SOC 344 Cognitive Social Psychology (5) I&S Cognitive structures and processes and their antecedents and consequences, both societal and individual. Reciprocal influences of social roles, social institutions, and social cognition. Prerequisite: 240 or equivalent or permission of instructor.

SOC 345 Collective Behavior (5) I&S Behavior of large numbers in crowds, masses, publics, and social movements where institutional definitions for joint action are minimal and the collectivity seeks to define new patterns of collective action. Prerequisite: 240 or permission of instructor or adviser.

SOC 346 Group Processes (5) I&S Cook, Schmitt Systematic analysis of social processes in small groups, including conformity, deviance, cooperation, competition, coalition formation, status and role differentiation, inequity, communication, and authority and power. A variety of methods of research are considered: field studies, field experiments, laboratory studies, and the simulation of social processes. Prerequisite: 240 or equivalent.

SOC 350 Contemporary American Institutions (5) I&S Guest Origins and development of major social institutions. Sociology of economic structure, political organization, religion, education, recreation, and other institutionalized patterns. SOC 352 The Family (5) I&S The family as a social institution. Historical changes and societal variation in family patterns. Changes over the life cycle. Alternative family forms.

SOC 353 The Family in Cross-Cultural Perspective (5) I&S Form, content, and functions of families through case studies of different countries. Family organization, including family structure, inheritance, sexual division of labor, and socialization with attention given to life-cycle stages. Prerequisite: 110.

SOC 354 The Comparative Study of Societies (5) I&S van den Berghe Entire societies at various levels of technological complexity are compared to explore problems of their development and structural organization. Both historical and contemporary Western and non-Western societies are examined. Offered: jointly with ANTH 354.

SOC 355 Social Change in Latin America (5) I&S Neuhouser, van den Berghe Problems of development and dependency in Latin America. Relations of power and production between social classes and ethnic groups, with special emphasis on Meso-America (Mexico, Guatemala) and the Andes (Peru, Bolivia). Prerequisite: introductory course in sociology, anthropology, political science, or economics. Offered: jointly with SIS 355.

SOC 356 Society and Politics (5) I&S Burstein, Jepperson, Neuhouser Causes of political change in democratic countries, including public opinion, social movements, interest group activity, and party organization. Offered: jointly with POL S 356.

SOC 360 Introduction to Social Stratification (5) I&S Social class and social inequality in American society. Status, power, authority, and unequal opportunity are examined in depth, using material from other societies to provide a comparative and historical perspective. Sociological origins of recurrent conflicts involving race, sex, poverty, and political ideology.

SOC 361 Age and Sex Differentiation (3) I&S Physiological and social bases of age and sex differentiation in human societies. The implications of age and sex distinctions for kinship, economic, and political structures. The relationship between age, sex, and other bases of social inequality.

SOC 362 Race Relations (5) I&S Internacial contacts and conflicts.

SOC 364 Women in the Social Structure (5) I&S Howard Gender and social institutions; the family, politics, education, medicine, law, the labor force. Intersection of gender with other minority statuses such as race, age, socioeconomic status, and sexual orientation. Structural, ideological, and historical determinants of gender relations. Offered: jointly with WOMEN 364.

SOC 365 Urban Community (5) I&S Conley, Guest Comparative and analytic study of organization and activities of urban groups.

SOC 386 Bureaucracy in Society (5) I&S Hamilton The coming of organizational societies; causes of bureaucracy; informal relations and work groups; ideologies; authority and the division of labor; social change in bureaucracies; the "faceless" bureaucrat in relationship to client needs; comparative organizations; complex organizations as settings for research.

SOC 371 Criminology (5) I&S Bridges, Crutchfield, Weis Survey of legal definitions, types of criminal behavior, trends and patterns, recidivism, characteristics of offenders, environmental influences, diagnostic methods, prediction, theories of crime and delinquency prevention, social policy. Recommended: 271.

SOC 372 Introduction to Criminal Justice (5) I&S Examines role of police, courts, and corrections in criminal justice. Applies sociological theories and perspectives to issues in law enforcement, adjudication,

and corrections. Legislative reforms. Innovations in policy. Recommended: 271.

SOC 373 Social Factors in White Collar Crime (5) I&S Weis Concept and etiology of white collar crime, its forms, costs, victims, and innovative developments. Prospects for theoretical explanations and social control.

SOC 399 Undergraduate Internship (2-5, max. 10) Students serve in approved internships. Recommended for sociology majors.

SOC 401 Special Topics in Societogy (5, max. 15) I&S Selected topics of contemporary interest taught by a sociologist active in the field. Topics vary and may be substantive, theoretical, or methodological. Prerequisite: major standing or permission of instructor.

SOC 410 History of Sociological Thought (5) I&S Contributions of individual theorists (from Comte to the present); emphasis on cumulative development of concepts and principles, emergence of sociology as a science, probable future developments.

SOC 411 Selected Topics in History of Sociological Thought (5) I&S Specific areas or eras in the history of sociological thought. Emphasis on the development of sociological theory in relation to the intellectual and social setting of the time. Topics change from quarter to quarter. Some topics are: the development of concepts of order in sociological thought; conflict theories; the development of action theory in sociology; German sociology; Marx, Weber, and Simmel.

SOC 412 Classics of Social Research (5) I&S Becker Analysis of classics of social research from various subfields in sociology, designed to discover and illustrate the varieties of quality such classics exhibit.

SOC 415 Theory of Social Organization (5) I&S State and usages of theory in social organization; importance of linkage between theory and methodology; major features of social organization demonstrated by intensive examination of representative theories of social organization with particular focus on complex forms.

SOC 416 Sociological Theory (5) I&S Jepperson, Kiser Theories of individual action, social order, and institutional change. Cumulative development of solutions rather than on works of given theorists. Theories of social order. How sociological treatments of these issues compare with those offered by economists and other social socientists.

SOC 419- Fieldwork: Observation and Interviewing (5-) I&S Becker Perspective, logic, and techniques of qualitative social research and analysis. Nature and uses of intensive interviewing, participant observation, and analytic ethnography. Application of field research principles. Research project required in addition to reading and analysis of classic studies. Recommended; 240 or 352. Offered: W.

SOC 420 Fleldwork: Observation and Interviewing (-5) I&S Becker Logic and techniques of qualitative social research and analysis. Intensive interviewing, participant observation, qualitative data analysis (including applications of data base technology, problem reformulation, and techniques of visual documentation). Results of student work reported and discussed in class. Offered: Sp.

SOC 424-425 Applied Social Statistics (3-3) I&S Applications of statistics in sociology and related social sciences. Emphasis on problems of analysis with imperfect data. Probability in statistical inference. Analysis of variance; contingency table analysis, nonparametric procedures; regression analysis in social research. Prerequisites: 329 for 424-; 424- for -425. Offered: W,Sp.

SOC 426 Methodology: Quantitative Techniques in Sociology (3) I&S Raftery Applied regression analysis with emphasis on interactive computer graphics techniques and interpretation. Application to typical sociological problems. Prerequisite: 329 or 425. Offered: A.

SOC 427 Statistical Classification and Measurement (3) I&S Costner Application of statistical principles and methods to problems of classification and measurement in social research. Prerequisites: 426, 428-429.

SOC 428 Principles of Study Design (3) 1&S *Costner, Crutchfield, Guest* Study design from problem formulation to the analysis and interpretation of data. Prerequisite: 329. Offered: Sp.

SOC 429 Practicum in Data Analysis (3) I&S Bridges, Crutchfield, Guest Introduction to selected programs for data analysis and practice in their application. Practice in coordination research problem, data, and mode of analysis into a coherent, interrelated set. Interpretation of results. Prerequisite: 424-425, 428. Offered: A.

SOC 430 Advanced Human Ecology (3) I&S Human population distribution and migration patterns. Causes and consequences of world urbanization. Spatial and social patterns in the metropolis. Aggregate population movements and selectivity of migrants.

SOC 431 Fertility and Mortality (3) I&S Lye Theories of fertility and mortality, demographic transitions, individual variations. Specific analytic approaches. Familiarity with basic fertility and mortality measures, and with the life table, is assumed.

SOC 432 Population and Modernization (3) I&S Hirschman Examines role of demographic factors in the process of social modernization and economic growth. The approach is both historical, focusing on populations of developed countries since 1700, and analytic, stressing the attempts made by different disciplines to model demographic relationships, with attention to less-developed regions. Prerequisite: 331 or permission of instructor or adviser. Offered: jointly with SIS 432.

SOC 433 Research Methods In Demography (3) I&S Lye, McCann Basic measures and models used in demographic research. Sources and quality of demographic data. Rate construction, standardization, the life table, stable population models, migration models, population estimation and projection, measures of concentration and dispersion, measures of family formation and dispedulton.

SOC 434 Demographic issues in Asia (3-5) I&S Lavely Contemporary Asian countries face a number of issues with demographic components, including environmental and resource issues, ethnic rivalries, international migration, and public health. This seminar addresses a set of these issues by focusing on the demography of one or more countries in Asia. Offered: jointly with SISEA 434.

SOC 442 Public Opinion (3) I&S The nature of public opinion; formation and measurement of public opinion; the operation of public opinion polls. Recommended: 240.

SOC 443 Mass Communication (5) I&S Control, structure, and functioning of mass media of communications as a force in social life; methods of research. Recommended: 240.

SOC 445 Religious Movements: The Sociology of Cults and Sects (5) I&S Stark Understanding religion, what it is, and what it does. Examines the formation of new religious movements, cults, and sects, and the conditions under which they succeed or fail. Prerequisite: 110. Offered: jointly with RELIG 449.

SOC 446 Theories and Tactics of the Women's Movement (3) I&S History of the women's movement and its current philosophies and tactics used to achieve change in women's status. Recommended: background in status of women and philosophies of women movements. Prerequisites: 110 or WOMEN 200 and junior or senior standing. Offered: jointly with WOMEN 446.

SOC 447 Social Movements (5) I&S Social movements as collective attempts to change society: why people join; characteristics of successful and unsuccessful movements; consequences of social movement activities. Prerequisite: previous course in political sociology or political science.

SOC 449 Social Relationships (5) I&S The structure of different kinds of relationships and the nature of interaction within them. Concept of social relationships in general; several specific types of relationships. Close personal relationships: marriage, nonmarital sexual relationships, and the parent-child relationship. Prerequisites: course in social psychology and 352 or equivalent.

SOC 450 Political Economy of Women and Family in the Third World (5) I&S Neuhouser Theoretical and empirical aspects of the political economy of women and the family in the Third World during the process of development, with a focus on labor. Main theoretical approaches examined and applied to case studies from Asia and Latin America. Offered: jointly with SIS 450.

SOC 451 Theory and Process of Social Change (5) I&S Hamilton Basic trends in American life; frames of reference for analysis of social change; forces causing social change. Prerequisite: 15 credits in social sciences.

SOC 453 Social Factors in the Family (5) I&S Review and analysis of empirical research in courtship and marriage, marital adjustment, and specific areas of marriage and family life. Prerequisites: 329 and 352.

SOC 456 Political Sociology (5) I&S Burstein, Jepperson, Neuhouser Relationships between social change and political change. Focus on selected issues, including social bases of democracy, political organization, elections, and consequences of public policy. Prerequisites: 356, and a 200-level political science course or equivalent.

SOC 457 Sociology of Religion (5) I&S Neuhouser The relations between religion, polity, economy, and social structure; in particular, the political, economic, and social impact of religious beliefs and organizations, as well as the social determination of these beliefs and organizations; the rise of secularism, the rationalization of modern life, and the emergence of political quasi-religions.

SOC 460 Social Differentiation (5) I&S Analysis of societal organization based on sex, age, residence, occupation, community, class, caste, and race.

SOC 461 Comparative Ethnic Race Relations in the Americas (5) I&S Sketches the ethnoracial systems operating in American society. Studies these systems as systems, and examines their institutional and interpersonal dynamics. Compares ethnoracial systems in order to arrive at empirical generalizations about race/ethnorelations in the Americas. Offered: iointly with AES 461.

SOC 462 Comparative Race and Ethnic Relations (5) I&S Scott Race and ethnicity as factors of social differentiation in a number of Western and non-Western societies in Europe, Africa, Asia, and the Americas. Recommended: 362. Offered: jointly with AES 462.

SOC 464 Contemporary Society in the Peoples Republic of China (5) I&S Lavely Separate development of rural and urban social institutions in the Peoples Republic of China since 1949 from a sociological perspective. Family and marriage, social control, educational institutions. Dilemmas of contemporary China and reasons for institutional change. Offered: jointly with SISEA 464.

SOC 465 Complex Organizations (5) I&S Cook, Hamilton Examination of the structure of complex organizations. Attention to developing generalizations

applicable to industrial organizations, businesses, hospitals, prisons, labor unions, governments, universities, armies, and similar formally instituted organizations. The major focus is on empirical research, with some attention to methodological problems in studying such organizations. Prerequisite: 15 credits in sociology.

SOC 466 Industrial Sociology (5) I&S Reitman Changing focus of field; cultural variation, work, and the worker; technology, society, and the evolution of industrial forms; types and forms of industrial organizations; industrial organizations as social and technical systems; issues of control, process, and change; the individual in social and technical systems.

SOC 468 Sociology of Occupations and Professions (5) I&S Frameworks for study of occupations and professions; occupational structure and mobility in American society in relation to adult socialization and career development; occupational and professional associations and society. Prerequisites: 240 and 15 credits in social sciences.

SOC 469 Balkan Societies (5) I&S Chirot Examination of the roots of Balkan social problems (economic backwardness, minority-group conflicts, peasant problem), the failure of pre-1945 attempts to solve these problems, the post-1945 communist failures, the causes of the upheavals of 1989, and the prospects for success in the 1990's.

SOC 472 Juvenile Delinquency (5) I&S Crutchlield, Weis Factors in delinquency, juvenile courts Programs of treatment and prevention. Recommended: 371 or equivalent.

SOC 473 Corrections (5) I&S Weis Analyzes research on diversionary methods and treatment of convicted offenders. Emphasis on program evaluation. Community treatment, fines, restitution; probation, parole, halfway houses, and other alternatives to incarceration; correctional institutions. Organization of state and federal systems. Problems of administration. Subsidies and governmental control. Planning and public participation. Prerequisite: 371 or 372. Recommended: 329. Offered: jointly with SO JU 473.

SOC 481, 482, 483 Issues in Analytic Sociology (5, max. 15; 3, max. 9; 1-3, max. 9) I&S Examination of current issues in sociological analysis. Specific content of the course varies according to recent developments in sociology and the interests of the instructor.

SOC 486 Human Family Systems: Biological and Social Aspects (5) I&S van den Berghe Biological bases for human mating and reproduction, and an examination of the range of cross-cultural variability in human systems of kinship and marriage. Compares wide range of human and nonhuman species, and Western and non-Western human societies. Interplay of biological, ecological, and sociocultural factors in determining the structure and function of human family systems. Offered: jointly with ANTH 486.

SOC 491 Sociology of Science (5) I&S Becker Sociological study of scientific activity. Social origins of scientific thought and practice, the organization of scientific work, and the process of change in science. Major theories in the area, including Merton, Kuhn, and Latour. Prerequisites: 15 prior credits in sociology; one course in physical or biological sciences.

SOC 495 Honors Senior Thesis (5) I&S Preparation of senior honors thesis. Sociology majors only.

SOC 496-497-498 Honors Senior Seminar ([3/5]-, [3/5]-, [3/5]) I&S Jepperson Exploration of selected sociological problems with emphasis on research experience and the interpretation of data. For sociology majors only, primarily for honors students. Prerequisites: senior standing and permission of instructor. Offered: A-W-Sp. SOC 499 Undergraduate Independent Study or Research (2-5, max. 10) Credit/no credit only. Prerequisite: permission of instructor.

Courses for Graduates Only

SOC 501 Proseminar (2) Introduction of first-year graduate students to each of the substantive areas in sociology and to research facilities. Credit/no credit only. Offered: A.

SOC 502 Seminar on Teaching Sociology (3) Techniques of lecturing, leading discussion, evaluating student performance, and other pedagogical skills ancillary to successful teaching. Students develop a course and obtain videotaped feedback of presentations. Prerequisite: completion of MA. Offered: W.

SOC 503 Seminar on Writing Social Science (3) *Becker, Burstein, Howard* Techniques, skills, and strategies helpful for publishing in the social sciences. Includes writing and revision of own work and evaluation of the writing of other students. Also includes social scientific analysis of writing and other forms of academic communication. Prerequisite: completion of MA. Offered: A.

SOC 510 Seminar in Sociological Theory (3) *Jepperson, Kiser* Macrosociological theories; functionalism and neoevolutionism; conflict and consensus approach; comparative strategies; models and longrange theories; ideology and sociology. From Marx and de Tocqueville to contemporary literature. Offered: A.

SOC 511 Classical Social Theory (3) Study of classical masters of social theory; Marx, Durkheim, Weber, and Simmel.

SOC 513 Demography and Ecology (3) Hirschman, Lye, McCann Theories and research on human fertility, motality, mobility, migration, and urbanization in social/economic context. Comparative and historical materials on Europe, the United States, and the Third World.

SOC 514 Current Theories in Social Psychology (3) *Cook, Howard, Schmitt* Broad graduate-level introduction to the theories in the field of social psychology.

SOC 515 Current Research in Social Psychology (3) Howard Broad graduate-level introduction to the research in the field of social psychology.

SOC 516 Organizations (3) Cook, Hamilton Broad graduate-level introduction to the theory and research on complex organizations.

SOC 517 Deviance and Social Control (3) Bridges, Crutchfield, Weis Survey of current research on deviant behavior and mechanisms of social control; definitions and forms of deviant behavior, causal analysis, and legal or other methods of social control.

SOC 518 Social Stratification (3) Butstein, Guest Intensive preparation in theoretical, methodological, and substantive topics in social stratification.

SOC 519 Social Change (3) Burstein Basic perspectives in the study of social change. Classical works and exemplary contemporary contributions in the literature.

SOC 525 Experimental Methods in Social Research (3) For graduate students who wish additional understanding of techniques, problems, and issues involved in the design and conduct of experimental social research. Considers strengths and weaknesses of various experimental designs, artifacts and their control, problems in going from the laboratory to the field, and ethical issues. Prerequisites: 424-425 and 428, 429, or equivalents.

SOC 526 Causal Approach to Theory Building and Data Analysis (3) Theory construction and testing from a causal models perspective. Path analysis, stan-

dardized versus unstandardized measures, feedback models, identification problems, estimation in overidentified models, difference equations, differential equations, stability conditions. Multiplicative models as alternatives to additive ones. Causal approach to measurement error.

SOC 527 Measurement of Basic Sociological Concepts (3) Conceptualization and measurement problems in sociology, using major concepts as illustrations of basic issues. Causal approach to measurement to deal with problems of indirect measurement, crosslevel measurement problems, aggregation and disaggregation. Consequences of crude measurement for data analyses. Prerequisite: 424. Recommended: 426.

SOC 528 Seminar on Selected Statistical Problems in Social Research (3) Costner, Raftery Prerequisite: 426.

SOC 529 Multiple Indicators in Social Measurement (3) Costner Repeated measures, alternate measures and multiple observers in estimating the reliability, assessing the validity, and analyzing conceptual and indicator problems in social measurement. Implications of measurement error for research conclusions. Prerequisites: 424, 426.

SOC 536 Log-Linear Modeling and Logistic Regression for the Social Sciences (3) Raftery Loglinear modeling of multidimensional contingency tables. Logistic regression. Applications to social mobility, educational opportunity, and assortative marriage. Applied and computing focus. Prerequisite: 425 or STAT 395 or permission of instructor. Offered: jointly with STAT 536.

SOC 539 Selected Topics in Demography and Ecology (3, max. 9) Specialized problems in demography or ecology are covered; for example, migration, fertility, mortality, language, race and ethnic relations, metropolitan community. See quarterly announcement for specific problem to be covered.

SOC 542 Selected Topics in Group Processes (3) Cook, Schmitt Theories, methodology, and studies in the area of small-group research. Prerequisite: permission of instructor for nonmajors.

SOC 544 Seminar on Social Power (3) Examination of basic principles concerning power, influence, and authority in small groups, organizations, and communities. Recommended: 240, 415, 460.

SOC 546 Seminar on Symbolic Interaction (3) Focuses on several key areas in, and related to, the symbolic interactionist perspective (e.g., language, the self, the dramaturgic perspective, ethnomethodology, stigma, the social construction of social problems). Prerequisite: permission of instructor for nonmajors.

SOC 547 Social Cognition and Attribution (3) Theories and research on social cognition and attribution. Theoretical and methodological debates on cognition. Sociological aspects of attribution. Prerequisite: 514 or equivalent.

SOC 550 Changing Patterns of Family Organization (3) Schwartz History of the family with emphasis on changes in European and American families since 1600. Concomitant changes in other institutions and their relation to changes in the family.

SOC 551 Family and Gender Relations (3) *Lye, Schwartz* Overview of major research findings on marriage and the family, including demographic trends, the place of children in society, courtship, divorce, and gender roles.

SOC 554 Seminar in the Sociology of Religion (3) Survey of significant and active areas of theory and research in contemporary social scientific studies of religion.

SOC 555 Methods in Macro, Comparative, and Historical Sociology (3) Chirot

SOC 556 The Evolution of the Family (3) van den Berghe Biological evolution of species-specific behaviors and forms of sociality linked to human mating, reproduction, and parenting. Cultural evolution of human systems of kinship and marriage as filnessmaximizing adaptations to a wide range of habitats. Prerequisite: upper-division course in evolutionary theory, population genetics, behavioral ecology, primatology, or animal behavior. Offered: jointly with ANTH 556.

o

SOC 559 Seminar on Gender Roles (3) Brines, Howard Theoretical issues concerning gender and society. Current state of empirical knowledge on the sociology of gender and strategies for research. Cross-cultural variations in gender roles, how these develop in people, how gender roles develop in society and their effects on social structure, social institutions, and interaction. Prerequisite: graduate standing in a social science. Offered: alternate years.

SOC 561 Society, Chronic Illness, and Disability (3) Critical examination and discussion of sociological approaches—methodological, theoretical, and empirical—in the health-care field. Attention to applied studles in the field and, more broadly, to the implications for decision making from the sociological perspective. Prerequisite: permission of instructor. Offered: jointly with HSERV 554.

SOC 562 Seminar in Comparative Race Relations (3) van den Berghe Cross-cultural approach to race and ethnic relations, including case studies from Africa and Latin America. Prerequisite: graduate standing in social sciences.

SOC 566, 567 Seminar in Complex Organizations (3,3) Special topic seminars in the field of complex organizations or industrial sociology.

SOC 568 Social Mobility (3) Description and measurement of social mobility. Determinants of mobility and cross-national comparisons. Consequences of mobility for social behaviors. Emphasizes movement from the socioeconomic position of family of origin to adult position. Prerequisite: 518.

SOC 569 Demographic Studies of Stratification (3) *Guest, Hirschman* Overview of development of models of socioeconomic achievement ("status attainment" paradigm) in the field of stratification. Begins with work of Blau and Duncan. Covers elaboration of basic models to include race and ethnicity, social psychological variables, class, school and labor market effects, and other structural variables. Prerequisites: 513, 518.

SOC 574 Seminar in Methods of Criminological Research (3) Bridges, Weis Provides training in the technical analysis of published research in criminology; designs and processes studies in parole prediction, prediction of prison adjustment, and prediction of treatment effect.

SOC 581 Special Topics in Theory and the History of Sociological Thought (3, max. 9) Examination of current topics in theory and the history of sociological thought. Content varies according to recent developments in the field and the interests of the instructor.

SOC 582 Special Topics in Research Methods and Statistical Analysis in Sociology (3, max. 9) Examination of current topics in research methods and statistical analysis in sociology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 583 Special Topics in Demography and Ecology (3, max. 9) Examination of current topics in demography and ecology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 584 Special Topics in Social Psychology (3, max. 9) Examination of current substantive topics in social psychology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 585 Special Topics in Marriage and Family (3, max. 9) Examination of current substantive topics in marriage and the family. Content varies according to recent developments in the field and the interests of the instructor.

SOC 586 Special Topics in Organization and Industrial Sociology (3, max. 9) Examination of current substantive topics in organizational and industrial sociology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 587 Special Topics in Deviance and Social Control (3, max. 9) Examination of current substantive topics in deviance and social control. Content varies according to recent developments in the field and the interests of the instructor.

SOC 588 Special Topics in Stratification and Race Relations (3, max. 9) Examination of current substantive topics in stratification and race relations. Content varies according to recent developments in the field and the interests of the instructor.

SOC 589 Special Topics in Macrosociology (3, max. 9) Examination of current substantive topics in macrosociology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 590 Special Topics in Sociology (3, max. 9) Examination of current substantive topics in sociology. Content varies according to recent developments in the field and the interests of the instructor. Topics covered in courses with this number lie outside those covered by other special topics courses numbered 581 through 589.

SOC 591 Political Sociology (3) Introduction to political sociology, considering the rise of the modern state, power, political organization, social movements, and other related topics.

SOC 600 Independent Study or Research (*) Credit/no credit only.

SOC 700 Master's Thesis (*) Credit/no credit only.

SOC 800 Doctoral Dissertation (*) Credit/no credit only.

Speech and Hearing Sciences

203 Eagleson

The speech and hearing sciences concern the processes and disorders of verbal communication. The undergraduate programs include the study of normal language development, speech acoustics, speech physiology and perception, hearing, the nature of language, speech and hearing disorders in children and adults, and the clinical processes involved in identification, prevention, and remediation of those disorders.

Undergraduate Program

Director of Student Services Mélissa Johnson 205 Eagleson

Bachelor of Science Degree

Admission Requirements: 2.50 overall GPA. Recommended preparation includes high school physics or equivalent; introductory exposure to human learning, sensory, perceptual, and cognitive processes, general physiology and the physiology of behavior, and college mathematics.

Core requirements for all options: 29 credits in the following courses—SPHSC 201, 250, 303, 307, 310, 311. Students following Options II, III, or IV below must have a 3.00 GPA in courses that make up the common core. Students following Options III or IV must meet additional grade-point requirements to participate in clinical practicum.

OPTION I, GENERAL ACADEMIC

Intended to provide broad perspectives of the field, but not to prepare students for professional careers in the speech and hearing sciences.

Major Requirements: Core requirements listed above; 25 credits in courses dealing with normal and abnormal language, speech, and hearing taken from the following: SPHSC 315, 330, 332, 370, 380, 401, 402, 410, 411, 416, 420, 430, 431, 499; PHYS 114 and 117, or 207; ZOOL 118.

OPTION II, BASIC SCIENCES

Intended for students who wish to continue graduate study in speech and hearing that leads to university teaching and research careers, but does not include clinical training in audiology or speech pathology.

Major Requirements: Core requirements listed above; 28-37 credits, including SPHSC 401, 402, 410, 416, 420, 499, and 6 credits in the speech pathology or clinical audiology areas; 28-30 credits outside the department, including a mathematics course that deals with calculus; one course each in statistics, psychology (learning, memory, or cognition), and human physiology; PHYS 114 and 117, or 207; ZOOL 118.

OPTION III, CLINICAL SCIENCES-AUDIOLOGY

Intended for students who wish to continue graduate study and to obtain clinical training in audiology.

Major Requirements: Core requirements listed above; 36 credits, including SPHSC 315, 330, 332, 350, 370, 380, 401, 420, 431, 451 (audiology); at least 9 credits outside the department, in psychology (deviant personality, cognitive development, developmental psychology, neural and sensory bases of behavior), educational psychology (behavior measurement and management, statistics); PHYS 114 and 117, or 207; ZOOL 118.

OPTION IV, CLINICAL SCIENCES— SPEECH/LANGUAGE PATHOLOGY

Intended for students who wish to continue graduate study and to obtain clinical training in speech/language pathology.

Major Requirements: Core requirements listed above; 36 credits, including SPHSC 315, 330, 332, 350, 370, 380, 401, 430, 431, 451 (audiology); two courses in developmental psychology or deviant personality; PHYS 114 and 117, or 207; ZOOL 118.

Graduate Program

The Department of Speech and Hearing Sciences offers the Master of Science and Doctor of Philosophy degrees. The program consists of a wide range of course work and seminars providing opportunities for.

COLLEGE OF ARTS AND SCIENCES / SPEECH AND HEARING SCIENCES 227

the development of scholarly and professional competence in various areas of specialization: language acquisition; phonology; speech production and transmission; hearing; psychoacoustics; speech perception; computer recognition and generation of meaningful speech: and human communication disorders related to language, speech, and hearing and the clinical procedures involved in their identification, prevention, and remediation. To complement departmental curricula in various specialization areas, close interdisciplinary relationships are maintained with other University departments and off-campus centers. Advanced degrees in the speech and hearing sciences equip the student to do research, to teach at the college and university level, and to provide clinical services to the communicatively impaired.

Special Requirements: Prospective candidates for advanced degrees are expected to have earned 50-60 credits in the speech and hearing sciences at the undergraduate level, depending upon the specific area of graduate specialization chosen. The M.S. (thesis) degree requires a minimum of 30 credits of approved course work, plus an acceptable thesis (9 credits). This degree program is recommended for students who plan to continue graduate study for the Ph.D. degree. The M.S. (non-thesis) degree is intended primarily for students who desire careers as speech and hearing clinicians, but who do not intend to continue study for the Ph.D. degree. A minimum of 45 credits is required, of which 23 must be at the 500 level or above in this program. Students also complete the academic and practical experience requirements for the Certificate of Clinical Competence of the American Speech-Language-Hearing Association. These requirements necessitate more than the minimum 45credit program for most students. A thesis is not required. For the Ph.D. degree, individually tailored programs of study are developed to focus on specialized areas of interest within speech science, experimental and clinical audiology, and speech/language pathology.

Financial Aid

A number of teaching and research assistantships are available for qualified graduate students. In addition, the department has traineeships/fellowships supported by the U.S. Department of Education, the National Institutes of Health, and the Department of Veterans Affairs.

Research Facilities

The department's research laboratories, as well as those of the Virginia Merrill Bloedel Hearing Research Center, contain sophisticated equipment for the collection and analysis of data related to the study of human communication and its disorders. The University Speech and Hearing Clinic and the Child Development and Mental Retardation Center also provide laboratories to support applied research in communication processes and remedial procedures.

Correspondence and Information

Graduate Program Secretary 203 Eagleson, JG-15

Faculty

Chairperson

Patricia K. Kuhl

Protossors

Dale, Philip S. * 1968, (Adjunct); PhD, 1968, University of Michigan; psycholinguistics, language development.

Folsom, Richard C. * 1976; PhD, 1979, University of Washington; pediatric audiology, auditory evoked potentials.

Kuhl, Patricia K. * 1976; PhD, 1973, University of Minnesota; speech perception. Miner, Adah L. 1965, (Emeritus); PhD, 1962, University of Wisconsin; speech pathology, clinical supervision.

Minifie, Fred D. * 1971; PhD, 1963, University of Iowa; speech acoustics.

Olswang, Lesley B. * 1977; PhD, 1978, University of Washington; language development and disorders/ clinical processes.

Palmer, John M. * 1950, (Emeritus); PhD, 1952, University of Michigan; disorders of voice and orofacial deformities, anatomy of speech.

Prins, David * 1969, (Emeritus); PhD, 1961, University of Michigan; fluency disorders.

Stoel-Gammon, Carol * 1983; PhD, 1974, Stanford University; developmental phonology and phonetics.

Thompson, Gary * 1966, (Emeritus); PhD, 1967, University of Minnesota; pediatric audiology, clinical evaluation.

Thompson, Marie D. * 1979, (Adjunct); PhD, 1970, University of Washington; special education (hearing impaired).

Tiffany, William R. 1946, (Emeritus); PhD, 1951, Iowa State University; phonetics and speech sciences.

Wilson, Wesley * 1966; PhD, 1969, University of Washington; audiology, infant assessment and aural rehabilitation.

Yantis, Phillip A. * 1965, (Emeritus); PhD, 1955, University of Michigan; audiology, clinical evaluation.

Yorkston, Kathryn * 1977, (Adjunct); PhD, 1975, University of Oregon; neurogenic communication disorders in adults, electrodiagnosis, speech and hearing.

Associate Professors

Burns, Edward M. * 1984; PhD, 1977, University of Minnesota; psychoacoustics.

Carpenter, Robert L. * 1970; PhD, 1969, Northwestern University; language and language disorders.

Coggins, Truman E. * 1974; PhD, 1976, University of Wisconsin; language disorders in children.

Cooker, Harry S. * 1976, (Emeritus); PhD, 1967, University of Iowa; speech physiology.

Mateer, Catherine A. * 1979, (Clinical); PhD, 1977, Western Ontario University (Canada); neuropsychology and neurolinguistics.

Miller, Robert M. 1976, (Clinical); PhD, 1976, University of Washington; speech-language pathology/adults.

Norton, Susan J. * 1991, (Adjunct); PhD, 1982, University of Washington; normal and non-normal hearing, specifically cochlear mechanics, in humans and animals.

Reich, Alan R. * 1977; PhD, 1975, University of Iowa; speech physiology and voice disorders.

Werner, Lynne A. * 1986; PhD, 1980, Loyola University (Chicago); auditory development, infant psychoacoustics.

Assistant Professors

Dowden, Patricia A. 1993, (Clinical); PhD, 1993, University of Washington; augmentative communication, cleft palate.

Quigley, Suzanne M. 1993, (Clinical); PhD, 1991, University of Washington; diagnostic audiology, aural rehabilitation.

Rogers, Margaret A. 1992; PhD, 1992, University of Iowa; neurogenic speech/anguage disorders.

Smith, Raymond A. 1975, (Clinical); PhD, 1969, University of Washington.

Stone, Judith R. 1986, (Research); PhD, 1986, University of Washington; language development and disorders, counseling.

Strand, Edythe A. * 1990; PhD, 1987, University of Wisconsin; neurogenic speech/language disorders.

Takahashi, Gail A. * 1992; PhD, 1990, University of lowa; audiology, clinical evaluation.

Lecturers

Alarcon, Nancy B. 1988; MS, 1981, University of Wisconsin; speech-language disorders/adult.

Branson, Cynthia J. 1982; MA, 1970, Northwestern University; speech-language disorders/child.

Coggins, Kathleen B. 1984; MS, 1974, University of Wisconsin; speech-language disorders/child.

Grigg, Carol A. 1991; MS, 1981, University of Wisconsin; speech-language disorders/adult.

Hamilton, Susan L. 1992; MA, 1978, Washington State University; fluency disorders.

Labiak, James M. 1974; MA, 1971, University of Washington; audiologic evaluation/calibration.

Sanborn, E. Sue 1988; PhD, 1971, University of Washington; clinical audiology/aural rehabilitation.

Stachowiak, Shirley A. 1991; MAT, 1975, Indiana University; speech-language disorders/child.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

SPHSC 100 Voice and Articulation Improvement (3) VLPA Stoel-Gammon Only for persons for whom English is the primary language. Voice production and the sound system of standard American speech. Speech standards, regional and social dialects, voice qualify and basic language-oriented characteristics. Practice for improving speech style. Offered: AWSp.

SPHSC 111 The American English Sound System (2, max. 4) Stoel-Gammah For persons for whom English is not the primary language. Speech sounds of American English. Practice in listening and using American phonetic features. Credit/no credit only. Prerequisite: college-level reading knowledge of English. Offered: AWSpS.

SPHSC 201 Anatomy of the Speech and Hearing Mechanisms (5) NW Minifie, Reich Anatomy and functional coordination of those parts of the human body associated with phonation, articulation, resonance, and hearing. Required for majors; open to nonmajors. Offered: ASp.

SPHSC 250 Human Communication and its Disorders (5) I&S Carpenter Normal and disordered oral communication: includes speech, language, and hearing disorders as well as normal processes. Required for majors, open to nonmajors. Offered: W.

SPHSC 300 Speech Science (5) NW Basic physiological and acoustical attributes of normal speech and hearing. For nonmajors only. Offered: AWSp.

SPHSC 303 Language Science (5) VLPA Stoel-Gammon Introduction to techniques of linguistic analysis in the areas of phonetics, phonology, morphology, syntax, and semantics. Required for majors. Offered: A.

SPHSC 307 Speech and Language Development (4) IAS T. Coggins, Olswang Study of the normal acquisition of speech and language in children. Required for majors. Prerequisites: 250, 303; or permission of instructor. Offered: WSp.

SPHSC 310 Introduction to Hearing Science (5) NW,QSR Folsom, Werner Acoustic properties of simple and complex sounds; description of normal audition; elementary structure and function of the hearing mechanism. Required for majors. Offered: AW.

SPHSC 311 Speech Science: Speech Production (5) NW Minifie, Reich Physiological, acoustical, and

228 COLLEGE OF ARTS AND SCIENCES / SPEECH AND HEARING SCIENCES

perceptual aspects of speech production. Examples and laboratory work directed toward students with interests in speech pathology and audiology. Required for majors. Prerequisites: 201, 310; 310 may be taken concurrently. Offered: ASp.

SPHSC 315 Survey of Hearing Impairment (3) Sanborn Causes of hearing impairment and their psychological, social, and educational/vocational effects on the individual. Prerequisite: 310. Offered: ASp.

SPHSC 330 Disorders of Articulation (3) NW Stoel-Gammon, Stone Patterns of normal development; nature, assessment, and treatment of phonological disorders. Prerequisites: 250, 303, 307. Offered: ASp.

SPHSC 332 Clinical Processes I: Assessment (4) NW Olswang, Stone Principles and procedures for the assessment of speech and language disorders. Prerequisites: 307, 330; 330 may be taken concurrently. Offered: ASp.

SPHSC 350 Clinical Processes II: Treatment (4) NW Olswang, Stone Principles and procedures for planning the effective treatment of speech and language disorders. Prerequisites: 330, 332, and permission of director of student services. Offered: WS.

SPHSC 370 Basic Audiometry (5) NW Theory and practice of the assessment of hearing function, including standard pure-tone audiometry, speech audiometry, and basic impedance audiometry. Prerequisites: 315 and permission of director of student services. Offered: WS.

SPHSC 380 Introduction to Aural Rehabilitation (4) NW Sanborn Principles and methods of using auditory and visual cues and communication strategies to improve communication functioning. Prerequisites: 370 and permission of director of student services. Offered: SpS.

SPHSC 391 Practicum in Audiology (1-4, max. 10) NW Sanborn Guided experiences in audiological assessment and aural rehabilitation of children and adults. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

SPHSC 401 Neural Bases of Speech and Language (4) NW Rogers, Strand Neuroanatomical and neurophysiological bases of motor speech production and language processes. Laboratory. Prerequisite: 201 or permission of instructor. Offered: AS.

SPHSC 402 Advanced Phonetic Analysis (2) NW Stoel-Gammon Transcriptional and acoustic features of speech; includes languages other than English Prerequisite: 303 or equivalent introductory phonetics course or permission of instructor. Offered: WS.

SPHSC 410 Psychology and Physiology of Audition (4) NW Burns Physiological and behavioral bases of hearing. Correlation of human hearing with acoustic, anatomic, and physiological factors. Offered: A.

SPHSC 411 Perceptual Development (5) I&S/NW Kuhl, Meltzoff Origins, development of perception in human infancy; hature-nurture controversy as applied to perceptual development. Topics from visual, auditory domains. Development of object and face perception; auditory pattern perception; speech perception; categorization; perception; speech perception; categorization; perception; of three-dimensional space; auditory localization; cross-modal relations among touch, vision, audition. Offered: jointly with PSYCH 411; irregularly.

SPHSC 416 Speech Acoustics and Perception (3) NW Kuhl, Minifie Historical perspectives and current research on speech acoustics and perception: neurophysiology and brain organization underlying speech and language; machine recognition of speech; animal communication; speech evolution; implications for people with impaired communication skills. Offered: A. SPHSC 420 Instrumentation for Speech and Hearing Sciences (3) NW General problems in design and application of electronic equipment used in the speech and hearing sciences. Laboratory problems and demonstrations. Offered: Sp.

SPHSC 430 Nature of Stuttering (3) NW Major theories of stuttering are studied in light of research concerning the characteristics of stutterers and their symptoms. Prerequisite: 250 or permission of instructor. Offered: A.

SPHSC 431 Language Disorders of Children (4) NW Carpenter, Coggins Consideration of descriptions and theories, both historical and contemporary, of disordered language in children and related problems. Prerequisites: 250, 303, 307. Offered: ASp.

SPHSC 449 Special Studies in Speech Pathology and Audiology (* max. 30) Selected special problems in speech pathology and audiology. Prerequisites: vary by topic. Offered: S.

SPHSC 451 Speech Pathology-Audiology Practicum in the Schools (1-10) Clinical practicum special projects, offered only in the school setting. Provides an opportunity for students to extend practicum experiences in this special environment. Credit/no credit only. Prerequisites: 350 or permission of instructor. Offered: AWSp.

SPHSC 453 Communication Augmentation for Non-Speaking Individuals (3) NW Communication needs of nonspeaking individuals. Interdisciplinary approaches to the evaluation, selection, and implementation of aided and unaided communication augmentation systems. Prerequisite: basic course work in either speech and hearing sciences, physical therapy, occupational therapy, or engineering, or permission of instructor. Offered: jointly with REHAB 458; irregularly.

SPHSC 470 Hearing and Aging (3) NW Consequences of hearing impairment on speech recognition and perception in older adults. Emphasis on information important to the speech-language pathologist regarding assessment and management. Not open to audiology majors except by permission of instructor. Prerequisite: 370 or permission of instructor. Offered: W

SPHSC 479 Pediatric Audiology (3) NW Folsom Assessment of auditory disorders in infants and young children. Emphasis on behavioral and electrophysiologic techniques and on the role of the audiologist in the clinical management of the young hearingimpaired child. Prerequisite: 370 or equivalent. Offered: Sp.

SPHSC 499 Undergraduate Research (1-5, max. 15) Prerequisite: permission of instructor. Offered: AWSpS.

Courses for Graduates Only

SPHSC 502 Advanced Anatomy of Speech and Hearing Structures (2) Directed independent dissection and study of selected anatomic structures of the speech or hearing mechanisms. Prerequisites: 201 and permission of instructor. Offered: AW.

SPHSC 503 Current Issues in Speech and Hearing Sciences (3) Application of experimental methods to research in speech and hearing sciences. Offered: irregularly.

SPHSC 504 Research Methods in Speech and Hearing Sciences (3) Minifie Introduction to empirical methods in the speech and hearing sciences. Offered: AW.

SPHSC 505 Clinical Research in Communication Disorders (3) Olswang Introduction to clinical research. Methodological issues concerning the evaluation of treatment for speech, hearing, and language disorders. Primary emphasis on time series designs. Prerequisite: 504 or permission of instructor. Offered: W. SPHSC 510 Physiological Acoustics (3) Burns Study of pertinent literature and experimental techniques incident to the scientific study of the normal and abnormal auditory system. Prerequisites: 410 and familiarity with algebra and trigonometry. Offered: odd years; W.

SPHSC 511 Psychoacoustics (3) Burns Review of significant literature and theory pertinent to normal auditory sensitivity, pitch, loudness, and other attributes of auditory sensation. Prerequisites: 410 or permission of instructor; MATH 120 or equivalent. Offered: odd years; Sp.

SPHSC 512 Auditory System Development (3) Werner Review of the anatomical, physiological, and behavioral development of the auditory system. Consideration of literature dealing with both human and nonhuman systems, with emphasis on general principles of auditory development. Prerequisite: 410 or permission of instructor. Offered: A.

SPHSC 514 Speech Physiology (3) Study of the physiological parameters of acoustic speech production. Prerequisites: 310, 311; or permission of instructor. Offered: odd years; A.

SPHSC 515 Speech Acoustics (3) Minifie Study of the acoustical correlates of the distinctive parameters of speech. Prerequisites: 310, 311, 514; or permission of instructor. Offered: even years; W.

SPHSC 516 Speech Perception (3) Kuhl Study of the perceptual and linguistic parameters of speech perception. Prerequisites: 310, 311, 515; or permission of instructor. Offered: even years; Sp.

SPHSC 519 Seminar in Speech Science (2, max. 6) Offered: AWSp.

SPHSC 520 Advanced Instrumentation for Speech and Hearing Sciences (3) Design and use of electronic and electroacoustic devices in the speech and hearing sciences. Four hours of laboratory required each week. Prerequisite: 420. Offered: W.

SPHSC 525 Speech Signal Processing (3) Theory, evaluation, and use of speech signal processing algorithms such as sampling, filtering, spectral analysis, autocorrelation, and speech synthesis. Laboratory assignments develop skills in using signal analysis and synthesis software applied to normal and pathological speech. Offered: Sp.

SPHSC 531 Neurogenic Motor Speech Disorders (4) Strand The nature of dysarthria and apraxia of speech and the evaluation and treatment of those disorders. Prerequisite: 401 or permission of instructor. Offered: Sp.

SPHSC 532 Neurogenic Language Disorders (4) Rogers Nature of aphasia and other neurogenic language disorders; evaluation and treatment of those disorders. Prerequisite: 401 or permission of instructor. Offered: W.

SPHSC 533 Speech Pathology in a Medical Setting (3) Rogers For speech pathology students who intend to work in a hospital. Prerequisites: 531, 532 or permission of instructor. Offered: Sp.

SPHSC 534 Dysphagia and Associated Disorders (3) Miller Anatophysiologic bases of function and dysfunction associated with speech-language disorders. Mastication and swallowing problems, their causes, assessments, and management. Prerequisites: 201, 401. Offered: irregularly.

SPHSC 535 Voice Disorders (4) Reich Physiology, acoustics, and perception of the normal and disordered human voice. Etiology, evaluation, and treatment of phonatory disorders. Offered: WS.

SPHSC 536 Assessment of Language Impairment in Children (5) Carpenter, Coggins Principles and procedures used in the assessment of speech- and language-disordered children and adolescents. Prerequisites: 332, 431, and permission of instructor. Offered: S.

SPHSC 537 Treatment of Stuttering (4) Description and evaluation of therapy systems for children and adults who stutter. One hour per week of clinical observation is integrated with class material. Prerequisites: 350 and 430; or permission of instructor. Offered: A.

SPHSC 540 Phonological Development (3) Stoel-Gammon Selected topics in the developmental sequence of phonological systems in normal-speaking children. Relationships between possible phonological inventories and rule systems in different languages. Prerequisites: LING 451, 452, or permission of instructor. Offered: jointly with LING 540; even years; W.

SPHSC 541 Syntactic and Semantic Development (3) Dale Advanced topics in the study of firstlanguage acquisition by children, including cognitive bases of language, cross-linguistic research, early semantic systems and their reorganization, learnability theory, and other theories of acquisition. Prerequisite: LING/PSYCH 447 or permission of instructor. Offered: jointly with LING 541; odd years; Sp.

SPHSC 550 Intervention with Communication Disorders in the School Setting (2) Cole Study of administrative and clinical issues in implementation of programs to remediate communication disorders in the school-aged population. Field experiences and professional issues. Open to nonmatriculated students with permission of director of student services. Prerequisite: graduate student in speech and hearing sciences or permission of director of student services. Offered: W.

SPHSC 551 Advanced Practicum in Speech Pathology Evaluation (1-9, max. 10) Laboratory experience in the evaluation of speech and language disorders. Credit/no credit only. Prerequisites: 536 and permission of instructor. Offered: AWSpS.

SPHSC 552 Advanced Practicum in Speech Pathology Management (1-9) Laboratory experience in the management of speech and language disorders. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

SPHSC 555 Preinternship in Speech and Hearing Sciences (1-9) Practicum in speech pathology or audiology designed to teach the clinical regimen of a participating professional center prior to assuming a full internship assignment. Credit/no credit only. Offered: AWSp.

SPHSC 566 Seminar in Speech-Language Development (2, max. 6) Prerequisites: 307 and 431 or permission of instructor. Offered: Sp.

SPHSC 569 Seminar in Speech-Language Pathology (2, max. 6) Offered: AW.

SPHSC 570-571 Assessment of Auditory Dysfunction I, II (5-5) Strategies and procedures in the auditory evaluation of hearing-impaired adults. Laboratory required. Prerequisite: 370 or equivalent. Offered: A-W.

SPHSC 573 Electrophysiologic Assessment of Auditory Function (3) Folsom Consideration of electrophysiologic techniques that may be used to evaluate the normal and disordered auditory system. Outside laboratory required. Prerequisite: 310 or permission of instructor. Offered: So.

SPHSC 575 Medical Backgrounds In Audiology (3) Rees Diseases and injuries of the ear resulting in reduced audition. Prerequisite: -571 or permission of instructor. Offered: S.

SPHSC 581 Management of Hearing-Impaired Children (3) *M. Thompson* Management of hearingimpaired children, including identification of target behaviors and methods for modification such as individualized therapy programs and parent and teacher involvement. Offered: S. SPHSC 582 Hearing Aid Amplification (4) Takahashi Acoustic amplification and methods of determining electroacoustic characteristics. Includes earmold technology. Prerequisites: 370, 380; or permission of instructor. Offered: W.

SPHSC 583 Hearing Aid Selection (4) Takahashi Consideration of strategies utilized in selecting acoustic amplification for the hearing impaired, including review of pertinent research literature. Prerequisite: 582 or permission of instructor. Offered: Sp.

SPHSC 584 Industrial and Community Hearing Conservation (2) Psychophysiological effects of environmental noise on man. Techniques of noise measurement and attenuation, including the planning of hearing conservation programs in industry and in the community. Prerequisite: 370 or permission of instructor. Offered: irregularly.

SPHSC 588 Proseminar (1, max. 3) Consideration of professional issues and student/faculty research in specific areas of interest. Credit/no credit only. Offered: ASp.

SPHSC 589 Seminar in Audiology (2, max. 6) Prerequisite: permission of instructor. Offered: irregularly.

SPHSC 591 Advanced Practicum In Audiology (1-9, max. 10) Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

SPHSC 599 Research Practicum (* max. 12) Supervised laboratory experience in experimental approach to problems in speech and hearing sciences. Prerequisite: permission of instructor. Offered: AWSpS.

SPHSC 600 Independent Study or Research (*) Prerequisite: permission of instructor. Offered: AWSpS.

SPHSC 601 Internship (3-9) Supervised field experiences in settings other than public schools. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

SPHSC 602 Internship in the Schools (3-9) Supervised field experience in a public school setting. Prerequisite: permission of instructor. Offered: AWSpS.

SPHSC 700 Master's Thesis (*) Offered: AWSpS.

SPHSC 800 Doctoral Dissertation (*) Offered: AWSpS.

Speech Communication

205 Raitt

Speech communication is the study of the ways people share meanings and ideas in face-to-face interaction and in other forms of discourse. The major in speech communication is designed to enable students (1) to enhance their theoretical knowledge by understanding speech communication as a form of behavior, a social activity, and an aesthetic endeavor, (2) to improve their critical faculties through analysis of communicative behavior and discourse, and (3) to develop their abilities to apply theory to the practice of communication skills.

Undergraduate Program

Advisers Robert M. Post Beatrice Restoule 206B Raitt

Students in the department begin their study in introductory courses in public speaking, interpersonal communication, oral interpretation, and small-group decision making. In advanced courses, students study and analyze specialized forms of communication— persuasion, argumentation, small-group facilitation, and communication in instructional settings and large organizations.

Bachelor of Arts Degree

Admission Requirements: A minimum of 30 quarter credits completed and a minimum 2.50 overall GPA (2.50 guarantees consideration, but not acceptance). Recommended courses include 10 credits in quantitative and symbolic reasoning; 10 credits in history, literature, and philosophy; and 10 credits in English composition (see department for list of recommended courses). Students submit an application packet that includes (1) application form; (2) current class schedule; (3) copies of transcripts and grade reports; (4) original statement. Applications are due the end of the third week of the quarter. Admission is once a quarter—autumn, winter, and spring.

Major Requirements: 60 approved credits, which include 32-33 credits of core requirements (students should consult departmental adviser upon entering the program regarding distribution of core requirements), and 27-28 elective credits, of which 15 credits must be in courses at the 400 level, excluding 499. For core requirements, students should complete 10 credits from SPCH 103, 140, 220; 5 credits from 334, 373; 14-15 credits from 270, 305, 310, 476; and 400. A 2.50 overall GPA in all speech courses taken is required.

Minor

Minor Requirements: 30 credits to include at least 5 credits in theory (SPCH 102, 103, 203, 305, 308, 310, 384, 385, 434, 455, 456, 471, 472, 474, 475, 476); at least 5 credits in criticism (SPCH 222, 270, 329, 375, 424, 425, 426, 428); and at least.5 credits in practice (SPCH 140, 220, 235, 301, 320, 334, 335, 341, 349, 368, 369, 373, 421, 440, 442, 444, 446, 473). SPCH 400 and 499 do not count toward the minor. Minimum 10 credits at the 400 level.

Graduate Program

Barbara P. Warnick, Graduate Program Coordinator

Graduate study is guided by the principle that speech communication is a unified discipline concerned with the ways persons share meanings and how shared meanings affect, and are affected by, persons and society at large. Specialty areas include communication theory; interpersonal, small-group, organizational, instructional, cultural, and developmental communication; communication education; oral interpretation; freedom of speech; argument; rhetorical theory; criticism; and public address. Emphasis is on both "social scientific" and "humanistic" methods of scholarly inquiry.

The M.A. program with thesis requires at least 31 credits of approved course work and a thesis (9 credits). The M.A. program without thesis: 45 credits, including a creative project.

The Ph.D. program usually requires four to five years of study beyond the baccalaureate degree.

Special Research Facilities

A laboratory complex accommodates studies on individuals and groups of varying sizes and includes oneway mirrors, as well as audio and video capabilities. A computer lab houses several personal computers, terminals, and printers that are linked to the University's computer systems. An instructional resource center provides support for the development and use of electronic and print materials for teaching and research.

Admission Qualifications

A background of academic work adequate for pursuit of the degree sought is required. Applicants for the

230 COLLEGE OF ARTS AND SCIENCES / SPEECH COMMUNICATION

Ph.D. are normally expected to have an M.A. in speech communication or communications. A GPA and Graduate Record Examination scores that give promise of success in the department's graduate program are required.

Financial Assistance

The department annually awards a number of teaching assistantships.

Graduate Program Coordinator 205 Raitt, DL-15

Faculty

Chairperson

Thomas Scheidel

Professors

Baskerville, Barnet 1940, (Emeritus); PhD, 1948, Northwestern University; public address, rhetorical criticism.

Bosmajian, Halg A. * 1965; PhD, 1960, Stanford University; rhetoric, freedom of speech.

Crowell, Laura I. 1949, (Emeritus); PhD, 1948, University of Iowa; public address, discussion.

Nilsen, Thomas R. 1946, (Emeritus); PhD, 1953, Northwestern University; contemporary rhetorical theory, ethics of rhetoric.

Philipsen, Gerry F. * 1978; PhD, 1972, Northwestern University; ethnography of communication.

Scheidel, Thomas 1976; PhD, 1958, University of Washington; communication theory and research, small group processes.

Staton, Ann Q. * 1977; PhD, 1977, University of Texas (Austin); instructional communication.

Warnick, Barbara P. * 1980; PhD, 1977, University of Michigan; rhetorical theory and criticism.

Associate Professors

Campbell, John A. * 1968; PhD, 1968, University of Pittsburgh; modern rhetorical theory, British public address.

Parks, Malcolm R. * 1978; PhD, 1976, Michigan State University; communication theory, interpersonal communication, research methods.

Post, Robert M. * 1960; PhD, 1961, Ohio University; oral interpretation of literature.

Stewart, John R. * 1969; PhD, 1970, University of Southern California; philosophy of qualitative research and interpersonal communication.

Assistant Protossors

Bauman, Isabelle * 1990; PhD, 1990, University of Wisconsin; comprehension, conversation and politeness.

Manusov, Valerie L. * 1993; PhD, 1989, University of Southern California; the interplay between communication behaviors and cognitions in interpersonal interactions.

Purcell, William Michael * 1988; PhD, 1986, Indiana University; classical and medieval rhetorical theory, rhetorical criticism.

Trethewey, Angela C. 1993; PhD, 1994, Purdue University; organizational communication, gender.

Senior Lecturer

Nyquist, Jody D. 1966; MA, 1967, University of Washington; communication education.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

SPCH 102 Speech, the Individual, and Society (5) VLPA/I&S Provides a basic understanding of human speech communication. Covers three major areas: (1) the nature of human communication, including models, principles, settings; (2) elements of verbal and nonverbal communication; and (3) approaches to, and functions of, human communication including persuasion, interpersonal communication, argument, propaganda, free speech. Offered: AWSp.

SPCH 103 Interpersonal Communication (5) VLPA/I&S Emphasizes analyzing and understanding communication variables affecting human relationships, such as person perception, feedback, idea development, nonverbal cues. Focus on informal communication settings. Offered: AWSp.

SPCH 140 Oral Interpretation of Literature (5) VLPA Analysis and critical study of imaginative literature through the medium of oral performance. Includes verse, prose, and drama. Offered: AWSp.

SPCH 203 Communication in the Classroom (5) VLPA/I&S Theory and practice of interpersonal communication in instructional settings. Designed to prepare prospective teachers to employ communication effectively as a medium of teaching and learning, to create a classroom communication environment in which interaction is open and productive. Recommended for all teacher candidates in any discipline.

SPCH 220 Introduction to Public Speaking (5) VLPA/I&S Emphasizes choice and organization of material, sound reasoning, audience analysis, oral style, and delivery. Overview of history of rhetoric. Classroom speeches followed by conferences with instructor. Offered: AWSp.

SPCH 222 Speech Communication in a Free Society (3) VLPA/I&S Problems and arguments related to freedom of speech; early English writers on freedom of expression; background of freedom of speech in the United States; contemporary freedom of speech issues.

SPCH 235 Parliamentary Procedure (3) VLPA/I&S Principles and practice: a study of the historical bases and contemporary uses of parliamentary procedure; methods and practice in organizing and conducting public meetings.

SPCH 270 Introduction to Empirical Research in Speech Communication (5) I&S Basic research principles in speech communication science; survey of substantive research findings. Recommended: any 100- or 200-level speech communication course.

SPCH 301 Interviewing (5) VLPA/I&S Interviewing principles and practices, with emphasis on information gathering and persuasive interviews. Purposes and types of interviews, structure of interviews, and influence of communication patterns on interview outcomes.

SPCH 305 Perspectives on Language in Speech Communication (5) VLPA/I&S Study of language and meaning, and survey of several influential modern approaches, including the semantic, general semantic, behavioral, and analytic philosophical. Relates theories of language and meaning to the study of speech communication.

SPCH 308 Humanistic Approaches to Interpersonal Communication (5) VLPA Exploration of several humanistic approaches to interpersonal speech communication, emphasizing the theorists' philosophical orientations. SPCH 310 The Rhetorical Tradition in Western Thought (5) VLPA/I&S Analysis of the major theories that prescribe and describe the use of symbols to change attitudes and behavior. Principal emphasis is placed upon defining the nature and scope of rhetoric and upon analyzing the art's underlying assumptions about human beings as symbol users. Some background in history, philosophy, and literature is desirable. Recommended: junior standing.

SPCH 320 Public Speaking (5) VLPA/I&S Practice in preparation and presentation of a variety of types of public speeches based on study of their structure and form; emphasis on organization and delivery. Recommended: 220.

SPCH 329 Rhetoric of Social and Political Movements (5) VLPA/I&S Inquiry into the rhetoric of social and political movements; emphasis on investigation of persuasive discourse; examination of the nonverbal symbols of persuasion.

SPCH 334 Essentials of Argument (5) VLPA/I&S Argument as a technique in the investigation of social problems; evidence, proof, refutation, persuasion; training in argumentative speaking. Offered: AWSp.

SPCH 335 Methods of Debate (5) VLPA/I&S Debate as a method of advocacy, with emphasis on the analysis of value and policy questions. Prerequisite: 220 or 334.

SPCH 341 Oral Interpretation of Childrens Literature (3) VLPA Study and performance of children's literature, emphasizing oral interpretation as a method of teaching literature in the elementary school.

SPCH 349 Readers Theatre (2, max. 10) VLPA Preparation and public presentation of programs of literary works. Credit/no credit only. Prerequisites: 140 and permission of instructor.

SPCH 368 Small-Group Facilitation (3) VLPA/l&S Methods for facilitating discussion in small groups formed for the purposes of instruction. Emphasis Is on each student's practical application of the insights derived. Prerequisites: permission of instructor, concurrent registration in 369. Recommended: 102.

SPCH 369 Small-Group Facilitation Practicum (2) VLPA/I&S Implementation of the theoretical principles taught in 368. Emphasis on direct application of those principles to an assigned group of students from 102. Prerequisite: concurrent registration in 368.

SPCH 373 Principles of Group Discussion (5) VLPA/I&S Discussion as an everyday community activity, with emphasis on the informal cooperative decision-making methods of committee, conference, and roundtable groups.

SPCH 375 Ethics in interpersonal and Public Speech Communication (5) VLPA/I&S Ethical problems in interpersonal and public speech communication. Alternative ways of evaluating and responding to moral problems in a variety of communication situations.

SPCH 384 Cultural Codes in Communication (5) VLPA/I&S Social and cultural codes in interpersonal communication, with special reference to contemporary American subcultural groups and their communication patterns.

SPCH 385 Fieldwork in Communication Studies (5) Theory and practice of participant observation, intensive interviewing, and discourse analysis in the study of communicative practices.

SPCH 400 Theoretical Backgrounds in Speech Communication (3) VLPA/1&S Speech viewed as a form of individual and social behavior, with emphasis on the function of symbols in speech communication in informal and societal settings. The development of speech as a field of study and its contemporary emphases.

COLLEGE OF ARTS AND SCIENCES / SPEECH COMMUNICATION 231

SPCH 421 Advanced Speech Composition (5) VLPA/I&S Preparation and delivery of public speeches with emphasis on style, thought organization, and proof. Analysis of model speeches. Recommended: 220 or 320.

SPCH 424 Rhetorical Perspectives in Intellectual Revolutions (5) VLPA/I&S Rhetorical investigation of selected major writings. Examines the rhetorical dimension in the progress of ideas through analysis of documents of major intellectual revolutions as persuasive works. Relates principal revolutions in Western thought to contemporary controversy. Examines Rights of Man, Communist Manifesto, The Origin of Species.

SPCH 425 American Public Address (5) VLPA/1&S Historical and critical study of rhetorical discourse and movements and of their relationship to American political, social, and intellectual life. Examines the discourse of the American revolution, debates on the ratification of the federal constitution, the slavery question, Reconstruction, populism, imperialism.

SPCH 426 American Public Address (5) VLPA/I&S Historical and critical study of rhetorical discourse and movements and of their relationship to American political, social, and intellectual life. Examines Lyceum and Chautauqua movements, progressive era, World War I, the New Deal, isolationism, the Cold War era, civil rights movement, anti-nuclear movement. Recommended: 425.

SPCH 428 British Public Address (5) VLPA/l&S Historical and critical analysis of significant speeches and speakers and of their relationship to British social, political, and religious life. Historical overview of the major periods of British oratory and of the unique role of the oration in each as a means of exhortation and advocacy.

SPCH 434 Argumentation Theory (5) VLPA/I&S Theory and research on the structure and properties of argument, argument fields, argument modeling, the influence of audience, argument criticism, and related topics. Prerequisite: 220 or 334.

SPCH 440 Oral Interpretation of Poetry (3) VLPA Study of forms of verse through analysis and oral presentation. Recommended: 140.

SPCH 442 Oral Interpretation of Fiction (3) VLPA Analysis and oral interpretation of narrative perspectives in the novel and the short story. Recommended: 140.

SPCH 444 Oral Interpretation of Modern Dramatic Literature (3) VLPA Study of dramatic literature from Ibsen to the present for purposes of developing understanding, appreciation, and ability to communicate its meaning, Recommended: 140.

SPCH 455 Communication in Children's Environments (5) VLPA/I&S Study of the communication capacity of children with emphasis on the analysis of the communication process in formal and informal learning environments. Includes examination of communication-based educational approaches and instructional strategies.

SPCH 456 Communication in Adolescent Environments (5) VLPA/I&S Study of the communication process in youth environments with a primary focus on formal and informal learning. Includes critical analysis of communication in contemporary instructional settings and the development of communication strategies for teaching and learning.

SPCH471 Persuasion (3) VLPA/I&S Analysis of the ways in which beliefs, values, attitudes, and behavior are deliberately influenced through communication. Recommended: junior standing.

SPCH 472 Empirical Approaches to Interpersonal Communication (5) I&S Examination of major theoretic positions and empirical research findings in current speech communication literature on interpersonal influence. Emphasis on the insights that such theory and research provides on human speech communication behavior in common interpersonal situations. Recommended: junior standing.

SPCH 473 Problems of Discussion Leadership (3) VLPA/I&S Critical analysis of leadership in committee and conference, with emphasis on the development of speech effectiveness in the cooperative achievement of goals. Recommended: 373.

SPCH 474 Communication, Confilct, and Cooperation (5) VLPA/I&S Role of communication in resolving informal conflicts and in facilitating interpersonal and intergroup cooperation. Review of empirical literature. In-class simulations and exercises. Prerequisite: 373.

SPCH 475 Organizational Communication (5) VLPA/I&S Role of communication in organizations, the types of problems arising, and approaches to their resolution. Communication in the human relations and productivity of organizations. Applying communication skills in various organization roles. Recommended: junior standing.

SPCH 476 Models and Theories in Speech Communication (4) I&S Examination of selected theories and models of speech communication from the behavioral sciences, as well as of criteria applicable to them. Emphasis on the nature and function of theories and models, especially as these relate to basic principles underlying the scientific study of speech communication phenomena. Recommended: junior standing.

SPCH 498 Special Topics in Speech Communication (2-5, max. 15) Lecture, seminar, and/or team study. Topics vary.

SPCH 499 Undergraduate Research (1-5, max. 10) Prerequisite: permission of instructor. Offered: AWSpS.

Courses for Graduates Only

SPCH 501 Introduction to Graduate Research in Speech Communication (3)

SPCH 510 Rhetoric in Society (4) Selected works of major rhetorical theorists such as Aristotle, Cicero, Augustine, Campbell, Whately, Perelman, and Burke. Examines how rhetorical themes are responsive to and symptomatic of societal conditions and values.

SPCH 521 Studies in Greek and Roman Rhetoric (5) Development of the Greek tradition in rhetorical theory, criticism, and pedagogy from Homer to Augustine; analysis of the contributions of major figures and works to that tradition.

SPCH 522 Studies in Medleval Rhetoric (5) Critical analysis of selected persons, works, and topics related to the development of rhetorical theory during the Middle Ages.

SPCH 523 Studies in Renaissance and Modern Rhetoric (5) Development of rhetorical theory from the mid-sixteenth to early nineteenth centuries. Examines the contributions of Wilson, Ramus, Bacon, Port Royalists, Vico, Campbell, Blair, and Whately.

SPCH 524 Studies in Contemporary Rhetoric (5) Critical analysis of theories of twentleth-century rhetoric.

SPCH 525 Rhetorical Criticism (5) History and method of rhetorical criticism. Application of critical standards to notable British and American speeches.

SPCH 526 The Rhetoric of Scientific Revolutions (3) Examines selected topics in the history of science, underscoring the interplay of language, situation, culture, and prior tradition in the quest for exact knowledge of the natural world. Focuses on one science, biology, geology or psychology, examining selected revolutions within that discipline. SPCH 530 Philosophical Issues In Rhetorical and Communication Theory (5) Survey of selected philosophical controversies among speech communication theorists, and analysis of one philosopher's approach to communication. Topics include paradigm descriptions of communication, rhetoric and knowledge, linguistic analysis and communication, hermeneutics and dialogue. Prerequisite: graduate standing.

SPCH 540 History of Oral Interpretation (3) Critical analysis of writings by Sheridan, Walker, Rush, Delsarte, Bell, Curry, Emerson, and others.

SPCH 550 Instructional Design in Speech Communication (4) Research, theory, and practice relevant to instructional design in speech communication. Instructional models, writing instructional objectives, strategies, and evaluative measures.

SPCH 555 Instructional Communication (5) Communication in instructional environments. Nature of instructional communication, paradigms for instructional communication research, quantitative and qualitative approaches to instructional communication, verbal and nonverbal classroom interaction.

SPCH 560 Social Scientific Perspectives on Interpersonal Communication (5) Social scientific research and theory on the role of communication in developing and maintaining interpersonal relationships. Nature of interpersonal communication, relationship change processes, interpersonal control through communication, and personal communication networks.

SPCH 570 Organizational Communication (5) Examination of social scientific theory and research on communication in organizations. Topics include quantitative and qualitative approaches to process of organizational communication, function and structure of macro networks, superior-subordinate relationships, and the role of communication in organizational change, development, and effectiveness. Prerequisite: graduate standing in the social sciences.

SPCH 572 Theories of Human Communication (4) Description and evaluation of theoretical approaches to the study of human communication. Exploration of their applications to specific subject areas.

SPCH 575 Philosophy of Interpretive Research in Communication (5) Introduces interpretive researchers to foundations of this approach in Dilithey, Gadamer, Schutz, Weber, Wittgenstein, and others. Emphasizes Gadamer's philosophical hermeneutics.

SPCH 576 Research Methods in Speech Communication (5) Application of behavioral research principles to problems in quantification, design, and analysis of data in speech communication research.

SPCH 577 Research Problems in Speech Communication (3-6, max. 12) Application of methodology and design principles to research problems in speech communication.

SPCH 581 Advanced Research Methods in Speech Communication (4) Application of social scientific methods to problems in quantification, design, and analysis of communication data. Emphasis on advanced data collection concerns, multivariate data analysis, and computer operation. Prerequisite: 576.

SPCH 584 Ways of Speaking (5) Theory and literature of the ethnography of communication, with special emphasis on the descriptive-comparative approach to culturally patterned styles of communicative conduct. Offered: jointly with ANTH 584.

SPCH 588 Small-Group Communication (5) Major small-group theories relevant to communicative behavior. Descriptive and experimental research findings in current speech communication literature. Prerequisite: 473.

232 COLLEGE OF ARTS AND SCIENCES / SPEECH COMMUNICATION

SPCH 590 Seminar in Theory of Speech Communication (3-4, max. 12)

SPCH 592 Seminar in Public Address (3-4, max. 12)

SPCH 593 Seminar in Rhetorical Theory (3-4, max. 12)

SPCH 594 Seminar in Oral Interpretation (2, max. 6)

SPCH 595 Seminar in Speech Communication Education (3-4, max. 12)

SPCH 597 Seminar in Interpersonal Communications (3-4, max. 12) Examination of experimental literature on selected topics. Subject changes from year to year; topics include conflict resolution, information processing, communication networks, feedback systems, audience composition research, communication effects.

SPCH 598 Small-Group Discussion and Communication (3-4, max. 12) Introduction to study of communication within small problem-solving groups. Theoretical as well as methodological dimensions of selected studies. Emphasis on role communication in decision-making process. From a communication viewpoint, examines such topics as conformity, consensus, interpersonal attraction, and emergent phases of discussion.

SPCH 600 Independent Study or Research (*) Offered: AWSpS.

SPCH 700 Master's Thesis (*) Offered: AWSpS.

SPCH 800 Doctoral Dissertation (*) Offered: AWSpS.

Statistics

B313 Padelford

Probability provides the conceptual foundation and mathematical language for the logic of uncertainty and induction. Statistics is concerned with procedures for the acquisition, management, exploration, and use of information, in order to learn from experience in situations of uncertainty and to make decisions under risk. Statistical practice includes: design of experiments and of sampling surveys; exploration, summarization, and display of observational data; drawing inferences, and assessing their uncertainty; building mathematical models for systems with stochastic components.

By means of joint faculty appointments, courses, and seminars, the Department of Statistics maintains active academic contacts with the School of Business Administration; the College of Engineering; the Departments of Applied Mathematics, Atmospheric Sciences, Computer Science, Economics, Genetics, Geological Sciences, Geophysics, Mathematics, Psychology, Radiology, Sociology, and Zoology; the Center for Quantitative Science; the Applied Physics Laboratory; and the Applied Statistics Division of the Boeing Company. The department has an especially close relationship with the Department of Biostatistics.

Undergraduate Program

Bachelor of Science Degree

The Bachelor of Science program offers broad-based, flexible educational pathways emphasizing the theoretical, practical, or computational aspects of probability and statistics. The program serves the needs of future statisticians in science, industry, business, and government, as well as providing the necessary background and stimulation for graduate study; it also offers excellent opportunities for double-majoring in statistics and either mathematics or computer science. Admission Requirements: (1) Completion of 45 credits, including MATH 124, 125, 126; a minimum 8 credits from one of the following groups of courses: ASTR 101, 102, 190, 201, 301; CHEM 100, 140, 141, 145, 150, 151, 155, 157; GENET 351, 371, 453, 455; PHYS 114, 115, 116, 117, 118, 119, 121/131, 122/132, 123/133, 210, 211, 212; and one course from STAT 220, 301, 311, 390, or an approved substitute; (2) minimum grade of 2.0 in each of the above listed prerequisites and a cumulative GPA of 2.80 for these courses. Students wishing to declare a statistics major must apply by bringing transcripts which include completed prerequisites to B309 Padelford during any quarter.

Major Requirements: MATH 124, 125, 126; 307, 308, 309; 324, 325 (the honors sequences in calculus may replace the corresponding regular sequences); ENGR/CSE 142, CSE 143; one course from STAT 220, 301, 311, 390, or approved substitute; 341, 342, 421, 423 and two other upper-division statistics courses chosen with prior approval of the statistics adviser. (Typically these are 394 and 395, which are strongly recommended as preparation for 341, 342.) Electives (9 credits): one upper-division course in mathematics, statistics, or computer science, plus two upper-division courses in any discipline (including but not limited to mathematics, statistics, and computer science), all subject to prior approval by the statistics adviser. The first elective gives an opportunity to define the flavor of the major within interrelated fields, and the other two give a chance to broaden the basis of the major into a special interest area, chosen from the full range of upper-division courses offered at the University. Grades of 2.0 or better in all courses used to satisfy major requirements. Cumulative GPA, of 2.50 in required statistics courses.

Minor

See department for requirements.

Graduate Programs

The graduate programs emphasize both the theory and application of statistics, including probability theory, mathematical statistics, data analysis, statistical computing, and scientific applications. An ongoing statistical consulting program provides the students with practical experience in using statistics and in communicating with clients. Under faculty supervision, participants in the program assist members of the University community in applying statistical methodology. The department offers Master of Science and Doctor of Philosophy degrees.

Admission Requirements

Background in mathematics, statistics, or a quantitative field, with 30 or more quarter credits in mathematics and statistics, to include a year of advanced (second year) calculus, one course in linear algebra, and one course in probability theory; Graduate Record Examination scores, including the Advanced Mathematics subject test; three letters of recommendation from appropriate former or current faculty.

Master of Science Degree

Graduation Requirements: At least twelve approved courses numbered 400 or above with a value of 36 credits or more; of these, at least six courses must be numbered in the 500 series (exclusive of 512, 513) with a value of 18 credits or more, and with a coherent theme. Approved proficiency in statistical computing. Satisfactory participation in statistical computing and the departmental seminar. Passage of an appropriate final master's examination. Successful completion of a master's thesis can count as up to three courses worth 9 credits, but cannot replace any of the six courses in the 500 series mentioned above. All programs must be approved in advance by the departmental graduate program coordinator.

Doctor of Philosophy Degree

Graduation Requirements: Appropriate training in statistics and related sciences. Appropriate General Examination of basic graduate-level knowledge in statistics and probability (including two preliminary examinations). Satisfactory performance in approved methodology and theory course sequences (typically STAT 570, 571, 572 and 581, 582, 583; or 521, 522, 523). (In some circumstances, other graduate-level mathematical science courses may be used as a substitute.) Satisfactory performance in at least three other 500-level graded courses in a coherent program. Approved performance in statistical consulting (typically STAT 598 and 599). Demonstration of proficiency in computing. 1 credit of STAT 590 per guarter. Demonstration of ability to read technical literature in Chinese," French, German, or Russian. Dissertation. Final Examination

Computing Facilities

Computing facilities in the Department of Statistics rank among the best of any statistics programs in the country and reflect the department's expertise in the field of statistical computing. For graduate instruction, the department relies primarily on the Mathematical Sciences Computing Center's laboratory of UNIX and Macintosh workstations. For research purposes, the department has a network of approximately thirty-five DEC, Macintosh, Sun and Silicon Graphics workstations, and many X-terminals. Support is provided by a systems programmer/administrator.

Financial Aid

The department annually awards a limited number of teaching and research assistantships for the support of new and continuing graduate students on the basis of academic promise.

Correspondence and Information

Undergraduate or Graduate Program Coordinator Department of Statistics, GN-22

Faculty

Chairperson

Werner Stuetzle

Professors

Bass, Richard * 1981, (Adjunct); PhD, 1977, University of California (Berkeley); probability theory.

Besag, Julian E. * 1989; BS, 1963, University of Birmingham (UK); spatial statistics; applications to epidemiology, image analysis, agriculture; Bayesian inference.

Birnbaum, Z. W. * 1939, (Emeritus); PhD, 1929, John Casimir State University (Poland); probability, mathematical statistics (distribution-free statistics, reliability theory).

Burdzy, Krzysztof * 1988, (Adjunct); PhD, 1984, University of California (Berkeley); probability theory.

Felsenstein, Joseph * 1968, (Adjunct); PhD, 1968, University of Chicago; evolution and population genetics.

Fleming, Thomas Richard * 1984; PhD, 1976, University of Maryland; survival analysis, cancer clinical trials, AIDS research, sequential analysis.

Ford, E. David * 1985, (Adjunct); PhD, 1968, University College, London (UK); spacial processes in ecology, forest productivity, and plants' response to environmental change.

Guttorp, Peter * 1980; PhD, 1980, University of California (Berkeley); point processes, stochastic models, applications to hydrology and atmospheric science.

Kronmat, Richard A. * 1964; PhD, 1964, University of California (Los Angeles); nonparametric density estimation, computer algorithms, cardiovascular data analysis, clinical trials.

COLLEGE OF ARTS AND SCIENCES / STATISTICS 233

Lunneborg, Clifford E. * 1962, (Emeritus): PhD, 1959, University of Washington; psychometrics, multivariate models, individual differences in cognition.

Martin, R. Douglas * 1974; PhD, 1969, Princeton University; robust methods, time series, wavelets and neural networks.

Nelson, Charles R. * 1975, (Adjunct); PhD, 1969, University of Wisconsin; time series analysis, economic statistical analysis, advanced macroeconomic theory.

O'Sullivan, S. Finbarr * 1987; PhD, 1983, University of Wisconsin; nonparametric curve estimation, inverse problems, radiology.

Perlman, Michael D. * 1979; PhD, 1967, Stanford University; multivariate analysis, decision theory, probability inequalities, convexity.

Raftery; Adrian Elmes * 1985; Doctorate, 1980, University of Paris; time series, spatial statistics, population estimation, model selection, Bayesian statistics.

Scholz, Friedrich-Wilhelm * 1982, (Affiliate); PhD, 1971, University of California (Berkeley); large-sample theory, nonparametrics, software reliability, risk and tolerance analysis, bootstrap.

Shorack, Galen * 1965; PhD, 1965, Stanford University; empirical processes, robustness, nonparametric statistics.

Siegel, Andrew F. * 1983, (Adjunct); PhD, 1977, Stanford University; exploratory data anlysis, statistical computing and graphics, morphometrics, quantitative methods.

Stuetzle, Werner * 1984; PhD, 1977, Swiss Federal Institute of Technology; nonparametric methods in multivariate analysis, statistical applications of computer graphics.

Thompson, Elizabeth A. * 1985; PhD, 1974, Cambridge University (UK); statistical analysis of human genetic data, statistics of conservation and computational biology.

Wellner, Jon A. * 1983; PhD, 1975, University of Washington; large-sample theory, asymptotic efficiency, empirical processes, semiparametric models.

Associate Professors

McDonald, John A. * 1985, (Research); PhD, 1982, Stanford University; scientific computing, interactive graphics, human interfaces, visualization, programming languages.

Sampson, Paul D. * 1981, (Research); PhD, 1979, University of Michigan; spatial statistics and environmetrics, morphometrics, statistical consulting.

Zeh, Judith * 1961, (Research); PhD, 1979, University of Washington; estimation of whale population size and dynamics, statistics in infectious disease research.

Assistant Professors

Kooperberg, Charles L. * 1991; PhD, 1991, University of California (Berkeley); splines, density estimation, image reconstruction, spatial statistics.

Madigan, David * 1990; PhD, 1990, Trinity College (Ireland); Bayesian graphical models, Bayesian networks, intelligent tutoring systems, multimedia architectures.

Percival, Donald B. * 1979, (Affiliate); PhD, 1983, University of Washington; time series and signal analysis, computational environments, statistics of clocks.

Riskin, Eve A. * 1990, (Adjunct); PhD, 1990, Stanford University; image compression and processing, signal processing, medical imaging, and pattern recognition.

Senior Lecturer

Morita, June G. * 1982; PhD, 1985, University of California (Berkeley); survey design/implementation, quality control, survival analysis, statistical data analysis.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

STAT 111 Lectures in Applied Statistics (1) NW Weekly lectures illustrating the importance of statisticians in a variety of fields, including medicine and the biological, physical, and social sciences. Contact instructor for information on emphasized fields of applications. Credit/no credit only. Offered: jointly with BIOST 111; Sp.

STAT 220 Basic Statistics (5) NW, QSR Objectives and pitfalls of statistical studies. Structure of data sets, histograms, means, and standard deviations. Correlation and regression. Probability, binomial and normal, Interpretation of estimates, confidence intervals, and significance tests. (Students may receive credit for only one of 220, 301, 311, and ECON 311.) Prerequisite: 1½ years of high school algebra. Offered: AWSpS.

STAT 301 Basic Statistics with Applications (5) NW, QSR Objectives, pitfalls of statistical studies. Structure of data sets, histograms, means, standard deviations. Correlation, regression. Probability, binomial and normal. Interpretation of estimates, confidence intervals, significance tests. Application to problems in student's major field. (Students may receive credit for only one of 220, 301, 311.) Prerequisites: 1½ years of high school algebra. Offered: W.

STAT 311 Elements of Statistical Methods (5) NW, QSR Elementary concepts of probability and sampling; binomial and normal distributions. Basic concepts of hypothesis testing, estimation, and confidence intervals; t-tests and chi-square tests. Linear regression theory and the analysis of variance. (Students may receive credit for only one of 220, 301, 311, and ECON 311.) Prerequisite: MATH 111 or 120. Offered: AWSpS.

STAT 316 Regression Analysis and Design of Experiments (3) NW Introduction to the analysis of data from planned experiments. Analysis of variance and regression analysis with applications in engineering. Prerequisite: ENGR 315 or permission of instructor. Offered: jointly with IND E 316.

STAT 341, 342 Introduction to Probability and Statistical Inference I, II (4,4) NW Sample spaces, random variables, probability. Distributions: binomial, normal, Poisson, geometric. Expectation, variance, moment generating functions. Central limit theorem. Basic concepts of estimation, testing and confidence intervals. Maximum likelihood estimators and likelihood ratio tests; efficiency. Introduction to regression and analysis of variance. (Students may not receive credit for both 341 and 481.) Prerequisite: 311, MATH 126. Offered: W,Sp.

STAT 361, 362 Statistics for Social Scientists (3,3) NW Introduction to statistical methodology, measurement scales, design of surveys and experiments, descriptive statistics, exploratory data analysis, probability distributions, use of computer packages for statistical data analysis, point and interval estimation, hypothesis testing. Comparisons, two sample tests, nonparametric methods, measuring and testing association, correlation, simple linear and multiple regression, time series, multivariate data analysis, analysis of variance (ANOVA) and analysis of covariance (ANCOVA). Prerequisite: 220 or 311, or equivalent. Computers used, but no prior experience required. Offered A.W.:

STAT 390 Probability and Statistics in Engineering and Science (4) NW Concepts of probability and statistics. Conditional probability, independence, random variables, distribution functions. Descriptive statistics, transformations, sampling errors, confidence intervals, least squares and maximum likelihood. Exploratory data analysis and interactive computing. (Students may not receive credit for both 390 and 481.) Prerequisites: MATH 126 and MATH 205 or 308. Offered: jointly with MATH 390; AWSpS.

STAT 394 Probability I (3) NW Sample spaces; basic axioms of probability; combinatorial probability; conditional probability and independence; binomial, Poisson and normal distributions. Prerequisite: MATH 324. Offered: jointly with MATH 394; AWS.

STAT 395 Probability II (3) NW Random variables; expectation and variance; laws of large numbers; normal approximation and other limit theorems; multidimensional distributions and transformations. Prerequisite: 394. Offered; jointly with MATH 395; WSpS.

STAT 396 Probability III (3) NW Characteristic functions and generating functions; recurrent events and renewal theory; random walk. Prerequisite: 395 or 511. Offered: jointly with MATH 396; Sp.

STAT 403 Introduction to Data Analysis (4) NW Philosophy, methods of exploratory data analysis, robustness, statistical graphics. Structure in data sets: groups of numbers, several groups, bivariate, time series, two-way tables. Includes plotting, transformation, outlier identification, regression, smoothing, median pollsh. May not be taken for credit if credit received for 503. Prerequisite: 220 or 311 or QMETH 201 or ECON 311. Offered: Sp.

STAT 421 Applied Statistics and Experimental Design (4) NW Computer-aided data analyses using comparisons between batches, analysis of variance and regression. Evaluation of assumptions, data transformation, reliability of statistical measures (jackknife, bootstrap). Fisher-Gosset controversy. Prerequisites: 342, 390, 481, or permission of instructor. Offered: A.

STAT 423 Applied Regression and Analysis of Variance (4) NW Regression analysis. Problems in interpreting regression coefficients. Estimation, including two-stage least squares. Guided regression: building linear models, selecting carriers. Regression residuals. Analysis of variance. Nonparametric regression. Factorial designs, response surface methods. Prerequisites: 342, 390, 421, 481, or grade of 3.0 in 311 plus MATH 126, or permission of instructor. Offered: W.

STAT 425 Introduction to Nonparametric Statistics (3) NW Overview of nonparametric methods, such as rank tests, goodness of fit tests, 2x2 tables, nonparametric estimation. Useful for students with only a statistical methods course background. Prerequisites: 311, BIOST 473, 511, or permission of instructor. Offered: jointly with BIOST 425, when demand is sufficient.

STAT 427 Introduction to Analysis of Categorical Data (4) NW Techniques for analysis of count data. Log-linear models, logistic regression, and analysis of ordered response categories. Illustrations from the behavioral and biological sciences. Computational procedures. Prerequisites: 362, 421, or permission of instructor. Offered: alternate years; 1995; Sp.

STAT 428 Multivariate Analysis for the Social Sciences (4) NW Multivariate techniques commonly used in the social and behavioral sciences. Linear models for dependence analysis (multivariate regression, MANOVA, and discriminant analysis) and for interdependence analysis (principal components and factor analysis). Techniques applied to social science data using computer statistical packages. Prerequisites: 362, 421, or permission of instructor. Offered: alternate years; 1996; Sp.

STAT 480 Sampling Theory for Biologists (3) NW Simple random sampling, stratified random sampling, ratio estimates, regression estimates, systematic sampling, cluster sampling, sample size determinations, applications in fisheries and forestry. Sampling plant and animal populations, sampling distributions, estimation and statistical treatment of data. Prerequisites:

234 COLLEGE OF ARTS AND SCIENCES / STATISTICS

Q SCI 482, 483, or permission of instructor. Offered: jointly with Q SCI 480; even years.

STAT 481 Introduction to Mathematical Statistics (5) NW Probability, generating functions; the dmethod, Jacobians, Bayes theorem; maximum likelihoods, Neyman-Pearson, efficiency, decision theory, regression, correlation, bivariate normal. (Students receiving credit for either 341 or 390 may not receive credit for 481.) Prerequisites: 311, ECON 311 or equivalent; MATH 124, 125, 126; and a course in linear algebra, which may be taken concurrently. Offered: iointly with ECON 481: A.

STAT 486 Experimental Design (3) NW Topics in analysis of variance and experimental designs; choice of designs, comparison of efficiency, power, sample size, pseudoreplication, factor structure. Prerequisite: Q SCI 483 or equivalent, matrix algebra. Offered: jointly with Q SCI 486.

STAT 491, 492 Introduction to Stochastic Processes (3,3) NW Random walks, Markov chains, branching processes, Poisson process, point processes, birth and death processes, queuing theory, stationary processes. Prerequisites: 396 for 491; 491 for 492. Offered: jointly with MATH 491, 492; A,W.

STAT 498 Special Topics (1-5, max. 15) NW Reading and lecture course intended for special needs of students. Prerequisite: permission of instructor. Offered: when demand is sufficient.

STAT 499 Undergraduate Research (1-5, max. 15) Prerequisite: permission of instructor. Offered: AWSpS.

Courses for Graduates Only

STAT 503 Practical Methods for Data Analysis (4) Morita Basic exploratory data analysis with business examples. Data summaries, multivariate date, time series, multiway tables. Techniques include graphical display, transformation, outlier identification, cluster analysis, smoothing, regression, robustness. Departmental credit allowed for only one of 403 and 503. Prerequisites: B A 500 or QMETH 500 or equivalent or permission of instructor. Offered: jointly with QMETH 503.

STAT 506 Applied Probability Models (4) Overview of probability models, random variables, independence and conditional probability, Markov chains, stationary time series. Prerequisites: some advanced calculus and linear algebra; familiarity with elementary discrete probability models. Offered: jointly with AMATH 506; Sp.

STAT 512, 513 Statistical Inference (4,4) General theory of statistical inference; estimation and hypothesis testing; multivariate theory; regression, correlation, and analysis of variance. Prerequisites: 395 and 421, 423, or BIOST 512 (concurrent registration permitted for these three) for 512; 512 for 513. Offered: A.W.

STAT 516-517 Stochastic Modeling of Scientific Data (4-4) Markovian and semi-Markovian models, point processes, cluster models, queuing models, likelihood methods, estimating equations. Prerequisites: 511 or 396 for 516-; 516- for -517. Offered: A-W.

STAT 519 Time Series Analysis (3) Descriptive techniques. Stationary and nonstationary processes, including ARIMA processes. Estimation of process mean and autocovariance function. Fitting ARIMA models to data. Statistical tests for white noise. Forecasting. State space models and the Kalman filter. Robust time series analysis. Regression analysis with correlated errors. Statistical properties of long memory processes. Prerequisite: 513. Offered: A.

STAT 520 Spectral Analysis of Time Series (4) Estimation of spectral densities for single and multiple time series. Nonparametric estimation of spectral density, cross-spectral density, and coherency for stationary time series, real and complex spectrum techniques. Bispectrum. Digital filtering techniques. Aliasing, prewhitening. Choice of lag windows and data windows. Use of the fast Fourier transform. The parametric autoregressive spectral density estimate for single and multiple stationary time series. Spectral analysis of nonstationary random processes and for randomly sampled processes. Techniques of robust spectral analysis. Prerequisite: one of 342, 390, 481, or permission of instructor. Offered: jointly with E E 520; W.

STAT 521, 522, 523 Advanced Probability (3,3,3) Measure theory and integration, independence, laws of large numbers. Fourier analysis of distributions, central limit problem and infinitely divisible laws, conditional expectations, martingales. Prerequisite: MATH 426. Offered: jointly with MATH 521, 522, 523; A,W,Sp.

STAT 524 Design of Medical Studies (3) Emphasis on randomized controlled clinical trials. Bias elimination, controls, treatment assignment and randomization, precision, replication, power and sample size calculations, stratification, and ethics. Suitable for students in biostatistics and other scientific fields. Prerequisites: BIOST 511 or equivalent, and one of 421, 423, BIOST 513 or EPI 512; or permission of instructor. Offered: jointly with BIOST 524; even years.

STAT 529 Sample Survey Techniques (3) Design and implementation of selection and estimation procedures. Emphasis on human populations. Simple, stratified, and cluster sampling; multistage and two-phase procedures; optimal allocation of resources; estimation theory; replicated designs; variance estimation; national samples and census materials. Prerequisites: 421, 423, QMETH 500 or BIOST 511 or equivalent; or permission of instructor. Offered: jointly with BIOST 529.

STAT 533 Classical Theory of Linear Models (3) Introduction to one-, two-way analysis of variance; randomized blocks; fixed, random effects, multiple comparisons. Statistical distribution theory for quadratic forms of normal variables. Fitting of the general linear model by least squares. Prerequisites: 421 or 423; and 513, BIOST 513, and a course in matrix algebra. Offered: jointly with BIOST 533; Sp.

STAT 534 Statistical Computing I (3) Computational methods in statistics: sorting, searching and calculation of order statistics, data interpolation and approximation, numerical methods for least squares and principal components, computational geometry, calculation of probabilities, data structures, and database management. Offered: jointly with BIOST 534; alternate years; 1995; W.

STAT 535 Statistical Computing II (3) Computational methods in statistics: generation of pseudo random numbers, Monte Carlo quadrature, variance reduction techniques, design of Monte Carlo studies, nonlinear optimization, nonlinear least squares, selected special topics. Offered: jointly with BIOST 535; alternate years; 1995; Sp.

STAT 536 Log-Linear Modeling and Logistic Regression for the Social Sciences (3) Log-linear modeling of multidimensional contingency tables. Logistic regression. Applications to social mobility, educational opportunity, and assortative marriage. Applied and computing focus. Prerequisite: 395 or SOC 425 or permission of instructor. Offered: jointly with SOC 536.

STAT 542 Multivariate Analysis (3) Multivariate normal distribution; partial and multiple correlation; Hotelling's T²; Bartlett's decomposition; various likelihood ratio tests; discriminant analysis; principal components. Prerequisite: 582 or permission of instructor. Offered: 1995-1996.

STAT 544 Bayesian Statistical Methods (3) Statistical methods based on the idea of a probability distribution over the parameter space. Coherence and utility. Subjective probability. Likelihood principle. Conjugate families. Structure of Bayesian inference. Limit theory for posterior distributions. Sequential experiments. Exchangeability. Bayesian nonparametrics. Empirical Bayes methods. Prerequisite: 513 or permission of instructor. Offered: 1995-1996.

STAT 565 Inference in Stochastic Processes (3) Methods for statistical inference from dependent observations. Emphasis on one or more of the following: Markov chains in discrete or continuous time; diffusion processes; point processes; asymptotic theory; filtering and smoothing of linear models. Prerequisite: 581 or permission of instructor. Offered: when demand is sufficient.

STAT 570, 571, 572 Advanced Applied Statistics and Linear Models (3,3,3) Generalized linear models, REML in mixed models for randomized blocks, split plots, longitudinal data. Generalized estimating equations, empirical model building, cross validation, recursive partitioning, generalized additive models, projection pursuit. Prerequisites: 513; 533 or 421 and 423, and a course in matrix algebra for 570; 570 for 571; 571 for 572. Offered: jointly with BIOST 570, 571, 572; A,W,Sp.

STAT 573 Statistical Methods for Categorical Data (3) Exact and asymptotic methods for 2x2 contingency tables. Maximum likelihood estimation of logistic regression models for binary response. Examples in epidemiologic and clinical research. Theory and applications of log-linear models for discrete data. Selected special topics. Prerequisites: 571 and 581; or permission of instructor. Offered: jointly with BIOST 573; alternate years.

STAT 574 Multivariate Statistical Methods (3) Use of multivariate normal sampling theory, linear transformations of random variables, one- and two-sample tests, profile analysis, partial and multiple correlation, multivariate ANOVA and least squares, discriminant analysis, principal components, factor analysis, robustness, and some special topics. Some computer use included. Prerequisite: 570 or permission of instructor. Offered: jointly with BIOST 574; alternate years; 1995; W.

STAT 576 Statistical Methods for Survival Data (3) Statistical methods for censored survival data. Covers parametric and nonparametric methods, Kaplan-Meier survival curve estimator, comparison of survival curves, log-rank test, regression models including the Cox proportional hazards model, competing risks. Prerequisites: 581 and either 423, BIOST 513, or Q SCI 483, or equivalent. Offered: jointly with BIOST 576: alternate years.

STAT 577 Advanced Design and Analysis of Experiments (3) Concepts important in experimental design: randomization, blocking, confounding. Application and analysis of data from randomized blocks designs, Latin and Greco-Latin squares, incomplete blocks designs, split-plot and repeated measures, factorial and fractional replicates, response surface experiments. Prerequisite: 570 or 421 (minimum grade 3.0), or permission of instructor. Offered: jointly with BIOST 577.

STAT 578 Special Topics in Advanced Biostatistics (* max. 3) Advanced-level topics in biostatistics offered by regular and visiting faculty members. Prerequisite: permission of instructor. Offered: jointly with BIOST 578.

STAT 579 Advanced Data Analysis (4) Resampling methods; jackknife, bootstrap, crossvalidation. Smoothing techniques; local averages; projection-pursuit regression; recursive partitioning regression. Selected aspects of linear regression. Robust-resistant methods. Density estimation. Clustering techniques. The EM-algorithm. Graphical exploratory methods. Prim-81. Prerequisites: 513; one of 571, 421, 423; or permission of instructor. Offered: jointly with BIOST 579.

COLLEGE OF ARTS AND SCIENCES / WOMEN STUDIES 235

STAT 581, 582, 583 Advanced Theory of Statistical Inference (3,3,3) Limit theorems, asymptotic methods, asymptotic efficiency and efficiency bounds for estimation, maximum likelihood estimation, Bayes methods, asymptotics via derivatives of functionals, sample-based estimates of variability: (bootstrap and jackknife); robustness; estimation for dependent data, nonparametric estimation and testing. Prerequisites: 513 and either prior or concurrent registration in MATH 426 and 427 for 581; 570 and 581 for 582; 582 for 583. Offered: A.W.Sp.

STAT 590 Statistics Seminar (* max. 15) Prerequisite: permission of graduate program coordinator. Credit/no credit only. Offered: AWSp.

STAT 591, 592, 593 Special Topics in Statistics (1-5, max. 15; 1-5, max. 15; 1-5, max. 15) Distributionfree inference, game and decision theory, advanced theory of estimation (including sequential estimation), robustness, advanced probability theory, stochastic processes or empirical processes. Prerequisite: permission of instructor. Offered: A,W,Sp.

STAT 598 Techniques of Statistical Consulting (3) Instruction and practice in planning studies, analyzing data, writing reports, and interacting with clients. Includes applied statistics and consulting literature not covered elsewhere in graduate curriculum. Significant data analysis projects and critiques of actual consulting sessions. Prerequisites: two or more courses in the application of statistical methods. Offered: ASp.

STAT 599 Statistical Consulting (* max. 12) Consulting experience in data analysis, applied statistics. Student required to provide consulting services to students and faculty three hours per week. Credit/no credit only. Prerequisite: permission of graduate program coordinator. Offered: AWSpS.

STAT 600 Independent Study or Research (*) Prerequisite: permission of graduate program coordinator. Offered: AWSpS.

STAT 700 Master's Thesis (*) Prerequisite: permission of graduate program coordinator. Offered: AWSpS.

STAT 800 Doctoral Dissertation (*) Prerequisite: permission of graduate program coordinator. Offered: AWSpS

Women Studies

B110 Padelford

Women Studies is an interdisciplinary department that offers students the opportunity for intensive, crosscultural and theoretical study of women. Students select a variety of courses offering breadth in women studies scholarship while pursuing concentrated study in a particular track, such as women and the arts; gender, race, and ethnicity; and women and public policy.

Undergraduate Program

Bachelor of Arts Degree

Major Requirements: WOMEN 200 or equivalent; 5 additional lower-division credits in women studies (excluding 290); one course dealing with race and ethnicity (from women studies or another discipline); 300; 400; 493; 497; 15 additional upper-division credits in women studies (excluding 495, 497, 499), which may include a maximum of 5 credits of 490. Also required: 25 additional upper-division credits which may be satisfied by one of two core option sequences: (1) 25 credits in a women studies track (one of several approved series of interdisciplinary courses); (2) 25 credits in an individual course of study arranged between the student and a women studies adviser, with approval by the director.

Minor

Minor Requirements: 30 credits to include WOMEN 200 or equivalent; 5 additional lower-division credits in women studies (excluding 290); one course dealing with race and ethnicity (from women studies or another discipline); 15 additional upper-division credits in women studies (excluding 490, 495, 497, 499).

Faculty

Chairperson

Susan E. Jeffords

Professors

Bereano, Philip L. * 1975, (Adjunct); JD, 1965, Columbia University; technology assessment, alternative technology, public policy and social values regarding technology.

Blake, Kathleen * 1971, (Adjunct); PhD, 1971, University of California (San Diego); Victorian literature, children's literature, women's studies.

Boersma, P. Dee * 1974, (Adjunct); PhD, 1974, Ohio State University; population, ecology.

Butler, Johnnella E. * 1987, (Adjunct); EdD, 1979, University of Massachusetts.

Gerstenberger, Donna * 1960, (Adjunct); PhD, 1958, University of Oklahoma; twentieth-century literature, Anglo-Irish literature, feminist criticism.

Goldsmith, Layne * 1983, (Adjunct): MFA, 1979, Cranbrook Academy of Art; fiber arts and related historic and contemporary textile structures and processes.

Graham, Katherine Y. * 1988, (Adjunct); PhD, 1978, University of Washington; family adaptation, quality of life in wellness and illness, professional commitment.

Jeffords, Susan E. * 1985; PhD, 1981, University of Pennsylvania; feminist theory, American popular culture, and the representation of Vietnam.

Kaplan, Sydney J. * 1971, (Adjunct); PhD, 1971, University of California (Los Angeles); twentieth-century literature, women writers, feminist criticism.

McElroy, Colleen W. * 1972, (Adjunct); PhD, 1973, University of Washington; Black literature, women writers, poetry writing.

Pollak, Vivian R. * 1985, (Adjunct); PhD, 1969, Brandeis University; nineteenth-century American literature, American women writers, biography.

Richey, Cheryl A. * 1973, (Adjunct); DSW, 1974, University of California (Berkeley); cultural and gender issues, intervention design and research.

Schwartz, Pepper J. * 1972, (Adjunct); PhD, 1974, Yale. University; family, gender, human sexuality, field methods.

Woods, Nancy* 1978, (Adjunct); PhD, 1978, University of North Carolina; women's health.

Associate Professors

Allen, Carolyn * 1972, (Adjunct); PhD, 1972, University of Minnesota; twentieth-century literature, women writers, contemporary critical theory.

Allen, David G. * 1988. (Adjunct); PhD, 1975, University of Iowa; philosophy of science, critical and feminist theory, psychosocial nursing theory.

Cauce, Ana Mari * 1986, (Adjunct); PhD, 1984, Yale University; social support and networks, at-risk adolescents, community psychology, minority populations.

Clatterbaugh, Kenneth C. * 1966, (Adjunct); PhD, 1966, Indiana University; philosophy of science, modern philosophy, social philosophy.

Cummings, Katherine * 1985, (Adjunct); PhD, 1985, University of Wisconsin; feminist, psychoanalytical, and literary theory, modern and contemporary literature. Di Stefano, Christine * 1985, (Adjunct); PhD, 1984, University of Massachusetts; political theory (modern and contemporary), feminist theory, political culture.

Dubrow, Gail Lee * 1989, (Adjunct); MA, 1979, University of Oregon.

Hartsock, Nancy C. M. * 1984, (Adjunct); PhD, 1972, University of Chicago; feminist theory, Marxism, contemporary political theory.

Howard, Judith A. * 1982, (Adjunct); PhD, 1982, University of Wisconsin; social psychology, gender roles.

Jacobs, Sue-Ellen * 1974; PhD, 1970, University of Colorado (Boulder); anthropological studies of women, sociocultural-applied anthropology, ethnohistory, North America.

Kenney, Nancy J. * 1976; PhD, 1975, University of Virginia; neural and endocrine controls of food and fluid intake, physiological basis of motivation.

Lawson, Victoria A. * 1986, (Adjunct); PhD, 1986, Ohio State University; Latin America, political economy of development, feminist theory in development.

Magyary, Diane L. * 1981, (Adjunct); PhD, 1981, University of Washington; family centered health care of children at risk, disabled or handicapped.

Olshansky, Eilen F. * 1985, (Adjunct); DNS, 1985, University of California (San Francisco); psychosocial implications of infertility related to the family, qualitative research.

Palomo, Dolores J. * 1971, (Adjunct); PhD, 1972, State University of New York (Buffalo); Rennaissance literature, women writers.

Rhodes, Lorna A. * 1983, (Adjunct); PhD, 1973, Cornell University; medical anthropology, symbolic anthropology, South Asia, religion, psychiatry.

Roberts, Jean Valerie * 1991, (Adjunct); PhD, 1982, University of Pittsburgh; ancient Greek philosophy; history of ethics and political theory; feminist philosophy.

Salas, Elizabeth 1987, (Adjunct); PhD, 1987, University of California (Los Angeles); United States women's history, Chicana history.

Shannon, Margaret A. * 1992, (Adjunct); PhD, 1989, University of California (Berkeley); natural resources, sociology and policy.

Silberstein, Sandra V. * 1982, (Adjunct); PhD, 1982, University of Michigan; TESL, critical theory, discourse analysis, sociolinguistics, language and culture.

Sokoloff, Naomi B. * 1985, (Adjunct); PhD, 1980, Princeton University; Hebrew language and literature.

Steele, Cynthia * 1986, (Adjunct); PhD, 1980, University of California (San Diego); Latin American literature and society, narrative and feminist theory.

Treat, John W. * 1983, (Adjunct); PhD, 1982, Yale University; Japanese language and literature.

Ward, Deborah * 1987, (Adjunct); PhD, 1987, Boston University; health policy and politics, women's paid and unpaid caregiving work.

Yee, Shirley J. * 1988; PhD, 1987, Ohio State University; U.S. women's history, African-American history, nineteenth-century U.S. social history.

Assistant Professors

Anagnost, Ann S. * 1990, (Adjunct); PhD, 1985, University of Michigan; ethnography of the state, ideology and popular culture, peasant society; China.

Bryant-Bertail, Sarah * 1990, (Adjunct); PhD, 1986, University of Minnesota; dramatic criticism, semiotics, feminist theatre.

Domansky, Elisabeth * 1991, (Adjunct); PhD, 1981, Ruhr University (Germany); social and cultural history of Germany, 1871 to the present.

DuBois, Thomas A. * 1990, (Adjunct); PhD, 1990, University of Pennsylvania; Nordic and North American

folkloristics, Finnish, Sami, women's culture, adolescence.

Ellason, Leslie Carol 1988, (Adjunct); PhD, 1988, Stanford University; comparative politics; European public policy: comparative education and health care policy.

Gavel Adams, Ann-Charlotte * 1986, (Adjunct); PhD, 1990, University of Washington; August Strindberg, Scandinavian women's literature, Scandinavian turnof-the-century drama and art.

Ginorio, Angela B. * 1981; PhD, 1979, Fordham University; violence against women, sexual harrassment; racial identity, especially among Latinas.

Jarosz, Lucy A. * 1990, (Adjunct); PhD, 1990, University of California (Berkeley); social and environmental impacts of economic development in the Third World.

Moody, Jocelyn K. 1991, (Adjunct); PhD, 1992, University of Kansas; nineteenth-century American, African-American, and women's literature, autobiography, poetry.

Sears, Laurie J. * 1989; PhD, 1986, University of Wisconsin; Southeast Asian social and cultural history.

Stacey, Robin C. * 1988, (Adjunct); PhD, 1986, Yale University; early and high medieval history, tribal law, Celtic/Anglo-Saxon literature, heresy.

Stygall, Gail * 1990, (Adjunct); PhD, 1989, Indiana University; rhetoric and composition, English language linguistics, law and literature.

Sunindyo, Saraswati 1993; PhD, 1993, University of Wisconsin; political sociology, sociology of economic change, sociology of gender.

Winddance Twine, Francine 1994; PhD, 1994, University of California (Berkeley); race and ethnicity, gender and racial identity, feminism and popular culture.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

WOMEN 200 Introduction to Women Studies (5) ISS Sunindyo Ferninist study of women, society, and culture, looking at how gender, race, class, and sexuality create similarities, differences, and connection across women's experience. Topics include women's histories and identities, family, sexual choices, work, violence against women, creativity, empowerment, and social change. Offered: AWS.

WOMEN 206 Philosophy of Feminism (5) I&S Philosophical analysis of the concepts and assumptions central to feminism. Theoretical positions within the feminist movement; view of the ideal society, goals and strategies of the movement, its relation to racial liberation, and ethical issues. Offered: jointly with PHIL 206/POLS 212; Sp.

WOMEN 250 Gender, War, and Peace (5) I&S Jeffords Examines extent to which issues of war and peace can be understood through gender. Discussion of long-accepted traditions that men go to war and women do not, that women are more inclined toward peace, that women need to be protected, that men are naturally aggressive or combative.

WOMEN 257 Psychology of Sex Differences (5) I&S Kenney Major psychological theories of sex-role development; biological and environmental influences that determine and maintain sex differences in behavior; sex roles in children, sex differences in aggression, cognitive abilities, achievement motivation, affiliation, sexuality. Not open for credit to students who have taken GIS 244. Recommended: PSYCH 101 or 102. Offered: jointly with PSYCH 257; A.

WOMEN 283 Introduction to Women's History (5) I&S Yee Includes units on American, European, and Third World women that examine centers of women's activities, women's place in male-dominated spheres (politics), women's impact on culture (health, arts), and the effect of larger changes on women's lives (technology, colonization). Offered: jointly with HST 283; A.

WOMEN 290 Special Topics in Women Studies (2-5, max. 15) I&S Offered occasionally by visitors or resident faculty.

WOMEN 300 Research Methods in Women Studles (5) I&S Yee Selected methods in women studies research. Use of historical documents, literary texts, interviews, and computerized data sets in research on human problems and women's roles. Computer applications in women studies research. Includes drafting proposal for senior thesis project. Prerequisites: 200, 206, or permission of instructor. Offered: A:

WOMEN 310 Women and the Law (5) I&S Focus on the status of women and the law; the legal status of single and married women, the rationale of protective legislation, and the effect of the legal changes such as the Civil Rights Act of 1964 and Equal Rights Amendment. Current cases on abortion, child care, tax laws, Social Security benefits. lesbianism, prostitution. Not open for credit to students who have taken GIS 355. Offered: A.

WOMEN 313 Women in Politics (5) I&S Distefano Political theory, historical and contemporary, including writings of the women's liberation movement on the political role of women in society. Empirical studies of the "apolitical" woman; process of political socialization In various cultural contexts; women's participation in political decision making. Prerequisite: 200 or a political science course. Offered: jointly with POL S 313.

WOMEN 321 History of Afro-American Women and the Feminist Movement (5) I&S "Feminist Movement" from early nineteenth century to present. Treats relationship between Black and White women in their struggle for independence, at times together and at times apart. Discusses the reasons, process, and results of collaboration as well as opposition. Examines recent and contemporary attempts at cooperation. Offered: jointly with AFRAM 321.

WOMEN 322 Race and Gender: Historical Perspectives (5) I&S Sunindyo, Yee The intersection of race and gender in the lives of women of color in the United States from historical and contemporary perspectives. Topics include racism, sexism, activism, sexuality, and inter-racial dynamics between women of color groups. Offered: jointly with AES 322; A.

WOMEN 323 African-American Women's History (5) I&S Yee Survey of African-American women's experience in United States, 1600 to present. Includes: social, political, economic status of Afro-American women in slavery, freedom, education, activism, Civil Rights, women's rights, other social movements. Explores individual and collective interactions with African-American men, white men and women, other people of color. Offered: jointly with AFRAM 323.

WOMEN 339 Women Writers in English Translation (3) VLPA Feminist analysis of selected contemporary texts in English or English translation by Chicana/ Latina writers in the United States; or by Spanish-American, Luso-Brazilian and/or Spanish women writers, in their specific socio-historical context. Offered: jointly with SPAN 339.

WOMEN 353 Anthropological Studies of Women (5) I&S Jacobs Cross-cultural and comparative survey of the varieties of women's cultural experiences, statuses, and roles in cultural context and the anthropological theories used to account for them. Topics include: biological factors, studies of primates, woman the gatherer, work in preindustrial and industrial societles, matriarchy and matrilineal kinship, childbirth, and women's roles in economic development. Prerequisites: 200 and ANTH 202, or permission of instructor. Offered: jointly with ANTH 353; W.

WOMEN 354 Lesblan Lives and Culture (5) I&S An exploration and overview of lesblanism in historical,

social, cultural, and interpersonal contexts. Prerequisites: 200 or 206 or permission of instructor.

WOMEN 355 Gender and Masculinity (5) I&S Clatterbaugh Social development of masculinity in American society. Definition of masculinity at different times in history; how men are socialized today; differences in the social development of masculinity for Black men, gay men, physically disabled. Individual and collective efforts at altering masculinity (e.g., critically examines the "men's movement"). Offered: Sp.

WOMEN 357 Psychobiology of Women (5) NW Kenney Physiological and psychological aspects of women's lives: determinants of biological aspects of ological and psychological events of puberty, menstruation, and menopause; sexuality; pregnancy, childbirth; the role of culture in determining the psychological response to the physiological events. Prerequisite: 200 or 257 or PSYCH 101 or 102 or 257. Offered: jointly with PSYCH 357; W.

WOMEN 364 Women In the Social Structure (5) I&S Sunindyo Gender and social institutions; the family, politics, education, medicine, law, the labor force. Intersection of gender with other minority statuses such as race, age, socioeconomic status, and sexual orientation. Structural, ideological, and historical determinants of gender relations. Offered: jointly with SOC 364; A.

WOMEN 374 Methods in Life History Research (5) I&S Jacobs Techniques and procedures for constructing life histories: use of diaries, letters, photography, and personal interviews. Technical instruction in use of tape recorder; indexing, cataloging, and writing summaries of tapes; use of cameras for copying documents and photography. Each student completes one life history per quarter. Prerequisite: 200. Offered: Sp.

WOMEN 383 Social History of American Women (5) I&S Yee Multi-racial, multi-cultural study of United States women, sixteenth century to present: emphasis on women's unpaid work; participation in paid labor force; charitable, reform activities; feminist movements of the nineteenth and twentieth centuries. Use of primary materials, i.e., diaries, letters, speeches, artifacts. Prerequisite: 200 or 283 or HSTAA 201 or permission of instructor. Offered: jointly with HSTAA 373; W.

WOMEN 392 Asian American Women (5) I&S Tien History of and contemporary issues related to Asian American women in the United States. Prerequisite: 206. Offered: jointly with AAS 392.

WOMEN 400 Senior Seminar in Women Studies (3) I&S Jeffords Part of the senior thesis requirement in Women Studies. For Women Studies majors only. Prerequisites: senior standing, permission of adviser.

WOMEN 415 Gender Equity in Education (3) I&S Implications of sex-role stereotyping in American education, kindergarten through grade 12, and development of insights into experiences as students, educators, and parents. Includes image of women and girls in curriculum materials, socialization and career counseling, teacher behavior, effects of Title IX and affirmative action on present school policy, and practical alternatives and skills useful for changing attitudes about sex roles. Prerequisite: 200 or 15 credits in education or Women Studies.

WOMEN 416 Sexist Language and Education (3) I&S How language reflects or determines sexist attitudes, particularly in current educational institutions. Includes male and female language use, systematic lexical syntactic distinctions based on sex, derogatory references to women, influences of classroom language on sex roles, and effects of language of sex differences on learning. Prerequisite: 200 or 15 credits in education or Women Studies.

WOMEN 439 Women Writers (5) VLPA Feminist analysis of selected texts by Chicana/Latina writers in the United States as well as by Spanish-American, Luso-Brazilian and/or Spanish women writers in their

specific socio-historical contexts. Prerequisites: SPAN 303, SPAN 320, and one additional 300-level course beyond 303. Offered: jointly with SPAN 439.

WOMEN 446 Theories and Tactics of the Women's Movement (3) I&S History of the women's movement and its current philosophies and tactics used to achieve change in women's status. Recommended: background in status of women and philosophies of women movements. Prerequisites: 200 or SOC 110, and junior or senior standing. Offered: jointly with SOC 446.

WOMEN 453 Women in Evolutionary Perspective (5) I&S/NW Jacobs Critical appraisal of major theories accounting for evolution of sex and gender roles and status differences; cross-cultural testing of sociobiological, biocultural, cultural materialist, structural, and symbolic explanations for "female power and male dominance." Prerequisite: 353 or permission of instructor. Offered: jointly with ANTH 483.

WOMEN 454 Women, Words, Music, and Change (5) VLPA/I&S Jacobs Comparative analysis of use of myths, tales, music, and other forms of expressive culture to account for, reinforce, and change women's status and roles; cross-cultural analysis of planned change and development. Prerequisite: 353 or permission of instructor. Offered: jointly with ANTH 454.

WOMEN 455 Contemporary Feminist Theory (5) I&S Recent work on study of women, focusing on social science research that has challenged our fundamental suppositions about organization of family, nature of moral development, definition of political behavior, conceptualization of time in history, and division of labor in market place. Recommended: 200, 206, or course in social theory.

WOMEN 456 FemInism, Racism, and Anti-Racism (5) I&S Builds on examination of the historically shifting meanings of race and racism. Asks how all United States women's daily lives and consciousness are shaped by racial oppression or race privilege. Examines steps being taken towards specifically feminist anti-racist theories and practices. Prerequisites: 200 and 206 or permission of instructor.

WOMEN 464 Chicana Expressive Culture (5) VLPA/I&S Expressive culture of Mexican women in United States. Cultural and artistic practices in home, film, literary (print, oral), performing and visual arts. Focuses on ways Chicana visual artists re-vision traditional iconography. Prerequisites: SPAN 303, 322, one additional 300-level course beyond 303 or permission of instructor. Offered: jointly with CHSTU/SPAN 464.

WOMEN 467 Spanish Women (5) VLPA/I&S Women's culture in Spain, focusing on women's experience during Civil War; persecution and censorship of women activists, artists, intellectuals during Franco years; changes in women's culture brought about.by reintroduction of democracy; major issues addressed by contemporary Spanish feminists. Prerequisites: SPAN 303, SPAN 321, and one additional 300-level course beyond 303. Offered: jointly with SPAN 467.

WOMEN 468 Latin American Women (5) VLPA/I&S Issues in women's culture from various Latin American countries, social classes, ethnic groups. Includes female creativity, relationship between female artists and the male tradition, women's exploitation of women, relationship of middle-class to popular feminism, connections between feminism and social change. Prerequisites: SPAN 303, SPAN 321, and one additional 300-level course beyond 303. Offered: jointly with SPAN 468.

WOMEN 489 Women, Minorities, and Media (5) I&S Images of women and minorities in United States media. Alternative media systems created by women and minorities in the United States. Offered: jointly with AES/CMU 489.

WOMEN 490 Special Topics in Women Studies (2-5, max. 15) I&S Exploration of specific problems and issues relevant to the study of women. Offered by visiting or resident faculty members. Primarily for upper-division and graduate students.

WOMEN 493 Senior Thesis (5) *I&S* Research and writing of thesis under supervision of a faculty member. Required of all majors. Prerequisite: major only; 300 and 400.

WOMEN 495 Tutoring Women Studies (5) Students train to serve as tutors in designated courses. Facilitate weekly group discussions, assist with writing assignments, explain course materials. Credit/no credit only. Prerequisites: 200 or 206, junior or senior standing, one upper-division course relevant to Women Studies, completion of course equivalent to course tutored, and permission of instructor.

WOMEN 497 Fletdwork in Women Studies (3-15, max. 15) Internships in local agencies. Allows development of specific skills in area of specialization. Credit/no credit only. Prerequisites: 200, junior standing, or permission of instructor. Offered: AWSpS.

WOMEN 499 Undergraduate Research (1-5, max. 10) Independent study and research supervised by a faculty member with appropriate academic interest. Prerequisite: permission of instructor and adviser. Offered: AWSpS.

WOMEN 501 Interdisciplinary Feminist Theory (5) Uses contemporary feminist writings, discusses feminist theories and methods. Addresses silences and invisibilities such as those of women of color in developing theories. Raises questions about the nature of feminist theory. Offered: W.

WOMEN 502 Feminist Research and Methods of Inquiry (5) Explores appropriate research methodologies for interdisciplinary work. Asks how scholarship is related to feminism as a social movement and to the institutions in which we work. Focuses on how similar objects of study are constituted in different disciplines for feminist scholars. Offered: Sp.

WOMEN 553 Discourses in Feminist Anthropology Seminar (5) Jacobs Exploration of feminist anthropological theories and the works of their critics. Ways of using feminist anthropology in preparation for and conducting fieldwork. Topics include foundations in feminist anthropology, grand theories, variation in feminist anthropology, grand theories, variation in feminist theoretical focl within the "four fields," responses to critics. Prerequisite: graduate standing. Offered: jointly with ANTH 555.

Zoology

106 Kincaid

Zoology is a natural science concerned primarily with animals: their development, structure, and function, and their relationship with their environments.

Zoology field courses are offered both at the main campus and at the Friday Harbor Laboratories. See individual course listing for location.

Undergraduate Program

Adviser Joyce Fagel 318 Hitchcock

The department offers two degree programs: Bachelor of Science, designed for students planning graduate work, and Bachelor of Arts, a program with minimal stated requirements.

Bachelor of Science Degree

Major Requirements: A minimum of 90 credits distributed as follows: (1) Supporting course work (minimum of 36 credits): CHEM 140, 150, 160; CHEM 223, 224 or CHEM 237, 238, 239; two courses from either PHYS 114, 115, 116 or PHYS 121/131, 122/132, 123/133; MATH 124, 125 or Q SCI 291, 292 or Q SCI 482, 483, Students who choose calculus for their mathematics requirement are encouraged to take a statistics course such as STAT 311 or Q SCI 381. Laboratory courses in chemistry and physics are recommended, not required. (The Department of Physics, however, requires concurrent enrollment in laboratory courses associated with PHYS 121, 122, 123.) (2) Introductory Biology (15 credits): BIOL 201, 202, 203 or BIOL 101, 102 (with a minimum grade of 2.5 in each), GENET 371; (3) 39 upper-division biological science credits to include: (a) Zoology Core: a minimum of 25 credits including at least two lecture courses from each of three groups and at least one course with a laboratory component from two groups: Group I. Cell Biology, Development, Gene Action; Group II. Morphology, Physiology; Group III. Ecology, Natural History, Evolution, Organisms. Consult zoology adviser for a list of approved courses. (b) Zoology Electives: 14 elective credits in the biological sciences. Consult zoology adviser for a list of approved courses. A minimum of 15 credits must be from 400-level courses in zoology and biology. A minimum of 15 upper-division credits (300- and 400-level) in zoology and biology must be taken at the UW. A minimum GPA of 2.00 is required, to include all courses required for the major.

Bachelor of Arts Degree

Major Requirements: A minimum of 75 credits distributed as follows: (1) Supporting course work (minimum of 25 credits): CHEM 140, 150, 160; CHEM 223, 224 or CHEM 237, 238, 239; MATH 124, 125 or Q SCI 291, 292 or STAT 311 or Q SCI 381. Laboratory courses in chemistry and general physics are recommended, not required. (2) 50 credits in biology and zoology courses, with not more than 20 credits in 100- and 200-level courses, to include: (a) Introductory Biology: BIOL 201, 202, 203 or BIOL 101, 102 (with a minimum grade of 2.5 in each), GENET 371; (b) Zoology Core: a minimum of 20 credits including at least one lecture course from each of three groups and at least one course with a laboratory component: Group I. Cell Biology, Development, Gene Action; Group II. Morphology, Physiology; Group III. Ecology, Natural History, Evolution, Organisms. Consult zoology adviser for a list of approved courses. (c) Zoology Electives: elective credits to complete 50 total credits in the biological sciences. Consult zoology adviser for a list of approved courses. A minimum of 15 credits must be from 400-level courses in zoology and biology. A minimum of 15 upper-division credits (300- and 400-level) in zoology and biology must be taken at the UW. A minimum GPA of 2.00 is required, to include all courses required for the major.

Graduate Program

Programs of study leading to the degree of Doctor of Philosophy are available in the areas of cell biology, developmental biology, developmental genetics, ecology, evolution, behavior, invertebrate and vertebrate morphology, comparative physiology, endocrinology, and neurobiology, as well as mathematical approaches to the above topics. Interdisciplinary programs are offered in developmental biology, cell and molecular biology, and neurobiology.

Research Facilities

Modern instruments and special facilities needed for advanced instructional and research purposes are available in Kincaid Hall. The department features an advanced, networked computer system. Extensive natural history collections are housed at the Burke Museum. The facilities of the Friday Harbor Laboratories on San Juan Island are available for research. Departmental graduate students may carry on an extensive part of their research there or at other field stations.

Special Requirements

Entering students should have preparation in several of the areas listed above, organic chemistry, physical chemistry in some cases, two quarters of college physics, and mathematics through calculus. All students are required to acquire at least three quarters of teaching experience regardless of their source of support.

Financial Aid

Normally all prospective candidates for M.S. and Ph.D. degrees are supported by teaching or research assistantships or by fellowships or traineeships from national or private agencies. Summer appointments are available both on the Seattle campus and at the Friday Harbor Laboratories on San Juan Island.

Application Date

Completed applications for entry in the autumn quarter must be received by January 15.

Robert T. Paine

Protessors

Beecher, Michael D. * 1978, (Adjunct); PhD, 1970, Boston University; animal communication, animal behaviors and communication, sensory processes.

Boersma, P. Dee * 1974; PhD, 1974, Ohio State University; population, ecology.

Cloney, Richard A. * 1961; PhD, 1959, University of Washington; invertebrate embryology, histology, morphogenetic movements, metamorphosis, biology of ascidians.

Daniel, Thomas L. * 1984; PhD, 1982, Duke University; functional morphology, biomechanics, mechanics and energetics of animal locomotion.

Deyrup-Olsen, Ingrith J. * 1964, (Emeritus); PhD, 1944, Columbia University; general physiology, cell-membrane phenomena.

Edmondson, W. Thomas * 1949, (Emeritus); PhD, 1942, Yale University; ecology, rotifers, limnology with emphasis on productivity of lakes.

Edwards, John S. * 1967; PhD, 1960, Cambridge University (UK); arthropod neurobiology, insect physiology and development, tundra and alpine biology.

Felsenstein, Joseph * 1968, (Adjunct); PhD, 1968, University of Chicago; evolution and population genetics.

Gorbman, Aubrey * 1963, (Emeritus); PhD, 1940, University of California (Berkeley); endocrinology and neuroendocrinology.

Hauschka, Stephen D. * 1972, (Adjunct); PhD, 1966, Johns Hopkins University, muscle differentiation.

Herring, Susan W. * 1990, (Adjunct); PhD, 1971, University of Chicago; vertebrate functional morphology, relations between muscular function and skull growth.

Huey, Raymond B. * 1977; PhD, 1975, Harvard University; evolutionary and physiological ecology, herpetology, behavior.

Illg, Paul L. * 1952, (Emeritus); PhD, 1952, George Washington University; invertebrate zoology and systematics, copepods, symbiosis of crustaceans.

Kareiva, Peter M. * 1983; PhD, 1981, Cornell University; theoretical ecology, conservation biology, agricultural ecology, plant-insect interaction. Karr, James * 1991; PhD, 1970, University of Illinois; ecology and conservation biology, water resources, environmental sciences, natural resources.

Kenagy, G. James * 1976; PhD, 1972, University of California (Los Angeles); ecophysiology and behavior, reproduction and life history, population biology, evolution, mammalogy.

Kingsolver, Joel * 1986; PhD, 1981, Stanford University; physiological ecology and evolutionary morphology of insects.

Kohn, Alan J. * 1961; PhD, 1957, Yale University; invertebrate zoology, ecology and fuctional morphology of marine invertebrates.

Kozloff, Eugene N. * 1966, (Emeritus); PhD, 1950, University of California (Berkeley); biology of lower invertebrates, ciliates, orthonectids, turbellarians and kinorhynches.

Laird, Charles D. * 1971; PhD, 1966, Stanford University; cell and developmental biology, human genetics.

Martin, Arthur W. 1937, (Emeritus); PhD, 1936, Stanford University; comparative invertebrate physiology.

Moody, William J. * 1982; PhD, 1977, Stanford University; single cell electrophysiology, development of electrical properties in embryos.

Murray, James D. * 1988, (Adjunct); PhD, 1956, Oxford University (UK); mathematical biology, biological pattern formation, wound healing, spread of epidemics.

Odell, Garrett M. * 1985; PhD. 1972, Johns Hopkins University; mathematical biology, ecology, models in cell and developmental biology.

Okubo, Akira 1992, (Affiliate); PhD, 1963, Johns Hopkins University; mathematical modeling, ecology.

Orians, Gordon H. * 1960; PhD, 1960, University of California (Berkeley); ecology and ethology, vertebrate social systems, community structure, plant-herbivore interactions.

Paine, Robert T. * 1962; PhD, 1961, University of Michigan; experimental ecology, organization and structure of marine communities.

Palka, John M. * 1969; PhD, 1965, University of California (Los Angeles); neurophysiology, sensory physiology, developmental neurobiology.

Pietsch, Theodore W. * 1978, (Adjunct); PhD, 1973, University of Southern California; ichthyology.

Pinter, Robert B. * 1967, (Adjunct); PhD, 1964, Northwestern University; cybernetics, robotics, biophysics.

Reeder, Ronald H. * 1981, (Affiliate); PhD, 1965, Massachusetts Institute of Technology; regulation of ribosomal RNA transcription by RNA polymerase I.

Riddiford, Lynn M. * 1973; PhD, 1961, Cornell University; insect development and physiology, invertebrate endocrinology.

Rohwer, Sievert A. * 1973; PhD, 1971, University of Kansas; ecology and evolution of social behavior, avian biology and systematics.

Schubiger, Gerold A. * 1972; PhD, 1968, University of Zurich (Switzerland); developmental genetic control of *Drosophila* embryos, pattern formation in imaginal disks.

Snyder, Richard C. * 1949, (Emeritus); PhD, 1948, Cornell University; comparative and functional vertebrate anatomy, vertebrate biology.

Steiner, Robert A. * 1977, (Adjunct); PhD, 1975, University of Oregon; neuroendocrinology.

Strathmann, Richard R. * 1973; PhD, 1970, University of Washington; invertebrate development, larval ecology and developmental strategies of marine invertebrates.

Svihla, Arthur 1938, (Emeritus); PhD, 1931, University of Michigan; zoology.

Truman, James W. * 1973; PhD, 1970, Harvard University; hormones and invertebrate behavior, insect physiology, circadian rhythms.

Ward, Peter D. * 1984, (Adjunct); PhD, 1976, McMaster University (Canada); invertebrate paleontology, paleobiology.

Whiteley, Arthur H. * 1947, (Emeritus); PhD, 1945, Princeton University; comparative developmental physiology of invertebrates, gene action, fertilization.

Willows, A. O. Dennis * 1969; PhD, 1967, University of Oregon; invertebrate neurophysiology, neural mechanisms underlying behavior.

Wingfield, John C. * 1985; PhD, 1973, University College of North Wales (UK); environmental and hormonal control of avian reproductive cycles.

Yao, Meng Chao * 1986, (Affiliate); PhD, 1975, University of Rochester; regulation of gene amplification and chromosome rearrangements in *Tetrahymena*.

Associate Professors

Bakken, Aimee * 1973; PhD, 1970, University of Iowa; gene regulation during oogensis and embryogenesis, developmental, cellular and molecular biology.

Brenowitz, Eliot A. * 1987; PhD, 1982, Cornell University; animal behavior, neuroethology, neuroendocrinology, animal communications.

Graubard, Katherine * 1979, (Research); PhD, 1973, University of Washington; cellular neurophysiology, neural basis of behavior.

Griffiths, W. Mary 1961, (Emeritus); PhD, 1953, University of California (Berkeley); zoology.

Hille, Merrill B. * 1976; PhD, 1965, Rockefeller University; developmental biology, gastrulation in sea urchin embryos, translational regulation during meiosis.

Osterud, Kenneth L. 1949, (Emeritus); PhD, 1941, New York University; zoology.

Priess, James R. * 1993, (Affiliate); PhD, 1983, University of Colorado, Boulder; reliability models, fault trees.

Wakimoto, Barbara T. * 1984; PhD, 1981, Indiana University; developmental genetics, gene expression and chromosome organization in eukaryotes.

Assistant Professors

Cooper, Mark S. * 1990; PhD, 1985, University of California (Berkeley); cellular physiology and cell motility in developing tissues.

Kot, Mark * 1989, (Adjunct): PhD, 1987, University of Arizona; mathematical ecology, nonlinear dynamics, and population biology.

Wright, Robin L. • 1990; PhD, 1985, Carnegie-Mellon University; membrane dynamics and regulation of sterol biosynthesis in yeast.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

ZOOL 114 Evolution (2) NW Kingsolver Evolutionary biology for nonmajors: Evolutionary history of the earth and various theories of evolution.

ZOOL 118 Survey of Physiology (5) NW Human physiology, for nonmajors and health sciences students. Offered: AWSpS.

ZOOL 119 Elementary Physiology Laboratory (1) NW Prerequisite: concurrent or previous enrollment in 118. Offered: AWSpS.

ZOOL 220 Diversity in Animals (5) NW Huey Morphological, functional, and ecological diversity within the major phyla of animals. Prerequisite: high school biology or permission of instructor.

ZOOL 301 Introductory Physiology (4) NW Fundamentals of physiology: biochemistry of cell constituents, environment of the cell, bioenergetics, membranes, control mechanisms. Laboratory project required. Prerequisites: chemistry through organic, one year of college physics, 10 credits in biological sciences.

ZOOL 330 Natural History of Marine Invertebrates (5) NW Kohn Field and laboratory course emphasizing the habits, habitats, adaptations, and interrelationships of marine animals. Students may be required to share a portion of the transportation costs of field trips.

ZOOL 362 Natural History of Vertebrates (5) NW Field and laboratory course on the classification, ecology, adaptations, and natural history of fishes, amphibians; reptiles, birds, and mammals. Students may be required to share a portion of the transportation costs of field trips. Prerequisite: permission of instructor.

ZOOL 403 Comparative Vertebrate Histology (5) NW Cloney Microscopic and submicroscopic anatomy of vertebrates. Emphasis on mammals. Light microscopy and interpretation of ultrastructure. Functions of basic tissue types and organs as related to structure. Prerequisite: BIOL 202.

ZOOL 408 Mechanisms of Animal Behavior (4) NW Beecher, Brenowitz Comparative exploration of physiological and perceptual mechanisms that control behaviors necessary for survival and reproduction in animals. Model systems discussed include animal communication, mate choice, escape behavior, learning and memory, orientation, biological rhythms, foraging behavior. Prerequisites: PSYCH 200 or BIOL 101 and 102 or permission of instructor. Offered: jointly with PSYCH 408.

ZOOL 409 Sociobiology (4) NW Rohwer Biological bases of social behavior, emphasizing evolution as a paradigm. Topics are: individual versus group selection, kin selection, altruism, group versus individual living, mating systems, parental care of offspring, and competitive strategies. Prerequisites: BIOL 202 and 203 or PSYCH 200, or equivalent. Offered: jointly with PSYCH 409.

ZOOL 410 Ethology and Ecology Laboratory (4) NW Boersma Field projects on foraging and social behavior, species interactions and structure of terrestrial and marine communities, including special student research problems. Students may be required to share a portion of the transportation costs of field trips. Prerequisite: permission of instructor. Offered: Sp.

ZOOL 430 Marine Zoology (8) NW Strathmann Survey of groups of invertebrate animals represented in marine environments; natural history, ecology, distribution, habitat, adaptation, and trophic interrelationships. Concurrent registration in BOT 445 required at Friday Harbor. Prerequisites: 20 credits in biological sciences and permission of Director of Friday Harbor Laboratories. Offered: at Friday Harbor Laboratories; Sp.

ZOOL 432 Marine Invertebrate Zoology (9) NW Comparative morphology and biology of marine invertebrates. Laboratory study covers the structure and interrelationships among marine invertebrate animals. Representatives of all major and most minor phyla are collected, observed alive, and studied in some detail. Not open for credit to students who have taken 433 or 434. Prerequisites: BIOL 202 or equivalent and permission of Director of Friday Harbor Laboratories. Offered: at Friday Harbor Laboratories; S.

ZOOL 433, 434 Invertebrate Zoology (5,5) NW Kohn Comparative morphology and biology of invertebrates. Laboratories emphasize structures and functions. Not open to students who have taken 432. Prerequisites: BIOL 202; 433 for 434. Offered: A,W.

ZOOL 435 Parasitology (5) NW General course covering the principles of parasitism and the major

groups of animal parasites. Prerequisite: 20 credits in biological sciences or permission of instructor.

ZOOL 438 Comparative Endocrinology (3) NW Wingfield Hormonal integration of living processes at all levels in animals: molecules, cells, organs, organisms, populations. Prerequisite: one year of biology. Recommended: a 400-level course in physiology, biochemistry, or histology.

ZOOL 439 Comparative Endocrinology Laboratory (2) NW Wingfield A broad introduction to endocrine techniques with appropriate experiments to accompany and erilarge on material presented in 438. Prerequisites: 438 and permission of instructor.

ZOOL 440 Biomechanics (4) NW Daniel Physical biology emphasizing a mechanical approach to ecological, evolutionary, and physiological questions. Basic principles underlying fluid and solid mechanics to explore responses of animals to flows, loads, and motions. Recommended: some familiarity with calculus and introductory physics.

ZOOL 444 Entomology (3) NW Edwards Biology of terrestrial arthropods, with emphasis on insects. Structure, classification, physiology, and ecology of insects. Interrelationships of insects and man. Prerequisite: 15 credits in biological sciences or permission of instructor. Offered: Sp.

ZOOL 445 Entomology Laboratory (2) NW *Edwards* Structure and function of arthropods, with emphasis on insects. Field studies and taxonomy of important insect groups. Students may be required to share a portion of the transportation costs of field trips. Prerequisites: concurrent registration in 444 and permission of instructor. Offered: Sp.

ZOOL 448 Concepts of Nervous System Function (3) NW Palka Broad examination of integrative mechanisms in central nervous system function, with emphasis on sensory processing, plasticity, and control of behavior. Examples are taken from a variety of animal groups.

ZOOL 449 Concepts of Nervous System Function Laboratory (2) NW Palka Experiments to accompany material presented in 448. Prerequisites: 408, 448, or other courses with a strong neuroscience component.

ZOOL 451 Vertebrate Zoology (5) NW Kenagy Integrated exploration of the biology of vertebrate animals, emphasizing their diversity, adaptations, life styles, and evolutionary history. Introduces aspects of behavior, physiology, morphology, and ecology that emerge from the comparative study of vertebrates. Laboratory includes local field trips, films, and writing workshop. Prerequisites: BIOL 201, 202, 203. Offered: A.

ZOOL 453 Comparative Anatomy of Vertebrates (5) NW Comparison of the structure of vertebrates with emphasis on functional morphology, evolution, and biomechanics. Prerequisite: BIOL 202. Recommended: 451. Offered: W.

ZOOL 455 Developmental Biology of Animals (3) NW Schubiger Embryology and subsequent development of vertebrate and invertebrate animals, including frogs, mammals, chicks, insects, echinoderms. Morphological changes in developing animals; experimental analysis of developing systems; underlying genetic and biochemical regulation of development. Prerequisites: BIOL 201, 202, 203, or permission of instructor. Recommended: some genetics, cell biology, or biochemistry.

ZOOL 456 Developmental Biology of Animals Laboratory (3) NW Shellenbarger Normal development of living embryos (frog, chick, insect, echlnoderm). Internal anatomy of embryos on prepared slides. Comparisons between vertebrate and invertebrate animals. Prerequisites: 455 or equivalent; permission of instructor. **ZOOL 457** Methods and Problems in Development (3) NW Bakken, Schubiger, Wakimoto Special topics in development. Integrating classical and current approaches. Developmental genetics, experimental embryology, molecular mechanisms of developmental regulation, and gene function in cell determination and cell differentiation in animal systems. Prerequisites: 455 or equivalent and permission of instructor.

ZOOL 484 Natural History of Birds (5) NW Rohwer, Wingfield Field, lecture, and laboratory study of birds framed in biological theory rather than taxonomy. Breeding systems, brood parasitism, appearance, molt, migration, orientation, social behavior, song, and flight are emphasized. Includes Saturday and weekend field trips for which students are required to share a portion of transportation costs. Prerequisites: BIOL 201, 202, 203 or equivalent, and permission of instructor. Offered: Sp.

ZOOL 465 Natural History of Mammals (5) NW Kenagy Field, lecture, and laboratory course introducing mammals in a general biological context, emphasizing ecology, evolution, behavior, morphology, and adaptation to the environment. Fieldwork focuses on rodent populations and their habitats in Washington State. Includes weekend field trips, for which students may be required to share a portion of transportation costs. Prerequisites: BIOL 201, 202, 203, and permission of instructor. Recommended: 453 and BIOL 472.

ZOOL 457 Comparative Animal Reproduction (3) NW Ramenofsky, Wingfield Reproductive mechanisms, environmental influences on reproductive endocrinology, physiology, behavior, ecology of vertebrates. Discussions extend from organismal to cellular level, and focus on diversity of reproductive patterns among vertebrates. Prerequisite: one year of collegelevel biology. Recommended: biochemistry and physiology.

ZOOL 468 Comparative Animal Reproduction Laboratory (2) NW Ramenofsky, Wingfield Laboratory and field studies on animal reproduction involving endocrinology, anatomy, behavior, and ecology. Accompanies, supplements, and extends material presented in 467. Prerequisites: 467 or 469, may be taken concurrently, and permission of instructor.

ZOOL 470 Techniques for Mathematical Biology (3) NW Odell Equips students to use, rather than prove, many applied mathematics techniques essential in mathematical biology. Includes instruction to use symbolic computation software (Mathematica, Macsyma) to do by computer the kind of mathematical formula manipulation that mathematicians formerly performed by hand. Prerequisite: calculus. Recommended: linear algebra.

ZOOL 471 Models in Biology (4) NW Kareiva Explores use of models in biology in a wide range of topics, including morphogenesis, nerve signals, ecological interactions, population biology, and evolutionary theory. Emphasis on the biological insights models can provide rather than mathematical techniques. Prerequisites: MATH 124, 125.

ZOOL 475 Biogeography (3) NW Orians Analysis of the historical and ecological determinants of current and past distributions of organisms. Integrates techniques developed by taxonomists, paleontologists, geologists, evolutionists, ecologists, and biogeographers to elucidate relationships between geographical distributions and continental drift, ecological interactions, climate, and the dispersal abilities of organisms.

ZOOL 483 Histological Research Methods (5) NW *Cloney* Preparation and analysis of tissues for light and electron microscopy. Students consult appropriate literature, analyze tissue samples, prepare micrographs, and present oral reports on individual projects. Prerequisites: 403 or 433, 434 with permission of instructor.

ZOOL 484, 485 Animal Physiology (3,3) NW Huey, Riddiford, Truman Physiology at levels of organisms

and behavior, organ systems, and cells—an evolutionary and integrative perspective. 484 Organismal physiology: metabolism, temperature, locomotion, osmoregulation, circulation, digestion. 485 Integrative physiology: neurons, muscles, and hormones. Prerequisites: introductory biology, chemistry, and physics.

ZOOL 486, 487 Animal Physiology Lab (2,2) NW Huey, Riddiford, Truman Experimental design and techniques, data analysis, written reports. 486: project labs in organismal-level physiology. 487: experiments in integrative physiology. Prerequisites: concurrent or previous enrollment in 484 for 486, 485 for 487.

ZOOL 490 Undergraduate Seminar (3, max. 6) NW Supervised reading and group discussion on selected concepts of zoology. Prerequisites: 20 credits in zoology and permission of instructor.

ZOOL 491 Topics in Zoological Research (1, max. 3) NW Undergraduate seminar on research problems currently under investigation by department faculty members. Includes discussions and laboratory demonstrations of aims, techniques, and results of zoological research. Credit/no credit only. Prerequisites: upper-division standing and permission of instructor.

ZOOL 493 Special Problems in Zoology (1-5, max. 15) Prerequisite: permission of instructor. Offered: AWSpS.

Courses for Graduates Only

ZOOL 506 Topics in Developmental Biology (1-2, max. 15) Seminars and discussions of aspects of growth of special current interest. Prerequisite: permission of instructor.

 ZOOL 509 Topics in Vertebrate Biology (1-3, max.
 15) Orians, Rohwer Detailed consideration of topics in behavioral integration, communication, and social organization. Prerequisite: 409 or PSYCH 409 or equivalent.

ZOOL 517 Analytical Development Physiology (9) Modern analysis of oogenesis, fertilization, embryonic organization and differentiation from an experimental and comparative point of view, and other advanced topics. Laboratory emphasizes experimental study of metabolic, blochemical, and biophysical properties, structural and mechanical features, subcellular localization, and microscopic organization of gametes and embryos of various marine invertebrates. Prerequisite: permission of instructor.

ZOOL 520, 521, 522 Seminar (1,1,1) Credit/no credit only. Offered: A,W,Sp.

ZOOL 525 Seminar in Mathematical Biology (2, max. 12) Daniel, Odell Examines mathematical models in a broad range of topics in biology, from cellular and subcellular to organismal and population phenomena. Participants present research topics, supplemented with selected readings from the primary literature, showing how mathematical methods and experimental or field biology are merged to predict observable phenomena. Credit/no credit only. Offered: WSp.

ZOOL 528 Advanced Topics in Physiology (1-3, max. 15) Recent developments. Prerequisite: one 400-level course in physiology.

ZOOL 529 Advanced Topics in Physiology (1-3, max. 15) Recent developments. Credit/no credit only. Prerequisite: one 400-level course in physiology.

ZOOL 533 Advanced Invertebrate Zoology (9) Invertebrate fauna of the San Juan Archipelago. Topic changes from year to year. Individual research projects are emphasized. Prerequisites: 10 credits in invertebrate zoology or equivalent and permission of Director of Friday Harbor Laboratories. Offered: at Friday Harbor Laboratories; SpS.

ZOOL 536 Comparative Invertebrate Embryology (9) Morphological and experimental studies of development of selected types of marine invertebrates. Prerequisites: 433, 434, 456, and permission of Director of Friday Harbor Laboratories. Offered: at Friday Harbor Laboratories; Sp.S.

ZOOL 538 Advanced Invertebrate Physiology (9) General and comparative aspects of nerve and muscle physiology with particular emphasis upon neuronal control of behavior, neuronal interactions, and other advanced topics determined by visiting faculty. Extensive laboratory experience, including intracellular and extracellular stimulating and recording techniques. Recommended: background in cellular physiology and invertebrate morphology. Offered: at Friday Harbor Laboratories; Sp.

ZOOL 540 Topics in Cellular Developmental Biology (1, max. 16) Bakken, Cooper, Hille, Moody Seminar on current topics dealing with cellular aspects of developmental biology. Variable topics on both vertebrate and invertebrate development. Credit/no credit only.

ZOOL 556 Insect Development (3) Edwards, Riddiford, Schubiger Characterizes developmental processes and their adaptations in diverse insect groups. Emphasizes hormonal control mechanisms in metamorphosis, polymorphism and diapause, regeneration and genetic analysis of development. Prerequisites: 456 or equivalent, BIOL 202 or equivalent, or permission of instructor.

ZOOL 568 Chemical Integration (2, max. 6) Wingfield Graduate seminar dealing with current problems in endocrinology and neuroendocrinology. Credit/no credit only. Prerequisite: permission of instructor.

ZOOL 570 Evolutionary Physiological Ecology (2, max. 16) Huey, Kingsolver Assigned reading, discussion, and student presentations on issues in physi-

ological and ecological aspects of evolution. Topics variable. Credit/no credit only. Prerequisites: 488 and BIOL 454 and 472 or equivalent.

ZOOL 571 Current Topics In Evolution (1, max. 16) Huey, Kingsolver Assigned reading and discussion of current topics in evolution. Topics variable. Credit/no credit only. Prerequisite: BIOL 454 or equivalent.

ZOOL 572 Topics in Ecology (1-3, max. 15) Kareiva, Kingsolver, Kohn, Orians, Paine Graduate seminar on modern problems in ecology. Prerequisites: BIOL 472 or equivalent, and permission of instructor.

ZOOL 573 Physiological Ecology (1-3, max. 15) Huey, Kenagy, Kingsolver Perspectives and principles of research in the physiology and behavior of animals in an ecological and evolutionary context, emphasizing whole animals and integration with diverse levels of biological organization. Prerequisite: permission of instructor.

ZOOL 574 Ecology of Marine Communities (3) Paine Lecture course emphasizing the ecological structure and functioning of marine communities. Topics include population interactions and dynamics, distributional patterns, bioenergetics, stability, and species diversity. Prerequisites: BIOL 472 or equivalent, and permission of instructor.

ZOOL 575 Topics in Historical Ecology (2, max. 14) Paine Assigned reading and discussion of the history of conceptual issues or significant individuals. Topics variable. Credit/no credit only. Prerequisite: BIOL 472 or equivalent.

ZOOL 577 Marine Invertebrate Biology (1, max. 8) Kohn Seminar on current topics in biology or marine invertebrates at all levels of biological organization. Topics variable. Credit/no credit only. Prerequisite: 433 and 434 or equivalent.

ZOOL 578 Advanced Ecology (5) Kareiva Strategies of reproduction, habitat selection, foraging and spacing; theory of competition and predator-prey interactions; niche theory and community structure. Prerequisites: BIOL 472 or equivalent, and permission of instructor.

ZOOL 579 Criticism in Evolutionary Ecology and Behavior (2, max. 16) Rohwer Critical analysis of manuscripts under preparation that treat evolutionary ecology, morphology, and behavior. Topics variable. Credit/no credit only. Prerequisite: 409 or equivalent introduction to evolutionary thinking.

ZOOL 600 Independent Study or Research (*) Credit/no.credit only. Offered: AWSpS.

ZOOL 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

ZOOL 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

SCHOOL OF BUSINESS ADMINISTRATION / UNDERGRADUATE PROGRAM 241

School of Business Administration

Acting Dean .

Gerhard G. Mueller 114 Mackenzie

Men and women embarking on business careers will have the opportunity to influence many of the social, political, and economic forces in today's world. The School of Business Administration prepares students for professional careers in management and related disciplines in both the private and public sectors.

The School of Business Administration offers an undergraduate program leading to the degree of Bachelor of Arts in Business Administration and graduate programs leading to the degrees of Master of Business Administration, Master of Professional Accounting, and Doctor of Philosophy.

Business Administration became an independent unit within the University system in 1917. It has been accredited by the American Assembly of Collegiate Schools of Business since 1921.

Facilities and Services

Most business administration classes and activities are in two buildings. Balmer Hall, named for Thomas Balmer, former president of the University Board of Regents, contains classrooms, the business administration library, and the business administration computer users center. Mackenzie Hall, named in memory of Prof. Donald Mackenzie, Chairperson of the Department of Accounting from 1949 to 1955, contains the Dean's office, the Office of Graduate Programs, the Office of Undergraduate Programs, faculty offices, and other business administration program offices.

To serve the continuing education needs of business persons, the School of Business Administration offers a number of short programs, either University-initiated or cosponsored with various community and industry organizations. The eight-month management program. for middle- to upper-level managers strengthens understanding and skills in all areas of management and provides an opportunity for successful managers to learn from each other. Short courses and workshops are offered throughout the year in all areas of management, including marketing strategy, sales management, managing change, finance and accounting for non-financial executives, marketing research, tax clinic for small business, and the entrepreneurship symposium. In addition, the School develops and runs in-house training programs under contract with individual companies. Information on continuing education programs may be obtained from the Office of Executive Programs, 543-8560.

International Business Programs

International business programs are coordinated and developed by the School's Center for International Business Education and Research (CIBER). These activities include special graduate and undergraduate certificate programs, seminars, special guest speaker programs, and graduate foreign exchange programs. Each of the five academic departments within the School maintains faculty with special international teaching and research expertise. Internationally-oriented courses are offered by each department.

At the undergraduate level, the School offers the Certificate of International Studies in Business (CISB) Program. Students in the program complete the same demanding business curriculum as other students and enhance this training with foreign language study, area studies, and an international experience. The program requires that students have a solid foundation in one of six language tracks: Chinese, French, German, Japanese, Russian, and Spanish; a seventh custom track for other languages is also an option.

The M.B.A.-level International Management Fellows Program (IMFP) gives qualified students a rigorous curriculum that integrates their graduate course work with advanced foreign language and area studies, an overseas business internship, a foreign study program, and international business course work. As fellows in this intensive program, students may spend a total of nine months outside the United States and may specialize in one of four language tracks: Mandarin Chinese, German, Japanese, or Spanish.

Questions regarding these programs may be directed to the Associate Director, CIBER, 303 Lewis, (206) 685-3432; FAX: (206) 685-9392.

Business Career Center

202 Lewis

Director JoAnne Starr

Associate Director Janelle LaFond

The Business Career Center serves as a resource for business students. Among the services provided to all business students are the A.S.K. (Alumni Sharing Knowledge) mentoring program and a job listing service for career, internship, and part-time positions. Undergraduate business career counseling and oncampus recruitment is provided by the UW Center for Career Services in 301 Loew.

All M.B.A. and M.P.Acc. career services are coordinated through the Business Career Center, including career counseling and career management workshops, the administration of special career events such as firm nights, company presentations, and on-campus M.B.A. and M.P.Acc. recruitment. Questions regarding these programs and services may be directed to the Director, 685-2410.

Honor Societies

Beta Gamma Sigma is the national scholastic honor society in the field of business. Election to membership is available to both undergraduate and graduate students in business. Selection is based upon outstanding scholastic achievement.

Beta Alpha Psi is the accounting honor society. Membership is based primarily on scholastic achievement, but some community service is also required. Beta Alpha Psi provides a mechanism for students, professionals, and educators to meet on both formal and informal bases.

Student Organizations

Chapters of Alpha Kappa Psi, Association of Black Business Students, Hispanic Business Association, International Association of Students in Economics and Business Management, American Marketing Association, the Accounting Society, National Human Relations Management Association, Business Information Technology Association, Phi Beta Lambda, and Student Advisory Council provide opportunities for undergraduate students to meet informally and to participate in a variety of projects and events.

The goals and interests of graduate students are served by the M.B.A. Association, the Center for Entrepreneurship, Challenge for Charity, Graduate Consulting Club, Graduate Finance Club, Graduate International Business Association, Business Diagnostic Center, Graduate Accounting Club, Environmental Business Alliance, Graduate Marketing Club, Toastmasters, and the Doctoral Association.

Undergraduate Program

Undergraduate Office 137 Mackenzie

Associate Dean Philip Kienast

Director Patsy Wosepka

Associate Director Elaine G. Miller

The School of Business Administration admits only for autumn quarter, offering application for early admission to those attending the UW and prepared to declare a business major during their freshman year, and application for upper-division admission to all other students. Admitted students may elect to take classes the summer quarter prior to autumn quarter admission.

Undergraduate Business Educational Opportunity Program

137 Mackenzie

Director Jeffrey Hedgepeth

Special admissions assistance, advising, and support services are available for minority students underrepresented at the University, and students from educationally and economically disadvantaged backgrounds. Any student who qualifies for the UW Educational Opportunity Program is eligible. Special scholarships are also available for underrepresented minority students. Academic advisers in 137 Mackenzie have information on the Business Educational Opportunity Program.

Academic Advisers

Holly Bauman Nancy Clarke

Academic advisers are available to help with selecting classes, adding and dropping classes, long-range planning, applying for graduation, making referrals to other campus resources and programs, and providing any needed general assistance. The Undergraduate Office publishes a weekly newsletter that provides information to majors and premajors.

Bachelor of Arts in Business Administration Degree

Specific School Admission Requirements

Early Admission Group (EAG): Open to students who began their studies at the UW as freshmen, have been enrolled no more than three quarters, and have completed 30 graded credits at the UW to include the following (or equivalents): ECON 200, Microeconomics; MATH 112 or 124, Calculus—most students need precalculus before taking college calculus; an approved English composition course, and pre-college test scores (ACT or SAT). Students must be currently enrolled UW students who have completed autumn and winter quarters in residence.

Upper-Division Admission Group (UAG): Students must present a minimum of 60 academic credits at the time of application including the following graded credits: ECON 200, Microeconomics; MATH 112 or 124, Calculus—most students need precalculus before taking college calculus; an approved English composition course; ACCTG 210, Introduction to Accounting; O E 200, Introduction to Law. In addition, the following courses must be completed prior to the quarter of admission, autumn quarter: ECON 201, Macroeconomics; ACCTG 220, Fundamentals of Financial Accounting and ACCTG 230, Fundamentals of Financial Accounting; OMETH 201, Introduction to Statistical Methods. Students admitted to the UW as freshmen are expected to take the accounting, organization and environment, and quantitative methods courses in residence.

Qualified applicants who meet the University and School of Business Administration requirements at the time they transfer are eligible to be placed directly in the school; those with at least 45 credits and a minimum 2.85 GPA who meet the University entrance requirements, but not the business administration requirements, are eligible to be placed in the College of Arts and Sciences as pre-business majors.

For admission to the School of Business Administration, a School of Business application, together with all supporting materials, must be on file by April 10. Records of all course work completed by the deadline must be submitted at the time of application. Since eligible applicants exceed the space available, acceptance is competitive. Admission will be based on evaluation of five factors: (1) pre-college test scores (for Early Admission Group); (2) overall scholastic record; (3) grades in pre-business courses; (4) written communications skills; and (5) evidence of leadership skills, community activities, and the promise of achievement in a business or professional career. In addition, the School of Business is committed to the University's affirmative action policy. Consideration will therefore be given in the admissions process to creating ethnic diversity. No student will be admitted with a cumulative GPA less than 2.50 for all college credits or less than 2.50 for all required business administration courses. A student who has previously attended the UW also must have GPAs of at least 2.50, both UW cumulative and in UW business administration courses (including approved substitutes and required economics courses). The GPA for admission will usually be higher.

Accounting Concentration: The notation "Accounting" will be included on the permanent record, or transcript, of a student who graduates with a degree of Bachelor of Arts in Business Administration and who completes with a cumulative GPA of at least 2.00 the following courses: ACCTG 301, 302, 303, 311, 330, 411, 421, and 6 elective credits in 400-level accounting courses, except 401 and 499. Students who have completed ACCTG 505 may not apply to the accounting concentration. Students who have completed ACCTG 301 may not receive credit for ACCTG 375.

Specific School Graduation Requirements

General Education Requirements: The following must be selected from the University Areas-of-Knowledge courses. (Students from community colleges in Washington should check the *Transfer Guide* or consult with their community college adviser for equivalent courses. Students from other four-year schools should see an adviser at their school.) 20 credits in Visual, Literary, & Performing Arts; 20 credits in Individuals & Societies, including 10 credits in microeconomics and macroeconomics (ECON 200 and 201); 20 credits in the Natural World, including 5 credits in calculus (MATH 112 or 124)---most students need precalculus before taking college calculus (some precalculus courses qualify for the Natural World requirement); 5 credits in English composition.

Specific Business Requirements: ACCTG 210, 220, 230; QMETH 201; O E 200; B ECN 300; MKTG 301; I S 300; I BUS 300; OPMGT 301; FIN 350; HRMOB 400; O E 302, 440; B POL 470 or 471 or 480; and a minimum of 15 credits of 300- or 400-level business administration electives (or area of concentration); two writing-intensive courses—one from B CMU 301, B CMU 410, ENGL 281, ENGL 381; one from English composition, or from the remaining three courses listed immediately above, or from any W course.

No more than 7 lower-division business elective credits; a minimum of 72 non-business administration crediits, and 72 business administration credits, including those listed under the preceding requirements sections; a cumulative GPA of at least 2.50 in all business administration credits earned at the UW; and a cumulative GPA of 2.50 for all UW credits. Students must complete six of the ten upper-division core courses, including Business Policy, and 35 of the 54 required upper-division business credits at the UW. Students who have taken more than four of the ten upperdivision core business courses at another school will not usually be admitted to the School of Business Administration.

Double Baccalaureate Degrees and Second Baccalaureate Degree

Students who wish to earn more than one baccalaureate degree should consult an academic adviser in the business administration undergraduate office, either during or before the junior year. Persons seeking a second baccalaureate should apply at the University's Office of Undergraduate Admissions. To be considered, applicants must complete by quarter of entry the same prerequisites for admission as applicants for the first baccalaureate degree. Since the number of eligible applicants exceeds that for which space is available, acceptance will be competitive, based on the criteria listed above for selection of first baccalaureate degree applicants. The School of Business will use the GPA for the last 90 credits earned.

Graduate Program

Graduate Office

110 Mackenzie

Gary L. Sundem, Associate Dean

Peter A. Frost, Director, Ph.D. Program, Graduate Program Coordinator

Leighanne Harris, Director, M.B.A. Program, Alternate Graduate Program Coordinator

Nina Sanders, Director, E.M.B.A. Program

Admission

Qualified students who are graduates of the University of Washington or of other accredited colleges or universities may be admitted autumn quarter to graduate degree programs. GPA, Graduate Management Admission Test score, work experience, educational and professional objectives, and other factors are considered in the admission process. Inquiries concerning the details of admission should be made to the specific degree program of interest, University of Washington, Graduate School of Business Administration, Mackenzie Hall, DJ-10, Seattle, Washington 98195.

Application Procedure

Applications to graduate programs are considered in the winter and spring of each year for entry in the autumn quarter. The formal deadlines for application are: February 1 for the Ph.D. program; February 1 for international applicants, March 1 for domestic applicants for the M.B.A. and M.P.Acc. programs; and April 15 for the Executive M.B.A. Program.

The Graduate School of Business Administration offers programs of study leading to the advanced degrees of Master of Business Administration, Master of Professional Accounting, and Doctor of Philosophy.

Master of Business Administration Degree

The Master of Business Administration degree program has been designed for students with varied academic backgrounds (e.g., arts and sciences, engineering, business administration) who are preparing for a professional career in management. A period of two academic years, or 96 academic credits, is required for most students to complete the M.B.A. program. The program consists of 48 credits of required first-year courses and 48 elective credits. The student may take no more than 18 credits in any one elective area. Since the autumn of 1983, the Executive M.B.A. Program has provided an additional pathway to the Master of Business Administration degree, The E.M.B.A. Program provides an intensive executive development experience to a select group of micrareer managers who continue to work fulltime while pursuing the M.B.A. degree. Candidates for this two-year program should have seven or more years of increasingly successful work experience and currently hold mid- or top-level management positions. They are typically sponsored by their organizations and have been identified as employees with high potential to advance as general managers. Students are selected to ensure diversity of industry, functional areas and organizational size. Classes meet all day on alternate Fridays and Saturdays during the academic year. In addition, students attend spring and fall residence sessions each year. While the curriculum scope is comparable to that of the regular M.B.A. program, the pace is more intense and the perspective is that of a general manager. There are twenty-one required courses and no electives. Applications are accepted throughout the year; with an application deadline of April 15 for the class beginning each autumn. Late applications are handled on a space available basis.

Master of Professional Accounting Degree

The Master of Professional Accounting degree program prepares individuals for high-level careers in the specialized fields of professional accounting and taxation. The M.P.Acc. degree provides an opportunity for graduate study in accounting beyond the typical undergraduate accounting major and in greater depth than that offered by an accounting concentration in an M.B.A. program. The newly developed M.P.Acc. (Taxation) degree track is an intensive detailed study of federal taxation that is designed to provide a working knowledge of tax law in both a transactional and theoretical framework. The taxation track is designed to be completed in two years for individuals without prior study in accounting or business. For those who have an undergraduate degree in accounting or an M.B.A., the M.P.Acc. degree program may be completed in one calendar year.

Doctor of Philosophy Degree

The Doctor of Philosophy degree in Business Administration is designed primarily for students who wish to pursue academic careers, although the training is also useful for students oriented toward research positions in business or other institutions. Students must select a major area of concentration and two or three minor supporting areas. Major areas of concentration include accounting, finance, human resource management and organizational behavior, information systems, marketing, operations management, operations research, and strategic management. All students must take research methods as a minor area. The other minor areas can be chosen from either international business, the above list of major areas, or from other areas in the University outside the School of Business Administration, such as economics, psychology, statistics, mathematics, and computer science. The minor areas should support and complement the major area.

Graduation requirements: Each Ph.D. student must successfully complete course work in the major and minor areas, pass area examinations, successfully defend the thesis proposal in the General Examination, and finally, defend the completed dissertation in the Final Examination.

Doctoral students with strong backrounds can complete the doctoral program in three years, but most students take four to five years. The School's goal is to make financial aid available, in the form of research and teaching assistantships, to all of its doctoral students. In addition to service appointments, fellowships are available on a competitive basis to support students engaged in their dissertation research during the final part of their programs.

SCHOOL OF BUSINESS ADMINISTRATION / GRADUATE PROGRAM 243

Special Requirements

Applicants to graduate business programs are required to submit spores on the Graduate Management Admission Test. Those admitted to the M.B.A. program must demonstrate understanding of the fundamental concepts of calculus and proficiency in the use of computers.

Accounting

Accounting involves development and communication of financial and operational information for business and nonprofit economic entities. The curriculum coverage includes understanding accounting information systems, using accounting information in managerial decision-making, preparing and auditing financial statements under generally accepted accounting and auditing standards, and understanding the fundamental aspects of personal and corporate taxation. Elective courses provide in-depth instruction in managerial and financial accounting, not-for-profit accounting, and taxation. Courses provide a foundation for careers in accounting (public, industrial, private, governmental, or institutional), for a general business career, or for other professions such as law.

Kelly, Lauren * 1982; PhD, 1975, University of Alabama; financial accounting, interface between corporate management and accounting standards. Sefcik, Stephan E. * 1986; PhD, 1983, University of Illinois; financial reporting and environmental accounting issues.

Shevlin, Terrence J. * 1985; PhD, 1986, Stanford University; financial accounting, capital markets, taxation. Shores, Donna J. 1986; PhD, 1986, Stanford University; financial and managerial accounting.

Assistant Professors

Hemmer, Thomas * 1989; PhD, 1990, Odense University (Denmark); financial and managerial accounting.

Kennedy, S. Jane 1991; PhD, 1992, Duke University; financial and managerial accounting.

Moyer, Susan E. 1987; PhD, 1989, University of Rochester; financial accounting, corporate reporting issues.

Peecher, Mark E. 1993, (Acting); MAS, 1989, University of Illinois; auditing and decision making.

Soderstrom, Naomi S. 1988; PhD, 1990, Northwestern University; accounting information systems, managerial accounting, environmental accounting issues.

Senior Lecturers

Resler, William M. 1982; LLM, 1973, New York University; tax accounting.

Rice, Steven J. 1985; PhD, 1974, University of Texas (Austin); tax accounting.

Lecturers

Creech, William R. 1992; LLM, 1983, New York University; taxation.

Faas, A. Stanley 1987; BA, 1962, University of Washington; managerial accounting.

Gerboth, Dale L. 1990; BS, 1959, University of Kansas; financial and managerial accounting.

Hubbard, Quinn D. 1991; MTax, 1989, University of Denver; tax accounting.

Wells, William L. 1988; MPAcc, 1989, University of Washington; financial reporting, not-for-profit accounting.

Finance and Business Economics

Finance and business economics address the financial and economic aspects of decision making. The finance curriculum focuses on financial management and the financial markets within which firms and individual investors operate. Business economics courses concern the economic behavior of firms, including factors that determine costs and prices, and the real and monetary forces (such as government policies) that affect the national and international economic environment.

Lecturer

Tarhouni, Ali A. 1985; PhD, 1983, Michigan State University; economic theory, international trade and finance, financial markets.

244 SCHOOL OF BUSINESS ADMINISTRATION / GRADUATE PROGRAM

Management and Organization

Management and organization provides an understanding of the processes and structures of organizations through three distinct programs. The human resource management and organizational behavior courses address personnel and industrial relations topics such as selection, performance appraisal, compensation, and negotiations, as well as behavioral topics such as leadership, motivation, and group dynamics. They prepare students for managing an organization's human resources effectively. The organization and environment courses examine organization theory, organization design, and management of technology and innovation, as well as the social, political, legal, and ethical environments in which organizations operate. They give students the knowledge, perspective, and analytical tools to deal effectively with organization-environment interactions. The business policy courses focus on organizational effectiveness from the viewpoint of top management. Emphasis is placed on an integrated view through strategic management and control, planning, decision making, and entrepreneurship.

Le Breton, Preston P * 1960, (Emeritus); PhD, 1953, University of Illinois; business policy and administrative theory.

Mitchell, Terence R. * 1969; PhD, 1969, University of Illinois; organizational behavior.

Newell, William T. * 1963; PhD, 1962, University of Texas (Austin); operations management and business policy.

Peterson, Richard B. * 1971; PhD, 1966, University of Wisconsin; human resources management.

Rosenzweig, Jim E. * 1956, (Emeritus); PhD, 1956, University of Illinois; administrative theory and organizational behavior.

Saxberg, Borje O. * 1957; PhD, 1958, University of Illinois; administrative theory and organizational behavior. Schrieber, Albert N. * 1948, (Emeritus); MBA, 1947, Harvard University; business policy.

Scott, William George * 1966; DBA, 1957, Indiana University; administrative theory and organizational behavior.

Sutermeister, Robert A. 1949, (Emeritus); MA, 1942, University of Washington; personnel and organizational behavior.

Vesper, Karl H. * 1969; PhD, 1969, Stanford University; ' business policy, mechanical engineering, marine studies.

Wheeler, Bayard O. 1948, (Emeritus); PhD, 1942, University of California (Berkeley); urban economics.

Associate Professors

Beard, Donald W. * 1975; PhD, 1975, University of Nebraska; business policy.

Bell, Cecil H. Jr. * 1968; PhD, 1970, Boston University; organizational behavior and administrative theory.

Buck, Vernon E. * 1968; PhD, 1963, Cornell University; organizational behavior and administrative theory.

Butler, John E. * 1985; PhD, 1985, New York University; entrepreneurship, technology and innovation, strategic management.

Gist, Marilyn Elaine * 1987; PhD, 1985, University of Maryland; cognitive processes involved in motivation training and work task performance.

Hansen, Gary S. * 1984; PhD, 1987, University of Michigan; business and corporate strategy, innovation and entrepreneurship.

Huber, Vandra Lee * 1987; DBA, 1982, Indiana University; human resource decision making, compensation, and performance appraisal.

Kienast, Philip K. * 1970; PhD, 1972, Michigan State University; human resources management.

Lee, Thomas W. * 1983; PhD, 1984, University of Oregon; administrative theory and organizational behavior, human resources management.

Moxon, Richard W. * 1971; DBA, 1973, Harvard University; international business.

Strong, Dennis Fulton * 1967, (Emeritus); PhD, 1959, University of Washington; business history.

Wickman, James A. 1955, (Emeritus); DBA, 1961, University of Washington; risk control and insurance.

Woodworth, Robert T. * 1966; PhD, 1963, Northwestern University; administrative theory and organizational behavior, human resources management.

Assistant Professors

Collins, Paul D. * 1990; PhD, 1986, Rutgers University; organizational theory, technological innovation, and organizational change.

Fuller, Sally R. 1992; PhD, 1993, University of Wisconsin; organizational behavior and organizational theory.

llinitch, Anne Y. 1991; PhD, 1991, University of North Carolina; strategic management and business policy.

Schulz, Martin 1993; PhD, 1993, Stanford University; organizations, qualitative and quantitative methods.

Thomas, Tom E. 1988; PhD, 1989, University of California (Berkeley); organization and environment, corporate political strategic management.

Wicks, Andrew C. 1992; PhD, 1992, University of Virginia; business ethics, corporate and social responsibility.

Lecturers

Berger, Robert H. 1985; JD, 1967, University of California (Berkeley); law.

Brucker, Thomas H. 1983; LLB, 1960, Columbia University; law.

Management Science

The Department of Management Science consists of three subareas: information systems' (I S), operations management (OPMGT), and quantitative methods (QMETH). The information systems area focuses on the integration of information management and computer based systems. Topics in this area include application programming, systems analysis and design, telecommunications and networks, expert systems, database management, and decision support systems, among others. The operations management area refers to the functional area of an organization which is concerned with the production of goods and services. Topics covered in operations management include operations strategy, inventory management, project management, waiting line management, logistics, and quality management, among others. The quantitative methods area focuses on the theory and application of mathematical and statistical tools in the modelling and analysis of business problems. The quantitative methods curriculum includes courses in statistics and data analysis as well as courses in operations research such as linear programming, networks, and simulation, among others.

Theodore Klastorin

Professors

Chiu, John S. Y. * 1960, (Emeritus); PhD, 1960, University of Illinois; business statistics.

Faaland, Bruce H. * 1971; PhD, 1971, Stanford University; manufacturing, scheduling, inventory, operations research, mathematical programming, forestry.

Klastorin, Theodore * 1974; PhD, 1973, University of Texas (Austin); operations management, facility location, project management, quality, inventory, health services.

Newell, William T. * 1963; PhD, 1962, University of Texas (Austin); operations management and business policy.

Siegel, Andrew F. * 1983; PhD, 1977, Stanford University; exploratory data analysis, statistical computing and graphics, morphometrics, quantitative methods.

Tamura, Hirokuni * 1967; PhD, 1967, University of Michigan; strategic use of statistics for quality management, use of expert information in auditing.

Associate Professors

Moinzadeh, Kamran * 1984; PhD, 1984, Stanford University; operations management, production management, inventory and quality management.

Prater, George I. * 1965; PhD, 1963, Stanford University; information systems.

Schmitt, Thomas G. * 1979; DBA, 1979, Indiana University; management of service and manufacturing operations.

Assistant Professors

De Croix, Gregory A. 1991; PhD, 1991, Stanford University; quantitative methods.

Hillier, Mark S. 1993; PhD, 1994, Stanford University; operations management.

Koushik, Murlidhar V. 1986; PhD, 1987, University of lowa; information systems.

Langford, Joseph D. * 1988; PhD, 1990, University of Rochester; modeling of stochastic phenomena in information systems.

Mannino, Michael V. * 1991; PhD, 1983, University of Arizona; database management, automated reasoning, object-off Add modeling.

Mookerjee, Vijaya 3991; PhD, 1991, Purdue University; information system and the system of the syste

nup bin

200

Senior Lecturers

Burrows, William E. 1979; MA, 1971, University of Washington; information systems.

Morita, June G. * 1982; PhD, 1985, University of California (Berkeley); survey design/implementation, quality control, survival analysis, statistical data analysis.

Lecturers

Lou, Cheryl F. 1991; MS, 1984, University of Wyoming; information systems development, systems analysis, design and implementation, IS internships.

Pilcher, Martha G. * 1987; PhD, 1985, Georgia Institute of Technology; operations research/operations management, health care applications and logistics.

Marketing and International Business

Marketing provides knowledge of concepts and relationships in the areas of consumer behavior, channels of distribution, measurement and analysis of markets, pricing, physical movement of goods, product development, promotion, and sales administration. Marketing careers may involve specialization in product or brand management, advertising, selling, sales management, marketing research, retailing, wholesaling, and international marketing for a wide spectrum of firms and industries. International business includes trade, payments, and multinational corporate systems and activities. The area prepares students for international responsibilities in domestic business firms, governmental agencies, and overseas business. Courses in business communications stress writing in organizations to accomplish goals, oral reporting, business plan presentation, and the use of computer graphics in communication.

Faculty

Chairperson

Robert L. Jacobson

Professors

Gordon, Guy G. 1957, (Emeritus): PhD, 1957, University of California (Berkeley): marketing.

Harder, Virgil E. * 1955, (Emeritus); PhD, 1958, University of Illinois; business communications.

Ingene, Charles A. * 1982; PhD, 1975, Brown University; retailing and distribution.

Jacobson, Robert L. * 1984; PhD, 1981, University of California (Berkeley); marketing strategy, marketing management.

Kolde, Endel-Jakob * 1951, (Emeritus); DBA, 1954, University of Washington; international business and marketing.

MacLachlan, Douglas * 1970; PhD, 1971, University of California (Berkeley); forecasting, psychological measurement and statistics.

Miller, Charles J. 1922, (Emeritus); MBA, 1927, University of Washington; marketing.

Moinpour, Reza * 1966; PhD, 1970, Ohio State University; consumer behavior and marketing research.

Murphy, Herta 1946, (Emeritus); MA, 1942, University of Washington; international business.

Narver, John C. * 1966; PhD, 1965, University of California (Berkeley); market strategy, pricing policies, marketing management.

Spratlen, Thaddeus H. * 1972; PhD, 1962, Ohio State University; retailing, marketing management.

Sullivan, Jeremiah J. * 1975; PhD, 1970, New York University; international business, Japanese management.

Wheatley, John J. * 1960; PhD, 1959, State University of New York (Buffalo); marketing management, marketing research.

Yalch, Richard F. * 1971; PhD, 1974, Northwestern University; advertising and consumer behavior.

Yamamura, Kozo * 1972, (Adjunct); PhD, 1964, Northwestern University; economic development and economic history of Japan, comparative economic history.

Associate Professors

Erickson, Gary * 1980; PhD, 1978, Stanford University; quantitative models of marketing.

Gautschi, David A. * 1992; PhD, 1979, University of California (Berkeley); marketing management, marketing strategies.

Grathwohl, Harrison L. * 1958, (Emeritus); DBA, 1957, Indiana University; marketing.

Assistant Professors

Louie, Therese A. 1993; PhD, 1992, University of California (Los Angeles); consumer behavior, social cognition, motivational biases.

Ruth, Julie A. 1991; PhD, 1991, University of Michigan; consumer satisfaction, advertising effects.

Simonin, Bernard L. 1991; PhD, 1991, University of Michigan; international marketing, multinational business management and strategic alliances.

Lecturer

Atwood, April 1983; PhD, 1987, Ohio State University; environmental marketing, consumer evaluations and attitudes.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Accounting

Courses for Undergraduates

ACCTG 199 Accounting Problem Solving (2, max. 6) Supplementary lectures, discussion, and problem solving sessions in introductory accounting. Enrollment restricted to EOP students and others by permission of instructor. Credit may not be applied to fulfill specific course requirements or to 180 credits required for graduation. Credit/no credit only. Concurrent enrollment in 210, 220, or 230 required.

ACCTG 210 Introduction to Accounting (3) Nature and social setting of accounting; uses of accounting information; introduction of basic accounting concepts and some basic accounting procedures. Prerequisite: sophomore standing.

ACCTG 220 Fundamentals of Financial Accounting (3) Principal procedures and concepts utilized in contemporary financial accounting and reporting. Preparation and interpretation of financial statements. Prerequisite: 210.

ACCTG 230 Fundamentals of Managerial Accounting (3) Analysis and evaluation of accounting information as part of the managerial processes of planning, decision making, and control. Concentrates on types of economic decision making in enterprises and on accounting information useful to enterprise managers. Prerequisite: 220. ACCTG 301, 302, 303 Intermediate Accounting I, II, III (3, 3, 3) Concepts and principles of financial accounting. Analysis of controversies and problems related to the measurement of enterprise income and asset and liability valuation. Prerequisites: 230 and admission to accounting major for 301; 301 for 302; 302 for 303.

ACCTG 311 Cost Accounting (3) Introduction to the theory of cost accounting; job order, process, and standard cost systems; overhead accounting; problems in accumulation and allocation of costs; decision making with cost data. Prerequisite: 301.

ACCTG 330 Introduction to Accounting Information Systems (3) Concepts of accounting information systems in organizations. Processes of analyzing and designing accounting information systems, with emphasis on those using computer facilities. Internal controls and auditing considerations. Prerequisites: 302 and I S 300.

ACCTG 371 Auditing or Industrial Internship (2) One quarter's internship with a certified public accounting firm, industrial organization, or government agency. Credit/no credit only. Prerequisite: prior departmental approval.

ACCTG 375 Topics in Financial Reporting (4) Critical examination of the uses and limitations of general purpose financial statements that have been prepared in accordance with generally accepted accounting principles. Not open for credit to accounting majors or to students who have completed 301. Prerequisite: 230.

ACCTG 401 Federal Income Tax Factors in Business Decisions (3) Service course in taxation recommended for the junior year for non-accounting majors. May also be taken by MBA students for graduate credit. Not open to accounting majors. Prerequisite: 230.

ACCTG 411 Auditing Standards and Principles (3) Intensive introduction to the attest function in society today. The environment, the process, and the report of the public auditor are analyzed. Potential extensions of the attest function are examined. Prerequisites: 303, 311, 330.

ACCTG 421 Tax Effects of Business Decisions (3) Issues in taxation, including tax considerations in business decision making, tax effects of business transactions, taxation of compensation, fringe benefits, capital gains, fixed asset transactions, disposition of business distribution from corporations. Prerequisite: 303 or permission of undergraduate office.

ACCTG 450 Business Taxation (3) Issues of taxation for entities other than individuals, including corporations, subchapter S corporations, partnerships, estates, and trusts. Includes corporate distributions, liquidations, and reorganizations. Prerequisite: 421.

ACCTG 451 Individual Income Taxation (3) Political, economic, and social forces influencing federal income taxation, role of taxation in personal decisions. Coverage of individual income tax matters, including business and investment income, business and personal deductions, property transactions, and tax issues of employees. Prerequisite: 421.

ACCTG 460 Advanced Cost Accounting (3) Advanced analysis of cost and management accounting problems; special applications of cost accounting techniques for management planning and control; current developments in cost accounting. Prerequisite: 311.

ACCTG 470 Case Studies in Auditing (3) Application of the theory, standards, and principles to a simulated audit engagement. Guest lecturers discuss the broad-ranging audit involvement. Prerequisite: 411.

ACCTG 471 Internal Auditing (3) Independent appraisal function established within an organization.

245 SCHOOL OF BUSINESS ADMINISTRATION / COURSE DESCRIPTIONS

Role and nature of internal auditing; intensive review of internal control; management effectiveness audits; and financial audits from the point of view of the internal auditor. Prerequisite: 411.

ACCTG 480 Accounting for Not-for-Profit Organizations (3) Fund and budgetary accounting as applied to public sector organizations, such as governments, foundations, hospitals, and colleges. Prerequisite: 303.

ACCTG 485 Advanced Financial Accounting (3) Accounting for partnerships, accounting for business combinations, parent-subsidiary and branch relationships, foreign exchange. Prerequisite: 303.

ACCTG 490 Special Topics in Accounting (1-6) Special topics of current concern to faculty and students. Offered only when faculty is available and student interest is sufficient. Class is announced in advance of scheduled offerings.

ACCTG 495 Advanced Accounting Theory (3) Theory of accounting related to income measurement, assets, and equities. Prerequisites: 303 and senior standing.

ACCTG 499 Undergraduate Research (1-6) Arranged and supervised by individual members of the faculty. Prerequisite: permission of undergraduate office.

Courses for Graduates Only

Approval of graduate business program office required. Entry code required for nonmajors.

ACCTG 503 Introduction to Accounting for Managers (4) Noreen, Sundern Provides potential managers with a basic knowledge of financial and managerial accounting. Focuses on the use, not the preparation, of accounting information. Examples presented for a variety of for-profit and nonprofit organizations.

ACCTG 505 Intensive Analysis of Accounting Principles and Practices (15) Covers the subjects in the required core for undergraduate accounting majors: intermediate accounting, advanced accounting, cost accounting, auditing, and tax accounting. Credit will not count toward MBA degree. Prerequisites: 210, 220, 230 or equivalent, or permission of instructor.

ACCTG 510 Problems in Financial Reporting (4) Extension of 500 emphasizing financial reporting from a user's perspective. Alternative approaches to recognition, valuation, and measurement of assets, equities, and income considered. Choice of accounting methods and effects on the firm of accounting policy regulation also examined. Prerequisites: B A 502 or permission of instructor.

ACCTG 511 Problems in Managerial and Cost Accounting (4) Discussion and analysis of costing techniques, use of accounting data in planning and evaluating managerial performance, and use of accounting data in short-run and long-run decisions. Special attention directed to issues in human behavior Involved in cost allocation, budgeting, and performance evaluation. Prerequisites: B A 502 or permission of instructor.

ACCTG 513 Tax Effects of Business Decisions (4) Importance of tax considerations in making business decisions. Relationship of taxable income to accounting and economic concepts of income, and the economic, political, and social background of important tax provisions. Prerequisite: B A 502 or permission of instructor.

ACCTG 520 Seminar in Financial Statement Analysis (4) Emphasizes use of published financial reports by decision makers external to the firm (e.g., investors, creditors). Within each decision context, traditional models and recent empirical research in accounting and finance are discussed. Project required as an application of course subject matter. Prerequisites: B A 502 or permission of instructor. ACCTG 524 Seminar in International Accounting (4) Introduction to the conceptual, managerial, professional, and institutional issues of international accounting. Comparative and empirical studies receive special attention. Current interest topics (e.g., standard setting and transnational financial reporting) are explored. A research paper required. Prerequisites: B A 502 or permission of instructor.

ACCTG 530 Tax Issues In Property Ownership (4) Analysis of gain and loss realization, recognition, and characterization of such. Detailed exploration of statutory and case law regarding acquisition, ownership, and disposition of assets. Treatment of capital and ordinary gains and losses. Timing issues regarding deferral transactions and installment reporting are analyzed. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 531 Timing and Periods of Taxation (4) Analysis of the cash and accrual methods of accounting, choice of taxable period and multi-period transaction analysis. Consideration of statute of limitations and mitigation thereof. Details of passive activity losses. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 533 Procedural and Policy Issues (4) Analysis of the procedures of Federal taxation: assessment, collection, and refund claims. Detailed exploration of the rules governing the statute of limitations and the mitigation thereof. An introduction to tax policy considerations is given. Tax penalties are explored. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 534 Fundamentals of Corporate Taxation (4) Detailed analysis of contribution of assets to corporations. Calculation of recognized gains and basic effects of asset contributions. Treatment of income and deduction items of corporate operations. Analysis of distribution of assets to shareholders with respect to their stock. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 535 Advanced Issues in Corporate Taxation (4) A continuation of 534. Fundamentals of moving assets out of and within corporate solution. Basics of corporate reorganizations: acquisitive and divisive. The details of the election to obtain (or avoid) the Section 338 election are explored in detail. Prerequisite: Undergraduate accounting concentration or equivalent; 534 or permission of instructor.

ACCTG 536 Advanced Issues In Corporate Taxation (4) Continuation of 534 and 535. Study of complex issues in corporate taxation planning. Substantial portion of course involves resolving case studies to improve analytic skills and to interrelate disparate corporate planning opportunities. Corporate reorganizations are analyzed in detail. Prerequisite: undergraduate accounting concentration or equivalent; 535 or permission of instructor.

ACCTG 538 Income Taxation of Conduits II (4) A continuation of 537. Study of complex issues in partnership and S corporation taxation. Substantial portion involves resolving case studies to improve analytic skills and interrelate partnership and S corporation planning issues. Sections 751(b) and 736 examined in detail. Prerequisite: undergraduate accounting concentration or equivalent; 537 or permission of instructor.

ACCTG 543 Income Taxation of Trusts and Estates (4) Development of fundamental skills regarding income taxation of trusts and estates. Calculation of distributable net income and the distribution deduction for the fiduciary entity. Basic analysis of the throwback rules. Case studies. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 547 Estate and Gift Taxation (4) Development of fundamental knowledge of the unified transfer tax on the transfer of property from one person to another. Calculation of gross estate, adjusted gross estate, and taxable estate. Calculation of gift and estate taxes owing. Discussion of estate/planning concepts. Prerequisite: undergraduate/accounting concentration or equivalent.

ACCTG 550 Communications in Professional Accounting (4) Introduction to the communications forms and to practices professional accountants and accounting managers. Development of effective written and oral skills employed in accounting presentations, such as audit reports and consultants' reports. Study of results of organizational communications research applicable to accounting firms and/or units within firms. Prerequisite: undergraduate accounting concentration or permission of instructor.

ACCTG 551 Management Information Systems (4) Develops the professional accountant's responsibilities in designing and operating management information systems with an emphasis on accounting systems. Data organization and management, effects on accounting functions, responsibilities for controls and security, and planning and acquisition of system resources. Prerequisites: 330, I S 320 and B A 501 or equivalent.

ACCTG 555 Statistical Methods in Professional Auditing (4) Comparative analysis of the methods of statistical inference used in auditing and incorporation of these methods in the auditor's decision processes. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 557 Tax Consulting, Planning, and Research (4) Decision-making processes in relation to problems of taxation. Tools of tax analysis and research and the communication of conclusions flowing from professional tax work. Role of the professional accountant in client business transactions and in negotiations with taxing authorities is highlighted and simulated on the basis of actual case histories. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 558 Current Financial Accounting and Reporting Issues (4) Develops professional-level ability to understand, analyze, and report upon selected political, economic, social, and legal dimensions of current financial accounting and reporting issues. Issues vary each year. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 559 Advanced Auditing Problems and Cases (4) Analysis of current developments in auditing and comprehensive case studies. Designed to extend knowledge of audit decision making and advanced techniques. Topics covered vary depending upon current issues facing professional auditors. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 560 Special Topics in Professional Accounting (4) Lectures, discussion, and case analyses dealing with special current topics relevant to professional accounting. Satisfies the professional accounting elective requirement for the M.P.Acc. degree program. Prerequisite: permission of instructor.

ACCTG 579 Special Topics in Accounting (4, max. 12) Accounting topics of current concern to faculty and students. Offered only when faculty are available and sufficient student interest exists. Seminar content announced in advance of scheduled offering. Prerequisite: permission of instructor.

ACCTG 580 Introduction to Accounting Research (4) Examination of research problems and techniques in accounting. Interdisciplinary nature of accounting research emphasized. Work in finance, economics, and psychology used to develop current trends in accounting research. Prerequisite: doctoral student status.

ACCTG 581 Seminar in Managerial Accounting (4) Critical examination of conceptual and practical issues of cost and managerial accounting. Specific topics may change from quarter to quarter, and they include application of behavioral, quantitative, and economic models to managerial accounting problems. Prerequisite: 511 or permission of instructor.

ACCTG 596 Seminar:In Financial Accounting Research (4) Review and critical analysis of research strategies and methods applied to problems in financial reporting practice and financial accounting standard setting. Prerequisite: doctoral student status and 580 or equivalent or permission of graduate office.

ACCTG 597 Seminar in Managerial Accounting Research (4) Critical analysis of current managerial accounting research, both published and unpublished. Prerequisite: doctoral student status and 581 or equivalent or permission of graduate office.

ACCTG 599 Doctoral Seminar in Accounting (1, max. 12) Study and research in advanced topics of Accounting. The seminar is generally concerned with unpublished areas of research as well as research methodology and philosophy. It is conducted by departmental faculty and occasional distinguished visiting faculty. Prerequisite: doctoral student status.

ACCTG 600 Independent Study or Research (1, max. 9)

Administration

Course for Graduates Only

Approval of graduate business program office required. Entry code required.

ADMIN 510 Integrative Administration (15) LeBreton Includes materials basic to the study and analysis of administration in organizations; organization theory and administrative behavior; human resources management; resource allocation, accounting, and financial control, systems operation and analysis; marketing; governmental-societal framework; policy formulation and strategic planning. Faculty team-teaching approach. Not open to business administration majors. Credit/no credit only. Prerequisite: permission of Graduate School of Business Administration.

Business Administration

Courses for Undergraduates

B A 300 Foreign Study-Business Administration (3-5, max. 15) For participants in approved foreignstudy programs where equivalent UW business administration courses are not available. Prerequisite: permission of undergraduate adviser.

B A 371 Cooperative Education in Business (2, max. 6) Business practicum: one or two quarter internship with approved business or governmental agency. Open only to students who meet requirements of internship program. Internship credit may not be applied to fulfill specific course requirements or to 180 credits required for graduation. Credit/no credit only.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required.

B A 500, 501, 502 Business Administration I, II, III (16, 16, 16) Coordinated course consisting of accounting, business economics, business ethics, business policy, finance, information systems, international business, legal environment of business, management, and organizational behavior, marketing, operations management, and quantitative methods for management. Prerequisite: permission of the School of Business Administration. **B A 541** Environmental Management I (4) Survey of environmental ethics, environmental laws and regulation, the economics of environmental decisions, and the relationship of business to public policy and the environment. Must be taken concurrently with B A 544. Prerequisites: permission of instructor.

B A 542 Environmental Management II (4) Applications of the functional areas of business to environmental concerns. Major federal legislation affecting these concerns applied to business problems in the areas of accounting, finance, marketing, management information systems, and organizational behavior. Must be taken concurrently with 544. Prerequisites: 541 or permission of instructor.

B A 543 Environmental Management III (4) Case studies that integrate the fundamentals of business and environmental management to address such issues as plant siting, regulatory compliance, production line changes, and innovative, proactive responses to environmental issues. Case studies include results of student consulting projects. Must be taken concurrently with 544. Prerequisites: 542 or permission of instructor.

B A 544 Environmental Management Seminar (1, max. 3) Guest lecturers from academia, business, government, and advocacy groups discuss environmental science, ethics, law, regulation, economics, finance, accounting, and policy issues. Seminar topics supplement course material in 541, 542, 543 which are to be taken concurrently.

B A 571-572 Research Reports (4-4) Independent study in business administration; critical evaluation of business analysis and research methods. Effective communication of ideas emphasized. Methods and content of independent research studies subjected to critical evaluation. Open only to MBA nonthesis students. Prerequisites: instructor's approval of preliminary research topic outline for 571; 571 for 572.

B A 700 Masters Thesis (*)

B A 800 Doctoral Dissertation (*, max. 9)

Business Administration Research Methods

Approval of the graduate business program office required. Entry code required for nonmajors.

Courses for Graduates Only

BA RM 580 Applied Econometrics I (4) Emphasizes the application of econometric methods rather than the mathematical proofs of statistical procedures. Introduction to the linear regression model, interpretation of summary statistics, bias and precision of regression estimates, analysis of the residuals. Prerequisites: STAT 342, or 395, or 481, or permission of instructor.

BA RM 581 Applied Econometrics II (4) Continuation of 580. Hypothesis testing, distributed lags, serial correlation models, simultaneous equation models. Prerequisite: 580.

BA RM 590 Behavioral Research Methods— Theory and Design (4) Philosophy of science, development of scientific method, and meaning of behavioral research. Historical perspective of scientific investigation and the evaluation of research. The development of theory and its relationship to research. Various strategies and designs in behavioral research. Prerequisites: STAT 361, 362, or permission of instructor.

BA RM 591 Behavioral Research Methods— Approaches and Applications (4) Considers alternative research approaches, such as laboratory and field experimentation, simulation, and surveys, with datagathering techniques appropriate for each approach. It is primarily concerned with developing alternative approaches to research problems and with discussing specific applications. It builds upon a background of specific statistical tools and techniques and an understanding of theory development and research design. Prerequisites: STAT 361, 362, or permission of instructor.

Business Communications

Courses for Undergraduates

B CMU 301 Basic Written Business Communications (4) Broad analytical approach to written communications as a management tool. Analysis of the psychology, semantics, planning, and principles of effective business writing. Practical application through messages that inform and persuade, grant and refuse; plus short business reports and applications for positions. Prerequisite: junior standing.

B CMU 410 Business Reports and Other Specialized Communications (5) Covers both internal and external communications that businessmen and businesswomen write on the job. Emphasis is on various types of internal reports, ranging from short informal memos to the more complex formal reports. Also covered are specialized external types of communications directed to customers. Prerequisite: junior standing.

Courses for Graduates Only

B CMU 510 Business Communications for Managers (4) Seeks to develop understanding of communications and related theories, to describe strategies for planning managerial communications, and to build skills in oral and written reporting and persuading. Prerequisite: approval of graduate business office. Entry code required for nonmajors.

Business Economics

Courses for Undergraduates

B ECN 300 Managerial Economics (3) Analysis of economic factors affecting decisions made by business firms. Demand and cost analysis, and alternative policies from the firm's point of view. Prerequisites: ECON 200, admission to business administration or permission of undergraduate office.

B ECN 301 Intermediate Macroeconomics (4) Analysis of economy including business cycle, output of goods and services (GNP), inflation, unemployment, and government's fiscal and monetary policies. How the economy affects individuals and firms and how to deal effectively with economic environment. Prerequisites: ECON 200 and 201 and admission to business administration or permission of undergraduate office.

B ECN 420 Financial Markets (4) Analysis of the structure and functions of the money and capital markets; the saving-investment process and financial intermediaries; supply and demand for lendable funds and the level and structure of interest rates, role of Federal Reserve and Treasury in money market developments. Prerequisite: 301.

B ECN 427 International Finance (4) Asset choice and institutional operations in international finance; foreign-exchange problems; the impact of international financial problems and operations on business; short- and long-term international financing. Prerequisite: 301.

B ECN 439 Business Forecasting (4) Analysis of basic variations affecting general business conditions as a background for business and investment decisions; appraisal of proposals for controlling cycles and of forecasting techniques. Prerequisites: 301, QMETH 201.

B ECN 490 Special Topics in Business Economics (1-6) Study and research on topics of current concern

248 SCHOOL OF BUSINESS ADMINISTRATION / COURSE DESCRIPTIONS

to faculty and students. Only offered when allowed by faculty availability and sufficient student interest. Seminar content to be announced in advance of scheduled offerings.

B ECN 499 Undergraduate Research (1-6) Research in selected areas of business economics. Prerequisites: 300, 301, permission of undergraduate office.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

B ECN 520 Financial Markets (4) Analysis of the functions and structure of money markets; the savinginvestment process and financial intermediaries; supply and demand for lendable funds and the level and structure of interest rates, role of the Federal Reserve and Treasury in the money markets. Prerequisite: B A 501.

B ECN 527 International Finance and Investments (4) Study of selected problems in financing, international trade, investment, and foreign business operations; international aspects of money markets; problems of evaluation of foreign investments. Prerequisite: B A 502.

B ECN 528 International Financial Management (4) Analysis of financial problems facing businesses engaged in international activities: financing foreign investment, financial control of foreign operations, and working capital management including foreign-exchange positions using cases and readings.

B ECN 579 Special Topics in Business Economics (4, max. 12) Business economics topics of current concern to faculty and students. Offered only when faculty are available and sufficient student interest exists. Seminar content announced in advance of scheduled offering. Prerequisite: permission of instructor.

B ECN 600 Independent Study or Research (*, max. 9)

Business Policy

Courses for Undergraduates

B POL 470 Business Policy (4) Policy making and administration from a general management point of view. Emphasis is on problem analysis, the decision-making process, administration and control, and continuous reappraisal of policies and objectives. This course integrates and builds upon the work of the core curriculum. Prerequisites: admission to business administration, senior standing, and FIN 350, MKTG 301, OPMGT 301, and HRMOB 400, or permission of under-graduate office.

BPOL 471 Small Business Management (4) Policy formulation and implementation in smaller firms from the top manager's point of view. Integrates and builds upon work of the core curriculum. Includes analysis of cases and field projects related to small firms. Prerequisites: admission to business administration, senior standing, and FIN 350, MKTG 301, OPMGT 301, and HRMOB 400, or permission of undergraduate office.

B POL 480 Business Simulation (5) Critical analysis of integrated business policy formulation in a complex and dynamic industrial environment by means of simulation (business gaming). Prerequisites: admission to business administration, senior standing, and FIN 350, MKTG 301, OPMGT 301, and HRMOB 400, or permission of undergraduate office.

B POL 490 Special Topics in Business Policy (1-6) Study and research topics of current interest to faculty and students. Offered only when faculty is available and student interest is sufficient. Class is announced in advance of scheduled offerings. **B POL 499 Undergraduate Research (1-6)** Prerequisite: permission of undergraduate office.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

B POL 530 Entrepreneurship (4) Entrepreneurship, both in the form of (1) establishment of new independent businesses owned largely by those who manage them and (2) initiation of new enterprises having exceptional autonomy within larger organizations that finance and own them. Basic knowledge in accounting, marketing, and finance is assumed.

B POL 555 Entrepreneurial Marketing and Management (4) Focuses on role of managers in fostering profitable growth and entrepreneurial actions within ongoing organizations. Class sessions utilize current analytical and conceptual methods, case and field studies, management development exercises, and *Foodcorp, Inc.* which allows students to simulate management of multinational corporations. Prerequisite: B A 502. Offered: jointly with MKTG 555.

B POL 570 Strategic Planning Systems (4) Formal institutional procedures for involving the entire organization in strategic planning and quantitative methods for doing such planning. These are applied to analyzing strategy and firm performance, predicting long-range industry and national environments, formulating corporate-level and business-level strategies, and integrating planning models into the planning process. Prerequisites: B A 502 or permission of graduate office.

B POL 575 Strategic Decision Making (4) Focuses on (1) role of strategic leadership in the success of organizations, (2) conceptual-logical methods for doing strategic planning, (3) organization-wide experience methods for formulating policies, and (4) decision methods for use within the strategic coalition. Prerequisites: B A 502 or permission of graduate office.

B POL 579 Special Topics In Business Policy (4, max. 12) Study and research in topics of current concern to faculty and students. Offered only when allowed by faculty availability and sufficient student interest. Seminar content announced in advance of scheduled offering.

B POL 590 Classics of Strategic Management Thought (4) Examines the main currents in strategic management through a study of classic works in the field. Explores the evolution of professional management, the origins of strategic management in military science, and the evolution of strategic management as a discipline of organizational science.

B POL 591 Theories of the Firm and Strategic Management: Economic Models (4) Reviews the economic theories that support strategies pursued by firms and the links between market processes, firm strategy, and firm performance.

B POL 592 Theories of the Firm and Strategic Management: Sociological Models (4) Explores the sociology of organizations from multiple perspectives while introducing fundamental sociological questions and preparing students for conducting research in organizations. Emphasis on structural contingencies, institutions, resource dependence, population ecology, negotiated order and culture, organizational learning and decision making, organizational power and politics, networks, and inter-organizational relations.

B POL 593 Contemporary Strategic Management Research (4) Facilitates understanding of empirical foundations of theory development and testing in contemporary strategic management research. Focuseo on evaluation of ways in which the empirical tradition has evolved in the strategic management area.

B POL 594 The Social and Political Environment of the Firm (4) Focuses on the social and political factors that help shape corporate strategy using stakeholder management as an integrating concept. Topics include corporate governance, corporate political activity, regulatory environment and the firm, comparative political economy, and normative aspects of strategic management, including ethics and corporate social responsibility.

B POL 599 Doctoral Seminar in Business Policy (1, max. 12)

B POL 600 Independent Study or Research (*, max. 9)

Finance

Courses for Undergraduates

FIN 350 Business Finance (4) Sources, uses, cost, and control of funds in business enterprises. Internal management of working capital and income sources and cost of long-term funds; capital budgeting; financing of the growth and expansion of business enterprises; government regulation of the financial process. Prerequisites: B ECN 300 and admission to business administration or permission of undergraduate office.

FIN 423 Banking and the Financial System (4) Role of banks and nonbank financial institutions in the financial system; asset choices of banks and nonbank financial institutions; problems in the management of financial institutions with emphasis on commercial banks. Prerequisites: 350, B ECN 420.

FIN 450 Problems in Corporation Finance (4) Case problems in corporate financial management. Includes cases on management of current assets; obtaining short-term loans, raising long-term capital, capital budgeting, and dividend policy. The management point of view is stressed. Prerequisites: 350, ACCTG 375.

FIN 453 Financial Theory and Analysis (4) Determination of liquidity needs subject to firm constraints and longer-term capital budgeting problems involving cost of capital and capital rationing considerations; analytical approach. Prerequisites: 350, OMETH 201.

FIN 460 Investments (4) Introduction to the nature, problems, and process of evaluating particular securities and portfolio construction and administration. Special attention is directed to the risk and rate-of-return aspects of particular securities portfolios, and total wealth. Prerequisites: 350, senior standing.

FIN 461 Financial Futures and Options Markets (4) Introduction to financial futures and options markets. Instructional aspects and social functions of these markets, pricing of options and futures, and risk shifting by hedging. Prerequisite: 460.

FIN 490 Special Topics in Finance (1-6) Study and research topics of current concern to faculty and students. Only offered when faculty availability and sufficient student interest. Seminar content to be announced in advance of scheduled offerings.

FIN 499 Undergraduate Research (1-6) Research in selected areas of business finance, money and banking, or investments. Prerequisites: 350, permission of undergraduate office.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

FIN 530 Financial Management of Banks (4) Analysis of problems in the financial management of commercial banks and other financial institutions. Loan and investment policies, liability management, capital policies, and other selected issues are discussed. Prerequisite: B ECN 520 or permission of graduate office. FIN 550 Advanced Business Finance (4) Systematic coverage of the theory of financial management. Application of quantitative analysis to financial problems of the firm including the investment and financial decisions, lease analysis: Prerequisite: B A 502.

FIN 551 Problems in Business Finance (4) The application of financial principles and techniques to problems in financial management. Topics include cash management, credit management, problems in short- and long-term financing, and capital budgeting. Prerequisite: B A 502.

FIN 552 Corporate Planning and Financing (4) Addresses management of working capital flows and finance operations. Topics include financial statement analysis, *pro forma* forecasting, case budgeting, sources of financing including bank, venture capital, private placements, and leases, and determinants of company financing policy. Cannot be taken for credit in combination with FIN 551. Prerequisite: B A 502.

FIN 560 Investments (4) Introduction to the nature, problems, and process of evaluating particular securities and portfolio construction and administration. Special attention is directed to the risk and rate of return aspects of particular securities, securities portfolios, and total wealth. Prerequisite: B A 502 or permission of graduate office.

FIN 561 Financial Futures and Options Markets (4) The pricing of options and futures contracts are analyzed and available empirical evidence is examined. Particular attention is given to the ways these instruments can be used to reduce an investor's or a firm's exposure to risk. Prerequisite: 560.

FIN 579 Special Topics in Finance (4, max. 12) Finance topics of current concern to faculty and students. Offered only when faculty are available and sufficient student interest exists. Seminar content announced in advance of scheduled offerings. Prerequisite: permission of instructor.

FIN 580 Doctoral Seminar in Financial Economics (4) Study of the financing of the corporation, including recent theoretical and institutional developments. Extensive reading and discussion in designated areas covering problems relating to financial management and to the social and economic implications of the financial process. Prerequisite: B A 500 or permission of instructor.

FIN 590 Doctoral Seminar in Capital Market Theory (4) Decision making under uncertainty, information and capital market efficiency, portfolio theory, capital asset pricing model, arbitrage pricing model, and options pricing model. Prerequisite: B A 500 or permission of instructor.

FIN 591 Doctoral Seminar in Corporate Finance (4) Principles of intertemporal choice, alternative valuation models, theory of investment under uncertainty, impact of dividend and financing decisions on firm valuation in perfect and imperfect markets, and theory of firm organization and agency costs. Prerequisites: 590 and BA RM 581 or ECON 582 or permission of instructor.

FIN 592 Doctoral Seminar in Financial Research (4) Empirical research in finance with emphasis on methodology and scientific method. Empirical research in market efficiency, capital asset pricing model, options pricing model, and impact of firm's dividend and financing decisions on firm value. Prerequisites: 590 and BA RM 581 or ECON 582 or permission of instructor.

FIN 599 Doctoral Seminar in Finance (1, max. 12) Study and research in advanced topics of finance. Generally concerned with unpublished areas of research, conducted by visiting professors and departmental faculty. Prerequisite: doctoral student status. FIN 600 Independent Study or Research (*, max. 9)

Human Resources Management and Organizational Behavior

Courses for Undergraduates

HRMOB 301 Personnel Systems and Industrial Relations (3) The personnel/industrial relations function from a managerial perspective. Selection, compensation, performance appraisal, and training and development. Special emphasis on union-management relations and relevant behavior science research. Prerequisite: junior standing.

HRMOB 400 The Management of Organizational Behavior (4) Behavioral aspects of management in organizations, with emphasis on leadership, motivation, communication, conflict resolution, group dynamics, and organization development. Prerequisite: admission to business administration or permission of undergraduate office.

HRMOB 410 Staffing (4) Affirmative action, recruitment, testing, interviewing, placement, promotion, and overall human resource planning. Prerequisite: junior standing.

HRMOB 415 Performance Appraisal and Compensation (4) The various kinds of systems used by organizations to evaluate and reward employee performance. Job analysis, job evaluation, setting performance standards, giving appraisal feedback, designing incentive systems, administering a salary plan. Prerequisite: junior standing.

HRMOB 420 Collective Bargaining and Arbitration (4) Labor-management relations. The legal context, union organizing, grievance administration, collective bargaining. Individual and group simulations used. Prerequisite: junior standing.

HRMOB 450 Leadership and Decision Making (4) The manager as leader and decision maker. Various leadership theories, styles, and behaviors. Decisionmaking models and techniques. Prerequisite: junior standing.

HRMOB 460 Negotiations (4) The art and science of negotiations with the goal of making students more effective negotiators in a variety of business situations, such as budget negotiations, buying and selling, contracts, and merger negotiations. Concept and skill development. Prerequisite: junior standing.

HRMOB 470 Motivation and Performance (4) Various strategies for influencing employee motivation and performance. Reward systems, goal-setting procedures, and various techniques to enlarge and enrich ones job. Effects of these formal and informal strategies on job attiludes. Prerequisite: junior standing.

HRMOB 475 Organization Development and Change (4) Provides a conceptual understanding of organization development theory, practice, and research. Organization development is an umbrella term for a collection of behavioral science techniques for increasing individual, group, and organizational effectiveness. Prerequisite: junior standing.

HRMOB 490 Special Topics in Human Resources Management and Organizational Behavior (1-6) Topics of current interest to faculty and students. Offered when allowed by faculty availability and sufficient student interest. Content announced in advance of scheduled offerings. Prerequisite: junior standing.

HRMOB 499 Undergraduate Research (1-6)

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

HRMOB 501 Human Resource Management (4) Fair employment practice, job analysis, selection, performance appraisal, and training. May include compensation and labor relations.

HRMOB 510 Staffing (4) Systems related to manpower planning, recruitment, interviewing, placement, and development. Advanced techniques, with emphasis on validating predictive measures of performance. Criteria development, psychological testing, validation procedures, and cost effectiveness of personnel research.

HRMOB 515 Performance Appraisal and Compensation (4) Strategies, procedures, and problems in evaluating and rewarding employees. Performance measurement methods, different appraisal systems, and ways of coaching employees. Ways to integrate performance appraisal into compensation systems.

HRMOB 520 Collective Bargalning (4) Traditional labor-management relations in private, public, and nonprofit sectors with special emphasis on grievance arbitration and collective bargaining processes. Simulations and case studies.

HRMOB 525 Dispute Settlement and Labor-Management Cooperation (4) Goes beyond traditional collective bargaining and grievance arbitration to examine the role of third parties as mediators, interest arbitrators, and fact finders. New forms of labor-management cooperation, such as gain sharing, quality of work life programs and labor-management committees.

HRMOB 530 Managerial Behavior in Cross-Cultural Settings (4) The role of culture as it impacts managerial values and behavior in diverse national settings including the United States, western Europe, Latin America, and Japan.

HRMOB 550 Leadership (4) Various theories of leadership: trait theories, leader behavior theories, and situational theories. Concept of leadership within the broader framework of power-how power is gained, lost, and distributed within organizations.

HRMOB 560 Negotiations (4) Strategy used in negotiations other than labor-management bargaining to develop skills necessary to devise a negotiating strategy appropriate to situation. Negotiation of contracts in simulated business settings, case studies, readings.

HRMOB 570 Motivation (4) Approaches that emphasize people's needs, effects of reward systems, and goal setting, as well as topics that show how the social environment and the task itself influence motivation. Different motivational techniques to be used under various conditions.

HRMOB 575 Theory and Practice in Organizational Development (4) Theory, practice, and research in organizational development; the applied discipline that seeks to improve organizational effectiveness, efficiency, and morale through causing changes in managerial practices and organizational dynamics. History of the field, intervention techniques, diagnostic methods, and client-consultant relations. Concepts and skill development.

HRMOB 579 Special Topics in Human Resources
 Management and Organizational Behavior (4, max.
 12) In-depth study and research on topics of special interest to faculty members and students in the fields of human resources management and organizational behavior. Offered on an ad hoc basis. Content announced before scheduled offering.

HRMOB 580 The Individual and the Organization (4) Focuses on elements the individual brings to the organization. Covers important performance-related

250 SCHOOL OF BUSINESS ADMINISTRATION / COURSE DESCRIPTIONS

processes such as learning, motivation, and decisionmaking as well as an understanding of personal attitudes and personality traits.

HRMOB 581 Groups, Teams, and Organizations (4) Focuses on importance of group processes for organizational effectiveness. Covers concepts of group dynamics including interpersonal communication, role and norm development, and group decision making as well as organizational processes such as team development and organizational climate and culture.

HRMOB 582 Power, Influence, and Citizenship Behavior (4) Focuses on ways in which the individual and the organization get things done through working with others. Includes leadership, social influence, and the use and abuse of power, with attention given to positive organizational activities such as citizenship behavior and extra role activities.

HRMOB 590 Organizational Entry, Training, and Exit (4) Focuses on the systems, processes, and experiences that newcomers to organizations undergo. Covers employee selection, training, socialization, and attachment.

HRMOB 591 Employee Appraisals and Rewards
 (4) Focuses on the organization's employee performance appraisal and compensation systems.

HRMOB 592 Employee Rights, Protection, and Justice (4) Focuses on the systems and procedures that safeguard an individual's employment and benefits, including industrial and labor relations, whistleblowing, procedural justice, and dispute resolution.

HRMOB 599 Doctoral Seminar in Human Resources Management and Organizational Behavior (1, max. 12) Advanced topics in the fields of human resources management and organizational behavior. May be used by visiting faculty members to present topics of interest to students. Prerequisite: doctoral student status.

HRMOB 600 Independent Study or Research (*, max. 9)

Information Systems

Courses for Undergraduates

I S 300 Introduction to Information Systems (4) Fundamentals of information systems, what they are, how they affect organizations. Technical and organizational foundations of information systems, building information systems, managing information system resources. Laboratory emphasizes using computer to analyze, coordinate, solve organizational decisionmaking problems. Prerequisite: admission to School of Business Administration or permission of undergraduate office.

I S 320 Fundamentals of Application Programming (4) Fundamental programming concepts including data types, control structures, modularization, and structure programming. Developing solutions for problems in interactive business applications. Introduction to data and file structures. Extensive use of an eventdriven programming language. Prerequisites: 300 and junior standing.

IS 422 Applications Programming for Information Systems (4) Advanced computer programming using COBOL and program development tools. Structured design based on system documentation and specifications. Use of COBOL for transaction processing and complex file management activities. Prerequisite: 320.

I S 423 Object-Oriented Systems (4) Covers the design and programming of object-oriented application software. Includes introduction to object-oriented principles, representing objects in software, object management, object analysis and design, construction of object-oriented applications, and use of objectoriented language to program working applications. Prerequisite: 320.

I S 460 Systems Analysis and Design I (4) First course in analysis and design of business information systems. Concentrates on analysis phase of systems development. Systems development life cycle, the feasibility study, analysis of user requirements, and the development of a logical model for the system under study. Prerequisites: 320 and junior standing.

IS 461 Systems Analysis and Design II (4) Second course in analysis and design of business information systems. Concentrates on design and implementation phases of systems development. Translation of logical system model into physical model, design of modules, file design, testing, implementation. Includes a project using third- and fourth-generation software development tools. Prerequisites: 409, 460, and junior standing.

I S 470 Business Data Communications (4) Technology and applications of business data communications including characteristics of data, fundamentals of transmission, communications hardware and software, common-carrier services, network configurations (LAN, MAN, WAN),design, management, and security. Exercises in use of information retrieval/distribution systems, file transfer, and internet resources. Prerequisites: 320 and junior standing.

I S 480 Data-Base Management (4) Concepts of physical and logical data-base organization. Physical file structures used in data management. Logical data models, including hierarchical, network, relational. Data-base design, data dictionaries, data manipulation languages. Exercises in design, implementation, and use of data-base systems. Survey of commercial data-base management systems. Prerequisites: 320 and junior standing.

I S 490 Selected Topics in Information Systems (1-6) Topics of current concern to faculty and students. Potential topics include networks and distributed information-processing systems, office automation, artificial intelligence and knowledge-based systems, new approaches to systems development, fourth- and fifth-generation languages, economics of information systems. Prerequisites: 320 and junior standing.

I S 495 Practical Experience in Information Systems (1-4) Information Systems internship. Weekly status reports, internship value paper, and project related to internship. Prerequisites: 300, 320, one 400level Information Systems course, and permission of instructor.

I S 499 Undergraduate Research (1-6) Selected problems in information systems and computer applications. Prerequisite: permission of undergraduate office.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

I S 530 Management of Information Systems Resources (4) Topics include general control problem in organizations; performance evaluation of data processing managers; technology and cost trends; software cost estimation; capacity planning; short term utilization; queueing and associated externalities; issues in centralization and decentralization of the information system facilities. Prerequisite: B A 501 or equivalent.

I S 545 Database Management (4) Concepts of physical, logical database organization. Physical file structures used in data management. Logical data models, including hierarchical, network, relational. Database design. Data dictionaries. Data manipulation languages. Exercise in design, implementation, use of

several database management systems. Survey of commercial database management systems. Database administrator's role. Prerequisites:¹B A 501 and introductory knowledge of a programming language.

I S 560 Information Systems Development (4) Lou, Mookerjee, Prater Offers comprehensive look at information systems development from the initial stage of defining requirements to final evaluation of installed systems. Topics include analysis of use requirements, development of logical system model, translation of logical systems model into physical system model, testing, and implementation. Prerequisites: B A 501 or equivalent.

IS 579 Selected Topics in Information Systems (4, max. 12) Topics of current concern to faculty and students. Potential topics include networks and distributed information-processing systems, office automation, artificial intelligence and knowledge-based systems, new approaches to systems development, fourth- and fifth-generation languages, economics of information systems. Prerequisite: B A 501.

IS 585 Advanced Database Research (4) Mannino Introduces topics of interest in database research including heterogeneous database, derived data management, expert database systems, logical and physical database design, formal languages for data manipulation, and temporal databases. Prerequisites: doctoral student and previous course work and experience with database management system or permission of instructor.

IS 586 Data Structures and Algorithms in Information Systems (4) Langford Design of computer algorithms in information systems. Methods for analyzing in terms of time and space. Data structures and design techniques used in the solution of frequently encountered problems. Prerequisites: doctoral student and working knowledge of a programming language or permission of instructor.

I S 588 Advanced Expert Systems (4) Study of methodological, behavioral, and economic considerations of uncertainty handling in expert systems. Topics include the Certainty Factor model, the Depster-Shaefer theory, and probabilistic belief networks. Prerequisites: doctoral student and introductory knowledge of a programming language and basic probability theory or permission of instructor.

I S 599 Doctoral Seminar (1, max. 12) Advanced topics of information systems. Generally concerned with unpublished areas of research and conducted by visiting professors and departmental faculty. Prerequisite: doctoral student status.

IS 600 Independent Study or Research (*, max. 9)

International Business

Courses for Undergraduates

I BUS 300 The International Environment of Business (5) Prepares students to understand the most important aspects of the international political economy. Emphasis on the important relationships among nations and business and economic institutions that influence students' performances as managers, consumers, and citizens. Prerequisites: ECON 200, 201, junior standing, admission to business administration or permission of undergraduate office. Offered: AWSpS.

I BUS 330 Business Environment in Developing Nations (4) The international environment for transnational trade, investment, and operations in the less-developed countries; survey of the economics of underdevelopment; analysis of foreign economic, cultural, and political environments and their impact on international business; foreign investment in the development process; case studies. Prerequisites: 300 or equivalent and junior standing. I BUS 340 Business Environment in Industrial Countries (4), Factors and conditions affecting business operations and behavior in developed countries, international integration, business relations among nation states and integrated supranational systems, direct investment addattullinational industrial activities, analysis of sources and causes of international change. Prerequisites: 300 or equivalent and junior standing.

I BUS 440 Business in Japan (4) Major aspects of the Japanese business environment and how Japanese enterprises are managed. Problems and opportunities of foreign corporations in Japan. Prerequisite: 300 or 550 and junior standing or permission of instructor.

I BUS 470 Management of International Trade Operations (4) Applicable for students interested in exporting and importing activities, but especially relevant to small companies. Management of importional tools. Cases and the application of relevant functional tools. Cases and class projects are drawn from service companies as well as from manufacturers. Prerequisites: 300 and senior standing.

I BUS 480 Multinational Operations Management (4) Case studies in foreign operations management: planning international objectives and strategies; developing multinational company structures and executives; adapting administrative practices and operating policies to international diversities. Prerequisites: 300, 470, and junior standing.

I BUS 490 Special Topics in International Business (1-6) Students and faculty focus on current topics of concern. Offered when faculty, student interest, and availability allow. Prerequisites: 300 or permission of instructor and junior standing.

IBUS 499 Undergraduate Research (1-6) Prerequisite: permission of undergraduate office.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

I BUS 530 International Business in Less Daveloped Countries (4) Understanding the economic, sociocultural, and political environment in the less developed countries. Problems of international trade and investment, north-south relations, commodities, technology transfer, foreign aid, and capital flows. Prerequisites: B A 500 or course in international economics or trade or international finance, or permission of graduate office.

I BUS 540 International Business in Industrialized Countries (4) Understanding the economic, sociocultural, and political environment in developed, industrialized countries. Problems of international trade and payments relations, economic integration, national policies, and supranational organizations' impact on managerial environments. Prerequisite: B A 500 or course in international economics or trade or international finance, or permission of graduate office.

I BUS 550 Field Studies in International Business (4) Research, analysis, and report on a specific international business project with an existing organization involved with international trade. Possible tasks include identifying most viable foreign target markets, developing best market entry strategies, establishing international terms and conditions of sale, and completing a preliminary marketing or business plan for clients.

IBUS 560 Multinational Business Management (4) Managerial responses to problems of international business organizations and operations. Strategy formulation in an international context; design and control of multinational organization; adaptation of management systems and policies to different economic, sociocultural, and political environments. Prerequisite: B A 500 or course in international economics or trade or international finance, or permission of graduate office.

I BUS 575 Business Studies Abroad (*, max. 24) Research and study of foreign business problems in the country or countries where the firms are located. Limited to students who have the approval of their major adviser and a faculty member who has agreed to direct their work in accordance with a definite program of studies. Credit/no credit only.

I BUS 579 Seminar: Special Topics in International Business (4, max. 12) Application of international business principles to the analysis of a specific issue in trade or resource transfer, or to the business conditions in a particular country. Japan and other Pacific Rim countries are frequent topics. Prerequisite: B A 500 or permission of instructor.

I BUS 600 Independent Study or Research (*, max. 9)

Marketing

Courses for Undergraduates

MKTG 301 Marketing Concepts (4) Tools, factors, and concepts used by management in planning, establishing policies, and solving marketing problems. Marketing concepts, consumer demand and behavior, location analysis, marketing, functions, institutions, channels, prices, and public policy. Prerequisites: ECON 200, junior standing, and admission to business administration or permission of undergraduate office. Offered: AWSpS.

MKTG 310 Product and Price Policies (4) Important aspects of product planning and development, product line decisions, packaging, brand policies, guarantees, and services. Price theory is considered but emphasis is placed on special pricing policies and problems and legal constraints on pricing activity. Prerequisites: 301, B ECN 300, and junior standing.

MKTG 335 Principles of Selling (4) Focuses on role of influence and persuasion in professional selling and other organizational settings. In addition to formal theoretical coursework in such areas as consumer behavior, negotiation, and communication, students practice sales skills in role plays, presentations, and other exercises requiring practical application of selling theory. Prerequisites: 301 and junior standing.

MKTG 340 Advertising (4) Management of the advertising function and its integration with other forms of promotion. Planning the program, determining the most effective approach, evaluation of media and budget, advertising research, advertising institutions, economic and social aspects. Prerequisites: 301. and junior standing.

MKTG 370 Retailing (4) Profit planning and business control; buying, stock control, pricing, promotion; store location, layout, organization, policies, systems; coordination of store activities. Prerequisites: 301 and junior standing.

MKTG 430 Sales Force Management (4) Sales and distribution planning; sales organization and training; management of the sales force; methods of sales, cost, and performance analysis. Prerequisites: 301 and senior standing. Offered: AWSp.

MKTG 450 Consumer Behavior (4) Theory and practice pertinent to marketing decisions of individuals and business firms; utilization of theories from behavioral sciences in marketing research; theories of fashion, characteristics of goods, shopping behavior, product differentiation, market segmentation, and opinion leadership; application of concepts to management of advertising, personal selling, pricing, and channels of distribution. Prerequisites: 301 and junior standing. Recommended: QMETH 201. MKTG 460 Marketing Research (4) Marketing research process; preliminary steps and research design, questionnaires, secondary and primary data, sampling, processing and interpreting data, evaluation and effective presentation of findings. A class research project provides practical application of methods studied. Prerequisites: 301, QMETH 201, or equivalent, and junior standing.

MKTG 465 Marketing Research Topics (4) Topics such as experimental design, market analysis, positioning and segmentation research, advertising research, forecasting, and new product research covered in varying depths, depending on instructor's emphasis. Prerequisite: 460 and junior standing.

MKTG 475 Retail Structure and Strategy (4) Analysis of the nature and scope of competition within and between sectors of retail trade. Emphasis is placed on the importance of demographic, environmental, and legal differences between geographical areas in determining the level of competition. Prerequisites: 301 and senior status. Recommended: 370.

MKTG 480 Advanced Marketing Management (4) Introduction to advanced marketing management through the application of various decision-making models and selected computer routines to such marketing problems as advertising budgeting, media planning, sales forecasting, sales-force allocation, and pricing. Applications include market simulation, Bayesian approaches, and linear programming. Prerequisites: 301, MATH 157, or equivalent, and senior standing.

MKTG 485 Cases in Marketing Management (4) Analysis of managerial marketing cases involving market trends, marketing research, product planning, distribution channels, pricing, promotion, and social trends. Prerequisites: 301 and senior standing.

MKTG 490 Special Topics and Issues in Marketing (1-6) Contemporary topics and issues in marketing: marketing in nonprofit organizations, marketing of services, marketing in the public sector, and marketing in an economy of scarcity. Ordinarily only one topic area is addressed in any one quarter. Course content reflects contemporary developments and the current interests of instructors and students. Prerequisites: 301 and junior standing.

MKTG 499 Undergraduate Research (1-6) Prerequisite: permission of undergraduate office.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

MKTG 510 Product and Price Management (4) Identification of market opportunities, choice of which goods and services in what combinations to market, and prices at which to offer them. Considers product and price interrelationships in product-line management; product differentiation; the marketing mix; and multiple-market, oligopoly, and monopoly contexts. Includes policy considerations. Prerequisite: B A 502.

MKTG 520 Distribution Management (4) Location and distribution decisions for goods and services in profit and nonprofit organizations. Considers methods of optimizing the number and quality of institutions and activities employed in dealing with exchange, and space and time aspects of distribution. Relates distribution questions to the marketing mix and organizational objectives. Prerequisite: B A 502.

MKTG 525 Strategic Retail Management (4) Emphasis on strategic planning decisions faced by senior management in a wide range of retail industries. Taught exclusively by the case method. Prerequisite: B A 502.

MKTG 530 Management of Sales Operations (4) Management of personal selling activities within a marketing program. Setting objectives, determining sales
252 SCHOOL OF BUSINESS ADMINISTRATION / COURSE DESCRIPTIONS

strategies; recruiting, selection, and training of sales representatives; allocation of effort, supervision, compensation, and control. Emphasis on case studies. Prerequisite: B A 502.

MKTG 540 Advertising and Promotion Management (4) Management of advertising and promotional activities and their integration with other elements of the marketing mix. Topics include: understanding the communication process, analyzing markets, working with suppliers, establishing objectives, determining budgets, selecting media, measuring and evaluating effectiveness, using publicity and promotions. Legal, social, and economic consequences are considered. Prerequisite: B A 502.

