience, usually during the second year of the graduate program.

The basic requirements for admission for graduate study in biochemistry are one year of biochemistry, one year of physical chemistry, and mathematics through integral calculus. Applicants must also meet the general admission requirements of the Graduate School.

Normally, all graduate students admitted to the Department of Biochemistry are provided with financial assistance.

Research facilities for the department are housed in the Biochemistry-Genetics Building, which provides approximately fifty-two thousand square feet of excellent research space, conference rooms, and a departmental library. In addition, approximately eleven thousand square feet of research space and conjoint facilities are shared with the Department of Genetics. The laboratories are equipped with the latest in research equipment and are supported extensively by external, centralized research facilities, which include a modern computer center, the Marine Biology Laboratory at Friday Harbor, and the Health Sciences Library. An emphasis on biomedical research is facilitated by the location of the department within the School of Medicine. Close collaboration exists with investigators in other related departments, including biological structure, chemistry, pharmacology, genetics, and microbiology.

Teller, David C.,\* 1965, Ph.D., 1964, California (Berkeley); physical chemistry of macromolecules, association reactions of proteins.

Walsh, Kenneth A.,\* 1958, M.S., 1953, Purdue; Ph.D., 1959, Toronto; structure and functions of proteins and zymogens, proteases and fertilization.

Young, Elton T.,\* 1969, (Genetics), Ph.D., 1967, California Institute of Technology; regulation of gene activity in the yeast *Saccharomyces cerevisiae*.

#### Associate Professors

Babcock, Donner,\* 1986, (Research), Ph.D., 1971, Oregon State; reproductive cell biology, mechanisms of cytosolic pH homeostasis.

Chung, Dominic, 1982, (Research), Ph.D., 1976, California (Los Angeles); mechanisms of blood clotting.

Gelb, Michael H.,\* 1986, ‡(Chemistry), Ph.D., 1982, Yale; mechanism-directed inhibitors of enzymes.

Herriott, Jon R.,\* 1969, Ph.D., 1967, Johns Hopkins; X-ray crystallography of macromolecules, protein structure and function.

Hurley, James B.,\* 1985, Ph.D., 1979, Illinois (Urbana); molecular biology of guanyl nucleotide binding proteins involved in signal transduction in eukaryotic cells.

Ichinose, Akitada, 1987, (Research), M.D., 1978, Kagoshima (Japan); blood coagulation and fibrinolysis.

Klevit, Rachel E.,\* 1986, D.Phil., 1981, Oxford (England); protein structure and changes in conformation related to function as studied by magnetic resonance spectroscopy.

Sandell, Linda, 1987, ‡(Orthopaedics), Ph.D., 1980, Northwestern; molecular mechanism by which cells establish and regulate the expression of an extracellular matrix.

Stenkamp, Ronald E.,\* 1981, ‡(Biological Structure), Ph.D., 1975, Washington; crystallography, molecular biophysics, bioinorganic chemistry.

#### Assistant Professors

Bradshaw, Harvey D., 1989, (Research), Ph.D., 1984, Louisiana State; plant molecular biology and genetic modification of poplars.

Chou, Patrick Shan-Ho, 1986, (Research), Ph.D., 1984, Washington; high resolution nmr studies of unusual nucleic acid structures.

Davis, Trisha N.,\* 1987, Ph.D., 1983, Yale; molecular biology of calmodulin in yeast.

Kimelman, David,\* 1989, Ph.D., 1985, Harvard; molecular biology of early development.

Liska, DeAnn J., 1992, (Research), Ph.D., 1987, Wisconsin; transcriptional regulation of extracellular matrix molecules during development.

Muller, Eric,\* 1988, (Research), Ph.D., 1981, Yale; molecular analysis of regulatory proteins in photosynthesis.

Nagarajan, V., 1991, (Research), Ph.D., 1984, Notre Dame; fast reactions in chemistry and biology; bacterial photosynthesis.

Tan, Xuehai, 1991, (Research), Ph.D., 1990, Medical College of Ohio; structure and function of the protein domains of the cell surface receptor CD 45.

Yarfitz, Stuart, 1992, (Research), Ph.D., 1986, State University of New York at Buffalo; G protein function in *Drosophila* phototransduction.

## Course Descriptions

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

**BIOC 405, 406 Introduction to Biochemistry (3,3) A,W Petra, Saari, Sandell, Teller** Basic principles of biochemistry, emphasizing broad understanding of chemical events in living systems in terms of metabolism and structure-function relationships of biologically important molecules. Does not fulfill advanced biochemistry prerequisites (see 440, 441, 442). Prerequisites: general biology and organic chemistry or permission of instructor for 405; 405 or permission of instructor for 406.

**BIOC 426 Basic Techniques in Biochemistry (3) Sp Davie** Introduction to basic biochemistry experiments. Acquaints students with basic biochemical laboratory techniques and serves as a preparation for advanced biochemistry laboratory courses. Prerequisites: 405, 406 or 440, 441, 442, which may be taken concurrently.

**BIOC 440, 441, 442 Molecular Biology (4,4,4)** Interdisciplinary course in general biochemistry and molecular biology for undergraduate students in molecular and cellular biology and graduate students in other science departments. (One-hour quiz per week required.) Recommended: three quarters of organic chemistry.

**BIOC 461 Introduction to Physical Biochemistry (2) W Herriott, Teller** Behavior of biological macromolecules in aqueous solutions (ten lectures) and fundamentals of x-ray structure analysis (ten lectures). Given concurrently with 561, but problem sets and examinations are designed for the advanced (senior) undergraduate. Prerequisites: physical chemistry (e.g., CHEM 352) and calculus.

**BIOC 498 Undergraduate Thesis (\*) AWSpS** For senior medical students. Prerequisite: permission of instructor.

**BIOC 499 Undergraduate Research (\*) AWSpS** Investigative work on enzymes, proteins, lipids, nucleic acids, protein biosynthesis, intermediary metabolism, physical biochemistry, and related fields. Credit/no credit only. Prerequisite: permission of instructor.

**BIOC 515-519** (For description, see listing for "Current Literature Conferences" at the end of this section.)

**BIOC 520 Seminar (1) AWSp** Seminar dealing with special topics in the field of biochemistry. May be repeated for credit. Prerequisite: permission of instructor.

**BIOC 525-529** (For description, see listing for "Current Literature Conferences" at the end of this section.)

**BIOC 530 Advanced Biochemistry (3) A** Graduate-level discussion of the structure, function, and chemistry of proteins, control of enzymatic reactions. Prerequisites: a comprehensive course in biochemistry and permission.

**BIOC 531 Advanced Biochemistry (3) W** Graduate-level discussion of the action of hormones, membrane structure and function, electron transport, oxidative phosphorylation, photosynthesis. Prerequisites: a comprehensive course in biochemistry and permission of instructor.

**BIOC 532 Advanced Biochemistry (3) Sp** Graduate-level discussion of nucleic acid structure, viruses including oncogenic viruses, RNA biosynthesis, protein biosynthesis, and eukaryotic cell cycle. Prerequisites: a comprehensive course in biochemistry and permission of instructor.

**BIOC 535-539** (For description, see listing for "Current Literature Conferences" at the end of this section.)

**BIOC 540, 541, 542 Literature Review (2,2,2) A,W,Sp** Emphasizes critical evaluation of original ar-

ticles in the literature. Coordinated with 530, 531, 532, and to be taken concurrently. For first-year graduate students in biochemistry and students of other science departments, with permission. For 540: numerical grade; for 541 and 542: Credit/no credit only. Entry codes required.

**BIOC 546-548** (For description, see listing for "Current Literature Conferences" at the end of this section.)

**BIOC 555-559** (For description, see listing for "Current Research Conferences" at the end of this section.)

**BIOC 561 Physical Biochemistry I (2) W Herriott, Teller** Solution properties of macromolecules, transport processes in biology, and the structure of macromolecules determined by x-ray diffraction. Prerequisite: physical chemistry or permission of instructor.

**BIOC 562 Physical Biochemistry II (2) Sp Parson, Reid** Macromolecular structure determined in solution by high-resolution NMR, and by optical spectroscopic techniques. Prerequisite: 561 or permission of instructor.

**BIOC 565-569** (For description, see listing for "Current Research Conferences" at the end of this section.)

**BIOC 575-579** (For description, see listing for "Current Research Conferences" at the end of this section.)

**BIOC 581 Introduction to Biochemical Research (3, max. 6) AWSp** Student works with one of the research groups within the department for one quarter and then rotates to other laboratories for second and third quarters. Credit/no credit only. Prerequisite: graduate standing in biochemistry or permission of instructor. Entry code required.

**BIOC 586-588** (For description, see listing for "Current Research Conferences" at the end of this section.)

**BIOC 600 Independent Study or Research (\*) AWSps**

**BIOC 700 Master's Thesis (\*) AWSps**

**BIOC 800 Doctoral Dissertation (\*) AWSps**

### Current Literature Conferences

**BIOC 515-519, 525-529, 535-539, 546-548 Current Literature Conference in Biochemistry** Weekly literature reviews of topics pertinent to ongoing research in biochemistry. Students may register for more than one conference each quarter. Credit/no credit only. Prerequisite: permission of instructor. (Only 25 credits may be counted toward degree.)

**BIOC 515 Matrix Macromolecules in Morphogenesis and Development (1, max. 30) Bornstein**

**BIOC 516 Molecular Mechanisms of Blood Clotting (1, max. 30) Davie**

**BIOC 517 Regulation of the Cell Cycle (1, max. 30) Davis**

**BIOC 518 Protein Phosphorylation and Dephosphorylation (1, max. 30) Fischer**

**BIOC 519 Cell Membranes (1, max. 30) Glomset**

**BIOC 525 Plant Molecular Biology (1, max. 30) Gordon**

**BIOC 526 Control of Growth and Differentiation During Development (1, max. 30) Hauschka**

**BIOC 527 Macromolecular Structure (1, max. 30) Herriott**

**BIOC 528 Signal Transduction (1, max. 30) Hurley**

**BIOC 529 Molecular Biology of Early Development (1, max. 30) Kimelman**

**BIOC 535 Macromolecular Structure (1, max. 30) Klevit**

**BIOC 536 Control of Cell Growth (1, max. 30) Morris**

**BIOC 537 Regulation of Gene Expression (1, max. 30) Palmiter**

**BIOC 538 Bioenergetics (1, max. 30) Parson**

**BIOC 539 Immunobiology (1, max. 30) Perlmutter**

**BIOC 546 Physical Chemistry of Macromolecules (1, max. 30) Teller**

**BIOC 547 Protein Structure, Function, and Evolution (1, max. 30) Neurath, Walsh**

**BIOC 548 Regulation of Gene Activity and Protein Transport (1, max. 30) Young**

### Current Research Conferences

**BIOC 555-559, 565-569, 575-579, 586-588 Current Research Conferences in Biochemistry** Weekly group conferences concerning ongoing graduate student and postdoctoral research in biochemistry. Students may register for more than one conference each quarter. Credit/no credit only. Prerequisite: permission of instructor. (Only 25 credits may be counted toward degree.)

**BIOC 555 Cell and Molecular Biology of Connective Tissue Proteins (1, max. 30) Bornstein**

**BIOC 556 Enzymatic and Genetic Aspects of Blood Clotting (1, max. 30) Davie**

**BIOC 557 Growth Regulation by Calcium Binding Proteins (1, max. 30) Davis**

**BIOC 558 Regulation of Cellular Events by Protein Phosphorylation (1, max. 30) Fischer, Krebs**

**BIOC 559 Membrane Biochemistry and Cell Growth (1, max. 30) Glomset**

**BIOC 565 Plant Molecular Genetics (1, max. 30) Gordon**

**BIOC 566 Growth and Differentiation of Skeletal and Cardiac Muscle (1, max. 30) Hauschka**

**BIOC 567 X-Ray and NMR Analysis of Macromolecular Structure (1, max. 30) Herriott**

**BIOC 568 Molecular and Genetic Aspects of G Protein Signal Transduction (1, max. 30) Hurley**

**BIOC 569 Inductive Events in Early Development (1, max. 30) Kimelman**

**BIOC 575 NMR Analysis of Proteins and Nucleic Acids (1, max. 30) Klevit**

**BIOC 576 Sequential Analysis of Growth Regulation (1, max. 30) Morris**

**BIOC 577 Gene Regulation in Transgenic Mice (1, max. 30) Palmiter**

**BIOC 578 Electron Transport in Photosynthesis (1, max. 30) Parson**

**BIOC 579 Molecular Biology of the Immune System (1, max. 30) Perlmutter**

**BIOC 586 Protein Hydrodynamics and Computer Modeling (1, max. 30) Teller**

**BIOC 587 Structural Domains, Evolution, and Regulation of Proteins (1, max. 30) Neurath, Walsh**

**BIOC 588 Molecular Biology of Yeast Gene Regulation (1, max. 30) Young**

clude bioinstrumentation, biomaterials, biomechanics, controlled drug-release systems, imaging, microsen-sors, bioelectromagnetics, molecular bioengineering, microcirculation, cell mechanics, muscle, and simulation of biosystems. There are options for study leading to master's and doctoral degrees with different levels of specialization. Detailed information on Bioengineering, its faculty and courses appears in the Interschool or Intercollege Programs section of this catalog.

## Biological Structure

Andrew Farr, Graduate Program Coordinator  
G514 Health Sciences

The Department of Biological Structure offers graduate programs of study leading to the Master of Science and Doctor of Philosophy degrees. The department promotes an understanding of biological processes through the study and analysis of structure-function relationships. The research problems that interest members of the faculty are diverse, including cellular differentiation and development explored in a variety of biological systems, neuroscience, molecular biophysics, and quantitative biology with an emphasis on computer graphic representations of biological structures. This diversity creates a lively atmosphere in the department that provides a stimulating environment for the training of scientists with a variety of backgrounds.

The department's graduate program is directed toward the education of doctoral students who anticipate academic careers that will involve teaching and research in the biomedical sciences. Graduates from the program are expected to have a broad knowledge of biological structure at all levels, from the molecular to the human anatomical, with major emphasis on the cellular level.

Graduate students select research and teaching pathways in their program. The research pathways are designed to provide training for a student in one or two of the following areas: cell and developmental biology, neurobiology, reproductive biology, quantitative biology, cellular immunology, molecular biology, and macromolecular structure. The purpose of the teaching pathways is to prepare the student to teach in one of the anatomical subdisciplines: human anatomy, neuroanatomy/neurobiology, histology, embryology/developmental biology, cell biology, and macromolecular structure.

### Special Requirements

Applicants should have completed an undergraduate major in any appropriate field, such as anthropology, biochemistry, biology, chemistry, physics, psychology, or zoology.

### Financial Aid

The department offers financial support through teaching assistantships and training grant positions and from research funds.

### Correspondence and Information

Graduate Program Coordinator  
Department of Biological Structure, SM-20

## Faculty

### Chairperson

Cornelius Rosse

### Professors

Adman, Elinor T.,\* 1971, (Research), M.A., 1964, Ph.D., 1967, Brandeis; macromolecular crystallography.

Baskin, Denis G.,\* 1979, (Research), (Medicine),† Ph.D., 1969, California (Berkeley); histology, cytochemistry, neuroendocrinology.

## Bioengineering

309 Harris Hydraulics Laboratory

The Center for Bioengineering provides a multidisciplinary program of collaborative research and training designed to accelerate the application of new engineering technologies to clinical practice and research. Major areas of current bioengineering research in-

Blandau, Richard J., 1949, (Emeritus), Ph.D., 1939, Brown; M.D., 1948, Rochester; endocrinology, embryology, phase microscopy, reproductive physiology.

Byers, Margaret R.,\* 1971, (Research), (Anesthesiology),† (Endodontics), Ph.D., 1969, Harvard; neurocytology, sensory receptors, pain mechanisms, dental innervation, axonal transport.

Clark, John I.,\* 1982, Ph.D., 1974, Washington; anatomy, lens opacification, cell biology.

Gehrig, John D.,\* 1954, (Emeritus), (Oral and Maxillofacial Surgery), D.D.S., 1946, M.S.D., 1951, Minnesota; oral and maxillofacial surgery, chronic pain research.

Hendrickson, Anita E.,\* 1965, (Ophthalmology),† Ph.D., 1964, Washington; neuroanatomy, morphology, and development of primate visual system.

Holbrook, Karen A.,\* 1972, (Medicine), M.S., 1966, Wisconsin; Ph.D., 1972, Washington; fetal skin development and differentiation.

Jensen, Lyle H.,\* 1949, (Emeritus), (Biochemistry),† Ph.D., 1943, Washington; molecular structure, x-ray diffraction.

Koehler, James K.,\* 1963, M.S., 1958, Ph.D., 1961, California (Berkeley); electron microscopy, reproductive biology.

Luft, John H.,\* 1956, M.D., 1953, Washington; cytology, light and electron microscopy.

Myall, Robert W. T.,\* 1979, ‡(Oral and Maxillofacial Surgery), M.D., 1975, British Columbia; oral and maxillofacial surgery.

Odland, George F., 1962, (Medicine),† M.D., 1946, Harvard; dermatology.

Pollack, Sylvia B.,\* 1973, (Research), Ph.D., 1967, Pennsylvania; cellular immunology.

Rosse, Cornelius,\* 1967, M.B.Ch.B., 1964, M.D., 1974, D.Sc., 1983, Bristol (England); hemopoiesis, gross anatomy.

Sage, E. Helene,\* 1980, Ph.D., 1977, Utah; cell biology.

Verdugo, Pedro J.,\* 1975, ‡(Bioengineering), M.S., 1958, M.D., 1965, State University of Chile; fertility studies, cell biology of mucillary transport.

Westrum, Lesnick E.,\* 1966, (Neurological Surgery),† M.D., 1963, Washington; Ph.D., 1966, University College (London); neuroanatomy, neurocytology.

#### Associate Professors

Bolender, Robert P.,\* 1975, M.A., 1965, Columbia; Ph.D., 1970, Harvard; cell structure and function employing morphometric and biochemical techniques.

DeVito, June,\* 1955, (Emeritus), (Research), M.A., 1949, British Columbia; Ph.D., 1954, Washington; neuroanatomy.

Farr, Andrew G.,\* 1982, Ph.D., 1975, Chicago; immunology.

Gaddum-Rosse, Penelope,\* 1972, Ph.D., 1965, Liverpool (England); reproductive biology.

Graney, Daniel O.,\* 1966, M.A., 1962, Ph.D., 1965, California (San Francisco); gross anatomy, electron microscopy, intestinal absorption.

Harris, Roger M.,\* 1982, Ph.D., 1975, Washington; neuroanatomy.

Landau, Barbara R., 1964, (Emeritus), (Physiology and Biophysics),† M.S., 1949, Ph.D., 1956, Wisconsin; anatomy.

Lee, Minako Y.,\* 1977, (Research), (Medicine, Oral Biology), M.D., 1976, Tokyo Women's College (Japan); immunology.

Nameroff, Mark A.,\* 1970, M.D., 1965, Ph.D., 1966, Pennsylvania; cell differentiation.

Patton, Dorothy L., 1984, (Research), ‡(Obstetrics and Gynecology), M.S., 1973, Puget Sound; Ph.D., 1981, Washington; infertility and tubal disease, sexually transmitted diseases, chlamydial infections.

Prothero, John W.,\* 1965, Ph.D., 1960, Western Ontario; model building, morphogenesis, cell kinetics, scaling.

Reh, Thomas A.,\* 1989, Ph.D., 1981, Wisconsin; neurobiology, neuroanatomy.

Sherk, Helen A.,\* 1982, Ph.D., 1978, Massachusetts Institute of Technology; neuroanatomy.

Sieker, Larry C.,\* 1981, (Research), Ph.D., 1981, Washington; crystallography.

Stenkamp, Ronald E.,\* 1981, (Biochemistry), M.Sc., 1971, Ph.D., 1975, Washington; crystallography.

Sundsten, John W.,\* 1962, Ph.D., 1961, California (Los Angeles); neuroanatomy, neurobiology.

Yablonka-Reuveni, Zipora,\* 1984, (Research), M.Sc., 1975, Weizmann Institute of Science (Israel); Ph.D., 1979, Windsor (Canada); cell differentiation, myogenesis, developmental biology.

Yoshimura, Fayth K.,\* 1980, (Research), Ph.D., 1972, Yale; mechanism of transformation of lymphocytes by murine retroviruses.

#### Assistant Professors

Angello, John C., (Research), 1984, Ph.D., 1976, Washington; cell differentiation and aging, cell cycle regulation, cell size regulation.

Brinkley, James F. III,\* 1988, (Research), (Computer Science and Engineering), M.D., 1974, Washington; Ph.D., 1984, Stanford; computer graphics, artificial intelligence.

Broderson, Stevan H.,\* 1967, Ph.D., 1967, New York State (Buffalo); lipid histochemistry.

Clark, Judy M., 1983, (Research), M.S., 1974, Washington; Ph.D., 1978, Boston; developmental biology.

Dacey, Dennis M.,\* 1989, (Research), Ph.D., 1983, Chicago; neurobiology.

Merritt, Ethan A., 1989, M.S., 1975, Ph.D., 1980, Wisconsin; crystallography.

Press, Oliver W., 1987, (Medicine), Ph.D., 1977, Washington; M.D., 1979, Washington; oncology.

Quinn, LeBris S.,\* 1986, (Research), Ph.D., 1982, Washington; cell differentiation, myogenesis, developmental biology.

Smith, Lynn T.,\* 1988, (Research), M.A., 1974, Tufts; Ph.D., 1985, Washington; fetal skin development and differentiation.

Vernon, Robert B., 1990, (Research), Ph.D., 1985, Washington; cell biology.

#### Teaching Associates

Conley, David M., 1988, M.S., 1987, Washington State; anatomy, computer graphics.

Kastella, Kenneth G., 1987, M.S., 1965, Ph.D., 1969, Washington; anatomy, computer graphics.

## Course Descriptions

*Course numbers with a P suffix are not graduate courses and are restricted to medical or dental student enrollment only.*

**B STR 301 General Anatomy (6) Sp Quinn** Survey of systemic human anatomy, with correlated lectures and selected laboratory demonstrations. Includes: human skeletal system, muscles, joints, neuroanatomy, circulatory system, digestive system, urinary system, and reproductive system.

**CONJ 340-341-342 Human Anatomy and Physiology (4-4-4) Becker, Bolender, Gaddum-Rosse, Peterman** See Conjoint Courses.

**B STR 431 Introduction to Neuroanatomy (4) W Gehrig, Harris, Prothero, Sundsten, Westrum** General survey of the structure of the central nervous system, including an analysis of sensory and motor systems and higher integrative functions and clinical correlation. Prerequisite: 301 or permission of instructor.

**B STR 498 Undergraduate Thesis (\*) AWSpS** Prerequisite: permission of instructor.

**B STR 499 Undergraduate Research (\*) AWSpS** Prerequisite: permission of instructor.

**B STR 501 Gross Anatomy (1-10, max. 10) A Rosse** Lecture and laboratory dissection course in regional anatomy: thorax, abdomen, pelvis, perineum. Prerequisite: graduate or medical student standing; others by permission of instructor.

**B STR 502 Gross Anatomy (1-5) W Graney** Lecture and laboratory dissection course in regional anatomy: upper and lower extremities. For graduate students and medical students; others by permission of instructor.

**B STR 503 Gross Anatomy (1-5) Sp Graney** Lecture and laboratory dissection course in regional human anatomy: head and neck. For graduate students and medical students; others by permission of instructor.

**B STR 505 Histology in Biomedical Research (3) W Baskin** Selected topics in histology, with emphasis on analysis of research literature, methods, and laboratory exposure. Prerequisite: HUBIO 510P or permission of instructor. (Offered even-numbered years.)

**CONJ 508 EM Methods and Interpretation (3-5) Holbrook, Wright** See Conjoint Courses.

**B STR 510 Seminar in Anatomy (1) AWSp Graney, Rosse** Scientific and historical basis of selected studies in biological structure, anatomy, and human development. Original literature used as basis for textbook descriptions is reviewed. Prerequisites: 501, 502, or 503; concurrent enrollment in HUBIO 511P, 531P; permission of instructor.

**CONJ 511 Functional Neuroanatomy (4) W Hendrickson, Smith** See Conjoint Courses.

**B STR 512 Human Microanatomy (4) A Koehler** Lectures and laboratory treating the specialized tissues and organs of the body from the microscopic and ultramicroscopic points of view. Prerequisite: permission of instructor.

**B STR 514 Methods in Quantitative Morphology (3) Sp Bolender** Lecture/laboratory course covering major techniques in areas of organ, tissue, cellular, and molecular biology. Emphasis on understanding the use of modern experimental methods for detecting and interpreting structural changes in biology. Prerequisite: familiarity with microcomputers and permission of instructor. (Offered even-numbered years.)

**B STR 515 Biological X-ray Structure Analysis (3) W Stenkamp** Theory of x-ray diffraction, with emphasis on applications to biological systems. Prerequisite: permission of instructor.

**B STR 517 Embryology/Developmental Biology Seminar (1) AWSp Nameroff** Embryology of a region or organ. Topics vary. Emphasis on original literature and developmental principles. Prerequisite: permission of instructor.

**B STR 519 Current Problems in Macromolecular Structure (2, max. 10) Sp Stenkamp** A discussion of macromolecular structures related to specific areas of biological research. Emphasis on discussion of relevant research papers and use of computer graphics to visualize the molecular structures. (Offered odd-numbered years.)

**CONJ 520 Anatomy and Autopsy (1 or 2) Mottet, Rosse** See Conjoint Courses.

**B STR 525 Brain Dissection (2) SpS Sundsten** Detailed consideration of the macroscopic anatomy of the human brain (individual study). Prerequisite: permission of instructor.

**B STR 530P Gross Anatomy and Embryology for Dental Students (7) A Broderson, Gehrig, Myall** Normal gross structures of thorax, abdomen, pelvis, perineum, upper extremity, and neck are discussed,

then dissected on human cadavers. The development of each organ system is presented and related to the definitive normal adult structure. Developmental anomalies and diagnostic anatomy are also discussed. For prerequisites, see predental requirements.

**B STR 531, 532, 533 Electron Microscopy (1-5, 1-5, 1-5) A,W,Sp** *Luft* Theoretical and applied aspects of microscopy in biology, with emphasis on newer methods. Light microscopy and electron optics, the electron microscope in detail, and methods for preparation of biological specimens. Joint with BIOEN 531, 532, 533. Credit/no credit only. Prerequisite: permission of instructor. (Offered alternate years.)

**B STR 540 Special Problems in Anatomy (1-6, max. 6) AWSpS** Special projects in anatomy under sponsorship of faculty member. Prerequisite: graduate, medical, or dental student standing and permission of instructor.

**B STR 541P Microscopic Anatomy for Dental Students (4) A** *Koehler* Lecture and laboratory work in microscopic anatomy. For dental students taking HUBIO 510; others by permission of instructor.

**B STR 550P Head, CNS, and Embryology for Dental Students (6) W** *Brodersen, Gehrig, Myall* Normal structures of head, brain, and spinal cord discussed and dissected on human cadavers. Development of the head and CNS presented to illustrate the definitive normal, as well as anomalous, structures. Fundamentals of diagnostic anatomy. Prerequisite: 530P.

**B STR 555 Laboratory Rotation in Biological Structure (\*, max. 5) AWSpS** Introduction to experimental design, research methods, and scientific thought in laboratories of faculty members. Provides hands-on experience, an entrance into the literature of the field, and opportunities for discussion with all members of the laboratory. Prerequisite: permission of instructor.

**B STR 556 Topics in Developmental and Systemic Cell Biology (3) AWSp** *Sage* Recent advances in molecular and developmental aspects of cell biology. Emphasis on specific organ systems. Differentiation of lymphocytes, germ cells, muscle, epidermis; cell biology of lens, vessel wall, visual cortex; computer modeling; cell-cell and cell-matrix interactions. Prerequisites: undergraduate biochemistry and/or molecular biology, general cell biology; or permission of instructor.

**B STR 559 Developing Research Proposals (2) Sp** *Holbrook* Developing research proposals in cellular, molecular, and developmental biology; neurobiology; morphometrics and computer modeling; experimental immunology and hemopoiesis; reproductive biology; molecular structure. Weekly seminars by faculty and written proposals by students to include background and significance of projects specific hypotheses and aims, methodology, analyses of possible outcomes. Prerequisite: permission of instructor. (Offered even-numbered years.)

**B STR 567 On the Design of Mammals: A Scaling Approach (1) A** *Prothero, Sundsten* Guided reading and seminars on the topic of scaling in mammals. Organ system scaling, especially for the central nervous system, as well as energy metabolism and life history parameters such as life span and reproductive rates. Prerequisite: permission of instructor.

**B STR 580P Anatomy Teaching Practicum (\*, max. 8) AWSp** *Graney, Koehler, Rosse, Sherk* Opportunity for medical student (or other professional student) to gain teaching experience in biological structure and human biology courses, including gross anatomy, histology, and neuroanatomy. May include lecture, laboratory, and conference, depending on student interest and experience. Credit based on course credit in which student is assisting. Prerequisite: permission of course chairperson.

**B STR 581P Anatomy: Intraoral Dissection of Maxilla and Mandible (1) Sp** *Baeb, Gehrig* Lecture and dissection course in intraoral anatomy (maxilla and

mandible only) from a periodontal surgical approach. Prerequisite: graduate standing in periodontics.

**CONJ 585 Surgical Anatomy (1-3, max. 12) AWSpS** *Graney* See Conjoint Courses.

**B STR 591 X-Ray and NMR Analysis of Macromolecular Structure (1, max. 30) AWSp** *Adman, Stenkamp* Weekly discussion of current topics in research on molecular structure, usually emphasizing techniques of x-ray crystallography. Joint with BIOC 567. Credit/no credit only. Prerequisite: permission of instructor.

**B STR 592 Current Methods in Molecular and Cellular Biology (3) Sp** *Yoshimura* Lecture/laboratory demonstration course covering 6-7 current techniques in the areas of molecular and cellular biology. Emphasis on the type of scientific questions and problems that can be addressed by various methods that are in current use. (Offered odd-numbered years.)

**B STR 594 Seminar in Myogenesis (1, max. 5) AWSpS** *Nameroff* Discussion of recent work on the differentiation of skeletal muscle and related cell types. Emphasis on the cell-biological aspects of differentiation both *in vivo* and *in vitro*. Credit/no credit only. Prerequisite: permission of instructor.

**B STR 595 Skin Biology Seminar (1, max. 5) AWSp** *Holbrook* Presentation, discussion of ongoing multidisciplinary research in basic and clinical problems of adult and fetal skin biology. Genetic diseases of epidermis and dermis, percutaneous absorption in adult and fetal skin, wound healing, cutaneous blood flow, development and prenatal diagnosis of inherited disorders, pigment cell biology. Credit/no credit only. Prerequisite: permission of instructor.

**B STR 597 Topics in Neurobiology (1, max. 5) AWSp** *Harris* Presentations by participants of topics in neuroanatomy, neurophysiology, neurochemistry, and other areas relating to the nervous system. Problems of current research interest. Credit/no credit only. Prerequisite: permission of instructor.

**B STR 598 Reading in Biological Structure (2) AWSp** Critical evaluation of research in biological structure, including current problems, methods and future directions by reading and discussing research and review papers. Credit/no credit only. Prerequisite: permission of instructor.

**B STR 600 Independent Study or Research (\*) AWSpS**

**B STR 700 Master's Thesis (\*) AWSpS**

**B STR 800 Doctoral Dissertation (\*) AWSpS**

## Comparative Medicine

T142 Health Sciences

The Department of Comparative Medicine provides education and research opportunities in laboratory animal medicine and comparative pathology. Current educational programs include scheduled courses in zoonotic diseases and in the principles and techniques of animal experimentation (CMED 407) for biomedical graduate students; training in laboratory animal medicine for veterinary medical students and veterinarians; and a Master of Science degree program in collaboration with the Department of Pathology. Areas of current research include bacteriological and viral diseases of laboratory animals, parasitic diseases, and animal models of human disease conditions.

### Predoctoral Programs

These programs are designed to acquaint veterinary medical students with laboratory animal medicine as a veterinary specialty. Specific areas covered include the principal diseases, disease control and treatment,

and principles of sound animal husbandry of the common laboratory animals, as well as the role of laboratory animals in biomedical research. Blocks of twelve weeks (offered in the summer to second- and third-year students) and four weeks (offered to fourth-year students year-round) are available. Stipend support is normally provided.

### Postdoctoral Program

Postdoctoral training in the areas of laboratory animal medicine and comparative pathology are offered to holders of the D.V.M. or equivalent degree. Training that consists of a combination of course work, residency experience, and research is normally completed in three years. The program prepares participants for specialty certification by the American College of Laboratory Animal Medicine. Stipend support is normally provided.

### Master of Science Degree

Options are offered within the Master of Science degree program in pathology in the areas of comparative pathology and laboratory animal medicine. These may be added to the postdoctoral training described above. The degree options involve additional elective courses and the completion of a more involved research project.

## Faculty

### Chairperson

Gerald L. Van Hoosier, Jr.

### Professors

Liggett, H. Denny, 1989, D.V.M., 1972, Ph.D., 1979, Colorado State; comparative pathology.

Rausch, Robert L.,\* 1977, (Pathobiology),† (Zoology), D.V.M., 1945, Ohio State; M.S., 1946, Michigan State; Ph.D., 1949, Wisconsin; zoonotic disease, pathobiology of helminths, parasitology.

Van Hoosier, Gerald L., Jr.,\* 1975, ‡(Pathology), D.V.M., 1957, Texas A&M; laboratory animal medicine.

Wolf, Norman S.,\* 1968, ‡(Pathology), D.V.M., 1953, Kansas State; Ph.D., 1960, Northwestern; pathology.

### Associate Professors

Dennis, Melvin B., Jr., 1971, (Medicine), D.V.M., 1961, Washington State; comparative medicine.

DiGiacomo, Ronald F.,\* 1974, (Epidemiology), V.M.D., 1965, Pennsylvania; M.P.H., 1974, Washington; epizootiology.

Ladiges, Warren C., 1986, D.V.M., 1971, M.S., 1978, Washington State; laboratory animal medicine.

Morton, William R., 1982, (Clinical) V.M.D., 1967, Pennsylvania; primate clinical medicine.

Price, Lillian M., 1984, V.M.D., 1972, Ph.D., 1983, Pennsylvania; clinical veterinary medicine, experimental hematology.

Thouless, Margaret E.,\* 1980, ‡(Pathobiology), M.Sc., 1967, Ph.D., 1974, Birmingham (England); pathobiology.

### Assistant Professors

Deeb, Barbara J., 1987, (Research), D.V.M., 1963, Illinois (Urbana); M.S., 1966, Washington; microbiology.

Grossmann, Angelika, 1988, (Research), (Pathology), D.V.M., 1978, Ph.D., 1982, Freie Universität (Berlin); pathology of aging.

## Course Descriptions

**C MED 407 Principles of Animal Experimentation (3) A Dennis, Van Hoosier** For graduate students and advanced undergraduates; focus on biology and care of experimental animals, animal models of human disease, ethical use of animals in biomedical research and teaching; techniques of experimental surgery. Lectures, demonstrations, and experimental procedures. Prerequisite: permission of instructor.

**C MED 512 Introduction to the Anatomical Analysis of Animal Disease (5, max. 10) AWSp Liggitt, Van Hoosier** Use of animals in experimental study of disease; introduction to: techniques of animal necropsy, characterization and interpretation of gross and microscopic lesions, correlation of lesions with altered physiological processes, differentiation between naturally occurring and experimentally induced lesions. Prerequisites: PATH 444, 445, or equivalent, and permission of instructor. Enrollment limited to two students per quarter.

**C MED 514 Comparative Pathology Conference (1, max. 6) AWSp Liggitt, Van Hoosier** Focus on histopathology of naturally occurring and experimentally induced lesions of primates, laboratory and domestic animals, fish, wildlife, and birds. Participants discuss the lesions and the basic pathogenetic mechanisms that underlie them. Prerequisites: PATH 500 or equivalent and permission of instructor.

**C MED 516 Current Literature in Laboratory Animal Medicine (1, max. 12) Dennis, Van Hoosier** Critical evaluation of recent articles on laboratory animal medicine and science. Emphasis on literature dealing with spontaneous diseases of laboratory animals, biology and husbandry, zoonotic diseases, and animal models of human disease. Experimental design, use of animals in research, and methods of reviewing manuscripts. Prerequisite: permission of instructor.

**C MED 518 Clinical Conference Seminar (1, max. 12) Dennis, Van Hoosier** Clinical reports of cases of spontaneous and induced diseases, animal models of human disease, and zoonotic diseases discussed. Disease prevalence and preventive medicine measures. Diagnostic exercises. Prerequisite: permission of instructor.

**C MED 520, 521 Biology of Laboratory Animals (2,2) Van Hoosier** Fundamentals of the morphological, functional, and applied aspects of anatomy, physiology, pharmacology, biochemistry, and immunology of the commonly used laboratory animal species. Similarities and differences within, and between, species, including man. Husbandry, genetics, behavior, and nutrition. Prerequisite: permission of instructor.

**C MED 526 Zoonotic Diseases (3) W DiGiorgio, Rausch** Explores the public health aspects of zoonotic diseases, their epidemiology and current approaches to control. Focuses on the major viral, rickettsial, bacterial, protozoal, helminthic, and fungal diseases transmitted from wild and domesticated animals to humans in North America. Joint with EPI 526. Prerequisites: EPI 520 or permission of instructor.

**C MED 530, 531 Diseases of Laboratory Animals (3,3) A, W Van Hoosier** Analysis of etiology, pathogenesis, pathology, and disease processes in rodents, lagomorphs, carnivores, and nonhuman primates. Prerequisite: permission of instructor.

**C MED 540 Animal Models (1) Sp Dennis** Naturally occurring and experimentally induced analogs of human diseases in animals with emphasis on diseases in search of animal models, and approaches to identifying new models. Animal models of categorical disease (e.g., cancer, atherosclerosis, gerontology) discussed. Prerequisite: permission of instructor.

**C MED 590 Selected Topics in Animal Medicine (2) Dennis, Van Hoosier** Radiation biology, genetics, anesthesiology and experimental surgery, preventive medicine, and ethical aspects of use of animals in biomedical teaching and research. Specific topics vary from year to year, depending on the expertise of the

annual visiting professor. Prerequisite: permission of instructor.

## Conjoint Courses

### Course Descriptions

*Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.*

**CONJ 340-341-342 Human Anatomy and Physiology (4-4-4)** Introductory course integrating physiology with some histology and gross anatomy of the human body. Primarily for pharmacy students, some nursing students and others by permission of course coordinator in Department of Physiology and Biophysics. Prerequisites: CHEM 140, introductory biology and permission of instructor.

**CONJ 475 Alcoholism: A Course for Medical Students and Students in the Allied Health Sciences (2) Sp Kivlahan, Samson** A lecture course for medical students in the allied health sciences in any year that will cover an introduction to the epidemiology, diagnostic strategies, natural history, physiologic effects, and treatment of alcohol-related disorders.

**CONJ 505P Pain Clinic Preceptorship (1) Loeser** One morning a week for a total of 30 hours per quarter spent observing patient care in either inpatient or outpatient settings at University of Washington Medical Center; associated readings. Prerequisite: first- or second-year medical student standing. Coordinator: Pain Center.

**CONJ 508 EM Methods and Interpretation (3-5) Holbrook, Wight** Techniques used in biological transmission and scanning electron microscopy. Practical laboratory experience in research environment, tutorial discussions of cell architecture as related to the functional behavior of cells. Student projects required. Prerequisites: a basic cell biology course and graduate or postdoctoral status in pathology or biological structure.

**CONJ 509 Neurochemistry (3) A Stahl** Introductory course covering chemistry and metabolism, chemical pathology of disorders of lipid, amino acid, and carbohydrate metabolism, transport phenomena, neurotransmitters, memory, the visual system, and unique proteins of the nervous system. Recommended for graduate and medical students. Knowledge of biochemistry is strongly advised. Prerequisite: permission of instructor. (Offered alternate years.)

**CONJ 511 Functional Neuroanatomy (4) W Hendrickson, Smith** Lecture and laboratory course in neuroanatomy. Laboratory includes gross human brain and slide material and cat and monkey material. Offered conjointly by the departments of Biological Structure and of Physiology and Biophysics. Prerequisite: permission of instructor. Coordinator: Department of Physiology and Biophysics.

**CONJ 515 Interdisciplinary Health and Human Services Delivery in Rural Communities (1)** Provides opportunities for students in health and human services to explore current trends and issues of service delivery in rural communities. Demographics, economics, community structure, culture, and professional/personal issues are addressed. Prerequisite: major standing in a health or human services profession.

**CONJ 519 Molecular and Cellular Neurobiology (3)** Concepts and techniques of molecular and cell biology as applied to understanding development and function of the nervous system. Recommended: biochemistry course or equivalent. Coordinator: Physiology and Biophysics.

**CONJ 520 Anatomy and Autopsy (1 or 2)** Students attend autopsies at UW affiliated hospitals. Objectives: (1) demonstration of normal anatomic relationships and features of unfixed cadavers; (2) demonstration of

gross anatomical relationships in various pathological states; (3) follow-up of histological findings. Offered as elective concurrent with HUBIO 520P. Prerequisites: HUBIO 510P or equivalent, permission of instructor.

**CONJ 550P Clinical Infectious Diseases (3) W Burns, Miller** Lecture series by faculty members from various departments, authorities in the field of clinically important infectious diseases. Lectures, reading assignments, and handouts emphasize epidemiology, clinical manifestations, laboratory findings, diagnosis, treatment, and prevention. Oriented for second-year medical students. Prerequisite: HUBIO 521P or permission of coordinator, Department of Medicine.

**CONJ 553P Nutrition for Physicians (2) A Wood** Basic nutritional concepts directed at second-year medical students. Controversial issues relating to diet and disease, with emphasis on application of scientific reasoning and pragmatism to the search for answers. Focuses on providing practical information relevant to the practice of a physician. Prerequisites: HUBIO 514P, 524P, or equivalent.

**CONJ 561 Tumor Biology (2) W I. Hellström** Graduate students and interested medical students. The general areas covered are the basis of carcinogenesis, tumor progression and metastasis, virus-induced tumors, tumor genetics, and tumor immunology. Offered conjointly by the departments of Microbiology and Pathology. Prerequisite: permission of Department of Microbiology. (Offered alternate years; offered 1993.)

**CONJ 572 Advanced Immunology II—Immunopathology (2) W I. Hellström, K.E. Hellström** Graduate students and upper-division undergraduates. In-depth treatment of basic immunology with MICRO 570. Covers the mechanisms concerned with immunological tissue injuries. Prerequisites: MICRO 447 (or equivalent), biochemistry, genetics, and one quarter of general pathology. Coordinator: Department of Microbiology. (Offered every three years; offered 1994.)

**CONJ 580 Clinical Correlations of Neuroanatomy (2) Harris, Koerker, Swanson** The relation between clinical neurological problems and the underlying neuroanatomy, studied by presenting case studies with extensive tests such as CT, MRI, angiograms. Prerequisites: 511 or equivalent, HUBIO 532.

**CONJ 585 Surgical Anatomy (1-3, max. 12) AWSpS Graney** Guided dissection of selected regions, supplemented by conferences. Offered conjointly by the departments of Biological Structure and Surgery. Prerequisite: permission of department. Coordinator: Department of Biological Structure.

**CONJ 677P Clinical Allergy and Immunology (\*, max. 12) AWSpS Van Arsdell (University of Washington Medical Center)** Clinic and office experience in diagnosing and managing allergic disease. Clinical conferences, hospital rounds on clinical immunology and allergy. Student may elect a flexible program, emphasizing adult or pediatric allergy. Prerequisites: MED 665P or basic clerkships in Departments of Family Medicine or Pediatrics. (Four weeks, full-time.)

**CONJ 678P Pain Clinic Clerkship (8) Egan, Loeser** Full-time, four-week clerkship emphasizing comprehensive care of patients with chronic pain from benign diseases and cancer. Faculty members from multiple departments provide student with didactic and bedside experiences; student member of treatment team. Involves both inpatient and outpatient activities. Prerequisites: completion of human biology series, MED 665P.

**CONJ 680P Detoxification and Rehabilitation Program for Alcoholism and Drug Abuse (\*, max. 16) Sp Walker** Supervised introduction to alcoholic detoxification and rehabilitation and drug abuse. Supervised clinical experience in a variety of alcoholism and drug abuse treatment programs; accompanied by a core series of lectures and discussions. For medical students only.

**CONJ 688P Foreign Medical Student Clerkship (\*, max. 24)** A limited number of students from foreign

medical schools are accepted for individually designed clinical clerkships at available sites after all UW students are accommodated. Prerequisites: permission of Associate Dean for Academic Affairs, School of Medicine.

#### CONJ 699P Clinical Clerkships (\*, max. 32)

## Family Medicine

### C408 Health Sciences

Family medicine is the discipline concerned with the continuing and comprehensive care of individuals and their families. The prime instructional goal of the department is the education and training of physicians who will apply the knowledge and skills of this and other medical disciplines in family practice. Implicit in this goal is the necessity for continual development of new knowledge and its application in the clinical activities of the department.

The Department of Family Medicine was founded in 1971 and is involved with instruction of medical students in several ways. These include presentations in the basic curriculum of the first two years, selective clinical clerkships as part of the clinical core curriculum, and other elective courses open to all medical students. A graduate residency program in family practice provides training consistent with the standards of the American Board of Family Practice, the American Academy of Family Physicians, and the Council on Medical Education of the American Medical Association. Active teaching affiliations are maintained throughout the WAMI region at both undergraduate and graduate levels.

Family medicine fellowship training programs are available to develop teaching and research skills for future academic faculty.

## Faculty

### Chairperson

John P. Geyman

### Professors

Berg, Alfred O., 1979, M.D., 1974, Washington (St. Louis); M.P.H., 1979, Washington; family medicine.

Chrisman, Noel J.,\* 1979, ‡(Anthropology, Community Health Care Systems), M.P.H., 1967, Ph.D., 1966, California (Berkeley); health beliefs and practices, social networks, social support.

Geyman, John P., 1976, M.D., 1960, California (San Francisco); family medicine.

Katon, Wayne J., 1981, (Psychiatry and Behavioral Sciences), M.D., 1976, Oregon.

Mayer, Jonathan D.,\* 1977, ‡(Geography, Health Services), M.A., 1975, Ph.D., 1977, Michigan; urban geography, transportation, medical geography, geographic philosophy and methods.

Rosenblatt, Roger A.,\* 1977, (Health Services), M.P.H., 1971, M.D., 1971, Harvard; family medicine.

Schneeweiss, Ronald, 1977, M.B.Ch.B., 1964, Cape Town (South Africa); family medicine.

### Associate Professors

Carter, William B.,\* 1983, ‡(Health Services), M.S., 1971, Nebraska; Ph.D., 1975, Washington; health behavior.

Cherkin, Daniel C., 1979, (Research), M.S., 1974, Ph.D., 1978, Washington; epidemiology.

Eggertsen, Sam C., 1982, M.D., 1976, Washington; family medicine.

Ellsbury, Kathleen E., 1982, M.D., 1977, Johns Hopkins; M.S.P.H., 1982, Missouri (Columbia); family medicine.

Ellsworth, Allan J., 1984, ‡(Pharmacy Practice), Pharm.D., 1977, Philadelphia College; clinical pharmacy.

Gordon, Michael J.,\* 1973, (Health Services), (Medical Education), ‡ M.A., 1970, Ph.D., 1973, Michigan State; educational psychology.

Leversee, John H., 1975, M.D., 1952, Minnesota; family medicine.

Taylor, Thomas R., 1979, M.B.Ch.B., 1957, Ph.D., 1971, Glasgow (Scotland); family medicine.

### Assistant Professors

Baldwin, Laura A., 1987, M.P.H., 1986, Washington; M.D., 1980, Southern California; family medicine.

De Neef, C. Peter, 1985, Ph.D., 1971, Maryland; M.D., 1981, Miami; family medicine.

Dobie, Sharon, 1989, (Acting), M.C.P., 1971, California (Berkeley); M.D., 1979, California (San Francisco); family medicine.

Goldbaum, Gary M.,\* 1989, ‡(Epidemiology), M.D., 1978, Colorado; M.P.H., 1989, Washington; preventive medicine, testing and counseling interventions for AIDS prevention.

Greer, H. Thomas, Jr., 1977, M.D., 1974, Mississippi; M.P.H., 1979, Washington; family medicine.

Hart, L. Gary, 1985, (Research), M.S., 1975, Utah; Ph.D., 1985, Washington; health services research.

Neighbor, William E., Jr., 1983, M.D., 1979, M.P.H., 1985, Washington; family medicine and preventive cardiology.

Nuovo, James, 1987, M.D., 1980, Vermont; family medicine.

Oliver, Lynn, 1989, (Acting), M.D., 1983, Washington; family medicine.

Stevens, Nancy G.,\* 1982, (Epidemiology), M.D., 1979, M.P.H., 1982, Washington; family medicine.

Taplin, Stephen H., 1985, M.D., 1978, California (Davis); M.P.H., 1985, Washington; family medicine.

### Lecturer

Gloyd, Stephen S.,\* 1986, (Health Services), M.D., 1973, Chicago; M.P.H., 1983, Harvard; international public health.

## Course Descriptions

*Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.*

**FAMED 499 Undergraduate Research (\*)** Research activities arranged with University-based or community physicians in diversified areas relating to family medicine. Various research philosophies and investigative methods are introduced. Prerequisite: permission of course coordinator.

**FAMED 501P Introduction to Family Medicine: Preceptorship (2½)** Students spend one morning per week for one quarter working with a practicing community family physician. Prerequisites: first- and second-year medical students, permission of course coordinator.

**FAMED 505P Rural Preceptorship (\*, max. 12)** Opportunity to work in a variety of community settings in rural and urban areas of Washington, Alaska, Idaho, and Montana. Prerequisite: permission of instructor.

**FAMED 640P Clinical Clerkship in Family Medicine—Boise (8 or 12)** Stresses ambulatory primary care with emphasis on comprehensive, integrated care to patients of both sexes and all ages. Student functions as clerk in community/residency site. Participates in care of assigned patients, using office, hospital, home, community resources. Prerequisite: third- or fourth-year medical students.

**FAMED 641P Clinical Clerkship in Family Medicine—Spokane (8 or 12)** For description and prerequisite, see 640P.

**FAMED 642P Clinical Clerkship in Family Medicine—Madigan (8 or 12)** For description and prerequisite, see 640P.

**FAMED 643P Clinical Clerkship in Family Medicine—Tacoma (8 or 12)** For description and prerequisite, see 640P.

**FAMED 644P Clinical Clerkship in Family Medicine—University of Washington Medical Center (8 or 12)** For description and prerequisite, see 640P.

**FAMED 645P Clinical Clerkship in Family Medicine—Group Health (8 or 12)** For description and prerequisite, see 640P.

**FAMED 646P Clinical Clerkship in Family Medicine—Swedish (8 or 12)** For description and prerequisite, see 640P.

**FAMED 647P Clinical Clerkship in Family Medicine—Providence (8 or 12)** For description and prerequisite, see 640P.

**FAMED 648P Clinical Clerkship in Family Medicine—Valley (8 or 12)** For description and prerequisite, see 640P.

**FAMED 650P Clinical Clerkship in Family Medicine—Anacortes (8 or 12)** For description and prerequisite, see 640P.

**FAMED 651P Clinical Clerkship in Family Medicine—Omak (8 or 12)** For description and prerequisite, see 640P.

**FAMED 652P Clinical Clerkship in Family Medicine—Spokane Valley (8 or 12)** For description and prerequisite, see 640P.

**FAMED 653P Clinical Clerkship in Family Medicine—Anchorage (8 or 12)** For description and prerequisite, see 640P.

**FAMED 654P Clinical Clerkship in Family Medicine—Ketchikan (8 or 12)** For description and prerequisite, see 640P.

**FAMED 656P Clinical Clerkship in Family Medicine—Whitefish (8 or 12)** For description and prerequisite, see 640P.

**FAMED 657P Clinical Clerkship in Family Medicine—Pocatello (8 or 12)** For description and prerequisite, see 640P.

**FAMED 658P Clinical Clerkship in Family Medicine—Sea Mar Clinic (8 or 12)** For description and prerequisite, see 640P.

**FAMED 659P Clinical Clerkship in Family Medicine—Country Doctor (8 or 12)** For description and prerequisite, see 640P.

**FAMED 670P Advanced Preceptorship in WAMI Area (\*, max. 24)** Students gain experience, knowledge, and skills needed to care for rural, Native American Indian, and other ethnic or underserved populations in Washington, Alaska, Montana, and Idaho. Prerequisites: third- or fourth-year medical students, permission of course coordinator.

**FAMED 671P Advanced Preceptorship in United States (\*, max. 24)** Supplemental experience for junior or senior medical students in rural/urban practice or a family medicine department in a setting not already established through the family medicine curriculum. Prerequisites: third- or fourth-year medical students, permission of course coordinator.

**FAMED 672P Advanced Preceptorship International (\*, max. 24)** For medical students desiring primary care experience abroad. Special project deals with influences of social, cultural, educational, and economic forces on health care delivery. Prerequisite: third- or fourth-year medical students, permission of course coordinator.

**FAMED 698P Clinical Clerkship in Family Medicine, Away (8 or 12)** For description and prerequisites, see 640P.

## Human Biology

### Course Descriptions

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only. This sequence is required for all medical students. Other students may enroll by permission of the Assistant Dean for Curriculum, School of Medicine.

**HUBIO 500P Medical Practice Preceptorship at WAMI Sites (1, max. 3) AWSp** Personal experience with, and insight into, medical practice situations. Student is stationed with carefully selected clinical faculty members in their offices in accordance with the student's preference of discipline at the WAMI sites. Registration limited to first-year medical students at WAMI sites.

**HUBIO 501P Human Biology Special Projects (\*) AWSpS** *Hunt* Designed for medical students electing a special study project related to the Introduction to Clinical Medicine or other human biology courses, which are offered during the first and second years in the School of Medicine. Primarily intended for students in remedial or extended programs. Prerequisite: permission of assistant dean for curriculum.

**HUBIO 510P Microscopic Anatomy (Histology) (3) A Koehler** Lectures and laboratories in microscopic anatomy designed to provide the principles and concepts of histology, to define the morphological characteristics of the cells, tissues, and organs of the human body, and to relate this information to functional processes studied in concurrent and subsequent courses.

**HUBIO 511P Gross Anatomy and Embryology (7) A Rosse** Structural organization of human body at the macroscopic level to provide a foundation for physical examination and functional assessment of the human organism. Integrates embryological development with study of the cadaver and examination of the normal living body. Concentrates on exploration of the body cavities and the viscera they contain.

**HUBIO 512P Mechanisms in Cell Physiology (5) A Crill** Physiology of the cell membrane, including ionic and electrical potential gradients; active transport, excitability, and action potentials; biophysics of sensory receptors; neuromuscular transmission; muscle energetics and contractility; spinal reflexes and central synaptic transmission; autonomic nervous system; energy metabolism and temperature regulation; epithelial transport; gastrointestinal motility and secretions.

**HUBIO 513P Introduction to Clinical Medicine (1) A Phillips** Instruction in communication skills and interview techniques to form the basis for the doctor-patient relationship and for the skills of communicating with patients. The patient profile is obtained. Attention to developing comfort in the physician role.

**HUBIO 514 Biochemistry I-A (4) A Walsh** First portion of a coordinated course covering classical molecular and cellular biochemistry, cellular physiology and molecular genetics. Metabolic interrelationships as they occur in the individual stressed and related to disturbances in disease states.

**HUBIO 516 Systems of Human Behavior I-A (3) Carr** Sensitizes students to impact of such factors as emotional and physical development, cultural backgrounds, social roles, families, sexual identities, and belief systems upon their effectiveness as physicians. Teaches skills in analyzing behavior, defining behavioral objectives, and designing precise treatment strategies to obtain these objectives.

**HUBIO 520P Cell and Tissue Response to Injury (6) W Monnat** Patterns of cell and tissue response to injury. Mechanisms of cell injury, the inflammatory process, immunology, immunopathology, thrombosis, normal and abnormal growth, neoplasia, clinicopathological correlation.

**HUBIO 521P Natural History of Infectious Disease and Chemotherapy I-A (4) W Moseley** Pathogenesis and immunity of infectious diseases, natural barriers. Microbiology, epidemiology, clinical manifestations and control of representative bacterial, fungal, parasitic, and viral infectious diseases. Chemotherapeutics and principles of chemotherapy. Sterilization, principles of asepsis, nosocomial and iatrogenic infections and their prevention.

**HUBIO 522P Introduction to Clinical Medicine (2) W Phillips** Medical history is introduced and instruction in data collection is begun. Experience in conducting medical interviews with patients to obtain the medical history and patient profile. Special problems related to interviewing are addressed.

**HUBIO 523P Introduction to Immunology (2) W Perlmutter** Basic concepts such as antigens; antibodies; complement; B- and T-lymphocyte function, including interactions with each other and with accessory cells; immunological tolerance; major histocompatibility complex; and role of these basic concepts in immunopathology (immunodeficiencies, hypersensitivities, autoimmunity, blood transfusion, and transplantation).

**HUBIO 524P Biochemistry I-B (3) W Walsh** Second portion of a coordinated course covering classical molecular and cellular biochemistry, cellular physiology, and molecular genetics. Metabolic interrelationships as they occur in the individual are stressed and related to disturbances in disease states.

**HUBIO 526P Systems of Human Behavior I-B (1) W Carr** Effects of behavioral factors in major management problems faced in medical practice relating to cultural background, social role, sexual identity, and belief systems. Acquisition of skills in analyzing behavior, defining objectives, and designing precise treatment strategies.

**HUBIO 530P Epidemiology (2) Sp Chu** Community health and disease, including assessment of disease risk and mechanisms of epidemic detection, spread, and control; interpretation of research design, data analysis, bias source; and clinical epidemiology, including evaluation and application of diagnostic tests, natural history of disease, and quantitative aids for clinical decision making.

**HUBIO 531P Head, Neck, Ear, Nose, and Throat (5) Sp D. Graney** Gross anatomy (including skull, pharynx, and larynx), audition and balance, physiology and clinical evaluation, maxillofacial disorders, diseases of nasal passages, nasopharynx and oropharynx, accessory sinuses. Physical examination.

**HUBIO 532P Nervous System (6) Sp Sherk** Integrated approach to normal structure and function of the nervous system, including the eye. Neuropathological examples, as well as clinical manifestations of neurological disease are presented.

**HUBIO 534P Natural History of Infectious Disease and Chemotherapy I-B (2)**

**HUBIO 535P Introduction to Clinical Medicine (4) Sp Goldstein** Adult screening physical examination is taught through the use of lecture, audiovisual aids, and small-group tutorial, where students in supervised setting practice the physical examination on one other. Further practice in the performance and recording of the patient profile and medical history.

**HUBIO 540P Cardiovascular System (5½) A Brengelmann** Interdisciplinary approach to cardiovascular medicine, including anatomy, physiology, radiology, pathology, medicine, and surgery. Function of the cardiovascular system in health and disease.

**HUBIO 541P Respiratory System (4) A Culver** Interdisciplinary approach to the respiratory system, including anatomy of thorax and lungs, ventilation mechanics, blood-gas transport, gas exchange, acid-base balance, and the physiology and pathology of obstructive, restrictive, and pulmonary-vascular diseases.

**HUBIO 542P Introduction to Clinical Medicine (2½) A McArthur** Advanced instruction in interview technique, history taking, and physical examination, with emphasis on detection of abnormalities.

**HUBIO 543P Principles of Pharmacology I (4) A Vincenzi** Includes general principles of pharmacology and the specific pharmacology of major drugs acting on the autonomic and cardiovascular systems.

**HUBIO 544P Endocrine System (2½) A Brunzell** Normal, gross, and microscopic anatomy and physiology of the endocrine system. Illustrations examining the clinical relevance of homeostasis, feedback, and other controlling mechanisms previously learned. Endocrine integration of metabolism. Clinically important endocrine pathophysiology.

**HUBIO 546P Systemic Pathology (2) A Schmidt** Multidisciplinary approach to some diseases that affect more than one organ system (nervous, cardiovascular, respiratory) and that are caused by different mechanisms (congenital, inflammatory, vascular, traumatic, metabolic, neoplastic).

**HUBIO 550P Introduction to Clinical Medicine (3½) W McArthur** Continuation of 542 with emphasis on identification of problems and correlation of findings with pathophysiological mechanisms.

**HUBIO 551P Gastro-Intestinal System (4) W Saunders** Anatomy of the gastrointestinal system; physiology and pathology of digestion and hepatic function; and physical and laboratory examination.

**HUBIO 552P Hematology (3) W Hammond** Familiarizes students with the basic pathophysiologic mechanisms leading to disturbances of red cell, white cell, and platelet production, as well as abnormalities of hemostasis presenting clinical problems. Pathophysiology, rather than minute details of individual disease, is stressed.

**HUBIO 553P Musculoskeletal System (4½) W Teitz** Gross, surface, applied, and x-ray anatomy of system, including entire spine but excluding head and neck. Histology of bone, cartilage, tendon-myotendinous junction and joints. Musculoskeletal trauma and healing. Pathology and clinical manifestations of other degenerative, inflammatory, metabolic, nutritional, and congenital disorders. Physical examination.

**HUBIO 554P Genetics (2½) A Stamatoyanopoulos** Review of basic genetic principles and their applications in clinical medicine. Includes human chromosomal disorders; patterns of inheritance, genetic counseling, amniocentesis; pathogenesis of hereditary diseases, monogenic and multifactorial; role of genetics in common diseases; behavioral genetics; drug-gene interactions; and prevention and treatment of genetic diseases, including prenatal diagnosis and population screening.

**HUBIO 555P Medicine, Health, and Society (3½) W Connell** Interrelationships between provision of medical care and nonbiological factors that influence health. Includes relative importance of society, environment, and individual choice in determining health status; impact of organizational, economic, and political influences on medical practice and choice; their importance in decision making.

**HUBIO 560P Introduction to Clinical Medicine (5) Sp McArthur** Continuation of 550P. Introduction to clinical and laboratory diagnosis.

**HUBIO 562P Urinary System (4) Sp Sherrard** Anatomy, physiology, and pathology of the kidney, ureter, bladder, and prostate; pathophysiology and treatment of common fluid and electrolyte problems; renal

pharmacology; major clinical urinary system syndromes, with current diagnostic approaches and therapy.

**HUBIO 563P Systems of Human Behavior II (3) Sp N. Ward** Major psychiatric disorders are defined and described, and a systematic approach to differential diagnosis is presented. Conceptual development, pathogenesis, epidemiology, nomenclature, and the terminology used in psychiatry are discussed.

**HUBIO 564P Principles of Pharmacology II (3) Sp Horita** Lectures and conferences on drugs that act on the central nervous system. Emphasis on physiological and biochemical mechanisms, with consideration of therapeutic and adverse effects.

**HUBIO 565P Reproduction (3½) Sp Gaddum-Rosse** Normal development of the human reproductive system. Sexual differentiation, puberty, endocrine control of testicular and ovarian function, gamete biology, fertilization, implantation, immunology and endocrinology of pregnancy, labor and delivery, pathology of the male and female reproductive organs, contraception, prolactin and lactation, aging and infertility.

**HUBIO 567P Skin System (2) A Olerud** Gross and microscopic anatomy. Physiology, protection, temperature control, pigmentation, and photosensitivity. Pathology and genetics of skin abnormalities, including tumors. Introduction to clinical evaluation, including physical examination and illustrating examples of inflammatory, vascular, immunological (including drug hypersensitivity), and neoplastic diseases.

**HUBIO 599P Independent Study in Medical Science (6)** Independent research with faculty sponsor and completion of paper as partial fulfillment of non-clinical selective graduation requirement.

## Immunology

1264 Health Sciences

The science of immunology began in the nineteenth century as an outgrowth of microbiology. During the past few decades, immunology has emerged as a truly separate discipline, with a specialized technical armamentarium and a conceptual base that has had profound general impact on research in molecular and cellular biology. Indeed, immunological questions provide some of the most exciting intellectual challenges in contemporary science. In recognition of these facts, the University of Washington established the Department of Immunology in 1989. The following information is provided as a guide to those students interested in a Ph.D. degree in this important new area.

Research facilities in the Department of Immunology include state-of-the-art equipment for gene manipulation and flow cytometry. A departmental library, extensive computer resources, and conference rooms are also available for students. Members of the faculty hold joint appointments in the departments of Biochemistry, Genetics, Medicine, and Pediatrics, and the department participates in the Interdisciplinary Molecular and Cellular Biology Program. Close interaction therefore exists between the Department of Immunology and other research units in the health sciences.

Students are admitted for autumn quarter; the application deadline is February 15. The requirements for admission are flexible; however, most successful applicants will have completed survey courses in biology, chemistry, and physics, one year of organic chemistry, and mathematics through integral calculus. Prior exposure to immunology through formal course work or laboratory research is desirable. All immunology graduate students are assured of financial support for the term of their studies.

### Correspondence and Information

## Faculty

### Chairperson

Roger M. Perlmutter

### Professors

Bevan, Michael J.,\* 1990, Ph.D., 1972, Nat'l. Inst. for Med. Res. (London); Class I MHC restricted antigen presentation to cytotoxic T cells; selection of the T cell receptor repertoire.

Clark, Edward A.,\* 1979, ‡(Microbiology), Ph.D., 1977, California (Los Angeles); lymphocyte surface molecules; lymphocyte activation and cell communication.

Greenberg, Philip D.,\* 1978, (Medicine), †(Microbiology), M.D., 1971, State University of New York (Downstate); oncology, cellular and molecular immunology; regulation and expression of T cell responses to viral and tumor antigens; retroviral mediated gene transfer.

Hood, Leroy E., 1992, (Bioengineering, Molecular Biotechnology), †(Medicine), M.D., 1964, Johns Hopkins; Ph.D., 1968, California Institute of Technology; T cell receptor/MHC recognition; tolerance, autoimmunity, and genetic predispositions, T cell development, genome sequencing of T cell receptor loci.

Perlmutter, Roger M.,\* 1984, (Biochemistry, Medicine), † M.D., 1979, Ph.D., 1979, Washington (St. Louis); genetics of immune recognition; chromosomal translocations; oncogenesis.

Pious, Donald A.,\* 1964, (Pediatrics), †(Genetics), M.D., 1956, Pennsylvania; major histocompatibility complex; antigen processing and presentation; autoimmunity.

Wilson, Christopher B.,\* 1979, (Pediatrics), † M.D., 1972, California (Los Angeles); mechanisms for differential expression of lymphokines by T cells; signal transduction in macrophages.

### Associate Professors

Farr, Andrew G.,\* 1982, ‡(Biological Structure), Ph.D., 1975, Chicago; T cell differentiation.

Nepom, Gerald T.,\* 1982, (Affiliate), Ph.D., 1977, M.D., 1978, Washington; immunogenetics of human major histocompatibility complex; molecular and cellular immunology; immunoregulation; autoimmunity.

### Assistant Professors

Blum, Janice S., 1992, (Affiliate), Ph.D., 1984, Duke University Medical Center; function of proteases in immune response; antigen processing; structure and function of HLA antigen.

Concannon, Patrick J., 1989, (Affiliate), Ph.D., 1984, California (Los Angeles); development of the human T cell receptor repertoire.

Fink, Pamela J.,\* 1990, Ph.D., 1981, Massachusetts Institute of Technology; T cell differentiation; transgenic mice; molecular analysis of murine T cell receptor repertoire.

Lewis, David B., 1989, ‡(Pediatrics), M.D., 1981, California (San Francisco); developmental control of cytokine gene expression by T-lineage cells; cytokine effects.

Milner, Eric C. B., 1987, (Affiliate), Ph.D., 1980, Montana; autoantibodies; immunoglobulin gene polymorphisms; human disease.

Pullen, Ann M., 1991, Ph.D., 1987, Cambridge (England); T cell repertoire; superantigen presentation and recognition.

## Course Descriptions

**IMMUN 441 Introduction to Immunology (4) A** General properties of immune responses; cells and tissues of immune system; lymphocyte activation and specificity; effector mechanisms; immunity to microbes; immunodeficiency and AIDS; autoimmune diseases; transplantation. Joint with MICRO 441. Prerequisites: BIOL 203, organic chemistry, or permission of

instructor, junior standing or above; recommended: biochemistry, cell biology and/or genetics.

**IMMUN 532 Advanced Immunology (3)** Examines the molecular and cellular basis of immune function. Students must have completed a baccalaureate degree in a biological specialty, and be conversant with molecular genetics. Topics include antigen receptor structure, antigen presentation, and the biochemistry of lymphokines.

**IMMUN 533 Developmental Immunology (3)** Draws on background materials offered in 532, placing the molecular and cellular biology of immune function in an appropriate developmental context. Topics include hematopoiesis, lineage commitment in lymphocytes, and the development of immune responsiveness. Prerequisite: 532 or permission of instructor.

**IMMUN 550 Selected Topics in Immunology (1)** Formal seminar-discussion course for advanced students focused on recent developments in the field and consisting of literature research and intensive in-depth study of important and timely topics. Credit/no credit only. Prerequisite: permission of instructor.

**IMMUN 573 Immunology Seminar Series (1)** Weekly discussion in which original research results are presented and discussed. Emphasis is on new and original contributions to field of immunology and related areas; occasional seminars are concerned with review of important topics. Credit/no credit only. Prerequisites: firm background in immunology, permission of instructor.

**IMMUN 599 Topics in Immunology (\*, max. 6)** Current problems in immunological research. Credit/no credit only. Prerequisite: permission of instructor.

**IMMUN 600 Independent Study or Research (\*)**

**IMMUN 700 Master's Thesis (\*)**

**IMMUN 800 Doctoral Dissertation (\*)**

## Laboratory Medicine

NW120 University of Washington Medical Center

The Department of Laboratory Medicine includes divisions of clinical chemistry, hematology, microbiology, coagulation, immunology, genetics, virology, and information processing. In addition to courses for medical students, the department offers Bachelor of Science in Medical Technology and Master of Science degree programs. The department also provides residency training in clinical pathology for graduate physicians and postdoctoral training in several subspecialty areas of laboratory medicine.

## Undergraduate Program

### Bachelor of Science in Medical Technology Degree

Medical technology is an interesting and rewarding health science profession. Individuals who enjoy studying the biological, chemical, and physical sciences find personal satisfaction and intellectual reward in employing scientific methods for the diagnosis and evaluation of disease. Advances in medical science and interest in health maintenance have resulted in an exponential growth in the diversity and volume of laboratory procedures. The medical technologist/clinical laboratory scientist is a creative, knowledge-based professional who performs assays, analyzes problems, and helps to evaluate test results.

The medical technology program is a four-year college curriculum supervised by the College of Arts and Sciences in the freshman and sophomore years (preprofessional, 90 credits) and by the Department of Laboratory Medicine in the junior and senior years (professional). Detailed program requirements and application material may be obtained from the Arts and Sciences Advising Office or the Department of Laboratory Medicine.

**Admission Requirements:** The medical technology professional curriculum consists of seven consecutive quarters of study that must be taken in the School of Medicine. Prerequisite requirements may be satisfied at the University or at other accredited colleges and universities. Completion of 90 quarter credits or attainment of junior standing must occur prior to admission. Department requirements include preprofessional courses in general and organic chemistry, statistics and/or mathematics, and biological sciences. Admission to the professional program requires submission of an application to the Department of Laboratory Medicine by April 15 of the year the applicant plans to enroll. The Allied Health Professions Admission Test is required, and scores from the test should be available by April 15, deadline for application to the program. A GPA of 2.00, both cumulative and in required courses, is necessary for admission consideration.

**Graduation Requirements:** Detailed requirements may be obtained from the Medical Technology Program Director, Department of Laboratory Medicine, SB-10. A GPA of 2.00, both cumulative and in required courses, is necessary for graduation.

The medical technology curriculum is accredited by the Committee on Allied Health Education and Accreditation. Graduates are eligible and are encouraged to take an appropriate examination to become certified medical technologists/clinical laboratory scientists. Examples of practice in medical technology include service in hospitals and clinics; and research in industrial, public health, and medical laboratories.

## Graduate Program

The Department of Laboratory Medicine offers a graduate program leading to the Master of Science degree. Each student in the program selects one of the major areas of concentration (e.g., chemistry, coagulation, hematology, immunology, microbiology, virology). The chemistry concentration is approved by the Commission on Accreditation in Clinical Chemistry. The other pathways have no comparable accrediting agencies.

A thesis based upon independent research in the student's selected area of concentration is required. Course requirements vary with the concentration selected. However, the program is flexible and permits each student (with the help of an adviser) to plan a course of study that meets individual needs. A full-time student normally completes the program in two years. The program prepares qualified candidates for supervisory positions in clinical laboratories and for careers in investigation or teaching in an area of clinical laboratory science.

### Admission Requirements

Applicants must have a B.S. or B.A. degree in a field appropriate to the graduate study (medical technology, biochemistry, biology, chemistry, or microbiology) and meet the Graduate School's requirements for admission. The applicant must also be certified as a medical technologist/clinical laboratory scientist, or as a specialist in a particular area of laboratory medicine by one of the national certifying agencies. In addition, applicants must take the Graduate Record Examination aptitude test.

### Major Requirements

Students must meet the minimum requirements for a master's degree as stated in the Graduate School section of this catalog. In addition, a core of courses is required for all students in the program as well as additional specific course requirements for the various major areas of concentration.

### Financial Aid

Research assistantships may be available for second year students. Opportunities for part-time employment in departmental laboratories may be available, and applications will be considered. This program is currently included as one of the regional graduate pro-

grams by the Western Interstate Commission for Higher Education (WICHE), which enables residents of thirteen Western states to attend the University of Washington as out-of-state graduate students paying resident tuition. The thirteen states are Alaska, Arizona, Colorado, Hawaii, Idaho, Montana, North Dakota, New Mexico, Nevada, Oregon, South Dakota, Utah, and Wyoming.

### Research Facilities

Each division in the department is equipped with modern facilities for research in its specialty area.

### Correspondence and Information

Graduate Program Coordinator  
Department of Laboratory Medicine, SB-10

## Residency Training Program

The department provides residency training in clinical pathology (laboratory medicine) for graduate physicians in cooperation with the Department of Pathology. Persons who complete the program are eligible for certification by the American Board of Pathology.

### Correspondence and Information

Resident Program Director  
Department of Laboratory Medicine, SB-10

## Faculty

### Chairperson

Paul E. Strandjord

### Professors

Benjamin, Denis R.,\* 1975, (Pediatrics), (Pathology),† M.B.B.Ch., 1968, Witwatersrand (South Africa); pediatric pathology, laboratory medicine, hematopathology, nutrition, circadian rhythms, interpretation of laboratory values.

Chatrian, Gian-Emilio, 1959, (Emeritus), (Neurological Surgery),† M.D., 1951, Naples (Italy); electroencephalography and clinical neurophysiology.

Corey, Lawrence,\* 1977, (Medicine, Pediatrics), (Microbiology),† M.D., 1971, Michigan; diagnosis, therapy, and pathogenesis of viral infections.

Detter, James C.,\* 1969, M.D., 1962, Kansas; laboratory diagnosis of genetic disorders, red-cell disorders and laboratory instrumentation.

Gilliland, Bruce C.,\* 1968, (Microbiology), (Medicine),† M.D., 1960, Northwestern; immune complex disorders, hemolytic anemia, complement abnormalities.

Kaplan, Alex, 1960, (Emeritus), Ph.D., 1936, California; clinical chemistry.

Kenny, Margaret A.,\* 1970, (Anesthesiology), Ph.D., 1968, Illinois (Urbana); hormone regulation of electrolyte metabolism, new technologies for *in vivo* clinical biochemical analysis.

Labbe, Robert F.,\* 1957, (Pediatrics), M.S., 1949, Ph.D., 1951, Oregon State; porphyrin disorders, nutritional biochemistry.

Plorde, James J.,\* 1967, (Microbiology), (Medicine),† M.D., 1959, Minnesota; clinical microbiology, infectious diseases, antibiotic-resistant nosocomial infections.

Raisys, Vidmantas A.,\* 1971, M.S., 1965, Illinois; Ph.D., 1969, State University of New York (Buffalo); clinical toxicology, therapeutic drug monitoring.

Schmer, Gottfried,\* 1969, M.D., 1956, Vienna (Austria); synthesis of artificial organs, molecular engineering of antitumor enzymes.

Schoenkecht, Fritz D.,\* 1967, (Microbiology),† M.D., 1957, Freie (Berlin); *in vitro* antibiotic action, clinical microbiology, nosocomial infections.

Strandjord, Paul E.,\* 1969, M.A., 1952, Minnesota; M.D., 1959, Stanford; clinical chemistry, leadership and management.

### Associate Professors

Ashley, Rhoda L.,\* 1982, Ph.D., 1977, California (Davis); pathogenesis of viral infections, immune response to herpes, rapid diagnosis.

Bauer, Larry A., 1980, ‡(Pharmacy Practice), Pharm.D., 1980, Kentucky; pharmacokinetics, drug metabolism.

Clayson, Kathleen J.,\* 1969, M.S., 1968, Minnesota; enzymology in clinical chemistry.

Coyle, Marie B.,\* 1973, (Microbiology),† M.S., 1963, St. Louis; Ph.D., 1965, Kansas State; DNA probes and GLC for rapid identification of mycobacteria and corynebacteria.

Delaney, Collene J.,\* 1975, M.S., 1967, Ph.D., 1972, Illinois; clinical chemistry, application of 2-D high-resolution electrophoresis to the study of diabetes (types I and II) and alcoholism.

Fine, James S.,\* 1977, M.D., 1972, M.S., 1977, Minnesota; enzymology, medical computer applications.

Fritsche, Thomas R.,\* 1984, (Microbiology),† M.S., 1975, M.D., 1981, Ph.D., 1984, Minnesota; systematics and ecology of animal parasites; medical microbiology.

Opheim, Kent E.,\* 1977, Ph.D., 1972, Cornell; therapeutic drug monitoring, drug assay development, pediatric clinical chemistry.

Rutledge, Joe C.,\* 1988, M.D., 1976, Vanderbilt; genetic diseases, fetal and pediatric laboratory medicine.

Schiller, Harvey S.,\* 1972, M.D., 1966, Washington (St. Louis); clinical chemistry, hematology, interpretation of laboratory data.

Smith, Elizabeth K., 1950, (Emeritus), (Research), (Pediatrics),† M.S., 1939, Michigan; Ph.D., 1943, Iowa; pediatric endocrinology, steroid assays for congenital adrenal hyperplasia, metabolic disease testing.

Wener, Mark H.,\* 1981, (Medicine),† M.D., 1974, Washington (St. Louis); diagnostic immunology, immune complex diseases.

### Assistant Professors

Behrens, Joyce A., 1972, M.S., 1971, Minnesota; clinical hematology and clinical coagulation methodologies.

Chandler, Wayne L.,\* 1984, M.D., 1982, St. Louis; neurochemistry, fibrinolysis, clinical chemistry, clinical coagulation, hematology, enzyme kinetics.

Cone, Richard W., 1987, M.S., 1977, Ph.D., 1980, Stanford; M.D., 1983, Cincinnati; viral nucleic detection for diagnosis, viral tumor genesis.

Coombs, Robert W., 1988, (Medicine),† Ph.D., 1977, M.D., 1981, Dalhousie (Halifax); diagnosis and pathogenesis of HIV infection.

Fligner, Corrine L., 1984, ‡(Pathology), M.D., 1976, New Mexico; forensic pathology and forensic clinical toxicology.

Kidd, Pamela G.,\* 1984, (Pathology), M.D., 1971, Baylor; hematopathology, differentiation of B and T lymphocytes.

LeCron, Carol N.,\* 1967, M.S., 1966, Colorado State; thalassemia, hemoglobinopathies.

McGonagle, Lee Anne, 1970, M.P.H., 1969, Michigan; clinical microbiology, procedures for diagnostic bacteriology.

Malik, Sohail, 1988, (Research), (Medicine),† M.S., 1980, Ph.D., 1985, Karachi (Pakistan); pathogenesis of hypertension, analytical chemistry.

Simrell, Charles R., 1987, ‡(Pathology), M.D., 1978, Florida; hematology and hematopathology.

Szabo, LaVerne L., 1970, (Emeritus), M.S., 1970, Washington; general clinical chemistry, heavy metals in clinical chemistry.

Tait, Jonathan F.,\* 1985, (Pathology), M.D., 1983, Ph.D., 1983, Washington (St. Louis); biochemistry of blood coagulation, laboratory diagnosis of genetic disorders.

Toivola, Pertti T., 1986, Ph.D., 1972, Washington; clinical chemistry, immunochemistry, trace metals in clinical chemistry.

## Course Descriptions

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

**LAB M 321 Medical Technology: Introductory Clinical Hematology (5) AWS** Behrens, LeCrone Lecture-laboratory coverage of the theoretical and practical concepts associated with cellular morphology, instrumentation, quality control, and selected hematological diagnostic studies. Prerequisite: permission of instructor.

**LAB M 322 Medical Technology: Introductory Clinical Chemistry (5) AS** Raisys Lecture and laboratory covering the theoretical and practical concepts associated with testing procedures performed in clinical chemistry. Prerequisite: permission of instructor.

**LAB M 418 Topics in Clinical Chemistry (5) SpS** Clayton, Raisys, Toivola Lecture and laboratory exercises covering fundamentals of instrumentation, methodology, and quality control in the clinical chemistry laboratory. Prerequisite: 322, or permission of instructor.

**LAB M 419 Clinical Coagulation (3½) AS** Behrens Lecture and laboratory covering the theory and pathology of coagulation with inclusion of selected diagnostic procedures. Prerequisite: 321 or permission of instructor.

**LAB M 420 Clinical Microscopy (3½) S** LeCrone Lecture and laboratory covering urinalysis testing procedures and associated disease entities. Analysis of other body fluids. Methods of microscopic examination by use of bright-field, phase, and polarizing microscopy. Prerequisite: permission of instructor.

**LAB M 421 Medical Microbiology (1 or 6) S** McGonagle Lecture and laboratory coverage of human infections and diagnostic procedures used to isolate, identify, and test the antibiotic susceptibility of the microorganisms associated with disease. Prerequisite: permission of instructor.

**LAB M 422 Topics in Hematology and Immunology (3) AWSpS** Behrens Advanced didactic coverage of topics related to clinical laboratory diagnostic procedures in hematology and immunology. Prerequisite: 321 or permission of instructor.

**LAB M 423 Clinical Chemistry (\*, max. 24) AWSpS** Toivola Clinical testing related to protein and amino acid determinations, pancreatic function and intestinal absorption, renal and liver function, enzymes, electrolytes, and acid-base balance, lipids, toxicology, and endocrinology. Prerequisite: permission of instructor.

**LAB M 424 Clinical Microbiology (\*, max. 24) AWSpS** McGonagle Clinical study of techniques used in the diagnostic microbiology laboratory, including specimen evaluation, culture, identification, and antibiotic susceptibility testing of clinically significant organisms, and quality-control procedures. Prerequisite: permission of instructor.

**LAB M 425 Clinical Hematology (\*, max. 24) AWSpS** Behrens Study of procedures used in the clinical hematology and hemostasis laboratories, including cell counting, cellular morphology, tests useful in the diagnosis of red, white, and platelet cell disorders and routine hemostasis. Prerequisite: permission of instructor.

**LAB M 426 Clinical Immunohematology (6) AW** LeCrone Clinical study of immunohematology of the

red cells and hemagglutination techniques. Prerequisite: permission of instructor.

**LAB M 427 Selected Studies in Laboratory Medicine (\*, max. 24) AWSpS** Behrens, Clayton, LeCrone, McGonagle, Raisys, Toivola Selected study in either one of the major disciplines of laboratory medicine, in all major disciplines of this field, or pursuance of a clinical research problem. Credit/no credit only. Prerequisite: permission of instructor.

**LAB M 499 Undergraduate Research (\*) AWSpS** Specific project in clinical laboratory investigation. Credit/no credit only.

**LAB M 501 Clinical Laboratory Diagnosis (3) W** Fine Interpretation of diagnostic laboratory testing. Appropriate testing strategies, principles, problems, and limitations. Lectures-discussions and illustrative case presentations and demonstrations. For third- and fourth-year medical students and graduate students. Recommended: HUBIO 560P.

**LAB M 502 Laboratory Medicine Grand Rounds (1, max. 6) AWSp** Dettler Grand rounds are concerned with current topics in the field of laboratory medicine. Credit/no credit only. May be repeated for credit.

**LAB M 510 Clinical Chemistry Research Conference (1, max. 6) AWSp** Labbe Ongoing research and development projects in clinical chemistry, as well as reports of advances in clinical chemistry. Open to graduate students in laboratory medicine and other medical sciences. Credit/no credit only. Prerequisite: permission of instructor.

**LAB M 520 Seminar in Organization and Management in Laboratory Medicine (3) Sp** Strandjord Core course for the Master of Science degree in laboratory medicine. Prerequisite: graduate student standing in laboratory medicine or permission of instructor. (Offered odd-numbered years.)

**LAB M 521 Advanced Laboratory Hematology (1, max. 6) AWSp** Dettler Lectures on laboratory diagnosis in clinical hematology. Emphasis on clinicopathological correlation. For laboratory medicine graduate students with special interest in diagnostic clinical hematology. Credit/no credit only. Prerequisites: graduate standing and permission of instructor.

**LAB M 522 Hematopathology Seminar (2) W** Kidd Lecture series with emphasis on histopathology, cytochemical, and immunological markers of hematologic disorders. Offered jointly with PATH 522. Credit/no credit only. (Offered even-numbered years.)

**LAB M 590P Research Projects in Laboratory Medicine (\*) AWSpS** Schmer Opportunity for laboratory experience on a research problem related to laboratory medicine. Students investigate new areas of potential clinical importance. Highly variable selection of projects includes chemistry, coagulation, hematology, immunology, microbiology, virology, and computer applications. Research goals established by instructor in discussion with each student. Prerequisite: permission of instructor.

**LAB M 596 Clinical Chemistry Seminar (2) AWSp** Delaney, Raisys Conferences on research and development in clinical chemistry. For postdoctoral students in clinical chemistry and graduate students. May be repeated for credit. Prerequisite: permission of instructor.

**LAB M 601 Internship (3-9, max. 9) AWSpS** Credit/no credit only. Prerequisite: graduate standing in laboratory medicine. Entry Code required.

**LAB M 680P Clinical Laboratory Testing: Methods and Interpretation (\*) AWSpS** Dettler, Kidd Provides the third- and fourth-year medical student with the opportunity to evaluate clinical laboratory data in the clinical laboratory setting. One-on-one teaching using case material and actual clinical samples.

**LAB M 700 Master's Thesis (\*) AWSpS** Credit/no credit only.

## Medical Education

The objectives of the Department of Medical Education are to discover, disseminate, and apply knowledge of educational theory and practice in medical education. Research seeks to increase the basic fund of knowledge in educational theory and practice in medical education. Through teaching, the educational knowledge base is transmitted to the faculty, fellows, residents, and students. Through scholarly research, teaching, and service, educational expertise is used to enhance the quality of academic programs in medicine and the health sciences.

## Faculty

### Chairperson

Charles W. Dohner

### Professors

Dohner, Charles W.,\* 1967, (Education),† M.S., 1957, Kansas State (Pittsburgh); Ph.D., 1966, Ohio State; program evaluation, administration, faculty development.

Irby, David M., 1977, M. Div., 1971, Union Theological Seminary; Ph.D., 1977, Washington; teacher evaluation, faculty development, planning.

### Associate Professors

Carline, Jan D., 1981, M.Ed., 1976, Ph.D., 1979, Washington; clinical evaluation, program evaluation.

Cullen, Thomas J., 1971, (Research), M.Ed., 1970, Ph.D., 1974, Washington; evaluation, adult learning.

Gordon, Michael J.,\* 1973, (Health Services), (Family Medicine),† M.A., 1970, Ph.D., 1973, Michigan State; clinical judgment, self-assessment.

Scott, Craig S., 1979, M.Ed., 1970, Columbia; Ph.D., 1973, Iowa; faculty course evaluation, medical education outcomes, health promotion.

### Assistant Professors

Cole, William G., 1990, Ph.D., 1980, Washington; experimental psychology.

Fuller, Sherrilynne S., 1988, (Affiliate), M.L.S., 1968, Indiana; Ph.D., 1984, Southern California; library and information management.

Mandel, Lynn S., 1989, (Research), Ph.D., 1983, Washington; science education.

Rakestraw, Phillip G., 1982, (Affiliate), M.S., 1977, Oregon; Ph.D., 1981, Washington; research in medical education.

Schaad, Douglas C., 1981, M.Ed., 1974, Ph.D., 1986, Washington; computer science, measurement, evaluation.

### Senior Lecturer

Strand, Donn A., 1973, M.Ed., 1972, Seattle Pacific; Ph.D., 1981, Washington; curriculum evaluation, curriculum development.

### Lecturer

MacLaren, Carol F., 1989, M.S., 1980, Ph.D., 1985, Pennsylvania; experimental research.

## Course Descriptions

**MEDED 499 Undergraduate Research (\*, max. 12) AWSpS** Scott Investigative research or readings in medical education; topics include clinical reasoning, curriculum development, evaluation, use of computers in medical education, and educational research in medical settings. Credit/no credit only. Prerequisite: permission of instructor.

**MEDED 510 Topics in Medical Education Research (2-3) AWSpS** Selected research topics in

medical education. Development of skills in critical analysis and production of original research. Optional: 1 additional credit for seminar focusing on application of issues in education practice. May be repeated for credit. Credit/no credit only.

**MEDED 520 Teaching Methods in Medical Education (2) W Irby** Empirical and theoretical merits of different teaching methods as applied to medical education. Structuring and leading group discussions, using questions, organizing and delivering lectures, identifying styles of clinical supervision, providing constructive feedback, and presenting effective clinical demonstrations.

**MEDED 521 Evaluation of Learning in the Health Sciences (2) Sp Carline** Basic issues and methods for evaluation of learning: cognitive performance, psychomotor skills, and reasoning abilities in classroom, laboratory, and clinical settings. Practical applications of instruments such as multiple-choice questions, essays, oral examinations, checklists, rating scales, simulations, and patient management problems. Recommended: 520.

**MEDED 522 Research in Medical Education (2) W Scott** Basic overview of research methods and research design pertinent to educational research in medical education. Development and sequencing of research projects from conceptualization through literature review, proposal development, project implementation, data management, analysis, and write-up. Critical reading of related literature stressed.

**MEDED 530 Medical Informatics (3) W Cole** Survey of the history and current status of computers as used to assist analysis, decision, and judgment in medical care and research. Topics include medical artificial intelligence, clinical data bases, computer aids for medical decision making, bibliographic searching and retrieval, and computers as mimics of the analog world (graphics, sounds).

## Medical History and Ethics

Jack W. Berryman, Graduate Program Coordinator

The Department of Medical History and Ethics offers a program of study leading to the Master of Arts degree in either medical history or medical ethics. An interdisciplinary Ph.D. option in philosophy and medical ethics is offered through the Department of Philosophy in the College of Arts and Sciences.

An undergraduate degree is not offered. Students who desire an undergraduate curriculum emphasizing subject matter in medical history may choose the Program in History of Science, Technology and Medicine offered through the Department of History in the College of Arts and Sciences.

### Special Requirements

Applicants for the Master of Arts program must meet requirements for admission to the Graduate School and present a background in either history or philosophy. Additional information concerning acceptable preparation may be obtained by contacting the Graduate Program Coordinator.

Aspirants to the Master of Arts degree are expected to possess proficiency in historical and/or philosophical methods and familiarity with the biomedical sciences. Department requirements include completion of a series of approved upper-division and graduate courses in supporting fields of study; demonstration of reading knowledge in one foreign language; satisfactory completion of a general examination (written and oral); and submission of an acceptable thesis with oral defense of the thesis. A minimum of three full-time quarters of residency is required, and it is expected that the entire program will be completed within four to six quarters. Current areas of specialization for master's

program students include history of medicine; history of health, exercise and sports medicine; and medical ethics.

Admission to the interdisciplinary Ph.D. program option in philosophy and medical ethics is normally subsequent to completion of the Master of Arts degree in medical ethics or philosophy at the University of Washington.

Albert R. Jonsen

### Professors

Jonsen, Albert R.,\* 1987, (Medicine), M.A., 1956, Gonzaga; S.T.M., 1963, Santa Clara; Ph.D., 1967, Yale; philosophical and historical study of values affecting the practice of medicine and delivery of health care.

Odegaard, Charles E., 1974, (Emeritus), (Education), † Ph.D., 1937, Harvard; history of medical education.

Whorton, James C.,\* 1970, (History), Ph.D., 1969, Wisconsin; history of American medicine, public health, alternative healing, pharmacy and biochemistry.

### Associate Professors

Benson, Keith R.,\* 1981, (History), M.A., 1973, Ph.D., 1979, Oregon State; history of modern American biology, marine biology, and evolutionary biology.

Berryman, Jack W.,\* 1975, M.S., 1971, M.A., 1974, Massachusetts; Ph.D., 1976, Maryland; history of exercise and sports medicine.

### Assistant Professor

Jecker, Nancy S.,\* 1988, (Philosophy, Law), M.A., 1982, Stanford; M.A., 1984, Ph.D., 1986, Washington; ethical theory, medical ethics, philosophy of medicine.

### Senior Lecturer

McCormick, Thomas R.,\* 1974, D.Min., 1976, Southern Methodist; biomedical ethics.

## Course Descriptions

**MHE 201 Understanding American Medicine (2) Jonsen, Whorton** Survey of the history, sociology and ethics of modern American medicine. Through analysis of its achievements and problems, the student is prepared to make an informed, realistic choice of the profession of medicine. Recommended for students considering a premed curriculum.

**MHE 401 Disease and Medicine in History (5) Whorton** Examination of impact of epidemic disease on European and American society from late Middle Ages into twentieth century, the development of understanding of causes and mode of spread of infection, and application of that understanding to prevention and treatment of disease. Prerequisites: courses in sciences and/or history.

**MHE 402 Normative Ethical Theory (5) Jecker** Development of moral thought from Hobbes through Nietzsche, with particular emphasis on the ethical writings of David Hume, Immanuel Kant, and Jeremy Bentham. Recommended: one course in ethics.

**MHE 404 Metaethical Theory (5) Jecker** Study of major ethical writings in the twentieth century, with principal emphasis on the Anglo-American tradition. Recommended: one course in philosophy.

**MHE 419 Science in Civilization: Antiquity to the Scientific Revolution (5) Benson** From preclassical antiquity to the end of the Middle Ages, stressing the

growth of scientific ideas, the cultural context in which they take shape, and their relationship to other movements of thought in the history of civilization. Prerequisite: graduate standing.

**MHE 421 Science in Civilization: Science in Modern Society (5) Benson** Growth of modern science from the Renaissance to the nineteenth century, emphasizing the scientific revolution of the seventeenth century. Development of methodology and the emergence of new fields of interest and new modes of thought. Prerequisite: graduate standing.

**MHE 422 History of Evolution Theory (3) Benson** Development of evolution theory from its early-nineteenth-century roots through the work of Charles Darwin. Impact of evolution theory on society and the formulation of the theory in the twentieth century.

**MHE 424 Modern Biology in Historical Perspective (5) Benson** Two diverse traditions of biology, natural history, and physiology, in their nineteenth-century development and their subsequent merging after Darwin's evolution theory. Emergence of specialty areas in biology after the beginning of the twentieth century. Prerequisite: upper-class standing or permission of instructor.

**MHE 440 Philosophy of Medicine (5) Jecker** Familiarizes students with central issues in the philosophy of medicine. Focuses on the nature of medical knowledge, the connection between theory and observation, the meaning of medical concepts, and the relationship between theories and the world. Joint with PHIL 459. Prerequisites: some prior course work in philosophy, the history of science, or the history of medicine.

**MHE 474 Justice in Health Care (5) Jecker** Examination of the ethical problem of allocating scarce medical resources. Emphasis on fundamental principles of justice that support alternative health policies. Joint with PHIL 411. Recommended: some previous background in philosophy or medical ethics.

**MHE 481 The Pursuit of Health in American Society (5) Berryman, Whorton** Examination of the development of concern for personal health over the past two centuries, and of the evolution of philosophies and practices of health promotion. Emphasis on the influence of both medicine and popular culture on shaping of attitudes towards diet, exercise, dress, sex, and other health behavior.

**MHE 483 The Rise and Development of Sports Medicine (3) Berryman** Evolution of medical thought related to exercise for good health, training for sport participation, and treatment of sport-related injuries. Begins with ancient period, concludes with present. Development of specialization in sports medicine, sport team physicians, preventive medicine, concepts of fitness and wellness as related to exercise prescription, and sports medicine clinics.

**MHE 485 Concepts of the Body in Nineteenth- and Twentieth-Century America (3) Berryman** Investigation of ideas relating to corporeal self in nineteenth- and twentieth-century America. Evolution of physical ideals of manliness/femininity, how ideals related to surrounding culture, how different bodily activities developed to realize ideals. Athleticism, physiognomy, beauty contests, body building, decorations, cosmetics, anthropometry, artificial parts.

**MHE 497 Medical History and Ethics Special Electives (\*) AWSpS**

**MHE 498 Undergraduate Thesis (\*) AWSpS**

**MHE 499 Undergraduate Research (\*, max. 5) AWSpS** Investigative work in history of the biomedical sciences.

**MHE 500 Seminar in Research Methods (\*, max. 6)** Emphasis is placed on bibliography and utilization of bibliographic sources. Practice in techniques of organizing and writing history of medicine and ethics. Prerequisite: permission of instructor.

**MHE 501 Alternative Systems of Medicine (1)** *Whorton* Philosophies and practices of the major alternative systems of medicine. Historical analysis of alternative medicine accompanied by presentations by practitioners of systems such as chiropractic, naturopathy, and traditional Chinese medicine. Recommended: enrollment in medical or other health professional school.

**MHE 502 History of Dentistry (1)** Overview of history of healing arts as evolved from scientific, religious, and other cultural roots, with emphasis on dentistry, its pioneers, developers, historic trends, and professional societies. Limited to: dental students.

**MHE 503 The Historical Background of Modern Medicine (1)** *Whorton* Major elements of thought, practice, and values that have directed the evolution of medicine in Western civilization. Medical culture examined as both an expression and modifier of the culture of its ambient society. Limited to: medical students and others in health professional schools.

**MHE 510 Topics in Medical History and Ethics (\*, max. 6)** Detailed study of topics in medical history and ethics through lectures, seminars, and discussion. Open to majors and graduate students in medicine, the arts and sciences, and others with appropriate background and interest. Prerequisite: permission of instructor.

**MHE 511P Medical Ethics (1)** Ethics course designed especially for first- and second-year medical students. Study of ethical problems arising in clinical setting of medicine, introducing students to philosophical analysis and argument in practical contexts. Seminar-discussion format with readings from contemporary authors.

**MHE 512P The Human Face of Medicine (1)** *McCormick* Foundation of human values undergirding medical practice. Images of physician — motivations for medicine; empathy versus detachment in doctor-patient relationship; health for the health-professional — the art of coping; limits of power — when medicine fails to cure; uses/abuses of technology; physician's role in public health issues; the healing process.

**MHE 520 Seminar in the History and Philosophy of Medicine (3)** Origins and philosophical foundations of medical sciences. Critical analysis of processes of evaluation and explanation in biomedical sciences. Consideration of evolution and nature of modern biomedical investigation; concepts of life/death, health/disease; philosophical dimensions of clinical medicine. Open to majors, medical students, arts and sciences graduate students, and others.

**MHE 521 The Ethical Challenges of Modern Medicine (3)** *McCormick* Case-study approach to contemporary ethical issues in medicine, utilizing techniques of ethical analysis and argument in examining actual cases arising in our pluralistic culture, where values are often in conflict. Open to graduate and professional students and others with appropriate background.

**MHE 522 Ethical Problems Surrounding Death (3)** *McCormick* Issues arising in care and treatment of dying patients and their families, including truthful disclosure, use of life-supports, "euthanasia," coping with death and grief. Intersection of patient and professional values related to care in terminal phase of illness. Open to graduate and professional students and others with appropriate background.

**MHE 523 Biomedical Ethics (3)** *McCormick* Selected topics in medical ethics emphasizing methods of ethical reasoning about moral dilemmas and contributions of philosophical theories and principles to practical problems of medicine. Students provided with opportunities to test their value assumptions and analytical skills. Open to graduate and professional students and others with appropriate background.

**MHE 525 Seminar in the History and Philosophy of Biology (3)** Tailored to individual interests in certain areas of the history and philosophy of biology. Open to majors and graduate students in medicine, the arts and

sciences, and others with appropriate background and interest.

**MHE 530 Seminar in the History of American Medicine (3)** Selected topics in the development of medicine and public health in the United States. Open to majors and graduate students in medicine and the arts and sciences and to others with appropriate background and interest.

**MHE 535 Medical Ethics and Jurisprudence (3)** *Jonsen* Relationship between bioethics and law. Review of basic concepts of both disciplines; their theoretical and practical connections. Analysis of principal legal cases and statutes illustrating such issues as informed consent to treatment, foregoing life support, research with human subjects, confidentiality, allocation of health care resources. For graduate and professional students.

**MHE 540 Seminar in the History of Health and Physical Exercise (3)** Selected topics in the development of medical thought as it relates to exercise, sport, and overall well-being. Open to majors and graduate students in medicine, the arts and sciences, and others with appropriate background and interest. Prerequisite: permission of instructor.

**MHE 545 Seminar in Clinical Ethics (3)** *Jonsen* Review of various approaches to analyzing ethical aspects of clinical decisions. Relationship between ethical theories and practical problems. Analysis of important current cases in medical ethics to demonstrate a systematic method of clinical-ethical analysis. Open only to graduate and professional students.

**MHE 595- Clinical Ethics Practicum (4-)** Students spend one week on each of four clinical services at University of Washington teaching hospitals. Under direction of clinicians, observe patient care activities, participate in care conferences, become familiar with relevant medical and ethical literature. Prerequisite: graduate or professional standing.

**MHE 599P Independent Study for Medical Students (\*, max. 10) AWSp** Research in medical history or medical ethics for ISMS projects. Enrollment restricted to medical students.

**MHE 600 Independent Study or Research (\*, AWSp)**

**MHE 700 Master's Thesis (\*, AWSp)**

## Medicine

RR512 University of Washington Medical Center

Active programs in teaching, research, and patient care are carried on at the University of Washington Medical Center, Seattle Veterans Administration Medical Center, Harborview Medical Center, Pacific Medical Center, the Puget Sound Blood Center, the Northwest Kidney Center, and the Fred Hutchinson Cancer Research Center. Major affiliations for clinical teaching also exist with Providence Medical Center and Swedish Hospital Medical Center. There are many additional affiliations with community hospitals in Seattle, the state of Washington, and the WAMI region. Medical students, interns, medical residents, and postdoctoral research fellows rotate through these various hospitals and participate in the learning experiences offered at each.

## Faculty

### Chairperson

Paul G. Ramsey, Acting

### Professors

Aagaard, George N., \* 1954, (Emeritus), (Pharmacology), † M.D., 1937, Minnesota; clinical pharmacology.

Abress, Itamar B., 1983, M.D., 1966, California (San Francisco); gerontology.

Albers, John J., \* 1971, (Research), (Nutritional Sciences, Pathology), M.S., 1967, Ph.D., 1969, Illinois; metabolism and endocrinology.

