PSYCH 575 Minority Mental Health (3) Barrett, George Surveys topics on mental health and treatment of racial and ethnic minorities. Theory emphases include: models addressing ethnic identity, cross-cultural differences, models of culturally sensitive intervention. Practice emphases include unique psychotherapy strategies for: African-, Asian-, and Latino-American Indians. Prerequisite: graduate clinical major standing in psychology or permission of instructor.

PSYCH 576 Intervention Techniques With Families (3) Theory and practice of principal methods of therapeutic intervention with families. Attention to clinical problems arising in a family context and use of family members and processes by the clinician. Prerequisite: 575, 592 and 593 or equivalent and permission of instructor.

PSYCH 578 Affective Disorders: Theory and Research (2) Jacobson Causes, sustainers, correlates, and consequences of affective disorders, including biological and psychosocial factors. Credit/ no credit only. Prerequisite: graduate or professional student standing or permission of instructor; recommended: graduate course in psychopathology and personality.

PSYCH 579 Treatment of Affective Disorders: Methods and Evaluation (2) Jacobson Differential diagnosis of depression and depressive subtypes; emphasis on psychodynamic, cognitive-behavioral, and combined forms of psychological treatment of less severely incapacitated patients; biological approaches electroconvulsive therapy) as alternative or adjunctive treatments in severe, psychotic, and endogenous-like depressions. Credit/no credit only. Prerequisite: 578, graduate or professional student standing or permission of instructor; recommended: graduate course in psychopathology and personality.

PSYCH 584 Behavioral Methods: Clinical Interventions (3) Lineham Provides students with basic skills required for competent practice of cognitive and behavioral therapies. Topics include behavioral skills training, cognitive restructuring, contingency management, and exposure-based procedures. Prerequisite: second year of graduate clinical psychology, social work, psychosocial nursing, or psychiatric residency. Offered: W.

PSYCH 585 Research in Psychotherapy (5) *Marlatt* Research in psychotherapy, including process and outcome. Experience in research design. Prerequisite: graduate major standing and permission of instructor.

PSYCH 586 Clinical Personality Assessment (3) *R Smith* Use of objective personality inventories in the description of normal and abnormal personality and use of such information in case conceptualization and treatment planning. Minnesota Multiphasic Personality Inventory, Millon Clinical Multiaxial Inventory. Credit/no credit only. Prerequisite: clinical psychology graduate standing.

PSYCH 587 Clinical Methods: Interviewing (2) *Fagan* Provides the foundation for developing good clinical skills. Enables students to conduct an initial clinical interview and generate a diagnostic formulation, problem list, and treatment plan after taking a complete history. Limited to and required of all second-year clinical psychology graduate students. Credit/no credit only. Offered: A.

PSYCH 588 Clinical Methods: Ethics (2) Fagan Enables students to acquire a thorough working knowledge of the American Psychological Association's Ethical Standards for Psychologists; an awareness of Washington state law as it affects psychologists and a knowledge of how to identify and solve ethical dilemmas. Limited to and required of all second-year clinical psychology graduate students. Credit/no credit only. Offered: W.

PSYCH 589 Advanced Clinical Practicum (4) Cauce, Dawson, George, Jacobson, Kohlenberg, Marlatt, McMahon, Smith Supervised psychotherapy involving several individual clients. Separate consultations with instructor for intensive supervision of each case. Occasional meetings in small groups of instructors and students to discuss case material. Assigned readings appropriate to each case with opportunities to discuss these with instructor. Credit/ no credit only. Prerequisite: clinical psychology graduate standing and permission of instructor. Offered: AWSpS.

PSYCH 590 Practicum in Psychological Assessment (2) Demonstration and practice of selected psychological test procedures and interviewing skills. Concurrent registration in 535 required. Required for all first-year graduate students majoring in clinical and child-clinical psychology. Prerequisite: graduate major standing in clinical or child-clinical psychology and permission of instructor.

PSYCH 591 Issues in Clinical Psychology (1, max. 3) Personal and professional issues in clinical psychology. Required for all first-year graduate students majoring in clinical and child-clinical psychology. Credit/no credit only. Prerequisite: graduate major standing in clinical psychology. Offered: AW.

PSYCH 593 Clinical Colloquium and Clinic Practicum (1-6, max. 24) Required of all clinical psychology graduate students seeing clients in the clinic. Clinical colloquium required of all second-year students, optional for others. Credit/no credit only. Offered: AWS.

PSYCH 594 Advanced Personality Theory (5) Linehan Conceptual models of behavioral functioning, cognition, emotion, and environment as organizers of behavior and other critical issues in personality theory. Opportunity to integrate previous courses, research, and practice, and arrive at coherent theoretical framework. Required for graduate majors in clinical psychology.

PSYCH 595 Behavior Disorders (5) *I. Sarason* Major types of behavior disorders, with emphasis on clinical manifestations, relevant research, and theoretical perspectives. Required for all graduate students majoring in clinical psychology. Prerequisite: graduate major standing in clinical psychology or permission of instructor. Offered: W.

PSYCH 596 Psychology of Behavior Change (5) *Jacobson, Kohlenberg* Behavioral theory and behavioral approaches to treatment. Prerequisite: 595 and permission of instructor. Offered: Sp.

PSYCH 597 Fieldwork in Clinical Psychology (1-5, max. 36) Baer, Cauce, Dawson, George, Jacobson, Kohlenberg, Linehan, Marlatt, McMahon, N Robinson, R Smith Prerequisite: second-year graduate major standing and permission of departmental faculty. **PSYCH 598 Directed Reading in Psychology** (* max. 30) Selected topics. Prerequisite: permission of a supervising psychology faculty member.

PSYCH 599 Directed Research in Psychology (1-3, max. 24) Supervised participation in research. Prerequisite: permission of a supervising psychology faculty member.

Romance Languages and Literature

C104 Padelford

The department consists of two divisions: French and Italian Studies and Spanish and Portuguese Studies. The divisions offer programs designed to develop competence in the reading, speaking, and writing of the languages and in the study of the literatures and cultures.

French and Italian Studies

C254 Padelford

Undergraduate Program

Adviser Theresa Callahan C252 Padelford, Box 354360 (206) 616-5366

Bachelor of Arts

Admission: Students in good academic standing may declare this major at any time.

Suggested Introductory Course Work: Community-college students should take as many lower-division language courses as possible while at the community college.

Major Requirements

French: 54 credits beyond FRENCH 203, to include 301, 302, 303 (or 313), 304, 305, 306, 378. Five 400-level courses chosen to satisfy the requirements for an emphasis on literature/culture. Transfer credits at the 400 level are accepted only by petition to the Faculty Studies Committee.

Italian: 50 credits in courses at the 300 and 400 levels, including ITAL 301, 302, 303, 401, 402, 403; 15 additional credits in literature courses at the 400 level. Consult the Italian adviser about courses in translation.

Minor

Minor Requirements: Italian—30 credits in courses at the 300 and 400 levels, including ITAL 301, 302, 303, and 401, 402, 403 (or equivalent 400-level courses).

Graduate Program

Graduate Program Coordinator C257 Padelford, Box 354360 (206) 543-4545

The Division of French and Italian Studies offers programs of graduate study leading to the degrees of Master of Arts in French or Italian and Doctor of Philosophy in French. Students who wish to complete their doctoral studies in Italian may do so through the Department of Comparative Literature.