MKTG 550 Consumer Behavior (4) Analysis of current research in consumer behavior. Topics include consumer decision making processes, models of buyer behavior, and contributions from the behavioral sciences: Prerequisite: B A 502.

MKTG 555 Entrepreneurial Marketing and Management (4) Focuses on role of managers in fostering profitable growth and entrepreneurial actions within ongoing organizations. Class sessions utilize current analytical and conceptual methods, case and field studies, management development exercises, and *Foodcorp*, *Inc.* which allows students to simulate management of multinational corporations. Prerequisite: B A 502. Offered: jointy with B POL 555.

MKTG 560 Research for Marketing Decisions (4) Methods and applications of marketing research incorporating analytical procedures and relevant concepts from behavioral and quantitative sciences. Deals with various aspects of research: problem definition, research design, questionnaire construction, sampling, and data analysis. Introduces promising new developments: multivariate techniques of data analysis, laboratory and field experimentation, and demand analysis in both business and public environments. Prerequisite: B A 502.

MKTG 565 Analysis of Multivariate Marketing Data (4) Methods for analyzing multivariate data in such marketing research problems as market segmentation and product positioning. The analytical procedures include factor, cluster, and discriminant analysis, multidimensional scaling, and conjoint measurement. Prerequisite: B A 502.

MKTG 570 International Marketing (4) Analysis of the marketing strategies and tactics of multinational corporations. Choice of entry strategies for foreign markets, analyzing international competition at home and abroad, and developing global marketing strategies. Prerequisite: B A 502. Recommended: one I BUS course.

MKTG 575 Strategic Market Management (4) The marketing dimensions of strategic planning with emphasis on identifying market opportunities and implementing appropriate competitive-advantage strategies. Includes strategies to stimulate brand demand; defend ones market position; manage the behavior of competitors; manage the behavior of suppliers; and increase the market orientation of ones business. Prerequisite: B A 502.

MKTG 579 Special Topics in Marketing (4, max. 12) Marketing topics of current concern to faculty and students. Offered only when allowed by faculty availability and sufficient student interest. Seminar content to be announced in advance of scheduled offerings. Prerequisite: B A 502.

MKTG 581 Doctoral Seminar in Consumer Behavior (4) Ruth, Yalch. Survey of the field of consumer behavior including cognitive processes, emotion, and consumer satisfaction. Provides exposure to a variety of research methods including experiments, surveys, and phenomenological research. MKTG 582 Doctoral Seminar in Multivariate Analysis for Marketing Research (4) MacLachlan, Moinpour Survey of methods useful for empirical evaluation of multivariate marketing phenomena and relationships. Includes an overview of measurement theory and practice; multidimensional scaling; conjoint analysis; cluster, factor, and discriminant analyses; multivariate analysis of variance; structural equation modeling; and other methods commonly encountered in academic marketing research.

MKTG 583 Doctoral Seminar in Marketing Strategy (4) Jacobson, Narver Study of factors influencing business performance and role of marketing in achieving competitive advantage. Analysis of prevailing, and emerging, theories underlying strategic thinking and competitive process. Examination of empirical research regarding measurement, level, and persistence of business success and implications of findings for theory and strategy development. Prerequisite: BA RM 580.

MKTG 584 Doctoral Seminar In Marketing Systems (4) Gautschi, Ingene Examines fundamental and Institutional dynamics within marketing systems. Addresses market intermediation, including conditions under which institutions survive, flourish, or retreat and relevant forces on marketing systems including public policy, transportation, infrastructure, information and communications systems, business cycles, levels of economic development, international trade. Prerequisite: B A 500 or permission of instructor.

MKTG 591 Doctoral Seminar in Social Influences and Marketing (4) Louie, Ruth Investigates topics in social cognition as related to the field of marketing. Examination of ways the principles in social cognition influence consumers' individual responses to marketing-related activities and ways in which the field of marketing, in turn, influences one's understanding of the macro-social environment.

MKTG 592 Doctoral Seminar in Information Processing Theories of Consumer Behavior (4) Ruth, Yalch Considers the processes used by consumers to acquire and evaluate market information including advertising, publicity, word of mouth, packaging, product description, price, and retail outlets.

MKTG 593 Doctoral Seminar in Marketing Models (4) Erickson, Ingene Focuses on modeling research efforts in various areas of marketing. Discussion of mathematical and statistical modeling approaches which contribute to scientific development in the marketing area and ways in which modeling is used to characterize and summarize the nature of general marketing situations in complex environments.

MKTG 594 Doctoral Seminar In Pricing and Distribution Channels Models (4) Erickson, Ingene Provides current coverage of the marketing science literature on pricing and channels of distribution. Discussions focus on the conceptual and theoretical evaluation of mathematical modeling research as it applies to these two intertwined areas of marketing as well as on ways in which to contribute to that literature. Prerequisite: 593.

MKTG 599 Doctoral Seminar in Marketing (1, max. 12) Study and research in advanced topics of marketing. The seminar is generally concerned with unpublished areas of research and conducted by visiting professors and departmental faculty. Prerequisite: doctoral student status.

MKTG 600 Independent Study or Research (*, max. 9)

Operations Management

Courses for Undergraduates

OPMGT 301 Principles of Operations Management (4) Examines problems encountered in plan-

ning, operating, and controlling production of goods and services. Topics include: waiting-line management, quality assurance, production.systems, project management, and inventory management. Computer and quantitative models used in formulating managerial problems. Prerequisites: QMETH 201 and admission to School of Business Administration or permission of undergraduate office.

OPMGT 402 Introduction to Logistics (4) Logistics study of the efficient delivery of goods and services. A total-cost approach recognizes this involves not only the obvious vehicle-routing issues but also shipment size and mix, warehouse location, product design, and customer services. Includes study of real companies' logistics problems. Prerequisites: 301, OMETH 201.

OPMGT 443 Inventory and Materials Management (4) Production and inventory management decisions for manufacturing and distribution firms. Techniques for forecasting demand for finished product items; role of inventories and aggregate planning in production process. Integrated materials requirements planning (MRP) and capacity planning. Prerequisite: 301 or equivalent.

OPMGT 450 Introduction to Project Management (4) Focuses on the management of complex projects and the tools and techniques which have been developed in the past 25 years to assist managers with such projects. The course covers all elements of project planning, scheduling and control as well as implementation and organizational issues. Prerequisite: 301.

OPMGT 490 Special Topics in Operations Management (1-6) Operations management topics of current concern to faculty and students. Potential topics are: logistics management, project scheduling, manufacturing strategy, site and location analysis, management of service operations. Prerequisite: 301.

OPMGT 499 Undergraduate Research (1-6) Prerequisite: permission of undergraduate office.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

OPMGT 535 Logistics and Physical Distribution Management (4) *Pilcher* Deals with management of the distribution process including all activities involved in physically moving raw materials and finished goods from point of origin to point of consumption. Topics include warehousing, locations, purchasing, and strategic planning in physical distribution organizations. Prerequisites: 502 or B A 502 or equivalent and permission of graduate office.

OPMGT 545 Strategic Management of Quality (4) Newell Study of strategic role of quality of products and services. Managerial concepts for implementing quality strategy and improving quality including Total Quality Management (TQM), Statistical Process Control (SPC), economics of quality, and approaches suggested by Deming, Juran, and others. Prerequisites: 502 or B A 502 or equivalent.

OPMGT 550 Project Management (4) Management of complex projects, and tools and techniques (e.g., CPM and PERT) developed to aid the planning, scheduling, and control of projects. Includes work breakdown structures, precedence networks, Gantt charts, resource leveling and allocation, and the use of microcomputer programs. Prerequisite: B A 502.

OPMGT 570 Operations Strategy (4) Develops a general framework for creating and analyzing a strategy for domestic and international manufacturing-based companies and industries. Identifying and integrating those categories of manufacturing decisions that have a strategic impact. Work-force management, capacity planning, and organization of the manufacturing function. Course based substantially on case studies. Prerequisite: B A 502.

OPMGT 575 Manufacturing Planning and Control (4) *Moinzadeh, Schmitt* Focuses on planning decision for manufacturing firms with emphasis on Material Requirements Plan (MRP) system. Topics include inventory managemento: capacity planning, operations scheduling, assembly [ine balancing, cellular manufacturing, and Just-in-Time (JIT) techniques. Prerequisites: 502 or B A 502.

OPMGT 577 System Dynamics (4) Newell Presents applied systems thinking, strategic modeling, and learning organizations. Analysis of feedback system structure including cause and effect relations within feedback loops and dynamics of behavior and managerial, social and economic systems. Construction of continuous-flow computer simulation models using specialized languages such as ITHINK, STELLA, and DYNAMO. Prerequisite: 502 or B A 502.

OPMGT 579 Special Topics in Operations Management (4, max. 12) Major topics in operations management and systems analysis. Emphasis or research and, where appropriate, application of quantitative analysis and computers. Topics vary, including workforce planning, project management, research and development management, quality assurance, technology planning and forecasting, systems analysis of complex organizations, and urban systems analysis. Prerequisite: B A 502.

OPMGT 580 Facility Layout and Location (4) *Klastorin* Focuses on quantitative models used to analyze problems in the layout and location of economic facilities in both the public and the private sectors with emphasis on current research. Prerequisites: QMETH 580 or equivalent and doctoral student or permission of instructor.

OPMGT 587 Advanced Topics in inventory Management (4) Survey of literature in inventory/production control with emphasis on current research. Topics include single-echelon deterministic and probabilistic models and multi-echelon stochastic models. Prerequisite: QMETH 592 and course in probability theory and in stochastic processes.

OPMGT 590 Theory of Scheduling (4) Schmitt Considers scheduling problems in different production environments including assembly lines and flow shops as well as closed and open job shops. Discussion of optimization and heuristic techniques for sequencing, due-date assignment, release time determination, labor assignment, and lot sizing. Prerequisite: doctoral student or permission of instructor.

OPMGT 599 Doctoral Seminar in Operations Management (1, max. 12) Study and research in advanced topics of operations management. The seminar is generally concerned with unpublished areas of research and is conducted by visiting professors and departmental faculty. Credit/no credit only.

OPMGT 600 Independent Study or Research (*, max. 10)

Organization and Environment

Courses for Undergraduates

O E 200 Introduction to Law (5) Legal institutions and processes; law as a system of social thought and behavior and a frame of order within which rival claims are resolved and compromised; legal reasoning; law as a process of protecting and facilitating voluntary arrangements in a business society. Prerequisite: sophomore standing.

O E 302 Organization and Environment (4) Political, social, and legal environment of business. Critical managerial issues from historical, theoretical, ethical perspectives; their impact on organization. Corporate political power, boards of directors, capitalism, industrial policy, business ethics and social responsibility, alternative corporate roles in society. Prerequisite: admission to business administration or permission of undergraduate office.

O E 310 Political and Regulatory Environment of Business (5) Managerial implications of restrictions imposed by government on corporations from legal point of view. Constitutional law impacting business managers; antitrust, administrative, and regulatory issues; environmental law, product liability law, and securities law. Not a business or commercial law course. Prerequisite; junior standing.

O E 314 Historical Development of the Business-Government Relationship (3) Business-government relationships in American history, with aim of defining and explaining patterns in attitudes and behavior rather than detailing events. Discussions organized in terms of policy areas (e.g., national banking, transportation, agriculture, energy, industry in wartime, trade, and research). Prerequisite: junior standing.

O E 316 Business Ethics and Corporate Social Responsibility (3) Philosophical and pragmatic perspectives, including values and social/ethical premises in organizational decision making. Several issues covered in depth; investments abroad, hazardous products, bribery, industry practices, and others. Prerequisite: junior standing.

O E 403 Commercial Law (5) Principles of the law of contracts, agency, property, sales, negotiable instruments, and security transactions. Prerequisites: 200, junior standing.

O E 440 Organization Structure (3) Concepts of formal organization structures, power, authority, and influence; delegation and decentralization, strategic planning, decision making; philosophy and values in management, the organization in the context of the environment and its impact on the organization's subsystems. Prerequisites: HRMOB 400 and admission to business administration or permission of undergraduate office.

O E 441 Advanced Organization Theory (3) Current research, measuring of organizational effectiveness, planning for alternate structural relationships, developments in related disciplines, and current issues. Prerequisite: 440.

O E 490 Special Topics and Issues in Organization and Environment (1-6) Topics and issues of business organization and a changing environment. Content reflects interests of faculty members and students not otherwise covered in the curriculum. Prerequisite: junior standing.

O E 499 Undergraduate Research (1-6) Selected problem areas or issues in consultation among faculty members and students. Prerequisite: permission of the undergraduate office.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

O E 510 Organization and Environment (4) Business organization's political, social and legal environments. Critical managerial issues from historical, theoretical, and social/ethical perspectives. Corporate political power, corporate boards of directors, industrial power, social responsibility, business ethics, roles of the corporation in society, themes of change.

O E 511 Legal and Regulatory Constraints on Business (4) Managerial implications of restrictions imposed by government on corporations from legal point of view. Employment law, environmental law, product liability law, securities law, campaign finance law. Not a business or commercial law course.

O E 513 Business Ethics and Corporate Responsibility (4) Business ethics and corporate social responsibility from philosophical, theoretical, and pragmatic perspectives. Ethical theories and the role of values in business. Ethics and social responsibility put into a framework useful for practicing managers.

OE514 Commercial Law (4) Principles of the law of property sales, negotiable instruments, and security transactions.

O E 550 Organization and Management (4) Integrates management as practice, theory, and research. Concepts and values, alternative theories, organizational rationality, cooperative and coordinated systems, bureaucracy and classical organization theory, executive function, accountability and legitimacy; manager's role in matching environment, culture goals, strategy, structure, technology, and control systems.

O E 560 Seminar in Organization Design (4) Top managers can choose among alternative organizational forms. Each is dependent on the current stage in the organization's life cycle, the organization's strategy, and internal organization practices. Conditions that lead to effective organization design.

O E 570 Seminar in Management of Technology and Innovation (4) Critical issues relating to the management of technology and innovation. How to design innovative organizations in terms of strategy, structure, and process. The innovation process, creativity, management of professionals, technical and strategic leadership, entrepreneurship, intraentrepreneurship, and matrix management.

O E 575 Seminar In Advanced Organization Theory (4) Major issues and problems in the design and conduct of organization theory research. Organizational philosophy, structural congruence with environment, goals and effectiveness, culture and values, power and politics, information and control, and structure and bureaucracy.

O E 579 Special Topics in Organization and Environment (4, max. 12) Topics of current concern to faculty members and students. Offered only when faculty members are available and there is sufficient student interest.

O E 600 Independent Study or Research (*)

Quantitative Methods

Courses for Undergraduates

Statistics

CMETH 201 Introduction to Statistical Methods (4) NW/QSR Survey of principles of data analysis and their applications for management problems. Elementary techniques of classification, summarization, and visual display of data. Applications of probability models for inference and decision making are illustrated through examples. Prerequisites: MATH 157 or equivalent, and sophomore standing.

QMETH 302 Statistical Methods for Quality Management (4) Tamura Philosophies and statistical methods for quality management with applications to both manufacturing and service sectors. Topics include definition and measures of quality, seven QC tools, process capability, design of control charts, design of experiments, and multiple regression. Prerequisite: 201 and junior standing.

Business Mathematics and Operations Research

CMETH 300 Quantitative Analysis for Business (4) Introduction to mathematical tools utilized for analysis of business problems; appreciation of the use of these tools in business situations; calculus; linear algebra. Prerequisites: MATH 157 and junior standing.

QMETH 450 Spreadsheet Models for Managerial Decision Making (4) DeCroix Formulation and solution of business problems using operations research

254 SCHOOL OF BUSINESS ADMINISTRATION / COURSE DESCRIPTIONS

techniques in a spreadsheet environment. Techniques of linear and integer programming, dynamic programming, network optimization, queueing, and simulation. Applications from marketing, finance, and operations. Prerequisites: 300 or equivalent and junior standing.

QMETH 490 Special Problems in Quantitative Analysis (1-6). Specialized quantitative techniques useful for solving business problems. Topics from operation research, statistics, computer methods. Emphasis on application. Prerequisites: 401, 450, depending on topic, and junior standing.

QMETH 499 Undergraduate Research (1-6) Research in selected problems in business statistics, operations research, decision theory, and computer applications. Prerequisite: permission of undergraduate office.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

QMETH 520 Managerial Applications of Regression Models (4) *Tamura* Data exploration and inference using regression models for business forecasting and management. Models include simple, multiple, logistic, and nonlinear regression, use of dummy variables, transformations, variable selection, and diagnostics. Prerequisite: 500 or B A 500. **QMETH 528 Survey Sampling Applications (4)** *Morita* Introduction to design and implementation of sample surveys with emphasis on business applications. Simple random, stratified, cluster, multistage sample methods. Probability sampling, optimal allocation of sampling units. Mail, telephone, interview methods. Estimation methods, Questionnaire design. Nonresponse. Prerequisites: 500 or B A 500 or equivalent or permission of instructor.

QMETH 530 Forecasting Models in Business (4) Introduction to time series analysis and forecasting. Topics include seasonal adjustment, decomposition, exponential smoothing, moving average, and autoregression as well as model identification, estimation, diagnostics, and adaptive forecasting illustrations using real data. Prerequisite: 500 or B A 500.

QMETH 551 Linear and Integer Programming (4) Advanced modeling in linear and integer programming. Linear programming includes formulations, simplex method and variations, duality theory, sensitivity and parametric analysis, quadratic and separable programming; integer programming includes formulations and algorithms (branch and bound and cutting planes). Application areas include production, scheduling, distribution, marketing, finance. Prerequisite: B A 501 or equivalent.

QMETH 579 Special Topics in Quantitative Methods (4, max. 12) Presentation of topics of current concern to students and faculty in operations research and applied business statistics. Potential topics include applications and extensions of mathematical programming, stochastic processes, discrete programming, networks models, and the application of statistical techniques.

CMETH 580 Mathematical Programming (4) DeCroix, Faaland Advanced survey of mathematical programming with applications to business problems. Includes linear, integer, stochastic, nonlinear, and dynamic programming and network optimization. Treatment includes formulation, optimality conditions, duality theory, solution algorithms. Applications to production, scheduling, marketing, finance, and equipment replacement. Prerequisites: B A 501 or equivalent and doctoral student or permission of instructor.

QMETH 592 Stochastic Models: Queuelng and Simulation (4) Moinzadeh Application of stochastic processes to business problems. Focuses on development and application of queueing theory and discrete event simulation. Prerequisites: stochastic processes, knowledge of high level programming language, and doctoral student or permission of instructor.

QMETH 599 Doctoral Seminar in Operations Research (1, max. 12) Study and research in advanced topics of operations research. The seminar is generally concerned with unpublished areas of research and is conducted by visiting professors and departmental faculty. Prerequisite: doctoral student status.

QMETH 600 Independent Study or Research (*)

SCHOOL OF DENTISTRY / UNDERGRADUATE PROGRAM 255

School of Dentistry

Dean

Paul B. Robertson D322 Health Sciences

"The School of Dentistry shares the University's overall mission to generate, disseminate, and preserve knowledge and provide service to the community. The School is an integral part of the Health Sciences Center and is an oral health care center of excellence serving the people of the state of Washington and the Pacific Northwest. Through its exemplary educational, research, and service programs, the School strives to prepare students of all races, ethnic backgrounds and socioeconomic circumstances to be competent and effective practitioners of dentistry. Its research programs make fundamental contributions to understanding basic biologic processes as well as behavioral, biomedical, and clinical aspects of oral health. The School fosters an environment of mutual respect where objectivity, imaginative inquiry, and the free exchange of ideas can flourish, facilitating personal development, professionalism, and a strong sense of selfworth." (School of Dentistry Mission Statement, October 1993.)

The School of Dentistry offers courses leading to the degrees of Bachelor of Science with a major in dental hygiene, Doctor of Dental Surgery, Master of Science in Dentistry, Master of Science, and Doctor of Philosophy, as well as postgraduate certificate programs and residency training in specific areas. Opportunities to earn other degrees concurrently (M.S. or Ph.D. in other schools) may be arranged on an individual basis. The school is accredited by the Commission on Dental Accreditation and is a member of the American Association of Dental Schools.

The following departments participate in the curriculum for the school's programs: Dental Public Health Sciences is concerned with the social, legal, political, economic, and psychological aspects of dental healthcare delivery as well as the epidemiology of oral diseases and the application of biostatistical methods in studying them. Endodontics offers training in the diagnosis and treatment of disease of the tooth pulp. Oral and Maxillofacial Surgery trains students in the procedures used for all types of operations in the oral cavity and all phases of dental pain control. Oral Biology encompasses the study of basic biological mechanisms in normal and diseased oral tissues and structures. Oral Medicine provides training in diagnostic techniques, so students learn to correlate information gained in various departments and to plan treatment for the patient. Orthodontics provides training in the prevention and correction of malocclusion of the teeth. Pediatric Dentistry provides students with a broad understanding of the growth and development of the child and teaches students the principles of preventive dentistry, allowing them to develop the skills necessary for maintenance of optimal oral health in children. Periodontics offers training relative to the periodontium in health and disease, with emphasis placed on the diagnosis, prevention, and treatment of diseases that affect the periodontium. Prosthodontics provides instruction in the fabrication and maintenance of removable, complete, and partial dentures. Restorative Dentistry offers training in the restoration or replacement of tooth structure and study of the form and function of the masticatory structures.

Undergraduate Program

Bachelor of Science Degree

The School of Dentistry offers a Dental Hygiene Degree Completion Program for graduates of associate degree or certificate/diploma programs in dental hygiene. The basic goal of accredited associate degree and certificate/diploma programs in dental hygiene is to prepare competent clinicians capable of providing dental hygiene clinical services. The scope of the Dental Hygiene Degree Completion Program extends beyond this clinical focus and provides educational opportunities to prepare its graduates to function professionally as dental hygienists who can broadly understand oral health issues affecting society, dental hygiene, and dentistry. To qualify for the Bachelor of Science degree in the School of Dentistry, students must complete the general education and proficiency requirements of the University, three sequenced dental hygiene core courses, and one dental hygiene pathway. The program of study includes theory, methods, and applications from which students obtain critical thinking, problem solving, and pragmatic experiences. University and affiliated sites provide the settings for projects. Majors may be eligible to participate in study abroad programs, that focus on oral health issues, following the completion of prerequisite courses.

Completion of the required major and University requirements takes one to two years. Students planning to graduate in one year must have a faculty approved plan of study within the first quarter of enrollment. Students planning a two-year program must have a faculty approved plan of study within the first two quarters of enrollment. All students must meet with a program adviser yearly and are encouraged to meet with a program adviser quarterly. The completion of courses that fulfill graduation requirements is the responsibility of the student.

Major Requirements

Core Requirement

Students must complete three courses (9 credits) which form the core of this program. These courses are designed to improve the student's skills in computeraccess to scientific information, English language usage, and scientific investigative methods. The core courses must be taken in sequence beginning autumn guarter: D HYG 465, D HYG 492, and D HYG 493.

Path Requirement

Students must select one of four pathways to fulfill the path requirement. The options are:

Educator/Clinician with Emphasis on Dental Hygiene Care in Special Populations. This path prepares dental hygienists as entry-level teachers who have knowledge of fundamental principles of education and who have experience in dental hygiene management of special populations. Major requirements for this path include a minimum of 12 credits beyond the core: at least 6 in education, of which 2 must be in teaching methods (D HYG 494 or MEDED 520), 2 in evaluation of learning (MEDED 521), and 2 in educational internship (D HYG 595); and 6 in care of special populations, of which 2 must be in ORALM 404 and the remaining either D HYG 404, D HYG 466, DPHS 449, ORALM 460, or an approved substitute.

Oral Health Promotion in Public Health. This path prepares dental hygienists to function as oral health promoters in public health settings. It focuses on national and international health goals and on oral health promotional strategies. Major requirements for this path include a minimum of 10 credits beyond the core: 2 in educational methods (D HYG 494 or MEDED 520), 3 in health care goals and delivery systems (D HYG 402 or an approved substitute), 3 in health promotion strategies (D HYG 403 or an approved substitute), and 2 in community health services (D HYG 404 or G ST 350).

Oral Health Services Administration. This path is for dental hygienists who want to increase their knowledge of how effective administrators function in complex organizations, or who want to advance their career in marketing, business or management. Students study organizational theory and administrative behavior, human resources management, resource allocation, systems operations and analysis, marketing, policy formulation, and strategic planning. Major requirements for this path require a minimum of 17 credits beyond the core: 15 in ADMIN 510, and a minimum of 2 in an oral health services related internship (D HYG 595 or G ST 350).

Biological and Behavioral Sciences. This path is for students seeking entry into a graduate school program or a professional school while earning the Bachelor of Science degree in dental hygiene. Major requirements for this path include: the core, 5 credits in technical writing (TC 400, TC 401, or other approved writing courses), plus a sufficient number of credits for admission eligibility to a graduate or professional degree program.

Academic Standards

The School of Dentistry requires that a minimum numerical grade of 2.5 be earned in dental hygiene courses which are to be counted toward satisfaction of graduation requirements with a dental hygiene major. Graduation with a dental hygiene major also requires a minimum cumulative GPA of 2.50. A student whose cumulative GPA falls below 2.50 in any quarter will be placed on academic probation. The status of academic probation shall be removed when the cumulative GPA is 2.50 or above. While on probation, the student must attain at least a 2.50 GPA for each succeeding quarter's work until the cumulative GPA is raised to 2.50.

Admission Requirements

U.S. or Canadian Applicants. The student must meet the admission requirements and standards of the University. In addition, the student must possess an assoclate degree or certificate/diploma in dental hygiene from a program accredited by the Commission on Dental Accreditation of the American Dental Association and a license to practice dental hygiene in at least one state or province.

Other Applicants. The student must meet the admission requirements and standards of the University. The student must possess a certificate or diploma in dental hygiene granted by an officially recognized educational institution. In addition, the student must submit verification that the practice of dental hygiene is authorized by the government of the home country. Students whose native language is not English must submit a score of 580 or higher on the Test of English as a Foreign Language (TOEFL).

Admissions Schedule. Students are admitted into the program summer and autumn quarters. The deadline for submitting an application to the program and to the University for U.S. and Canadian applicants is May 15 for summer quarter and July 1 for autumn quarter. The deadline for submitting an international application to the program and to the University for summer quarter or autumn quarter is March 1.

Application Information. For information on admission criteria and application process, contact the Dental Hygiene Program, Department of Dental Public Health Sciences, SM-35, School of Dentistry, University of Washington, Seattle, Washington 98195 USA. Telephone: (206) 543-5820. FAX: (206) 685-4258.

Professional Programs

Doctor of Dental Surgery

The Doctor of Dental Surgery (D.D.S.) curriculum provides opportunities to learn the fundamental principles significant to the entire body of dental knowledge. Students are expected to learn fundamentals of basic health sciences, to attain proficiency in clinical skills, to develop an understanding of professional and ethical principles, and to develop reasoning and critical decision-making skills that will enable implementation of the dental knowledge base. The first year is divided among lecture, laboratory and preclinical activities in basic sciences, dental anatomy and dental materials. In the second year students develop further preclinical skills, learn how basic science principles are applied to the clinical setting and begin clinical treatment. In the third and fourth years students concentrate on providing clinical treatment, attend lectures which refine technical and diagnostic skills, and participate in electives. Each student is required to take one elective in each of his/her junior and senior year. Electives are chosen by students from courses offered by all departments, including opportunities in independent study, research, seminars on various topics, and specialty clinical topics.

The curriculum extends for forty-two months or fourteen quarters, including two summer quarters. If needed, students may be allowed additional time to complete required course work.

Admission

To be considered for admission to the School, a student will need to have completed the required courses listed below, have taken the Dental Admission Test, and have attended a personal interview. Required courses are: organic chemistry-2 quarters or 1 semester; biochemistry-2 quarters or 1 semester, physics-1 year; introductory biology or zoology-1 year. Equally important are courses in the social sciences and the humanities. The Admissions Committee does not select or give preference to a particular undergraduate major field; in fact the Committee encourages diversity in majors. The School is committed to diversity within the dental school student body and the dental community. A program for ethnically underrepresented or economically disadvantaged persons is described below. (See the Dental Readiness Program.) Equal gender representation also adds to the diversity of the School, and the Admissions Committee encourages women to apply.

Transfer Applicants: Transfer students from U.S. and Canadian dental schools will be considered for advanced standing at the end of the regular admissions cycle and accepted on a space available basis. The applicant's current standing and courses completed at the current dental school will be taken into consideration when determining placement within the curriculum. All recent accepted transfer students have been placed in the first or second year curriculum. The application and supplementary materials must reach the school by March 1 of the year prior to requested entry.

Foreign Applicants: The School does not provide a special program for foreign trained dentists, but does consider foreign trained dentists for advanced standing (see transfer information above). In addition, applications from foreign students are considered for entry into the first year class. Foreign students whose first language is not English will be required to present TOEFL (Test of English as a Foreign Language) scores of 600 or higher. Also foreign applicants on nonresident visas must submit a written statement from a bank indicating financial support is available to complete the program.

Dental Readiness Program: The School is committed to diversity within the student body and the profession of dentistry. To achieve this, the School has instituted the Dental Readiness Program. The goals of the Dental Readiness Program are: (1) to correct academic deficiencies of students who have not met the University of Washington School of Dentistry's GPA or Dental Admission Test admission criteria eligibility, (2) to assist students in gaining admission to dental school, (3) to prepare students for successful completion of the predoctoral dental (D.D.S. or D.M.D.) degree. This program provides entrants with a year of preparation prior to entry into dental school. Entrants are enrolled in several first year dental courses, as well as study skills seminars, learning method assessment seminars, and other University courses that will strengthen academic background. Entrant's schedules will be unique and be based on individual needs and strengths. A mentor and tutors will be provided as needed. The minimum requirements for eligibility are 2.7 overall GPA, 2.5 predental science GPA, and Dental Admission Test scores of at least 16. To be maintained in the program the student must complete a pre-entry summer histology course, enroll in approved courses and receive no 0.0 or withdrawal grades in dental courses, and attain a 2.5 overall GPA in all other coursework in the Dental Readiness Program. The student must complete all courses in the Dental Readiness Program curriculum. Entrants identified as having made satisfactory progress in the Dental Readiness Program will be admitted to the Doctor of Dental Surgery (D.D.S.) curriculum in the School of Dentistry beginning with the autumn quarter following completion of the Dental Readiness curriculum.

To increase the number of applicants from ethnically underrepresented groups, the School also participates in, and provides funding for, activities through the Health Sciences Center Office of Minority Students. In addition to academic counseling, this Office sponsors the Minority Students Health Sciences Organization. and manages several grants designed to stimulate interest among students of color in pursuing careers in biomedical research and health science fields. For example, the Minority High School Students Research Apprentice Program is funded by an Health Careers Opportunity grant. The Stipends for Training Aspiring Researchers (STAR) Program is funded by the National Institutes for Heart, Lungs and Blood. The Seattle School District Partnership Program is funded by the Seattle School District. Students from each of these programs interact with and/or participate in research with School of Dentistry faculty and students.

The School applied for, and received, a \$150,000 endowment from the Warner Lambert Company to establish a scholarship fund to recruit and retain students of color. In addition the School has established the Karl-Åke Omnell Scholarship to recruit underrepresented and disadvantaged students.

The School belongs to the American Association of Dental Schools Application Service (AADSAS). The School has established December 1 as its AADSAS priority filing deadline. Only those applications received in the AADSAS Washington, D.C. office (1625 Massachusetts Avenue NW, Washington. D.C. 20036-2212, phone 202-667-1886) by the priority filing date will be forwarded to the University of Washington for consideration by our Admissions Committee.

Once the School has received the applicant's AADSAS application, the School will send competitive applicants a supplementary application and a request for the following materials:

1. A supplementary application which includes a short autobiographical essay

- 2. A non-refundable application fee of \$35.00
- 3. Three letters of recommendation
- 4. Dental Admission Test scores
- 5. Transcripts from all higher education institutions

attended

6. A list of current and future courses

The application will be considered complete once the interview has been completed and all materials noted above are returned. Upon completion of the application, the Admissions Committee, which is composed of faculty, students, and alumni, will make a decision concerning the applicant's admission status. In the Admissions Committee deliberations, the following seven areas are considered, with the first two areas receiving the most weight in assessing the applicant's merits as a candidate:

1. Grades: Overall grade point average (GPA); GPA of the last two years of study and GPA of predental required science courses are reviewed. College grades are an important indicator of dental school performance and success. The Committee members review these grades for a strong, consistent GPA with very few withdrawals, incompletes, repeated courses or non-graded options.

2. DAT (Dental Admission Test): The test, sponsored by the American Dental Association, covers several areas: quantitative reasoning, survey of natural sciences (including biology, general and organic chemistry) and perceptual ability (including form development, apertures, angles, cubes, and orthographic projections). At the University of Washington the scores are reviewed to identify an applicant's areas of strength. The test must be taken no later than October, one year prior to admission.

3. Level of Preprofessional Education: A majority of our applicants will have a baccalaureate degree by the time of entry, but admission may be offered to applicants without a baccalaureate degree.

4. Dental Knowledge: Knowledge of the field of dentistry through experience in a dental setting (dentist's office, clinic, etc.); introductory dental coursework; and exploration of the dental literature is considered as admissions factors. A qualified applicant will have a clear understanding of the profession and a demonstrated interest in the field.

5. Unique Life Experiences: Research and teaching efforts, travel, and work experience are some of the life experiences that are considered important. Such experiences demonstrate the breadth and level of maturity of a candidate.

6. *Personal Attributes:* In addition to motivation, the applicant's poise and communication skills are examined by the Admissions Committee. Personal attributes such as integrity, responsibility, leadership, initiative, community service, perseverance, and diversity of interests are important.

7. Ethnically Underrepresented or Disadvantaged Status: Special admissions consideration may be given to applicants who are members of ethnically underrepresented groups or are economically disadvantaged or differently abled. (See Dental Readiness Program.)

Information regarding the AADSAS application, supplementary application materials, selection criteria, and selection process is available from the University of Washington, School of Dentistry, Office of Student Services, SC-62, D323 Health Sciences, Seattle, WA 98195-9950 or the Predental Advising Office, 008 Communications, DS-60. Information on the Dental Admission Test is available from both of the above and the American Dental Association, 211 East Chicago Avenue, Chicago, IL 60611-2678.

Western Interstate Commission for Higher Education (WICHE): The school participates in a program administered by WICHE for students who reside in Western states not served by a dental school (Alaska, Arizona, Hawaii, Montana, Nevada, New Mexico, and Wyoming). Such students should seek requests for certification from the WICHE commission office in their state of residence. Students who enroll in the school under the WICHE program pay in-state tuition rates, the difference being paid by the member state that sponsors the student.

SCHOOL OF DENTISTRY / GRADUATE PROGRAMS 257

	First Year	Second Year	Third Year	Fourth Year
Projected Costs for 1994-95				
Tuition, resident down	\$7,458	\$9,944	\$9,944	\$7,458
Tuition, nonresidentity	18,933	25,244	25,244	18,933
Other expenses issimption				
Issue (purchase) tarada	3,011	3,324	280	0
Issue (rental)	87	786	170	0
Syllabi/lab fees	290	1,079	606	8
Miscellaneous	205	311	104	462
Books (purchase)	779	674	162	0
Subtotal	4.372	6,174	1,322	470
Total resident costs†	\$11,830	\$16,118	\$11,266	\$7,928
Total nonresident costs†	\$23,305	\$31,418	\$26,566	\$19,403

(All costs subject to change)

*Tuition calculated at 1994-95 schedule for Washington residents at \$2,486 per quarter. For nonresident costs, calculate \$6,311 per quarter.

†Total costs do not include living and personal expenses.

Effective autumn quarter 1994 quarterly tuition for fulltime dental students is \$2,486 for residents and \$6,311 for nonresidents. Additional costs for dental students include textbooks, materials, supplies, and equipment for use in laboratory and preclinical courses (see below). A rental fee (see table below) is charged for instruments used during the four years and returned. Nonrental instruments belong to the student, so should be considered a long-term investment and not part of the expendable educational costs.

Information on loans and scholarships may be obtained from the Office of Student Services, D323 Health Sciences, SC-62. Also available in this office is information relating to student life, including the Student Dress Code, Academic Regulations Manual, and Professional Ethics Code.

Graduate Programs

Through their respective departments, the graduate faculty members of the school offer programs leading to the degree of Master of Science in Dentistry, Master of Science, and Doctor of Philosophy, as well as postgraduate certificate programs.

Master of Science in Dentistry Degree/ Postgraduate Certificates

Fields of study for the M.S.D. programs are endodontics, oral biology (oral pathology), oral medicine, orthodontics, periodontics, and prosthodontics. The programs are planned to prepare students to think independently, to evaluate their own services and the literature of the programs, and to develop their clinical operative skills to a level to permit the successful practice of their chosen specialty. Emphasis is placed on the basic principles of diagnosis and treatment that compose one of the clinician's most valuable assets. The purpose of the programs is not only to train students in the art of their respective specialties but also to encourage possible preparation for academic careers or for research. Research may be undertaken in basic or applied science. Opportunities for collaborative research are available with the cooperation of other colleges, schools, or departments of the University.

Applicants for admission to the M.S.D. and certificate programs must be graduates of a school of dentistry approved by the Commission on Dental Accreditation of the American Dental Association or a university dental school located outside the North American continent whose curriculum and admission requirements are similar to those of the UW School of Dentistry. Applications must be submitted to the appropriate department, on or before November 1 for consideration for entrance in the following autumn quarter (October 1 for oral medicine and orthodontics for consideration for entrance in the following summer quarter). A concurrent Application for Admission to the Graduate School also must be filed. International students must submit financial statements before the application deadlines and must demonstrate competency in the English language, for which TOEFL scores are required. Applicants who have not received dental degrees from an institution within the United States will be required to supply Graduate Record Examination scores for admission to the University of Washington Graduate School (graduates of U.S. institutions are not required to submit GRE scores). Requests for Information or application forms may be forwarded to the department of the specialty field, School of Dentistry, University of Washington, Seattle, Washington 98195.

A minimum of eight consecutive full-time quarters of residence is required except in the periodontics and prosthodontics programs. Certificate training in periodontics requires a minimum of twelve consecutive fulltime quarters of enrollment and may be pursued concurrently with other advanced degrees which may extend the program length. The graduate prosthodontic program includes two years of didactic and clinical work followed by a third year of clinical care and research.

Although a student may enroll in a postgraduate certificate program only, students enrolled in the M.S.D. program also will be awarded a postgraduate certificate in the specialty. Postgraduate certificate programs are not administered by the Graduate School, and no thesis is required. The course content may vary somewhat from the M.S.D. program, although the same academic standards are applied in both programs. Tuition and fees are assessed at the graduate level for both programs.

Master of Science, Doctor of Philosophy Degrees

Curriculums for the M.S. and Ph.D. programs are offered through the Department of Oral Biology.

Oral biology is concerned with the nature of the oral and paraoral tissues and with the applicability of basic scientific knowledge to oral tissues in health and disease. The courses and research programs in the department deal with the origin, growth and development, structure, and functions of oral tissues, as well as with the etiology and pathogenesis of oral diseases and malfunctions. By its nature, oral biology overlaps the basic medical sciences and clinical dental sciences.

The department contains well-equipped laboratories actively engaged in various aspects of research involving the following approaches: biochemical, including studies on protein synthesis and secretion and the structure of salivary macromolecules, as well as studies on the structural proteins of the cytoskeleton of oral epithelial and epidermal cells; pharmacological, including molecular mechanisms in the regulation of secretion; physiological, including ion fluxes and their control in secretory tissues; microbiological, including the molecular basis of bacterial colonization of oral surfaces, and the identification, taxonomy and pathogenicity of oral pathogens; pathological, including the growth and metastasis of oral tumors; tissue culture, including studies on factors regulating the growth and development of oral epithelial cells; and morphological, including studies on oral tissues at the light and electron microscopic levels.

Several programs are available through the Department of Oral Biology to accommodate students with different educational objectives.

A program of study and research leading to the Doctor of Philosophy degree is available for those students desiring extensive research training as well as in-depth course work in oral biology. In addition to the courses offered by this department, students in the Ph.D. program are expected to gain proficiency in one of the biomedical sciences.

A separate program of study and research leading to the Master of Science degree is available for those students who want less training than the Ph.D. program affords.

A nonthesis option exists in the Master of Science program for the purpose of training dental hygiene educators to instruct in certain basic and applied sciences as well as in the clinic.

For the more clinically oriented students, the school offers a program leading to the degree of Master of Science in Dentistry with specialization in oral pathology. Students enrolled in this program receive training that includes experience in the school's extensive biopsy service, participation in the teaching of oral pathology to dental students, participation in a residency program, and enrollment in a series of advanced courses in general and oral pathology.

Clinical specialty training (e.g., oral pathology, oral medicine, periodontics) can also be obtained in conjunction with either the M.S. or Ph.D. programs.

Applicants for all programs must have either a baccalaureate or professional degree from a dental or medical school. Acceptance into the programs requires approval of both the Department of Oral Biology and the Graduate School. For information or application materials, contact the Graduate Program Adviser, Department of Oral Biology, B224 Health Sciences, SB-22, University of Washington, Seattle, Washington 98195.

United States Public Health Service traineeships may be available to students who are United States citizens or permanent residents. These begin at \$18,600 at the postdoctoral level. An allowance for tuition and fees is normally included. Applicants may also seek support via the individual Dentist-Scientist Awards from the National Institutes of Health, which provide up to five years of stipend support for dental graduates seeking a combined clinical specialty-Ph.D. degree course of study. The M.S. and Ph.D. programs, including the nonthesis M.S. for dental hygienists, are identified as WICHE Regional Graduate Programs, making students from WICHE-participating states eligible to receive support while pursuing these degree programs.

Residency Training

Residency training programs are available in oral and maxillofacial surgery and the general practice of dentistry. Both programs provide for rotation through several of the University-affiliated hospitals. Each is a fully accredited program which grants a certificate upon successful completion of the training. Stipends are provided.

The Oral and Maxillofacial Surgery Program is at least four years in duration and provides broad exposure to all aspects of the practice of oral and maxillofacial surgery. Application, selection, and administration of this training program is provided through the Depart ment of Oral and Maxillofacial Surgery. Further information can be obtained by contacting Dr. O. Ross Beirne, Department of Oral and Maxillofacial Surgery,

258 SCHOOL OF DENTISTRY / GRADUATE PROGRAMS

SB-24, School of Dentistry, University of Washington, Seattle, Washington, 98195.

The General Practice Residency is a one-year training program that emphasizes the general dentist's role in a hospital and the management of medically, physically, and mentally compromised patients. Application, selection, and administration of the General Practice Residency is provided through the Division of Hospital Dentistry, Further information can be obtained by contacting Dr. Barton S. Johnson, Division of Hospital Dentistry, SC-62, School of Dentistry, University of Washington, Seattle, Washington, 98195.

Postdoctoral Fellowships

Postdoctoral training fellowships are available in periodontics and behavioral or public health research in dentistry. Programs vary in duration and many accommodate degree-seeking or research fellows pursuing an academic career. NIH-sponsored full tuition and a stipend for up to three years are provided for U.S. citizens, noncitizen nationals, and those foreign nationals with permanent residency status in the United States. Members of ethnic minorities and women are especially invited to apply. Application, selection, and administration of the program are provided through the Department of Dental Public Health Sciences.

Graduate Training in Dental Public Health

Opportunities exist for pursuing graduate degrees in public health which emphasize applications to research in dentistry. Master of Public Health (M.P.H.) programs in the Departments of Epidemiology and Health Services of the School of Public Health and Community Medicine can be pursued in conjunction with postdoctoral training in the School of Dentistry's Department of Dental Public Health Sciences. Didactic course work is taken in the School of Public Health and Community Medicine, augmented with independent study and thesis research on selected topics in the School of Dentistry. Similar opportunities exist for pursuing the Ph.D. in epidemiology with an emphasis on research in dentistry. Further information may be obtained from the Department of Dental Public Health Sciences, SM-35, School of Dentistry, University of Washington, Seattle, Washington 98195.

Dental Hygiene

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

D HYG 402 Global Perspectives In Oral Health (3) Disease patterns and their impact on oral health care delivery systems. Cultural, demographic, economic, and political factors affecting the efficacy of various systems.

D HYG 403 Oral Health Educational Strategies (3) Planning, preparing, and evaluating educational strategies for oral health promotion. Assessment of needs, development of objectives, creation of communication messages, review of behavioral and educational theories, mechanisms of evaluation.

D HYG 404 Field Experience in Delivery of Oral Health Care (2, max. 12) Field observations of oral health services. Students spend three hours per week at an approved health care agency. Accompanying seminars and written assignments focus on professional need of service, consumer needs and demands, societal obligations, and availability of services.

D HYG 485 Theoretical and Scientific Basis for Dental Hygiene Practice (3) Lecture-discussion on the scientific proof for theories, procedures, and techniques used in clinical dental hygiene practice. Includes field experience at selected practice sites. Students use the University of Washington reference library and catalog system to search and retrieve information essential to making oral and written reports. Prerequisite: dental hygiene major or permission of instructor.

D HYG 475 Orientation to Hospital Dentistry for Dental Hygienists (4) Operation of dental profession within hospital setting. Hospital rounds, surgical observation, participation in emergency dental treatment, clinic operations and management, and clinical dental hygiene. Prerequisite: 465.

D HYG 482 Local Anesthesia for Dental Hyglenists (2) Techniques of local anesthesia and initial management of emergencies in the dental office.

D HYG 491 Issues in Professional Education (3) Seminar and discussions on topics influencing dental education. Academic freedom, accreditation, interdisciplinary relationships, legislation, licensure, tenure.

D HYG 492 Principles of Scientific Investigation for Oral Health Professionals (3) Introduction to principles of scientific investigation, biostatistics and their application to relevant literature.

D HYG 493 Review of Literature for Oral Health Professionals (3) Application of modern methods of library search and critical analysis of relevant literature. Includes technical writing and oral reporting as a means of integrating knowledge and skills acquired in 465 and 492. Prerequisites: 465 and 492 or permission of instructor.

D HYG 494 Principles of Teaching for Oral Health Professionals (3) Application of principles of learning to teaching methods and techniques used in education, with opportunity for course planning, demonstration, and practice teaching.

D HYG 497 Directed Studies for Oral Health Professionals (*, max. 14) Based on student interest in special areas. Independent study and tutorial studentfaculty relationships. Credit/no credit only. Prerequisite: permission of instructor.

D HYG 565 Theoretical and Scientific Basis for Dental Hygiene Practice (3) Lecture-discussion on the scientific proof for theories, procedures, and techniques used in clinical dental hygiene practice. Includes field experience at selected practice sites. Students use the University of Washington referencelibrary and catalog system to search and retrieve information essential to making oral and written reports.

D HYG 594 Principles of Teaching for Oral Health Professionals (3) Application of principles of learning to teaching methods and techniques used in education, with opportunity for course planning, demonstration, and practice teaching. Prerequisite: graduate program admission.

D HYG 595 Educational Internship (*, max. 12) Clinical and/or didactic teaching experience or program administration. Teaching and administration responsibilities assigned according to student's previous experience, education needs, and interest. Seminar required. Prerequisites: 494 or 594 and permission of instructor.

Dental Public Health Sciences

Faculty

Chairperson Timothy De Rouen

Professors

Chapko, Michael K. * 1978, (Adjunct Research); PhD, 1972, City University of New Yorky-diffusion of health technologies, cost-effectiveness, in health care.

Conrad, Douglas A. * 1977; PhD, 1978, University of Chicago.

De Rouen, Timothy * 1975; PhD, 1971, Virginia Polytechnic Institute & State University; applications of biostatistics to clinical epidemiology of oral and infectious diseases.

Fales, Martha H. * 1959, (Emeritus); PhD, 1978, University of Michigan; dental hygiene.

Milgrom, Peter M. * 1974; DDS, 1972, University of California (San Francisco); management of fearful and phobic dental patients, quality of dental care.

Weinstein, Philip * 1972; PhD, 1971, University of Kentucky; dental behavioral science, treatment and prevention of fear and pain, clinical assessment.

Associate Professors

Beaton, Randal D. * 1976, (Adjunct Research); PhD, 1972, University of Washington; assessment and treatment of temporomandibular joint pain and dysfunction.

Cameron, Cheryl A. 1979; PhD, 1986, University of Washington; dental hygiene.

Domoto, Peter K. 1973, (Adjunct); DDS, 1964, University of California (San Francisco); pediatric dentistry, dental behavioral science.

Grembowski, David * 1980; PhD, 1982, University of Washington; dental care demand, fluoridation, dental health services research.

Sharp, Lawrence J. 1962; PhD, 1964, Washington State University; research methods, statistics.

Wells, Norma J. 1960; MPH, 1966, University of California (Los Angeles); international dental health.

Assistant Professors

Critchlow, Cathy W. 1979; PhD, 1993, University of Washington; epidemiology in dental health, chronic disease as affected by infectious disease.

Leroux, Brian * 1991, (Research); PhD, 1989, University of British Columbia (Canada); random effect models, stochastic processes, dental research, toxicology.

Martin, Michael D. 1986, (Acting); PhD, 1993, University of Washington; dental education in oral health care of persons with disability.

Ramsay, Douglas S. * 1985, (Adjunct); DMD, 1983, University of Pennsylvania; behavioral medicine/dentistry, physiological psychology, orthodontics, pediatric dentistry.

Instructor

Drangsholt, Mark T. 1985, (Acting); DDS, 1984, University of Washington.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

DPHS 201 Planning a Career in Dentistry for the Future (2) Future-oriented overview of important concepts in dental science, contemporary modes of patient treatment, and dental-care delivery systems. Provides firsthand exposure to practice of dentistry and prerequisite materials in oral anatomy, epidemiology, and other basic science subjects. Open to first-, second-, and third-year undergraduate students throughout the University.

DPHS 449P Directed Studies in Dental Public Health Sciences (*) Students and faculty with common academic interests pursue them together within the curriculum by means of independent study and a tutorial student-faculty relationship. Credit/no credit only. Prerequisite: permission of instructor.

SCHOOL OF DENTISTRY / ENDODONTICS 259

DPHS 510 Social and Historical Perspectives in Dentistry (2) Examines dental care problems involving biological, behavioral, and community elements and has studentic develop hypotheses regarding nature and complexity or problem, set objectives, seek resources and information; and contribute to development of outcomes.

DPHS 535P Professional Issues: Scientific Literature in Clinical Decision Making (1) Introduction to critical reading of individual articles in professional journals and integrating the findings of several articles. Use of the literature to assist the practicing dentist in making clinical decisions.

DPHS 541P Professional Issues: Policy Issues in Financing, Regulating, and Organizing Dental Care (2) Provides information on private and public involvement in financing, regulating, and organizing dental care. Stresses analysis of public policy matters directly influencing professional environment of the practicing dentist.

DPHS 550P Directed Studies in Dental Public Health Sciences (*, max. 6) Students and faculty members who have common academic interests can pursue them together within the curriculum by means of independent study and a tutorial student-faculty relationship. Credit/no credit only.

DPHS 569 Clinical Epidemiology and Study Design in Dentistry (3) An introduction to epidemiological methods as they relate to dental research. Topics covered include the estimation of dental disease occurrence at patient level and site level and the design and analysis of clinical trials with special emphasis on designs unique to dentistry, such as split-mouth designs. Credit/no credit only.

DPHS 575 Behavioral Dental Research (1) Survey of behavioral science research and methodology in dentistry and related fields. Emphasis in various quarters varies: literature review, research design, instrumentation, data analysis. Designed for advanced students who plan a research career. Credit/no credit only. Prerequisite: doctoral degree or permission of instructor.

DPHS 640P Professional Issues: Clinical Management of the Fearful and Phobic (1) Introduction to assessment process and treatment strategies for successful management of anxious, fearful, or phobio patient, combined with clinical observation of diagnostic and treatment appointments of active patients.

DPHS 660 Dental Fear Clinic (2) Clinical instruction in the care of the severely anxious or phobic adult or child. Strategies fröm behavioral and cognitive psychology. Credit/no credit only. Prerequisite: graduate standing in dentistry or permission of instructor.

Dentistry

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

DENT 520P Clinical Practice Management 1 (1) Designed to provide the student with the knowledge required to manage a patient pool during the clinical program and in future dental practice including: obtaining a patient pool, authorized treatment planning, patient management in accordance with professional codes, risk management strategies, patient financial account management, and contemporary biohazardous materials guidelines.

DENT 534P Gerlatric Dentistry (1, max. 2) Special needs of older persons seeking dental care: oral health, psychology of aging, socioeconomic problems, effective communications, dental management,

special problems in home health care, and problems with institutional and long-term care. Credit/no credit only.

DENT 537P Hospital Dentistry (1) Introductory course presenting hospital procedures and protocol and specific patient types.

DENT 550P Special Studies in Dentistry (*, max. 12) Series of courses offered by the various departments from which students may elect study in areas of special interest to them. These courses include subject matter applicable to all phases of dentistry. Credit/no credit only.

DENT 551P,552P,553P,554P,555P,556P,557P Clinical Practice Management 2 (1,1,1,1,1,1) Designed to provide the student with the knowledge required to manage a patient pool during the clinical program and in future dental practice including: obtaining a patient pool, authorized treatment planning, patient management in accordance with professional codes, risk management, strategies, patient financial account management, and contemporary biohazardous materials guidelines.

DENT 560- Elective Offering in Oncologic Research (1-) Assist faculty in investigation of oncologic mechanisms utilizing the tools of molecular biology.

DENT 561 Elective in Forensic Odontology (1) Elective opportunity in forensic odontology.

DENT 562 Elective Offering in Advanced Cardiac Life Support (2) Basics of advanced cardiac life support.

DENT 563 Elective Offering in Intravenous Sedation (2) Provides didactic and clinical training in the management of patients utilizing intravenous sedation.

DENT 565 Dental Photography (2) Provides student with sufficient knowledge and experience to select and use correct photographic equipment for photographing patients (facial and interoral), casts, instruments, x-rays, charts, and objects.

DENT 640P Extramural Clinics in Geriatric Dentistry (2) Extramural geriatric clinical experience, including choice of hospital, nursing home, community clinic, and brief didactic component.

DENT 645P Hospital Rotation (2) Clinical experience that puts into practice the material presented in 537P. The student is involved in hospital procedures and protocol and in dental care of the hospital patient.

DENT 650P Extramurals (*, max. 12) Extramural sites arranged to provide dental students, at varying levels of their education, with opportunities to treat a wide variety of patients in the delivery systems outside the school. Credit/no credit only. Prerequisite: permission of instructor.

DENT 655 Medical Emergency Management: Basic Life Support (1) Review of principles and practical applications for the management of medical emergencies in dental practice in conjunction with training and certification in Basic Life Support.

DENT 659 Comprehensive Clinic (1-10) Clinical comprehensive care for patients. Offered: S.

DENT 660 Temporomandibular Joint Diagnosis and Treatment (2, max. 8) Seminar and clinic sequence for comprehensive examination, diagnosis, and treatment of patients with temporomandibular joint problems. Includes management of dysfunction and morphologic alterations in associated muscles and occlusion. Prerequisite: permission of instructor.

DENT 700 Master's Thesis (*)

Endodontics

Faculty

Chairperson

Gerald W. Harrington

Professors

Byers, Margaret R. * 1972, (Adjunct Research); PhD, 1969, Harvard University; somatosensory receptor structure, cytochemistry, and pathologic reactions; neuroimmune interactions.

Guild, Robert E. 1951, (Emeritus); PhD, 1955, University of Washington.

Harrington, Gerald W. * 1969; DDS, 1959, St Louis University; endodontics.

Natkin, Eugene * 1962; DDS, 1957, New York University; endodontics.

Oswald, Robert J. * 1974, (Clinical); DDS, 1969, Virginia Commonwealth University; endodontics.

Associate Professor

Pitts, David Leroy * 1977; DDS, 1972, Indiana University; endodontics.

Senior Lecturer

Steiner, James C. * 1992; DDS, 1956, Case Western Reserve University; normal sensory mechanisms of human dental pulp and pathologic alterations causing pain.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

ENDO 520P Introduction to Endodontics (2) Lecture course dealing with the differential diagnosis and the treatment of pulp pathosis and associated periapical pathosis. This course also deals with criteria and procedures for the evaluation of success and failure of endodontic treatment.

ENDO 531P Endodontic Technique (4) Lecturelaboratory course in root canal therapy in terms of present-day concepts. Treatment of extracted teeth as practice for clinical cases.

ENDO 534P Endodontics (1) Lecture course dealing with diagnosis and treatment of endodontic emergencies, surgical management of endodontic problems, and clinical procedures particular to endodontics. Offered: W.

ENDO 535P Clinical Management of Endodontic Treatment Problems (1) Management of a variety of technical problems frequently encountered in the treatment of endodontic cases and the treatment of endodontic cases and the diagnosis and treatment of impact injuries to teeth. Offered: Sp.

ENDO 545 Honors Endodontics (2, max. 4) Seminar discussions of advanced endodontic diagnosis and treatment planning issues as well as clinical sessions on treatment of calcified negotiable canals, alternate instrumentation procedures and anterior endodontic surgery. Offered: WSp.

ENDO 550P Directed Studies in Endodontics (*, max. 6) See DPHS 449 for course description and prerequisite.

ENDO 560 Advanced Endodontic Diagnosis and Treatment (2) Current concepts are presented and discussed relating to the diagnosis and treatment of pulpal and periapical pathosis. Criteria for evaluation

260 SCHOOL OF DENTISTRY / ENDODONTICS

of success or failure of root canal therapy are presented. Offered: W.

ENDO 562 Advanced Endodontic Treatment Planning (2) Diagnosis and treatment of acute symptoms of dental origin, surgical endodontic therapy, traumatic dental injuries, and the relationship between periodontal and pulpal pathosis, including differential diagnosis and appropriate treatment planning, are discussed. Offered: Sp.

ENDO 563 Radiographic interpretation (2) Various aspects of radiographic interpretation of particular relevance to endodontics, including interpretation of normal structures, acquired and developmental abnormalities, infections, sialoliths, dysplasias, and cysts. Offered: A.

ENDO 566 Advanced Radiographic Interpretation (2) Various aspects of radiographic interpretation of particular relevance to endodontics, including malignant lesions, benign tumors, various diseases other than tumors, soft-tissue calcifications, and radiographic technique. Offered: W.

ENDO 580, 581, 582, 583, 584, 585, 586, 587 Endodontic Seminar (2,2,2,2,2,2,2,2) Continuous weekly seminar devoted to review of endodontic and related literature and discussion of research methods.

ENDO 590 Treatment Planning Seminar (2, max. 16) Weekly seminar to discuss controversial treatment problems and difficult diagnostic cases.

ENDO 593 Clinical Practice Teaching (1, max. 3) Closely supervised experience in teaching clinical endodontics to the undergraduate dental student.

ENDO 597, 598 Endodontics Teaching Seminar (2,2) Weekly seminars devoted to an examination of general problems of teaching and learning and specific problems of endodontics teaching.

ENDO 600 Independent Study or Research (*) Prerequisite: permission of graduate program adviser.

ENDO 630P Clinical Endodontics (1-, max. 7) Student is required to complete endodontic treatment of anterior, premolar, and molar teeth. In addition to conservative treatment of several endodontic cases, the student assists in a periapical surgery. Student must complete at least six quarters of 630P and all course requirements before any grade is awarded.

ENDO 659P Endodontics Extended Learning (*, max. 4) Supplemental work in endodontics to correct an area of student deficiency. Credit/no credit only.

ENDO 660 Clinical Endodontics (4, max. 32) Clinical diagnosis and treatment of pulpal pathosis and related sequelae.

Oral Biology

Faculty

Chairperson

Murray Robinovitch

Professors

Altman, Leonard * 1974, (Clinical); MD, 1969, Harvard University; mechanisms of tissue injury produced by bacteria, leukocytes, or toxins.

Binder, Marc D. * 1978, (Adjunct); PhD, 1974, University of Southern California; organization of spinal reflexes.

Dale, Beverly A. * 1972; PhD, 1968; University of Michigan; keratin biochemistry. Eyre, David R. * 1985, (Adjunct); PhD, 1969, University of Leeds (UK): connective tissue biology, collagen chemistry, bone and cartilage metabolism.

Herring, Susan W. * 1990, (Adjunct); PhD, 1971, University of Chicago; vertebrate functional morphology; relations between muscular function and skull growth.

Izutsu, Kenneth * 1971; PhD, 1970, University of Washington; salivary gland physiology and pathophysiology.

Keller, Patricia J. * 1955, (Emeritus); PhD, 1953, Washington University; protein structure and function.

Robinovitch, Murray * 1966; DDS, 1961, University of Minnesota; salivary biochemistry and saliva-bacterial interactions.

Tamarin, Arnold * 1961, (Emeritus); DDS, 1951, University of Illinois; oral embryology and histology, electron microscopy.

Verdugo, Pedro * 1974, (Adjunct); MD, 1965, State University of Chile; microrheology, biomechanics, polymer gel physics, laser spectroscopy, cell biology.

Watson, Eileen L. * 1972; PhD, 1970, University of Utah; salivary gland pharmacology and regulation.

Associate Professors

Anderson, Leigh C. * 1988; DDS, 1977, University of Minnesota; salivary gland physiology, neural and hormonal regulation of secretion.

Lamont, Richard J. * 1988; PhD, 1985, University of Aberdeen (UK); pathogenic mechanisms and taxonomy of oral bacteria.

Lee, Minako Y. * 1977, (Adjunct Research); MD, 1963, Tokyo Women's Medical College (Japan); growth and differentiation of hematopoietic and lymphopoietic cells.

Morton, Thomas H. * 1975; DDS, 1972, Creighton University; oral pathology, oral medicine.

Oda, Dolphine * 1985; MSc, 1981, University of Manitoba (Canada); transformation and differentiation of cultured oral epithelial cells.

Wells, Norma J. 1960, (Adjunct); MPH, 1966, University of California (Los Angeles); international dental health.

Instructors

D'Silva, Nisha J. 1990, (Acting); MSD, 1990, Indiana University; pathology and pathophysiology of oral tissues.

Sawczuk, Andrea 1984, (Acting); DDS, 1985, University of Washington; neurological aspects of craniofacial and oral functions.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

ORALB 449 Undergraduate Research Topics in Oral Biology (*) Individual research on topics selected in collaboration with a faculty member. Credit/no credit only. Prerequisite: permission of instructor.

ORALB 510P Development, Structure, and Function of Oral Tissues (3-3) Development, microscopic and submicroscopic structure, functional aspects of hard and soft oral tissues. Embryonic development of head and neck; morphodifferentiation of face and oral structures. Structure-function relationships in descriptions of development and histology-ultrastructure of oral tissues by integration of traditional oral histology and oral physiology topics.

ORALB 520P Molecular Microbiology and Oral Diseases (3) Applies students' background knowledge in basic sciences to an understanding of the molecular bases of the interactions between microorganisms and oral tissues that lead to plaque formation and dental diseases. Principles of clinical asepsis and diagnosis of caries and periodontal diseases also covered. Offered: A.

ORALB 521P, 522P Oral Pathology (3,2) Survey of the diseases of the oral-facial regions in lecture and laboratory sessions. Among the conditions discussed are diseases of teeth and their supporting structures and diseases of the oral and paraoral soft tissues and bones. Correlations between clinical findings, etiologic factors, and histopathologic features are stressed. Attendance in the laboratory is required.

ORALB 540P CPC: Oral Biology (2) Seminar stressing basic science aspects and clinical findings of various oral lesions through exploration of etiology, pathogenesis, histopathology, and treatment modalities for oral pathology cases drawn from files of the Division of Oral Pathology.

ORALB 550P Directed Studies in Oral Biology (*, max. 12) Selected readings and seminars on a topic chosen by individual arrangement in collaboration with a faculty member. Credit/no credit only. Prerequisite: permission of instructor.

ORALB 560 Dental Plaque and Oral Disease (3) Series of lectures and review of current literature pertaining to the formation and microbiological and biochemical characteristics of dental plaque, and the relationship, etiologically, of dental plaque to dental caries, periodontal disease, and the sequels of these conditions.

ORALB 561 Oral Tissue Development, Structure, and Function (4-3) Embryonic development of head, neck; emphasis on morphodifferentiation of face and oral structures. Development and microscopic anatomy of enamel, dentin, dental pulp, cementum, periodontal membrane, alveolar bone, oral mucous, membrane, maxillary sinus, temporomandibular articulation, other oral and paraoral structures. Correlation of physiological-structural form with function. Prerequisite: permission of instructor.

ORALB 562 Supervised Teaching in Oral Biology (1-5, max. 10) Directed and guided experience in selected topics in teaching techniques, teaching philosophy, and course design of courses given by the Department of Oral Biology. Students are required to participate in lecture and laboratory teaching under the supervision of the course director. Prerequisite: permission of instructor.

ORALB 565 Clinical Oral Pathology (1-3, max. 10) Presentation of interesting oral lesions from the dental school and the University of Washington Medical Center and the correlation of the clinical findings with the underlying morphologic and biochemical changes in the tissues. The relation of these oral lesions to systemic disease is stressed. Primarily designed for students with D.D.S., M.D., or D.V.M. degrees. Prerequisite: permission of instructor.

ORALB 566 Surgical Oral Pathology (2-4, max. 16) Students are trained to interpret microscopic slides of lesions from the oral cavity and related areas, and to correlate these with the clinical findings. Each student is responsible for the grossing of specimens and the preparation of histology reports. Primarily designed for students with D.D.S., M.D., or D.V.M. degrees. Prerequisite: permission of instructor.

ORALB 568 Biomineralization (2) Ontogeny, microscopic, and submicroscopic organization and chemistry of bones and teeth in mammals. Mineral metabolism, crystallographic structure, mechanical properties, and experimental models of biomineralization. For graduate students and advanced students in dentistry and medicine; senior undergraduates with permission of instructor.

ORALB 569 Periodontal Microbiology (2) Viral, bacterial classification; physiology; toxicity mechanisms reviewed. Formation and composition of plaque and calculus, and chemical methods of control discussed. Specific microbial floras of acute and chronic

SCHOOL OF DENTISTRY / ORAL MEDICINE 261

gingivitis, early onset forms of periodontitis, and adult periodontitis studied. Principles of antibiotic use reviewed. Offered: jointly with PERIO 574.

ORALB 570 ^C Seminar In Oral Pathology (1-3, max. 9) Consists of in depth studies of specific oral diseases through use of seminar and discussion. Students are required to present literature reviews and to act as discussion leaders. Primarily designed for students with D.D.S., M.D., or D.V.M. degrees. Prerequisite: permission of instructor.

ORALB 572 Oral Pathology (5) Survey of the diseases of the oral facial regions in lecture and laboratory sessions. Diseases of teeth and their supporting structures and diseases of the oral and paraoral soft tissues and bones. Correlations between clinical findings and histopathologic features. Attendance in the laboratory is required.

ORALB 574 Clinical Stomatology (3) Diseases of the oral cavity and jaw are presented as the practitioner encounters them-detailed clinical pictures, laboratory tests, radiographic findings, surgical exploration for the establishment of a therapeutic diagnosis.

ORALB 575 Oral Blology Seminar (1-3, max. 10) Presentation and discussion of current research problems by members of the staff, investigators from other departments in the University, visiting scientists, and trainees. Prerequisite: permission of instructor.

ORALB 576 Molecular Aspects of Epithelial Blology (2) In-depth discussion of cytoskeleton, cell junctions, influence of growth factors, retinoids, and other exogenous agents on differentiation and function of normal stratified epithelia. Prerequisite: BIO C 440 (or equivalent) or permission of instructor. Offered: alternate years.

ORALB 578 Research Techniques in Oral Biology (2-4, max. 15) Introduction to biochemical, analytical, or morphological techniques employed in biochemical cytology or molecular pathology as well as *in vitro* techniques of tissue and organ culture. Prerequisite: permission of instructor.

ORALB 581-582-583 Secretory Process in Exocrine Glands ([1-3]-[1-3]) Biostructural, physiological, and biochemical aspects of individual secretory systems as integrated units. Faculty members with appropriate expertise participate in discussions and presentations during each of the three quarters.

ORALB 600 Independent Study or Research (*) Prerequisite: permission of instructor.

ORALB 700 Master's Thesis (*)

ORALB 800 Doctoral Dissertation (*)

Oral and Maxillofacial Surgery

Faculty

Chairperson

Philip Worthington

Professors

Beirne, Owen Ross 1985; PhD, 1976, University of California (San Francisco); oral and maxillofacial surgery.

Gehrig, John D. * 1954, (Emeritus); DDS, 1946, University of Minnesota; oral and maxillofacial surgery, biological structure.

Kiyak, H. Asuman * 1972; PhD, 1977, Wayne State University; health psychology, gerontology, geriatrics, environmental psychology. Myall, Robert W. * 1977; MD, 1975, University of British Columbia (Canada); oral and maxillofacial surgery and biological structure.

Worthington, Philip 1976; MD, 1956, University of Liverpool (UK); oral and maxillofacial surgery.

Associate Professor

Bloomquist, Dale S. * 1972; DDS, 1969, University of Washington; oral and maxillofacial surgery.

Assistant Professors

Egbert, Mark A. 1986; DDS, 1981, University of Washington, oral and maxillofacial surgery.

Evans, John R. 1982; DDS, 1975, University of Washington; oral and maxillofacial surgery.

Instructors

Dawson, Kenneth 1993, (Acting); MDS, 1993, University of Melbourne (Australia); oral and maxillofacial surgery.

Rubens, Brian C. 1990, (Acting); DDS, 1980; University of Washington; oral and maxillofacial surgery.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

O S 520P Local Anesthesia and Emergencies (2) Techniques of local anesthesia, introduction to diagnosis, and initial management of emergencies in the dental office.

O S 522P Sedation and Pain Control (2) Techniques of sedation (oral, inhalational, intravenous) and pain control.

O S 530- Oral Surgery: Didactic (1-, max. 3) Theory of major and minor oral surgery, using a medicated autotutorial approach covering extraction of teeth, impaction surgery, preprosthetic surgery, medications, surgical complications and postoperative care, biopsy, infections and principles of incision and drainage, bone cysts, maxillary sinus, salivary glands, treatment of facial trauma and deformities.

O S 550P Directed Studies in Oral Surgery (*, max. 16) See DPHS 449 for course description and prerequisite.

O S 560 Dental Sedation (2) For graduates of the various dental specialties on the theory, application, and techniques of dental sedation. All forms of sedation, including oral, intramuscular, intravenous, and inhalation, are covered. Clinical experience is provided in the second half of the quarter.

O S 630- Oral Surgery Clinic (2-, max. 6) Clinical application of 530P-.

O S 651P Harborview Clerkship (2-10) Six-week rotation at Harborview Medical Center, including intensive instruction in oral surgery procedures and observing and assisting oral and maxillofacial surgery in the operating room. Credit/no credit only. Prerequisite: permission of department Chairperson.

O S 652P Smith Hospital, Texas, Rotation (2-12) Six-week rotation at John Peter Smith Hospital in Fort Worth, Texas, including intensive instruction in oral surgery procedures and observing and assisting oral and maxillofacial surgery in the operating room. Credit/ no credit only. Prerequisite: permission of department Chairperson.

Oral Medicine

Faculty

Chairperson

Edmond L. Truelove

Professors

Dworkin, Samuel F. * 1974; DDS, 1958, New York University; dentistry and clinical psychology, pain, psychosomatic and illness-related behavior.

Hollender, Lars Gosta 1988; DDS, 1958, University of Lund (Sweden); oral radiology.

Izutsu, Kenneth * 1971; PhD, 1970, University of Washington; salivary gland physiology and pathophysiology.

Omnell, Karl-Åke * 1981; DDS, 1950, Royal Dental School (Sweden); oral radiology.

Truelove, Edmond L. * 1972; DDS, 1967, Indiana University; oral medicine, orofacial pain, stomatitis, and salivary gland disorders.

Associate Professors

Chasteen, Joseph E. 1989; DDS, 1967, University of Michigan.

Le Resche, Linda A. * 1983, (Research); DSc, 1977, Johns Hopkins University; nonverbal behavior (facial expression) related to pain; pain epidemiology.

Morton, Thomas H. * 1975; DDS, 1972, Creighton University; oral pathology, oral medicine.

Schubert, Mark M. * 1974; DDS, 1974, University of Washington; oral medicine/oral oncology.

Stiefel, Doris * 1972; DDS, 1954, University of Washington; dental education in oral health care of persons with disability.

Assistant Professors

Martin, Michael D. 1986, (Acting); MPH, 1989, University of Washington; dental education in oral health care of persons with disability.

Middaugh, Dan 1967; DDS, 1961, University of Minnesota; oral medicine.

Lecturer

Sommers, Earl E. * 1972; DDS, 1971, Indiana University; diagnosis/management of orofacial pain, stomatitis, and salivary gland disorders.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

ORALM 404 Considerations in Care of the Patient With a Disability (*, max. 6) Stiefel Role of auxiliaries in dental treatment of the special patient, including psychosocial issues, communication techniques, wheelchair transfers; dental prevention, medical and dental management of specific disabilities; drug therapy, sedation, and anesthesia. Prerequisite: permission of instructor.

ORALM 460 Clinical Management of Patients With Disabilities (*, max. 10) Stiefel Participation in chair/ bedside dental treatment of a broad range of disabled populations, including homebound and institutionalized patients. Prerequisites: 404, permission of instructor.

ORALM 525- Detection and Management of Human Disease (1-13-, max. 17) Interviewing, historytaking, physical diagnostic techniques, use of medications, physical therapy, and clinical nonsurgical management and treatment of patients in dental set-

262 SCHOOL OF DENTISTRY / ORAL MEDICINE

ting. Medical factors in treatment of dental and specific oral diseases and chronic pain. Treatment planning of oral, medical, and behavioral problems.

ORALM 531P, 532P, 533P Special Clinical Topics: Acute and Chronic Pain (1,1,2) Essential clinical and technical information and skills for diagnosis and treatment of acute and chronic pain, including differential diagnosis, behavioral factors.

ORALM 540P Clinical Pathological Conference: Oral Medicine Clinical Conference (2) Clinical conference devoted to case presentations of patients with dental treatment needs and complicating medical problems.

ORALM 545- Clinical Pathologic Conference (1-, max. 2) Clinical pathologic conference utilizing interdisciplinary approach to patient care and emphasizing basic science application.

ORALM 547, 548, 549 Dental Practice Administration (2,2,2) Material essential to persons entering dentistry in a time of rapid change in health care systèms, including practice management, career opportunities, and starting out in a private practice. Offered: A,W,Sp.

ORALM 550P Directed Studies in Oral Diagnosis (*, max. 12) See DPHS 449 for course description and prerequisite.

ORALM 560 Advanced Diagnostic Techniques (2) Advanced diagnostic procedures used to identify oral and perioral diseases. Included are in-depth discussions of history analysis, methods for psychologic evaluation, soft and hard tissue diagnostic procedures, neurologic, salivary gland, and other tissue analyses requiring special procedures.

ORALM 564 Dental Care of the Disabled I (*, max. 10) Advanced topics in rehabilitation dentistry including psychosocial issues; characteristics and needs of patients with specific disabilities; patient management and use of portable equipment; drug therapy, sedation and anesthesia; dental prevention, and emergency procedures. Seminars and self-directed study. Prerequisite: permission of instructor.

ORALM 565 Oral Medicine Clinical Conference (*, max. 16) Clinical conference in which diagnostic data concerning patients seen in the oral medicine clinic are presented for evaluation. When possible, the patient is present with laboratory findings, radiographs, and the results of special tests.

ORALM 567 Behavioral Management of Acute and Chronic Orofacial Pain (2) Overview of psychosomatic concepts, as related to acute and chronic pain. Behavioral management strategies for acute and chronic pain integrated into clinical care provided by primary dentist. Review biofeedbacks, relaxation, hypnosis, placebos, and related psychophysiological approaches. Open to graduate students, postdoctoral fellows, residents in dentistry, medicine, psychology.

ORALM 57- Oral Medicine and Therapy (2-, max. 6) Lecture directed toward the presentation and discussion of oral diseases and oral manifestations of systemic disease. Primarily the clinical manifestations' relationship to generalized disease processes and patient management with in-depth discussions of therapy.

ORALM 576 Oral Medicine Literature Review (1) Seminar analyzes the recent literature concerning the area of oral medicine, diagnosis, and therapy for oral disease.

ORALM 580 Current Concepts in Oral Radiology (2) Lecture/seminar covering current concepts in oral radiology including technical factors, radiation risks, observer characteristics and variation, radiographic localization, interpretation, and overview of current extraoral techniques. **ORALM 584** Dental Care of the Disabled III (*, max. 10) Field practice in community outreach to facilities and agencies serving disabled populations. Includes observation, dental screenings, patient education and in-service training of direct care staff. Prerequisite: 404 or 664.

ORALM 600 Independent Study or Research (*) Credit/no credit only.

ORALM 620P Introduction to Clinical Diagnosis and Oral Medicine (1) Clinical patient diagnosis and treatment planning, including emergency care, physical diagnosis, case planning, and use of special radiographic procedures, nonsurgical diagnostic and therapeutic protocols.

ORALM 630P- Clinical Diagnosis and Oral Medicine (1- or 2-, max. 3) Opportunity for examining, performing x-ray survey, and planning treatment for less-involved patients. Students also participate in rendering diagnosis and emergency treatment.

ORALM 640- Advanced Clinical Diagnosis and Oral Medicine (1- or 2-, max. 3) Advanced instruction in diagnosis and in the examination and handling of patients. Students are in block assignment and perform radiographic surveys, oral diagnosis, and treatment plans for prospective patients.

ORALM 650P Oral Medicine Clinical Elective (1-6) Opportunities for students to work in various clinical activities at local hospitals or other sites outside the school. Credit/no credit only. Prerequisite: permission of instructor.

ORALM 660 Rotations in Medical Disciplines (1-4, max. 24) Clinic, oriented to the hospital practice of oral medicine, deals with examination and nonsurgical therapy of hospital patients. The conditions treated include primary oral diseases, oral manifestations of systemic diseases, and oral defects resulting from medical treatment of serious systemic disease. Credit/ no credit only.

ORALM 663 Introduction to Educational Methods in Dentistry (2) Principles of teaching and learning, their applications in dental education. Basic principles include learning theory and cognitive processing, identifying prerequisite knowledge of learners, determining objectives of outcomes of learning, selecting appropriate methods and materials, using evaluation procedures. Increases understanding of instruction process to provide a sound foundation for teaching.

ORALM 664 Dental Care of the Disabled II (*, max. 10) Practicum in chair/bedside delivery of dental care to different disabled populations. Includes rotations to institutions, long-term care facilities, and homebound service, using mobile equipment. Prerequisites: 564 and permission of instructor.

ORALM 665 Clinical Oral Medicine (*, max. 33) Clinic involving the diagnostic evaluation of patients with difficult and unusual oral diseases. The student diagnoses and treats the patient. Types of therapy include medications and chemical agents, functional physical therapy, and counseling.

ORALM 670 Clinical Oral Medicine Teaching (1-4, max. 16) Clinic designed to give the student experience and instruction in the teaching of clinical oral diagnosis. Treatment of emergency dental problems as well as routine and special diagnostic procedures is emphasized.

Orthodontics

Faculty

Chairperson Peter A. Shapiro

Professors

Herring, Susan W. * 1990; PhD, 1971, University of Chicago; vertebrate functional morphology; relations between muscular function and skull drowth.

Kokich, Vincent G. * 1974; DDS, 1971, University of Washington; orthodontics: craniofacial growth and development, sutural morphogenesis, premature sutural fusion.

Little, Robert M. * 1974; DDS, 1966, Northwestern University; orthodontics.

Moffett, Benjamin C. * 1964, (Emeritus); PhD, 1952, New York University; anatomy.

Moore, Alton W. 1948, (Emeritus); DDS, 1941, University of California (San Francisco); orthodontics.

Newell, Laura L. * 1957, (Adjunct); PhD, 1967, University of Washington; primatology growth and development, human biology, evolutionary aspects of dermatoglyphics.

Riedel, Richard A. * 1949, (Emeritus); DDS, 1945, Marquette University; orthodontics.

Shapiro, Peter A. * 1973; DDS, 1970, Howard University; craniofacial biology, longterm evaluation of orthodontic treatment.

Associate Professors

Artun, Jon 1988; DDS, 1969, University of Oslo (Norway); orthodontics.

Joondeph, Donald R. * 1971; DDS, 1967, Northwestern University; orthodontics.

Assistant Professors

Bollen, Anne-Marie 1990; PhD, 1990, University of Michigan; orthopaedics.

Ramsay, Douglas S. * 1985; DMD, 1983, University of Pennsylvania; behavioral medicine/dentistry, physiological psychology, orthodontics, pediatric dentistry.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

ORTHO 449 Directed Studies in Orthodontics (*) See DPHS 449 for course description and prerequisite. Credit/no credit only.

ORTHO 520P Cranlofacial Growth and Development in Orthodontic Diagnosis and Treatment (4) Basic principles of pre- and postnatal growth and development integrated with the recognition, analysis, and treatment planning of problems encountered in dental and skeletal malocclusions.

ORTHO 522P Beginning Adjunctive Orthodontics (2) Lecture/laboratory instruction in indications for, and techniques of, simple orthodontic tipping, rotational and extrusive movements often necessary in preparation for restorative and periodontal therapy. Prerequisite: 520P.

ORTHO 550P Directed Studies in Orthodontics (*, max. 6) See DPHS 449 for course description and prerequisite.

ORTHO 551 Review of Selected Literature in Orthodontics (1) Students select a topic for review, review appropriate literature, and prepare written critique.

ORTHO 552 Journal Club (1) Predoctoral students join graduate students in review of current orthodontic literature.

ORTHO 560 Orthodontics Seminar (1-5, max. 25) Methods of diagnosis, analysis, and treatment planning of malocclusion; analysis of methods and theoretical principles used in the treatment of malocclusion. The student presents a detailed case analysis and plan of treatment for each clinical patient supervised. ORTHO 562, 563, 564, 565, 566, 567 Orthodontic Theory (2,2,2,2,2,2) Lecture-seminar sequence dealing with interpretation and application of orthodontic principles and concepts. Pertinent literature, research findings, and current orthodontic theory are analyzed in depth. 91, 300

ORTHO 570 Roentgenographic Cephalometry (2) Basic principles, history, and techniques of roentgenographic cephalometry.

R¹OKE

ORTHO 575 Post-Retention Seminar (1, max. 2) Each student is required to locate one or more former orthodontic patient(s) with at least ten years postretention. Complete orthodontic records must be obtained, analyzed, and discussed in the seminar. The instructor critiques the presentation and offers similar or contrasting cases for comparison.

ORTHO 580 Orofacial Biology (*, max. 8) Comprehensive evaluation seminar of the literature relative to the growth and development of the craniofacial complex. Anthropology, embryology, morphogenesis, genetics, and anatomy are integrated to give the student an appreciation of facial development. Outside reading assignments by the student are discussed and critiqued during the seminar discussion.

ORTHO 582 Adult Orthodontics Seminar (2) Seminar for orthodontic, periodontic, and restorative dentistry graduate students in comprehensive, integrated diagnosis and treatment planning of the dental problems of the adult patient.

ORTHO 585 Surgical Orthodontic Diagnosis and Treatment Planning (3) Seminar and clinic for orthodontic graduate students and oral surgery residents in comprehensive, integrated diagnosis, and treatment planning for patients with major facial deformities.

ORTHO 584 Clinical Management of Cleft Lip and Palate and Craniofacial Anomalies (2) Management of these complex patients involves members of a dedicated, highly specialized multidisciplinary team. Insight gained into specific evaluation and treatment modalities of each discipline through lectures, seminars, assigned readings. Integrated approach to management is illustrated by attendance at craniofacial staffing and clinics. Prerequisite: graduate students in orthodontics.

ORTHO 589 Applied Psychology in Orthodontics and Pediatric Dentistry (1) Application of psychological theories, research, and intervention strategies to orthodontics and pediatric dentistry. Topics include the principles of behavior change, patient compliance with therapeutic regimens, and motivations for orthodontic treatment. Prerequisite: graduate standing in dentistry or permission of instructor.

ORTHO 590 Scientific Methodology in Dental Research (2) Review of the scientific method. Evaluation of dental literature. Discussion of proposed master's degree research projects. Procedure in scientific writing. Formulation and discussion of hypothetical research projects related to orthodontics.

ORTHO 597, 598, 599 Preclinical Technique (*, max. 3; *, max. 3; *, max. 3) Techniques of construction and manipulation of the edgewise arch mechanism.

ORTHO 600 Independent Study or Research (*) Prerequisite: permission of instructor.

ORTHO 630P- Orthodontic Clinic (1-, max. 6) Direct clinical application of principles of orthodontic diagnosis and treatment planning for simple orthodontic appliances to modify tooth position in preparation for definitive restorative and/or periodontal therapy. Prerequisite: 522P.

ORTHO 660P Clinical Orthodontics (1-6, max. 24) Clinical application of the techniques in the treatment of malocclusion. **ORTHO 682 Adult Orthodontics Clinic (1)** Artun, *Ive, Moore* Clinic for orthodontic graduate students in the treatment of the dental problems of the adult patient.

Pediatric Dentistry

Faculty

Chairperson

Peter K. Domoto

Professors

Lewis, Thompson M. * 1955, (Emeritus); DDS, 1950, Northwestern University; pediatric dentistry:

Weinstein, Philip * 1972, (Adjunct); PhD, 1971, University of Kentucky; dental behavioral science, treatment and prevention of fear and pain, clinical assessment.

Associate Professors

Davis, John M. * 1967; DDS, 1961, University of Washington; pediatric dentistry.

Domoto, Peter K. 1973; DDS, 1964, University of California (San Francisco); pediatric dentistry, dental behavioral science.

Leggott, Penelope J. 1993; BDentS, 1969, University of Bristol (UK); pediatric dentistry.

Peterson, Devereaux * 1982; PhD, 1980, University of Pittsburgh; pedodontics, educational administration, and dental treatment for medically compromised patients.

Assistant Professor

Ramsay, Douglas S. * 1985; DMD, 1983, University of Pennsylvania; behavioral medicine/dentistry, physiological psychology, orthodontics, pediatric dentistry.

Lecturer

Williams, Bryan J. 1991; DDS, 1974, Western Ontario University (Canada).

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

PEDO 520P Pediatric Dentistry (4) Introduction to clinical pediatric dentistry, including behavior management, oral diagnosis, preventive dentistry, dental anomalles, radiography, anesthesia, restorative procedures, pulpal therapy, interceptive orthodontios, and traumatic dental injuries of the child patient.

PEDO 523P Professional Issues: Communication Skills I (1) Introductory communication skills with emphasis on interviewing, presented in seminar format. Credit/no credit only.

PEDO 524P Professional Issues: Communication Skills II (1) Continuation of basic communication skills. Credit/no credit only.

PEDO 525P Professional Issues: Management of Pediatric Patient Behavior (1) Introduction to selected theories of child development and application in dental setting; pediatric cognitive, affective, and social development and introduction to problematic child behaviors; use of social systems approach to overview child psychosocial development for the dentist. Credit/ no credit only.

PEDO 550P Directed Studies in Pediatric Dentistry (*, max. 6) See DPHS 449 for course description and prerequisite. PEDO 600 Independent Study or Research (*) Prerequisite: permission of instructor.

PEDO 630P- Clinical Pediatric Dentistry (1-, max. 7) Educational experiences in comprehensive clinical pediatric dentistry. Students register third and fourth years for 24 sessions in the pediatric dentistry clinic, a 3-day rotation at a community clinic, computer assisted clinical simulations, behavioral change projects, and a written analysis of videotaped patient/student clinic encounters.

PEDO 650P Pediatric Dentistry Extramurals (1-8) Clinical extramurals in the field of children's dentistry. Prerequisite: permission of instructor.

Periodontics

Faculty

Chairperson

Gosta Rutger Persson

Professors

Ammons, William F. * 1970; DDS, 1959, University of Texas (Houston); periodontics.

. . . .

Dale, Beverly A. * 1972; PhD, 1968, University of Michigan; keratin biochemistry.

Engel, L: David * 1974; DDS, 1967, University of Minnesota; cellular immunology, regulation of three lymphocyte responses.

Johnson, Robert H. * 1981; DDS, 1962, McGill University (Canada); periodontics.

Page, Roy C. * 1967; DDS, 1957, University of Maryland; connective-tissue pathology, chronic inflammation, immunopathology, periodontal disease.

Persson, Gosta Rutger * 1985; DDS, 1967, University of Lund (Sweden); diagnosis of periodontal diseases and the consecutive process of clinical decision making.

Robertson, Paul B. * 1992; MS, 1972, University of Alabama; host-bacterial interactions in the etiology and pathogenesis of the periodontal diseases.

Robinovitch, Murray * 1966, (Adjunct); DDS, 1961, University of Minnesota; salivary biochemistry and saliva-bacterial interactions.

Yuodelis, Ralph A. * 1963, (Adjunct); DDS, 1955, University of Alberta (Canada); restorative dentistry, prosthodontics, periodontics.

Associate Professors

Baab, David A. * 1980; DDS, 1970, Ohio State University; gingival blood flow measured by laser Doppler flowmetry and preventive periodontics.

Bordin, Sandra * 1981, (Research); PhD, 1966, University of Ferrara (Italy); regulation of connective tissue repair by immune-inflamatory complement components.

Selipsky, Herbert * 1972; MSD, 1973, University of Washington; periodontics.

Assistant Professors

Johnson, Bradley D. * 1982; DDS, 1982, University of Washington.

Weinberg, Aaron * 1991; PhD, 1990, Hebrew University (Isreal); molecular pathogenesis of gram-negative anaerobic bacteria involved in periodontal diseases.

Lecturer

Spektor, Michael D. 1979; DDS, 1975, University of Illinois; periodontal diseases, treatment of recurrent and refractory disease.

SCHOOL OF DENTISTRY / PERIODONTICS 263

264 SCHOOL OF DENTISTRY / PERIODONTICS

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

PERIO 449 Directed Studies in Periodontics (*) See DPHS 449 for course description and prerequisite.

PERIO 525P-526P Prevention/Periodontics (2-2) Overview of preventive dentistry, introduction to periodontal therapy.

PERIO 527P Introduction to Periodontics (1) Epidemiology, natural history, etiology, and histopathology of various periodontal diseases.

PERIO 530P-531P- Periodontics (2-2-) Principles of examination, consultation, instrumentation, occlusal therapy, and treatment planning of the periodontal patient.

PERIO 541P Professional Issues: Ethics in Dentistry (1) Designed to improve ethical reasoning, sensitivity skills; to convey ethical standards and values of the profession through small-group discussions. Standardized tests of moral reasoning and ethical sensitivity given at the beginning and end of course. Credit/no credit only. (Formerly DENT 541P.)

PERIO 550P Directed Studies in Periodontics (*, max. 6) See DPHS 449 for course description and prerequisite.

PERIO 561- Periodontal Case Management (2-, max. 8) Didactic presentation of clinical periodontics to provide a comprehensive view of the field and a grasp of modern therapeutics.

PERIO 565 Periodontal Surgical Anatomy (2) Lecture and dissection course in intraoral anatomy (maxilla and mandible only) from a periodontal surgical approach. Prerequisite: graduate standing in periodontics.

PERIO 566 Practice Management (1) Aspects of setting up and administering a private periodontal practice. Financing, insurance, office design, equipment, employees, professional forms, marketing strategies, and patient management. Prerequisite: 561.

PERIO 574 Periodontal Microbiology (2) Viral, bacterial classification; physiology; toxicity mechanisms reviewed. Formation and composition of plaque and calculus, and chemical methods of control discussed. Specific microbial floras of acute and chronic gingivitis, early onset forms of periodontitis, and adult periodontitis studied. Principles of antibiotic use reviewed. Offered: jointly with ORALB 569.

PERIO 575 Immunologic Aspects of Oral Diseases (2) Lecture course designed to acquaint students with basic concepts of immunology and immunopathology. Topics include cellular immunology, antibody structure and function, complement system, immunopathologic mechanisms, tumor immunology and immunologic manifestations in mucocutaneous oral lesions as well as immunology of caries and periodontal disease.

PERIO 576 The Molecular and Cellular Biology of the Periodontium (2) Nucleic acid, protein, and carbohydrate biochemistry reviewed. Roles of collagens and proteoglycans in gingival tissues and the organization of oral epithelia discussed. Structures of human and animal periodontal lesions compared. Cellular and molecular inflammatory and immunological mechanisms in periodontal disease discussed. History, classification, and epidemiology of periodontal diseases described.

PERIO 577 Review of Literature (2, max. 16) Concise review of the scientific periodontal literature with specific focus on studies of periodontal diagnosis, wound healing, periodontal regeneration, microbiology, and implant procedures. PERIO 582- Periodontic Treatment Planning Seminar (1-, max. 12) Weekly seminar involved with the presentation, discussion, and tentative solution of moderate to complex problems in diagnosis and treatment. Credit/no credit only.

PERIO 585- Periodontal Therapy Seminar (1-, max. 8) Weekly seminar utilizing the case review method and dealing with the treatment of moderate to advanced periodontal disease.

PERIO 586- Longitudinal Evaluation of Periodental Therapy (1-, max. 9) Close examination of case progress from initial therapy to most recent maintenance visits to determine efficacy of method, demands upon patient, and temporal effect of therapy and survival. Preparation and delivery of a lecture on a therapeutic modality. Credit/no credit.

PERIO 587 Periodontal Diseases Research Seminar (1, max. 12) Weekly seminar devoted to advances in periodontal research. Topics include research design, methodology, and data derived from recent and/ or ongoing periodontal research. Credit/no credit only.

PERIO 592 Prescription Surgery (1-1-1) Clinical course in periodontal surgery in which surgical procedures are performed on prescription basis for patients undergoing therapy in the undergraduate dental clinic. Exposes student to a wider spectrum of patients and to stimulate an environment in which the student can encounter the problems in communication and patient management that occur in the private sector.

PERIO 600 Independent Study or Research (*) Prerequisite: permission of graduate program adviser.

PERIO 620P Introduction to Clinical Periodontics (1) Clinical periodontics, with emphasis on examination and assessment.

PERIO 630P-631P-632P Clinical Periodontics (1-1-1) Clinical experience in examination, preventive periodontics, instrumentation, and treatment planning of periodontal therapy in patients with mild to moderate periodontal disease.

PERIO 640P-641P-642P Advanced Clinical Periodontics (1-1-2) Maintenance and treatment of patients with more complex periodontal involvement. Development of skill in comprehensive treatment planning and execution by the individual student. Allowance made for surgical periodontics and experience in assisting in the treatment of advanced cases. Offered: A,W,Sp.

PERIO 659P Periodontics Extended Learning (*, max. 4) Supplemental work in periodontics to correct an area of student deficiency. Credit/no credit only.

PERIO 660- Clinical Periodontics (2-6-, max. 60) Clinical experience in diagnosis and treatment of periodontal disease.

PERIO 663 Pre-Prosthodontics Clinical Periodontics (*) Clinical diagnosis and treatment of periodontal disease for nonperiodontics student. Prerequisite: permission of department chairperson.

PERIO 665 Clinical Practice Teaching (*) Supervised experience in teaching clinical periodontics to undergraduate dental students.

PERIO 685 Hospital Periodontics (1) Preparation in periodontics to practice in hospital situations, including experience in operation of nitrous oxide analgesia, general anesthesia, intravenous premedication, treating of out- and inpatients.

Prosthodontics

Faculty

Chairperson

Richard P. Frank

Professors

Bolender, Charles L. * 1959; DDS, 1956, University of lowa; removable prosthodontics.

Brudvik, James S. * 1979; DDS, 1957, University of Minnesota; removable prosthodontics.

Frank, Richard P. * 1971; DDS, 1962, University of lowa; removable prosthodontics.

Smith, Dale E. * 1972, (Emeritus); DDS, 1952, University of Pittsburgh; removable prosthodontics.

Associate Professor

Toolson, Leigh * 1970; DDS, 1967, University of Washington; removable prosthodontics.

Assistant Professors

Faine, Mary P. 1982; MS, 1975, University of Washington; nutrition.

Nabadalung, Darunee 1992; DDS, 1984, University of Texas (Houston); maxillofacial prosthodontics and oncology.

Rubenstein, Jeffrey E. * 1989; DMD, 1975, Tufts University; maxillofacial and implant prosthodontics.

Lecturer

Phillips, Sandra L. 1988; MPA, 1985, University of Washington.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

PROS 510P Introduction to Dental Nutrition (3) Basic principles of normal human nutrition, including nutrient requirements at various ages, assessment of nutritional status, nutritive values of foods, with special emphasis on the role of diet in development and maintenance of oral tissues.

PROS 520P Introduction to Complete Dentures-Lecture (3) Didactic course in the treatment of completely edentulous patients. Instruction is provided in diagnostic procedures, complete denture construction, and maintenance care.

PROS 521P Management of Immediate Denture Patients (1) Lecture course describing and illustrating the clinical management of immediate denture patients (typical and overdenture). (Formerty 530P.)

PROS 523P Removable Partial Denture Design (2) Lectures in the basic principles of removable partial denture design; more advanced designs are discussed in seminars; certain technical aspects of design procedures are done in the classroom.

PROS 525P Removable Partial Denture Clinical Preparatory Course (4) Lecture-laboratory course dealing with those procedures the dentist must perform in order to fabricate a physiologically acceptable removable partial denture. The student gains experience via clinically simulated laboratory exercises prior to beginning prosthodontic treatment of a partially edentulous patient.

PROS 532P Special Topics in Prosthodontics (1) Lecture describing and illustrating the following topics: reline procedure, management of difficult patients,

SCHOOL OF DENTISTRY / RESTORATIVE DENTISTRY 265

maxillofacial prosthesis, and quality-control problems in private practice.

PROS 542P Special Topics in Prosthodontics (1) Lecture describing and illustrating the following topics: reline procedure, management of difficult patients, maxillofacial prosthesis, and quality-control problems in private practice.

PROS 550P Directed Studies in Prosthodontics (*, max. 6) See DPHS 449 for course description and prerequisite.

PROS 560 Complete Dentures (2) Lecture/seminar devoted to the diagnosis and treatment of the completely edentulous patient, with emphasis on management of patients with difficulties in treatment.

PROS 562 Removable Partial Dentures (2) Lecture/seminar concentrating on factors peculiar to fabrication of immediate dentures, with emphasis on management of combined fixed and removable therapy.

PROS 563 Maxillofacial Prosthetics I (1) Introductory lecture/seminars with emphasis on pertinent literature, case reports, and the reliance of maxillofacial prosthetics on sound prosthodontic principles.

PROS 564 Maxillofacial Prosthetics II (1) Lecture/ seminar augments 563. Diagnosis and detailed treatment planning, procedures for patients with anatomic or neurologic deficits of head and neck.

PROS 571 Review of Literature Seminar (1, max.12) Continuous weekly seminar devoted to the review of prosthodontic and related literature.

PROS 572 Special Topics Related to Prosthodontics (1) Lecture-seminar dealing with subjects having a bearing on comprehensive treatment of the maxillofacial and regular prosthodontic patient. Topics include surgery, speech, orthodontics, psychology, gerontology, and sociology.

PROS 574 Prosthodontic Visual Aids (1-1) Lecture/seminar covering principles of preparation and presentation of essays before dental audiences; emphasis on audiovisual aids. Practical application during Autumn Quarter.

PROS 580 Prosthodontic Dental Materials (2) Study of common materials utilized in the fabrication of dental appliances. Emphasis on resin systems and various precious and base-metal alloys.

PROS 600 Independent Study or Research (*) Prerequisite: permission of graduate program adviser.

PROS 620P- Clinical Complete Dentures (3-) Clinical course dealing with the basic principles of complete denture fabrication as well as the diagnosis and treatment of a completely edentulous patient.

PROS 621P Complete Denture Prosthodontics (1) Clinical course using the didactic material presented in 620P. The student manages a second complete-denture patient during Winter Quarter with less supervision than in 620P, and also provides follow-up care to the 620P and 621P patients during Winter Quarter and Spring Quarter.

PROS 630P Clinical Prosthodontics (1, max. 4) Clinical course involving the diagnosis and management of completely and partially edentulous patients. Removable partial dentures and immediate dentures are fabricated. Follow-up care provided for patients previously treated.

PROS 640P Clinical Prosthodontic Maintenance (1, max. 4) Clinical course involving management of patients requiring an intra-oral prosthesis, plus the maintenance of previously treated patients. Involves recalls, adjustments, relines, and completion of treatment begun in 630P.

PROS 650P Extramurals in Prosthodontics (*, max. 12) Elective clinical experiences, including Foss

Nursing Home or clinical practice teaching. Credit/no credit only. Prerequisite: permission of instructor.

PROS 659P Prosthodontics Extended Learning (*, max. 4) Supplemental work in prosthodontics to correct an area of student deficiency. Credit/no credit only.

PROS 660 Clinical Prosthodontics (2, max. 6) Practical application of material covered in 560 and 562.

PROS 663 Clinical Maxillofacial Prosthetics I (1-1) Clinical/laboratory providing exposure to treatment of maxillofacial prosthetic patients.

PROS 664 Cilnical Maxillofacial Prosthetics II (1-1) Clinical/laboratory expanding upon 663, including extensive patient treatment.

PROS 665- Clinical Practice Teaching (1-, max. 4) Supervised experience in teaching clinical prosthodontics to the undergraduate dental student.

PROS 670 Advanced Clinical Prosthodontics (4, max. 16) Continuation of 660. Patients who present more difficult clinical problems are assigned.

Restorative Dentistry

Faculty

Chairperson

Bruce R. Rothwell

Professors

Canfield, Robert C. * 1967, (Emeritus); DDS, 1951, University of Washington; restorative dentistry.

Hamilton, A. Ian * 1968, (Emeritus); DDS, 1936, University of Toronto (Canada); restorative dentistry.

Hodson, Jean Turnbaugh * 1952, (Emeritus); MS, 1958, University of Washington; restorative dentistry.

Johnson, Glen H. * 1980; DDS, 1978, University of Washington; instruction, clinical trials and laboratory research with dental biomaterials.

Morrison, Kenneth N. * 1948, (Emeritus); DDS, 1943, University of Toronto (Canada); restorative dentistry.

Nicholis, Jack I. * 1965; PhD, 1966, Purdue University; dental materials.

Warnick, Myron E. * 1956; DDS, 1955, University of Alberta (Canada); restorative dentistry.

Westrum, Lesnick E. * 1966, (Adjunct); MD, 1963, University of Washington; neuroanatomy, synaptology, plasticity, olfactory and trigeminal systems, dental pathways.

Yuodelis, Ralph A. * 1963; DDS, 1955, University of Alberta (Canada); restorative dentistry, prosthodontics, periodontics.

Associate Professors

Bales, David J. 1983; DDS, 1957, University of Washington; restorative dentistry.

Chasteen, Joseph E. 1989, (Adjunct); DDS, 1967, University of Michigan.

Ostlund, Lyle E. 1972, (Emeritus); DMD, 1947, University of Oregon; restorative dentistry.

Powell, Lauri Virginia 1986; DMD, 1982, University of Mississippi; restorative dentistry.

Rothwell, Bruce R. 1980; DMD, 1973, University of Oregon; hospital-based dentistry, forensic odontology.

Assistant Professors

Johnson, Barton S. 1991; DDS, 1985, University of California (Los Angeles); hospital-based dentistry, molecular biology cancer research.

Lepe, Xavier 1993; DDS, 1980, University of Guadalajara (Mexico); restorative dentistry, dental materials.

Liou, Ann D. 1992; DDS, 1984, University of Southern California; restorative dentistry, prosthetic, implant dentistry.

Instructor

Hage, Abbie D. 1990, (Acting); DDS, 1993, University of Washington; hospital-based dentistry.

Senior Lecturers

Gordon, Glenn E. 1985; DDS, 1962, University of Michigan; general dentistry, restorative dentistry.

McCoy, Richard B. 1992; DDS, 1961, University of Washington; restorative dentistry.

Lecturers

Kay, Michael A. 1988; DDS, 1987, Northwestern University; hospital-based dentistry.

Townsend, John D. 1977; DDS, 1967, McGill University (Canada); restorative dentistry, fixed prosthodontics, periodontics.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

RES D 410 Dental Anatomy (3) Lecture and laboratory exercises on the morphology and nomenclature of individual human adult and primary teeth. Introduction to function, internal tooth morphology, and the influence of tooth anatomy on selected clinical procedures. For dental hygiene students; others by permission of associate dean.

RES D 449 Directed Studies in Restorative Dentistry (*) See DPHS 449 for course description and prerequisite.

RES D 510P Introduction to Dental Materials (2) Physical and chemical properties of dental materials.

RES D 511P Applied Dental Materials (4) Lecture/ laboratory in use of dental materials relative to restorative dentistry. Clinical application and student selfevaluation of laboratory work emphasized.

RES D 515P Dental Anatomy (3) Lecture and laboratory on the morphology and nomenclature of individual teeth of the adult human dentition. Introduction to tooth histology and function and the influence of tooth anatomy on clinical dental procedures.

RES D 516P Introduction to Occlusion (3) Lecture/ laboratory in the functional determinants of occlusal morphology. Preparation and waxing techniques for developing opposing quadrants by the additive waxing technique.

RES D 517P Functional Analysis of Occlusion (3) Clinical and laboratory experiences in examination and charting of patient's occlusion, record-taking for analysis of occlusion on a dental articulator, and preclinical diagnostic correction of problems of occlusion on articulated clinical casts. Provides basic background or technique information relative to laboratory and clinical experiences.

RES D 519P Operative Dentistry (1) Lecture series introducing operative dentistry. Nomenclature, cavity classification, instrumentation, pulp protection, and principles of cavity preparation.

RES D 520P, 521P, 522P, 523P Introduction to Operative Dentistry Technique (3,3,3,2) Introduces processes of restoring diseased or damaged tooth structure to proper health, form, function, and esthet-

266 SCHOOL OF DENTISTRY / RESTORATIVE DENTISTRY

ics. Emphasis on basic principles of cavity preparation, preparation and restoration design, proper selection and use of restorative materials, and clinical considerations for restorative treatment planning. Following demonstration of competence in didactic and practical aspects. Limited opportunity available for introduction to restorative care.

RES D 525P, 526P, 527P Fixed Prosthodontics (3,3,3) Serve as introduction to area of restorative dentistry dealing with indirect restorations. Preclinical experience provided in tooth preparation and restoration, fabrication for various crown designs, singly and in conjunction with various pontic types to serve as fixed partial denture prostheses. Projects emphasize single-tooth preparation/restoration, multiple-tooth preparation/restoration, and esthetic veneer restorations.

RES D 530P, 531P, 532P Restorative Dentistry (2,2,2) Lecture series related to 630P presenting restorative dentistry principles, including supportive material on clinical procedures.

RES D 540P, 541P Advanced Restorative Dentistry (2,2) Broadens base of restorative procedures. Introduction of new techniques and preparation for state board examination.

RES D 542P New Developments in Dental Materials (1) Dental materials recently introduced to dental profession reviewed, compared to current materials, and clinically demonstrated.

RES D 550P Directed Studies in Restorative Dentistry (*, max. 6) See DPHS 449 for course description and prerequisite. RES D 570 Review of Literature Seminar (1, max. 6) Continuous weekly seminar devoted to a review of restorative and related literature, and discussion of teaching methods, philosophy of teaching and treatment.

RES D 580- Restorative Treatment Planning Seminar (1-, max. 8) Continuous weekly seminar to discuss controversial treatment problems and difficult diagnostic cases selected for graduate students.

RES D 581- Comprehensive Treatment Planning (2-, max. 4) Seminar devoted to the diagnosis and treatment of comprehensive dental cases with special emphasis given to the relationship of periodontics to restorative dentistry.

RES D 588 Masticatory Functional Analysis and Occlusal Adjustment (2) Lecture/seminar and clinical sessions in the study of the physiology of occlusion. Pertinent literature reviewed and discussed from the multidisciplinary viewpoint. The clinical sessions include training in masticatory functional analysis and treatment of occlusally related diseases.

RES D 589 Review of Literature in Occlusion (2) Seminar to review pertinent literature in occlusion.

RES D 580- Fundamentals of Fixed Prosthodontics (2-, max. 4) Lecture/laboratory/clinical sessions in the study of gnathological principles and procedures as they pertain to the treatment of comprehensive cases assigned to the students. Use and application of several fully adjustable articulators.

RES D 600 Independent Study or Research (*) Prerequisite: permission of graduate program adviser. RES D 620P Introduction to Clinical Restorative Dentistry (1) Orientation to Clinical operations, administrative procedures associated with restorative clinical, initial treatment plan, and limited treatment of patients.

RES D 630P- Clinical Restorative Dentistry (1 or 2 or 3-, max. 9) Clinical training in fundamental restorative dentistry procedures, including diagnostic, treatment planning, and therapeutic aspects of operative dentistry, fixed prosthodontics, and occlusal treatment.

RES D 640P- Advanced Clinical Restorative Dentistry (1-3-, max. 12) Clinical training in restorative dentistry procedures, including diagnostic, treatment planning, and therapeutic aspects of operative dentistry, fixed prosthodontics, and occlusal treatment.

RES D 650 Restorative Dentistry Clinical Elective (1-6, max. 12) Elective offering in clinical areas related to discipline. Offered: AWSpS.

RES D 659P Restorative Dentistry Extended Learning (*, max. 4) Supplemental work in restorative dentistry to correct an area of student deficiency. Credit/no credit only.

RES D 660- Oral Rehabilitation (2-6-, max. 32) Clinical course to provide experience in diagnosis and treatment of patients requiring restorative procedures from single restorations to complex oral rehabilitative methods. Special emphasis is directed toward the integration of periodontics and occlusion as they relate to restorative dentistry.

RES D 665 Clinical Practice Teaching (1, max. 4) Supervised experience in teaching clinical fixed prosthodontics to undergraduate dental students.

College of Education

Dean

Allen D. Glenn 222 Miller

Associate Deans

Sheila Lowenbraun Richard S. Neel

The mission of the College of Education is reflected in the following goals: (1) to conduct systematic study and research on problems, concerns, and policies of education; (2) to conduct programs that will attract and prepare those who will provide leadership for the schools; (3) to experiment, innovate, and develop models for improved training of school personnel; (4) to generate new ideas for the improvement of education; (5) to become intimately involved in cooperative and coordinated research and service activities with the educational enterprise; and (6) to develop systematic procedures for ensuring adequate attention to education for minority groups.

Programs

In order to achieve its mission, the College of Education has two clusters of programs: (1) professional studies and (2) graduate studies. Each cluster is administered by an associate dean. The professional studies programs lead to a Bachelor of Arts degree or to any of a number of professional certificates in the field of education. The various graduate programs lead to the Master of Education, Doctor of Education, or Doctor of Philosophy degrees.

Special Facilities and Services

The College of Education maintains a number of special facilities to assist in the fulfillment of its goals. Among these are the Office of Teacher Education Advising and Certification, the Office of Graduate Studies and Research, and the Experimental Education Unit. In addition, the College of Education maintains formal relationships with a number of school districts in the area to provide research and field experience opportunities for the students in the various programs. Individuals interested in teacher certification should contact the Office of Teacher Education Advising and Certification.

Professional Certification Programs

Sheila Lowenbraun Associate Dean 201 Miller, DQ-12

Teacher Education Advising and Certification 211 Miller, DQ-12

The College of Education is authorized by the State Board of Education to offer professional certificate programs in education for administrators, educational staff associates, and teachers. Academic counselors are available in the Office of Teacher Education Advising and Certification to help with pre-program counseling, applications, long-range planning, continuing certificate needs, referrals to other campus resources, general program advising, and registration.

Administrator Certificates

Administrator certificate preparation programs for superintendents, principals, and program administrators are offered in the College of Education. Information concerning admission and requirements for these programs is available from the Area of Educational Leadership and Policy Studies, M204 Miller.

Educational Staff Associate Certificates

Educational staff associate certificate preparation programs are offered for the communication disorders specialist, occupational therapist, school counselor, school psychologist, and social worker. These programs are offered in various departments of the University or in the College of Education. Information concerning requirements and admission may be obtained as follows: communication disorders specialist- Department of Speech and Hearing Sciences, 203 Eagleson, JG-15, University of Washington, Seattle, Washington 98195; occupational therapist-Department of Rehabilitation Medicine, CC-902 University of Washington Medical Center, RJ-30, Seattle, Washington 98195; school counselor and school psychologist-Area of Educational Psychology, College of Education, 312 Miller, DQ-12, University of Washington, Seattle, Washington 98195; social worker–School of Social Work, JH-30, University of Washington, Seattle, Washington 98195.

Teaching Certificates

The College of Education is authorized by the State Board of Education to prepare and recommend individuals for Initial and Continuing Teaching Certificates. The Teacher Education Program is accredited by the National Council for the Accreditation of Teacher Education and by the National Association of State Directors of Teacher Education and Certification. Graduates are qualified for certification in all states party to the Interstate Certification Compact and in other states as well.

Initial Teaching Certification Program

The initial certification program at the University of Washington is in the midst of a total revision. To receive the most current information on the certification program, prerequisites, specific admission criteria, applications, and deadlines, contact the Office of Teacher Education Advising and Certification.

Continuing Teaching Certificates

Teachers may obtain an initial renewal or a continuing certificate either through a state-approved teaching institution or directly through the Office of the Superintendent of Public Instruction. For information on the OSPI guidelines, contact any Educational Service District or the Office of Professional Licensing and Certification, OSPI, FG-11, Old Capitol Building, Olympia, Washington 98504.

Teachers who wish to be recommended for the Continuing Teaching Certificate through the University of Washington, whether as postbaccalaureate or graduate students, should consult an adviser in the Office of Teacher Education Advising and Certification regarding certificate requirements.

Endorsements on Teaching Certificates

Teachers holding an initial or continuing teaching certificate under the 1988 guidelines may add endorsements to their certificates which will qualify them to teach subjects and at grade levels in addition to those in which they were originally endorsed. For information on state requirements and on endorsement course work through the University of Washington, contact the Office of Teacher Education Advising and Certification, 211 Miller, or UW Extension, GH-21, Seattle, Washington 98195. Teachers may also obtain applications and information and apply for endorsements directly through OSPI or an Educational Service District.

Graduate Degree Programs

Richard S. Neel, Associate Dean for Graduate Studies and Research, Graduate Program Coordinator

The College of Education offers three advanced degrees: Master of Education, Doctor of Education, and Doctor of Philosophy. Graduate students may specialize their degree studies in curriculum and instruction; educational psychology; educational leadership and policy studies; or special education. Questions regarding graduate study in education should be directed to the Office of Graduate Studies and Research, 206 Miller, DQ-12, College of Education, University of Washington, Seattle, Washington 98195.

Master of Education Degree

The Master of Education degree requires a minimum of 45 credits, including at least 15 credits in a specialized area of study in education; 9 credits related to but outside of the specialization, some course work outside education; 9 thesis credits or, for the nonthesis option, 9 credits in a field study or other approved project; and a final examination.

Doctor of Education Degree

The Doctor of Education degree is designed to prepare professionals whose primary interest is to deal directly with problems of educational practice. The program of study leading to the Doctor of Education degree, as a professional degree, focuses on the utilization of research knowledge and practitioners' knowledge, rather than on the production of research knowledge. Those who aspire to positions as master teachers, curriculum designers, or learning resource specialists, for example, would appropriately seek the Doctor of Education degree.

This professional degree requires at least two years of resident study, a program of specialized study with credit in education and related fields, sufficient preparation in research methodology to interpret research findings for use in practice, an internship and leadership training, a General Examination, a dissertation on a problem of educational practice, and a Final Examination.

Doctor of Philosophy Degree

The Doctor of Philosophy degree in education is specifically a research degree. While the typical recipient of the Doctor of Education degree becomes an educational practitioner in the schools or other educative agencies, the holder of the Doctor of Philosophy degree is prepared for a career of research on issues fundamental to the conduct of education-issues that range from fairly narrow questions about human learning to macroquestions regarding the form of societies' educational institutions. The scope of the Ph.D. degree in education is a broad one. It is possible to pursue a degree organized around traditional study areas such as educational psychology, curriculum and instruction, special education, or educational leadership. A student may develop a course of study that integrates various elements of more than one study area (e.g., multiethnic education, literacy).

Degree requirements include minimally two years of resident study, a program of specialized study with credits both in education and in other academic units, preparation in research methodology adequate to design and assess research in the field of specialization, sufficient study in cognate fields inside and outside of education to ensure that the candidate can place the specialized research in a broader context, a General Examination, a research dissertation, and a Final Examination.

268 COLLEGE OF EDUCATION / GRADUATE DEGREE PROGRAMS

Accreditation

The College of Education has the following formal accreditation: American Psychological Association (APA) for the Ph.D. program in school psychology; National Council for the Accreditation of Teacher Education (NCATE) for all certification programs in teaching and administration.

Admission Requirements

Admission to graduate degree programs in education is competitive, with space limited by faculty size and facilities. To be considered in the competition for admission to the Master of Education degree programs, the applicant should have earned a baccalaureate degree from an accredited institution and present a 3,00 GPA on the last 90 graded quarter hours, or 60 semester hours, of course work taken, must have submitted a score on the Graduate Record Examination general test, and must have satisfied any additional prerequisites specified by the area of specialization.

Consideration for admission to either doctoral program requires a master's degree or equivalent preparation in a field appropriate to the area of specialization, usually at least a 3.50 GPA in the master's program, satisfaction of special prerequisites specified by the area of specialization, and completion of the application steps outlined in the appropriate doctoral program document (available in the Office of Graduate Studies and Research, 206 Miller, DQ-12).

Financial Ald

Research and teaching assistantships in the College of Education are available on a competitive basis. To be considered for an appointment, the graduate student must show exceptional academic promise. Doctoral applicants are given priority.

Specific information on the various types of remunerative appointments for graduate students in education, amounts of stipends, application procedures, and deadlines may be obtained from the University of Washington College of Education, Office of Graduate Studies and Research, 206 Miller, DQ-12, Seattle, Washington 98195.

Special Research Facilities

Within the College of Education are opportunities for students to gain research experience through four organizations. The Clinical Training Laboratory, operating under the aegis of Educational Psychology, offers research facilities ranging from observation rooms equipped with videorecorders to central computer terminals, microcomputers, and a library. The worldrenowned Experimental Education Unit offers an interdisciplinary approach to research, training, and service provision for handicapped children and their families. The Institute for the Study of Educational Policy, which promotes interdisciplinary research that bears on education policy, provides a point of contact between the University and the educational policy researchers and analysts throughout the state. The Teacher Education Research Center assists faculty members and graduate students in conducting research and evaluation on teacher education.

Faculty

Professors

Abbott, Robert D. * 1975; PhD, 1970, University of Washington; measurement, statistics and research design.

Affleck, James Q. * 1967; EdD, 1968, Columbia University; special education/inclusion.

Anderson, Robert A. * 1965, (Emeritus); PhD, 1964, University of Minnesota; educational administration.

Banks, James A. * 1969; PhD, 1969, Michigan State University; social studies, multiethnic education.

Berninger, Virginia Wise * 1986; PhD, 1981, Johns Hopkins University; educational psychology.

Billingsley, Felix F. * 1977; PhD, 1974, University of Washington; special education (severely handicapped).

Bolton, Dale Leroy * 1965, (Emeritus); PhD, 1958, University of Wisconsin; educational administration.

Boroughs, Homer Jr. 1946, (Emeritus); PhD, 1949, University of Washington; history and philosophy of education.

Brammer, Lawrence M. * 1963, (Emeritus); PhD, 1950, Stanford University; counseling, adult development.

Briggs, Robert 1947, (Emeritus); EdD, 1954, University of Washington; business education.

Brown, Frances A. 1953, (Emeritus); MA, 1950, Columbia University; business education.

Burgess, Charles O. * 1964, (Emeritus); PhD, 1962, University of Wisconsin; history of education.

Butterfield, Earl C. * 1981; PhD, 1963, George Peabody College; cognitive development, metacognition.

Dohner, Charles W. * 1967; PhD, 1966, Ohio State University; program evaluation, administration, faculty development.

Doi, James I. * 1979, (Emeritus); PhD, 1952, University of Chicago; finance and management of colleges and universities.

Driscoll, John P. * 1967, (Emeritus); PhD, 1957, Pennsylvania State University; educational communications.

Edgar, Eugene Bayard * 1972; PhD, 1972, George Peabody College; special education.

Evans, Ellis D. * 1964; EdD, 1964, Indiana University; human development and cognition.

Fea, Henry R. 1954, (Emeritus); PhD, 1950, University of California (Berkeley).

Forster, Jerald R. * 1966; PhD, 1966, University of Minnesota; counseling.

Freehill, Maurice F. * 1962, (Emeritus); EdD, 1948, Stanford University; school psychology/human development and cognition.

Gay, Geneva * 1989; PhD, 1972, University of Texas (Austin); general curriculum theory, multicultural education, and educating African American students.

Gehrke, Nathalie J. * 1979; PhD, 1976, Arizona State University; curriculum.

Giles, Frederic T. 1961, (Emeritus); EdD, 1961, Washington University.

Glenn, Allen D. * 1989; PhD, 1970, University of Michigan; teacher education, social studies education, and instructional computing.

Goodlad, John I. * 1983, (Emeritus); EdD, 1982, Eastern Michigan University; education reform, curriculum theory.

Haring, Norris Grover * 1965, (Emeritus); EdD, 1956, Syracuse University; special education (early childhood).

Hunkins, Francis Peter * 1966; PhD, 1966, Kent State University; curriculum.

Irby, David M. * 1972, (Adjunct); PhD, 1977, University of Washington; the evaluation and improvement of clinical teaching in medicine.

Jarolimek, John * 1962, (Emeritus); PhD, 1955, University of Minnesota; social studies.

Jenkins, Joseph R. * 1978; PhD, 1967, University of Minnesota; special education (mildly handicapped).

Kaltsounis, Theodore * 1967; PhD, 1961, University of Illinois; social studies.

Kerr, Donna H. * 1973; PhD, 1973, Columbia University; philosophy and education. Kerr, Stephen T. * 1985; PhD, 1975, University of Washington; information technology and telecommunications.

Klockars, Alan J. * 1963; PhD, 1967, University of Washington; measurement, statistics and research design.

Lovitt, Thomas C. * 1966; EdD, 1966, University of Kansas; special education (mildly handicapped).

Lowenbraun, Sheila * 1968; PhD, 1969, Columbia University; special education (hearing impaired).

Madsen, David L. * 1962, (Emeritus); PhD, 1961, University of Chicago; history of education.

McCartin, Rosemarie E. * 1969, (Emeritus); PhD, 1964, University of Southern California; school psychology/ human development and cognition.

Meacham, Merle L. * 1964, (Emeritus); MS, 1956, University of Washington; school psychology.

Mizokawa, Donald T. * 1973; PhD, 1974, Indiana University; human development and cognition.

Morishima, James K. * 1960; PhD, 1967, University of Washington; human development and cognition.

Morris, Arval * 1955, (Adjunct); LLM, 1958, Yale University; constitutional law, jurisprudence, education law.

Neel, Richard S. * 1972; PhD, 1972, University of Southern California; special education (severely handicapped).

Nelson, Thomas O. * 1971, (Adjunct); PhD, 1970, University of Illinois; human memory, metacognition, research methodology, philosophy of science.

Odegaard, Charles E. 1979, (Emeritus); PhD, 1937, Harvard University; history of medical education.

Olstad, Roger G. * 1964; PhD, 1963, University of Minnesota; science education, teacher education.

Olswang, Steven G. * 1975; PhD, 1977, University of Washington; higher education administration and policy, law, faculty government, collective bargaining.

Peckham, Percy D. * 1968, (Emeritus); PhD, 1968, University of Colorado (Denver); measurement, statistics and research design.

Reitan, Henry M. 1967, (Emeritus); PhD, 1950, University of North Dakota.

Robinson, Nancy M. * 1969, (Adjunct): PhD, 1958, Stanford University; psychology.

Ryckman, David B. * 1969; EdD, 1966, University of Illinois; special education (mildly handicapped).

Sax, Gilbert * 1965; PhD, 1958, University of Southern California; measurement, statistics and research design.

Sebesta, Sam L. * 1963; EdD, 1963, Stanford University; reading/language arts.

Sirotnik, Kenneth A. * 1985; PhD, 1969, University of California (Los Angeles); measurement, statistics, research design and evaluation, educational change and school renewal.

Standal, Timothy * 1976; PhD, 1976, University of Minnesota; reading/language arts.

Stowitschek, Joseph James * 1986, (Research); EdD, 1973, Utah State University; vocational and social development, service policies regarding disabled youth.

Strayer, George D. 1949, (Emeritus); PhD, 1934, Columbia University.

Thompson, Marie D. * 1979; PhD, 1970, University of Washington; special education (hearing impaired).

Torkelson, Gerald M. * 1965, (Emeritus); EdD, 1953, Pennsylvania State University; educational media.

Tostberg, Robert E. * 1962, (Emeritus); PhD, 1960, University of Wisconsin; philosophy of education.

White, Owen R. * 1973; PhD, 1971, University of Oregon; special education (severely handicapped).

Williams, Donald T. * 1969; PhD, 1963, Stanford University; higher education.

Williams, Richard C. * 1990; PhD, 1966, University of Minnesota; career socialization of school principals; the process of school reform.

Winn, William David * 1985; PhD, 1972, Indiana University; educational technology, instructional theory, instructional design, visual information processing.

Associate Professors

Beal, Jack L. * 1973; PhD, 1972, University of Nebraska; secondary mathematics education.

Brown, Robert Lewis * 1965; EdD, 1961, University of Arkansas; school psychology.

Dimmitt, Norma M. 1969, (Emeritus); EdD, 1970, Stanford University.

Fassett, William E. 1980, (Adjunct); PhD, 1992, University of Washington; pharmacy administration, professional ethics.

Frerichs, Alberta J. 1955, (Emeritus); MEd, 1951, University of Nebraska; business education.

Gray, Carol A. * 1971; PhD, 1971, University of Washington; school psychology/human development and cognition.

Grossman, Pamela * 1987; PhD, 1988, Stanford University; research on teaching and teacher education, teacher knowledge, and qualitative research methods.

Hansen-Krening, Nancy M. * 1974; PhD, 1974, University of Oregon; reading/language arts.

Keating, Pamela J. * 1982, (Research); PhD, 1981, University of Washington; educational policy studies: law; equity-finance, gender, access to knowledge; comparative analysis.

Kelly, Samuel E. 1970, (Emeritus); PhD, 1971, University of Washington.

Knapp, Michael S. * 1990; PhD, 1981, Stanford University; public policy in education; policy research; sociology of education.

Malen, Betty L. * 1990; PhD, 1983, University of Minnesota; educational policy; organizational relationships.

McCutchen, Deborah Elaine * 1986; PhD, 1985, University of Pittsburgh; cognitive processes underlying reading and writing skills.

Nelson, George D. * 1989, (Adjunct); PhD, 1978, University of Washington; stellar atmospheres, radiative transfer, hydrodynamics.

Nolen, Patricia A. * 1970, (Emeritus); PhD, 1970, University of Washington; school psychology/human development and cognition.

Ostrander, Kenneth H. * 1968; EdD, 1968, Tennessee State University; educational administration.

Parker, Walter C. * 1985; PhD, 1982, University of Washington; social studies.

Smith, John P. * 1969; EdD, 1969, Stanford University; science education.

Sulzbacher, Stephen 1972, (Adjunct); PhD, 1971, University of Washington; psychiatry and behavioral sciences.

Thalberg, Stanton P. * 1965, (Emeritus); PhD, 1964, University of Iowa; school psychology.

Valencia, Sheila Denise W. * 1987; PhD, 1978, University of Colorado (Boulder); reading remediation, comprehension, instruction and assessment.

Vasquez, James A. * 1975; PhD, 1973, University of California (Los Angeles); learning (minority youth)/bilingual education.

Wineburg, Samuel S. * 1989; PhD, 1990, Stanford University; educational psychology, cognitive psychology of school subjects, historical cognition. Zumeta, William M. * 1985, (Adjunct); PhD, 1978, University of California (Berkeley); public management, policy analysis, education and workforce policy.

Assistant Professors

Bamburg, Jerry D. * 1985, (Research); EdD, 1989, University of Washington; educational reform, organizational change.

Bashey, Husain Ismail 1968; PhD, 1975, University of Oregon; counseling.

Beadie, Nancy Elizabeth * 1993; PhD, 1989, Syracuse University; history of education.

Kerdeman, Deborah * 1990; Other, 1991, Stanford University; philosophy of education, philosophy of social inquiry, and hermeneutics.

Mukhopadhyay, Swapna 1991; PhD, 1989, Syracuse University; curriculum and instruction.

Nelson, Mary Lee * 1990; PhD, 1989, University of Oregon; counseling, interpersonal theory, process research, supervision, gender issues.

Nolen, Susan B. * 1990; PhD, 1986, Purdue University; development of students' achievement motivation and learning strategies.

Plecki, Margaret L. 1994; PhD, 1991, University of California (Berkeley); economics of education.

Schwartz, Ilene Sharon * 1991; PhD, 1989, University of Kansas; early childhood, classroom-based interventions, and applied behavior analysis.

Semrud-Clikeman, Margaret * 1991; PhD, 1990, University of Georgia; school psychology, childhood psychopathology; neuropsychology.

Taylor, Catherine S. 1991; PhD, 1986, University of Kansas; educational psychology.

Senior Lecturer

Julnes, Ralph 1987; JD, 1980, University of Puget Sound; school law.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Education Curriculum and Instruction

EDC&I 324 Physical Education and Health in the Schools (2) Techniques and procedures for teaching physical education and health in elementary and secondary schools. Prerequisite: admission to Teacher Certification Program.

EDC&I 329 Teaching Foreign Language in the Schools (4) Basic course in the methods of teaching foreign languages in the K-12 school, including practicum.

EDC&I 341 The Teaching of Art in the Secondary School (3) For majors in secondary art education planning to teach on the junior or senior high school level.

EDC&I 353 Teaching in the Elementary School (3) Emphasizes selected teaching modes; lesson planning; classroom management procedures; grouping to accommodate pupils with special needs; utilization of learning resources; evaluation of teaching. Attention also given to school culture. Prerequisite: admission to Teacher Certification Program.

EDC&I 354 Teaching in the Secondary School (3) Development of basic skills in instructional methods, lesson planning, classroom management procedures, evaluation of teaching. Attention also given to school culture. Prerequisite: admission to Teacher Certification Program.

EDC&I 355 Language Arts in the Elementary School (3) Hansen-Krening, Valencia Basic course in planning and teaching elementary language arts: listening and speaking, written composition, handwriting, spelling, creative and practical writing. Prerequisites: admission to Teacher Certification Program.

EDC&I 356 The Teaching of English (3) Combines theoretical understanding of teaching with specific techniques and materials for literature, language, composition, and mass media at the secondary level; coordinated with concurrent experience in schools. Prerequisites: admission to Teacher Certification Program.

EDC&I 357 The Teaching of Speech (3) Staton Special methods course in the teaching of speech communication at the elementary and secondary levels. Prerequisites for majors in speech communication: at least 20 credits in speech communication; for nonmajors: permission of instructor.

EDC&I 360 Reading in the Elementary School (3) Basic course in methods, techniques, and materials used the teaching reading through decoding, comprehension, strategies, and literature in primary and intermediate grades. Prerequisites: admission to Teacher Certification Program.

EDC&I 365 Social Studies in the Elementary School (3) Banks, Kaltsounis, Parker Basic course in the planning and teaching of social studies in the elementary school. Prerequisites: GEOG 100 and admission to Teacher Certification Program.

EDC&I 366 The Teaching of Social Studies in Secondary Schools (3) Kaltsounis, Parker Application of educational principles and methods to the teaching of social studies on the junior and senior high school levels.

EDC&I 370 Science in the Elementary School (3) Kubota, Smith Basic course in the teaching of science in the elementary school with special emphasis on the nature of science as a process of inquiry. Prerequisites: 5 credits in an approved laboratory natural science course (biology, chemistry, or physics), and admission to Teacher Certification Program.

EDC&I 371 Teaching Science in the Secondary School (3) Olstad Basic course in the teaching of science in the secondary school with special emphasis on the nature of science as a process of inquiry. Prerequisites: admission to Teacher Certification Program.

EDC&I 372 The Teaching of Blology (2) Prerequisites: 371 and 25 credits in biology.

EDC&I 373 The Teaching of Chemistry (3) Prerequisites: 371 and at least 20 credits in college chemistry.

EDC&I 375 Mathematics in the Elementary School (3) Beal, Mukhopadhyay Examination of the learning and teaching of elementary mathematics, in light of recent theoretical and pedagogical developments. Prerequisites: MATH 170, and admission to Teacher Certification Program.

EDC&I 378 Teaching Mathematics in the Secondary School (3) Beal, Mukhopadhyay Basic course in the teaching of mathematics in the secondary school for preservice teachers. Prerequisites: admission to Teacher Certification Program.

EDC&I 424 Multiethnic Curriculum and Instruction (3) Banks Primarily for preservice and in-service teachers who have little or no previous exposure to issues related to ethnicity and schooling. Designed to help teachers better understand the school's role in the ethnic education of students and acquire the insights, understandings, and skills needed to design and implement curricular and instructional strategies that reflect ethnic diversity. Prerequisite: admission to Teacher Education Program, teaching experience, or permission of instructor.

EDC&I 425 Instructional Strategies for Minority Students (3) Designed to equip educators with appropriate skills in effective teaching of culturally and

socioeconomically different students. Attention is directed to understanding how these students differ from mainstream youth and what the implications are for instructional strategies in the classroom. No credit given for students who have completed EDPSY 513/ 536.

EDC&I 434 Introduction to Computers in the Classroom (3) Overview of the uses of computers in education. Uses of computers in instruction, classroom management (gradebooks, utilities), evaluation of software, overview of programming, and word processing. Prior experience not required.

EDC&I 436 Design and Authoring of CAI (3) introduction to the design of computer-assisted-instructional programs. Types of learning, characteristics of effective instruction. Students design and produce CAI programs using authoring systems for computers. Offered: jointly with TC 436.

EDC&I 437 Uses of Computer Application Packages in Schools (3) Introduction to the instructional and management uses of application programs. Topics may include: databases, spreadsheets, word processing, graphics packages, graphing utilities, telecommunication, desktop publishing. Emphasis is on K-12 setting. Prerequisites: 434 or equivalent and word processing skills.

EDC&I 443 Improvement of Teaching: Elementary School Music (3) Advanced studies in the teaching of music in the elementary school. Prerequisite: teaching experience.

EDC&I 453 Teaching the Bilingual-Bicultural Student (3) Vasquez Educational needs of bilingual students: research findings, special programs, materials, and methodologies that bilingual-bicultural education can provide to meet those needs. Cultural educanations of bilingual populations in American culture; historical, social, and linguistic factors affecting their K-12 education.

EDC&I 454 Cooperative Learning in the Classroom (3) Theory and research on cooperative learning and current practices of managing such learning. Team learning activities and opportunities to plan and try out lessons and materials using several different cooperative strategies. Prerequisite: student teaching, which may be done concurrently.

EDC&I 455 The Language Arts: Instructional . Problems and Practices in the Elementary School (3) Hansen-Krening, Valencia Study of important and recent research in elementary school language arts and consideration of its practical implications for teaching. Prerequisite: teaching experience.

EDC&I 456 Workshop in Instructional Improvement: Language Arts (1-6, max. 15) Individual or group study projects on the improvement of instruction in language arts.

EDC&I 457 Methods in Teaching English as a Second Language (3) Prepares preservice and in-service teachers to teach English as a second language and to meet the educational and linguistic needs of students who have little or no English language skills. Emphasis on a survey of first- and second-language acquisition research and its educational implications, as well as instructional strategies consistent with the audiolingual, cognitive, and creative construction approaches to second-language learning. Includes diagnosticprescriptive strategies for classroom application.

EDC&I 459 Workshop in Instructional Improvement: Reading (1-6, max. 15) Projects on the improvement of instruction in reading. Prerequisite: minimum of one course in methods of teaching reading.

EDC&I 460 The Teaching of Reading (3) Hansen-Krening, Sebesta, Valencia Improvement of teaching reading in the elementary school, including comprehension and decoding, reading in the content fields, motivation of voluntary reading and teaching of titerature. Prerequisite: teaching experience or prior course work in the teaching of reading.

EDC&I 461 Materials for Teaching Reading (3) Hansen-Krening, Sebesta, Valencia Designed to provide acquaintance with materials used in the teaching of reading. Trade books and materials from content areas are examined. Prerequisite: one prior course in the teaching of reading.

EDC&I 462 Reading in the Secondary School (3) Standal Teaching of reading in the secondary schools, including vocabulary development, comprehension, reading in the content fields, and organization of reading programs at the secondary level. Prerequisite: teaching experience or concurrent internship.

EDC&I 464 Educating Native American Youth (3) Assists students in understanding the North American Indian child from cultural, socioeconomic, and psychological points of view. Provides opportunities for the student to apply knowledge and skills gained in other courses to prepare programs and learning aids relevant to the educational situation of the Indian child.

EDC&I 465 Social Studies Education: Elementary School Programs and Practices (3) Banks, Kaltsounis, Parker Stresses curriculum patterns, instructional procedures, resource materials, and the selection of content in social studies. For elementary and middle school teachers. Prerequisite: teaching experience.

EDC&I 466 Social Studies Education: Secondary School Programs and Practices (3) Kaltsounis, Parker Stresses curriculum patterns, instructional procedures, resource materials, and a selection of content in social studies for middle, junior, and senior high school teachers. Prerequisite: teaching experience.

EDC&I 467 Geography in the Social Studies Curriculum (3) I&S Discussion of the concepts and content of geography essential to effective social studies curricula. Offered: jointly with GEOG 467.

EDC&I 468 Workshop in Instructional Improvement: Social Studies (1-6, max. 15) Individual or group study projects on the improvement of instruction in social studies.

EDC&I 469 Educating the Black Inner-City Child (3) Banks Intensive analysis and review of the research and literature, both theoretical and empirical, relevant to curriculum patterns and programs designed especially for Black inner-city children. Special attention is given to the implications of the research reviewed for devising effective teaching strategies for Black inner-city children.

EDC&I 470 Science Education: Elementary School Programs and Practices (3) Oistad, Smith Designed for classroom teachers with reference to the teaching and learning of science from kindergarten ethrough grade 6. Emphasis is placed on objectives, methods, and materials as related to the concepts and processes of science. Prerequisite: teaching experience.

EDC&I 471 Science Education: Secondary School Programs and Practices (3) Olstad, Smith Survey of the status and potential role of science in education; trends and their implications for the teaching of both biological and physical sciences in the junior and senior high schools; representative curricula and related teaching procedures; the psychology of concept formation and problem solving; and organization of science programs. Prerequisite: teaching experience.

EDC&I472 Environmental Education for Teachers (3) Smith Status, selected problems, and role of environmental education in program of elementary, middle, and junior high schools. Opportunity to examine and receive instruction in use of existing environmental education instructional materials. Instruction is in the spirit of inquiry/discovery. Prerequisite: teaching experience. EDC&I 473 Workshop in Instructional Improvement: Science (1-6, max. 15) Olstad, Smith Individual or group study projects on the improvement of instruction in science.

EDC&I 474 Multi-Ethnic Studies: Methods, Content, and Materials (3) Banks Designed to help preservice and in-service teachers identify content and materials and devise methods for implementing ethnic studies programs and for incorporating ethnic content into regular K-12 social studies, language arts, and humanities curricula. Special attention is given to teaching about American Indians, Mexican-Americans, African Americans, Asian Americans, Puerto Rican-Americans, and White ethnic groups. Prerequisite: admission to Teacher Education Program or teaching experience.

EDC&I 475 Improvement of Teaching: Elementary School Mathematics (3) Beal, Mukhopadhyay Designed for elementary teachers. Emphasis is placed on the contributions of research to the improvement of the teaching of mathematics in the elementary school. Prerequisite: teaching experience.

EDC&I 476 Improvement of Teaching: Junior High School Mathematics (5) Exploration of mathematical concepts for the purpose of improving the teaching of middle school mathematics.

EDC&I 477 Improvement of Teaching: Secondary School Mathematics (5) Exploration of mathematical concepts for the purpose of improving the teaching of secondary-school mathematics. Prerequisite: teaching experience.

EDC&I 478 Special Topics in Mathematics for Teachers (2-9) NW Study of selected areas of mathematics. Designed for the improvement of teachers of mathematics. Offered: jointly with MATH 497.

EDC&I 479 Workshop in Instructional Improvement: Mathematics (1-6, max. 15) Individual or group study projects for the improvement of instruction in mathematics.

EDC&I 480 Introduction to Graduate Study in Educational Technology (3) Introduction to the theoretical and practical aspects of educational technology. Introduces the history, conceptual orientation, and research of the field. The practical application of theory and research through the procedures of instructional design and development are also examined.

EDC&I 481 Introduction to Instructional Design (3) Students design a unit of instruction that relies upon a technology for its delivery. Steps in the design process discussed and practiced, and principles that guide selection of methods and materials applied.

EDC&I 482 Educational Technology in Schooling (3) Introduction to the application of technologies (computers, telecommunications, interactive video) in schools. Designed primarily for pre- and in-service teachers, but of interest to anyone involved in technology in education.

EDC&I 485 Workshop in Instructional Improvement: Educational Communication and Technology (2-6) Individual or group study projects on the improvement of instruction through use of educational communication and technology. Prerequisite: 480.

EDC&I 488 Educational Technology and Learning In Alternative Settings (3) How educational technology can be used to encourage learning in nonschool environments, such as museums, radio and television broadcasts; parks and recreation centers, and distance education programs. Students investigate one of these areas and prepare a project.

EDC&J 494 Workshop In Improvement of Curriculum (1-6, max. 15) Stresses the application of procedures for curriculum development, maintenance, and evaluation. Opportunities furnished to develop and perfect strategies for program development with occa-

sions given to utilize the strategies in master plan and materials preparation for simulated or real school situations. Specific focus of workshop is determined by instructor or by arrangement with district. Prerequisite: permission of instructor.

EDC&I 495 Workshop in Improvement of Teaching: Selected Topics, issues, or Problems (1-6, max. 15) Individual or group projects to help teachers adapt instruction to selected topics, issues, or problems and to identify the approaches and instructional resources that provide the soundest learning experiences.

EDC&I 496 Workshop in Instructional Improvement (2-6, max. 6) Individual or group study projects on the improvement of instruction with attention to designing instructional plans.

EDC&I 497 Dealing Effectively with the Disruptive Student (3) Several approaches to discipline. Using research, theory, and practice, participants develop individual action plans for classroom management, create formats to identify disruptive behavior, develop strategies for intervention of disruptive behavior, and devise means for evaluating the effectiveness of teacher interventions. Prerequisite: student teaching, which may be done concurrently.

EDC&I 499 Undergraduate Research (2-5, max. 5) Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program.

EDC&I 500 Field Study (3/6, max. 9) Individual study of an educational problem in the field under the direction of a faculty member. Prerequisites: approved plan of study and permission of the instructor must be filed in the Office of Curriculum and Instruction in the College of Education.

EDC&I 505 Seminar in Curriculum and Instruction (1-3, max. 15) Seminar on advanced topics in curriculum and instruction. Critical examination of current research and practice. Content varies, check quarterly *Time Schedule* for topics to be covered. Prerequisite: permission of instructor.

EDC&I 524 Seminar in Teacher Education (3, max. 6) Gehrke, Grossman Focus on recent research, issues, and proposals for future development in teacher education, certification, and continuing professional growth. Alternate year offering focuses on either preservice or inservice issues. Prerequisite: permission of instructor.

EDC&I 530 Seminar in Analysis of Approaches for Teaching Reading (3) Sebesta, Valencia Designed to aid experienced teachers who possess background in the teaching of reading, this course presents a variety of approaches and actual analysis of approaches. Prerequisites: teaching experience and a basic course in the teaching of reading.

EDC&I 531 Seminar: Analysis of Reading Materials (3) Sebesta, Valencia Students formulate and apply criteria for assessing materials, with emphasis on linguistic, cultural, and psychological factors; instruction effectiveness, interest level; and educational objectives. Prerequisites: teaching experience and one basic course in the teaching of reading.

EDC&I 532 Seminar in Research in Reading (3) Sebesta, Standal, Valencia Primary focus on those aspects of the reading program. Emphasis is on research design, evaluation of research, and research findings dealing with factors influencing reading ability, problems in skill development, and recreational reading. Course work includes group and individual analysis of studies with attention to research design and measurement. Prerequisite: permission of instructor.

EDC&I 533 Seminar: Conducting Research in Reading (3, max. 6) Sebesta, Standal Students

design and conduct original research studies in the field of reading. Emphasis on research rationale, choice of productive research types, and reporting of research results and implications. Prerequisite: 532.

EDC&I 534 Seminar in the Reading of Literature (3) Hansen-Krening, Sebesta Reading of literature and its effect on reading skills, language development, social values, and literary judgment of children and adolescents. Emphasis on analysis of research in these areas and on the development of action research designed to study response to literature. Prerequisite: one 400- or 500-level education curriculum and instruction course in reading or language arts or one graduate course in literature for children or young adults.

EDC&I 535 Seminar: Conducting Research in Response to Literature (3, max. 6) Hansen-Krening, Sebesta Students design, conduct, and interpret original research studies in the field of reading literature within the context of the school curriculum. Emphasis on the analysis of literary content and structure and the relationship of those qualities to the literary experience. Prerequisite: 534.

EDC&I 541 Seminar in Bilingual Education: Organization and Structure (4) Study of the structure and organization of bilingual programs. Includes study of the developmental and organizational factors affecting bilingual education. Assists graduate students in reviewing the historical antecedents in bilingual education and in developing a personal philosophy about bilingual education.

EDC&I 542 Seminar in Bilingual Education: Instructional Foundations and Issues (4) Vasquez Study of the theoretical foundations and instructional implications of psychology and linguistics as they apply to bilingual education. Assists graduate students in exploring learning styles of bilingual children and in becoming familiar with the crucial issues in bilingual education.

EDC&I 543 Seminar in Bilingual Education: Instructional Strategles (4) Vasquez Study of instructional factors affecting bilingual education. Particular emphasis is given to research related to the variables involved in teaching in a bilingual environment. Assists graduate students in exploring instructional methodologies and formats as they apply to bilingual education and in becoming familiar with the current issues in bilingual education.

EDC&I 550 Educational Technology Research (3) Kerr, Winn Analysis, critique, and practical experience with research studies of all types (experimental, ethnographic, evaluation) concerning questions of interest to educational technologists. Prerequisite: 480, a research methods course, or permission of instructor.

EDC&I 551 Design of Computer-Based Training (3) Winn Examination of the issues surrounding the design of computer-based training for use in business and industry. Exploration of the implications of these issues by means of the development and testing of CBT units. Prerequisites: 436, 481.

EDC&I 555 Educational Futures (3) Hunkins Concept of alternative futures stressing manageability of the future. Attention is given to current and future events that can or might impact education. Basic future studies methods are considered with opportunities to apply such methods within educational arena. Prerequisite: prior graduate course work or experience in education.

EDC&I 556 Elementary School Curriculum (3) Hunkins Study of elementary school curriculum, its design, rationale, and delivery. Current trends and issues affecting elementary school curriculum analyzed.

EDC&I 558 Secondary School Curriculum (3) Gay, Gehrke Systematic analysis of current curriculum practices, with particular emphasis on the social and historical forces affecting secondary-school curriculum.

EDC&I 559 Principles and Procedures of Curriculum Development (3) Hunkins, Gay, Gehrke Intensive study of basic principles and procedures utilized in development of curricula. Participants have opportunities to apply such procedures in class activities. Attention given to curriculum foundations.

EDC&I 561 Seminar in Language Arts (3) Hansen-Krening Study of language with special attention to research pertaining to the social context of language in the classroom. Course work includes group and individual analysis of language arts studies with attention to research design and measurement. Prerequisite: 455.

EDC&I 562 Seminar in Reading and Language Arts: Secondary Emphasis (3) Standal Study of recent research in listening; oral language, reading, and written language, emphasizing psychological and interrelated aspects. Prerequisite: permission of instructor.

EDC&I 563 Current Issues in Language Arts Education (1-3, max. 6) Hansen-Krening Discussion of problems and issues of current interest and importance in language arts education. Prerequisite: 561

EDC&I 565 Seminar in Social Studies Education: Elementary Emphasis (3) Banks, Kaltsounis, Parker Intensive study of the social studies curriculum, with particular emphasis on current literature and research. Prerequisite: 465 or equivalent.

EDC&I 566 Seminar in Social Studies Education: Secondary Emphasis (3) Banks, Kaltsounis, Parker Intensive study of the social studies curriculum, with particular emphasis on current literature and research. Prerequisite: 466 or equivalent.

EDC&I 567 Current Issues in Social Studies Education (1-3, max. 6) Kaltsounis, Parker Discussion of problems and issues of current interest and importance in social studies education.

EDC&I 568 Seminar on Instruction and Curriculum for Minority Youth (3) Vasquez Examines research related to curriculum and instruction for minority youth for purpose of preparing teachers, administrators, and other educators working with students who differ from mainstream students in value and motivational systems, learning styles, and socialization practices. Prerequisite: 591, or permission of instrutor.

EDC&I 569 Educating Ethnic Minority Youths (4) Banks Intensive analysis and review of the research and curricular programs related to the social, psychological, and political factors that influence the school experiences of ethnic minority youths. Special attention given to instructional and curricular programs for African American, American Indian, Mexican-American, Puerto Rican-American, and Asian-American students. Prerequisite: graduate standing or permission of instructor.

EDC&I 570 Seminar in Science Education: Elementary Emphasis (3) Olstad, Smith Investigation of curriculum and instruction in science at elementaryschool levels, with particular emphasis on current literature and research. Prerequisite: 470 or equivalent.

EDC&I 571 Seminar in Science Education: Secondary Emphasis (3) Olstad, Smith Investigation of curriculum and instruction in science at secondaryschool levels, with particular emphasis on current literature and research. Prerequisite: 471 or equivalent.

EDC&I 572 Current Issues in Science Education (1, max. 6) Olstad, Smith Discussion of topics and problems of current interest and importance in science education. Prerequisite: graduate standing.

EDC&I 574 Race, Gender, and Knowledge Construction: Curriculum Considerations (3) Banks Using historical and contemporary perspectives, considers ways in which knowledge related to race and gender has been and is constructed and the implications of ways in which knowledge is constructed for curriculum reform and teaching. Prerequisite: one course in ethnic studies, multicultural education, or women studies or permission or instructor.

EDC&I 575 Seminar in Mathematics Education: Elementary Emphasis (3) Beal, Mukhopadhyay Investigation of curriculum and instruction in mathematics at the elementary-school level; review of research and preparation of proposals. Prerequisite: graduate standing.

EDC&I 576 Seminar in Mathematics Education: Secondary Emphasis (3) Beal, Mukhopadhyay Investigation of curriculum and instruction in mathematics at the secondary-school level; review of research and preparation of proposals. Prerequisite: graduate standing.

EDC&I 577 Current Issues in Mathematics Education (1, max. 6) Beal, Mukhopadhyay Discussion of problems and issues of current interest and importance in mathematics education. Prerequisite: graduate standing.

EDC&I 578-579 Qualitative Methods of Educational Research (3-3) Grossman, Wineburg Survey of various qualitative research methods from a variety of disciplinary perspectives (anthropology, cognitive psychology, policy analysis and evaluation) with intensive experience in collection, analysis, and reporting of data. Prerequisites: second year doctoral standing and one course in statistics. Students must enroll for both quarters. Offered: jointly with EDPSY 586-587.

EDC&I 580 Seminar in Educational Communication and Technology (3) History, basic assumptions, and current controversies of the field. Discussion of appropriate research, theory, and practice for educational technologists. Prerequisite: 480 or permission of instructor.

EDC&I 581 Management of Educational Technology Programs (3) Factors contributing to effective management of programs incorporating educational technology and microcomputers. Manager's role as agent of instructional change and processes leading to successful adoption and long-term implementation of a new instructional system. Prerequisite: 480 or permission of instructor.

EDC&I 582 Seminar on Instructional Systems Development (3) Critical analysis of processes involved in the development of instructional systems. Prerequisites: 481 or permission of instructor.

EDC&I 583 Message Design (3) Research and theory on design of instructional messages in various modalities (visual, auditory), and in various formats (pictorial, verbal, graphic). Prerequisite: 480 or permission of instructor.

EDC&I 584 Instructional Graphics for Microcomputers (3) Winn Study of current research on instructional uses of computer graphics. Development, selection, and application of design principles for graphically-based instructional and training programs. Prerequisites: 436, 481.

EDC&I 585 Technology and the Culture of Education (3) Social impact of technology on education in the United States and elsewhere: social, political, and cultural factors affecting educational communication and technology; roles and relationships among instructors and learners; appropriate technology in developing countries; technology's long-term influence on thought and values. Prerequisite: 480 or permission of instructor.

EDC&I 586 Current lasues for Computers in the Classroom (1, max. 6) Addresses many of the current topics in computer-related education. Issues and research related to computer uses in curriculum, instruction, and management of instruction.

EDC&I 587 Design of Interactive Instructional Systems (3) Theoretical and empirical questions involved in design of interactive instructional systems using such technologies as videodisc, and CAI. Specific problems inherent in design of complex learning environments: control, branching, structure and sequence of material, way-finding, help systems. Prerequisites: 481 or 582, and 436; or permission of instructor.

EDC&I 588 Seminar: Computers in Education (3) Provides opportunity for graduate students to analyze, discuss, and design research in areas of computers in education. Includes historical development of research in this area as well as a platform for the development of research proposals and refinement of ongoing research. Prerequisite: 434 or 436.

EDC&I 589 Current Issues in Educational Communications (1, max. 9) Discussion of problems and issues of current interest and importance in the field of educational communications. Serves also as a forum for discussion of doctoral research. Designed for master's and doctoral candidates in educational communications. Credit/no credit only. Prerequisite: graduate standing.

EDC&I 590 Seminar in Elementary Education (3) Hunkins Exploration of the philosophy, history, purposes, curriculum, methods, and school organization of elementary education. Prerequisites: elementaryschool teaching experience, 556.

EDC&I 591 Seminar in Curriculum Research (3) Gehrke, Hunkins Analysis of past and current empirical, historical, ethnographic research, and philosophical analysis of the curriculum field. Studies considered include research in curriculum development, the curriculum plan, contextual characteristics, and factors related to curriculum participants. Group and individual analyses focus on theory generation and practical applications of research. Prerequisite: 559 or permission of instructor.

EDC&I 592 Seminar in Secondary Education (3) Gehrke Research and study of secondary education. Primary focus on factors involving change in secondary-school curriculum and organization. Prerequisite: 558.

EDC&I 593 Seminar in Curriculum: Theory and Practice (3) Hunkins Investigation of curriculum theory and practice. Consideration is given to theoretical models that explain and/or describe the relationships between various curricular variables. These theoretical models are related to curricular practices and innovations. Prerequisite: 559.

EDC&I 594 Seminar in Curriculum: Issues, Systems, Models (3) Hunkins Emphasis, from a systems and futuristic view, on the current approaches to curriculum, curriculum innovation, and major educational issues as they affect curricular activity. Prerequisite: 559.

EDC&I 595 Seminar In Analysis of Teaching (3) Gehrke, Grossman, Hunkins Investigation of the ways in which classroom teaching has been analyzed from a variety of disciplinary perspectives. Focus on methods, findings, and implications of research on teaching. Prerequisite: teaching experience.

EDC&I 596 Seminar in Strategles of Instruction (3) Grossman, Hunkins Various instructional models applicable to all levels of schooling. Theoretical and philosophical bases for these instructional models are considered.

EDC&I 597 Curriculum Evaluation Seminar (3, max. 6) Smith Focuses on the evaluators' roles, evaluation theory and models, and selected curricular evaluations. Examples are drawn from the several disciplines commonly offered in the elementary and secondary schools. Students are expected to identify an evaluation problem and to develop an evaluation design that can be implemented as a practical solution to the problem. Prerequisites: 559 and permission of instructor.

EDC&I 599 Independent Studies in Education (*) Independent studies or readings of specialized aspects of education. Prerequisite: permission of instructor.

EDC&I 600 Independent Study or Research (*) Prerequisite: permission of instructor.

EDC&I 601 Internship (3-9, max. 9) Credit/no credit only. Prerequisites: graduate standing and permission based on approval of proposal submitted during quarter preceding the internship.

Leadership and Policy Studies

EDLPS 444 Constitution and American Public Education (3-6, max. 6) Emphasis on the principles, processes, and content of constitutional law in an effort to provide new insights and new tools with which school administrators and teachers may examine questions involving political and civil rights in the United States, especially as these affect the conduct of education. Specific topics on constitutional freedom include the obligation to go to school; legal controls over curriculum, teachers, and students; and racial integration and equal financing of public schools. Open to law students and to nonlaw students enrolled as graduate students or as upper-division undergraduates. Satisfactory/not satisfactory option available to nonlaw students only. Offered: jointly with LAW 444.

EDLPS 458 History of American Education to 1865 (3) I&S Development of American education in cultural context; colonial period, influence of Enlightenment, and common school movement. Offered: jointly with HSTAA 458.

EDLPS 459 History of American Education Since 1865 (3) 18S Development of American education in cultural context: progressive education, recent criticism, continuing issues and trends. Offered: jointly with HSTAA 459.

EDLPS 479 Crucial Issues in Education (3) Selected educational issues, policies, and contexts. Evolution of the American education enterprise, legal issues, professionalism, finance, and other vital educational concerns. Prerequisite: admission to Teacher Certification Program or permission of instructor.

EDLPS 496 Workshop: Education Programs and Problems (1-6, max. 12) Study of such topics as planning, development, supervision, organization, operation, or evaluation of current or emerging programs or problems in education.

EDLPS 499 Undergraduate Research (*) Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program. Prerequisite: permission of instructor.

EDLPS 501 Introduction: Leadership Beyond the Classroom (3-6, max. 6) First course in principal certification program; explores Washington State laws, legal principles, context of public schools, multicultural issues, changing population. Essential skills of leadership: communication, human relations, strategies for shared decision making, and dealing with conflict. (Open only to students admitted to the EDLPS Principal/Program Administrator Preparation Program.)

EDLPS 502-503-504 Leadership Core ([3-6]-[3-6]-3-6]) Topics include moral dimensions of leadership; modes of inquiry; organizational theory and change; history of educational reform; curriculum deliberation and instructional leadership and supervision; schoolcentered inquiry and decision-making; policy, planning, and program evaluation; issues on diversity and multicultural education; American and Washington State school law; school finance and resource allocation; school-community relations. Instruction occurs in units and seminar throughout the academic year. Prerequisite: admission to Principal/Program Administrator Preparation Program.

EDLPS 505 Transition to Leadership (3-6, max. 6) Development and administration of systems for selection, evaluation and clinical supervision of certificated and classified personnel. Focuses on leadership models and transition to a leadership role, including opening a school or program and dealing with student/ school crises. (Only for students admitted to the EDLPS Principal/Program Administrator Program.)

EDLPS 507 Reflective Seminar (1-6, max. 6) Integration of theory and internship experience; group process laboratory and peer feedback and review of written work, oral presentations, and journals. Reading and discussion of crucial issues. (Only for students admitted to the EDLPS Principal/Program Administrator Preparation Program.) Credit/no credit only.

EDLPS 509 Planning, Organizing, and Decision Making (3) Application of principles utilized in planning, organizing, and decision making in districts and schools. Formation of policy and procedures; formal and informal organization; power, authority, and responsibility; utilization of people, time, and space.

EDLPS 510 School Finance (3) Financial practices and problems in districts and schools considered, including state and federal support plans, school plant planning, school business management, resource allocation, and budgeting and educational accountability.

EDLPS 511 School-Community Relations (3) Examines the dynamics of the interface between the public schools and the community. Special attention is given to the findings of research in relation to schoolcommunity power, types, and organizational influences.

EDLPS 512 Seminar in Personnel Administration and Development (3) Major emphasis on the analysis of factors to be considered in the selection and evaluation of teachers and administrators and considerations in staff development

EDLPS 513 Seminar in Instructional Development and Supervision (3) Theory of the process of supervising instructionally effective school personnel, including an analysis of the techniques of supervision theory of leadership and group process, interpersonal relations, and evaluation of teacher effectiveness.

EDLPS 514 Washington School Law (3) Overview of Washington State specific legal provisions affecting the operations and management of public schools, including school organization and operations, school finance, separation of church and state, school employment, student conduct, discipline and rights, equity, intergovernmental agreements, and student health and safety. Prerequisite: 562 or equivalent.

EDLPS 515 Management of Labor Relations in Education (3) Examination of procedures and techniques pertinent to the management of organizational conflict. Among the areas covered are collective bargaining, grievance procedures, mediation, fact finding, and arbitration.

EDLPS 516 Special Education and the Law (3) Overview of major state and federal laws affecting the operation and management of special education programs in public schools. Emphasis upon procedural and substantive rights of children with disabling conditions. Offered: jointly with EDSPE 504.

EDLPS 517 Seminar in Administration: Facilities (3) Contemporary issues, problems, and techniques of educational facility administration. Emphasis placed on such factors as planning, financing, development, design, construction, operation, liabilities, property management, state regulation. EDLPS 518 Reflective seminar: The Superintendency (1-6, max. 6) Integration of theory and internship experience. Readings and discussion of crucial issues, presentations by local school superintendents: district budgeting processes, personnel, staff relations and collective bargaining, superintendent-board relations, bond issues, facilities planning, superintendent as instructional leader. Credit/no credit only.

EDLPS 519 Special Topics in Educational Leadership (1-3, max. 9) Readings, lectures and discussions pertaining to significant topics of special and current interest to educators. Focus is on issues of particular concern to K-12 administrators and other educators in leadership roles in districts and schools. Problems vary; check *Time Schedule* for topic(s) to be covered.

EDLPS 520 Education as a Moral Endeavor (3) An exploration of fundamental questions that have faced educational leaders in the past and most likely will continue to face them in the future. Foundational studies in history, philosophy, and sociology provide the basis for discussion and writing about these fundamental questions. Credit/no credit only.

EDLPS 521 Philosophy of Education (3) Philosophy of education considered as a study of the conceptual basis for educational policy and practice. Emphasis on relationships between enduring educational problems and fundamental philosophic issues; concepts that feature centrally in educational discourse; and conceptual analysis as a means for clarifying decisions regarding educational policy and practice.

EDLPS 522 Contemporary Philosophies of Education (3) Intensive study of the writings of selected contemporary philosophers of education.

EDLPS 523 Analysis of Educational Concepts (3) Selected concepts central to conduct and understanding of education.

EDLPS 524 Seminar in Philosophy of Education (3, max. 6) Philosophical examination of ways in which education might be studied. Uses and limits of conventional scientific approaches in education inquiry. Consideration of alternatives.

EDLPS 525, 526 Educational Inquiry (3,3) General survey of epistemological issues underlying the several schools of thought or families of inquiry. Overview of various methods used in conduct of educational inquiry, examples of ways those methods are typically used, and exploration of strengths and weaknesses of those methods. Discussion throughout is in terms of assumptions regarding the nature of knowledge and purposes of inquiry. Must be taken in sequence. Credit/no credit only. Prerequisite: doctoral status in education.

EDLPS 530 History of Educational Thought (3) An overview of the influence of cultural context on educational theory and practice from classical times to the present.

EDLPS 531 History of American Higher Education (3) Examination of the historical development of the American higher education enterprise, including precolonial origins. Includes attention to the colonial colleges, the rise of new institutions in the nineteenth century, and the further development of American colleges and universities in the twentieth century. Leaders in these developments are identified.

EDLPS 532 Seminar: American Education in the Twentieth Century (3, max. 6) Selected problems in American education over the last century, with special emphasis on contemporary issues and trends.

EDLPS 533 Seminar in Educational Classics (3) Analysis in depth and in the context of the relevant history of several major works in educational thought from Plato to Dewey.

EDLPS 534 History of the Modern University (3) Growth of the modern university with attention to intellectual trends as well as organizational and curricular changes. Special attention is given to nine American universities in the twentieth century.

EDLPS 535 Seminar: Research in History of Education (3, max. 6) Research procedures in the history of education to include the employment of bibliographic resources, the use of the computer, the elements of a research proposal, the review of research literature, and the role of theory.

EDLPS 540 Sociology of Education (3) Examination of education and educational institutions by using the major conceptual tools of sociology. Emphasis on sociological thought and findings that have particular bearing on the understandings and judgments of educators.

EDLPS 541 Comparative Education (3) International efforts in education, including the role of the United States in overseas programs. Analysis of the relation of education and society in foreign areas, stressing social change and conflict. Regions of the world considered in the course vary from one offering to another.

EDLPS 542 Seminar in Educational Sociology (3) Application of sociological principles to school.problems; individual problems and investigations. For teachers, administrators, and those using educational sociology as a field for advanced degrees.

EDLPS 543 Seminar: Research in Educational Sociology (3) Theory, concept, and method of sociological inquiry as applied to problems in education.

EDLPS 549 Special Topics in Educational Studies (1-3, max. 9) Readings, lectures, and discussions pertaining to significant and enduring ideas in the philosophy, history and sociology of education. Specific topics are critically examined in light of contemporary problems in education. Problems vary; check *Time Schedule* for topic(s) to be covered.

EDLPS 550 The Dynamics of Educational Organizations (3) Exploration of the literature in organizational theory and leadership, the assumptions that underlie the development of various approaches to organizational theory and how these approaches are applied, and an acquaintance with different conceptual frames that can be used to determine how to improve and change organizations. Credit/no credit only.

EDLPS 551 Foundational Studies in Complex Organizations (3) Examination of conceptual and theoretical bases for complex organizations, characterized by problematic goals, knotty decision-making processes, and fluid participation. Impact of information, power, beliefs, resources, organizational structure, and environment. Although issues discussed are generic, examples focus on educational organizations.

EDLPS 552 Organizational Change in Education (3) Change and innovation in educational organizations. Theoretical approaches include sociopsychological, rational planning, political perspectives, and those associated with notion of organized anarchies. Specific topics related to change and innovation (e.g., roles of beliefs, symbols and norms, diffusion of innovations, and research issues).

EDLPS 553 Human Resources in Educational Organizations (3) Analysis of factors involved in human resource problems related to operation of educational organizations. Motivation, perception, communication, role analysis, and dynamics of groups are studied through use of cases and seminal literature.

EDLPS 560 Perspectives on Policy & Policy Making In Education (3) This course introduces a variety of theoretical perspectives that can be used to analyze policy content, processes and outcomes. Includes a consideration of the power and limits of policy and a discussion of the many ways people in different posi-

tions in organizations can influence policy. Credit/no credit only.

EDLPS 561 Education Policies in Political Context (3) Systematic consideration of the structure and function of educational policies and problems of research in political context.

EDLPS 562 American School Law (3) Examination of persistent legal issues, including an analysis of how these issues are manifest in public policy debates.

EDLPS 563 Education, The Workforce, and Public Policy (3, max. 6) Two (noncumulative) courses on policy issues involving education, training, the economy, and the development of the nation's human resources. Relationship between education, training, and work; underutilized workers; race and gender discrimination issues; and the role of education/training in economic development. Offered: jointly with PB AF 571, 572.

EDLPS 564 Seminar in Economics of Education (3) Current problems in school finance, including costs, ability to support schools, and financial implications of educational principles. The economics of public education. Problems of federal, state, and local school support. Financing capital outlay, research, and public relations.

EDLPS 565 Power and Politics in Organizational Decisionmaking (3) Focuses on conceptual frameworks that can be used to analyze power-influence processes in complex organizations and research methods that are well-suited to the study of these processes. Opportunities to design studies of power relations and political processes are provided.

EDLPS 566 Education Policy Serving Disenfranchised Groups (3) This seminar examines programs and policies aimed at ameliorating conditions that face disenfranchised groups in contemporary K-12 schooling. Seminar members critically analyze the assumptions, design, and likely impact of these programs and policies on institutions and individuals. Designed for advanced doctoral students. Others admitted with permission of instructor.

EDLPS 579 Special Topics in Organizational & Policy Analysis (1-3, max. 9) Readings, lectures and discussions pertaining to significant topics of special and current interest to educators. Focus is on issues related to the analysis of educational organizations, policies, and policy making. Problems vary; check *Time Schedule* for topic(s) to be covered.

EDLPS 580 The American College and University (3) Introduction to contemporary United States higher education, with special emphasis on emerging trends, roles of the several kinds of institutions, the composition and character of student bodies and faculty, and the state coordination of colleges and universities.

EDLPS 581 Principles and Practices of Adult and Continuing Education (3) History and development of adult and continuing education in the United States: component parts of the field; issues, theory, and research; program planning for adults; professionalization of the field.

EDLPS 582 Seminar in the History and the Organization of Higher Education (3) Advanced seminar in the history and the organization of higher education.

EDLPS 583 Higher Education and the Law (3) Legal implications of university operations and an explanation of the legal and constitutional rights of students, faculty, and staff within the university. Special attention given to faculty employment and termination decisions; student protections, including due process; and university liabilities.

EDLPS 584 Academic Governance and Collective Bargaining in Higher Education (3) Explores the concept and operation of collective bargaining in higher education: its origin; the reasons for its growing popularity as a governance mechanism; the legal framework within which it operates; the rights, powers, and duties subsumed under its operation; and its relationship to the traditional form of faculty governance mechanisms.

EDLPS 585 Resource Allocation in Higher Education (3) After attention to the basic tools of economic analysis, focus is on application of those tools to specific topics in higher education (e.g., access, budgeting, finance and policies, and funding alternatives).

EDLPS 586 Seminar in the Administration of Colleges and Universities (3) Study of the internal administration and organization of four-year colleges and universities with emphases on practice and theory. Instruction largely by the case or problem method.

EDLPS 587 Seminar in Teaching and Learning in Higher Education (3, max. 9) Theory and practice of instruction and learning in higher education.

EDLPS 588 Seminar in Administration of Community Colleges (3) For students preparing for administrative positions in community colleges. Principles and practices in organization and administration of community colleges.

EDLPS 589 The Community College (3) Intensive study of the community college-its history and present and future status. Curriculum, instruction, financial, and governance issues are also discussed.

EDLPS 598 Special Topics In Higher Education (1-3, max. 9) Readings, lectures, and discussions pertaining to significant topics of special and current interest to educators. Focus is on issues related to education in community colleges, four-year colleges and universities. Problems vary; check for topic(s) to be covered.

EDLPS 600 Independent Study or Research (*) Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed, and which with permission of the instructor, must be filed with the Office of Leadership & Policy Studies in the College of Education. Prerequisite: permission of instructor.

EDLPS 601 Internship (1-9, max. 9) Name of faculty member responsible for supervising the student should be indicated on program of studies. Credit/no credit only. Prerequisite: permission of Supervisory Committee chairperson or graduate program adviser.

Educational Psychology

EDPSY 408 Stress Management for Teachers and Administrators (3) Principles and methods of stress management for school personnel and students. Designed to help teachers handle the stress associated with teaching. The principles also apply to management of students stress.

EDPSY 425 Reading Disability: Remedial Techniques (3) Evaluation of methods for diagnosing and minimizing reading retardation. Descriptions of inclass and clinical procedures. Prerequisite: EDC&I 360 or equivalent.

EDPSY 449 Laboratory in Educational Psychology (2-6, max. 6) Special studies for counselors, teachers, administrators, and others concerned with student personnel and psychological services in schools and colleges. The course focuses on special topics that have either local or contemporary significance.

EDPSY 471 Neuropsychology of School Learning and Behavioral Problems (5) The microstructure, macrostructure, and structural and functional development of the brain are reviewed with a focus on the educational relevance of developmental neuropsychology. We read and critique articles in four areas: Hemispheric differences and integration; neurological soft signs, attention deficit, and hyperactivity; language, reading, and learning disabilities; and medical syndromes.

EDPSY 490 Basic Educational Statistics (3) Measures of central tendency and variability, point and interval estimation, linear correlation, hypothesis testing.

EDPSY 499 Undergraduate Research (*) Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program. Entry code required.

EDPSY 500 Field Study (*) Individual study of an educational problem in the field under the direction of a faculty member. Prerequisites: approved plan of study and permission of the instructor must be filed in the Office of Educational Psychology in the College of Education. Entry code required.

EDPSY 501 Human Learning and Educational Practice (3) Systematic examination of current research about human learning and instructional psychology, including the study of motivation, human abilities, and learning, the learning process, and performance assessment. Prerequisite: permission of instructor.

EDPSY 502 Developmental Foundations of Early Learning (3) Perceptual-motor, language, and overall cognitive development in children from birth through primary-school age. Emphasis on basic learning processes and guidelines for assessment of developmental status and their implications for parents and professionals. Field-based course projects may be required. Prerequisites: background in child development and 501 or equivalent.

EDPSY 503 Theories of Intelligence (3) Reading and discussion of theoretical and research papers from the extensive literature on Piagetian, psychometric, and information processing conceptions of intelligence. An historical approach to the topic is followed by analysis of current writings on intelligence and its measurement. Prerequisites: 501 and graduate status in education or psychology.

EDPSY 506 Instructional Theory (3) Sources, current state, and utility of prescriptive instructional theories with emphasis upon theories having a potential for guiding the design of instruction. Prerequisite: 501 or equivalent.

EDPSY 507 Reading, Writing, and Arithmetic: Educational Assessment and Consultation (5) Students administer and interpret tests of reading, writing, arithmetic, and related developmental skills; integrate test, observational, interview, and portfolio information in staffings and written reports; and consult with teachers regarding educational interventions. Prerequisites: graduate standing in the school psychology specialization and permission of instructor. Entry code required.

EDPSY 508 Clinical Supervision-Practicum (2-6, max. 12) Practicum in supervising counseling, group counseling, diagnostic activities, and remedial academic therapy. Prerequisites: advanced graduate standing. Entry code required.

EDPSY 509 Educational Issues in Human Development (5) Human development theories. Educational implications of theory, methodology, and application. Current research complements the historical antecedents of current practice. Age range covered varies as function of current issues in professional literature. Prerequisites: 15 credits in educational psychology or psychology.

EDPSY 510 Educational issues in Human Learning (3) Contemporary issues and trends in human learning from the perspective of major psychological theories of learning. Both classic and emerging viewpoints on issues about learning theory for educational

practice, including counseling and special programs. Prerequisite: 501 or equivalent.

EDPSY 511 Seminar in Applied Educational Psychology (1, max. 6) Designed for graduate students in educational psychology. Applications of theoretical constructs to particular problems encountered in school counseling, practice. Entry code required.

EDPSY 519 Communication and Language in Young Exceptional Children (3) Review and discussion of theories of language acquisition as they relate to communication and language in young children. Review of research of language environments that relate to early literacy and education and how to use this information to modify environments for special needs children. Offered: jointly with EDSPE 521.

EDPSY 520 Psychology of Reading (3) Reading and perception, word recognition, concept development and meaning in reading, psychology of reading interests and skills. Prerequisite: 501 or equivalent. Entry code required.

EDPSY 521 Psychology of Writing (3) Examines writing as a cognitive process and reviews current empirical research on writing, emphasizing primarily studies from a psychological perspective. Explores both developmental differences and individual differences in writing skills, together with instructional implications. Prerequisite: 501 or equivalent. Entry code required.

EDPSY 522 Reading Disability Clinic (3-5) Supervised practicum in diagnosis and remediation of reading disabilities. Prerequisites: 425, or equivalent; 507 and EDC&I 360 and 460; and permission of instructor. Entry code required.

EDPSY 524 Problem Solving and Critical Thinking in Education (3) Study of the classic and contemporary research literature concerned with human problem solving and critical thinking with emphasis upon applications to educational practice and further research. Prerequisite: 501 or equivalent.

EDPSY 525 Creativity and Education (3) Study of the classic and contemporary research literature about creativity with emphasis upon applications to educational practice, evaluation of strategies to promote creativity in the schools, and further research. Prerequisite: 501 or equivalent.

EDPSY 526 Seminar on Metacognition (3) Students read and discuss theoretical and research papers from the extensive literature on metacognition. Focuses on defining the concept of metacognition, establishing its range of applicability to educational matters, and becoming familiar with excellent examples of metacognitive research. Prerequisites: graduate status in education or psychology and permission of instructor.

EDPSY 527 Transfer of Teaching (3) Students read and discuss a representative sample of theoretical and research papers from extensive literature on teaching to promote transfer of what students learn to nonteaching environments. Historical approach to the topic is followed by analysis of current writings on transfer. Prerequisites: 501 and graduate status in education or psychology.

EDPSY 531 Socialization of School-Age Children (3) Study of personal social development and behavior from preschool age through preadolescence. Socialization theory and research are reviewed to include such topics as aggression, achievement, motivation, moral development, social cognition, and applicable socialization influences.

EDPSY 532 Adolescence and Youth (3) Includes middle school, senior high, and early college years, with implications for helping professions. Developmental processes and patterns examined with major theoretical and current research themes from behavioral sciences. Educational issues, social problems associ-

i gir an an

ated with adolescence in Western culture. Prerequisite: 501 or equivalent.

EDPSY 533 Current Research In Adolescence (3) Contemporary trends and patterns of adolescent research are examined with emphasis upon theoretical foundations, contrasting methodologies, and implications for further research. Exemplary studies and integrative reviews of research on adolescence are featured. Prerequisites: 532 and 591 or equivalents.

EDPSY 534 School Problems of Adolescence (3) Study of the classic, contemporary, and emerging school problems of secondary school age youth with emphasis upon problem solving strategies for educators and associated youth service personnel. Includes problems of academic achievement, interpersonal relations, and social deviancy in the schools. Prerequisite: 532 or equivalent.

EDPSY 535 Education and the Highly Capable Learner (3) Examination of major issues and problems in study and nurturance of highly capable children and youth in the educational setting. Emphasis placed on contributions of theory and research to educational problem solving for multiple aspects of advanced human capacity. Prerequisite: 501 or equivalent.

EDPSY 536 Learning Variables of Minority Children: Instructional Implications (3) Provides students with data base regarding (1) four variables (language/dialect, cognitive style, locus of control, and motivational systems) that affect learning among minority students, and (2) teaching strategies appropriate for these cultural socioeconomic variables. No credit given for students who have completed EDC&I 425.

EDPSY 540 School Psychological Assessment (5) Study of assessment of human intelligence with supervised training in the administration, scoring, and interpretation of individual intelligence tests with emphasis on Stanford- Binet and Wechsler scales. Prerequisite: graduate standing in the school psychology specialization and permission of instructor. Entry code required.

EDPSY 541 Group Tests in Counseling (5) Emphasis on the utilization of objective measures in counseling. Prerequisite: 490 or equivalent. Entry code required.

EDPSY 542 Career Development (3) Emphasis on vocational development theory and research. Psychological, social, and economic determinants of vocational development and choice are examined as a basis for vocational counseling. Prerequisite: graduate standing or permission of instructor.

EDPSY 543 Facilitating Career Development (3) Theory and practice in exploring, clarifying, and articulating individual goals and career plans. Entry code required.

EDPSY 544 Counseling (5) Emphasis on the theory and practice of counseling.

EDPSY 545 Prepracticum (3) Competency-based skills training for beginning counseling and school psychology students. Attending, listening, focusing, and intervening behaviors for use with adults and children. Introduction to theories of helping. Prerequisite: enrolled in school counseling or school psychology or permission of instructor.

EDPSY 546 Counseling Practicum (3) Supervised practice in counseling. Prerequisite: 544. Entry code required.

EDPSY 548 Educational implications of Personality Theory (5) Study of personality development and personality theories with continuous attention to the meaning of these in educational practice, testing, and counseling. Prerequisites: 15 credits of psychology and educational psychology. EDPSY 549 Seminar in Consultation Methods (3) Theory and practice of process consultation in educational settings. Field practice in teams with clients. Entry code required.

EDPSY 550 Family Counseling (3) Introduction to family counseling theory and practice, emphasizing family dynamics and communication analysis. Prerequisite: 544 or permission of instructor.

EDPSY 555 . Seminar in Counseling Specialty (1-2, max. 6) Oriented toward the role of a counselor as a professional worker. Entry code required.

EDPSY 561 Group Process Laboratory (3) Experience in small-group process. Collateral discussions of process and independent study. Entry code required.

EDPSY 562 Group Counseling in Schools (3) Provides students with the opportunity to co-facilitate groups in elementary, middle, and secondary schools, supplemented by weekly didactic presentations of counseling and guidance models. Prerequisite: 561 or permission of instructor.

EDPSY 564 Practicum in School Psychology (1-6, max. 6) Practicum in appraisal and counseling, emphasizing diagnosis and counseling with behavior and learning disabilities, and focusing on techniques acquired in 540, 545, and 565. Entry code required.

EDPSY 565 Personality Appraisal (5) Study of personality evaluation with a supervised laboratory emphasizing work with children and their families. Pre-requisites: 540, 548. Entry code required.

EDPSY 566 Case Study Seminar (1, max. 4) Integrating theoretical concepts with practice/service issues. Cases selected for discussion represent a wide range of problems and agency settings, including school and child problems. Entry code required.

EDPSY 568 Seminar in Professional Issues and Ethics (2) Professional ethics codes and cases, history of counseling or school psychology, legal problems, credentialing issues, conditions of practice, continuing education, publishing, and presenting research papers.

EDPSY 569 Seminar in Counseling Psychology Research (2) Methodological and professional issues related to research in counseling and psychological services. Counseling psychology research literature with focus on content and methods. Prerequisite: 591 or equivalent.

EDPSY 570 Seminar in School and Community Psychology (2, max. 4) Current issues in professional psychology practice and research. Limited to graduate students in school psychology. Entry code required.

EDPSY 571 Educational Applications of Neuropsychology: Assessment and Intervention (5) Students observe and administer neuropsychological tests and plan and carry out educational interventions for children with neuropsychological disorders. Content focuses on various neuropsychological disorders for which school psychologists can provide assessment and consultation. Prerequisites: 540 or equivalent course in individual testing, and 471 or permission of the instructor.

EDPSY 573 Psychological Assessment of Preschool Children (3) Students learn to give and interpret five tests of intellectual development to assess language, play, and social/emotional functioning, and to write psychological assessment reports for infants, toddlers, and preschoolers. Prerequisites: graduate standing in the school psychology specialization and permission of instructor. Entry code required.

EDPSY 575 Structural Equation Modeling (3) Theory and data analysis using linear structural equation models. Application to data in educational research. Prerequisite: 594 or equivalent.

EDPSY 576 Hierarchical Linear Models (3) Theory and data analysis for research models where random factors are nested, such as multi-level data, growth curve analysis, and meta-analysis. Prerequisite: 593 or equivalent.

EDPSY 580 Seminar: The Emergence of Educational Psychology (3) Examination of documents by selected contributors to the field of educational psychology. Special focus on period from mid-nineteenth century to early twentieth century. Prerequisite: graduate standing.

EDPSY 581 Seminar in Educational Psychology (1-3, max. 15) Seminar on advanced topics in educational psychology. A critical appraisal of current research. Prerequisite: advanced degree work in educational psychology. (Check quarterly *Time Schedule* for subject listings, which vary from quarter to quarter.)

EDPSY 582 Seminar in Development and Socialization (3, max. 15) Advanced seminar on selected topics concerned with human development and socialization processes. Emphasis placed upon empirical research and its theoretical underpinnings in such areas as cognitive development, moral development and education, self-concept development, and related concerns. Entry code required.

EDPSY 583 Seminar In Learning and Thinking (3, max. 15) Seminar in the psychology of learning language and language learning. Each seminar is offered with predesignated emphasis in one of the following topics: linguistics, phonology, pragmatics, psycholinguistics, semantics. Entry code required.

EDPSY 584 Seminar In Quantitative Methods (3, max. 15) Seminar on such topics as measurement techniques, research design, psychometrics, and statistics. Entry code required.

EDPSY 586-587 Qualitative Methods of Educational Research (3-3) Survey of various qualitative research methods from a variety of disciplinary perspectives (anthropology, cognitive psychology, policy analysis, and evaluation) with intensive experience in collection, analysis, and reporting of data. Prerequisites: second year doctoral standing and one course in statistics. Offered: jointly with EDC&I 578-579.

EDPSY 588 Survey Research Methodology and Theory (3) Survey research, research, theory, and methodology. Probability theory, sampling, human subjects considerations, instrumentation, and analysis techniques. Review and critique by students of theoretical issues in survey research and development of a survey instrument. Prerequisite: 490 or equivalent.

EDPSY 590 Computer Utilization in Educational Research (3) Computer utilization in solution of research problems, data reduction to forms amenable to computer solution, appropriate framing of problems for solutions by computer. Using an interactive system, editors, and program packages. Prerequisite: 490.

EDPSY 591 Methods of Educational Research (3) Introduction to educational research. Primary focus on hypothesis development, experimental design, use of controls, data analysis and interpretation. Prerequisite: 490. Entry code required.

EDPSY 592 Advanced Educational Measurements (3) Theory of measurement; an examination of assumptions involved in test theory, errors of measurement, factors affecting reliability and validity, and item analysis. Prerequisite: 490. Offered: jointly with PSYCH 516.

EDPSY 593 Experimental Design and Analysis (5) Experimental design with emphasis on the analysis of variance. Prerequisites: 490 or equivalent, and 591 or permission of instructor.

EDPSY 594 Advanced Correlational Techniques (5) Multivariate analysis, including regression and multiple correlation; matrix algebra; factor analysis. Prerequisite: 490 or equivalent.

EDPSY 595 Measurement and Evaluation In Human Development and Education (3) Measurement strategies and evaluation research in developmental psychology and education. Overview of major childhood intervention studies and procedures established and experimental measurement techniques, and problems of measurement and evaluation. Skill in evaluating measurement and evaluation design. Prerequisite: 490 or permission of instructor.

EDPSY 596 Program Evaluation (3) Advanced course in evaluation research emphasizing nontraditional designs, especially those that impose severe ecological constraints on the evaluators. Prerequisites: 593, 594, EDC&I 597, or permission of instructor.

EDPSY 597 Test Development (3) Principles of test construction, including criterion and norm-referenced tests, item writing and sampling, test administration, preparation, scoring, and item evaluation techniques; problems of scaling and norming of cognitive and affective measures. Prerequisites: 592 and 594, or permission of instructor.

EDPSY 599 Independent Studies in Education (*) Independent studies or readings of specialized aspects of education. Entry code required.

EDPSY 600 Independent Study or Research (*) Prerequisite: permission of instructor. Entry code required.

EDPSY 601 Internship (3-9, max. 9) Entry code required.

Special Education

EDSPE 404 Exceptional Children (3) Atypical children studied from the point of view of the classroom teacher.

EDSPE 414 Introduction to Early Childhood Special Education (3) Provides students with a comprehensive overview of major aspects of the field of early childhood special education. Theoretical foundations and program development and implementation are presented in an approach that integrates theory, research, and practice.

EDSPE 419 Interventions for Families of Children with Disabilities (3) Upper-division course for professionals and paraprofessionals working with families of children with disabilities enrolled in special education or integrated programs.

EDSPE 420 Classroom Management of the Physical Problems of Individuals With Severe or Profound Disabilities (3) Overview of physical management of pupils with severe or profound disabilities in educational settings. Principles of normal motor development, positioning, and handling are applied to the development of classroom strategies. Effects of abnormal motor development on educational programming.

EDSPE 496 Workshop in Special Education (1-9, max. 15) Demonstration, observation, and/or participation with groups of disabled children in laboratory or controlled classroom settings. Prerequisite: permission of instructor. Entry code required.

EDSPE 499 Undergraduate Research (2-5, max. 5) Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program. Prerequisite: permission of instructor. Entry code required.

EDSPE 500 Field Study (1-6, max. 6) Individual study of an educational problem in the field under the direction of a faculty member. Prerequisites: approved plan of study and permission of the instructor. Entry code required.

EDSPE 504 Special Education and the Law (3) Overview of major state and federal laws affecting the operation and management of special education programs in public schools. Emphasis on procedural and substantive rights of children with disabling conditions. Offered: jointly with EDLPS 516.

EDSPE 505 Curriculum Development of Students with Moderate to Severe Disabilities (3) Addresses issues and practices in the development of appropriate curricula for students with moderate to severe or profound disabilities. Includes curriculum models, methods for the selection of appropriate skills for inclusion in Individualized Education Plans, and establishing priorities for instruction.

EDSPE 507 Instructional Methods for Students with Moderate to Severe Disabilities (3) Details a systematic instructional process for the education of students with moderate to severe or profound disabilities. Includes instructional methods and materials designed to promote the development of functional skills and reduce challenging behaviors.

EDSPE 508 Administration of Special Education (3) Research and trends in administrative organization, programs, personnel assignments, and instructional groupings for the education of exceptional students as these relate to the total school program, pupil personnel services, community agency services, and state and federal legislation.

EDSPE 509 Seminar in Mental Retardation (3, max. 9) Research, theory, and/or contemporary practice in the education and habilitation of mentally retarded individuals. The synthesis of findings and their application to the educational environment. Prerequisites: 505, 507, 542.

EDSPE 510 Behavioral Measurement and Management in the Classroom (3) Response measurement in the classroom; use of data analysis for instructional decisions and behavior management; instructional programming for children with disabilities.

EDSPE 511 Methods of Applied Behavior Analysis Research (3) Characteristics of applied behavior analysis are presented: direct, daily measurement, and the systematic investigation of important variables. Representative studies from various applied situations are discussed in terms of dependent and independent variables, research design, reliability, validity, and data analysis. Prerequisite: 510 or equivalent preparation.

EDSPE 513 Clinical Appraisal of Exceptional Children (3) Diagnostic instruments used in the clinical appraisal of exceptional children. Theoretical and measurement considerations are used to buttress practical experiences in appraisal related to intervention.

EDSPE 514 Fundamentals of Reading for Children with Disabilities (3) Emphasis on basic prereading and reading skills, such as phonics and structural analysis, specifically for the disabled child. Acquisition of comprehension skills by the disabled. Diagnosis of reading problems, published materials appropriate for children with disabilities, material modification.

EDSPE 515 Problems and Issues in Special Education (3, max. 9) Intensive examination of the issues pertinent to special education, such as legislation, interdisciplinary functions, and the role of special education in general education and placement practices.

EDSPE 517 Practicum in Research Design and Analysis in Special Education (1-3, max 9) Critical analysis of current research in special education and related fields serves as background for designing applied research projects. Projects are examined, evaluated, and revised in seminar discussion. Prerequisites: EDPSY 490 and 591 or equivalent and permission of instructor.

EDPSE 518 Seminar in Special Education Research (1-3, max. 9) Designed for doctoral students in special education during their first year of residency. Each candidate selects a dissertation problem and submits a proposal. Topics such as the procurement of subjects, the reporting and communication of research findings, and the evaluation of research are stressed. The seminar leads to the evolution of a viable dissertation proposal. Credit/no credit only.

EDSPE 520 Seminar in Applied Special Education (1-12, max. 12) Designed for graduate students in special education. Focus on contemporary topics relating to the application of the theoretical constructs to special education.

EDSPE 521 Communication and Language in Young Exceptional Children (3) Review and discussion of theories of language acquisition as they relate to communication and language in young exceptional children. Review of research of language environments that relate to early literacy and education and how to use this information to modify environments for special needs children. Offered: jointly with EDPSY 519.

EDSPE 522 Seminar on the Education of Students with Sovere Disabilities (3) Advanced graduate seminar arranged to study and discuss the essential components of providing a comprehensive approach to the identification and education of infants, children, adolescents, and young adults with severe disabilities.

EDSPE 525 Educating Students with Autism or Severe Behavior Disorders (3) Consideration of the identification, etiology, education, and progress of individuals with autism or other severe behavior-disorders.

EDSPE 541 Education of Children with Behavior Disorders (3) Introductory course covering characteristics of children with behavior disorders; introduction to the various theoretical approaches to education practices.

EDSPE 542 Introduction to Mental Retardation (3) Introductory course on intellectual disabilities and the challenges they present to individuals with such disabilities, the community, the schools, and society.

EDSPE 543 Learning Disabilities (3) Analysis of major theoretical approaches to the study of children with learning disabilities. Adaptation of various approaches to educational settings.

EDSPE 545 Instructional Modifications for the Education of the Mildly Disabled (3) In-depth analysis and application of several modifications of instructional techniques necessary for the education of students with mild disabilities.

EDSPE 546 Seminar in Educating the Socially and Emotionally Disturbed (3, max. 9) Advanced-level seminars focus on contemporary research topics relating to the effective education of children with serious behavior disorders. Students analyze and review research pertinent to the chosen topics and prepare a scholarly manuscript for dissemination.

EDSPE 548 Special Topics in the Education of the Learning Disabled (3, max. 12) In-depth analysis of empirical findings in the specialty of learning disabilities with focus on the synthesis of research findings and their application to the educational environment. A paper suitable for publication required. Prerequisite: course in learning theory, introductory course in learning disabilities, or equivalent preparation. **EDSPE 551** Grant Proposal Writing - Special Education (3) Doctoral level seminar focusing on the preparation of research grant proposals in Special Education and related fields. Students utilize computer data bases to locate funding sources and prepare competitive applications. Peer and instructor feedback based on application criteria provided weekly. Prerequisite: doctoral standing in EDSPE or permission of instructor.

EDSPE 561 Educational Assessment of Preschool Special Needs Children (3) Special standardized and educational measurement and evaluation procedures for use with young children with a variety of disabling conditions. Administration, evaluation, and programming strategies are discussed in combination with practical application of the skills within an educational framework.

EDSPE 562 Curricula for Preschool Children with Disabilities (3) Basic theoretical models and approaches to curricula for preschoolers with disabilities. Promote specific preschool curricula and develop skills to assist students in critiquing and evaluating curricula. How to adapt materials for specific populations and to plan a program for exceptional preschoolers.

EDSPE 563 Issues in Working with Families of Young Special Needs Children (3) Adjustment of parents to the birth of an infant with disabilities. Transactions that occur between parents and their infant, procedures that facilitate the infant's development through these interactions. How to assist families in interacting with professionals in the assessment, IFSP process.

EDSPE 565 Seminar: Early Childhood Education for Children with Disabilities (3, max. 9) Advanced seminar on early childhood education for the disabled. Historical and current research from appropriate specialties in special education reviewed; research from related fields is reviewed in terms of its application to the education of young children with disabilities.

EDSPE 566 Current Research in Early Childhood Special Education (2, max. 6) Introduces students to theory and current research related to early intervention with infants and toddlers and how to evaluate research articles. Selected topics cover typical and atypical development in the areas of cognitive, social communication, and social development, as well as issues in assessment, curricula, and intervention strategies.

EDSPE 599 Independent Studies in Education (*) Independent studies or readings of specialized aspects of education. Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed. Entry code required.

EDSPE 600 Independent Study or Research (*) Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed. Entry code required.

EDSPE 601 Internship (3-9, max. 9) Prerequisites: graduate standing and permission based on prearrangement of internship placement and approval by adviser. Entry code required.

Independent Study, Research, and Field Experiences

EDUC 301 Introductory Practicum In Community Service Activity (3) Observation and participation in a variety of activities in a K-12 classroom, placement made according to participant interests and needs. Sixty hours of scheduled participation plus scheduled seminars are required. Prerequisites: application during quarter prior to participation, permission of instructor, and junior standing.

EDUC 401 Practicum in Community Service Activity (3-18) Tutoring and teaching experiences in a school or community service organization, placement made according to participant interests and needs. Approximately twenty hours of participation on a predetermined schedule plus scheduled seminars are required for each credit earned. Prerequisites: application during quarter prior to participation and permission of instructor.

EDUC 402 Practicum in Classroom Teaching and Management: Early Childhood, Kindergarten, Primary: Through Grade 3 (3-36) Student teaching practicum in an assigned school. Approximately twenty hours of participation on a predetermined schedule plus scheduled seminars are required for each credit earned. Placement is made by the Office of Teacher Education. Prerequisites: 302 and permission of instructor.

EDUC 403 Practicum in Classroom Teaching and Management: Intermediate Grades, Middle School: Grades 4-8 (3-36) Student teaching practicum in an assigned school. Approximately twenty hours of participation on a predetermined schedule plus scheduled seminars are required for each credit earned. Placement is made by the Office of Teacher Education. Prerequisites: 302 and permission of instructor.

EDUC 404 Practicum in Classroom Teaching and Management: Secondary School: Grades 6-12 (3-36) Student teaching practicum in an assigned school. Approximately twenty hours of participation on a predetermined schedule plus scheduled seminars are required for each credit earned. Placement is made by the Office of Teacher Education. Prerequisites: 302 and permission of instructor.

EDUC 501 Advanced Practicum in Community Service Activity (3-18) Selective, in-depth participation and teaching experiences for postbaccalaureate students in a community service organization. Approximately twenty hours of participation plus scheduled seminars are required for each credit earned. Participants wishing to use advanced community service experience to satisfy, in part, graduate program requirements should make such arrangements prior to enrollment with their faculty adviser and the Director of Certification. Prerequisites: application during quarter prior to participation and permission of instructor.

EDUC 502 Advanced Practicum in Classroom Teaching and Management (3-18) Designed to proyide postbaccalaureate students with student teaching and certificated teachers with selective, in-depth classroom participation experiences. Participants wishing to use the advanced teaching practicum to satisfy, in part, graduate program requirements should make such arrangements prior to enrollment with their adviser and the Director of Certification. Prerequisites: application during quarter prior to participation and permission of instructor.

EDUC 700 Master's Thesis (*) Prerequisites: permission of supervisory committee chairperson and graduate program coordinator.

EDUC 800 Doctoral Dissertation (*) Prerequisites: permission of Supervisory Committee chairperson and graduate program coordinator.

College of Engineering

Dean

J. Ray Bowen 371 Loew

Associate Deans

Mark J. Damborg Ashley F. Emery Keith A. Holsapple

Engineering is an increasingly critical societal enterprise. More than ever before, the engineer is challenged both to design products whose value is high by social and economic measures and to provide for efficient manufacture of such products within the constraints of environmental protection and diminishing raw material resources. Requirements imposed on the transportation system and other elements of society's physical infrastructure pose analogous challenges. At the same time, reductions in computer costs and increases in sophistication are dramatically impacting both the products and processes designed by the engineer and the actual practice of engineering.

An engineer with the baccalaureate degree is adequately prepared for many challenging technical assignments in government and industry. Students who plan to engage in research or college teaching, however, should undertake graduate study leading to either a master's or doctoral degree.

At the undergraduate level, the College of Engineering offers a flexible curriculum that accommodates varied student needs, both in established departmental programs and interdisciplinary studies. The College also offers active educational and research programs, both departmental and interdisciplinary, at the graduate levels. (See Interdisciplinary Engineering Studies Program for interdisciplinary undergraduate and graduate programs.)

The College of Engineering has been a major unit of the University since 1899; the first engineering degrees were authorized in mining engineering and metallurgical engineering in 1898. Degrees were added for civil engineering (1901), electrical engineering (1902), mechanical engineering (1906), chemical engineering (1907), ceramic engineering (1919), aeronautical engineering (1929), industrial engineering (1986), computer engineering (1987), computer science (1978), and technical communication (1991). In 1993, 1,640 upper-division undergraduate majors and 1,248 graduate students were enrolled in engineering programs taught by a faculty of 209 members.

College Facilities

Teaching and research activities of the College are conducted in thirteen major campus buildings (and portions of others), which contain the College's offices, classrooms, and research and teaching laboratories. The Engineering Library, a branch of the University Libraries, provides outstanding collections of books, periodicals, technical reports, and patents of interest to engineers. Computers and terminals are available in all departments and at the University's Academic Computer Center.

Student Organizations and Activities

All of the major professional engineering societies have student chapters on campus, and all engineering students are encouraged to join the chapter that represents his or her field of interest. The College also has student chapters of the Society of Women Engineers, American Indian Science and Engineering Society, National Society of Black Engineers, and the Society of Hispanic Professional Engineers. The Pre-Engineering Student Association (PESA) is the major College-wide organization for all students enrolled in a pre-engineering course of study but not yet admitted to a department. The Engineering Student Council, comprising student representatives from all departments and professional societies, is the major College-wide student organization and participates actively in College affairs. Honor societies open to engineering students are Tau Beta Pi and Sigma Xi.

Students serve with faculty members on engineering policy committees which make recommendations concerning teacher evaluation, curriculum revisions, advising, grading systems, and other matters of interest to students and faculty.

Financial Ald

The College offers financial assistance to undergraduates through industrial scholarships and loan funds. Scholarship information is available at the College Advising Center, 353 Loew, at the Office of Academic Affairs, 356 Loew, and at the Office of Student Financial Aid, 105 Schmitz. Most scholarships are given after a vear or more in residence by the student.

Honors Program

356 Loew

Coordinator, Dianne Cline

The College of Engineering Honors Program offers students of outstanding performance and achievement a course of study designed to provide intellectual challenge in a stimulating learning atmosphere which draws on the resources of a large diversified university. Students entering the Honors Program become candidates for the degree "With College Honors" or "With Distinction."

The College Honors Degree

Students who complete this program receive a degree "With College Honors."

The College Honors degree requires that students participate in the University Honors Program while they take engineering prerequisites in the College of Arts and Sciences. When these students are admitted to engineering departments, they may be nominated to enroll in the Engineering Honors Program. Completion of the College Honors degree involves both an honors general education component and advanced honors work completed after students have been admitted to the College of Engineering.

Admission requirements: 3.30 cumulative GPA, minimum departmental GPA, and participation in the University Honors Program as a pre-engineer.

Graduation requirements: The College Honors curriculum consists of two parts; a general education component and a component in the student's major department. The general education component is completed while the student is in the College of Arts and Sciences prior to application to the College of Engineering. Students select three sequences, each three quarters long, from Honors A&S.courses, the Natural World, and Mathematics (selecting at least one from each).

The second component begins when a student is admitted to an engineering department. Students then select a minimum of 9 credits of honors courses from either College or departmental 498H and 499H course work.

The Departmental Honors Degree

Students who complete this program receive a degree "With Distinction."

Admission Requirements: 3.30 cumulative GPA, minimum departmental GPA. Graduation Requirements: Students are nominated for the Departmental Honors Program when they have been in their departments for a minimum of one quarter. Students are required to select a minimum of 9 credits of honors courses from either College or departmental 498H and 499H course work.

At present, departmental honors degrees are offered in the following departments: Bioengineering, Civil Engineering, Chemical Engineering, Computer Engineering, Electrical Engineering, Industrial Engineering, Materials Science and Engineering, Mechanical Engineering, and Technical Communication.

Foreign Study

Given the increased likelihood that engineering students will have overseas work experiences or will do business with foreign clients and competitors, the College encourages students to study foreign languages in addition to their engineering course work and to take advantage of opportunities for study in foreign universities either at the undergraduate or graduate level. The College has active exchange agreements with approximately fifty-nine universities in twenty-four countries. Foreign language courses at the third-quarter level or above (e.g., GERM 103) may be applied toward VLPA distribution. Students may contact the Office of Academic Affairs, 356 Loew, for information about opportunities for foreign study.

Undergraduate Program

The College of Engineering provides curricula that offer a variety of educational experiences to its students. The curricula also facilitate transfer from community colleges and from other four-year colleges and universities.

Students planning to major in engineering begin as pre-engineering majors in the College of Arts and Sciences. As a pre-engineering major, a student will take the mathematics, chemistry, physics, English composition, and engineering fundamentals courses prerequisite for admission to the desired engineering departmental program. In addition, courses in the Visual, Literary, & Performing Arts and Individuals & Societies will be taken.

Students who indicate an interest in engineering on their University admission application are assigned pre-engineering status. Students without pre-engineering status who wish to pursue an engineering degree may have their coding changed to pre-engineering upon request at the Undergraduate Advising Center.

Admission

After completion of the prerequisite courses for an engineering departmental program and at least 64 credits applicable to the degree program, students must apply to be considered for admission to an engineering department. In general, the prerequisite courses are: one year of calculus, differential equations, one or two quarters of inorganic chemistry, two to three quarters of physics. English composition, and two to four courses in engineering fundamentals (e.g., programming, statics, thermodynamics, etc.). The Engineering Advising Center or the individual department may be consulted for a listing of specific entrance requirements.

All engineering departments have enrollment quotas, and admission is on a competitive basis. The criteria by which applicants are judged vary from department to department.

Admission for the Disadvantaged

While the sole purpose of the admission requirement is to limit enrollment to a number that can be taught well with the resources available, the College recognizes that this may eliminate some disadvantaged students

COLLEGE OF ENGINEERING / SPECIAL FACILITIES 279

whose potential is high but who, through extenuating background circumstances, have had limited access to early education that provides adequate experience in abstract reasoning. For purposes of special consideration for admission, a disadvantaged student is defined as one who (1) is economically disadvantaged as shown by eligibility for a Basic Need Grant on the National Financial Aid Program, or (2) is educationally disadvantaged, having attended a school without a full and available complement of college preparatory work, or (3) has ethnic minority status with a group showing historic underrepresentation in the field of engineering. These students are encouraged to apply for admission to departments and to attach to their application a letter to the admissions committee that provides information on the applicant that is relevant to the admission decision.

Recommended High School Preparation

Substantial high school preparation in mathematics, physical science, and communication is essential for entrance to engineering studies. Required and recommended courses may be determined from the Engineering Advising Center.

Engineering Advising Center

353 Loew

The Engineering Advising Center assists any student interested in planning the initial portion of an engineering degree program, and distributes information about prerequisites for application for admission to one of the departments in the College. A student who is interested in engineering is urged to identify engineering as the intended major while still in the College of Arts and Sciences and to seek advice in the Engineering Advising Center.

Students are urged to contact the Engineering Advising Center for program, course, or career information and discussion. A first-year, career-planning course (ENGR 110) is available for students who wish more information on career alternatives.

Types of Programs

The College offers three basic programs leading to Bachelor of Science degrees:

Departmental Major. This program leads to a Bachelor of Science degree in a designated field of engineering (e.g., Bachelor of Science in Civil Engineering). It is designed for students who intend to practice as professional engineers in a standard branch of engineering or who plan to undertake graduate study in that field. The curricula for these degrees are accredited by the Accreditation Board for Engineering and Technology, (ABET), the principal engineering accrediting agency in the United States. Accreditation requirements stipulate certain course distribution requirements for the undergraduate degree. A description of how each of the accredited baccalaureate programs meets the ABET requirements is available from the department office and from the Engineering Advising Center. Accredited four-year curricula leading to baccalaureate degrees are offered in aeronautics and astronautics and in ceramic, chemical, civil, computer, electrical, industrial, mechanical, and metallurgical engineering, as well as in technical communication.

Application to a department program at the upperdivision level is made at the time that lower-division requirements are satisfied. Currently, enrollment limits imposed by faculty size and laboratory/classroom space available are such that entry into a specific department may be competitive. In general, a student applicant must demonstrate scholastic aptitude, as evidenced by the attainment of grades whose average is 2.5 or above (depending upon the program) in Mathematics; the Natural World, English composition, and Engineering Fundamentals. The student is urged to plan ahead by learning the intended department's requirements and particularly by noting which requirements must be fulfilled by the time the application is made. The larger departments permit entry for autumn or spring quarters. Others permit only autumn quarter entry.

Nondepartmental Professional Program. This program leads to a Bachelor of Science in Engineering degree and is designed for students who have well-defined, special educational objectives that departmental programs do not satisfy. Graduates can practice as professional engineers in newly developing fields, or they may embark on graduate study in these or allied fields (see Engineering Interdepartmental Curricular Program).

Nonprofessional Program. Leading to a Bachelor of Science degree, this program is intended for students who wish to have significant exposure to science and engineering courses, but who do not plan to engage in professional engineering practice (see Engineering Interdepartmental Curricular Program).

General Requirements for Graduation. To graduate, students must meet or exceed the requirements of the University, the College, and their particular program or department. College requirements are listed in this section, and program or departmental requirements are given in the specific section that describes that program or department:

All departments of the College have continuation policies that specify a minimum rate of progress as well as minimum academic performance levels. These policies may be more restrictive than those generally applied by this university and may change in time. Information on current policy is available at the departmental offices.

Selecting courses that fulfill graduation requirements is the responsibility of each individual. Students are urged to check carefully the course and credit requirements of the program in which they are enrolled.

The College requires a minimum number of credits within certain areas of study and some specific courses within certain areas. All programs require:

General Education Requirements: 91 Credits

Areas of Knowledge: 55 Credits

Visual, Literary, & Performing Arts and Individuals & Societies: 30 credits minimum. Visual, Literary, & Performing Arts (VLPA) includes courses in literature, art, music, drama, etc., which stress the essential qualities of individual forms of expression. First- and secondquarter language courses may not be counted toward the VLPA requirement. Individuals & Societies includes courses in history, economics, psychology, sociology, etc., which stress the social nature of mankind and the development and analysis of societies and/or social institutions. Courses that count toward these requirements are identified as VLPA or I&S in the General Catalog and in the quarterly Time Schedule. A minimum of 10 credits is required in each area. Also required is one in-depth sequence consisting of two or more related courses.

Natural World: 25 credits. Specifically required are chemistry (10 credits): CHEM 140, 141, 150, 151; and physics (15 credits): PHYS 121/131, 122/132, 123/133.

Mathematics: 24 Credits

Specifically required are MATH 124, 125, 126, 307 and 308. The remaining 3 credits are specified or recommended by the department.

Written and Oral Communication: 12 Credits

One 5-credit English composition course from the approved University list. ENGR 231 Introduction to Technical Writing (3 credits) and ENGR 333 Advanced Technical Writing and Oral Presentations (4 credits, or department approved alternative).

Engineering Fundamentals: 24 Credits

CSE/ENGR 142 Computer Programming for Engineers (4 credits), is required. The remaining credits are to be selected from the following areas of study: engineering science, graphics, numerical and computational techniques, engineering economics, and systems engineering.

Each department specifies part or all of the Engineering Fundamentals course work (see individual departmental requirements). Such courses are intended to provide the student with a strong background for the chosen major field of study.

At least 16 of the required 24 credits in Engineering Fundamentals must be completed within the first 144 credits earned, unless a waiver has been granted.

Engineering Departmental Course of Study: 77 Credits

Major departments or specific programs will require at least 77 credits in their curricula. At least 24 credits must have a design component.

Special Programs

Cooperative Education and Minority Internship Program 353 Loew Director, Helene Beaver

The Cooperative Education and Minority Internship Program provides the opportunity for pre-engineering students and all departmental students to combine practical, full-time, on-the-job engineering experience with atternate periods of full-time academic study. Advantages of participation in this program include assistance for the student in deciding which branch of engineering to follow; additional income to help defray college expenses; relevance and motivation for study based on real engineering work; and work experience and employment contacts that may result in a higher starting salary after graduation.

Information may be obtained from the Director of Cooperative Education, College of Engineering, FH-10.

Continuing Education Programs

Engineering noncredit short courses, conferences, televised instructional programs, and late-afternoon credit classes are offered to the professional community. These offerings range from refresher courses, which assist engineers who are planning for professional registration, to credit courses leading to a graduate degree. In general, the offering of noncredit and credit continuing education programs is based on need or demand. Courses are announced in *Spectrum*, by special announcements, professional society newsletters, and news media.

Special Facilities

OFFICE OF ENGINEERING RESEARCH Coordinator, Mary Heusner 372 Loew

The Office of Engineering Research promotes, stimulates, and coordinates research in all fields of engineering. Its primary role is to maintain records of grant and contract proposals and awards. It also allocates limited resources to College units to increase the number and quality of research grants and contracts in the College of Engineering.

AEROSPACE AND ENERGETICS RESEARCH PROGRAM

Director, Abraham Hertzberg 120 Aerospace Research and Engineering Laboratory

The Aerospace and Energetics Research Program is

directed toward high-technology engineering research and teaching through research. The program has the task of anticipating, and even trying to outpace, the critical technology needs of our nation. The research and teaching programs of this laboratory, therefore, emphasize those engineering skills that both match the requirements of the present and future and develop in students a broad understanding of the impact of technology on society. Suitable programs are designed to develop in the student, through his or her particular research program, the imagination and, more importantly, the willingness to respond to the complex and rapidly changing future of engineering. This ideal directs the faculty's efforts and creates within the principal investigators, research faculty, and students the concept of engineering as an adventure.

The program is marked by a catholic approach to research, with programs covering many fields, usually centered on energy or aerospace. Active research programs are available in plasma engineering related to fusion power, space and terrestrial solar energy systems, laser bioengineering experiments, studies of the basic technology of high-power laser systems, advanced gas dynamics research involving new propulsive concepts, and the use of shock waves to process chemicals, which represent some of the interests of the principal investigators working together in the Aerospace and Energetics Research Program.

Interdisciplinary Engineering Studies Program

356 Loew

The College of Engineering directly administers nondepartmental undergraduate and graduate degree programs, all of the College's lower-level courses, and upper-level courses not encompassed by regular departmental offerings. These courses are designated ENGR; in general, ENGR courses are supervised and taught by regular departmental faculty members.

Undergraduate Programs

358 Loew

Coordinator, Dianne F. Cline

The Interdisciplinary Engineering Studies (IES) Program is intended for students whose desired course of study does not fall within one of the traditional engineering departments. An interdisciplinary program combines in-depth course work from two or more departments. Although course work may involve departments outside the College of Engineering, the major thrust must be in engineering.

The IES Program offer a nonprofessional degree program leading to the Bachelor of Science (B.S.) and a professional degree program for the Bachelor of Science in Engineering (B.S.E.).

Due to the uniqueness of each interdisciplinary student's program of studies, the B.S. and B.S.E. degrees are not accredited by the American Board of Engineering and Technology (ABET). The experience requirement to obtain a professional engineering ilicense is two years longer for a B.S.E. graduate, except in surveying, than for a graduate of an accredited program. A B.S. graduate is not eligible for a professional engineering license.

Interdisciplinary students develop personal programs of study approved by a faculty adviser with similar interests. Programs are reviewed and approved by the Interdisciplinary Committee which oversees all interdisciplinary study programs. Contact the Office of Academic Affairs at 543-8590 for information on established procedures and applications for entry into the B.S.E. and B.S. programs. Entrance requirements and the continuation policy for participation in these programs are consistent with those of other departments in the College.

Bachelor of Science in Engineering Degree

A typical B.S.E. program could: combine course work from civil and mechanical engineering and oceanography for a program in ocean engineering; course work from civil and chemical engineering to form a program in environmental engineering; or course work from one or more of the engineering programs and from physics for a program in engineering physics. Admission into this program (usually after completion of 90 credits) is competitive with a GPA of at least 2.80 in technical courses required for entry. A minimum of 75 credits must be completed after entering the program before a B.S.E. degree is awarded.

Bachelor of Science Degree

The nonprofessional Bachelor of Science degree provides greater flexibility than does the Bachelor of Science in Engineering degree. It can be an excellent base for subsequent professional studies in law, medicine, or business. It may also be the primary educational objective in such fields as technical writing, engineering sales, or environmental studies. Detailed requirements are available from the coordinator in the Office of Academic Affairs.

Graduate Programs

The College also offers graduate programs leading to the Master of Science in Engineering, Master of Engineering, and Master of Science degrees, without designation of a specific major.

Approved programs lead to the M.S.E. degree in civil, mechanical, electrical, chemical, and interengineering; an approved program leads to the M.Eng. degree in aeronautics and astronautics; and approved programs lead to the M.S. degree in civil engineering, interengineering, and materials science and engineering. Admission requires a B.S. degree in engineering, mathematics, or physical science and evidence of aptitude for graduate study. Submission of scores on the Graduate Record Examination is required.

Master of Science in Engineering Degree

The Interengineering Master of Science in Engineering (M.S.E.) and Master of Science (M.S.) program is intended for students whose desired course of study includes two or more engineering departments and may also include study in departments outside the College of Engineering. Applications and files of stu-dents entering the M.S./M.S.E. option are handled in the office of the Associate Dean for Academic Affairs. Admission to the interengineering option requires a statement describing the applicant's objectives. This statement should state why students want to enter the M.S./M.S.E. program rather than one of the traditional engineering graduate programs. Applicants to the M.S./M.S.E. program must have well-defined educational objectives which cannot be satisfied by established engineering programs. Graduation and entrance requirements, which differ for the various programs, may be obtained from the Office of the Dean for Academic Affairs, College of Engineering, 543-8590.

Program in Engineering and Manufacturing Management—PEMM Fellows

For students interested in a career in manufacturing management, PEMM offers a two-year (24-month) joint degree program leading to both M.B.A. (Master of Business Administration) and M.S.E. (Master of Science in Engineering) degrees. PEMM applicants must apply to the M.B.A. Program, the M.S.E. Interengineering Program, and the PEMM Program. Prospective students must take both the GRE and GMAT examinations before applying. The Graduate Program Office in the School of Business must receive all M.B.A. applications by March 1. The deadline for submitting M.S.E. and PEMM applications to the College of Engineering is March 15. Graduation and entrance requirements may be obtained from: Office of the Dean for Academic Affairs, College of Engineering, (206) 543-8590 and the Program in Engineering and Manufacturing Management (PEMM), (206) 685-7023.

M.S.E.—Technical Japanese Program

The Technical Japanese Program, within the College of Engineering Interengineering Program, is a two-year, 50-credit master's degree program which combines graduate work in a science or engineering field with advanced instruction in technical Japanese language. The degree equips students with the skills necessary to read technical literature in Japanese and to work effectively with Japanese engineers and scientists in research or business environments. The program includes a summer internship in Japan in an industrial or research setting.

Students are admitted to the program only for autumn quarter and the application deadline is February 15. To be admitted, applicants must have: a bachelor's degree in engineering or science; an undergraduate GPA of at least 3.00; two years of college-level Japanese or equivalent training; satisfactory scores on the GRE; and satisfactory scores on the Japanese Proficiency Test (administered by the Technical Japanese Program).

For more information, contact Miriam Rich, Program Coordinator, 13 Engineering Library, (206) 685-1109.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

ENGR 100 Introduction to Design Engineering (4) I&S Introduction to design and communication principles through engineering project approach, stressing teamwork, design process, specialties and tools of engineering, creative and analytical thinking, professionalism and ethics, social, economic and political context, open-ended problems. Grading based on quality of engineering projects and presentation of design through written, oral, and graphical communication. Offered: AWSp.

ENGR 110 Career Planning I (1) Presentations by various faculty and staff members, students, and recent graduates offer an introduction to the College of Engineering, curricular options, fields of engineering, interdisciplinary programs, and information of general interest. Credit/no credit only. Limited to freshmen, sophomores, or transfer juniors. Offered: AW.

ENGR 111 Engineering Problems (5) Introduction to solving problems in statics and dynamics. Applications of vectors and calculus to rectilinear motion, statics, momentum, work and energy, and rotational motion. Designed to develop the ability to analyze and solve engineering problems. Prerequisites: MATH 124 and permission of instructor. Offered: Sp.

ENGR 123 Introduction to Engineering Graphics (4) NW Freehand sketching, lettering, scales, use of instruments, layout drawings, orthogonal projection,

COLLEGE OF ENGINEERING / INTERDISCIPLINARY ENGINEERING STUDIES PROGRAM 281

descriptive geometry, pictorials, and basic dimensioning. Communicating technical information in engineering design and research. Introduction to computeraided design drafting, Offered: AWSpS.

ENGR 142 Computer Programming for Engineers and Scientists I (4) NW/QSR Patis Computer programming in high-level language. Algorithmics (variables, expressions, statements); abstraction (data types, subprograms, packages, generics); analysis (correctness, efficiency, numerics). Design and analysis: specification, coding, documentation, testing, debugging, evaluation. Using software tools. Not available for credit to those who have taken 141 or CSE 210. Offered: jointly with CSE 142; AWSpS.

ENGR 170 Fundamentals of Materials Science (4) NW Fundamental principles of structure and properties of materials utilized in the practice of engineering. Properties of materials are related to atomic, molecular, crystalline structure. Metals, ceramics, multiphase systems, and polymeric materials. Relationships between structure and electrical, mechanical, thermal, chemical properties. For advanced freshmen and sophomores. Prerequisite: CHEM 150 or permission of instructor. Offered: AWSpS.

ENGR 197 Engineering Problem Solving (1, max. 12) Lectures and problem sessions in mathematics, chemistry, and physics with engineering applications. Enrollment restricted to Minority Science and Engineering Program (MSEP) students. Credit/no credit only. Offered: AWSp.

ENGR 199 Special Projects (1-3, max. 3) Students propose problems to solve to an engineering faculty member. The problems may be selected from the student's own experiences and interests, from the interest of the faculty member, or from other sources such as faculty or graduate students doing research projects, or from personnel in the physical medicine area, occupational therapy, hospital, industry, government. Corroboration by an engineering faculty member is required. Project suggestions are available. Offered: AWSoS.

ENGR 202 Special Projects (1-3) Projects on topics of current interest in engineering. Prerequisite: permission of instructor. Offered: A.

ENGR 210 Engineering Statics (4) Principles of statics, basic concepts, parallelogram law, Newton's law, resultants, force-couple relationships, equilibrium diagrams, equilibrium analysis, three-dimensional structures, two-dimensional frames, trusses, beams, and friction. Vector algebra used throughout the course. Prerequisites: MATH 126, PHYS 121; recommended: graphics background. Offered: AWSpS.

ENGR 215 Fundamentals of Electrical Engineering (4) Introduction to electrical engineering. Basic circuit and systems concepts. Mathematical models of components. Kirchoff's laws. Resistors, sources, capacitors, inductors, and operational amplifiers. Solution of first and second order linear differential equations associated with basic circuit forms. Prerequisites: PHYS 122 and MATH 126. Offered: AWSp.

ENGR 220 Introduction to Mechanics of Materials (4) Introduction to the concepts of stress, deformation, and strain in solid materials. Development of basic relationships between loads on structural and machine elements such as rods, shafts, and beams, and the stresses, deflections, and load-carrying capacity of these elements under tension, compression, torsion, bending, and shear forces, or combinations thereof. Prerequisite: 210. Offered: AWSpS.

ENGR 230 Kinematics and Dynamics (4) NW Kinematics of particles, systems of particles, and rigid bodies; moving reference frames; kinetics of particles, systems of particles, and rigid bodies; equilibrium, energy, linear momentum, angular momentum, Euler equations, and special problems (e.g., central force motion, vibration). Prerequisite: 210. Offered: AWSpS. ENGR 231 Introduction to Technical Writing (3) Principles of organizing, developing, and writing technical information. Report forms and rhetorical patterns common to scientific and technical disciplines. Technical writing conventions such as headings, illustrations, style, and tone. Numerous written assignments required. Required for all engineering majors. Prerequisite: all required ESL courses and one 5 credit composition course. Offered: AWSpS.

ENGR 250 Fundamentals of Engineering Economy (4) NW Introduction to industrial cost analysis. Basics of industrial cost accounting. Application of interest computations to engineering decision making. Analysis of engineering alternatives based on use of interest computations, valuations, depreciation, and cost estimates in process and product manufacturing. Use of spreadsheets. Offered: AWSp.

ENGR 260 Thermodynamics (4) NW Introduction to the basic principles of thermodynamics from a macroscopic point of view. Emphasis on the First and Second Laws and the State Principle, problem solving methodology. Prerequisites: MATH 126, PHYS 121, and CHEM 140. Offered: AWSpS.

ENGR 280 Introduction to System Engineering (4) Concepts of system approach, system hierarchies, functional analysis, requirements, trade studies, and other concepts used to define and integrate complex engineering systems. Prerequisite: 142. Offered: AW.

ENGR 301 Creating the Future (3) I&S Douthwaite Examines the concept of alternative individual and societal futures and the opportunities for creating them. Many authors are reviewed, a number of scenarios for the future are explored, and several methods of forecasting are investigated.

ENGR 310 Social Constraints on Engineering Design (3) I&S Ways in which social goals affect engineering design decisions. Social values and public policy issues that generate design criteria using engineering cases such as space travel, energy conservation, nuclear waste disposal. For students from any discipline. Prerequisite: junior standing or permission of instructor.

ENGR 315 Probability and Statistics for Engineers (3) NW Application of probability theory and statistics to engineering problems, distribution theory and discussion of particular distributions of interest in engineering, statistical estimation and data analysis. Illustrative statistical applications may include quality control, linear regression, analysis of variance, and experimental design. Prerequisite: MATH 307. Offered: AWSp.

ENGR 321- Engineering Cooperative Education (2-, max. 16) Engineering practicum; integration of classroom theory with on-the-job training. Periods of full-time work alternate with periods of full-time study. Open only to students who have been admitted to the Engineering Cooperative Education Program. Requires subsequent completion of ENGR 322 to obtain credit. Credit/no credit only. Offered: AWSpS.

ENGR 322 Engineering Cooperative Education Postwork Seminar (0) Reporting and evaluation of co-op work experience, and discussion of current topics in engineering. To be taken during the first quarter in school following each work session. Offered: AWSpS.

ENGR 323- Engineering Cooperative Education-Parallel (1-, max. 12) Engineering practicum; integration of classroom theory with on-the-job training. Parttime work concurrent with study. Open only to students who have been admitted to Engineering Cooperative Education Program. Requires subsequent completion of ENGR 322 to obtain credit. Credit/no credit only. Offered: AWSpS.

ENGR 333 Advanced Technical Writing and Oral Presentation (4) Emphasis on the presentation of technical information to various audiences. Style of writing required for proposals, reports, and journal articles. Oral presentation principles, including use of visuals, as well as organizing and presenting an effective talk. Prerequisite: 231. Offered: AWSpS.

ENGR 341 Energy: Consumption Patterns, Fossil Fuels, and Conservation (3) NW Woodruff Survey of energy use, especially in the United States. Fossil fuels with emphasis on resource availability and on greenhouse effects and other environmental consequences. Methods for reducing consumption through conservation. Offered: jointly with ENV S/PHYS 341; A.

ENGR 342 Energy: Nuclear and Solar Power (3) NW Woodruff Technology of nuclear power, especially fission power, and of the major forms of solar power, including hydroelectric power, wind power, and biomass. Consideration given to the factors limiting the utilization of these sources. Offered: jointly with ENV S/PHYS 342: W.

ENGR 343 Environmental Radioactivity (3) NW Woodruff Sources of radioactivity in the environment, including both natural sources, especially radon, and manmade sources, especially nuclear power and nuclear explosions. Emphasis given to methods for determining radiation doses from the significant sources. Offered: jointly with ENVH/ENV S/PHYS 343; Sp.

ENGR 351 Inventions and Patents (1) I&S Law and procedures for patenting inventions, employer- employee relationship, and trademarks. Primarily for engineering students. Prerequisite: junior standing. Offered: Sp.

ENGR 360 Introductory Acoustics (3) NW Introduction to propagation of acoustical waves; emphasis on propagation of sound waves in air, but material is applicable to propagation of sound waves in liquids; including underwater acoustics, and to propagation of stress waves in solids. Includes a historical development of acoustics, terminology, and units employed. Prerequisite: PHYS 123, MATH 307. Offered: Sp.

ENGR 401 Methods in Applied Mathematics I (4) NW Emphasis on acquisition of solution techniques; ideas illustrated, specific example problems arising in science and engineering. Applications of vector differential calculus, complex variables. Line, surface integrals; integral theorems; Taylor and Laurent series, contour integration. Prerequisites: MATH 205; MATH 328 or A A 370, and AMATH 351 or MATH 307 or permission of instructor. Offered: jointly with AMATH 401; A.

ENGR 402 Methods in Applied Mathematics II (4) NW See 401. Applications of ordinary differential equations; review of elementary concepts for first and second order equations; power series and Frobenius solutions. Laplace transforms; systems of differential equations, eigenvalues. Prerequisites: MATH 205; MATH 328 or A A 370; and AMATH 351 or MATH 307 or permission of instructor. Offered: jointly with AMATH 402; W.

ENGR 403 Methods in Applied Mathematics III (4) NW See 401. Application of partial differential equations; linear and quasilinear first order equations, characteristics; classification of linear second order equations; basic solution techniques for parabolic, elliptic, and hyperbolic equations; Green's functions and integral transform methods. Prerequisite: 402 or permission of instructor. Offered: jointly with AMATH 403; Sp.