Albert, Richard K., 1976, M.D., 1971, Colorado; respiratory diseases.

Applebaum, Frederick R., 1978, M.D., 1972, Tufts; oncology.

Baskin, Denis G., \* 1979, (Research), (Biological Structure), † Ph.D., 1969, California (Berkeley); metabolism and endocrinology.

Beeson, Paul B., 1974, (Emeritus), M.D., 1933, McGill.

Belknap, Benjamin H., 1971, M.P.A., 1954, Princeton; M.D., 1961, Rochester; metabolism and endocrinology.

Bierman, Edwin L., \* 1962, (Nutritional Sciences), M.D., 1955, Cornell; metabolism and endocrinology.

Bird, Thomas D., 1976, M.D., 1968, Cornell; neurology.

Bishop, Michael J., 1979, ‡(Anesthesiology), M.D., 1974, California (San Diego); anesthesiology.

Blagg, Christopher R., 1966, M.D., 1964, Leeds; nephrology.

Bornstein, Paul, \* 1967, (Biochemistry), † M.D., 1958, New York.

Bremner, William J., 1977, (Obstetrics and Gynecology), M.D., 1969, Washington; Ph.D., 1977, Monash (Australia); endocrinology.

Brown, B. Gregory, 1980, M.D., 1969, Ph.D., 1969, Johns Hopkins; cardiology.

Bruce, Robert A., 1950, (Emeritus), M.D., 1943, Rochester; cardiology.

Brunzell, John D., \* 1969, (Nutritional Sciences), M.D., 1963, Washington; metabolism and endocrinology.

Buckner, C. Dean, 1968, M.D., 1961, Michigan; oncology.

Burnell, James M., 1950, (Emeritus), (Research), M.D., 1949, Stanford; nephrology.

Byers, Peter H., \* 1977, (Pathology), † M.D., 1969, Case Western Reserve; medical genetics.

Camerman, Arthur, \* 1967, (Research), (Pharmacology), † Ph.D., 1964, British Columbia; neurology.

Carithers, Robert L., 1990, M.D., 1969, Pennsylvania; gastroenterology.

Chait, Alan, \* 1977, (Nutritional Sciences), M.Sc., 1973, London (England); M.D., 1974, Cape Town (South Africa); metabolism and endocrinology.

Cheever, Martin A., 1975, M.D., 1970, Michigan; oncology.

Chesnut, Charles H. III, \* 1973, (Nutritional Sciences), (Radiology), † M.D., 1966, Florida; nuclear medicine.

Cobb, Leonard A., 1957, M.D., 1952, Minnesota; cardiology.

Copass, Michael K., 1973, (Surgery), M.A., 1964, M.D., 1964, Northwestern; neurology/surgery.

Corey, Lawrence, \* 1977, ‡(Laboratory Medicine, Microbiology, Pediatrics), M.D., 1971, Michigan; diagnosis, therapy and pathogenesis of viral infections.

Counts, Richard B., 1973, M.D., 1967, Washington (St. Louis); hematology.

Couser, William, 1982, M.D., 1965, Harvard; nephrology.

Cowan, Marie J., \* 1979, ‡(Pathology, Physiological Nursing), M.S., 1972, Ph.D., 1979, Washington; cardiovascular pathology, electrocardiography.

Crill, Wayne E., \* 1967, (Physiology and Biophysics), † M.D., 1962, Washington; neurology.

Dale, Beverly A., \* 1972, ‡(Biochemistry, Oral Biology, Periodontics), Ph.D., 1968, Michigan; keratin biochemistry.

- Dale, David C., 1975, M.D., 1966, Harvard; internal medicine.
- Dodge, Harold T., 1969, (Emeritus), M.D., 1948, Harvard; cardiology.
- Dorsa, Daniel M.,\* 1979, (Psychiatry and Behavioral Sciences), (Pharmacology),† Ph.D., 1977, California (Davis); gerontology.
- Eisenberg, Mickey S.,\* 1978, (Epidemiology), M.D., 1971, Case Western Reserve; M.P.H., 1977, Ph.D., 1978, Washington; emergency medicine.
- Eliel, Leonard P., 1977, (Emeritus), M.D., 1940, Harvard; metabolism and endocrinology.
- Ensink, John W.,\* 1960, (Nutritional Sciences), M.D.C.M., 1956, McGill; metabolism and endocrinology.
- Farrell, Donald F., 1971, M.D., 1965, George Washington; neurology.
- Fefer, Alexander, 1968, M.D., 1964, Stanford; oncology.
- Fialkow, Philip J.,\* 1965, M.D., 1960, Tufts; medical genetics.
- Figley, Melvin M.,\* 1958, (Emeritus), (Radiology),† M.D., 1944, Harvard.
- Finch, Clement A., 1949, (Emeritus), M.D., 1941, Rochester; hematology.
- Fujimoto, Wilfred Y.,\* 1970, (Nutritional Sciences), M.D., 1965, Johns Hopkins; metabolism and endocrinology.
- Gartler, Stanley M.,\* 1957, (Genetics),† Ph.D., 1952, California (Berkeley); medical genetics.
- Giblett, Eloise R., 1952, (Emeritus), (Research), M.S., 1947, M.D., 1951, Washington; hematology.
- Gilliland, Bruce C.,\* 1968, (Microbiology), (Laboratory Medicine),† M.D., 1960, Northwestern; rheumatology.
- Glomset, John A.,\* 1960, (Biochemistry),† M.D., 1960, Uppsala (Sweden); metabolism and endocrinology.
- Goodner, Charles J.,\* 1962, (Emeritus), (Physiology and Biophysics), M.D., 1955, Utah; metabolism and endocrinology.
- Graham, Michael M., 1980, ‡(Radiation Oncology, Radiology), Ph.D., 1973, California (Berkeley); M.D., 1976, California (San Francisco); nuclear medicine, PET.
- Greenberg, Philip D.,\* 1978, (Microbiology), (Immunology),† M.D., 1971, State University of New York (Downstate); oncology.
- Greene, H. Leon, 1979, M.D., 1969, Johns Hopkins; cardiology.
- Haggitt, Rodger C., 1984, ‡(Pathology), M.D., 1967, Tennessee; gastroenterology.
- Handsfield, H. Hunter, 1979, (Epidemiology), M.D., 1968, Columbia; infectious disease.
- Hansen, John A., 1977, M.D., 1970, Stanford; oncology.
- Harlan, John M., 1978, (Pathology), M.D., 1978, Chicago; hematology.
- Henderson, Maureen M.,\* 1975, (Health Services), (Epidemiology),† M.B.B.S., 1949, D.P.H., 1956, Durham (England); internal medicine.
- Henderson, William R., Jr., 1978, M.D., 1973, California (San Francisco); allergy and infectious disease.
- Hildebrandt, Jacob,\* 1966, (Physiology and Biophysics),† M.Sc., 1960, British Columbia; Ph.D., 1966, Washington; internal medicine/physiology and biophysics.
- Hirschmann, Jan V., 1976, M.D., 1970, Washington; internal medicine.
- Hlastala, Michael P.,\* 1973, (Bioengineering), (Physiology and Biophysics),† Ph.D., 1969, State University of New York (Buffalo); respiratory diseases.
- Holbrook, Karen A.,\* 1972, ‡(Biological Structure), M.S., 1966, Wisconsin; Ph.D., 1972, Washington; biology.
- Holmes, King K.,\* 1967, (Epidemiology, Microbiology), M.D., 1963, Cornell; Ph.D., 1967, Hawaii; infectious diseases.
- Hood, Leroy E., 1992, ‡(Biomedical Engineering, Immunology, Molecular Biotechnology), M.D., 1964, Johns Hopkins; Ph.D., 1968, California Institute of Technology; molecular immunology, protein chemistry, large scale DNA mapping and sequencing, molecular evolution.
- Hudson, Leonard D., 1973, M.D., 1964, Washington; respiratory diseases.
- Jonsen, Albert R.,\* 1987, ‡(Medical History and Ethics), M.A., 1956, Gonzaga; S.T.M., 1963, Santa Clara; Ph.D., 1967, Yale; philosophical and historical study of values affecting the practice of medicine and delivery of health care.
- Kennedy, J. Ward, 1966, M.D., 1959, Rochester; cardiology.
- Kirby, William M. M., 1949, (Emeritus), M.D., 1950, Cornell; infectious disease.
- Klebanoff, Seymour J.,\* 1962, (Microbiology), M.D., 1951, Toronto; Ph.D., 1954, London (England); infectious disease.
- Knopp, Robert H.,\* 1974, (Obstetrics and Gynecology, Nutritional Sciences), M.D., 1964, Cornell; metabolism and endocrinology.
- Koepsell, Thomas D.,\* 1979, ‡(Epidemiology, Health Services), M.D., 1972, Harvard; M.P.H., 1979, Washington; epidemiology of chronic diseases, particularly seizure disorders, applications of epidemiologic concepts to medical practice.
- Koerker, Donna J.,\* 1974, (Physiology and Biophysics),† Ph.D., 1970, Michigan; endocrinology.
- Lakshminarayan, Sambasiva, 1975, M.B.B.S. (M.D.), 1965, All India Institute of Medical Sciences; pulmonary medicine.
- Larson, Eric B.,\* 1977, (Health Services), M.D., 1973, Harvard; internal medicine.
- Lee, Sum Ping, 1985, Ph.D., 1978, Auckland (New Zealand); M.D., 1982, Hong Kong; gastroenterology.
- Lernmark, Åke, 1988, M.D., 1970, Ph.D., 1971, Umeå (Sweden); diabetes.
- Livingston, Robert B., 1982, M.D., 1967, Oklahoma; oncology.
- LoGerfo, James P.,\* 1974, (Health Services),† M.D., 1968, Rochester; Ph.D., 1974, Washington; internal medicine.
- Mannik, Mart,\* 1966, (Microbiology), M.D., 1959, Case Western Reserve; rheumatology.
- Marcovina, Santica, 1990, (Research), Ph.D., 1975, Pavia (Italy); metabolism and endocrinology.
- Martin, Paul J., 1979, M.D., 1975, Pennsylvania; oncology.
- McArthur, James R., 1973, M.D., 1956, Harvard; hematology.
- McDonald, George B., 1973, M.D., 1967, Washington (St. Louis); gastroenterology.
- Merriam, George R., 1991, (Research), M.D., 1976, Harvard; metabolism and endocrinology.
- Mills, Richard P., 1984, ‡(Neurological Surgery, Ophthalmology), M.D., 1968, Yale; neurology.
- Monsen, Elaine R.,\* 1963, (Nutritional Sciences), M.S., 1959, Ph.D., 1961, California (Berkeley); nutrition.
- Motulsky, Arno G.,\* 1953, (Genetics),† M.D., 1947, Illinois; medical genetics.
- Neiman, Paul E.,\* 1968, (Pathology), M.D., 1964, Washington; oncology.
- Nelp, Wil B., 1962, (Radiology),† M.D., 1955, Johns Hopkins; nuclear medicine.
- Odland, George F., (Emeritus), 1962, (Biological Structure),† M.D., 1946, Harvard; dermatology.
- Olson, Maynard, 1992, (Molecular Biotechnology),† Ph.D., 1970, Stanford; large-scale genome mapping and sequencing.
- Omenn, Gilbert S.,\* 1971, (Environmental Health),† M.D., 1965, Harvard; Ph.D., 1972, Washington; medical genetics.
- Pagon, Roberta A., 1979, ‡(Ophthalmology, Pediatrics), M.D., 1972, Harvard; ophthalmology, pediatrics.
- Palmer, Jerry P., 1974, M.D., 1970, Upstate Medical (New York); metabolism and endocrinology, diabetes.
- Papayannopoulou, Thalia P., 1974, M.D., 1961, D.M.Sc., 1964, Athens (Greece); hematology.
- Paulsen, C. Alvin, 1961, M.D., 1952, Oregon; metabolism and endocrinology.
- Pearlman, Alan S.,\* 1978, M.D., 1970, Harvard; cardiology.

- Nielson, Christopher P., 1983, M.D., 1978, California (Los Angeles); gerontology and geriatric medicine.
- Olerud, John E., 1977, (Orthopaedics),† M.D., 1971, Washington; dermatology.
- Olson, Richard D., 1984, (Research), Ph.D., 1978, Vanderbilt; gerontology/geriatrics.
- Oram, John F., Jr., 1975, (Research), Ph.D., 1972, Pennsylvania State; metabolism and endocrinology.
- Ott-Ralph, Susan, 1983, (Radiology), M.D., 1974, Washington; bone metabolism.
- Pearlman, Robert A.,\* 1981, (Health Sciences), M.D., 1975, Boston; M.P.H., 1980, Washington; gerontology.
- Press, Oliver W., 1982, Ph.D., 1977, M.D., 1979, Washington; oncology.
- Price, Thomas H., 1975, M.D., 1966, Johns Hopkins; hematology.
- Raghu, Ganesh, 1983, M.B.B.S., 1972, Mysore (India); respiratory disease.
- Ralph, David D., 1980, M.D., 1972, Stanford; respiratory diseases.
- Raskind, Wendy H., 1982, Ph.D., 1977, M.D., 1978, Washington; medical genetics.
- Raugi, Gregory J., 1980, M.D., 1975, Ph.D., 1975, Duke; dermatology.
- Reddy, Arram L., 1976, (Research), M.Sc., 1964, Osmania; Ph.D., 1972, Pittsburgh; medical genetics.
- Robertson, H. Thomas, 1976, M.D., 1968, Harvard; respiratory diseases.
- Rosenstock, Linda,\* 1980, (Environmental Health),† M.D., 1977, M.P.H., 1977, Johns Hopkins; occupational medicine.
- Sayers, Merlin H., 1979, M.B.B.Ch., 1968, Ph.D., 1978, Witwatersrand (South Africa); hematology.
- Schellenberg, Gerard D., 1983, (Research), Ph.D., 1978, California (Riverside); neurology.
- Schoene, Robert B., 1979, M.D., 1972, Columbia; respiratory diseases.

- Schwartz, Robert S.,\* 1982, M.D., 1974, Ohio State; gerontology.
- Sheehan, Florence, 1981, (Research), M.D., 1975, Pritzker; cardiology.
- Siscovick, David S.,\* 1987, (Epidemiology),† M.D., 1976, Maryland; M.P.H., 1981, Washington; epidemiology.
- Sparkman, Donal R., 1949, (Emeritus), M.D., 1934, Pennsylvania.
- Starkebaum, Gordon A., 1978, M.D., 1970, Columbia; rheumatology.
- Stevens, Dennis L., 1979, Ph.D., 1967, Montana State; M.D., 1971, Utah; infectious diseases.
- Stewart, Douglas K., 1971, M.D., 1965, Harvard; cardiology.
- Stewart, Patricia S., 1977, M.A., 1965, M.D., 1969, West Virginia; oncology.
- Surawicz, Christina M., 1978, M.D., 1973, Kentucky; gastroenterology.
- Sybert, Virginia P., 1979, ‡(Pediatrics), M.D., 1974, State University of New York (Buffalo); genetics and dermatology.
- Thiagarajan, Perumal, 1986, M.B.B.S., 1974, Tirunelveli Medical (India); hematology.
- Uhlmann, Richard F., 1983, M.D., 1978, Chicago; M.P.H., 1983, Washington; gerontology.
- Weaver, W. Douglas, 1979, (Nursing), M.D., 1971, Tufts; cardiology.
- Weigle, D. Scott, 1984, M.D., 1978, Harvard; endocrinology and metabolism.
- Wener, Mark H., 1983, (Laboratory Medicine),† M.D., 1974, Washington (St. Louis).
- Wilensky, Alan J., 1975, (Neurological Surgery),† M.D., 1967, Western Ontario; Ph.D., 1973, Toronto; neurology.
- Willson, Richard A., 1973, M.D., 1962, Minnesota; gastroenterology.
- Witherspoon, Robert P., 1976, M.S., 1970, M.D., 1970, Baylor; oncology.
- Wood, Francis C., Jr.,\* 1961, M.D., 1954, Harvard; metabolism and endocrinology.
- Wood, Robert W., 1979, (Health Services), M.D., 1970, Rochester; infectious diseases.
- Assistant Professors**
- Aitken, Moira L., 1985, M.B.Ch.B., 1978, Edinburgh (Scotland); respiratory disease.
- Andress, Dennis L., 1984, M.D., 1978, Oklahoma; nephrology.
- Andrews, D. Frank III, 1989, M.D., 1977, Emory; oncology.
- Beatty, Christopher D., 1991, (Acting), M.D., 1983, Vermont; pulmonary and critical care medicine.
- Birnbaum, Roger S., 1986, (Research), Ph.D., 1975, Massachusetts; gerontology.
- Boyko, Edward J., 1989, M.D., 1973, Harvard; M.P.H., 1977, Washington.
- Broudy, Virginia C., 1987, M.D., 1980, California (San Francisco); hematology.
- Buchwald, Dedra S., 1987, M.D., 1981, California (San Diego); internal medicine.
- Burke, Wylie G., 1985, Ph.D., 1974, M.D., 1978, Washington; internal medicine.
- Bursten, Stuart L., 1988, M.D., 1980, Yale; nephrology.
- Chambers, Joseph W., 1990, (Acting), M.D., 1984, Yale; cardiology.
- Chen, Wei, 1990, (Research), Ph.D., 1987, Shanghai Medical University (China); oncology.
- Collins, Carolyn, 1986, M.D., 1980, California (San Francisco); oncology.
- Coombs, Robert W., 1988, (Laboratory Medicine),† Ph.D., 1977, M.D., 1981, Dalhousie; infectious diseases.
- Crawford, Stephen W., 1984, M.D., 1978, St. Louis; respiratory disease.
- Crowley, Joseph J., 1989, M.D., 1981, Georgetown; gerontology and pulmonary medicine.
- Dahl, Kristine D., 1989, (Research), (Physiology and Biophysics), Ph.D., 1985, Loyola; endocrinology.
- Daniell, William E.,\* 1988, (Environmental Health),† M.D., 1979, Tufts; occupational medicine.
- Davis, Connie L., 1991, M.D., 1980, Washington; nephrology.
- Deffebach, Mark E., 1989, M.D., 1981, Oregon; pulmonary medicine.
- Dolack, George L., 1988, M.D., 1981, Washington; cardiology.
- Dugdale, David C., 1991, M.D., 1982, Pennsylvania; general internal medicine.
- Dugowson, Carin E., 1985, (Epidemiology), M.D., 1976, Illinois.
- Ellis, Georgiana K., 1988, (Acting), M.D., 1982, Washington; oncology.
- Evans, James P., 1991, (Acting), Ph.D., 1983, M.D., 1984, Kansas; medical genetics.
- Fishbein, Daniel P., 1988, M.D., 1980, Albert Einstein; cardiology.
- Francis, Julie S., 1989, ‡(Pediatrics), M.D., 1984, Washington; dermatology.
- Gauthier, V. Joyce, 1990, M.D., 1984, Ph.D., 1984, Washington; rheumatology.
- Gjerset, George F., 1988, (Acting), M.D., 1978, California (San Diego); hematology.
- Glenny, Robb W., 1990, M.D., 1984, Virginia; pulmonary and critical care medicine.
- Goldstein, Erika A., 1989, M.D., 1981, Rochester; general internal medicine.
- Goodman, Richard B., 1989, M.D., 1982, Oklahoma; pulmonary and critical care medicine.
- Gruenewald, David A., 1990, (Acting), M.D., 1983, Chicago (Pritzker); gerontology and geriatric medicine.
- Higano, Celestia S., 1989, M.D., 1979, Massachusetts; oncology.
- Hillson, Jan L., 1989, M.D., 1980, Stanford; rheumatology.
- Hirsch, Irl B., 1990, M.D., 1984, Missouri (Columbia); metabolism and endocrinology.
- Hooton, Thomas M., 1982, M.D., 1973, Texas Southwestern; internal medicine.
- Kavanagh, Terrance J.,\* 1989, (Research), (Environmental Health),† Ph.D., 1985, Michigan State; pulmonary medicine.
- Keifer, Matthew C., 1991, M.D., 1982, Illinois (Urbana); general internal medicine.
- Kent, Daniel L., 1985, M.D., 1978, Rochester; internal medicine.
- Kimmey, Michael B., 1982, M.D., 1979, Washington (St. Louis); gastroenterology.
- Kudenchuk, Peter J., 1986, M.D., 1979, Washington; cardiology.
- Lampe, Mary F., 1989, (Research), Ph.D., 1984, North Carolina (Chapel Hill); infectious diseases.
- LeBoeuf, Renee J.,\* 1988, (Research), Ph.D., 1977, State University of New York; nutrition.
- Levine, Douglas S., 1985, M.D., 1979, Massachusetts; gastroenterology.
- Levy, Wayne C., 1991, M.D., 1985, Loma Linda; cardiology.
- Li, Qiliang, 1990, (Research), Ph.D., 1978, Shanghai Institute of Biochemistry (China); medical genetics.
- Little, Timothy E., 1988, M.D., 1983, Southern California (Los Angeles); gastroenterology.
- Malik, Sohail, 1988, (Research), (Laboratory Medicine),† Ph.D., 1985, Karachi (Pakistan); nephrology.
- Martin, Gary V., 1987, M.D., 1980, Arizona.
- McCormick, Wayne C., 1990, (Acting), M.D., 1983, Washington (St. Louis); gerontology and preventative medicine.
- McElrath, M. Juliana, 1990, Ph.D., 1978, M.D., 1980, South Carolina; infectious diseases.
- McGee, Steven R., 1987, M.D., 1980, Washington (St. Louis); general internal medicine.
- McMullen, William R., 1981, M.D., 1978, Cincinnati; internal medicine, emergency medicine.
- Mengert, Terry J., 1987, M.D., 1984, Washington; emergency medicine.
- Miller, Richard A., 1989, M.D., 1977, Harvard; infectious diseases.
- Montamat, Stephen C., 1991, (Acting), M.D., 1984, Texas A & M; gerontology and geriatric medicine.
- Odland, Peter B., 1990, M.D., 1984, Chicago; dermatology.
- Otto, Catherine M., 1984, M.D., 1979, Washington; cardiology.
- Paauw, Douglas S., 1988, M.D., 1985, Michigan; general internal medicine.
- Peace, David J., 1988, (Acting), M.D., 1980, Pittsburgh; oncology.
- Petersdorf, Stephen H., 1986, M.D., 1983, Brown; oncology.
- Peterson, Kenneth R., 1992, (Research), Ph.D., 1987, Arizona; medical genetics.
- Poole, Jeanne E., 1988, M.D., 1980, Washington; cardiology.
- Psaty, Bruce M.,\* 1986, (Epidemiology),† Ph.D., 1979, M.D., 1981, Indiana; M.P.H., 1986, Washington; internal medicine.
- Reid, Brian J., 1986, Ph.D., 1979, M.D., 1980, Washington; gastroenterology.
- Sasso, Eric H., 1988, M.D., 1980, California (San Diego); rheumatology.
- Schwartz, Michael W., 1989, (Acting), M.D., 1983, Rush Medical College; metabolism and endocrinology.
- Shields, Anthony F., 1987, M.D., 1979, Harvard; Ph.D., 1979, Massachusetts Institute of Technology; oncology.
- Smith, Lynne T.,\* 1989, (Research), ‡(Biological Structure), Ph.D., 1985, Washington; dermatology.
- Spain, William, 1987, (Physiology and Biophysics),† M.D., 1977, Columbia; neurology.
- Stephens, Karen, 1989, (Research), Ph.D., 1982, Indiana; medical genetics.
- Swenson, Erik R., 1985, M.D., 1979, California (San Diego); pulmonary medicine.
- Tartaglione, Teresa A., 1989, (Pharmacy Practice), Pharm.D., 1982, Florida; infectious diseases.
- Tempel, Bruce L.,\* 1988, (Pharmacology),† Ph.D., 1983, Princeton; gerontology.
- Thomas, Charles R., 1991, M.D., 1985, Illinois; oncology.
- Thompson, John A., 1985, M.D., 1979, Alabama; oncology.
- Tyler, Martha L.,\* 1976, ‡(Physiological Nursing), M.S., 1977, Washington; respiratory nursing.
- Van Voorhis, Wesley C., 1989, M.D., 1984, Cornell; infectious diseases.

Wijsman, Ellen M.,\* 1987, (Research), (Biostatistics), Ph.D., 1981, Wisconsin (Madison); medical genetics.

Wipf, Joyce E., 1987, M.D., 1984, Minnesota; general internal medicine.

## Course Descriptions

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

**MED 498 Undergraduate Thesis (\*) AWSpS** Prerequisite: permission of department.

**MED 499 Undergraduate Research (\*) AWSpS** Case studies, with laboratory research. For medical students. Prerequisite: permission of department.

**MED 505P Preceptorship in Medicine (1) AWSpS** To provide opportunity for first- and second-year medical students to gain personal experience with medical practice situations by being stationed with carefully selected clinical faculty members in their offices. Prerequisite: permission of department.

**MED 530 AIDS: A Multidisciplinary Approach (2) A** Koutsky, Kreiss Comprehensive overview of the public health, clinical, and laboratory aspects of AIDS. Topics include the pathogenesis, natural history, and management of human immunodeficiency virus (HIV) infections. The impact of AIDS on community and global health care and prospects for prevention and control. Joint with EPI 530.

**MED 531P Human Genetics (\*) AWSp Stamatoyannopoulos** Weekly seminar dealing with a variety of topics in medical genetics given by faculty of the Division of Medical Genetics and related departments and divisions. Open to medical students with a good foundation in genetics.

**MED 532 Statistical Methods in Medical Genetics (2) Sp** Wijsman Theory and application of statistical techniques used in medical genetics. In-depth discussion of linkage and segregation analysis and ascertainment problems. Applications stressed with reference to assumptions and limitations. Data sets analyzed with current computer programs. Joint with BIOST 532. Prerequisite: knowledge of genetics or permission of instructor.

**MED 533P Clinical Endocrinology (2) W** Wood Emphasis on the most major and dependable symptoms, signs, laboratory tests, and therapy for clinical endocrinopathies. Patient illustrated. Limited to second-year medical students.

**MED 536 Topics in Clinical Neurology (1) S** Bird, Longstreth, Swanson Lectures are presented on common topics in clinical neurology, such as epilepsy, stroke, coma, drug overdose, dementia, pediatric neurology, neuro-ophthalmological emergencies, headaches, myelopathies, infectious diseases.

**MED 548P Medical Genetics (3) A** Stamatoyannopoulos Intermediate-level course in medical genetics. General human genetics, molecular human genetics, biochemical genetics, immunogenetics, cytogenetics, clinical genetics, syndromology, developmental genetics, fetal medicine, and pharmacogenetics. Prerequisite: third- or fourth-year medical student standing or permission of instructor.

**CONJ 550P Clinical Infectious Diseases (3) W** See Conjoint Courses.

**CONJ 553P Nutrition for Physicians (2) A** See Conjoint Courses.

**MED 555P Human Oncology for Fourth-Year Medical Students (2) W** Cancer epidemiology, prevention, screening, diagnosis, and treatment are combined into a single intensive course designed to provide the knowledge to be able to help patients minimize risk of cancer, to detect its occurrence at the earliest opportunity, and in affected patients, to ar-

range the best possible management. Prerequisite: 665P.

**MED 599P Transfusion Machine (3) A** Counts, Price, Sayers, Slichter Group discussions and didactic sessions cover broad category of transfusion medicine. Hands-on laboratory experience in red cell seriology/compatibility, coagulation, and histocompatibility with emphasis on diagnosis and management of clinical problems. Based at Puget Sound Blood Center. Prerequisite: fourth-year medical student standing; third-year student standing with permission of instructor.

**MED 604P Clinical Preceptorship in Internal Medicine (8) AWSpS** Hamon (Bremerton), Patterson (Friday Harbor), Shima (Forks), Thorson (Longview) Working closely with primary-care physicians, the student is exposed to the private practice of internal medicine in a small community. Operating on a one-to-one basis with an internist, the student evaluates and manages inpatients and outpatients on a primary care, consultative, and emergency basis. Prerequisite: 665P. (Four weeks, full-time.)

**MED 640P Dermatology Clinic (\*, max. 5) AWSpS** Olerud Students attend dermatology clinic on Monday mornings and Thursday afternoons for twelve weeks. Two half-days per week. Prerequisite: 665P.

**MED 641P Clinical Gastroenterology (8) A** Botoman (Virginia Mason Hospital) Combined inpatient-outpatient elective in clinical gastroenterology, which includes practical experience in GI endoscopy and liver biopsy. Directed tutorial work. Prerequisite: 665P. (Four weeks, full-time.)

**MED 642P Clinical Oncology (8) AWSpS** Stewart (Fred Hutchinson Cancer Research Center) Students functioning as primary physicians are responsible for the workups and daily care of patients receiving marrow transplants, high-dose chemotherapy or immunotherapy on an intensive-care research ward. Emphasis is on the management and supportive care of patients with pancytopenia and immunosuppression, transplantation biology, cancer chemotherapy, and infectious disease problems. Prerequisite: 665P. (Four weeks.)

**MED 644P Management of Sexually Transmitted Diseases (2) AWSpS** Corey, Handsfield, Holmes, Stamm Instruction and clinical experience in diagnosis, treatment, and management of sexually transmitted diseases. Instruction in genitourinary physical examination skills; relevant laboratory techniques and management of patients with STDs. Prior to the elective, each student must review a packet of didactic materials. Prerequisites: 665P, SURG 665P, and OB GY 665P.

**MED 645P Clinical Geriatric Medicine (8) AWSpS** Matsumoto Full time spent caring for patients in a half-day outpatient clinic each week, work up and follow inpatients on the geriatric evaluation unit, actively participate in twice-weekly attending and multidisciplinary team rounds, attend weekly conferences of the Division of Gerontology. Prerequisite: 665P. (Limit: one student.)

**MED 646P Clinical Electroencephalography (\*, max. 12) AWSpS** Chatrain, Vossler, Wilkus For third- and fourth-year medical students who desire to acquire familiarity with the techniques, interpretive criteria, and clinical applications of electroencephalography, long-term EEG-video-audio monitoring, computer-averaged evoked potentials, and other clinical neurophysiological techniques. Prerequisites: 666P and permission of instructor.

**MED 649P Genetic Counseling (\*) ASpS** Bird, Byers, Motulsky, Stamatoyannopoulos Provides exposure to genetic counseling. Involves attendance at Medical Genetics Clinic, University of Washington Medical Center, on Monday for assignment of a case and reading; Tuesday morning, student participates in clinical examination of family members and attends genetic counseling session; Tuesday afternoon, stu-

dent attends genetics clinical conference. Prerequisite: 665P or pediatrics basic clerkship.

**MED 650P Advanced Medical Genetics (\*, max. 5) S** Stamatoyannopoulos Summer course intended for third-year students who would like to increase their background in specific areas of medical genetics. Involves seeing patients with the instructor, reviewing the literature, analyzing clinical information, and writing a review on a selected topic. Prerequisite: HUBIO 554P.

**MED 665P Clinical Clerkship (\*, max. 24) Ramsey** Third-year medical students assume increasing responsibility for care of hospitalized patients in a teaching-hospital setting. Daily rounds with resident and attending physicians, with lectures and conferences. Progress evaluated by supervising physicians and a written examination. (Twelve weeks, full-time.)

**MED 666P Advanced Clinical Clerkship in Internal Medicine—WAMI (12) AWSpS** Ramsey, Wallace Advanced clinical clerkship in internal medicine in three small urban communities. Supervised, structured experience in dealing with situations commonly encountered by the practicing internist. Continuity of care and the relationship between care given in the ambulatory setting and in the hospital, as well as by other community health services, is emphasized. Prerequisite: 665P. (Six weeks, full time. Limit: six students.)

**CONJ 677P Clinical Allergy and Immunology (\*, max. 12) See Conjoint Courses.**

**MED 678P Clinical Dermatology (8) AWSpS** Olerud Participation in dermatology clinics and inpatient consultations at University of Washington Medical Center, Harborview Medical Center, Children's Hospital Medical Center, and Veterans Administration Hospital. Journal club and clinical conferences each week with entire staff. A continuing series of teaching seminars and weekly dermatopathology conferences. Prerequisite: 665P. (Four weeks.)

**MED 679P Clinical Gastroenterology (8) AWSpS** Saunders Participation in consulting ward rounds, procedures, conferences, and selected clinics with full-time divisional staff at University and Veterans Administration hospitals, and at Pacific and Harborview medical centers, plus directed tutorial work. Prerequisite: 665P. (Four weeks, full-time.)

**MED 680P Rheumatology (8) AWSpS** Mannik Full-time inpatient-outpatient clerkship in rheumatology. Clinical experience provided in diagnosis and treatment of rheumatic diseases, utilizing outpatient clinics and hospitalized patients at the University of Washington Medical Center, Harborview Medical Center, or VAMC. Emphasis on concepts in pathophysiology, diagnosis, and treatment of these diseases. In addition to patient contact, reading, seminars, and preceptorial sessions are the methods of instruction. Prerequisite: 665P.

**MED 682P Clinical Cardiology and Electrocardiography (8) AWSpS** Greene (Harborview Medical Center), Eiriksson (Boise Veterans Administration Medical Center), Otto (University of Washington Medical Center), Chamusca (Madigan Hospital Medical Center), Ritchie (Veterans Administration Hospital), Preston (Pacific Medical Center/Providence) Clerkship in clinical cardiology-combined inpatient-outpatient assignments, ECG interpretation. Prerequisite: 665P. (Four weeks.)

**MED 683P Clinical Respiratory Disease and Critical Care Medicine (8) AWSpS** Pierson Training in respiratory disease diagnosis and pulmonary therapy, with special emphasis on cardiopulmonary function testing and interpretation. Inpatient and outpatient teaching rounds, conferences, and basic science integration. Prerequisite: 665P. (Four weeks.)

**MED 684P Clinical Hematology/Oncology (8) AWSpS** Abkowitz (University of Washington Medical Center), Harlan (Harborview Medical Center), Roth (Veterans Administration Hospital) Outpatient and inpatient experience with hematologic/oncologic disorders. The elective includes teaching rounds, confer-

ences, and evaluation of laboratory work. Prerequisite: 665P. (Four weeks.)

**MED 685P Clinical Genetics (\*, max. 24)** *Bird, Byers, Motulsky, Stamatoyannopoulos* Full-time clinical clerkship in medical genetics. Provides extensive exposure to variety of genetic diseases and genetic counseling. Students work in three clinics (Monday, Tuesday, Thursday), response to in-house consultation requests, attend rounds at Children's Hospital and Medical Center and University of Washington Medical Center and seminars at University of Washington Medical Center (Wednesday, Friday). Prerequisite: 665P.

**MED 686P Clinical Neurology (8) AWSpS** *Swanson* Inpatient and outpatient experience at University of Washington Medical Center, Veterans Administration Hospital, Pacific Medical Center, Harborview Medical Center, Virginia Mason Hospital, American Lake Veterans Administration Hospital, or Children's Hospital and Medical Center. Students attend clinical conferences and seminars with neurology staff and become familiar with diagnostic neurological procedures. Prerequisite: 665P. (Four weeks.)

**MED 687P Ambulatory Medicine Elective (\*, max. 12) AWSpS** *Goldberg (Harborview Medical Center), Ramsey (University of Washington Medical Center)* Students acquire knowledge and skill in dealing with ambulatory patients with problems commonly encountered in the office practice of internal medicine. Prerequisite: 665P. (Minimum: two quarters. Limits: five students at University of Washington Medical Center, four students at Harborview Medical Center.)

**MED 688P Ward Medicine Subinternship (\*, max. 24) AWSpS** *Hammond (Providence), R. Jones (Madigan Hospital Medical Center), McMahon (Anchor-age), Rosen (Swedish Hospital Medical Center), Bremner (VAMC)* Students act in the capacity of interns on the medical wards under supervision of house staff and visiting physicians. They attend all regular medicine rounds and conferences as their schedules permit. Prerequisite: 665P. (Four or six weeks.)

**MED 689P Clinical Infectious Diseases (8) AWSpS** *Kirby (University of Washington Medical Center)* Students participate in the consulting service throughout the hospital, attend daily plate rounds, conferences, and seminars. (Four weeks.) *Stamm (Harborview Medical Center), Miller (Veterans Administration Hospital)* Participate in consulting service throughout hospital to learn microbiological aspects of infectious diseases through the clinical laboratories. Prerequisite: 665P. (Four weeks.)

**MED 690P Cardiology Subinternship (8) AWSpS** *Kennedy (University of Washington Medical Center)* Students act in the capacity of interns on the white service under the supervision of house officer. Prerequisite: 665P. (Four weeks.)

**MED 691P Primary Care (12)** *Gardner, Paauw* Six-week, full-time ambulatory care block in primary care internal medicine. Students participate in several clinics at University of Washington Medical Center following a panel of patients in medicine, rheumatology, virology clinics, and spend one day a week at Harborview Medical Center in the acute illness clinic. Prerequisites: 665P and permission of instructor.

**MED 692P Clinical Endocrinology and Metabolism (\*, max. 12) AWSpS** *Wood/Goodner (University of Washington Medical Center/Harborview); Paulsen (Pacific Medical Center); Palmer (Seattle VAMC); Jones (Madigan)* Clerkship in clinical endocrinology and metabolism combined inpatient and outpatient assignments at selected hospitals. Prerequisite: 665P.

**MED 693P Nephrology and Fluid Balance (8) AWSpS** *Couser (University of Washington Medical Center), Zager (Harborview Medical Center), Sherrard (Veterans Administration Hospital)* Students see clinical nephrologic problems under close supervision, participate in nephrology and transplant rounds, see consults with renal fellow and attending, and work up patients in renal clinics, participate in seminars with

clerks from all three hospitals. Prerequisite: 665P. (Four weeks.)

**MED 694P Harborview Evening Clinic (2) AWSpS** *Goldstein* A longitudinal elective for senior medical students who assume primary responsibility for a panel of medical patients in an outpatient clinic. Direct care of patients is supplemented by didactic sessions dealing with issues in ambulatory care. Students are strongly encouraged to participate for four quarters. Prerequisites: 665 and permission of instructor.

**MED 695P Clinical Aspects of Aging (8) AWSpS** *McCormick (Greenery Special Care Unit), Uhlmann (Harborview Medical Center)* Work with elderly patients as subintern with Senior Care Program. Inpatient and ambulatory setting in nursing homes and patients' homes. Interdisciplinary approach. Prerequisite: 665P.

**MED 697P Medicine Special Electives (\*, max. 24) AWSpS** *Ramsey* Special clerkship, externship, or research opportunities that can at times be made available at institutions other than University of Washington. Faculty can advise students of opportunities. Students wishing to elect this course should obtain from Dean's office a special assignment form at least three months before preregistration. Prerequisite: permission of department. (Two, four, six, or twelve weeks.)

## Microbiology

G315 Health Sciences

Microbiology is a natural science that deals with cellular and acellular forms of life including bacteria, fungi, protozoa, algae, and viruses. It is concerned with the nature and properties of these entities, their effects on humans and the environment, and how they can be exploited to provide useful products.

## Undergraduate Program

### Bachelor of Science Degree

**Admission Requirements:** A minimum of 75 credits applicable to graduation, with an overall GPA of 2.25 in required chemistry and biology courses. Students should complete departmental requirements in biology and chemistry (inorganic and organic) before applying for admission.

**Major Requirements:** minimum 90 credits in the biological, physical, and mathematical sciences, to include: 10-15 credits in biology, botany, and/or zoology (BIOL 201, 202, 203 preferred); 30-31 credits in microbiology courses (MICRO 402, 410, 411, 412, 431, 441, 442, 443, 496, and 445 or 450); 3-13 credits in approved microbiology electives (MICRO 301, 302, 319, 331 cannot be used); 12 credits in inorganic chemistry (normally CHEM 140, 150, 160); 8-12 credits in organic chemistry (CHEM 223, 224; or 237, 238, 239; or 335, 336, 337; three-quarter sequence preferred); 12 credits in physics (PHYS 114, 115, 116; or 121, 122, 123); 5 credits in mathematics (MATH 112 or 124; or Q SCI 381; or STAT 311). Minimum 2.25 cumulative GPA in required and elective microbiology courses used toward graduation requirement. Transfer students must complete at least 20 of the required and elective microbiology credits at the University of Washington.

## Graduate Program

The Department of Microbiology offers graduate programs leading to the Master of Science and Doctor of Philosophy degrees. Students interested in graduate work should obtain the necessary application forms from the department.

The choice of an adviser and research problem are matters of mutual consent between the student and a faculty member. The course work taken by a graduate student depends to a certain extent upon the student's

background and chosen area of specialization, but, in general, courses are chosen from the fields of microbiology, immunology, biochemistry, genetics, and pathobiology. The master's degree program without thesis is available on a limited basis. An M.S. degree is not necessarily a prerequisite for the Ph.D. degree.

Applicants are evaluated by a committee that considers the student's grades, scores on the Graduate Record Examination, research experience, letters of recommendation, and any other data that might provide an indication of the student's capabilities for success in a career in science.

Students are normally admitted into the graduate program only in autumn quarter, and all application materials should be received by the department no later than the preceding December 31. Graduate Record Examination aptitude scores are required as part of the application, and the examination should be taken no later than October. Three letters of recommendation must also be sent directly to the department.

Students with a variety of academic backgrounds are accepted for graduate study in microbiology, but it is highly desirable that their undergraduate preparation include at least a year of general chemistry and a year of college physics, courses in organic chemistry and quantitative analysis, calculus, one year of biology, and courses in genetics, biochemistry and microbiology.

Students in the Ph.D. program are usually supported by funds from training grants, research grants, or teaching assistantships.

## Faculty

### Chairperson

Eugene W. Nester

### Professors

Champoux, James J.,\* 1972, Ph.D., 1970, Stanford; DNA replication, tumor virology.

Clark, Edward A.,\* 1979, (Immunology), Ph.D., 1977, California (Los Angeles); immunology emphasizing lymphocyte surface molecules/cell interactions, simian immunodeficiency viruses (SIV).

Corey, Lawrence,\* 1977, (Medicine, Pediatrics) (Laboratory Medicine),† M.D., 1971, Michigan; virology, herpes viruses, AIDS viruses.

Douglas, Howard C., 1941, (Emeritus), Ph.D., 1949, California (Berkeley); microbiology, immunology and genetics.

Evans, Charles A., 1946, (Emeritus), M.D., 1937, Ph.D., 1943, Minnesota; microbial flora of human skin.

Floss, Heinz G.,\* 1987, ‡(Chemistry, Biochemistry, Medicinal Chemistry), Ph.D., 1961, Technical University of Munich; biorganic and natural products chemistry.

Gilliland, Bruce C.,\* 1968, ‡(Laboratory Medicine, Medicine), M.D., 1960, Northwestern; autoimmune disorders.

Gordon, Milton P.,\* 1959, ‡(Biochemistry), Ph.D., 1953, Illinois; biochemistry of plant tumors.

Greenberg, Philip D.,\* 1978, ‡(Medicine, Immunology), M.D., 1971, State University of New York (Downstate); oncology.

Groman, Neal B.,\* 1950, (Emeritus), Ph.D., 1950, Chicago; gene flow, evolution, medical microbiology.

Hakomori, Sen-Itiroh,\* 1967, (Biochemistry), (Pathobiology),† M.D., 1952, D.Med.Sci., 1956, Tohoku (Japan); membrane biochemistry and glycoproteins.

Hellström, Ingegerd E.,\* 1966, (Affiliate) M.D., 1964, Ph.D., 1966, Karolinska Institut (Sweden); tumor immunology and transplantation immunology.

Hellström, Karl E., 1966, (Affiliate) M.D., 1964, Ph.D., 1964, Karolinska Institut (Sweden); oncology, cancer immunology.

Holmes, King K.,\* 1967, ‡(Epidemiology, Medicine), M.D., 1963, Cornell; Ph.D., 1967, Hawaii; clinical epidemiology and pathogenesis of infectious diseases, specifically sexually transmitted diseases, HIV.

Kenny, George E.,\* 1961, ‡(Pathobiology), M.S., 1957, North Dakota; Ph.D., 1961, Minnesota; antigenic structure.

Klebanoff, Seymour J.,\* 1962, ‡(Medicine), M.D., 1951, Toronto; Ph.D., 1954, London (England); host defense mechanisms against bacterial, viral, fungal, and parasitic agents, with particular regard to microbicidal mechanisms in phagocytes (neutrophils, eosinophils, mononuclear phagocytes).

Linial, Maxine L.,\* 1974, (Affiliate), Ph.D., 1970, Tufts; retroviral-host cell interactions, retroviral mediated transformation.

Mannik, Mart,\* 1966, ‡(Medicine), M.D., 1959, Case Western Reserve; immunologic mechanisms of tissue injury and characteristics of antigen-antibody complexes.

Nester, Eugene W.,\* 1962, Ph.D., 1959, Case Western Reserve; genetics and biochemistry of bacterial-plant cell interactions.

Plorde, James J.,\* 1967, ‡(Laboratory Medicine, Medicine), M.D., 1959, Minnesota; studies of applied diagnosis microbiology and pathogenesis.

Schoenknecht, Fritz D.,\* 1967, (Laboratory Medicine), ‡M.D., 1957, Freie (Berlin); clinical microbiology; *in vitro* antibiotic susceptibility testing, compromised host microbiology, nosocomial infections.

Sherres, John C.,\* 1959, (Emeritus), M.D., 1950, London (England); medical microbiology, antibiotic action and resistance.

Smith, Arnold L.,\* 1978, ‡(Pediatrics, Medicine), M.S., 1964, M.D., 1964, Missouri; infectious diseases.

Staley, James T.,\* 1971, (Environmental Studies), M.S., 1963, Ohio; Ph.D., 1967, California (Davis); microbial ecology, general microbiology, bacterial taxonomy.

Stuart, Kenneth, 1985, (Affiliate), M.A., 1965, Wesleyan; Ph.D., 1969, Iowa; molecular parasitology.

Weiser, Russell S., 1934, (Emeritus), Ph.D., 1934, Washington; microbiology and immunology.

#### Associate Professors

Coyle, Marie B.,\* 1973, (Laboratory Medicine), ‡M.S., 1963, St. Louis; Ph.D., 1965, Kansas State; clinical microbiology, epidemiology and taxonomy of gram positive and acid-fast organisms.

Fritsche, Thomas R.,\* 1984, (Laboratory Medicine), ‡M.S., 1975, M.D., 1981, Ph.D., 1984, Minnesota; systematics and ecology of animal parasites, medical microbiology.

Hillier, Sharon L., 1989, (Research) ‡(Obstetrics & Gynecology), Ph.D., 1982, Washington State; public health and clinical medicine.

Hu, Shiu-Lok, 1988, (Research), Ph.D., 1978, Wisconsin (Madison); molecular virology, immunology and vaccine research.

Katze, Michael G.,\* 1987, M.S., 1978, Ph.D., 1980, Hahnemann Medical; regulation of viral gene expression at the translational level.

Lara, Jimmie C.,\* 1972, M.S., 1967, California State (Los Angeles); Ph.D., 1970, California (Riverside); microbial physiology and crytology, sporulation and gas vesicle synthesis and regulation.

Ledbetter, Jeffery A., 1988, (Research), Ph.D., 1977, Wisconsin; oncology, immunology.

Leigh, John A.,\* 1985, M.S., 1979, Ph.D., 1983, Illinois; bacterial physiology, genetics, and biochemistry, bacteria-plant interactions.

Lory, Stephen,\* 1984, Ph.D., 1980, California (Los Angeles); biochemistry and genetics of microbial virulence factors.

Moseley, Stephen L.,\* 1985, (Pediatrics), M.S., 1978, Catholic University of America; Ph.D., 1981, Washington; molecular basis of pathogenesis in *E. coli* diarrhea.

Rubens, Craig E.,\* 1985, ‡(Pediatrics), Ph.D., 1978, Medical University of South Carolina; M.D., 1982, Washington; molecular biology, genetics of infectious diseases.

Vessella, Robert L., Jr., 1989, ‡(Urology), Ph.D., 1974, Mississippi; tumor immunology.

Wong, Timothy Chee-Hing,\* 1983, Ph.D., 1979, Southwestern Medical School (Dallas); viral gene expression in chronic infections and oncogenesis.

#### Assistant Professors

Geballe, Adam, 1988, (Affiliate), M.D., 1978, Duke; virology

Herwig, Russ, 1990, (Research), M.A., 1978, William & Mary; Ph.D., 1988, Washington; microbial ecology, biodegradation of environmental pollutants.

Hughes, Kelly T.,\* 1989, Ph.D., 1984, Utah; genetics, gene regulation, microbial physiology and metabolism, salmonella pathogenesis.

Lamont, Richard J.,\* 1989, ‡(Oral Biology), Ph.D., 1985, Aberdeen (Scotland); microbial pathogenesis.

Overbaugh, Julie M.,\* 1988, (Research), Ph.D., 1983, Colorado; retroviral pathogenesis, AIDS.

Raff, Howard V.,\* 1980, (Affiliate), M.S., 1974, Ph.D., 1976, Washington State; immunotherapeutic approaches to treating infectious diseases.

Valentine, Mary A., 1989, (Research), Ph.D., 1982, Arizona; lymphocyte activation.

#### Lecturers

Anderson, Denise G., 1987, M.S., 1985, Washington; microbiology laboratory teaching.

Barnes, Glover W.,\* 1969, (Urology), ‡M.A., 1955, Ph.D., 1962, State University of New York (Buffalo); tissue antigens, immunoreproduction and microbiology.

Bicknell, Mary E., 1976, M.S., 1962, Washington; microbiology laboratory teaching.

Cramer, Dorothy I., 1961, (Emeritus), B.S., 1945, Washington; microbiology laboratory teaching.

Fulton, Janis R., 1983, M.S., 1977, Montana State; microbiology laboratory teaching.

Memmer, Ramona J., 1960, M.S., 1957, Washington; microbiology laboratory teaching.

Parkhurst, Dale J., 1969, B.S., 1960, Washington; microbiology laboratory teaching.

## Course Descriptions

### Courses for Undergraduates

**MICRO 301 General Microbiology (3) ASps** Acquaints students with microorganisms and their activities. Topics include microbial cell structure and function, metabolism, microbial genetics, and the role of microorganisms in disease, immunity, and other selected applied areas. Prerequisite: two quarters of chemistry; recommended: a course in biological science.

**MICRO 302 General Microbiology Laboratory (2) ASps** Anderson, Bicknell, Fulton Laboratory course primarily for students taking 301. Covers a variety of microbiological techniques, with experiments designed to illustrate major concepts of bacteriology, virology, and immunology. No auditors. Prerequisite: concurrent or previous registration in 301 or permission of instructor.

**MICRO 319 Laboratory Techniques in Microbiology (1) AWSp** Parkhurst Self-instruction laboratory. Student performs the techniques fundamental to microbiology. Instructional material presented in visual, audiovisual, and written form. Not open to those who recently have taken a laboratory in microbiology. Prerequisite: prior or concurrent enrollment in a microbiology course or permission of instructor.

**MICRO 320 Media Preparation (2) AWSps** Parkhurst Practical work in the preparation of culture media. Nutritional requirements of microorganisms and sterilization methods are considered. For students expecting to enter vocations involving laboratory work with bacteria. Credit/no credit only. Prerequisites: 301 and 302, or equivalent, and permission of instructor.

**MICRO 322 Applied Clinical Microbiology (5) AWSp** Schoenknecht Practical experience in a clinical or public health laboratory; fifteen hours per week. For students majoring in medical microbiology. Three quarters advance sign-up in G303 Health Sciences recommended. Applicants are selected by interview. Prerequisites: 443 and permission of instructor. (Limit: three students.)

**MICRO 402 Fundamentals of General Microbiology Laboratory (3) Asp** Bicknell, Fulton Isolation of a broad range of nonpathogenic bacteria from natural sources, using selective and enrichment techniques, with microscopic and biochemical identification. Related exercises include genetics, quantitation, and growth kinetics. Prerequisite: 410, which may be taken concurrently, or permission of instructor.

**MICRO 410 Fundamentals of General Microbiology I (3) A** Lara, Nester Survey of the microbial world, metabolism, biosynthesis, regulation, growth, structure, and function. Required for students majoring in microbiology; recommended for students majoring in biology. Prerequisites: BIOL 201, 202, 203, and two quarters of organic chemistry.

**MICRO 411 Gene Action (5) W** Hughes, Manoil Molecular genetics: description of fundamental genetic processes such as mutation, repair, genetic exchange, recombination, and gene expression. Use of genetic strategies to analyze complex biological problems. Focuses on prokaryotic model systems. Joint with GENE 411. Prerequisites: CHEM 237, GENET 360, or 410.

**MICRO 412 Fundamentals of General Microbiology II (3) Sp** Leigh Structure, biochemical properties, and genetics of the major groups of prokaryotes. Required for students majoring in microbiology, recommended for students majoring in biology. Prerequisite: 410 or permission of instructor.

**MICRO 431 Prokaryotic Recombinant DNA Techniques (3) W** Anderson Laboratory course emphasizing concepts and techniques/methodologies in recombinant DNA research employing bacteria and their viruses. Topics and experiments/ demonstrations include genomic and plasmid DNA isolation, restriction mapping, cloning, transposon mutagenesis, sequencing, and western and southern blotting. No auditors. Prerequisite: 302 or 402 or permission of instructor.

**MICRO 435 Microbial Ecology (3) Sp** Staley Consideration of the various roles that microorganisms, particularly bacteria and cyanobacteria, play in environmental processes. The interrelationships among microorganisms and the effects of the physical, chemical, and biological properties of their environment are discussed and assessed. Prerequisites: 412 or equivalent, or permission of instructor. (Next offered in 1993.)

**MICRO 440 Introductory Bacteriology for Medical Technologists (1) A** Limited introduction to basic microbiology, with focus on structure, metabolism, and genetics of medically important organisms. Prerequisite: medical technology student, or permission of instructor.

**MICRO 441 Introduction to Immunology (4) A** Bevan, Clark General properties of immune responses; cells and tissues of immune system; lympho-

cyte activation and specificity; effector mechanisms; immunity to microbes; immunodeficiency and AIDS; autoimmune diseases; transplantation. Joint with IMMUN 441. Prerequisites: BIOL 203, organic chemistry, or permission of instructor, junior standing or above; recommended: biochemistry, cell biology and/or genetics.

**MICRO 442 Medical Bacteriology (3) W** *Fritsche, Hillier, Schoenknecht* Medically important bacterial pathogens are discussed in terms of the clinical, therapeutic, and epidemiological aspects of diseases caused by them, molecular mechanisms of pathogenesis and their identification in the clinical laboratory. Laboratory course 443 coordinates. Prerequisites: 441, a prokaryotic cell structure and function course or permission of instructor.

**MICRO 443 Medical Microbiology Laboratory (3) AW** *Coyle, Memmer, Schoenknecht* Required for medical technology students, microbiology majors; elective for medical students. Procedures for isolation and identification of pathogenic bacteria, testing their susceptibility to antibiotics. No auditors. Prerequisites: 441, 442 sequence taken concurrently or HUBIO 521P.

**MICRO 444 Medical Mycology and Parasitology (4) Sp** *Coyle, Fritsche, Memmer* Consideration of medically important fungi and parasites, with emphasis on their biology in relation to disease and its laboratory diagnosis. For medical technology students, microbiology majors, and medical students as an elective. Prerequisites: basic biology.

**MICRO 445 Medical Virology (2) Sp** *Ashley, Wong* An introductory course emphasizing basic understanding of medical virology and viral pathogenesis. The biochemical, replication, host-parasite relationships and pathogenesis of animal viruses are examined. Prerequisite: basic biology; recommended: 441 or permission of instructor.

**MICRO 450 Molecular Biology of Viruses (3) Sp** *Champoux, Wong* Introduction to the molecular biology of viruses and virus-host relationships. Designed for advanced undergraduates and graduate students in the biological sciences. Coverage includes bacterial and animal viruses, with an emphasis on the molecular mechanisms of viral gene expression and regulation. Prerequisites: 410, 411 and/or GENET 365.

**MICRO 480 Microbiology for Secondary Teachers (3) A** Basic concepts in cell biology; emphasis on life processes of microorganisms/viruses including recent developments in such areas as infectious diseases and their control, genetic engineering, and the role of microorganisms in the ecosystem. Laboratory exercise/demonstrations augment the lecture materials. Prerequisite: secondary teachers or permission of instructor.

**MICRO 495- Honors Undergraduate Research (\*) AWSpS** *Lara* Specific problems in microbiology or immunology. Prerequisite: permission of honors adviser.

**MICRO 496 Undergraduate Library Research (2) AWSpS** *Lara* Introduction to library research and to the microbiological literature. Topics are assigned and supervised by staff members. Credit/no credit only. Prerequisite: permission of instructor; senior standing desirable.

**MICRO 497 Microbiology Special Electives (\*) AWSpS** Special clerkships, externships, or research opportunities are occasionally available at institutions other than the University of Washington. Obtain from the Dean's office a special assignment form and contact the Chairperson of the Department of Microbiology and Immunology at least one month before preregistration. Limited to medical students. Prerequisite: permission of instructor.

**MICRO 498 Undergraduate Thesis (\*) AWSpS** For medical students. Prerequisite: permission of instructor.

**MICRO 499- Undergraduate Laboratory Research (\*) AWSpS** *Lara* Specific problems in microbiology

or immunology. Prerequisite: permission of departmental adviser; senior standing desirable. Credit/no credit only.

### Courses for Graduates Only

**MICRO 500 Introduction to Research (\*, max. 20) AWSpS** *Nester* Introduction to research areas of the faculty and the techniques employed in their investigations. Credit/no credit only. Prerequisite: graduate standing in microbiology or immunology or permission of instructor.

**MICRO 510 Physiology of Bacteria (3) W** Topics of current interest concerning the molecular biology and physiology of bacteria. Prerequisites: 410 and BIOC 440, 441, and 442, or permission of instructor. (Offered alternate years; offered 1993.)

**MICRO 518 Microbial Degradation of Toxic Contaminants (3) Sp** *Herwig, Staley, Stensel, Strand* Detailed survey of current understanding of microbiology and degradative pathways of industrial organic compounds, pesticides, plastics, oil, and metals. Microbial requirements for bioremediation. Methods of scientific investigation of microbial transformations. Requires basic understanding of metabolism and organic chemistry. Joint with FRM 518 and CEWA 518. Prerequisite: biological science course.

**MICRO 520 Seminar (1) AWSp** May be repeated for credit. Credit/no credit only.

**MICRO 522 Current Research in Microbiology (1) AWSp** Weekly student and faculty seminar presentations based on the current literature. May be repeated for credit. Credit/no credit only. Prerequisite: graduate standing in microbiology.

**MICRO 527 Genetic Approach to Complex Biological Processes (1) Hughes** Current research as it applies to genetic approaches to complex biological processes in the area of microbiology.

**MICRO 528 Salmonella Genetics (1) Hughes, Kelly** Review current literature in the area of gene regulation in *Salmonella typhimurium* and related studies in *Escherichia coli*. Prerequisite: graduate student standing; advanced undergraduates by permission of instructor.

**MICRO 530 Biology and Evolution of Prokaryotes (4) A** *Leigh, Staley* Selected eubacterial and archbacterial groups studied. Students enrich, isolate, and characterize their own cultures as part of the laboratory. Prerequisites: 402, 412 or equivalents; open to qualified undergraduates by permission of instructor. (Offered alternate years; offered 1992.)

**MICRO 532 Seminar in General Microbiology (1, max. 15) AWSp** *Leigh* Weekly seminar concerning research topics in the genetics and biochemistry of selected bacteria. Credit/no credit only. Prerequisites: 410, permission of instructor.

**MICRO 540 Virology (3) W** Lecture-seminar course concerning host-viral interactions. Prerequisite: permission of instructor. (Offered alternate years; offered 1994.)

**MICRO 552 Pathogenic Microbiology (4) Sp** *Katze, Lory* Introduction to concepts and techniques of general microbiology, to major groups of infectious agents affecting the human body, and to mechanisms and models of pathogenesis. Prerequisites: BIOL 201, 202, 203, or equivalent and some basic immunology; for dental students, others by permission of instructor.

**MICRO 553 Molecular Mechanisms of Bacterial Pathogenesis (3) A** *Lory, Moseley, Rubens* Mechanisms of bacterial pathogenesis explored at the molecular, genetic, and cellular levels through selected models as presented in the current scientific literature. Prerequisite: 411 or equivalent. (Offered alternate years; offered 1993.)

**MICRO 554 Seminar in Molecular and Medical Microbiology (1, max. 15) AWSp** *Lory, Mosley* Weekly one-hour seminar in which recent advances in molecu-

lar biology of microbial pathogenesis or the current research of the participants is presented and discussed critically. Credit/no credit only. Prerequisite: permission of instructor.

**MICRO 555 Advanced Clinical Microbiology (2½) AWSp** *Fritsche, Schoenknecht* Attendance at daily plate rounds of the Division of Clinical Microbiology. Designed to increase understanding of clinical microbiological work and its application to the care of the patient. Credit/no credit only. Prerequisites: 443 and permission of instructor.

**MICRO 556 Clinical Microbiology Training and Research (\*, max. 12) AWSpS** Training in clinical microbiology and applied research. Attendance at daily laboratory rounds in addition to bench-side training and research. For medical students and microbiology graduate students only. Credit/no credit only. Prerequisites: 443 and permission of instructor.

**CONJ 561 Tumor Biology (2) W** See Conjoint Courses.

**CONJ 572 Advanced Immunology III: Immunopathology (2) W** See Conjoint Courses.

**MICRO 585 Research in Cell and Molecular Biology (1, max. 15) AWSp** *Champoux* Weekly research seminar. Credit/no credit only. Prerequisite: permission of instructor.

**MICRO 598 Microbial Degradation of Toxic Contaminants (1-5, max. 10)** Lectures/seminars dealing with special topics in the field of microbiology. Prerequisite: graduate standing or permission of instructor.

**MICRO 599 Topics in Virology (2)** Current problems in microbiological or immunological research. Credit/no credit only. Prerequisite: permission of instructor.

**MICRO 600 Independent Study or Research (\*)** Offered on credit/nocredit basis only.

**MICRO 700 Master's Thesis (\*) AWSpS** Credit/no credit only.

**MICRO 800 Doctoral Dissertation (\*) AWSpS** Credit/no credit only.

## Molecular Biotechnology

The Department of Molecular Biotechnology encompasses a multidisciplinary program that is oriented toward the development of new tools for modern biology and medicine and their application to leading-edge problems in these areas. These tools include the development of new chemistries, instruments, and computer hardware or software for the analysis of DNA and proteins. The department brings together skills from applied mathematics, applied physics, biology, chemistry, computer sciences, engineering, and physics. Particular areas of expertise include protein chemistry, nucleic acid chemistry, genomics, large-scale DNA mapping and sequencing, and informatics. Areas of particular interest include immune recognition and autoimmune disease, signal transduction, transcriptional control of early development, and human genetics. A graduate degree program will be developed for the new department. Until then, graduate Ph.D. students may work with departmental faculty by enrollment in the Department of Bioengineering.

For additional information, contact the School of Medicine, Office of the Dean.

## Faculty

### Chairperson

Leroy E. Hood

### Professors

Hood, Leroy E., 1992, (Biomedical Engineering, Immunology, Medicine), M.D., 1964, Johns Hopkins; Ph.D., 1968, California Institute of Technology; molecular immunology, protein chemistry, large-scale DNA mapping and sequencing, molecular evolution.

Olson, Maynard, 1992, Ph.D., 1970, Stanford University; large-scale genome mapping and sequencing.

### Assistant Professors

Goverman, Joan, 1992, Ph.D., 1981, California (Los Angeles); immune recognition and tolerance, autoimmunity, T cell development and activation, antibody diversity.

Kaiser, Robert, 1992, (Research), Ph.D., 1984, California Institute of Technology; non-isotopic labeling and detection of nucleic acids applied to large-scale DNA mapping and sequencing.

Nickerson, Deborah, 1992, Ph.D., 1978, Tennessee; DNA diagnostics and gene mapping, molecular immunology.

Yates, John, 1992, Ph.D., 1987, Virginia; oligonucleotide mass spectrometry, protein sequencing, oligonucleotide analysis, ion trap mass spectrometry.

## Neurological Surgery

700 9th Avenue,  
Harborview Medical Center

The Department of Neurological Surgery is dedicated to teaching and research in the entire spectrum of diseases of the central and peripheral nervous system. Instruction in this area is provided for medical students and postgraduate physicians.

The department's medical student instruction includes participation in the human biology curriculum as well as in elective basic science and clinical experiences. These are available at Harborview Medical Center, University of Washington Medical Center, Veterans Administration Medical Center, and Children's Hospital and Medical Center, including the Epilepsy Center at Harborview. The department also has several course offerings correlating research and clinical problems of the nervous system, including the neuroscience research seminar, and clinical and basic science correlates of the epilepsies.

Selected medical students also may elect research experience within the Department of Neurological Surgery. The department research facilities are housed in the Medical Research Tower of the University of Washington Medical Center, at Harborview Hall, at Veterans Administration Medical Center, and at the Epilepsy Center at Harborview. Investigations are under way at these institutions in many areas of neurophysiology, in behavioral research, in light and electron microscopic examination of the anatomy of the nervous system, in cerebral vascular physiology and in hemo-oncology.

In addition to undergraduate instruction, a fully certified residency program in neurological surgery is available for selected postgraduate physicians. The seven-year program emphasizes preparation for a career in academic neurosurgery.

### Chairperson

H. Richard Winn

### Professors

Alvord, Ellsworth C.,\* 1960, ‡(Pathology), M.D., 1946, Cornell; neuropathology, experimental allergic encephalitis.

Chatrian, Gian E., 1959, (Emeritus), (Laboratory Medicine), † M.D., 1951, Naples (Italy); electroencephalography and clinical neurophysiology.

Dikmen, Surreya S.,\* 1974, ‡(Psychiatry and Behavioral Sciences, Rehabilitation Medicine), M.A., 1967, Michigan; Ph.D., 1973, Washington; clinical neuropsychology, traumatic head injury, epilepsy.

Dodrill, Carl B., 1973, (Psychiatry and Behavioral Sciences), † M.S., 1967, Ph.D., 1970, Purdue; human neuropsychology, epilepsy, electroencephalogram and performance, antiepileptic medications and performance.

Fraser, Robert T.,\* 1977, (Rehabilitation Medicine), † M.S., 1972, Southern California; Ph.D., 1976, Wisconsin (Madison); M.P.A., 1984, Seattle; prediction of rehabilitation outcome, program evaluation, brain impairment and vocational potential, brief therapy interventions.

Harris, A. Basil, 1967, M.D., 1954, Alabama; neurosurgery, neuroanatomy, microvascular, arteriovenous malformations, epilepsy mechanisms, cortex, biochemical, blood flow.

Kelly, William A., 1962, (Emeritus), M.D., 1954, Cincinnati; neurosurgery, neuroendocrinology, microneurosurgery, cerebrovascular, gross surgical anatomy of brain, rheology and endocrinology.

Lam, Arthur M-L, 1989, (Anesthesiology), † M.D., 1974, Western Ontario.

Levy, René H.,\* 1970, (Pharmaceutics), † Ph.D., 1970, California (San Francisco); biopharmaceutics, neurophysiology, epilepsy.

Loeser, John D., 1965, (Anesthesiology), † M.D., 1961, New York; pain, neurophysiology.

Maravilla, Kenneth R., 1986, (Radiology), † M.D., 1970, State University of New York (Brooklyn).

Millis, Richard P., 1984, ‡(Medicine, Ophthalmology), M.D., 1968, Yale.

Ojemann, George A., 1962, M.D., 1959, Iowa; neurophysiology, organization of higher functions in human brain, language, memory.

Roberts, Theodore S., 1985, M.S., 1952, M.D., 1955, Wisconsin; neurological surgery, stereotaxic surgery, pituitary disease, cerebrovascular disease.

Rubel, Edwin W.,\* 1986, (Otolaryngology, Physiology and Biophysics), † M.S., 1967, Ph.D., 1969, Michigan State; neurobiology, sensory ontogeny.

Schwartzkroin, Philip A.,\* 1978, (Physiology and Biophysics), † Ph.D., 1972, Stanford; neurophysiology, epilepsy, CNS development, plasticity.

Shaw, Cheng-mei,\* 1960, ‡(Pathology), M.D., 1950, National Taiwan.

Spence, Alexander M., 1974, (Medicine, Pathology), † M.D., 1965, Chicago; neurology.

Ward, Arthur A., Jr., 1948, (Emeritus), M.D., 1942, Yale; neurological surgery.

Westrum, Lesnick E.,\* 1966, (Biological Structure), † M.D., 1963, Washington; Ph.D., 1966, University College (London); neuroanatomy, synaptology, plasticity, olfactory and trigeminal systems, dental pathways.

Winn, H. Richard,\* 1983, (Physiology and Biophysics), M.D., 1968, Pennsylvania; cerebral blood flow regulation.

### Associate Professors

Anderson, Paul A., 1985, M.S.E., 1975, Michigan; M.D., 1979, Wayne State.

Berger, Mitchel S., 1986, M.D., 1979, Miami; neuro-oncology, pediatric neurosurgery.

Cohen, Wendy A., 1987, (Radiology), M.D., 1975, Harvard.

Esckridge, Joseph M., 1987, (Radiology), † M.D., 1981, Louisville.

Farwell, Jacqueline R., 1979, (Medicine), (Pediatrics), † M.D., 1972, California (San Francisco); child neurology, especially epilepsy, neonatal neurology, brain tumors in children.

Goodkin, Robert, 1987, M.D., 1964, Chicago; neurological surgery.

Grady, M. Sean, 1987, M.D., 1981, Georgetown; traumatic brain and spinal cord injury.

Griffin, Brian R., 1985, (Radiation Oncology), † M.D., 1981, Nebraska; radiation oncology.

Jaffe, Kenneth M.,\* 1988, ‡(Rehabilitation Medicine), M.D., 1975, Harvard.

Mateer, Catherine A.,\* 1980, (Research), (Speech and Hearing Sciences), † M.S., 1972, Wisconsin (Madison); Ph.D., 1977, Western Ontario; human neurophysiology, speech and language pathology, memory, mechanisms of motor control.

Mayberg, Marc R., 1985, M.D., 1978, Mayo; cerebrovascular disease, vasospasms, ultrastructure of cerebral arteries.

Ojemann, Linda M., 1966, M.D., 1960, Illinois; neurology, treatment of epilepsy.

Temkin, Nancy R.,\* 1977, (Biostatistics), † M.S., 1971, Connecticut; Ph.D., 1976, State University of New York (Buffalo); statistical research.

Wilensky, Alan J., 1975, (Medicine), † M.D., 1967, Western Ontario; Ph.D., 1973, Toronto; neurology, treatment of epilepsy, testing and use of anticonvulsants.

### Assistant Professors

Anderson, Gail D., 1989; ‡(Pharmaceutics), Ph.D., 1987, Washington.

Clemmons, David C., 1986, Ph.D., 1985, Washington; epilepsy rehabilitation, vocational rehabilitation of epileptics.

Dalley, Robert W., 1989, (Radiology), † M.D., 1982, Utah.

Franck, JoAnn E., 1985, M.S., 1975, Villanova; Ph.D., 1977, Rochester; cellular activity in seizure prone and lesioned animals.

Kliot, Michel, 1990, M.D., 1984, Yale; peripheral nerve injury and diseases, nerve injury and regeneration.

Malouf, Alfred T., 1986, Ph.D., 1983, Johns Hopkins; neurobiology.

Newell, David W., 1989, M.D., 1982, Case Western Reserve; general clinical neurosurgery and neurovascular research in mechanizing of cerebral ischemia.

Russell, Lisa C., 1986, (Research), M.S., 1980, Ph.D., 1980, Tulane; neurophysiology, neuropharmacology.

Warner, Mary H., 1988, Ph.D., 1983, Georgia; neuropsychology.

## Course Descriptions

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

**NR 488 Undergraduate Thesis (\*) AWSpS Winn**  
Prerequisite: permission of instructor.

**NR 499 Undergraduate Research (\*) AWSpS Winn**  
Investigation of special problems as an intimate member of the research team in the neurological surgery

laboratories. Research to lead to a thesis, if desired. List of projects available on request. Prerequisite: permission of instructor.

**NR 505P Preceptorship in Academic Neurosurgery (1) AWSpS Winn** Opportunity for first- and second-year medical students to observe the research, teaching, and patient-care activities of academic neurosurgery. Prerequisite: permission of instructor.

**NR 542 Clinical and Basic Research Correlates of Epilepsy (2) A G. Ojemann, Westrum** Clinical symptoms and treatment of epilepsy; related basic research in neuroanatomy, neurophysiology, neuropsychology, and neuropharmacology of epilepsy. Prerequisite: HUBIO 532P for medical students; permission of instructor for others.

**NR 680P Neurological Surgery Clerkship (\*, max. 8) AWSpS Grady, Mayberg** Student serves clinical clerkship as an intimate member of the staff, participating in inpatient and outpatient care, both preoperative and postoperative, involving neurological surgery patients. University of Washington Medical Center or a University-affiliated hospital may be selected, subject to approval of the department. Prerequisite: HUBIO 563P. (Four weeks.)

**NR 681P Seizure Clinic Clerkship (2½) AWSpS A. Wilensky** Initial evaluation and follow-up of patients with seizure disorders. Definition of medical and social problems and drug therapy are stressed. Alternate forms of therapy are considered. Linear follow-up of patients. Limited contact with inpatients. Specialized contact with specific neurologic problem and experience in prolonged follow-up and management planning for a chronic disease. Prerequisites: MED 665P and permission of instructor.

**NR 697P Neurological Surgery Special Electives (\*, max. 24) AWSpS Winn** By specific arrangement, for qualified students, special clerkship, externship, or research opportunities can be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of instructor.

## Obstetrics and Gynecology

BB607 Health Sciences

The Department of Obstetrics and Gynecology is involved with teaching, patient care, and research in the areas of normal and abnormal human reproduction: growth and development of the fetus, normal and complicated obstetrics, and surgical and medical diseases of the female reproductive system, including endocrinology, oncology, infectious disease, and psychosocial problems.

## Faculty

### Chairperson

Morton A. Stenchever

### Professors

Benedetti, Thomas J., 1979, M.D., 1973, Washington; perinatal medicine.

Bremner, William J., (Medicine), M.D., 1969, Washington; Ph.D., 1977, Monash (Australia); endocrinology.

Brown, Zane A., 1977, M.D., 1966, Temple; perinatal medicine.

Eschenbach, David A., 1973, M.D., 1968, Wisconsin; gynecology and infectious disease.

Figge, David C., 1953, M.D., 1950, Northwestern; gynecologic oncology.

Greer, Benjamin E., 1980, M.D., 1966, Pennsylvania; gynecologic oncology.

Knopp, Robert H., 1974, (Medicine), M.D., 1964, Cornell; obstetrics/gynecology, clinical nutrition.

Lein, John N., 1964, M.D., 1955, Washington; government relations.

Mack, Laurence A., 1978, (Orthopaedics, Radiology), M.D., 1971, Illinois; ultrasonography, computed tomography.

Petra, Philip H., 1966, (Biochemistry), M.S., 1962, Ph.D., 1966, Tulane; reproductive biochemistry.

Shepard, Thomas H., 1955, (Environmental Health, Pediatrics), M.D., 1948, Rochester; embryology.

Shy, Kirkwood K., 1979, (Epidemiology), M.D., 1973, M.P.H., 1979, Washington; gynecology.

Smith, James R., 1977, (Clinical), M.D., 1956, Case Western Reserve; perinatal medicine.

Soules, Michael R., 1980, M.D., 1972, California; reproductive endocrinology.

Spadoni, Leon R., 1963, M.D., 1957, Washington; reproductive endocrinology.

Steiner, Robert A., 1977, (Physiology and Biophysics), Ph.D., 1975, Oregon; reproductive physiology.

Stenchever, Morton A., 1976, M.D., 1956, Buffalo; gynecology, reproductive genetics, medical education.

Tamimi, Hisham K., 1977, M.D., 1969, Cairo (Egypt); gynecologic oncology.

Vontver, Louis A., 1969, M.D., 1960, M.Ed., 1970, Washington; medical education, gynecology.

### Associate Professors

Cain, Joanna M., 1985, M.D., 1977, Creighton; gynecologic oncology.

Chu, Joseph, 1981, (Epidemiology), M.D., 1975, Georgetown; M.P.H., 1981, Washington; women's health care.

Clifton, Donald K., 1983, Ph.D., 1979, California; reproductive physiology.

Easterling, Thomas R., 1987, M.D., 1981, North Carolina.

Hillier, Sharon L., 1984, (Research), Ph.D., 1982, Washington State; public health and clinical microbiology.

Moore, Donald E., 1977, (Epidemiology), M.D., 1967, Case Western Reserve; reproductive endocrinology.

Patton, Dorothy L., 1984, (Research), (Biological Structure), M.S., 1973, Puget Sound; Ph.D., 1981, Washington; infertility and infectious disease.

Watts, D. Heather, 1988, M.D., 1981, Jefferson; perinatal medicine.

Zarutskie, Paul W., 1984, (Radiology), M.D., 1976, Hahnemann Medical; reproductive endocrinology.

### Assistant Professors

Battaglia, David E., 1992, M.S., 1978, Ph.D., 1985, Washington; gamete biology.

Branigan, Emmett A., 1990, (Acting), M.D., 1981, Marshall (West Virginia).

Eckert, Linda O., 1992, (Acting), M.D., 1987, California (San Diego); gynecology.

Hendricks, Susan K., 1985, M.S., 1975, M.D., 1979, Michigan State; perinatal medicine.

Krohn, Marijane, 1991, M.A., 1978, California State; M.P.H., 1981, California (Berkeley); Ph.D., 1987, Washington; female reproductive complications.

Lau, R. Jane, 1990, (Acting), M.D., 1979, Michigan.

Lentz, Gretchen M., 1992, (Acting), M.D., 1986, Washington; urogynecology.

## Course Descriptions

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

**OB GY 498 Undergraduate Thesis (\*) AWSpS Vontver** By arrangement.

**OB GY 499 Undergraduate Research (\*) AWSpS Vontver** Prerequisite: permission of instructor.

**OB GY 579P Obstetric and Gynecologic Investigation (\*) AWSpS Vontver** The investigation may cover any one of the following fields: uterine muscle physiology, toxemias of pregnancy, hormone assays in obstetrics and endocrinology, obstetric and gynecologic oncology. By arrangement.

**OB GY 665P Introduction to Obstetrics and Gynecology, UH-HMC (\*, max. 12) AWSpS Vontver** Introductory clerkship providing comprehensive medical care and counseling to female patients. Includes management and delivery of obstetrical patients, diagnosis and management of gynecologic diseases, hospital rounds, outpatient clinics, seminars, tutorial, and community health-care agencies for women. Rotation between UMMC and Harborview Medical Center. Prerequisite: HUBIO 565P. (Six weeks. Limit: six students.)

**OB GY 666P Introduction to Obstetrics and Gynecology, Boise (\*, max. 12) AWSpS Vontver** Clerkship equivalent to 665P offered at Boise, Idaho (WAMI). Includes experience in several private physician offices. Prerequisite: HUBIO 565P. (Six weeks. Limit: two students.)

**OB GY 667P Introduction to Obstetrics and Gynecology, Madigan (\*, max. 12) AWSp Vontver** Clerkship equivalent to 665P offered at Madigan Army Medical Center, Tacoma. Not offered Summer Quarter. Prerequisite: HUBIO 565P. (Six weeks. Limit: five students.)

**OB GY 668P Introduction to Obstetrics and Gynecology, Spokane (12) AWSpS Vontver** Clerkship, equivalent to 665P, offered at Spokane (WAMI). Includes experience in several private physicians' offices. Prerequisite: HUBIO 565P. (Six weeks. Limit: three students.)

**OB GY 669P Introduction to Obstetrics and Gynecology, Swedish (12) AWSpS Vontver** Clerkship, equivalent to 665P, offered at Swedish Hospital Medical Center. Prerequisite: HUBIO 565P. (Six weeks. Limit: two students.)

**OB GY 670P Introduction to Obstetrics and Gynecology, GH-Central (12)** This clerkship is equivalent to 665P but is offered at the Central facility of Group Health Cooperative of Puget Sound in Seattle. Students spend time in delivery room, surgery, and clinic, and have a specific preceptor assigned. Prerequisite: HUBIO 565P. (Six weeks. Limit: two students.)

**OB GY 671P Introduction to Obstetrics and Gynecology, Anchorage (12) AWSpS Vontver** Clerkship, equivalent to 665P, offered at Anchorage, Alaska (WAMI). Includes experience in several private physicians' offices as well as Providence Hospital and Elmendorf Air Force Base. Prerequisite: HUBIO 565P. (Six weeks. Limit: three students.)

**OB GY 672P Introduction to Obstetrics and Gynecology, GH-East (12)** This clerkship is equivalent to 665P but is offered at the Eastside facility of Group Health Cooperative of Puget Sound in Redmond. Students spend time in delivery room, surgery, and clinic, and have a specific preceptor assigned. Prerequisite: HUBIO 565P. (Six weeks. Limit: one student.)

**OB GY 673P Introduction to Obstetrics and Gynecology, Military, Madigan (12)** This clerkship is equivalent to 665P but is offered at Madigan Army Medical Center. Students spend time in delivery room, surgery, and clinic, and have a specific preceptor assigned.

signed. Prerequisite: HUBIO 565P. (Six weeks. Limit: two students.)

**OB GY 681P Gynecological Oncology Subspecialty (8) AWSpS Vontver** Experience in reproductive tract malignancy, chemotherapy, and radiation therapy. Student follows selected patients through primary surgery, recovery, and initial adjuvant treatment, as well as continuing treatment in both clinic and inpatient settings. Prerequisite: basic OB GY Clerkship. (Limit: one student each four weeks.)

**OB GY 682P Antenatal High-Risk Obstetrics (8) AWSpS Vontver** Four weeks on high-risk antenatal obstetrics ward and clinic. Students responsible for initial workups, daily laboratory evaluations, continuing care of high-risk antepartum patients. Weekly conference with obstetrics attending; presentation of one or more topics per rotation. Excellent coordination with resident and attending staff required to maintain patient-care continuity. (Limit: one student each four weeks.)

**OB GY 684P Endocrinology of Reproduction (\*, max. 12) AWSpS Vontver** The biochemistry of steroids. Steroid metabolism as related to clinical problems. Diagnosis and treatment of endocrine disorders. Case studies with special emphasis on modern methods of investigation. (Limit: one student each four weeks.)

**OB GY 685P Obstetrics/Gynecology Preceptorship (\*, max. 8) AWSpS Vontver** Close working relationship with physician in private practice of obstetrics and gynecology, including: hospital rounds, surgery, deliveries, and office and business aspects of private practice as individually arranged. Forty hours minimum can be arranged to fit schedule not to exceed 8 credits. Prerequisites: 665P or equivalent and permission of instructor. (Limit: two students.)

**OB GY 697P Obstetrics and Gynecology Special Electives (\*, max. 24) AWSpS Vontver** By arrangement, for qualified students, special clerkship or research opportunities can sometimes be made available at other institutions. Students wishing this course should obtain special assignment form one month before preregistration. Department evaluates student performance. Prerequisite: permission of instructor.

**OB GY 698P Introduction to Obstetrics and Gynecology, Away (\*, max. 12) AWSpS Vontver** Clerkship equivalent to 665P, at sites outside the UW/WAMI system (currently includes Everett and Tacoma). By arrangement. A special assignment form must be obtained one month in advance of preregistration. Subject to Dean's Office approval. Department evaluates student performance. Prerequisites: HUBIO 565P; permission of instructor.

## Ophthalmology

RR801 University of Washington Medical Center

The Department of Ophthalmology is responsible for the instructional and research programs in diseases of the eye and its adnexae as well as the visual system.

Medical student instruction is provided at all levels, including multiple electives in the clinical years. Graduate physicians are provided with three or four years of residency training at the affiliated hospitals. Post-residency fellowships are offered in the subspecialties of ophthalmology. Patient care is provided under the supervision of full- and part-time faculty physicians at University of Washington Medical Center, Harborview Medical Center, Pacific Medical Center, Veterans Administration Medical Center, and Children's Hospital and Medical Center.

Clinical research programs relate to blinding eye diseases. Laboratory research encompasses neurophysiology of vision, morphology of the retina and visual system, and biochemistry of ocular tissues. Postdoctoral training is offered in all these disciplines.

## Faculty

### Chairperson

Robert E. Kalina

### Professors

Clark, John I., \* 1989, (Biological Structure), Ph.D., 1974, Washington; lens opacification.

Hendrickson, Anita E., \* 1965, (Biological Structure), Ph.D., 1964, Washington; visual development.

Kalina, Robert E., 1967, M.D., 1960, Minnesota; vitreoretinal diseases.

Kinyoun, James L., 1978, M.D., 1971, Nebraska; vitreoretinal diseases.

Milam, Ann, 1971, Ph.D., 1967, Texas Southwestern (Dallas); electron microscopy, pathology.

Mills, Richard P., 1984, (Medicine, Neurological Surgery), M.D., 1968, Yale; glaucoma, neuro-ophthalmology.

Pagon, Roberta A., 1975, (Medicine, Pediatrics), M.D., 1972, Harvard; medical genetics.

Rodiek, Robert W., 1978, M.S., 1961, Massachusetts Institute of Technology; Ph.D., 1964, Sydney (Australia); neurophysiology.

Saari, John C., \* 1974, (Biochemistry), M.S., 1963, Minnesota; Ph.D., 1970, Washington; retinal biochemistry.

### Associate Professors

Lindquist, Thomas D., 1987, Ph.D., 1978, M.D., 1981, New Jersey; corneal and external disease.

Orcutt, James C., 1982, (Otolaryngology), Ph.D., 1976, M.D., 1977, Colorado (Denver); ophthalmology.

Patton, Dorothy L., 1990, (Research), (Obstetrics and Gynecology), Ph.D., 1981, Washington; infectious diseases.

Weiss, Avery H., 1991, M.D., 1974, University of Miami; pediatric ophthalmology.

### Assistant Professors

Koontz-Siebert, Margaret A., 1989, (Research) Ph.D., 1977, Washington; retinal research.

Palczewski, Krzysztof, 1992, (Pharmacology), M.S., 1980, Ph.D., 1986, Wroclaw (Poland); visual transduction.

Wells, Craig G., 1987, M.D., 1979, Oregon; vitreoretinal diseases.

## Course Descriptions

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

**OPHTH 488 Undergraduate Thesis (\*) AWSpS Kinyoun (University of Washington Medical Center)** Thesis-based research in vision and ophthalmology. Elective. Prerequisite: permission of instructor. (Limit: two students.)

**OPHTH 499 Undergraduate Research (\*) AWSpS Kinyoun (University of Washington Medical Center)** Laboratory or clinical research in morphology, biochemistry, immunology, experimental pathology, or clinical studies of the eye and visual system. Prerequisite: permission of instructor. (Limit: two students.)

**OPHTH 501P Ophthalmology Preceptorship (1) AWSpS Kinyoun** Individualized experiences with one or more of the full-time faculty members of the department covering research, teaching, and patient care. Student observes activities in the clinic, hospital ward, operating room, and research laboratories. Prerequisites: first- and second-year medical student standing and permission of instructor.

**OPHTH 681P Ophthalmology Clerkship (4) AWSpS Mills (Harborview Medical Center)** Students gain experience in the diagnosis and treatment of common ocular disorders. Basic examination techniques, including tonometry, ophthalmoscopy, and biomicroscopy. Students work with an eye pathologist in gross and microscopic examination of surgical and autopsy eyes. Prerequisite: completion of human biology series. (Limit: one student.)

**OPHTH 682P Ophthalmology Clerkship (4) AWSpS Kramar (Pacific Medical Center)** Student works with a faculty member in the diagnosis and treatment of ocular diseases in both outpatient and inpatient populations. Experience in common ocular disorders is gained, and neurological and other consultations seen. Prerequisite: completion of human biology series. (Limit: one student.)

**OPHTH 683P Pediatric Ophthalmology Clerkship (4) AWSpS Weiss (Children's Hospital and Medical Center)** Student examines and observes treatment of children with ocular diseases and learns to differentiate trivial from potentially blinding disorders. Programmed text in general ophthalmology furnished. Prerequisite: completion of human biology series. (Two weeks, full-time. Limit: one student.)

**OPHTH 685P Ophthalmology Clerkship (4) AWSpS Orcutt (Veterans Administration Hospital)** Participation in diagnosis and treatment of medical and surgical ocular disease. Outpatient examinations, inpatient surgery, and neuro-ophthalmologic, retinal, and medical consultations. Basic techniques involved in tonometry, ophthalmoscopy, and biomicroscopy of eye. Prerequisite: completion of human biology series. (Limit: one student.)

**OPHTH 686P Ophthalmology Clerkship (4) AWSpS Gorman (Group Health Hospital)** Diagnosis and treatment of ocular diseases in outpatients. Weekly assignment to Group Health ophthalmologist responsible for the care of walk-in and urgent patients, which may demonstrate findings pertinent to the future practice of primary-care physicians. Examination techniques, including tonometry, ophthalmoscopy, and biomicroscopy. Prerequisite: completion of human biology series. (Limit: one student.)

**OPHTH 687P Ophthalmology Clerkship (4) AWSpS Kinyoun (University of Washington Medical Center)** Inpatient and outpatient diagnosis and treatment of eye diseases. Subspecialty clinics include cornea, retina, neuro-ophthalmology, glaucoma, contact lenses, and strabismus. Student attends regularly scheduled conferences in ophthalmic basic and clinical science. Prerequisite: completion of human biology series. (Limit: one student.)

**OPHTH 688P Ophthalmology Clerkship (8) AWSpS Kinyoun, Werner** Four-week externship at Alaska Native Medical Center in Anchorage. Opportunity to learn and practice common eye examination techniques, including slit-lamp biomicroscopy, tonometry, and funduscopy. Patients seen three days a week; two days spent in the operating room. Prerequisites: completion of human biology series, fourth-year medical students only.

**OPHTH 697P Ophthalmology Special Electives (\*, max. 24) AWSpS Kalina** By specific arrangement, for qualified students, special clerkship, externship, or research opportunities can at times be made available at other institutions. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of instructor.

## Orthopaedics

BB1043 University of Washington Medical Center

The Department of Orthopaedics is actively involved in quality patient care, teaching, and research concerning bone and joint problems. Special areas of expertise

include foot and ankle, hand and microvascular, hip and knee, arthritis, sports medicine, pediatric orthopaedics, shoulder and elbow, spine, trauma, and tumors.

In addition to providing instruction for medical students, the department provides education at the graduate, residency, and post-residency levels. Selected medical students may elect research experience in the department. A fully approved residency offers opportunities to carry out fundamental and clinical research. Residents may work toward the Master of Science degree by meeting the requirements of the Graduate School and the academic unit offering the degree program.

## Faculty

### Chairperson

Frederick A. Matsen III

### Professors

Bigos, Stanley J., 1980, (Environmental Health), M.D., 1975, Missouri; orthopaedics.

Chesnut, Charles H. III, 1973, ‡(Medicine, Radiology), M.D., 1966, Florida; nuclear medicine.

Eyre, David R., 1985, (Biochemistry), Ph.D., 1969, Leeds (England); orthopaedics.

Hansen, Sigvard T., Jr., 1969, M.D., 1961, Washington; orthopaedics.

Mack, Laurence A., 1978, ‡(Obstetrics and Gynecology, Radiology), M.D., 1971, Illinois; orthopaedics.

Matsen, Frederick A. III, 1974, (Bioengineering), M.D., 1968, Baylor; orthopaedics.

Simkin, Peter A., 1968, ‡(Medicine), M.D., 1961, Pennsylvania; orthopaedics.

Staheli, Lynn T., 1970, M.D., 1959, Utah; orthopaedics.

Strong, D. Michael, 1991, (Research), Ph.D., 1973, Medical College of Wisconsin; orthopaedics.

Swiontkowski, Marc F., 1988, M.D., 1973, Southern California; orthopaedics.

### Associate Professors

Anderson, Paul A., 1985, M.S.E., 1975, Michigan; M.D., 1979, Wayne State; orthopaedics.

Benirschke, Stephen K., 1985, M.D., 1979, Case Western Reserve; orthopaedics.

Clark, John M., Jr., 1986, Ph.D., 1975, M.D., 1976, Chicago; orthopaedics.

Conrad, Ernest U. III, 1986, M.D., 1979, Virginia; orthopaedics.

Gardner, Gregory C., 1990, ‡(Medicine), M.D., 1984, Baylor.

Graney, Daniel O., 1987, ‡(Biological Structure), Ph.D., 1965, California (San Francisco).

Greenlee, Theodore K., Jr., 1971, M.D., 1959, Northwestern; orthopaedics.

Hanel, Douglas P. 1992, M.D., 1977, St. Louis; orthopaedics.

Henley, M. Bradford, 1987, M.D., 1979, Washington; orthopaedics.

Larson, Roger V., 1982, M.D., 1975, Utah; orthopaedics.

Olerud, John E., 1977, (Medicine), † M.D., 1971, Washington; dermatology.

Ott-Ralph, Susan M., 1990, ‡(Medicine), M.D., 1974, Washington.

Richardson, Michael L., 1989, ‡(Radiology), M.D., 1975, Baylor.

Sandell, Linda J., 1987, M.S., 1971, Denver; Ph.D., 1980, Northwestern; molecular biology.

Sangeorzan, Bruce J., 1986, M.D., 1981, Wayne State; orthopaedics.

Sidles, John A., \* 1984, Ph.D., 1983, Washington; physics.

Teitz, Carol C., 1978, M.D., 1974, Yale; orthopaedics.

Tencer, Allan F., \* 1988, (Bioengineering, Mechanical Engineering), Ph.D., 1981, McGill; orthopaedics.

Trumble, Thomas E., 1989, M.D., 1979, Yale; orthopaedics.

Wu, Jiann-Jiu (James), 1985, (Research), M.S., 1972, Illinois State; Ph.D., 1978, Texas A&M; orthopaedics.

### Assistant Professors

Battié, Michelle C., 1990, (Research), M.S., 1984, Washington; Ph.D., 1989, Gothenburg (Sweden); orthopaedics.

Chapman, Jens R., 1991, M.D., 1983, Technical University (Munich); orthopaedics.

Dales, Mark C., 1989, M.D., 1979, Nevada; orthopaedics.

Harryman, Douglas T. II, 1989, M.D., 1979, Virginia; orthopaedics.

Hoffinger, Scott A., 1989, M.D., 1983, Michigan; orthopaedics.

Mosca, Vincent S., 1988, M.D., 1984, Duke; orthopaedics.

Niyibizi, Christopher, 1989, (Research), M.S., 1980, Rutgers; Ph.D., 1985, McGill; orthopaedics.

Routt, Milton L. (Chip), 1989, M.D., 1983, Texas; orthopaedics.

Smith, Douglas G., 1990, M.D., 1984, Chicago; orthopaedics.

Vedder, Nicholas B., 1992, (Surgery), † M.D., 1981, case history, plastic and reconstructive surgery.

### Lecturer

Rice, Stephen G., 1977, (Pediatrics), Ph.D., 1974, M.D., 1974, New York; pediatrics.

### Research Associate

Bollen, Anne-Marie, 1991, M.S., 1986, Ph.D., 1990, Michigan; orthopaedics.

## Course Descriptions

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

**ORTHP 435 Spine Resource Clinic Elective (2)** A four-week course examining musculoskeletal pathology of spine. Introduction to physical and non-physical problems that can block patient's response to treatment and complicate care, outcome. Promotes understanding of role of helping patients identify, act upon options. Prerequisites: physical and occupational therapy students, physician assistants, nurses with at least two years undergraduate work.

**ORTHP 494 Athletic Health Care (\*, max. 3) AWSpS Marquardt, Rice** Prevention and management of athletic injuries. Basic course for coaches, school nurses, medical students. Responsibilities/liability, preseason screening/prevention techniques, conditioning, equipment nutrition, safety, preparedness, injury recognition, emergency procedures, common injuries, record keeping, communication, athletic health care organization. Laboratories, taping, stretching, athletic first-aid, use of ice.

**ORTHP 495 Athletic Health Care Administration (3)** Organizational management of athletic health-care aspects of operating organized athletic programs. For health professionals, school or community-based administrators/athletic directors/coaches, university-based health educators. Overview; generating awareness; needs assessment; educating coaches, student

trainers; establishing central training room; standardization of procedures; record keeping; evaluation. Prerequisite: 494.

**ORTHP 496 Advanced Athletic Health Care (3)** Advanced sports medicine course on the prevention and management of athletic injuries. For coaches, school nurses, medical students. Problem-solving and hands-on approach emphasize wellness, conditioning, skills of injury evaluation, steps to recovery through rehabilitation, taping techniques, emergency first aid procedures. Prerequisite: 494 or permission of instructor.

**ORTHP 498 Undergraduate Thesis (\*) AWSpS Eyre** Student works directly with a preceptor in selecting a suitable area for laboratory or clinical research in the area of orthopaedics, and develops a thesis for recognition. Prerequisites: HUBIO 553P and permission of faculty mentor. (Twelve weeks.)

**ORTHP 499 Undergraduate Research (\*) AWSpS Eyre** Investigation of pertinent musculoskeletal problems in the orthopaedic laboratories as part of the research group. Prerequisite: permission of faculty mentor. (Twelve weeks.)

**ORTHP 505P Preceptorship in Orthopaedic Surgery (1)** Opportunity for first- and second-year medical students to gain experience with clinical faculty members in the community. Students observe general aspects of private practice from a longitudinal perspective. Prerequisite: permission of department.

**ORTHP 585P Sports Medicine (2)** Lectures, patient problem presentations, and seminar discussions to explore impact of exercise and sport participation on various body systems. Includes nutritional concerns, biomechanics of certain sports injuries and cardiovascular, pulmonary, and musculoskeletal concerns. Prerequisite: second-year medical student standing.

**ORTHP 675P Preceptorship in Orthopaedics (\*, max. 4) AWSpS Anderson** Student spends full time with the preceptor during all his or her working day in order to gain a better understanding of the diagnosis and the management of problems of the musculoskeletal system as seen in the private orthopaedic practice. Prerequisites: SURG 665P or HUBIO 553P and permission of department. (Two weeks, full-time.)

**ORTHP 676P Pediatric Orthopaedics (\*, max. 8) AWSpS Staheli** Acquaints students with all aspects of musculoskeletal problems in childhood. Didactic conferences and seminars, and opportunities for active participation in both inpatient and outpatient care at Children's Hospital and Medical Center, and correlative anatomy and pathology. Prerequisite: SURG 665P or HUBIO 553P. (Four weeks, full-time.)

**ORTHP 677P Musculoskeletal Trauma (\*, max. 8) AWSp Anderson, Benirschke, Chapman, Hansen, Henley, Routt, Sangeorzan, Smith** Harborview Medical Center. Emergency room, wards, operating room, and outpatient clinics. Instruction in general and special clinics, including hand, hip, foot, and fracture, with emphasis placed on physical examination of the patient. Students take correlative anatomy and pathology. Prerequisites: SURG 665P, HUBIO 553P. (Four weeks, full-time.)

**ORTHP 678P Musculoskeletal Oncology (8 or 12) AWSpS Conrad** In-depth experience on musculoskeletal oncology service with primary involvement in initial evaluation, staging, treatment, and postoperative follow-up of patients with various musculoskeletal malignancies. Elective involves experience in surgical, oncologic, radiologic, and pathologic principles of managing sarcomas. Prerequisite: basic orthopaedic elective or permission of instructor.

**ORTHP 680P General Orthopaedic Clerkship (\*, max. 8) AWSpS Greenlee** Veteran's Administration Hospital: structured to provide a basic education in the fundamentals of the musculoskeletal system. Heavy emphasis is placed on the reconstructive alternatives in the treatment of degenerative joint diseases. Prereq-

uisite: completion of HUBIO series; third- and fourth-year students. Enrollment limited to three.

**ORTHP 681P University of Washington Medical Center Orthopaedics (8)** *Bigos, Clark, Conrad, Harryman, Larson, Teitz, Trumble* Orthopaedic subspecialty clerkship at University of Washington Medical Center. Preceptor-based outpatient, inpatient, emergency, or operative orthopaedic care. Students work primarily in one subspecialty area and in one general orthopaedic clinic. For students who plan careers in orthopaedic surgery. Prerequisites: completion of HUBIO series, third- and fourth-year medical students.

**ORTHP 682P Outpatient Orthopaedics (8)** Outpatient orthopaedic experience at University of Washington Medical Center. Emphasis on physical exam, diagnosis, radiographic evaluation, and non-operative treatment. Rotation through general orthopaedics as well as all subspecialty areas. For students who plan careers in primary care. Prerequisite: completion of HUBIO series.

**ORTHP 685P Spine Resource Clinic Elective (2)** *Bigos* Four-week part-time clerkship examining musculoskeletal pathology of the spine. Introduction to physical and non-physical problems that can block the patient's response to treatment and complicate care and outcome. Promotes understanding of the role of helping patients identify and act upon options. Prerequisite: any level medical student.

**ORTHP 697P Orthopaedic External Elective (\*, max. 12) AWSpS** *Anderson* Special arrangements can be made for students desiring to take orthopaedic electives at other institutions. Programs generally approved include orthopaedic clerkships at other universities or at large orthopaedic institutes. Prerequisites: HUBIO 553P and permission of department.

## Otolaryngology—Head and Neck Surgery

BB1165 University of Washington Medical Center

The Department of Otolaryngology—Head and Neck Surgery provides clinical care for patients with a broad spectrum of disorders affecting the head and neck region, including the ears, nose, and throat. A major portion of departmental effort is directed toward basic research in the areas of sensorineural hearing disorders, physiology of the larynx, and cancer treatment and rehabilitation. The department supports a number of research fellows and advanced degree candidates, and is responsible for a four-year residency program and for the training of medical students in subjects relevant to the specialty.

## Faculty

### Chairperson

Ernest A. Weymuller, Jr.

### Professors

Duckert, Larry G., 1978, M.D., 1972, Ph.D., 1977, Minnesota; otolaryngology.

Kuhl, Patricia K., 1988, ‡(Psychology, Speech and Hearing Sciences), Ph.D., 1973, Minnesota; psychology.

Richardson, Mark A., 1980, M.D., 1975, South Carolina; otolaryngology.

Rubel, Edwin W., 1986, (Psychology), (Neurological Surgery, Physiology and Biophysics), † Ph.D., 1969, Michigan State; otolaryngology.

Snyder, Jack M., 1970, M.A., 1956, Ph.D., 1970, Washington; audiology.

Spelman, Francis A., 1961, ‡(Bioengineering, Electrical Engineering), Ph.D., 1975, Washington; otolaryngology.

Weymuller, Ernest A., Jr., 1978, M.D., 1966, Harvard; otolaryngology.

### Associate Professors

Glenn, Michael G., 1986, M.D., 1981, California (San Francisco); otolaryngology.

Hillel, Allen D., 1983, M.A., 1972, M.D., 1976, Stanford; otolaryngology.

Makielski, Kathleen, 1985, M.D., 1978, Michigan; otolaryngology.

Norton, Susan J., 1991, Ph.D., 1982, Washington; hearing sciences/audiology

Orcutt, James C., 1982, ‡(Ophthalmology), Ph.D., 1976, M.D., 1977, Colorado; ophthalmology.

Rees, Thomas S., 1972, M.A., 1969, Redlands; Ph.D., 1972, Washington; audiology.