The Master of Arts degree may be with thesis or without thesis in the main area specialization of language and literature.

Students enrolled in the doctoral program of French language and literature should devote at least twothirds of their course work to the field specialization. Some training in the history of language is required.

Information on specific requirements for the various degree programs is available upon request from the office of the graduate program adviser.

Financial Aid

The department awards annually a number of teaching assistantships. The assistant normally participates in teaching three classes during the academic year. Each class is limited to approximately 25 students and meets five hours a week for the 10 weeks of the quarter.

Faculty

Chair

John T. Keeler

Professors

Borch-Jacobsen, Mikkel * 1986; Doct, 1981, University of Strasbourg (France); French twentieth-century literature, modern philosophy, psycho-analysis.

Christofides, Constantine * 1966, (Emeritus); PhD, 1956, University of Michigan; medieval, seventeenth-century, Romanesque art and literature.

Clausen, Meredith L. * 1979, (Adjunct); PhD, 1975, University of California (Berkeley); twentieth-century and American architecture.

Creore, A. Emerson 1940, (Emeritus); MA, 1936, University of Rochester; PhD, 1939, Johns Hopkins University.

Friedman, Lionel J. 1961, (Emeritus); PhD, 1950, Harvard University.

Keeler, John T. * 1980; PhD, 1978, Harvard University; comparative politics (Western Europe), international relations.

Leiner, Jacqueline * 1963, (Emeritus); Dr és Lettres, 1969, University of Strasbourg (France); modern French literature.

Nostrand, Howard L. 1982, (Emeritus); MA, 1933, Harvard University; Doct, 1934, Universite de Paris (France); French culture and civilization.

Pace, Antonio 1980, (Emeritus); MA, 1937, Syracuse University; PhD, 1943, Princeton University; Italian language and literature.

Vance, Eugene * 1990; PhD, 1964, Cornell University; French, English, and Italian medieval literature; history of rhetoric; sacred art; age of Augustine.

Associate Professors

Collins, Douglas P. * 1980; PhD, 1978, University of Missouri; twentieth-century French literature.

Dale, Robert C. * 1963, (Emeritus); PhD, 1963, University of Wisconsin; nineteenth-century French literature, cinema. Delcourt, Denyse * 1990; PhD, 1987, University of Montreal (Canada); French Middle Ages, French Renaissance, French women writers and Quebecois literature.

Ellrich, Robert J. * 1964, (Emeritus); PhD, 1960, Harvard University; eighteenth-century French literature.

Friedrich, Pia * 1965, (Emeritus); PhD, 1946, University of Turin (Italy); pedagogy and twentieth-century Italian literature.

Handwerk, Gary J. * 1984, (Adjunct); PhD, 1984, Brown University; literary theory, English and Irish nineteenth- and twentieth-century narrative.

Jonas, Raymond A. * 1985, (Adjunct); PhD, 1985, University of California (Berkeley); modern France.

O'Neil, Mary R. * 1983, (Adjunct); PhD, 1982, Stanford University; Renaissance/Reformation, early modern Europe.

Sbragia, Albert J. * 1989; PhD, 1988, University of California (Berkeley); modern and contemporary Italian literature and cinema, Italian fascism, Rome.

Wortley, W. Victor * 1965, (Emeritus); PhD, 1964, University of Oregon; seventeenth-century French theatre and prose (nonfiction).

Assistant Professors

Bryant-Bertail, Sarah * 1990, (Adjunct); PhD, 1986, University of Minnesota; dramatic criticism, semiotics, feminist theatre.

Collins, Jeffrey L. 1994, (Adjunct); PhD, 1994, Yale University; Baroque art and architecture with an emphasis on Italy.

Rubino, Nancy I. 1997; PhD, 1996, Columbia University; nineteenth-century French literature, Paris.

Van Elslande, Jean-Pierre * 1996; PhD, 1996, University of Geneva (Switzerland); seventeenth-century French literature.

Senior Lecturer

Yowell, Donna Lynne * 1988; PhD, 1987, University of California (Berkeley); medieval Italian literature, Dante, Occitan lyric.

Lecturers

Collins, Helene V. 1984; PhD, 1995, University of Washington; French pedagogy and curriculum development, French cinema studies.

Leporace, Giuseppe 1987; MA, 1989, University of Washington; Italian pedagogy and translation.

Meyer, Hedwige M. 1988; MA, 1992, University of Washington; French pedagogy.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

French

Credit: The sequence 121, 122, 123 is parallel to 101, 102, 103; students can receive credit for 101 and 121, but not for 102 and 122 or 103 and 123. 101 or 121 cannot be taken for credit after 102, 103, 122, or 123. 134 is a 15-credit intensive course exactly equivalent to 121, 122, 123; a maximum of 15 credits are allowed for 134 and any of 102, 103, 121, 122, and 123. A student who completes 134 cannot later take 101 for credit, but a student who earns credit for 101 can take 134 for 15 additional credits.

FRENCH 101, 102, 103 Elementary (5) Methods and objectives are primarily oral-aural. Oral practice in the language laboratory is required. 101 - Prerequisite: placement by FR TL exam if French is language of admission. 102 - Prerequisite: either FRENCH 101 or placement by FR TL exam. 103 - Prerequisite: either FRENCH 102 or placement by FR TL exam.

FRENCH 110 Basic French Review (5) Combines in one quarter the contents of 101 and 102. Designed for students who have studied French in high school but who are not ready for 102. Prerequisite: placement by FR TL exam.

FRENCH 121, 122, 123 French Immersion (5, 5, 5) This "planned immersion" approach covers the equivalent of elementary French (101, 102, 103) through an alternative method with video as the central medium of presentation.

FRENCH 134 First-Year Intensive French (15) Equivalent of 101, 102, 103. No more than 15 credits allowed for any combination of 101, 102, 103, and 134. Offered: S.

FRENCH 199 Foreign Study—Elementary (4-16) Elementary instruction in approved foreign study program. Students who wish to satisfy foreign language proficiency requirement must see the departmental adviser and may be required to take additional courses through 103.

FRENCH 201, 202, 203 Intermediate (5, 5, 5) VLPA Designed to bring students to an intermediate level of proficiency. Emphasis on experiencing the language in context through a multi-media approach. 201 -Prerequisite: either FRENCH 103, FRENCH 134, or placement by FR TL exam. 202 - Prerequisite: FRENCH 201. 203 - Prerequisite: FRENCH 202.

FRENCH 210 Paris (5) VLPA/I&S Taught in English. Provides an introduction to the art, architecture, politics, and literature of the City of Light. Offered: jointly with HSTEU 210.

FRENCH 221, 222, 223 Second Year French Immersion (5, 5, 5) VLPA Cover the equivalent of second year French (FRENCH 201, 202, 203) through an alternative "planned immersion" method with video as the central medium of presentation.

FRENCH 234 Intermediate French Immersion (15) VLPA Covers the equivalent of second year French (FRENCH 201, 202, 203) through an alternative "planned immersion" method with video as the central medium of presentation. Prerequisite: either FRENCH 103, FRENCH 134, or placement by FR TL exam.

FRENCH 237 Foreign Study Conversational French (2-8) VLPA For participants in the Foreign Study Program.

FRENCH 297 Foreign Study French Civilization (3/6) VLPA For participants in the Foreign Study Program. Literary tradition, social and cultural values as reflected in literature. Paper (in English) and higher degree of participation for 6 credits. In English.