ENGR 450 Gas Discharges for Plasma Processing and Other Applications (3) *Ribe, Vlases* Lectures and demonstrations on direct-current and radio-frequency electrical discharges for sputtering, plasma etching and other plasma processing applications. Prerequisites: MATH 307, PHYS 122.

ENGR 490 Reliability and Risk Analysis (3) Principles of reliability and safety analysis, including Markov models and fault-tree/event-tree construction; introduction to fundamental concepts in probabilistic 282 COLLEGE OF ENGINEERING / INTERDISCIPLINARY ENGINEERING STUDIES PROGRAM

risk analysis (PRA); examples of PRA for energy production technologies and site-specific chemical plant applications; introduction to value-impact tradeoff analysis and acceptance of risk by society.

ENGR 498 Special Topics in Engineering (1-5, max. 6) Offered: AWSpS.

ENGR 499 Special Projects in Engineering (1-3, max. 6) Offered: AWSpS.

Aeronautics and Astronautics

206 Guggenheim

Aeronautics and Astronautics deals with atmospheric and space flight and a broad spectrum of related engineering science. Established in 1930, the department offers a full complement of degree programs and is unique in the Pacific Northwest.

Undergraduate Program

David A. Russell, Faculty Adviser Reiner Decher, Undergraduate Program Coordinator

The department offers the Bachelor of Science in Aeronautical and Astronautical Engineering degree, based on a program of study of engineering science with emphasis on the design and development of vehicles operating within the atmosphere or space. The program is accredited by the Accreditation Board for Engineering and Technology, and all graduates must meet certain specific distribution requirements.

Admission

Entrance into the department requires the equivalent of at least 75 applicable credits and a 2.50 GPA in specified courses. These are minimum requirements; admission is competitive. Details of the entrance requirements, application deadlines, application forms, and advising literature may be obtained from the department office.

Technical Proparation

The department requires the General Education and Engineering Fundamentals requirements of the College of Engineering listed above and, in addition has the following recommendations and requirements for technical preparation. In the Natural World, PHYS 225 is required. In engineering science, ENGR 210, 230, and 260 are required prior to admission to the department. In addition, ENGR 215 is required and is recom- a mended to be taken prior to entering the department.

Professional Courses

The department program begins in the autumn quarter of the junior year. Exceptions are very unusual and must be coordinated with the undergraduate adviser. Required junior courses: A A 300, 301, 302, 310, 311, 312, 321, 322, 330, 331, 332, 370. Required senior courses: A A 410-411 or 420-421, 460, 498 and 21 credits of senior technical electives, with at least 18 chosen from department offerings.

Additional free electives may be needed to meet the 192 credits required for graduation. Appropriate technical electives include electronics, automatic control, mathematics, applied mathematics, computer science, physics, and astronomy. Senior programs should be planned with the assistance of the faculty adviser.

Graduate Program

Mitsuru Kurosaka, Graduate Program Adviser

The Department of Aeronautics and Astronautics offers programs that provide a foundation in the engineering sciences and study in various engineering applications. These lead to the degrees of Master of Science in Aeronautics and Astronautics, Master of Engineering, or Doctor of Philosophy.

Master of Science in Aeronautics and Astronautics Degree

The program of study is tailored to the needs and interests of the student. Each program must be approved by the department graduate committee and must provide breadth through a variety of subjects, depth through extensive study of a specialized field, and analytical strength. Minimum programs consist of either 39 credits of course work, or 30 credits of course work and a 9-credit thesis.

Master of Engineering Degree

The Master of Engineering program is intended to provide course work and research beyond that for the degree of Master of Science in Aeronautics and Astronautics. The student must complete an approved program of study and research, which usually consists of a prior Master of Science degree, followed by a minimum 30 credits of course work and a 9-credit thesis.

Doctor of Philosophy Degree

The doctoral program consists of lectures, seminars, discussions, and independent study, enabling the student to master and to make original contributions to a particular field. In addition to the formal steps for obtaining the degree listed in the Graduate School section of this catalog, the student must complete an approved program of study consisting of 30 credits of course work beyond that required for the Master of Science in Aeronautics and Astronautics, and is expected to be in continuous full-time residence for a minimum of one academic year after advancement to Candidate standing.

Research Activities

Research facilities include the Kirsten 8x12-foot lowspeed wind tunnel, a water tunnel, a blow-down tunnel, shock tunnels and Ludwieg tubes, a projectile accelerator, material and structural test machines, a dynamic fracture laboratory, a composite material laboratory, and various fusion-research and engineering physics laboratories. A variety of computer facilities are available, including a computational fluid dynamics laboratory and a new controls laboratory. The Aerospace and Energetics Research Program, which conducts interdisciplinary research in the Aerospace and Energetics Research Building, is also part of the Department of Aeronautics and Astronautics.

Externally funded research is carried out by faculty members and students on such topics as buoyant flows, separation control, combustor mixing, shear layers, computational fluid dynamics, internal flows, reacting flows, ram accelerators, space energy systems, space system design, control system design and engineering, robust and optimal control, rotorcraft control, wing optimization, impact mechanics, cylinder failure, composite material structure and fracture, plasma science, and fusion research.

Admission

Students who have earned a baccalaureate degree in an accredited program of aeronautics and astronautics or closely related field are eligible for the Master of Science program. Backgrounds in related fields require review on a case-by-case basis, and preparatory courses may be required, depending on the student's previous studies and educational objectives. Admission is competitive, with the equivalent of a 3.00 GPA in previous technical study a minimum standard. Submission of verbal, quantitative, and analytical scores on the Graduate Record Examination is required.

.

Admission to the Doctor of Philosophy program is based on satisfactory performance on a departmental qualifying examination. Admission to that examination is based on evidence of superior academic ability.

Additional Information

Students who intend to work toward advanced degrees must apply for admission to the Graduate School. Most students are financially supported by their employers or by the department as teaching or research assistants. For further information on this or other aspects of department programs, contact the Graduate Program Coordinator, 206 Guggenheim, FS-10.

Faculty

Chairperson

Walter H. Christiansen

Professors

Bollard, R. John * 1961; PhD, 1954, Purdue University; mechanics of materials, structural mechanics, aeroelasticity, design and crashworthiness of aircraft.

Bruckner, Adam * 1972; PhD, 1972, Princeton University; space propulsion, power, and systems design; hypersonic, hypervelocity accelerators; lasers.

Christiansen, Walter H. * 1967; PhD, 1961, California Institute of Technology; gas dynamics and gas physics, high-power gas lasers and their application, energy conversion.

Clark, Robert N. * 1957; PhD, 1969, Stanford University; automatic control systems, fault detection in dynamic systems.

Decher, Reiner * 1973; PhD, 1968, Massachusetts Institute of Technology; aircraft propulsion, fluid mechanics, energy conversion.

Eastman, Fred 1927, (Emeritus); MS, 1929, Massachusetts Institute of Technology; aeronautics and astronautics.

Fyfe, Ian M * 1959; PhD, 1958, Stanford University; dynamics, fracture mechanics.

Hertzberg, Abraham * 1966, (Emeritus); MAeE, 1949, Cornell University; high-power lasers, fusion research, solar energy, space systems, energy systems, heat transfer.

Hoffman, Alan Lowell * 1989, (Research); PhD, 1967, California Institute of Technology; plasma physics and magnetic confinement fusion.

Holsapple, Keith A. * 1965; PhD, 1965, University of Washington; solid mechanics, continuum mechanics, structure waves, finite element methods.

Jarboe, Thomas R. * 1989; PhD, 1974, University of California (Berkeley); plasma physics and controlled fusion, magnetic reconnection and relaxation.

Joppa, Robert G. * 1947, (Emeritus); PhD, 1972, Princeton University; aircraft flight mechanics, stability and control.

Kevorkian, Jirair * 1964; PhD, 1961, California Institute of Technology; partial differential equations, perturbation theory.

Kurosaka, Mitsuru * 1987; PhD, 1968, California Institute of Technology; propulsion, turbo machinery, thermo-fluid mechanics, heat transfer and acoustics.

Lin, Kuen-Yuan * 1984; PhD, 1977, Massachusetts Institute of Technology; composite materials, structural mechanics, finite element methods.

Parmerter, R. Reid * 1963; PhD, 1963, California Institute of Technology; structures, solid mechanics, fracture mechanics. Pearson, Carl E. * 1967, (Emeritus); PhD, 1949, Brown University; wave propagation, fluid dynamics, numerical analysis, optimization.

Russell, David A. * 1967; PhD, 1961, California Institute of Technology; fluid mechanics and gas physics, aerodynamics, shock processes and laser fluid dynamics.

Street, Robert E. 1948, (Emeritus); PhD, 1939, Harvard University; aeronautics and astronautics.

Vagners, Juris * 1967; PhD, 1967, Stanford University; dynamics, controls and optimization.

Associate Professors

Breidenthal, Robert E. * 1980; PhD, 1979, California Institute of Technology; turbulence, mixing, combustion, vorticity.

Eberhardt, David Scott * 1986; PhD, 1985, Stanford University; computational fluid dynamics, numerical analysis.

Keller, Jakob J. * 1992; PhD, 1975, Swiss Federal Institute of Technology; aeroacoustics, nonlinear wave propogation, combustion, vortex flows, turbo machines.

Ly, Uy-Loi * 1988; PhD, 1983, Stanford University; robust controls, parameter optimization, model reduction, digital control, design integration.

Mattick, Arthur T. * 1975; PhD, 1975, Massachusetts Institute of Technology; gas physics, gas lasers, energy conversion.

Assistant Professor

Livne, Eli * 1990; PhD, 1990, University of California (Los Angeles); aeroelasticity, aeroservoelasticity, optimization, structural dynamics.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

A A 300, 301, 302 Aerodynamics I, II, III (4,4,4) Breidenthal, Decher, Eberhardt Aerodynamics as applied to the problems of performance of flight vehicles in the atmosphere. Kinematics and dynamics of flow fields; incompressible flow about bodies. Thin airfoil theory; finite wing theory. Compressible fluids; onedimensional compressible flow; two-dimensional supersonic flow. Viscous flows; boundary layers. Prerequisites: junior standing or permission of instructor for 300; MATH 307 and ENGR 260 for 301; 301 for 302. A A majors only. Offered: A,W,Sp.

A A 310 Orbital and Space Flight Mechanics (3) Fyle, Vagners Review of kinematics and particle dynamics. Dynamics of systems of particles. Gravitational field of the earth. Keplerian motion. Application to orbital transfer problems. Torque-free motion, spacecraft stability. A A majors only. Offered: A.

A A 311 Atmospheric Flight Mechanics (3) Clark, Livne, Ly Applied aerodynamics, aircraft flight "envelope," minimum and maximum speeds, climb and glide performance. Range and endurance, take-off and landing performance, using both jet and propeller power plants. Longitudinal static stability and control, wing downwash, stabilizer and elevator effectiveness, power effects. Lateral and directional static stability and control. A A majors only. Offered; W.

A A 312 Structural Vibrations (3) Bollard, Ly, Parmerter, Vagners Vibration theory. Characteristics of single and multidegree-of-freedom linear systems with forced inputs. Approximate methods for determining principal frequencies and mode shapes. Application to simple aeroelastic problems. Prerequisite: 311. A A majors only. Offered: Sp. A A 321, 322 Junior Laboratory II, III (2,2) Breidenthal, Clark, Fyfe, Vagners The design and conduct of experimental inquiry with consequent introduction to experimental equipment and techniques relative to the general field of mechanics with emphasis in the applied fields of aeronautics and astronautics. A A majors only. Offered: W,Sp.

A A 330, 331, 332 Structural Analysis I, II, III (4,4,4) Bollard, Fyfe, Holsapple, Livne, Parmerter Development of the equations of elasticity, viscoelasticity, and plasticity. Plane stress, plane strain; torsion, bending, and stability of rods and beams; virtual work, potential energy, Castigliano's theorem; statically indeterminate structures; bending of plates and shells. Prerequisite: 331 for 332. A A majors only. Offered: A,W,Sp.

A A 370 Introduction to Applied Analysis (3) Advanced calculus, from applications point of view. Review of ordinary differential equations. Fourier series and integrals. Laplace transformation. Bessel functions, Legendre polynomials. Review of vector analysis. Line, surface, and volume integrals. Prerequisite: MATH 307. A A majors only. Offered: A.

A A 400 Gas Dynamics (3) Christiansen, Eberhardt, Russell Introduction to kinetic theory and free molecule flows. Review of thermodynamics. Onedimensional gas dynamics: one-dimensional wave motion, waves in supersonic flow, flow in ducts and wind tunnels. Prerequisite: ENGR 260 or permission of instructor. Offered: A.

A A 401 Fluid Mechanics (3) Eberhardt, Keller, Kurosaka, Russell Inviscid equations of motion, incompressible potential flows, vortex flows, small perturbation flows, bodies of revolution, similarity laws. Method of characteristics. Prerequisites: 302 and ENGR 260, or permission of instructor. Offered: W.

A A 402 Viscous Flow (3) Christiansen, Russell Equations of motion including viscosity and heat conductivity. Exact solutions of Navier Stokes equations. Laminar boundary-layer equations, similar solutions, integral methods. Compressibility. Instability. Turbulent boundary layers. Prerequisites: 302 and ENGR 260 or permission of instructor. Offered: Sp.

A A410- Aircraft Design I (4) Preliminary design of a modern airplane to satisfy a given set of requirements. Estimation of size, selection of configuration, weight and balance, and performance. Satisfaction of stability, control, and handling qualities requirements. Prerequisite: 302; recommended: 440. Offered: W.

A A -411 Alrcraft Design II (4) Livne Preliminary design of a modern airplane to satisfy a given set of requirements. Estimation of size, selection of configuration, weight and balance, and performance. Satisfaction of stability, control, and handling qualities requirements. Prerequisite: 410. Offered: Sp.

A A 419 Aerospace Heat Transfer (3) Bruckner, Jarboe, Mattick Concentrates on conductive and radiative heat transfer, with application to thermal management in space systems. Prerequisite: senior standing in aeronautics and astronautics. Offered: A.

A A 420- Spacecraft and Space Systems Design I (4-) Bruckner Design of space systems and spacecraft for advanced near-Earth and interplanetary missions. Astrodynamics, space environment, space systems engineering. Mission design and analysis, space vehicle propulsion, flight mechanics, atmospheric entry, aerobraking, configuration, structural design, power systems. thermal management, systems integration. Design topics vary. Prerequisite: 310 or permission of instructor. Recommended: 419. Offered: W.

A A -421 Spacecraft and Space System Design II (-4) Bruckrier A continuation of 420. Course content varies from year to year and is dependent on the design topic chosen for 420. Supported by NASA/ USRA Advanced Design Program. Prerequisite: 420. Offered: Sp. A A 430 Finite Element Structural Analysis (3) Holsapple, Lin, Parmerter Introduction to the finite element method and application. One- and two-dimensional problems including trusses, beams, box beams, plane stress and plane strain analysis, and heat transfer. Use of finite element software. Prerequisite: 332 or equivalent. Offered: A.

A A 431 Plates and Shells (3) Bollard, Lin, Parmerter Introduction to the theory of plates and shells. Membrane theory of shells of revolution, cylindrical and conical shells. Axisymmetric bending of shells of revolution. Stability of structures. Prerequisite: 332. Offered: W.

A A 432 Composite Materials for Aerospace Structures (3) Lin Introduction to analysis and design of aerospace structures utilizing filamentary composite materials. Basic elastic properties and constitutive relations of composite laminates. Failure criteria, buckling analysis, durability, and damage tolerance of composite structures. Aerospace structure design philosophy and practices. Prerequisite: 332 or permission of instructor. Offered: Sp.

A A 440, 441 Flight Mechanics I, II (3,3) Clark, Livne, Ly Calculation of aerodynamic characteristics of aircraft and components including stability derivatives. Relation to wind tunnel and flight data. Vehicle equations of motion within the atmosphere, characteristics of propulsion systems and components including propellers. Prediction of performance, stability and control characteristics for a specific aircraft. Determination in flight of performance, stability, and control characteristics; and comparison with predicted and wind tunnel results. Prerequisites: 302 for 440; 440 for 441. Offered: A,Sp.

A A 448 Control Systems Sensors and Actuators (3) Study of components and formulation of their mathematical models. Amplifiers, servomotors, synchros, gyroscopes. Accelerometers, reaction mass actuators, potentiometers, shaft encoders and resolvers, proximity sensors, force and torque transducers. Experimental determination of component models and model parameters. Two 3-hour laboratories per week. Prerequisite: senior standing. Offered: jointly with E E 448; W.

A A 449 Design of Automatic Control Systems (4) Design problems in electromechanical feedback systems, aerospace and hydrospace vehicles, systems with unstable plants, lightly damped modes, nonminimum phase plants, nonlinear plants. Computer-aided simulation and design emphasized. Team elfort encouraged. Design reviews, oral presentations required. Prerequisite: 450 or E E 446 or M E 471 or equivalent. Offered: jointly with E E 449; Sp.

A A 450 Control in Aerospace Systems (4) Ly, Vagners Review of linear, ordinary differential equations. Linearization of mathematical models for aircraft and spacecraft, state space models. Laplace transformation, stability criteria, frequency domain and time domain. Feedback control and compensation methods using root locus techniques coupled with computer aided analysis. Prerequisites: MATH 307 and ENGR 230. Recommended: 311 and 312. Offered: A.

A A 450, 461 Propulsion I, II (3,3) Breidenthal, Bruckner, Decher, Kurosaka Study of the aero- and thermodynamics of rocket engines. Rocket vehicle performance. Introduction to space propulsion. Airbreathing engines as propulsion systems. Turbojets, turbofans, turboprops, ramjets, hybrid engines. Aerodynamics of gas-turbine engine components. Prerequisites: 302, ENGR 260 for 460; 460 for 461. Offered: A,W.

A A 452 Rocket Propulsion (3) Decher, Jarboe Physical and performance characteristics of rocket propulsion devices. Mission requirements, chemical rockets, arcjets, electrostatic and electromagnetic thruster. Prerequisite: A A program senior or permission of instructor. Offered: Sp.

284 COLLEGE OF ENGINEERING / AERONAUTICS AND ASTRONAUTICS

A A 460 Systems Dynamics (3) Bollard, Fyfe, Parmerter Equations of motion and solutions for selected problems; natural frequencies and mode shapes; response of simple systems to applied loads. Prerequisite: senior standing. Offered: W.

A A481 Introduction to Aeroelasticity (3) Bollard, Line, Fyfe Discussion of aeroelastic problems in aircraft design; development of static and dynamic aeroelastic problems. Prerequisites: 311, 312, 330, 331, 332. Recommended: 480. Offered: Sp.

A A 498 Special Topics in Aeronautics and Astronautics (0-1) Lectures and discussions on topics of current interest in aviation and space engineering. Three quarters required for credit. Offered: AWSp.

A A 499 Special Projects (2-5, max. 10) Investigation on a special project by the student under the supervision of a faculty member. A maximum of 6 credits may be applied toward senior technical electives. Prerequisite: senior standing. Offered: AWSpS.

Courses for Graduates Only

A A 501 Physical Gasdynamics I (3) Christiansen, Mattick Equilibrium kinetic theory; chemical thermodynamics; thermodynamic properties derived from quantum statistical mechanics; reacting gas mixtures; applications to real gas flows and gas dynamics. Offered: odd years; A.

A A 502 Physical Gasdynamics II (3) Christiansen Introduction to vibrational relaxation and nonequilibrium chemistry. Nonequilibrium physics applied to flow. Brief introduction to nonequilibrium kinetic theory. Application to a variety of research and development areas such as high-temperature energy systems and gas lasers. Prerequisite: 501 or permission of instructor. Offered: even years; W.

A A 503 Kinetic Theory/Radiative Transfer (3) Christiansen, Jarboe Boltzmann and Collisionless Boltzmann (Vlasov) equations. Instabilities in homogeneous and inhomogeneous plasma, quasi-linear diffusion, wave-particle interaction, collisional (Fokker-Plank) equation. Introduction to radiative nonequilibrium, scattering and abdorption processes. Integral equation of radiative transfer. Prerequisites: 501 or permission of instructor. Offered: even years; Sp.

A A 504 Fluid Mechanics I (3) Keller, Russell Review of thermodynamics; vectors and dyads. Derivation of the Navier-Stokes equations, stream functions and potential functions; integrals of the equations of motion. Boundary conditions and discontinuity surfaces in fluids. Exact solutions. Dimensional analysis. Highly viscous flows. Offered: A.

A A 505 Fluid Mechanics of Inviscid Flow I (3) Christiansen, Decher, Kurosaka, Russell Ideal incompressible flow; potential and stream functions. Airfolh theory and lifting line theory. Introduction to nonsteady flow; sound waves and surface waves; special topics. Offered: even years; W.

A A 506 Fluid Mechanics of Inviscid Flow II (3) Breidenthal, Decher, Keller, Kurosaka, Russell Ideal compressible flow; supersonic airfoils; shock waves; slender-body theory; lifting surface theory; approximate methods. Transonic flow; similarity; special topics. Prerequisite: 505. Offered: even years; Sp.

A A 507 Aerodynamics of Viscous Fluids I (3) Kurosaka, Russell Introduction to viscous flow; exact solutions of the larninar equations of motion; approximate equations. Exact solutions for laminar boundarylayer equations. Approximate methods for compressible laminar boundary layers. Offered: odd years; W.

A A 508 Aerodynamics of Viscous Fluids II (3) Breidenthal, Keller, Kurosaka, Russell The phenomena of turbulence; transition prediction; Reynolds stresses; turbulent boundary-layer equations. Approximate methods for turbulent boundary layers. Prerequisite: 507 or permission of instructor. Offered: odd years; Sp.

A A 509 Computational Fluid Dynamics I (3) Eberhardt Numerical approximation of the inviscid compressible equations of fluid dynamics. Analysis of numerical accuracy, stability, and efficiency. Use of explicit, implicit, and flux split methods. Discussion of splitting, approximate factorization, discrete point, and finite volume approaches. Applications to the solution of simple hyperbolic systems of equations and the Euler equations. Offered: W.

A A 510 Computational Fluid Dynamics II (3) Eberhardt Numerical approximation of equations of compressible viscous flow. Mesh requirements for resolving viscous effects in high Reynolds number flows. Analysis of numerical accuracy, stability, and efficiency. Use of explicit and implicit methods, boundary condition procedures. Applications to solution of the Navier-Stokes equations. Prerequisite: 509 or permission of instructor. Offered: odd years; Sp.

A A 513 Gas Laser Theory and Practice (3) Christiansen, Mattick - Physics and fluid mechanics of high-power lasers, emphasis on performance of modern gas dynamic lasers, flowing chemical lasers, and gaseous electric lasers. Techniques of obtaining population inversions, power extraction, basic thermodynamics, and the interaction of optical radiation with matter. Applications of high-power lasers also are emphasized. Offered: even years; Sp.

A A 516 Stability and Control of Flight Vehicles I (3) Clark, Ly Static and dynamic stability and control of flight vehicles in the atmosphere. Aerodynamics for stability derivatives. Response to control inputs and external disturbances. Effect of stability derivatives on flight characteristics. Handling qualities. Introduction to automatic control. Offered: A.

A A 517 Stability and Control of Flight Vehicles II (3) Clark, Ly, Vagners Specification of flight vehicle performance objectives. Control system components, sensor characteristics, choice of system models. Compensator design, frequency domain design of stability augmentation systems, single/multiple loop autopilot design and evaluation. Use of computer-aided control design packages. Prerequisite: 516. Offered: W.

A A 518 Stability and Control of Flight Vehicles III (3) Ly, Vagners Introduction to Linear-Quadratic-Gaussian (LQG) optimal control theory. Synthesis of stability augmentation systems and autopilot control laws using LQG methodology. Relationship of LQG results to frequency domain criteria. Reduced-order controller synthesis, digital design and implementation. Use of computer-aided control design packages. Prerequisite: 517. Offered: Sp.

A A 520-521-522 Seminar (0-0-1) Topics of current interest in aerospace engineering. Offered: A-W-Sp.

A A 523 Special Topics in Fluid Physics (3) Offered: AWSp.

A A 524 Aircraft Engine Noise (3) Decher, Kurosaka Description and measurement of noise, power spectra. Elementary duct acoustics, rotor-stator interaction, effect of design blade loading. Turbine noise, core noise, acoustic linings. Jet noise, Lighthill theory, scaling laws. Offered: odd years; A.

A A 525 Aerothermodynamics of Aircraft Engines Components (3) Decher, Kurosaka Estimation of component performances. Inlets, description of flow distortion. Aerodynamics of turbines and compressors. Radial equilibrium theory, through-flow theory. Offered: even years; W.

A A 526 Aerothermodynamics of Aircraft Engine Systems (3) Decher, Kurosaka Aircraft gas turbine engine, cycle analysis. Component performance measures. Preliminary design of engines, including component losses. Off-design performance. Variable geometry engines. Offered: even years; Sp. A A 527 Energy Conversion I (3) Decher Energy resources. Heat generation by advanced reactors, combustion, solar collection. Analysis of power systems for space and advanced commercial power generation. High-temperature cycles. Offered: even years; A.

A A 528 Energy Conversion II (3) Decher Heat exchangers, energy storage. Direct conversion of heat to electricity. Electrochemical processes. Recommended: 527. Offered: odd years; W.

A A 529 Space Propulsion (3) Decher Nucleonics, and heat transfer of nuclear-heated rockets. Electrothermal, electromagnetic, and electrostatic thrusters. Power/propulsion systems. Prerequisite: permission. Offered: odd years; Sp.

A A 530 Mechanics of Solids (3) Bollard, Fyfe, Holsapple, Lin, Livne General concepts and theory of solid mechanics. Large deformations. Behavior of elastic, viscoelastic, and plastic solids. Linear theory of elasticity and thermoelasticity. Wave propagation in solids. Offered: A.

A A 531 Structural Reliability and Damage (3) Bollard, Fyfe, Parmerter Theory of plasticity, yield surfaces, flow rules, limit theorems. Concepts of failure and fatigue in aerospace structures, residual strength, cumulative damage, probability aspects and case histories. Prerequisite: 530 or equivalent or permission of instructor. Offered: odd years; W.

A A 532 Mechanics of Composite Materials (3) Holsapple, Lin Analyses and design of composite materials for aerospace structures. Micromechanics. Anisotropic elasticity. Laminated plate theory. Thermoviscoelastic behavior and fracture of composites. Prerequisite: 530 or permission of instructor. Offered: odd years; Sp.

A A 535 Analysis of Shells I (3) Parmerter General development of the geometrically non-linear theory of thin elastic shells. Topics include an introduction to tensor analysis with applications to curved two dimensional spaces, theory of surfaces, Kirchhoff approximations, membrane theory and non-linear shallow shells. Offered: even years; Sp.

A A 540 Finite Element Analysis I (3) Fyle, Holsapple, Lin Formulation of the finite element method using variational and weighted residual methods. Element types and interpolation functions. Application to elasticity problems, thermal conduction, and other problems of engineering and physics. Offered: W.

A A 541 Finite Element Analysis II (3) Fyfe, Holsapple, Lin Advanced concepts of the finite element method. Hybrid and boundary element methods. Nonlinear, eigenvalue, and time-dependent problems. Prerequisite: 540 or permission of instructor. Offered: Sp.

A A 546 Mathematical Foundations of Systems Theory (4) Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Prerequisite: graduate standing or permission of instructor. Offered: jointly with CH E/E E/M E 510: A.

A A 548 Linear Multivariable Control (3) Ly. Vagners Single loop feedback control theory; poles, zeros, Nyquist stability, performance, robustness of multivariable systems; multivariable control synthesis: Linear-Quadratic-Gaussian methods, loop transfer recovery, Youla parametrization, H-infinity techniques, parameter optimization design. Prerequisite: E E 584 or M E 575; E E 446 or A A 448 or M E 471 or equivalent. Offered: jointly with E E 548; W. A A 549 Estimation and System Identification (3) Vagners Review of system models, model structure, model parametrization; review of stochastic processes; state estimation: observers, the Kalman-Bucy filter, numerical issues in filter design and implementation; system identification: linear regression, least squares, maximum likelihood, instrumental variable techniques. Prerequisites: E E 505 or AMATH 506 or STAT 506; recommended: 548 or E E 548. Offered: jointly with E E 549; Sp.

A A 550 Nonlinear Optimal Control (3) Vagners Calculus of variations for dynamical systems, definition of the dynamic optimization problem, constraints and Lagrange multipliers, the Pontryagin Maximum Principle, necessary conditions for optimality, the Hamilton-Jacobi-Bellman equation, singular arc problems, computational techniques for solution of the necessary conditions. Prerequisite: graduate standing; recommended: A A 548 or E E 548. Offered: jointly with E E 550; A.

A A 553 Vibrations of Aerospace Systems (3) Bollard, Fyfe, Livne Continuous and discrete systems, natural frequencies, and modal analysis; forced vibrations and motion-dependent forces. Structural damping; control augmented structures. Measurements for structural dynamic testing. Prerequisite: 571 or equivalent. Offered: odd years; Sp.

A A 554 Aeroelasticity (3) Livne Static and dynamic aeroelasticity, unsteady aerodynamics, aeroservoelastic modeling, and active control. Offered: even years; Sp

A A 556 Plasma Theory I (4) Hoffman, Jarboe Review of electromagnetic theory and statistical mechanics, unmagnetized plasma, dynamics of charged particles in a magnetic field, radiation from a plasma, fluid equation for single species, simple waves in a magnetized and unmagnetized plasma, and magnetohydrodynamics (MHD). Offered: A.

A A 557 Plasma Theory II (3) Hoffman, Jarboe Equilibrium, stability, and confinement. Classical transport, collisionless and resistive skin depths. Ideal MHD equations formally derived and properties of plasmas in the ideal limit are studied. Straight and toroidal equilibrium. Linear stability analysis with examples. Taylor minimum energy principle. Prerequisite: 556. Offered: odd years; W.

A A565 Fusion Reactor Fundamentals (3) Jarboe Introduction to basic engineering features of fusion power plants. Brief description of basic fusion physics and discussion of power plants for leading thermonuclear concepts. Engineering problems; blanket, shield neutronics; materials, thermal hydraulics; tritium, superconducting systems. Prerequisite: completion of or concurrent enrollment in 556 or permission of instructor. Offered: even years; W.

A A 567 Analysis in Engineering and Science I (3) Complex variable and associated topics. Branch cuts, series and product expansions. Contour integration, numerical implications. Harmonic functions. Complex potential (and singularities) in physical problems. Conformal mapping; applications and examples. Fourier and Laplace transforms and applications. Recommended: AMATH 401 or equivalent. Offered: jointly with AMATH 567: A.

A A 568 Analysis in Engineering and Science II (3) Survey of practical solution techniques for ordinary differential equations. Linear systems of equations including nondiagonalizable case. Linear difference equations. Nonlinear systems; stability phase plane analysis. Poincare maps. Asymptotic expansions. Regular and singular perturbations. Some computer work may be assigned. Prerequisite: AMATH 402 or equivalent. Offered: jointly with AMATH 568; W.

A A 569 Partial Differential Equations (3) Analytical solution techniques for linear partial differential equations, discussion of how these arise in engineering and science. Transform and Green's function methods. Classification of second-order equations, theory and applications of method of characteristics. Prerequisite: AMATH 403, 568 or MATH 428 or permission of instructor. Offered: jointly with MATH/AMATH 569; Sp.

A A 571 Principles of Dynamics I (3) Fyle, Livne, Ly, Vagners Systems of particles, rotating axes, rigidbody dynamics; calculus of variations. Lagrangian mechanics. Kane's equations. Periodic and quasiperiodic motion. Stability of dynamical systems; resonance in dynamical systems. Offered: A.

A A 575 Continuum Mechanics I (3) Holsapple, Parmerter General foundations of the fundamental concepts of motion, stress, energy, and electromagnetism for a continuum. General equations of conservation of mass, momentum, and energy. Linear and nonlinear elastic, viscous, and inelastic materials. Offered: jointly with CESM 521; even years; W.

A A 583 Special Topics in Solid Mechanics (3) Offered: AWSp.

A A 584 Applied Linear Algebra and Introductory Numerical Methods (3) Vagners Applied linear algebra: matrix operations, linear systems, matrix factorization, eigenvalues, numerical methods, applications to optimization, circuits, differential equations. Surveys of numerical methods: nonlinear systems, curve fitting, ordinary differential equations, quadrature, basic ideas in partial differential equations. Offered: jointly with AMATH 584; A.

A A 585, 586 Approximate Numerical Analysis II, III (3,3) Advanced topics in numerical analysis. More detailed consideration of topics in 584. Emphasis on methods for partial differential equations, integral equations, finite elements, stability and accuracy, mesh generation, adaptive meshes, sparse matrices, variational methods. Postmaster's sequence. Prerequisites: 567, 584, and 568, 569, or equivalent. Offered: jointly with AMATH 585, 586; even years; W,Sp.

A A 591 Control Systems Seminar ([0/1]-max. 1) Seminar on current topics in control systems analysis and design, presented by invited and on-campus speakers. Emphasis on control systems problems representative of all disciplines. Credit/no credit only. Offered: jointly with CH E/E E/M E 591; AWSp.

A A 599 Special Projects (1-5, max. 15) Investigation on a special project by the student under the supervision of a faculty member. Offered: AWSpS.

A A 600 independent Study or Research (*) Offered: AWSpS.

A A 700 Master's Thesis (*) Offered: AWSpS.

A A 800 Doctoral Dissertation (*) Offered: AWSpS.

Bioengineering

309 Harris Hydraulics Laboratory

The Center for Bioengineering provides a multidisciplinary program of collaborative research and training designed to accelerate the application of new engineering technologies to clinical practice and research. Major areas of current bioengineering research include bioinstrumentation, biomaterials, biomechanics, controlled drug-release systems, imaging, microsensors, bioelectromagnetics, molecular bioengineering, microcirculation, cellular bioengineering, muscle, and simulation of biosystems. There are options for study leading to master's and doctoral degrees with different levels of specialization. Detailed information on Bioengineering, its faculty and courses appears in the Interschool or Intercollege Programs section of this catalog.

Chemical Engineering

105 Berrson

Chemical engineering is concerned with processes for transforming raw materials into energy and into a great variety of consumer products, such as gasoline, pulp and paper, fertilizers, rubber, polymers and composites, pharmaceuticals, and electronic materials. Chemical engineers work on research and development of these materials and on the processes for making them, as well as on the design and operation of chemical plants and equipment by which production is achieved. This must be done with efficiency, economy, and concern for society and the environment. Some chemical engineers are employed by government agencies. Few other professions can match the diversity of job opportunities available to graduates in chemical engineering.

Chemical engineers employ the skills of mathematics, physics, chemistry, and, increasingly, biology. The chemical engineer develops competence in the use of fundamental tools for engineering analysis and design: thermodynamics, chemical kinetics and reactor design, fluid mechanics, heat and mass transfer, process control, and economics. At the University, the student studies intensively in these fields to acquire knowledge and skills applicable in a variety of specialized fields and industries. Flexibility, in fact, is the hallmark of the chemical engineer. Graduates of the department are given thorough grounding in the three main pillars of a liberal education—science, technology, and the humanities and social sciences.

Undergraduate Program

Bachelor of Science in Chemical Engineering Degree

The Bachelor of Science in Chemical Engineering degree offered by the department is an accredited, professional program. Its completion should enable the graduate either to find employment in industry or to continue on to graduate school.

Information on degree requirements is available in detail from the department. In brief, the required 192 credits includes the College of Engineering General Education requirements as specified above; engineering fundamentals, 12; chemical engineering, 44; engineering science, 8; and electives, 9. An optional 9credit specialty area allows each student to develop special competence in a selected subject by taking a minimum of three courses in that area. Engineering science and free electives may be used for this purpose. The areas are biotechnology; polymers, composites, colloids, and interfaces; computers applied to chemical engineering; and environmental engineering. A minimum GPA of 2.00 in chemical engineering courses, based on the first time each course is taken, is required for graduation.

Students can participate in the Cooperative Education Program of the College.

Advising in the Department

All students, including freshmen and sophomores, who are considering chemical engineering as a major may, and are encouraged to, be advised in the department.

Admission Requirements

Admission to the department is limited, and application requirements are subject to change. Students should consult an adviser about current requirements. Applications from women and minorities are encouraged. The applicant must have completed at least 12 credits at the UW and the following courses: MATH 124, 125, 126, 307 (18 credits); CHEM 140, 141, 150, 160, 223 (or 237) (18); PHYS 121/131, 122/132 (10), CSE/ENGR 142, ENGR 260 (8); and one 5-credit English composi-

286 COLLEGE OF ENGINEERING / CHEMICAL ENGINEERING

tion course. In addition, it is strongly recommended that students complete PHYS 123/133 and CHEM 224 (or 238). Students with a GPA lower than 2.50 for these specified courses or an overall GPA lower than 2.50 for all courses applicable to the B.S.Ch.E. degree seldom succeed in the department. Historically, a minimum GPA of 2.80 in these categories is required for admission to and success in the department. Admission is on a space-available or competitive basis. Students who wish to be admitted but who have not yet completed 12 credits at the UW should consult an adviser in the department.

Factors included in the admissions decision include the course record as indicated above and qualitative considerations such as difficulty of completed courses, frequency of incomplete or withdrawal grades, number of repeated courses, applicable work experience and maturity of attitude, record of honors, and a demonstrated ability to take at least 12 credits per quarter.

Application Procedure and Timing

Application is made by filling out an application form available in the department office. Students may apply for admission as soon as they meet the admission requirements, and are invited to consult with the departmental adviser.

Admission for the Disadvantaged

While the sole purpose of the admission requirement is to limit enrollment to a number that can be taught well with the resources available, the department recognizes that this may eliminate some disadvantaged students whose potential is high but who, through extenuating circumstances of their background, have had limited access to early education that provides adequate experience in abstract reasoning. For purposes of special consideration for admission, a disadvantaged student is here defined as one who (1) is economically disadvantaged as shown by eligibility for a Basic Need Grant on the National Financial Aid Program, or (2) is educationally disadvantaged, having attended a school without a full and available complement of college preparatory courses, or (3) has ethnic minority status with a group showing historic underrepresentation in the field of engineering. These students are encouraged to apply for admission and to attach to their application a letter to the admissions committee that provides information on the applicant that is relevant to the admission decision.

Entrance to Chemical Engineering Courses

Entrance into most chemical engineering courses is ordinarily limited to majors in chemical engineering, pulp and paper technology, and the B.S.E. program. Other students who wish to take departmental courses must meet the admission requirements of the department, have the course prerequisites, and fill out a chemical engineering course request form.

Continuation Policy

The department policy on continuation is consistent with the continuation policy of the College. Details may be obtained from the department.

Graduate Program

The department offers studies leading to the degrees of Doctor of Philosophy, Master of Science in Chemical Engineering, and Master of Science in Engineering. The doctoral degree is centered on the dissertation with a foundation in course work; it is generally completed in four to five years beyond the baccalaureate degree.

In the master's program primary emphasis is placed on course work, and the degree generally requires between 18 and 24 months of study. Thesis and nonthesis options are available, with the former requiring both course work and research.

The program of study normally includes basic subjects of importance to all chemical engineers, such as thermodynamics, transport phenomena, kinetics, and applied mathematics. In addition, students are invited to take more specialized courses in chemical engineering or in other departments. Students usually take four courses during their first quarter. Subsequently, less time is spent on course work and more on research.

The department has about seventy full-time graduate students, roughly one-fourth of whom are working toward the M.S. degree and three-fourths toward the doctorate. They study and collaborate with members of the faculty in an atmosphere that is informal, friendly, and intellectually vigorous. The range of interests among the faculty members is quite broad, so students in courses and in research work have access to a variety of fields while receiving individual attention and guidance.

Research Facilities

The department is fortunate in having outstanding facilities. The chemical engineering building, Benson Hall, is supplied with much new research equipment. The building contains classrooms, offices, stockrooms, a well-staffed machine shop, laboratories, and a variety of specialized research equipment, including VAXstations (model 3200), as well as seven Apollo work stations and many microcomputers. Each graduate student is provided desk space in a small laboratory or office as well as access to larger laboratories in the building. Students also may use the services of the Academic Computer Center, the glassblowing shop, and the Chemistry-Chemical Engineering Library.

Admission Requirements

A student is accepted for admission to the Graduate School as a chemical engineering major by joint action of the Graduate School and the department after consideration of a formal application. Most students applying for admission as graduate students have a Bachelor of Science degree in chemical engineering. If a student has an undergraduate degree in chemistry, physics, mathematics, or another branch of engineering, he or she may obtain a graduate degree in chemical engineering by meeting certain additional requirements.

The Graduate Record Examination (GRE), not including the advanced test, is generally required of all applicants. In addition, applicants who do not have a baccalaureate degree in chemical engineering from an accredited university in the United States must take the advanced test in chemistry or engineering.

Financial Aid

The department has various sources of support for qualified graduate students. Prospective students in terested in applying for admission and support should request application forms from the department. The completed forms and reference letters should be received in the department office by January 31, if possible, and by March 15 at the latest. Offers of admission with financial support are usually made in February and March.

Correspondence and Information

Graduate Program Coordinator

Department of Chemical Engineering, BF-10

Faculty

Chairperson Bruce A. Finlayson

Professors

Allan, G. Graham * 1966; PhD, 1956, University of Glasgow (UK); fiber and polymer science, creativity and innovation.

Babb, Albert L. * 1956, (Emeritus); PhD, 1951, University of Illinois; reactor engineering, bioengineering.

Berg, John C. * 1964; PhD, 1964, University of California (Berkeley); interfacial phenomena, surface and colloid science.

Bowen, J. Ray * 1981; PhD, 1963, University of California (Berkeley); combustion.

David, Morton 1953, (Emeritus); DEng, 1950, Yale University; chemical engineering.

Davis, E. James * 1983; PhD, 1960, University of Washington; transport in porous media, microparticle physics and chemistry, surface and colloid science.

Finlayson, Bruce A. * 1967; PhD, 1965, University of Minnesota; modeling of chemical reactors, polymer flow, flow through porous media.

Garlid, Kermit L. * 1960; PhD, 1961, University of Minnesota; nuclear fuel cycles, radioactive waste management.

Heideger, William J. * 1957; PhD, 1959, Princeton University; biomedical transport phenomena.

Hoffman, Alian S. * 1970; DSc, 1957, Massachusetts Institute of Technology; polymer materials science and engineering.

Horbett, Thomas A. * 1973; PhD, 1970, University of Washington; interfacial proteins, cell interactions, insulin delivery systems.

Johanson, Lennart N. * 1951, (Emeritus); PhD, 1948, University of Wisconsin; chemical engineering.

McCarthy, Joseph L. * 1941, (Emeritus); PhD, 1938, McGill University (Canada); thermodynamics, lignin and cellulose, chemistry, pulp and paper science, biochemical engineering.

McKean, William T. * 1979; PhD, 1968, University of Washington; pulp and paper science, chemical engineering.

Moulton, Ralph W. 1941, (Emeritus); PhD, 1938, Washington University; chemical engineering.

Pilat, Michael J. * 1967, (Adjunct); PhD, 1967, University of Washington; air resources engineering (design of air-pollution-control equipment).

Ratner, Buddy D. * 1972; PhD, 1972; Polytechnic Institute of Brooklyn; synthesis and characterization of polymeric biomaterials.

Ricker, Neil L. * 1978; PhD, 1978, University of California (Berkeley); chemical process design, simulation, and control.

Seferis, James C. * 1977; PhD, 1977, University of Delaware; polymer science and engineering, polymeric composites.

Sleicher, Charles A. * 1960, (Emeritus); PhD, 1955, University of Michigan; fluid mechanics, heat transfer.

Woodruff, Gene L. * 1965; PhD, 1966, Massachusetts Institute of Technology; reactor physics, fusion engineering, neutron spectroscopy, energy studies.

Associate Professors

Gustafson, Richard Roy * 1986, (Adjunct); PhD, 1982, University of Washington; process simulation and dynamics, development of high tensile carbon fibers.

Hodgson, Kevin T. * 1991, (Adjunct); PhD, 1986, University of Washington; surface and colloid science, chemistry, fiber-water interactions, papermaking.

Holt, Bradley R. * 1984; PhD, 1984, University of Wisconsin; process control, process design.

Krieger-Brockett, Barbara * 1975; PhD, 1975, Wayne State University; reaction engineering, chemical kinetics and catalysis simulation.

COLLEGE OF ENGINEERING / CHEMICAL ENGINEERING 287

Lindstrom, Duaine G. * 1982, (Affiliate); PhD, 1968, University of Washington; computing methods applied to nuclear engineering and radiation transport.

Rogers, James W. Jr. * 1990; PhD, 1979, University of Texas (Austin); surface chemistry and engineering; applications to thin film deposition.

Stuve, Eric M. * 1985; PhD, 1984, Stanford University; catalytic and electrochemical surface science.

Yager, Paul * 1987, (Adjunct); PhD, 1980, University of Oregon; physical chemistry and applications of biomembranes.

Assistant Professors

Baneyx, Francois 1992; PhD, 1991, University of Texas (Austin); biotechnology, protein technology, biochemical engineering.

Castner, David G. * 1986, (Research); PhD, 1979, University of California (Berkeley); surface analysis characterization of biomedical and catalytic materials.

Chang, Michael Wei * 1992, (Adjunct); MD, 1988, University of Texas (Galveston); physiatry.

Schwartz, Daniel T. * 1991; PhD, 1989, University of California (Davis); electrochemical engineering and electrolytic thin film science.

Wedgewood, Lewis E. * 1990; PhD, 1988, University of Wisconsin; computational fluid mechanics, macromolecular fluid flow, transport phenomena, stochastic simulation.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

CH E 309 Creativity and Innovation (2) VLPA Allan Understanding creativity and creative thinking; its challenges and dynamics through knowledge, judgment, planning, and observation. Techniques of creative thinking. Design and development of creative games. Computer-aided creative thinking. Creation, protection, and exploitation of a useful idea, including bargaining and negotiations. Prerequisite: junior standing or permission of instructor. Offered: jointly with PSE 309; Sp.

CH E 310 Material and Energy Balances (4) Chemical and physical process calculations: steadyand unsteady-state material and energy balances with specific examples in vapor-liquid contact operations and multiphase extraction, and introductory thermochemistry. Prerequisite: ENGR 260. Offered: ASp.

CH E 326 Chemical Engineering Thermodynamics (4) Phase equilibria and chemical equilibria in multicomponent systems; theories of solution; chemical reaction analysis. Prerequisites: 310; CHEM 456 or ENGR 260. Offered: AW.

CH E 330 Transport Processes I (5) Diffusive transport of momentum, heat and mass; general aspects of fluid flow; the Navier-Stokes equations; onedimensional flow with engineering applications. Prerequisites: 310 and MATH 307. Offered: AW.

CH E 340 Transport Processes II (4) Heat transfer, basic principles, and applications. Conduction, convection, and radiation. Prerequisite: 330. Offered: WSp.

CH E 400 Methods of Engineering Analysis (3) NW Applications of mathematics to problems in chemical engineering; vector calculus; properties and methods of solution of first and second order partial differential equations; similarity transforms, separation of variables, Laplace and Fourier transforms. Prerequisites: MATH 205, MATH 307, MATH 328, or permission of instructor. Offered: jointly with AMATH 400; A. **CH E 435 Transport Processes III (4)** Mass transfer, basic principles, and applications to equipment design. Physical separation processes. Prerequisites: 326, 340. Offered: ASp.

CH E 436 Chemical Engineering Laboratory I (3) Lectures on experimental design, instrumentation, laboratory safety, and report writing; laboratory experiments on fluid mechanics and heat transfer. Emphasis on experimental planning, procedures, and report writing. Prerequisites: 326, 340, and ENGR 231. Offered: AWSp.

CH E 437 Chemical Engineering Laboratory II (3) Continuation of 436. Laboratory investigation of chemical engineering principles applied to equipment design with emphasis on mass transfer operations and chemical reactors. Prerequisites: 435, 436, 465. Offered: AW.

CH E 450 Solid State Materials and Chemical Processes (3) Seferis Fundamentals of solid state including process analysis, mechanical properties; heterogeneity; anisotropy: Ilquid/solid transformations; rate processes; thermal analysis; viscoelasticity; microscopy; molecular characterization techniques. Application of fundamentals in examining polymers, metals and ceramics as used in the electronics and aviation industries. Prerequisites: 330, 340, and 465, or permission of instructor. Offered; W.

CH E 455 Surface and Colloid Science Laboratory (3) Berg Laboratory techniques, equipment, and underlying fundamentals in surface and colloid science. Experiments in the measurement of surface tension, adsorption, wetting and spreading, colloid properties, emulsion preparation and stability, electrophoresis, and interfacial hydrodynamics. Prerequisites: 326, 330, CHEM 461. Offered: Sp.

CH E 456 Physical Chemistry (3) NW Chemical thermodynamics. Laws of thermodynamics presented with applications to phase equilibria, chemical equilibria, and solutions. Honors section available Autumn Quarter. May be taken without CHEM 455. Prerequisites: CHEM 150 or 155, MATH 126, and college physics. Recommended: MATH 308. Offered: jointly with CHEM 456; W.

CH E 458 Surface Analysis (3) Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials science, wear, and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger): ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Offered: jointly with BIOEN 492; W.

CH E 461 Electrochemical Engineering (3) Schwartz Explores role of thermodynamics, charge transfer kinetics, and mass transfer on behavior of electrochemical systems. Includes cell thermodynamrics, faradaic and non-faradaic rate processes, ionic transport, nucleation and growth theories. Applications to chemical sensors, batteries, corrosion, thin film deposition. In-class demonstrations to illustrate concepts. Prerequisite: permission of instructor. Offered: W.

CH E 452 Application of Chemical Engineering Principles to Environmental Problems (3) Environmental problems in chemical engineering. Team taught; topics vary from year to year. Includes: geomedia, flow and dispersion through porous media water flow in dry soils, chemistry of radioactive waste, *in situ* site cleanup, *ex situ* site cleanup, colloid and surface science. Prerequisite: 330. Offered: Sp.

CH E 465 Reactor Design (4) Application of principles of chemical kinetics to the design of commercial-scale chemical reactors; characterization of batch and flow reactors in homogeneous and heterogeneous systems. Prerequisites: 326, 340. Offered: ASp.

CH E 467 Biochemical Engineering (3) Baneyx Application of basic chemical engineering principles to biochemical and biological process industries such as fermentation, enzyme technology, and biological waste treatment. Rapid overview of relevant microbiology, biochemistry, and molecular genetics. Design and analysis of biological reactors and product recovery operations. Prerequisites: 340, organic chemistry; recommended: 465. Offered: jointly with BIOEN 467; W.

CH E 468 Air-Pollution Control Equipment Design (3) Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption of gaseous pollutants; electrostatic precipitation and filtration of particular pollutants. Actual case studies. Prerequisite: senior standing or permission of instructor. Offered: jointly with CIVE 494/M E 468; W.

CH E 470 Chemistry of Wood (3) Chemical and physical properties of cellulose, lignin, hemicellulose, and extractives; wood as a raw material for the chemical industry. Prerequisite: CHEM 102 or 238 or permission of instructor. Offered: A.

CH E 471 Pulping and Bleaching Processes (3) Conversion of wood to mechanical and chemical pulps. Kraft, sulfite, and semichemical pulping processes. Chemical recovery systems. Bleaching of mechanical and chemical pulps. Offered: jointly with PSE 476; W.

CH E 472 Papermaking Processes (3) Fiber sources and properties. Secondary fibers. Stock preparation, sheet forming, water removal, finishing. Coating, lamination, and printing. Paper products. Offered: jointly with PSE 477; W.

CH E 473 Pulp and Paper Laboratory (2) Laboratory experiments in chemical and semichemical pulping of wood. Bleaching of chemical and high-yield pulps. Physical and chemical characteristics of pulp fibers. Prerequisite: PSE 476. Offered: jointly with PSE 478: Sp.

CH E 475 Computer Analysis In Chemical Engineering (3) Model building/simulation of chemical engineering processes: reactor design, fiber spinning, electrochemistry, biotech processes. Numerical methods include integrating ordinary differential equations as initial and boundary-value problems; finite difference, collocation, Galerkin methods. For each model the appropriate tool is developed. Offered: A.

CH E 480 Process Dynamics and Control (4) Analysis of the dynamics of simple chemical process units and systems; applications to stability, control, and instrumentation of such processes. Weekly twohour laboratory included. Prerequisites: 435, 465. Offered: AW.

CH E 481 Process Optimization (3) Concepts and techniques of optimizing chemical engineering processes and systems, including classical and direct methods of search, linear and nonlinear programming, dynamic programming, statistical experimental design, and evolutionary operation. Prerequisite: 485. Offered: Sp.

CH E 482 Advanced Topics in Process Centrol (3) Holt, Ricker Current topics in process control design and analysis. Possible topics include robustness analysis and design, time delay compensation, modern frequency response techniques, discrete control, adaptive control, model-based control, and nonlinear control. Prerequisite: 480.

CH E 485 Process Design I (3) Applied economics in chemical engineering design and operations; market survey and plant location; introduction to plant and process design. Prerequisite: 480. Offered: W.

CH E 486 Process Design II (6) Comprehensive design of a specific process, including economic feasibility studies, utilization of market survey and plant
location studies, process equipment design and optimization, and overall plant integration and layout. Prerequisite: 485. Offered: Sp.

CH E 490 Engineering Materials for Biomedical Applications (3) Hoffman Combined application of the principles of physical chemistry, biochemistry, materials engineering, mass transfer, and fluid mechanics to biomedical problems. Case studies include considerations of the selection of materials, the design and the operation of instruments, components of, or entire, artificial organs (heart, kidney, lung) and artificial structural elements (bone, teeth, skin), all for use in contact with body fluids. Prerequisite: organic chemistry or permission of instructor. Offered: jointly with BIOEN 490; odd years; W.

CH E 491 Controlled Release Systems-Principles and Applications (3) Hoffman Mechanisms or controlled release of active agents and the development of useful systems for this purpose. Release mechanisms include diffusive, convective, or erosive driving forces. Applications to the biomedical, agricultural, forestry, and oceanography fields. Some special case studies covered in detail. Prerequisite: permission of instructor. Offered: jointly with BIOEN 491; even years; W.

CH E 495 Physicochemical Transport Phenomena (3) Low Reynolds number hydrodynamics for flow around solid and fluid spheres and near surfaces. Convective diffusion in liquids within capillary tubes and outside the flat plate, the rotating disk, the sphere. Flow and convective diffusion in porous media. Electrokinetic phenomena, including electrophoresis, electro-osmosis, streaming potential. Applications to electrochemistry. Prerequisite: 330.

Ł

CH E 498 Special Topics in Chemical Engineering (1-4, max. 12) Topics of current interest in the field. Subject matter changes from year to year. Prerequisite: permission of instructor.

CH E 499- Undergraduate Research (1-6-, max. 12) Independent research projects in chemical engineering. Prerequisites: GPA of 3.0 in Chemical Engineering courses and permission of instructor. Offered: AWSpS.

Courses for Graduates Only

CH E 510 Mathematical Foundations of Systems Theory (4) Damborg Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Prerequisite: graduate standing or permission of instructor. Offered: jointly with A A 546/E E/M E 510; A.

CH E 511 Blomaterials Seminar (1) Hoffman, Horbett, Ratner Presentation of student research results. Credit/no credit only. Prerequisite: permission ofinstructor. Offered: jointly with BIOEN 511; WSp.

CH E 523 Seminar in Chemical Engineering (1) Topics of current interest in chemical engineering. Credit/no credit only. Offered: AWSp.

CH E 525 Chemical Engineering Thermodynamlcs (4) Review of principles of thermodynamics. Applications to problems in multiphase and multicomponent systems; theories of solutions. Prerequisite: undergraduate thermodynamics. Offered: A.

CH E 526 Topics in Thermodynamics (3) Classical and molecular thermodynamics of phase equilibria, solution theory, thermodynamic stability, and critical phenomena. Prerequisite: 525 or permission of instructor.

CH E 530 Momentum, Heat, and Mass Transfer I (4) Derivation of the differential equations for mass, energy, and momentum transport. Principles of fluid mechanics; creeping flow, turbulence, boundary-layer theory. Offered: A.

÷

CH E 531 Momentum, Heat, and Mass Transfer II (4) Continuation of 530. Flows of fluid-particle systems; convective heat transfer, natural convection. Prerequisite: 530. Offered: W.

CH E 532 Separation Processes (3) Design of industrial processes for separation and purification of materials. Covers classification and selection of separation techniques, efficiency of separators, energy conservation concepts, and methods for design calculations.

CH E 533 Mass Transfer (3) Molecular mass transport; single-phase mixing; age distributions and residence time analysis; transfer across interfaces; coupled heat and mass transfer; effects of chemical reaction; design considerations.

CH E 543, 544 Fluid Turbulence (3,3) Methods of characterizing fluid turbulence; spatial, temporal velocity correlations; energy spectra; probability concepts; isotropic, nonisotropic turbulence; hot-wire measurement techniques; phenomenological turbulence models; higher-order closure models; local equilibrium concepts; recent advances in modeling techniques. Prerequisite: 6 credits of graduate fluid mechanics or permission of instructor. Offered: jointly with M E 543, 544; even vears; W.Sp.

CH E555 Interfacial Phenomena (4) Berg Surface tension, capillary statics, wetting and spreading phenomena; thermodynamics of capillary systems, adsorption, surfactant monolayers and micellar solutions; capillary hydrodynamics, interfacial turbulence and applications in distillation, absorption, and extraction. Prerequisites: 525, 530, or permission of instructor. Offered: even years.

CH E 556 Principles and Applications of Colloidal Materials (3/4) Berg, Hoffman Preparation, stabilization, properties, and destruction of important colloidal materials. The theory and structure of the electrical double layer, electrokinetics. Includes selected case studies pertinent to air and water pollution, biological fluids, industrial processes. Offered: odd years.

CH E 558 Surface Analysis (3) Ratner Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials science, wear, and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger); ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Offered: jointly with BIOEN 592: W.

CH E 560 Reactions at Solid Surfaces (3) Stuve Fundamental studies of adsorption systems and reactions that occur at surfaces with application toward heterogeneous catalysis, electrochemistry, etching, and corrosion. Analysis of reaction poisons and promoters, acid-base theory of metal surfaces, jellium theory of metals, and water and ion adsorption, plus other topics of current interest. Recommended: 558 or CHEM 560.

CH E 562 Hazardous Air Pollution (3) Control of emission of hazardous or toxic air pollutants. Government regulations, determination of needed control efficiency. Emission control by thermal incineration, catalytic incineration, flares, condensation, carbon adsorption, and adsorption (wet and dry). Hazardous waste incinerators. Case studies. Offered: jointly with CEWA 562; W.

CH E 564 Applications of Chemical Kinetics (3) Fast reactions and highly energetic reactions with applications to combustion, explosions, and lasers. Coupling of transport processes and reaction rates, photochemical kinetics, intermolecular energy transfer, free radical, and chain reaction kinetics. Rate plasmas, flames, and biological systems. CH E 565 Kinetics and Catalysis (3) Finlayson, Krieger, Stuve Homogeneous and heterogeneous systems with emphasis on chemical engineering principles applied to industrial reactor design. Prerequisite: 525. Offered: W.

CH E 566 Control of Gaseous Air Pollutants (3) Pilat Physical and chemical processes used to control gaseous air pollutants. Absorption into liquids. Aqueous spray dryer scrubbers. Adsorption beds. Control of sulfur oxide and nitrogen oxide. Case studies of control systems. Prerequisite: 435 or 468 or permission of instructor. Offered: jointly with CEWA 566; even years; Sp.

CH E 567 Control of Particulate Air Pollutants (3) *Pilat* Processes used to control emissions of particulate air pollutants. Use of settling chambers, cyclones, fabric filters, wet scrubbers, and electrostatic precipitators to control aerosol particles. Case studies of particulate air-pollutant control systems. Prerequisite: 468 or permission of instructor. Offered: jointly with CEWA 567; odd years; A.

CH E 570 Chemistry of High Polymers (3, max. 6) Allan Fundamentals of high polymer chemistry, including kinetics of addition and condensation polymerization, the determination of average molecular weights and chain length distributions, solution properties and the relationship between molecular structure and plastic film and fiber properties of various polymers. Prerequisite: an undergraduate sequence in organic chemistry. Offered: W.

CH E 571 Polymer Physics and Engineering (3) Seferis Description and analysis of methods for processing polymeric materials. Introduction to solid polymer physics with emphasis on the coupling of structure morphology and properties. Development of structure property models for quantitative description and control of properties in synthetic and natural polymers and composite materials. Offered: A.

CH E 572 Advanced Polymeric Composites (3) Seferis Design, manufacture, and properties of organic and inorganic particle and fiber-reinforced polymers. Advanced techniques for characterization of processing and properties, including anisotropic elasticity/viscoelasticity theory, polymerization and network formation of matrices, theory of reinforcement, environmental and chemical effects. Prerequisite: 571 or MSE 423 or permission of instructor. Offered: Sp.

CH E 575 Nonlinear Analysis in Chemical Engineering (3) Finlayson Comparison of numerical techniques: similarity, perturbation, finite difference, Galerkin, orthogonal collocation methods as applied to nonlinear chemical engineering problems. Offered: odd years.

CH E 580 Topics in Chemical Engineering Design (3, max. 9) Lectures and seminars on current design methods in chemical engineering, including technici and economic feasibility of processes, design and optimization of process equipment, and environmental and socal constraints. Prerequisite: undergraduate chemical engineering design, admission to chemical engineering nonthesis master's prgram, or permission of instructor.

CH E 582 Advanced Topics in Process Control (3) Hilt, Ricker Current topics in process control design and analysis. Possible topics inclue robustness analysis and design, time delay compensation, modern frequency response techniques, discrete control, adaptive control, model-based control, an nonlinear control. Prerequisites: undergraduate control class and graduate standing.

CH E 590 Advanced Topics in Biomaterials (3) Major,controversial issues in application of synthetic materials to medical problems. Blood compatibility, bioadhesion, intraoular lenses, contact lenses, polyurethanes, biodegradation, protein adsorption, corrosion, bne fixation, new materials, artificial heart, medi-

cal device regulation. Prerequisite: 490 or BIOEN 490. Offered: jointly with BIOEN 590.

CH E 591 Control Systems Seminar ([0/1]-max. 1) Seminar on current topics in control systems analysis and design, presented by invited and on-campus speakers. Emphasis on control systems problems representative of all disciplines. Credit/no credit only. Offered: jointly with A A/E E/M E 591.

CH E 598- Effective Teaching of Chemical Engineering ([1/2]-, max. 3) Finlayson Topics/activities include: curriculum development: outlining a course, comparing textbooks, preparing lectures, use of lectures versus quiz sections, microteaching, other modes of instruction, e.g., self-paced, use of design problems. Tests: creating and grading. Role of computers, review of engineering software, diversity, international teaching assistants, sexual harassment, assessment of teaching, resume. Offered: WSp.

CH E 599 Current Topics in Chemical Engineering (1-3, max. 12) Readings or lectures and discussions of topics of current interest in the field of chemical engineering. Subject matter changes from year to year. Prerequisite: permission of instructor.

CH E 600 Independent Study or Research (*) Offered: AWSpS.

CH E 700 Master's Thesis (*) Offered: AWSpS.

CH E 800 Doctoral Dissertation (*) Offered: AWSpS.

Civil Engineering

201 More

Civil engineering is a profession which interfaces closely with society in the planning, design, construction, and management of facilities serving the needs of people. These activities include all transportation modes: highways, aerospace, rivers, and harbors; water resources, hydraulics, and coastal engineering; structures, mechanics, and geotechnical engineering; surveying, mapping, and photogrammetry; urban planning and development; water supply, wastewater treatment, and water-quality management; solid- and hazardous-waste disposal; and quality control and management of the air resource.

A civil engineer may specialize in one or several of these activities and may further specialize in a particular function, such as design or management. The work frequently provides close associations with the legal profession, urban and regional planners, economists, public officials, biologists, chemists, financial consulfants, architects, and system analysts. Education and practice require a consideration not only of the technological-science aspects of a particular problem but also of its relationship to social, economic, political, and environmental constraints.

To accommodate these wide interests, the department is organized into three academic programs: Structural and Geotechnical Engineering and Mechanics: Transportation, Surveying, and Construction Engineering; Environmental Engineering and Science.

Undergraduate Program

Admission to the department is usually at the junior level. Enrollment in the department is limited; students who desire entrance must formally apply to, and be accepted by, the departmental admissions committee. The primary admission criterion is degree of qualification for probable success in the engineering degree program as evidenced by academic performance, work experience, and other factors. Specific courses reqired are: MATH 124, 125, 126, 308; CHEM 140; PHYS 121/131, 122/132; 5 credits of English composition; and CSE/ENGR 142, ENGR 210, 220, 230. Prospective students should obtain a copy of the departmental undergraduate advising guide and the departmental application form, both of which are available in 201-A More.

Bachelor of Science in Civil Engineering Degree

The minimum number of credits required for graduation with the Bachelor of Science in Civil Engineering degree is 192, of which 115 credits are the College of Engineering General Education and Engineering Fundamentals requirements as specified above. Upperdivision requirements in civil engineering Include a common core of specified courses taken in the junior year.

Correspondence and Information

Undergraduate Advising Office 201-A More, FX-10

Graduate Program

S. Kramer Graduate Program Coordinator

The Department of Civil Engineering offers courses leading to the degrees of Master of Science in Civil Engineering and Doctor of Philosophy. The department also provides authorized options leading to the College-wide Master of Science and Master of Science in Engineering degrees.

The three master's programs are intended to accommodate the needs of three categories of students: the M.S.C.E. for those who have completed an undergraduate degree in civil engineering and plan to continue with their professional training; the College-wide M.S.E. for other engineering graduates who wish to do graduate work in civil engineering; and the Collegewide M.S. for those whose Bachelor of Science degrees are not in engineering, but who desire to apply their training in science to the solution of problems in some specific sector related to civil engineering. The nonengineer may take additional course work to obtain an M.S.E. degree.

Graduate work is offered in most fields of civil engineering. To accommodate these wide areas of interest, the department is organized into three academic graduate programs: Structural and Geotechnical Engineering and Mechanics; Transportation, Surveying, and Construction Engineering; and Environmental Engineering and Science.

Priority for admission is based on an applicant's apparent ability to progress satisfactorily in a graduate degree program. The applicant's scholastic record is of major importance; usually, at least a B, or 3.00 GPA in the junior and senior years is required. Consideration is also given to the Graduate Record Examination scores and other information.

Degree Requirements

The requirement for the master's degree is a minimum of 39 credits, of which 30 must be in formal course work and 9 in thesis. A nonthesis program is available, requiring a minimum of 45 credits, of which at least 3 credits will be individual study with the advisory committee chairperson. The Environmental Engineering and Science Program requires 45 credits for both the thesis and nonthesis degree. For all master's degrees, at least 3 credits must be from outside the major field of study.

Students working for the Ph.D. degree must complete an approved program of studies and research normally requiring an additional two or three years beyond the master's degree.

Financial Aid

Research and teaching assistantships are available on a competitive basis. The number of positions depends upon the current level of funding. Additionally, there are a limited number of fellowships, scholarships, and traineeships.

Research Facilities

More Hall and Wilcox Hall have structural, concrete, and bituminous materials, soil mechanics, surveying and photogrammetry, computer, water-quality, solidwastes, and air-quality laboratories as well as an airmonitoring station and equipment for fieldwork in the construction, water, air, and solid-waste programs. Facilities for experimental studies in hydraulics and coastal engineering and in fluid mechanics are located in the Harris Hydraulics Laboratory.

Faculty

Chairperson

John F. Ferguson

Professors

Banerjee, Sunirmal * 1981; PhD, 1978, University of California (Berkeley); foundation and geotechnical engineering, soil mechanics.

Benjamin, Mark M. * 1977; PhD, 1979, Stanford University; chemistry of natural waters, chemical and biological treatment of water and wastewater.

Bogan, Richard H. * 1954; DSc, 1954, Massachusetts Institute of Technology; water and air resources, environmental engineering.

Brown, Colin B. * 1969; PhD, 1962, University of Minnesota; structural engineering and systems.

Burges, Stephen J. * 1970; PhD, 1970, Stanford University; surface and ground water hydrology, water resource systems analysis and design.

Carlson, Dale A. * 1955, (Emeritus); PhD, 1960, University of Wisconsin; water resources and solid-waste management.

Charlson, Robert J. * 1962, (Adjunct); PhD, 1964, University of Washington; atmospheric chemistry, aerosol physics, aerosol/cloud/climate interaction.

Clanton, Jack R. 1947, (Emeritus); MS, 1939, University of Pittsburgh; structural engineering.

Clough, G. Wayne 1993; PhD, 1969, University of California (Berkeley).

Colcord, J. E. * 1949, (Emeritus); MSCE, 1949, University of Minnesota; surveying engineering.

Dunn, Walter L. 1954, (Emeritus); MPH, 1953, University of California (Berkeley); transportation planning.

Elias, Ziad * 1969; DSc, 1963, Massachusetts Institute of Technology; engineering mechanics.

Evans, Roger J. * 1966, (Emeritus); PhD, 1965, University of California (Berkeley); engineering mechanics, structural engineering.

Ferguson, John F. * 1974; PhD, 1970, Stanford University; chemical and biological processes in water and waste treatment and in natural water systems.

Hammer, Vernon B. 1947, (Emeritus); MS, 1941, Harvard University; solid-waste management.

Hartz, Billy J. * 1955, (Emeritus); PhD, 1955, University of California (Berkeley); engineering mechanics, structural mechanics.

Hennes, Robert G. 1934, (Emeritus); MS, 1928, Massachusetts Institute of Technology; transportation engineering.

Hinze, Jimmie W. * 1984; PhD, 1976, Stanford University; construction engineering and management.

Holtz, Robert Dean * 1988; PhD, 1970, Northwestern University; geotechnical engineering.

Larson, Timothy * 1970; PhD, 1976, University of Washington; airborn particles, air quality modeling, and instrument development.

Lettenmaier, Dennis P. * 1973; PhD, 1975, University of Washington; systems analysis and water resources planning.

Mahoney, Joseph P. * 1978; PhD, 1979, Texas A&M University; construction materials, pavement systems.

Mannering, Fred L. * 1986; PhD, 1983, Massachusetts Institute of Technology; traffic flow theory, networks, econometric methods, equilibration in transportation markets.

Mar, Brian W. * 1967; PhD, 1958, University of Washington; system engineering, environmental management, interdisciplinary management.

Mattock, Alan * 1964, (Emeritus); PhD, 1955, University of London (UK); structural behavior and design.

Meese, Richard H. 1975, (Emeritus); MS, 1941, Harvard University; soil mechanics and foundations.

Nece, Ronald E. * 1959; DSc, 1958, Massachusetts Institute of Technology; hydraulic and coastal engineering.

Nihan, Nancy L. * 1973; PhD, 1970, Northwestern University; transportation planning and systems analysis.

Palmer, Richard * 1979; PhD, 1979, Johns Hopkins University; civil engineering systems, computer methods, water resources planning and management.

Pilat, Michael J. * 1967; PhD, 1967, University of Washington; air resources engineering (design of air-pollution-control equipment).

Richey, Eugene 1954, (Emeritus); PhD, 1955, Stanford University; hydraulic engineering.

Roeder, Charles W. * 1977; PhD, 1977, University of California (Berkeley); structures and materials.

Rossano, August T. 1963, (Emeritus); ScD, 1954, Harvard University; air resources.

Sawhill, Roy 1952, (Emeritus); MEng, 1952, University of California (Berkeley).

Schneider, Jerry * 1967; PhD, 1966, University of Pennsylvania; metropolitan area and regional planning, transportation and other urban models.

Seabloom, Robert * 1954, (Emeritus); MSCE, 1956, University of Washington; water-quality and solidwaste management.

Stanton, John F. * 1978; PhD, 1978, University of California (Berkeley); structural engineering, analysis and design.

Stensel, H. David * 1983; PhD, 1971, Cornell University; biological wastewater treatment, fixed film reactors, mass transfer mechanics, modeling.

Sylvester, Robert O. 1947, (Emeritus); MS, 1941, Harvard University; water resources.

Terrel, Ronald L. 1967, (Emeritus); PhD, 1967, University of California (Berkeley).

Veress, Sandor A. * 1965; PhD, 1969, Laval University (Canada); photogrammetry.

Welch, Eugene B. * 1968; PhD, 1967, University of Washington; water resources and aquatic biology.

Wenk, Edward 1970, (Emeritus); PhD, 1950, Johns Hopkins University.

Associate Professors

Bentil, Kweku K. * 1991, (Adjunct); PhD, 1990, Urliversity of Florida; project management, construction safety, construction practice, estimating.

Chenoweth, Harry H. 1946, (Emeritus); MSCE, 1957, University of Washington; engineering mechanics and hydraulic engineering.

Covert, David S. * 1975, (Adjunct Research); PhD, 1974, University of Washington; atmospheric chemistry, aerosol physics and instrumentation.

Cundy, Terrance W. * 1983, (Adjunct); PhD, 1983, Utah State University; hillslope hydrology and watershed management.

Goldblatt, Steven M. 1982, (Adjunct); JD, 1977, Golden Gate University; construction accounting, labor relations, and construction law.

Harrison, Halstead * 1971, (Adjunct); PhD, 1960, Stanford University; atmospheric chemistry.

Horner, Richard R. * 1981, (Research); PhD, 1978, University of Washington; wetlands, conservation and storm water management.

Janssen, Donald J. * 1985; PhD, 1985, University of Illinois; construction materials, pavements.

Kent, Joseph C. * 1952, (Emeritus); PhD, 1952, University of California (Berkeley); hydraulic engineering.

Kramer, Steven * 1984; PhD, 1984, University of California (Berkeley); soil mechanics, foundation engineering, geotechnical earthquake engineering.

Massmann, Joel W. * 1991; PhD, 1987, University of British Columbia (Canada); groundwater hydrology, subsurface contaminant transport, site remediation, applied decision analysis.

Miller, Gregory * 1983; PhD, 1984, Northwestern University; structural materials, solid mechanics, nonlinear dynamics.

Miller, William * 1951, (Emeritus); MSCE, 1952, University of Washington; materials.

Morgan, Michael S. * 1974, (Adjunct); DSc, 1972, Massachusetts Institute of Technology; applied respiratory, physiology and inhalation toxicology.

Ongerth, Jerry E. * 1984, (Adjunct); PhD, 1973, University of Michigan; public water supply, solid waste and water quality management; waterborne pathogens.

Reed, Dorothy * 1983; PhD, 1980, Princeton University; structural and wind engineering, and expert systems.

Rutherford, G. Scott * 1981; PhD, 1974, Northwestern University; transportation planning and engineering.

Spyridakis, Dimitris * 1970; PhD, 1965, University of Wisconsin; soil and water chemistry.

Strand, Stuart E. * 1982, (Adjunct Research); PhD, 1982, Pennsylvania State University; forest biotechnology, environmental pollution control.

Strausser, Howard * 1955, (Emeritus); MSEng, 1950, Johns Hopkins University; hydraulic engineering.

Yeh, Harry H. * 1983; PhD, 1983, University of California (Berkeley); fluid mechanics, water wave motions, coastal and hydraulic engineering.

Assistant Professors

Eberhard, Marc O. * 1989; PhD, 1989, University of Illinois; structural analysis and design, reinforced concrete, earthquake engineering, nondestructive testing.

Petroff, Catherine * 1993; PhD, 1993, California Institute of Technology; sediment transport, coastal engineering, and environmental fluid mechanics.

Taylor, Teresa * 1992; PhD, 1988, Washington State University: geotechnical/geological engineering, physical modeling, centrifuge modeling.

Turkiyyah, George * 1991; PhD, 1990, Carnegie-Mellon University; computer-aided engineering; finite element modeling.

Senior Lecturer

Bucknam, Ronald E. 1985; PhD, 1964, University of Illinois.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

Core Courses

CIVE 250 Environmental Pollution: Assessing Problems and Solutions (5) NW,QSR Welch Problems in air, water, land environment caused by increasing demands on resources; their definition, control or prospects for control from engineering viewpoint. Ecological cycles, quantity/quality of wastes, biological effects of pollutants, energy, legislation and policy. Offered: jointly with ENV S 250; Sp.

CIVE 306 Construction Engineering I (3) *Hinze* Introduction to construction engineering, planning, scheduling, methods, contracts, and specifications. Production estimates; equipment selection; ownership and operating costs; role of the engineer in construction and cost estimating. Prerequisite: Civil Engineering student or permission of instructor or adviser. Offered: WSp.

CIVE 316 Surveying Engineering (4) Veress Application of geodesy to engineering surveys. Modern measurement and mapping techniques. Computer adjustment of measurements and analysis of error. Plane coordinate systems and transformation. Horizontal and vertical curve computations and layout. Leveling and datum considerations. Introduction to photogrammetry, cadastral surveys and construction surveys. Prerequisites: Civil Engineering student or permission of instructor or adviser, CSE/ENGR 142, and linear algebra. Recommended: statistics. Offered: ASp.

CIVE 320 Transportation Engineering I (3) *Mannering* Review of operating characteristics of vehicles and methods used to predict travel demand and capacity supply. Study of basic geometric fundamentals and their relationship to design with emphasis on highways, and management of transportation systems. Prerequisite: Civil Engineering student or permission of instructor or adviser and 316 which may be taken concurrently. Offered: AW.

CIVE 342 Fluid Mechanics (4) Nece, Petroff Elementary mechanics of incompressible fluids. Hydrostatics. Continuity, energy, and momentum equations. Introduction to potential flow. Resistance phenomena for laminar and turbulent flows. Dynamic similitude. Prerequisites: Civil Engineering student or permission of instructor or adviser and ENGR 210 and 230. Offered: ASp.

CiVE 345 Hydraulic Engineering (4) Massmann, Nece, Yeh Extension and application of fluid mechanics principles to hydraulic engineering problems. Open channel flow, pipeline systems, turbomachinery, unsteady flow in pipes, diffusion and mixing processes, groundwater, surface water hydrology. Prerequisites: Civil Engineering student or permission of instructor or adviser and 342. Offered: AW.

CiVE 350 Environmental Engineering-Water and Air Quality (4) Benjamin, Ferguson, Spyridakis' Description of water and air resources and parameters that characterize their quality, how their use alters their properties. Emphasis on effects of civil engineering projects; significance to engineer/scientist and society. Laboratory sessions stress water-quality analysis techniques and significance. Prerequisite: Civil Engineering student or permission of instructor or adviser. Offered: AW.

CIVE 351 Water Supply and Waste Management (3) Benjamin, Stensel Fundamentals of water supply: surface- and ground-water sources, demand, and system design. Municipal sewerage systems: wastewater quantity and quality: and fundamentals of engineering design for collection, treatment, and disposal. Solid wastes: characteristics and quantities, collection, treatment, and disposal, Prerequisites: Civil Engineering student or permission of instructor or adviser, 345 which may be taken concurrently, and 350. Offered: WSp.

CIVE 363 Constructional Materials (4) Mahoney, Miller General treatment of physical and mechanical properties and engineering behavior of metallic and nonmetallic materials. Steel, aluminum, concrete, wood. Laboratory testing, instrumentation, and investigation into macrobehavior. Correlation with microstructure and various aspects of materials science. Prerequisites: Civil Engineering student or permission of instructor or adviser and ENGR 220. Offered: ASp.

CIVE 366 Basic Soil Mechanics (4) Banerjee, Holtz, Kramer Introduction to basic soil properties, soil classification, volumetric relationships, compaction, consolidation, soil rheology, shear strength, bearing capacity, and lateral stresses against retaining structures. Prerequisites: Civil Engineering student or permission of instructor or adviser and ENGR 220. Offered: WSp.

CIVE 379 Elementary Structures I (3) Elias Review of engineering theory of beams, combined stresses, beam deflections, indeterminate beams, principle of virtual work, application to beams, unsymmetrical bending, shear center, torsion of open and thin-walled sections, composite beams, inelastic bending of beams, elastic stability, beam-columns, column design formulas. Prerequisites: Civil Engineering student or permission of instructor or adviser and ENGR 220. Offered: ASp.

CIVE 380 Elementary Structures II (3) *Elias* Classification and idealization of structures. Theorem of virtual work. Unit load method for beams, frames, and trusses. Matrix formulation of theorem of virtual work. Force method for statically determinate and indeterminate method. Moment distribution for beams and frames including sway analysis. Prerequisites: Civil Engineering student or permission of instructor or adviser and 379. Offered: AW.

CIVE 381 Concepts of Structural Design (3) Mattock, Reed, Stanton Planning, design, and constructional aspects of structures. Criteria for structural adequacy and efficiency. Examination of the design process. Introduction to design of components. Use of influence lines. Prerequisites: Civil Engineering student or permission of instructor or adviser and 380. Offered: WSp.

CIVE 390 Civil Engineering Systems (3) Mar, Nihan, Palmer Introduction to civil engineering system processes. Decision methods, economic considerations, and optimization. Examples illustrating quantitative and subjective aspects of civil engineering practice. Prerequisite: Civil Engineering student or permission of instructor or adviser. Offered: WSp.

CIVE 400 Computer-Aided Design (3) Schneider Review and evaluation of computer-aided design hardware, software, and applications in civil engineering. Use of interactive graphic software to solve complex, multiobjective design problems. Recommended: ENGR 123 or equivalent. Offered: A.

CIVE 405 Construction Planning and Scheduling (3) *Hinze* Principles of construction planning and scheduling, including network analysis of construction activities, examination of arrow and precedence diagrams, time-cost tradeoffs, resource leveling, resource allocation, PERT, integrated cost/schedule systems, computer applications, and a CPM project. Offered: W. CIVE 406 Construction Engineering II (3) Hinze Heavy construction equipment. Equipment economics, contractor equipment policies, equipment specifications, selection and performance of equipment, estimating productivity of construction equipment, and engineering support for construction operating. Prerequisite: 306 or permission of instructor. Offered: A.

CIVE 407 Contracts and Specifications (3) *Hinze* Construction industry, forms of organizations, real property laws, and bidding procedures. Basic elements of contracts, types of specifications, general conditions of standard construction contracts, legal disputes related to construction contract provisions, surety bonds and construction insurance. Prerequisite: 306 or permission of instructor. Offered: ASp.

CIVE 410 Traffic Engineering Fundamentals and Surveys (3) *Nihan* General review of the fundamentals of traffic engineering, including their relationship to transportation operations management and planning, with special emphasis on traffic engineering field surveys and data analysis. Prerequisite: 320 or permission of instructor. Offered: W.

CIVE 411 Highway and Traffic Engineering-Geometric Design (3-5) Mannering Factors and elements in geometric design of arterials, intersections, freeways, interchanges, including problem solution. Prerequisites: senior standing in Civil Engineering and 320. Offered: W.

CIVE 412 Traffic Flow Theory (3) Mannering Introduction to traffic flow theory, characteristics. Measurement, statistical representation of traffic characteristics. Speed-flow-concentration models and relationship to level of service, highway capacity. Application of queuing theory to traffic events; introduction to traffic flow simulation. Prerequisites: senior standing in Civil Engineering and 320. Offered: W.

CIVE 413 Transportation Technologies and Systems (3) Schneider Review and evaluation of conventional and innovative vehicle systems, fuel types, command and control systems, and information systems. Technology forecasting and assessment techniques. Alternative futures for the role of transportation system in society. Prerequisite: 320 or permission of instructor.

CIVE 416 Urban Transportation Planning and Design (3) Nihan, Rutherford Brief review of major issues in urban transportation planning. Planning process discussed and transportation models introduced. Uses a systems framework, including goals and objectives, evaluation, implementation, and monitoring. A design term project, individual or small groups, utilizes material presented on a contemporary problem. Prerequisites: senior standing and 320 or graduate standing and permission of instructor. Offered: A.

CIVE 417 Urban Transportation Demand Forecasting (3) *Nihan, Rutherford* The urban transportation planning process and its traditional travel demand modeling components, including trip generation, trip distribution, mode choice, and route assignment techniques. Quick response method, sketch planning, and other alternatives to the conventional modeling process. Prerequisites: senior standing and 390.

CIVE 418 Computer-Alded Planning of Urban Systems (3) Schneider Survey of on-line planning applications; use of various on-line systems to solve urban systems design problems; investigations of hardware/software tradeoffs; human factors in man-computer systems design theory as it relates to problem-solving activity. Prerequisite: 390 or permission of instructor. Offered: jointly with URBDP 429; W.

CIVE 421 Pavement Design (3) Janssen, Mahoney Current and developing procedures for the structural thickness design of pavements. Bituminous and concrete pavements for highways, airports, and special heavy loading. Elastic layered systems, slab theory. Performance evaluation for maintenance and overlay design. Prerequisite: senior or graduate standing in Civil Engineering. Offered: ASp.

CIVE 422 Construction Materials II (4) Janssen Types, sources, uses, performance behavior from construction point of view of aggregates; asphalt products and mixtures; Portland cement, concrete, and other materials the civil engineer is responsible for selecting and manufacturing on job site. Includes laboratory work. Prerequisites: senior or graduate standing in civil engineering and 363 or equivalent. Offered: A.

CIVE 423 Heritage of Civil Engineering (3/4) *Colcord* Contribution of civil engineering to civilization based on the lives and projects of prominent engineers and cultures. Incidents and individuals from prehistory to the nineteenth century give the student an awareness of the profession and its influence on sociefy. Industrial archaeology and historic sites are considered. An additional 1 credit may be earned by participating in a special project. Emphasis on the control of elements and the methodology, planning, objectives, and reasons for the project. May be used as social science distribution. Prerequisite: junior standing. Offered: W.

CIVE 425 Photogrammetry and Remote Sensing (3/4) Veress Geometrical characteristics of images and imaging systems. Image acquisition, stereoscopic theory and image measurement. Control design and photogrammetry instrumentation for mapping. Image analysis and target signatures and aberrations for visual, thermal, and radar systems. Photogrammetry and R/S applications in engineering site analysis and evaluation. Prerequisite: 316 or permission of instructor.

CIVE 426 Boundary Surveys and Plat Design (3) *Veress* System of public lands. Boundary and riparian law and case discussion. Survey record research, recordation, surveying and cost considerations. Site and subdivision planning and design. GIS and multipurpose cadastre ownership and infrastructure inputs. Prerequisite: 316 or permission of instructor.

CIVE 427 Construction Survey Control (3) Jahren Surveying specifications, instrumentation and calibration, infrastructure design and layout considerations; curves, sewer, building and slope staking. Project control and monitoring. As built surveys. Prerequisites: 306 and 316 or equivalent or permission of instructor. Offered: Sp.

CIVE 430 Issues in Professional Engineering Practice (3) I&S Bucknam Professional practice issues encountered in engineering firms and agencies, including professionalism, marketing services, proposal and design contract preparation, effective team communications, basics of total quality management, applied engineering ethics with case histories, loss prevention, limitation of liability, alternate dispute resolution methods. Prerequisite: senior or graduate standing or permission of instructor. Offered: AS.

CIVE 431 Selsmology and Earthquake Engineering (3) NW *Reed, Roeder, Stanton* Presents an overview of earthquake processes and details of the characteristics of destructive ground motion; illustrates the effects of such motion on engineering structures; reviews current practice in estimating earthquake hazards for important structures such as nuclear power plants. Prerequisite: MATH 307 or permission of instructor. Offered: jointly with GPHYS 431; W.

CIVE 436 Foundation Design (3) Banerjee, Holtz, Kramer, Taylor Design considerations for foundations and retaining structures. Subsurface investigations and determination of soil properties for design. Design of shallow and deep foundations and retaining structures. Foundations and soil considerations for waterfront structures. Prerequisite: 366. Offered: AWSp.

CiVE 437 Engineering Geology I (3) Taylor General overview of engineering geology and its importance to civil engineers. Topics include geologic pro-

cesses, hazards, oring and classification of geologic materials, data synthesis, and natural construction materials. Prerequisite: GEOL 205 or equivalent. Offered: A.

CiVE 441 Advanced Structures I (3) Elias, Reed, Roeder The displacement method in matrix form with programming applications. Fundamentals of modeling of various types of structures. Prerequisite: 380. Offered: ASp.

CIVE 442 Advanced Structures II (3) *Miller, Roeder, Stanton* Introduction to stability, includig a consideration of elastic and inelastic buckling with applications to beam-columns and plates. Introduction to plastic analysis. Prerequisite: 379. Offered: W.

CIVE 443 Advanced Structural Mechanics (3) *Elias*: Formulation and solution of the basic equations of elasticity. Applications in 2-D stress analysis, torsion, thermal stresses, and beams on elastic foundation. Plate theory optional. Prerequisite: 379. Offered: A.

CIVE 451 Design of Metal Structures (3) Miller, Roeder, Stanton Introduction to the design and behavior of metal structures using LRFD concepts. Application of design methods and codes to columns, beams, frames, connections, and tension members. Prerequisite: 381. Recommended: 441 and 442. Offered: ASp.

CIVE 452 Design of Reinforced Concrete Structures (3) Eberhard, Mattock, Stanton Fundamentals of design of buildings in reinforced concrete in accordance with current codes and practices. Prerequisite: 381. Offered: ASp.

CIVE 453 Prestressed Concrete Design (3) *Mattock, Stanton* Analysis, design, and construction of prestressed concrete structures. Prerequisite: 452 or graduate standing. Offered: W.

CIVE 454 Design of Timber Structures (3) *Eberhard, Miller* The design and construction of timber structures, using elements made of sawn wood, gluedlaminated wood, and plywood. Prerequisite: 381. Offered: WSp.

CIVE 455 Structural Unit Masonry (3) Tawresey Structural behavior and design of reinforced brick, tile, and unit concrete masonry structures. Prerequisite: 381 or permission of instructor. Offered: jointly with ARCH 426; Sp.

CIVE 456 Design Project (3)

CIVE 461 Blological Problems in Water Pollution (3/5) NW Ecological risk assessment of toxic chemicals and problems associated with electrical power production. Considers safety and toxicity and effects on individuals, populations, and communities. Laboratory covers simulation models of chemical exposure and community effects. Prerequisite: senior or graduate standing in Fisheries, Engineering, or related field. Offered: jointly with FISH 430; W.

CIVE 462 Ecological Effects of Waste Water (3/5) NW Welch Principles of aquatic ecology that relate to causes and effects of water quality problems in lakes and streams. Population growth kinetics, nutrient cycling, eutrophication; acidification, oxygen/temperature requirements, and effects of various wastes on aquatic animals. Prerequisite: senior or graduate standing in Engineering or a science. Offered: jointly with FISH 434; A.

CIVE 464 Subsurface Contaminant Transport (3) Massmann Principles of transport through porous media used to study fate and movement of subsurface contamination. Processes include aqueous phase transport, flow of immiscible fluids, vapor transport, solid-liquid-vapor interactions. Techniques for simulating transport processes presented. Effects of subsurface heterogeneities and uncertainties are emphasized. Prerequisites: 342 or equivalent or permission of instructor. Offered: W. CIVE 466 Design of Subsurface Remediation Activities (3) Massmann Technologies for cleaning sites with subsurface contamination are presented. These technologies include groundwater extraction, vapor extraction, groundwater containment, and in-situ treatment. Analytical tools and methods for making design calculations are emphasized. Prerequisite: 464 or permission of instructor. Offered: Sp.

CIVE 472 Introduction to Hydraulics in Water Resources (3) Nece Physics of water movements in natural freshwater bodies and inshore marine waters. Brief review of some essential fluid mechanics. Flow in rivers and streams; motions in lakes, reservoirs, and estuaries. Some aspects of diffusion. Not open to students with undergraduate civil engineering backgrounds. Prerequisites: senior or graduate standing and permission of instructor. Offered: Sp.

CIVE 473 Coastal Engineering I (3) Yeh Linear theory of water waves, wave transformations due to boundary conditions, sediment motion, elementary tidal theory; applications illustrated by laboratory experiments and selected case histories. Prerequisite: 342. Offered: A.

CIVE 474 Computational Hydraulics (3) Yeh Introduction to unsteady hydraulic problems in open channels and pressure conduits; their solutions by numerical techniques. Existing models used to analyze problems in hydraulic flood routing, tidal river hydraulics, transient flows in pipes, unsteady transport phenomena. Practical applications emphasized. Prerequisites: senior standing in Civil Engineering, 345, and MATH 307. Offered: W.

CIVE 475 Analysis Techniques for Groundwater Flow (3) Burges Development of appropriate equations to describe saturated groundwater flow, and application of numerical methods for solving groundwater flow problems and flow to wells. Participants required to solve specific problems using numerical techniques developed during the course. Prerequisite: 342 or equivalent. Offered: W.

CIVE 476 Physical Hydrology (3) *Burges* Global water picture, data sources and data homogeneity, precipitation, evapotranspiration, hydrographs. Hydrologic data frequency analysis. Hydrologic design: flood mitigation, drainage. Introduction to deterministic and stochastic models. Prerequisite: senior standing in Civil Engineering or permission of instructor. Offered: A.

CIVE 477 Open-Channel Engineering (3) Nece, Petroff, Yeh Water flow in natural and constructed channels. Analysis and design of canals, transitions, energy dissipators, and similar structures. Analysis of surface profiles and effect of nonlinear alignment on flow. Introduction to river mechanics. Design-oriented problems. Prerequisite: 345. Offered: AWSp.

CIVE 478 Water Resources and Hydraulic Engineering Design (3) Burges, Nece, Yeh Opportunity to effect design solutions for projects or major project components in areas of water resources engineering or hydraulic and coastal engineering. Problems include irrigation, multiple- or single-purpose reservoirs (e.g., flood, water supply, hydroelectric), hydraulic structures, and coastal facilities. Prerequisites: senior standing in Civil Engineering or permission of instructor. Offered: Sp.

CiVE 480 Air-Quality Modeling (3) Larson Evaluation of air-quality models relating air pollution emissions to environmental concentrations. Topics include meteorological dispersion models and various "receptor" models based on chemical "fingerprinting" of sources. Emphasizes current problems. Prerequisite: 490 or ATM S/ENV S/CHEM 458 or permission of instructor. Offered: jointly with ATM S 480; Sp.

CIVE 481 Environmental Engineering Design (3) Bogan Introduction to the theory and the practice of planning and design of urban water supply, sewerage, solid wastes, and drainage collection systems. Evaluation of service areas and service requirements and their relationships to urban and regional planning activities. Engineering methods and computer programs for designing basic system elements. Prerequisite: 351. Offered: AW.

CIVE 482 Water and Wastewater Treatment (3) Bogan, Stensel Objectives of water and wastewater treatment; associated physical, chemical, and biological phenomena; design of common treatment systems. Prerequisite: 351 or permission of instructor. Offered: W.

CIVE 483 Environmental Engineering Design Studies (3) Bogan, Stensel Individual and group design studies involving environmental engineering water and wastewater treatment facilities. Topics include proposal preparation, engineering reports, alternative evaluations, process equipment design, and environmental engineering projects. Presentation of engineering reports on selected design problems. Prerequisites: 351 and 345. Offered: Sp.

CIVE 484 On-Site Wastewater Disposal (3) Seabloom, Spyridakis Latest information on design, construction, operation, maintenance of individual and small community wastewater disposal systems. Conventional water carriage septic tank soil absorption systems considered with new alternatives, such as mounds, evapotranspiration systems, anaerobic filters, pressure drainfields, sand filters. Nonwater carriage methods studied. Pressure and vacuum sewers introduced. Prerequisite: senior standing. Offered: Sp.

CIVE 485 Aquatic Chemistry (3) Benjamin, Ferguson, Spyridakis Principles of chemical equilibrium relevant to natural water systems; the nature and effect of chemical interactions of domestic and industrial waste effluents on natural water systems; chemical principles involved in the treatment of water and wastewaters. Prerequisite: one year of general chemistry or equivalent. Offered: ASp.

CIVE 486 Water-Quality Analysis (3) Spyridakis Laboratory evaluation of chemical quality of natural and wastewaters. Theory and application of instrumentation used in water-quality measurement. Prerequisite: senior or graduate standing. Offered: W.

CIVE 487 Solid-Waste Disposal (3) Bogan Describes sources and handling of municipal and industrial solid waste, with examination of collection, processing, recycling and resource recovery, and disposal alternatives. Public policy issues, local agencies and solid waste facilities, the legal and regulatory framework are all addressed in context of solid waste engineering. Offered: W.

CIVE 488 Hazardous Wastes Engineering (3) *Stensel* Classification of hazardous wastes; resource conservation, Recovery Act regulations; characteristics and behavior of toxic organics; superfund; groundwater contamination, solutions. Hazardous waste site remedial action; case histories; sampling; landfill design. Stabilization and processing technologies, including incineration, carbon adsorption, emerging techniques. Prerequisite: 351 or permission of instructor. Offered: Sp.

CIVE 489 Water and Air Quality Sampling (2) *Larson, Spyridakis, Welch* Samples collected from lakes, streams, precipitation, and air and resulting (and supplemental) data interpreted for cause-effect and statistical inference. Design for water and air quality monitoring programs. Prerequisite: 462 or permission of instructor. Offered: A.

CIVE 490 Air-Pollution Control (3) Larson, Pilat Fundamental concepts of air pollution. Emission sources, atmospheric dispersion, ambient concentrations, adverse effects, governmental regulations, emission standards, air-quality standards, processes and equipment for controlling emissions. Prerequisite: senior standing. Offered: jointly with ENVH 461; A.

CIVE 491 Deterministic Systems (3) Mar, Palmer Development of quantitative methods for mathematical problem solving with emphasis on computer applications. Linear programming, mathematics of the simplex algorithm, sensitivity analysis, dynamic programming, systems simulation, and goal programming. Class project required. Prerequisite: 390 or equivalent or permission of instruct@? Offered: A.

CIVE 492 Stochastic Systems (3) Mar, Palmer Introduction to probability distributions and statistics useful in systems analysis, conditional distributions, queuing theory and applications, Monte Carlo simulation, chance-constrained mathematical programming, and stochastic dynamic programming. Emphasis on application of the techniques to civil engineering systems problems, including transportation, water resources, and structures. Prerequisite: 491 or permission of instructor. Offered: W.

CIVE 493 Air-Pollution Source Testing and Equipment Evaluation (3) Larson, Pilat Engineering evaluation of air pollutant sources and air control equipment. Air-pollutant source testing and stack sampling. Analysis of equiformance and source emissions in the field and in the laboratory. Prerequisite: senior standing or permission of instructor. Offered: Sp.

CIVE 494 Air-Pollution Control Equipment Design (3) *Pilat* Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption of gaseous pollutants; electrostatic precipitation and filtration of particulate pollutants. Actual case studies. Prerequisite: senior standing or permission of instructor. Offered: jointly with CH E/M E 468; W.

CIVE 498 Special Topics (1-5) Special topics in civil engineering offered as course with lecture and/or laboratory. Maximum of 6 credits in combination of 498 and 499 may be applied toward an undergraduate degree. Prerequisites: senior standing in Civil Engineering and permission of instructor. Offered: AWSpS.

CIVE 499 Special Projects (1-5) Individual undergraduate research projects. Maximum of 6 credits in combination of 498 and 499 may be applied toward anundergraduate degree. Prerequisites: any 400-level course, which may be taken concurrently, and permission of instructor. Offered: AWSpS.

Courses for Graduates Only

CIVE 700 Master's Thesis (*) Prerequisite: permission of adviser. Offered: AWSpS.

CIVE 800 Doctoral Dissertation (*) Prerequisite: permission of adviser. Offered: AWSpS.

Transportation, Surveying, and Construction Engineering

CETS 505 Construction Labor Relations: Law and Policy (3) Goldblatt In-depth study of construction labor topics, including labor-management organization, legislation, and regulation, collective bargaining, and job site administration. Examines importance of labor relations in construction firms, whether in a union setting or an open shop environment. Offered: W.

CETS 506 Design of Temporary Structures in Construction (3) Hinze Fundamental criteria to be considered in the design of various temporary structures in construction. Temporary structures include rock crushing plants, belt conveying systems, concrete forms, cellular fill cofferdams, braced cofferdams. Manual and computer-aided design approaches. Prerequisites: 406 which may be taken concurrently, CIVE 454 or equivalent, or permission of instructor. Offered: W.

CETS 508 Construction Administration (3) Hinze Conceptual estimating and detailed estimating. Estimating as it applies to labor, materials, equipment, and overhead. Cost control for construction operations. Quality control. Accounting and taxation in construction. Managing project security, subcontractors, submittals, change orders, correspondence, testing, and start-up. Offered: Sp.

CETS 509 Construction Productivity (3) Hinze Work improvement techniques applied to construction operations. Review of major contributions in behavioral science that may be applicable to the construction industry. Case studies. Innovative productivity programs successfully implemented on construction projects. Safety on construction projects, especially as influenced by managerial practices. Offered: A.

CETS 511 Traffic Systems Operations (3) Nihan Operational planning, management of arterial and freeway traffic systems. Review of transportation system management strategies to achieve more efficient use of existing infrastructure, including improved and innovative traffic control systems and demand management policies, measures of effectiveness, impact assessment, traveler response. Introduction to use of relevant computer models and packages. Offered: Sp.

CETS 513 Survey Adjustment and Analysis (4) Veress Concept of survey data errors and distributions. Least square a priori analysis of photogrammetry and survey design systems. Data analysis and computer adjustment computations of classical and hybrid systems, in surveying, geodesy, and photogrammetry. Prerequisite: permission of instructor. Offered: A.

CETS 514 Engineering and industrial Photogrammetry (4) Veress Metric and nonmetric cameras. Mathematics of close range photogrammetry. Applications of deformation monitoring, industrial quality control. Analytical instruments and measurements. Aerial photographic model geometry. Design of photogrammetric projects for engineering applications such as highways, dams, and environmental site mapping. Prerequisite: 425. Offered: W.

CETS 518 Photo Geodesy and Digital Mapping (4) Veress Coordinate systems. Mathematical principle of aero-triangulation. Establishing mathematical models for combined photogrammetric and global positioning systems. Design of combined system. Analysis and practical applications for digital mapping. Prerequisite: 514. Offered: alternate years; Sp.

CETS 520 Seminar (1, max. 6) Prerequisite: permission of thesis supervisor. Offered: AW.

CETS 526 Portland Cement Concrete Laboratory (4) Janssen The examination of strength, stiffness, and durability properties of conventional and high performance portland cement concrete mixes through laboratory analysis and classroom lectures. Topics include mix design parameters, the effects of admixtures, methods of testing, and non-destructive analysis. Prerequisites: BSCE with CIVE 363 or CIVE 422 or equivalent.

CETS 529 Urban Region Geocoding and Land-Based Information Systems (3) Multipurpose street network and land-based information systems. The United States Census geocoding system, automated map overlay systems, and cadastral file information use. Applications to land surveying, urban and transportation planning, and geographic analysis. Offered: jointly with GEOG/URBDP 529.

CETS 532 Satellite Geodesy (4) Reference frames. Keplerian and Cartesian orbital elements. Satellite orbit dynamics. Long-arc and short-arc orbit determination. Use of satellite observations for determination of positions and of the earth's gravity field. Applications of the NAVSTAR GPS and TRANSIT satellite systems in surveying and navigation. Prerequisite: graduate standing or permission of instructor.

CETS 541 Transit Systems Planning (3) Rutherford Planning, operational methods for urban public transportation. Review of technological, operating characteristics of vehicles and systems; firmancing, management, institutional aspects. Paratransit. Shortrange planning, operational strategies, revenue-fare structures. Service monitoring. Mode choice, transit demand relating to service. Computer-aided methods for planning, design of transit systems. Prerequisite: graduate standing or permission of instructor. Offered: Sp.

CETS 543 Alrport Engineering (3) Mahoney Definitions and terminology relating to airport engineering. Characteristics of aircraft, air traffic control, and resulting impact upon design process. Airport capacity, configuration, and planning associated with terminal design. Emphasis on geometric and structural design of pavements and airside. Design projects relating to airport engineering required. Prerequisite: permission of instructor. Offered: Sp.

CETS 564 Soli and Site Improvement (3) Development, improvement, and utilization of marginal natural earth materials through compaction and stabilization using chemicals, portland cement, lime, asphalt, salt, and others. Includes discussion, design, and evaluation of materials for pavement subgrades, slope protection, dust palliation, and general site Improvement. Prerequisite: 422 or permission of instructor. Recommended: 421.

CETS 570 Land Use/Transportation Models (3) Schneider Review of theoretical basis of several existing models used to forecast urban growth patterns and their associated land use, transportation, and energy requirements. Model validation studies in relation to empirical studies of urban growth and change. Environmental implications of alternative urban growth patterns. Offered: jointly with URBDP 530; A.

CETS 571 Analytical Methods in Transportation (3) Nihan Application of analytical and statistical methods to transportation planning problems. Analysis of probability distributions that describe variables. Development of statistical models for predicting transportation phenomena. Elementary sampling theory hypothesis testing, regression analysis, time series analysis, applied to transportation data. Prerequisite: graduate standing or permission of instructor. Offered: Sp.

CETS 572 Transportation Data Collection and Analysis (3) *Mannering* Data collection methods, survey sampling, experimental design in transportation planning and engineering. Preliminary planning, sampling methods, sources of errors, sample size, survey instruments, survey administration, data processing. Analysis of variance, experimental design. Illustrative examples drawn from various branches of transportation planning and engineering. Prerequisite: graduate standing or permission of instructor. Offered: W

CETS 573 Transportation Systems Evaluation (3) Schneider Principles and concepts of alternatives analysis and evaluation in relation to decision-making processes of large-scale transportation projects. Estimation of capital, operating/direct user costs, benefit/ cost concepts, impact identification, forecasting/assessment, equity/financing considerations, methods for improving decision-making process. Prerequisite: graduate standing or permission of instructor.

CETS 574 Advanced Travel Demand Theory and Applications (3) Rutherford New methods for estimating and forecasting travel demand. Individual as economic, psychological decision-making unit. Theoretical background to models, model structures, model specification, attitudinal measurement, empirical estimation, market segmentation, aggregation issues, model transferability, parameter updating. Practical applications, directions of present and future research. Prerequisite: graduate standing or permission of instructor. Offered: A.

CETS 599 Special Topics: Transportation, Construction, and Geometronics (2-5, max. 15) Prerequisite: permission of instructor. Offered: AWSpS.

CETS 600 Independent Study or Research (*) Prerequisite: permission of adviser. Offered: ASpS.

Structural and Geotechnical Engineering and Mechanics

CESM 501 Structural Mechanics I-Statics (6) Miller Equations of a continuum for small displacements, applications to linear elasticity. Kirchoff plate theory, problems in advanced strength of materials. Virtual work, minimum potential energy, force and displacement methods of structural analysis. Direct stiffness method. Approximate solutions, geometric stiffness matrix. Linearized buckling. Offered: A.

CESM 502 Structural Mechanics II-Dynamics (3) Miller, Reed Lagrange's equations. Free vibrations of linear, single, and multiple degree of freedom systems. Damping. Mode superposition. Forced vibrations by time history and by response spectrum methods. Free and forced vibrations of continuous systems. Wave propagation in rods and beams. Prerequisite: 501. Offered: W.

CESM 503 Materials (3) Brown, Miller, Roeder Behavior of materials used in civil engineering structures. Yield and failure surfaces. Physical and phenomenological models of plastic and viscoelastic behavior. Fracture mechanics. Fatigue models and predictions. Damping and friction. Behavior of anisotropic and composite materials.

CESM 504 Finite Element Methods in Structural Mechanics (3) *Elias* Extension of the matrix methods of structural analysis to the solution of elasticity, plate, and shell problems by use of finite element approximations. Discussion of convergence and bounding and extension to investigation of stability and finite deformations. Prerequisite: 501 or permission of instructor. Offered: W.

CESM 511 Advanced Reinforced Concrete Design (3) Eberhard, Mattock, Stanton Behavior and design of reinforced concrete members and structures. Members subject to torsion and torsion combined with flexure and shear; members with small shear span/ depth ratios, slabs. Offered: A.

CESM 512 Advanced Prestressed Concrete Design (3) Eberhard, Mattock, Stanton Prestress loss. Design of statically indeterminate prestressed concrete structures; continuous beam, frame, and slab structures (cast in place or assembled from precast units). Prerequisite: 453 or equivalent. Offered: Sp.

CESM 513 Advanced Steel Design (3) Roeder Factors influencing strength and serviceability of steel structures; LRFD limit state design procedures. Use of theories of plasticity and stability in development of design methods and specifications, bolted and welded connections, temperature effects, and effect of different fabrication methods on behavior of structure. Prerequisites: 501, 503. Offered: W.

CESM 514 Design for Earthquakes I (3) Roeder, Stanton Linear elastic analysis for prediction of structural behavior in earthquakes. Ground-shaking and earthquake mechanism. Factors affecting severity and frequency of shaking. Ductility and multilevel design approach. Response spectra and design codes such as UBC and ATC, and evaluation of rationale for these specifications. Design problem. Prerequisites: 501, 502. Offered: Sp.

CESM 516 Design for Wind (3) Reed Wind effects on structures, including atmospheric boundary layer flow, bluff body aerodynamics, structural dynamics, and aeroelasticity; development and use of ANSI standards; estimation of along-wind, across-wind, and torsional response of tall buildings; design strategies for avoiding wind-induced discomfort in humans. Fundamentals of wind-tunnel testing. Prerequisites: 501, 502. Offered: Sp. CESM 520 Seminar (1, max. 6) Required for doctoral students. Prerequisite: permission of thesis supervisor. Offered: AWSp.

CESM 521 Continuum Mechanics I (3) Elias, Miller General foundation of fundamental concepts of motion, stress, and energy for a continuum. General equations of conservation of mass, momentum, and energy. Linear and nonlinear elastic, viscous, and inelastic materials. Prerequisite: 501. Offered: jointly with A A 575.

CESM 522 Continuum Mechanics II (3) Elias, Miller Development of classical and nonclassical constitutive theories relating to real materials. Applications in metals, concrete, ice, wood, rock, soils, and composites. Prerequisite: 521.

CESM 523 Reliability and Design (3) Brown, Reed Introduction to theory of structural reliability and its application to design procedures in civil engineering, including probability theory; assessment of uncertainties; code specification (first-order, second-moment format) and the related concept of risk and the influence of socioeconomic factors; loads, load combinations, and probabilities of damage.

CESM 531 Special Structures (3, max. 6) Special topics such as shells; inflated structures, suspended structures, or other specialized forms of civil engineering structures.

CESM 561 Seepage and Consolidation (3) Banerjee, Holtz, Kramer, Taylor Confined and unconfined seepage through porous media, flow net solutions, consolidation, settlement, numerical solution of seepage, and consolidation problems. Prerequisite: CIVE 366 or equivalent. Offered: A.

CESM 562 Shear Strength and Slope Stability (3) Banerjee, Holtz, Kramer, Taylor Shear strength of cohesive and cohesionless soils and slope stability analysis of natural and man-made slopes. Prerequisite: 561. Offered: A.

CESM 563 Advanced Foundation Engineering (3) Banerjee, Holtz, Kramer, Taylor Design of shallow and deep foundations for bearing capacity and settlement. Construction considerations. Prerequisites 562 and 567. Offered: W.

CESM 564 Seepage and Stope Stability (3) Banerjee, Holtz, Kramer Anatysis of groundwater flow and seepage through dams using analytical and numerical techniques. Various one- and two-dimensional methods of analysis of soil slopes under static and seismic conditions. Computer application of stability analysis methods to slope-stability problems. Prerequisite: 437 or equivalent or permission of instructor. Offered: Sp.

CESM 565 Soll Dynamics (3) Kramer Dynamics of discrete systems; dynamics of continuous systems, wave propagation; dynamic soil properties; linear, nonlinear, and equivalent linear ground response analysis; vibrations of footings; construction vibrations; vibration isolation. Offered: W.

CESM 566 Geotechnical Earthquake Engineering (3) Kramer Plate tectonics and elastic rebound theory of earthquakes and faults; characterization of ground motions; seismicity; seismic risk analysis; effect of local soil conditions on ground response; development of design ground motions; liquefaction; dynamic lateral earth pressures; seismic slope stability. Prerequisite: 565 or permission of instructor. Offered: Sp.

CESM 567 Advanced Geotechnical Laboratory (4) Holtz, Kramer, Taylor Soil and site investigation, classification and engineering properties of soils and rock as determined by standard and advanced test procedures and equipment. Evaluation of test data. Report writing. Prerequisite: CIVE 366 or equivalent. Offered: A. CESM 568 Geosynthetic Engineering (3) Holtz Identification and testing of geosynthetics. Design of geosynthetic filters, roadway stabilization, earth reinforcement, and waste containment systems. Prerequisite: 562 and 563. Offered: odd years, Sp.

CESM 569 Foundation Soil Improvement (3) Holtz Analysis and design of physical and chemical treatment techniques commonly applied to problem foundation soils for civil engineering structure. Prerequisite: 563. Offered: even years; Sp.

CESM 570 Engineering Geology II (3) Taylor Application of engineering geology fundamentals to: location, design and maintenance of engineered structures; policy decisions related to potential geological hazards. Case histories, governmental policy discussions, interpretation of geological maps for engineering purposes. Prerequisite graduate standing and CIVE 437 or permission of instructor. Offered: Sp.

CESM 571 Rock Engineering (3) Taylor Engineering classification, physical and mechanical properties of rocks, failure modes and initial stresses in rocks, laboratory and field testing of rocks, rock slope engineering, underground openings, foundations on rocks. Prerequisite: graduate standing and CIVE 366 or permission of instructor.

CESM 599 Special Topics: Structures and Mechanics (2-5, max. 15) Prerequisites: permission of instructor. Offered: AWSpS.

CESM 600 Independent Study or Research (*) Prerequisite: permission of adviser. Offered: AWSpS.

Environmental Engineering and Science

CEWA 518 Microbial Degradation of Toxic Contaminantis (3) Herwig, Staley, Stensel, Strand Detailed survey of current understanding of microbiology and degradative pathways of industrial organic compounds, pesticides, plastics, oil, and metals. Microbial requirements for bioremediation. Methods of scientific investigation of microbial transformations. Requires basic understanding of metabolism and organic chemistry. Prerequisite: biological science course. Offered: jointly with ESC/MICRO 518; Sp.

CEWA 520 Seminar (1, max. 6) Required of all graduate students in Environmental and Engineering Science each quarter. Credit/no credit only. Offered: AWSp.

CEWA 525 Seminar-Topics in Atmospheric Chemistry (1-3, max. 6) Charlson, Harrison Seminar for atmospheric scientists, chemists, engineers in problems associated with the chemical composition of the atmosphere. Covers wide variety of topics, ranging from the natural system to urban pollution and global atmospheric change. Faculty lectures, student participation. Prerequisite: ATM S 301 or permission of instructor. Offered: jointly with ATM S 525.

CEWA 540 Hydrodynamics (4) Nece, Yeh Applications of the equations of motion to the flow of ideal and real fluids. Fundamentals of fluid potential motion. Viscous flows; Navier-Stokes equations and some exact solutions. Boundary-layer theory. Introduction to turbulence. Two- and three-dimensional examples, including free surface flows. Applications of field equations to problems of engineering significance. Prerequisite: CIVE 342 or equivalent. Offered: A.

CEWA 541 Hydrodynamics in Water Quality (3) Nece Theoretical, field study, and laboratory model approaches to diffusion in transport problems of concern to water resources engineers. Prerequisite: CIVE 342 or permission of instructor. Offered: W.

CEWA 544 Water Wave Mechanics (3) Yeh Theory of water waves. Classical water wave problem and approximate solution techniques. Evolution equations for and their solutions wave systems. Viscous damping effects and mass transport. Nonlinear shallow-water waves and the Korteweg-deVries equation. Waves on beaches. Recommended: graduate-level course in fluid mechanics. Offered: jointly with AMATH 544; Sp.

CEWA 545 Advanced Computational Hydraulics (4) Yeh Review of hydrodynamic and transport equations for hydraulic engineering application; nurmerical solution methods; implementation and practice with existing two- and three-dimensional numerical models; numerical model calibration and verification techniques; case studies. Theoretical and civil engineering decision makers aspects. Prerequisites: 474, 540, 541 or permission of instructor.

CEWA 547 Advanced Hydrology (3) Burges Detailed treatment of statistical methods used in hydrologic analysis. Stochastic hydrology, detailed examination and use of a deterministic watershed model (e.g., Stanford Watershed Model). Prerequisite: graduate standing in civil engineering or permission of instructor. Offered: W.

CEWA 548 Groundwater Transport Modeling (3) Massmann Review of equations for flow and transport in porous media; techniques for simulating transport as boundary. value problems; analytical and numerical solution techniques; finite element models; field-scale applications and case histories. Offeréd: Sp.

CEWA 550 Microbiological Process Fundamentals (3) Ferguson, Stansel Fundamental concepts for microbial processes including organic chemical structure, nomenclature and environmental properties, principles of microbial metabolism, study of specific types of bacteria important to environmental engineering and their metabolism and development of microbial kinetic equations including substrate utilization, energetics, and stoichiometry. Prerequisite: permission of instructor. Offered: A.

CEWA 551 Biological Treatment Systems (3) *Stensel* Basic reactions, design principles, models, and operational considerations for biological treatment systems in environmental engineering. Applications include activated sludge, bulking sludge control, fixed film reactors, nitrification, nitrogen removal, phosphorus removal, anaerobic treatment, and toxic organics removal. Prerequisite: 550. Offered: W.

CEWA 552 Physical-Chemical Treatment Processes (4) Benjamin Principles and design of major physical-chemical unit processes used in water, wastewater, and hazardous waste treatment. Processes include chemical and reactor kinetics, filtration, chemical coagulation, ion exchange, adsorption, and gas transfer. Development of mathematical models, laboratory demonstrations, and evaluation of current design practice. Prerequisite: 485 or permission of instructor, Offered: W.

CEWA 553 Topics in Ecclogical Effects of Wastewater (3) Welch Application of ecological concepts for analysis and interpretation of bioenvironmental problems and data (eutrophication, acid rain, and toxicity). Students participate in presentation and discussion of current research. Prerequisite: 462 or BIOL 473 or permission of instructor. Offered: Sp.

CEWA 554 Advanced Topics in Environmental Engineering, Chemistry, and Biology (3) Benjamin, Ferguson Special topics of current importance in environmental engineering. Application of fundamental chemical and biological principles to the study of such phenomena as the behavior of aqueous colloids, corrosion processes, bacterial metabolism in chemically complex solutions, and acid precipitation. May be taken more than once for credit. Prerequisites: 550, 551. Offered: W.

CEWA 555 Lake Management (2) Welch Application of recognized techniques/approaches to restore and manage eutrophic lakes. Includes critiques of restoration proposals. Credit/no credit only. Prerequisites: CIVE 462/FISH 434, BIOL 473, or permission of instructor. Offered: jointly with ENV S 555; A. CEWA 556 Industrial Waste Treatment (3) Benjamin, Ferguson, Stensel Survey of laws and regulations governing industrial waste discharge. Sources, amounts, and characteristics of wastes from various industries. Specialized treatment processes, case studies, and site visits. Prerequisite: 550 or 551 or permission of instructor.

CEWA 557 Water Resources Management (3) Mar, Palmer Engineering, social, and economic factors involved in water resource development and management; water policies, programs, and administration; use relationships and conflicts; considerations for regional water resource systems. Offered: W.

CEWA 558 Water-Quality Management (3) Mar, Palmer Application of biological, ecological, and chemical processes to modeling of water quality and use of such models in appropriate management of water resource systems. Includes units on the modeling of temperature, BOD, nutrient, phytoplankton, zooplankton, and other processes in lakes, streams, and estuaries. Recommended: 476, 485, CIVE 462/ FISH 434, and CIVE 491. Offered: Sp.

CEWA 559 Water Resources System Management (3) Burges, Mar, Palmer A readings course in recent literature related to the modeling and management of water resources. Topics include drought management, expansion of existing water supplies, hydropower production, streamflow forecasting, water demand forecasting, regional water planning, climate change, and other topical issues.Recommended: 557, 558. Offered: A.

CEWA 560 Topics In Environmental Health (3) Larson Introduction to human biology, including physiology, epidemiology, and toxicology. Study of contemporary environmental health problems and practices as they relate to radiological health, solidwaste disposal, occupational health, biometeorology, and bioengineering.

CEWA 562 Hazardous Air Pollution (3) Pilat Control of emissions of hazardous or toxic air pollutants. Government regulations, determination of needed control efficiency. Emission control by thermal incineration, catalytic incineration, flares, condensation, carbon adsorption, and absorption (wet and dry). Hazardous waste incinerators. Case studies. Offered: jointly with CH E 562; W.

CEWA 563 Air Resources Management (3) Larson, Pilat Technical, administrative, and legal aspects of air conservation. Current case studies involving engineering analysis, air-quality modeling, and regulatory aspects at local, state, and federal governmental levels. Offered: A.

CEWA 566 Control of Gaseous Air Pollutants (3) Larson, Pilat Physical and chemical processes used to control gaseous air pollutants: Absorption into liquids. Aqueous spray dryer scrubbers. Adsorption beds. Control of sulfur oxide and nitrogen oxide. Case studies of control systems. Prerequisite: 468 or CH E 435 or permission of instructor. Offered: jointly with CH E 566; even years.

CEWA 567 Control of Particulate Air Pollutants (3) *Pilat* Processes used to control emissions of particulate air pollutants. Use of settling chambers, cyclones, fabric filters, wet scrubbers, and electrostatic precipitators to control aerosol particles. Case studies of particulate air-pollutant control systems. Prerequisite: 468 or permission of instructor. Offered: jointly with CH E 567; odd years; A.

CEWA 577 Risk Assessment for Environmental Health Hazards (3/4) Faustman, Omenn Examines context, methodologies, data, uncertainties, and institutional arrangements for risk assessment. Qualitative and quantitative approaches to identification, characterization, and control of environmental hazards to health emphasized through didactic and case studies. Offered: jointly with ENVH/ENV S/PB AF 577; A. CEWA 599 Special Topics: Water and Air Resources (2-5, max. 15) Prerequisite: permission of instructor. Offered: AWSpS.

CEWA 600 Independent Study or Research (*) Prerequisite: permission of adviser. Offered: AWSpS.

Computer Science and Engineering

114 Sieg

A Bachelor of Science in Computer Engineering degree is offered by the Department of Computer Science and Engineering, and is administered through the College of Engineering. The Department of Computer Science and Engineering also offers a Bachelor of Science degree in computer science administered through the College of Arts and Sciences. More information concerning the B.S. degree in computer science can be found under Computer Science in the College of Arts and Sciences section of this catatoq.

Computer science is the study of information and algorithms within the context of real and abstract computing devices. Computer scientists are interested in such topics as the representation and storage of information, algorithms to access, display, edit, and transform information, programming languages to express algorithms, and hardware and software processors to execute algorithms. These concerns lead to practical developments in computer systems software and in application areas such as artificial intelligence, computer graphics, and databases, and to theoretical investigations of computers, algorithms, and data.

Computer engineering is a closely related field that concerns itself with the design and practical application of computer hardware and software systems to the solution of technological, economic, and societal problems. The computer engineer analyzes a problem and selects from a variety of tools those most appropriate for its solution. A computer engineer can expect to be involved in hardware design, software creation and systems integration. The program provides an in-depth education in computer engineering while retaining strong foundations in traditional electrical engineering and computer science. The computer engineering program involves digital hardware, software, and architecture. Mathematics, engineering design, laboratory work, and communication skills development are emphasized. A course including a project must be completed during the senior year.

The computer science major is more appropriate for students who want to have a double major with another College of Arts and Sciences program (for example, mathematics or economics), who want the additional flexibility of the computer science requirements (the computer engineering major has more required courses and fewer electives), or who want more theory of computation. The computer engineering major is more appropriate for students who are interested in building systems that include both custom hardware and software components, who have strong interests in electrical engineering, or who specifically want an engineering degree.

Instructional and Special Research Facilities

í

The Computer Science Laboratory provides powerful, state-of-the-art facilities for undergraduate, graduate, and faculty instruction and research. There are two primary laboratories for undergraduate instructional computing, containing approximately four dozen Xterminals, backed by three DECstation 5000 systems running UNIX. To support our hardware courses, the department operates a design laboratory consisting of sixteen Macintosh IIs and Tektronix logic analyzers, and other test equipment. General-purpose research computing is provided by roughly 100 DECstation, SPARCstation, and Alpha workstations, which are lo-

296 COLLEGE OF ENGINEERING / COMPUTER SCIENCE AND ENGINEERING

cated in graduate student and faculty offices and in various research laboratories in the department. The workstations are backed by a number of other compute, file, and print servers. For research in parallel computing, the laboratory operates an Intel Hypercube distributed-memory machine, a MasPar data parallel machine, a Sequent Symmetry shared-memory multiprocessor, and two scalable Kendall Square Research KSR1 multiprocessors. Other specialized equipment supports research in digital hardware design, graphics, and image processing.

Undergraduate Programs

Bachelor of Science Degree

See Computer Science in the College of Arts and Sciences section of this catalog.

Bachelor of Science in Computer Engineering Degree 114 Sieg

Because resources are limited, students must apply for admission to the computer engineering program. Application forms and a comprehensive booklet, *The Computer Engineering Handbook for Undergraduates*, can be obtained from the Undergraduate Adviser in 114 Sieg. To be considered for admission to the program the student must have completed 64 credits applicable to the degree, including MATH 124, 125, 126, 307; PHYS 121/131, 122/132, 123/133; CHEM 140, 141; CSE/ENGR 142; and at least 5 credits of English composition.

Graduation Requirements (in addition to the General Education requirements of the College of Engineering as specified above): (1) Engineering Fundamentals (24 credits) to include CSE 143. (2) Core Component (54 credits): CSE 321, 326, 341, 370, 378, 451, 471, 477; E E 233, 331, 332. (3) Computer Engineering Elective Component (22 credits): Selected from the approved list of computer engineering electives in the undergraduate handbook. To graduate, a student must earn a total of 192 credits with a grade of at least 2.0 in all required or elective computer engineering courses taken. The engineering design credits must total at least 26, while the engineering science credits must total at least 50. For a complete description of the current requirements, please consult the undergraduate handbook.

Graduate Program

Alan Shaw, Graduate Program Coordinator

The Department of Computer Science and Engineering offers programs of study leading to the degrees of Master of Science and Doctor of Philosophy. Individual programs can be designed to provide considerable breadth of knowledge, as well as depth in an area of specialization. An M.S. degree can usually be completed in one to two years, and a Ph.D. degree can be completed in four to five years. It is not necessary to complete an M.S. program before entering the Ph.D. program. Degree requirements are outlined in *The Computer Science and Engineering Graduate Program Brochure*, available from the department.

The department has thirty-two faculty members with appointments in Computer Science and Engineering and twenty-three adjunct, affiliate, and emeritus faculty members. Research opportunities exist for graduate students in the following ongoing projects and in other areas: VLSI, computer-aided design, computer architecture, operating systems, networks, programming environments, parallel and distributed computing, programming languages, compilers, performance analysis, artificial intelligence, image analysis, computer graphics, computer vision, computational complexity, analysis of algorithms, and biomedical computing.

Application Requirements

Most entering graduate students are expected to have a solid background in computer science, including programming, machine organization, data structures, discrete mathematics, automata theory, and programming systems (e.g., the equivalent of 378, 326, 321, 322, and either 401 or 451). Some exceptions to these requirements are made for otherwise-promising students. Graduate Record Examination scores are required; GRE subject test score (not necessarily in computer science) is recommended. Scores should be earned within the preceding five years. The Computer Science and Engineering Graduate Program Brochure gives full details of application procedures.

Complete applications must be received by January 10 for autumn guarter admission.

Assistantships

Some research assistantships are available in the Computer Science Laboratory and through research grants. Teaching assistantships are also available. In general, this support is allocated on the basis of scholastic excellence and potential. Students who are applying for assistantships to start in autumn quarter should have all applications to the Graduate School and the department completed by January 10.

The application packet contains all the necessary forms for applying to the Graduate School and to the Graduate Program in Computer Science and Engineering and for consideration for assistantships.

Department of Computer Science and Engineering, FR-35

Faculty

Chairperson⁻

Edward D. Lazowska

Professors

Baer, Jean-Loup * 1969; PhD, 1968, University of California (Los Angeles); parallel processing, computer system architecture, data structures.

Borning, Alan H. * 1980; PhD, 1979, Stanford University; programming languages and environments, user interfaces, computers and society.

Golde, Hellmut * 1959, (Emeritus); PhD, 1959, Stanford University; programming languages, programming systems, compilers.

Haralick, Robert M. * 1986, (Adjunct); PhD, 1969, University of Kansas; computer vision, artificial intelligence, pattern recognition, image processing.

Holden, Alistair D. * 1958; PhD, 1964, University of Washington; computer engineering, speech recognition, computer-aided design, artificial intelligence.

Hunt, Earl B. * 1966, (Adjunct); PhD, 1960, Yale University; human and artificial intelligence, computer applications in teaching.

Kalonji, Gretchen * 1990, (Adjunct); PhD, 1982, Massachusetts Institute of Technology; crystalline defects, computer simulation, rapid solidification of ceramics.

Kehl, Theodore • 1963; PhD, 1961, University of Wisconsin; computer application in physiology.

Kim, Yongmin * 1982, (Adjunct); PhD, 1982, University of Wisconsin; computer architecture, imaging systems, computer graphics, multimedia, modeling and instrumentation.

Klee, Victor * 1953, (Adjunct); PhD, 1949, University of Virginia; convex sets, functional analysis, analysis of algorithms, optimization, combinatorics. Ladner, Richard E. * 1971; PhD, 1971, University of California (Berkeley); distributed and parallel computing theory, computational complexity, computers to aid the disabled.

Lazowska, Edward D. * 1977; PhD; 1977, University of Toronto (Canada); computer systems: modeling and analysis, design and implementation, distributed and parallel systems.

Leveson, Nancy G. * 1992; PhD, 1980, University of California (Los Angeles); software engineering, software and system safety, software reliability and fault tolerance.

MacKay, Pierre A. * 1966, (Adjunct); PhD, 1964, University of California (Berkeley); Greek literature, postclassical and Byzantine Greek literature, numismatics.

Noe, Jerre D. * 1968, (Emeritus); PhD, 1948, Stanford University; operating systems, computer measurement and evaluation, distributed computer networks, simulation.

Ruzzo, Walter L. * 1977; PhD, 1978, University of California (Berkeley); computational complexity, parallel computation.

Shapiro, Linda G. * 1986; PhD, 1974, University of lowa; computer vision, artificial intelligence, pattern recognition, robotics, database systems.

Shaw, Alan Cary * 1971; PhD, 1968, Stanford University; operating systems, software specifications, realtime systems.

Snyder, Lawrence * 1983; PhD, 1973, Carnegie-Mellon University; theory of computation, parallel computation, VLSI.

Stuetzle, Werner * 1984, (Adjunct); PhD, 1977, Swiss Federal Institute of Technology; nonparametric methods in multivariate analysis, statistical applications of computer graphics.

Tanimoto, Steven L. * 1977; PhD, 1975, Princeton University; image analysis, artificial intelligence, computer graphics.

Tompa, Martin * 1986; PhD, 1978, University of Toronto (Canada); theory computation, particularly computational complexity.

Young, Paul R. * 1983; PhD, 1963, Massachusetts Institute of Technology; computational complexity, theory of computation, connections with mathematical logic.

Zahorjan, John * 1980; PhD, 1980, University of Toronto (Canada); design and performance of parallel and distributed computer systems.

Zick, Gregory L. * 1974, (Adjunct); PhD, 1974, University of Michigan; image and multimedia databases, medical imaging.

Associate Professors

Adams, Loyce M. * 1985, (Adjunct); PhD, 1983, University of Virginia; numerical algorithms for parallel computers.

Anderson, Richard J. * 1986; PhD, 1986, Stanford University; theory, parallel computation, analysis of algorithms, combinatorial optimization.

Atlas, Les Eugene * 1983, (Adjunct); PhD, 1983, Stanford University; speech recognition and processing, digital signal processing, auditory sciences, neural networks.

Beame, Paul W. * 1987; PhD, 1986, University of Toronto (Canada); computational complexity, cryptology, theoretical aspects of parallel and distributed computing.

Borriello, Gaetano * 1988; PhD, 1988, University of California (Berkeley); computer aided design and synthesis of digital circuits, VLSI design and architecture systems.

.

Brinkley, James F. III * 1988, (Adjunct Research); MD, 1974, University of Washington; computer applications in medicine and biology.

De Rose, Anthony David * 1985; PhD, 1985, University of California (Berkelay); computer-aided geometric design and modeligia, graphical user interfaces, high resolution graphics.

Dekker, David B. 1982, (Emeritus); PhD, 1948, University of California (Berkeley); numerical analysis, curve fitting, numerical solution of differential equations.

Ebeling, William H. C. * 1986; PhD, 1986, Carnegie-Mellon University; special-purpose computer architecture, VLSI.

Kalet, Ira J. * 1980, (Adjunct); PhD, 1968, Princeton University; computer simulation of radiation therapy, artifical intelligence, computer graphics.

Levy, Henry M. * 1983; MS, 1981, University of Washington; computer architecture, operating systems, distributed and parallel systems, object-oriented systems.

McDonald, John A. * 1985, (Adjunct Research); PhD, 1982, Stanford University; scientific computing, interactive graphics, human interfaces, visualization, programming languages.

Notkin, David S. * 1984; PhD, 1984, Carnegie-Mellon University; software engineering, evolution, environments, and systems; parallel systems and environments.

Somani, Arun Kumar * 1985; PhD, 1985, McGill University (Canada); computer architecture, fault-tolerant computing, interconnection networks.

Weld, Daniel Sabey * 1988; PhD, 1988, Massachusetts Institute of Technology; artificial intelligence: automated reasoning about physical systems.

Assistant Professors

Bershad, Brian * 1986; PhD, 1990, University of Washington; operating systems, architecture, distributed systems, parallel systems.

Burns, Steven M. * 1991; PhD, 1991, California Institute of Technology; VLSI, asynchronous circuit design, CAD, formal methods.

Chambers, Craig D. * 1991; PhD, 1992, Stanford University; programming language design and Implementation, object-oriented systems.

Eggers, Susan Jane * 1989; PhD, 1989, University of California (Berkeley); parallel architectures, program behavior, and compiler optimizations, code and thread scheduling.

Etzioni, Oren * 1991; PhD, 1991, Carnegie-Mellon University; artificial intelligence, machine learning, agent architectures, knowbots, softbots.

Hanks, Steven John * 1989; PhD, 1990, Yale University; artificial intelligence, automated planning, decision making under uncertainty.

Riskin, Eve A. * 1990, (Adjunct); PhD, 1990, Stanford University; image compression and processing, signal processing, medical imaging, and pattern recognition.

Salesin, David Henry * 1992; PhD, 1991, Stanford University; computer graphics, user interfaces, computational geometry.

Lecturer

Pattis, Richard E. 1984; MS, 1984, Stanford University; understanding programming through formal and heuristic methods, debugging.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

CSE 142 Computer Programming for Engineers and Scientists I (4) NW,QSR Computer programming in high-level language. Algorithmics (variables, expressions, statements); abstraction (data types, subprograms, packages, generics); analysis (correctness, efficiency, numerics). Program design and analysis: specification, coding, documentation, testing, debugging, evaluation. Using software tools. Not available for credit to students who have completed 210 or ENGR 141. Offered: jointly with ENGR 142; AWSpS.

CSE 143 Computer Programming for Engineers and Scientists II (5) NW,QSR Topics include analyzing algorithms; using/writing standard software components (queues, stacks, tables) implemented by private types, generic packages, and dynamic data structures (lists and trees); recursive data- and control structures. Last two weeks survey computer science topics. Not available for credit to students who have completed CSE 211. Prerequisite: CSE/ENGR 142. Offered: AWSpS.

210 and 211, which are no longer offered, may be used as prerequisites in place of CSE/ENGR 142 and CSE 143 respectively.

Courses for Nonmajors

The following courses are intended to give a technical introduction to fundamental topics in computer science to non-computer science majors who are likely to use computers as tools in their own disciplines.

CSE 373 Data Structures and Algorithms (3) Fundamental algorithms and data structures for implementation. Techniques for solving problems by programming. Linked lists, stacks, queues, directed graphs. Trees: representations, traversals. Searching (hashing, binary search trees, multiway trees). Garbage collection, memory management. Internal and external sorting. Not open for credit to students who have completed 326, 374, or E E 374. Prerequisite: 143. Offered: ASp.

CSE 410 Computer Systems (3) Structure and components of hardware and software systems. Machine organization, including central processor and input-output architectures; assembly language programming; operating systems, including process, storage, and file management. Not open for credit to students who have completed 378 or 451. Prerequisite: 373. Offered: W.

CSE 413 Programming Languages and Their Implementation (3) Concepts and implementation strategies for ALGOL-class languages, including Pascal, Modula, ALGOL 60, Ada. Compilers for ALGOLclass languages. Languages with late binding times, including LISP, APL, Smalltalk. Not open for credit to students who have completed 341 or 401. Prerequisite: 373. Offered: So.

CSE 415 Introduction to Artificial Intelligence (5) NW Principles and programming techniques of artificial intelligence: LISP, symbol manipulation, knowledge representation, logical and probabilistic reasoning, learning, language understanding, vision, expert systems, and social issues. Not open for credit to students who have completed 473. Prerequisites: 373 or 143 and permission of instructor. Offered: A.

Courses for Majors.

Nonmajors may petition for entry codes.

CSE 321 Discrete Structures (4) Fundamentals of set theory, graph theory, enumeration, and algebraic structures, with applications in computing. Prerequisites: 143 and MATH 126. Offered: AWSp.

CSE 322 Introduction to Formal Models in Computer Science (3) Finite automata and regular expressions; context-free grammars and pushdown automata; nondeterminism; Turing machines and the halting problem. Emphasis on understanding models and their applications and on rigorous use of basic techniques of analysis. Induction proofs, simulation, diagonalization, and reduction arguments. Prerequisite: 321. Offered: AW.

CSE 326 Data Structures (4) Data types, abstract data types, and data structures. Efficiency of algorithms. Sequential and linked implementation of lists. Binary tree representations and traversals. Searching: dictionaries, priority queues, hashing. Directed graphs, depth-first algorithms. Garbage collection. Dynamic storage allocation. Internal and external sorting. Not open for credit to students who have completed 373, 374, or E E 374. Prerequisite: 321. Offered: AWSD.

CSE 341 Programming Languages (5) Designed to make the student reasonably fluent in several radically different languages, such as LISP, PROLOG, and Smalltalk. Not open for credit to students who have completed 413. Prerequisite: 143. Offered: AWSp.

CSE 370 Introduction to Digital Design (4) Introductory course in digital logic and its specification, simulation, and testing. Boolean algebra, combinational and sequential digital circuits including arithmetic circuits and programmable logic devices. Laboratory sessions, three hours per week, to design, simulate, construct, and debug circuits based on concepts presented in lectures. Prerequisite: 321 or permission of instructor. Offered: AWSp.

CSE 378 Machine Organization and Assembly Language (4) Differences and similarities in machine organization. Central processors. Fundamentals of machine language and addressing. Assembly language programming, including macros. Operating system interfaces. Not open for credit to students who have completed 410. Prerequisite: CSE 143. Offered: AWSp.

CSE 401 Introduction to Compiler Construction (3) Fundamentals of compilers and interpreters for symbol tables; lexical analysis, syntax analysis, semantic analysis, code generation, and optimizations for general purpose programming languages. Prerequisites: 326, 341, and 378. Offered: ASp.

CSE 403 Software Engineering (4) Fundamentals of software engineering using a group project as the basic vehicle. Topics covered include the software crisis, managing complexity, requirements specification, architectural and detailed design, testing and analysis, software process, and tools and environments. Recommended: 401 or 451. Prerequisite: 321, 341, and 378. Offered: WSp.

CSE 421 Introduction to Algorithms (3) Techniques for design and analysis of efficient algorithms. Methods for showing lower bounds on computational complexity. Particular algorithms for sorting, searching, set manipulation, arithmetic, graph problems, pattern matching. Prerequisites: 322; 326. Offered: W.

CSE 431 Introduction to Theory of Computation (3) Models of computation, computable and noncomputable functions, space and time complexity, tractable and intractable functions. Prerequisite: 322. Offered: Sp.

CSE 444 Introduction to Data-base Systems (3) Fundamental concepts, system organization, and implementation of data-base systems. Relational, hierarchical, and network data models; file organizations and data structures; query languages; query optimization; data-base design; concurrency control; security; issues involving distributed data-base systems. Prerequisite: 326. Offered: A.

CSE 451 Introduction to Operating Systems (4) Principles of operating systems. Process management, memory management, auxiliary storage management, resource allocation. Not open for credit to

298 COLLEGE OF ENGINEERING / COMPUTER SCIENCE AND ENGINEERING

٨

students who have completed 410 or E E 474. Prerequisites: 326, 378. Offered: AWSp.

CSE 457 Computer Graphics (3), Techniques of computer image synthesis, including both hardware and software. Line drawing and color raster graphics. Homogeneous coordinates, hidden surface, and smooth shading algorithms. Prerequisite: 326. Offered: ASp.

CSE 461. Introduction to Computer-Communication Networks (3) Computer network architectures, protocol layers. Transmission media, encoding systems, error detection, multiplexing, switching. Data link, multiple access channel protocols. Methods for network routing, congestion control, flow control. Endto-end transport services, protocols. Network security, privacy. Applications including electronic mail, virtual terminals, distributed operating systems. Prerequisite: senior standing. Offered: jointly with E E 461; A.

CSE 471 Computer Design and Organization (4) CPU instruction set and addressing modes, CPU structure and functions, computer arithmetic and logic unit register transfer level design, hardware and microprogram control, memory hierarchy design and organization, I/O, and system components interconnection. Laboratory project involves design and simulation of an instruction set processor. Prerequisites: 370 and 378. Offered: A.

CSE 472 Introduction to Computational Linguistics (3) Introduction to computer applications of linguistic theory, including syntactic processing, semantic, and pragmatic interpretation and natural language generation. Prerequisite: LING 471 or permission of instructor. Offered: jointly with LING 472.

CSE 473 Introduction to Artificial Intelligence (3) Principal ideas and developments in artificial intelligence: theorem proving, problem-solving methods, representation of knowledge, natural language analysis and synthesis, programming languages for artificial intelligence. Not open for credit to students who have completed 415. Prerequisite: 326; recommended: 341. Offered: WSp.

CSE 477 Digital System Design (5) Student uses laboratory to design, simulate, construct, and debug a substantial project of their choosing. Lectures focus on issues in composing large digital systems ranging from memory subsystems and interface logic to communication protocols and controllers. Prerequisites: 370 and assembly language programming. Offered: WSp.

CSE 490 Special Topics in Computer Science and Engineering (1-5) Lectures, discussions, and possibly labs on topics of current interest in computer science and engineering not covered by other CSE undergraduate courses. Prerequisite: senior standing in Computer Science or Computer Engineering. Offered: AWSpS.

CSE 498- Senior Project ([1-9]-) A report (and perhaps demonstration) describing a development, survey, or small research project in computer science or an application to another field. Objectives are: (1) integrating material from several courses, (2) introducing the professional literature, (3) gaining experience in writing a technical document, and (4) showing evidence of independent work. Work normally extends over more than one quarter, for a maximum of 6 credits for 498-9 credits are required for 498H-. Prerequisite: senior standing and permission of instructor. Offered: AWSpS.

CSE 499 Reading and Research (1-24) Available in special situations for advanced computer science majors to do reading and research in field, subject to approval of undergraduate adviser and CSE faculty member. Free elective, but does not replace core course or computer science elective. Prerequisites: senior standing and permission of instructor. Credit/no credit only. Offered: AWSpS.

Courses for Graduates Only

All graduate courses are primarily for computer science graduate students. Others must petition for entry codes.

CSE 500 Computers and Society (2) Study of impact of computer technology on present and future society, including political, economic, cultural, social, and moral issues. Includes guest lecturers and discussion leaders. Each student is required to complete a term project. Prerequisite: graduate standing in computer science or permission of instructor. Credit/no credit only. Offered: alternate years.

CSE 501 Compiler Construction (3) Design of compilers for block-structured general-purpose programming languages. Automatic generation of lexical analyzers and parsers. Error detection and correction. Code optimization. Prerequisites: 401, 505.

CSE 503 Software Engineering (3) Specification, implementation, and testing of large, multiperson, software systems. Topics include abstraction, information hiding, software development environments, and formal specifications. Prerequisites: CSE major and 322, 326, and 378 or equivalents.

CSE 505 Concepts of Programming Languages (3) Data structures, types, control structures. Languages in the ALGOL family; functional, object-oriented, and logic programming languages. Prerequisites: CSE major, 401 and a working knowledge of Pascal and LISP.

CSE 506 Advanced Topics in Programming Languages (3) May include functional, object-oriented, parallel, and logic programming languages; semantics for languages of these kinds; type declaration, inference, and checking (including polymorphic types); implementation issues, such as compilation, lazy evaluation, combinators, parallelism, various optimization techniques. Implementation project required. Prerequisites: CSE major, 501 which may be taken concurrently, and 505. Offered: alternate years.

CSE 519 Computer Science Research Seminar (1, max. 3) Weekly presentations on current research activities by members of the department. Only computer science graduate students may register, although others are encouraged to attend. Credit/no credit only. Offered: AWSpS.

CSE 520 Computer Science Colloquium (1, max. 9) Weekly public presentations on topics of current interest by visiting computer scientists. Credit/no credit only. Offered: AWSp.

CSE 521 Design and Analysis of Algorithms I (3) Principles of design of afficient algorithms: recursion, divide and conquer, balancing, dynamic programming, greedy method, data structure selection. Correctness and analysis of algorithms. Examples drawn from problems in sorting, searching, set manipulation, pattern matching, graphs, matrices, polynomials, and integers. Prerequisite: CSE major and 326 or equivalent.

CSE 522 Design and Analysis of Algorithms II (3) Analysis of algorithms more sophisticated than those treated in 521. Content varies and may include such topics as algebraic algorithms, combinational algorithms, techniques for proving lower bounds on complexity, and algorithms for special computing devices such as networks or formulas. Prerequisite: CSE major and 521. Offered: alternate years.

CSE 523 Computational Geometry (3). Algorithms for discrete computational geometry. Geometric computation, range searching, convex hulls, proximity, Vornoi Diagrams, intersection. Application areas include VLSI design and computer graphics. Prerequisites: CSE major and 521. Recommended: 457 or equivalent. Offered: alternate years.

CSE 524 Parallel Algorithms (3) Design and analysis of parallel algorithms: fundamental parallel algorithms for sorting, arithmetic, matrix and graph problems and additional selected topics. Emphasis on general techniques and approaches used for developing fast and efficient parallel algorithms and on limitations to their efficacy. Prerequisite: CSE major and 521. Offered: alternate years.

CSE 531 Automata, Computability, and Complexity (3) Computational models including finite automata, regular expressions, context-free grammars, pushdown automata, Turing machines, and techniques for analyzing them. Basic computability theory and undecidability. Fundamentals of computational complexity theory and NP-completeness. Prerequisite: CSE majors only.

CSE 532 Complexity Theory (3) Deterministic, nondeterministic, alternating, and probabilistic Turing machines. Time and space complexity, complexity classes, complexity hierarchies, and provably intractable problems. Prerequisite: CSE major and 531.

CSE 533 Advanced Topics in Complexity Theory (3) Topics in computational complexity more sophisticated than those treated in 532. Topics are expected to vary from year to year, but might typically focus on such areas as parallel complexity, probabilistic complexity, circuit- or automaton-based complexity, or logic. Prerequisite: CSE major. Offered: alternate years.

CSE 536 Theory of Distributed Computing (3) Formal approaches to distributed computing problems. Topics vary, but typically include models of distributed computing, agreement problems, impossibility results, mutual exclusion protocols, concurrent reading while writing protocols, knowledge analysis of protocols, and distributed algorithms. Prerequisite: CSE major. Offered: alternate years.

CSE 540 Discrete System Simulation (3) Principles of simulation of discrete, event-oriented systems. Model construction, simulation and validation. Distributed and parallel simulation techniques. Basic statistical analysis of simulation inputs and outputs. Use of C, an object-oriented language, and S, a statistical analysis package. Prior familiarity with the concepts of probability and statistics desirable. Prerequisitle: CSE major.

CSE 542 Central Processor Architecture (3) Several central processing units are examined at the gate level. Included are the logic structures of: I/O bus, memory bus, ALU, address modification, control logic, combinatorial and multiphase instructions, access priority, cycle stealing. Prerequisite: CSE major. Offered: atternate years.

CSE 543 Computer System Performance (3) Emphasizes the use of analytic models as tools for evaluating the performance of centralized, distributed, and parallel computer systems. Prerequisite: CSE major and 451.

CSE 548 Computer Systems Architecture (3) Notations for computer systems. Processor design (single chip, look-ahead, pipelined, data flow). Memory hierarchy organization and management (virtual memory and caches). Microprogramming. I/O processing. Multiprocessors (SIMD and MIMD). Prerequisites: CSE major and 451.

CSE 549 High-Performance Computer Architectures (3) Algorithm design, software techniques, computer organizations for high-performance systems. Selected topics from: VLSI complexity for parallel algorithms, compiling techniques for parallel and vector machines, large MIMD machines, interconnection networks, reconfigurable systems, memory hierarchies in multiprocessors, algorithmically specialized processors, data flow architectures. Prerequisite: CSE major and 548 or permission of instructor. Offered: alternate years.

CSE 551 Operating Systems (3) Operating systems design and construction techniques. Concurrent programming, operating system kernels, correctness, deadlock, protection, transaction processing, design

methodologies, comparative structure of different kinds of operating systems, and other topics. Prerequisite: 451; CSE major.

CSE 552 Distributed and Parallel Systems (3) Principles, technicilies, and examples related to the design, implementation, and analysis of distributed and parallel computer systems. Prerequisite: CSE major and 551.

CSE 553 Real-Time Systems (3) Design and construction of software for real-time computer systems. Software architectures. Requirements and specification methods. Scheduling algorithms and timing analysis. Real-time operating systems. Real-time programming languages. Selected case studies. Prerequisites: 451; CSE major. Offered: alternate years.

CSE 557 Computer Graphics (3) Generation and interpretation of pictures by computer with or without human interaction. Graphics hardware. Display programming. Picture transformation. Representations of pictures and their attributes. Curve and surface design and generation. Input methods. Graphics programming languages and systems. Laboratory project required. Prerequisite: CSE major and knowledge of data structures and linear algebra.

CSE 558 Special Topics in Computer Graphics (3) Advanced topics in computer graphics not treated in CSE 557. Topics vary from year-to-year but typically include advance image synthesis and/or computer aided geometric design. Prerequisite: CSE major and 523 or 557 or permission of instructor. Offered: alternate years; Sp.

CSE 561 Computer Communication and Networks (3) Fundamentals of data transmission: coding, message formats, and protocols. Organization of computer networks. Examples of network implementations. Prerequisite: CSE or E E major and 451 or equivalent.

CSE 563 Fault Telerant Computing (3) Faults and their manifestation, issues, theory, and techniques of reliable systems design, testing, design for testability, self-checking and fail-safe circuits, coding techniques, system-level fault diagnosis, fault-tolerant communication, reliable software design, and evaluation criteria. Prerequisite: basic knowledge of digital systems design or permission of instructor. Offered: jointly with E E 563.

CSE 567 Principles of Digital Systems Design (3) Principles of logic design, combinational and sequential circuits, minimization techniques, structured design, methods, CMOS technology, complementary and ratioed gates, delay estimation and performance analysis, arithmetic circuits, memories, clocking methodologies, synthesis and simulation tools, VLSI processor architecture. Prerequisite: CSE major and basic knowledge of logic design.

CSE 568 Advanced VLSI Laboratory (3) Advanced topics on MOS technology and CAD software; students design a large chip (more than 10K transistors) to be fabricated at end of term; laboratory activities include circuit and logic design, graphic layout of a chip, extraction, checking, and simulation. Prerequisite: CSE major and 567 or permission of instructor.

CSE 573 Artificial Intelligence I (3) Introduction to computational models of thought and construction of intelligent information systems. Topics include search algorithms, data dependencies and truth-maintenance systems, approaches to knowledge representation, automated deduction, reasoning under uncertainty, and machine learning. Prerequisites: 421 or equivalent; exposure to logic, LISP programming experience; CSE major.

CSE 574 Artificial Intelligence II (3) Advanced topics in artificial intelligence. Subjects include planning, natural language understanding, qualitative physics, machine learning, and formal models of time and action. Students are required to do projects. Prerequisite: 573. CSE major.

CSE 576 Image Understanding (3) Overview of computer vision, emphasizing the middle ground between image processing and artificial intelligence. Image formation, preattentive image processing, boundary and region representations, and case studies of vision architectures. Prerequisites: 573 or E E 562 or permission of instructor. Offered: jointly with E E 576.

CSE 577 Mathematical Morphology (3) Theory of mathematical morphology and its application in various commercial, industrial, medical, and research applications. Contents include binary and grayscale morphologic dilation, erosion, opening and closing, morphological sampling theorem, structuring element decomposition, thinning, skeletonizing, and relational shape description. Group project. Prerequisite: 576 or E E 568 or permission of instructor. Offered: jointly with E E 577; alternate years.

CSE 581 Parallel Computation in Image Process-Ing (3) Parallel architectures, algorithms, and languages for image processing. Cellular array, pipelined and pyramid machines, instruction sets, and design issues. Parallel implementations of filtering, edge detection, segmentation, shape, stereo, motion, relaxation algorithms, multiresolution methods, and iconicto-symbolic transforms. Students write and debug programs for parallel computers. Prerequisite: permission of instructor. Offered: alternate years.

CSE 590 Special Topics in Computer Science (*) Several offerings each quarter, on topics of current interest. Prerequisite: permission of instructor. Offered: AWSp.

CSE 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

CSE 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

CSE 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Electrical Engineering

211 Electrical Engineering

Electrical engineering is concerned with the understanding and utilization of electricity, including the electric and magnetic properties of matter, to provide society with useful, efficient, and economic products and services. The scope of activity is wide-ranging and diversified, covering such topics as planning, design, implementation, and maintenance of large-scale systems for worldwide communication and regional power generation and distribution; design and use of microelectronic and photonic devices; signal and image processing; computer systems and their applications; instrumentation and control systems. In electrical engineering, rapid technological innovation is the rule rather than the exception. Preparation for a professional career in the field builds on a solid foundation in mathematics and the physical sciences, plus practice in the application of these basic principles to practical problems. In addition to technical education, the practice of engineering in contemporary society requires significant emphasis in the humanities and social sciences.

The department's undergraduate program provides the intellectual tools, analytical and laboratory skills, and humanistic-social values for professional work in the field. The program also forms a basis for further professional development, in graduate school, or through continuing education programs and independent study. The core curriculum consists of required courses in the College and department that focus on mathematical and physical principles and on modern techniques that have applications to real-world problems. Technical electives offer the opportunity to obtain breadth and depth in such areas as electronic materials, devices and circuits, power systems and energy conversion, electrophysics, computers and information systems, communication systems, automatic controls, robotics, and signal processing.

Undergraduate Program

Bachelor of Science in Electrical Engineering Degree

A separate application is required for admission to the undergraduate program in electrical engineering. Deadlines for submitting applications are the same as the closing dates that are given in the Academic Calendar at the front of this catalog for all new and former student applications. Students may only enter the degree program of the department autumn or spring quarters. To be eligible for consideration for admission, a student must satisfy the following conditions: (1) have applied and be admissible to the UW or already be a student in good standing; (2) have completed a minimum of 45 credits (i.e., sophomore standing) with a cumulative GPA of 2.50 or higher; (3) have successfully completed a year of college calculus (MATH 124, 125, 126), a quarter of differential equations (MATH 307), three quarters of physics using calculus (PHYS 121/131, 122/132, 123/133), a quarter of college chemistry (CHEM 140, 141), a quarter of computer programming (CSE/ENGR 142), electrical engineering funda-mentals (ENGR 215), and 5 credits of English composition. The cumulative GPA in these courses must be 2.50 or higher.

Copies of the Undergraduate Handbook, which contains detailed curriculum requirements and suggestions for the design of an effective sequence of elective courses, are available in 215 Electrical Engineering (Advising Office) or in the Engineering Advising Center.

In addition to the College of Engineering requirements in General Education and Engineering Fundamentals listed above, the following courses are required for the electrical engineering program: a core of 35 credits of specified electrical engineering courses normally taken in the junior year and 32 credits of electrical engineering electives. To graduate, a student must earn a total of 192 credits with a minimum cumulative GPA of 2.00 in all electrical engineering courses, with no grade below 1.0 in any of these courses. In addition, it is required that each student's program of study conform with the Accreditation Board for Engineering and Technology (ABET) requirement of at least 48 credits in engineering science and 24 credits in engineering design.

The departmental policy on continuation is consistent with the continuation policy of the College but also includes supplementary requirements specific to the department. Details may be obtained from the department advising office.

Many scholarships specifically for electrical engineering majors, based on merit and financial need, are awarded each year. Students interested in applying for these and other College of Engineering scholarships may obtain information from the Department of Electrical Engineering Scholarship Award Committee chairperson.

Graduate Program

The Department of Electrical Engineering offers graduate programs leading to the degrees of Master of Science in Electrical Engineering and Doctor of Philosophy. Graduate courses and research programs are offered in electromagnetics, radio science, optics, acoustics, microsensors, electronic materials and devices, microelectronics, VLSI design, computers and information systems, digital systems, computer architecture, computer networks and distributed systems, software engineering, operating systems, micropro-

cessors, energy systems, power electronics and electric drives, control systems, robotics, circuits and network theory, neural networks, telecommunications, signal processing, image and speech processing, machine vision, and biosystems. Opportunities also exist for participation in research on medical instrumentation in the bioengineering program and in marine acoustics and instrumentation systems at the Applied Physics Laboratory.

A minimum of 45 credits is required for graduation with the M.S.E.E. degree. Students selecting the thesis option must register for 9-12 thesis credits. Students selecting the nonthesis option can either complete their degree by total course work or bya one-term project of 4-8 credits. Course work for any of the abovementioned options must be selected with each student's supervisory committee approval to prepare the student in an area of specialization. If more flexibility is desired than allowed by the M.S.E.E. requirements, the interdisciplinary Master of Science in Engineering degree is available.

The M.S.E.E. degree is also offered to part-time students employed in local industries through the Televised Instruction in Engineering (TIE) program. Regular graduate courses are offered over cable television or by videotape to enable working engineers to participate in the program without traveling to campus.

To graduate with the Ph.D. degree, a student must pass the departmental qualifying examination, pass an advanced General Examination, pursue an original research problem, and report the results of that research in a dissertation that must be a contribution to knowledge. At least one year of course work beyond completion of the M.S.E.E. degree is usually desirable.

Research Facilities

Facilities in the Electrical Engineering Department include laboratories for study of solid-state materials and devices, computer technology, microsensors, optics, electromagnetics, computer systems, machine vision, analog and digital electronics, energy systems, power electronics and electric drives, bioelectronics, biorobotics, control systems, and statistical data analysis. Also available are extensive computer, integrated circuit and sensor fabrication, and characterization facilities.

Admissions Qualifications

In addition to meeting Graduate School admission requirements, the Graduate Record Examination (GRE) general test is required of all students. Official test scores must be submitted, along with a formal application and a minimum of two reference letters. Although most applicants have baccalaureate degrees in electrical engineering, applicants with degrees in other branches of engineering, the physical sciences, computer science, or mathematics often are able to pursue graduate study in electrical engineering following some additional preparation.

Financial Aid

Research assistantships, teaching assistantships, scholarships, and graduate fellowships are available to qualified graduate students in all areas of electrical engineering. Most awards include a monthly stipend plus payment of tuition and fees.

Correspondence and Information

Graduate Program Coordinator Department of Electrical Engineering, FT-10

Chairperson Gregory L. Zick

Professors

Afromowitz, Martin * 1975; PhD, 1969, Columbia University; microtechnology, solid-state and fiber-optics sensors, biomedical instrumentation.

Albrecht, Robert W. * 1961; PhD, 1961, University of Michigan; robotics, stochastic analysis, nuclear reactor theory.

Alexandro, Frank J. * 1964; DSc, 1964, New York University; control systems, stochastic estimation methods.

Andersen, Jonny * 1967; PhD, 1965, Massachusetts Institute of Technology; circuit design, modeling, CAD/ CAM and computer graphics.

Baer, Jean-Loup * 1969, (Adjunct); PhD, 1968, University of California (Los Angeles); parallel processing, computer system architecture, data structures.

Bergseth, F. Robert 1947, (Emeritus); MSEE, 1938, Massachusetts Institute of Technology; electric power systems.

Bernard, Gary D. * 1989, (Affiliate); PhD, 1964, University of Washington; advanced sensors for manufacturing, time-frequency classification, visual information processing.

Bjorkstam, John L. * 1950, (Emeritus); PhD, 1958, University of Washington; electromagnetic properties of materials, magnetic resonance spectroscopy.

Clark, Robert N. * 1957; PhD, 1969, Stanford University; automatic control systems, fault detection in dynamic systems.

Crum, Lawrence A. * 1992, (Research); PhD, 1967, Ohio University.

Damborg, Mark J. * 1969; PhD, 1969, University of Michigan; control systems theory, power system dynamics, expert systems and database applications.

Dow, Daniel G. * 1968; PhD, 1958, Stanford University; microwaves, physical electronics, semiconductor devices, sensors.

Ehrenberg, John E. * 1970, (Affiliate); PhD, 1973, University of Washington; communications, signal processing, underwater acoustics.

El-Sharkawi, Mohamed A. * 1980; PhD, 1980, University of British Columbia (Canada); analysis and control of power electronics, systems, and electric drives; artificial neural networks.

Ewart, Terry E. * 1956, (Adjunct); PhD, 1965, University of Washington; physics, ocean microstructure, diffusion, acoustic transmission.

Furness, Thomas A. * 1989, (Adjunct); PhD, 1981, University of Southampton (UK); display systems engineering, human factors, computer graphics.

Guilford, Edward C. * 1959, (Emeritus); PhD, 1959, University of California (Berkeley); electronics, com-, puters.

Haralick, Robert M. * 1986; PhD, 1969, University of Kansas; computer vision, artificial intelligence, pattern recognition, image processing.

Holden, Alistair D. * 1958; PhD, 1964, University of Washington; computer engineering, speech recognition, computer-eided design, artificial intelligence.

Hsu, Chih-Chi * 1958, (Emeritus); PhD, 1951, Ohio State University; control systems and cybernetics.

Ishimaru, Akira * 1953; PhD, 1958, University of Washington; electromagnetics, optics, acoustics, applied mathematics, scattering theory.

Jackson, Darrell R. * 1976, (Research); PhD, 1977, California Institute of Technology; signal processing, underwater acoustics, wave scattering.

Johnson, David L. 1955, (Emeritus); PhD, 1955, Purdue University; digital design, artificial intelligence, models of learning systems. Kim, Yongmin * 1982; PhD, 1982, University of Wisconsin; computer architecture, imaging systems, computer graphics, multimedia, modeling and instrumentation.

Lauritzen, Peter O. * 1968; PhD, 1961, Stanford University; power electronics, electronic devices, instrumentation.

Lewellen, Thomas * 1967, (Adjunct); PhD, 1972, University of Washington; bioengineering, electrical engineering.

Lewis, Laurel J. 1946, (Emeritus); PhD, 1947, Stanford University; circuits and systems.

Liu, Chen-Ching * 1983; PhD, 1983, University of California (Berkeley); planning and operation of power systems, systems and control, power electronics.

Lytle, Dean W. * 1958; PhD, 1957, Stanford University; communication and stochastic systems analysis, marine acoustics.

Marks, Robert * 1977; PhD, 1977, Texas Technological University; optical processing, signal analysis, neural networks.

Meditch, James S. * 1977; PhD, 1961, Purdue University; computer-communications networks.

Moritz, William E. * 1973; PhD, 1969, Stanford University; microcomputer applications, bioinstrumentation, human-powered transportation.

Noges, Endrik * 1958, (Emeritus); PhD, 1959, Northwestern University; automatic control systems, nonlinear and discontinuous control.

Pearsail, Thomas P. * 1989; PhD, 1973, Cornell University; physics of semiconductors and the technology of semiconductor devices.

Peden, Irene Carswell * 1961; PhD, 1962, Stanford University; subsurface remote sensing and applied electro-magnetics.

Pinter, Robert B. * 1967; PhD, 1964, Northwestern University; cybernetics, robotics, biophysics.

Porter, Robert P. * 1985; PhD, 1970, Northeastern University; acoustics, electromagnetics, signal processing.

Seliga, Thomas A. * 1990; PhD, 1965, Pennsylvania State University; electromagnetics, wave propagation, remote sensing and applications to atmosphere and geosciences.

Shapiro, Linda G. * 1986; PhD, 1974, University of lowa; computer vision, artificial intelligence, pattern recognition, robotics, database systems.

Sigelmann, Rubens A. * 1959, (Emeritus); PhD, 1963, University of Washington; bioengineering, ultrasonics, propagation, acoustics.

Smith, George S. 1968, (Emeritus); MSEE, 1924, University of Washington; instrumentation, high voltage technique.

Soma, Mani * 1982; PhD, 1980, Stanford University; computer-aided design, device modeling, IC technology and design, bioengineering.

Spelman, Francis A. * 1961, (Adjunct); PhD, 1975, University of Washington; biophysics of implanted cochlea; bioinstrumentation for primate research.

Spindel, Robert C. 1987; PhD, 1971, Yale University; ocean acoustics, signal processing, acoustic navigation systems, acoustic tomography.

Szablya, John F. * 1984, (Affiliate); PhD, 1948, Josef Nador University (Hungary).

Tanimoto, Steven L. * 1977, (Adjunct); PhD, 1975, Princeton University; image analysis, artificial intelligence, computer graphics.

Tsang, Leung * 1983; PhD, 1976, Massachusetts Institute of Technology; wave propagation and scattering, remote sensing and optics.

Venkata, Subrahmanyam S. * 1979; PhD, 1971, University of South Carolina; computer applications to power systems, Al' applications, transmission and distribution.

Yee, Sinclair S.² 1970; PhD, 1965, University of California (Berkeley); physical electronics, semiconductor devices, microsensors.

Young, James A. * 1982, (Affiliate); PhD, 1953, University of Washington; telecommunications, electronic systems, and signal processing.

Zick, Gregory L. * 1974; PhD, 1974, University of Michigan; image and multimedia databases, medical imaging.

Associate Professors

Atlas, Les Eugene * 1983; PhD, 1983, Stanford University; speech recognition and processing; digital signal processing, auditory sciences, neural networks.

Chan, Chi H. * 1989; PhD, 1987, University of Illinois; computational electromagnetics, microwave ICs, scattering and antennas, bioengineering.

Darling, Robert B.* 1985; PhD, 1985, Georgia Institute of Technology; semiconductor devices, solid state, optoelectronics, microelectronics.

Giri, Jay * 1990, (Affiliate); PhD, 1977, Clarkson University.

Hannaford, Blake * 1989; PhD, 1985, University of California (Berkeley); human and robotic movement control, bioengineering, controls, human-machine interaction.

Helms, Ward J. * 1964; PhD, 1968, University of Washington; VLSI analog and digital circuit design, integrated circuits, acoustics and audio, silicon compilers.

Katz, Philip L. * 1980, (Research); PhD, 1970, University of Michigan.

Kuga, Yasuo * 1991; PhD, 1983, University of Washington; microwave and millimeter-wave remote sensing, optics, and electromagnetics.

Kuhn, Kelin J. * 1987; PhD, 1985, Stanford University; molecular beam epitaxy growth of strained-layer InGaAs/GaAs quantum wells and superlattices.

Morrin, Thomas Harvey II * 1988, (Affiliate); BSEng, 1965, Massachusetts Institute of Technology; simulation and test of mixed analog-digital VLSI electronics.

Redeker, Charles C. 1963, (Emeritus); MS, 1964, University of Washington.

Ritcey, James A. * 1985; PhD, 1985, University of California (San Diego); detection, estimation and signal processing.

Sechen, Carl M. * 1992; PhD, 1987, University of California (Berkeley); computer-aided design of analog and digital integrated circuits.

Sharma, Tilak Chand * 1990, (Affiliate); PhD, 1972, University of Alberta (Canada); reliability methodology for very highly reliable fault-tolerant systems.

Somani, Arun Kumar * 1985; PhD, 1985, McGill University (Canada); computer architecture, fault-tolerant computing, interconnection networks.

Thorsos, Eric I. * 1980, (Research); PhD, 1972, Massachusetts Institute of Technology; rough surface scattering: numerical simulation and theory; underwater acoustics.

Assistant Professors

Beausoleil, Raymond G. * 1987, (Affiliate); PhD, 1987, Stanford University; laser physics, nonlinear optics, quantum optics, and computational physics.

Belcher, Edward O. * 1982, (Research); MSEE, 1973, Purdue University; signal processing, artificial intelligence, underwater acoustics.

Carey, W. Patrick * 1990, (Research); PhD, 1987, University of Washington; chemical sensors and arrays, integrated sensor systems and multivariate calibration.

Choi, Jai Joon * 1988, (Affiliate); PhD, 1990, University of Washington; adaptive signal processing, neural networks, and fuzzy logic.

Christie, Richard Dunstan Jr. * 1989; PhD, 1989, Carnegie-Mellon University; power systems analysis, expert systems applications, user interfaces.

Dailey, Daniel J. * 1982, (Research); PhD, 1988, University of Washington; time series modeling of physical phenomena, optimization, distributed computing, networking.

Goreoki, Francis D. * 1984, (Affiliate); PhD, -1981, University of Washington.

Hwang, Jenq-Neng * 1989; PhD, 1988, University of Southern California; parallel architectures, signal and image processing, neural networks.

Krishnan, Ramasamy * 1989, (Affiliate); PhD, 1985, University of Windsor (Canada); DSP algorithms, DSP VLSI architecture for ASICs, computer architecture, CMOS computational cells.

Luby, James C. * 1979, (Research); PhD, 1984, University of Washington; signal processing, underwater acoustics, computer simulation, adaptive array processing, tracking:

Meldrum, Deirdre R. * 1992; PhD, 1992, Stanford University; modeling, control, identification, and design of dynamic systems; robots, flexible structures.

Music, Wayne D. * 1990, (Affiliate); PhD, 1987, Southern Methodist University; adaptive and statistical signal processing techniques to communications and sonar problems.

Nelson, Brian A. * 1987, (Research); PhD, 1987, University of Wisconsin; fusion plasma physics, plasma processing of materials, data acquisition software.

Oh, Seho * 1987, (Affiliate): PhD, 1989, University of Washington; neural networks and fuzzy systems.

Phillips, Ihsin Tsai-Yun * 1988, (Affiliate); PhD, 1984, University of Maryland; computer vision, document image understanding, image database, software engineering.

Ramon, Ceon * 1989, (Adjunct Research); PhD, 1973, University of Utah; biomagnetic imaging and its application to detect cardiac dysrhythmia problems.

Riskin, Eve A. * 1990; PhD, 1990, Stanford University; image compression and processing, signal processing, medical imaging, and pattern recognition.

Sahr, John D. * 1991; PhD, 1990, Cornell University; radar remote sensing of the Earth's upper atmosphere. Sumic, Zarko * 1988, (Affiliate); PhD, 1990, University of Washington.

Winebrenner, Dale P. * 1986, (Research); PhD, 1985, University of Washington; wave propagation and scattering and remote sensing of planetary surfaces.

Yang, Andrew T. * 1989; PhD, 1989, University of Illinois; VLSI CAD, modeling and simulation of GaAs/Si Devices.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

E E 233 Circuit Theory (5) Electric circuit theory. Analysis of circuits with sinusoidal signals. Phasors, system functions, and complex frequency. Frequency response. Computer analysis of electrical circuits. Power and energy. Two port network theory. Laboratory in basic electrical engineering topics. Prerequisite: 231 or ENGR 215. Offered: AWSp.

E E235 Signal Analysis (4) Introduction to continuous and discrete time signal analysis. Basic signals including impulses, pulses, and unit steps. Periodic signals. Convolution of signals. Fourier series and transforms in discrete and continuous time. Computer illustrations. Prerequisites: PHYS 122, 132, and concurrent registration in MATH 307. Offered: AWSp.

E E 299 Special Topics in Electrical Engineering (1-5) New and experimental approaches to basic electrical engineering. May include design and construction projects. Prerequisite: permission of department Chairperson. Offered: AWSp.

E E331 Devices and Circuits I (5) Fundamentals of electrons and holes in semiconductors; physical processes of drift, diffusion, recombination; structure, characteristics of pn-junction diodes; use and analysis of junction diodes in nonlinear circuit applications; structure, characteristics of field-effect transistors; use and analysis of field-effect transistors in nonlinear circuit applications: Weekly laboratory. Prerequisite: ENGR 233. Offered: AWSp.

E E 332 Devices and Circuits II (5) Analysis of pn junctions, large and small signal models of bipolar transistors, single and two transistor amplifiers, transistor current sources and active loads, output stages, bipolar operational amplifiers, and frequency response of analog integrated circuits. Prerequisites: 331. Offered: AWSp.

E E 341 Linear Systems Analysis (5) Continuous and discrete time signals and systems, impulse response, convolution, Laplace and Z-transforms, transient and steady-state response. Probability in systems analysis. Computer laboratory. Prerequisites: 235, MATH 307. Offered: AWSp.

E E 351 Energy Systems (5) Introduction to theory and methods of analysis in the use of typical apparatus to generate, transmit, utilize energy in electrical form. Includes conventions of circuit description, balanced polyphase circuits, complex power concept, transformer, fundamentals of electromechanical energy conversion, practical synchronous induction and commutator machines, an introduction to power electronics circuits, Prerequisite: 233. Offered: AWSp.

E E 361 Applied Electromagnetics (5) Introductory electromagnetic field theory and Maxwell's equation in Integral and differential forms; uniform plane waves in linear medium; boundary conditions and reflection and transmission of waves; guided waves; transmission lines and Smith chart; electrostatics. Prerequisites: 233, MATH 324. Offered: AWSp.

E E 371 Digital Circuits and Systems (5) Introductory course in digital logic. Boolean algebra, combinational and sequential circuits, combinational and sequential logic design, programmable logic devices, and design and operation of digital computers, including ALU and memory. Four-hour laboratories every other week. Prerequisites: ENGR 142 and ENGR 275 or CSE 143. Offered: AWSp.

E E 399 Special Topics in Electrical Engineering (1-5) New and experimental approaches to current electrical engineering problems. May include design and construction projects. Prerequisite: permission of department. Offered: AWSpS.

E E 400 Advanced Topics in Electrical Engineering (1-4, max. 8) Contemporary topics at the advanced undergraduate elective level. Faculty presents advanced elective topics not included in the established curriculum. Prerequisite: permission of instructor. Offered: AWSp.

E E 411 Introductory Network Synthesis (3) Network representations in the complex frequency domain, realizability criteria for driving-point and transfer functions, canonical forms, and application of the digital computer in synthesis procedures. Prerequisites: 233 and senior standing. Offered: A.

E E 415 Computer-Aided System Analysis and Design (3) Concepts, principles, and techniques concerned with the design, testing, and application of

general-purpose problem-oriented computer programs for analyzing large-scale systems. Prerequisites: ENGR 142 and senior standing. Offered: Sp.

E E 417, 418 Introductory Communication Theory I, II (4,3) Techniques of analog and digital communications. Elementary concepts of probability, random signals, and noise. Base-band communication by digital and analog methods. Modulation techniques including AM, FM, PM, PAM, PCM. Information theory, channel capacity, and error-control coding. Prerequisites: 341 for 417, 417 for 418. Offered: W,Sp.

E E 421 Electroacoustics (4) Fundamentals of acoustics and the electroacoustical aspects of electromechanical systems. Characteristics of transducers. Design of acoustic devices. Includes laboratory to be arranged. Prerequisite: 361 or permission of department. Offered: A.

E E 433 Analog Circuit Design (5) Design of analog circuits and systems applying modern integrated circuit technology: operational amplifiers, differential amplifiers, active filters, voltage references and regulators. Prerequisite: 332. Offered: AW.

E E 438 Medical Instrumentation (4) Spelman Introductory course in the application of instrumentation to medicine. Topics include transducers, signal-conditioning amplifiers, electrodes and electrochemistry, ultrasound systems, electrical safety, and the design of clinical electronics. Laboratory included. For upperdivision and first-year graduate students who are preparing for careers in bioengineering-both research and industrial. Prerequisite: 433 or permission of department. Offered: jointly with BIOEN 436; Sp.

E E 440 Linear Systems Analysis II (4) Development of advanced Fourier methods, concentration on applications to engineering problems. Analog and digital filters; applications of discrete Fourier transform, including aliasing, short data sets, average transforms, system identification; orthogonal functions for boundary-value problems, two-dimensional Fourier transforms with application to image processing and aperture antennas. Prerequisite: 341. Offered: A.

E E 442 Digital Signals and Filtering (3) Methods and techniques for digital signal processing. Review of sampling theorems, A/D and D/A converters. Demodulation by quadrature sampling. Z-transform methods, system functions, linear shift-invariant systems, difference equations. Signat flow graphs for digital networks, canonical forms. Design of digital filters, practical considerations, IIR and FIR filters. Digital Fourier transforms and FFT techniques. Prerequisite: 341 or permission of department. Offered: W.

E E 443 Design and Application of Digital Signal Processors (5) Design of signal processing systems in digital computer circuitry and their use in various commercial, industrial, and research applications. Digital signal microprocessors, digitization and analog reconstruction, design of digital filters and fast Fourier transform systems, case studies of applications in communications and audio. Weekly lab, group design project. Prerequisites: 442. Offered: Sp.

E E 445 Nonlinear Systems Analysis (4) Dynamic analysis of nonlinear circuits, neural networks and of other simple systems. Exact methods, graphical methods, approximate methods, including linearization and numerical and analog computer solutions. Stability. Forced oscillations. Prerequisite: 233 or permission of department. Offered: A.

E E 446 Control System Analysis I (4) Linear control system theory and design principles. Linear models. Stability and dynamic response of feedback systems. Control system performance. Root locus and frequency response design methods. Prerequisite: 341 or permission of instructor. Offered: AWSp.

E E 447 Control System Analysis II (3) Statespace formulation of multivariable feedback control system problems. Dynamic performance, including stability evaluation, by vector-matrix methods. Application of discrete time methods of feedback control problems. Introduction to nonlinear feedback system analysis including state-space methods, Lyapunov stability theory, and describing functions. Prerequisite: 446 or permission of department. Offered: Sp.

E E 448 Control Systems Sensors and Actuators (3) Study of components and formulation of their mathematical models. Amplifiers, servomotors, synchros, gyroscopes. Accelerometers, reaction mass actuators, potentiometers, shaft encoders and resolvers, proximity sensors, force and torque transducers. Experimental determination of component models and model parameters. Two 3-hour laboratories per week. Prerequisite: senior standing. Offered: jointly with A A 448; W.

E E 449 Design of Automatic Control Systems (4) Design problems in electromechanical feedback systems, aerospace and hydrospace vehicles, systems with unstable plants, lightly damped modes, nonminimum phase plants, nonlinear plants. Computer-aided simulation and design emphasized. Team elfort encouraged. Design reviews, oral presentations required. Prerequisite: 446 or A A 450 or M E 471 or equivalent. Offered: jointly with A A 449; Sp.

E E 452 Power Electronics Design (5) Electronic conversion and control of electrical power. Includes semiconductor switching devices, power converter circuits, design of magnetics, and control of power converters. Also ac/ac, ac/dc, and dc/dc power converters; circuit simulation; extensive laboratory work a four-week power converter design project. Prerequisites: 332, 351. Offered: A.

E E 453 Electric Drives (5) Elements of drive systems, speed-torque characteristics of electric motors and industrial loads, solid-state converter. Starting and braking methods of loaded motors. Speed control of electric motors. Solid-state drives. Transient analysis of loaded motors. Special forms of individual- and multimotor drives. Prerequisite: 351 and permission of instructor. Offered: W.

E E 454 Power System Analysis I (4) Introduction to methods of analyzing power systems. Includes symmetrical components, calculation of line parameters, representation of transmission lines and power components, and power flow control. Prerequisite: 351 or permission of instructor. Offered: A.

E E 455 Power System Analysis II (4) Analysis of symmetrical and unsymmetrical power systems' networks, fault analysis, and stability studies. Prerequisite: 351 or permission of department. Offered: W.

E E 456 Computer-Aided Design in Power Systems (4) Design-oriented course in power system engineering. Students are assigned a project concerning system operation and planning, steady-state and dynamic behaviors of power systems, or distribution systems. Each involves formulation of design criteria, development of approach, application of existing software. Prerequisite: 454 or 455 or 457, or permission of instructor. Offered: Sp.

E E 457 Electric Energy Distribution Systems (4) Introduction to electric utility distribution systems. Primary and secondary network analysis and design, distribution substation problems, distribution transformers, capacitor application, overcurrent and overvoltage protection. System planning and reliability. Prerequisite: 344 or permission; background in system analysis desirable. Offered: Sp.

E E 461 Introduction to Computer-Communication Networks (3) Computer network architectures, protocol layers. Transmission media, encoding systems, error detection, multiplexing, switching. Data link, multiple access channel protocols. Methods for network routing, congestion control, flow control. Endto-end transport services, protocols. Network security, privacy. Applications including electronic mail, virtual terminals, distributed operating systems. Prerequisite: senior standing. Offered: jointly with CSE 461; A.

.

E E 462 Mobile Robots I: Vehicles (4) Principles of autonomous vehicles and environments in which they operate. CAD modelling of environments, knowledge base development of environments, vehicle performance by teleoperation, coordinate transformations, and generation of trajectories for vehicle drive and steering. Characteristics of sensors including sonar, laser range, infra-red, tactile, and video. Prerequisites: ENGR 230 and senior standing. Offered: A.

E E 463 Mobile Robots II: Intelligent Control (4) Autonomous vehicles operating in semi-structured environments. Expert system modelling of the Interaction of vehicles and environments through sensors to perform tasks autonomously. Knowledge base development of robotic behaviors and environments. The principles of computer vision as applied to mobile robots. Prerequisites: 462 and senior standing. Offered: W.

E E 464 Mobile Robots III: Integration and Projects (4) Application of principles of autonomous navigation and control to actual vehicles in semi-structured laboratory environments. Projects to demonstrate autonomous behavior. Prerequisites: 463 and senior standing. Offered: Sp.

E E 465 Fiber Optics, Devices, and Applications (4) Wave propagation in optical waveguiding structures, signal distortion, coupling of modes, modulation, sources and detectors, fabrication and measurement methods, communication and sensor systems. Prerequisite: 332; recommended: 361. Offered: Sp.

E E 466 Design in Electromagnetics, Optics, and Acoustics (4) Design of electromagnetic, optical, and acoustic (EDA) devices and systems. Measurements of material properties and system characteristics. Utilization of software for simulation of propagation, interaction and devices in optics, microwave, millimeter wave, acoustic, and ultrasound. A list of projects available prior to registration. Prerequisites: 356, 361, and senior standing. Offered: Sp.

E E 467 Antennas and Remote Sensing (3) Peden, Tsang Radiation and radio science; antenna fundamentals and applications; wave propagation and earth's environments; remote sensing. Prerequisites: 235 and 361 or permission of instructor.

E E 468 Wave Propagation in Optoelectronics (4) Electromagnetic wave propagation and diffraction and its applications to optoelectronics, imaging, and holography. Fraunhofer and Fresnel diffraction, lenses, Fourier optics, coupling of modes, distributed feedback structures, anisotropic media, optical modulators. Prerequisites: 341 and 361. Offered: W.

E E 471 Computer Design and Organization (5) Introduction to computer architecture, algorithms, hardware design for various computer subsystems, CPU control unit design, hardwired and microprogrammed control, memory organization, cache design, virtual memory, I/O organization, and I/O hardware design. Prerequisites: 370 or equivalent with permission of instructor. Offered: AW.

E E 472 Microcomputer Systems (5) Concepts of multi-level machines and computer systems organization. Utilizing microprocessor digital computer studied at assembly- and high-language levels with emphasis on concepts of central processor architecture, memory organization, input/output and interrupts. Assembly language programming concepts applied to solution of various laboratory problems including I/O programming. Prerequisite: 471. Offered: AW.

E E 473 Wave Shaping (5) Design of circuits for the generation and transmission of special wave forms. Design of oscillators, AM circuits, FM circuits, D/A and A/D circuits. Prerequisites: 355 and 356. Offered: Sp.

E E 476 Digital Integrated Circuit Design (5) Sechen A comprehensive view of digital integrated circuit design: Topics to be covered include the design of inverters, static logic circuits, switch logic, and synchronous logic? Students design, simulate, and layout a complete digital IC using modern computer-aided design tools. Prereculisites 331 and 371. Offered: W.

E E 478 Design of Computer Subsystems (5) Design of digital computer subsystems and systems, using SSI, MSI, and LSI digital components. Combinational logic, sequential logic, ALU and control-unit designs, memory hardware design, I/O hardware and interface designs, data-acquisition system design, and digital troubleshooting. One four-hour laboratory each week. Prerequisites: 355, 370, 372 or 472, and permission of department. Offered: Sp.

E E 480 Microwave Engineering I (4) Analysis and design of transmission lines and matching circuits. Lossy transmission lines. Mode structures in metallic and dielectric waveguides. Design of microwave circuits using S-parameter techniques. Smith chart and matching techniques. Prerequisite: 361. Offered: A

E E 481 Microwave Electronic Design (4) Design of microwave circuits using S-parameter techniques. Measurement techniques, CAD of microwave systems. Includes design, fabrication, and evaluation of a microwave functional component. Prerequisite: 361. Offered: W.

E E 482 Semiconductor Devices (4) Fundamentals of semiconductor theory: carrier diffusion and drift; concept of direct and indirect energy materials, effective mass of mobile carriers; device physics; homo-and heterojunctions, operating principles of bipolar, junction, and MOS field-effect transistors. Prerequisite: 332. Offered: A.

E E 483 Semiconductor Device Design and Modeling (4) Design and characteristics of semiconductor devices using a PISCES-based commercial CAD tool; SPICE-type device models; device parameter extraction and optimization; completion of a device design and characterization project using these computer tools. Prerequisite: 482. Offered: W.

E E 484 Sensors and Sensor Systems (3) Theory, design, and fabrication of thermal, mass, electrochemical, and optical sensors; for measurements of physical, chemical and biomedical parameters. Includes a course design project of students choice. Prerequisite: junior or senior standing in Electrical Engineering, Chemistry, or Bioengineering or permission of instruction. Offered: W.

E E 486 Fundamentals of Integrated Circuit Technology (3) Afromowitz Processing physics, chemistry, and technology, including evaporation, sputtering, epitaxial growth, diffusion, ion implantation, laser annealing, oxidation, chemical vapor deposition, photoresists. Design considerations for bipolar and MOS devices, material and process characterization. Future trends. Prerequisite: 485 or permission of department. Offered: W.

E E 488 Laser Electronics (4) Analysis and design of laser systems. Basic resonator design, Gassian beams, longitudinal and transverse modes, rate equations, oscillation, gain, Q-switching, mode-locking, and important non-linear processes. Design concepts underlying various laser systems discussed. Prerequisites: 331, 361. Offered: A.

E E 498 Design of Consumer Electronics (4) Design of consumer electronics products. Typical products include conventional audio systems, CD players, VCRs, camcorders, and FAX systems. Choice of products varies from quarter to quarter. Course includes an integrated laboratory and design project. Prerequisites 233 and 341. Recommended: 331 and 332. Offered; A.

E E 499 Special Projects (2-5, max. 10) Assigned construction or design projects carried out under the

supervision of the instructor. Prerequisite: permission of department. Offered: AWSpS.

Courses for Graduates Only

E E 500 Graduate Seminar (1, max. 3) Weekly seminars on current topics in electrical engineering. More than one section may be offered in a given quarter. Credit/no credit only. Offered: AWSp.

E E 505 Introduction to Probability and Random Processes (4) Lytle, Ritcey Foundations for the engineering analysis of random processes: set theoretic fundamentals, basic axioms of probability models, conditional probabilities and independence, discrete and continuous random variables, multiple random variables, sequences of random variables, limit theorems, models of stochastic processes, noise, stationarity and ergodicity, Gaussian processes, power spectral densities. Prerequisite: graduate standing, Offered: AWSp.

E E 506, 507 Communication Theory I, II (3,3) Lytle, Ritcey Review of stochastic processes. Communication system models. Channel noise and capacity. Optimum detection, modulation and coding, convolutional coders and decoders. Typical channels, random and fading channels. Waveform communication, optimum filters. Prerequisite: 505 or equivalent. Offered: W,Sp.

E E 508 Stochastic Processes (3) Lytle, Ritcey Modeling and analysis of random processes encountered in engineering applications. Stationarity and ergodicity. Harmonic analysis, power spectral densities. Karhunen-Loeve expansions. Poisson, Gaussian, and Markov processes. Stochastic integrals and differential equations. Prerequisite: 505 or permission of instructor. Offered: W.

E E 509 Engineering Applications of Linear Graphs (3) Andersen Elementary theory of linear graphs, incidence; cut-set and circuit matrices, matrix formulation of loop, node, and state equations, topological analysis and synthesis of networks, signal flow graphs, applications to switching circuits, automata and communication nets. Prerequisite: graduate standing or permission of instructor. Offered: W.

E E 510 Mathematical Foundations of Systems Theory (4) Damborg Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Prerequisite: graduate standing or permission of instructor. Offered: jointly with A A 546/CH E/M E 510; A.

E E 511 Principles of Network Synthesis (3) Andersen Network representation in the complex frequency domain, realizability criteria, synthesis of driving point and transfer impedance and coupling networks for prescribed transfer characteristics, canonical forms, and network equivalents, frequency and time domain aspects of approximating response functions. Prerequisite: graduate standing or permission of instructor. Offered: W.

E E 513 Active Circuit Theory (3) Andersen Principles of analysis and synthesis of linear active circuits. Emphasis on general principles, including conservation theorems, invariants, performance limitations in the presence of parasitic elements and realizability conditions. Illustrative applications related to negative resistance amplifiers, feedback amplifiers, and active filters. Prerequisite: 341 or permission of instructor. Offered: Sp.

E E 517 Introduction to System Optimization (3) Hsu Systems engineering and optimization; classical optimization techniques; equality constraints and inequality constraints. Kuhn-Tucker conditions; linear inequalities and linear programming; nonlinear optimization and programming; Fibonacci, Golden-section, and minimax search; gradient search; method of Davidsoh, Fletcher, and Powell; method of conjugate gradients; elements of quadratic and geometric programming; applications to engineering systems. Prerequisite: 510 or permission of Instructor, Offered; W.,

E E518 Digital Signal Processing (4) Atlas Digital representation of analog signals. Frequency domain and Z-transforms of digital signals and systems design of digital systems; IIR and FIR filter design techniques, fast Fourier transform algorithms. Sources of error in digital systems. Analysis of noise in digital systems. Prerequisites: knowledge of Fourier analysis techniques and graduate standing, or permission of instructor. Offered: A.

E E 519 Stochastic Analysis of Data From Physical Systems (4) Albrecht Computer systems for acquisition and processing of stochastic signals. Calculation of typical descriptors of such random processes as correlation functions, spectral densities, probability densities. Interpretation of statistical measurements made on a variety of physical systems (e.g., electrical, mechanical, acoustic, nuclear). Lecture plus laboratory. Prerequisite: 505 or equivalent. Offered: W.

E E 520 Spectral Analysis of Time Series (4) Estimation of spectral densities for single and multiple time series. Basic theory for nonparametric estimation of spectral density, cross-spectral density and coherency for stationary time series, real and complex spectrum techniques. Bispectrum. Digital filtering techniques. Aliasing, prewhitening. Choice of lag windows and data windows. Use of the fast Fourter transform in spectral estimation and computation of correlation functions. The parametric autoregressive spectral density estimate for single and multiple stationary time series. Spectral analysis of nonstationary random processes, and for randomly sampled processes. Techniques of robust spectral analysis. Prerequisite: one of STAT 342, 390, 481, E E 505, or permission of instructor. Offered: jointly with STAT 520; A.

E E 521 Multidimensional Signal Processing (3) Marks Multidimensional (MD) signals and systems, MD sampling theorem, sample dependence in higher dimensions, MD FIR filter design using windows and the McClellan transform, MD IIR filter stability and design. Current topics in MD signals and systems. Prerequisite: 442 or 518 or equivalent. Offered: odd years; A.

E E 522 Shannon Sampling and Interpolation Theory (4) Historical overview of Shannon sampling theorem; fundamentals of the cardinal series; generalizations including those of Papoulis, Kramer, and Lagrange; effects of jitter, truncation and data noise on interpolation; continuous sampling restoration using prolate spheroidal wave functions and the Papoulis-Gerchberg algorithm. Prerequisite: 508. Offered: odd years; Sp.

E E 523. Computational Neural Networks (3) Fundamentals of computational neural networks from perspectives of system theory and electrical engineering applications: historical review, adaptive parameter estimation, nonlinear optimization, combinational optimization, learning rules, neural network models, data clustering and regression, pattern classification, speech recognition, image modeling, nonlinear control, principal component analysis, probability density estimation. Prerequisite: permission of instructor. Offered: Sp.

E E 524 Waves In Random Media II (4) Continuation of 575, treating recent developments and advanced topics in wave scattering by discrete random media, random rough surfaces, photon localization, and their engineering applications. Emphasis on multiple scattering field theory, polarimetry, transport theory, Monte-Carlo simulations and media characterization. Prerequisites: 572 and 575 (or equivalent). Offered: W.

E E 525 Acoustics in Engineering I (3) Porter Acoustic wave transmission, reflection, refraction, and

diffraction in solids, liquids, and gases. Includes review of continuum mechanics and examples from electromechanical systems. Prerequisite: graduate standing in electrical or mechanical engineering or permission of instructor. Offered: jointly with M E 525; W.

E E 526 Acoustics in Engineering II (3) Porter Continuation of 525. Material differs each year, covering such topics as scattering, moving media, ultrasonics, acoustic holography, optoacoustics, transducer propagation in anisotropic medium. Prerequisite: 525 or permission of instructor. Offered: jointly with M E 526; Sp.

E E 527 Solid-State Laboratory Techniques (4) Darling, Kuhn, Pearsall Principles and laboratory techniques used in solid-state electronics research. Basic familiarity with practices and equipment used on-campus. Laboratory safety; materials handling, storage and disposal; clean room use; photoresist characteristics; mounting, bonding, and probing; wet chemical etching; vacuum evaporation; patterning of metal films using photoresist. Extensive laboratory with limited enrollment. Prerequisites: graduate standing and permission of instructor. Offered: Sp.

E E 528 Advanced Semiconductor Fundamentals (4) Afromowitz, Kuhn, Tsang, Yee Limits of classical physics, Schrodinger's equation, eigenvalues of simple systems; postulates of quantum mechanics, matrix methods, Dirac notation, operator methods; basic crystallography, real and reciprocal lattices, Brillouin zones, phonons, E(k) diagrams, band structure calculations in solids; effective mass equation, spin-orbit splitting; application to quantum wells, superlattices, tunneling devices. Offered: Sp.

E E 529 Semiconductor Optics and Optical Devices (A) Arromowitz. Kuhn, Pearsall, Yee Perturbations of energy states in semiconductors; direct and indirect transitions; absorption processes; optical constants; absorption spectroscopy; radiative and nonradiative transitions; processes occurring at p-n junctions; junction devices; LEDs and lasers, photovoltatcs; self-electro-optic effect device; modern laser structures. Prerequisite: 528 or permission of instructor. Offered: A.

E E 530 Quantum Electronics (4) Bjorkstam, Darling, Kuhn, Tsang, Yee Application of quantum mechanics principles and mathematical techniques to interactions of electrons, phonons, and photons. Electron states, transitions and selection rules; field quantization; coherent and incoherent interactions of radiation with matter. Prerequisite: 528 or permission of instructor. Offered: A.

E E 531 Transport Properties of Semiconductors (4) Darling, Kuhn, Pearsall, Yee The theory of electron transport in crystalline solids. Includes the kinetic theory of the electron gas and solutions to Boltzman's equation in the relaxation time approximation, electron motion in k-space, electron scattering processes, low and high field transport, cyclotron resonance, and magnetoresistance. Prerequisite: 528 or permission of instructor. Offered: Sp.

E E 532 Power Semiconductor Devices (4) Lauritzen Device principles needed for modeling and circuit simulation of semiconductor devices used in power electronic applications. Includes diode, BJT, MOSFET, SCR, GTO, IGBT, SIThy, power IC device types. Design and simulation of device drive circuits. Failure modes, thermal simulation also included. Prerequisites: graduate standing; recommended: 485 and 487. Offered: alternate years; W.

E E 533 Advanced Semiconductor Devices (4) Darling, Yee Analysis of selected structures with emphasis on III-V compound semiconductors and extreme operating conditions of bias, temperature, and frequency; includes metal-semiconductor contacts, heterojunctions, field-effect transistors, photoconductors, tunneling structures, and modern modeling techniques. Prerequisite: permission of instructor. Offered: Sp.

E E 534 Power Electronics (4) Lauritzen Detailed study of DC-to-AC inverters, pulse-width modulated and resonant DC-to-DC converter topologies; drive and protection circuits for efficient switching of semiconductor devices. Includes extensive computeraided circuit simulation and power supply control. Prerequisite: graduate standing. Offered: W.

E E 535 Design of Digital Integrated Circuits and Systems (4) Helms, Soma Design of digital VLSI, system specifications, architectures, synthesis, simulation, and layout. Covering CMOS technologies with minor emphasis on ECL, GaAS. Prerequisites: graduate standing in electrical or computer engineering and 331 or equivalent or permission of instructor. Offered: W.

E E 536 Design of Analog Integrated Circuits and Systems (4) Helms, Soma Design of analog VLSI: specifications, design, simulation, layout. Covering CMOS and Bi CMOS technologies. Prerequisites: 433 or equivalent and graduate standing in electrical or computer engineering, or permission of instructor. Offered: Sp.

E E 537 Computation Methods for Circuit Analysis and Simulation (3) Introduction to numerical algorithms and computer-aided techniques for the simulation of electronic circuits. Theoretical and practical aspects of important analyses:large-signal nonlinear DC, small-signal AC, nonlinear transient, and largesignal steady-state. Simulation concepts applied to the modeling and characterization of various electronic devices. Offered: W.

E E 538 Topics in Electronic Circuit Design (1-5) Atlas, Guilford, Helms, Lauritzen, Soma Topics of current interest in electronic circuit and system design. Course content varies from year to year, based on current professional interests of the faculty member in charge. Prerequisite: permission of instructor. Offered: AW.

E E 539. Advanced Topics in Solid-State Electronics (1-5) *Bjorkstam*, Yee Lectures or discussions of topics of current interest in the field of solid-state electronics for advanced graduate students having adequate preparation in solid-state theory. Subject matter may vary according to the interests of students and faculty. Prerequisite: permission of instructor. Offered: AWSp.

E E 540 VLSI Testing (3) Soma VLSI testing and design-for-test techniques. Reliability predictions and characterizations for integrated circuits and systems. Circuits fabricated in 536 are tested as laboratory work. Prerequisites: 535, 536. Offered: A.

E E 543 Models of Robot Manipulation (3) Mathematical models of arbitrary articulated robotic (or biological) arms and their application to realistic arms and tasks, including the homogeneous coordinate model of positioning tasks, the forward and inverse kinematic models, the Jacobian Matrix, and the recursive Newton-Euler dynamic model. Prerequisite: linear algebra and graduate standing or permission of instructor. Offered: W.

E E 544 Advanced Robot Manipulation (4) Continuation of the analysis of robot manipulation, considering kinematic redundancy, control of robot manipulators in contact with the environment, teleoperation, and grasping with multi-fingered hands. Students will perform a project and critique a research paper in the area of the project. Prerequisite: 543. Offered: Sp.

E E 546 Advanced Topics in Control System Theory (1-5) Topics of current interest in control system theory for advanced graduate students with adequate preparation in linear and nonlinear system theory. Prerequisite: permission of instructor. Offered: when adequate enrollment develops prior to close of advance registration. Offered: AWSp. E E 547 Neural Communication and Control in Biological Systems (3) Neural processing of the visual image and communication between levels of the central nervous system. Feedback and its role in movement by organisms. Description and analysis of the means by which electrochemical events generate, modulate, and demodulate neuronal signals, and the parallel interaction between these signals in transduction of images and other information. Prerequisite: advanced graduate standing or permission of instructor. Offered: W.

E E 548 Linear Multivariable Control (3) Single loop feedback control theory; poles, zeros, Nyquist stability, performance, robustness of multivariable systems; multivariable control syntheses: Linear-Quadratic-Gaussian methods, loop transfer recovery, Youla parametrization, H-infinity techniques, parameter optimization design. Prerequisite: 584 or M E 575; 446 or A A 451 or M E 471 or equivalent. Offered: jointly with A A 548; W.

E E 549 Estimation and System Identification (3) Review of system models, model structure, model parametrization; review of stochastic processes; state estimation: observers, the Kalman-Bucy filter, numerical issues in filter design and implementation; system identification: linear regression, least squares, maximum likelihood, instrumental variable techniques. Prerequisites: E E 505 or AMATH 506 or STAT 506; recommended: 548 or A A 548. Offered: jointly with A A 549; Sp.

E E 550 Nonlinear Optimal Control (3) Calculus of variations for dynamical systems, definition of the dynamic optimization problem, constraints and Lagrange mutipliers, the Pontryagin Maximum Principle, necessary conditions for optimality, the Hamilton-Jacobi-Beliman equation, singular arc problems, computational techniques for solution of the necessary conditions. Prerequisite: graduate standing; recommended: A A 548 or E E 548. Offered: jointly with A A 550; A.

E E 551 Power System Protection (4) The protection of electric power systems from overcurrents and overvoltages. Analysis and design of overcurrents resulting from faults, lightning induced or otherwise, or from excessive loads or power swings. Analysis and design of overvoltages resulting from switching transients or lightning. Principal concern is with relays and lightning arrestors as protection means. Prerequisite: 455 or equivalent. Offered: alternate years; Sp.

E E 552 Power Systems Dynamics and Control (4) El-Sharkawi Advanced computer modeling and analysis of power systems. Application of modern systems and control theories. Prerequisites: 344 and 455 or permission of instructor. Offered: alternate years; Sp.

E E 554 Large Electric Energy Systems Analysis (4) Venkata Deals with problems whose solution depends upon the inversion of sparse matrices that occur in the planning and operational studies of large interconnected energy systems. Application studies include system model development, state estimation, and load flow. Prerequisite: 456 or permission of instructor. Offered: even years; A.

E E 559 Special Topics in Electrical Energy Systems (1-5) Damborg, El-Sharkawi, Liu, Venkata Topics of current interest in electrical power and energy devices and systems. Content varies from year to year, based on current professional interests of faculty member in charge. Prerequisite: permission of instructor. Offered: AWSp.

E E 562 Artificial Intelligence for Engineers (3) Holden, Shapiro Covers main areas of artificial intelligence (AI) without need for extensive prerequisites. Programming languages for AI; problem solving; representations; control strategies; searching strategies; predicate calculus; rule-based deduction; goal-directed planning; knowledge-based systems. Prerequisites: 371 and CSE 374 or equivalents. Offered: W.

COLLEGE OF ENGINEERING / INDUSTRIAL ENGINEERING 305

E E 563 Fault-Tolerant Computing (3) Faults and their manifestation, issues, theory, and techniques of reliable systems design, testing, design for testability, self-checking and fail-safe circuits, coding techniques, system-level fault diagnosis, fault-tolerant communication, reliable software design, and evaluation criteria. Prerequisite: basic knowledge of digital systems design or permission of instructor. Offered: jointly with CSE 563; Sp.

E E 564 Parallel Computer Systems (3) Hwang, Kim, Somani Pipelined and vector processors; interconnection network for parallel processing, array and associative processors; multiprocessors; data-flow machines; systolic arrays and impact of the VLSI technology on parallel processors and processing. Prerequisites: 471, permission of instructor. Offered: W.

E E 565 Computer-Communication Networks I (3) Meditch Network architectures and protocols; Broadband-ISDN and Asynchronous Transfer Mode (ATM); performance modeling and analysis of packetswitched networks, digital switching systems. Prerequisite: 505 or equivalent. Offered: W.

E E 566 Computer-Communication Networks II (3) Meditch Local area, metropolitan area, satellite, and packet radio networks; routing algorithms for wide area networks; congestion and flow control; fast packet switching; gigabit networks. Prerequisite: 565 or permission of instructor. Offered: Sp.

E E 567 Electronic Materials: Preparation and Properties (3) Physics and technology of semiconductor materials growth. Physics of growth, quantum wells, superlattices, strained layers. High vacuum technology and III-V characterization techniques. Limited enrollment. Prerequisite: permission of instructor. Offered: jointly with MSE 567; Sp.

E E 568 Image Processing Computer Systems (4) Haralick, Kim All components of digital image-processing computer systems. Two-dimensional filtering and optimal filter design as well as basic image processing operations. Selected advanced image processing topics. Individual student project. Prerequisite: permission of instructor. Offered: jointly with BIOEN 568; W.

E E 570 Antenna Engineering (3) Peden Theory of radiation; impedance characteristics and radiation patterns of thin linear antenna elements; antenna arrays; pattern synthesis; aperture antennas. Prerequisite; graduate standing or permission of instructor. Offered: A.

E E 571 Applications of Finite Difference and Finite Element Methods in Fields and Waves (4) General principles of finite difference and finite element discretization schemes; finite-difference time-domain method: Galerkin's method and functional minimization; construction of FEM matrices for electromagnetic problems; absorbing boundary conditions; sparse matrix solvers. Prerequisite: 572 or permission of instructor. Offered: W.

E E 572 Electromagnetic Theory and Applications I (4) Chan, Ishimaru, Kuga, Tsang Electromagnetic waves in layered media; complex waves, leaky and slow waves, waves in periodic structures, optical fibers, ionosphere and other guiding structures; transients and dispersive medium; waveguides and cavities; beam wares; eigenfunctions and eigenvalues. Prerequisite: graduate standing or permission of instructor. Offered: A.

E E 573 Electromagnetic Theory and Applications II (4) Chan, Ishimaru, Kuga, Tsang Scattering and absorption of electromagnetic waves, Rayleigh scattering, Born approximations, Green's functions, integral equations, anisotropic media, chiral media, Tmatrix, high- and low-frequency approximations, saddle-point method, and variational principle. Prerequisite: 572 or permission of instructor. Offered: W.

E E 574 Electromagnetic Theory and Applications III (4) Chan, Ishimaru, Kuga, Tsang Geometric theory of diffraction, wave fluctuations, antenna noise temperature, radar plarimetry, remote-sensing techniques and tomography applications, diffraction and inverse scattering, radon transform. Prerequisite: 573 or permission of instructor. Offered: Sp.

E E 575 Waves in Random Media (4) Ishimaru, Kuga, Tsang Propagation and scattering of electromagnetic, optical, and acoustic waves in turbulence and random media, scattering from rough surfaces and randomly distributed particles. Atmospheric turbulence, fog, rain, smog, clear-air turbulence detection, remote sensing, terrain scattering, scattering from blood cells and tissues, scattering by ocean waves. Applications to atmospheric sciences, bioengineering, geoscience, ocean engineering. Prerequisite: graduate standing or permission of instructor. Offered: Sp.

E E 576 Image Understanding (3) Haralick, Shapiro, Sloane, Tanimoto Overview of computer vision, emphasizing middle ground between image processing and artificial intelligence. Image formation, preattentive image processing, boundary and region representation, matching, case studies of vision systems. Prerequisites: 562 or CSE 573 and CSE 557, or equivalent, or permission of instructor. Offered: jointly with CSE 576; Sp.

E E 577 Mathematical Morphology (3) Haralick Theory of mathematical morphology and its application in various commercial, industrial, medical, and research applications. Contents include binary and grayscale morphologic dilation, erosion, opening, and closing, morphological sampling theorem, structuring element decomposition, thinning, skeletonizing, and relational shape description. Group project. Prerequisite: 568 or 576 or permission of instructor. Offered: jointly with CSE 577; alternate years; A.

E E 578 Tomographic and Holographic Imaging in Acoustics and Electromagnetics (3) Porter Imaging problems including holographic shape determination, inverse source problems, diffraction tomography. Holographic tomography as a general imaging method for weak scatterer. Applications in ultrasound, geophysics, oceanography, optics, medicine. Methods that simplify experimental techniques and computer reconstructions. Prerequisite: graduate standing. Offered: A.

E E 579 Advanced Topics in Electromagnetics, Optics, and Acoustics (1-5) Topics of current interest in electromagnetics, optics, and acoustics. Content varies from year to year, based on current professional interests of faculty member in charge. Prerequisite: permission of instructor. Offered: AWSp.

E E 580 Volterra and Wiener Nonlinear Systems (3) Pinter Methods of the Volterra and Wiener integral series for input-output description of nonlinear systems. Generalization of the linear convolution integral to multiple convolutions, transforms of kernels, derivation of kernels from parametric (differential equation) models. Orthogonalization of series. Applications. Prerequisite: 335. Offered: Sp.

E E 583 Nonlinear Control Systems (4) Noges Dynamic analysis of nonlinear control systems. Analytical, graphical, numerical, and simulation techniques for solving continuous and discontinuous nonlinear control system problems. Phase space. Describing functions, Popov and Lyapunov and contraction mapping methods are employed for stability evaluation of dynamic systems. Prerequisite: 584 or permission of instructor. Offered: odd years; Sp.

E E 584 Continuous and Discrete State Variable Methods (3) Alexandro, Clark, Hsu Dynamic analysis of automatic control systems using state variable methods. Vector space concepts, modeling of physical systems in state space format, canonical forms for continuous and discrete time systems, controllability, and observability, full-state feedback, state estimators, eigenstructure design. Prerequisite: graduate standing or permission of instructor. Offered: AW.

E E 585 Digital and Sampled-Data Systems (3) Hsu Sampling process and data holds, state variables and state transition equations for sampled-data systems, frequency domain and time domain analysis of sampled-data systems, stability of sampled-data systems, digital compensation of sampled-data systems. Prerequisite: 584. Offered: Sp.

E E 586 Advanced Computer Applications I (3) Holden Basic analytical methods related to manmachine communication by voice and vision. State-ofthe-art review of speech understanding systems. Each student does a self-chosen project. Prerequisite: graduate standing or permission of instructor. Offered: A.

E E 590 Advanced Topics in Digital Computers (2-5, max. 15) Hannaford, Haralick, Holden, Johnson, Kim, Lin, Meditch, Shapiro, Somani, Zick Lectures or discussions of topics of current interest in the field of digital systems. Subject matter may vary from year to year. Prerequisite: permission of instructor. Offered: AWSp.

E E 591 Control Systems Seminar ([0/1]-max. 1) Seminar on current topics in control systems analysis and design, presented by invited and on-campus speakers. Emphasis on control systems problems representative of all disciplines. Credit/no credit only. Offered: jointly with A A/CH E/M E 591.

E E 595 Advanced Topics in Communication Theory (1-5) Lytle Extension of 507, 508, 518, 519, 520. Material differs each year, covering such topics as: detection theory, decision theory, game theory, adaptive communication systems, nonlinear random processes. Prerequisite: permission of instructor. Offered: AWSp.

E E 599 Selected Topics in Electrical Engineering (*) Prerequisite: permission of instructor. Offered: AWSpS.

E E 600 Independent Study or Research (*) Offered: AWSpS.

E E 700 Master's Thesis (*) Offered: AWSpS.

E E 800 Doctoral Dissertation (*) Offered: AWSpS.

Industrial Engineering

G6-B Mechanical Engineering

Industrial engineering focuses on the science and technology of the industrial environment and on the analysis and design of systems that efficiently produce goods and services. The curriculum pays particular attention to the physical process involved in manufacturing and the decision-making components of industry. Industrial engineering provides a basic engineering foundation for understanding the interaction between technology and management.

Undergraduate Program

Bachelor of Science in Industrial Engineering Degree

Admission to the program is usually either at the sophomore or junior level. Enrollment is limited; students who desire entrance must formally apply to, and be accepted by, the program admissions committee. The primary admission criterion is degree of qualification for probable success in the engineering degree

306 COLLEGE OF ENGINEERING / INDUSTRIAL ENGINEERING

program as evidenced by academic performance, work experience, and other factors. Specific courses required for application are: MATH 124, 125, 126, 307; CHEM 140, 141; PHYS 121/131, 122(132; ENGR 210; 5 credits of English composition.

The Industrial Engineering Undergraduate Advising Guide contains a typical pre-industrial engineering program.

The professional program consists of courses listed in the *Industrial Engineering Undergraduate Advising Guide*. Typical courses are statistics, operations research, engineering economy, human factors, workplace and work design, manufacturing processes, planning and scheduling, reliability, simulation quality control, industrial management, and computer-integrated production.

A total of 192 applicable credits is required for graduation, with a GPA of at least 2.00 maintained in all engineering courses in the program. Courses counting toward the B.S.I.E. degree may not be taken on a satisfactory/not satisfactory basis. Courses required for graduation include the College of Engineering General Education and Engineering Fundamentals requirements as specified above, 65 credits of industrial engineering core courses, and 12 credits of technical electives.

Correspondence and Information

All inquiries concerning the industrial engineering program should be addressed to the Industrial Engineering Undergraduate Adviser, G6-B Mechanical Engineering, FU-20.

Graduate Program

Faculty members in the industrial engineering program participate in offering the authorized interengineering degree option within the College-wide Master of Science in Engineering degree program. Students may earn a Ph.D. by enrolling in the mechanical engineering doctoral program and specializing in industrial engineering. Areas of faculty expertise include manufacturing, operations research, large-scale systems, experimental statistics, production planning and quality, reliability engineering, computer-integrated manufacturing, robotics, human factors, and community health.

A proposal to offer the specific degrees of Master of Science in Industrial Engineering and Doctor of Philosophy in Industrial Engineering is now under review.

Correspondence and Information

Graduate Adviser Industrial Engineering, FU-20

Faculty

Director

Kailash C. Kapur

Professors

Furness, Thomas A. * 1989; PhD, 1981, University of Southampton (UK); display systems engineering, human factors, computer graphics.

Jorgensen, Jens E. * 1973, (Adjunct); DSc, 1969, Massachusetts Institute of Technology; systems analysis, manufacturing, automation and controls, forest engineering.

Kapur, Kailash C. * 1992; PhD, 1969, University of California (Berkeley); quality and reliability engineering, system design and optimization, total quality management.

Associate Professors

Barfield, Woodrow * 1987; PhD, 1986, Purdue University; interactive computer graphics, human factors in computer systems.

Douthwaite, Geoffrey K 1954, (Emeritus); MSEE, 1963, University of Washington; rigid body mechanics, software design for engineering economics.

Drui, Albert B. * 1959, (Emeritus); MS, 1957, Washington University; industrial engineering, human factors.

Iverson, Scott Christian * 1983; PhD, 1974, University of Colorado (Boulder).

Roberts, Norman H. * 1953, (Emeritus); PhD, 1958, University of Washington; reliability and probability theory.

Storch, Richard L. * 1975; PhD, 1978, University of Washington; vessel stability, vessel safety.

Wiker, Steven F. * 1993, (Adjunct); PhD, 1986, University of Michigan; ergonomics and human factors engineering.

Zabinsky, Zelda * 1985; PhD, 1985, University of Michigan; operations research, applications in industrial engineering, optimization with stochastic elements.

Assistant Professors

Heim, Joseph A. 1993; PhD, 1990, Purdue University; computer simulations, manufacturing systems and manufacturing engineering.

Smith, Robert P. 1993; PhD, 1992, Massachusetts Institute of Technology; design methodology, manufacturing systems, concurrent engineering.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

IND E 316 Regression Analysis and Design of Experiments (3) NW Barfield Introduction to the analysis of data from planned experiments. Analysis of variance and regression analysis with applications in engineering. Prerequisite: ENGR 315. Offered: jointly with STAT 316.

IND E 317 Introduction to Manufacturing Systems (3) Storch Description of manufacturing systems. Includes discussion of current trends in manufacturing. Introduces process flow analysis, manufacturing organizations including job-shop, assembly lines, and group technology, manufacturing inventory philosophies (just-in-time, MRP, OPT), work environment, and work simplification.

IND E 324 Engineering Applications of Linear Programming (3) Iverson, Zabinsky Optimization of linear systems, mathematical model design, simplex methods, primal-dual algorithms, parametric programming, network theory, integer and goal programming. Design aspects of models with applications involving transportation, allocation, and total industrial systems. Prerequisites: MATH 308, ENGR 141.

IND E 325 Nonlinear Programming and Stochastic Models (3) Iverson, Zabinsky Optimization of nonlinear and stochastic systems analysis to industrial engineering problems. Linear approximation methods, geometric and risk programming, inventory, queuing, game and decision theories, simulation, and Markov chains. Prerequisites: 315, 324.

IND E 326 Methodology of Operations Research (3) Iverson Fundamental concepts of mathematical systems theory. Application of general systems approach for specification of requirements, analysis, design, implementation of industrial engineering, and information systems. Generalized techniques and applications common to industrial, mechanical engineers, and management scientists. Class project concerning analysis of large-scale systems problem utilizing operational research. Prerequisite: 325.

IND E 351 Human Factors in Design (3) Barfield Engineering considerations of the abilities and limitations of the human aspect in the design of operational systems and components. Functional, psychological, physiological, and environmental considerations. Studies with local industry used as laboratory exercises. Prerequisite: 315.

IND E 419 Plant Layout and Material Handling (4) Storch Design of new or expanding industrial facilities. Consideration of work organization and layout. Study of basic design of plant systems, including plumbing, electrical, HVAC, illumination, acoustics, and waste handling. In depth coverage of material handling system design and equipment choices.

IND E 420 System Safety and Reliability Engineering (3) *Kapur* Applications of statistical and algebraic techniques to system reliability. Derivation and discussion of failure distributions; quality control; analysis of reliability test data; maintenance policies and Monte Carlo simulation techniques. Prerequisite: 315.

IND E 424 Simulation (4) Hein Discrete-event simulation methodology emphasizing model formulation and construction, statistical base for simulation modeling, and computer languages. Applications to industrial and manufacturing problems in conjunction with lab. Prerequisite: 315 or equivalent. Offered: A.

IND E 430 Manufacturing Scheduling and Inventory (4) Hein, Storch Manufacturing scheduling and inventory control for different work organizations. Coverage of workforce scheduling, job shop scheduling, assembly line balancing, MRP, just-in-time, OPT, and large project scheduling. Prerequisites: 325, ENGR 315.

IND E 451 Statistical Quality Control (3) Kapur, Storch Design of quality-control systems. Use of statistical process controls and acceptance sampling methods. Process capability analysis and methods for establishing specifications and tolerances. Prerequisite: 315.

IND E 455 User Interface Design (3) Barfield Design oriented to cover fundamentals of user interface design; models on human computer interaction, software psychology, input devices, usability, cognitive and perceptual aspects of human-computer interaction, advanced interface, and research methodologies are discussed. Prerequisites: ENGR 315 and 316 or equivalent, or permission of instructor. Offered: jointly with TC 455.

IND E 485 System Engineering Project (3) A system engineering project course that develops requirements and specifications and management systems for system development. Integration of simulation optimization, control and decision theory methods to the system engineering of large complex projects. Prerequisite: senior standing, permission of instructor.

IND E 493 Computer Integrated Manufacturing (4) Design and control of computer-based production systems. Focus on selection and integration of flexible manufacturing technology, computer hardware, application and operating system software, data communication networks, data management systems. Laboratory assignments concentrate on programming and integration of system components. Current literature and recommended texts used as reference sources. Prerequisite: 317.

IND E 494 Design in the Manufacturing System (4) *Smith* Enginéering design in manufacturing firms is presented. Topics include design methodology, concurrent engineering, and project management. Focus on the relationship between product design and manufacturing (design for production and assembly). Prerequisites: 493, M E 304 and 343. **IND E 495 Industrial Engineering Design (3)** *Smith* Design seminar laboratory involving identification and synthesis of engineering factors to plan and achieve specific project goals. Current literature and recommended texts are used as reference sources. Lecture and/or laboratory. Prerequisite: 494.

IND E 498 Special Topics in Industrial Engineering (3) Lecture and/or laboratory. Maximum of 9 credits may be applied toward an undergraduate degree. Prerequisite: permission of instructor.

IND E 499 Special Projects (2-5, max. 9) Prerequisite: permission of department Chairperson.

Courses for Graduates Only

IND E 510 Applications of Optimization in Engineering Design (3) Zabinsky Discussion of issues arising in applications of optimization to engineering design. Emphasis on formulating problems and selecting appropriate solution techniques. Random search methods for problems otherwise computationally intractable. Individual projects in engineering optimal design. Prerequisites: AMATH/MATH/IND E 515 and MATH 328 or permission of instructor. Offered: jointly with AMATH 510.

IND E 511 Management Decision Models (3) Iverson Quantitative approaches, using decision models. Topics include elements of a decision, theory of optimal decisions, resource allocation, simulated decision making, decisions under uncertainty, risk and pressure, utility theory, and game theory. Projects in manufacturing, community health, construction, and urban development. Prerequisites: ENGR 250 and ENGR 315 or permission of instructor.

IND E 513 Linear Optimization Models in Engineering (3) Zabinsky Advanced formulation techniques to expand applications of linear programming to large-scale models. Appreciation of role of optimization models in engineering applications through introduction of techniques such as decomposition. Individual engineering projects. Prerequisites: 324 and MATH 308 or permission of instructor.

IND E 515 Fundamentals of Optimization (3) Maximization and minimization of functions of finitely many variables subject to constraints. Basic problem types and examples of applications; linear, convex, smooth, and nonsmooth programming. Optimality conditions. Saddlepoints and dual problems. Penalties, decomposition. Overview of computational approaches. Prerequisites: MATH 309, 328, or equivalents. Offered: jointly with AMATH/MATH 515.

IND E 521 Quality Control in Manufacturing (3) Storch Design of quality control systems in manufacturing. Use of advanced statistical process controls, sampling inspection techniques, process capability, and other statistical tools. Also included are vendor sourcing and control tools, methods for establishing specifications and tolerances, quality function deployment, and other quality control techniques. Prerequisite: 451 or equivalent.

IND E 526 Reliability in Product Design and Testing (3) Kapur Product assurance including reliability and quality engineering. Reliability design, measurement, and optimization. Advanced topics in probabilistic design. Design of reliability test plans and analysis of test data. Design of reliability programs and their management. Prerequisite: 521 or equivalent.

IND E 531 Computer Integrated Manufacturing Systems (3) Design and implementation. Relationship of manufacturing systems to design and management systems. Group Technology, MRP, MRP-II, Justin-Time manufacturing, NC machines, flexible manufacturing systems, robots, Automatically Guided Vehicles, factory communications, process design and control, and human and organizational effects of automation. Consideration of artificial intelligence, expert systems. Prerequisite: 483 or equivalent. IND E 535 Engineering Simulation (3) Engineering applications of computer simulation. Topics include discrete and continuous simulation concepts, general and specialized simulation languages, suitability of a problem for simulation analysis, data collection and preparation, output analysis, and simulation project planning and justification. Prerequisite: 424 or equivalent.

IND E 538 Large Assembly Manufacturing Systems (3) Storch Presents principles of group technology, zone construction, product-oriented work breakdown structure. Application to shipbuilding, aircraft, rail-car, and truck manufacture. Techniques of production planning, scheduling and control, organization, and plant layout, as well as the role of the computer, are studied in detail. Prerequisite: graduate standing.

IND E 541 Human Factors Engineering (3) Barfield Human performance models, human-computer interface design, interactive graphics, information processing, virtual environments. Three-dimensional spatialized sound, stereoscopic displays, human-computer interaction. Hardware for producing stereoscopic images and computer synthesized spatialized sound. Auditory and visual modalities as related to interface design. Prerequisites: 351 or PSYCH 335 and one course in design of experiments.

IND E 542 Haptic Interface Design (3) Barfield Research oriented seminar focusing on tactile and kinesthetic modalities of haptic interface design, including tactile displays, the kinesthetic sense, input devices, and virtual environments. Hardware for producing haptic interfaces and psychological literature related to tactile and kinesthetic modalities as related to interface design. Prerequisite: 541 or permission of instructor.

IND E 543 Virtual Interface Technology (1/3) Furness Explores advanced concepts and technologies for interfacing humans to complex machines, with focus on virtual interfaces. Interface design principles reviewed from psychological and technological perspectives. Hardware, software, and mindware aspects of virtual interfaces investigated. Applications postulated and designed. Prerequisite: graduate standing in College of Engineering or permission of instructor.

IND E 544 Virtual World Development (3) Furness Software implementation, physiological and cognitive constraints, and the mathematics and philosophy of inclusion. Development of software tools, editing and interaction techniques, disposition of virtual world entities, nature of space, situated knowledge, divergent models for multiple participants, experiential mathematics, cyberspace. Cultural, legal, moral, ethical issues. Prerequisite: 543 or permission of instructor.

IND E 554 Decision Modelling (3) Iverson Current environmental issues concerning industrial engineers and the decision modelling techniques appropriate to conflict resolution, simulation, and assessment of impacts. Modelling techniques applied to topics ranging from stress management and quality improvement in the workplace to the principles of sustainable resource management. Prerequisite: 511 or permission of instructor.

IND E 555 Health Systems Engineering (3) *lverson* Applications of industrial engineering techniques, processes, and methodologies to the operations and management decisions of hospitals and to policy analysis in health care systems, including quality improvement, decision analysis, system dynamics modelling, and simulation. Prerequisite: 511 or permission of instructor.

IND E 591-, 592-, 593- Seminar (0-,0-,1-) Credit/no credit only. Prerequisite: graduate standing in Industrial Engineering or permission of instructor.

IND E 599 Special Topics in Industrial Engineering (1-5, max. 9) Written report required. Prerequisite: permission of supervisor.

Materials Science and Engineering

302 Roberts

Materials science and engineering is an interdisciplinary field that addresses the scientific fundamentals of materials, their processing, and their engineering design for technological applications. Basic principles of chemistry and physics are applied to provide an understanding of the structure of materials and the manner in which the structure determines the properties. Scientific processing is then applied to yield the necessary properties, which then can be integrated with, and designed to accommodate, the needs of modern technology.

Ceramic materials are high-temperature resistant, chemically durable, strong, and rigid. The ceramic engineering program provides students with an understanding of the chemical, electrical, optical, mechanical, and thermal properties of ceramics; of processing methods and their effects on the structure and properties; and of the feasibility and economics of manufacture of ceramic materials for engineering applications. The study of electronic and optical materials is also available in the program.

Metallurgical engineering is concerned with the processing, fabrication, and utilization of metals, alloys, and other engineering materials. Extractive metallurgy relates to the processing and refining of metals and their compounds. Physical metallurgy is concerned with the structure and properties of materials, the development of new materials with improved properties, and the application and performance of materials in modern engineering systems and design. The study of electronic and optical materials is also available in the program.

Undergraduate Program

Bachelor of Science in Ceramic Engineering Degree

Entrance to the program requires the equivalent of at least 64 credits earned at the UW, or their transfer equivalent, with a 2.00 GPA and attainment of 2.0 in specified courses. Due to competitive admissions, attaining the minimum GPA does not ensure admission; in recent years a 2.50 GPA has been required. Entrance requirement details may be obtained from the department or the University's Office of Admissions. Application forms to enter the program are available from the department office. Continuation in the program is subject to the policy defined by the College of Engineering.