Schubert, Mark, 1975, ‡(Oral Medicine), D.D.S., 1974, M.S.D., 1981, Washington; oral medicine.

Sutton, Dwight, 1971, M.S., 1955, Idaho; Ph.D., 1962, California (Berkeley); otolaryngology.

### Assistant Professors

Coltrera, Marc D., 1989, M.D., 1981, Yale; otolaryngology.

Inglis, Andrew F., Jr., 1987, M.D., 1981, Medical College of Pennsylvania; otolaryngology.

Lippe, William R., 1988, (Research), M.S., 1969, Pennsylvania; Ph.D., 1972, California (Irvine); neurobiology.

Murakami, Craig S., 1989, M.D., 1983, Washington; otolaryngology.

Werner, Lynne, 1986, (Research), ‡(Speech and Hearing Sciences), Ph.D., 1980, Loyola; auditory research.

## Course Descriptions

*Courses numbered with a P suffix are not graduate courses and are restricted to medical student enrollment only.*

**OTOHN 498 Undergraduate Thesis (\*, AWSpS)** *Rubel, Weymuller* Student works directly with department faculty in selecting a suitable area for laboratory or clinical research in the area of otolaryngology, and develops a thesis for recognition. Prerequisite: permission of instructor.

**OTOHN 499 Undergraduate Research (\*, AWSpS)** *Rubel, Weymuller* Research opportunities offered under direction in the area of otolaryngology. May be repeated for credit. (Twelve weeks.)

**OTOHN 680P Otolaryngology Clerkship (8, max. 24)** Four-week clinical rotation at University of Washington Medical Center, Veterans Administration Hospital, Children's Hospital and Medical Center, Harborview Medical Center, or Pacific Medical Center (one student at each facility). Clinic, operating room, and inpatient experience. Students assigned to hospitals on first day of clerkship according to interests and availability. Prerequisite: human biology series.

**OTOHN 683P Otolaryngology Externship (\*, max. 8) AWSpS (Madigan Army Medical Center)** Individual externship training at outpatient clinic, where visits average twelve hundred per month, supplemented by inpatient assignments. Students reside at the hospital during externship, using facilities of bachelor officer quarters and hospital mess. Prerequisite: completion of human biology series. (Two or four weeks, full-time.)

**OTOHN 686P Otolaryngology: Medical and Surgical Aspects (\*, max. 12) AWSpS** *Weymuller* Clinical in-depth study for the student whose interest lies in pathology of the head and neck. Reasonable flexibility to arrange course content that provides exposure to all aspects of patient care.

**OTOHN 697P Otolaryngology Special Electives (\*, max. 24) AWSpS** *Weymuller* By specific arrangement. Special clerkship, externship, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of chairman.

## Pathology

C516 Health Sciences

Pathology is both a basic biological science and a specialty of medicine. As a basic science, it deals with the natural history and mechanisms of initiation and expression of disease processes. In its broadest sense, the study of disease encompasses the entire animal and plant kingdoms. The interests of the department focus on diseases of vertebrates, especially of man. The principal aim of the pathologist is to understand disease manifestations and processes in whatever terms are required. Therefore, the techniques of the pathologist range from those of the physicist and physical chemist through those of the physiologist to the realm of the epidemiologist. Present emphasis in the department is on cellular and molecular pathology, environmental pathology, and analysis of disease by methods of cell and molecular biology, recombinant DNA techniques, light and electron microscopy, histochemistry and cytochemistry, analytical biochemistry, cell and organ culture, and immunology.

## Graduate Program

Stephen Schwartz, Graduate Program Coordinator

The Department of Pathology offers graduate training in experimental pathology, with an emphasis on the cellular and molecular biological basis of disease, leading to the Doctor of Philosophy degree in experimental pathology. Students are accepted on a limited basis into the Master of Science degree program. The aim of the graduate program is to train individuals for a career in the scientific investigation of basic disease mechanisms. The program encompasses students and faculty members with diverse interests, which range from investigation of specific disease conditions to the molecular basis of alterations in cell function and of gene expression. Faculty members' interests include the normal and pathological aspects of cardiovascular biology, tumor biology, environmental effects on normal processes, biology of aging, neurobiology, immune response, inflammation and repair, immunopathology and biology of extracellular matrix, as well as fundamental processes that underlie disease, such as regulation of gene expression and protein synthesis, structure and function of oncogenes, viral and nonviral transformation, chromatin structure, mutagenesis and DNA repair, and genetic recombination. The department's graduate faculty comprises forty members, who are located at the Health Sciences Center, Veterans Administration Medical Center, Harborview Medical Center, Children's Hospital and Medical Center, and Fred Hutchinson Cancer Research Center. More than thirty full-time students are pursuing the Ph.D. degree.

Students in the program are expected to fulfill course work requirements during the first two years. In line with the diversity of faculty members' interests within the department, course requirements are kept to a minimum to provide students with maximum flexibility.

### Special Requirements

Prospective candidates are expected to have had undergraduate experience in biology, physics, chemistry, and mathematics and acceptable scores on the Graduate Record Examination, including advanced biology or chemistry. Those wishing to matriculate toward both the M.D. and Ph.D. degrees must gain ad-

mission to both the Graduate School and the School of Medicine.

#### **Financial Aid**

Funding for students is provided from departmental and University funds, training grants, a variety of institutional fellowships, and research grants of individual faculty members.

#### **Research Facilities**

The department emphasizes the cellular and molecular approach to the investigation of the pathogenesis of disease in mammalian species. Special facilities exist for training in electron microscopy; cell, tissue, and organ culture; recombinant DNA techniques; histochemistry and cytochemistry; analytical biochemistry; immunology; and molecular and cell biology.

#### **Correspondence and Information**

Graduate Program Coordinator  
Department of Pathology, SM-30

## **Residency Training Program**

The department supervises an internship and residency training program in anatomic pathology and, jointly with the Department of Laboratory Medicine, in clinical pathology for qualified medical doctors. Persons who complete the residency program are eligible for certification by the American Board of Pathology. Lawrence D. True is the program director.

## **Faculty**

#### **Chairperson**

Russell Ross

#### **Professors**

Albers, John J.,\* 1971, (Research), ‡(Medicine), M.S., 1967, Ph.D., 1969, Illinois; lipoprotein measurements, structure, genetics, metabolism.

Alvord, Ellsworth C.,\* 1960, (Neurological Surgery), M.D., 1946, Cornell; neuropathology, experimental allergic encephalitis.

Benditt, Earl P.,\* 1957, (Emeritus), M.D., 1941, Harvard; atherosclerosis, diabetes mellitus, amyloidosis, inflammation.

Benjamin, Denis R.,\* 1975, (Pediatrics), (Laboratory Medicine), †M.B.B.Sc., 1968, Witwatersrand (South Africa); pediatric pathology.

Byers, Peter H.,\* 1977, (Medicine), †M.D., 1969, Case Western Reserve; extracellular matrix synthesis, genetic disorders of collagen metabolism, secretion of collagen.

Cowan, Marie J.,\* 1979, (Medicine, Physiological Nursing), M.S., 1972, Ph.D., 1979, Washington; cardiovascular pathology, electrocardiography.

Galloway, Denise A.,\* 1982, (Research), Ph.D., 1976, City, (New York); herpes viruses transformation and latency.

Gown, Allen M.,\* 1979, M.D., 1975, Albert Einstein; immunocytochemistry, monoclonal antibodies, cell differentiation markers in neoplasia and atherosclerosis.

Groudine, Mark T.,\* 1979, ‡(Radiation Oncology), M.D., 1975, Ph.D., 1976, Pennsylvania; cellular differentiation.

Haggitt, Rodger C., 1984, (Medicine), M.D., 1967, Tennessee; anatomic pathology.

Harlan, John M., 1978, ‡(Medicine), M.D., 1973, Chicago; hematology, leukocyte-endothelial interaction.

Heilström, Ingegerd E.,\* 1966, (Affiliate), (Microbiology), M.D., 1964, Ph.D., 1966, Karolinska Institut (Sweden); tumor immunology.

Heilström, Karl E.,\* 1966, (Affiliate), (Microbiology), M.D., 1964, Ph.D., 1964, Karolinska Institut (Sweden); tumor immunology.

Landolt, Marsha L.,\* 1975, ‡(Fisheries), M.S., 1970, Oklahoma; Ph.D., 1975, George Washington; fisheries and wildlife pathology, toxicology.

Loeb, Lawrence A.,\* 1978, (Biochemistry), M.D., 1961, New York; Ph.D., 1967, California (Berkeley); fidelity of DNA replication, molecular basis of mutagenesis and chemical carcinogenesis.

Martin, George M.,\* 1957, (Genetics), M.D., 1953, Washington; somatic cell genetics, pathobiology of aging.

McDougall, James K.,\* 1979, (Research), M.Sc., 1970, Ph.D., 1971, Birmingham (England); virology, neoplasia.

Mottet, N. Karle,\* 1959, (Environmental Health), †M.D., 1952, Yale; environmental pathology, teratology, toxic effects of mercury and other trace metals.

Narayanan, A. Sampath,\* 1971, (Research), M.Sc., 1963, Ph.D., 1967, Madras (India); connective tissue, acquired diseases.

Norwood, Thomas H.,\* 1974, M.D., 1968, Maryland; somatic cell genetics, pathobiology of aging, mitotic cell cycle regulation.

Page, Roy C.,\* 1967, (Periodontics), †D.D.S., 1957, Maryland; Ph.D., 1967, Washington; connective-tissue pathology, chronic inflammation, immunopathology, periodontal disease.

Reay, Donald T., 1975, M.D., 1963, Utah; M.P.A., 1978, Seattle; forensic medicine.

Raines, Elaine W., 1975, (Research), M.S., 1975, California; growth regulatory molecules, vascular cell biology.

Reichenbach, Dennis D.,\* 1966, M.D., 1958, Washington; cardiovascular pathology.

Reidy, Michael A.,\* 1980, M.Sc., 1972, Guelph (Ontario); Ph.D., 1976, Cambridge; atherosclerosis, vascular endothelial cells, arterial injury and repair.

Ross, Russell,\* 1962, (Biochemistry), D.D.S., 1955, Columbia; Ph.D., 1962, Washington; atherosclerosis, growth regulatory molecules, inflammation, wound healing, and diseases of cell proliferation.

Rubin, Cyrus E., 1954, ‡(Medicine), M.D., 1945, Harvard; gastroenterology.

Sale, George E., 1975, M.D., 1968, Stanford; immunopathology of bone marrow transplantation, graft-versus-host reaction.

Schwartz, Stephen M.,\* 1974, (Bioengineering), M.D., 1967, Boston; Ph.D., 1973, Washington; vascular cell biology, atherosclerosis, hypertension, molecular development biology.

Shaw, Cheng-Mei,\* 1960, (Neurological Surgery), M.D., 1950, National Taiwan; neuropathology, immunopathology, trace metal neurotoxicology.

Shulman, Howard M., 1977, M.D., 1971, California (Los Angeles); graft-versus-host disease; venoocclusive disease of the liver.

Spence, Alexander M., 1974, (Medicine), †M.D., 1965, Chicago; neuropathology.

Stamatoyannopoulos, George, 1965, ‡(Medicine), M.D., 1960, Athens (Greece); medical genetics.

Sumi, S. Mark,\* 1966, (Medicine), †M.D., 1956, Toronto; neuropathology, neuromuscular disease, neurodegenerative diseases.

Todaro, George J., 1983, ‡(Pathobiology), M.D., 1963, New York; growth regulation in normal and tumor cells.

Vracko, Rudolf,\* 1963, M.D., 1956, Munich (Germany); endocrine pathology, role of basal lamina in tissue repair.

Wight, Thomas N.,\* 1978, M.S., 1968, Ph.D., 1972, New Hampshire (Durham); connective tissue biology and pathology, proteoglycan metabolism.

Wolf, Norman S.,\* 1968, (Comparative Medicine), D.V.M., 1953, Kansas State; Ph.D., 1960, Northwestern; radiobiology, developmental hematology, aging studies, laboratory animal disease.

#### **Associate Professors**

Alpers, Charles E., 1986, M.D., 1978, Rochester; clinical and experimental glomerular disease; AIDS in man and experimental simian AIDS.

Bowen-Pope, Daniel F.,\* 1982, Ph.D., 1979, California (Berkeley); developmental biology, growth factors and receptors.

Brawer, Michael K., 1989, ‡(Urology), M.D., 1980, California (Los Angeles); benign and malignant prostate proliferative disorders.

Chi, Emil Y.,\* 1972, (Research), M.A., 1968, California State (Los Angeles); Ph.D., 1971, California (Santa Barbara); lung pathology, mast cell structure and function.

Disteche, Christine,\* 1980, Ph.D., 1976, Liege (Belgium); molecular genetics, human and mouse cytogenetics.

Eary, Janet F., 1986, (Radiology), M.D., 1980, Michigan; nuclear medicine.

Haas, Joel E.,\* 1977, (Pediatrics), M.D., 1967, Pittsburgh; pediatric pathology.

Hackman, Robert C., 1978, M.D., 1971, Stanford; infectious and pulmonary complications in immunocompromise patients.

Kiviat, Nancy C., 1978, (Medicine), M.A., 1970, M.D., 1975, Washington; HPV, studies on etiology and natural history of squamous cell neoplasia.

Monnat, Raymond J.,\* 1982, M.D., 1976, Chicago; somatic mutation, somatic cell and molecular genetics.

Myerson, David,\* 1985, M.D., 1979, Ph.D., 1979, Albert Einstein; RNA tumor viruses, molecular biology.

Ott-Ralph, Susan M., 1983, ‡(Medicine), M.D., 1974, Washington; nephrology.

Rabinovitch, Peter S.,\* 1981, M.D., 1979, Ph.D., 1980, Washington; cell cycle alterations in cellular aging and neoplasia, flow cytometry.

Siebert, Joseph R., 1986, (Research), M.S., 1984, Ph.D., 1985, Washington; normal and abnormal growth and development.

Thorning, David R., 1975, M.D., 1965, Kansas; anatomic pathology, pulmonary pathology, electron microscopy.

True, Lawrence D.,\* 1990, M.D., 1971, New Orleans; urologic pathology, nuclear aspects of tumor differentiation.

Vessella, Robert L., Jr., 1989, ‡(Urology), Ph.D., 1974, Mississippi; monoclonal antibody targeting of tumors and tumor immunodiagnostic assays.

Wiegenstein, Louise L., 1953, (Emeritus), M.D., 1946, Tufts; pathology.

#### **Assistant Professors**

Burmer, Glenna C.,\* 1989, M.D., Ph.D., 1983, Washington; molecular diagnostics.

Eriksen, Nils, 1952, (Research), Ph.D., 1944, Washington; amyloidosis, Alzheimer's disease.

Fligner, Corinne L., 1984, (Laboratory Medicine), M.D., 1976, New Mexico; forensic pathology, forensic and clinical toxicology.

Fukuchi, Ken-ichiro, 1991, M.D., 1979, Ph.D., 1985 Osaka (Japan); Alzheimer's disease, molecular biology of aging.

Grossmann, Angelika, 1989, (Research), ‡(Comparative Medicine), D.V.M., 1978, Ph.D., 1982, Freie Universität (Berlin); cell proliferation and signal transduction in aging and Alzheimer's disease.

Kidd, Pamela G., 1984, ‡(Laboratory Medicine), M.D., 1971, Baylor; hematopathology, differentiation of B and T lymphocytes, diagnosis of leukemia and lymphoma.

Kinsella, Michael G., 1987, (Research), Ph.D., 1978, Oregon; cell biology of proteoglycans.

Meek, Rick L., 1983, (Research), Ph.D., 1978, California (Santa Cruz); molecular biology of serum amyloid A, amyloidosis, Alzheimer's disease.

Nochlin, David, 1988, M.D., 1972, National Autonomous (Mexico); neuropathology.

Qvarnstrom, Eva E., 1987, (Research), D.D.S., 1975, Ph.D., 1984, Lund (Sweden); extracellular matrix, cytokines.

Schmidt, Rodney A., 1988, M.D., Ph.D., 1984, Washington; surgical pathology, pulmonary pathology, mechanisms of fibrosis.

Simrell, Charles R., 1987, (Laboratory Medicine), M.D., 1978, Florida; hematopathology.

Snow, Alan D., 1989, (Research), Ph.D., 1986, Ontario (Canada); proteoglycans in Alzheimer's disease.

Tait, Jonathan F., 1989, ‡(Laboratory Medicine), M.D., Ph.D., 1983, Washington (St. Louis).

#### Lecturers

Giachelli, Cecilia M., 1990, Ph.D., 1987, Washington; molecular biology of smooth muscle differentiation.

Lee, Ming-Jong, 1972, M.D., 1963, Gunma (Japan); surgical pathology, anatomical pathology.

Pendergrass, William R., 1986, Ph.D., 1977, Washington; gerontology, *in vitro* senescence, regulation of entry into S-phase.

Seifert, Ronald A., 1986, Ph.D., 1983, Washington; growth factor/receptor structure and function.

## Course Descriptions

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

**PATH 410 Introduction to Pathology (4) A** Wolf Study of causes, processes, and effects of important diseases. Combines basic and systemic pathology. Required for students in medical technology, and physical therapy. Prerequisites for other students: MICRO 301 and/or equivalent courses in human anatomy, human physiology, and microbiology, and permission of instructor or adviser on individual or group basis.

**PATH 444 General Pathology (4) WSp** Bowen-Pope, Page Basic pathologic processes that underlie disease, including cell alterations, genetic and developmental pathology, environmental pathology, neoplasia, immunopathology, inflammation, and infection. Correlates the gross, functional, and biochemical alterations. For second-year dental students and graduate students. Requires a reasonable grounding in biological and chemical sciences. Prerequisite for nondental and nonpharmacy students: permission of instructor.

**PATH 445 Systemic Pathology (3) A** Burner Survey of pathologic processes affecting organs and systems pertinent to the practice of dentistry. Lectures and demonstrations present a coherent picture of systemic disease. For first-year dental students, graduate students, and others with a reasonable background in biologic and chemical sciences. Prerequisites: 444 and permission of instructor for nondental students.

**PATH 498 Undergraduate Thesis (\*) AWSpS** Elective. Prerequisite: permission of instructor.

**PATH 499 Undergraduate Research (\*) AWSpS** Elective. May be repeated for credit. Prerequisite: permission of instructor.

**PATH 500 Molecular Basis of Disease (5)** Designed for first and second year graduate students to introduce the concepts of pathology and the modern day approaches to the study of disease. Integrates general and experimental pathology with cellular and molecular biology.

**PATH 501 Cellular Response to Injury (3, max. 9) AWSpS** Lecture-seminar. Considerations of current concepts of cellular and subcellular reactions to injury, including neoplasia, as studied by modern techniques of cell biology. Required of all pathology graduate students. Prerequisite: permission of instructor.

**PATH 502 Inflammation and Repair (2) Sp** Lecture-seminar; a seminar course dealing with an in-depth examination of the processes involved in inflammation and repair. Credit/no credit only. Prerequisite: permission of instructor. (Offered even-numbered years.)

**PATH 507 Cellular Pathology (2) S** Emphasis on application of recent developments and techniques in biology to problems of pathology. Series of lectures by eminent visiting scientists with expertise in the area being discussed. May be repeated for credit. Credit/no credit only. Prerequisite: permission of instructor.

**CONJ 508 EM Methods and Interpretation (3-5)** Holbrook, Wight See Conjoint Courses.

**PATH 510 Anatomical Analysis of Disease (\*, max. 30) AWSpS** The anatomical features of human disease as revealed at surgery or postmortem by gross examination and light microscopy are correlated with chemical and physiologic changes. Prerequisites: graduate student standing and permission of instructor.

**C MED 512 Introduction to the Anatomical Analysis of Animal Disease (5, max. 10) AWSp** See Comparative Medicine courses.

**C MED 514 Comparative Pathology Conference (1, max. 6) AWSp** See Comparative Medicine courses.

**PATH 520 Experimental Pathology Seminar (1) AWSp** Gown, Loeb Review of current research in various areas of experimental pathology by members of the department and visiting scientists. May be repeated for credit. Credit/no credit only.

**CONJ 520 Anatomy and Autopsy (1 or 2)** See Conjoint Courses.

**PATH 522 Hematopathology Seminar (2) W** Kidd Identification of normal lymphocyte and bone marrow subpopulations, diagnosis of leukemias, lymphomas, and benign conditions that resemble them. Emphasis on histopathology, cytochemical and immunological markers. Clinicopathologic correlation. Joint with LAB M 522. Credit/no credit only. (Offered even-numbered years.)

**PATH 530 Human Cytogenetics (\*, max. 4) W** Distech Sources and methods of preparation and identification of human chromosomes. Molecular structure and mapping of chromosomes. Human cytogenetic pathology: karyotype-phenotype interactions, chromosome breakage, and cancer cytogenetics. Prerequisite: permission of instructor. (Offered odd-numbered years.)

**PATH 535 Fundamentals of Human Disease (\*, max. 20)** Students study human pathology through participation in the autopsy service under direct supervision of a faculty member. They analyze the histologic, cellular, and biochemical aspects of selected cases, and present their observations in weekly seminars. Prerequisites: 444 or 555 and permission of course director: graduate students only.

**PATH 551 Experimental and Molecular Pathology (2-5, max. 20) AWSpS** Byers, Wight Introduction to

experimental pathology. A tutorial course designed to introduce a graduate student (medical, dental) or senior undergraduate to selected methods and problems through literature surveys and/or laboratory experience. Exploration of causes at the cellular and molecular levels in the study of disease is emphasized. Prerequisite: permission of instructor.

**PATH 552 Contemporary Anatomic Pathology (2-5, max. 30) AWSpS** Study of recent developments in anatomic pathology. Subject includes areas of basic science and review of systemic pathology. Recent developments and interpretation of these findings are stressed. For pathology residents, fellows, and trainees. Credit/no credit only. Prerequisite: permission of instructor.

**PATH 555 Environmental Pathology (3) Mottet** Selected cases of human diseases caused by environmental chemical exposures and ionizing radiations. Seminar format with active student participation. Cellular and subcellular reaction to chemical injury. Prerequisites: 410 or 444 or HUBIO 520P and permission of instructor; recommended: ENVH 515 or equivalent.

**CONJ 560, 561 Tumor Biology (3,2)** See Conjoint Courses.

**PATH 560P Analysis of Human Disease (\*, max. 10) AWSpS** Beginning with a human disease problem, the student individually develops a working hypothesis, discusses the problem with appropriate pathology faculty member, and jointly designs an experiment to test the hypothesis. A written report is required. Prerequisite: second-year medical student standing.

**PATH 562P Cardiovascular Pathology Conference (\*) AWSpS** Reichenbach Course consists of two parts: a laboratory review of gross and microscopic cardiovascular pathology of selected autopsied cases followed by a combined clinical (medical and/or surgical) and pathology conference discussing these cases. Prerequisites: HUBIO 540P and permission of instructor.

**PATH 563 Neuropathology (\*) AWSpS** Alvord, Shaw, Sumi Course consists of ten parts. Conferences on gross neuropathology (brain cutting and clinicopathologic correlations) held at six hospitals. Weekly neurology or surgical neuropathology conferences, neuropathology slide show, and neuropathology laboratory case studies. Prerequisite: permission of instructor.

**PATH 564 Neuropathology Brain Modeling (4) S** Alvord Designed along clinically important, functional, neuroanatomic lines, generally based first on the embryologic development of the most primitive segmental elements (sensory, motor and association cells, and simple reflexes), followed by the more elaborate suprasegmental elements (cerebellum, colliculi, and forebrain).

**PATH 571 Neuroanatomic Pathology (\*) W** Alvord, Shaw, Sumi The particular diseases occurring in specific parts of the nervous system are considered in terms of the segmental, intersegmental, and suprasegmental components. Clinicopathologic correlations are emphasized. Prerequisite: permission of instructor; recommended as concurrent course: 563.

**PATH 572 Neuropathologic Reactions (\*) A** Alvord, Shaw, Sumi The reactions of the nervous system, considered in terms of congenital malformations, inflammations, vascular, traumatic, metabolic-toxic, degenerative, and neoplastic diseases peculiar to the nervous system as a whole. Clinicopathologic correlations are emphasized. Prerequisite: permission of instructor; recommended as concurrent course: 563.

**PATH 576 Systemic Pathology II (3) W** Mottet Case examples of gastrointestinal, hematopoietic, lymphoreticular, musculoskeletal, urinary, skin systems, and forensic pathology discussed by students. Relevant laboratory interpretations. Student presentations. Prerequisites: HUBIO 520P or equivalent general pathology course, and permission of instructor.

**PATH 584 Neuropathology Brain Modeling Laboratory (4) S Alvord** Clinically important, functional neuroanatomic study based on embryologic motor, sensory, and association cells and simple reflexes, followed by the more elaborate suprasegmental elements (cerebellum, colliculi, forebrain). Three-dimensional neuroanatomical relationships, critical for understanding neuropathology, can best be obtained in constructing a brain model. Prerequisite: 564, which may be taken concurrently.

**PATH 600 Independent Study or Research (\*) AWSpS** Credit/no credit only.

**PATH 665P Surgical Pathology (\*) AWSpS** Study of fresh current gross surgical specimens and autopsy specimens and their correlation to a patient's clinical course through observation of pathologists working in a large hospital setting. Prerequisite: permission of instructor.

**PATH 666P Renal Pathology Conference (1) AWSpS** Conference-seminar on the histopathologic aspects of renal disease. May be taken concurrently with MED 693P. For third- and fourth-year students. Prerequisite: permission of instructor.

**PATH 667P Renal Pathology Laboratory (\*, max. 6) AWSpS** Laboratory elective for third- and fourth-year medical students. Read current literature, review various renal biopsies and urine sediments, and read standard texts prior to a weekly topic-oriented conference. All students earn 1 credit for one-hour seminar per week. May be taken concurrently with MED 693P. Prerequisite: permission of instructor.

**PATH 668P Skin Pathology (\*) AWSpS** Histopathological aspects of skin diseases are presented and discussed in a group-conference type of seminar. Current dermatologic cases also are discussed. Prerequisites: dermatology elective and permission of instructor.

**PATH 673P Cardiovascular Pathology (\*) W Reichenbach** Spectrum of cardiovascular pathology covered in depth by case studies and gross and microscopic material. Case analysis for presentation, including clinical and gross and microscopic material, prepared outside of class time. Clinicopathologic correlation is emphasized. Prerequisites: HUBIO 540P and permission of instructor and second-year medical student standing.

**PATH 678P Pathology Summer Clerkship (\*, max. 24) S** Dissection, writeup, and literature review of autopsy and surgical pathology specimens by students. Emphasis on etiology and pathogenesis of disease as a biological process. Designed for students who have not completed organ systems as covered in Human Biology courses. Offered at University of Washington Medical Center, Harborview Medical Center, Veterans Administration Hospital, Madigan Army Medical Center, and Swedish Hospital. Prerequisites: HUBIO 520P and completion of first year of medical school.

**PATH 680P Diagnostic Pathology Clerkship—University of Washington Medical Center (\*, max. 24) AWSp** Hagglit Medical student participation in dissection and study of autopsy and surgical pathology cases. Cases worked up under senior staff, including dissection, microscopic examination, and literature review. Attendance at pathology conferences and seminars expected. Prerequisite: third- or fourth-year student standing.

**PATH 681P Diagnostic Pathology Clerkship—Harborview Medical Center (\*, max. 24) AWSp** Reay, Reichenbach For description and prerequisite, see 680P.

**PATH 682P Diagnostic Pathology Clerkship—Veterans Administration Hospital (\*, max. 24) AWSp** Wracko For description and prerequisite, see 680P.

**PATH 683P Diagnostic Pathology Clerkship—Medical Examiner's Office (\*, max. 24) AWSp** Mullen For description and prerequisite, see 680P.

**PATH 684P Diagnostic Pathology Clerkship—Laboratory Pathology of Seattle (\*, max. 24) AWSp** LaZerte For description and prerequisite, see 680P.

**PATH 685P Diagnostic Pathology Clerkship—Sacred Heart Hospital, Spokane (\*, max. 24) AWSp** Haas For description and prerequisite, see 680P.

**PATH 686P Diagnostic Pathology Clerkship—Overlake Medical Center (\*, max. 24) AWSp** Coppin For description and prerequisite, see 680P.

**PATH 687P Diagnostic Pathology Clerkship—Children's Hospital and Medical Center (\*, max. 24) AWSp** For description and prerequisite, see 680P.

**PATH 688P Diagnostic Pathology Clerkship—Madigan Army Medical Center (\*, max. 24) AWSp** For description and prerequisite, see 680P.

**PATH 689P Diagnostic Pathology Clerkship—Valley Medical Center (\*, max. 24) AWSp** For description and prerequisite, see 680P.

**PATH 690P Diagnostic Pathology Clerkship—Northwest Medical Center (\*, max. 24) AWSp** For description and prerequisite, see 680P.

**PATH 691P Diagnostic Pathology Clerkship—General Hospital of Everett (\*, max. 24) AWSp** For description and prerequisite, see 680P.

**PATH 692P Diagnostic Pathology Clerkship—Group Health Cooperative (\*, max. 24) AWSp** For description and prerequisite, see 680P.

**PATH 697P Pathology Special Electives (\*, max. 24)** By specific arrangement, students can have clerkships, externships, or research opportunities at institutions other than the University of Washington. Students who wish to elect this course should obtain Special Assignment forms from the Dean's office at least one month before advance registration. Prerequisite: permission of instructor.

**PATH 700 Master's Thesis (\*) AWSpS**

**PATH 800 Doctoral Dissertation (\*) AWSpS**

## Pediatrics

RR314 Health Sciences

Pediatrics involves the study of physical and behavioral development of man, in health and disease, from conception to maturity.

Instruction is provided through conjoint courses, lectures, conferences, clerkships, and electives. Faculty members participate in teaching the basic curriculum and offer twenty-four electives, including the general pediatrics clerkship at multiple WAMI sites. A residency program is offered with a wide variety of electives in addition to traditional hospital inpatient and clinic experience. Postdoctoral fellowship training is available in many subspecialty areas of pediatrics. The major teaching hospitals are Children's Hospital and Medical Center, University of Washington Medical Center, and Harborview Medical Center.

## Faculty

### Chairperson

Herbert T. Abelson

### Professors

Abelson, Herbert T., 1983, M.D., 1966, Washington (St. Louis); hematology-oncology.

Avner, Ellis D., 1988, M.D., 1975, Pennsylvania; nephrology.

Benjamin, Denis,\* 1975, ‡(Laboratory Medicine, Pathology), M.B.B.Sc., 1968, Witwatersrand (South Africa); laboratory medicine and pathology.

Bennett, Forrest C., 1977, M.D., 1970, Minnesota; child development and handicapped children.

Bergman, Abraham B., 1964, (Health Services), M.D., 1958, Case Western Reserve; general pediatrics.

Bernstein, Irwin D., 1973, M.D., 1967, New York; hematology, oncology.

Chen, Shi-Han, 1972, (Research), M.S., 1963, National Taiwan; Ph.D., 1968, Texas (Austin); pediatric genetics.

Clarren, Sterling K., 1978, M.D., 1973, Minnesota; congenital defects.

Connell, Frederick A.,\* 1976, (Epidemiology, Health Services), M.D., 1972, New York; M.P.H., 1978, Washington; health services.

Corey, Lawrence,\* 1977, ‡(Laboratory Medicine, Medicine, Microbiology), M.D., 1971, Michigan; laboratory medicine.

Crone, Robert K., 1988, (Anesthesiology), † M.D., 1972, Union; anesthesiology.

Deisher, Robert W., 1949, (Emeritus), M.D., 1944, Washington; adolescent medicine.

Emanuel, Irvin,\* 1966, (Epidemiology), † M.A., 1956, Arizona; M.D., 1960, Rochester; M.S.P.M., 1966, Washington; child development and mental retardation.

Fantel, Alan G.,\* 1974, (Research), (Environmental Health), M.A., 1969, Oregon; Ph.D., 1974, Washington; embryology, teratology.

French, James W., 1970, M.D., 1963, Michigan; pediatric cardiology.

Graham, C. Benjamin, 1965, (Radiology), † M.D., 1958, Washington; radiology, pediatrics.

Guntheroth, Warren G., 1958, M.D., 1952, Harvard; pediatric cardiology.

Guralnick, Michael J., 1986, (Psychology), † M.S., 1964, Ph.D., 1967, Lehigh.

Hayden, Patricia W., 1964, (Emeritus), M.D., 1953, Rochester; congenital defects.

Hodson, W. Alan, 1966, M.D., 1959, Manitoba; M.M.Sc., 1964, Ohio State; neonatal biology.

Kelley, Vincent C., 1958, (Emeritus), M.S., 1935, North Dakota; Ph.D., 1942, M.D., 1946, Minnesota; endocrinology.

Labbe, Robert F.,\* 1957, ‡(Laboratory Medicine), M.S., 1949, Ph.D., 1951, Oregon State; laboratory medicine.

Lemire, Ronald J., 1967, M.D., 1962, Washington; teratology.

Mackler, Bruce, 1957, (Emeritus), M.D., 1943, Temple; developmental biology.

McEvoy, Robert C., 1992, M.D., 1973, Minnesota; endocrinology.

Mirkes, Philip E., 1979, (Research), M.S., 1967, Ph.D., 1970, Michigan; teratology.

Neff, John M., 1981, M.D., 1960, Harvard; infectious disease.

Novack, Alvin H., 1979, (Health Services), M.D., 1958, Temple; general pediatrics.

Ochs, Hans D., 1969, M.D., 1962, Friburg (West Germany); immunology.

Osborne, William R. A., 1975, (Research), M.Sc., 1970, Bristol (England); Ph.D., 1972, Kings (England); pediatric genetics.

Pagon, Roberta A., 1975, (Medicine, Ophthalmology), M.D., 1972, Harvard; ophthalmology, pediatrics.

Pious, Donald A.,\* 1964, (Genetics), (Immunology), † M.D., 1956, Pennsylvania; developmental biology.

Reichler, Robert J., 1976, ‡(Psychiatry and Behavioral Sciences), M.D., 1961, Albert Einstein; psychiatry.

Rivara, Frederick P. II,\* 1984, (Epidemiology), M.D., 1974, Pennsylvania; M.P.H., 1980, Washington; general pediatrics.

Robertson, William O., 1963, M.D., 1949, Rochester; general pediatrics.

Rothenberg, Michael B., 1967, (Emeritus), (Psychiatry and Behavioral Sciences), † M.D., 1954, Case Western Reserve; psychiatry and behavioral sciences.

Ruvalcaba, Rogelio H. A., 1966, M.D., 1957, Universidad de Guadalajara (Mexico); endocrinology.

Sanders, Jean E., 1975, M.D., 1970, Iowa; hematology, oncology.

Scott, C. Ronald, \* 1965, M.D., 1959, Washington; pediatric genetics.

Seils, Clifford J., \* 1970, M.D., 1963, Washington; M.P.H., 1968, California (Berkeley); child development and mental retardation.

Shepard, Thomas H. II, \* 1955, (Environmental Health, Obstetrics and Gynecology), M.D., 1948, Rochester; embryology.

Shurtliff, David B., \* 1960, M.D., 1955, Tufts; congenital defects.

Smith, Arnold L., \* 1978, (Medicine, Microbiology), M.S., 1964, M.D., 1964, Missouri; infectious disease.

Smith, Nathan J., \* 1965, (Emeritus), M.D., 1945, Wisconsin; orthopaedics, pediatrics.

Stevenson, James G., 1976, M.D., 1970, Baylor; pediatric cardiology.

Tapner, David, 1983, ‡(Surgery), M.D., 1970, Maryland; surgery.

Truog, William E., 1978, M.D., 1973, Chicago; neonatal biology.

Wedgwood, Ralph J., 1962, (Emeritus), M.D., 1947, Harvard; arthritis.

Wilson, Christopher B., \* 1979, (Immunology), † M.D., 1972, California (Los Angeles); immunology.

Woodrum, David E., 1971, M.D., 1965, Illinois; neonatal biology.

#### Associate Professors

Andrews, Robert G., 1982, M.D., 1976, Minnesota; hematology/oncology.

Bowden, Raleigh A., 1987, M.D., 1987, Washington; hematology/oncology.

Brewer, David K., 1978, ‡(Radiology), M.D., 1972, Harvard; radiology.

Burns, Jane L., 1986, M.D., 1978, Washington; infectious diseases.

Christie, Dennis L., 1988, M.D., 1968, Northwestern; gastroenterology.

Cotner, Thomas, 1982, (Research), Ph.D., 1978, Massachusetts Institute of Technology; developmental biology.

Farrow, James A., 1979, (Medicine), M.D., 1973, Baylor; adolescent medicine.

Farwell, Jacqueline R., 1979, (Medicine), (Neurological Surgery), † M.D., 1972, California (San Francisco); neurological surgery, pediatrics.

Haas, Joel E., \* 1977, ‡(Pathology), M.D., 1967, Pittsburgh; pathology.

Hays, Ross M., \* 1983, ‡(Rehabilitation Medicine), M.A., 1978, Washington; psychiatry, pediatrics.

Herndon, S. Paul, 1991, M.D., 1970, George Washington; pediatric cardiology.

Holm, Vanja A., 1965, M.D., 1954, Karolinska Institut (Sweden); child development and mental retardation.

Jackson, J. Craig, 1982, M.D., 1979, Vanderbilt; neonatology and respiratory diseases.

Jaffe, Kenneth M., \* 1982, ‡(Rehabilitation Medicine), M.D., 1975, Harvard; M.R.M., 1982, Washington; rehabilitation medicine.

Kawabori, Isamu, 1973, M.D., 1966, Washington; pediatric cardiology.

Krane, Elliot J., 1983, ‡(Anesthesiology), M.D., 1977, Arizona.

Lynn, Anne M., 1981, ‡(Anesthesiology), M.D., 1975, Stanford; anesthesiology.

Mayock, Dennis E., 1980, M.D., 1975, Ohio State; neonatology and respiratory diseases.

McLaughlin, John F., 1977, M.D., 1970, Northwestern; congenital defects.

Milstein, Jerrold M., 1977, (Medicine), M.D., 1964, Minnesota; pediatric neurology.

Miser, Angela W., 1991 (Anesthesiology), † M.B.B.S., 1971, London; pediatric anesthesiology.

Miser, James S., 1991, M.D., 1973, Washington; hematology, oncology.

Murray, Jeffrey P., 1980, ‡(Anesthesiology), M.D., 1974, Rochester; anesthesiology.

Moseley, Stephen L., \* 1985, ‡(Microbiology), M.S., 1978, Catholic University of America; Ph.D., 1981, Washington; microbiology.

O'Rourke, Patricia Pearl, 1988, ‡(Anesthesiology), M.D., 1975, Minnesota; anesthesiology.

Pendergrass, Thomas W., 1979, (Epidemiology), M.D., 1971, Tennessee; hematology, oncology.

Ramsey, Bonnie W., 1979, M.D., 1976, Harvard; general pediatrics.

Redding, Gregory J., 1980, M.D., 1974, Stanford; neonatal biology.

Rosenbaum, David M., 1983, ‡(Radiology), M.D., 1977, Albert Einstein; radiology.

Rubens, Craig E., \* 1985, (Microbiology), Ph.D., 1978, Medical University of South Carolina; M.D., 1982, Washington; molecular biology and genetics of infectious diseases.

Sherry, David D., 1984, M.D., 1977, Texas Technical; immunology/rheumatology.

Smith, Elizabeth K., \* 1957, (Emeritus), (Research), (Laboratory Medicine), † M.S., 1939, Michigan; Ph.D., 1943, Iowa; laboratory medicine, pediatrics.

Smith, Mark S., 1977, M.D., 1969, Virginia; adolescent medicine.

Standaert, Thomas A., 1971, (Research), Ph.D., 1970, Duke; neonatal biology.

Sulzbacher, Stephen I., 1966, (Education), (Psychiatry and Behavioral Sciences), † A.M., 1964, Hollins; Ph.D., 1971, Washington; psychiatry and behavioral sciences.

Sybert, Virginia P., 1979, (Medicine), M.D., 1974, State University of New York (Buffalo); genetics and dermatology.

Tyler, Donald C., 1977, (Anesthesiology), † M.D., 1970, Pennsylvania; anesthesiology, pediatrics.

Weinberger, Edward, 1985, ‡(Radiology), M.D., 1979, Harvard; pediatric radiology.

Weiss, Avery H., 1991, ‡(Ophthalmology), M.D., 1974, Miami; pediatric ophthalmology.

#### Assistant Professors

Burchett, Sandra L., 1990, M.D., 1983, Arkansas; immunology/infectious diseases.

DeBeccaro, Mark A., 1989, M.D., 1985, Washington; general pediatrics.

Fouser, Laurie S., 1989, M.D., 1979, Nebraska; nephrology.

Francis, Julie S., 1990, M.D., 1984, Washington; dermatology.

Geyer, J. Russell, 1988, M.D., 1977, Wayne State; hematology/oncology.

Gibson, Ronald L., Jr., 1988, M.D., Ph.D., 1982, Washington (St. Louis); pulmonology.

Grossman, David C., 1990, M.D., 1982, California (Los Angeles); M.P.H., 1990, Washington; general pediatrics.

Haberkern, Charles M., 1988, ‡(Anesthesiology), M.D., 1974, Columbia; anesthesiology.

Jones, Thomas K., 1991, (Acting), M.D., 1981, Jefferson; pediatric cardiology.

Kemper, Kathi, 1988, M.D., 1982, North Carolina; general pediatrics.

Lehman, Robert M., 1989, M.D., 1978, Tufts; adolescent medicine.

Lewis, David B., 1989, M.D., 1981, California (San Francisco); infectious diseases/immunology.

Marshall, Susan G., 1988, M.D., 1980, California (Los Angeles); neonatal and respiratory diseases.

Martin, David I. K., 1991, M.D., 1981, Medical College of Virginia; hematology, oncology.

Massagli, Teresa L., \* 1988, ‡(Rehabilitation Medicine), M.D., 1982, Yale; psychiatry.

Matthews, Dana C., 1989, M.D., 1981, Washington; hematology/oncology.

Murphy, Janet H., 1974, M.B.Ch.B., 1967, Victoria (England); neonatal biology and respiratory disease.

Quan, Linda, 1976, B.M.S., 1969, Dartmouth; M.D., 1971, Washington; general pediatrics.

Sorensen, Gregory K., 1986, ‡(Anesthesiology), M.D., 1978, Nebraska.

Strandjord, Thomas P., 1990, (Acting), M.D., 1983, Johns Hopkins; neonatal biology and respiratory diseases.

Tarr, Phillip I., 1989, M.D., 1980, Yale; gastroenterology/infectious diseases.

Taylor, James A., 1991, M.D., 1980, North Carolina; general pediatrics.

Wallace, Carol A., 1989, M.D., 1973, Michigan; immunology/rheumatology.

Watkins, Sandra L., 1992, M.D., 1981, Texas; nephrology.

Wright, Jeffrey A., 1988, M.D., 1978, Missouri; general pediatrics.

Zelikovic, Israel, 1989, M.D., 1976, Tel-Aviv; nephrology.

#### Lecturers

Holterman, Virgil L., 1977, M.S.W., 1960, Washington; adolescent medicine.

Rees, Jane M., 1991, M.S., 1972, Washington; adolescent medicine.

## Course Descriptions

*Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.*

**PEDS 498 Undergraduate Thesis (\*) AWSpS**  
*Robertson* For medical students. Prerequisite: permission of instructor.

**PEDS 499 Undergraduate Research (\*) AWSpS**  
*Robertson* Participation in various clinical or basic research programs in progress, specifically: child development, developmental biology, human embryology and teratology, medical genetics, infectious diseases, neonatology, neuroembryology, cardiology, endocrinology and metabolism, immunology, respiratory disease. Prerequisite: permission of instructor.

**PEDS 500P Topics in Adolescent Medicine for Medical Professionals (1) WS Farrow** Survey course on adolescent health-care topics, including psychological and physical development, sexuality, gynecological problems, chronic illness and hospitalization, acne treatment, office approach. Prerequisites: 665P, MED 665P, and PBSCI 665P; postdoctoral medical trainees.

**PEDS 501P Survey of Human Growth and Development (1½) AWSp** *Baker (Clinical Training Unit)* Clinical observation and study of normal growth patterns in multiple areas of human development. Observation and increasing participation in patient interview, examination, and treatment plan. Survey of subjects covered in more detail in 502P-503P-504P. Credit not allowed for both 501P and 502P-503P-504P sequence.

**PEDS 505P Preceptorship in Pediatrics (1)** *Robertson* To provide opportunity for first- and second-year medical students to gain personal experience with medical practice situations for pediatricians by being stationed with carefully selected clinical faculty members in their offices. Prerequisite: permission of instructor. Enrollment limited. Coordinator: Department of Pediatrics.

**PEDS 512P Seminars in Human Embryology and Teratology (3) AWSp** *Lemire, Mirkes* Presents in depth discussions of human embryonic-fetal development and malformations that arise, correlations with experimental studies and molecular embryology are included. A laboratory experience is optional. Prerequisite: permission of instructor.

**PEDS 530P Pioneer Square Adolescent Seminar (1)** Clinic-based setting for seminar and interview practice with Pioneer Square adolescents; students learn how to deal with special health problems and other related problems of "street kids" through interviews and observations. Credit/no credit only.

**PEDS 551P Pediatric Electrocardiography (2) W** *Guntheroth* Brief review of the physiology and physics pertinent to clinical electrocardiography is followed by a presentation of terminology and methods in clinical use. Normal electrocardiograms are studied, followed by abnormal tracings, with emphasis on pediatric material, but including adult material such as myocardial infarction. Prerequisite: HUBIO 540P.

**PEDS 611P Pioneer Square Night Clinic (\*, max. 24) AWSpS** *Deisher* One night per week at free clinic in Pioneer Square area. Adolescent and young adult patients, generally poorly educated with low incomes and histories of inadequate health care. Seminars and interviews in conjunction with clinic focus on impact of nontraditional lifestyles and values on health status of individuals.

**PEDS 662P, 663P, 664P, 665P, 666P, 667P, 668P Pediatric General Clerkship (\*, max. 24 each) AWSpS** *Robertson* General introductory pediatric clerkship. One-half in hospital setting; one-half in outpatient department, clinic, or private office. Location preferences are considered; twelve-week clerkship is broader, permits more individual selection of site. Open to all third- and fourth-year medical students. Prerequisite: HUBIO 563P. (Six or twelve weeks, full time. Limit: twenty-four students.)

**PEDS 669P Neonatal Pediatrics—Clerkship (\*, max. 24) AWSpS** *Hodson* Participation in the activities in the newborn and premature divisions; ward rounds, seminars, conferences, and familiarization with certain laboratory techniques, particularly those relating to acid-base balance. Prerequisite: 665P. (Limit: two students.)

**PEDS 670P Pediatric Infectious Diseases (\*, max. 24) AWSpS** *A. Smith* Students see and work up clinic consultations and present in detail to attending physician. Daily rounds include problem-solving discussions and didactic presentations in broad category of infectious diseases. Opportunity for experience in clinical research and laboratory techniques. Prerequisites: 665P or permission; third- or fourth-year medical student standing. (Limit: one student.)

**PEDS 673P Office Practice (\*, max. 12) AWSpS** *Robertson* Opportunity to observe and function in the private office settings of a number of clinical pediatric faculty and to accompany pediatricians as they pursue their daily activities in the community. Prerequisite: 665P.

**PEDS 676P Pediatric Clerkship With the Mentally Handicapped (\*, max. 12) AWSpS** *Ruvalcaba (Rainier School), Doan (Fircrest School)* Total care involvement with mentally handicapped patients, incorporating general pediatric knowledge of mental retardation and neurology, plus other specialties related to mental deficiencies. Additional information may be obtained from Dr. W. O. Robertson, Children's Hospital and Medical Center. Prerequisite: 665P. (Four or six weeks, full-time.)

**CONJ 677P Clinical Allergy and Immunology (\*, max. 12)** See Conjoint Courses.

**PEDS 679P Clinical Problems in Developmental Disabilities (\*, max. 12) AWSpS** *Holm* Experience in multidisciplinary evaluation and management of the handicapped child. Student performs pediatric evaluations, obtains appropriate consultations, observes additional professional assessments (e.g., psychological testing), and plans rehabilitation program. Opportunity to provide parent counseling. Prerequisite: 665P. (Limit: two students.)

**PEDS 680P Pediatric Clinics (\*, max. 24) AWSpS** *Robertson* One to ten half-day sessions may be elected each week for twelve weeks in the following areas: general pediatrics, endocrinology, neurology, immunology, arthritis, cardiology, congenital defects and retardation, well-child, teratology, adolescent medicine, allergy, cystic fibrosis, hematology, prematurity, neonatology, and poison control. Prerequisite: 665P.

**PEDS 681P Pediatric Genetics (\*, max. 24) AWSpS** *Pagon* Clinical focus on evaluation and management of children with genetic disorders. Exposure to genetic counseling, the evaluation of children with hereditary structural defects, and diagnosis and management of children with inborn errors of metabolism. Emphasis on genetic mechanisms that cause human disease. Prerequisite: 665P. (Two, four, six, or twelve weeks. Limit: one student.)

**PEDS 682P Congenital Defects—Clinical Experience (\*, max. 24) AWSpS** *Clarren* Advanced course in pediatrics providing experience in the clinical diagnosis and management of structural and metabolic congenital defects. Prerequisite: permission of instructor. (Limit: one student.)

**PEDS 683P Pediatric Nephrology (8) AWSpS** *Avner, Hickman, Fouser, Watkins, Zelikovich* Four-week elective clerkship at Children's Hospital and Medical Center. Students participate in nephrology and transplant rounds, consult with renal fellows and attendings, and work up patients in renal clinics. Participation in seminars; special course in fluid balance. Prerequisites: third- or fourth-year medical student, 665, and MED 665 or equivalent. (Limit: two students.)

**PEDS 684P Pediatric Pulmonary Medicine (8) AWSpS** *Redding* Respiratory disorders, diagnostic techniques and treatments unique to children in the inpatient, intensive care, and outpatient settings. Application of principles of pulmonary physiology to clinical problems. Students conduct consultations under the supervision of the attending and present a topic of choice. Inpatient rounds and clinics. Prerequisites: 665P, fourth-year medical student standing. (Limit: one student.)

**PEDS 685P Pediatric Hematology and Oncology (\*, max. 24) AWSpS** *Bernstein, Chard, Miser, Pendergrass* One-on-one teaching plus four weekly didactic sessions. Specific training in techniques and interpretation of bone marrow aspirations, intravenous chemotherapy, transfusions, and laboratory techniques of hematologic evaluation. Self-learning programs available. Prerequisite: 665P. (Two, four, six, or twelve weeks, full-time.)

**PEDS 686P Pediatric Cardiology (\*, max. 24) AWSpS** *Guntheroth* Emphasis on physical diagnosis and electrocardiography and on clinical knowledge of diagnostic techniques and surgical possibilities for inpatients and outpatients with cardiovascular problems. Opportunity to observe catheterizations and car-

diovascular operations. Weekly clinics and twice-daily inpatient rounds. Prerequisite: 665P.

**PEDS 687P Advanced Clinical Clerkship in Child Neurology (\*, max. 8) AWSpS** *Milstein* Advanced course in neurology dealing with neurological disease in children. Both inpatient and outpatient experience are included. Prerequisite: 665P.

**PEDS 688P Adolescent Clinic (\*, max. 24) AWSpS** *Farrow* Advanced pediatric clerkship dealing with special problems of the adolescent. Medical students are offered an experience in a multidiscipline clinic. Prerequisite: 665P. (Limit: two students.)

**PEDS 691P Advanced Pediatric Clerkship (\*, max. 24) AWSpS** *Robertson* Inpatient and/or outpatient experience with responsibilities comparable to an intern for patient workup, diagnosis, and care. Available at any one, or combination, of affiliated hospitals, including WAMI units in Idaho, Montana, or Washington. Students interested in this option should make arrangements well in advance of registration. Prerequisite: 665P.

**PEDS 697P Pediatric Special Electives (\*, max. 24) AWSpS** *Robertson* By specific arrangement, for qualified students, special clerkship externship or research opportunities at institutions other than University of Washington. The faculty can advise of possible opportunities. Obtain special assignment form from Dean's office at least one month before preregistration. Prerequisite: permission of instructor.

## Pharmacology

### E401 Health Sciences

Pharmacology is the science that deals with the nature of interactions between drugs and biological systems, and with the applications of such interactions to the treatment of disease. Courses in this field are given for medical, dental, pharmacy, nursing, and graduate students.

## Graduate Program

The Department of Pharmacology offers programs leading to the Master of Science and Doctor of Philosophy degrees. The Master of Science degree is not required of all students, although it may be elected by the student or requested by the department.

### Master of Science and Doctor of Philosophy Degrees

**Admission Requirement:** A baccalaureate degree with a major in any of the sciences, such as biochemistry, chemistry, pharmacy, physics, physiology, psychology, or zoology.

**Graduation Requirements:** Master of Science degree—completion of Graduate School requirements to include: PHCOL 511, 512, 513, and three additional 500-level pharmacology courses. Demonstration of competence in pharmacology and a related discipline, such as biochemistry or physiology, and a thesis. A foreign language is not required.

**Graduation Requirements:** Doctor of Philosophy degree—completion of Graduate School requirements to include: PHCOL 511, 512, 513, 519, and five additional 500-level pharmacology courses plus 6 credits of biochemistry or molecular biology, 6 credits of physiology, and 6 credits chosen from biochemistry, molecular biology, physiology, immunology, or cell biology for a total of 18 credits. Of these 18, 9 must be at the 500 level; the other 9 must be at the approved 400 or 500 level. Students must pass a comprehensive General Examination covering general pharmacology and allied disciplines. A dissertation and Final Examination complete the program.

In the first year, students generally are expected to enroll in biochemistry, pharmacology, and physiology

courses. For each of the academic quarters of the first year, a student may work with a different faculty member. The purpose of rotating among the faculty is to acquaint the student with various areas of pharmacology and research under investigation within the department. With this insight, the student should be better able to decide on a thesis or dissertation topic.

In the second year, while becoming more involved with research, the student continues attending courses in pharmacology and supporting disciplines. Immediately after spring quarter of the second year, the student will be given the written portion of the General Examination. Within three months after having taken the written portion, the student will be given the oral portion of the General Examination. The student's supervisory committee will then recommend that the student (1) continue to pursue the doctoral degree, (2) work for a master's degree, (3) undergo reexamination at a later date, or (4) terminate the program.

Continued work in the department for a Ph.D. or M.S. degree usually involves taking advanced biochemistry, pharmacology, and physiology courses and research.

#### Financial Aid

A limited number of teaching assistantships, research assistantships, and traineeships are available.

#### Correspondence and Information

## Faculty

#### Chairperson

William A. Catterall

#### Professors

Aagaard, George N.\* 1954, (Emeritus), (Medicine),† M.B., 1936, M.D., 1936, Minnesota; clinical pharmacology.

Beavo, Joseph A.\* 1977, Ph.D., 1970, Vanderbilt; mechanism of action of cyclic nucleotides; study of problems involving the roles of several isozymes of cyclic nucleotide-phosphodiesterases in the regulation of cyclic nucleotide action and metabolism; use of enzyme fractionation, monoclonal antibody, selective inhibitor, and molecular genetic techniques.

Camerman, Arthur.\* 1967, (Research), (Medicine),† Ph.D., 1964, British Columbia; relationships between three-dimensional molecular structure and pharmacological activity in anticonvulsant and anticancer drugs; drug design; neurochemistry; X-ray crystallography.

Catterall, William A.\* 1977, Ph.D., 1972, Johns Hopkins; molecular basis of electrical excitability; biochemical studies of purified components of electrically excitable membranes; regulation of excitability of nerve and muscle cells in cell culture; mechanism of action of drugs and toxins that affect electrical excitability; molecular biology of ion channels.

Dorsa, Daniel M.\* 1979, (Psychiatry and Behavioral Sciences), (Medicine),† Ph.D., 1977, California (Davis); neuropeptide pharmacology and gene expression, with special emphasis on vasopressin and neurotensin neuronal systems of the brain; effects of steroid hormones and antipsychotic drugs on the brain.

Horita, Akira.\* 1954, (Psychiatry and Behavioral Sciences),† M.S., 1951, Ph.D., 1954, Washington; drugs acting on the CNS; effects of peptides and drugs of abuse on central cholinergic mechanisms.

Juchau, Mont R.\* 1969, M.S., 1963, Washington State; Ph.D., 1966, Iowa; studies of biotransformation and bioactivation of drugs, carcinogenesis, mutagenesis, and atherosclerosis.

Krebs, Edwin G.\* 1948, (Emeritus), (Biochemistry),† M.D., 1943, Washington (St. Louis); regulation of cellular

lar functions by protein phosphorylation-dephosphorylation; mechanism of action of growth factor receptor protein tyrosine kinases; protein kinase structure-function relationships.

Loomis, Ted A.\* 1947, (Emeritus), M.S., 1941, Ph.D., 1943, Buffalo; M.D., 1946, Yale; toxicology and neuromuscular pharmacology.

McKnight, G. Stanley.\* 1979, Ph.D., 1976, Stanford; signal transduction pathways; use of molecular genetic techniques to study the role of cAMP-dependent protein kinases in the hormonal regulation of gene expression, differentiation, and ion channel function; expression of wild-type and mutant kinase genes in cultured cells and transgenic mice; targeted gene disruption in mice.

Nathanson, Neil M.\* 1979, Ph.D., 1975, Brandeis; molecular studies of neurotransmitter receptors; regulation and function of neurotransmitter receptors and effector proteins; use of immunological and molecular genetic techniques to study expression and regulation of receptors and coupling proteins.

Storm, Daniel R.\* 1978, M.S., 1967, Washington; Ph.D., 1971, California (Berkeley); regulation of animal cells through two-messenger systems, neurobiology; bacterial toxins.

Vincenzi, Frank.\* 1967, M.S., 1962, Ph.D., 1965, Washington; membranes and membrane transport of calcium, regulation of intracellular calcium, and the effects of drugs and cellular aging on these processes; use of human red blood cells as models of normal cellular function and abnormal function in disease; use of microcomputers in teaching and research.

Watson, Eileen L.\* 1972, ‡(Oral Biology), Ph.D., 1970, Utah; mechanisms of salivary gland secretion, with emphasis on G-protein and intracellular messenger regulation, bacterial cAMP regulation and physiological function.

#### Associate Professors

Chavkin, Charles.\* 1984, Ph.D., 1982, Stanford; neurophysiology of opioid peptides; electrophysiological and neurochemical studies of opioid receptor function, opioid receptor diversity, and regulation of receptor function.

Halpern, Lawrence M.\* 1965, Ph.D., 1961, Albert Einstein; mechanisms of action of opiate and nonopiate analgesic drugs, with emphasis on neurophysiological and behavioral assessment of pain and analgesia; actions of antiepileptic drugs, with emphasis on neurophysiological mechanisms.

Hinds, Thomas R.\* 1981, (Research), Ph.D., 1972, Oregon State; membranes, calcium signaling and regulation of intracellular calcium, measurement of intracellular calcium, Alzheimer's disease, essential hypertension and aging.

Lai, Henry C.\* 1981, (Research), Ph.D., 1977, Washington; neurological and behavioral effects of low level non-ionizing radiation (microwaves and 60-cycle electromagnetic field), effects of stress on central cholinergic systems.

Moon, Randall T.\* 1985, Ph.D., 1982, Washington; roles of *wnt* proto-oncogenes (related to *int-1*, wingless) in embryonic development; signal transduction and communication during formation of the nervous system; molecular and cellular aspects of the cytoskeleton in embryos.

Omiecinski, Curtis J.\* 1983, ‡(Environmental Health), Ph.D., 1980, Washington; molecular biology of enzyme systems involved in bioactivation and detoxification of xenobiotics; developmental regulation of expression of genes for these enzymes; effects of chemical inducing agents.

#### Assistant Professors

De Jongh, Karen, 1990, (Research), Ph.D., 1984, New South Wales (Australia); characterization of the molecular components of electrical excitability, mechanism of regulation of ion channels by protein phosphorylation, effector binding and molecular composition,

use of protein microsequencing and peptide synthesis to define the properties of cellular proteins.

Idzerda, Rejean L., 1990, (Research), Ph.D., 1986, Washington; cAMP-dependent protein kinases: gene expression and role in cell biology using molecular genetic approaches in cultured cells, transgenic, and mutant mice.

Liu, Yuechueng, 1991, (Research), Ph.D., 1988, Miami; regulation of axonal growth during development and regeneration of vertebrate neurons.

Scheuer, Todd, 1990, (Research), Ph.D., 1983, Rochester; structure and function of ion channels in electrically excitable cells, regulation of excitability by drugs, toxins and by phosphorylation.

Tempel, Bruce L.\* 1988, (Medicine),† M.A./Ph.D., 1983, Princeton; molecular and genetic basis of membrane excitability, studies of normal and mutant potassium channel genes in transformed cells and in mice (normal, mutant, and transgenic) using electrophysiological, biochemical, and molecular techniques.

Villacres, Enrique C., (Research), 1990, M.D., 1981, Medical College of Wisconsin; signal transduction and role of cAMP cascade proteins in memory and learning, molecular mechanisms underlying autism, Down Syndrome, Alzheimer's disease and other neuropsychiatric disorders.

## Course Descriptions

**PHCOL 401 General Pharmacology I (2-4) A** Juchau, Storm Principles governing drug-receptor interactions, dose-effect relationships, drug absorption, distribution, metabolism, and excretion. Drug toxicity, tolerance, allergy, and drug-induced mutagenesis and carcinogenesis. Drugs utilized as antimicrobial agents and cancer chemotherapeutic agents. Prerequisites: organic chemistry, introductory anatomy, physiology, and biochemistry. For pharmacy students and other undergraduates.

**PHCOL 402 General Pharmacology II (3 or 4) W** Chavkin, Nathanson General pharmacology of drugs affecting the autonomic and central nervous systems. For pharmacy students and other undergraduates. Prerequisite: 401 or permission of instructor.

**PHCOL 403 General Pharmacology III (3 or 4) Sp** Beavo, McKnight General pharmacology of drugs affecting the endocrine and cardiovascular systems. For pharmacy students and other undergraduates. Prerequisites: 401, 402, or permission of instructor.

**PHCOL 434,435 General Pharmacology (2,2) A,W** Halpern, Watson Lectures and demonstrations concerning the action of drugs on physiological and pathological processes with special emphasis on agents of special importance in the practice of dentistry. For dental students.

**PHCOL 498 Undergraduate Thesis (\*) AWSpS** Prerequisite: permission of instructor.

**PHCOL 499 Undergraduate Research (\*) AWSpS** Participation in departmental research projects. Prerequisite: permission of instructor.

**PHCOL 507 Pharmacology Seminar (1) AWSpS** Presentation of comprehensive reports on recent medical and scientific literature in fields of current importance. Research progress reports, and reports on results of completed research. Registration limited to pharmacology students; lectures are open to the public.

**PHCOL 511 General Pharmacology I (4-5) A** Juchau, Storm Consideration of principles governing drug-receptor interactions, dose-effect relationships, drug absorption, distribution, metabolism, and excretion. Introduction to drug toxicity, tolerance, allergy, and drug-induced mutagenesis and carcinogenesis. Drugs utilized as antimicrobial agents and cancer chemotherapeutic agents. Prerequisites: graduate standing, organic chemistry, biochemistry, and introductory anatomy and physiology.

**PHCOL 512 General Pharmacology II (4-5) W** *Chavkin, Nathanson* General pharmacology of drugs affecting the autonomic and central nervous systems. Emphasis on current research approaches to understanding the basic mechanisms of drug action. For graduate students. Prerequisite: 511 or permission of instructor.

**PHCOL 513 General Pharmacology III (4-5) Sp** *Beavo, McKnight* General pharmacology of drugs affecting the endocrine and cardiovascular systems. Prerequisites: 511, 512, or permission of instructor.

**PHCOL 514 Current Topics in Pharmacology (1) AWSp** *McKnight* Current research related to the mechanisms of drug action presented in a seminar format. Presentations include relevant background material as well as detailed experimental results taken from current research articles. Open to medical and graduate students. Prerequisite: permission of instructor.

**PHCOL 515 General Pharmacology Laboratory (\*, max. 9)** Laboratory course for professional and graduate students who wish to do independent laboratory research under the direction of a specific faculty member. Prerequisite: permission of instructor.

**PHCOL 519 Introduction to Laboratory Research in Pharmacology (4) Krebs** On a rotation basis students carry out individual research projects in the laboratories of different faculty members. At the end of each quarter they make formal presentations of their work. For first year graduate students in pharmacology.

**PHCOL 527 Drug Metabolism (3) W** *Juchau, Nelson* Considerations of the biochemical mechanisms for the biotransformation of drugs and foreign compounds. Open to medical and graduate students. Joint with MEDCH 527. Prerequisite: one year graduate, medical, or dental biochemistry, or permission of instructor. (Offered odd-numbered years.)

**PHCOL 528 Neuropsychopharmacology (2) A** *Halpern, Horita* Advanced review and discussion of biochemical and pharmacodynamic mechanisms underlying the central nervous system actions of psychotropic, analgesic, sedative, and antiepileptic drugs. Prerequisites: 511, 512, 513, or permission of instructor. (Offered even-numbered years.)

**PHCOL 529 Membrane Pharmacology (2) W** *Catterall, Nathanson, Tempel, Vincenzi* Advanced consideration of the fundamental properties of biological membranes and the mechanisms of drug and hormone action on enzymes, drug and hormone receptors, and ion transport systems in the plasma membrane of cells. Prerequisites: 511, 512, 513, BIOC 440, 441, or 531 or permission of instructor. (Offered even-numbered years.)

**PHCOL 530 Pathways of Receptor Action (2) A** *Beavo, Krebs, Storm* Advanced consideration of the molecular events between drug or hormone binding to receptors and the resulting responses. Roles played by cyclic nucleotides and other second messengers. Adenylate cyclase, phosphoinositide-mediated regulation, phosphodiesterases and protein kinases. Prerequisites: 511, 512, 513, or permission of instructor. (Offered odd-numbered years.)

**PHCOL 531 Control of Gene Expression (2) Sp** *McKnight, Moon* Advanced discussion of hormone-receptor interactions, structure of active genes, molecular events leading to altered gene expression, posttranscriptional and posttranslational mechanisms of regulating protein abundance and assembly into subcellular structures. Prerequisite: permission of instructor. (Offered odd-numbered years.)

**PHCOL 533 Molecular Toxicology (2) A** *Omicinski* Advanced discussion of molecular mechanisms whereby chemical, physical, and biological agents produce their harmful effects on biological tissue. Joint with ENVH 533. Prerequisites: 511, 512, 513; or ENVH 514, 515; or permission of instructor. (Offered even-numbered years.)

**PHCOL 534 Regulation of Neurotransmission (2) Sp** *Chavkin, Dorsa* Advanced consideration of the effects of drugs on neurotransmission including current topics in receptor pharmacology, transmitter release and reuptake mechanisms, synaptic plasticity, and neurodegeneration. Prerequisites: 401, 402, or permission of instructor. (Offered even-numbered years.)

**PHCOL 550 An Overview of Faculty Research (1) A** Reviews research topics currently being studied in pharmacology. Student reads articles published on each topic. Credit/no credit only. Prerequisite: first-year student standing in pharmacology.

**PHCOL 600 Independent Study or Research (\*) AWSps** Pharmacology graduate students only.

**PHCOL 697P Pharmacology Special Electives (\*) AWSps** By specific arrangement, for qualified students, special clerkship, externship, or research opportunities can at times be made available at institutions other than the University of Washington. The faculty can advise student of opportunities. Students electing this course should obtain from the Dean's office a special assignment form at least one month before preregistration.

**PHCOL 700 Master's Thesis (\*) AWSps** Pharmacology graduate students only.

**PHCOL 800 Doctoral Dissertation (\*) AWSps** Pharmacology graduate students only.

## Physiology and Biophysics

G424 Health Sciences

Physiology deals with the processes, activities, and phenomena incidental to, and characteristic of, life and living organisms. Based upon physics, chemistry, and mathematics, physiology interlocks closely with the other basic medical sciences—anatomy, molecular biology, immunology, biochemistry, pharmacology, and pathology—and with psychology. Research in physiology is accomplished by analyzing the molecular, cellular, and integrative properties of the system under study. For this reason, physiology appeals to students with diverse backgrounds and goals. Courses in this field are given for medical, dental, pharmacy, nursing, and graduate students.

## Graduate Program

The Department of Physiology and Biophysics offers advanced instruction and training leading to both the Master of Science and Doctor of Philosophy degrees. Students aspiring only to the M.S. degree are rarely accepted. Students pursuing a Ph.D. degree in physiology and biophysics may emphasize either molecular and cellular physiology, biophysics, neurobiology, cardiovascular-respiratory physiology, or endocrinology. Studies leading to the doctoral degree require five to six years. The first year is spent in acquiring a broad knowledge of physiology by means of a sequence of courses and laboratory rotations. After selection of a special area of study, the second year is spent taking advanced seminars in the area of specialization and developing a thesis proposal. After admission to candidacy, the latter years are spent in pursuing the area in depth and completing an original research project.

The department participates in the interdepartmental neurobiology and molecular and cellular biology programs. For students wishing a program equally distributed between physiology and psychology, an interdisciplinary Ph.D. degree program in these subjects is administered by the Physiology-Psychology Group of the Graduate School (see Physiology-Psychology).

### Special Requirements

Admission to the physiology program normally requires a baccalaureate degree in biology, molecular biology, genetics, biochemistry, physics, mathematics, psychology, engineering, or chemistry.

Graduate Record Examination scores are required as part of the application.

Students are normally admitted to the graduate program in the autumn quarter. Applications and all relevant material should be submitted by February 1.

### Research Facilities

The department is well equipped to provide instruction and research training in cellular and molecular physiology, neurobiology, membrane biophysics, cardiovascular physiology, respiratory physiology, muscle biophysics, temperature regulation, endocrinology, reproduction, and physiological psychology. The facilities of the Regional Primate Research Center, adjacent to the department, are available to qualified trainees who need to use primates in their research.

## Faculty

### Chairperson

Wayne E. Crill

### Professors

Anderson, Marjorie E.,\* 1971, (Rehabilitation Medicine),† Ph.D., 1969, Washington; physiology of basal ganglia and cerebellum.

Berger, Albert J.,\* 1977, M.A., 1965, Ph.D., 1967, Princeton; Ph.D., 1976, California (San Francisco); neural and chemical control of respiration; neuron structure and function.

Binder, Marc D.,\* 1978, M.S., 1972, Ph.D., 1974, Southern California; neural control of muscle.

Blinks, John R.,\* 1990, M.D., 1955, Harvard; muscle calcium.

Bothwell, Mark A.,\* 1985, Ph.D., 1975, California (Berkeley); molecular and cellular physiology of nerve growth factors.

Brengelmann, George L.,\* 1969, Ph.D., 1967, Washington; temperature regulation, cutaneous blood flow.

Crill, Wayne E.,\* 1967, (Medicine),† M.D., 1962, Washington; properties of spinal and cortical neurons, mechanism of repetitive firing of CNS neurons.

Cook, Daniel L.,\* 1978, (Research), (Medicine),† M.S.M.E., 1970, M.D., 1977, Ph.D., 1980, Washington; insulin secretion.

Detwiler, Peter B.,\* 1976, Ph.D., 1970, Georgetown; cellular and molecular properties of sensory transducers.

Feigl, Eric O.,\* 1969, M.D., 1958, Minnesota; cardiovascular physiology, coronary and cerebral circulation.

Fetz, Eberhard E.,\* 1969, Ph.D., 1966, Massachusetts Institute of Technology; cortical regulation of movement, neuron modeling.

Freund, Peter R., 1980, ‡(Anesthesiology), M.A., 1971, Brown; M.D., 1971, Columbia; temperature regulation, vasomotor control, physiology/biophysics.

Fuchs, Albert F.,\* 1969, M.S., 1961, Drexel; Ph.D., 1966, Johns Hopkins; oculomotor physiology.

Gordon, Albert M.,\* 1964, Ph.D., 1961, Cornell; skeletal muscle physiology.

Hildebrandt, Jacob,\* 1966, (Medicine),† M.Sc., 1960, British Columbia; Ph.D., 1966, Washington; respiratory physiology.

Hille, Bertil,\* 1968, Ph.D., 1967, Rockefeller; receptors and channels of excitable membranes.

Hlastala, Michael P.,\* 1973, (Bioengineering), (Medicine),† Ph.D., 1969, State University of New York (Buffalo); respiratory physiology, inert gas analysis of respiratory function.

Hornbein, Thomas F.,\* 1963, (Anesthesiology),† M.D., 1956, Washington (St. Louis); respiratory physiology adaptive to high altitudes.

Kehl, Theodore H.,\* 1965, (Computer Science and Engineering),† M.S., 1958, Ph.D., 1961, Wisconsin; computer application in physiology.

Kennedy, Thelma T., 1961, (Emeritus), M.S., 1949, Ph.D., 1955, Chicago.

Koerker, Donna J.,\* 1974, (Medicine),† Ph.D., 1970, Michigan; endocrinology, intermediate metabolism of carbohydrates.

Kushmerick, Martin J.,\* 1988, (Bioengineering), (Radiology),† M.D., 1963, Ph.D., 1966, Pennsylvania; muscle contraction and metabolism.

Patton, Harry D., 1947, (Emeritus), Ph.D., 1943, M.D., 1946, Yale.

Rowell, Loring B.,\* 1964, (Medicine), Ph.D., 1962, Minnesota; regulation of blood flow, exercise physiology.

Rubel, Edwin W.,\* 1986, (Psychology), (Neurological Surgery, Otolaryngology),† M.S., 1967, Ph.D., 1969, Michigan State; auditory physiology, developmental neurobiology.

Scher, Allen M., 1954, (Emeritus), Ph.D., 1951, Yale; electrophysiology of heart, baroreceptor reflexes.

Schwartzkroin, Philip A.,\* 1978, (Neurological Surgery),† Ph.D., 1972, Stanford; synaptic properties of hippocampal neurons.

Schwindt, Peter C.,\* 1978, M.S., 1965, Massachusetts Institute of Technology; Ph.D., 1972, Washington; properties of spinal and cortical neurons, mechanisms of repetitive firing and convulsive activity.

Smith, Orville A.,\* 1959, M.A., 1950, Ph.D., 1953, Michigan State; central regulation of cardiovascular function.

Stahl, William L.,\* 1967, (Medicine),† Ph.D., 1963, Pittsburgh; neurochemistry of brain ATPase systems.

Steiner, Robert A.,\* 1977, (Zoology), (Obstetrics and Gynecology),† Ph.D., 1975, Oregon; reproductive physiology; neuroendocrine systems.

Stirling, Charles E.,\* 1968, Ph.D., 1966, State University of New York (Upstate); epithelial transport mechanisms.

Teller, Davida Y.,\* 1965, (Psychology),† Ph.D., 1965, California (Berkeley); vision, psychophysics, development of vision.

Towe, Arnold L.,\* 1957, Ph.D., 1953, Washington; cerebral cortical networks.

Van Citters, Robert L.,\* 1962, (Medicine),† M.D., 1953, Kansas; cardiovascular physiology.

Wiederhielm, Curt A., 1964, (Emeritus), Ph.D., 1961, Washington.

Winn, H. Richard,\* 1983, ‡(Neurological Surgery), M.D., 1968, Pennsylvania; cerebral blood flow.

Winn, Robert K., 1984, (Research), (Surgery),† Ph.D., 1974, Washington; respiratory physiology.

#### Associate Professors

Carlson, Steven S.,\* 1985, Ph.D., 1975, California (Berkeley); molecular and cellular physiology of synapse formation.

Cunningham, Susanna L.,\* 1978, ‡(Physiological Nursing), M.A., 1969, Ph.D., 1977, Washington; hormonal regulation of circulation, hypertension.

Landau, Barbara B., 1964, (Emeritus), (Biological Structure),† M.S., 1949, Wisconsin; Ph.D., 1970, Georgetown.

Skahen, Julia G., 1946, (Emeritus), (Biological Structure),† M.S., 1928, Washington; Ph.D., 1940, Chicago; endocrinology.

#### Assistant Professors

Dahl, Kristine D., 1988, (Research), ‡(Medicine), Ph.D., 1985, Loyola; reproductive physiology.

Howard, Jonathon,\* 1989, Ph.D., 1983, Australian National; physiology of molecular motors in neurons and muscle.

Kroll, Keith,\* 1989, (Research), ‡(Bioengineering), Ph.D., 1983, Washington; cardiac adenosine metabolism and coronary blood flow.

Powers, Randall K., 1988, (Research), M.A., 1976, Texas; Ph.D., 1982, Washington; motor system neurophysiology.

Robinson, Farrel R., 1988, (Research), Ph.D., 1982, Brown; oculomotor physiology.

Sheriff, Don D., 1992, (Research), Ph.D., 1987, Washington; regulation of blood flow; exercise physiology.

Spain, William, 1987, (Medicine),† M.D., 1977, Columbia; properties of cortical neurons; mechanisms of repetitive firing and convulsive activity.

#### Lecturers

Linder, Thomas, 1990, Ph.D., 1971, Washington.

Peterman, Annie, 1989, Ph.D., 1987, Washington.

## Course Descriptions

**CONJ 340-341-342 Human Anatomy and Physiology (4-4-4)** See Conjoint Courses.

**P BIO 405-406 Human Physiology (4-4)** Intensive coverage of physiology through lectures, conference. Winter Quarter: excitable tissue, skeletal muscle; spinal reflex; cardiovascular, respiratory physiology; acid base balance; autonomic nervous system; temperature regulation. Spring Quarter: renal, body fluids; neuroendocrinology; reproductive, gastrointestinal, neurophysiology. Required for dental, graduate nursing, and bioengineering students. Also offered for graduate students.

**P BIO 424 Vision and Its Physiological Basis (5)** Phenomena of human vision; color vision, acuity and spatial vision, light and dark adaptation, visual development. Correlation of human visual functioning with known optical, biochemical, physiological, and anatomical substrates. Joint with PSYCH 424. Recommended: some background in physical or biological science or engineering.

**P BIO 488 Undergraduate Thesis (\*) AWSpS** For medical students. May be repeated for credit. Prerequisite: permission of instructor.

**P BIO 499 Undergraduate Research (\*) AWSpS** For medical students. May be repeated for credit. Prerequisite: permission of instructor.

**P BIO 503 Physiological Instrumentation (4) Fetz, Schwindt** Introduction to linear systems and electronic circuits. Topics include basic circuit theory; step and sinusoidal response of first- and second-order linear systems (RLC circuits, mechanical and hydraulic systems); bode plots; Fourier analysis; operational amplifier circuits. Associated laboratory exercises. Prerequisites: beginning calculus, permission of instructor.

**P BIO 505 Cell Physiology (3)** Cell membranes, membrane proteins, ion channels, ion pumps. Bioelectricity, with emphasis on action potentials in neurons, axons, and cardiac muscle. Signal transduction and intracellular signaling with emphasis on synaptic transmission, sensory receptors, and control of intracellular calcium. Cell motility with emphasis on muscle. Prerequisite: permission of instructor.

**P BIO 506 Neurophysiology (3)** Properties of neurons, processing of synaptic inputs, analysis of sensory and motor systems, and higher functions of the vertebrate central nervous system.

sory and motor systems, and higher functions of the vertebrate central nervous system.

**P BIO 507 Cardiovascular, Renal, Respiratory Physiology (3)** Cardiovascular physiology: the heart, microcirculation, hemodynamics, regional circulation, and reflex integration. Renal physiology: osmolarity, volume, and ion transport. Respiratory physiology: the lung, pulmonary circulation, alveolar ventilation, gas exchange, control of breathing, acid-base regulation, exercise.

**P BIO 508 Introduction to Laboratory Research in Physiology (2-5)** Students participate in the performance of ongoing projects in designated research laboratories. Emphasis is on experimental design, methodology and techniques. For first- and second-year graduate students in physiology and biophysics to provide a basis for future independent research.

**P BIO 509 Neuroendocrinology (3)** Emphasizes the cellular and molecular aspects of several topics in neuroendocrinology, including neuropeptide genes, reproduction, steroid hormone regulation of gene expression, mechanisms of hormone action, endocrine rhythms and neural oscillators. Prerequisites: BIOL 200,202,202; BIOC 440,441,442.

**CONJ 509 Neurochemistry (3)** See Conjoint Courses.

**CONJ 511 Functional Neuroanatomy (4) W** See Conjoint Courses.

**P BIO 515 Neurophysiology Proseminar (2)** Guided survey of the experimental neurobiology literature. Course conducted as seminar, with discussion of assigned papers. May be repeated for credit. Prerequisite: permission of instructor.

**P BIO 516 Physiological Proseminar (7)** Guided survey of the experimental literature in cardiovascular and respiratory physiology. Course conducted as seminar with oral analysis of assigned papers and topics. Prerequisite: permission of instructor.

**P BIO 518 Research Topics in Cardiovascular Physiology (1) WSp Feigl** Graduate students and faculty members present and discuss current literature and research. May be repeated for credit. Prerequisite: permission of instructor.

**P BIO 519 Membrane and Muscle Biophysics Seminar (1) Sp** Detailed discussion and study of current topics in cell membrane function and muscle contraction. May be repeated for credit. Credit/no credit only. Prerequisite: permission of instructor.

**P BIO 520 Physiology Seminar (\*) AWSpS** Selected topics in physiology. May be repeated for credit. Prerequisite: permission of instructor.

**P BIO 521 Biophysics Seminar (\*) AWSpS** Selected topics in biophysics. May be repeated for credit. Prerequisite: permission of instructor.

**P BIO 522 Selected Topics in Respiratory Physiology (1-3) AWSpS Hildebrandt** Advanced seminar on selected topics, including pulmonary mechanics, gas exchange, lung fluid balance, regulation of breathing, pulmonary circulation, respiration in the neonate, liquid breathing, airway dynamics, lung structure and development, cardiopulmonary interactions, exercise physiology. Prerequisite: permission of instructor.

**P BIO 523 Heat Transfer and Temperature Regulation (2-5) S Brengelmann** Thermal exchange between the body surface and the environment. Heat production and distribution within the body. Properties of cutaneous and deep temperature receptors. Neural integration and homeothermy. Prerequisite: permission of instructor. (Not offered every year.)

**P BIO 525, 526, 527 Readings in Advanced Physiology and Biophysics (\*,\*,\*) A,W,Sp,S** Guided study of the experimental literature of physiology and biophysics. Essays are written and discussed with the staff. Emphasis is placed on critical analysis, accuracy of expression, bibliographical technique, and other

factors of good scholarship. Each course may be repeated for credit. Prerequisite: permission of instructor.

**P BIO 539 Sensory Systems I (3)** Towe Reading and analysis of primary sources in sensory neurophysiology. Receptor mechanisms and the somatosensory system are covered. Prerequisites: 506 and CONJ 511 or equivalent. (Not offered every year.)

**P BIO 540 Sensory Systems II (3)** Fuchs Neural processing of visual information and auditory information. Selected topic, such as visual acuity, is introduced by behavioral papers on infants and adults. Neural structures involved in elaborating the sensory property (visual acuity) examined in papers using neurophysiological techniques. (Not offered every year.)

**P BIO 541 Motor Systems I: Peripheral Mechanisms (3)** Binder Critical reading and discussion of research papers on the current physiology of the motor unit, afferent inputs and segmental interneurons that control motor units. Prerequisites: 506 and CONJ 511 or equivalent and permission of instructor. (Not offered every year.)

**P BIO 542 Motor Systems II: Brainstem Mechanisms (3)** Anderson, Fuchs Critical discussion of research papers and resulting concepts regarding the roles of various brainstem systems in controlling somatic and ocular movements. Prerequisites: 506 and CONJ 511 or equivalent and permission of instructor. (Not offered every year.)

**P BIO 543 Motor Systems III: Cerebral Cortex and Cerebellum (3)** Fetz Critical reading and discussion of classical and current papers on motor and premotor cortex, corticospinal system; cerebellar circuitry and function, and cerebrocerebellar relations. Prerequisites: 506 and CONJ 511 or equivalent and permission of instructor. (Not offered every year.)

**P BIO 544 Properties of Neurons (3)** A Schwindt Critical reading and discussion of papers on passive, active, and integrative properties of single invertebrate and mammalian neurons. Provides understanding of how a variety of cellular mechanisms contribute to neuronal discharge patterns. Prerequisites: 506, 515, and CONJ 511 or equivalent and permission of instructor.

**P BIO 547 Readings in Cell Physiology (2 or 3, max. 15)** Hille Reading and discussion of research literature on excitable cells. Emphasis on membrane excitability, transport, contractility, growth factors, and extracellular matrix. A literature research paper may be written for additional credit. Prerequisites: 506 and CONJ 511 or equivalent.

**P BIO 549 Plasticity in the Vertebrate Nervous System (2)** Sp Schwartzkroin Emphasis on mammalian CNS. Examples of anatomical, pharmacological plasticity chosen from literature. Structure changes during development and in adult (hippocampus, spinal cord, nerve-muscle) studied and as correlates of learning. Students responsible for leading class discussion of one topic. Credit/no credit only. Prerequisites: graduate-level courses in neurophysiology and neuroanatomy; understanding of basic neuronal mechanisms.

**P BIO 550 Cortical Potentials (4)** Towe Properties of continuous and evoked potentials and their interactions, including the biophysics of their cellular origin. Prerequisites: 516 and permission of instructor.

**P BIO 559 Integrative Neurophysiology (3)** Towe Interpretation of neurophysiological phenomena from comparative, biophysical, and evolutionary standpoints. Prerequisite: permission of instructor.

**P BIO 560 Muscle and Cell Motility (\*)** Gordon Selected topics in muscle contraction and cell motility. Reading of original papers. Presentations by students and faculty. May be repeated for credit. Credit/no credit only. Prerequisite: permission of instructor. (Not offered every year.)

**P BIO 594 Neurological Study Unit (0.5) AW** Faculty and student discussion of neurological topics illus-

trated with clinical cases or demonstrations include the following: physiology, neuroanatomy, neurology, neuropathology, neurosurgery, and psychiatry. May be repeated for credit. Credit/no credit only. Prerequisite for medical students: HUBIO 532P.

**P BIO 600 Independent Study or Research (\*) AWSpS**

**P BIO 700 Master's Thesis (\*) AWSpS**

**P BIO 800 Doctoral Dissertation (\*) AWSpS**

## Psychiatry and Behavioral Sciences

BB1644 Health Sciences

The department offers course work, clinical training, and research opportunities for undergraduate students, medical students, graduate physicians, and graduate students in allied health programs such as psychology, social work, and psychiatric nursing.

A biobehavioral approach is emphasized, which incorporates intrapersonal, interpersonal, and sociocultural factors. Intrapersonal factors include emotion, perception, cognition, psychodynamics, neurochemistry, neuroanatomy, neurophysiology, and the developmental and aging processes. Interpersonal factors focus upon dyadic, familial, and group interactions. Sociocultural factors include the cultural, social, institutional, and community systems as well as the environment and epidemiology of health and disease.

## Undergraduate Program

Contact: Richard Veith, Chairman, Undergraduate Education

John Carr, Nicholas Ward, Pre-clinical Curriculum

Maryonda Scher, Clinical Clerkships

A variety of courses in the behavioral sciences and psychiatry are available to students during their undergraduate years. Included among these are psychosocial growth and development, including aging and adult development, preventive methods for mental health, cross-cultural mental health, clinical psychiatry, and behavioral medicine.

## Graduate Program

The medical school curriculum is divided into a core (basic) curriculum and an elective curriculum. Within its core curriculum the Department of Psychiatry and Behavioral Sciences offers material covering learning theory, cognition, memory, perception, neuropharmacology, social growth and development, epidemiology of health and disease, psychopathology, psychotherapy, and neuropsychiatry and behavioral medicine, as well as training in interviewing skills and assessment techniques. Its elective program includes a variety of clinical experiences and advanced didactics and seminars designed to further the knowledge and skills developed within the basic curriculum. In addition, the department encourages research and other scholarly pursuits by students in areas of interest to them. Stipends are available for research studies.

### Residency Training in Psychiatry

Contact: Johan Verhulst

A four-year residency for medical school graduates and a three-year post-internship residency prepares physicians for Specialty Board Certification in Psychiatry. Clinical rotations on various inpatient, outpatient, and consultation/liaison services are augmented by individual supervision and didactic lectures. With the program's integrative orientation, residents become

proficient in psychotherapy, psychopharmacology, and community liaison with patients of all ages. Fellowships in child, geriatric, and community psychiatry are available, as well as in substance abuse and various other specialty areas.

### Clinical Psychology Internship and Postdoctoral Training

Contact: Joseph Becker

A one-year internship in clinical psychology approved by the American Psychological Association is offered as an interdepartmental program. This internship is open to candidates for the doctorate in clinical psychology from graduate programs approved by the American Psychological Association. Postdoctoral fellowships for advanced clinical and research training in behavioral medicine, broadly construed, are also offered.

## Faculty

### Chairperson

Gary J. Tucker

### Professors

Becker, Joseph,\* 1965, (Psychology),† M.A., 1952, George Washington; Ph.D., 1958, Duke; psychology.

Bowden, Douglas M., 1969, M.D., 1965, Stanford.

Carr, John E.,\* 1963, (Psychology),† M.A., 1958, Ph.D., 1963, Syracuse; clinical psychology.

Chapman, C. Richard,\* 1971, (Psychology), (Anesthesiology),† M.A., 1968, Ph.D., 1969, Denver; psychology.

Dikmen, Sureyya S.,\* 1974, ‡(Neurological Surgery, Rehabilitation Medicine), M.A., 1967, Michigan; Ph.D., 1973, Washington; neuropsychology.

Dodrill, Carl B., 1973, (Neurological Surgery),† M.S., 1967, Ph.D., 1970, Purdue; clinical psychology.

Doerr, Hans O.,\* 1967, (Psychology),† M.S., 1962, Ph.D., 1965, Florida State; clinical psychology.

Dorsa, Daniel M.,\* 1987, (Pharmacology, Medicine),† Ph.D., 1977, California (Davis).

Dunner, David L., 1978, M.D., 1965, Washington (St Louis).

Dworkin, Samuel F.,\* 1974, (Oral Medicine),† D.D.S., 1958, Cert., 1963, Ph.D., 1969, New York; dentistry and clinical psychology, pain, psychosomatic and illness-related behavior.

Hampson, John L., 1960, (Emeritus), M.D., 1946, Johns Hopkins.

Heiman, Julia R.,\* 1980, Ph.D., 1975, State University of New York (Stony Brook); clinical psychology.

Heston, Leonard L., 1990, M.D., 1961, Oregon.

Horita, Akira,\* 1954, (Pharmacology),† M.S., 1951, Ph.D., 1954, Washington; biochemical and autonomic pharmacology.

Johnson, Merlin H., 1955, M.D., 1947, Iowa.

Katon, Wayne J., 1979, (Family Medicine), M.D., 1976, Oregon.

Kogan, Kate L., 1956, (Emeritus), M.A., 1935, Ph.D., 1943, Columbia.

Linehan, Marsha M.,\* 1977, ‡(Psychology), M.A., 1970, Ph.D., 1971, Loyola (Chicago); behavior assessment and therapy, suicide and parasuicide, assertion training, behavior therapy with women.

Martin, Donald C.,\* 1972, ‡(Biostatistics), M.S., 1961, Ph.D., 1968, Florida State; statistical computing, randomization tests, approximations for probability functions.

Martin, Joan C.,\* 1972, (Psychology), M.S., 1962, Ph.D., 1965, Florida State; experimental psychology.

Meltzoff, Andrew N.,\* 1984, ‡(Psychology), Ph.D., 1976, Oxford; social and early speech language development and their interaction.

Prinz, Patricia N.,\* 1976, (Physiological Nursing), Ph.D., 1969, Stanford; pharmacology.

Raskind, Murray A., 1973, M.D., 1968, Columbia.

Reichler, Robert J., 1976, (Pediatrics), M.D., 1961, Albert Einstein.

Robinson, Nancy M.,\* 1974, (Pediatrics, Psychology), M.A., 1953, Ph.D., 1958, Stanford; psychology.

Rothenberg, Michael B., 1967, (Emeritus), (Pediatrics), † M.D., 1954, Case Western Reserve.

Roy-Byrne, Peter P., 1986, M.D., 1978, Tufts.

Samson, Herman H.,\* 1977, (Psychology), Ph.D., 1968, Waterloo; behavioral pharmacology, addictive processes.

Schwartz, Pepper J.,\* 1972, ‡(Sociology, Women Studies), M.A., 1968, Washington (St. Louis); M.Phil., 1970, Ph.D., 1974, Yale; family, human sexuality, field methods.

Streissguth, Ann P., 1963, M.A., 1959, California (Berkeley); Ph.D., 1964, Washington; psychology.

Teri, Linda, 1984, Ph.D., 1980, Vermont; clinical psychology.

Townes, Brenda D.,\* 1961, (Anesthesiology, Psychology), M.A., 1958, Mills; Ph.D., 1970, Washington; psychology.

Trupin, Eric W., 1974, M.A., 1973, Ph.D., 1974, Wyoming; psychology.

Tucker, Gary J., 1985, M.D., 1960, Case Western Reserve.

Turner, Judith A., 1980, (Rehabilitation Medicine), † M.A., 1975, Ph.D., 1979, California (Los Angeles); clinical psychology.

Veith, Richard C., 1977, M.D., 1973, Washington.

Vitaliano, Peter P.,\* 1977, (Psychology), M.S., 1973, Ph.D., 1975, Syracuse; psychology.

Walker, R. Dale, 1977, M.D., 1972, Oklahoma.

#### Associate Professors

Armstrong, Hubert E., 1966, (Education, Psychology), Ph.D., 1963, Syracuse; clinical psychology.

Avery, David H., 1980, M.D., 1972, Washington (St. Louis).

Barnes, Robert F., 1977, M.D., 1973, Utah.

Borson, Soo, 1979, M.D., 1969, Stanford.

Calsyn, Donald A., 1980, Ph.D., 1979, Washington; educational psychology.

Radant, Allen, 1990, (Acting), M.D., 1985, California (Davis).

Rimmele, Carl T., 1991, (Acting), Ph.D., 1988, New Mexico; clinical psychology.

Rosengren, David B., 1990, (Acting), Ph.D., 1988, Montana.

Simon, Gregory E., 1988, (Acting), M.D., 1982, North Carolina.

Tarver, David J., 1989, (Acting), Ph.D., 1988, South Dakota.

Uldall, Karina K., 1991, (Acting), M.D., 1987, Missouri.

#### Lecturers

Backus, Frank I., 1968, M.D., 1962, Washington.

Brinkley, John R., 1975, M.D., 1973, Wisconsin.

Dagadakis, Christos S., 1979, M.D., 1974, M.P.H., 1975, Washington.

O'Connor, Elsa, 1990, Ed.D., 1985, Seattle.

Wright, Robert G., 1959, (Emeritus), M.D., 1954, Rochester.

## Course Descriptions

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

**PBSCI 451 Principles of Personality Development (2) Sp Doerr** Development of the personality from infancy through advanced age traced to its physiologic, experiential, and cultural sources with emphasis on psychodynamic concepts and behavior.

**CONJ 475 Alcoholism: A Course for Medical Students in the Allied Health Sciences (2) Sp** See Joint Courses.

**PBSCI 498 Undergraduate Thesis (\*) AWSpS** Opportunity to complete work on psychiatric research projects or to pursue a specific psychiatric topic in depth, for instance, through library research. May be repeated for credit. Prerequisite: permission of responsible faculty member. (Four or six weeks, full-time, or equivalent part-time.) Entry Code required.

**PBSCI 499 Undergraduate Research (\*, max. 15) AWSpS** Opportunities are available for participation in a wide variety of ongoing research in the behavioral sciences and clinical psychiatry, or for the development of an individual investigative project under the supervision of a faculty sponsor. May be repeated for credit. Prerequisite: permission of faculty sponsor. (Two, four, six, or twelve weeks.) Entry Code required.

**PBSCI 525P Forensic Issues in Mental Illness (3) Sp Goldenberg** Concentration on major areas in psychology and law (e.g., criminal, civil); several outside speakers from professional, legal, judicial, and psychiatric communities; lectures followed by discussion groups; and case presentations. Background in psychopathology and diagnosis recommended. For medical students, graduate students in the allied health sciences, and advanced law students.

**PBSCI 530P Developmental Psychoanalytical Therapy (2) Sp Schimmelbusch** Continuation of study of mental functioning from a developmental point of view. How failures of psychological development lead to various psychiatric pathological states and how psychoanalytic treatment reinstitutes normal development. Prerequisite: 535.

**PBSCI 535P Basic Concepts of Modern Psychoanalysis (2) A Schimmelbusch** Childhood developmental stages studied in light of inborn and environmental determinates. Correlating developmental phases with all aspects of adult personality functioning. A hierarchy of different models of the mind used to explicate personality functioning on a clinical case discussion level. Prerequisite: medical or graduate student standing, or permission of instructor.

**PBSCI 547P Families and Family Therapy (2) Verhulst** Theoretical and practical seminar with review of literature and discussion of videotapes of families in therapy, including: family through history, what is a healthy family? the developmental stages, evaluation of families in distress, couple therapy, family therapy, nonspecific and specific systems of intervention. Fourth-year medical students.

**PBSCI 548P Aging and Adult Development (1-3) Asp Vitiello** Aging in Western technologically advanced societies frequently involves losses in status, stamina, and economic and social supports. Consideration given to losses among the aged. Students select projects in the area of aging and work at their own levels of expertise and sophistication. Seminar format with guided reading.

**PBSCI 557 Behavioral Medicine (2) W Vitaliano** Theory and technique of behavioral medicine and behavioral modification as applied to medical practice. Behavioral techniques in management of various chronic and acute disorders. Open to second-, third-, and fourth-year medical students and graduate students in clinical psychology; others by permission of instructor.

**PBSCI 562P Principles of Hypnosis (2) Sp Dworkin** History and theory of hypnosis. Induction techniques. Application to the treatment of emotional and physical problems. Medical and dental students. Entry Code required.

**PBSCI 575P Community Psychiatry Seminar (2) AWSp Trupin** Preparation for mental-health work in community agencies: cultural, social, and economic factors in mental illness and provision of services; history of community mental health; direct and indirect intervention; consultation and supervision; agency organization and leadership; psychiatric epidemiology; prevention; forensic psychiatry. Lectures, readings, case discussions.

**PBSCI 591P Seminars and Conferences in Psychiatry (\*) AWSpS** A variety of topics that can be arranged to accommodate the particular interests of students. Prerequisite: permission of responsible faculty member. Entry Code required.

**PBSCI 592P Behavioral Medicine Study Unit (\*) AWSp** A variety of topics is presented under the sponsorship of the Department of Psychiatry and Behavioral Sciences, with participation of faculty members from departments throughout the University. May be repeated for credit. Open to medical and graduate students. Entry Code required.

**PBSCI 664P Basic Clerkship in Ambulatory Services, HCMHC, or Clinic II (12) AWSpS Brinkley** Opportunity to experience outpatient psychiatric ambulatory services. Focus on improving interviewing skills and developing an interviewing style and content appropriate to patients with psychiatric dysfunction; gaining familiarity with psychopharmacology; exposure to problems seen in psychiatric emergency medicine. (Six weeks, full-time. Limit: two students.)

**PBSCI 665P Basic Clinical Clerkship (8, max. 24) AWSpS Backus, Bierut, Brinkley, Dagadakis, Scher** Inpatient and outpatient clerkship in psychiatry. Students have primary responsibility under the direction of attending psychiatrists and residents for diagnosis and care of patients at University of Washington Medical Center, Harborview Medical Center, or Veterans Administration Hospital. Emergency room, crisis intervention, and consultation service experiences appropriate to patients with psychiatric dysfunction, gaining familiarity with psychopharmacology; exposure to psychiatric emergency medicine. (Six weeks, full-time.)

**PBSCI 666P WAMI Psychiatry and Behavioral Sciences Clerkship (12) AWSpS Knight-Richardson** Rotation aims to increase student's skills in basic psychiatry, social psychiatry, transcultural psychiatry, and office management. Orientation is around the diagnosis, treatment, and clinical management of White, Aleut, Indian, and Eskimo children and adults in outpatient and community settings. Third-, fourth-year medical students. Prerequisite: HUBIO 563P. (Limit: three students.)

**PBSCI 670P Clerkship in Consultation/Liaison Psychiatry UMMC (\*, max. 24)** Assessment of patients with major psychosocial problems associated with physical disease, including: problems stemming from the way the illness is perceived and experienced,

liaison with other clinical disciplines on complex diagnosis and treatment of problems. Prerequisites: HUBIO 563P, 664P, 665P, 666P.

**PBSCI 671P Clerkship in Consultation/Liaison Psychiatry HMC (\*, max. 24) Wilson** Prerequisites: HUBIO 563P, 664P, 665P, 666P.

**PBSCI 672P Elective Clerkship in Primary Care Psychiatry at Boise VAMC (8 or 12) Blackburn, Dewey, Leone, Marsh** Assessment and treatment of patients with acute psychiatric problems in a primary care/rural setting. Consultation work on general medicine and surgery; assessment and dealing with outpatient psychiatric problems as they initially present. Initial evaluations, crisis intervention strategies, and brief therapies stressed. Prerequisites: 664P, 665P, 666P. (Four to six weeks; UW students only.)

**PBSCI 673P Outpatient Psychiatry Elective (\*, max. 24) AWSpS Brinkley** Offered at HCMHC, the primary outpatient psychiatric facility for Harborview Medical Center. Students function as subinterns, conducting diagnostic interviews, initiating and managing pharmacotherapeutic treatment regimens, and providing crisis intervention, under the supervision of the full-time attending at Psychopharmacology Clinic. Prerequisite: 664P, 665P, or 666P. (Four to six weeks, full-time.)

**PBSCI 675P Clerkship in Consultation/Liaison Psychiatry American Lake (8 or 12) Harris, Lampe, Risse** Assessment and treatment of patients with acute and chronic medical illness: COPD, cardiac disease, cancer, neural diseases such as M.S., Huntington's chorea, and blindness. Psychosocial implications for patients, families, and impact on staff. Prerequisite: 664P, 665P, or 666P. (Four to six weeks, full-time.)

**PBSCI 676P Inpatient Clerkship in Psychiatry at American Lake VA (8 or 12) Martin, Neurenberger, Taylor, Verhey** For medical students with a defined interest in psychiatry who wish to develop their knowledge and skills in the evaluation, management, and treatment of a wide range of acute and chronic psychiatric conditions requiring inpatient hospital treatment. Prerequisite: 664P, 665P, or 666P. (Four to six weeks, full-time.)

**PBSCI 677P Alcohol and Drug Treatment Clerkship at American Lake VA (8 or 12) Lim** Student assists in every phase of the substance-abuse treatment, including admission interviews, patient evaluation, problem identification, group and individual psychotherapy, assertiveness training, anger control, human sexuality, medical evaluation and treatment, couples therapy, discharge and aftercare planning. Experience primarily clinical. Prerequisite: 664P, 665P, or 666P. (Four to six weeks, full-time.)

**PBSCI 678P Clerkship in Psychiatric Long-Term Care and Rehabilitation (\*, max. 12) Risse, Verhey, Zemmer** Two- or six-week clerkship provides learning experiences in rehabilitation of long-term psychiatric patients with medical illness. Multidisciplinary team approach, working with families affected by catastrophic illness, diagnostic skills. Spectrum of diseases (cardiovascular, Huntington's, organic brain syndrome) is such that physical rehabilitation is not an emphasis. Prerequisites: HUBIO 563P, 664P, 665P, 666P.