FRENCH 299 Foreign Study—Intermediate (4-16) **VLPA** Intermediate instruction in approved foreign study program. Evaluation by departmental adviser required to establish proficiency. Further study at 200-level subject to departmental evaluation.

FRENCH 301, 302, 303 Advanced French (5, 5, 5) VLPA Designed to bring students to an advanced level of proficiency in grammar and composition. Emphasis on experiencing the language in context through a multi-media approach. 303 prepares students for literature classes. 301 - Prerequisite: either FRENCH 203 or FRENCH 234. 302 - Prerequisite: FRENCH 301. 303 - Prerequisite: FRENCH 302.

FRENCH 304 Survey of French Literature: Origins to 1600 (3) VLPA Thematic and formal developments in literature of the period with emphasis on movements and texts in relation to cultural background. Prerequisite: FRENCH 302. **FRENCH 305** Survey of French Literature: 1600-1789 (3) VLPA Emphasis on literary movements and texts in relation to cultural background. Prerequisite: FRENCH 302.

FRENCH 306 Survey of French Literature: 1789 to the Present (3) VLPA Development of modern literature through its most important writers and movements. Prerequisite: FRENCH 302.

FRENCH 308 Foreign Study Composition (3-5, max. 10) VLPA For participants in the Foreign Study Program. Compositions on topical subjects of intermediate difficulty relating to the civilization of the French-speaking countries of Europe. Grammar review as needed. Prerequisite: FRENCH 203.

FRENCH 313 Business Communication in French (5) VLPA Offers students the opportunity to develop French language skills (reading, writing, speaking, and listening) within the context of the French-speaking business world. Business-specific culture emphasized. May be taken in lieu of, or in addition to, 303. Prerequisite: FRENCH 302.

FRENCH 323 Introduction to French Linguistics (5) VLPA Synchronic and diachronic linguistic analysis of French, including French phonetics and phonology, morphology, syntax, and evolution of the language. Prerequisite: FRENCH 203.

FRENCH 327 Advanced Conversation (2, max. 8) **VLPA** Not open to students whose native language is French. Prerequisite: FRENCH 203.

FRENCH 337 Foreign Study Conversational French (2-8) VLPA For participants in the Foreign Study Program. Prerequisite: FRENCH 203.

FRENCH 378 The Making of Contemporary France, Studied in French (5) VLPA/I&S Study of the historical origins and subsequent development of contemporary problems and characteristics of French government and politics, economy, and society. Prerequisite: FRENCH 203.

FRENCH 390 Supervised Study (2-6, max. 20)

FRENCH 397 Foreign Study French Civilization (3-6) VLPA For participants in the Foreign Study Program. Literary tradition, social and cultural values as reflected in literature. Paper (in French) and higher degree of participation for 6 credits. In French. Prerequisite: FRENCH 203.

FRENCH 400 The Syntactic Structure of French (5) VLPA Scientific study of the syntax of French: phrase structures and transformations (emphasis on passives, relativization, pronominalization, reflexive structures). Prerequisite: either ROLING 401 or FRENCH 323. Offered: jointly with FRLING 400.

FRENCH 401 The Morphological Structure of French (5) VLPA Linguistic study of French morphology. Prerequisite: either ROLING 401 or FRENCH 323. Offered: jointly with FRLING 401.

FRENCH 402 The Phonological Structure of French (5) VLPA The phonological component of the generative grammar of French: representations of syllabic and segmental units, phonological rules, distinctive features and their articulatory correlates. Prerequisite: either ROLING 401 or FRENCH 323. Offered: jointly with FRLING 402.

FRENCH 403 Background of Modern French (5) VLPA Linguistic analysis of the important developments in the history of the French language from its Latin origin to contemporary speech. Prerequisite: either ROLING 401 or FRENCH 323. Offered: jointly with FRLING 403.

FRENCH 404 Old French (5) VLPA Designed for acquisition of reading facility in Old French through intensive study of selected texts. Prerequisite: either ROLING 401 or FRENCH 323.

FRENCH 405 Linguistics and the Teaching of French (5) VLPA Areas of linguistics that can be particularly helpful to the French teacher. Prerequisite: either ROLING 401 or FRENCH 323. Offered: jointly with FRLING 405.

FRENCH 406 Advanced French Grammar (5) VLPA Problems of French grammar. Differences between forms and structures of French and English. Problems of effective teaching of French. For students with at least three years of college French and for beginning teaching assistants. Prerequisite: FRENCH 303. Offered: jointly with FRLING 406.

FRENCH 409 The Phonetics of French (5) VLPA Scientific study of the French sound system with special emphasis on "lower-level" phonetic rules, with integral values. Focus on data from standard French as well as socioeconomic and geographic variations. Prerequisite: ROLING 401, FRENCH 323, or either FRENCH 203, FRENCH 223, or FRENCH 234 with either LING 200 or LING 400. Offered: jointly with FREING 409.

FRENCH 411 Topics in the Middle Ages (5) VLPA Sixteenth-century literature with emphasis on poetry and the general artistic ambiance. Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 412 Topics in Sixteenth Century French Literature (5) VLPA An introduction to major French literary texts of the sixteenth century. Prerequisite: FRENCH 303; FRENCH 304.

FRENCH 413 Topics in Seventeenth Century (5) VLPA Seventeenth-century literature, with emphasis on the development of classicism. Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 414 French Literature of the Eighteenth Century: Enlightenment (5) VLPA Eighteenth-century literature, with emphasis on the development of the Enlightenment ideology. Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 415 French Literature of the Eighteenth Century: Post-Enlightenment (5) VLPA Eighteenthcentury literature, with emphasis on the "dark side of the Enlightenment" and nascent romanticism. Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 416 French Literature of the Nineteenth Century: Romanticism (5) VLPA Nineteenth-century literature, with emphasis on romanticism and the early manifestations of realism. Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 418 French Literature of the Early Twentieth Century (5) VLPA Twentieth-century literature, with emphasis on the period 1900-1939. Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 419 French Literature Since World War II (5) VLPA Twentieth-century literature, with emphasis on the period 1939 to the present. Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 420 Interdisciplinary Approaches to Literature (5) VLPA Interdisciplinary studies in French literature and culture, focusing on the complex interactions of literature and other disciplines, i.e. philosophy, psychoanalysis, anthropology, architecture. Prerequisite: FRENCH 303; FRENCH 304; FRENCH 306.

FRENCH 421 Psychoanalysis and Literature (5) VLPA Borch-Jacobsen Readings from Freud and French critical writers regarding the relationship between psychoanalysis and literature. Prerequisite: FRENCH 303; FRENCH 306. **FRENCH 422 Literature and the Other Arts (5) VLPA** Examines the relationship between text and image in a variety of art forms. Prerequisite: FRENCH 303.

FRENCH 424 Fiction: 1800-1850 (5) VLPA Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 425 Fiction: 1850-1900 (5) VLPA Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 427 Fiction: Twentieth Century (5) VLPA Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 431 Critical Approaches to French Poetry (5) VLPA Interdisciplinary approaches to French poetry focusing on the intersection of fine art, cultural movements, and the production of literature in the Second Empire and the Third Republic.

FRENCH 432 Critical Approaches to French Fiction (5) VLPA Addresses theory and practice of fiction within the context of a given century or movement. Content varies. Prerequisite: FRENCH 303.

FRENCH 435 Topics in Non-Fiction (5) VLPA Content varies. Prerequisite: FRENCH 303.