Graduation Requirements: Students must complete the College of Engineering General Education requirements and select the following courses from the Engineering Fundamentals category: ENGR 123, 170, 210, 215, 220, 250. The upper-division professional program consists of 77 credits of required courses including courses in materials structure and properties, analysis techniques, and thermodynamics, plus a 4credit senior problem or design alternate. Courses in ceramic processing and properties are designed to develop technical expertise applicable to modern ceramic engineering practice. Additional courses must be completed for a total of 192 credits for the B.S.Cer.E. degree.

A variety of financial aid is available to students in ceramic engineering. In addition to need-based aid provided through the University's Office of Financial Aid, companies and individuals with interest in developing ceramic engineering students have provided scholarships for students at all levels who have been admitted to the program. Specific information and application forms are available in the department office, 302 Roberts.

308 COLLEGE OF ENGINEERING / MATERIALS SCIENCE AND ENGINEERING

Bachelor of Science in Metallurgical Engineering Degree

Entrance to the program requires the equivalent of at least 64 credits earned at the UW, or their transfer equivalent, with a 2.00 GPA and attainment of 2.0 in specified courses. Due to competitive admissions, attaining the minimum GPA does not ensure admission; in recent years a 2.50 GPA has been required. Entrance requirement details may be obtained from the department or the University's Office of Admissions. Application forms to enter the program are available from the department office. Continuation in the program is subject to the policy defined by the College of Engineering.

Graduation Requirements: Students must complete the College of Engineering General Education requirements and select the following courses from the Engineering Fundamentals category: ENGR 170, 210, 215, 220, 250. Remaining lower-division courses are selected from among those recommended. Metallurgy majors must complete a 6-credit, upper-level science requirement, chosen with the adviser's approval. Recommended courses to fulfill this requirement include CHEM 223, 224; 350, 351; 455, 456; or PHYS 224, 225. 14 credits of technical electives are required, of which 3 credits are to be in design. The design and technical elective courses must meet standards specified in the advising guide. A 4-credit senior problem or design alternate is required. In addition to the College and departmental requirements specified above, additional courses must be completed to satisfy the minimum graduation requirement of 192 credits.

A variety of financial aid is available to students in metallurgical engineering. In addition to need-based aid provided through the University's Office of Financial Aid, companies and individuals with interest in developing metallurgical engineering students have provided scholarships for students at all levels who have been admitted to the program. Specific information and application forms are available in the department office, 302 Roberts.

Graduate Program

Thomas F. Archbold, Graduate Program Coordinator

The Department of Materials Science and Engineering offers programs of study leading to the degree of Master of Science in Materials Science and Engineering with defined options in ceramic engineering, metallurgical engineering, and materials science. The Doctor of Philosophy program is offered with defined pathways in ceramic engineering, metallurgical engineering, and materials science.

The materials science option or pathway is a course of study that combines the basic elements of understanding ceramics, metals, polymers; composites and electronic materials. Many specialized courses, including engineering fracture mechanics, semiconductor devices, and polymer chemistry, may be taken in other departments to provide a broad, yet basic, materials study program.

Ceramic engineering graduate programs are designed to develop a fundamental understanding of the physical, chemical, and structural relationships that influence the properties and applications of ceramic materials. Processing, the development of microstructure, and the relationships of microstructure to properties are considered from a basic viewpoint that is applicable to a broad range of materials.

Graduate programs in metallurgical engineering encompass a variety of courses and research programs that are related to the physical and chemical aspects of metals, alloys, and related engineering materials. Programs in the physical metallurgy and materials science areas include the structure and properties of alloys, phase transformations, biomaterials, lattice defects, the optical properties of nonmetallic solids, failure analysis, x-ray diffraction, and the mechanical behavior of materials. Programs in the area of extractive metallurgy and minerals processing include metallurgical thermodynamics, rate phenomena, extractive process design, and carbothermic reduction processes.

In addition, the department is authorized to supervise an option in materials science and engineering that leads to the College of Engineering Master of Science degree. This degree program is intended to accommodate students who have a strong science background but lack an undergraduate engineering degree. The required courses are the same for all of the above degrees. Students with deficiencies in their intended area of engineering specialization may be required to take undergraduate courses in addition to the normal graduate course requirements.

Master of Science in Materials Science and Engineering and Master of Science Degrees

For these master's degrees, a minimum of 30 credits of course work and the satisfactory completion of an M.S. thesis research problem are required. Fifteen of the course credits are specified to include courses on chemical kipetics, diffusion, crystal structure and imperfections, microstructure and phase transformations, and graduate seminar. Other courses may be required for specific program options. The residence and grading requirements follow those of the Graduate School.

Doctor of Philosophy Degree

Students who have completed one year of graduate work must take the Ph.D. qualifying examination the next time it is offered to determine whether the faculty will advise continued study proceeding to the General Examination for the degree of Doctor of Philosophy. A critical examination of the applicant's complete academic record, recommendations, and proposed course of study will be pertinent to this decision. In addition to course work, each student is required to pass the General Examination, which is sufficiently comprehensive to demonstrate the student's ability to deal with broad aspects of materials science, as well as with a specialized subject area. Proficiency in basic research is of paramount importance. Each prospective candidate is required to present a written dissertation that makes an original and independent contribution to knowledge of the student's field of specialization.

Research Facilities

The research laboratories in the Department of Materials Science and Engineering are well equipped for a variety of research endeavors. Facilities include equipment for electron and optical microscopy, x-ray diffraction, high-temperature heat treatment and mechanical testing, specialized processing equipment, including hot and cold isostatic presses, nitrogen reaction furnaces, and automated TGA, DTA analysis systems. Equipment for analyses of particle size, surface area, and pore size is also available. Students have liberal access to the large University mainframe computers, as well as local mini and microcomputers.

Financial Ald

A limited number of teaching assistant and research assistant appointments are available. Early application and direct correspondence or interviews with faculty members who may have open positions on research projects are encouraged. Requests for application forms and financial aid should be directed to the graduate program coordinator.

Correspondence and Information

Thomas G. Stoebe

Professors

Anderson, Donald 1947, (Emeritus); BS, 1941, University of Illinois; mining and exploration.

210

10.0

Archbold, Thomas F. * 1961; PhD, 1961, Purdue University; physical metallurgy corrosion, diffraction, oxidation, metal failures.

Fischbach, David B. * 1969, (Emeritus); PhD, 1955, Yale University; structure and properties of carbons, graphite, other non-oxide ceramics, and composite materials.

Ghose, Subrata * 1972, (Adjunct); PhD, 1959, University of Chicago; lattice dynamics, structural and magnetic phase transitions, thermal expansion.

Inoue, Kanryu * 1993, (Research); PhD, 1977, Osaka City University (Japan); mechanical and physical properties; phase transformations, material characterization by x-ray plus EM.

Kalonji, Gretchen * 1990; PhD, 1982, Massachusetts Institute of Technology; crystalline defects, computer simulation, rapid solidification of ceramics.

Pearsall, Thomas P. * 1989; PhD, 1973, Cornell University; physics of semiconductors and the technology of semiconductor devices.

Polonis, Douglas H. * 1955; PhD, 1955, University of British Columbia (Canada); physical metallurgy, phase transformations, mechanical properties of materials.

Rao, Y. Krishna * 1976; PhD, 1965, University of Pennsylvania; chemical and extractive metallurgy, ore dressing.

Scott, William D. * 1965; PhD, 1961, University of California (Berkeley); mechanical properties of ceramics, composites, twinning in alumina, optical microscopy.

Stoebe, Thomas Gaines * 1966; PhD, 1965, Stanford University; physics of solids, optical properties, thermoluminescence, compound semiconductors.

Taya, Minoru * 1986, (Adjunct); PhD, 1977, Northwestern University; composite materials, elasticity and plasticiy, impact physics, fracture theory.

Whittemore, Osgood J. * 1964, (Emeritus); Cer.E.(Professional), 1950, Iowa State; ceramic processing, refractories, industrial minerals.

Associate Professors

Bordia, Rajendra Kumar * 1991; PhD, 1986, Cornell University; densification and microstructual development in ceramics and ceramic compounds.

Kuhn, Kelin J. * 1987, (Adjunct); PhD, 1985, Stanford University; molecular beam epitaxy growth of strainedlayer InGaAs/GaAs quantum wells and superlattices.

Miller, Alan D. * 1967; PhD, 1967, University of Washington; instrumental analysis, high-temp equilibria processing, electronic ceramics, cooperative education.

Ohuchi, Fumio * 1992; PhD, 1981, University of Florida; nucleation and growth of thin film materials, surface science, glass, device applications.

Rogers, James W. Jr. * 1990, (Adjunct); PhD, 1979, University of Texas (Austin); surface chemistry and engineering, applications to thin film deposition.

Sarikaya, Mehmet * 1984; PhD, 1982, University of California (Berkeley); nanoscopical (TEM), imaging, diffraction and spectroscopy, phase transformations, biocrystallization.

Stang, Robert George * 1973; PhD, 1972, Stanford University; elastic and plastic deformation of materials, high-temperature creep in metals and ceramics.

Viney, Christopher * 1987, (Adjunct); PhD, 1983, Cambridge University (UK); phase transformations and microstructure/property relationships in polymers and liquid crystals.

Assistant Professors

Brush, Lucien N. * 1990; PhD, 1988, Carnegie-Mellon University; computational modeling of solidification, modeling studies of materials processing.

Haile, Sossina M. * 1993; PhD, 1992, Massachusetts Institute of Technology; ion transport in solids, crystal growth, x-ray diffraction.

Yan, Hong * 1991, (Research); PhD, 1991, University of Michigan; materials physics, computer modeling of materials surfaces and interfaces.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

Ceramic Engineering

CER E 336 Ceramic Engineering Excursion (1) Plant inspection trip. Credit/no credit only. Offered: A.

CER E 401 Equipment and Plant Design (3) The design process and its application in ceramic-engineering. Design projects. Prerequisite: MSE 330. Offered: Sp.

CER E 411 Vitreous State (4) Chemistry and physics of glass, glazes, and porcelain enamels; structure, properties and processing of vitreous materials. Prerequisite: MSE 316 or permission of instructor. Offered: Sp.

CER E 413 Physical Ceramics: Mechanical Properties (3) Mechanical properties, elasticity, strength, thermal shock, and high temperature effects relative to structural design. Fracture mechanics and notch sensitivity of brittle materials. Environmental effects, plastic flow, and high temperature deformation. Prerequisite: ENGR 220. Offered: A.

CER E 414 Electrical Properties of Ceramics (3) lonic and electronic conduction in crystalline and noncrystalline inorganic solids. Dielectric and ferroelectric behavior, magnetic properties of ferrimagnetic materials, optical properties of dielectrics. Undergraduate ceramic engineering majors must take 415 concurrently. Prerequisite: E E 306. Offered: W.

CER E 415 Electrical Properties of Ceramics/ Laboratory (1) Ionic and electronic conduction in crystalline and noncrystalline inorganic solids. Dielectric and ferroelectric behavior, magnetic properties of ferrimagnetic materials, optical properties of dielectrics. Prerequisite: concurrent enrollment in 414. Offered: W.

CER E 416 Mechanical Properties Laboratory (1) Measurements of the mechanical properties of ceramics: strength, fracture, toughness, thermal shock damage. Use of Weibull statistics to characterize strength and failure. Prerequisites: 413 which may be taken concurrently, ENGR 220. Offered: A.

CER E 420 Colloidal Ceramics (3) Properties and surface chemistry of ceramic colloids. Topics include absorption, adsorption, gels and their contributions to cementitious bonding, ion exchange, rheological properties, and analytical techniques applicable to these studies.

CERE 421 Ceramic Processing (4) Technology of ceramic fabrication processes. Material characterization at processing stages for control. Laboratory study of all operations in the manufacture of selected ceramic products. Offered: A. **CER E 470 Refractories (3)** Chemical and mineralogical composition; processing methods; thermal, physical, and chemical properties and tests; application in high-temperature processes. Offered: W.

Materials Science and Engineering

MSE 300 Introduction to Materials Science and Engineering (2) Introduces the materials field to new department majors. Examples are drawn from ceramics, metals, polymers, electronic materials and composites. Structure/properties/manufacturing/design relationships are emphasized. Offered: A.

MSE 305 Phase Equilibria (4) Phase equilibria in ceramic and metal systems of one, two, and three components. Use and determination of phase equilibrium diagrams. Prerequisite: 322 or ENGR 260. Offered: W.

MSE 314 X-Ray Diffraction and Crystallography (3) Miller Theory and practice of x-ray diffraction with applications to materials systems. Principles of crystal symmetry, reciprocal lattice, and stereographic projections. Offered: A.

MSE 315 Kinetic Processes and Transformations in Materials (4) Applications of thermodynamic and kinetic principles to the study of transformations and reactions in engineering materials. Thermal activation and rate equations; solid state diffusion; nucleation and growth; phase transformations; examples of important reactions including crystal growth, recrystallization, precipitation in solids, sintering, and devitrification. Prerequisites: 314, ENGR 170. Offered: W.

MSE 316 Mechanical Behavior of Materials (4) influence of structure on the mechanical properties of ideal and real solids. Mechanical behavior in metallic and ceramic systems. Prerequisite: 315. Offered: Sp.

MSE 317 Physical Materials Laboratory (2) Experimental topics in x-ray diffraction and optical microscopy. To accompany 314. Offered: A.

MSE 318, 319 Physical Materials Laboratory (1,1) Experimental work to accompany 315, 316. Microstructure development and mechanical behavior of inorganic materials. Offered: W,Sp.

MSE 322 Thermodynamics in Materials Systems (4) Quantitative applications of thermodynamics to systems of interest to metallurgical and ceramic engineers. Detailed review of thermodynamic quantities and equations of state. Offered: A.

MSE 330 Processing of Inorganic Materials (4) Fundamental and technological aspects of processing of metals, ceramics and semiconductor materials, transport processes relevant to materials processing low and high temperature routes for refining materials; liquid state and vapor phase processing inorganic materials. Offered: Sp.

MSE 399 Introduction to Research and Design (1) Research planning and design in materials science and engineering introduced by the faculty to facilitate student selection of senior project topic. Offered: Sp.

MSE 421 Thermodynamics of Solids (3) Applications of thermodynamics to the solid state. Statistical interpretation of entropy. Heterogeneous equilibria. Theories of solutions. Thermodynamics of surfaces and of defects in solids. Prerequisite: 322 or equivalent. Offered: W.

MSE 423 Fiber Composite Materials (3) Introduction to the materials science of composites composed of strong fibers in polymer, metal, or ceramic matrices. Properties of the individual phases and of the fiber/ matrix interface; micromechanisms of load transfer from matrix to fiber; fabrication, and elastic and failure properties of the composites. Prerequisite: ENGR 170 or permission of instructor. Offered: A.

MSE 433 Polymeric Materials (3) Offered: A.

MSE 442 Seminar in Ethics and Safety (1) Deals with issues of engineering ethics and industrial safety within the context of materials science and engineering. Credit/no credit only. Prerequisite: senior standing. Offered: W.

MSE 466 Physical Properties of Materials (4) Introduction to elementary solid-state concepts in materials. Atom bonding, statistical mechanics, free electron and band theories; thermal properties. Application of princlples to conduction in metals, insulators, semiconductors, and to magnetic and optical processes in solids. Offered: W.

MSE 467 Electronic Materials Processing (3) Materials and processes used in the manufacture of electronic components: Basic principles of crystal growth, deposition, doping, diffusion, component delineation, and packaging as they apply to hybrid and integrated circuits and devices. Offered: Sp.

MSE 498 Special Topics (1-5, max. 8) Special topics in materials science and engineering offered as a course with lectures, conferences, or laboratory. Prerequisite: senior standing or above and permission of faculty member. Offered: AWSpS.

MSE 499- Special Project (*-, max. 5) Materials science and engineering field or laboratory investigations in group or individual setting. Prerequisite: 399. Offered: AWSpS.

Metallurgical Engineering

MET E 421 Metallurgical Processing (4) Principles and applications of techniques used to process metals and alloys including solidification and casting, heat treating, forming, joining and machining and their effects on microstructure and properties. Prerequisite: ENGR 170. Offered: A.

MET E 432 Corrosion of Engineering Materials (3) Applications of physical chemical principles to the reaction of materials with their environments. Prevention and control of corrosion and oxidation processes. Corrosion problems in materials applications. Offered: W.

MET E 435 Corrosion (1) Archbold Laboratory experiences in application of physical chemical principles to reaction of materials with their environments. To accompany 432. Offered: W.

MET E 461 Engineering Physical Metallurgy (4) Phase transformations and strengthening mechanisms in ferrous and nonferrous alloys; heat treatment and microstructure control; physical metallurgy of carbon and alloy steels, aluminum and titanium alloys; microstructure-property relationships and alloy design. Offered: A.

MET E 462 Mechanical Behavior of Metals (3) Theories of elastic and plastic deformation in materials. Application of these theories in design, stress and strain, tensile and compression loading, yielding and plastic deformation, fracture, introduction to fracture mechanics, creep and fatigue. Offered: W.

MET E 463 Reliability and Design in Metallurgical Systems (4) Metallurgical design problems and failure analysis. Properties of commercially important engineering alloys. Prerequisite: MSE 316 or equivalent. Offered: Sp.

MET E 464 Extractive Process Analysis (3) Extractive processes analyzed by the methods of material and energy balances, computational thermodynamics, process kinetics and reactor theory. Introduction to process optimization. Prerequisite: MSE 322 or equivalent. Offered: Sp.

MET E 465 Mechanical Behavior Laboratory (1) Laboratory experience in mechanical behavior of metals. To accompany 462. Offered: W.

310 COLLEGE OF ENGINEERING / MATERIALS SCIENCE AND ENGINEERING

Courses for Graduates Only

Materials Science and Engineering

MSE 510 Bonding, Symmetry, and Crystallography (4) Atomic bonding, coordination; structures, stability of organic and inorganic compounds in the solid-state. Reciprocal lattice concept, its vectorial basis. Crystallography of solids, emphasis on point and space group symmetries. Structures of complex organic, inorganic compounds. Introduction to physical properties described by tensors: elasticity, optical magnetic, electrical, thermal properties. Offered: A.

MSE 511 Advanced Theory of X-ray Diffraction (3) Use of the reciprocal lattice concept and Fourier analysis in the study of atomic arrangements in crystals. Line shape and diffuse scattering analysis. Analytical interpretation of diffraction patterns. Prerequisite: MSE 314 or equivalent.

MSE 512 Experimental Transmission Electron Microscopy (3) Fundamentals of electron optics as applied to microscopy; applications of contrast theories and electron diffraction with emphasis on defects and multiphase structures in crystalline solids. Prerequisite: 510. Offered: W.

MSE 513 Transmission Electron Microscopy Laboratory (2) One four-hour laboratory and one twohour discussion/demonstration per week; metallic, ceramic, electronic biological sample preparation techniques; diffraction, imaging, and spectroscopy techniques in electron microscopy. Prerequisite: 512 which may be taken concurrently. Offered: W.

MSE 515 Advanced Transmission Electron Microscopy (3) Principles of image formation in crystalline and amorphous materials at the atomic resolution level; high spatial resolution electron diffraction with emphasis on convergent beam electron diffraction; quantitative elemental compositional and chemical analysis with energy dispersive x-ray spectroscopy and electron energy loss spectroscopy; high voltage electron microscopy. Prerequisite: 512 and 513. Offered: even years Sp.

MSE 518 Advanced Mineralogy (3) Crystal symmetry: point groups, space groups. Mathematical description of crystal structures; group theory and irreducible representations; tensor description of physical properties; stress, strain, piezoelectricity, elasticity; structural and magnetic phase transition, Landau theory, deformation and creep in crystals; elasto-viscous properties of Earth's mantle, crystal chemistry and solid state reactions.

MSE 520 Seminar (1, max. 6) Review of research problems in recent literature. Registration required for all graduate students. Credit/no credit only.

MSE 521 Mechanical Behavior of Ceramics (3) Dislocation structures in ceramics; influence of dislocations on the deformation and fracture of single crystals and polycrystalline ceramics; brittle fracture and theoretical strength. Prerequisite: 511 or permission of instructor.

MSE 523 Advanced Extractive Metallurgy (3) Physical chemistry of solutions, mattes, fused salts, and slags. Discussion of papers from current literature. Prerequisite: basic course in thermodynamics or physical chemistry or permission of instructor.

MSE 524 Applied Rate Phenomena (3) Introduction to rate theory and transport processes. The principal thrust is on applications in ceramics and metallurgy. Prerequisite: basic course in transport phenomena or permission of instructor. Offered: W.

MSE 525 Thermodynamic Topics in Materials Science (3) Selected topics in application of classical and statistical thermodynamics to systems of current interest. Offered: MSE 526 Dynamic Behavior of Metallurgical Systems (3) Interpretation of the behavior of systems by application of the methods of process analysis and control theory; modeling of systems, exploration of their characteristics by stimulus-response, and review of current industrial control processes. Prerequisite: graduate standing in engineering or permission of instructor.

MSE 541 Theoretical Structural Metallurgy (3) Detailed study of the general properties and effects of point, line, and surface defects in crystalline solids. Prerequisite: MET E 462.

MSE 551 Diffusion in Solids (3) Theories and principles of diffusion in solids; phenomenological and atomistic concepts; equilibrium defects; impurity, chemical potential gradient, grain boundary and dislocation effects in metals and nonmetals.

MSE 553 Vacuum Science and Technology (3) Fundamental theory and gas kinetics and treatment of gas flow, working principles of vacuum pumps and gauges, characteristics required of the vacuum components, material selection, fundamentals essential to vacuum system design. Covers both fundamental and practical aspects of modern vacuum science and technology.

MSE 561 Phase Transformations in Material Systems (3) Thermodynamics and kinetics of solid state reactions; phase stability; transition phases, theories of nucleation and spinodal decomposition, growth models, phase morphology and microstructure development, precipitation from solid solutions, examples of specific transformation types. Offered: Sp.

MSE 562 High Temperature Composites (3) Thermo-mechanical behavior and environmental degradation of high temperature composites (metal, ceramic, and intermetallic matrix composites) and carbon/carbon composites addressed. Covers related topics such as processing (primary and secondary). Recommended: 423 or ME 450. Offered: jointly with M E 562; odd years.

MSE 565 Electron Theory of Materials (3) Solidstate concepts of materials. Atomic bonding, statistical mechanics, Brillouin zone theory. Applications to conduction, optical, and magnetic properties of metals, semiconductors, and insulators. Prerequisite: 466. Offered: A.

MSE 566 Superconductors and Magnetic Materials (3) Theories of magnetic phenomena: dia-, para-, ferri-, and ferromagnetism; theories of superconductivity. Applicants in current technology superconductor materials and magnetic devices. Prerequisite: 466 or equivalent. Offered: W.

MSE 567 Electronic Materials: Preparation and Properties (3) Physics and technology of semiconductor materials growth. Physics of growth, quantum wells, superlattices, strained layers. High vacuum technology and III-V characterization techniques. Limited enrollment. Prerequisite: permission of instructor. Offered: jointly with E E 567.

MSE 571 Polymeric Materials (3) Relationships between configuration, conformation, molecular order, microstructure, properties of polymeric materials. Concepts relevant to tailoring polymer molecules and microstructures for specific applications. Interactions between polymers and their in-service environment. Characterization and processing techniques relevant to polymeric materials. Prerequisite: one semester or two quarters of organic chemistry. Offered: jointly with BIOEN 571; A.

MSE 572 Liquid Crystals (3) Properties of the liquid crystalline state are discussed in fundamental chemical and physical terms. Engineering and biological uses of liquid crystals are described in detail. Appropriate microstructural and nanostructural characterization techniques are emphasized throughout. Prerequisite: Molecular Bioengineering Fundamentals. Offered: jointly with BIOEN 572; Sp.

MSE 599 Special Topics in Materials Science (1-5, max. 5) Studies of special advanced topics in materials science. Prerequisite: petrilission of instructor. Offered: AWSpS.

MSE 600 Independent Study or Research (*) Offered: AWSpS.

MSE 700 Master's Thesis (*) Offered: AWSpS.

MSE 800 Doctoral Dissertation (*) AWSpS.

Mechanical Engineering

The Department of Mechanical Engineering focuses on increased productivity through modern design methods, automated manufacturing, and introduction of new materials. It also continues its strong history of involvement with conversion and management of energy. The department offers instruction and research in three principal areas: materials and manufacturing, systems and design, and energy and fluids.

The department offers undergraduate and graduate degree programs, with courses in design, analysis, and fabrication of mechanical devices; analysis of vibration and failure; automated manufacturing; combustion and energy systems; fluid mechanics; computer-aided design; robotics; and applications of mechanical engineering to interdisciplinary fields.

Undergraduate Program

The undergraduate program in mechanical engineering provides the sound educational basis in the mathematical, chemical, and physical sciences, and in computational, graphical, and written communication skills that is needed for professional work in the field.

Prospective students should obtain a copy of the Mechanical Engineering Admission Guide that contains more details regarding admission, and the Mechanical Engineering Undergraduate Advising Guide that contains a curriculum flow chart and information on scholarships, scheduling, and the continuation policy.

Admission to the department is usually by the end of the sophomore year. Prospective students are encouraged to apply for autumn or spring admission as soon as they are eligible because enrollment in the department is limited and is controlled in large part by the number of students who have recently graduated. Students who desire entrance must formally apply to, and be accepted by, the department admissions committee. The primary admission criterion is the student's probable success in the program as evidenced by academic performance, work experience, and other factors.

The minimum entrance requirements are 64 credits in courses applicable to the degree, a GPA of 2.50, and a minimum grade of 2.0 in each of the following courses, which are required for admission: MATH 124, 125, 126, and 307; CHEM 140, 141, and 150, 151; PHYS 121/131 and 122/132; CSE/ENGR 142, ENGR 210, 220, and 230; one 5-credit English composition course; and ENGR 231.

Bachelor of Science in Mechanical Engineering Degree

Graduation Requirements: The student must satisfactorily complete a minimum of 192 credits, with 115 credits in General Education and Engineering Fundamentals as specified above by the College of Engineering, as well as 61 credits of department-required

¹⁴³ Mechanical Engineering

courses and 12 credits of mechanical engineering option courses (400-level). A cumulative GPA of 2.00 or better, including a minimum GPA of 2.00 in all professional courses, is required.

Typical department-required courses include machine design analysis, behavior of engineering materials, manufacturing processes, mechanics of solids, system dynamics, thermodynamics, heat transfer, fluid mechanics, and mechanical engineering design.

Correspondence and Information

All inquiries concerning the mechanical engineering program should be addressed to the Department of Mechanical Engineering, Undergraduate Advising Office, 143 MEB, FU-10. If possible, prior to applying for admission, prospective students are urged to make an appointment in the office by calling (206) 685-0908.

Graduate Program

The Department of Mechanical Engineering offers graduate programs leading to the degrees of Master of Science in Mechanical Engineering and Doctor of Philosophy. The department also provides an authorized option leading to the College-wide Master of Science in Engineering degree. These provide a balanced combination of formal instruction and independent research or design experience. Individual projects may be drawn from a wide spectrum of topics, which include mechanical and energy conservation systems, heat transfer, combustion, fluid mechanics, applied mechanics, including computational mechanics, computer-aided design and manufacturing, production systems, materials behavior, robotics, and applications of mechanical engineering science to a variety of such interdisciplinary fields as bioengineering, ocean engineering, and acoustics. Flexible requirements for course work provide opportunities both for a broad scientific and professional background and for specialty training.

Research Facilities

The department has well-equipped laboratories for pursuing research in various disciplinary fields in mechanical engineering and for constructing specialized research equipment. These include experimental stress analysis; materials testing; synthesis and simulation of electromechanical control systems; foundry, welding, and other metal fabrication operations; computer facilities for CAD/CAM research; wind tunnels for boundary-layer and high-speed flow analysis; combustion systems performance, exhaust emissions control, and combustion engines; acoustics, vibration, and dynamic testing and measurements and modal analysis; radiation, conduction, and convection (including multiphase) heat transfer analysis, and a bioengineering flow facility.

Financial Aid

Financial aid is offered to full-time graduate students so far as funds permit. This aid may be in the form of a research assistantship for sponsored programs, a fellowship provided by the University or industry, or a teaching assistantship.

Alexander, Daniel 1960, (Emeritus); PhD, 1977, Washington State University; engineering design. Balise, Peter * 1950, (Emeritus); MS, 1950, Massachusetts Institute of Technology; systems analysis and control.

Chalupnik, James * 1964; PhD, 1964, University of Texas (Austin); sound and vibration, wave propagation.

Childs, Morris * 1954, (Emeritus); PhD, 1956, University of Illinois; fluid mechanics, gas dynamics, turbulent boundary layers.

Corlett, Richard * 1964; PhD, 1963, Harvard University; energy systems and combustion.

Daly, Colin H. * 1967; PhD, 1966, University of Strathclyde (UK); bioengineering, materials.

Day, Emmett E. * 1947, (Emeritus); PhD, 1962, University of California (Berkeley); materials, experimental stress analysis.

Depew, Creighton A. * 1960; PhD, 1960, University of California (Berkeley); heat transfer, fluid mechanics.

Emery, Ashley F. * 1961; PhD, 1961, University of California (Berkeley); bioengineering, energy conservation in buildings and air conditioning.

Firey, Joseph C. 1983, (Emeritus); MSME, 1941, University of Wisconsin; combustion, lubrication.

Galle, Kurt R. * 1960, (Emeritus); PhD, 1951, Purdue University; instrumentation, controls, bioengineering.

Garbini, Joseph * 1979; PhD, 1977, University of Washington; systems and controls analysis, instrumentation, manufacturing automation.

Gessner, Frederick B. * 1967; PhD, 1964, Purdue University; fluid mechanics, turbulence.

Hyman, Barry * 1975; PhD, 1965, Virginia Polytechnic Institute & State University; energy policy, technology and public policy, quantitative methods.

Jorgensen, Jens E. * 1973; DSc, 1969, Massachusetts Institute of Technology; systems analysis, manufacturing, automation and controls, forest engineering.

Kapur, Kailash C. * 1992, (Adjunct); PhD, 1969, University of California (Berkeley); quality and reliability engineering, system designization, total quality management.

Kippenhan, Charles J. * 1963, (Emeritus); PhD, 1948, University of Iowa.

Kobayashi, Albert S. * 1958; PhD, 1958, Illinois Institute of Technology; fracture mechanics, bioengineering.

Kosály, George * 1980; PhD, 1974, Eotvos Lorand University (Hungary); applications of stochastic processes, reacting turbulent flows, reactor dynamics, two-phase flow.

Love, William J. * 1970, (Emeritus); PhD, 1952, University of Illinois; design, mechanics, power systems.

Malte, Philip C. * 1979; PhD, 1971, University of Michigan; combustion, thermodynamics, fluid mechanics.

McCormick, Norman J. * 1966; PhD, 1965, University of Michigan; reliability and risk analysis, reactor physics, neutron and photon transport.

McFeron, Dean E. * 1958, (Emeritus); PhD, 1956, University of Illinois; heat transfer and thermal power processes.

Mills, Blake D. Jr. 1946, (Emeritus); MEng, 1947, University of Washington.

Morrison, James B. * 1946, (Emeritus); MS, 1954, University of Washington; design, dynamics.

Murphy, Stanley R. 1952, (Emeritus); PhD, 1959, University of Washington.

Pratt, David T. * 1981; PhD, 1968, University of California (Berkeley); turbulent combustion, computer simulation.

Riley, James J. * 1983; PhD, 1971, Johns Hopkins University; fluid mechanics, especially turbulent flows. Taggart, Raymond * 1959, (Emeritus); PhD, 1956, Queen's University (UK); mechanical metallurgy.

Taya, Minoru * 1986; PhD, 1977, Northwestern University; composite materials, elasticity and plasticiy, impact physics, fracture theory.

Vesper, Karl H. * 1969; PhD, 1969, Stanford University; business policy, mechanical engineering, marine studies.

Wolak, Jan * 1965, (Emeritus); PhD, 1965, University of California (Berkeley); mechanics of materials, manufacturing processes.

Associate Professors

Adee, Bruce H. * 1970; PhD, 1972, University of California (Berkeley); vessel safety and stability, floating structures, waves, ship resistance, model testing.

Berg, Martin C. * 1986; PhD, 1986, Stanford University; control system design, computer-aided digital control system design, dynamics.

Bodoia, John R. * 1964, (Emeritus); PhD, 1959, Carnegie-Mellon University; fluid mechanics, heat transfer, solar energy.

Calkins, Dale * 1979; DEng, 1976, University of California (Berkeley); ship hydrodynamics and motions, naval architecture, computer-aided design and engineering.

Chalk, William 1957, (Emeritus); MSME, 1961, University of Washington; design graphics.

Ford, Paul W. * 1957, (Emeritus); MSEng, 1959, University of Washington; manufacturing processes, metal casting.

Forster, Fred * 1977; PhD, 1972, Stanford University; physiological fluid dynamics, medical ultrasound applications, Doppler experimental fluid mechanics.

Ganter, Mark * 1986; PhD, 1985, University of Wisconsin; solid modeling, computer graphics, kinematics and automated manufacturing.

Holt, Richard * 1947, (Emeritus); MSME, 1957, University of Washington; manufacturing processes, welding.

Kieling, William C. * 1956, (Emeritus); MSME, 1959, University of Washington; design, dynamics, and kinematics.

Kramlich, John C. * 1991; PhD, 1980, Washington State University; heterogenous combustion, pollutant formation and control from thermal systems, waste remediation.

Messer, Rowland E. 1946, (Emeritus); MSME, 1935, University of Washington; graphics.

Ramulu, Mamidala * 1978; PhD, 1982, University of Washington; manufacturing processes, production engineering, applied mechanics, fatigue and fracture mechanics.

Reinhall, Per G. * 1982; PhD, 1982, California Institute of Technology; nonlinear dynamics, vibrations.

Sandwith, Colin J. * 1966, (Research); PhD, 1966, Oregon State University; corrosion, material science, design, manufacturing.

Sherrer, Robert E. * 1960, (Emeritus); PhD, 1958, University of Wisconsin; solid mechanics.

Storti, Duane W.* 1983; PhD, 1983, Corneil University; nonlinear dynamics and vibrations, dynamical systems, perturbations and bifurcations.

Tencer, Allan Fred * 1988, (Adjunct); PhD, 1981, McGill University (Canada).

Tuttle, Mark E. * 1985; PhD, 1984, Virginia Polytechnic Institute & State University; experimental stress analysis, composite materials, adhesion mechanics.

Zabinsky, Zelda * 1985, (Adjunct); PhD, 1985, University of Michigan; operations research, applications in industrial engineering, optimization with stochastic elements.

Assistant Professors

Fabien, Brian C. * 1993; PhD, 1990, Columbia University; kinematic/dynamic analysis and synthesis of mechanisms and multidiscipline systems, control systems.

Jenkins, Michael G. * 1992; PhD, 1987, University of Washington; elevated-temperature mechanical properties and performance of ceramics and ceramic composites.

Kumar, Vipin * 1988; PhD, 1988, Massachusetts Institute of Technology; manufacturing, polymer processing, microcellular plastics, design theory and methodology.

Murray, William R. * 1989; PhD, 1988, Massachusetts Institute of Technology; modeling and control applied to automated manufacturing; robotics and instrumentation.

Nevrinceanu, Cornelius * 1987; PhD, 1987, University of Minnesota; computer-aided mathematics and computer science in mechanical engineering; design, kinematics.

Shen, I-Yeu (Steve) * 1993; PhD, 1991, University of California (Berkeley); linear and nonlinear vibrations, smart structures, vibration damping, modal analysis.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

M E 304 Manufacturing Processes (3) Ramulu Study of manufacturing processes, including interrelationships between the properties of the material, the manufacturing process, and the design of component parts. Prerequisite: 343. Offered: AWSpS.

M E 323 Thermodynamics (4) Depew Applications of thermodynamic principles: properties of pure substances from an advanced point of view, nonreactive gas mixtures, energy analysis of reactive mixtures, chemical equilibria, combustion, power, and refrigeration cycle analysis. Prerequisite: ENGR 260. Offered: AWSp.

M E 331 Introduction to Heat Transfer (4) Corlett Study of heat transfer by conduction, radiation, and convection; elementary heat-exchanger design. Prerequisites: ENGR 260, and 333 or CIVE 342. Offered: AWSp.

M E 333 Introduction to Fluid Mechanics (4) Gessner Introduction to the basic fluid laws and their application. Conservation equations, dynamic similarity, potential flow, boundary-layer concepts, effects of friction, compressible flow, fluid machinery, measurement techniques. Prerequisites: ENGR 260, and MATH 307. Offered: AWSpS.

M E 343 Behavior of Engineering Materials (4) Daly Study of the nature, properties, and behavior of engineering materials, involving strength, deformation, fracture, impact, creep, fatigue, and corrosion. Lecture and laboratory. Prerequisite: ENGR 220 or permission of instructor; recommended: ENGR 170. Offered: AWSp.

M E 352 Mechanics of Solids (3) Kumar Development of relationships among loads, stresses, and deformations in the elastic behavior of machine or structural elements in tension, compression, bending, or torsion. Prerequisite: ENGR 220. Offered: AWSp.

M E 353 Machine Design Analysis (4) Nevrinceanu Analysis, design, and selection of mechanical subsystems and elements, such as gears, linkages, cams, and bearings. Lecture and laboratory. Prerequisites: 343, 352. Offered: AWSpS.

M E 373 Introduction to System Dynamics (4) Jorgensen Mathematical modeling, analysis, and design of physical dynamic systems involving energy storage and transfer by lumped-parameter linear elements. Time-domain response via analytical methods and numeric simulation. Prerequisites: MATH 307 and 308 and ENGR 215 and 230. Offered: AW.

M E 374 Systems Dynamic Analysis and Design (5) Jorgensen Extension of 373. Frequency response analysis, generalized impedance concepts and applications, Fourier series analysis and Laplace transform techniques. Modeling and analysis of electromechanical actuators and rotating machinery. Laboratory experiments and design projects. Prerequisite: 373. Offered: WSo.

M E 395 introduction to Mechanical Design (4) Calkins Design process and methodology; decision making; optimization techniques; project planning; engineering economics; probabilistic and statistical aspects of mechanical design; ethical and legal issues. Lecture and laboratory. Prerequisites: 352, 373, ENGR 123, 260, ENGR 315. Offered: AWSpS.

M E 403 Material-Removal Processes (3) Ramulu Cutting and noncutting processes for material removal in the shaping of manufactured products. Study of forces and of power consumption and relative costs in the various processes. Prerequisites: 304 and 343, or permission of instructor. Offered: A.

M E 406 Corrosion and Surface Treatment of Materials (3) Sandwith Corrosion fundamentals and forms (galvanic, crevice, pitting, stress corrosion, erosion, hydrogen and leaching). Principles of design, materials selection, cathodic protection and surface treatments (coatings, carburizing, nitriding and plating) applied to reduce corrosion. Failure analysis applied to case studies. Offered: W.

M E 409 Introduction to Numerical Control and Computer-Aided Manufacturing (3) Ramulu Control system fundamentals, numerical control (NC) machine control systems, and the design aspect of NC machine tools, programming methods of NC machines, computer-aided manufacturing, CNC, DNC, and process optimization. Prerequisites: 304, 374, or permission of instructor. Offered: Sp.

M E 424 Combustion Systems (4) Corlett, Malte, Pratt Flame and combustion theory, including chemical kinetics, mixing/diffusion, and heat transfer. Flame types. Combustion chamber theory, design concepts, and performance. Pollutant control by combustion modification and flame additives. Lectures and laboratory demonstrations. Prerequisite: 323 or permission of instructor. Offered: even years; Sp.

M E 425 Air Conditioning (4) Depew Air conditioning, heating, and ventilating of buildings. Comfort and health, psychometric processes, load calculations, fluid distribution systems, simultaneous heat and mass transfer devices, controls. Design calculations involving these criteria, devices and systems. Prerequisites: 323, 331. Offered: Sp.

M E 426 Solar Energy Engineering (4) Bodoia Fundamental principles of heat transfer, thermodynamics, and fluid mechanics are directed toward the analysis of devices for the collection and storage of solar energy, and of the syntheses of such devices into energy-delivery systems. Prerequisite: 331 or permission of instructor. Offered: odd years; Sp.

M E 428 Noise Control (3) Chalupnik Introduction to design for noise control. Includes summary of acoustical phenomena as they pertain to noise control and measurement. Noise rating schemes, particularly in relation to machine noise in the work environment. Prerequisite: junior standing in engineering. Offered: W

M E 430 Advanced Energy Conversion Systems (4) Review of power cycles. Steam and gas, generation of thermal power, combustion and fuels, steam power plant design considerations, gas turbine power plant operation and design, cogeneration, nuclear power, environmental considerations in power production. Otto, diesel, Stirling cycle analysis. Alternate energy sources. Offered: W.

M E 431 Advanced Fluid Mechanics (4) Forster, Riley Advanced topics in fluid mechanics, including kinematics, potential theory and vortex dynamics, viscous flow, turbulence, experimental and numerical methods, and design. Prerequisite: 333. Offered: A.

M E 432 Gas Dynamics (3) Gessner Dynamic and thermodynamic relationships for the flow of a gas. Application of thermodynamic processes involving nozzles, diffusers, compressors, and turbines. Prerequisites: ENGR 260 and 333 or CIVE 342. Offered: Sp.

M E 433 Turbomachinery (4) Pratt Thermodynamics, gas dynamics, and fluid mechanics of axial and centrifugal compressors, pumps, and turbines. Design and selection of components for engineering applications. Offered: W.

M E 434 Advanced Mechanical Engineering Laboratory (3) Depew Introduction to engineering measurement problems and techniques including interpretation of experimental data based upon the theories of probability and statistics. Experiments in all areas of mechanical engineering using single-component and multicomponent systems. Prerequisites: 323, 331, 333, 343, 374, and ENGR 315. Offered: AWSpS.

M E 436 Friction and Lubrication (3) Kumar Fundamental principles of friction and lubrication with applications to rolling and hydrodynamic bearing design. Prerequisites: 333, 353, or permission of instructor. Offered: Sp.

M E 440 Mechanical Behavior of Solids (3) Tuttle Mechanics of deformable bodies; transformation of stress and strain; yield criteria; equations of compatibility; elastic constants of crystalline and polycrystalline solids. Application to design and manufacturing. Prerequisite: 343 or permission of instructor. Offered: W.

M E 445 Introduction to Fracture Mechanics (3) Deformation processes leading to fracture, and the linear elastic fracture mechanics. Fatigue crack propagation. Fracture control and failure analysis. Prerequisite: 343 or permission of instructor. Offered: A.

M E 450 Introduction to Composite Materials and Design (3) Taya, Tuttle Stress and strain analysis of continuous fiber composite materials. Orthotropic elasticity, lamination theory, failure criteria, design philosophy, and joining techniques, as applied to composites. Prerequisite: 352. Offered: A.

M E 460 Kinematics and Linkage Design (3) Ganter Synthesis of linkage-type mechanisms using graphical and computer methods. Prerequisite: senior standing in engineering or permission of instructor. Offered: AW.

M E 468 Air-Poilution Control Equipment Design (3) Pilat Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption of gaseous pollutants; electrostatic precipitation and filtration of particular pollutants. Actual case studies. Prerequisite: senior standing or permission of instructor. Offered: jointly with CH E 468 and CIVE 494; W.

M E 469 Applications of Dynamics in Engineering (4) Storti Application of the principles of dynamics to selected engineering problems, such as suspension systems, gyroscopes, electromechanical devices. Includes introduction to energy methods, Hamilton's principle and Lagrange equations and the design of dynamic system. Prerequisite: 374, ENGR 230 or permission of instructor. Offered: ASpS.

M E 470 Mechanical Vibrations (3) Reinhall Single-degree-of-freedom linear systems techniques. Matrix techniques for multi-degree-of-freedom linear systems. Applications in vibration isolation, transmission, and absorption problems and instrumentation. Prerequisite: 373 or permission of instructor. Offered: Sp.

M E 471 Automatic Control (4) . Berg, Garbini, Jorgensen Dynamic system modeling; control system stability and performance analysis; compensator design by Bode and root-locus methods. Prerequisite: 374 or permission of instructor. Offered: ASp.

M E 473 Instrumentation (3) Garbini Principles and practice of industrial measurement. Dynamics of instrument response; theory of transducers for temperature, pressure, flow, and other measurements. Lecture and laboratory. Prerequisite: 374 or permission of instructor. Offered: W.

M E 474 Systems Modeling and Simulation (3) Murray Unified approach to modeling of systems, and computer simulation of systems behavior. Selecting system variables; writing state, loop, and node equations; modal response and state transition response; system functions and convolution; analogs. Applications to control, vibrations, and other problems. Prerequisite: 374. Offered: W.

M E 477 Microcomputers in Mechanical Systems (4) Garbini Analysis of electromechanical systems employing microcomputers for control or data acquisition. Microcomputer architecture, memory organization, assembly language programming, interfaces, and communications. Particular emphasis on design of hardware and software interfaces for real-time interaction with mechanical systems. Weekly laboratory. Prerequisities: 373, 374, E E 306, or permission of instructor. Offered: WSp.

M E 478 Finite Element Analysis (4) Reinhall Development of theory and concepts of finite element analysis. Applications in all areas of mechanical engineering, including mechanics of solids, heat transfer, and design of dynamical systems. Weekly computer exercises. Prerequisites: 352, 374, MATH 205 or 302. Offered: ASp.

M E 480 Introduction to Computer-Aided Technology (4) Calkins Principles of computer-aided technology. Computer-aided design, engineering, drafting, and manufacturing; computer-aided design systems, geometry, computer graphics, hardware, computer-aided vehicle/system design synthesis. System demonstrations, laboratories, and site visits. Prerequisites: ENGR 123, 141. Offered: ASp.

M E 481 Internal Combustion Engines (5) Malte Spark ignition and diesel engines. Thermodynamic cycles, fuels, carburetion and injection, ignition, combustion, friction, turbocharging, and performance of engines. Lecture and laboratory. Prerequisite: 323 or permission of instructor. Offered: A.

M E 490 Naval Architecture (3) Adee Theory of naval architecture; ship's lines, hydrostatic curves, intact and damaged stability, launching. Prerequisite: junior standing in engineering or permission of instructor. Offered: A.

M E 491 Naval Architecture (3) Adee Theory of naval architecture; strength, ABS rules, water waves, ship and platform motions. Prerequisite: junior standing in engineering or permission of instructor. Offered: W.

M E 492 Naval Architecture (3) Adee Theory of naval architecture; dimensional analysis, resistance, model testing, propellers, steering. Prerequisite: junior standing in engineering or permission of instructor. Offered: Sp.

M E 495 Mechanical Engineering Design (4) Hyman Design laboratory involving the identification and synthesis of engineering factors to plan and achieve specific project goals. Current literature and prerequisite texts are used as reference sources. Lecture and laboratory. Prerequisites: 331, 353, 374, 395. Offered: AWSp.

M E 498 Special Topics in Mechanical Engineering (1-5, max. 6) Lecture and/or laboratory. Maximum of 6 credits may be applied toward an undergraduate degree. Prerequisite: permission of instructor.

M E 499 Special Projects (2-5, max. 9) Written report required. Prerequisite: permission of department Chairperson. Offered: AWSpS.

Courses for Graduates Only

M E 506 Friction and Wear (3) Kumar Nature of the processes of friction and wear. Temperature rise at contact surfaces during sliding. Boundary friction. Tribological properties of materials. Prerequisite: graduate standing in engineering or permission of instructor. Offered: Sp.

M E 510 Mathematical Foundations of Systems Theory (4) Damborg Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Prerequisite: graduate standing or permission of instructor. Offered: jointly with A A 546/CH E/E E 510; A.

M E 518 -519-520 Seminar (0-0-1, max. 6) Credit/ no credit only. Offered: A-W-Sp.

M E 521 Thermodynamics (3) Depew, Emery, Malte, Pratt Fundamental concepts of temperature, thermodynamic properties, and systems. The first, second, and combined laws. Development of the relations of classical thermodynamics. Introduction to statistical themodynamics. Prerequisites: 323 and graduale standing in mechanical engineering or permission of instructor. Offered: odd years; A.

M E 522 Thermodynamics (3) Corlett, Emery, Malte Topics from statistical thermodynamics, including the Boltzmann, Bose-Einstein, and Fermi-Dirac statistics. Solutions of the Schrodinger wave equation and evaluation of the partition function for translation, rotation, and vibration. Prerequisite: 521 or permission of instructor. Offered: by request only; even years; W.

M E 523 Combustion Seminar (1) Kramlich, Malte, Pratt Seminar on combustion and energy systems, including discussions on current topics in combustion science and technology, and presentations by experts in the field. Credit/no credit only.

M E 524 Combustion (3) Corlett, Malte, Pratt Chemical and physical processes of combustion with applications to design of combustors, fuel selection, and consideration of environmental effects. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: odd years; Sp.

M E 525 Acoustics in Engineering I (3) Chalupnik, Forster Acoustic wave transmission, reflection, refraction, and diffraction. Review of continuum mechanics and examples from electromechanical systems. Prerequisite: graduate standing in mechanical or electrical engineering, or permission of instructor. Offered: jointly with E E 525; W.

M E 526 Acoustics in Engineering II (3) Chalupnik, Forster Continuation of 525. Material differs each year, covering such topics as scattering, moving media, ultrasonics, acoustic holography, optoacoustics, transducer design, propagation in anisotropic medium. Prerequisite: 525 or permission of instructor. Offered: jointly with E E 526; Sp.

M E 530 Radiative Heat Transfer (3) Corlett, Depew, Ernery, Malte Fundamentals of thermal radiation for black, gray, nongray, diffuse, and specular surfaces. Gaseous radiation and special applications of thermal radiation. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: W.

M E 531 Conductive Heat Transfer (3) Corlett, Depew, Emery Analysis of steady-state and transient heat conduction in single- and multidimensional systems by mathematical, graphical, numerical, and analogical methods. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: odd years; A.

M E 532 Convective Heat Transfer (3) Corlett, Depew, Emery Introduction to fluid flow and boundarylayer theory as applicable to forced- and natural-convection heat transfer. Condensation and boiling heat transfer. Prerequisite: graduate standing or permission of instructor. Offered: So.

M E 533, 534 Fluid Mechanics (3,3) Corlett, Gessner, Kosály, Riley Basic conservation laws and kinematics of fluid flow, two-dimensional inviscid flow, wave motion and shock waves in inviscid compressible flow, exact solutions and boundary layer analyses of laminar and turbulent viscous flow, analysis of non-Newtonian flow, applications. Prerequisite: 533 or permission of instructor for 534. Offered: W,Sp.

M E 535 Computational Techniques in Heat Transfer (3) Emery, Pratt Advanced heat transfer studies of interest to mechanical engineers. Subject coverage varies from year to year. Prerequisite: permission of instructor. Offered: A.

M E 537 Topics in Fluid Mechanics (3) Corlett, Emery, Gessner, Pratt, Riley Selected fluid mechanics research topics relevant to current advances in mechanical engineering practice. Topics selected vary with faculty and student interest, but are drawn predominantly from the general areas of energy conversion, energy management, and manufacturing processes. Offered: even years; A.

M E 538 Turbulent Boundary Layer Theory (3) Gessner, Riley Characteristic features of turbulent boundary layers; development of the turbulent boundary layer equations; equilibrium boundary layers; integral methods of solution based on power law and wallwake velocity profiles; methods of solution based on higher order constitutive equations; application to diffuser flows and free shear flows; new developments and physical models. Offered: odd years; A.

M E 541 Fatigue of Materials (3) Macro and micro aspects of fatigue of metals and fatigue mechanisms. Analytical methods for fatigue and life assessment in advanced materials. Offered: W.

M E 543, 544 Fluid Turbutence (3,3) Gessner, Riley Methods of characterizing fluid turbutence; spatial, temporal velocity correlations; energy spectra; probability concepts; isotropic, nonisotropic turbulence; hot-wire measurement techniques; phenomenological turbutence models; higher-order closure models; local equilibrium concepts; recent advances in modeling techniques. Prerequisite: 6 credits of graduate fluid mechanics or permission of instructor. Offered: jointly with CH E 543 and 544; even years; W,Sp.

M E 551 Elasticity I: Elastostatics (3) Elastostatics, including general formulations of 2D and 3D elastostatic problems (stress function method, complex variable method, displacement potential method). Eth Eshelby's method is emphasized and used to solve 2D and 3D problems with special application to composite materials. Offered: A.

M E 552 Elasticity II: Viscoelasticity and Elastodynamics (3) Elastodynamics includes wave propagation in linear elastic and linear viscoelastic solids where solids are monolithic materials, composite materials. Viscoelasticity part includes the stressstrain equations in terms of convolution integral, Fourier transform and Laplace transform modes. Simple and fundamental problems are solved by several techniques as demonstration. Offered: even years; W.

M E 553 Adhesion Mechanics (3) Tuttle Introduction to adhesive systems and test/evaluation techniques. Stress/strain analysis methods used with adhesive joints. Examples of practical applications. Prerequisite: graduate student status or permission of instructor. Offered: even years; Sp.

M E 555 Thermoelasticity (3) Emery Basic equations of thermoelasticity for isotropic elastic solids. Analysis of disks, cylinders, spheres, beams, and plates under steady temperature and sudden and slow heating and cooling. Introduction to thermoelastic stability. Prerequisite: 551 or permission of instructor. Offered: by request only; even years; W.

M E 556 Experimental Stress Analysis I (3) Tuttle Theory and practice of experimental techniques including brittle coatings, strain gages, thermocouples, LVDT's, and transducer design. Lecture and laboratory. Prerequisite: graduate standing or permission of instructor. Offered: A.

M E 557 Experimental Stress Analysis II (3) Tuttle Theory and practice of optical mechanics, including 2and 3-dimensional photoelasticity, birefringent coatings, moire, interferometry, and holography. Lecture and laboratory. Prerequisite: graduate standing or permission of instructor. Offered: W.

M E 559 Fracture Mechanics I (3) Kobayashi, Ramulu Applications of linear fracture mechanics to failure analysis and fracture control based on actual case studies. Fracture toughness and fatigue testing techniques, crack initiation and propagation fatigue life prediction of mechanical components subjected to environmental effects. Offered: W.

M E 560 Fracture Mechanics II (3) Kobayashi Theories of linear fracture mechanics, fracture dynamics, ductile fracture, stable crack growth and mixed mode fracture. Discussion of advanced topics from recent literature. Prerequisite: 559 or permission of instructor. Offered: even years; Sp.

M E 562 High Temperature Composites (3) Taya Thermo-mechanical behavior and environmental degradation of high temperature composites (metal, ceramic, and intermetallic matrix composites) and carbon/carbon composites addressed. Covers related topics such as processing (primary and secondary). Recommended: 450 or MSE 423. Offered: jointly with MSE 562; even years; Sp.

M E 564 Mechanical Engineering Analysis (3) Storti Application of mathematical methods to the description and analysis of systems in mechanical engineering. Analogies in heat transfer, fluid flow, stress distribution, dynamics, and feedback control. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: A.

M E 565 Mechanical Engineering Analysis (3) Storti Applications of vectors, matrices, and partial differential equations to mechanical engineering systems, including computational techniques and analogies. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: W.

M E 566 Introduction to Random Processes (3) Kosály, Reinhall Probability and random variables. Ensemble averaging, probability density function auto- and cross-correlation functions. Brownian motion, Poisson process. Ergodicity. Frequency domain analysis, auto- and cross-spectrum, transfer function. Fundamentals of digital spectral analysis. Applications in fluid mechanics, acoustics and vibrations. Offered: by request only; even years; A.

M E 571 Digital Control I (3) Berg, Garbini, Murray Discrete-time dynamic system analysis. Sampled data systems. Controller design via discrete-time equivalents to continuous-time transfer function; via root loci and Bode plots; and via state feedback and observers. Prerequisites: 575 or permission of instructor. Offered: W. M E 572 Digital Control II (3) Berg, Garbini, Murray Quantization effects. Parameter identification. LQR optimal control. Discrete-time stochastic processes. The Kalman filter. LQG optimal control. Sample rate selection and antialiasing filter design. Advanced topics in MIMO controller design. Prerequisite: 571 or permission of instructor. Offered: Sp.

M E 575 Linear System Theory (3) Berg Statespace representations. Solution of the state equation; state transition matrix. Controllability and observability. State feedback, observer design; the separation principle. Zeros and poles of multivariable systems; the Smith McMillan form. Systems invertibility. Prerequisite: graduate standing or permission of instructor. Offered: A.

M E 579 Fluid Power Systems (3) Jorgensen Design, analysis, and control of fluid power systems. Steady-state analysis of valves, actuators, and transmissions. Dynamic modeling, response, stability, and control analysis via linear element representation and computer simulation. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: W.

M E 584 Combustion in Airbreathing Propulsion (3) Fundamentals of gasdynamics, mixing, and thermodynamics applies to the analysis and design of gas turbine, ramjet and scramjet engine combustors, with treatment of computer simulation. Offered: even years; A.

M E 588 Dynamics and Vibrations (3) Reinhall, Storti Variational techniques, Hamilton's principle, Lagrange's equations applied to dynamics of particles and rigid bodies. Vibration analysis of multi-degree-offreedom and continuous systems. Prerequisite: graduate standing in engineering or permission of instructor. Offered: A.

M E 589, 590 Vibrations (3,3) Reinhall, Storti Study of systems with nonlinear damping and restoring forces excited by deterministic or random inputs. Applications in measurement, testing, and design of mechanical systems. Nonlinear systems are emphasized in 589 and random inputs in 590. Prerequisite: 588 or permission of instructor. Offered: even years; W.Sp.

M E 591 Control Systems Seminar ([0/1]-max. 1) Seminar on current topics in control systems analysis and design, presented by invited and on-campus speakers. Emphasis on control systems problems representative of all disciplines. Credit/no credit only. Offered: jointly with A A/CH E/E E 591.

M E 598 Topics in Research (1) Doctoral seminar. Credit/no credit only. Offered: AWSp.

M E 599 Special Projects (1-5, max. 9) Written report required. Prerequisite: permission of department Chairperson. Offered: AWSpS.

M E 600 Independent Study or Research (*) Written report required. Offered: AWSpS.

M E 700 Master's Thesis (*) Offered: AWSpS.

M E 800 Doctoral Dissertation (*) Offered: AWSpS.

Mechanical Engineering Industrial Engineering

MEIE 516 Advanced Topics in Engineering Statistics (3) Roberts, Zabinsky Topics are flexible and tailored to the needs of the particular student group involved. Topics usually considered: regression, correlation, experimental design, Monte Carlo techniques, Markov processes, extreme value theory, time-series analysis. Prerequisite: graduate standing or permission of instructor.

MEIE 599 Special Projects in Industrial Engineering (1-5, max. 9) Prerequisite: permission of industrial engineering program director. Offered: AWSp.

Technical Communication

Technical communicators use their language, visual, and analytical skills, as well as training and research in electronic and other media, to create and enhance communication in scientific and technical environments. The Department of Technical Communication prepares students to design, write, edit, and evaluate technical and scientific materials. The department also provides course work in the development of online support systems and in electronic information presentations. Other major interests of the department are the human-computer interface, hypermedia, communications technology, the rhetoric of technical discourse, publications and communications management, policy analyses of technological systems, and research and testing.

Undergraduate Program

Technical communication offers a Bachelor of Science in Technical Communication (B.S.T.C.). Entrance to the program requires at least 60 college credits, 38 of which must be distributed as follows: 10 approved mathematics or statistics credits, 15 approved Natural World credits, and 13 approved written and oral communications credits (including ENGR 231, which is 3 credits). The applicant must have an overall GPA of 3.00 in the 13 required written and oral communications credits.

The technical communication graduation requirements differ slightly from the general College of Engineering requirements in that the student must complete 180 credits, distributed according to the following minimum number of credits in each component: 50 credits in mathematics and the Natural World (with a minimum of 15 credits in mathematics and/or statistics and 20 credits in the Natural World), 13 credits of written and oral communications (including ENGR 231), 24 credits of engineering fundamentals, 35 credits of VLPA and I&S (with one in-depth sequence), 26 credits of required TC courses, 20 credits of approved electives that demonstrate a coherent and relevant area of specialization, and 12 credits of free electives.

Admissions Schedule

Students are admitted into the department only in autumn and spring quarters.

July 1 is the deadline for application for autumn quarter, and February 1 is the deadline for application for spring quarter.

Students should apply for admission to the program in the last quarter of their sophomore year or the first quarter of their junior year. Those applying for admission in their senior year will be expected to spend a minimum of four quarters in the degree program, which allows students time to grow, to develop the necessary skills, and to integrate the knowledge necessary to enter the profession.

For more information, contact the Undergraduate Adviser, 14 Loew.

Graduate Program

Technical communication offers a Master of Science (M.S.) in technical communication. A total of 45 credits is required for the M.S. degree, including 36 credits of course work and either 9 credits of thesis or a 9-credit combination of 5 credits of internship and 4 credits of report project. The 36 credits of course work include 17 credits of required TC courses: TC 501, Theoretical Dimensions of Technical Communication (4); TC 510, Infor-

mation Design (3); TC 520, Technical Communication Management (3); and TC 521, Seminar: Current Issues in Technical Communication (1); plus one of the following: TC 515, Designing Natural Language Interfaces. (3), TC 516, Research Methods in Technical Communication (3), or TC 517, Usability Testing (3); 12-15 credits of technical courses; and 4-7 credits of free electives.

In addition to meeting the requirements of the Graduate School, students admitted to the technical communication M.S. program must hold a baccalaureate degree in some branch of engineering or related science or in some other way present evidence of adequate preparation for graduate study in technical communication. Students with baccalaureate degrees in fields other than engineering or science may be admitted into the program if they have a minimum of three years of professional technical communication experience and undergraduate training relevant and applicable to the solution of problems in the field of technical communication. A limited number of prerequisite undergraduate courses may be required.

Research Facilities

Technical communication students enjoy access to a variety of computer systems and work directly with a state-of-the-art publications facility. They have the opportunity to participate in the development of new document formats, new insights into human information processing, and new publications practices and technologies. Technical communication also currently supports the following specialized laboratories: the Hypermedia Lab, Laboratory for Usability Testing and Evaluation (LUTE), and the Technical Japanese Lab.

For more information, contact the Graduate Adviser, 14 Loew.

Financial Aid

A limited number of teaching and research assistantships and scholarships are available for the financial support of graduate students in technical communication. More information and application forms can be obtained by contacting the department.

Correspondence and Information

Department of Technical Communication 14 Loew, FH-40

Faculty

Chairperson

Mark P. Haselkorn

Professors

Bereano, Philip L. * 1975; JD, 1965, Columbia University; technology assessment, alternative technology, public policy and social values regarding technology.

Butterfield, Earl C. * 1981, (Adjunct); PhD, 1963, George Peabody College; cognitive development, metacognition.

Haselkorn, Mark P. * 1985; PhD, 1977, University of Michigan; real-time information systems, man/machine interface, the computer in technical communication.

Mar, Brian W. * 1967, (Adjunct); PhD, 1958, University of Washington; system engineering, environmental management, interdisciplinary management.

Skeels, Dell R. 1949, (Emeritus); PhD, 1949, University of Washington; foiklore, myth, and foiktale.

White, Myron 1943, (Emeritus); PhD, 1958, University of Washington; technical editing and publications management.

Winn, William David * 1985, (Adjunct); PhD, 1972, Indiana University; educational technology, instructional theory, instructional design, visual information processing.

Associate Professors

Barfield, Woodrow * 1987, (Adjunct); PhD, 1986, Purdue University; interactive computer graphics, human factors in computer systems.

Coney, Mary B. * 1976; PhD, 1973, University of Washington; writing and theories of technical discourse.

Farkas, David K. * 1983; PhD; 1976, University of Minnesota; document design, information systems and design, hypermedia, advisory interface of computer systems.

Ramey, Judith A. * 1983; PhD, 1983, University of Texas (Austin); computer documentation, online documentation, user interface design and usability testing.

Spyridakis, Jan * 1982; PhD, 1986, University of Washington; comprehension and usability, research methods, document design.

Tsutsui, Michio * 1990; PhD, 1984, University of Illinois; JSL, technical Japanese, computer assisted language learning, linguistics.

Assistant Professors

Dailey, Daniel J. * 1982, (Adjunct Research); PhD, 1988, University of Washington; time series modeling of physical phenomena, optimization, distributed computing, networking.

Williams, Thomas R. 1976; PhD, 1988, University of Washington; cognitive science, visual media, document design.

Lecturers

Kato, Masashi 1988; MA, 1980, University of Washington; social research methods, Japanese curriculum design, JSL, computer-assisted language learning.

Mizuno, Sandra S. 1994; BS, 1987, University of Washington; Japanese curriculum design, Japanese as a second language.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

TC 300 Practice in Technical Reporting (1-2, max.
2) Application of the fundamentals of technical reporting to the specific reporting activity of students who are enrolled in a jointly designated engineering, scientific, or technical course. Offered: A.

TC 310 The Computer in Technical Communication (4) Functions of, and relationships among, computer applications, systems software, and computer hardware in technical publications and communication. Required of technical communication majors. Prerequisites: TC major or permission of instructor. Offered: A.

TC 400 Scientific and Technical Communication (3) Coney, Spyridakis Principles and practices of writing to communicate scientific and technical information to a variety of readers, including the expert, general scientific and technical reader, manager, and general public. Required of technical communication majors. Prerequisite: junior standing or permission of instructor. Offered: ASp.

TC 401 Style in Scientific and Technical Writing (3) Coney, Spyridakis Grammatical structures and stylistic strategies within specific professional contexts. Achieving clarity and conciseness through word choice and placement, using a variety of sentence structures for appropriate emphasis, handling details, establishing effective tone. Required of technical communication majors. Prerequisite: junior standing or permission of instructor. Offered: ASp.

TC 402 Scientific and Technical Editing (3) Williams Editorial responsibilities and practice in the communication of scientific and technical information; the editor's role both as editor and as supervisor of publication groups. Required of technical communication majors. Prerequisite: 401 or permission of instructor. Offered: W.

TC 403 Publication Project Management (3) *Plumb* Responsibilities and practice in managing publication projects in scientific and technical organizations. Project design, coordination, production, and evaluation, including planning, organizing, staffing, and directing. Required of technical communication majors. Prerequisite: TC major or permission of instructor; recommended: 415. Offered: W.

TC 406 Understanding Research In Technical Communication (3) Spyridakis Provides a basis for integrating knowledge acquired in other technical communication courses. Students examine the research literature of various disciplines that impact technical writing. Structured around theoretical and empirical literature as it relates to different textual issues in technical writing. Offered: Sp.

TC 407 Computer Documentation (3) Farkas, Ramey Writing documentation for computer hardware, software, and integrated systems. Examines kinds of documentation needed for computer products; introduces use of the computer in its own documentation and resulting innovations in the field. Prerequisites: 310 or equivalent, upper-division standing. Offered: ASp.

TC 408 Public Documents: Proposals, EIS's, Assessments (3) Bereano Analyzing special documents of public character: proposals, EISs, questionnaires, technology assessments. Understanding socio-political milieu in which they are planned, organized, written; the specialized audiences (e.g., agencies with their missions, guidelines, constituencies; citizen groups; commercial interests) they serve. Documents, the decision-making process. Prerequisite: upper-division standing or permission of instructor. Offered: W.

TC 409 Writing for Publication (3) Coney Writing for professional and trade periodicals in science, engineering, and technology; examination of the publication process, including the roles of author, editor, and reviewer; selecting the appropriate periodical; organizing and writing the article. Prerequisite: 400 and 401 or permission of instructor. Offered: W.

TC 411 Visual Media In Technical Communication (3) Williams . Use of visuals in print and electronic communication of technical matter. Topics include the human visual system, theories of perception and attention, effects of visuals on learning from text, competing theories of memory for visuals, use of visuals in conjunction with prose, and the impact of new visual display media. Offered: W.

TC 415: Production Editing (5) Ramey, Williams The editorial role in the preparation of text and visual materials for production. The editor's responsibilities and prerogatives as they relate to those of other professionals in the production phase of the publications field. Prerequisite: TC major or permission of the instructor. Offered: Sp.

TC 420 Introduction to Technology as a Social and Political Phenomenon (3/5) Bereano Introductory survey presenting some of the issues pertaining to technology and social change, technology and values. Emphasis on the social, political, and economic aspects of current problems that have important technological components. Prior technical background not required; readings from diverse sources. Offered: A.

TC 425 Technology Assessment Methods and Analysis I (3/5) Bereano In-depth analysis of the concept, practice, and methods of technology assessment (policy analysis that concentrates on social consequences of technological development): social, political, economic, and environmental impacts of new technologies; options for channeling these developments; and relevant decision-making institutions and processes. Offered: W.

316 COLLEGE OF ENGINEERING / TECHNICAL COMMUNICATION

TC 436 Design and Authoring of CAI (3) Winn Introduction to the design of computer-assisted-instructional programs. Types of learning, characteristics of effective instruction. Students design and produce CAI programs using authoring systems for computers. Offered: jointly with EDC&I 436; A.

TC 454 Alternative Technology (3) Bereano Exploration of the evolution of technological forms that are small-scaled, decentralized, emphasizing the public policy aspects of these developments. Topics include the relationship between alternative technologies and worker-controlled enterprises, community planning, the politics of technological change, the Third World, and decentralized development. Background in engineering or technical design is not required. Offered: A.

TC 455 User Interface Design (3) Barfield Design oriented to cover fundamentals of user interface design; models on human computer interaction, software psychology, input devices, usability, cognitive and perceptual aspects of human-computer interaction, advanced interface, and research methodologies are discussed. Prerequisites: ENGR 315 and 316 or equivalent, or permission of instructor. Offered: jointly with IND E 455; A.

TC 495 Professional Practice (3-5, max. 10) Williams Supervised internship in a publications organization approved by the faculty adviser. A minimum of one internship is required of students majoring in technical communication. Credit/no credit only. Prerequisites: TC major or permission of instructor. Offered: AWSpS.

TC 498 Special Topics (1-5, max. 10) Special topics in technical communication to be offered occasionally by permanent or visiting faculty members.

TC 499 Special Projects (2-5, max. 10) Individual undergraduate projects in technical communication. Prerequisite: permission of instructor. Offered: AWSpS.

Courses for Graduates Only

TC 501 Theoretical Dimension of Technical Communication (3) Coney Theories and research drawn from a variety of fields that inform such topics as the historical and social context of technical communication, the aims of technical discourse, readability, invention and audience, audience analysis, technical style, and graphics. Prerequisite: admission to an engineering master's program or permission of instructor. Offered: A.

TC 502 Empirical Traditions in Technical Communication (3) Williams, Spyridakis Introduction to the empirical traditions that inform research and practice in the field of technical communication. Topics include modes of empirical research, communications implications of differences between iconographic and orthographic media, and text and graphic factors affecting comprehension, retention, and performance. Prerequisite: graduate standing or permission of instructor. Offered: odd years; W.

TC 505 Computer-Assisted Communication (4) Ramey Introduction to the concepts of information theory; information management in the larger context of computerized publishing (both procedures and technologies internal to the publishing unit and electronic media for external dissemination of information). Prerequisite: graduate standing or permission of instructor. Offered: A.

TC 510 Information Design (3) Farkas Examination of the design principles and procedures underlying the creation of both print and electronic information presentations. Topics include: print vs. electronic media, designing for the page and screen, information topolo gies, and hypermedia. Seminar includes a design project. Prerequisite: 501 or permission of instructor.

TC 515 Designing Natural Language Interfaces (3) Haselkom Relationship between formal and natural languages. Application of this relationship to designing interface languages that allow users to access machine functionality using natural language. Prerequisite: upper-level course in logic, semantics, computer languages or permission of instructor.

TC 516 Research Methods In Technical Communication (3) Spyridakis Introduction to research methods in technical communication. Students examine the relationship between theory and research, hypothesis testing, experimental designs, modes of observation, sampling, validity, and data analysis and interpretation. Prerequisite: introductory statistics course. Offered: W.

TC 517 Usability Testing (3) Ramey Discusses the human-computer interface (HCI) as the communicative aspect of a computer system. Analyzes usability issues in HCI design, explores design-phase methods of predictability, and introduces evaluative methods of usability testing. Prerequisite: substantial experience with computers and graduate standing, or permission of instructor. Offered: W.

TC 520 Technical Communication Management (3) Emphasizes the role and function of communication as a key to understanding organizational frameworks and managerial practices. Traditional and innovative approaches to viewing and managing technical communication. Roles, responsibilities, impact of technology. Offered: Sp.

TC 521 Seminar: Current Issues in Technical Communication (1-2, max. 3) Presentations on current issues in technical communication. Credit/no credit only. Prerequisite: TC graduate student status or permission of instructor. Offered: ASp.

TC 525 Assessing Communications Technologles (3) Bereano Analysis of development, deployment of new communication technologies; emphasis on public policy issues they present (e.g., videotelephone, mobile telephoning, hypermedia, electronic message transfer, virtual reality). Impacts explored include: access, privacy, civil liberties; power of elites; changes in social organization. Prerequisite: 425 or other background in policy analysis, technology, and society. Offered: even years; Sp.

TC 530 Technical Japanese 1 (4) Kato, Tsutsui Focus on oral communication and reading. Students review and strengthen their basic knowledge of grammar and kanji and apply this to practical communication situations and technical reading. Lab work required for kanji building, grammar review, and oral drills. Japanese word-processing introduced. Prerequisite: JAPAN 213 or equivalent. Offered: A.

TC 531 Technical Japanese 2 (4) Kato, Tsutsui Focus on oral communication and reading. Additional vocabulary and kanji necessary for practical communication and technical reading are introduced. Lab work required for kanji building, grammar review, and oral drills. Prerequisite: 530. Offered: W.

TC 532 Technical Japanese 3 (4) Kato, Tsutsui Focus on oral communication and reading. Additional vocabulary and kanji necessary for practical communication and technical reading are introduced. The course also prepares students for internships in Japan. Lab work required for kanji building, grammar review, and oral drills. Prerequisite: 531. Offered: Sp.

TC 536 Advanced Technical Japanese 1 (4) Kato, Tsutsui Focuses on reading and oral/aural skills in technical Japanese. Develops advanced reading skills, technical vocabulary in the student's specialty, and skills for technical presentation, discussion, and presentation comprehension. Introduction of technical translation. Lab work is required for oral communication and vocabulary building. Prerequisite 532. Offered: A.

TC 537 Advanced Technical Japanese 2 (4) Kato, *Tsutsui* Focuses on reading and oral/aural skills in technical Japanese. Further development of advanced reading skills, technical vocabulary in the student's specialty, and skills for technical presentation, discussion, and presentation comprehension. Training in technical translation from Japanese to English. Lab work is required. Prerequisite: 536. Offered: W.

TC 598 Special Topics (1-5, max. 6) Prerequisite: permission of instructor.

TC 599 Special Projects (1-5) Written report required. Prerequisite: permission of graduate adviser or committee chair. Offered: AWSpS.

TC 600 Independent Study or Research (*) Written report required. Prerequisite: permission of committee chair. Offered: AWSpS.

TC 601 Internship (3-9, max. 9) Written report required. Prerequisite: permission of committee chair. Offered: AWSpS.

TC 700 Master's Thesis (*) Prerequisite: permission of thesis adviser. Offered: AWSpS.

COLLEGE OF FOREST RESOURCES 317

College of Forest Resources

Dean

David B. Thorud 102A Anderson

Associate Dean

Dale W. Cole 107B Anderson

Founded 1907, when professional forestry education was in its infancy, the College holds a position of national and international leadership in both instruction and research. Its location in one of the world's largest forest regions provides unique opportunities for field classes and research, actual management of forested lands, exposure to wood-based industries, and awareness of resource-use issues. Enrolled in the College are over two hundred undergraduate and approximately two hundred graduate students, taught by more than fifty faculty members. Thus, students enjoy small classes and close association with faculty, as well as the diversity and superior facilities of a large university.

College Facilities

The College occupies three buildings: Alfred H. Anderson Hall, the Hugo Winkenwerder Forest Sciences Laboratory, and Julius H. Bloedel Hall. In addition, the Center for Urban Horticulture occupies a building complex at Union Bay. Thus, the College has excellent areas and equipment for scientific laboratories, classrooms, seminar rooms, special collections, and administrative offices.

The Forest Resources Library, a branch of the University's Suzzallo Library, houses more than twenty-six thousand bound volumes and thirty-three thousand pamphlets, reports, and monographs. It also has an excellent collection of approximately twenty-five hundred periodicals and many indexes to current literature in forestry and supporting sciences. Under the nationwide Farmington Plan, sponsored by the Special Library Association, the Forest Resources Library has assumed responsibility for collecting foreign material published in the fields of forestry and pulp and paper technology, providing an unusual opportunity for academic research. The Center for Urban Horticulture also maintains a library. Its herbarium supplements forest resources students' fieldwork in dendrology. Containing representative plant material from all parts of the United States, the collection includes dried, mounted specimens of shrubs, hardwood trees, and conifers. Fruit specimens and a complete cone collection of American conifers are maintained apart from the mounted collection. Another herbarium, complete in range plants and maintained by the Department of Botany, is available for use by forest resources students.

The laboratory facilities of the College represent an extensive array of modern equipment for research. The many available research tools include optical equipment, electronic instrumentation for a wide variety of uses, gas chromatographs, spectrophotometers, and physical test equipment. Specific laboratories are designed to study soil chemistry and soil physics, hydrology, polymer chemistry, meteorology, tree physiology, genetics, wood and extractives chemistry, physics of fibrous composites, applied mechanics, wood process technology, pathology, entomology, recreation, horticultural physiology, and horticultural plant materials. The College computing facilities include a remote input-output connection with the main University computers, microcomputer systems dedicated to a specific research area, and a microcomputer student laboratory.

Office of Student Services

Assistant Dean for Student Services

Cherie Renfrow-Starry 116 Anderson

The Office of Student Services assists both undergraduate and graduate students in the College of Forest Resources in all aspects of advising, including interpretation of College and University requirements and assistance in course registration to meet graduation requirements. Faculty advisers are available to assist students in choosing elective courses which will help them build an appropriate academic background for their chosen professional specialty. A Mentor Program is also administered by the Office of Student Services and assists undergraduate students in establishing mentoring relationships with faculty, graduate students, alumni, and industry or agency representatives.

The Office of Student Services also operates a Professional Opportunities Program which assists students in obtaining summer employment while in school and permanent employment upon graduation. Summer work may be available through federal and state agencies and in the numerous private companies in with wood-using industry of the region. Although field experience is not required for graduation, students are strongly urged to seek summer employment relevant to their major and career goals. As in any applied technical field, practical experience is as important as academics in preparing for a professional career.

The College Scholarship and Financial Assistance Program is also housed within the Office of Student Services. Through the generous donations of alumni and friends, the College has established scholarships and loan programs to assist students in paying for their tuition. Scholarships, which typically pay the cost of instate tuition only, are awarded on the basis of academic merit. Students seeking information about financial aid offered outside the College should contact the Office of Student Financial Aid, 105 Schmitz. The Washington Pulp and Paper Foundation, Inc. provides scholarships for students enrolled in the pulp and paper science curriculum, with awards based on professional promise and scholastic achievement. The foundation is supported by companies of the pulp and paper industry and by supplier companies. Information about pulp and paper scholarships may be obtained from Professor William McKean, 344 Bloedel.

Institute of Forest Resources

Director

David B. Thorud 102A Anderson

Associate Director

Dale W. Cole 107B Anderson

The overall research program of the College is administered by the Institute of Forest Resources. Because of the size and complexity of this program, the institute assumes a broad scope of responsibility and provides vital support to the College administration, faculty, staff, and students: Major functions include administering all research projects funded by federal, state, and private agencies, monitoring the McIntire-Stennis research program, ensuring College compliance with federal reporting requirements, and producing College publications and special reports.

Institute staff coordinate and facilitate the submission of research proposals for the faculty with the University administration and numerous funding agencies. Students earn research and thesis credit toward advanced degrees by working on major forest resources problems supported by grants or contracts. Graduate and undergraduate employment related to research is arranged by the institute office.

Areas of current and future research include a broad array of topics including forest policy analysis, stand management, streamside and riparian zone management, forest ecosystem analysis, international trade in forest products, forest products marketing, forest biotechnology, wildlife science, urban horticulture, forestry engineering and hydrology, and pulp and paper the interests of individuals and groups in the region, but also to promote the scientific community at large. Research projects include studies by individual faculty, as well as interdisciplinary programs, which combine the interests of College faculty with those from other academic units of the University.

The College also collaborates with Cooperative Extension of Washington State University to undertake and promote continuing education for citizens of the state, particularly in the nonindustrial forestry area.

The Institute Publications Office provides a wide range of services in producing College research publications: technical editing, desktop publishing systems, format and layout design, computer graphics, printing/ publishing coordination, distribution, advertising, and sales. College publications are distributed to national and international institutions and libraries, as well as to forestry professionals, to organizations in the private sector, and to the general public.

Field Research Areas and Facilities

The College field facilities include two major forested areas covering more than four thousand acres, an arboretum, a reserve, and several cooperative research centers and stations. These lands offer a wide variety of terrestrial and aquatic characteristics favorable to a full range of scientific investigations. They also provide a general natural science laboratory for the many disciplines in the College specifically related to, or concerned with, the research and teaching of natural resources behavioral patterns and management

The Charles Lathrop Pack Demonstration Forest of approximately forty-two hundred acres, is located sixty-five miles south of the University, near Eatonville. This forested property is the focal point for on-theground academic work in forest management, resource science, and forest engineering, both at the undergraduate and graduate levels. Broad forest and soil diversity has led to extensive biological, management, and engineering research, much of which may be characterized as a "pioneering effort." A full-time resident staff manages this facility, harmonizing its demonstration objectives with academic and research objectives. Rustic; but comfortable, facilities which provide housing and support to academic and research programs also are used extensively for conferences both within and outside the University.

The Lee Memorial Forest, of approximately one hundred sixty acres, is located about twenty-two miles northeast of the University near Maltby. This forested property provides valuable academic and research opportunities near the campus. Characterized by forest types and soils common to western Washington lowlands, Lee Forest is used extensively for part-day trips and for research and demonstration projects especially useful in a land base where long-term study commitments are difficult to achieve.

The Allan H. Thompson Research Center and the Joe E. Monahan Findley Lake Reserve and Research Area in the Cedar River watershed are utilized by the College in cooperation with the water department of Seattle for studies in forest hydrology and mineral cycling in the forest ecosystem.

318 COLLEGE OF FOREST RESOURCES

The Washington Park Arboretum, a two-hundred-acre collection of trees and shrubs growing in a naturalistic setting, is only a fifteen-minute walk from the University campus. Managed and operated by the Center for Urban Horticulture, under an agreement with the City of Seattle Department of Parks and Recreation, the Arboreturn contains some fifty-two hundred different kinds of woody plants that are available for research and academic study. The Arboretum was established in 1934 and many of its original specimens are now approaching maturity. Classes in botany, dendrology, horticulture, and landscape architecture make use of the collections, while the grounds are used for studies in soil science, ecology, and various research projects, including many independent student projects. The Arboretum also serves as an important public service area to the University, offering various formal and informal classes for the general public and, in addition, serving the community as a public park and as open space.

The Union Bay facility, a fifty-five-acre tract adjacent to Lake Washington and the main campus, is devoted to research and teaching in the Center for Urban Horticulture. It includes a research nursery area, education collections, and a forty-acre naturalized shoreline and upland area.

Forest Management and Engineering Division

Chairperson

Gerard F. Schreuder 296 Bloedel

Courses for which the Forest Management and Engineering Division is responsible deal with the management of forest resources and its many multiple uses, including timber, water, wildlife, and recreation. Forest land uses range from bioreserves, wilderness, and national parks to watershed and tree farms. Courses in the forest engineering curriculum emphasize the scientific and engineering design principles that will enable graduates to find technical solutions to problems facing forest resources, forestry-related enterprises, and rural communities. Course subjects include silviculture, forest protection, economics, business, sociology, computer applications, forest policy, hydrology, measurements, and engineering.

The Division of Forest Management and Engineering offers two undergraduate curricula leading to the Bachelor of Science in Forest Resources: forest resources management and forest engineering, which is offered jointly with the College of Engineering. Forest resources management emphasizes the management and multiple-use of forest resources and forest land. The forest engineering curriculum focuses on engineering design for facilitating forest and forested watershed management, protection, harvest, and transportation to meet the needs and constraints of society. It is dedicated to the advancement of engineering, applicable to forest resources, forest-related enterprises, and rural communities.

Graduate programs leading to the Master of Science and Doctor of Philosophy degrees include social sciences, forest economics, silviculture and forest protection, and quantitative resources management. Practice-oriented degrees leading to the Master of Forest Resources are also available.

Ecosystem Science and Conservation Division

Chairperson Robert L. Edmonds

264 Bloedel

Courses included in the Ecosystem Science and Conservation Division cover basic and applied subject matters in forest biology. Subjects covered include forest plant and animal ecology, wildlife biology and conservation, dendrology and autecology, soils and forest ecosystem analysis.

The Division of Ecosystem Science and Conservation offers two undergraduate curricula leading to the Bachelor of Science in Forest Resources: wildlife science and conservation of wildland resources. Wildlife science focuses on the application of ecological knowledge to wildlife biology and management, with the intent of preparing students for graduate education in wildlife science. The conservation of wildland resources curriculum provides a broad education in forest-related natural resources. It emphasizes vegetation and animal components of forest ecosystems and how they interact with environmental and social components.

Graduate programs leading to the Master of Science and Doctor of Philosophy degrees include ecosystem analysis (ecology, soils and mineral cycling, tree physiology and genetics) and wildlife science. A practiceoriented Master of Forest Resources in natural ecosystems management is also available.

Paper Science and Engineering Division

Chairperson

Bjorn F. Hrutfiord 332 Bloedel

Courses for which the Paper Science and Engineering Division is responsible include those in pulp and paper processing, pulping chemistry, wood and fiber utilization and their properties, and wood chemistry.

The Division of Paper Science and Engineering administers an undergraduate curriculum in the area of pulp and paper science as well as a graduate curriculum leading to the Master of Science and Doctor of Philosophy in the area of pulp and paper science and engineering.

Urban Horticulture Division

Chairperson

Clement W. Hamilton 119 Merrill

The Urban Horticulture Division is concerned with the selection, management, and role of plants and of ecosystems in urban environments. Faculty members participate in research, education, and public service programs and teach students in the undergraduate urban forestry curriculum as well as in the graduate programs in urban horticulture.

The faculty offers expertise in horticultural taxonomy and plant materials, landscape plant science and management, urban ecology and restoration biology, continuing education, and public garden curation and management. Research facilities of the Center for Urban Horticulture include greenhouses, laboratories, an outdoor growing area and research arboretum at Union Bay, and the two-hundred-acre Washington Park Arboretum, a world-famous collection of mature woody plants.

Undergraduate Program

In addition to the University's general admission requirements, students who plan to enter the College of Forest Resources should have completed Algebra III (Intermediate), trigonometry, and at least one unit each of biological and physical science.

The College of Forest Resources offers six undergraduate curricula leading to a Bachelor of Science in Forest Resources degree: forest resources management, wildlife science, conservation of wildland resources, forest engineering, pulp and paper science, and urban forestry.

The first two years of study emphasize general preparation, followed by an upper-division professional program. Each curriculum contains a number of elective credits selected at the student's discretion. Students are encouraged to take a number of these credits outside the College to broaden their preparation.

In addition to University regulations concerning requirements and grading, College regulations state that no required course may be taken on a satisfactory/not satisfactory basis. Some classes include field trips, laboratory supplies, or material duplication at extra expense to the students.

Students interested in forest resources management should note that senior-level course work may be taken only after completion of the required field camp at Pack Forest.

Students planning to enter the College from community colleges or from other universities should check with their advisers to ensure their prior programs of study include the proper prerequisites.

Student advising is the joint responsibility of the College's Office of Student Services, 116 Anderson, and the divisions. Student files are centrally located in the Office of Student Services.

Pack Forest Residential Field Classes

Students enrolled in the forest resources management and forest engineering curricula must attend the Pack Forest program. This program is typically completed during the spring of the junior year for forest resources management students and during the spring of the senior year for forest engineering students. Courses are conducted as part of the field residential program at the Charles Lathrop Pack Demonstration Forest near LaGrande, sixty-five miles from Seattle.

Students taking course work at Pack Forest must live at the field residential station, paying room-and-board charges in addition to regular tuition. Information is available from the Office of Student Services, 116 Anderson.

Accreditation

The curricula in forest resources management and forest engineering are accredited by the Society of American Foresters (SAF). SAF is the specialized accrediting body recognized by the Council on Postsecondary Education and the U.S. Department of Education as the accrediting agency for forestry in the United States. Other curricula include electives that may be used toward qualifications for SAF and the Forester rating for the United States Civil Service. Students should consult with advisers in planning their schedules to include the specific class requirements for SAF and civil service qualifications.

Bachelor of Science in Forest Resources Degree

For information concerning the general education, lower division, and upper division (major) requirements, see a College adviser in the Forest Resources Student Services Office, 116 Anderson.

Conservation of Wildland Resources Undergraduate Curriculum

General Education Requirements: English Composition—5 credits from the University list (ENGL 131 Composition: Exposition is preferred); writing intensive courses—7 credits minimum to include ESC 495 Senior Project (5 credits) and 2 credits of additional writing-intensive course work; Visual, Literary, & Performing Arts—10 credits to include SPCH 220 Introduction to Public Speaking (5) or other College-approved course from University VLPA list and 5 additional credits from University VLPA list; and sadditional credits from University VLPA list; and sadditional credits from University VLPA list; and so additional credits to include ECON 200 Introduction to Microeconomics (5); POL S 202 Introduction to American Politics (5); FRM 370 Social Functions of Forest Ecosystems (3), and FRM 470 Forest Policy and Law (5) or other College-approved courses from University I&S list.

Lower-Division Requirements: CFR 101 Forests and Society (5 credits); Q SCI 291, 292 Calculus with Analytical Geometry (4, 4) or MATH 124, 125 (5, 5); Q SCI 340 Application of Computers to Natural Resources Problems (2); Q SCI 381 Introduction to Probability and Statistics (5); CHEM 120 Introduction to General Chemistry (5); CHEM 120 Introduction to Organic and Biochemistry (5); GEOL 101 Introduction to Geological Sciences (5); BIOL 101 General Biology (5); BIOL 102 General Biology (5); Free Electives (25).

Upper-Division (Major) Requirements: ESC 202 Global Changes and Forest Biology (5 credits); ESC 210 Introductory Soils (4); ESC 221 Dendrology and Autecology (6); ESC 322 Forest Ecosystems (3); ESC 350 Wildlife Biology and Conservation (4); Restricted/Directed Electives (48).

Minor

Minor Requirements: Minimum 35 credits to include CFR 101 Forests and Society (5 credits); ESC 200 Trees in Our Environment (5); ESC 210 Introductory Soils (4); ESC 320 Natural Resource Issues: Old Growth and Forest Management (3); ESC 322 Forest Ecosystems (3); FRM 324 Forest Protection (4); FRM 328 Forestry-Fisheries Interactions (4); ESC 350 Wildlife Biology and Conservation. Recommended, optional courses include ESC 221 Dendrology and Autecology (6); ESC 411 Forest Soil Microbiology (4); ESC 421 Dendrochronology (4); ESC 441 Landscape Ecology (3).

Forest Engineering Undergraduate Curriculum

General Education Requirements: English Composition—5 credits from the University list (ENGL 131 Composition: Exposition is preferred); writing intensive courses—7 credits minimum to include ENGR 231 Introduction to Technical Writing (3 credits) and ENGR 333 Advanced Technical Writing (4) or other writing courses as approved by the College of Engineering and the College of Forest Resources; 30 credits total from Visual, Literary, & Performing Arts list and from Individuals & Societies list with a minimum of 10 credits from each of these two Areas of Knowledge.

Lower-Division Requirements: CHEM 140, 141 General Chemistry and Laboratory (4 credits, 1 credit); CHEM 150, 151 General Chemistry and Laboratory (4,

1); MATH 124, 125, 126 Calculus With Analytic Geometry (5, 5, 5); MATH 307 Differential Equations (3); MATH 308 Linear Algebra (3); PHYS 121/131 Mechanics (4/1); PHYS 122/132 Electromagnetism and Oscillatory Motion (4/1); PHYS 123/133 Waves (4/1); CSE/ ENGR 142 Computer Programming (4); ENGR 123 Engineering Graphics (4); ENGR 210 Engineering Statics (4); ENGR 220 Mechanics of Materials (4); ENGR 230 Kinematics and Dynamics (4); ENGR 250 Engineering Economics (4); ENGR 315 Probability and Statistics (3).

Upper-Division (Major) Requirements: F E 330 Forest Engineering in Society (4 credits); F E 332 Ecological Basis of Forest Engineering (4); F E 341 Timber Harvesting (5); F E 340 Plane Surveying (4); F E 346 Design of Low Volume Roads (5); F E 368 Forest Engineering Measurement (4); F E 425 Wildland Hydrology (4); F E 444 Introduction to Forest Engineering Design (4); F E 450 Advanced Forest Engineering Design (15); F E 470 Processing Wood (3); F E 480 Silvicultural Engineering Systems (3); CIVE 342 Fluid Mechanics (4); CIVE 366 Soil Mechanics (4); Restricted/Directed Forest Engineering Electives(14).

Forest Resources Management Undergraduate Curriculum

General Education Requirements: English Composition—5 credits from the University list (ENGL 131 Composition: Exposition is preferred); writing intensive courses—7 credits minimum to include FRM 496 Forest Management Case Studies (5 credits) and 2 credits of additional writing-intensive course work; Visual, Literary, & Performing Arts—10 credits to include SPCH 220 Introduction to Public Speaking (5) or other College-approved course from University VLPA list; and viduals & Societies—20 credits to include ECON 200 Introduction to Microeconomics (5); ECON 201 Introduction to Macroeconomics (5); FOL S 202 Introduction to American Politics (5); FNM 370 Social Functions of Forest Ecosystems (3), and FRM 470 Forest Policy and Law (5) or other College-approved courses from University I&S list.

Lower-Division Requirements: CFR 101 Forest and Society (5 credits); ESC 210 Introductory Soils (4); ESC 221 Dendrology and Autecology (6); MATH 124 Calculus with Analytical Geometry (5); CFR 250 Introduction to Remote Sensing in Forest Resources with Geographic Information Systems Applications (5); Q SCI 381 Introduction to Probability and Statistics (5); CHEM 120 Introduction to General Chemistry (5); CHEM 220 Introduction to Organic and Blochemistry (5); GEOL 101 Introduction to Geological Sciences (5); BOT 113 Plant Identification (5); BIOL 101 General Biology (5); BIOL 102 General Biology (5); Free Electives (10).

Upper-Division (Major) Requirements: FRM 270 Forest Land Use Planning (3), FRM 323 Sliviculture (5 credits); FRM 324 Forest Protection (5); FRM 360 Forest Management and Economics I (5); FRM 362 Field Measurements (5); FRM 481 Management of Wildland Recreation and Amenities (3); F E 423 Watershed Analysis (4); F E 345 Forest Surveying and Transportation (5); ESC 322 Forest Ecosystems (3); ESC 350 Wildle Biology and Conservation (4); Restricted Business/ Management Electives (15); Free Electives (11).

Minor

Minor Requirements: Minimum 35 credits to include Biology—minimum 9 credits from: ESC 210 Introductory Soils (4), ESC 322 Forest Ecosystems (3), FRM 328 Forestry-Fisheries Interactions (4), ESC 350 Wildlife Biology and Conservation (4); Social Sciences—minimum 9 credits from: FRM 270 Forest Land Use Planning (3), FRM 370 Social Functions of Forest Ecosystems (3), FRM 370 Social Functions of Forest Ecosystems (3), FRM 470 Forest Policy and Law (5), FRM 360 Forest Management and Economics (4), FRM 421 Fundamentals of Business from a Forest Product Perspective (3), FRM 422 Marketing of Forest Products (3), FRM 423 International Marketing of Forest Products (3); (3); Forest Management—minimum 9 credits from: FRM 100 Introduction to Forest Resources Management (5), CFR 101 Forests and Society (5), CFR 250 Introduction to Remote Sensing in Forest Resources with Geographic Information Systems Applications (5), FRM 323 Silviculture (5), FRM 362 Field Measurements (5), FRM 481 Management of Wildland Resources and Amenities (3), FRM 377 Environmental Impact Assessment (3), FRM 425 Ecosystem Management (3), F E 423 Advanced Watershed Design (4); *Electives*—minimum 8 credits from any FRM course at the 300 level or above.

Pulp and Paper Science Undergraduate Curriculum

General Education Requirements: English Composition—5 credits from the University list (ENGL 131 Composition: Exposition is preferred); writing intensive courses—7 credits minimum; Visual, Literary, & Performing Arts—10 credits from University VLPA list; Individuals & Societies—10 credits to include ECON 200 Introduction to Microeconomics (5 credits) or other College-approved course from University I&S list and 5 additional credits from University I&S list.

Lower-Division Requirements: CHEM 140, 141 General Chemistry and Laboratory (4 credits, 1 credit); CHEM 150, 151 General Chemistry and Laboratory (4,1); CHEM 160, 161 General Chemistry and Laboratory (4,1); CHEM 237 Organic Chemistry (4); CHEM 238 Organic Chemistry (4); MATH 124, 125, 126 Calculus With Analytic Geometry (5, 5, 5); MATH 307 Differential Equations (3); Q SCI 381 Introduction to Proba ability and Statistics (5); PHYS 121/131 Mechanics (4/ 1); PHYS 122/132 Electromagnetism and Oscillatory Motion (4/1); PHYS 123/133 Waves (4/1); CSE/ENGR 142 Computer Programming (4); ENGR 260 Thermodynamics (4); PSE 302 Introduction to Pulp and Paper Technology (4); PSE 306 Pulp and Paper Processes Analysis (3).

Upper-Division (Major) Requirements: CHEM 350 Elementary Physical Chemistry (3 credits); CHEM 351 Elementary Physical Chemistry (3); CH E 310 Material and Energy Balances (4); CH E 330 Transport Pro-cesses I (4); CH E 340 Transport Processes II (4); CH E 436 Chemical Engineering Laboratory I (3); PSE 400 Wood and Fiber Structure (5); PSE 402 Paper Proper-ties and Additives (3) or PSE 403 Fibrous Structure and Rheology I (3); PSE 406 Wood Chemistry I (3); PSE 407 Wood Chemistry I Laboratory (2); PSE 476 Pulping and Bleaching Processes (3); PSE 477 Papermaking Processes (3); PSE 478 Pulp and Paper Laboratory I (2); PSE 479 Pulp and Paper Laboratory II (2); PSE 480 Pulp and Paper Process Control (3); PSE 481 Pulp and Paper Unit Operations (3); PSE 482 Pulp and Paper Process Design and Economics (3); PSE 485- Undergraduate Research-taken three times-(1-1-1); PSE 483 Paper Coating and Converting (3) or PSE 488 Polymer Chemistry (3); PSE 497 Pulp and Paper Internship I (1). Restricted/Directed Electives (11).

Minor

See department for requirements.

Urban Forestry Undergraduate Curriculum

General Education Requirements: English Composition—5 credits from the University list (ENGL 131 Composition: Exposition is preferred); writing intensive courses—7 credits minimum to include UHF 495 Senior Project (5 credits) and 2 credits of additional writing-intensive course work; Visual, Literary, & Performing Arts—10 credits to include SPCH 220 Introduction to Public Speaking (5) or other College-approved course from University VLPA list; Individuals & Societies—10 credits to include ECON 200 Introduction to Microeconomics (5) and POL S 202 Introduction to American Politics (5) or other College-approved course from University I&S list.

Lówer-Division Requirements: Q SCI 291, 292 Calculus with Analytical Geometry (4, 4 credits) or MATH 124, 125 (5, 5); Q SCI 340 Application of Computers to Natural Resources Problems (2) or CAUP 270 Computers in Environmental Design and Planning (3); Q SCI 381 Introduction to Probability and Statistics (5); CHEM 120 Introduction to General Chemistry (5); CHEM 220 Introduction to Organic and Biochemistry (5); PHYS 114 General Physics (4); PHYS 117 General Physics Laboratory (1); GEOL 101 Introduction to Geological Sciences (5); BOT 113 Plant Identification (5); BIOL 101 General Biology (5); BIOL 102 General Biology (5); Free Electives (10).

Upper-Division (Major) Requirements: UHF 331 Landscape Plant Recognition (3 credits); UHF 431 Landscape Plant Selection (5); UHF 445 Landscape Plant Management (5); UHF 449 Urban Forestry Seminar (3); UHF 451 Urban Plant Protection (4); UHF 471 Ecological Concepts and Urban Ecosystems (3); ESC 210 Introductory Soils (4); ESC 311 Soils and Land Use (3); FRM 471 Forest Planning and Project Management (4); BOT 371 Elementary Plant Physiology (3); BOT 354 Introduction to Plant Ecology (5); L ARC 322 Introduction to Planting Design (3); L ARC 341 Site Planning (3); Restricted/Directed Electives (22); Free Electives (20-23).

Minor

See department for requirements.

Wildlife Science Undergraduate Curriculum

General Education Requirements: English Composition—5 credits from the University list (ENGL 131 Composition: Exposition is preferred); writing intensive courses—8 credits minimum to include ESC 494 Wildlife Senior Project Proposal (3 credits) and ESC 496 Wildlife Senior ThesIs (5); Visual, Literary, & Performing Arts—10 credits to include SPCH 220 Introduction to Public Speaking (5) or other College-approved course from University VLPA list and 5 additional credits from University VLPA list; Individuals & Societies—10 credits minimum to include ECON 200 Introduction to Microeconomics (5) or other College-approved course from University I&S list and 5 additional credits from University I&S list.

Lower-Division Requirements: ESC 101 Introduction to Wildlife Science (1 credit); ESC 210 Introductory Soils (4); ESC 221 Dendrology and Autecology (6); Q SCI 291, 292 Calculus with Analytical Geometry (4, 4) or MATH 124, 125 (5, 5); Q SCI 340 Application of Computers to Natural Resources Problems (2); Q SCI 381 Introduction to Probability and Statistics (5); CHEM 120 Introduction to General Chemistry (5); CHEM 220 Introduction to Organic and Biochemistry (5); GENET 371 Introductory Genetics (5) or College-approved substitute; BOT 113 Plant Identification (5); BIOL 101 General Biology (5); BIOL 102 General Biology (5); Free Electives (10).

Upper-Division (Major) Requirements: ESC 322 Forest Ecosystems (3 credits); ESC 326 Wildlife Habitat and Silviculture (5); FRM 370 Social Functions of Forest Ecosystems (3); ESC 350 Wildlife Biology and Conservation (4); ESC 351 Wildlife Research Techniques (3); ESC 450 Wildlife Ecology and Conservation (5); ESC 455 Wildlife Seminar—taken two times—(1,1); Q SCI 477 Quantitative Assessment of Wildlife Populations (5); Q SCI 482, 483 Statistical Inference (5, 5); Restricted/Directed Electives (39-41).

Minor

Minor Requirements: Minimum 35 credits to include ESC 101 Introduction to Wildlife Science (1), ESC 322 Forest Ecosystems (3), ESC 326 Wildlife Habitat and Silviculture (5), ESC 350 Wildlife Biology and Conservation (4), ESC 450 Wildlife Ecology and Conservation (5), ESC 451 Biology and Conservation of Birds (3), ESC 452 Field Ornithology (3), ESC 453 Biology and Conservation of Mammals (5), ESC 454 Aquatic Wildlife Ecology (3), ESC 455 Wildlife Seminar (1). Optional: ESC 459 Wildlife Conservation in Northwest Ecosystems (2).

Graduate Programs

Dale W. Cole, Graduate Program Coordinator

Graduate programs in forest resources are designed to accommodate a wide range of education and career objectives. A student may concentrate on development of advanced professional skills and knowledge or on exploration of sciences basic to forest resources.

Graduate programs offered in forest resources lead to degrees of Master of Forest Resources, Master of Science, and Doctor of Philosophy. Graduate students may center their graduate study in one of the special fields of study within the College divisions.

Master of Forest Resources Degree

The Master of Forest Resources degree is a professional degree offered for the student who desires to acquire a greater competence in a specific subject area of forest resources. This is a nonthesis option open to professionals who are returning to study and obtain expertise in areas such as: natural ecosystems analysis, silviculture, and urban horticulture. Interested persons should contact the graduate program coordinator to determine eligibility for this degree program.

Master of Science Degree

The Master of Science degree is a learned degree, often precursory to the Doctor of Philosophy degree. Some program areas allow nonthesis work while most programs of study require the completion of a thesis. The nonthesis program requires at least 6 credits of research and the thesis program requires a minimum of 9 credits of research. A foreign language is not required. Students must complete a set of core courses prescribed for the major area of study.

Doctor of Philosophy Degree

The Doctor of Philosophy degree may be preceded by education in either forest resources or another discipline. The program comprises an appropriate selection of core courses in forest resources and in the related natural and social sciences. The program requires passage of the General Examination in forest resources, the necessary research, and completion of the dissertation. A minimum of two years of residence at the UW also is required. The time necessary to complete the degree requirements depends upon the thoroughness and applicability of prior course work. Reading proficiency in one foreign language may be required by the Supervisory Committee when the language is essential to the student's program of study.

Mid-Career Education

The College has established a certificate program in silviculture to provide mid-career education for forestry professionals. Participants in the mid-career program take courses to prepare themselves for new or broader responsibilities in their current career. In this certificate program, courses can be taught in a more flexible time arrangement to meet the specific career and scheduling needs of participants. Interested forestry professionals should contact the College of Forest Resources Continuing Education Office.

Graduate Areas

Graduate education is offered through the academic divisions of Forest Management and Engineering, Ecosystem Science and Conservation, Paper Science and Engineering, and Urban Horticulture. Program areas of study and emphasis areas include: pulp and paper science (pulp and paper engineering, wood chemistry, polymer and fiber science); forest engineering; forest products and marketing; forest economics; forest ecosystem analysis (forest ecosystems, forest ecology, forest genetics, forest soils/mineral cycling, stream side/riparian management, tree physiology); quantitative resources management (biometry, quantitative management, aerial photogrammetry/remote sensing); silviculture and forest protection (silviculture, forest entomology, fire management, forest pathology); social sciences (forest land use planning, forest policy and law, environmental interpretation and outdoor recreation, forest sociology and leisure studies); wildlife science; urban horticulture (environmental horticulture, horticultural taxonomy, horticultural physiology, wetlands management, urban forestry).

In all areas of study, the College maintains a close working relationship with faculties of other colleges and schools throughout the University, including service on graduate committees. Faculty advisers assist graduate students in determining those courses in other departments on campus which will lend to students' intended areas of expertise.

Admission Qualifications, Background

A student who intends to work toward an advanced degree must apply for admission to the Graduate School and must meet the requirements set forth by the Graduate School and by the College of Forest Resources.

Basic requirements for admission to the Graduate School are a baccalaureate degree from an institution of recognized standing, a minimum GPA of 3.00 in the junior and senior years of college work, approval of the Dean of the Graduate School, and approval of the College.

In addition to requesting admission forms from the Graduate Admissions Office, an applicant should obtain supplemental admission and reference forms from the College of Forest Resources. The Graduate Record Examination general test is required, and test scores must be submitted to the College by the applicant.

Upon enrollment, the student is assigned a graduate program committee that is responsible for guidance in the early stages of the graduate program, to be followed by more formal committees as the student's program develops.

Applicants for the College are considered quarterly within the enrollment limitations for the College and the available faculty and workload limitations within the specific program area selected. Students with both undergraduate forestry degrees and other related fields are considered, although a prior forestry degree is normally expected of applicants for the professional Master of Forest Resources degree.

Financial Aid

The College has available a limited number of appointments as research assistants. Teaching and research responsibilities allow time to pursue a full academic load. Fellowships and scholarships without teaching or research obligations are also available. Requests for financial aid should be submitted by February 1 for priority consideration for the following academic year.

Correspondence and Information

Office of Student Services 116 Anderson, AR-10

Research Centers

Center for Quantitative Science in Forestry, Fisheries, and Wildlife

Interim Director

John R. Skalski

The Center for Quantitative Science in Forestry, Fisheries, and Wildlife (CQS) is an intercollege academic unit

COLLEGE OF FOREST RESOURCES / FACULTY 321

sponsored by the College of Forest Resources and the School of Fisheries of the College of Ocean and Fishery Sciences. The center offers a comprehensive program of study in mathematics and statistical methods as applied to problems in ecology and natural resource management. The faculty of the center include members of the College of Forest Resources and the School of Fisheries, and many are also adjunct members of the departments of Biostatistics and Statistics.

Center for International Trade in Forest Products

Director

Bruce R. Lippke

The Center for International Trade in Forest Products (CINTRAFOR) was established in 1984 to respond to opportunities and problems relating to the export and import of wood products. Through programs of research, education, and outreach, CINTRAFOR works to improve knowledge of export trade and to train professionals competent in the analysis and interpretation of trade problems, issues, and policies. The center serves as a focal point for dissemination of information on world trade in forest products by means of seminars, conferences, workshops, and publications.

CINTRAFOR activities involve the cooperative effort of the forest products industry, state and federal organizations, and other organizations at the University such as the School of Business Administration and the Northwest Policy Center. The research undertaken by CINTRAFOR includes country market analyses, global competitive models, new product and market opportunities, the linkages between global forest products trade and environmental impacts and socioeconomic stability, and policy impact analyses.

Students interested in participating in specific research activities sponsored by CINTRAFOR may enroll for study in graduate programs in one of the College's four academic divisions or in programs offered by other academic divisions on campus.

Center for Streamside Studies

Director

Robert J. Naiman

The Center for Streamside Studies (CSS) was established in 1887 as a joint effort of the College of Forest Resources, the College of Ocean and Fishery Sciences, and the Center for Quantitative Science in Forestry, Fisheries, and Wildlife. CSS provides information for the resolution of management issues related to the production and protection of forest, fish, wildlife, and water resources associated with the streams and rivers in the Pacific Northwest.

The center conducts research activities related to the understanding of ecological and physical processes and their relation to governmental regulations. Projects are solution-oriented, centering around biological, physical, and social aspects of management issues. Cooperative projects are undertaken with state and federal agencies, tribes, private industry, and national and international research institutions, and involve faculty and students of the College of Forest Resources, the College of Ocean and Fishery Sciences, and the Center for Quantitative Science in Forestry, Fisheries, and Wildlife.

To provide interdisciplinary training necessary to deal with the management of interacting resources, CSS conducts symposia, workshops, conferences, and seminar series as forums for resource conflict discussion and resolution. Students interested in participating in specific research activities sponsored by CSS may enroll for study in graduate programs in one of the College of Forest Resources' four academic divisions or in programs offered by other academic divisions on campus.

Olympic Natural Resources Center

Interim Director

Dale W. Cole

The mission of the Olympic Natural Resources Center (ONRC) is to conduct research and education on natural resource management practices which integrate the production of commodities with the preservation and enhancement of ecological values. Created by the Washington State Legislature in 1989, the center conducts biological, physical, economic, and social science research in both terrestrial and coastal/marine systems. The center's programs span a spectrum from developing new knowledge through basic and applied research to education and outreach.

Much of the center's work is conducted cooperatively with other research institutions, state and federal agencies, resource owners, and interest groups. The center is developing facilities at Forks, Washington on the Olympic Peninsula, and the natural resources of the area will be a major focus of the work of the center. The center is jointly administered by the College of Forest Resources and the College of Ocean and Fishery Sciences.

Dean

David B. Thorud

Associate Dean

Dale W. Cole

Professors

Adams, Darius M. * 1984, (Affiliate); PhD, 1973, University of California (Berkeley); modeling of trade patterns, international forest products, marketing.

Agee, James K. * 1982; PhD, 1973, University of California (Berkeley); management of natural systems, forest ecology, fire ecology.

Allan, G. Graham * 1966; PhD, 1956, University of Glasgow (UK); fiber and polymer science, creativity and innovation.

Ammirati, Joseph F. * 1979, (Adjunct); PhD, 1972, University of Michigan; mycology, taxonomy and ecology of fungi.

Bare, B. Bruce * 1969; PhD, 1969, Purdue University; harvest scheduling, biometry, forest land management, taxation, finance, management science.

Bethel, James S. * 1962, (Emeritus); PhD, 1947, Duke University; wood science, wood energy, international forestry.

Bledsoe, Caroline S. * 1973, (Affiliate); PhD, 1970, Colorado State University; forest tree nutrition, physiology of mycorrhizal tree roots, nitrogen cycling in forest ecosystems.

Bradley, Gordon A. * 1972; PhD, 1986, University of Michigan; forest land use planning, recreation site planning and design.

Briggs, David G. * 1973; PhD, 1980, University of Washington; operations research in forest products industries.

Brubaker, Linda B. * 1973; PhD, 1973, University of Michigan; dendrochronology, forest ecology, quaternary paleocology. Bryant, Benjamin S. * 1949, (Emeritus); DF, 1951, Yale University; wood utilization technology, wood gluing, plywood and board technology.

Cole, Dale W. * 1958; PhD, 1963, University of Washington; mineral cycling in forest ecosystems, forest soils.

Dowdle, Barney * 1962; PhD, 1962, Yale University; markets for timber and forest products, public forest land management.

Edmonds, Robert L. * 1973; PhD, 1971, University of Washington; forest soil microbiology, biology of forest diseases, aerobiology.

Edwards, John S. * 1967, (Adjunct); PhD, 1960, Cambridge University (UK); arthropod neurobiology, insect physiology and development, tundra and alpine biology.

Erickson, Harvey D. 1947, (Emeritus); PhD, 1937, University of Minnesota; wood science and technology.

Ford, E. David * 1985; PhD, 1968, University College, London (UK); spacial processes in ecology, forest productivity, and plants' response to environmental change.

Franklin, Jerry F. * 1986; PhD, 1966, Washington State University; structure and function of forest ecosystems.

Fritschen, Leo J. * 1966, (Emeritus); PhD, 1960, Iowa State University; biometeorology, micrometeorology, measurement and instrumentation of the environment.

Gallucci, Vincent * 1976, (Adjunct); PhD, 1971, North Carolina State University; biomathematics and population dynamics.

Gara, Robert I. * 1968; PhD, 1964, Oregon State University; bark beetle ecology, forest insect behavior, international forestry.

Gessel, Stanley Paul * 1983, (Emeritus); PhD, 1950, University of California (Berkeley); forest soil, forest fertility, international forestry.

Greulich, Francis E. * 1977; PhD, 1976, University of California (Berkeley); forest engineering, statistics, operations research.

Harr, R. Dennis * 1988, (Affiliate); PhD, 1967, Colorado State University; forest hydrology, forest geomorphology, waterbed management.

Hatheway, William H. * 1969, (Emeritus); PhD, 1956, Harvard University; quantitative ecology, physiological ecology, tropical forestry.

Hinckley, Thomas M. * 1980; PhD, 1971, University of Washington; forest tree physiology and autecology, subalpine ecosystems, water stress problems.

Hrutfiord, Bjorn F. * 1959; PhD, 1959, University of North Carolina; wood extractive chemicals, air and water quality in forest products industries.

Johnson, Jay A. * 1983; PhD, 1973, University of Washington; mechanical and physical properties of wood and wood composite materials, wood quality.

Jorgensen, Jens E. * 1973, (Adjunct); DSc, 1969, Massachusetts Institute of Technology; systems analysis, manufacturing, automation and controls, forest engineering.

Lee, Robert G. * 1978; PhD, 1973, University of California (Berkeley); natural resource sociology, human communities, development and change of forestry institutions.

Leney, Lawrence * 1960, (Emeritus); PhD, 1960, New York State College of Forestry (Syracuse); wood anatomy, microtechniques, machining wood, photomicrography, seasoning and preservation of wood.

Leopold, Estella B. * 1976, (Adjunct); PhD, 1955, Yale University; paleoecology, pollen and seed analysis, late Cenozoic environment.

Lettenmaier, Dennis P. * 1973, (Adjunct); PhD, 1975, University of Washington; systems analysis and water resources planning.

322 COLLEGE OF FOREST RESOURCES / FACULTY

Lippke, Bruce R. * 1990; MSIE, 1966, University of California (Berkeley); international trade and environmental linkages, investment analysis, economics of forest industry.

Manuwal, David * 1972; PhD, 1962, University of California (Los Angeles); avian ecology, effects of forest management on birds.

McCarthy, Joseph L. * 1941, (Emeritus); PhD, 1938, McGill University (Canada); thermodynamics, lignin and cellulose, chemistry, pulp and paper science, biochemical engineering.

McKean, William T. * 1979; PhD, 1968, University of Washington; pulp and paper science, chemical engineering.

Naiman, Robert J. * 1988; PhD, 1974, Arizona State University; forest stream ecosystems, aquatic landscape dynamics.

Oliver, Chadwick D. * 1975; PhD, 1975, Yale University; silviculture and forest ecology, culture of single- and mixed-species forest stands.

Peterson, David L. * 1989; PhD, 1980, University of Illinois; environmental stress on tree growth and forest ecosystems, subalpine forests, global climate change.

Pickford, Stewart G. * 1976; PhD, 1972, University of Washington; forest fire science, wildland fire management.

Richey, Jeffrey E. * 1973; PhD, 1973, University of California (Davis); quantitative problems of aquatic ecosystems, primary Amazon River, limnology.

Ricker, Neil L. * 1978, (Adjunct); PhD, 1978, University of California (Berkeley); chemical process design, simulation, and control.

Robertson, James C. H. 1945, (Emeritus); DrF, 1947, Duke University; forest resources.

Schaeffer, Walter H. 1952, (Emeritus); PhD; 1952, University of Washington; forestry.

Schiess, Peter * 1975; PhD, 1975, University of Washington; forest engineering, small-log harvesting, biomass production.

Schreuder, Gerard Fritz * 1971; PhD, 1968, Yale University; statistical analysis in resource economics, international forestry, trade, aerial photos.

Scott, David R. M. * 1955, (Emeritus); PhD, 1950, Yale University; silviculture, forest ecology.

Sharpe, Grant William * 1966, (Emeritus); PhD, 1956, University of Washington; wildland recreation, interpretation and management of recreation areas.

Sprugel, Douglas George * 1984; PhD, 1974, Yate University; forest ecology, tree ecophysiology, subalpine systems.

Stenzel, George 1949, (Emeritus); MF, 1939, Yale University; forest resources.

Stettler, Reinhard F. * 1963; PhD, 1963, University of California (Berkeley); genetics of forest tree populations, biotechnology, biomass production.

Taber, Richard D. * 1968, (Emeritus); PhD, 1951, University of California (Berkeley); wildlife science.

Thorud, David B. * 1981; PhD, 1964, University of Minnesota; watershed management, international forest policy and development.

Tukey, Harold B. * 1980; PhD, 1958, Michigan State University; urban horticulture, horticultural physiology.

Wagar, John Alan * 1967, (Research); PhD, 1961, University of Michigan; urban forestry, urban forest inventory and cost-effective management.

Waggener, Thomas R. * 1969; PhD, 1966, University of Washington; policy and economics, regional impact analysis, marketing and international trade in forest products.

Wissmar, Robert C. * 1972; PhD, 1972, University of Idaho; ecology.

Wott, John A. * 1981; PhD, 1968. Cornell University; urban horticulture, public programs in horticulture, public gardens, arboreta.

Associate Professors

Chappell, Henry N. * 1985, (Research); PhD, 1979, North Carolina State University; silviculture, forest soils, tree nutrition.

Conquest, Loveday L. * 1976, (Adjunct); PhD, 1975, University of Washington; biological applications and statistics.

Cundy, Terrancc W. * 1983, (Affiliate); PhD, 1983, Utah State University; hillslope hydrology and watershed management.

Fridley, James * 1988; PhD, 1984, University of Washington; engineering design, mechanical engineering, computer graphics and graphical simulation.

Ganter, Mark * 1986, (Adjunct); PhD, 1985, University of Wisconsin; solid modeling, computer graphics, kinematics and automated manufacturing.

Grue, Christian E. * 1989, (Adjunct); PhD, 1977, Texas A&M University; wildlife toxicology, wildlife and fisheries science.

Gustafson, Richard Roy * 1986; PhD, 1982; University of Washington; process simulation and dynamics, development of high tensile carbon fibers.

Hamilton, Clement Wilson * 1985; PhD, 1985, Washington University; landscape plant selection, taxonomy of horticultural and tropical plants.

Hanley, Donald P. * 1983; PhD, 1981, University of Idaho; extension forestry, small-forest management, forestry continuing education.

Harrison, Robert B. * 1987; PhD, 1985, Auburn University; forest soil chemistry, soil amendments, organic waste utilization.

Hodgson, Kevin T. * 1991; PhD, 1986, University of Washington; surface and colloid science, papermaking chemistry, fiber-water interactions.

McNeel, Joseph * 1992; PhD, 1984, Virginia Polytechnic Institute & State University; forest operations and the effect of their interactions with the forest ecosystem.

Raedeke, Kenneth J. * 1979, (Research); PhD, 1979, University of Washington; wildlife biology and conservation, population dynamics.

Robertson, Iain M. * 1982, (Adjunct): MLA, 1975, University of Pennsylvania; designing with plants, planning and design of botanical gardens/arboreta.

Rustagi, Krishna P. * 1973; PhD, 1973, Yale University; operations research and statistical applications in forest management.

Shannon, Margaret A. * 1992; PhD, 1989, University of California (Berkeley); natural resources, sociology and policy.

Strand, Stuart E. * 1982, (Research); PhD, 1982, Pennsylvania State University; forest biotechnology, environmental pollution control.

Van Blaricom, Glenn R. * 1993, (Adjunct); PhD, 1978, University of California (San Diego); aquatic wildlife, ecology of marine communities, wildlife-fisheries interactions.

West, Stephen D. * 1979; PhD, 1979, University of California (Berkeley); vertebrate ecology, conservation and management.

Assistant Professors

Bolton, Susan M. * 1992; PhD, 1991, New Mexico State University, hydrology, watershed management.

Eastin, Ivan * 1987; PhD, 1992, University of Washington; marketing strategies and international trade of forest products. Ewing, Kern * 1990; PhD, 1982, University of Washington; wetland plant ecology, urban ecology, ecosystem management.

Gonzalez, Rico A. 1993; PhD, 1993, Ohio State University; landscape plant science and management, woody plant response to water stress.

Halpern, Charles * 1991, (Research); PhD. 1987, Oregon State University; plant community ecology, plant succession, montane/subapline meadow ecology.

Henry, Charles L. * 1982, (Research); PhD, 1989, University of Washington; recycling organic wastes as soil amendments.

Paun, Dorothy Ann 1993; PhD, 1993, University of Oregon; marketing of forest products, international marketing.

Perez-Garcia, John 1990; DF, 1991, Yale University; analysis of trade policy, global trade modeling.

Salazar, Debra J. * 1980, (Affiliate); PhD, 1985, University of Washington; political economy, natural resource and environmental politics, forest policy.

Vande Castle, John * 1989, (Research); PhD, 1985, University of Wisconsin; aquatic-terrestrial ecosystem interfaces, remote sensing and geographic information systems.

Zabowski, Darlene * 1992; PhD, 1988, University of Washington; forest soils and their productivity, soil genesis, biogeochemical cycling of soils.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Students taking undergraduate and graduate courses, structured or unstructured, that require field trips, special laboratory supplies, or special material duplications are required to pay appropriate amounts to cover such expenses. If a student fails to pay, the transcript may be withheld and the degree may not be conferred.

Courses for Undergraduates

CFR 101 Forests and Society (5) NW Edmonds, Gara Survey course covering forest ecosystems of the world, history of forestry and forest conservation, how forest ecosystems function, wildlife in forests, environmental issues in forestry, forest management, economics and products, and new approaches to forest management. Open to majors and non-majors. Offered: AWSp.

CFR 250 Introduction to Remote Sensing in Forest Resources with Geographic Information Systems Applications (5) Pickford Introduction to remote sensing data as an information source in forest management, remote sensing platforms, sensors and products, radiometric characteristics of photos and imaging systems, digital imaging processing, georeferencing, map projections, spatial data and map analysis, map and tabulated data output. Prerequisite: ability to work with MS-DOS. Offered: A.

Courses for Graduates Only

CFR 500 Graduate Orientation Seminar (1) Introduction to graduate study. Presentations on College resources and services and current research in each College Division. Division Chairs will share teaching responsibilities. Credit/no credit only. Offered: A.

CFR 590 Graduate Studies (1-5) Study in fields for which there is not sufficient demand to warrant the organization of regular courses. Offered: AWSpS.

CFR 600 Independent Study or Research (*) Offered: AWSpS.

CFR 700 Master's Thesis (*) Offered: AWSpS.

CFR 800 Doctoral Dissertation (*) Offered: AWSpS.

COLLEGE OF FOREST RESOURCES / COURSE DESCRIPTIONS 323

Ecosystem Science and Conservation

Courses for Undergraduates

ESC 101 Introduction to Wildlife Science (1) NW Manuwal Survey of historical development, present status and future of professional field of wildlife science and how it interacts with other disciplines. Natural resource agency speakers discuss how their agencies work and administer wildlife conservation programs. Students discuss wildlife science with faculty and graduate students. Credit/no credit only. Offered: A.

ESC 200 Trees in Our Environment (5) NW Brubaker, Stettler Intended for non-science majors; may not be taken for credit by forest resource majors. Form and function of fifty-sixty tree species; principles and concepts of biology; developing an awareness for science; lectures; laboratory demonstrations, and field studies in the Arboretum. Offered: Sp.

ESC 202 Global Changes and Forest Biology (3/5) NW Hinckley Ecological and biological effects of atmospheric pollutants, acid precipitation, and climate change on forest trees and ecosystems. Potential climate changes are compared to current and historical climates. Students taking this course for five credits must enroll in optional laboratory which introduces major tree species, old-growth forests, small group problem analysis. Offered: W.

ESC 210 Introductory Soils (4) NW Harrison, Zabowski Physical, chemical, and biological properties that affect distribution and use patterns of this important ecosystem component. Includes soil morphology and genesis, plant nutrition and nutrient cycling, soil water, microbiology, and application of soil properties to environmental concerns. One Saturday field trip. Offered: A.

ESC 221 Dendrology and Autecology (6) NW Brubsker, Stettler Introduction to the systematics, identification, life histories, genetics, and physiological ecology of forest trees and shrubs. Field trips to regional forest ecosystems. Includes one hour of technical writing instruction per week. Offered: A.

ESC 300 Internship (3-5, max. 8) Internship experience with a public agency or private company. Preparation of professional report and presentation of oral report. Offered: AWSpS.

ESC 311 Soils and Land Use (3) NW Harrison Intended for students concerned with environmental problems in the Puget Sound basin; also for those who intend to become professionally involved in land-planning decisions. Focus is on the significance of soils in understanding environmental problems and in promoting intelligent land-use decisions. Basic concepts of soil systems are presented, stressing those aspects important in making land-planning decisions. Offered: W.

ESC 320 Natural Resource Issues: Old-Growth and Forest Management (3) I&S/NW Franklin Biological and social elements of current conflicts, especially those associated with old-growth and its disposition. Ecology of Pacific Northwest forests and landscapes, history of forest practices, application of emerging science, proposed alternative practices and policies, including analysis of current proposal and its predecessors and successors. Open to majors and non-majors. Offered: Sp.

ESC 322 Forest Ecosystems (3) NW Agee, Edmonds, Gara Introduction to forest ecosystems, principles of forest ecology, vegetation classification, history of development of Pacific Northwest vegetation, succession, competition, nutrient cycling, ecology and classification of decomposers and insects, use of ecological information in forest management. Two Saturday field trips. Offered: W. ESC 326 Wildlife Habitat and Silviculture (5) NW Agee Principles of wildlife habitat in forest and range ecosystems. Silvicultural principles applicable to wildlife conservation and management. Includes weekend field trips across Washington illustrating principles covered in lecture. Prerequisite: 322 and 350 or permission of instructor. Offered: Sp.

ESC 350 Wildlife Biology and Conservation (4) NW Manuwal Wildlife ecology and population biology, and interrelationships between wild animals and humans, including encouragement of wildlife population growth and productivity, control of pest populations, and preservation of endangered species with emphasis on forest environments and forest faunas. Open to nonmajors. Prerequisite: junior standing. Offered: W.

ESC 351 Wildlife Research Techniques (3) NW Manuwal, Raedeke, West Scientific approaches to the field study of wildlife populations, including basic considerations in experimental design and development of scientific papers. Emphasis on direct experience with current field techniques used in study of vertebrate populations. Prerequisite: junior standing in Wildlife Science. Offered: Sp.

ESC 410 Forest Solls and Site Productivity (5) NW Harrison Considers unique properties and processes occurring in forest soils throughout the world with emphasis on soils of Pacific Northwest and aspects of forest soils that affect productivity. Two all-day Saturday field trips and one Saturday-Sunday field trip required. Prerequisites: 210 or one course in soil science or permission of instructor. Offered: A.

ESC 411 Forest Soil Microbiology (4) NW Edmonds Soil organisms in forest ecosystems, decomposition, nutrient cycling. N transformation, mycorrhizae, effects of forest management. Prerequisites: general biology, basic soils, or permission of instructor. Offered: even years; A.

ESC 413 Soil Genesis and Classification (5) NW Zabowski Soil formation, morphology, classification, and relationship to the environment. Labs and weekend field trip illustrate properties and processes of forest and grassland soils in Washington. Prerequisites: 210 or permission of instructor. Offered: Sp.

ESC 414 Forest Soil Fertility and Chemistry (3) NW Harrison Tree growth depends, in part, on the interaction between chemical and biological activities within a given soil: the biological and chemical parameters that influence the growth; soil solution chemistry and surface reactions; reactions and processes that control essential plant nutrient levels and forms in soil solutions. Prerequisite: 210. Offered: Sp.

ESC 418 The Science of Composting (3) Harrison, Henry Introduction to composting as a timely tool for waste management. Designed to give an understanding of the science of composting, an overview of the processes from large-scale composting, an understanding of what acceptable contaminant levels are, and an evaluation of the benefits of compost. Offered: A

ESC 421 Dendrochronology (4) NW Brubaker, Peterson Analysis of important physiological and environmental factors controlling annual tree-ring growth and a critical review of the applications of tree-ring analysis to study forest productivity, watershed hydrology, forest fires, insect epidemics in relation to yearly weather conditions. Laboratory and field exercises construct tree-ring chronologies to study environmental histories of selected forest stands. Prerequisites: introductory botany and senior or graduate standing. Offered: odd years; W.

ESC 427 Forest Genetics (3) NW Stettler Genetic theory as applied to the biological manipulation of forest trees. Principles of genetics and organic evolution are discussed and related to management strategy and silvicultural practices. Credit/no credit only. Prerequisite: 221. Offered: odd years; W.

ESC 432 Forest Pathology (4) NW Edmonds Biology impact and control of forest diseases. Abiotic diseases caused by air pollution, adverse weather, and biotic diseases caused by bacteria, fungi, viruses, parasitic plants, and nematodes. Disease management including silvicultural, chemical, and biological control. Disease modeling. Offered: odd years; A.

ESC 441 Landscape Ecology (3) NW Franklin Basic landscape ecology concepts, including patches, corridors, networks, spatial dynamics; island biogeographic principles; landscape analysis methods; landscape models. Applications of landscape ecology in resources management (e.g., cumulative effects, cutting, patterns, anadromous fisheries, management of wildlife populations, and open-space planning). Prerequisites: upper-division ecology courses or permission of instructor. Offered: W.

ESC 442 Geographic Information System Applications to Forest Resources (3) NW VandeCastle Experience with Geographic Information System (GIS) applications as they relate to forest resource management and ecosystem management including remote sensing, data integration, and modeling. Offered: W.

ESC 450 Wildlife Ecology and Conservation (5) NW West Covers advanced principles of wildlife ecology such as habitat selection, population viability, and landscape ecology, and illustrates how they apply to wildlife conservation problems with terrestrial, aquatic, and marine wildlife. Students must share costs of field trips. Prerequisite: advanced standing. Offered: W.

ESC 451 Biology and Conservation of Birds (3) NW Manuwal Major principles of natural history, avian reproductive biology, population ecology, and national and international conservation strategies for both hunted and unhunted birds. Emphasis on western United States. Prerequisite: introductory biology. Offered: odd years; A.

ESC 452 Field Ornithology (3) NW Manuwal Students learn field identification skills and are introduced to field methodologies through required indoor labs, field trips, and field exercises. Exercises include study of survey techniques, feeding ecology, and behavior. Students are required to share field trip costs. Offered: odd years; A.

ESC 453 Biology and Conservation of Mammals (5) NW West Introduction to mammalian evolution, morphology, reproduction, population biology, ecology, and conservation. Lectures address mammals worldwide. Laboratories and fieldwork focus on mammals of Pacific Northwest. Laboratories and two weekend field trips required. Students share travel costs. Prerequisites: 350 or equivalent. Offered: even years; A.

ESC 454 Aquatic Wildlife Ecology (3) NW VanBlaricom, West, Manuwal, Grue Conceptual examination of relationships of aquatic wildlife populations (mammals, birds, reptiles, amphibians) to one another and to the aquatic realm. Application of conceptual background to contemporary high-profile issues in aquatic wildlife ecology, conservation, and management. Included is exposure to primary technical literature in the field. Offered: jointly with FISH 454; odd years; A.

ESC 455 Wildlife Seminar (1, max. 4) NW Manuwal, West Discussion of current research and application in wildlife biology and conservation. Credit/ no credit only. Prerequisite: 350 or equivalent. Offered: AW.

ESC 459 Wildlife Conservation in Northwest Ecosystems (2) NW Agee, Manuwal, West Extended field course offers Wildlife Science students personal interactions with wildlife managers and wildlife populations in strategic public and private lands in the north western United States and southern Canada. Students will share costs of trip. Offered when there is sufficient
324 COLLEGE OF FOREST RESOURCES / COURSE DESCRIPTIONS

student demand. Prerequisite: junior standing or above

ESC 490, 491, 492 Undergraduate Studies (1-5, 1-5, 1-5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSpS, AWSpS, AWSpS.

ESC 494 Wildlife Senior Project Proposal (3) Selection of research topic, literature review, and preparation of a formal research proposal. Students select a faculty advisor or a faculty committee to assist them in the proposal writing process. Prerequisite: senior standing in wildlife science. Offered: AWSpS.

ESC 495 Senior Project (5) Individual study of a ecosystem science and conservation problem under direction of a faculty member. Generally taken in last quarter of residence. Prerequisites: approved plan of study and permission of major advisor. Offered: AWSpS.

ESC 496 Wildlife Senior Thesis (5) Manuwal, Raedeke, West Statistical analysis and presentation of research results and discussion of results of the senior research project. Students work with faculty advisors to complete field or laboratory research and then prepare the senior thesis. Prerequisite: 494. Offered: AWSpS.

Courses for Graduates Only

ESC 501 Forest Ecosystems-Community Ecology (5) Brubaker Community ecology of forest ecosystems. Quantitative methods of community description. Role of limiting factors, competition and disturbance in determining community composition, structure and stability. Introduction to forest ecosystem productivity. History and application of successional theory. Prerequisite: basic ecology course or permission of instructor. Offered: A.

ESC 502 Structure and Function of Forest Ecosystems (5) Franklin Behavior of forest ecosystems: carbon, nutrient, and hydrologic cycling; factors controlling paths and flow rates of materials; contrasts in ecosystem structure and function among forest types. Offered: Sp.

ESC 506 Graduate Ecosystems Seminar (1) Halpern Formal seminar presentations by graduate students in ecosystems and related programs. Information is given on how to give effective seminar presentations and prepare slides. Credit/no credit only. Offered: Sp.

ESC 507 Soils and Land Use Problems (4) Environmental concerns of soils; how soil properties control potential and reasonable possibilities of land use. Includes factors controlling soil stability, hydrology, fertility, and movement of pollutants. Field trip oriented with weekly activity summaries. Students also conduct field trips to soil-use problem sites. Offered: W.

ESC 509 Review of Forest Autecology (4) Hinckley, Stettler Review of concepts of soil formation, soil fertility, microclimate, hydrology, tree anatomy and morphology, physiology, water relations, mineral nutrition, and genetic and evolutionary mechanisms, as they relate to the adaptation and manipulation of foresttree populations. For mid-career students only. Offered: A.

ESC 510 Graduate Studies in Forest Soils (1-5) Offered: AWSpS.

ESC 511 Advanced Forest Soll Microbiology (5) Edmonds Detailed examination of microbial processes in forest ecosystems; types of organisms, biomass, decomposition and nutrient cycling, microbial transformations of N, impacts of management-clearcutting, fertilization, pesticide addition. Graduate project required. Prerequisites: general biology, basic soils or permission of instructor. Offered: even years; A. ESC 513 Advanced Soil Genesis and Classification (5) Zabowski Soil formation, morphology, classification, and relationship to the environment. Labs and field trips illustrate properties and processes of forest and grassland soils in Washington. Requires two weekend field trips and a graduate project. Prerequisites: 210 or permission of instructor. Offered: Sp.

ESC 515 Advanced Soil and Plant Analysis (3) Harrison Plants and animals must acquire nutrient elements from their environment. Quantifying the composition of samples is the first step in understanding the processes in natural and manmade systems. Sampling, handling, preparation, storage, and analysis stressed. Prerequisites: one botany or plant science course, instrumental analysis, soils. Offered: Sp.

ESC 516 Advanced Forest Soil Fertility and Chemlatry (4) Harrison Chemical properties of soil, nutrient and toxic elements; supply, retention, and loss of nutrients in soils; utilization of geochemical and ecosystem models such as GEOCHEM, MAGIC, TRICLE-DOWN, and ILWAS in developing a quantitative understanding of the chemical function of forest ecosystems. Prerequisites: general chemistry and geology of soils. Offered: Sp.

ESC 517 Biotransformations of Hazardous Compounds (1) Strand Presentation and discussion of the current literature in biotransformation and biological degradation of organic and inorganic compounds, particularly in the microbial environment. Credit/no credit only. Offered: ASp.

ESC 518 Microbial Degradation of Toxic Contaminants (3) Herwig, Staley, Stensel, Strand Detailed survey of current understanding of microbiology and degradative pathways of industrial organic compounds, pesticides, plastics, oil, and metals. Microbial requirements for bioremediation. Methods of scientific investigation of microbial transformations. Requires basic understanding of metabolism and organic chembistry. Prerequisite: biological science course. Offered: iointly with CEWA/MICRO 518; Sp.

ESC 520 Graduate Studies in Ecosystem Science (1-5) Offered: AWSpS.

ESC 521 Current Topics in Ecosystem Science (2, max. 6) Consideration of current literature and topics in forest ecosystems and tree physiology. Offered: AWSp.

ESC 524 Tree Physiology I: Growth and Development (3) Hinckley Review of major developmental processes in trees, concentrating on regulatory mechanisms. Role of genetic, hormonal, mechanical, environmental, and ecological mechanisms in regulation of shoot, diameter, root, and reproductive development examined in lecture-discussion format. Seniors in forestry, botany, or related fields may enroll. Offered: even years; W.

ESC 525 Tree Physiology II: Stress (4) Hinckley Review of principles and examples of stress physiology, concentrating on processes impacted and mechanisms of resistance. Stress and stress resistance defined and following examples examined: high, low temperature, radiation, anoxia, and pollutants. Prerequisite: 524. Offered: Sp.

ESC 527 Advanced Forest Genetics (3) Stettler Discussion course relating concepts of quantitative and population genetics to forest-tree populations, both natural and artificial. Credit/no credit only. Prerequisite: 427 or equivalent. Offered: even years; W.

ESC 529 Eccesystems Seminar (1) Discussion by invited speakers on current research related to eccesystems. Credit/no credit only. Offered: A.

ESC 535 Fire Ecology (3) Agee Fire regime concept as applied to fire ecology. Methodology for fire history research. History and function of forest fire in western United States with emphasis on Pacific Northwest. One weekend field trip. Prerequisite: permission of instructor. Offered: A. ESC 538 Graduate Studies in Forest Pathology (1-5) Edmonds Offered; AWSpS.

ESC 539 Forestry-Fisherles Interactions: Case Studies (3) Naiman Case studies of streamside nanagement situation at the watershed and basin level. Topics include resource conflict resolution, current and future management alternatives, landscape dynamics, role of disturbance, and policy options. Prerequisite: graduate standing in forestry, fisheries, or related field; undergraduates by permission of instructor. Offered: jointly with FISH 539; odd years; A.

ESC 547 Stream and River Ecology (4) Naiman Characterizations of stream and river ecosystems from a watershed perspective. Emphasis on fundamental processes affecting the structure and dynamics of aquatic communities and the riparian zone. Resource conflicts, new technologies, field trips, and class projects. Recommended: general ecology, forestryfisheries interactions. Offered: jointly with FISH 547; Sp.

ESC 548 Special Topics in Streamside Studies (2, max. 6) Naiman Contemporary problems and issues in forestry, fisheries, and wildlife management in watersheds. Topics vary, yet focus on interactions of land and water resources in the forests of the Pacific Northwest. Prerequisite: permission of instructor. Offered: ionity with FISH 548; AWSpS.

ESC 554 Wildlife Seminar (1-2, max. 10) Manuwal, West Discussion of current research and application in wildlife biology and conservation. Prerequisite: permission of instructor. Offered: AW.

ESC 555 Graduate Studies in Wildlife Science (1-5) Manuwal, Raedeke, West Offered: AWSpS.

ESC 557 Topics in Wildlife Science (2, max. 6) West Graduate seminar on applied and basic topics in wildlife ecology and conservation. Different topics selected each offering. Offered: AWSp.

ESC 591 Graduate Teaching Practicum (1-5) Principles of teaching and learning applied to undergraduate instruction in Ecosystem Science and Conservation. Development, delivery, and evaluation of lectures and homework assignments. Graduate teaching experience for ESC students only. Credit/no credit only. Prerequisites: permission of instructor. Entry code required. Offered: AWSp.

ESC 601 . Internship (3-9) Prerequisite: permission of graduate program advisor. Credit/no credit only. Offered: AWSpS.

Forest Management and Engineering

Forest Engineering

Courses for Undergraduates

F E 210 Statics (4) NW Greulich Principles of statics with application in forestry. Basic concepts, parallelogram law, Newton's laws, equilibrium diagrams and analysis. Treatment of structural systems and systems with friction. Prerequisite: MATH 125 or Q SCI 292, which may be taken concurrently. Offered: A.

F E 220 Mechanics of Solids (4) NW Greulich Introduction to the concepts of stress, deformation, and strain in solid materials, including the unique properties of wood. Development of those equations that relate these variables in structures. Laboratory session emphasizes theory. Prerequisites: ENGR 210 and permission of instructor. Offered: W.

F E 300 Timber Harvesting Management (3) Dowdle Timber harvesting methods and planning procedures. Logging costs and production. Safety and environmental considerations. For forest managers and other non-engineering majors. Offered: Sp. FE330 Forest Engineering in Society (4) I&S Lee Forest engineering as a profession in a social, political, and regulatory context including: who engineers work for and what they do; professional ethics and leadership responsibilities, psychological issues in engineering work, state and federal regulatory environment affecting engineering practices; relationships to employees, special interest groups, and attentive publics. Offered: WSp.

FE332 Ecological Basis of Forest Engineering (4) NW Pickford The recognition and characteristics of forest and wild land organisms in plant and animal kingdoms; their structure, function, development, site requirements, and role within the forest and wild land communities in which they are found. Ecological and biological basis for environmental regulations affecting forest engineering projects and tasks. Offered: A.

F E 340 Plane Surveying (4) Pickford Surveying theory and practice with emphasis on plane surveying. Proper use of survey instruments including engineer's tape, theodolite, level, and rods to measure and establish angles and distances. Appropriate technique for data recording, reduction and written form presentation, drafting using CADD and COGO packages, and incorporation into GIS. Offered: ASp.

F E 341 Timber Harvesting (5) Greulich Timber harvesting methods and planning procedures. Logging cost and production control. Environmental and safety considerations as related to logging and road construction. Prerequisite: 342.

F E 342 Fluid Mechanics (4) NW Greulich Fundamentals of fluid mechanics, open- and closed-conduit flow and hydrologic prediction. Analysis and design of drainage ditches and culverts for logging roads. Prerequisites: 10 credits in physics, 8 credits in mathematics. Prerequisite: permission of instructor. Offered: Sp.

F E 345 Forest Surveying and Transportation (5) NW Schiess Concepts of timber harvesting requirements, road-access planning, and forest land surveying. Basic road design principles, processes, and practical application of field road location. Basic road drainage design review, overview of road construction techniques and maintenance. A concentrated field experience at Pack Forest for non-forest engineering majors. Offered: Sp.

F E 346 Design of Low Volume Roads (5) NW Schiess Theory combined with strong emphasis on field practice. Engineering activities from pre-reconnaissance through construction staking discussed in context of class project involving location, field survey, and design of a forest road. Engineering design theory covered includes horizontal and vertical curves (including spirals), earthwork, minor drainage structures. Prerequisite: 340. Offered: W.

F E 366 Introductory Soil Mechanics (4) NW Soil mechanics background necessary for the design of logging roads and structures. Soil properties and classification, soil hydraulics, soil strength and failure, soil behavior in structural design, soil modification techniques, and slope stability analysis. Application of basic laboratory and field testing procedures. Prerequisites: permission of instructor. Offered: W.

FE 368 Forest Engineering Measurements (4) NW Fridley Introduction to principles of measurement and various types of electrical transducers and recording devices used to make measurements. Laboratories include application to surveying; soil mechanical and physical properties; size, weight, and volume of trees; environmental variables, stream flows. Offered: W.

F E.423 Watershed Analysis (4) Inventory and historical analysis of the interactions between natural resources, climate, and forest management. Development of management objectives and design of forest management activities based on inventory and analysis. Includes the use of modeling and simulation in predicting the influence of forest management activities on other resources. Prerequisite: 425. Offered: W. F E 425 Wildland Hydrology (4) Introduction to the hydrologic cycle and basic hydrologic methods as applied to wildlands. Effects of forest management activities on hydrologic processes. Offered: W.

FE426 Snow Hydrology (4) Snow from formation to melt as it relates to the hydrologic response of watersheds. Measurement of snowpack properties, energy and mass balances, effects of vegetation manipulation on accumulation and melt, role of snowmelt in hydrologic modeling. Prerequisites: one course in hydrology and one course in meteorology. Offered: odd years; Sp.

F E 427 Hillslope Stability and Land Use (4) Effects of land management, especially forest land management, on slope stability. Forest harvesting, road construction, and species conversion. Slope stability analyzed on both large (landscape) and small (hillslope) spatial scales. Prerequisites: 425 or equivalent. Offered: Sp.

F E 428 Hillslope Hydrology (4) Runoff processes from hillslopes and small drainage basins. Processes of infiltration, overland flow, and subsurface flow described mathematically. Solutions to resulting differential equations. Prerequisites: 425, MATH 307 or equivalent. Offered: even years; Sp.

F E 430 Aerial Photos/Remote Sensing Natural Resources (3) Schreuder Principles of photogrammetry, interpretation, and remote sensing; and their application to management of natural resources and wildlands. Uses for watersheds, forest resources, wildlife, point and nonpoint pollution, land-use planning, and outdoor recreation. Offered: Sp.

F E 435 Soil Physics (4) Physical properties of soiland water. Thermodynamic properties of soil-water mixtures and osmotic effects. Darcy's law and application to the movement of the water table. Horizontal and vertical unsaturated lows: rain infiltration, capillary rise, soil evaporation, water redistribution and hysteresis, heterogeneous soils and instability. Soil-plant-atmosphere continuum: water balance in the root zone; movement through the plant. Prerequisite: integral and differential calculus. Offered: Sp.

FE 444 Introduction to Forest Engineering Design (4) Fridley, Schiess Design process and methodology; decision making; creativity; project planning and management; engineering economics; probabalistic and statistical aspects of forest engineering design; ethical and legal issues; presentation of design project results. Lecture, laboratory, and design projects.

F E 445 Management Science in Forest Engineering (5) Greulich Management science methods used in data collection, analysis, and decision making examined within a systems framework. Statistical methods of point and interval estimation and regression analysis applied to logging and construction time studies and work sampling. Linear, non-linear, and dynamic programming optimization techniques are applied to forest engineering problems. Offered: W.

F E 450 Advanced Forest Engineering Design (15) Schiess The capstone course for forest engineering majors. Emphasizes the application of forest engineering design principles. State-of-the-art methods and technology are used to craft an implementable natural resources development plan. Enrollment is restricted to forest engineering majors who have completed all other upper-division courses. Offered: Sp.

F E 470 Processing Wood as an Industrial Feedstock (3) Fridley Study of the principles and processes related to processing trees, logs, chips, and other forms of wood in terms of mechanics, chemistry, energy, and the quality of eventual products. Prerequisites: permission of instructor. Offered: W.

F E 480 Silvicultural Engineering Systems (3) Oliver, Fridley Engineering design of systems for establishing, nurturing, and culturing trees for eventual harvest and use as industrial feedstock. Lecture/discussion. Prerequisites: 368 and ENGR 142, 220, 230, 250. Offered: A.

F E 490, 491, 492 Undergraduate Studies (1-5, 1-5, 1-5) NW Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSpS, AWSpS, AWSpS.

Courses for Graduates Only

F E 515 Graduate Studies in Forest Influences (1-5) Offered: AWSpS.

FE 523 Advanced Watershed Design (4) Inventory and historical analysis of interactions between natural resources, climate, and forest management. Development management objectives and design forest management activities based on inventory and analysis. Use of modeling and simulation for predicting influence of forest management activities on other resources. Site-specific mitigation design and remediation projects. Prerequisite: 425. Offered: W.

F E 524 Watershed Design (4) Fridley, Schiess Study of the principles and processes related to forest engineering design of watershed scale systems. Prerequisites: 523 and graduate standing or permission of instructor. Offered: Sp.

F E 525 Advanced Wildland Hydrology (4) Advanced treatment of hydrologic cycle and basic hydrologic methods as applied to wildlands. Effects of forest management activities on hydrologic processes. Graduate focus on a detailed field or modeling hydrologic analysis. Offered: W.

F E 526 Advanced Snow Hydrology (4) Advanced treatment of snow from formation to melt as it relates to the hydrologic response of watersheds. Measurement of snowpack properties, energy and mass balances, effects of vegetation manipulation on accumulation and melt. Graduate focus on modeling some aspects of snow accumulation and/or melt. Offered: odd years; Sp.

FE 527 Advanced Hillstope Stability (4) Advanced exposure to the effects of land management, especially forest land management, on slope stability. Forest harvesting, road construction, and species conversion. Focus on modeling slope stability in space and time. Offered: Sp.

F E 528 Advanced Hillslope Hydrology (4) Advanced treatment of runoff processes from hillslopes and small drainage basins. Processes of infiltration, overland flow, and subsurface flow described mathematically. Focus on linking soil water and runoff processes in a computer model. Offered: even years; Sp.

F E 529 Current Topics in Wildland Hydrology (1) Students present detailed analysis of research papers on selected topics in wildland hydrology. Topics cover measurement techniques, experimental data, and theoretical models of hydrologic processes. Credit/no credit only. Prerequisites: senior or graduate standing and permission of instructor. Offered: AWSp.

F E 540 Graduate Studies in Forest Engineering (1-5) Fridley, Greulich, Schiess Offered: AWSpS.

F E 541 Advanced Forest Engineering (5) Fridley, Greulich, Schiess Logging organization and management; logging cost analysis and budgeting. Offered: W

F E 542 Advanced Logging Engineering (3) Greulich Detailed consideration of problems of logging planning and truck road engineering, including the preparation and field layout of logging plans; location, design, and construction of forest roads. Offered: Sp.

F E 591 Graduate Teaching Practicum (*, max. 5) Principles of teaching and learning applied to undergraduate instruction in forest products and engineering. Development, delivery, and evaluation of actual lectures and homework assignments in the student's

326 COLLEGE OF FOREST RESOURCES / COURSE DESCRIPTIONS

area of expertise are required. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

Forest Resources Management

Courses for Undergraduates

FRM 100 Introduction to Forest Resources Management (5) I&S Gara Survey of human use of forest resources and the impact of social and cultural institutions on resources management. History and the development of forest conservation and forest utilization practices and policies in the United States. Changing patterns of resource use and methods of resolving conflicts among management alternatives. Offered: A.

FRM 270 Forest Land Use Planning (3) I&S Bradley Introduction to the theory and practice of forest land use planning. Emphasis on the process of developing, implementing, and monitoring multiple-resource land management plans. Discussion of laws and regulations influencing forest land use planning. Selected forest resource planning case studies along the urban to wildland gradient. Two weekend field trips. Offered: W.

FRM 300 Professional Forestry Internship (3-5, max. 8) Comprehensive examination of an acceptable experience in professional forestry within a public or private agency, including operational policies and procedures. Preparation of professional assessment report and presentation of seminar based on internship in forest management in broad aspects. Prerequisites: 323, 362, F E 345 and permission of instructor. Offered: AWSpS.

FRM 323 Silviculture (5) NW Oliver Silviculture techniques, including nursery practices, clear-cutting, seed trees, shelterwood, selection cutting, site preparation, regeneration methods, thinning, fertilization, chemicals, and regional silviculture in the Northeast, Southeast, Midwest, Rocky Mountains, California, Pacific Northwest, and Alaska. Taught at Pack Forest. Multiple-use field trips. Offered: Sp.

FRM 324 Forest Protection (5) NW Agee, Edmonds, Gara Effects of fire, diseases, and insects on forest ecosystems, fire ecology and management, abiotic and biotic diseases, disease management, effects of defoliators, bark beetles and wood boring insects, pests of intensive forest management and principles of insect management. Offered: W.

FRM 328 Forestry-Fisheries Interactions (4) NW Bolton Characteristics of forestry-fisheries interactions in terrestrial and aquatic landscapes. Effects of changes in landforms on forest and aquatic communities. River basin and watershed features. Forest stand dynamics, forest hydrology, fish and wildlife histories and behavior. Resource conflicts and resolution. Recommended: general biology and ecology. Offered: jointly with FISH 328; even years; W.

FRM 360 Forest Management and Economics I (5) I&S Dowdle Basic concepts of production theory, accounting, investment analysis, supply and demand, and their application to the management of forested properties. Prerequisites: ECON 200, Q SCI 292, or equivalent. Offered: W.

FRM 362 Field Measurements (5) Basic field measurement skills, interpretation of aerial photos, measurement of vegetation, including stand examination and timber cruising. Concentrated field experience taught at Pack Forest. Prerequisites: Q SCI 340 and Q SCI 381 or equivalent. Offered: Sp.

FRM 370 Social Functions of Forest Ecosystems (3) I&S Lee Introduction to structure and function of forest ecosystems; resources as social functions; role of social institutions in modifying ecosystem structure and processes; multi-resource case studies and field trips. Offered: A. FRM 377 Environmental Impact Assessment and Regulation in Forest Resource Management (3) I&S Bradley Current environmental, forest resource, and land-use legislation affecting resource management; origin and evolution of federal, state, and local legislation and their relationship to forest resource planning and management; environmental impact assessment and its relationship to forest practices. Selected case studies of prepared forest land use plans and environmental impact statements. Offered: W.

FRM 400 Forestry in Washington (5) Wagar Examines the components of contemporary forestry practices and issues and their importance to the economy and quality of life in Washington state. For education majors, selected laboratory sessions provide hands-on experience for classrooms K-12 using the Project Learning Tree activity guides. One all-day field trip. Prerequisite: senior or graduate standing. Offered: S.

FRM 415 Economics of Forest Products Industries (3) Market structure and economic organization of major forest-related industries. Global supply and demand of commercial forest products. Economic factors affecting production, distribution and marketing of forest products, including international, inter-regional, and intra-regional competition. Prerequisites: ECON 200, 201, or MKTG 300. Offered: W.

FRM 421 Fundamentals of Business from a Forest Product Perspective (3) I&S Paun Introduction to major business disciplines of marketing, finance, human resource management, and management information systems, using examples from the forest products industry. Examination of other business dimensions including international business, social responsibility, and business ethics. Offered: A.

FRM 422 Marketing of Forest Products (3) Eastin Introduction to forest products marketing in North America. Examines products marketing, industry structure, and strategic management issues utilizing marketing concepts. Topics include product marketing, distribution channels, strategic industry analysis, and marketing research techniques. Case studies used to understand forest products industry decision making. Offered: W.

FRM 423 International Marketing of Forest Products (3) Eastin Introduction to international marketing concepts and their application to forest products. Analysis of forest products trade patterns, resource base changes, policy, industrial policies, and environmental concerns. Discussion of market distorting practices including log export bans and tariff and non-tariff barriers. Offered: Sp.

FRM 424 Forest Stand Dynamics (3) Oliver Forest stand development and manipulation response. Forest stand dynamics and stand structure in pure and mixed species forests, response to minor and major disturbances, interactive changes with time, and patterns and response to manipulation. Prerequisite: previous course work in ecology. Offered: A.

FRM 425 Ecosystem Management (3) NW Oliver Advanced concepts and practices in ecosystem management, integrating landscape management principles, inventory, planning, silviculture, objective/ tradeoff/policy considerations, stand growth, adaptive management, and systems organization and management. Case study emphasizes integration. Prerequisites: 323 or permission of instructor.

FRM 429 Intermediate Operations in Silviculture (3) Oliver For advanced undergraduate and graduate students in silviculture. Includes those operations designed to direct an existing forest into the desired form such as cleaning, weeding, thinning, irrigating, and fertilizing; all-day field trips required. Prerequisite: 322 or equivalent.

FRM 430 Forest Chemicals (3) NW Gara Covers all aspects of the use of forest chemicals in forestry: laws, safety, application techniques, and biological effects.

Specific chemicals are discussed as to formulations, toxicity, timing, application rates, carriers, and unique safety problems. Prerequisite: junior standing in forest resources curriculum or permission of instructor. Offered: W.

FRM 435 Forest Entomology (3) NW Gara Introduction to general entomology, characteristics, life histories, ecological relations, prevention, and control of forest insects. Offered: A.

FRM 436 Laboratory in Forest Entomology (2) NW Gara Introduction to the insect orders; identification of forest insects and their damage. One field trip to study insect problems required. Prerequisite: 435, which may be taken concurrently. Offered: A.

FRM 461 Forest Management and Economics II (4) Bare Basic concepts of timber harvest scheduling, sustained-yield models, contemporary analytical techniques, timber supply, and forest product markets. Prerequisites: 360 or equivalent. Offered: A.

 FRM 464 Economics of Forest Use (3) Dowdle
Application of economic concepts to use of forest lands and the allocation of lands to alternate forest uses, including outdoor recreation and other nonconsumption uses. Consideration of institutional factors as determinants of land allocation in public and private sector. Trends in forest land use and impact of public policy on growth and development of resourcebased economic sections. Prerequisite: 360 or ECON 200. Offered: Sp.

FRM 485 Forest Finance and Accounting (3) Dowdle Basic concepts of finance and accounting used in forestry. Introduction to principles of bookkeeping and measurement of income. Essentials of cost accounting and taxation. Treatment of property and income taxes and accounting for fixed assets. Use of ratio analysis and financial statements in decision making. Prerequisite: 360. Offered: W.

FRM 466 Economics of Timber Production (3) Dowdle Application of basic economic concepts to the production of timber as a commercial land use. Analysis of timber investments, alternative management programs, and regulation models. Prerequisite: 360. Offered: Sp.

FRM 468 Forest Measurements (4) Rustagi Measurement of trees and forest stands; sampling methods for timber, recreation, wildlife and ecological attributes; aerial-photo measurement and interpretation; use of photos in estimation of timber volumes. Prerequisites: Q SCI 381 and Q SCI 340 or equivalent. (Formerly 361.) Offered: A.

FRM 470 Forest Policy and Law (5) I&S Shannon Analysis of forest policy processes and laws. Stages of policy making/problem solving: law and public policy; natural resource politics; public ownership and management; public policy and private forest land; forest product policies; review of current forest laws and regulations. Includes one hour of writing instruction per week. Offered: A

FRM 471 Forest Planning and Project Management (4) Bradley Basic concepts of resource planning and project management applied to forest land management. Related processes in formation of resource programs; planning process as a systematic method for problem solving and plan implementation. Evaluation of selected public and private sector forest resource planning cases and development of project management schedules. Offered: W.

FRM 481 Management of Wildland Recreation and Amenities (3) NW The wildland recreation movement in America. Agency history and objectives. Integrating recreation with other land uses. Water, forestry, wildlife, and wilderness resources for recreation. Role of private enterprise. Topics of current interest.

FRM 482 Sociology of Leisure and Wildland Recreation (3) I&S Lee Focuses upon an understanding of human behavior in leisure settings. An examination of basic sociological concepts as well as contemporary theories concerning leisure behavior; research techniques and problems of measurement in leisure research. Implications for the management of recreational areas provide an applied orientation and integration of substantive material. Prerequisite: SOC 110. Offered: even years; W.

FRM 485 Conservation Area Planning and Design (5) Bradley Integrated consideration of the resource base, social factors, and management objectives in providing conservation, environmental education, open space, and wildland recreation opportunities. Application of contemporary resource planning processes and technology in the development of ecologically-based, multiple resource plans. Case study approach. Prerequisite: permission of instructor. Offered: even years; A.

FRM 486 Wilderness Preservation and Management (3) Wagar Review of American wilderness philosophies, concepts, and values. Development of the Wilderness Act. Examination of current wildernessmanagement policies, problems, trends in use, issues and controversies, wilderness research, social costs, and benefits of wilderness. Prerequisite: permission of instructor. Offered: even years; Sp.

FRM 490, 491, 492 Undergraduate Studies (1-5, 1-5, 1-5) NW Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSpS, AWSpS, AWSpS.

FRM 495 Senior Project (5) Individual study of a forest resources management problem under direction of a faculty member. Prerequisites: approved plan of study and permission of major adviser. Offered: AWSpS.

FRM 496 Forest Management Case Studies (5) Bare, Bradley Focus on preparation and presentation of management plan for forested area. All aspects of multiple use and ecosystem health considered within multiplicity of economic, biological, legal, social, and political constraints. Case studies to familiarize students with complexities of modern decision making. Prerequisites: approved study plan and permission of major adviser. Offered: Sp.

Courses for Graduates Only

FRM 503 Advanced Forest Stand Dynamics (3) Oliver Emphasizes current research and sources of knowledge about forest stand development and responses to manipulations. Development of pure and mixed species forests, even-aged and uneven-aged stands. Responses to disturbances, interactive changes with time, patterns and responses to manipulation, growth and yield quantification. Prerequisite: previous ecology courses. Offered: A.

FRM 504 Research Processes in Forest Resources (4) Lee Comprehensive survey of research processes for entering graduate students. Diagnostic and prescriptive evaluation of student research capabilities. Problem and hypothesis formulation, study design, multi-method strategies for gathering and analyzing data, and interpretation and presentation of results. Prerequisite: graduate standing. Offered: W.

FRM 505. Forest Statistics I (4) Applications stressed in depth include: growth and yield models, individual tree versus whole-stand models; regeneration survey methods such as stock quadrat and random sampling techniques; concepts of productivity; data collection and analysis techniques used in forest resources management; basic statistics; regression analysis. For mid-career students only. Prerequisite: Q SCI 381 or equivalent. Offered: W.

FRM 508 Slivicultural Prescription Preparation (4) Oliver Advanced course in silviculture as applied to purposes other than wood production and in the preparation of silvicultural prescriptions. For mid-career students only. Offered: S.

FRM 522 Current Topics in Silviculture/Protection (2, max. 6) Edmonds, Gara, Oliver Detailed study of current issues, information, and literature in silviculture/ protection. Offered: AWSp.

FRM 528 International Silviculture (3) Gara, Oliver Background of biological, social, and economic basis for silvicultural practices in different areas; case examples of silvicultural practices in different localities; consideration of selected international issues in silviculture. Prerequisite: permission of instructor. Offered: even years; W.

FRM 530 Graduate Studies in Forest Fire Control (1-5) *Pickford* Offered: AWSpS.

FRM 531 Forest Fire Science Seminar (2) Pickford Presentation and discussion of current issues in forest fire prevention, control, use, and discussion of ongoing fire research. Credit/no credit only. Prerequisite: permission of instructor. Offered: Sp.

FRM 534 Fire Behavior and Wildland Fuels (5) Pickford Estimating wildland fire spread and intensity; influence of fuel bed characteristics, moisture, wind, and slope on ignition, spread, intensity, and control of wildland fires. Modeling fire growth; extreme behavior. Use of fire behavior modeling in fire management fire danger rating; fire hazard appraisal. Fuel modification techniques; evaluating fuel treatment projects. Offered: Sp.

FRM 537 Graduate Studies in Forest Entomology (1-5) Gara Offered: AWSpS.

FRM 541 Readings in Silviculture (1-5, max. 6) Oliver Detailed study of national and international literature pertaining to silviculture. Offered: AWSpS.

FRM. 545 Principles of Forest Entomology (3) Gara Historical perspective of the discipline, introduction to general entomology and taxonomy, forest insect ecology, integrated pest management concepts for defoliators, bark beetles, wood borers, and urban for estry pests. Prerequisites: general biology, botany, zoology or permission of instructor. Offered: A.

FRM 560 Decision Methods in Natural Resources Management (3) Rustagi Formulation and optimization of management planning and resource allocation in forestry, fisheries, and wildlife. Importance of quantitative data needs in decision making. Solution procedures for both linear and nonlinear formulations. Term project required. Prerequisite: permission of instructor. Offered: jointly with Q SCI 560; A.

FRM 561 Multiobjective Programming in Resources Management (3) Rustagi Concepts and philosophy of goal programming as a tool in the evaluation of resource allocation among multiple, conflicting, often incommensurate objectives (goals). LP and GP computer programs are used to study impact of changes in relative importance of difficult goals. Goal programming applications in natural resource areas are discussed. Prerequisites: familiarity with linear programming and permission of instructor. Offered: jointy with Q SCI 561; even years; W.

FRM 562 Advanced Forest Resources Management (3) Bare Overview of concepts and procedures involved in managing forested lands for the production of commodity and amenity values. Use of systems analysis techniques for evaluating alternative land-use programs and manipulations of the forest ecosystem. Prerequisites: graduate standing and permission of instructor. Offered: A.

FRM 563 Graduate Studies in Forest Mensuration (1-5) Rustagi Offered: AWSpS.

FRM 564 Advanced Forest Blometry (3/5) Ford Classical problems in analysis of forest populations and growth theory, and principles of parametric analysis and estimation processes in forest biometry. Offered: odd years; W.

FRM 565 Graduate Studies in Forest Management (1-5) Bare, Schreuder, Waggener Offered: AWSpS.

FRM 566 Graduate Studies in Forest Photogrammetry (1-5) Pickford, Schreuder Offered: AWSpS.

FRM 567 Forest Products Economics (3) Dowdle Economic analysis of the forest products industries; market structure, regional impact of forest products industries, current problems in forest products economics. Offered: odd years; Sp.

FRM 568 Graduate Studies in Forest Economics (1-5) Dowdle, Schreuder, Waggener Offered: AWSpS.

FRM 569 Economics of Forest Products Trade (3) Structure and trends in world forest products trade, trade barriers, trade policies, and methods of modelling and forecasting international forest products markets. Prerequisite: permission of instructor. Offered: Sp.

FRM 570 Graduate Studies in Forest Policý Analysis (1-5) Shannon Offered: AWSpS.

FRM 571 Forest Policy Analysis (3) Shannon Legal and political contexts in which forest management and use take place. Rationales for forest policies, how policies actually develop, and consequences of government actions. Cases related to student management and/or research interests. Prerequisite: graduate standing. Offered: Sp.

FRM 572 Graduate Studies in Forest Resource Planning (1-5) Bradley Offered: AWSpS.

FRM 573 Forest Environmental Resource Planning (3) Bradley Origins and evolution of environmental planning in the forest environment. Discussion of the planning process and methodologies for environmental management and planning; selected case studies of environmental resource plans. Prerequisite: graduate standing. Offered: odd years; A.

FRM 575 Advanced Natural Resources Sociology (3) Lee Comparative study of institutional and organizational aspects of natural resources management, with special attention to forest resources. Development, persistence, and change of selected institutions in the context of pre-industrial, industrial, and advanced industrial societies. Implications for policy formulation, decision making, and technology transfer. Offered: A.

FRM 576 Current Topics in Forest Policy and Management (1-2) Lee Contemporary problems in forest policy and management. Topics vary but focus on the development of specific political or philosophical issues; empirical questions of concern to the forestry profession; or the development of new tools for management, planning, or policy analysis. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSD.

FRM 577 Forest Resource Economics: Supply (3) Perez-Garcia Economic analysis of forest resource and forest products production decisions. Problems of optimal management at stand and forest level. Models of timber supply from public and private lands. Production and supply characteristics of secondary forest products processing. Prerequisites: ECON 400, 401, and permission of instructor. Offered: odd years; So.

FRM 578 Forest Resource Economics: Demand and Markets (3) Perez-Garcia Origin and characteristics of demand for forest products and services including amenities, analysis of markets for products, log and stumpage. Intensive review of current literature. Prerequisites: ECON 400, 401, and permission of instructor. Offered: even years; Sp.

FRM 579 Graduate Studies in Forest Sociology (1-5) Lee Offered: AWSpS.

328 COLLEGE OF FOREST RESOURCES / COURSE DESCRIPTIONS

FRM 588 Current Topics in International Forest Products Trade (2, max. 6) Eastin Current research topics in a variety of business related areas, including international marketing of forest products, forest economics, international business and global trade modeling. Seminars by faculty and invited professionals supplemented by student presentations. Credit/no credit only. Offered: AWSp.

FRM 591 Graduate Teaching Practicum (1-5) Principles of teaching and learning applied to undergraduate instruction in Forest Resources Management. Development, delivery, and evaluation of actual lectures and homework assignments are required in the student area of expertise. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

FRM 601 Internship (*) Credit/no credit only. Prerequisite: permission of graduate program advisor.

FRM 700 Master's Thesis (*)

FRM 800 Doctoral Dissertation (*)

Paper Science and Engineering

Courses for Undergraduates

PSE 302 Pulp and Paper Technology (4) NW Hrutfiord Sources of pulpwood. Mechanical and chemical pulping, processes. Conversion of pulp to paper. Laboratory study of raw material, mechanical pulping and paper making. Offered: A.

PSE 306 Putp and Paper Processes Analysis (3) NW Hrutfiord, McKean Inorganic chemistry of pulping and bleaching inclusive of sulfur, chlorine, and oxygen-based chemicals, reactivities, and chemical analysis. Wood raw material and conversion to mechanical pulps. Computer-aided material balances on mechanical separation processes. Offered: W.

PSE 309 Creativity and Innovation (2) VLPA Allan Understanding creativity and creative thinking; its challenges and dynamics through knowledge, judgment, planning, and observation. Techniques of creative thinking. Design and development of creative games. Computer-aided creative thinking. Creation, protection, and exploitation of a useful idea, including bargaining and negotiations. Prerequisite: junior standing or permission of instructor. Offered: jointly with CH E 309; Sp.

PSE 400 Wood and Fiber Structure (5) Briggs Development, growth, and anatomy of wood and bark. Relationship of anatomy to physical and mechanical properties of wood. Formation and influence of defects on properties. Identification of wood and fibers of commercial North American species. Prerequisite: permission of instructor. Offered: A.

PSE 401 Wood Physics (4) Equilibrium physical properties of solid wood and wood products. Density calculations and variations, equilibrium moisture content, shrinkage and swelling, flow mechanisms and thermal, electrical and nuclear properties. Offered: odd years; W.

PSE 402 Paper Properties and Additives (4) *Johnson, McKean* Material science of paper and paperboard. Measurement and characterization of structural, mechanical, and optical properties of paper. Standard testing methods, paper colorants, effect of additives on paper properties, and relationship of fundamental paper properties to end use requirements. Offered: A.

PSE 403 Fibrous Structure and Rheology I (3) *Allan* Review of the synthetic and natural fibers and their chemical, physical, microscopic, and submicroscopic properties. The bonding behavior of fibers in networks. Analysis of the structure of fiber networks with reference to nonwovens and paper. Offered: A. **PSE 404 Fibrous Structure and Rheology II (3)** *Allan* Behavior of fibers in fluid suspensions and properties of webs formed therefrom. Physics and chemistry of fiber-polymer interactions and adhesion. Fiber modification by physical and chemical processes and theory and design of fiber composite materials. Prerequisite: 403. Offered: Sp.

PSE 406 Wood Chemistry I (3) *Hrutfiord* Chemical and physical properties of cellulose, lignin, hemicellulose, and extractives. Wood as a raw material for the chemical industry. Offered: A.

PSE 407 Wood Chemistry I Laboratory (2) Hrutfiord Laboratory to supplement 406. Offered: W.

PSE 409 Wood Extractives Chemistry (2) *Hrutfiord* Nature, origin, and occurrence of the extraneous components of wood, their influence on pulp and paper preparation, and their utilization. Offered: odd years; Sp.

PSE 410 Specifications and Manufacturing of Solid Wood Products: I (4) Briggs Unit operations of harvesting, lumber manufacturing, and plywood manufacturing industries. Measurement and grading systems for raw materials and finished products. Hardwood and softwood industries in the Pacific Northwest. Laboratory emphasizes visits to representative manufacturers. Offered: odd years; W.

PSE 411 Specifications and Manufacture of Solid Wood Products: II (4) Briggs, Johnson Unit operations of composite products industries based on chips or fibers as raw materials. Important secondary manufacturing industries, such as prefabricated housing, furniture, laminated beams, pallets. Measurement and grading systems for raw materials and finished projects. Laboratory includes visits to representative manufacturers. Prerequisite: 410 or permission of instructor. Offered: odd years; Sp.

PSE 472 Wood Manufacturing Operations I (4) *Johnson* Machining, combustion, and energy generation. Analysis of cutting process: orthogonal cutting, peripheral milling, sawing, veneer cutting, chipping, flaking. Combustion and energy section covers wood combustion mechanisms, use of energy in the forest products industry, physical and chemical properties, firing methods, material and energy balances. Offered: odd years; A.

PSE 473 Wood Manufacturing Operations II (4) *W* Johnson Wood drying and degradation processes. Analysis of moisture-related degradation mechanisms for wood products and preventive techniques. Fundamentals of moisture removal techniques for lumber, veneer and particles, drying techniques, industrial procedures, and economic considerations. Prerequisite: 472 or permission of instructor. Offered: even years.

PSE 474 Wood Manufacturing Operations III (4) Johnson Gluing, coating, and preservation of wood. Nature of adhesion; factors influencing wood adhesion, types of wood adhesives and binders. Principles of finishing; types of coatings for wood products. Preservatives, fire retardants and their effectiveness. Prerequisite: 473 or permission of instructor. Offered: even years; Sp.

PSE 475 Structural Wood Design (4) Johnson Principles of design for wood; allowable stresses for structural wood and wood-based components; analysis of beams, columns, panels, trusses, I-beams, and laminated beams; behavior of fasteners and connectors; reliability concepts. Prerequisite: ENGR 220 or permission of instructor. Offered: even years; Sp.

PSE 476 Pulping and Bleaching Processes (3) *Gustafson* Conversion of wood to mechanical and chemical pulps. Kraft, sulfite, and semi-chemical pulping processes. Chemical recovery systems. Bleaching of mechanical and chemical pulps. Offered: jointly with CH E 471; W. **PSE 477** Papermaking Processes (3) Hodgson Fiber sources and properties. Secondary fibers. Stock preparation, sheet forming, water removal, finishing. Coating, lamination, and printing. Paper products. Offered: jointly with CH E 472; W.

PSE 478 Pulp and Paper Laboratory (2) *Gustafson* Laboratory experiments in chemical and semi-chemical pulping of wood. Bleaching of chemical and highyield pulps. Physical and chemical characteristics of pulp fibers. Prerequisite: 476. Offered: jointly with CH E 473; Sp.

PSE 479 Pulp and Paper Laboratory II (2) McKean Paper testing, paper additives, flocculation, drainage, retention, heat transfer, and fluid dynamics in papermaking. Sensors and process control. Prerequisite: 477. Offered: Sp.

PSE 480 Pulp and Paper Process Control (3) *Boyle* Control of pulp and paper processes. Sensors, actuators, interface equipment, and computer control strategies common to this industry. Prerequisites: 476, 477, or permission of instructor. Offered: Sp.

PSE 481 Pulp and Paper Unit Operation (3) *Gustafson* Unit operations of particular interest in the pulp and paper industry in addition to those covered in CH E 330 and 340. Prerequisite: CH E 340. Offered: W.

PSE 482 Pulp and Paper, Process Design and Economics (4) Briggs, McKean Analysis of industrial pulping, bleaching, papermaking, recovery, and steam and power operations, using systems analysis approach. Material and energy balances, process economics, process control, and design calculations. Prerequisites: 406, 476, 477, 481, or permission of instructor. Offered: Sp.

PSE 483 Paper Coating and Converting (3) Barlow Coatings and their preparation, rheology, process equipment, drying; and product evaluation. Prerequisite: 477. Offered: W.

PSE 484 Secondary Fiber (3) Hodgson Recycling of paper. Sources of secondary fiber. Processing methods for contaminants and ink removal. Properties and uses of recycled fiber. Prerequisites: 406, 476, 477. Offered: Sp.

PSE 485- Undergraduate Research (1-) Undergraduate research or independent study project under the supervision of the faculty; usually one credit per quarter. Prerequisite: senior standing in Pulp and Paper Science. Offered: AWSp.

PSE 488 Polymer Chemistry (3) Allan Fundamental review of synthetic and natural polymers, including kinetics of formation, molecular weight distributions, and solid-state and solution properties. Offered: W.

PSE 490, 491, 492 Undergraduate Studies (1-5, 1-5, 1-5) NW Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSpS, AWSpS, AWSpS.

PSE 497 Pulp and Paper Internship I (1, max. 2) *Gustafson* Technical and economic analysis of commercial pulp and paper installations. Structured visits to industrial operations to observe technical aspects of pulp and paper curriculum in practice. Preparation of visitation reports and analysis in seminar setting. Prerequisites: 406, 476, 477, 481, or permission of instructor. Offered: AWSpS.

Courses for Graduates Only

PSE 503 Pulp and Paper Technology and Industry Analysis (5) Hrutfiord Characteristics, sources and supply of raw material, chemical and mechanical pulping processes. Paper manufacturing products and grades. Pulp and paper industry organization, including key firms, strategies, and issues. Includes international perspectives and case study analysis. Offered: A.

COLLEGE OF FOREST RESOURCES / COURSE DESCRIPTIONS 329

PSE 508 Advanced Wood Chemistry (3) Hrutfiord Biogenesis of lignins and isotope labeling methods. Oxidative coupling phenols. Carboníum ion intermediates in acid-catalyzed processes. Protodeduteration and reactions with chlorines. Oxidation by inorganic agents and enzymes. Structure of cellulose microfibrils, acid- and enzyme-catalyzed hydrolysis, and alkaline degradation of polysaccharides. Prerequisite: 406. Offered: even years; A.

PSE 514 Pulp and Paper Process Simulation (3) Gustafson Presentation of process simulation techniques currently used in the pulp and paper industry. Large-scale simulations of pulp and paper unit operations developed and analyzed. Use of simulations for control, process optimization, and statistical quality control purposes. Offered: even years A

PSE 570 Graduate Studies in Forest Products (1-5) Offered: AWSpS.

PSE 572 Wood Chemistry and Analysis (3-5) *Hrutfiord* Application of instrumental methods of analysis to wood, wood products, and forest products processing effluents. Emphasis on separation systems, including gas and liquid chromatography, and on spectral analysis. Offered: odd years; W.

PSE 576 Photomicrography of Woody, Tissues (3) Theory and method in microscopy and photomicrography of woody tissues. Offered; Sp.

PSE 577 Wood and Paper Science Seminar (1, max. 3) Discussion of current topics in the science of wood and its various composites in the form of composition board, laminates, and paper. Offered: ASp.

PSE 579 Specifications for Forest Products in World Trade (3) Johnson Compares forest product specifications, standards, testing, and quality procedures between countries and evaluates their role as trade barriers. Examines cultural and trading partners to minimize their impact on trade. Offered: odd years; W.

PSE 580 World Woods and Their Utilization (3) Briggs Principal species, forms, and end-uses of wood in world trade. Evaluation of future demands to identify changes in end-use requirements. Examination of technical utilization issues related to plantations, underutilized species, and tropical forests in meeting these uses. Solid wood, panel, fiber, and wood fuel products. Offered: even years; W.

PSE 589 Wood Biosynthesis (3) Hrutfiord Biosynthesis of carbohydrates, phenolic and terpenoid compounds in forest trees, and biochemistry of wood degradation. Prerequisite: 406. Offered: even years Sp.

PSE 591 Graduate Teaching Practicum (*, max. 5) Principles of teaching and learning applied to undergraduate instruction in paper science and engineering. Development, delivery, and evaluation of actual lectures and homework assignments. Graduate teaching experience for PSE students only. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

Urban Horticulture

Courses for Undergraduates

UHF 201 Ecology of Urban Environments (3) I&S/ NW Hamilton Biological, chemical, and physical processes and components of urban environments, plus human impacts. Each urban environment, from city cores to naturalized open spaces, is discussed for above-and below-ground conditions, key plant and animal species, and biological implications of management practices. Intended primarily for nonmajors and potential majors. Offered: A.

UHF 202 Plants in Cities: An Introduction to Urban Horticulture (3) I&S/NW Tukey Introduction to use of plants in cities for the benefit of people who live there, including plant selection, production, design, utilization, maintenance, and management with implications in society, business, environment, and quality of life in urban areas. Intended primarily for nonmajors and potential majors. Offered: W.

UHF 331 Landscape Plant Recognition (3) NW Hamilton, Tsukada Field recognition of important groups of woody and herbaceous landscape plants, emphasizing diversity at the genus and family levels. Cultivated plant nomenclature. Plant descriptive characters evident in the field with eye and hand lens. Hardiness and landscape applications. Recommended: BOT 113. Offered: jointly with BOT 331; SpS.

UHF 406 Curatorial Practices in Public Gardens (3) Techniques of curatorial practice relevant to living collections of plants. Includes developing and using collections policies, collection documentation, plant acquisition and conservation programs, display methods, exchange programs and procedures, and plant introduction programs. Recommended: three credits in urban horticulture or museology. Offered: Sp.

UHF 411 Plant Propagation, Principles, and Practice (3) NW Wott Science and practice of plant propagation including sexual (seed) and asexual (cutting, layering, grafting) propagation. Includes discussion of physiological effects, methodology and laboratory exercises. Wide variety of plants covered. Intended for majors in urban horticulture and others interested in reproducing landscape plants. Offered: Sp.

UHF 431 Landscape Plant Selection (5) NW Hamilton Principles of selecting plants for urban landscape sites. Biological basis of plant selection; site analysis of above-ground and soil conditions, including microclimate; assessment of plant performance; plant geography, genetics, exploration, and introduction. Two student projects: study one urban site and analyze one particular plant species. Prerequisite: 331 or equivalent. Offered: A.

UHF 444 Plant Materials in Urban Landscapes (5) Gonzalez Laboratory and field course on urban plant materials. Emphasis on cultural requirements, pest and disease susceptibility, and ornamental characteristics of commonly used landscape plants. Introduction to species and cultivars currently available in the nursery trade is integrated with selection and site use in a variety of landscapes. Prerequisite: 331 or equivalent. Offered: So.

UHF 445 Landscape Plant Management (5) Gonzalez Principles and practices of plant management in cultivated situations. Review of landscape design from the horticultural perspective, management schedules and budgets, arboricultural practices, and care of specialized plant materials. Prerequisite: 331 or equivalent knowledge of woody plants. Offered: A.

UHF 449 Urban Forestry Seminar (1-3, max. 9) Bradley, Wagar Discussion of current practice and research for managing trees in urban and suburban environments and in forested environments with substantial human use. Prerequisite: permission of instructor. Offered: Sp.

UHF 451 Urban Plant Protection (4) NW Gara Working knowledge on insects and diseases of plants growing in the urban environment. Emphasis placed on pest and damage recognition, control methods, and integrated pest management systems. Prerequisites: CHEM 101, 102; BIOL 101, 102 or equivalents. Offered: Sp.

UHF 461 Public Outreach in Urban Horticulture (3) Wott Aspects of establishing and implementing programs of public urban horticulture outreach (extension) education in university, public institutions, and private contexts. Includes quantitative audience assessment, organization, objective building, lecture and class management, publications, interpretation for diverse audiences, funding, volunteers, and evaluation techniques. Recommended: three credits in urban horticulture. Offered: W.

UHF 471 Ecological Concepts and Urban Ecosystems (3) NW Ewing Ecological concepts intro an urban context with emphasis on autoecological relationships of plant in an urban environment. General framework for development of urban ecological concepts followed by case studies and exploring applications in new areas. Prerequisite: general ecology, plant physiology, or permission of instructor. Offered: W.

UHF 475 Wetland Ecology (5) NW Ewing, Harrison Wetland types and functions, global and North American distribution, wetland plant types, soil chemistry. The influence of stresses on wetland composition and form. Autecology of wetland plants; response to and detection of stresses. Impacts of urbanization; management techniques. Prerequisites: BOT 371; BOT 354 or BIOL 472; or permission of instructor. Offered: A.

UHF 490, 491, 492 Undergraduate Studies (1-5, 1-5, 1-5) NW Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSpS, AWSpS, AWSpS.

UHF 495 Senior Project in Urban Forestry (5) Bradley, Hamilton Individual study of an urban forestry problem under direction of a faculty member. Prerequisites: approved plan of study and permission of major advisor. Offered: AWSpS.

Courses for Graduates Only

UHF 501 Urban Horticulture Profession (2) Tukey Describes the emerging profession of urban horticulture and forestry, its history and significance, and the attitudes, knowledge, and skills necessary for success in the profession. Guest lecturers and student participation discuss and evaluate opportunities. Prerequisites: MFR-UH students and others by permission of instructor. Offered: A.

UHF 502 Data Collection, Analysis, and Presentation (3) Ewing Design of scientific experiments, collection of data, and use of computers to store, analyze and present data. Limited by equipment availability to 8 students; UH students have priority. Offered: Sp.

UHF 531 Seminar in Horticultural Taxonomy and Landscape Plant Selection (1-3, max. 12) Hamilton Special topics in horticultural taxonomy (nomenclature and systematics of cultivated plants, evolution of diverse genera and families, methods of analysis) and landscape plant selection (natural ecology and biogeography of landscape plants, plant exploration, introduction and testing, Recommended: 331 and 431.

UHF 549 Urban Horticulture Seminar (1, max. 6) *Hamilton* Discussion by invited speakers on current topics in urban horticulture. Credit/no credit only. Offered: A.

UHF 561 Public Presentation in Urban Horticulture (2) Wott Students learn to make public presentations in scientific, professional and popular contexts and to interpret technical information for professional and lay audiences. Support materials, such as audiovisuals and graphics discussed. Offered: W.

UHF 572 Urban Ecosystem Management Seminar (1-3, max. 9) Ewing Graduate seminar in urban ecosystem management. Special topics of current importance in urban ecosystem management. Ecological aspects of ecosystem conservation, restoration, and management. Students participate in presentation and discussion of current work. Prerequisites: 471, 475. Offered: W.

UHF 601 Internship (1-9) Prerequisite: permission of graduate program adviser. Credit/no credit only.

Interdisciplinary Graduate Degree Programs

These programs are administered by interdisciplinary groups of the Graduate School. Certain courses carrying the particular program prefix appear below; other courses with the same prefix appear elsewhere as indicated. Other courses included in these programs are selected from many disciplines throughout the University and carry the prefix of the respective discipline.

Behavioral Neuroscience

Albert F. Fuchs, Director

This interdisciplinary Doctor of Philosophy degree program administered by the Behavioral Neuroscience Interdisciplinary Group of the Graduate School provides intensive training in behavioral neuroscience. The program accepts only two or three students a year. In the first two years, students take didactic course work, as well as three laboratory rotations. During this time students are supported by a University research assistantship. By the third year, students select a research laboratory and are supported by a variety of funding resources until the completion of the Ph.D. program, usually after two to four additional years. Graduates of the program are employed in University departments of Psychology, Physiology, Neuroscience, and Zoology, and in various School of Medicine departments.

Because physiological psychology and modern neurobiology are strongly developed at the University, graduate students can find the latest concepts, research techniques, and instrumentation in both fields. In addition to the research facilities of the participating departments, students may work at a multitude of other neuroscience facilities, including the Regional Primate Research Center (on campus), the W. M. Keck Imaging Center (on campus), and the Friday Harbor Laboratories for the study of marine and invertebrate biology (on San Juan Island).

Anderson, Marjorie E. * 1971; PhD, 1969, University of Washington; physiology of basal ganglia and cerebellum.

Beecher, Michael D. * 1978; PhD, 1970, Boston University; animal communication, animal behaviors and communication, sensory processes.

Bernstein, Ilene L. * 1974; PhD, 1972, University of California (Los Angeles); behavioral neuroscience, mechanisms affecting appetite and taste preference.

Diaz, Jaime * 1978; PhD, 1975, University of California (Los Angeles); brain development, developmental psychopharmacology.

Dorsa, Daniel M. * 1979, PhD, 1977, University of California (Davis); neuropharmacology, neurochemistry.

Edwards, John S. * 1967; PhD, 1960, Cambridge University (UK); arthropod neurobiology, insect physiology and development, tundra and alpine biology.

Fetz, Eberhard * 1975; PhD, 1966, Massachusetts Institute of Technology; cortical regulation of movement.

Fuchs, Albert F. * 1969; PhD, 1966, Johns Hopkins University; oculomotor physiology.

Kuhl, Patricia K. * 1976, PhD, 1973, University of Minnesota; speech perception.

Palka, John M. * 1969; PhD, 1965, University of California (Los Angeles); neurophysiology, sensory physiology, developmental neurobiology.

Rubel, Edwin W. * 1986; PhD, 1969, Michigan State University; developmental neurobiology, with special emphasis on vertebrate auditory system development.

Schwartzkroin, Philip A. * 1978; PhD, 1972, Stanford University; mechanisms of cortical excitability.

Smith, Orville A. * 1958; PhD, 1953, Michigan State University; central regulation of cardiovascular function.

Steiner, Robert A. * 1977; PhD, 1975, University of Oregon; neuroendocrinology.

Teller, Davida Y. * 1965; PhD, 1965, University of California (Berkeley); vision, psychophysics, development of vision.

Truman, James W. * 1973; PhD, 1970, Harvard University; hormones and invertebrate behavior, insect physiology, circadian rhythms.

Wingfield, John C. * 1985; PhD, 1973, University College of North Wales (UK); environmental and hormonal control of avian reproductive cycles.

Woods, Stephen C. * 1972; PhD, 1970, University of Washington; physiological and conditioned drug effects, neural control of endocrine systems.

Associate Professors

Brenowitz, Eliot A. * 1987; PhD, 1982, Cornell University; animal behavior, neuroethology, neuroendocrinology, animal communications.

Sherk, Helen * 1982; PhD, 1978, Massachusetts Institute of Technology; neuroanatomy.

Tempel, Brucé L. * 1988; PhD, 1983, Princeton University; molecular neurobiology/neurogenetics, especially potassium channel gene structure and function.

Assistant Professors

Miller, Margaret A. 1990; PhD, 1984, University of Washington.

Olavarria, Jaime F. * 1990; PhD, 1984, University of California (Berkeley); visual system: anatomy and physiology, comparative and developmental studies.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

B NEU 535 Issues in Behavioral Neuroscience (3) Provides faculty-guided readings and discussions of original papers in behavioral neuroscience.

B NEU 800 Doctoral Dissertation (*, max. 9) Offered: AWSpS.

Biology Teaching

John S. Edwards, Graduate Program Coordinator

The Graduate School Biology Teaching Group offers an interdisciplinary program that leads to the degree of Master of Arts for Teachers in the field of biological science. Designed specifically for biology teachers in secondary schools and community colleges, the program emphasizes broadening the student's understanding of the various fields of biological science, with improvement of the student's effectiveness as a teacher as the primary goal. The program offers opportunities for course work within the departments of the University in biological science and science education. Each student is asked to perform an in-depth study of a biological problem in the context of its relevance to the teaching of biological science. Facilities and guidance are provided by a sponsoring professor and advisory committee drawn from the Biology Teaching Group and the several biological science departments of the University.

Special Requirements

Prospective candidates for the degree must have an initial or continuing certificate for teaching biology at the secondary level.

Assistantships and fellowships are not provided under the aegis of this program.

Stettler, Reinhard F. * 1963; PhD, 1963, University of California (Berkeley); genetics of forest tree populations, biotechnology, biomass production.

INTERDISCIPLINARY GRADUATE DEGREE PROGRAMS / NEAR AND MIDDLE EASTERN STUDIES 331

Whisler, Howard C. * 1963; PhD, 1961, University of California (Berkeley); mycology, aquatic fungi, slime-molds and phycomycetes, development.

Associate Professors

Hille, Merrill B. * 1976; PhD, 1965, Rockefeller University; developmental biology, gastrulation in sea urchin embryos, translational regulation during meiosis.

Van Volkenburgh, Elizabeth * 1982; PhD, 1980, University of Washington; leaf growth and development, cellular and biochemical levels of control.

Health Services Administration

Mary Richardson, Graduate Program Coordinator

The Health Services Administration Group offers a twoyear program of studies leading to the degree of Master of Health Administration. It provides preparation for careers in management, planning, and policy analysis in ambulatory-care organizations, hospitals, long-termcare facilities, mental-health-care organizations, government agencies, planning agencies, and other organizational settings in the health field. The curriculum is designed to be interdisciplinary, with a faculty drawn not only from the School of Public Health and Community Medicine, but also from the graduate schools of Business Administration and Public Affairs. A student's program of studies may vary according to his or her concentration of study and career objectives. In addition to academic work, students are required to participate in an internship experience in a health facility or agency under the preceptorship of the administrator or director of that organization. Also, a two-quarter analytical project under the supervision of a faculty adviser is required in the second year.

The program has developed a unique opportunity for concentration in health policy and managed care. A concurrent degree program combining the M.H.A. and M.B.A. degrees also is offered. This curriculum requires three years of intensive academic study and culminates in a joint M.H.A.-M.B.A. degree.

Course listings may be found under the School of Public Health and Community Medicine, Department of Health Services.

Special Requirements

Applicants must submit, in addition to Graduate School admission requirements, at least three letters of recommendation and scores from the Graduate Record Examination. A narrative statement of objectives is also required, and interviews by members of the program faculty may be required. Relevant health field experience is preferred. In general, applicants are accepted only for autumn quarter of each year. The application deadline is February 15.

Financial Aid

A limited number of fellowships, assistantships, scholarships and loans are available each year. The M.H.A. Alumni Association sponsors a fund-raising phonathon from which some of the proceeds go toward program scholarships. The Foster G. McGaw Scholarship, administered by the Association of University Programs in Health Administration, may be awarded. A scholarship sponsored by the Association of Medical Group Administrators is available for students concentrating in ambulatory care management. Group Health Cooperative of Puget Sound sponsors a Graduate Research Association position for an under-represented minority student (particularly Black, Hispanic, or Native American). Health Education Assistance Loans (HEAL) monies are also available to graduate students in health services. However, students admitted should be prepared to utilize their own resources to finance their graduate education.

Research Facilities

In addition to utilizing University facilities, the program makes extensive use of community health facilities and agencies for research and training.

Grembowski, David * 1980; PhD, 1982, University of Washington; dental care demand, fluoridation, dental health services research.

Martin, Diane P. 1978; PhD, 1979, University of Washington; health services use and cost, alternative delivery systems and insurance.

Richardson, Mary L. * 1977; PhD, 1984, University of Washington; organization, management and analysis of policy relevant to health services.

Wickizer, Thomas M. 1988; PhD, 1989, University of Michigan; health promotion evaluation.

Senior Lecturer

Altamore, Rita A. * 1981; MD, 1977, Boston University; information systems in health services, quality of health care.

Near and Middle Eastern Studies

The interdisciplinary Ph.D. program in Near and Middle Eastern Studies is designed for students who wish to pursue research with a comparative perspective in Near Eastern languages and literature: Arabic, Hebrew, Persian (or Dari or Tajik); Turkish and Central Asian Turkic languages; Near Eastern linguistics; Islamic topics, namely: Islamic law, history, institutions, theology, and mysticism; comparative religion: Judaism, Christianity, and Islam; and interdisciplinary investigations of modern topics using the social sciences. The program is administered by an interdisciplinary Graduate School faculty group. The program of studies includes courses offered in the Department of Near Eastern Languages and Civilization, JSIS, and other departments on campus. Students in the program must take courses in both the humanities and social sciences.

Degree Requirements and Satisfactory Progress

Specific course work and areas of concentration will be determined by the student's interests within the frame-

work of the degree and satisfactory progress requirements listed below.

1. Within 18 months of admission, demonstration of a general knowledge of history and culture in one of the following general fields: Islamic civilization; Arabic, Hebrew, Persian, Turkish, or Central Asian Turkic languages and literature; the modern Middle East; or comparative religion either through previous degree work or through examination administered by the program.

2. Within three years of admission, completion of two advanced courses in the humanities, one of which must be in the Department of Near Eastern Languages and Civilization (NELC); and two advanced courses in the social sciences, one of which must be in the Department of History. These courses are in addition to work the student may have done at the B.A. and M.A. level.

3. Within three years of admission, completion of a graduate seminar, or two if none was taken at the M.A. level.

4. A student will be expected to have studied four languages, two of which must be regional languages and one of which must be a Western European language other than English, such as French, German, Italian, Russian, or Spanish. Within three years of admission, a student must acquire a reading knowledge of a pertinent research language different from the two languages offered at the time of admission. Before the oral examination may be taken, the student must complete the second-year level in a regional language different from the two languages offered at the time of admission.

Annual Review

A subcommittee of the Near and Middle Eastern Studies Program faculty will meet each spring to review the progress of all students in the Ph.D. program. Either the chair of the student's committee, the program's graduate adviser, or the program's director will inform students of the results of this annual review.

Ph.D. Examinations and Dissertation

Students will be required to take written examinations, one of which will involve the primary regional language offered by the student. The specific fields will be set by the student's Ph.D. committee in consultation with the student.

Students must meet the general University requirements concerning admission to candidacy for the doctoral degree, the dissertation, and final examinations, including an oral examination.

Students must have a major adviser from among the Near and Middle Eastern Program faculty. Major changes in a student's program must be approved by a three-person faculty committee, which must include the student's major adviser as well as the graduate adviser for the program. At least one member and no more than two members of a student's committee must be in NELC.

Students will write a dissertation as the final requirement for the Ph.D. degree. The topic of the dissertation will be set in consultation with the Ph.D. candidate's supervisory committee.

Admission Deadline

The application deadline for autumn quarter admission is February 1. Applications which are completed and postmarked on or before this date will be reviewed by the apppropriate admission committee. Late applications may be submitted until April 15, although consideration is not guaranteed if enrollment targets have been met.

Zysow, Aron * 1988; PhD, 1984, Harvard University; Arábic language and literature, Islamic law, Islamic theology.

Nutritional Sciences

Elaine R. Monsen, Graduate Program Coordinator

The Nutritional Sciences Program offers an interdisciplinary graduate program of study leading to a Master of Science or a Doctor of Philosophy degree. Training is provided in advanced nutrition and its application to the field of clinical dietetics through both didactic and clinical experiences. Four types of students are best served by this program: (1) the individual with a strong science background who wishes to pursue advanced training in nutritional sciences; (2) the individual who wishes to complete academic requirements (ADA-approved didactic plan) for becoming a registered dietitian; (3) the individual with an undergraduate background in nutrition, dietetics and foods who wishes to pursue additional education in nutritional sciences while obtaining the supervised clinical experience required for registered dietitian status (ADA-approved AP-4); and (4) the individual who is a registered dietitian and wishes to pursue an advanced degree in nutritional sciences.

Principal areas of study include clinical nutrition, community nutrition, maternal and child nutrition, and nutritional biochemistry. The faculty is composed of a core group in nutrition plus a larger affiliated group representing relevant fields within the schools of Public Health, Medicine, and Nursing, the Division of Food Science in the College of Ocean and Fishery Sciences, and the College of Arts and Sciences.

Each individual program of study is designed by the student in consultation with, and with the approval of, a supervisory committee. Not only will appropriate course work be carefully defined, but collaboration between student and faculty in appropriate thesis research will begin as early in the graduate experience as possible. Those students receiving supervised clinical experience will work closely with the coordinator of clinical activities, so the program of experiences meets ADA requirements.

Research Facilities

Support facilities are available in the form of libraries, laboratories, a nutrient data base, computer facilities, a human metabolic unit, and a vivarium. Additional support is available through the Clinical Research Center, the Clinical Nutrition Research Unit, the Northwest Lipid Research Center, and the Nutrition Metabolism Division of the Department of Laboratory Medicine in the School of Medicine. Clinical facilities available for supervised clinical experience include University of Washington Medical Center, Harborview Medical Center, Fred Hutchinson Cancer Research Center, Northwest Kidney Center, Children's Hospital and Medical Center, Pacific Medical Center, and the Child Development and Mental Retardation Center.

Admission Requirements

Students may enter the graduate degree program after completing a bachelor's and/or master's degree in the biological sciences; background in human physiology and biochemistry is especially desirable. Those students who wish to pursue registration status with the Commission on Dietetic Registration must complete ADA-approved Plan 4 or Plan 5 academic requirements prior to applying for the supervised clinical experience program (AP-4). Students who wish to pursue the Ph.D. degree should correspond with the Director of the Nutritional Sciences Group for detailed admission requirements.

Kestin, Mark * 1990; PhD, 1990, Flinders University (Australia); relationship between nutrition, cancer and cardiovascular disease. Kristal, Alan R. * 1988; DPH, 1983, Columbia University; nutritional epidemiology, dietary behavior, nutrition intervention, and cancer control.

Lecturers

Aker, Saundra 1977, (Affiliate); BS, 1961, University of Utah; medically optimal nutrition support for immunocompromised patients.

Adams, Susan L. 1979, MS, 1988, University of Washington; clinical dietetics and research, critical care nutritional support.

Karkeck, Joan M. * 1974, MS, 1969, Case Western Reserve University; applied nutrition including food intake methods and clinical dietetic practice.

King, Irena B. 1985; PhD, 1984, University of Washington; fatty acids, antioxidants, DNA damage, biomarkers.

Lucas, Betty L. 1974, MPH, 1969, University of California (Berkeley); maternal and child nutrition.

Pipes, Peggy L. 1968; MPH, 1966, University of Michigan; maternal and child nutrition.

Rees, Jane 1973; MS, 1972, University of Washington; adolescent medicine, nutrition.

Trahms, Cristine M. 1973, MS, 1972, University of Washington, maternal and child nutrition.

Wilkens, Katherine G. 1989, MS, 1977, University of Washington; nutrition care of patients requiring dialysis.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

NUTR 300 Nutrition for Today (3) NW Basic and applied nutrition and food science. Includes identification and physiological roles of nutrients, nutritional requirements, problems with over- and undernutrition, and nutritional and food-related diseases. Food additives, processing, safety, and their effects on overall nutrition. Current issues of public significance.

NUTR 301 Nutrition and Nursing (3) NW Worthington-Roberts Basic principles of nutrition and their relationship to health problems. Normal nutrition needs of individuals at various age levels; environmental influences on nutrition; assessment of nutritional status; nutritional values of foods; dietary modifications as appropriate in the nutritional component of medical treatment. Prerequisite: organic chemistry. Offered: A.

NUTR 441 Food Structure and Preparation (3) Review of relationships between food quality and food handling. Principles of food science integrated with laboratory sessions that observe the effects of various parameters on food composition and quality. Prerequisite: organic chemistry.

NUTR 445 Food Service Management (3) Objectives of management in a food service system; purchasing systems currently in use, receiving systems, inventory control, menu planning, cost control, service styles, and sanitation requirements. Prerequisite: 441.

NUTR 461 Diet Therapy (4) Karkeck Nutrition in the etiology and treatment of disease and in the maintenance of health. Various organ systems are discussed: pathology, medical/surgical treatment and dietary management, with emphasis on counseling skills. Prerequisites: basic nutrition and P BIO 406-406 or CONJ 340-341-342. Offered: 1996; W.

Courses for Graduates Only

NUTR 500 Seminar: Current Issues in Nutrition (1, max. 4) Addresses current topics in the Nutrition and Applied Nutrition literature and provides a forum for student and faculty presentation and review of current research efforts. Prerequisite: graduate student in nutrition. Offered: AWSp. NUTR 520 Protein and Carbohydrate Nutrition (4) Monsen, Rosenfeld Metabolic and physiologic concepts related to protein and carbohydrate nutrition Areas address include composition of foods, requirements through the life cycle, quality of protein, vegetarianism, protein deficiency, low carbohydrate diets, glycemic response to foods, carbohydrates and dental caries, inborn errors in carbohydrate and protein metabolism. Prerequisite: biochemistry. Offered: A.

NUTR 521 Lipid Nutrition (4) Monsen, Rosenfeld Normal lipid components of animal fluids and tissues, with review of their metabolism and physiological functions. Effect of diet and the normal development during the life span of these lipid metabolism. Changes of lipids with various types of disease states and means of nutritional modification of these changes. Prerequisite: biochemistry. Offered: W.

NUTR 522 Vitamin and Mineral Nutrition (4) Monsen, Rosenfeld Advanced study of biologically essential minerals and vitamins. To include absorption, transport, function, storage, excretion; imbalance, deficiency and toxicity; dietary sources; role of these nutrients in prevention diseases directly on indirectly (such as cancer, dental caries); role of modern food technology on availability of these nutrients in our food supply. Prerequisite: biochemistry. Offered: Sp.

NUTR 525 Evaluation of Nutritional Status (3) Monsen Dietary, clinical, and biochemical-biophysical components in the assessment of nutritional status. Interrelationships of nutrients and effects of varying levels of nutrient intake. Critical appraisal of nutritional status surveys. Experimental design and dietary methodology. Prerequisites: human nutrition and biochemistry. Offered: 1995; A.

NUTR 526 Maternal and Infant Nutrition (3) Worthington-Roberts Influence of nutrition on fertility and on the course and outcome of pregnancy. Nutritional management of high-risk pregnancy. Nutritional needs during lactation and effect of maternal diet on milk composition. Breast-feeding versus bottle-feeding; fundamentals of infant nutrition. Nutritional management of high-risk infants. Prerequisites: human nutrition and human physiology. Offered: W.

NUTR 527 Nutrition: Childhood Through Adolescence (3) Rees, Trahms, Worthington-Roberts Influence of nourishment on growth, development, and behavior of children, toddlers through adolescents. Critical evaluation of normative data, special problems, and intervention strategies for individual as well as public health programs. Prerequisites: human nutrition and human physiology. Offered: 1996; Sp.

NUTR 528 Nutrition in Aging (3) Karkeck Physiological, psychological, social, cultural, and economic factors affecting nutrition in the middle and later years. Prerequisites:: human nutrition and human physiology. Offered: 1995; Sp.

NUTR 529 Evaluation of Nutrition Research and Literature (3) Critical review of selected nutrition literature. Evaluation of experimental design, research protocols, data analyses, and application in nutritional science. Offered: 1995; Sp.

NUTR 531 Community Nutrition (3) Nutrition-related health issues in the United States. Surveillance strategies and available data. Review of nutrition programs designed to improve status of high risk populations and methods of evaluation. Prerequisite: course in general nutrition. Offered: 1995; A.

NUTR 532 Fieldwork in Public Health Nutrition (2-12, max. 12) Observation and participation in community agency nutrition programs.

NUTR 535 Laboratory Methods in Nutrition (3) LeBoeuf, Rosenfeld Techniques used in nutrition research. Spectroscopy, isotopes, ultracentrifugation, chromatography; vitamin, lipid, and mineral analysis; methods for animal and human research. Prerequisites: laboratory experience in chemistry, biochemistry. Offered: Sp. 334 INTERDISCIPLINARY GRADUATE DEGREE PROGRAMS / NUTRITIONAL SCIENCES

NUTR 536 Nutrition Education Principles and Practice (3) Integrated course designed to prepare students of the practical application of nutrition education theories and principles in diverse behavioral change settings for a variety of learner-population groups. Prerequisite: permission of instructor. Offered: 1996; Sp.

NUTR 537 Laboratory Rotation (1-4, max. 6) LeBoeuf, Rosenfeld Exposure to research being conducted in the laboratories of the graduate nutrition faculty. Provides hands-on experience in laboratory research. Introduces the student to on-going research for preparation of dissertation topics. Prerequisites: 535, permission of graduate adviser. Offered: AWSpS.

NUTR 538 Nutritional Epidemiology (3) Beresford, Kestin Application of epidemiology methods to current studies of nutrition and disease. Special methodological problems of importance in nutritional epidemiological studies. Enables students to plan studies in nutritional epidemiology. Prerequisite: EPI 511 or 512 and BIOST 511 or permission of instructors. Offered: jointly with EPI 538; W.

NUTR 539 Seminar in Nutrition (1-3, max, 9) Library seminar and research on selected topics in recent developments in the field of nutrition. Prerequisite: advanced nutrition.

NUTR 540 Recent Developments in Foods (3) Development of new technology in food production and product development. Design of modified food products. A review of government regulations concerning new development in foods, including food contamination and food additives. Prerequisites: basic foods and nutrition.

NUTR 560 Practicum in Dietetic Education (1-5) Karkeck Supervised instructional experiences for dietetic education in both classroom and clinical situations. Individually arranged. Offered: AWSp.

NUTR 561 Advanced Clinical Nutrition Fieldwork (1-3, max. 9) Participation in a health-care team assessing nutrition status and needs, designing care plans to optimize nutritional support of patients, and establishing appropriate criteria for the evaluation of the nutrition care provided. Supervised clinical experience provided in a variety of local health-care institutions. Prerequisite: permission of instructor. Offered: AWSpS.

NUTR 562 Advanced Clinical Nutrition I (4) Karkeck Epidemiology and pathophysiology of acute of chronic disease related to nutrition (e.g., cardiovascular, endocrinologic, and hematologic diseases). Nutritional interventions and their relationship to medical, surgical, and pharmacologic treatment. Prerequisite: diet therapy. Offered: A.

NUTR 563 Advanced Clinical Nutrition II (4) Karkeck Assessment of the nutritional demands and hypermetabolic response of trauma, surgery, acute and neoplastic disease; determination of the appropriate amounts and sources of nutrients supplied through enteral and/or parenteral routs, Prerequisite: diet therapy. Offered: W.

NUTR 564 Management of Nutrition Services (3) Karkeck Administrative processes affecting health care, specific focus on management of nutritional support systems. Includes productivity and cost effectiveness of nutrition care, establishing and achieving quality of health-care professionals and varying health-care systems. For clinical nutritionists working in standard health-care systems. Offered: Sp.

NUTR 565 Seminar in Clinical Nutrition Practice (1-3) Selected topics and learning experiences in nutritional care delivery. Prepares students for practical application of nutritional concepts in diverse clinical settings. Prerequisites: concurrent registration in 561 and permission of instructor. Offered: AWSp.

NUTR 600 Independent Study or Research (*) Offered: AWSpS.

NUTR 700 Master's Thesis (*) Offered: AWSpS. NUTR 800 Doctoral Dissertation (*) Credit/no credit only. Prerequisite: permission of program adviser. Offered: AWSpS.

Quantitative Ecology and Resource Management

John R. Skalski, Graduate Program Coordinator (1994-95)

The graduate program offered by the Quantitative Ecology and Resource Management (QERM) interdisciplinary group provides a unique opportunity for students to study the application of statistical, mathematical, and decision sciences to a broad array of terrestrial and marine ecology, natural resource management, biometrical, and mathematical biology problems. The QERM program of study leads to Master of Science and Doctor of Philosophy degrees, and is designed to attract mathematically trained students interested in working on contemporary ecological or resource management problems from a quantitative perspective.

Faculty associated with this interdisciplinary program come from fourteen campus units; including statistics, applied mathematics, forest resources, fisheries, zoology, engineering, biostatistics, and marine affairs. This pool of faculty talent is available to enrich the academic experience of all QERM students.

Degree Requirements

Students entering the QERM program are expected to have either a strong mathematical or biological (ecological) background. Master of Science course work requirements include two courses in statistical theory; one course in optimization; one applied statistical methods course; two courses in either applied quantitative ecology or quantitative resource management; a seminar in quantitative ecology; plus approved electives. All master's degree holders must pass a first-year qualifying examination, prepare and defend a thesis, take a total of at least 45 graded quarter credits, and satisfy all Graduate School requirements.

Students passing the first-year qualifying examination at the Ph.D. level are eligible to enter the doctoral program of study. Course requirements equivalent to the master's program also must be completed. Doctor of Philosophy degree requirements include a minimum of 36 credits of graded course work beyond the master's; a minimum of 27 credits of dissertation research; and satisfaction of all Graduate School requirements. The 36 credits of course work must be taken from an approved list of courses and varies by one of the following three options: (a) systems analysis in ecology, (b) resource management, or (c) biometrical studies.

Admission Requirements

Students entering this graduate program are expected to perform well on the quantitative and analytical sections of the Graduate Record Examination. Background in a biological or ecological field is also highly desirable. To enter the Ph.D. program, students must pass the first-year qualifying examination at the Ph.D. level. In addition, all course requirements equivalent to the master's program must be completed. At least three letters of recommendation and a brief narrative statement of objectives must accompany each application for admission. Applications are accepted only for autumn quarter. The application deadline is February 1.

Financial Aid

Fellowships, teaching assistantships, and research assistantships are available each year. These come from either the Graduate School or one of the campus units contributing faculty to the QERM program. They generally cover the nine-month academic year, although provisions can be made for summer support. Tuition is normally included as part of the financial package. Funding decisions are made yearly, but attempts are made to continue support for students making satisfactory progress.

Research Facilities

The major space allocation in support of the QERM program is located in the Center for Quantitative Science in Forestry, Fisheries, and Wildlife. This intercollege unit offers student desk space, a small library, and modern UNIX-based workstations for conducting quantitative research. Additional field support is available from supporting colleges, schools, and departments such as fisheries, forest resources, and zoology. Existing research is conducted in concert with several federal, state, and local agencies spread throughout the state.

Professors

Bare, B. Bruce * 1969, PhD, 1969, Purdue University; harvest scheduling, biometry, forest land management, taxation, finance, management science.

Bassingthwaighte, James * 1975, MD, 1955, University of Toronto (Canada); computer analysis of transport mechanisms in blood and tissues.

Bell, Earl J. * 1966; PhD, 1965, University of California (Berkeley).

Briggs, David G. * 1973; PhD, 1980, University of Washington; operations research in forest products industries.

Brown, Gardner * 1965; PhD, 1964, University of California (Berkeley); resource economics.

Dowdle, Barney * 1962; PhD; 1962, Yale University; markets for timber and forest products, public forest land management.

Faaland, Bruce H. * 1971; PhD, 1971, Stanford University; manufacturing, scheduling, inventory, operations research, mathematical programming, forestry

Felsenstein, Joseph * 1968; PhD, 1968, University of Chicago; evolution and population genetics.

Ford, E. David * 1985, PhD, 1968, University College, London (UK); spacial processes in ecology, forest productivity, and plants' response to environmental change.

Francis, Robert C. * 1983, PhD, 1970, University of Washington; biological production of commercially important marine fishes, fisheries management.

Gallucci, Vincent * 1976; PhD, 1971, North Carolina State University; biomathematics and population dynamics.

Greulich, Francis E. * 1977; PhD, 1976, University of California (Berkeley); forest engineering, statistics, operations research.

Guttorp, Peter * 1980; PhD, 1980, University of California (Berkeley); point processes, stochastic models, applications to hydrology and atmospheric science.

Hilborn, Ray * 1987; PhD, 1974, University of British Columbia (Canada); population dynamics and resource policy.

Johnson, Jay A.* 1983; PhD, 1973, University of Washington; mechanical and physical properties of wood and wood composite materials, wood quality.

Kareiva, Peter M. * 1983; PhD, 1981, Cornell University; theoretical ecology, conservation biology, agricultural ecology, plant-insect interaction.

Kingsolver, Joel * 1986; PhD, 1981, Stanford University; physiological ecology and evolutionary morphology of insects.

Kronmal, Richard A. * 1964; PhD, 1964, University of California (Los Angeles); nonparametric density estimation, computer algorithms, cardiovascular data analysis, clinical trials.

Mar, Brian W. * 1967, PhD, 1958, University of Washington; system engineering, environmental management, interdisciplinary management.

Martin, R. Douglas * 1974; PhD, 1969, Princeton University; robust methods, time series, wavelets and neural networks.

Mathews, Stephen B. * 1972; PhD, 1967, University of Washington; quantitative fishery management.

Murray, James D. * 1988; PhD, 1956, Oxford University (UK); mathematical biology, biological pattern formation, wound healing, spread of epidemics.

Naiman, Robert J. * 1988; PhD, 1974, Arizona State University; forest stream ecosystems, aquatic landscape dynamics.

Pickford, Stewart G. * 1976; PhD, 1972, University of Washington; forest fire science, wildland fire management.

Schemske, Douglas W. * 1989; PhD, 1977, University of Illinois; evolutionary biology, plant population biology and coevolution.

Schreuder, Gerard Fritz * 1971; PhD, 1968, Yale University; statistical analysis in resource economics, international forestry, trade, aerial photos.

Swartzman, Gordon Leni * 1973, (Research); PhD, 1969, University of Michigan.

Thompson, Elizabeth A. * 1985; PhD, 1974, Cambridge University (UK); statistical analysis of human genetic data, statistics of conservation and computational biology.

van Belle, Gerald * 1974; PhD, 1967, University of Toronto (Canada); biostatistics, environmental risk factors for neurodegenerative diseases, risk communication.

Associate Professors

Anderson, James J. * 1969; PhD, 1977, University of Washington; fisheries and oceanography.

Conquest, Loveday L. * 1976; PhD, 1975, University of Washington; biological applications and statistics.

Huppert, Daniel D. * 1987, PhD, 1975, University of Washington; economics and management of natural resources, especially marine fisheries.

Leschine, Thomas M. * 1983; PhD, 1975, University of Pittsburgh; marine pollution management, ocean policy studies.

Pikitch, Ellen * 1987; PhD, 1983, Indiana University; marine fisheries population dynamics, assessment and management.

Rustagi, Krishna P. * 1973; PhD, 1973, Yale University; operations research and statistical applications in forest management. Sampson, Paul D. * 1981, (Research); PhD, 1979, University of Michigan; spatial statistics and environmetrics, morphometrics, statistical consulting.

Skalski, John R. * 1987; PhD, 1985, Cornell University; environmental sampling and effects assessment on wild populations, parameter estimation.

Zeh, Judith * 1961, (Research); PhD, 1979, University of Washington; estimation of whate population size and dynamics, statistics in infectious disease research.

Assistant Professors

Kot, Mark * 1989; PhD, 1987, University of Arizona; mathematical ecology, nonlinear dynamics, and population biology.

Sullivan, Patrick J. 1991, (Affiliate); PhD, 1986, Scripps Oceanographic Institute.

QERM 800 Doctoral Dissertation (*)

Urban Design and Planning

Richard Morrill, Graduate Program Coordinator

The Interdisciplinary Group for Urban Design and Planning offers the Doctor of Philosophy degree. The program offers a course of study for those seeking to pursue academic or research careers in the public or private sector. The program is concerned with research in urban design and planning and focuses on four areas of concentration: history of urban development, planning, and design; urban form analysis and design; land use planning; and environmental planning. Please write for a more detailed description of these areas of concentration.

The research focus of the program is aimed at achieving a better understanding of cities, of urban regions, city planning and urban design as manifestations of society and culture, and at developing better tools to plan for future physical development. It includes the development of new methods and the application of methods from other disciplines to expand knowledge of urbanization processes. The program stresses the link which exists between urban planning, its legislative context, and the resulting built environment. Objectives of the program are to help students and researchers to master general knowledge, to train them to be scholars and researchers in a particular subject area, and to guide them in the development of original research. The program of study is divided into three phases.

Phase one provides advanced knowledge in major aspects of planning and design. Included are three doctoral seminars, as well as elective courses from a structured list. Each student must prepare and present a research paper.

Phase two prepares the student in the interdisciplinary content of the field and involves the development of two areas of concentration. These areas must be matched with the interests and experience of faculty on the student's Supervisory Committee. The Supervisory Committee members, most of whom will be from the interdisciplinary group, have primary responsibility for student progress and evaluation. Students are expected to develop knowledge in at least one area outside urban design and planning. Completion of phase two is marked by passage of the General Examination.

Phase three focuses on original work which is presented as a dissertation.

Admission Criteria

Applicants must possess a Master of Urban Planning degree or its equivalent in urban design and practice. Students may be asked to complete appropriate background work. Admission into the program is very limited and is based on evidence of promise for high scholarly achievement. The applicant's statement of purpose, prior course work, GRE examination scores, letters of recommendation, and examples of past written work are all considered. Students may begin the program autumn quarter only.

Financial Aid

A very limited number of fellowships and assistantships are available each year. Tuition is normally included as part of the financial package.

Zerbe, Richard O. * 1975; PhD, 1969, Duke University; law and economics, cost-benefit analysis, economic history, environmental regulation.

Associate Professors

Chrisman, Nicholas R. * 1987; PhD, 1982, University of Bristol (UK); geographic information systems, spatial error analysis.

Dubrow, Gail Lee * 1989; MA, 1979, University of Oregon.

Findlay, John M. * 1987; PhD, 1982, University of California (Berkeley); history of the American West.

Horner, Richard R. * 1981, (Research); PhD, 1978, University of Washington; wetlands, conservation and storm water management.

Nyerges, Timothy L. * 1985; PhD, 1980, Ohio State University; GIS, spatial decision support, urban, transportation, environment.

Pivo, Gary E. * 1987; PhD, 1987, University of California (Berkeley); land use and physical planning, environmental planning; growth management.

Rutherford, G. Scott * 1981; PhD, 1974, Northwestern University; transportation planning and engineering.

Sommers, Paul E. * 1985, (Research); PhD, 1978, Yale University; economic development policy, regional economics.

Interschool or Intercollege Programs

Bioengineering

309 Harris Hydraulics Laboratory

The Center for Bioengineering provides a comprehensive, multidisciplinary program of education and research. The concepts and techniques of engineering are applied to the challenges in biology and medicine. Major areas of current bioengineering research include bioinstrumentation, biomaterials, biomechanics, controlled drug-release systems, imaging, microsensors, bioelectromagnetics, molecular bioengineering, microcirculation, cell mechanics, muscle, and simulation of biosystems.

Undergraduate Program

The undergraduate bioengineering program at the University of Washington is an honors program tailored for students bound for an M.D.-Ph.D. degree with a Ph.D. component in bioengineering. It is designed to bridge the gap in emphasis and curriculum that has traditionally alienated students in biology and in engineering. The curriculum leads to a B.S.E., and consists of a blend of engineering and biological sciences that provides students with unusual opportunities and qualifications for a future biomedical-bioengineering research career. This program is administered by the Center for Bioengineering via the Interdisciplinary Engineering Studies Program of the College of Engineering. Admission is restricted to a small number of highly motivated individuals with an outstanding track record of academic performance. Applicants must have completed at least one year of pre-engineering course work with a minimum GPA of 3.50.

Graduate Program

The Center for Bioengineering offers programs of study which lead to the Master of Science (M.S.), Master of Science in Engineering (M.S.E.), and Doctor of Philosophy (Ph.D.) degrees.

Master of Science Degree

The Master of Science degree program provides essential training in the engineering sciences, which aids students with strong backgrounds in the biological sciences to prepare for careers in research and development in either basic medical sciences or clinical investigations. A thesis is required.

Master of Science in Engineering Degree

The Master of Science in Engineering degree program provides essential training in the life sciences that assists students with sound engineering backgrounds to prepare for careers in academic, industrial, or hospital environments. A thesis is required.

Doctor of Philosophy Degree

The objective of the Ph.D. program is to train individuals for careers in bioengineering research and teaching. The training has three major components: (1) acquisition of a breadth of knowledge about engineering, biology, and medicine and the interdisciplinary interface between these quite disparate fields; (2) development of a depth of knowledge and expertise in a particular scientific specialty. (3) development of a potential for independent research that can be demonstrated. The objectives are fulfilled through use of a combination of research and teaching experiences. The program is designed to be rigorous while maintaining sufficient flexibility regarding specific requirements to accommodate qualified students with diverse backgrounds. Entrance to the Ph.D. program may be made directly after the B.S. or following completion of the M.S. or M.S.E.

Medical Scientist Program

A Medical Scientist Program exists for the support of individuals interested in coordinated graduate schoolmedical school study leading to both the M.D. and Ph.D. degrees. Students entering this highly competitive program are given an opportunity to pursue a flexible, combined course of study and research. Early inquiry regarding this program is urged since admission to the Graduate School and to the School of Medicine must be secured independently.

Research Facilities

Offices and laboratories are located in the College of Engineering and the School of Medicine. Students have access to the University of Washington Medical Center, vivarium, primate center, computer center, and libraries, as well as to all engineering and health sciences departments and facilities. A wide range of technologies and virtually all aspects of biomedical science are available. Cellular and molecular bioengineering are strong components of the research programs of the center. State-of-the-art facilities are available to support both research and instructional activities. Computer resources are especially abundant, and their use is an integral part of most laboratory and course work.

Admission Requirements

Applicants for the M.S. degree should have a baccalaureate degree in a science or the equivalent; applicants for the M.S.E. degree should have a baccalaureate degree in engineering or the equivalent. Preparation for both programs must include, at a minimum, one year each of calculus, physics, and chemistry. Applicants to the Ph.D. program should have strong academic credentials, a bachelor's degree in science or engineering, and demonstrated potential for advanced study. Admission to the program is highly selective.

In addition to completing the application requirements for the Graduate School, an applicant should also forward the following items to the Graduate Program Coordinator, Center for Bioengineering, WD-12, University of Washington, Seattle, WA 98195:

1) A one- or two-page written statement outlining academic and professional goals;

2) Official copies of Graduate Record Examination scores for the general tests;

 Three letters of recommendation from persons acquainted with the applicant's background (no specific form required).

Financial Aid

Financial aid is available to qualified graduate students in the form of traineeships, fellowships, and assistantships. Funding is derived from federal research and training programs, the Graduate School Research Fund, and programs sponsored by private agencies. Information concerning these fellowships is available from the Center for Bloengineering.

Crum, Lawrence A. * 1992; (Research); PhD, 1967, Ohio University.

Daly, Colin H. * 1967, (Adjunct); PhD, 1966, University of Strathclyde (UK); bioengineering, materials.

Foster, David M. * 1980, (Research); PhD, 1969, University of British Columbia (Canada).

Graham, Michael M. * 1980, (Adjunct); MD, 1976, University of California (San Francisco); mathematical modeling of radiotracer kinetics particularly involving positron emission tomography.

Guy, Arthur W. * 1955, (Emeritus); PhD, 1966, University of Washington; biological effects and medical applications of electromagnetic fields.

Haralick, Robert M. * 1986, (Adjunct); PhD, 1969, University of Kansas; computer vision, artificial intelligence, pattern recognition, image processing.

Hlastala, Michael P. * 1970; (Adjunct); PhD, 1969, State University of New York (Buffalo); respiratory physiology, inert gas analysis of respiratory function.

Hoffman, Allan S. * 1970; DSc, 1957, Massachusetts Institute of Technology; polymer materials science and engineering.

Hood, Leroy E. * 1992; PhD, 1968, California Institute of Technology; molecular immunology, large scale DNA mapping and sequencing, molecular evolution.

Horbett, Thomas A. * 1973; PhD, 1970, University of Washington; interfacial proteins, cell interactions, insulin delivery systems.