**PBSCI 680P Clerkship in Emergency Psychiatry (\*, max. 24) Dagadakis** Emphasis on clinical evaluation, acute management, and treatment planning for individual patients. Experience in coordinating these activities with other emergency room personnel, and various hospital and community resources. Emphasis on skills useful to physicians in any specialty. Third- and fourth-year medical students only. Prerequisite: either 664P, 665P, or 666P. (Four to six weeks, full-time.)

**CONJ 680P Detoxification and Rehabilitation Programs for Alcoholism and Drug Abuse (\*, max. 16)**

*Walker* See Conjoint Courses. (Four or six weeks, full-time; medical students only.)

**PBSCI 685 Geriatric Psychiatry Clerkship (\*, max. 12)** *Lampe* Two- or six-week elective. Participation in the evaluation and care of older persons with psychopathology, such as intellectual impairment and depression, in a variety of settings. Emphasis on improving clinical skills regarding diagnosis and treatment of common behavioral problems in the elderly. Prerequisite: 664P, 665P, or 666P.

**PBSCI 688P Subinternship in General Psychiatry (\*, max. 16)** *Backus, Scher* Students function as interns under the supervision of house staff and attending psychiatrists. Further development of their diagnostic and therapeutic skills emphasized. Special areas of interest, such as family intervention, substance abuse, psychoses, neuropsychiatry, community psychiatry, administration, research pursued. Prerequisites: 664P, 665P, or 666P. (Four or six weeks, full-time.)

**PBSCI 690P Clerkship in Neuropsychiatry (\*, max. 24)** *Neppa* Assessment of patients with possible organic causes for behavioral/psychopathological problems. Includes evaluation/management of refractory psychoses; epilepsies with behavioral problems; metabolic/endocrine problems presenting psychiatrically; psychopathology caused by lesions in cerebral cortex/limbic system; psychopharmacological manipulation of underlying neurotransmitter disease. Provides student intensive exposure to neuropsychiatry. Prerequisite: 664P, 665P, or 666P. (Four, six, or eight weeks, full-time; preceptor approval required.)

**PBSCI 696P Advanced Clerkship in Child Psychiatry (\*, max. 24)** *AWSpS Varley* Provides students an opportunity to participate in evaluations and treatment in both outpatient and inpatient settings. Experiences in specialized clinics are also available. It is suggested that the student contact the instructor prior to enrollment. Prerequisite: 664P, 665P, or 666P. (Four, six or twelve weeks, full-time. Limit: two students.)

**PBSCI 697P Psychiatry Special Electives (\*, max. 24)** *Scher* By special arrangement, clerkships, externships, and research opportunities can be made available at the University and other institutions. Students obtain permission from Dr. Hunt before obtaining a special assignment form from the Dean's office one month before advance registration. Students contact affiliating institutions. Does not fulfill the requirement for a basic clerkship in psychiatry. Entry Code required.

## Radiation Oncology

NN106 University of Washington Medical Center

Radiation oncology is the branch of clinical medicine that utilizes high-energy radiation to treat disease, usually cancer. The department consists of three divisions: clinical oncology, medical radiation physics, and experimental cancer biology. Training programs are offered in all three divisions. Research programs in the Department of Radiation Oncology are aimed at the physical and biological mechanisms of interactions between ionizing radiations and normal and malignant tissues.

## Faculty

### Chairperson

Thomas W. Griffin

### Professors

Graham, Michael M.,\* 1980, (Medicine), (Radiology),† M.A., 1969, Ph.D., 1973, California (Berkeley); M.D., 1976, California (San Francisco); nuclear medicine.

Griffin, Thomas W., 1976, M.D., 1970, Nebraska (Omaha); therapeutic radiology.

Groudine, Mark T.,\* 1979, (Pathology), M.D., 1975, Ph.D., 1976, Pennsylvania; molecular biology.

Krohn, Kenneth A.,\* 1981, (Chemistry), (Radiology),† Ph.D., 1971, California (Davis); nuclear medicine.

Laramore, George E., 1979, M.S., 1966, Ph.D., 1969, Illinois (Urbana); M.D., 1976, Miami; therapeutic radiology.

Rasey, Janet S., 1972, M.S., 1965, Oregon State; Ph.D., 1970, Oregon; radiation biology.

Shuman, William P., 1979, (Radiology),† M.D., 1973, New York (Upstate); ultrasound and computed tomography.

Wootton, Peter, 1964, B.Sc. (Hon.), 1944, Birmingham (England); medical radiation physics.

### Associate Professors

Austin-Seymour, Mary M., 1988, M.D., 1978, Chicago; therapeutic radiology.

Griffin, Brian R., 1985, (Neurological Surgery),† M.D., 1981, Nebraska; therapeutic radiology.

Kalet, Ira J.,\* 1982, (Computer Science and Engineering, Biological Structure), M.A., 1967, Ph.D., 1968, Princeton; particle physics.

Pelton, James G., 1984, (Clinical), M.D., 1981, Nebraska; therapeutic radiology.

Phillips, Mark H., 1991, Ph.D., 1982, Wisconsin; medical radiation physics.

Russell, Kenneth J., 1985, M.D., 1979, Harvard; therapeutic radiology.

Wilbur, D. Scott, 1990, Ph.D., 1978, California (Irvine); radiochemistry.

### Assistant Professors

Koh, Wui-jin, 1988, M.D., 1984, Loma Linda; therapeutic radiology.

Livesey, John C., 1985, Ph.D., 1982, Minnesota; radiation biology.

## Course Descriptions

*Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.*

**R ONC 499 Undergraduate Research (\*, max. 24)** *B. Griffin, Koh, Laramore, Livesey, K. Russell* Opportunities in clinical or laboratory investigation in radiation oncology. Participation of medical students in ongoing projects or new projects designed for the students. Credit/no credit only. Prerequisites: medical student standing and permission of Dr. Koh.

**R ONC 505, 506 Radiological Physics I, II (3,3)** *Wootton* Application of physical concepts, methodology, and instrumentation in the study, production, and mensuration of ionizing radiations and their interactions with biological materials. Prerequisite: permission of instructor.

**R ONC 517 Radiation Dosimetry (3) A** *Kalet* Examines the interactions of ionizing radiations with matter and the physical principles involved in their measurement in greater depth than does 505. For students contemplating a career in research concerned with ionizing radiation; assumes a sound background in physics. Prerequisite: permission of instructor.

**R ONC 685P Clinical Cancer Management (\*, max. 8) AWSpS** *Koh* Supervised participation in clinical management of the patient with cancer. Includes clinical evaluation, planning of treatment and follow-up examination of patients. Daily teaching conferences. Prerequisite: MED 665P or permission of instructor. (Four weeks.)

**R ONC 697P Radiation Oncology Special Elective (\*, max. 24) AWSpS** By specific arrangement for qualified students, special clerkship, externship or research opportunities can be made at institutions other

than the University of Washington. Students should obtain a "Special Assignment" form from the Dean's Office at least one month before advance registration. Prerequisite: permission of instructor.

## Radiology

RR215 University of Washington Medical Center

Diagnostic radiology is that branch of clinical medicine that uses information obtained from imaging modalities, and, more recently, data acquired from NMR spectroscopy, to detect and to characterize states of disease. Historically, X-rays were the first and the primary energy source utilized for these purposes; X-rays continue today to be a mainstay of this discipline. More recently, the armamentarium has grown to include diagnostic ultrasound, computed tomography, nuclear magnetic resonance, and positron emission tomography. In nuclear medicine, one of radiology's major subspecialties, radionuclides are employed for both diagnostic and therapeutic purposes. The Department of Radiology consists of two clinical divisions, diagnostic radiology and nuclear medicine. Both divisions are ably supported by technologists and faculty members in the field of radiation physics. Instruction in radiology is provided for medical students and residents as well as for other physicians. The faculty and its teaching and research activities are represented in each of the hospitals affiliated with the University.

## Faculty

### Chairperson

Albert A. Moss

### Professors

Bassingthwaite, James B.,\* 1975, †(Bioengineering, Quantitative Ecology and Resource Management), M.D., 1955, Toronto; Ph.D., 1964, Mayo Graduate School of Medicine; computer analysis of transport mechanisms in blood tissues.

Bush, William H., Jr., 1991, M.D., 1967, Oregon; urology.

Chesnut, Charles H. III,\* 1973, (Nutritional Sciences, Orthopaedics), (Medicine),† M.D., 1966, Florida; nuclear medicine.

Effmann, Eric L., 1991, M.D., 1967, Indiana; pediatric radiology.

Figley, Melvin M.,\* 1958, (Emeritus), (Medicine),† M.D., 1944, Harvard; general and chest radiology.

Freeny, Patrick C., 1991, M.D., 1968, Oklahoma; abdominal radiology.

Godwin, J. David, 1986, M.D., 1971, Stanford; pulmonary radiology.

Graham, C. Benjamin, 1965, (Pediatrics),† M.D., 1958, Washington; pediatric, neonatal radiology.

Graham, Michael M.,\* 1980, (Medicine), (Radiation Oncology),† M.S.E.E., 1966, M. Biorad., 1969, Ph.D., 1973, California (Berkeley); M.D., 1979, California (San Francisco); nuclear medicine, PET.

Harley, John D., 1975, M.D., 1966, Washington (St. Louis); general radiology and angiography.

Kim, Yongmin,\* 1990, †(Electrical Engineering), Ph.D., 1982, Wisconsin (Madison); computer engineering, image processing/development, PACS workstations.

Krohn, Kenneth A.,\* 1981, (Chemistry), (Radiation Oncology),† Ph.D., 1971, California (Davis); radiochemistry.

Kushmerick, Martin J.,\* 1988, (Physiology and Biophysics),† (Bioengineering), M.D., 1963, Ph.D., 1966, Pennsylvania; metabolic imaging NMR spectroscopy.

Lewellen, Thomas K.,\* 1972, (Bioengineering, Electrical Engineering), Ph.D., 1972, Washington; medical imaging physics.

Mack, Laurence A., 1978, (Obstetrics and Gynecology, Orthopaedics), M.D., 1971, Illinois; ultrasonography, computed tomography.

Maravilla, Kenneth R., 1986, (Neurological Surgery),† M.D., 1970, State University of New York; neuroradiology.

Moss, Albert A., 1984, M.D., 1967, State University of New York (Syracuse); gastrointestinal radiology, computed tomography.

Nelp, Wil B., 1962, (Medicine),† M.D., 1955, Johns Hopkins; nuclear medicine.

Nelson, James A., 1986, (Bioengineering), M.D., 1965, Harvard; gastrointestinal radiology, imaging research.

Robertson, William D., 1990, M.D., 1969, British Columbia; neuroradiology.

Rohrmann, Charles A., Jr., 1975, M.D., 1966, Washington; gastrointestinal radiology.

Shuman, William P., 1979, (Radiation Oncology),† M.D., 1973, New York (Upstate); ultrasound, computed tomography and MRI.

#### Associate Professors

Brewer, David K., 1978, (Pediatrics), M.D., 1972, Harvard; pediatric radiology, angiography, computed tomography.

Cerqueira, Manuel, 1983, (Medicine), M.D., 1976, New York; nuclear medicine.

Cohen, Wendy, 1987, (Neurological Surgery), M.D., 1975, Harvard; neuroradiology.

Coldwell, Douglas M., 1987, Ph.D., 1975, Rice; M.D., 1979, Texas; angiography/interventional radiology.

Eary, Janet F., 1986, (Pathology), M.D., 1980, Michigan State; nuclear medicine.

Eskridge, Joseph M., 1987, (Neurological Surgery),† M.D., 1980, Kentucky; neuroradiology.

Gillespy, Thurman III, 1990, M.D., 1980, Thomas Jefferson Medical College; musculoskeletal radiology.

Goodsitt, Mitchell M.,\* 1986, Ph.D., 1982, Wisconsin; medical physics, ultrasound, computed tomography.

Griep, Robert J., 1967, (Medicine),† M.D., 1958, Texas; nuclear medicine.

Hayes, Cecil E., 1991, Ph.D., 1973, Harvard; physics, MRI.

Marglin, Stephen I., 1980, M.D., 1968, Yale; chest and oncologic radiology.

Ott-Ralph, Susan M., 1982, ‡(Medicine, Orthopaedics, Pathology), M.D., 1974, Washington.

Phillips, Leon A., 1965, (Emeritus), M.D., 1952, Yale; general radiology, uroradiology.

Richards, Todd L.,\* 1985, Ph.D., 1984, California (Berkeley); physics.

Richardson, Michael L., 1984, (Orthopaedics), M.D., 1975, Baylor; bone and joint radiology.

Rosenbaum, David M., 1983, (Pediatrics), M.D., 1977, Albert Einstein; pediatrics.

Tsuruda, Jay S., M.D., 1981, California (San Diego); neuroradiology, research.

Weinberger, Edward, 1985, (Pediatrics), M.D., 1979, Harvard; pediatric radiology.

#### Assistant Professors

Althaus, Sandra J., 1991, M.D., 1984, Wisconsin; angiography, interventional radiology.

Bice, Alden N., Jr.,\* 1987, (Research), Ph.D., 1981, California (Berkeley); medical imaging physics.

Biskupiak, Joseph E., 1992, (Research), Ph.D., 1985, Utah; PET, radiochemistry.

Bronstein, Andrew S., 1990, (Acting), M.D., 1984, Harvard; neuroradiology.

Chase, P. Bryant, 1988, (Research), Ph.D., 1984, Southern California; muscle biophysics.

Conley, Kevin E., 1988, (Research), Ph.D., 1983, Wisconsin; muscle physiology.

Dalley, Robert W., 1987, (Neurological Surgery),† M.D., 1982, Utah; neuroradiology.

Done, Stephen L., 1989, M.D., 1970, Utah; pediatric radiology.

Escobedo, Eva M., 1992, (Acting), M.D., 1985, Stanford; musculoskeletal radiology.

Frank, Mark S., 1990, M.D., 1984, Washington (St. Louis); body imaging, chest radiology, digital imaging, PAC.

Glickerman, David, 1990, M.D., 1983, Albany Medical College; angiography, interventional radiology.

Grierson, John R., 1987, (Research), Ph.D., 1983, British Columbia; chemistry.

Hardin, Christopher D., 1989, (Research), Ph.D., 1989, Cincinnati.

Hartling, Ross P., 1987, (Acting) M.D., 1981; neuroradiology.

Haynor, David R., 1985, Ph.D., 1971, California (Berkeley); M.D., 1979, Harvard; computed tomography/ultrasound.

Hunter, John C., 1992, M.D., 1970; musculoskeletal.

Jacobson, Arnold F., 1987, Ph.D., 1980, Wisconsin; M.D., 1980, Illinois; nuclear medicine.

Johnson, Janet, 1990, M.D., 1985, Hawaii; musculoskeletal imaging, chest, GI, CT, ultrasound.

Lewis, David H., 1990, M.D., 1985, Medical College of Virginia; nuclear medicine.

Mercker, Janis P., 1980, (Acting), M.D., 1976, Washington; pediatric radiology.

Nghiem, Hanh V., 1992, M.D., 1987, Wayne State; abdominal imaging.

Patten, Randall M., 1988, (Clinical), M.D., 1981, California (San Diego); cross-sectional imaging.

Rowberg, Alan H.,\* 1982, (Bioengineering), M.D., 1970, Washington; M.S., 1974, Johns Hopkins; medical imaging and computing.

Schmiedl, Udo, 1989, M.D., 1982, Ph.D., 1979, Max-Planck-Institute (Heidelberg); abdominal imaging.

Schulte, Scott J., 1989, M.D., 1979, Washington; gastrointestinal radiology.

Shaw, Dennis W.W., 1992, M.D., 1983 Washington; neuroradiology, pediatric radiology.

Spear, Rex P., 1992, (Acting), M.D., 1985, Texas Technical; abdominal imaging.

Takasugi, Julie E., 1988, M.D., 1985, California (Los Angeles); pulmonary radiology.

Teefey, Sharlene A., 1985, M.D., 1980, Hawaii (Honolulu); ultrasound, computed tomography.

Venkatesan, Prasann P., 1990, (Research), Ph.D., 1984, Pennsylvania State; radiochemistry.

White, Keith S., 1991, M.D., 1985, Utah; pediatric radiology.

Winter, Thomas C. III., 1991, M.D., 1986, Duke; ultrasound, computed tomography, MRI.

Winters, William D., 1989, M.D., 1983, Utah; pediatric radiology.

Wiseman, Robert W., 1992, (Research), Ph.D., 1988, Florida State; muscle energetics.

Yuan, Chun, 1991, Ph.D., 1984, Utah; medical biophysics, MRI.

**RADGY 488 Undergraduate Thesis (\*) AWSp Nelson** Supervised clinical and/or laboratory research in the broad field of medical imaging, culminating in a thesis. The thesis will be submitted to Dr. James Nelson for suitable recognition.

**RADGY 499 Undergraduate Research (\*) AWSpS Nelson** Opportunity to gain research experience and direct participation in either clinical or basic sciences investigation in diagnostic radiology and/or nuclear medicine. Written exposition of the results of this experience will be submitted to Dr. James Nelson.

**RADGY 508 Physical Aspects of Medical Imaging (4) A Goodst** Quantitative physical principles of medical imaging are presented for electromagnetic and sonic radiation. Methods of image formation and analysis are discussed for conventional film radiography, CT, DSA, PET, B-mode ultrasound and Doppler ultrasound. Joint with BIOEN 508.

**RADGY 550 In vivo NMR in Biomedicine (2) Richards** Basic physics of nuclear magnetic resonance (NMR) imaging and spectroscopy are presented. Research applications of NMR in physiology and biochemistry are reviewed with emphasis on the brain. Grade based on written tests and small research paper. Prerequisite: permission of instructor.

**RADGY 580P Nuclear Medicine Technique, Physics, and Instrumentation (2½) S Lewellen** Provides familiarization with basic nuclear phenomena and with the instrumentation used in the practice of nuclear medicine. There are discussions and laboratory exercises. Practical experience in instrument operation and sample counting are provided. Prerequisite: permission of instructor.

**RADGY 600 Independent Study or Research (\*) AWSpS Nelson** Prerequisite: permission of Dr. Nelson and faculty sponsor.

**RADGY 693P Introduction to Clinical Radiology (8) AWSpS Schulte** Medical imaging. Emphasis on gaining in-depth understanding of criteria recommended for selection of radiologic examination and the perceptual skills needed for preliminary interpretation of the more commonly encountered studies. Includes lectures, film reading, case related conferences, and independent study. Prerequisite: completion of Human Biology series. (Not offered in June, July, or December.)

**RADGY 694P Advanced Clinical Clerkship (8) AWSpS Schulte** For students who have completed 693 or its equivalent and who wish to obtain more comprehensive and/or more specialized experience in the field of medical imaging. Prerequisites: 693 and permission of instructor.

**RADGY 696P Nuclear Medicine Clerkship (\*, max. 12) Nelp** Daily participation at University of Washington Medical Center nuclear medicine clinic emphasizing technical performance, diagnostic interpretation, and clinical relevance of nuclear imaging. Daily clinical teaching conferences of the division. Four- and six-week clerkships can be preplanned in areas such as pulmonary, cardiovascular, renal, bone, computer analysis. Prerequisite: permission of instructor.

**RADGY 697P Radiology Special Electives (\*, max. 24) Schulte** Radiologic training in a nonaffiliated institution. Permission and arrangements must be made at the time of registration through direct communication between the student and the education coordinator in Radiology. A written outline from a preceptor at the intended site required. Prerequisite: permission of radiology education coordinator.

## Rehabilitation Medicine

BB919 Health Sciences

The Department of Rehabilitation Medicine provides instruction for medical students, interns, and residents in a comprehensive approach to rehabilitation problems. This includes special diagnostic and evaluative procedures; methods and rationale in the application of principles of occupational therapy, physical therapy, prosthetics and orthotics, and other health professions; and advanced investigation of special problems encountered in the field. In addition, the department conducts a residency training program for the specialty of physical medicine and rehabilitation.

The department offers curricula leading to the following degrees: Bachelor of Science in Occupational Therapy, Master of Science (occupational therapy); Bachelor of Science in Physical Therapy, Master of Physical Therapy, Master of Science (physical therapy); Bachelor of Science in the field of prosthetics and orthotics, as well as a Master of Science (rehabilitation medicine) or Master of Rehabilitation Medicine degree for residents in physical medicine and rehabilitation who wish to enter the academic field.

## Occupational Therapy

Head

Elizabeth M. Kanny

Occupational therapy is a health profession that provides services to persons whose lives have been disrupted by physical illness or injury, social or emotional difficulties, congenital or developmental problems, or the aging process. The term "occupation" refers to life skills and occupational therapists use activities with specific goals in helping people of all ages to prevent, reduce, or overcome disabilities. The activities may be as basic as bathing, dressing, or eating, or as complex as operating a computer with modified control switches.

Today's occupational therapists work in clinical practice, administration, education, research, private practice, and many other areas. Work settings include rehabilitation centers, hospitals, public and private schools, home health agencies, community mental health centers, private practice, nursing homes, drug and alcohol abuse centers, vocational rehabilitation centers, physicians' offices, industrial clinics, and hospices. In addition, occupational therapists may become involved in academic or clinical teaching and in research.

Services may include training in self-care activities; design, fabrication, and application of splints; sensorimotor activities; therapeutic group activities; selection and use of adaptive equipment; adaptation of physical environments; therapeutic activities to enhance functional performance; and work evaluation and training.

The program in occupational therapy leading to a Bachelor of Science degree awarded by the School of Medicine is accredited by the American Occupational Therapy Association and the American Medical Association. The program includes two years of professional course work and six months of supervised, full-time clinical training. Graduates are eligible to become registered occupational therapists after passing the National Certification Examination for occupational therapists. Some states, including Washington, require state licensure, as well.

**Admission Requirements:** Students are admitted to the baccalaureate program at the junior level; however, some applicants have completed three or more years of college work or may hold a baccalaureate degree before applying to the program. The admission process occurs once each year for the autumn quarter of

each year; the application deadline is February 15. Preprofessional requirements prior to entrance include completion of the College of Arts and Sciences proficiency and general education requirements and completion of the following prerequisite course work, which may be counted toward distribution requirements:

**Physical Sciences:** CHEM 101, General Chemistry (5 credits), or CHEM 140, General Chemistry (4); PHYS 114, General Physics (4); PHYS 117, General Physics Laboratory (1).

**Biological Sciences:** B STR 301, General Anatomy (6); ZOOL 118, Survey of Physiology (5).

**Social Sciences:** PSYCH 101, Psychology as a Social Science (5 credits); PSYCH 305, Deviant Personality (5); PSYCH 306, Developmental Psychology (5); SOC 110, Survey of Sociology (5).

Students must have earned a minimum GPA of 2.50 on a minimum of 25 credits in the prerequisite courses listed above and have a cumulative GPA of 2.50 in order to be eligible to apply. Detailed program requirements and selection process information may be obtained from the curriculum office.

**Graduation Requirements:** The following courses must be completed satisfactorily in the scheduled sequence, beginning autumn quarter only, at the University: REHAB 320, 321, 332, 380, 414, 417, 435, 442, 444, 445, 446, 447, 448, 468, 469, 470, 473, 477, 481, 482, 483, 484, 485, 486, 487, and 496.

The University grade-point system is used in student evaluation. A student must maintain a cumulative GPA of 2.50 in all required professional course work to maintain satisfactory standing and to graduate. The student must attain a minimum grade of 2.0 in all required courses, with the exception of one course grade allowed between 1.7 and 1.9 or be required to repeat that course at the next offering.

At the end of any academic quarter in which a student's performance falls below the scholastic requirement, he or she is placed on academic probation and is allowed two additional consecutive quarters to raise the GPA to 2.50. A student who fails to meet the above scholastic requirements is dismissed from the program and advised to transfer to an alternative major or withdraw from the University.

The student must satisfactorily complete all academic coursework before being promoted to Fieldwork II. Two Fieldwork II placements are required. If a student should fail to pass a Fieldwork II placement he/she must petition the Advisory and Evaluation Committee for approval to repeat it. A Fieldwork II placement can be repeated only once.

## Physical Therapy

Head

JoAnn McMillan

Physical therapy is a direct form of professional patient care that can be applied in most disciplines of medicine. The principal objective in physical therapy is to restore or improve motor function in individuals with musculoskeletal and/or neuromuscular problems.

Management of problems related to motor function is only part of the work of physical therapy. Equally important is a rebuilding of self-confidence and the creation of a desire to return to a normal active life. Other primary objectives of physical therapy are prevention of disability and pain, and training in mobility skills for those who must adapt to permanent disability.

As a consequence of the scope of the profession, physical therapists function in a variety of settings, the most familiar being the hospital. Physical therapists also plan, provide, and supervise evaluation and direct patient care in outpatient clinics, rehabilitation centers, home-care agencies, schools, extended-care facilities

for the elderly, voluntary health agencies, industry, and private practices. The physical therapist may be found anywhere that quality health care is needed. Increasingly, physical therapists are becoming involved in basic and clinical research; in the academic community, either as full-time faculty members or as supervisors of clinical education; and as consultants in local, state, and federal health-planning activities.

Physical therapists function in compliance with the licensing laws and ethical principles that govern the practice of physical therapy. The steps to licensure as a physical therapist vary slightly from state to state, but all physical therapists graduate from an accredited curriculum of physical therapy that includes a specific period of clinical training. As physical therapy relates to the majority of medical specialties, the education program is broad in scope, including a heavy dose of physical and social sciences. The physical therapist evaluates the patient's problem by testing such factors as range of joint motion, muscle strength, posture and gait, pulmonary function, sensation and sensory perception, orthotic and prosthetic fit, reflexes and muscle tone, and functional skills. Some of the procedures used may include ultrasound, superficial heat and cold, electrical stimulation, massage, traction, joint mobilization, biofeedback, therapeutic exercise, and training in the use of orthotic, prosthetic, and other assistive devices, such as crutches, canes, and wheelchairs.

As with all professionals in health fields, physical therapists are responsible for subscribing to a program of continuing education. Some therapists also develop the knowledge and skills of a specialist via continuing education and concentrated practice in one area, such as sports or pediatric therapy. A formalized mechanism for certifying specialists is implemented by the national professional association, the American Physical Therapy Association.

The University baccalaureate program in physical therapy is accredited by the American Physical Therapy Association Commission on Accreditation in Education.

**Admission Requirements:** Detailed program requirements and selection process information may be obtained from the curriculum office. Students are urged to request this information early, because the deadline for receipt of applications is February 15. At the time of entrance to the program (Autumn Quarter), applicants must be legal residents of Washington (as defined by the University administration code) or of Idaho, Alaska, Montana, Oregon, Hawaii, Wyoming, or Nevada. Requirements prior to entrance include completion of the University proficiency and distribution requirements and completion of the following prerequisite course work, which may be counted toward distribution requirements:

**Physical Sciences:** CHEM 140, 150, General Chemistry (4, 4 credits) or CHEM 101, 102 (5,5); PHYS 114, 115, 117, 118, General Physics and Laboratory (10).

**Biological Sciences:** B STR 301, General Anatomy (6 credits); ZOOL 118, Survey of Physiology (5); MICRO 301, General Microbiology (3); MICRO 302, General Microbiology Laboratory (2).

**Social Sciences:** PSYCH 101, Psychology as a Social Science (5 credits) or PSYCH 102, Psychology as a Natural Science (5); plus one additional psychology or psychiatry course (only 2 credits from the additional course may be counted toward the prerequisite GPA).

Students must have earned a minimum GPA of 3.00 on a minimum of 28 credits of the preceding courses and have a cumulative GPA of 2.70 in order to be eligible to apply. Admission is competitive, based on a demonstrated academic ability and apparent aptitude for physical therapy. Returning students who previously dropped out of the program must reapply and are subject to the same review process as that used for all other applicants.

While the professional phase of the entry-level professional program is designed to begin with the junior year

of a four-year baccalaureate curriculum, the majority of applicants have completed three or more years of college work before being accepted into this program. Most students admitted hold a baccalaureate degree in another discipline. To be competitive, applicants must arrange for a strong and general program of prerequisite course work that includes the specific courses listed above. It is possible that changes in the program requirements at the University may be made in the future to accommodate professional initiatives. Students are encouraged to contact the physical therapy curriculum office (685-7408) for information updated yearly.

**Graduation Requirements:** The following courses must be completed satisfactorily in the scheduled sequence, beginning autumn quarter only, at the University: REHAB 320-321, 322, 332, 404-405, 413, 414, 416, 442, 443, 444-445, 451-452, 463, 466-467, 471-472, 475, 476, 490, 495; PATH 410; B STR 431.

#### Student Evaluation

The University grade-point system is used. A student in the professional phase of the curriculum must maintain a cumulative GPA of 2.50 in all required courses for satisfactory standing and for graduation. At the end of any academic quarter in which a student's performance falls below that point, he or she is placed on academic probation. Once on academic probation, a student is allowed two additional consecutive quarters to bring his or her curriculum GPA to 2.50. A student not meeting the above standard is dropped from the curriculum and advised to transfer to an alternate major within the University or to withdraw from the University.

Any grade of less than 2.0 in a professional curriculum course necessitates repetition of that course if recommended by the physical therapy faculty and approved by the Advisory and Evaluation Committee.

## Prosthetics and Orthotics

#### Head

Alan J. Dralle

The prosthetist-orthotist is a member of a professional medical team devoted to the evaluation and treatment of physically handicapped persons. He or she is responsible for the designing and fabricating of prosthetic and orthotic devices (artificial limbs and braces) and for helping handicapped patients of all ages to enjoy more functional and independent lives.

#### Bachelor of Science Degree

**Admission Requirements:** Students are admitted to this curriculum at the junior level. Preprofessional requirements for admission include completion of the College of Arts and Sciences proficiency requirements, as well as the distribution requirements with a minimum of 20 credits each in the humanities, natural sciences, and social sciences with a 2.00 cumulative GPA on a 4.00 scale, and completion by the end of autumn quarter or semester of the year prior to expected admission into the program of a minimum of 22 quarter credits of the 36-41 credits in the following prerequisite courses (or their equivalent for transfer students) with a minimum GPA of 2.50: BIOL 101-102 (10 credits) or MICRO 301, 302 (3, 2); note that CHEM 102 is prerequisite for microbiology; PHYS 114, 115, 117, 118 (10); B STR 301 (6); ZOOL 118 (5); PSYCH 101 (5).

At the time of application, a student must submit a reasonable plan for completion before the date of expected entry into the program of the balance of the prerequisite courses listed above. If, by the time of expected entry into the program, the student has not completed all prerequisite courses with a minimum GPA of 2.50 as well as a total GPA of 2.00, that student will not be admitted to the program.

**Graduation Requirements:** The following courses must be taken in the scheduled sequence, beginning autumn quarter only, at the University of Washington: REHAB 320, 321, 332, 340, 341, 342, 343, 414, 420,

421, 423, 427, 428, 429, 430, 442, 443, 444-445, 451, 452.

In student evaluation, the University grade-point system is used with the exception that a grade below 2.0 in any required professional course is not acceptable. Satisfactory scholarship requires the maintenance of a cumulative GPA of 2.50 in the required courses, which is the basis for promotion and graduation.

## Graduate Program

The graduate programs in rehabilitation medicine lead to the following degrees: Master of Rehabilitation Medicine, Master of Science (rehabilitation medicine, occupational therapy, or physical therapy), and Master of Physical Therapy.

#### Master of Rehabilitation Medicine Degree

An applicant for the Master of Rehabilitation Medicine program must have an M.D. degree and be currently enrolled or have completed residency training in the specialty of physical medicine and rehabilitation. The purpose of the program leading to the Master of Rehabilitation Medicine degree is to train academicians in the field of physical medicine and rehabilitation. Students must earn a minimum of 36 credits. A minor is taken in one of the related medical sciences: general medical science, biophysics-physiology, or psychology. A special, in-depth project is required as part of the master's degree program.

#### Master of Science Degree (rehabilitation medicine)

The Master of Science degree (rehabilitation medicine pathway) requirements include all of those stated above for a Master of Rehabilitation Medicine degree. In addition to those requirements, more extensive research and a formal thesis are required.

**Special Requirements:** Requirements for admission to the program leading to the Master of Science degree (rehabilitation medicine pathway), in addition to the requirements of the Graduate School, include an M.D. degree from an approved medical school. Students must be concurrently enrolled, or have completed an approved residency program, in physical medicine and rehabilitation, or, in exceptional cases, students who have successfully finished a three-year residency program in a related specialty can be accepted into the program.

#### Master of Science Degree (occupational therapy)

The Master of Science degree in occupational therapy is designed for registered occupational therapists. Core courses focus on the development of research and teaching. Independent study options and electives offer flexibility that allows students to meet individual objectives. Completion of a data-based thesis is required. Full-time students generally complete the course work in three to four quarters. The additional time to complete the thesis requirement varies.

**Special Requirements:** The applicant for admission to the program leading to the degree of Master of Science (occupational therapy pathway) must be a graduate of an approved occupational therapy program. A year of professional experience is desirable. Detailed information on the program and admission requirements is available.

**Graduation Requirements:** All students must meet the minimum requirements for a master's degree as outlined in the Graduate Study section of this catalog. In addition, students must satisfactorily complete core courses required by the occupational therapy program and a data-based thesis.

#### Master of Science Degree (physical therapy)

The program of study leading to the degree of Master of Science (physical therapy pathway) has been designed to prepare physical therapists to assume a career in teaching and administration within the field. An emphasis of the curriculum is preparation for research

and contribution to the professional literature; therefore, a thesis is a requirement of this plan. Opportunities are provided to enhance specialized knowledge and skill in selected content areas of physical therapy practice. Depending upon the student's educational goals and prior accomplishments, the program should require one to two calendar years for completion.

**Special Requirements:** Selection for admission to the Master of Science degree program (physical therapy pathway) is based on an assessment of intellectual capacity, basic professional competence, promise for future contributions to the field, and availability of the program (due to funding limitations, the program is not offered every year). Students must have completed a baccalaureate degree and an accredited physical therapy program with a minimum cumulative GPA of 3.00, based on a 4-point scale, on all college work. Detailed information on program and admission requirements is available from the Division of Physical Therapy Curriculum Office (685-7408).

**Graduation Requirements (Master of Science degree):** Minimum of 36 credits, including specified core course work and approved individual curriculum program. Completion of an approved thesis and Graduate School requirements for a master's degree.

#### Master of Physical Therapy Degree

The purpose of the Master of Physical Therapy program is to provide opportunities to pursue in-depth study in an area of interest related to a clinical specialty and to strengthen general evaluation and management skills for practice as a health-care practitioner. Preparation in statistics and research design and completion of a major project are requirements of this plan. Focus of this curriculum is on work related to future clinical practice in positions of responsibility and on participation in clinical teaching, research, and administration.

**Special Requirements:** Selection for admission to the Master of Physical Therapy degree program is based on assessment of intellectual capacity, basic professional achievement in undergraduate physical therapy course work, promise for future contributions to the field, and availability of the program (due to funding limitations, the program is not offered every year). Students must have completed a baccalaureate degree and an accredited physical therapy program with a minimum cumulative GPA of 3.00, based on a 4-point scale, on all college work. Detailed information on program and admission requirements is available from the Division of Physical Therapy Curriculum Office (685-7408).

**Graduation Requirements (Master of Physical Therapy degree):** A minimum of 36 credits, including specified core course work and approved individual curriculum program. Completion of an approved project and Graduate School requirements for a master's degree.

## Faculty

#### Chairperson

Walter C. Stolor

#### Professors

Anderson, Marjorie E.,\* 1971, (Physiology and Biophysics),† Ph.D., 1969, Washington; physiology.

Cardenas, Diana D.,\* 1981, M.D., 1973, Texas (Dallas); M.S., 1976, Washington; psychiatry.

deLateur, Barbara J.,\* 1967, M.D., 1963, M.S., 1968, Washington; psychiatry.

Dikmen, Sureyya S.,\* 1974, (Neurological Surgery, Psychiatry and Behavioral Sciences), M.A., 1967, Michigan; Ph.D., 1973, Washington; neuropsychology.

Fordyce, Wilbert E.,\* 1955, (Emeritus), M.S., 1951, Ph.D., 1953, Washington; psychology.

Fraser, Robert T., 1977, (Neurological Surgery), M.S., 1972, Southern California; Ph.D., 1976, Wisconsin (Madison); M.P.A., 1984, Seattle; psychology.

Guy, Arthur W.,\* 1965, (Emeritus), ‡(Bioengineering, Electrical Engineering), M.S.E.E., 1957, Ph.D., 1966, Washington; electrical engineering.

Halar, Eugen M.,\* 1968, M.D., 1959, Zagreb (Yugoslavia); psychiatry.

Kraft, George H.,\* 1969, M.D., 1963, M.S., 1967, Ohio State; psychiatry.

Lehmann, Justus F.,\* 1957, (Emeritus), M.D., 1945, Frankfurt (West Germany); psychiatry.

Stolov, Walter C.,\* 1960, M.A., 1951, M.D., 1956, Minnesota; psychiatry.

Turner, Judith A., 1980, (Psychiatry and Behavioral Sciences), † M.A., 1975, Ph.D., 1979, California (Los Angeles); psychology.

Yorkston, Kathryn M.,\* 1978, M.S., 1972, Ph.D., 1975, Oregon; speech and hearing.

#### Associate Professors

Berni, Rosemarian,\* 1967, (Emeritus), M.N., 1973, Washington; rehabilitation nursing.

Catanzaro, Marci,\* 1977, ‡(Nursing), M.N., 1971, Washington; Ph.D., 1980, Union Graduate School-West (San Francisco); symptom management and chronic illness.

Deitz, Jean C.,\* 1979, M.Ed., 1970, Ph.D., 1976, Florida; occupational therapy.

Egan, Kelly, 1980, ‡(Anesthesiology, Behavioral Sciences and Psychiatry), M.A., 1968, Texas Tech; Ph.D., 1980, Washington; clinical psychology.

Hammond, Margaret C., 1982, M.R.M., 1984, Washington; M.D., 1979, Medical College of Wisconsin; psychiatry.

Hays, Ross M.,\* 1983, (Pediatrics), M.D., 1978, Washington; psychiatry, pediatrics.

Jaffe, Kenneth M.,\* 1982, (Neurosurgery, Pediatrics), M.D., 1975, Harvard; M.R.M., 1982, Washington; pediatric psychiatry.

Little, James W., 1984, Ph.D., 1976, M.D., 1977, Chicago; psychiatry.

McMillan, JoAnn,\* 1958, M.S.Ed., 1968, Southern California; physical therapy.

Patterson, David R., 1984, Ph.D., 1982, Florida State; clinical psychology.

Slimp, Jefferson C.,\* 1980, (Research), M.A., 1974, Ph.D., 1976, Wisconsin; psychology.

#### Assistant Professors

Bombardier, Charles H., 1989, (Acting), Ph.D., 1987, Washington State; clinical psychology.

Czerniecki, Joseph M., 1986, M.D., 1981, British Columbia; M.S., 1985, Washington; psychiatry.

Fitts, Sally S., 1989, (Research), M.S., 1973, Ph.D., 1976, Washington; research.

Gitter, Andrew T., 1988, M.D., 1984, Michigan; psychiatry.

Guthrie, Mark R., 1983, M.P.T., 1980, Ph.D., 1990, Washington; physical therapy; educational psychology.

Haselkorn, Jodie, 1989, (Acting), M.D., 1985, Louisiana State; psychiatry.

Margherita, Anthony, 1989, (Acting), M.D., 1985, Georgetown; psychiatry.

Massagli, Teresa, 1988, (Acting), M.D., 1982, Yale; psychiatry.

Odderson, Ib, 1989, (Acting), Ph.D., 1978, M.D., 1985, Vanderbilt; psychiatry.

Questad, Kent A., 1982, (Clinical), M.S.W., 1979, Washington; Ph.D., 1983, Wisconsin; rehabilitation counseling, psychology.

Robinson, Lawrence R., 1989, M.D., 1982, Baylor; psychiatry.

Trotter, Martha J., 1965, B.S., 1957, East Tennessee; physical therapy.

Uomoto, Jay M., 1987, M.A., 1983, Ph.D., 1985, Fuller Theological Seminary; psychology.

#### Senior Lecturer

Greenberg, Sharon L., 1979, M.O.T., 1978, Washington; occupational therapy.

#### Lecturers

Anson, Denis, 1989, (Acting), M.S., 1983, Washington; occupational therapy.

Atwater, Sally, 1987, (Acting), M.P.T., 1979, Washington; physical therapy.

Cunningham, Susan J., 1988, M.S., 1985, Washington; occupational therapy.

Dralle, Alan J., 1972, B.S.P.T., 1968, Washington; prosthetics and orthotics.

Dudgeon, Brian J., 1989, (Acting), M.S., 1980, Washington; occupational therapy.

Hager, Mary Louise, 1978, B.S., 1957, Puget Sound; occupational therapy.

Hertling, Darlene M., 1965, B.S., 1956, California (Berkeley); physical therapy.

Kanny, Elizabeth M., 1978, M.A., 1977, Seattle; occupational therapy.

Stewart, Kathy, 1988, M.S., 1985, Washington; occupational therapy.

Swanson, Marcia W., 1978, B.A., 1971, Wellesley College; physical therapy.

Yamane, Ann, 1982, B.S., 1976, Washington; prosthetics and orthotics.

#### Clinical Instructor

Honsinger, Melissa J., 1986, (Acting), M.A., 1981, Washington State; speech communication disorders.

## Course Descriptions

*Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.*

**REHAB 320, 321 Medical Science (4,4)** Lectures in fields related to: general surgery, obstetrics and gynecology, internal medicine, neurology, rehabilitation medicine, orthopaedics, psychiatry and behavioral sciences, rheumatology, and pediatrics. Required for occupational therapy, prosthetics and orthotics, and physical therapy students. Credit/no credit only.

**REHAB 322 Medical Science Laboratory (1, max. 2) WSp** Greenberg, McMillan, Okumura To introduce students to the role of allied health professionals in the treatment of disabilities presented in 320, 321 lectures. Credit/no credit only. Prerequisite: 320, 321.

**REHAB 332 Pathologic Physiology for Physical Therapists and Occupational Therapists (5)** Anderson, Slimp Emphasis on normal and pathologic physiology of the circulatory, respiratory, central nervous, and musculoskeletal systems as basis for treatment in occupational therapy, physical therapy, and prosthetics-orthotics. Required for students in these fields. Others by permission. Prerequisites: B STR 301, ZOOL 118, and permission of instructor.

**REHAB 340 Spinal Orthotics (3)** Yamane Lecture and laboratory instruction in, and experience with, the use of orthotic components and materials, patient evaluation, and fitting of orthoses for management of spinal pathology. Required for prosthetics and orthotics majors; others by permission of instructor.

**REHAB 341 Upper-Limb Prosthetics I (4)** Okumura Instruction in, and experience with, the use of prosthetic components and materials, including preprosthetic care, prosthetic components, principles of fabrication and harnessing, and techniques of

checkout and prosthetic training for all amputation types. Required for prosthetics and orthotics majors; others by permission of instructor.

**REHAB 342 Upper-Limb Prosthetics II (4)** Okumura Instruction and experience in use of prosthetic components and materials, including preprosthetic care, principles of fabrication and harnessing, and techniques of checkout and prosthetic training, review of anatomy, biomechanics, locomotion, and motor disability as they pertain to upper-limb prosthetics, as well as medical management and prescription considerations. Immediate postsurgical fitting techniques.

**REHAB 343 Upper-Limb Orthotics (6)** Okumura, Yamane Instruction in, and experience with, the use of orthotic components and materials. Students evaluate and fabricate therapeutic and functional orthoses. Required for prosthetics and orthotics majors; others by permission of instructor.

**REHAB 380 Occupational Therapy in the Health-Care System (2)** Dudgeon Acquisition of an understanding of the role of occupational therapy within the American health-care delivery system. Covers factors including national health, use of health-care services, regulation and reimbursement of services and health-care trends affecting occupational therapy services. Prerequisite: occupational therapy major standing.

**REHAB 404, 405 PT Management of Musculoskeletal Disorders: I, II (5,5)** Hertling Functional anatomy, biomechanics, clinical assessment and management as they relate to patients with common musculoskeletal disorders who have been referred to physical therapy services. Development of appropriate therapeutic strategies for management of extremity joints (404) and spine (405). Prerequisite: physical therapy major standing.

**REHAB 413 Special Studies in Physical Therapy (1-15, max. 24)** Series of courses on theory and practice in specialized areas of physical therapy. Includes organization and administration of specialized programs, advanced evaluation and treatment techniques, role of the consultant. Credit/no credit only. Prerequisite: permission of instructor.

**REHAB 414 Psychological Aspects of Disability (2)** Uomoto Psychological processes underlying adjustment to disability; application of behavioral/analysis systems in patient therapy management; effects of intellectual and perceptual deficit on patient performance and treatment strategies. Prerequisite: occupational therapy, prosthetics and orthotics, or physical therapy major standing.

**REHAB 416 Principles of Physical Therapy Administration (3)** McMillan The nature of administration, economic trends, operational policy, aspects of supervision, ethical and legal influences applicable to a physical therapy department. Required for physical therapy students.

**REHAB 417 Introduction to Research in Occupational Therapy (3)** Deitz Statistics, group research design, tests and measurements, and single-subject research methodology. Lectures, readings, and assignments related to occupational therapy and rehabilitation medicine research. Prerequisite: occupational therapy major or permission of instructor.

**REHAB 420 Lower-Limb Prosthetics I (6)** Dralle Instruction in fabrication, fitting, and alignment of the patellar-tendon-bearing prosthesis. Emphasis is placed on the biomechanics of below-knee fit and alignment, dynamic alignment, and the use of the below-knee adjustable leg and duplication devices, as well as methods of suspension. Required for prosthetics and orthotics majors; others by permission of instructor.

**REHAB 421 Lower-Limb Prosthetics II (11)** Dralle Instruction in above knee cast modification, socket fabrication, static and dynamic alignment, alignment duplication, and suspension system. Required for pros-

thetics and orthotics majors; others by permission of instructor.

**REHAB 423 Lower-Limb Orthotics (8)** *Dralle, Yamane* Instruction in, and experience with, the use of orthotic components and materials, including patient evaluation measurements, fabrication and fitting of lower-limb orthoses. Required for prosthetics and orthotics majors; others by permission of instructor.

**REHAB 427, 428 Applied Prosthetics and Orthotics I, II (1-1-1; 5)** *Dralle* Further clinical experience in patient evaluation, planning, fabricating, and fitting of prosthetic and orthotic devices, and attendance at prosthetics and orthotics clinics at University of Washington Medical Center and University-affiliated Seattle hospitals. Experience in immediate postoperative prosthetics. Required for prosthetics and orthotics majors; others by permission of instructor.

**REHAB 429 Immediate Post-Operative and Early Fitting (3)** *Okumura* Lecture and laboratory designed to introduce the student to the principles of immediate postsurgical prosthetic fitting, including patient management for both upper and lower extremities.

**REHAB 430 Advanced Limb Prosthetics and Engineering Concepts (4)** Exposure to principles underlying modern prosthetic/orthotic devices and practices including hydraulic control, material behavior, force analysis, and myoelectrics.

**REHAB 435 Professional and Therapeutic Communication in Occupational Therapy (2)** *Cunningham* Provides knowledge and understanding of therapeutic use of self and communication skills with clients, their families and other health professionals. Prerequisite: occupational therapy major standing.

**REHAB 442 Advanced Clinical Kinesiology and Biomechanics (6)** *Lehmann* Study of joint motion and muscle function in relation to both the normal and abnormal state. Specific techniques employed in the field of rehabilitation medicine are analyzed. Required for Department of Rehabilitation Medicine students; others by permission.

**REHAB 443 Introduction to Clinical Evaluation (5)** *Hertling* Lecture and laboratory format. Developing clinical competency in goniometric measurement of joint motion, manual muscle strength testing, postural analysis, and gait analysis of normal and pathological patterns. Prerequisite: physical therapy or prosthetics and orthotics majors only.

**REHAB 444-445 Function of the Locomotor System (4-4)** *Guthrie* Functions of musculoskeletal system as applied to patterns of motion. Anatomy of peripheral-vascular and peripheral-nervous system. Required for occupational therapy students, prosthetics and orthotics students, and physical therapy students; others by permission of instructor. Prerequisites: B STR 301, ZOOL 118.

**REHAB 446, 447 Anatomy Laboratory for Occupational Therapists (1,1)** *Hager* Guided self-study of musculoskeletal, peripheral-vascular, and peripheral-nervous systems from prosected material. Required for occupational therapy and prosthetics/orthotics students.

**REHAB 448 Applied Kinesiology for Occupational Therapists (1)** Instruction and laboratory focus on practical experience and clinical problem solving related to muscle and joint motion testing procedures, gait, prosthetic and orthotic devices, environmental controls, and assistive devices utilized in occupational therapy treatment strategies. Required for occupational therapy students.

**REHAB 451, 452 Functional Anatomy Laboratory (1,1)** *Guthrie* Study of musculoskeletal, peripheral-vascular, and peripheral-nervous systems from prosected material. Required for physical therapy students.

**REHAB 463 Application of Physical Therapy Modalities (3)** Principles and concepts of basic physical

therapy procedures. Laboratory practice of hydrotherapy and superficial heating modalities. Application of physiological principles to the clinical procedures. Method of application of diathermy and ultrasound, TENS, EMG-biofeedback, low and high voltage therapies and ultraviolet light. Lectures and laboratories. Prerequisite: physical therapy major standing.

**REHAB 466-467 Advanced Biophysical and Physiological Effects of Modalities (2-2)** *Lehmann* Biophysical principles of equipment employed in physical therapy, physiological effects produced. Required for physical therapy students; others by permission of instructor.

**REHAB 468 Analysis of Therapeutic Activities (3)** Lecture and laboratory practice to develop skills in the analysis, adaptation, and sequencing of therapeutic activities. The teaching-learning process emphasized. Prerequisite: occupational therapy major standing.

**REHAB 469 Physical Disabilities Treatment Modalities (4)** Lecture and laboratory practice of special skills in occupational therapy directed toward facilitation of movement and daily living skills as applied to treatment of the physically disabled. Emphasis on evaluation skills and treatment techniques in the areas of mobility, upper extremity rehabilitation and orthotic, and daily living skills.

**REHAB 470 Vocational Assessment and Training (3)** *Dudgeon* Provides knowledge and skill competencies relevant to vocational/work evaluation and training for individuals with physical, psychosocial, and developmental disabilities. Prerequisite: occupational therapy major standing.

**REHAB 471 Therapeutic Exercise Procedures I (5)** *Trotter* Theory and principles of basic exercise procedures used for treatment purposes in physical therapy: motor learning and control, variables of motor performance, risks and benefits of exercise, exercise prescription, selected patient assessment and exercise procedures. Lectures and laboratories. Simulated patient problems. Prerequisite: physical therapy major standing.

**REHAB 472 Therapeutic Exercise Procedures II (5)** *Trotter* Theory and principles of advanced therapeutic exercise procedures: normal motor development, facilitation and inhibition elements, adaptation of procedure to appropriate age level and handicap. Lectures and laboratories. Simulated patient problems. Prerequisite: physical therapy major standing.

**REHAB 473 Administration of Occupational Therapy Services (3)** *Kanny* Organizational and administrative techniques including strategic planning, management by objectives, program planning, fiscal management, productivity measures, quality assurance, and marketing. Practice in developing applicable skills. Prerequisite: occupational therapy major standing.

**REHAB 475 Physical Restoration (4)** *Hertling* Lectures and laboratory practice to develop special skills in physical therapy directed toward facilitation of movement as applied to treatment of neurological and musculoskeletal dysfunction. Treatment techniques in mobility, activities of daily living, self-care, transfers, and ambulation activities. Required for physical therapy students.

**REHAB 476 Prosthetic and Orthotic Evaluation and Use (2)** Instruction in mechanical component substitution for functional losses. Emphasis is on biomechanical principles, prosthetic components and alignment and fitting techniques. Prerequisite: physical therapy major standing.

**REHAB 477 Group Communication Skills (2)** *Kanny* Principles and concepts of small-group interaction and dynamics. Development of group participatory and leadership skills through class learning experiences. Prerequisite: occupational therapy major.

**REHAB 481 Introduction to Theory and Practice of Occupational Therapy (4)** *Crowe* History, theory,

and practice of occupational therapy. Application of treatment principles and observations in clinical settings. Prerequisite: occupational therapy major standing.

**REHAB 482 Occupational Therapy Theory and Practice in Pediatrics (4)** *Crowe* Theoretical bases for occupational therapy intervention and treatment of children (birth to 16 years) with acute and chronic physical or developmental dysfunction. Laboratory includes assessments of normal children as well as observation and limited participation in clinical settings. Prerequisite: occupational therapy major standing.

**REHAB 483 Occupational Therapy Theory and Practice in Physical Disabilities (4)** *Dudgeon* Theoretical bases for occupational therapy intervention and treatment of the physically disabled client. Supervised clinical experiences. Prerequisite: occupational therapy major standing.

**REHAB 484 Occupational Therapy Theory and Practice in Psychosocial Dysfunction (5)** *Woodrum* Psychosocial intervention and its relation to occupational therapy practice. Theory and practical application with examination of issues and techniques of evaluation and therapeutic interventions. Fieldwork training provides integration of didactic course work with actual practice experiences. Prerequisite: occupational therapy major standing.

**REHAB 485 Occupational Therapy Theory and Practice in Geriatrics (4)** *Hager* Occupational therapy evaluation, program planning, and treatment of the elderly. Aging as a developmental process, distinguishing between normal aging and the pathology of biological, cognitive, and emotional changes. Practical application of theory and treatment in clinical setting. Prerequisite: occupational therapy major standing.

**REHAB 486 School System and Pediatric Practice for Occupational Therapists (3)** *Crowe* Provides clinically oriented experiences and lectures in the evaluation and management of the child with a handicap. Emphasis is placed on pediatric practice in a school system setting. Prerequisite: occupational therapy major standing.

**REHAB 487 Technology in Rehabilitation (3)** *Anson* Lecture and laboratory practice with use of assistive technology in occupational therapy. Content includes set-up and use of alternative input systems for applications of micro-computer technology with disabled individuals using the Apple II, Macintosh, and MS-DOS computers. Prerequisites: major standing in occupational therapy and familiarity with computer operation.

**REHAB 490 Clinical Clerkships in Physical Therapy (2, max. 4)** *Trotter* Observation, instruction, and supervised practice in treatment of patients in diverse clinical settings. Emphasis is given to the application of previously learned material and skills to specific clinical problems. Required for physical therapy students. Credit/no credit only.

**REHAB 492 Pathways in Occupational Therapy (\*, max. 3)** Provides the opportunity for continued study in specific areas of interest under preceptorship of selected faculty members with guided readings and clinical experiences. Oral presentation of completed projects to students and faculty. Credit/no credit only. Prerequisite: occupational therapy major standing.

**REHAB 494 Clinical Fieldwork in Occupational Therapy (4-12)** *Dudgeon* A minimum of six months of directed and supervised occupational therapy fieldwork experience at University-affiliated hospitals and other approved centers. Required for occupational therapy major. Credit/no credit only.

**REHAB 495 Clinical Affiliation in Physical Therapy (2-12, max. 24)** *Trotter* Six to twelve weeks with two hundred ten minimum working hours. Clinical practice of physical therapy techniques under supervision in community-based clinics. Credit/no credit only. Prerequisite: physical therapy major standing.

**REHAB 496 Special Topics in Rehabilitation (1-9, max. 14)** Guided opportunity for in-depth study in specific areas of rehabilitation. Topics vary. Prerequisite: permission of instructor.

**REHAB 498 Undergraduate Thesis (\*)** Prerequisite: permission of instructor.

**REHAB 499 Undergraduate Research (\*)** Opportunity to design, perform, and analyze research investigation in problem areas in rehabilitation medicine. These include clinical and basic research problems in, for example, head and spinal injury, chronic disease, pain neurophysiology, electrodiagnosis, communication, and bioengineering. Prerequisite: permission of instructor.

**REHAB 500 Specialized Clinical Experience in Physical Therapy (1-5, max. 15)** *Atwater* Student is assigned to an affiliated clinical facility. Activities focus on a variety of processes. These might include acquisition of an advanced and/or specialized treatment skill to be used in patient care; the development and presentation of an in-service training program; the analysis and assessment of existing supervisory problems. Credit/no credit only. Prerequisite: permission of instructor.

**REHAB 501 Physical Therapy Management of Selected Motor Problems (2-5, max. 7)** *Atwater, Guthrie* Study of mechanisms involved in the control of posture and movement. Critical examination of selected literature and techniques dealing with the evaluation or modification of motor behavior. Prerequisite: physical therapy graduate student standing.

**REHAB 502 Management of the Child With a Developmental Disability (3)** Practical management of child with a physical handicap or other developmental disability. Developmental motor assessment, developing therapy goals and objectives, and an introduction to NDT handling and feeding techniques. Completion of a practicum project with a handicapped child is required. Credit/no credit only. Prerequisite: permission of instructor.

**REHAB 510 Somatopsychology: Psychological Aspects of Disability (2)** Processes and management methods for assimilation of disability, enhancing patient participation in rehabilitation process, and for helping in maintenance of performance; behavioral management and case conference strategies; rehearsal of contingency management techniques. Required for residents; others by permission of instructor.

**REHAB 513 Special Studies in Physical Therapy (1-5, max. 15)** *Atwater* Series of courses on theory and practice in specialized areas of physical therapy. Includes organization and administration of specialized programs, advanced evaluation and treatment techniques, role of the consultant. Credit/no credit only. Prerequisite: permission of instructor.

**REHAB 516 Medical Information for Rehabilitation Counselors (4)** *Johnson* Lectures in medical science field regarding the etiology, prognosis, and physical restoration of common disabling conditions. Case studies are used extensively, and major emphasis is placed on vocational implications of physical disability. Prerequisite: permission of instructor.

**REHAB 518 Infants and Young Children: Current Research (3)** *Deitz* Introduces students to recent research relating to assessment and early intervention with infants and young children who are "at risk" or who are disabled. Critical evaluation of the current research emphasized. Prerequisites: clinical experience or course work related to infants with disabilities and permission of instructors.

**REHAB 520 Seminar (1-5)** Conferences, seminars, discussions of advanced physical medicine and rehabilitation topics for graduate students, residents and postdoctoral fellows in rehabilitation medicine. Lectures, discussion, and laboratory work in selected aspects appropriate to elected area of study for applicants for master-level degree. May be repeated for credit.

**REHAB 522 Neurophysiological Topics in Rehabilitation Medicine (2)** *Anderson* Review of traditional neurophysiological concepts and an exposition of recent advances in neurophysiological research related to the practice of rehabilitation medicine. Mechanisms underlying facilitation techniques and other techniques used in neuromuscular reeducation; various techniques compared and evaluated. Prerequisite: permission of instructor.

**REHAB 530 Medical Aspects of Vocational Counseling (2)** *Johnson* Introduction to vocational implications of physical and emotional disabilities. Methods, counseling techniques, therapeutic modalities, community resources used in producing vocational assistance for the handicapped. Prerequisite: resident standing in rehabilitation medicine.

**REHAB 532 Clinical Affiliation for Rehabilitation Counselors (5-6)** *Johnson* Under preceptorship of rehabilitation counseling staff, students counsel and evaluate patients with severe physical, emotional, or social problems; administer vocational testing; obtain placement on job stations; work with community resources for vocational/educational placement; and develop activity-oriented schedules. Prerequisite: permission of instructor.

**REHAB 539 Communication Disorders in Rehabilitation Medicine (1)** *Yorkston* Overview of communication disorders secondary to central and peripheral nervous system impairment. Emphasis on facilitating identification of speech/language disorders with discussion of implications for rehabilitation. Prerequisite: graduate student status (postdoctoral fellow).

**REHAB 540 Application of Measurement Systems (3)** *Deitz* Introduction to reliability, validity, norms, the test development process, statistics relevant to tests and measurements, and ethical implications of testing. Prerequisite: permission of instructor.

**REHAB 542 Working with Culturally-Diverse and Multi-Risk Families (2)** *Stewart* Analysis of current federal policy and issues in early childhood services examined within systems framework including family, interdisciplinary team, interagency system. Special emphasis placed on knowledge, skills, attitudes necessary for providing culturally-sensitive, family-centered services with families who are at-risk for managing special needs of their young children.

**REHAB 543 Early Childhood Therapy Interventions: Adaptations and Interactions (2)** *Stewart* Provides students with current knowledge regarding research and practice in early childhood therapy interventions. Content focuses on three major areas: best practices in early childhood therapy assessments; promoting positive caregiver-child interactions; and application of assistive technology in early childhood.

**REHAB 544-545 Functional Anatomy for Physiatrists (2-2)** Lectures and demonstrations to illustrate functional anatomy as applied by physicians in the practice of clinical rehabilitation. Intended to enhance functional assessments and to improve neuromusculo-skeletal diagnosis and treatment through greater understanding of the underlying anatomy. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

**REHAB 546 Teaching Practicum in Occupational and Physical Therapy (1-3)** *Atwater, Deitz* Integration of knowledge and skills in teaching through actual teaching in the classroom or presentation of a minicourse, workshop, or in-service training series (optional). Prerequisites: MEDED 520 and permission of instructor.

**REHAB 550 Neuropsychology in Rehabilitation (2)** *Dikmen* Examination and management of patients with brain lesions, as well as an understanding of the consequences of such conditions. Prerequisite: graduate standing in rehabilitation medicine.

**REHAB 555P Neuromuscular Electrodiagnosis (2½)** *AWS Kraft* Demonstration of fundamentals of

electromyography and peripheral nerve stimulation followed by participation in clinical electrodiagnosis examinations. Develops awareness of the usefulness of knowing when such procedures are indicated for patients and interpret results rather than develop proficiency in performing these examinations. Prerequisites: HUBIO 560P and permission of instructor.

**REHAB 565 Technology in Rehabilitation and School System Practice (3)** *Anson* Introduction to the use of assistive technology in rehabilitation and special education. Content includes set-up and use of alternative input systems on microcomputers and applications of technology to neuromuscular retraining, augmentative communication, and facilitation of learning in the classroom. Prerequisites: familiarity with basic computer operations, graduate standing, permission of instructor.

**REHAB 566 Special Topics in Rehabilitation (3)** Philosophy and concepts in the interdisciplinary rehabilitation of persons with major disabilities, including advanced content in the rehabilitation theory and process of selected categories.

**REHAB 568 Biophysics as Applied to Physical Medicine (2)** *Esselman* Propagation and absorption characteristics of physical forms of energy used for treatment in physical medicine. Physiologic effects basic to prescription of the physical therapy modalities. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

**REHAB 596 Electromyography and Clinical Neurophysiology (4)** *Kraft* Didactic course covering electromyography and clinical neurophysiology. First part covers basic neurophysiology and second covers electromyography, nerve conduction studies, somatosensory-evoked potentials, residual- and auditory-evoked potentials, single fiber EMG, late response, quantitative analysis, and macro EMG. Prerequisite: residency in rehabilitation medicine; others by permission of instructor.

**REHAB 597-598-599 Electromyography and Electrodiagnosis Laboratory (1-1-1)** *Kraft* Elective work in clinical electromyography and other electrodiagnostic methods. Prerequisite: residency in rehabilitation medicine; others by permission of instructor.

**REHAB 600 Independent Study or Research (\*)** Credit/no credit only.

**REHAB 654P Second-Year Clinical Elective in Physical Medicine and Rehabilitation (8)** *S Hays, Stolov* Alternative to 685 to meet chronic-care requirement. Explores the same goals recognizing the limited skills of the first-year student. Structured contacts permit understanding of disability problems in patients with chronic disease. Treatment methods and psychosocial consequences explored. Prerequisite: completion of one year of medical school.

**REHAB 685P Chronic Disease and Disability (4)** *AWSpS Hays, Stolov* Meets chronic-care requirement for medical students. Structured clinical experience on rehabilitation medicine services. Differences between acute and chronic medicine, identification of disability problems, and therapeutic techniques for removing disability. Hospitals are within University system, local area, WAMI area, and Hawaii. Prerequisite: third-year medical student standing.

**REHAB 686P Rehabilitation Medicine Clerkship—Pediatrics (8 or 12)** *AWSpS Jaffe, Stolov* Meets chronic-care requirement for medical students. Incorporates material of 685 and expands into disabling pediatric disease. School planning, family counseling, community support services included. Six-week package permits inpatient, outpatient, and consultation experience. Recommended for students contemplating pediatrics. Prerequisite: third-year medical student standing.

**REHAB 687P Rehabilitation Medicine Clerkship—Medical (8 or 12)** *AWSpS Hays, Stolov* Meets chronic-care requirement for medical students. Incorporates material of 685 and expands into disability

problems associated with "nonsurgical" disease. Six-week package permits inpatient, outpatient, and consultation experience. Recommended for careers in family medicine, internal medicine, rheumatology, cardiology, neurology, and geriatrics. Prerequisite: third-year medical student standing.

**REHAB 688P Rehabilitation Medicine Clerkship—Surgical (8 or 12) AWSpS** Hays, Stolov Meets chronic-care requirement for medical students. Incorporates material of 685 and expands into disability problems associated with surgically related disease. Six-week package permits inpatient, outpatient, and consultation experience. Recommended for careers in orthopedic surgery, neurosurgery, cardiovascular surgery, and urology. Prerequisite: third-year medical student standing.

**REHAB 689P Spinal Cord Injury (8 or 12)** Hammond Introduction to diagnosis, management, rehabilitation of patients with spinal-cord injuries. Interaction with rehabilitation team, psychiatrists, and subspecialists in urology, neurosurgery, and plastic surgery. Performance at subintern level expected. Veterans Administration Medical Center only. Prerequisites: MED 665P, SURG 665P.

**REHAB 695P Rural Rehabilitation Medicine Clerkship (8)** Hays, Stolov Structured clinical experience in identification and treatment of disability problems in rural (nonmajor urban) communities. Satisfies chronic care/rehabilitation medical graduation requirements. Prerequisites: completion of at least six months of clinical clerkships, permission of instructor.

**REHAB 697P Rehabilitation Medicine Special Elective (\*, max. 24)** Equivalent to 686P, 687P, or 688P. Satisfies requirements in rehabilitation medicine/chronic care. Student arranges with another university, using the "Special Assignment Form." Students can qualify after review, similar experience at another university. Prerequisite: permission of instructor.

**REHAB 700 Master's Thesis (\*)** Credit/no credit only.

## Surgery

BB487 University of Washington Medical Center

The Department of Surgery carries out instruction during all four years of School of Medicine attendance. The third-year six-week clerkship constitutes the core of student exposure to general surgery and is required of all students. The fourth-year emergency room clerkship is also a required part of the curriculum. The department also offers a variety of fourth-year elective clerkships in a number of the specialty aspects of the department's clinical activities, including but not limited to cardiothoracic surgery, plastic surgery, vascular surgery, and the management of burn patients.

## Faculty

### Chairperson

Alexander W. Clowes

### Professors

Ashbaugh, David G., 1988, M.D., 1957, Ohio State; thoracic surgery.

Clowes, Alexander W., 1980, M.D., 1972, Harvard; general and vascular surgery.

Copass, Michael K., 1973, (Medicine), M.A., 1964, M.D., 1964, Northwestern; neurology/surgery.

Dellinger, E. Patchen, 1977, (Nutritional Sciences), M.D., 1970, Harvard; general surgery.

Dillard, David H., 1953, (Emeritus), M.D., 1950, Johns Hopkins; thoracic surgery.

Engrav, Loren H., 1977, M.D., 1969, California (Los Angeles); plastic and reconstructive surgery.

Gruss, Joseph S., 1991, M.B., 1969, Witwatersrand (South Africa); plastic surgery.

Heimbach, David M., 1974, M.D., 1964, Cornell; burn and general surgery.

Herman, Clifford M., 1977, M.D., 1959, Vermont; general surgery.

Johansen, Kaj H., 1978, M.D., 1970, Washington; Ph.D., 1977, California (San Diego); general and vascular surgery.

Jones, Robert F., 1974, M.D., 1952, Texas Southwestern; oncology and general surgery.

Maier, Ronald V., 1981, M.D., 1973, Duke; general surgery.

Marchioro, Thomas L., 1967, M.D., 1955, St. Louis; thoracic surgery.

Merendino, K. Alvin, 1949, (Emeritus), M.D., 1940, Yale; Ph.D., 1946, Minnesota; cardiothoracic surgery.

Rice, Charles L., 1984, M.D., 1968, Medical College of Georgia; critical care and general surgery.

Schilling, John A., 1974, (Emeritus), M.D., 1941, Harvard; general surgery.

Strandness, D. Eugene, Jr., 1962, M.D., 1954, Washington; vascular surgery.

Tapper, David, 1983, (Pediatrics), M.D., 1970, Maryland; pediatric surgery.

Winn, Robert K., 1984, (Research), Ph.D., 1974, Washington; pulmonary physiology.

Winterscheid, Loren C., 1957, Ph.D., 1953, M.D., 1954, Pennsylvania; general and thoracic surgery.

### Associate Professors

Allen, Margaret D., 1985, M.D., 1974, California (San Diego); cardiothoracic surgery.

Beach, Kirk W., 1976, (Research), (Bioengineering), M.S.Ch.E., 1968, Ph.D., 1971, California (Berkeley); M.D., 1976, Washington; vascular-Doppler ultrasonic techniques.

Jurkovich, Gregory J., 1988, M.D., 1978, Minnesota; general surgery.

Kohler, Ted R., 1983, M.D., 1976, Harvard; general and vascular surgery.

Moe, Roger E., 1966, M.D., 1959, Washington; oncology and general surgery.

Perkins, James D., 1989, M.D., 1979, Arkansas; transplant surgery.

Radke, Hubert M., 1963, M.D., 1954, Texas; general and thoracic surgery.

Verrier, Edward D., 1989, M.D., 1974, Tufts; cardiothoracic surgery.

Zierler, R. Eugene, 1984, M.D., 1976, John Hopkins; general and vascular surgery.

### Assistant Professors

Au, Yin Ping Tina, 1987, (Research), Ph.D., 1984, Wisconsin (Madison); molecular biology.

Aziz, Salim, 1990, M.B., 1976, St. Mary's (England); cardiothoracic surgery.

Byrd, David R., 1992, M.D., 1982, Tulane; general surgery.

Cochran, Richard P., 1990, M.D., 1978, Emory; cardiothoracic surgery.

Detmer, Paul R., 1990, (Research), Ph.D., 1990, Washington; bioengineering.

Eddy, Arthur C., 1991, M.D., 1978, Cincinnati; cardiothoracic surgery.

Foy, Hugh M., 1989, M.D., 1978, Nebraska; general surgery.

Gentilello, Larry M., 1990, M.D., 1982, Albert Einstein; general surgery.

Grube, Baiba J., 1986, M.D., 1980, Utah; burn and general surgery.

Hatsukami, Thomas S., 1992, (Acting), M.D., 1982, California (Los Angeles); vascular surgery.

Helton, William S., 1991, M.D., 1981, California (Irvine); general surgery.

Hofer, Bradley O., 1990, M.D., 1980, Northwestern; cardiothoracic surgery.

Holman, Robert G., 1989, M.D., 1981, Cornell; general surgery.

Kunzelman, Karyn S., 1991, (Bioengineering), Ph.D., 1991, Texas Southwestern; bioengineering.

Langdale, Lorrie A., 1985, M.D., 1979, Washington; general surgery.

Marsh, Christopher L., 1989, (Urology), M.D., 1980, Loma Linda.

McVicar, John P., 1990, M.D., 1981, Duke; transplant surgery.

Nicholls, Stephen C., 1986, M.B.Ch.B., 1975, Auckland (New Zealand).

Pohlman, Timothy H., 1986, M.D., 1978, Rush Medical College.

Rand, Richard P., 1991, M.D., 1981, Michigan; plastic and reconstructive surgery.

Sawin, Robert S., 1989, M.D., 1982, Pittsburgh; pediatric surgery.

Sikkema, Wesley W., 1967, M.D., 1957, Michigan; general surgery.

Sinanan, Mika N., 1988, M.D., 1980, Johns Hopkins; general surgery.

Vedder, Nicholas B., 1992, (Orthopaedics), M.D., 1981, Case Western Reserve; plastic and reconstructive surgery.

Wood, Douglas E., 1992, M.D., 1983, Harvard; thoracic surgery.

## Course Descriptions

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

**SURG 488 Undergraduate Thesis (\*) AWSpS Foy** Offered to those students who have engaged in undergraduate research in general surgery. (Full- or part-time.) Please see "Research Opportunities in the Department of Surgery".

**SURG 499 Undergraduate Research (\*) AWSpS Foy** Provides an opportunity to participate in ongoing research projects in general surgery being carried out by Department of Surgery faculty or to carry out an independent research project under supervision. Practical experience in experimental design and execution is provided under direct supervision of selected faculty members. (Full- or part-time.)

**SURG 505P Preceptorship in Surgery (1) Foy** Opportunity for first- and second-year medical students to gain personal experience with clinical faculty members in the community. Students observe general aspects of private practice, including clinical problems seen; practice limitation; doctor-doctor, doctor-patient, and doctor-nurse relationships in the office and hospital. Prerequisite: permission of department.

**CONJ 585 Surgical Anatomy (1-3, max. 12) See** Conjoint Courses.

**SURG 600 Independent Study or Research (\*) AWSpS Foy**

**SURG 665P Clinical Clerkship (\*, max. 24) AWSpS Foy** (Veterans Administration Hospital, Harborview Medical Center, Providence Medical Center, University of Washington Medical Center) Diagnosis and management of problems amenable to surgical therapy. Physiological basis of surgical care, differential diagnosis and decision making, and the basic principles of surgical management. Care of inpatients and outpatients, including participation in the operating

rooms. Prerequisite: HUBIO 563P. (Six weeks. Limit: twenty-five students.)

**SURG 681P Peripheral Vascular Disease (4 or 8) AWSp** *Strandness (Veterans Administration Hospital, University of Washington Medical Center)* Peripheral arterial and venous problems, including methods of clinical evaluation; new diagnostic procedures; and the available methods of treatment. Patient workup, performance of diagnostic studies, and presentation of case material to the staff. Prerequisites: 665P, HUBIO 563P. (Two or four weeks. Limit: two students.)

**SURG 682P Clinical Burn Care (\*, max. 12) AWSpS** *Heimbach* Offered on the burn unit of Harborview Medical Center. Exposure to the care of patients with thermal injury, including management of severe metabolic and septic problems and opportunity to participate in surgical procedures. Exposure to plastic and reconstructive surgery. Prerequisite: 665P. (Four or six weeks. Limit: two students.)

**SURG 683P Pediatric Surgery Externship (8 or 12) AWSpS** *Tapner (Children's Hospital and Medical Center)* Surgical conditions peculiar to the particular age group with a preponderance of congenital and neoplastic conditions that are amenable to surgical treatment. A reasonable background of knowledge in human embryology and genetics is recommended. Prerequisite: 665P. (Four or six weeks, full-time. Limit: two students.)

**SURG 684P Trauma and Emergency Care (\*, max. 16) AWSpS** *Copass, Eisenberg* Register for one or both segments of this course. Segment 1: emergency medicine and trauma at Harborview Medical Center with assignment to the emergency department. Emphasis on management of critical medical emergencies and trauma. Segment 2: acute medicine at University of Washington Medical Center. Evaluate and treat ambulatory emergencies. Prerequisites: 665P, MED 665P. (Four weeks, fourth-year students. Limit: twelve students at Harborview Medical Center; three students at University of Washington Medical Center.)

**SURG 685P Cardiothoracic Surgery Externship (\*, max. 12) AWSpS** *Verrier* Serve as subintern, participate in patient care while learning cardiopulmonary hemodynamics of cardiac surgery. Wide variety of both cardiac and thoracic disease entities. Participate in the open-heart procedures in the operating room. Opportunity to gain additional understanding of physiology of cardiopulmonary bypass. (Four or six weeks. Limit: two students.)

**SURG 686P Plastic Surgery Clerkship and Preceptorship (\*, max. 12) AWSp** *Engrav* Plastic surgery service at University-affiliated hospitals; includes patient workups and operating room experience with emphasis on learning the fundamentals of plastic surgery, wound management on animal specimens and in the emergency room. Includes wounds, burns, facial trauma, head and neck cancer, cosmetic surgery, skin tumors, hand surgery, and reconstructive surgery. Prerequisite: 665P. (Four or six weeks. Limit: two students.)

**SURG 687P Transplantation Surgery Clerkship (8) Perkins** Clerkship is in the University regional multi-organ transplantation center. Student participates fully in the care of all transplant patients, on twice daily multidisciplinary rounds, in pre-operative conference, and in the operating room and on the donor harvest team. Weekly didactic teaching sessions. Prerequisites: 665P and MED 665P. (Four weeks. Limit: five students.)

**SURG 688P Subinternship in General Surgery (\*, max. 12) AWSpS** *Foy* Offered on the general surgery wards of the University-affiliated hospitals. Diagnosis, preoperative care, and postoperative care; management of surgical emergencies and outpatient follow-up of discharged patients. Students function at the intern level under close supervision of the staff and house

staff. Prerequisite: 665P. (Four or six weeks. Limit: seven students.)

**SURG 697P Surgery Special Electives (\*, max. 24) AWSpS** *Foy* Special clerkship, externship, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisites: 665P and departmental permission. (Four, six, or twelve weeks.)

## Urology

BB1115 Health Sciences

Urology is the surgical discipline concerned with diseases of the urinary tract in male and female systems. The science is broadly based: major areas of practical and investigative concern include congenital defects, cancer, renal pathology, reproductive biology, neural pathology, and transplantation.

Clinically, the field encompasses a large variety of technical skills including real time imaging and manipulation, endoscopy, and open surgery. The medical diagnosis and treatment are a large part of the discipline.

The department is actively involved in patient care, instruction, and research concerning the problems of urology. Training for medical students starts in the second year and continues through the third and fourth years. Training is also provided for interns, nurses and physical medicine technologists and applied specialists. The department is responsible for a fully approved urology residency program. Contact the Urology Clerkship Coordinator at 685-3245 for further information.

## Faculty

### Chairperson

Paul H. Lange

### Professors

Ansell, Julian S., 1959, (Emeritus), M.D., 1951, Tufts; Ph.D., 1959, Minnesota; congenital defects and pediatric urology.

Barnes, Glover W., 1969, (Microbiology), M.A., 1955, Ph.D., 1962, State University of New York (Buffalo); tissue, organ immunology.

Berger, Richard E., 1979, M.D., 1973, Chicago; infertility, infectious diseases, and impotence.

Chapman, Warren H., 1966, (Emeritus), M.D., 1952, Chicago; oncology and microsurgery.

Krieger, John N., 1982, M.D., 1974, Cornell; infectious diseases.

Lange, Paul H. 1988, M.D., 1967, Washington (St. Louis); oncology, endourology and adult reconstruction.

Mayo, Michael E., 1975, M.B.B.S., 1962, St. Thomas Hospital (London); neuro-urology and reconstruction, urodynamics.

Mitchell, Michael E., 1989, M.D., 1969, Harvard; pediatric urology and reconstruction.

### Associate Professors

Brawer, Michael K., 1989, M.D., 1980, California (Los Angeles); oncology.

Burns, Mark W., 1986, M.D., 1979, Washington; pediatric urology and transplantation.

Vessella, Robert L., Jr., 1989, (Microbiology, Pathology), Ph.D., 1974, Mississippi; tumor markers and immunology.

### Assistant Professors

Bavendam, Tamara G., 1989, M.D., 1981, Iowa; female urology and urodynamics.

DeFalco, Alfred G., 1989, M.D., 1962, Rochester; urologic trauma, urodynamics and endourology.

Ellis, William J., 1991, M.D., 1985, Johns Hopkins; oncology.

Marsh, Christopher L., 1989, (Surgery), M.D., 1980, Loma Linda.

Riley, Donald E., 1990, (Research), (Pathobiology), Ph.D., 1976, Washington; molecular biology/biochemistry of microorganisms and human DNA.

## Course Descriptions

*Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.*

**UROL 498 Undergraduate Thesis (\*, max. 24) AWSpS** *Brawer* Provides an opportunity for medical students to write theses in the area of urology. Prerequisite: permission of sponsor and department.

**UROL 499 Undergraduate Research (\*, max. 24) AWSpS** *Brawer* The student participates in current urologic research projects under supervision of full-time staff. Certain specific problems may be elected by the student. Elective for medical students. Prerequisite: permission of sponsor and department.

**UROL 501P Urology Preceptorship (1) AWSpS** *Brawer* Individual experiences with one or more of the full-time department faculty members covering research, teaching, and patient care. Students observe activities in the clinic, hospital ward, operating room, and research laboratories. Prerequisites: first- or second-year medical student standing; permission of instructor.

**UROL 675P Urology Preceptorship (\*, max. 8) AWSpS** *Brawer* Student follows a private practice preceptor in all of his or her work. Becomes acquainted with the office management of urological problems. Prerequisites: 680P, HUBIO 562P. (Two or four weeks.)

**UROL 680P Urology Clerkship (\*, max. 8) AWSpS** *Bavendam, Berger, Ellis, Krieger, Mayo* Full activities of clinical service. Basic principles of urology emphasized. Prerequisite: HUBIO 562P. (Two or four weeks.)

**UROL 685P Urology Subinternship (\*, max. 12) AWSpS** *Bavendam, Berger, Ellis, Krieger, Mayo* Subintern is responsible for patient workups and for preoperative and postoperative care and participates in the operating room. Prerequisite: MED 665P or pediatric basic clerkship, or permission of instructor.

**UROL 690P Urology Specialties (\*, max. 8) AWSpS** *Brawer* For those who wish further exposure to a specific aspect of urology. Students can spend time with one attending at University of Washington Medical Center, Harborview Medical Center, Children's Hospital and Medical Center, or Veterans Administration Hospital studying oncology, infections, infertility, stone disease, impotence, or other aspects of urology. Prerequisites: 680P and permission of instructor.

**UROL 697P Urology Special Electives (\*, max. 24) AWSpS** *Brawer* Special clerkship, externship, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of instructor. (Six or twelve weeks.)

# School of Nursing

## Dean

Sue T. Hegyvary  
T318 Health Sciences

## Associate Deans

Kathryn E. Barnard, Academic Programs  
Marie J. Cowan, Research and Practice

## Assistant Deans

Ruth F. Craven, Continuing Nursing Education  
Anne Loustau, Student Affairs

The School of Nursing offers programs leading to baccalaureate, master's, and doctoral degrees.

Gary Olson, Director, Academic Programs

## Undergraduate Program

The School of Nursing prepares its graduates to function as generalists in professional nursing practice and to collaborate with other health-care providers. The six-quarter undergraduate curriculum emphasizes theory and clinical practice to ensure critical thinking, human caring, and clinical expertise. Clinical experiences are provided in institutional and community settings for preventive and acute care. Completion of the curriculum leads to a Bachelor of Science in Nursing degree and eligibility to take the licensure examination to become a registered nurse.

Opportunity is available to study in an upper-division honors program and complete a Bachelor of Science in Nursing with Distinction. For UW Arts and Sciences students enrolled in an honors program, the opportunity is available to complete a Bachelor of Science in Nursing with Honors.

Students may be admitted to the University of Washington as prenursing majors. Courses required for admission to the nursing major include: communication (written and oral), problem solving (including statistics), life sciences (inorganic and organic chemistry, human anatomy and physiology, nutrition, and microbiology), humanities, social sciences (including growth and development), and electives to achieve a minimum of 90 credits. A minimum 2.00 cumulative GPA is required and a minimum grade of 2.0 must be obtained for each prerequisite course.

A four-quarter modification of the basic curriculum is available for the registered nurse who is able to validate selected nursing courses through written examination and who intends to complete a master's degree program.

Admission to the nursing major occurs once a year, in autumn quarter, with an application deadline in the previous February. Admission to the registered nurse program is in summer quarter, with a December 1 application deadline. Selection is competitive. For information on admission criteria, specific prerequisites, and deadlines, as well as application forms, contact the Office of Academic Programs, School of Nursing, 543-8735 or 1-800-759-NURSE.

## Graduate Program

The School of Nursing offers graduate study leading to the degrees of Master of Nursing, Master of Science, and Doctor of Philosophy. At the master's level, programs are designed to provide opportunity for advanced study and research in nursing and, in the Master of Nursing program, to assist in the development of increased competence in selected areas of clinical specialization: community health care systems, parent and child nursing, physiological nursing, and psychosocial nursing. Research is an integral part of all programs. A thesis is required in the Master of Science program. The Master of Nursing program provides the option of a thesis or non-thesis project. Opportunities for functional preparation in teaching, administration, and clinical practice as a nurse practitioner are available. The School of Nursing offers a concurrent graduate degree program with the Department of Health Services in the School of Public Health and Community Medicine.

The aim of the program at the doctoral level is to prepare scholars and researchers to expand the body of knowledge upon which the practice of nursing rests. The program provides for rigorous research training related to four fields of nursing science: (1) individual adaptations to health and illness; (2) family adaptations to health and illness; (3) environments: supporting and nonsupporting; and (4) clinical therapeutics. The Ph.D. in nursing science program is appropriate preparation for individuals interested in careers in academia or for other types of leadership positions in health service agencies in which the ability to design, plan, and implement research in nursing is a critical requirement.

## Special Requirements

In addition to the basic requirements for graduate status in the University, admission to premaster's status in the School of Nursing requires baccalaureate preparation with an upper-division major in nursing or equivalent, a basic course in statistics, a Graduate Record Examination within the past five years, a statement of goals, three references, and at least one year of practice for most programs. Admission is normally autumn quarter, except for the nursing administration pathway, which begins summer quarter. The deadline for application to the nursing administration pathway is December 1. The application deadline for most other master's degree pathways is April 1. Early application is encouraged, although late applications may be accepted. Additional information may be obtained from the School of Nursing Office of Academic Programs.

Admission requirements for the doctoral program, in addition to the above, include Graduate Record Examination scores within the past five years, five references, a statement of goals for doctoral study, a description of area of research interest, and evidence of scholarly work. A personal interview may be required. The deadline for application to the doctoral program is February 1.

## Financial Aid

A limited number of nurse traineeships are available for premaster's study. Special pre- and post-master's traineeships are also available to a limited number of students for specific specialties. Additional information may be obtained from the School of Nursing.

Teaching assistantships and research assistantships are available to a limited number of students. Priority for these appointments is given to predoctoral students.

## Faculty

### Chairpersons

Community Health Care Systems: Katherine J. Graham  
Parent and Child Nursing: Marcia G. Killien  
Physiological Nursing: Joan Shaver  
Psychosocial Nursing: David G. Allen

### Professors

Barnard, Kathryn E.,\* 1972, (Psychology), M.S., 1962, Boston; Ph.D., 1972, Washington; ecological factors of child development.

Batey, Marjorie V.,\* 1956, M.S., 1956, Ph.D., 1968, Colorado; sociological factors in health-care systems.

Benoliel, Jeanne Q.,\* 1970, (Emeritus), M.S., 1961, California (Los Angeles); D.N.Sc., 1969, California (San Francisco); psychosocial consequences of life-threatening illnesses, process of identity change.

Blackburn, Susan T.,\* 1974, M.N., 1973, Ph.D., 1979, Washington; high-risk infants and their families, infant care-giving actions and environments.

Booth, Cathryn L.,\* 1979, (Research), M.A., 1971, Ph.D., 1974, Ohio State; mother-infant interaction, observational methodology, childbirth experiences and attachments.

Chrisman, Noel J.,\* 1973, (Anthropology, Family Medicine), M.P.H., 1967, Ph.D., 1966, California (Berkeley); health beliefs and practices, social networks and social support.

Cowan, Marie J.,\* 1979, (Medicine, Pathology), M.S., 1972, Ph.D., 1979, Washington; estimation of infarct size by electrocardiography, sudden cardiac death, heart rate variability.

deTornyay, Rheba,\* 1975, M.A., 1954, San Francisco State; Ed.D., 1967, Stanford; health services, nursing education.

Dimond, Margaret F.,\* 1988, M.A., 1971, Iowa; Ph.D., 1978, Wisconsin; gerontology, bereavement, chronic illness, long-term care.

Disbrow, Mildred A.,\* 1968, (Emeritus), M.Litt., 1954, Pittsburgh; Ph.D., 1954, Washington; maternal-infant interaction, child abuse.

Eyres, Sandra J.,\* 1974, M.P.H., 1968, Ph.D., 1972, North Carolina; environmental resources promoting adaptation and health.

Gallucci, Betty B.,\* 1976, M.L.Sc., 1972, Ph.D., 1973, North Carolina State; oncology, nutritional assessment, pathophysiology of stomatitis, and graft versus host disease.

Giblin, Elizabeth C.,\* 1959, (Emeritus), M.N., 1954, Washington; Ed.D., 1959, Colorado; nursing assessment and nursing therapies, pathophysiological bases.

Graham, Katherine J.,\* 1988, M.N., 1967, M.A., 1972, Ph.D., 1978, Washington; community health nursing, public policy, quality of life.

Hegyvary, Sue T.,\* 1986, M.N., 1966, Emory; Ph.D., 1974, Vanderbilt; health services research, organization of health-care facilities, institutional quality assurance, nursing management.

Heinemann, Edith M.,\* 1954, (Emeritus), M.A., 1954, Washington; alcohol- and substance-abuse nursing.

Heitkemper, Margaret,\* 1981, M.N., 1975, Washington; Ph.D., 1981, Illinois; physiological nursing, gastroenterology, enteral nutrition, gerontology.

Horn, Barbara J.,\* 1977, M.S., 1957, Indiana; Ph.D., 1971, Michigan; effective organization of nursing resources.

Killien, Marcia Gruis,\* 1982, M.N., 1974, Ph.D., 1982, Washington; women's health, reproductive decision making, evaluation research, perinatal nursing.

Lewis, Frances Marcus,\* 1978, M.N., 1968, Washington; M.A., 1973, Ph.D., 1977, Stanford; complex orga-

nizational analysis, evaluation research, psychosocial factors in chronic illness.

Little, Dolores E.,\* 1957, (Emeritus), M.N., 1957, Washington; leadership, emerging nursing roles.

Mansfield, Louise W., 1951, (Emeritus), M.A., 1951, Columbia; physiological nursing.

Mitchell, Pamela H.,\* 1965, M.S., 1965, California (San Francisco); Ph.D., 1991, Washington; neuroscience nursing, diagnostic strategies.

Muecke, Marjorie A.,\* 1979, (Anthropology, Health Services), M.A., 1968, New York; M.A., 1972, Ph.D., 1976, Washington; medical anthropology, women's health, refugee health, Southeast Asia.

Murphy, Shirley A.,\* 1985, M.Ed., 1965, Gonzaga; Ph.D., 1981, Portland; addictive processes in women, coping with undesirable life events.

Nakagawa-Kogan, Helen,\* 1968, M.A., 1956, Columbia; Ph.D., 1968, California (Los Angeles); stress response: cognitive/physiologic interface in chronic dysfunctions, self-management teaching.

Osborne, Oliver H.,\* 1969, (Anthropology), M.A., 1960, New York; Ph.D., 1968, Michigan State; ideology, policy and health-care systems, transcultural health, mental health.

Patrick, Maxine L.,\* 1955, M.N., 1953, Washington; D.P.H., 1970, California (Los Angeles); gerontology, geriatrics.

Price Spratlen, Lois,\* 1976, M.N., 1972, California (Los Angeles); Ph.D., 1976, Washington; urban and ethnic factors in health and illness.

Prinz, Patricia N.,\* 1976, ‡(Psychiatry and Behavioral Sciences), Ph.D., 1969, Stanford; sleep.

Shamansky, Sherry L.,\* 1988, M.S.N., 1969, Dr.P.H., 1977, Yale; clinical, scholarly, and social aspects of community health nursing.

Shaver, Joan,\* 1980, M.N., 1970, Ph.D.; 1976, Washington; women's health and female reproductive physiology.

Thomas, Morgan D.,\* 1959, ‡(Geography), Ph.D., 1954, Queens (Belfast); regional economics, regional planning and development, technical innovation.

Webster-Stratton, Carolyn H.,\* 1976, M.S.N., 1972, M.P.H., 1972, Yale; Ph.D., 1978, Washington; parent intervention programs for behaviorally disturbed children.

Wolf-Wilets, Vivian C.,\* 1969, M.A., 1964, Ph.D., 1969, Chicago; curriculum development, instruction, stress management.

Woods, Nancy F.,\* 1978, (Social Work), M.N., 1969, Washington; Ph.D., 1978, North Carolina; women's health.

#### Associate Professors

Allen, David G.,\* M.A., 1971, Ph.D., 1975, Iowa; M.S.N., 1981, Wisconsin; application of critical and feminist theories to nursing; Alzheimer's disease, decentralizing decision making, philosophy of science.

Beaton, Randal D.,\* 1977, (Research), (Dental Public Health Sciences), Ph.D., 1972, Washington; evaluation of clinical outcomes in health-care programs.

Betrus, Patricia A.,\* 1982, M.N., 1979, Ph.D., 1985, Washington; stress, cognitive behavioral therapy, depression, research design.

Blainey, Carol A.,\* 1967, M.N., 1967, Washington; clinical teaching and problems of patients with diabetes mellitus.

Bond, Eleanor R.,\* 1985, M.S., 1976, Ph.D., 1985, Washington; critical care nursing.

Booser, Mary K.,\* 1960, (Emeritus), M.N., 1955, Washington; physiological nursing, care of patients.

Brandt, Edna M., 1954, (Emeritus), M.N., 1953, Washington; physiological nursing.

Brandt, Patricia A.,\* 1982, M.S., 1968, Colorado; Ph.D., 1981, Washington; influence of family functioning on early child development.

Brown, Marie A.,\* 1983, M.N., 1973, Ph.D., 1983, Washington; perimenstrual distress (premenstrual syndrome and dysmenorrhea), psychosocial aspects of pregnancy.

Burke, A. Evelyn, 1943, (Emeritus), M.A., 1941, Case Western Reserve; community health-care systems.

Burr, Robert L.,\* (Research), 1991, M.S.E.E., 1978, Ph.D., 1986, Washington; bioengineering, adaptive signal processing, information theory, spectral analysis.

Bush, James P., 1974, M.N., 1973, Washington; Ed.D., 1984, San Francisco; pain management, power and powerlessness as perceived by professional nurses.

Carnevali, Doris L.,\* 1962, (Emeritus), M.N., 1961, Washington; planning nursing care.

Catanzaro, Marci L.,\* 1977, (Rehabilitation Medicine), M.S., 1971, Washington; Ph.D., 1980, Union Graduate School—West (San Francisco); symptom management and chronic illness.

Cobb, M. Marguerite, 1953, (Emeritus), M.N., 1957, Washington; community and school health problems.

Craven, Ruth F.,\* 1968, M.N., 1968, Washington; Ed.D., 1984, Seattle; gerontological nursing.

Cunningham, Susanna L.,\* 1978, (Physiology and Biophysics), M.A., 1969, Ph.D., 1977, Washington; cardiovascular and sympathetic nervous system control of renin release.

Eggert, Leona L.,\* 1978, M.A., 1970, Ph.D., 1984, Washington; personal relationships, nurses' communication competency, adolescents' drug use and abuse.

Estes, Nada J.,\* 1972, M.S.N., 1958, Colorado; counseling, people with substance-use disorder, depression.

Fine, Ruth B.,\* 1960, (Emeritus), M.N., 1957, Washington; organization and structure as it influences behavior.

Flagler, Susan,\* 1979, M.S., 1976, D.N.Sc., 1981, California (San Francisco); nursing interventions that promote adaptations to parenting.

Gray, Carol A.,\* 1971, ‡(Education), M.Ed., 1968, Western Washington; Ph.D., 1971, Washington; school psychology/human development and cognition.

Gray, Florence I., 1945, (Emeritus), M.S., 1950, Washington; undergraduate nursing education.

Hammond, Mary A.,\* 1972, (Research), M.S., 1968, Ph.D., 1971, Wisconsin; child development, longitudinal research methods.

Hay, Stella,\* 1955, (Emeritus), M.A., 1951, Minnesota; physiological nursing.

Hoffman, Agnes K.,\* 1979, M.N.S., 1968, Wayne State; M.A., 1974, Ph.D., 1977, Kansas; substance-use disorders, mental-health care of the elderly.

Horn, Beverly M.,\* 1976, (Anthropology), M.N., 1962, Ph.D., 1975, Washington; cross-cultural research in maternal-child nursing.

Jordan, Pamela L.,\* 1984, M.S., 1975, Rush; Ph.D., 1984, Michigan; family expansion, fathering, social support.

Lentz, Martha J.,\* 1984, (Research), M.N., 1975, Ph.D., 1984, Washington; circadian phase relationship of sleep-wake cycle and body temperature rhythm in aging.

Loustau, Anne,\* 1976, M.S., 1967, California (San Francisco); Ph.D., 1975, Washington; clinical decision making, patient teaching, patient compliance with therapeutic regimens.

Magyary, Diane L.,\* 1982, M.N., 1977, Ph.D., 1981, Washington; parent interactions with high-risk infants and children.

Molbo, Doris M.,\* 1970, (Emeritus), M.A., 1968, Washington; oncology: prevention and screening, care and rehabilitation.

Olshansky, Ellen F.,\* 1985, M.S., 1979, D.N.Sc., 1985, California (San Francisco); psychological implications of infertility related to the family, qualitative research.

Pesznecker, Betty L.,\* 1970, (Emeritus), M.N., 1957, Washington; life change, life strain, impact on health, low-income women.

Pittman, Rosemary J.,\* 1954, (Emeritus), M.S., 1947, Chicago; family nurse practitioner.

Schultz, Phyllis R.,\* 1989, M.N., 1966, Emory; M.A., 1977, Ph.D., 1981, Denver; nursing care delivery systems, research design and methods, epistemological foundations of nursing.

Spieker, Susan J.,\* 1985, (Research), Ph.D., 1982, Cornell; developmental psychology, infant security.

Thomas, Karen A. J.,\* 1986, M.A., 1977, Iowa; Ph.D., 1986, Washington; physiological adaptation of premature infants.

Thomas, Mary Durand,\* 1985, M.S.N., 1962, Washington; Ph.D., 1978, Hawaii; psychiatric disabilities, nursing assessment and diagnosis, cultural aspects of care.

Wagnild, Gail M.,\* 1986, M.S.N., 1980, Montana State; Ph.D., 1984, Texas (Austin); geriatric care in the community.

Weaver, W. Douglas, 1988, ‡(Medicine), M.D., 1971, Tufts; coronary care, cardiac arrest, myocardial infarction.

Woods, Susan L.,\* 1975, M.A., 1974, Washington; cardiovascular clinical specialist, pulmonary artery catheter measurement.

#### Assistant Professors

Belza, Basia B.,\* 1991, M.S.N., 1982, Virginia; Ph.D., 1991, California (San Francisco); fatigue in chronic illness, rheumatic diseases, geriatrics.

Brown, Linda,\* 1991, (Social Work), M.S., 1968, Ph.D., 1982, Colorado (Boulder); care phenomena, qualitative research methods, public sector health care delivery systems.

Cornman, B. Jane,\* 1979, (Research), M.N., 1976, Oregon; Ph.D., 1988, Washington; childhood cancer, sexual assault counseling, holistic care.

Draye, Mary Ann, 1973, M.P.H., 1968, Michigan; FNP practice, infertility, computer-aided instruction, risk appraisal.

Elmore, Shawn K.,\* 1990, M.N., 1982, Ph.D., 1990, Washington; women and affective disorders, seasonal affective disorder, circadian rhythms and mental health, stress management.

Hendershot, Susan C., 1991, (Research), M.N. 1980, Ph.D., 1991, Washington; biofeedback-assisted self-management training interventions, self-disclosure in the therapeutic relationship.

Jarrett, Monica E., 1989, (Research), M.N., 1981, Ph.D., 1989, Washington; stress management as a nursing intervention, stress and menstrual cycle regularity.

Jones, Mary C.,\* 1964, (Emeritus), M.S., 1962, Boston; occupational health nursing, health promotion, self-care practice.

Kang, Rebecca R.,\* 1989, M.N., 1974, Ph.D., 1985, Washington; public health nursing, minority family health, high risk infants and their families, parental problem-solving.

Kelly, Jean F., 1988, (Research), M.A., 1973, San Francisco State; Ph.D., 1979, Washington; social and emotional health of biologically or socially vulnerable children and their families.

Kieckhefer, Gail M.,\* 1988, M.S., 1977, St. Louis; Ph.D., 1985, Washington; children with chronic illness; children's health promotion.

Lalonde, Bernadette I.D., 1989, Ph.D., 1979, Toronto (Ontario); chronic illness, community health, quality assurance, program evaluation.

Landis, Carol A., 1991, M.S., 1973, D.N.Sc., 1988, California (San Francisco); neuroscience, chronic pain, sleep disturbances.

Larson, M. Linn, 1967, (Emeritus), M.N., 1967, Washington; cross-cultural variables in mental illness, nursing interventions in disturbed behaviors.

Lewis, Linda L., 1989, M.S., 1981, Ph.D., 1987, Illinois; premenstrual syndrome, women's health, critical care.

Lowenberg, June S., 1990, M.N., 1969, California (Los Angeles); Ph.D., 1985, California (San Diego); sociology of health and illness, family health (child/adolescent), interpretive research methodology.

Mitchell, Ellen S., 1987, (Research), M.N., 1967, Florida; Ph.D., 1986, Washington; eating control, menstrual cycle, women's health.

Montano, Daniel E., 1989, (Research), M.A., 1979, Illinois; Ph.D., 1983, Washington; patient and provider behavior, attitude measurement, research methods, design, statistics, and psychometric testing and instrumentation.

O'Connor, Frederica W., 1986, M.S.N., 1974, Illinois; M.S., 1984, Ph.D., 1986, Northwestern; psychiatric nursing, social psychology, psychoeducational care.

Packard, Nancy J., 1991, M.N., 1978, M.P.H., 1987, Ph.D., 1987, Washington; health care systems, chronic illness, long term care, information systems, health policy.

Price, Martha J., 1990, M.S.N., 1977, West Virginia; D.N.Sc., 1988, California (San Francisco); nursing management of diabetes mellitus, chronic illness, primary health care.

Salazar, Mary K., 1991, M.N., 1986, Washington; Ed.D., 1991, Seattle University; occupational health nursing, breast cancer prevention.

Schepp, Karen G., 1988, M.N., 1967, Washington; Ph.D., 1985, Arizona; coping efforts of families with hospitalized children; family, child and adolescent psychiatric nursing.

Simpson, Terri A., 1991, M.S.N., 1975, California (San Francisco); Ph.D., 1988, Washington; environmental social influences, physiologic responses in coronary care patients.

Stetz, Kathy M., 1990, M.S.N., 1981, Ph.D., 1986, Washington; families with chronic illness, spousal care in advanced cancer.

Swanson, Kristen M., 1985, M.S.N., 1978, Pennsylvania; Ph.D., 1983, Colorado; psychosocial and parent-child nursing, reproductive loss, caring, qualitative research methodologies.

Thompson, F. Elaine, 1991, (Research), M.A., 1972, Ph.D., 1990, Washington; psychosocial nursing, social psychology, adolescent behavior.

Tyler, Martha L., 1976, M.N., 1977, Washington; oxygenation during chest physiotherapy, suctioning, dyspnea, breathing patterns in disease.