FRENCH 441 Quebécois Literature (5) VLPA Readings of novels, plays, and occasionally, poetry. Special attention paid to how Quebécois authors represent in their works the complex socio-political reality of their culture. Conducted in French. French majors required to read and write in French; all others may read and write in English. Prerequisite: FRENCH 303; FRENCH 306. Offered: jointly with SISCA 441.

FRENCH 444 Poetry: Romantic (5) VLPA Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 445 Women Writers and Feminist Theory (5) VLPA Focus on French women writers from different periods and places. Gender issues addressed in critical fashion, considering the different historical and ideological contexts in which each of the works were produced. Prerequisite: FRENCH 303.

FRENCH 446 Poetry: Twentieth Century (5) VLPA Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 450 Themes in French Literature and Culture (5) VLPA Interdisciplinary studies in French literature and culture, focusing on the construction and representation of gender roles in the French novel from the early eighteenth century. Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 451 History and Literature of the French Religious Wars (5) VLPA/I&S Major political, social, and religious movements and events of, and related to, the French religious wars of 1560 to the end of the century, along with the treatment of these in the prose, poetry, and drama of the period. For students receiving French credit, readings must be done in French. Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 454 Nonfiction of the Classic Period (5) **VLPA** Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 455 One Author in French Literature/ Culture (5, max. 15) VLPA In-depth focus on the works of one author in French literature or culture. Prerequisite: FRENCH 303.

FRENCH 457 One Decade in French Literature and Culture (5, max. 15) VLPA Content varies. Prerequisite: FRENCH 303. **FRENCH 461** Seventeenth-Century Drama (5) **VLPA** Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 463 Nineteenth-Century Drama (5) VLPA Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 465 Twentieth-Century Drama (5) VLPA Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 470 Cinema (5) VLPA Major films and figures of French cinema from the beginnings to the present. Prerequisite: FRENCH 303; FRENCH 304; FRENCH 306.

FRENCH 490 Honors Seminar (2-5, max. 10) VLPA Special studies in French literature. Required of candidates for honors and distinction in French.

FRENCH 496 Poetry and Song as Elements in French Civilization (5) VLPA Relationship of poetry and music as expressed in the chanson in several periods of French culture. Emphasis on twentiethcentury poet-composer-performers. Attention given to the medieval troubadours and to poet-musician collaboration in the Renaissance and later periods. Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

FRENCH 499 Special Topics (1-5, max. 10) Topics to meet special needs. Prerequisite: FRENCH 303; FRENCH 304; FRENCH 305; FRENCH 306.

Italian

ITAL 101, 102, 103 Elementary (5, 5, 5) Methods and objectives are primarily oral-aural. Language laboratory is required. 101 - Prerequisite: placement by IT TL exam if Italian is language of admission. 102 - Prerequisite: either ITAL 101 or placement by IT TL exam. 103 - Prerequisite: either ITAL 102 or placement by IT TL exam.

ITAL 108 Intensive Italian Grammar and Reading (5) Intensive two-quarter presentation of Italian grammar with emphasis on reading Italian texts. For persons who require solid reading knowledge of Italian or who plan to study in Italy.

ITAL 111 Accelerated First-Year Italian (10) Intensive version of 101 and 102. Designed for highly motivated students. Offered: A.

ITAL 113 Accelerated First-Year Italian (10) Intensive version of 102 and 103. Design for highly motivated students. Offered: W.

ITAL 134 Intensive First Year Italian (15) An intensive language course equivalent to 101, 102, 103, designed for highly motivated students. Not open for credit to students who have taken 102 and 103. Offered: S.

ITAL 199 Foreign Study—Elementary (4-16) Elementary instruction in approved foreign study program. Students who wish to satisfy foreign language proficiency requirement must see the departmental adviser and may be required to take additional courses through 103.

ITAL 201, 202, 203 Intermediate (5, 5, 5) VLPA Intensive speaking, reading, and writing. Functional review of grammar. 201 - Prerequisite: either ITAL 103, ITAL 113, ITAL 134, or placement by IT TL exam. 202 - Prerequisite: ITAL 201. 203 - Prerequisite: ITAL 202.

ITAL 208 Intensive Italian Grammar and Reading (5) VLPA Intensive two-quarter presentation of Italian grammar with emphasis on reading Italian texts. For persons who require solid reading knowledge of Italian or who plan to study in Italy. ITAL 234 Intensive Second-Year Italian (15) VLPA Intensive language course designed for highly motivated students. Equivalent to 201, 202, 203. Prerequisite: either ITAL 103, ITAL 134, or placement by IT TL exam. Offered: S.

ITAL 250 Rome (5) VLPA/I&S Rome as an historical, intellectual, and artistic world center. Literary documents, visual arts, architecture, film, and opera used to explore the changing paradigms of the Eternal City. In English. Offered: jointly with ART H 250.

ITAL 301, 302 Advanced Syntax and Composition (5, 5) VLPA 301 - Prerequisite: either ITAL 203 or ITAL 234. 302 - Prerequisite: ITAL 301.

ITAL 303 Italian Stylistics (5) VLPA Functional grammar review; creative written and oral composition and reading, with special attention to problems of style. Prerequisite: ITAL 302.

ITAL 327 Advanced Conversation (2, max. 8) VLPA Not open to students whose native language is Italian. Prerequisite: ITAL 203.

ITAL 390 Supervised Study (2-6, max. 20)

ITAL 395 Italian Cultural History (5) VLPA/I&S Explores Italian cultural history through a variety of literary and other textual traditions.

ITAL 399 Foreign Study: Advanced (4-16) VLPA Advanced instruction in approved foreign study program.

ITAL 400 The Development of the Italian Language (5) VLPA Historical survey of Italian phonology, morphology, and syntax. Evolution of the language is illustrated with study of pertinent documents from various periods. Prerequisite: either ITAL 303, LING 400, or ROLING 401. Offered: jointly with LING 419.

ITAL 401 Readings in Italian: Medieval (5) VLPA Exploration of medieval Italian cultural history through a broad variety of literary and other textual traditions.

ITAL 402 Readings in Italian: Early Modern (5) VLPA Exploration of early modern Italian cultural history through a variety of literary and other textual traditions.

ITAL 403 Readings in Italian: Modern (5) VLPA Exploration of modern Italian cultural history through a broad variety of literary and other textual traditions. Limited to undergraduate students.

ITAL 404, 405, 406 Survey of Italian Literature (5, 5, 5) VLPA 404, 405, 406 - Prerequisite: 203.

ITAL 413 Literature of the Renaissance: Quattrocento (5) VLPA The early Renaissance. Humanism; writings of Lorenzo de' Medici, Poliziano, Belcari, Alberti, Masuccio, Sannazzaro, Pulci, Boiardo.

ITAL 414 Literature of the Renaissance: Cinquecento (5) VLPA The high Renaissance. Bembo and the Petrarchans, Machiavelli, Guicciardini, Castiglione, Ariosto, Guarini, Tasso.

ITAL 423 Seventeenth-Century Italian Literature (5) VLPA New sciences and new poetics: Campanella, Sarpi, Della Valle, Marino, Tesauro, Bartoli, Galileo, Redi.

ITAL 424 Eighteenth-Century Italian Literature (5) VLPA Survey of eighteenth-century literature—the melodrama, drama and poetry: Metastasio, Goldoni, Alfieri, Parini, Monti, and Foscolo. Prerequisite: ITAL 303. **ITAL 431 Italian Theater (5) VLPA** The development of Italian theater from the Renaissance to the twentieth century. Prerequisite: ITAL 303.