Huntsman, Lee L. * 1968; PhD, 1968, University of Pennsylvania; mechanics of heart and heart muscle, cardiovascular system assessment, new measurement techniques.

Johnson, Dale E. * 1976; PhD, 1971, University of Chicago; elemental microanalysis of biological systems, electron energy loss spectrometry.

Kim, Yongmin * 1982, (Adjunct); PhD, 1982, University of Wisconsin; computer architecture, imaging systems, computer graphics, multimedia, modeling and instrumentation.

Kushmerick, Martin J. * 1988, (Adjunct); MD, 1963, University of Pennsylvania; muscle contraction, mag-

338 INTERSCHOOL OR INTERCOLLEGE PROGRAMS / BIOENGINEERING

netic resonance, metabolic imaging NMR spectroscopy.

Lewellen, Thomas * 1967, (Adjunct); PhD, 1972, University of Washington; bioengineering, electrical engineering.

Martin, Roy W. * 1971, (Research); PhD, 1975, University of Washington; bioinstrumentation, ultrasonic Doppler, echo, tissue characterization, signal processing.

Matsen, Frederick A. * 1973, (Adjunct); MD, 1968, Baylor University; orthopaedics, bone and joint research, robotics.

Moritz, William E. * 1973, (Adjunct); PhD, 1969, Stanford University; microcomputer applications, bioinstrumentation, human-powered transportation.

Nelson, James A. * 1986, (Adjunct); MD, 1965, Harvard University; diagnostic radiology with basic research in related sciences.

Pollack, Gerald H. * 1968; PhD, 1968, University of Pennsylvania; muscular contraction.

Ratner, Buddy D. * 1972; PhD, 1972, Polytechnic Institute of Brocklyn; synthesis and characterization of polymeric biomaterials.

Rushmer, Robert F. * 1947, (Emeritus); MD, 1939, University of Chicago; health care delivery systems, technology transfer.

Schwartz, Stephen Mark * 1974, (Adjunct); MD, 1967, Boston University; vascular biology, atherosclerosis, molecular basis of lineage, developmental biology, cell kinetics.

Soma, Mani * 1982, (Adjunct); PhD, 1980, Stanford University; computer-aided design, device modeling, IC technology and design, bioengineering.

Spelman, Francis A. * 1961; PhD, 1975, University of Washington; biophysics of implanted cochlea; bioinstrumentation for primate research.

Verdugo, Pedro * 1974; MD, 1965, State University of Chile; microrheology, biomechanics, polymer gel physics, laser spectroscopy, cell biology.

Associate Professors

Dager, Stephen R. 1983, (Adjunct); MD, 1978, University of Nebraska.

Halbert, Sheridan * 1973, (Affiliate); PhD, 1972, University of Washington; reproductive biology/physiology.

Hannaford, Blake * 1989, (Adjunct); PhD, 1985, University of California (Berkeley); human and robotic movement control, bioengineering, controls, human-machine interaction.

Kalet, Ira J. * 1980, (Adjunct); PhD, 1968, Princeton University; computer simulation of radiation therapy, artificial intelligence, computer graphics.

Linker, David T. 1993, (Adjunct); MD, 1976, Stanford University; cardiology.

Nelson, Alan C. * 1986, (Affiliate); PhD, 1980, University of California (Berkeley); biomedical imaging using image analysis for tissue and tumor studies.

Richards, Todd L. * 1985, (Adjunct): PhD, 1984, University of California (Berkeley); nuclear magnetic resonance imaging, spectroscopy of the brain in demyellnating diseases.

Rowberg, Alan H. * 1982, (Adjunct); MD, 1970, University of Washington.

Tencer, Allan Fred * 1988, (Adjunct); PhD, 1981, McGill University (Canada).

Viney, Christopher * 1987; PhD, 1983, Cambridge University (UK); phase transformations and microstructure/property relationships in polymers and liquid crystals.

Yager, Paul * 1987; PhD, 1980, University of Oregon; physical chemistry and applications of biomembranes.

Assistant Professors

Baneyx, Francois 1992, (Adjunct); PhD, 1991, University of Texas (Austin); biotechnology, protein technology, biochemical engineering.

Cantino, Marie E. * 1981, (Affiliate); PhD, 1981, University of Washington; muscle ultrastructure and regulation, electron microscopy, x-ray microanalysis, image anlysis.

Kroll, Keith * 1987, (Research); PhD, 1983, University of Washington; regulation of energy balance in the heart.

Kunzelman, Karyn S. * 1991, (Adjunct Research); PhD, 1991, University of Texas (Dallas); biomedical engineering—cardiac; anatomy and physiology.

Lybrand, Terry Paul * 1990; PhD, 1984, University of California (San Francisco); molecular modeling.

Nickerson, Deborah A. * 1992, (Adjunct); PhD, 1978, University of Tennessee; automating the identification and typing of human DNA variations, genetic mapping, DNA diagnostics.

Pagliaro, Leonard J. * 1990; PhD, 1986, Wesleyan University; *in vivo* enzymology, cytoplasmic organization, light microscopy, image processing, photobleaching.

Ramon, Ceon * 1989, (Research); PhD, 1973, University of Utah; biomagnetic imaging and its application to detect cardiac dysrhythmia problems.

Riskin, Eve A. * 1990, (Adjunct); PhD, 1990, Stanford University; image compression and processing, signal processing, medical imaging, and pattern recognition.

Sanders, Joan Elizabeth * 1985; PhD, 1991, University of Washington; soft tissue biomechanics and tissue adaptation to mechanical stress.

Stayton, Patrick S. * 1992; PhD, 1989, University of Illinois; engineering proteins for biotechnology, biomaterials, and biomedical therapies/diagnostics.

Vogel, Viola * 1990; PhD, 1987, Johann Wolfgang Goethe University (Germany); molecular assemblies and Langmuir-Blodgett films.

Yates, John R. III * 1992, (Adjunct); PhD, 1987, University of Virginia; biological and ion trap mass spectrometry, protein sequencing, oligonucleotide analysis.

Lecturer

Aw, Chak-Yoon 1983; MSEE, 1987, University of Washington.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

BIOEN 299 Introduction to Bioengineering (1) *Verdugo* Lectures on the various aspects of bioengineering; orientation in bioengineering studies and practice, Credit/no credit only. Offered: ASp:

BIOEN 401 Engineering Analysis of Cell Function (3) Verdugo For engineers with no previous experience in the biological sciences, this course introduces the fundamentals of cell biology in an engineeringoriented framework. Includes structure, energetics, information processing, transduction, and biological engines.

BIOEN 436 Medical Instrumentation (4) Spelman Introduction to the application of instrumentation to medicine. Topics include transducers, signal-conditioning amplifiers, electrodes and electrochemistry, ultrasound systems, electrical safety, and the design of clinical electronics. Laboratory included. For juniors, seniors, and first-year graduate students who are preparing for careers in bioengineering, both research and industrial. Prerequisite: some knowledge of human physiology and electronics or instrumentation or permission of instructor. Recommended: 534, 535, E E 433. Offered: jointly with E E 436; Sp.

BIOEN 467 Biochemical Engineering (3) Baneyx Application of basic chemical engineering principles to biochemical and biological process industries such as fermentation, enzyme technology, and biological waste treatment. Rapid overview of relevant microbiology, biochemistry, and molecular genetics. Design and analysis of biological reactors and product recovery operations. Prerequisite: CH E 340, organic chemistry. Recommended: CH E 465. Offered: jointly with CH E 467; W.

BIOEN 490 Engineering Materials for Biomedical Applications (3) Hoffman Combined application of the principles of physical chemistry, biochemistry, materials engineering, mass transfer, and fluid mechanics to biomedical problems. Case studies include considerations of the selection of materials, design, and the operation of instruments, components of, or entire, artificial organs (heart, kidney, lung) and artificial structural elements (bone, teeth, skin), all for use in contact with body fluids. Prerequisite: organic chemistry or permission of instructor. Offered: jointly with CH E 490; even years; W.

BIOEN 491 Controlled-Release Systems: Principles and Applications (3) Hoffman Mechanisms for controlled release of active agents and the development of useful systems for this purpose. Release mechanisms include diffusive, convective, or erosive driving forces. Applications to the biomedical, agricultural, forestry, and oceanography fields. Some special case studies covered in detail. Prerequisite: permission of instructor. Offered: jointly with CH E 491; odd years; W.

BIOEN 492 Surface Analysis (3) Ratner Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials, science wear, and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger): ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Offered: jointly with CH E 458: W.

BIOEN 499 Special Projects (2-6, max. 6) Individual undergraduate bioengineering projects under the supervision of an instructor. In addition, classes on selected topics of current interests as announced. Prerequisite: permission of instructor. Entry Code required. Offered: AWSpS.

Courses for Graduates Only

BIOEN 508 Physical Aspects of Medical Imaging (4) Stewart Quantitative physical principles of medical imaging are presented for electromagnetic and sonic radiation. Methods of image formation and analysis are discussed for conventional film radiography, CT, DSA, PET, B-mode ultrasound and Doppler ultrasound. Offered: jointly with RADGY 508; Sp.

BIOEN 510- Bioengineering Seminars ([1-2]-, max. 3) Topics of current bioengineering interests presented by resident and visiting faculty members and students: Graduate students actively involved in bioengineering research are eligible to enroll for credit and can be expected to attend regularly, participate in discussions, and make presentations. Credit/no credit only. Offered: AW.

BIOEN 511 Biomaterials Seminar (1) Hoffman, Horbett, Ratner Presentation of student research results. Credit/no credit only. Prerequisite: permission of instructor. Offered: jointly with CH E 511; AWSp.

BIOEN 512 Biomechanics Seminar (1) Sanders Designed to expose students to current research topics in the area of biomechanics and permit them the opportunity to present their work for discussion. Subjects include presentations of on-going laboratory research, as well as related topics, journal article review, and summaries of national meetings. Credit/no credit only.

BIOEN 515 Introduction to Clinical Medicine for Engineers (3) Neison Introduction to concepts and methods used in clinical medicine for students with engineering and physical science backgrounds. How and where engineering principles and methodologies can be applied to health-care problems. Prerequisite: basic physiology or permission of instructor. Offered: odd years; W.

BIOEN 516 Measurement and Confirmation: An Introduction to Philosophical and Ethical Issues for Scientists (2) Pagliaro Graduate level introduction to philosophical foundations of science and engineering. Methods used to measure and confirm phenomena in research examined, and principles of hypothesis, prediction, testing, experimental design, data acquisition, data recording, data analysis, data presentation, statistics in research, and interpretation of results discussed. Prerequisite: permission of instructor. Offered: w.

BIOEN 520 Orthopedic Biomechanics (4) Tencer Mechanical engineering applied to musculoskeletal system with emphasis on techniques in orthopedic surgery. Measurement of mechanical properties of tissues. mechanics of bone, soft tissue, and muscle, mechanics of upper extremity, spine, and lower extremity. Engineering in surgery, gait analysis, joint replacement, fracture fixation. Prerequisite: M E 556 and 557 or permission of instructor. Offered: odd years; W.

BIOEN 534 Introduction to Biomedical Instrumentation: Analog (4) Spelman Techniques of biological systems analysis using Fourier and Laplace transforms. Electronic circuit analysis techniques applied to biological problems. Operational amplifiers as interfaces to transducers and as signal processors. Computer-aided design used in both homework and weekly laboratory. Prerequisites: MATH 307, PHYS 121-123, or equivalents. Offered: A.

BIOEN 535 Introduction to Biomedical Instrumentation: Digital (4) Instrumentation systems (power supplies, transducers, amplifiers, recording and display devices); techniques of signal/noise enhancement (grounding, shielding, averaging); digital logic and instrumentation; A/D and D/A conversion; use of laboratory computers and laboratory experience in these areas. Biomedical applications. Prerequisite: permission of instructor. Offered: W.

BIOEN 537 Case Studies in Biomedical Instrumentation (3) Spelman Current applications of medical instrumentation to neural prosthesis, microscopy, and the interaction of electromagnetic fields with biological tissues. Prerequisites: 436, 534, and 535 or permission of instructor. Offered: W.

BIOEN 540 Problem Solving in Bioengineering (3) Foster Introduction to techniques of mathematical modeling. How to use computer methods to solve selected bioengineering problems in data analysis and modeling, and use models to test hypotheses. Handson computer experience. Prerequisite: permission of instructor. Offered: even years; A.

BIOEN 542 Computer Simulation In Biology (3) Kroll, Bassingthwaighte, Graham Introduction to mathematical modeling of biological phenomena. Tutorial text explains how to derive equations for simple models and apply them to generate simulation data. Application topics include kinetics of biomolecular reactions and enzyme saturation, membrane transport, organismal predation, competition and growth, compartmental and spatially distributed models, physiological control systems, probabilistic models. Prerequisite: P BIO 405 and 406 or equivalent or permission of instructor. Offered: W.

BIOEN 545 Fractals in Biology and Medicine (3) Bassingthwaighte Introduction to fractal and chaos. Conceptual approaches to using fractals for characterizing structures and growth processes, describing heterogeneities, and evaluating properties of tissues. The behavior of non-linear systems, often chaotic, describes physiological homeodynamics, regulation without set points in feedback control. Offered: A.

BIOEN 550 Mass Transport and Exchange in Blological Systems (3) Bassingthwaighte Review of basic mechanisms of transport; transport through vascular system and blood-tissue exchange processes in organs; integrated system analysis of closed systems and applications to physiological regulation, medical imaging, and pharmacokinetics. Prerequisites: calculus, introduction to differential equations; cardiovascular physiology; E E network analysis or systems analysis, chemical engineering transport. Offered: W.

BIOEN 555 Introduction to Biomechanics (3) Pollack Mechanical properties of biological tissues, with emphasis on the underlying histological bases. Bones, joints, cartilage, blood vessels, connective tissue, muscle, heart. Many laboratory sessions. Offered: odd years; Sp.

BIOEN 560 Ultrasound in Bioengineering (4) Martin Fundamentals of ultrasonic generation, formation, reception, and treatment of absorption, scattering, and transmission. Conventional and new methodology. (A, B, T-M mode, imaging, Doppler, tissue characterization, and nonlinear effects.) Credit/no credit only. Prerequisite: M E 525 or E E 525 for nonbioengineering students or permission of instructor. Offered: odd years; A.

BIOEN 562 Bioelectromagnetics (4) Ramon Interaction of radio-frequency electromagnetic fields with biological systems: history, quantities and units, theoretical analysis, instrumentation and measurements, biological effects, medical applications, including cancer detection and therapy, major energy sources, public controversies, public and occupational health protection, international and national safety standards. Prerequisite: E E 381, or permission of instructor. Offered: cdd years; A.

BIOEN 564 Biomadical Light Microscopy and Imaging (4) Pagliaro, Viney Introduction to light microscopy for biomedical applications, presented at the graduate level for students with some background in optics, physics, and biology. Topics include the principles of image formation, contrast, magnification and resolution, practical aspects of microscopy, introduction to microscope imaging, and three-dimensional microscopy. Prerequisite: 534 or permission of instructors. Offered: odd years; Sp.

BIOEN 565 Nuclear Magnetic Resonance in Biomedicine (2) Hayes, Kushmerick, Richards, Yuan Basic physics of nuclear magnetic resonance (NMR) imaging and spectroscopy are presented. Research applications of NMR in physiology and biochemistry are reviewed with emphasis on the brain. Grade based on written tests and small research paper. Prerequisite: permission of instructor. Offered: jointly with RADGY 550; odd years; W.

BIOEN 568 Image-Processing Computer Systems (4) Haralick, Kim Components of digital processing computer systems. Two-dimensional filtering and optimal filter design as well as basic image-processing operations. Selected advanced image-processing topics introduced. Individual student project. Prerequisite: permission of instructor. Offered: jointly with E E 568; W.

BIOEN 571 Polymeric Materials (3) Viney Relationships between configuration, conformation, molecular order, microstructure, properties of polymeric ecules and microstructures for specific applications. Interactions between polymers and their in-service environment. Characterization and processing techniques relevant to polymeric materials. Prerequisite: one semester or two quarters of organic chemistry. Offered: jointly with MSE 571; odd years; A. BIOEN 572 Liquid Crystals (3) Viney Properties of the liquid crystalline state are discussed in fundamental chemical and physical terms. Engineering and biological uses of liquid crystals are described in detail. Appropriate microstructural and nanostructural characterization techniques are emphasized throughout. Prerequisite: Molecular Bioengineering Fundamentals. Offered: jointly with MSE 572; even years; Sp.

BIOEN 573 Biosensors and Biomedical Sensing (3) Yager In-depth overview of the principal types of biosensors. Topics include: how biological molecules are used in sensing, how the sensors operate, how different sensors compare, under what circumstances sensors can be useful, and the applicability of sensors to biomedical sensing. Prerequisite: 436 or 534 and 535 or permission of instructor. Offered: even years; A.

BIOEN 575 Molecular Modeling Methods (3) Lybrand Introduction to theory and practice of computer simulation studies of molecules with emphasis on applications to biological molecules and complexes. Discussion of background theory, implementation details, capabilities and practical limitations of these methods. Laboratory sessions, hands-on tutorials, projects. Prerequisite: previous coursework in biochemistry and physical chemistry and/or permission of instructor. Offered: W.

BIOEN 576 Laboratory Techniques in Protein Engineering (4) Stayton Practical introduction to fundamentals of recombinant DNA technology and protein engineering. Gene design, bacterial molecular biology, genetic engineering strategy. Laboratory project focused on making site-directed protein mutations. Techniques include the Polymerase Chain Reaction, DNA sequencing, DNA cutting/splicing, protein expression. Prerequisite: background in biochemistry or molecular biology or consent of instructor. Offered: W.

BIOEN 590 Advanced Topics in Biomaterials (3) Ratner, Hoffman, Horbett, Yager Major, controversial issues in application of synthetic materials to medical problems. Blood compatibility, bioadhesion, intraocular lenses, contact lenses, polyurethanes, biodegradation, protein adsorption, corrosion, bone fixation, new materials, artificial heart, medical device regulation. Prerequisite: 490 or CH E 490. Offered: jointly with CH E 590; even years; Sp.

BIOEN 592 Surface Analysis (3) Ratner Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials science, wear and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger); ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Offered: jointly with CH E 558; W.

BIOEN 599 Special Topics in Bioengineering (1-6, max. 15) Offered at a graduate level periodically by faculty members within the Center for Bioengineering; concerns areas of research activities with current and topical interest to bioengineers. Prerequisites: undergraduate or graduate courses (or equivalent) determined individually for each special topic. Offered: AWSpS.

BIOEN 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

BIOEN 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

BIOEN 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

340 INTERSCHOOL OR INTERCOLLEGE PROGRAMS/MOLECULAR AND CELLULAR BIOLOGY

Molecular and Cellular Biology

Graduate Program

The University of Washington offers a program in molecular and cellular biology leading to a Ph.D. degree. Over 100 faculty members are drawn from the departments of Biochemistry, Biological Structure, Botany, Environmental Health, Genetics, Immunology, Microbiology, Pathobiology, Pathology, Physiology and Biophysics, Pharmacology, Zoology, the Center for Bioengineering, and the Fred Hutchinson Cancer Research Center.

The goals of the program are to provide students with a sound background in molecular and cellular biology and broad access to research expertise of faculty members and laboratories involved in research in this area. The program includes a three-quarter core course, a three-quarter literature review course, three or more quarter-long laboratory rotations, advanced courses in molecular and cellular biology (elected), and a series of informal workshops and seminars. Critical evaluation of pertinent literature, exposure to current research methods, and creative thinking through independent research are stressed. Students are expected to begin active research in their first year, through their laboratory rotations.

The faculty members who participate in the program are leaders in developing and using molecular and cellular biological approaches to the understanding of basic biological processes. A brochure of participating faculty members and their specific research interests is mailed to students who inquire about the program. In general, the faculty's research interests encompass both prokaryotic and eukaryotic (animal and plant) organisms and include such areas as cell structure; cell-cell interactions; cell signaling and cellular messages; cell-matrix interactions; cell, tissue, and organ development and differentiation; membrane biogenesis and cytoskeletal structure and function; chromosome structure and function; protein synthesis and compartmentalization; gene structure and regulation; and the mechanisms by which normal processes are altered in disease states. Such techniques as recombinant DNA analysis, gene transfer, monoclonal antibody production and use, peptide and oligonucleotide synthesis, and microinjection are used in conjunction with the classical methods of biochemistry, microbiology, genetics, cell culture, and light and electron microscopy. A wide variety of research facilities is available to program participants.

Financial Aid

Students with satisfactory academic progress can anticipate a stipend plus tuition for the duration of their programs.

Application Process

Students who have emphasized the biological or physical sciences in their undergraduate careers are encouraged to apply. Required application materials include official copies of all coilege and/or university transcripts, GRE scores (general and advanced), a statement of purpose, and three letters of recommendation. Students are strongly advised to request letters from individuals who can knowledgeably assess their potential for a research career. The application deadline is January 2, and students enter the program in autumn quarter.

Correspondence and Information

Program Director

Molecular and Cellular Biology Program, HR-21

Faculty

Professors

Bassingthwaighte, James * 1975; MD, 1955, University of Toronto (Canada); computer analysis of transport mechanisms in blood and tissues.

Beavo, Joseph A. * 1977; PhD, 1970, Vanderbilt University; nucleotide phosphodiesterase regulation of cell function.

Bendich, Arnold J. * 1970; PhD, 1969, University of Washington; mitochondrial and chloroplast genome structure, genome mapping.

Benditt, Earl P. * 1957, (Emeritus); MD, 1941, Harvard University; atherosclerosis, diabetes mellitus, amyloidosis.

Berger, Albert J. * 1978; PhD, 1976, University of California (San Francisco); neural and chemical control of respiration.

Bevan, Michael J. * 1990; PhD, 1972, National Institute For Medical Research (UK); T lymphocyte development and specificity.

Bornstein, Paul * 1967; MD, 1958, New York University; extracellular matrix.

Bothwell, Mark A. * 1985; PhD, 1975, University of California (Berkeley); molecular and cellular physiology of growth factors.

Bowen-Pope, Daniel * 1982; PhD, 1979, University of California (Berkeley); gene regulation, growth factors and receptors.

Byers, Breck E. * 1970; PhD, 1967, Harvard University; cell biology: mitosis and meiosis, mechanisms of nuclear division and crossing-over in yeast.

Byers, Peter H. * 1976; MD, 1969, Case Western Reserve University; extracellular matrix synthesis, genetic disorders of collagen metabolism, secretion.

Carter, William G. * 1981; PhD, 1974, University of California (Davis); elucidation of components in cell attachment and cell spreading in normal cells.

Catterall, William A. * 1977; PhD, 1972, Johns Hopkins University; molecular biology of ion channels, molecular pharmacology and neurobiology.

Cattolico, Rose A. * 1975; PhD, 1973, State University of New York (Stony Brook); plastid replication, nucleic acid biochemisty in synchronized unicellular algae.

Champoux, James J. * 1972; PhD, 1970, Stanford University; DNA replication, tumor virology.

Clark, Edward A. * 1979; PhD, 1977, University of California (Los Angeles); lymphocyte surface molecules, lymphocyte activation and cell communication.

Clark, John I.* 1982; PhD, 1974, University of Washington; structural and developmental basis of lens-cell transparency.

Cleland, Robert E. * 1964; PhD, 1957, California Institute of Technology; physiology, plant hormones, cell wall.

Cloney, Richard A. * 1961; PhD, 1959, University of Washington; invertebrate embryology, histology, morphogenetic movements, metamorphosis, biology of ascidians.

Collins, Steven J. 1980; MD, 1973; Columbia University; oncology.

Costa, Lucio Guido * 1983; PhD, 1977, University of Milan (Italy); neurotoxicology; developmental and molecular mechanisms/biological markers of neurotoxicity.

Crill, Wayne E. * 1967; MD, 1962, University of Washington; properties of cortical neurons.

Dale, Beverly A. * 1972; PhD, 1968; University of Michigan; keratin biochemistry. Detwiler, Peter B. * 1977; PhD, 1970, Georgetown University; physiology of photoreceptors.

Disteche, Christine M. * 1980; PhD, 1976, University of Liege (Belgium); molecular genetics of sex chromosomes, X inactivation, human and mouse cytogenetics.

Dorsa, Daniel M. * 1979; PhD, 1977, University of California (Davis); neuropharmacology, neurochemistry.

Eaton, David L. * 1979; PhD, 1978, University of Kansas; biochemical and environmental toxicology, aflatoxin carcinogenesis, metabolism of toxic chemicals.

Edwards, John S. * 1967; PhD, 1960, Cambridge University (UK); arthropod neurobiology, insect physiology and development, tundra and alpine biology.

Eisen, Harvey * 1986, (Affiliate); PhD, 1967, University of Toronto (Canada); host-parasite interactions, generation of genetic diversity.

Eisenman, Robert M. * 1976, (Affiliate); PhD, 1971, University of Chicago; viral oncology, oncogenes, retrovirus multiplication.

Eyre, David R. * 1985; PhD, 1969, University of Leeds (UK); connective tissue biology, collagen chemistry, bone and cartilage metabolism.

Fangman, Walton L. * 1967; PhD, 1965, Purdue University; molecular genetics: control of replication of yeast chromosomes, plasmid and mitochondrial DNA.

Faustman, Elaine M. * 1981; PhD, 1981, Michigan State University; developmental toxicology, risk assessment methodologies, toxicology of N-nitroso compounds.

Floss, Heinz G. * 1987; PhD, 1961, Technical University of Munich (Germany); bioorganic and natural products chemistry.

Fournier, Keith 1994, (Affiliate); PhD, 1974, Princeton University; regulation of tissue-specific gene expression, somatic cell and molecular genetics.

Furlong, Clement E. * 1977, (Research); PhD, 1968, University of California (Davis); human biochemical genetics in biochemistry of membrane transport systems.

Gallant, Jonathan A. * 1961; PhD, 1961, Johns Hopkins University: molecular genetics, control mechanisms in bacteria, accuracy of translation.

Galloway, Denise A. * 1982, (Research); PhD, 1976, City University of New York; viral pathogenesis and neoplasia.

Glomset, John A. * 1960; MD, 1960, University of Uppsala (Sweden); membrane structure and function.

Gordon, Albert M. * 1964; PhD, 1961, Cornell University; skeletal muscle physiology.

Gordon, Milton * 1959; PhD, 1953, University of Illinois; molecular basis of plant turnors, control of gene expression in plants.

Greenberg, Philip D. * 1978; MD, 1971, State University of New York (Downstate); molecular, cellular, viral, and tumor immunology.

Groudine, Mark * 1982; MD, 1975, University of Pennsylvania; chromatin structure and gene activity in development and transformation.

Hakomori, Sen-Itiroh * 1967; MD, 1951, Tohoku Imperial University (Japan); biochemistry and immunology of carbohydrate antigens on malignant and normal cells.

Hall, Benjamin D. * 1963; PhD, 1959, Harvard University; molecular genetics of yeast and higher plants.

Hartwell, Leland H. * 1968; PhD, 1964, Massachusetts Institute of Technology; genetic analysis of chromosome transmission and of the control of division by hormones in yeast.

Hauschka, Stephen D. * 1972; PhD, 1966, Johns Hopkins University; muscle differentiation.

INTERSCHOOL OR INTERCOLLEGE PROGRAMS / MOLECULAR AND CELLULAR BIOLOGY 341

Hille, Bertil * 1968; PhD, 1967, Rockefeller University; ion channels of excitable membranes.

Hoffman, Allari S. * 1970; DSc, 1957, Massachusetts Institute of Technology; polymer materials science and engineering. $(m,b) \sigma_{\rm S} = a$

Hol, Wilhelmus G. J. * 1992; PhD, 1971, University of Groningen (Netherlands); protein crystallography, drug design, vaccine development, and protein engineering.

Hood, Leroy E. * 1992; PhD, 1968, California Institute of Technology; molecular immunology, large scale DNA mapping and sequencing, molecular evolution.

Horbett, Thomas A. * 1973; PhD, 1970, University of Washington; interfacial proteins, cell interactions, insulin delivery systems.

Kenny, George E. * 1961; PhD, 1961, University of Minnesota; antigenic analysis of mycoplasmas, bacteria, and other organisms.

Krebs, Edwin G. * 1977, (Emeritus); MD, 1943, Washington University; intracellular signaling mechanisms involving protein phosphorylation.

Kuo, Cho-Chou * 1969; PhD, 1970, University of Washington; antigenic analysis, immunology and pathogenesis of chlamydiae.

Kushmerick, Martin J. * 1988; MD, 1963, University of Pennsylvania; muscle contraction, magnetic resonance, metabolic imaging NMR spectroscopy.

Laird, Charles D. * 1971; PhD, 1966, Stanford University; cell and developmental biology, human genetics.

Linial, Maxine L. * 1982, (Affiliate); PhD, 1970, Tufts University; retrovirology, molecular basis of cancer.

Loeb, Lawrence A.* 1978; MD, 1961, New York University; DNA replication, cancer and AIDS.

Martin, George * 1957; MD, 1953, University of Washington; somatic cell genetics, pathobiology of aging, Alzheimer's disease.

McDougali, James K. * 1979, (Research); PhD, 1971, University of Birmingham (UK); cell cycle, genetic instability and neoplasia.

McKnight, G. Stanley * 1979; PhD, 1976, Stanford University; phosphorylation; gene expression and neuro/endocrine physiology in mice using genetic approaches.

Miller, Arthur D. * 1987, (Affiliate); PhD, 1982, Stanford University; retrovirus biology, gene transfer, gene therapy.

Moody, William J. * 1982; PhD, 1977, Stanford University; single cell electrophysiology, development of electrical properties in embryos.

Morris, David R. * 1966; PhD, 1964, University of Illinois; regulatory genes.

Motulsky, Arno G. * 1953; MD, 1947, University of Illinois; medical genetics.

Narayanan, A. Sampath * 1975, (Research); PhD, 1967, University of Madras (India); connective tissue, periodontal disease.

Nathanson, Neil M. * 1979; PhD, 1975, Brandeis University; molecular analysis of neural signal transduction by muscarinic neurokine receptors.

Neiman, Paul E. * 1971; MD, 1964, University of Washington; oncology.

Nester, Eugene W. * 1962; PhD, 1959, Case Western Reserve University; genetics and biochemistry of bacterial-plant cell interactions, tumorigenesis.

Norwood, Thomas H. * 1973; MD, 1968, University of Maryland; somatic cell genetics, pathobiology of aging, mitotic cell cycle regulation.

Odell, Garrett M. * 1985; PhD, 1972, Johns Hopkins University; mathematical biology, ecology, models in cell and developmental biology. Omiecinski, Curtis J. * 1983; PhD, 1980, University of Washington; molecular toxicology, genetic regulation/ expression of drug/chemical metabolizing enzymes.

Palmiter, Richard D. * 1982; PhD, 1968, Stanford University; regulation of gene expression in transgenic mice.

Parson, William W. * 1971; PhD, 1965, Case Western Reserve University; bioenergetics, with particular emphasis on photosynthesis, picosecond spectroscopy.

Perlmutter, Roger M. * 1984; MD, 1979, Washington University; molecular immunology and the molecular biology of neoplasia.

Petra, Philip H. * 1966; PhD, 1966, Tulane University; reproductive biochemistry.

Pious, Donald A. * 1964; MD, 1956, University of Pennsylvania; antigen processing, function of nonclassical MHC genes, MHC gene regulation.

Pollack, Gerald H. * 1968; PhD, 1968, University of Pennsylvania; muscular contraction.

Rabinovitch, Peter S. * 1981; MD, 1979, University of Washington; signal transduction in cellular aging, neoplastic progression flow cytometry.

Ratner, Buddy D. * 1972; PhD, 1972, Polytechnic Institute of Brooklyn; synthesis and characterization of polymeric biomaterials.

Reeder, Ronald H. * 1981, (Affiliate); PhD, 1965, Massachusetts Institute of Technology; regulation of ribosomal RNA transcription by RNA polymerase I.

Reid, Brian R. * 1980; PhD, 1965, University of California (Berkeley); biophysical chemistry.

Reidy, Michael A. * 1980; PhD, 1976, Cambridge University (UK); atherosclerosis, smooth muscle cell replication and migration, growth factors and receptors.

Riddiford, Lynn M. * 1973; PhD, 1961, Cornell University; insect development and physiology, invertebrate endocrinology.

Rohrschneider, Larry R. * 1982, (Affiliate); PhD, 1973, University of Wisconsin; control of growth, differientiation, transformation by the c-fms protooncogene.

Ross, Russell * 1962; PhD, 1962, University of Washington; atherosclerosis, growth factors, inflammation, vascular biology.

Saarí, John C. * 1974; PhD, 1970, University of Washington; retinal biochemistry.

Sage, E. Helene * 1980; PhD, 1977, University of Utah; cell biology.

Sandell, Linda J. * 1987; PhD, 1980, Northwestern University; biochemistry and molecular biology of connective tissue, extracellular matrix molecules.

Schubiger, Gerold A. * 1972; PhD, 1968, University of Zurich (Switzerland); developmental genetic control of *Drosophila* embryos, pattern formation in imaginal disks.

Schwartz, Stephen Mark * 1974; MD, 1967, Boston University; vascular biology, atherosclerosis, molecular basis of lineage, developmental biology, cell kinetics.

Sibley, Carol Hopkins * 1976; PhD, 1974, University of California (San Francisco); mammalian cell genetics and molecular parasitology.

Smith, Gerald R. 1983, (Affiliate); PhD, 1970, Massachusetts Institute of Technology; molecular biology of genetic recombination and regulation and gene expression.

Stahl, William L. * 1967; PhD, 1963, University of Pittsburgh; neurochemistry of brain ATPase systems.

Staley, James T. * 1971; PhD, 1967, University of California (Davis); freshwater bacteriology, microbial ecology, general microbiology.

Stamatoyannopoulos, George 1965; MD, 1958, University of Athens (Greece); medical genetics.

Steiner, Robert A. * 1977; PhD, 1975, University of Oregon; neuroendocrinology.

Storm, Daniel R. * 1978; PhD, 1971, University of California (Berkeley); molecular basis of neuroplasticity; cAMP and Ca²⁺ signal transduction systems in the CNS.

Stuart, Kenneth Daniel * 1985; PhD, 1969, University of lowa; molecular biology of parasites.

Teller, David C. * 1965; PhD, 1964, University of California (Berkeley); physical chemistry of macromolecules, association reactions of proteins.

Todaro, George J. * 1983; MD, 1963, New York University; growth regulation in normal and tumor cells.

Truman, James W. * 1973; PhD, 1970, Harvard University; hormones and invertebrate behavior, insect physiology, circadian rhythms.

Verdugo, Pedro * 1974; MD, 1965, State University of Chile; microrheology, biomechanics, polymer gel physics, laser spectroscopy, cell biology.

Vincenzi, Frank F. * 1967; PhD, 1965, University of Washington; ion transport and intracellular calcium, free radicals and disease, computers in education/ research.

Walsh, Kenneth A. * 1958; PhD, 1959, University of Toronto (Canada); structure and functions of proteins; phosphatases, mass spectrometry.

Watson, Eileen L. * 1972; PhD, 1970, University of Utah; salivary gland pharmacology and regulation.

Weintraub, Harold M. 1982, (Affiliate); MD, 1973, University of Pennsylvania; developmental biology, control of gene expression.

Wight, Thomas * 1978; PhD, 1972, University of New Hampshire; connective tissue biology and pathology, proteoglycans metabolism.

Willows, A. O. Dennis * 1969; PhD, 1967, University of Oregon; invertebrate neurophysiology, neural mechanisms underlying behavior.

Wilson, Christopher B. * 1979; MD, 1972, University of California (Los Angeles); regulation of cytokine production in T cells and macrophages.

Wingfield, John C. * 1985; PhD, 1973, University College of North Wales (UK); environmental and hormonal control of avian reproductive cycles.

Wolf, Norman S. * 1968; DVM, 1953, Kansas State University; hematopoietic stem cell dynamics and transplantation, aging at the cellular level.

Woods, James S. * 1982, (Research); PhD, 1970, University of Washington; biochemical toxicology of trace metals; biological markers of metal exposure.

Yao, Meng Chao * 1986, (Affiliate); PhD, 1975, University of Rochester; regulation of gene amplification and chromosome rearrangements in *Tetrahymena*.

Young, Elton * 1969; PhD, 1967, California Institute of Technology; regulation of gene activity in the yeast Saccharomyces cerevisiae.

Zakian, Virginia A. * 1982, (Affiliate); PhD, 1975, Yale University; initiation of DNA replication, eukaryotic chromosome structure.

Associate Professors

Bakken, Aimee * 1973; PhD, 1970, University of Iowa; gene regulation during oogensis and embryogenesis, developmental, cellular and molecular biology.

Breeden, Linda L. 1994, (Affiliate); PhD, 1981, University of Colorado (Boulder); events that control the G1/S transition in *Saccharomyces cerevisiae*.

Campbell, Lee Ann * 1985; PhD, 1982, Pennsylvania State University; molecular biology and pathogenic mechanisms of chlamydiae.

342 INTERSCHOOL OR INTERCOLLEGE PROGRAMS / MOLECULAR AND CELLULAR BIOLOGY

Carlson, Steven S. * 1985; PhD, 1975, University of California (Berkeley); molecular and cellular physiology of synaptic transmission.

Chavkin, Charles * 1984; PhD, 1982, Stanford University; cell and molecular mechanisms of psychoactive opiate drugs to understand normal and pathophysiology.

Comai, Luca * 1989; PhD, 1980, University of California (Davis); chromatin and gene regulation, genome mapping, axil development.

Cooper, Jonathan A. 1987, (Affiliate); PhD, 1976, Warwick University (UK); regulation of cellular metabolism and proliferation by protein phosphorylation.

Davis, Trisha Nell * 1987; PhD, 1983, Yale University; the function of calcium-binding proteins in cell growth.

Emerman, Michael 1994, (Affiliate); PhD, 1986, University of Wisconsin; function of HIV genes, tropism of HIV.

Farr, Andrew G. * 1982; PhD, 1975, University of Chlcago; cell interactions governing lymphocyte production and function.

Gelb, Michael H. * 1985; PhD, 1982, Yale University; mechanistic enzymology, bioorganic and medicinal chemistry.

Hahn, Steven M. 1994, (Affiliate); PhD, 1984, Brandeis University; molecular and biochemical analysis of RNA polymerase II transcription initiation.

Hille, Merrill B. * 1976; PhD, 1965, Rockefeller University; developmental biology, gastrulation in sea urchin embryos, translational regulation during meiosis.

Henikoff, Steven 1982, (Affiliate); PhD, 1977, Harvard University; gene and chromosome organization in *Drosophila*.

Hinrichsen, Robert D. 1994, (Affiliate); PhD, 1982, Indiana University; genetic and biochemical analysis of ion channels in *Paramecium*, behavioral genetics.

Howard, Jonathon * 1989; PhD, 1983, Australian National University; biophysics of molecular motors.

Hurley, James Bryant * 1985; PhD, 1979, University of Illinois: molecular basis of vision.

Kahn, Michael * 1992; PhD, 1982, Yale University; molecular recognition, protein structure-function relationships, peptidomimetics.

Katze, Michael Gerald * 1987; PhD, 1980, Hahnemann Medical College; regulation of viral gene expression at the translational level.

Klevit, Rachel E. * 1983; DPhil, 1981, Oxford University (UK); molecular recognition, protein NMR.

Lee, Minako I. * 1977, (Research); MD, 1963, Tokyo Women's Medical College (Japan); growth and differentiation of hematopoletic and lymphopoletic cells.

Leigh, John A. * 1985; PhD, 1983, University of Illinois; bacterial physiology, biochemistry, genetics, bacteriaplant interactions.

Levis, Robert W. 1994, (Affiliate); PhD, 1978, Massachusetts Institute of Technology; structure and function of telomeres in *Drosophila*, transposable genetic elements.

Lewis, David B. * 1988; MD, 1981, University of California (San Francisco); T lymphocyte cytokine biology; infectious diseases.

Lory, Stephen * 1984; PhD, 1980, University of California (Los Angeles); biochemistry, genetics of microbial virulence factors.

Luchtel, Daniel L. * 1972; PhD, 1969, University of Washington; electron microscopy and cell biology, lung anatomy/pathophysiology, fiber toxicology.

Manoil, Colin C. * 1986; PhD, 1979, Stanford University; molecular genetics, protein localization in bacteria.

Monnat, Raymond J. Jr. * 1982; MD, 1976, University of Chicago; somatic mutation, somatic cell and molecular genetics. Moon, Randall T. * 1985; PhD, 1982, University of Washington; embryonic development, signal transduction.

Moseley, Stephen L. * 1985; PhD, 1981, University of Washington; molecular basis of pathogenesis in *E. coli* diarrhea.

Myerson, David * 1985; PhD, 1979, Albert Einstein College of Medicine; the pathology of viral disease in humans.

Nameroff, Mark A. * 1970; MD, 1965, University of Pennsylvania; cell differentiation.

Overbaugh, Julie Maureen * 1988; PhD, 1983, University of Colorado (Boulder); molecular mechanisms of: retroviral pathogenesis/viral gene expression/AIDS.

Parsons, Marilyn * 1986, (Research); PhD, 1979, Stanford University; signal transduction and organelle biogenesis in African trypanosomes.

Priess, James R. * 1993, (Affiliate); PhD, 1983, University of Colorado; reliability models, fault trees.

Prothero, John W. * 1965; PhD, 1960, Western Ontario University (Canada); model building, morphogenesis, cell kinetics, scaling.

Reh, Thomas A. * 1989; PhD, 1981, University of Wisconsin; regeneration and development of central nervous system.

Reuveni, Zipora * 1982, (Research); PhD, 1979, University of Windsor (Canada); myogenesis during growth development and regeneration of skeletal muscle.

Roberts, Marilyn C. * 1981; PhD, 1978, University of Washington; mycobacterium, antibiotic resistance genes, plasmids and sexually transmitted diseases.

Rosenfeld, Michael E. * 1992; PhD, 1981, University of Wisconsin; mechanisms of atherogenesis and macrophage gene expression.

Roth, Mark B. 1994, (Affiliate); PhD, 1984, University of Colorado (Boulder); chromosome structure, analysis of proteins associated with transcription units.

Soriano, Philippe 1994, (Affiliate); PhD, 1978, University of Paris; mammalian developmental genetics.

Stenkamp, Ronald E. * 1978; PhD, 1975, University of Washington; crystallography.

Tempel, Bruce L. * 1988; PhD, 1983, Princeton University; molecular neurobiology/neurogenetics, especially potassium channel gene structure and function.

Thomas, James H. * 1988; PhD, 1985, Massachusetts Institute of Technology; genetics of development and the nervous system in nematodes.

Thouless, Margaret E. * 1980; PhD, 1974, University of Birmingham (UK); antigenic variability of enteric viruses and simian retroviruses.

Van Volkenburgh, Elizabeth * 1982; PhD, 1980, University of Washington; leaf growth and development, cellular and biochemical levels of control.

Wakimoto, Barbara T. * 1984; PhD, 1981, Indiana University; developmental genetics, gene expression and chromosome organization in eukaryotes.

Wong, Timothy Chee-Hing * 1983; PhD, 1979, University of Texas (Dallas); viral gene expression in chronic infections and oncogenesis.

Yamamoto, Fumiichiro * 1988, (Research); PhD, 1983, Osaka City University (Japan); molecular biology of histo-blood group ABO genes.

Yoshimura, Fayth K. * 1980, (Research); PhD, 1972, Yale University; retroviral transformation of hemopoietic cells.

Assistant Professors

Bendiak, Brad K. * 1988, (Research); PhD, 1983, Cambridge University (UK); biosynthesis of glycoprotein carbohydrate structures. Berg, Celeste A. * 1990; PhD, 1986, Yale University; *Drosophila* developmental genetics, cell communication and cell migration during oogenesis.

Blochlinger, Karen B. 1994, (Affiliate); PhD, 1986, Swiss Institute for Cancer Research; specification of neural identity in the peripheral nervous system of *Drosophila*.

Bradley, R. Douglas 1991, (Research); PhD, 1983, University of Colorado (Denver).

Braun, Robert Elmer * 1986; PhD, 1985, Tufts University; mouse molecular genetics and male germ cell development.

Cooper, Mark S. * 1990; PhD, 1985, University of California (Berkeley); cellular physiology and cell motility in developing tissues.

Edgar, Bruce A. 1994, (Affiliate); PhD, 1987, University of Washington; genetic control of cell division patterns in the *Drosophila* embryo.

Fink, Pamela J. * 1990; PhD, 1981, Massachusetts Institute of Technology; T cell differentiation, tolerance induction, molecular and cellular immunology.

Foote, Jefferson 1994, (Affiliate); PhD, 1985, University of California (Berkeley); physical chemistry of antibodies.

Geballe, Adam 1988, (Affiliate); MD, 1978, Duke University; virology.

Giniger, Edward 1994, (Affiliate); PhD, 1988, Harvard University; mechanisms of axon guidance and synapse formation in *Drosophila*.

Hockenbery, David M. 1994, (Affiliate); MD, 1982, Washington University; molecular and cellular aspects of the Bcl-2 proto-oncogene involved in cell death prevention.

Hughes, Kelly T. * 1989; PhD, 1984, University of Utah; genetics, gene regulation, microbial physiology, and metabolism.

Kavanagh, Terrance J. * 1985, (Research); PhD, 1985, Michigan State University; biochemical toxicology and free radical damage.

Kimelman, David * 1989; PhD, 1985, Harvard University; molecular biology of early development in the frog, *Xenopus laevis*.

Lybrand, Terry Paul * 1990; PhD, 1984, University of California (San Francisco); molecular modeling.

Mandoli, Dina F. 1987, (Research); PhD, 1983, Stanford University.

Martin, David 1990; MD, 1981, Virginia College of Medicine; hematology, oncology.

Mazurek, Nachman 1990, (Research); PhD, 1984, Flinberg Graduate School (Israel).

Ostrander, Elaine A. 1994, (Affiliate); PhD, 1987, Oregon Health Sciences University; study of mammalian behavioral genes.

Pagliaro, Leonard J. * 1990; PhD, 1986, Wesleyan University; *in vivo* enzymology, cytoplasmic organization, light microscopy, image processing, photobleaching.

Parkhurst, Susan M. 1994, (Affiliate); PhD, 1985, Johns Hopkins University; developmental, genetic and molecular analysis of *Drosophila* embryogenesis.

Pullen, Ann M. * 1991; PhD, 1987, Cambridge University (UK); superantigens and their effects on T-cells.

Reynolds, Ann E. 1986, (Research); PhD, 1983, Tufts University.

Riley, Donald E. * 1982, (Research); PhD, 1976, University of Washington; pathogenic research and diagnosis involving DNA sequences.

Roberts, James Michael * 1989, (Affiliate); PhD, 1984, Columbia University; cell cycle regulation and control of DNA replication. Rudensky, Alexander Y. * 1992; PhD, 1986, Gabrichevsky Institute For Epidemiology & Microbiology; antigen processing and presentation, T-cell recognition.

Stoddard, Barry L. 1994, (Affiliate); PhD, 1990, Massachusetts Institute of Technology; x-ray crystallography and associated structural studies of transmembrane receptor signalling.

Tapscott, Stephen J. 1986, (Clinical); MD, 1982, University of Pennsylvania; regulation of gene expression during development and tumor formation.

Traxler, Beth A. * 1992; PhD, 1987, Carnegie-Mellon University; bacterial physiology, genetics, and membrane protein biochemistry.

Vogel, Viola * 1990; PhD, 1987, Johann Wolfgang Goethe University (Germany); molecular assemblies and Langmuir-Blodgett films.

Wright, Robin L. * 1990; PhD, 1985, Carnegie-Mellon University; membrane dynamics and regulation of sterol biosynthesis in yeast.

Zagotta, William N. * 1993; PhD, 1989, Stanford University; molecular mechanisms of ion channel function.

Neurobiology

202B Hitchcock

Graduate Program

The departments of Physiology and Biophysics, Pharmacology, Biochemistry, and Biological Structure of the School of Medicine, the Behavioral Neuroscience Interdisciplinary Group, and the Department of Zoology of the College of Arts and Sciences offer an interdepartmental training program in neurobiology. The program leading to a Ph.D. degree provides a broad background in basic neurobiology, in-depth experience in one of the participating academic disciplines, and extensive training in the application of modern experimental methods to fundamental problems in neurobiology.

Upon admission to the program, students perform three to four laboratory rotations in two or more of the departments participating in the program. Students must fulfill basic core course requirements for the graduate program in neurobiology along with their designated departmental requirements for neurobiology students in order to receive the Ph.D. degree. At the end of the first year, students choose a dissertation mentor and are usually then affiliated with the mentor's department. Exceptional students whose objectives are not met within the departmental pathways in neurobiology may develop an individual Ph.D. program with the guidance of the program's faculty.

A broad series of courses that spans the various disciplines of neurobiology is offered as part of the interdisciplinary program. Critical evaluation of the original literature and exposure to current experimental methods are stressed. Students are expected to begin active research during their first year. Research opportunities for students encompass many areas of neurobiology. Participating in the program are more than forty faculty members, who are active in the areas of vertebrate and invertebrate neurophysiology, membrane biophysics, neuropharmacology, molecular neurobiology, neuroanatomy, neurochemistry, and developmental neurobiology.

Application Process

•

Students who have emphasized either biological or physical sciences in their undergraduate careers are

invited to apply. Applicants are requested to send a copy of their academic record; GRE scores, including, if possible, scores on the subject test in chemistry, physics, molecular and cellular biology, or biology; and three letters of recommendation from the persons who can best evaluate their potential for success in graduate study. New students enter the graduate program September 15. Applications are considered and students are accepted until March 1. Applications received after March 1 are considered only in unusual circumstances.

Research Facilities

Sponsoring departments are located in the Health Sciences Center and in the College of Arts and Sciences. Because the program is interdepartmental, extensive research facilities in all areas of neurobiology are available to the student. The member departments maintain electronics shop, machine shop, instrumentation for synthesis and sequence determination of proteins and nucleic acids, and computer facilities, and equipment for ultrastructural studies is readily available. Students also may employ the resources of the Regional Primate Research Center and the Friday Harbor Laboratories.

Financial Aid

The program offers full stipend and tuition support to students through traineeships derived from NIH training grants and private foundation support and through research assistantships supported by the University or research grant monles. Students with satisfactory academic progress can anticipate that funding will continue for the duration of their program.

Olavarria, Jaime F. * 1990; PhD, 1984, University of California (Berkeley); visual system: anatomy and physiology, comparative and developmental studies.

Zagotta, William N. * 1993; PhD, 1989, Stanford University; molecular mechanisms of ion channel function.

Quantitative Science

The Center for Quantitative Science in Forestry, Fisheries, and Wildlife is an intercollege academic unit sponsored by the College of Forest Resources and the School of Fisheries of the College of Ocean and Fishery Sciences. The center offers a comprehensive program of study in mathematics and statistical methods as applied to problems in ecology and natural resource management. The faculty of the center includes members of the College of Forest Resources and the School of Fisheries, and many are also adjunct members of the Departments of Biostatistics and Statistics.

Faculty

Acting Director

John R. Skalski

Professors

Bare, B. Bruce * 1969; PhD, 1969, Purdue University; harvest scheduling, biometry, forest land management, taxation, finance, management science.

Bevan, Donald E. * 1947, (Emeritus); PhD, 1959, University of Washington; biometrics.

Briggs, David G. * 1973; PhD, 1980, University of Washington; operations research in forest products industries.

Chapman, Douglas G. * 1949, (Emeritus); PhD, 1949, University of California (Berkeley); population dynamics and enumeration.

Dowdle, Barney * 1962; PhD, 1962, Yale University; markets for timber and forest products, public forest land management.

Ford, E. David * 1985; PhD, 1968, University College, London (UK); spacial processes in ecology, forest productivity, and plants' response to environmental change.

Francis, Robert C. * 1983, PhD, 1970, University of Washington; biological production of commercially important marine fishes, fisheries management.

Gallucci, Vincent* 1976; PhD, 1971, North Carolina State University; biomathematics and population dynamics.

Greulich, FrancisE. * 1977; PhD, 1976, University of California (Berkeley); forest engineering, statistics, operations research.

Hatheway, WilliamH. * 1969, (Emeritus); PhD, 1956, Harvard University; quantitative ecology, physiological ecology, tropical forestry.

Hilborn, Ray * 197; PhD, 1974, University of British Columbia (Canada); population dynamics and resource policy.

Johnson, Jay A. *1983; PhD, 1973, University of Washington; mechanical and physical properties of wood and wood composite materials, wood quality.

Mathews, Stephen . * 1972; PhD, 1967, University of Washington; quantitative fishery management.

Pickford, StewartG. * 1976; PhD, 1972, University of Washington; forest fire science, wildland fire management.

Schreuder, GerardFritz* 1971; PhD, 1968, Yale University; statistical analysis in resource economics, international forestry, trade, aerial photos.

Swartzman, GordonLeni * 1973, (Research); PhD, 1969, University of Michigan.

Associate Professors

Anderson, James J * 1969; PhD, 1977, University of Washington; fisheries and oceanography.

Conquest, LovedayL. * 1976; PhD, 1975, University of Washington; biological applications and statistics.

Cundy, Terrance W * 1983; PhD, 1983, Utah State University; hillslope hydrology and watershed management.

Pikitch, Ellen * 987; PhD, 1983, Indiana University; marine fisheries population dynamics, assessment and management.

Rustagi, Krishna . * 1973; PhD, 1973, Yale University; operations research and statistical applications in forest management.

Skalski, John R. 1987; PhD, 1985, Cornell University; environmental sampling and effects assessment on wild populations, parameter estimation.

Course Descriptions.

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

Q SCI 291, 292 Analysis for Biologists (4,4) NW, QSR Differentiation; integration, including multiple integrals and partial derivatives. Numerical and computing techniques in analysis. Emphasis on biological problems, particularly in ecology. Prerequisites: MATH 120 for 291; 291 or MATH 124 for 292. Offered: AW, WSp.

Q SCI 340 Application of Computers to Natural Resources Problems (2) NW Instruction in use of existing personal computer software in fisheries and forestry applications. Prerequisite: 381 or equivalent introductory statistics course. Offered: A.

Q SCI 381 Introduction to Probability and Statistics (5) NW, QSR Elementary concepts of probability and statistical inference. Sample space, set theory, random variables, expectations, variances, covariance; binomial, normal, hypergeometric, Poisson, chi square, "t" and "F" distributions. Point and confidence interval estimation, basic concepts of hypothesis testing; applications to biological problems. Prerequisite: MATH 120 or equivalent. Offered: AWSpS.

Q SCI 392 Techniques of Applied Mathematics in Biology I (3) NW Ordinary differential equations-linear and nonlinear; systems of differential equations; approximation techniques, numerical solution techniques; applications to biological processes. Prerequisite: 292 or MATH 126, or permission of instructor.

Q SCI 393 Techniques of Applied Mathematics in Biology II (3) NW Applications of advanced ordinary differential equations, special functions, and partial differential equations to descriptions of biological phenomena. Particular emphasis on transport in biological systems, including diffusion and fluid flow. Prerequisite: 392 or permission of instructor.

Q SCI 456 Fundamentals of Fish Population Dynamics and Management (4) NW Pikitch Conveys fundamental concepts of fish population dynamics and fishery management within concept of real-world fisheries problems. Lectures discuss notation, terminology, mathematical models, fisheries principles, and case studies. Laboratory time devoted to practical applications, problems. Prerequisites: 291 and 292, or MATH 124 and 125, or equivalent. Offered: jointly with FISH 456.

Q SCI 457 Methods of Abundance Estimation (4) NW Gunderson, Mathews Methods of estimating fish abundance by direct sampling and indirectly from tagging, catch, and effort analysis. Confidence limits and bias adjustments. Design of marine fishery surveys using statistical sampling principles. Laboratory work with real fishery data and data collected during trawl sampling survey. Prerequisites: 291, 292, 381, and 456 or equivalent. Offered: jointly with FISH 457.

Q SCI 458 Fisheries Stock Assessment (4) NW Hilborn Emphasizes quantitative analysis of fisheries data to determine how the fishery would respond to alternative management actions. Major topics include production models, stocks and recruitment, catch at age analysis, and formulation of harvest strategies. Prerequisite: 456 or permission of instructor. Offered: jointly with FISH 458.

Q SCI 477 Quantitative Wildlife Assessment (5) NW Skalski Focuses on wildlife asmpling techniques for estimating animal abundance, home range, and survival rates in terrestrial populations. The design of wildlife investigations for the purposes of impact assessment, research, and resource management is integrated with estimation schemes and demographic models in a quantitative framework. Prerequisites: 291, 482. Q SCI 480 Sampling Theory for Biologists (3) NW Gallucci, Rustagi Theory and applications of sampling finite populations including: simple random sampling, stratified random sampling, ratio estimates, regression estimates, systematic sampling, cluster sampling, sample size determinations, applications in fisheries and forestry. Other topics include sampling plant and animal populations, Sampling distributions, estimation of parameters and statistical treatment of data. Prerequisites: 482, 483, or permission of instructor. Offered: jointly with STAT 480; even years.

Q SCI 482, 483 Statistical Inference in Applied Research (5,5) NW Analysis of variance and covariance; chi square tests; nonparametric procedures multiple and curvilinear regression; experimental design and power of tests. Application to biological problems. Use of computer programs in standard statistical problems. Prerequisites: 381 or permission of Instructor for 482; 381 or 482 or equivalent for 483. Offered: AW.WSo.

Q SCI 486 Experimental Design (3) NW Topics in analysis of variance and experimental designs: choice of designs, comparison of efficiency, power, sample size, pseudoreplication, factor structure. Prerequisite: 482 or equivalent, and matrix algebra. Offered: jointly with STAT 486.

Q SCI 499 Undergraduate Research (1-5, max. 5) NW Special studies in quantitative ecology and resource management for which there is not sufficient demand to warrant the organization of regular courses. Credit/no credit only. Prerequisite: permission of instructor.

Courses for Graduates Only

Q SCI 502 Statistical Consulting for the Life Sciences (1-4) Conquest, Rustagi Consulting experience in data analysis, applied statistics, experimental design, parameter estimation, and sampling. For graduate students in Quantitative Ecology and Resource Management. Student provides consultation services to students and faculty. Students spend one classroom hour per week under faculty supervision discussing problems encountered. Prerequisites: 482, 483, STAT 421, 423, or BIOST 514, 515, or equivalents, and permission of instructor. Entry code required.

Q SCI 514 Analysis of Ecological and Environmental Data I (3) Conquest, Skalski Factors affecting optimal growth of individuals in their habitat. Estimation of growth and mortality parameters. Response of organisms to changes in environment (bioassay, environmental monitoring). Stochastic viewpoint emphasized. Research design issues for ecological or environmental studies. Analysis of unwieldy data sets. Prerequisites: STAT 512 or STAT 341, 342; and knowledge of calculus.

Q SCI 515 Analysis of Ecological and Environmental Data II (3) Conquest Complex models for population growth and parameter estimation. Habitat preferences of organisms; study design and data analysis. Nonparametric methods for ecological studies and environmental monitoring. Complications including nonlinear response, redundant ecological information, censored data, sample size limitations. Multiple lines of inquiry; well-defined experiments versus ecological realism. Prerequisite: 514.

Q SCI 521 Scientific Method in Resource Management (4) Ford, Hillborn Describes process of scientific discovery and strategies used for problems in ecology and natural resources management. Relationships between growth and use of objective knowledge in natural resources management is explored through case studies. The 4-credit option is for development of a written research proposal.

Q SCI 550 Applied Ecological Modeling (4) Ford, Francis Methods of applied ecological modeling at individual community and ecosystem levels. Analysis of ecological problems suitable for modeling and assessment of models. Students construct a model of their own.

Q SCI 551 Modeling Organism Dynamics (3) Anderson Application of techniques of stochastic differential equations, time series analysis, simulating dynamic processes to plant and animal growth.

Q SCI 552 Spatial Processes In Ecology (3) Ford Spatial distribution of organisms, the mechanisms that produce different distributions, and how they may be described mathematically and modeled. Spatial distribution of communities, how this arises, and what its consequences are. Prerequisites: 482, 483, 550.

Q SCI 556 Mathematical Analysis in Fisheries Stock Assessment (3) Gallucci Analytic approaches to stock assessment and population management applications of parent-progeny models and logistic models; biological and economic yields of natural populations; analysis of population data on computers. Prerequisities: 292, 392, 456, 483; or permission of instructor. Offered: jointly with FISH 556.

Q SCI 557 Estimation of Population Parameters (4) Skalski Statistical analysis of population data; design and analysis of mark-recapture experiments on natural populations; laboratory work on computers. Prerequisites: 292, 483, and probability theory. Offered: jointly with FISH 557.

Q SCI 558 Advanced Analysis in Fisheries Stock Assessment (3) Hilborn Deterministic and stochastic representations of age-dependent and size-dependent models for stock assessment; analysis of multispecies models; risk analysis and uncertainty in fisheries management strategies; analysis of population data on computers. Prerequisite: 393, 556 or permission of instructor. Recommended: 557. Offered: jointly. with FISH 558.

Q SCI 565 Quantitative Resource Management (3) Bare, Mathews Formulation, solution, and interpretation of fisheries, forestry, and other natural resource problems, using mathematically based models. Principles of resource management from a quantitative perspective.

Q SCI 597 Seminar in Quantitative Ecology (2) Current topics in quantitative ecology and resource management. Fisheries, forestry, and marine resources. Offered: AWSp.

Q SCI 598 Special Topics in Quantitative Resource Management (1-3, max. 12) Population and community ecology, systems ecology, and physical processes in ecosystems. Prerequisite: permission of instructor. Entry code required.

Q SCI 599 Research in Quantitative Resource Management (*, max. 12) Topics can be theoretical in nature or combined theory and experiment. Research might be a prelude to thesis or dissertation research. Credit/no credit only. Entry code required.

Quaternary Research Center

19 Johnson

Quaternary studies focus on the processes that presently shape the natural environment and have operated over approximately the past two million years (Quaternary Period). A knowledge of Quaternary events facilitates an understanding of earth history in relation to the modern environment and has predictive value with regard to present-day and future environmental changes.

Quaternary research is typically interdisciplinary, and thus it commonly involves related interests of two or more academic units. The Quaternary Research Center was established in 1967 to foster such interdisciplinary studies on a cooperative basis,

The center has as goals: (1) to understand environments and climate changes of the past two million years in the context of modern surface processes, which include historical changes, prehistoric postglacial environments, and Ice Age events; (2) to serve as an effective catalyst in fostering interdisciplinary studies in the fields of atmospheric sciences, archaeology/ anthropology, botany, engineering, fisheries, forestry, geology, geophysics, oceanography, pedology, and zoology; (3) to provide a scientific perspective on the scale of modern and man-made environmental changes, including those of climate, in the context of recent earth history; (4) to conduct a curriculum jointly with other disciplines in the training of graduate students in Quaternary-oriented studies; and (5) to seek applications of Quaternary studies to modern environmental problems that will help predict consequences of policy decisions.

Graduate Program

Students associated with the center obtain their degrees through cooperating departments. Students interested in graduate work at the center should apply to the department of their choice but plan to do their research in a Quaternary-related subject.

Research Facilities

The research laboratories of the center provide an array of modern facilities for investigation of Quaternary problems:

Quaternary Isotope Laboratory. The work emphasizes use of carbon and oxygen isotopes to study various aspects of the carbon and hydrological cycles. Major interests include radiocarbon dating, as applied to time-scale calibration and the study of climate change, and studies of polar ice cores.

Periglacial Laboratory. The laboratory contains cold rooms equipped for manipulating and studying the freezing and thawing of soils, rocks, and building materials. A large, unique tilt table permits the study of soils under controlled conditions of slope, temperature, and moisture. Research stress is placed on frost action in arctic and alpine environments.

Quaternary Palynology and Paleoecology Laboratories. These facilities foster studies of the biotic environment through time and of the uses of plant and animal fossils in Quaternary environmental and ecological reconstruction. Studies of vegetational changes are supported by an extensive modern pollen and plant reference collection from Asia and western North America.

ORC Library. This specialized collection, dealing with a wide range of Quaternary topics, is among the most extensive in North America. It includes books, monographs, theses, journals, and maps, and houses a large, diverse reprint collection.

Stuiver, Minze * 1969; PhD, 1958, University of Groningen (Netherlands); geochronology, isotope geology.

Tsukada, Matsuo * 1969; DSc, 1961, Osaka City University (Japan); interpretation of Quaternary events from palyngological and kindred data.

Warren, Stephen G. * 1981; PhD, 1973, Harvard University; atmospheric radiation, climatology, glaciology.

Associate Professors

Eck, Gerald G. * 1974; PhD, 1977, University of California (Berkeley); primate paleontology, especially African Pliocene-Pleistocene monkeys and hominids.

Quay, Paul D. * 1977; PhD, 1977, Columbia University; chemical oceanography, stable isotope geochemistry, ocean tracers and mixing.

Assistant Professors

10

Montgomery, David R. * 1991, (Research); PhD, 1991, University of California (Berkeley); earth surface processes, especially those occurring in mountain drainage basins.

Shen, Glen T. * 1988; PhD, 1986, Massachusetts Institute of Technology; chemical oceanography, trace element geochemistry, paleoclimate.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations. QUAT 417 Quaternary Glacial Ages (3) Porter Physical, biological evidence of climatic change during Quaternary Period, emphasizing stratigraphy and chronology. Impact of alternating glacial/interglacial cycles on earth's terrestrial, marine environments. Use of these data to assess theories on causes of climatic variation. Prerequisite: introductory course in earth science and biological science. Offered: jointly with GEOL 417.

QUAT 501 Seminar/Conference in Quaternary Environments (1, max. 6) Interdisciplinary seminar or conference in the changing natural environments of the Quaternary Period, with emphasis on climatic changes and their effects. Speakers from the University and elsewhere present lectures on their specialties, followed by discussion. Credit/no credit only.

QUAT 502 Interdisciplinary Quaternary Investigations (2, max. 6) Research course for interdisciplinary investigation of Quaternary problems. Student attends sessions of QUAT 501 and pursues a problem-oriented case study concurrently under faculty direction. Required paper on case study. Credit/no credit only. Prerequisite: graduate standing.

QUAT 504 Special Topics in Quaternary Sciences (1-3) Environments and climate changes of past two million years (Quaternary Period) in context of modern surface processes, including historical changes, prehistorical environments of postglacial period, and lce Age events. Provides scientific perspective on scale of modern and man-made environmental changes, including those of climate, in context² of recent earth history. Credit/no credit only. Prerequisites: background courses in earth sciences and ecology.

University Conjoint Courses

See page 55 for explanation of course numbers, symbols, and abbreviations.

Each of the following courses is administered by two or more schools or colleges within the University. No degree program is offered.

Courses for Undergraduates

UCONJ 100 Introduction to Health Professions (1) Strandjord Opportunities in health professions. Information on educational requirements, professional/patient interaction, interprofessional roles, licensing, registering for practice in profession, salaries, and career opportunities.

UCONJ 411 Psychology of Aging (3) Kiyak Focuses on developing the skills necessary for critically evaluating current psychological theories of aging, research findings in this area, and the implications of findings on the aging person. Special consideration given to the effects of socioeconomic, sex, and ethnic differences in the psychology of aging. Open to upperdivision undergraduates and beginning graduate students interested in the field of gerontology.

UCONJ 420 Biological Safety Practices (1) Kenny General introduction to appropriate laboratory procedures used for handling potentially hazardous biological agents. Particular focus on laboratory safety and appropriate protocols that should be employed by those engaged in infectious disease and recombinant DNA research. Credit/no credit only.

UCONJ 422 Sexually Transmitted Diseases: An Overview (2) Elmer, Holmes Clinically oriented course designed to provide a knowledge base for upper division health science students to participate effectively in community outreach programs for the prevention of sexually-transmitted diseases. Offered cooperatively by the departments of Medicinal Chemistry, and Medicine. Credit/no credit only. UCONJ 440 Biological Aspects of Aging (3) Introductory course on aspects of the biology of human aging and of functional changes associated with normal aging and with those illnesses that may be present in the elderly. Focus on the relationship between changes in physical function, environment, and quality of life. Includes theoretical pairs between of the second systems. Designed for upper-level undergraduate students with an interest in aging. Prerequisite: introductory course in biology or permission of instructor.

UCONJ 442 Social and Cultural Aspects of Aging (3) Involves faculty members from the various social science fields examining the range and variation of relationships among age-linked attitudes and cultural values related to aging; the social and economic factors that influence the elderly in contemporary society; the effects of ethnic and sex differences in sociocultural aging. Open to upper-division undergraduates and beginning graduate students interested in gerontology. Entry code required.

UCONJ 443 Interdisciplinary Seminar on Aging (1-6, max. 15) Borgatta Interdisciplinary examination of the contemporary theoretical literature on gerontology and long-term care. For upper-level undergraduate and graduate students with an interest in aging. Quarterly offerings available from the Institute on Aging. Prerequisites: 411, 440, 442, or permission of instructor.

UCONJ 490 Social Sensitivity in Health Care (3) Multidisciplinary course for health professions students. Health professionals' roles in dealing with social, cultural, and physical barriers to health care of low-income groups and ethnic people of color. Personal involvement through field experiences and faculty drawn from affected communities as well as health sciences, social work schools. Credit/no credit only. Prerequisite: permission of instructor.

UCONJ 497 Health Care In a Rural Community (3) Critical analysis built upon concepts relative to interdisciplinary health-care delivery in a rural community. Students develop an organizational model for rural health care and study innovative ways of mobilizing community resources and support for a comprehensive rural health-care system. Pharmacy students, nurses, and other health professionals study application of theory in an appropriate clinical setting within the conceptual framework of each student's professional field.

Courses for Graduates Only

UCONJ 500- Seminar in Interprofessional Collaboration (1-5, max. 8) Emphasizes experiential learning, involving a collaborative project with students from Social Work, Nursing, Public Health, Education, and Public Affairs. Seminars focus on interprofessional collaborative practice, intrapersonal understanding, interpersonal group process skills, organizational ability, community awareness, and sociocultural sensitivity. Students encouraged to participate concurrently in disciplinary field placements. Credit/no credit. Offered: A-W-Sp.

UCONJ 501, 502, 503 International Health (1,1,1) Weekly seminar introduces students to issues and opportunities of participating in health care systems in other countries. Guest speakers bring many perspectives of international health care experiences. Class discussions help prepare students for international placements. Credit/no credit only.

UCONJ 510 Seminar in Neurobiology (0.5) Biweekly seminar on current topics in neuroscience. Recommended for students in the Graduate Program in Neurobiology and required for students supported on Graduate Neuroscience Program Training Grant. Physiology and Biophysics responsible.

UCONJ 511 Issues in Home Health Care Delivery (3) Service delivery issues relevant to provision of health care services across the life span in the home

INTERSCHOOL OR INTERCOLLEGE PROGRAMS / UNIVERSITY CONJOINT COURSES 347

setting. Home health care as an important component in health care system. Individual and multidisciplinary practice of health care disciplines. Emphasis on research literature. Prerequisite: graduate student standing, upper division with permission of instructor.

UCONJ 513 Dynamics of Patient Management: Diabetes Mellitus (2). Analysis of advanced knowledge related to interdisciplinary management of diabetes. Commonalities and differences in provider approaches, recent research and its effect on management practices, collaborative communication, knowledge application. Brief interactive presentations, decision-making opportunities, discussion. Credit/no credit only. Prerequisites: graduate standing in pharmacy, dietetics, nursing; third- or fourth-year medical student; or permission of instructor.

UCONJ 514, 515 Molecular and Cellular Biology Literature Review (2,2) Morris Emphasizes critical evaluation of the original literature orally and in writing. Subject matter coordinated with 504 and 505. Open only to first year students in the Interdisciplinary Molecular and Cellular Biology Program.

UCONJ 517 Topics in Molecular and Cellular Biology (1-3) Advanced in-depth coverage of specific areas of molecular and cellular biology of current interest. Lectures by University of Washington faculty involved in research in this area and lectures by invited speakers. A basic knowledge of principles of molecular and cellular biology assumed. Credit/no credit only. Prerequisites: 504,505,506, or equivalent. UCONJ 520 Motecular Biophysics Research Seminar (1) Drobny, Herriott, Reid A series of research seminars for faculty and students involved with the molecular biophysics program. Credit/no credit only.

UCONJ 524 Developmental Neurobiology (3) Reh, Rubel Survey of contemporary issues in developmental neurobiology, including neurogenesis and differentiation; electrophysiological, morphological, and neurochemical regulation of cellular phenotype; neuronal pathways and synaptic contacts; cellular and synaptic plasticity; and behavior. Examination of molecular biological, morphological, electrophysiological, and behavioral approaches. Prerequisite: background in neurophysiology, neuroanatomy, molecular neurobiology.

UCONJ 525 Overview of Faculty Research in Neurobiology (1) Reviews research topics currently being studied in neurobiology. Student preparation consists of reading pertinent articles published on each topic. Credit/no credit only. Prerequisite: first year graduate student in neurobiology.

UCONJ 526 Introduction to Laboratory Research in Neurobiology (4) Students become familiar with, and assist in, the performance of research on ongoing projects in designated laboratories. Emphasis on employed methodology and techniques. Credit/no credit only. Prerequisite: first year graduate students in neurobiology.

UCONJ 527 Current Topics in Neurobiology (1) Presentation and discussion of current research in neurobiology in order to provide students with exposure to and understanding of the diverse areas of neurobioloby research. Credit/no credit only. Prerequisite: graduate student in the Program in Neurobiology or permission of the instructors.

UCONJ 530 Issues in Indian Health (3) Survey of historical and contemporary issues in Indian Health. Covers Indian contributions to health, traditional Indian Medicine, current disease epidemiology, development of Federal Indian Health policy, the Indian Health Service, tribal health programs, and consequences of major legislation on Indian Health. Prerequisite: current health science student or permission of instructor.

UCONJ 555 Principles of STD/HIV Research (1-3) Provides MD and PhD fellows and graduate students with a comprehensive overview of the current state of knowledge in specific areas of STD/HIV research, including study design, laboratory methods, production of instruments for data collection, and methods for data analysis. Credit/no credit only.

UCONJ 584 Plant Tumors (1, max. 9) *M. Gordon* Discussion of the literature of plant tumors and current research work being carried on in this area at the University. Offered cooperatively by the departments of Biochemistry, Botany, and Microbiology and Immunology. Credit/no credit only. Prerequisite: offered only to persons actively pursuing work in this area.

UCONJ 599 Introduction to Research in Molecular and Cellular Biology (*, max. 20) Morris The student rotates through one research laboratory involved in the Interdisciplinary Molecular and Cellular Biology Program per quarter. Open only to first-year students in the IMCBP. Credit/no credit only.

School of Law

Dean

Wallace D. Loh 326 Condon

Associate Deans

Roland L. Hjorth 304 Condon

Stewart Jay 724 Condon

Assistant Deans

Sandra E. Madrid 338 Condon

John Michalik 306 Condon

Established in 1889, the School of Law is a member of the Association of American Law Schools and is on the American Bar Association's list of approved law schools. Graduates of the School are prepared to practice law anywhere in the United States. Additional information about the School is contained in the current School of Law catalog.

Facilities and Services

The School of Law is housed in Condon Hall, adjacent to the University's main campus. It is equipped with classroom, library, lounge, and office facilities.

The Marian Gould Gallagher Law Library is one of the finest law libraries in the country. Its collection, among the largest university law collections on the West Coast, currently numbers more than 435,000 volumes. In addition to the extensive main collection, it houses important materials that support the Asian and marine law graduate programs and serves as a federal depository for selected United States government documents. An experienced audiovisual staff directs the use of video equipment in the trial advocacy and moot court programs. The library is equipped with the latest in microreaders and printers in order to make full use of the growing microform collection. The library is a subscriber to LEXIS, WESTLAW, and the Western Library Network, and other research databases.

Juris Doctor Program

Juris Doctor Degree

The Juris Doctor degree is conferred upon a student who has met the residence requirements, consisting of nine quarters of at least 12 credits each, and has earned at least 135 credits satisfactory to the School of Law.

As in most law schools of the United States, the firstyear courses are required and are designed to introduce students to basic legal skills, foundational subject matter, and the variety of public and private processes with which the profession is concerned. Those courses deal with contracts, torts, property, civil procedure, criminal law, constitutional law, and basic legal skills.

Except for a required course in professional responsibility and an analytical writing requirement, courses in the second and third years are elective. Therefore, a student may choose a program designed to suit his or her interests and needs. Beginning with the class of 1997, J.D. candidates will be required to perform 60 hours of public service legal work during the second and/or third year.

Admission

New students may enter the School of Law only in autumn quarter. Instruction begins for first-year students a few days earlier than the time set for upperclass students. Beginning students must have received a baccalaureate degree from an accredited college or university prior to commencing the study of law.

All applicants are required to take the Law School Admission Test (LSAT) and to register for the Law School Data Assembly Service (LSDAS). Registration packets and test information are available at most law schools and from Law School Admission Services, Box 2000, Newtown, Pennsylvania 18940.

No specific prelaw course is required or recommended, and the School of Law subscribes to the remarks set forth on prelaw preparation in the *Prelaw Handbook—Official Guide to U.S. Law Schools.* Applications for admission to the next entering class must be received by January 15. To be assured of consideration for admission, an applicant must cause complete credentials, including the LSDAS report, to be filed in the School of Law by February 1. An application fee (at this writing, \$50) also is required.

Transfer Applicants

Students who have completed at least one year at a member school of the Association of American Law Schools may apply to this school for admission with advanced standing with credit for no more than one year of such work. A student who has completed or expects to complete at least two years of work at a member school of the Association of American Law Schools and who expects to graduate from that member school may apply to this school for admission as a non-degree candidate.

Applicants should request application forms and instructions from the admissions office in time to permit filing of the application by July 15. To be assured of consideration, the applicant must complete his or her application file by August 1.

Applications are considered only if vacancies exist. Selection of the applicants is based on evidence either (1) that the candidate can produce above-average work at this law school, or (2) that the candidate will contribute to the diversity of the student body.

Students working on law degrees to be conferred by the University have priority over non-degree candidates in the selection of courses. This policy is in accordance with the general University policy on the registration of nonmatriculated students.

Inguiries

A more detailed statement on admission policy and application procedure is available in the School of Law. Requests for application materials and the University law school bulletin should be addressed to Law School Admissions, Condon Hall, JB-20, University of Washington, Seattle, Washington 98195.

Financial Aid

Students in need of financial assistance may receive University aid, School of Law aid, federal loans, or aid from all of these sources. To be considered for aid, applicants must submit the Free Application for Federal Student Aid (FAFSA) by February 28. FAFSAs are available in December in most college financial aid offices, or may be obtained by writing or calling the Office of Student Financial Aid, 105 Schmitz Hall, PE-20. University of Washington, Seattle, Washington 98195, (206) 543-6101. Applicants for admission should not walt until they have been admitted before applying for financial aid.

School of Law grants are awarded primarily on the basis of financial need, although scholarship, minority status, or other factors may be considered with regard to certain awards. Inquiries concerning School of Law

aid should be addressed to: Kathleen Hallisy, Financial Aid Coordinator; School of Law, Condon Hall, JB-20, University of Washington, Seattle, Washington 98195.

991

Graduate Program

Roland L. Hjorth Stor

In addition to the professional law program leading to the Juris Doctor degree, the law faculty offers graduate programs leading to the Master of Laws (LL.M.) in law and marine affairs, Asian and comparative law, international environmental law, and law of sustainable international development. The School of Law offers the Doctor of Philosophy (Ph.D.) degree in Asian and comparative law only. The requirements for each program are as follows:

Asian Law Program. The Master of Laws degree program in Asian and comparative law is designed for students with career and research interests in one or more of the legal systems of East Asia, with particular emphasis on that of Japan, as well as for lawyers from East Asia seeking advanced comparative study of American law. The Asian law program is structured around extensive course offerings involving comparative study of basic areas of United States and East Asian law and tutorials in areas of special interest to each student.

Admission to the LL.M. degree program in Asian and comparative law is limited to language-qualified applicants who have received the first degree in law and who have a record of superior academic achievement. Graduates of American law schools must have a degree from an ABA-accredited institution. The applicant must be competent in an East Asian language (or, in the case of foreign students, in English). Students without the required competence may be admitted to the program, but must successfully complete an approved program of intensive study of an East Asian language before beginning their studies. The program contemplates one year in residence, at least 36 credits, and an acceptable major research undertaking.

Admission to the Ph.D. program in law is limited to exceptional scholar-lawyers who are fluent in English and in either Japanese, Chinese, or Korean. Prospective Ph.D. students must normally complete the LL.M. program before being accepted as Ph.D. students. The core of the program is a major creative research project using Asian-language sources as well as English-language sources. At least two, and usually three, years in residence are necessary in order to accomplish the work that must be done in order to pass the General Examination that precedes candidacy for the doctoral degree. An acceptable dissertation must thereafter be submitted to complete the requirements for the degree. The Candidate may spend a year abroad while working on the dissertation but must be in residence during the quarter in which the degree is to be conferred.

Law and Marine Affairs Emphasis. Students who have acquired a first degree in law can become prospective candidates for the LL.M. degree in law and marine affairs. Graduates of American law schools must have a degree from an ABA-accredited school. Particular emphasis is placed on interdisciplinary aspects of marine affairs and coastal zone management. Attainment of the LL.M. degree with specialization in law and marine affairs requires satisfactory completion of 40 credits of course and research work, at least 15 of which must be in the School of Law. In the School of Law, courses include Law of the Coastal Zone, International Law of the Sea, Ocean Policy and Resources, United States Law and the Marine Environment, and Admiralty. Pertinent courses are also offered in the schools of Fisheries, Marine Affairs, and Oceanography, the Graduate School of Public Affairs, the College of Engineering, and the departments of Economics and Geography.

SCHOOL OF LAW/FACULTY 349

and serves

International Environmental Law Emphasis. Students may earn an LL.M. degree in international environmental law. This LL.M. degree option is open to students with a first degree in law. Graduates of American law schools must have a degree from an ABA-accredited school. Emphasis is placed on the interdisciplinary study of environmental problems, and students may earn more than half of their credits in courses outside of the School of Law, including courses offered by the schools of Fisheries and Marine Affairs, the Institute for Environmental Studies, the Graduate School of Public Affairs, the colleges of Engineering and Forest Resources, and the departments of Atmospheric Sciences, Economics, Environmental Health, and Geography. Courses offered in the School of Law include Environmental Law: Pollution Control, Natural Resources: Energy, U.S. Law and the Marine Environment, International Environmental Law, and Land Use Planning. To earn the LL.M. degree, students must satisfactorily complete 40 credits of course and research work, at least 15 of which must be in the School of Law. Students must take LAW A 527, Environmental Law: Pollution Control and LAW A 574, The International Legal Process unless they have had equivalent courses; and one course on international environmental law. As part of their course work or an independent study project, students must write one substantial paper.

Law of Sustainable International Development Emphasis. Students may earn an LL.M. degree in the law of sustainable international development. This LL.M. degree option is open to students with a first degree in law. Graduates of American law schools must have a degree from an ABA-accredited school. Emphasis is placed on the interdisciplinary study of sustainable international development, and students may earn more than half their credits in courses outside the School of Law, including courses offered by the schools of International Studies and Public Health, the Institute for Environmental Studies, and the departments of Economics, Political Science, and Sociology. In the School of Law, courses offered include Legal Problems of Economic Development (required), International Environmental Law (required), Public Land Law, International Commercial Law, and Land, American Culture, and the Law. Attainment of the LL.M. degree with specialization in the law of sustainable international development requires satisfactory completion of 40 credits of course and research work, at least 15 of which must be in the School of Law, and the taking of courses in at least three other departments other than law. As part of their work, students must write one substantial paper.

Inquiries

Requests for applications and program brochures for all School of Law LL.M. programs, as well as information regarding application procedures should be addressed to Jacqueline Fisher, Law School Graduate Admissions, Condon Hall, JB-20, University of Washington, Seattle, Washington 98195, U.S.A.

Financial Aid

Scholarship funds for graduate students in law are quite limited. Inquiries should be made to Law School Graduate Admissions, Condon Hall, JB-20, University of Washington, Seattle, Washington 98195, U.S.A.

Cosway, Richard * 1958, (Emeritus); JD, 1942, University of Cincinnati; commercial transactions, contracts.

Cross, Harry M. * 1943, (Emeritus); JD, 1940, University of Washington; property.

Ellis, Jane W. 1987; JD, 1983, Yale University; juvenile justice and domestic relations, interviewing and counseling.

Fitzpatrick, Joan M. * 1983; JD, 1975, Harvard University; International human rights and civil rights, federal courts, immigration.

Fletcher, Robert L. * 1956, (Emeritus); LLB, 1947, Stanford University; property.

Foote, Daniel * 1988; JD, 1981, Harvard University; comparative law with a focus on Japan and Asia, labor and employment law.

Haley, John O. * 1974; LLM, 1971, University of Washington; comparative law (Japan).

Hardisty, James * 1970; LLB, 1966, Harvard University; criminal law, psychiatry and law, juvenile courts, torts.

Hazelton, Penelope A. * 1985; MLL, 1976, University of Washington; law librarianship, legal bibliography, computer-assisted legal research, law, Indian law.

Henderson, Dan F. * 1962, (Emeritus); PhD, 1955, University of California (Berkeley); U.S./Japanese business transactions, corporate relations, admiralty.

Hershman, Marc * 1976, (Adjunct); JD, 1967, Temple University; coastal zone management law.

Hicks, Gregory A. 1984; JD, 1978, University of Texas (Austin); torts, securities regulation.

Hjorth, Roland L. * 1964; LLB, 1961, New York University; transnational tax, Common Market, federal taxation.

Hume, Linda S. * 1972; JD, 1970, University of California (Los Angeles); commercial transactions, property, equal rights.

Huston, John * 1967; LLM, 1955, New York University; federal taxation.

Jay, Stewart M. * 1980; JD, 1976, Harvard University; civil procedure, theories of justice, federal courts, constitutional law.

Johnson, Ralph W. * 1955; LLB, 1949, University of Oregon; natural resources, legislation, Indian law.

Junker, John M. * 1964; JD, 1962, University of Chicago; criminal law and procedure.

Kummert, Richard O. * 1964; LLB, 1961, Stanford University; business planning, corporations, federal tax.

Loftus, Elizabeth F. * 1973, (Adjunct); PhD, 1970, Stanford University; cognition, long-term memory, eye-witness testimony, psychology and law.

Loh, Wallace * 1974; PhD, 1971, University of Michigan; contracts, criminal procedure, social science and the courts. Morris, Arval * 1955; LLM, 1958, Yale University; constitutional law, jurisprudence, education law.

Peck, Cornelius J. * 1954, (Emeritus); LLB, 1949, Harvard University; administrative law, labor law, torts.

Price, John R. * 1969; LLB, 1961, New York University; estate planning, taxation, property, elder law.

Prosterman, Roy L. * 1965; LLB, 1958, Harvard University; international law.

Rieke, Luvern V. * 1949, (Emeritus); LLM, 1953, University of Chicago; contracts, domestic relations.

Roddis, Richard S. L. * 1968; JD, 1954, University of California (Berkeley); insurance, torts.

Rodgers, William H. * 1979; LLB, 1965, Columbia University; legislation, environmental law, resource management.

Rombauer, Marjorie D. * 1960, (Emeritus); JD, 1960, University of Washington; creditor and debtor, personal property.

Schnapper, Eric 1994; LLB, 1968, Yale University; constitutional law, civil rights, civil procedure.

Shattuck, Warren L. 1935, (Emeritus); JSD, 1936, Yale University; commercial law.

Smith, Charles Z. * 1973, (Emeritus); JD, 1955, University of Washington; evidence, judicial administration.

Smith, Frank W. Jr. * 1968; LLM, 1968, Harvard University; commercial law.

Stoebuck, William B. * 1967; SJD, 1973, Harvard University; property, land use, legal history.

Trautman, Philip A. * 1956; JD, 1954, University of Washington; conflict of laws, procedure.

Vaughn, Lea B. * 1984; JD, 1978, University of Michigan; labor law, alternate dispute resolution, civil procedure.

Wolcher, Louis E. * 1986; JD, 1973, Harvard University; contracts, critical legal studies, federal courts, remedies and restitution, admiralty.

Assistant Professors

Itin, Mary E. * 1993; JD, 1986, University of Michigan; bankruptcy, contracts, commercial law.

Jecker, Nancy A. S. * 1990; PhD, 1986, University of Washington; geriatric medical ethics, allocation of medical resources, ethical theory.

Kirtley, Alan 1984; JD, 1972, Indiana University; clinical legal education, affordable housing development, alternative dispute resolution.

Kuszler, Patricia C. 1994; JD, 1991, Yale University; health law, insurance.

Levins, Annmarie 1992; JD, 1983, University of Maine; trial advocacy, professional responsibility, criminal law.

Townsend, Michael F. 1992; JD, 1989, Yale University; intellectual property, contracts.

Senior Lecturers

Maranville, Deborah 1989; JD, 1975, Harvard University; Civil Clinic.

McMurtrie, Jacqueline 1989; JD, 1983, University of Michigan; Criminal Clinic.

O'Neill, Kathleen M. 1993; JD, 1980, Columbia University; legal research and writing.

Lecturers

Jones-Garling, Michele 1993; JD, 1987, Gonzaga University; Family Law Clinic.

Stearns, Janet E. 1993; JD, 1988, Yale University; Affordable Housing Clinic, real estate.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

LAW 442 Land Law and the Urban Environment (3) I&S Examination of the major legal tools available to shape the urban environment by controlling the use of land. Considers zoning, subdivision controls, urban renewal, private land-use restrictions, and the rules of nuisance law. Credit/no credit only. Open to law and nonlaw students.

LAW 443 The Legal Process I (3/5) I&S Open only to nonlaw students. The system of law and its functions rather than substantive law pertaining to any particular subject or discipline. Credit/no credit only.

LAW 444 Constitution and American Public Education (3-6) I&S Examines the relationships between the Constitution of the United States and the American system of public education, excluding higher education, in areas of constitutional freedom and legal controls, racial desegregation, and equal educational opportunity, including equal financing of the public schools. Offered: jointly with EDLPS 444.

LAW 445 Major Issues in American Constitutional Law (3) I&S Significant themes in American constitutional law. Doctrine of judicial review, application of the Bill of Rights to the states, Supreme Court's recognition of fundamental rights, the Equal Protection clause, the Religion clauses, freedom of speech, and Presidential powers. Open to law and nonlaw students.

LAW 446 Race, Age, and Sex Discrimination in Employment (3) I&S What constitutes race, age, and sex discrimination in employment, and related prohibited practices that limit employment opportunities. Methods of proving such discrimination and establishing that a practice should be prohibited. Remedies for violations considered. Open to law and nonlaw students.

LAW 447 Copyright Law for the Lay Person (3) I&S Introductory survey of federal copyright law. Protection of original works, fair use, required formalities, and related issues. Open to law and nonlaw students.

LAW 467 American Law and the American Indian (3) I&S Relationship between Indians and the United States from 1789 to the present. Significant constitutional, legislative, and judicial actions. Legal events explored within their political, military, social, and cultural contexts. Comparisons with other minority-group experiences. Offered: jointly with HSTAA 416.

LAW 495 Introduction to Law: A Social Science Perspective (4).18S Policy-oriented, interdisciplinary study of uses and limits of social science in the lawmaking process on appeal and fact-finding process at trial. Critical perspectives on roles of social science, especially social psychology, in adjudication. Open to upper-division undergraduates and graduate students only. Offered: jointly with PSYCH 495.

First-Year Courses

The courses below are intended for law students; other students are admitted only rarely with special permission of the Dean. Only the course titles are given. For complete course descriptions, see the School of Law Bulletin.

LAW A 501-	Contracts ([2-8]-, max. 8)
LAW A 502-	Civil Procedure I ([2-6]-, max. 6)
LAW A 503-	Property I ([2-8]-, max. 8)
LAW A 504-	Torts ([2-8]-, max. 8)
LAW A 505-	Criminal Law (12-51- may 5)

LAW A 506- Basic Legal Skills ([1-6]-, max. 6)

LAW A 507 Constitutional Law I: Constitutional Structures of Government (4)

Second- and Third-Year Courses
LAW A 508 Payment Systems (3)
LAW A 509 Administrative Law (4)
LAW A 510 Sales: A Comparative Perspective (4)
LAW A 511 Transmission of Wealth (5)
LAW A 512 Secured Transactions III (3)
LAW A 513- Creditor-Debtor Law ([2-3]-, max. 5)
LAW A 514 Corporations (3/4)
LAW A 515 Business Organizations (5)
LAW A 516 Legal Accounting (4)
LAW A 517 Securities Regulations (4)
LAW A 518 Restitution (3).
LAW A 520- Property II ([2-8]-, max. 8)
LAW A 521 Community Property (3)
LAW A 522 Copyright (3)
LAW A 523 Real Property Security (3/4)
LAW A 524 Private Land Development (3)
LAW A 525 Water Law (3)
LAW A 526 Copyrights and Trademarks (4)
LAW A 527 Environmental Law: Pollution Control (3)
LAW A 528 Natural Resources: Energy (3)
LAW A 529 Public Land Law (3)
LAW A 530- Basic Income Tax ([2-6]-, max. 6)
LAW A 531 Death and Gift Taxation (2-5)
LAW A 532 Corporate Taxation (5)
LAW A 533 Partnership Taxation (3)
LAW A 535 Trademarks and Unfair Competition (2)
LAW A 536 Deferred Compensation (3)
LAW A 537- Business Planning ([2-6]-, max. 6)
LAW A 538 Estate Planning Workshop (4)
LAW A 540 Land Use Planning (3)
LAW A 541 Transnational Tax (5)
LAW A 542 Oil and Gas Law (3)
LAW A 543 Business Reorganization Under the Bankruptcy Code (5)
LAW A 544 Advanced Commercial Law (3)
LAW A 546- Legal Protection for Technology Patent and Trade Secret Law ([2-4]-, max. 4)
LAW A 547 Critical Legal Studies (2)
LAW A 548- Civil Rights ([2-6]-, max. 6)
LAW A 549 Advanced Legal Research (4)
LAW A 550- Constitutional Law ([2-8]-, max. 8)
LAW A 551 Constitution and American Public Education (3-6, max. 6) No credit given if LAW

LAW A 552- Antitrust ([2-5]-, max. 5)

EDLPS 444 taken previously.

LAW A 553 Feminist Legal Theory (4)
LAW A 554- Labor Relations and the Law ([1-5]-, max. 5)
LAW A 555 Labor Relations in the Public Sector (3)
LAW A 556- Employment Discrimination ([2-4]-, max. 4)
LAW A 558- Jurisprudence and Legal Philosophy ([2-4]-, max. 4)
LAW A 559 Legal Method (3)
LAW A 560 Income Maintenance Legislation (3)
LAW A 561 Law and Economics (3) Offered: jointly with PB AF 532.
LAW A 562 Employment Law (3/4)
LAW A 563 Urban Government (4)
LAW A 564 Legal History (3)
LAW A 565 American Indian Law (3)
LAW A 566- Theories of Justice ([2-4]-, max. 4)
LAW A 567 Disabled and the Law (2)
LAW A 568 Collective Bargaining and Labor Arbitration (4)
LAW A 569 Law and Social Science (3/4)
LAW A 571 International Organizations (3)
LAW A 572 International Legal Order (3)
LAW A 573 Arms Control and Disarmament: The Legal Perspective (3)
LAW A 574 The International Legal Process (2-4, max. 4)
LAW A 575 United States Legal History (3)
LAW A 576 International Economic Relations and Comparative Trade Policy (3/4)
LAW A 577 Immigration Law (4)
LAW A 578- International Commercial Law ([1-4]-, max. 4)
LAW A 579 Advanced Family Law (3)
LAW A 580 Family Law (4)
LAW A 583 Insurance Law (4)
LAW A 585 Admiralty (3)
LAW A 586 Secured Transactions IV (4)
LAW A 587 Computer Law (3)
LAW A 590 Constitutional Law: Equal Protection, Fundamental Rights, and Due Process of Law (4)
LAW A 591 Constitutional Law: Freedom of Expression (3)
LAW A 592 Constitutional Law II: The Fourteenth and First Amendments—Equal Protection, Funda- mental Rights, Due Process of Law, Freedom of Expression and Religion (2-8, max. 8)

LAW A 593 Constitutional Law: The Constitution and the Economy (3)

LAW A 598 Legal Bibliography (3) Offered: jointly with LIBR 544.

LAW A 599 Advanced Legal Bibliography (4) Offered: jointly with LIBR 557.

352 GRADUATE SCHOOL OF LIBRARY AND INFORMATION SCIENCE / GRADUATE PROGRAM

Graduate School of Library and Information Science

Director

Phyllis J. Van Orden

133 Suzzallo

Graduate Program

A 63-credit course of study leads to the Master of Librarianship degree, which prepares graduates for professional positions in information management in libraries and a variety of other environments. The School's curriculum incorporates a significant number of courses in the organization, storage, retrieval, and management of information through the use of diverse technologies. Foundation courses provide the theoretical base for the program. Technical and advanced courses are organized around five areas of concentration: managerial tools, organization of resources, information resources and retrieval, design and provision of information services, and environments of information service.

The law librarianship program requires a J.D. degree for admission and may be completed in one calendar year. This specialized course of study prepares lawyers to serve as law librarians in courts, federal and state governmental agencies, schools of law, corporations, and law firms.

Special Research Facilities

The School's computer laboratory provides a dedicated facility for research and instruction in the design and utilization of information systems. Microcomputers, laser disc drives, and allied equipment support a broad variety of data bases, applications software, and programming capabilities, as well as providing access to the University's computer network and off-campus bibliographic utilities and information services.

Admission Requirements

Admission is subject to the approval of the School's admissions committee. A complete application file includes: application for admission; official transcripts; Graduate Record Examination scores, general test section (an exception is made for those who have completed a Ph.D. program); three letters of recommendation; and a statement of educational and professional goals. International students (except those from English-speaking countries) are required to take the Test of English as a Foreign Language (TOEFL) examination. Students may be admitted any quarter, though most choose to begin autumn quarter. Completed applications for admission for summer or autumn quarters must be received prior to March 15, for winter quarter prior to November 1, and for spring quarter prior to February 1. Students are strongly advised to complete their applications early.

In addition to the above requirements, an applicant for the law librarianship program must hold a degree from an accredited American law school or from a law school in one of the common-law countries. The Graduate School of Library and Information Science brochure gives full details of application procedures.

Financial Aid

The School has funding available each year for one staff assistantship. In addition, fellowships/scholarships from the Cobb, Finley Multiethnic, Henry, Koon, McAlpin, and Page endowment funds are awarded each year. The amount of assistance and number of awards varies from year to year. All awards have financial need as one criterion, which is based on the figures the applicant provides on the Free Application for Federal Student Aid (FAFSA). This form is available from the Office of Student Financial Aid in mid-December and must be submitted by February 28 each year. The School is unable to offer financial assistance to international students. Other fellowships are described in Financial Assistance for Library Education, available from the American Library Association, 50 East Huron Street, Chicago, Illinois 60611.

Correspondence and Information

Director

Graduate School of Library and Information Science, FM-30

Faculty

Professors

Ahlers, Eleanor E. 1966, (Emeritus); MA, 1957, University of Washington; librarianship.

Benne, Mae M. * 1971, (Emeritus); MS, 1955, University of Illinois; children's literature, public library services for children.

Bevis, L. Dorothy 1947, (Emeritus); MA, 1951, University of Washington; librarianship.

Chisholm, Margaret E. * 1975, (Emeritus); PhD, 1966, University of Washington; organization and administration, library education.

Hiatt, Peter * 1974; PhD, 1963, Rutgers University; adult services, special populations, library education, staff development, continuing education.

Lieberman, Irving 1956, (Emeritus); EdD, 1955, Columbia University; librarianship.

Shaw, Spencer G. * 1970, (Emeritus); BLS, 1941, University of Wisconsin; librarianship.

Van Orden, Phyllis J. * 1993; EdD, 1970, Wayne State University; library services to youth, including children's literature, and to teachers.

Associate Professors

Brooks, Terrence A. * 1986; PhD, 1981, University of Texas (Austin); information storage and retrieval, database design, bibliometrics, statistical methodology.

Doll, Carol A. * 1988; PhD, 1980, University of Illinois; library materials for and services to children and young adults.

Fidel, Raya * 1982; PhD, 1982, University of Maryland; information systems, systems analysis, database design, classification research.

Mignon, Edmond * 1970; PhD, 1976, University of California (Berkeley); information retrieval, bibliographic organization, information policy, government statistics.

Skelley, Grant T. * 1969; PhD, 1968, University of California (Berkeley); bibliography and reference, subject literature, history of the book, preservation.

Assistant Professors

Nelson, Jerold A. * 1971; PhD, 1971, University of California (Berkeley); interpersonal relations in libraries, intellectual freedom. Soper, Mary E. * 1972; PhD, 1972, University of Illinois; technical services, organization of library materials, cataloging, subject analysis.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

LIBR 450 Survey of Children's Literature (3) Designed for educators, librarians, and others interested in the selection and utilization of children's books for family, school, and library enrichment. Not open to Library and Information Science majors. Prerequisite: junior or higher standing.

LIBR 451 Young Adult Materials: Evaluation and Use (3) Reading and appraisal of literature appropriate to the needs, interests, and abilities of young adults. For the general student as well as the teacher. Not open to Library and Information Science majors. Prerequisite: junior or higher standing.

LIBR 470 History of the Book (3) Survey of the development of the book from hieroglyphics and clay tablets to the present, with emphasis on the printed book in the Western world since Gutenberg. The book as a physical object and the processes and materials of its production, viewed in the context of changing technologies and various cultural, esthetic, economic, and trade influences. Includes aspects of book collecting. Credit/no credit only. Prerequisite: junior or higher standing.

LIBR 471 Storytelling: Art and Techniques (3) Storytelling, past and present, noting its development as an art form. Reading and analyzing storytelling materials (folk literature and literary forms) used by storytellers throughout historical periods. Learning essential techniques necessary to maintain this artistic skill in a professional field. Planning storytelling programs for various age and interest groups and situations, utilizing folk, classic, and contemporary literature. Not open to Library and Information Science majors. Prerequisite: junior or higher standing.

LIBR 497 Learning Resources Endorsement Topics (3, max. 6) School library media center subject matter presented in seminar, workshops or other appropriate formats. Topics meet the Learning Resources Endorsement areas of study required for the learning resources endorsement. Not open to Library and Information Science majors. Prerequisite: junior or higher standing.

LIBR 498 Special Topics (1-5, max. 15) - Library service and information science subject matter in seminars, workshops, or other appropriate förmats. Topics vary and may be repeated for credit. Credit/no credit only. Prerequisite: junior or higher standing.

LIBR 500 Society, Users, and Libraries (4) Technological, societal change as it relates to information. Society's information processes, ways individuals use information in their environments. Skills basic to other courses developed, including awareness of resources for study of library and information science. Intellectual context of librarianship as service profession. Prerequisite: major standing.

LIBR 501 Bibliographic Control (4) Survey of the major types of instruments for the bibliographic control of the various kinds of library materials and of the conventions used in describing them. Basic concepts, historical background, and theoretical and practical aspects of bibliographic control; evaluation and methodology. Prerequisite: major standing.

LIBR 502 Introduction to Information Science (3) Theory, understanding, and perspectives for the analysis of design and operation of information retrieval systems. Systems analysis applied to the process of information transfer. Consideration of user needs assessment, performance evaluation, and control of terminology.

GRADUATE SCHOOL OF LIBRARY AND INFORMATION SCIENCE / COURSE DESCRIPTIONS 353

LIBR 503 Bibliographic Data Bases (4) Concepts and conventions of bibliographic record structure, file organization, and search protocols. Elementary techniques in the use of bibliographic utilities and on-line search services. Prerequisite: major standing.

LIBR 510 Management for Librarianship (3) Management concepts critical to provision of library services. The planning process applied to library problems and opportunities. Communications awareness and skills in the professional environment. Organizational concerns, including personnel, budgeting, control techniques, theories of management, and evaluation of effectiveness.

LIBR 511 Library Administration Skills (3) Provides practice in the administrative skills related to personnel selection, supervision, and management, and to planning and budgeting processes in the library setting. Topics include work specification, performance evaluation, personnel policy formulation, budget types, and budget preparation and control.

LIBR 512 Community Analysis and Library Change (3) Review of the concepts, strategies, and tools for study of the community, response to community change, and promotion of desired library change. Includes experiential exercises, analysis of case studies, and investigation of the literature of relevant fields. Prerequisite: 500 or permission of instructor.

LIBR 513 Management of Automated Systems in Libraries (3) Developing criteria for selection and design of computer systems for libraries and information centers. Applying criteria in evaluation of hardware and software. Examining related management challenges such as vendor relations, financing options, personnel requirements, and design of auxiliary activities. Credit/no credit only. Prerequisites: 501, 503, or permission of instructor.

LIBR 520 Organization of Library Materials: Introduction (3) Principles and techniques of standard methods of organizing library materials for use. Includes fundamentals of descriptive cataloging, primary systems of subject analysis, and developments in technical services. Prerequisites: 501, 503, or permission of instructor; recommended: 500.

LIBR 522 Descriptive Cataloging (3) Continuation of 520, with emphasis on rules of descriptive cataloging for monographic print materials of all kinds and nonbook materials. Includes applications of automation to bibliographic control of library materials. Prerequisite: 520 or permission of instructor.

LIBR 523 Subject Analysis of Library Materials (3) Continuation of 520, with emphasis on subject analysis of library materials. Includes work with Library of Congress and Dewey decimal classifications, Sears and Library of Congress subject headings, and other systems used in libraries today. Prerequisite: 520 or permission of instructor.

LIBR 525 Organization and Use of Serials (3) Management of serials, including acquisition and replacement, control, subject access, preservation, and use of all types in all kinds of libraries. Includes application of new technology and international developments as they affect serials. Credit/no credit only. Prerequisite: 520 or permission of instructor. Recommended: 522.

LIBR 526 Indexing and Abstracting (3) Techniques of vocabulary control and thesaurus construction as applied to indexing and abstracting processes. Design, selection, and evaluation of indexing systems. Computerized methods for free text, full text, and controlled vocabulary procedures. Application of methods to information retrieval systems. Prerequisites: 501, 503, or permission of instructor.

LIBR 527 Construction of Index Languages (3) Explanations of design options, features of index languages or thesauri, and criteria to use in their selection. After completing the thesaurus construction project, students are prepared to design index languages, plan and implement a design project, and evaluate index languages. Credit/no credit only. Prerequisite: 501, 502, 503 or permission of instructor.

LIBR 528 Literature Searching (3) Concepts and techniques of professional literature searches, using a variety of standard search languages on representative types of bibliographic data bases and on-line reference resources. Analysis and evaluation of data bases. Prerequisite: 503 or permission of instructor; recommended: 501.

LIBR 531 Conceptual Database Design (3) Preliminary design of data bases for decision support systems. Introduces methods of collecting user requirements, requirement analysis, data dictionary, the entity-relationship model, methods for data-base integration, preparation for data collection, and evaluation. Credit/no credit only. Prerequisites: 501, 503, or permission of instructor.

LIBR 533 Bibliographic Knowledge Bases (3) Practical application of appropriate software for design of bibliographic databases and knowledge bases. Emphasis on creation of real working systems. Focus on bibliographic data structures, creation of indices and user interfaces. Considers approaches to artificial intelligence and expert systems with bibliographic data. Prerequisite: 503 or permission of instructor.

LIBR 540 Materials for General Information Needs (3) Consideration of the individual in the generalized information environment. Interdisciplinary sources for the selection of library materials. Forms of materials for nonspecialized information retrieval and referral. Development of skills in question negotiation and search strategy. Prerequisite: 501, or permission of instructor; recommended: 500, 503.

LIBR 541 Information Access in the Humanities (3) Description and analysis of information problems and information sources in the humanities. Fields considered are philosophy, religion, visual arts, performing arts, language, and literature. Prerequisite: 501 or permission of instructor; recommended: 500, 503.

LIBR 542 Information Access in the Social Sciences (3) Description and analysis of information problems and information sources in the social sciences. Fields considered are anthropology, business economics, education, geography, history, political science, psychology, and sociology. Prerequisites: 501, 503, or permission of instructor.

LIBR 543 Information Access in Science and Technology (3) Covers the following topics as they apply in the literature of the natural sciences and engineering: nature of information transfer; characteristics and organization of bibliographic and reference sources; information retrieval from manual and computer on-line sources; search strategy; practice with specific data bases and manual sources. Prerequisites: 501, 503, or permission of instructor; recommended: 528.

LIBR 544 Legal Bibliography (3) Introduction to legal bibliography and law librarianship. Basic primary and secondary legal bibliographic tools. Integration of manual and computer resources for effective legal research. Prerequisite: law librarianship major or 501 and 503 for non-law librarianship major. Offered: jointly with LAW A 558.

LIBR 545 Government Publications (3) Government publications of the United States and foreign countries, their acquisition, organization, and use. Credit/no credit only. Prerequisites: 501, 503, or permission of instructor; recommended: 500.

LIBR 546 Business Information Resources (3) Survey of the extent and nature of business information and its sources, and of business information producers and consumers. Study and use of both print and online sources. Prerequisites: 501, 503, or permission of instructor. LIBR 547 Evaluation and Selection of Audiovisual Materials (3) Develops competency in applying criteria to the evaluation, selection, and use of audiovisual materials and their accompanying technologies. Focuses on previewing the full range of audiovisual formats found in all types of libraries.

LIBR 549 Children's Materials: Evaluation and Use (3) Study of library materials for children with emphasis on literature in its various forms. Attention also given to criteria used in evaluation, issues in selection, and use of materials with children.

LIBR 550 Youth Materials: Bibliography and Resources (3) Sources of information about youth materials. Includes reviewing journals, selection aids, general and subject bibliographies, books of readings and criticism, textbooks, and biographical tools. Emphasis on the critical evaluation of these sources. Includes brief history of children's literature and the function of special collections. Prerequisite: 503.

LIBR 551 Young Adult Materials: Evaluation and Use (3) Reading, evaluation, and sharing of literature currently appropriate to the needs, interests, and abilities of young adults, ages twelve through twenty. Application of criteria to the assessment of young adult reading materials and consideration of the uses of these materials with young people.

LIBR 553 Information Access in Health Sciences (3) Characteristics of users of biomedical literature. Information resources in health sciences and healthcare planning. Use of information retrieval systems, emphasizing services of National Library of Medicine. Organization of medical, hospital libraries. Problems of information policy, professional standards, certification. Credit/no credit only. Prerequisite: 528 or permission of instructor; recommended; 543.

LIBR 555 Socioeconomic Data Resources (3) Utilization of public data bases of economic and demographic statistics for information retrieval, with special attention to services of Bureau of the Census. Application of on-line data files to library reference services. Credit/no credit only. Prerequisites: 528 and 599 or knowledge of inferential statistics, or permission of instructor.

LIBR 557 Advanced Legal Bibliography (4) Legal bibliographic tools that answer more complex legal research problems, such as federal legislative histories, sources of administrative law, specialized research (e.g., tax, securities). Builds on skill, techniques utilized in 544. Extensive work with computer-assisted legal retrieval. Prerequisite: major standing in law librarianship, 544, or permission of instructor. Offered: iointly with LAW A 599.

LIBR 558 Selection and Processing of Law Library Materials (3) Study of tools for collection development and collection development plans in law libraries. All law library technical processes, including acquisitions, budgeting, cataloging, and serials. Credit/no credit only. Prerequisite: 544 or permission of instructor.

LIBR 560- User Education: Issues and Practice (3-, max. 6) User education as professional activity in libraries. Teaching methods, instructional design, special populations, learning styles, impact of technology, critical thinking skills. Practical teaching experience through University of Washington Libraries' user education program. Material covered over two consecutive quarters. Credit/no credit only. Prerequisites: 501 and 503. Recommended: one reference course.

LIBR 561 Serving Individual Information Needs (3) Training in awareness and skills for perceiving and responding to the information requests of users. Effective strategies for meeting information needs are learned through use of simulations, role playing, experiential exercises, discussion, and practice. Credit/no credit only. Prerequisite: 500 or permission of instructor.

354 GRADUATE SCHOOL OF LIBRARY AND INFORMATION SCIENCE / COURSE DESCRIPTIONS

LIBR 562 Planning for Library and Information Services (3) Principles underlying library and information services, and the selection and design of services to meet user needs in all types of libraries and information centers. Emphasis on adult clientele in academic, public, and special libraries, but attention given to school library media centers and all age levels. Prerequisite: 500 or permission of instructor; recommended: 501.

LIBR 563 Services for Special Groups (3) Needs analysis and design of library services for the blind and visually handicapped, deaf and hearing impaired, institutionalized, mentally and physically handicapped, functionally illiterate, minorities, and aging. Skills, insights, and knowledge to work with these groups. Current research, practice, and experimental programs. Prerequisite: 500 or permission of instructor; recommended: 562.

LIBR 566 Special Librarianship (3) Seminar in the practice of special librarianship in business and industrial firms, government agencies, and the free-lance sector. User services and information resources. Credit/no credit only. Prerequisites: 24 credits in Master of Librarianship program.

LIBR 567 Public Library Services for Youth (3) Administration of youth departments in public libraries; planning and promoting programs and services; evaluation of library collections; community and professional roles of the youth librarian. Prerequisite: 500 or permission of instructor.

LIBR 568 Administration of the School Library Media Program (3) Develops competency in administering materials, equipment, and services of the library media program as an integral part of the educational process of the school. Focuses on developing skills in acquiring, organizing, and managing the full range of learning resources for access and use, and communicating the program to users. Required for school library media specialists.

LIBR 571 Storytelling: Art and Techniques (3) Storytelling, past and present, noting its development as an art form. Reading and analyzing storytelling materials (folk literature and literary forms) used by storytellers throughout historical periods. Learning essential techniques necessary to maintain this artistic skill in a professional field. Planning storytelling programs for various age and interest groups and situations, utilizing folk, classic, and contemporary literature. LIBR 572 Archival and Manuscript Services (3) Selection, organization, and uses of archival and manuscript collections. Emphasis on the principles and techniques; some attention to the administration of state archival and historical institutions' collections. Lecture, demonstration, and laboratory. Prerequisite: 501, or permission of instructor.

LIBR 577 Law Library Administration (4) Administration in law libraries, including organization, personnel, and management issues (e.g., interviewing, hiring, firing), communications, library planning, and bookkeeping. Credit/no credit only. Prerequisite: 544 or permission of instructor.

LIBR 581 Intellectual Freedom in Libraries (3) Analysis of issues related to intellectual freedom, with particular attention to implications for libraries and librarians. Includes consideration of the current legal climate, conformity versus freedom in the modern world, the librarian as censor, social responsibility and individual freedom, the intellectual freedom of children, prospects for the future. Credit/no credit only. Prerequisite: 500 or permission of instructor.

LIBR 583 Cooperative Information Systems (3) Analysis of cooperative information systems found among all types of libraries and information centers. Emphasis on developments in the United States and also treatment of foreign and multinational systems, with assessment of their contributions. Prerequisite: 500 or permission of instructor, recommended: 501.

LIBR 584 Information Policy (3) Review of efforts to develop national information policy and assessment of where we are in process. Consideration of legislation and issues pertinent to national information policy (e.g., freedom of information, privacy, copyright, management of government information, telecommunications, transborder data flow, and satellite technology). Prerequisites: 500, 503, or permission of instructor; recommended: 501, 545.

LIBR 585 Information in the Public Policymaking Process (3) Demystifying information base for policymaking in a democracy. Review of theoretical needs and opportunities for input of information associated with three branches of government and each phase of policymaking. Focus on actors who bring information to policymakers. Federal, state, and local comparison. Credit/no credit only. Prerequisite: 500 or permission of instructor; recommended: 501, 503. LIBR 590- Directed Fieldwork (4-) Library and information science majors only. A minimum of 200 hours of professional, supervised fieldwork in a library or professional information agency (May be taken in one quarter or as many as three consecutive quarters. Credit/no credit only. Prerequisite 33 credits in Master of Librarianship program.

LIBR 592 Aspects of Publishing (3) Examination of selected topics in book and periodical publishing from Renaissance through present. Focus on publishing practices, processes, and strategies in given economic, cultural, and social contexts. Covers the combination of activities, entrepreneurial or otherwise, that constitute publishing but not the technical means involved in producing the published product.

LIBR 593 Preservation and Conservation of Library Materials (3) Consideration of the many factors contributing to the physical vulnerability of library materials of all kinds and an overview of resources and strategies for those who determine preservation policy or manage the application of such policy. No technical background necessary.

LIBR 594 Collection Development (3) Access to materials as context for development and management of library collections in academic, public, school libraries. Community analysis, library mission; collection development policies, criteria, principles, levels, responsibilities; aids to selection; collection evaluation, use studies; controversial, difficult materials. Major issues, research, trends. Prerequisites: 500, 501, 503, or permission of instructor; recommended: course in 540 sequence.

LIBR 598 Special Topics In Librarianship (3) Seminar dealing with various topics in librarianship. Offered by visitors or resident faculty. Topics are changed from quarter to quarter. May not be offered every quarter. May be repeated for credit. Credit/no credit only. Prerequisite is determined by specific course.

LIBR 599 Methods of Research in Librarianship (3) Introduction to research methods commonly used in library and information science. Emphasis on problem selection, study design, data interpretation, and dissemination of results.

LIBR 600 Independent Study or Research (*) Credit/no credit only.

LIBR 700 Master's Thesis (*) Credit/no credit only.

SCHOOL OF MEDICINE / ADMISSIONS 355

School of Medicine

Dean

Philip J. Fialkow C314 Health Sciences

Associate Deans

John B. Coombs Bruce C. Gilliland Robert J. Gust D. Daniel Hunt Lee L. Huntsman Eric B. Larson James P. LoGerfo John M. Neff Charles B. Smith

Assistant Deans

Joseph Chu Carol F. MacLaren Thomas E. Norris Werner E. Samson

WAMI Coordinators / Assistant Deans

Michael J. Dimino, University of Alaska

Stephen J. Guggenheim, Montana State University Michael B. Laskowski, University of Idaho and Washington State University

WAMI Program

Established in 1946, the School of Medicine is the only medical school directly serving the states of Washington, Alaska, Montana, and Idaho. Located in the Warren G. Magnuson Health Sciences Building, the School operates a decentralized program of medical education (WAMI) via a network of teaching affiliates throughout the Pacific Northwest.

The School's basic science departments provide educational opportunities for students from all schools and colleges within the University. Clinical teaching programs are conducted at the University of Washington Medical Center, Harborview Medical Center, Children's Hospital and Medical Center, and the Seattle Veterans Affairs Medical Center, as well as at other clinical affiliates in Seattle and throughout the WAMI states.

The School admits 166 medical students to its first-year class and has a total enrollment of about seven hundred students pursuing the Doctor of Medicine degree. The full-time faculty numbers more than one thousand members. The affiliated University residency training network enrolls approximately six hundred house officers. Enrollment in the graduate programs in the basic sciences exceeds three hundred students, and approximately six hundred postdoctoral fellows are enrolled in various advanced training programs. The School has baccalaureate and graduate programs in occupational therapy, physical therapy, prosthetics and orthotics, and medical technology. It participates in training a broad spectrum of other allied health professionals.

Academic Programs

Doctor of Medicine Degree

Upon completion of the curriculum of the School of Medicine, the M.D. degree is awarded to those candidates who (1) have given evidence of good moral character, (2) have satisfactorily completed the re-

quirements of the curriculum, (3) have fulfilled all special requirements, and (4) have discharged all indebtedness to the University.

Bachelor of Science Degree

Programs leading to a baccalaureate degree with a major in microbiology are offered through the College of Arts and Sciences. Those programs are described in the College of Arts and Sciences section of this cataloa.

Bachelor of Science in Medical Technology Degree

A curriculum in medical technology is offered by the Department of Laboratory Medicine. This program provides study in the basic sciences plus clinical laboratory training designed to prepare competent laboratory scientists for varied employment opportunities. Information concerning admission to the medical technology program appears under Laboratory Medicine in this catalog.

Bachelor of Science in Occupational Therapy Degree

A curriculum in occupational therapy leading to a Bachelor of Science is offered by the Department of Rehabilitation Medicine. It provides professional training in the basic sciences and in the theory and practice of occupational therapy as it impacts occupational performance across the life span and in the various arenas of practice. Occupation refers to daily living skills that include self-care, work, and leisure/play. Information concerning admission to the occupational therapy program appears under Rehabilitation Medicine in this catalog.

Bachelor of Science in Physical Therapy Degree

A curriculum in physical therapy is offered by the Department of Rehabilitation Medicine. It provides professional education in the basic sciences and in the clinical use of physical therapy evaluation and management strategies in the treatment or prevention of neuromusculoskeletal dysfunction. Information concerning admission to physical therapy appears under Rehabilitation Medicine in this catalog.

Bachelor of Science in Prosthetics and Orthotics Degree

A curriculum in prosthetics and orthotics leading to the degree of Bachelor of Science is offered by the Department of Rehabilitation Medicine. It provides professional training in the basic sciences and the clinical application, design, and fabrication of prostheses and orthoses. Information concerning admission to the curriculum in prosthetics and orthotics may be found under Rehabilitation Medicine in this catalog.

Master of Science and Doctor of Philosophy Degrees

Work leading to master's and doctoral degrees is offered, in accordance with the requirements of the Graduate School, in the departments of Biochemistry, Bioengineering, Biological Structure, Immunology, Microbiology, Pathology, Pharmacology, and Physiology and Biophysics. Master's degree programs are offered by the departments of Laboratory Medicine, Medical History and Ethics, and Rehabilitation Medicine.

Students may work toward these degrees concurrently with the M.D. degree, taking additional years beyond the typical four-year medical curriculum. To expedite the training of physicians who wish to specialize in public health and community medicine, the School has available a program that leads simultaneously to the degrees of Doctor of Medicine and Master of Public Health. The program usually requires the addition of a fifth year to the medical education process. The quarters of the fifth year may be taken sequentially or interspersed with medical training in a variable pattern, subject to appropriate academic approval. Students may elect concentration in any of four departments of the School of Public Health and Community Medicine: Biostatistics, Environmental Health, Epidemiology, or Health Services.

Concurrent degrees are possible in many other departments and colleges of the University. Recent graduates have pursued concurrent degrees in education and engineering, as well as in the basic sciences of medicine and the School of Public Health and Community Medicine. A student who intends to work toward a graduate degree should confer with the Chairperson of the department in which graduate study is to be pursued and with the Associate Dean for Academic Affairs of the School of Medicine. Specific requirements for admission to work for advanced degrees appear in the Graduate School: Graduate Study section of this catalog. Permission to pursue advanced degrees is granted to medical students only if they are progressing normally in the medical curriculum and show evidence of being able to take on this additional work load.

Admissions

(These procedures and policies described are subject to change. Information regarding changes is available from the School of Medicine Admissions Office.)

Selection Factors

Candidates for admission to the University of Washington School of Medicine are considered comparatively on the basis of academic performance, motivation, maturity, personal integrity, and demonstrated humanitarian qualities. A knowledge of and exposure to the needs of individuals and society and an awareness of health care delivery systems are desired. Extenuating circumstances in an applicant's background are evaluated as they relate to these selection factors.

Applicants must submit scores from the Medical College Admission Test (MCAT). This exam must be taken no later than the autumn of the year before possible matriculation. Scores will not be accepted from exams that were taken prior to spring 1992. MCAT registration blanks are available through premedical advisers or through the Office of Admissions. Under exceptional circumstances, to be determined by the Admissions Committee, the GRE may be considered during the admissions process, however, if accepted, the applicant will be required to take the MCAT prior to matriculation.

The premedical course requirements must be completed before matriculation but preferably should be completed by the time of application. They are:

A total of 32 semester hours or 48 quarter hours of undergraduate science courses divided into:

 a) Chemistry, 12 semester/18 quarter hours, which can be satisfied by taking any combination of inorganic, organic, biochemistry or molecular biology courses.

b) Physics, 4 semester/6 quarter hours

c) Biology, 8 semester/12 quarter hours

d) Other ("open") science subjects, 8 semester/12 quarter hours which can be met by taking other courses in any of the three categories above.

Under exceptional circumstances certain course requirements may be waived for individuals who present unusual achievements and academic promise. All candidates must demonstrate substantial academic ability in their major field as well as in the required science courses. Candidates should be proficient in the use of the English language and basic mathematics and are expected to have a basic understanding of personal computing and information technologies. It is strongly recommended that an understanding of the concepts underlying biochemistry or molecular biology be acquired prior to entering medical school. Those offered positions for the fall of 1993 had a mean GPA of 3.57 and the following mean MCAT scores: Verbal, 10.0; Physical Science, 10.2; and Biological Science, 10.4.

356 SCHOOL OF MEDICINE / ADMISSIONS

Completion of three years of course work at an accredited college or university is the minimum required before possible matriculation; however, 99 to 100 percent of entrants in recent years have earned bachelor's degrees. No specific major is advised. A broad background in the humanities and liberal arts is encouraged, indeed expected.

Application Procedure

The University of Washington participates in the American Medical College Application Service (AMCAS). The deadline for submitting an application to AMCAS is November 1. After receiving the application from AMCAS, the School of Medicine will ask qualified individuals to submit a \$35 application fee and supplemental application materials. Every attempt will be made to notify applicants of the final action by the end of March.

Preference is given to legal residents of Washington, Alaska, Montana, and Idaho. Out-of-region African Americans, American Indians/Alaskan Natives, Mexican Americans, and mainland Puerto Ricans are encouraged to apply and to contact the Minority Affairs Program for additional information regarding student support services. Medical Scientist Training Program applicants will also be considered. Non-U.S. citizens, in addition to the above, also must have a permanent resident's visa. Applications from persons who have failed to meet minimum standards in another medical or dental school will not be considered.

The deadline for submitting the additional application materials is January 15. These supplemental materials include:

(1) a supplemental application form. This will be sent to qualified applicants after the School of Medicine has received the AMCAS application.

(2) a 300-word autobiographical statement in which the candidate describes the origin and development of his or her motivation to be a physician, the reasons for desiring to attend the University of Washington School of Medicine, and any other issues of importance to the candidate. The applicant may request that the Personal Comments section of the AMCAS application be used to fulfill this requirement.

(3) a premedical committee letter of recommendation or three letters from instructors from whom the candidate has taken courses. These letters should be critical evaluations of the candidate's academic ability, strengths and weaknesses, the difficulty of course work undertaken, motivation for medicine, personal maturity, and special attributes and assets.

(4) a \$35 fee. This will automatically be waived for those who have qualified for AMCAS fee waivers. Others seeking a waiver of this fee should submit their requests directly to the School of Medicine Office of Admissions.

Candidates from Alaska, Montana, and Idaho will be required to submit residency certifications from their respective state certifying officers. Proof of legal residence for Washington residents also may have to be furnished. Determination of state of legal residence is not made by the School of Medicine; specific instructions regarding this requirement are furnished at the time of application. Those who enter as residents of Alaska, Montana, and Idaho are expected to spend their first year at the university site in their particular state. Twenty Washington students begin their medical education by spending the first year at Washington State University. Offers of acceptance, therefore, are conditional upon agreement to participate in the WAMI Program.

Inquiries, address changes, or other information regarding the application should be transmitted in writing and directed to the Committee on Admissions, Office of Admissions, SC-64, School of Medicine, University of Washington, Seattle, Washington 98195.

Minority Affairs Program

The Minority Affairs Program assists students from minority and/or disadvantaged backgrounds who are pursuing M.D. or M.D.-Ph.D. degrees. The program nurtures interests in medical careers by providing a variety of support services and enrichment activities in the areas of recruitment; education, admission, retention, and professional development.

The School actively recruits underrepresented ethnic minority applicants and encourages students to contact the Minority Affairs Program for assistance during the admissions and application process. In addition, the program offers counseling and advocacy, referrals to University and community resources, tutoring, financial aid information, and numerous opportunities to interact with other minority health care professionals within the community.

U-DOC is a high school summer enrichment program offered by the Minority Affairs Program. It is a six-week program for students who have completed their junior year in high school. U-DOC's goal is to foster, affirm, and encourage high school student's interest in the medical profession by allowing them to further explore medical careers and to obtain a valuable introduction to college life.

The Western Consortium Minority Medical Education Program (MMEP) offers undergraduate and some qualified postbaccalaureate students a six-week summer academic enrichment program that includes science, mathematics, writing, study skills, and MCAT preparation. Structured clinical and research activities are also offered. Housing, stipends, and travel assistance are available.

A six-week Prematriculation Program for entering minority and disadvantaged medical students is offered during the summer. The program is designed to facilitate students' entry into medical school by providing instruction in histology as well as enrichment activities in areas such as study skills, stress management, testtaking skills, research, clinical practice, and community health. Stipends and travel assistance are available to students who qualify.

During the regular school year, the Minority Affairs Program serves as a general information resource for both the academic and nonacademic needs of students and facilitates students' access to the multiple resources in the School of Medicine, the WAMI region, and the community. Annual events include a Pre-Admission Workshop and a Cross-Cultural Medicine Workshop. A program of early acceptance called PATHWAYS has been established for outstanding minority and disadvantaged students from the WAMI region. PATHWAYS acceptance enables students to be accepted to the UW School of Medicine as early as their sophomore year in college.

The Native American Center of Excellence was established in 1992 as part of the Minority Affairs Program to encourage Native American students to pursue medicine as a career, to promote research on Native American health issues, and to foster the preparation of Native American students for faculty roles in academic medicine. The Center of Excellence provides educational experiences that integrate western medicine with the Native American way of life, offers a variety of support services to promote the academic development of students, and sponsors a variety of educational opportunities within the Native American community.

Inquiries and requests for additional information may be obtained by contacting the Minority Affairs Program, SM-22, School of Medicine, University of Washington, Seattle, Washington 98195; telephone (206) 685-2489.

Medical Scientist Training (M.D.-Ph.D.) Program

A limited number of highly qualified candidates who wish to pursue both the M.D. and Ph.D. degrees are considered annually. Medical⁹Scientist trainees must be accepted by the School of Medicine for the M.D. degree and by the Graduate School for the Ph.D. degree. They are permitted a wide choice of research specializations from among numerous disciplines and interdisciplinary areas of biomedical sciences. The program emphasizes continuity of both clinical and basic sciences exposure. Among participating graduate departments and interdepartmental disciplines are biochemistry, bioengineering, biological structure, biomathematics and biostatistics, environmental health, epidemiology, genetics, immunology, the interdisciplinary molecular and cellular biology program, microbiology, molecular biotechnology, neurobiology, pathology, pharmacology, physiology and biophysics, and zoology.

Applicants should correspond directly with the Director of the Medical Scientist Training Program, D525 Health Sciences, SM-30, University of Washington, Seattle, Washington 98195, as well as proceed with the regular School of Medicine application.

Applicants who wish to be considered for the M.D.-Ph.D. program must submit the Medical Scientist Training Program application as quickly as possible. Both the application and any' supplemental material requested must be complete by January 15. This application form is sent to all eligible applicants together with acknowledgment of receipt of their medical school application. Serious consideration is rarely given to application swith either a cumulative GPA of less than 3.50 and/or MCAT scores of less than 10.

Financial Information

Fees and Other Charges

All fees and extra service charges are payable in United States dollars and due at the time specified for such fees and charges. The University reserves the right to change any of its fees and charges without notice. Resident tuition for 1994-95 is \$2,486 per quarter; nonresident tuition is \$6,311 per quarter.

Financial Assistance

All financial aid is based on the demonstrated need of the student. All applicants for aid from the school must submit data for an analysis of need using the Free Application for Federal Student Aid. This requires full disclosure of resources available to the student from individual and family sources. The Federal Direct Stafford Loan (subsidized and unsubsidized), Perkins Loan, and the Primary Care Loan are the primary sources of aid. Loans are also available from the School of Medicine provided students meet the need requirement that is based on both the student's and parent's financial information.

Partial scholarships are available through the School of Medicine scholarship fund. These awards are limited to students with exceptional financial need and require financial information from the student and the student's parents.

Financial aid information is distributed to all accepted applicants. Application forms for financial aid may be obtained from the UW Office of Student Financial Aid or the Financial Aid Office at the School of Medicine. Each year a deadline is set for receipt of the application by the processor, generally February 28. Applicants must meet this deadline to be considered for all available aid sources regardless of the status of their admission file. In case of emergency or special need, an application for financial assistance may be made at any time.

SCHOOL OF MEDICINE / ENRICHMENT OPPORTUNITIES 357

Outside employment is discouraged while the student is enrolled in medical school course work.

Medical Curriculum

Basic Curriculum (122 Credits)

The first two years (six guarters) of the medical student curriculum is identified as the Basic Curriculum. It consists of three phases, or groups, of courses in the human biology series: pre-organ system courses in the sciences basic to medicine, organ systems taught by basic and clinical disciplines, and introduction to clinical medicine and health care. The first phase is designed to provide the background in basic disciplines required for the organ system courses. In the second phase, the student is concerned with learning the normal and pathophysiologic properties of the several human organ systems. Emphasis is placed upon correlating these properties with clinical methods of data collection and problem formulation. Students pursue the Introduction to Clinical Medicine course throughout all six quarters, learning to interview patients, obtain a medical history, and perform physical examinations. In the course Medicine, Health, and Society, they also study the health care system and problems of providing medical care to populations.

Students are expected to pursue the Basic Curriculum during their first six quarters in the School of Medicine. The academic demands of the Basic Curriculum are scaled so that most students also will be able to take elective courses. Electives are used to broaden the student's background.

FIRST QUARTER (AUTUMN)

HUBIO 510P Microscopic Anatomy (Histology) HUBIO 511P Gross Anatomy and Embryology HUBIO 512P Mechanisms in Cell Physiology HUBIO 513P Introduction to Clinical Medicine HUBIO 514P Biochemistry I-A

HUBIO 516P Systems of Human Behavior I-A

SECOND QUARTER (WINTER)

HUBIO 520P Cell and Tissue Response to Injury HUBIO 521P Natural History of Infectious Disease and Chemotherapy I-A

HUBIO 522P Introduction to Clinical Medicine

HUBIO 523P Introduction to Immunology

HUBIO 524P Biochemistry I-B

HUBIO 526P Systems of Human Behavior I-B

THIRD QUARTER (SPRING)

HUBIO 530P Epidemiology

HUBIO 531P Head, Neck, Ear, Nose, and Throat HUBIO 532P Nervous System

HUBIO 534P Natural History of Infectious Disease and Chemotherapy I-B

HUBIO 535P Introduction to Clinical Medicine

FOURTH QUARTER (AUTUMN)

HUBIO 540P Cardiovascular System HUBIO 541P Respiratory System HUBIO 542P Introduction to Clinical Medicine HUBIO 543P Principles of Pharmacology I HUBIO 544P Endocrine System HUBIO 546P Systemic Pathology HUBIO 554P Genetics HUBIO 567P Skin System

FIFTH QUARTER (WINTER)

HUBIO 550P Introduction to Clinical Medicine HUBIO 551P Gastrointestinal System HUBIO 552P Hematology HUBIO 553P Musculoskeletal System

HUBIO 555P Medicine, Health, and Society

SIXTH QUARTER (SPRING)

HUBIO 560P Introduction to Clinical Medicine HUBIO 562P Urinary System HUBIO 563P Systems of Human Behavior II HUBIO 564P Principles of Pharmacology II HUBIO 565P Reproduction

Clinical Curriculum (144 Credits)

The clinical curriculum is pursued predominantly in the third and fourth years of medical school. It includes three elements: prescribed clerkships to be completed by all students (72 credits or thirty-six weeks in medicine, obstetrics and gynecology, pediatrics, psychiatry, surgery); a clinical selective series requiring a minimum number of credits (24) in three clinical areas (family medicine, rehabilitation medicine/chronic care, and emergency care/trauma); and a minimum of 48 credits of clinical clerkships elected by the student.

Education in the clinical curriculum utilizes the casestudy method. Students gain clinical knowledge and gradually increase their clinical problem-solving abilities while working as junior members of a medical care team. Each such team is headed by a faculty clinician working in one of the medical school-affiliated hospitals or practice units.

Independent Study in Medical Science

In addition to the basic and clinical curricula, each student must complete 10 credits in courses, independent study, and investigation in one or more of the biological, behavioral, sociocultural, or epidemiological sciences basic to medicine. The purpose of this requirement is that the student gain an understanding of the philosophy and methods of science. Of the 10 credits, 6 are earned by the satisfactory completion of a project in Independent Study in Medical Science (ISMS) that includes a written paper. The remaining 4 may be satisfied by taking 500-level courses in a variety of subjects at any time during the student's enrollment in the M.D. program.

WAMI Program

The WAMI Program was initiated in 1971 as an experiment in decentralized medical education to provide a broader range of educational opportunities for students, and to address the need for primary-care physicians oriented toward rural practice. It is an integral part of the undergraduate medical curriculum and is a fully accredited program of the School of Medicine. The WAMI Program is named for the four states (Washington, Alaska, Montana, and Idaho) that share resources and responsibilities in the regional educational program. Funds appropriated to the WAMI Program by Alaska, Montana, and Idaho legislatures assure each state of positions in the freshman medical class each year for its students.

First-Year Training

In the first year of the WAMI Program, approximately forty percent of the students admitted to the University's School of Medicine receive the first year of medical school training at Washington State University. the University of Alaska, Montana State University, or the University of Idaho. Washington State University positions not filled by volunteers are assigned by lottery. Every Washington resident applicant should recognize the possibility of assignment to Washington State University during the first year. Alaskans, Montanans, and Idahoans attend their home-state institutions. While in one of these institutions, they enroll in basic science courses taught by the science faculty and are provided supplemental resources from this University's School of Medicine faculty. These students join their classmates at the University's campus in Seattle for the second year of medical studies.

Third-Year Training

At the conclusion of the second year, students enter that portion of the curriculum that is predominantly clinical. As part of the clinical training, they complete clerkships at the University of Washington, at its affiliated hospitals, or at twenty-five Community Clinical Units located in the four-state region. At these sites, physicians in practice serve as School of Medicine clinical faculty members to provide supervised clinical training in five specialties: family medicine, internal medicine, obstetrics and gynecology, pediatrics, and psychiatry. The WAMI Community Clinical Units are also used for a portion of the residency training in the respective disciplines. Training experiences at the WAMI Community Clinical Units include outpatient contact at local physicians' private offices, hospital rounds, follow-through inpatient care, emergency room duty, service at local community special clinics, lectures, and didactic and participatory discussions. Clerkships in family medicine are offered at Boise and Pocatello, Idaho; Anchorage, Seward, and Ketchikan, Alaska; Whitefish and Havre, Montana; and Anacortes, Ornak, Spokane, Olympia, Bremerton, Yakima, and Tacoma, Washington. Clerkships in obstetrics and gynecology are offered at Tacoma and Spokane, Washington; Anchorage, Alaska; and Boise, Idaho. Psychiatric clerkships are offered at Anchorage. Alaska and Boise, Idaho, Pediatrics clerkships are available in Pocatello, Idaho; Great Falls, Montana; and Tacoma and Spokane, Washington. Clerkships in internal medicine are offered at Boise, Idaho; Billings and Missoula, Montana; and Wenatchee and Spokane, Washington.

By capitalizing on the resources of neighboring state universities, the clinical expertise of community practitioners, and the medical center, the WAMI Program has been able to expand medical school admissions for students from all four states, to enlarge clinical training opportunities in the primary-care disciplines, and to address the shortage of physicians in rural areas.

Enrichment Opportunities

Students may enhance their medical education through a variety of sponsored activities that offer students an opportunity to explore areas of special interest, such as working in rural or urban clinics that serve medically underserved communities, undertaking medical research projects or clinical investigations, or participating in an international exchange program with a developing country. Brief descriptions of three of the more formally structured programs follow. Information on other opportunities may be obtained from the Academic Affairs Office.

Rural/Underserved Opportunities Program (RUOP)

This program exposes students to rural medicine and utilizes clinical training sites in all four states. For one month during the summer between the first and second year, students work with physicians in small communities, offering a chance to better understand the challenges and opportunities in these settings. Students receive a stipend supported by the Family Health Foundation, the Academy of Family Physicians, Area Health Education Centers, and the School of Medicine.

Medical Student Research Training Program

Research opportunities are offered to UW medical students interested in gaining valuable experience from training in medical research. The purpose of the program is to encourage students to participate in a research project as part of their medical education. This research is planned and carried out under the supervision of a faculty sponsor and may be undertaken during any quarter. Student trainees in the program receive a stipend supported largely by a special fund from the School of Medicine. The project is expected to be twelve weeks, full-time, on a working schedule of forty hours per week, and the student may not be enrolled in courses for credit during this time.

Medical Thesis Program

The medical thesis program of the School of Medicine is voluntary, and participation is initiated by the student. Often a student will develop a special interest in

358 SCHOOL OF MEDICINE / ENRICHMENT OPPORTUNITIES

some particular field in medicine. This interest will create a desire to learn more about the field or to do special work in it. The thesis program is a means of fulfilling that desire. Prizes are awarded for the best theses submitted each year, and certain departments offer prizes for the best thesis written under that department's supervision. The preparation of a satisfactory thesis may carry with it honors at graduation. Additional information concerning the thesis program can be obtained from the chairperson of the Medical Thesis Committee or from the School of Medicine Academic Affairs Office.

Student Evaluation and Promotion

The awarding of the Doctor of Medicine degree is contingent upon satisfactory completion of academic and non-cognitive requirements. The latter includes the acquisition of behavioral patterns and attitudes consistent with the oath that all students take at the time of graduation. As such, student evaluation is based upon the faculty's observation of the student's behavior and conduct as well as papers and examinations. Every student is required to pass Steps 1 and 2 of the United States Medical Licensing Examination, all University of Washington examinations, and complete an approved Independent Study in Medical Science project before receiving the Doctor of Medicine degree. Periodic review of student performance is conducted by the School's Student Progress Committee. Students are informed of their deficiencies and the remedial requirements, if any, for these deficiencies. Dismissal from the School may occur if the student fails to maintain an acceptable academic record, fails to follow academic directives provided by the School's committees, or fails to develop attitudes and behavioral patterns appropriate to a career in medicine. The Faculty Council on Academic Affairs reviews the Student Progress Committee's actions, and the Dean of the School of Medicine has final approval of the committee's and council's recommendations. A review mechanism is available within this process. Once dismissal or withdrawal from the School has occurred, readmission requires the approval of the Faculty Council on Academic Affairs. Readmission will not be considered without substantial evidence that the problems causing the dismissal or withdrawal have been resolved. Only one readmission petition through the Faculty Council on Academic Affairs is allowed. Subsequent requests for admission must be directed through the standard admissions procedures.

Grading System

The grades awarded in each course in the M.D. curriculum are Honors, Satisfactory, or Not-Satisfactory. The School's goal is to provide a curriculum that defines the competencies to be achieved by the student at each level. Therefore, grading usually signifies satisfactory or not satisfactory accomplishment of these competencies at the end of each course. However, a pattern of documented evaluator concerns about a student's performance may indicate not satisfactory performance when the record is viewed as a whole, even though passing grades have been assigned. Honors may be awarded in a course on predetermined criteria that may involve additional work in the subject as selected by the student. The grading system precludes the ranking of students in class standing by a grade-point average.

The School of Medicine reserves the right to revise or modify the curriculum, system of evaluation, or graduation requirements.

Honors

A charter as Alpha of Washington was granted to the School of Medicine in 1950 by Alpha Omega Alpha, the honorary medical society. Members are elected by the membership of Alpha Omega Alpha on the basis of high scholarship and good moral character.

Graduation With Honors

A degree of Doctor of Medicine with Honors may be awarded to students with high achievement who, in addition, have demonstrated initiative and success in clinical and scholarly pursuits related to medicine. Candidates for graduation with honors are nominated by the departments each year and are selected on the basis of an Honors and Awards Committee review of academic records.

Postgraduate Medical Education

Internships and Residencies

Postgraduate clinical training programs are available at University-affiliated hospitals: University of Washington Medical Center, Harborview Medical Center, Seattle Veterans Affairs Medical Center, Pacific Medical Center, Children's Hospital and Medical Center, Providence Medical Center, Swedish Medical Center, Group Health Cooperative of Puget Sound, and Boise Veterans Affairs Medical Center. All clinical departments cooperate with one or more of these institutions. A University network of affiliated family practice residencies includes training programs based in Seattle, Tacoma, Renton, Olympia, Yakima, Spokane, and Boise, Idaho, and in military programs at Madigan Army Medical Center and Bremerton Naval Hospital. Training programs are available in anesthesiology, family medicine, general surgery, internal medicine, laboratory medicine, neurological surgery, neurology, nuclear medicine, obstetrics and gynecology, ophthalmology, orthopaedic surgery, otolaryngology, pathology, pediatrics, psychiatry, radiation therapy, radiology, rehabilitation medicine, and urology. Residency programs vary in duration from three to five years and are integrated, providing for rotation through several of the University-affiliated hospitals during this period of training.

Postdoctoral Fellowships and Traineeships

Postdoctoral fellowships and traineeships are available in all departments. They are designed to provide additional research, teaching and clinical experience for advanced students who already have obtained the Ph.D. or M.D. degree.

Continuing Medical Education

The Office of Continuing Medical Education, School of Medicine, offers a wide variety of programs for physicians and health care professionals in the Pacific Northwest and throughout the nation. While the vast majority of these programs are offered at the School of Medicine, a number are offered at off-site locations throughout the region.

Programs include short courses of one to three days, conferences, one- to two-week board review courses, workshops, visiting professorships, preceptorships, and mini-residencies. Programs in the community include lecture series, video tape presentations, selfdirected instructional materials, and other educational activities as requested by members of the medical community throughout the region.

All physicians are invited to participate in continuing medical education programs, which also include clinical department grand rounds and regular conference series. These activities also occur in our affiliated hospitals.

The University of Washington School of Medicine is accredited by the Accreditation Council for Continuing Medical Education to, sponsor Continuing Medical Education for physicians. All programs sponsored by the Office of Continuing Medical Education are applicable to physician relicensure requirements of the Washington Board of Medical Examiners and for category I credit of the Physician's Recognition Award of the American Medical Association. Prescribed credit for the American Academy of Family Physicians is requested for all applicable programs. Other forms of accreditation are included in the program offerings where appropriate.

Descriptive brochures and calendars for courses and conferences are published during the academic year. Specific program information in the way of a brochure or program announcement is made available twelve to fifteen weeks prior to the scheduled course. Information concerning Continuing Medical Education programs may be obtained from the University of Washington School of Medicine, Office of Continuing Medical Education, XF-01, or the following street address: 1325 4th Ave. Suite 2000, Seattle, Washington 98101. Telephone number: (206) 543-1050 or 1.800-869-2633.

Anesthesiology

BB1459 Health Sciences

The Department of Anesthesiology maintains an active program of teaching and research for the specialist and nonspecialist. Medical students are introduced to the principles of anesthetic management and the effects of anesthetic agents on circulatory and respiratory physiology. The clinical clerkship program provides basic training in airway management and care of the unconscious patient. A four-year residency program, including an internship year, is available for physicians who desire specialty training in anesthesiology. In addition, advanced clinical and research training is offered in several major subspecialty areas (cardiac anesthesia, neuroanesthesia, pediatric anesthesia, obstetrical anesthesia, pain management). Opportunities for collaborative research are available to undergraduate and graduate students. The department conducts a regular series of clinical conferences, didactic lectures, and research seminars. Questions regarding clinical clerkships may be directed to Dr. Brian Ross at 543-4070. Other training questions may be directed to the Residency Coordinator at 543-2773.

McFall, Teri 1993, (Acting); MD, 1986, University of Utah.

Nichols, William W. 1991, (Acting); MD, 1987, University of North Carolina.

Shroff; Ashok B. 1992, (Acting); MBBS, 1976, Armed Forces Medical College (India).

Souders, Jennifer E. 1992, (Acting); MD, 1988, University of Chicago.

Stenzel, Matthew J. 1989, (Acting); MBChB, 1989, National University of Ireland.

Twist, David L. 1994, (Acting); MD, 1986, University of Saskatchewan (Canada).

Uezono, Shoichi 1991, (Acting); MD, 1988, Tokyo University (Japan).

Van Norman, Gail 1986, (Acting); MD, 1981, University of Washington.

Senior Lecturer

Syrovy, George A. 1989; MD, 1955, Charles University (Czechoslovakia).

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

ANEST 498 Undergraduate Thesis (*) Geiduschek By special arrangement. Time and credit to be arranged.

ANEST 499 Undergraduate Research (*) Geiduschek Specific research problems relating to pulmonary, cardiovascular, renal, obstetric, and central nervous system functions, and their alteration by anesthetic techniques and agents. (Six weeks, fulltime Limit: two students.)

ANEST 501P Preceptorship in Anesthesiology (1) Geiduschek An opportunity for first- and second-year medical students to gain experience with medical practice situations by observing clinical faculty members in their offices. Prerequisite: permission of instructor.

ANEST 680P Basic Anesthesia Clerkship (4) Geiduschek Introduction to the principles of airway management, ventilatory support, use of local anesthetics, techniques of patient monitoring and fluid therapy. Skills taught include airway management, venipuncture, lumbar puncture and endotracheal intubation. Prerequisite: third- or fourth-year student. (Two weeks, full-time. Limit: three to five students each two-week period.) Affiliated hospitals.

ANEST 681P Advanced Clerkship in Anesthesiology (8) Geiduschek Clerkship for students desiring greater exposure to anesthesiology as a specialty. Individual programs can be arranged in the following areas: surgical anesthesia, obstetrical anesthesia, and pain clinic. Prerequisite: 680P or permission of instructor. (Four weeks, full-time. Limit: two students per period.) Affiliated hospitals.

ANEST 697P Anesthesiology Special Electives (*, max. 24) Geiduschek Special clerkships, extemships, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain a special assignment form from the Dean's office at least one month before advance regis-
tration. Prerequisite: permission of instructor. (Six to twelve weeks, full-time.)

Biochemistry

J405 Health Sciences

James Hurley, Graduate Program Coordinator

Modern biochemistry involves the study of biological processes at a molecular level. Specific research projects may entail study in such diverse fields as molecular biology, molecular biophysics, genetics, microbiology, immunology, developmental biology, organic chemistry, pharmacology, and physiology. Graduate students enrolled in the Department of Biochemistry engage in studies and research that prepare them for the challenging opportunities open to the professional biochemist in colleges and universities, research institutes, medical schools and hospitals, government laboratories, and the laboratories of chemical, biotechnology, and pharmaceutical industries.

The course of advanced study is designed to give each student a firm foundation upon which to base further professional progress. In the first year of academic work, students attend courses in biochemistry and molecular biology, and in related fields such as chemistry, biophysics, genetics, cell biology, and microbiology. In the second and succeeding years, an increasing amount of time is devoted to research and independent study. For the Ph.D. degree, each student is required to gain teaching experience, usually during the second year of the graduate program.

The basic requirements for admission for graduate study in biochemistry are one year of biochemistry, one year of physical chemistry, and mathematics through integral calculus. Applicants must also meet the general admission requirements of the Graduate School.

Normally, all graduate students admitted to the Department of Biochemistry are provided with financial assistance.

Research facilities for the department are housed in the Biochemistry-Genetics Building, which provides approximately fifty-two thousand square feet of excellent research space, conference rooms, and a departmental library. In addition, approximately eleven thousand square feet of research space and conjoint facilities are shared with the Department of Genetics. The laboratories are equipped with the latest in research equipment and are supported extensively by external, centralized research facilities, which include a modern computer center, the Marine Biology Laboratory at Friday Harbor, and the Health Sciences Library. An emphasis on biomedical research is facilitated by the location of the department within the School of Medicine. Close collaboration exists with investigators in other related departments, including biological structure, chemistry, pharmacology, genetics, and microbiology.

Kenneth A. Walsh

Protossors

Adman, Elinor T. * 1971, (Adjunct Research): PhD, 1967, Brandeis University; macromolecular crystallography.

Bornstein, Paul * 1967; MD, 1958, New York University; extracellular matrix.

Byers, Breck E. * 1970, (Adjunct); PhD, 1967, Harvard University; cell biology: mitosis and meiosis, mechanisms of nuclear division and crossing-over in yeast.

Dale, Beverly A. * 1972, (Adjunct); PhD, 1968, University of Michigan; keratin biochemistry.

Davie, Earl Warren * 1962; PhD, 1954, University of Washington; protein synthesis, mechanism of blood clotting, cloning of plasma proteins.

Eisenman, Robert M. * 1976, (Affiliate); PhD, 1971, University of Chicago; viral oncology, oncogenes, retrovirus multiplication.

Eyre, David R. * 1985, (Adjunct); PhD, 1969, University of Leeds (UK); connective tissue biology, collagen chemistry, bone and cartilage metabolism.

Fischer, Edmond H. * 1953, (Emeritus); PhD, 1947, University of Geneva (Switzerland); regulation by phosphorylation.

Floss, Heinz G. * 1987, (Adjunct); PhD, 1961, Technical University of Munich (Germany); bioorganic and natural products chemistry.

Glomset, John A. * 1960; MD, 1960, University of Uppsala (Sweden); membrane structure and function.

Gordon, Milton * 1959; PhD, 1953, University of Illinois; molecular basis of plant tumors, control of gene expression in plants.

Hauschka, Stephen D. * 1972; PhD, 1966, Johns Hopkins University; muscle differentiation.

Hol, Wilhelmus G. J. * 1992; PhD, 1971, University of Groningen (Netherlands); protein crystallography, drug design, vaccine development, and protein engineering.

Jensen, Lyle H. * 1949, (Emeritus); PhD, 1943, University of Washington; molecular structure, x-ray diffraction.

Krebs, Edwin G. * 1977, (Emeritus); MD, 1943, Washington University; intracellular signaling mechanisms involving protein phosphorylation.

Loeb, Lawrence A. * 1978, (Adjunct); MD, 1961, New York University; DNA replication, cancer and AIDS.

Morris, David R. * 1966; PhD, 1964, University of Illinois; regulatory genes.

Neurath, Hans * 1980, (Emeritus); PhD, 1933, University of Vienna (Austria); structure and functions of proteolytic enzymes, zymogen activation, evolution of proteins.

Palmiter, Richard D. * 1982; PhD, 1968, Stanford University; regulation of gene expression in transgenic mice.

Parson, William W.. 1971; PhD, 1965, Case Western Reserve University; bioenergetics, with particular emphasis on photosynthesis, picosecond spectroscopy.

Perlmutter, Roger M. * 1984; MD, 1979, Washington University; molecular immunology and the molecular biology of neoplasia.

Petra, Philip H. * 1966; PhD, 1966, Tulane University; reproductive biochemistry.

Reid, Brian R. * 1980; PhD, 1965, University of California (Berkeley); biophysical chemistry.

Ross, Russell * 1962, (Adjunct); DDS, 1955, Columbia University; atherosclerosis, growth factors, inflammation, vascular biology.

Saari, John C. * 1974; PhD, 1970, University of Washington; retinal biochemistry.

Sandell, Linda J. * 1987, (Adjunct); PhD, 1980, Northwestern University; biochemistry and molecular biology of connective tissue, extracellular matrix molecules.

Shapiro, Bennett M. * 1970, (Affiliate); MD, 1964, Jefferson Medical College; molecular basis of reproduction.

Teller, David C. * 1965; PhD, 1964, University of California (Berkeley); physical chemistry of macromolecules, association reactions of proteins.

Walsh, Kenneth A. * 1958; PhD, 1959, University of Toronto (Canada); structure and functions of proteins; phosphatases, mass spectrometry.

Young, Elton * 1969; PhD, 1967, California Institute of Technology; regulation of gene activity in the yeast Saccharomyces cerevisiae.

Associate Professors

Davis, Trisha Nell * 1987; PhD, 1983, Yale University; the function of calcium-binding proteins in cell growth.

Gelb, Michael H. * 1985, (Adjunct); PhD, 1982, Yale University; mechanistic enzymology, bioorganic and medicinal chemistry.

Herriott, Jon R. * 1976; PhD, 1967, Johns Hopkins University; x-ray crystallography of macromolecules, protein structure and function.

Hurley, James Bryant * 1985; PhD, 1979, University of Illinois; molecular basis of vision.

Klevit, Rachel E. * 1983; DPhil, 1981, Oxford University (UK); molecular recognition, protein NMR.

Muller, Eric D. * 1988, (Research); PhD, 1981, Yale University; the regulation of metabolism by the protein thioredoxin.

Stenkamp, Ronald E. * 1978, (Adjunct); PhD, 1975, University of Washington; crystallography.

Assistant Professors

Baker, David * 1993; PhD, 1989, University of California (Berkeley); protein folding.

Kimelman, David * 1989; PhD, 1985, Harvard University; molecular biology of early development in the frog, Xenopus laevis.

Ruohola-Baker, Hannele * 1993; PhD, 1989, Helsinki University (Finland); oogenesis, developmental genetics.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

BIOC 405, 406 Introduction to Biochemistry (3,3) NW Petra, Saari, Sandell, Teller Basic principles of biochemistry, emphasizing broad understanding of chemical events in living systems in terms of metabolism and structure-function relationships of biologically important molecules. Does not fulfill advanced biochemistry prerequisites (see 440, 441, 442). Prerequisites: general biology and organic chemistry or permission of instructor for 405; 405 or permission of instructor for 406. Offered: AW.

BIOC 426 Basic Techniques in Biochemistry (3) NW Davie Introduction to basic biochemistry experiments. Acquaints students with basic biochemical laboratory techniques and serves as a preparation for advanced biochemistry laboratory courses. Prerequisites: 405 and 406 or 440 and 441 or equivalent. Offered: ASp.

BIOC 440, 441, 442 Biochemistry (4,4,4) NW Interdisciplinary course in general biochemistry and molecular biology for undergraduate students in molecular and cellular biology and graduate students in other science departments. (One-hour quiz per week re-

SCHOOL OF MEDICINE / BIOLOGICAL STRUCTURE 361

quired.) Prerequisite: BIOL 201 and three quarters organic chemistry. Offered: AWSp.

BIOC 461 Introduction to Physical Biochemistry (3) NW Herriott, Parson, Reid, Teller Behavior of biological macromolecules in aqueous solutions; fundamentals of x-ray structure analysis; optical spectroscopic probes of macromolecular structure and dynamics; determination of macromolecular structure by high-resolution NMR. Offered with 561, but problem sets and examinations designed for advanced undergraduate. Prerequisites: 440 and CHEM 352 and 455 (or equivalent) and calculus. Offered: W.

BIOC 498 Undergraduate Thesis (*) For senior medical students. Prerequisite: permission of instructor. Offered: AWSpS.

BIOC 499 Undergraduate Research (*) Investigative work on enzymes, proteins, lipids, nucleic acids, protein biosynthesis, intermediary metabolism, physical biochemistry, and related fields. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

BIOC 515-519 (For description, see listing for "Current Literature Conferences" at the end of this section.)

BIOC 520 Seminar (1) Seminar dealing with special topics in the field of biochemistry. Prerequisite: permission of instructor. Offered: AWSpS,

BIOC 525-529 (For description, see listing for "Current Literature Conferences" at the end of this section.)

BIOC 530 Advanced Biochemistry (3) Graduatelevel discussion of the structure, function, and chemistry of proteins, control of enzymatic reactions. Prerequisites: a comprehensive course in biochemistry and permission. Offered: A.

BIOC 535-539 (For description, see listing for "Current Literature Conferences" at the end of this section.)

BIOC 540, 541, 542 Literature Review (1,1,2) Emphasizes critical evaluation of original articles in the literature. For first-year graduate students in biochemistry and students of other science departments, with permission. 541 and 542 offered credit/no credit only. Entry code required. Offered: AWSp.

BIOC 546-548 (For description, see listing for "Current Literature Conferences" at the end of this section.)

BIOC 555-559 (For description, see listing for "Current Research Conferences" at the end of this section.)

BIOC 561 Introduction to Physical Biochemistry (3) Herriott, Parson, Reid, Teller Behavior of biological macromolecules in aqueous solutions; fundamentals of x-ray structure analysis; optical spectroscopic probes of macromolecular structure and dynamics; and determination of macromolecular structure by high-resolution NMR. Prerequisites: general biochemistry, calculus, and physical chemistry or permission of instructor. Offered: W.

BIOC 565-569 (For description, see listing for "Current Research Conferences" at the end of this section.)

BIOC 575-579 (For description, see listing for "Current Research Conferences" at the end of this section.)

BIOC 581 Introduction to Biochemical Research (3, max. 6) Student works with one of the research groups within the department for one quarter and then rotates to other laboratories for second and third quarters. Credit/no credit only. Prerequisite: graduate standing in biochemistry or permission of instructor. Entry code required. Offered: AWSp.

BIOC 586-588 (For description, see listing for "Current Research Conferences" at the end of this section.)

BIOC 600 Independent Study or Research (*) Offered: AWSpS.

BIOC 700 Master's Thesis (*) Offered: AWSpS.

BIOC 800 Doctoral Dissertation (*) Offered: AWSpS.

Current Literature Conferences

BIOC 515-519, 525-529, 535-539, 546-548 Current Literature Conference in Biochemistry Weekly literature reviews of topics pertinent to ongoing research in biochemistry. Students may register for more than one conference each quarter. Credit/no credit only. Prerequisite: permission of instructor. (Only 25 credits may be counted toward degree.)

BIOC 515 Matrix Macromolecules in Morphogenesis and Development (1, max. 30) Bornstein

BIOC 516 Molecular Mechanisms of Blood Clotting (1, max. 30) Davie

BIOC 526 Control of Growth and Differentiation During Development (1, max. 30) Hauschka

BIOC 528 Signal Transduction (1, max. 30) Hurley

BIOC 529 Molecular Blology of Early Development (1, max. 30) Kimelman

BIOC 535 Macromolecular Structure (1, max. 30) Klevit

BIOC 536 Control of Cell Growth (1, max. 30) Morris

BIOC 537 Regulation of Gene Expression (1, max. 30) Palmiter

BIOC 539 Immunobiology (1, max. 30) Perimutter

Current Research Conferences

BIOC 555-559, 565-569, 575-579, 586-588 Current Research Conferences in Biochemistry Weekly group conferences concerning ongoing graduate student and postdoctoral research in biochemistry. Students may register for more than one conference each quarter. Credit/no credit only. Prerequisite: permission of instructor. (Only 25 credits may be counted toward degree.)

BIOC 555 Cell and Molecular Biology of Connective Tissue Proteins (1, max. 30) Bornstein

BIOC 556 Enzymatic and Genetic Aspects of Blood Clotting (1, max. 30) Davie

BIOC 557 Growth Regulation by Calcium Binding Proteins (1, max. 30) Davis

BIOC 558 Regulation of Cellular Events by Protein Phosphorylation (1, max. 30) Fischer, Krebs

BIOC 559 Membrane Biochemistry and Cell Growth (1, max. 30) Glomset

BIOC 565 Plant Molecular Genetics (1, max. 30) Gordon

BIOC 566 Growth and Differentiation of Skeletal and Cardiac Muscle (1, max. 30) Hauschka

BIOC 568 Molecular and Genetic Aspects of G Protein Signal Transduction (1, max. 30) Hurley

BIOC 569 Inductive Events In Early Development (1, max. 30) Kimelman

BIOC 575 NMR Analysis of Proteins and Nucleic Acids (1, max. 30) Klevit

BIOC 576 Sequential Analysis of Growth Regulation (1, max. 30) Morris

BIOC 577 Gene Regulation in Transgenic Mice (1, max. 30) Palmiter

BIOC 578 Electron Transport in Photosynthesis (1, max. 30) Parson

BIOC 579 Molecular Biology of the Immune System (1, max. 30) Perimutter

BIOC 587 Structural Domains, Evolution, and Regulation of Proteins (1, max. 30) Neurath, Waish

BIOC 588 Molecular Biology of Yeast Gene Regulation (1, max. 30) Young

Bioengineering

309 Harris Hydraulics Laboratory

The Center for Bioengineering provides a multidisciplinary program of collaborative research and training designed to accelerate the application of new engineering technologies to clinical practice and research. Major areas of current bioengineering research include bioinstrumentation, biomaterials, biomechanics, controlled drug-release systems, imaging, microsensors. bioelectromagnetics, molecular bioengineering, microcirculation, cellular bioengineering, muscle, and simulation of biosystems. There are options for study leading to master's and doctoral degrees with different levels of specialization. Detailed information on Bioengineering, its faculty and courses appears in the Interschool or Intercollege Programs section of this catalog.

Biological Structure

Ronald Stenkamp, Graduate Program Coordinator G514 Health Sciences

The Department of Biological Structure offers graduate programs of study leading to the Master of Science and Doctor of Philosophy degrees. The department promotes an understanding of biological processes through the study and analysis of structure-function relationships. The research problems that interest members of the faculty are diverse, including cellular differentiation and development explored in a variety of biological systems, neuroscience, molecular biophysics, and quantitative biology with an emphasis on computer graphic representations of biological structures. This diversity creates a lively atmosphere in the department that provides a stimulating environment for the training of scientists with a variety of backgrounds.

The department's graduate program is directed toward the education of doctoral students who anticipate academic careers that will involve teaching and research in the biomedical sciences. Graduates from the program are expected to have a broad knowledge of biological structure at all levels, from the molecular to the human anatomical, with major emphasis on the cellular level.

Graduate students select research and teaching pathways in their program. The research pathways are designed to provide training for a student in one or two of the following areas: cell and developmental biology, neurobiology, reproductive biology, quantitative biology, cellular immunology, molecular biology, and macromolecular structure. The purpose of the teaching pathways is to prepare the student to teach in one of the anatomical subdisciplines: human anatomy, neuroanatomy/neurobiology, histology, embryology/developmental biology, cell biology, and macromolecular structure.

Special Requirements

Applicants should have completed an undergraduate major in any appropriate field, such as anthropology, biochemistry, biology, chemistry, physics, psychology, or zoology.

Financial Aid

The department offers financial support through teaching assistantships and training grant positions and from research funds.

Correspondence and Information

Graduate Program Coordinator Department of Biological Structure, SM-20

Faculty

Chairperson

Anita E. Hendrickson

Professors

Adman, Elinor T. * 1971, (Research); PhD, 1967, Brandeis University; macromolecular crystallography.

Baskin, Denis G. * 1979, (Research); PhD, 1969, University of California (Berkeley); histology, cytochemistry, neuroendocrinology.

Blandau, Richard J. 1949, (Emeritus); MD, 1948, University of Rochester; endocrinology, embryology, phase microscopy, reproductive physiology.

Byers, Margaret R. * 1972, (Research); PhD, 1969, Harvard University; somatosensory receptor structure, cytochemistry, and pathologic reactions; neuroimmune interactions.

Clark, John I. * 1982; PhD, 1974, University of Washington; structural and developmental basis of lens-cell transparency.

Gehrig, John D. * 1954, (Emeritus); DDS, 1946, University of Minnesota; oral and maxillofacial surgery, biological structure.

Hendrickson, Anita E. * 1969; PhD, 1964, University of Washington; neuroanatomy, morphology and development of primate visual system.

Herring, Susan W. * 1990, (Adjunct); PhD, 1971, University of Chicago; vertebrate functional morphology; relations between muscular function and skull growth.

Hol, Wilhelmus G. J. * 1992; PhD, 1971, University of Groningen (Netherlands); protein crystallography, drug design, vaccine development, and protein engineering.

Jensen, Lyle H. * 1949, (Emeritus); PhD, 1943, University of Washington; molecular structure, x-ray diffraction.

Koehler, James K. * 1963; PhD, 1961, University of California (Berkeley); electron microscopy, cryobiology, reproductive biology.

Myall, Robert W. * 1977, (Adjunct); MD, 1975, University of British Columbia (Canada); oral and maxillofacial surgery and biological structure.

Odland, George F. 1955, (Emeritus); MD, 1946, Harvard University; dermatology.

Pollack, Sylvia * 1968, (Research); PhD, 1967, University of Pennsylvania; cellular immunology.

Rosse, Cornelius * 1967; DSC, 1983, University of Bristol (UK); hemopoiesis, gross anatomy.

Sage, E. Helene * 1980; PhD, 1977, University of Utah; cell biology.

Verdugo, Pedro * 1974, (Adjunct); MD, 1965, State University of Chile; microrheology, biomechanics, polymer gel physics, laser spectroscopy, cell biology.

Westrum, Lesnick E. * 1966; MD, 1963, University of Washington; neuroanatomy, synaptology, plasticity, olfactory and trigeminal systems, dental pathways.

Associate Professors

Anderson, Leigh C. * 1988, (Adjunct); DDS, 1977, University of Minnesota; salivary gland physiology, neural and hormonal regulation of secretion. Bolender, Robert P. * 1975; PhD, 1970, Harvard University; cell structure and function employing morphometric and biochemical techniques.

Brinkley, James F. III * 1988, (Research); MD, 1974, University of Washington; computer applications in medicine and biology.

Dacey, Dennis M. * 1986, (Research); PhD, 1983, University of Chicago; the neural basis of vision and the organization of primate retina.

Farr, Andrew G. * 1982; PhD, 1975, University of Chicago; immunology, cell interactions governing lymphocyte production and function.

Gaddum-Rosse, Penelope * 1969; PhD, 1965, University of Liverpool (UK); reproductive biology.

Graney, Daniel O. * 1966; PhD, 1965, University of California (San Francisco); gross anatomy, electron microscopy, intestinal absorption.

Harris, Roger M. * 1982; PhD, 1975, University of Washington; computer-assisted neuron measurements, structure and function of somatosensory thalamus.

Kalet, Ira J. * 1980, (Adjunct); PhD, 1968, Princeton University; computer simulation of radiation therapy, artifical intelligence, computer graphics.

Lee, Minako Y. * 1977, (Research); MD, 1963, Tokyo Women's Medical College (Japan); growth and differentiation of hematopoietic and lymphopoietic cells.

Nameroff, Mark A. * 1970; MD, 1965, University of Pennsylvania; cell differentiation.

Press, Oliver W. * 1982, (Adjunct); MD, 1979, University of Washington; treatment of hematologic malignancies with monoclonal antibody immunoconjugates.

Prothero, John W. * 1965; PhD, 1960, Western Ontario University (Canada); model building, morphogenesis, cell kinetics, scaling.

Reh, Thomas A. * 1989; PhD, 1981, University of Wisconsin; regeneration and development of central nervous system.

Reuveni, Zipora * 1982, (Research); PhD, 1979, University of Windsor (Canada); myogenesis during growth development and regeneration of skeletal muscle.

Sherk, Helen * 1982; PhD, 1978, Massachusetts Institute of Technology; neuroanatomy.

Stenkamp, Ronald E. * 1978; PhD, 1975, University of Washington; crystallography.

Sundsten, John Wallin 1962; PhD, 1961, University of California (Los Angeles).

Yoshimura, Fayth K. * 1980, (Research); PhD, 1972, Yale University; retroviral transformation of hemopoietic cells.

Assistant Professors

Bassuk, James A. 1992, (Research); PhD, 1983, Iowa State University; cell biology.

Broderson, Stevan H. * 1967; PhD, 1967, State University of New York (Buffalo); lipid histochemistry.

Merritt, Ethan A. 1989, (Research); PhD, 1980, University of Wisconsin; crystallography.

van Brederode, Hans 1991, (Research); PhD, 1987, Medical College of Wisconsin.

Vernon, Robert B. 1990, (Research); PhD, 1985, University of Washington; cell biology.

Lecturer

Peterman, Annie K. 1989; PhD, 1987, University of Washington.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical or dental student enrollment only.

B STR 301 General Anatomy (4) NW Bolender Survey of systemic human anatomy, including human skeletal system, muscles, joints, neuroanatomy, circulatory system, digestive system, urinary system, and reproductive system. For second, third, and fourth year undergraduates. Offered: Sp.

CONJ 340-341-342 Human Anatomy and Physiology (4-4-4) Peterman See Conjoint Courses. Offered: A-W-Sp.

B STR 431 Introduction to Neurcanatomy (4) NW Gehrig, Harris, Prothero, Sundsten, Westrum General survey of the structure of the central nervous system, including an analysis of sensory and motor systems and higher integrative functions and clinical correlation. Required for OT and PT students. Entry code required. Prerequisite: 301 or permission of instructor. Offered: W.

B STR 498 Undergraduate Thesis (*) Individual research projects under the supervision of an instructor. For senior medical students. Entry code required. Prerequisite: permission of instructor. Offered: AWSpS.

B STR 499 Undergraduate Research (*) Individual research projects in cellular and developmental biology, experimental immunology, reproductive biology, neurobiology, molecular structure, morphometrics, computer modeling, and related fields under the supervision of an instructor. Entry code required. Prerequisite: permission of instructor. Offered: AWSpS.

B STR 501 Gross Anatomy (1-10, max. 10) Rosse Lecture and laboratory dissection course in regional anatomy: thorax, abdomen, pelvis, perineum. Prerequisite: permission of instructor. Offered: A.

B STR 502 Gross Anatomy (1-5) Graney Lecture and laboratory dissection course in regional anatomy: upper and lower extremities. Prerequisite: permission of instructor. Offered: W.

B STR 503 Gross Anatomy (1-5) Graney Lecture and laboratory dissection course in regional human anatomy; head and neck. Prerequisite: permission of instructor. Offered: Sp.

B STR 505 Histology in Biomedical Research (3) Baskin Selected topics in histology, with emphasis on analysis of research literature, methods, and laboratory exposure. Prerequisite: permission of instructor. Offered: even years; W.

CONJ 508 EM Methods and Interpretation (3-5) Wight See Conjoint Courses.

B STR 510 Seminar in Anatomy (1) Graney, Rosse Scientific and historical basis of selected studies in biological structure, anatomy, and human development. Original literature used as basis for textbook descriptions is reviewed. Prerequisite: permission of instructor. Offered: AWSp.

CONJ 511 Functional Neuroanatomy (4) Hendrickson, Smith See Conjoint Courses. Offered: A.

B STR 512 Human Microanatomy (4) Nameroff Lectures and laboratory treating the specialized tissues and organs of the body from the microscopic and ultramicroscopic points of view. Prerequisite: permission of instructor. Offered: A.

B STR 514 Methods in Quantitative Morphology (3) Bolender Lecture/laboratory course covering major techniques in areas of organ, tissue, cellular, and

SCHOOL OF MEDICINE / COMPARATIVE MEDICINE 363

molecular biology. Emphasis on understanding the use of modern experimental methods for detecting and interpreting structural changes in biology. Prerequisite: familiarity with microcomputers and permission of instructor. Offered: even years; Sp.

B STR 515 Biological X-ray Structure Analysis (3) Stenkamp Theory of x-ray diffraction, with emphasis on applications to biological systems. Prerequisite: permission of instructor. Offered: W.

B STR 517 Embryology/Developmental Biology Seminar (1) Nameroff Embryology of a region or organ. Topics vary. Emphasis on original literature and developmental principles. Prerequisite: permission of instructor. Offered: AWSp.

B STR 519 Current Problems in Macromolecular Structure (2, max. 10) Stenkamp A discussion of macromolecular structures related to specific areas of biological research. Emphasis on discussion of relevant research papers and use of computer graphics to visualize the molecular structures. Offered: odd years, Sp.

CONJ 520 Anatomy and Autopsy (1/2) Mottet, Rosse See Conjoint Courses. Offered: AWSpS.

UCONJ 524 Developmental Neurobiology (3) Reh See University Conjoint Courses. Offered: W.

B STR 525 Brain Dissection (2) *Sundsten* Detailed consideration of the macroscopic anatomy of the human brain (individual study). Entry code required. Prerequisite: permission of instructor. Offered: SpS.

B STR 530P Gross Anatomy and Embryology for Dental Students (7) Broderson, Gehrig, Myall Normal gross structures of thorax, abdomen, pelvis, perineum, upper extremity, and neck are discussed, then dissected on human cadavers. The development of each organ system is presented and related to the definitive normal adult structure. Developmental anomalies and diagnostic anatomy are also discussed. Prerequisite: admission to School of Dentistry or permission of instructor. Offered: A.

B STR 535 Dental Musculoskeletal System (1) The gross anatomy, embryology and clinical topics relating to the musculoskeletal system are presented in lecture and reinforced through human dissection. Restricted to first year dental students. Prerequisite: 530. Offered: Sp.

B STR 540 Special Problems in Anatomy (1-6, max. 6) Special projects in anatomy under sponsorship of faculty member. Prerequisite: graduate, medical, or dental student standing and permission of instructor. Offered: AWSpS.

B STR 541P Microscopic Anatomy for Dental Students (4) Koehler Lecture and laboratory work in microscopic anatomy. For dental students taking HUBIO 510; others by permission of instructor. Offered: A.

B STR 550P Head and Embryology for Dental Students (4) Broderson Normal structure of head is discussed and dissected on human cadavers. The development of the head is presented to appreciate the definitive normal as well as anomalous structures. Fundamentals of diagnostic anatomy are also discussed. First year dental students only. Offered: Sp.

B STR 555 Laboratory Rotation in Biological Structure (*, max. 5) Introduction to experimental design, research methods, and scientific thought in laboratories of faculty members. Provides hands-on experience, an entrance into the literature of the field, and opportunities for discussion with all members of the laboratory. Prerequisite: permission of instructor. Offered: AWSpS.

B STR 556 Topics in Developmental and Systemic Cell Biology (1-3) Recent advances in molecular and

1

developmental aspects of cell biology. Emphasis on specific organ systems. Differentiation of lymphocytes, germ cells, muscle, epidermis; cell biology of lens, vessel wall, visual cortex; computer modeling; cell-cell and cell-matrix interactions. Prerequisites: undergraduate biochemistry and/or molecular biology, general cell biology; or permission of instructor. Offered: AWSpS.

B STR 557 Biomolecular Structure Seminar (1) Hol Literature review of key research in Biomolecular Structure in the form of short presentations by participants followed by discussion. Critical evaluation of methods and results regarding properties and protein structure determination. Credit/no credit only. Prerequisite: graduate standing in biological structure or biochemistry and permission of instructor. Offered: AWSp.

B STR 559 Developing Research Proposals (2) Developing research proposals in cellular, molecular, and developmental biology; neurobiology; morphometrics and computer modeling; experimental immunology and hemopoiesis; reproductive biology; molecular structure. Weekly seminars by faculty and written proposals by students to include background and significance of projects specific hypotheses and aims, methodology, analyses of possible outcomes. Prerequisite: permission of instructor. Offered: even years; Sp.

B STR 580P Anatomy Teaching Practicum (*, max. 8) Graney, Koehler, Rosse, Sherk Opportunity for medical student (or other professional student) to gain teaching experience in biological structure and human biology courses, including gross anatomy, histology, and neuroanatomy. May include lecture, laboratory, conference, depending on student interest, experience. Credit based on course credit in which student is assisting. Prerequisite: permission of course chairperson.

B STR 581P Anatomy: Intraoral Dissection of Maxilla and Mandible (1) Baab, Gehrig Lecture and dissection course in intraoral anatomy (maxilla and mandible only) from a periodontal surgical approach. Prerequisite: graduate standing in periodontics. Offered: Sp.

CONJ 585 Surgical Anatomy (1-3, max. 12) Graney See Conjoint Courses. Offered: AWSpS.

B STR 591 X-ray and NMR Analysis of Macromolecular Structure (1, max. 30) Adman, Stenkamp Weekly discussion of current topics in research on molecular structure, usually emphasizing techniques of x-ray crystallography. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

B STR 592 Current Methods in Molecular and Cellular Biology (3) Yoshimura Lecture/laboratory demonstration course covering 6-7. current techniques in the areas of molecular and cellular biology. Emphasis on the type of scientific questions and problems that can be addressed by various methods that are in current use. Offered: Sp.

B STR 594 Seminar in Myogenesis (1, max. 5) Nameroff Discussion of recent work on the differentiation of skeletal muscle and related cell types. Emphasis on the cell-biological aspects of differentiation both *in* vivo and *in* vitro. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

B STR 595 Skin Biology SemInar (1, max. 5) Smith Presentation, discussion of ongoing multidisciplinary research in basic and clinical problems of adult and fetal skin biology. Genetic diseases of epidermis and dermis, percutaneous absorption in adult and fetal skin, wound healing, cutaneous blood flow, development and prenatal diagnosis of inherited disorders, pigment cell biology. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS. B STR 597 Topics in Neurobiology (1, max. 5) Harris Presentations by participants of topics in neuroanatomy, neurophysiology, neurochemistry, and other areas relating to the nervous system. Problems of current research interest. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

B STR 598 Reading in Biological Structure (2) Critical evaluation of research in biological structure, including current problems, methods and future directions by reading and discussing research and review papers. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

B STR 600 Independent Study or Research (*) Offered: AWSpS.

B STR 700 Master's Thesis (*) Offered: AWSpS.

B STR 800 Doctoral Dissertation (*) Offered: AWSpS.

Comparative Medicine

T142 Health Sciences

The Department of Comparative Medicine provides education and research opportunities in the use of animals in biomedical research, testing, and education. In addition, training is provided for veterinarians in the diagnosis, treatment, and prevention of the diseases of laboratory animals. Current educational programs include scheduled courses in the principles and techniques of animal experimentation (CMED 407) for biomedical graduate students; zoonotic diseases; and training in laboratory animal medicine for veterinary medical students and veterinarians combined with a Master of Science degree program in comparative medicine. Areas of current research interests include immunotoxicology, bacterial and viral diseases of laboratory animals, parasitic diseases, and animal models of human disease conditions.

Postdoctoral Program

Postdoctoral training in the areas of laboratory animal medicine and comparative pathology is offered to persons with a D.V.M. or equivalent degree. Training consists of a combination of course work, clinical residency rotations, and research over a three year period leading to a Master of Science degree in comparative medicine or a doctoral degree in one of the basic sciences. The program also prepares participants for specialty certification by the American College of Laboratory Animal Medicine. Stipend support is normally provided.

Master of Science Degree

The Master of Science degree in comparative medicine provides advanced training in comparative medicine to veterinarians. Admission to the degree program requires acceptance into the department's Postdoctoral Training Program. The degree option involves additional elective courses, the completion of a more involved research project, and a thesis.

Predoctoral Program

This program is designed to acquaint veterinary medical students with laboratory animal medicine as a veterinary specialty. Specific areas covered include control/treatment of the principal diseases of common laboratory animals and their role in biomedical research. Blocks of four to eight weeks are available for fourth-year students year-round. Stipend support is normally provided.

Faculty

Chairperson

Gerald Van Hoosier

Professors

Liggitt, H. Denny * 1989; PhD, 1979, Colorado State University; using *in vivo* models to evaluate novel approaches for gene delivery.

Rausch, Robert L. * 1978, (Emeritus); PhD, 1949, University of Wisconsin; parasitology, helminthic zoonoses.

Van Hoosier, Gerald * 1975; DVM, 1957, Texas A&M University; laboratory animal medicine.

Wolf, Norman S. * 1968, (Adjunct); DVM, 1953, Kansas State University; hematopoietic stem cell dynamics and transplantation, aging at the cellular level.

Associate Protessors

Dennis, Melvin B.* 1971; DVM, 1961, Washington State University; comparative medicine, including animal models and experimental surgery.

Di Giacomo, Ronald F. * 1974; DVM, 1965, University of Pennsylvania; comparative epidemiology and zoonoses.

Ladiges, Warren C. * 1981; DVM, 1971, Washington State University; immunobiology of hematopoietic and mucosal tissues in animal models.

Price, Lillian M. * 1984; DVM, 1972, University of Pennsylvania; t-cell development in the thymus, immunotoxicology, fetal alcohol syndrome.

Thouless, Margaret E. * 1980, (Adjunct); PhD, 1974, University of Birmingham (UK); antigenic variability of enteric viruses and simian retroviruses.

Assistant Professors

Grossmann, Angelika * 1985, (Research); DVM, 1978, Freie University of Berlin (Germany); immunosenecence in humans and mice; immunotoxicology; transmembrane signaling in T-lymphocytes.

Pekow, Cynthia A. 1986; DVM, 1984, University of Illinois; comparative medicine, including animal models and antibody production.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

C MED 407 Principles of Animal Experimentation (3) Dennis, Van Hoosier Focus on biology and care of experimental animals, animal models of human disease, ethical use of animals in biomedical research and teaching; techniques of aseptic surgery. Includes lectures and animal-use laboratories. For graduate and advanced undergraduate students. Prerequisite: permission of instructor. Offered: A.

C MED 512 Introduction to the Anatomical Analysis of Animal Disease (5, max. 10) Liggitt, Van Hoosier Use of animals in experimental study of disease; techniques of animal necropsy, characterization, interpretation of gross and microscopic lesions, correlation of lesions with altered physiological processes, differentiation between naturally occurring and experimentally induced lesions. Prerequisites: PATH 444, 445, or equivalent, and permission of instructor. Enrollment limited: two students per quarter. Offered: AWSpS.

C MED 514 Comparative Pathology Conference (1, max. 6) Liggitt., Van Hoosier Focus on histopathology

 \cdot \cdot \cdot \cdot \cdot

of naturally occurring and experimentally induced lesions of primates, laboratory and domestic animals, fish, wildlife, and birds. Participants discuss the lesions and the basic pathogenetic mechanisms that underlie them. Prerequisites: PATH 500 or equivalent and permission of instructor. Offered: AWSpS.

C MED 516 Current Literature in Laboratory Animal Medicine (1, max. 12) Dennis, Van Hoosier Critical evaluation of recent articles on laboratory animal medicine and science. Emphasis on literature dealing with spontaneous diseases of laboratory animals, biology and husbandry, zoonotic diseases, and animal models of human disease. Experimental design, use of animals in research, and methods of reviewing manuscripts. Prerequisite: permission of instructor. Offered: AWSpS.

C MED 518 Clinical Conference Seminar (1, max. 12) Dennis, Van Hoosier Clinical reports of cases of spontaneous and induced diseases, animal models of human disease, and zoonotic diseases discussed. Disease prevalence and preventive medicine measures. Diagnostic exercises. Prerequisite: permission of instructor. Offered: AWSpS.

C MED 520, 521 Biology of Laboratory Animals (2,2) Van Hoosier Fundamentals of the morphological, functional, and applied aspects of anatomy, physiology, pharmacology, biochemistry, and immunology of the commonly used laboratory animal species. Similarities and differences within, and between, species, including man. Husbandry, genetics, behavior, and nutrition. Prerequisite: permission of instructor. Offered: S.

C MED 526 Zoonctic Diseases (3) DiGiacomo, Rausch Explores the public health aspects of zoonotic diseases, their epidemiology and current approaches to control. Focuses on the major viral, rickettsial, bacterial, protozoal, helminthic, and fungal diseases transmitted from wild and domesticated animals to humans in North America. Prerequisites: EPI 520 or permission of instructor. Offered: jointly with EPI 526.

C MED 530, 531 Diseases of Laboratory Animals (3,3) Van Hoosier Analysis of etiology, pathogenesis, pathology, and disease processes in rodents, lagomorphs, carnivores, and nonhuman primates. Prerequisite: permission of instructor. Offered: S.

C MED 540 Animal Models (1) Dennis Naturally occurring and experimentally induced analogs of human diseases in animals with emphasis on diseases in search of animal models, and approaches to identifying new models. Animal models of categorical disease (e.g., cancer, atherosclerosis, gerontology) discussed. Prerequisite: permission of instructor. Offered: S.

C MED 590 Selected Topics in Animal Medicine (2) Dennis, Van Hoosier Radiation biology, genetics, anesthesiology and experimental surgery, preventive medicine, and ethical aspects of use of animals in biomedical teaching and research. Specific topics vary from year to year, depending on the expertise of the annual visiting professor. Prerequisite: permission of instructor. Offered: S.

C MED 600 Independent Study or Research (*) Offered: AWSpS.

C MED 601 Internship Rotation - Laboratory Animal Medicine (1) Prerequisite: DVM degree. Offered: AWSpS.

C MED 700 Masters Thesis (*) Offered: AWSpS.

Conjoint Courses

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

CONJ 340-341-342 Human Anatomy and Physiology (4-4-4) Bolender, Gaddum-Rosse Introductory course integrating physiology with some histology and gross anatomy of the human body. Primarily for pharmacy students, some nursing students and others by permission of course coordinator in Department of Physiology and Biophysics. Prerequisites: CHEM 140. introductory biology and permission of instructor.

CONJ 475 Alcoholism: A Course for Medical Students and Students in the Allled Health Sciences (2) *Kivlahan, Samson* A lecture course for medical students in the allied health sciences in any year that will cover an introduction to the epidemiology, diagnostic strategies, natural history, physiologic effects, and treatment of alcohol-related disorders.

CONJ 501, 502, 503 Molecular Basis of Cell Function (3,9;3) Plasma membrane (501), including membrane structure, ion channels, transmembrane signaling; nucleus (502), including chromatin structure, recombination, RNA processing and gene expression; and cytoplasm (503), including protein synthesis targeting and secretion, organelles, extracellular matrix, higher-order cell functions. Prerequisites: introductory biochemistry or permission of instructors. Physiology/ Biophysics responsible.

CONJ 505P Pain Clinic Preceptorship (1) Loeser One morning a week for a total of 30 hours per quarter spent observing patient care in either inpatient or outpatient settings at University of Washington Medical Center; associated readings. Prerequisite: first- or second-year medical student standing. Coordinator: Pain Center.

CONJ 508 EM Methods and Interpretation (3-5) *Wight* Techniques used in biological transmission and scanning electron microscopy. Practical laboratory experience in research environment, tutorial discussions of cell architecture as related to the functional behavior of cells. Student projects required. Prerequisites: a basic cell biology course and graduate or postdoctoral status in pathology or biological structure.

CONJ 511 Functional Neuroanatomy (4) Hendrickson, Smith Lecture and laboratory course in neuroanatomy. Laboratory includes gross human brain and slide material and cat and monkey material. Offered conjointly by the departments of Biological Structure and of Physiology and Biophysics. Prerequisite: permission of instructor. Coordinator: Department of Physiology and Biophysics.

CONJ 515 Interdisciplinary Health and Human Services Delivery in Rural Communities (1) Provides opportunities for students in health and human services to explore current trends and issues of service delivery in rural communities. Demographics, economics, community structure, culture, and professional/ personal issues are addressed. Prerequisite: major standing in a health or human services profession.

CONJ 519 Molecular and Cellular Neurobiology (3) Concepts and techniques of molecular and cell biology as applied to understanding development and function of the nervous system. Recommended: biochemistry course or equivalent. Coordinator: Department of Physiology and Biophysics. CONJ 520 Anatomy and Autopsy (1/2) Students attend autopsies at UWMC affiliated hospitals. Objectives: (1) demonstration of normal anatomic relationships and features of unfixed cadavers; (2) demonstration of gross anatomical relationships in various pathological states; (3) follow-up of histological findings. Offered as elective concurrent with HUBIO 520P. Prerequisites: HUBIO 510P or equivalent, permission of instructor.

CONJ 550P Clinical Infectious Diseases (3) *Miller* Lecture series by faculty members from various departments, authorities in the field of clinically important infectious diseases. Lectures, reading assignments, and handouts emphasize epidemiology, clinical manifestations, laboratory findings, diagnosis, treatment, and prevention. Oriented for second-year medical students. Credit/no credit only. Prerequisite: HUBIO 521P or permission of coordinator. Department of Medicine.

CONJ 553P Nutrition for Physicians (2) Lipkin Basic nutritional concepts directed at second-year medical students. Controversial issues relating to diet and disease, with emphasis on application of scientific reasoning and pragmatism to the search for answers. Focuses on providing practical information relevant to the practice of a physician. Prerequisites: HUBIO 514P, 524P, or equivalent.

CONJ 555P Human Oncology for Fourth-Year Medical Students (2) Berger Recapitulates the principles and practice of human oncology prior to the senior medical student starting residency. Includes cancer epidemiology, including oncogenes, tumor suppressor genes, and molecular carcinogenesis, geriatric and pediatric cancer, and individual organ system involvement in terms of diagnosis and management.

CONJ 580 Clinical Correlations of Neuroanatomy (2) Harris, Koerker, Swanson The relation between clinical neurological problems and the underlying neuroanatomy, studied by presenting case studies with extensive tests such as CT, MRI, angiograms. Prerequisites: 511 or equivalent, HUBIO 532.

CONJ 585 Surgical Anatomy (1-3, max. 12) Graney Guided dissection of selected regions, supplemented by conferences. Offered conjointly by the departments of Biological Structure and Surgery. Prerequisite: permission of department. Coordinator: Department of Biological Structure.

CONJ 677P Clinical Allergy and Immunology (*, max. 12) Van Arsdel (University of Washington Medical Center) Clinic and office experience in diagnosing and managing allergic disease. Clinical conferences, hospital rounds on clinical immunology and allergy. Student may elect a flexible program, emphasizing adult or pediatric allergy. Prerequisites: MED 665P or basic clerkships in Departments of Family Medicine or Pediatrics. (Four weeks, full-time.)

CONJ 678P Pain Clinic Clerkship (8) Egan, Loeser Full-time, four-week clerkship emphasizing comprehensive care of patients with chronic pain from benign diseases and cancer. Faculty members from multiple departments provide student with didactic and bedside experiences; student member of treatment team. Involves both inpatient and outpatient activities. Prerequisites: completion of human biology series, MED 665P.

CONJ 680P Detoxification and Rehabilitation Program for Alcoholism and Drug Abuse (*, max. 16) *Walker* Supervised introduction to alcoholic detoxification and rehabilitation and drug abuse. Supervised clinical experience in a variety of alcoholism and drug abuse treatment programs; accompanied by a core series of lectures and discussions. For medical students only.

CONJ 697P International Exchange Clerkship (12) Hunt Participation in health care delivery systems in developing countries; observation of relationship of host country's traditional medicine with Western medicine. Students live in cross-cultural setting to better understand their own assumptions about health care and tife styles.

CONJ 698P Foreign Medical Student Clerkship (*, max. 24) A limited number of students from foreign medical schools are accepted for individually designed clinical clerkships at available sites after all UWMC students are accommodated. Prerequisites: permission of Associate Dean for Academic Affairs, School of Medicine.

CONJ 699P Clinical Clerkships (*, max. 32)

Family Medicine

C408 Health Sciences

Family medicine is the discipline concerned with the continuing and comprehensive care of individuals and their families. The prime instructional goal of the department is the education and training of physicians who will apply the knowledge and skills of this and other medical disciplines in family practice. Implicit in this goal is the necessity for continual development of new knowledge and its application in the clinical activities of the department.

The Department of Family Medicine was founded in 1971 and is involved with instruction of medical students in several ways. These include presentations in the basic curriculum of the first two years, clinical clerkships as part of the clinical core curriculum, and other elective courses open to all medical students. A graduate residency program in family practice provides training consistent with the standards of the American Board of Family Practice, the American Academy of Family Physicians, and the Council on Medical Education of the American Medical Association. Active teaching affiliations are maintained throughout the WAMI region at both undergraduate and graduate levels.

Family medicine fellowship training programs are available to develop teaching and research skills for future academic faculty.

Faculty

Chairperson

Ronald Schneeweiss

Professors

Berg, Alfred O. 1979; MD, 1974, Washington University; family medicine.

Chrisman, Noel J. * 1973, (Adjunct); PhD, 1966, University of California (Berkeley); health beliefs and practices, social networks and social support.

Coombs, John B. 1983; MD, 1972, Cornell University; rural health policy, nutrition and medicine.

Geyman, John P. 1976, (Emeritus); MD, 1960, University of California (San Francisco); family medicine.

Gordon, Michael J. * 1973; PhD, 1973, Michigan State University.

Katon, Wayne J. 1979, (Adjunct); MD, 1976, University of Oregon.

Mayer, Jonathan D. * 1977, (Adjunct); PhD, 1977, University of Michigan; medical geography, clinical applications, philosophy.

Rosenblatt, Roger A. * 1977; MD, 1971, Harvard University; research into the organization and delivery of health services.

Schneeweiss, Ronald 1977; MBChB, 1964, University of Capetown (South Africa); family medicine.

Associate Professors

Eggertsen, Sam C. 1982; MD, 1976, University of Washington; family medicine.

Ellsbury, Kathleen E. 1982; MD, 1977, Johns Hopkins University; family medicine.

Ellsworth, Allan J. 1981, (Adjunct); PharmD, 1977, Philadelphia College of Pharmacy & Science; clinical pharmacy.

Greer, H. Thomas 1977; MD, 1974, University of Mississippi; family medicine.

Leversee, John H. 1973; MD, 1952, University of Minnesota.

Losh, David Paul 1992; MD, 1974, University of Kansas.

Neighbor, William E. Jr. 1983; MD, 1979, University of Washington; family medicine and preventive cardiology.

Norris, Thomas E. 1989; MD, 1973, University of Texas (Galveston); rural health policy, primary care policy, geriatrics.

Stevens, Nancy G. * 1982; MD, 1979, University of Washington; family medicine.

Taplin, Stephen H. 1983; MD, 1978, University of California (Davis); family medicine.

Taylor, Thomas R. 1979; MBChB, 1957, University of Glasgow (UK); family medicine.

Assistant Professors

Baldwin, Laura M. 1984; MD, 1980, University of Southern California; family medicine.

Church, Lili L. 1992, (Acting); MD, 1985, University of lowa; family medicine.

Dobie, Sharon A. 1987; MD, 1979, University of California (San Francisco); family medicine.

Gloyd, Stephen S. * 1986, (Adjunct); MD, 1973, University of Chicago; political economy, epidemiology, and primary health care in developing countries.

Goldbaum, Gary M. * 1989, (Adjunct); MD, 1978, University of Colorado; the epidemiology of human behaviors that increase risk for disease.

Oliver, Lynn M. 1988; MD, 1983, University of Washington; family medicine.

Walker, Edward A. 1987, (Adjunct); MD, 1983, University of Washington.

West, Peter A. 1991, (Acting); MD, 1969, University of California (Irvine); family medicine.

Instructors

Gunderson, Heidi 1990, (Acting); MD, 1990, University of Washington.

Osborn, Justin 1994; MD, 1989, University of Virginia; family medicine.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

FAMED 499 Undergraduate Research (*) Research activities arranged with University-based or community physicians in diversified areas relating to family medicine. Various research philosophies and investigative methods are introduced. Prerequisite: permission of course coordinator. Offered: AWSpS.

FAMED 501P. Introduction to Family Medicine: Preceptorship (2.5) Students spend one morning per week for one quarter working with a practicing community family physician. Prerequisites: first- and second-

366 SCHOOL OF MEDICINE / FAMILY MEDICINE

year medical students, permission of course coordinator. Offered: AWSpS.

FAMED 505P Rural/Urban Preceptorship (*, max. 12) Opportunity to work in a variety of medical settings in rural and urban areas of Washington, Alaska, Idaho, and Montana. Prerequisite: permission of instructor. Offered: AWSpS.

FAMED 640P Clinical Clerkship in Family Medicine-Boise (12) Stresses ambulatory primary care with emphasis on comprehensive, integrated care to patients of both sexes and all ages. Student functions as clerk in community/residency site. Participates in care of assigned patients, using office, hospital, home, community resources. Prerequisite: third- or fourthyear medical students. Offered: AWSpS.

FAMED 641P Clinical Clerkship in Family Medicine-Spokane (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 642P Clinical Clerkship in Family Medicine-Madigan (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 643P Clinical Clerkship in Family Medicine-Tacoma (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 644P Clinical Clerkship in Family Medicine-University of Washington Medical Center (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 645P Clinical Clerkship in Family Medicine-Group Health (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 646P Clinical Clerkship in Family Medicine-Swedish (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 647P Clinical Clerkship in Family Medicine-Providence (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 648P Clinical Clerkship in Family Medicine- Renton Valley (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 650P Clinical Clerkship in Family Medicine-Anacortes (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 651P Clinical Clerkship in Family Medicine-Omak (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 652P Clinical Clerkship in Family Medicine-Spokane Valley (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 653P Clinical Clerkship in Family Medicine-Anchorage (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 654P Clinical Clerkship in Family Medicine-Ketchikan (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 656P Clinical Clerkship in Family Medicine-Whitefish (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 657P Clinical Clerkship in Family Medicine-Pocatello (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 658P Clinical Clerkship in Family Medicine-Sea Mar Clinic (12) For description and prerequisite, see 640P. Offered: AWSpS.

FAMED 659P Clinical Clerkship in Family Medicine-Country Doctor (12) For description and prerequisite, see 640P. Offered: AWSpS. FAMED 670P Advanced Preceptorship in WAMI Area (*, max. 24) Students gain experience, knowledge, and skills needed to care for rural, Native American Indian, and other ethnic or underserved populations in Washington, Alaska, Montana, and Idaho. Prerequisites: third- or fourth-year medical students, permission of course coordinator. Offered: AWSpS.

FAMED 671P Advanced Preceptorship in United States (*, max. 24) Supplemental experience in rural/ urban practice or a family medicine department in a setting not already established through the family medicine curriculum. Prerequisites: third- or fourthyear medical students, permission of course coordinator. Offered: AWSpS.

FAMED 672P Advanced Preceptorship Internaflonal (*, max. 24) For medical students desiring primary care experience abroad. Special project deals with influences of social, cultural, educational, and economic forces on health care delivery. Prerequisite: third- or fourth-year medical students, permission of course coordinator. Offered: AWSpS.

FAMED 698P Clinical Clerkship in Family Medicine, Away (12) For description and prerequisites, see 640P. Offered: AWSpS.

Human Biology

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only. This sequence is required for all medical students. Other students may enroll by permission of the Assistant Dean for Curriculum, School of Medicine.

HUBIO 500P Medical Practice Preceptorship at WAMI Sites (1, max. 3) Personal experience with, and insight into, medical practice situations. Student is stationed with carefully selected clinical faculty members in their offices in accordance with the student's preference of discipline at the WAMI sites. Registration limited to first-year medical students at WAMI sites.

HUBIO 501P Human Biology Special Projects (*) Hunt Designed for medical students electing a special study project related to the Introduction to Clinical Medicine or other human biology courses, which are offered during the first and second years in the School of Medicine. Primarily intended for students in remedial or extended programs. Prerequisite: permission of assistant dean for curriculum.

HUBIO 505P WAMI Preceptorship (1) Opportunity for first-year medical students at WAMI sites to gain personal experience with medical practice situations by being assigned to selected clinical faculty members in their offices.

HUBIO 510P Microscopic Anatomy: Histology (3) Nameroff Lectures and laboratories in microscopic anatomy designed to provide the principles and concepts of histology, to define the morphological characteristics of the cells, tissues, and organs of the human body, and to relate this information to functional processes studied in concurrent and subsequent courses. Offered: A.

HUBIO 511P Gross Anatomy and Embryology (7) Rosse Structural organization of human body at the macroscopic level to provide a foundation for physical examination and functional assessment of the human organism. Integrates embryological development with study of the cadaver and examination of the normal living body. Concentrates on exploration of the body cavities and the viscera they contain. Offered: A. HUBIO 512P Mechanisms in Cell Physiology (5) Crill Physiology of the cell membrane, including ionic and electrical potential gradients; active transport, excitability, and action potentials; biophysics of sensory receptors; neuromuscular transmission; muscle energetics and contractility; spinal reflexes and central synaptic transmission; autonomic nervous system; energy metabolism and temperature regulation; epithelial transport; gastrointestinal motility and secretions. Offered: A.

HUBIO 513P Introduction to Cilnical Medicine (1) Ellsbury Instruction in communication skills and interview techniques to form the basis for the doctor-patient relationship and for the skills of communicating with patients. The patient profile is obtained. Attention to developing comfort in the physician role. Offered: A.

HUBIO 514 Blochemistry I-A (4) Walsh First portion of a coordinated course covering classical molecular and cellular biochemistry, cellular physiology and molecular genetics. Metabolic interrelationships as they occur in the individual stressed and related to disturbances in disease states. Offered: A.

HUBIO 516 Systems of Human Behavior I-A (3) Walker Sensitizes students to impact of such factors as emotional and physical development, cultural backgrounds, social roles, families, sexual identities, and belief systems upon their effectiveness as physicians. Teaches skills in analyzing behavior, defining behavioral objectives, and designing precise treatment strategies to obtain these objectives. Offered: A.

HUBIO 520P Cell and Tissue Response to Injury (6) Reidy Patterns of cell and tissue response to injury. Mechanisms of cell injury, the inflammatory process, immunology, immunopathology, thrombosis, normal and abnormal growth, neoplasia, clinicopathological correlation. Offered: W.

HUBIO 521P Natural History of Infectious Disease and Chemotherapy I-A (4) Moseley Pathogenesis and immunity of infectious diseases, natural barriers. Microbiology, epidemiology, clinical manifestations and control of representative bacterial, fungal, parasitic, and viral infectious diseases. Chemotherapeutics and principles of chemotherapy. Sterilization, principles of asepsis, nosocomial and iatrogenic infections and their prevention. Offered: W.

HUBIO 522P Introduction to Clinical Medicine (2) Ellsbury Medical history is introduced and instruction in data collection is begun. Experience in conducting medical interviews with patients to obtain the medical history and patient profile. Special problems related to interviewing are addressed. Offered: W.

HUBIO 523P Introduction to Immunology (2) Perlmutter Basic concepts such as antigens; antibodies; complement; B- and T-lymphocyte function, including interactions with each other and with accessory cells; immunological tolerance; major histocompatibility complex; and role of these basic concepts in immunopathology (immunodeficiencies, hypersensitivities, autoimmunity, blood transfusion, and transplantation). Offered: W.

HUBIO 524P Biochemistry I-B (3) Walsh Second portion of a coordinated course covering classical molecular and cellular biochemistry, cellular physiology, and molecular genetics. Metabolic interrelationships as they occur in the individual are stressed and related to disturbances in disease states. Offered: W.

HUBIO 526P Systems of Human Behavior I-B (1) Walker Effects of behavioral factors in major management problems faced in medical practice relating to cultural background, social role, sexual identity, and belief systems. Acquisition of skills in analyzing behavior, defining objectives, and designing precise treatment strategies, Offered: W.

HUBIO 530P Epidemiology (2) Davis Community health and disease, including assessment of disease risk and mechanisms of epidemic detection, spread,

SCHOOL OF MEDICINE / IMMUNOLOGY 367

and control; interpretation of research design, data analysis, bias source; and clinical epidemiology, including evaluation and application of diagnostic tests, natural history of disease, and quantitative aids for clinical decision making. Offered: Sp.

HUBIO 531P Head, Neck, Ear, Nose, and Throat (5) Graney Gross anatomy (including skull, pharynx, and larynx), audition and balance, physiology and clinical evaluation, maxillofacial disorders, diseases of nasal passages, nasopharynx and oropharynx, accessory sinuses. Physical examination. Offered: Sp.

HUBIO 532P Nervous System (6) Reh Integrated approach to normal structure and function of the nervous system, including the eye. Neuropathological examples, as well as clinical manifestations of neurological disease are presented. Offered: Sp.

HUBIO 534P Natural History of Infectious Disease and Chemotherapy I-B (2) Offered: Sp.

HUBIO 535P Introduction to Clinical Medicine (4) Goldstein Adult screening physical examination is taught through the use of lecture, audiovisual aids, and small-group tutorial, where students in supervised setting practice the physical examination on one other. Further practice in the performance and recording of the patient profile and medical history. Offered: Sp.

HUBIO 540P Cardiovascular System (5.5) Brengelmann Interdisciplinary approach to cardiovascular medicine, including anatomy, physiology, radiology, pathology, medicine, and surgery. Function of the cardiovascular system in health and disease. Offered: A.

HUBIO 541P Respiratory System (4) Cuiver Interdisciplinary approach to the respiratory system, including anatomy of thorax and lungs, ventilation mechanics, blood-gas transport, gas exchange, acid-base balance, and the physiology and pathology of obstructive, restrictive, and pulmonary-vascular diseases. Offered: A.

HUBIO 542P Introduction to Clinical Medicine (2.5) *McArthur* Advanced instruction in interview technique, history taking, and physical examination, with emphasis on detection of abnormalities. Offered: A.

HUBIO 543P Principles of Pharmacology I (4) Vincenzi Includes general principles of pharmacology and the specific pharmacology of major drugs acting on the autonomic and cardiovascular systems. Offered: A.

HUBIO 544P Endocrine System (2.5) Brunzell Normal, gross, and microscopic anatomy and physiology of the endocrine system. Illustrations examining the clinical relevance of homeostasis, feedback, and other controlling mechanisms previously learned. Endocrine integration of metabolism. Clinically important endocrine pathophysiology. Offered: A.

HUBIO 546P Systemic Pathology (2) Schmidt Multidisciplinary approach to some diseases that affect more than one organ system (nervous, cardiovascular, respiratory) and that are caused by different mechanisms (congenital, inflammatory, vascular, traumatic, netabolic, neoplastic). Offered: A.

HUBIO 550P Introduction to Clinical Medicine (3.5) *McArthur* Continuation of 542 with emphasis on identification of problems and correlation of findings with pathophysiological mechanisms. Offered: W.

HUBIO 551P Gastro-Intestinal System (4) Saunders Anatomy of the gastrointestinal system; physiology and pathology of digestion and hepatic function; and physical and laboratory examination. Offered: W.

HUBIO 552P Hematology (3) Broudy Familiarizes students with the basic pathophysiologic mechanisms leading to disturbances of red cell, white cell, and platelet production, as well as abnormalities of hemostasis presenting clinical problems. Pathophysiology, rather than minute details of individual disease, is stressed. Offered: W.

HUBIO 553P Musculoskeletal System (4.5) Teitz Gross, surface, applied, and x-ray ahatomy of system, including entire spine but excluding head and neck. Histology of bone, cartilage, tendon-myotendinal junction and joints. Musculoskeletal trauma and healing. Pathology and clinical manifestations of other degenerative, inflammatory, metabolic, nutritional, and congenital disorders. Physical examination. Offered: W.

HUBIO 554P Genetics (2.5) Stamatoyannopoulos Review of basic genetic principles and their applications in clinical medicine. Includes human chromosomal disorders; patterns of inheritance, genetic counseling, amniocentesis; pathogenesis of hereditary diseases, monogenic and multifactorial; role of genetics in common diseases; behavioral genetics; druggene interactions; and prevention and treatment of genetic diseases, including prenatal diagnosis and population screening. Offered: A.

HUBIO 555P Medicine, Health, and Society (3.5) Lessler Interrelationships between provision of medical care and nonbiological factors that influence health. Includes relative importance of society, environment, and individual choice in determining health status; impact of organizational, economic, and political influences on medical practice and choice; their importance in decision making. Offered: W.

HUBIO 560P Introduction to Clinical Medicine (5). McArthur Continuation of 550P. Introduction to clinical and laboratory diagnosis. Offered: Sp.

HUBIO 562P Urinary System (4) Sherrard Anatomy, physiology, and pathology of the kidney, ureter, bladder, and prostate; pathophysiology and treatment of common fluid and electrolyte problems; renal pharmacology; major clinical urinary system syndromes, with current diagnostic approaches and therapy. Offered: Sp.

HUBIO 563P Systems of Human Behavior II (3) *N.* Ward Major psychiatric disorders are defined and described, and a systematic approach to differential diagnosis is presented. Conceptual development, pathogenesis, epidemiology, nomenclature, and the terminology used in psychiatry are discussed. Offered: Sp.

HUBIO 564P Principles of Pharmacology II (3) Horita Lectures and conferences on drugs that act on the central nervous system. Emphasis on physiological and biochemical mechanisms, with consideration of therapeutic and adverse effects. Offered: Sp.

HUBIO 565P Reproduction (3.5) Gaddum-Rosse Normal development of the human reproductive system. Sexual differentiation, puberty, endocrine control of testicular and ovarian function, gamete biology, fertilization, implantation, immunology and endocrinology of pregnancy, labor and delivery, pathology of the male and female reproductive organs, contraception, prolactin and lactation, aging and infertility. Offered: Sp.

HUBIO 567P Skin System (2) Olerud Gross and microscopic anatomy. Physiology, protection, temperature control, pigmentation, and photosensitivity. Pathology and genetics of skin abnormalities, including tumors. Introduction to clinical evaluation, including physical examination and illustrating examples of inflammatory, vascular, immunological (including drug hypersensitivity), and neoplastic diseases. Offered: A.

HUBIO 598P WAMI Non-Clinical Selectives (*) Courses offered at WAMI university sites designed to satisfy the non-clinical selective graduation requirement for medical students.

HUBIO 599P Independent Study in Medical Science (6) Independent research with faculty sponsor and completion of paper as partial fulfillment of nonclinical selective graduation requirement. Offered: Sp.

Immunology

H564 Health Sciences

The science of immunology began in the nineteenth century as an outgrowth of microbiology. During the past few decades, immunology has emerged as a truly separate discipline, with a specialized technical armamentarium and a conceptual base that has had profound general impact on research in molecular and cellular biology. Indeed, immunological questions provide some of the most exciting intellectual challenges in contemporary science. In recognition of these facts, the University of Washington established the Department of Immunology in 1989. The following information is provided as a guide to those students interested in a Ph.D. degree in this important new area.

Research facilities in the Department of Immunology include state-of-the-art equipment for gene manipulation and flow cytometry. A departmental library, extensive computer resources, and conference rooms are also available for students. Members of the faculty hold joint appointments in the departments of Biochemistry, Bioengineering, Genetics, Medicine, Molecular Biotechnology, and Pediatrics, and the department participates in the Interdisciplinary Molecular and Cellular Biology Program. Close interaction therefore exists between the Department of Immunology and other research units in the health sciences.

Students are admitted for autumn quarter; the application deadline is February 1. The requirements for admission are flexible; however, most successful applicants will have completed survey courses in biology, chemistry, and physics, one year of organic chemistry, and mathematics through integral calculus. Prior exposure to immunology through formal course work or laboratory research is desirable. All immunology graduate students are assured of financial support for the term of their studies.

Bevan, Michael J. * 1990; PhD, 1972, National Institute For Medical Research (UK); T lymphocyte development and specificity.

Clark, Edward A. * 1979, (Adjunct); PhD, 1977, University of California (Los Angeles); lymphocyte surface molecules, lymphocyte activation and cell communication.

Greenberg, Philip D. * 1978; MD, 1971, State University of New York (Downstate); molecular, cellular, viral, and tumor immunology.

Hood, Leroy E. * 1992; PhD, 1968, California Institute of Technology; molecular immunology, large scale DNA mapping and sequencing, molecular evolution.

Nepom, Gerald T. * 1982, (Affiliate); MD, 1978, University of Washington; immunogenetics of human MHC, molecular and cellular immunology, immunoregulation, autoimmunity.

Perlmutter, Roger M. * 1984; MD, 1979, Washington University; molecular immunology and the molecular biology of neoplasia.

Pious, Donald A. * 1964; MD, 1956, University of Pennsylvania; antigen processing, function of nonclassical MHC genes, MHC gene regulation. 368 SCHOOL OF MEDICINE / IMMUNOLOGY

Wilson, Christopher B. * 1979; MD, 1972, University of California (Los Angeles); regulation of cytokine production in T cells and macrophages.

Associate Professors

Farr, Andrew G. * 1982, (Adjunct); PhD, 1975, University of Chicago; cell interactions governing lymphocyte production and function.

Lewis, David B. * 1988, (Adjunct); MD, 1981, University of California (San Francisco); T lymphocyte cytokine biology, infectious diseases.

Assistant Professors

Blum, Janice S. * 1992, (Affiliate); PhD, 1984, Duke University; protease functions in immune response, antigen processing, structure and function of HLA antigen.

Concannon, Patrick J. * 1989, (Affiliate); PhD, 1984, University of California (Los Angeles); development of the human T cell receptor repertoire, genetics of diabetes and ataxia-telangiectasia.

Fink, Pamela J. * 1990; PhD, 1981, Massachusetts Institute of Technology; T cell differentiation, tolerance induction, molecular and cellular immunology.

Goverman, Joan M. 1992, (Adjunct); PhD, 1981, University of California (Los Angeles); immune recognition and tolerance, autoimmunity, T cell development and activation, antibody diversity.

Milner, Eric C. B. * 1987, (Affiliate); PhD, 1980, University of Montana; autoantibodies, antibody repertoire, immunoglobulin polymorphism, autoimmune disease.

Pullen, Ann M. * 1991; PhD, 1987, Cambridge University (UK); superantigens and their effects on T-cells.

Rudensky, Alexander Y. * 1992; PhD, 1986, Gabrichevsky Institute For Epidemiology & Microbiology; antigen processing and presentation, T-cell recognition.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

IMMUN 441 Introduction to Immunology (4) NW General properties of immune responses; cells and tissues of immune system; lymphocyte activation and specificity; effector mechanisms; immunity to microbes; immunodeficiency and AIDS; autoimmune diseases; transplantation. Prerequisites: BIOL 203, organic chemistry, or permission of instructor, junior standing or above; recommended: biochemistry, cell biology and/or genetics. Offered: jointly with MICRO 441; A.

IMMUN 499 Undergraduate Research (*, max. 24) Investigative work on a variety of topics, including mechanisms of antigen recognition, T-cell development and differentiation, immunogenetics, lymphocyte activation, MHC gene structure and function, retrovirology, and the pathogenesis of autoimmune diseases, among others. Prerequisite: permission of instructor.

IMMUN 532 Advanced Immunology (3) Examines the molecular and cellular basis of immune function. Students must have completed a baccalaureate degree in a biological specialty, and be conversant with molecular genetics. Topics include antigen receptor structure, antigen presentation, and the biochemistry of lymphokines. Otfered: W.

IMMUN 533 Developmental Immunology (3) Draws on background materials offered in 532, placing the molecular and cellular biology of immune function in an appropriate developmental context. Topics include hematopoiesis, lineage commitment in lymphocytes, and the development of immune responsiveness. Prerequisite: 532 or permission of instructor. Offered: Sp. IMMUN 550 Selected Topics in Immunology (1) Formal seminar-discussion course for advanced students focused on recent developments in the field and consisting of literature research and intensive in-depth study of important and timely topics. Credit/no credit only. Prerequisite: permission of instructor.

IMMUN 563 Central Topics in Immunology (2) Presentations by participants of topics relating to the broad study of immunology. Credit/no credit only. Prerequisite: graduate standing in Immunology. Offered: Sp.

IMMUN 573 Immunology Seminar Series (1) Weekly discussion in which original research results are presented and discussed. Emphasis is on new and original contributions to field of immunology and related areas; occasional seminars are concerned with review of important topics. Credit/no credit only. Prerequisites: firm background in immunology, permission of instructor.

IMMUN 599 Topics in Immunology (*, max. 6) Current problems in immunological research. Credit/no credit only. Prerequisite: permission of instructor.

IMMUN 600 Independent Study or Research (*)

IMMUN 700 Master's Thesis (*)

IMMUN 800 Doctoral Dissertation (*)

Laboratory Medicine

NW120 University of Washington Medical Center

The Department of Laboratory Medicine includes divisions of clinical chemistry, hematology, microbiology, coagulation, immunology, genetics, virology, and medical informatics. In addition to courses for medical students, the department offers Bachelor of Science in Medical Technology and Master of Science degree programs. The department also provides residency training in clinical pathology for graduate physicians and postdoctoral training in several subspecialty areas of laboratory medicine.

Undergraduate Program

Bachelor of Science in Medical Technology Degree

Medical technology is an interesting and rewarding health science profession. Individuals who enjoy studying the biological, chemical, and physical sciences find personal satisfaction and intellectual reward in employing scientific methods for the diagnosis and evaluation of disease. Advances in medical science and interest in health maintenance have resulted in an exponential growth in the diversity and volume of laboratory procedures. The medical technologist/clinical laboratory scientist is a creative, knowledge-based professional who performs assays, analyzes problems, and helps to evaluate test results.

The medical technology program is a four-year college curriculum supervised by the College of Arts and Sciences in the freshman and sophomore years (preprofessional, 90 credits) and by the Department of Laboratory Medicine in the junior and senior years (professional). Detailed program requirements and application material may be obtained from the Undergraduate Advising Center or the Department of Laboratory Medicine.

Admission Requirements: Completion of 90 quarter credits, or junior standing, is required for admission. Preprofessional requirements for admission include completion of the University writing, reasoning, and general education requirements. Writing and reasoning requirements include 5 credits English composition, plus a minimum 7 credits of additional writingintensive courses, and 5 credits of quantitative reasoning. General education requirements include a minimum of 40 credits from three Areas of Knowledge Visual, Literary & Performing Arts; Individuals & Societies; the Natural World. A minimum of 10 credits must be earned in each of the three Areas of Knowledge. (Students who began college before autumn 1985 complete a different set of requirements. See adviser for details.)

Graduation Requirements: Detailed requirements may be obtained from the Medical Technology Program Director, Department of Laboratory Medicine, SB-10. A minimum of a C grade in all laboratory medicine courses and a GPA of 2.00, both cumulative and in required courses, is required for graduation.

The medical technology curriculum is accredited by the Committee on Allied Health Education and Accreditation. Graduates are eligible and are encouraged to take an appropriate examination to become certified medical technologists/clinical laboratory scientists. Examples of practice in medical technology include service in hospitals and clinics; and research in industrial, public health, and medical laboratories.

Graduate Program

The Department of Laboratory Medicine offers a graduate program leading to the Master of Science degree. Each student in the program selects one of the major areas of concentration (e.g., chemistry, coagulation, hematology, immunology, microbiology, virology). The chemistry concentration is approved by the Commission on Accreditation in Clinical Chemistry. The other pathways have no comparable accrediting agencies.

A thesis based upon independent research in the student's selected area of concentration is required. Course requirements vary with the concentration selected. However, the program is flexible and permits each student (with the help of an adviser) to plan a course of study that meets individual needs. A full-time student normally completes the program in two years. The program prepares qualified candidates for supervisory positions in clinical laboratories and for careers in investigation or teaching in an area of clinical laboratory core.

Admission Requirements

Applicants must have a B.S. or B.A. degree in a field appropriate to the graduate study (medical technology, biochemistry, biology, chemistry, or microbiology) and meet the Graduate School's requirements for admission. The applicant must also be certified as a medical technologist/clinical laboratory scientist, or as a specialist in a particular area of laboratory medicine by one of the national certifying agencies. In addition, applicants must take the Graduate Record Examination aptilude test.

Maior Requirements

Students must meet the minimum requirements for a master's degree as stated in the Graduate School section of this catalog. In addition, a core of courses is required for all students in the program as well as additional specific course requirements for the various major areas of concentration.

Financial Aid

Research assistantships may be available for second year students. Opportunities for part-time employment in departmental laboratories may be available, and applications will be considered.

Research Facilities

Each division in the department is equipped with modern facilities for research in its specialty area.

Chatrian, Gian E. 1959, (Emeritus); MD, 1951, University of Naples (Italy); electroencephalography and clinical neurophysiology.

Corey, Lawrence * 1977; MD, 1971, University of Michigan; laboratory medicine: diagnosis, therapy, and pathogenesis of viral infections, AIDS virus.

Coyle, Marie B. * 1973; PhD, 1965, Kansas State University; DNA probes and GLC for rapid identification of mycobacteria and corynebacteria.

Detter, James C. * 1970; MD, 1962, University of Kansas; laboratory diagnosis of genetic disorders, red-cell disorders and laboratory instrumentation.

Gilliland, Bruce C. * 1970; MD, 1960, Northwestern University; rheumatology/immunology.

Kaplan, Alex 1960, (Emeritus); PhD, 1936, University of California (Berkeley); clinical chemistry.

Kenny, Margaret * 1970; PhD, 1968, University of Illinois; clinical chemistry, new technologies for *in vivo* clinical biochemical analysis.

Labbe, Robert F. * 1957, (Emeritus); PhD, 1951, Oregon State University; porphyrin disorders, nutritional biochemistry.

Plorde, James J. * 1982; MD, 1959, University of Minnesota; infectious diseases, antibiotic-resistant nosocomial infections.

Raisys, Vidmantas A. * 1971; PhD, 1969, State University of New York (Buffalo); clinical toxicology, therapeutic drug monitoring.

Schmer, Gottfried * 1970; MD, 1956, University of Vienna (Austria); synthesis of artificial organs, molecular engineering of antitumor enzymes.

Schoenknecht, Fritz D. * 1967; MD, 1957, Freie University of Berlin (Germany); clinical microbiology, nosocomial infections, *in vitro* antibiotic action.

Strandjord, Paul E. * 1969, (Emeritus); MD, 1959, Stanford University; clinical chemistry, leadership and management.

Associate Professors

Ashley, Rhoda L. * 1981; PhD, 1977, University of California (Davis): pathogenesis of viral infections, immune response to herpes, rapid diagnosis.

Bauer, Larry * 1980, (Adjunct); PharmD, 1980, University of Kentucky; clinical pharmacokinetics: drug absorption, distribution, excretion and metabolism in humans.

Chandler, Wayne L. * 1984; MD, 1982, St Louis University; clinical chemistry, clinical coagulation hematology.

Clayson, Kathleen J. * 1969, (Emeritus); MS, 1968, University of Minnesota; enzymology in clinical chemistry.

Delaney, Collene J. * 1975; PhD, 1972, University of Illinois; clinical chemistry, the study of diabetes and alcoholism.

Fine, James S. * 1977; MD, 1972, University of Minnesota; enzymology, medical computer applications.

Fligner, Corinne L. 1984, (Adjunct); MD, 1976, University of New Mexico; autopsy and forensic pathology, fetal and perinatal pathology, forensic toxicology.

Fritsche, Thomas R. * 1981; MD, 1981, University of Minnesota; systematics and ecology of animal parasites; medical microbiology.

Kidd, Pamela G. * 1978; MD, 1971, Baylor University; immunologic and molecular diagnosis of leukemia and lymphoma, AIDS.

Opheim, Kent E. * 1977; PhD, 1973, Cornell University; therapeutic drug monitoring, drug assay development, pediatric clinical chemistry.

Rutledge, Joe C. * 1989; MD, 1976, Vanderbilt University; genetic disease pathology, human embryology, mouse mutagenesis, pediatric chemistry/hematology.

Schiller, Harvey S. * 1982; MD, 1966, Washington University; clinical chemistry, hematology, interpretation of laboratory data.

Tait, Jonathan F. *. 1985; MD, 1983, Washington University; biochemistry of blood coagulation, laboratory diagnosis of genetic disorders.

Wener, Mark H. * 1981; MD, 1974, Washington University; diagnostic immunology, immune complex diseases.

Assistant Professors

Astion, Michael L. 1993; PhD, 1989, University of Pennsylvania; neural networks, multimedia computer-aided tutorials, immunology.

Behrens, Joyce A. 1971; MS, 1971, University of Minnesota; clinical hematology and clinical coagulation methodologies.

Cone, Richard W. 1987; MD, 1983, University of Cincinnati; viral nucleic detection for diagnosis, viral tumor genesis.

Cookson, Brad 1993, (Acting); MD, 1991, Washington University; molecular biology and biochemistry, microbial pathogens.

Coombs, Robert W. * 1988; MD, 1981, Dalhousie University (Canada); diagnosis and pathogenesis of HIV infection.

Gretch, David R. 1993; PhD, 1990, University of Iowa; research and diagnostics related to viral hepatitis.

Le Crone, Carol N. * 1967; MS, 1966, Colorado State University; hematology, hemoglobinopathies.

McGonagle, Lee Anne 1969; MPH, 1969, University of Michigan; clinical microbiology, procedures for diagnostic bacteriology.

Sabath, Daniel E. * 1989; PhD, 1989, University of Pennsylvania; regulation of gene expression in hematopoietic cells.

Szabo, La Verne 1970, (Emeritus); MS, 1970, University of Washington; general clinical chemistry, heavy metals in clinical chemistry.

Toivola, Pertti T. 1986; PhD, 1972, University of Washington; clinical chemistry, immunochemistry, trace metals in clinical chemistry.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

LAB M 321 Medical Technology: Introductory Clinical Hematology (6) Behrens, LeCrone Lecturelaboratory coverage of the theoretical and practical concepts associated with cellular morphology, instrumentation, quality control, and selected hematological diagnostic studies. Prerequisite: permission of instructor.