Ward, Deborah H., 1987, M.S., 1977, Yale; Ph.D., 1987, Boston; health policy, equity of health care, care of elderly by women.

Whitney, Joanne D., 1991, M.S., 1979, Michigan; Ph.D., 1991, California (San Francisco); tissue oxygen and perfusion, wound healing, clinical interventions to support healing.

Witkie, Diana J., 1990, M.S., 1984, Ph.D., 1990, California (San Francisco); oncology, cancer pain behaviors.

Worthy, Elizabeth J., 1966, (Emeritus), M.N., 1964, Washington; mother-infant interactions, handicapped child.

Young, Heather M., 1991, (Research), M.N., 1989, Ph.D., 1991, Washington; gerontology.

Zerwekh, Joyce V., 1986, M.A., 1969, New York; Ed.D., 1990, Seattle University.

#### Lecturers

Hancock, Lois A., 1982, M.S.N., 1978, Yale; parent and child nursing.

Hirnie, Constance J., 1983, M.N., 1973, Washington; diabetes, clinical teaching.

Metheny, Elizabeth M., 1984, M.N., 1961, Washington; physiological nursing.

Pipes, Peggy L., 1968, M.A., 1952, Columbia; M.P.H., 1966, Michigan; nutrition.

Russell, Millie L., 1974, (Biology), M.S., 1979, Washington; kinesiology.

## Course Descriptions

### Community Health Care Systems

**CHCS 301 The Discipline and Profession of Nursing (3) A** Conceptual organization of the discipline of nursing and the scope of its professional practice. Nursing's historical development and current trends influencing the contributions of nursing in health-care delivery. Prerequisite: admission to School of Nursing.

**CHCS 361 Cultural Variation and Nursing Practice (2) W** Importance in nursing practice of ethnomedical beliefs, values, practices pertaining to wellness-illness, care seeking, and healing. Comparative approach emphasizes cross-cultural similarities and differences. Value orientations influencing the effectiveness of nurses working with culturally diverse populations. Prerequisite: upper-division standing.

**CHCS 402 Strategies in Community Health Nursing (8) WSp** Community health nursing process at levels of family and other small groups, community and aggregate populations. Formulation of community health diagnoses as basis for interventions to promote disease prevention, wellness, and self-care within community. Prerequisite: senior standing in nursing or permission of instructor.

**CHCS 410 Gerontological Nursing (2) WSp** Major physiological, psychological, and sociocultural changes associated with aging and their impact on individuals within the context of their families and environments. Nursing assessments and interventions utilizing strengths and capabilities of the elderly and aimed at maintaining optimum health status. Prerequisites: senior standing, nursing major standing.

**CHCS 420 Nursing Leadership and Health-Care Systems Analysis (3) WSp** Analysis of selected leadership theories and their relationship to leadership role required of professional nurse. Comparative analysis of past, current, and emerging health-care systems in United States and other countries. Factors influencing health-delivery systems (e.g., political, technological, socioeconomic, cultural). Prerequisite: senior standing or permission of instructor.

**CHCS 423 Senior Practicum in Community Health Nursing (7) Sp** Theoretical depth and practice offered in areas of leadership, health promotion, health education, community organization, and application of research influencing the quality of health-care delivery applied in primary community health-care settings. Prerequisite: 402 or permission of instructor.

**CHCS 450 Advanced Fieldwork Community Health Nursing (2)** Guided experience in delineating nursing roles in community settings. Development of a philosophy of community health nursing. Application of core concepts pertaining to health, ethics, care, and community. A minimum of four hours of guided experience weekly. Prerequisites: graduate standing, permission of instructor.

**CHCS 458 Practice Teaching Community Health Nursing (3) Sp** Guided experience in selected teaching-learning situations in community health nursing. Identification, analysis, and solution of teaching-learning problems. A minimum of seven hours of guided experience weekly. Prerequisite: 450.

**CHCS 492 Anthropology of Refugees (3)** The refugee phenomenon, its emergence in postcolonial world, and structure of life history of refugees. Ethnic change, involuntary deculturation, and acculturation as they occur in refugee life histories. Joint with ANTH 492. Prerequisite: ANTH 202 or permission of instructor.

**CHCS 495 Child Rearing, Culture, and Health (3) Sp** Cross-cultural study of the child-rearing practices, cultural norms, and health behavior of children and adolescents in different societies. Comparative approaches, diverse theoretical postures, and empirical research findings are used. Joint with ANTH 440. Prerequisite: permission of departmental adviser.

**CHCS 499 Undergraduate Research (1-5, max. 12) AWSpS** Supervised individual research on a specific nursing problem. Prerequisites: junior year standing in the School of Nursing, cumulative grade-point average of 3.00 or better, and permission of academic programs office.

**CHCS 501 Advanced Health Assessment (4) A** Provides framework for systematic data collection, organization, precise recording, and accurate communication of health status data on individuals of all ages. Demonstrations of, and experiences with, the processes of symptom analysis and health screening with basically healthy individuals. Credit/no credit only. Prerequisites: graduate standing, permission of instructor.

**CHCS 506 Seminar in Nursing Administration (3) W** Critical analyses of problems affecting the administration of nursing. Intensive directed study of the conditions that influence human behavior in nursing work environments. Prerequisites: graduate standing, ADMIN 510, and permission of departmental adviser.

**CHCS 514 Seminar in Home Care for Chronic Illness (3) S** Home-care services as component of community health nursing. Understanding effects of direct nursing functions on care of chronically ill persons and their families. Selected field study experiences in community health settings. Prerequisites: 550, graduate standing, and permission of instructor.

**CHCS 515 Seminar in Nursing Leadership and Management (3)** Current leadership and management theories of nurses working in a variety of settings. Concepts essential in developing the nurse's leadership activities and skills at different management levels. Prerequisites: graduate standing, permission of instructor.

**CHCS 516 Communications in Complex Health-Care Systems (3) W** Forum for critically examining and conceptualizing various communication processes in complex health-care systems and their implications for practice. Analytic and theoretical perspectives for the study of communication within health care. Prerequisites: 571, permission of instructor.

**CHCS 520 Methods of Research in Nursing (3) A** Research process as it applies to nursing. Use of the literature in building theoretical rationale. Selection of appropriate methods. Presentation of findings. Minimum of two laboratory hours weekly. Prerequisite: a course in statistics.

**CHCS 521 Methods of Research in Nursing (2) W** Continuation of 520, with emphasis on methods of research applied to the solution of problems in all fields of nursing.

**CHCS 524 Conceptual Foundations for Care Systems Management (3) A** Critical analysis of nature and theoretical bases of nursing administration practice. Concepts of nursing and organization science foundational to executive and middle management leadership in context of nursing's community, economic, health, political, professional, and social environment.

ronments. Prerequisite: ADMIN 510 or permission of instructor.

**CHCS 550 Advanced Community Health Nursing (3)** Systematic inquiry into the nature and foundations of community health nursing. Analytic and theoretical perspectives on health risk assessment and nursing interventions in the community. Implications for community health nursing services. Prerequisites: permission of instructor and graduate standing.

**CHCS 551 Theoretical Foundations of Primary Care (1-3) W** Presentation and interpretation of theoretical basis of advanced nursing practice in primary care. Provides students with conceptual foundation upon which to base their development as nurse practitioners. Prerequisites: graduate standing; permission of instructor.

**CHCS 552 Health Promotion (2 or 3) A** Emphasis on health promotion, screening, and disease prevention in primary care. Examination of individual and family wellness, models of risk assessment and behavior change, health promotion strategies, and barriers to achieving health. Opportunity to explore age-related health risks. Prerequisites: graduate standing and permission of instructor; recommended: nurse practitioner students take fieldwork concurrently.

**CHCS 553 Seminar in Primary Care I: Health Promotion (2) A** Weekly seminars with supervised field study within selected primary-care and wellness settings. Emphasis on health assessment and strategies related to improving health in people of all ages. Analysis of, and counseling on, life-styles, nutrition, physical fitness, stress management, self-care, and prevention. Credit/no credit only. Prerequisites: graduate standing, permission of instructor.

**CHCS 556, 557 Seminar in Primary Care II and III: Management of Common Health Concerns (3,3) W, Sp** Focus on research questions, patient presentations, and group discussions drawn from field study. Supervised clinical field study within selected primary health-care settings and weekly seminar discussions related to theory presented in NURS 510. Credit/no credit only. Prerequisite: graduate standing and permission of instructor.

**CHCS 558 Advanced Occupational Health Nursing (2 or 5) A** Occupational health nursing theory; concepts from community health nursing, industrial hygiene, occupational epidemiology, and toxicology. Students synthesize concepts and explore in-depth selected problems in work settings. Evaluation and application of theories and research findings. Field experiences in occupational health nursing mandatory for 5 credits. Prerequisites: ENVH 453, permission of instructor.

**CHCS 559 Seminar in Primary Care IV: Management of Common Health Concerns (3-5)** Focus on research questions, patient presentations, and group discussions drawn from field study. Supervised clinical field study within selected primary care settings and weekly seminar discussions related to theory presented in NURS 510. Credit/no credit only. Prerequisite: permission of instructor; nurse practitioner students register for NURS 510 concurrently.

**CHCS 560 Seminar in Primary Care V: Complex Clinical Decision Making (1-11, max. 11) WSp** Seminar with associated field study. Synthesis of advanced knowledge base and clinical family nurse practitioner skills with effective management of complex clinical problems. Credit/no credit only. Prerequisite: graduate standing and permission of instructor.

**CHCS 561 Systems Analysis in Nursing Administration (3) W** Examines concepts and techniques in industrial engineering, system analysis, and operations research applicable to decision making, control and monitoring functions in nursing administration. Student demonstrates application and critical appraisal of concepts and techniques. Prerequisites: ADMIN 510, or equivalent, and permission of instructor.

**CHCS 562 Clinically Applied Anthropology (3) Sp** Anthropology as it relates to interdisciplinary delivery of culturally relevant health care. Cultural variation in illness beliefs and behavior, types of healing practices, illness prevention, social support networks. Joint with ANTH 562. Prerequisites: graduate standing, permission of instructor.

**CHCS 564 Managing Organizational Effectiveness Within Care Systems (3) Sp** Elements of the administrative process as applied to organized nursing service. Exploration of concepts related to organizational structure, administrative behavior, personnel management, and the technology of administration. Prerequisites: ADMIN 510, graduate standing, and permission of instructor.

**CHCS 566 Managing Clinical Effectiveness Within Care Systems (3) Sp** Application of administrative theory in the development of a program in a selected clinical area of practice. The program will be developed on consumer need, community and agency resources and constraints; two-hour seminar; three hours field study each week. Prerequisites: graduate standing, 561, 564, ADMIN 510, or permission of instructor.

**CHCS 567 Evaluation and Quality Assurance in Nursing (3) S** Examines the framework for the evaluation and quality assurance of nursing practice in health-care and educational settings. The multiprofessional responsibility for review of health care is incorporated into the legal and professional mechanisms of peer review practices. Prerequisites: graduate standing, 520, 521.

**CHCS 568 Advanced Practice in Care Systems Management (4-8) A** Field study provides opportunities to study and analyze the relationships between espoused theories and theories in action under real-time conditions and to make a comparative analysis of structure and behavior of management systems. Minimum of sixteen hours of field study and a two-hour seminar weekly. Prerequisites: equivalency of 506, 520, 521, 564, and ADMIN 510.

**CHCS 570 Occupational Stress and Stress Management (3)** Relationships between occupational stressors and worker's health, well-being, productivity. Analyzes models of occupational stress. Investigates similarities, differences between job-related stressors and stress responses in various occupations. Explores elements of worksite stress management programs. Joint with PSN 570. Prerequisites: graduate standing in nursing or allied health discipline; advanced undergraduates with permission of instructor.

**CHCS 571 Seminar in Nursing and the Social Order (3, max. 9)** Changing patterns of nursing service and education in contemporary society. Implications of personal value systems. Prerequisite: permission of instructor.

**CHCS 574 Selected Topics in Comparative Nursing Care Systems (2 or 3, max. 10)** In-depth examination of the literature pertinent to major theoretical issues in cross-cultural nursing and health-care systems. Seminar with analysis and discussion of selected topics and readings. Implications for research and health care stressed.

**CHCS 575 Death Influence in Clinical Practice (4)** Analysis and study of social, cultural, and psychological conditions that influence human death in modern society. Research findings, selected readings, and direct experience provide direction for examination of philosophic, theoretical, and pragmatic issues underlying choices and decisions in clinical practice. Open to graduate students with permission of instructor. (Limit: sixteen students.)

**CHCS 578 Health, Care, and Community (3) A** Analysis of health care in community from nursing and behavioral science perspectives. Sociocultural influences on health beliefs and practices, natural-care units, and community life patterns analyzed. Community as both context and target of change explored in

relation to nursing approaches in health promotion and maintenance. Prerequisite: graduate standing.

**CHCS 580 Populations at Risk in the Community (3)** Health needs and risks of selected populations in the community and theoretical and analytical perspectives on assessment and intervention strategies in community health nursing practice with groups and populations whose health is at risk. Prerequisites: graduate standing and permission of instructor.

**CHCS 581 Seminar in Advanced Community Health Nursing (6)** Construction and analysis of research questions, presentation of individual and community problems and intervention/evaluation strategies in community health nursing. Individual and community assessment and nursing strategies related to health promotion and prevention of illness. Field study in community health settings. Prerequisites: graduate standing and permission of instructor.

**CHCS 583 Transcultural Nursing Practices (3) WS** Study of nursing practices in different cultures. Seminar focus is on theoretical formulations and comparative analysis of values, patterns, techniques, and practices of nursing care in many societies. Rituals, myths, taboos, and beliefs are studied in relation to the subculture(s) of caring and nursing practices.

**CHCS 600 Independent Study or Research (\*)** Credit/no credit only.

**CHCS 700 Master's Thesis (\*)** Credit/no credit only.

## Parent and Child Nursing

**PCN 300 Human Growth and Development Through the Life Span (5) A** Processes of, and theories about, human growth and development; examination of relevant research; relationship of research and theory to working with clients of various ages. Prerequisite: admission to School of Nursing or permission of instructor.

**PCN 328 Family Centered Nursing of Children (7) AWSp** Holistic assessment and optimizing wellness of pediatric clients and their families. Clinical experiences include care of children and families at various positions along the wellness continuum. Prerequisite: junior standing with nursing major standing.

**PCN 400 Nursing Care of the Childbearing Family (5) AWSp** Nursing care of families through pregnancy, childbirth, and early parenting. Reproductive health-care issues, including human sexuality, family planning, and sexually transmitted diseases. Clinical experiences in community and hospital settings. Prerequisites: PN 323, 324, PSN 305.

**PCN 425 Senior Practicum in Parent-Child Nursing (7) WSp** Further development, critical examination, and synthesis of nursing care in a specialized parent-child setting. Increasing depth of clinical practice, including care to groups of clients, applying leadership skills, assessing problems affecting quality health-care delivery, and applying research findings. Prerequisite: senior standing in nursing.

**PCN 499 Undergraduate Research (1-5, max. 12) AWSp** Supervised individual research on a specific nursing problem. Prerequisites: junior-year standing in the School of Nursing, cumulative grade-point average of 3.00 or better, and permission of academic programs office.

**PCN 501 Pediatric Health Assessment and Promotion (4) A** Gives experience in obtaining a health history and performing a physical assessment of infants, children, and adolescents. Interviewing techniques, problem-oriented charting, and a systems approach to the physical examination. Emphasis on screening principles, health promotion, and wellness care for children/families. Credit/no credit only. Prerequisite: permission of instructor.

**PCN 505 Seminar: Counseling and Educational Approaches in Child Health Care (1 or 3) A** Focuses

on theory, practice, and issues involved in conducting health-related groups. Special emphasis on counseling process. Alternative approaches to educating communities about health-care issues. Clinical experiences designed to assist students in developing and conducting health-related groups in various settings in the community. Prerequisite: permission of instructor.

**PCN 508 Health Patterns Across the Lifespan (3)** Conceptually oriented focus on health across the lifespan. Emphasizes issues central to the developing person; how transactions with environment influence personal growth. Patterns of health provide framework for integrating nursing concepts with selected theories of growth and development.

**PCN 509 Women's Health: A Nursing Perspective (3)** Critical analysis of contemporary and historical works relevant to nursing care for women across the life span. Synthesis of a holistic view of women's health to guide nursing practice and research. Prerequisite: graduate and senior undergraduate students.

**PCN 510 Individual Adaptation to Childbearing (3)** Analysis of theories, research, and issues related to physiological and psychosocial adaptation of individual family members during the perinatal period. Theoretical foundations of therapeutic strategies for care in normal and high-risk situations. Prerequisite: 529 or permission of instructor.

**PCN 511 Seminar in Neonatal Nursing (3)** Neonatal neurobehavioral and physiologic adaptation within context of physical and social environment. Neonatal responses to alterations in growth and illness. Assessment modalities and therapeutic strategies used during the neonatal period. Prerequisite: 529 or permission of instructor.

**PCN 512 Advanced Practicum in Parent and Child Nursing I (2-12, max. 25)** Clinical seminar and practicum provide opportunities to develop advanced nursing practice competencies in the care of women, parents, children, and/or adolescents. Application of theory and principles to direct care, consultation, education and/or care coordinator roles with individuals and/or groups.

**PCN 514 Coping Strategies of Well and Sick Children (3) A** Gaining knowledge and skill in helping well and sick children cope in supportive and non-supportive environments. Fit between coping strategies and environment, adaptation to environment, adjustment of environment to child's needs. Prerequisite: course in growth and development or permission of instructor.

**PCN 515 Wellness Care for Children and Their Families (1-5)** Concepts and issues related to wellness, health maintenance, promotion and prevention of illness for well children and children with special needs. Models of wellness and intervention, appropriate nursing diagnoses, assessment, and intervention approaches for various areas of wellness (physical, social, emotional, and spiritual) and the nurse's role. Prerequisite: permission of instructor.

**PCN 516 Nursing Management of Acutely Ill Children and Their Environments (1-5)** Nursing management of children with acute illnesses. Scientific principles, theories, and research used in planning, implementing, and evaluating nursing care of children at different levels of acuity and their families. Prerequisites: permission of instructor.

**PCN 517 Advanced Clinical Seminar in the Nursing of Children (2-6) Sp** Synthesis and evaluation of scientific principles and research findings for care collaboration with other health professionals. Development of specialist role. Social and environmental issues. Prerequisites: core courses, 516 or permission of instructor.

**PCN 518 Pediatric Pulmonary Anatomy and Physiology: Clinical Applications (2)** Lung development, anatomy, and physiology; clinical application when caring for children with acute and chronic lung disease. Prerequisite: permission of instructor.

**PCN 519 Pediatric Pulmonary Nursing (2-5)** Applies knowledge of pediatric anatomy and physiology to assessment and treatment of pulmonary pathophysiology in children. Nursing issues in caring for children and families with acute and chronic lung disease. Prerequisite: permission of instructor.

**PCN 520 Methods of Research in Nursing (3) W** Research process as it applies to nursing. Use of the literature in building theoretical rationale. Selection of appropriate methods. Presentation of findings. Minimum of two laboratory hours weekly. Prerequisite: course in statistics.

**PCN 521 Methods of Research in Nursing (2) Sp** Continuation of 520, with emphasis on methods of research applied to the solution of problems in all fields of nursing.

**PCN 528 Implications of Human Embryology and Genetics for Clinical Practice (3)** Normal development of the human embryo and fetus and principles of human genetics. Alterations in development leading to common anomalies and implications for clinical practice. Prerequisite: graduate standing or permission of instructor.

**PCN 529 Physiologic Adaptation in Women and Children (1-6)** Analysis of developmental physiologic adaptations in four units: women/reproductive processes, pregnancy/postpartum, fetus/neonate, and infancy through adolescence. Emphasis on implications for nursing practice. Examination of research basis for selected intervention strategies.

**PCN 530 Conceptual Frameworks for Parent-Child Nursing (3) A** Designed to assist graduate students in exploration, criticism, and analysis of selected concepts, frameworks, and models relevant to parent-child nursing practice. Group seminar work focuses on the discussion of issues influencing the roles and practice of clinical nurse specialists in parent-child nursing. Skills necessary for developing a conceptual framework for practice.

**PCN 531 Nursing Process in Parent-Child Nursing (4) W** Includes lecture, seminar, and laboratory instruction designed to assist the student with knowledge and skill acquisition related to nursing care of individuals and families with regard to childbearing and childrearing. Prerequisite: 530.

**PCN 532 Advanced Parent and Child Nursing: Provision of Health Services (1-5, max. 8) S** Focus on the aggregate of parents and children and their health-care needs. Selected strategies suitable for providing services to groups of parents/children emphasized. Role of the clinical nurse specialist in planning, implementing, and evaluating services. Prerequisites: 530, 531.

**PCN 535 Children with Chronic Health Conditions (1-5)** Theory and research analyses of physical problems, biobehavioral responses and psychosocial hardships. Applications of interventions and case management strategies that prevent handicaps and maintain, promote or restore health of infants, children, and adolescents within a developmental, family, and community context. Required laboratory and optional clinical experiences. Prerequisite: permission of instructor.

**PCN 536 Behavioral Change Strategies: Children and Their Families (3)** Analysis of behavioral change paradigms that promote the child's and adolescent's health behaviors, self-control, and functional patterns within the context of the family, community, and physical environment. Treatment strategies based on the integration of behavioral, cognitive, operant, and social learning models. Prerequisite: permission of instructor.

**PCN 537 Interpersonal Therapeutic Relationships and Processes: Children and Their Families (1-5)** Analyze conceptual models and research on interpersonal relationships and processes for developing communication and partnerships among professionals and between professionals and children/families. Individual and group therapeutic approaches that promote

caring and enhance empowerment, interpersonal functioning, and health behaviors. Required helping skills laboratory, optional clinical experiences. Prerequisite: permission of instructor.

**PCN 538 Family Adaptation During Childhood and Adolescence (3)** Analysis of conceptual models and research in family support, stress, and functioning. Multidirectional influences and interactive patterns among the child, family, and community. Family assessment, diagnosis and therapeutic intervention that promote family adaptation and reduce the associated hardships that may be handicapping. Prerequisite: permission of instructor.

**PCN 540 Physical Therapeutics: School Age Children and Adolescents (2-6)** Theory and research analysis of physical problems, biobehavioral responses, and psychosocial hardships. Adaptive physical and technological interventions that prevent handicaps and maintain, promote, or restore health of school-age children and adolescents within a developmental, family, institutional, and community context. Optional laboratory and clinical experiences. Prerequisite: permission of instructor.

**PCN 573 Selected Topics in Parent and Child Nursing (1-6, max. 12)** In-depth examination of the literature pertinent to major theoretical issues in parent and child nursing. Seminar with analysis and discussion of selected topics and readings. Implications for research, prevention, and health care stressed. Prerequisite: permission of instructor.

**PCN 600 Independent Study or Research (\*)** Credit/no credit only.

**PCN 700 Master's Thesis (\*)** Credit/no credit only.

## Physiological Nursing

**PN 302 Clinical Decision Making and Therapeutics (5) W** Clinical decision making and management of individuals experiencing common health concerns. Commonly occurring alterations producing broad pathological changes considered as basis for comprehensive nursing interventions. Theory underlying basic communication and patient-teaching activities. Prerequisites: CHCS 301, CONJ 340-, NUTR 301, PCN 300, concurrently with 304, permission of instructor.

**PN 304 Clinical Decision Making and Therapeutics, Laboratory (4) W** Clinical therapeutic decision making in the nursing care of ill adults. Instruction and supervision of basic nursing procedures in a clinical setting. Infection control in the hospital. Prerequisites: CHCS 301, PCN 300, CONJ 340-, NUTR 301, concurrently with 302, permission of instructor.

**PN 321 Care of Ill Adults I (4) Sp** Alterations in function of specific systems through pathophysiological concepts. Application of knowledge underlying critical thinking, sound judgment, and evaluation in the nursing process. Prerequisites: 302, 304, concurrently with 322, CONJ 340-341-.

**PN 322 Care of Ill Adults I, Laboratory (5) Sp** Application of scientific principles to decision making in nursing of ill adults. Emphasizes increasing skill in systematic patient assessment, in developing competency with selected nursing therapies, in nursing care of adults with physiological alteration. Includes one week operating room. Prerequisites: 302, 304, CONJ 340-341-; concurrent registration in 321.

**PN 323 Care of Ill Adults II (4) A** Alterations in function of specific systems through pathophysiological concepts. Application of knowledge underlying critical thinking, sound judgment, and evaluation in the nursing process. Prerequisites: 322, concurrently with 324, CONJ 340-341-342.

**PN 324 Care of Ill Adults II, Laboratory (5) A** Alterations in function of specific systems based on pathophysiological concepts. Application of knowledge underlying critical thinking, evaluation in the nursing process.

cess. Prerequisites: concurrently with 323, CONJ 340-341-342.

**PN 426 Senior Practicum in Medical-Surgical Nursing (7) WSp** Further development, critical examination, and synthesis of nursing care of the hospitalized ill adult. Clinical practice, problem solving, organizing, setting priorities, and other elements of leadership. Selected theoretical concepts and research findings. Prerequisites: senior standing in nursing, permission of instructor.

**PN 445 Topics in Physiological Nursing (1-10, max. 10) AWSpS** Guided survey and discussion of current literature on major topics in physiological nursing. Seminar/lecture with analysis and discussion of selected topics and readings. May have clinical component. Implications for nursing practice and health care emphasized. Prerequisites: nursing majors, permission of instructor.

**PN 466 Continuing Education in Nursing (3) Sp** Planning, developing, and evaluating continuing education programs in various institutions and agencies. Includes the application of adult learning principles to a variety of situations, such as workshops, in-service and staff development programs. Prerequisite: graduate standing.

**PN 499 Undergraduate Research (1-5, max. 12) AWSp** Supervised individual research on a specific nursing problem. Prerequisites: junior-year standing in the School of Nursing, cumulative grade-point average of 3.00 or better, and permission of academic programs office.

**PN 502 Human Responses in Health and Illness I (3) W** Survey of selected human responses to environmental demands in health and illness as expressed at physiologic, pathophysiologic, experiential, and behavioral levels. Such concepts as host defenses, ventilation, circulation, elimination, and nutrition are discussed. Prerequisite: graduate standing.

**PN 503 Human Responses in Health and Illness II (3) Sp** Survey of selected human responses to environmental demands in health and illness at physiologic, pathophysiologic, experiential, and behavioral levels. Such concepts as immune response, stress response, circadian rhythms, pain, sleep, cognition, and consciousness. Prerequisite: graduate standing.

**PN 504 Clinical Nursing Therapeutics (1-6, max. 6) Sp** Critical analysis of therapeutic modalities to assist patients with a variety of responses to health problems. Includes selected therapies such as suction/drainage, positioning to address responses in critical, life threatening, and chronic/continuing health states. Varying credits assigned for modules covering particular therapies. Prerequisites: 502, 503, or permission of instructor.

**PN 509 Practice Teaching in Physiological Nursing (3) A** Guided experience in selected teaching-learning situations in nursing, in both classroom and clinical situations. Identification, analysis, and solution of teaching-learning problems in clinical nursing. Minimum of seven hours of guided experience weekly.

**PN 510 Curriculum Development in Nursing Education (3) S** Theoretical rationale for curriculum development, study of curricular problems in nursing in relation to the elements of the curriculum as described in a curricular design. Prerequisite: graduate standing.

**PN 511 Evaluation of Clinical Performance in Nursing (3) A** For graduate students preparing for faculty or staff development positions in nursing. Theory and principles of evaluation. Instruments to appraise clinical nursing performance developed as part of course requirements. Prerequisite: graduate standing or permission of instructor.

**PN 520 Methods of Research in Nursing (3) A** Research process as it applies to critique and conduct of nursing science. Use of the literature in building theoretical rationale. Selection of appropriate meth-

ods. Presentation of findings. Minimum of two laboratory hours weekly. Prerequisite: course in statistics.

**PN 521 Methods of Research in Nursing (2) A** Continuation of 520, with emphasis on methods of research applied to the solution of problems in all fields of nursing.

**PN 541 Clinical Physiological Nursing Seminar I (1-10, max. 10) AWSp** Guided experience in nursing practice with selected individuals in a specialized field of nursing. Synthesis and application of relevant principles and theories from biological, behavioral, and pathological sciences; proficiency in comprehensive nursing assessments, interventions, and evaluations; effective collaborative functioning as a member of the health team.

**PN 542 Seminar in Cardiovascular Nursing (3) A** Systematic inquiry into the influence of physical and emotional factors on pathophysiology underlying selected cardiovascular conditions; group study of current therapies with emphasis on prevention and rehabilitation. Individual study of topic of interest.

**PN 543 Seminar in Nursing in Gerontology (3) W** Gerontological research findings applied to complex nursing problems in maintenance of health and maximum functioning in the aged.

**PN 544 Clinical Physiological Nursing Seminar II (1-10, max. 10) WSpS** Continuation of 541. Guided experience in selected situations in area of clinical interest. Minimum of seven hours of guided experience weekly. Prerequisite: 541.

**PN 545 Special Topics in Physiological Nursing (3-6, max. 9) AWSpS** Guided survey of the experimental literature of major topics in physiological nursing, including cardiopulmonary, biology of aging, neuromuscular, cancer, and endocrine. Course conducted as a seminar with analysis and discussion of selected topics and readings. Implications for future research and health care are emphasized.

**PN 546 Rehabilitation Nursing Seminar I (3) S** Analysis of selected theoretical components underlying rehabilitation and utilization of scientific rationale in clinical nursing studies, with emphasis on prevention and maintenance.

**PN 548 Management of Adults With Respiratory Dysfunction (3) AS** In-depth examination of problems such as abnormal secretions and shortness of breath associated with respiratory dysfunction due to pulmonary diseases and other pathophysiological states.

**PN 549 Seminar in Critical-Care Nursing (3, max. 9) A** Systematic inquiry into pathophysiology, initial nursing management, and systems of care for the critically ill adult or child.

**PN 550 Seminar in Neuroscience Nursing (3) A** Guided survey of clinical and experimental literatures regarding selected concepts of human functioning mediated by the nervous system: consciousness, mentation, movement, sensation, integrated regulation, coping with disability. Clinical and research measurement, current research and implications for further research, clinical applications.

**PN 570 Seminar in Clinical Research in Nursing (3) S** Philosophy, problems of design; use of criterion measures in terms of patient care.

**PN 600 Independent Study or Research (\*)** Credit/no credit only.

**PN 700 Master's Thesis (\*)** Credit/no credit only.

## Psychosocial Nursing

**PSN 303 Psychosocial Dimensions of Health and Illness (3)** Surveys the psychobiosocial responses of persons to their environments. Stress response, crisis, and selected factors that affect dyadic and multiperson relationships. Psychosocial assessment

and intervention practiced in seminars, using a variety of mechanisms. Prerequisite: junior standing or permission of instructor.

**PSN 305 The Family in Health and Illness (2) A** Basic theories (general systems, role) useful in family nursing care. Assessment and intervention issues with emphasis on family life-span development, social support, and adaptation. Nursing role and the family-health-care systems interface. Prerequisite: junior standing or permission of instructor.

**PSN 403 Psychosocial Nursing Theory (2) AWSp** Selected theories relevant to the practice of psychosocial nursing. Severely psychosocially disabled persons, both adults and children. Theoretic basis of psychosocial nursing interventions in acute and long-term treatment settings. Prerequisites: 303; 407 or equivalent, which may be taken concurrently.

**PSN 407 Psychosocial Nursing Practice (6) AWSp** Application of selected theory to practice of psychosocial nursing. Severely psychosocially disabled persons, both adults and children. Theoretically based psychosocial nursing interventions tested in acute and long-term treatment settings. Prerequisites: 303; 403 or equivalent, which may be taken concurrently.

**PSN 424 Senior Practicum in Psychosocial Nursing (7) AWSp** Synthesis and application of psychosocial nursing theories in the care of psychosocially disabled persons. Analysis of factors supporting or impeding quality care within the mental-health-delivery system. Use of research findings and application of theories of leadership and psychosocial nursing. Prerequisite: senior standing in nursing or permission of instructor.

**PSN 488 Effects of Alcohol and Its Relation to Health and Disease (3) ASpS** Intensive inquiry into the effects of alcohol on the total person, emphasizing physiological effects, utilizing case studies, research reports, and audiovisual materials. Focus on methods used in the assessment of patients, in patient management, and in evaluation of therapeutic intervention. Open to students in other disciplines. Prerequisite: permission of instructor.

**PSN 489 Alcohol Problems in Family and Society (3) WS** Analysis of family problems associated with alcoholism. Emphasis on psychological, cultural, and social implications; examination of various counseling practices employed and theories of prevention. Open to upper-division and graduate students. Prerequisite: permission of instructor.

**UCONJ 490 Social Sensitivity in Health Care (3) Asp** For course description, see Interschool or Intercollege Programs.

**PSN 499 Undergraduate Research (1-5, max. 12) AWSpS** Supervised individual research on a specific nursing problem. Prerequisites: junior-year standing in the School of Nursing, cumulative grade-point average of 3.00 or better, and permission of academic programs office. Credit/no credit only.

**PSN 500 Theories in Interpersonal Systems in Psychosocial Nursing (3) W** Empirical and theoretical literature on etiology and treatment of chronic mental illness in a sociocultural framework. Social networks and personality development, adaptation to stress, and chronic mental illness. Implications for research and implementation of nursing intervention strategies and mental health programs.

**PSN 503 Seminar in Psychosocial Family Theory (4) W** Examination of theories relevant to psychosocial family intervention into problems of children, adults, and the aged. Analysis of appropriateness of theories for nursing theory development, practice, and research.

**PSN 504 Theories of Intervention and Process in Family and Child Treatment (3) Sp** Critical review of the family assessment and intervention process. Analysis of existing treatment methods regarding adaptation to psychosocial nursing practice. Prerequisite: 503.

**PSN 505 Selected Topics in Psychosocial Nursing (2-10, max. 10) AWSpS** In-depth exploration of the major theoretical issues in psychosocial nursing. Seminar with analysis and discussion of selected topics and readings and implications for research and health care.

**PSN 506 Theoretical Models of Family Analysis and Intervention (3) Sp** Selected theoretical models of family analysis and intervention evaluated in relation to: models of intervention; nursing theories, psychosocial nursing practice. Assessment of family unit and family as context of individual dysfunction. Interventions in various crises and chronic dysfunction. Prerequisite: 550 or equivalent or permission of faculty.

**PSN 507 Behavior and Adaptation: Elder Adults (3) A** Theory and research of behavior and adaptation in elder adults. Functional impairments within person-environment contexts. Intervention strategies based on psychodynamic, development, cognitive-behavioral, role theory, somatic, and self-help models. Prerequisite: permission of instructor.

**PSN 508 Psychosocial Strategies for Elder Adults (4) W** Psychosocial strategies that promote well-being/mental health of elder adults within a person-environment context. Selected treatment approaches based on psychodynamic, developmental, cognitive-behavioral, somatic, and person-environment transaction models. Prerequisite: 507 or permission of instructor.

**PSN 513 Seminar in Group Treatment (3) A** Seminar on the theoretical basis for working with various treatment groups. Analysis of selected approaches to group treatment. Analysis of leader responsibilities and functions in the development of therapeutic group experiences.

**PSN 520 Methods of Research in Nursing (3) W** Research process as it applies to nursing. Use of the literature in building theoretical rationale. Selection of appropriate methods. Presentation of findings. Minimum of two laboratory hours weekly. Prerequisite: course in statistics.

**PSN 521 Methods of Research in Nursing (2) Sp** Continuation of 520, with emphasis on methods of research applied to the solution of problems in all fields of nursing.

**PSN 526 Program Planning and Program Evaluation in Health Service Delivery (3) S** Analysis of selected theories and methods of program planning and program evaluation in the design, organization, and development of health services for defined populations in the community. Prerequisite: graduate standing or permission of instructor.

**PSN 527 Practicum in Family Treatment (2-6) Sp** Supervised experience as a cotherapist within a family. Long-term therapy for primary and secondary intervention in family crises. Treatment of all family members, including extended family as appropriate. Credit/no credit only. Prerequisites: 503, 504, which may be taken concurrently, or equivalent, and permission of departmental adviser.

**PSN 528 Field Study in Evaluative Analysis for Health Care Programs (3, max. 6) S** Field study in evaluation. Experiences include preevaluation studies; consultation with community members and agency personnel to operationalize health-care program objectives in terms of goals; construction of evaluation protocols; and assessment of program functioning. Credit/no credit only. Prerequisite: 526.

**PSN 529 Practicum in Group Treatment (2-6) A** Supervised experience working as primary therapist or cotherapist in a group. Opportunity is provided to practice selected therapeutic techniques in therapy groups. Supervision is provided by nursing faculty member. Credit/no credit only. Prerequisites: 513 or equivalent, which may be taken concurrently, and permission of departmental adviser.

**PSN 550 Interpersonal Aspects of Behavior (3) A** Selected theories in relation to psychosocial development and adaptation across life span for individuals, families, and small groups and as explanatory models of major psychosocial disabilities. General and psychosocial nursing models evaluated for heuristic value for research and practice. Prerequisite: graduate standing or permission of instructor.

**PSN 551 Biologic Aspects of Psychosocial Disabilities (3) A** Analysis of biological processes influencing psychosocial behavior in response to internal and external stimuli. Research and theory of neuroendocrine mechanisms in psychosocial disabilities. Analysis of nursing management and evaluation of biopsychosocial modalities used in modification of behavior. Prerequisite: graduate standing in nursing or permission of instructor.

**PSN 552 Socioecological Dimensions of Community Mental Health (3) W** Socioecological and sociocultural theories of mental health disablements analyzed. Conceptual trends and intervention strategies evaluated with community and client-centered emphasis on mental health service delivery to high-risk and underserved populations, including the moderately and severely mentally disabled. Prerequisite: graduate standing in nursing or permission of instructor.

**PSN 553 Assessment in Psychosocial Nursing (3) S** Concepts, methods, and clinical approaches to psychosocial nursing assessment. Basic principles of measurement as they apply to psychosocial nursing assessment diagnosis and intervention. Knowledge synthesized from psychosocial nursing and allied disciplines tested. Clinical assessment laboratory included. Prerequisite: graduate standing in nursing or permission of instructor.

**PSN 554 Clinical Therapeutics Theory (3) Sp** Introduces conceptual foundation for clinical practice in psychosocial nursing with moderate to severe mentally disabled. Opportunities to synthesize selected theories and research contributions to generic psychosocial nursing interventions. Prerequisites: 550, 551, 553, or permission of instructor, concurrently with 555.

**PSN 555 Advanced Clinical Therapeutics Seminar (4) SpS** Opportunities to test and evaluate selected theories presented in 554. Faculty and preceptor supervision in clinical agencies guide students' therapeutic skills in working with individuals, groups, and families. Collaborative interactions with interdisciplinary team members. Prerequisite: concurrent registration in 554, or permission of instructor.

**PSN 556 Theories of Substance Use Disorders: Psychosocial and Biological Aspects (3) Sp** Psychosocial and pathophysiological aspects of substance use examined for their effects on individuals and families throughout life span. Theories and empirical findings serve as basis for evaluating preventive and therapeutic nursing approaches to substance use disorders, including those related to target populations. Prerequisite: basic course in biological sciences.

**PSN 557 Clinical Seminar in Substance Use Disorders I (3-6) A** Treatment of individuals and families with substance use-related disorders. Students function as primary or cotherapists in application and evaluation of selected therapeutic interventions. Weekly seminars analyze student/client interactions. Credit/no credit only. Prerequisite: prior or concurrent registration in 556.

**PSN 558 Advanced Clinical Seminar in Substance Use Disorders II (3-6) W** Practicum with opportunities for advancement of skills in therapeutic interventions and involvement in community-linked substance-use-disorder issues. Students engage in therapeutic interventions, coordinate community health-care resources, and design a prevention program for target populations within context of regional laws and policies. Credit/no credit only. Prerequisite: 557.

**PSN 559 Theories of Psychiatric Disabilities (3) Sp** Theories from psychosocial nursing, psychiatry, and behavioral sciences explanatory of psychiatric

disabilities provide basis for identifying psychosocial problems and developing nursing diagnoses. Structure and functions of mental health organizations and social networks analyzed for more effective system management by nurses. Prerequisites: 500 and 551 or permission of instructor.

**PSN 560 Clinical Seminar in Psychiatric Disabilities I: Community (3-6) S** Supervised psychosocial nursing experience with clients in psychiatric treatment programs. Treatment settings, such as community mental health centers, partial hospitalization, and congregate care facilities viewed as social systems. Weekly seminars provide analysis of client/student interaction. Credit/no credit only. Prerequisite: prior or concurrent registration in 559, or permission of instructor.

**PSN 561 Advanced Clinical Seminar in Psychiatric Disabilities II: Institutions (3-6) A** Mental hospital and psychiatric unit viewed as social systems. Clinical practice in institutional setting focuses on planning, evaluating psychosocial nursing care programs. Effects of organizational dynamics on client populations analyzed, intervention theories tested. Analyzes client/student interaction. Credit/no credit only. Prerequisite: prior or concurrent registration in 559, or permission of instructor.

**PSN 562 Theoretical Basis of Management of Stress Response (3) W** Theories of physiologic responses linked to theories of cognitive/affective and behavioral responses to stressors. Conceptual basis of self-management techniques. Research findings relevant to these theories and techniques examined and analyzed. Prerequisites: course in human physiology or physiologic psychology, permission of instructor.

**PSN 563 Clinical Seminar in Management of Stress Response I (3-6) S** Theory and application of self-management training for dysfunctional stress responses. Demonstration/training in relaxation, biofeedback instrumentation, and supervision of self-management program conducted by students. Credit/no credit only. Prerequisites: 562, human physiology course.

**PSN 564 Advanced Clinical Seminar in Management of Stress Response II (3-6) A** Supervised field experience in self-management techniques for clients with dysfunctional stress responses such as headache and hypertension. Supervised clinical application of biofeedback and stress counseling for selected psychophysiologic disorders. Prerequisite: 563 or permission of instructor.

**PSN 565 Self-Management Strategies and Techniques in Patient Care (3) S** Theories underlying cognitive/behavioral self-management strategies and techniques in patient care. Evaluation of the clinical appropriateness and utility for nursing. Application to such clinical problems as abstinence in the recovering alcoholic, depression, and eating disorders. Prerequisite: graduate standing or permission of faculty.

**PSN 569 Consultation in Human Service Systems (3) S** Exploration of theoretical perspectives and concepts relevant to consultation in human service systems. Models for intervention evaluated. Students design consultation projects, implementation determined through negotiation with faculty and agency representatives. Prerequisites: fourth-quarter placement or faculty permission; access to consultee system.

**PSN 570 Occupational Stress and Stress Management (3)** Relationships between occupational stressors and worker's health, well-being, productivity. Analyzes models of occupational stress. Investigates similarities, differences between job-related stressors and stress responses in various occupations. Explores elements of worksite stress management programs. Joint with CHCS 570. Prerequisites: graduate standing in nursing or allied health discipline; advanced undergraduates with permission of instructor.

**PSN 600 Independent Study or Research (\*)** Credit/no credit only.

**PSN 700 Master's Thesis (\*)** Credit/no credit only.

## Nursing Courses

### Courses for Registered Nurses

**NURS 201 Growth and Development Through the Life Span (5)** Focuses on processes of human growth and development from prenatal life to old age. Emphasizes influence of growth and development on achievement of health, and how awareness of growth and development theory and research helps guide health promotional efforts directed towards persons of various ages and life styles. Open to non-majors.

**NURS 301 The Nature of Health and Caring (3)** Scientific principles of nursing-care of health clients. Emphasis on understanding multidimensional aspects of health; personal, environmental factors that support healthy functioning patterns of individual clients; health promotion interventions. Underlying concepts: health, adaptation to life transitions, person-environment fit, client, caring, health promotion, health maintenance. Prerequisite: admission to nursing program.

**NURS 302 Practicum: the Nature of Health and Caring (5)** Emphasizes beginning nursing skills in communication, interviewing, and health assessment and maintenance. Predominant themes include: personal health beliefs, values clarification, basic communication skills, and beginning physical and psychosocial assessment of the individual across the age span. Prerequisite: concurrent registration in 301.

**NURS 303 Introduction to Professional Nursing (4)** Focuses on nature of nursing, development of identity as nursing students and professional practitioners. Students consider their choices to be nurses; nurses' experiences past, present; experience of illness, health-seeking; nursing issues in context of overall American health care system; perspectives on nursing education. Prerequisite: admission to nursing program.

**NURS 304 Bases for Understanding Human Responses I (2)** This course and its companion, 308, are concerned with commonly occurring psychopathological and pathophysiological human responses to states of health and illness. They identify and describe the major concepts and principles necessary to understand disregulatory processes at the mind-body interface. Prerequisite: admission to nursing program.

**NURS 305 Threats to Health (3)** Challenges to health during transitions: birth and death, developmental and role changes, acute changes in health, chronicity, and personal network. Assesses health patterns in terms of risk, vulnerability, and resilience. Examines personal and environmental demands, constraints, resources for interaction with individuals, families, communities/populations undergoing transitions. Prerequisites: 301,302,304.

**NURS 306 Practicum: Threats to Health (4)** Beginning nursing skills in communication, interviewing, health assessment, identification of threats to health in selected community/clinical settings. Predominant themes, skills: risk, vulnerability identification; communication; physical, psychosocial assessment of individuals across life span; nursing care planning, documentation; psychomotor skills development. Prerequisite: 301,302,304; 305 which may be taken concurrently.

**NURS 307 Human Social Systems (3)** Review systems theory with emphasis on the nature and analysis of human social systems, including their growth, development, and transitions. The family is primary vehicle for examining relationships among social systems components; assessing self-care and utilizing health care; analyzing variables which affect social groups. Prerequisite: admission to nursing program.

**NURS 308 Bases for Understanding Human Responses II (2)** Continuation and extension of 304. The two courses introduce and describe commonly occurring psychopathological and pathophysiological human responses to states of health and illness. They

identify and describe the major concepts and principles necessary to understand disregulatory processes at the mind-body interface. Prerequisite: 304.

**NURS 309 Pharmacotherapeutics in Nursing Practice (2)** Introduces professional nursing students to the principles of pharmacology and drug therapies, pharmacologic-therapeutic classes of drugs, and important drug information resources. Prerequisite: admission to nursing program.

**NURS 340 Clinical Nursing Phenomena (3) S** Selected clinical phenomena examined from the perspective of physiologic, pathophysiologic, experiential, and behavioral responses to life events and alterations in states of health and illness. Relationship of nursing therapies to each perspective and influence of life span and sociocultural factors identified. Prerequisite: admission to RN-Master's program or permission of instructor.

**NURS 350 Decision Making and Therapeutics in Nursing (3) S** Focuses on types of thinking and writing germane to learning and practice in nursing including self-assessment, understanding and producing written communication, abstract thinking, group dialogue, evaluating points of view, problem solving, clinical decision making. Provides opportunity for application in discipline-related issues and frameworks. Prerequisite: licensed Registered Nurse.

**NURS 401 Care in Illness I (4)** Selected psychopathologic and pathophysiologic health alterations and therapies across life span. Assesses human functioning, pathophysiology, pharmacology, psychosocial, cultural variation, health care resources, and person-environment relationships to select nursing strategies for acutely and chronically ill individuals of all ages. Prerequisites: 301,302,303,304,305,306,308,309.

**NURS 402 Practicum: Care in Illness I (4)** Provides supervised nursing care to individuals and families with acute and chronic illnesses. Emphasis on increasing skill in systematic assessment, developing competency in selected nursing therapies, and developing role as care agent for persons of all ages. Prerequisite: 401 which may be taken concurrently.

**NURS 403 Introduction to Research in Nursing (3)** Organization of the structure of nursing knowledge through research. Concepts and processes of research utilized in the investigation of nursing science. Prerequisite: one introductory statistics course.

**NURS 404 Interpersonal Therapeutics (3)** Nursing care within context of interpersonal relationships. Effective enactment of nursing role requires knowledge of relationship development, maintenance and termination, using skillful interpersonal communication in diverse health-care contexts. Emphasizes application of conceptual models in interpersonal processes and skills between professionals and clients, other professionals, and groups. Prerequisite: concurrent registration in 401.

**NURS 405 Care in Illness II (4)** Continuation of 401, further examining selected psychopathologic and pathophysiological alterations in health of individuals in context of families across life span. Emphasizes assessing functioning in psychosocial, cultural, person-environment relationships, and health care resources to plan nursing strategies for acutely/chronically ill individuals of all ages. Prerequisite: 401.

**NURS 406 Practicum: Care in Illness II (4)** Provides supervised nursing care to individuals and families with acute and chronic illnesses. Emphasis on increasing skill in systematic assessment, developing competency in selected nursing therapies, and developing role as caring agent for persons of all ages. Prerequisites: 402; 405 which may be taken concurrently.

**NURS 407 Cultural Variation and Nursing Practice (3)** Introduces knowledge and skills for culturally competent health care for all. Compares health related values, beliefs, and customs among major cultural groups. Views family and social network as culturally

variable health seeking behavior contexts. Examines Western biomedicine and alternative healing methods within broader environment, including government, other social institutions.

**NURS 408 Nursing Care with Families in the Community (3)** Application of biopsychosocial and social environmental theories and assessments to diagnose alterations in health/mental health of families, small groups in community settings. Emphasizes interpersonal and clinical therapies; coordination of community resources, evaluating effectiveness of changes; characteristics of nursing care in home visiting. Prerequisites: 307,405,406,407.

**NURS 409 Nursing Strategies for Community as Client (6)** Analysis, application, and evaluation of nursing process at level of community. Formulation of community health diagnoses as basis for community-level interventions to maintain and promote biopsychosocial health, prevent disease, and enable self care by the community. Analysis of nursing's role in community health/mental health. Prerequisites: 307, 405, 406, 407.

**NURS 410 Legal and Ethical Issues in Clinical Practice (2)** Identification of ethical and legal issues and the ensuing dilemmas relevant to the profession of nursing and nurses as health professionals and citizens. Selected problems and dilemmas affecting nurses, nursing, and the delivery of health care analyzed using specific moral-ethical perspectives. Prerequisite: upper-division standing or permission of instructor.

**NURS 411 Transition to Professional Practice (12)** Intensive field work in a nursing care specialty focusing on critical examination, synthesis, and evaluation of professional nursing care. Client populations include individuals and/or groups reflecting diverse settings, ages, ethnic communities. Emphasizes mastering theoretical concepts, applying research findings, improving skill competency, developing leadership capabilities. Prerequisites: 307, 405, 406, 407.

**NURS 412 Nursing Care Systems (3)** Introduction to analyzing current health care systems and their effectiveness in achieving desired health outcomes for selected client populations from a system perspective. Emphasizes key features of interface between client and health care professionals, and environmental factors and organizational structures which influence the transaction. Prerequisite: senior standing in nursing.

**NURS 430 Interpersonal Relationships in Nursing (3) W** Theory, current research, and practice in communication to develop and maintain interpersonal relationships with clients and health care colleagues. Lecture/discussion and laboratory learning opportunities include concepts of relationship development and disorder, interpersonal and group therapeutic communication processes, health care interviewing, and social support. Prerequisite: admission to RN-Master's program or permission of instructor.

**NURS 450 Connected Learning (1, max. 9)** An opportunity and quarterly requirement for nursing students to participate in a learning community in small groups with a faculty member. Focus is on dialogue, understanding others' perspectives, building community, and integration of concurrent learning in other courses. Prerequisite: admission to nursing program.

### Courses in Nursing Science

**NURS 510 Theoretical Foundations of Primary Care: Management of Common Health Concerns (1-3, max. 9) AWSp** Focuses on assessment, clinical decision making, and management of common health problems. Emphasizes individual and family responses to common health problems and selection of nursing strategies within the scope of primary health care practice. Content focus changes each quarter. Prerequisite: permission of instructor; recommended: concurrent fieldwork for nurse practitioner students.

**NURS 570 Family Concepts: Health and Illness (3)** Emphasizes the family as unit of care across the life

span. Predominant themes: factors influencing family health promotion, including resilience, vulnerability, risk reduction, and health policy; continuity, change and transition; and promotion of family health during acute and chronic illness episodes.

**NURS 571 Advanced Interpersonal Therapeutics with Families (3)** Models and research on therapeutic relationships and interpersonal processes evaluated and applied to group interactions among family members, among professionals, and between the family, professionals, and macrosystems. Partnership building emphasized. Individual and group characteristics examined across the life span in social, cultural, and health contexts. Prerequisite: permission of instructor.

**NURS 572 Family Nursing Therapeutics: Behavioral Models (3)** Behavioral models of health-related behavior analyzed to develop therapeutic programs and services for families experiencing health-related concerns or disruptions. Seminars introduce didactic material and laboratory assignments facilitate development of therapeutic and programmatic content. Prerequisite: permission of instructor.

**NURS 573 Advanced Field Study in Family Nursing (2-9)** Advanced practice development in direct care, consultation, and/or care coordination with individual families or groups of families across the life span. Opportunities provided to strengthen interpersonal therapeutic process skills, family nursing approaches relevant to family health promotion, problematic family health patterns. Prerequisites: concurrent registration in 572, 574; recommended: 571.

**NURS 574 Family Nursing Therapeutics: A Systems Perspective (3)** *Brandt, Cornman, Schepp, Stetz* Family models and research evaluated for relevance to advanced nursing practice and the family as a system. The interrelatedness of the individual, family, and social and health contexts examined. Experiential learning laboratories with family case analyses enhance knowledge and therapeutic skills. Prerequisite: permission of instructor.

**NURS 575 Methodological Issues in Family Research (3)** Emphasizes research with the family as unit of analysis. Examines patterns of family functioning in relation to responses to health situations. Reviews family units from generational and intergenerational perspectives. Critiques methods assessing dyadic and

triadic relationships and therapeutic interventions on family outcomes. Prerequisite: permission of instructor.

**NURS 580 Theory Building in Nursing I (3) Sp** Exploration and analysis of nursing theory, types, techniques of construction, problems in evaluation and testing, and implications for nursing science. Prerequisite: permission of instructor.

**NURS 581 Theory Building in Nursing II (3) S** Continuation of 580 with emphasis on evaluation of existing nursing theories, student construction and presentation of a theory for nursing, and critiques of the students' theories. Prerequisite: 580.

**NURS 582 Environments, Supporting and Non-supporting (3) A** Analysis and study of environments as complex multidimensional systems that support or do not support human health. Emphasis on the influence of different conceptualizations of human-environmental interactions. Prerequisites: graduate standing, a minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor.

**NURS 584 Clinical Therapeutics: Physical (3) S** Analysis and study of current theories and knowledge regarding physical therapeutic measures and nursing interventions that promote, maintain, or restore health status for humans throughout the life span. Prerequisites: graduate standing and a minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor.

**NURS 585 Individual Adaptations to Wellness and Illness (3) W** Survey and analysis of current theory and research in health and illness awareness, in health-seeking and -maintaining behaviors, and in coping responses to illness and disability. Prerequisites: graduate standing and a minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor.

**NURS 586 Family Adaptations to Wellness and Illness (3) W** Current theory and research in family functioning in health and illness. Family developmental tasks, separation, divorce, major and minor disabilities, social cultural processes, and other events that strengthen or weaken the family. Prerequisites: graduate standing and a minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor.

ing research methodology at graduate level and permission of instructor.

**NURS 587 Clinical Therapeutics: Interpersonal (3) Sp** Analysis of care/cure orientations in patient care and their impacts on nursing intervention programs. Dynamics of change, interpersonal aspects of planned change, and measurement of clinical outcomes. Prerequisites: minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor.

**NURS 588-589 Advanced Problems in Nursing Research (3-3) W,Sp** Examination of alternative methodological decisions for their direct and indirect consequences at different points in nursing research process. Prerequisites: inferential statistics; minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor.

**NURS 590 Special Topics in Nursing Research (2-3, max. 9) AWSpS** Examination of a specific research method, with evaluation of appropriateness, efficiency, rigor of measurement, and potential for inference for nursing research. Prerequisites: minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor.

**NURS 591 Advanced Seminar in Nursing Science (3, max. 15) AWSpS** In-depth analysis and evaluation of literature in focused areas of research. Synthesis of literature related to selected fields of nursing science. Oral analysis of assigned papers and topics. Prerequisite: graduate standing or permission of instructor.

**NURS 598 Special Projects ((1-12)-, max. 12)** Fulfills the requirements of the non-thesis option for Master's students in nursing. Projects involve scholarly inquiry with in-depth focused analysis, culminating in a written product/report for dissemination. May be repeated until the project is completed. Credit/no credit only. Prerequisites: 520 and 521, or permission of instructor.

**NURS 599 Selected Readings in Nursing Sciences (1-3, max. 18)** Analysis of synthesis of selected readings with faculty mentor. Prerequisite: permission of instructor.

**NURS 800 Doctoral Dissertation (\*) AWSpS** Credit/no credit only. Prerequisite: permission of Supervisory Committee chairperson or graduate program adviser.

# College of Ocean and Fishery Sciences

## Dean

G. Ross Heath  
557 Henderson

## Associate Dean

Loveday L. Conquest

The marine environment has been a dominant factor in the history of the Pacific Northwest from the time of the first Indian settlements to the modern day of container ships and waterfront condominiums. It is not surprising, therefore, that the University has a long tradition of commitment to teaching, research, and public service in the marine and freshwater area.

The College of Ocean and Fishery Sciences, newest college at the University, comprises five major units in the marine and freshwater sciences. Established in September 1981, the college consists of the Applied Physics Laboratory, and the Schools of Fisheries, Marine Affairs, and Oceanography. It also administers the Washington Sea Grant Program.

The college offers both undergraduate and graduate instructional programs; its faculty, staff, and students carry out research in oceans and freshwater lakes and rivers all over the world. Facilities range from oceangoing vessels to well-equipped laboratories and classrooms.

Each of the units in the college focuses on a different aspect of the aquatic environment, but much overlap exists. Established in 1919, the School of Fisheries is concerned with searching for ways to use stocks of fish and shellfish more effectively, making better use of all waters to produce more food from living organisms, and culturing aquatic plants and animals more effectively. It is also concerned with impacts of pollution, industry, and human population pressures on the environment. It offers both undergraduate and graduate degrees.

Established in 1930, the School of Oceanography carries out research and teaching on the physical, chemical, and biological processes in the ocean and on the interactions of the ocean with the earth, the biosphere, and the atmosphere. It is concerned with the study of seawater in motion, life in the sea, the chemical composition and properties of seawater, the sediments and rocks beneath the sea, and the geophysics of the seafloor. It offers both undergraduate and graduate degrees.

Established in 1943, the Applied Physics Laboratory, is a research and development unit with strong capabilities in ocean sciences, engineering, acoustic sensors, sound propagation, marine and geophysical instrumentation, and polar science and technology. No degrees are offered, but special short courses and seminars are taught and student employment is available.

Established in 1972, the School of Marine Affairs is interested in policy and institutional problems of the ocean. It combines natural sciences and engineering with law, economics, international affairs, and public administration. The school's teaching and research programs include marine affairs, coastal zone management, ports and marine transportation, atmospheric and marine policy, living marine resources, and international law of the sea. The Master of Marine Affairs degree is offered.

Also part of the college is the Washington Sea Grant Program, established in 1969. Congress created the Sea Grant program to enhance the wise use and protection of the nation's marine resources through coordinated efforts in education, training, research, development, and advisory services. Although the Sea Grant program does not offer degrees, it presents workshops, short courses, lectures, and publications, and supports research and advisory services.

One of the major achievements in this area was the designation of the University in 1971 by the U.S. Secretary of Commerce as a Sea Grant College. Along with the University of Rhode Island, Texas A&M University, and Oregon State University, the University of Washington was one of the first four universities so designated in recognition of outstanding sustained programs in research, education, and advisory services in the marine area.

In 1991, the college had a total of 160 undergraduate and 285 graduate students enrolled, a faculty of 160 members, and a budget of \$49 million, making it one of the largest institutions of its kind in the nation.

## Office of Student Services

Through the Office of Student Services, the College of Ocean and Fishery Sciences assists students in obtaining internships, cooperative education work experience, and permanent employment. Students are encouraged to participate in field placements that provide not only needed income but also the valuable practical experience to bridge the transition from the classroom and the laboratory to employment after graduation.

Local and national job listings and a career information library are continually updated. The director of student services is available to work with students and alumni in career development, including job search strategies, such as writing of resumes and design of cover letters.

Additional information may be obtained from Pat Caver, Director, Office of Student Services, 561 Henderson.

## Fisheries

### 204 Fisheries Center

The School of Fisheries, which was established in 1919, offers courses and conducts research on the conservation, management, and effective use of fish and shellfish resources. Education and research in the school include studies of aquatic ecology; population dynamics; management of free-ranging stocks; hatchery-based propagation of marine and freshwater organisms; seafood products; effects of human activities on aquatic/marine ecosystems. Faculty and students in the school draw upon the disciplines of zoology, biology, botany, statistics, chemistry, physics, and mathematics to conduct basic and applied research in the field of fishery science. Joint programs are maintained with the College of Forest Resources, the School of Marine Affairs, the Institute of Environmental Studies, the School of Oceanography, the School of Medicine, and the departments of Zoology, Genetics, Pathology, Biostatistics, Applied Mathematics, Civil Engineering, Environmental Health, and Nutritional Sciences.

### Courses

A full spectrum of undergraduate- and graduate-level courses allow students to learn basic principles of fishery science and to develop expertise in specialized fields such as quantitative fishery management, enhancement and commercial aquaculture, seafood technology, and aquatic ecology. Among the wide variety of courses open to students are the following: Ichthyology, world fisheries and aquaculture, salmonid behavior and life history, fisheries stock assessment,

ecology of marine fishes, genetics in fish management and production, physiological effects of water pollutants, and food engineering.

Summer quarter instruction is offered both on the main campus and at the Friday Harbor Laboratories on San Juan Island.

### Advising

The Student Services Office is located in 211 Fisheries Center. The office is staffed by two academic counselors who are available to assist students with curriculum, course scheduling, and graduation requirements. Faculty advisers are also available to all students.

### Interdisciplinary Programs

**Center for Quantitative Science in Forestry, Fisheries, and Wildlife:** The center is an intercollege academic unit sponsored by the College of Forest Resources and the School of Fisheries. The center offers a comprehensive program of study in mathematics and statistical methods applied to problems in ecology and natural resources management. The faculty of the center are drawn from the College of Forest Resources or the School of Fisheries, and most hold adjunct appointments in the Department of Biostatistics.

**Joint Curriculum in Fishery Management:** The School of Fisheries and the School of Marine Affairs offer a joint curriculum in fishery management, consisting of parallel two-year master's programs. The curriculum is designed to provide professional fisheries managers with the skills needed to participate effectively in contemporary fishery management. These skills require a multidisciplinary education in biology, economics, quantitative methods, law, policy analysis, and political science. Students may enter the fisheries management master's program through either the School of Fisheries or the School of Marine Affairs and must meet the thesis and other requirements of their school.

### Research

The faculty, staff, and students of the School of Fisheries conduct basic and applied research on regional, national, and international fishery problems. Examples of research projects include the following:

*In the field of fisheries management*—development of strategies for enhancing inland recreational fishing, reduction of by-catch in the North Pacific through improvements in fishing gear design, influence of physical oceanographic factors on recruitment of larval fish and shellfish. *In the field of aquaculture*—identification of hormone receptors involved in reproduction and smoltification, development of DNA probes for rapid identification of pathogens, manipulation of chromosome complement to select for desirable traits in cultured fish and shellfish. *In the fields of evolutionary biology and ecology*—application of polymerase chain reaction to the study of taxonomy, behavioral studies of homing and straying in Pacific salmon, analysis of energy flow in Pacific Northwest estuaries. *In the field of habitat protection*—contaminant transport through aquatic food chains, effects of forest practices on fish habitat, development of mitigation measures for restoring damaged wetlands. *In the field of resource utilization*—determination of fat content in edible fish tissue using non-invasive technology, development of techniques for tracing sources of contamination in shellfish beds, techniques to enhance the nutritional value of seafood products.

Researchers in the School of Fisheries collaborate with scientists within the University and with investigators employed by other agencies. The school benefits from the presence in Seattle of laboratories of the National Marine Fisheries Service, the U.S. Fish and Wildlife Service, the Washington State Department of Fisheries, and the Washington State Department of Wildlife. The headquarters and research staff of the International Pacific Halibut Commission are located on the campus as well. In addition, researchers collaborate with the scientific staff of private companies located in the Puget Sound region. School of Fisheries researchers frequently participate in inter-institutional projects

that involve scientists from other states and from other countries.

The research program is enhanced through the activities of several institutes and centers that are housed within the School of Fisheries.

The *Fisheries Research Institute* coordinates research in the field of fisheries science and management. Long-term projects include research on the origins, abundance, migratory patterns, and ocean distribution of Pacific salmon and steelhead trout; spawning distribution, growth, and abundance of sockeye salmon in Alaska's Bristol Bay; environmental (physical and biological) factors influencing salmonid productivity.

The *Institute for Food Science and Technology* conducts research on food composition, food safety, food processing, nutrition, and related food science topics.

The *Washington Cooperative Fish and Wildlife Research Unit* is supported by the U.S. Department of Interior through the Fish and Wildlife Service and the Wildlife Management Institute, and by the Washington State Departments of Ecology, Fisheries, Natural Resources, and Wildlife. The unit conducts research related to inland fisheries management and to wildlife conservation.

The *Center for Streamside Studies* is an interdisciplinary unit of the College of Forest Resources and the School of Fisheries. The center conducts research related to management issues that surround the production and protection of forest, fish, wildlife, and water resources associated with streams and rivers in the Pacific Northwest.

The *Western Regional Aquaculture Consortium* is one of five regional aquaculture centers supported by the U.S. Department of Agriculture. Participating scientists from twelve Western states conduct research that is directed toward enhancement of commercial aquaculture production.

#### **Facilities and Services**

The Fisheries Center, the Fisheries Teaching and Research Building, and the Marine Studies Building are located adjacent to the Lake Washington Ship Canal. The buildings contain classrooms, laboratories, and support facilities. The Fisheries-Oceanography Library, a branch library offering research materials in fisheries, food science, oceanography, and wildlife science, is located in the Oceanography Teaching Building nearby. The collections of fishes and invertebrates now total some 225,000 specimens, representing more than 3,200 species in 237 families.

An annual run of several thousand salmon has been developed and is maintained at the school by the release of thousands of fingerlings each spring. Returning adults utilize a fish ladder to enter the school's experimental fish hatchery. The run is the basis for both instruction and research on the life cycle of Pacific salmon. A secondary hatchery at Seward Park allows for additional projects, such as a newly developing sportfish propagation program.

Other laboratories provide for the study of the physiology, biochemistry, and behavior of fish and of the effects of pollutants on fish. Physiological facilities include equipment for surgical procedures and biochemical analysis of body fluids and tissues from both freshwater and marine fish.

The School of Fisheries maintains an extensive library of computer programs for processing biological data. The Fisheries Analysis Center of the school provides service in programming, data entry, and assistance with the use of the computer; the school maintains video display terminals to provide ready access to the larger computers of University Computing Services and has an array of microcomputers for instructional and research use.

The school uses various small vessels for instructional and research work, including tow netting, purse seining, and trawling to depths of a hundred fathoms.

These vessels are used in regular courses or training cruises to introduce students to shipboard operations. The one-hundred foot R/V *Alaska* is operated by the school.

Fisheries field stations in Alaska and at Big Beef Creek on Hood Canal provide additional opportunities for field studies and research in stream and estuarine ecology.

Seafood research facilities, located in the Marine Studies Building, include separate well-equipped laboratories for food microbiology, food biochemistry, and food analysis. The food-processing and -engineering laboratory pilot plant complex comprises several separate facilities containing equipment for teaching and experimental work in applied areas of unit operations and processing.

#### **Fisheries Club**

Students formed the Fisheries Club in 1922. Since its beginning, the club has been a center of extracurricular social and educational activities.

#### **Food Science Club**

Organized and run by food science majors in the school, this club promotes interest in food science and seafood technology. It works closely with the Puget Sound section of the Institute of Food Technologists.

#### **Financial Aid**

The school offers limited financial assistance to undergraduates and graduates through industrial and private scholarships. The *Handbook of Scholarships*, available from the Office of Financial Aid, 105 Schmitz, lists other available scholarships.

#### **Employment**

The College of Ocean and Fishery Sciences' Office of Student Services maintains a file of permanent and summer job opportunities for its students. Both summer and part-time employment during the scholastic year are frequently available with the research organizations that are associated with the School of Fisheries on or near the campus and elsewhere in the Pacific Northwest. The Fisheries Research Institute normally hires some students for summer work in the field and usually has several part-time positions available during the school year.

Students receiving degrees in fisheries find employment in varied fields. Some graduates pursue careers in resource management agencies such as the National Marine Fisheries Service, the U.S. Fish and Wildlife Service, the Northwest Indian Fish Commission, the state departments of fisheries or wildlife. Some work for enforcement agencies such as the U.S. Environmental Protection Agency, the U.S. Food and Drug Administration, state or local departments of environmental quality. Many graduates find employment in the private sector, working for aquaculture companies, the seafood industry, the recreational fishing industry, and environmental consulting firms. Employment in international projects is available through organizations such as the Peace Corps, the United Nations Food and Agriculture Organization, the Agency for International Development, the World Bank, and private industry. Positions in academic institutions are open to students completing advanced degree programs.

## **Undergraduate Program**

The school offers the Bachelor of Science in Fisheries degree.

#### **High School Preparation**

Students are urged to take four years of college preparatory mathematics (usually including precalculus or mathematical analysis), because these are prerequisites for the mathematics courses included in all School of Fisheries curricula. Taking high school courses in chemistry, physics, and biology and training

in computer use will prove to be valuable to the fisheries student.

#### **Admission as a Fisheries Major**

Students who wish to major in fisheries must be students in good standing in the University and must declare a major following University-wide guidelines.

After notification of admission and before registration, new students should visit or write to the School of Fisheries for help in planning their course programs. Academic and other counseling of fisheries students is provided through the Office of Student Services.

#### **Bachelor of Science in Fisheries**

The baccalaureate degree requires completion of a core curriculum and no fewer than 40 credits in fisheries. The program includes the subjects listed below or their equivalents. Each student must meet the general University requirements for graduation.

**Natural Sciences:** (minimum of 46 credits, including linked sequences in biology, chemistry and physics) General Biology—BIOL 201 (5), 202 (5), 203 (5). Inorganic Chemistry—CHEM 140 (4), 141 (1), 150 (4), 151 (1), 160 (4). Organic Chemistry—CHEM 102 (5). General Physics—PHYS 114 (4), 115 (4). Oceanography—OCEAN 200 (3). Genetics—GENET 360 (5) or GENET 365 (4).

**Mathematics and Statistics:** (minimum of 18 credits beyond MATH 120) Mathematics—Q SCI 291 (4), 292 (4) or MATH 124 (5), 125 (5). Statistics—Q SCI 381 (5), 482 (5).

**Environmental Sciences:** (minimum of 12 credits) Ecology—BIOL 472 (4). Limnology—BIOL 473 (3), 475 (2).

**Social Sciences and Humanities:** A combined total of 15 credits is required in social sciences and humanities with a minimum of 6 credits in each area. Courses must be selected from the UW Arts and Sciences distribution list and must include one linked set.

**Writing Proficiency:** (minimum of 8 credits) Recommended courses are FD SC 492 (2), and TC 408 (3) or 409 (3), or courses from the Arts and Sciences W list.

**Fishery Sciences:** (29 credits required courses, plus a minimum of 15 credits in 400-level fisheries courses) FISH 310 (5), 311 (5), 312 (4), 314 (5), 340 (2), 379 (3).

Additional elective courses should be taken to bring the total to 180 credits. Assistance in selection of elective courses can be obtained from advisers in the school. Students wishing to specialize in aquaculture, environmental science, or fishery management may obtain flyers listing recommended courses in 211 Fisheries Center.

## **Graduate Program**

E. David Ford  
Graduate Program Coordinator

The school offers programs leading to the Master of Science and Doctor of Philosophy degrees.

#### **Admission Requirements**

Basic requirements for admission to the graduate program in the School of Fisheries are a bachelor's degree from an institution of recognized standing, a GPA of 3.00 in the last two years of college work and approval of the School of Fisheries and the Graduate School. Students enter the school from varied disciplines at many universities. All have in common a strong background in the sciences and mathematics. Previous training in fisheries is not required.

Applicants for the graduate program must submit a completed application form and description of their interests and objectives, GRE scores (general portion only is required), transcripts of all previous college coursework, three letters of recommendation, and a TOEFL score (only for applicants who are non-native

English speakers). Applications must be submitted prior to December 31. Admissions are limited to autumn quarter. Final acceptance is contingent on matching each incoming student with a faculty member having space and similar research interests. Applicants may contact the School of Fisheries Office of Student Services for complete application materials, including a list of faculty and their research interests.

#### **Master of Science Degree**

Any graduate student without a previous master's degree from a recognized school is expected to start at the master's degree level. At least one year of study, with completion of a thesis project, leads to the Master of Science degree. A minimum of 45 senior or graduate credits must be earned including 18 credits of thesis research. Students must take 15 credit hours of specified courses (the graduate core curriculum). A seminar on the results of the thesis research and an oral defense of the thesis are required for graduation. There is no foreign language requirement for the master's degree. Further details can be obtained from the School's Office of Student Services.

#### **Doctor of Philosophy Degree**

The student must complete at least three years of graduate study and complete a dissertation to earn the Ph.D. Certain credits earned in conjunction with a master's degree program may be applied toward the doctoral program. The same graduate core curriculum as required for the master's degree must be completed unless the student has already taken these same courses at the School of Fisheries or their equivalent. One academic year of foreign language with passing grades or equivalent competency is required. Students must pass written and oral General Examinations during their second year of residency. Presentation and defense of a dissertation proposal is normally a part of the oral examination. Further details can be obtained from the School's Office of Student Services.

#### **Financial Aid**

General information on graduate student support is available from the Office of Financial Aid, 105 Schmitz. Scholarships, fellowships, and teaching and research assistantships are available from a wide variety of sources for qualified graduate students. Most student support comes from research grants and contracts under the direction of individual professors. Graduate applicants are, therefore, urged to discuss their financial needs with professors in their potential major fields and with the graduate program coordinator during the early stages of the graduate application process.

#### **Correspondence and Information**

A package of materials describing courses, listing more specific procedures for applying for graduate admission, and giving details of faculty research and activities is available from Graduate Program Assistant, 213 Fisheries, WH-10; (206) 543-7457.

## **Faculty**

#### **Director**

Marsha L. Landolt

#### **Professors**

Armstrong, David A.,\* 1978, M.S., 1974, Oregon State; Ph.D., 1978, California (Davis); shellfish physiology.  
Bell, Milo C., 1940, (Emeritus), B.S.M.E., 1930, Washington; hydrology and fish guidance.  
Bevan, Donald E.,\* 1959, (Emeritus), Ph.D., 1959, Washington; biometrics.  
Brown, George W., Jr.,\* 1967, (Emeritus), M.A., 1951, Ph.D., 1955, California (Berkeley); fish biochemistry and biochemical ecology.  
Burgner, Robert L.,\* 1956, (Emeritus), Ph.D., 1958, Washington; salmon ecology and salmon biology.

Chapman, Douglas G.,\* 1949, (Emeritus), M.A., 1940, Ph.D., 1949, California (Berkeley); population dynamics and enumeration.

Chew, Kenneth K.,\* 1962, M.S., 1958, Ph.D., 1962, Washington; shellfish biology and aquaculture.

Dickhoff, Walton W.,\* 1975, Ph.D., 1976, California (Berkeley); fisheries.

Donaldson, Lauren R., 1948, (Emeritus), Ph.D., 1939, Washington; freshwater fish biology.

Erickson, Albert W.,\* 1974, M.S., 1955, Ph.D., 1964, Michigan State; wildlife biology and marine mammals.

Ford, E. David,\* 1985, (Biostatistics, Statistics, Quantitative Ecology and Resource Management), (Forest Resources),† Ph.D., 1968, University College (London); analysis of ecological systems.

Francis, Robert C.,\* 1980, (Marine Affairs, Oceanography, Quantitative Ecology and Resource Management), M.S., 1966, Ph.D., 1970, Washington; ground fish and tuna ecology research and management, population dynamics of salmon.

Gallucci, Vincent F.,\* 1972, (Biostatistics, Forest Resources, Quantitative Ecology and Resource Management), M.S., 1966, State University of New York (Buffalo); Ph.D., 1971, North Carolina State; biomathematics and population dynamics.

Halver, John E.,\* 1958, (Emeritus), M.S., 1948, Washington State; Ph.D., 1953, Washington; nutrition, biochemistry, toxicology.

Hershberger, William K.,\* 1970, M.S., 1965, Ph.D., 1968, Pennsylvania State; fish genetics.

Hilborn, Ray W.,\* 1987, (Quantitative Ecology and Resource Management), Ph.D., 1974, British Columbia; stock assessment, population dynamics, fisheries policy.

Kocan, Richard M.,\* 1978, M.S., 1965, Ph.D., 1967, Michigan State; aquatic toxicology.

Landolt, Marsha L.,\* 1975, (Pathology), M.S., 1970, Oklahoma; Ph.D., 1976, George Washington; fish and shellfish diseases.

Liston, John,\* 1957, (Emeritus), Ph.D., 1955, Aberdeen (Scotland); food science, marine microbiology.

Matches, Jack R.,\* 1963, (Emeritus), M.S., 1958, Oregon; Ph.D., 1963, Iowa State; microbiology, food science.

Mathews, Stephen B.,\* 1969, (Quantitative Ecology and Resource Management), M.A., 1962, California (Berkeley); Ph.D., 1967, Washington; quantitative fishery management.

Miller, Bruce S.,\* 1971, M.S., 1965, Ph.D., 1969, Washington; life history and ecology of marine fishes.

Miller, Marc L.,\* 1979, ‡(Anthropology, Marine Affairs), M.A., 1972, California (San Diego); Ph.D., 1974, California (Irvine); maritime anthropology, cognitive anthropology and social/cultural change.

Naiman, Robert J.,\* 1988, (Forest Resources), †(Quantitative Ecology and Resource Management), M.A., 1971, California (Los Angeles); Ph.D., 1974, Arizona State; river ecology, landscape ecology.

Nakatani, Roy E.,\* 1964, (Emeritus), Ph.D., 1960, Washington; water pollution ecology.

Pietsch, Theodore W.,\* 1978, (Zoology), M.S., 1969, Ph.D., 1973, Southern California; ichthyology.

Pigott, George M.,\* 1963, (Nutritional Sciences), M.S., 1955, Ph.D., 1963, Washington; food engineering.

Pilsetskaya, Erika M.,\* 1980, (Research), Ph.D., 1958, D.Sci., 1973, Academy of Sciences (USSR); comparative physiology and biochemistry, especially endocrine regulations of nutrition and metabolism.

Rogers, Donald E.,\* 1969, (Research), M.S., 1961, Ph.D., 1967, Washington; sockeye salmon research.

Royce, William F., 1958, (Emeritus), Ph.D., 1943, Cornell; applications of fisheries science.

Seymour, Allyn H., 1962, (Emeritus), Ph.D., 1956, Washington; radioecology.

Smith, Lynwood S.,\* 1965, M.S., 1955, Ph.D., 1962, Washington; fish physiology.

Stickney, Robert R.,\* 1985, M.A., 1968, Missouri; Ph.D., 1971, Florida State; aquaculture, biological oceanography.

Swartzman, Gordon L.,\* 1973, (Research), (Quantitative Ecology and Resource Management), M.S.E.E., 1965, Ph.D., 1969, Michigan; ecological modeling, quantitative natural resource management.

Taub, Frieda B.,\* 1961, (Environmental Studies), M.S., 1957, Ph.D., 1959, Rutgers; ecology.

Whitney, Richard R.,\* 1967, M.S., 1951, Utah; Ph.D., 1955, Iowa State; recreational fisheries.

Wissmar, Robert C.,\* 1972, (Forest Resources), † M.S., 1968, Ph.D., 1972, Idaho; ecology.

Wooster, Warren S.,\* 1976, (Emeritus), (Environmental Studies, Oceanography), (Marine Affairs), † M.S., 1947, California Institute of Technology; Ph.D., 1953, California (San Diego); ocean circulation, effects on fish stock, ocean affairs.

#### **Associate Professors**

Anderson, James J.,\* 1981, (Quantitative Ecology and Resource Management), Ph.D., 1977, Washington; fisheries and oceanography.

Brannon, Charlene S.,\* 1969, (Nutritional Sciences), M.S., 1966, Iowa State; Ph.D., 1974, Washington; sensory evaluation, food produce development, nutritional anthropology.

Conquest, Loveday L.,\* 1978, (Biostatistics, Forest Resources, Quantitative Ecology and Resource Management), M.S., 1972, Stanford; Ph.D., 1975, Washington; sampling and experimental design for environmental monitoring studies, especially spatial and temporal aspects; statistical methods for timber, fish, and wildlife studies; global monitoring of the environment; general biometry.

Dong, Faye,\* 1984, M.S., 1973, Ph.D., 1976, California (Davis); nutrition.

Grue, Christian E.,\* 1989, (Forest Resources), M.S., 1974, Northern Arizona; Ph.D., 1977, Texas A&M; wildlife toxicology and wildlife science.

Gunderson, Donald R.,\* 1978, M.S., 1966, Montana State; Ph.D., 1976, Washington; marine fisheries and stock assessment.

Nevissi, Ahmad Ed,\* 1973, (Research), ‡(Environmental Health), M.S., 1966, Technische Hochschule (West Germany); Ph.D., 1973, Arkansas; radiochemistry.

Pauley, Gilbert B.,\* 1974, M.S., 1965, Washington; Ph.D., 1971, California (Irvine); fish immunology, recreational fisheries.

Pikitch, Ellen K.,\* 1987, (Quantitative Ecology and Resource Management), M.S., 1982, Ph.D., 1983, Indiana; marine fisheries, population dynamics, fisheries management.

Quinn, Thomas P.,\* 1986, M.S., 1978, Ph.D., 1981, Washington; fish behavior.

Rasco, Barbara A.,\* 1984, Ph.D., 1983, Massachusetts; biochemistry.

Sibley, Thomas H.,\* 1978, M.S., 1968, State University of New York (Buffalo); Ph.D., 1976, California (Davis); trace pollutants.

Skalski, John R.,\* 1987, (Quantitative Ecology and Resource Management), M.S., 1976, Oregon State; M.S., 1978, Ph.D., 1985, Cornell; population estimation, environmental sampling, effective assessment.

#### **Assistant Professor**

Foot, Christopher J., 1992, M.S., 1980, Manitoba; Ph.D., 1988, British Columbia; evolutionary biology, salmon ecology and behavioral ecology.

**Senior Lecturer**

Johnson, Frederick G., 1987, M.A., 1973, Stanford; Ph.D., 1979, Washington; marine biology, environmental impact.

## Course Descriptions

### Courses for Undergraduates

#### Fisheries

**FISH 100 Introduction to Careers in the Marine Sciences (1)** Presentations by various faculty and staff members, students and recent graduates offer an introduction to the College of Ocean and Fishery Sciences, curricular options, and professional opportunities in the marine sciences. Joint with OCEAN 100. Credit/no credit only. Limited to freshmen, sophomores or transfer juniors.

**FISH 101 Introduction to Fisheries Science (5) WSpS** Identification, distribution, and life histories of selected fish and shellfish; commercial and recreational fishing; utilization of fisheries products; problems faced in fisheries conservation and management.

**FISH 201 Topics in Fisheries Science (5) W** Introduction to fundamentals of fisheries science and the breadth of issues addressed through research in fisheries. Lectures, laboratories, and field trips encourage student participation in fishery research methods and familiarity with fishery problems typically encountered in the Pacific Northwest. Prerequisite: major status in fisheries or permission of instructor.

**FISH 310 Biology of Shellfish (5) A** Commercially important mollusca and crustacea highlighted with respect to systematics, anatomy, reproductive strategies, feeding, growth. Basic management and/or aquaculture efforts for key species; several major fishery that highlight variability in recruitment and landings, management of species with complex life cycles. Laboratories, field trips. Prerequisites: ten credits in biological sciences.

**FISH 311 Biology of Fishes (5) W Pietsch** Lecture, laboratory, and field study of the morphological, physiological, behavioral, and ecological diversity of fishes of the world; designed to provide a basic foundation for advanced courses in all areas of finfish fisheries. Prerequisites: ten credits in biological sciences.

**FISH 312 Fisheries Ecology (4) Sp** Ecological characteristics of fishes and shellfishes in the important freshwater and marine habitats of north America. Relationship between physical aspects of the habitats and community structure. Impacts of human activities on diversity and abundance. Prerequisites: 310, 311; OCEAN 200; BIOL 472.

**FISH 314 Methods and Instruments of Fisheries, Aquaculture, and Food Science (5) A** Theory and practice of instrumentation, methods, gear selection, and sampling in fisheries, aquaculture, and food science. Laboratory and shipboard experience with equipment and methods. The integration of fish capture with care and handling of fish destined for market. Prerequisite: Q SCI 381 which may be taken concurrently, or permission of instructor.

**FISH 328 Forestry-Fisheries Interactions (4) W Naiman, Raedeke, Wissmar** Characteristics of forestry-fisheries interactions in terrestrial and aquatic landscapes. Effects of changes in landforms on forest and aquatic communities. River basin and watershed features. Forest stand dynamics, forest hydrology, fish and wildlife histories and behavior. Resource conflicts and resolution. Joint with FRM 328. Recommended: general biology and ecology.

**FISH 340 Applications of Computers to Natural Resource Problems (2) A** A first course in computing for undergraduates in fisheries and forestry emphasizing use of personal computers. Use of existing software for spread sheet analysis data base concepts, graphics, routine statistical analysis, and text process-

ing. Introduction to simulation. Joint with Q SCI 340. Prerequisite: Q SCI 381 or equivalent introductory statistics course.

**FISH 350 Current Topics in Nutrition and Food Science (3) A Dong** Nutritional properties, chemistry, safety, regulatory issues, and sensory properties of food components. Joint with FD SC 350.

**FISH 367 Recreational Fisheries (4) Sp Pauley** History of recreational fishing; present trends in sport fishing and prediction of future trends; types and characteristics of recreational fisheries; value of recreational fisheries; habitat requirements; ecology and behavior that are important considerations in management; management philosophy and techniques. Recommended for majors and nonmajors. Field trips. Laboratory fee may be required. Prerequisite: ten credits in biological science.

**FISH 379 World Fisheries and Aquaculture (3) A Gunderson** Importance of aquatic living resources; present and future of world fisheries; potential harvest and problems of development; fisheries management; aquaculture; law of the sea and international arrangements for fisheries; status of the United States fishing industry.

**FISH 405 Economically Important Mollusca (5) Sp Chew** Classifications, life histories, distribution, methods of cultivation, and economic importance of oysters, clams, scallops, abalones, cephalopods, and other mollusca. Prerequisite: ten credits in biological science.

**FISH 406 Economically Important Crustacea (5) W Armstrong** Classifications, life histories, distribution, methods of capture, and economic importance of crabs, shrimps, lobsters, crayfish, and the smaller crustacea. Mandatory laboratory fee. Prerequisite: ten credits in biological science.

**FISH 415 Molecular and Organismal Functions of Fishes (5) A Dickhoff, Smith** Types, occurrences, and roles of inorganic and organic substances in supporting physiological functions, including osmoregulation, respiration, circulation, bioenergetics, digestion, and musculo-skeletal systems. Shows the integration of these processes, including stress and reproductive responses, by neuroendocrine systems. Prerequisites: ten credits in biology, one course in organic chemistry.

**FISH 425 Life History of Marine Fishes (9) W Miller** Early life history (modes of reproduction, spawning, fecundity, egg and larva development, sampling eggs and larvae, ecology of eggs and larvae), aging, food habits, subpopulation identification, and migrations of marine fishes. Prerequisite: 311 or equivalent or permission of the instructor.

**FISH 430 Biological Problems in Water Pollution (3 or 5)** Ecological risk assessment of toxic chemicals; problems associated with electrical power production. Risk assessment considers exposure and toxicity, and effects on individuals, populations, communities. Laboratory covers invertebrate toxicity tests, microcosms, field trips to electrical power plants. Joint with CIVE 461. Prerequisite: senior or graduate standing in fisheries, engineering, or related fields.

**FISH 434 Ecological Effects of Waste Water (3 or 5) ASp Welch** Principles of aquatic ecology that relate to causes and effects of water quality problems in lakes and streams. Population growth kinetics, nutrient cycling, eutrophication; acidification, oxygen/temperature requirements, and effects of various wastes on aquatic animals. Joint with CIVE 462. Prerequisite: senior or graduate standing in engineering or science.

**FISH 435 Physiological Effects of Water Pollutants (3) Sp Brown** Physiological effects of water pollutants on economically important or endangered fishes, especially with respect to wastewater. Types of industrial, urban, and agricultural entities that contribute wastes to natural waters. Joint with CIVE 463. Prerequisites: upper-division or graduate standing, organic chemistry, and some background in any of the

following: general physiology, cell biology, biochemistry, chemical biology, sanitary engineering.

**FISH 444 Fisheries Genetics (5) W Hershberger** Transmission, analysis, manipulation of genetic material in aquacultural species. Application of genetic analysis in fishery biology, aquaculture. Reproduction in aquacultural species; development of artificial mating, incubation techniques. Embryological development, definition of factors affecting embryo species. Techniques used in genetic and embryological analyses. Prerequisite: 453; GENET 360; or permission of instructor.

**FISH 450 Salmonid Behavior and Life History (4) A** Marine distribution, homing migration, and spawning behavior of adult salmon: incubation, emergence, migration, and residence of fry; fingerling distribution and residence with reference to species interaction and population evolution. Prerequisites: 311 and 15 credits in biology.

**FISH 452 Nutrition and Health of Aquatic Animals (4) W Halver, Landolt** Basic nutritional requirements of fish and shellfish in nature and in artificial environments; principles governing the transmission and control of disease; importance of diet in prevention. Prerequisites: 311 and ten credits in biology.

**FISH 453 Fish Culture (3) A Hershberger, Stickney** Layout, management of fish production facilities; water quality, treatment needs; fish husbandry during grow-out; transportation of fish; harvesting, processing fish for commercial production; use of hatchery-produced fish in fishery management, their impact. Laboratory includes water quality determination; spawning, incubation of different species; fish husbandry techniques. Prerequisites: 311, 314, and 451.

**FISH 456 Fundamentals of Fish Population Dynamics and Management (4) A Pikitch** Conveys fundamental concepts of fish population dynamics and fishery management within context of real-world fisheries problems. Lectures discuss notation, terminology, mathematical models, fisheries principles, and case studies. Laboratory time devoted to practical applications, problems. Joint with Q SCI 456. Prerequisites: Q SCI 291 and Q SCI 292, or MATH 124 and 125, or equivalent.

**FISH 457 Methods of Abundance (4) W Gunderson, Mathews** Methods of estimating fish abundance by direct sampling and indirectly from tagging, catch, and effort analysis. Confidence limits and bias adjustments. Design of marine fishery surveys using statistical sampling principles. Laboratory work with real fishery data and data collected during trawl sampling survey. Joint with Q SCI 457. Prerequisites: Q SCI 291, Q SCI 292, Q SCI 381, Q SCI 456; or equivalents.

**FISH 458 Fisheries Stock Assessment (4) Sp Hilborn** Emphasizes quantitative analysis of fisheries data to determine how the fishery would respond to alternative management actions. Major topics include production models, stock and recruitment, catch at age analysis, and formulation of harvest strategies. Joint with Q SCI 458. Prerequisite: 456 or permission of instructor.

**FISH 459 Aquatic Food Chains (5) W Taub** Survey of the sources and nutritional values of foods for fisheries resources. Efficiencies, rates of transfer through the food chain, pollution effects, and the potential for using pollution are considered. Prerequisite: major status or permission of instructor.

**FISH 460 Water Management and Hydrology (4) A Kent** Nomenclature water cycles and soil retention, water-flow measurements in streams, flow in pipes and channels, determination of pressure in open and closed systems, screening of water diversions, upstream and downstream fish passage. Prerequisites: MATH 105, and physics, or permission of instructor.

**FISH 475 Marine Mammalogy (3) SpS Erickson** Evolution, taxonomy, physiology, life history, and behavior of marine mammals; the techniques of studying

and the management and conservation of them. (Offered irregularly.)

**FISH 476 Laboratory of Marine Mammalogy (2) SpS** *Erickson* Evolution, taxonomy, physiology, life history, and behavior of marine mammals; the techniques of studying and the management and conservation of them. Laboratory fee may be required. Prerequisite: 15 credits in biology; recommended: vertebrate anatomy and physiology. (Offered irregularly.)

**FISH 482 Food Chemistry (4) Sp** *Rasco* Chemical composition and properties of food, chemical reactions involving food components including water, vitamins, minerals, additives, toxicants, pesticides, macronutrients, and topics of current interest. Joint with FD SC 482. Prerequisite: organic chemistry or permission of instructor.

**FISH 485 Food Engineering (4) W** *Pigott* Unit operations in food processing with a concentration on fishery products, emphasizing engineering and technological basis of commercial operations. Majors must take FD SC 495 concurrently. Joint with FD SC 485. Prerequisites: MATH 125, PHYS 116, and CHEM 160, or permission of instructor.

**FISH 493 Food Analysis Laboratory (3) W** *Rasco* Laboratory sessions using standard analytical, instrumental (spectroscopy, GLC, HPLC, AA) and immunological methods for analyzing major and minor food constituents. Joint with FD SC 493. Prerequisite: organic chemistry laboratory, or quantitative analysis, or permission of instructor.

**FISH 498 Internship/Experiential Learning (1-9, max. 9) AWSps** Structured, practical training in the fishing industry, government agencies and other areas utilizing fisheries, food science, or quantitative science expertise. Experiences as supervised and evaluated. Written reports required. Prerequisite: permission of faculty adviser.

**FISH 499 Undergraduate Research (1-5, max. 9) AWSps** Individual research within the School of Fisheries. Guest lecture series; special problems: special courses in fisheries. Prerequisite: permission of instructor.

## Food Science

**FD SC 300 Nutrition for Today (3) ASp** *Dong* Basic and applied nutrition and food science. Identification and physiological roles of nutrients, nutritional requirements, problems with over- and undernutrition, and nutritional and food-related diseases. Food additives, processing, safety, and their effects on overall nutrition. Current issues of public significance. Joint with NUTR 300.

**FISH 350 Current Topics in Nutrition and Food Science (3) A** *Dong* Nutritional properties, chemistry, safety, regulatory issues, and sensory properties of food components. Joint with FD SC 350.

**FD SC 385 Food Engineering I (3) W** *Pigott* Quantitative physics and chemistry of harvesting, processing, and storing foods. Solving problems of mass and energy transfer with regard to processes and to changes in important food components such as nutrients. Prerequisite: food science major or permission of instructor.

**FD SC 385 Food Engineering I Laboratory (1) W** *Pigott* Laboratory demonstrations and report writing involving basic food engineering principles studied in 385. Stoichiometry and nutritional effects of processing. Laboratory fee may be required. Prerequisite: concurrent registration in 385.

**FD SC 450 Food Engineering for Engineers (3) Pigott** Scientific and engineering principles of food engineering, including catching, harvesting, transporting, storing, processing, packaging, and distributing food and food products. Of particular concern are the design and operation of processing machinery and equipment for these unit processes and operations.

Prerequisite: senior or graduate student in engineering, food science, or fisheries.

**FD SC 481 Introduction to Food Technology (4) Sp** Chemical, biological, and nutritional properties of food raw materials. Principles of preservation and processing and significance of handling and storage procedures in relation to safety, wholesomeness, and nutritional value of foods. Prerequisite: permission of instructor.

**FD SC 482 Food Chemistry (4) A** *Rasco* Chemical composition and properties of food, chemical reactions involving food components including water, vitamins, minerals and other nutrients, additives, toxicants, pesticides, macronutrients, and topics of current interest. Joint with FISH 482. Prerequisite: organic chemistry or permission of instructor.

**FD SC 483 Food Analysis (3) W** *Rasco* Principles of separation and identification of food components by chromatographic, spectrophotometric, and other methods, including vitamins, minerals, and preservatives. Prerequisite: 482 or permission of instructor.

**FD SC 484 Food Microbiology (4) A** Occurrence and activity of microorganisms in foods; their significance in spoilage, fermentation, food-borne disease, and nutritional effects; principles of control and destruction by environmental adjustment and processing, detection and evaluation of significance. Prerequisite: 481, MICRO 301, or permission of instructor.

**FD SC 485 Food Engineering (4) W** *Pigott* Unit operations in food processing with a concentration on fishery products, emphasizing engineering and technological basis of commercial operations. Majors must take 495 concurrently. Joint with FISH 485. Prerequisites: MATH 125, PHYS 116, and CHEM 160, or permission of instructor.

**FD SC 486 Deteriorative Processes in Foods (3) Sp** *Rasco* Effects of deteriorative processes on quality and nutritional value of foods and chemical and microbiological analysis of this; quality assurance methods. Fish, meat, poultry, and other animal foods. Prerequisites: 483, 485, and concurrent registration in 496, or permission of instructor.

**FD SC 491 Introduction to Food Technology Laboratory (1) Sp** Laboratories and field trips to local food-processing plants to see and study important food-processing operations, such as freezing, milling, canning, brewing, milk processing, and spice processing. Food science majors must take 491 concurrently with 481.

**FD SC 493 Food Analysis Laboratory (3) W** *Rasco* Laboratory sessions using standard analytical, instrumental (spectroscopy, GLC, HPLC, AA) and immunological methods for analyzing major and minor food constituents. Joint with FISH 493. Prerequisite: organic chemistry laboratory, or quantitative analysis, or permission of instructor.

**FD SC 494 Food Microbiology Laboratory (3) A** Selected experiments on the enumeration and identification of microorganisms in food, fermentation processes, and the changes in microbial populations as a result of handling, storing, and processing. Food science majors must take 494 concurrently with 484. Laboratory fee may be required.

**FD SC 495 Food Engineering II Laboratory (2) W** *Pigott* Laboratory investigations and demonstrations concerned with the application of modern engineering principles to efficient commercial processing of food. Retaining maximum nutrient properties of foods, both natural and formulated. Prerequisite: concurrent registration in 485.

**FD SC 496 Deteriorative Processes in Foods Laboratory (2) Sp** *Rasco* Selected experimental problems in food deterioration. Measurement of changes in food components and such nutrients as proteins and vitamins during deteriorative processes. Laboratory fee may be required. Prerequisites: concurrent registration in 486 and food science major.

**FD SC 498 Undergraduate Thesis (3-5, max. 5) AWSps** Design project, write project proposal, conduct research, write up results in scientific journal form.

## Courses for Graduates Only

### Fisheries

**FISH 501 Internship/Experiential Learning (1-9, max. 9) AWSps** Structured, practical training in the fishing industry, government agencies and other areas utilizing fisheries, food science, or quantitative science expertise. Experiences are supervised and evaluated. Written reports required. Prerequisite: permission of faculty adviser.

**FISH 502 Fundamentals of Fishery Science (5) A** Team-taught course designed to provide an advanced overview of all aspects of fishery science. Emphasis on critical concepts of fishery biology relevant to those requiring a basic understanding of major sub-disciplines of the field. Theoretical approach emphasized. Extensive use of classical and current literature. Prerequisite: graduate standing.

**FISH 503 Systematic Ichthyology (5) A** *Pietsch* Phylogenetic history of the major groups of fishes: a survey of extinct and living fishes of the world, phylogenetic methodology as applied to fishes, geographic distribution and historical zoogeography. Joint with ZOOL 503. Prerequisite: FISH 311 or equivalent.

**FISH 504 Invertebrate Pathology (5) W** *Landolt, Pauley* Pathological effects and communicable diseases in invertebrates. The discussion is phylogenetic and comparative. Juniors and seniors may take the course, but must have course prerequisites. Prerequisites: 454 and invertebrate zoology or equivalent, or permission. (Offered even-numbered years.)

**FISH 505 Research Techniques in Shellfish Biology (5) Sp** *Chew* Study of research methods in field surveys of invertebrates and of research techniques involved with the studies of reproduction, growth, and mortality of oysters and clams. Prerequisite: permission of instructor. (Offered irregularly.)

**FISH 506 Pathology of Fishes (5) A** *Landolt* Infectious diseases of fish. Emphasis on bacterial and viral pathogens, diagnostic procedures, control strategies. Recommended: upper division course work in microbiology or immunology.

**FISH 507 Special Problems in Fisheries (1-5, max. 15) AWSps** Classroom, laboratory, or field studies on problems of current interest. A maximum of 6 credits of 507 is permitted to apply to a master's degree program. A. Guest lecture series. Offered on credit/no credit basis only. B. Special problems. C. Special course in fisheries. D. Special courses in fisheries. Prerequisite: permission of instructor.

**FISH 508 Physiological Ecology of Shellfish (3)** Relationships between physical-chemical features of habitats, and physiological adaptations of shellfish. Ability to tolerate extreme environments and adverse conditions examined as causes of variable recruitment, productivity, energy allocation, in marginal habitats. How such changes impact fisheries. Prerequisites: CHEM 140, 150; ZOOL 301, 330 or equivalents or permission of instructor.

**FISH 515 Advanced Integrative Fish Physiology (3) Sp** *Dickhoff, Smith* Integration of physiological processes from molecular to organ system levels. Recent advances in control of reproduction, development, growth, metabolism, and osmoregulation. Prerequisite: 415 or equivalent; recommended: BIOC 405, 406 or BIOC 440, 441, 442; ZOOL 438.

**FISH 520 Graduate Seminar (1) AWSps** Introduction to research in fisheries. Required of all first-year graduate students. Offered on credit/no credit basis only.

**FISH 521 Scientific Method in Resource Management (2) Ford** Process of scientific discovery and strategies used for different problems in ecology and natural resources management. The relationship be-

tween growth of objective knowledge and use made of that knowledge in natural resources management explored through case studies. Joint with Q SCI 521.

**FISH 522 Classical Literature of Fisheries Science and Aquaculture (2) WSp** Discussion of the classic literature of fisheries science and aquaculture. Both oral and writing communication skills stressed. Credit/no credit only.

**FISH 525 Ecology and Behavior of Fishes (3) Sp** Miller, Quinn Basic principles of ecology and behavior (e.g., habitat associations, competition and predation, migrations and movements, reproductive patterns) as applied to fishes. Critical evaluation of current literature and fieldwork required. Prerequisites: 311 or equivalent, and permission of instructor.

**FISH 527 Aquatic Community Responses to Chemical Stress (3) W** Taub Aquatic ecotoxicology; bridging the gap between physiological and ecosystem responses to toxic chemicals. Detecting effects against natural variability; altered species abundances and dominance, counter-intuitive responses. Case histories, controversies on data interpretation. Prerequisite: at least one course in ecology, limnology, oceanography or permission of instructor.

**FISH 535 Metabolic Effects of Chemical Pollutants (4) Sp** Brown Physiological and biochemical effects of industrial, urban, and agricultural chemicals on aquatic biota; specific metabolic effects of various poisonous and inhibitory substances; models of inhibition of enzyme systems of aquatic organisms. Offered concurrently with 435. Prerequisites: upper-division or graduate standing, organic chemistry, general physiology, biochemistry, or cell physiology, or equivalent.