ITAL 450 The Romantic Movement (5) VLPA Beginning with an examination of the pre-romantic works of Ugo Foscolo, focuses on the literary and critical writings of Alessandro Manzoni and Giacomo Leopardi. Discusses the Romantic movement in Italy within the context of European Romanticism. Reference made to later variations on Romantic themes. Prerequisite: ITAL 303.

ITAL 460 Verismo (5) VLPA The development of Verismo with extensive readings from its main exponents-Capuana, Verga, Serao, Deledda, Fucini, and d'Annunzio.

ITAL 465 Contemporary Italian Narrative (5) VLPA Critical reading of selected modern exponents of the short story and novel.

ITAL 470 Dante (5) VLPA Introduction to Dante's Commedia and minor works, conducted in Italian. Prerequisite: ITAL 303.

ITAL 475 Italian Fascism: Architecture and Power (5) **VLPA/I&S** Fascism in Italy as studied within the broader European context of nationalism, imperialism, and modernization, with particular emphasis on the arts—literature, film, architecture, and urbanism. Offered: jointly with ART H 495; A.

ITAL 490 Proseminar in Italian Literature (3-5) VLPA Intended to help the student achieve a mature critical mastery of Italian literature.

ITAL 499 Special Topics (1-5, max. 10) Topics to meet special needs.

Courses in English

These courses are recommended as appropriate supporting studies for students majoring in other departments. Courses in English translation are not usually applicable toward undergraduate or graduate major programs in French and Italian. Majors may take any of these courses for credit as one of their electives.

French

FRENCH 458 French Art and Literature: Period Studies (5) VLPA Comparative studies of theme and technique in art and literature to illustrate major concerns of a particular period as expressed in these two media. Recommended: background in French literature.

FRENCH 481 Twentieth-Century French Novel in English (5) VLPA

FRENCH 482 French Poetry From Baudelaire to the Present in English (5) VLPA Analysis in English of the major trends and movements in modern French poetry with representative works, from Baudelaire to the poets of the 1950s.

FRENCH 483 Trends in Twentieth-Century Theatre in English (5) VLPA Study of the evolution of the French theatre from the turn of the century to the present. Special emphasis is given the French theatrical scene since World War II.

FRENCH 484 Rabelais and Montaigne in English (5) **VLPA** Reading and discussion of selected passages from the works of Rabelais and the essays of Montaigne. Background information through informal lectures and outside reading on the two figures as illustrative of the Renaissance in France.

FRENCH 485 Racine and Molière in English (5) VLPA

FRENCH 486 Literature of the Enlightenment in English (5) VLPA

FRENCH 487 Nineteenth-Century Fiction in English (5) VLPA

FRENCH 488 Women in French Literature in English (5) VLPA Masterpieces of French literature are read in an attempt to understand French attitudes toward women. From the sixteenth century, with a concentration on the twentieth century.

Italian

ITAL 318 Italian Literature in English (5) VLPA

ITAL 319 The Italian Short Story in English (5) **VLPA** The short story from the Novellino and Bocaccio to modern masters of the form. The translations are studied both as examples of narrative technique and as reflections of particular moments in Italian cultural history.

ITAL 384 Renaissance Literature of Italy in English (3) VLPA

ITAL 466 Italian Society in Cinema and Literature in English (5) VLPA/I&S *Sbragia* Studies the evolution of Italian postwar society through the analysis of film and literature as well as critical, historical, and sociological readings.

ITAL 480 Dante's Comedy in English (5) VLPA Introduction to Dante's Comedy. Considers formal, structural, linguistic, literary, historical, cultural, philosophical, and theological issues raised by the text. Discusses the main currents of twentieth-century Dante criticism.

ITAL 481 Dante's Comedy in English (5) VLPA Second half of a two-quarter series. Close study of Dante's Purgatory and Paradiso and retrospective reading of Inferno. Explores Dante's concept of art, both human and divine, as it is developed in and defines the poem. Prerequisite: ITAL 480.

ITAL 482 The Decameron in English (5) VLPA An integral reading of the Decameron, with some consideration of its place in world literature and as an expression of the culture of its time.

Courses for Graduates Only

French

FRENCH 510 Methodology of French Language Teaching (3) Theoretical and practical foundation of teaching French. Major topics include modern theories of language and language acquisition which underlie modern methods of foreign language teaching, teaching techniques, testing, and classroom relations with emphasis on the multiple-approach direct method. Required for beginning French Teaching Assistants. Credit/no credit only.

FRENCH 515 French Literature of the High Middle Ages (5, max. 10) Old French literature, from the beginning to 1315. Prerequisite: permission of instructor.

FRENCH 516 Middle French Literature (5, max. 10) French literature from 1315 to 1500. Pre-requisite: permission of instructor.

FRENCH 520 Renaissance Prose: Rabelais (5)

FRENCH 521 Renaissance Prose: Montaigne (5)

FRENCH 523 Studies in Fiction: 1660-1800 (5, max. 10)

FRENCH 525 Studies in Fiction: 1850-1900 (5, max. 10)

FRENCH 526 Studies in Fiction: 1900-1950 (5, max. 10)

FRENCH 530 Studies in Renaissance Poetry (5, max. 10)

FRENCH 532 Studies in Nineteenth-Century Poetry (5, max. 10)

FRENCH 534 Studies in Twentieth-Century Poetry (5, max. 10) **FRENCH 541, 542 History of the French Language (5, 5)** Survey of the phonological, morphological, and syntactical development of the French language from its origins to the present.

FRENCH 555 French Nonfiction (5, max. 10)

FRENCH 561 Studies in Seventeenth-Century Drama (5, max. 10)

FRENCH 565 Studies in French Drama (5, max. 10) Studies in French drama, sixteenth to twentieth centuries.

FRENCH 570 Seminar in Cinema (5, max. 10) Prerequisite: permission of instructor.

FRENCH 575 Literary Criticism (5)

FRENCH 576 Critical Methodology (5) Basic scholarly tools of bibliography; historical review of literary doctrine; an introduction to critical methodology.

FRENCH 577 Modern Critical Methods (5) Modern critical methodology and theory.

FRENCH 590 Special Seminar and Conference (1-10, max. 30) Group seminars, or individual conferences, are scheduled under this number to meet special needs. Prerequisite: permission of the graduate program coordinator.

FRENCH 591 Literary Problems: Middle Ages (5, max. 10)

FRENCH 592 Literary Problems: Renaissance (5, max. 10)

FRENCH 593 Literary Problems: Seventeenth Century (5, max. 10)

FRENCH 594 Literary Problems: Eighteenth Century (5, max. 10)

FRENCH 595 Literary Problems: Nineteenth Century (5, max. 10)

FRENCH 596 Literary Problems: Twentieth Century (5, max. 10)

FRENCH 600 Independent Study or Research (*)

FRENCH 700 Master's Thesis (*) Credit/no credit only.

FRENCH 800 Doctoral Dissertation (*) Credit/no credit only.

Italian

ITAL 514 Dante (5, max. 10)

ITAL 531 Italian Theater (5) The development of Italian theater from the Renaissance to the twentieth century. Individual conferences with lecturing professor. Prerequisite: graduate students only.

ITAL 570 Seminar in Cinema (5) Studies in various areas of Italian cinema, concentrating on major directors, critics, and movements. Prerequisite: permission of instructor.