LAB M 322 Medical Technology: Introductory Clinical Chemistry (5) Raisys Lecture and laboratory covering the theoretical and practical concepts associated with testing procedures performed in clinical chemistry. Prerequisite: permission of instructor.

LAB M 418 Topics in Clinical Chemistry (5) Raisys, Toivola Lecture and laboratory exercises covering fundamentals of instrumentation, methodology, and quality control in the clinical chemistry laboratory. Prerequisite: 322, or permission of instructor.

LAB M 419 Clinical Coagulation (3.5) Behrens Lecture and laboratory covering the theory and pathology of coagulation with inclusion of selected diagnostic procedures. Prerequisite: 321 or permission of instructor.

LAB M 420 Clinical Microscopy (3.5) LeCrone Lecture and laboratory covering urinalysis testing procedures and associated disease entities. Analysis of other body fluids. Methods of microscopic examination by use of bright-field; phase, and polarizing microscopy. Prerequisite: permission of instructor.

LAB M 421 Medical Microbiology (1/6) McGonagle Lecture and laboratory coverage of human infections and diagnostic procedures used to isolate, identify, and test the antibiotic susceptibility of the microorganisms associated with disease. Prerequisite: permission of instructor.

LAB M 423 Clinical Chemistry (*, max. 24) Toivola Clinical testing related to protein and amino acid determinations, pancreatic function and intestinal absorption, renal and liver function, enzymes, electrolytes, and acid-base balance, lipids, toxicology, and endocrinology. Prerequisite: permission of instructor.

LAB M 424 Clinical Microbiology (*, max. 24) McGonagle Clinical study of techniques used in the diagnostic microbiology laboratory, including specimen evaluation, culture, identification, and antibiotic susceptibility testing of clinically significant organisms, and quality-control procedures. Prerequisite: permission of instructor.

LAB M 425 Ctinical Hematology (*, max. 24) Behrens Study of procedures used in the clinical hematology and hemostasis laboratories, including cell counting, cellular morphology, tests useful in the diagnosis of red, white, and platelet cell disorders and routine hemostasis. Prerequisite: permission of instructor.

LAB M 426 Clinical Immunohematology (7) LeCrone Clinical study of immunohematology of the red cells and hemagglutination techniques. Prerequisite: permission of instructor.

LAB M 427 Selected Studies in Laboratory Medicine (*, max. 24) Behrens, LeCrone, McGonagle, Raisys, Toivola Selected study, in either one of the major disciplines of laboratory medicine, in all major disciplines of this field, or pursuance of a clinical research problem. Prerequisite: permission of instructor. 370 SCHOOL OF MEDICINE / LABORATORY MEDICINE

LAB M 499 Undergraduate Research (*) Specific project in clinical laboratory investigation. Credit/no credit only.

LAB M 501 Clinical Laboratory Diagnosis (3) Fine Interpretation of diagnostic laboratory testing. Appropriate testing strategies, principles, problems, and limitations. Lectures-discussions and illustrative case presentations and demonstrations. For third- and fourth-year medical students and graduate students. Recommended: HUBIO 560P.

LAB M 502 Laboratory Medicine Grand Rounds (1, max. 6) Detter Grand rounds are concerned with current topics in the field of laboratory medicine. Credit/no credit only.

LAB M 510 Clinical Chemistry Research Conference (1, max. 6) Raisys Ongoing research and development projects in clinical chemistry, as well as reports of advances in clinical chemistry. Open to graduate students in laboratory medicine and other medical sciences. Credit/no credit only. Prerequisite: permission of instructor.

LAB M 520 Seminar in Organization and Management in Laboratory Medicine (3) Core course for the Master of Science degree in laboratory medicine. Prerequisite: graduate student standing in laboratory medicine or permission of instructor. Offered: odd years.

LAB M 521 Advanced Laboratory Hematology (1, max. 6) Detter Lectures on laboratory diagnosis in clinical hematology. Emphasis on clinicopathological correlation. For laboratory medicine graduate students with special interest in diagnostic clinical hematology. Credit/no credit only. Prerequisites: graduate standing and permission of instructor.

LAB M 522 Hematopathology Seminar (2) Kidd Identification of normal lymphocyte and bone marrow subpopulations, diagnosis of leukemias, lymphomas, and benign conditions that resemble them. Emphasis on histopathology, cytochemical and immunological markers. Clinicopathologic correlation. Offered: jointly with PATH 522; even years; W.

LAB M 590P Research Projects in Laboratory Medicine (*) Schmer Opportunity for laboratory experience on a research problem related to laboratory medicine. Students investigate new areas of potential clinical importance. Highly variable selection of projects includes chemistry, coagulation, hematology, immunology, microbiology, virology, and computer applications. Research goals established by instructor in discussion with each student. Prerequisite: permission of instructor.

LAB M 596 Clinical Chemistry Seminar (2) Raisys Conferences on research and development in clinical chemistry. For postdoctoral students in clinical chemistry and graduate students. Prerequisite: permission of instructor.

LAB M601 Internship (3-9, max. 9) Credit/no credit only. Prerequisite: graduate standing in laboratory medicine.

LAB M 680P Clinical Laboratory Testing: Methods and Interpretation (*) Detter Provides the third- and fourth-year medical student with the opportunity to evaluate clinical laboratory data in the clinical laboratory setting. One-on-one teaching using case material and actual clinical samples.

LAB M 700 Master's Thesis (*) Credit/no credit only.

Medical Education

The objectives of the Department of Medical Education are to discover, disseminate, and apply knowledge of educational theory and practice in medical education. Research seeks to increase the basic fund of knowledge in educational theory and practice in medical education. Through teaching, the educational knowledge base is transmitted to the faculty, fellows, residents, and students. Through scholarly research, teaching, and service, educational expertise is used to enhance the quality of academic programs in medicine and the health sciences.

MEDED 499 Undergraduate Research (*, max. 12) Scott Investigative research or readings in medical education; topics include clinical reasoning, curriculum development, evaluation, use of computers in medical education, and educational research in medical settings. Credit/no credit only. Prerequisite: permission of instructor.

MEDED 510 Topics in Medical Education Research (2-3) Selected research topics in medical education. Development of skills in critical analysis and production of original research. Optional: 1 additional credit for seminar focusing on application of issues in education practice. Credit/no credit only. Offered: A.

MEDED 520 Teaching Methods in Medical Education (2) Irby Empirical and theoretical merits of different teaching methods as applied to medical education. Structuring and leading group discussions, using questions, organizing and delivering lectures, identifying styles of clinical supervision, providing constructive feedback, and presenting effective clinical demonstrations. Offered: W. MEDED 521 Evaluation of Learning in the Health Sciences (2) Carline Basic issues and methods for evaluation of learning: cognitive performance, psychomotor skills, and reasoning abilities in classroom, laboratory, and clinical settings. Practical applications of instruments such as multiple-choice questions, essays, oral examinations, checklists, rating scales, simulations, and patient management problems. Recommended: 520. Offered: S.

MEDED 522 Research in Medical Education (2) Scott Basic overview of research methods and research design pertinent to educational research immedical education. Development and sequencing of research projects from conceptualization through literature review, proposal development, project implementation, data management, analysis, and write-up. Critical reading of related literature stressed. Offered: A.

MEDED 530 Medical Informatics (3) Cole Survey of the history and current status of computers as used to assist analysis, decision, and judgment in medical care and research. Topics include medical artificial intelligence, clinical data bases, computer aids for medical decision making, bibliographic searching and retrieval, and computers as mimics of the analog world (graphics, sounds).

MEDED 599 Independent Study or Research (*, max. 6) Credit/no credit only.

Medical History and Ethics

Nancy S. Jecker, Graduate Program Coordinator

The Department of Medical History and Ethics offers a program of study leading to the Master of Arts degree in either medical history or medical ethics. An interdisciplinary Ph.D. option in philosophy and medical ethics is offered through the Department of Philosophy in the College of Arts and Sciences.

An undergraduate degree is not offered. Students who desire an undergraduate curriculum emphasizing subject matter in medical history may choose the Program in History of Science, Technology and Medicine offered through the Department of History in the College of Arts and Sciences.

Special Requirements

Applicants for the Master of Arts program must meet requirements for admission to the Graduate School and present a background in either history or philosophy. Additional information concerning acceptable preparation may be obtained by contacting the Graduate Program Coordinator.

Aspirants to the Master of Arts degree are expected to possess proficiency in historical and/or philosophical methods and familiarity with the biomedical sciences. Department requirements include completion of a series of approved upper-division and graduate courses in supporting fields of study; demonstration of reading knowledge in one foreign language for medical history majors; satisfactory completion of a general examination (written and oral); and submission of an acceptable thesis with oral defense of the thesis. A minimum of three full-time quarters of residency is required, and it is expected that the entire program will be completed within four to six quarters. Current areas of specialization for master's program students include history of medicine; history of health, exercise and sports medicine; and medical ethics.

Admission to the interdisciplinary Ph.D. program option in philosophy and medical ethics is normally subsequent to completion of the Master of Arts degree in medical ethics or philosophy at the University of Washington.

Pearlman, Robert A. * 1981, (Adjunct); MD, 1975, Boston University; gerontology.

Assistant Professor

Diekema, Douglas S. 1993, (Adjunct); MD, 1985, University of North Carolina; pediatric emergency medicine.

Senior Lecturer

McCormick, Thomas R. * 1974; DMin, 1976, Southern Methodist University; biomedical ethics, particularly relating to neonatology, and problems related to death and dying.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

MHE 201 Understanding American Medicine (2) I&S Jonsen, Whorton Survey of the history, sociology and ethics of modern American medicine. Through analysis of its achievements and problems, the student is prepared to make an informed, realistic choice of the profession of medicine. Recommended for students considering a premed curriculum.

MHE 401 Disease and Medicine in History (5) I&S Whorton Examination of impact of epidemic disease on European and American society from late Middle Ages into twentieth century, the development of understanding of causes and mode of spread of infection, and application of that understanding to prevention and treatment of disease. Prerequisites: courses in sciences and/or history.

MHE 402 Normative Ethical Theory (5) I&S Jecker Development of moral thought from Hobbes through Nietzsche, with particular emphasis on the ethical writings of David Hume, Immanuel Kant, and Jeremy Bentham. Recommended: one course in ethics.

MHE 404 Metaethical Theory (5) I&S Jecker Study of major ethical writings in the twentieth century, with principal emphasis on the Anglo-American tradition. Recommended: one course in philosophy.

MHE 419 Science in Civilization: Antiquity to the Scientific Revolution (5) I&S Benson From

preclassical antiquity to the end of the Middle Ages, stressing the growth of scientific ideas, the cultural context in which they take shape, and their relationship to other movements of thought in the history of civilization. Prerequisite: graduate standing.

MHE 421 Science in Civilization: Science in Modern Society (5) I&S Benson Growth of modern science from the Renaissance to the nineteenth century, emphasizing the scientific revolution of the seventeenth century. Development of methodology and the emergence of new fields of interest and new modes of thought. Prerequisite: graduate standing.

MHE 422 History of Evolution Theory (3) I&S Benson Development of evolution theory from its earlynineteenth-century roots through the work of Charles Darwin. Impact of evolution theory on society and the formulation of the theory in the twentieth century.

MHE 424 Modern Biology In Historical Perspective (5) 1&S Benson Two diverse traditions of biology, natural history, and physiology, in their nineteenthcentury development and, their subsequent merging after Darwin's evolution theory. Emergence of specialty areas in biology after the beginning of the twentieth century. Prerequisite: upper-class standing or permission of instructor.

MHE 440 Philosophy of Medicine (5) I&S Jecker Familiarizes students with central issues in the philosophy of medicine. Focuses on the nature of medical knowledge, the connection between theory and observation, the meaning of medical concepts, and the relationship between theories and the world. Prerequisites: some prior course work in philosophy, the history of science, or the history of medicine. Offered: jointly with PHIL 459.

MHE 474 Justice in Health Care (5) I&S Jecker Examination of the ethical problem of allocating scarce medical resources. Emphasis on fundamental principles of justice that support alternative health policies. Recommended: some previous background in philosophy or medical ethics. Offered: jointly with PHIL 411.

MHE 481 The Pursuit of Health in American Society (5) 1&S Berryman, Whorton Examination of the development of concern for personal health over the past two centuries, and of the evolution of philosophies and practices of health promotion, Emphasis on the influence of both medicine and popular culture on shaping of attitudes towards diet, exercise, dress, sex, and other health behavior.

MHE 483 The Rise and Development of Sports Medicine (3) I&S Berryman Evolution of medical thought related to exercise for good health, training for sport participation, and treatment of sport-related injuries. Begins with ancient period, concludes with present. Development of specialization in sports medicine, sport team physicians, preventive medicine, concepts of fliness and wellness as related to exercise prescription, and sports medicine clinics.

MHE 485 Concepts of the Body in Nineteenth- and Twentieth-Century America (3) I&S Berryman Investigation of ideas relating to corporeal self in nineteenth- and twentieth-century America. Evolution of physical ideals of manliness/femininity, how ideals related to surrounding culture, how different bodily activities developed to realize ideals. Athleticism, physiognomy, beauty contests, body building, decorations, cosmetics, anthropometry, artificial parts.

MHE 497 Medical History and Ethics Special Electives (*)

MHE 498 Undergraduate Thesis (*)

MHE 499 Undergraduate Research (*, max. 5) Investigative work in history of the biomedical sciences.

MHE 500 Seminar in Research Methods (*, max. 6) Emphasis is placed on bibliography and utilization of bibliographic sources. Practice in techniques of organizing and writing history of medicine and ethics. Prerequisite: permission of instructor.

MHE 501 Alternative Approaches to Healing (1) Whorton Philosophies and practices of the major alternative approaches to healing. Historical characterization of alternative medicine accompanied by presentations by practitioners of chiropractic, naturopathic, homeopathic, and traditional Chinese medicine. Recommended: enrollment in medical or other health professional school.

MHE 503 The Historical Background of Modern Medicine (1) Whorton Major elements of thought, practice, and values that have directed the evolution of medicine in Western civilization. Medical culture examined as both an expression and modifier of the culture of its ambient society. Limited to: medical students and others in health professional schools.

MHE 510 Topics in Medical History and Ethics (*, max. 6) Detailed study of topics in medical history and ethics through lectures, seminars, and discussion. Open to majors and graduate students in medicine, the arts and sciences, and others with appropriate background and interest. Prerequisite: permission of instructor.

MHE 511P Medical Ethics (2) Ethics course designed especially for first and second-year medical students. Study of ethical problems arising in clinical setting of medicine, introducing students to philosophical analysis and argument in practical contexts. Seminar-discussion format with readings from contemporary authors.

MHE 512P The Human Face of Medicine (1) McCormick Foundation of human values undergirding medical practice. Images of physician-motivations for medicine; empathy versus detachment in doctorpatient relationship; health for the health-professional--the art of coping; limits of power--when medicine fails to cure; uses/abuses of technology; physician's role in public health issues; the healing process.

MHE 513P Ethical Responsibilities of Medical Practice (2) Provides intensive and practical guidance about management of principal ethical and legal problems that arise in clinical practice: informed consent, confidentiality, decisions regarding life-support, advance directives and surrogate decision-makers, duty to care for indigent and risky patients. Offered on half days over two weeks.

MHE 520 Seminar in the History and Philosophy of Medicine (3) Origins and philosophical foundations of medical sciences. Critical analysis of processes of evaluation and explanation in biomedical sciences. Consideration of evolution and nature of modern biomedical investigation; concepts of life/death, health/ disease; philosophical dimensions of clinical medicine. Open to majors, medical students, arts and sciences graduate students, and others.

MHE 521 The Ethical Challenges of Modern Medicine (3) McCormick Case-study approach to contemporary ethical issues in medicine, utilizing techniques of ethical analysis and argument in examining actual cases arising in our pluralistic culture, where values are often in conflict. Open to graduate and professional students and others with appropriate background.

MHE 522 Ethical Problems Surrounding Death (3) McCormick Issues arising in care and treatment of dying patients and their families, including truthful disclosure, use of life-supports, "euthanasia," coping with death and grief. Intersection of patient and professional values related to care in terminal phase of illness. Open to graduate and professional students and others with appropriate background.

MHE 523 Blomedical Ethics (3) McCormick Selected topics in medical ethics emphasizing methods of ethical reasoning about moral dilemmas and contributions of philosophical theories and principles to

372 SCHOOL OF MEDICINE / MEDICAL HISTORY AND ETHICS

practical problems of medicine. Students provided with opportunities to test their value assumptions and analytical skills. Open to graduate and professional students and others with appropriate background.

MHE 525 Seminar in the History and Philosophy of Biology (3) Tailored to individual interests in certain areas of the history and philosophy of biology. Open to majors and graduate students in medicine, the arts and sciences, and others with appropriate background and interest.

MHE 530 Seminar in the History of American Medicine (3) Selected topics in the development of medicine and public health in the United States. Open to majors and graduate students in medicine and the arts and sciences and to others with appropriate backaround and interest.

MHE 535 Medical Ethics and Jurisprudence (3) Jonsen Relationship between bioethics and law. Review of basic concepts of both disciplines; their theoretical and practical connections. Analysis of principal legal cases and statutes illustrating such issues as informed consent to treatment, foregoing life support, research with human subjects, confidentiality, allocation of health care resources. For graduate and professional students.

MHE 540 Seminar in the History of Health and Physical Exercise (3) Selected topics in the development of medical thought as it relates to exercise, sport, and overall well-being. Open to majors and graduate students in medicine, the arts and sciences, and others with appropriate background and interest. Prerequisite: permission of instructor.

MHE 545 Seminar In Clinical Ethics (3) Jonsen Review of various approaches to analyzing ethical aspects of clinical decisions. Relationship between ethical theories and practical problems. Analysis of important current cases in medical ethics to demonstrate a systematic method of clinical-ethical analysis. Open only to graduate and professional students.

MHE 595- Clinical Ethics Practicum (4-) Students spend one week on each of four clinical services at University of Washington teaching hospitals. Under direction of clinicians, observe patient care activities, participate in care conferences, become familiar with relevant medical and ethical literature. For majors only.

MHE 600 Independent Study or Research (*)

MHE 700 Master's Thesis (*)

Medicine

RR512 University of Washington Medical Center

Active programs in teaching, research, and patient care are carried on at the University of Washington Medical Center, Seattle Veterans Affairs Medical Center, Harborview Medical Center, Pacific Medical Center, the Puget Sound Blood Center, the Northwest Kidney Center, and the Fred Hutchinson Cancer Research Center. Major affiliations for clinical teaching also exist with Providence Medical Center and Swedish Hospital Medical Center. There are many additional affiliations with community hospitals in Seattle, the state of Washington, and the WAMI region. Medical students, interns, medical residents, and postdoctoral research fellows rotate through these various hospitals and participate in the learning experiences offered at each.

1.

Faculty

Chairperson Paul G. Ramsev

Professors

Aagaard, George N. * 1954, (Emeritus); MD, 1937, University of Minnesota; clinical pharmacology.

Abrass, Christine K. 1984; MD, 1973, Case Western Reserve University; nephrology.

Abrass, Itamar B. 1983; MD, 1966, University of California (San Francisco); gerontology.

Albers, John J. * 1971, (Research); PhD, 1969, University of Illincis; lipoprotein metabolism and pathophysiology.

Albert, Richard K. 1976; MD, 1971, University of Colorado (Denver); respiratory diseases.

Appelbaum, Frederick R. 1978; MD, 1972, Tufts University; oncology.

Baskin, Denis G. * 1979, (Research); PhD, 1969, University of California (Berkeley); histology, cytochemistry, neuroendocrinology.

Beeson, Paul B. 1974, (Emeritus); MD, 1933, McGill University (Canada).

Bierman, Edwin L. * 1962; MD, 1955, Cornell University; metabolism and endocrinology.

Bird, Thomas D. 1976; MD, 1968, Cornell University; neurology.

Bishop, Michael J. 1979, (Adjunct); MD, 1974, University of California (San Diego).

Blagg, Christopher R. 1966; MD, 1954, University of Leeds (UK); nephrology.

Bornstein, Paul * 1967; MD, 1958, New York University; extracellular matrix.

Bremner, William J. 1982; MD, 1969, University of Washington; endocrinology.

Brown, B. Greg 1981; MD, 1969, Johns Hopkins University; cardiology.

Bruce, Robert A. 1950, (Emeritus); MD, 1943, University of Rochester; cardiology.

Brunzeil, John D. * 1975; MD, 1963, University of Washington; nutritional and metabolic aspects of lipoproteins and diabetes.

Buckner, Clarence D. 1982; MD, 1961, University of Michigan; oncology.

Byers, Peter H. * 1976; MD, 1969, Case Western Reserve University; extracellular matrix synthesis, genetic disorders of collagen metabolism, secretion.

Caldwell, James H. 1983; MD, 1970, University of Missouri; cardiology.

Carithers, Robert L. 1990; MD, 1969, University of Pennsylvania; gastroenterology/hepatology.

Chait, Alan * 1977; MD, 1974, University of Capetown (South Africa); clinical nutrition with special emphasis on lipid metabolism.

Chatrian, Gian E. 1959, (Emeritus); MD, 1951, University of Naples (Italy); electroencephalography and clinical neurophysiology.

Cheever, Martin A. 1974; MD, 1970, University of Michigan; oncology.

Chesnut, Charles * 1974; MD, 1966, University of Florida; nuclear medicine.

Cobb, Leonard A. 1957, (Emeritus); MD, 1952, University of Minnesota; cardiology.

Collins, Steven J. 1980; MD, 1973, Columbia University; oncology.

Copass, Michael K. 1971; MD, 1964, Northwestern University; neurology/emergency medicine.

Corey, Lawrence * 1977, (Adjunct); MD, 1971, University of Michigan; laboratory medicine: diagnosis, therapy, and pathogenesis of viral infections, AIDS virus.

Counts, Richard B. 1973; MD, 1967, Washington University; hematology.

Couser, William G. 1982; MD, 1965, Harvard University; nephrology.

Cowan, Marie J. * 1977, (Adjunct); PhD, 1979, University of Washington; estimation of infarct size by electrocardiography, sudden cardiac death, physiological nursing.

Crill, Wayne E. * 1967; MD, 1962, University of Washington; properties of cortical neurons.

Cummins, Richard 1977; MD, 1972, Case Western Reserve University; emergency medicine.

Dale, Beverly A. * 1972, (Adjunct); PhD, 1968, University of Michigan; keratin biochemistry.

Dale, David C. 1974; MD, 1966, Harvard University; internal medicine.

Deeb, Samir S. * 1986, (Research); PhD, 1964, University of Illinois; genetic factors predisposing to hyperlipidemia and coronary artery disease.

Deyo, Richard A. * 1986; MD, 1975, Pennsylvania State University; health status measurement and evaluation of common medical practices.

Dodge, Harold T. 1969, (Emeritus); MD, 1948, Harvard University; cardiology.

Dorsa, Daniel M. * 1979, (Adjunct); PhD, 1977, University of California (Davis); neuropharmacology, neurochemistry.

Eisenberg, Mickey * 1976; MD, 1971, Case Western Reserve University; sudden cardiac arrest and acute myocardial infarction.

Eliel, Leonard P. 1974, (Emeritus); MD, 1940, Harvard University; metabolism and endocrinology.

Ensinck, John W. * 1961; MDCM, 1956, McGill University (Canada); the role of GI hormones in fuel homeostasis.

Farrell, Donald F. 1971; MD, 1965, George Washington University; neurology.

Fefer, Alexander 1968; MD, 1964, Stanford University; oncology.

Fialkow, Philip J. * 1965; MD, 1960, Tufts University; medical genetics.

Figley, Melvin M. 1958, (Emeritus); MD, 1944, Harvard University.

Finch, Clement A. 1949, (Emeritus); MD, 1941, University of Rochester; hematology.

Fujimoto, Wilfred Y. * 1969; MD, 1965, Johns Hopkins University; metabolism, endocrinology, nutrition.

Furlong, Clement E. * 1977, (Research); PhD, 1968, University of California (Davis); human biochemical genetics in biochemistry of membrane transport systems.

Gartler, Stanley M. * 1957, (Emeritus); PhD, 1952, University of California (Berkeley); mammalian somatic cell genetics with emphasis on the mechanism of xchromosome inactivation.

Gilliland, Bruce C. * 1970; MD, 1960, Northwestern University; rheumatology/immunology.

Glomset, John A. * 1960; MD, 1960, University of Uppsala (Sweden); membrane structure and function.

Goodner, Charles J. * 1962, (Emeritus); MD, 1955, University of Utah; metabolism and endocrinology.

Graham, Michael M. * 1980, (Adjunct); MD, 1976, University of California (San Francisco); positron emission tomography, nuclear medicine.

Greenberg, Philip D. * 1978; MD, 1971, State University of New York (Downstate); molecular, cellular, viral, and tumor immunology.

Greene, H. Leon 1979; MD, 1969, Johns Hopkins University; cardiology.

Haggitt, Rodger C. 1984, (Adjunct); MD, 1967, University of Tennessee; anatomic pathology.

Handsfield, Hunter 1979; MD, 1968, Golumbia University; infectious diseases.

Hansen, John A. 1977; MD, 1970, Stanford University; oncology.

Harlan, John M. 1978; MD, 1973, University of Chicago; hematology, leukocyte-endothelial interaction.

Henderson, Maureen M. * 1975; MBBS, 1949, University of Durham (UK); epidemiology of chronic diseases.

Henderson, William R. 1978; MD, 1973, University of California (San Francisco); allergy and infectious disease.

Hildebrandt, Jacob * 1969; PhD, 1966, University of Washington; respiratory physiology.

Hirschmann, Jan V. 1976; MD, 1970, University of Washington; internal medicine.

Hlastala, Michael P. * 1970; PhD, 1969, State University of New York (Buffalo); respiratory physiology, inert gas analysis of respiratory function.

Holmes, King K. * 1967; MD, 1963, Cornell University; clinical epidemiology and pathogenesis of infectious diseases.

Hood, Leroy E. * 1992, (Adjunct); PhD, 1968, California Institute of Technology; molecular immunology, large scale DNA mapping and sequencing, molecular evolution.

Hudson, Leonard D. 1973; MD, 1964, University of Washington; respiratory diseases.

Jonsen, Albert R. * 1987, (Adjunct); PhD, 1967, Yale University; philosophical, historical values affecting practice and delivery of health care.

Kennedy, J. Ward 1966; MD, 1959, University of Rochester; cardiology.

Kirby, William M. M. 1949, (Emeritus); MD, 1940, Cornell University; infectious disease.

Kiviat, Nancy C. 1978, (Adjunct); MD, 1975, University of Washington; pathology, epidemiology and interrelationships between HIV, HPV, other STDs and malignancy.

Klebanoff, Seymour * 1962; MD, 1951, University of Toronto (Canada); infectious disease.

Knopp, Robert H. * 1974; MD, 1964, Cornell University; metabolism and endocrinology.

Koepsell, Thomas D. * 1979, (Adjunct); MD, 1972, Harvard University; chronic diseases, applying epidemiologic concepts to medical practice.

Koerker, Donna J. * 1970; PhD, 1970, University of Michigan; endocrinology, intermediate metabolism of carbohydrates.

Lakshminarayan, Sambasiva 1977; MBBS, 1965, All-India Institute of Medical Sciences; pulmonary medicine.

Larson, Eric B. * 1977; MD, 1973, Harvard University; internal medicine.

Lee, Sum Ping 1985; MD, 1982, University of Hong Kong; gastroenterology.

Livingston, Robert B. 1982; MD, 1967, University of Oklahoma; oncology.

LoGerfo, James P. * 1974; MD, 1968, University of Rochester, quality-of-care assessment.

Longstreth, William T. 1980; MD, 1975, University of Pennsylvania; neurology.

Mannik, Mart * 1966; MD, 1959, Case Western Reserve University; rheumatology.

Martin, Paul J. 1979; MD, 1974, University of Pennsylvania; oncology.

Martin, Thomas R. 1982; MD, 1979, University of Portland; pulmonary medicine.

Mayer, Jonathan D. * 1977, (Adjunct); PhD, 1977, University of Michigan; medical geography, clinical applications, philosophy. McArthur, James R. 1973; MD, 1956, Harvard University; hematology.

McDonald, George B. 1973; MD, 1967, Washington University; gastroenterology.

Mills, Richard P. 1978, (Adjunct); MD, 1968, Yale University; glaucoma, neuro-ophthalmology.

Monsen, Elaine R. * 1969, (Adjunct); PhD, 1961, University of California (Berkeley); nutrition, dietetics.

Motulsky, Arno G. * 1953; MD, 1947, University of Illinois; medical genetics.

Neiman, Paul E. * 1971; MD, 1964, University of Washington; oncology.

Nelp, Wil B. 1962; MD, 1955, Johns Hopkins University; nuclear medicine.

Odland, George F. 1955, (Emeritus); MD, 1946, Harvard University; dermatology.

Olson, Maynard V. 1992; PhD, 1970, Stanford University; large-scale genome mapping and sequencing.

Omenn, Gilbert S. * 1981; MD, 1965, Harvard University; genetic predisposition to environmental and occupational hazards.

Pagon, Roberta A. 1979, (Adjunct); MD, 1972, Harvard University; ophthalmology, pediatrics.

Palmer, Jerry P. 1973; MD, 1970, State Univ of New York (Upstate Med Ct); metabolism and endocrinology, diabetes.

Papayannopoulou, Thalia P. 1974; MD, 1961, University of Athens (Greece); hematology.

Paulsen, C. Alvin 1959, (Emeritus); MD, 1952, University of Oregon; metabolism and endocrinology.

Pearlman, Alan S. 1978; MD, 1970, Harvard University; cardiology.

Perlmutter, Roger M. * 1984; MD, 1979, Washington University; molecular immunology and the molecular biology of neoplasia.

Pierson, David John 1976; MD, 1969, Johns Hopkins University; respiratory diseases.

Piorde, James J. * 1982; MD, 1959, University of Minnesota; infectious diseases, antibiotic-resistant nosocomial infections.

Pope, Charles E. 1964, (Emeritus); MD, 1957, Case Western Reserve University; gastroenterology.

Porte, Daniel Jr. 1982; MD, 1957, University of Chicago; metabolism and endocrinology.

Preston, Thomas A. 1973; MD, 1962, University of Pennsylvania; cardiology.

Ramsey, Paul G. 1980; MD, 1975, Harvard University; infectious diseases, internal medicine.

Ritchie, James L. 1974; MD, 1967, Case Western Reserve University; cardiology.

Robertson, H. Thomas 1973; MD, 1968, Harvard University; respiratory diseases.

Root, Richard K. 1991; MD, 1963, Johns Hopkins University; infectious diseases.

Rosen, Henry 1977; MD, 1972, University of Rochester; allergy and infectious diseases.

Rosenstock, Linda * 1980; MD, 1977, Johns Hopkins University; occupational/general internal medicine.

Roth, Gerald J. 1984; MD, 1967, Harvard University; hematology.

Rowell, Loring B. * 1962, (Adjunct); PhD, 1962, University of Minnesota; regulation of blood flow, exercise physiology.

Rubin, Cyrus E. 1954, (Emeritus); MD, 1945, Harvard University; gastroenterology.

Sarnat, Harvey B. 1992, (Adjunct); MD, 1966, University of Illinois; neuromuscular diseases, neurodevelopment. Saunders, David R. * 1969; MD, 1957, McGill University (Canada); intestinal absorption, effect of drugs on GI mucosa.

Schuffler, Michael D. 1973; MD, 1966, University of Illinois; gastroenterology.

Schwartz, Stephen Mark * 1974, (Adjunct); MD, 1967, Boston University; vascular biology, atherosclerosis, molecular basis of lineage, developmental biology, cell kinetics.

Scribner, Belding H. 1957, (Emeritus); MD, 1945, Stanford University; nephrology.

Sherrard, Donald J. 1968; MD, 1960, University of Washington; nephrology.

Silverstein, Fred 1973; MD, 1967, Columbia University; gastroenterology.

Simkin, Peter A. 1969; MD, 1961, University of Pennsylvanla; rheumatology.

Slichter, Sherrill J. 1970; MD, 1963, George Washington University; hematology.

Smith, Arnold L. * 1978, (Adjunct); MD, 1964, University of Missouri; infectious disease.

Smith, Charles B. 1991; MD, 1962, Harvard University; infectious diseases.

Spence, Alexander M. 1974; MD, 1965, University of Chicago; neurology.

Stahl, William L. * 1967; PhD, 1963, University of Pittsburgh; neurochemistry of brain ATPase systems.

Stamatoyannopoulos, George 1965; MD, 1958, University of Athens (Greece); medical genetics.

Stamm, Walter E. * 1979; MD, 1971, Harvard University; infectious disease.

Starkebaum, Gordon A. 1978; MD, 1970, Columbia University; rheumatology.

Stevens, Dennis L. 1982; MD, 1971, University of Utah; infectious diseases.

Stewart, Douglas 1972; MD, 1965, Harvard University; cardiology.

Storb, Rainer F. 1976; MD, 1960, University of Freiburg (Germany); oncology.

Stratton, John R. 1982; MD, 1973, Yale University; cardiology.

Sullivan, Keith 1982; MD, 1971, Indiana University; oncology.

Sumi, Mark * 1966; MD, 1956, University of Toronto (Canada); neuropathology, neuromuscular disease, neurode-generative diseases.

Swanson, Phillip D. 1984; MD, 1958, Johns Hopkins University; neurology.

Sybert, Virginia 1979, (Adjunct); MD, 1974, State University of New York (Buffalo); genetics and dermatology.

Thomas, E. Donnall 1963, (Emeritus); MD, 1946, Harvard University; oncology.

Thompson, Arthur R. 1982; MD, 1966, University of Washington; hematology.

Turck, Marvin 1964; MD, 1959, University of Illinois; infectious diseases.

Van Citters, Robert L. * 1962; MD, 1953, University of Kansas; cardiovascular physiology.

Vestal, Robert E. 1977; MD, 1971, University of California (San Francisco); gerontology.

Volwiler, Wade 1949, (Emeritus); MD, 1943, Harvard University; gastroenterology.

Wallace, James F. 1968; MD, 1961, Washington University; internal medicine.

Weaver, W. Douglas 1979; MD, 1971, Tufts University; cardiology.

Woods, Stephen C. * 1972, (Adjunct); PhD, 1970, University of Washington; physiological and conditioned drug effects, neural control of endocrine systems.

Zager, Richard A. 1985; MD, 1969, Northwestern University; nephrology.

Associate Professors

Abkowitz, Janis L. 1983; MD, 1977, Harvard University; hematology.

Ahmad, Suhail 1978; MBBS, 1968, University of Allahabad (India); nephrology.

Aitken, Moira L. 1985; MBChB, 1978, University of Edinburgh (UK); respiratory disease.

Andress, Dennis 1984; MD, 1978, University of Oklahoma; nephrology.

Bardy, Gust H. 1983; MD, 1977, Northwestern University; cardiology.

Barnhart, Scott * 1983; MD, 1979, George Washington University; occupationally related lung disease.

Belcher, Donald W. * 1976; MD, 1962, University of Pennsylvania; ambulatory medicine.

Benedetti, Jacqueline K. * 1980, (Adjunct); PhD, 1974, University of Washington; statistical methodology in infectious disease research, cancer clinical trials.

Bensinger, William I. 1979; MD, 1973, Northwestern University; oncology.

Berk, Bradford Charles 1994; MD, 1981, University of Rochester; cardiology.

Bomsztyk, Karol 1983; MD, 1977, University of Rochester; nephrology.

Boyko, Edward J. * 1989; MD, 1979, University of Pittsburgh; epidemiology of inflammatory bowel disease and non-insulin-dependent diabetes mellitus.

Broudy, Virginia C. 1987; MD, 1980, University of California (San Francisco); hematology.

Buchner, David M. * 1982, (Adjunct); MD, 1977, University of Kansas; geriatric health promotion.

Buchwald, Dedra S. 1987; MD, 1981, University of California (San Diego); internal medicine.

Burke, Wylie 1984; MD, 1978, University of Washington; internal medicine.

Cerqueira, Manuel 1983, (Adjunct); MD, 1976, New York University; cardiology.

Charan, Nirmal B. 1980; MBBS, 1968, Christian Medical College of Ludhiana (India); respiratory disease.

Childs, Marian T. * 1981, (Emeritus); PhD, 1950, University of California (Berkeley); nutrition.

Clark, Joan G. 1985; MD, 1974, Washington University; pulmonary and respiratory disease.

Collier, Ann C. 1985; MD, 1978, Dartmouth College; infectious diseases.

Crawford, Stephen W. 1984; MD, 1978, St Louis University; respiratory disease.

Culver, Bruce H. 1974; MD, 1969, University of Washington; respiratory diseases.

Cusack, Barry J. 1982; MD, 1980, University College of Dublin (Ireland); gerontology.

Davidson, Robert C. 1968, (Emeritus); MD, 1953, University of Washington; nephrology.

Dennis, Melvin B. * 1971, (Adjunct); DVM, 1961, Washington State University; comparative medicine, including animal models and experimental surgery.

Doney, Kristine 1978; MD, 1972, University of Michigan; hematology/oncology.

Dugowson, Carin E. 1979; MD, 1976, University of Illinois; rheumatology.

Farrow, James A. 1979, (Adjunct); MD, 1973, Baylor University; adolescent medicine.

Farwell, Jacqueline R. 1979, (Adjunct); MD, 1972, University of California (San Francisco); child neurology, especially epilepsy; neonatal neurology, brain tumors in children.

Fihn, Stephan * 1979; MD, 1977, St Louis University; internal medicine.

Fleckman, Philip H. 1982; MD, 1973, Washington University; dermatology.

Fleet, Wendell P. 1972; MD, 1965, Creighton University; internal medicine.

Franklin, Gary M. * 1988, (Adjunct Research); MD, 1969, George Washington University; occupational injury, neurological epidemiology, public health nutrition.

Goldberg, Harold I. 1986; MD, 1977, Stanford University; internal medicine.

Griep, Robert J. 1967; MD, 1958, University of Texas (Galveston); internal medicine/radiology.

Hammond, William P. 1978; MD, 1972, Tufts University; hematology.

Hickstein, Dennis D. 1984; MD, 1978, University of Nebraska; hematology.

Hooton, Thomas M. 1982; MD, 1973, University of Texas (Dallas); internal medicine.

Johnson, Richard J. 1986; MD, 1979, University of Minnesota; nephrology.

Kaushansky, Kenneth 1986; MD, 1979, University of California (Los Angeles); hematology.

Kimball, Ann Marie 1992, (Adjunct); MD, 1976, University of Washington; maternal and child health, HIV/ AIDS, international health.

Kimmey, Michael 1982; MD, 1979, Washington University; gastroenterology/endoscopy.

Kreiss, Joan K. * 1984; MD, 1978, Washington University; epidemiology of AIDS, particularly in Africa.

Kudenchuk, Peter J. 1986; MD, 1979, University of Washington; cardiology.

Lehmann, Kenneth G. 1990; MD, 1979, University of California (San Diego); cardiology.

Levine, Douglas S. 1985; MD, 1979, University of Massachusetts; gastroenterology.

Lilly, Michael B. 1989; MD, 1975, Loma Linda University; oncology.

Lindner, Armando 1970; MD, 1964, University of Buenos Aires (Argentina); nephrology.

Linker, David T. 1993; MD, 1976, Stanford University; cardiology.

Lipkin, Edward W. * 1981; MD, 1978, Case Western Reserve University; mineral metabolism, nutrition support, non-human primate physiology.

Lipsky, Benjamin A. 1978; MD, 1973, Cornell University; internal medicine.

Martin, Gary V. 1986; MD, 1980, University of Arizona; cardiology.

Mathews, Meredith W. 1977; MD, 1972, University of Washington; internal medicine.

Matsumoto, Alvin M. 1982; MD, 1975, University of Washington; metabolism and endocrinology.

McMullen, W. Russell 1981; MD, 1978, University of Cincinnati; internal medicine, emergency medicine.

Miller, Richard A. 1983; MD, 1977, Harvard University; infectious diseases.

Milstein, Jerrold M. 1980, (Adjunct); MD, 1964, University of Minnesota; pediatric neurology.

Nguyen, Toan D. 1994; MD, 1978, University of Chicago; gastroenterology.

Nielson, Christopher P. 1983; MD, 1978, University of California (Los Angeles); gerontology and geriatric medicine.

Olerud, John E. **J977**; MD, 1971, University of Washington; dermatology.

Ott Ralph, Susan M. 1982; MD, 1974, University of Washington; nephrology.

Otto, Catherine M. 1984; MD, 1979, University of Washington; cardiology.

Pearlman, Robert A. * 1981; MD, 1975, Boston University; gerontology.

Piepkorn, Michael W. 1991; MD, 1973, University of Minnesota; dermatology.

Press, Oliver W. * 1982; MD, 1979, University of Washington; treatment of hematologic malignancies with monoclonal antibody immunoconjugates.

Price, Thomas H. 1975; MD, 1966, Johns Hopkins University; hematology.

Psaty, Bruce M. * 1986; MD, 1981, Indiana University, cardiovascular disease, coronary heart disease, hypertension, and pharmacoepidemiology.

Raghu, Ganesh 1983; MD, 1974, University of Mysore (India); respiratory disease.

Ralph, David D. 1980; MD, 1972, Stanford University; respiratory diseases.

Raskind, Wendy H. 1982; MD, 1978, University of Washington; medical genetics.

Raugi, Gregory J. 1980; MD, 1975, Duke University; dermatology.

Reid, Brian J. 1985; MD, 1980, University of Washington; gastroenterology.

Sayers, Merlin H. 1979; MBChB, 1968, University of Witwatersrand (South Africa); hematology.

Schoene, Robert B. 1979; MD, 1972, Columbia University; respiratory diseases.

Schubach, William H. 1994; MD, 1974, Columbia University; oncology.

Schwartz, Robert S. * 1982; MD, 1974, Ohio State University; internal medicine and geriatrics.

Shields, Anthony F. 1983; MD, 1979, Harvard University; oncology.

Siscovick, David S. * 1987; MD, 1976, University of Maryland; epidemiology.

Spain, William * 1987; MD, 1977, Columbia University; signal transduction in the central nervous system.

Sparkman, Donal R. 1949, (Emeritus); MD, 1934, University of Pennsylvania.

Stadius, Michael L. 1993; MD, 1978, University of Oregon; cardiology.

Stewart, Patricia S. 1977; MD, 1969, University of West Virginia; oncology.

Surawicz, Christina M. 1978; MD, 1973, University of Kentucky; gastroenterology.

Swenson, Erik R. 1983; MD, 1979, University of California (San Diego); pulmonary medicine.

Tempel, Bruce L. * 1988; PhD, 1983, Princeton University; molecular neurobiology/neurogenetics, especially potassium channel gene structure and function.

Thompson, John A. 1985; MD, 1979, University of Alabama; oncology.

Van Voorhis, Wesley C. * 1986; MD, 1984, Cornell University; infectious diseases.

Weigle, D. Scott 1984; MD, 1978, Harvard University; endocrinology and metabolism.

Wener, Mark H. * 1981; MD, 1974, Washington University; diagnostic immunology, immune complex diseases.

Wijsman, Ellen M. * 1987, (Research); PhD, 1981, University of Wisconsin; human quantitative and population genetics.

Wilensky, Alan J. 1975; MD, 1967, Western Ontario University (Canada); neurology, treatment of epilepsy, testing and use anticonvulsants.

Willson, Richard 1973; MD, 1962, University of Minnesota; gastroenterology.

Witherspoon, Robert P. 1976; MD, 1970, Baylor University; oncology.

Wood, Francis C. * 1960, (Emeritus); MD, 1954, Harvard University; metabolism and endocrinology.

Wood, Robert W. 1977; MD, 1970, University of Rochester; internal medicine.

Assistant Professors

Back, Anthony L. 1991; MD, 1984, Harvard University; oncology.

Beaty, Christopher D. 1991; MD, 1983, University of Vermont; pulmonary and critical care medicine.

Benditt, Joshua O. 1994; MD, 1982, University of Washington; pulmonary and critical care medicine.

Benyunes, Mark C. 1993, (Acting); MD, 1984, Duke University; oncology.

Brodkin, Carl * 1989; MD, 1983, University of Colorado (Denver); hepatic effects of occupational solvent exposure; ventillatory decline in asbestos-exposed workers.

Celum, Connie L. 1987; MD, 1984, University of California (San Francisco); infectious diseases.

Chambers, Joseph W. 1990, (Acting); MD, 1984, Yale University; cardiology.

Chauncey, Thomas R. 1989; MD, 1985, Rush Medical College; oncology.

Coombs, Robert W. * 1988; MD, 1981, Dalhousie University (Canada); diagnosis and pathogenesis of HIV infection.

Crowley, Joseph J. 1989; MD, 1981, Georgetown University; gerontology and pulmonary medicine.

Daniell, William E. * 1984, (Adjunct); MD, 1979, Tufts University; health effects of occupational chemical exposures, multiple chemical sensitivity syndrome.

Davis, Connie 1991; MD, 1980, University of Washington; nephrology.

Dolack, George L. 1987; MD, 1981, University of Washington; cardiology.

Dugdale, David C. 1991; MD, 1982, University of Pennsylvania; general internal medicine.

Egaas, Susan A. 1989; MD, 1985, University of Washington; internal medicine.

Ellis, Georgiana K. 1987; MD, 1982, University of Washington; oncology.

Evans, James P. 1991; MD, 1984, University of Kansas; medical genetics.

Fishbein, Daniel P. 1988; MD, 1980, Albert Einstein College of Medicine; cardiology.

Francis, Julie S. 1989, (Adjunct); MD, 1984, University of Washington; dermatology.

Galer, Bradley S. 1992, (Acting); MD, 1987, Albert Einstein College of Medicine; neurology.

Gardner, Gregory C. 1989; MD, 1984, Baylor University; rheumatology.

Gauthier, Verlene Joyce 1990; MD, 1977, University of Washington; rheumatology.

Gernsheimer, Terry B. 1993, (Acting); MD, 1979, State University of New York (Stony Brook); hematology.

Glenny, Robb 1990; MD, 1984, University of Virginia; pulmonary and critical care medicine.

Goldbaum, Gary M. * 1989. (Adjunct); MD. 1978, University of Colorado; the epidemiology of human behaviors that increase risk for disease. Goldstein, Erika A. 1990; MD, 1981, University of Rochester; general internal medicine.

Goodman, Richard B. 1989; MD, 1982, University of Oklahoma; pulmonary and critical care medicine.

Gruenewald, David A. 1990, (Acting); MD, 1983, University of Chicago; gerontology and geriatric medicine.

Hansen, R. Scott 1993, (Acting); PhD, 1986, University of Washington; medical genetics.

Higano, Celestia S. 1984; MD, 1979, University of Massachusetts; oncology.

Hirsch, Irl B. 1990; MD, 1984, University of Missouri; metabolism and endocrinology/diabetes.

Holmes, Mark D. 1991, (Acting); MD, 1977, Ohio State University; neurology/EEG.

Huth, Mark M. 1992, (Acting); MD, 1985, Louisiana State University; cardiology:

Jackson, J. Carey 1990, (Acting); MD, 1986, Michigan State University; general internal medicine.

Jobe, Kathleen A. 1989; MD, 1986, University of Colorado (Denver); internal medicine.

Kahn, Steven Emanuel 1988; MBChB, 1978, University of Capetown (South Africa); metabolism and endocrinology.

Kavanagh, Terrance J. * 1985, (Research); PhD, 1985, Michigan State University; biochemical toxicology and free radical damage.

Kay, Mark A. 1993; MD, 1987, Case Western Reserve University; medical genetics.

Keifer, Matthew C. * 1991; MD, 1982, University of Illinois; the human health effects of pesticide exposure.

Kovach, Nicholas L. 1991, (Acting); MD, 1984, Oregon

Health Sciences University; hematology.

Kowdley, Kris V. 1993; MD, 1985, Mt Sinai School of Medicine (New York); gastroenterology.

Lafferty, William E. 1993, (Acting); MD, 1978, University of Kansas; infectious diseases.

Lee, Colin D. 1991, (Acting); MD, 1983, Yale University; cardiology.

Lessler, Daniel 1990, (Adjunct); MD, 1986, Stanford University; physician management and decision-making, pharmacoeconomics.

Levy, Wayne C. 1991, (Acting); MD, 1985, Loma Linda-University; cardiology.

Linenberger, Michael L. 1989; MD, 1982, University of Kansas; hematology.

Marra, Christina M. 1991, (Acting); MD, 1984, Oregon Health Sciences University; neurology.

McCormick, Wayne C. 1990; MD, 1983, Washington University; gerontology and preventative medicine.

McElrath, Margaret Juliana 1990; MD, 1980, Medical University of South Carolina; infectious diseases.

McGee, Steve R. 1987; MD, 1980, Washington University; general internal medicine.

Mengert, Terry J. 1987; MD, 1984, University of Washington; emergency medicine.

O'Brien, Kevin D. 1988, (Acting); MD, 1984, University of Washington; cardiology.

Odland, Peter B. 1990; MD, 1984, Chicago Medical School; dermatologic surgery.

Olson, Carin M. 1994, (Acting); MD, 1978, Ohio State University; general internal medicine.

Paauw, Douglas 1988; MD, 1985, University of Michigan; general internal medicine.

Petersdorf, Stephen H. 1989; MD, 1983, Brown University; oncology.

Poole, Jeanne E. 1985; MD, 1980, University of Washington; cardiology.

Ryan, Caroline A. 1989; MDCM, 1981, McGill University (Canada); infectious disease.

Sasso, Eric H. 1986; MD, 1980, University of California (San Diego); rheumatology.

Schwartz, Michael W. 1989; MD, 1983, Rush Medical College; metabolism and endocrinology.

Sekijima, John 1994; MD, 1983, University of Washington; gastroenterology.

Skerrett, Shawn J. 1986; MD, 1978, New York University; pulmonary and critical care medicine.

Smith, Curtis Scott 1989; MD, 1980, University of Washington; general internal medicine.

Smith, Lynne T. * 1989, (Adjunct Research); PhD, 1985, University of Washington; synthesis and organization of connective tissue in development and in inherited disorders.

Spach, David H. 1992; MD, 1986, Duke University; infectious diseases.

Sugg, Nancy K. 1983; MD, 1983, University of Maryland; internal medicine.

Tyler, Martha L. * 1973, (Adjunct); MN, 1977, University of Washington; oxygenation during chest physiotherapy, suctioning, dyspnea, breathing patterns in disease.

Watkins, Sandra L. 1981, (Adjunct); MD, 1981, University of Texas (Houston); nephrology.

Wipf, Joyce E. 1987; MD, 1984, University of Minnesota; general internal medicine.

Instructor

Forti, Robert L. 1993, (Acting); MD, 1985, Vanderbilt University.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

MED 498 Undergraduate Thesis (*) Prerequisite: permission of department. Offered: AWSpS.

MED 499 Undergraduate Research (*) Case studles, with laboratory research. For medical students. Prerequisite: permission of department. Offered: AWSpS.

MED 505P Preceptorship in Medicine (1) To provide opportunity for first- and second-year medical students to gain personal experience with medical practice situations by being stationed with carefully selected clinical faculty members in their offices. Prerequisite: permission of department. Offered: AWSpS.

MED 530 AIDS: A Multidisciplinary Approach (2) Koutsky, Kreiss Comprehensive overview of the public health, clinical, and laboratory aspects of AIDS. Topics include the pathogenesis, natural history, and management of human immunodeficiency virus (HIV) infections. The impact of AIDS on community and global health care and prospects for prevention and control. Offered; jointly with EPI 530; A.

MED 531P Human Genetics (*) Stamatoyannopoulos Weekly seminar dealing with a variety of topics in medical genetics given by faculty of the Division of Medical Genetics and related departments and divisions. Open to medical students with a good foundation in genetics.

MED 532 Statistical Methods in Medical Genetics (2) Wijsman Theory and application of statistical techniques used in medical genetics. In-depth discussion of linkage and segregation analysis and ascertainment problems. Applications stressed with

reference to assumptions and limitations. Data sets analyzed with current computer programs. Prerequisite: knowledge of genetics or permission of instructor. Offered: jointly with BIOST 532.

MED 533P Clinical Endocrinology (2) Chait Emphasis on the most major and dependable symptoms, signs, laboratory tests, and therapy for clinical endocrinopathies. Patient illustrated. Limited to second-year medical students. Offered: W.

MED 536 Topics in Clinical Neurology (1) Bird, Longstreth, Swanson Lectures are presented on common topics in clinical neurology, such as epilepsy, stroke, coma, drug overdose, dementia, pediatric neurology. neuro-ophthalmological emergencies, headaches, myelopathies, infectious diseases. Offered: S.

CONJ 550P Clinical Infectious Diseases (3) See Conjoint Courses. Offered: W.

CONJ 553P Nutrition for Physicians (2) See Conjoint Courses. Offered: A.

MED 599P Transfusion Machine (3) Counts, Price, Sayers, Slichter Group discussions and didactic sessions cover broad category of transfusion medicine. Hands-on laboratory experience in red cell seriology/ compatibility, coagulation, and histocompatibility with emphasis on diagnosis and management of clinical problems. Based at Puget Sound Blood Center. Prerequisite: fourth-year medical student standing; thirdyear student standing with permission of instructor.

MED 604P Cilinical Preceptorship in Internal Medicine (8) Hamon (Bremerton), Patterson (Friday Harbor), Shima (Forks), Thorson (Longview) Working closely with primary-care physicians, the student is exposed to the private practice of internal medicine in a small community. Operating on a one-to-one basis with an internist, the student evaluates and manages inpatients and outpatients on a primary care, consultative, and emergency basis. Prerequisite: 665P. (Four weeks, full-time.) Offered: AWSpS.

MED 640P Dermatology Clinic (*, max. 5) Olerud Students attend dermatology clinic on Monday mornings and Thursday afternoons for twelve weeks. Two half-days per week. Prerequisite: 665P. Offered: AWSpS.

MED 641P Clinical Gastroenterology (8) Botoman (Virginia Mason Hospital) Combined inpatient-outpatient elective in clinical gastroenterology, which includes practical experience in GI endoscopy and liver biopsy. Directed tutorial work. Prerequisite: 665P. (Four weeks, full-time.) Offered: A.

MED 642P Clinical Oncology (8) Stewart (Fred Hutchinson Cancer Research Center) Students functioning as primary physicians are responsible for the workups and daily care of patients receiving marrow transplants, high-dose chemotherapy or immunotherapy on an intensive-care research ward. Emphasis is on the management and supportive care of patients with pancytopenia and immunosuppression, transplantation biology, cancer chemotherapy, and infectious disease problems. Prerequisite: 665P. (Four weeks.) Offered: AWSpS.

MED 644P Management of Sexually Transmitted Diseases (2) Corey, Handsfield, Holmes, Stamm Instruction and clinical experience in diagnosis, treatment, and management of sexually transmitted diseases. Instruction in genitourinary physical examination skills; relevant laboratory techniques and management of patients with STDs. Prior to the elective, each student must review a packet of didactic materials. Prerequisites: 665P, SURG 665P, and OB GY 665P. Offered: AWSpS.

MED 645P Clinical Gerlatric Medicine (8) Matsumoto Full time spent caring for patients in a half-day outpatient clinic each week, work up and follow inpatients on the geriatric evaluation unit, actively participate in twice-weekly attending and multidisciplinary team rounds, attend weekly conferences of the Division of Gerontology. Prerequisite: 665P. (Limit: one student.) Offered: AWSpS.

MED 646P Clinical Electroencephalography (*, max. 12) Chatrain, Vossler, Wilkus For third- and fourth-year medical students who desire to acquire familiarity with the techniques, interpretive criteria, and clinical applications of electroencephalography, longterm EEG-video-audio monitoring, computer-averaged evoked potentials, and other clinical neurophysiological techniques. Prerequisites: completion of Human Biology series. Offered: AWSpS.

MED 650P Advanced Medical Genetics (*, max. 5) Stamatoyannopoulos Summer course intended for third-year students who would like to increase their background in specific areas of medical genetics. Involves seeing patients with the instructor, reviewing the literature, analyzing clinical information, and writing a review on a selected topic. Prerequisite: HUBIO 554P. Offered: S.

MED 665P Clinical Clerkship (*, max. 24) Paauw Third-year medical students assume increasing responsibility for care of hospitalized patients in a teaching-hospital setting and participate in a four-week outpatient experience emphasizing continuity of care.. Daily rounds with resident and attending physicians, with lectures and conferences. Progress evaluated by supervising physicians and a written examination. (Twelve weeks, full-time.) Offered: AWSpS.

MED 666P Advanced Clinical Clerkship in Internal Medicine-WAMI (12) Paauw Advanced clinical clerkship in internal medicine in three small urban communities. Supervised, structured experience in dealing with situations commonly encountered by the practicing internist. Continuity of care and the relationship between care given in the ambulatory setting and in the hospital, as well as by other community health services, is emphasized. Prerequisite: 665P. (Six weeks, full time. Limit: six students.) Offered: AWSpS.

CONJ 677P Clinical Allergy and Immunology (*, max. 12) See Conjoint Courses. Offered: AWSpS.

MED 678P Clinical Dermatology (8) Olerud Participation in dermatology clinics and inpatient consultations at University of Washington Medical Center, Harborview Medical Center, Children's Hospital Medical Center, and Veterans Administration Hospital Journal club and clinical conferences each week with entire staff. A continuing series of teaching seminars and weekly dermatopathology conferences. Prerequisite: 665P. (Four weeks.) Offered: AWSpS.

MED 679P Clinical Gastroenterology (8) Saunders Participation in consulting ward rounds, procedures, conferences, and selected clinics with full-time divisional staff at University and Veterans Administration hospitals, and at Pacific and Harborview medical centers, plus directed tutorial work. Prerequisite: 665P. (Four weeks, full-time.) Offered: AWSpS.

MED 660P Rheumatology (8) Mannik Full-time inpatient-outpatient clerkship in rheumatology. Clinical experience provided in diagnosis and treatment of rheumatic diseases, utilizing outpatient clinics and hospitalized patients at the University of Washington Medical Center, Harborview Medical Center, or VAMC. Emphasis on concepts in pathophysiology, diagnosis, and treatment of these diseases. In addition to patient contact, reading, seminars, and preceptorial sessions are the methods of instruction. Prerequisite: 665P. Offered: AWSp.

MED 682P Clinical Cardiology and Electrocardiography (8) Greene (Harborview Medical Center), Eiriksson (Boise Veterans Administration Medical Center), Chamusco (Madigan Hospital Medical Center), Ritchie (Veterans Administration Hospital) Clerkship in clinical cardiology-combined inpatient-outpatient assignments, ECG interpretation. Prerequisite: 665P. (Four weeks.) Offered: AWSpS. MED 683P Clinical Respiratory Disease and Critical Care Medicine (8) *Pierson* Training in respiratory disease diagnosis and pulmonary therapy, with special emphasis on cardiopulmonary function testing and interpretation. Inpatient and outpatient teaching rounds, conferences, and basic science integration. Prerequisite: 665P. (Four weeks.) Offered: AWSpS.

MED 684P Clinical Hematology/Oncology (8) Abkowitz (University of Washington Medical Center), Harlan (Harborview Medical Center), Roth (Veterans Administration Hospital) Outpatient and inpatient experience with hematologic/oncologic disorders. The elective includes teaching rounds, conferences, and evaluation of laboratory work. Prerequisite: 665P. (Four weeks.) Offered: AWSpS.

MED 685P Clinical Genetics (*, max. 24) Bird, Byers, Motulsky, Stamatoyannopoulos Full-time clinical clerkship in medical genetics. Provides extensive exposure to variety of genetic diseases and genetic counseling. Students work in three clinics (Monday, Tuesday, Thursday), response to in-house consultation requests, attend rounds at Children's Hospital and Medical Center and University of Washington Medical Center (Wednesday, Friday). Prerequisite: 665P. Offered: AWSpS.

MED 686P Clinical Neurology (8) Swanson Inpatient and outpatient experience at University of Washington Medical Center, Veterans Administration Hospital, Pacific Medical Center, Harborview Medical Center, Virginia Mason Hospital, American Lake Veterans Administration Hospital, or Children's Hospital and Medical Center. Students attend clinical conferences and seminars with neurology staff and become familiar with diagnostic neurological procedures. Prerequisite: 665P. (Four weeks.) Offered: AWSpS.

MED 687P Ambulatory Medicine Elective (*, max. 12) Goldberg (Harborview Medical Center), Paauw (University of Washington Medical Center) Students acquire knowledge and skill in dealing with ambulatory patients with problems commonly encountered in the office practice of internal medicine. Prerequisite: 665P. (Minimum: two quarters. Limits: five students at University of Washington Medical Center, four students at Harborview Medical Center.) Offered: AWSpS.

MED 688P Ward Medicine Subinternship (*, max. 24) Hammond (Providence), R. Jones (Madigan Hospital Medical Center), McMahon (Anchorage), Robertson (Swedish Hospital Medical Center), Bremner (VAMC) Students act in the capacity of interns on the medical wards under supervision of house staff and visiting physicians. They attend all regular medicine rounds and conferences as their schedules permit. Prerequisite: 665P. (Four or six weeks.) Offered: AWSpS.

MED 689P Clinical Infectious Diseases (8) Kirby (University of Washington Medical Center) Students participate in the consulting service throughout the hospital, attend daily plate rounds, conferences, and seminars. (Four weeks.) Stamm (Harborview Medical Center), Miller (Veterans Administration Hospital) Participate in consulting service throughout hospital to learn microbiological aspects of infectious diseases through the clinical laboratories. Prerequisite: 665P. (Four weeks.) Offered: AWSpS.

MED 690P Cardiology Subinternship (8) Kennedy (University of Washington Medical Center) Students act in the capacity of interns on the cardiology service under the supervision of house officer. Prerequisite: 665P. (Four weeks.) Offered: AWSpS.

MED 691P Primary Care (12) Gardner, Paauw Sixweek, full-time ambulatory care block in primary care internal médicine. Students participate in several clinics at University of Washington Medical Center following a panel of patients in medicine, rheumatology, virology clinics, and spend one day a week at Harborview Medical Center in the acute illness clinic. Prerequisites: 665P and permission of instructor. MED 693P Nephrology and Fluid Balance (8) Couser (University of Washington Medical Center), Zager (Harborview Medical Center), Sherrard (Veterans Administration Hospital) Students see clinical nephrologic problems under close supervision, participate in nephrology and transplant rounds, see consults with renal fellow and attending, and work up patients in renal clinics, participate in seminars with clerks from all three hospitals. Prerequisite: 665P. (Four weeks.) Offered: AWSpS.

MED 694P Harborview Evening Clinic (2) Goldstein A longitudinal elective for senior medical students who assume primary responsibility for a panel of medical patients in an outpatient clinic. Direct care of patients is supplemented by didactic sessions dealing with issues in ambulatory care. Students are strongly encouraged to participate for four quarters. Prerequisites: 665 and permission of instructor. Offered: AW3pS.

MED 695P Clinical Aspects of Aging (8) McCormick (Phoenix Rehabilitation Center and Harborview Medical Center) Work with elderly patients as subintern with Senior Care Program. Inpatient and ambulatory setting in nursing homes and patients' homes. Interdisciplinary approach. Prerequisite: 665P. Offered: AWSDS.

MED 697P Medicine Special Electives (*, max. 24) Paauw Special clerkship, extenship, or research opportunities that can at times be made available at institutions other than University of Washington. Faculty can advise students of opportunities. Students wishing to elect this course should obtain from Dean's office a special assignment form at least three months before preregistration. Prerequisite: permission of department. (Two, four, six, or twelve weeks.) Offered: AWSpS.

Microbiology

G315 Health Sciences

Microbiology is a natural science that deals with cellular and acellular forms of life including bacteria, fungi, protozoa, algae, and viruses. It is concerned with the nature and properties of these entities, their effects on humans and the environment, and how they can be exploited to provide useful products.

Undergraduate Program

Bachelor of Science Degree

Admission Requirements: A minimum of 75 credits applicable to graduation, with an overall GPA of 2.25 in prerequisite chemistry and biology courses. Students should complete departmental requirements in biology and chemistry (inorganic and organic) before applying for admission.

Major Requirements: minimum 90 credits in the biological, physical, and mathematical sciences, to include: 10-15 credits in biology, botany, and/or zoology (BIOL 201, 202, 203 preferred); 30-31 credits in microbiology courses (MICRO 402, 410, 411, 412, 431, 441, 442, 443, 496, and 445 or 450); 3-13 credits in approved microbiology electives (MICRO 301, 302, 319, 331 cannot be used); 12 credits in inorganic chemistry (normally CHEM 140, 150, 160); 8-12 credits in organic chemistry (CHEM 223, 224; or 237, 238, 239; or 335, 336, 337); 12 credits in physics (PHYS 114, 115, 116; or 121/131, 122/132, 123/133); 5 credits in mathematics (MATH 112 or 124; or Q SCI 381; or STAT 311). Minimum 2.25 cumulative GPA in required and elective microbiology courses used toward graduation requirement. Transfer students must complete at least 20 of the required and elective microbiology credits at the UW.

Graduate Program

The Department of Microbiology offers a graduate program leading to the Doctor of Philosophy degree. Students interested in graduate work should obtain the necessary application forms from the department.

The choice of an adviser and research problem are matters of mutual consent between the student and a faculty member. The course work taken by a graduate student depends to a certain extent upon the student's background and chosen area of specialization, but, in general, courses are chosen from the fields of microbiology, immunology, biochemistry, genetics, and pathobiology. A master's degree program either with or without thesis is available on a very limited basis. An M.S. degree is not necessarily a prerequisite for the Ph.D. degree.

Applicants are evaluated by a committee that considers the student's grades, scores on the Graduate Record Examination, research experience, letters of recommendation, and any other data that might provide an indication of the student's capabilities for success in a career in science.

Students are normally admitted into the graduate program only in autumn quarter, and all application materials should be received by the department no later than the preceding December 31. Graduate Record Examination aptitude scores are required as part of the application, and the examination should be taken no later than October. Three letters of recommendation must also be sent directly to the department.

Students with a variety of academic backgrounds are accepted for graduate study in microbiology, but it is highly desirable that their undergraduate preparation include at least a year of general chemistry and a year of college physics, courses in organic chemistry and quantitative analysis, calculus, one year of biology, and courses in genetics, biochemistry and microbiology.

Students in the Ph.D. program are usually supported by funds from training grants, research grants, or teaching assistantships.

Correspondence and Information

Chairperson

Eugene W. Nester

Professors

Champoux, James J. * 1972; PhD, 1970, Stanford University; DNA replication, tumor virology.

Clark, Edward A. * 1979; PhD, 1977, University of California (Los Angeles); lymphocyte surface molecules, lymphocyte activation and cell communication.

Corey, Lawrence * 1977; MD, 1971, University of Michigan; laboratory medicine: diagnosis, therapy, and pathogenesis of viral infections, AIDS virus.

Coyle, Marie B. * 1973; PhD, 1965, Kansas State University; DNA probes and GLC for rapid identification of mycobacteria and corynebacteria.

Douglas, Howard C. 1941, (Emeritus); PhD, 1949, University of California (Berkely

SCHOOL OF MEDICINE / MICROBIOLOGY 377

Evans, Charles A. 1946, (Emeritus); PhD, 1942, University of Minnesota; microbial flora of human skin.

Floss, Heinz G. * 1987, (Adjunct); PhD, 1961, Technical University of Munich (Germany); bioorganic and natural products chemistry.

Gilliland, Bruce C. * 1970, (Adjunct); MD, 1960, Northwestern University; rheumatology/immunology.

Gordon, Milton * 1959, (Adjunct); PhD, 1953, University of Illinois; molecular basis of plant tumors, control of gene expression in plants.

Greenberg, Philip D. * 1978, (Adjunct); MD, 1971, State University of New York (Downstate); molecular, cellular, viral, and tumor immunology.

Groman, Neal B. * 1950, (Emeritus); PhD, 1950, University of Chicago.

Hakomori, Sen-Iliroh * 1967; MD, 1951, Tohoku Imperial University (Japan); biochemistry and immunology of carbohydrate antigens on malignant and normal cells.

Holmes, King K. * 1967, (Adjunct); MD, 1963, Cornell University; clinical epidemiology and pathogenesis of infectious diseases.

Kenny, George E. * 1961, (Adjunct); PhD, 1961, University of Minnesota; antigenic analysis of mycoplasmas, bacteria, and other organisms.

Klebanoff, Seymour * 1962, (Adjunct); MD, 1951, University of Toronto (Canada); infectious disease.

Linial, Maxine L. * 1982, (Affiliate); PhD, 1970, Tufts University; retrovirology, molecular basis of cancer.

Mannik, Mart * 1966, (Adjunct); MD, 1959, Case Western Reserve University; rheumatology.

Mullins, James 1994; PhD, 1978, University of Minnesota; cell biology and biochemistry.

Nester, Eugene W. * 1962; PhD, 1959, Case Western Reserve University; genetics and biochemistry of bacterial-plant cell interactions, tumorigenesis.

Plorde, James J. * 1982, (Adjunct); MD, 1959, University of Minnesota; infectious diseases, antibiotic-resistant nosocomial infections.

Schoenknecht, Fritz D. * 1967; MD, 1957, Freie University of Berlin (Germany); clinical microbiology, nosocomial infections, *in vitro* antibiotic action.

Sherris, John C. * 1959, (Emeritus); MD, 1950, University of London (UK); medical microbiology, antibiotic action and resistance.

Smith, Arnold L. * 1978, (Adjunct); MD, 1964, University of Missouri; infectious disease.

Staley, James T. * 1971; PhD, 1967, University of California (Davis); freshwater bacteriology, microbial ecology, general microbiology.

Stuart, Kenneth Daniel * 1985, (Adjunct); PhD, 1969, University of Iowa; molecular biology of parasites.

Weiser, Russell S. 1931, (Emeritus); PhD, 1934, Washington University; microbiology and immunology.

Associate Professors

Fritsche, Thomas R. * 1981; MD, 1981, University of Minnesota; systematics and ecology of animal parasites; medical microbiology.

Hu, Shiu-Lok 1988, (Research); PhD, 1978, University of Wisconsin; molecular virology, immunology and vaccine research.

Katze, Michael Gerald * 1987; PhD, 1980, Hahnemann Medical College; regulation of viral gene expression at the translational level.

Lamont, Richard J. * 1988, (Adjunct); PhD, 1985, University of Aberdeen (UK); pathogenic mechanisms and taxonomy of oral bacteria.

Lara, Jimmie Cano * 1972; PhD, 1970, University of California (Riverside); microbial physiology and crytol-

378 SCHOOL OF MEDICINE / MICROBIOLOGY

ogy, sporulation and gas vesicle synthesis and regulation.

Leigh, John A. * 1985; PhD, 1983, University of Illinois; bacterial physiology, biochemistry, genetics, bacteriaplant interactions.

Lory, Stephen * 1984; PhD, 1980, University of California (Los Angeles); biochemistry, genetics of microbial virulence factors.

Moseley, Stephen L. * 1985; PhD, 1981, University of Washington; molecular basis of pathogenesis in *E. coli* diarrhea.

Overbaugh, Julie Maureen * 1988; PhD, 1983, University of Colorado (Boulder); molecular mechanisms of: retroviral pathogenesis/viral gene expression/AIDS.

Rubens, Craig E. * 1984, (Adjunct); MD, 1982, University of Washington; molecular pathogenesis of Group B streptococcal infections in newborn infants.

Vessella, Robert L. 1989, (Adjunct); PhD, 1974, University of Mississippi; tumor markers and immunology.

Wong, Timothy Chee-Hing * 1983; PhD, 1979, University of Texas (Dallas); viral gene expression in chronic infections and oncogenesis.

Assistant Professors

Geballe, Adam 1988, (Affiliate); MD, 1978, Duke University; virology.

Hughes, Kelly T. * 1989; PhD, 1984, University of Utah; genetics, gene regulation, microbial physiology, and metabolism.

Tarr, Phillip I. 1983, (Adjunct); MD, 1980, Yale University; gastroenterology/infectious diseases.

Traxler, Beth A. * 1992; PhD, 1987, Carnegie-Mellon University; bacterial physiology, genetics, and membrane protein biochemistry.

Lecturers

Anderson, Denise G. 1982; MS, 1985, University of Washington; microbiology laboratory teaching.

Barnes, Glover W. * 1969; PhD, 1961, State University of New York (Buffalo); tissue, organ immunology.

Bicknell, Mary 1975; MS, 1962, University of Washington; microbiology laboratory teaching.

Fulton, Janis R. 1983; MS, 1977, Montana State University; microbiology laboratory teaching.

Parkhurst, Dale J. 1959; BS, 1960, University of Washington; microbiology laboratory teaching.

Course Descriptions

Courses for Undergraduates

See page 55 for explanation of course numbers, symbols, and abbreviations.

MICRO 301 General Microbiology (3) NW Acquaints students with microorganisms and their activities. Topics include microbial cell structure and function, metabolism, microbial genetics, and the role of microorganisms in disease, immunity, and other selected applied areas. Prerequisite: two quarters of chemistry; recommended: a course in biological science. Offered: ASpS.

MICRO 302 General Microbiology Laboratory (2) NW Anderson, Bicknell, Fulton Laboratory course primarily for students taking 301. Covers a variety of microbiological techniques, with experiments designed to illustrate major concepts of bacteriology, virology, and immunology. No auditors. Prerequisite: concurrent or previous registration in 301 or permission of instructor. Offered: ASpS.

MICRO 320. Media Preparation (2) NW Parkhurst Practical work in the preparation of culture media. Nutritional requirements of microorganisms and steril-, ization methods are considered. For students expecting to enter vocations involving laboratory work with bacteria. Credit/no credit only. Prerequisites: 301 and 302, or equivalent, and permission of instructor. Offered: ASpS.

MICRO 322 Applied Clinical Microbiology (5) NW Schoenknecht Practical experience in a clinical or public health laboratory; fifteen hours per week. For students majoring in medical microbiology. Three quarters advance sign-up in G315 Health Sciences recommended. Applicants are selected by interview. Prerequisites: 443 and permission of instructor. (Limit: three students.) Offered: AWSp.

MICRO 402 Fundamentals of General Microbiology Laboratory (3) NW Bicknell, Fulton Isolation of a broad range of nonpathogenic bacteria from natural sources, using selective and enrichment techniques, with microscopic and biochemical identification. Related exercises include genetics, quantitation, and growth kinetics. Prerequisite: 410, which may be taken concurrently, or permission of instructor. Offered: ASp.

MICRO 410 Fundamentals of General Microbiology I (3) NW Lara, Nester Survey of the microbial world, metabolism, biosynthesis, regulation, growth, structure, and function. Required for students majoring in microbiology; recommended for students majoring in biology. Prerequisites: BIOL 201, 202, 203, and two quarters of organic chemistry. Offered: A.

MICRO 411 Gene Action (5) NW Hughes, Manoil Molecular genetics: description of fundamental genetic processes such as mutation, repair, genetic exchange, recombination, and gene expression. Use of genetic strategies to analyze complex biological processes. Focuses on prokaryotic organisms. Prerequisites: 410 or CHEM 237. Offered: jointly with GENET 411; W.

MICRO 412 Fundamentals of General Microbiology III (3) NW Leigh Structure, biochemical properties, and genetics of the major groups of prokaryotes. Required for students majoring in microbiology, recommended for students majoring in biology. Prerequisite: 410 or permission of instructor. Offered: Sp.

MICRO 431 Prokaryotic Recombinant DNA Techniques (3) NW Anderson Laboratory course emphasizing concepts and techniques/methodologies in recombinant DNA research employing bacteria and their viruses. Topics and experiments/demonstrations include genomic and plasmid DNA isolation, restriction mapping, cloning, transposon mutagenesis, sequencing, and Western and Southern blotting. No auditors. Prerequisite: 302 or 402 or permission of instructor. Offered: W.

MICRO 435 Microbial Ecology (3) NW Staley Consideration of the various roles that microorganisms, particularly bacteria and cyanobacteria, play in environmental processes. The interrelationships among microorganisms and the effects of the physical, chemical, and biological properties of their environment are discussed and assessed. Prerequisites: 412 or equivalent, or permission of instructor. Offered: 1995; Sp.

MICRO 440 Introductory Bacteriology for Medical Technologists (1) NW Limited introduction to basic microbiology, with focus on structure, metabolism, and genetics of medically important organisms. Prerequisite: medical technology student, or permission of instructor. Offered: A.

MICRO 441 Introduction to Immunology (4) NW Bevan General properties of immune responses; cells and tissues of immune system; lymphocyte activation and specificity; effector mechanisms; immunity to microbes; immunodeficiency and AIDS; autoimmune diseases; transplantation. Prerequisites: BIOL 203, organic chemistry, or permission of instructor, junior standing or above; recommended: biochemistry, cell biology and/or genetics. Offered: jointly with IMMUN 441; A. MICRO 442 Medical Bacteriology (3) NW Fritsche, Hillier, Schoenknecht Medically important bacterial pathogens are discussed in terms of the clinical, therapeutic, and epidemiological aspects of diseases caused by them, molecular mechanisms of pathogenesis and their identification in the clinical laboratory. Laboratory course 443 coordinates. Prerequisites: 441, a prokaryotic cell structure and function course or permission of instructor. Offered: W.

MICRO 443 Medical Microbiology Laboratory (3) NW Coyle, Schoenknecht Required for medical technology students, microbiology majors; elective for medical students. Procedures for isolation and identification of pathogenic bacteria, testing their susceptibility to antibiotics. No auditors. Prerequisites: 441, 442 sequence taken concurrently or HUBIO 521P. Offered: AW.

MICRO 444 Medical Mycology and Parasitology (4) NW Coyle, Fritsche Consideration of medically important fungi and parasites, with emphasis on their biology in relation to disease and its laboratory diagnosis. For medical technology students, microbiology majors, and medical students as an elective. Prerequisites: basic biology. Offered: Sp.

MICRO 445 Medical Virology (2) NW Thouless, Wong An introductory course emphasizing basic understanding of medical virology and viral pathogenesis. The biochemical, replication, host-parasite relationships and pathogenesis of animal viruses are examined. Prerequisite: basic biology; recommended: 441 or permission of instructor. Offered: Sp.

MICRO 450 Molecular Biology of Viruses (3) NW Champoux, Wong Introduction to the molecular biology of viruses and virus-host relationships. Designed for advanced undergraduates and graduate students in the biological sciences. Coverage includes bacterial and animal viruses, with an emphasis on the molecular mechanisms of viral gene expression and regulation. Prerequisites: 410, 411 and/or either GENET 371 or 372. Offered: Sp.

MICRO 495- Honors Undergraduate Research (*-) NW Lara Specific problems in microbiology or immunology. Prerequisite: permission of honors adviser. Offered: AWSpS.

MICRO 496 Undergraduate Library Research (2) NW Lara Introduction to library research and to the microbiological literature. Topics are assigned and supervised by staff members. Credit/no credit only. Prerequisite: permission of instructor; senior standing, desirable. Offered: AWSpS.

MICRO 497 Microbiology Special Electives (*) NW Special clerkships, externships, or research opportunities are occasionally available at institutions other than the University of Washington. Obtain from the Dean's office a special assignment form and contact the Chairperson of the Department of Microbiology at least one month before preregistration. Limited to medical students. Prerequisite: permission of instructor.

MICRO 498 Undergraduate Thesis (*) For medical students. Prerequisite: permission of instructor.

MICRO 499- Undergraduate Laboratory Research (*-) Lara Specific problems in microbiology or immunology. Prerequisite: permission of departmental adviser; senior standing desirable. Credit/no credit only. Offered: AWSpS.

Courses for Graduates Only

MICRO 500 Introduction to Research (*, max. 20) Introduction to research areas of the faculty and the techniques employed in their investigations. Credit/no credit only. Prerequisite: graduate standing in microbiology or permission of instructor. Offered: AWSpS.

MICRO 510 Physiology of Bacteria (3) Traxler Topics of current interest concerning the molecular biology and physiology of bacteria. Prerequisites: 410 and BIOC 440, 441, and 442, or permission of instructor. Offered: 1995, W.

MICRO 518 Microbial Degradation of Toxic Contaminants (3) Herwig, Stensel, Strand Detailed survey of current understanding of microbiology and degradative pathways of industrial organic compounds, pesticides, plastics, oil, and metals. Microbial requirements for bioremediation. Methods of scientific investigation of microbial transformations. Requires basic understanding of metabolism and organic chemistry. Prerequisite: biological science course. Offered: jointly with CEWA/FRM 518; Sp.

MICRO 520 Seminar (1) Credit/no credit only. Offered: AWSp.

MICRO 522 Current Research in Microbiology (1) Weekly student and faculty seminar presentations based on the current literature. Credit/no credit only. Prerequisite: graduate standing in microbiology. Offered: AWSp.

MICRO 525 Cell Surface Membrane in Cell Sociology and Immunology (2) Hakomori Structure and function of cell surface membranes in relation to various immunobiological and pathobiological phenomena, e.g., differentiation, organization, infection, cancer. Prerequisites: BIOC 440, 441, 442, and permission of instructor. Offered: So.

MICRO 527 Genetic Approach to Complex Blological Processes (1) Hughes Current research as it applies to genetic approaches to complex biological processes in the area of microbiology.

MICRO 528 Salmonella Genetics (1) Hughes Review current literature in the area of gene regulation in Salmonella typhimurium and related studies in Escherichia coli. Prerequisite: graduate student standing; advanced undergraduates by permission of instructor.

MICRO 530 Biology and Evolution of Prokaryotes (4) Leigh, Staley Selected eubacterial and archbacterial groups studied. Students enrich, isolate, and characterize their own cultures as part of the laboratory. Prerequisites: 402, 412 or equivalents; open to qualified undergraduates by permission of instructor. Offered: even years; A.

MICRO 532 Seminar In General Microbiology (1, max. 15) Leigh Weekly seminar concerning research topics in the genetics and biochemistry of selected bacteria. Credit/no credit only. Prerequisites: 410, permission of instructor.

MICRO 540 Virology (3) Lecture-seminar course concerning host-viral interactions. Prerequisite: permission of instructor. Offered: alternate years; 1996; W.

MICRO 552 Pathogenic Microbiology (4) Katze, Lory Introduction to concepts and techniques of general microbiology, to major groups of infectious agents affecting the human body, and to mechanisms and models of pathogenesis. Prerequisites: BIOL 201, 202, 203, or equivalent and some basic immunology; for dental students, others by permission of instructor. Offered: Sp.

MICRO 553 Molecular Mechanisms of Bacterial Pathogenesis (3) Lory, Moseley, Rubens Mechanisms of bacterial pathogenesis explored at the molecular, genetic, and cellular levels through selected models as presented in the current scientific literature. Prerequisite: 411 or equivalent. Offered: alternate years; 1995; A.

MICRO 554 Seminar in Molecular and Medical Microbiology (1, max. 15) Lory, Moseley Weekly onehour seminar in which recent advances in molecular biology of microbial pathogenesis or the current research of the participants is presented and discussed critically. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp. MICRO 555 Advanced Clinical Microbiology (2.5) Fritsche, Schoenknecht Attendance at daily plate rounds of the Division of Clinical Microbiology. Designed to increase understanding of clinical microbiological work and its application to the care of the patient. Credit/no credit only. Prerequisites: 443 and permission of instructor. Offered: AWSp.

MICRO 556 Clinical Microbiology Training and Research (*, max. 12) Training in clinical microbiology and applied research. Attendance at daily laboratory rounds in addition to bench-side training and research. For medical students and microbiology graduate students only. Credit/no credit only. Prerequisites: 443 and permission of instructor.

MICRO 560 Research and Journal Club in Retrovirology (1) Linial Weekly research seminar and discussion of literature in areas of retroviral replication and transformation. Prerequisite: graduate or permission of instructor.

MICRO 562 Oncogene and Retrovirus Research Seminar (1) Linial, Overbaugh Weekly discussions of ongoing research related to retroviral replication, retroviral oncogeneses and pathology. Prerequisite: graduate standing or permission of instructor.

MICRO 585 Research in Ceil and Molecular Biology (1, max. 15) Champoux Weekly research seminar. Credit/no credit only. Prerequisite: permission of instructor.

MICRO 599 Topics in Virology (2) Current problems in microbiological or immunological research. Credit/no credit only. Prerequisite: permission of instructor.

MICRO 600 Independent Study or Research (*) Credit/no credit only.

MICRO 700 Master's Thesis (*) Credit/no credit only.

MICRO 800 Doctoral Dissertation (*) Credit/no credit only.

Molecular Biotechnology

The Department of Molecular Biotechnology encompasses a multidisciplinary program that is oriented toward the development of new tools for modern biology and medicine and their application to leadingedge problems in these areas. These tools include the development of new chemistries, instruments, and computer hardware or software for the analysis of DNA and proteins. The department brings together skills from applied mathematics, applied physics, biology, chemistry, computer science, and engineering. Particular areas of expertise include protein chemistry, nucleic acid chemistry, genomics, large-scale DNA mapping and sequencing, and informatics. Areas of particular interest include immune recognition and autoimmune disease, signal transduction, transcriptional control of early development, and human genetics. The department's proposal to offer a Ph.D. degree program is under review by the University. Until this program is established, graduate students interested in working with faculty in the Department of Molecular Biotechnology should apply to the Center for Bioengineering.

Faculty

Chairperson

Leroy E. Hood

Professors

Hood, Leroy E. * 1992; PhD, 1968, California Institute of Technology; molecular immunology, large scale DNA mapping and sequencing, molecular evolution.

Olson, Maynard V. 1992; PhD, 1970, Stanford University; large-scale genome mapping and sequencing.

Trask, Barbara J. * 1992, (Research); PhD, 1985, University of Leiden (Netherlands); *in situ* hybridization, analytical cytogenetics, analysis of large-scale DNA polymorphisms.

van den Engh, Gerrit J. * 1992, (Research); PhD, 1976, University of Leiden (Netherlands); flow cytometry, quantative cytogenetics, instrument design and development.

Associate Professors

Aebersold, Rudolf Hans 1993; PhD, 1983, University of Basel (Switzerland): development of technology for protein analysis, biochemistry of cell internal signaling pathways.

Green, Phil 1994; PhD, 1976, University of California (Berkeley); mathematical and computer methods for genome analysis.

Assistant Professors

Bumgarner, Roger 1992, (Acting); PhD, 1988, University of Arizona; spectroscopy and instrumentation for biotechnology.

Delahunty, Claire 1992, (Acting); PhD, 1987, University of Virginia; DNA diagnostics and forensics.

Goverman, Joan M. 1992; PhD, 1981, University of California (Los Angeles); Immune recognition and tolerance, autoimmunity, T cell development and activation, antibody diversity.

Hunkapiller, Tim * 1992, (Research); PhD, 1992, California Institute of Technology; biological computation.

Kaiser, Robert J. * 1992, (Research); PhD, 1984, California Institute of Technology; flourescence labeling and detection of biopolymers; microscale DNA probe array technology.

Nickerson, Deborah A. * 1992; PhD, 1978, University of Tennessee; automating the identification and typing of human DNA variations, genetic mapping, DNA diagnostics.

Rowen, Lee 1992, (Acting); PhD, 1986, Vanderbilt University; molecular evolution, genomics, large scale mapping and sequencing technology, immunology.

Wang, Kai 1992, (Acting); PhD, 1987, University of Oregon; gene mapping, molecular evolution.

Yates, John R. III * 1992; PhD, 1987, University of Virginia; biological and ion trap mass spectrometry, protein sequencing, oligonucleotide analysis.

Neurological Surgery

700 9th Avenue, Harborview Medical Center

The Department of Neurological Surgery is dedicated to teaching and research in the entire spectrum of diseases of the central and peripheral nervous system. Instruction in this area is provided for medical students and postgraduate physicians.

The department's medical student instruction includes participation in the human biology curriculum as well as in elective basic science and clinical experiences. These are available at Harborview Medical Center, University of Washington Medical Center, Veterans Affairs Medical Center, and Children's Hospital and Medical Center, including the Epilepsy Center at Harborview. The department also has several course offerings correlating research and clinical problems of the nervous system, including the neuroscience research seminar, and clinical and basic science correlates of the epilepsies.

380 SCHOOL OF MEDICINE / NEUROLOGICAL SURGERY

Selected medical students also may elect research experience within the Department of Neurological Surgery. The department research facilities are housed in the Medical Research Tower of the University of Washington Medical Center, at Harborview Hall, at Veterans Affairs Medical Center, and at the Epilepsy Center at Harborview. Investigations are under way at these institutions in many areas of neurophysiology, in behavioral research, in light and electron microscopic examination of the anatomy of the nervous system, in cerebral vascular physiology and in hemo-oncology.

In addition to undergraduate instruction, a fully certified residency program in neurological surgery is available for selected postgraduate physicians. The sevenyear program emphasizes preparation for a career in academic neurosurgery.

Faculty

Chairperson

H. Richard Winn

Professors

Alvord, Ellsworth C. * 1960, (Adjunct); MD, 1946, Cornell University; neuropathology, experimental allergic encephalitis.

Chatrian, Gian E. 1959, (Emeritus); MD, 1951, University of Naples (Italy); electroencephalography and clinical neurophysiology.

Dikmen, Sureyya S. * 1974, (Adjunct); PhD, 1973, University of Washington; neuropsychology.

Dodrill, Carl B. 1973; PhD, 1970, Purdue University; human neuropsychology, epilepsy, EEG and performance, antiepileptic medications and performance.

Fraser, Robert T. * 1976; PhD, 1976, University of Wisconsin; psychology.

Gruss, Joseph S. 1991, (Adjunct); MBChB, 1969, University of Witwatersrand (South Africa); plastic surgery.

Harris, A. Basil 1967; MD, 1954, University of Alabama; neurosurgery, neuroanatomy, microvascular, arteriovenous malformations, epilipsy mechanisms.

Jaffe, Kenneth M. * 1982, (Adjunct); MD, 1975, Harvard University; pediatric rehabilitation, brain injury, neuromuscular diseases, congenital defects, electromyography.

Kelly, William A. 1959, (Emeritus); MD, 1954, University of Cincinnati; neurosurgery, neuroendocrinology.

Lam, Arthur M. 1986; MD, 1974, Western Ontario University (Canada); neuroanesthesia.

Levy, René H. * 1970; PhD, 1970, University of California (San Francisco); pharmacokinetics.

Loeser, John D. 1969; MD, 1961, New York University; pain, neurophysiology.

Maravilla, Kenneth R. 1986; MD, 1970, State University of New York (Brooklyn); neuroradiology.

Mills, Richard P. 1978, (Adjunct); MD, 1968, Yale University; glaucoma, neuro-ophthalmology.

Ojemann, George A. 1966; MD, 1959, University of lowa; neurophysiology, organization of higher functions in brain, language, memory.

Roberts, Theodore S. 1985; MD, 1955, University of Wisconsin; neurological surgery, stereotaxic surgery, pituitary and cerebrovascular disease.

Rubel, Edwin W. * 1986; PhD, 1969, Michigan State University; developmental neurobiology, with special emphasis on vertebrate auditory system development.

Schwartzkroin, Philip A. * 1978; PhD, 1972, Stanford University; mechanisms of cortical excitability.

Shaw, Cheng-Mei * 1963, (Adjunct); MD, 1950, National Taiwan University; neuropathology, immunopathology, neurotoxicology, congenital malformation. Spence, Alexander M. 1974, (Adjunct); MD, 1965, University of Chicago; neurology.

Ward, Arthur A. 1948, (Emeritus); MD, 1942, Yale University; neurological surgery.

Westrum, Lesnick E. * 1966; MD, 1963, University of Washington; neuroanatomy, synaptology, plasticity, olfactory and trigeminal systems, dental pathways.

Winn, H. Richard * 1983; MD, 1968, University of Pennsylvania; physiology of cerebral blood flow regulation.

Associate Professors

Anderson, Gail 1981, (Adjunct); PhD, 1987, University of Washington.

Berger, Mitchel S. 1986; MD, 1979, University of Miami (Florida); neurooncology, pediatric neurosurgery.

Cohen, Wendy A. 1992; MD, 1975, Harvard University; neuroradiology.

Dalley, Robert W. 1987; MD, 1982, University of Utah; neuroradiology.

Domino, Karen B. 1986, (Adjunct); MD, 1978, University of Michigan; neuroanesthesia.

Eskridge, Joseph M. 1987; MD, 1981, University of Louisville; neuroradiology.

Farwell, Jacqueline R. 1979; MD, 1972, University of California (San Francisco); child neurology, especially epilepsy, neonatal neurology, brain tumors in children.

Goodkin, Robert 1987; MD, 1964, Chicago Medical School; neurological surgery.

Grady, M. Sean 1987; MD, 1981, Georgetown University; traumatic brain and spinal cord injury.

Mayberg, Marc R. 1985; MD, 1978, Mayo Medical School; cerebrovascular disease, vasospasms, ultrastructure of cerebral arteries.

Newell, David W. 1982; MD, 1982; Case Western Reserve University; clinical neurosurgery and neurovascular mechanizing of cerebral ischemia.

Ojemann, Linda M. 1974; MD, 1960, University of Illinois; neurology, treatment of epilepsy.

Phillips, Mark H. 1991; PhD, 1982, University of Wisconsin; medical radiation physics.

Temkin, Nancy R. * 1977; PhD, 1976, State University of New York (Buffalo); clinical trials, recovery models, statistical modeling of epileptic phenomena, survival analysis.

Tsuruda, Jay S. 1992; MD, 1981, University of California (San Diego); neuroradiology, research.

Wilensky, Alan J. 1975; MD, 1967, Western Ontario University (Canada); neurology, treatment of epilepsy, testing and use of anticonvulsants.

Assistant Professors

Haynor, David R. 1979, (Adjunct); MD, 1979, Harvard University; neuroradiology.

Kliot, Michel 1990; MD, 1984, Yale University; peripheral nerve injury and diseases, nerve injury/regeneration.

Malouf, Alfred Thomas 1986; PhD, 1983, Johns Hopkins University; neurobiology.

Mayberg, Teresa Slee 1986; MD, 1983, University of Washington.

Stelzer, Keith J. 1990; MD, 1989, University of California (Los Angeles); therapeutic radiology.

Instructors ·

Haglund, Michael M. 1994, (Acting); MD, 1987, University of Washington.

Rostomily, Robert C. 1994, (Acting); MD, 1987, Case Western Reserve University.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

NR 495 Community Rehabilitation of the Neurologically Impaired: Internship (*, max. 5) Fraser, Clemmons Supervised work with a neurologically disabled vocational rehabilitation population within a multidisciplinary vocational rehabilitation population within a multidisciplinary vocational rehabilitation unit. Weekly two-hour seminars on vocational rehabilitation issues. Weekly supervision. Prerequisite: three years experience in general population vocational rehabilitation within a private or public sector agency or equivalent. Offered: AWSpS.

NR 498 Undergraduate Thesis (*) Winn Prerequisite: permission of instructor. Offered: AWSpS.

NR 499 Undergraduate Research (*) Winn Investigation of special problems as an intimate member of the research team in the neurological surgery laboratories. Research to lead to a thesis, if desired. List of projects available on request. Prerequisite: permission of instructor. Offered: AWSpS.

NR 505P Preceptorship In Academic Neurosurgery (1) Winn Opportunity for first- and second-year medical students to observe the research, teaching, and patient-care activities of academic neurosurgery. Prerequisite: permission of instructor. Offered: AWSoS.

CONJ 555P Human Oncology for Fourth-Year Medical Students (2) See Conjoint Courses.

NR 680P Neurological Surgery Clerkship (*, max. 8) Grady, Mayberg Student serves clinical clerkship as an intimate member of the staff, participating in inpatient and outpatient care, both preoperative and postoperative, involving neurological surgery patients. University of Washington Medical Center or a University-affiliated hospital may be selected, subject to approval of the department. Prerequisite: HUBIO 563P. (Four weeks.) Offered: AWSpS.

NR 681P Seizure Clinic Clerkship (2.5) A. Wilensky Initial evaluation and follow-up of patients with seizure disorders. Definition of medical and social problems and drug therapy are stressed. Alternate forms of therapy are considered. Linear follow-up of patients. Limited contact with inpatients. Specialized contact with specific neurologic problem and experience in prolonged follow-up and management planning for a chronic disease. Prerequisites: MED 665P and permission of instructor. Offered: AWSpS.

NR 697P Neurological Surgery Special Electives (*, max. 24) Winn By specific arrangement, for qualified students, special clerkship, externship, or research opportunities can be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of instructor. Offered: AWSpS.

Obstetrics and Gynecology

BB607 Health Sciences

The Department of Obstetrics and Gynecology is involved with teaching, patient care, and research in the areas of normal and abnormal human reproduction: growth and development of the fetus, normal and com-

SCHOOL OF MEDICINE / OBSTETRICS AND GYNECOLOGY 381

plicated obstetrics, and surgical and medical diseases of the female reproductive system, including endocrinology, oncology, infectious disease, psychosocial problems, preventive health care, and ethics.

Walker, Edward A. 1987; MD, 1983, University of Washington.

Instructor

Cheng, Edith Y. 1987, (Acting); MD, 1987, University of Washington; genetics.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

OB GY 498 Undergraduate Thesis (*) Vontver By arrangement.

OB GY 499 Undergraduate Research (*) Vontver Prerequisite: permission of instructor.

OB GY 579P Obstetric and Gynecologic Investigation (*) Vontver The investigation may cover any one of the following fields: toxemias of pregnancy, hormone assays in obstetrics and endocrinology, obstetric and gynecologic oncology, genetics. By arrangement.

OB GY 665P Introduction to Obstetrics and Gynecology, UH-HMC (*, max. 12) Vontver Introductory clerkship providing comprehensive medical care and counseling to female patients. Includes management and delivery of obstetrical patients, diagnosis and management of gynecologic diseases, hospital rounds, outpatient clinics, seminars, tutorial, and community health-care agencies for women. Rotation between UWMC and Harborview Medical Center. Prerequisite: HUBIO 565P. (Six weeks. Limit: six students.)

OB GY 666P Introduction to Obstetrics and Gynecology, Bolse (*, max. 12) Vontver Clerkship equivalent to 665P offered at Boise, Idaho (WAMI). Includes experience in several private physician offices. Prerequisite: HUBIO 565P. (Six weeks. Limit: two students.)

OB GY 667P Introduction to Obstetrics and Gynecology, Madigan (*, max. 12) Vontver Clerkship equivalent to 665P offered at Madigan Army Medical Center, Tacoma. Not offered Summer Quarter. Prerequisite: HUBIO 565P. (Six weeks. Limit: five students.)

OB GY 668P Introduction to Obstetrics and Gynecology, Spokane (12) Vontver Clerkship equivalent to 665P offered at Spokane (WAMI). Includes experience in several private physicians' offices. Prerequisite: HUBIO 565P. (Six weeks. Limit: four students.)

OB GY 669P Introduction to Obstetrics and Gynecology, Swedish (12) Vantver Clerkship equivalent to 665P offered at Swedish Hospital Medical Center, Prerequisite: HUBIO 565P. (Six weeks. Limit: two students.)

OB GY 670P Introduction to Obstetrics and Gynecology, GH-Central (12) Clerkship equivalent to 665P offered at the Central facility of Group Health Cooperative of Puget Sound in Seattle. Students spend time in delivery room, surgery, and clinic, and have a specific preceptor assigned. Prerequisite: HUBIO 565P. (Six weeks. Limit: two students.) OB GY 671P Introduction to Obstetrics and Gynecology, Anchorage (12) Vontver Clerkship equivalent to 665P offered at Anchorage, Alaska (WAMI). Includes experience in several private physicians' offices as well as Providence Hospital and Elmendorf Air Force Base. Prerequisite: HUBIO 565P. (Six weeks. Limit: three students.)

OB GY 672P Introduction to Obstetrics and Gynecology, GH-East (12) Clerkship equivalent to 665P offered at the Eastside facility of Group Health Cooperative of Puget Sound in Redmond. Students spend time in delivery room, surgery, and clinic, and have a specific preceptor assigned. Prerequisite: HUBIO 565P. (Six weeks. Limit: one student.)

OB GY 673P Introduction to Obstetrics and Gynecology, Military, Madigan (12) Clerkship equivalent to 665P offered at Madigan Army Medical Center. Students spend time in delivery room, surgery, and clinic, and have a specific preceptor assigned. Prerequisite: HUBIO 565P. (Six weeks. Limit: two students.)

OB GY 674P Introduction to Obstetrics and Gynecology, Tacoma (12) Clerkship equivalent to 665P offered at Tacoma General Hospital. Prerequisite: HUBIO 465P. (Six weeks. Limit: one students.)

OB GY 681P Gynecological Oncology Subspecialty (8) Vontver Experience in reproductive tract malignancy, chemotherapy, and radiation therapy. Student follows selected patients through primary surgery, recovery, and initial adjuvant treatment, as well as continuing treatment in both clinic and inpatient settings. Prerequisite: basic OB GY Clerkship. (Limit: two students each four weeks.)

OB GY 682P Antenatal High-Risk Obstetrics (8) Vontver Four weeks on high-risk antenatal obstetrics ward and clinic. Students responsible for initial workups, daily laboratory evaluations, continuing care of high-risk antepartum patients. Weekly conference with obstetrics attending; presentation of one or more topics per rotation. Excellent coordination with resident and attending staff required to maintain patient-care continuity. (Limit: two students each four weeks.)

OB GY 684P Endocrinology of Reproduction (*, max. 12) Vontver The biochemistry of steroids. Steroid metabolism as related to clinical problems. Diagnosis and treatment of endocrine disorders. Case studies with special emphasis on modern methods of investigation and assisted reproductive technology. (Limit: one student each four weeks.)

OB GY 685P Obstetrics/Gynecology Preceptorship (*, max. 8) Vontver Close working relationship with physician in private practice of obstetrics and gynecology, including: hospital rounds, surgery, deliveries, and office and business aspects of private practice as individually arranged. Forty hours minimum can be arranged to fit schedule not to exceed 8 credits. Prerequisites: 665P or equivalent and permission of instructor. (Limit: two students.)

OB GY 697P Obstetrics and Gynecology Special Electives (*, max. 24) Vontver By arrangement, for qualified students, special clerkship or research opportunities can sometimes be made available at other institutions. Students wishing this course should obtain special assignment form one month before preregistration. Department evaluates student performance. Prerequisite: permission of instructor.

OB GY 698P Introduction to Obstetrics and Gynecology, Away (*, max. 12) Vontver Clerkship equivalent to 665P, at sites outside the UW/WAMI system (currently includes Everett). By arrangement. A special assignment form must be obtained one month in advance of preregistration. Subject to Dean's Office approval. Department evaluates student performance. Prerequisites: HUBIO 565P; permission of instructor.

382 SCHOOL OF MEDICINE / OPHTHALMOLOGY

Ophthalmology

RR801 University of Washington Medical Center

The Department of Ophthalmology is responsible for the instructional and research programs in diseases of the eye and its adnexae as well as the visual system.

Medical student instruction is provided at all levels, including multiple electives in the clinical years. Graduate physicians are provided with three or four years of residency training at the affiliated hospitals. Post-residency fellowships are offered in the subspecialties of ophthalmology. Patient care is provided under the supervision of full- and part-time faculty physicians at University of Washington Medical Center, Harborview Medical Center, Pacific Medical Center, Veterans Affairs Medical Center, and Children's Hospital and Medical Center.

Clinical research programs relate to eye diseases. Laboratory research encompasses neurophysiology of vision, morphology of the retina and visual system, and biochemistry of ocular tissues. Postdoctoral training is offered in all these disciplines.

Faculty

Chairperson

Robert E. Kalina

Professors

Clark, John I. * 1982, (Adjunct); PhD, 1974, University of Washington.

Hendrickson, Anita E. * 1969; PhD, 1964, University of Washington; neuroanatomy, morphology and development of primate visual system.

Kalina, Robert E. 1967; MD, 1960, University of Minnesota; vitreoretinal diseases.

Kinyoun, James L. 1978; MD, 1971, University of Nebraska; vitreoretinal diseases.

Milam, Ann H. 1974; PhD, 1967, University of Texas, Southwestern; electron microscopy, ophthalmic pathology, retinitis pigmentosa, retinal cell biology.

Mills, Richard P. 1978; MD, 1968, Yale University; glaucoma, neuro-ophthalmology.

Pagon, Roberta A. 1979, (Adjunct); MD, 1972, Harvard University; ophthalmology, pediatrics.

Rodieck, Robert W. 1978; PhD, 1965, University of Sydney (Australia); neurophysiology and visual neurobiology.

Saari, John C. * 1974; PhD, 1970, University of Washington; retinal biochemistry.

Associate Professors

Chuang, Elaine L. 1993; MD, 1979, University of Texas (San Antonio); vitreoretinal diseases, ocular inflammation.

Lindquist, Thomas D. 1987; MD, 1981, University of Medicine & Dentistry of New Jersey; corneal and external disease.

Orcutt, James C. 1982; MD, 1977, University of Colorado (Denver); orbit, oculoplastics, neuro-ophthalmology.

Palczewski, Krzysztof * 1992; PhD, 1986, Technical University of Wroclaw (Poland); visual transduction.

Patton, Dorothy L. 1981, (Adjunct Research); PhD, 1981, University of Washington; infectious disease.

Weiss, Avery H. 1991; MD, 1974, Miami University (Ohio); pediatric ophthalmology, strabismus.

ាល

Assistant Professor

Leen, Martha Motuz 1993; MD, 1988, Brown University; glaucoma, anterior segment surgery.

Instructors

Champer, Robert J. 1993, (Acting); PhD, 1987, Albert Einstein College of Medicine; vitreoretinal deseases.

Gariano, Ray F. 1992, (Acting); PhD, 1988, University of California (San Diego); vitreoretinal diseases.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

OPHTH 498 Undergraduate Thesis (*) Kinyoun (University of Washington Medical Center) Thesisbased research in vision and ophthalmology. Elective. Prerequisite: permission of instructor. (Limit: two.students.)

OPHTH 499 Undergraduate Research (*) Kinyoun (University of Washington Medical Center) Laboratory or clinical research in morphology, biochemistry, immunology, experimental pathology, or clinical studies of the eye and visual system. Prerequisite: permission of instructor. (Limit: two students.)

OPHTH 501P Ophthalmology Preceptorship (1) *Kinyoun* Individualized experiences with one or more of the full-time faculty members of the department covering research, teaching, and patient care. Student observes activities in the clinic, hospital ward, operating room, and research laboratories. Prerequisites: first- and second-year medical student standing and permission of instructor.

OPHTH 681P Ophthalmology Clerkship (4) *Mills* (*Harborview Medical Center*) Students gain experience in the diagnosis and treatment of common ocular disorders. Basic examination techniques, including tonometry, ophthalmoscopy, and biomicroscopy. Students work with an eye pathologist in gross and microscopic examination of surgical and autopsy eyes. Prerequisite: completion of human biology series. (Limit: one student.)

OPHTH 682P Ophthalmology Clerkship (4) *Kramar (Pacific Medical Center)* Student works with a faculty member in the diagnosis and treatment of ocular diseases in both outpatient and inpatient populations. Experience in common ocular disorders is gained, and neurological and other consultations seen. Prerequisite: completion of human biology series. (Limit: one student.)

OPHTH 683P Pediatric Ophthalmology Clerkship (4) Weiss (Children's Hospital and Medical Center) Student examines and observes treatment of children with ocular diseases and learns to differentiate trivial from potentially blinding disorders. Programmed text in general ophthalmology furnished. Prerequisite: completion of human biology series. (Two weeks, fulltime. Limit: one student.)

OPHTH 685P Ophthalmology Clerkship (4) Orcutt (Veterans Administration Hospital) Participation in diagnosis and treatment of medical and surgical ocular disease. Outpatient examinations, inpatient surgery, and neuro-ophthalmologic, retinal, and medical consultations. Basic techniques involved in tonometry, ophthalmoscopy, and biomicroscopy of eye. Prerequisite: completion of human biology series. (Limit: one student.)

OPHTH 686P Ophthalmology Clerkship. (4) Gorman (Group Health Hospital) Diagnosis and treatment of ocular diseases in outpatients. Weekly assignment to Group Health ophthalmologist responsible for the care of walk-in and urgent patients, which may demonstrate findings pertinent to the future practice of primary-care physicians. Examination techniques, including tonometry, ophthalmoscopy, and biomicroscopy. Prerequisite: completion of human biology series. (Limit: one student.)

OPHTH 687P Ophthalmology Clerkship (4) *Kinyoun (University of Washington Medical Center)* Inpatient and outpatient diagnosis and treatment of eye diseases. Subspecialty clinics include cornea, retina, neuro-ophthalmology, glaucoma, contact lenses, and strabismus. Student attends regularly scheduled conferences in ophthalmic basic and clinical science. Prerequisite: completion of human biology series. (Limit: one student.)

OPHTH 688P Ophthalmology Clerkship (8) *Kinyoun, Werner* Four-week externship at Alaska Native Medical Center in Anchorage Opportunity to learn and practice common eye examination techniques, including slit-lamp biomicroscopy, tonometry, and funduscopy. Patients seen three days a week; two days spent in the operating room. Prerequisites: completion of human biology series, fourth-year medical students only.

OPHTH 697P Ophthalmology Special Electives (*, max. 24) *Kinyoun* By specific arrangement, for qualified students, special clerkship, externship, or research opportunities can at times be made available at other institutions. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of instructor.

Orthopaedics

BB1043 University of Washington Medical Center

The Department of Orthopaedics is actively involved in quality patient care, teaching, and research concerning bone and joint problems. Special areas of expertise include foot and ankle, hand and microvascular, hip and knee, arthritis, sports medicine, pediatric orthopaedics, shoulder and elbow, spine, trauma, and tumors.

In addition to providing instruction for medical students, the department provides education at the graduate, residency, and post-residency levels. Selected medical students may elect research experience in the department. A fully approved residency offers opportunities to carry out fundamental and clinical research. Residents may work toward the Master of Science degree by meeting the requirements of the Graduate School and the academic unit offering the degree program.

Faculty

Chairperson

Frederick A. Matsen

Professors

Bigos, Stanley J. 1980; MD, 1975, University of Missouri; orthopaedics, spine.

Chesnut, Charles * 1974, (Adjunct); MD, 1966, University of Florida; nuclear medicine.

Eyre, David R. * 1985; PhD, 1969, University of Leeds (UK); connective tissue biology, collagen chemistry, bone and cartilage metabolism.

Hansen, Sigvard T. 1968; MD, 1961, University of Washington; orthopaedics, foot, ankle and amputations.

Matsen, Frederick A. * 1973; MD, 1968, Baylor University; orthopaedics; bone and joint research; robotics.

SCHOOL OF MEDICINE / ORTHOPAEDICS 383

Sandell, Linda J. * 1987; PhD, 1980, Northwestern University; biochemistry and molecular biology of connective tissue, extracellular matrix molecules.

Simkin, Peter A. 1969, (Adjunct); MD, 1961, University of Pennsylvania; rheumatology.

Smith, Nathan J. * 1965, (Emeritus); MD, 1945, University of Wisconsin; orthopaedics, pediatrics, sports medicine.

Staheli, Lynn T. 1968; MD, 1959, University of Utah; pediatric orthopaedics.

Swiontkowski, Marc F. 1988; MD, 1979, University of Southern California; orthopaedics, traumatology.

Associate Professors

Benirschke, Stephen K. 1985; MD, 1979, Case Western Reserve University; traumatology.

Bruckner, James D. 1984; MD, 1984, Creighton University; orthopaedics, tumor and bone transplantation, limb salvage.

Clark, John M. Jr. 1982; MD, 1976, University of Chicago; orthopaedics, hip and knee arthritis.

Conrad, Ernest U. 1986; MD, 1979, University of Virginia; orthopaedics, tumors and bone transplantation.

Graney, Daniel O. * 1966, (Adjunct); PhD, 1965, University of California (San Francisco); gross anatomy, electron microscopy, intestinal absorption.

Greenlee, Theodore K. 1971; MD, 1959, Northwestern University; general orthopaedics.

Hanel, Douglas Paul 1992; MD, 1977, St Louis University; orthopaedics, hand/microvascular surgery.

Henley, Michael Bradford 1988; MD, 1979, University of Washington; orthopaedics, spine trauma and reconstruction.

Larson, Roger V. 1982; MD, 1973, University of Utah; orthopaedics, anthroscopy, sports medicine and knee ligament reconstruction.

Mosca, Vincent S. 1985; MD, 1978, University of Rochester; pediatric orthopaedics.

Olerud, John E. 1977; MD, 1971, University of Washington; dermatology.

Ott Ralph, Susan M. 1982, (Adjunct); MD, 1974, University of Washington; nephrology.

Raskind, Wendy H. 1982, (Adjunct); MD, 1978, University of Washington; medical genetics.

Richardson, Michael L. 1984, (Adjunct); MD, 1975, Baylor University; bone and joint radiology.

Sangeorzan, Bruce J. 1986; MD, 1981, Wayne State University; orthopaedics, foot, ankle and amputations.

Sidles, John Arthur 1984; PhD, 1983, University of Washington.

Teitz, Carol Claire 1978; MD, 1974, Yale University; orthopaedics, anthroscopy, sports medicine and knee ligament reconstruction.

Tencer, Allan Fred * 1988; PhD, 1981, McGill University (Canada).

Trumble, Thomas E. 1989; MD, 1979, Yale University; orthopaedics, hand and microvascular surgery.

Assistant Professors

Chapman, Jens R. 1990; MD, 1983, Technical University of Munich (Germany); orthopaedics, spine trauma/ reconstruction.

Gardner, Gregory C. 1989, (Adjunct); MD, 1984, Baylor University; rheumatology.

Harryman, Douglas T. 1988; MD, 1979, Virginia Commonwealth University; orthopaedics, shoulder and elbow.

Routt, Milton L. 1988; MD, 1983, University of Texas (Galveston); orthopaedics, traumatology.

Smith, Douglas G. 1989; MD, 1984, University of Chicago; orthopaedics, foot, ankle and amputations.

Vedder, Nicholas 1990; MD, 1981, Case Western Reserve University; case history, plastic and reconstructive surgery.

Lecturer

. •

Rice, Stephen G. 1977; MD, 1974, New York University; pediatrics.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

ORTHP 435 Spine Resource Clinic Elective (2) A four-week course examining musculoskeletal pathology of spine. Introduction to physical and non-physical problems that can block patient's response to treatment and complicate care, outcome. Promotes understanding of role of helping patients identify, act upon options. Prerequisites: physical and occupational therapy students, physician assistants, nurses with at least two years undergraduate work.

ORTHP 494 Athletic Health Care (*, max. 3) Marquardt, Rice Prevention and management of athletic injuries. Basic course for coaches, school nurses, medical students. Responsibilities/liability, preseason screening/prevention techniques, conditioning, equipment nutrition, safety, preparedness, injury recognition, emergency procedures, common injuries, record keeping, communication, athletic health care organization. Laboratories, taping, stretching, athletic firstaid, use of ice. Prerequisite: permission of instructor.

ORTHP 495 Athletic Health Care Administration (3) Organizational management of athletic health-care aspects of operating organized athletic, programs. For health professionals, school or community-based administrators/athletic directors/coaches, universitybased health educators. Overview; generating awareness; needs assessment; educating coaches, student trainers; establishing central training room; standardization of procedures; record keeping; evaluation. Prerequisite: 494 or permission of instructor.

ORTHP 496 Advanced Athletic Health Care (3) Advanced sports medicine course on the prevention and management of athletic injuries. For coaches, school nurses, medical students. Problem-solving and hands-on approach emphasize wellness, conditioning, skills of injury evaluation, steps to recovery through rehabilitation, taping techniques, emergency first aid procedures. Prerequisite: 494 or permission of instructor.

ORTHP 498 Undergraduate Thesis (*) Eyre Student works directly with a preceptor in selecting a suitable area for laboratory or clinical research in the area of orthopaedics, and develops a thesis for recognition. Prerequisites: HUBIO 553P and permission of faculty mentor. (Twelve weeks.) Offered: AWSpS.

ORTHP 499 Undergraduate Research (*) Eyre Investigation of pertinent musculoskeletal problems in the orthopaedic laboratories as part of the research group. Prerequisite: permission of faculty mentor. (Twelve weeks.) Offered: AWSpS.

ORTHP 505P Preceptorship in Orthopaedic Surgery (1) Opportunity for first- and second-year medical students to gain experience with clinical faculty members in the community. Students observe general aspects of private practice from a longitudinal perspective. Prerequisite: permission of department. Offered: AWSpS.

ORTHP 585P Sports Medicine (2) Lectures, patient problem presentations, and seminar discussions to .

explore impact of exercise and sport participation on various body systems. Includes nutritional concerns, biomechanics of certain sports injuries and cardiovascular, pulmonary, and musculoskeletal concerns. Prerequisite: second-year medical student standing. Offered: W.

ORTHP 675P Preceptorship in Orthopaedics (*, max. 4) Anderson Student spends full time with the preceptor during all his or her working day in order to gain a better understanding of the diagnosis and the management of problems of the musculoskeletal system as seen in the private orthopaedic practice. Prerequisites: SURG 665P or HUBIO 553P and permission of department. (Two weeks, full-time.) Offered: AWSpS.

ORTHP 676P Pediatric Orthopaedics (*, max. 3) Staheli Acquaints students with all aspects of musculoskeletal problems in childhood. Didactic conferences and seminars, and opportunities for active participation in both inpatient and outpatient care at Children's Hospital and Medical Center, and correlative anatomy and pathology. Prerequisite: SURG 665P or HUBIO 553P. (Four weeks, full-time.) Offered: AWSpS.

ORTHP 677P Musculoskeletal Trauma (*, max. 8) Anderson, Benirschke, Chapman, Hansen, Henley, Routt, Sangeorzan, Smith Harborview Medical Center. Emergency room, wards, operating room, and outpatient clinics. Instruction in general and special clinics, including hand, hip, foot, and fracture, with emphasis placed on physical examination of the patient. Students take correlative anatomy and pathology. Prerequisites: SURG 665P, HUBIO 553P. (Four weeks, fulltime.) Offered: AWSpS.

ORTHP 678P Musculoskeletal Oncology (8/12) Conrad In-depth experience on musculoskeletal oncology service with primary involvement in Initial evaluation, staging, treatment, and postoperative follow-up of patients with various musculoskeletal malignancies. Elective involves experience in surgical, oncologic, radiologic, and pathologic principles of managing sarcomas. Prerequisite: basic orthopaedic elective or permission of instructor. Offered: AWSpS.

ORTHP 680P General Orthopaedic Clerkship (*, max. 8) Greenlee Veteran's Administration Hospital: structured to provide a basic education in the fundamentals of the musculoskeletal system. Heavy emphasis is placed on the reconstructive alternatives in the treatment of degenerative joint diseases. Prerequisite: completion of HUBIO series; third- and fourth-year students. Enrollment limited to three. Offered: AWSpS.

ORTHP 681P University of Washington Medical Center Orthopaedics (8) Bigos, Clark, Conrad, Harryman, Larson, Teitz, Trumble Orthopaedic subspecialty clerkship at University of Washington Medical Center. Preceptor-based outpatient, inpatient, emergency, or operative orthopaedic care. Students work primarily in one subspecialty area and in one general orthopaedic clinic. For students who plan careers in orthopaedic surgery. Prerequisites: completion of HUBIO series, third- and fourth-year medical students. Offered: AWSpS.

ORTHP 682P Outpatient Orthopaedics (8) Outpatient orthopaedic experience at University of Washington Medical Center. Emphasis on physical exam, diagnosis, radiographic evaluation, and non-operative treatment. Rotation through general orthopaedics as well as all subspecialty areas. For students who plan careers in primary care. Prerequisite: completion of HUBIO series. Offered: AWSpS.

ORTHP 685P Spine Resource Clinic Elective (2) *Bigos* Four-week part-time clerkship examining musculoskeletal pathology of the spine. Introduction to physical and non-physical problems that can block the patient's response to treatment and complicate care and outcome. Promotes understanding of the role of helping patients identify and act upon options. Prerequisite: any level medical student.

384 SCHOOL OF MEDICINE / ORTHOPAEDICS

ORTHP 697P Orthopaedic External Elective (*, max. 12) Anderson Special arrangements can be made for students desiring to take orthopaedic electives at other institutions. Programs generally approved include orthopaedic clerkships at other universities or at large orthopaedic institutes. Prerequisites: HUBIO 553P and permission of department. Offered: AWSpS.

Otolaryngology— Head and Neck Surgery

BB1165 University of Washington Medical Center

The Department of Otolaryngology—Head and Neck Surgery provides clinical care for patients with a broad spectrum of disorders affecting the head and neck region, including the ears, nose, and throat. A major portion of departmental effort is directed toward basic research in the areas of sensorineural hearing disorders, physiology of the larynx, and cancer treatment and rehabilitation. The department supports a number of research fellows and advanced degree candidates, and is responsible for a four-year residency program and for the training of medical students in subjects relevant to the specialty.

Faculty

Chairperson

Ernest A. Weymuller, Jr.

Professors

Donaldson, James A. 1965, (Emeritus); MD, 1954, University of Minnesota; otology.

Duckert, Larry Gene 1978; MD, 1972, University of Minnesota; otology/neurotology.

Gates, George A. 1993; MD, 1959, University of Michigan; otology/neurotology, cochlear implantation.

Kuhl, Patricia K. * 1976, (Adjunct); PhD, 1973, University of Minnesota; speech perception.

Richardson, Mark A. 1980; MD, 1975, Medical University of South Carolina; pediatric otolaryngology/head and neck surgery.

Rubel, Edwin W. * 1986; PhD, 1969, Michigan State University; developmental neurobiology, with special emphasis on vertebrate auditory system development.

Snyder, Jack 1969, (Emeritus); PhD, 1971, University of Washington; audiology.

Spelman, Francis A. * 1961, (Adjunct); PhD, 1975, University of Washington; biophysics of implanted cochlea, bioinstrumentation for primate research.

Stanley, Robert B. 1993; MD, 1976, Duke University; otolaryngology/head and neck surgery, trauma, maxillofacial surgery.

Weymuller, Ernest A. Jr. 1978; MD, 1966, Harvard University; otolaryngology/head and neck surgery, oncology.

Associate Professors

Coltrera, Marc Dante 1986; MD, 1981, Yale University; otolaryngology/head and neck surgery.

Glenn, Michael Gerard 1986; MD, 1981, University of California (San Francisco); otolaryngology/nead and neck surgery, microvascular surgery.

Hillel, Allen D. * 1983; MD, 1976, Stanford University; peripheral nerve physiology after injury, swallowing disorders in neuromuscular disease. Inglis, Andrew F. Jr. 1987; MD, 1981, Medical College of Pennsylvania; pediatric otolaryngology/head and neck surgery.

Makielski, Kathleen H. 1985; MD, 1978, University of Michigan; otolaryngology.

Mayberg, Marc R. 1985, (Adjunct); MD, 1978, Mayo Medical School; cerebrovascular disease, vasospasms, ultrastructure of cerebral arteries.

Norton, Susan J. * 1991; PhD, 1982, University of Washington; normal and non-normal hearing, specifically cochlear mechanics, in humans and animals.

Orcutt, James C. 1982, (Adjunct); MD, 1977, University of Colorado (Denver); orbit, oculoplastics, neuro-oph-thalmology.

Rees, Thomas 1971; PhD, 1972, University of Washington; audiology.

Robinson, Lawrence R. * 1989, (Adjunct); MD, 1982, Baylor University; physiatry.

Schubert, Mark M. * 1974, (Adjunct); DDS, 1974, University of Washington; oral medicine/oral oncology.

Werner, Lynne A. * 1986, (Adjunct); PhD, 1980, Loyola University (Chicago); auditory development, infant psychoacoustics.

Assistant Professors

Murakami, Craig S. 1989; MD, 1983, University of Washington; facial cosmetic and reconstructive surgery.

Pinczower, Eric F. 1991; MD, 1986, University of California (Irvine); otolaryngology/head and neck surgery, facial reconstructive surgery.

Sie, Kathleen C. Y. 1990; MD, 1984, University of Michigan; pediatric otolaryngology/head and neck surgery.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses numbered with a P suffix are not graduate courses and are restricted to medical student enrollment only.

OTOHN 498 Undergraduate Thesis (*) Rubel, Weymuller Student works directly with department faculty in selecting a suitable area for laboratory or clinical research in the area of otolaryngology, and develops a thesis for recognition. Prerequisite: permission of instructor. Offered: AWSpS.

OTOHN 499 Undergraduate Research (*) Rubel, Weymuller Research opportunities offered under direction in the area of otolaryngology. (Twelve weeks.) Offered: AWSpS.

OTOHN 680P Introduction to Clinical Otolaryngology-Head and Neck Surgery (4/8, max. 24) Hillel, Makielski, Richardson, Stanley, Weymuller Introduction to surgical subspecialty of toolaryngology-head and neck surgery. Structured to allow broad introduction to breadth of specialty. Students see patients in clinic, join inpatient rounds, have opportunity to go to operating room. Rotations at UWMC, VAH, HMC, CHMC, PMC/PRV. Prerequisite: human biology series. Recommended: MED 665 or SURG 665. Offered: AWSpS.

OTOHN 683P Otolaryngology-Head and Neck Surgery Externship (*, max. 8) (Madigan Army Medical Center) Individual externship training at outpatient clinic, where visits average twelve hundred per month, supplemented by inpatient assignments. Students may reside at the hospital during externship, using facilities of bachelor officer quarters and hospital mess. Prerequisite: completion of human biology series. (Two or four weeks, full-time.) Recommended: MED or SURG 665. Offered: AWSpS.

. Ч. OTOHN 686P Otolaryngology-Head and Neck Surgery: Medical and Surgical Aspects (*, max. 12) Weymuller Clinical in-depth study for the student whose interest lies in pathology of the head and neck. Reasonable flexibility to arrange course content that provides exposure to all aspects of patient care. Prerequisite: permission of chairman. Recommended: MED or SURG 665. Offered: AWSpS.

OTOHN 697P Otolaryngology-Head and Neck Surgery Special Electives (*, max. 24) Weymuller By specific arrangement. Special clerkship, externship, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of chairman. Offered: AWSpS.

Pathology

C516 Health Sciences

Pathology is both a basic biological science and a specialty of medicine. As a basic science, it deals with the natural history and mechanisms of initiation and expression of disease processes. In its broadest sense, the study of disease encompasses the entire animal and plant kingdoms. The interests of the department focus on diseases of vertebrates, especially of man. The principal aim of the pathologist is to understand disease manifestations and processes in whatever terms are required. Therefore, the techniques of the pathologist range from those of the physicist and physical chemist through those of the physiologist to the realm of the epidemiologist. Present emphasis in the department is on cellular and molecular pathology, environmental pathology, and analysis of disease by methods of cell and molecular biology; recombinant DNA techniques, light and electron microscopy, histochemistry and cytochemistry, analytical biochemistry, cell and organ culture, and immunology.

Graduate Program

Daniel Bowen-Pope, Graduate Program Coordinator

The Department of Pathology offers graduate training in experimental pathology, with an emphasis on the cellular and molecular biological basis of disease, leading to the Doctor of Philosophy degree in experimental pathology. The aim of the graduate program is to train individuals for a career in the scientific investigation of basic disease mechanisms. The program encompasses students and faculty members with diverse interests, which range from investigation of specific disease conditions to the molecular basis of alterations in cell function and of gene expression. Faculty members' interests include the normal and pathological aspects of cardiovascular biology, tumor biology, environmental effects on normal processes, biology of aging, neurobiology, immune response, inflammation and repair, immunopathology and biology of extracellular matrix, as well as fundamental processes that underlie disease, such as regulation of gene expression and protein synthesis, structure and function of oncogenes, viral and nonviral transformation, chromatin structure, mutagenesis and DNA repair, and genetic recombination. The department's graduate faculty comprises forty members, who are located at the Health Sciences Center, Veterans Affairs Medical Center, Harborview Medical Center, Children's Hospital and Medical Center, and Fred Hutchinson Cancer Research Center. More than thirty full-time students are pursuing the Ph.D. degree.

Students in the program are expected to fulfill course work requirements during the first two years. In line with the diversity of faculty members' interests within the department, course requirements are kept to a minimum to provide students with maximum flexibility.

Special Requirements

Prospective candidates are expected to have had undergraduate experience in biology, physics, chemistry, and mathematics and acceptable scores on the Graduate Record Examination, including advanced biology or chemistry. Those wishing to matriculate toward both the M.D. and Ph.D. degrees must gain admission to both the Graduate School and the School of Medicine.

Financial Aid

Funding for students is provided from departmental and University funds, training grants, a variety of institutional fellowships, and research grants of individual faculty members.

Research Facilities

The department emphasizes the cellular and molecular approach to the investigation of the pathogenesis of disease in mammallan species. Special facilities exist for training in electron microscopy; cell, tissue, and organ culture; recombinant DNA techniques; histochemistry and cytochemistry; analytical biochemistry; immunology; and molecular and cell biology.

Correspondence and Information

Graduate Program Coordinator Department of Pathology, SM-30

Residency Training Program

The department supervises an internship and residency training program in anatomic pathology and, jointly with the Department of Laboratory Medicine, in clinical pathology for qualified medical doctors. Persons who complete the residency program are eligible for certification by the American Board of Pathology. Lawrence D. True is the program director.

Correspondence and Information

Professors

Albers, John J. * 1971, (Adjunct Research); PhD, 1969, University of Illinois; lipoprotein metabolism and pathophysiology.

Alvord, Ellsworth C. * 1960; MD, 1946, Cornell University; neuropathology, experimental allergic encephalitis.

Benditt, Earl P. * 1957, (Emeritus); MD, 1941, Harvard University; atherosclerosis, diabetes mellitus, amyloidosis.

Benjamin, Denis R. * 1982; MBChB, 1968, University of Witwatersrand (South Africa); pediatric pathology, hematopathology nutrition, circadian rhythms.

Bowen-Pope, Daniel * 1982; PhD, 1979, University of California (Berkeley); gene regulation, growth factors and receptors.

Brawer, Michael K. 1989, (Adjunct); MD, 1980, University of California (Los Angeles); benign and malignant prostate proliferative disorders.

Byers, Peter H. * 1976; MD, 1969, Case Western Reserve University; extracellular matrix synthesis, genetic disorders of collagen metabolism, secretion. Clowes, Alexander W. 1980, (Adjunct); MD, 1972, Harvard University; general and vascular surgery.

Cowan, Marie J. * 1977, (Adjunct); PhD, 1979, University of Washington; estimation of infarct size by electrocardiography, sudden cardiac death, physiological nursing.

Disteche, Christine M. * 1980; PhD, 1976, University of Liege (Belgium); molecular genetics of sex chromosomes, X inactivation, human and mouse cytogenetics.

Eisen, Harvey * 1986, (Affiliate); PhD, 1967, University of Toronto (Canada); host-parasite interactions, generation of genetic diversity.

Fausto, Nelson 1994; MD, 1960, University of São Paulo (Brazil); liver regeneration, tumor biology, growth factors.

Galloway, Denise A. * 1982, (Research); PhD, 1976, City University of New York; viral pathogenesis and neoplasia.

Gown, Allen M. * 1979; MD, 1975, Albert Einstein College of Medicine; immunocytochemistry, cell differentiation markers in neoplasia, ovarian cancer, melanoma.

Groudine, Mark * 1982, (Adjunct); MD, 1975, University of Pennsylvania; chromatin structure and gene activity in development and transformation.

Haggitt, Rodger C. 1984; MD, 1967, University of Tennessee; anatomic pathology.

Harlan, John M. 1978, (Adjunct); MD, 1973, University of Chicago; hematology, leukocyte-endothelial interaction.

Heilström, Ingegerd * 1966, (Affiliate); DrMed, 1966, Karolinska Institute (Sweden); tumor immunology.

Kiviat, Nancy C. 1978; MD, 1975, University of Washington; pathology, epidemiology and interrelationships between HIV, HPV, other STDs and malignancy.

Landolt, Marsha L. * 1975, (Adjunct); PhD, 1976, George Washington University; fish and shellfish disease.

Loeb, Lawrence A. * 1978; MD, 1961, New York University; DNA replication, cancer and AIDS.

Martin, George * 1957; MD, 1953, University of Washington; somatic cell genetics, pathobiology of aging, Alzheimer's disease.

McDougall, James K. * 1979, (Research); PhD, 1971, University of Birmingham (UK); cell cycle, genetic instability and neoplasia.

Mottet, N. Karle * 1959; MD, 1952, Yale University; effects of trace elements, especially methylmercury and arsenic, on growth and development.

Narayanan, A. Sampath * 1975, (Research); PhD, 1967, University of Madras (India); connective tissue, periodontal disease.

Neiman, Paul E.* 1971, (Adjunct); MD, 1964, University of Washington; oncology.

Norwood, Thomas H. * 1973; MD, 1968, University of Maryland; somatic cell genetics, pathobiology of aging, mitotic cell cycle regulation.

Page, Roy C. * 1967; DDS, 1957, University of Maryland; connective-tissue pathology, chronic inflammation, immunopathology, periodontal disease.

Rabinovitch, Peter S. * 1981; MD, 1979, University of Washington; signal transduction in cellular aging, neoplastic progression, flow cytometry.

Raines, Elaine W. 1977, (Research); MS, 1975, University of California (San Francisco); growth regulatory molecules, vascular cell biology.

Reay, Donald T. 1975; MD, 1963, University of Utah; forensic medicine.

Reichenbach, Dennis D. * 1966; MD, 1958, University of Washington; cardiovascular pathology, myocardial cell injury.

Reidy, Michael A. * 1980; PhD, 1976, Cambridge University (UK); atherosclerosis, smooth muscle cell replication and migration, growth factors and receptors.

Ross, Russell * 1962; PhD, 1962, University of Washington; atherosclerosis, growth factors, inflammation, vascular biology.

Rubin, Cyrus E. 1954, (Emeritus); MD, 1945, Harvard University; gastroenterology.

Sale, George E. 1977; MD, 1968, Stanford University; immunopathology of bone marrow transplantation, graft-versus-host.

Sarnat, Harvey B. 1992, (Adjunct); MD, 1966, University of Illinois; neuromuscular diseases, neurodevelopment.

Schwartz, Stephen Mark * 1974; MD, 1967, Boston University; vascular biology; atherosclerosis, molecular basis of lineage, developmental biology, cell kinetics.

Shaw, Cheng-Mei * 1963; MD, 1950, National Taiwan University; neuropathology, immunopathology, neurotoxicology, congenital malformation.

Shulman, Howard M. 1982; MD, 1971, University of California (Los Angeles); graft-versus-host disease; venocclusive disease of the liver.

Spence, Alexander M. 1974; MD, 1965, University of Chicago; neurology.

Stamatoyannopoulos, George 1965, (Adjunct); MD, 1958, University of Athens (Greece); medical genetics.

Sumi, Mark * 1966; MD, 1956, University of Toronto (Canada); neuropathology, neuromuscular disease, neurodegenerative diseases.

Todaro, George J. * 1983, (Adjunct); MD, 1963, New York University; growth regulation in normal and tumor cells.

Vracko, Rudolf * 1982; MD, 1950, University of Zagreb (Yugoslavia); endocrine pathology, role of basal lamina in tissue repair.

Wight, Thomas * 1978; PhD, 1972, University of New Hampshire; connective tissue biology and pathology, proteoglycans metabolism.

Wolf, Norman S. * 1968; DVM, 1953, Kansas State University; hematopoietic stem cell dynamics and transplantation, aging at the cellular level.

Zakian, Virginia A. * 1982, (Affiliate); PhD, 1975, Yale University; initiation of DNA replication, eukaryotic chromosome structure.

Associate Professors

Alpers, Charles E. 1986; MD, 1978, University of Rochester; clinical and experimental glomerular disease; AIDS in man and experimental simian AIDS.

Chi, Emil Y. * 1972, (Research); PhD, 1973, University of California (Santa Barbara); lung structures and function: mast cell secretion and inflammation.

Eary, Janet F. 1980, (Adjunct); MD, 1980, Michigan State University; nuclear medicine.

Fligner, Corinne L. 1984; MD, 1976, University of New Mexico; autopsy and forensic pathology, fetal and perinatal pathology, forensic toxicology.

Haas, Joel E. * 1977; MD, 1967, University of Pittsburgh; pediatric pathology.

Hackman, Robert C. 1978; MD, 1971, Stanford University; infectious and pulmonary complications in immunocompromised patients.

Kidd, Pamela G. * 1978, (Adjunct); MD, 1971, Baylor University; immunologic and molecular diagnosis of leukernia and lymphoma, AIDS.

386 SCHOOL OF MEDICINE / PATHOLOGY

Kinsella, Michael G. 1991, (Research); PhD, 1978, University of Oregon; cell biology of proteoglycans.

Monnat, Raymond J. Jr. * 1982; MD, 1976, University of Chicago; somatic mutation, somatic cell and molecular genetics.

Myerson, David * 1985; PhD, 1979, Albert Einstein College of Medicine; the pathology of viral disease in humans.

Ott Ralph, Susan M. 1982, (Adjunct); MD, 1974, University of Washington; nephrology.

Patterson, Kathleen 1992; MD, 1976, University of lowa; pediatric pathology.

Piepkorn, Michael W. 1991; PhD, 1980, University of Washington; dermatology.

Qwarnstrom, Eva E. 1991, (Research); PhD, 1984, University of Lund (Sweden); cell matrix interaction, cytokine signaling.

Rosenfeld, Michael E. * 1992, (Adjunct); PhD, 1981, University of Wisconsin; mechanisms of atherogenesis and macrophage gene expression.

Schmidt, Rodney 1987; MD, 1984, University of Washington; surgical pathology, pulmonary pathology, sarcomas, image analysis, electron microscopy.

Siebert, Joseph R. 1986, (Research); PhD, 1985, University of Washington; normal and abnormal growth and development.

Tait, Jonathan F. * 1985, (Adjunct); MD, 1983, Washington University; biochemistry of blood coagulation, laboratory diagnosis of genetic disorders.

Thoming, David R. 1982; MD, 1965, University of Kansas; anatomic pathology, pulmonary pathology, tissue biology, microscopy.

True, Lawrence D. * 1990; MD, 1971, Tulane University; urologic pathology, nuclear aspects of tumor differentiation.

Vessella, Robert L. 1989, (Adjunct); PhD, 1974, University of Mississippi; tumor markers and immunology.

Wiegenstein, Louise M. 1969, (Emeritus); MD, 1946, Tufts University; pathology.

Assistant Professors

Bronner, Mary P. 1993, (Acting); MD, 1989, University of Pennsylvania; gastrointestinal and hepatic pathology, neoplastic progression and transplantation pathology.

Burmer, Glenna C. * 1988, (Affiliate); MD, 1983, University of Washington; molecular events in turnor progression, molecular evolution, diagnostic molecular pathology.

Eriksen, Nils 1952, (Research); PhD, 1944, University of Washington; amyloidosis, Alzheimer's disease.

Fukuchi, Ken-Ichiro 1991, (Research); PhD, 1985, Osaka City University (Japan); Alzheimer's disease, molecular biology of aging.

Giachelli, Cecilia * 1991, (Research); PhD, 1987, University of Washington; adhesion molecules and vascular biology processes.

Grossmann, Angelika * 1985, (Adjunct Research); DVM, 1978, Freie University of Berlin (Germany); immunosenecence in humans and mice; immunotoxicology; transmembrane signaling in T-lymphocytes.

Kapur, Raj P. 1991; MD, 1988, University of Southern California; human embryology, birth defects.

Nochlin, David 1986; MD, 1972, University of Mexico; neuropathology.

Porter, Peggy L. 1991; MD, 1987, University of New Mexico; cytology and breast cancer.

Snow, Alan 1991, (Research); PhD, 1986, Queen's University at Kingston (Canada); proteoglycans in Alzheimer's disease.

Swisshelm, Karen 1980; PhD, 1989, University of Washington; senescence, breast cancer, gene expression, DNA methylation, cytogenetics.

Instructors

Bartelmez, Stephen H. 1988, (Acting); PhD, 1979, University of Glasgow (UK); hematopoietic stem cell biology.

Born, Donald E. 1987, (Acting); MD, 1987, University of Virginia; neutrophins in central nervous system development, brain trauma, epilepsy.

Murry, Charles E. 1989, (Acting); PhD, 1989, Duke University; cardiovascular pathology, atherosclerosis, gene expression, myocardial infarction, gene therapy.

Lecturers

Lee, Ming Jong 1972; MD, 1963, Gunma University (Japan); surgical pathology, anatomical pathology.

Pendergrass, William R. 1991; PhD, 1977, University of Washington; gerontology, *in vitro* senescence, regulation of entry into s-phase.

Seifert, Ronald A. 1981; PhD, 1983, University of Washington; growth factor/receptor structure and function.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

PATH 410 Introduction to Pathology (4) Wolf Study of causes, processes, and effects of important diseases. Combines basic and systemic pathology, Required for students in medical technology, and physical therapy. Prerequisites for other students: MICRO 301 and/or equivalent courses in human anatomy, human physiology, and microbiology, and permission of instructor or adviser on individual or group basis.

PATH 444 General Pathology (4) Page Basic pathologic processes that underlie disease, including cell alterations, genetic and developmental pathology, environmental pathology, neoplasia, immunopathology, inflammation, and infection. Correlates the gross, functional, and biochemical alterations. For secondyear dental students and graduate students. Requires a reasonable grounding in biological and chemical sciences. Prerequisite for nondental and nonpharmacy students: permission of instructor.

PATH 445 Systemic Pathology (3) Survey of pathologic processes affecting organs and systems pertinent to the practice of dentistry. Lectures and demonstrations present a coherent picture of systemic. disease. For first-year dental students, graduate students, and others with a reasonable background in biologic and chemical sciences. Prerequisites: 444 and permission of instructor for nondental students.

PATH 498 Undergraduate Thesis (*) Elective. Prerequisite: permission of instructor.

PATH 499 Undergraduate Research (*) Elective. Prerequisite: permission of instructor.

PATH 500 Molecular Basis of Disease (5) Wight Designed for first and second year graduate students to introduce the concepts of pathology and the modern day approaches to the study of disease. Integrates general and experimental pathology with cellular and molecular biology.

PATH 501 Cellular Response to Injury (3, max. 9) Lecture-seminar. Considerations of current concepts of cellular and subcellular reactions to injury, including neoplasia, as studied by modern techniques of cell biology. Required of all pathology graduate students. Prerequisite: permission of instructor. PATH 502 Inflammation and Repair (2) Lectureseminar; a seminar course dealing with an in-depth examination of the processes involved in inflammation and repair. Credit/no credit only. Prerequisite: permission of instructor. Offered: even years.

PATH 507 Cellular Pathology (2) Emphasis on application of recent developments and techniques in biology to problems of pathology. Series of lectures by eminent visiting scientists with expertise in the area being discussed. Credit/no credit only. Prerequisite: permission of instructor.

CONJ 508 EM Methods and Interpretation (3-5) Holbrook, Wight See Conjoint Courses.

PATH 510 Anatomical Analysis of Disease (*, max. 30) The anatomical features of human disease as revealed at surgery or postmortem by gross examination and light microscopy are correlated with chemical and physiologic changes. Prerequisites: graduate student standing and permission of instructor.

C MED 512 Introduction to the Anatomical Analysis of Animal Disease (5, max. 10) See Comparative Medicine courses.

C MED 514 Comparative Pathology Conference (1, max. 6) See Comparative Medicine courses.

PATH 520 Experimental Pathology Seminar (1) Giachelli Review of current research in various areas of experimental pathology by members of the department and visiting scientists. Credit/no credit only.

CONJ 520 Anatomy and Autopsy (1/2) See Conjoint Courses.

PATH 522 Hematopathology Seminar (2) Kidd Identification of normal lymphocyte and bone marrow subpopulations, diagnosis of leukemias, lymphomas, and benign conditions that resemble them. Emphasis on histopathology, cytochemical and immunological markers. Clinicopathologic correlation. Offered: jointly with LAB M 522; even years.

PATH 530 Human Cytogenetics (*, max. 4) Disteche Sources and methods of preparation and identification of human chromosomes. Molecular structure and mapping of chromosomes. Human cytogenetic pathology: karyotype-phenotype interactions, chromosome breakage, and cancer cytogenetics. Prerequisite: permission of instructor. Offered: odd years.

PATH 535 Fundamentals of Human Disease (*, max. 20) Students study human pathology through participation in the autopsy service under direct supervision of a faculty member. They analyze the histologic, cellular, and biochemical aspects of selected cases, and present their observations in weekly seminars. Prerequisites: 444 or 555 and permission of course director: graduate students only.

PATH 551 Experimental and Molecular Pathology (2-5, max. 20) Byers, Wight Introduction to experimental pathology. A tutorial course designed to introduce a graduate student (medical, dental) or senior undergraduate to selected methods and problems through literature surveys and/or laboratory experience. Exploration of causes at the cellular and molecular levels in the study of disease is emphasized. Prerequisite: permission of instructor.

PATH 552 Contemporary Anatomic Pathology (2-5, max. 30) Study of recent developments in anatomic pathology. Subject includes areas of basic science and review of systemic pathology. Recent developments and interpretation of these findings are stressed. For pathology residents, fellows, and trainees. Credit/ no credit only. Prerequisite: permission of instructor.

PATH 555 Environmental Pathology (3) Monnat. Modern morphologic, cell biological, and molecular approaches to environmental disease associated with exposure/predisposition. Lectures, seminar discussion, and student presentations. Prerequisites: 410 or

444 or HUBIO 520P. Recommended: ENVH/ENV S 514 and 515. Offered: alternate years.

CONJ 560, 561 Tumor Blology (3,2) See Conjoint Courses.

PATH 560P Analysis of Human Disease (*, max. 10) Beginning with a human disease problem, the student individually develops a working hypothesis, discusses the problem with appropriate pathology faculty member, and jointly designs an experiment to test the hypothesis. A written report is required. Prerequisite: second-vear medical student standing.

PATH 562P Cardiovascular Pathology Conference (*) Reichenbach Course consists of two parts: a laboratory review of gross and microscopic cardiovascular pathology of selected autopsied cases followed by a combined clinical (medical and/or surgical) and pathology conference discussing these cases. Prerequisites: HUBIO 540P and permission of instructor.

PATH 563 Neuropathology (*) Alvord, Shaw, Sumi Course consists of ten parts. Conferences on gross neuropathology (brain cutting and clinicopathologic correlations) held at six hospitals. Weekly neurology or surgical neuropathology conferences, neuropathology slide show, and neuropathology laboratory case studies. Prerequisite: permission of instructor.

PATH 564 Neuropathology Brain Modeling (4) Alvord Designed along clinically important, functional, neuroanatomic lines, generally based first on the embryologic development of the most primitive segmental elements (sensory, motor and association cells, and simple reflexes), followed by the more elaborate suprasegmental elements (cerebellum, colliculi, and forebrain).

PATH 571 Neuroanatomic Pathology (*) Alvord, Shaw, Sumi The particular diseases occurring in specific parts of the nervous system are considered in terms of the segmental, intersegmental, and suprasegmental components. Clinicopathologic correlations are emphasized. Prerequisite: permission of instructor; recommended as concurrent course: 563.

PATH 572 Neuropathologic Reactions (*) Alvord, Shaw, Sumi The reactions of the nervous system, considered in terms of congenital malformations, inflammations, vascular, traumatic, metabolic-toxic, degenerative, and neoplastic diseases peculiar to the nervous system as a whole. Clinicopathologic correlations are emphasized. Prerequisite: permission of instructor; recommended as concurrent course: 563.

PATH 576 Systemic Pathology II (3) Mottet Case examples of gastrointestinal, hematopoietic, lymphoreticular, musculoskeletal, urinary, skin systems, and forensic pathology discussed by students. Relevant laboratory interpretations. Student presentations. Prerequisites: HUBIO 520P or equivalent general pathology course, and permission of instructor.

PATH 584 Neuropathology Brain Modeling Laboratory (4) Alvord Clinically important, functional neuroanatomic study based on embryologic motor, sensory, and association cells and simple reflexes, followed by the more elaborate suprasegmental elements (cerebellum, colliculi, forebrain). Three-dimensional neuroanatomical relationships, critical for understanding neuropathology, can best be obtained in constructing a brain model. Prerequisite: 564, which may be taken concurrently.

PATH 600 Independent Study or Research (*) Credit/no credit only.

PATH 665P Surgical Pathology (*) Study of fresh current gross surgical specimens and autopsy specimens and their correlation to a patient's clinical course through observation of pathologists working in a large hospital setting. Prerequisite: permission of instructor.

PATH 666P Renal Pathology Conference (1) Conference-seminar on the histopathologic aspects of renal disease. May be taken concurrently with MED 693P. For third- and fourth-year students. Prerequisite: permission of instructor.

PATH 667P Renal Pathology Laboratory (*, max. 6) Laboratory elective for third- and fourth-year medical students. Read current literature, review various renal biopsies and urine sediments, and read standard texts prior to a weekly topic-oriented conference. All students earn 1 credit for one-hour seminar per week. May be taken concurrently with MED 693P. Prerequisite: permission of instructor.

PATH 668P Skin Pathology (*) Histopathological aspects of skin diseases are presented and discussed in a group-conference type of seminar. Current dermatologic cases also are discussed. Prerequisites: dermatology elective and permission of instructor.

PATH 673P Cardiovascular Pathology (*) Reichenbach Spectrum of cardiovascular pathology covered in depth by case studies and gross and microscopic material. Case analysis for presentation, including clinical and gross and microscopic material, prepared outside of class time. Clinicopathologic correlation is emphasized. Prerequisites: HUBIO 540P and permission of instructor and second-year medical student standing.

PATH 679P Pathology Summer Clerkship (*, max. 24) Dissection, writeup, and literature review of autopsy and surgical pathology specimens by students. Emphasis on etiology and pathogenesis of disease as a biological process. Designed for students who have not completed organ systems as covered in Human Biology courses. Offered at University of Washington Medical Center, Harborview Medical Center, Veterans Administration Hospital, Madigan Army Medical Center, and Swedish Hospital. Prerequisites: HUBIO 520P and completion of first year of medical school.

PATH 680P Diagnostic Pathology Clerkship-University of Washington Medical Center (*, max. 24) Fligner, Bronne Medical student participation in dissection and study of autopsy and surgical pathology cases. Cases worked up under senior staff, including dissection, microscopic examination, and literature review. Attendance at pathology conferences and seminars expected. Prerequisite: third- or fourth-year student standing.

PATH 681P Diagnostic Pathology Clerkship-Harborview Medical Center (*, max. 24) Reay, Reichenbach For description and prerequisite, see 680P.

PATH 682P Diagnostic Pathology Clerkship- Veterans Administration Hospital (*, max. 24) Vracko For description and prerequisité, see 680P.

PATH 683P Diagnostic Pathology Clerkship-Medical Examiner's Office (*, max. 24) Mullen For description and prerequisite, see 680P.

PATH 684P Diagnostic Pathology Clerkship-Laboratory Pathology of Seattle (*, max. 24) LaZerte For description and prerequisite, see 680P.

PATH 685P Diagnostic Pathology Clerkship-Sacred Heart Hospital, Spokane (*, max. 24) Haas For description and prerequisite, see 680P.

PATH 686P Diagnostic Pathology Clerkship-Overtake Medical Center (*, max. 24) Coppin For description and prerequisite, see 680P.

PATH 687P Diagnostic Pathology Clerkship-Children's Hospital and Medical Center (*, max. 24) For description and prerequisite, see 680P.

PATH 688P Diagnostic Pathology Clerkship-Madigan Army Medical Center (*, max. 24) For description and prerequisite, see 680P.

PATH 689P Diagnostic Pathology Clerkship-Valley Medical Center (*, max. 24) For description and prerequisite, see 680P. PATH 690P Diagnostic Pathology Clerkship-Northwest Medical Center (*, max. 24) For description and prerequisite, see 680P.

PATH 691P Diagnostic Pathology Clerkship-General Hospital of Everett (*, max. 24) For description and prerequisite, see 680P.

PATH 692P Diagnostic Pathology Clerkship-Group Health Cooperative (*, max. 24) For description and prerequisite, see 680P.

PATH 697P Pathology Special Electives (*, max. 24) By specific arrangement, students can have clerkships, externships, or research opportunities at institutions other than the University of Washington. Students who wish to elect this course should obtain Special Assignment forms from the Dean's office at least one month before advance registration. Prerequisite: permission of instructor.

PATH 700 Master's Thesis (*)

PATH 800 Doctoral Dissertation (*)

Pediatrics

RR314 Health Sciences

Pediatrics involves the study of physical and behavioral development of man, in health and disease, from conception to maturity.

Instruction is provided through conjoint courses, lectures, conferences, clerkships, and electives. Faculty members participate in teaching the basic curriculum and offer twenty-four electives, including the general pediatrics clerkship at multiple WAMI sites. A residency program is offered with a wide variety of electives in addition to traditional hospital inpatient and clinic experience. Postdoctoral fellowship training is available in many subspecialty areas of pediatrics. The major teaching hospitals are Children's Hospital and Medical Center, University of Washington Medical Center, and Harborview Medical Center.

Faculty

Chairperson

Herbert T. Abelson

Professors

Abelson, Herbert T. 1983; MD, 1966, Washington University; hematology-oncology.

Avner, Ellis D. 1988; MD, 1975, University of Pennsylvania; nephrology.

Benjamin, Denis R. * 1982, (Adjunct); MBChB, 1968, University of Witwatersrand (South Africa); pediatric pathology, hematopathology nutrition, circadian rhythms.

Bennett, Forrest C. 1977; MD. 1970, University of Minnesota; child development and handicapped children.

Bergman, Abraham 1964; MD, 1958, Case Western Reserve University; ambulatory pediatrics.

Bernstein, Irwin D. 1980; MD, 1967, New York University; hematology, oncology.

Chen, Shi-Han 1972, (Research); PhD, 1968, University of Texas (Austin); pediatric genetics.

Clarren, Sterling K. 1978; MD, 1973, University of Minnesota; congenital defects.

Connell, Frederick A. * 1978, (Adjunct); MD, 1972, New York University; maternal and child care, health services.

Coombs, John B. 1983; MD, 1972, Cornell University; rural health policy, nutrition and medicine.

Corey, Lawrence * 1977, (Adjunct); MD, 1971, University of Michigan; laboratory medicine: diagnosis, therapy, and pathogenesis of viral infections, AIDS virus.

Deisher, Robert W. 1949, (Emeritus); MD, 1944, Washington University; adolescent medicine.

Emanuel, Irvin * 1966; MD, 1960, University of Rochester; child development and mental retardation.

Fantel, Alan G. * 1973, (Research); PhD, 1974, University of Washington; embryology, teratology.

French, James W. 1984; MD, 1963, University of Michigan; pediatric cardiology.

Graham, C. Benjamin 1956; MD, 1958, University of Washington; pediatric, neonatal radiology.

Guntheroth, Warren G. 1958; MD, 1952, Harvard University: pediatric cardiology.

Guralnick, Michael J. 1986; PhD, 1967, Lehigh University; developmental disabilities, peer relations, social and language development, evaluation systems.

Hayden, Patricia 1958, (Emeritus); MD, 1953, University of Rochester; congenital defects.

Hodson, W. Alan 1966; MD, 1959, University of Manitoba (Canada); neonatal biology.

Jaffe, Kenneth M. * 1982, (Adjunct); MD, 1975, Harvard University; pediatric rehabilitation, brain injury, neuromuscular. diseases, congenital defects, electromyography.

Lemire, Ronald J. 1968; MD, 1962, University of Washington; teratology.

Mackler, Bruce 1957, (Emeritus); MD, 1943, Temple University; developmental biology.

McEvoy, Robert C. 1992; MD, 1973; University of Minnesota; endocrinology.

Mirkes, Philip E. 1979, (Research); PhD, 1970, University of Michigan; teratology.

Neff, John 1982; MD, 1960, Harvard University; infectious disease.

Novack, Alvin H. 1979; MD, 1958, Temple University; ambulatory pediatrics.

Ochs, Hans D. 1969; MD, 1962, University of Freiburg (Germany); immunology.

Osborne, William R. 1975, (Research); PhD, 1972, University of London: Kings College (England); pediatric genetics.

Pagon, Roberta A. 1979; MD, 1972, Harvard University; ophthalmology, pediatrics.

Pious, Donald A. * 1964; MD, 1956, University of Pennsylvania; antigen processing, function of nonclassical MHC genes, MHC gene regulation.

Redding, Gregory J. 1980; MD, 1974, Stanford University; neonatal biology.

Rivara, Frederick P. * 1984; MD, 1974, University of Pennsylvania; pediatric epidemiology and injury prevention and research.

Robertson, William O. 1963; MD, 1949, University of Rochester; general pediatrics.

Rothenberg, Michael B. 1967, (Emeritus); MD, 1954, Case Western Reserve University; psychiatry and behavioral sciences.

Ruvalcaba, Rogelio 1977; MD, 1957, University of Guadalajara (Mexico); endocrinology.

Sanders, Jean E. 1975; MD, 1970, University of Iowa; hematology, oncology.

Sarnat, Harvey B. 1992; MD, 1966, University of Illinois; neuromuscular diseases, neurodevelopment.

Scott, C. Ronald * 1965; MD, 1959, University of Washington; diagnosis and nutritional management of genetic disorders of children. Shepard, Thomas H. 1962, (Emeritus); MD, 1948, University of Rochester; embryology.

Shurtleff, David B. * 1960; MD, 1955, Tufts University; congenital defects.

Smith, Arnold L. * 1978; MD, 1964, University of Missouri; infectious disease.

Smith, Nathan J. * 1965, (Emeritus); MD, 1945, University of Wisconsin; orthopaedics, pediatrics, sports medicine.

Stevenson, James G. 1976; MD, 1970, Baylor University; pediatric cardiology.

Sybert, Virginia 1979; MD, 1974, State University of New York (Buffalo); genetics and dermatology.

Tapper, David 1983, (Adjunct); MD, 1970, University of Maryland; pediatric surgery.

Wedgwood, Ralph J. 1962, (Emeritus); MD, 1947, Harvard University; arthritis.

Wilson, Christopher B. * 1979; MD, 1972, University of California (Los Angeles); regulation of cytokine production in T cells and macrophages.

Woodrum, David E. 1971; MD, 1965, University of Illinois; neonatal biology.

Associate Professors

Andrews, Robert G. 1979; MD, 1976, University of Minnesota; hematology/oncology.

Bowden, Raleigh A. 1987; MD, 1978, University of Washington; hematology/oncology.

Brewer, David K. 1978, (Adjunct); MD, 1972, Harvard University; pediatric radiology, angiography, computed tomography.

Burns, Jane L. 1986; MD, 1978, University of Washington; infectious diseases.

Christie, Dennis L. 1977; MD, 1968, Northwestern University; gastroenterology.

Cotner, Thomas 1982, (Research); PhD, 1978, Massachusetts Institute of Technology; developmental biology.

Farrow, James A. 1979; MD, 1973, Baylor University; adolescent medicine.

Farwell, Jacqueline R. 1979; MD, 1972, University of California (San Francisco); child neurology, especially epilepsy; neonatal neurology, brain tumors in children.

Geyer, Jeffrey R. 1984; MD, 1977, Wayne State University; hematology/oncology.

Gibson, Ronald L. Jr. 1982; MD, 1982, Washington University; pulmonology.

Haas, Joel E. * 1977, (Adjunct); MD, 1967, University of Pittsburgh; pediatric pathology.

Haberkern, Charles M. 1988, (Adjunct); MD, 1974, Columbia University; anesthesiology.

Hays, Ross M. * 1983, (Adjunct); MD, 1978, University of Washington; pediatric rehabilitation, brain injury, neuromuscular diseases, congenital defects, electromyography.

Herndon, S. Paul 1975; MD, 1970, George Washington University; pediatric cardiology.

Holm, Vanja A. 1962; MD, 1954, Karolinska Institute (Sweden); child development and mental retardation.

Jackson, J. Craig 1979; MD, 1979, Vanderbilt University; neonatology and respiratory diseases.

Kawabori, Isamu 1973; MD, 1966, University of Washington; pediatric cardiology.

Krane, Elliot J. 1983, (Adjunct); MD, 1977, University of Arizona.

Lewis, David B. * 1988; MD, 1981, University of California (San Francisco); infectious diseases, T lymphocyte cytokine biology. Lynn, Anne 1981, (Adjunct); MD, 1975, Stanford University; anesthesiology.

Mayock, Dennis Edward 1985; MD, 1975, Ohio State University; neonatology and respiratory diseases.

McLaughlin, John F. 1977; MD_{SR} 1970, Northwestern University; congenital defects $_{\rm SHC}$

Milstein, Jerrold M. 1980; MD, 1964, University of Minnesota; pediatric neurology.

Miser, Angela W. 1991; MBBS, 1971, University of London (UK); pediatric anesthesiology.

Miser, James S. 1991; MD, 1973, University of Washington; hematology, oncology.

Morray, Jeffrey P. 1980, (Adjunct); MD, 1974, University of Rochester.

Moseley, Stephen L. * 1985, (Adjunct); PhD, 1981, University of Washington; molecular basis of pathogenesis in *E. coli* diarrhea.

Murphy, Janet Haworth 1974; MBChB, 1967, Victoria University (UK); neonatal biology and respiratory disease.

O'Rourke, Patricia Pearl 1988, (Adjunct); MD, 1975, University of Minnesota; anesthesiology.

Pendergrass, Thomas W. 1978; MD, 1971, University of Tennessee; hematology, oncology.

Portman, Michael A. 1992; MD, 1980, University of Cincinnati; pediatric cardiology.

Quan, Linda 1977; MD, 1971, University of Washington; pediatric emergency medicine.

Ramsey, Bonnie W. 1978; MD, 1976, Harvard University; general pediatrics.

Rosenbaum, David M. 1983, (Adjunct); MD, 1977, Albert Einstein College of Medicine; pediatrics.

Rubens, Craig E. * 1984; MD, 1982, University of Washington; molecular pathogenesis of Group B streptococcal infections in newborn infants.

Sherry, David Dan 1984; MD, 1977, Texas Technological University; immunology/rheumatology.

Smith, Mark S. 1977; MD, 1969, University of Virginia; adolescent medicine.

Sorensen, Gregory K. 1986, (Adjunct); MD, 1978, University of Nebraska.

Standaert, Thomas A. 1971, (Research); PhD, 1970, Duke University; neonatal biology.

Sulzbacher, Stephen 1972; PhD, 1971, University of Washington; psychiatry and behavioral sciences.

Tyler, Donald C. 1977; MD, 1970, University of Pennsylvania; anesthesiology, pediatrics.

Weinberger, Edward 1979, (Adjunct); MD, 1979, Harvard University; pediatric radiology.

Weiss, Avery H. 1991, (Adjunct); MD, 1974, Miami University (Ohio); pediatric ophthalmology, strabismus.

Zelikovic, Israel 1989; MD, 1977, Tel Aviv University (Israel); nephrology.

Assistant Professors

Astley, Susan J. * 1980, (Adjunct); PhD, 1990, University of Washington; chronic childhood diseases.

Bell, Thomas A. * 1980, (Clinical); MD, 1971, Tufts University; general pediatrics.

Brownstein, Dena R. 1986; MD, 1982, University of Washington; pediatric emergency medicine.

Davis, Robert L. 1991, (Acting); MD, 1983, University of California (San Diego); general pediatrics.

Del Beccaro, Mark A. 1987; MD, 1981, University of Washington; pediatric emergency medicine.

Diekema, Douglas S. 1993; MD, 1985, University of North Carolina; pediatric emergency medicine.

Fouser, Laurie S. 1987; MD, 1979, University of Nebraska; nephrology.

Francis, Julie S_{2}^{Θ} 1989; MD, 1984, University of Washington; dermatology S_{2}^{Θ}

Graham, Elinor A. 1982 (Acting); MD, 1970, University of Rochester; general pediatrics.

Grossman, David C. 1988; MD, 1982, University of California (Los Angeles); general pediatrics.

Hudgins, Louanne 1993; MD, 1984, University of Kansas; pediatric genetics.

Jones, Thomas K. 1991; MD, 1978, Jefferson Medical College; pediatric cardiology.

Kahn, Stuart J. 1985; MD, 1985, University of Medicine & Dentistry of New Jersey; rheumatology.

Lehman, Robert M. 1989; MD, 1978, Tufts University; adolescent medicine.

Marshall, Susan G. 1979; MD, 1980, University of California (Los Angeles); neonatal and respiratory diseases.

Martin, David 1990; MD, 1981, Virginia College of Medicine; hematology, oncology.

Matthews, Dana C. 1987, (Acting); MD, 1981, University of Washington; hematology/oncology.

McCloskey, John P. 1990, (Acting); MD, 1983, University of California (San Francisco); pediatric cardiology.

McDonald, Ruth A. 1993, (Acting); MD, 1987; University of Minnesota; nephrology.

Orellana, Stephanie A. 1992, (Research); PhD, 1992, University of Washington; pediatric nephrology.

Shugerman, Richard P. 1987; MD, 1984, University of Alabama; general pediatrics.

Strandjord, Thomas P. 1983; MD, 1983, Johns Hopkins University; neonatal biology and respiratory diseases.

Tarr, Phillip I. 1983; MD, 1980, Yale University; gastroenterology/infectious diseases.

Taylor, James A. Jr. 1987; MD, 1980, University of North Carolina; general pediatrics.

Wallace, Carol A. 1982; MD, 1973, University of Michigan; immunology/rheumatology.

Watkins, Sandra L. 1981; MD, 1981, University of Texas (Houston); nephrology.

Whitaker, Robert C. 1991, (Acting); MD, 1987, Johns Hopkins University; general pediatrics.

Wright, Jeffrey A. 1988; MD, 1978, University of Missouri; general pediatrics.

Instructors

Cunningham, Michael L. 1988, (Acting); MD, 1988, University of Vermont; congenital defects.

Graf, William D. 1991, (Acting); MD, 1983, Freie University of Berlin (Germany); congenital defects.

Melvin, Ann Jorns 1993, (Acting); MD, 1986, Tulane University; infectious diseases.

Lecturer

Rees, Jane 1973; MS, 1972, University of Washington; adolescent medicine, nutrition.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

PEDS 498 Undergraduate Thesis (*) Robertson For medical students. Prerequisite: permission of instructor. Offered: AWSpS. PEDS 499 Undergraduate Research (*) Robertson Participation in various clinical or basic research programs in progress, specifically: child development, developmental biology, human embryology and teratology, medical genetics, infectious diseases, neonatology, neuroembryology, cardiology, endocrinology and metabolism, immunology, respiratory disease. Prerequisite: permission of instructor. Offered: AWSpS.

PEDS 500P Topics in Adolescent Medicine for Medical Professionals (1) Farrow Survey course on adolescent health-care topics, including psychological and physical development, sexuality, gynecological problems, chronic illness and hospitalization, acne treatment, office approach. Prerequisites: 665P, MED 665P, and PBSCI 665P; postdoctoral medical trainees. Offered: AWSpS.

PEDS 505P Preceptorship in Pediatrics (1) Robertson To provide opportunity for first- and secondyear medical students to gain personal experience with medical practice situations for pediatricians by being stationed with carefully selected clinical faculty members in their offices. Prerequisite: permission of instructor. Enrollment limited. Coordinator: Department of Pediatrics. Offered: AWSpS.

PEDS 512P Seminars in Human Embryology and Teratology (3) Lemire, Mirkes Presents in depth discussions of human embryonic-fetal development and malformations that arise, correlations with experimental studies and molecular embryology are included. A laboratory experience is optional. Prerequisite: permission of instructor. Offered: AWSp.

PEDS 530P Pioneer Square Adolescent Seminar (1) Deisher Clinic-based setting for seminar and interview practice with Pioneer Square adolescents; students learn how to deal with special health problems and other related problems of "street kids" through interviews and observations. Credit/no credit only. Offered: W.

PEDS 551P Pediatric Electrocardiography (2) Guntheroth Brief review of the physiology and physics pertinent to clinical electrocardiography is followed by a presentation of terminology and methods in clinical use. Normal electrocardiograms are studied, followed by abnormal tracings, with emphasis on pediatric material, but including adult material such as myocardial infarction. Prerequisite: HUBIO 540P. Offered: W.

PEDS 611P Pioneer Square Night Clinic (*, max. 24) Deisher One night per week at free clinic in Pioneer Square area. Adolescent and young adult patients, generally poorly educated with low incomes and histories of inadequate health care. Seminars and interviews in conjunction with clinic focus on impact of nontraditional lifestyles and values on health status of individuals. (Limit: four students.) Offered: AWSpS.

PEDS 662P, 663P, 664P, 665P, 666P, 667P, 668P Pediatric General Clerkship (*, max. 24, *, *, max. 24) Robertson General introductory pediatric clerkship. One-half in hospital setting; one-half in outpatient department, clinic, or private office. Location preferences are considered; twelve-week clerkship is broader, permits more individual selection of site. Open to all third- and fourth-year medical students. Prerequisite: HUBIO 563P. (Six or twelve weeks, full time. Limit: twenty-four students.) Offered: AWSpS.

PEDS 669P Neonatal Pediatrics-Clerkship (*, max. 24) Hodson Participation in the activities in the newborn and premature divisions; ward rounds, seminars, conferences, and familiarization with certain laboratory techniques, particularly those relating to acid-base balance. Prerequisite: 665P. (Limit: two students.) Offered: AWSpS.

PEDS 670P Pediatric Infectious Diseases (*, max. 24) A. Smith Students see and work up clinic consultations and present in detail to attending physician. Daily rounds include problem-solving discussions and didactic presentations in broad category of infectious diseases. Opportunity for experience In clinical research and laboratory techniques. Prerequisites: 665P or permission; third- or fourth-year medical student standing. (Limit: one student.) Offered: AWSpS.

PEDS 673P Office Practice (*, max. 12) Robertson Opportunity to observe and function in the private office settings of a number of clinical pediatric faculty and to accompany pediatricians as they pursue their daily activities in the community. Prerequisite: 665P. Offered: AWSpS.

PEDS 676P Pediatric Clerkship With the Mentally Handicapped (*, max. 12) Ruvalcaba (Rainier School), Singh (Fircrest School) Total care involvement with mentally handicapped patients, incorporating general pediatric knowledge of mental retardation and neurology, plus other specialties related to mental deficiencies. Additional information may be obtained from Dr. W. O. Robertson, Children's Hospital and Medical Center. Prerequisite: 665P. (Four or six weeks, full-time.) Offered: AWSpS.

CONJ 677P Clinical Allergy and Immunology (*, max. 12) See Conjoint Courses.

PEDS 679P Clinical Problems in Developmental Disabilities (*, max. 12) Holm Experience in multidisciplinary evaluation and management of the handicapped child. Student performs pediatric evaluations, obtains appropriate consultations, observes additional professional assessments (e.g., psychological testing), and plans rehabilitation program. Opportunity to provide parent counseling. Prerequisite: 665P. (Limit: two students.) Offered: AWSpS.

PEDS 680P Pediatric Clinics (*, max. 24) Robertson One to ten half-day sessions may be elected each week for twelve weeks in the following areas: general pediatrics, endocrinology, neurology, immunology, arthritis, cardiology, congenital defects and retardation, well-child, teratology, adolescent medicine, allergy, cystic fibrosis, hematology, prematurity, neonatology, and poison control. Enrollment limited. Coordinator: Department of Pediatrics. Prerequisite: 665P.

PEDS 681P Pediatric Genetics (*, max. 24) Pagon Clinical focus on evaluation and management of children with genetic disorders. Exposure to genetic counseling, the evaluation of children with hereditary structural defects, and diagnosis and management of children with inborn errors of metabolism. Emphasis on genetic mechanisms that cause human disease. Prerequisite: 665P. (Two, four, six; or twelve weeks. Limit: one student.) Offered: AWSpS.

PEDS 682P Congenital Defects-Clinical Experience (*, max. 24) Clarren Advanced course in pediatrics providing experience in the clinical diagnosis and management of structural and metabolic congenital defects. Prerequisite: permission of instructor. (Limit: one student.) Offered: AWSDS.

PEDS 683P Pediatric Nephrology (8) Avner Fourweek elective clerkship at Children's Hospital and Medical Center. Students participate in nephrology and transplant rounds, consult with renal fellows and attendings, and work up patients in renal clinics. Participation in seminars; special course in fluid balance. Prerequisites: third- or fourth-year medical student, 665, and MED 665 or equivalent. (Limit: two students.) Offered: AWSpS.

PEDS 684P Pediatric Pulmonary Medicine (8) Redding Respiratory disorders, diagnostic techniques and treatments unique to children in the inpatient, intensive care, and outpatient settings. Application of principles of pulmonary physiology to clinical problems. Students conduct consultations under the supervision of the attending and present a topic of choice. Inpatient rounds and clinics. Prerequisites: 665P, fourth-year medical student standing. (Limit: one student.) Offered: AWSpS.

PEDS 685P Pedlatric Hematology and Oncology (*, max. 24) Bernstein, Miser One-on-one teaching plus four weekly didactic sessions. Specific training in techniques and interpretation of bone marrow aspirations, intravenous chemotherapy, transfusions, and laboratory techniques of hematologic evaluation. Selflearning programs available. Prerequisite: 665P. (Two, four, six, or twelve weeks, full-time.) (Limit: one student.) Offered: AWSpS.

PEDS 686P Pediatric Cardiology (*, max. 24). Guntheroth, Kawabori Emphasis on physical diagnosis and electrocardiography and on clinical knowledge of diagnostic techniques and surgical possibilities for inpatients and outpatients with cardiovascular problems. Opportunity to observe catheterizations and cardiovascular operations. Weekly clinics and twice-daily inpatient rounds. Prerequisite: 665P. (Limit: one student.) Offered: AWSpS.

PEDS 687P Advanced Clinical Clerkship in Child Neurology (*, max. 8) Sarnat Advanced course in neurology dealing with neurological disease in children. Both inpatient and outpatient experience are included. Prerequisite: 665P. (Limit: one student.) Offered: AWSpS.

PEDS 688P Adolescent Clinic (*, max. 24) Farrow Advanced pediatric clerkship dealing with special problems of the adolescent. Medical students are offered an experience in a multidiscipline clinic. Prerequisite: 665P. (Limit: two students.) Offered: AWSpS.

PEDS 691P Advanced Pediatric Clerkship (*, max. 24) Robertson Inpatient and/or outpatient experience with responsibilities comparable to intern for patient workup, diagnosis, and care. Available at any one, or combination, of affiliated hospitals, including WAMI units in Idaho, Montana, or Washington. Students interested in this option should make arrangements well in advance of registration. Prerequisite: 665P. (Limit: two students.) Offered: AWSpS.

PEDS 697P Pediatric Special Electives (*, max. 24) Robertson By specific arrangement, for qualified students, special clerkship externship or research opportunities at institutions other than University of Washington. The faculty can advise of possible opportunities. Obtain special assignment form from Dean's office at least one month before preregistration. Prerequisite: permission of instructor. Offered: AWSpS.

Pharmacology

E401 Health Sciences

Pharmacology is the science that deals with the nature of interactions between drugs and biological systems, and with the applications of such interactions to the treatment of disease. Courses in this field are given for medical, dental, pharmacy, nursing, and graduate students.

Graduate Program

The Department of Pharmacology offers programs leading to the Master of Science and Doctor of Philosophy degrees. The Master of Science degree is not required of all students, although it may be elected by the student or requested by the department.

Master of Science and Doctor of Philosophy Degrees

Admission Requirement: A baccalaureate degree with a major in any of the sciences, such as biochemistry, chemistry, pharmacy, physics, physiology, psychology, or zoology.

Graduation Requirements: Master of Science degree—completion of Graduate School requirements to include: PHCOL 511, 512, 513, and three additional 500-level pharmacology courses. Demonstration of competence in pharmacology and a related discipline, such as biochemistry or physiology, and a thesis. A foreign language is not required.

Graduation Requirements: Doctor of Philosophy degree—completion of Graduate School requirements to include: PHCOL 511, 512, 513, 519, and five additional 500-level pharmacology courses plus 9 credits of UCONJ 504, 505, 508, 3 non-seminar credits of physiology, and 3 non-seminar credits chosen from biochemistry, molecular biology, physiology, immunology, or cell biology for a total of 15 credits. All 15 credits must be at the approved 400 or 500 level. Students must pass a comprehensive General Examination covering general pharmacology and allied disciplines. A dissertation and Final Examination complete the program.

In the first year, students generally are expected to enroll in biochemistry, pharmacology, and physiology courses. For each of the academic quarters of the first year, a student may work with a different faculty member. The purpose of rotating among the faculty is to acquaint the student with various areas of pharmacology and research under investigation within the department. With this insight, the student should be better able to decide on a thesis or dissertation topic.

In the second year, while becoming more involved with research, the student continues attending courses in pharmacology and supporting disciplines. Immediately after spring quarter of the second year, the student will be given the written portion of the General Examination. Within three months after having taken the written portion, the student will be given the oral portion of the General Examination. The student's supervisory committee will then recommend that the student (1) continue to pursue the doctoral degree, (2) work for a master's degree, (3) undergo reexamination at a later date, or (4) terminate the program.

Continued work in the department for a Ph.D. or M.S. degree usually involves taking advanced biochemistry, pharmacology, and physiology courses and research.

Financial Ald

A limited number of teaching assistantships, research assistantships, and traineeships are available.

Aagaard, George N. * 1954, (Emeritus); MD, 1937, University of Minnesota; clinical pharmacology.

Beavo, Joseph A. * 1977; PhD, 1970, Vanderbilt University; roles and molecular mechanisms of cyclic nucleotide phosphodiesterase regulation of cell function:

Catterall, William A. * 1977; PhD, 1972, Johns Hopkins University; molecular biology of ion channels, molecular pharmacology and neurobiology.

Dorsa, Daniel M. * 1979; PhD, 1977, University of California (Davis); neuropharmacology, neurochemistry.

Hol, Wilhelmus G. J. * 1992, (Adjunct); PhD, 1971, University of Groningen (Netherlands); protein crystallography, drug design, vaccine development, and protein engineering.

Horita, Akira * 1950; PhD, 1954, University of Washington; neuropsychopharmacology. Juchau, Mont Rawlings * 1969; PhD, 1966, University of Iowa; developmental pharmacology; drug metabolism.

Krebs, Edwin G. * 1977, (Emeritus); MD, 1943, Washington University; intracellular, signaling mechanisms involving protein phosphorylation.

McKnight, G. Stanley 1979; PhD, 1976, Stanford University; phosphorylation; gene expression and neuro/endocrine physiology in mice using genetic approaches.

Nathanson, Neil M. * 1979; PhD, 1975, Brandeis University; molecular analysis of neural signal transduction by muscarinic neurokine receptors.

Omiecinski, Curtis J. * 1983, (Adjunct); PhD, 1980, University of Washington; molecular toxicology, genetic regulation/expression of drug/chemical metabolizing enzymes.

Storm, Daniel R. * 1978; PhD, 1971, University of California (Berkeley); molecular basis of neuroplasticity; cAMP and Ca²⁺ signal transduction systems in the CNS.

Vestal, Robert E. 1977, (Adjunct); MD, 1971, University of Catifornia (San Francisco); gerontology.

Vincenzi, Frank F. * 1967; PhD, 1965, University of Washington; ion transport and intracellular calcium, free radicals and disease, computers in education/ research.

Watson, Eileen L. * 1972, (Adjunct); PhD, 1970, University of Utah; salivary gland pharmacology and regulation.

Associate Professors

Chavkin, Charles * 1984; PhD, 1982, Stanford University; cell and molecular mechanisms of psychoactive opiate drugs to understand normal and pathophysiology.

Halpern, Lawrence M. * 1965; PhD, 1961, Albert Einstein College of Medicine; neuropharmacology.

Moon, Randall T. * 1985; PhD, 1982, University of Washington; embryonic development; signal transduction.

Palczewski, Krzysztof * 1992, (Adjunct); PhD, 1986, Technical University of Wroclaw (Poland); visual transduction.

Tempel, Bruce L. * 1988; PhD, 1983, Princeton University; molecular neurobiology/neurogenetics, especially potassium channel gene structure and function.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

PHCOL 401 General Pharmacology I (2-4) Juchau, Storm Principles governing drug-receptor interactions, dose-effect relationships, drug absorption, distribution, metabolism, and excretion. Drug toxicity, tolerance, allergy, and drug-induced mutagenesis and carcinogenesis. Drugs utilized as antimicrobial agents and cancer chemotherapeutic agents. Prerequisites: organic chemistry, introductory anatomy, physiology, and biochemistry. For pharmacy students and other undergraduates. Offered: A.

PHCOL 402 General Pharmacology II (3/4) Chavkin, Nathanson General pharmacology of drugs affecting the autonomic and central nervous systems. For pharmacy students and other undergraduates. Prerequisite: 401 or permission of instructor. Offered: W.

PHCOL 403 General Pharmacology III (3/4) Beavo, McKnight General pharmacology of drugs affecting the endocrine and cardiovascular systems. For pharmacy students and other undergraduates. Prerequisites: 401, 402, or permission of instructor. Offered: Sp.

SCHOOL OF MEDICINE / PHYSIOLOGY AND BIOPHYSICS 391

PHCOL 434, 435 General Pharmacology (2,2) Halpern, Watson Lectures and demonstrations concerning the action of drugs on physiological and pathological processes with special emphasis on agents of special importance in the practice of dentistry. For dental students. Offered: A.

PHCOL 498 Undergraduate Thesis (*) Prerequisite: permission of instructor. Offered: A.

PHCOL 499 Undergraduate Research (*) Participation in departmental research projects. Prerequisite: permission of instructor. Offered: A.

PHCOL 507 Pharmacology Seminar (1) Presentation of comprehensive reports on recent medical and scientific literature in fields of current importance. Research progress reports, and reports on results of completed research. Registration limited to pharmacology students; lectures are open to the public. Offered: A.

PHCOL 511 General Pharmacology I (1-5) Juchau, Storm Consideration of principles governing drugreceptor interactions, dose-effect relationships, drug i absorption, distribution, metabolism, and excretion. Introduction to drug toxicity, tolerance, allergy, and drug-induced mutagenesis and carcinogenesis. Drugs utilized as antimicrobial agents and cancer chemotherapeutic agents. Prerequisites: graduate standing, organic chemistry, biochemistry, and introductory anatomy and physiology. Offered: A.

PHCOL 512 General Pharmacology II (1-5) Chavkin, Nathanson General pharmacology of drugs affecting the autonomic and central nervous systems. Emphasis on current research approaches to understanding the basic mechanisms of drug action. For graduate students. Prerequisite: 511 or permission of instructor. Offered: W.

PHCOL 513 General Pharmacology III (1-5) Beavo, McKnight General pharmacology of drugs affecting the endocrine and cardiovascular systems. Prerequisites: 511, 512, or permission of instructor. Offered: Sp.

PHCOL 514 Current Topics in Pharmacology (1) McKnight Current research related to the mechanisms of drug action presented in a seminar format. Presentations include relevant background material as well as detailed experimental results taken from current research articles. Open to medical and graduate students. Prerequisite: permission of instructor. Offered: AWSp.

PHCOL 515 General Pharmacology Laboratory (*, max. 9) Laboratory course for professional and graduate students who wish to do independent laboratory research under the direction of a specific faculty member. Prerequisite: permission of instructor. Offered: AWSp.

PHCOL 519 Introduction to Laboratory Research in Pharmacology (4) Krebs On a rotation basis students carry out individual research projects in the laboratories of different faculty members. At the end of each quarter they make formal presentations of their work. For first year graduate students in pharmacology. Offered: AWSpS.

PHCOL 527 Drug Metabolism (3) Juchau, Nelson Considerations of the biochemical mechanisms for the biotransformation of drugs and foreign compounds. Open to medical and graduate students. Prerequisite: one year graduate, medical, or dental biochemistry, or permission of instructor. Offered: jointly with MEDCH 527; odd years; W.

PHCOL 528 Neuropsychopharmacology (2) Halpern, Horita Advanced review and discussion of biochemical and pharmacodynamic mechanisms underlying the central nervous system actions of psychotropic, analgesic, sedative, and antiepileptic drugs. Prerequisites: 511, 512, 513, or permission of instructor. Offered: even years; A. PHCOL 529 Membrane Pharmacology (2) Catterall, Nathanson, Tempel, Vincenzi Advanced consideration of the fundamental properties of biological membranes and the mechanisms of drug and hormone action on enzymes, drug and hormone receptors, and ion transport systems in the plasma membrane of cells. Prerequisites: 511, 512, 513, BIOC 440, 441, or 531 or permission of instructor. Offered: even years.

PHCOL 530 Pathways of Receptor Action (2). Beavo, Krebs, Storm Advanced consideration of the molecular events between drug or hormone binding to receptors and the resulting responses. Roles played by cyclic nucleotides and other second messengers. Adenylate cyclase, phosphoinositide-mediated regulation, phosphodiesterases and protein kinases. Prerequisities: 511, 512, 513, or permission of instructor. Offered: odd years; A.

PHCOL 531 Control of Gene Expression (2) McKnight, Moon Advanced discussion of hormonereceptor interactions, structure of active genes, molecular events leading to altered gene expression, posttranscriptional and posttranslational mechanisms of regulating protein abundance and assembly into subcellular structures. Prerequisite: permission of instructor. Offered: odd years; Sp.

PHCOL 533 Molecular Toxicology (2) Omiecinski Advanced discussion of molecular mechanisms whereby chemical, physical, and biological agents produce their harmful effects on biological tissue. Prerequisites: 511, 512, 513; or ENVH 514, 515; or permission of instructor. Offered: jointly with ENVH 533; even years; W.

PHCOL 534 Regulation of Neurotransmission (2) Chavkin, Dorsa Advanced consideration of the effects of drugs on neurotransmission including current topics in receptor pharmacology, transmitter release and reuptake mechanisms, synaptic plasticity; and neurodegeneration. Prerequisites: 511, 512, or permission of instructor. Offered: even years; Sp.

PHCOL 550 An Overview of Faculty Research (1) Reviews research topics currently being studied in pharmacology. Student reads articles published on each topic. Credit/no credit only. Prerequisite: firstyear student standing in pharmacology. Offered: A.

PHCOL 600 Independent Study or Research (*) Pharmacology graduate students only. Offered: AWSpS.

PHCOL 697P Pharmacology Special Electives (*) By specific arrangement, for qualified students, special clerkship, externship, or research opportunities can at times be made available at institutions other than the University of Washington. The faculty can advise student of opportunities. Students electing this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Offered: AWSpS.

PHCOL 700 Master's Thesis (*) Pharmacology graduate students only. Offered: AWSpS.

PHCOL 800 Doctoral Dissertation (*) Pharmacology graduate students only. Offered: AWSpS.

Physiology and Biophysics

G424 Health Sciences

Physiology deals with the processes, activities, and phenomena incidental to, and characteristic of, life and living organisms. Based upon physics, chemistry, and mathematics, physiology interlocks closely with the other basic medical sciences—anatomy, molecular biology, immunology, biochemistry, pharmacology, and pathology—and with psychology. Research in physiology is accomplished by analyzing the molecular, cellular, and integrative properties of the system under study. For this reason, physiology appeals to students with diverse backgrounds and goals. Courses in this field are given for medical, dental, pharmacy, nursing, and graduate students.

Graduate Program

The Department of Physiology and Biophysics offers advanced instruction and training leading to both the Master of Science and Doctor of Philosophy degrees. Students aspiring only to the M.S. degree are rarely accepted. Students pursuing a Ph.D. degree in physiology and biophysics may emphasize either molecular and cellular physiology, biophysics, neurobiology, cardiovascular-respiratory physiology, or endocrinology. Studies leading to the doctoral degree require five to six years. The first year is spent in acquiring a broad knowledge of physiology by means of a sequence of courses and laboratory rotations. After selection of a special area of study, the second year is spent taking advanced seminars in the area of specialization and developing a thesis proposal. After admission to candidacy, the latter years are spent in pursuing the area in depth and completing an original research project.

The department participates in the interdepartmental neurobiology and molecular and cellular biology programs. For students wishing a program equally distribtionary Ph.D. degree program in these subjects is administered by the Behavioral Neuroscience Group of the Graduate School (for Behavioral Neuroscience see the Interdisciplinary Graduate Degree Programs section of this catalog).

Special Requirements

Admission to the physiology program normally requires a baccalaureate degree in biology, molecular biology, genetics, biochemistry, physics, mathematics, psychology, engineering, or chemistry.

Graduate Record Examination scores are required as part of the application.

Students are normally admitted to the graduate program in the autumn quarter. Applications and all relevant material should be submitted by February 1.

Research Facilities

The department is well equipped to provide instruction and research training in cellular and molecular physiology, neurobiology, membrane biophysics, cardiovascular physiology, respiratory physiology, muscle biophysics, temperature regulation, endocrinology, reproduction, and physiological psychology. The facilities of the Regional Primate Research Center, adjacent to the department, are available to qualified trainees who need to use primates in their research.

Protessars

Anderson, Marjorie E. * 1971; PhD, 1969, University of Washington; physiology of basal ganglia and cerebellum.

Berger, Albert J. * 1978; PhD, 1976, University of California (San Francisco); neural and chemical control of respiration.

Binder, Marc D. * 1978; PhD, 1974, University of Southern California; organization of spinal reflexes.

392 SCHOOL OF MEDICINE / PHYSIOLOGY AND BIOPHYSICS

Blinks, John R. * 1990; MD, 1955, Harvard University; muscle calcium.

Bothwell, Mark A. * 1985; PhD, 1975, University of California (Berkeley); molecular and cellular physiology of growth factors.

Brengelmann, George L. * 1966; PhD, 1967, University of Washington; temperature regulation, cutaneous blood flow.

Crill, Wayne E. * 1967; MD, 1962, University of Wash ington; properties of cortical neurons.

Detwiler, Peter B. * 1977; PhD, 1970, Georgetown University; physiology of photoreceptors.

Feigl, Eric O. * 1969; MD, 1958, University of Minnesota; cardiovascular physiology, coronary and cerebral circulation.

Fetz, Eberhard * 1975; PhD, 1966, Massachusetts Institute of Technology; cortical regulation of movement.

Freund, Peter 1980, (Adjunct); MD, 1975, Columbia University; temperature regulation, vasomotor control, physiology/biophysics.

Fuchs, Albert F. * 1969; PhD, 1966, Johns Hopkins University; oculomotor physiology.

Gordon, Albert M. * 1964; PhD, 1961, Cornell University; skeletal muscle physiology.

Hildebrandt, Jacob * 1969; PhD, 1966, University of Washington; respiratory physiology.

Hille, Bertil * 1968; PhD, 1967, Rockefeller University; ion channels of excitable membranes.

Hlastala, Michael P. * 1970; PhD, 1969, State University of New York (Buffalo); respiratory physiology, inert gas analysis of respiratory function.

Hornbein, Thomas F. * 1963; MD, 1956, Washington University; physiology, biophysics.

Kennedy, Thelma T. * 1958, (Emeritus); PhD, 1955, University of Chicago.

Koerker, Donna J. * 1970; PhD, 1970, University of Michigan; endocrinology, intermediate metabolism of carbohydrates.

Kushmerick, Martin J. * 1988; MD, 1963, University of Pennsylvania; muscle contraction, magnetic resonance, metabolic imaging NMR spectroscopy.

Patton, Harry D. 1947, (Emeritus); MD, 1946, Yale University.

Rowell, Loring B. * 1962; PhD, 1962, University of Minnesota; regulation of blood flow, exercise physiology.

Rubel, Edwin W. * 1986; PhD; 1969, Michigan State University; developmental neurobiology, with special emphasis on vertebrate auditory system development.

Scher, Allen M. * 1950, (Emeritus); PhD, 1951, Yale University.

Schwartzkroin, Philip A. * 1978; PhD, 1972, Stanford University; mechanisms of cortical excitability.

Schwindt, Peter C. * 1974; PhD, 1972, University of Washington; properties of spinal and cortical neurons, mechanisms of repetitive firing and convulsive activity.

Smith, Orville A. * 1958; PhD, 1953, Michigan State University; central regulation of cardiovascular function.

Stahl, William L. * 1967; PhD, 1963, University of Pittsburgh; neurochemistry of brain ATPase systems.

Steiner, Robert A. * 1977; PhD, 1975, University of Oregon; neuroendocrinology.

Stirling, Charles E. * 1968; PhD, 1966, State University of New York (Upstate); epithelial transport mechanisms.

Teller, Davida Y. * 1965; PhD, 1965, University of California (Berkeley); vision, psychophysics, development of vision.

Towe, Arnold L. * 1953; PhD, 1953, University of Washington; cerebral cortical networks.

Van Citters, Robert L. * 1962; MD, 1953, University of Kansas; cardiovascular physiology.

Winn, H. Richard * 1983, (Adjunct); MD, 1968, University of Pennsylvania; physiology of cerebral blood flow regulation.

Winn, Robert K. 1984, (Research); PhD, 1974, University of Washington; pulmonary physiology, neutrophil immigration using monoclonal antibody 60.3.

Associate Professors

Carlson, Steven S. * 1985; PhD, 1975, University of California (Berkeley); molecular and cellular physiology of synaptic transmission.

Cunningham, Susanna L. * 1978, (Adjunct); PhD, 1977, University of Washington.

Howard, Jonathon * 1989; PhD, 1983, Australian National University; biophysics of molecular motors.

Landau, Barbara R. 1964; (Emeritus); PhD, 1956, University of Wisconsin.

Skahen, Julia G. 1945, (Emeritus); PhD, 1941, University of Chicago.

Spain, William * 1987; MD, 1977, Columbia University; signal transduction in the central nervous system.

Assistant Professors

Kroll, Keith * 1987, (Adjunct Research); PhD, 1983; University of Washington; regulation of energy balance in the heart.

Mackie, Kenneth P. 1990, (Adjunct); MD, 1984, Yale University.

Wordeman, Linda * 1994; PhD, 1988, University of California (Berkeley); mitosis and myofibril formation.

Zagotta, William N. * 1993; PhD, 1989, Stanford University; molecular mechanisms of ion channel function.

Lecturers

Linder, Thomas M. 1982; PhD, 1971, University of Washington.

Peterman, Annie K. 1989; PhD, 1987, University of Washington.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

CONJ 340-341-342 Human Anatomy and Physiology (4-4-4) See Conjoint Courses.

P BIO 405-406 Human Physiology (4-4) Intensive coverage of physiology through lectures, conference. Winter Quarter: excitable tissue, skeletal muscle; spinal reflex; cardiovascular, respiratory physiology; acid base balance; autonomic nervous system; temperature regulation. Spring Quarter: renal, body fluids; neuroendocrinology; reproductive, gastrointestinal, neurophysiology. Required for dental, graduate nursing, and bioengineering students. Also offered for graduate students. Offered: W-Sp.

P BIO 424 Vision and its Physiological Basis (5) NW Phenomena of human vision; color vision, acuity and spatial vision, light and dark adaptation, visual development. Correlation of human visual functioning with known optical, biochemical, physiological, and anatomical substrates. Recommended: some background in physical or biological science or engineering. Offered: jointly with PSYCH 424.

P BIO 498 Undergraduate Thesis (*) For medical students. Prerequisite: permission of instructor. Offered: AWSpS.

P BIO 499 Undergraduate Research (*) For medical students. Prerequisite: permission, of instructor. Offered: AWSpS.

CONJ 501, 502, 503 Molecular Basis of Cell Function (3,3,3) Plasma membrane (501), including membrane structure, ion channels, transmembrane signaling; nucleus (502), including chromatin structure, recombination, RNA processing and gene expression; and cytoplasm (503), including protein synthesis targeting and secretion, organelles, extracellular matrix, higher-order cell functions. Prerequisites: introductory biochemistry or permission of instructors. Physiology/ Biophysics responsible. Offered: A, W, Sp.

P BIO 503 Physiological Instrumentation (4) Fetz, Schwindt Introduction to linear systems and electronic circuits. Topics include basic circuit theory; step and sinusoidal response of first- and second-order linear systems (RLC circuits, mechanical and hydraulic systems); bode plots; Fourier analysis; operational amplifier circuits. Associated laboratory exercises. Prerequisites: beginning calculus, permission of instructor. Offered: 1995; S.

P BIO 505 Selected Topics in Cell Physiology (1) Cell membranes, membrane proteins, ion channels, ion pumps. Bioelectricity, with emphasis on action potentials in neurons, axons, and cardiac muscle. Signal transduction and intracellular signaling with emphasis on synaptic transmission, sensory receptors, and control of intracellular calcium. Cell motility with emphasis on muscle. Credit/no credit only. Prerequisite: permission of instructor. Offered: A.

P BIO 506 Neurophysiology (3) Properties of neurons, processing of synaptic inputs, analysis of sensory and motor systems, and higher functions of the vertebrate central nervous system. Offered: W.

P BiO 507 Cardiovascular, Renal, Respiratory Physiology (3) Cardiovascular physiology: the heart, microcirculation, hemodynamics, regional circulation, and reflex integration. Renal physiology: osmolarity, volume, and ion transport. Respiratory physiology: the lung, pulmonary circulation, alveolar ventilation, gas exchange, control of breathing, acid-base regulation, exercise.

P BIO 508 Introduction to Laboratory Research in Physiology (2-5) Students participate in the performance of ongoing projects in designated research laboratories. Emphasis is on experimental design, methodology and techniques. For first- and secondyear graduate students in physiology and biophysics to provide a basis for future independent research. Offered: AWSpS.

P BIO 509 Neuroendocrinology (3) Emphasizes the cellular and molecular aspects of several topics in neuroendocrinology, including neuropeptide genes, reproduction, steroid hormone regulation of gene expression, mechanisms of hormone action, endocrine rhythms and neural oscillators. Prerequisites: BIOL 201,202,203; BIOC 440,441,442.

CONJ 511 Functional Neuroanatomy (4) See Conjoint Courses. Offered: W.

P BIO 515 Neurophysiology Proseminar (2) Guided survey of the experimental neurobiology literature. Course conducted as seminar, with discussion of assigned papers. Prerequisite: permission of instructor. Offered: AWSp.

P BIO 516 Physiological Proseminar (7) Guided survey of the experimental literature in cardiovascular and respiratory physiology. Course conducted as seminar with oral analysis of assigned papers and topics. Prerequisite: permission of instructor.

P BIO 518 Research Topics in Cardiovascular Physiology (1) Feigl Graduate students and faculty members present and discuss current literature and research. Prerequisite: permission of instructor. P BIO 519 Membrane and Muscle Biophysics Seminar (1) Detailed discussion and study of current topics in ceil membrane function and muscle contraction. Credit/no credit only. Prerequisite: permission of instructor. 268 15!!!C

P BIO 520 Physiology Seminar (*) Selected topics in physiology. Prerequisite: permission of instructor.

P BIO 521 Biophysics Seminar (*) Selected topics in biophysics. Prerequisite: permission of instructor.

P BIO 522 Selected Topics in Respiratory Physiology (1-3) Hildebrandt Advanced seminar on selected topics, including pulmonary mechanics, gas exchange, lung fluid balance, regulation of breathing, pulmonary circulation, respiration in the neonate, liquid breathing, airway dynamics, lung structure and development, cardiopulmonary interactions, exercise physiology. Prerequisite: permission of instructor. Offered: AWSpS.

P BIO 523 Heat Transfer and Temperature Regulation (2-5) Brengelmann Thermal exchange between the body surface and the environment. Heat production and distribution within the body. Properties of cutaneous and deep temperature receptors. Neural integration and homeothermy. Prerequisite: permission of instructor.

P BIO 525, 526, 527 Readings In Advanced Physiology and Biophysics (*,*,*) Guided study of the experimental literature of physiology and biophysics. Essays are written and discussed with the staff. Emphasis is placed on critical analysis, accuracy of expression, bibliographical technique, and other factors of good scholarship. Prerequisite: permission of instructor. Offered: AWSpS.

P BIO 539 Sensory Systems I (3) Reading and analysis of primary sources in sensory neurophysiology. Receptor mechanisms and the somatosensory system are covered. Prerequisites: 506 and CONJ 511 or equivalent.

P BIO 541 Motor Systems I: Peripheral Mechanisms (3) Binder Critical reading and discussion of research papers on the current physiology of the motor unit, afferent inputs and segmental interneurons that control motor units. Prerequisites: 506 and CONJ 511 or equivalent and permission of instructor. Offered: 1996; W.

P BIO 542 Motor Systems II: Brainstem Mechanisms (3) Anderson, Fuchs Critical discussion of research papers and resulting concepts regarding the roles of various brainstem systems in controlling somatic and ocular movements. Prerequisities: 506 and CONJ 511 or equivalent and permission of instructor.

P BIO 543 Motor Systems III: Cerebral Cortex and Cerebellum (3) Fetz Critical reading and discussion of classical and current papers on motor and premotor cortex, corticospinal system; cerebellar circuitry and function, and cerebrocerebellar relations. Prerequisites: 506 and CONJ 511 or equivalent and permission of instructor. Offered: 1995; W.

P BIO 544 Properties of Neurons (3) Schwindt Critical reading and discussion of papers on passive, active, and integrative properties of single invertebrate and mammalian neurons. Provides understanding of how a variety of cellular mechanisms contribute to neuronal discharge patterns. Prerequisites: 506, 515, and CONJ 511 or equivalent and permission of instructor, Offered: even years; A.

P BIO 547 Readings In Cell Physiology (2/3, max. 15) Hille Reading and discussion of research literature on excitable cells. Emphasis on membrane excitability, transport, contractility, growth factors, and extracellular matrix. A literature research paper may be written for additional credit. Prerequisites: 506 and CONJ 511 or equivalent. P BIO 549 Plasticity in the Vertebrate Nervous System (2) Schwartzkroin Emphasis on mammalian CNS. Examples of anatomical, pharmacological plasticity chosen from literature. Structure changes during development and in adult (hippocampus, spinal cord, nerve-muscle) studied and as correlates of learning. Students responsible for leading class discussion of one topic. Credit/no credit only. Prerequisites: graduate-level courses in neurophysiology and neuroanatomy; understanding of basic neuronal mechanisms. Offered: even years; Sp.

P BIO 550 Cortical Potentials (4) Properties of continuous and evoked potentials and their interactions, including the biophysics of their cellular origin. Prerequisites: 516 and permission of instructor.

P BIO 559 Integrative Neurophysiology (3) Interpretation of neurophysiological phenomena from comparative, biophysical, and evolutionary standpoints. Prerequisite: permission of instructor.

P BIO 560 Muscle and Cell Motility (*) Gordon Selected topics in muscle contraction and cell motility. Reading of original papers. Presentations by students and faculty. Credit/no credit only. Prerequisite: permission of instructor.

P BIO 594 Neurological Study Unit (0.5) Faculty and student discussion of neurological topics illustrated with clinical cases or demonstrations include the following: physiology, neuroanatomy, neurology, neuropathology, neurosurgery, and psychiatry. Credit/no credit only. Prerequisite for medical students: HUBIO 532P.

P BIO 600 Independent Study or Research (*)

P BIO 700 Master's Thesis (*)

P BIO 800 Doctoral Dissertation (*)

Psychiatry and Behavioral Sciences

BB1644 Health Sciences

The department offers course work, clinical training, and research opportunities for undergraduate students, medical students, graduate physicians, and graduate students in allied health-programs such as psychology, social work, and psychiatric nursing.

A biobehavioral approach is emphasized, which incorporates intrapersonal, interpersonal, and sociocultural factors. Intrapersonal factors include emotion, perception, cognition, psychodynamics, neurochemistry, neuroanatomy, neurophysiology, and the developmental and aging processes. Interpersonal factors focus upon dyadic, familial, and group interactions. Sociocultural factors include the cultural, social, institutional, and community systems as well as the environment and epidemiology of health and disease.

Undergraduate Program

Contact: Gary Tucker, Chairman, Undergraduate Education

Ed Walker, Nicholas Ward, Pre-clinical Curriculum

Rebecca Jones, Maryonda Scher, Clinical Clerkships

A variety of courses in the behavioral sciences and psychiatry are available to students during their undergraduate years. Included among these are psychosocial growth and development, including aging and adult development, preventive methods for mental health, cross-cultural mental health, clinical psychiatry, and behavioral medicine.

Graduate Program

The medical school curriculum is divided into a core (basic) curriculum and an elective curriculum. Within its core curriculum the Department of Psychiatry and Behavioral Sciences offers material covering learning theory, cognition, memory, perception, neuropharmacology, social growth and development, epidemiology of health and disease, psychopathology, psychotherapy, and neuropsychiatry and behavioral medicine, as well as training in interviewing skills and assessment techniques. Its elective program includes a variety of clinical experiences and advanced didactics and seminars designed to further the knowledge and skills developed within the basic curriculum. In addition, the department encourages research and other scholarly pursuits by students in areas of interest to them. Stipends are available for research studies.

Residency Training in Psychiatry

Contact: Johan Verhulst

A four-year residency for medical school graduates and a three-year post-internship residency prepares physicians for Specialty Board Certification in Psychiatry. Clinical rotations on various inpatient, outpatient, and consultation/liaison services are augmented by individual supervision and didactic lectures. With the program's integrative orientation, residents become proficient in psychotherapy, psychopharmacology, and community liaison with patients of all ages. Fellowships in child, geriatric, and community psychiatry are available, as well as in substance abuse and various other specialty areas.

Clinical Psychology Internship and Postdoctoral Training

Contact: Joseph Becker

A one-year internship in clinical psychology approved by the American Psychological Association is offered as an interdepartmental program. This internship is open to candidates for the doctorate in clinical psychology from graduate programs approved by the American Psychological Association. Postdoctoral fellowships for advanced clinical and research training in behavioral medicine, broadly construed, are also offered.

Linehan, Marsha M. * 1977, (Adjunct); PhD, 1971, Loyola University (Chicago); personality disorders, including borderline; suicidal behaviors, cognitive and behavior therapies.

Martin, Donald C. * 1972, (Adjunct); PhD, 1968, Florida State University; statistical computing, randomization tests, approximations for probability functions.

Martin, Joan C. * 1972; PhD, 1965, Florida State University.

Meltzoff, Andrew N. * 1977, (Adjunct); PhD, 1976, Oxford University (UK); development of human infants.

Prinz, Patricia * 1976; PhD, 1969, Stanford University; pharmacology.

Raskind, Murray 1970; MD, 1968, Columbia University.

Robinson, Nancy M. * 1969; PhD, 1958, Stanford University; psychology.

Rothenberg, Michael B. 1967, (Emeritus); MD, 1954, Case Western Reserve University; psychiatry and behavioral sciences.

Roy-Byrne, Peter 1986; MD, 1978, Tufts University.

Schwartz, Pepper J. * 1972, (Adjunct); PhD, 1974, Yale University; family, gender, human sexuality, field methods.

Spain, David H. * 1968, (Adjunct); PhD, 1969, Northwestern University; psychocultural anthropology, African studies, research methods.

Streissguth, Ann P. 1963; PhD, 1964, University of Washington; psychology.

Strother, Charles R. 1947, (Emeritus); PhD, 1935, University of Iowa; mental retardation, psychopathology, speech pathology.

Teri, Linda 1984; PhD, 1980, University of Vermont; clinical psychology.

Townes, Brenda D. * 1961; PhD, 1970, University of Washington; psychology.

Trupin, Eric W. 1973; PhD, 1974, University of Wyoming; psychology.

Tucker, Gary J. 1985; MD, 1960, Case Western Reserve University.

Turner, Judith A. 1980; PhD, 1979, University of California (Los Angeles); psychology.

Veith, Richard 1977; MD, 1973, University of Washington.

Vitaliano, Peter P. * 1978; PhD, 1975, Syracuse University.

Vitiello, Michael V. * 1982; PhD, 1980, University of Washington; behavioral medicine, principles of behavioral sciences applied to medical research and practice.

Walker, R. Dale 1977; MD, 1972, University of Oklahoma.

Ward, Nicholas G. 1975; MD, 1973, Cornell University.

Associate Professors

Armstrong, Hubert E. 1966; PhD, 1963, Syracuse University; clinical psychology.

Avery, David H. 1980; MD, 1972, Washington University.

Barnes, Robert 1977; MD, 1973, University of Utah.

Borson, Soo 1979; MD, 1969, Stanford University.

Carlin, Albert S. 1964; PhD, 1964, Syracuse University; clinical psychology.

Chaney, Edmund 1977; PhD, 1976, University of Washington; clinical psychology.

Cowley, Deborah S. 1985; MD, 1980, University of Pennsylvania.

Cox, Gary B. * 1972, (Research); PhD, 1970, Duke University; program evaluation, statistics and research methodology, computer modeling, community psychology.

Dager, Stephen R. 1983; MD, 1978, University of Nebraska.

Dubach, Mark F. 1985; PhD, 1983, University of Washington; anthropology.

Egan, Kelly J. 1980; PhD, 1980, University of Washington; clinical psychology.

Erickson, Richard C. 1991; PhD, 1969, University of Washington; clinical psychology.

Khan, Arifulla 1984; MBBS, 1975, Bangalore Medical College (India).

Kivlahan, Daniel R. * 1984; PhD, 1983, University of Missouri; evaluating assessment, prevention, and treatment approaches for addictive behaviors.

Lampe, Thomas H. 1982; MD, 1977, Indiana University.

Maiuro, Roland D. 1978; PhD, 1978, Washington University; clinical psychology.

Maxim, Peter E. 1976; PhD, 1971, Stanford University.

McCann, Barbara S. 1986; PhD, 1984, Rutgers University; psychology.

McCauley, Elizabeth 1979; PhD, 1973, State University of New York (Buffalo); clinical and developmental psychology.

McFall, Miles E. 1984; PhD, 1981, University of Montana; clinical psychology.

Murburg, Michele 1982; MD, 1978, Albert Einstein College of Medicine.

Ries, Richard K. 1978; MD, 1975, Northwestern University.

Romano, Joan 1984; PhD, 1982, University of Pittsburgh; clinical psychology.

Scher, Maryonda 1955; MD, 1954, University of Washington.

Scott, David T. 1993; PhD, 1978, Yale University.

Speltz, Matthew L. 1981; PhD, 1980, University of Missouri; developmental psychotherapy, family therapy, pediatric behavioral medicine.

Sutzbacher, Stephen 1972; PhD, 1971, University of Washington; psychiatry and behavioral sciences.

Unis, Alan S. 1987; MD, 1976, University of Pittsburgh.

Varley, Christopher K. 1974; MD, 1973, University of Washington.

Verhulst, Johan 1977; MD, 1964, Catholic University of Louvain (Belgium); clinical Copychology, marital therapy.

Wilson, Lawrence G. 1978; MD, 1966, University of Kansas.

Womack, William M. 1969; MD, 1961, University of Virginia.

Assistant Professors

Ashleigh, E. Alexandra 1989; MD, 1985, University of California (San Francisco).

Calderon, Rosemary 1989; PhD, 1988, University of Washington.

Claypoole, Keith H. 1988; PhD, 1987, University of Wyoming.

Decker, Kathleen P. 1993, (Acting); MD, 1985, Stanford University.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

PBSCI 451 Principles of Personality Development (2) Doerr Development of the personality from infancy through advanced age traced to its physiologic, experiential, and cultural sources with emphasis on psychodynamic concepts and behavior.

CONJ 475 Alcoholism: A Course for Medical Students in the Allied Health Sciences (2) See Conjoint Courses.

PBSCI 498 Undergraduate Thesis (*) Opportunity to complete work on psychiatric research projects or to pursue a specific psychiatric topic in depth, for instance, through library research. Prerequisite: permission of responsible faculty member. (Four or six weeks, full-time, or equivalent part-time.) Entry Code required.

PBSCI 499 Undergraduate Research (*, max. 15) Opportunities are available for participation in a wide variety of ongoing research in the behavioral sciences and clinical psychiatry, or for the development of an individual investigative project under the supervision of a faculty sponsor. Prerequisite: permission of faculty sponsor. (Two, four, six, or twelve weeks.) Entry Code required. PBSCI 525P Forensic Issues in Mental Health (3) Goldenberg Concentration on major issues in psychiatry and law. Outside speakers from legal, judicial, and psychiatric communities. Lectures on assessment in forensic settings, competence to stand trial, and criminal responsibility. Discussions on personality disorders and correctional environments. For residents and medical, psychiatry, psychosocial nursing, graduate psychology, social work, and law students.

PBSCI 530P Developmental Psychoanalytic Psychotherapy (2) Schimmelbusch Continuation of study of mental functioning from a developmental point of view. How failures of psychological development lead to various psychiatric pathological states and how psychoanalytic treatment reinstitutes normal development. Prerequisite: 535.

PBSCI 535 Modern Concepts of Psychoanalysis (2) Schimmelbusch Childhood developmental stages studied in light of inborn and environmental determinates. Correlating developmental phases with all aspects of adult personality functioning. A hierarchy of different models of the mind used to explicate personality functioning on a clinical case discussion level. Prerequisite: medical or graduate student standing or permission of instructor.

PBSCI 548P Aging and Adult Development (1-3) Aging in Western technologically advanced societies frequently involves losses in status, stamina, and economic and social supports. Consideration given to losses among the aged. Students select projects in the area of aging and work at their own levels of expertise and sophistication. Seminar format with guided reading.

PBSCI 562P Principles of Hypnosis (2) Dworkin History and theory of hypnosis. Induction techniques. Application to the treatment of emotional and physical problems. Medical and dental students. Entry Code required.

PBSCI 575P Community Psychiatry Seminar (2) *Trupin* Preparation for mental-health work in community agencies: cultural, social, and economic factors in mental illness and provision of services; history of community mental health; direct and indirect intervention; consultation and supervision; agency organization and leadership; psychiatric epidemiology; prevention; forensic psychiatry. Lectures, readings, case discussions.

PBSCI 591P Seminars and Conferences in Psychiatry: Seminar in Clinical Neuropsychology (*) Introduction to neuropsychological studies of brainbehavior relationships. Exposure to neuropsychological assessment procedures and manifestation of neurocognitive deficits in selected mental and medical disorders, e.g., epilepsy, AIDS, sleep disorders, trauma, toxin exposure, vascular disorders, psychiatric disorders. Develop knowledge of neuropsychological assessment procedures and applications to diverse medical conditions. Prerequisite: psychological assessment experience.

PBSCI 664P Basic Clerkship in Ambulatory Services, HCMHC, or Clinic II (12) Opportunity to experience outpatient psychiatric ambulatory services. Focus on improving interviewing skills and developing an interviewing style and content appropriate to patients with psychiatric dysfunction; gaining familiarity with psychopharmacology; exposure to problems seen in psychiatric emergency medicine. (Six weeks, full-time. Limit: two students.)

PBSCI 665P Basic Clinical Clerkship (8, max. 24) Dagadakis, Pascualy, Scher, Shores, Ward Inpatient clerkship in psychiatry. Students have primary responsibility under the direction of attending psychiatrists and residents for diagnosis and care of patients at University of Washington Medical Center, Harbotview Medical Center, or Veterans Administration Hospital. Emergency room, crisis intervention, consultation appropriate to patients with psychiatric dysfunction. Familiarity with psychopharmacology and short-term hospitalization are emphasized. (Six weeks, full-time.)

PBSCI 666P WAMI Paychlatry and Behavloral Sciences Clerkship (12) Rotation aims to increase student's skills in basic psychiatry, social psychiatry, transcultural psychiatry, and community psychiatry. Orientation is around the diagnosis, treatment, and clinical management of White, Aleut, Indian, and Eskimo children and adults in outpatient, inpatient, and community settings. Third-, fourth-year medical students. Prerequisite: HUBIO 563P. (Limit: three students.)

PBSCI 667P Basic Psychiatry Clerkship, Bolse (12) Leone Basic psychiatry clerkship at Veterans Administration Medical Center in Boise, Idaho. Fulfills graduation requirement for clerkship in Psychiatry.

PBSCI 670P Clerkship in Consultation/Liaison Psychiatry UWMC (*, max. 24) Katon Assessment of patients with major psychosocial problems associated with physical disease, including: problems stemming from the way the illness is perceived and experienced, liaison with other clinical disciplines on complex diagnosis and treatment of problems. Prerequisites: HUBIO 563P, 664P, 665P, 666P, or 667P.

PBSCI 671P Clerkship in Consultation/Liaison Psychiatry HMC (*, max. 24) Wilson Prerequisites: HUBIO 563P, 664P, 665P, 666P, or 667P.

PBSCI 672P Elective Clerkship in Primary Care Psychiatry at Bolse VAMC (8/12) Blackburn, Leone, Marsh Assessment and treatment of patients with acute psychiatric problems in a primary care/rural setting. Consultation work on general medicine and surgery; assessment and dealing with outpatient psychiatric problems as they initially present. Evaluations, crisis Intervention strategies, and brief therapies stressed. Prerequisites: 664P, 665P, or 667P. (Four to six weeks; UW students only.)

PBSCI 673P Outpatient Psychlatry Elective (*, max. 24) Brinkley Offered at Harborview Outpatient Center. Students function as subinterns, conducting diagnostic interviews, initiating and managing pharmacotherapeutic treatment regimens, and providing crisis intervention, under the supervision of the full-time attending at Psychopharmacology Clinic. Prerequisite: 664P, 665P, 666P, or 667P. (Four to six weeks, fulltime.)

PBSCI 676P Inpatient Clerkship in Psychiatry at American Lake VA (8/12) Martin, Taylor, Verhey For medical students with a defined interest in psychiatry who wish to develop their knowledge and skills in the evaluation, management, and treatment of a wide range of acute and chronic psychiatric conditions requiring inpatient hospital treatment. Prerequisite: 664P, 665P, 666P, or 667P. (Four to six weeks; fulltime.)

PBSCI 677P Alcohol and Drug Treatment Clerkship at American Lake VA (8/12) Lim Student assists in every phase of the substance-abuse treatment, including admission interviews, patient evaluation, problem identification, group and individual psychotherapy, assertiveness training, anger control, human sexuality, medical evaluation and treatment, couples therapy, discharge and aftercare planning. Experience primarity clinical. Prerequisite: 664P, 665P, 666P, or 667P. (Four to six weeks, full-time.)

PBSCI 678P Clerkship in Psychlatric Long-Term Care and Rehabilitation (*, max. 12) Verhey, Zemmers Two- or six-week clerkship provides learning experiences in rehabilitation of long-term psychiar ric patients with medical illness. Multidisciplinary team approach, working with homeless mentally ill. Diagnostic skills emphasized. Spectrum of diseases (cardiovascular, Huntington's, organic brain syndrome) is such that physical rehabilitation is not an emphasis. Prerequisites: HUBIO 563P, 664P, 665P, 666P, or 667P.
396 SCHOOL OF MEDICINE / PSYCHIATRY AND BEHAVIORAL SCIENCES

PBSCI 680P Clerkship in Emergency Psychiatry (*, max. 24) Dagadakis Emphasis on clinical evaluation, acute management, and treatment planning for individual patients. Experience in coordinating these activities with other emergency room personnel, and various hospital and community resources. Emphasis on skills useful to physicians in any specialty. Thirdand fourth-year medical students only. Prerequisite: either 664P, 665P, or 666P. (Four to six weeks, fulltime.)

CONJ 680P Detoxification and Rehabilitation Programs for Alcoholism and Drug Abuse (*, max. 16) Walker See Conjoint Courses. (Four or six weeks, fulltime; medical students only.)

PBSCI 685P Geriatric Psychiatry Clerkship (*, max. 12) Lampe Two- or six-week elective. Participation in the evaluation and care of older persons with psychopathology, such as intellectual impairment and depression, in a variety of settings. Emphasis on improving clinical skills regarding diagnosis and treatment of common behavioral problems in the elderly. Prerequisite: 664P, 665P, or 666P.

PBSCI 688P Subinternship in General Psychiatry (*, max. 16) Backus, Scher Students function as interns under the supervision of house staff and attending psychiatrists. Further development of their diagnostic and therapeutic skills emphasized. Special areas of interest, such as family intervention, substance abuse, psychoses, neuropsychiatry, community psychiatry, administration, research pursued. Prerequisites: 664P, 665P, 666P, or 667P. (Four or six weeks, full-time.)

PBSCI 690P Clerkship in Neuropsychlatry (*, max. 24) Neppe Assessment of patients with possible organic causes for behavioral/psychopathological problems. Includes evaluation/management of refractory psychoses; epileptics with behavioral problems; metabolic/endocrine problems presenting psychiatrically; psychopathology caused by lesions in cerebral cortex/limbic system; psychopharmacological manipulation of underlying neurotransmitter disease. Provides student intensive exposure to neuropsychiatry. Prerequisite: 664P, 665P, or 666P. (Four, six, or eight weeks, full-time; preceptor approval required.)

PBSCI 696P Advanced Clerkship in Child Psychiatry (*, max. 24) Unis, Varley Provides students an opportunity to participate in evaluation and treatment. Experiences in specialized clinics are also available. It is suggested that the student contact the instructor prior to enrollment. Prerequisite: 664P, 665P, 666P, or 667P. (Four, six or twelve weeks, full-time. Limit: two students.)

PBSCI 697P Psychiatry Special Electives (*, max. 24) Scher By special arrangement, clerkships, externships, and research opportunities can be made available at the University and other institutions. Students obtain permission from Dr. Hunt before obtaining a special assignment form from the Dean's office one month before advance registration. Students contact affiliating institutions. Does not fulfill the requirement for a basic clerkship in psychiatry. Entry Code required.

Radiation Oncology

NN106 University of Washington Medical Center

Radiation oncology is the branch of clinical medicine that utilizes high-energy radiation to treat disease, usually cancer. The department consists of three divisions: clinical oncology, medical radiation physics, and experimental cancer biology. Training programs are offered in all three divisions. Research programs in the Department of Radiation Oncology are aimed at the physical and biological mechanisms of interactions between ionizing radiations and normal and malignant tissues.

Faculty

Chairperson

Thomas W. Griffin

Professors

Graham, Michael M. * 1980; MD, 1976, University of California (San Francisco); positron emission tomography, nuclear medicine.

Griffin, Thomas W. 1976; MD, 1970, University of Nebraska; therapeutic radiology.

Groudine, Mark * 1982; MD, 1975, University of Pennsylvania; chromatin structure and gene activity in development and transformation.

Krohn, Kenneth A. * 1981; PhD, 1971, University of California (Davis); chemistry, radiation oncology.

Laramore, George E. 1976; MD, 1976, University of Miami (Florida); therapeutic radiology.

Rasey, Janet S. 1972; PhD, 1970; University of Oregon; radiation biology.

Wootton, Peter 1959; BSc (Hon), 1944, University of Birmingham (UK); medical radiation physics.

Associate Protessors

Austin-Seymour, Mary M. 1988; MD, 1978, University of Chicago; therapeutic radiology.

Kalet, Ira J. * 1980; PhD, 1968, Princeton University; computer simulation of radiation therapy, artificial intelligence, computer graphics.

Koh, Wui-Jin 1984; MD, 1984, Loma Linda University; therapeutic radiology.

Phillips, Mark H. 1991; PhD, 1982, University of Wisconsin; medical radiation physics.

Russell, Kenneth J. 1985; MD, 1979, Harvard University; therapeutic radiology.

Wilbur, D. Scott 1986; PhD, 1978, University of California (Irvine); radiochemistry.

Assistant Professors

Cho, Paul S. 1990; PhD, 1989, University of California (Los Angeles); medical radiation physics.

Lindsley, Karen L. 1993; MD, 1985, Vanderbilt University; therapeutic radiology.

Livesey, John C. 1985; PhD, 1982, University of Minnesota; radiation biology.

Stelzer, Keith J. 1990; MD, 1989, University of California (Los Angeles); therapeutic radiology.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

R ONC 499 Undergraduate Research (*, max. 24) Austin-Seymour, Koh, Laramore, Russell, Stelzer Opportunities in clinical or laboratory investigation in radiation oncology. Participation of medical students in ongoing projects or new projects designed for the students. Credit/no credit only. Prerequisites: medical student standing and permission of Dr. Koh.

R ONC 505, 506 Radiological Physics I, II (3,3) *Wootton* Application of physical concepts, methodology, and instrumentation in the study, production, and mensuration of ionizing radiations and their interactions with biological materials. Prerequisite: permission of instructor.

R ONC 517 Radiation Dosimetry (3) Wootton Examines the interactions of ionizing radiations with matter and the physical principles involved in their measurement in greater depth than does 505. For students contemplating a career in research concerned with ionizing radiation; assumes a sound background in physics. Prerequisite: permission of instructor.

R ONC 695P Clinical Cancer Management (*, max. 8) Participation in the clinical management of patients with cancer, emphasizing a multi-modality approach. Includes clinical assessment, planning of radiation treatment, and follow-up evaluation of patients. Special procedures include implant brachytherapy and intraoperative radiation. Daily teaching conferences with faculty and residents. Prerequisite: MED 665P or permission of instructor.

R ONC 697P Radiation Oncology Special Elective (*, max. 24) By specific arrangement for qualified students, special clerkship, externship or research opportunities can be made at institutions other than the University of Washington. Students should obtain a "Special Assignment" form from the Dean's Office at least one month before advance registration. Prerequisite: permission of instructor.

Radiology

RR215 University of Washington Medical Center

Diagnostic radiology is that branch of clinical medicine that uses information obtained from imaging modalities to detect and to characterize states of disease. Historically, X-rays were the first energy source utilized for these purposes, and they continue to be a mainstay of this discipline. More recently, the armamentarium has grown to include ultrasound, computed tomography, magnetic resonance, and positron emission tomography. In nuclear medicine, one of radiology's major subspecialties, radionuclides are employed for both diagnostic and therapeutic purposes. Another sub-specialty is interventional radiology, where radiologic techniques are utilized to treat a variety of diseases. The Department of Radiology consists of two clinical divisions, diagnostic radiology and nuclear medicine. Both divisions are ably supported by technologists and faculty members in the field of radiation physics. Instruction in radiology is provided for medical students, residents, and fellows as well as for other physicians. The faculty and its teaching and research activities are represented in each of the hospitals affiliated with the University.

Faculty

Chairperson

Albert A. Moss

Professors

Bassingthwaighte, James * 1975, (Adjunct); MD, 1955, University of Toronto (Canada); computer analysis of transport mechanisms in blood and tissues.

Bush, William H. 1979; MD, 1967, Oregon Health Sciences University; uroradiology.

Chesnut, Charles H. * 1974; MD, 1966, University of Florida; nuclear medicine.

Effmann, Eric L. 1991; MD, 1967, Indiana University; pediatric radiology.

Figley, Melvin M. 1958, (Emeritus); MD, 1944, Harvard University.

Freeny, Patrick C. 1991; MD, 1968, University of Oklahoma; abdominal radiology.

Godwin, J. David 1986; MD, 1971, Stanford University; pulmonary radiology.

Graham, C. Benjamin 1956; MD, 1958, University of Washington; pediatric, neonatal radiology.

SCHOOL OF MEDICINE / RADIOLOGY 397

Graham, Michael M. * 1980; MD, 1976, University of California (San Francisco); positron emission tomography, nuclear medicine.

Harley, John D. 1975; MD, 1966, Washington University; general radiology and angiography.

Kim, Yongmin * 1982, (Adjunct); PhD, 1982, University of Wisconsin; computer architecture, imaging systems, computer graphics, multimedia, modeling and instrumentation.

Krohn, Kenneth A. * 1981; PhD, 1971, University of California (Davis); chemistry, radiation oncology.

Kushmerick, Martin J. * 1988; MD, 1963, University of Pennsylvania; muscle contraction, magnetic resonance, metabolic imaging NMR spectroscopy.

Lewellen, Thomas * 1967; PhD, 1972, University of Washington; bioengineering, electrical engineering.

Mack, Laurence A. 1978; MD, 1971, University of Illinois; ultrasonography, computed tomography.

Maravilla, Kenneth R. 1986; MD, 1970, State University of New York (Brooklyn); neuroradiology.

Moss, Albert A. 1984; MD, 1967, State University of New York (Upstate); gastrointestinal radiology, computed tomography.

Nelp, Wil B. 1962; MD, 1955, Johns Hopkins University; nuclear medicine.