**FISH 539 Forestry-Fisheries Interactions: Case Studies (3) A** Naiman, Raedeke, Wissmar Case studies of streamside management situation at the watershed and basin level. Topics include resource conflict resolution, current and future management alternatives, landscape dynamics, role of disturbance, and policy options. Joint with FRM 539. Prerequisite: graduate standing in forestry, fisheries, or related field; undergraduates by permission of instructor.

**FISH 544 Genetics in Fish Management and Production (3) Sp** Hershberger Possible changes in genetic characteristics and response of populations with the current types and levels of fisheries resource manipulation. Includes genetic considerations in population models, quantitative genetics and breeding, and use of genetic markers for population analysis. Prerequisites: 444, 451, Q SCI 482, 483, and upper-division or graduate standing. (Offered odd-numbered years.)

**FISH 545 Selection and Breeding in Aquaculture (3) Sp** Hershberger Genetic bases, analytical techniques and experimental approaches for study and utilization of quantitative genetic variation in aquatic species. Statistical determination of genetic and phenotypic parameters; design and assessment of selection and breeding programs; use of quantitative genetic data. Prerequisites: 444, GENET 360, Q SCI 486, or permission of instructor. (Offered even-numbered years.)

**FISH 547 Stream and River Ecology (4) Sp** Cundy, Naiman Characterizations of stream and river ecosystems from a watershed perspective. Emphasis on fundamental processes affecting the structure and dynamics of aquatic communities and the riparian zone. Resource conflicts, new technologies, field trips, and class projects. Joint with FRM 547. Recommended: general ecology, forestry-fisheries interactions.

**FISH 548 Special Topics in Streamside Studies (2, max. 6) AWSpS** Naiman, Quinn, Raedeke, Wissmar Contemporary problems and issues in forestry, fisheries, and wildlife management in watersheds. Topics vary, yet focus on interactions of land and water resources in the forests of the Pacific Northwest. Joint with FRM 548. Prerequisite: permission of instructor.

**FISH 551 Fish Feed Technology (5) W** Halver, Hardy, Pigott, Stickney Fish feedstuffs classification, processing, nutrient profiles. Fish feed formulation techniques and practice. Least-cost computerized diets. Manufacture techniques for eight types of fish feeds: wet, semi-moist, frozen, extruded, expanded, rolled, pelleted, and microparticulate or microencapsulated diets. Design and operation of various type feed mills. Prerequisite: 452.

**FISH 552 Comparative Fish Nutrition (3) W** Halver, Hardy, Stickney Quantitative nutrient requirements of salmonids, cyprinids, ictalurids, and test species of fishes for growth, development and reproduction. Vitamin, lipid, amino acid, carbohydrate, and minerals requirements plus metabolism of each examined and compared between species reared in various environments. Prerequisite: 452 or equivalent animal nutrition/biochemistry course.

**FISH 556 Mathematical Analysis in Fisheries Stock Assessment (3) A** Gallucci Analytic approaches to stock assessment and population management applications of parent-progeny models and logistic models; biological and economic yields of natural populations; analysis of population data on computers. Joint with Q SCI 556. Prerequisites: Q SCI 292, Q SCI 392, Q SCI 456, Q SCI 483; or permission of instructor.

**FISH 557 Estimation of Population Parameters (4) W** Skalski Statistical analysis of population data; design and analysis of mark-recapture experiments on natural populations; laboratory work on computers. Joint with Q SCI 557. Prerequisites: Q SCI 292, Q SCI 483, and probability theory.

**FISH 558 Advanced Analysis in Fisheries Stock Assessment (3) Sp** Deterministic and stochastic representations of age-dependent and size-dependent models for stock assessment; analysis of multi-species models; risk analysis and uncertainty in fisheries management strategies; analysis of population data on computers. Joint with Q SCI 558. Prerequisite: Q SCI 393, 556 or permission of instructor; recommended: 557.

**FISH 560 Methods of Acoustic Stock Assessment (3) Sp** Theory and implementation of processing of acoustic fish target signals. Application for estimation of fish stocks and the statistical properties of the estimation procedure. (Offered irregularly.)

**FISH 565 Marine Fish Biology (9) S** Taxonomy, ecology, and life history of the fishes of the San Juan Islands and northeast Pacific Ocean. Prerequisite: permission of instructor. (Offered at Friday Harbor Laboratories Summer Quarter only; offered alternate years.)

**FISH 580 Introduction to the Management of Fisheries (3) Sp** Francis, Miller Introduction to fisheries and the multidisciplinary aspects of their management. Emphasis is on integration of biological, socio-economic, and institutional aspects of fisheries management. Joint with IMS 580.

**FISH 581 Fishery Management: Case Studies (5) A** Francis, Huppert Examination of historical case studies chosen to illustrate specific fishery management problem areas. Faculty presentations occupy first half of quarter, student presentations the second half. Joint with IMS 581. Prerequisite: 580.

**FISH 582 Fishery Management: Contemporary Issues (5) W** Huppert Focuses on multi-disciplinary, in-depth analysis of specific problems, including biological and economic assessments, evaluation of alternative management systems, and formulation of specific research, data collection, and management recommendations. Joint with IMS 582. Prerequisite: 581.

**FISH 600 Independent Study or Research (\*) AWSpS** Offered on credit/no credit basis only.

**FISH 700 Master's Thesis (\*) AWSpS** Offered on credit/no credit basis only.

**FISH 800 Doctoral Dissertation (\*) AWSpS** Offered on credit/no credit basis only.

## Food Science

**FD SC 521 Graduate Seminar in Food Science (1, max. 3) AWSp** Lectures and discussions of current problems and current research in food science. Offered on credit/no credit basis only. Prerequisite: permission of instructor.

**FD SC 522 Advanced Food Chemistry (3, max. 9) Sp** Rasco Lecture and/or laboratory dealing with special or current topics in food chemistry and food analysis. Laboratory fee may be required. Prerequisite: graduate standing or permission of instructor. (Offered even-numbered years.)

**FD SC 524 Microorganisms in Foods (3) W** Occurrence and activity of microorganisms important in foods as agents of spoilage, fermentation, and food-borne disease; relationship to food or food process; control and detection. Food science majors must take 534 concurrently with 524. Prerequisite: graduate standing in food science or permission of instructor.

**FD SC 525 Advanced Unit Operations in Food Processing (3) Sp** Pigott Application of modern engineering principles to operations such as evaporation, drying, distillation, pumping, and heat transfer in the handling, processing, and packaging of foods. To be taken concurrently with 526. Prerequisite: 485 or permission of instructor.

**FD SC 526 Advanced Unit Operations in Food Processing Laboratory (3) Sp** Pigott Laboratory investigations concerned with the engineering of food processes and processing facilities. To be taken concurrently with 525. Laboratory fee may be required.

**FD SC 534 Microorganisms in Foods Laboratory (1) W** Special projects or selected experiments designed to study microorganisms in foods. Food science majors must take 534 concurrently with 524. Laboratory fee may be required.

**FD SC 600 Independent Study or Research (\*) AWSpS**

**FD SC 700 Master's Thesis (\*) AWSpS**

## School of Marine Affairs

3707 Brooklyn Avenue Northeast

## Graduate Program

The School of Marine Affairs offers an interdisciplinary program of study leading to the Master of Marine Affairs degree. Marine affairs concerns management and policy questions on the uses of the coastal and offshore regions of the ocean and their resources. The core curriculum includes courses from the School of Marine Affairs, business administration, economics, engineering, fisheries, law, oceanography, political science, and public affairs. The School of Law has a related Master of Laws degree program with specialization in marine affairs.

A major program objective is to prepare students for professional careers in policy making, management, teaching, and research. Breadth of study is emphasized, and all students are expected to gain familiarity with relevant aspects of the social, technological, and environmental sciences. In addition, each student is expected to develop a professional and scholarly proficiency in a particular aspect of marine affairs.

Completion of the M.M.A. program normally requires two academic years for students who have recently received a baccalaureate degree. During the first year, students develop a comprehensive understanding of

the marine affairs field and acquire analytic skills. During the second year, a special competence is developed in an area of concentration (e.g., coastal zone management and planning, international marine institutions, living resources and fisheries management, marine environmental policy, port and marine transportation management), and a research topic is prepared and presented in thesis format under the guidance of a faculty supervisory committee. Individual courses of study may be adjusted to accommodate prior experience and academic background, and especially qualified students, such as those in midcareer, may be able to meet the degree requirements in eighteen months of study.

#### **Joint Curriculum in Fisheries Management**

The School of Fisheries (SOF) and the School of Marine Affairs (SMA) offer a joint curriculum in fishery management consisting of parallel two-year master's programs. The curriculum is designed to develop a cadre of professional fisheries managers with skills needed to participate effectively in the wide range of activities characteristic of contemporary fishery management. These skills require a multi-disciplinary education in biology, the social sciences (e.g., economics, political science, anthropology, sociology), quantitative methods, law, and policy analysis. All students in either SOF or SMA will obtain basic tools during their first year. A second part of the curriculum consists of a four-quarter core course which brings SOF and SMA students together in a problem-oriented focus. This core course has three components: (1) introduction to fisheries and their management, (2) retrospective case studies, and (3) contemporary issues. During the core sequence, students will develop progressively more extensive case studies on their own, leading to a master's thesis. Students may enter the fisheries management master's program through either the School of Fisheries or the School of Marine Affairs and must meet the thesis and other requirements of their department.

#### **Admission Requirements**

Admission to the School of Marine Affairs is based on evaluation of required application materials in competition with other applicants. Required materials include Graduate Record Examination general test scores, completed departmental supplementary information form, three letters of recommendation, official academic transcripts, and a statement of career objectives. In addition, applicants must make separate application to, and be accepted by, the Graduate School of this university. Course sequences begin each autumn quarter, and new students are admitted at that time.

#### **Financial Aid**

The School of Marine Affairs has a limited number of positions for graduate student appointments as research assistants. Applicants in need of support are urged to investigate outside sources of funding.

#### **Correspondence and Information**

Graduate Program Coordinator  
School of Marine Affairs, HF-05

## **Faculty**

#### **Director**

Edward L. Miles

#### **Associate Director**

Mac J. Hershman

#### **Professors**

Burke, William T.,\* 1968, (Law),† J.D., 1953, Indiana; J.S.D., 1959, Yale; international law of the sea.

Crutchfield, James A., 1949, (Emeritus),<sup>1</sup> (Economics, Public Affairs),† M.A., 1942, California (Los Angeles); Ph.D., 1954, California (Berkeley); natural resources

economics, policy, and management, especially marine and environmental resources.

Delaney, John R.,\* 1977, ‡(Geological Sciences, Oceanography), M.S., 1967, Virginia; Ph.D., 1977, Arizona; geochemistry and tectonics with special interests in the role of volatiles in submarine basalts.

Francis, Robert C.,\* 1980, ‡(Fisheries, Oceanography, Quantitative Ecology and Resource Management), M.S., 1966, Ph.D., 1970, Washington; ground fish and tuna ecology research and management, population dynamics of salmon.

Hershman, Marc J.,\* 1976, (Law), J.D., 1967, Temple; LL.M., 1970, Miami; law of the coastal zone, socioeconomic aspects of the uses of the coastal zone, port development.

Miles, Edward L.,\* 1974, (Public Affairs),† Ph.D., 1965, Denver; international law and organization, science and international relations, marine policy and ocean management.

Miller, Marc L.,\* 1979, (Anthropology, Fisheries), M.A., 1972, California (San Diego); Ph.D., 1974, California (Irvine); maritime anthropology, cognitive anthropology and social/cultural change.

Olson, David J.,\* 1979, M.A., 1966, Ph.D., 1971, Wisconsin; urban governance, public port management and development.

Vesper, Karl H.,\* 1969, (Management and Organization, Mechanical Engineering),† M.B.A., 1960, Harvard; M.S., 1966, Ph.D., 1969, Stanford; entrepreneurship, technological innovation, interdisciplinary management, marine systems design.

Wooster, Warren S.,\* 1976, (Emeritus), (Fisheries),† (Environmental Studies), M.S., 1947, California Institute of Technology; Ph.D., 1953, California (San Diego); ocean circulation, effects on fish stocks, ocean affairs.

#### **Associate Professors**

Duxbury, Alyn C.,\* 1964, (Oceanography),† M.S., 1956, Washington; Ph.D., 1963, Texas A&M; descriptive physical oceanography with emphasis on coastal and estuarine processes and education.

Fluharty, David L.,\* 1976, (Research), M.A., 1972, Washington; Ph.D., 1976, Michigan; natural resource policy and management.

Huppert, Daniel D.,\* 1989, (Economics), M.A., 1972, Ph.D., 1975, Washington; economics of fisheries management, natural resource economics.

Kaczynski, Włodzimierz M.,\* 1977, (International Studies), M.A., 1965, Ph.D., 1973, Gdansk (Poland); fishery economics, international joint ventures in marine fisheries, international fisheries policy and management.

Leschine, Thomas M.,\* 1983, M.A., 1970, Ph.D., 1975, Pittsburgh; marine pollution management, ocean policy studies.

#### **Assistant Professors**

Bodansky, Daniel, 1989, ‡(Law), M. Phil., 1981, Cambridge; J.D., 1984, Yale; international and environmental law, marine policy.

Olson, Annette, 1992, M.S., 1985, Washington; Ph.D., 1992, Oregon State; population and community ecology, environmental policy.

## **Course Descriptions**

**SMA 455 Marine Resource Policy of Russia and Eastern Europe (3) A Kaczynski** Criteria applied by post-communist Russia, East Europe in developing ocean resource use, management conservation of marine environment, international relations strategies. Problems, choices influencing ocean policy; present challenges, conflicting priorities including, decentralization, privatization, reshaped relations with Third World. Joint with SISRE 455. Prerequisite: knowledge of Soviet system or permission of instructor.

**SMA 499 Undergraduate Research (1-3, max. 6) AWSpS** Research on assigned topics under the supervision of faculty members. Prerequisite: permission of instructor.

**SMA 500 Marine Affairs (5) A Miller** Surveys a wide range of academic disciplines and substantive problems pertinent to interaction of human beings and the world's oceans and coasts. Management of living/non-living resources, shipping, scientific research, pollution, recreation, and others. Lecture and discussion by invited specialists.

**SMA 506 International Law of the Sea (4) A Burke** Ways nations claim authority to regulate activities at sea. Fundamental policies and decisions regarding navigation for commercial and military purposes, fisheries, exploitation and conservation, continental shelf resources, scientific research, protection of environment, deep-sea mining, and other uses of the ocean. Joint with LAW B 561.

**SMA 507 International Organizations and Ocean Management (3) W Miles** Survey of the manner in which international organizations attempt to manage and regulate the uses of the ocean. Primary emphasis is on the analysis of processes that support or constrain these organizations and on the search for alternative policies and organizations. Joint with PB AF 507. Prerequisite: 500 or permission of instructor.

**SMA 508 National Marine Policy Processes (3) Sp Miles** Institutional dimensions of marine policy processes. Marine policy context at the national level and the dynamics that drive policy formulation and policy implementation. Prerequisite: 507 or permission of instructor.

**SMA 509 Principles of Coastal Zone Management (3) W Hershman** Multiple uses of coastal waters and the adjacent land; conflicts arising from competition for space and resources; legal and organizational problems associated with overlapping jurisdiction; legal basis for management; planning and management experience in the United States and abroad. Joint with LAW B 566. Prerequisite: 500 or permission of instructor.

**SMA 511 Coastal Environment Management (3) Sp Duxbury** Coastal zone planners and managers evaluate proposed and ongoing use activities that affect wetland, estuarine, and nearshore environments. Concepts and techniques for retrieving, analyzing, and using technical environmental information in planning and decision making. Washington State case examples and practical exercises. Prerequisite: OCEAN 580 or permission of instructor.

**SMA 514 Marine Pollution Management Issues (3) A Leschine** Management aspects of marine pollution, emphasizing two-way interaction between environmental managers and environmental and policy scientists which ideally shapes policy. Recommended: familiarity with marine science or ocean policy or pollution control policy.

**SMA 515 United States Law and the Marine Environment (3) Sp Hershman** Federal/state boundary problems, living resources management, offshore oil and gas production, vessel and tanker safety. Joint with LAW B 565.

**SMA 516 Seaport Management (3) Sp Hershman** Role of port authorities in management of marine uses: cargo and trade, economic development, tourism and recreation, and fisheries. Management functions of planning, marketing, finance, engineering. Examples and guest speakers from the Port of Seattle and other Puget Sound ports. Prerequisite: 500 or permission of instructor.

**SMA 517 Marine Uses: Transportation and Commerce (3) W** Role of the oceans in the transportation of men and materials, character and trends in vessel design and terminal facilities, pattern and nature of industry organization, regulations, economics of the shipping industry, management of fleets and vessels, manpower at sea and ashore, national policies affect-

ing the merchant marine and port facilities. Prerequisite: 500 or permission of instructor.

**SMA 518 Port and Marine Transportation Systems (3) W** Activities associated with the water-borne movement of cargo. Types of cargo handling methodologies used in ocean transport, ship types involved in these cargo-handling methods, and seaport terminal facilities that are utilized by each cargo handling method. Prerequisite: permission of instructor.

**SMA 519 Quantitative Methods In Policy Analysis (3) W Leschine** Goal is to develop appreciation for and basic working knowledge of modeling and quantitative evaluation techniques commonly used in policy sciences; to develop techniques in quasi-realistic settings and to provide through supplemental readings applications to real world policy problems. Working skills in algebra desirable.

**SMA 537 Economic Aspects of Marine Policy I (3) W** Development of pertinent economic concepts and their application to selected topics in marine policy decision making. Joint with ECON 537. Prerequisite: 500 or permission of instructor.

**SMA 538 Economic Aspects of Marine Policy II (3) Sp Huppert** Development of pertinent economic concepts and their application to selected topics in marine policy. Joint with ECON 538. Prerequisite: 508 or permission of instructor.

**SMA 540 Economics of World Fisheries (3) A Kaczynski** Economic view of contemporary world problems in use, conservation, and management of marine living resources. Special focus on North-South relations, sustainable development strategies, and basic needs of Third World. How to approach and analyze international fisheries issues in student's own research. Prerequisite: 500 or permission of instructor.

**SMA 550 Special Topics in Marine Studies (1-3, max. 18) AWSp** Examination of various aspects of marine studies. Content varies, depending upon the interests of the faculty and students. Intended for the joint participation by the faculty and advanced students in the investigation of selected topics. One or more groups are organized each quarter.

**SMA 555 Russian Ocean Policy (3) W Kaczynski** Russian ocean policy following Perestroika and disintegration of Soviet empire. Discusses Russian navy, fishery industry, merchant marine, ocean research fleet in light of international agreements and joint ventures and new politic, economic, and social environments. Joint with SISRE 555. Prerequisite: knowledge of Soviet/Russian socio-economic problems or permission of instructor.

**SMA 560 Methods Seminar (2) Sp** Preparation for thesis work. Draws on the philosophy of science from the natural, social, and policy sciences to examine such topics as research design, data collection, analysis, write-up, and abstract/applied research.

**SMA 580 Introduction to the Management of Fisheries (3) Sp Miller** Introduction to fisheries and the multidisciplinary aspects of their management. Emphasis is on integration of biological, socio-economic, and institutional aspects of fisheries management. Joint with FISH 580.

**SMA 581 Fishery Management: Case Studies (5) A Huppert** Examination of historical case studies chosen to illustrate specific fishery management problem areas. Faculty presentations occupy first half of quarter, student presentations the second half. Joint with FISH 581. Prerequisite: 580.

**SMA 582 Fishery Management: Contemporary Issues (5) W Huppert** Focuses on multi-disciplinary, in-depth analysis of specific problems, including biological and economic assessments, evaluation of alternative management systems, and formulation of specific research, data collection, and management recommendations. Joint with FISH 582. Prerequisite: 581.

**SMA 600 Independent Study or Research (\*) AWSpS**

**SMA 700 Master's Thesis (\*) AWSpS**

## Oceanography

### 108 Oceanography Teaching

The School of Oceanography, which had its beginnings in 1930, offers courses and conducts basic research in oceanography, the science that examines physical, geological, chemical, and biological processes in the ocean and interactions of the ocean with the earth, the biosphere, and the atmosphere. Education and research in the school include studies of seawater in motion; life in the sea; chemical composition and properties of seawater; interactions between the sea and the atmosphere, the sea and the land, sediments and rocks beneath the sea; and the geophysics of the ocean floor. Because the science of oceanography is interdisciplinary in nature, joint programs are maintained in the areas of geochemistry and biochemistry, geophysics, atmospheric sciences, marine biology and botany, and geophysical fluid dynamics, with the departments of Botany, Zoology, Atmospheric Sciences, Applied Mathematics, Geophysics, and Geological Sciences, and with the other units in the College of Ocean and Fishery Sciences.

### Courses

A full spectrum of basic and advanced courses is offered in each of the areas of specialization in oceanography: biological oceanography, chemical oceanography, marine geology and geophysics, and physical oceanography. Among the wide variety of courses open to students are the following: zooplankton ecology, marine microbiology, advanced problems in chemical oceanography, ocean and climate variation, sedimentary dynamics and history of the ocean, marine science of coastal zone management, and human impacts on the ocean.

Summer quarter instruction is offered both on the main campus and at the Friday Harbor Laboratories on San Juan Island.

### Advising

The student services office is staffed by an academic counselor, who assists students with curriculum, scheduling, and career counseling. All students also consult with a faculty adviser.

### Research

Each year the school participates in a broad range of oceanographic investigations, ranging from individual research projects to multidisciplinary or multiuniversity projects. Major biological programs are carried out in Puget Sound, in the waters of the continental shelf off Washington and California, and in the North Pacific Ocean. These projects include investigations of the processes governing the communities or organisms in the water column, on the seabed, and in the surf zone. Chemical oceanography includes work on the distribution of organic material and trace metals in Puget Sound and the open sea, the geochemistry of the sediment-water interface, and study of chemical processes in waters trapped in the sediments. Geological investigations include theoretical studies and field experiments on sediment motion and sedimentary processes. This work has ranged from the deep waters of the Scotian Rise in the Atlantic Ocean to Prudhoe Bay to the Barents Sea, where a cooperative program with Norwegian scientists is under way.

The effect of organisms on sediment transport is a major new interdisciplinary program among geological, biological, and physical oceanographers. Geophysical research is concerned with the oceanic crust and upper mantle. Topics include seismic experiments on plate boundaries, crustal formation processes in the Juan de Fuca-Gorda Ridge System, and studies of the

earth's magnetic field. Physical oceanographic programs range from large-scale circulation studies of the North Pacific, the North Atlantic, the tropical oceans, and the antarctic circumpolar current to coastal circulation studies and small-scale mixing programs. The theoretical and experimental programs include studies of air-sea interaction, surface and internal waves, oceanic fronts, and sea ice.

The school is particularly strong in arctic research, which includes both physical oceanographic studies and multidisciplinary ecosystem studies of the processes and resources in the Bering Sea. Studies in local waters include sediment transport and mixing processes in fjords and inlets and the chemistry of Lake Washington.

### Facilities and Vessels

Housed in four large and several smaller buildings on campus by Portage Bay, the school is equipped with extensive laboratories and teaching facilities, including controlled-environment rooms, a paleomagnetism laboratory, and a sea-ice laboratory. The school operates its own midscale interactive computer and highly specialized laboratory instruments, such as mass spectrometers, scanning electron microscopes, and seawater sediment transport flumes. Access to other more sophisticated facilities and instruments, as well as super computers, is available on campus. Docks provide mooring for the school's two research vessels. Deep-ocean research programs are accommodated on the newly constructed 274-foot *R/V Thomas G. Thompson*. Graduate students are involved in all of the cruises, most often for their thesis research. The sixty-five-foot *R/V Clifford A. Barnes* undertakes short cruises into Lake Washington and Puget Sound for the instructional and research programs.

Friday Harbor Laboratories on San Juan Island offer unique opportunities for research and study. Specialized courses in new areas of oceanography are offered each summer. The facilities are utilized by faculty members and students throughout the year for oceanographic research.

### Funding

The school is supported primarily by funds from the state of Washington and federal agencies. Major sources of federal funding include the National Science Foundation, National Oceanic and Atmospheric Administration, Office of Naval Research, and Department of Energy. Funds are also provided by various state and local government agencies and private organizations.

## Undergraduate Program

### Degrees

Students may earn a Bachelor of Science or a Bachelor of Arts degree, with specialization in biological, chemical, or physical oceanography, or marine geology and geophysics.

### Careers In Oceanography

Oceanographers are employed predominantly in research, both pure and applied. They seek to produce a new understanding of an ocean system and to explore the potential consequences to the marine environment of human activities. They collect samples and data, analyze and interpret them, and prepare and disseminate the results. Oceanographers work at sea, on land, and in laboratories, often with computers.

In addition to the knowledge acquired through research, a degree in oceanography can serve as a background for a career in teaching, administration, marine affairs, environmental studies, production, inspection, computing, instrumentation development, and statistical analysis.

Most oceanographers are employed in educational and research institutions. Many others work for federal government agencies, such as the National Oceanic

and Atmospheric Administration, U.S. Geological Survey, Office of Naval Research, U.S. Department of Interior, U.S. Coast Guard, Naval Oceanographic Research and Development Activity, and National Marine Fisheries Service. Other employers include state and local governments in coastal areas and independent consulting firms that conduct research for companies and government agencies. Additional private-sector positions are available in research and development for companies extracting and harvesting products from the oceans.

An oceanographer's duties are diverse, dictated by the nature of the profession. Research projects are as varied as an oceanographer's responsibilities. The field is open to both women and men. Graduates from the oceanography program are prepared to enter the profession or to pursue graduate studies.

### High School Preparation

A high school student considering oceanography as a career should be guided by an interest in natural sciences and a good record in high school science courses, and particularly mathematics. A student should plan to meet or exceed the general University entrance requirements. One year each of biology, chemistry, and physics is recommended.

### Admission

The School of Oceanography has no admission requirement. Students may enter the program upon acceptance for admission to the University.

### Bachelor of Science Degree

Students may specialize in biological, chemical, or physical oceanography, or marine geology and geophysics.

**Major Requirements:** (1) MATH 124, 125, 126; CHEM 140, 141, 150, 151; PHYS 121, 122, 123; GEOL 205; and BIOL 101-102 or 201, 202, 203; (2) OCEAN 200, W201, 202, 401, 402, 421, 433, 450, W460, W485; (3) 20 credits of upper-division science, mathematics, or engineering to be selected in the student's area of specialization in consultation with a faculty adviser; (4) 20 credits of humanities and 20 credits of social science selected from the College of Arts and Sciences distribution lists; and (5) 5 credits of English composition. University-approved W courses (writing) are included within the curriculum.

### Bachelor of Arts Degree

**Major Requirements:** Same as for Bachelor of Science degree, except only 10 credits of upper-division science, mathematics, or engineering courses are required.

### Student Oceanographic Society

The Student Oceanographic Society is an undergraduate organization for students majoring in oceanography. The society coordinates tours of the facilities and elects the undergraduate representatives to the school's student council. The club also provides the students with an informal environment for meeting with the faculty and other students who share an interest in the marine sciences.

## Graduate Program

Arthur R. M. Nowell, Director and Graduate Program Coordinator

The School of Oceanography provides excellent instruction and research opportunities at the graduate level in all areas of oceanography: biological oceanography, chemical oceanography, marine geology and geophysics, and physical oceanography. The program of study emphasizes independent research in conjunction with basic and specialized courses. Interdisciplinary research is encouraged, and students enjoy the opportunity to work across the usual scientific boundaries. Course work during the first two years is

required in each option; specialized course work is structured to fit the student's background and objectives. Foreign-language proficiency is required only when deemed crucial to scholarly research.

### Admission

Students enter the school from varied undergraduate disciplines at many universities. All have in common a strong background in the sciences and mathematics; most have never taken courses in oceanography. Evaluation of candidates is based on Graduate Record Examination scores, the undergraduate transcript (scholarship and depth), three letters of recommendation, and the applicant's statement of objectives and interests. Admission can be accommodated at the beginning of any academic quarter, although autumn entry is most common.

### Master of Science Degree

The program of study includes course work in the student's area of interest and the other oceanography options, a comprehensive examination, and the completion of an approved research project and oral presentation of the results. Thesis and nonthesis programs are offered; most students select the nonthesis option.

### Doctor of Philosophy Degree

The degree program places a strong emphasis on research following completion of course requirements and General Examination. Upon successful completion of the General Examination, the student undertakes an original research investigation, which is described in the dissertation and defended during the Final Examination.

### Financial Aid

Normally all students pursuing a graduate degree are supported by research or teaching assistantships, or by fellowships and scholarships from national or private sources. Most appointments continue through the summer when students are engaged in research.

## Faculty

### Director

Arthur R. M. Nowell

### Professors

Aagaard, Knut,\* 1968, (Affiliate), M.S., 1964, Ph.D., 1966, Washington; physical oceanography, ocean circulation, arctic oceanography.

Ahmed, Saiyed I.,\* 1973, Ph.D., 1963, J.W. Goethe (Frankfurt); marine phytoplankton, ecology and nitrogen assimilation, biofouling, anoxic marine environments.

Anderson, George C.,\* 1958, (Emeritus), M.A., 1949, British Columbia; Ph.D., 1954, Washington; plankton ecology, biological oceanography.

Banase, Karl,\* 1960, Ph.D., 1955, Kiel (Germany); biological oceanography, plankton production and methodology, polychaete systematics.

Barnes, Clifford A.,\* 1947, (Emeritus), Ph.D., 1936, Washington; physical oceanography, water properties, circulation.

Cannon, Glenn A.,\* 1969, (Affiliate), M.A., 1965, Ph.D., 1969, Johns Hopkins; physical oceanography of coastal waters and deep-sea hydrothermal venting.

Carpenter, Roy,\* 1968, Ph.D., 1968, California (San Diego); marine geochemistry of metals and hydrocarbons in coastal zones.

Cattolico, Rose Ann,\* 1975, (Botany), Ph.D., 1973, McGill; structure, expression, and evolution of specific

chloroplast genes, light regulated expression of genes important to photosynthesis and Calvin cycle function.

Coachman, Lawrence K.,\* 1962, M.F., 1951, Yale; Ph.D., 1962, Washington; physical oceanography, water properties circulation, arctic oceanography.

Creager, Joe S.,\* 1958, (Emeritus), (Geological Sciences),† M.S., 1953, Ph.D., 1958, Texas A&M; geological oceanography, sea-level changes, recent marine sediments, shallow-water sediment transportation.

Criminale, William O., Jr.,\* 1968, (Applied Mathematics, Geophysics),† Ph.D., 1960, Johns Hopkins; applied mathematics, geophysical fluid mechanics, air-sea interactions.

Delaney, John R.,\* 1977, (Geological Sciences, Marine Affairs), M.S., 1967, Virginia; Ph.D., 1977, Arizona; geological oceanography, igneous petrology, properties and origin of the oceanic crust and upper mantle.

Devol, Allan H.,\* 1974, Ph.D., 1975, Washington; marine and freshwater biogeochemistry, sediment diagenesis, oceanography of anoxic systems, carbon fluxes.

Emerson, Steven R.,\* (Quaternary Research Center), 1976, M.Phil., 1973, Ph.D., 1974, Columbia; marine geochemistry/chemical oceanography, sediment diagenesis.

Eriksen, Charles C.,\* 1986, Ph.D., 1977, Massachusetts Institute of Technology/Woods Hole Oceanographic Institution; physical oceanography: upper-ocean dynamics, internal gravity waves, mixing processes, equatorial dynamics.

Ewart, Terry E.,\* 1970, Ph.D., 1965, Washington; physics, ocean microstructure, diffusion, acoustic transmission.

Francis, Robert C.,\* 1980, (Fisheries, Marine Affairs, Quantitative Ecology and Resource Management), M.S., 1966, Ph.D., 1970, Washington; ground fish and tuna ecology research and management, population dynamics of salmon.

Frost, Bruce W.,\* 1969, Ph.D., 1969, California (San Diego); biological oceanography, marine zoogeography, plankton ecology and systematics.

Gammon, Richard H.,\* 1989, (Chemistry),† Ph.D., 1970, Harvard; chemical oceanography, geochemistry related to the global carbon cycle and climatic change, organic chemistry of interstellar space.

Gregg, Michael C.,\* 1974, (Geophysics), Ph.D., 1971, California (San Diego); physical oceanography, ocean microstructure.

Heath, G. Ross,\* 1984, Ph.D., 1968, California (San Diego); geochemistry of sediments.

Hedges, John I.,\* 1976, Ph.D., 1975, Texas (Austin); organic geochemistry, sources, transport, fate of organic material in coastal zones.

Henry, Dora P., 1960, (Emeritus), M.A., 1926, Ph.D., 1931, California (Berkeley); systematics and ecology of barnacles.

Hickey, Barbara M.,\* 1973, M.S., 1968, Ph.D., 1975, California (San Diego); physical oceanography, dynamics of equatorial and shelf circulation.

Holloway, Gregory,\* 1978, (Research), M.S., 1968, Ph.D., 1976, California (San Diego); physical oceanography, turbulence theory, geophysical fluid dynamics.

Johnson, H. Paul,\* 1976, M.S., 1966, Southern Illinois; Ph.D., 1972, Washington; paleomagnetism and marine geophysics.

Jumars, Peter A.,\* 1975, Ph.D., 1974, California (San Diego); biological oceanography, benthos, biological sedimentary dynamics and spatial statistics.

Lewin, Joyce C., 1965, (Emeritus), (Research), M.S., 1950, Ph.D., 1953, Yale; biological oceanography, dynamics of surf diatom blooms, physiology and systematics of diatoms, North Pacific nanoplankton.

Lewis, Brian T. R.,\* 1970, (Geophysics),† Ph.D., 1970, Wisconsin; marine geophysics, marine seismology,

gravity, magnetism, and computer modeling of those processes.

Lister, Clive R. B.,\* 1965, (Emeritus), Ph.D., 1963, Sc.D., 1984, Cambridge (England); marine geophysics, cooling processes in the outer layers of the earth, geodynamics.

Martin, Seelye,\* 1968, Ph.D., 1967, Johns Hopkins; geophysical fluid dynamics, properties of sea ice.

McManus, Dean A.,\* 1959, M.S., 1956, Ph.D., 1959, Kansas; geological oceanography, continental shelf sediments.

Merrill, Ronald T.,\* 1967, ‡(Geological Sciences, Geophysics), M.S., 1961, Michigan; Ph.D., 1967, California (Berkeley); geomagnetism and paleomagnetism.

Murray, James W.,\* 1973, (Environmental Studies), Ph.D., 1973, Massachusetts Institute of Technology/Woods Hole Oceanographic Institution; marine geochemistry, aquatic chemistry.

Nowell, Arthur R. M.,\* 1978, M.A., 1971, Ph.D., 1975, British Columbia; physical oceanography, turbulent boundary layer dynamics, sediment transport.

Rattray, Maurice, Jr.,\* 1950, (Emeritus), M.S., 1947, Ph.D., 1951, California Institute of Technology; physical oceanography, hydrodynamics, estuarine circulation, internal waves, ocean circulation modeling.

Rhines, Peter B.,\* 1984, (Atmospheric Sciences), ‡ Sc.M., 1964, Massachusetts Institute of Technology; Ph.D., 1967, Cambridge (England); theoretical physical oceanography, fluid dynamics, global ocean circulation, climate dynamics, wave propagation.

Richey, Jeffrey E.,\* 1973, (Quaternary Research Center), M.S.P.H., 1970, North Carolina; Ph.D., 1973, California (Davis); aquatic chemistry, aquatic biogeochemistry and systems analysis, primary Amazon River, limnology.

Roden, Gunnar I., 1966, (Research), M.S., 1956, California (San Diego); physical oceanography, ocean fronts, mesoscale ocean circulation and structure, climate variability, effects of seamounts on ocean currents.

Sanford, Thomas B.,\* 1979, Ph.D., 1967, Massachusetts Institute of Technology; physical oceanography, dynamics of ocean currents, motional induction, instrumentation.

Sarachik, Edward S.,\* 1984, (Research), ‡(Atmospheric Sciences), M.S., 1963, Ph.D., 1965, Brandeis; ocean-atmosphere interaction, equatorial oceanography.

Spindel, Robert C., 1986, ‡(Electrical Engineering), Ph.D., 1971, Yale; underwater acoustics; application of tomographic methods to large scale ocean measurement.

Sternberg, Richard W.,\* 1965, (Environmental Studies), M.Sc., 1961, Ph.D., 1965, Washington; geological oceanography, marine sedimentation processes.

Stuiver, Minze,\* 1969, ‡(Geological Sciences, Quaternary Research Center), M.S., 1953, Ph.D., 1958, Groningen (Netherlands); chemical oceanography, limnology, isotope geology, geochronometry.

Taft, Bruce A.,\* 1973, (Affiliate), M.S., 1961, Ph.D., 1965, California (San Diego); physical oceanography and ocean circulation.

Welander, Pierre L. R.,\* 1973, (Emeritus), M.S., 1950, Ph.D., 1954, Stockholm (Sweden); theory of general ocean circulation, large-scale atmosphere-ocean interaction.

#### Associate Professors

Baross, John A.,\* 1984, M.A., 1966, San Francisco State; Ph.D., 1973, Washington; microbial oceanography, bacterial ecology.

D'Asaro, Eric,\* 1980, (Applied Physics Lab), M.S., 1976, Harvard; Ph.D., 1980, Massachusetts Institute of Technology; upper-ocean dynamics, oceanic internal waves, bottom boundary-layer processes, oceanic turbulence and mixing processes.

Deming, Jody W.,\* 1988, Ph.D., 1981, Maryland; marine microbiology.

Duxbury, Alyn C.,\* 1964, (Marine Affairs), ‡ M.S., 1956, Washington; Ph.D., 1963, Texas A&M; descriptive physical oceanography, mechanics of estuarine and coastal circulation.

McDuff, Russell E.,\* 1981, Ph.D., 1978, California (San Diego); marine geochemistry.

Perry, Mary Jane,\* 1976, Ph.D., 1974, California (San Diego); biological oceanography, phytoplankton physiology, nutrient cycling.

Quay, Paul D.,\* 1981, (Quaternary Research Center), ‡ M.Phil., 1975, Ph.D., 1977, Columbia; chemical oceanography, stable isotope geochemistry, ocean tracers and mixing rates.

Riser, Stephen C.,\* 1981, S.M., 1974, Massachusetts Institute of Technology; Ph.D., 1981, Rhode Island; physical oceanography, large- and mesoscale mixing in the ocean, water masses and tracer fields in the ocean, physics of mesoscale eddies, numerical models of ocean circulation.

Rothrock, David A.,\* 1988, Ph.D., 1968, Cambridge; physical oceanography, sea ice remote sensing and modeling ice processes, polar oceanography, geophysics of polar regions.

#### Assistant Professors

Goldfarb, Marjorie S., 1986, (Research), Ph.D., 1984, Stanford; geological oceanography, description and analysis of submarine hydrothermal deposits, interactions of geological and biological processes.

Howe, Bruce M., 1988, (Research), Ph.D., 1986, California (San Diego); physical oceanography, ocean acoustic tomography.

Kawase, Mitsuhiro,\* 1988, Ph.D., 1986, Princeton; physical oceanography, geophysical fluid dynamics.

Kunze, Eric,\* 1987, (Research), Ph.D., 1985, Washington; physical oceanography: mesoscale and small-scale mixing processes.

Lessard, Evelyn J.,\* 1989, (Research), Ph.D., 1984, Rhode Island; biological oceanography, trophic roles of microzooplankton and the interaction of biological and physical processes at oceanic fronts.

Lilley, Marvin D.,\* 1986, (Research), M.S., 1970, Arkansas; Ph.D., 1983, Oregon State; chemical oceanography.

Rudnick, Daniel L.,\* 1989, Ph.D., 1987, California (San Diego); physical processes in the upper ocean, wind-force currents and mixing, oceanic fronts and their relation to atmospheric forcing and coastal boundaries.

Schultz, Adam, 1985,\* (Research), (Geophysics), Ph.D., 1985, Washington; electrical conductivity studies in marine environment, ocean bottom magnetic observatories and magnetotelluric stations, mini- and microcomputer systems.

Sempere, Jean-Christophe,\* 1987, Ph.D., 1986, California (Santa Barbara); marine geophysics.

Shen, Glen T.,\* 1989, (Quaternary Research Center), Ph.D., 1986, Massachusetts Institute of Technology/Woods Hole Oceanographic Institution; chemical oceanography, trace metal geochemistry, chemical tracers of atmospheric-ocean processes and paleoceanographic implications.

#### Lecturer

Emerick, Christina M., 1985, Ph.D., 1985, Oregon State; marine geochemistry and tectonics.

## Course Descriptions

### Courses for Undergraduates

**OCEAN 100 Introduction to Careers in the Marine Sciences (1)** Presentations by various faculty and staff members, students and recent graduates offer an introduction to the College of Ocean and Fishery Sciences, curricular options, and professional opportunities in the marine sciences. Joint with FISH 100. Limited to freshmen, sophomores or transfer juniors.

ences, curricular options, and professional opportunities in the marine sciences. Joint with FISH 100. Limited to freshmen, sophomores or transfer juniors.

**OCEAN 101 Survey of Oceanography (5) AWSpS** Origin and extent of the oceans; nature of the sea bottom; causes and effects of currents and tides; animal and plant life in the sea. Intended for nonmajors.

**OCEAN 102 Environmental Oceanography (5) Sp** Designed to study in detail the benefits and the scientific problems created by man's activities impinging on the oceanic environment. Prerequisite: 101 or permission of instructor.

**OCEAN 110, 111, 112 Lectures in Oceanography (1,1,1) A,W,Sp** Selected aspects of oceanography ranging from deep-sea drilling and hydrothermal springs to the ocean's role in climate. Students interested in oceanography can learn more about the field. May be entered any quarter.

**OCEAN 200 Introduction to Oceanography (3) A** Description of the oceans. Emphasis on relations of biology, chemistry, geology, and physics in marine environments. Examination of relationships and interactions at macro-, meso-, and microscales in the ocean. Intended for science majors.

**OCEAN 201 Introduction to Field Oceanography (3) Sp** Methods of oceanographic field study. Instruments and sampling techniques. Writing assignment to teach report-writing skills. Prerequisite: oceanography major or permission of instructor.

**OCEAN 202 Environmental Geography (3) W** Physical properties of ocean basins. Descriptive, regional outline of world's oceans. Water mass, T/S analysis, conservation, water salt and heat budgets, advection and diffusion.

**OCEAN 351, 352 Quantitative Methods I, II (3,3) A,W** Applications of mathematical techniques to problems in the sciences and engineering. 351: ordinary differential equations. 352: approximate methods; Fourier series; partial differential equations; boundary-value problems. Joint with AMATH 351, 352 and MATH 351, 352. Prerequisites: one year of physics and MATH 126 for 351; 351 or MATH 307 for 352.

**OCEAN 401, 402 General Physical Oceanography I, II (3,3) A,W** Physical properties and processes; theories and methods describing ocean currents, waves, and tides. Prerequisites: one year each of chemistry and physics, 202 for 401; 401 for 402.

**OCEAN 421 Chemical Oceanography (4) Sp** Physical and chemical properties of seawater and marine products; processes determining the chemical makeup of the oceans. Prerequisites: CHEM 140, 150.

**OCEAN 433 General Biological Oceanography (4) W** Marine organisms, their quantitative distribution in time and space and their interactions with the ocean. Prerequisites: 401 and BIOL 101-102 or BIOL 201, 202, 203.

**OCEAN 440 Instrumentation in Oceanography (3-6)** Introduction to the general principles of instrument design, including discussions of sensors, signal processing, telemetry, and recording from the point of view of the experimental scientist. Laboratory work, for variable credit, is offered in the form of projects, preferably practical ones resulting in the completion of a small hardware device.

**OCEAN 450 Marine Geology and Geophysics (4) A** Sedimentological and petrologic processes that determine the geologic record. Prerequisite: GEOL 205.

**OCEAN 451 Marine Geochemistry (3)** Study of chemical aspects of more abundant minerals in marine sediments, origin or mode of formation, isotopic and chemical composition, rate of deposition, distribution and relative importance in major sedimentary cycle, influence on chemical composition of seawater. Prerequisite: one year of general chemistry.

**OCEAN 452 Principles of Sediment Transport by Turbulent Flow (3) Sp** Theoretical and experimental techniques used in studying erosion, transportation, and deposition of sediment. Initial motion of sediments, bed-load motion, suspension of sediment by turbulent flows, erosion and deposition of sediments, and applications of sediment transport theory to problems of geological interest. Joint with GEOL 452 and GPHYS 452. Prerequisite: GEOL 455 or GPHYS 455.

**OCEAN 460 Oceanic Data Interpretation (5) Sp** Collection and analysis of marine data. Laboratory analysis of samples, data handling, and modeling of marine problems. Prerequisites: 402, 421, 433.

**OCEAN 485 Topics in Oceanography (1-4, max. 5) Sp** Specialized topics in oceanography. Various techniques in solving oceanographic problems. For students with senior standing. Prerequisite: permission of instructor.

**OCEAN 499 Undergraduate Research (1-12, max. 24) AWSps** Research on assigned topics that may involve laboratory work, fieldwork, or literature surveys. Prerequisite: permission of instructor.

### Courses for Graduates Only

**OCEAN 500 Current Problems in Oceanography (1)** Discussion of research topics that are currently being investigated within the school. Prerequisite: permission of instructor.

**OCEAN 501 Marine Geological Processes (5)** Overview of petrologic and sedimentologic processes that generate, modify, consume oceanic geologic record; plate-margin, midplate basalt genesis; hydrothermal metamorphism of oceanic crust; sediment sources, accumulation, postdepositional modification; passive margin sediment accumulation; trench subduction zones, basalts and andesites of oceanic island arcs; continental accretion. For first-year oceanography students. Prerequisite: permission of instructor.

**OCEAN 502 Physics of Ocean Circulation (5) A** Structure of ocean basins; physical properties of seawater and the equation of state; heat, salt, fresh water budgets; tidal potentials; Coriolis effect and geostrophic balance; major current systems and water masses; mixing, stirring in the ocean; simple waves; modern experimental methods in physical oceanography. Prerequisite: permission of instructor.

**OCEAN 503 Ocean Circulation: Observations (3)** Modern large- and mesoscale ocean observations, interpreted in terms of contemporary circulation theories. Spectrum of temporal variability; eddies and eddy fluxes; ventilation; advection and diffusion in the abyss; transports of heat and salt; climatic scale of variability; modern methods for determining circulation. Prerequisite: 502 or permission of instructor.

**OCEAN 504 Physical Fluid Dynamics (3) A** Fundamentals of fluid mechanics as a basis for understanding problems in geophysical fluid dynamics. Cartesian tensors, derivation of the Navier-Stokes equation, Bernoulli's equation and potential flow, dimensional analyses, introduction to mathematical approximation techniques, flows with rotation, effects of density stratification. For physical oceanography graduate students. Prerequisite: permission of instructor.

**OCEAN 506 Physics of Marine Geologic Processes (5)** Thermomechanics of hot material upwelling at spreading centers and formation of characteristic physical structures; lithosphere thickening with age and related geophysical observables; mechanics of subduction zones; fate of sinking slabs and deep-mantle recycling; geometry of plate tectonics on a sphere; causes of vertical motions at the earth's surface. Joint with GPHYS 506. Prerequisite: permission of instructor.

**OCEAN 509 Geophysical Fluid Dynamics I (3) W** Large-scale dynamics of rotating stratified fluids, introductory fluid mechanics. Observed properties of oceanic, atmospheric circulation. Development of geostrophic flow, thermal-wind balance, velocity spirals.

Potential vorticity, instability of large-scale flows, Ekman layers. Gravity, inertia, Rossby waves; ray theory, equatorial waveguide. Action, energy principles. Joint with ATM S 509.

**OCEAN 510 Geophysical Fluid Dynamics II (3) Sp** Theories, models of large-scale dynamics of oceans, atmospheres. Potential vorticity, Q principles; Rossby waves, ray tracing; Green's function, setup of general circulation; atmospheric "channels" versus ocean "basins"; wave-mean flow interaction, mountain drag, internal momentum flux; "Lagrangian" motion of particles, tracers; cascades, eddy flux of heat, moisture, Q. Prerequisite: 509.

**OCEAN 511 Methods and Measurements in Physical Oceanography (2)** Principal instruments and experimental methods of physical oceanography. Devices and systems that measure pressure, temperature, electrical conductivity, sea state, and velocity. Prerequisite: permission of instructor.

**OCEAN 513 Marine Hydrodynamics (4)** Methods for solving problems in physical oceanography. Prerequisite: major standing in a physical science.

**OCEAN 514 Seminar in Physical Oceanography (1, max. 9)** Discussion of selected problems of current interest in physical oceanography. Prerequisites: 402 or 502, and permission of instructor.

**OCEAN 515 Waves (3)** Application of marine hydrodynamics principles to wave motion in oceans.

**OCEAN 516 Ocean Circulation: Theories (3)** Hydrodynamic theories concerning origin and characteristics of major ocean currents. Prerequisite: permission of instructor.

**OCEAN 517 Oceanography of Inshore Waters (5)** Theories and techniques of investigation and interpretation of conditions existing in inshore waters with particular reference to mixing and flushing and to areas adjacent to the state of Washington; use of dynamic models. Prerequisite: permission of instructor.

**OCEAN 518 Seminar on Dynamical Oceanography (1, max. 9)** Selected problems of current importance concerning the dynamics of the ocean. Concentrates on those topics of importance that are considered fundamental and central to most of the areas of applications.

**OCEAN 519 Oceans and Climate Variation (3)** Interchange of heat, water, and energy; study of budgets and of mechanisms of exchange. Prerequisite: ATM S 462.

**OCEAN 520 Seminar (1) AWSp** Introduction to current research topics for beginning graduate students.

**OCEAN 521 Seminar on Chemical Oceanography (\*, max. 9)** Lectures, discussions, and readings on selected problems of current interest. Prerequisite: permission of instructor.

**OCEAN 522 Radiochemical Tracers and Ocean Mixing (3)** Distribution of natural and bomb-produced radioactive tracers in the ocean. Application of models used to derive information concerning time scales of (1) gas transfer at the water atmosphere interface; (2) whole ocean, thermocline, and deep-ocean water circulation; and (3) particulate settling in the marine environment. Knowledge of elementary differential equations suggested. Prerequisite: permission of instructor.

**OCEAN 523 Stable Isotope Applications in Oceanography (3)** The use of stable isotopes as a means of studying biogeochemical cycles in the ocean, specifically carbon nitrogen, and sulfur cycles. Isotopic effects during photosynthesis, respiration, organic matter degradation,  $\text{CaCO}_3$  dissolution, methanogenesis, nitrification/denitrification, and sulfate reduction. Prerequisite: permission of instructor.

**OCEAN 524 Aquatic Chemistry (3) W** Application of physical chemistry and thermodynamics to processes that control chemical composition of natural waters. Equilibrium approach. Acid/base chemistry,

the carbonate system, dissolution and precipitation, metal ions in solution, oxidation-reduction chemistry, silicate mineral reactions. Prerequisite: 527 or permission of instructor.

**OCEAN 525 Aquatic Kinetics (3)** Reaction rates and mass transport in water. Theories of chemical kinetics; experimental results from:  $\text{CO}_2$  hydrolysis, Fe, Mn and  $\text{H}_2\text{S}$  oxidation, stable isotope fractionation, mineral dissolution; homogeneous, heterogeneous, microbial catalysis; reaction and transport at air-water, sediment-water, and  $\text{O}_2/\text{H}_2\text{S}$  interfaces. Prerequisites: 524 or equivalent, differential equations.

**OCEAN 526 Marine Organic Geochemistry (3)** Sources, reactions, and fates of organic molecules in the marine environment along with the stable isotope geochemistry of marine organic substances. Prerequisites: CHEM 237, 239, or permission of instructor.

**OCEAN 527 Marine Chemistry (5) A** Processes controlling the chemical composition of seawater. Chemical distributions in the ocean, marine physical chemistry, chemical equilibrium, and concepts of mass balance. Mechanisms and models used to explain distributions of stable and radioactive isotopes, gases, trace metals, and biochemicals in the world's oceans.

**OCEAN 528 Paleooceanography (3)** History of environmental changes on earth over the past 100 million years as reconstructed from records in deep-sea sediments, ice sheets, and other ocean/terrestrial substrates. Examination of isotopic, geochemical, micropaleontological, and dating techniques. Role of the ocean in climate change. Prerequisite: permission of instructor.

**OCEAN 529 Biological Oceanography for Physical Scientists (5) W** Principles and practice of biological oceanography for students with strong background in physical sciences but little recent exposure to biology. Ecological principles at individual, population, and community levels; overview of discipline of biological oceanography; case studies of interdisciplinary problems shared with the physical sciences. Prerequisite: permission of instructor.

**OCEAN 530 Biological Oceanography: Bacteria and Protozoa (3) W** Bacteria in the marine environment; fate of organic carbon in the ocean and the interrelationship of the carbon cycle with other biogeochemical cycles. Prerequisite: permission of instructor.

**OCEAN 531 Biological Oceanography: Phytoplankton (3) W** Phytoplankton in the marine environment; ecology, primary productivity, and physiology. Phytoplankton growth and photosynthetic patterns; spatial and temporal distributions of phytoplankton; methods for determining distributions and rates of production and growth. Prerequisite: permission of instructor.

**OCEAN 532 Biological Oceanography: Zooplankton (3) Sp** Distribution and abundance of pelagic animals in space and time; analysis of their interactions. Small-scale distributions and behavior, population dynamics and energetics, trophic structure and dynamics, pelagic community structure, models of populations and food chains, secondary production and biogeography. Prerequisite: permission of instructor.

**OCEAN 533 Biological Oceanography: Benthos (3) Sp** Analysis of marine benthic communities; new research questions and methods: ecologically important physics of benthic boundary layer; theories, mechanics, and observations of deposit feeding; succession as consequence of physical processes and biological interactions. Environments include deep-sea, continental shelves, estuaries and intertidal, focusing on soft substrata. Prerequisite: permission of instructor.

**OCEAN 534 Methods and Measurements in Biological Oceanography (2) W** Methods for bacteria, phytoplankton, and zooplankton population assessment. Rate measurements of phytoplankton, zooplank-

ton, and bacterial production. Benthos measurements, including deep-sea environments. Prerequisite: permission of instructor.

**OCEAN 535 Seminar in Biological Oceanography (\*, max. 9)** Lectures, discussions, and work on selected problems of current interest. Prerequisite: permission of instructor.

**OCEAN 536 Marine Microbial Interactions (3)** Structure, function, and dynamics of natural mixed-species populations of marine bacteria and their interactions with higher organisms; mixed-species culture methods; synecological field methods; species assemblages in specialized environments; mutualisms; sites and patterns of genetic exchange. Prerequisite: 530 or permission of instructor. (Offered alternate years.)

**OCEAN 537 Marine Primary Productivity (3)** Patterns and mechanisms of marine phytoplankton primary production. Small-to-global-scale patterns of production; environmental regulation of production; absorption of electromagnetic radiation; fluorescence; carbon fixation; trophic interactions; remote sensing and other optical methods. Prerequisite: 531 or permission of instructor. (Offered alternate years.)

**OCEAN 538 Zooplankton Ecology (3)** Life history strategies, dynamics and production of populations, vertical migration, interspecific interactions and community structure, models of complex assemblages of zooplankton, sampling methods and analysis, spatial heterogeneity. Prerequisite: 532 or permission of instructor. (Offered alternate years.)

**OCEAN 539 Benthic Biological Processes (3)** Processes characteristic of soft-bottom benthic environments; areas and methods of rapid current progress; open research questions; deposit feeding; passive larval recruitment; physical, chemical, geological, and biological feedbacks in ecological succession; scaling of laboratory systems. Prerequisite: 533 or permission of instructor. (Offered alternate years.)

**OCEAN 540 Seminar in Geostatistics (1-3)** Lectures and discussions on selected problems in the applications of statistics in earth science.

**OCEAN 541 Marine Reflection Seismology (3)** Principles of ocean reflection acoustics; effect of frequency on reflection coefficient and attenuation; bandwidth and resolution; sound sources; hydrophones, acoustic noise, tow noise; multichannel techniques; migration of reflectors; normal move out and wave-equation; physical basis and numerical methods. Prerequisite: permission of instructor.

**OCEAN 543 Petrogenesis and Geochemical Evolution of Marine Igneous Rocks (3)** Petrologic processes involved in generation and metamorphism of igneous rocks in oceanic basins. Emphasizing genesis of special petrotectonic assemblages, including ridge and "hot spot" basalts, oceanic islands, midplate volcanics, igneous sequences associated with oceanic island arcs. Includes geochemical characterization of important rock types. Prerequisites: 501, 506, GEOL 424 and 425 or equivalent, and permission of instructor.

**OCEAN 544 Statistical Models in Oceanography (3)** Multivariate analysis: regression, trend surface analysis, factor analysis, discriminant functions, and stochastic process models in oceanography. Prerequisite: Q SCI 483 or permission of instructor.

**OCEAN 545 Thermomechanics and Mechanisms in Hydrothermal Systems (3)** Thermal balance of hot material injected at a plate divergence; heat transport capability of fluid convection through cracks compared to thermal conduction; theory of hydrothermal penetration into hot rock by thermal contraction cracking; development history of a hydrothermal system; effects of rock/water chemical interaction and mineral deposition; mineral stills. Joint with GPHYS 545. Prerequisite: permission of instructor.

**OCEAN 548 Topics in Physical Oceanography (1-4, max. 9)** Lecture series on topics of major importance in physical oceanography.

**OCEAN 550 Seminar on Geological Oceanography (\*, max. 9)** Lectures, discussions, and field and laboratory work on selected problems of current interest. Prerequisite: permission of instructor.

**OCEAN 554 Techniques for Ocean Floor Research (3)** Planning field programs; selection of equipment and survey procedures; collection, analysis, compilation, and presentation of bathymetric and sediment data; evaluation of techniques and results. Prerequisite: 551, which may be taken concurrently.

**OCEAN 556 Advanced Marine Geology and Geophysics (\*, max. 9) AWSp** Contemporary problems in marine geology; concepts supporting or at variance with accepted hypotheses; discussion of recent advances. Prerequisite: permission of instructor.

**OCEAN 560 Mechanics of Erosion and Sediment Transport (3)** Physics of transportation of sediment by turbulent flows. Use of theoretical fluid mechanics to formulate and solve problems of bed-load and suspended-load transport. Joint with GEOL 560 and GPHYS 560. Prerequisites: 452 and either MATH 329 or GEOL 455 or GPHYS 455.

**OCEAN 561 Seminar in Geological Fluid Mechanics (3) W** Reading and discussion of topics of current interest in geological fluid mechanics. Course work includes a report on a specialized topic. Joint with GEOL 561 and GPHYS 561. Prerequisite: permission of instructor.

**OCEAN 562 Mechanics of Sediment Transporting Flows (3)** Comprehensive investigation of mechanics of turbulent near-bottom flows responsible for erosion and transportation of sediment, and how bed-load and suspended-load transport modify characteristics of these flows. Joint with GEOL 562 and GPHYS 562. Prerequisites: 452 and either MATH 329 or GEOL 455 or GPHYS 455.

**OCEAN 570 Simulation Analysis of Marine Systems (3)** Introduction to the analytical methods of systems ecology. Simulation models are used in comparative analyses of the structure, nutrient and energy flow, and sensitivity of response in representative aquatic

ecosystems. Prerequisites: BIOL 472, FORTRAN, MATH 126, Q SCI 482, or permission of instructor.

**OCEAN 571 Gravity and Geomagnetic Interpretation (3)** Power of the numerical Fourier transform to compute potential fields; gravity and magnetic fields of source bodies of arbitrary shape; inversion of observational data to plausible source models; application of the techniques to a real problem on the computer. Joint with GPHYS 571. Prerequisites: MATH 328, PHYS 323 or equivalents or permission of instructor.

**OCEAN 572 Geodynamics (3)** Driving forces of plate tectonics and other large-scale motions. Critical review of measured data, energy balances, basic properties of low Reynolds number flow. Qualitative physics of processes and order-of-magnitude calculations, rather than complex mathematic theory. Critiques of some hypotheses. Joint with GPHYS 572. (Offered odd-numbered years.)

**OCEAN 573 Terrestrial Magnetism (3)** Advanced aspects of earth magnetism intended for specialists in this field. Extensive discussion of origin theories and their implications; physical basis and theories of magnetism in rocks; paleomagnetic techniques and results. Joint with GPHYS 573. Prerequisite: permission of instructor. (Offered alternate years.)

**OCEAN 580 Marine Science in the Coastal Zone (4) A** Major oceanic and nearshore processes, conditions, and their influence on man's activities in coastal zone. Methods of understanding and accessing the accumulated knowledge on marine processes and its application to decision-making process. Lectures and discussions of biological, chemical, geological, and physical oceanography. Generation and use of data bases as interpretative tools.

**OCEAN 581 Geochemical Modeling (3)** Background to modeling concepts frequently encountered in chemical oceanography: box models, advection-diffusion problems, sediment diagenesis equations, and boundary layer (air-water and sediment-water interface) models. Problems requiring application of the models to chemical distributions in the ocean. Prerequisite: permission of instructor.

**OCEAN 582 River Basin Biogeochemistry (3)** The function of rivers and river basins in transporting materials to the oceans and their importance in biogeochemical cycles. Origin of water and water routing within drainage basins, sources and modification of dissolved and particulate materials in transport, ecological theory, and estuarine mixing zone transformations. Prerequisite: permission of instructor.

**OCEAN 590 Advanced Topics in Biological Oceanography (\*, max. 18)** Specialized research areas. Topic varies each year. Offered at Friday Harbor Laboratories. Prerequisite: permission of director of Friday Harbor Laboratories.

**OCEAN 600 Independent Study or Research (\*, AWSpS)**

**OCEAN 700 Master's Thesis (\*, AWSpS)**

**OCEAN 800 Doctoral Dissertation (\*, AWSpS)**

# School of Pharmacy

## Assistant Dean

Peggy S. Odegard

The School of Pharmacy prepares students for careers in pharmacy in a variety of settings, including community pharmacies, hospitals and other health-care institutions, the pharmaceutical industry, and government agencies. Students are trained in the biological, chemical, physical, and social sciences and in clinical and professional practice. Training programs lead to the Bachelor of Science in Pharmacy degree or to the Doctor of Pharmacy degree. Graduates meet the educational requirement for licensure in all fifty states, because the School of Pharmacy is fully accredited by the American Council on Pharmaceutical Education.

The School of Pharmacy is organized into Departments of Medicinal Chemistry, Pharmaceutics, and Pharmacy Practice. Information about undergraduate programs and advising may be obtained from the Office of Academic and Student Programs, T329 Health Sciences. Clinical clerkship and institutional externship training sites are provided by Children's Hospital and Medical Center, Group Health Cooperative Hospital, Harborview Medical Center, Providence Medical Center, Swedish Medical Center, University of Washington Medical Center, Veterans Administration Medical Center, Virginia Mason Hospital, and other Seattle area hospitals. Students also are assigned to a variety of community practice pharmacy sites for externships.

## Bachelor of Science in Pharmacy Degree

This program complies with educational requirements for licensure to practice pharmacy. Admission to the three-year professional program requires a minimum of 90 credits of prepharmacy training, including sequences in biology, general chemistry, and organic chemistry, as well as courses in calculus, statistics, English composition, and microbiology. Admission is competitive, based on academic achievement, communicative skills, and aptitude for pharmacy. An applicant who is admissible to the University is not assured of admission to the School of Pharmacy. Students are ordinarily admitted to the baccalaureate degree program only at the beginning of autumn quarter; the deadline for submission of applications is March 15. Details on admission requirements, application procedures, and program content can be obtained from the Office of Academic and Student Programs.

The baccalaureate degree program provides basic training on biological, chemical, and physical properties of drugs and on the clinical and administrative aspects of drug utilization. Core courses are required in biochemistry, biopharmaceutics and pharmacokinetics, clinical pharmacy, medication distribution and control, human physiology, immunizing and antibiotic agents, medicinal chemistry, pathology, pharmacology, pharmacy law, physical principles of drug formulation, and social aspects of pharmacy and drug use. In the third year of the professional program, students must complete a clinical clerkship and externships in community and institutional pharmacies. The 238 credits required for graduation include an opportunity for developing areas of individual expertise; at least 32 elective credits must be professional in nature.

# Medicinal Chemistry

## Chairperson

Wendel L. Nelson

## Graduate Program

Wendel L. Nelson, Graduate Program Coordinator

The Department of Medicinal Chemistry offers programs of graduate study leading to the degrees of Master of Science and Doctor of Philosophy. The primary area of research training of the Department of Medicinal Chemistry is in chemical and molecular aspects of drug action and of drug metabolism. Studies in the field include, for example, the relationship between chemical structure and biologic effect, function, and toxicity; delineation of the metabolic spectrum of drugs or foreign substances in man and animals; and the factors (environmental, disease, etc.) that affect this spectrum of metabolites, the study of the nature and catalytic properties of the enzymes responsible for metabolic reactions, and the molecular mechanisms by which such reactions occur.

Graduates from the program must possess the skills necessary to develop quantitative and qualitative methodologies to pursue studies at the whole animal, organ, microsomal, or purified enzyme level; to elucidate and evaluate the chemical transformations that occur in metabolic processes by isolation, purification, spectroscopic investigation, structural determination, and chemical synthesis; and, ultimately, to provide an understanding and rationale at the molecular level for events that occur at the biological level.

When substantive information is available, permission may be granted for the student to bypass the master's degree and proceed directly to the doctoral program. Evidence of reading competence in one foreign language (French, German, Japanese, or Russian) is required of all graduate students, and a student who has not satisfied this requirement prior to admission is expected to do so at the earliest opportunity. Participation in a cumulative examination process and at least two quarters of teaching experience are additional requirements for the doctoral program.

## Admission Requirements

Students who intend to work toward a Master of Science or Doctor of Philosophy degree must apply for admission to the Graduate School and meet the requirements outlined in the Graduate Study section of this catalog. Graduate students must satisfy the requirements for an advanced degree in force at the time the degree is to be awarded. Graduate study requires approval of the Graduate School and the Department of Medicinal Chemistry.

## Special Requirements

Students with undergraduate degrees in pharmacy or in the biological or physical sciences are accepted for graduate study in medicinal chemistry. Undergraduates who plan to pursue graduate study may expedite their programs by selection of pertinent electives. Although the choice of electives varies with the student's ultimate goals, graduate study in medicinal chemistry requires adequate preparation in mathematics and in the biological and physical sciences.

## Master of Science Degree

A student in the master's degree program must present at least 27 credits of course work, exclusive of thesis and nonthesis research. The student also must complete a research project, prepare an acceptable thesis, and pass a final examination.

## Doctor of Philosophy Degree

A student in the doctoral program must present a minimum of 45 credits of course work, exclusive of disser-

tation and nonthesis research. Credits earned for the master's degree may be applied toward the doctoral degree. The student must pass a General Examination for admission to candidacy for the doctoral degree, complete a research project, prepare an acceptable dissertation and pass a Final Examination. Research for the doctoral degree must be done at this university.

## Financial Aid

Financial support in the form of research assistantships and fellowships may be available to students in good standing throughout their graduate careers. Availability of financial support varies from year to year, and prospective applicants should contact the graduate program coordinator for additional information.

Kunze, Kent L., 1990, (Research), Ph.D., 1981, California (San Francisco); medicinal chemistry.

McFarland, Lynn, 1991, (Research), Ph.D., 1988, Washington; medicinal chemistry.

Rettie, Allan E.,\* Ph.D., 1983, Newcastle-upon-Tyne (England); medicinal chemistry.

## Lecturer

Howald, William M., 1983, B.S., 1967, Washington; mass spectrometry.

## Pharmaceutics

### Chairperson

René H. Levy

## Graduate Program

René H. Levy, Graduate Program Coordinator

The Department of Pharmaceutics offers programs of graduate study leading to the degrees of Master of Science and Doctor of Philosophy.

### Program Description

These programs train research scholars in the fundamental aspects of drug disposition and action in animals and man. Graduates possess expertise in quantitative analytical techniques and in the elaboration of mathematical models to describe the various processes of pharmacokinetics (drug absorption, distribution, and elimination). Scientists graduating from this program assume positions in academia, the pharmaceutical industry, or various government research institutions. Didactic training for the doctoral program includes courses in advanced pharmaceutics, mathematics, biostatistics, computer science, drug analysis, and metabolism. After the first year, permission may be granted for students to bypass the master's degree and proceed directly to the doctoral program.

### Admission Qualifications

Students with undergraduate degrees in pharmacy or in the biological or physical sciences are accepted for graduate study in pharmaceutics. Undergraduates who plan to pursue graduate study may expedite their programs by selection of pertinent electives.

### Financial Aid

Financial support in the form of teaching or research assistantships and fellowships may be available to students in good standing throughout their graduate careers. Prospective applicants should contact the graduate program coordinator for additional information.

### Professors

Bradley, William E., 1990, (Affiliate), M.D., 1957, Minnesota; neurology.

Gibaldi, Milo,\* 1978, Ph.D., 1963, Columbia; pharmacokinetics.

Hammarlund, E. Roy,\* 1960, (Emeritus), Ph.D., 1951, Washington; pharmaceutics.

Levy, René H.,\* 1970 (Neurological Surgery),† Ph.D., 1970, California (San Francisco); pharmacokinetics.

### Associate Professors

Bowdle, T. Andrew, 1983, ‡(Anesthesiology), M.D., 1980, Ph.D., 1983, Washington; anesthesiology.

Shen, Danny D.,\* 1984, Ph.D., 1975, State University of New York (Buffalo); pharmaceutics.

Slattery, John T.,\* 1978, (Anesthesiology), Ph.D., 1978, State University of New York (Buffalo); pharmacokinetics.

Unadkat, Jashvant D.,\* 1985, (Anesthesiology), Ph.D., 1982, Manchester (England); theoretical pharmacokinetics.

### Assistant Professors

Anderson, Gail D., 1988, (Pharmacy Practice),† Ph.D., 1987, Washington; pharmaceutics.

Ho, Rodney J.Y., 1990, Ph.D., 1987, Tennessee; pharmacokinetics.

Thummel, Kenneth E., 1989, (Research), Ph.D., 1987, Washington; pharmaceutics.

### Lecturer

Witek, Donald E., 1991, B.S., 1988, Washington; pharmacy.

## Pharmacy Practice

### Chairperson

Andy Stergachis

## Postgraduate Professional Pharmacy Programs

### Doctor of Pharmacy Degree

The Department of Pharmacy Practice offers a two-year Doctor of Pharmacy (Pharm.D.) program for persons who wish to practice pharmacy at an advanced level. Academic and clinical education is provided for individuals who have graduated from an accredited school or college of pharmacy and who are eligible for licensure in the state of Washington. The Pharm.D. curriculum offers two options: a joint Doctor of Pharmacy-general residency program and a Pharm.D.-only program. Because enrollment is limited, admission is competitive, based on academic achievement, letters recommendation, and a personal interview. Students are admitted to the program July 1 of each year. The Department of Pharmacy Practice must receive all application materials by January 1. Details on application procedures and program content may be obtained from the director of the Doctor of Pharmacy program, or by requesting the brochure describing the Doctor of Pharmacy-residency program.

Students complete 50 credits in didactic courses including: advanced therapeutics, biostatistics, clinical pharmacokinetics, research methods, case conferences, and departmental seminars. Sufficient elective course opportunities exist to allow the student to develop specialized expertise. In addition, a minimum of eight five-week rotations (48 credits) are spent in clinical clerkships and residency rotations that are individually precepted by faculty members of the Department of Pharmacy Practice.

The 2080-hour residency component is completed at the University of Washington Medical Center and at Harborview Medical Center under the guidance of the Director of Pharmacy Services, V. de Paul Burkhardt. The residency consists of experience in clinical practice, drug distribution, and hospital pharmacy administration. An annual stipend is associated with the joint Pharm.D.-residency program.

### Master of Public Health Degree

Students can earn the Master of Public Health (M.P.H.) or Master of Health Administration (M.H.A.) degree through a collaborative program with the School of Public Health and Community Medicine. Most students complete an American Society of Hospital Pharmacists-accredited general residency at Group Health Cooperative of Puget Sound concurrent with a two-year program of academic study, however other training sites are also available. The academic portion is broad based, with a central theme of administration. Areas of training include health services, administration and finance, biostatistics, epidemiology, human

resources management, program evaluation, pharmacy administration, and advanced clinical pharmacy and therapeutics. This combination provides the student with a solid foundation for a career in institutional pharmacy administration and offers the opportunity for further career advancement in health services administration.

Enrollment is competitive and limited to two or three students. An annual stipend associated with the residency portion of the program is available. Applicants must be graduates of an accredited school or college of pharmacy and be eligible for licensure as a pharmacist. Students are admitted to the program starting on July 1 of each year. Applicants should register for the American Society of Hospital Pharmacists residency matching program by mid-December and complete all application materials by January 31. Applicants are also required to take the GRE examination. Additional information is available from Dr. Dale Christensen, Department of Pharmacy Practice.

The Program in Pharmacoepidemiology and Drug Policy was established to provide a focus for academic activities concerning the relationship between medications, medical care, and health outcomes. In collaboration with the School of Public Health, the program offers graduate training in pharmacoepidemiology, the study of the use and effects of drugs in large, defined populations, and in drug policy. The core faculty for the program is drawn from the disciplines of pharmacy, epidemiology, medicine, health services, and biostatistics. Strong linkages have been established with many public and private health care organizations in the Northwest. For further information and application material contact Andy Stergachis.

## Faculty

### Chairperson

Andy Stergachis

### Professors

Hall, Nathan A.,\* 1952, (Emeritus), Ph.D., 1948, Washington; pharmacy practice.

Hansten, Philip D., 1989, Pharm.D., 1968, California (San Francisco); drug interactions.

Kradjan, Wayne A.,\* 1971, Pharm.D., 1970, California (San Francisco); clinical pharmacy.

Orr, Jack E., 1956, (Emeritus), Ph.D., 1943, Wisconsin; pharmacy practice.

Plein, Elmer M.,\* 1938, (Emeritus), M.S., 1931, Ph.D., 1936, Colorado; pharmacy practice.

Plein, Joy B.,\* 1970, M.S., 1951, Ph.D., 1956, Washington; geriatrics, interdisciplinary programs.

### Associate Professors

Bauer, Larry A.,\* 1980, (Laboratory Medicine), Pharm.D., 1980, Kentucky; clinical pharmacy.

Burkhart, V. dePaul, 1982, M.S., 1972, Maryland; institutional pharmacy practice.

Christensen, Dale B.,\* 1976, (Health Services), M.S., 1972, Oregon State; Ph.D., 1977, Minnesota; pharmacy administration.

Edwards, W. Drew, 1976, M.S., 1971, Wisconsin; gastroenterology, management.

Ellsworth, Allan J., 1984, (Family Medicine, Health Services), Pharm.D., 1977, Philadelphia College of Pharmacy and Science; clinical pharmacy.

Fassett, William E., 1980, M.B.A., 1983, Puget Sound; practice management marketing.

Gardner, Jackie, 1991, Ph.D., 1979, Washington; pharmacoepidemiology, drug policy.

Horn, John R., 1978, Pharm.D., 1977, Cincinnati; clinical pharmacy.

Stergachis, Andy S.,\* 1980, (Epidemiology),† M.S., 1976, Ph.D., 1979, Minnesota; pharmacoepidemiology, reproductive epidemiology, drug policy, health program evaluation, pharmacy administration.

#### Assistant Professors

Anderson, Gail, D., 1988, (Neurological Surgery), (Pharmaceutics),† Ph.D., 1987, Washington; epidemiology, pharmaceutics.

Benfield, William, 1989, (Clinical), Ph.D., 1975, Mississippi; pharmacy health care administration.

Black, Douglas, 1989, Pharm.D., 1983, Washington; oncology.

McRorie, Teresa, 1989, Pharm.D., 1987, Utah; neonatology, pharmacokinetics.

Scott, Dale H., 1987, M.S., 1978, Ohio State; hospital pharmacy.

#### Lecturers

Andrews, G. Amber, 1986, B.S.Pharm., 1985, Washington; pharmacy practice.

Bomgaars, Donald L., 1987, M.S./M.B.A., 1985, Utah; hospital pharmacy.

Davis, Paul W., 1983, (Pharmacology), M.A., 1962, Harvard; Ph.D., 1966, Michigan; pharmacy administration.

Dawson, Karan N., 1978, (Community Health Care Systems),† M.S., 1978, Washington; clinical practice.

#### Instructor

Odegard, Peggy S., 1986, Pharm.D., 1990, Washington; clinical practice, pediatrics.

## Course Descriptions

### Courses for Undergraduates

#### Medicinal Chemistry

**MEDCH 350 Medicinal and Poisonous Plants (3) A Brady** Review of the history/ethnobotany, chemistry, and physiological activity of selected higher plants that are used medicinally or are poisonous. A perspective for the current popular use of herbal remedies is provided. For majors and advanced-level nonmajors. Prerequisite: BIOL 202 or equivalent.

**MEDCH 400 Biophysical Medicinal Chemistry (3) Sp Trager** Principles of physical organic chemistry; chemical bonding, stereochemistry, acids/bases, and reaction mechanisms relevant to processes of drug distribution, binding, specificity, metabolism, and elimination. Prerequisite: CHEM 239.

**MEDCH 413 Immunizing and Antimicrobial Agents (3) Sp Brady, Elmer** Chemical and biologic properties of agents used to prevent or treat infectious diseases, including diagnostic, prophylactic, and therapeutic uses of immunizing biologicals and spectrum, action mechanisms, resistance patterns, toxicity, and therapeutic applications of antibiotics. Prerequisites: MICRO 301, 302.

**MEDCH 435 Diagnostic Medicinal Chemistry (3) W S. Nelson** Examination of clinical diagnostic tests with regard to the chemical or biochemical rationale of the testing method, interpretation of test results, and major factors influencing test values with special emphasis on the effects of medications. Clinical laboratory data from patients considered in light of these factors. Prerequisite: BIOC 406.

**MEDCH 440, 441, 442 Medicinal Chemistry (3,3,3) A,W,Sp Atkins, Baillie, Elmer, S. Nelson, W. Nelson, Rettie, Trager** Study of the various classes of medicinal compounds with particular emphasis on biological activity, mechanism of action, biotransformation, and

the structural and physical properties governing absorption, distribution, and excretion. Prerequisites: CHEM 239 and CONJ -342.

**MEDCH 490 Metabolism of Drugs (3) W Baillie, Trager** Processes of drug metabolism, their mechanisms, and their implications in modern therapy. Bioactivation of prodrugs and biotransformations in the inactivation and elimination of drugs, and the relationship to drug toxicity and drug design. Prerequisite: CHEM 239 or equivalent.

**MEDCH 499 Undergraduate Research (\*, max. 6) AWSps** Research problems in medicinal chemistry, pharmaceutical chemistry and pharmacognosy. Prerequisites: cumulative grade-point average of 2.50 and permission of instructor. Entry code required.

#### Pharmaceutics

**PCEUT 331 General and Physical Principles (4) A Unadkat** Introduction to scientific bases of pharmacy, with emphasis on physical processes important in the manufacture, stability, and characteristics of various drug dosage forms. Prerequisites: CHEM 239 and pharmacy major.

**PCEUT 405 Biopharmaceutics and Pharmacokinetics (3) A Shen, Slattery** Drug release from dosage forms, absorption from different routes of administration, the resulting concentration time curves in blood and urine, and the role of these factors in bioavailability and drug product selection. Prerequisites: PHARM 333, 369, and pharmacy major.

**PCEUT 406 Clinical Pharmacokinetics (4) W Levy** Basic principles of pharmacokinetics and their application to the clinical setting, including: single-dose intravenous and oral kinetics, multiple dosing, nonlinear pharmacokinetics, determination of patient-specific dosage regimens, role of disease in drug requirements for the major pharmacologic classes of drugs, and mechanisms and importance of drug requirements. Prerequisites: 405 and pharmacy major.

**PCEUT 410 Pharmacokinetics of Drug Interactions (3) Sp Shen** The common pharmacokinetic mechanisms underlying clinically important interactions between drugs. Interactions involving gastrointestinal absorption, serum drug protein binding, excretory and metabolic clearance processes. Prerequisite: 406.

**PCEUT 499 Undergraduate Research (\*, max. 6)** Basic and clinical research problems in drug disposition and effect. Prerequisites: 2.5 GPA and permission of instructor.

#### Pharmacy Practice

**PHARM 301 Drugs and Your Health (3) Sp Davis, Dawson** Consumer-oriented approach addressing a broad range of health-related issues, emphasizing rational use of prescription and nonprescription medications. Topics include general health care, how to use drugs appropriately, economic factors that impact upon health care, and use of self-help medications. Credit/no credit only. Enrollment limited to nonmajors.

**PHARM 304 Profession of Pharmacy (3) A** Overview of the profession of pharmacy emphasizing practice opportunities, specialization, professional associations, publications, laws, ethics and professionalism. Credit/no credit only. Prerequisite: pharmacy majors; prepharmacy students by permission of instructor.

**PHARM 305 Clinical Dispensing Pharmacy (1-3, max. 3) AWSps** Preparation and dispensing of prescriptions at Rubenstein Memorial Pharmacy in Hall Health Center or University of Washington Medical Center outpatient pharmacy. For students with little or no experience in pharmacy wishing experience prior to internship, externship, or didactic course work. Under direct supervision of the Student Health Service pharmacist and University of Washington Medical Center pharmacists. Credit/no credit only. Prerequisites: pharmacy major and permission of instructor.

**PHARM 309 Drug Information Sources (1) A Murri** Introduction to systematic methods for responding to drug information inquiries with emphasis on familiarizing students with content and use of important pharmacy, drug information resources. Emphasis on written, verbal communications and development of efficient strategies for retrieving and evaluating information relative to specific drug information inquiries. Prerequisite: pharmacy majors.

**PHARM 333 Medication Distribution and Control (4) W Fassett** Distribution of medication in ambulatory and inpatient settings. Design and supervision of distribution systems to prevent and detect medication errors and promote rational drug use. State and federal regulations controlling distribution of medications. Professional responsibilities of pharmacists in dispensing medications pursuant to order of prescriber. Prerequisites: PCEUT 331, concurrent registration in 334, and pharmacy major.

**PHARM 334 Dispensing Practice and Calculations Laboratory (1) W Fassett** Exercises in dispensing medications pursuant to order of prescriber. Intravenous admixtures, extemporaneous compounding, patient profiles, patient counseling, use of computers for outpatient dispensing. Required pharmaceutical calculations proficiency taught through exercises, computer-aided instruction, and assigned practice problems. Prerequisites: PCEUT 331, concurrent registration in 333, and pharmacy major.

**PHARM 340 Pharmacy, Health, and Society (3) A Gardner, Stergachis** Overview of the health-care system, with an emphasis on factors of financing, organization, and patterns of use of pharmacy services; contemporary health issues, such as cost control, quality insurance, and national health insurance; and implications to pharmacy. Prerequisite: pharmacy major.

**PHARM 409 Applied Pharmacokinetics (2) Sp Anderson, Bauer** Pharmacokinetics of specific drugs. Influence of age, weight, sex, and disease states on patient-specific dosage regimens. Advanced kinetic concepts. Prerequisite: PCEUT 406 or permission of instructor.

**PHARM 411 Medical Devices for Home Health Care (3) Sp Fassett** Study of medical devices commonly provided by pharmacists to their patients, including their selection and adaptation for specific patient needs. Lectures include display and demonstration of actual devices. Enrollment limited. Prerequisite: 333.

**PHARM 412 Nonprescription Drugs and Self-Care (3) Sp** Pharmacist's counseling on self-care and use of nonprescription medications. Patient assessment, selection of nonprescription products if appropriate, advice to patients. Prerequisite: 484, which may be taken concurrently.

**PHARM 415 Applied Drug Therapy in Nursing (3)** Clinical applications of drugs in primary-care and hospital settings. Selected drugs compared and contrasted as to indications; efficacy; therapeutic, adverse effects; monitoring parameters; dosing principles; dosage forms; common drug interactions. Individualization of patient drug therapy requirements emphasized. Prerequisites: 315; CONJ 340-341-342; PATH 444 or equivalent; PN 323, 324.

**PHARM 435 Human Behavior in Pharmacy (3) W Christensen, Gardner** Overview of health, illness, and sick-role behavior, patterns of drug prescribing and use, drug-taking compliance, the aging process and drug services for the elderly. Practice-based communication techniques and skills presented, demonstrated, and practiced. Prerequisite: pharmacy major.

**PHARM 437 Substance Abuse Awareness (3) W Haynes, Odegard** The etiology and patterns of substance abuse, drug classes, treatment options, codependency and recovery, drug testing, and community resources are covered in a lecture-discussion format. Students also participate in community service lectures and/or special projects. Prerequisites: 435, 485.

**PHARM 438 Gerontological Communication Skills Seminar (2) Sp** *Dawson* Addresses special communication needs of the elderly, ranging from individualized patient counselling to patient advocacy through development and provision of pharmacy services. Communication techniques applicable to teaching, developing innovative services, supervising, motivating, conflict resolution, and interdisciplinary interactions are explored in lecture and laboratory. Prerequisite: Geriatric Certificate Program or permission of instructor.

**PHARM 450 Pharmacy Laws (3) Sp** Study of the laws regulating the practice of pharmacy. These include federal, state, and municipal laws and professional ethics. Prerequisites: 470 or 471 or 487, and pharmacy major.

**PHARM 452 Contemporary Problems (1) Sp** Discussion of current trends affecting the role of pharmacy in health-care delivery. Credit/no credit only. Prerequisite: third-year standing.

**PHARM 460 Principles of Professional Practice Management (3) W** *Benfield* Topics include organization of time and objectives, management of financial resources, management of inventory, and marketing management. Emphasis on developing specific skills, such as burden rate analysis, and financial ratio analysis. Primarily for students who are interested in managerial careers in community pharmacy practice. Prerequisite: 340.

**PHARM 461 Pharmaceutical Marketing (3) A** Introduction to marketing concepts as applied to delivery of pharmaceutical products and services. Trends in the pharmaceutical marketplace; focus on pharmaceutical industry practices as they affect community and institutional pharmacy. Prescriber and consumer behavior relative to legend and over-the-counter drugs. Prerequisite: pharmacy major.

**PHARM 465 Computer Applications in Pharmacy Practice (3) A** *Christensen, Fassett* Computer applications in pharmacy practice. Microcomputers, including elementary computer concepts, with introduction to programming and applications languages. Programs used in clinical and administrative pharmacy functions (kinetics, prescription processing, and similar applications).

**PHARM 470 Externship in Community Practice (8) Andrews** Closely supervised study-experience periods in community pharmacies. Students participate in active community pharmacy under the supervision of clinical preceptor. Conferences on selected topics supplement work experience. Credit/no credit only. Prerequisite: pharmacy major. Entry code required.

**PHARM 471 Externship in Institutional Practice (4) Dawson** Closely supervised study-experience periods in hospital or other institutional pharmacies. Students participate in active institutional pharmacy under supervision of clinical preceptor. Conferences on selected topics supplement work experience. Credit/no credit only. Prerequisite: pharmacy major. Entry code required.

**PHARM 472 Advanced Externship in Pharmacy Practice (\*, max. 16) Andrews, Dawson** Advanced level externship in pharmacy in a community, institutional, long-term care, or specialty practice setting under direct supervision of a clinical preceptor. Credit/no credit only. Prerequisite: permission of instructor. Entry code required.

**PHARM 481 Introduction to Clinical Pharmacy (3) W Hansten** Clinical roles of the pharmacist and study of more common diseases and their drug therapy. Methods of drug therapy monitoring, drug histories, laboratory tests, drug administration, and case method studies of drug therapy. The pharmacist's professional responsibilities for inpatient and outpatient care. Prerequisites: PHCOL 401, 402, and pharmacy major.

**PHARM 483 Institutional Pharmacy Practice (2) W Burkhart** Covers a wide range of topics regarding current contemporary institutional pharmacy practice. In-

cluded are discussions on distribution systems and technology, management of human and material resources, and patient-oriented services.

**PHARM 484 Clinical Pharmacy (4) Sp Black** Continuation of 481 with emphasis on disease states and their drug therapies. Assessment of drug therapy and application of basic pharmaceutical sciences to selection of drugs in patient care. Prerequisites: 481 and pharmacy major.

**PHARM 485 Clinical Pharmacy (3) A McRorie** Continuation of 484 with emphasis on disease states and their drug therapies. Lectures stress assessment of drug therapy and application of basic pharmaceutical sciences to selection of drugs in patient care. Prerequisites: 484 and pharmacy major.

**PHARM 486,487 Clinical Pharmacy Clerkship I,II (4,4) AWSpS,AWSpS Andrews, Dawson** Supervised experience in the clinical roles of pharmacy practice. Students participate in daily rounds in institutional patient-care facilities and take drug-use histories, monitor drug therapy of patients, instruct patients about medications, and provide consultation to other health-care professionals in ambulatory or institutional patient-care facilities. Credit/no credit only. Prerequisites: 334, 484, and pharmacy major.

**PHARM 488 Advanced Clinical Pharmacy Clerkship (\*, max. 16) Dawson, Plein** Advanced-level clinical pharmacy experience in institutional (hospital, nursing home, long-term-care facility) and ambulatory patient-care facilities under direct supervision of a clinical preceptor. Credit/no credit only. Prerequisites: 487 and permission of instructor.

**PHARM 489 Drug Information (4-8) AWSpS Murri** Supervised experience in performing clinical pharmacy activities relating to retrieval and analysis of drug information from various resources; preparation of responses to consultation requests presented to Drug Information Service; techniques of preparing written and verbal drug information reports; participation in preparation of a pharmacy newsletter. Prerequisite: permission of instructor. Entry code required.

**PHARM 490 Fluid and Electrolytes and Parenteral Nutrition (2) Sp Edwards** Principles of fluid and electrolyte therapy, including saline, water, and acid-base balance. Carbohydrate, protein, lipid, vitamin, and mineral requirements in parenteral nutrition. Nutritional assessment, complications of parenteral nutrition, stability and compatibility of intravenous solutions, modifications of parenteral nutrition in pediatrics and specific disease states. Prerequisite: 481.

**PHARM 491 Cancer Pharmacotherapeutics (2) Sp Kwok, McDonnell** Pharmacotherapy of cancer, covering supportive care (antibiotics, antiemetics, analgesics, nutrition) to the antineoplastic agents themselves. Specialists in each area serve as guest lecturers. Designed for pharmacists. Prerequisite: third-year professional standing in pharmacy.

**PHARM 492 Pharmaceutical Services for Long-Term Care (2) W Plein** Scope of pharmaceutical services for long-term care (LTC) and systems for services. Responsibilities of the pharmacist for distributive, administrative, and clinical pharmacy services for nursing homes and other long-term-care facilities. Economic considerations in provision of LTC pharmaceutical services. Role of the consultant pharmacist for home-health-care organizations. Pharmaceutical services for independently living elderly. Prerequisite: pharmacy major.

**PHARM 495 Special Studies in Pharmacy (\*, max. 6) AWSpS** Special studies of professional topics in pharmacy. An opportunity to expand the breadth and depth of understanding in specific pharmaceutical areas. Students usually undertake independent study under the individual direction of a faculty member. Prerequisite: permission of instructor. Entry code required.

**PHARM 497 Drug Therapy for the Elderly (3) Plein** Current knowledge of effects of aging on clinical use of drugs for elderly and aged patients. Drugs of choice

and drug therapy monitoring. Multiple drug regimens in treatment of multiple pathologies. Prerequisite: 415 or 484 or permission of instructor.

**PHARM 498 Case Conference: Geriatrics (1) WS Plein** Students taking geriatric pharmacy clerkships in various clinical settings meet together with faculty to present case studies of elderly patients requiring complex drug therapies. Required for the Certificate in Geriatric Pharmacy Practice. Prerequisites: 487 and 488 which may be taken concurrently, or permission of instructor.

**PHARM 499 Undergraduate Research (\*, max. 6) AWSpS** Pharmaceutical research problems. Prerequisites: cumulative grade-point average of 2.50 and permission of instructor. Entry code required.

## Courses for Graduates Only

### Medicinal Chemistry

**MEDCH 501, 502, 503 Advanced Medicinal Chemistry (4,4,4) A,W,Sp Atkins, Baillie, Elmer, S. Nelson, W. Nelson, Rettie, Trager** Advanced study of the various classes of medicinal compounds, with particular emphasis on biological activity, mechanism of action, biotransformation, and the structural and physical properties governing absorption, distribution, and excretion. Prerequisite: permission of instructor.

**MEDCH 520 Seminar (1, max. 5) AWSp** Graduate students attend seminars and make one formal presentation per year while in residence; 1 credit per year is allowed. Credit/no credit only.

**MEDCH 521, 522 Advanced Medicinal Chemistry (3,3) W,Sp Atkins, Baillie, Elmer, S. Nelson, W. Nelson, Rettie, Trager** Application of integrated data from the physical and biological sciences to problems of chemotherapy, including transport of drugs to site of action, biotransformation of drugs, interaction of drugs with enzyme systems, and recent advances in drug design. Prerequisites: CHEM 457, 531, and BIOC 442, or permission of instructor.

**MEDCH 527 Drug Metabolism (3) W Juchau, S. Nelson** Considerations of the biochemical mechanisms for the biotransformation of drugs and foreign compounds. Includes reaction mechanisms, ultrastructural considerations, induction mechanisms, methodology, kinetics of inhibition and activation, steroid and amine metabolism. Joint with PHCOL 527. (Offered odd-numbered years.)

**MEDCH 541 Mass Spectrometry in Life Sciences (3) Sp Baillie, Howald** Principles of modern mass spectrometry. Applications to problems in chemical, biological, and health sciences. Applications of mass spectrometric techniques to the structural determination and quantitative measurement of biologically important substances. Joint with CHEM 541. Prerequisite: permission of instructor. (Offered even-numbered years.)

**MEDCH 582 Topics in Medicinal Chemistry (1, max. 10) AWSp** Discussion of pertinent articles from current literature. Credit/no credit only.

**MEDCH 600 Independent Study or Research (\*) AWSpS** Credit/no credit only.

**MEDCH 700 Master's Thesis (\*) AWSpS** Credit/no credit only.

**MEDCH 800 Doctoral Dissertation (\*)** Credit/no credit only.

### Pharmaceutics

**PCEUT 501 Advanced Pharmacokinetics I (3) Sp Levy, Shen, Slattery, Unadkat** Drug absorption, distribution, excretion, metabolism, and effects in mammalian systems. Compartmental model and model-independent approaches examined. Drug disposition is studied in a physiologically realistic context taking nonlinear events into account. Aimed at development of

innovative methods for data analysis and evaluation in biological systems. Prerequisites: 405 and 406 or equivalent, introductory calculus.

**PCEUT 502 Advanced Pharmacokinetics Concepts (5) S** *Levy, Shen, Slattery, Unadkat* Recent developments and emerging concepts in theoretical and experimental pharmacokinetics. Critical analysis of the current literature. Prerequisite: 501.

**PCEUT 506 Pharmacokinetics (2) Sp** *Levy, Shen, Slattery, Unadkat* Discussion format in which students are given reading assignments prior to class in the area of basic pharmacokinetics and examined orally over the material in class. Credit/no credit only. Prerequisite: 406.

**PCEUT 507 Topics in Clinical Pharmacokinetics (1, max. 12) AWSp** *Gibaldi* New and important findings and trends in pharmacokinetics, biopharmaceutics, drug metabolism, and drug toxicity, with particular emphasis on clinical significance and applicability. Credit/no credit only. Prerequisite: PCEUT 405 or equivalent.

**PCEUT 510 Pharmacokinetics of Drug Interactions (3) Sp** *Shen* Common pharmacokinetic mechanisms underlying the clinically important interactions between drugs. Interactions involving gastrointestinal absorption, serum drug protein binding, excretory and metabolic clearance processes. Prerequisite: 406 or equivalent.

**PCEUT 520 Seminar (1, max. 5) AWSp** Graduate students attend seminars and make one formal presentation per year while in residence; 1 credit per year is allowed. Credit/no credit only.

**PCEUT 583 Topics in Pharmaceutics (1, max. 15) AWSp** Discussion of pertinent articles from current literature and recent laboratory results. Credit/no credit only.

**PCEUT 600 Independent Study or Research (\*) AWSpS** Credit/no credit only.

**PCEUT 700 Master's Thesis (\*) AWSpS** Credit/no credit only.

**PCEUT 800 Doctoral Dissertation (\*) AWSpS** Credit/no credit only.

## Pharmacy Practice

**PHARM 501 Orientation to Pharm.D. (2) S** Orientation to literature searching and evaluation and discussion of presentation skills. Orientation to departmental faculty practice and research. Credit/no credit only. Prerequisite: Doctor of Pharmacy students only.

**PHARM 505 Clinical Pharmacokinetics (4) W** *Bauer* Clinically oriented introduction to advanced pharmacokinetic theories. Didactic presentation of the above materials of particular drugs or classes of drugs. Prerequisites: 484, 530, PCEUT 405, and permission of instructor.

**PHARM 506 Clinical Pharmacokinetics II (3) Sp** *Bauer* Continuation of 505. Discussion sessions regarding the pharmacokinetics of a drug or class of drugs are required. An original research proposal developed by each student and presented in class. Credit/no credit only. Prerequisites: 484, 530, 505, PCEUT 405, and permission of instructor.

**PHARM 520 Seminar (1, max. 5) AWSp** Doctor of Pharmacy student seminar. Students present two seminars each year. Credit/no credit only.

**PHARM 530 Seminar: Research Methods in Pharmacy Practice (3) Sp** *Christensen, Stergachis* Research methods and protocols designed to help develop skills in preparing research proposals and conducting research in pharmacy practice. Selected research methods, sources of data, analysis designs, and statistical methodologies. Prerequisites: graduate standing in pharmacy; one statistics course or permission of instructor.

**PHARM 533 Pharmacoeconomics (2) W** *Heckbert, Stergachis* Introduction to the study of the risks and benefits of pharmaceuticals. Overview of drug development and approval, assessment of methods for study of drug risks and benefits, and their relationship with the formulation of public policy. Prerequisite: graduate standing.

**PHARM 550 Pharmacotherapeutics for Older Adults (3) Plein** Clinical use of drugs for older adults. Age-related pharmacokinetics, pharmacodynamics, and pharmacotherapeutics as applied to selecting and monitoring drug regimens for elderly patients. Problem solving regarding drugs of choice for older people with multiple pathologies. Open to Doctor of Pharmacy degree and health sciences graduate students.

**PHARM 582 Primary Care Pharmacy (2) A** *Ellsworth* Provides principles of physical assessment and techniques necessary for clinical pharmacists to obtain subjective and objective information from patients in logical sequence for use in monitoring drug therapy and communicating recommendations to other health professionals. Didactic, classroom, clinical experimental formats are utilized. Prerequisite: concurrent registration in 583.

**PHARM 583 Advanced Clinical Pharmacy and Therapeutics I (2-6, max. 6) A** *Horn* Advanced

course on disease states and current therapy with emphasis on pharmacotherapy. Lecture-discussion format with extensive readings. Course is arranged in modules including cardiovascular, pulmonary, renal diseases. Pharm.D. students take all modules; MPH students may select one or more modules for variable credits. Prerequisite: Pharm.D. student or permission of instructor.

**PHARM 584 Advanced Clinical Pharmacy and Therapeutics II (2-6, max. 6) W** *Black, Edwards* Advanced course on disease states and current therapy with emphasis on pharmacotherapy. Lecture-discussion format with extensive readings. Arranged in modules including endocrine, gastrointestinal, and infectious diseases. Pharm.D. students take all modules; MPH students may select one or more modules for variable credits. Prerequisite: Pharm.D. student or permission of instructor.

**PHARM 585 Advanced Clinical Pharmacy and Therapeutics III (2-6, max. 6) Sp** *Kwok, Plein* Advanced course on disease states and current therapy with emphasis on pharmacotherapy. Lecture-discussion format with extensive readings. Arranged in modules including neoplastic, central nervous system, musculoskeletal, skin diseases; pediatrics, and geriatrics. Pharm.D. students take all modules; MPH students may select one or more modules for variable credits. Prerequisite: Pharm.D. student or permission of instructor.

**PHARM 586 Clinical Case Conferences (1) AWSp** *Kradjan* Biweekly clinical literature evaluation and case presentation conferences stressing current therapeutics and decision making. Prerequisite: 585.

**PHARM 587 Advanced Clinical Clerkship: Inpatient Care (\*, max. 15) AWSpS** Under faculty supervision, students participate in medical and pharmacy patient rounds in hospitals or long-term-care facilities, monitor drug therapy, instruct patients concerning proper use of medications, and provide drug consultation to other health-care providers. Credit/no credit only. Prerequisites: 485 or equivalent, and permission of instructor.

**PHARM 588 Advanced Clinical Clerkship: Outpatient Care (\*, max. 15) AWSpS** Under faculty supervision, students refine skills in developing and maintaining a drug-use data base for ambulatory patients. Activities include taking drug histories, developing patient medication profiles, and documenting drug-use experience. Credit/no credit only. Prerequisites: 485 or equivalent, and permission of instructor.

**PHARM 600 Independent Study or Research (\*) AWSpS** Credit/no credit only.

# Graduate School of Public Affairs

## Dean

Margaret T. Gordon  
203A Parrington

The Graduate School of Public Affairs (GSPA) is a graduate professional school providing education and research for the public service. The school confers the Master of Public Administration (M.P.A.) degree. GSPA's program of study is designed to train highly-skilled managers and policy analysts for a wide range of careers in the public and not-for-profit sectors. The academic and professional orientation of the degree program gives GSPA students the knowledge and skills necessary to make significant contributions to national, regional, and international policy. Graduates hold leadership positions throughout the public sector as mayors and city managers; local and regional government administrators; foreign service officers; staff assistants to elected officials; analysts with budget offices, legislative staff units, and city councils; directors of social service agencies; and administrators of arts organizations. In addition, a number of alumni are employed in the private sector, usually in positions involving substantial contact with public agencies.

## Graduate Program

### Master of Public Administration Degree

The degree of Master of Public Administration is awarded upon satisfactory completion of 60 credits of course work, including a final degree project. Students without substantial prior experience in public service work also are expected to complete a paid administrative internship. The program normally requires two full academic years, and, for those requiring an internship, the intervening summer. Students may attend GSPA on a part-time basis. Foreign-language proficiency or a thesis are not required for the M.P.A. degree. Concurrent degree programs in International Studies (M.P.A.-M.A.) and Law (M.P.A.-J.D.) are available.

The GSPA curriculum ensures the integration of public policy analysis and management while giving students the flexibility to specialize in substantive policy fields. Courses emphasize the practical application of the theory, values, and techniques needed to succeed in public life. The academic program is divided into three major components: 1) the required core curriculum, which introduces students to public organization theory; policy analysis; budgeting; microeconomic analysis; and quantitative methods; 2) concentrated study in GSPA's three curricular "streams": analysis, management, and context and values; and 3) specialized study in one of five policy gateways: education and human resource policy; environmental policy; international affairs; urban and regional affairs; or individualized policy study. The policy gateways permit students to explore a wide range of academic disciplines and professional opportunities. Central to the gateways are courses offered by numerous other schools and departments at the University of Washington.