ITAL 590 Special Seminar and Conference (1-10, max. 30) Group seminars, or individual conferences, are scheduled under this number to meet special needs. Prerequisite: permission of instructor.

ITAL 592 Literary Problems: Renaissance (5, max. 10)

ITAL 593 Literary Problems: Early Modern (5, max. 10)

ITAL 594 Literary Problems: Eighteenth Century (5, max. 10)

ITAL 595 Literary Problems: Nineteenth Century (5, max. 10)

ITAL 596 Literary Problems: Twentieth Century (5, max. 10)

ITAL 600 Independent Study or Research (*)

Spanish and Portuguese Studies

C104 Padelford

Undergraduate Program

Adviser Elena M. Johns C104F Padelford, Box 354360 (206) 543-2075

Bachelor of Arts

Admission Requirements

Spanish:

1. Completion of SPAN 203, with a minimum cumulative GPA of 2.70 or higher for all Spanish course work completed and a minimum grade of 2.5 in all Spanish course work.

2. Completion of at least 10 credits of English composition with a minimum grade of 2.5 in each course.

3. Admission is competitive, based on the following minimum qualifications: (1) preparation for the major as indicated by a student's grades in courses required for application, (2) overall scholastic record, and (3) personal statement, in English or Spanish, of interest in and commitment to the major. Other evidence reflecting the student's interest may be appended. Completion of the above requirements does not guarantee admission.

4. Application deadline is the first Friday of autumn, winter, and spring quarters, for admission in the fifth week of the same quarter. Applicants denied admission may submit written petitions requesting reconsideration. Applications are available in C104 Padelford.

Suggested Course Work for the Major: Spanish, Latin American, and Chicano literature. Courses relating to history and culture. Courses in English literature and comparative literature.

Major Requirements

Spanish: Minimum 53 credits above SPAN 203, including 301, 302, 303, 321, 322, 323 (LING 200 may substitute for SPAN 323); three 300-level elective courses (maximum of two from film series); four 400level courses (one from 400 through 409). Other than 400 through 409, only one course whose instructional materials are primarily in English may apply toward the maior.

Minor

Minor Requirements: Spanish—Minimum 32 credits above the 203 level, to include SPAN 301, 302, 303 and five courses numbered 304 to 495 (minimum 17 credits), including at least 5 credits from 400 to 409.

Graduate Program

Graduate Program Coordinator C104 Padelford, Box 354360 (206) 543-2020

The Division of Spanish and Portuguese Studies offers programs of graduate study leading to the degrees of Master of Arts and Doctor of Philosophy. The Master of Arts degree normally requires two years of course work and successful completion of a comprehensive examination.

The doctorate normally requires one to two years of course work beyond the M.A., successful completion of a series of comprehensive examinations, and a dissertation.

Information on specific requirements for the various degree programs is available upon request from the office of the division's academic counselor.

Financial Aid

The department awards annually a number of teaching assistantships. The assistant normally participates in teaching three classes during the academic year. Each class is limited to approximately 25 students and meets five hours a week for the ten weeks of the quarter.

Faculty

Chair

Farris Furman Anderson

Professors

Anderson, Farris Furman * 1967; MA, 1962, Duke University; PhD, 1968, University of Wisconsin; nineteenthand twentieth-century Spanish literature and civilization, advanced Spanish grammar.

Steele, Cynthia 1986; PhD, 1980, University of California (San Diego); Latin American literature and cultural studies; Mexican literature, film, and photography.

Strozer, Judith R. * 1987, (Adjunct); PhD, 1976, University of California (Los Angeles); comparative Romance syntax, second language acquisition, foreign language teaching.

Associate Professors

Flores, Lauro H. * 1980; PhD, 1980, University of California (San Diego); Chicano literature, contemporary Latin American literature (narrative).

Geist, Anthony L. * 1987; PhD, 1978, University of California (Berkeley); twentieth-century Spanish literature: ideology and literary form, cultural studies, film.

O'Hara, Edgar * 1989; PhD, 1989, University of Texas (Austin); Spanish, Latin American poetry, writing poetry and essays.

Petersen, Suzanne Helen * 1973; PhD, 1976, University of Wisconsin; medieval Spanish literature, oral poetry, pan-Hispanic ballad, medieval Spanish literature.

Shipley, George A. * 1967; PhD, 1968, Harvard University; Spanish Golden Age.

Zagona, Karen T. * 1987, (Adjunct); PhD, 1982, University of Washington; syntactic theory and Spanish syntax.

Lecturers

Basdeo, Ganeshdath D. 1985; MA, 1976, University of Washington; second-year Spanish, Spanish linguistics.

Bensadon, Leon M. 1989; MA, 1991, University of Washington; French and Spanish pedagogy and curriculum development.

Borreguero, Paloma A. 1990; MA, 1992, University of Washington; Spanish language and culture, pedagogy and teaching methodology.

Fox, Joan H. 1984; MA, 1973, University of British Columbia (Canada); language pedagogy and translation.

Gillman, Maria 1990; MA, 1986, Oregon State University; third-year Spanish curriculum and pedagogy.

Raneda-Cuartero, Imnmaculada 1997; MA, 1994, University of Wisconsin; second- and third-year Spanish curriculum and pedagogy.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

Portuguese

PORT 101, 102, 103 Elementary (5, 5, 5) Methods and objectives are primarily oral-aural. Covers all major elements of Portuguese grammar. 102 - Prerequisite: PORT 101. 103 - Prerequisite: PORT 102.

PORT 105 Intensive Portuguese for Spanish Speakers (6) Covers the verbal system and major grammatical points. Does not satisfy foreign language requirement. Prerequisite: SPAN 203.

PORT 201, 202, 203 Intermediate (5, 5, 5) VLPA Modern texts, compositions, conversation, and a systematic review of grammar. 201 - Prerequisite: PORT 103. 202 - Prerequisite: PORT 201. 203 - Prerequisite: PORT 202.

PORT 301, 302 Grammar and Lexicon (3, 3) VLPA 301 - Prerequisite: PORT 203. 302 - Prerequisite: PORT 301.

PORT 310 Introduction to Lusophone Literature (3) VLPA Introduction to the studies of Lusophone literature and culture.

PORT 335 Twentieth-Cenutry Brazilian Fiction in English (5, max. 10) VLPA Penna Reading texts in connection with cultural and theoretical issues.

Romanian

RMN 401, 402, 403 Elementary Romanian (5, 5, 5) 401, 402: comprehensive introduction to spoken and literary Romanian. 403: designed to increase vocabulary and enhance knowledge of grammar through readings in modern Romanian. 402 - Prerequisite: RMN/ROMN 401. 403 - Prerequisite: RMN/ROMN 402. Offered: jointly with RMN/ROMN 401, 402, 403; A, W, Sp.

RMN 404, 405, 406 Advanced Romanian (5, 5, 5) VLPA Continuation of 401, 402, 403. Introduction to Romanian literature, history, and culture through selected readings. Reinforces and extends basic knowledge of grammar and vocabulary. 404 - Prerequisite: RMN/ROMN 403. 405 - Prerequisite: RMN/ROMN 404. 406 - Prerequisite: RMN/ROMN 405. Offered: jointly with RMN/ROMN 404, 405, 406; A, W, Sp.