Nelson, James A. * 1986; MD, 1965, Harvard University; diagnostic radiology with basic research in related sciences.

Robertson, William D. 1990; MD, 1969, University of British Columbia (Canada); neuroradiology.

Rohrmann, Charles A. 1975; MD, 1966, University of Washington; gastrointestional radiology.

Talner, Lee B. 1993; MD, 1963, Yale University; uroradiology.

Associate Professors

Brewer, David K. 1978; MD, 1972, Harvard University; pediatric radiology, angiography, computed tomography.

Cohen, Wendy A. 1992; MD, 1975, Harvard University; neuroradiology.

Coldwell, Douglas M. 1987; MD, 1980, University of Texas (Galveston); angiography/interventional radiology.

Dalley, Robert W. 1987; MD, 1982, University of Utah; neuroradiology.

Eary, Janet F. 1980; MD, 1980, Michigan State University; nuclear medicine.

Eskridge, Joseph M. 1987; MD, 1981, University of Louisville; neuroradiology.

Gillespy, Thurman 1990; MD, 1980, Thomas Jefferson University; musculoskeletal radiology.

Griep, Robert J. 1967; MD, 1958, University of Texas (Galveston); internal medicine/radiology.

Hayes, Cecil E. 1991; PhD, 1973, Harvard University; physics, MRI.

Jacobson, Arnold F. 1987; MD, 1980, University of Illinois; nuclear medicine.

Kimmey, Michael 1982, (Adjunct); MD, 1979, Washington University; gastroenterology/endoscopy.

Mann, Frederick A. 1993; MD, 1975, Indiana University; emergency radiology.

Marglin, Stephen I. 1980; MD, 1968, Yale University; chest and oncologic radiology.

Ott Ralph, Susan M. 1982, (Adjunct); MD, 1974, University of Washington; nephrology.

Patten, Randall M. 1988, (Clinical); MD, 1981, University of California (San Diego); magnetic resonance imaging. Phillips, Leon A. 1959, (Emeritus); MD, 1952, Yale University; general radiology, uroradiology.

Stern, Eric J. 1992; MD, 1985, University of Medicine & Dentistry of New Jersey; chest radiology.

Takasugi, Julie E. 1988; MD, 1982, University of California (Los Angeles); pulmonary radiology.

Winter, Thomas C. 1990; MD, 1986, Duke University; ultrasound, computed tomography, MRI.

Winters, William D. 1989; MD, 1983, University of Utah; pediatric radiology.

Yuan, Chun 1991; PhD, 1988, University of Utah; medical biophysics, MRI.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

RADGY 498 Undergraduate Thesis (*) Nelson Supervised clinical and/or laboratory research in the broad field of medical imaging, culminating in a thesis. The thesis will be submitted to Dr. James Nelson for suitable recognition.

RADGY 499 Undergraduate Research (*) Nelson Opportunity to gain research experience and direct participation in either clinical or basic sciences investigation in diagnostic radiology and/or nuclear medicine. Written exposition of the results of this experience will be submitted to Dr. James Nelson.

RADGY 508 Physical Aspects of Medical Imaging (4) Stewart Quantitative physical principles of medical imaging are presented for electromagnetic and sonic radiation. Methods of image formation and analysis are discussed for conventional film radiography, CT, DSA, PET, B-mode ultrasound and Doppler ultrasound. Offered: jointly with BIOEN 508.

RADGY 550 Nuclear Magnetic Resonance in Biomedicine (2) Hayes, Kushmerick, Richards, Yuan Basic physics of nuclear magnetic resonance (NMR) imaging and spectroscopy are presented. Research applications of NMR in physiology and biochemistry are reviewed with emphasis on the brain. Grade based on writter tests and small research paper. Prerequisite: permission of instructor. Offered: jointly with BIOEN 565.

RADGY 580P Nuclear Medicine Technique, Physics, and Instrumentation (2.5) Lewellen Provides familiarization with basic nuclear phenomena and with the instrumentation used in the practice of nuclear medicine. There are discussions and laboratory exercises. Practical experience in instrument operation and sample counting are provided. Prerequisite: permission of instructor.

RADGY 600 Independent Study or Research (*) *Nelson* Prerequisite: permission of Dr. Nelson and faculty sponsor.

RADGY 693P Introduction to Diagnostic Radiology (4) Schulte Half-time clerkship in the field of medical imaging. Lectures, case discussions, film reading, and independent study provide an overview of the subspecialty areas of diagnostic radiology and nuclear medicine. Emphasis on utilization and selection of imaging tests, radiologic anatomy, and interpretation of commonly encountered studies.

RADGY 694P Advanced Clinical Clerkship (8) Schulte Full-time clerkship provides a more in depth experience in diagnostic radiology and nuclear medicine. Required rotations in the subspecialty areas of radiology augment the basic lecture series and case discussions of Radiology 693. For those with a special interest in diagnostic radiology. Prerequisites: permission of instructor.

RADGY 696P Nuclear Medicine Clerkship (*, max. 12) Nelp Daily participation at University of Washington Medical Center nuclear medicine clinic emphasizing technical performance, diagnostic interpretation, and clinical relevance of nuclear imaging. Daily clinical teaching conferences of the division. Four- and sixweek clerkships can be preplanned in areas such as pulmonary, cardiovascular, renal, bone, computer analysis. Prerequisite: permission of instructor.

RADGY 697P Radiology Special Electives (*, max. 24) Schulte Radiologic training in a nonaffiliated institution. Permission and arrangements must be made at the time of registration through direct commu-

398 SCHOOL OF MEDICINE / RADIOLOGY

nication between the student and the education coordinator in Radiology. A written outline from a preceptor at the intended site required. Prerequisite: permission of radiology education coordinator.

Rehabilitation Medicine

BB919 Health Sciences

The Department of Rehabilitation Medicine provides instruction for medical students, interns, and residents in a comprehensive approach to rehabilitation problems. This includes special diagnostic and evaluative procedures; methods and rationale in the application of principles of occupational therapy, physical therapy, prosthetics and orthotics, and other health professions; and advanced investigation of special problems encountered in the field. In addition, the department conducts a residency training program for the specialty of physical medicine and rehabilitation.

The department offers curricula leading to the following degrees: Bachelor of Science in Occupational Therapy, Master of Science (occupational therapy); Bachelor of Science in Physical Therapy, Master of Physical Therapy, Master of Science (physical therapy); Bachelor of Science in the field of prosthetics and orthotics, as well as a Master of Science (rehabilitation medicine) or Master of Rehabilitation Medicine degree for residents in physical medicine and rehabilitation who wish to enter the academic field.

Occupational Therapy

Head

Elizabeth M. Kanny

Occupational therapy is a health profession that provides services related to functional performance in everyday life, whether it be in self-care, work, or play/ leisure activities. Occupational therapists work with people who have physical illness or injury, social or emotional difficulties, congenital or developmental problems, or who are in need of preventative strategies that promote well-being. They serve people in all age groups, and of diverse cultural and ethnic groups and socio-economic levels.

Occupational therapy interventions include the use of self-care, work, and play activities to increase independent function, enhance development, and to minimize or prevent disability. They may include adaptation of activities or the environment to achieve maximum independence and to enhance quality of life. Services may include: training in self-care activities; design, fabrication, and application of splints; sensorimotor activities; therapeutic group activities; selection and use of adaptive equipment; adaptation of physical environments in the home, school, work, or community; therapeutic activities to enhance functional performance in everyday life; and work evaluation, work hardening, and workplace adaptations; and leisure exploration and performance.

Today's occupational therapists work in clinical practice, administration, education, research, private practice, and home health. Work settings include: rehabilitation centers and hospitals; public and private schools; home health agencies; mental health centers and psychiatric hospital settings; substance abuse centers; vocational rehabilitation centers and industrial clinics; wellness and prevention programs; and hospices.

The program is designed to build on a preprofessional liberal arts foundation. Then in the professional program, theoretical and technical knowledge in occupational therapy is linked with professional values, attitudes, and skills. The education of each student is based on the philosophy that "occupational performance" (including self-care, work, leisure/play) is central and provides a purpose and meaning to one's life. Professional standards of practice, ethics, and continued professional growth are emphasized throughout the program. The program is accredited by the Accreditation Council for Occupational Therapy Education of the American Occupational Therapy Association. It includes two years of professional course work and six months of clinical fieldwork training. Completion of all University and program requirements leads to the Bachelor of Science in Occupational Therapy degree awarded by the School of Medicine, Department of Rehabilitation Medicine. Graduates of the program are eligible to sit for the national certification examination for the occupational therapist administered by the American Occupational Therapy Certification Board (AOTCB). After successful completion of this exam, the individual will be an Occupational Therapist, Registered (OTR). Most states, including Washington, require state licensure in order to practice; however, state licenses are usually based on the results of the AOTCB Certification Examination.

Admission Requirements. Students are admitted to the baccalaureate program at the junior level; however, some applicants have completed three or more years of college work or may hold a baccalaureate degree before applying to the program. The admission process occurs once a year for entry autumn quarter of each year; the application deadline is February 15.

Preprofessional requirements for entrance include completion of the College of Arts and Sciences language, writing, reasoning, and general education requirements, as follows: 5 credits English composition; minimum 10 credits additional writing-intensive courses (identified as W courses in the quarterly *Time Schedule*); through the third quarter of a single foreign language; 5 credits quantitative and symbolic reasoning. Minimum grade for the English composition course and the third-quarter course in foreign language must be 2.0. The general education requirements include 20 credits minimum in each of the following three Areas of Knowledge: Visual, Literary, & Performing Arts; Individuals & Societies; the Natural World.

Specific prerequisite courses include the following:

Physical Sciences: CHEM 120, Introduction to General Chemistry (5 credits), or CHEM 140, General Chemistry (4); PHYS 114, General Physics (4); PHYS 117, General Physics Laboratory (1).

Biological Sciences: B STR 301, General Anatomy (4); ZOOL 118, Survey of Physiology (5).

Social Sciences: PSYCH 101, Psychology as a Social Science (5 credits); PSYCH 305, Deviant Personality (5); PSYCH 306, Developmental Psychology (5); SOC 110, Survey of Sociology (5):

Prerequisite courses simultaneously fulfill the following Areas-of-Knowledge requirements: all 20 credits of Individuals & Societies; and most credits of the Natural World.

To apply, students must have completed five of the prerequisite courses, with two courses in the physical and biological sciences. They must have earned a minimum GPA of 2.50 in the prerequisite courses with no single course graded less than 2.0; and have a cumulative GPA of 2.50 in order to be eligible to apply. Admission is competitive, based on demonstrated academic ability, communication skills, and understanding and experience in occupational therapy. Detailed program requirements and selection process information may be obtained from the curriculum office.

Graduation Requirements: The following courses must be completed satisfactorily in the scheduled sequence, beginning autumn quarter only, at the UW: REHAB 320, 321, 322, 332, 380, 414, 417, 435, 442, 444, 445, 446, 447, 448, 468, 470, 473, 481, 482, 483, 484, 485, 486, 487, 488, 489, 494, B STR 431, and HUBIO 563.

Student Evaluation: The University grade-point system is used in student evaluation. A student must maintain a cumulative GPA of 2.50 in all required professional course work to maintain satisfactory standing and to graduate. The student must attain a minimum grade of 2.0 in all required courses, with the exception of one course grade allowed between 1.7 and 1.9, or be required to repeat that course at the next offering.

At the end of any academic quarter in which a student's performance falls below the scholastic requirement, he/she is placed on academic probation and is allowed two additional consecutive quarters to raise the GPA to 2.50. A student who fails to meet the above scholastic requirements is dismissed from the program and advised to transfer to an alternative major or withdraw from the University.

The student must satisfactorily complete all academic course work before being promoted to Level II Fieldwork (REHAB 494). Two Level II Fieldwork placements are required. If a student should fail to pass a Level II Fieldwork placement he/she must petition the Occupational Therapy Advisory and Evaluation Committee for approval to repeat it. A Level II Fieldwork placement can be repeated only once.

Physical Therapy

Head

JoAnn McMillan

Physical therapy is a direct form of professional patient care that can be applied in most disciplines of medicine. The principal objective in physical therapy is to restore or improve motor function in individuals with musculoskeletal and/or neuromuscular problems.

Management of problems related to motor function is only part of the work of physical therapy. Equally important is a rebuilding of self-confidence and the creation of a desire to return to a normal active life. Other primary objectives of physical therapy are prevention of disability and pain, and training in mobility skills for those who must adapt to permanent disability.

As a consequence of the scope of the profession, physical therapists function in a variety of settings, the most familiar being the hospital. Physical therapists also plan, provide, and supervise evaluation and direct patient care in outpatient clinics, rehabilitation centers, home-care agencies, schools, extended-care facilities, voluntary health agencies, industry, and private practices. The physical therapist may be found anywhere that quality health care is needed. Increasingly, physical therapists are becoming involved in basic and clinical research; in the academic community, either as full-time faculty members or as supervisors of clinical education; and as consultants in local, state, and federal health-planning activities.

Physical therapists function in compliance with the licensing laws and ethical principles that govern the practice of physical therapy. The steps to licensure as a physical therapist vary slightly from state to state, but all physical therapists graduate from an accredited curriculum of physical therapy that includes a specific period of clinical training. As physical therapy relates to the majority of medical specialties, the education program is broad in scope, including a heavy dose of physical and social sciences. The physical therapist evaluates the patient's problem by testing such factors as range of joint motion, muscle strength, posture and gait, pulmonary function, sensation and sensory perception, orthotic and prosthetic fit, reflexes and muscle tone, and functional skills. Some of the procedures used may include ultrasound, superficial heat and cold, electrical stimulation, massage, traction, joint mobilization, biofeedback, therapeutic exercise, and training in the use of orthotic, prosthetic, and other

assistive devices, such as crutches, canes, and wheelchairs.

As with all professionals in health fields, physical therapists are responsible for subscribing to a program of continuing education. Some therapists also develop the knowledge and skills of a specialist via continuing education and concentrated practice in one area, such as sports or pediatric therapy. A formalized mechanism for certifying specialists is implemented by the national professional association, the American Physical Therapy Association.

The University baccalaureate program in physical therapy is accredited by the American Physical Therapy Association Commission on Accreditation in Physical Therapy Education.

Admission Requirements: The following information is an overview. Applicants are urged to request more detailed program information (which is updated annually and available after October 1 each year) from the Physical Therapy Curriculum Office, RJ-30, University of Washington, Seattle, Washington 98195, (206/685-7408). Students are urged to request these materials early, since the deadline for receipt of applications is February 15. At the time of entrance to the program (autumn quarter), applicants must be legal residents of Washington, Idaho, Alaska, Montana, Oregon, Hawaii, Wyoming, or Nevada. Preference is given to Washington residents.

University general education, writing, and reasoning requirements must be completed prior to admission. General education courses must include at least 40 credits, with 10 credits minimum in each of the following three Areas of Knowledge: Visual, Literary, & Performing Arts; Individuals & Societies; the Natural World. Writing courses (minimum 12 credits) consist of 5 credits of English composition plus two additional writing-intensive courses. Reasoning courses must total no less than 5 credits devoted to reasoning skills. Students may satisfy these requirements (and the specific physical therapy prerequisite courses which follow) with courses completed for previous college-level degrees.

Applicants to the program must also complete specific physical therapy prerequisite courses as follows. These courses, as they apply, may also satisfy University general education requirements.

Chemistry: CHEM 140, 150, General Chemistry (4, 4 credits) or CHEM 120, Introduction to General Chemistry (5) and CHEM 220, Introduction to Organic and Biochemistry (5), or equivalents.

Physics: PHYS 114, 115, 117, 118, General Physics and Laboratory (4,4,1,1).

Anatomy and Physiology: B STR 301, General Anatomy (4 credits) and ZOOL 118, Survey of Physiology (5), or equivalents.

Microbiology: MICRO 301, General Microbiology (3) and MICRO 302, General Microbiology Laboratory (2), or equivalents.

Psychology: PSYCH 101, Psychology as a Social Science (5) or PSYCH 102, Psychology as a Natural Science (5) plus an additional psychology or psychiatry course.

The preceding courses in chemistry, physics, anatomy and physiology, and microbiology may all be used toward general education requirements in the Area of Knowledge entitled "the Natural World." Courses taken to satisfy the psychology prerequisite requirement may be applied toward the Area of Knowledge entitled "Individuals & Societies" if they have a social science orientation, e.g., PSYCH 101, or toward "the Natural World" if they have a natural science orientation, e.g., PSYCH 102.

By the application deadline (the end of the preceding autumn quarter or semester), students must have completed at least 28 required physical therapy prerequisite credits. Courses in progress on February 15, the application deadline, are not counted toward this minimum. Students must also have earned a minimum 3.00 GPA, with no individual course grade below a 2.0 in the prerequisite courses completed. All applicants must have earned a minimum 2.70 cumulative GPA for all college-level work.

All specific physical therapy prerequisite credits must be completed prior to entrance into the program, with minimum GPAs and minimum individual grades mentioned above, met or exceeded. Admission is competitive, based on demonstrated academic ability and apparent aptitude for physical therapy. Returning students who previously dropped out of the program must reapply and are subject to the same review process as that used for all other applicants.

While the professional phase of the entry-level professional program is designed to begin with the junior year of a four-year baccalaureate curriculum, the majority of applicants have completed three or more years of college work before being accepted into the program. Most students admitted hold a baccalaureate degree in another discipline. To be competitive, applicants must arrange for a strong and general program of prerequisite course work that includes the specific courses listed above. Changes in the program requirements at the University may be made in the future to accommodate professional initiatives. Students are encouraged to contact the Physical Therapy Curriculum Office (206/685-7408) for information updated yearly.

Graduation Requirements: The following courses must be completed satisfactorily in the scheduled sequence, beginning autumn quarter only, at the UW: REHAB 320-321, 322, 332, 404-405, 413, 414, 416, 442, 443, 444-445, 451-452, 463, 466-467, 471-472, 475, 476, 490, 495; PATH 410; B STR 431.

Student Evaluation

The University grade-point system is used. A student in the professional phase of the curriculum must maintain a cumulative GPA of 2.50 in all required courses for satisfactory standing and for graduation. At the end of any academic quarter in which a student's performance falls below that point, he or she is placed on academic probation. Once on academic probation, a student is allowed two additional consecutive quarters to bring his or her curriculum GPA to 2.50. A student not meeting the above standard is dropped from the curriculum and advised to transfer to an alternate major within the University or to withdraw from the University.

Any grade of less than 2.0 in a professional curriculum course necessitates repetition of that course if recommended by the physical therapy faculty and approved by the Advisory and Evaluation Committee.

Prosthetics and Orthotics

Head

Alan J. Dralle

The prosthetist-orthotist is a member of a professional medical team devoted to the evaluation and treatment of persons with physical disabilities. The prosthetistorthotist is responsible for the designing and fabricating of prosthetic and orthotic devices (artificial limbs and braces) to enable patients with disabilities of all ages to enjoy more functional and independent lives.

Bachelor of Science Degree

Admission Requirements: Students are admitted to this curriculum at the junior level. Preprofessional requirements for admission include completion of the University writing and reasoning requirements (5 credits of English composition; two additional writing courses totaling a minimum of 10 credits; 5 credits quantitative and symbolic reasoning) and the College of Arts and Sciences Areas-of-Knowledge requirements (20 credits Visual, Literary, & Performing Arts; 20 credits Individuals & Societies; 20 credits the Natural World). Postbaccalaureate (fifth-year) students are exempt from the writing and reasoning requirements but not from the Areas-of-Knowledge requirements.

Applicants must achieve a minimum 2.00 cumulative GPA on a 4.00 scale. In addition, by the end of autumn quarter or semester of the year prior to expected admission into the program, applicants must complete at least 22 quarter credits with a minimum 2.50 GPA in the following prerequisite courses (or their equivalent for transfer students): BIOL 101-102 (5-5 credits) or MICRO 301, 302 (3, 2); note that CHEM 220 is a prerequisite for microbiology; PHYS 114, 115, 117, 118 (4,4,1,1); B STR 301 (4); ZOOL 118 (5); PSYCH 101 (5); CHEM 120 (5). Prerequisite courses fulfill 5 credits of the individuals & Societies requirement and all 20 credits of the Natural World requirement.

At the time of application, a student must submit a reasonable plan for completion before the date of expected entry into the program of the balance of the prerequisite courses listed above. If, by the time of expected entry into the program, the student has not completed all prerequisite courses with a minimum GPA of 2.50 as well as a cumulative GPA of 2.00, that student will not be admitted to the program.

Graduation Requirements: The following courses must be taken in the scheduled sequence, beginning auturnn quarter only, at the UW: REHAB 320, 321, 332, 340, 341, 342, 343, 414, 420, 421, 423, 427, 428, 429, 430, 442, 443, 444-445, 451, 452.

In student evaluation, the University grade-point system is used with the exception that a grade below 2.0 in any required professional course is not acceptable. Satisfactory scholarship requires the maintenance of a cumulative GPA of 2.50 in the required courses, which is the basis for promotion and graduation.

Graduate Program

The graduate programs in the Department of Rehabilitation Medicine lead to the following degrees: , Master of Science (three pathways: occupational therapy, physical therapy, and rehabilitation medicine), Master of Physical Therapy, and Master of Rehabilitation Medicine.

Master of Science (Occupational Therapy Pathway)

This degree program is designed to prepare occupational therapists to understand and apply occupational therapy theories and frames of reference to clinical practice; to design and conduct research; to provide instruction; and to administer occupational therapy services and/or provide a higher level of clinical service. Independent study options and electives offer flexibility, allowing the student to meet individual objectives. Completion of a data-based thesis is required. Full-time students generally complete the course work in four quarters. The additional time to complete the thesis requirement varies.

Admission Requirements: An applicant for admission must be a graduate of an approved occupational therapy program and must be certified to practice by the American Occupational Therapy Certification Board. A minimum of one year of professional experience is desirable. Detailed information on the program and admission requirements is available from the Division of Occupational Therapy Curriculum Office, (206/ 685-7411).

Graduation Requirements: All students must meet the minimum requirements for a master's degree as outlined in the Graduate Study section of this catalog. In addition, students must satisfactorily complete (1) core courses required by the occupational therapy program and the specialty track selected by the student, and (2) a data-based thesis contributing the knowledge base in occupational therapy.

Master of Science (Physical Therapy Pathway)

This degree program is designed to prepare physical therapists to assume a career in teaching and administration within the field. An emphasis of the curriculum is preparation for research and contribution to the professional literature; therefore, a thesis is a requirement of this plan. Opportunities are provided to enhance specialized knowledge and skill in selected content areas of physical therapy practice. Depending upon the student's educational goals and prior accomplishments, the program should require one to two calendar years for completion.

Admission Requirements: Selection for admission to the Master of Science degree program (physical therapy pathway) is based on an assessment of intellectual capacity, basic professional competence, promise for future contributions to the field, and availability of the program (due to funding limitations, the program is not offered every year). Students must have completed a baccalaureate degree and an accredited physical therapy program with a minimum cumulative GPA of 3.00, based on a 4-point scale, in all college work. Detailed information on program and admission requirements is available from the Division of Physical Therapy Curriculum Office (206/685-7408).

Graduation Requirements: All students must satisfactorily complete (1) a minimum of 36 credits, including specified core courses; (2) all Graduate School requirements for a master's degree; and (3) a databased thesis contributing to the knowledge base in physical therapy.

Master of Physical Therapy

The purpose of this program is to provide opportunities to pursue in-depth study in an area of interest related to a clinical specialty and to strengthen general evaluation and management skills for practice as a healthcare practitioner. Preparation in statistics and research design and completion of a major project are requirements of this plan. The focus of this curriculum is on work related to future clinical practice in positions of responsibility and on participation in clinical teaching, research, and administration.

Admission Requirements: See requirements for the Master of Science (Physical Therapy Pathway).

Graduation Requirements: Requirements for this program are the same as for the Master of Science (Physical Therapy Pathway), except that students complete a project rather than a thesis.

Master of Science (Rehabilitation Medicine Pathway)

This degree program is designed to prepare physicians, specifically physiatrists, as academicians in the field of physical medicine and rehabilitation. In addition to core course work in relevant medical sciences, an emphasis is placed on developing skills toward the goal of conducting independent or collaborative research projects.

Admission Requirements: An applicant for admission must be a physician from an approved medical school. and must be concurrently enrolled, or have completed, an approved residency program in physical medicine and rehabilitation.

Graduation Requirements: All students must complete (1) a minimum of 36 credits, including specific core courses, (2) all Graduate School requirements for a master's degree, and (3) a data-based thesis contributing to the knowledge base in physical medicine and rehabilitation.

Master of Rehabilitation Medicine Degree

This degree program is designed to prepare physicians to evaluate literature critically, assessing applicability, practicality, and validity. Courses in relevant medical sciences provide the foundation for in-depth study of the rehabilitation literature. A project must be completed and can be a literature review; preparation of a case study, including pertinent literature review; or a limited research project, emphasizing the review of pertinent research literature.

Admission Requirements: See requirements for the Master of Science (Rehabilitation Medicine Pathway).

Graduation Requirements: Requirements for this program are the same as for the Master of Science (Rehabilitation Medicine Pathway), except that students complete a project rather than a thesis.

Robinson, Lawrence R. * 1989; MD, 1982, Baylor University; physiatry.

Slimp, Jefferson C. * 1979; PhD, 1976, University of Wisconsin; neurophysiology, cerebral cortex, spinal cord, clinical somatosensory evoked potentials.

Uomoto, Jay M. * 1987; PhD, 1985, Fuller Theological Seminary; neurological disorders; neuropsychology; traumatic brain injury; behavior management.

Assistant Professors

Bell, Kathleen * 1985; MD, 1981, Temple University; brain injury-prognosis, pharmacologic intervention.

Bombardier, Charles H. * 1989; PhD, 1987, Washington State University; spinal cord injury adjustment, decubitus ulcers, brain injury, alcohol abuse.

Chang, Michael Wei * 1992; MD, 1988, University of Texas (Galveston); physiatry.

Czerniecki, Joseph M. * 1986; MD, 1981, University of British Columbia (Canada); amputation rehabilitation, biomechanics and gait analysis.

Engel Knowles, Joyce M. * 1993; PhD, 1988, University of Kansas; use of occupational therapy in pain management, especially with children.

Esselman, Peter C. * 1990; MD, 1986, University of Washington; exercise in the elderly; treatment of traumatic brain injury.

Gardner, Gregory C. 1989, (Adjunct); MD, 1984, Baylor University; rheumatology.

Gitter, Andrew J. * 1987; MD, 1984, University of Michigan; biomechanics of abnormal gait, quantitative neurophysiologic assessment of neuromuscular disorders.

Goldstein, Barry * 1990; MD, 1986, University of California (Los Angeles); recovery following spinal cord injury, skin adaptation to mechanical stress.

Guthrie, Mark R. * 1983; PhD, 1990, University of Washington; physical therapy, measurement.

Haselkorn, Jodie K. * 1989; MD, 1985, Louisiana State University; health services for the disabled—cost, outcomes, quality of life.

Johnson, Kurt Lewis 1990; PhD, 1984, University of Wisconsin.

Margherita, Anthony J. 1989; MD, 1985, Georgetown University; physiatry.

Massagli, Teresa L. * 1988; MD, 1982, Yale University; medical and rehabilitation outcome after spinal cord injury in children.

Odderson, Ib R. * 1989; MD, 1985, Vanderbilt University; physiatry.

Sanders, Joan Elizabeth * 1985, (Adjunct); PhD, 1991, University of Washington; soft tissue biomechanics and tissue adaptation to mechanical stress.

Stiens, Steve A. 1993, (Acting); MD, 1986, University of Cincinnati; physiatry.

Strand, Edythe A. * 1990, (Adjunct); PhD, 1987, University of Wisconsin; neurogenic speech/language disorders.

Trotter, Martha Jane 1963; BA, 1957, East Tennessee State University; physical therapy.

White, David M. * 1987; PhD, 1987, University of Alabama.

Senior Locturer 10 Cites

Greenberg, Sharon L. 1979; MOT, 1978, University of Washington; occupational therapy.

Lecturers

Amundson, Susan J. 1988; MS, 1985, University of Washington; occupational therapy.

Anson, Denis 1989; MS, 1983, University of Washington; occupational therapy.

Dralle, Alan J. 1973; BS, 1968, University of Washington; prosthetics and orthotics.

Dudgeon, Brian J. 1982; MS, 1983, University of Washington; occupational therapy.

Hager, Mary Louise 1974; BS, 1957, University of Puget Sound; occupational therapy.

Hertling, Darlene 1965; BS, 1956, University of California (Berkeley); physical therapy.

Kanny, Elizabeth M. 1978; MA, 1977, Seattle University; occupational therapy.

Okumura, Ramona M. 1990; BS, 1981, University of Washington; prosthetics and orthotics.

Swanson, Marcia W. 1978; MPA, 1992, University of Washington; physical therapy.

Yamane, Ann 1984; BS, 1976, University of Washington; prosthetics and orthotics.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

REHAB 320, 321 Medical Science (4,4) Lectures in fields related to: general surgery, obstetrics and gynecology, internal medicine, neurology, rehabilitation medicine, orthopaedics, psychiatry and behavioral sciences, rheumatology, and pediatrics. Required for occupational therapy, prosthetics and orthotics, and physical therapy students. Credit/no credit only.

REHAB 322 Medical Science Laboratory (1, max. 2) Greenberg, McMillan, Okumura To introduce students to the role of allied health professionals in the treatment of disabilities presented in 320, 321 lectures. Credit/no credit only. Prerequisite: 320, 321.

REHAB 332 Pathologic Physiology for Physical Therapists and Occupational Therapists (5) Anderson, Slimp Emphasis on normal and pathologic physiology of the circulatory, respiratory, central nervous, and musculoskeletal systems as basis for treatment in occupational therapy, physical therapy, and prosthetics-orthotics. Required for students in these fields. Others by permission. Prerequisites: B STR 301, ZOOL 118, and permission of instructor.

REHAB 340 Spinal Orthotics (3) Yamane Lecture and laboratory instruction in, and experience with, the use of orthotic components and materials, patient evaluation, and fitting of orthoses for management of spinal pathology. Required for prosthetics and orthotics majors; others by permission of instructor.

REHAB 341 Upper-Limb Prosthetics I (4) Okumura Instruction in and experience with, the use of prosthetic components and materials, including preprosthetic care, prosthetic components, principles of fabrication and harnessing, and techniques of checkout and prosthetic training for all amputation types. Required for prosthetics and orthotics majors; others by permission of instructor.

REHAB 342 Upper-Limb Prosthetics II (4) *Okumura* Instruction and experience in use of prosthetic components and materials, including preprosthetic care, principles of fabrication and harnessing, and techniques of checkout and prosthetic training, review of anatomy, biomechanics, locomotion, and motor disability as they pertain to upper-limb prosthetics, as well as medical management and prescription considerations. Immediate postsurgical fitting techniques.

REHAB 343 Upper-Limb Orthotics (6) Okumura, Yamane Lecture and laboratory instruction in the use of orthotic components and materials, biomechanics, and clinical assessment. Required for prosthetics and orthotics majors; others by permission of instructor.

REHAB 380 Occupational Therapy In the Health-Care System (2) Kanny Overview of the health services system and the role of occupational therapy. Covers history and trends, health service providers, reimbursement, regulation, and monitoring, ethical standards and decision making, and role delineation of professionals. Prerequisite: occupational therapy major standing.

REHAB 404, 405 Physical Therapy Management of Musculoskeletal Disorders: I, II (5,5) Herting Functional anatomy, biomechanics, clinical assessment and management as they relate to patients with common musculoskeletal disorders who have been referred to physical therapy services. Development of appropriate therapeutic strategies for management of extremity joints and spine. Prerequisite: physical therapy major standing.

REHAB 413 Special Studies in Physical Therapy (1-15, max. 24) Theory and practice in specialized areas of physical therapy. Credit/no credit only. Prerequisite: permission of instructor.

REHAB 414 Psychological and Ethical Aspects of Rehabilitation (2) Uomoto Psychological processes underlying adjustment to disability; application of behavioral/analysis systems in patient therapy management; effects of intellectual and perceptual deficit on patient performance and treatment strategies. Integrates biomedical ethics as they apply to disabilities Prerequisite: occupational therapy, prosthetics and orthotics, or physical therapy major standing. Credit/no credit only.

REHAB 416 Principles of Physical Therapy Administration (3) *McMillan* The nature of administration, economic trends, operational policy, aspects of supervision, ethical and legal influences applicable to a physical therapy department. Required for physical therapy students.

REHAB 417 Introduction to Research in Occupational Therapy (3) Deitz Statistics, group research design, tests and measurements, and single-subject research methods. Lectures, readings, and assignments related to occupational therapy and rehabilitation medicine research. Prerequisite: occupational therapy major or permission of instructor.

REHAB 420 Lower-Limb Prosthetics I (8) Dralle Instruction in fabrication, fitting, and alignment of the patellar-tendon-bearing prosthesis. Emphasis is placed on the biomechanics of below-knee fit and alignment, dynamic alignment, and the use of the below-knee adjustable leg and duplication devices, as well as methods of suspension. Required for prosthetics and orthotics majors; others by permission of instructor.

REHAB 421 Lower-Limb Prosthetics II (11) Dralle Instruction in above knee cast modification, socket fabrication, static and dynamic alignment, alignment duplication, and suspension system. Required for prosthetics and orthotics majors; others by permission of instructor. **REHAB 423 Lower-Limb Orthotics (8)** Dralle, Yamane Instruction in, and experience with the use of orthotic components and materials, including patient evaluation, measurements, fabrication and fitting of lower-limb orthoses. Required for prosthetics and orthotics majors; others by permission of instructor.

REHAB 427 Applied Prosthetics and Orthotics I (1, max. 3) Dralle Further clinical experience in patient evaluation, planning, fabricating, and fitting of prosthetic and orthotic devices, and attendance at prosthetics and orthotics clinics at University of Washington Medical Center and University-affiliated Seattle hospitals. Experience in Immediate postoperative prosthetics. Required for prosthetics and orthotics majors; others by permission of instructor.

REHAB 428 Applied Prosthetics and Orthotics II (5) Supervised clinical practice under the preceptorship of a certified practitioner for a minimum of 250 hours in each discipline required for prosthetic-orthotic majors. Prerequisite: prosthetic-orthotic major standing.

REHAB 429 Immediate Post-Operative and Early Fitting (3) *Dralle, Okumura* Lecture and laboratory designed to introduce the student to the principles of immediate postsurgical prosthetic fitting, including patient management for both upper and lower extremities.

REHAB 430 Advanced Limb Prosthetics and Englneering Concepts (4) Yamane Exposure to principles underlying modern prosthetic/orthotic devices and practices including hydraulic control, material behavior, force analysis.

REHAB 435 Professional and Therapeutic Communication in Occupational Therapy (2) Engel Provides knowledge and understanding of therapeutic use of self and communication skills with clients, their families and other professionals. Emphasis is placed on communication skills with individuals of diverse ages, educational levels, and cultural and ethnic backgrounds. Prerequisite: occupational therapy major standing.

REHAB 442 Kinesiology (4) Czerniecki, Guthrie Study of joint motion and muscle function in relation to both the normal and abnormal state. Specific techniques employed in the field of rehabilitation medicine are analyzed. Required for Department of Rehabilitation Medicine students; others by permission.

REHAB 443 Introduction to Clinical Evaluation (5) Hertling, Yamane Lecture and laboratory format. Developing clinical competency in goniometric measurement of joint motion, manual muscle strength testing, postural analysis, and gait analysis of normal and pathological patterns. Prerequisite: physical therapy or prosthetics and orthotics majors only.

REHAB 444-445 Function of the Locomotor System (4-4) Guthrie Functions of musculoskeletal system as applied to patterns of motion. Anatomy of peripheral-vascular and peripheral-nervous system. Required for occupational therapy students, prosthetics and orthotics students, and physical therapy students; others by permission of instructor. Prerequisites: B STR 301, ZOOL 118.

REHAB 446, 447 Anatomy Laboratory for Occupational Therapists (1,1) Hager Guided self-study of musculoskeletal, peripheral-vascular, and peripheralnervous systems from prosected material. Prerequisite: occupational therapy major standing.

REHAB 448 Applied Kineslology for Occupational Therapists (1) Anson Instruction and laboratory focus on practical experience and clinical problem solving related to muscle and joint motion testing procedures, sensory/perceptual testing, prosthetic and orthotic devices, and wheeled mobility devices utilized in occupational therapy treatment. Prerequisite: occupational therapy major standing.

REHAB 451, 452 Functional Anatomy Laboratory (1,1) Guthrie Study of musculoskeletal, peripheralvascular, and peripheral-nervous systems from prosected material. Required for physical therapy students and prosthetic/orthotic students. Credit/no credit only.

REHAB 463 Application of Physical Therapy Modalities (1-2, max. 3) McGee Principles and concepts of basic physical therapy procedures. Laboratory practice of hydrotherapy and superficial heating modalities. Methods of application of dlathermy and ultrasound, TENS, EMG-biofeedback, low and high voltage therapies and ultraviolet light. Lectures and laboratories. Credit/no credit only. Prerequisite: physical therapy major standing.

REHAB 466-467 Advanced Biophysical and Physiological Effects of Modalities (2-2) Esselman, Lehmann Biophysical principles of equipment employed in physical therapy, physiological effects produced. Required for physical therapy students; others by permission of instructor.

REHAB 468 Analysis of Therapeutic Activities (2) Greenberg Skills in the analysis, adaptation, and sequencing of therapeutic activities as they apply to occupational performance. Analysis emphasizes sensorimotor, cognitive, perceptual, emotional, social, and cultural aspects of activities. Prerequisite: occupational therapy major standing.

REHAB 470 Vocational Assessment and Training (2) Dudgeon Knowledge and skill competencies applicable to evaluation and training of individuals with vocational/work related disabilities. Emphasis placed on worker characteristics and job analysis as well as rules and techniques of accommodation within business and industrial settings. Prerequisite: occupational therapy major standing.

REHAB 471 Therapeutic Exercise Procedures I (5) *Trotter* Theory and principles of basic exercise procedures used for treatment purposes in physical therapy: motor learning and control, variables of motor performance, risks and benefits of exercise, exercise prescription, selected patient assessment and exercise procedures. Lectures and laboratories. Simulated patient problems. Prerequisite: physical therapy major standing.

REHAB 472 Therapeutic Exercise Procedures II (5) *Mullens, Trotter* Theory and principles of advanced therapeutic exercise procedures: normal motor development, facilitation and inhibition elements, adaptation of procedure to appropriate age level and impairment. Lectures and laboratories: Simulated patient problems. Prerequisite: physical therapy major standing.

REHAB 473 Administration of Occupational Therapy Services (3) Kanny Organizational and administrative techniques including strategic planning, program planning, fiscal management, productivity measures, quality assurance, personnel management, and marketing. Practice in developing skills through a program development project. Prerequisite: occupational therapy major standing.

REHAB 475 Physical Restoration (4) Lectures and laboratory practice to develop special skills in physical therapy directed toward facilitation of movement as applied to treatment of severe neurological and musculoskeletal dysfunction. Treatment techniques in mobility, activities of daily living, self-care, transfers, and ambulation activities. Required for physical therapy students.

REHAB 476 Prosthetic and Orthotic Evaluation and Use (2) Okumura Instruction in mechanical component substitution for functional losses. Emphasis is on biomechanical principles, prosthetic components and alignment and fitting techniques. Prerequisite: physical therapy major standing. Credit/no credit only. **REHAB 481** Introduction to Theory and Practice of Occupational Therapy (4) History, philosophical base, theoretical foundations, frames of reference, and practice arenas of occupational therapy. Professional attitudes, values, and behavior explored. Fieldwork enhances didactic coursework through observation in practice settings. Prerequisite: occupational therapy major standing.

REHAB 482 Occupational Performance through the Life Span (4) Overview of human development and its relationship to occupational performance. Emphasis on various occupational tasks and roles at specific ages and stages from infancy to old age. Lecture, lab, and community-based experiences. Prerequisite: major standing in occupational therapy.

REHAB 483 Occupational Therapy Theory and Practice in Physical Disabilities I (5) Dudgeon Provides theoretical bases and clinical skills in occupational therapy assessment and intervention with individuals who experience sensorimotor and/or cognitive impairments which impact occupational roles and tasks in self-care, work, and/or leisure. Fieldwork enhances didactic coursework through selected participation in practice setting. Prerequisite: occupational therapy major standing.

REHAB 484 Occupational Therapy Theory and Practice in Psychosocial Dysfunction I (4) Engel Theoretical bases and clinical practice skills in occupational therapy assessment and intervention with individuals who have psychological and/or cognitive impairments which impact occupational roles and tasks in self-care, work, and leisure. Prerequisite: occupational therapy major standing.

REHAB 485 Occupational Therapy Theory and Practice in Geriatrics (4) *Dudgeon, Engel* Occupational therapy assessment and intervention with older adults. Covers psychology of aging, physiology of aging, sociodemographics of aging, social interactions skills with elderly, and activity performance. Fieldwork enhances didactic coursework through participation in the practice setting. Prerequisite: occupational therapy major standing.

REHAB 486 Occupational Therapy Theory and Practice in Pediatrics (5) Lectures, discussions, and clinically-oriented experiences related to the occupational performance of children with special needs and their families in diverse pediatric settings. Emphasis on assessing the child in the environmental context, applying pediatric frames of reference, and collaborating with families and team members. Prerequisite: occupational therapy major standing.

REHAB 487 Assistive Technology in Rehabilitation (3) Anson Overview of the field of assistive technology as it impacts occupational roles and tasks in self-care, work, and leisure. Covers interface devices, computer applications, environmental controls, augmentative communications, power mobility, and sensory enhancement. Prerequisite: occupational therapy major standing.

REHAB 488 Occupational Therapy Theory and Practice in Physical Disabilities II (4) Dudgeon Integration of theory and practice skills through case simulations and laboratory experiences. Emphasis on strategies and techniques of assessment and goal setting as well as treatment planning and implementation within various contexts of care to physical disabilities practice. Prerequisite: occupational therapy major standing.

REHAB 489 Occupational Therapy Theory and Practice in Psychosocial Dysfunction II (5) Engel Continuation of 484 with special emphasis on application of psychosocial occupational therapy frames of reference to client assessment and intervention. Fieldwork enhances didactic coursework through participation in the mental health practice setting. Prerequisite: occupational therapy major standing. REHAB 490 Clinical Clerkships in Physical Therapy (2, max. 4) Trotter Observation, instruction, and supervised practice in treatment of patients in diverse clinical settings. Emphasis is given to the application of previously learned material and skills to specific clinical problems. Required for physical therapy students. Credit/no credit only. Case

REHAB 492 Pathways In Occupational Therapy (*, max. 3) Provides the opportunity for continued study in specific areas of interest under preceptorship of selected faculty members with guided readings and clinical experiences. Oral presentation of completed projects to students and faculty. Credit/no credit only. Prerequisite: occupational therapy major standing.

REHAB 494 Clinical Fieldwork in Occupational Therapy (4-12) Hager A minimum of six months of directed and supervised experiences with a variety of ages and client diagnoses in each of two areas physical disabilities and mental health. Students may also complete optional placements in other areas of practice. Prerequisites: occupational therapy major standing.

REHAB 495 Clinical Affiliation in Physical Therapy (2-12, max. 24) Trotter Clinical practice of physical therapy techniques under supervision in community-based clinics. Credit/no credit only. Prerequisite: physical therapy major standing.

REHAB 496 Special Topics in Rehabilitation (1-9, max. 14) Guided opportunity for in-depth study in specific areas of rehabilitation. Topics vary. Prerequisite: permission of instructor.

REHAB 498 Undergraduate Thesis (*) Prerequisite: permission of instructor.

REHAB 499 Undergraduate Research (*) Opportunity to design, perform, and analyze research investigation in problem areas in rehabilitation medicine. These include clinical and basic research problems in, for example, head and spinal injury, chronic disease, pain neurophysiology, electrodiagnosis, communication, and bioengineering. Prerequisite: permission of instructor.

REHAB 500 Specialized Cilnical Experience in Physical Therapy (1-5, max. 15) Brady Student is assigned to an affiliated clinical facility. Activities focus on a variety of processes. These might include acquisition of an advanced and/or specialized treatment skill to be used in patient care; the development and presentation of an in-service training program; the analysis and assessment of existing supervisory problems. Credit/no credit only. Prerequisite: permission of instructor.

REHAB 501 Physical Therapy Management of Selected Motor Problems (2-5, max. 7) Guthrie Study of mechanisms involved in the control of movement. Critical examination of selected literature and techniques dealing with the evaluation or modification of motor behavior. Prerequisite: physical therapy graduate student standing.

REHAB 502 Perspectives In Pediatric Physical Therapy (3) Brady Overview of pediatric therapeutic practices for atypically developing children. Standardized assessment, development of functional goals and objectives, treatment efficacy, family-centered intervention, and treatment planning for specific disabilities. Assessment project with atypically developing child required. Credit/no credit only. Prerequisite: permission of instructor.

REHAB 505 Foundations of Occupational Therapy (2) Kanny In-depth exploration of philosophical base of occupational therapy and ways in which theories and frames of reference influence occupational therapy practice. Students identify and discuss frames of reference that are compatible with each other and within their own occupational therapy practice.

REHAB 510 Rehabilitation Psychology (2) Jensen Processes and management methods for assimilation of disability, enhancing patient participation in rehabilitation process_{vi} and for helping in maintenance of performance; being used management and case conference strategies; debears of contingency management techniques. Required for residents; others by permission of instructor.

REHAB 513 Special Studies in Physical Therapy (1-5, max. 15) *Brady* Theory and practice in specialized areas of physical therapy. Includes organization and administration of specialized programs, advanced evaluation and treatment techniques, role of the consultant. Credit/no credit only. Prerequisite: permission of instructor.

REHAB 516 Medical Information for Rehabilitation Counselors (4) Johnson Lectutes in medical science field regarding the etiology, prognosis, and physical restoration of common disabiling conditions. Case studies are used extensively, and major emphasis is placed on vocational implications of physical disability. Prerequisite: permission of instructor.

REHAB 518 Infants and Young Children: Current Research (3) Deitz, Swanson Introduces students to recent research relating to assessment and intervention with infants and young children who are "at risk" or who are disabled. Critical evaluation of the current research emphasized. Prerequisites: clinical experience or course work related to infants and young children with disabilities and permission of instructors.

REHAB 520 Seminar (1-5) Conferences, seminars, discussions of advanced physical medicine and rehabilitation topics for graduate students, residents and postdoctoral fellows in rehabilitation medicine. Lectures, discussion, and laboratory work in selected aspects appropriate to elected area of study for applicants for master-level degree.

REHAB 522 Neurophysiological Topics in Rehabilitation Medicine (2) Anderson Review of traditional neurophysiological concepts and an exposition of recent advances in neurophysiological research related to the practice of rehabilitation medicine. Prerequisite: permission of instructor.

REHAB 530 Medical Aspects of Vocational Counseling (2) Johnson Introduction to vocational implications of physical and emotional disabilities. Methods, counseling techniques, therapeutic modalities, community resources used in producing vocational assistance for persons with disabilities. Prerequisite: resident standing in rehabilitation medicine.

REHAB 532 Clinical Affiliation for Rehabilitation Counselors (5-6) Johnson Under preceptorship of rehabilitation counseling staff, students counsel and evaluate patients with severe physical, emotional, or social problems; administer vocational testing; obtain placement on job stations; work with community resources for vocational/educational placement; and develop activity-oriented schedules. Prerequisite: permission of instructor.

REHAB 539 Communication Disorders in Rehabilitation Medicine (1) Yorkston Overview of communication disorders secondary to central and peripheral nervous system impairment. Emphasis on facilitating identification of speech/language disorders with discussion of implications for rehabilitation. Prerequisite: graduate student status (postdoctoral fellow).

REHAB 540 Application of Measurement Systems (3) Deitz Introduction to reliability, validity, norms, the test development process, statistics relevant to tests and measurements, and ethical implications of testing. Review selected standardized tests used in occupational and physical therapy. Prerequisite: permission of instructor.

REHAB 542 Working with Culturally-Diverse and Multi-Risk Families (2) Analysis of current federal policy and issues in early childhood services examined within systems framework including family, interdisciplinary team, interagency system. Special emphasis placed on knowledge, skills, attitudes necessary for providing culturally-sensitive, family-centered services with families who are at-risk for managing special needs of their young children.

REHAB 543 Early Childhood Therapy Interventions: Adaptations and Interactions (2) Provides students with current knowledge regarding research and practice in early childhood therapy interventions. Content focuses on three major areas: best practices in early childhood therapy assessments; promoting positive caregiver-child interactions; and application of assistive technology in early childhood.

REHAB 544-545 Functional Anatomy for Physiatrists (2-2) Goldstein Lectures and demonstrations to illustrate functional anatomy as applied by physicians in the practice of clinical rehabilitation. Intended to enhance functional assessments and to improve neuromusculoskeletal diagnosis and treatment through greater understanding of the underlying anatomy. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

REHAB 548 Teaching Practicum in Occupational and Physical Therapy (1-3) Integration of knowledge and skills in teaching through teaching in the classroom or presentation of a minicourse, workshop, or inservice training series. Prerequisites: MEDED 520 and permission of instructor.

REHAB 550 Neuropsychology in Rehabilitation (2) *Dikmen* Examination and management of patients with brain lesions, as well as an understanding of the consequences of such conditions. Prerequisite: graduate standing in rehabilitation medicine.

REHAB 555P Neuromuscular Electrodiagnosis (2.5) *Kraft* Demonstration of fundamentals of electromyography and peripheral nerve stimulation followed by participation in clinical electrodiagnosis examinations. Develops awareness of the usefulness of knowing when such procedures are indicated for patients and interpret results rather than develop proficiency in performing these examinations. Prerequisites: HUBIO 560P and permission of instructor.

REHAB 565 Assistive Technology in Rehabilitation and School System Practice (3) Anson Introduction to the use of assistive technology in rehabilitation and special education. Content includes set-up and use of alternative input systems on microcomputers and applications of technology to neuromuscular retraining, augmentative communication, and facilitation of learning in the classroom. Prerequisites: familiarity with basic computer operations and permission of instructor.

REHAB 566 Special Topics in Rehabilitation (1-9, max. 14) Philosophy and concepts in the interdisciplinary rehabilitation of persons with major disabilities, including advanced content in the rehabilitation theory and process of selected categories.

REHAB 567 Practicum in Rehabilitation (1-12, max. 24) Specialized practicum experience in environment providing rehabilitation services. Practicum arrangements and permission by instructor.

REHAB 568 Biophysics as Applied to Physical Medicine (2) Esselman Propagation and absorption characteristics of physical forms of energy used for treatment in physical medicine. Physiologic effects basic to prescription of the physical therapy modalities. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

REHAB 596 Electromyography and Clinical Neurophysiology (4) Kraft Didactic course covering electromyography and clinical neurophysiology. First part covers basic neurophysiology and second covers electromyography, nerve conduction studies, somatosensory-evoked potentials, residual- and auditoryevoked potentials, single fiber EMG, late response, quantitative analysis, and macro EMG. Prerequisite: residency in rehabilitation medicine; others by permission of instructor.

REHAB 597-598-599 Electromyography and Electrodiagnosis Laboratory (1-1-1) Kraft Elective work in clinical electromyography and other electrodiagnostic methods. Prerequisite: residency in rehabilitation medicine; others by permission of instructor.

REHAB 600 Independent Study or Research (*) Credit/no credit only.

REHAB 654P Second-Year Clinical Elective in Physical Medicine and Rehabilitation (8) Haselkorn, Hays Alternative to 685 to meet chronic-care requirement. Explores the same goals recognizing the limited skills of the first-year student. Structured contacts permit understanding of disability problems in patients with chronic disease. Treatment methods and psychosocial consequences explored. Prerequisite: completion of one year of medical school.

REHAB 685P Chronic Disease and Disability (4) Hays Meets chronic-care requirement for medical students. Structured clinical experience on rehabilitation medicine services. Differences between acute and chronic medicine, identification of disability problems, and therapeutic techniques for removing disability. Hospitals are within University system, local area, WAMI area, and Hawaii. Prerequisite: third-year medical student standing.

REHAB 686P Rehabilitation Medicine Clerkship-Pediatrics (8/12) Hays, Jaffe, Massagli Meets chronic-care requirement for medical students. Incorporates material of 685 and expands into disabling pediatric disease. School planning, family counseling, community support services included. Six-week package permits inpatient, outpatient, and consultation experience. Recommended for students contemplating pediatrics. Prerequisite: third-year medical student standing.

REHAB 687P Rehabilitation Medicine Clerkship-Medical (8/12) Hays Meets chronic-care requirement for medical students. Incorporates material of 685 and expands into disability problems associated with "nonsurgical" disease. Six-week package permits inpatient, outpatient, and consultation experience. Recommended for careers in family medicine, internal medicine, rheumatology, cardiology, neurology, and geriatrics. Prerequisite: third-year medical student standing.

REHAB 688P Rehabilitation Medicine Clerkship-Surgical (8/12) Hays Meets chronic-care requirement for medical students. Incorporates material of 685 and expands into disability problems associated with surgically related disease. Six-week package permits inpatient, outpatient, and consultation experience. Recommended for careers in orthopedic surgery, neurosurgery, cardiovascular surgery, and urology. Prerequisite: third-year medical student standing.

REHAB 689P Spinal Cord Injury (8/12) Hammond Introduction to diagnosis, management, rehabilitation of patients with spinal-cord injuries. Interaction with rehabilitation team, psychiatrists, and subspecialists in urology, neurosurgery, and plastic surgery. Performance at subintern level expected. Veterans Administration Medical Center only. Prerequisites: MED 665P, SURG 665P.

REHAB 695P Rural Rehabilitation Medicine Clerkship (8) Hays Structured clinical experience in identification and treatment of disability problems in rural (nonmajor urban) communities. Satisfies chronic care/rehabilitation medical graduation requirements. Prerequisites: completion of at least six months of clinical clerkships, permission of instructor.

REHAB 697P Rehabilitation Medicine Special Elective (*, max. 24) Equivalent to 686P, 687P, or 688P. Satisfies requirements in rehabilitation medicine/ chronic care. Student arranges with another university,

using the "Special Assignment Form." Students can qualify after review, similar experience at another university. Prerequisite: permission of instructor.

REHAB 700 Master's Thesis (*) Credit/no credit only.

Surgery

BB487 University of Washington Medical Center

The Department of Surgery carries out instruction during all four years of School of Medicine attendance. The third-year six-week clerkship constitutes the core of student exposure to general surgery and is required of all students. The fourth-year emergency room clerkship is also a required part of the curriculum. The department also offers a variety of fourth-year elective clerkships in a number of the specialty aspects of the department's clinical activities, including but not limited to cardiothoracic surgery, plastic surgery, vascular surgery, and the management of burn patients.

Faculty

Chairperson

Carlos A. Pellegrini

Professors

Ashbaugh, David G. 1982, (Emeritus); MD, 1957, Ohio State University; thoracic surgery.

Beach, Kirk Watson * 1976, (Research); MD, 1976, University of Washington; arterial disease in diabetes, blood flow studies with ultrasonic Doppler.

Bell, Richard H. Jr. 1994; MD, 1971, Northwestern University; general surgery.

Clowes, Alexander W. 1980; MD, 1972, Harvard University; general and vascular surgery.

Copass, Michael K. 1971, (Adjunct); MD, 1964, Northwestern University; neurology/emergency medicine.

Dellinger, E. Patchen * 1977; MD, 1970, Harvard University; general and gastrointestinal surgery.

Engrav, Loren H. 1977; MD, 1969, University of California (Los Angeles); plastic and reconstructive surgery,

Gruss, Joseph S. 1991; MBChB, 1969, University of Witwatersrand (South Africa); plastic surgery.

Heimbach, David M. 1974; MD, 1964, Cornell University; burn and general surgery.

Herman, Clifford M. 1977, (Emeritus); MD, 1959, University of Vermont; general surgery.

Johansen, Kaj H. 1978; MD, 1970, University of Washington; general and vascular surgery.

Jones, Robert F. 1974, (Emeritus); MD, 1952, University of Texas, Southwestern (Dailas); oncology and general surgery.

Jurkovich, Gregory J. 1988; MD, 1978, University of Minnesota; general surgery.

Maier, Ronald V. 1981; MD, 1973, Duke University; general surgery, trauma-critical care surgery.

Marchioro, Thomas L. 1967; MD, 1955, St Louis University; thoracic surgery.

Merendino, K. Alvin 1948, (Emeritus); MD, 1940, Yale University; general surgery.

Moe, Roger E. 1967; MD, 1959, University of Washington; oncology and general surgery.

Pellegrini, Carlos A. 1993; MD, 1971, University of Rosario Medical School (Argentina); general and laparoscopic surgery.

Schilling, John A. 1974, (Emeritus); MD, 1941, Harvard University; general surgery.

Strandness, D. Eugene 1965; MD, 1954, University of Washington; vascular surgery.

Strong, D. Michael 1988, (Research); PhD, 1973, Medical College of Wisconsin.

Tapper, David 1983; MD, 1970, University of Maryland; pediatric surgery.

Verrier, Edward D. 1989; MD, 1974, Tufts University; cardiothoracic surgery.

Winn, Robert K. 1984, (Research); PhD, 1974, University of Washington; pulmonary physiology, neutrophil immigration using monoclonal antibody 60.3.

Winterscheid, Loren C. 1957, (Emeritus); MD, 1954, University of Pennsylvania; general and thoracic surgery.

Associate Professors

Allen, Margaret D. 1985; MD, 1974, University of California (San Diego); cardiothoracic surgery.

Kohler, Ted R. 1983; MD, 1976, Harvard University; general and vascular surgery.

Langdale, Lorrie A. 1985; MD, 1979, University of Washington; general surgery.

Lupinetti, Flavian M. 1993; MD, 1978, Johns Hopkins University; cardiothoracic surgery.

Perkins, James D. 1989; MD, 1979, University of Arkansas; transplant surgery.

Pohlman, Timothy H. 1984; MD, 1978, Rush Medical College; general surgery.

Radke, Hubert M. 1977; MD, 1954, University of Texas (Galveston); general and thoracic surgery.

Zierler, R. Eugene 1984; MD, 1976, Johns Hopkins University; general and vascular surgery.

Assistant Professors

Anderson, Benjamin O. 1994; MD, 1985, Albert Einstein College of Medicine; oncology, general surgery.

Au, Tina Y. P. 1992, (Research); PhD, 1984, University of Wisconsin; molecular biology, heparin controls, collagenase expression.

Aziz, Salim 1990; MBBS, 1976, University of London (UK); cardiothoracic surgery.

Barr, Darlene 1991, (Acting); MD, 1985, University of Alabama; transplant surgery.

Byrd, David R. 1992; MD, 1982, Tulane University; general surgery and oncology.

Cochran; R. Pat 1990; MD, 1978, Emory University; cardiothoracic surgery.

Detmer, Paul R. 1990, (Research); PhD, 1990, University of Washington; use of three-dimensional ultrasound imaging to define arterial wall thickness in vascular disease.

Egbert, Mark A. 1986, (Adjunct); DDS, 1981, University of Washington; oral and maxillofacial surgery.

Foy, Hugh M. 1978; MD, 1978, University of Nebraska; general surgery.

Gentilello, Larry M. 1990; MD, 1982, Albert Einstein College of Medicine; general surgery.

Hatsukami, Thomas 1988; MD, 1982, University of California (Los Angeles); vascular surgery.

Helton, William S. 1981; MD, 1981, University of California (Irvine); general surgery.

Hofer, Brad 1987; MD, 1980, Northwestern University; cardiothoracic surgery.

Kunzelman, Karyn S. * 1991, (Research); PhD, 1991, University of Texas (Dallas); biomedical engineering cardiac; anatomy and physiology.

Mann, Roberta 1992; MD, 1985, University of Texas, Southwestern (Dallas); general and burn surgery.

Marsh, Christopher L. 1989; MD, 1980, Loma Linda University; transplant surgery.

McVicar, John 1990; MD, 1981, Duke University; transplant surgery.

Meissner, Mark H. 1990; MD, 1985, University of Colorado (Denver); general, vascular, and critical care surgery.

Nicholls, Stephen C. 1986; MBChB, 1975, University of Auckland (New Zealand).

Panos, Anthony 1993; MD, 1980, University of Toronto (Canada); general, cardiovascular, and thoracic surgery.

Rand, Richard P. 1990; MD, 1981, University of Michigan; plastic and reconstructive surgery.

Sawin, Robert 1989; MD, 1982, University of Pittsburgh; pediatric surgery.

Sikkema, Wesley 1967; MD, 1957, University of Michigan; general surgery.

Sinanan, Mika N. 1980; MD, 1980, Johns Hopkins University; general and laparoscopic surgery.

Vedder, Nicholas 1990; MD, 1981, Case Western Reserve University; case history, plastic and reconstructive surgery.

Waldhausen, John H. 1993, (Acting); MD, 1986; Pennsylvania State University; pediatric surgery.

Wood, Douglas E. 1992; MD, 1983, Harvard University; thoracic surgery.

Instructors

Gibran, Nicole 1990, (Acting); MD, 1985, Boston University; general, burn, and trauma surgery.

Healey, Patrick J. 1993, (Acting); MD, 1987, Boston University; general and pediatric surgery.

Kraiss, Larry W. 1986, (Acting); MD, 1986, Baylor University; general and vascular surgery.

Lynge, Dana C. 1993, (Acting); MD, 1985, McGill University (Canada); general surgery.

Mock, Charles N. 1992, (Acting); MD, 1980, Brown University; trauma-critical care surgery.

Rhee, Peter M. 1993, (Acting); MD, 1987, Uniformed Services—University of Health Sciences; trauma and critical care surgery.

Lecturer

Clowes, Monika M. 1981; BA, 1954, University of Geneva (Switzerland); vascular wall biology, kinetics of smooth muscle proliferation, restenosis of vessels of angiography.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

SURG 498 Undergraduate Thesis (*) Langdale Offered to those students who have engaged in undergraduate research in general surgery. Please see "Research Opportunities in the Department of Surgery". (Full- or part-time.)

SURG 499 Undergraduate Research (*) Langdale Provides an opportunity to participate in ongoing research projects in general surgery being carried out by Department of Surgery faculty or to carry out an independent research project under supervision. Practical experience in experimental design and execution is provided under direct supervision of selected faculty members. (Full- or part-time.)

SURG 505P Preceptorship in Surgery (1) Langdale Opportunity for first- and second-year medical students to gain personal experience with clinical faculty members in the community. Students observe general aspects of private practice, including clinical problems seen; practice limitation; doctor-doctor, doctor-patient, and doctor-nurse relationships in the office and hospital. Prerequisite: permission of department.

CONJ 585 Surgical Anatomy (1-3, max. 12) See Conjoint Courses. HORM

SURG 600 Independent Study or Research (*) Langdale

SURG 665P Clinical Clerkship (*, max. 24) Langdale (Veterans Administration Hospital, Harborview Medical Center, Providence Medical Center, University of Washington Medical Center) Diagnosis and management of problems amenable to surgical therapy. Physiological basis of surgical care, differential diagnosis and decision making, and the basic principles of surgical management. Care of inpatients and outpatients, including participation in the operating rooms. Prerequisite: HUBIO 563P. (Six weeks. Limit: twenty-five students.)

SURG 681P Peripheral Vascular Disease (4/8) Strandness (Veterans Administration Hospital, University of Washington Medical Center) Peripheral arterial and venous problems, including methods of clinical evaluation; new diagnostic procedures; and the available methods of treatment. Patient workup, performance of diagnostic studies, and presentation of case material to the staff. Prerequisites: 665P, HUBIO 563P. (Two or four weeks. Limit: two students.)

SURG 682P Clinical Burn Care (*, max. 12) Heimbach Offered on the burn unit of Harborview Medical Center. Exposure to the care of patients with thermal injury, including management of severe metabolic and septic problems and opportunity to participate in surgical procedures. Exposure to plastic and reconstructive surgery. Prerequisite: 665P. (Four or six weeks. Limit: two students.)

SURG 683P Pediatric Surgery Externship (8/12) Tapper (Children's Hospital and Medical Center) Surgical conditions peculiar to the particular age group with a preponderance of congenital and neoplastic conditions that are amenable to surgical treatment. A reasonable background of knowledge in human embryology and genetics is recommended. Prerequisite: 665P. (Four or six weeks. Limit: two students.)

SURG 684P Trauma and Emergency Care (*, max. 16) Copass, Eisenberg Register for one or both segments of this course. Segment 1: emergency medicine and trauma at Harborview Medical Center with assignment to the emergency department. Emphasis on management of critical medical emergencies and trauma. Segment 2: acute medicine at University of Washington Medical Center. Evaluate and treat ambulatory emergencies. Prerequisites: 665P, MED 665P. (Four weeks, fourth-year students. Limit: twelve students at Harborview Medical Center; three students at University of Washington Medical Center.)

SURG 685P Cardiothoracic Surgery Externship (*, max. 12) Verrier Serve as subintern, participate in patient care while learning cardiopulmonary hemodynamics of cardiac surgery. Wide variety of both cardiac and thoracic disease entities. Participate in the openheart procedures in the operating room. Opportunity to gain additional understanding of physiology of cardiopulmonary bypass. (Four or six weeks. Limit: two students.)

SURG 686P Plastic Surgery Clerkship and Preceptorship (*, max. 12) Engrav Plastic surgery service at University-affiliated hospitals; includes patient workups and operating room experience with emphasis on learning the fundamentals of plastic surgery, wound management on animal specimens and in the emergency room. Includes wounds, burns, facial trauma, head and neck cancer, cosmetic surgery, skin tumors, hand surgery, and reconstructive surgery. Prerequisite: 665P. (Four or six weeks. Limit: two students.) SURG 687P Transplantation Surgery Clerkship (8) Perkins Clerkship is in the University regional multiorgan transplantation center. Student participates fully in the care of all transplant patients, on twice daily multidisciplinary rounds, in pre-operative conference, and in the operating room and on the donor harvest team. Weekly didactic teaching sessions. Prerequisites: 665P and MED 665P. (Four weeks. Limit: two students.)

SURG 688P Subinternship in General Surgery (*, max. 12) Langdale Offered on the general surgery wards of the University-affiliated hospitals. Diagnosis, preoperative care, and postoperative care; management of surgical emergencies and outpatient follow-up of discharged patients. Students function at the intern level under close supervision of the staff and house staff. Prerequisite: 665P. (Four or six weeks. Limit: seven students.)

SURG 689P Community Surgery Clerkship (8) Langdale Designed to supplement basics learned in 665. Excellent opportunity to participate in general, thoracic, vascular, and plastic surgery in a group practice in a smaller city. Recommended for students entering primary care. Prerequisites: 665 and permission of department. (Four weeks. Longview - one student; Coeur d'Alene - one student.)

SURG 690P Alaska Native Medical Center Surgery Sub-Internship (12) Langdale Designed to supplement basics learned in 665. Excellent opportunity to participate in general, thoracic, vascular, and plastic surgery in a specialized population of patients. Recommended for students entering primary care. Prerequisites: 665 and permission of department. (Six weeks. Alaska Native Medical Center, Anchorage - one student)

SURG 697P Surgery Special Electives (*, max. 24) Langdale Special clerkship, externship, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisites: 665P and departmental permission. (Four, six, or twelve weeks.)

Urology

BB1115 Health Sciences

Urology is the surgical discipline concerned with diseases of the urinary tract in male and female systems. The science is broadly based: major areas of practical and investigative concern include congenital defects, cancer, renal pathology, reproductive biology, neuropathology, and transplantation.

Clinically, the field encompasses a large variety of technical skills including real time imaging and manipulation, endoscopy, and open surgery. The medical diagnosis and treatment are a large part of the discioline.

The department is actively involved in patient care, instruction, and research concerning the problems of urology. Training for medical students starts in the second year and continues through the third and fourth years. Training is also provided for residents, fellows, nurses and applied specialists. The department is responsible for a fully approved urology residency program. Contact the Urology Clerkship Coordinator at 685-3245 for further information.

Faculty

Chairperson Paul H. Lange

Professors

Ansell, Julian S. 1959, (Emeritus); MD, 1951, Tufts University; congenital defects and pediatric urology.

Barnes, Glover W. * 1969; PhD, 1961, State University of New York (Buffalo); tissue, organ immunology.

Berger, Richard E. 1982; MD, 1973, University of Chicago; infertility, infectious diseases, and impotence.

Brawer, Michael K. 1989; MD, 1980, University of California (Los Angeles); benign and malignant prostate proliferative disorders.

Chapman, Warren H. 1962, (Emeritus); MD, 1952, University of Chicago; oncology and microsurgery.

Krieger, John N. 1982; MD, 1974, Cornell University; infectious diseases.

Lange, Paul Henry 1988; MD, 1967, Washington University; oncology, endourology and adult reconstruction.

Mayo, Michael Edward 1975; MBBS, 1962, St Thomas' Hospital Medical School (UK); neuro-urology and reconstruction, urodynamics.

Mitchell, Michael E. 1989; MD, 1969, Harvard University; pediatric urology and reconstruction.

Associate Professor

Vessella, Robert L. 1989; PhD, 1974, University of Mississippi; tumor markers and immunology.

Assistant Professors

Bavendam, Tamara G. 1989; MD, 1981, University of lowa; female urology and urodynamics.

Carr, Michael C. 1993; MD, 1985, University of Cincinnati; pediatric urology.

Choongkittaworn, Ngamchit 1993, (Research); PhD, 1987, Washington State University; immunocytochemistry of prostatic disease.

DeFalco, Alfred J. 1989; MD, 1962, University of Rochester; urologic trauma, urodynamics and endourology.

Ellis, William J. 1991; MD, 1985, Johns Hopkins University; oncology, prostate disease.

Marsh, Christopher L. 1989; MD, 1980, Loma Linda University; transplant surgery.

Miller, Jane L. 1985; MD, 1985, University of Oklahoma; female urology and urodynamics.

Riley, Donald E. * 1982, (Research); PhD, 1976, University of Washington; pathogenic research and diagnosis involving DNA sequences.

Yao, Yue (Lena) 1993, (Research); PhD, 1988, University of Washington; molecular biology.

Instructors

Bagli, Darius 1993, (Acting); MD, 1984, McGill University (Canada); pediatric urology.

Close, Clare E. 1994, (Acting); MD, 1988, University of Washington; pediatric urology.

Takayama, Thomas K. 1989, (Acting); MD, 1985, Tufts University; biochemistry of prostate specific antigen.

Yang, Claire C. 1993, (Acting); MD, 1988, Vanderbilt University; urodynamics, neuro-urology.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

UROL 498 Undergraduate Thesis (*) Brawer Provides an opportunity for medical students to write in the area of urology. Prerequisite: permission of sponsor and department.

406 SCHOOL OF MEDICINE / UROLOGY

UROL 499 Undergraduate Research (*) Brawer The student participates in current urologic research projects under supervision of full-time staff. Certain specific problems may be elected by the student. Elective for medical students. Prerequisite: permission of sponsor and department.

UROL 501P Urology Preceptorship (1) Brawer Individual experiences with one or more of the full-time department faculty members covering research, teaching, and patient care. Students observe activities in the clinic, hospital ward, operating room, and research laboratories. Prerequisites: first- or secondyear medical student standing; permission of instructor.

UROL 675P Urology Preceptorship (*, max. 8) *Brawer* Student follows a private practice preceptor in all of his or her work. Becomes acquainted with the office management of urological problems. Prerequisites: 680P, HUBIO 562P. (Two or four weeks.) UROL 680P Urology Clerkship (*, max. 8) Bavendam, Berger, Ellis, Krieger, Mayo Full activities of clinical service. Basic principles of urology emphasized. Prerequisite: HUBIO 562P. (Two or four weeks.)

UROL 681P Female Urology (4) Bavendam, Miller Observation of cases of lower urinary tract disorders specific to women, emphasizing behavioral management and multidisciplinary care. Ninety-five percent of cases observed are women. Not intended as the only exposure to urology for students considering urology as career choice. Prerequisites: third or fourth year standing and permission of instructor.

UROL 685P Urology Subinternship (*, max. 12) Bavendam, Berger, Ellis, Krieger, Mayo Subintern is responsible for patient workups and for preoperative and postoperative care and participates in the operating room. Prerequisite: MED 665P or pediatrics basic clerkship, or permission of instructor. UROL 690P Urology Specialties (*, max. 8) Brawer For those who wish further exposure to a specific aspect of urology. Students can spend time with one attending at University of Washington, Medical Center, Harborview Medical Center, Children's Hospital and Medical Center, or Veterans Administration Hospital studying oncology, infections, Infertility, stone disease, impotence, or other aspects of urology. Prerequisites: 680P and permission of instructor.

UROL 697P Urology Special Electives (*, max. 24) Brawer Special clerkship, externship, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of instructor. (Six or twelve weeks.)

SCHOOL OF NURSING / FACULTY 407

School of Nursing

Dean

Sue T. Hegyvary T318 Health Sciences

Associate Deans

Pamela H. Mitchell, Academic Programs Marie J. Cowan, Research and Practice

Assistant Deans

Ruth F. Craven, Continuing Nursing Education Anne Loustau

The School of Nursing offers programs leading to baccalaureate, master's, and doctoral degrees.

Gary Olson, Director, Academic Programs

Undergraduate Program

The School of Nursing prepares its graduates to function as generalists in professional nursing practice and to collaborate with other health-care providers. The sixquarter undergraduate curriculum emphasizes theory and clinical practice to ensure critical thinking, human caring, and clinical experise. Clinical experiences are provided in institutional and community settings for preventive and acute care. Completion of the curriculum leads to a Bachelor of Science in Nursing degree and eligibility to take the licensure examination to become a registered nurse.

Students may be admitted to the University of Washington as prenursing majors. Courses required for admission to the nursing major include: written communication, problem solving (including statistics), life sciences (inorganic and organic chemistry, human anatomy and physiology, nutrition, and microbiology), humanities, social sciences (including growth and development), and electives to achieve a minimum of 90 credits. A minimum 2.00 cumulative GPA is required and a minimum grade of 2.0 must be obtained for each prerequisite course. As admission is competitive, the GPA for admission is usually significantly higher. Together with the application and transcript(s), applicants are asked to submit an essay demonstrating proficiency in writing and a record of their volunteer and health care experience.

A four-quarter modification of the basic curriculum is available for the registered nurse who is able to validate selected nursing courses through written examination and who intends to complete a master's degree program. This B.S.N. completion program is available at the UW Branch Campuses in Bothell and Tacoma.

Admission to the nursing major occurs once a year, in autumn quarter, with an application deadline of January 15. Selection is competitive. For information on admission criteria, specific prerequisites, and deadlines, as well as application forms, contact the Office of Academic Programs, School of Nursing, (206) 543-8735 or 1-800-759-NURSE.

Graduate Program

The School of Nursing offers graduate study leading to the degrees of Master of Nursing, Master of Science, and Doctor of Philosophy. At the master's level, programs are designed to provide opportunity for advanced study and research in nursing. The Master of Nursing program develops increased competence in selected areas of clinical specialization: community health care systems, parent and child nursing, physiological nursing, and psychosocial nursing. Research is an integral part of all programs. A thesis is required in the Master of Science program. The Master of Nursing program provides the option of a thesis or non-thesis project. Opportunities for functional preparation in teaching, care systems management, and clinical practice as a nurse practitioner are available. The School of Nursing offers a concurrent graduate degree program with the Department of Health Services in the School of Public Health and Community Medicine.

Part-time study is available in most programs. Course work may be started prior to formal admission to a program as a graduate nonmatriculated student (GNM). GNM status allows the student to earn up to 12 graduate-level credits which may be applied to a graduate program if the student is later admitted. Time limits for acceptance of courses taken as a GNM student are six years for a master's degree and ten years for a doctoral degree

The aim of the program at the doctoral level is to prepare scholars and researchers to expand the body of knowledge upon which the practice of nursing is based. The program provides for rigorous research training related to four fields of nursing science: (1) individual adaptations to health and illness; (2) family adaptations to health and illness; (3) environments: supporting and nonsupporting; and (4) clinical therapeutics. The Ph.D. in nursing science program is designed for individuals interested in careers in academia or for other types of leadership positions in health service agencies in which the ability to design, plan, and implement research in nursing is a critical requirement.

Special Requirements

In addition to the basic requirements for graduate status in the University, admission to premaster's status in the School of Nursing requires baccalaureate preparation with an upper-division major in nursing or equivalent, a basic course in statistics, Graduate Record Examination scores within the past five years, a statement of goals, three references, and at least one year of practice for most clinical programs. Admission is usually for autumn quarter. The application deadline for most master's degree pathways is April 1. Early application is encouraged, although late applications may be accepted on a space-available basis. Additional information may be obtained from the School of Nursing Office of Academic Programs.

Admission requirements for the doctoral program, in addition to the above, include Graduate Record Examination scores within the past five years, five references, a statement of goals for doctoral study, a description of area of research interest, and evidence of scholarly work. The deadline for application to the doctoral program is February 1.

Financial Aid

A limited number of nurse traineeships are available for premaster's study. Other financial aid is available on a limited basis.

Teaching assistantships and research assistantships are available to a limited number of students. Priority for these appointments is given to predoctoral students.

Contact the Office of Academic Programs, School of Nursing, for current information.

Faculty

Chairpersons

Community Health Care Systems: Katherine J. Graham Parent and Child Nursing: Marcia G. Killien Physiological Nursing: Joan Shaver Psychosocial Nursing: David G. Allen

Professors

Barnard, Kathryn E. * 1972; PhD, 1972, University of Washington; ecological factors of child development.

Batey, Marjorie V. * 1956, (Emeritus); PhD, 1968, University of Colorado; sociological factors in health-care systems.

Benoliel, Jeanne 1970, (Emeritus); DNS, 1969, University of California (San Francisco).

Blackburn, Susan T. * 1973; PhD, 1979, University of Washington; high-risk infants and their families, infant care-giving interactions and environments.

Booth, Cathryn L. * 1980, (Research); PhD, 1974, Ohio State University; mother-infant interaction, observational methodology, child birth experiences and attachment.

Brandt, Patricia * 1981; PhD, 1981, University of Washington; influence of family functioning on early child development.

Chrisman, Noel J. * 1973; PhD, 1966, University of California (Berkeley); health beliefs and practices, social networks and social support.

Cowan, Marie J. * 1977; PhD, 1979, University of Washington; estimation of infarct size by electrocardiography, sudden cardiac death, physiological nursing.

De Tornyay, Rheba * 1975; EdD, 1967, Stanford University; health services, nursing education.

Dimond, Margaret * 1988; PhD, 1978, University of Wiscońsin; aging, bereavement, family caregiving, Alzheimer's disease, chronic illness, long-term care.

Disbrow, Mildred A. * 1982, (Emeritus); PhD, 1968, University of Washington; maternal-infant interaction, child abuse.

Eyres, Sandra J. * 1974; PhD, 1972, University of North Carolina; environmental resources promoting adaptation and health.

Gallucci, Betty J. * 1973; PhD, 1973, North Carolina State University; oncology, nutritional assessment, pathophysiology of stomatitis, and graft *versus* host disease.

Giblin, Elizabeth C. * 1959, (Emeritus); BS, 1943, University of Washington; nursing assessment and nursing therapies, pathophysiological bases.

Graham, Katherine J. * 1988; PhD, 1978, University of Washington; family adaptation, quality of life in wellness and illness, professional commitment.

Hegyvary, Sue T. * 1986; PhD, 1974, Vanderbilt University; administration and productivity of health care and nursing services.

Heinemann, Edith * 1954, (Emeritus); MA, 1954, University of Washington; substance abuse, gerontology.

Heitkemper, Margaret M. * 1981; PhD, 1981, University of Illinois; gastroenterology, enteral nutrition, gerontology.

Horn, Barbara J. * 1977, (Emeritus); PhD, 1971, University of Michigan; effective organization of nursing resources.

Killien, Marcia G. * 1973; PhD, 1982, University of Washington; women's health, reproductive decision making, evaluation research, perinatal nursing.

Kogan, Helen N. * 1968; PhD, 1968, University of California (Los Angeles); stress response: cognitive/ physiologic interface in chronic dysfunctions, selfmanagement teaching.

Lewis, Frances M. * 1978; PhD, 1977, Stanford University; complex organizational analysis, evaluation research, psychosocial factors in chronic illness.

Little, Dolores E. 1957, (Emeritus); BS, 1946, University of Washington.

Mansfield, Louise W. 1951, (Emeritus); MA, 1951, Columbia University; physiological nursing.

408 SCHOOL OF NURSING / FACULTY

Mitchell, Pamela H. * 1971; MS, 1965, University of California (San Francisco); neuroscience nursing, diagnostic strategies.

Muecke, Marjorie A. * 1979; PhD, 1976, University of Washington; medical anthropology, women's health, refugee health, Southeast Asia.

Murphy, Shirley Ann * 1985; PhD, 1981, Portland State University; addictive processes in women, coping with undesirable life events.

Osborne, Oliver H. * 1969; PhD, 1968, Michigan State University; ideology, policy and health care systems, transcultural health.

Patrick, Maxine L. * 1973, (Emeritus); DPH, 1970, University of California (Los Angeles); gerontology, geriatrics.

Price Spratlen, Lois * 1976; PhD, 1976, University of Washington; urban and ethnic factors in health and illness.

Prinz, Patricia * 1976, (Adjunct); PhD, 1969, Stanford University; pharmacology.

Shamansky, Sherry * 1988; DPH, 1977, Yale University; nursing administration and organizational culture.

Shaver, Joan * 1980; PhD, 1976, University of Washington; women's health and female reproductive physiology.

Teri, Linda 1983, (Adjunct); PhD, 1980, University of Vermont; clinical psychology.

Thomas, Morgan D. * 1960, (Adjunct); PhD, 1954, Queen's University (UK); regional economics, regional planning and development, technical innovation.

Vitiello, Michael V. * 1993, (Adjunct); PhD, 1980, University of Washington; behavioral medicine, principles of behavioral sciences applied to medical research and practice.

Weaver, W. Douglas 1979, (Adjunct); MD, 1971, Tufts University; cardiology.

Webster-Stratton, Carolyn * 1976; PhD, 1978, University of Washington; parent intervention programs for behaviorally disturbed children.

Wolf-Wilets, Vivian * 1969; PhD, 1969, University of Chicago; curriculum development, instruction, stress management.

Woods, Nancy * 1978; PhD, 1978, University of North Carolina; women's health.

Woods, Susan L. * 1975; MA, 1974, University of Washington; cardiovascular clinical specialist, pulmonary artery catheter measurement.

Associate Professors

Allen, David G. * 1988; PhD, 1975, University of Iowa; philosophy of science, critical and feminist theory, psychosocial nursing theory.

Beaton, Randal D. * 1976, (Research); PhD, .1972, University of Washington; assessment and treatment of temporomandibular joint pain and dysfunction.

Betrus, Patricia * 1978; PhD, 1985, University of Washington; stress, cognitive behavioral therapy, depression, research design.

Blainey, Carol * 1967; MN, 1967, University of Washington; clinical teaching and problems of patients with diabetes mellitus.

Bond, Eleanor * 1984; PhD, 1985, University of Washington; critical care nursing, therapeutic effects of exercise.

Boozer, Mary Kathryn * 1960, (Emeritus); MN, 1955, University of Washington; physiological nursing, care of patients.

Brandt, Edna M. 1952, (Emeritus); MN, 1953, University of Washington; physiological nursing.

Brown, Marie A. * 1983; PhD, 1983, University of Washington; perimenstrual distress (premenstrual syndrome and dysmenorrhea), psychosocial aspects of pregnancy.

Burke, A. Evelyn 1943, (Emeritus); MA, 1941, Case Western Reserve University; community health-care systems.

Burr, Robert L. * 1976, (Research); PhD, 1986, University of Washington; cardiovascular/psychophysiology, autonomic nervous system.

Bush, James P. 1984; EdD, 1984, University of San Francisco; pain management, power and powerlessness as perceived by professional nurses.

Carnevali, Doris 1982, (Emeritus); MN, 1961, University of Washington.

Catanzaro, Marci-Lee * 1982, (Research); PhD, 1980, Union Graduate School-West; symptom management and chronic lilness.

Cobb, Marguerite 1953, (Emeritus); MN, 1957, University of Washington; community and school health problems.

Craven, Ruth F. * 1968; EdD, 1984, Seattle University; gerontological nursing.

Cunningham, Susanna L. * 1978; PhD, 1977, University of Washington.

Eggert, Leena * 1978; PhD, 1984, University of Washington; adolescents, drug use, suicide, communication, personal relationships.

Estes, Nada * 1972, (Emeritus); MS, 1958, University of Colorado (Boulder); counseling people with substance-use disorder, depression.

Fine, Ruth Barney 1958, (Emeritus); MN, 1957, University of Washington.

Flagler, Susan B. * 1979; DNS, 1981, University of California (San Francisco); maternal role adjustment and early parent-infant interaction.

Gray, Carol A. * 1971, (Adjunct); PhD, 1971, University of Washington; school psychology/human development and cognition.

Gray, Florence I. 1949, (Emeritus); MS, 1950, Washington University; undergraduate nursing education.

Hammond, Mary A. * 1972, (Research); PhD, 1971, University of Wisconsin; child development, longitudinal research methods.

Hay, Stella I. * 1955, (Emeritus); MA, 1951, University of Minnesota; physiological nursing.

Hoffman, Agnes * 1979; PhD, 1977, University of Kansas; substance use disorders, mental health care of the elderty.

Horn, Beverly M. * 1976; PhD, 1975, University of Washington; cross-cultural research in maternal-child nursing.

Jordan, Pamela L. * 1984; PhD, 1984, University of Michigan; family expansion, fathering, social support.

Kieckhefer, Gail M. * 1987; PhD, 1985, University of Washington; motivation for health promotional and illness management behavior in children.

Lentz, Martha J. * 1983, (Research); PhD, 1984, University of Washington; physiological adaption: the influence of sleep and other biological rhythms.

Loustau, Anne * 1976; PhD, 1975, University of Washington; clinical decision making, patient teaching, patient compliance with therapeutic regimens.

Magyary, Diane L. * 1981; PhD, 1981, University of Washington; family centered health care of children at risk, disabled or handicapped.

Mitchell, Ellen S.* 1977, (Research); MN, 1967, University of Florida; menstrual cycle symptom experiences; food cravings and eating control.

Molbo, Doris M. * 1969, (Emeritus); MA, 1968, University of Washington; oncology: prevention and screening, care and rehabilitation. O'Connor, Frederica W. * 1986; PhD, 1986, Northwestern University; psychoeducation in schizophrenia, mental health promotion, program evaluation.

Olshansky, Ellen F. * 1985; DNS, 1985, University of California (San Francisco); psychosocial implications of infertility related to the family, qualitative research.

Pesznecker, Betty L. 1970, (Emeritus); MN, 1957, University of Washington.

Pittman, Rosemary 1964, (Emeritus); MS, 1947, University of Chicago.

Schepp, Karen G. * 1988; PhD, 1985, University of Arizona; stress and coping of physically and mentally ill youth and their families.

Schultz, Phyllis R. * 1989; PhD, 1981, University of Denver, nursing systems research, impact of nursing services on population's health.

Spieker, Susan J. * 1983, (Research); PhD, 1982, Cornell University; developmental psychology, infant security.

Swanson, Kristen M. * 1985; PhD, 1983, University of Colorado (Boulder); psychosocial, parent-child nursing, reproductive loss, caring, qualitative research methodologies.

Thomas, Karen A. * 1981; PhD, 1986, University of Washington; preterm infant development, care unit environments, acute care pediatrics.

Thomas, Mary Durand * 1983; PhD, 1978, University of Hawali; psychiatric illnesses, nursing assessment and diagnosis, cultural aspects of care.

Wagnild, Gail M. * 1992; PhD, 1984, University of Texas (Austin); geriatric care in the community.

Ward, Deborah * 1987; PhD, 1987, Boston University; health policy and politics, women's paid and unpaid caregiving work.

Assistant Professors

Belza, Basia * 1991; PhD, 1991, University of California (San Francisco); chronic illness, gerontology, fatigue prevention and managment in rheumatic diseases.

Brown, Linda * 1991, (Research); PhD, 1982, University of Colorado (Denver); mental health care delivery system evaluation, theories of psychiatric nursing, nursing intervention.

Carr, Catherine A. * 1993; PhD, 1993, University of Michigan; nurse-midwifery.

Draye, Mary A. 1982; MPH, 1968, University of Michigan; FNP practice, infertility, computer-aided instruction, risk appraisal.

Elmore, Shawn K. * 1983; PhD, 1990, University of Washington; psychobiological aspects of women with mood disorders and light therapy.

Frost, Diana Patterson * 1989; DNS, 1984, University of Alabama.

Heerwagen, Judith * 1981, (Research); PhD, 1982, University of Washington; behavioral ecology.

Jones, Mary C. 1964, (Emeritus); MS, 1962, Boston University.

Kang, Rebecca R. * 1981; PhD, 1985, University of Washington; environment of at-risk infants and families.

Kelly, Jean F. * 1988, (Research); PhD, 1979, University of Washington; social and emotional health of biologically or socially vulnerable children and their families.

Landis, Carol A. * 1991; MS, 1973, University of California (San Francisco).

Larson, Margaret L. * 1958, (Emeritus); MN, 1967, University of Washington; cross-cultural variables in mental illness, nursing interventions in disturbed behaviors.

Levine, Barbara 1989; PhD, 1993, Oregon Health Sciences University.

Lewis, Linda L. * 1989; PhD, 1987, University of Illinois; reproductive neuroendocrinology mood changes related to the human menstrual cycle.

Lowenberg, June S. * 1990; PhD, 1985, University of California (San Diego); social construction of health and illness experiences, interpretive research.

Martell, Louise K. * 1992; PhD, 1990, Oregon State University.

Petrucci, Kerry E. * 1992; PhD, 1990, University of Maryland.

Price, Martha J. * 1990; DNS, 1988, University of California (San Francisco); self-management in chronic illness, diabetes mellitus, qualitative research methodologies.

Salazar, Mary K. * 1984; MN, 1986, University of Washington; behavioral theory applied to health education, cancer control, occupational health.

Simpson, Terri A. * 1991; PhD, 1988, University of Washington; critical care patients' physiological and psychological responses to environmental stressors.

Thompson, Frances Elaine A * 1984, (Research); PhD, 1990, University of Washington; attribution theory, adolescent drug use, suicide.

Tyler, Martha L. * 1973; MN, 1977, University of Washington; oxygenation during chest physiotherapy, suctioning, dyspnea, breathing patterns in disease.

Whitney, Joanne D. * 1991; MS, 1979, University of Michigan; wound healing.

Wilkie, Diana J. * 1990; PhD, 1990, University of California (San Francisco); cancer pain assessment and management, pain research.

Worthy, Elizabeth J. * 1966, (Emeritus); MN, 1964, University of Washington; mother-infant interactions, handicapped child.

Senior Lecturer

Cornman, Barbara J. * 1979; PhD, 1988, University of Washington; sexual assault victims, kinetic family drawings, family having child with cancer.

Lecturers

Andersen, Heather A. 1986; MN, 1983, University of Washington; hospice/home care, health care.

Claman, Faith L. 1992; MN, 1988, Yale University; adolescent health.

Halverson, Susan G. 1993; MS, 1976, University of Rochester.

Pipes, Peggy L. 1968; MPH, 1966, University of Michigan; maternal and child nutrition.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Nursing

Courses for Registered Nurses

NURS 201 Growth and Development Through the Life Span (5) Focuses on processes of human growth and development from prenatal life to old age. Emphasizes influence of growth and development on achievement of health, and how awareness of growth and development theory and research helps guide health promotional efforts directed towards persons of various ages and life styles. Open to non-majors.

NURS 301 The Nature of Health and Caring (3) Scientific principles of nursing care of health clients. Emphasis on understanding multidimensional aspects of health; personal, environmental factors that support healthy functioning patterns of individual clients; health promotion interventions. Underlying concepts: health, adaptation to life transitions, person-environment fit, client, caring, health promotion, health maintenance. Prerequisite: admission to nursing program. NURS 302 Practicum: The Nature of Health and Caring (5) Emphasizes beginning nursing skills in communication, interviewing, and health assessment and maintenance. Predominant themes include: personal health beliefs, values clarification, basic communication skills, and beginning physical and psychosocial assessment of the individual across the age span. Prerequisite: concurrent registration in 301.

NURS 303 Introduction to Professional Nursing (4) Focuses on nature of nursing, development of identity as nursing students and professional practitioners. Students consider their choices to be nurses; nurses' experiences past, present; experience of illness, health-seeking; nursing issues in context of overall American health care system; perspectives on nursing education. Prerequisite: admission to nursing program.

NURS 304 Bases for Understanding Human Responses I (2) This course and its companion, 308, are concerned with commonly occurring psychopathological and pathophysiological human responses to states of health and illness. They identify and describe the major concepts and principles necessary to understand disregulatory processes at the mind-body interface. Prerequisite: admission to nursing program.

NURS 305 Threats to Health (3) Challenges to health during transitions: birth and death, developmental and role changes, acute changes in health, chronicity, and personal network. Assesses health patterns in terms of risk, vulnerability, and resilience. Examines personal and environmental demands, constraints, resources for interaction with individuals, families, communities/populations undergoing transitions. Prerequisites: 301,302,304.

NURS 306 Practicum: Threats to Health (4) Beginning nursing skills in communication, interviewing, health assessment, identification of threats to health in selected community/clinical settings. Predominant themes, skills: risk, vulnerability identification; communication; physical, psychosocial assessment of individuals across life span; nursing care planning, documentation; psychomotor skills development. Prerequisite: 301,302,304; 305 which may be taken concurrently.

NURS 307 Human Social Systems (2) Review systems theory with emphasis on the nature and analysis of human social systems, including their growth, development, and transitions. The family is primary vehicle for examining relationships among social systems components; assessing self-care and utilizing health care; analyzing variables which affect social groups. Prerequisite: admission to nursing program.

NURS 308 Bases for Understanding Human Responses II (2) Continuation and extension of 304. The two courses introduce and describe commonly occurring psychopathological and pathophysiological human responses to states of health and illness. They identify and describe the major concepts and principles necessary to understand disregulatory processes at the mind-body interface. Prerequisite: 304.

NURS 309 Pharmacotherapeutics in Nursing Practice (3) Introduces professional nursing students to the principles of pharmacology and drug therapies, pharmacologic-therapeutic classes of drugs, and important drug information resources. Prerequisite: admission to nursing program.

NURS 340 Cilnical Nursing Phenomena (3) Selected clinical phenomena examined from the perspective of physiologic, pathophysiologic, experiential, and behavioral responses to life events and alterations in states of health and illness. Relationship of nursing therapies to each perspective and influence of life span and sociocultural factors identified. Prerequisite: admission to RN-Masters program or permission of instructor.

NURS 350 Decision Making and Therapeutics in Nursing (3) Focuses on types of thinking and writing germane to learning and practice in nursing including self-assessment, understanding and producing written communication, abstract thinking, group dialogue, evaluating points of view, problem solving, clinical decision making. Provides opportunity for application in discipline-related issues and frameworks. Prerequisite: licensed Registered Nurse.

NURS 401 Care in Illness I (5) Selected psychopathologic and pathophysiologic health alterations and therapies across life span. Assesses human functioning, pathophysiology, pharmacology, psychosocial, cultural variation, health care resources, and person-environment relationships to select nursing strategies for acutely and chronically ill individuals of all ages. Prerequisites: 301,302,303,304,305,306,308, 309.

NURS 402 Practicum: Care in Illness I (4) Provides supervised nursing care to individuals and families with acute and chronic illness. Emphasis on increasing skill in systematic assessment, developing competency in selected nursing therapies, and developing role as care agent for persons of all ages. Credit/no credit only. Prerequisite: 401 which may be taken concurrently.

NURS 403 Introduction to Research in Nursing (3) Organization of the structure of nursing knowledge through research. Concepts and processes of research utilized in the investigation of nursing science. Prerequisite: one introductory statistics course.

NURS 404 Interpersonal Therapeutics (3) Nursing care within context of interpersonal relationships. Effective enactment of nursing role requires knowledge of relationship development, maintenance and termination, using skillful interpersonal communication in diverse health-care contexts. Emphasizes application of conceptual models in interpersonal processes and skills between professionals and clients, other professionals, and groups. Prerequisite: concurrent registration in 401.

NURS 405 Care In Illness II (5) Continuation of 401, further examining selected psychopathologic and pathophysiologic alterations in health of individuals in context of families across life span. Emphasizes assessing functioning in psychosocial, cultural, personenvironment relationships, and health care resources to plan nursing strategies for acutely/chronically ill individuals of all ages. Prerequisite: 401.

NURS 406 Practicum: Care in liness II (4) Provides supervised nursing care to individuals and families with acute and chronic illness. Emphasis on increasing skill in systematic assessment, developing competency in selected nursing therapies, and developing role as caring agent for persons of all ages. Credit/no credit only. Prerequisites: 402; 405 which may be taken concurrently.

NURS 407 Cultural Variation and Nursing Practice (3) Introduces knowledge and skills for culturally competent health care for all. Compares health related values, beliefs, and customs among major cultural groups. Views family and social network as culturally variable health seeking behavior contexts, Examines Western biomedicine and alternative healing methods within broader environment, including government, other social institutions.

NURS 408 Nursing Care with Familles in the Community (3) Application of biopsychosocial and social environmental theories and assessments to diagnose alterations in health/mental health of familles, small groups in community settings. Emphasizes interpersonal and clinical therapies; coordination of community resources, evaluating effectiveness of changes; characteristics of nursing care in home visiting. Prerequisites: 307,405,406,407.

NURS 409 Nursing Stratégies for Community as Client (6) Analysis, application, and evaluation of nursing process at level of community. Formulation of community health diagnoses as basis for communitylevel interventions to maintain and promote biopsychosocial health, prevent disease, and enable self

care by the community. Analysis of nursing's role in community health/mental health. Prerequisites: 307, 405, 406, 407.

NURS 410 Legal and Ethical Issues in Clinical Practice (2) Identification of ethical and legal issues and the ensuing dilemmas relevant to the profession of nursing and nurses as health professionals and citizens. Selected problems and dilemmas affecting nurses, nursing, and the delivery of health care analyzed using specific moral-ethical perspectives. Prerequisite: upper-division standing or permission of instructor.

NURS 411 Transition to Professional Practice (12) Intensive field work in a nursing care specially focusing on critical examination, synthesis, and evaluation of professional nursing care. Client populations include individuals and/or groups reflecting diverse settings, ages, ethnic communities. Emphasizes mastering theoretical concepts, applying research findings, improving skill competency, developing leadership capabilities. Prerequisites: 307, 405, 406, 407.

NURS 412 Nursing Care Systems (3) Introduction to analyzing current health care systems and their effectiveness in achieving desired health outcomes for selected client populations from a system perspective. Emphasizes key features of interface between client and health care professionals, and environmental factors and organizational structures which influence the transaction. Prerequisite: senior standing in nursing.

NURS 430 Interpersonal Relationships in Nursing (3) Theory, current research, and practice in communication to develop and maintain interpersonal relationships with clients and health care colleagues. Lecture/ discussion and laboratory learning opportunities include concepts of relationship development and disorder, interpersonal and group therapeutic communication processes, health care interviewing, and social support. Prerequisite: admission to RN-Masters program or permission of instructor.

NURS 450 Connected Learning I (1, max. 6) An opportunity and quarterly requirement for nursing students to participate in a learning community in small groups with a faculty member. Focus is on dialogue, understanding others perspectives, building community, and integration of concurrent learning in other courses. Prerequisite, admission to nursing program.

NURS 451 Connected Learning II (1, max. 3) An opportunity and quarterly requirement for nursing students to participate in a learning community in small groups with a faculty member. Focus is on dialogue, understanding others perspectives, building community, and integration of concurrent learning in other courses. Prerequisite: admission to nursing program.

NURS 499 Undergraduate Research (1-5, max. 12) Supervised individual scholarly inquiry on a specific nursing problem. Nursing students only. Permission of academic programs office.

Courses in Nursing Science

NURS 510 Theoretical Foundations of Primary Care: Management of Common Health Concerns (1-3, max. 9) Focuses on assessment, clinical decision making, and management of common health problems. Emphasizes individual and family responses to common health problems and selection of nursing strategies within the scope of primary health care practice. Content focus changes each quarter. Prerequisite: permission of instructor; recommended: concurrent fieldwork for nurse practitioner students.

NURS 570 Family Concepts: Health and liness (3) Emphasizes the family as unit of care across the life span. Predominant themes: factors influencing family health promotion, including resilience, vulnerability, risk reduction, and health policy: continuity, change and transition; and promotion of family health during acute and chronic illness episodes. NURS 571 Advanced Interpersonal Therapeutics with Families (3) Models and research on therapeutic relationships and interpersonal processes evaluated and applied to group interactions among family members, among professionals, and between the family, professionals, and macrosystems. Partnership building emphasized. Individual and group characteristics examined across the life span in social, cultural, and health contexts. Prerequisite: permission of instructor.

NURS 572 Family Nursing Therapeutics: Behavioral Models (3) Behavioral models of health-related behavior analyzed to develop therapeutic programs and services for families experiencing health-related concerns or disruptions. Seminars introduce didactic material and laboratory assignments facilitate development of therapeutic and programmatic content. Prerequisite: permission of instructor.

NURS 573 Advanced Field Study in Family Nursing (2-9) Advanced practice development in direct care, consultation, and/or care coordination with individual families or groups of families across the life span. Opportunities provided to strengthen interpersonal therapeutic process skills, family nursing approaches relevant to family health promotion, problematic family health patterns. Prerequisites: concurrent registration in 572, 574; recommended: 571.

NURS 574 Family Nursing Therapeutics: A Systems Perspective (3) Brandt, Comman, Schepp, Stetz Family models and research evaluated for relevance to advanced nursing practice and the family as a system. The interrelatedness of the individual, family, and social and health contexts examined. Experiential learning laboratories with family case analyses enhance knowledge and therapeutic skills. Prerequisite: permission of instructor.

NURS 575 Methodological issues in Family Research (3) Emphasizes research with the family as unit of analysis. Examines patterns of family functioning in relation to responses to heal situations. Reviews family units from generational and intergenerational perspectives. Critiques methods assessing dyadic and triadic relationships and therapeutic interventions on family outcomes. Prerequisite: permission of instructor.

NURS 580 Theory Building in Nursing I (3) Exploration and analysis of nursing theory, types, techniques of construction, problems in evaluation and testing, and implications for nursing science. Prerequisite: permission of instructor.

NURS 581 Theory Building in Nursing II (3) Continuation of 580 with emphasis on evaluation of existing nursing theories, student construction and presentation of a theory for nursing, and critiques of the students' theories. Prerequisite: 580.

NURS 582 Environments, Supporting and Nonsupporting (3) Analysis and study of environments as complex multidimensional systems that support or do not support human health. Emphasis on the influence of different conceptualizations of human-environmental interactions. Prerequisites: graduate standing, a minimum of 5 credits in basic nursing research methodology at graduate level, and permission of instructor.

NURS 584 Clinical Therapeutics: Physical (3) Analysis and study of current theories and knowledge regarding physical therapeutic measures and nursing interventions that promote, maintain, or restore health status for human throughout the life span. Prerequisites: graduate standing and a minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor.

NURS 585 Individual Adaptations to Wellness and Illness (3) Survey and analysis of current theory and research in health and illness awareness, in healthseeking and -maintaining behaviors, and in coping responses to illness and disability. Prerequisites: graduate standing and a minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor. NURS 586 Family Adaptations to Wellness and Illness (3) Current theory and research in family functioning in health and illness. Family developmental tasks, separation, divorce, major and minor disablements, social cultural processes, and other events that strengthen or weaken the family. Prerequisites: graduate standing and a minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor.

NURS 587 Clinical Therapeutics: Interpersonal (3) Analysis of care/cure orientations in patient care and their impacts on nursing intervention programs. Dynamics of change, interpersonal aspects of planned change, and measurement of clinical outcomes. Prerequisites: minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor.

NURS 588-589 Advanced Problems in Nursing Research (3-3) Examination of alternative methodological decisions for their direct and indirect consequences at different points in nursing research process. Prerequisites: inferential statistics; minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor.

NURS 590 Special Topics in Nursing Research (2-3, max. 9) Examination of a specific research method, with evaluation of appropriateness, efficiency, rigor of measurement, and potential for inference for nursing research. Prerequisites: minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor.

NURS 591 Advanced Seminar in Nursing Science (3, max. 15) In-depth analysis and evaluation of literature in focused areas of research. Synthesis of literature related to selected fields of nursing science. Oral analysis of assigned papers and topics. Prerequisite, graduate standing or permission of instructor.

NURS 598 Special Projects ([1-12]-, max. 12) Fulfills the requirements of the non-thesis option for Masters students in nursing. Projects involve scholarly inquiry with in-depth focused analysis, culminating in a written product/report for dissemination. Credit/no credit only. Prerequisites: 520 and 521 or permission of instructor.

NURS 599 Selected Readings in Nursing Sciences (1-3, max. 18) Analysis of synthesis of selected readings with faculty mentor. Prerequisite: permission of instructor.

NURS 800 Doctoral Dissertation (*) Credit/no credit only. Prerequisite: permission of Supervisory Committee chairperson or graduate program adviser.

Community Health Care Systems

Courses for Undergraduates

CHCS 458 Practice Teaching Community Health Nursing (3) Guided experience in selected teachinglearning situations in community health nursing. Identification, analysis, and solution of teaching-learning problems. A minimum of seven hours of guided experience weekly. Prerequisite: 450.

CHCS 492 Anthropology of Refugees (3) I&S The refugee phenomenon, its emergence in postcolonial world, and structure of life history of refugees. Ethnic change, involuntary deculturation, and acculturation as they occur in refugee life histories. Prerequisite: ANTH 202 or permission of instructor. Offered: jointly with ANTH 492.

CHCS 495 Child Rearing, Culture, and Health (3) I&S Cross-cultural study of the child-rearing practices, cultural norms, and health behavior of children and adolescents in different societies. Comparative approaches, diverse theoretical postures, and empirical research findings are used. Prerequisite: permission of departmental adviser. Offered: jointly with ANTH 440.

Courses for Graduates Only

CHCS 501 Health Assessment for Advanced Practice (1-5, max. 5) Provides framework for systematic data collection, organization, precise recording, and accurate communication of health status data on individuals of all ages. Demonstrations of, and experiences with, the processes of symptom analysis and health screening with basically healthy individuals. Credit/no credit only. Prerequisites: graduate standing, permission of instructor.

CHCS 502 Dynamics of Community Health Practice (3/5) Examination of and experience with principles of clinical practice in community settings. Included are family as community constituent, populations at risk, community assessment, and community development. Prerequisites: graduate standing or permission.

CHCS 503 Advanced Fieldwork Community Health Nursing (2-6, max. 12) Guided experience in delineating nursing roles in community settings. Development of a philosophy of community health nursing. Application of core concepts pertaining to health, ethics, care, and community. A minimum of four hours of guided experience weekly. Prerequisites: graduate standing, permission of instructor.

CHCS 514 Seminar in Home Care for Chronic IIIness (3) Home-care services as component of community health nursing. Understanding effects of direct nursing functions on care of chronically ill persons and their families. Selected field study experiences in community health settings. Prerequisites: 550, graduate standing, and permission of instructor.

CHCS 516 Communications in Complex Health-Care Systems (3) Forum for critically examining and conceptualizing various communication processes in complex health-care systems and their implications for practice. Analytic and theoretical perspectives for the study of communication within health care. Prerequisites: 571, permission of instructor.

CHCS 520 Methods of Research in Nursing (3) Research process as it applies to nursing. Use of the literature in building theoretical rationale. Selection of appropriate methods. Presentation of findings. Minimum of two laboratory hours weekly. Prerequisite: a course in statistics.

CHCS 521 Methods of Research in Nursing (2) Continuation of 520, with emphasis on methods of research applied to the solution of problems in all fields of nursing.

CHCS 524 Conceptual Foundations for Care Systems Management (3) Critical analysis of nature and theoretical bases of care systems management practice. Concepts of nursing and organization science foundations to person-provider transaction management and leadership in context of economic, political, and social environments and health outcomes. Prerequisite: graduate standing.

CHCS 525 Managing Clinical Effectiveness Within Care Systems (3/4) Optimizing person-provider clinical therapeutic transactions at multiple levels of care systems complexity and population aggregation. Emphasis on designing, managing and evaluating clinical effectiveness and efficiency within care systems. Prerequisite: 524 or permission of instructor.

CHCS 526 Managing Organizational Effectiveness Within Care Systems (3/4) Analysis of management strategies for attaining effective and efficient organizational structures and processes within health care systems. Prerequisite: 524 or permission of instructor.

CHCS 527 Managing Effective Access and Utilization Within Care Systems (3/4) In depth inquiry into health care access and resource utilization patterns among diverse populations, with emphasis on management strategies for establishing effective population-system fit. CHCS 528 Advanced Practice in Care Systems Management (4-8) Analysis of relationship between theory and practice in real-time conditions. Comparative analysis of structure and behavior of management approaches. Prerequisite: core courses in Care Systems Management.

CHCS 529 Seminar in Care Systems Management (3) Nursing science framework for analysis of the performance of care systems and of innovative change in care systems. Improving care through the use of leadership, quality improvement, and clinical and organizational effectiveness. For non-majors in care systems management.

CHCS 550 Advanced Community Health Nursing (3) Systematic inquiry into the nature and foundations of community health nursing. Analytic and theoretical perspectives on health risk assessment and nursing interventions in the community. Implications for community health nursing services. Prerequisites: permission of instructor and graduate standing.

CHCS 551 Theoretical Foundations of Primary Care (1-3) Presentation and interpretation of theoretical basis of advanced nursing practice in primary care. Provides students with conceptual foundation upon which to base their development as nurse practitioners. Prerequisites: graduate standing; permission of instructor.

CHCS 552 Health Promotion (2/3) Emphasis on health promotion, screening, and disease prevention in primary care. Examination of individual and family wellness, models of risk assessment and behavior change, health promotion strategies, and barriers to achieving health. Opportunity to explore age-related health risks. Prerequisites: graduate standing and permission of instructor; recommended: nurse practitioner students take fieldwork concurrently.

CHCS 553 Seminar in Primary Care I: Health Promotion (2) Weekly seminars with supervised field study within selected primary-care and wellness settings. Emphasis on health assessment and strategies related to improving health in people of all ages. Analysis of, and counseling on, life-styles, nutrition, physical fitness, stress management, self-care, and prevention. Credit/no credit only. Prerequisites: graduate standing, permission of instructor.

CHCS 556, 557 Seminar in Primary Care II and III: Management of Common Health Concerns (3,3) Focus on research questions, patient presentations, and group discussions drawn from field study. Supervised clinical field study within selected primary healthcare settings and weekly seminar discussions related to theory presented in NURS 510. Credit/no credit only. Prerequisite: graduate standing and permission of instructor.

CHCS 558 Advanced Occupational Health Nursing (2 or 5) Occupational health nursing theory; concepts from community health nursing, industrial hygiene, occupational epidemiology, and toxicology. Students synthesize concepts and explore in-depth selected problems in work settings. Evaluation and application of theories and research findings. Field experiences in occupational health nursing mandatory for 5 credits. Prerequisites: ENVH 453, permission of instructor.

CHCS 559 Seminar In Primary Care IV: Management of Common Health Concerns (3-5) Focus on research questions, patient presentations, and group discussions drawn from field study. Supervised clinical field study within selected primary care settings and weekly seminar discussions related to theory presented in NURS 510. Credit/no credit only. Prerequisite: permission of instructor; nurse practitioner students register for NURS 510 concurrently.

CHCS 560 Seminar in Primary Care V: Complex Clinical Decision Making (1-11, max. 11) Seminar with associated field study. Synthesis of advanced knowledge base and clinical family nurse practitioner skills with effective management of complex clinical problems. Credit/no credit only. Prerequisite: graduate standing and permission of instructor.

CHCS 561 Systems Analysis in Nursing Administration (3) Examines concepts and techniques in industrial engineering, system analysis, and operations research applicable to decision making, control and monitoring functions in nursing administration. Student demonstrates application and critical appraisal of concepts and techniques. Prerequisites: ADMIN 510, or equivalent, and permission of instrutor.

CHCS 562 Clinically Applied Anthropology (3) Anthropology as it relates to interdisciplinary delivery of culturally relevant health care. Cultural variation in illness beliefs and behavior, types of healing practices, illness prevention, social support networks. Prerequisites: graduate standing, permission of instructor. Offered: jointly with ANTH 562.

CHCS 570 Occupational Stress and Stress Management (3) Relationships between occupational stressors and worker's health, well-being, productivity. Analyzes models of occupational stress. Investigates similarities, differences between job-related stressors and stress responses in various occupations. Explores elements of worksite stress management programs. Prerequisites: graduate standing in nursing or allied health discipline; advanced undergraduates with permission of instructor. Offered: jointly with PSN 570.

CHCS 571 Seminar in Nursing and the Social Order (3, max. 9) Changing patterns of nursing service and education in contemporary society. Implications of personal value systems. Prerequisite: permission of instructor.

CHCS 574 Selected Topics in Comparative Nursing Care Systems (2 or 3, max. 10) In-depth examination of the literature pertinent to major theoretical issues in cross-cultural nursing and health-care systems. Seminar with analysis and discussion of selected topics and readings. Implications for research and health care stressed.

CHCS 575 Death Influence in Clinical Practice (2-4) Analysis and study of social, cultural, and psychological conditions that influence human death in modern society. Research findings, selected readings, and direct experience provide direction for examination of philosophic, theoretical, and pragmatic issues underlying choices and decisions in clinical practice. Open to graduate students with permission of instructor. (Limit: sixteen students.)

CHCS 578 Health, Care, and Community (3) Analysis of health care in community from nursing and behavioral science perspectives. Sociocultural influences on health beliefs and practices, natural-care units, and community life patterns analyzed. Community as both context and target of change explored in relation to nursing approaches in health promotion and maintenance. Prerequisite: graduate standing.

CHCS 580 Populations at Risk in the Community (3) Health needs and risks of selected populations in the community and theoretical and analytical perspectives on assessment and intervention strategies in community health nursing practice with groups and populations whose health is at risk. Prerequisites: graduate standing and permission of instructor.

CHCS 581 Seminar In Advanced Community Health Nursing (6) Construction and analysis of research questions, presentation of individual and community problems and intervention/evaluation strategies in community health nursing. Individual and community assessment and nursing strategies related to health promotion and prevention of illness. Field study in community health settings. Prerequisities: graduate standing and permission of instructor.

CHCS 583 Transcultural Nursing Practices (3) Study of nursing practices in different cultures. Seminar focus is on theoretical formulations and comparative analysis of values, patterns, techniques, and practices of nursing care in many societies. Rituals, myths, taboos, and beliefs are studied in relation to the subculture(s) of caring and nursing practices.

CHCS 600 Independent Study or Research (*) Credit/no credit only.

CHCS 700 Masters Thesis (*) Credit/no credit only.

Parent and Child Nursing

Courses for Graduates Only

PCN 501 Pediatric Health Assessment and Promotion (4) Gives experience in obtaining a health history and performing a physical assessment of infants, children, and adolescents. Interviewing techniques, problem-oriented charting, and a systems approach to the physical examination. Emphasis on screening principles, health promotion, and wellness care for children/families. Credit/no credit only. Prerequisite: permission of instructor.

PCN 504 Common Child Behavioral Problems, Part III (2-4, max. 4) Focuses on process of assessment, integration of research findings into clinical decision-making, and management of common pediatric behavioral and psychological problems. Includes concepts of prevention, self care, anticipatory guidance, and family involvement in formulation management strategies. Emphasizes relations between the medical and psychological aspects of pediatric illness in families.

PCN 505 Seminar: Counseling and Educational Approaches in Child Health Care (1/3) Focuses on theory, practice, and issues involved in conducting health-related groups. Special emphasis on counseling process. Alternative approaches to educating communities about health-care issues. Clinical experiences designed to assist students in developing and conducting health-related groups in various settings in the community. Prerequisite: permission of instructor.

PCN 508 Health Patterns Across the Lifespan (3) Conceptually oriented focus on health across the lifespan. Emphasizes issues central to the developing person; how transactions with environment influence personal growth. Patterns of health provide framework for integrating nursing concepts with selected theories of growth and development.

PCN 509 Women's Health: A Nursing Perspective (3) Critical analysis of contemporary and historical works relevant to nursing care for women across the life span. Synthesis of a holistic view of women's health to guide nursing practice and research. Prerequisite: graduate and senior undergraduate students.

PCN 511 Seminar in Neonatal Nursing (3) Neonatal neurobehavioral and physiologic adaptation within context of physical and social environment. Neonatal responses to alterations in growth and illness. Assessment modalities and therapeutic strategies used during the neonatal period. Prerequisite: 529 or permission of instructor.

PCN 512 Advanced Practicum in Parent and Child Nursing I (2-12, max. 25) Clinical seminar and practicum provide opportunities to develop advanced nursing practice competencies in the care of women, parents, children, and/or adolescents. Application of theory and principles to direct care, consultation, education and/or care coordinator roles with individuals and/or groups.

PCN 514 Coping Strategies of Well and Sick Children (3) Gaining knowledge and skill in helping well and sick children cope in supportive and nonsupportive environments. Fit between coping strategies and environment, adaptation to environment, adjustment of environment to child's needs. Prerequisite: course in growth and development or permission of instructor.

PCN 515 Wellness Care for Children and Their Families (1-5) Concepts and issues related to wellness, health maintenance, promotion and prevention of illness for well children and children with special needs. Models of wellness and intervention, appropriate nursing diagnoses, assessment, and intervention approaches for various areas of wellness (physical, social, emotional, and spiritual) and the nurse's role. Prerequisite: permission of instructor.

PCN 516 Nursing Management of Acutely III Children and Their Environments (1-5) Nursing management of children with acute illnesses. Scientific principles, theories, and research used in planning, implementing, and evaluating nursing care of children at different levels of acuity and their families. Prerequisites: permission of instructor.

PCN 517 Advanced Clinical Seminar in the Nursing of Children (2-6) Synthesis and evaluation of scientific principles and research findings for care collaboration with other health professionals. Development of specialist role. Social and environmental issues. Prerequisites: core courses, 516 or permission of instructor.

PCN 518 Pediatric Pulmonary Anatomy and Physiology: Clinical Applications (2) Lung development, anatomy, and physiology; clinical application when caring for children with acute and chronic lung disease. Prerequisite: permission of instructor.

PCN 519 Pediatric Pulmonary Nursing (2-5) Applies knowledge of pediatric anatomy and physiology to assessment and treatment of pulmonary pathophysiology in children. Nursing issues in caring for children and families with acute and chronic lung disease. Prerequisitie: permission of instructor.

PCN 520 Methods of Research in Nursing (3) Research process as it applies to nursing. Use of the literature in building theoretical rationale. Selection of appropriate methods. Presentation of findings. Minimum of two laboratory hours weekly. Prerequisite: course in statistics.

PCN 521 Methods of Research in Nursing (2) Continuation of 520, with emphasis on methods of research applied to the solution of problems in all fields of nursing.

PCN 528 Implications of Human Embryology and Genetics for Clinical Practice (3) Normal development of the human embryo and fetus and principles of human genetics. Alterations in development leading to common anomalies and implications for clinical practice. Prerequisite: graduate standing or permission of instructor.

PCN 529 Physiologic Adaptation in Women and Children (1-6) Analysis of developmental physiologic adaptations in four units: women/reproductive processes, pregnancy/postpartum, fetus/neonate, and infancy through adolescence. Emphasis on implications for nursing practice. Examination of research basis for selected intervention strategies.

PCN 530 Conceptual Frameworks for Parent-Child Nursing (3) Designed to assist graduate students in exploration, criticism, and analysis of selected concepts, frameworks, and models relevant to parentchild nursing practice. Group seminar work focuses on the discussion of issues influencing the roles and practice of clinical nurse specialists in parent-child nursing. Skills necessary for developing a conceptual framework for practice.

PCN 531 Nursing Process in Parent-Child Nursing (4) Includes lecture, seminar, and laboratory instruction designed to assist the student with knowledge and skill acquisition related to nursing care of individuals and families with regard to childbearing and childrearing. Prerequisite: 530.

PCN 532 Professional Issues in Advanced Parent and Child Nursing (2-5) History and current issues in advanced parent and child nursing practice and interface with health care systems. Advanced practice roles in provision, implementation, and evaluation of health care services for women, children, and families. Opportunity for application to specific advanced practice roles. Prerequisite: permission of instructor. PCN 535 Children with Chronic Health Conditions (1-5) Theory and research analyses of physical problems, biobehavioral responses and psychosocial hardships. Applications of interventions and case management strategies that prevent handicaps and maintain, promote or restore health of infants, children, and adolescents within a developmental, family, and community context. Required laboratory and optional clinical experiences. Prerequisite: permission of instructor.

PCN 536 Behavioral Change Strategies: Children and Their Families (3) Analysis of behavioral change paradigms that promote the child's and adolescent's health behaviors, self-control, and functional patterns within the context of the family, community, and physical environment. Treatment strategies based on the integration of behavioral, cognitive, operant, and social learning models. Prerequisite: permission of instructor.

PCN 537 Interpersonal Therapeutic Relationships and Processes: Children and Their Families (1-5) Analyze conceptual models and research on interpersonal relationships and processes for developing communication and partnerships among professionals and, between professionals and children/families. Individual and group therapeutic approaches that promote caring and enhance empowerment, interpersonal functioning, and health behaviors. Required helping skills laboratory, optional clinical experiences. Prerequisite: permission of instructor.

PCN 538 Family Adaptation During Childhood and Adolescence (3) Analysis of conceptual models and research in family support, stress, and functioning. Multidirectional influences and interactive patterns among the child, family, and community. Family as sessment, diagnosis and therapeutic intervention that promote family adaptation and reduce the associated hardships that may be handicapping. Prerequisite: permission of instructor.

PCN 540 Physical Therapeutics: School Age Children and Adolescents (2-6) Theory and research analysis of physical problems, biobehavioral responses, and psychosocial hardships. Adaptive physical and technological interventions that prevent handicaps and maintain, promote, or restore health of school-age children and adolescents within a developmental, family, institutional, and community context. Optional laboratory and clinical experiences. Prerequisite: permission of instructor.

Theoretical Foundations of Advanced Practice Nursing

PCN 541 Care of Well Women (4) Examines components the components of advanced nursing/midwifery care of well women. Emphasis on assessment, diagnosis, and management of common health issues and problems of women across the life span. Prerequisite: permission of instructor.

PCN 542 Care During Childbearing I (4) Advanced nursing/midwifery care and management of the lowrisk childbearing woman and fetus through preconception, prenatal, intrapartum, and postpartum periods. Prerequisite: 529.

PCN 543 Care During Childbearing II (4) Advanced nursing/midwifery care and management of childbearing women and fetus at risk for health problems throughout the prenatal, intrapartum, and post-partum periods. Primary management, collaborative management, and referral of at-risk clients. Prerequisites: 529 and 542 or permission of instructor.

PCN 544 Psychosocial Adaptations of Individuals and Families during the Perinatal Period (3) Adaptation of individuals and families during the perinatal period, with emphasis on psychosocial adaptation, consumer education, transition to parenthood, parentinfant interaction and community based support. Prerequisite: permission of instructor.

PCN 545 Care of the Neonate and Infant (2) Adaptation of neonate to the extrauterine environment and

continuum of care to promote the health of infants within the context of family, community, and other environments. Prerequisites: 528, 529, or permission of instructor.

PCN 573 Selected Topics in Parent and Child Nursing (1-6, max. 12) In-depth examination of the literature pertinent to major theoretical issues in parent and child nursing. Seminar with analysis and discussion of selected topics and readings. Implications for research, prevention, and health care stressed. Preregulsite: permission of instructor.

PCN 600 Independent Study or Research (*) Credit/no credit only.

PCN 700 Masters Thesis (*) Credit/no credit only.

Physiological Nursing

Courses for Undergraduates

PN 445 Topics in Physiological Nursing (1-10, max. 10) Guided survey and discussion of current literature on major topics in physiological nursing. Seminar/lecture with analysis and discussion of selected topics and readings. May have clinical component. Implications for nursing practice and health care emphasized. Prerequisites: nursing majors, permission of instructor.

PN 466 Continuing Education in Nursing (3) Planning, developing, and evaluating continuing education programs in various institutions and agencies. Includes the application of adult learning principles to a variety of situations, such as workshops, in-service and staff development programs. Prerequisite: graduate standing.

Courses for Graduates Only

PN 502 Human Responses in Health and illness I (3) Survey of selected human responses to environmental demands in health and illness as expressed at physiologic, pathophysiologic, experiential, and behavioral levels. Such concepts as host defenses, ventilation, circulation, elimination, and nutrition are discussed. Prerequisite: graduate standing.

PN 503 Human Responses in Health and Illness II (3) Survey of selected human responses to environmental demands in health and Illness at physiologic, pathophysiologic, experiential, and behavioral levels. Such concepts as immune response, stress response, circadian rhythms, pain, sleep, cognition, and consciousness. Prerequisite: graduate standing.

PN 504 Clinical Nursing Therapeutics (1-6, max. 6) Critical analysis of therapeutic modalities to assist patients with a variety of responses to health problems. Includes selected therapies such as suction/drainage, positioning to address responses in critical, life threatening, and chronic/continuing health states. Varying credits assigned for modules covering particular therapies. Prerequisites: 502, 503, or permission of instructor.

PN 509 Practice Teaching in Physiological Nursing (3) Guided experience in selected teachinglearning situations in nursing, in both classroom and clinical situations. Identification, analysis, and solution of teaching-learning problems in clinical nursing. Minimum of seven hours of guided experience weekly.

PN 510 Curriculum Development in Nursing Education (3) Theoretical rationale for curriculum development, study of curricular problems in nursing in relation to the elements of the curriculum as described in a curricular design. Prerequisite: graduate standing.

PN 511 Evaluation of Clinical Performance in Nursing (3) For graduate students preparing for faculty or staff development positions in nursing. Theory and principles of evaluation. Instruments to appraise clinical nursing performance developed as part of course requirements. Prerequisite: graduate standing or permission of instructor. PN 520 Methods of Research in Nursing (3) Research process as it applies to critique and conduct of nursing science. Use of the literature in building theoretical rationale. Selection of appropriate methods. Presentation of findings. Minimum of two laboratory hours weekly. Prerequisite: course in statistics.

PN 521 Methods of Research in Nursing (2) Continuation of 520, with emphasis on methods of research applied to the solution of problems in all fields of nursing.

PN 541 Cilnical Physiological Nursing Seminar I (1-10, max. 10) Guided experience in nursing practice with selected individuals in a specialized field of nursing. Synthesis and application of relevant principles and theories from biological, behavioral, and pathological sciences; proficiency in comprehensive nursing assessments, interventions, and evaluations; effective collaborative functioning as a member of the health team.

PN 542 Seminar in Cardiovascular Nursing (3) Systematic inquiry into the influence of physical and emotional factors on pathophysiology underlying selected cardiovascular conditions; group study of current therapies with emphasis on prevention and rehabilitation. Individual study of topic of interest.

PN 543 Seminar in Nursing in Gerontology (3) Gerontological research findings applied to complex nursing problems in maintenance of health and maximum functioning in the aged.

PN 544 Clinical Physiological Nursing Seminar II (1-10, max. 20) Continuation of 541. Guided experience in selected situations in area of clinical interest. Minimum of seven hours of guided experience weekly. Prerequisite: 541.

PN 545 Special Topics in Physiological Nursing (3-6, max. 9) Guided survey of the experimental literature of major topics in physiological nursing, including cardiopulmonary, biology of aging, neuromuscular, cancer, and endocrine. Course conducted as a seminar with analysis and discussion of selected topics and readings. Implications for future research and health care are emphasized.

PN 546 Rehabilitation Nursing Seminar I (3) Analysis of selected theoretical components underlying rehabilitation and utilization of scientific rationale in clinical nursing studies, with emphasis on prevention and maintenance.

PN 548 Management of Adults With Respiratory Dysfunction (3) In-depth examination of problems such as abnormal secretions and shortness of breath associated with respiratory dysfunction due to pulmonary diseases and other pathophysiological states.

PN 549 Seminar in Critical-Care Nursing (3, max.
 9) Systematic inquiry into pathophysiology, initial nursing management, and systems of care for the critically ill adult or child.

PN 550 Seminar in Neuroscience Nursing (3) Guided survey of clinical and experimental literatures regarding selected concepts of human functioning mediated by the nervous system: consciousness, mentation, movement, sensation, integrated regulation, coping with disability. Clinical and research measurement, current research and implications for further research, clinical applications.

PN 570 Seminar in Clinical Research in Nursing
(3) Philosophy, problems of design; use of criterion measures in terms of patient care.

PN 600 Independent Study or Research (*) Credit/ no credit only.

PN 700 Masters Thesis (*) Credit/no credit only.

Psychosocial Nursing

PSN 488 Effects of Alcohol and its Relation to Health and Disease (3) Intensive inquiry into the effects of alcohol on the total person, emphasizing physiological effects, utilizing case studies, research reports, and audiovisual materials. Focus on methods used in the assessment of patients, in patient management, and in evaluation of therapeutic intervention. Open to students in other disciplines. Prerequisite: permission of instructor.

PSN 489 Alcohol Problems in Family and Society (3) Analysis of family problems associated with alcoholism. Emphasis on psychological, cultural, and social implications; examination of various counseling practices employed and theories of prevention. Open to upper-division and graduate students. Prerequisite: permission of instructor.

UCONJ 490 Social Sensitivity in Health Care (3) For course description, see Interschool or Intercollege Programs.

Courses for Graduates Only

PSN 500 Theories in Interpersonal Systems in Psychosocial Nursing (3) Empirical and theoretical literature on etiology and treatment of chronic mental illness in a sociocultural framework. Social networks and personality development, adaptation to stress, and chronic mental illness. Implications for research and implementation of nursing intervention strategies and mental health programs.

PSN 501 Foundations in Psychosocial Nursing (3) Introduces students to Psychosocial Nursing by study of classic published papers. Current status of the specialty analyzed by review of standards of practice, certification criteria, and discussion of ethical, clinical, and educational issues. Examines visions and projected needs for the future.

PSN 503 Seminar in Psychosocial Family Theory (4) Examination of theories relevant to psychosocial family intervention into problems of children, adults, and the aged. Analysis of appropriateness of theories for nursing theory development, practice, and research.

PSN 504 Theories of Intervention and Process in Family and Child Treatment (3) Critical review of the family assessment and intervention process. Analysis of existing treatment methods regarding adaptation to psychosocial nursing practice. Prerequisite: 503.

PSN 505 Selected Topics in Psychosocial Nursing (2-10, max. 10) In-depth exploration of the major theoretical issues in psychosocial nursing. Seminar with analysis and discussion of selected topics and readings and implications for research and health care.

PSN 507 Behavior and Adaptation: Elder Adults (3) Theory and research of behavior and adaptation in elder adults. Functional impairments within personenvironment contexts. Intervention strategies based on psychodynamic, development, cognitive-behavioral, role theory, somatic, and self-help models. Prerequisite: permission of instructor.

PSN 509 Issues in Violence and Aggression for Health Professionals (3) Focuses on research and theory of violent/aggressive behavior. Perspectives of victim, offender, family, community, society examined. Focus is recognition of violence against women. Course is designed to challenge students to clarify betlefs, values related to topics such as rape, homicide, domestic violence. Prerequisite: graduate nursing student or permission of instructor.

PSN 510 Group Work with High-Risk Youth (3-6) Theory and application course in group counseling for high-risk youth. Central theme is group leader effectiveness in helping young people increase school performance, decrease drug involvement, and increase emotional well-being. Open to graduate students in nursing, education, and related human services professions.

PSN 511 Psychosocial Approaches to Assessment and Management of Paln (3) Critically analyzes and integrates psychological and sociocultural models

of acute and chronic pain. Commonly employed psychosocial pain assessment protocols and treatment modalities reviewed and evaluated. Non-pharmacologica and non-invasive therapies evaluated for efficacy in treating pain. Prerequisite: advanced undergraduate or graduate studies in nursing, psychology, dentistry, medicine, or allied health professions.

PSN 513 Seminar in Group Treatment (3) Seminar on the theoretical basis for working with various treatment groups. Analysis of selected approaches to group treatment. Analysis of leader responsibilities and functions in the development of therapeutic group experiences.

PSN 515 Memory Theory and Implications for Health Care (3) Presents comparative analysis of research, theories of memory and their physiological basis. Means of measuring memory are critically evaluated. Current clinical problems and the therapeutic and care interventions using memory theory and rehabilitation are evaluated. Prerequisite: graduate or advanced undergraduate standing, or GNM or NM standing with permission of instructor.

PSN 516 People of Color, Psychosocial Health, and the Culture of Oppression (3) Explores relationships among the psychosocial health of people of color, American cultural patterns of intersecting forms of oppression (e.g., gender, race, and class) and the role of health professionals in defining, ameliorating and/or aggravating psychosocial distress. Prerequisite: experience with mental health professionals and ethnic identities among various people of color.

PSN 520 Methods of Research in Nursing (3) Research process as it applies to nursing. Use of the literature in building theoretical rationale. Selection of appropriate methods. Presentation of findings. Minimum of two laboratory hours weekly. Prerequisite: course in statistics.

PSN 521 Methods of Research in Nursing (2) Continuation of 520, with emphasis on methods of research applied to the solution of problems in all fields of nursing.

PSN 526 Program Planning and Program Evaluation in Health Service Delivery (3) Analysis of selected theories and methods of program planning and program evaluation in the design, organization, and development of health services for defined populations in the community. Prerequisite: graduate standing or permission of instructor.

PSN 528 Field Study in Evaluative Analysis for Health Care Programs (3, max. 6) Field study in evaluation. Experiences include preevaluation studies; consultation with community members and agency personnel to operationalize health-care program objectives in terms of goals; construction of evaluation protocols; and assessment of program functioning. Credit/no credit only. Prerequisite: 526.

PSN 529 Practicum in Group Treatment (2-6) Supervised experience working as primary therapist or co-therapist in a group. Opportunity is provided to practice selected therapeutic techniques in therapy groups. Supervision is provided by nursing faculty member. Credit/no credit only. Prerequisites: 513 or equivalent, which may be taken concurrently, and permission of departmental adviser.

PSN 550 Interpersonal Aspects of Behavior (3) Selected theories in relation to psychosocial development and adaptation across life span for individuals, families, and small groups and as explanatory models of major psychosocial disabilities. General and psychosocial nursing models evaluated for heuristic value for research and practice. Prerequisite: graduate standing or permission of instructor.

PSN 551 Biologic Aspects of Psychosocial Disabilities (3) Analysis of biological processes influencing psychosocial behavior in response to internal and external stimuli. Research and theory of neuroendocrine mechanisms in psychosocial disabilities. Analysis of nursing management and evaluation of biopsychosocial modalities used in modification of behavior. Prerequisite: graduate standing in nursing or permission of instructor.

PSN 552 Socioecological Dimensions of Community Mental Health (3) Socioecological and sociocultural theories of mental health disablements analyzed Conceptual trends and intervention strategies evaluated with community and client-centered emphasis on mental health service delivery to high-risk and underserved populations, including the moderately and severely mentally disabled. Prerequisite: graduate standing in nursing or permission of instructor.

PSN 553 Assessment in Psychosocial Nursing (3) Concepts, methods, and clinical approaches to psychosocial nursing assessment. Basic principles of measurement as they apply to psychosocial nursing assessment diagnosis and intervention. Knowledge synthesized from psychosocial nursing and allied disciplines tested. Clinical assessment laboratory included. Prerequisite: graduate standing in nursing or permission of instructor.

PSN 554 Psychosocial Interventions in Nursing (3) Conceptual foundations and interpersonal skills for interventions to promote personal change. Application made to nursing care of persons with psychosocial or physical health problems. Lecture-discussion and inclass practice. Prerequisites: graduate standing in nursing or permission of instructor.

PSN 555 Advanced Clinical Therapeutics Seminar (4) Opportunities to test and evaluate selected theories presented in 554. Faculty and preceptor supervision in clinical agencies guide students' therapeutic skills in working with individuals, groups, and families. Collaborative interactions with interdisciplinary team members. Prerequisite: concurrent registration in 554, or permission of instructor.

PSN 556 Theories of Substance Use Disorders: Psychosocial and Biological Aspects (3) Psychosocial and pathophysiological aspects of substance use examined for their effects on individuals and families throughout life span. Theories and empirical findings serve as basis for evaluating preventive and therapeutic nursing approaches to substance use disorders, including those related to target populations. Prerequisite: basic course in biological sciences.

PSN 557 Clinical Seminar In Substance Use Disorders I (3-6) Treatment of individuals and families with substance use-related disorders. Students function as primary or co-therapists in application and evaluation of selected therapeutic interventions. Weekly seminars analyze student/client interactions. Credit/no credit only. Prerequisite: prior or concurrent registration in 556.

PSN 558 Advanced Clinical Seminar in Substance Use Disorders II (3-6) Practicum with opportunities for advancement of skills in therapeutic interventions and involvement in community-linked substance-use-disorder issues. Students engage in therapeutic interventions, coordinate community health-care resources, and design a prevention program for target populations within context of regional laws and policies. Credit/no credit only. Prerequisite: 557.

PSN 559 Theories of Psychiatric Disabilities (3) Theories from psychosocial nursing, psychiatry, and behavioral sciences explanatory of psychiatric disabilities provide basis for identifying psychosocial problems and developing nursing diagnoses. Structure and functions of mental health organizations and social networks analyzed for more effective system management by nurses. Prerequisites: 500 and 551 or permission of instructor. PSN 560 Clinical Seminar in Psychiatric Disabilities I: Community (3-6) Supervised psychosocial nursing experience with clients in psychiatric treatment programs. Treatment settings, such as community mental health centers, partial hospitalization, and congregate care facilities viewed as social systems. Weekly seminars provide analysis of client/student interaction. Credit/no credit only. Prerequisite: prior or concurrent registration in 559, or permission of instructor.

PSN 561 Advanced Cilnical Seminar in Psychiatric Disabilities II: Institutions (3-6) Mental hospital and psychiatric unit viewed as social systems. Clinical practice in institutional setting focuses on planning, evaluating psychosocial nursing care programs. Effects of organizational dynamics on client populations analyzed, intervention theories tested. Analyzes client/ student interaction. Credit/no credit only. Prerequisite: prior or concurrent registration in 559, or permission of instructor.

PSN 562 Theoretical Basis of Management of Stress Response (3) Theories of physiologic responses linked to theories of cognitive/affective and behavioral responses to stressors. Conceptual basis of self-management techniques. Research findings relevant to these theories and techniques examined and analyzed. Prerequisites: course in human physiology or physiologic psychology, permission of instructor.

PSN 563 Clinical Seminar in Management of Stress' Response I (3-6) Theory and application of self-management training for dysfunctional stress responses. Demonstration/training in relaxation, biofeedback instrumentation, and supervision of self-management program conducted by students. Credit/no credit only. Prerequisites: 562, human physiology course.

PSN 564 Advanced Clinical Seminar in Management of Stress Response II (3-6) Supervised field experience in self-management techniques for clients with dysfunctional stress responses such as headache and hypertension. Supervised clinical application of biofeedback and stress counseling for selected psychophysiologic disorders. Prerequisite: 563 or permission of instructor.

PSN 565 Self-Management Strategies and Techniques in Patient Care (3) Theories underlying cognitive/behavioral self-management strategies and techniques in patient care. Evaluation of the clinical appropriateness and utility for nursing. Application to such clinical problems as abstinence in the recovering alcoholic, depression, and eating disorders. Prerequisite: graduate standing or permission of faculty.

PSN 569 Consultation in Human Service Systems (3) Exploration of theoretical perspectives and concepts relevant to consultation in human service systems. Models for intervention evaluated. Students design consultation projects, implementation determined through negotiation with faculty and agency representatives. Prerequisites: fourth-quarter placement or faculty permission; access to consultee system.

PSN 570 Occupational Stress and Stress Management (3) Relationships between occupational stressors and worker's health, well-being, productivity. Analyzes models of occupational stress. Investigates similarities, differences between job-related stressors and stress responses in various occupations. Explores elements of worksite stress management programs. Prerequisites: graduate standing in nursing or allied health discipline; advanced undergraduates with permission of instructor. Offered: jointly with CHCS 570.

PSN 600 Independent Study or Research (*) Credit/no credit only.

PSN 700 Masters Thesis (*) Credit/no credit only.

COLLEGE OF OCEAN AND FISHERY SCIENCES / FISHERIES 415

College of Ocean and Fishery Sciences

Dean

G. Ross Heath 557 Henderson

Associate Dean

Loveday L. Conquest

The marine environment has been a dominant factor in the history of the Pacific Northwest from the time of the first Indian settlements to the modern day of container ships and waterfront condominiums. It is not surprising, therefore, that the University has a long tradition of commitment to teaching; research, and public service in the marine and freshwater area.

The College of Ocean and Fishery Sciences, the newest college at the University, comprises five major units in the marine and freshwater sciences. Established in September 1981, the College consists of the Applied Physics Laboratory, and the Schools of Fisheries, Marine Affairs, and Oceanography. It also administers the Office of Marine Environmental and Resource Programs, which includes the Washington Sea Grant Program.

The College offers both undergraduate and graduate instructional programs; its faculty, staff, and students carry cut research in oceans and freshwater lakes and rivers all over the world. Facilities range from oceangoing vessels to well-equipped laboratories and class-rooms.

Each of the units in the College focuses on a different aspect of the aquatic environment, but much overlap exists. Established in 1919, the School of Fisheries carries out research and teaching on the conservation, management, and utilization of living aquatic resources. It is concerned with marine, estuarine, and freshwater species and with understanding, protecting, and restoring their habitats. The school is also concerned with the biology and ecology of aquatic animals, with the management of free-ranging stocks, with the production of fish and shellfish through aquaculture, and with the safety and quality of the nation's seafood products. The school offers both undergraduate and graduate degrees.

Established in 1930, the School of Oceanography carries out research and teaching on the physical, chemical, and biological processes in the ocean and on the interactions of the ocean with the earth, the biosphere, and the atmosphere. It is concerned with the study of seawater in motion, life in the sea, the chemical composition and properties of seawater, the sediments and rocks beneath the sea, and the geophysics of the seafloor. It offers both undergraduate and graduate degrees.

Established in 1943, the Applied Physics Laboratory is a research and development unit with programs in ocean sciences, engineering, acoustic sensors, sound propagation, marine and geophysical instrumentation, and polar science and technology. No degrees are offered, but special short courses and seminars are taught and graduate student support is available at research facilities.

Established in 1972, the School of Marine Affairs is interested in policy and institutional problems of the ocean. It combines natural sciences and engineering with law, economics, international affairs, and public administration. The school's teaching and research programs include marine affairs, coastal zone management, ports and marine transportation, atmospheric and marine policy, living marine resources, and international law of the sea. The Master of Marine Affairs degree is offered.

Also part of the College is the Office of Marine Environmental and Resource Programs (OMERP), which manages the Washington Sea Grant Program and related activities. The Washington Sea Grant Program was established by Congress in 1969 to enhance the conservation and use of the nation's marine resources through coordinated efforts in education, training, research, development, and outreach, and technology transfer. Although the Sea Grant program does not offer degrees, it presents workshops, short courses lectures, and publications, and supports extensive research and outreach activities. A number of state and federal initiatives are also managed by OMERP.

One of the major achievements in this area was the designation of the University in 1971 by the U.S. Secretary of Commerce as a Sea Grant College. Along with the University of Rhode Island, Texas A&M University, and Oregon State University, the University of Washington was one of the first four universities so designated in recognition of outstanding sustained programs in research, education, and advisory services in the marine area.

In 1993, the College had a total of 167 undergraduate and 280 graduate students enrolled, a faculty of 158 members, and a total budget of \$52 million, making it one of the largest institutions of its kind in the nation.

Office of Student Services

Through the Office of Student Services, the College of Ocean and Fishery Sciences offers learning experiences to complement traditional course work, by assisting students in obtaining internships, cooperative education work experience, and permanent employment. Students are encouraged to participate in field placements that provide valuable practical experience to bridge the transition from the classroom and the laboratory to employment after graduation.

Local and national job listings and a career information library are continually updated in the Career Center. The director of student services is available to work with students and alumni in career development, including job search strategies, such as writing of resumes, design of cover letters, and interviewing skills.

Additional information may be obtained from Pat Caver, Director, Office of Student Services, 561 Henderson.

Fisheries

204 Fisheries Center

The School of Fisheries, which was established in 1919, offers courses and conducts research on the conservation, management, and effective use of fish and shelifish resources. Education and research in the School include studies of aquatic ecology; population dynamics; management of free-ranging stocks; hatchery-based propagation of marine and freshwater organisms; seafood products; effects of human activities on aquatic/marine ecosystems. Faculty and students in the School draw upon the disciplines of zoology, biology, botany, statistics, chemistry, physics, and mathematics to conduct basic and applied research in the field of fishery science. Joint programs are maintained with the College of Forest Resources, the School of Marine Affairs, the Institute of Environmental Studies, the School of Oceanography, the School of Medicine, and the departments of Zoology, Genetics, Pathology, Biostatistics, Applied Mathematics, Civil Engineering, Environmental Health, and Nutritional Sciences.

Courses -

A full spectrum of undergraduate- and graduate-level courses allows students to learn basic principles of fishery science and to develop expertise in specialized fields such as quantitative fishery management, enhancement and commercial aquaculture, seafood technology, and aquatic ecology. Among the wide variety of courses open to students are the following: ichthyology, world fisheries and aquaculture, salmonid behavior and life history, fisheries stock assessment, ecology of marine fishes, genetics in fish management and production, physiological effects of water pollutants, and food engineering.

Summer quarter instruction is offered both on the main campus and at the Friday Harbor Laboratories on San Juan Island.

Advising

The Student Services Office is located in 211 Fisheries Center. The office is staffed by academic counselors who are available to assist students with curriculum, course scheduling, and graduation requirements. Faculty advisers are also available to all students.

Interdisciplinary Programs

Center for Quantitative Science in Forestry, Fisheries, and Wildlife: The center is an intercollege academic unit sponsored by the College of Forest Resources and the School of Fisheries. The center offers a comprehensive program of study in mathematics and statistical methods applied to problems in ecology and natural resources management. The faculty of the center are drawn from the College of Forest Resources or the School of Fisheries, and most hold adjunct appointments in the Department of Biostatistics.

Joint Curriculum in Fishery Management: The School of Fisheries and the School of Marine Affairs offer a joint curriculum in fishery management, consisting of parallel two-year master's programs. The curriculum is designed to provide professional fisheries managers with the skills needed to participate effectively in contemporary fishery management. These skills require a multidisciplinary education in biology, economics, quantitative methods, law, policy analysis, and political science. Students may enter the fisheries management master's program through either the School of Fisheries or the School of Marine Affairs and must meet the thesis and other requirements of their School.

Research

The faculty, staff, and students of the School of Fisheries conduct basic and applied research on regional, national, and international fishery problems. Examples of research projects include the following:

In the field of fisheries management-development of strategies for enhancing inland recreational fishing, reduction of by-catch in the North Pacific through improvements in fishing gear design, influence of physical oceanographic factors on recruitment of larval fish and shellfish. In the field of aquaculture-identification of hormone receptors involved in reproduction and smoltification, development of DNA probes for rapid identification of pathogens, manipulation of chromosome complement to select for desirable traits in cultured fish and shellfish. In the fields of evolutionary biology and ecology-application of polymerase chain reaction to the study of taxonomy, behavioral studies of homing and straying in Pacific salmon, analysis of energy flow in Pacific Northwest estuaries. In the field of habitat protection-contaminant transport through aquatic food chains, effects of forest practices on fish habitat, development of mitigation measures for restoring damaged wetlands. In the field of resource utilization-determination of fat content in edible fish tissue using non-invasive technology, development of tech-

416 COLLEGE OF OCEAN AND FISHERY SCIENCES / FISHERIES

niques for tracing sources of contamination in shellfish beds, techniques to enhance the nutritional value of seafood products.

Researchers in the School of Fisheries collaborate with scientists within the University and with investigators employed by other agencies. The School benefits from the presence in Seattle of laboratories of the National Marine Fisheries Service, the U.S. Fish and Wildlife Service, and the Washington State Department of Fish and Wildlife. The headquarters and research staff of the International Pacific Halibut Commission are located on the campus as well. In addition, researchers collaborate with the scientific staff of private companies located in the Puget Sound region. School of Fisheries researchers frequently participate in interinstitutional projects that involve scientists from other states and from other countries.

The research program is enhanced through the activities of several institutes and centers that are housed within the School of Fisheries.

The Fisheries Research Institute coordinates research throughout the School. Long-term projects include research on the origins, abundance, migratory patterns, and ocean distribution of Pacific salmon and steelhead trout; spawning distribution, growth, and abundance of sockeye salmon in Alaska's Bristol Bay; environmental (physical and biological) factors influencing salmonid productivity.

The Institute for Food Science and Technology conducts research on seafood composition, safety, processing, nutrition, and related food science topics.

The Washington Cooperative Fish and Wildlife Research Unit is supported by the U.S. Department of Interior through the National Biological Survey and the Wildlife Management Institute, and by the Washington State Departments of Ecology, Natural Resources, and Fish and Wildlife. The unit conducts research related to inland fisheries management and to wildlife conservation.

The Center for Streamside Studies is an interdisciplinary unit of the College of Forest Resources and the School of Fisheries. The center conducts research related to management issues that surround the production and protection of forest, fish, wildlife, and water resources associated with streams and rivers in the Pacific Northwest.

The Western Regional Aquaculture Consortium is one of five regional aquaculture centers supported by the U.S. Department of Agriculture. Participating scientists from twelve Western states conduct research that is directed toward enhancement of commercial aquaculture production.

Facilities and Services

The Fisheries Center, the Fisheries Teaching and Research Building, and the Marine Studies Building are located adjacent to the Lake Washington Ship Canal. The buildings contain classrooms, laboratories, and support facilities. The Fisheries-Oceanography Library, a branch library offering research materials in fisheries, food science, oceanography, and wildlife science, is located in the Oceanography Teaching Building nearby. The collections of fishes and invertebrates now total some 225,000 specimens, representing more than 3,200 species in 237 families.

An annual run of several thousand salmon has been developed and is maintained at the School by the release of thousands of fingerlings each spring. Returning adults utilize a fish ladder to enter the School's experimental fish hatchery. The run is the basis for both instruction and research on the life cycle of Pacific salmon. A secondary hatchery at Seward Park allows for additional projects, such as a newly developing sportfish propagation program.

The Marine Molecular Biology Laboratory is jointly operated by the Schools of Fisheries and Oceanography. State of the art equipment is available for automatic sequencing of DNA as well as other techniques.

Other laboratories provide for the study of the physiology, biochemistry, and behavior of fish and of the effects of pollutants on fish. Physiological facilities include equipment for surgical procedures and biochemical analysis of body fluids and tissues from both freshwater and marine fish.

The School of Fisheries maintains an extensive library of computer programs for processing biological data. The Fisheries Analysis Center provides service in programming, data entry, and assistance with the use of the computer; the School maintains video display terminals to provide ready access to the larger computers of University Computing Services and has an array of microcomputers for instructional and research use.

The School uses various small vessels for instructional and research work, including tow netting, purse seining, and trawling. These vessels are used in regular courses or training cruises to introduce students to shipboard operations.

Fisheries field stations in Alaska and at Big Beef Creek on Hood Canal provide additional opportunities for field studies and research in stream and estuarine ecology.

Seafood research facilities, located in the Marine Studies Building, include well-equipped laboratories for microbiology, biochemistry, and analysis. The seafood-processing and -engineering laboratory pilot plant complex comprises several facilities containing equipment for teaching and experimental work in applied areas of unit operations and processing.

Fisheries Club

Students formed the Fisheries Club in 1922. Since its beginning, the club has been a center of extracurricular social and educational activities.

Food Science Club

This club promotes interest in food science and seafood technology. It works closely with the Puget Sound section of the Institute of Food Technologists.

Financial Aid

The School offers limited financial assistance to undergraduates and graduates through scholarships. The Handbook of Scholarships, available from the Office of Student Financial Aid, 105 Schmitz, lists other available scholarships.

Employment

The College of Ocean and Fishery Sciences' Office of Student Services maintains a file of permanent and temporary job opportunities for its'students. Both summer and part-time employment during the scholastic year are frequently available with the research organizations that are associated with the School of Fisherles on or near the campus and elsewhere in the Pacific Northwest. The Fisheries Research Institute normally hires some students for summer work in the field and usually has several part-time positions available during the school year.

Students receiving degrees in fisheries find employment in varied fields. Some graduates pursue careers in resource management agencies such as the National Marine Fisheries Service, the U.S. Fish and Wildlife Service, the Northwest Indian Fish Commission, and state departments of fisheries or wildlife. Some work for enforcement agencies such as the U.S. Environmental Protection Agency, the U.S. Food and Drug Administration, or state or local departments of environmental quality. Many graduates find employment in the private sector, working for aquaculture companies, the seafood industry, the recreational fishing industry, and environmental consulting firms. Employment in international projects is available through organizations such as the Peace Corps, the United Nations Food and Agriculture Organization, the Agency for International Development, the World Bank, and private industry. Positions in academic institutions are open to students completing advanced degree programs.

Undergraduate Program

The School offers the Bachelor of Science in Fisheries degree.

High School Preparation

Students are urged to take four years of college preparatory mathematics (usually including precalculus or mathematical analysis), because these are prerequisites for the mathematics courses included in all School of Fisheries curricula. Taking high school courses in chemistry, physics, and biology and training in computer use will prove to be valuable to the fisheries student.

Admission as a Fisheries Major

Students who wish to major in fisheries must be students in good standing in the University and must declare a major following University-wide guidelines.

After notification of admission and before registration, new students should visit or write to the School of Fisheries for help in planning their course programs. Academic and other counseling of fisheries students is provided through the Office of Student Services.

Bachelor of Science in Fisheries

The baccalaureate degree requires completion of a core curriculum and no fewer than 40 credits in fisheries. The program includes the subjects listed below or their equivalents. Each student must meet the general University requirements for graduation.

The Natural World: (minimum of 46 credits) General Biology—BIOL 201 (5), 202 (5), 203 (5) or BIOL 101-102 (5-5). Inorganic Chemistry—CHEM 140 (4), 141 (1), 150 (4), 160 (4). Organic Chemistry—CHEM 102 (5). General Physics—PHYS 114 (4), 115 (4). Oceanography—OCEAN 200 (3). Genetics—GENET 371 (5). Ecology—BIOL 472 (4).

Mathematics and Statistics: (minimum of 13 credits beyond MATH 120) Mathematics—Q SCI 291 (4), 292 (4) or MATH 124 (5), 125 (5). Statistics—Q SCI 381 (5).

Individuals & Societies and Visual, Literary, & Performing Arts: Minimum 10 credits in each area.

Writing Proficiency: (minimum of 12 credits) 5 credits of composition drawn from the University list, and at least 7 additional credits of writing-intensive courses.

Fishery Sciences: (30 credits required courses, plus a minimum of 15 credits in 400-level fisheries courses, and 3 credits in FISH 498, 499, or FD SC 498) FISH 210 (5), 310 (5), 311 (5), 312 (4), 323 (3), 324 (4), 325 (4).

Additional elective courses should be taken to bring the total to 180 credits. Assistance in selection of elective courses can be obtained from advisers in the School. Students wishing to specialize in aquaculture, environmental science, seafood science, or fishery management may obtain flyers listing recommended courses in 213 Fisheries Center.

Minors

Minor Requirements—Fisheries Science: Minimum of 27-28 credits to include FISH 310 (5 credits) or 311 (5); FISH 312 (4); FISH 323 (3) or 324 (4) or 325 (4); Q SCI 381 (5) or 482 (5); 10 additional credits of fisheries courses at the 400 level.

Minor Requirements—Food Science/Seafood Science: Minimum 31 credits to include FISH 324 (4 credits), 452 (4), 470 (5), 480 (5), 490 (5); ENVH 441 (3); MICRO 301 (3), 302 (2).

Graduate Program

Thomas Quinn Graduate Program Coordinator

The School offers programs leading to the Master of Science and Doctor of Philosophy degrees.

Admission Requirements

Basic requirements for admission to the graduate program in the School of Fisheries are a bachelor's degree from an institution of recognized standing, a GPA of 3.00 in the last two years of college work and approval of the School of Fisheries and the Graduate School. Students enter the School from varied disciplines at many universities. All have in common a strong background in the sciences and mathematics. Previous training in fisheries is not required.

Applicants for the graduate program must submit a completed application form and description of their interests and objectives, GRE scores (general portion only is required), transcripts of all previous college course work, three letters of recommendation, and a TOEFL score (only for applicants who are non-native English speakers). Applications must be submitted prior to December 31. Admissions are limited to autumn quarter. Final acceptance is contingent on matching each incoming student with a faculty member having space and similar research interests. Applications may contact the School of Fisheries Office of Student Services for complete application materials, including a list of faculty and their research interests.

Master of Science Degree

Any graduate student without a previous master's degree from a recognized school is expected to start at the master's degree level. At least one year of study, with completion of a thesis project, leads to the Master of Science degree. A minimum of 45 senior or graduate credits must be earned including 18 credits of thesis research. Students must take 15 credit hours of specified courses (the graduate core curriculum). A seminar on the results of the thesis research and an oral defense of the thesis are required for graduation. There is no foreign language requirement for the master's degree. Further details can be obtained from the School's Office of Student Services.

Doctor of Philosophy Degree

The student must complete at least three years of graduate study and complete a dissertation to earn the Ph.D. Certain credits earned in conjunction with a master's degree program may be applied toward the doctoral program. The same graduate core curriculum as required for the master's degree must be completed unless the student has already taken these same courses at the School of Fisheries or their equivalent. One academic year of foreign language with passing grades or equivalent competency is required. Students must pass written and oral General Examinations during their second year of residency. Presentation and defense of a dissertation proposal is normally a part of the oral examination. Further details can be obtained from the School's Office of Student Services.

Financial Aid

General information on graduate student support is available from the Office of Student Financial Aid, 105 Schmitz. Scholarships, fellowships, and teaching and research assistantships are available from a wide variety of sources for qualified graduate students. Most student support comes from research grants and contracts under the direction of individual professors. Graduate applicants are, therefore, urged to discuss their financial needs with professors in their potential major fields and with the graduate program coordinator during the early stages of the graduate application process.

Correspondence and Information

A package of materials describing courses, listing more specific procedures for applying for graduate admission, and giving details of faculty research and activities is available from the Graduate Program Assistant, 213 Fisheries, WH-10; (206) 543-7457.

Faculty

Director

Marsha L. Landolt

Professors

Armstrong, David A. * 1978; PhD, 1978, University of California (Davis); shellfish physiology.

Bare, B. Bruce * 1969, (Adjunct); PhD, 1969, Purdue University; harvest scheduling, biometry, forest land management, taxation, finance, management science.

Bell, Milo C. 1953, (Emeritus); BS, 1930, University of Washington; hydrology and fish guidance.

Bevan, Donald E. * 1947, (Emeritus); PhD, 1959, University of Washington; biometrics.

Brown, George W. * 1967, (Emeritus); PhD, 1955, University of California (Berkeley); fish biochemistry and biochemical ecology.

Burgner, Robert L. * 1949, (Emeritus); PhD, 1958, University of Washington; salmon ecology and salmon biology.

Chapman, Douglas G. * 1949, (Emeritus); PhD, 1949, University of California (Berkeley); population dynamics and enumeration.

Chew, Kenneth K. * 1955; PhD, 1962, University of Washington; shellfish biology and aquaculture.

Dickhoff, Walton W. * 1977; PhD, 1976, University of California (Berkeley); fish physiology, endocrinology, aquaculture.

Donaldson, Lauren R. 1932, (Emeritus); PhD, 1939, University of Washington; freshwater fish biology.

Erickson, Albert W. * 1974, (Emeritus); PhD, 1964, Michigan State University; wildlife biology and marine mammals.

Francis, Robert C. * 1983; PhD, 1970, University of Washington; biological production of commercially Important marine fishes, fisheries management.

Gallucci, Vincent * 1976; PhD, 1971, North Carolina State University; biomathematics and population dynamics.

Halver, John E. * 1949, (Emeritus); PhD, 1953, University of Washington; nutrition, biochemistry, toxicology.

Hershberger, William K. * 1978; PhD, 1968, Pennsylvania State University; fish genetics.

Hilborn, Ray ⁴ 1987; PhD, 1974, University of British Columbia (Canada); population dynamics and resource policy.

Karr, James * 1991, (Adjunct); PhD, 1970, University of Illinois; ecology and conservation biology, water resources, environmental sciences, natural resources.

Kocan, Richard M. * 1978; PhD, 1967, Michigan State University; aquatic toxicology.

Landolt, Marsha L. * 1975; PhD, 1976, George Washington University, fish and shellfish disease.

Liston, John * 1957, (Emeritus); PhD, 1955, University of Aberdeen (UK); food science, marine microbiology.

Mathews, Stephen B. * 1972; PhD, 1967, University of Washington; quantitative fishery management.

Miller, Bruce S. * 1971; PhD, 1969, University of Washington; life history and ecology of marine fishes. Miller, Marc * 1979, (Adjunct); PhD, 1974, University of California (Irvine); maritime anthropology, cognitive anthropology and social/cultural change.

Naiman, Robert J. * 1988; PhD, 1974, Arizona State University; forest stream ecosystems, aquatic landscape dynamics.

Nakatani, Roy E. * 1970, (Emeritus); PhD, 1960, University of Washington; water pollution, ecology.

Pietsch, Theodore W. * 1978; PhD, 1973, University of Southern California; ichthyology.

Pigott, George M. * 1965; PhD, 1963, University of Washington; food engineering.

Plisetskaya, Erika * 1980, (Research); PhD, 1958, Academy of Sciences (USSR).

Rogers, Donald E. * 1959, (Research); PhD, 1967, University of Washington; sockeye salmon research.

Royce, William F. 1983, (Emeritus); PhD, 1943; Cornell University; applications of fisheries science.

Seymour, Allyn H. 1945, (Emeritus); PhD, 1956, University of Washington; radioecology.

Smith, Lynwood S. * 1965, (Emeritus); PhD, 1962, University of Washington; fish physiology.

Stickney, Robert R. * 1985; PhD, 1971, Florida State University.

Swartzman, Gordon Leni * 1973, (Research); PhD, 1969, University of Michigan.

Taub, Frieda B. * 1959; PhD, 1959, Rutgers University; ecology.

Wissmar, Robert C. * 1972; PhD, 1972, University of Idaho; ecology.

Wooster, Warren S. * 1976, (Emeritus); PhD, 1953, University of California (San Diego); effects of climate change on marine ecosystems, use of scientific information in marine management.

Associate Professors

Anderson, James J. * 1969; PhD, 1977, University of Washington; fisheries and oceanography.

Conquest, Loveday L. * 1976; PhD, 1975, University of Washington; biological applications and statistics.

Dong, Faye L. * 1982; PhD, 1976, University of California (Davis); nutritional evaluation of foods, food irradiation, and nutrient bioavailability.

Grue, Christian E. * 1989; PhD, 1977, Texas A&M University; wildlife toxicology, wildlife and fisheries science.

Gunderson, Donald R. * 1978; PhD, 1976, University of Washington; marine fisheries and stock assessment.

Huppert, Daniel D. * 1987, (Adjunct); PhD, 1975, University of Washington; economics and management of natural resources, especially marine fisheries.

Leschine, Thomas M. * 1983, (Adjunct); PhD, 1975, University of Pittsburgh; marine pollution management, ocean policy studies.

Nevissi, Ahmad * 1973, (Adjunct Research); PhD, 1973, University of Arkansas; radiochemistry.

Pauley, Gilbert B. * 1982; PhD, 1971, University of California (Irvine); fish immunology, recreational fisheries.

Pikitch, Ellen * 1987; PhD, 1983, Indiana University; marine fisheries population dynamics, assessment and management.

Quinn, Thomas P. * 1986; PhD, 1981, University of Washington; fish behavior.

Rasco, Barbara A. * 1984; PhD, 1983, University of Massachusetts.

Sibley, Thomas H. * 1978; PhD, 1976, University of California (Davis); trace pollutants.

Skalski, John R. * 1987; PhD, 1985, Cornell University; environmental sampling and effects assessment on wild populations, parameter estimation.

Van Blaricom, Glenn R. * 1993; PhD, 1978, University of California (San Diego); aquatic wildlife, ecology of marine communities, wildlife-fisheries interactions.

Assistant Professors

Bentzen, Paul * 1993; PhD, 1989, McGill University (Canada); molecular population/evolution genetics of fishes and other aquatic organisms.

Foote, Christopher * 1991; PhD, 1988, University of British Columbia (Canada); behavioral ecology, population genetics and evolutionary biology of fishes.

Senior Lecturer

Johnson, Frederick G. 1987; PhD, 1979, University of Washington; marine biology, environmental impact.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

Fisheries

FISH 100 Introduction to Careers in the Marine Sciences (1) Presentations by various faculty and staff members, students and recent graduates offer an introduction to the College of Ocean and Fishery Sciences, curricular options, and professional opportunities in the marine sciences. Credit/no credit only. Limited to freshmen, sophomores or transfer juniors. Offered: jointly with OCEAN 100.

FISH 101 Introduction to Fisheries Science (5) NW Identification, distribution, and life histories of selected fish and shellfish; commercial and recreational fishing; utilization of fisheries products; problems faced in fisheries conservation and management.

FISH 210 Fisheries Techniquea (5) NW Theory and techniques of field research in fisheries; practical sampling design, collection, and interpretation of data from river, lake, and marine environments. Field trips and laboratory demonstrations. Offered: A.

FISH 310 Biology of Shelifish (5) NW Commercially important mollusca and crustacea highlighted with respect to systematics, anatomy, reproductive strategies, feeding, growth. Basic management and/or aquaculture efforts for key species; several major fisheries that highlight variability in recruitment and landings, management of species with complex life cycles. Laboratories, field trips. Prerequisite: 10 credits in biological sciences. Offered: A.

FISH 311 Biology of Fishes (5) NW Pietsch Lecture, laboratory, and field study of the morphological, physiological, behavioral, and ecological diversity of fishes of the world; designed to provide a basic foundation for advanced courses in all areas of finfish fisheries. Prerequisite: 10 credits in biological sciences. Offered: W.

FISH 312 Fisheries Ecology (4) NW Quinn Ecological characteristics of fishes and shellfishes in the important freshwater and marine habitats of North America. Relationship between physical aspects of the habitats and community structure. Impacts of human activities on diversity and abundance. Prerequisites: 310, 311 and OCEAN 200. Offered: Sp.

FISH 323 Fisheries Management and Conservation (3) NW Gunderson Importance of aquatic living resources; current world fisheries and their future, biological principles of fisheries conservation and management; development and implementation of fisheries policy; case histories of successful and unsuccessful fishery management systems. Offered: A. FISH 324 Utilization of Fishery Commodities (4) NW Dong, Rasco, Pigott Overview of factors affecting food quality of finfish and shellfish; chemical/physical properties of aquatic food products; microbiological/ parasitological environmental forces affecting food safety; by-product utilization; effects of processing on quality; regulatory aspects; future of aquatic food products. Prerequisites: CHEM 102 or 223 and 224. Recommended: microbiology. Offered: W.

FISH 325 Introduction to Aquaculture (4) NW Stickney Survey of fish and shellfish species involved in commercial and enhancement aquaculture. History of aquaculture and current world production levels are examined. Emphasis on design and operation of aquaculture facilities, water quality and management, nutrition and diseases of fish and shellfish, harvesting, marketing, economics. Visits to aquaculture and related facilities. Offered: Sp.

FISH 328 Forestry-Fisheries Interactions (4) NW Naiman, Raedeke, Wissmar Characteristics of forestry-fisheries interactions in terrestrial and aquatic landscapes. Effects of changes in landforms on forest and aquatic communities. River basin and watershed features. Forest stand dynamics, forest hydrology, fish and wildlife histories and behavior. Resource conflicts and resolution. Recommended: general biology and ecology. Offered: jointly with ESC 328.

FISH 350 Current Topics in Nutrition and Food Science (3) NW Dong Nutritional properties, chemistry, safety, regulatory issues, and sensory properties of food components.

FISH 367 Recreational Fisheries (4) NW Pauley History of recreational fishing; present trends in sport fishing and prediction of future trends; types and characteristics of recreational fisheries; value of recreational fisheries; habitat requirements; ecology and behavior that are important considerations in management; management philosophy and techniques. Recommended for majors and nonmajors. Field trips. Laboratory fee may be required. Prerequisite: 10 credits in biological sciences.

FISH 378 Effects of Gear and Shipboard Handling (3) NW

FISH 380 Principles of Seafood Technology (3) NW Pigott

FISH 381 Environmental Impact of Seafood Processing (3) NW Pigott

FISH 401 Systematics, Zoogeography, and Evolution of Fishes (5) NW Pietsch Advanced course in ichthyology with emphasis on living bony fishes of the world; past and present biodiversity, evolutionary history, classification, comparative morphology, geographic distribution, and historical zoogeography. Prerequisites: 10 credits in biological sciences.

FISH 405 Economically Important Mollusca (5) NW Chew Classifications of life histories, distribution, methods of cultivation, and economic importance of oysters, clams, scallops, abalone, cephalopods, and other mollusca. Prerequisite: 10 credits in biological sciences.

FISH 406 Economically Important Crustacea (5) NW Armstrong Classifications of life histories, distribution, methods of capture, and economic importance of crabs, shrimps, lobsters, crayfish, and the smaller crustacea. Mandatory laboratory fee. Prerequisite: 10 credits in biological sciences.

FISH 415 Fish and Shellfish Physiology (5) NW Dickhoff Types, occurrences, and roles of inorganic and organic substances in supporting physiological functions, including osmoregulation, respiration, circulation, bioenergetics, digestion, and musculo-skeletal systems. Shows the integration of these processes, including stress and reproductive responses, by neuroendocrine systems. Prerequisites: 10 credits in biological sciences, one course in organic chemistry. FISH 425 Life History of Marine Fishes (5) NW Miller Early life history, including modes of reproduction, spawning, fecundity, egg and larva development, and sampling and ecology of eggs and larvae; aging, food habits, subpopulation identification, and migrations of marine fishes. Prerequisite: 311 or permission of instructor. Offered: main campus odd years, W; Friday Harbor Laboratories even years, Sp.

FISH 430 Biological Problems in Water Pollution (3/5) NW Ecological risk assessment of toxic chemicals and problems associated with electrical power production. Considers safety and toxicity and effects on individuals, populations, and communities. Laboratory covers simulation models of chemical exposure and community effects. Prerequisite: senior or graduate standing in fisheries, engineering, or related field. Offered: jointly with CIVE 461.

FISH 434 Ecological Effects of Waste Water (3/5) NW Welch Principles of aquatic ecology that relate to causes and effects of water quality problems in takes and streams. Population growth kinetics, nutrient cycling, eutrophication; acidification, oxygen/temperature requirements, and effects of various wastes on aquatic animals. Prerequisite: senior or graduate standing in engineering or science. Offered: jointly with CIVE 462.

FISH 444 Fisheries Genetics (4) NW Hershberger Concepts in management and culture of aquatic species. Cytogenetic analysis, manipulation of chromosomes, electrophoretic analysis, genetic analysis of natural and cultured populations, quantitative genetic analysis, and effects of selection and breeding programs. Laboratory experience with analytical techniques. Prerequisites: FISH 311 and GENET 371 or equivalent and permission of instructor.

FISH 450 Salmonid Behavior and Life History (4) NW Quinn Marine distribution, homing migration, and spawning behavior of adult salmon: incubation, emergence, migration, and residence of fry; fingerling distribution and residence with reference to species interaction and population evolution. Prerequisites: 311 and 15 credits in biological sciences.

FISH 451 Reproduction and Early Development in Fish (4) NW Hershberger Reproductive development, sexual maturation, spawning and incubation in selected fish species; embryology and developmental traits of different salmonid and non-salmonid species; practical experience in artificial spawning techniques, egg handling and care, incubation techniques and the handling of newly-hatched alevins.

FISH 452 Nutrition and Health of Aquatic Animals (4) NW Dong, Landolt Basic nutritional requirements of fish and shellfish in nature and in artificial environments; principles governing the transmission and control of disease; importance of diet in prevention. Prerequisites: 311 and 10 credits in biological sciences. Offered: even years.

FISH 454 Aquatic Wildlife Ecology (3) NW VanBlaricom, West, Manuwal, Grue Conceptual examination of relationships of aquatic wildlife populations (mammals, birds, reptiles, amphibians) to one another and to the aquatic realm. Application of conceptual background to contemporary high-profile issues in aquatic wildlife ecology, conservation, and management. Included is exposure to primary technical literature in the field. Offered: jointly with ESC 454.

FISH 456 Fundamentals of Fish Population Dynamics and Management (4) NW Pikitch Conveys fundamental concepts of fish population dynamics and fishery management within context of real-world fisheries problems. Lectures discuss notation, terminology, mathematical models, fisheries principles, and case studies. Laboratory time devoted to practical applications, problems. Prerequisites: Q SCI 291 and 292 or MATH 124 and 125 or equivalent. Offered: jointly with Q SCI 456.

COLLEGE OF OCEAN AND FISHERY SCIENCES / FISHERIES 419

FISH 457 Methods of Abundance Estimation (4) NW Gunderson, Mathews Methods of estimating fish abundance by direct sampling and indirectly from tagging, catch, and effort analysis. Confidence limits and bias adjustments. Design of marine fishery surveys using statistical sampling principles. Laboratory work with real fishery data and data collected during trawl sampling survey. Prerequisites: Q SCI 291, 292, 381, and 456 or equivalent. Offered: jointly with Q SCI 457.

FISH 458 Fisheries Stock Assessment (4) NW Hilborn Emphasizes quantitative analysis of fisheries data to determine how the fishery would respond to alternative management actions. Major topics include production models, stock and recruitment, catch at age analysis, and formulation of harvest strategies. Prerequisite: 456 or permission of instructor. Offered: jointly with Q SCI 458.

FISH 470 Aquatic Food Engineering (5) NW Quantitative physics/chemistry of harvesting, processing, storing, packaging, and marketing aquatic foods. Solving problems of mass and energy transfer with regard to processes and to changes in important food components. Use of computer process control involving basic food engineering principles. Prerequisites: Q SCI 292 or MATH 125 or equivalent; PHYS 116, and CHEM 160 or permission.

FISH 475 Marine Mammalogy (3) NW Van Blaricom Evolution, taxonomy, physiology, life history, and behavior of marine mammals; the techniques of studying and the management and conservation of them. Offered: trregularly.

FISH 476 Laboratory of Marine Mammalogy (2) NW Van Blaricom Evolution, taxonomy, physiology, life history, and behavior of marine mammals; the techniques of studying and the management and conservation of them. Laboratory fee may be required. Prerequisite: 15 credits in biological sciences. Recommended: vertebrate anatomy and physiology. Offered: irregularly.

FISH 480 Chemical Analysis of Aquatic Products (5) NW Rasco Chemical composition, structure, properties, and chemical changes of foods and food components. Principles of separation and identification of food components by chromatographic, spectrophotometric, and other methods. Prerequisites: 324 and CHEM 224.

FISH 490 Aquatic Food Microbiology (5) NW Occurrence and activity of microorganisms in aquatic foods, their significance in spoilage, fermentation, deterioration, foodborne disease, and nutritional effects. Principles of control and destruction by environmental adjustment and processing, detection, and evaluation of significance. Prerequisites: 324, MICRO 301 and 302 or equivalent, and CHEM 224.

FISH 498 Internship/Experiential Learning (1-9) NW Structured, practical training in the fishing industry, government agencies and other areas utilizing fisheries, food science, or quantitative science expertise. Experiences are supervised and evaluated. Written reports required. Prerequisite: permission of faculty adviser. Offered: AWSpS.

FISH 499 Undergraduate Research (1-5, max. 9) NW Individual research within the School of Fisheries. Each project supervised by an individual faculty member. Written reports required. Prerequisite: permission of instructor. Offered: AWSpS.

Food Science

FD SC 300 Nutrition for Today (3) NW Dong Basic and applied nutrition and food science. Identification and physiological roles of nutrients, nutritional requirements, problems with over- and undernutrition, and nutritional and food-related diseases. Food additives, processing, safety, and their effects on overall nutrition. Current issues of public significance. Offered: jointly with NUTR 300.

Courses for Graduates Only

Fisherles

FISH 501 Internship/Experiential Learning (1-9) Structured, practical training in the fishing industry, government agencies and other areas utilizing fisheries, food science, or quantitative science expertise. Experiences are supervised and evaluated. Written reports required. Prerequisite: permission of faculty adviser.

FISH 502 Fundamentals of Fishery Science (5) Team-taught course designed to provide an advanced overview of all aspects of fishery science. Emphasis on critical concepts of fishery biology relevant to those requiring a basic understanding of major sub-disciplines of the field. Theoretical approach emphasized. Extensive use of classical and current literature. Prerequisite: graduate standing.

FISH 503 Systematic lehthyology (5) Pietsch Phylogenetic history of the major groups of fishes: a survey of extinct and living fishes of the world, phylogenetic methodology as applied to fishes, geographic distribution and historical zoogeography. Prerequisite: FISH 311 or equivalent. Offered: jointly with ZOOL 503.

FISH 504 Invertebrate Pathology (5) Landolt, Pauley Pathological effects and communicable diseases in invertebrates. The discussion is phylogenetic and comparative. Juniors and seniors may take the course, but must have course prerequisites. Prerequisites: 454 and invertebrate zoology or equivalent, or permission. Offered: even years.*

FISH 505 Research Techniques in Shellfish Biology (5) Chew Study of research methods in field surveys of invertebrates and of research techniques involved with the studies of reproduction, growth, and mortality of oysters and clams. Prerequisite: permission of instructor. Offered: irregularly.

FISH 506 Pathology of Fishes (5) Landolt Infectious diseases of fish. Emphasis on bacterial and viral pathogens, diagnostic procedures, control strategies. Recommended: upper division course work in microbiology or immunology.

FISH 507 Special Problems in Fisheries (1-5, max. 15) Classroom, laboratory, or field studies on problems of current interest. A maximum of 6 credits of 507 is permitted to apply to a master's degree program. A. Guest lecture series. Offered on credit/no credit basis only. B. Special problems. C. Special course in fisheries. D. Special courses in fisheries. Prerequisite: permission of instructor.

FISH 508 Physiological Ecology of Shellfish (3) Relationships between physical-chemical features of habitats, and physiological adaptations of shellfish. Ability to tolerate extreme environments and adverse conditions examined as causes of variable recruitment, productivity, energy allocation, in marginal habitats. How such changes impact fisheries. Prerequisites: CHEM 140, 150; ZOOL 301, 330 or equivalents or permission of instructor.

FISH 515 Advanced Integrative Fish Physiology (3) Dickhoff, Smith Integration of physiological processes from molecular to organ system levels. Recent advances in control of reproduction, development, growth, metabolism, and osmoregulation, Prerequisite: 415 or equivalent; recommended: BIOC 405, 406 or BIOC 440, 441, 442; ZOOL 438.

FISH 520 Graduate Seminar (1) Introduction to research in fisheries. Required of all first-year graduate students. Offered on credit/no credit basis only.

FISH 522 Classical Literature of Fisheries Science and Aquaculture (2) Discussion of the classic literature of fisheries science and aquaculture. Both oral and writing communication skills stressed. Credit/no credit only.

FISH 525 Ecology and Behavior of Fishes (3) Miller, Quinn Basic principles of ecology and behavior (e.g., habitat associations, competition and predation, migrations and movements, reproductive patterns) as applied to fishes. Critical evaluation of current literature and fieldwork required. Prerequisites: 311 or equivalent, and permission of instructor.

FISH 527 Aquatic Community Responses to Chemical Stress (3) Taub Aquatic ecotoxicology; bridging the gap between physiological and ecosystem responses to toxic chemicals. Detecting effects against natural variability; altered species abundances and dominance, counter-intuitive responses. Case histories, controversies on data interpretation. Prerequisite: at least one course in ecology, limnology, oceanography or permission of instructor.

FISH 535 Metabolic Effects of Chemical Pollutants (4) Brown Physiological and biochemical effects of industrial, urban, and agricultural chemicals on aquatic biota; specific metabolic effects of various poisonous and inhibitory substances; models of inhibition of enzyme systems of aquatic organisms. Offered concurrently with 435. Prerequisities: upper-division or graduate standing, organic chemistry, general physiology, biochemistry, or cell physiology, or equivalent.

FISH 539 Forestry-Fisheries Interactions: Case Studies (3) Naiman, Raedeke, Wissmar Case studies of streamside management situations at the watershed and basin level. Topics include resource conflict resolution, current and future management alternatives, landscape dynamics, role of disturbance, and policy options. Prerequisite: graduate standing in forestry, fisheries, or related field; undergraduates by permission of instructor. Offered: jointly with ESC 539.

FISH 544 Genetics in Fish Management and Production (3) Hershberger Possible changes in genetic characteristics and response of populations with the current types and levels of fisheries resource manipulation. Includes genetic considerations in population models, quantitative genetics and breeding, and use of genetic markers for population analysis. Prerequisites: 444, 451, Q SCI 482, 483, and upper-division or graduate standing. Offered: odd years.

FISH 545 Selection and Breeding in Aquaculture (3) Hershberger Genetic bases, analytical techniques and experimental approaches for study and utilization of quantitative genetic variation in aquatic species. Statistical determination of genetic and phenotypic parameters; design and assessment of selection and breeding programs; use of quantitative genetic data. Prerequisites: 444, GENET 360, Q SCI 486, or permission of instructor. Offered: even years.

FISH 547 Stream and River Ecology (4) Cundy, Naiman Characterizations of stream and river ecosystems from a watershed perspective. Emphasis on fundamental processes affecting the structure and dynamics of aquatic communities and the riparian zone. Resource conflicts, new technologies, field trips, and class projects. Recommended: general ecology, forestry-fisheries interactions. Offered: jointly. with ESC 547

FISH 548 Special Topics in Streamside Studies (2, max. 6) Naiman, Quinn, Raedeke, Wissmar Contemporary problems and issues in forestry, fisheries, and wildlife management in watersheds. Topics vary, yet focus on interactions of land and water resources in the forests of the Pacific Northwest. Prerequisite: permission of instructor. Offered: jointly with ESC 548.

FISH 551 Fish Feed Technology (5) Halver, Hardy, Pigott, Stickney Fish feedstuffs classification, processing, nutrient profiles. Fish feed formulation techniques and practice. Least-cosf computerized diets. Manufacture techniques for eight types of fish feeds: wet, semi-moist, frozen, extruded, expanded, rolled,

420 COLLEGE OF OCEAN AND FISHERY SCIENCES / FISHERIES

pelleted, and microparticulate or microencapsulated diets. Design and operation of various type feed mills. Prerequisite: 452.

FISH 552 Comparative Fish Nutrition (3) Halver, Hardy, Stickney Quantitative nutrient requirements of salmonids, cyprinids, ictalurids, and test species of fishes for growth, development and reproduction. Vitamin, lipid, amino acid, carbohydrate, and minerals requirements plus metabolism of each examined and compared between species reared in various environments. Prerequisite: 452 or equivalent animal nutrition/ biochemistry course.

FISH 556 Mathematical Analysis in Fisheries Stock Assessment (3) Gallucci Analytic approaches to stock assessment and population management applications of parent-progeny models and logistic models; biological and economic yields of natural populations; analysis of population data on computers. Prerequisites: Q SCI 292, Q SCI 392, Q SCI 456, Q SCI 483; or permission of instructor. Offered: jointly with Q SCI 556.

FISH 557 Estimation of Population Parameters (4) Skalski Statistical analysis of population data; design and analysis of mark-recapture experiments on natural populations; laboratory work on computers. Prerequisites: Q SCI 292, Q SCI 483, and probability theory. Offered: jointly with Q SCI 557.

FISH 558 Advanced Analysis in Fisherles Stock Assessment (3) Deterministic and stochastic representations of age-dependent and size-dependent models for stock assessment; analysis of multi-species models; risk analysis and uncertainty in fisheries management strategies; analysis of population data on computers. Prerequisite: Q SCI 393, 556 or permission of instructor; recommended: 557. Offered: jointly with Q SCI 558.

FISH 560 Methods of Acoustic Stock Assessment (3) Theory and implementation of processing of acoustic fish target signals. Application for estimation of fish stocks and the statistical properties of the estimation procedure. Offered: irregularly.

FISH 565 Marine Fish Biology (9) Taxonomy, ecology, and life history of the fishes of the San Juan Islands and northeast Pacific Ocean. Prerequisite: permission of instructor. Offered: Friday Harbor Laboratories alternate years, S.

FISH 580 Introduction to the Management of Fisheries (3) Francis, Miller Introduction to fisheries and the multidisciplinary aspects of their management. Emphasis is on integration of biological, socio-economic, and institutional aspects of fisheries management. Offered: jointly with SMA 580.

FISH 581 Fishery Management: Case Studies (5) Francis, Huppert Examination of historical case studies chosen to illustrate specific fishery management problem areas. Faculty presentations occupy first half of quarter, student presentations the second half. Prerequisite: 580. Offered: jointly with SMA 581.

FISH 582 Fishery Management: Contemporary Issues (5) Huppert Focuses on multi-disciplinary, indepth analysis of specific problems, including biological and economic assessments, evaluation of alternative management systems, and formulation of specific research, data collection, and management recommendations. Prerequisite: 581. Offered: jointly with SMA 582.

FISH 600 Independent Study or Research (*) Offered on credit/no credit basis only.

FISH 700 Master's Thesis (*) Offered on credit/no credit basis only.

FISH 800 Doctoral Dissertation (*) Offered on credit/no credit basis only.

Food Science

FD SC 521 Graduate Seminar in Food Science (1, max. 3) Lectures and discussions of current problems and current research in food science. Offered on credit/no credit basis only. Prerequisite: permission of instructor.

FD SC 522 Advanced Food Chemistry (3, max. 9) Rasco Lecture and/or laboratory dealing with special or current topics in food chemistry and food analysis. Laboratory fee may be required. Prerequisite: graduate standing or permission of instructor. Offered: evennumbered years.

FD SC 524 Microorganisms In Foods (3) Occurrence and activity of microorganisms important in foods as agents of spoilage, fermentation, and foodborne disease; relationship to food or food process; control and detection. Food science majors must take 534 concurrently with 524. Prerequisite: graduate standing in food science or permission of instructor.

FD SC 525 Advanced Unit Operations in Food Processing (3) Pigott Application of modern engineering principles to operations such as evaporation, drying, distillation, pumping, and heat transfer in the handling, processing, and packaging of foods. To be taken concurrently with 526. Prerequisite: FISH 470 or permission of instructor.

FD SC 526 Advanced Unit Operations in Food Processing Laboratory (3) Pigott Laboratory investigations concerned with the engineering of food processes and processing facilities. To be taken concurrently with 525. Laboratory fee may be required.

FD SC 534 Microorganisms in Foods Laboratory (1) Special projects or selected experiments designed to study microorganisms in foods. Food science majors must take 534 concurrently with 524. Laboratory fee may be required.

FD SC 600 · Independent Study or Research (*)

FD SC 700 Master's Thesis

School of Marine Affairs

3707 Brooklyn Avenue Northeast

Graduate Program

The School of Marine Affairs offers an interdisciplinary program of study leading to the Master of Marine Affairs degree. Marine affairs concerns management and policy questions on the uses of the coastal and offshore regions of the ocean and their resources. The core curriculum includes courses from the School of Marine Affairs, business administration, economics, engineering, fisheries, law, oceanography, political science, and public affairs. The School of Law has a related Master of Laws degree program with specialization in marine affairs.

A major program objective is to prepare students for professional careers in policy making, management, teaching, and research. Breadth of study is emphasized, and all students are expected to gain familiarity with relevant aspects of the social, technological, and environmental sciences. In addition, each student is expected to develop a professional and scholarly proficiency in a particular aspect of marine affairs.

Completion of the M.M.A. program normally requires two academic years for students who have recently received a baccalaureate degree. During the first year, students develop a comprehensive understanding of the marine affairs field and acquire analytic skills. During the second year, a special competence is developed in an area of concentration (e.g., coastal zone management and planning, international marine institutions, living resources and fisheries management, marine environmental policy, port and marine transportation management), and a thesis is prepared and presented under the guidance of a faculty supervisory committee. Individual courses of study may be adjusted to accommodate prior experience and academic background, and especially qualified students, such as those in midcareer, may be able to meet the degree requirements in eighteen months of study.

Joint Curriculum in Fisheries Management

The School of Fisheries (SOF) and the School of Marine Affairs (SMA) offer a joint curriculum in fishery management consisting of parallel two-year master's programs. The curriculum is designed to develop professional fisheries managers with skills needed to participate effectively in the wide range of activities characteristic of contemporary fishery management. These skills require a multi-disciplinary education in biology, the social sciences (e.g., economics, political science, anthropology, sociology), quantitative methods, law, and policy analysis. A major part of the curriculum consists of a three-quarter core course which brings SOF and SMA students together in a problem-oriented focus. This core course has three components: (1) introduction to fisheries and their management, (2) retrospective case studies, and (3) contemporary issues. During the core sequence, students will develop progressively more extensive case studies on their own, leading to a master's thesis. Students may enter the fisheries management master's program through either the School of Fisheries or the School of Marine Affairs and must meet the thesis and other requirements of their department.

Admission Requirements

Admission to the School of Marine Affairs is based on evaluation of required application materials in competition with other applicants. Required materials include Graduate Record Examination general test scores, completed departmental supplementary information form, three letters of recommendation, official academic transcripts, and a statement of career objectives. In addition, applicants must make separate application to, and be accepted by, the Graduate School of this university. Course sequences begin each autumn quarter, and new students normally are admitted only at that time.

Financial Aid

The School of Marine Affairs has a limited number of positions for graduate student appointments as research assistants. Applicants in need of support are urged to investigate outside sources of funding.

Correspondence and Information

Graduate Program Coordinator School of Marine Affairs, HF-05

Faculty

Acting Director

Marc Hershman

Professors

Alverson, Dayton L. * 1982, (Affiliate); PhD, 1967, University of Washington; marine affairs.

Bodansky, Daniel * 1989, (Adjunct); JD, 1984, Yale University; international law, international environmental and human rights law, civil procedure.

Burke, William T. * 1968; JSD, 1959, Yale University; marine law.

Crutchfield, James A. 1960, (Emeritus); PhD, 1954, University of California (Berkeley); natural resources economics, policy and management, especially marine and environmental resources.

Delaney, John R. * 1977, (Adjunct); PhD, 1977, University of Arizona; geological oceanography, origin of oceanic crust, igneous petrology.

Francis, Robert C. * 1983, (Adjunct); PhD, 1970, University of Washington; biological production of commercially important marine fishes, fisheries management.

Hershman, Marc * 1976; JD, 1967, Temple University; coastal zone management law.

Miles, Edward L. * 1974; PhD, 1965, University of Denver; international law and organization, science and international relations, marine policy.

Miller, Marc * 1979; PhD, 1974, University of California (Irvine); maritime anthropology, cognitive anthropology and social/cultural change.

Olson, David J. * 1974, (Adjunct); PhD, 1971, University of Wisconsin; American government and politics.

Vesper, Karl H. * 1969; PhD, 1969, Stanford University; business policy, mechanical engineering, marine studies.

Wooster, Warren S. * 1976, (Emeritus); PhD, 1953, University of California (San Diego); effects of climate change on marine ecosystems, use of scientific information in marine management.

Associate Professors

Copping, Andrea * 1992, (Affiliate); PhD, 1982, University of Washington; marine environment and water quality, marine science/marine policy.

Duxbury, Alyn C. * 1954, (Emeritus); PhD, 1963, Texas A&M University; estuarine processes and the management of human uses of these marine systems.

Fluharty, David L. * 1983, (Research); PhD, 1977, University of Michigan; natural resource and environmental policy.

Huppert, Daniel D. * 1987; PhD, 1975, University of Washington; economics and management of natural resources, especially marine fisheries.

Kaczynski, Włodzimierz M. * 1977; PhD, 1972, University of Gdansk (Poland); fishery economics, international joint ventures in marine fisheries, international fisheries policy.

Leschine, Thomas M. * 1983; PhD, 1975, University of Pittsburgh; marine pollution management, ocean policy studies.

Assistant Professor

Olson, Annette M. * 1991; PhD, 1992, Oregon State University; use of ecological models in environmental decision making.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

SMA 455 Marine Business Environment in Russia and Eastern Europe (3) Kaczynski International marine business environment of Russia and the maritime nations of East Europe; their transition process from communist to free market economic systems. Covers aspects of doing business in marine-related fields such as shipping, fisheries, shipbuilding, ports, and land infrastructures, marine tourism, and water sports. Offered: jointly with SISRE 455.

SMA 499 Undergraduate Research (1-3, max. 6) Research on assigned topics under the supervision of faculty members. Prerequisite: permission of instructor. SMA 500 Marine Affairs (5) Miller Surveys a wide range of academic disciplines and substantive problems pertinent to interaction of human beings and the world's oceans and coasts. Management of living/ nonliving resources, shipping, scientific research, pollution, recreation, and others. Lecture and discussion by invited specialists.

SMA 505 Introduction to Administrative Law and . Process (2) Hershman Constitutional and administrative law applied to selected coastal and marine statutes. How to research legislative and administrative materials. Reading and briefing selected judicial opinions. Control of administrative agencies by the executive, legislative, and judicial branches. Designed for non-law graduate students pursuing natural resources and environmental subjects. Prerequisite: permission of instructor.

SMA 508 International Law of the Sea (4) Burke Ways nations claim authority to regulate activities at sea. Fundamental policies and decisions regarding navigation for commercial and military purposes, fisheries, exploitation and conservation, continental shelf resources, scientific research, protection of environment, deep-sea mining, and other uses of the ocean. Offered: jointly with LAW B 561.

SMA 507 International Organizations and Ocean Management (3) Miles Survey of the manner in which international organizations attempt to manage and regulate the uses of the ocean. Primary emphasis is on the analysis of processes that support or constrain these organizations and on the search for alternative policies and organizations. Prerequisite: 500 or permission of instructor. Offered: jointly with PB AF 507.

SMA 508 National Marine Policy Processes (3) Miles Comparative institutional dimensions of marine policy processes. Marine policy context at the national level and the dynamics that drive policy formulation and policy implementation. Prerequisite: 507 or permission of instructor.

SMA 509 Principles of Coastal Zone Management (3) *Hershman* Managing multiple uses of coastal waters and the adjacent land; conflicts arising from competition for space and resources; legal and organizational problems associated with overlapping jurisdiction; legal basis for management; planning and management experience in the United States and abroad. Prerequisite: 500 or permission of instructor. Offered: jointly with LAW B 566.

SMA 511 Coastal Environment Management (3) Olson Coastal zone planners and managers evaluate proposed and ongoing use activities that affect wetland, estuarine, and nearshore environments. Concepts and techniques for retrieving, analyzing, and using technical environmental information in planning and decision making. Washington State case examples and practical exercises. Prerequisite: OCEAN 580 or permission of instructor.

SMA 514 Marine Pollution Management Issues (3) Leschine Management aspects of marine pollution, emphasizing two-way interaction between environmental managers and environmental and policy scientists which ideally shapes policy. Recommended: familiarity with marine science or ocean policy or pollution control policy.

SMA 515 United States Law and the Marine Environment (3) Hershman Federal/state boundary problems, living resources management, offshore oil and gas production, vessel and tanker safety. Offered: jointly with LAW 8 565.

SMA 516 Seaport Management (3) Denning Role of port authorities in management of marine uses: cargo and trade, economic development, tourism and recreation, and fisheries. Management functions of planning, marketing, finance, engineering. Examples and guest speakers from the Port of Seattle and other Puget Sound ports. Prerequisite: 500 or permission of instructor.

SMA 517 Marine Uses: Transportation and Commerce (3) *Denning* Role of the oceans in the transportation of people and materials, character and trends in vessel design and terminal facilities, pattern and nature of industry organization, regulations, economics of the shipping industry, management of fleets and vessels, individuals at sea and ashore, national policies affecting the merchant marine and port facilities. Prerequisite: 500 or permission of instructor.

SMA 518 Port and Marine Transportation Systems (3) Activities associated with the water-borne movement of cargo. Types of cargo handling methodologies used in ocean transport, ship types involved in these cargo-handling methods, and seaport terminal facilities that are utilized by each cargo handling method. Prerequisite: permission of instructor.

SMA 519 Martne Policy Analysis (3) Leschine Goal is appreciation for and basic working knowledge of techniques used in policy analysis. Techniques are explored in both quasi-realistic settings and in application to real world problems of marine policy.

SMA 536 Applied Microeconomics for Marine Affairs (3) Acquaints students with microeconomic tools commonly employed in policy analysis. Emphasis is placed on mastery of basic concepts, definitions, and models useful to marine policy, including determinants of price and outputs in competitive markets, effects of other market structures, market failure, and applied welfare economics.

SMA 537 Economic Aspects of Marine Policy I (3) Huppert Development of pertinent economic concepts and their application to selected topics in marine policy decision making, including maritime policy, OCS oil and gas development, and wetlands management. Prerequisite: 500 or permission of instructor. Offered: jointly with ECON 537.

SMA 538 Economic Aspects of Marine Policy II (3) Huppert Development of pertinent economic concepts and their application to fisheries management and development. Prerequisite: 508 or permission of instructor. Offered: jointly with ECON 538.

SMA 540 Economics of World Fisheries (3) Kaczynski Economic view of contemporary world problems in use, conservation, and management of marine living resources. Special focus on North-South relations, sustainable development strategies, and basic needs of Third World. How to approach and analyze international fisheries issues in student's own research. Prerequisite: 500 or permission of instructor.

SMA 550 Special Topics In Marine Studies (1-3, max. 18) Examination of various aspects of marine studies. Content varies, depending upon the interests of the faculty and students. Intended for the joint participation by the faculty and advanced students in the investigation of selected topics. One or more groups are organized each quarter.

SMA 555 Russian Ocean Policy (3) Kaczynski Russian ocean policy following Perestroika and disintegration of Soviet empire. Discusses Russian navy, fishery industry, merchant marine, ocean research fleet in light of international agreements and joint ventures and new politic, economic, and social environments. Prerequisite: knowledge of Soviet/Russian socio-economic problems or permission of instructor. Offered: jointly with SISRE 555.

SMA 560 Methods Seminar (2) Preparation for thesis work. Draws on the philosophy of science from the natural, social, and policy sciences to examine such topics as research design, data collection, analysis, write-up, and abstract/applied research.

SMA 580 Introduction to the Management of Fisheries (3) Miller Introduction to fisheries and the multidisciplinary aspects of their management. Em-

422 COLLEGE OF OCEAN AND FISHERY SCIENCES / MARINE AFFAIRS

phasis is on integration of biological, socio-economic, and institutional aspects of fisheries management. Offered: jointly with FISH 580.

SMA 581 Fishery Management: Case Studies (5) Huppert Examination of historical case studies chosen to illustrate specific fishery management problem areas. Faculty presentations occupy first half of quarter, student presentations the second half. Prerequisite: 580 or permission of instructor. Offered: jointly with FISH 581.

SMA 582 Fishery Management: Contemporary issues (5) Huppert Focuses on multi-disciplinary, indepth analysis of specific problems, including biological and economic assessments, evaluation of alternative management systems, and formulation of specific research, data collection, and management recommendations. Prerequisite: 580, 581 or permission of instructor. Offered: jointly with FISH 582.

SMA 600 Independent Study or Research (*)

SMA 700 Master's Thesis (*)

Oceanography

108 Oceanography Teaching

The School of Oceanography, which had its beginnings in 1930, offers courses and conducts basic research in oceanography, the science that examines physical, geological, chemical, and biological processes in the ocean and interactions of the ocean with the earth, the biosphere, and the atmosphere. Education and research in the School include studies of seawater in motion; life in the sea; chemical composition and properties of seawater; interactions between the sea and the atmosphere, the sea and the land, sediments and rocks beneath the sea, and the geophysics of the ocean floor. Because the science of oceanography is interdisciplinary in nature, joint programs are maintained in the areas of geochemistry and biochemistry, geophysics, atmospheric sciences, marine biology and botany, and geophysical fluid dynamics, with the departments of Botany, Zoology, Atmospheric Sciences, Applied Mathematics, Geophysics, and Geological Sciences, and with the other units in the College of Ocean and Fishery Sciences.

Courses

A full spectrum of basic and advanced courses is offered in each of the areas of specialization in oceanography: biological oceanography, chemical oceanography, marine geology and geophysics, and physical oceanography. Among the wide variety of courses open to students are the following: zooplankton ecology, marine microbiology, advanced problems in chemical oceanography, ocean and climate variation, sedimentary dynamics and history of the ocean, marine science of coastal zone management, and human impacts on the ocean.

Summer quarter instruction is offered both on the main campus and at the Friday Harbor Laboratories on San Juan Island.

Advising

The student services office is staffed by an academic counselor, who assists students with curriculum, scheduling, and career counseling. All students also consult with a faculty adviser.

Research

Each year the School participates in a broad range of oceanographic investigations, ranging from individual research projects to multidisciplinary or multiuniversity projects. Major biological programs are carried out in Puget Sound, in the waters of the continental shelf off Washington and California, and in the North Pacific Ocean. These projects include investigations of the processes governing the communities or organisms in the water column, on the seabed, and in the surf zone. Chemical oceanography includes work on the distribution of organic material and trace metals in Puget Sound and the open sea, the geochemistry of the sediment-water interface, and study of chemical processes in waters trapped in the sediments. Geological investigations include theoretical studies and field experiments on sediment motion and sedimentary processes. This work has ranged from the deep waters of the Scotian Rise in the Atlantic Ocean to Prudhoe Bay to the Barents Sea, where a cooperative program with Norwegian scientists is under way.

The effect of organisms on sediment transport is a major new interdisciplinary program among geological, biological, and physical oceanographers. Geophysical research is concerned with the oceanic crust and upper mantle. Topics include seismic experiments on plate boundaries, crustal formation processes in the Juan de Fuca-Gorda Ridge System, and studies of the auth's magnetic field. Physical oceanographic programs range from large-scale circulation studies of the North Pacific, the North Atlantic, the tropical oceans, and the antarctic circumpolar current to coastal circulation studies and small-scale mixing programs. The theoretical and experimental programs include studies of air-sea interaction, surface and internal waves, oceanic fronts, and sea ice.

The School is particularly strong in arctic research, which includes both physical oceanographic studies and multidisciplinary ecosystem studies of the processes and resources in the Bering Sea. Studies in local waters include sediment transport and mixing processes in fjords and inlets and the chemistry of Lake Washington.

Facilities and Vessels

Housed in four large and several smaller buildings on campus by Portage Bay, the School is equipped with extensive laboratories and teaching facilities, including controlled-environment rooms, a paleomagnetics laboratory, and a sea-ice laboratory. The School operates its own midscale interactive computer and highly specialized laboratory instruments, such as mass spectrometers, scanning electron microscopes, and seawater sediment transport flumes. Access to other more sophisticated facilities and instruments, as well as super computers, is available on campus, Docks provide mooring for the School's two research vessels. Deep-ocean research programs are accommodated on the newly constructed 274-foot R/V Thomas G. Thompson. Graduate students are involved in all of the cruises, most often for their thesis research. The sixtyfive-foot R/V Clifford A. Barnes undertakes short cruises into Lake Washington and Puget Sound for the instructional and research programs.

Friday Harbor Laboratories on San Juan Island offer unique opportunities for research and study. Specialized courses in new areas of oceanography are offered each summer. The facilities are utilized by faculty members and students throughout the year for oceanographic research.

Funding

The School is supported primarily by funds from the state of Washington and federal agencies. Major sources of federal funding include the National Science Foundation, National Oceanic and Atmospheric Administration, Office of Naval Research, and Department of Energy. Funds are also provided by various state and local government agencies and private organizations.

Undergraduate Program

Degrees

Students may earn a Bachelor of Science or a Bachelor of Arts degree, with specialization in biological, chemi-

cal, or physical oceanography, or marine geology and geophysics.

Careers in Oceanography

Oceanographers are employed predominantly in research, both pure and applied. They seek to produce a new understanding of an ocean system and to explore the potential consequences to the marine environment of human activities. They collect samples and data, analyze and interpret them, and prepare and disseminate the results. Oceanographers work at sea, on land, and in laboratories, often with computers.

In addition to the knowledge acquired through research, a degree in oceanography can serve as a background for a career in teaching, administration, marine affairs, environmental studies, production, inspection, computing, instrumentation development, and statistical analysis.

Most oceanographers are employed in educational and research institutions. Many others work for federal government agencies, such as the National Oceanic and Atmospheric Administration, U.S. Geological Survey, Office of Naval Research, U.S. Department of Interior, U.S. Coast Guard, Naval Oceanographic Research and Development Activity, and National Marine Fisheries Service. Other employers include state and local governments in coastal areas and independent consulting firms that conduct research for companies and government agencies. Additional private-sector positions are available in research and development for companies extracting and harvesting products from the oceans.

An oceanographer's duties are diverse, dictated by the nature of the profession. Research projects are as varied as an oceanographer's responsibilities. The field is open to both women and men. Graduates from the oceanography program are prepared to enter the profession or to pursue graduate studies.

High School Preparation

A high school student considering oceanography as a career should be guided by an interest in natural sciences and a good record in high school science courses, and particularly mathematics. A student should plan to meet or exceed the general University entrance requirements. One year each of biology, chemistry, and physics is recommended.

Admission

The School of Oceanography has no admission requirement. Students may enter the program upon acceptance for admission to the University.

Bachelor of Science Degree

Students may specialize in biological, chemical, or physical oceanography, or marine geology and geophysics.

Major Requirements: (1) MATH 124, 125, 126; CHEM 140, 141, 150, 151; PHYS 121/131, 122/132, 123/133; GEOL 205; and BIOL 101-102 or 201, 202, 203; (2) OCEAN 200, W201, 202, 401, 402, 421, 433, 450, W460, W485; (3) 20 credits of upper-division science, mathematics, or engineering to be selected in the student's area of specialization in consultation with a faculty adviser; (4) 20 credits of Visual, Literary, & Performing Arts and 20 credits of Individuals & Societies from the University Areas-of-Knowledge lists; and (5) 5 credits of English composition. University-approved *W* courses (writing) are included within the curriculum.

Bachelor of Arts Degree

Major Requirements: Same as for Bachelor of Science degree, except only 10 credits of upper-division science, mathematics, or engineering courses are required.

Student Oceanographic Society

The Student Oceanographic Society is an undergraduate organization for students majoring in oceanography. The society coordinates tours of the facilities and elects the undergraduate representatives to the School's student council. The club also provides the students with an informal environment for meeting with the faculty and other students who share an interest in the marine sciences.

Minor

Minor Requirements: Minimum 25 credits to include OCEAN 200 (3 credits), 202 (3), 401 (3), 402 (3), 421 (4), 433 (4), 450 (4), 499 (1).

Graduate Program

Arthur R. M. Nowell, Director and Graduate Program Coordinator

The School of Oceanography provides excellent instruction and research opportunities at the graduate level in all areas of oceanography: biological oceanography, chemical oceanography. biological oceanography, chemical oceanography, marine geology and geophysics, and physical oceanography. The program of study emphasizes independent research in conjunction with basic and specialized courses. Interdisciplinary research is encouraged, and students enjoy the opportunity to work across the usual scientific boundaries. Course work during the first two years is required in each option; specialized course work is structured to fit the student's background and objectives. Foreign-language proficiency is required only when deemed crucial to scholarly research.

Admission

Students enter the School from varied undergraduate disciplines at many universities. All have in common a strong background in the sciences and mathematics; most have never taken courses in oceanography. Evaluation of candidates is based on Graduate Record Examination scores, the undergraduate transcript (scholarship and depth), three letters of recommendation, and the applicant's statement of objectives and interests. Admission can be accommodated at the beginning of any academic quarter, although autumn entry is most common.

Master of Science Degree

The program of study includes course work in the student's area of interest and the other oceanography options, a comprehensive examination, and the completion of an approved research project and oral presentation of the results. Thesis and nonthesis programs are offered; most students select the nonthesis option.

Doctor of Philosophy Degree

The degree program places a strong emphasis on research following completion of course requirements and General Examination. Upon successful completion of the General Examination, the student undertakes an original research investigation, which is described in the dissertation and defended during the Final Examination.

Financial Ald

Normally all students pursuing a graduate degree are supported by research or teaching assistantships, or by fellowships and scholarships from national or private sources. Most appointments continue through the summer when students are engaged in research.

Correspondence and Information

Graduate Student Services School of Oceanography, WB-10

Faculty

Director

Arthur R. M. Nowell

Professors

Aagaard, Knut * 1968; PhD, 1966, University of Washington; physical oceanography, ocean circulation, arctic oceanography.

Ahmed, Saiyed I. * 1973; PhD, 1963, Johann Wolfgang Goethe University (Germany); marine phytoplankton, ecology and nitrogen assimilation, biofouling, anoxic marine environments.

Anderson, George C. * 1972, (Emeritus); PhD, 1954, University of Washington; plankton ecology, biological oceanography.

Banse, Karl * 1960; Doctorat, 1955, University of Kiel (Germany); biological oceanography, plankton production and methodology, polychaete systematics.

Barnes, Clifford A. 1931, (Emeritus); PhD, 1936, University of Washington; physical oceanography, water properties, circulation.

Cannon, Glenn A. * 1983, (Affiliate); PhD, 1969, Johns Hopkins University; physical oceanography of coastal waters and deep-sea hydrothermal ventino.

Carpenter, Roy * 1968; PhD, 1968, University of California (San Diego); marine geochemistry of metals and hydrocarbons in coastal zones.

Cattolico, Rose A. * 1975, (Adjunct); PhD, 1973, State University of New York (Stony Brook); plastid replication, nucleic acid blochemisty in synchronized unicellular algae.

Creager, Joe S. * 1958, (Emeritus); PhD, 1958, Texas A&M University; geological oceanography, sedimentology.

Criminale, William O. * 1968; PhD, 1960, Johns Hopkins University; fluid dynamics, mathematical physics, nonlinear mechanics, stability theory.

D'Asaro, Eric A. * 1980; PhD, 1980, Massachusetts Institute of Technology; physical oceanography, internal waves, turbulence and mixing processes.

Delaney, John R. * 1977; PhD, 1977, University of Arizona; geological oceanography, origin of oceanic crust, igneous petrology.

Devol, Allan H. * 1975; PhD, 1975, University of Washington; biogeochemistry, sediment diagenesis, anoxic systems, carbon fluxes.

Emerson, Steven R. * 1976; PhD, 1974, Columbia University; marine geochemistry, chemical oceanography, sediment diagenesis.

Eriksen, Charles C. * 1986; PhD, 1977, Massachusetts Institute of Technology; experimental physical oceanography; equatorial and upper ocean dynamics, internal waves.

Ewart, Terry E. * 1956; PhD, 1965, University of Washington; physics, ocean microstructure, diffusion, acoustic transmission.

Francis, Robert C. * 1983, (Adjunct); PhD, 1970, University of Washington; biological production of commercially important marine fishes, fisheries management.

Frost, Bruce W. * 1969; PhD, 1969, University of California (San Diego); biological oceanography, marine zoogeography, plankton ecology and systematics.

Gammon, Richard H. * 1985; PhD, 1970, Harvard University.

Gregg, Michael C. * 1974; PhD, 1971, University of California (San Diego); physical oceanography, ocean microstructure.

Harrison, Don Edmunds * 1985, (Affiliate); PhD, 1977, Harvard University; ocean circulation modeling, air sea interaction tropical dynamics.

Heath, G. Ross 1984; PhD, 1968, University of California (San Diego); geochemistry of sediments.

Hedges, John I. * 1976; PhD, 1975, University of Texas (Austin); organic geochemistry, sources, transport, fate of organic material in coastal zones.

Henry, Dora P. 1960, (Emeritus); PhD, 1931, University of California (Berkeley); systematics and ecology of barnacles.

Hickey, Barbara M. * 1973; PhD, 1975, University of California (San Diego); physical oceanography, dynamics of equatorial and shelf circulation.

Johnson, Harlan Paul * 1976; PhD, 1972, University of Washington; paleomagnetism and marine geophysics.

Jumars, Peter A. * 1975; PhD, 1974, University of California (San Diego); biological oceanography, benthos, biological sedimentary dynamics and spatial statistics.

Lewin, Joyce C. 1965, (Emeritus); PhD, 1953, Yale University; biological oceanography, diatoms, nanoplankton.

Lewis, Brian T. * 1970; PhD, 1970, University of Wisconsin; marine geophysics, marine seismology, gravity, magnetics, and computer modeling of those processes.

Lister, Clive Ronald * 1965, (Emeritus); PhD, 1963, Cambridge University (UK); marine geophysics, cooling processes in the outer layers of the earth, geodynamics.

Martin, Seelye * 1969; PhD, 1967, Johns Hopkins University; geophysical fluid dynamics, properties of sea ice.

McManus, Dean A. * 1959; PhD, 1959, University of Kansas; geological oceanography, continental shelf sediments.

Merrill, Ronald T. * 1967, (Adjunct); PhD, 1967, University of California (Berkeley); geomagnetism.

Murray, James W. * 1973; PhD, 1973, Massachusetts Institute of Technology; marine geochemistry, aquatic chemistry.

Nowell, Arthur R. M. * 1978; PhD, 1975, University of British Columbia (Canada); physical oceanography, turbulent boundary layer dynamics, sediment transport.

Rattray, Maurice Jr. * 1950, (Emeritus); PhD, 1951, California Institute of Technology; physical oceanography, hydrodynamics, ocean circulation modeling.

Rhines, Peter B. * 1984; PhD, 1967, Cambridge University (UK); the circulation of the oceans and evolution of climate.

Richey, Jeffrey E. * 1973; PhD, 1973, University of California (Davis); quantitative problems of aquatic ecosystems, primary Amazon River, limnology.

Sanford, Thomas B. * 1979; PhD, 1967, Massachusetts Institute of Technology; physical oceanography, dynamics of ocean currents, motional induction, instrumentation.

Sarachik, Edward * 1984, (Adjunct); PhD, 1966, Brandeis University; large scale ocean/atmosphere interaction, equatorial dynamics, climate change.

Spindel, Robert C. 1987, (Adjunct); PhD, 1971, Yale University; ocean acoustics, signal processing, acoustic navigation systems, acoustic tomography.

Sternberg, Richard * 1965; PhD, 1965, University of Washington; geological oceanography, marine sedimentation processes.

Stuiver, Minze * 1969, (Adjunct); PhD, 1958, University of Groningen (Netherlands); geochronology, isotope geology.

Taft, Bruce A. * 1973, (Affiliate); PhD, 1965, University of California (San Diego); physical oceanography and ocean circulation.

Welander, Pierre * 1973, (Emeritus); PhD, 1954, University of Stockholm (Sweden); theory of general ocean circulation, large-scale atmosphere-ocean interaction.

Associate Professors

Baross, John A. * 1984; PhD, 1973, University of Washington; microbial oceanography, bacterial ecology.

Deming, Jody W. * 1988; PhD, 1981, University of Maryland; evolution and ecology of marine bacteria in the pressurized ocean.

Duxbury, Alyn C. * 1954, (Emeritus); PhD, 1963, Texas A&M University; estuarine processes and the management of human uses of these marine systems.

Feely, Richard A. * 1983, (Affiliate); PhD, 1974, Texas A&M University; chemical oceanography, oceanic sources and sinks for carbon dioxide.

Howe, Bruce M. 1988, (Research); PhD, 1986, University of California (San Diego); physical oceanography, acoustic tomography.

Kawase, Mitsuhiro * 1988; PhD, 1986, Princeton University; geophysical fluid dynamics; oceanic general circulation; tracer oceanography.

Kunze, Eric L. * 1987; PhD, 1985, University of Washington; mesoscale phenomena, wave/mean flow interaction double diffusion and mixing.

Lilley, Marvin D. * 1984; PhD, 1983, Oregon State University; chemical oceanography.

McDuff, Russell E. * 1981; PhD, 1978, University of California (San Diego); marine geochemistry.

McPhaden, Michael J. * 1982, (Affiliate); PhD, 1980, Scripps Oceanographic Institution; equatorial ocean dynamics, climate scale air-sea interaction.

Perry, Mary J. * 1976; PhD, 1974, University of California (San Diego); biological oceanography, phytoplankton physiology, nutrient cycling.

Quay, Paul D. * 1977; PhD, 1977, Columbia University; chemical oceanography, stable isotope geochemistry, ocean tracers and mixing.

Riser, Stephen C. * 1981; PhD, 1981, University of Rhode Island; physical oceanography, mesoscale mixing, physics of mesoscale eddies, numerical modeling.

Rothrock, David A. * 1970; PhD, 1969, Cambridge University (UK); physical oceanography, polar oceanography, polar ice remote sensing and modeling.

Schultz, Adam * 1979, (Affiliate); PhD, 1985, University of Washington; geological oceanography, ocean bottom magnetics and magnetotellurics.

Sempere, Jean-Christophe * 1987; PhD, 1986, University of California (Santa Barbara); marine geophysics, magnetics, gravity, theoretical models, sea floor morphology.

Assistant Professors

Hautala, Susan L. 1994; PhD, 1992, University of Washington; physical oceanography, abyssal and paleoabyssal circulation.

Lessard, Evelyn J. * 1989, (Research); PhD, 1984, University of Rhode Island; microzooplankton ecology and physiology; physical/biological interactions at oceanic fronts.

Shen, Glen T. * 1988; PhD, 1986, Massachusetts Institute of Technology; chemical oceanography, trace element geochemistry, paleoclimate.

Thompson, Luanne * 1990; PhD, 1990, Massachusetts Institute of Technology; numerical modeling of mesoscale and general circulation of the oceans. Warner, Mark J. * 1989, (Research); PhD, 1988, University of California (San Diego); physical oceanography, ocean ventilation and mixing processes.

Wilcock, William S. D. 1993; PhD, 1992, Massachusetts Institute of Technology; marine seismology, dynamics of mid-ocean ridges, geological fluid dynamics.

.Lecturer

Emerick, Christina M. 1985; PhD, 1985, Oregon State University; marine geochemistry and tectonics.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

OCEAN 100 Introduction to Careers in the Marine Sciences (1) NW Presentations by various faculty and staff members, students and recent graduates offer an introduction to the College of Ocean and Fishery Sciences, curricular options, and professional opportunities in the marine sciences. Limited to freshmen, sophomores or transfer juniors. Offered: jointly with FISH 100; Sp.

OCEAN 101 Survey of Oceanography (5) NW Origin and extent of the oceans; nature of the sea bottom; causes and effects of currents and tides; animal and plant life in the sea. Intended for nonmajors. Offered: AWSpS.

OCEAN 102 Environmental Oceanography (5) NW Designed to study in detail the benefits and the scientific problems created by human activities impinging on the oceanic environment. Prerequisite: 101 or permission of instructor. Offered: Sp.

OCEAN 200 Introduction to Oceanography (3) NW Description of the oceans. Emphasis on relations of biology, chemistry, geology, and physics in marine environments. Examination of relationships and interactions at macro-, meso-, and microscales in the ocean. Intended for science majors. Offered: A.

OCEAN 201 Introduction to Field Oceanography (3) NW Methods of oceanographic field study. Instruments and sampling techniques. Writing assignment to teach report-writing skills. Prerequisite: oceanography major or permission of instructor. Offered: Sp.

OCEAN 202 Ocean Circulation (3) NW The largescale circulation of the ocean. Topics include temperature-salinity analysis; water mass identification; water, salt, and heat budgets; chemical tracer distributions; advection and diffusion. Offered: W.

OCEAN 351-352 Quantitative Methods I, II (3,3) NW Applications of mathematical techniques to problems in the sciences and engineering. Emphasis on formulation, solution, and interpretation of results. 351: ordinary differential equations. 352: approximate methods; Fourier series; partial differential equations; boundary-value problems. Prerequisites: one year of physics and MATH 126 for 351; 351 or MATH 307 for 352. Offered: jointly with AMATH/MATH 351, 352; A-W.

OCEAN 353 Quantitative Methods III (3) NW Development and application of numerical methods and algorithms to problems in the applied sciences and engineering. Linear algebra, curve fitting, root-finding algorithms, numerical integration, and ordinary differential equations. Prerequisite: MATH 126. Offered: jointly with AMATH 353; Sp.

OCEAN 401, 402 General Physical Oceanography I, II (3,3) NW Physical properties and processes; theories and methods describing ocean currents, waves, and tides. Prerequisites: one year each of chemistry and physics, 202 for 401, 401 for 402. Offered: A.W. OCEAN 421 Chemical Oceanography (4) NW Physical and chemical properties of seawater and marine products; processes determining the chemical makeup of the oceans. Prerequisites: CHEM 140, 150. Offered: Sp.

OCEAN 433 General Biological Oceanography (4) NW Marine organisms, their quantitative distribution in time and space and their interactions with the ocean. Prerequisites: 401 and BIOL 101-102 or BIOL 201, 202, 203. Offered: W.

OCEAN 440 Instrumentation in Oceanography (3-6) NW Introduction to the general principles of instrument design, including discussions of sensors, signal processing, telemetry, and recording from the point of view of the experimental scientist. Laboratory work for variable credit is offered in the form of projects, preferably practical ones resulting in the completion of a small hardware device.

OCEAN 450 Marine Geology and Geophysics (4) NW Sedimentological and petrologic processes that determine the geologic record. Prerequisite: GEOL 205. Offered: A.

OCEAN 452 Principles of Sediment Transport by Turbulent Flow (3) NW Theoretical and experimental techniques used in studying erosion, transportation, and deposition of sediment. Initial motion of sediments, bed-load motion, suspension of sediment by turbulent flows, erosion and deposition of sediments, and applications of sediment transport theory to problems of geological interest. Prerequisite: GEOL/GPHYS 455. Offered: jointly with GEOL/GPHYS 452.

OCEAN 460 Oceanic Data Interpretation (5) NW Collection and analysis of marine data. Laboratory analysis of samples, data handling, and modeling of marine problems. Prerequisites: 402, 421, and 433. Offered: So.

OCEAN 485 Topics in Oceanography (1-4, max. 5) NW Specialized topics in oceanography. Various techniques in solving oceanographic problems. For students with senior standing. Prerequisite: permission of instructor. Offered: Sp.

OCEAN 499 Undergraduate Research (1-12, max. 24) NW Research on assigned topics that may involve laboratory work, fieldwork, or literature surveys. Prerequisite: permission of instructor. Offered: AWSpS.

Courses for Graduates Only

OCEAN 500 Current Problems in Oceanography (1) Discussion of research topics that are currently being investigated within the school. Prerequisite: permission of instructor. Offered: A.

OCEAN 501 Marine Geological Processes (5) Overview of petrologic and sedimentologic processes that generate, modify, consume oceanic geologic record; plate-margin, midplate basalt genesis; hydrothermal metamorphism of oceanic crust; sediment sources, accumulation, postdepositional modification; passive margin sediment accumulation; trench subduction zones, basalts and andesites of oceanic island arcs; continental accretion. For first-year oceanography students. Prerequisite: permission of instructor. Offered: W.

OCEAN 502 Physics of Ocean Circulation (5) Structure of ocean basins; physical properties of seawater and the equation of state; heat, salt, fresh water budgets; tidal potential; Coriolis effect and geostrophic balance; major current systems and water masses; mixing, stirring in the ocean; simple waves; modern experimental methods in physical oceanography. Prerequisite: permission of instructor. Offered: A.

OCEAN 503 Ocean Circulation: Observations (3) Modern large- and mesoscale ocean observations, interpreted in terms of contemporary circulation theories. Spectrum of temporal variability; eddies and eddy fluxes; ventilation; advection and diffusion in the abyss;

transports of heat and salt; climatic scale of variability; modern methods for determining circulation. Prerequisite: 502 or permission of instructor. Offered: Sp.

OCEAN 504 Physical Fluid Dynamics (3) Fundamentals of fluid mechanics as a basis for understanding problems in geophysical fluid dynamics. Cartesian tensors, derivation of the Navier-Stokes equation, Bernoull's equation and potential flow, dimensional analyses, introduction to mathematical approximation techniques, flows with rotation, effects of density stratification. For physical oceanography graduate students. Prerequisite: permission of instructor. Offered: A.

OCEAN 506 Physics of Marine Geologic Processes (5) Thermomechanics of hot material upwelling at spreading centers and formation of characteristic physical structures; lithosphere thickening with age and related geophysical observables; mechanics of subduction zones; fate of sinking slabs and deepmantle recycling; geometry of plate tectonics on a sphere; causes of vertical motions at the earth's surface. Prerequisite: permission of instructor. Offered: jointly with GPHYS 506.

OCEAN 509 Geophysical Fluid Dynamics I (3) Large-scale dynamics of rotating stratified fluids, introductory fluid mechanics. Observed properties of oceanic, atmospheric flow, thermal-wind balance, velocity spirals. Potential vorticity, instability of large-scale flows, Ekman layers. Gravity, inertia, Rossby waves; ray theory, equatorial waveguide. Action, energy principles. Offered: jointly with ATM S 509; W.

OCEAN 510 Geophysical Fluid Dynamics II (3) Theories, models of large-scale dynamics of oceans, atmospheres. Potential vorticity, Q principles; Rossby waves, ray tracing, Green's function, setup of general circulation; atmospheric "channels" versus ocean "basins"; wave-mean flow interaction, mountain drag, internal momentum flux; "Lagrangian" motion of particles, tracers; cascades, eddy flux of heat, moisture, Q. Prerequisite: 509. Offered: Sp.

OCEAN 511 Methods and Measurements in Physical Oceanography (2) Principal instruments and experimental methods of physical oceanography. Devices and systems that measure pressure, temperature, electrical conductivity, sea state, and velocity. Prerequisite: permission of instructor, Offered: 1996; W.

OCEAN 514 Seminar in Physical Oceanography (1, max. 9) Discussion of selected problems of current interest in physical oceanography. Prerequisites: 402 or 502 and permission of instructor.

OCEAN 515 Waves (3) Application of marine hydrodynamics principles to wave motion in oceans.. Offered: W.

OCEAN 516 Ocean Circulation: Theories (3) Hydrodynamic theories concerning origin and characteristics of major ocean currents. Prerequisite: permission of instructor. Offered: A.

OCEAN 517 Oceanography of Inshore Waters (5) Theories and techniques of investigation and interpretation of conditions existing in inshore waters with particular reference to mixing and flushing and to areas adjacent to the State of Washington; use of dynamic models. Prerequisite: permission of instructor.

OCEAN 518 Seminar on Dynamical Oceanography (1, max. 9) Selected problems of current importance concerning the dynamics of the ocean. Concentrates on those topics of importance that are considered fundamental and central to most of the areas of applications.

OCEAN 519 Oceans and Climate Variation (3) Interchange of heat, water, and energy; study of budgets and of mechanisms of exchange. Prerequisite: ATM S 462. OCEAN 520 Seminar (1) Introduction to current research topics for beginning graduate students. Offered: AWSp.

OCEAN 521 Seminar on Chemical Oceanogaphy (*, max. 9) Lectures, discussions, and readings on selected problems of current interest. Prerequisite: permission of instructor.

OCEAN 522 Radiochemical Tracers and Ocean Mixing (3) Distribution of natural and bomb-produced radioactive tracers in the ocean. Application of models used to derive information concerning time scales of (1) gas transfer at the water atmosphere interface; (2) whole ocean, thermocline, and deep-ocean water circulation; and (3) particulate settling in the marine environment. Knowledge of elementary differential equations suggested. Prerequisite: permission of instructor. Offered: 1995; W.