### Admission Requirements

The Graduate School of Public Affairs admits students on an annual basis, for summer or autumn quarters only. The application deadline for either quarter is March 15. GSPA admissions decisions are made on a rolling basis, beginning in early February of each year. Candidates are encouraged to apply by that time in

order to be given priority consideration for admission and departmental financial aid.

The prospective student must hold a baccalaureate degree from an accredited college or university in the United States, or its equivalent from a foreign institution. The student's academic record should be a strong one, with a minimum GPA of 3.00 on the last 90 (quarter) or 60 (semester) credits of undergraduate work. Scores on the Graduate Record Examination (GRE) general test are also required for admission.

The primary criterion for admission to the school is the applicant's demonstrated ability to complete the graduate program while sustaining a high level of achievement. GSPA's Admissions Committee considers grades and test scores, and also gives considerable weight to professional experience, volunteer work, letters of recommendation, and the applicant's writing skills as demonstrated in personal essays.

Although the school has no formal undergraduate course requirement for admission, GSPA's core courses in economics and quantitative methods assume that entering students have been exposed to these subjects at the undergraduate level. Ideally, new students will possess academic or professional background in governmental process, excellent writing skills, and academic preparation in microeconomics and statistics. Students lacking sufficient preparation in these areas may be required to demonstrate aptitude prior to admission, or may be asked to take preparatory course work in addition to the basic M.P.A. degree requirements.

### Financial Aid

The Graduate School of Public Affairs provides financial assistance to a limited number of students each year. Although GSPA can award only a few departmental scholarships, the school also offers research and teaching assistantship opportunities. First- and second-year students are eligible to apply for most research assistantships, while teaching assistantships are generally reserved for second-year students. In addition, administrative internships with public agencies can provide students with additional income and frequently evolve into part-time jobs during the second year of study.

Because GSPA's financial aid resources are quite limited, the University of Washington Office of Student Financial Aid is the primary source of financial assistance for M.P.A. students. The most common forms of University-administered financial aid are work-study awards and Stafford or Perkins Loans. Only full-time students are eligible for non-loan forms of university financial aid.

*In order to receive priority consideration for UW financial aid, applicants must file the Financial Aid Form (FAF) with the College Scholarship Service by March 1 of the application year. FAF forms can be obtained from the UW Office of Student Financial Aid, PE-20, Seattle, Washington 98195, (206) 543-6101, or from the financial aid office of another college or university.*

### Correspondence and Application Information

A program brochure and application may be obtained from the Director of Graduate Studies, Graduate School of Public Affairs, DC-13, University of Washington, Seattle, Washington 98195, or by telephoning (206) 543-4900.

## Research Facilities

### Institute for Public Policy and Management

The culture of the Graduate School of Public Affairs promotes the integration of extensive applied research into the academic program. In addition to supporting the independent research of its faculty members, the school houses the Institute for Public Policy and Management (IPPM). The IPPM initiates and conducts major applied research projects for public managers and elected officials, drawing upon the skills and knowl-

edge of University researchers, faculty members, graduate students, and practitioners from various public and private organizations. Through research, consultancy, conferences, publications, and training, the IPPM enhances the ability of public sector officials and the general public to understand major public policy issues and to make sound public management decisions.

### Northwest Policy Center

The Northwest Policy Center (NPC) was established in 1987 as a model regional program to develop and improve public strategies which promote economic vitality in the five-state Northwest region. NPC conducts policy research, designs and evaluates policy alternatives, and promotes the continuous exchange of information among regional policymakers.

### Cascade Center for Public Service

The Cascade Center helps public organizations and leaders to apply innovative and proven techniques to public policy and management issues. Cascade offers an extensive set of training programs tailored to senior and mid-level public managers and to elected officials in state and local government.

### Human Services Policy Center

Founded in 1991, the Human Services Policy Center (HSPC) is an interdisciplinary research center focused upon issues relating to families and children. It was created to help professionals forge links among schools and service agencies to improve service delivery to children and families. HSPC's mission includes program evaluation and data analysis to help policymakers and the general public better understand these critical issues. The center is a collaborative endeavor involving faculty from several University of Washington professional schools: Public Affairs, Public Health and Community Medicine, Education, Social Work, Nursing, and Communications.

## Faculty

### Professors

Beyers, William B.,\* 1967, ‡(Geography), Ph.D., 1967, Washington; regional science, economic geography, location theory, regional analysis, environment of the Pacific Northwest.

Denny, Brewster C.,\* (Emeritus), 1961, M.A., 1948, Ph.D., 1959, Fletcher School of Law and Diplomacy; American foreign and defense policy, science and public policy.

Gordon, Andrew C.,\* 1988, Ph.D., 1970, Columbia; information policy, organizational theory and practice, community organizations.

Gordon, Margaret T.,\* 1988, M.S.J., 1962, Ph.D., 1972, Northwestern; news media and public policy, urban crime, women's issues.

Hyman, Barry I.,\* 1975, (Mechanical Engineering), † M.S., 1961, St. Louis; Ph.D., 1965, Virginia Polytechnic Institute; energy policy, technology and public policy, quantitative methods.

Kroll, Morton,\* 1958, (Emeritus), (Political Science), † Ph.D., 1952, California (Los Angeles); organizational theory, comparative bureaucracy, ethics, arts management.

Locke, Hubert G.,\* 1976, M.A., 1962, Michigan; criminal justice, urban policy, race and ethnic relations.

Lyden, Fremont J.,\* 1962, (Emeritus), M.P.A., 1952, Ph.D., 1960, Washington; organizational and systems theory, personnel management, program design and budgeting.

Miles, Edward L.,\* 1974, (Marine Affairs), † Ph.D., 1965, Denver; international law and organization; science, technology, and international relations; marine policy and ocean management.

Morrill, Richard L.,\* 1960, ‡(Geography), M.A., 1957, Ph.D., 1959, Washington; spatial organization, migration, diffusion and population, regional planning and development.

Plotnick, Robert D.,\* 1984, (Social Work), † M.A., 1973, Ph.D., 1976, California (Berkeley); economics of poverty, labor and social welfare policy, public policy.

Williams, Walter,\* 1970, M.B.A., 1956, Texas; Ph.D., 1960, Indiana; executive leadership, policy analysis and implementation, comparative politics.

Wolfe, Dael L.,\* 1969, (Emeritus), M.S., 1928, Washington; Ph.D., 1931, Ohio State; science and public policy, development of human talent.

Zerbe, Richard O.,\* 1976, (Civil Engineering), Ph.D., 1969, Duke; law and economics, cost-benefit analysis, economic history, environmental regulation.

#### Associate Professors

Brandon, Richard N.,\* 1989, (Research), Ph.D., 1975, Pennsylvania; health and human services policy, education policy, legislative relations.

Brock, Jonathan, 1985, M.B.A., 1973, Harvard; labor relations, negotiation and mediation, public management, managing people.

Dobel, J. Patrick,\* 1985, A.M., 1972, Ph.D., 1976, Princeton; political theory, ethics and public policy, organizational theory.

Harrison, David S., 1986, (Research), M.P.A., 1979, Harvard; regional economic development, growth management, industrial policy.

Madden, Carolyn Watts,\* 1975, ‡(Economics, Health Services), M.S., 1974, Ph.D., 1976, Johns Hopkins; health economics and policy.

May, Peter J.,\* 1979, ‡(Political Science), M.P.P., 1976, Ph.D., 1979, California (Berkeley); policy analysis, quantitative methods.

Miller, Ernest G.,\* 1965, M.P.A., 1953, Washington; Ph.D., 1959, Princeton; management and organizational development, organization theory, administrative behavior.

Narver, Betty Jane, 1976, (Research), M.A., 1973, Washington; education and workforce training policy, state and local fiscal issues, social and health policy.

Sommers, Paul E.,\* 1988, (Research), Ph.D., 1978, Yale; regional economic development, energy policy, industrial policy.

Ulberg, Cy,\* 1988, (Research), Ph.D., 1973, Michigan; transportation policy and planning.

Zumeta, William M.,\* 1985, M.P.P., 1973, Ph.D., 1978, California (Berkeley); public management, policy analysis, education and manpower policies, regulation.

#### Assistant Professors

Eliason, Leslie C.,\* 1988, M.A., 1985, Ph.D., 1988, Stanford; comparative politics, political theory and American politics.

Harrison, Kathryn J., 1992, S.M., 1986, Massachusetts Institute of Technology; Ph.D., 1992, British Columbia; environmental policy, regulation, and politics.

Klawitter, Marieta,\* 1990, M.P.P., 1983, Michigan; M.S., 1986, Ph.D., 1992, Wisconsin; policy analysis, women's studies, economics of family and gender.

McIntire, James L., 1987, (Research), M.A., 1983, Washington; housing policy, state tax policy, labor market policy.

Pivo, Gary, 1987, ‡(Urban Design & Planning), M.R.P., 1979, Cornell; Ph.D., 1988, California (Berkeley); land use, physical and environmental planning, growth management.

#### Lecturer

Reisner, Fritzie, 1989, Ph.D., 1983, California (Berkeley); government and industry, antitrust regulation, public policy analysis.

## Course Descriptions

### Courses for Graduates Only

#### PB AF 500 General Seminar (1, max. 9)

**PB AF 502 The Administrator and the Policy Process (3)** Context of public administration from the perspective of the administrator. Roles and functions of the administrator, particularly in relation to the process of implementing, making, and changing public policy. Joint with POL S 571.

**PB AF 503 Administrative and Executive Leadership (3)** Nature of executive life in the public sector, the function of leadership in implementing, making, and changing policy. Leadership styles, the relation of leadership to its constituencies and communities. Joint with POL S 572.

**PB AF 504 Administrative Ethics (3)** Moral dilemmas that confront public managers. Critical view of societal and political values that prescribe moral behavior. Organizational and professional ethics. Ethical problems of public organization managers. Systematic means for understanding, analyzing, and coping with moral issues that appear in a career.

**PB AF 505 The Law of Public Administration (3)** Legal framework of public administrative action in the United States, emphasizing constitutional requirements; operation of the administrative process; management of personnel, funds, and contracts; and judicial review of administrative activity.

**PB AF 506 Ethics and Public Policy (3)** Teaches students to identify moral issues in public life. Special focus on the integration of moral concerns into public discussion in a manner which contributes to good policy and does not polarize issues. Discusses moral and political theory by focusing on contemporary cases and issues.

**PB AF 507 International Organizations and Ocean Management (3)** Survey of the manner in which international organizations attempt to manage and regulate the uses of the ocean. Primary emphasis on the analysis of processes that support or constrain these organizations and on the search for alternative policies and organizations. Joint with SMA 507. Prerequisite: SMA 500 or permission of instructor.

**PB AF 509 Public Organizational Theory (3)** Approaches to the study of organizational behavior in a changing society, including consideration of formal and informal organization, personality needs, role playing, client relations, and the sociopolitical and technological environments.

**PB AF 510 Management Analysis (3)** Survey of the theory and current practice relating to governmental organizations and their program objectives.

**PB AF 511 Management of Not-for-Profit Organizations (3)** Focuses upon the roles played by not-for-profit organizations in meeting the public good. Examines internal management issues such as structure, budget, and operations; and external issues such as board functions, legal status, marketing, media relations, and fund-raising.

**PB AF 512 Management of Public Enterprises (3)** Examines issues in managing public enterprises. Provides comparative analysis of policies, development, and management approaches of such enterprises with regard to traditional government agencies, private sector business, and public enterprise of other countries. Special focus on "balancing" business and competitive requirements with public policy/process and the political environment.

**PB AF 513 Public Policy Analysis (3)** Production and use of analysis to support public policy decisions. Defining problems, devising alternative solutions, clarifying

stakes in choices, predicting impacts of choices. Skills developed by working on specific policy problems. Assumes familiarity with statistics, microeconomic theory, and institutions and processes of American government. Prerequisite: 516 or permission of instructor.

**PB AF 514 Policy Implementation (3)** Examines how policies are implemented, provides a set of analytic skills for anticipating, diagnosing implementation problems. Primarily for students who plan to become public-sector policy analysts or managers. Mastery of basic literature and its application to solving problems of public policy, including estimating feasibility of policy alternatives, identifying sources of implementation failure, is expected. Prerequisites: 509, 516.

**PB AF 515 Decision Making for Public Managers (3)** Considers decision making from normative, prescriptive, and descriptive perspectives. Emphasizes individual decision making, with some discussion of organizational decision practice. Focuses on decision analysis; presents tools for structuring decisions; and considers the role of analysis as a basis for negotiation.

**PB AF 516 Microeconomic Policy Analysis (3)** Ways in which microeconomic analysis can contribute to the analysis of public sector issues. Supply and demand, consumer and firm behavior, competitive and monopoly markets, income distribution, market failure, government intervention. Policy applications of theory. Prerequisite: elementary economics.

**PB AF 517 Economics of the Public Sector (3)** Methods of analyzing effects of public expenditures and taxes on behavior of individuals and firms, on economic efficiency, and on equity and distribution of income. Theory and practice of intergovernmental fiscal relations. Application of theory to formulation of public policy. Prerequisite: 516.

**PB AF 519 Policy Analysis Workshop (3)** Techniques and methods required in social policy analysis, including the technical issues in developing, using, interpreting research relevant for social policy and bureaucratic problems. Designed to aid future administrators and analysts in performing policy analysis, working with researchers to develop relevant studies and with the agency bureaucracy to integrate research and analysis. Prerequisite: permission of instructor.

**PB AF 520 Intergovernmental Relations (3)** Comparative study of the issues involved in implementing government programs across multiple jurisdictions. Issues of accountability, feasibility, politics, and constitutional limits are examined by focusing upon various methods used to implement programs across federal, state, regional, and international jurisdictions.

**PB AF 521 Public Management: Program Planning and Design (3)** Policy context of planning and programming, the institutionalization of purpose, the planning process, activity design, work scheduling and measurement, and program evaluation.

**PB AF 522 Public Management: Budgeting (3)** Budgeting as a management process. Study of formulation and administration of government budgets, including the role of budgeting in the policy process, the approaches to budget formulation and analysis, the development of the PPB approach, and the aspects of budget administration, such as revenue estimating, allotment control, and cost accounting.

**PB AF 523 Public Management: Personnel (3)** Study of line-staff decision making in acquisition and use of human resources in public organizations, including evaluation of job responsibilities, establishment of compensation levels, collective bargaining, selection and placement, performance appraisal, incentive management, and training.

**PB AF 524 Managing People in Public and Non-profit Agencies (3)** Emphasizes the role of the program manager rather than that of the personnel officer. Managing people within a variety of programmatic, bureaucratic, and political settings. Case studies form basis of class discussion, assignments.

**PB AF 525 Organizational Development in Public Agencies (3)** Philosophies, theories, and models of behavioral science interventions in organizational diagnosis and development (OD). In addition to a review of the basic literature dealing with the OD approach, emphasis is placed on examination of case studies and class experience in OD applications, including organizational diagnosis, problem confrontation, and team building. Prerequisite: permission of instructor.

**PB AF 527, 528 Quantitative Analysis; Quantitative Analysis for Public Managers (3,3)** This sequence introduces quantitative methods in the context of public management and policy analysis. Descriptive statistics, hypothesis testing, linear models, and research design and modeling are covered. The sequence helps students to become knowledgeable "consumers" of empirical evidence. Prerequisite: 527 for 528.

**PB AF 530 Financial Management in the Public Sector (3)** Exploration of the managerial uses of accounting and other processes of financial management in the public sector. Topics covered include: financial planning and control, fund accounting, cost accounting, asset accounting, internal controls, auditing, financial analysis, and financial reporting. Prerequisite: permission of instructor.

**PB AF 532 Law and Economics (3)** An introduction to simple microeconomic tools is followed by illustrations of the application of economic reasoning to such topics as antitrust, property, product liability, and torts. Uses and limitations of economics in normative analysis is discussed as well as applications and extensions of the Coase Theorem.

**PB AF 533 Regulatory Policy (3)** Principles of regulation applied to case studies; transportation, environmental safety, communication, monopoly regulation; issues of deregulation and substitutes for regulation.

**PB AF 534 American Foreign Policy (3)** American foreign policy viewed whole, including defense policy, the relationships of foreign policy to domestic policies and priorities, and the full range of historical, constitutional, institutional, political, and theoretical questions related to the formation and the execution of foreign policy in this broad sense. Joint with POL S 534.

**PB AF 535-536 Seminar in American Foreign Policy (3-3)** Seminar discusses wide variety of issues surrounding formation and execution of foreign policy. Special attention to institutional dimensions of international policy and management. Prerequisite: 534.

**PB AF 537 Topics in International Affairs (3, max. 12)** Examines topics of interest and import in foreign policy and international affairs. Focuses on the in-depth analysis of issues and the integration of economic, institutional, and political dimensions.

**PB AF 538 Legislative Relations (3)** Studies role of legislative bodies in American public policy making. Builds on case studies and focuses on tactics, constraints, and options involved in working within a legislative process to achieve public policy goals.

**PB AF 548 Economics of Labor and Human Resources (3)** Economic analysis of policy-related topics in human resources. Topics include labor demand and supply, education and occupation, wage structures and income inequality, discrimination, and poverty. Joint with ECON 548. Prerequisite: equivalent of ECON 400, or permission of instructor; not open to economics majors.

**PB AF 550 Public Arts Policy and Management (3)** Role of government in arts. Range of public support at federal, state, and local levels; reasons for its development and viability. Nature, evolution; functions of public arts agencies in implementing arts policy; relation of such agencies to their constituencies. Seattle, King County, and Washington State serve as case studies.

**PB AF 551 Comparative Administrative Systems (3)** Methodological problems of research in comparative administration. Theoretical and substantive as-

pects of administrative systems in urban-industrial and developing nations. Joint with POL S 579.

**PB AF 552 Administrative Problems of Development (3)** Problems of administering developing nation-states and regions, including theoretical aspects of development administration, bureaucratic change, administrative-political interaction in policy making, organizational development, political impact of administering major programs. Prerequisite: permission of instructor.

**PB AF 553 Applied Cost-Benefit Analysis (3)** Familiarity developed through problems and applications. Techniques of use stressed. Prerequisite: 516 or permission of instructor.

**PB AF 554 Advanced Seminar in Cost-Benefit Analysis (3)** Techniques of, and theoretical foundation for, cost-benefit analysis as applied to the public sector. Joint with ECON 554. Prerequisite: 553 or permission of instructor.

**PB AF 557 Dealings With a Unionized Workforce in Public and Not-for-Profit Sectors (3)** Focuses on making policy and management decisions that avoid effects detrimental to employee/union relationships. Exposure to technical, procedural aspects of labor relations; aimed primarily at responsibilities of prototypical mid-level or senior manager trying to run program in unionized environment. Uses case studies, role plays, guest experts from management/labor.

**PB AF 558 Mediation and Negotiation as Instruments of Public Management and Policy-Making (3)** Possibilities offered by mediation and negotiation methods using a mixture of cases, readings, discussions, lectures, and guest speakers. Use of negotiation and mediation techniques to resolve disputes and disagreements over public-policy issues.

**PB AF 561-562 Policy Development and Administration: Urban Affairs (3-3)** A two-quarter course in the structures, functions, and processes of city government, with special emphasis on the origin, content, and implementation of public policies. Major focus is on the political process at the municipal level: the distribution of influence, the political actors, the decision-making machinery, and the policy outputs. Relevant for students preparing for careers in urban government.

**PB AF 565 Topics in Urban and Regional Affairs (3, max. 12)** Examines various issues of public policy importance in urban and regional affairs by integrating managerial, political, policy, and economic dimensions of the issues.

**PB AF 568 Seminar in Law and Justice (3)** The current volatility in American law enforcement revolves around a number of policy issues that have emerged in the past decade and are considered crucial to the future role, organization, and function of urban policing. These issues are explored, with emphasis on their historic settings, the "actors" who shape their articulation, the parameters of the debate, effects of legal constraints and sociopolitical factors on the development of policy alternatives, and emerging patterns of resolution.

**PB AF 569 Race and Public Policy (3)** Analyzes the way in which the persistent problem of race is expressed in the formation and implementation of social and public policy.

**PB AF 570 Human Resources Policy Analysis and Management (3)** Examines major institutions and programs in the human resources policy area: education, regulation of labor market, health care, income maintenance, social services. Discusses alternative policy instruments, analytic perspectives, intergovernmental issues, and management issues arising across policy areas. Explores challenges of linking services and clients across separate agencies.

**PB AF 571, 572 Public and Educational Policy Issues in the Development of Human Talent (3,3)** Two (noncumulative) courses on policy issues involving education, training, the economy, and the develop-

ment of the nation's human resources. Relationship between education, training, and work; underutilized workers; race and gender discrimination issues; the role of education/training in economic development. Joint with EDPGA 553.

**PB AF 573 Topics in Education and Human Resources Policy (3, max. 12)** Examines various issues of public importance in the areas of education and human resources policy. Focuses on in-depth analysis of relevant issues and the integration of the economic, administrative, and political dimensions of these issues.

**PB AF 577 Risk Assessment for Environmental Health Hazards (3) A** Context, methodologies, types of data, uncertainties and institutional arrangements for risk assessment. Both qualitative and quantitative approaches to the identification, characterization, and control of environmental hazards to health emphasized through didactic and case studies. Joint with ENV S 577, ENVH 577, and CEWA 577. Prerequisites: BIOST 511, EPI 511, or permission of instructor.

**PB AF 580 United States Energy Policy (3)** Energy policy formulation and implementation with emphasis on post-1973 developments. Energy conservation programs; changing roles of oil, coal, gas, nuclear, and solar energy; institutional, environmental and equity considerations; government research and development programs.

**PB AF 581 Information Technology and the Policy-Making Process (3)** Demystifies information base for policy making in democracies. Examines theoretical and practical issues associated with information processing in the public sector. Considers role of new technologies in collecting, analyzing, and disseminating information with special attention to the relationship between these technologies and effective government service, public participation, and organizational accountability.

**PB AF 582 News Media and Public Policy (3)** Explores impacts of news coverage on public policy. Exposure to journalists' approaches to coverage of public affairs, as well as to strategies used by leaders of public/non-profit agencies to attract favorable coverage and minimize damaging coverage. Students learn techniques for assessing impacts of new coverage.

**PB AF 583, 584 Seminar in Science and Public Policy (3,3)** Issues and problems relating to the interaction of science and scientists with the public policy-making process. Science versus the nature and values of political processes, and the continuing tensions between the two. The evolving interaction between scientific and technical knowledge and political power; scientific versus ethical judgments. Role of science in the establishment of national goals. Plans and proposals for increasing governmental competence to deal with public policy issues involving science and technology.

**PB AF 585 Topics in Science, Technology, and Public Policy (3)** Examines relationship between advancement of technical knowledge and pace of technological change, and public policies to induce or respond to these trends. Generic issues of government research, development, and personnel training programs are addressed. Applications of policy issues involving biomedical, communications, energy, environmental, transportation, and weapons technologies.

**PB AF 586 International Science and Technology Policy (3)** Seminar is designed: first, to analyze the relationships between research and development policy, capabilities, and national technological strategies for advanced industrial and less-developed countries; second, to deal with the international implications of particular technologies as countries try to make policy for them in regional and global organizations. Examples of specific technologies are chosen from such fields as space telecommunication, weather and climate modification, airline transportation, nuclear energy, and seabed exploitation.

**PB AF 590, 591 Midcareer Seminar (3,3)** Interdisciplinary seminar in public policy for midcareer professionals.

**PB AF 593 Environmental Policy Processes (3)** Emphasizes the process of developing and implementing environmental policy within context of political and social institutions. Built on a series of case studies that address: topical areas of interest; key aspects of political, regulatory, and institutional processes; and important components of policy analysis.

**PB AF 594 Environmental Policy Analysis: Risks and Values (3)** Familiarizes students with analytical

tools that can provide insight into environmental policy decisions. Methods for representing uncertainty and complex value tradeoffs are presented and used. Case studies in environmental risk management are discussed.

**PB AF 595 Topics in Environmental Policy and Management (3, max. 12)** Examines various topics of public importance in environmental policy and management. Integrates the political, managerial, and economic dimensions of these issues.

**PB AF 598 Administrative and Policy Skills Workshop (1-3)** Teaches practical administrative, leader-

ship, and analytic skills commonly required of managers and analysts in the public and non-profit sectors. The workshops emphasize hands-on problem resolution, simulations, and actual practice.

**PB AF 599 Special Topics (2-6, max. 6)** Study and analysis of special topics in public affairs. Topics vary each quarter depending on curricular needs and interests of students and faculty. May be repeated for credit. Prerequisite: permission of instructor.

**PB AF 600 Independent Study or Research (\*)**

**PB AF 605- Degree Project (1-6)-**

# School of Public Health and Community Medicine

## Dean

Gilbert S. Omenn  
F350 Health Sciences

## Associate Dean

Patricia W. Wahl

The School of Public Health and Community Medicine offers graduate programs leading to the degrees of Master of Public Health, Master of Science, Master of Science in Radiological Sciences, and Doctor of Philosophy. In the M.P.H. program, the student may select an area of emphasis in one of three fields: environmental health, epidemiology, or health services. These programs are directed particularly at preparing individuals for research, academic, or professional practice careers.

Admission requirements vary according to the field in which the student wishes to major and are given in the departmental descriptions that follow. Prior consultation with the departments is recommended. Applicants holding medical degrees have three options: one of the master's programs, research fellowship, or two-year residency in general preventive medicine, public health, or occupational medicine. For the medical student, a concurrent M.D.-M.P.H. program is offered. Ph.D. programs are offered in biostatistics, epidemiology, pathobiology, and in environmental and occupational health sciences. Doctoral studies in health services in collaboration with other school and campus departments are available.

Students may earn both Master of Public Health and Master of Arts degrees concurrently through a special program offered jointly by the School of Public Health and Community Medicine and the Henry M. Jackson School of International Studies (M.P.H.-M.A.). The interdisciplinary curriculum covers the complex relationship between public health problems of the developing world and the cultural, economic, and political environments in which they exist. Both schools provide tools to gain insights into community-based problems and to implement change. Other concurrent degree programs offered are the M.P.H.-M.S.W. in maternal and child health offered jointly with the School of Social Work, and a joint M.P.H.-M.N. in community health care.

Other opportunities include the Master of Health Administration degree which is offered by the Health Services Administration Group. This program is described elsewhere in this catalog. The school also offers a non-traditional, part-time extended M.P.H. program in the Department of Health Services for midcareer health professionals who are unable to participate in the residence master's program.

In addition, the school offers two undergraduate degrees. The Department of Environmental Health offers a Bachelor of Science degree providing a general education in the broad fields of environmental health. Also offered is a Bachelor of Clinical Health Services degree in the Department of Health Services. Candidates for both these degrees must be admitted to the University of Washington at the junior year level.

## Biostatistics

### F600 Health Sciences

The Department of Biostatistics offers Master of Science and Doctor of Philosophy degrees in quantitative methods applied to the medical and biological sciences. Biology and medicine are undergoing major changes in their development as quantitative sciences. As technological advances find expression in new research tools, new theoretical concepts are being employed in the analysis of quantitative data. The techniques and viewpoints of mathematics and statistics, traditionally peripheral to biology and medicine, are rapidly being woven into the fabric of the life sciences, thereby providing exciting new opportunities in research and teaching.

Many universities have instituted programs relating mathematics or statistics to one particular biological field. The goal of the biostatistics graduate program is to equip students to develop and apply the quantitative techniques of mathematics, statistics, and computing appropriate to medicine and biology.

Because of the faculty's involvement in a diversity of statistical applications, students receive an education of high quality. Students are recruited from undergraduate programs in mathematics, statistics, and biology and are selected on the basis of outstanding quantitative ability.

### Admission Requirements

Students may enter the program from an undergraduate major in mathematics, statistics, or a biological field. An applicant must have completed or be in the process of completing two years of calculus (to include one year of advanced calculus), one course in linear algebra, and one course in probability theory.

In addition to fulfilling graduate admission requirements, an applicant must submit three letters of recommendation from persons competent to evaluate the applicant's abilities, a narrative statement concerning the applicant's purpose and interest in entering the program, and an official Graduate Record Examination score report. Recommendation for selection of candidates is made by a faculty admissions committee, with review of applicants beginning in February for admission autumn quarter. The application deadline is April 15.

### Master of Science Degree

Students working for the Master of Science degree must complete required course work, demonstrate proficiency in a computer language, write a thesis, take a consulting class, and pass the first-year theory examination. This examination is offered at the conclusion of a student's first year, and, if a student does not pass, it can be retaken the next year. A Ph.D. student may receive a nonthesis Master of Science degree by successfully passing the first- and second-year qualifying examinations.

### Doctor of Philosophy Degree

Students earning the Ph.D. degree develop statistical theory and applications particular to the health sciences.

Students in the Ph.D. program must complete 36 credits of BIOT 800, write a dissertation, complete a consulting class, and demonstrate proficiency in a computer language. Students must also pass the Ph.D. statistical theory and applied theory qualifying examinations, a biology project, and pass the General and Final Examinations.

### Correspondence and Information

Graduate Program Coordinator  
Department of Biostatistics, SC-32

## Faculty

### Chairperson

Norman E. Breslow

### Professors

Bare, B. Bruce,\* 1969, ‡(Forest Resources, Quantitative Ecology and Resource Management), M.S., 1965, Minnesota; Ph.D., 1969, Purdue; harvest scheduling, biometry, forest land management, taxation, finance, management science.

Breslow, Norman E.,\* 1967, Ph.D., 1967, Stanford; clinical trials, epidemiology, survival and categorical data.

Crowley, John J.,\* 1981, M.S., 1970, Ph.D., 1973, Washington; survival analysis: cancer clinical trials and carcinogenesis studies; statistical methods in epidemiology.

Davis, Kathryn A. B.,\* 1974, M.A., 1966, Michigan; Ph.D., 1974, Washington; density estimation, cardiovascular data analysis, clinical trials.

DeRouen, Timothy A.,\* 1975, (Dental Public Health Sciences), † M.S., 1969, Ph.D., 1971, Virginia Polytechnic; applications to the epidemiology of cardiovascular and sexually transmitted diseases.

Diehr, Paula,\* 1970, (Health Services), M.S., 1967, Ph.D., 1970, California (Los Angeles); application of statistics to health services research, multiple regression.

Feigl, Polly,\* 1969, M.A., 1957, Ph.D., 1961, Minnesota; application of statistics to biomedical studies and cancer patient data systems.

Fisher, Lloyd D., Jr.,\* 1966, (Applied Mathematics), M.A., 1965, Ph.D., 1966, Dartmouth; cardiovascular data analysis, clinical trials, multivariate statistics, longitudinal data analysis.

Fleming, Thomas R.,\* 1984, (Statistics), † M.A., 1974, Ph.D., 1976, Maryland; survival analysis, cancer-related trials, sequential analysis.

Ford, E. David,\* 1985, (Fisheries, Forest Resources), † (Quantitative Ecology and Resource Management, Statistics), Ph.D., 1968, University College (London); time-series analysis, modeling plant response to environment, interpreting ecological processes from spatial patterns, statistical inference for complex models, measurement theory for ecological processes.

Gallucci, Vincent F.,\* 1972, ‡(Fisheries, Forest Resources, Quantitative Ecology and Resource Management), M.S., 1966, State University of New York (Buffalo); Ph.D., 1971, North Carolina State; biomathematics and population dynamics.

Grizzle, James,\* 1989, (Research), Ph.D., 1960, North Carolina State College; clinical trials, cancer prevention studies.

Hallstrom, Alfred P.,\* 1968, M.Sc., 1961, Ph.D., 1968, Brown; application of statistics to biomedical data, cardiovascular applications, emergency medical services.

Kronmal, Richard A.,\* 1964, (Statistics), † (Quantitative Ecology and Resource Management), Ph.D., 1964, California (Los Angeles); nonparametric density estimation, computer algorithms, cardiovascular data analysis.

Martin, Donald C.,\* 1972, (Psychiatry and Behavioral Sciences), M.S., 1961, Ph.D., 1968, Florida State; statistical computing, randomization tests, approximations for probability functions.

Moolgavkar, Suresh H.,\* 1984, ‡(Epidemiology), M.B.B.S., 1966, Bombay (India); Ph.D., 1973, Johns Hopkins; cervix and breast carcinoma epidemiology.

Perrin, Edward B.,\* 1962, ‡(Health Services), M.A., 1956, Columbia; Ph.D., 1961, Stanford; health information systems, stochastic modeling, research methodology.

Peterson, Arthur V., Jr.\* 1975, M.S., 1971, Ph.D., 1976, Stanford; survival data methodology, competing risks, design of medical studies, random number generation.

Prentice, Ross L.\* 1974, M.S., 1968, Ph.D., 1970, Toronto; failure time analysis, disease prevention trials, epidemiologic methods, dietary lactose and disease.

Self, Steven G.\* 1984, M.S., 1975, California State (Long Beach); Ph.D., 1981, Washington; longitudinal data analysis, survival time models, clinical trials.

Thompson, Elizabeth A.\* 1985, (Statistics),† (Quantitative Ecology and Resource Management), M.A., 1974, Ph.D., 1974, Cambridge; statistical analysis of human genetic data, population genetics, statistics of conservation biology.

van Belle, Gerald.\* 1974, (Environmental Health),† (Quantitative Ecology and Resource Management), M.A., 1964, Ph.D., 1967, Toronto; clinical trials, applied statistics, screening, epidemiology.

Wahl, Patricia W.\* 1971, Ph.D., 1971, Washington; multivariate statistical techniques, especially regression analysis applied to cardiovascular data.

Wellner, Jon A.\* 1983, (Statistics),† Ph.D., 1975, Washington; large-sample theory, asymptotic efficiency, empirical processes, survival analysis.

#### Associate Professors

Benedetti, Jacqueline K.\* 1980, (Medicine), Ph.D., 1974, Washington; statistical methodology in infectious disease research.

Blumenstein, Brent A.\* 1983, (Research), M.S., 1970, Ph.D., 1974, Emory; computer applications in biostatistics, cancer clinical trials, applied statistics.

Conquest, Loveday L.\* 1978, ‡(Fisheries), (Forest Resources, Quantitative Ecology and Resource Management), M.S., 1972, Stanford; Ph.D., 1975, Washington; sampling and experimental design for environmental monitoring studies, especially spatial and temporal aspects; statistical methods for timber, fish, and wildlife studies; global monitoring of the environment; general biometry.

Green, Stephanie J.\* 1984, (Research), M.A., 1973, Indiana; 1979, Wisconsin; longitudinal data analysis, clinical trials, cancer research.

Kopecky, Kenneth J.\* 1978, (Research), M.S., 1975, Ph.D., 1977, Oregon State; clinical trials design and analysis, survival data analysis, epidemiologic methodology, goodness of fit, biomedical and cancer-related applications.

McKnight, Barbara.\* 1982, M.S., 1979, Ph.D., 1981, Wisconsin; survival analysis and competing risks, carcinogenesis testing, epidemiology, and diabetes research.

O'Sullivan, Finbarr.\* 1987, (Statistics),† Ph.D., 1983, Wisconsin; inverse problems, statistical computing, applied statistics.

Temkin, Nancy R.\* 1977, (Neurological Surgery),† M.S., 1971, Connecticut; Ph.D., 1976, State University of New York (Buffalo); clinical trials, recovery models, statistical modeling—epileptic phenomenon, survival analysis.

#### Assistant Professors

Brooks, Maria M., 1991, (Research), M.A., 1986, Harvard; Ph.D., 1991, North Carolina (Chapel Hill); nonparametric curve estimation, clinical trials.

Leroux, Brian G., 1991, (Research), (Dental Public Health Sciences),† M.Sc., 1985, Ph.D., 1989, British Columbia; toxicology, analysis of random effects models, stochastic modeling.

Lin, Danyu, 1990, M.S., 1986, Ph.D., 1989, Michigan; survival analysis, clinical trials, AIDS research, liver transplantation, environmental health.

Raghunathan, T. E.\* 1987, M.S., 1983, Ph.D., 1987, Harvard; sample surveys, longitudinal studies, Bayesian techniques.

Wijsman, Ellen M.\* 1981, (Research), ‡(Medicine), Ph.D., Wisconsin; statistical genetics, population genetics, genetic epidemiology.

## Course Descriptions

### Courses for Undergraduates

**BIOST 111 Lectures in Applied Statistics (1)** Weekly lectures illustrating the importance of statisticians in a variety of fields, including medicine and the biological, physical, and social sciences. Contact instructor for information on which fields of applications emphasized. Joint with STAT 111.

### Courses for Graduates Only

**BIOST 511 Medical Biometry I (4) AS** Presentation of the principles and methods of data description and elementary parametric and nonparametric statistical analysis. Examples are drawn from the biomedical literature, and real data sets are analyzed by the students after a brief introduction to the use of standard statistical computer program packages. (e.g., SPSS, BMDP, MINITAB). Statistical techniques covered include description of samples, comparison of two sample means and proportions, simple linear regression and correlation.

**BIOST 512 Medical Biometry II (4) W** Multiple regression, analysis of covariance, and an introduction to one-way and two-way analyses of variance: including assumptions, transformations, outlier detection, dummy variables, and variable selection procedures. Examples drawn from the biomedical literature with computer assignments using SPSS. Prerequisite: 511 or equivalent.

**BIOST 513 Medical Biometry III (4) Sp** Analysis of categorical data including two sample methods, sets of  $2 \times 2$  tables,  $R \times C$  tables, and logistic regression. Classification and discrimination techniques. Survival analysis including product limit estimates and the Cox proportional hazards model. Prerequisite: 512 or permission of instructor.

**BIOST 514 Biostatistics I (4) A** Mathematically sophisticated presentation of principles and methods of data description; graphics; point, confidence interval estimation; hypothesis testing; relative risk; odds ratio; Mantel-Haenszel; chi-square test (matrix algebra required). Examples drawn from biomedical literature; real-data sets analyzed using statistical computer package. Prerequisite: biostatistics majors or permission of instructor.

**BIOST 515 Biostatistics II (4) W** Mathematically sophisticated introduction to linear models; multiple regression, correlation; residual analysis; dummy variables; analysis of covariance; one-, two-way analysis of variance; randomized blocks; fixed, random effects (repeated measure, factorial designs); multiple comparisons (matrix algebra required). Real biomedical data sets analyzed. Prerequisite: 514, biostatistics major, or permission of instructor.

**BIOST 521 Biostatistics for Experimentalists (4) Sp** Statistical aspects of design, data analytic models appropriate to classes of experiments most commonly employed in biomedical sciences. One-, two-way analyses of variance; factorial, crossed, nested, repeated measures designs. Clean, messy real-data sets analyzed using BMD or SAS computer programs. Prerequisites: 511, 512, or equivalent. (Offered alternate years)

**BIOST 522 Applications of Vital and Health Statistics (3)** Analysis of routinely collected data on the health status and care of populations, with emphasis on the potential and limitations of this approach. Stressed are the importance of such data for the development and the evaluation of programs and the recognition of new hazards. Joint with EPI 522. Prerequisite: EPI 511 or permission of instructor.

**BIOST 524 Design of Medical Studies (3)** Design of medical studies, with emphasis on randomized

controlled clinical trials. Bias elimination, controls, treatment assignment and randomization, precision, replication, power and sample size calculations, stratification, and ethics. Suitable for graduate students in biostatistics and for research-oriented graduate students in other scientific fields. Joint with STAT 524. Prerequisites: 511 or equivalent, and one of 513, STAT 421, 423, 512, or EPI 512; or permission of instructor. (Offered alternate years.)

**BIOST 529 Sample Survey Techniques (3) Sp** Design and implementation of selection and estimation procedures in sample surveys. Emphasis on the sampling of human populations, although principles apply to oil-leister sampling, multistage and two-phase procedures, optimal allocation of resources, estimay, replicated designs, variance estimation, national census materials. Joint with QMETH 529 and STAT 529. Prerequisites: 511, STAT 421, STAT 423, QMETH 500 or equivalent; or permission of instructor.

**BIOST 532 Statistical Methods in Medical Genetics (2) Sp** *Wijsman* Theory and application of statistical techniques used in medical genetics. In-depth discussion of linkage and segregation analysis and ascertainment problems. Applications stressed with reference to assumptions and limitations. Data sets analyzed with current computer programs. Joint with MED 532. Prerequisite: knowledge of genetics or permission of instructor.

**BIOST 533 Classical Theory of Linear Models (3) Sp** Introduction to one-, two-way analysis of variance; randomized blocks; fixed, random effects, multiple comparisons. Statistical distribution theory for quadratic forms of normal variables. Fitting of the general linear model by least squares. Joint with STAT 533. Prerequisites: 513, STAT 421 or STAT 423; and STAT 513; and a course in matrix algebra.

**BIOST 534 Statistical Computing I (3)** Computational methods in statistics: sorting, searching, and calculation of order statistics; data interpolation and approximation; numerical methods for least squares and principal components; computational geometry; calculation of probabilities; data structures and database management. Joint with STAT 534.

**BIOST 535 Statistical Computing II (3)** Computational methods in statistics: generation of pseudo random numbers, Monte Carlo quadrature, variance reduction techniques, design of Monte Carlo studies, nonlinear optimization, nonlinear least squares, selected special topics. Joint with STAT 535. Prerequisite: 534 or equivalent.

**BIOST 536 Categorical Data Analysis in Epidemiology (4) A** Summary of univariate categorical data analysis; introduction to multivariate analysis of categorical epidemiologic data using multiplicative models. Experience at interpretation; familiarity with available programs gained by analysis of *bona fide* data, critiques of analyses appearing in literature. Joint with EPI 536. Prerequisites: 513 and EPI 514, or 515, or permission of instructor.

**BIOST 537 Survival Data Analysis in Epidemiology (4) W** Introduction to multivariate analysis of survival data using multiplicative models. Application to epidemiologic studies. Familiarity with interpretation and available computer programs gained by analysis of *bona fide* sets of data and critiques of analyses appearing in the literature. Joint with EPI 537. Prerequisite: 536 or permission of instructor.

**BIOST 570, 571, 572 Advanced Applied Statistics and Linear Models (4,4,4)** Quality measures, robustness, variability, and randomization. Regression; multiple predictors; multiple linear regression. Analysis of residuals; model building; errors in variables; missing data; additive models; recursive partitioning; classification; generalized linear models; censored and truncated data; design of experiments; blocking; patterned covariance matrices. Multivariate analysis. Joint with STAT 570, 571, 572. Prerequisites: 512, 513 or 533 or STAT 421, 423 and a course in matrix algebra for 570; 570 for 571; 571 for 572.

**BIOST 573 Statistical Methods for Categorical Data (3) Sp** Exact and asymptotic methods of analysis for  $2 \times 2$  contingency tables. Maximum likelihood estimation of logistic regression models for binary response variables, and selected examples of the use of these models in epidemiologic and clinical research. Introduction to the theory and applications of log linear models for discrete data. Selected special topics. Joint with STAT 573. Prerequisites: 571 and STAT 581, or permission of instructor. (Offered alternate years.)

**BIOST 574 Multivariate Statistical Methods (3)** Use of multivariate normal sampling theory, linear transformations of random variables, one- and two-sample tests, profile analysis, partial and multiple correlation, multivariate ANOVA and least squares, discriminant analysis, principal components, factor analysis, robustness, and some special topics. Some computer use included. Joint with STAT 574. Prerequisite: 570 or permission of instructor. (Offered alternate years.)

**BIOST 576 Statistical Methods for Survival Data (3) A** Statistical methods for censored survival data arising from follow-up studies on human or animal populations. Parametric and nonparametric methods, Kaplan-Meier survival curve estimator, comparison of survival curves, log-rank test, regression models including the Cox proportional hazards model, competing risks. Joint with STAT 576. Prerequisites: STAT 581 and either 513, STAT 473, or equivalent. (Offered alternate years.)

**BIOST 577 Advanced Design and Analysis of Experiments (3)** Concepts important in experimental design: randomization, blocking, confounding. Application and analysis of data from randomized blocks designs, Latin and Graeco-Latin squares, incomplete blocks designs, split-plot and repeated measures, factorial and fractional replicates, response surface experiments. Joint with STAT 577. Prerequisite: 570 or STAT 421 (minimum 3.0) or permission of instructor.

**BIOST 578 Special Topics in Advanced Biostatistics (\*, max. 3)** Advanced-level topics in biostatistics offered by regular and visiting faculty. Joint with STAT 578. Prerequisite: permission of instructor.

**BIOST 579 Advanced Data Analysis (4)** Resampling methods; jackknife, bootstrap, cross-validation. Smoothing techniques; local averages; projection-pursuit regression; recursive partitioning regression. Selected aspects of linear regression. Robust-resistant methods. Density estimation. Clustering techniques. The EM-algorithm. Graphical exploratory methods. Prim-81. Joint with STAT 579. Prerequisites: 571 and STAT 513 or permission of instructor.

**BIOST 580 Seminar in Biostatistics (\*, max. 9) AWSp** Presentation and discussion of special topics and research results in biostatistics. Speakers include resident faculty, visiting scientists, and advanced graduate students.

**BIOST 590 Biostatistical Consulting (\*) AWSps** Training in consulting on the biostatistical aspect of research problems arising in the biomedical field. Students, initially under the close supervision of a faculty member, participate in discussions with investigators leading to the design and/or the analysis of a quantitative investigation of a problem. With experience, independent associations of student and research worker are encouraged, with subsequent review by faculty of resulting design and analysis. Prerequisite: permission of instructor.

**BIOST 593 Cancer Prevention Laboratory (3)** Laboratory experience for pre- and post-doctoral students working on cancer prevention projects at the Fred Hutchinson Cancer Research Center. Joint with EPI 593.

**BIOST 600 Independent Study or Research (\*) AWSps**

**BIOST 700 Master's Thesis (\*) AWSps**

**BIOST 800 Doctoral Dissertation (\*)**

## Environmental Health

F463 Health Sciences

### Undergraduate Program

#### *Bachelor of Science Degree*

This curriculum focuses on environmental conditions in the community and workplace that adversely affect the health and well-being of people, and the means by which these conditions may be eliminated or controlled. Public health topics include water, wastewater, food protection, housing, vectors, and epidemiology. Other subject matter covered includes industrial hygiene, toxicology, hazardous waste management, and environmental health regulation. Graduates from this curriculum have career opportunities in public health, occupational health, environmental protection, and environmental consulting.

**Admission Requirements:** Junior standing. CHEM 140, 141, 150, 151, 160, 161, 223, 224, 241, 242; BIOL 201, 202, 203; MATH 124; MICRO 301, 302; ENGR 331; ZOOL 118; and PHYS 114, 115, 116.

**Graduation Requirements:** 40 credits in environmental health; STAT 311 (or 220), EPI 420; one-quarter internship.

### Graduate Program

The Department of Environmental Health offers four graduate degrees: Master of Science, Master of Science in Radiological Sciences, Master of Public Health, and Doctor of Philosophy. The areas of emphasis in the graduate programs are: industrial hygiene and safety, with radiological sciences option (M.S., M.S. in Radiological Sciences, Ph.D.), environmental and occupational toxicology (M.S., Ph.D.), environmental health technology (M.S.), and occupational and preventive medicine (M.P.H.).

The industrial hygiene and safety program (M.S., Ph.D.) focuses on technical, psychological, and administrative aspects of the prevention or control of industrial disease and accidental injury. The industrial hygiene radiological sciences program (M.S. in Radiological Sciences) also emphasizes the health effects and control measures of industrial disease as they relate to radiation sources.

The environmental and occupational toxicology emphasis (M.S., Ph.D.) focuses on research and application of basic scientific principles toward a better understanding of the health effects of toxic substances in the workplace and general environment. Students who select the toxicology emphasis participate in laboratory research on molecular and biochemical processes involved in chemically induced toxic responses such as soft-tissue (e.g., brain, lung, kidney and liver) damage, birth defects, cancer, and nervous system impairment.

The environmental health technology emphasis (M.S.) focuses on community problems associated with toxic substances and their control, hazardous waste disposal, and traditional areas of environmental health, such as water and wastewater treatment. Students conduct research on the monitoring and control of hazardous substances and biological agents contaminating surface and ground waters, or on hazardous waste management. This may involve field and laboratory activities.

The M.P.H. program is for individuals with an earned doctorate. The goal of the program is to provide training in public health sciences with a focus on occupa-

tional and environmental health. The program provides didactic instruction and participation in field studies. Research efforts focus on the etiology and prevention of occupational disease. Physicians have the option of also applying for a residency in occupational or preventive medicine.

The Department of Environmental Health cooperates with the Department of Health Services in a three-year, part-time Extended Master of Public Health degree program designed for midcareer public and community health professionals. Students continue their employment, are required to attend one-month summer sessions for three years, and must meet at the University for five weekends during the academic year. The curriculum is designed to provide advanced knowledge and skills for planning, organizing, and evaluating community and environmental health programs.

#### *Admission Requirements*

Prerequisites for admission to the M.S. graduate programs in industrial hygiene and safety, environmental and occupational toxicology, and environmental health technology include Bachelor of Science or equivalent degree in environmental health, a physical science, a biological science, or engineering, and submission of Graduate Record Examination scores.

Prerequisite for admission to the M.P.H. program is a doctoral degree.

Prerequisites for admission into the Ph.D. program in environmental and occupational health sciences include a Bachelor of Science degree in science or engineering with adequate preparation in physics, chemistry, mathematics, and biology. Selection of an applicant will also be based upon an honors-level GPA, a statement of personal goals consistent with the program, supportive letters of reference, and high scores on the Graduate Record Examination.

#### *Graduation Requirements*

The M.S. and M.P.H. graduate programs are designed for seven quarters of study, including field applications and research, requiring completion of a minimum of 60 credits plus 9 credits of thesis, and submission of an acceptable thesis.

The Ph.D. program has a strong research focus, and requires completion of a minimum of 95 credits of which at least 68 are didactic courses in relevant fields of study. A dissertation of original research suitable for publication in an appropriate peer-reviewed journal is required. For an entering student with a Bachelor of Science or Engineering degree, the program of study can be expected to take approximately four to five years. A student entering with a Master of Science degree in a relevant area may complete the degree in less time.

#### *Financial Aid*

Traineeships and tuition support are available for a limited number of students. This support comes from federal and private sources awarded to the department or school. A few research assistantships are available to second-year students.

#### *Research Facilities*

Specialized laboratories exist for research in industrial hygiene chemistry, trace organics and heavy metals, environmental microbiology, electron microscopy, controlled exposure to environmental factors, toxicology, and radiological sciences. Field research is facilitated through an extensive consultation or service program conducted by this department for labor and industry in Washington State.

## Faculty

### Chairperson

Gerald van Belle

### Professors

Bigos, Stanley J., 1980,  $\ddagger$ (Orthopaedics), M.D., 1975, Missouri; orthopaedics.

Checkoway, Harvey,\* 1987, (Epidemiology),  $\ddagger$  M.P.H., 1975, Yale; Ph.D., 1978, North Carolina; occupational and environmental health epidemiology.

Costa, Lucio G.,\* 1983, Dott.Pharm., 1977, Milano; neurotoxicology, signal-transduction systems in developmental neurotoxicity; molecular mechanisms and biological markers of neurotoxicity.

Eaton, David L.,\* 1979, (Environmental Studies),  $\ddagger$  Ph.D., 1978, Kansas Medical Center; biochemical toxicology, mechanisms of chemical carcinogenesis, metabolism of toxic chemicals.

Fantel, Alan G.,\* 1974, (Research),  $\ddagger$ (Pediatrics), M.A., 1969, Oregon; Ph.D., 1974, Washington; embryology, teratology.

Mottet, N. Karle,\* 1959, (Pathology),  $\ddagger$  M.D., 1952, Yale; effects of trace elements, especially methylmercury and arsenic, on the nervous system.

Omenn, Gilbert S.,\* 1971, (Medicine),  $\ddagger$  M.D., 1965, Harvard; Ph.D., 1972, Washington; genetic predisposition to environmental and occupational hazards, cancer prevention, health promotion in older adults.

Robkin, Maurice A.,\* 1967, (Nuclear Engineering),  $\ddagger$  Ph.D., 1961, Massachusetts Institute of Technology; radiation dosimetry, environmental radioactivity, radioactive waste management, health physics.

Shepard, Thomas H., 1962, (Obstetrics and Gynecology, Pediatrics), M.D., 1948, Rochester; embryology.

van Belle, Gerald,\* 1974, (Biostatistics),  $\ddagger$  (Quantitative Ecology and Resource Management), M.A., 1964, Ph.D., 1967, Toronto; environmental risk factors for neurodegenerative diseases, neuroepidemiology, risk communication, clinical trials, applied statistics.

Wilson, John T., Jr.,\* 1974, M.D., 1950, Columbia; Sc.D., 1956, Cincinnati; environmental and occupational medicine, industrial toxicology.

Woods, James S.,\* 1982, (Research), M.S., 1968, Ph.D., 1970, Washington; M.P.H., 1978, North Carolina; biochemical toxicology of trace metals, metal effects on heme and porphyrin metabolism; biomarkers of metal exposure.

### Associate Professors

Barnhart, Scott,\* 1983,  $\ddagger$ (Medicine), M.D., 1979, George Washington; M.P.H., 1986, Washington; occupational medicine.

Breyse, Peter A.,\* 1957, (Emeritus), M.S., 1954, Washington State; M.P.H., 1957, Pittsburgh; exposure of population to contaminants.

Burbacher, Thomas M.,\* 1984, (Research), Ph.D., 1983, Washington; behavioral toxicology, developmental effects of pre and postnatal exposure to environmental contaminants.

Covert, David S.,\* 1975, (Research), (Civil Engineering, Atmospheric Sciences), M.S., 1971, Ph.D., 1974, Washington; atmospheric chemistry, aerosol physics, air pollution meteorology.

Faustman, Elaine M.,\* 1983, Ph.D., 1980, Michigan State; molecular mechanisms of teratogenesis, developmental and reproductive toxicology, N-nitroso compounds, risk assessment methodology.

Fenske, Richard A.,\* 1990, Ph.D., 1984, California (Berkeley); exposure assessment, agricultural health and safety, pesticide exposure.

Franklin, Gary M.,\* 1988, (Research), (Medicine), M.D., 1969, George Washington; M.P.H., 1983, California

(Berkeley); occupational injury, neurological epidemiology, public health nutrition.

Geraci, Joseph P.,\* 1973, M.S., 1969, Ph.D., 1972, Washington; radiation hepatic injury, neutron effects on gastrointestinal system, radiation carcinogenesis, biological effects of nuclear weapons.

Gilbert, Steven P.,\* 1991, (Research), Ph.D., 1986, Rochester; primate neurobehavioral toxicology and teratology, heavy metals and developmental neurotoxicants, risk assessment.

Hatlen, Jack B.,\* 1952, (Emeritus), M.S., 1958, Washington; environmental health program planning and management, environmental health manpower training.

Kalman, David A.,\* 1978, Ph.D., 1978, Washington; organic chemistry of toxic agents, detection and fate of chemical hazards in natural or man-made environments, exposure assessments.

Koenig, Jane O.,\* 1975, M.S., 1961, Ph.D., 1963, Washington; respiratory physiology, health effects of air pollutants, lung response of susceptible groups.

Luchtel, Daniel L.,\* 1972, Ph.D., 1969, Washington; electron microscopy, cell biology, lung anatomy and pathophysiology of air pollutants at cellular level, fiber toxicology.

Morgan, Michael S.,\* 1974, (Civil Engineering), Sc.D., 1972, Massachusetts Institute of Technology; applied respiratory physiology and inhalation toxicology.

Nevissi, Ahmad,\* 1973, (Research), (Fisheries), Ph.D., 1973, Arkansas; radiochemistry.

Omiecinski, Curtis J.,\* 1983, (Pharmacology), Ph.D., 1980, Washington; molecular toxicology, genetic regulation/expression of drug and chemical metabolizing enzymes.

Ongerth, Jerry E.,\* 1984, (Civil Engineering), M.S., 1966, Ph.D., 1973, Michigan; public water supply, solid waste management, water quality management, monitoring and control of waterborne pathogens.

Rosenstock, Linda,\* 1980, (Medicine),  $\ddagger$  M.D., 1977, M.P.H., 1977, Johns Hopkins; occupational/general internal medicine.

### Assistant Professors

Daniell, William E.,\* 1988, (Medicine),  $\ddagger$  M.D., 1979, Tufts; M.P.H., 1986, Washington; occupational medicine and epidemiology, neuropsychological sequelae of solvent/pesticide exposure, multiple chemical sensitivity syndrome.

Grossmann, Angelika,\* 1988, (Research),  $\ddagger$ (Comparative Medicine, Pathology), D.V.M., 1978, Ph.D., 1982, Freie Universität (Berlin); pathology of aging.

Guffey, Steven E.,\* 1987, Ph.D., 1987, North Carolina; industrial exhaust ventilation design, modeling of pressure and flow relationships, and tracer gas studies of hood design.

Kavanagh, Terrance J.,\* 1989, (Research), (Medicine),  $\ddagger$  Ph.D., 1985, Michigan State; glutathione metabolism, analytical cytology, in vitro toxicology, toxicology of oxygen free radicals.

Kissel, John,\* 1990, Ph.D., 1985, Stanford; human exposure assessment, environmental risk assessment, solid and hazardous waste management practice, design of water and wastewater treatment processes.

### Lecturers

Freeman, Stanley H., 1976, M.A., 1959, New York University; industrial safety, program organization and administration.

Monteith, Lee E., 1981, M.S., 1956, Washington; industrial hygiene, analytical and environmental chemistry.

Morris, Sharon L., 1982, B.A., 1965, Reed; occupational safety and health policy, continuing education.

Treser, Charles D., 1980, M.P.H., 1976, Michigan; policy analysis and decision making, program planning and evaluation, environmental education, housing, vector control.

## Course Descriptions

### Courses for Undergraduates

**ENVH 311 Introduction to Environmental Health (3) Asp Treser** Relationship of people to their environment, how it affects their physical well-being and what they can do to influence the quality of the environment and to enhance the protection of their health. Emphasis on environmental factors involved in transmission of communicable diseases and hazards due to exposure to chemical and physical materials in our environment.

**ENVH 343 Environmental Radioactivity (3)** Sources of radioactivity in the environment, including both natural sources, especially radon, and manmade sources, especially nuclear power and nuclear explosions. Emphasis given to methods for determining radiation doses from the significant sources. Joint with PHYS 343 and NUC E 343. Prerequisites: PHYS 121, 122, 123 or equivalent.

**ENVH 405 Toxic Chemicals in the Environment (3) W Eaton, Omiecinski** Basic principles governing the behavior and effects of toxic chemicals released into the environment; sources, distribution, and fate of toxic chemicals in the environment; chemicals and cancer; chemicals and birth defects; ecological effects of chemicals, government regulation of chemical hazards. Joint with ENV S 305. Prerequisites: BIOL 203, or BIOC 405, 406 or equivalent.

**ENVH 415 Nuclear Instruments (3) W** Principles, measurements, and detection of various types of radiation encountered in nuclear energy systems. Use of Geiger, proportional, and scintillation detectors; ionization chambers; analog-digital data-logging equipment; multichannel analyzers. Joint with NUC E 485. Prerequisite: junior standing.

**ENVH 430 Methods in Environmental Sampling and Analysis (3) Sp** Field sampling methods are studied and selected laboratory analyses of food, drinking water, and waste waters are conducted. Official methods for characterizing physical and chemical quality of water and wastes are demonstrated. Microbiological criteria are emphasized for student participation, including: enumeration of subgroups in populations, selective inhibitor, characteristics of normal flora, rationale of "indicator" organisms. Prerequisites: junior standing, 440, MICRO 301 and 302, and permission of instructor.

**ENVH 440 Water and Waste Sanitation (4) A Hatlen** Study of the health implications of water use and sewage disposal methodology. Focal concerns include water-quality evaluation, pollution factors, individual and public water and sewage facilities, site selection criteria, and legislative and agency activities. The knowledge and skills required for effective field performance by the environmental health specialist are emphasized.

**ENVH 441 Food Protection (3) W Hatlen** Protection of food products during production, processing, and distribution. Emphasis on prevention of food-borne diseases and chemical contamination of foods at the retail level. Prerequisite: MICRO 301 or permission of instructor.

**ENVH 442 Vector Control and Housing (3) Sp Hatlen** Study of the impact and control of rodents and arthropod vectors of disease, including consideration of economic poisons used, their regulation, and safety measures. Housing practices and conditions affecting health in residential (private and multiple dwelling) and institutional (schools and hospitals) settings are examined and control measures reviewed.

**ENVH 445 Solid Waste Management (3) Sp Ongerth** Examination of the public health, environmental, economic, and materials conservation aspects of solid wastes management; amounts and sources of solid wastes, waste reduction and recycling, methods of storage, transportation and disposal, integrated waste management, identification of present problems

and future needs. Prerequisite: environmental health major or permission of instructor.

**ENVH 446 Hazardous Waste Management (3) Sp Kisse** Characterization of hazardous wastes and introduction to pertinent federal and state regulations. Description of management options at pre-generation, pre-release, and post-release stages. Emphasis on environmental health effects and significance. Supplemented with case studies. Prerequisite: environmental health major or permission of instructor.

**ENVH 449 Respiratory Effects of Air Pollution (2) Sp Koenig** Structure and function of the respiratory and cardiac systems and the changes that may be produced by specific air pollutants, such as ozone, carbon monoxide, SO<sub>2</sub>. Air quality criteria and the economic costs of disease are discussed. Several classroom demonstrations. Prerequisite: sophomore standing. (Offered odd-numbered years.)

**ENVH 453 Industrial Hygiene and Safety (3) A Morgan** Introduction to occupational health and safety hazards, analysis, including causes, effects, evaluation, control, and legislation. Prerequisite: 311 or permission of instructor.

**ENVH 454 Industrial Hygiene Sampling and Instrumentation (2) W Breyse** Series of laboratory experiments illustrate the use of a wide spectrum of industrial hygiene sampling equipment. Included are airflow calibration, chemical calibration, detector tubes, personnel sampling devices, both continuous and discrete reading instruments. Instrumentation for noise also covered. Prerequisite: 453.

**ENVH 457 Industrial and Environmental Noise (3) Sp** Survey of industrial and community noise problems, including sources, effects, measurement, control, and legislation.

**ENVH 481 Air Pollution Control (3) A Pilat** Fundamental concepts of air pollution. Emission sources, atmospheric dispersion, ambient concentrations, adverse effects, governmental regulations, emission standards, air-quality standards, processes and equipment for controlling emissions. Joint with CIVE 490. Prerequisite: senior standing.

**ENVH 470 EH Practice: Administration and Management (2) A Treser** Explores selected aspects of administering environmental health programs in the community, including organization theory and practice, budgeting, personnel management, program planning and evaluation, and community relations. Prerequisite: environmental health major or permission of instructor.

**ENVH 471 Environmental Health Regulation (2) W Treser** Introduction to administrative regulation and process. Authority, jurisdiction, and structure of environmental control programs and agencies; the regulatory process; agency acquisition and retention of information; administrative actions; enforcement of environmental health laws; major statutes and cases impacting programs. Prerequisite: environmental health major or permission of instructor.

**ENVH 479 Environmental Research Design (1) W Treser** Designed to assist in the development of environmental health research projects. Common research designs, methodology, principles, and problems with emphasis on effective research problem definition, implementation, and data presentation.

**ENVH 480 Environmental Health Problems (\*, max. 6) AWSps Treser** Individual projects involving library, laboratory, or field study of a specific environmental health problem. Prerequisite: environmental health major or permission of instructor.

**ENVH 482 Environmental Health Internship (3-15) Treser** Assignment to an environmental health or environmental protection agency for supervised observation and experience in environmental health technology, program planning and utilization of community resources. Credit/no credit only. Prerequisite: environ-

mental health major or permission of departmental adviser.

#### **ENVH 497 Environmental Health Special Electives (\*) AWSps**

**ENVH 499 Undergraduate Research (\*) AWSps** Individual research on a specific topic in environmental health upon which specific conclusions, judgments, or evaluation can be made or upon which facts can be presented. Prerequisite: environmental health major or permission of instructor.

#### **Courses for Graduates Only**

**ENVH 511 Environmental and Occupational Health (3) W** Effects of exposure to chemical, physical, and biological agents, using a problem-oriented approach embracing the community and workplace environments. Current issues, using specific cases from recent literature as basis for classroom discussion and written assignments.

**ENVH 512 Hazardous Waste Disposal (3) S DeWalle** Generation, collection, transportation, and ultimate disposal of hazardous waste on land. Alternatives include physical-chemical elimination, resource recovery, and process modifications. In-depth engineering and cost aspects of alternatives. Health and engineering implications of TSCA, RCRA, CWA, and CERCLA.

**ENVH 514, 515 Environmental and Occupational Toxicology I, II (3,3) W,Sp Eaton, Kavanagh** Major topical areas in human and environmental toxicology, including the biochemical, cellular, and physiological mechanisms by which chemicals produce toxic responses; the toxicology of the major classes of chemicals; principles of toxicity testing; interpretation of toxicological data. Joint with ENV 514, 515. Prerequisites: BIOL 212, BIOC 440, or permission of instructor.

**ENVH 517 Methods and Applications of Genetic Epidemiology (3) W Austin** Research methods for evaluating genetic influences on disease, risk factors. Study designs, statistical methods include twin studies, family studies, population-based association studies, complex segregation analysis, path analysis, linkage analysis. Joint with EPI 517. Prerequisites: EPI 512, 513; BIOST 511, 512, 513; background in human genetics or equivalent basic genetics course.

**ENVH 520 Biological Effects of Ionizing Radiation (3) AW Geraci** Effects of ionizing radiation at the molecular, cellular, organ, and organism levels with emphasis on mammalian systems.

**ENVH 521, 522 Laboratory in Radiation Biology (1,1)** Laboratory study of the biological effects of ionizing radiation.

**ENVH 523 Biological Effects of Nuclear Explosions (2) Sp Geraci** Biological effects of blast, thermal radiation, and nuclear radiation, or combination thereof, from nuclear weapons. Physical description of nuclear weapons and their effects, biomedical effects, protection, and possible treatments. Prerequisite: permission of instructor.

**ENVH 524 Radioactive and Chemical Wastes (3) Sp Nevissi** Fate and effects of mixed radioactive and hazardous waste in the environment are discussed. Topics are: the generation, storage, disposal, environmental transport, pathways to humans, and evaluation of health effects of mixed wastes. Also includes: waste disposal at sea, and the current status and future trends in mixed waste disposal.

**ENVH 525, 526 Physical Radiation Dosimetry I, II (3,3) A,W Robkin** Physical basis of the quantification of the exposure to ionizing radiation. Includes the mathematics and physics of sources, interactions, spectrometry, and dosimetry of ionizing radiation.

**ENVH 527 Radiation Hazards Analysis and Control (1) Sp** Emphasizes methods and procedures rather than facility or equipment design.

**ENVH 528 Physical Aspects of Medical Imaging (4)** Quantitative physical principles of medical imaging are presented for electromagnetic and sonic radiation. Methods of image formation and formation extraction are discussed for conventional film radiography, CT, DSA, PET, B-mode ultrasound and Doppler ultrasound. Joint with RADGY and BIOEN 508.

**ENVH 529 Environmental Impact of Radioactivity (3) Sp Robkin** Dispersion, fate, and environmental significance of radionuclides released into environment. Includes dispersion, deposition, environmental transport, uptake, biological effects, protection from, and regulations relating to, radionuclides released into environment. Examples taken from academic, research, and industrial sources with emphasis on central station nuclear power plants.

**ENVH 531 Neurotoxicology (3) W Costa** Advanced discussions of the principles and methodological approaches to neurotoxicology (including behavioral toxicology), classes of neurotoxic agents, types and mechanisms of neurotoxic effects, as well as the role of neurotoxicology in toxicology and public health. Prerequisite: 514, 515 or ENVH 405 or permission of instructor. (Offered even-numbered years.)

**ENVH 532 Reproductive and Developmental Toxicology (2) S Faustman** Investigates chemicals that can induce adverse reproductive and developmental outcomes. Discussion topics include identification and characterization of specific classes of toxic agents, mechanisms of action of these agents at the molecular and cellular level, and risk assessment and regulatory issues. Prerequisite: 514 or equivalent with permission of instructor.

**ENVH 533 Molecular Toxicology (2) A Omiecinski** Advanced discussion of molecular mechanisms whereby chemical, physical, and biological agents produce their harmful effects on biological tissues. Joint with PHCOL 533. Prerequisites: 511, 515; or PHCOL 401, 402, 403; or PHCOL 511, 512, 513; or permission of instructor. (Offered even-numbered years.)

**ENVH 535 Inhalation Toxicology (2) Sp Covert, Koenig, Luchtel** Advanced course on the toxicology of air pollutants and the response of the respiratory system to inhaled gaseous and particulate toxins. Issues and concepts covered include biology of the respiratory system, exposure technology, experimental design and methodological issues, health effects of air pollutants, and regulatory aspects. Prerequisites: 511, 514.

**ENVH 545 Drinking Water and Health (3) Sp Ongerth** Principles, requirements of public water supply for protection of public health. Includes essential characteristics of water quality and sources, water treatment and distribution systems with associated health hazards; public health engineering, epidemiology, risk assessment; surveillance, regulatory needs to assure safe public water supplies. Prerequisite: permission of instructor; recommended: 440 or CIVE 351.

**ENVH 550 Methods of Microscopy (2) Sp Luchtel** Sample preparation, methods for biological/nonbiological specimens, photographic and darkroom printing techniques, theory and practical use of light microscopy (bright field, phase, polarizing) and electron microscopy (transmission and scanning). Emphasis on asbestos fiber analysis, including elements of the NIOSH 7400 and 7402 methods. Small project required.

**ENVH 552 Environmental Chemistry of Pollution (3) A Kalman** Chemical and physical processes determining distribution and fate of chemical hazards, detection of low levels of hazardous compounds, and environmental evaluation and prediction. Fundamental chemical concepts and measurable properties of individual compounds to interpret and relate measurements. Prerequisite: admission to graduate program or permission of instructor.

**ENVH 553 Instrumental Methods for Industrial Hygiene Measurement (Lecture) (3) W Kalman** Methods, instrumentation, and theory of atmospheric sampling and analysis, emphasizing evaluation of potential occupational hazards and exposures. Prerequisite: 453 or permission of instructor.

**ENVH 555 Instrumental Methods for Industrial Hygiene Measurement (Laboratory) (3) W Monteith** Utilizes typical instrumental techniques and analytical methods for the evaluation of potential occupational exposures. Prerequisites: 453 or permission of instructor and concurrent registration in 553.

**ENVH 557 Industrial Ventilation I (3) W Guffey** Principles of exhaust ventilation systems, design for contaminant control in industry. Prerequisite: 453 or permission of instructor.

**ENVH 558 Industrial Ventilation II (3) Sp Guffey** Troubleshooting and redesign of existing exhaust ventilation systems for contaminant control. Includes measurement laboratories. Prerequisite: 557 or permission of instructor.

**ENVH 560 Organizing and Administering Industrial Safety and Health Programs (4) Sp Freeman** Explores industrial organization and methods of integrating safety and industrial hygiene programs with industrial operations. Philosophic issues related to industrial safety and health such as responsibility for safety, dependency on safe practice, and hierarchy of prevention are investigated. Contains numerous case problems and other student involvement opportunities.

**ENVH 562 Technical Aspects of Safety and Health (3) A Freeman** Explores specific hazards associated with major industries, as well as hazards common to all industries. Machine guarding, electrical safety, systems safety analysis, materials handling, and working at heights are among the subjects covered.

**ENVH 564 Health and Safety Problems in Industry (2)** Provides wide spectrum of practical examples of industrial processes and occupational health and safety problems, as practiced in an industrial milieu; serves as a case-study sequence for the didactic course work in several programs. Provides opportunity to approach and analyze health and safety problems using a multidisciplinary approach.

**ENVH 566 Introduction to Ergonomics (3) Sp Basic** principles of ergonomics applied to problems of worker and management of working environment. Topics include measurement of physical work capacity, problems of fatigue and heat stress, applied biomechanics, worker-machine interactions and communication, design of displays and controls. Prerequisite: basic human physiology or permission of instructor.

**ENVH 567 Environmental Carcinogenesis (2) A Eaton** Biochemical and molecular basis of carcinogenesis induced by chemical and physical agents in the environment, including detailed discussion of multi-stage process of carcinogenesis, mechanisms of action of specific chemical and physical carcinogens; current approaches to identification of carcinogens, and chemoprevention strategies. Prerequisite: 514 or equivalent, or permission of instructor.

**ENVH 569 Occupational Fitness (3) A** Interaction between physical requirements of occupational tasks and the individual's capacity to perform; jobs requiring manual material handling. Techniques of job analysis, validation of standards, criteria for new design or redesign, and employee screening. Prerequisite: 566 or permission of instructor.

**ENVH 570 Occupational and Environmental Epidemiology (3) W Checkoway** Research in occupational and environmental determinants of disease. Defining exposed populations, characterizing exposure levels, estimating disease risks relative to exposure. Cohort, case-control, cross-sectional designs for various health outcomes. Applications to exposure standard setting and risk assessment. Joint with EPI 570. Prerequisite: EPI 511 or EPI 512, 513 or permission instructor.

**ENVH 572 Clinical Occupational Medicine (3) S Rosenstock** Comprehensive overview of clinical occupational medicine. Introduction to principles of occupational disease, occupational history taking, and physician involvement in workers' compensation. Approaches to diagnosis and management of occupational diseases based on organ systems. Prerequisite: possession of an M.D. degree or health related background or permission of instructor.

**ENVH 577 Risk Assessment for Environmental Health Hazards (3) A Faustman, Omenn** Examines the context, methodologies, types of data, uncertainties, and institutional arrangements for risk assessment. Both qualitative and quantitative approaches to the identification, characterization, and control of environmental hazards to health emphasized through didactic and case studies. Joint with ENV S 577, CEWA 577, and PB AF 577. Prerequisite: 515, BIOST 511, or permission of instructor.

**ENVH 580 Environmental Health Seminar (1, max. 6) AWSpS** Current environmental health research and environmental control programs. Credit/no credit only.

**ENVH 581, 582, 583 Environmental Health Reading (1,1,1) A,W,Sp Koenig, Luchtel, van Belle** Critical reading of selected basic and applied research publications on environmental health problems and programs. Must be taken in sequence.

**ENVH 584 Occupational Health and Safety: Policy and Politics (3) Sp Camp, Morris** Designed to provide a better understanding of the historical, political, and policy issues in occupational health and safety through selected readings and discussion with experts in the field. Each student prepares a written and oral analysis of a policy issue and makes a policy proposal.

**ENVH 590 Selected Topics (1-6) AWSpS** In-depth study of a current environmental health topic. May be taken with HSERV 590 and EPI 590. Credit/no credit only. For more information and permission, consult department program adviser.

**ENVH 591 Current Topics in Toxicology (1, max. 6) Faustman, Woods** Provides in-depth examination of current topics in environmental and occupational toxicology taken from recently published journal articles. Consists of presentations led by students, postdoctoral fellows and faculty. Students expected to participate actively in discussion. Assigned weekly readings given according to the schedule of speakers and topics.

**ENVH 592 Special Topics in Radiation Biology (2)**

**ENVH 595 Research Rotation (3, max. 9)** Research laboratory rotation for predoctoral graduate students. Students commit at least ten hours per week to a laboratory research project aimed at introducing the student to current methods in laboratory research, and to familiarize the student with specific faculty research interests. Prerequisites: graduate standing and permission of program director.

**ENVH 598 Field Practice in Radiological Health (\*, max. 6)**

**ENVH 599 Field Studies (2-6, max. 6) AWSpS** Assignment to an environmental research or service program for application of evaluation techniques. Credit/no credit only.

**ENVH 600 Independent Study or Research (\*) AWSpS** Prerequisite: permission of departmental adviser.

**ENVH 700 Master's Thesis (\*) AWSpS** Prerequisite: permission of departmental adviser.

**ENVH 800 Doctoral Dissertation (\*)** Credit/no credit only. Prerequisite: permission of departmental adviser.

## Epidemiology

F263 Health Sciences

## Graduate Program

The Department of Epidemiology offers three graduate degrees in the field of epidemiology for individuals intending to become academicians, highly qualified research specialists, or well-trained practitioners. The Master of Science degree requires concentration on courses and research in epidemiology as preparation for technical specialization or as a prelude to the Doctor of Philosophy program. The Master of Public Health degree requires course work in health services and environmental health in addition to epidemiology and thesis research. The Ph.D. course requirements differ from the M.S. program requirements primarily in the degree and complexity of research for the dissertation. Course work includes a basic series in epidemiology, one or more courses in biostatistics, and seminars. Electives are dictated by the student's special interest and experience. The department also offers post-doctoral research training and a two-year residency in general preventive medicine with emphasis on epidemiology for physicians.

### Special Requirements

An applicant should have a degree in medicine, dentistry, or veterinary medicine or be a qualified holder of a master's or higher degree in a relevant field, such as nursing, microbiology, or biostatistics, or in an appropriate social science. Others who will be considered are students enrolled in medical school who are recommended for the M.D.-Ph.D. program and, occasionally, individuals with a baccalaureate degree whose prior work experience is appropriate.

### Financial Aid

Federally financed research training stipends are available on a limited basis. Some opportunities for work on various research projects or for aid in teaching may provide partial assistance.

### Research Facilities

University facilities include well-equipped laboratories and access to computers. Various opportunities for field research are provided in Seattle and elsewhere in the state, including the Fred Hutchinson Cancer Research Center, which is staffed, in part, by members of the departmental faculty.

### Correspondence and Information

Graduate Program Coordinator  
Department of Epidemiology, SC-36

## Faculty

### Chairperson

Noel S. Weiss

### Professors

Alexander, E. Russell,\* 1990, M.D., 1953, Ph.D., 1948, Chicago; infectious diseases, public health administration.

Checkoway, Harvey,\* 1987, (Environmental Health),† M.P.H., 1975, Yale; Ph.D., 1978, North Carolina; occupational epidemiology.

Connell, Frederick A.,\* 1976, ‡(Health Services, Pediatrics), M.D., 1972, New York; M.P.H., 1978, Washington; maternal and child care, health services.

Daling, Janet R.,\* 1978, M.A., 1973, Ph.D., 1977, Washington; maternal and child health and cancer research.

Eisenberg, Mickey S.,\* 1976, ‡(Medicine), M.D., 1971, Case Western Reserve; Ph.D., 1978, Washington; emergency medicine.

Emanuel, Irvin,\* 1964, (Pediatrics), † M.A., 1956, Arizona; M.D., 1960, Rochester, M.S.P.H., 1966, Washington; epidemiology of maternal and child health problems, nutritional sciences.

Foy, Hjordis M.,\* 1965, M.D., 1953, Karolinska Institut (Sweden); M.S., 1967, Ph.D., 1968, Washington; epidemiology and control of infectious disease.

Gale, James L.,\* 1969, M.D., 1961, Columbia; M.S., 1969, Washington; epidemiology and control of infectious disease, international health.

Grayston, J. Thomas,\* 1960, (Pathobiology), M.D., 1948, M.S., 1952, Chicago; epidemiology and control of infectious disease.

Handfield, H. Hunter, 1979, ‡(Medicine), M.D., 1968, Columbia; infectious diseases.

Henderson, Maureen M.,\* 1975, (Health Services), (Medicine), † M.B.B.S., 1949, D.P.H., 1956, Durham (England); epidemiology of chronic diseases.

Holmes, King K.,\* 1967, ‡(Medicine, Microbiology), M.D., 1963, Cornell; Ph.D., 1967, Hawaii; clinical epidemiology and pathogenesis of infectious diseases.

Koepsell, Thomas D.,\* 1979, (Medicine), (Health Services), † M.D., 1972, Harvard; M.P.H., 1979, Washington; epidemiology of chronic diseases, particularly seizure disorders, applications of epidemiologic concepts to medical practice, epidemiology approaches to health services research.

Lee, John A. H.,\* 1966, M.B.Ch.B., 1949, M.D., 1955, Edinburgh (Scotland); D.P.H., 1952, London (England); epidemiology of neoplastic disease.

Moolgavkar, Suresh H.,\* 1984, (Biostatistics), M.B.B.S., 1966, Bombay (India); Ph.D., 1973, Johns Hopkins; cancer epidemiology, development of quantitative methodology.

Perine, Peter L.,\* 1981, M.D., 1966, Kansas; M.P.H., 1973, Washington; international health, sexually transmitted diseases, diseases caused by pathogenic spirochetes and their molecular biology.

Peterson, Donald R.,\* 1960, (Emeritus), M.D., 1947, Oregon; M.P.H., 1958, California (Berkeley); epidemiology.

Rivara, Frederick P. II,\* 1984, ‡(Pediatrics), M.D., 1974, Pennsylvania; M.P.H., 1980, Washington; ambulatory pediatrics.

Stamm, Walter E.,\* 1976, ‡(Medicine), M.D., 1971, Harvard; infectious diseases.

Thomas, David B.,\* 1975, M.D., 1963, Washington; M.P.H., 1969, D.P.H., 1972, Johns Hopkins; cervix and breast carcinoma epidemiology.

Weiss, Noel S.,\* 1973, M.D., 1967, Stanford; M.P.H., 1969, D.P.H., 1971, Harvard; chronic disease epidemiology.

Worthington-Roberts, Bonnie S.,\* 1971, (Nutritional Sciences), M.S., 1967, Ph.D., 1971, Washington; maternal and child nutrition.

#### Associate Professors

Austin, Melissa A.,\* 1988, M.S., 1975, California (Los Angeles); Ph.D., 1985, California (Berkeley); genetic epidemiology, coronary artery disease.

Beresford, Shirley A.,\* 1987, M.A., 1973, Cambridge (England); Ph.D., 1981, London (England); cancer control and health promotion.

Chu, Joseph,\* 1981, (Obstetrics and Gynecology), † M.D., 1975, Georgetown; M.P.H., 1981, Washington; women's health care.

Davis, Scott,\* 1981, M.S., 1977, Rochester; Ph.D., 1980, Washington; cancer epidemiology, disease etiology.

DiGiacomo, Ronald F.,\* 1974, ‡(Comparative Medicine), D.V.M., 1965, Pennsylvania; M.P.H., 1974,

Washington; comparative epidemiology and zoonoses.

Hoover, J. Joanne,\* 1972, (Research), M.D., 1960, Illinois; M.P.H., 1972, Washington; cardiovascular epidemiology.

Kreiss, Joan K.,\* 1985, (Medicine), † M.D., 1978, Washington (St. Louis); M.S.P.H., 1984, California (Los Angeles); infectious disease, international health.

Kukull, Walter A.,\* 1991, M.S., 1974, Western Washington; Ph.D., 1983, Washington; aging and neurodegenerative diseases.

LaCroix, Andrea Z.,\* 1989, (Health Services), M.P.H., 1981, Ph.D., 1984, North Carolina; epidemiology of aging.

Longstreth, William T., 1980, ‡(Medicine), M.D., 1975, Pennsylvania; M.P.H., 1982, Washington; neurology.

Martin, Diane K.,\* 1978, ‡(Health Services), M.A., 1972, Temple; Ph.D., 1979, Washington; health-care organization and behavior.

Moore, Donald E., 1977, ‡(Obstetrics and Gynecology), M.D., 1967, Case Western Reserve; reproductive endocrinology.

Nolan, Charles M., 1980, ‡(Medicine), M.D., 1969, Arkansas; infectious diseases.

Pendergrass, Thomas W., 1978, ‡(Pediatrics), M.D., 1971, Tennessee; hematology, oncology.

Shy, Kirkwood K.,\* 1979, ‡(Obstetrics and Gynecology), M.D., 1973, Wayne State; M.P.H., 1979, Washington; gynecology.

Siscovick, David S.,\* 1987, (Medicine), † M.D., 1976, Maryland; M.P.H., 1981, Washington; preventive cardiology.

Stanford, Janet L.,\* 1986, M.P.H., 1982, Emory; Ph.D., 1986, Johns Hopkins; cancer and women's health.

Stergachis, Andy S.,\* 1980, (Pharmacy Practice), † M.S., 1976, Ph.D., 1979, Minnesota; reproductive epidemiology, drug epidemiology, health program evaluation, pharmacy administration.

Vaughan, Thomas L.,\* 1982, M.D., 1978, Illinois; M.P.H., 1983, Washington; cancer and adverse reproductive outcomes as related to environmental and occupational exposures.

White, J. Emily,\* 1982, M.S., 1978, Ph.D., 1982, Washington; cancer prevention research, epidemiologic methods, Alzheimer's disease.

Yamanaka, William K.,\* 1974, Ph.D., 1969, California (Berkeley); public health and international nutrition.

#### Assistant Professors

Alderman, Beth W.,\* 1989, M.D., 1981, Chicago; M.P.H., 1984, Washington; maternal and child health.

Astley, Susan, J.,\* 1992, M.S., 1979, Oregon; Ph.D., 1990, Washington; chronic childhood diseases.

Dugowson, Carin E., 1989, ‡(Medicine), M.D., 1976, Illinois; M.P.H., 1986, Washington; rheumatology.

Goldbaum, Gary M.,\* 1989, M.D., 1978, Colorado; M.P.H., 1989, Washington; infectious diseases, public health administration.

Heckbert, Susan R., 1991, M.D., 1981, Case Western Reserve; M.P.H., 1987, Ph.D., 1990, Washington; outcomes of drug therapy, susceptibility to cancers.

Holt, Victoria, 1991, (Health Services), † M.P.H., 1987, Ph.D., 1990, Washington; women's reproductive health issues.

Keston, Mark,\* 1990, Ph.D., 1989, Flinders; M.P.H., 1990, Harvard; nutrition and chronic diseases.

Koutsky, Laura A.,\* 1989, M.S.P.H., 1981, Ph.D., 1987, Washington; sexually transmitted diseases, cancer etiology.

Kristal, Alan R.,\* 1990, (Health Services), M.S., 1976, Framingham State; M.P.H., 1979, Northwestern; Dr. P.H., 1983, Columbia; diet, cancer and nutritional intervention.

Krohn, Marijane,\* 1991, (Obstetrics and Gynecology), † M.A., 1978, California State; M.P.H., 1981, California (Berkeley); Ph.D., 1987, Washington; female reproductive complications.

Mueller, Beth A.,\* 1989, M.P.H., 1980, California (Los Angeles); Dr. P.H., 1984, Tulane; pediatric injury and emergency treatment, maternal health.

Nazar-Stewart, Valle, 1992, M.S., 1982, Harvard; Ph.D., 1991, Washington; cancer rates in different populations, infant mortality.

Psaty, Bruce M.,\* 1984, (Medicine), † (Health Services), M.D., 1981, Indiana; M.P.H., 1986, Washington; cardiovascular disease, health-care delivery systems.

Reiber, Gayle E., 1991 (Health Services), † M.P.H., 1975, Johns Hopkins; Ph.D., 1989, Washington; public health, epidemiology.

Schwartz, Stephen M.,\* 1990, M.P.H., 1984, Yale; Ph.D., 1989, Washington; epidemiology methods, cancer.

Sherman, Karen J.,\* 1989, Ph.D., 1983, Cornell; M.P.H., 1986, Washington; infectious diseases and the occurrence of cancer.

Sherry, Bettylou,\* 1985, M.S., 1978, Ph.D., 1986, Washington; nutrition and maternal and child health.

Stevens, Nancy G.,\* 1982, ‡(Family Medicine), M.D., 1979, M.P.H., 1982, Washington; family medicine.

Wolf, Marsha E.,\* 1989, M.S., 1979, Sarah Lawrence College; Ph.D., 1988, Washington; injury prevention, infectious diseases.

## Course Descriptions

### Courses for Undergraduates

**EPI 420 Introduction to Epidemiology (3) A Schwartz** For the undergraduate student wishing to devote only one quarter to a course in epidemiologic methods. Description of ways in which variation in disease occurrence is documented and how that variation is studied to understand causes of disease.

**EPI 497 Epidemiology Special Electives (\*) AWSpS** Off-campus course for medical students. Prerequisite: permission of adviser.

**EPI 499 Undergraduate Research (\*) AWSpS** Prerequisite: permission of adviser.

### Courses for Graduates Only

**EPI 501 Public Health Practice at the Local Level (3)** History and development of local, state public health departments. Traditional vs. new roles and critical interactions with public, private agencies highlighted. Examples drawn from areas of current concern (e.g., sexually transmitted diseases; health promotion, disease prevention; environmental hazards; substance abuse; emergency medical services). Joint with HSERV 501. Prerequisite: HSERV 511 or permission of instructor.

**EPI 511 Introduction to Epidemiology (3-4) A Schwartz** For the graduate student wishing to devote only one quarter to a course in epidemiologic methods. Description of ways in which variation in disease occurrence is documented, and how that variation is studied to understand causes of disease. Prerequisite: graduate standing.

**EPI 512 Epidemiologic Methods I (4) A Koepsell, Weiss** Principles and methods of epidemiology. Covers measures of disease frequency, measures of effect, causal inferences, descriptive epidemiology, study types, misclassification, and effect modification. Designed for students who want to take 513. Prerequisite: prior or concurrent enrollment in BOST 511 or equivalent.

**EPI 513 Epidemiologic Methods II (4) W Koepsell, Weiss** Continuation of 512. Considers how designs of epidemiologic studies may be constructed to maximize etiologic inferences. Covers confounding, ran-

domized trials, cohort studies, case-control studies, and selected topics. Prerequisite: 512.

**EPI 514 Application of Epidemiologic Methods (4) Sp Daling, Mueller, Schwartz** Practical experience in analysis of data. Students analyze data sets currently on file using contemporary epidemiologic methods as taught in 512 and 513. Prerequisites: 512, 513 and epidemiology major.

**EPI 517 Methods and Applications of Genetic Epidemiology (3) W Austin** Research methods for evaluating genetic influences on disease, risk factors. Study designs, statistical methods include twin studies, family studies, population-based association studies, complex segregation analysis, path analysis, linkage analysis. Joint with ENVH 517. Prerequisites: 512, 513; BIOST 511, 512, 513; background in human genetics or equivalent basic genetics course.

**EPI 519 Epidemiology of Cardiovascular Disease (3) A Psaty** Principles, methods, and issues in the epidemiology of cardiovascular disease. Focuses on coronary heart disease and its major risk factors; also covers other topics such as stroke and sudden death. The format includes informal lectures and discussions of the current literature. Prerequisite: 511 or 512, 513.

**EPI 520 Infectious Diseases Epidemiology (4) A Foy** Principles and practices of epidemiology, focusing on communicable diseases. Methods for epidemiological investigation of infections taught by reading classical descriptions of disease outbreaks and analyzing current papers. Term paper required, consisting of an investigation of an infectious disease outbreak or a protocol for a research study. Prerequisite: 511 or permission of instructor.

**EPI 521 Epidemiology of Maternal and Child Health Problems (4) W Emanuel, Hickok** Contribution of epidemiology to understanding the etiology of various problems, including congenital malformations; fetal, infant, maternal mortality; abortion; neonatal morbidity; complications of pregnancy; prematurity; mental retardation together with evaluation of control problems. Joint with HSERV 542. Prerequisites: 511 and graduate, medical, or dental school standing, or permission of instructor.

**EPI 522 Applications of Vital and Health Statistics (3) S Lee** Analysis of routinely collected data on the health status and care of populations, with emphasis on the potential and limitations of this approach. Stressed are the importance of such data for the development and the evaluation of programs and the recognition of new hazards. Joint with BIOST 522. Prerequisites: 512, 513.

**EPI 524 Epidemiologic Studies of Cancer Etiology and Prevention (3) Sp Davis, Kristal** Current knowledge of the role that chemicals, radiation, viruses, familial factors, immunodeficiencies, and benign diseases play in the etiology of various cancers, as determined from studies in human populations; the epidemiologic characteristics of most major types of cancer; applications of epidemiologic principles to planning and evaluating programs of primary, secondary, and tertiary cancer prevention. Prerequisite: 511 or 513.

**EPI 525 Topics in Preventive Medicine (2) S Foy, Henderson** Examine current scientific knowledge and state of the art of preventive medical interventions. Discuss and consider options for current practice. Joint with HSERV 505. Prerequisite: M.D., O.D., or permission of instructor.

**EPI 526 Zoonotic Diseases (3) W DiGiacomo, Rausch** Explores the public health aspects of zoonotic diseases, their epidemiology and current approaches to control. Focuses on the major viral, rickettsial, bacterial, protozoal, helminthic, and fungal diseases transmitted from wild and domesticated animals to humans in North America. Joint with CMED 526. Prerequisite: 520 or permission of instructor.

**EPI 528 Exposure Measurement in Epidemiology (3) Sp White** Principles and methods of measuring

exposures and covariates in epidemiological studies. Validity and reliability of measures, questionnaire design, effects of measurement error, maximizing response rates, quality-control procedures, measurement of specific exposures. Prerequisite: 513.

**EPI 529 Scientific Basis for Collective Action in Disease Prevention (2) S Lee** Seminar series involving preliminary reading on contemporary problems of community action in support of the public health. Topics include aspects of standard setting, prophylactic activity, the control of injury, and international action such as that to protect the ozone layer. Prerequisites: 512, 513, or permission of instructor.

**EPI 530 AIDS: A Multidisciplinary Approach (2) A Koutsky, Kreiss** Comprehensive overview of the public health, clinical, and laboratory aspects of AIDS. Topics include the pathogenesis, natural history, and management of human immunodeficiency virus (HIV) infections. The impact of AIDS on community and global health care and prospects for prevention and control. Joint with MED 530.

**EPI 531 Problems in International Health (3) S Glynn** Survey of the relationship of the sociocultural, political, economic, and demographic characteristics of developing countries to disease occurrence and to the solution of health problems. Joint with HSERV 531. Prerequisite: graduate or medical student standing.

**EPI 532 Epidemiology of Infectious Diseases of Third-World Importance (3) Sp Gale, Kreiss** A review of major infectious disease problems of the developing world, including AIDS, malaria, tuberculosis, measles, diarrhea. Means of assessing the impact of infectious diseases on the health of communities through surveillance and appropriate survey techniques.

**EPI 533 Pharmacoeconomics (2) W Heckbert, Stergachis** Introduction to the study of risks and benefits of pharmaceuticals. Overview of drug development and approval, assessment of methods for study of drug risks and benefits, and their relationship with the formulation of public policy. Joint with PHARM 533. Prerequisite: graduate standing.

**EPI 535 Maternal and Child Health in Developing Countries (3) Sp Shaul** Familiarizes graduate students with issues in maternal and child health of less developed countries. Topics: nutritional assessment; growth monitoring; infant feeding practices; epidemiologic risk assessment; use of technologies; role of politics, economics, cultural factors toward morbidity and mortality. Joint with HSERV 535. Prerequisite: graduate student standing or permission of instructor.

**EPI 536 Categorical Data Analysis in Epidemiology (4) A** Summary of univariate categorical data analysis; introduction to multivariate analysis of categorical epidemiologic data using multiplicative models. Experience at interpretation; familiarity with available programs gained by analysis of *bona fide* data, critiques of analyses appearing in literature. Joint with BIOST 536. Prerequisites: 514 and BIOST 513; or BIOST 515; or permission of instructor.

**EPI 537 Survival Data Analysis in Epidemiology (4) W** Introduction to the multivariate analysis of survival data using multiplicative models. Application to epidemiologic studies. Familiarity with interpretation and available computer programs gained by analysis of *bona fide* sets of data and critiques of analyses appearing in the literature. Joint with BIOST 537. Prerequisite: 536 or permission of instructor.

**EPI 538 Nutritional Epidemiology (3) W Beresford, Kestin** Application of epidemiological methods to current studies of nutrition and disease. Special methodological problems of importance in nutritional epidemiological studies. Diet and heart disease, and diet and cancer relationships. Enables students to plan studies in nutritional epidemiology. Joint with NUTR 538. Prerequisite: 511 or 512 or permission of instructor.

**EPI 539 Research Methods in Developing Countries (3)** Explores methodologies to obtain useful information regarding health status and health services in Third World countries. Standard evaluation methods which require minimal resources to perform. Measurable indicators of health status and health services discussed. Students design and implement a community-based survey to apply methods learned. Joint with HSERV 539.

**EPI 542 Clinical Epidemiology (2) S Weiss** Principles and methods involved in studying outcome of illness. Prerequisite: 511, or 512 and 513.

**EPI 570 Occupational and Environmental Epidemiology (3) W Checkoway** Research methods for studying occupational and environmental determinants of disease. Defining exposed populations, characterizing exposure levels, estimating disease risks relative to exposure. Cohort, case-control, cross-sectional designs for various health outcomes. Applications to exposure standard setting and risk assessment. Joint with ENVH 570. Prerequisite: 511 or 512, 513 or permission of instructor.

**EPI 583 Epidemiology Seminar (1, max. 3) AWSp** Presentation of current epidemiologic research and application of epidemiologic research in the practice of public health.

**EPI 590 Selected Topics in Epidemiology or International Health (1-6, max. 6) AWSps** Tutorials are arranged for a small number of students for in-depth examination of an area of epidemiology or international health, usually of current nature. Seminar format. Prerequisite: 511. Also a special summer format presenting introductory material. May be taken with ENVH 590 and/or HSERV 590. For more information and permission, consult the department program adviser.

**EPI 591 Current Literature in Epidemiology (1, max. 6) AWSp Weiss** Articles pertaining to epidemiology and related subjects selected from the current literature to be distributed and read by all participants. Faculty members and enrolled students alternate being responsible for conducting sessions and choosing articles to read. Prerequisites: 513.

**EPI 592 Program Seminars (1-6, max. 6) AWSps** Graduate seminars organized to address specific educational needs of students in various specialized programs within the Department of Epidemiology (i.e., Maternal and Child Health). Prerequisite: permission of instructor.

**EPI 593 Cancer Prevention Laboratory (3)** Provides laboratory experience for pre- and post-doctoral students working on cancer prevention projects at the Fred Hutchinson Cancer Research Center. Joint with BIOST 593.

**EPI 600 Independent Study or Research (\*) AWSps** Credit/no credit only. Prerequisite: permission of departmental adviser.

**EPI 700 Master's Thesis (\*) AWSps** Credit/no credit only. Prerequisite: permission of departmental adviser.

**EPI 800 Doctoral Dissertation (\*) AWSps** Credit/no credit only. Prerequisite: permission of departmental adviser.

## Health Services

F346 Health Sciences

### Undergraduate Program

#### *Bachelor of Clinical Health Services*

Candidates for the Bachelor of Clinical Health Services degree must be admitted to the University of Washington at the junior year level. They will pursue a seven-quarter sequence of prescribed studies in the MEDEX Northwest Physician Assistant program. Admission to the professional training program is via a competitive process administered by the MEDEX Northwest program within the Department of Health Services. Because of the program's emphasis on prior medical experience, the great majority of applicants are working adults who have completed their pre-professional undergraduate course work at other colleges and universities throughout the Northwest.

Matriculation in the bachelor's degree pathway is dependent upon both admission to the University and acceptance by the MEDEX Northwest program. Students who are accepted by the MEDEX Northwest program for physician assistant training who are not admissible to the University will be classified as nonmatriculated students. They will earn official University credits and receive a certificate upon completion of the program.

#### *Certificate Program*

MEDEX Northwest is a program designed to train physician assistants. It provides primary-care, midlevel practitioners by training medical personnel with prior clinical experience. A fully accredited physician assistant program conforming to standards developed and administered by the American Medical Association, MEDEX Northwest places thirty students annually in a variety of sites in Washington, Alaska, Oregon, Idaho, and Montana.

MEDEX Northwest is a twenty-one-month program. The first nine months consist of intense clinical and didactic instruction at the University. The six subsequent months are spent in a variety of inpatient and outpatient clinical rotations. The final six-month preceptorship is an on-the-job experience tailored to the practice of individual primary-care preceptors and emphasizing diagnosis and treatment. At the completion of the program, students are eligible to sit for the national certifying examination for physician assistants. Besides the full-time program, MEDEX offers a part-time option which takes three years to complete.

#### *Special Requirements*

Applicants must have a minimum of two years recent, full-time, hands-on experience in the direct delivery of medical care to patients. Applicants must have completed two college-level English composition courses, and two college-level science courses, which must include at least 5 quarter credits in human anatomy and physiology, plus one other science course in a discipline relevant to medicine.

#### *Correspondence and Information*

MEDEX Northwest, Physician Assistant Program, HA-45

### Graduate Program

The Department of Health Services offers a two-year graduate program in health services leading to the Master of Public Health degree and maintains primary responsibility for the graduate program in Health Services Administration (an interdisciplinary degree-granting program of the Graduate School described in the Interdisciplinary Graduate Degree Programs section of this catalog). The department also offers a three-

year extended degree program in community health management leading to the M.P.H. degree for employed professionals working full-time and, in addition, participates in the training of doctoral students from other departments on campus by offering a specialization in health services under the Doctoral Studies Program.

#### *Master of Public Health Degree Program*

The M.P.H. program in health services gives priority to individuals who have completed their professional health training such as physicians, dentists, and nurses. Others who have had substantial experience in the health field are also considered. This program offers a general curriculum that includes introduction to health systems, epidemiology, current issues regarding the provision of medical care, and methodological training for research and program evaluation. Examples of areas of concentration include studies of patient and provider behaviors; evaluation of local, state, and federal health programs; and the impact of technology on medical care costs and benefits. There are three special tracks: one in maternal and child health and one in international health, both offered jointly with the Department of Epidemiology, and one in social and behavioral sciences.

The *maternal and child health* track offers in-depth interdisciplinary training in reproductive and family health. Students also develop technical skills in one or more of the following areas: policy analysis, program evaluation, program management, analysis of large data sets, or research.

The academic track in *international health* is available to students enrolled in an M.P.H. degree program in the School of Public Health and Community Medicine. The program focuses on community health and primary health-care systems of the developing world. Students learn the basic principles of public health and identify the social, political, and economic determinants of illness. They also learn about the planning, management, and evaluation of health-care systems. Requirements include the completion of core M.P.H. courses, a series of international health courses, and a thesis project on a topic relating to third-world health. Students are encouraged to carry out their thesis projects in an international setting. Previous developing country health-related experience is helpful for admission. Financial aid is generally not available. Contact the International Health Program Student Services Coordinator, SC-37, or 543-6714.

The *social and behavioral sciences* academic track is available to students enrolled in an M.P.H. degree program in the School of Public Health and Community Medicine. The program focus is on research and application of knowledge concerning the relationships among (1) social, cultural, and behavioral processes; (2) health and illness; and (3) what society does and can do to promote health and prevent illness. Students receive training in the general theories and methods of the social and behavioral sciences applied to public health interventions for well persons and people with disabilities. Students may choose to plan a course of study concentrating in a particular area of inquiry. Those areas supported within the department are (1) health promotion and disease prevention, (2) chronic illness and disability, and (3) medical and public health ethics.

If deemed appropriate by their advisers, students may take courses in other departments of the University. Community agencies and resources are used extensively. Students with a background in medicine may qualify to receive concurrent credit for residency training in preventive medicine.

#### *Admission Requirements*

In addition to completing Graduate School admission requirements, applicants to the M.P.H. program must submit at least three letters of recommendation, Graduate Record Examination scores, and a goal statement. At least three years of medical or health-care experience are required. In general, applicants

are accepted only for summer and autumn quarters of each year. The application deadline is March 1.

#### *Doctoral Studies Program*

Doctoral study in health services is available to qualified students on campus who are enrolled in the doctoral programs of other departments (e.g., anthropology, biostatistics, economics, epidemiology, geography, medicine, nursing, operations research, organizational theory, political science, psychology, social work, sociology, etc.). Students in the Doctoral Studies Program take four courses in health services and focus their dissertation on original research that relates the basic discipline to a specific health services issue (e.g., health behavior, health-care organizations, costs, quality and utilization of health-care services, etc.).