Spanish

Credit: The sequence 121, 122, 123 is parallel to 101, 102, 103; students can receive credit for 101 and 121, but not for 102 and 122 or 103 and 123. 101 or 121 cannot be taken for credit after 102, 103, 122, or 123. 134 is a 15-credit intensive course exactly equivalent to 121, 122, 123; a maximum of 15 credits are allowed for 134 and any of 102, 103, 121, 122, and 123. A student who completes 134 cannot later take 101 for credit, but a student who earns credit for 101 can take 134 for 15 additional credits.

SPAN 101, 102, 103 Elementary (5) Methods and objectives are primarily oral-aural. Language laboratory is required. 101 - Prerequisite: placement by SP100A exam if Spanish is language of admission. 102 - Prerequisite: either SPAN 101 or placement by SP100A exam. 103 - Prerequisite: either SPAN 102 or placement by SP100A exam.

SPAN 110 Basic Spanish Review (5) Covers the equivalent of 101 and 102 to prepare for 103. May not be taken in addition to 101 or 102. Prerequisite: placement by SP100A exam. Offered: AWSp.

SPAN 121, 122, 123 Spanish Immersion (5, 5, 5) Covers the equivalent of elementary Spanish (SPAN 101, 102, 103) through an alternative "planned immersion" method with video as the central medium of presentation. 122 - Prerequisite: either SPAN 101 or SPAN 121. 123 - Prerequisite: either SPAN 102 or SPAN 122.

SPAN 134 Intensive First-Year Spanish (15) Equivalent of 121, 122, 123. Employs "planned immersion" method with video as the central medium of presentation. Not open for credit to students who have taken 121, 122, 123 or 102, 103. Offered: S.

SPAN 201, 202, 203 Intermediate (5, 5, 5) VLPA Intensive practice in speaking, reading, and writing. Review of Spanish grammar. Oral practice based on literary and cultural readings. 201 - Prerequisite: either SPAN 103, SPAN 104, SPAN 123, SPAN 134, or placement by SP100A exam. 202 - Prerequisite: SPAN 201. 203 - Prerequisite: SPAN 202.

SPAN 204 Intensive Spanish Review—Intermediate (5) VLPA Intensive review of grammar, reading composition. For highly motivated students with at least one year of college Spanish, or equivalent. Synthesis of 201, 202, 203, and preparation for thirdyear work in language and literature. Prerequisite: either SPAN 103, SPAN 104, SPAN 123, SPAN 134, or placement by SP100A exam.

SPAN 299 Foreign Study—Intermediate (4-16) VLPA Intermediate instruction in approved foreign study program. Evaluation by departmental adviser required to establish proficiency. Further study at 200-level subject to departmental evaluation.

SPAN 301, 302 Grammar and Lexicon (5, 5) VLPA 301 - Prerequisite: either SPAN 203 or SPAN 204. 302 - Prerequisite: SPAN 301.

SPAN 303 Introduction to Stylistics Through Composition (5) VLPA Prerequisite: SPAN 302.

SPAN 304 Survey of Spanish Literature: 1140-1498 (3) VLPA Masterpieces of Spanish literature from origins to 1498. Prerequisite: SPAN 301 which may be taken concurrently.

SPAN 305 Survey of Spanish Literature: 1498-1681 (3) VLPA Prerequisite: SPAN 301 which may be taken concurrently.

SPAN 306 Survey of Spanish Literature: 1681 to the Present (3) VLPA Prerequisite: SPAN 301 which may be taken concurrently.

SPAN 307 Introduction to Latin American Literature (3) VLPA Study of selected works of twentiethcentury Latin American literature and their sociohistorical context. Development of reading and writing skills. Prerequisite: SPAN 301 which may be taken concurrently.

SPAN 310 Readings in Hispanic Literatures and Cultures (5) VLPA Intensive reading to improve skills and increase vocabulary in preparation for 300and 400-level courses. Emphasis on developing reading comprehension through oral discussion and some writing. Prerequisite: SPAN 203.

SPAN 313 Business Communication in Spanish (5) **VLPA** This intermediate-level course offers student the opportunity develop their Spanish language skills (reading, writing, speaking, and listening) within the context of the Spanish-speaking business world. Business-specific culture emphasized. Credit may not be applied toward Spanish major. Prerequisite: SPAN 203.

SPAN 321 Introduction to Hispanic Literary Studies (3) VLPA Acquaints the third-year student with elementary techniques of literary analysis, as applied to examples of narrative, poetry and theater, within the context of the Spanish and Latin American literary traditions. Prerequisite: SPAN 301 which may be taken concurrently. SPAN 322 Introduction to Hispanic Cultural Studies (3) VLPA Introduces students to elite, mass, and folk cultures of Spain, Latin America, and Hispanic peoples of the United States. Readings vary according to the faculty member's expertise and interests. Prerequisite: SPAN 301 which may be taken concurrently.

SPAN 323 Introduction to Spanish Linguistics (3) VLPA Synchronic and diachronic linguistic analysis of Spanish, including Spanish phonetics and phonology, morphology, syntax, and evolution of the language. Prerequisite: SPAN 301 which may be taken concurrently.

SPAN 331 Themes in Mexican-American Studies (5) VLPA/I&S Flores Examination of significant historical and cultural themes of the Mexican-American experience. Recommended: speaking knowledge of Spanish.

SPAN 332 Chicano Film and Narrative (5) VLPA/ I&S *Flores* Historical overview of the evolution of Chicano culture through film. Critical examination of the portrayal and self-portrayal of Chicanos in film and selected works of narrative. Prerequisite: SPAN 301 which may be taken concurrently.

SPAN 333 Hispanic Film Studies (3) VLPA Introduction to major issues in the study of Hispanic cinema from various national contexts. The relationship of film to other types of narrative, and of film to society, specifically relations between class, gender, ethnicity, and artistic production, as well as between cinema and social change. Prerequisite: SPAN 301 which may be taken concurrently.

SPAN 334 Latin American Film (5) VLPA/I&S Cultural studies through fictional films, documentaries, and literature. Theories of representation and subjectivity; cinema and underdevelopment. Prerequisite: SPAN 301 which may be taken concurrently.

SPAN 337 Foreign Study Conversational Spanish (2-6) VLPA For participants in foreign study program. Prerequisite: SPAN 203.

SPAN 350 Drama (3) VLPA Generic study of Spanish drama. Prerequisite: SPAN 301 which may be taken concurrently.

SPAN 351 Poetry (3) VLPA Generic study of Spanish poetry. Prerequisite: SPAN 301 which may be taken concurrently.

SPAN 352 Fiction (3) VLPA Generic study of Spanish fiction. Prerequisite: SPAN 301 which may be taken concurrently.

SPAN 376 Introduction to Latin American Poetry (3) VLPA O'Hara Traces the oral, musical, and written traditions of Latin American poetry. Prerequisite: SPAN 301 which may be taken concurrently.

SPAN 390 Supervised Study (2-6, max. 20)

SPAN 393 Foreign Study (2-10, max. 20) VLPA Study in Spanish speaking country outside the standard Spanish curriculum of the University of Washington. Prerequisite: SPAN 301 which may be taken concurrently.

SPAN 400 The Syntactic Structure of Spanish (5) VLPA Zagona Scientific study of the syntax of Spanish: structure of phrases, transformationally derived structures, grammatical relations, principles of interpretation. Prerequisite: SPAN 302; SPAN 323. Offered: jointly with SPLING 400.