OCEAN 523 Isotope Biogeochemistry (3) The use of stable isotopes to study biogeochemical cycles in the oceans and atmosphere; specifically carbon, nitrogen, and sulfur cycles. Isotopic effects during photosynthesis, respiration, organic matter degradation. CaCO₃ dissolution, methanogenesis, nitrification/denitrification, and sulfate reduction. Prerequisite: permission of instructor.

OCEAN 524 Aquatic Chemistry (3) Application of physical chemistry and thermodynamics to processes that control chemical composition of natural waters. Equilibrium approach. Acid/base chemistry, the carbonate system, dissolution and precipitation, metal ions in solution, oxidation-reduction chemistry, silicate mineral reactions. Prerequisite: 527 or permission of instructor. Offered: W.

OCEAN 525 Aquatic Kinetics (3) Reaction rates and mass transport in water. Theories of chemical kinetics; experimental results from: CO₂ hydrolysis, Fe, Mn, and H₂S oxidation, stable isotope fractionation, mineral dissolution; homogeneous, heterogeneous, microbial catalysis; reaction and transport at air-water, sediment-water, and O₂/H₂S interfaces. Prerequisites: CHEM 524 or equivalent and differential equations. Offered: alternate years.

OCEAN 526 Marine Organic Geochemistry (3) Sources, reactions, and fates of organic molecules in the marine environment along with the stable isotope geochemistry of marine organic substances. Prerequisites: CHEM 237 and 239 or permission of instructor.

OCEAN 527 Marine Chemistry (5) Processes controlling the chemical composition of seawater. Chemical distributions in the ocean, marine physical chemistry, chemical equilibrium, and concepts of mass balance. Mechanisms and models used to explain distributions of stable and radioactive isotopes, gases, trace metals, and biochemicals in the world's oceans. Offered: A.

OCEAN 528 Paleoceanography (3) History of environmental changes on earth over the past 100 million years as reconstructed from records in deep-sea sediments, ice sheets, and other ocean/terrestrial substrates. Examination of isotopic, geochemical, micropaleontological, and dating techniques. Role of the ocean in climate change. Prerequisite: permission of instructor. Offered: 1994; A.

OCEAN 529 Biological Oceanography for Physical Scientists (5) Principles and practice of biological oceanography for students with strong background in physical sciences but little recent exposure to biology. Ecological principles at individual, population, and community levels; overview of discipline of biological oceanography; case studies of interdisciplinary problems shared with the physical sciences. Prerequisite: permission of instructor. Offered: W.

OCEAN 530 Biological Oceanography: Bacteria and Protozoa (3) Bacteria in the marine environment; fate of organic carbon in the ocean and the interrelationship of the carbon cycle with other biogeochemical cycles. Prerequisite: permission of instructor. Offered: W.

OCEAN 531 Biological Oceanography: Phytoplankton (3) Phytoplankton in the marine environment: ecology, primary productivity, and physiology. Phytoplankton growth and photosynthetic patterns; spatial and temporal distributions of phytoplankton; methods for determining distributions and rates of production and growth. Prerequisite: permission of instructor. Offered: W.

OCEAN 532 Biological Oceanography: Zooplankton (3) Distribution and abundance of pelagic animals in space and time; analysis of their interactions. Smallscale distributions and behavior, population dynamics and energetics, trophic structure and dynamics, pelagic community structure, models of populations and food chains, secondary production and biogeography. Prerequisite: permission of instructor. Offered: Sp.

OCEAN 533 Biological Oceanography: Benthos (3) Analysis of marine benthic communities; new research questions and method; ecologically important physics of benthic boundary layer; theories, mechanics, and observations of deposit feeding; succession as consequence of physical processes and biological interactions. Environments include deepsea, continental shelves, estuaries, and intertidal, focusing on soft substrata. Prerequisite: permission of instructor. Offered: Sp.

OCEAN 534 Methods and Measurements in Biological Oceanography (2) Methods for bacteria, phytoplankton, and zooplankton population assessment. Rate measurements of phytoplankton, zooplankton, and bacterial production. Benthos measurements, including deep-sea environments. Prerequisite: permission of instructor. Offered: W.

OCEAN 535 Seminar in Biological Oceanography (*, max. 9) Lectures, discussions, and work on selected problems of current interest. Prerequisite: permission of instructor. Offered: AWSp.

OCEAN 536 Marine Microbial Interactions (3) Structure, function, and dynamics of natural mixedspecies populations of marine bacteria and their interactions with higher organisms; mixed-species culture methods; synecological field methods; species assemblages in specialized environments; mutualisms; sites and patterns of genetic exchange. Prerequisite: 530 or permission of instructor. Offered: alternate years.

OCEAN 537 Marine Primary Productivity (3) Patterns and mechanisms of marine phytoplankton primary production. Small-to-global-scale patterns of production; environmental regulation of production; absorption of electromagnetic radiation; fluorescence; carbon fixation; trophic interactions; remote sensing and other optical methods. Prerequisite: 531 or permission of instructor. Offered: alternate years.

OCEAN 538 Zooplankton Ecology (3) Life history strategies, dynamics and production of populations, vertical migration, interspecific interactions and community structure, models of complex assemblages of zooplankton, sampling methods and analysis, spatial heterogeneity. Prerequisite: 532 or permission of instructor. Offered: 1994; A.

OCEAN 539 Benthic Blological Processes (3) Processes characteristic of soft-bottom benthic environments; areas and methods of rapid current progress; open research questions; deposit feeding; passive larval recruitment; physical, chemical, geological, and biological feedbacks in ecological succession; scaling of laboratory systems. Prerequisite: 533 or permission of instructor. Offered: alternate years.

OCEAN 540 Seminar In Geostatistics (1-3) Lectures and discussions on selected problems in the applications of statistics in earth science. Offered: alternate years.

OCEAN 541 Marine Reflection Selsmology (3) Principles of ocean reflection acoustics; effect of frequency on reflection coefficient and attenuation; bandwidth and resolution; sound sources; hydrophones, acoustic noise, tow noise; multichannel techniques; migration of reflectors; normal move out and wave equation; physical basis and numerical methods. Prerequisite: permission of instructor.

OCEAN 543 Petrogenesis and Geochemical Evolution of Marine Igneous Rocks (3) Petrologic processes involved in generation and metamorphism of igneous rocks in oceanic basins. Emphasizing genesis of special petrotectonic assemblages, including ridge and "hot spot" basalts, oceanic islands, midplate volcanics, igneous sequences associated with oceanic island arcs. Includes geochemical characterization of important rock types. Prerequisites: 501, 506, and GEOL 424 and 425 or equivalent and permission of instructor.

OCEAN 544 Statistical Models in Oceanography (3) Multivariate analysis; regression, trend surface analysis, factor analysis, discriminant functions, and stochastic process models in oceanography. Prerequisite: Q SCI 483 or permission of instructor.

OCEAN 548 Topics in Physical Oceanography (1-4, max. 9) Lecture series on topics of major importance in physical oceanography. Offered: AWSp.

OCEAN 550 Seminar on Geological Oceanography (*, max. 9) Lectures, discussions, and field and laboratory work on selected problems of current interest. Prerequisite: permission of instructor.

OCEAN 554 Techniques for Ocean Floor Research (3) Planning field programs; selection of equipment and survey procedures; collection, analysis, compilation, and presentation of bathymetric and sediment data; evaluation of techniques and results.

OCEAN 556 Advanced Marine Geology and Geophysics (*, max. 9) Contemporary problems in marine geology; concepts supporting or at variance with accepted hypotheses; discussion of recent advances. Prerequisite: permission of instructor.

OCEAN 570 Simulation Analysis of Marine Systems (3) Introduction to the analytical methods of systems ecology. Simulation models are used in comparative analyses of the structure, nutrient and energy flow, and sensitivity of response in representative aquatic ecosystems. Prerequisites: BIOL 472, FOR-TRAN, MATH 126, Q SCI 482, or permission of instructor.

OCEAN 580 Marine Science in the Coastal Zone (4) Major oceanic and nearshore processes, conditions, and their influence on human activities in coastal zone. Methods of understanding and accessing the accumulated knowledge on marine processes and its applications to decision-making process. Lectures and discussions of biological, chemical, geological, and physical oceanography. Generation and use of data bases as interpretative tools. Offered: A. OCEAN 581 Geochemical Modeling (3) Background to modeling concepts frequently encountered in chemical oceanography: box models, advectiondiffusion problems, sediment diagenesis equations, and boundary layer (air-water and sediment-water interface) models. Problems requiring application of the models to chemical distributions in the ocean. Prerequisite: permission of instructor. Offered: alternate vears.

OCEAN 582 River Basin Biogeochemistry (3) The function of rivers and river basins in transporting materials to the oceans and their importance in biogeochemical cycles. Origin of water and water routing within drainage basins, sources and modification of dissolved and particulate materials in transport, ecological theory, and estuarine mixing zone transformations. Prerequisite: permission of instructor.

OCEAN 590 Advanced Topics in Biological Oceanography (*, max. 18) Specialized research areas. Topic varies each year. Offered at Friday Harbor Laboratories. Prerequisite: permission of director of Friday Harbor Laboratories.

OCEAN 600 Independent Study or Research (*) Offered: AWSpS.

OCEAN 700 Master's Thesis (*) Offered: AWSpS.

OCEAN 800 Doctoral Dissertation (*) Offered: AWSpS.

SCHOOL OF PHARMACY / MEDICINAL CHEMISTRY 427

School of Pharmacy

Dean

Milo Gibaldi

Associate Dean

Wayne A. Kradjan

The School of Pharmacy prepares students for careers in a variety of settings, including ambulatory practice, institutional practice, long term care, home care, industry, academia, and research. The entry level professional curriculum provides scientific and clinical applications in the following areas of training: the biological sciences (anatomy, physiology, genetics, immunology, microbiology, pathology, biochemistry), the pharmaceutical sciences (dosage formulation, pharmaceutics and biopharmaceutics, medicinal chemistry, pharmacology), the clinical sciences (therapeutics, pharmacokinetics, drug literature evaluation, clinical pharmacology, drug product selection and drug use review), administrative training (business administration, distribution system management, drug distribution and health care delivery systems, formulary management, health care policy, pharmacoeconomics, pharmacoepidemiology, pharmacy law), social and behavioral sciences (communications with patients and other health care providers, a sensitivity to patient concerns, ethics, health promotion and disease prevention), and the technical sciences (computerized data management, medication distribution systems and new technologies in drug administration). Teaching is directed at helping students develop the critical thinking and problem solving skills necessary to provide rational drug therapy, promote healthy lifestyles and disease prevention, enhance patient compliance, reduce medication related problems and improve health outcomes. In the final year of the program, students complete experiential training at community and institutional pharmacies located primarily in the Puget Sound area. Graduates meet the educational requirements for licensure in all fifty states, as the School is fully accredited by the American Council on Pharmaceutical Education.

The School of Pharmacy is organized into Departments of Medicinal Chemistry, Pharmaceutics, and Pharmacy. Information about the entry level professional program may be obtained from the Office of Academic and Student Programs located in H-362 Health Sciences. Graduate school information may be received from the individual departments offering the advanced degrees.

Consideration for admission to the professional program requires a minimum of two years of prepharmacy training. Sequences in biology, general chemistry and organic chemistry as well as courses in calculus, statistics, writing, microbiology, the visual, literary, and performing arts (formerly humanities) and individuals and societies (formerly the social sciences), compose the necessary prerequisite work. An applicant who is admissible to the University is not assured of admission to the School of Pharmacy. Admission is competitive, based on academic achievement, motivation, communicative skills, and aptitude for a pharmacy career. The deadline for submission of applications is March 15. Details on admission requirements, application procedures, and program content can be obtained from the Office of Academic and Student Programs.

Students are given an opportunity to use elective choices to design their own program sequence. Specialized professional courses may be taken which prepare a student to provide pharmaceutical care in an area compatible with career goals. The Geriatric Certificate Program which combines didactic and practicum course work addressing the needs of the elderly, is an example of how students can apply their elective choices to pursue an area of interest.

Currently the School of Pharmacy offers a three year professional program leading to the Bachelor of Science in Pharmacy. Successful completion qualifies a student to take the licensure examination to become a registered pharmacist. If students choose to pursue additional course work, they may apply to the Doctor of Pharmacy program which requires two additional years. The School is considering converting to a four year program awarding the Doctor of Pharmacy as its entry level degree. The likelihood of this conversion is contingent upon program readiness and funding approval. Prepharmacy students, particularly those who are applying for autumn 1995 admission, are encouraged to contact the School regarding progress toward this proposed change.

Medicinal Chemistry

Chairperson

Wendel L. Nelson

Graduate Program

Wendel L. Nelson, Graduate Program Coordinator

The Department of Medicinal Chemistry offers programs of graduate study leading to the degrees of Master of Science and Doctor of Philosophy. The primary areas of research training of the Department of Medicinal Chemistry are in chemical and molecular aspects of drug action and of drug metabolism including both laboratory experiments and theoretical work. Studies in the field include, for example, the relationship between chemical structure and biologic effect, function and toxicity: delineation of the metabolic spectrum of drugs or foreign substances in man and animals, and the factors (environmental, disease, etc.) that affect this spectrum of metabolites; the study of the nature and catalytic properties of the enzymes responsible for metabolic reactions and the molecular mechanisms by which such reactions occur. Theoretical studies on conformational aspects of important enzymes involved in these processes are under study.

Graduates from the program must possess the skills necessary to develop quantitative and qualitative methodologies to pursue studies at the whole animal, organ, microsomal, or purified enzyme level; to elucidate and evaluate the chemical transformations that occur in metabolic processes by isolation, purification, spectroscopic investigation, structural determination, and chemical synthesis; and, ultimately, to provide an understanding and rationale at the molecular level for events that occur at the biological level.

Most students proceed directly to the doctoral degree program. Participation in a cumulative examination process and at least two quarters of teaching experience are additional requirements for the doctoral program. Satisfactory completion of cumulative examination requirements are necessary to work for the Ph.D. degree.

Admission Regultements

Students who intend to work toward the Dbctor of Philosophy degree must apply for admission to the Graduate School and meet the requirements outlined in the Graduate Study section of this catalog. Graduate students must satisfy the requirements for an advanced degree in force at the time the degree is to be awarded. Graduate study requires approval of the Graduate School and the Department of Medicinal Chemistry.

Special Requirements

Students with undergraduate degrees in pharmacy or in the biological or physical sciences are accepted for graduate study in medicinal chemistry. Undergraduates who plan to pursue graduate study may expedite their programs by selection of pertinent electives. Although the choice of electives varies with the student's ultimate goals, graduate study in medicinal chemistry requires adequate preparation in mathematics and in the biological and physical sciences.

Master of Science Degree

A student in the master's degree program must present at least 27 credits of course work, exclusive of thesis and nonthesis research. The student also must complete a research project, prepare an acceptable thesis, and pass a final examination.

Doctor of Philosophy Degree

A student in the doctoral program must present a minimum of 45 credits of course work, exclusive of dissertation and nonthesis research. Credits earned for the master's degree may be applied toward the doctoral degree. The student must pass a General Examination for admission to candidacy for the doctoral degree. Satisfactory completion of departmental cumulative examinations precedes scheduling of the General Examination. The student must complete a research project, prepare an acceptable dissertation and pass a Final Examination. Research for the doctoral degree must be done at this university.

Financial Aid

Financial support in the form of research assistantships and fellowships may be available to students in good standing throughout their graduate careers. Availability of financial support varies from year to year, and prospective applicants should contact the graduate program coordinator for additional information.

Pharmaceutics

Chairperson

René H. Levy

Graduate Program

René H. Levy, Graduate Program Coordinator

The Department of Pharmaceutics offers programs of graduate study leading to the degrees of Master of Science and Doctor of Philosophy.

Program Description

This program will train research scholars in the fundamental aspects of drug disposition and action in animals and man. Drug disposition includes the phenomena of absorption, distribution, and elimination. Pharmacokinetics is the study of the time course of these processes and the time course of pharmacological effects. Graduates will possess expertise in quantitative analytical techniques and in the elaboration of mathematical models to describe the various processes of drug disposition and action. The scientists graduating from this program will be capable of investigating the relationship between drug and metabolite levels in various body compartments or tissues with the kinetics of pharmacological effects, both therapeutic and toxic. They will be able to probe the effects of alteration of physiological and biochemical processes which occur in disease states on drug disposition and pharmacological response.

Typically, these scientists will interact with clinicians, medicinal chemists, pharmacologists, analytical chemists, physiologists, and biochemists. This will be possible because their training is highly interdisciplinary at the didactic and research levels.

Admission Qualifications

Students with undergraduate degrees in pharmacy or in the biological or physical sciences are accepted for graduate study in pharmaceutics. Undergraduates who plan to pursue graduate study may expedite their programs by selection of pertinent electives. This information can be obtained from the graduate program coordinator.

Financial Aid

All students in the program receive financial support in the form of research assistantships, Public Health Service predoctoral training fellowships, and outside fellowships such as those from the American Foundation for Pharmaceutical Education. Financial support is awarded annually as long as substantial progress toward the degree is being made Correspondence and Information

Pharmacy

Chairperson

Andy Stergachis

Postgraduate Professional Pharmacy Programs

Doctor of Pharmacy Degree

The Department of Pharmacy offers a two-year Doctor of Pharmacy (Pharm.D.) program for persons who wish to practice pharmacy at an advanced level. Academic and clinical education is provided for individuals who have graduated from an accredited school or college of pharmacy and who are eligible for licensure in the state of Washington. The Pharm.D. curriculum offers two options: a joint Doctor of Pharmacy-general residency program and a Pharm.D.-only program. Because enrollment is limited, admission is competitive, based on academic achievement, letters recommendation, and a personal interview. Students are admitted to the program July 1 of each year. The Department of Pharmacy must receive all application materials by January 1. Details on application procedures and program content may be obtained from the director of the Doctor of Pharmacy program, or by requesting the brochure describing the Doctor of Pharmacy-residency program.

Students complete 50 credits in didactic courses including: advanced therapeutics, biostatistics, clinical pharmacokinetics, research methods, case conferences, and departmental seminars. Sufficient elective course opportunities exist to allow the student to develop specialized expertise. In addition, a minimum of eight five-week rotations (48 credits) are spent in clinical clerkships and residency rotations that are individually precepted by faculty members of the Department of Pharmacy.

The 2080-hour residency component is completed at the University of Washington Medical Center and at Harborview Medical Center under the guidance of the Director of Pharmacy Services, V. de Paul Burkhart. The residency consists of experience in clinical practice, drug distribution, and hospital pharmacy administration. An annual stipend is associated with the joint Pharm.D.-residency program.

Master of Public Health Degree

Students can earn the Master of Public Health (M.P.H.) or Master of Health Administration (M.H.A.) degree through a collaborative program with the School of Public Health and Community Medicine. Most students complete an American Society of Hospital Pharmacists-accredited general residency at Group Health Cooperative of Puget Sound concurrent with a twoyear program of academic study, however other training sites are also available, including Virginia Mason Medical Center. The academic portion is broad based, with a central theme of administration. Areas of training include health services, administration and finance, biostatistics, epidemiology, human resources management, program evaluation, pharmacy administration, and opportunities for advanced clinical pharmacy and therapeutics. This combination provides the student with a solid foundation for a career in institutional pharmacy administration and offers the opportunity for further career advancement in health services administration.

Enrollment is competitive and limited to two or three students. An annual stipend associated with the residency portion of the program is available. Applicants must be graduates of an accredited school or college of pharmacy and be eligible for licensure as a pharmacist. Students are admitted to the program starting on July 1 of each year. Applicants should register for the American Society of Hospital Pharmacists residency matching program by mid-December and complete all application materials by January 31. Applicants are also required to take the GRE examination. Additional information is available from Dr. Dale Christensen, Department of Pharmacy.

The Program in Pharmacoepidemiology and Drug Policy was established to provide a focus for academic activities concerning the relationship between medications, medical care, and health outcomes. In collaboration with the School of Public Health, the program offers graduate training in pharmacoepidemiology, the study of the use and effects of drugs in large, defined populations, pharmacoeconomics, and in drug policy. The core faculty for the program is drawn from the disciplines of pharmacy, epidemiology, medicine, health services, and biostatistics. Strong linkages have been established with many public and private health care organizations in the Northwest. For further information and application material contact Dr. Andy Stergachis.

Dawson, Karan N. 1976; MS, 1978, University of Washington; clinical practice, instruction and patient information.

Lecturers

Murphy, Nanci L. 1989; BPharm, 1977, Washington State University; pediatrics, patient teaching.

O'Sullivan, Teresa 1990; PharmD, 1990, University of Minnesota; clinical pharmacy, cystic fibrosis.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

Medicinal Chemistry

MEDCH 400 Biophysical Medicinal Chemistry (3) *Trager* Principles of physical organic chemistry; chemical bonding, stereochemistry, acids/bases, and reaction mechanisms relevant to processes of drug distribution, binding, specificity, metabolism, and elimination. Prerequisite: CHEM 239. Offered: Sp.

MEDCH 413 Immunizing and Antimicrobial Agents (3) Elmer Chemical and biologic properties of agents used to prevent or treat infectious diseases, including diagnostic, prophylactic, and therapeutic uses of immunizing biologicals and spectrum, action mechanisms, resistance patterns, toxicity, and thera-. peutic applications of antibiotics. Prerequisites: MICRO 301, 302. Offered: Sp.

MEDCH 435 Diagnostic Medicinal Chemistry (3) *S. Nelson* Examination of clinical diagnostic tests with regard to the chemical or biochemical rationale of the testing method, interpretation of test results, and major factors influencing test values with special emphasis on the effects of medications. Clinical laboratory data from patients considered in light of these factors. Prerequisite: BIOC 406. Offered: W.

MEDCH 440, 441, 442 Medicinal Chemistry (3,3,3) Atkins, Baillie, Elmer, S. Nelson, W. Nelson, Rettie, Trager Study of the various classes of medicinal compounds with particular emphasis on biological activity, mechanism of action, biotransformation, and the structural and physical properties governing absorption, distribution, and excretion. Prerequisites: CHEM 239 and CONJ -342. Offered: A,W,Sp.

MEDCH 490 Metabolism of Drugs (3) Baillie, Trager Processes of drug metabolism, their mechanisms, and their implications in modern therapy. Bioactivation of prodrugs and biotransformations in the inactivation and elimination of drugs, and the relationship to drug toxicity and drug design. Prerequisite: CHEM 239 or equivalent. Offered: W.

MEDCH 499 Undergraduate Research (*, max. 6) Research problems in medicinal chemistry. Prerequisites: cumulative grade-point average of 2.50 and permission of instructor. Entry code required. Offered: AWSpS.

Pharmaceutics

PCEUT 331 General and Physical Principles (4) Unadkat, Witket Introduction to scientific bases of pharmacy, with emphasis on physical processes important in the manufacture, stability, and characteristics of various drug dosage forms. Prerequisites: CHEM 239 and pharmacy major. Offered: A.

PCEUT 405 Biopharmaceutics and Pharmacokinatics (3) Shen, Slattery Drug release from dosage forms, absorption from different routes of administration, the resulting concentration time curves in blood and urine, and the role of these factors in bioavailability and drug product selection. Prerequisites: PCEUT 331, CONJ 342 and pharmacy major or permission of instructor. Offered: A.

PCEUT 406 Clinical Pharmacokinetics (4) G. Anderson, Levy Basic principles of pharmacokinetics and their application to the clinical setting, including: single-dose intravenous and oral kinetics, multiple dosing, nonlinear pharmacokinetics, determination of patient-specific dosage regimens, role of disease in drug requirements for the major pharmacologic classes of drugs. Prerequisites: 405 and pharmacy major. Offered: W.

PCEUT 410 Pharmacokinetics of Drug Interactions (3) Shen The common pharmacokinetic mechanisms underlying clinically important interactions between drugs. Interactions involving gastrointestinal absorption, serum drug protein binding, excretory and metabolic clearance processes. Prerequisite: 406. Offered: Sp.

PCEUT 486 Pharmaceutical Blotechnology (3) Gibaldi, Ho Applications of biotechnology in designing therapeutic products, with emphasis on research and development of biopharmaceuticals. Molecular cloning, production, physical stability, delivery systems of protein therapeutics in relation to pharmacokinetic and therapeutic responses. Prerequisite: concurrent registration in 405 and PHCOL 401 or permission of instructor; BIOC 405/406. Offered: A.

PCEUT 499 Undergraduate Research (*, max. 6) Basic and clinical research problems in drug disposition and effect. Prerequisites: 2.5 GPA and permission of instructor. Offered: AWSpS.

Pharmacy

PHARM 304 Profession of Pharmacy (3) Kradjan Overview of the profession of pharmacy emphasizing practice opportunities and specialization. Introduction to clinical and ethics case evaluation techniques provided in the scope of the course. Credit/no credit only. Prerequisite: pharmacy majors; prepharmacy students by permission of instructor. Offered: A.

PHARM 305 Clinical Dispensing Pharmacy (3) Davis Preparation and dispensing of prescriptions at Rubenstein Memorial Pharmacy in Hall Health Center or University of Washington Medical Center outpatient pharmacy. For students with little or no experience in pharmacy wishing experience prior to internship, externship, or didactic course work. Under direct supervision of the Student Health Center pharmacists and University of Washington Medical Center pharmaccists. Credit/no credit only. Prerequisites: pharmacy major and permission of instructor. Offered: AWSpS.

PHARM 309 Drug Information Sources (1) Murri Introduction to systematic methods for responding to drug information inquiries with emphasis on familiarizing students with content and use of important pharmacy, drug information resources. Emphasis on written, verbal communications and development of efficient strategies for retrieving and evaluating information relative to specific drug information inquiries. Prerequisite: pharmacy majors. Offered: A.

PHARM 334 Dispensing Practice and Calculations Laboratory (1) Exercises in dispensing medications pursuant to order of prescriber. Intravenous admixtures, extemporaneous compounding, patient profiles, patient counseling, use of computers for outpatient dispensing. Required pharmaceutical calculations proficiency taught through exercises, computeraided instruction, and assigned practice problems. Prerequisites: PCEUT 331, concurrent registration in 440, and pharmacy major. Offered: W.

PHARM 409 Applied Pharmacokinetics (2) Anderson, Bauer Pharmacokinetics of specific drugs. Influence of age, weight, sex, and disease states on patient-specific dosage regimens. Advanced kinetic concepts. Prerequisite: PCEUT 406 or permission of instructor. Offered: Sp.

PHARM 411 Medical Devices for Home Health Care (3) Study of medical devices commonly provided by pharmacists to their patients, including their selection and adaptation for specific patient needs. Lectures include display and demonstration of actual devices. Enrollment limited. Prerequisite: 440. Offered: Sp.

PHARM 412 Nonprescription Drugs and Self-Care (3) Kradjan Overview of common classes of nonprescription medications with emphasis on case examples. Patient assessment, non-drug therapy, selection of nonprescription products if appropriate, and advice to patients. Oral presentation required. Prerequisite: 484 which may be taken concurrently. Offered: So.

PHARM 415 Primary Care Pharmacotherapeutics (3) Explores clinical applications and therapeutic issues for selected drug categories commonly used in primary care settings and across age groups. Selected drug categories are defined by pharmacokinetics, indications for use, efficacy, therapeutic and adverse effects, monitoring parameters, dosing principles, common drug interactions. Patient education and socioeconomic and behavioral factors emphasized. Offered: Sp.

PHARM 437 Substance Abuse Awareness (3) Lippert The etiology and patterns of substance abuse, drug classes, treatment options, codependency and recovery, drug testing, legal and ethical considerations, and community resources are covered in a lecture-discussion format. Students also participate incommunity service lectures and/or special projects. Prerequisities: 440, 485, third-year students or permission of instructor. Offered: W.

430 SCHOOL OF PHARMACY / COURSE DESCRIPTIONS

PHARM 438 Gerontological Communication Skills Seminar (2) Dawson Addresses special communication needs of the elderly, ranging from individualized patient counseling to patient advocacy through development and provision of pharmacy services. Communication techniques applicable to teaching, developing innovative services, supervising, motivating, conflict resolution, and interdisciplinary interactions are explored in lecture and laboratory. Prerequisite: Geriatric Certificate Program or permission of instructor. Offered: Sp.

PHARM 440 Pharmaceutical Care Systems I (6) Dawson, Gardner Distribution and control systems for medications and influence of behavior and communications on use. Emphasis on interpreting orders, monitoring patient use, undertaking medication history interviews, and communicating with patients and health professionals using effective listening, writing, and interpersonal skills. Prerequisites: PCEUT 331, concurrent registration in 334, and pharmacy major. Offered: W.

PHARM 441 Pharmaceutical Care Systems II (4) Gardner Relationship of pharmaceutical care system to health care in United States. Role of organizations, institutions, public policy in delivery of care. Methods of analyzing medication use in patient populations. Contemporary health issues including access to care, cost containment, quality assurance, and national health insurance. Prerequisites: PHARM 440 and pharmacy major. Offered: Sp.

PHARM 450 Pharmacy Laws (3) Study of the laws regulating the practice of pharmacy. Includes professional liability, warranties, and contracts. Prerequisites: 470 or 471 or 486, and pharmacy major. Offered: Sp.

PHARM 452 Contemporary Problems (1) Christensen Discussion of current trends affecting the role of pharmacy in health-care delivery. Credit/no credit only. Prerequisite: third-year standing. Offered: Sp.

PHARM 460 Principles of Professional Practice Management (3) Christensen Topics include organization of time and objectives, management of financial resources, inventory, and computer simulations of management decision-making. Emphasis on developing specific skills, such as burden rate analysis, and financial ratio analysis. Primarily for students who are interested in managerial careers in community pharmacy practice. Prerequisite: pharmacy major. Offered: W.

PHARM 461 Pharmaceutical Marketing (3) Benfield Introduction to marketing concepts as applied to delivery of pharmaceutical products and services. Trends in pharmaceutical marketplace with focus on emerging trends and practices as they affect community and institutional pharmacy. Prescriber and consumer behavior relative to legend and over-thecounter drugs and demand for pharmaceutical care services. Prerequisite: pharmacy major. Offered: A.

PHARM 470 Community Practicum (8) O'Sullivan Closely supervised study-experience periods in community pharmacies. Students participate in active community pharmacy under the supervision of clinical preceptor. Conferences on selected topics supplement work experience. Credit/no credit only. Prerequisite: pharmacy major and permission of instructor. Offered: AWSpS.

PHARM 471 Institutional Distributive Practicum (4) O'Sullivan Closely supervised study-experience periods in hospital or other institutional pharmacies. Students participate in active institutional pharmacy under supervision of clinical preceptor. Conferences on selected topics supplement work experience. Credit/no credit only. Prerequisite: pharmacy major and permission of instructor. Offered: AWSpS.

PHARM 481 Introduction to Therapeutics (3) Hansten Introduces the process of applying the basic pharmaceutical sciences and physiology to the individualization of drug therapy. Covers patient assessment and pathophysiology for specific disease states and the process of optimizing and monitoring drug therapy. Prerequisites: PHCOL 401 and 402 and pharmacy major. Offered: W.

PHARM 483 Institutional Pharmacy Practice (2) Burkhart Presentation of topics regarding current contemporary institutions pharmacy practice. Discussion of new systems technology, home care programs, managed care, computer applications, budgeting, formulary systems, drug information services, intravenous admixture programs, quality assurance process, and patient oriented services. Offered: W.

PHARM 484 Clinical Therapeutics I (4) Black, Kradjan Continuation of 481 with emphasis on disease states and their drug therapies. Assessment of drug therapy and application of basic pharmaceutical sciences to selection of drugs in patient care. Prerequisites: 481 and pharmacy major. Offered: Sp.

PHARM 485 Clinical Therapeutics II (3) McRorie Continuation of 484 with emphasis on disease states and their drug therapies. Lectures stress assessment of drug therapy and application of basic pharmaceutical sciences to selection of drugs in patient care. Prerequisites: 484, PCEUT 406, or permission of instructor and pharmacy major. Offered: A.

PHARM 486 Institutional Clinical Practicum (4) O'Sullivan Supervised experience in the clinical roles of pharmacy practice. Students participate in daily rounds in institutional patient-care facilities and take drug-use histories, monitor drug therapy of patients, instruct patients about medications, and provide consultation to other health-care professionals. Credit/no credit only. Prerequisites: 334, 484, pharmacy major, or permission of instructor. Offered: AWSpS.

PHARM 487 Advanced Clinical Practicum (4) *O'Sullivan* Supervised experience in the clinical roles of pharmacy practice. Students provide pharmaceutical care under the supervision of a preceptor in an affiliated health care setting. Students may provide consultation to other health care professionals in ambulatory or institutional patient care facilities. Credit/no credit only. Prerequisite: 486. Offered: AWSpS.

PHARM 488 Elective Advanced Practicum (*, max. 16) O'Sullivan, Plein Advanced-level clinical pharmacy experience in institutional (hospital, nursing home, long-term-care facility) and ambulatory patientcare facilities under direct supervision of a clinical preceptor. Credit/no credit only. Prerequisites: 486 and permission of instructor. Offered: AWSpS.

PHARM 489 Drug Information (4-8) Murri Supervised experience in performing clinical pharmacy activities relating to retrieval and analysis of drug information from various resources; preparation of responses to consultation requests presented to Drug Information Service; techniques of preparing written and verbal drug information reports; participation in preparation of a pharmacy newsletter. Prerequisite: permission of instructor. Entry code required. Offered: AWSpS.

PHARM 490 Fluid and Electrolytes and Parenteral Nutrition (2) Edwards Principles of fluid and electrolyte therapy, including saline, water, and acid-base balance. Carbohydrate, protein, lipid, vitamin, and mineral requirements in parenteral nutrition. Nutritional assessment, complications of parenteral nutrition, stability and compatibility of intravenous solutions, modifications of parenteral nutrition in pediatrics and specific disease states. Prerequisite: 481. Offered: Sp.

PHARM 491 Cancer Pharmacotherapeutics (2) Kwok, McDonnell, Takeuchi Pharmacotherapy of cancer, covering supportive care (antibiotics, antiemetics, analgesics, nutrition) to the antineoplastic agents themselves. Specialists in each area serve as guest lecturers. Designed for pharmacists. Prerequisite: third-year professional standing in pharmacy. Offered: W.

PHARM 492 Pharmaceutical Services for Long-Term Care (2) Scope of pharmaceutical services for long-term care (LTC) and systems for services. Responsibilities of the pharmacist for distributive, administrative, and clinical pharmacy services for nursing homes and other long-term-care facilities. Economic considerations in provision of LTC pharmaceutical services. Role of the consultant pharmacist for homehealth-care organizations. Pharmaceutical services for independently living elderly. Prerequisite: pharmacy major. Offered: W.

PHARM 493 Basic Literature Evaluation (2) Introduction to steps involved in the assessment of primary and other literature sources. Students required to read and critique medical literature. Classes conducted in journal club format. Prerequisite: 309. Offered: Sp.

PHARM 495 Special Studies in Pharmacy (*, max. 6) Special studies of professional topics in pharmacy. An opportunity to expand the breadth and depth of understanding in specific pharmaceutical areas. Students usually undertake independent study under the individual direction of a faculty member. Prerequisite: permission of instructor. Entry code required. Offered: AWSpS.

PHARM 497 Drug Therapy for the Elderly (3) Plein Current knowledge of effects of aging on clinical use of drugs for elderly and aged patients. Drugs of choice and drug therapy monitoring. Multiple drug regimens in treatment of multiple pathologies. Prerequisite: 415 or 484 or permission of instructor. Offered: A.

PHARM 498 Case Conference: Geriatrics (1) Plein Students taking geriatric pharmacy clerkships in various clinical settings meet together with faculty to present case studies of elderly patients requiring complex drug therapies. Required for the Certificate in Geriatric Pharmacy Practice. Prerequisites: 486 and 488 which may be taken concurrently, or permission of instructor. Offered: WSp.

PHARM 499 Undergraduate Research (*, max. 6) Applied pharmaceutical research problems. Credit/no credit only. Prerequisites: cumulative grade-point average of 2.50 and permission of instructor. Entry code required. Offered: AWSpS.

Courses for Graduates Only

Medicinal Chemistry

MEDCH 501, 502, 503 Advanced Medicinal Chemistry (4,4,4) Atkins, Baillie, Elmer, S. Nelson, W. Nelson, Rettie, Trager Advanced study of the various classes of medicinal compounds, with particular emphasis on biological activity, mechanism of action, biotransformation, and the structural and physical properties governing absorption, distribution, and excretion. Prerequisite: permission of instructor. Offered: AWSp.

MEDCH 520 Seminar (1, max. 5) Graduate students attend seminars and make one formal presentation per year while in residence; 1 credit per year is allowed. Credit/no credit only. Offered: AWSp.

MEDCH 521 Advanced Medicinal Chemistry (3) Application of integrated data from the physical and biological sciences to problems of chemotherapy, including transport of drugs to site of action, biotransformation of drugs, interaction of drugs with enzyme systems, and recent advances in drug design. Prerequisites: CHEM 457, 531, and BIOC 442, or permission of instructor. Offered: Sp.

MEDCH 525 Laboratory Methods in Drug Metabolism (3) Atkins, Daggett, Kunze, Rettie, Thummel Examines laboratory techniques for the isolation and characterization of subcellular fractions from human tissues. Includes the determination of product formation kinetics, in *in vitro-in vivo* kinetic scaling, quantitation of specific enzyme contents in human tissue, and computer-assisted prediction of metabolites of catalytically sensitive drugs. Offered: jointly with PCEUT 525; Sp.

MEDCH 527 Drug Metabolism (3) Rettie, S. Nelson Considerations of the biochemical mechanisms for the biotransformation of drugs and foreign compounds. Includes reaction mechanisms, ultrastructural considerations, induction mechanisms, methodology, kinet-

SCHOOL OF PHARMACY / COURSE DESCRIPTIONS 431

ics of inhibition and activation, steroid and amine metabolism. Offered: jointly with PHCOL 527; odd years; W.

MEDCH 528 Proteins in Therapy and Disease (3) Atkins, Daggett Examination of enzyme catalysis and of protein structure and dynamics. Principles applied to topics of therapeutic relevance including: peptides and proteins as drugs, structure-based drug design, drug metabolism, protein engineering, and role of mutant or incorrectly folded proteins in disease states. Prerequisite: comprehensive course in biochemistry or consent of instructor. Offered: W.

MEDCH 541 Mass Spectrometry In Life Sciences (3) Baillie, Howald Principles of modern mass spectrometry. Applications to problems in chemical, biological, and health sciences. Applications of mass spectrometric techniques to the structural determination and quantitative measurement of biologically important substances. Prerequisite: permission of instructor. Offered: jointly with CHEM 541; even years; Sp.

MEDCH 582 Topics in Medicinal Chemistry (1, max. 10) Discussion of pertinent articles from current literature. Credit/no credit only. Offered: AWSp.

MEDCH 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

MEDCH 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

MEDCH 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Pharmaceutics

PCEUT 501 Advanced Pharmacokinetics I (3) Shen, Slattery, Thummel, Unadkat Drug absorption, distribution, excretion, metabolism, and effects in mammalian systems. Compartmental model and model-independent approaches examined. Drug disposition is studied in a physiologically realistic context taking nonlinear events into account. Aimed at development of innovative methods for data analysis and evaluation in biological systems. Prerequisite: 406. Offered: Sp.

PCEUT 502 Advanced Pharmacokinetics Concepts (5) *Levy, Shen, Slattery* Recent developments and emerging concepts in theoretical and experimental pharmacokinetics. Critical analysis of the current literature. Prerequisite: 406. Offered: Sp.

PCEUT 506 Pharmacokinetic Principles (4) Shen Coverage of basic pharmacokinetic concepts in an interactive format. Students are given reading assignments prior to class as a point of entry into the material. Topics emphasize the physiologic basic for mathematical models of drug distribution, clearance, and pharmacologic effect. Offered: W.

PCEUT 507 Topics in Clinical Pharmacokinetics (1, max. 12) Gibaldi New and important findings and trends in pharmacokinetics, biopharmaceutics, drug metabolism, and drug toxicity, with particular emphasis on clinical significance and applicability. Credit/no credit only. Prerequisite: PCEUT 405 or equivalent. Offered: AWSp.

PCEUT 510 Pharmacokinetics of Drug Interactions (3) Shen Common pharmacokinetic mechanisms underlying the clinically important interactions between drugs. Interactions involving gastrointestinal absorption, serum drug protein binding, excretory and metabolic clearance processes. Prerequisite: 406 or equivalent. Offered: Sp.

PCEUT 520 Seminar (1, max. 5) Graduate students attend seminars and make one formal presentation per year while in residence; 1 credit per year is allowed. Credit/no credit only. Offered: AWSp.

PCEUT 525 Laboratory Methods in Drug Metabolism (3) Atkins, Daggett, Kunze, Rettie, Thummel Examines laboratory techniques for the isolation and characterization of subcellular fractions from human tissues. Includes the determination of product formation kinetics, in *in vitro-in vivo* kinetic scaling, quantitation of specific enzyme contents in human tissue, and computer-assisted prediction of metabolites of catalytically sensitive drugs. Offered: jointly with MEDCH 525; Sp.

PCEUT 534 Pharmaceutical Analysis (3) Slattery Methods of drug and metabolite analysis from biologic matrices. Emphasis on practical aspects of assay design, optimization, and validation. Approaches to troubleshooting both assay methodology and instrumentation problems are also covered. Credit/no credit only. Offered: W.

PCEUT 583 Topics in Pharmaceutics (1, max. 15) Discussion of pertinent articles from current literature and recent laboratory results. Credit/no credit only. Offered: AWSp.

PCEUT 586 Pharmaceutical Biotechnology (3) Ho Applications of biotechnology in designing therapeutic products, with emphasis on research and development of biopharmaceuticals. Molecular cloning, production, physical stability, delivery systems of protein therapeutics in relation to pharmacokinetic and therapeutic responses. Prerequisite: concurrent registration in 405 and PHCOL 401 or permission of instructor; BIOC 405/406. Offered: A.

PCEUT 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

PCEUT 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

PCEUT 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Pharmacy

PHARM 501 Orientation to Pharm.D. (2) Murri Orientation to literature searching and evaluation and discussion of presentation skills. Orientation to departmental faculty practice and research. Credit/no credit only. Prerequisite: Doctor of Pharmacy students only. Offered: S.

PHARM 505 Clinical Pharmacokinetics (4) Bauer Clinically oriented introduction to advanced pharmacokinetic theories. Didactic presentation of the above materials for particular drugs or classes of drugs. Prerequisites: 484, 530, PCEUT 406, and permission of instructor. Offered: Sp.

PHARM 506 Clinical Pharmacokinetics II (3) Bauer Continuation of 505. Discussions based on research papers from clinical kinetic and therapeutic literature regarding the pharmacokinetics of a drug or class of drugs. Presentation of original research proposal required. Credit/no credit only. Prerequisites: 484, 505, 530, PCEUT 405, and permission of instructor. Offered: odd years; Sp.

PHARM 520 Seminar (1, max. 5) Doctor of Pharmacy student seminar. Students present two seminars on therapeutic topics of their choosing each year. Credit/no credit only. Offered: AWSp.

PHARM 530 Seminar: Research Methods in Pharmacy Practice (3) Christensen, Gardner, Stergachis Research methods and protocols designed to help develop skills in preparing research proposals and conducting applied research in pharmacy. Selected research methods, sources of data, analysis designs, and statistical methodologies. Prerequisites: graduate standing in pharmacy and one statistics course or permission of instructor. Offered: Sp.

PHARM 533 Pharmacoepidemiology (2) Heckbert, Gardner, Stergachis Introduction to the study of the risks and benefits of pharmaceuticals. Overview of drug development and approval, assessment of methods for study of drug risks and benefits, and their relationship with the formulation of public policy. Prerequisite: graduate standing or permission of instructor. Offered: W.

PHARM 534 Economic Evaluation of Technological Innovation in Medicine (3) Sullivan Focus on cost-effectiveness and cost-utility analyses, decision analysis, and economic model building for the purpose of resource allocation decisions. Entry code required. Prerequisite: permission of instructor. Offered: jointly with HSERV 584; A.

PHARM 550 Pharmacotherapeutics for Older Adults (3) Plein Clinical use of drugs for older adults. Age-related pharmacokinetics, pharmacodynamics, and pharmacotherapeutics as applied to selecting and monitoring drug regimens for elderly patients. Problem solving regarding drugs of choice for older people with multiple pathologies. Open to Doctor of Pharmacy degree and health sciences graduate students. Offered: A.

PHARM 582 Primary Care Pharmacy (2) Ellsworth Advanced course covering the principles of physical assessment and techniques necessary for clinical pharmacists to obtain subjective and objective information from patients in logical sequence for use in monitoring drug therapy and communicating recommendations to other health professionals. Didactic, classroom, clinical experimental formats are utilized. Prerequisite: Doctor of Pharmacy student and concurrent registration in 583. Offered: A.

PHARM 583 Advanced Clinical Pharmacy and Therapeutics I (2-6) Horn Advanced course on disease states and current therapy with emphasis on pharmacotherapy. Lecture-discussion format with extensive readings. Course is arranged in modules including cardiovascular, pulmonary, renal diseases. Pharm.D. students take all modules; MPH students may select one or more modules (or variable credits. Prerequisite: Pharm.D. student or permission of instructor. Offered: A.

PHARM 584 Advanced Clinical Pharmacy and Therapeutics II (2-6) Black, Edwards Advanced course on disease states and current therapy with emphasis on pharmacotherapy. Lecture-discussion format with extensive readings. Arranged in modules including endocrine, gastrointestinal, and infectious diseases. Pharm.D. students take all modules; MPH students may select one or more modules for variable credits. Prefequisite: Pharm.D. student or permission of instructor. Offered: W.

PHARM 585 Advanced Clinical Pharmacy and Therapeutics III (2-6) Kwok, Plein Advanced course on disease states and current therapy with emphasis on pharmacotherapy. Lecture-discussion format with extensive readings. Arranged in modules including neoplastic; central nervous system, musculoskeletal, skin diseases; pediatrics, and geriatrics. Pharm.D. students take all modules; MPH students may select one or more modules for variable credits. Prerequisite: Pharm.D. student or permission of instructor. Offered: So.

PHARM 588 Pharmacotherapy Literature Evaluation and Case Conferences (1-2) Weekly pharmacotherapy literature evaluation or case presentation conferences emphasizing current therapeutics and clinical decision making. Credit/no credit only. Prerequisite: enrolled in Doctor of Pharmacy program or by permission of instructor. Offered: AWSp.

PHARM 587 Advanced Clinical Clerkship (*, max. 15) Under faculty supervision, students participate in medical and pharmacy patient rounds in hospitals or long-term-care facilities or ambulatory settings, monitor drug therapy, instruct patients concerning proper use of medications, and provide drug consultation to other health-care providers. Credit/no credit only. Prerequisites: 485 or equivalent and permission of instructor. Offered; AWSpS.

PHARM 598 Topics in Pharmacoepidemiology and Drug Policy (2-4) Stergachis, Sullivan Directed individual study of contemporary literature and issues in pharmacoepidemiology, pharmacoeconomics, and drug policy. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

PHARM 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.
432 GRADUATE SCHOOL OF PUBLIC AFFAIRS / GRADUATE PROGRAM

Graduate School of Public Affairs

Dean

Margaret T. Gordon 203A Parrington

The Graduate School of Public Affairs (GSPA) is a graduate professional school providing education and research for the public service. The School confers the Master of Public Administration (M.P.A.) degree. GSPA's program of study is designed to train highlyskilled managers and policy analysts for a wide range of careers in the public and not-for-profit sectors. The academic and professional orientation of the degree program gives GSPA students the knowledge and skills necessary to make significant contributions to national, regional, and international policy. Graduates hold leadership positions throughout the public sector as mayors and city managers; local and regional government administrators; foreign service officers; staff assistants to elected officials; analysts with budget offices, legislative staff units, and city councils; directors of social service agencies; and administrators of arts organizations. In addition, a number of alumni are employed in the private sector, usually in positions involving substantial contact with public agencies.

Graduate Program

Master of Public Administration Degree

The degree of Master of Public Administration is awarded upon satisfactory completion of 60 credits of course work, including a final degree project. Students without substantial prior experience in public service work also are expected to complete a paid administrative internship. The program normally requires two full academic years, and, for those requiring an internship, the intervening summer. Students may attend GSPA on a part-time basis. Foreign-language proficiency or a thesis are not required for the M.P.A. degree. Concurrent degree programs in International Studies (M.P.A.-M.A.) and Law (M.P.A.-J.D.) are available.

The GSPA curriculum ensures the integration of public policy analysis and management while giving students the flexibility to specialize in substantive policy fields. Courses emphasize the practical application of the theory, values, and techniques needed to succeed in public life. The academic program is divided into three major components: 1) the required core curriculum, which introduces students to public organization theory; policy analysis; budgeting; microeconomic analysis; and quantitative methods; 2) more concentrated study in policy analysis, management, and context and values; and 3) specialized study in one of five policy gateways: education and social policy; environmental policy; international affairs; urban and regional affairs; or individualized policy study. The policy gateways permit students to explore a wide range of academic disciplines and professional opportunitles. Central to the gateways are courses offered by numerous other schools and departments at the University of Washington.

Admission Requirements

The Graduate School of Public Affairs admits students on an annual basis, for summer or autumn quarters only. The application deadline for either quarter is February 15. The prospective student must hold a baccalaureate degree from an accredited college or university in the United States, or its equivalent from a foreign institution. The student's academic record should be a strong one, with a minimum GPA of 3.00 on the last 90 (quarter) or 60 (semester) credits of undergraduate work. Scores on the Graduate Record Examination (GRE) general test are also required for admission.

The primary criterion for admission to the School is the applicant's demonstrated ability to complete the graduate program while sustaining a high level of achievement. GSPA's Admissions Committee considers grades and test scores, and also gives considerable weight to professional experience, volunteer work, letters of recommendation, and the applicant's writing skills as demonstrated in personal essays.

Although the School has no formal undergraduate course requirement for admission, GSPA's core courses in economics and quantitative methods assume that entering students have been exposed to these subjects at the undergraduate level. Ideally, new students will possess academic or professional background in governmental process, excellent writing skills, and academic preparation in microeconomics and statistics. Students lacking sufficient preparation in these areas may be required to demonstrate aptitude prior to admission, or may be asked to take preparatory course work in addition to the basic M.P.A. degree requirements.

Financial Aid

The Graduate School of Public Affairs has limited departmental financial aid. The University of Washington Office of Student Financial Aid is the primary source of financial assistance for M.P.A. students. The most common forms of University aid are work-study awards and Stafford or Perkins loans. Only full-time students are eligible for non-loan forms of university financial aid.

In order to receive priority consideration for UW financial aid, the Free Application for Federal Student Aid (FAFSA) must be received by the central processor (located in Iowa) by February 28 of the year of application to the school. Applicants should mail their completed FAFSA forms at least two weeks ahead of this deadline. FAFSA forms can be obtained from the UW Office of Student Financial Aid, PE-20, Seattle, Washington 98195, (206) 543-6101, or from the financial aid office of any college or university.

Each year the Graduate School of Public Affairs awards a limited number of departmental fellowships. In order to receive consideration for these awards, applicants must complete the GSPA financial aid application. These forms are included in the GSPA application packet. First-year students are also eligible to apply for some research assistantships. These appointments are generally made after the fall term begins. Teaching assistantships are reserved for secondyear students. Paid internships with public agencies can also provide students with additional income during their tenure at GSPA.

Correspondence and Application Information

A program brochure and application may be obtained from the Director of Admissions, Graduate School of Public Affairs, DC-13, University of Washington, Seattle, Washington 98195, or by telephoning (206) 543-4900.

Research Facilities

Institute for Public Policy and Management

The culture of the Graduate School of Public Affairs promotes the integration of extensive applied research into the academic program. In addition to supporting the independent research of its faculty members, the School houses the institute for Public Policy and Management (IPPM). The IPPM initiates and conducts major applied research projects for public managers and elected officials, drawing upon the skills and knowledge of University researchers, faculty members, graduate students, and practitioners from various public and private organizations. Through research, consultancy, conferences, publications, and training, the IPPM enhances the ability of public sector officials and the general public to understand major public policy issues and to make sound public management decisions.

Northwest Policy Center

The Northwest Policy Center (NPC) was established in 1987 as a model regional program to develop and improve public strategies which promote economic vitality in the five-state Northwest region. NPC conducts policy research, designs and evaluates policy alternatives, and promotes the continuous exchange of information among regional policymakers.

Cascade Center for Public Service

The Cascade Center for Public Service was established in 1987 to enhance the quality of public management in the Northwest through the design and delivery of executive education programs. The center offers and extensive set of training programs tailored to senior and mid-level public managers and to elected officials in state and local government. In addition, the center's Curriculum Development Project is working to improve the development and availability of new teaching tools and techniques through the use of a computer distribution network to distribute new case studies, skill exercises, and teaching notes.

Human Services Policy Center

Founded in 1991, the Human Services Policy Center (HSPC) is an interdisciplinary research center focused upon issues relating to families and children. It was created to help professionals forge links among schools and service agencies to improve service delivery to children and families. HSPC's mission includes program evaluation and data analysis to help policymakers and the general public better understand these critical issues. The center is a collaborative endeavor involving faculty from several University of Washington professional schools: Public Affairs, Public Health and Community Medicine, Education, Social Work, Nursing, and Communications.

Faculty

Professors

Beyers, William B. * 1967, (Adjunct); PhD, 1967, University of Washington; economic geography, regional analysis, regional development.

Gordon, Andrew * 1988; PhD, 1970, Columbia University; information policy and organizational dynamics.

Gordon, Margaret T. * 1988; PhD, 1972, Northwestern University; news media and public policy; violence against women.

Hill, Paul T. 1993, (Research); PhD, 1972, Ohio State University; education policy and reform.

Hyman, Barry * 1975; PhD, 1965, Virginia Polytechnic Institute & State University; energy policy, technology and public policy, quantitative methods.

Locke, Hubert G. * 1976; MA, 1962, University of Michigan; criminal justice, urban policy, race and ethnic relations.

Lyden, Fremont J. * 1962, (Emeritus); PhD, 1960, University of Washington; organizational and systems theory, personnel management, program design and budgeting.

Madden, Carolyn Watts * 1975, (Adjunct); PhD, 1976, Johns Hopkins University; health economics and policy.

May, Peter J. * 1979, (Adjunct); PhD, 1979, University of California (Berkeley); policy analysis, quantitative methods, federal disaster policy.

Miles, Edward L. * 1974; PhD, 1965, University of Denver; international law and organization, science and international relations, marine policy.

Morrill, Richard L. * 1955, (Adjunct); PhD, 1959, University of Washington; spatial organization, migration, population diffusion, regional planning and development, inequality.

Plotnick, Robert D. * 1984; PhD, 1976, University of California (Berkeley); economics of poverty, labor and social welfare policy.

Williams, Walter * 1970; PhD, 1960, Indiana University; executive branch decision making, policy implementation.

Wolfle, Dael L. * 1982, (Emeritus); PhD, 1931, Ohio State University; science and public policy.

Zerbe, Richard O. * 1975; PhD, 1969, Duke University; law and economics, cost-benefit analysis, economic history, environmental regulation.

Associate Professors

Brandon, Richard N. * 1989, (Research); PhD, 1975, University of Pennsylvania; human services: collaboration, data; US Congress, legislation and budget process.

Brock, Jonathan 1982; MBA, 1973, Harvard University; labor relations, negotiation and mediation, public management, managing people.

Dobel, J. Patrick * 1985; PhD, 1976, Princeton University; political theory, ethics and public policy, organizational theory.

Harrison, David S. 1991, (Research); MPA, 1979, Harvard University; regional economic development.

Miller, Ernest G. * 1965, (Emeritus); PhD, 1959, Princeton University; management and organizational development, organization theory, administrative behavior.

Narver, Betty Jane 1991, (Research); MA, 1973, University of Washington; state and local fiscal policy, social and health policy, education and workforce training.

Pivo, Gary E. * 1987, (Adjunct); PhD, 1987, University of California (Berkeley); land use and physical planning, environmental planning; growth management.

Sommers, Paul E. * 1985, (Research); PhD, 1978, Yale University; economic development policy, regional economics.

Ulberg, Cyrus G. * 1985, (Research); PhD, 1973, University of Michigan; transportation policy, forecasting, and pricing topics.

Zumeta, William M. * 1985; PhD, 1978, University of California (Berkeley); public management, policy analysis, education and workforce policy.

Assistant Professors

Eliason, Leslie Carol 1988; PhD, 1988, Stanford University; comparative politics; European public policy: comparative education and health care policy.

Flatt, Victor B. 1993, (Acting); JD, 1988, Northwestern University; environmental policy, law and public policy.

Klawitter, Marieka * 1990; PhD, 1992, University of Wisconsin; family and employment policy; health economics; women studies.

McIntire, James L. 1991, (Research); PhD, 1993, University of Washington; housing policy, state tax policy, labor market policy.

Thomas, Tom E. 1988, (Adjunct); PhD, 1989, University of California (Berkeley); organization and environment, corporate political strategic management.

Weinberg, Lisa Ellen 1993; PhD, 1993, Virginia Polytechnic Institute & State University; organizational processes and dynamics; intergovernmental and government/non-profit agency relations.

Senior Lecturer

Cormick, Gerald W. 1975; PhD, 1971, University of Michigan; mediation and negotiation.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

PB AF 500 General Seminar (1, max. 9)

PB AF 502 The Administrator and the Policy Process (3) Context of public administration from the perspective of the administrator. Roles and functions of the administrator, particularly in relation to the process of implementing, making, and changing public policy. Offered: jointly with POL S 571.

PB AF 503 Administrative and Executive Leadership (3) Nature of executive life in the public sector, the function of leadership in implementing, making, and changing policy. Leadership styles, the relation of leadership to its constituencies and communities. Offered: jointly with POL S 572.

PB AF 504 Administrative Ethics (3) Moral dilemmas that confront public managers. Critical view of societal and political values that prescribe moral behavior. Organizational and professional ethics. Ethical problems of public organization managers. Systematic means for understanding, analyzing, and coping with moral issues that appear in a career.

PB AF 505 The Law of Public Administration (3) Legal framework of public administrative action in the United States, emphasizing constitutional requirements; operation of the administrative process; management of personnel, funds, and contracts; and judicial review of administrative activity.

PB AF 506 Ethics and Public Policy (3) Teaches students to identify moral issues in public life. Special focus on the integration of moral concerns into public discussion in a manner which contributes to good policy and does not polarize issues. Discusses moral and political theory by focusing on contemporary cases and issues.

PB AF 507 International Organizations and Ocean Management (3) Survey of the manner in which international organizations attempt to manage and regulate the uses of the ocean. Primary emphasis on the analysis of processes that support or constrain these organizations and on the search for alternative policies and organizations. Prerequisite: SMA 500 or permission of instructor. Offered: jointly with SMA 507.

PB AF 509 Public Organizational Theory (3) Approaches to the study of organizational behavior in a charging society, including consideration of formal and informal organization, personality needs, role playing, client relations, and the sociopolitical and technotogical environments.

PB AF 510 Management Analysis (3) Survey of the theory and current practice relating to governmental organizations and their program objectives.

PB AF 511 Management of Not-for-Profit Organizations (3) Focuses upon the roles played by not-forprofit organizations in meeting the public good. Examines internal management issues such as structure, budget, and operations; and external issues such as board functions, legal status, marketing, media relations, and fund-raising.

PB AF 512 Management of Public Enterprises (3) Examines issues in managing public enterprises. Provides comparative analysis of policies, development, and management approaches of such enterprises with regard to traditional government agencies, private sector business, and public enterprise of other countries. Special focus on "balancing" business and competitive requirements with public policy/process and the political environment.

PB AF 513 Public Policy Analysis (3) Production and use of analysis to support public policy decisions: Defining problems, devising alternative solutions, clarifying stakes in choices, predicting impacts of choices. Skills developed by working on specific policy problems. Assumes familiarity with statistics, microeconomic theory, and institutions and processes of American government. Prerequisite: 516 or permission of instructor.

PB AF 514 Policy Implementation (3) Presents set of analytic skills for anticipating and diagnosing implementation problems. Primarily for students who plan to become public-sector policy analysts or managers. Mastery of basic literature and its application to solving problems of public policy, including estimating feasibility of policy alternatives and identifying sources of implementation failure, is expected.

PB AF 516 Microeconomic Policy Analysis (3) Ways in which microeconomic analysis can contribute to the analysis of public sector issues. Supply and demand, consumer and firm behavior, competitive and monopoly markets, income distribution, market failure, government intervention. Policy applications of theory. Prerequisite: elementary economics.

PB AF 517 Economics of the Public Sector (3) Methods of analyzing effects of public expenditures and taxes on behavior of individuals and firms, on economic efficiency, and on equity and distribution of income. Theory and practice of intergovernmental fiscal relations. Application of theory to formulation of public policy. Prerequisite: 516.

PB AF 519 Policy Analysis Workshop (3) Techniques and methods required in social policy analysis, including the technical issues in developing, using, interpreting research relevant for social policy and bureaucratic problems. Designed to aid future administrators and analysts in performing policy analysis, working with researchers to develop relevant studies and with the agency bureaucracy to integrate research and analysis. Prerequisite: permission of instructor.

PB AF 520 Intergovernmental Relations (3) Comparative study of the issues involved in implementing government programs across multiple jurisdictions. Issues of accountability, feasibility, politics, and constitutional limits are examined by focusing upon various methods used to implement programs across federal, state, regional, and international jurisdictions.

PB AF 521 Public Management: Program Planning and Design (3) Policy context of planning and programming, the institutionalization of purpose, the planning process, activity design, work scheduling and measurement, and program evaluation.

PB AF 522 Public Management: Budgeting (3) Budgeting as a management process. Study of formulation and administration of government budgets, including role of budgeting in policy processes, approaches to budget formulation and analysis, development of the PPB approach, and aspects of budget administration, such as revenue estimating, allotment control, cost accounting. Prerequisite: 516 or permission of instructor.

PB AF 523 Public Management: Personnel (3) Study of line-staff decision making in acquisition and use of human resources in public organizations, including evaluation of job responsibilities, establishment of compensation levels, collective bargalning, selection and placement, performance appraisal, incentive management, and training.

PB AF 524 Managing People in Public and Nonprofit Agencies (3) Emphasizes the role of the program manager rather than that of the personnel officer. Managing people within a variety of programmatic,

434 GRADUATE SCHOOL OF PUBLIC AFFAIRS / COURSE DESCRIPTIONS

bureaucratic, and political settings. Case studies form basis of class discussion, assignments.

PB AF 525 Organizational Development in Public Agencies (3) Philosophies, theories, and models of behavioral science interventions in organizational diagnosis and development (OD). In addition to a review of the basic literature dealing with the OD approach, emphasis is placed on examination of case studies and class experience in OD applications, including organizational diagnosis, problem confrontation, and team building. Prerequisite: permission of instructor.

PB AF 526 Program Evaluation (3) Martin Theory, practice, and politics of evaluation, from simple feedback mechanisms to evaluation of large-scale ongoing programs and social experiments. Emphasis on applications of experimental and quasi-experimental evaluation. Case studies drawn from health field illustrate various types of evaluation. Prerequisite: background in quantitative methods. Offered: jointly with HSERV 522.

PB AF 527, 528 Quantitative Analysis; Quantitative Analysis for Public Managers (3,3) Introduces quantitative methods in the context of public management and policy analysis. Covers descriptive statistics, hypothesis testing, linear models, and research design and modeling. Helps students become knowledgeable consumers of empirical evidence. Prerequisite: graduate status in School of Public Affairs or permission of instructor for 527, 527 for 528.

PB AF 530 Financial Management In the Public Sector (3) Exploration of the managerial uses of accounting and other processes of financial management in the public sector. Topics covered include: financial planning and control, fund accounting, cost accounting, asset accounting, internal controls, auditing, financial analysis, and financial reporting. Prerequisite: permission of instructor.

PB AF 534 International Affairs (3) Provides a broad understanding of international issues and United States policy. Students explore U.S. foreign policy and theories of major international actors in international trade, security, and strategic concerns, refugee policy, conflict resolution, development assistance, and the environment. Offered: jointly with POL S/ SIS 534.

PB AF 537 Topics in International Affairs (3, max.
12) Examines topics of interest and import in foreign policy and international affairs. Focuses on the indepth analysis of issues and the integration of economic, institutional, and political dimensions.

PB AF 538 Legislative Relations (3) Studies role of legislative bodies in American public policy making. Builds on case studies and focuses on tactics, constraints, and options involved in working within a legislative process to achieve public policy goals.

PB AF 550 Public Arts Policy and Management (3) Role of government in arts. Range of public support at federal, state, and local levels; reasons for its development and viability. Nature, evolution, functions of public arts agencies in implementing arts policy; relation of such agencies to their constituencies. Seattle, King County, and Washington State serve as case studies.

PB AF 551 Comparative Administrative Systems (3) Methodological problems of research in comparative administration. Theoretical and substantive aspects of administrative systems in urban-industrial and developing nations. Offered: jointly with SIS 551.

PB AF 552 Administrative Problems of Development (3) Problems of administering developing nation-states and regions, including theoretical aspects of development administration, bureaucratic change, administrative-political interaction in policy making, organizational development, political impact of administering major programs. Prerequisite: permission of instructor. **PB AF 553** Applied Cost-Benefit Analysis (3) Familiarity developed through problems and applications. Techniques of use stressed. Prerequisite: 516 or permission of instructor.

PB AF 554 Advanced Cost-Benefit Analysis (3) Techniques of, and theoretical foundation for, costbenefit analysis as applied to the public sector. Prerequisite: 553 or ECON 500, 501 or permission of instructor. Offered: jointly with ECON 554.

PB AF 558 Mediation and Negotiation as Instruments of Public Management and Policy-Making (3) Possibilities offered by mediation and negotiation methods using a mixture of cases, readings, discussions, lectures, and guest speakers. Use of negotiation and mediation techniques to resolve disputes and disagreements over public-policy issues.

PB AF 561-562 Policy Development and Administration: Urban Affairs (3-3) Two (noncumulative) courses to examine the structure, function, and process of city government, with special emphasis on the origin, content, and implementation of public policies. Focus on the political process at the municipal level including the distribution of influence, the political actors, the decision-making machinery, and the policy output.

PB AF 565 Topics in Urban and Regional Affairs (3, max. 12) Examines various issues of public policy importance in urban and regional affairs by integrating managerial, political, policy, and economic dimensions of the issues.

PB AF 568 Seminar In Law and Justice (3) The current volatility in American law enforcement revolves around a number of policy issues that have emerged in the past decade and are considered crucial to the future role, organization, and function of urban policing. These issues are explored, with emphasis on their historic settings, the "actors" who shape their articulation, the parameters of the debate, effects of legal constraints and sociopolitical factors on the development of policy alternatives, and emerging patterns of resolution.

PB AF 569 Race and Public Policy (3) Analyzes the way in which the persistent problem of race is expressed in the formation and implementation of social and public policy.

PB AF 570 Social Policy Analysis and Management (3) Examines major institutions and programs in the human resources policy area: education, regulation of labor market, health care, income maintenance, social services. Discusses alternative policy instruments, analytic perspectives, intergovernmental issues, and management issues arising across policy areas. Explores challenges of linking services and clients across separate agencies.

PB AF 571, 572 Education, The Workforce, and Public Policy (3,3) Two (noncumulative) courses on policy issues involving education, training, the economy, and the development of the nation's human resources. Relationship between education, training, and work; underutilized workers; race and gender discrimination issues; the role of education/training in economic development. Offered: jointly with EDLPS 563.

PB AF 573 Topics in Education and Social Policy (3, max. 12) Examines various issues of public importance in the areas of education and social policy. Focuses on in-depth analysis of relevant issues and the integration of the economic, administrative, and political dimensions of these issues.

PB AF 575 Public Policy Processes (5) Political science frameworks, approaches, and theories concerning development and implementation of public policies within American political systems. Governmental behaviors and processes, including rational, political, and bureaucratic models of governmental decision making; agenda-building processes; and

normative perspectives concerning role of governmental entities. Offered: jointly with POL S 575.

PB AF 577 Risk Assessment for Environmental Health Hazards (3/4) Context, methodologies, types of data, uncertainties and institutional arrangements for risk assessment. Both qualitative and quantitative approaches to the identification, characterization, and control of environmental hazards to health emphasized through didactic and case studies. Offered: jointly with CEWA/ENV S/ ENVH 577.

PB AF 580 United States Energy Policy (3) Energy policy formulation and implementation with emphasis on post-1973 developments. Energy conservation programs; changing roles of oil, coal, gas, nuclear, and solar energy; institutional, environmental and equity considerations; government research and development programs.

PB AF 581 Information Technology and the Policy-Making Process (3) Demystifies information base for policy making in democracies. Examines theoretical and practical issues associated with information processing in the public sector. Considers role of new technologies in collecting, analyzing, and disseminating information with special attention to the relationship between these technologies and effective government service, public participation, and organizational accountability.

PB AF 582 News Media and Public Policy (3) Explores impacts of news coverage on public policy. Exposure to journalists' approaches to coverage of public affairs, as well as to strategies used by leaders of public/non-profit agencies to attract favorable coverage and minimize damaging coverage. Students learn techniques for assessing impacts of new coverage.

PB AF 583, 584 Seminar in Science and Public Policy (3,3) Issues and problems relating to the interaction of science and scientists with the public policy-making process. Science versus the nature and values of political processes, and the continuing tensions between the two. The evolving interaction between scientific and technical knowledge and political power; scientific versus ethical judgments. Role of science in the establishment of national goals. Plans and proposals for increasing governmental competence to deal with public policy issues involving science and technology.

PB AF 585 Topics in Science, Technology, and Public Policy (3) Examines relationship between advancement of technical knowledge and pace of technological change, and public policies to induce or respond to these trends. Generic issues of government research, development, and personnel training programs are addressed. Applications of policy issues involving biomedical, communications, energy, environmental, transportation, and weapons technologies.

PB AF 586 International Science and Technology Policy (3) Seminar is designed: first, to analyze the relationships between research and development policy, capabilities, and national technological strategies for advanced industrial and less-developed countries; second, to deal with the international implications of particular technologies as countries try to make policy for them in regional and global organizations. Examples of specific technologies are chosen from such fields as space telecommunication, weather and climate modification, airline transportation, nuclear energy, and seabed exploitation.

PB AF 590, 591 Midcareer Seminar (3,3) Interdisciplinary seminar in public policy for midcareer professionals.

PB AF 593 Environmental Policy Processes (3) Presents background to establish the need for environmental policy. Explores in a comparative manner, examining both successes and failures, various strategies that have been used or proposed to protect the environment. **PB AF 594 Environmental Policy Analysis: Risks and Values (3)** Emphasizes institutions involved in environmental policy including the government, environmental organizations, and private business. Examines ways in which the nature of these institutions affects the substance and ultimate effect of the environmental policy implemented.

PB AF 595 Topics in Environmental Policy and Management (3, max. 12) Examines various topics of public importance in environmental policy and management. Integrates the political, managerial, and economic dimensions of these issues.

PB AF 598 Administrative and Policy Skills Workshop (1-3) Teaches practical administrative, leadership, and analytic skills commonly required of managers and analytis in the public and non-profit sectors. The workshops emphasize hands-on problem resolution, simulations, and actual practice. **PB AF 599 Special Topics (2-6)** Study and analysis of special topics in public affairs. Topics vary each quarter depending on curricular needs and interests of students and faculty. Prerequisite: permission of instructor.

PB AF 600 Independent Study or Research (*)

PB AF 605- Degree Project (1-6)-

School of Public Health and Community Medicine

Dean

Gilbert S. Omenn F350 Health Sciences

Associate Dean

Patricia W. Wahl

The School of Public Health and Community Medicine offers graduate programs leading to the degrees of Master of Public Health, Master of Science, Master of Science in Radiological Sciences, and Doctor of Philosophy. In the M.P.H. program, the student may select an area of emphasis in one of three fields: environmental health, epidemiology, or health services. These programs are directed particularly at preparing individuals for research, academic, or professional practice careers.

Admission requirements vary according to the field in which the student wishes to major and are given in the departmental descriptions that follow. Prior consultation with the departments is recommended. Applicants holding medical degrees have three options: one of the master's programs, research fellowship, or two-year residency in general preventive medicine/public health, or occupational medicine. For the medical student, a concurrent M.D.-M.P.H. program is offered. Ph.D. programs are offered in biostatistics, epidemiology, pathobiology, and in environmental and occupational health sciences. Studies in health services in collaboration with other School and campus departments with Ph.D. programs are available.

Students may earn both Master of Public Health and Master of Arts degrees concurrently through a special program offered jointly by the School of Public Health and Community Medicine and the Henry M. Jackson School of International Studies (M.P.H.-M.A.). The interdisciplinary curriculum covers the complex relationship between public health problems of the developing world and the cultural, economic, and political environments in which they exist. Both Schools provide tools to gain insights into community-based problems and to implement change. Other concurrent degree programs offered are the M.P.H.-M.S.W. offered jointly with the School of Social Work, and a joint M.P.H.-M.N. in community health care or parent and child nursing.

Other opportunities include the Master of Health Administration degree which is offered by the Health Services Administration Group. This program is described elsewhere in this catalog. The School also offers a nontraditional, part-time extended M.P.H. program in the Department of Health Services for midcareer health professionals who are unable to participate in the in-residence master's program.

In addition, the School offers two undergraduate degrees and two certificate programs. The Department of Environmental Health offers a Bachelor of Science degree providing a general education in the broad fields of environmental health. Also offered is a Bachelor of Clinical Health Services degree in the Department of Health Services. Candidates for both. these degrees must be admitted to the University of Washington at the junior year level. The certificate programs are offered by the Department of Health Services in two areas: 1) the MEDEX Northwest Physician Assistant Program and 2) the Health Information Administration Program.

Biostatistics

F600 Health Sciences

The Department of Biostatistics offers Master of Science and Doctor of Philosophy degrees in quantitative methods applied to the medical and biological sciences. Biology and medicine are undergoing major changes in their development as quantitative sciences. As technological advances find expression in new research tools, new theoretical concepts are being employed in the analysis of quantitative data. The techniques and viewpoints of mathematics and statistics, traditionally peripheral to biology and medicine, are rapidly being woven into the fabric of the life sciences, thereby providing exciting new opportunities in research and teaching.

Many universities have instituted programs relating mathematics or statistics to one particular biological field. The goal of the biostatistics graduate program is to equip students to develop and apply the quantitative techniques of mathematics, statistics, and computing appropriate to medicine and biology.

Because of the faculty's involvement in a diversity of statistical applications, students receive an education of high quality. Students are recruited from undergraduate programs in mathematics, statistics, and biology and are selected on the basis of outstanding quantitative ability.

Admission Requirements

Students may enter the program from an undergraduate major in mathematics, statistics, or a biological field. An applicant must have completed or be in the process of completing two years of calculus (to include one year of advanced calculus), one course in linear algebra, and one course in probability theory.

In addition to fulfilling graduate admission requirements, an applicant must submit three letters of recommendation from persons competent to evaluate the applicant's abilities, a narrative statement concerning the applicant's purpose and interest in entering the program, and an official Graduate Record Examination score report. Recommendation for selection of candidates is made by a faculty admissions committee, with review of applicants beginning in February for admission autumn quarter. The application deadline is April 15.

Master of Science Degree

Students working for the Master of Science degree must complete required course work, demonstrate proficiency in a computer language, write a thesis, take a consulting class, and pass the first-year theory examination. This examination is offered at the conclusion of a student's first year, and, if a student does not pass, it can be retaken the next year. A Ph.D. student may receive a nonthesis Master of Science degree by successfully passing the first- and second-year qualifying examinations.

Doctor of Philosophy Degree

Students earning the Ph.D. degree develop statistical theory and applications particular to the health sciences.

Students in the Ph.D. program must complete 36 credits of BIOST 800, write a dissertation, complete a consulting class, and demonstrate proficiency in a computer language. Students must also pass the Ph.D. statistical theory and applied theory qualifying examinations, a biology project, and pass the General and Final Examinations.

Barlow, William E. * 1989, (Research); PhD, 1986, University of Washington; survival analysis, residuals, and evaluation of screening programs.

Benedetti, Jacqueline K. * 1980; PhD, 1974, University of Washington; statistical methodology in infectious disease research, cancer clinical trials.

Conquest, Loveday L. * 1976, (Adjunct); PhD, 1975, University of Washington; biological applications and statistics.

Lin, Danyu * 1990; PhD, 1989, University of Michigan; analysis of failure time data, designs and analysis of clinical and epidemiologic studies.

McKnight, Barbara * 1981; PhD, 1981, University of Wisconsin; statistics in animal carcinogenicity testing, epidemiology and human genetics; survival analysis.

O'Sullivan, S. Finbarr * 1987; PhD, 1983, University of Wisconsin; nonparametric curve estimation, inverse problems, radiology.

Pepe, Margaret * 1982, (Affiliate); PhD, 1986, University of Washington; survival analysis, surrogate and mismeasured data, correlated data methods, child health issues.

Polissar, Nayak Lincoln * 1980, (Affiliate); PhD, 1974, Princeton University; statistical consulting, community surveys, clinical trials, demography, epidemiology, environment.

Temkin, Nancy R. * 1977; PhD, 1976, State University of New York (Buffalo); clinical trials, recovery models, statistical modeling of epileptic phenomena, survival analysis.

Wijsman, Ellen M. 1987, (Research); PhD, 1981, University of Wisconsin; human quantitative and population genetics.

Assistant Professors

Anderson, Garnet 1989, (Affiliate); PhD, 1989, University of Washington; survival analysis, regression models, clinical trials, human physiology, correlated responses.

Brooks, Maria Mori * 1991, (Research); PhD, 1991, University of North Carolina; nonparametric curve estimation and clinical trials.

Etzioni, Ruth D. * 1993, (Affiliate); PhD, 1993, Carnegie-Mellon University; statistical methods in C screening, Bayesian methods in biostatistics.

Hughes, James P. * 1993, (Research); PhD, 1993, University of Washington; longitudinal methods and Markov models.

Leroux, Brian G. * 1991, (Research); PhD, 1989, University of British Columbia (Canada); random effects models, stochastic processes, dental research, toxicology.

Sheppard, Elizabeth A. * 1989, (Research); PhD, 1992, University of Washington; aggregate data, survival analysis, biostatistical methods in environmental health.

Thornquist, Mark Daniel * 1985, (Affiliate); PhD, 1985, University of Wisconsin; ordinal/categorical response, repeated measures data, chemoprevention, grouprandomized trials.

Wang, Ching-Yun 1993, (Affiliate); PhD, 1993, Texas A&M University; case control studies, generalized linear models, measurement error models.

Yanez, Norbert David III 1993; PhD, 1993, Arizona State University; overdispersed data, joint modeling of mean and dispersion parameters, quasi-likelihood models.

Zhao, Lue-Ping * 1993, (Affiliate); PhD, 1989, University of Washington; estimating equations, correlated data analysis, missing data and sampling.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

BIOST 111 Lectures In Applied Statistics (1) Weekly lectures illustrating the importance of statisticians in a variety of fields, including medicine and the biological, physical, and social sciences. Contact instructor for information on which fields of applications emphasized. Offered: jointly with STAT 111.

Courses for Graduates Only

BIOST 511 Medical Biometry I (4) Presentation of the principles and methods of data description and elementary parametric and nonparametric statistical analysis. Examples are drawn from the biomedical literature, and real data sets are analyzed by the students after a brief introduction to the use of standard statistical computer program packages. (e.g., SPSS, BMDP, MINITAB). Statistical techniques covered include description of samples, comparison of two sample means and proportions, simple linear regression and correlation. Offered: AS.

BIOST 512 Medical Biometry II (4) Multiple regression, analysis of covariance, and an introduction to one-way and two-way analyses of variance: including assumptions, transformations, outlier detection, dummy variables, and variable selection procedures. Examples drawn from the biomedical literature with computer assignments using SPSS. Prerequisite: 511 or equivalent. Offered: W.

BIOST 513 Medical Biometry III (4) Analysis of categorical data including two sample methods, sets of 2 x 2 tables, R x C tables, and logistic regression. Classification and discrimination techniques. Survival analysis including product limit estimates and the Cox proportional hazards model. Prerequisite: 512 or permission of instructor. Offered: Sp.

BIOST 514 Biostatistics I (4) Mathematically sophisticated presentation of principles and methods of data description; graphics; point, confidence interval estimation; hypothesis testing; relative risk; odds ratio; Mantel-Haenszel; chi-square test (matrix algebra required). Examples drawn from biomedical literature; real-data sets analyzed using statistical computer package. Prerequisite: biostatistics majors or permission of instructor. Offered: A.

BIOST 515 Biostatistics II (4) Mathematically sophisticated introduction to linear models; multiple regression, correlation; residual analysis; dummy variables; analysis of covariance; one-, two-way analysis of variance; randomized blocks; fixed, random effects (repeated measure, factorial designs); multiple comparisons (matrix algebra required). Real biomedical data sets analyzed. Prerequisite: 514, biostatistics major, or permission of instructor. Offered: W. BIOST 521 Biostatistics for Experimentalists (4) Statistical aspects of design, data analytic models appropriate to classes of experiments most commonly employed in biomedical sciences. One-, two-way analyses of variance; factorial, crossed, nested, repeated measures designs. Clean, messy real-data sets analyzed using BMD or SAS computer programs. Prerequisites: 511, 512, or equivalent. Offered: alternate years; Sp.

BIOST 524 Design of Medical Studies (3) Design of medical studies, with emphasis on randomized controlled clinical trials. Bias elimination, controls, treatment assignment and randomization, precision, replication, power and sample size calculations, stratification, and ethics. Suitable for graduate students in biostatistics and for research-oriented graduate students in other scientific fields. Prerequisites: 511 or equivalent, and one of 513, STAT 421, 423, 512, or EPI 512; or permission of instructor. Offered: jointly with STAT 524, alternate years; Sp.

BIOST 532 Statistical Methods in Medical Genetics (2) Wijsman Theory and application of statistical techniques used in medical genetics. In-depth discussion of linkage and segregation analysis and ascertainment problems. Applications stressed with reference to assumptions and limitations. Data sets analyzed with current computer programs. Prerequisite: knowledge of genetics or permission of instructor. Offered: jointly with MED 532; Sp.

BIOST 533 Classical Theory of Linear Models (3) Introduction to one-, two-way analysis of variance; randomized blocks; fixed, random effects, multiple comparisons. Statistical distribution theory for quadratic forms of normal variables. Fitting of the general linear model by least squares. Prerequisites: 513, STAT 421 or STAT 423; and STAT 513; and a course in matrix algebra. Offered: jointly with STAT 533; Sp.

BIOST 534 Statistical Computing I (3) Computational methods in statistics: sorting, searching, and calculation of order statistics; data interpolation and approximation; numerical methods for least squares and principal components; computational geometry; calculation of probabilities; data structures and database management. Offered: jointly with STAT 534.

BIOST 535 Statistical Computing II (3) Computational methods in statistics: generation of pseudo random numbers, Monte Carlo quadrature, variance reduction techniques, design of Monte Carlo studies, nonlinear optimization, nonlinear least squares, selected special topics. Prerequisite: 534 or equivalent. Offered: jointly with STAT 535.

BIOST 536 Categorical Data Analysis in Epidemiology (4) Summary of univariate categorical data analysis; introduction to multivariate analysis of categorical epidemiologic data using multiplicative models. Experience at interpretation; familiarity with available programs gained by analysis of bona fide data, critiques of analyses appearing in literature. Prerequisites: 513 and EPI 514, or 515, or permission of instructor. Offered: jointly with EPI 536; A.

BIOST 537 Survival Data Analysis in Epidemiology (4) Introduction to multivariate analysis of survival data using multiplicative models. Application to epidemiologic studies. Familiarity with interpretation and available computer programs gained, by analysis of bona fide sets of data and critiques of analyses appearing in the literature. Prerequisite: 536 or permission of instructor. Offered: jointly with EPI 537; W.

BIOST 570, 571, 572 Advanced Applied Statistics and Linear Models (3,3,3) Generalized linear models, REML in mixed models for randomized blocks, split plots, longitudinal data. Generalized estimating equations, empirical model building, cross validation, recursive partitioning, generalized additive models, projection pursuit. Prerequisites: STAT 512, 513; BIOST/STAT 533 or STAT 421 and 423, and a course in matrix algebra for 570; 570 for 571; 571 for 572. Offered: jointly with STAT 570, 571, 572.

438 SCHOOL OF PUBLIC HEALTH AND COMMUNITY MEDICINE / BIOSTATISTICS

BIOST 573 Statistical Methods for Categorical Data (3) Exact and asymptotic methods of analysis for 2 x 2 contingency tables. Maximum likelihood estimation of logistic regression models for binary response variables, and selected examples of the use of these models in epidemiologic and clinical research. Introduction to the theory and applications of log linear models for discrete data. Selected special topics. Prerequisites: 571 and STAT 581, or permission of instructor. Offered: jointly with STAT 573, alternate years; Sp.

BIOST 574 Multivariate Statistical Methods (3) Use of multivariate normal sampling theory, linear transformations of random variables, one- and twosample tests, profile analysis, partial and multiple correlation, multivariate ANOVA and least squares, discriminant analysis, principal components, factor analysis, robustness, and some special topics. Some computer use included. Prerequisite: 570 or permission of instructor. Offered: jointly with STAT 574, alternate years.

BIOST 576 Statistical Methods for Survival Data (3) Statistical methods for censored survival data arising from follow-up studies on human or animal populations. Parametric and nonparametric methods, Kaplan-Meier survival curve estimator, comparison of survival curves, log-rank test, regression models including the Cox proportional hazards model, competing risks. Prerequisites: STAT 581 and either 513, STAT 473, or equivalent. Offered: jointly with STAT 576, alternate years.

BIOST 577 Advanced Design and Analysis of Experiments (3) Concepts important in experimental design: randomization, blocking, confounding. Application and analysis of data from randomized blocks designs, Latin and Graeco-Latin squares, incomplete blocks designs, split-plot and repeated measures, factorial and fractional replicates, response surface experiments. Prerequisite: 570 or STAT 421 (minimum 3.0) or permission of instructor. Offered: jointly with STAT 577.

BIOST 578 Special Topics in Advanced Biostatistics (*, max. 3) Advanced-level topics in biostatistics offered by regular and visiting faculty. Prerequisite: permission of instructor. Offered: jointly with STAT 578; AWSpS:

BIOST 579 Advanced Data Analysis (4) Resampling methods; jackknife, bootstrap, cross-validation. Smoothing techniques; local averages; projection-pursuit regression; recursive partitioning regression. Selected aspects of linear regression. Robust-resistant methods. Density estimation. Clustering techniques: The EM-algorithm. Graphical exploratory methods. Prim -81. Prerequisites: 571 and STAT 513 or permission of instructor. Offered: jointly with STAT 579.

BIOST 580 Seminar in Biostatistics (*, max. 9) Presentation and discussion of special topics and research results in biostatistics. Speakers include resident faculty, visiting scientists, and advanced graduate students. Offered: AWSp.

BIOST 590 Biostatistical Consulting (*) Training in consulting on the biostatistical aspect of research problems arising in the biomedical field. Students, initially under the close supervision of a faculty member, participate in discussions with investigators leading to the design and/or the analysis of a quantitative investigation of a problem. With experience, independent associations of student and research worker are encouraged, with subsequent review by faculty of resulting design and analysis. Prerequisite: permission of instructor. Offered: AWSpS.

BIOST 593 Cancer Prevention Laboratory (3) Laboratory experience for pre- and post-doctoral students working on cancer prevention projects at the Fred Hutchinson Cancer Research Center. Offered: jointly with EPI 593; AWSpS. BIOST 600 Independent Study or Research (*) Offered: AWSpS.

BIOST 700 Master's Thesis (*) Offered: AWSpS.

BIOST 800 Doctoral Dissertation (*) Offered: AWSpS.

Environmental Health

F463 Health Sciences

Undergraduate Program

Bachelor of Science Degree

This curriculum focuses on environmental conditions in the community and workplace that adversely affect the health and well-being of people, and the means by which these conditions may be eliminated or controlled. Public health topics include water, wastewater, food protection, housing, vectors, and epidemiology. Other subject matter covered includes industrial hygiene, toxicology, hazardous waste management, and environmental health regulation. Graduates from this curriculum have career opportunities in public health, occupational health, environmental protection, and environmental consulting.

Admission Requirements: Junior standing. CHEM 140, 141, 150, 151, 160, 161, 223, 224, 241, 242; BIOL 201, 202, 203; MATH 124; MICRO 301, 302; ZOOL 118; and PHYS 114, 115, 116.

Graduation Requirements: STAT 311 (or 220); ENGR 333; EPI 420; 40 credits in environmental health, plus one-quarter internship.

Correspondence and Information

Undergraduate Program Director F461 Health Sciences

Graduate Program

The Department of Environmental Health offers four graduate degrees: Master of Science, Master of Science in Radiological Sciences, Master of Public Health, and Doctor of Philosophy. No new students are being admitted to the Master of Science in Radiological Sciences degree program. However, students who are interested in the radiological sciences should inquire about the radiological health option in the industrial hygiene program. The areas of emphasis in the graduate programs are: industrial hygiene and safety, and toxicology (M.S., Ph.D.), environmental health technology (M.S.), and occupational and preventive medicine (M.P.H.).

The industrial hygiene and safety program (M.S., Ph.D.) focuses on technical, psychological, and administrative aspects of the prevention or control of industrial disease and accidental injury. The industrial hygiene radiological health option (M.S.) includes emphasis on the measurement and control of exposure to ionizing radiation.

The toxicology program (M.S., Ph.D.) focuses on research and application of basic scientific principles toward a better understanding of the health effects of toxic substances in the workplace and general environment. Students who select the toxicology option participate in laboratory research on molecular and biochemical processes involved in chemically induced toxic responses such as soft-tissue (e.g., brain, lung, kidney and liver) damage, birth defects, cancer, and nervous system impairment.

The environmental health technology program (M.S.) focuses on community problems associated with toxic substances and their control, hazardous waste disposal, and traditional areas of environmental health,

such as water and wastewater treatment. Students conduct research on the monitoring and control of hazardous substances and biological agents contaminating surface and ground waters, or on hazardous waste management. This mays wold tile and laboratory activities.

The M.P.H. program is for individuals with an earned doctorate. The goal of the program is to provide training in public health sciences with a focus on occupational and environmental health. The program provides. didactic instruction and participation in field studies. Research efforts focus on the etiology and prevention of occupational disease. Physicians have the option of also applying for a residency in occupational or preventive medicine.

The Department of Environmental Health cooperates with the Department of Health Services in a three-year, part-time Extended Master of Public Health degree program designed for midcareer public and community health professionals. Students continue their employment, are required to attend one-month summer sessions for three years, and must meet at the University for five weekends during the academic year. The curriculum is designed to provide advanced knowledge and skills for planning, organizing, and evaluating community and environmental health programs.

Admission Requirements

Prerequisites for admission to the M.S. graduate programs in industrial hygiene and safety, toxicology, and environmental health technology include a Bachelor of Science or equivalent degree in environmental health, a physical science, a biological science, or engineering, and submission of Graduate Record Examination scores.

Prerequisite for admission to the M.P.H. program is a doctoral degree.

Prerequisites for admission into the Ph.D. program in environmental and occupational health sciences include a Bachelor of Science degree in science or engineering with adequate preparation in physics, chemistry, mathematics, and biology. Selection of an applicant will also be based upon an honors-level GPA, a statement of personal goals consistent with the program, supportive letters of reference, and high scores on the Graduate Record Examination.

Graduation Requirements

The M.S. and M.P.H. graduate programs are designed for seven quarters of study, including field applications' and research, requiring completion of a minimum of 60 credits plus 9 credits of thesis, and submission of an acceptable thesis.

The Ph.D. program has a strong research focus, and requires completion of a minimum of 95 credits of which at least 68 are didactic courses in relevant fields of study. A dissertation of original research suitable for publication in an appropriate peer-reviewed journal is required. For an entering student with a Bachelor of Science or Engineering degree, the program of study can be expected to take approximately four to five years. A student entering with a Master of Science degree in a relevant area may complete the degree in less time.

Financial Aid

Traineeships and tuition support are available for a limited number of students. This support comes from federal and private sources awarded to the department or school. A few research assistantships are available to second-year students.

Research Facilities

Specialized laboratories exist for research in industrial hygiene chemistry, ergonomics, trace organics and heavy metals, environmental microbiology, electron microscopy, controlled exposure to environmental factors, toxicology, and radiological sciences. Field re-

SCHOOL OF PUBLIC HEALTH AND COMMUNITY MEDICINE / ENVIRONMENTAL HEALTH 439

search is facilitated through an extensive consultation or service program conducted by this department for labor and industry in Washington State.

Larson, Timothy * 1970, (Adjunct); PhD, 1976, University of Washington; airborn particles, air quality modeling, and instrument development.

Mottet, N. Karle * 1959; MD, 1952, Yale University; effects of trace elements, especially methylmercury and arsenic, on growth and development.

Omenn, Gilbert S. * 1981; MD, 1965, Harvard University; genetic predisposition to environmental and occupational hazards.

Omiecinski, Curtis J. * 1983; PhD, 1980, University of Washington; molecular toxicology, genetic regulation/ expression of drug/chemical metabolizing enzymes.

Robkin, Maurice A. * 1967; PhD, 1961, Massachusetts Institute of Technology; radiation dosimetry, environmental radioactivity, radioactive waste management, health physics.

Rosenstock, Linda * 1980; MD, 1977, Johns Hopkins University; occupational/general internal medicine.

van Belle, Gerald * 1974; PhD, 1967, University of Toronto (Canada); biostatistics, environmental risk factors for neurodegenerative diseases, risk communication.

Woods, James S. * 1982, (Research); PhD, 1970, University of Washington; biochemical toxicology of trace metals; biological markers of metal exposure.

Associate Professors

Barnhart, Scott * 1983, (Adjunct); MD, 1979, George Washington University; occupationally related lung disease.

Bigos, Stanley J. 1980, (Adjunct); MD, 1975, University of Missouri; orthopaedics, spine.

Breysse, Peter * 1957, (Emeritus); MPH, 1957, University of Pittsburgh; exposure of population to contaminants.

Burbacher, Thomas M.* 1983, (Research); PhD, 1983, University of Washington; neurotoxicology, specializing in the behavioral effects of agents on the central nervous system. Covert, David S. * 1975, (Adjunct Research); PhD, 1974, University of Washington; atmospheric chemistry, aerosol physics and instrumentation.

Fenske, Richard A. * 1990; PhD, 1984, University of California (Berkeley); human exposure and health risk assessment, pesticide exposure.

Franklin, Gary M. * 1988, (Research); MD, 1969, George Washington University; occupational injury, neurological epidemiology, public health nutrition.

Geraci, Joseph P. 1972; PhD, 1972, University of Washington; radiation biology, physiological mechanisms of radiation induced liver injury.

Gilbert, Steven G. * 1990, (Research); PhD, 1986, University of Rochester; primate neurobehavioral toxicology and teratology, developmental effects of heavy metals.

Hatlen, Jack B. * 1952, (Emeritus); MS, 1958, University of Washington; environmental health program planning and management, environmental health manpower training.

Kalman, David A. * 1978; PhD, 1978, University of Washington; environmental chemistry, detection and fate of chemical hazards in natural and manmade environments.

Luchtel, Daniel L. * 1972; PhD, 1969, University of Washington; electron microscopy and cell biology, lung anatomy/pathophysiology, fiber toxicology.

Morgan, Michael S. * 1974; DSc, 1972, Massachusetts Institute of Technology; applied respiratory, physiology and inhalation toxicology.

Nevissi, Ahmad * 1973, (Research); PhD, 1973, University of Arkansas; radiochemistry.

Ongerth, Jerry E. * 1984; PhD, 1973, University of Michigan; public water supply, solid waste and water quality management; waterborne pathogens.

Wiker, Steven F. * 1993; PhD, 1986, University of Michigan; ergonomics and human factors engineering.

Assistant Professors

Brodkin, Carl * 1989; MD, 1983, University of Colorado (Denver); hepatic effects of occupational solvent exposure, ventillatory decline in asbestos-exposed workers.

Daniell, William E. * 1984; MD, 1979, Tufts University; health effects of occupational chemical exposures, multiple chemical sensitivity syndrome.

Grossmann, Angelika * 1985, (Adjunct Research); DVM, 1978, Freie University of Berlin (Germany); immunosenecence in humans and mice; immunotoxicology; transmembrane signaling in T-lymphocytes.

Guffey, Steven E. * 1987; PhD, 1987, University of North Carolina; industrial ventilation design, modeling of pressure and flow relationships, hood design research.

Kavanagh, Terrance J. * 1985, (Research); PhD, 1985, Michigan State University; biochemical toxicology and free radical damage.

Keifer, Matthew C. * 1991; MD, 1982, University of Illinois; the human health effects of pesticide exposure.

Kissel, John C. * 1990; PhD, 1985, Stanford University; solid and hazardous waste management practice, human exposure assessment.

Leroux, Brian G. * 1991, (Adjunct Research); PhD, 1989, University of British Columbia (Canada); random effect models, stochastic processes, dental research, toxicology.

Seixas, Noah S. * 1992; PhD, 1990, University of Michigan; exposure assessment methods for occupational/ epidemiologic studies; small industrial plants.

Sheppard, Elizabeth A. * 1989, (Research); PhD, 1992, University of Washington; aggregate data, survival analysis, biostatistical methods in environmental health. Yost, Michael G. * 1993; PhD, 1989, University of California (Berkeley); worker exposures to physical agents, electromagnetic fields, noise and vibration.

Senior Lecturers

Monteith, Lee E. 1954; MS, 1956, University of Washington; industrial hygiene, analytical and environmental chemistry.

Morris, Sharon L. 1982; BA, 1965, Reed College; occupational safety and health policy, continuing education.

Treser, Charles D. 1980; MPH, 1976, University of Michigan; policy analysis and decision making, program planning and evaluation, environmental education.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

ENVH 311 Introduction to Environmental Health (3) Treser Relationship of people to their environment, how it affects their physical well-being and what they can do to influence the quality of the environment and to enhance the protection of their health. Emphasis on environmental factors involved in transmission of communicable diseases and hazards due to exposure to chemical and physical materials in our environment. Offered: ASp.

ENVH 343 Environmental Radicactivity (3) Woodruff Sources of radioactivity in the environment, including both natural sources, especially radon, and manmade sources, especially nuclear power and nuclear explosions. Emphasis given to methods for determining radiation doses from the significant sources. Offered: jointly with ENGR/ENV S/PHYS 343; Sp.

ENVH 405 Toxic Chemicals in the Environment (3) Eaton Basic principles governing the behavior and effects of toxic chemicals released into the environment; sources, distribution, and fate of toxic chemicals in the environment; chemicals and cancer; chemicals and birth defects; government regulation of chemical hazards. Prerequisites: BIOL 203, or BIOC 405, 406 or equivalent. Offered: jointly with ENV S 405; Sp.

ENVH 415 Nuclear Instruments (3) Principles, measurements, and detection of various types of radiation encountered in nuclear energy systems. Use of Geiger, proportional, and scintillation detectors; ionization chambers; analog-digital data-logging equipment; multichannel analyzers. Prerequisite: junior standing. Offered: W.

ENVH 430 Methods in Environmental Sampling and Analysis (3) Samadpour Field sampling methods are studied and selected laboratory analyses of food, drinking water, and waste waters are conducted. Official methods for characterizing physical and chemical quality of water and wastes are demonstrated. Microbiological criteria are emphasized for student participation, including: enumeration of subgroups in populations, selective inhibitor, characteristics of normal flora, rationale of "indicator" organisms. Prerequisites: junior standing, 440, MiCRO 301 and 302, and permission of instructor. Offered: Sp.

ENVH 440 Water and Waste Sanitation (4) Hatten Study of health problems associated with drinking water and wastewaters and minimization of problems. Focus on drinking water quality and quantity requirements; water pollutants and impacts on environment; individual drinking water, onsite sewage facilities, related site selection criteria/regulations, regulatory agency activities. Field performance of environmental health specialist emphasized. Offered: A.

440 SCHOOL OF PUBLIC HEALTH AND COMMUNITY MEDICINE / ENVIRONMENTAL HEALTH

ENVH 441 Food Protection (3) Hatlen Study of identification and characteristics of chemicals and biological agents implicated in foodborne disease outbreaks and conditions or circumstances by which food contamination occurs. Examination of food protection activities conducted by local and state government at the retail level. Prerequisite: MICRO 301 or permission of instructor. Offered: W.

ENVH 442 Vector Control and Housing (3) Hatlen Study of the impact and control of rodents and arthropod vectors of disease, including consideration of economic poisons used, their regulation, and safety measures. Housing practices and conditions affecting health in residential (private and multiple dwelling) and institutional (schools and hospitals) settings are examined and control measures reviewed. Offered: Sp.

ENVH 445 Solid Waste Management (3) Ongerth Examination of the public health, environmental, economic, and materials conservation aspects of solid wastes management; amounts and sources of solid wastes, waste reduction and recycling, methods of storage, transportation and disposal, integrated waste management, identification of present problems and future needs. Prerequisite: environmental health major or permission of instructor. Offered: W.

ENVH 446 Hazardous Waste Management (3) Kissel Characterization of hazardous wastes and introduction to pertinent federal and state regulations. Description of management options at pre-generation, pre-release, and post-release stages. Discussion of environmental health effects and significance. Supplemented with case studies. Prerequisite: environmental health major or permission of instructor. Offered: Sp.

ENVH 449 Respiratory Effects of Air Pollution (2) *Koenig* Structure and function of the respiratory system and the changes that may be produced by specific air pollutants, such as ozone, SO₂. Air quality criteria and the economic costs of disease are discussed. Several classroom demonstrations. Prerequisite: sophomore standing. Offered: odd years; Sp.

ENVH 453 Industrial Hyglene and Safety (3) Morgan Introduction to occupational health and safety hazards, analysis, including causes, effects, evaluation, control, and legislation. Prerequisite: 311 or permission of instructor.

ENVH 454 Industrial Hygiene Sampling and Instrumentation (2) Breysse Series of lectures and laboratory demonstrations illustrate the use of a wide spectrum of industrial hygiene sampling equipment. Included are airflow calibration, chemical calibration, detector tubes, personnel sampling devices, both continuous and discrete reading instruments. Instrumentation for noise also covered. Prerequisite: 453. Offered: W.

ENVH 457 Industrial and Environmental Noise (3) Yost Survey of industrial and community noise problems, including sources, effects, measurement, control, and legislation. Offered: Sp.

ENVH 461 Air Pollution Control (3) Pilat Fundamental concepts of air pollution. Emission sources, atmospheric dispersion, ambient concentrations, adverse effects, governmental regulations, emission standards, air-quality standards, processes and equipment for controlling emissions. Prerequisite: senior standing. Offered: jointly with CIVE 490; ASp.

ENVH 470 EH Practice: Administration and Management (2) Treser Explores selected aspects of the management of environmental health programs in the community, including organization theory and practice, budgeting, personnel management, program planning and evaluation, and community relations. Prerequisite: environmental health major or permission of instructor. Offered: A.

ENVH 471 Environmental Health Regulation (2) Treser Introduction to administrative regulation and process. Authority, jurisdiction, and structure of environmental control programs and agencies; the regulatory process; agency acquisition and retention of information; administrative actions; enforcement of environmental health laws; major statutes and cases affecting programs. Prerequisite: environmental health major or permission of instructor. Offered: W.

ENVH 479 Environmental Research Design (1) *Treser* Designed to assist in the development of environmental health research projects. Common research designs, methodology, principles, and problems with emphasis on effective research problem definition, implementation, and data presentation. Offered: W.

ENVH 480 Environmental Health Problems (*, max. 6) Treser Individual projects involving library, laboratory, or field study of a specific environmental health problem. Prerequisite: environmental health major or permission of Instructor. Offered: AWSpS.

ENVH 482 Environmental Health Internship (3-15) Treser Assignment to an environmental health or environmental protection agency for supervised observation and experience in environmental health technology, program planning and utilization of community resources. Prerequisite: environmental health major or permission of departmental adviser. Credit/no credit only. Offered: AWSpS.

ENVH 497 Environmental Health Special Electives (*) Offered: AWSpS.

ENVH 499 Undergraduate Research (*) Individual research on a specific topic in environmental health upon which specific conclusions, judgments, or evaluation. can be made or upon which facts can be presented. Prerequisite: environmental health major or permission of instructor. Offered: AWSpS.

Courses for Graduates Only

ENVH 511 Environmental and Occupational Health (3) Effects of exposure to chemical, physical, and biological agents, using a problem-oriented approach embracing the community and workplace environments. Current issues, using specific cases from recent literature as basis for classroom discussion and written assignments. Offered: W.

ENVH 512 Hazardous Waste Disposal (3) Laws and regulations applicable to hazardous wastes; management and regulation practices. Representatives describe role of regulatory agencies, industry, and environmental consulting firms. Considers technical, economic, and health and risk-related implications of hazardous wastes. Paper addressing specialized areas of disposal required. Recommended: 466. Offered: S.

ENVH 514, 515 Environmental and Occupational Toxicology I, II (3,3) Costa, Omiecinski Major topical areas in human and environmental toxicology, including the biochemical, cellular, and physiological mechanisms by which chemicals produce toxic responses; the toxicology of the major classes of chemicals; principles of toxicity testing; interpretation of toxicological data. Prerequisites: BIOL 212, BIOC 440, or permission of instructor. Offered: jointly with ENV S 514, 515; W.Sp.

ENVH 517 Methods and Applications of Genetic Epidemiology (3) Austin Research methods for evaluating genetic influences on disease, risk factors. Study designs, statistical methods include twin studies, family studies, population-based association studies, complex segregation analysis, path analysis, linkage analysis. Prerequisites: EPI 512, 513; BIOST 511, 512, 513; background in human genetics or equivalent basic genetics course. Offered: jointly with EPI 517; W.

ENVH 520 Biological Effects of Ionizing Radiation (3) Geraci Effects of ionizing radiation at the molecular, cellular, organ, and organism levels with emphasis on mammalian systems. Offered: S. ENVH 521, 522 Laboratory in Radiation Biology (1,1) Laboratory study of the biological effects of ionizing radiation.

ENVH 524 Radioactive and Chemical Wastes (3) Nevissi Fate and effects of mixed radioactive and hazardous waste in the environment are discussed. Topics are: the generation, storage, disposal, environmental transport, pathways to humans, and evaluation of health effects of mixed wastes. Also includes: waste disposal at sea, and the current status and future trends in mixed waste disposal.

ENVH 525, 526 Physical Radiation Dosimetry I, II (3,3) Robkin Physical basis of the dosimetry of ionizing radiation. Includes consideration of radiation sources, interactions with inert matter and living tissue, internal and external radiation exposure, radiation detection and measuring instruments, biological effects, radiation protection standards, and the statistics of radioactivity measurement.

ENVH 527 Radiation Hazards Analysis and Control (1) Emphasizes methods and procedures rather than facility or equipment design. Offered: Sp.

ENVH 528 Physical Aspects of Medical Imaging (4) Quantitative physical principles of medical imaging are presented for electromagnetic and sonic radiation. Methods of image formation and formation extraction are discussed for conventional film radiography, CT, DSA, PET, B-mode ultrasound and Doppler ultrasound. Offered: jointly with RADGY/BIOEN 508.

ENVH 529 Environmental Impact of Radioactivity (3) Robkin Dispersion, fate, and environmental significance of radioactivity released into environment. Assessment of environmental impact of radioactivity releases; impact of mixtures of radioactivity and chemicals. Laboratory setting permits evaluation of release and impact events with personal computer versions of state-of-the-art environmental assessment and radiation dosimetry codes. World environmental contamination problems addressed. Offered: So.

ENVH 531 Neurotoxicology (3) Costa Advanced discussions of the principles and methodological approaches to neurotoxicology (including behavioral toxicology), classes of neurotoxic agents, types and mechanisms of neurotoxic effects, as well as the role of neurotoxicology in toxicology and public health. Prerequisite: 514, 515 or ENVH 405 or permission of instructor. Offered: even years; W.

ENVH 532 Reproductive and Developmental Toxicology (2) Faustman Investigates chemicals that can induce adverse reproductive and developmental outcomes. Discussion topics include identification and characterization of specific classes of toxic agents, mechanisms of action of these agents at the molecular and cellular level, and risk assessment and regulatory issues. Prerequisite: 514 and 515 or 405 or permission of instructor. Offered: even years; S.

ENVH 533 Molecular Toxicology (2) Omiecinski Advanced discussion of molecular mechanisms whereby chemical, physical, and biological agents produce their harmful effects on biological tissues. Prerequisites: 515 or permission of instructor. Offered: jointly with PHCOL 533; even years; A.

ENVH 535 Inhalation Toxicology (2) Koenig, Luchtel Advanced course on the toxicology of air pollutants and the response of the respiratory system to inhaled gaseous and particulate toxins. Issues and concepts covered include biology of the respiratory system, exposure technology, experimental design and methodological issues, health effects of air pollutants, and regulatory aspects. Prerequisites: 514, 515, or ENVH 405 or permission of instructor. Offered: even years; Sp.

ENVH 545 Drinking Water and Health (3) Ongerth Principles, requirements of public water supply for protection of public health. Includes essential characteristics of water quality and sources, water treatment and distribution systems with associated health hazards; public health engineering, epidemiology, risk assessment; surveillance, regulatory needs to assure safe public water supplies. Prerequisite: 440 or CIVE 351 or permissioned histructor. Offered: Sp. System is

ENVH 550 Methods of Microscopy (2) Luchtel Sample preparation methods for biological and nonbiological specimens, photographic and darkroom printing techniques, theory and practical use of light microscopy (bright-field, phase contrast, polarizing, and DIC), electron microscopy (transmission, scanning, electron diffraction, and energy dispersive x-ray analysis), and image analysis. Opportunity for student research project. Prerequisite: permission of instructor. Offered: Sp.

ENVH 552 Environmental Chemistry of Pollution (3) Kalman, Kissel Chemical and physical processes determining distribution and fate of chemical hazards, detection of low levels of hazardous compounds, and environmental evaluation and prediction. Fundamental chemical concepts and measurable properties of individual compounds to interpret and relate measurements. Prerequisite: admission to graduate program or permission of instructor. Offered: W.

ENVH 553 Instrumental Methods for Industrial Hygiene Measurement: Lecture (3) Morgan Methods, instrumentation, and theory of atmospheric sampling and analysis, emphasizing evaluation of potential occupational hazards and exposures. Prerequisite: 453 or permission of instructor. Offered: A.

ENVH 555 Instrumental Methods for Industrial Hyglene Measurement: Laboratory (3) Monteith Utilizes typical instrumental techniques and analytical methods for the evaluation of potential occupational exposures. Prerequisites: 453 and 553 or permission of instructor. Offered: W.

ENVH 557 Industrial Ventilation I (3) Guffey Principles of exhaust ventilation systems, design for contaminant control in industry. Prerequisite: 453 or permission of Instructor. Offered: W.

ENVH 558 Industrial Ventilation II (3) Guffey Troubleshooting and redesign of existing exhaust ventilation systems for contaminant control. Includes measurement laboratories. Prerequisite: 557 or permission of instructor. Offered: Sp.

ENVH 559- Applied Industrial Hygiene (2-, max. 4) Fenske Application of occupational safety and health principles through a combination of field investigations and classroom discussions. Teams conduct walkthrough evaluations, sampling, exposure assessment, review of current health and safety programs, and development of control strategies to eliminate or reduce hazards at worksites. Extends over two quarters. Prerequisite: 453 or equivalent. Offered: AW.

ENVH 560 Organizing and Administering Industrial Safety and Health Programs (4) Freeman Explores industrial organization and methods of integrating safety and industrial hygiene programs with industrial operations. Philosophic issues related to industrial safety and health such as responsibility for safety, dependency on safe practice, and hierarchy of prevention are investigated. Contains numerous case problems and student involvement opportunities. Offered: W.

ENVH 562 Technical Aspects of Safety and Health (3) Wiker Explores specific hazards associated with major industries, as well as hazards common to all industries. Machine guarding, electrical safety, systems safety analysis, materials handling, and working at heights are among the subjects covered. Offered: A.

ENVH 564 Health and Safety Problems in Industry (2) Freeman, Seixas Provides wide spectrum of practical examples of industrial processes and occupational health and safety problems, as practiced in an industrial milieu; serves as a case-study sequence for the didactic course work in several programs. Provides opportunity to approach and analyze health and safety problems using a multidisciplinary approach.

ENVH 566 Introduction to Ergonomics (3) Wiker Basic principles of ergonomics in work environment applied to problems of worker and management. Topics include measurement of physical work capacity, problems of fatigue and heat stress, applied biomechanics, worker-machine interactions and communication, design of displays and controls. Prerequisite: basic human physiology or permission of instructor. Offered: Sp.

ENVH 567 Environmental Carcinogenesis (2) Eaton Biochemical and molecular basis of carcinogenesis induced by chemical and physical agents in the environment, including detailed discussion of multi-stage process of carcinogenesis, mechanisms of action of specific chemical and physical carcinogens; current approaches to identification of carcinogens, and chemoprevention strategies. Prerequisite: 514 and 515 or 405 or permission of instructor. Offered: W.

ENVH 569 Occupational Fitness (3) Wiker Interaction between physical requirements of occupational tasks and the individual's capacity to perform; jobs requiring manual material handling. Techniques of job analysis, validation of standards, criteria for new design or redesign, and employee screening. Prerequisite: 566 or permission of instructor. Offered: A.

ENVH 570 Occupational and Environmental Epidemiology (3) Checkoway Research in occupational and environmental determinants of disease. Defining exposed populations, characterizing exposure levels, estimating disease risks relative to exposure cohort, case-control, cross-sectional designs for various health outcomes: Applications to exposure standard setting and risk assessment. Prerequisite: EPI 511 or EPI 512, 513 or permission instructor. Offered: jointly with EPI 570; W.

ENVH 572 Clinical Occupational Medicine (3) Comprehensive overview of clinical occupational medicine. Introduction to principles of occupational disease, occupational history taking, and physician involvement in workers' compensation. Approaches to diagnosis and management of occupational diseases based on organ systems. Prerequisite: possession of an M.D. degree or health related background or permission of instructor. Offered: S.

ENVH 577 Risk Assessment for Environmental Health Hazards (3/4) Faustman, Omenn Examines context, methodologies, data, uncertainties, and institutional arrangements for risk assessment. Qualitative and quantitative approaches to identification, characterization, and control of environmental hazards to health emphasized through didactic and case studies. Prerequisite 515 and BIOST 511 or permission of instructor. Offered: jointly with CEWA/ENV S/PB AF 577.

ENVH 580 Environmental Health Seminar (1, max. 6) Current environmental health research and environmental control programs. Credit/no credit only. Offered: AWSp.

ENVH 581, 582, 583 Environmental Health Reading (1,1,1) Burbacher, Koenig, Luchtel Critical reading of selected basic and applied research publications on environmental health problems and programs. Must be taken in sequence. Offered: A,W,Sp.

ENVH 584 Occupational Health and Safety: Policy and Politics (3) Camp, Morris Designed to provide a better understanding of the historical, political, and policy issues in occupational health and safety through selected readings and discussion with experts in the field. Students prepare a written and oral analysis of a policy issue and make a policy proposal. Offered: Sp.

ENVH 590 Selected Topics (1-6) In-depth study of a current environmental health topic. For more information and permission, consult department program adviser. Offered: AWSpS. ENVH 591 Current Topics in Toxicology (1, max. 6) Faustman, Gilbert Provides in-depth examination of current topics in environmental and occupational toxicology taken from recently published journal articles. Consists of presentations led by students, postdoctoral fellows, and faculty. Students expected to participate actively in discussion. Assigned weekly readings given according to the schedule of speakers and topics. Offered: AWSp.

ENVH 592 Special Topics in Radiation Biology (2)

ENVH 595 Research Rotation (3, max. 9) Research laboratory rotation for predoctoral graduate students. Students commit at least ten hours per week to a laboratory research project aimed at introducing the student to current methods in laboratory research, and to familiarize the student with specific faculty research interests. Prerequisites: graduate standing and permission of program director. Offered: AWSpS.

ENVH 598 Field Practice in Radiological Health (*, max. 6)

ENVH 599 Field Studies (2-6) Assignment to an environmental research or service program for application of evaluation techniques. Credit/no credit only. Offered: AWSpS.

ENVH 600 Independent Study or Research (*) Prerequisite: permission of departmental adviser. Offered: AWSpS.

ENVH 700 Master's Thesis (*) Prerequisite: permission of departmental adviser. Offered: AWSpS.

ENVH 800 Doctoral Dissertation (*) Prerequisite: permission of departmental adviser. Credit/no credit only. Offered: AWSpS.

Epidemiology

F263 Health Sciences

Graduate Program

The Department of Epidemiology offers three graduate degrees in the field of epidemiology for individuals intending to become academicians, highly qualified research specialists, or well-trained practitioners. The Master of Public Health degree requires course work in health services and environmental health in addition to epidemiology and thesis research. The Master of Science degree requires concentration on courses and research in epidemiology as preparation for technical specialization or as a prelude to the Doctor of Philosophy program. The Ph.D. course requirements differ from the M.S. program requirements primarily in the scope and complexity of research for the dissertation. Course work includes a basic series in epidemiology, one or more courses in biostatistics, and seminars, Electives are dictated by the student's special interest and experience. The department also offers postdoctoral research training and a two-year residency in general preventive medicine with emphasis on epidemiology for physicians.

Special Requirements

An applicant should have a degree in medicine, dentistry, or veterinary medicine or be a qualified holder of a master's or higher degree in a relevant field, such as nursing, microbiology, or biostatistics, or in an appropriate social science. Others who will be considered are students enrolled in medical school who are recommended for the M.D.-Ph.D. program and, occasionally, individuals with a baccalaureate degree whose prior work experience is appropriate.

Financial Aid

Research training stipends are available on a limited basis. Some opportunities for work on various research

projects or for aid in teaching may provide partial assistance.

Research Facilities

University facilities include well-equipped laboratories, an excellent library system, and access to computers. Various opportunities for field research are provided in Seattle and elsewhere in the state, including the Fred Hutchinson Cancer Research Center, Group Health Cooperative's Center for Health Studies, the Harborview-Injury Prevention' and 'Research' Center, the Seattle-King County Department of Public Health, and several other local hospitals and health institutions.

Professors

Alexander, E. Russell * 1990; MD, 1953, University of Chicago; infectious disease epidemiology and infectious disease of children.

<u>.</u>

• •

Checkoway, Harvey * 1987; PhD, 1978, University of: North Carolina; occupational and environmental epidemiology.

Connell, Frederick A. * 1978, (Adjunct); MD, 1972, New York University; maternal and child care, health services.

Daling, Janet R.* 1979; PhD, 1977, University of Washington; maternal and child Wealth and caroor research.

Davis, Scott * 1981; PhD, 1980, University of Washington; cancer epidemiology, disease etiology.

Eisenberg, Mickey * 1976, (Adjunct); MD, 1971, Case Western Reserve University; sudden cardiac arrest and acute myocardial infarction.

Emanuel, Irvin * 1966; MD, 1960, University of Rochester; child development and mental retardation.

Foy, Hjordis * 1967; MD, 1953, Karolinska institute (Sweden); epidemiology and control of infectious disease.

Gale, James L.* 1969; MD, 1961, Columbia University; epidemiology and control of infectious disease, international health.

Grayston, J. Thomas * 1960; MD, 1948, University of Chicago; epidemiology and control of infectious disease. Handsfield, Hunter 1979, (Adjunct); MD; 1968, Columbia University; infectious diseases.

Henderson, Maureen M. * 1975; MBBS; 1949, University of Durham (UK); epidemiology of chronic diseases.

Holmes, King K. * 1967, (Adjunct); MD, 1963, Cornell University; clinical epidemiology and pathogenesis of infectious diseases.

Koepsell, Thomas D. 1979; MD, 1972, Harvard University, unronic diseases, applying epidemiologic concepts to medical practice.

Lee, John A. H. * 1966, (Emeritus); MD, 1955, University of Edinburgh (UK); epidemiology of neoplastic disease,

Longstreth, William T. 1980, (Adjunct); MD, 1975, University of Pennsylvania; neurology.

Moolgavkar, Suresh H. 7 1984; MBBS: 1966, Bombay: University (India); cancer epidemiology; development of quantitative methodology.

Perine, Peter L. * 1981; MD, 1966, University of Kansas; international health, sexually transmitted diseases. Rivara, Frederick P. * 1984, (Adjunct); MD, 1974, University of Pennsylvania; pediatric epidemiology and injury prevention and research.

Shy, Kirkwood K. * 1979, (Adjunct); MD, 1973, Wayne State University; epidemiologic applications to problems in obstetrics and gynęcology.

Stamm, Walter E. * 1979, (Adjunct); MD, 1971, Harvard University; infectious disease.

Stergachis, Andy * 1980; PhD, 1979, University of Minnesota; pharmaceutical outcomes research, reproductive epidemiology.

Thomas, David B. * 1975; MD, 1963, University of Washington; cervix and breast carcinoma epidemiology.

Weiss, Noel S. * 1975; MD, 1967, Stanford University; chronic disease epidemiology.

Worthington-Roberts, Bonnie S. * 1973; PhD, 1971, University of Washington; maternal and child nutrition.

Associate Professors

Austin, Melissa A. * 1988; PhD, 1985, University of California (Berkeley); genetic epidemiclogy of lipoproteins, coronary heart disease and cance:

Beresford, Shirley A. * 1987; PhD, 1981, University of London (UK); cancer prevention, especially dietary factors; diet and exercise in disease prevention.

Boyko, Edward J. * 1989, (Adjunct); MD, 1979, University of Pittsburgh; epidemiology of inflammatory bowel disease and non-insulin-dependent diabetes mellitus.

Chu, Joseph * 1982; MD, 1975, Georgetown University.

Di Giacomo, Ronald F. * 1974, (Adjunct); DVM, 1965, University of Pennsylvania; comparative epidemiology and zoonoses.

Dugowson, Carin E. 1979, (Adjunct); MD, 1976, University of Illinois; rheumatology.

Hickok, Durlin E. * 1974, (Clinical); MD, 1973, University of Michigan; perinatal epidemiology.

Hoover, J. Joanne * 1972, (Research); MD, 1960, University of Illinois; cardiovascular epidemiology.

Kreiss, Joan K. * 1984; MD, 1978, Washington University; epidemiology of AIDS, particularly in Africa.

Kukull, Walter A. * 1981; PhD, 1984, University of Washington; Alzheimer's disease, epidemiologic methods, chronic disease epidemiology.

LaCroix, Andrea Z. * 1989; PhD, 1984, University of North Carolina; epidemiology of aging.

Martin, Diane P. 1978, (Adjunct); PhD, 1979, University of Washington; health services use and cost, alternative delivery systems and insurance.

Moore, Donald E. 1977, (Adjunct); MD, 1967, Case Western Reserve University; reproductive endocrinology.

Mueller, Beth A. * 1984; DPH, 1984, Tulane University; epidemiology of perinatal and reproductive dieseases, cancer, and injury research.

Pendergrass, Thomas W. 1978, (Adjunct); MD, 1971, University of Tennessee; hematology, oncology.

Psaty, Bruce M. * 1986; MD, 1981, Indiana University; cardiovascular disease, coronary heart disease, hypertension, and pharmacoepidemiology.

Siscovick, David S. * 1987; MD, 1976, University of Maryland; epidemiology.

Stanford, Janet L. * 1986; PhD, 1986, Johns Hopkins University; chronic disease epidemiology including cancer and cardiovascular disorders, biochemical epidemiology.

Vaughan, Thomas L. * 1982; MD, 1978, University of Illinois; cancer, maternal and child health, environmental epidemiology. White, J. Emily * 1982; PhD, 1982, University of Washington; cancer control research and prevention, epidemiologic methods, Alzheimer's disease!

Holt, Victoria L. * 1989; PhD, 1990, University of Washington; reproductive health epidemiology, impact of prenatal care and perinatal technology.

Kestin, Mark * 1990; PhD, 1990, Flinders University (Australia); relationship between nutrition, cancer and cardiovascular disease.

Koutsky, Laura A. * 1981; PhD, 1987, University of Washington; sexually transmitted diseases, including HIV-AIDS.

Kristal, Alan R. * 1988; DPH, 1983, Columbia University; nutritional epidemiology, dietary behavior, nutrition intervention, and cancer control.

Krohn, Marijane A. * 1984; PhD, 1987, University of Washington; reproductive and perinatal epidemiology, vaginal flora and obstetric complications.

Nazar-Stewart, Valle * 1986; PhD, 1991, University of Washington; cancer biomarkers, pediatric diseases.

Reiber, Gayle E.* 1991; PhD, 1989, University of Washington; epidemiology and health services research on preventing complications of diabetes.

Schwartz, Stephen M. * 1989; PhD, 1990, University of Washington; cancer epidemiology, neuroepidemiology, reproductive epidemiology, epidemiologic methods.

Stevens, Nancy G. * 1982, (Adjunct); MD, 1979, University of Washington; family medicine.

Williams, Michelle A. * 1991; ScD, 1991, Harvard University; reproductive and perinatal epidemiology, cancer epidemiology.

Wolf, Marsha E. * 1983; PhD, 1988, University of Washington; injury epidemiology and older adults.

Instructor

Forti, Robert L. 1993, (Acting); MD, 1985, Vanderbilt University.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

EPI 420 Introduction to Epidemiology (3) Schwartz For the undergraduate student wishing to devote only one quarter to a course in epidemiologic methods. Description of ways in which variation in disease occurrence is documented and how that variation is studied to understand causes of disease.

EPI 497 Epidemiology Special Electives (*) Offcampus course for medical students. Prerequisite: permission of advisée

EPI 499 Undergraduate Research (*) Prerequisite: permission of adviser.

Courses for Graduates Only

EPI 501 Public Health Practice at the Local Level (3) History and development of local, state public health departments. Traditional vs. new roles and critical interactions with public, private agencies highlighted. Examples drawn from areas of current concern (e.g., sexually transmitted diseases; health promotion, disease prevention; environmental hazards; substance abuse; emergency medical services). Prerequisite: HSERV 511 or permission of instructor. Offered: jointly with HSERV 501.

EPI 503 Public Health Surveillance: Epidemiology and Health Policy (2/4) Covers data collection and analysis for public health and their use in formulation of policy and programs. Content is delivered through studies of various surveillance systems: injuries, AIDS, birth defects, vaccine-preventable diseases, occupational illnesses and injuries, adverse drug reactions, chronic diseases, hospital-acquired infections, disasters. Offered: jointly with HSERV 503.

EPI 511 Introduction to Epidemiology (3-4) Schwartz For the graduate student wishing to devote only one quarter to a course in epidemiologic methods. Description of ways in which variation in disease occurrence is documented, and how that variation is studied to understand causes of disease. Prerequisite: graduate standing.

EPI 512 Epidemiologic Methods I (4) Koepsell, Weiss Principles and methods of epidemiology. Covers measures of disease frequency, measures of effect, causal inferences, descriptive epidemiology, study types, misclassification, and effect modification. Designed for students who want to take 513. Prerequisite: prior or concurrent enrollment in BIOST 511 or equivalent.

EPI 513 Epidemiologic Methods II (4) Koepsell, Weiss Continuation of 512. Considers how designs of epidemiologic studies may be constructed to maximize etiologic inferences. Covers confounding, randomized trials, cohort studies, case-control studies, and selected topics. Prerequisite: 512.

EPI 514 Application of Epidemiologic Methods (4) Mueller, Schwartz Practical experience in analysis of data. Students analyze data sets currently on file using contemporary epidemiologic methods as taught in 512 and 513. Prerequisites: 512, 513 and epidemiology major.

EPI 517 Methods and Applications of Genetic Epidemiology (3) Austin Research methods for evaluating genetic influences on disease, risk factors. Study designs, statistical methods include twin studies, family studies, population-based association studies, complex segregation analysis, path analysis, linkage analysis. Prerequisites: 512, 513; BIOST 511, 512, 513; background in human genetics or equivalent basic genetics course. Offered: jointly with ENVH 517.

EPI 519 Epidemiology of Cardiovascular Disease (3) Psaty Principles, methods, and issues in the epidemiology of cardiovascular disease. Focuses on coronary heart disease and its major risk factors; also covers other topics such as stroke and sudden death. The format includes informal lectures and discussions of the current literature. Prerequisite: 511 or 512, 513.

EPI 520 Infectious Diseases Epidemiology (4) Foy Principles and practices of epidemiology, focusing on communicable diseases. Methods for epidemiological investigation of infections taught by reading classical descriptions of disease outbreaks and analyzing current papers. Term paper required, consisting of an investigation of an infectious disease outbreak or a protocol for a research study. Prerequisite: 511 or permission of instructor.

ş

EPI 521 Epidemiology of Maternal and Child Health Problems (4) Emanuel, Hickok Contributions of epidemiology to the understanding and prevention of various maternal and child health problems, including abnormal growth, morbidity and mortality, pregnancy complications, delivery, abortion, and abnormal child development. Prerequisites: graduate, medical, or dental school standing and 511 or 512 or permission of instructor. Offered: jointly with HSERV 542.

EPI 524 Epidemiologic Studies of Cancer Etiology and Prevention (3) Davis, Kristal Current knowledge of the role that chemicals, radiation, viruses, familial factors, immunodeficiencies, and benign diseases play in the etiology of various cancers, as determined from studies in human populations; the epidemiologic characteristics of most major types of cancer; applications of epidemiologic principles to planning and evaluating programs of primary, secondary, and tertiary cancer prevention. Prerequisite: 511 or 513.

EPI 525 Topics in Preventive Medicine (2) Foy, Henderson Examine current scientific knowledge and state of the art of preventive medical interventions. Discuss and consider options for current practice. Prerequisite: MD, OD, or permission of instructor. Offered: jointly with HSERV 505.

EP1526 Zoonotic Diseases (3) DiGiacomo, Rausch Explores the public health aspects of zoonotic diseases, their epidemiology and current approaches to control. Focuses on the major viral, rickettsial, bacterial, protozoal, helminthic, and fungal diseases transmitted from wild and domesticated animals to humans in North America. Prerequisite: 520 or permission of instructor. Offered: jointly with C MED 526.

EPI 527 Practical issues in the Conduct of Epidemiologic Studies (2) Seminar format focusing on practical aspects of conducting epidemiologic studies. Topics include grant writing and the peer review process, issues in the study of human subjects, random digit dialing, interviewing techniques, disease registries, and studies in the industrial setting. Prerequisite: graduate standing or permission of instructor. Offered: credit/no credit; odd years.

EPI 528 Exposure Measurement in Epidemiology (3) White Principles and methods of measuring exposures and covariates in epidemiological studies. Validity and reliability of measures, questionnaire design, effects of measurement error, maximizing response rates, quality-control procedures, measurement of specific exposures. Prerequisite: 513.

EPI 530 AIDS: A Multidisciplinary Approach (2) Koutsky, Kreiss Comprehensive overview of the public health, clinical, and laboratory aspects of AIDS. Topics include the pathogenesis, natural history, and management of human immunodeficiency virus (HIV) infections. The impact of AIDS on community and global health care and prospects for prevention and control. Offered: jointly with MED 530.

EPI 531 Problems in International Health (4) Gloyd Survey of the relationship of the sociocultural, political, economic, and demographic characteristics of developing countries to disease occurrence and to the solution of health problems. Prerequisite: graduate or medical student standing. Offered: jointly with HSERV 531.

EPI 532 Epidemiology of infectious Diseases of Third-World Importance (3) Gale, Kreiss A review of major infectious disease problems of the developing world, including AIDS, malaria, tuberculosis, measles, diarrhea. Means of assessing the impact of infectious diseases on the health of communities through surveillance and appropriate survey techniques. Offered: odd years.

EPi 533 Pharmacoepidemiology (2) Heckbert, Stergachis Introduction to the study of risks and benefits of pharmaceuticals. Overview of drug development and approval, assessment of methods for study of drug risks and benefits, and their relationship with the formulation of public policy. Prerequisite: graduate standing. Offered: jointly with PHARM 533.

EPI 535 Maternal and Child Health in Developing Countries (3) Shaul Familiarizes graduate students with issues in maternal and child health of less developed countries. Topics: nutritional assessment; growth monitoring; infant feeding practices; epidemiologic risk assessment; use of technologies; role of politics, economics, cultural factors toward morbidity and mortality. Prerequisite: graduate student standing or permission of instructor. Offered: jointly with HSERV 535.

EPI 536 Categorical Data Analysis in Epidemiology (4) Summary of univariate categorical data analysis; introduction to multivariate analysis of categorical epidemiologic data using multiplicative models. Experience at interpretation; familiarity with available programs gained by analysis of bona fide data, critiques of analyses appearing in literature. Prerequisites: 514 and BIOST 513; or BIOST 515; or permission of instructor. Offered: jointly with BIOST 536.

EPI 537 Survival Data Analysis in Epidemiology (4) Introduction to the multivariate analysis of survival data using multiplicative models. Application to epidemiologic studies. Familiarity with interpretation and available computer programs gained by analysis of bona fide sets of data and critiques of analyses appearing in the literature. Prerequisite: 536 or permission of instructor. Offered: jointly with BIOST 537.

EPI 538 Nutritional Epidemiology (3) Beresford, Kestin Application of epidemiological methods to current studies of nutrition and disease. Special methodclogical problems of importance in nutritional epidemiological studies. Diet and heart disease, and diet and cancer relationships. Enables students to plan studies in nutritional epidemiology. Prerequisite: 511 or 512 or permission of instructor. Offered: jointly with NUTR 538.

EPI 539 Research Methods in Developing Countries (3/4) Explores methodologies to obtain useful information regarding health status and health services in Third World countries. Standard evaluation methods which require minimal resources to perform. Measurable indicators of health status and health services discussed. Students design and implement a community-based survey to apply methods learned. Offered: jointly with HSERV 539.

EPI 542 Clinical Epidemiology (2) Weiss Principles and methods involved in studying outcome of illness. Prerequisite: 511, or 512 and 513.

EPI 570 Occupational and Environmental Epidemiology (3) Checkoway Research methods for studying occupational and environmental determinants of disease. Defining exposed populations, characterizing exposure levels, estimating disease risks relative to exposure. Cohort, case-control, cross-sectional designs for various health outcomes. Applications to exposure standard setting and risk assessment. Prerequisite: 511 or 512, 513 or permission of instructor. Offered: jointly with ENVH 570.

EPI 583 Epidemiology Seminar (1, max. 3) Presentation of current epidemiologic research and application of epidemiologic research in the practice of public health.

EPI 589- Epidemiologic Research in Aging Populations (3) LaCroix Emphasizes application of epidemiologic methods to the study of older populations. Topics include: compression of morbidity; successful aging; methodological challenges in studying older populations; physical, cognitive and social function as

٠.

444 SCHOOL OF PUBLIC HEALTH AND COMMUNITY MEDICINE / EPIDEMIOLOGY

epidemiological endpoints; chronic conditions of the aging (heart disease, cancer, Alzheimer's disease, dementia, osteoporosis, fractures); health promotion strategies. Prerequisites: 511 or 513. Offered: jointly with HSERV 589.

EPI 590 Selected Topics in Epidemiology or International Health (1-6) Tutorials are arranged for a small number of students for in-depth examination of an area of epidemiology or international health, usually of current nature. Seminar format. Prerequisite: 511. Also a special summer format presenting introductory material. May be taken with ENVH 590 and/or HSERV 590. For more information and permission, consult the department program adviser.

EPI 591 Current Literature in Epidemiology (1) Articles pertaining to epidemiology and related subjects selected from the current literature to be distributed and read by all participants. Faculty members and enrolled students alternate being responsible for conducting sessions and choosing articles to read. Prerequisites: 513.

EPI 592 Program Seminars (1-6) Graduate seminars organized to address specific educational needs of students in various specialized programs within the Department of Epidemiology (i.e., Maternal and Child Health). Prerequisite: permission of instructor.

EPI 593 Cancer Prevention Laboratory (3) Provides laboratory experience for pre- and post-doctoral students working on cancer prevention projects at the Fred Hutchinson Cancer Research Center. Offered: jointly with BIOST 593.

EPI 600 Independent Study or Research (*) Prerequisite: permission of departmental adviser. Credit/ no credit only.

EPI 700 Master's Thesis (*) Prerequisite: permission of departmental adviser. Credit/no credit only.

EPI 800 Doctoral Dissertation (*) Prerequisite: permission of departmental adviser. Credit/no credit only.

Health Services

F346 Health Sciences

Undergraduate Program

Bachelor of Clinical Health Services

Candidates for the Bachelor of Clinical Health Services degree must be admitted to the University of Washington at the junior year level. They will pursue a sevenquarter sequence of prescribed studies in the MEDEX Northwest Physician Assistant program. Admission to the professional training program is via a competitive process administered by the MEDEX Northwest program within the Department of Health Services. Because of the program's emphasis on prior medical experience, the great majority of applicants are working adults who have completed their pre-professional undergraduate course work at other colleges and universities throughout the Northwest.

Matriculation in the bachelor's degree pathway is dependent upon *both* admission to the University and acceptance by the MEDEX Northwest program. Students who are accepted by the MEDEX Northwest program for physician assistant training who are not admissible to the University will be classified as nonmatriculated students. They will earn official University credits and receive a certificate upon completion of the program.

MEDEX Northwest Certificate Program

MEDEX Northwest is a program designed to train physician assistants. It provides primary-care, midlevel practitioners by training medical personnel with prior clinical experience. A fully accredited physician assistant program conforming to standards developed and administered by the American Medical Association, MEDEX Northwest places thirty students annually in a variety of sites in Washington, Alaska, Oregon, Idaho, and Montana.

MEDEX Northwest is a twenty-one-month program. The first nine months consist of intense clinical and didactic instruction at the University. The six subsequent months are spent in a variety of inpatient and outpatient clinical rotations. The final six-month preceptorship is an on-the-job experience tailored to the practice of individual primary-care preceptors and emphasizing diagnosis and treatment. At the completion of the program, students are eligible to sit for the national certifying examination for physician assistants. Besides the full-time program, MEDEX offers a part-time option which takes three years to complete.

Special Requirements

Applicants must have a minimum of two years recent, full-time, hands-on experience in the direct delivery of medical care to patients. Applicants must have completed two college-level English composition courses, and two college-level English composition courses, include at least 5 quarter credits in human anatomy and physiology, plus one other science course in a discipline relevant to medicine.

Correspondence and Information

MEDEX Northwest, Physician Assistant Program, HA-45

Health Information Administration Postbaccalaureate Certificate Program

The program in Health Information Administration is designed to prepare individuals for a career in an administrative health care profession. Course work is enhanced by a field placement during one academic quarter. The program gives students the tools to become involved in a wide variety of health care arenas upon graduation, including health information management, health care quality improvement, research, health care financing, and consulting. Program requirements can be completed in three quarters (nine months) on a full-time basis, or over a longer period of time on a part-time basis.

The program is accredited by the Committee on Allied Health Education and Accreditation (CAHEA), or its successor, in cooperation with the American Health Information Management. Association's (AHIMA) Council on Accreditation.

Special Requirements

Applicants need a baccalaureate degree from an accredited college or university with a GPA of 2.50 or higher. They must also have taken courses in or have the requisite knowledge and skills pertaining to the following: human anatomy and physiology (laboratory course); pathophysiology; introduction to basic computer applications such as spreadsheets, databases, or word processing, or introductory programming; principles of management; statistics (any discipline); and medical terminology. Applicants who still need to complete any of these requirements may apply and submit a plan for completion of prerequisites.

Graduate Program

ş

The Department of Health Services offers a two-year graduate program in health services leading to the Master of Public Health degree and maintains primary responsibility for the graduale program in Health Services Administration (an interdisciplinary degreegranting program of the Graduate School described in the Interdisciplinary Graduate Degree Programs section of this catalog). The department also offers a threeyear extended degree program in community health management leading to the M.P.H. degree for employed professionals working full-time and, in addition, participates in the training of doctoral students from other departments on campus by offering a specialization in health services under the Doctoral Studies Program.

Master of Public Health Degree Program

The M.P.H. program in health services gives priority to individuals who have completed their professional health training such as physicians, dentists, and nurses. Others who have had substantial experience in the health field are also considered. This program offers a general curriculum that includes introduction to health systems, epidemiology, current issues regarding the provision of medical care, and methodological training for research and program evaluation. Examples of areas of concentration include studies of patient and provider behaviors; evaluation of local, state, and federal health programs; and the impact of technology on medical care costs and benefits. There are three special tracks: one in maternal and child health and one in international health, both offered jointly with the Department of Epidemiology, and one in social and behavioral sciences.

The maternal and child health track offers in-depth interdisciplinary training in reproductive and family health. Students also develop technical skills in one or more of the following areas: policy analysis, program evaluation, program management, analysis of large data sets, or research.

The academic track in international health is available to students enrolled in an M.P.H. degree program in the School of Public Health and Community Medicine. The program focuses on community health and primary health-care systems of the developing world. Students learn the basic principles of public health and identify the social, political, and economic determinants of illness. They also learn about the planning, management, and evaluation of health-care systems. Requirements include the completion of core M.P.H. courses, a series of international health courses, and a thesis project on a topic relating to third-world health. Students are encouraged to carry out their thesis projects in an international setting. Previous developing country health-related experience is helpful for admission. Financial aid is generally not available. Contact the International Health Program Student Services Coordinator, SC-37, or 543-6714.

The social and behavioral sciences academic track is available to students enrolled in an M.P.H. degree program in the School of Public Health and Community Medicine. The program focus is on research and application of knowledge concerning the relationships among (1) social, cultural, and behavioral processes; (2) health and illness; and (3) what society does and can do to promote health and prevent illness. Students receive training in the general theories and methods of the social and behavioral sciences applied to public health interventions for well persons and people with disabilities. Students may choose to plan a course of study concentrating in a particular area of inquiry. Those areas supported within the department are (1) health promotion and disease prevention, (2) chronic illness and disability, and (3) public health ethics.

If deemed appropriate by their advisers, students may take courses in other departments of the University. Community agancies and resources are used extensively. Students with a background in medicine may qualify to receive concurrent credit for residency training in preventive madicine.

Admission Requirements

In addition to completing Graduate School admission requirements, applicants to the M.P.H. program must submit at least three letters of recommendation, Graduate Record Examination scores, and a goal statement. At least three years of medical or healthcare experience are required. In general, applicants are accepted only for summer and autumn quarters of each year. The application deadline Is March 1.

Doctoral Studies Program

Doctoral study in health services is available to qualified students on campus who are enrolled in the doctoral programs of other departments (e.g., anthropology, biostatistics, economics, epidemiology, geography, medicine, nursing, operations research, organizational theory, political science, psychology, social work, sociology, etc.). Students in the Doctoral Studies Program take four courses in health services and focus their dissertation on original research that relates the basic discipline to a specific health services issue (e.g., health behavior, health-care organizations, costs, quality and utilization of health-care services, etc.).

Students interested in pursuing a doctoral-level concentration in health services should contact the Director of the Doctoral Studies Committee regarding special requirements.

Financial Aid

Every attempt is made to ensure that students admitted are not prevented from pursuing graduate studies due to inadequate finances. A limited number of fellowships, assistantships, scholarships, and loans are available each year. However, students admitted should be prepared to utilize their own resources to finance their graduate education.

Research Facilities

In addition to utilizing University facilities, the program makes use of community health-care delivery systems and agencies for research and training.

Correspondence and Information

Doctoral Studies: Committee Director, Department of Health Services, SC-37.

International Health Program: Graduate Program Coordinator, Department of Health Services, SC-37.

Maternal and Child Health Program, SC-36.

M.H.A., Health Services Administration, Graduate Program Coordinator, Department of Health Services, SC-37.

Social and Behavioral Sciences Program, Department of Health Services, SC-37.

Extended M.P.H. Degree Program

The extended M.P.H. degree program is a three-year, part-time program delivered through a combination of intensive four-week summer sessions on the University campus, directed independent study, and intensive weekend (Friday-Saturday) seminars during the academic year. Designed for mid-career public and community health professionals with three or more years of experience in the health-care field, the program provides knowledge and skills required at mid- and upperlevel practice and management positions for health professionals. In addition to the core courses in epidemiology, biostatistics, and environmental health, the prescribed course work includes a broad exposure to the health-care system plus specific management training in accounting, finance, personnel management, economics, organization theory, and program planning and evaluation. Pathways are also available in maternal and child health and in health education.

Admission Requirements

In addition to Graduate School admission requirements, applicants must submit a program application, at least three letters of recommendation, Graduate Record Examination scores, and a goal statement. A minimum of three years' work experience in the healthcare field is required. Applicants are accepted to begin in the program summer quarter. Deadline for priority consideration is December 1. Applications will be accepted through March 1 and considered on a spaceavailable basis. Because the program is self-sustaining, the tuition rate differs from the usual on-campus programs.

Psaty, Bruce M. * 1986, (Adjunct); MD, 1981, Indiana University; cardiovascular disease, coronary heart disease, hypertension, and pharmaccepidemiology.

Rhodes, Lorna A. * 1983, (Adjunct); PhD, 1973, Cornell University; medical anthropology, symbolic anthropology, South Asia, religion, psychiatry.

Richardson, Mary L. * 1977; PhD, 1984, University of Washington; organization, management and analysis of policy relevant to health services.

Spigner, Clarence 1994; DrPH, 1987, University of California (Berkeley); cultural diversity and health services for disadvantaged populations.

Thompson, Engelberta 1989; PhD, 1981, Western Michigan University; smoking cessation.

Urban, Nicole D. * 1988; DSc, 1978, Harvard University; analysis of the cost-effectiveness of disease prevention trials and interventions.

Wickizer, Thomas M. 1988; PhD, 1989, University of Michigan; health promotion evaluation.

Wood, Robert W. 1977, (Adjunct); MD, 1970, University of Rochester; internal medicine.

Assistant Professors

Gloyd, Stephen S. * 1986; MD, 1973, University of Chicago; political economy, epidemiology, and primary health care in developing countries.

Goldbaum, Gary M. * 1989, (Adjunct); MD, 1978, University of Colorado; the epidemiology of human behaviors that increase risk for disease.

Grossman, David C. 1993, (Acting); MD, 1982, University of California (Los Angeles); general pediatrics.

Holt, Victoria L. * 1989; PhD, 1990, University of Washington; reproductive health epidemiology, impact of prenatal care and perinatal technology.

Kristal, Alan R. * 1988, (Adjunct); DPH, 1983, Columbia University; nutritional epidemiology, dietary behavior, nutrition intervention, and cancer control.

Lessler, Daniel 1990; MD, 1986, Stanford University; physician management and decision-making, pharmacoeconomics.

Meischke, Hendrika W. * 1991; PhD, 1992, University of Michigan; health communication—with an emphasis on mass media and health.

Reiber, Gayle E. * 1991; PhD, 1989, University of Washington; epidemiology and health services research on preventing complications of diabetes.

Sullivan, Sean * 1992; PhD, 1992, University of California (Berkeley).

Senior Lecturers

Altamore, Rita A. * 1981; MD, 1977, Boston University; information systems in health services, quality of health care.

Ballweg, Ruth A. 1981; BS, 1969, Southern Oregon State College; women's health issues.

Gish, Oscar * 1989; MPhil, 1970, University of Sussex; socio-economic dimensions of health and health services: third world development focus.

Hanken, Mary A. 1991; PhD, 1989, University of Washington; health information systems.

Nickerson, Carl J. 1991; EdD, 1972, University of Oregon; health education.

Locturors

Asplin, Norma J. 1992; MS, 1978, University of Colorado (Denver); physician assistant education.

Collins, Robert N. 1991; EdD, 1970, University of Oregon; health education.

Downer, Ann E. 1989; MS, 1984, University of Washington; AIDS education and training.

Gianola, Fred J. 1987; PA-C, 1973, University of Washington; physician assistant education.

Harder, Ellen J. 1988; PA-C, 1978, University of Washington; outpatient clinical problems, orthopedics and administration.

Katz, Aaron 1988; CPH, 1975, University of Toronto (Canada); health policy analysis.

Kvam, Kaye C. 1993; BS, 1977, University of California (Davis); physician assistant education.

Landel, Grace P. 1990; BA, 1978, University of California (Santa Cruz): physician assistant training.

Murphy, Gretchen C. 1992; MEd, 1973, University of Washington; health information administration.

Plummer, William T. 1992; BS, 1974, University of Nebraska; physician assistant education.

Stoll, Henry 1978; BA, 1971, Brown University; physician assistant education and professional issues, curriculum development.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

MEDEX Northwest

HSERV 451 Anatomy and Physiology for the MEDEX Practitioner (6) Biomstrand Anatomy and physiology of the following organ systems: HEENT, respiratory, cardiovascular, gastrointestinal, reproductive, renal, musculoskeletal, and neurologic. Required for entering students to the MEDEX program who have not satisfied program prerequisites in anatomy and physiology. Prerequisite: admission to the MEDEX program.

HSERV 452 Basic Clinical Pathology for the MEDEX Practitioner (6) Stoll Basic pathological and pathophysiological concepts of diseases commonly encountered in primary-care practice. Pathophysiology studied per organ system. Prerequisite: admission to MEDEX program.

HSERV 453 Basic Clinical Skills for the MEDEX Practitioner (6) Kvam Provides the student with mastery of a screening history and physical examination and thoroughness in data-collection skills. Branching examinations of major organ systems and medical record-keeping and verbal presentation skills by the problem-oriented method are taught. Prerequisite: admission to the MEDEX program.

HSERV 454 Adult Medicine I (7) Hummel, Stoll Problem-oriented approach to the diagnosis and management of common primary care conditions. Introduction to relevant laboratory and radiological procedures. Organ system approach covers HEENT, respiratory, cardiovascular, gastrointestinal, and hematologic systems. Prerequisites: admission to MEDEX program. HSERV 455 Adult Medicine II (7) Continuation of 454. Introduction to relevant laboratory and radiological procedures. Organ system approach covers endocrine, renal, reproductive, demaiologic, musculoskeletal, and neurological systems. Prerequisite: admission to MEDEX program.

HSERV 456 Maternal and Child Health for the MEDEX Practitioner I (3) Asplin Designed to acquaint students with principles of prenatal care and primary-care pediatrics. Prenatal care, labor and delivery, newborn exam, developmental screening, growth and development. Prerequisite: admission to MEDEX program.

HSERV 457 Behavioral Science Skills for the MEDEX Practitioner I (3) Lurie Process skills and interpersonal skills needed for primary-care practice, assessment skills needed for the diagnosis of emotional problems, and management skills used in primary-care practice to deal with these problems. Prerequisite: admission to the MEDEX program.

HSERV 458 Behavioral Science Skills for the MEDEX Practitioner II (3) Lurie In-depth coverage of common emotional problems seen in primary care. Topics include crisis intervention, child abuse, death and dying, life planning, behavioral modification, human sexuality, alcohol and drugs, and family therapy techniques. Prerequisite: admission to MEDEX program.

HSERV 459 Behavioral Science Skills for MEDEX Practitioner III (3) Lurie In-depth approaches to assessment and management of specific primary-care problems, including posttraumatic stress disorders, SIDS, AIDS, violent patient, relevance of male/female issues to primary care, and emotional and sexual needs of disabled persons. Advanced interviewing skills with videotaped feedback included. Prerequisite: admission to MEDEX program.

HSERV 460 Principles of Patient Management for the MEDEX Practitioner I (3) Reynolds Systematic approach to patient management applicable to a primary-care setting. Majority of course is devoted to drug therapy and its administration. The other half includes health maintenance, risk factor identification, and nonpharmacological models of therapy. Prerequisite: admission to MEDEX program.

HSERV 461 Principles of Patient Management for the MEDEX Practitioner II (3) Reynolds Continuation of 460. Prerequisite: admission to the MEDEX program.

HSERV 462 Maternal and Child Health for the MEDEX Practitioner II (3) Asplin Continuation of 456. Emphasis on pediatric history taking and physical exam, and diagnosis and treatment of common pediatric problems. Prerequisite: admission to the MEDEX program.

HSERV 463 Clinical Clerkships for the MEDEX Practitioner I (19) Harder Full-time clinical clerkship spent in institution-based or specialty practice settifys, such as occupational health, surgery, emergency medicine, psychiatry, or geriatrics. Prerequisite: admission to MEDEX Northwest Physician Assistant program.

HSERV 465 Clinical Clerkships for the MEDEX Practitioner II (19) Ballweg, Harder Continuation of clinical clerkships spent in institution-based or specialty practice settings, with emphasis on inpatient medicine. Prerequisite: admission to the MEDEX Northwest Physician Assistant program.

HSERV 466 Family Practice Clerkship for the MEDEX Practitioner I (19) Ballweg Family practice under the supervision of physicians throughout the Pacific Northwest. Common primary-care problems. Students and preceptors are educated in the utilization and management of the physician assistant in practice. Students keep computerized records of patient encounters and complete a variety of written assignments. Prerequisite: admission to MEDEX program. Credit/no credit.only.

HSERV 467 Family Practice Clerkship for the MEDEX Practition (19) Ballweg Further experience in primary-care practice with emphasis on independent patient management by the student supervised by family practitioners. Prerequisite: admission to MEDEX program. Credit/no credit only.

HSERV 468 Emergency Medicine I for the MEDEX Practitioner (3) Plummer, Stoll Approach to the diagnosis and management of common emergency conditions for primary care physician assistants. Topics include multiple trauma, chest trauma, abdominal trauma, shock, and cardiac emergencies. Prerequisite: admission to MEDEX program.

HSERV 469 Emergency Medicine II for the MEDEX Practitioner (3) Plummer, Stoll Approach to diagnosis and management of common emergency conditions for primary care physician assistant. Topics include poisonings and overdoses, environmental emergencies, thermal injuries, orthopedic emergencies, pediatric emergencies, and head trauma. Prerequisite: admission to MEDEX program.

HSERV 475 Perspectives in Medical Anthropology (5) Rhodes Introduction to medical anthropology. Explores the relationship among culture, society, and medicine. Examples from Western medicine as well as from other medical systems, incorporating both interpretive and critical approaches. Offered: jointly with ANTH 475.

HSERV 499 Special Field Projects/Independent Study (1-12) Ballweg, Stoll Clinical clerkships and/or independent study activities for students enrolled in the MEDEX Northwest Physician Assistant program. Prerequisite: permission of instructor(s).

Courses for Graduates Only

Public Health/Preventive Medicine

HSERV 501 Public Health Practice at the Local Level (3) Gale, Thompson History and development of local, state public health departments. Traditional vs. new roles and critical interactions with public, private agencies highlighted. Examples drawn from areas of current concern (e.g., sexually transmitted diseases; health promotion, disease prevention; environmental hazards; substance abuse; emergency medical services). Prerequisite: 511 or permission of instructor. Offered: jointly with EPI 501; Sp.

HSERV 502 The Public Health Approach to AIDS (3) Downer Seminars, audio-visual resources, and interactive learning exercises address public health response to the HIV/AIDS epidemic. Includes community disease control and preventive efforts, socio-cultural aspects of AIDS, analysis of health services, cost financing and management issues, and psychosocial considerations. Recommended: completion of core courses in health services. Credit/no credit only. Offered: W.

HSERV 503 Public Health Surveillance: Epidemiology and Health Policy (2/4) Covers data collection and analysis for public health and their use in formulation of policy and programs. Content is delivered through studies of various surveillance systems: injuries, AIDS, birth defects, vaccine-preventable diseases, occupational illnesses and injuries, adverse drug reactions, chronic diseases, hospital-acquired infections, disasters. Offered: jointly with EPI 503; A.

HSERV 505 Topics in Preventive Medicine (2) Foy, Henderson Examine current scientific knowledge and state of the art of preventive medical interventions. Discuss and consider options for current practice. Prerequisite: MD, OD, or permission of instructor. Offered: jointly with EPI 525; S.

Introductory Core Courses

HSERV 510 Society and Health (3/5) Patrick Analysis of social inequalities in health and service use by class, gender, and race. Public health strategies for reducing health disparities. Methodologic focus on survey research methods. Literature review or survey analysis laboratory. Poster presentation of findings. Prerequisites: 511, BIOST 511, EPI 511, or equivalent or permission of instructor.

HSERV 511 Introduction to Health Services: A Systems and Behavioral Approach (3-4) Grembowski Introduction to health services that includes history and organization of the health services system; interrelationships among elements and personnel in the system; and determinants of health, disease, and use of health care. Prerequisite: graduate standing or permission of instructor. Offered: A.

HSERV 512 Introduction to Management in Health Services (3) Richardson Overview introduction to managerial roles, such as supervising and motivating, approaches to organizational and environmental assessment and change, and an understanding of management information and control systems. For students pursuing careers in research and teaching who will likely have management responsibilities. Offered: Sp.

HSERV 513 Allocating Health Care Resources: A Population Based Perspective (4) Conrad Analysis of health services financing in the United States, with comparison to systems of other developed countries. Develops analytic and normative frameworks for examining public and private health insurance. Study of pricing, underwriting, benefit design, and delivery system; financing integration issues. Prerequisite: 511 or equivalent or permission of instructor. Offered: W.

HSERV 516 Introduction to Health Services-Extended Degree(4) Definition of health and its determinants, including the role of health services. Contrasting aspects of personal health services and public health. Blending of traditional public health and personal health and medical care. Prevention in health care with consideration of screening, sensitivity, and specificity. Prerequisite: registration in Extended M.P.H. Degree program. Offered: A.

HSERV 517 Provision of Health Services-Extended Degree (2) Consideration of factors that influence the utilization of health services, including socioeconomic and cultural. Health belief systems and health behavior, with specific consideration of the effects of these factors on utilization of services and prevention. Prerequisites: 516, registration in Extended M.P.H. Degree program. Offered: W.

HSERV 518 Social and Ethical Issues in Health Services (2) Ehreth Rationale for evaluation of health services; quality control and its relation to costs. Patient protection and participation in determining medical care. Regulation of new drugs and devices. Criteria for the use of new technology. Ethical considerations, including informed consent. Offered: A.

Methods Courses

HSERV 520- Methods in Applied Community Research (2-) Skills/knowledge necessary to conduct orderly investigation of specific problems in preparation for M.P.H. thesis or project. Includes problem identification, posing research questions, literature review, consideration of theoretical/practical context, choosing a study design, population and sample, data collection, recognizing potential errors. Prerequisite: registration in Extended M.P.H. Degree program. Offered: A.

HSERV 521 Health Services Research Methods (3) Diehr, Reiber Selected topics for students who have already taken introductory courses on research methods and data analysis. Variety of study design, measurement, analysis issues that pose special methodological challenges in research. Overview of given topics, illustrations of how local investigators address them. Prerequisites: 511, BIOST 511, and EPI 511 or 512 or permission of instructor.

HSERV 522 Program Evaluation (3-) Martin Theory, practice, and politics of evaluation, from simple feedback mechanisms to evaluation of largescale orgoing programs and social experiments. Emphasis on applications of experimental and quasi-experimental evaluation. Case studies drawn from health field illustrate various types of evaluation. Prerequisite: background in quantitative methods. Offered: jointly with PB AF 526; A.

HSERV 523 Community Health Assessment (3) Connell Survey of approaches and tools to measure health status and health-care problems in defined communities. Topics include: uses and limitations of available data; community surveys; public health surveillance; problem identification and needs assessment; measurement of community health indices; analytic methods; and presentation techniques for program and policy planning. Offered: Sp.

HSERV 524 Quality of Health Care: Assessment and Assurance (3) Altamore, LoGerfo Methods used to assess components of medical care services and analysis of their application to care by physicians, nurses, social services, hospitals, nursing homes, emergency services. Legal and professional assurance mechanisms including continuous quality improvement, analysis of actual, potential impact. Prerequisites: 511, BIOST 511, or equivalent, or permission of instructor. Offered: Sp:

International Health

HSERV 531 Problems in International Health (4) *Gloyd* Explores social, political, economic, environmental determinants of developing countries' health; traces development of societal responses to problems. Includes: origins of primary health care; child surviva; traditional systems; population; water; sanitation; international agencies; effects of economic policies. Case study formulating pharmaceutical policy in a developing country. Offered: jointly with EPI 531; S.

HSERV 533 Population, Health, and Development (2) *Povey* Provides students with an introduction to demographic conditions in Third World countries and an understanding of the consequences of rapid population growth on health and the environment. The context and effectiveness of family planning programs is a major focus. Offered: W:

HSERV 534 Comparative International Health Systems (3) Belcher Guest lecturers present experiences with various health-care systems (e.g., Canada, Sweden, United Kingdom, Ghana, Tanzania, China), including interaction between sociopolitical setting, resources, and population health needs for each system discussed. Students acquire in-depth information about one country's health system. Prerequisite: graduate standing or permission of instructor. Offered: Sp.

HSERV 535 Maternal and Child Health In Developing Countries (3) Shaul Familiarizes graduate students with issues in maternal and child health of less developed countries. Topics: nutritional assessment; growth monitoring; Infant feeding practices; epidemiologic risk assessment; use of technologies; role of politics, economics, cultural factors toward morbidity and mortality. Prerequisite: graduate standing or permission of instructor. Offered: jointly with EPI 535; Sp.

HSERV 539 Research Methods in Developing Countries (3/4) Gale, Gloyd Explores methodologies to obtain useful information regarding health status and health services in Third World countries. Standard evaluation methods which require minimal resources to perform. Measurable indicators of health status and health services discussed. Students design and implement a community-based survey to apply methods learned. Offered: jointly with EPI 539.

448 SCHOOL OF PUBLIC HEALTH AND COMMUNITY MEDICINE / HEALTH SERVICES

Health Care Organization and Provision

HSERV 541- Topics in Maternal and Child Health I (3-) Bell Historic, legislative, structural, and economic basis for maternal and child health services in the United States. Seminar format, in which students critically review assigned readings and prepare questions for class discussion. Prerequisite: graduate standing or permission of instructor.

HSERV 542 Epidemiology of Maternal and Child Health Problems (4) Emanuel, Hickok Contributions of epidemiology to the understanding and prevention of various maternal and child health problems, including abnormal growth, morbidity and mortality, pregnancy complications, delivery, abortion, and abnormal child development. Prerequisites: graduate, medical, or dental school standing and 511 or 512 or permission of instructor. Offered: jointly with EPI 521; W.

HSERV 543 Topics in Maternal and Child Health III (3) Connell Examines the major child and adolescent health problems in the United States. The epidemiologic and programmatic aspects of each problem are discussed in the light of their implications for health policy. Prerequisite: graduate standing or permission of instructor. Offered: Sp.

HSERV 544 Hospitals and Ambulatory Care (4) Richardson, Ross Focuses on the development of integrative health care delivery systems. While hospital and ambulatory care provide a focal point for the course, the objective is to examine system linkages with other providers, including public health, group practices, and community based health care delivery programs. Prerequisite: 511 or permission of instructor. Offered: A.

HSERV 545 Capstone Integrative Seminar (4) Ross, Scott Designed to assist students in the transition from theory to practice. Emphasis on sharpening analytical and intuitive practices through the use of interactive case studies and team building exercises. Prerequisite: second year MHA students. Offered: Sp.

HSERV 546 Long-Term Care (3) Hawley Learning experience for graduate students in health services administration, planning, other graduate students to increase their ability to identify and solve problems related to long-term care they confront in their employment. Students are exposed to available knowledge in the field; effective problem-solving attitudes and techniques for organizing information and/or developing strategies, and agencies in the field. Prerequisite: 511 or permission of instructor. Offered: Sp.

HSERV 547- Maternal and Child Health (4-) Bell, Connell, Hickok Provides an understanding of factors affecting health, welfare of United States mothers and children. Includes affects of social policies and environmental factors, legislation and the health care system, levels of health services, social/political impact of public sector services, and effects of changing family structure/norms. Prerequisite: registration through Extended MPH Degree Program. Offered: A.

Health Policy and Politics

HSERV 551 Health Law (3) Analysis of law, the legal system and current legal problems as they relate to the financing and delivery of health care services. Offered: Sp.

HSERV 552 Health for All: the Community Responds (3) Gish Presentations by leaders of community organizations and local government officials concerned with the impact on health of socioeconomic developments, and the response of selected community groups to such developments. Sessions are organized around groups such as the workplace, Hispanic farm workers, environment, older Americans, homelessness, African-Americans, women.

HSERV 553 Politics of Health Care (3) Hagens Provides understanding of health policy development in the context of American political system. Health policy examined in terms of historical analysis, legislative process, bureaucracy, budget process, use of information in the political system, role of interest groups. Meet major participants in health policy formation. Prerequisite: 511 or permission of instructor.

HSERV 554 Health Legislation Seminar (1) Hagens Discussion of current state health policy topics with legislative staff and others involved with state health policy. In addition to session on campus, course meets 2-3 times during the quarter in Olympia. Offered: W.

HSERV 555 Health Policy (3) Sloma Provides an opportunity to gain and apply tools of policy analysis. Alternative techniques of gathering, synthesizing, and analyzing available information in a timely fashion. Attention focused on written and oral presentation to a policy audience on a "real" health issue. Offered: Sp.

Health Services Management

HSERV 560 Managing Health Care (3) Practical introduction to knowledge and skills required to effectively manage a variety of health services organizations. Theoretical material used to develop a diagnostic framework with which to analyze organizational dysfunctions and evaluate appropriate interventions. Students assess their skills at management through exercises, case analyses, and self assessments. Prerequisite: graduate student.

HSERV.561 Health Planning: The Management of Change (4) Erbstoeszer Designing realistic implementation strategies at beginning of planning process to optimize impact of planning on real problems. Discussion of ways in which change is brought about and decisions are made and implemented. Includes managing planning process, work plans, stakeholders, negotiation, and working with groups. Prerequisite: 511 or permission of instructor. Offered: A.

HSERV 562 Health Services Management (4) Dowling Examination of decision making, change implementation, and control processes in health-services-delivery organizations. Emphasizes (1) behavioral, organizational, and situational factors affecting management role in health organizations, and (2) management strategies for analyzing problems and implementing changes to improve organizational performance. Seminar/case study format. Prerequisite: 511 or 545 or permission of instructor. Offered: W.

HSERV 563 Personnel Management for Health Professionals (3) Designed for midcareer health services professionals developing strategies and skills in human resource management. Focuses on policy and practice issues important to handling day-to-day personnel problems-selection, promotion, performance appraisal, discipline, grievances. Prerequisite: registration in Extended M.P.H. Degree program or permission of instructor; non-business majors. Offered: Sp.

HSERV 564 Techniques For Strategic Planning and Marketing in Health Services (4) Blackman, Haines Review of the essential elements of a marketbased strategic planning process. Application of these elements through case study, in-class discussion, and panel discussions with area experts. Emphasis upon strategic thinking for inpatient/outpatient services management. Prerequisite: 511 or permission of instructor. Offered: Sp.

HSERV 565 Quantitative Decision Making for Health Services Management (3) Pilcher Applications of various quantitative techniques for problem solving, monitoring, controlling, decision making in health services. Identifying problem area, communications with consultant, evaluation to the quality and applicability of analyst's work. Statistical, mathematical, operations research, industrial engineering techniques. Prerequisite: QMETH 500 or BIOST 511 or permission of instructor. Offered: W. HSERV 566 Decision Support Models for Health Services (3) Management science and approaches developed as applied to problems in public health. Conceptual understanding of processes and application of systematic, rational approach to managerial problem solving, including cost456rilefit, cost effectiveness analysis. Prerequisites: BIOST 472 and 473, or BIOST 511; registration in Extended M.P.H. Degree program; non-business majors. Offered: S.

HSERV 567 Marketing Health Services Seminar (3) Application of planning, design, development, and promotional strategies for health services. Relevant literature, appropriate marketing concepts and techniques to health services, achieving organizational goals within community opportunities and constraints. Examples of successful and unsuccessful marketing programs. Prerequisite: 511, or permission of instructor.

HSERV 569 Information Systems (3) Altamore Assessing information system needs; planning, managing, and evaluating information systems (IS); behavioral issues in the implementation of IS. Current and evolving applications of IS in health care organizations and public health. Prerequisite: basic computer literacy required. Offered: W.

Health Care Financing and Financial Management

HSERV 571 Hospital Financial Management (3) Huebner, Tiscomia Third course in a three-course sequence dealing with the management of health services institutions and programs. Topics covered are: health services law, hospital and program policy decisions, financial planning, and hospital design and architecture; and the presentation of hospital survey and health services research project reports. Prerequisites: 511 and ACCTG 500 or 501 or permission of instructor. Offered: Sp.

HSERV 572 Financial Management for Health Professionals (3) Intensive review of basic accounting principles and terminology, introduction to financial management and managerial accounting, including budgeting for managerial control, planning, cost accounting, financing health programs. Managerial accounting, Firequisites: BIOST 472 and 473, or BIOST 511; registration in Extended M.P.H. Degree program or permission of instructor; non-business majors.

HSERV 573 Seminar in Health-Care Finance (3) Conrad Practical applications of corporate finance principles in health-care field. Applies theoretical framework to health-care financial problems of varying complexity, including capital investment analysis, leasing vs. borrow-to-buy decision, debt capacity analysis, bond refunding, control of capital, joint venture. Prerequisite: 585 or equivalent, ACCTG 500, 501; or permission of instructor. Offered: A.

HSERV 579 Advanced Health Services Financial Management (3) Lehman Develops financial management skills through case studies in budgeting, pricing, and monitoring the total financial requirements for health-care institutions. Topics include budgeting principles, cost analysis, rate setting, reimbursement, profit planning, short- and long-term capital financing, and financial feasibility analysis. Prerequisite: 571 or permission of instructor. Offered: Sp.

Social and Behavioral Sciences

HSERV 581- Health Behavior and Preventive Medicine ([3-4]-) Meischke Effective delivery of preventive health services is integrally and inseparably linked to voluntary health behavior. Clinical issues and psychosocial theory related to a broad spectrum of health behaviors. Emphasized: identifying effective preventive services; psychosocial and decisional bases for health actions; provider-patient interactions; and research and clinic-based strategies for changing beliefs and behaviors. Prerequisite: 511 or permission of instructor. Offered: Sp. HSERV 582 Strategies of Health Promotion (3) *Curry* Major types of health promotion strategies in use; attention to strengths, weaknesses, and potential utility of atternative strategies. Programs employing social engineering; (e.g., legal regulation, social marketing), behaviorah modification, education examined in terms of efficacy cost effectiveness in modifying health-hazardous lifestyles, environmental exposures. Prerequisite: 511.

HSERV 583 Society, Chronic Illness, and Disability (3) Durham, Hedrick Multidisciplinary perspectives of chronic disease and disability throughout the life course, including illness behavior and the sick role; aging and disablement; behavior change; method ological approaches in research; disability policy. Prerequisite: 510 or permission of instructor. Offered: Sp.

HSERV 584 Economic Evaluation of Technological Innovation in Medicine Sullivan Focus on costeffectiveness and cost-utility analyses, decision analysis, and economic model building for the purpose of resource allocation decisions. Entry code required. Prerequisite: permission of instructor. Offered: jointly with PHARM 534.

HSERV 585 Health Economics (3) Wickizer Uses economic concepts and tools to examine range of issues pertaining to health care, delivery of health care services. Includes demand analysis, production of health services, expenditure growth, markets for hospital and physiclan services, externalities. Emphasis on using economics to examine issues and solve problems. Prior economics courses not required. Offered: W.

HSERV 586 Medical Geography (3) Mayer Geography of disease, consideration to health systems planning. Distributions, diffusion models, migration studies. Application of distance, optimal location models to health systems planning; emergency medical services, distribution of health professionals; cultural variations in health behavior. Prerequisites: familiarity with social science research, health-related issues. Offered; jointly with GEOG 580;

HSERV 587 Advanced Health Economics (3) Madden Applies economic theory to selected topics in health care, including malpractice, risk and insurance, industry organization, government regulation, and public health issues. Emphasizes policy implications of these applications. For students who have taken microeconomic theory or 585. Prerequisite: 585 or PB AF 516 or equivalent, or permission of instructor. Offered: W.

HSERV 588 Community Approaches to Health Premotion (3) Thompson Provides opportunities to critically examine community-based health promotion interventions and the design, evaluation, and implementation issues they raise. A wide range of disciplinary perspectives is presented. Case studies and class projects are designed to give students the skills needed to critically assess community projects around health promotion. Offered: W.

HSERV 589- Epidemiologic Research in Aging Populations (3) LaCroix Emphasizes application of epidemiologic methods to the study of older populations. Topics include: compression of morbidity; successful aging; methodological challenges in studying older populations; physical, cognitive and social function as epidemiological endpoints; chronic conditions of the aging (heart disease, cancer, Alzheimer's disease, dementia, osteoporosis, fractures); health promotion strategies. Prerequisites: EPI 511 or EPI 513. Offered: jointly with EPI 589.

HSERV 590- Selected Topics in Health Services (*-) By individual arrangement, the student and faculty member(s) develop a program of reading and conference appropriate to the topic selected by the student. The topic chosen will be within the special competence of the faculty participating in the course, in the areas of health-care delivery and health-care administration. Also special summer format presenting introductory material may be taken with ENVH 590 and/or EPI 590. For more information and permission, consult department program adviser.

HSERV 591 Tutorials and Special Seminars (1-4) Special topics related to current issues in health services. Topics determined by expressed interest of students and faculty; also includes participation of health professionals. Prerequisites: 511 or 513.

HSERV 592 Program Seminars (1-6) Graduate seminars organized to address specific educational needs of students in various fellowships, residencies, and other specialized programs within the Department of Health Sciences (i.e., maternal and child health, international health, preventive medicine, social and behavioral sciences). Prerequisite: permission of instructor.

HSERV 595 Practicum/Field Work in Community Medicine (1-12) Experience in variable time blocks in community health activities in agencies delivering and planning health services. Sites include neighborhood clinics, health planning bodies, medical practice settings, public health agencies, special problem clinics and facilities, environmental programs and services. Prerequisite: masters student in health services and permission of instructor.

HSERV 596- MHA Field Project (1-6-, max. 9) Supervised research in a selected topic related to student's concentration in graduate study. Includes survey of literature, development of approach, and written paper on conclusions. Prerequisite: successful completion of first-year curriculum and internship in graduate program in health services administration and planning.

HSERV 597 International Health Projects (1-12) Field-based projects during which students learn how social, economic, and political conditions in a developing country affect the health status of populations while being involved in the design, implementation, and analysis of community health surveys. Prerequisite: permission of instructor.

HSERV 598 Extended Degree Program Project Option (*, max. 9) Supervised project work on a selected topic related to student's concentration in graduate study. Includes survey of literature, development of approach, and written paper on conclusions. Prerequisites: registration in extended MPH degree program and satisfactory completion of the first summer's course work.

HSERV 600 Independent Study or Research (*) Prerequisite: permission of instructor.

HSERV 700 Master's Thesis (*) Prerequisite: permission of instructor.

Pathobiology

F143 Health Sciences

Graduate Program

C. C. Kuo, Graduate Program Coordinator

The Department of Pathobiology offers a research training program leading to the degrees of Master of Science and Doctor of Philosophy. 'As a discipline, pathobiology stands at an interface between fundamental biology and clinical medicine. The mission of the department is to apply the latest research technologies to the study of human disease and disease agents. Members of the department have diverse research interests including the molecular biology of cancer; molecular investigation of pathogenesis; drug resistance and host responses; diagnosis of diseases; development of vaccines and therapeutics; and fundamental biology of infectious agents. Course work pro-

vides the foundation for interfacing molecular and cellular biology with public health issues.

Admission Requirements

Students with a variety of academic backgrounds are accepted for graduate school in pathobiology. It is highly desirable that applicants have completed course work in biology, organic chemistry, and biochemistry and/or molecular and cellular biology. Persons holding professional doctorates (medicine, dentistry, veterinary medicine) are also encouraged to enter the graduate program.

Financial Aid

Some financial aid may be available in the form of research assistantships funded primarily through federal research grants held by faculty members.

Research Facilities

In addition to the research facilities at the University of Washington, opportunities for training also exist at the Fred Hutchinson Carcer Research Center, the Biomembrane Institute, and the Seattle Biomedical Research Institute.

Professors

Carter, William G. * 1981; PhD, 1974, University of California (Davis); elucidation of components in cell attachment and cell spreading in normal cells.

Grayston, J. Thomas * 1960, (Adjunct); MD, 1948, University of Chicago; epidemiology and control of infectious disease.

Hakomori, Sen-Itiroh * 1967; MD, 1951, Tohoku Imperial University (Japan); biochemistry and immunology of carbohydrate antigens on malignant and normal cells.

Kenny, George E. * 1961; PhD, 1961, University of Minnesota; antigenic analysis of mycoplasmas, bacteria, and other organisms.

Kuo, Cho-Chou * 1969; PhD, 1970, University of Washington; antigenic analysis, immunology and pathogenesis of chlamydiae.

Perine, Peter L. * 1981, (Adjunct); MD, 1966, University of Kansas; international health, sexually transmitted diseases.

Rausch, Robert L. * 1978, (Emeritus); PhD, 1949, University of Wisconsin; parasitology, helminthic zoonoses.

Stuart, Kenneth Daniel * 1985; PhD, 1969, University of lowa; molecular biology of parasites.

Todaro, George J. * 1983; MD, 1963, New York University; growth regulation in normal and tumor cells.

Wang, San-Pin * 1963, (Emeritus); MD, 1944, Keio University; classification, pathogenesis, and epidemiology of chlamydiae.

Associate Professors

Campbell, Lee Ann * 1985; PhD, 1982, Pennsylvania State University; molecular biology and pathogenic mechanisms of chlamydiae.

Kahn, Michael * 1992; PhD, 1982, Yale University; molecular recognition, protein structure-function relationships, peptidomimetics.

450 SCHOOL OF PUBLIC HEALTH AND COMMUNITY MEDICINE / PATHOBIOLOGY

Parsons, Marilyn * 1986, (Research); PhD, 1979, Stanford University; signal transduction and organelle biogenesis in African trypanosomes.

Reed, Stephen G. * 1993; PhD, 1979, University of Montana; immune response to human pathogens.

Roberts, Marilyn C. * 1981; PhD, 1978, University of Washington; mycobacterium, antibiotic resistance genes, plasmids and sexually transmitted diseases.

Rosenfeld, Michael E. * 1992; PhD, 1981, University of Wisconsin; mechanisms of atherogenesis and macrophage gene expression.

Thouless, Margaret E. * 1980; PhD, 1974, University of Birmingham (UK); antigenic variability of enteric viruses and similan retroviruses.

Van Voorhis, Wesley C. * 1986, (Adjunct); MD, 1984, Cornell University; infectious diseases.

Yamamoto, Fumiichiro * 1988, (Research); PhD, 1983, Osaka City University (Japan); molecular biology of histo-blood group ABO genes.

Assistant Professors

Bendiak, Brad K. * 1988, (Research); PhD, 1983, Cambridge University (UK); biosynthesis of glycoprotein carbohydrate structures.

Blanton, Rebecca A. * 1992; PhD, 1982, Pennsylvania State University; growth differentiation, and morphogenesis of epithelial cells.

Bosch, Marnix L. *1994; PhD, 1987, University of Leiden (Netherlands); molecular interactions between lentiviruses and the cell, for HIV-1, SIV, and FIV.

Feagin, Jean E. * 1993; PhD, 1982, Stanford University; molecular parasitology, emphasizing organelle gene organization and expression in protozoans.

Howard, Randall F. * 1993; PhD, 1978, University of Minnesota; molecular and cellular biology of malaria parasites; host immune responses.

Myler, Peter J. * 1993; PhD, 1982, University of Queensland (Australia); regulation of gene expression in protozoan parasites.

Riley, Donald E. * 1982, (Research); PhD, 1976, University of Washington; pathogenic research and diagnosis involving DNA sequences.

Rose, Tim M. * 1991; PhD, 1981, University of Geneva (Switzerland); molecular biology, cytokines, cellular growth and differentiation.

Symington, Banu E. * 1993; MD, 1982, University of Pennsylvania; growth control via adhesion receptors.`

Symington, Frank W. * 1993; PhD, 1982, University of Pennsylvania; skin immunology, infection, cellular oligosaccharides.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

UCONJ 420 Biological Safety Practices (1) Kenny See University Conjoint courses.

PABIO 498 Undergraduate Thesis (*)

PABIO 499 Undergraduate Research (*)

Courses for Graduates Only

PABIO 511 Pathobiological Frontiers (2) Kenny Molecular and immunological concepts of infectious and noninfectious diseases presented in format suitable for graduate students knowledgeable in healthrelated areas who are not in biology-oriented programs. Allergy, immune responses, nature of infectious agents, prevention of disease with emphasis on newly defined diseases and disease agents. Prerequisite: permission of instructor.

PABIO 521 Tissue Culture and Virology (3) Kenny, Thouless General concepts, techniques, and applications of tissue culture with emphasis on use of tissue culture for viral diagnosis and propagation. Nutrition, growth characteristics, and metabolism of animal cell cultures. Laboratory experiments give practical experience in tissue culture and virology. Prerequisite: permission of instructor.

PABIO 522 Antigenic Analysis of Microorganisms (3) Kenny Theory and techniques for antigenic analysis of complex mixtures, including microorganisms. Recent advances in separating antigens, identifying antigenic determinants, and antigenic mapping of proteins. Laboratory includes a special problem of the student's choice. Prerequisite: permission of instructor.

PABIO 525 Cell Surface Membrane in Cell Sociology and immunology (2) Carter, Hakomori Structure and function of cell surface membranes in relation to various immunobiological and pathobiological phenomena (differentiation, organization, infection, cancer) covered. Prerequisites: BIOC 440, 441, 442, MICRO 447, and permission of instructor. Offered: jointly with MICRO 525.

PABIO 531 Applications of Molecular Biology to Public Health (2) Campbell Addresses the impact of molecular biology on public health. Lectures focus on the application of biotechnology to diagnostics, pharmaceuticals, vaccines, and environmental concerns. Considerations for developing and using biotechnology products also discussed. Prerequisites: courses in genetics, biochemistry, or microbiology, or permission of instructor.

PABIO 540 Antibiotic Resistance Mechanisms and Their Impact on Public Health (2) · Roberts Lectures covering resistance mechanisms against bacterial antibiotics, antiviral, antiparasitic, and cancer drugs. Topics also include the effects that resistant microorganisms have on therapy and cancer treatment and their impact on public health. Prerequisite: permission of instructor.

PABIO 550 Diseases of Public Mealth Importance and Strategies for their Control (3) Public Health perspective of major disease of national and global importance. Discussion of origins, establishment, progression, and pathogenesis of diseases. Importance of immunological, intercellular and external factors, and strategies of disease prevention. Requires a grounding in cellular and molecular biology, microbiology, and immunology. Prerequisite: permission of instructor.

PABIO 551 The Application of Basic Research to Diseases of Public Health Importance (3) Diseases of major national and international public health significance. Discussion of epidemiological aspects and clinical approaches. Analysis of relevant biological systems and their application to the pathobiology of disease. Requires familiarity with molecular and cellular biology. Prerequisite: permission of instructor.

PABIO 580 Pathobiology Seminar (1, max. 15) Research from students, faculty members, and invited speakers is presented and discussed. Topics include immunochemistry, viruses, membranes, infectious diseases, immune response and other related topics.

PABIO 581 Current Literature in Pathobiology (1, max. 15) Critical evaluation of recent articles related to human disease and disease agents. Prerequisite: graduate student in pathobiology or permission of instructor.

PABIO 583 Seminars on Frontier Membrane Research (1, max. 15) Hakomori Structure and functional roles of cell surface membrane molecules in cell recognition and transmembrane signaling with emphasis on pathological significance in development of various disease processes. Discussion on experimental design based on current knowledge among researchers in the Department of Pathobiology and at the Biomembrane Institute. Advanced secuel to 525.

PABIO 590 Selected Topics (1-6) In-depth study of an issue relating to pathobiology. Seminar format. Small groups of students by arrangement with faculty member. Prerequisites: enrollment in pathobiology graduate degree program and permission of instructor. Credit/no credit only.

PABIO 598 Didactic Pathobiology (*, max. 12) Supervised teaching experience in pathobiology courses for Ph.D. candidates. Prerequisite: permission of instructor.

PABIO 600 Independent Study or Research (*) Prerequisite: permission of graduate program adviser. Credit/no credit only.

PABIO 700 Master's Thesis (*) Prerequisite: permission of graduate program adviser. Credit/no credit only.

PABIO 800 Doctoral Dissertation (*) Prerequisite: permission of graduate program adviser. Credit/no credit only.

RESERVE OFFICERS TRAINING CORPS PROGRAMS / MILITARY SCIENCE 451

Reserve Officers Training Corps Programs

Aerospace Studies

202 Clark

The Air Force Reserve Officer Training Corps program (AFROTC) is designed to motivate, educate, and commission highly qualified students for active duty as officers in the U.S. Air Force. The curriculum develops the professional knowledge, in both theory and application, that an Air Force officer needs to be an effective manager and leader in the aerospace environment.

General Program Requirements

The freshman- and sophomore-level general military courses are open to all students attending any two- or four-year college or university full time. Any qualified male or female student may enroll in these general military courses. The junior- and senior-level professional officer courses are open to qualified students who have received credit for the general military courses and have been competitively selected for entry.

Commissioning Requirements

Students who successfully complete the AFROTC program and receive an academic degree from the University are offered commissions as second lieutenants in the Air Force.

General Military Courses

The basic division courses consist of one classroom hour and one leadership laboratory hour per week during the freshman and sophomore years. Uniforms and textbooks are provided. Students may enter the freshman class at the start of autumn, winter, or spring guarters. Sophomore students may enter at the start of autumn or winter quarters and take the freshman- and sophomore-level courses concurrently. A four-week field training course, taken during the summer between the sophomore and junior years, is required for entry into the professional officer courses. Students receive pay and travel costs for field training.

Except for sophomore cadets on AFROTC scholarship, students incur no active duty service commitment by taking general military courses, and students may drop the courses at any time.

Professional Officer Courses

Cadets selected for enrollment in professional officer courses are enlisted in the Air Force Reserve and receive tax-free monthly subsistence pay of \$100. They are furnished texts and uniforms. Junior- and seniorlevel classes consist of three hours of academic classes and one hour of leadership laboratory per week.

Financial Assistance

The Air Force offers one-, two-, and three-year scholarships to qualified college students. The following is a partial list of areas where scholarships are available: engineering, science and technology, nursing, medicine, law, non-technical, and others. A special oneyear scholarship is available for nursing and law majors. Nursing students are given special consideration in fulfilling their AFROTC courses to allow time to meet their clinical and core course requirements.

AFROTC scholarships pay tuition, certain fees, and full textbook reimbursement. In addition, scholarship winners receive a \$100 subsistence allowance per month. To take advantage of these scholarships, students should apply directly to the AFROTC department.

Two-Year Program

To provide for those students unable to take the general military courses, a two-year professional officer course is available on a highly competitive basis. The two-year program is open to graduate students and other students who have two years remaining until graduation.

Students in this program are required to attend a sixweek field training course at an Air Force base during the summer preceding program entry. The student is paid during the six-week period. Upon return to the campus, students enter the professional officer course. Uniform, texts, and \$100 monthly subsistence are provided.

Two-year scholarships may be available for qualified students. Students interested in this program should contact the AFROTC department *nine to twelve months* prior to the autumn quarter they desire to enter.

Chairperson

James C. Evans

Professor

Evans, James C. 1992; MA, 1967, University of Washington.

Assistant Professors

Crissey, Mary G. 1992; MS, 1988, University of Maryland.

Linder, Dale S. 1994; MS, 1987, University of Southern California.

Smith, Michael C. 1992; MS, 1991, Troy State University.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

A S 101, 102, 103 Aerospace Studies 100 (1,1,1) Crissey Focuses on the basic characteristics of air doctrine; U.S. Air Force mission and organization; functions of United States strategic offensive and defensive, general-purpose, and aerospace support forces; officership/professionalism and an introduction to communicative skills. Additional one-hour leadership laboratory is mandatory. Offered: A,W,Sp.

A S 211, 212, 213 Aerospace Studies 200 (1,1,1) Evans Factors contributing to the development of air power from its beginnings to the present, and the evolution of air power concepts and doctrine. History of air power employment in military and nonmilitary operations in support of national objectives. Assessment of communicative skills. Additional one-hour leadership laboratory is mandatory. Offered: A,W,Sp. A S 331, 332, 333 Aerospace Studies 300 (3,3,3) Linder Emphasis on leadership and management fundamentals, professional knowledge, leadership ethics, and communicative skills are required of an Air Force junior officer. Case studies used to examine leadership and management situations. Mandatory leadership laboratory provides advanced leadership experiences in officer type activities, giving students the opportunity to apply learned principles. Offered: A,W,Sp.

A S 431, 432, 433 Aerospace Studies 400 (3,3,3) Smith Needs for national security, evolution of American defense strategy and policy, methods for managing conflict, alliances and regional security to preserve American interests. Arms control and terrorism. The military as a profession, officership, the military justice system, current military issues; refinement of communicative skills. A one-hour leadership laboratory is also required. Offered: A,W,Sp.

Military Science

104 Clark

The ROTC program is designed to aid the student in developing those habits and attitudes that will make him a better student and increase his/her chances of graduating with a better education and higher academic achievement.

The ROTC program provides the student an opportunity to learn and practice the art of leading people. Recognizing that there is a great difference in cognition and volition, the program is structured in such a way as to give the student actual practical experience in leading and managing resources—training designed to prepare the student to reach the pinnacle of his or her chosen profession.

The Army ROTC program enables the student to learn about the military profession and the role it plays in our democratic system of government. The courses enable such knowledge to be acquired on the campus without having to serve in the military forces.

The Army ROTC electives enrich the student's course of study. Taking these courses also opens up an additional career option to the student, enabling him or her to gain a commission and serve in the Army as an officer, or serve as an officer in the Reserves or National Guard while pursuing another chosen career.

Army ROTC provides the student membership in a close-knit fraternal organization where social acceptance is assured.

ROTC programs on college campuses are the nation's way of ensuring that all the influences of higher education are transported into the military services—a mandatory requirement in a democracy.

Traditional Four-Year Program

Open to freshman and sophomore men and women, this program may lead to a commission in either the Regular Army or the Reserve Components (Army Reserve or National Guard). Academic studies include courses in military history and tactics, principles of leadership, techniques of instruction, management and staff procedures, logistics, physical conditioning, and military law. Extracurricular activities include such options as Ranger Company, air pistol and rifle teams, color guard, training exercises, field trips, and related activities. A student incurs no obligation of any kind during the first two years of the four-year AROTC program. Basic course grades are included in the GPA.

Placement credit toward completion of AROTC courses may be given for prior AROTC or military training. Veterans routinely receive full credit for the first two years of AROTC and may enter the advanced course directly. All military textbooks and uniform items

452 RESERVE OFFICERS TRAINING CORPS PROGRAMS / MILITARY SCIENCE

are furnished without charge. Students in the advanced course receive tax-free monthly subsistence of \$100 for a maximum of twenty months. In the advanced course, cadets are required to participate in the leadership development program, which is a practicum of skills and principles taught during the previous two years. Between their junior and senior years, cadets attend a six-week summer camp during which they receive varied and challenging training and for which they are paid both for the time at camp and for travel expenses to and from the camp location. Upon entering the advanced course, students agree to complete the course, to accept a commission upon graduation, if offered, and to serve on active duty for four years after commissioning or three to six months' active duty training, with the balance of service in the Army Reserve or National Guard.

Prior to commissioning, students must complete at least one undergraduate course from each of five fields of study: written communication, military history, human behavior, computer literacy, and mathematical reasoning. Alternative courses may be substituted for any of these requirements upon approval of the Professor of Military Science.

Two-Year Program

This program is open to qualified undergraduate and graduate students with at least two years in school remaining and who have completed 45 credits. Students may qualify for entrance into the advanced course under this program in either one of two ways.

First, they may participate as qualified veterans who receive placement credit for the first two years of AROTC. Veterans are also eligible to compete for twoand three-year scholarships while receiving their educational benefits. Members of the Reserves and National Guard may also be eligible to participate in AROTC and receive their commission upon graduation.

The second alternative under this program requires attendance at a basic camp for six weeks at Fort Knox, Kentucky. Completion of this basic camp also qualifies students for direct entry into the advanced course. While at camp, students receive pay plus travel expenses to and from the camp location, and they can compete for two-year scholarships. Academic subjects covered in the two-year program are the same as those covered in the four-year programs. Both programs have the same military obligation.

Two- and Three-Year Scholarship Program

This program is open to qualified students on campus. Selections are made on a regional level based upon the recommendation of the Professor of Military Science. The scholarship provides financial assistance during the remaining years of the student's enrollment. Each scholarship pays for tuition and a flat rate for books and laboratory expenses and provides subsistence of \$100 per month, tax free. All other advantages and obligations are the same as those of the four-year scholarship program.

Four-Year Scholarship Program

Application for this program should be made while the student is still in high school. Selection of students is made on a nationwide competitive basis. This program may lead to a commission in the Regular Army or the Army Reserve. All tuition, a flat rate for books and laboratory expenses, and uniform items, plus tax-free subsistence of \$100 for a maximum of four years, are provided by the Army. The program requires four years of academic study on campus, as well as a six-week advanced camp training period between the junior and senior years, for which the cadet is paid for both time and travel expense to and from the camp location. Academic studies are identical to those of the traditional four-year program. The student must sign a contract (with the consent of parents if under eighteen years of age) wherein he or she agrees to complete the program, to enlist in the Reserve, to accept a commission if offered, and to serve on active duty for four years after commissioning.

Courses for Undergraduates

M SCI 101, 102, 103 MIIItary Science I: Basic (2,2,2) History, organization, and mission of the United States Army and the Reserve Officer Training Corps. Relationship to the citizen's military and civilian obligations. Functions and organization of the United States defense establishment. Fundamentals of leadership and management. Leadership laboratories and two field training exercises conducted during the year encompass training in field craft, survival, and small unit tactics. Offered: AWSp, AWSp.

M SCI 201, 202, 203 Military Science II: Basic (2,2,2) Develops proficiency in oral and written communications. Presents a perspective on the world wide military threat; an evaluation of tactical methodologies of the hostile nations to include conventional weapon systems employment. Control, prevention, and treatment of combat or emergency medical situations. Fundamentals of military map reading, aerial photography, compass and field navigation, are taught and applied. Leadership laboratories and two field training exercises during the year. Offered: AWSp, AWSp, AWSp.

M SCI 301, 302, 303 Military Science III: Advanced (3,3,3) Small-unit tactics, emphasizing the importance of firepower, movement, and communications. Duties, responsibilities, and methods of employment of basic military units. Leader's role in directing and coordinating individuals and military units from squad to company level. Students are introduced to the planning and conduct of individual and group physical conditioning activities, stressing positive motivation to establish high standards of morale and esprit. Principles and techniques of command, control, military management, and leadership are taught and practiced throughout the academic year. Leadership laboratories and two field training exercises during the year. Prerequisites: completion of basic training; basic camp or 9 credits of 100- and 200-level courses. Offered: AWSp, AWSp, AWSp.

M SCI 305 Practicum-Techniques of Military Instructions (1-3) Analysis, review of techniques used in military training and instructions. Students plan, rehearse, deliver, provide written critique on block of military instruction from the Military Qualification Skills Manual. Prerequisites: admission to ROTC advanced course, permission of instructor, completion of 9 credits of 300- or 400-level courses.

M SCI 401, 402, 403 Military Science IV: Advanced (2,3,2) The Army officer's position in contemporary world and impact on problems within the military service. Use of a developmental study to provide awareness of personal responsibilities and official relationships of an Army officer. Organization and functions of command and staff positions. Coordination of administration, logistics, and planning for military operations. Basic concepts of legislative and executive authority for the Uniform Code of Military Justice (to include a study of the officer's authority and responsibility within the military justice system). Problem-solving techniques used by small-unit leaders, emphasizing coordination and planning by the junior officer. Leadership laboratories and two field training exercises during the year. Prerequisites: completion of basic training; basic camp or 9 credits of 100- and 200-level courses. Offered: AWSp, AWSp, AWSp.

Naval Science

305 Clark

The Department of Naval Science offers University students an opportunity to engage in study that leads to a commission in the U.S. Navy or Marine Corps while working toward a baccalaureate degree. The Naval Reserve Officer Training Corps (NROTC) unit functions in conjunction with the Department of Naval Science. An NROTC student may select an academic major within certain limitations (i.e., some majors that normally lead to immediate graduate education, such as prelaw or premedicine, are not consistent with the mission of the NROTC program).

In addition to their University curricula, NROTC students attend naval science courses in history and customs, naval engineering/weapons systems, navigation, naval operations, and leadership/management. In addition, each student must attend one drill session and one naval science laboratory session per week. During the summer, students may have a four-tosix-week training cruise to put into practice earlier classroom training. All NROTC students take the same naval science classes during the first two years. Students who elect to be commissioned in the Marine Corps take Marine Corps subjects during their third and fourth years.

Any University student may take any naval science course without enrolling in the NROTC Program. Two programs are offered.

Navy-Marine Scholarship Program

Each year, men and women are accepted for scholarship status in the four-year, three-year alternate, and two-year NROTC scholarship programs. Eligibility for the three- and four-year programs is based upon nationwide competition and selection by a central selection committee. Application must be made by December 1 of the academic year preceding appointment as midshipman. Those selected are provided educational benefits, including subsidy by the Navy of all tuition, fees, textbooks, and uniforms, plus \$100 per month in subsistence pay.

For the two-year scholarship program, applications from current sophomores, or juniors enrolled in fiveyear programs of study, must be received by March. Those chosen by a central selection committee attend a six-week course of instruction at the Naval Science Institute (NSI) at Newport, Rhode Island, during the summer prior to their junior year. Successful completion of NSI instruction qualifies these students for enrollment in the advanced courses in the NROTC program. All scholarship students are appointed as midshipmen, USNR, and upon graduation are commissioned as officies in the Navy or Marine Corps, after which they serve on active duty for a minimum of four years.

Navy-Marine College Program

Each year, men and women are accepted for four-, three-, and two-year nonscholarship college programs. For the three-year program, the Professor of Naval Science nominates qualified students throughout the freshman year. Applications for the two-year program are accepted from current sophomores in community colleges or four-year colleges and must be received prior to March of their sophomore year (or third year, if in a five-year program).

Those students selected for the two-year program attend a six-week course of instruction at NSI during the summer prior to their junior year. Successful completion of NSI instruction qualifies students for enrollment in the advanced course in the NROTC program. Students in the NROTC college program pay their own college expenses but receive monthly subsistence pay of \$100 during their junior and senior years, including the intervening summer. The Navy furnishes all uniforms and textbooks used in naval science courses.

All college program students are eligible for a scholarship after completing one academic term, with scholarship awards based on academic grades and participation within the midshipman battalion. The two-year college program students also may win a scholarship for superior performance at NSI. Upon graduation, college program students are commissioned in the Navy Reserve or Marine Corps Reserve and serve on active duty for three years.

Courses for Undergraduates

N SCI 111 The Naval Service (3) General introduction to the Navy, its organization, missions, roles, tasks, and operating methods. The relationship to the other services within the Department of Defense is emphasized. Offered: A.

N SCI 112, 113 Sea Power Practicum I, II (2,2) A comprehensive study of the role of sea power in the history of the United States, the current status of the various elements of the nation's sea power as they influence the development and implementation of national security policy, and the economic effects of the elements of sea power (the Navy, the merchant marine, port facilities, fisheries, and oceanographic capabilities). Offered: W,Sp.

N SCI 211 Naval Weapon Systems (3) Concept of naval weapons systems and the systems approach, the techniques of linear analysis of ballistics and weapons, the dynamics of basic components of weapons control systems. The tools are provided for understanding the basic principles that are involved in all modern naval weapon systems, gas turbines, and auxiliary power systems. Offered: A.

N SCI 212, 213 Naval Ship Systems I, II (3,3) Study of the varied ship systems operational in the Navy today, including the principles of characteristic propulsion systems and auxiliary machinery and the elements of ship stability and damage control. An introduction to nuclear propulsion, gas turbines, and auxiliary power systems. Offered: W,Sp. N SCI 311 Navigation (3) The science and practice of maritime coastal navigation, including visual fixing, dead reckoning, and piloting methods. Computation of tides and currents and nautical rules of the road. Offered: A.

N SCI 312 Celestial Navigation (3) Theory and practice of celestial navigation. The student performs the complete "day's work" of the ship's navigator. Offered: W.

N SCI 313 Naval Operations (3) Introduction to naval operations, the employment of naval forces, naval tactics, formulation of operations plans and orders, employment of detection equipment, and meteorology. Offered: Sp.

N SCI 411 Psychology of Leadership (3) Introduction of the theory and techniques of naval leadership based on those principles of behavioral science that are pertinent to understanding individual and group behavior of adults. It introduces the student to the management process and the relationship of management functions to leadership. Acceptance of a traditional deep sense of moral responsibility on the part of the aspiring leader is stressed. Offered: A.

N SCI 412, 413 Naval Organization and Management I, II (3,3) Study of organization, systems, and techniques employed in the Navy for management of its human, financial, and material resources. Some of the work-relates to the administration of discipline in the Navy under the Uniform Code of Military Justice. Emphasis is placed on the leadership and management role of the junior officer in the fleet. Offered: W,Sp.

Marine Corps Option Courses

N SCI 321, 322, 323 Evolution of Warfare I, II, III (3,3,3) Introduction to the art of war, the evolution of warfare from the earliest recorded battles to the present day. Offered: A,W.

N SCI 421, 422 Amphibious Warfare I, II (3,3) Provide basic knowledge of evolution of amphibious war, fare from premodern era to present. Strategic and tactical considerations in planning specific operations and amphibious landings. Offered: A,W.

N SCI 423 USMC Leadership and Administration of Justice (3) Concepts, objectives, characteristic qualities, and practical techniques of leadership as exercised by the Marine Corps officer are studied. Emphasis is placed on the leadership and management role of the junior officer in the Fleet Marine Forces. Offered: Sp.

School of Social Work

Dean

Nancy R. Hooyman 210 Social Work/Speech and Hearing Sciences

The School of Social Work offers three degree-granting programs, one undergraduate and two graduate. The undergraduate program prepares students to receive a Bachelor of Arts degree with a major in the field of social welfare, while the graduate programs offer the Master of Social Work degree and the Doctor of.Philosophy degree in social welfare. All three programs are housed in the Social Work/Speech and Hearing Sciences Building, 4101 Fifteenth Avenue Northeast.

In addition, the School offers a concurrent degree program with the School of Public Health and Community Medicine leading to the M.S.W. and M.P.H. degrees.

Undergraduate Program

Moya M. Duplica, Director

The undergraduate program consists primarily of upper-division courses in social welfare, with additional requirements in human biology, economics, psychology, and sociology. Students enter the major at the start of their junior year after completing the liberal arts requirements established by the College of Arts and Sciences. Social welfare courses during a student's junior and senior years impart a basic knowledge of the social welfare system, of human behavior and the social welfare research, and of the skills necessary to prepare for beginning social work practice. The program, leading to a bachelor's degree in social welfare.

The requirements and curriculum of the social welfare program may be summarized as follows:

Junior year—ECON 100, 200 or 201 (5); PSYCH 306 (5); SOC 352 (5); SOC W 419 (3), 300 (3), 320 (3), 390 (3), 310, 311 (3,3).

Senior year—SOC W 415 (12), 405 (6); social work electives (15).

Admission

Approximately fifty new juniors are admitted to the social welfare major each academic year, during autumn and winter quarters only. A selective admission procedure is used to determine entrance into the program. Applicants seeking admission should: be admitted or admissible to the University; be eligible, or nearly eligible, for junior class standing (i.e., 65 completed credits of undergraduate work) by the beginning of the entry quarter; have completed a human biology course; be in good academic standing (i.e., 2.00 minimum GPA); submit a completed application to the program; and provide copies of their college transcripts.

Application forms and a more detailed description of the social welfare major are available at the School's admissions office from February 1 to July 1 for entrance into the program starting the following autumn quarter, and from July 1 to November 1 for winter quarter entry. The School's admissions office is located in 23B Social Work/Speech and Hearing Sciences. Admission application forms also can be mailed upon request, telephone 543-5676. A student who wishes to discuss the program in person may arrange an interview by telephoning the Director of Admissions. Such inquiries are welcome.

Students accepted to the major at the end of their sophomore year surrender their premajor status by transferring their files and change-of-college forms to the School's Student Services Office, SWS 23C. Afterwards, they are advised by the Director of Student Services, located in the Student Services Office, SWS 23E.

Graduate Program

The School of Social Work offers a two-year, full-time program leading to the Master of Social Work degree, as well as an extended degree program that students usually complete in three years.

The program prepares students for advanced professional practice. The curriculum encompasses two distinct but interconnected areas: the beginning content or professional foundation and opportunities for advanced content in specialized practice.

The professional foundation provides instruction in the basic knowledge and skills required for effective, accountable social work practice as well as socialization to the profession, its value orientation, ethics, and history.

The advanced curriculum provides in-depth knowledge and skills needed for advanced practice in one major area of the social work profession. These include four concentrations in health and mental health; children, youth and families; multi-ethnic practice; and social welfare administration.

Admission Qualifications

Admission to the M.S.W. program requires formal admission to the Graduate School as well as to the School of Social Work. Applicants are required to have an undergraduate degree, a strong academic background, and some human services experience. Applicants must submit transcripts, references, applications, Graduate Record Examination scores, and an admission essay to be considered for autumn quarter entry. February 15 is the closing date for receipt of applications and materials. Admission is competitive and selection is based on a review of the applicant's submitted materials.

Financial Ald

A limited number of financial aid opportunities are available to students. Applicants to the M.S.W. program are urged to apply for assistance through the Office of Student Financial Aid by February 28. Completion of the Free Application for Federal Student Aid (FAFSA) is requisite for consideration for any departmental funding. Departmental funding is limited to a few resident tuition scholarships which cover only one or two quarters of tuition. Inquiries may be directed to the Chairperson of the Scholarship Committee, School of Social Work.

Master of Social Work-Master of Public Health Concurrent Degree Program

The School of Social Work participates with the School of Public Health and Community Medicine in a concurrent degree program leading to the M.P.H. and M.S.W. degrees. The program offers interdisciplinary preparation in the fields of public health and social work. Historically, public health and social work have shared an interest in a preventive approach to health and social problems, a community perspective, and a focus on vulnerable population groups. Both fields recognize the interrelationship of the health, social, and behavioral components of contemporary problems and the need for interventions and research that address all three components. The concurrent degree program prepares professionals who will function at the interface of both fields—in practice, research, planning, administration, and policy.idevelopment.

Additional information concerning the concurrent degree program may be obtained from the Associate Dean for Academic Programs, School of Social Work, 545-1660.

Ph.D. Program in Social Welfare

Cheryl A. Richey, Director and Graduate Program Coordinator

Anthony H. Ishisaka, Alternate Program Coordinator

The Ph.D. Program in Social Welfare prepares students to contribute to the advancement of knowledge and practice in the field of social welfare and the profession of social work. The program builds on the premise that social welfare scholarship must be scientifically based, responsive to service and practice needs, and informed of developments in related fields and disciplines.

After the first year of required courses, each student's program of study is individually designed and focuses on well-defined substantive and interventive areas of research in the field of social welfare. In the basic core of required courses, which include teaching and research practica, students have an opportunity to pursue their particular interests with faculty members in the School of Social Work and in other schools and departments.

During the first two years, students are expected to define and develop the specialized areas that will be the focus of their General Examination and subsequent dissertation research. The selected areas must have clear significance for the development of practice, programs, or policies in social work and social welfare. Various specialized areas of study are possible within the program, including, but not limited to, child welfare, aging, mental health, services to women, racial-ethnic minorities, income-maintenance programs, and community empowerment.

The General Examination for advancement to candidacy normally occurs at the end of the second year. After advancement to candidacy, students devote full time to completion of their dissertation research. The last step before award of the degree is the Final Examination, which consists mainly of the defense of the dissertation. Studen is are strongly encouraged to remain in residence at the University until the dissertation is accepted. The Ph.D. program takes approximately three years.

Admission

Applicants should have a master's degree in social work or comparable preparation in a closely related field. The applicants selected for admission are those whose scholastic achievements, previous experience, and aptitude for social welfare research and scholarship indicate the greatest promise for achieving the objectives of the program. In addition, an effort is made to maintain a balanced student group reflecting the range of concerns in social work and social welfare as well as the affirmative action goals of the University. The deadline for receipt of admission material is February 1.

Financial Aid

A limited number of stipends, scholarships, teaching and research assistantships, and tuition waivers are available. While every effort is made to provide aid to each student who requires it, priority is given to firstand second-year Ph.D. students. However, it is unlikely that the financial assistance provided to any student

SCHOOL OF SOCIAL WORK / FACULTY 455

would be adequate to cover all educational and living expenses. Financial aid forms required for financial assistance must be submitted by February 15.

Correspondence and Information

Graduate Program Coordinator Ph.D. Program in Social Welfare, JH-30

Center for Social Welfare Policy and Research

In addition to its degree programs, the School maintains the Center for Social Welfare Policy and Research, which is the focal point of the school's policy and research activities. The center serves as a resource within the School of Social Work and the social welfare community, both regional and national, for the design, implementation, and evaluation of human services policies and practices. Areas of research include prevention, crime and delinquency, substance abuse, family violence, child welfare, AIDS, ethnic-minority issues, mental health, women's issues, and services to the elderly. The research projects operated within the center reflect the increased recognition of the need for systematic research and evaluation to test the effectiveness of social service programs and policies.

Information about the Center for Social Welfare Policy and Research can be obtained from the School of Social Work, JH-30, Center for Social Welfare Policy and Research, telephone 543-4175.

Course Descriptions

See page 55 for explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

Social Welfare BASW

SOCWF 200 Introduction to Social Work Practice (5) **I&S** Introduction to the practice of social work including the theoretical concepts and institutional framework that guide practice and the conceptual organization of the discipline. Three weekly lectures and two hours per week in field observation sessions. Lectures supplemented by audiovisual aids and by special guest practitioners. Credit/no credit only. Offered: W.

SOCWF 300 Historical Approaches to Social Welfare (3) I&S Duplica, Fredriksen Stresses the origins and development of social welfare policy and programs, starting with the Elizabethan Poor Law (1601) and ending with the Social Security Act of 1935. The issue of poverty and the development of publicly funded income maintenance programs are central concerns. Required of social welfare majors. Open to nonmajors. Offered: AW.

SOCWF 310, 311 Social Welfare Practice (3,3) Allen, Whittaker Provides a conceptual framework for social work practice with individuals, families, small groups, and communities; an introduction to the roles, tasks, and functions of the social welfare practitioner and to theories and methods of intervention; and develops skills in problem assessment, intervention, termination, and evaluation. Prerequisite: social welfare junior. Offered: WSp.

SOCWF 320 Contemporary Approaches to Social Welfare (3) I&S Duplica Policy and program developments in the social welfare field since 1935. Typical topics include current income maintenance proposals, the emergence of programs to treat specific social dysfunctioning (mental health services) and the growth of a service-oriented society. Required of social welfare majors. Open to nonmajors. Prerequisite: 300. Offered: WSp. SOCWF 390 Introduction to Social Welfare Research (3) Introduction to the logic of the scientific method as applied to research in social work and social welfare, to the interrelated steps in the conduct of a research study, the development of skills in the critical consumption of social welfare research and the relationship of this research to social welfare practice. Required of social welfare majors. Open to nonmajors by permission of instructor. Offered: W.

SOCWF 405 Fieldwork Seminar (2/4, max. 6) Balassone, Gutierrez, Spearmon Integrates social work practicum experiences with prior and concurrent course work in social sciences, social work, and research. Includes discussion of class presentations and simulations or practice situations that combine knowledge and skill utilization. Student logs provide a basis for individual goal identification and achievement. Required of social welfare seniors. To be taken concurrently with 415. Prerequisites: social welfare senior, 310 and 311. Offered: AWSp.

SOCWF 409 Readings in Social Welfare (1-5, max. 15) Prerequisite: permission of instructor.

SOCWF 415 Beginning Field instruction (4-6, max. 12) Spearmon Students are placed in selected social service agencies and accept beginning social service assignments under the supervision of competent agency personnel. Credit/no credit only. Prerequisites: social welfare major and 300, 310 and 311. Offered: AWSp.

SOCWF 419 Adult Development and Aging (3) I&S Designed to introduce the student to the field of adult development. Interdisciplinary perspective stressing the interaction of psychological, social, and physiological factors affecting the aging process. Goals are to help the student understand and accept self-aging, and to provide a framework of understanding for working with adult persons. Required of social welfare maiors. Offered: So.

SOCWF 421 Methods of Child Care and Treatment (3) Whittaker Focuses on an introduction to the continuum of child welfare services and presents practical approaches to working with children and adolescents in a wide variety of practice settings. Offered: alternate years; A.

SOCWF 430 Child Care Work Practice (3) Whittaker Specialized practice with emotionally disturbed and delinquent children in group-care settings with focus on providing child-care staff with specific tools for teaching alternative behavior. Major topics include: etiology and diagnosis, observing and recording children's behavior, special problems of group living, life-space interviewing, token economies, activily programming, group interventions, parental involvement, organizational requisites and community linkages. Prerequisite: 310 or permission of instructor. Offered: alternate years; A.

Courses for Graduates Only

Social Work

SOC W 501 Social Policy and Economic Security (3) Dear, Herrick, Weatherley, Study of United States welfare system with emphasis on income maintenance programs. Analytical and descriptive focus on major income maintenance and social insurance programs, their strengths and weaknesses, and their historical, philosophical, and cultural foundations. Examines poverty, inequality, unemployment, and homelessness in context of emergent welfare state and related policies. Offered: A.

SOC W 502, 503 Human Behavior and Social Environment I, II (3, 3) Longres Human functioning in a social context across the life span. Includes human biological, psychological, social, and cultural functioning across the range of social systems in which individuals live, i.e., cultures, communities, institutions, organizations, groups, and families. Credit/no credit only. Offered: A,W. SOC W 504 Cultural Diversity and Social Justice (3) Bending, Schng, Spearmon History, culture, and status of disadvantaged and oppressed groups served in public sector social work practice. Credit/no credit only. Offered: AW.

SOC W 505 Foundations of Social Welfare Research (3) Catalano, Roffman Overview of research process and methods in social work with focus on both consuming and performing practice-based research. Emphasis on critical understanding of empirical litrature, development of useful and appropriate questions about social work practice, and strategies and techniques for doing practice research. Offered: Sp.

SOC W 506 Social Work: A Profession for Change (3) Duplica, Gutierrez Introduction to the foundations, approaches, and skills necessary for social work practice with individuals and families, groups, organizations, and communities across the fields of social welfare. Credit/no credit only.

SOC W 510 Practice I: Introduction to Social Work Practice (3) Conte, DeLong, Kopp, Roffman, Teather Foundation knowledge and skills for direct practice with individuals, families, and groups. Course assists students toward mastery in assessment, development of treatment plans based on theory and assessment information, goalsetting skills, and selection of appropriate interventions. Offered: ASp.

SOC W 511 Practice II: Intermediate Direct Service Practice (3) Conte, DeLong, Kopp, Sohng, Wrenn Foundation knowledge and skills for direct practice with individuals, families, and groups. Course assists students toward mastery in assessment, development of treatment plans based on theory and assessment information, goalsetting skills, and selection of appropriate interventions. Offered: AW.

SOC W 512 Practice III: Managing Agencies for Service Effectiveness (3) Fredriksen, Icard, Kruzich, Uehara Focuses on ways in which management activities contribute to service effectiveness for clients and quality of conditions for staff. Various managerial roles, functions, and skills examined. Impact of agency structure, culture, and mission on staff, clients, and organizational outcomes discussed with emphasis on ways social work managers influence change. Offered: W.

SOC W 513 Practice IV: Community Change Practice (3) Herrick, Icard Provides frame of reference and skills for community-based social work practice. Theories of social change are examined with examples drawn from community organizing and policy advocacy. Offered: Sp.

SOC W 515 Foundation Practicum (1-8, max. 12) DeLong, Hanneman, Roberts, Wrenn Agency-based practicum with emphasis on development of knowledge, perspectives, and skills needed for practice with individuals, families, groups, organizations, and communities. Credit/no credit only. Prerequisite: social work major. Offered: AWSpS.

SOC W 525 Advanced Practicum (2-10, max. 24) DeLong, Hanneman, Roberts, Wrenn Agency-based advanced practicum. Prerequisite: 515 and foundation courses. Credit/no credit only. Prerequisite: social work major. Offered: AWSpS.

SOC W 526 Field Research Methods (3) Seminar for practicum related research projects.

SOC W 531 Child and Family Policy and Services (3) Pecora Presentation of social welfare policies and services that meet societal problems, needs of specific client groups, and tools for evaluating various policies in child and families area. Facilitates understanding of network of institutions that employ social workers. Offered: A.

 SOC W 532 Children, Youth, and Family Practice I
(3) Kopp, Teather Builds on foundation practice methods sequence to deepen individual, family, and community level assessment and intervention skills

SCHOOL OF SOCIAL WORK / COURSE DESCRIPTIONS 457

relevant for work with children, youth, and families. Offered: ASp.

SOC W 533 Children, Youth, and Family Practice II (3) Kopp, Teather Builds on 532 and focuses on the values, knowledge, and skills used in intensive case management and intensive family preservation services. Offered: A.

SOC W 535 Advanced Social Work Research: Children, Youth, and Families Practice (3) Nicoll Principles and procedures for evaluation of oirect practice interventions, research methods involved in community-needs assessment, program evaluation, and management-information systems. For Children, Youth, and Families (CYF) concentration. Offered: W.

SOC W 536 Children, Youth, and Family Methods (3) Bending, Cook, Dear, Pecora, Roffman, Teather, Whittaker Focuses on child welfare services through different fields and intervention methods including juvenile justice, social work in the school, services for early intervention, prevention, and family support, child and adolescent mental health services, families of developmentally disabled, and intensive family preservation services. Offered: WSp.

SOC W 541 Policy Perspectives on Multi-Ethnic Practice (3) Bending Presentation of social welfare policies and services that meet societal problems, needs of specific client groups, and tools for evaluating various policies in the multi-ethnic area. Facilitates understanding of network of institutions that employ social workers. Offered: A.

SOC W 542 Introduction to Multi-Ethnic Practice (3) Bending, Longres Examination of selected social welfare problems as related to specific racial-ethnic minority groups. Attention is given to understanding of minority populations and the effective delivery of social work and social welfare services in minority communities. Offered: Sp.

SOC W 545 Advanced Social Work Research: Participatory Action Research for Multi-Ethnic Practice (3) Sohng Principles and procedures for the evaluation of direct practice interventions, research methods involved in community-needs assessment, program evaluation, and management-information systems. For Multi-Ethnic Practice (MEP) concentration. Offered: W.

SOC W 546 Multi-Ethnic Practice Methods (3, max. 9) Herrick, Leigh, Richardson Focus on specialized knowledge and skills necessary for effective social work with American Indian, African American, Asian American, and Latino or Hispanic individuals, groups, and communities and for work in a variety of settings and fields of practice. Offered: AWSp.

SOC W 552 Leadership in Program Development (3) *Ezell, Kruzich* Introduces the practice skills and knowledge required for specialized practice in agency management. Offered: Sp.

SOC W 553 Social Work Supervision (3) *Ezell, Pecora* Presents critical skills for major phases of the personnel process including recruiting, supervising, and supporting employees. Offered: A

SOC W 554 Financial Management in Human Services (3) Ezell Focus on key budgeting concepts and techniques common to human service agencies including budget development, resource allocation, problems of fiscal control, fiscal record keeping, and cost analysis. Offered: W.

SOC W 555 Advanced Social Work Research: Using information to Improve Agency Performance for Administration (3) Uehara Principles and procedures for the evaluation of direct practice interventions, research methods involved in community-needs assessment, program evaluation, and management-information systems. For Administration (ADM) concentration. Offered: W. SOC W 556 Social Work Administration Methods (3, max. 9) Dear. Ezell, Herrick, Resnick Focus on knowledge base, unique values and ethics, and relevant skills for use in human service organizations including leadership and empowerment, teamwork, problem solving, supervision, planning, and decision making. Offered: WSp.

SOC W 557 Advanced Social Welfare Administration (3) Concepts and practice skills for the management of social welfare organizations with emphasis on management practice in settings offering clinical social services. Includes analysis of treatment settings and auspices, management of interdisciplinary professional teams, overview of clinical practice technology, and planning, implementing, controlling, and budgeting in a human-services agency context.

SOC W 558 Organizational Analysis (3) *Kruzich, Weatherley* Conceptual base for analysis and action in human-service organizations with emphasis on utilization of conceptual tools of organization theory for problem solving in social welfare organizations. Techniques to describe and analyze selected organizational problems and contribute to their solutions. Prerequisite: permission of instructor.

SOC W 559 Group Process (3) *Resnick* Provides tools for students to understand dynamics and development of the group process, to increase awareness of participant and leader behavior, and to improve effectiveness as participants and as leaders. Prerequisite: permission of instructor.

SOC W 561 Health and Mental Health Policy (3) Almgren, Balassone Presentation of social welfare policies and services that meet societal problems, needs of specific client groups, and tools for evaluating various policies in the health and mental health area. Facilitates understanding of network of institutions that employ social workers. Offered: A.

SOC W 562 Adult Psychopathology and Chemical Dependency (3) Conte, Roffman Introduces differential diagnosis including applying diagnostic criteria to case examples, uses, strengths, and weaknesses of the Diagnostic and Statistical Manual, physiological bases of drug addictions, theories of drug dependence, physical and psychological consequences of drug use and abuse, and an introduction to role of 12step groups in recovery process. Offered: Sp.

SOC W 563 Advanced Health and Mental Health Practice I (3) Almgren, Conte, Levy Advanced human services practice in the health and mental health areas. Intensive study of practice materials with emphasis upon development of appropriate interventive and methodological skills. Offered: A.

SOC W 564 Advanced Health and Mental Health Practice II (3) Almgren, Conte, Levy Focus on major theoretical frameworks for practice in the health and mental health fields. Offered: W.

SOC W 565 Advanced Social Work Research: Health and Mental Health (3) Levy Principles and procedures for the evaluation of direct practice interventions, research methods involved in communityneeds assessment, program evaluation, and management-information systems. For Health and Mental Health (HMH) concentration. Offered: W.

SOC W 566 Health and Mental Health Methods (3) Gottlieb, Jaffee, Roffman Focus on range of practice roles in the fields of health and mental health and knowledge and skills necessary to work at the interface of these systems. Offered: WSp.

SOC W 590 Advanced Social Work Research (3) Principles and procedures for the evaluation of direct practice interventions. Research methods involved in community-needs assessment, program evaluation, and management-information systems.

SOC W 591 Research in Community and Organizational Settings (3)

SOC W 592 Social Problems and Social Welfare (3, max. 9) Balassone, Duplica, Roberts, Roffman Analysis of major social problems and social welfare service systems providing a systematic approach to assessing the scope, causes, social cost, and public policy alternatives in the provision of services related to such problems. Selected social problems are studied and related to the student's field.

SOC W 593 Community Organizing (3) Herrick Presentation of strategies and tactics used in community organizing with analysis of power relationships between the have's and have not's. Introduction to the history of community organizing in the United States and presentation of practical skills required as well as various models.

SOC W 594 Advanced Human Services Practice (3) Kopp, Levy, McGadney, Sohng Integration of practice and research with an understanding of and an ability to perform practice skills such as specification of problems and goals, intervention planning, evaluation. Scientific reasoning applied to practice tasks with problems including value conflicts and ethical dilemmas.

SOC W 595 Problem-Focused Human Development (3, max. 9) Hanneman, Nicoli, Roffman Focus on the social and developmental determinants of specific human problems and their impact on individual development, families, and social institutions. Some time given to examining the nature of organized social responses that are designed to deal with the specified human problem.

SOC W 596 Statistics in Social Work (3) Learning to describe and use the fundamental concepts underlying statistical analysis and basic statistical tests.

SOC W 597 Seminar (3, max. 6) Seminar for special topics in social work.

SOC W 598 Integrative Seminar (1-3, max. 12) Integrates specialized knowledge in social work settings. Credit/no credit only. Offered: AWSp.

SOC W 599 Readings in Social Work (*) Independent Studies. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

SOC W 600 Independent Study or Research (*)

SOC W 700 Master's Thesis (*)

Social Welfare

SOCWL 552 History of Poverty and Inequality: The Anglo-American Experience: 1485-1900 (3) Weatherley Examines roots of modern social welfare policy in the reign of the Tudors (1485-1603), the evolution of welfare policy compatible with the aims of the nation-state, and the significant societal and intellectual developments preceding the English Poor Law Reform of 1834. The English welfare heritage as it subsequently shaped public and private welfare measures in the United States also receives attention, as does the relevance of these early beginnings to today's conceptualization of welfare policy. Offered: W.

SOCWL 553 Seminar in Contemporary Social Welfare Policy (3) Plotnick, Weatherley Major American social welfare programs and some of the policies that guide their development and implementation. Contemporary income maintenance policies and their effectiveness in reducing income inequality. This course is closely linked to 552. Selected issues and dilemmas followed in 552, which serve as the focus for policy debate, are examined in the context of current welfare programs. Offered: Sp.

SOCWL 558 Integrative Seminar (1-2) Nurius, Richey Informal and topic-driven seminar. Active participation expected in presentations and other activities. May require weekly preparation for presentation or demonstration or for discussion based on research of an assigned topic. Offered: Sp.

1.

458 SCHOOL OF SOCIAL WORK / COURSE DESCRIPTIONS

SOCWL 580 Introduction to Advanced Research Method and Design (3) Uehara Introduction to the broad scientific issues and the specific methodological strategies used in formulating and answering research questions within the field of social welfare. Required of all first-year students in the social welfare Ph.D. program. Open to others by permission of instructor. Offered: A.

SOCWL 581 Introduction to Advanced Research Method and Design (3) Üehara Continuation of 580. Required of all first-year students in the Social Welfare Ph.D. program. Open to others by permission of instructor. Offered: W.

SOCWL 582-583 Research Practicum ([1-3]-[1-3]) Development of specific methodological skills in social welfare research through participation in an ongoing research project. Credit/no credit only. Offered: AWSpS, AWSpS.

SOCWL 584 Teaching Practicum (3) Supervised teaching of a required course or teaching as a co-

instructor or teaching assistant with a faculty member. Learning contract used to target specific teaching competencies, e.g., assessing and evaluating student outcomes, identifying class session goals and objectives, tailoring instruction methods to diverse learning styles. Offered: AWSpS.

SOCWL 587 Fundamentals of Social Work Statistics I (4) Gillmore Descriptive and inferential statistics. Underlying logic of statistical inference. Statistical issues of special relevance in social work, including measurement and research design. Prerequisite: concurrent registration in 580. Offered: A.

SOCWL 588 Fundamentals of Social Work Statistics II (4) *Gillmore* Issues in the use of descriptive and inferential statistics, especially the statistical control of extraneous variables. Applications of statistical inference in factorial design, and correlation and regression. Statistical issues of special relevance in social work. Ethics in the use of statistics. Prerequisite: concurrent registration in 581. Offered: W.

SOCWL 598-599 Research Problems and Priorities in Social Work and Social Weifare (3-3) Nurius, Weatherley Seminar assesses the current state of knowledge in selected major areas of social work and social welfare, examines analytic and methodological problems in conducting research in these areas, and identifies research priorities. Emphasis on peer learning centered on the identification of central research problems in the areas of social policy, program evaluation, and intervention with individuals, groups, families, and organizations. Prerequisite: admission to social welfare Ph.D. program or permission of instructor. Offered: A,W.

SOCWL 600 Independent Study or Research (*) Offered: AWSpS.

SOCWL 800 Doctoral Dissertation (*) Offered: AWSpS.