Students interested in pursuing a doctoral-level concentration in health services should contact the Director of the Doctoral Studies Committee regarding special requirements.

#### *Financial Aid*

Every attempt is made to ensure that students admitted are not prevented from pursuing graduate studies due to inadequate finances. A limited number of fellowships, assistantships, scholarships, and loans are available each year. However, students admitted should be prepared to utilize their own resources to finance their graduate education.

#### *Research Facilities*

In addition to utilizing University facilities, the program makes use of community health-care delivery systems and agencies for research and training.

#### *Extended M.P.H. Degree Program*

The extended M.P.H. degree program is a three-year, part-time program delivered through a combination of intensive four-week summer sessions on the University campus, directed independent study, and intensive weekend (Friday-Saturday) seminars during the academic year. Designed for mid-career public and community health professionals with three or more years of experience in the health-care field, the program provides knowledge and skills required at mid- and upper-level practice and management positions for health professionals. In addition to the core courses in epidemiology, biostatistics, and environmental health, the prescribed course work includes a broad exposure to the health-care system plus specific management training in accounting, finance, personnel management, economics, organization theory, and program planning and evaluation. Pathways are also available in maternal and child health and in health education.

#### *Admission Requirements*

In addition to Graduate School admission requirements, applicants must submit a program application, at least three letters of recommendation, Graduate Record Examination scores, and a goal statement. A minimum of three years' work experience in the health-care field is required. Applicants are accepted to begin in the program summer quarter. Deadline for priority consideration is December 1. Applications will be accepted through March 1 and considered on a space-available basis. Because the program is self-sustaining, the tuition rate differs from the usual on-campus programs.

### Chairperson

Edward B. Perrin

### Professors

Bergman, Abraham B., 1964, ‡(Pediatrics), M.D., 1958, Case Western Reserve; ambulatory pediatrics.

Carter, William B., 1975, (Family Medicine), M.S., 1971, Nebraska; Ph.D., 1975, Washington; health behavior.

Connell, Frederick A., 1976, (Epidemiology, Pediatrics), M.D., 1972, New York; M.P.H., 1978, Washington; maternal and child health.

Conrad, Douglas A., 1977, (Finance and Business Economics), (Dental Public Health Sciences), † M.H.A., 1973, Washington; M.B.A., 1976, Ph.D., 1978, Chicago; alternative vertical and horizontal market structures in health care, hospital and health administration, cost effectiveness of dental treatment.

Day, Robert W., 1968, M.D., 1956, Chicago; M.P.H., 1958, Ph.D., 1962, California; health-information systems.

Deyo, Richard A., 1986, (Medicine), † M.D., 1975, Pennsylvania State; M.P.H., 1981, Washington; patient behavior, clinical epidemiology and functional status assessment.

Diehr, Paula, 1987, ‡(Biostatistics), M.S., 1967, Ph.D., 1970, California (Los Angeles); application of statistics to health services research, multiple regression.

Fiedler, Fred E., 1969 ‡(Psychology, Management and Organization), A.M., 1947, Ph.D., 1949, Chicago; leadership and group effectiveness, social, industrial, and organizational psychology.

Gilson, Betty S., 1969, (Emeritus), M.D., 1943, Minnesota; health-status measurement.

Henderson, Maureen M., 1975, ‡(Epidemiology, Medicine), M.B.B.S., 1949, D.P.H., 1956, Durham (England); internal medicine.

Hogness, John R., 1989, M.D., 1946, Chicago; health policy.

Inui, Thomas S., 1976, (Medicine), † M.D., 1969, Sc.M., 1973, Johns Hopkins; health-related behavior.

Klasterin, Theodore D., 1974, ‡(Management Science), Ph.D., 1973, Texas (Austin); operations management.

Koepsell, Thomas D., 1979, (Medicine), (Epidemiology), † M.D., 1972, Harvard; M.P.H., 1979, Washington; epidemiology of chronic diseases, particularly seizure disorders, applications of epidemiologic concepts to medical practice, epidemiology approaches to health services research.

Larson, Eric B., 1977, ‡(Medicine), M.D., 1973, Harvard; internal medicine.

LoGerfo, James P., 1974, (Medicine), † M.D., 1968, Rochester; M.P.H., 1974, Washington; quality-of-care assessment.

Mayer, Jonathan D., 1977, ‡(Family Medicine, Geography), M.A., 1975, Ph.D., 1977, Michigan; urban geography, transportation, medical geography, geographic philosophy and methods.

Milgrom, Peter, 1974, ‡(Dental Public Health Sciences), D.D.S., 1972, California (San Francisco); man-

agement of fearful and phobic dental patients, dental care quality.

Muescke, Marjorie A., 1979, ‡(Anthropology, Community Health Care Systems), M.A., 1968, New York; M.A., 1972, Ph.D., 1976, Washington; community health nursing, refugee health, fertility and health, crosscultural healing.

Noreen, Eric W., 1976, ‡(Accounting), M.B.A., 1974, Ph.D., 1976, Stanford; managerial accounting.

Novack, Alvin H., 1979, ‡(Pediatrics), M.D., 1958, Temple; ambulatory pediatrics.

Patrick, Donald L., 1987, M.S., 1968, Ph.D., 1972, Columbia; social and behavioral sciences.

Perrin, Edward B., 1962, (Biostatistics), M.A., 1956, Columbia; Ph.D., 1961, Stanford; health information services, research methodology.

Rosenblatt, Roger A., 1974, ‡(Family Medicine), M.D., 1971, M.P.H., 1971, Harvard; research into the organization and delivery of health services.

Wagner, Edward H., 1984, M.D., 1965, State University of New York (Buffalo); M.P.H., 1972, North Carolina (Chapel Hill); health services research, health promotion and disease prevention.

Wing, Kenneth R., 1992, J.D., 1971, M.P.H., 1972, Harvard; health law.

### Associate Professors

Belcher, Donald W., 1976, ‡(Medicine), M.D., 1962, Pennsylvania; ambulatory medicine.

Bell, Michelle A., 1985, M.S.W., 1967, Ph.D., 1984, Washington; maternal and child health policies and programs.

Buchner, David M., 1984, (Medicine), M.D., 1977, Kansas; M.P.H., 1984, Washington; geriatric health promotion.

Chapko, Michael K., 1978, (Research), (Dental Public Health Sciences), † M.A., 1970, Hunter; Ph.D., 1972, City University of New York; evaluation research, health behavior.

Cherkin, Daniel C., 1989, (Research), ‡(Family Medicine), M.S., 1974, Ph.D., 1978, Washington; epidemiology.

Christensen, Dale B., 1976, ‡(Pharmacy Practice), M.S., 1972, Oregon; Ph.D., 1977, Minnesota; pharmacy administration.

Curry, Susan J., 1987, M.A., 1979, Ph.D., 1981, New Hampshire; health psychology.

Durham, Mary L., 1979, M.A., 1974, Ph.D., 1978, Oklahoma; long-term care.

Ellsworth, Allan J., 1984, ‡(Family Medicine, Pharmacy Practice), Pharm.D., 1977, Philadelphia College; clinical pharmacy.

Fihn, Stephan D., 1988, ‡(Medicine), M.D., 1972, St. Louis; M.P.H., 1982, Washington; internal medicine.

Goldberg, Harold I., 1988, ‡(Medicine), M.D., 1977, Stanford; internal medicine.

Gordon, Michael J., 1984, ‡(Family Medicine, Medical Education), M.A., 1970, Ph.D., 1973, Michigan State; educational psychology.

Grembowski, David, 1988, (Dental Public Health Sciences), † M.A., 1975, Washington State; Ph.D., 1982, Washington; utilization of health care/prevention.

Hedrick, Susan C., 1983, (Research), M.A., 1975, Ph.D., 1982, Michigan State; health services.

Hoover, J. Joanne, 1972, (Research), ‡(Epidemiology), M.D., 1960, Illinois; M.P.H., 1972, Washington; cardiovascular epidemiology.

Iverson, Scott C., 1989, ‡(Industrial Engineering), M.S., 1972, San Jose State; M.Sc., 1979, Trinity (Dublin); Ph.D., 1974, Colorado; operational research and systems theory applied to manufacturing automation, decision making, community health.

Kienast, Philip K., 1970, ‡(Management and Organization), M.L.I.R., 1966, Ph.D., 1972, Michigan State; human resources management.

LaCroix, Andrea Z., 1989, ‡(Epidemiology), M.P.H., 1981, Ph.D., 1984, North Carolina; epidemiology of aging.

Madden, Carolyn Watts, 1975, (Economics, Public Affairs), M.A., 1974, Ph.D., 1976, Johns Hopkins; health economics and policy.

Martin, Diane K., 1978, (Epidemiology), M.A., 1972, Temple; Ph.D., 1979, Washington; health-care organization and behavior.

McCann, Barbara S., 1986, ‡(Psychiatry and Behavioral Sciences), M.S., 1982, Ph.D., 1984, Rutgers; psychology.

Pearlman, Robert A., 1981, ‡(Medicine, Nutritional Sciences), M.D., 1975, Boston; M.P.H., 1980, Washington; gerontology.

Rhodes, Lorna A., 1984, ‡(Anthropology), M.A., 1971, Ph.D., 1973, Cornell; medical anthropology, symbolic anthropology, South Asia, religion, psychiatry.

Uhlmann, Richard F., 1987, ‡(Medicine), M.D., 1978, Chicago; M.P.H., 1983, Washington; gerontology.

Wickizer, Thomas M., 1988, M.P.H., 1979, M.A., 1987, Ph.D., 1989, Michigan; health promotion evaluation.

Wood, Robert W., 1979, ‡(Medicine), M.D., 1970, Rochester; internal medicine.

### Assistant Professors

Cheadle, Allen D., 1988, (Research), Ph.D., 1988, California; health promotion/disease prevention.

Ehret, Jennifer L., 1987, M.H.A., 1983, Ph.D., 1987, Washington; health policy analysis, organizational effectiveness, hospital and health administration.

Gloyd, Stephen S., 1986, M.D., 1973, Chicago; M.P.H., 1983, Harvard; international public health.

Hart, L. Gary, 1985, (Research), ‡(Family Medicine), M.S., 1975, Utah; Ph.D., 1985, Washington; health services research.

Hoare, Geoffrey A., 1986, Ph.D., 1984, Pennsylvania; health management and organization.

Holt, Victoria L., 1991, (Epidemiology), † M.P.H., 1987, Ph.D., 1990, Washington; perinatal health services, epidemiology.

Kristal, Alan R., 1990, ‡(Epidemiology), M.S., 1976, Framingham State; M.P.H., 1979, Northwestern; Dr.P.H., 1983, Columbia; nutritional epidemiology.

Meischke, Hendrika W., 1991, M.P.H., 1987, Michigan; Ph.D., 1991, Michigan State; health communications.

Peaty, Bruce M., 1984, ‡(Epidemiology, Medicine), M.D., 1981, Indiana; M.P.H., 1986, Washington; cardiovascular disease, health-care delivery systems.

Reiber, Gayle E., 1991, (Epidemiology), † M.P.H., 1975, Johns Hopkins; Ph.D., 1989, Washington; public health, epidemiology.

Richardson, Mary, 1978, Ph.D., 1984, Washington; program evaluation.

Thompson, Engelberta, 1989, M.A., 1978, Ph.D., 1981, Western Michigan; smoking cessation.

Urban, Nicole D., 1989, M.S., 1973, Sc.D., 1978, Harvard; health economics.

### Lecturers

Altamore, Rita A., 1982, M.D., 1977, Boston; M.P.H., 1983, Washington; medical care for uninsured poor and unemployed.

Ballweg, Ruth Ann, 1981, B.S., 1969, Southern Oregon State; women's health care and women's professional roles, utilization of physician assistants.

Collins, Robert N., 1991, M.S., 1967, Ed.D., 1970, Oregon; health education.

Gish, Oscar,\* 1991, M.S.S., 1967, The Hague; M.Phil., 1970, Sussex; international health planning and economics.

Kaetz, Susan M., 1989, M.P.H., 1975, Yale; health education.

Landel, Grace P., 1990, B.A., 1978, California (Santa Cruz); physician assistant training.

Nickerson, Carl J., 1991, M.S., 1967, Ed.D., 1972, Oregon; health education.

Pilcher, Martha G., 1987, ‡(Management Science), M.S., 1978, Ph.D., 1985, Georgia Institute of Technology; quantitative methods, operations management.

Stoll, Henry W., 1978, B.A., 1971, Brown; physician assistant education, curriculum development and physician assistant professional issues.

## Course Descriptions

### Courses for Undergraduates

#### MEDEX Northwest

**HSERV 451 Anatomy and Physiology for the MEDEX Practitioner (6) S Harder, Stoll** Anatomy and physiology of the following organ systems: HEENT, respiratory, cardiovascular, gastrointestinal, reproductive, renal, musculoskeletal, and neurologic. Required for entering students to the MEDEX program who have not satisfied program prerequisites in anatomy and physiology. Prerequisite: admission to the MEDEX program.

**HSERV 452 Basic Clinical Pathology for the MEDEX Practitioner (6) A Yerxa** Basic pathological and pathophysiological concepts of diseases commonly encountered in primary-care practice. Pathophysiology studied per organ system. Prerequisite: admission to MEDEX program.

**HSERV 453 Basic Clinical Skills for the MEDEX Practitioner (6) A Stoll** Provides the student with mastery of a screening history and physical examination and thoroughness in data-collection skills. Branching examinations of major organ systems and medical record-keeping and verbal presentation skills by the problem-oriented method are taught. Prerequisite: admission to the MEDEX program.

**HSERV 454 Adult Medicine I (10) W Hummel, Stoll** Problem-oriented approach to the diagnosis and management of common primary care conditions. Introduction to relevant laboratory and radiological procedures. Organ system approach covers HEENT, respiratory, cardiovascular, gastrointestinal, and hematologic systems. Prerequisites: admission to MEDEX program.

**HSERV 455 Adult Medicine II (10) Sp** Continuation of 454. Introduction to relevant laboratory and radiological procedures. Organ system approach covers endocrine, renal, reproductive, dermatologic, musculoskeletal, and neurological systems. Prerequisite: admission to MEDEX program.

**HSERV 456 Maternal and Child Health for the MEDEX Practitioner I (3) W Landel** Designed to acquaint students with principles of prenatal care and primary-care pediatrics. Prenatal care, labor and delivery, newborn exam, developmental screening, growth and development. Prerequisite: admission to MEDEX program.

**HSERV 457 Behavioral Science Skills for the MEDEX Practitioner I (3) A Lurie** Process skills and interpersonal skills needed for primary-care practice, assessment skills needed for the diagnosis of emotional problems, and management skills used in primary-care practice to deal with these problems. Prerequisite: admission to the MEDEX program.

**HSERV 458 Behavioral Science Skills for the MEDEX Practitioner II (3) W Lurie** In-depth coverage of common emotional problems seen in primary care.

Topics include crisis intervention, child abuse, death and dying, life planning, behavioral modification, human sexuality, alcohol and drugs, and family therapy techniques. Prerequisite: admission to MEDEX program.

**HSERV 459 Behavioral Science Skills for MEDEX Practitioner III (3) Sp Lurie** In-depth approaches to assessment and management of specific primary-care problems, including posttraumatic stress disorders, SIDS, violent patient, relevance of male/female issues to primary care, and emotional and sexual needs of disabled persons. Advanced interviewing skills with videotaped feedback included. Prerequisite: admission to MEDEX program.

**HSERV 460 Principles of Patient Management for the MEDEX Practitioner I (3) W Ellsworth, Reynolds, Yerxa** Systematic approach to patient management applicable to a primary-care setting. Majority of course is devoted to drug therapy and its administration. The other half includes health maintenance, risk factor identification, and nonpharmacological models of therapy. Prerequisite: admission to MEDEX program.

**HSERV 461 Principles of Patient Management for the MEDEX Practitioner II (3) Sp Ellsworth, Reynolds, Yerxa** Continuation of 460. Prerequisite: admission to the MEDEX program.

**HSERV 462 Maternal and Child Health for the MEDEX Practitioner II (3) Sp Landel** Continuation of 456. Emphasis on pediatric history taking and physical exam, and diagnosis and treatment of common pediatric problems. Prerequisite: admission to the MEDEX program.

**HSERV 463 Clinical Clerkships for the MEDEX Practitioner I (19) Ballweg** Full-time clinical clerkship spent in institution-based or specialty practice settings, such as occupational health, surgery, emergency medicine, psychiatry, or geriatrics. Prerequisite: admission to MEDEX Northwest Physician Assistant program.

**HSERV 465 Clinical Clerkships for the MEDEX Practitioner II (19) Ballweg** Continuation of clinical clerkships spent in institution-based or specialty practice settings, with emphasis on inpatient medicine. Prerequisite: admission to the MEDEX Northwest Physician Assistant program.

**HSERV 466 Family Practice Clerkship for the MEDEX Practitioner I (19) Ballweg** Family practice under the supervision of physicians throughout the Pacific Northwest. Common primary-care problems. Students and preceptors are educated in the utilization and management of the physician assistant in practice. Students keep computerized records of patient encounters and complete a variety of written assignments. Credit/no credit only. Prerequisite: admission to MEDEX program.

**HSERV 467 Family Practice Clerkship for the MEDEX Practitioner II (19) Ballweg** Further experience in primary-care practice with emphasis on independent patient management by the student supervised by family practitioners. Credit/no credit only. Prerequisite: admission to MEDEX program.

**HSERV 475 Perspectives in Medical Anthropology (5) Rhodes** Introduction to medical anthropology. Explores the relationship among culture, society, and medicine. Examples from Western medicine as well as from other medical systems, incorporating both interpretive and critical approaches. Joint with ANTH 475. (Not part of MEDEX program.)

**HSERV 489 Special Field Projects/Independent Study (1-12) Ballweg, Stoll** Clinical clerkships and/or independent study activities for students enrolled in the MEDEX Northwest Physician Assistant program. Prerequisite: permission of instructor(s).

### Courses for Graduates Only

#### Public Health/Preventive Medicine

**HSERV 501 Public Health Practice at the Local Level (3) Sp Goldbaum** History and development of local, state public health departments. Traditional vs. new roles and critical interactions with public, private agencies highlighted. Examples drawn from areas of current concern (e.g., sexually transmitted diseases; health promotion, disease prevention; environmental hazards; substance abuse; emergency medical services). Joint with EPI 501. Prerequisite: 511 or permission of instructor.

**HSERV 502 The Public Health Approach to AIDS (3) W Downer, Kaetz** Seminars, audio-visual resources, and interactive learning exercises address public health response to the HIV/AIDS epidemic. Includes community disease control and preventive efforts, socio-cultural aspects of AIDS, analysis of health services, cost financing and management issues, and psychosocial considerations. Credit/no credit only. Recommended: completion of core courses in health services.

**HSERV 505 Topics in Preventive Medicine (2) S Foy, Henderson** Examine current scientific knowledge and state of the art of preventive medical interventions. Discuss and consider options for current practice. Joint with EPI 525. Prerequisite: M.D., O.D., or permission of instructor.

#### Introductory Core Courses

**HSERV 510 Social and Behavioral Sciences in Public Health (3 or 5) W Patrick** Major concepts and methods of social sciences applied to research and practice of public health. Substantive focus on effects of poverty on health status. Methodologic focus on survey research methods and analysis. Prerequisites: 511 or 512-513; BIOST 511 or equivalent; EPI 511 or equivalent; or permission of instructor.

**HSERV 511 Introduction to Health Services: a Systems and Behavioral Approach (3-4) A Grembowski** Introduction to health services for nonmajors that includes history and organization of the health services system; interrelationships among elements and personnel in the system; and determinants of health, disease, and use of health care. No credit given if 512-513 taken for credit. Prerequisite: graduate standing or permission of instructor.

**HSERV 513 Allocating Health Care Resources: a Population Based Perspective (3) W Conrad** Analysis of health services financing in the United States, with comparison to systems of other developed countries. Develops analytic and normative frameworks for examining public and private health insurance. Study of pricing, underwriting, benefit design, and delivery system; financing integration issues. Prerequisite: 511 or equivalent or permission of instructor.

**HSERV 516 Introduction to Health Services—Extended Degree (4) A** Definition of health and its determinants, including the role of health services. Contrasting aspects of personal health services and public health. Blending of traditional public health and personal health and medical care. Prevention in health care with consideration of screening, sensitivity, and specificity. Prerequisite: registration in Extended M.P.H. Degree program.

**HSERV 517 Provision of Health Services—Extended Degree (2) W** Consideration of factors that influence the utilization of health services, including socioeconomic and cultural. Health belief systems and health behavior, with specific consideration of the effects of these factors on utilization of services and prevention. Prerequisites: 516, registration in Extended M.P.H. Degree program.

**HSERV 518 Social and Ethical Issues in Health Services (2) Sp** Rationale for evaluation of health services; quality control and its relation to costs. Patient protection and participation in determining medical

care. Regulation of new drugs and devices. Criteria for the use of new technology. Ethical considerations, including informed consent. Prerequisite: registration in Extended M.P.H. Degree program.

### Methods Courses

**HSERV 520- Methods in Applied Community Research (2-)** Skills/knowledge necessary to conduct orderly investigation of specific problems in preparation for M.P.H. thesis or project. Includes problem identification, posing research questions, literature review, consideration of theoretical/practical context, choosing a study design, population and sample, data collection, recognizing potential errors. Prerequisite: registration in Extended M.P.H. Degree program.

**HSERV 521 Health Services Research Methods (3) Sp Koepsell** Selected topics for students who have already taken introductory courses on research methods and data analysis. Variety of study design, measurement, analysis issues that pose special methodological challenges in research. Overview of given topics, illustrations of how local investigators address them. Prerequisites: 511 and BIOST 511 or permission of instructor.

**HSERV 522- Program Evaluation (3-) A Martin** Theory, practice, and politics of evaluation. All types of evaluative activities considered from simple feedback mechanisms to the evaluation of large-scale ongoing programs and social experiments. Emphasis on development of familiarity with, and applications of, experimental and quasiexperimental evaluation. Case studies drawn from the health field used to illustrate the various types of evaluation. Prerequisite: background in quantitative methods.

**HSERV 523 Community Health Assessment (3) Sp Connell** Survey of approaches and tools to measure health status and health-care problems in defined communities. Topics include: uses and limitations of available data; community surveys; public health surveillance; problem identification and needs assessment; measurement of community health indices; analytic methods; and presentation techniques for program and policy planning.

**HSERV 524 Quality of Health Care: Assessment and Assurance (3) Sp Altamore, LoGerfo** Methods used to assess components of medical care services and analysis of their application to care by physicians, nurses, social services, hospitals, nursing homes, emergency services. Legal and professional assurance mechanisms including continuous quality improvement, analysis of actual, potential impact. Prerequisites: 511, BIOST 511, or equivalent, or permission of instructor.

### International Health

**HSERV 531 Problems in International Health (3)** Explores social, political, economic, environmental determinants of developing countries' health; traces development of societal responses to problems. Includes: origins of primary health care; child survival; traditional systems; population; water; sanitation; international agencies; effects of economic policies. Case study formulating pharmaceutical policy in a developing country. Joint with EPI 531.

**HSERV 532 Planning and Financing Health Services: International Perspectives (3) S Gish** Survey of major issues affecting planning and financing of health services. Major focus is on developing countries. An historical perspective on social and economic factors in the development of primary health care, health service infrastructures, health manpower development, pharmaceuticals and financing health care, and related overall changes in health status.

**HSERV 533 Population, Health, and Development (2) W Povey** Provides students with an introduction to demographic conditions in Third World countries and an understanding of the consequences of rapid population growth on health and the environment. The con-

text and effectiveness of family planning programs is a major focus.

**HSERV 534 Comparative International Health Systems (3)** Guest lecturers present experiences with various health-care systems (e.g., Canada, Sweden, United Kingdom, Ghana, Tanzania, China), including interaction between sociopolitical setting, resources, and population health needs for each system discussed. Students acquire in-depth information about one country's health system. Prerequisite: graduate standing or permission of instructor.

**HSERV 535 Maternal and Child Health in Developing Countries (3) Sp Shaul** Familiarizes graduate students with issues in maternal and child health of less developed countries. Topics: nutritional assessment; growth monitoring; infant feeding practices; epidemiologic risk assessment; use of technologies; role of politics, economics, cultural factors toward morbidity and mortality. Joint with EPI 535. Prerequisite: graduate student standing or permission of instructor.

**HSERV 539 Research Methods in Developing Countries (3)** Explores methodologies to obtain useful information regarding health status and health services in Third World countries. Standard evaluation methods which require minimal resources to perform. Measurable indicators of health status and health services discussed. Students design and implement a community-based survey to apply methods learned. Joint with EPI 539.

### Health Care Organization and Provision

**HSERV 541 Topics in Maternal and Child Health I (3) A Bell** Historic, legislative, structural, and economic basis for maternal and child health services in the United States. Seminar format, in which students critically review assigned readings and prepare questions for class discussion. Prerequisite: graduate standing or permission of instructor.

**HSERV 542 Epidemiology of Maternal and Child Health Problems (4) W Hickok** Contribution of epidemiology to understanding the etiology of various perinatal problems, including congenital malformations, fetal, infant, maternal mortality, abortion, neonatal morbidity, complications of pregnancy, prematurity, mental retardation together with evaluation of control problems. Joint with EPI 521. Prerequisites: EPI 511 and graduate medical or dental school standing or permission of instructor.

**HSERV 543 Topics in Maternal and Child Health III (3) Sp Holt, Sherry** Examines the major child and adolescent health problems in the United States. The epidemiologic and programmatic aspects of each problem are discussed in the light of their implications for health policy. Prerequisite: graduate standing or permission of instructor.

**HSERV 544 Ambulatory Care Organization and Management (3) A Richardson** Addresses organizational, management, and policy aspects of ambulatory health care. The delivery of ambulatory health care is discussed with respect to rural and urban settings, acute and chronic disease, and hospital and community based services. Prerequisite: 511.

**HSERV 545 The Organization and Role of Hospitals (3) W Ross, Scott** External environment and internal organization of hospitals; community-hospital relationships, hospital ownership, governing board and medical staff functions and organization; and the role of hospitals in the delivery of health services and their relationship with other elements of the health-care system. Emphasis on issues and trends. Prerequisite: 511.

**HSERV 546 Long-Term Care (3) Sp Hawley** Learning experience for graduate students in health services administration, planning, other graduate students to increase their ability to identify and solve problems related to long-term care they confront in their employment. Students are exposed to available knowledge in the field; effective problem-solving attitudes and techniques for organizing information and/or developing

strategies, and agencies in the field. Prerequisite: 511 or permission of instructor.

**HSERV 547- Maternal and Child Health (4-) A Bell, Connell, Hickok, Sherry** Provides an understanding of factors affecting health, welfare of United States mothers and children. Includes effects of social policies and environmental factors, legislation and the health care system, levels of health services, social/political impact of public sector services, and effects of changing family structure/norms. Prerequisite: registration through Extended MPH Degree Program.

### Health Policy and Politics

**HSERV 551 Health Law (3)** Analysis of law, the legal system and current legal problems as they relate to the financing and delivery of health care services.

**HSERV 552 Health for All: the Community Responds (3) A Gish** Presentations by leaders of community organizations and local government officials concerned with the impact on health of socioeconomic developments, and the response of selected community groups to such developments. Sessions are organized around groups such as the workplace, Hispanic farm workers, environment, older Americans, homelessness, African-Americans, women.

**HSERV 553 Politics of Health Care (3) A Hagens** Provides understanding of health policy development in the context of American political system. Health policy examined in terms of historical analysis, legislative process, bureaucracy, budget process, use of information in the political system, role of interest groups. Meet major participants in health policy formation. Prerequisite: 511 or permission of instructor.

**HSERV 554 Health Legislation Seminar (1) W Hagens** Discussion of current state health policy topics with legislative staff and others involved with state health policy. In addition to session on campus, course meets 2-3 times during the quarter in Olympia.

**HSERV 555 Health Policy (3)** Provides an opportunity to gain and apply tools of policy analysis. Alternative techniques of gathering, synthesizing, and analyzing available information in a timely fashion. Attention focused on written and oral presentation to a policy audience on a "real" health issue.

### Health Services Management

**HSERV 560 Managing Health Care (3) A Hoare** Practical introduction to knowledge and skills required to effectively manage a variety of health services organizations. Theoretical material used to develop a diagnostic framework with which to analyze organizational dysfunctions and evaluate appropriate interventions. Students assess their skills at management through exercises, case analyses, and self assessments. Prerequisite: graduate student.

**HSERV 561 Health Planning: Implementation and Goals (3-4) A Erbstoeszer** How to design realistic implementation strategies at beginning of planning process to optimize impact of planning on problems. Students prepare several sets of strategies dealing with planning in community, organizational, committee settings. Techniques that can be used in designing planning programs. Demonstrates relationship between change implementation strategies, development of goals for change. How change is brought about, how decisions are made, how things get done at organization and community levels. Prerequisite: 511 or substantial experience in an operating setting or agency.

**HSERV 562 Health Services Management (4) W Dowling** Examination of decision making, change implementation, and control processes in health-services-delivery organizations. Emphasizes (1) behavioral, organizational, and situational factors affecting management role in health organizations, and (2) management strategies for analyzing problems and implementing changes to improve organizational perfor-

mance. Seminar/case study format. Prerequisite: 511 or 545 or permission of instructor.

**HSERV 563 Personnel Management for Health Professionals (3) WSp** Designed for midcareer health services professionals developing strategies and skills in human resource management. Focuses on policy and practice issues important to handling day-to-day personnel problems—selection, promotion, performance appraisal, discipline, grievances. Prerequisite: registration in Extended M.P.H. Degree program or permission of instructor; non-business majors.

**HSERV 584 Techniques For Strategic Planning and Marketing in Health Services (4)** Review of the essential elements of a market-based strategic planning process. Application of these elements through case study, in-class discussion, and panel discussions with area experts. Emphasis upon strategic thinking for inpatient/outpatient services management. Prerequisite: 511 or permission of instructor.

**HSERV 565 Quantitative Decision Making for Health Services Management (3)** Applications of various quantitative techniques for problem solving, monitoring, controlling, decision making in health services. Identifying problem area, communications with consultant, evaluation to the quality and applicability of analyst's work. Statistical, mathematical, operations research, industrial engineering techniques. Prerequisite: QMETH 500 or BIOST 511 or permission of instructor.

**HSERV 566 Decision Support Models for Health Services (3) S** Management science and approaches developed as applied to problems in public health. Conceptual understanding of processes and application of systematic, rational approach to managerial problem solving, including cost-benefit, cost effectiveness analysis. Prerequisites: BIOST 472 and 473, or BIOST 511; registration in Extended M.P.H. Degree program; non-business majors.

**HSERV 567 Marketing Health Services Seminar (3) Sp** Application of planning, design, development, and promotional strategies for health services. Relevant literature, appropriate marketing concepts and techniques to health services, achieving organizational goals within community opportunities and constraints. Examples of successful and unsuccessful marketing programs. Prerequisite: 511, or permission of instructor.

**HSERV 569 Information Systems (3) W Altmore** Assessing information system needs; planning, managing, and evaluating information systems (IS); behavioral issues in the implementation of IS. Current and evolving applications of IS in health care organizations and public health. Prerequisite: basic computer literacy required.

### Health Care Financing and Financial Management

**HSERV 571 Hospital Financial Management (3) Sp Huebner, Tiscornia** Third course in a three-course sequence dealing with the management of health services institutions and programs. Topics covered are: health services law, hospital and program policy decisions, financial planning, and hospital design and architecture; and the presentation of hospital survey and health services research project reports. Prerequisites: 511 and ACCT 500 or 501 or permission of instructor.

**HSERV 572 Financial Management for Health Professionals (3) S** Intensive review of basic accounting principles and terminology, introduction to financial management and managerial accounting, including budgeting for managerial control, planning, cost accounting, financing health programs. Managerial accounting. Prerequisites: BIOST 472 and 473, or BIOST 511; registration in Extended M.P.H. Degree program or permission of instructor; non-business majors.

**HSERV 573 Seminar in Health-Care Finance (3) A Conrad** Practical applications of corporate finance principles in health-care field. Applies theoretical

framework to health-care financial problems of varying complexity, including capital investment analysis, leasing vs. borrow-to-buy decision, debt capacity analysis, bond refunding, control of capital, joint venture. Prerequisite: 585 or equivalent, ACCTG 500, 501; or permission of instructor.

**HSERV 579 Advanced Health Services Financial Management (3) Sp Lehman** Develops financial management skills through case studies in budgeting, pricing, and monitoring the total financial requirements for health-care institutions. Topics include budgeting principles, cost analysis, rate setting, reimbursement, profit planning, short- and long-term capital financing, and financial feasibility analysis. Prerequisite: 571 or permission of instructor.

### Social and Behavioral Sciences

**HSERV 581- Health Behavior and Preventive Medicine (3-4)- Sp Carter** Effective delivery of preventive health services is integrally and inseparably linked to voluntary health behavior. Clinical issues and psychosocial theory related to a broad spectrum of health behaviors. Emphasized: identifying effective preventive services; psychosocial and decisional bases for health actions; provider-patient interactions; and research and clinic-based strategies for changing beliefs and behaviors. Prerequisite: 511 or permission of instructor.

**HSERV 582 Strategies of Health Promotion (3) A Curry** Major types of health promotion strategies in use; attention to strengths, weaknesses, and potential utility of alternative strategies. Programs employing social engineering (e.g., legal regulation, social marketing), behavioral modification, education examined in terms of efficacy, cost effectiveness in modifying health-hazardous lifestyles, environmental exposures. Prerequisite: 511.

**HSERV 583 Society, Chronic Illness, and Disability (3)** Multidisciplinary perspectives of chronic disease and disability throughout the life course, including illness behavior and the sick role; aging and disablement; behavior change; methodological approaches in research; disability policy. Prerequisite: 510 or permission of instructor.

**HSERV 585 Health Economics (3) W Wickizer** Uses economic concepts and tools to examine range of issues pertaining to health care, delivery of health care services. Includes demand analysis, production of health services, expenditure growth, markets for hospital and physician services, externalities. Emphasis on using economics to examine issues and solve problems. Prior economics courses no required.

**HSERV 586 Medical Geography (3) W Mayer** Geography of disease, consideration to health systems planning. Distributions, diffusion models, migration studies. Application of distance, optimal location models to health systems planning; emergency medical services, distribution of health professionals; cultural variations in health behavior. Joint with GEOG 580. Prerequisites: familiarity with social science research, health-related issues.

**HSERV 587 Advanced Health Economics (3) Sp Madden** Applies economic theory to selected topics in health care, including malpractice, risk and insurance, industry organization, government regulation, and public health issues. Emphasizes policy implications of these applications. For students who have taken microeconomic theory or 585. Prerequisite: 585 or PB AF 516 or equivalent, or permission of instructor.

**HSERV 588 Community Approaches to Health Promotion (3) A Thompson** Provides opportunities to critically examine community-based health promotion interventions and the design, evaluation, and implementation issues they raise. A wide range of disciplinary perspectives is presented. Case studies and class projects are designed to give students the skills needed to critically assess community projects around health promotion.

### Seminars and Field Work

**HSERV 590- Selected Topics in Health Services (\*) AWSps** By individual arrangement, the student and faculty member(s) develop a program of reading and conference appropriate to the topic selected by the student. The topic chosen will be within the special competence of the faculty participating in the course, in the areas of health-care delivery and health-care administration. Also special summer format presenting introductory material may be taken with ENVH 590 and/or EPI 590. For more information and permission, consult department program adviser.

**HSERV 591 Tutorials and Special Seminars (1-4, max. 4) AWSps** Special topics related to current issues in health services. Topics determined by expressed interest of students and faculty; also includes participation of health professionals. Prerequisites: 511 or 512-513.

**HSERV 592 Program Seminars (1-6, max. 6) AWSps** Graduate seminars organized to address specific educational needs of students in various fellowships, residencies, and other specialized programs within the Department of Health Sciences (i.e., maternal and child health, international health, preventive medicine, social and behavioral sciences). Prerequisite: permission of instructor.

**HSERV 595 Practicum/Field Work in Community Medicine (1-12) AWSps** Experience in variable time blocks in community health activities in agencies delivering and planning health services. Sites include neighborhood clinics, health planning bodies, medical practice settings, public health agencies, special problemclinics and facilities, environmental programs and services. Prerequisite: medical student standing or permission of instructor. (Formerly 531.)

**HSERV 596- MHA Field Project (\*, max. 9)** Supervised research in a selected topic related to student's concentration in graduate study. Includes survey of literature, development of approach, and written paper on conclusions. Prerequisite: successful completion of first-year curriculum and internship in graduate program in health services administration and planning.

**HSERV 597 International Health Projects (1-12, max. 12)** Field-based projects during which students learn how social, economic, and political conditions in a developing country affect the health status of populations while being involved in the design, implementation, and analysis of community health surveys. Prerequisite: permission of instructor.

**HSERV 598 Extended Degree Program Project Option (\*, max. 9)** Supervised project work on a selected topic related to student's concentration in graduate study. Includes survey of literature, development of approach, and written paper on conclusions. Prerequisites: registration in extended MPH degree program and satisfactory completion of the first summer's course work.

**HSERV 600 Independent Study or Research (\*) AWSps** Prerequisite: permission of instructor.

**HSERV 700 Master's Thesis (\*) AWSps** Prerequisite: permission of instructor.

## Pathobiology

F161 Health Sciences

### Graduate Program

George E. Kenny, Graduate Program Coordinator

The Department of Pathobiology offers a research training program leading to the degrees of Master of Science and Doctor of Philosophy. As a discipline, pathobiology stands at an interface between fundamental biology and clinical medicine. The mission of

the department is to apply a multidisciplinary approach and the latest research technologies to the study of public health problems such as cancer, HIV, and other infectious agents. Investigating the mechanisms underlying multifactorial diseases emphasizes the preventative as well as the curative, and a broader view of disease etiology. The department applies the research tools of immunology, molecular biology, pathology, and genetics to the detection and characterization of cancer, sexually transmitted diseases, and respiratory and helminthic infections. Course work includes basic courses in pathobiology, with additional courses required in biostatistics, epidemiology and molecular biology. Electives may be selected from these fields as well as from other basic medical sciences, such as microbiology, biochemistry, pathology, and genetics. Major emphasis is placed on the production of knowledge through the research program where the thesis or dissertation ordinarily results in publication. To the holder of a doctoral degree, the department also offers postdoctoral research training. Applicants for degree programs should apply to the graduate program coordinator, and applicants for postdoctoral training should apply directly to individual faculty members.

#### Admission Requirements

Applicants should have a baccalaureate degree in biological science. Courses in biochemistry and microbiology are required, and students entering the curriculum without such background will be required to correct the deficiency. Persons holding professional doctorates (medicine, dentistry, veterinary medicine) are also encouraged to enter the graduate program.

#### Financial Aid

Some financial aid may be available in the form of research assistantships funded primarily through federal research grants held by faculty members.

#### Research Facilities

Laboratories are specifically equipped for biochemical and immunochemical work. Although many students work at the University site, opportunities for training also exist at the Fred Hutchinson Cancer Research Center, including the Program in Growth Regulation, the Biomembrane Institute, and the Seattle Biomedical Research Institute.

#### Correspondence and Information

Graduate Program Coordinator  
Department of Pathobiology, SC-38

## Faculty

#### Chairperson

George J. Todaro

#### Professors

Carter, William G.,\* 1981, Ph.D., 1974, California (Davis); membrane biochemistry and glycoproteins.

Grayston, J. Thomas,\* 1960, ‡(Epidemiology), M.D., 1948, M.S., 1952, Chicago; epidemiology of infectious diseases, particularly chlamydial diseases.

Hakomori, Sen-itiroh,\* 1967, (Biochemistry, Chemistry), (Microbiology), † M.D., 1951, D.Med.Sci., 1956, Tohoku (Japan); membrane biochemistry and glycoproteins.

Kenny, George E.,\* 1961, (Microbiology), M.S., 1957, North Dakota; Ph.D., 1961, Minnesota; antigenic structure and mycoplasmas.

Kuo, Cho-chou,\* 1971, M.D., 1960, National Taiwan, Ph.D., 1970, Washington; chlamydiae.

Rausch, Robert L.,\* 1977, (Zoology), (Comparative Medicine), † D.V.M., 1945, Ohio State; M.S., 1946, Michigan State; Ph.D., 1949, Wisconsin; parasitology.

Todaro, George J.,\* 1991, M.D., 1963, New York; growth regulation in normal and tumor cells.

Wang, San-pin,\* 1966, (Emeritus), M.P.H., 1952, Michigan; M.D., 1944, D.Med.Sci., 1959, Keio (Tokyo); chlamydiae.

#### Associate Professors

Campbell, Lee Ann,\* 1985, M.S., 1979, Ph.D., 1982, Pennsylvania State; molecular biology and infectious diseases.

Kahn, Michael, 1992, Ph.D., 1983, Columbia; molecular recognition, protein structure-function relationships, peptidomimetics.

Parsons, Marilyn, 1986, (Research), Ph.D., 1979, Stanford; molecular biology, eukaryotic cells.

Roberts, Marilyn C.,\* 1981, M.S., 1977, Ph.D., 1978, Washington; molecular biology and infectious diseases.

Thouless, Margaret E.,\* 1980, (Comparative Medicine), M.Sc., 1967, Ph.D., 1974, Birmingham (England); rotaviruses and simian immunodeficiency viruses.

#### Assistant Professors

Bendiak, Brad Kirby,\* 1989, (Research), M.S., 1979, Alberta (Canada); M.Ph., 1980, Ph.D., 1983, Cambridge (England); biosynthesis of carbohydrates.

Blanton, Rebecca A., 1992, Ph.D., 1982, Pennsylvania State; growth, differentiation, and morphogenesis of epithelial cells.

Mazurek, Nachman, 1990, M.Sc., 1978, Ph.D., 1983, Rehovot (Israel); study of metastatic potential and signal transduction pathways of the mutant kinase C gene expressed in transformed fibroblasts.

Riley, Donald E., 1990, (Research), (Urology), † Ph.D., 1976, Washington; parasitology, pathogens in urogenital tract disorders, protease and protease inhibitor genes.

Rose, Timothy, 1991, Ph.D., 1981, Geneva (Switzerland); molecular biology, cytokines, cellular growth and differentiation.

Yamamoto, Fumiichiro, 1988, (Research), M.S., 1980, Ph.D., 1983, Osaka City (Japan); genetics of tumor cells.

## Course Descriptions

UCONJ 420 Biological Safety Practices (1) A  
Kenny See University Conjoint courses.

PABIO 498 Undergraduate Thesis (\*) AWSpS

PABIO 499 Undergraduate Research (\*) AWSpS

### Courses for Graduates Only

**PABIO 511 Pathobiological Frontiers (2)** Kenny Molecular and immunological concepts of infectious and noninfectious diseases presented in format suitable for graduate students knowledgeable in health-related areas who are not in biology-oriented programs. Allergy, immune responses, nature of infectious agents, prevention of disease with emphasis on newly defined diseases and disease agents. Prerequisite: permission of instructor.

**PABIO 521 Tissue Culture and Virology (3) A** Kenny, Thouless General concepts, techniques, and applications of tissue culture with emphasis on use of tissue culture for viral diagnosis and propagation. Nutrition, growth characteristics, and metabolism of animal cell cultures. Laboratory experiments give practical experience in tissue culture and virology. Prerequisite: permission of instructor.

**PABIO 522 Antigenic Analysis of Microorganisms (3) W** Kenny Theory and techniques for antigenic analysis of complex mixtures, including microorganisms. Recent advances in separating antigens, identifying antigenic determinants, and antigenic mapping of proteins. Laboratory includes a special problem of the student's choice. Prerequisite: permission of instructor.

**PABIO 525 Cell Surface Membrane in Cell Sociology and Immunology (2) Sp** Carter, Hakomori Structure and function of cell surface membranes in relation to various immunobiological and pathobiological phenomena (differentiation, organization, infection, cancer) covered. Joint with MICRO 525. Prerequisites: BIOC 440, 441, 442, MICRO 447, and permission of instructor.

**PABIO 531 Applications of Molecular Biology to Public Health (2) Sp** Campbell Addresses the impact of molecular biology on public health. Lectures focus on the application of biotechnology to diagnostics, pharmaceuticals, vaccines, and environmental concerns. Considerations for developing and using biotechnology products also discussed. Prerequisites: courses in genetics, biochemistry, or microbiology, or permission of instructor.

**PABIO 532 Laboratory Applications of Molecular Biology to Public Health (2)** Provide laboratory experience in the application of molecular biology technology in areas of interest to Public Health. Prerequisites: 531 and courses in genetics, biochemistry or microbiology, and permission of instructor.

**PABIO 540 Antibiotic Resistance Mechanisms and Their Impact on Public Health (2) Sp** Roberts Includes bacterial resistance to various antibiotics and chemotherapeutic agents and the impact that this has had on treatment of disease in the last fifteen years. Discusses antibiotic resistance in parasites, viruses, and fungi. Prerequisite: permission of instructor.

**PABIO 580 Pathobiology Seminar (1, max. 15) AWSp** Research reports from both students and faculty members are presented and discussed. Topics include immunochemistry, viruses, membranes, infectious diseases, immune response. Prerequisite: permission of instructor.

**PABIO 581 Current Literature in Pathobiology (1, max. 15) AWSp** Critical evaluation of recent articles on infectious agents. Emphasis on literature dealing with immunological, biochemical, and molecular studies of selected pathogenic microorganisms and viruses. Prerequisite: graduate student in pathobiology; others by permission of instructor.

**PABIO 583 Seminars on Frontier Membrane Research (1, max. 15) AWSp** Hakomori Structure and function of cell surface membranes for postdoctoral fellows and graduate students. Discussion on experimental design based on current topics of cell surface structure and function among researchers in the Department of Pathobiology and at the Biomembrane Institute. Advanced sequel to 525.

**PABIO 590 Selected Topics (1-6, max. 6) AWSpS** In-depth study of disease agents and host response, usually related to a current problem, and focusing on characteristics of the disease agent. Seminar format. Small groups of students by arrangement with faculty member. Credit/no credit only. Prerequisites: enrollment in pathobiology graduate degree program and permission of instructor.

**PABIO 598 Didactic Pathobiology (\*, max. 12) AWSp** Kenny Supervised lecture and laboratory teaching experience for Ph.D. candidates. Teaching is in pathobiology laboratory courses, depending on interests of the student. Prerequisite: permission of instructor.

**PABIO 600 Independent Study or Research (\*)** Credit/no credit only. Prerequisite: permission of graduate program adviser.

**PABIO 700 Master's Thesis (\*)** Credit/no credit only. Prerequisite: permission of graduate program adviser.

**PABIO 800 Doctoral Dissertation (\*)** Credit/no credit only. Prerequisite: permission of graduate program adviser.

# Reserve Officers Training Corps Programs

## Aerospace Studies

202 Clark

The Air Force Reserve Officer Training Corps program (AFROTC) is designed to motivate, educate, and commission highly qualified students for active duty as officers in the U.S. Air Force. The curriculum develops the professional knowledge, in both theory and application, that an Air Force officer needs to be an effective manager and leader in the aerospace environment.

### General Program Requirements

The freshman- and sophomore-level general military courses are open to all students between the ages of fourteen and twenty-six attending any two- or four-year college or university full time. Any qualified male or female student may enroll in these general military courses. The junior- and senior-level professional officer courses are open to qualified students who have received credit for the general military courses and have been competitively selected for entry.

### Commissioning Requirements

Students who successfully complete the AFROTC program and receive an academic degree from the University are offered commissions as second lieutenants in the Air Force.

### General Military Courses

The basic division courses consist of one classroom hour and one leadership laboratory hour per week during the freshman and sophomore years. Uniforms and textbooks are provided. Students may enter the freshman class at the start of autumn, winter, or spring quarters. Sophomore students may enter at the start of autumn or winter quarters and take the freshman- and sophomore-level courses concurrently. A four-week field training course, taken during the summer between the sophomore and junior years, is required for entry into the professional officer courses. Students receive pay and travel costs for field training.

Except for sophomore cadets on AFROTC scholarship, students incur no active duty service commitment by taking general military courses, and students may drop the courses at any time.

### Professional Officer Courses

Cadets selected for enrollment in professional officer courses are enlisted in the Air Force Reserve and receive tax-free monthly subsistence pay of \$100. They are furnished texts and uniforms. Junior- and senior-level classes consist of three hours of academic classes and one hour of leadership laboratory per week.

### Financial Assistance

The Air Force offers one-, two-, and three-year scholarships to qualified college students. The following is a partial list of areas where scholarships are available: engineering, science and technology, nursing, medicine, law, non-technical, and others. A special one-year scholarship is available for nursing and law majors. Nursing students are given special consideration

in fulfilling their AFROTC courses to allow time to meet their clinical and core course requirements.

AFROTC scholarships pay tuition, certain fees, and full textbook reimbursement. In addition, scholarship winners receive a \$100 subsistence allowance per month. To take advantage of these scholarships, students should apply directly to the AFROTC department.

### Two-Year Program

To provide for those students unable to take the general military courses, a two-year professional officer course is available on a highly competitive basis. The two-year program is open to graduate students and other students who have two years remaining until graduation.

Students in this program are required to attend a six-week field training course at an Air Force base during the summer preceding program entry. The student is paid during the six-week period. Upon return to the campus, students pursue the professional officer course. Uniform, texts, and \$100 monthly subsistence are provided.

Two-year scholarships may be available for qualified students. Students interested in this program should contact the AFROTC department *nine to twelve months prior to the autumn quarter they desire to enter.*

## Faculty

### Chairperson

Robert A. DeFee III

### Professor

DeFee, Robert A. III., 1991, M.S., 1976, St. Mary's.

### Associate Professor

Crissey, Mary G., 1992, M.S., 1988, Maryland.

### Assistant Professors

Plummer, Michael R., 1991, M.B.A., 1987, Golden Gate.

Smith, Michael C., 1992, M.S., 1991, Troy State.

## Course Descriptions

### Courses for Undergraduates

**A S 101,102,103 Aerospace Studies 100 (1,1,1) A,W,Sp Drysdale** Focuses on the basic characteristics of air doctrine; U.S. Air Force mission and organization; functions of United States strategic offensive and defensive, general-purpose, and aerospace support forces; officership/professionalism and an introduction to communicative skills. Additional one-hour leadership laboratory is mandatory.

**A S 211,212,213 Aerospace Studies 200 (1,1,1) A,W,Sp DeFee** Factors contributing to the development of air power from its beginnings to the present, and the evolution of air power concepts and doctrine. History of air power employment in military and nonmilitary operations in support of national objectives. Assessment of communicative skills. Additional one-hour leadership laboratory is mandatory.

**A S 331,332,333 Aerospace Studies 300 (3,3,3) A,W,Sp Plummer** Emphasis on leadership and management fundamentals, professional knowledge, leadership ethics, and communicative skills are required of an Air Force junior officer. Case studies used to examine leadership and management situations. Mandatory leadership laboratory provides advanced leadership experiences in officer-type activities, giving students the opportunity to apply learned principles.

**A S 431,432,433 Aerospace Studies 400 (3,3,3) A,W,Sp Sparrow** Needs for national security, evolution of American defense strategy and policy, methods for managing conflict, alliances and regional security

to preserve American interests. Arms control and terrorism. The military as a profession, officership, the military justice system, current military issues; refinement of communicative skills. A one-hour leadership laboratory is also required.

## Military Science

104 Clark

The Department of Military Science offers the college student several elective options for the attainment of an Army officer's commission in reserve or active forces through Army Reserve Officer Training Corps (AROTC) while pursuing the academic degree of his or her choice. The program is highly competitive for commissioning.

### Traditional Four-Year Program

Open to freshman and sophomore men and women, this program may lead to a commission in either the Regular Army or the Reserve Components (Army Reserve or National Guard). Academic studies include courses in military history and tactics, principles of leadership, techniques of instruction, management and staff procedures, logistics, physical conditioning, and military law. Extracurricular activities include such options as Ranger Company, air pistol and rifle teams, color guard, training exercises, field trips, and related activities. A student incurs no obligation of any kind during the first two years of the four-year AROTC program. Basic course grades are included in the GPA.

Placement credit toward completion of AROTC courses may be given for prior AROTC or military training. Veterans routinely receive full credit for the first two years of AROTC and may enter the advanced course directly. All military textbooks and uniform items are furnished without charge. Students in the advanced course receive tax-free monthly subsistence of \$100 for a maximum of twenty months. In the advanced course, cadets are required to participate in the leadership development program, which is a practicum of skills and principles taught during the previous two years. Between their junior and senior years, cadets attend a six-week summer camp during which they receive varied and challenging training and for which they are paid both for the time at camp and for travel expenses to and from the camp location. Upon entering the advanced course, students agree to complete the course, to accept a commission upon graduation, if offered, and to serve on active duty for four years after commissioning or three to six months' active duty training, with the balance of service in the Army Reserve or National Guard.

Prior to commissioning, students must complete at least one undergraduate course from each of five fields of study: written communication, military history, human behavior, computer literacy, and mathematical reasoning. Alternative courses may be substituted for any of these requirements upon approval of the Professor of Military Science.

### Two-Year Program

This program is open to qualified undergraduate and graduate students with at least two years in school remaining and who have completed 45 credits. Students may qualify for entrance into the advanced course under this program in either one of two ways.

First, they may participate in a special summer program offered on the University campus. This is a two-week program covering the freshman and sophomore years of the normal basic AROTC work (M SCI 101, 102, 103, and M SCI 201, 202, 203). Fees are charged for registration in this program, and students are free to register for and to take other University courses during summer quarter. Participation in the program includes individually arranged classwork to accommodate each student's summer work or academic program. Students who have taken some military science courses but who have not completed all courses in the first and

second year of AROTC may also arrange to complete the remaining course requirements during this summer program.

The second alternative under this program requires attendance at a basic camp for six weeks at Fort Knox, Kentucky. Completion of this basic camp also qualifies students for direct entry into the advanced course. While at camp, students receive pay plus travel expenses to and from the camp location, and they can compete for two-year scholarships. Academic subjects covered in the two-year program are the same as those covered in the four-year programs. Both programs have the same military obligation.

#### **Two- and Three-Year Scholarship Program**

This program is open to students enrolled in AROTC. Selections are made on a regional level based upon the recommendation of the Professor of Military Science. The scholarship provides financial assistance during the remaining years of the student's enrollment. Each scholarship pays for tuition and a flat rate for books and laboratory expenses and provides subsistence of \$100 per month, tax free. All other advantages and obligations are the same as those of the four-year scholarship program.

#### **Four-Year Scholarship Program**

Application for this program should be made while the student is still in high school. Selection of students is made on a nationwide competitive basis. This program may lead to a commission in the Regular Army or the Army Reserve. All tuition, a flat rate for books and laboratory expenses, and uniform items, plus tax-free subsistence of \$100 for a maximum of four years, are provided by the Army. The program requires four years of academic study on campus, as well as a six-week advanced camp training period between the junior and senior years, for which the cadet is paid for both time and travel expense to and from the camp location. Academic studies are identical to those of the traditional four-year program. The student must sign a contract (with the consent of parents if under eighteen years of age) wherein he or she agrees to complete the program, to enlist in the Reserve, to accept a commission if offered, and to serve on active duty for four years after commissioning.

Additional information concerning the Army ROTC program may be obtained by writing: University of Washington; Professor of Military Science; 104 Clark, DU-20; Seattle, Washington 98195, or by visiting the Army ROTC offices at 104 Clark, telephone (206) 543-9010; FAX (206) 543-9070.

## **Faculty**

#### **Chairperson**

Steven D. Vermillion

#### **Professor**

Vermillion, Steven D., 1989, M.B.A., 1987, St. Martin's College; business.

#### **Assistant Professors**

Bowen, John A., 1991, B.A., 1983, Washington; political science.

Coronel, Mario, 1991, B.A., 1983, City University (New York); psychology.

Rebman, Victoria E., 1991, B.A., 1983, Maine; zoology.

#### **Training and Drill Instructor**

Hampton, Dennis L., 1991.

## **Course Descriptions**

### **Courses for Undergraduates**

**MSCI 101, 102, 103 Military Science I: Basic (2,2,2) AWSp,AWSp,AWSp** History, organization, and mis-

sion of the United States Army and the Reserve Officer Training Corps. Relationship to the citizen's military and civilian obligations. Functions and organization of the United States defense establishment. Fundamentals of leadership and management. Leadership laboratories and two field training exercises conducted during the year encompass training in field craft, survival, and small unit tactics..

**M SCI 201, 202, 203 Military Science II: Basic (2,2,2) AWSp,AWSp,AWSp** Develops proficiency in oral and written communications. Presents a perspective on the world wide military threat; an evaluation of tactical methodologies of the hostile nations to include conventional weapon systems employment. Control, prevention, and treatment of combat or emergency medical situations. Fundamentals of military map reading, aerial photography, compass and field navigation, are taught and applied. Leadership laboratories and two field training exercises during the year.

**M SCI 301, 302, 303 Military Science III: Advanced (3,3,3) AWSp,AWSp,AWSp** Small-unit tactics, emphasizing the importance of firepower, movement, and communications. Duties, responsibilities, and methods of employment of basic military units. Leader's role in directing and coordinating individuals and military units from squad to company level. Students are introduced to the planning and conduct of individual and group physical conditioning activities, stressing positive motivation to establish high standards of morale and esprit. Principles and techniques of command, control, military management, and leadership are taught and practiced throughout the academic year. Leadership laboratories and two field training exercises during the year. Prerequisites: completion of basic training; basic camp or 9 credits of 100- and 200-level courses.

**M SCI 305 Practicum-Techniques of Military Instructions (3)** Analysis, review of techniques used in military training and instructions. Students plan, rehearse, deliver, provide written critique on block of military instruction from the Military Qualification Skills Manual. Prerequisites: admission to ROTC advanced course, permission of instructor, completion of 9 credits of 300- or 400-level courses.

**M SCI 401, 402, 403 Military Science IV: Advanced (2,3,2) AWSp,AWSp,AWSp** The Army officer's position in contemporary world and impact on problems within the military service. Use of a developmental study to provide awareness of personal responsibilities and official relationships of an Army officer. Organization and functions of command and staff positions. Coordination of administration, logistics, and planning for military operations. Basic concepts of legislative and executive authority for the Uniform Code of Military Justice (to include a study of the officer's authority and responsibility within the military justice system). Problem-solving techniques used by small-unit leaders, emphasizing coordination and planning by the junior officer. Leadership laboratories and two field training exercises during the year. Prerequisites: completion of basic training; basic camp or 9 credits of 100- and 200-level courses.

## **Naval Science**

305 Clark

The Department of Naval Science offers University students an opportunity to engage in study that leads to a commission in the U.S. Navy or Marine Corps while working toward a baccalaureate degree. The Naval Reserve Officer Training Corps (NROTC) unit functions in conjunction with the Department of Naval Science. An NROTC student may select an academic major within certain limitations (i.e., some majors that normally lead to immediate graduate education, such as prelaw or premedicine, are not consistent with the mission of the NROTC program). Technical and engineering majors are highly recommended, because the re-

sponsibilities of naval officers have become more technical in nature.

In addition to their University curricula, NROTC students attend naval science courses in history and customs, naval engineering/weapons systems, navigation, naval operations, and leadership/management. In addition, each student must attend one drill session and one naval science laboratory session per week. During the summer, students may have a four-to-six-week training cruise to put into practice earlier classroom training. All NROTC students take the same naval science classes during the first two years. Students who elect to be commissioned in the Marine Corps take Marine Corps subjects during their third and fourth years.

Any University student may take any naval science course without enrolling in the NROTC Program. Two programs are offered.

#### **Navy-Marine Scholarship Program**

Each year, men and women are accepted for scholarship status in the four-year, three-year alternate, and two-year NROTC scholarship programs. Eligibility for the four-year program is based upon nationwide competition and selection by a central selection committee. Application must be made by December 1 of the academic year preceding appointment as midshipman. Those selected are provided educational benefits, including subsidy by the Navy of all tuition, fees, textbooks, and uniforms, plus \$100 per month in subsistence pay.

For the two-year scholarship program, applications from current sophomores, or juniors enrolled in five-year programs of study, must be received by March. Those chosen by a central selection committee attend a six-week course of instruction at the Naval Science Institute (NSI) at Newport, Rhode Island, during the summer prior to their junior year. Successful completion of NSI instruction qualifies these students for enrollment in the advanced courses in the NROTC program. All scholarship students are appointed as midshipmen, USNR, and upon graduation are commissioned as regular officers in the Navy or Marine Corps, after which they serve on active duty for four years.

#### **Navy-Marine College Program**

Each year, men and women are accepted for four-, three-, and two-year nonscholarship college programs. For the three-year program, the Professor of Naval Science nominates qualified students throughout the freshman year. Applications for the two-year program are accepted from current sophomores in community colleges or four-year colleges and must be received prior to March of their sophomore year (or third year, if in a five-year program).

Those students selected for the two-year program attend a six-week course of instruction at NSI during the summer prior to their junior year. Successful completion of NSI instruction qualifies students for enrollment in the advanced course in the NROTC program. Students in the NROTC college program pay their own college expenses but receive monthly subsistence pay of \$100 during their junior and senior years, including the intervening summer. The Navy furnishes all uniforms and textbooks used in naval science courses.

All college program students are eligible for a scholarship after completing one academic term, with scholarship awards based on academic grades and participation within the midshipman battalion. The two-year college program students also may win a scholarship for superior performance at NSI. Upon graduation, college program students are commissioned in the Navy Reserve or Marine Corps Reserve and serve on active duty for three years.

Additional information concerning the NROTC programs may be obtained by writing the University of Washington; Professor of Naval Science; 317 Clark, DU-40; Seattle, Washington 98195; or by visiting the NROTC unit on campus.

## Faculty

### Chairperson

J. T. Gilmartin

### Professor

Gilmartin, J. T., 1991, B.S., 1964, U.S. Naval Academy; M.S., 1971, Naval Postgraduate School; physics.

### Associate Professor

Egan, James E., 1991, B.S., 1967, Western Oregon State College; M.A., 1976, Washington; international relations.

### Assistant Professors

Arends, Paul M., 1989, B.S., 1984, U.S. Naval Academy; aeronautical engineering.

Fondaw, Jeffery E., 1989, B.S., 1977, Murray State; physical education, history.

Szymanski, Gregory R., 1990, B.A., 1985, Rochester; geology.

## Course Descriptions

### Courses for Undergraduates

**N SCI 111 The Naval Service (3) A** General introduction to the Navy, its organization, missions, roles,

tasks, and operating methods. The relationship to the other services within the Department of Defense is emphasized.

**N SCI 112, 113 Sea Power Practicum I, II (2,2) W,Sp** A comprehensive study of the role of sea power in the history of the United States, the current status of the various elements of the nation's sea power as they influence the development and implementation of national security policy, and the economic effects of the elements of sea power (the Navy, the merchant marine, port facilities, fisheries, and oceanographic capabilities).

**N SCI 202, 203 Naval Ship Systems I, II (3,3) W,Sp** Study of the varied ship systems operational in the Navy today, including the principles of characteristic propulsion systems and auxiliary machinery and the elements of ship stability and damage control. An introduction to nuclear propulsion, gas turbines, and auxiliary power systems.

**N SCI 211 Naval Weapon Systems (3) A** Concept of naval weapons systems and the systems approach, the techniques of linear analysis of ballistics and weapons, the dynamics of basic components of weapons control systems. The tools are provided for understanding the basic principles that are involved in all modern naval weapon systems, gas turbines, and auxiliary power systems.

**N SCI 311 Navigation (3) A** The science and practice of maritime coastal navigation, including visual fixing, dead reckoning, and piloting methods. Computation of tides and currents and nautical rules of the road.

**N SCI 312 Celestial Navigation (3) W** Theory and practice of celestial navigation. The student performs the complete "day's work" of the ship's navigator.

**N SCI 313 Naval Operations (3) Sp** Introduction to naval operations, the employment of naval forces, na-

val tactics, formulation of operations plans and orders, employment of detection equipment, and meteorology.

**N SCI 411 Psychology of Leadership (3) A** Introduction of the theory and techniques of naval leadership based on those principles of behavioral science that are pertinent to understanding individual and group behavior of adults. It introduces the student to the management process and the relationship of management functions to leadership. Acceptance of a traditional deep sense of moral responsibility on the part of the aspiring leader is stressed.

**N SCI 412, 413 Naval Organization and Management I, II (3,3) W,Sp** Study of organization, systems, and techniques employed in the Navy for management of its human, financial, and material resources. Some of the work relates to the administration of discipline in the Navy under the Uniform Code of Military Justice. Emphasis is placed on the leadership and management role of the junior officer in the fleet.

### MARINE CORPS OPTION COURSES

**N SCI 321, 322, 323 Evolution of Warfare I, II, III (3,3,3) A,W** Introduction to the art of war, the evolution of warfare from the earliest recorded battles to the present day.

**N SCI 421, 422 Amphibious Warfare I, II (3,3) A,W** Provide basic knowledge of evolution of amphibious warfare from premodern era to present. Strategic and tactical considerations in planning specific operations and amphibious landings.

**N SCI 423 USMC Leadership and Administration of Justice (3) Sp** Concepts, objectives, characteristic qualities, and practical techniques of leadership as exercised by the Marine Corps officer are studied. Emphasis is placed on the leadership and management role of the junior officer in the Fleet Marine Forces.

# School of Social Work

## Dean

Nancy R. Hooyman  
210 Social Work/Speech and Hearing Sciences

The School of Social Work offers three degree-granting programs, one undergraduate and two graduate. The undergraduate program prepares students to receive a Bachelor of Arts degree with a major in the field of social welfare, while the graduate programs offer the Master of Social Work degree and the Doctor of Philosophy degree in social welfare. All three programs are housed in the Social Work/Speech and Hearing Sciences Building, 4101 Fifteenth Avenue Northeast.

In addition, the school offers a concurrent degree program with the School of Public Health and Community Medicine leading to the M.S.W. and M.P.H. degrees.

## Undergraduate Program

Moya M. Duplica, Director

The undergraduate program consists primarily of upper-division courses in social welfare, with additional requirements in human biology, economics, psychology, and sociology. Students enter the major at the start of their junior year after completing the liberal arts requirements established by the College of Arts and Sciences. Social welfare courses during a student's junior and senior years impart a basic knowledge of the social welfare system, of human behavior and the social environment, of the social work profession, of social welfare research, and of the skills necessary to prepare for beginning social work practice. The program, leading to a bachelor's degree in social welfare, is accredited by the Council on Social Work Education.

The requirements and curriculum of the social welfare program may be summarized as follows:

Junior year—ECON 100 (5); PSYCH 306 (5); SOC 352 (5); SOC W 419 (3), 300 (3), 320 (3), 390 (3), 310, 311 (3,3).

Senior year—SOC W 415 (12), 405 (6); social work electives (15).

## Admission

Approximately fifty new juniors are admitted to the social welfare major each academic year, during autumn and winter quarters only. A selective admission procedure is used to determine entrance into the program. Applicants seeking admission should: be admitted or admissible to the University; be eligible, or nearly eligible, for junior class standing (i.e., 65 completed credits of undergraduate work) by the beginning of the entry quarter; have completed a human biology course; be in good academic standing (i.e., 2.00 minimum GPA); submit a completed application to the program; and provide copies of their college transcripts.

Application forms and a more detailed description of the social welfare major are available at the school's admissions office from February 1 to July 1 for entrance into the program starting the following autumn quarter, and from July 1 to November 1 for winter quarter entry. The school's admissions office is located in 23B Social Work/Speech and Hearing Sciences. Admission application forms also can be mailed upon request, telephone 543-5676. A student who wishes to discuss the program in person may arrange an interview by telephoning the director of admissions. Such inquiries are welcome.

Students accepted to the major at the end of their sophomore year surrender their premajor status by transferring their files and change-of-college forms to the school's student services office, SWS 23C. Afterwards, they are advised by the director of student services, located in the student services office, SWS 23E.

## Graduate Program

The School of Social Work offers a two-year, full-time program leading to the Master of Social Work degree, as well as an evening program that students usually complete in three years.

The program prepares students for advanced professional practice. The curriculum is being substantially revised for 1992 to strengthen preparation for social work practice. The curriculum encompasses two distinct but interconnected areas: the beginning content or professional foundation and opportunities for advanced content in specialized practice. *Note:* specific aspects of the new M.S.W. curriculum are yet to be defined and are subject to change under the normal curriculum procedures for faculty decision making within the University.

The professional foundation provides instruction in the basic knowledge and skills required for effective, accountable social work practice as well as socialization to the profession, its value orientation, ethics, and history.

The advanced curriculum provides in-depth knowledge and skills needed for advanced practice in one major area of the social work profession. The four concentrations which have been selected tentatively include health and mental health; children, youth and families; multicultural practice; and social welfare administration.

## Admission Qualifications

Admission to the M.S.W. program requires formal admission to the Graduate School as well as to the School of Social Work. Applicants are required to have an undergraduate degree, a strong academic background, and some human services experience. Applicants must submit transcripts, references, applications, Graduate Record Examination scores, and an admission essay to be considered for autumn quarter entry. March 1 is the closing date for receipt of applications and materials. Admission is competitive and selection is based on a review of the applicant's submitted materials.

## Financial Aid

A limited number of financial aid opportunities are available to students. Inquiries should be directed to the chairperson, Scholarship and Financial Aid Committee, School of Social Work. Applicants to the M.S.W. program are urged to apply for assistance through the Office of Financial Aid by March 1.

## Correspondence and Information

Admissions Office  
School of Social Work, JH-30

## Master of Social Work-Master of Public Health Concurrent Degree Program

The School of Social Work participates with the School of Public Health and Community Medicine in a concurrent degree program leading to the M.P.H. and M.S.W. degrees. The program offers interdisciplinary preparation in the fields of public health and social work. Historically, public health and social work have shared an interest in a preventive approach to health and social problems, a community perspective, and a focus on vulnerable population groups. Both fields recognize the interrelationship of the health, social, and behavioral components of contemporary problems and the need for interventions and research that address all three components. The concurrent degree program prepares professionals who will function at the inter-

face of both fields—in practice, research, planning, administration, and policy development.

Additional information concerning the concurrent degree program may be obtained from the associate dean for curriculum, School of Social Work, 545-1660.

## Ph.D. Program in Social Welfare

Cheryl A. Richey, Director and Graduate Program Coordinator

Paula S. Nurius, Acting Director and Graduate Program Coordinator (1992-93)

Anthony H. Ishisaka, Alternate Program Coordinator

The Ph.D. Program in Social Welfare prepares students to contribute to the field. The program builds on the premise that scholarship in the field of social welfare must be scientifically based, responsive to service and practice needs, and informed of developments in related fields and disciplines.

After the first year of required courses, each student's program is individually designed and focuses on a well-defined substantive area of research interest in the field of social welfare. In the basic core of required courses, which include teaching and research practice as well as elective courses, students have an opportunity to pursue their particular interests with faculty members in the School of Social Work and in other schools and departments.

During the first two years, students are expected to define and develop the specialized areas that will be the focus of their subsequent dissertation research. The selected areas must have clear significance for the development of practice, programs, or policies in social work and social welfare. Various specialized areas of study are possible within the program, including, but not limited to, child welfare policy, aging, mental health, services to women, racial-ethnic minorities, income-maintenance programs, and community empowerment.

The General Examination for advancement to candidacy normally occurs at the end of the second year. After advancement to candidacy, students devote full time to completion of their dissertation research. The last step before award of the degree is the Final Examination, which consists mainly of the defense of the dissertation. Students are strongly encouraged to remain in residence at the University until the dissertation is accepted. The Ph.D. program takes approximately three years.

## Admission

Applicants should have a master's degree in social work or comparable preparation in a closely related field. The applicants selected for admission are those whose scholastic achievements, previous experience, and aptitude for social welfare research and scholarship indicate the greatest promise for achieving the objectives of the program. In addition, an effort is made to maintain a balanced student group reflecting the range of concerns in social work and social welfare as well as the affirmative action goals of the University.

The School of Social Work also offers a combined M.S.W.-Ph.D. degree program for a small number of baccalaureate-degree-level applicants wishing to pursue careers in research and teaching, and social policy and administration. The Ph.D. program director may be contacted for details.

## Financial Aid

A limited number of stipends, scholarships, teaching and research assistantships, and tuition waivers are available. While every effort is made to provide aid to each student who requires it, priority is given to first- and second-year Ph.D. students. However, it is unlikely that the financial assistance provided to any student

would be adequate to cover all educational and living expenses. Application forms for financial assistance are submitted after the applicant has been offered admission to the program.

#### **Correspondence and Information**

Graduate Program Coordinator  
Ph.D. Program in Social Welfare, JH-30

#### **Center for Social Welfare Policy and Research**

In addition to its degree programs, the school maintains the Center for Social Welfare Policy and Research, which is the focal point of the school's policy and research activities. The center serves as a resource within the School of Social Work and the social welfare community, both regional and national, for the design, implementation, and evaluation of human services policies and practices. Areas of research include prevention, crime and delinquency, substance abuse, family violence, child welfare, AIDS, ethnic-minority issues, mental health, women's issues, and services to the elderly. The research projects operated within the center reflect the increased recognition of the need for systematic research and evaluation to test the effectiveness of social service programs and policies.

Information about the Center for Social Welfare Policy and Research can be obtained from the School of Social Work, JH-30, Center for Social Welfare Policy and Research, telephone 543-4175.

## **Faculty**

#### **Professors**

Burstein, Paul, 1985, (Sociology), M.A., 1971, Ph.D., 1974, Harvard; political sociology, social stratification, research methods, families and the law.

Costner, Herbert L.,\* 1959, (Sociology), M.A., 1956, Ph.D., 1960, Indiana; methods, criminology.

Gottlieb, Naomi R.,\* 1970, (Emeritus), (Women Studies), M.S.W., 1949, D.S.W., 1970, California (Berkeley); women and mental health, research methodology.

Greenberg, Mark T.,\* 1977, M.A., 1976, Ph.D., 1978, Virginia; infant and preschool social and cognitive development of profoundly deaf children.

Hawkins, J. David,\* 1976, M.A., 1969, Ph.D., 1975, Northwestern; family-, school-, and peer-focused delinquency and drug abuse prevention; social networks and social support development, community reintegration and aftercare.

Hooyman, Nancy R.,\* 1979, M.S.W., 1970, Ph.D., 1974, Michigan; aging, women's issues, community and organizational development, social networks.

Hunt, Marguerite, 1949, (Emeritus), M.S., 1932, Western Reserve; social work.

Jaffee, Ben-Joshua,\* 1967, (Emeritus), M.S.W., 1953, Michigan; D.S.W., 1972, Columbia; social work practice in loss and grief, research methodology, program evaluation, needs assessment.

Levy, Rona L.,\* 1975, M.S.W., 1972, Ph.D., 1974, M.P.H., 1975, Michigan; research methodology, single-case evaluation, health care, behavioral medicine, feedback, women's health issues.

Maier, Henry W.,\* 1959, (Emeritus), M.S.S.C., 1949, Case Western Reserve; Ph.D., 1959, Minnesota; child development, group child care, direct practice with individuals, families, and groups.

Parsons, Jack R., 1955, (Emeritus), M.A., 1940, Pacific; M.S., 1943, Columbia; Ph.D., 1958, Chicago; social work.

Plotnick, Robert D.,\* 1984, (Public Affairs),† M.A., 1973, Ph.D., 1976, California (Berkeley); poverty and income inequality, income support and income redistribution policies.

Resnick, Herman,\* 1967, M.S.S., 1956, New York; Ph.D., 1970, Bryn Mawr; organizational development, group dynamics, planned change, environmental psychology, social welfare.

Richey, Cheryl A.,\* 1973, (Women Studies), M.S.W., 1971, D.S.W., 1974, California (Berkeley); social support intervention, gender issues in practice and research, practice evaluation.

Stier, Florence R.,\* 1964, (Emeritus), M.S.S.A., 1941, Pittsburgh; D.S.W., 1973, Columbia; social welfare planning and program development.

Takagi, Calvin Y.,\* 1961, M.S.W., 1952, Ph.D., 1958, Minnesota; mental health services, child development, services to minority population.

Webster-Stratton, Carolyn H.,\* 1980, ‡(Nursing), M.S.N., M.P.H., 1972, Yale; Ph.D., 1980, Washington; parent intervention programs for behaviorally disturbed children.

Whittaker, James K.,\* 1970, M.S.W., 1966, Michigan; Ph.D., 1970, Minnesota; child welfare, in-home, foster family care and residential services, social treatment, social support networks, group treatment.

Woods, Nancy A. F.,\* 1978, (Nursing), M.N., 1969, Washington; Ph.D., 1978, North Carolina; women's health.

#### **Associate Professors**

Anderson, James R.,\* 1968, (Emeritus), A.M., 1954, Indiana; social work and health care, interdisciplinary teams in health care, growth and development, particularly in Black Americans.

Berleman, William C.,\* 1966, (Emeritus), M.S.W., 1960, Washington; undergraduate social welfare, social welfare policy.

Catalano, Richard,\* 1979, M.A., 1976, Ph.D., 1982, Washington; juvenile delinquency causation and prevention, research methods and statistics.

Conte, Jon R.,\* 1990, M.S.W., Ph.D., 1979, Washington; effects of sexual abuse on children and adult survivors, prevention of sexual abuse, professional services to abused children, other aspects of childhood sexual abuse.

Cox, Gary B.,\* 1972, (Research), ‡(Psychiatry and Behavioral Sciences), Ph.D., 1970, Duke; psychology.

Dear, Ronald B.,\* 1970, M.S.W., 1957, Pittsburgh; D.S.W., 1972, Columbia; welfare and income maintenance policy and programs, fiscal impact of social programs, poverty and income inequality, social legislation, social service policy and programs.

Duplica, Moya M.,\* 1963, M.S.W., 1956, St. Louis; social welfare policy and history, women and social policy, values and ethics in social work practice, international social welfare.

Eggert, Leona L., 1978, (Nursing), M.A., 1970, Ph.D., 1984, Washington; personal relationships, nurses' communication competency, adolescents' drug use and abuse.

Ellis, Jack A. N.,\* 1966, (Emeritus), M.S.W., 1955, British Columbia; social welfare administration and planning, social work and the justice system, health care in custodial settings, social work in school settings.

Ezell, R. Mark,\* 1986, M.S., 1974, Ph.D., 1985, M.S.W., 1986, Florida State; administration, fiscal management, program evaluation, computer utilization, juvenile justice policies and programs, grant writing, class advocacy.

Gilchrist, Lewayne D.,\* 1986, M.A., 1964, Stanford; M.S.W., 1977, Ph.D., 1981, Washington; adolescents, behavioral medicine, sexuality, drug abuse.

Gillmore, Mary L. R.,\* 1983, (Research), M.S., 1970, Michigan; M.A., 1977, Ph.D., 1983, Washington; social psychology, adolescents, human sexuality, research methods and statistics.

Hanneman, C. Fred, 1967, M.A., 1951, Indiana; aging, alcoholism, human services practice.

Herrick, James E.,\* 1966, M.S.W., 1958, California (Berkeley); D.S.W., 1966, Southern California; social policy, social work and the justice system, research methodology, social and cultural change.

Ishisaka, Anthony H.,\* 1971, M.S.W., 1968, California (Berkeley); social work practice, mental health services, services to minority communities, human development, community development.

Kelley, Jerry L.,\* 1961, (Emeritus), A.M., 1949, Chicago; social workers in schools, interviewing and counseling in human services.

Klingbeil, Karil S., 1964, (Psychiatry and Behavioral Sciences), M.S.W., 1960, Washington; violence in society, particularly with reference to family violence, forensic aspects of criminal justice, health-care planning and administration, gerontology, health-care systems.

Kopp, Judy,\* 1983, M.S.W., 1964, Ph.D., 1982, Washington (St. Louis); interviewing/counseling skills, clinical research, cross-cultural practice, native Americans.

Kruzich, Jean M.,\* 1991, M.S.W., 1975, M.A., 1976, Minnesota; Ph.D., 1982, Washington; environmental influences on long-term care residences, organizational analysis and administration in human services organizations, working with task groups with special interest in mental health services.

Leigh, James W.,\* 1967, M.S.W., 1954, Wayne State; social work practice with families, multiethnic and multicultural concerns, family life education.

Maiuro, Roland D., 1978, ‡(Psychiatry and Behavioral Sciences), Ph.D., 1978, Washington (St. Louis); clinical psychology.

McMahon, Robert J., 1987, ‡(Psychology), M.S., 1977, Ph.D., 1979, Georgia; social learning-based treatment on conduct-disordered children and their families; developmental psychopathology; behavioral assessment, family interaction, pediatric psychology.

Miller, Sidney,\* 1962, (Emeritus), M.S., 1953, Columbia; children, adolescents, and their families, interviewing, crisis intervention, marital counseling.

Morrison, Diane M.,\* 1988, (Research), M.S., 1979, Ph.D., 1982, Washington; adolescent sexuality and contraceptive use, sexual decision making, behavioral medicine, child substance abuse.

Mundt, Lenora B., 1961, (Emeritus), M.S.W., 1950, Washington; family treatment.

Nurius, Paula S.,\* 1984, M.S.W., 1980, Hawaii; M.A., 1983, Ph.D., 1984, Michigan; self-concept and self-esteem; computers in social work practice, violence against women.

Pecora, Peter J.,\* 1990, M.S.W., 1977, Wisconsin; Ph.D., 1982, Washington; social welfare administration, child welfare practice, family foster care, family preservation services.

Roffman, Roger A.,\* 1972, M.S.W., 1965, Michigan; D.S.W., 1983, California (Berkeley); alcoholism and drug abuse, research methodology, program evaluation, AIDS prevention.

Spain, David H.,\* (1968), ‡(Anthropology, Psychiatry and Behavioral Sciences), M.A., 1962, Ohio State; Ph.D., 1969, Northwestern; psychocultural anthropology, African studies, research methods.

Teather, Edward C.,\* 1966, M.S.W., 1962, British Columbia; residential treatment of children, group work, program development, family preservation project.

Weatherley, Richard A.,\* 1975, M.S., 1963, Chicago; Ph.D., 1975, Massachusetts Institute of Technology; social welfare policy and administration, social welfare bureaucracies.

**Assistant Professors**

Allen, Allethia L.,\* 1966, M.S.W., 1950, Boston; Ph.D., 1986, Walden; social work practice, social policy, interviewing, minority women, minority families, adolescents, human sexuality.

Arthur, Michael W., 1991, (Research), M.A., 1987, Ph.D., 1990, Virginia; Director for Community Youth Activity Project, Director of Communities That Care.

Baker, Sharon, 1989, (Research), M.S.P.H., 1976, Ph.D., 1988, Washington; Project Director—Health Sciences.

Balassone, Mary Lou,\* 1986, M.P.A., M.S.W. 1980, Syracuse; D.S.W., 1987, California (Berkeley); maternal and child health, health-care policy, services for adolescents.

Beadnell, Blair, 1990, (Research), M.A., 1985, Ph.D., 1988, Southern Illinois; Project ARIES.

Bending, Raymond L., 1991, M.S.W., 1983, California (Berkeley); Ph.D., 1992, Washington; American Indian child welfare practice and policy, social work in American Indian communities, children and family service.

Brown, Linda, 1991, (Research), M.S., 1968, Ph.D., 1982, Colorado; Director of Client Outcome Study, Mental Health Reform Act (SSB 5400).

Cummings, Carol, 1990, (Research), M.Ed., 1979, Ph.D., 1984, Washington; Project Director—Raising Healthy Children.

Gibson, John W.,\* 1987, M.S.W., 1977, Michigan; M.S., 1987, D.S.W., 1987, Columbia; aging, mental health, research methodology, statistics, adult developmental disabilities.

Gutierrez, Lorraine,\* 1989, M.S.W., 1978, Chicago; M.A., 1987, Ph.D., 1989, Michigan; gender and ethnicity in practice, empowerment, social change, adult development.

Harachi, Tracy, 1991, (Research), M.S.W., 1988, Ph.D., 1991, Washington; Director of Parenting for Drug-Free Children Project.

Hodges, Vanessa G.,\* 1987, M.S.W., 1979, Ph.D., 1985, Illinois (Urbana); intervention research in mental health, practice evaluation, social competency training, family preservation project.

Hoppe, Marilyn J., 1983, (Research), M.S.Ed., 1974, Southern Illinois; Ph.D., 1982, Washington; Director of Children's Health Awareness Project, data management.

LaLonde, Bernadette I.D., 1980, Ph.D., 1980, Toronto; Director of Evaluation, NW Aids Education and Training Center.

McGadney, Brenda F., 1991, M.S.W., 1975, Michigan; Ph.D., 1992, Chicago; long-term care, health promotion and self-care for elders, ethnicity and families, social support for caregivers of frail elders, community-based applied research.

Peterson, Peggy L., 1990, (Research), M.A., 1985, Illinois; M.P.H., 1989, Alabama; Ph.D., 1988, Illinois; Director for Treating Cocaine Abuse Project; Data Analyst on the Seattle Social Development Project.

Ryan, Rosemary, 1991, (Research), M.P.A., 1979, Portland; M.S.W., 1987, Ph.D., 1987, Washington; Research Director—Project ARIES.

Siewert, Pauline, 1989, M.S.W., 1984, California (Los Angeles); mental health and cross cultural issues, research methods.

Sohng, Sung Sil (Sue), 1990, M.S.W., 1979, Wayne State; Ph.D., 1989, Pittsburgh; mental health and mental retardation, psychosocial rehabilitation service models, working with chronically mentally ill, multiple-problem children, consumer empowerment, research in mental health services and cross-cultural issues.

Soifer, Steven D.,\* 1988, M.S.W., 1980, Washington (St. Louis); Ph.D., 1988, Brandeis; planned social change, community organizing, social policy.

Uehara, Edwina,\* 1990, M.S.W., 1977, Michigan; Ph.D., 1987, Chicago; research, violence in society, particularly in families and toward children.

Wells, Elizabeth A., 1984, (Research), Ph.D., 1984 Washington; Principal Investigation for Children's Health Awareness Project.

**Lecturers**

Andersen, Heather A., 1987, M.N., 1983, Washington; hospice/home care, health care.

Averill, Lloyd J., 1984, M.Div., 1950, M.Th., 1966, Colgate Rochester Divinity School; M.A., 1952, Rochester; development and continuing education director.

Cahn, Katharine, 1989, M.S.W., 1989, Washington; Northwest Resource Center for Children, Youth, and Families Director.

DeLong, James B., 1989, M.S.W., 1979, Washington; Evening Program Coordinator, Practicum Coordinator.

Haggerty, Kevin P., 1990, M.S.W., 1989, Washington; Project Director—Focus on Families.

Johnson, Paul W., 1989, M.S.W., M.P.A., 1979, Eastern Washington; Northwest Resource Center for Children, Youth, and Families Project Coordinator.

Nicoll, Anne E., 1990, M.S.W., 1977, Utah; Ph.D., 1989, Washington; computer applications in social work curriculum, research methods, service delivery for women, adult development, critical thinking and problem solving.

Richardson, Gloria D., 1989, M.A., 1973, Chicago; training coordinator for public child welfare supervision training, cultural diversity training, ethnic practice models.

Roberts, Elizabeth A., 1986, M.S.W., 1975, Washington; Practicum Coordinator.

Wrenn, Rachel M., 1991, M.S.W., 1981, San Diego State; Ph.D., 1987, Washington; maternal and child health services and policy, social support and coping, trans-cultural social work practice, field education.

## Course Descriptions

### Courses for Undergraduates

**SOC W 200 Introduction to Social Work Practice (5) W Berleman** Introduction to the practice of social work, theoretical concepts and institutional framework that guides practice, and the conceptual organization of the discipline of social work. Three weekly lectures and two hours per week in field observation sessions. Lectures supplemented by audiovisual aids and by special guest practitioners.

**SOC W 300 Historical Approaches to Social Welfare (3) AW Berleman, Duplica** Stresses the origins and development of social welfare policy and programs, starting with the Elizabethan Poor Law (1601) and ending with the Social Security Act of 1935. The issue of poverty and the development of publicly funded income maintenance programs are central concerns. Open to nonmajors and required of social welfare majors.

**SOC W 310, 311 Social Welfare Practice (3,3) W,Sp Allen, Whittaker** Provides a conceptual framework for social work practice with individuals, families, small groups, and communities; an introduction to the roles, tasks, and functions of the social welfare practitioner and to theories and methods of intervention; and develops skills in problem assessment, intervention, termination, and evaluation. Open only to social welfare juniors.

**SOC W 320 Contemporary Approaches to Social Welfare (3) WSp Berleman, Duplica** Policy and program developments in the social welfare field since 1935. Current income maintenance proposals, the emergence of programs to treat specific social dysfunctioning (e.g., mental health services), and the

growth of a service-oriented society are typical course concerns. Required of social welfare majors and open to nonmajors. Prerequisite: 300.

**SOC W 390 Introduction to Social Welfare Research (3) W Roffman** Introduction to the logic of the scientific method as applied to research in social work/social welfare; a beginning understanding of the inter-related steps in the conduct of a research study; and development of skills in the critical consumption of social welfare research and the relationship of this research to social welfare practice. Required of social welfare majors; others by permission of instructor.

**SOC W 405 Fieldwork Seminar (2 or 4, max. 6) Anderson, Gutierrez** Two-hour seminar meeting weekly. Student integrates social work practicum experiences with prior and concurrent course work in the social sciences, social work, and research. Includes discussion of class presentations and simulations or practice situations that combine knowledge and skill utilization. Student logs provide a basis for individual goal identification and achievement. Required for, and open only to, social welfare seniors. Prerequisites: 310, 311; to be taken concurrently with 415.

**SOC W 409 Readings in Social Welfare (1-5, max. 15) AWSp** Prerequisite: permission of instructor.

**SOC W 415 Beginning Field Instruction (4-6, max. 12) AWSp** Students are placed in selected social service agencies and accept beginning social service assignments under the supervision of competent agency personnel. Credit/no credit only. Prerequisites: social welfare major standing and 300, 310, 311.

**SOC W 419 Adult Development and Aging (3) Sp Hanneman** Designed to introduce the student to the field of adult development. Interdisciplinary perspective stressing the interaction of psychological, social, and physiological factors affecting the aging process. Goals are (1) to help the student understand and accept self-aging, and (2) to provide a framework of understanding for working with adult persons. Required for social welfare majors.

**SOC W 421 Methods of Child Care and Treatment (3) A Whittaker** Major foci include an introduction to the continuum of child welfare services, as well as some practical approaches to working with children and adolescents in a wide variety of practice settings.

**SOC W 426 Conceptions of Basic Institutional Change (3) Sp** How basic cultural change may be brought about and specifically how such change may affect the institution of social welfare. Focus on (1) a critical assessment of the dominant cultural values and particularly those values underlying social welfare, (2) prerequisites for a change to occur in these values, and (3) dangers and dilemmas in implementing such a change. Recommended: 300 and ECON 200.

**SOC W 430 Child Care Work Practice (3) A Whittaker** Specialized practice with emotionally disturbed and delinquent children in group-care settings, with focus on providing child-care staff with specific tools for teaching alternative behavior. Major topics include: etiology and diagnosis, observing and recording children's behavior, special problems of group living, life-space interviewing, token economies, activity programming, group interventions, parental involvement, organizational requisites and community linkages. Prerequisite: 310 or permission of instructor.

### Courses for Graduates Only

#### Social Work

**SOC W 500 Social Work: A Profession for Change (3) AW Duplica, Gutierrez, Siewert** An introduction to the foundations, approaches, and skills to social work practice with individuals and families, groups, organizations, and communities across the fields of practice in social welfare.

**SOC W 501 Problems of Social Welfare in Ethnic Minority Communities (3, max. 6) Gutierrez, Siewert** Examination of selected social welfare problems as

related to specific racial-ethnic minority groups. Attention is given to understanding of minority populations and the effective delivery of social work and social welfare services in those communities.

**SOC W 502 Social Policy and Economic Security (3) A** *Dear, Herrick, Soifer, Weatherley* Advanced course in policy stemming from the Social Security Act with particular reference to programs of income maintenance and health; social assistance, social insurance, unemployment insurance, and public and private approaches to health care. Emphasis on the development of analytic skills that help to address questions about benefits, comprehensiveness of coverage, financing, gaps in service, and options and alternatives for the future improvement of these programs.

**SOC W 503 Social Policy and Social Services (3) W** *Allen, Duplica, Herrick, Soifer, Whittaker* Provides in-depth knowledge of social welfare policies and services that meet societal problems, the needs of specific client groups, and analytic tools for evaluating various policies. Understanding of the network of institutions that employ social workers to better serve their clientele is a prerequisite if needed changes and improvements are to be made by professional social workers in these institutions and if feasible options are to be selected to rectify inadequacies at the policy level.

**SOC W 504 Social Problems and Social Welfare (3, max. 9)** *Allen, Balassone, Dear, Duplica, Ezell, Herrick, Hooyman, Plotnick, Roberts, Roffman* Analysis of major social problems and social welfare service systems providing a systematic approach to assessing the scope, causes, social cost, and public policy alternatives in the provision of services related to such problems, selected social problems such as poverty and ill health, juvenile delinquency, drug and alcohol addiction, and neglect of the aging are studied and related to the student's field experiences.

**SOC W 508 Integrative Seminar (1-3, max. 12)** Integrates specialized knowledge in social work settings. Credit/no credit only.

**SOC W 509 Readings in Social Work (\*) AWSpS** May be repeated for credit. Credit/no credit only. Prerequisite: permission of instructor.

**SOC W 515 First Field Practicum (1-8, max. 12)** Social work majors only. Credit/no credit only.

**SOC W 529, 530, 531 Introduction to Human Services Practice, HS Practice I, HS Practice II (3,3,3)** Topics covering various helping methods used in practice with individuals, families, and small groups.

**SOC W 532 Advanced Human Service Methods (3, max. 9)** *Gottlieb, Hanneman, Hodges, Klingbeil, Levy, Nurius, Roffman, Whittaker* Focus is either on various methodologies employed in work with clients with specific problems (physical disability, chemical dependency) or on a specific counseling practice stance (behavioral therapy, group treatment). Prerequisites: 529 or 310, 311.

**SOC W 533 Advanced Specialized Practice in Human Services (3, max. 9)** *Hanneman, Kopp, Leigh, Miller, Nurius, Richey, Teather* Advanced human services practice in special areas. Intensive study of practice materials with emphasis upon development of appropriate interventive and methodological skills.

**SOC W 534 Advanced Human Services Practice (3) AW** *Kopp, Leigh, Levy, McGadney, Sohng* Integration of practice and research is the key objective. Integration includes an understanding of and an ability to perform practice skills such as specification of problems and goals, intervention planning, evaluation. Scientific reasoning applied to practice tasks, problems including value conflicts and ethical dilemmas. Prerequisites: 529, 530, 531, 594, 595.

**SOC W 535 Second Field Practicum (2-10, max. 24)** Social work majors only. Credit/no credit only. Prerequisite: 515.

**SOC W 540 Problem Focused Human Behavior (3)** *Allen, Anderson, Balassone, Takagi* Focuses on social problems and needs, and their impact on the behavior of individuals, groups, organizations, and communities. Provides a cross-concentration offering targeted on the development of knowledge regarding social problems and needs, their behavior implications, and the type of services developed in response to needs.

**SOC W 541 Human Behavior and the Social Environment: Life Span Development (3) A** *Takagi* Provides understanding of human behavior across the life span from a developmental perspective. The interconnections among major societal and environmental forces and individual development and behavior is highlighted. The development of analytical tools for understanding and explaining the interactions between individuals, families, and other societal systems is explored.

**SOC W 543 Problem-Focused Human Development (3, max. 9) W** *Gottlieb, Gutierrez, Hawkins, Hooyman, Nicoll, Klingbeil, Roffman* Focus on the social and developmental determinants of specific human problems and their impact on individual development, families, and social institutions. Some time given to examining the nature of organized social responses that are designed to deal with the specified human problem. Prerequisite: graduate standing.

**SOC W 560 Planned Social Change (3)** *Herrick, Soifer* Methodologically based course providing for the acquisition of professional analytic and interventive skills associated with social work practice in planning and policy analysis.

**SOC W 561 Social Welfare Administration (3)** *Kruzich, Uehara* Methodologically based course considers implications of alternative organizational structures and administrative practices from differing perspectives of client, worker, and administrator. Focus on the ways structure and administrative practices may be manipulated to alter the manner in which clients are served by an agency. Prerequisite: permission of instructor.

**SOC W 563 Organizational Analysis (3)** *Kruzich, Weatherley* Provides conceptual base for analysis and action in human-service organizations. Emphasis on utilization of conceptual tools of organization theory for problem solving in social welfare organizations. Students learn to describe and analyze selected organizational problems and contribute to their solutions. Prerequisite: permission of instructor.

**SOC W 564 Group Process (3) AW** *Resnick* Provides tools for students to understand dynamics and development of group, to increase awareness of behavior of participants and leaders, and to improve effectiveness as participants and leaders. Prerequisite: permission of instructor.

**SOC W 565 Economics of Social Welfare Policy (3)** *Plotnick* Introduction to economics and its application to social welfare policies. Analysis of markets, performance of the national economy and role of government in the economy. Applications drawn from income maintenance and health policy issues, benefit-cost analysis of social programs and other arenas of social welfare policy.

**SOC W 566 Specialized Community and Organizational Services Skills (3, max. 9)** *Allen, Dear, Ezell, Herrick, Resnick* Methodologically based course providing graduate social work students with professional analytic and interactional skills associated with administration, planning, and program development in social welfare. Content drawn from research in social work and related social science disciplines. Prerequisites: graduate status and permission of instructor.

**SOC W 570 Community Organizing (3)** *Herrick, Soifer* Different strategies and tactics used in community organizing and an analysis of power relationships between the have's and have not's are addressed along with an introduction to the "nuts and bolts" skills

involved, and the history and different models of community organizing in the United States.

**SOC W 571 Advanced Social Welfare Administration (3)** *Ezell, Kruzich* Concepts and practice skills necessary for the management of social welfare organization, with emphasis on management practice in those settings offering clinical social services. Includes analysis of treatment settings and auspices, the management of interdisciplinary professional teams, overview of clinical practice technology, and planning, implementing, controlling, and budgeting in a human-services agency context. Builds upon material presented in 561. Prerequisites: 560, 561, and 535 taken concurrently.

**SOC W 575 Special Topics in Social Welfare Policy (3, max. 6)** *Duplica, Herrick, Soifer, Weatherley* Analyzes new or expanding areas of social welfare policies and services. Emphasis on developing the student's knowledge of, and ability to assess, social welfare programs. The role of social work is examined in these expanding legislative and program directions.

**SOC W 586 Statistics in Social Work (3)** *Morrison* Learning to describe and use the fundamental concepts underlying statistical analysis and basic statistical tests.

**SOC W 590 Social Welfare Research (3)** *Balassone, Berger, Catalano, Gottlieb, Morrison, Siewert* Three major objectives: (1) to introduce the student to the logic of the scientific method as applied to research in social welfare, (2) to provide the student with a beginning understanding of the interrelated steps in the conduct of research, and (3) to equip students for roles as consumers of, and participants in, social welfare research.

**SOC W 591-592 Individual or Group Research Project (3-3) AWSp, AWSp** Field practice in a group or individual project in lieu of 594-595 in the community and organizational services concentration. Includes development of research design, collection of data, tabulation and analysis, and report writing. Prerequisites: 590 or equivalent and permission of research minor chairperson.

**SOC W 594, 595 Advanced Social Work Research (3,3)** *Conte, Ezell, Gibson, Herrick, Hodges, Kopp, Levy, Nurius, Richey, Roffman, Siewert, Teather, Uehara* Principles and procedures for the evaluation of direct practice interventions (for human services students). Research methods involved in community-needs assessment, program evaluation, and management-information systems (for community and organizational services students). Separate sections of these courses are available for students in human services and in community and organizational services.

**SOC W 600 Independent Study or Research (\*) AWSpS**

**SOC W 700 Master's Thesis (\*) AWSp**

## Social Welfare

**SOCWL 552 History of Poverty and Inequality: The Anglo-American Experience (1485-1900) (3) A** Examines the roots of modern social welfare policy and program in two historic periods: the reign of the Tudors (1485-1603) and the evolution of welfare policy compatible with the aims of the nation-state; and the significant societal and intellectual developments preceding the English Poor Law Reform of 1834. The English welfare heritage as it subsequently shaped public and private welfare measures in the United States also receives attention, as does the relevance of these early beginnings to today's conceptualization of welfare policy.

**SOCWL 553 Seminar in Contemporary Social Welfare Policy (3) Sp** *Dear, Plotnick, Weatherley* Major American social welfare programs and some of the policies that guide their development and implementation; contemporary income maintenance policies and their effectiveness in reducing income in-

equality. This course is closely linked to, and built upon, 552. Selected issues and dilemmas followed in that course, which serve as the focus for policy debate, are examined in the context of current welfare programs.

**SOCWL 580 Introduction to Advanced Research Methods and Design (3) A** *Hawkins, Levy* Introduction to the broad scientific issues and the specific methodological strategies used in formulating and answering research questions within the field of social welfare. Required of all first-year students in the social welfare Ph.D. program; open to others by permission of instructor.

**SOCWL 581 Introduction to Advanced Research Method and Design (3) W** Continuation of 580. Required of all first-year students in the Social Welfare Ph.D. program; open to others by permission of instructor.

**SOCWL 582-583 Research Practicum (1-3, max. 3)-(1-3, max. 3) W,Sp** Development of specific methodological skills in social welfare research through participation in an ongoing research project. Credit/no credit only.

**SOCWL 587 Fundamentals of Social Work Statistics I (4) A** *Gibson, Gillmore* Descriptive and inferential statistics. Underlying logic of statistical inference. Statistical issues of special relevance in social work, including measurement and research design. Prerequisite: concurrent registration in 580.

**SOCWL 588 Fundamentals of Social Work Statistics II (4) W** *Gibson, Gillmore* Issues in the use of descriptive and inferential statistics, especially the statistical control of extraneous variables. Applications of statistical inference in factorial design, and correlation and regression. Statistical issues of special relevance

in social work. Ethics in the use of statistics. Prerequisite: concurrent registration in 581.

**SOCWL 598-599 Research Problems and Priorities In Social Work and Social Welfare (3-3) W,Sp** *Richey, Weatherley* Seminar assesses the current state of knowledge in selected major areas of social work and social welfare, examines analytic and methodological problems in conducting research in these areas, and identifies research priorities. Emphasis on peer learning centered on the identification of central research problems in the areas of social policy, program evaluation, and intervention with individuals, groups, families, and organizations. Prerequisite: admission to social welfare Ph.D. program or permission of instructor.

**SOCWL 600 Independent Study or Research (\*) AWSpS**

**SOCWL 800 Doctoral Dissertation (\*) AWSpS**

Rev. 9/91

University of Washington Bulletin  
3900 Seventh Avenue Northeast  
Seattle, WA 98195

*On the cover: Denny Hall, first used by faculty and students in 1895, is the oldest building on campus. The bell in the belfry is rung once a year, at Homecoming. The drawing of the column symbolizes the University's founding. The four columns—which originally graced the entrance of the University's main building when it was located in downtown Seattle—were moved to the present campus in 1911. They now stand in the Sylvan Amphitheater near Drumheller Fountain.*