SPAN 401 The Morphological Structure of Spanish (5) VLPA Zagona Principles of word formation, including derivational and inflectional morphology. Relationship between inflectional morphology and other components of grammar. Prerequisite: SPAN 303; SPAN 323. Offered: jointly with SPLING 401. **SPAN 402** The Phonological Structure of Spanish (5) VLPA Strozer, Zagona Phonological component of the generative grammar of Spanish; representations of syllabic and segmental units, phonological rules, distinctive features and their articulatory correlates. Prerequisite: SPAN 303; SPAN 323. Offered: jointly with SPLING 402.

SPAN 403 The Evolution of the Spanish Language (5) VLPA Zagona Historical survey of Spanish phonology, morphology, and syntax, from Latin origins to the modern language. Prerequisite: SPAN 303; SPAN 323. Offered: jointly with SPLING 403.

SPAN 406 Advanced Spanish Grammar (5) VLPA Anderson Problems of Spanish grammar. Differences from English grammar. Techniques for the effective teaching of Spanish. Prerequisite: SPAN 303; SPAN 323. Offered: jointly with SPLING 406.

SPAN 408 Spanish Translation Workshop (5) VLPA Anderson Intensive practice in translation to and from Spanish. Texts include literary prose, poetry, expository writing, newspaper and magazine articles. Problems of standard versus colloquial language, transposition of cultural references, concept of fidelity in translation. Prerequisite: SPAN 303; SPAN 323; recommended: SPAN 406.

SPAN 409 Spanish Phonetics (5) VLPA Analysis of sounds: training in pronunciation, intonation, and close transcription of Spanish language in its modalities. Prerequisite: SPAN 303; SPAN 323. Offered: jointly with SPLING 409.

SPAN 415 Spanish Literature: Nineteenth Century (5) VLPA Anderson Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 416 Spanish Literature: 1900-1936 (5) VLPA Anderson, Geist Spanish literature of the twentieth century prior to the Civil War (1900-1936). Concentration on Generations of 1898 and 1927. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 417 Spanish Literature From 1940 to the Present (5) VLPA Anderson, Geist Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 420 Spanish Poetry: Origins Through the Fifteenth Century (5) VLPA Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 423 Spanish Poetry: The Golden Age, Sixteenth Through Seventeenth Centuries (5) VLPA Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 424, 425, 426 Hispanic Poetry (5, 5, 5) VLPA Geist Modern lyric poetry of the Hispanic world. The period studied extends from 1870 to 1936 and deals with thirteen major poets, from Becquer to Hernandez. 424, 425, 426 - Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 433 Golden Age Prose (5) VLPA Shipley Representative, and outstanding, prose works of sixteenth- and seventeenth-century Spain. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 436 Spanish Novel of the Nineteenth Century (5) VLPA Anderson Representative works of Galdos, Clarn, Pereda, Valera, and Blasco Ibanez. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 437 Spanish Novel: 1900-1936 (5) VLPA Spanish novel from the generation of 1898 to the beginning of the Civil War (1936). Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303. SPAN 438 Spanish Novel: 1939 to the Present (5) VLPA Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 439 Women Writers (5) VLPA/I&S Feminist analysis of selected texts by Chicana/Latina writers in the United States as well as by Spanish-American, Luso-Brazilian and/or Spanish women writers in their specific socio-historical contexts. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 440 Spanish Drama: 1150-1600 (5) VLPA From the beginning to Lope de Vega. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 441 Spanish Drama: 1600-1635 (5) VLPA Spanish theatre of the seventeenth century, with emphasis on Lope de Vega. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 445 The Modern Theatre in Spain, 1700-1900 (5) VLPA Anderson Literature and historical context of Spain's theatre in the eighteenth and nimeteenth centuries. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 446 The Modern Theatre in Spain, 1900-1936 (5) VLPA Anderson Major currents and literature of Spain's theatre in this century, up to the Spanish Civil War in 1936. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 447 Spanish Theatre Since the Civil War (5) VLPA Works of Spain's major dramatists of the postwar period. Special attention given to the social and political context of the theatre in Spain under the Franco regime.

SPAN 453 Cervantes and His Times (5) VLPA Shipley Study of Cervantes and his moment in Spanish history, with special attention to his cultural and artistic environment. Prerequisite: SPAN 303; SPAN 322; one additional 300-level course above SPAN 303.

SPAN 461 Cultural Background of Latin American Literature (5) VLPA Survey of ideas and art forms and their relationship to literature in four periods: pre-Columbian, colonial, early independence, and twentieth century. Prerequisite: SPAN 303; SPAN 322; one additional 300-level course above SPAN 303.

SPAN 462 Early Spanish Civilization (5) VLPA Development of Spanish society and art forms from early times to 1700. Prerequisite: SPAN 303; SPAN 322; one additional 300-level course above SPAN 303.

SPAN 463 Spanish Civilization Since 1700 (5) VLPA Spanish civilization and its major artistic products since 1700. Major moments in the development of Spanish society and intellectual life as reflected in music, painting, and especially literature. Prerequisite: SPAN 303; SPAN 322; one additional 300-level course above SPAN 303.

Cultural and artistic practices in home, film, literary (print, oral) performing and visual arts. Focuses on ways Chicana visual artists re-vision traditional iconography. Prerequisite: SPAN 303; SPAN 322; one additional 300-level course above SPAN 303.

SPAN 465 Contemporary Chicano Literature (5) VLPA Examination of one or more problems, themes, and/or figures in the developing body of Chicano literature. Prerequisite: SPAN 303; SPAN 322; one additional 300-level course above SPAN 303. SPAN 466 Chicano Literature: Fiction (5) VLPA Nineteenth- and early twentieth-century fiction, as well as contemporary works, are examined in attempts to trace the development of Chicano fiction in the proper historical trajectory. Prerequisite: either SPAN 303; SPAN 321 or 322; one additional 300-level course above SPAN 303.

SPAN 468 Latin American Women (5) VLPA/l&S Issues in women's culture from various Latin American countries, social classes, ethnic groups. Includes female creativity, relationship between female artists and the male tradition, women's exploitation of women, relationship of middle-class to popular feminism, connections between feminism and social change. Prerequisite: SPAN 303; SPAN 322; one additional 300-level course above SPAN 303. Offered: jointly with WOMEN 468.

SPAN 473 Latin American Fiction: Nineteenth Century (5, max. 15) VLPA Study of prose fiction in Latin America in the nineteenth century. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 474 Latin American Fiction: Twentieth Century (5) VLPA Study of prose fiction in Latin America in the twentieth century. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 475 Latin American Poetry: Colonial Through Nineteenth Century (5) VLPA Poetic movements of the seventeenth, eighteenth, and nineteenth centuries in Spanish American, Renaissance, baroque, neoclassicism, romanticism, and modernism. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 476 Contemporary Latin American Poetry (5) VLPA Evolution of Latin American poetry, from postmodernism and vanguardism to the most recent poetic expression: Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 477 Latin American Essay (5) VLPA Literary expression of ideas in Latin American countries, nineteenth and twentieth centuries. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 478 Modern Latin American Theatre (5) VLPA Study of the origin, development, and achievements of Latin American theatre with an overview of its history prior to the twentieth century. Prerequisite: SPAN 303; SPAN 321; one additional 300level course above SPAN 303.

SPAN 480 Spanish Medieval Literature (5) VLPA Principal literary works of the Spanish Middle Ages in the context of evolving intellectual, spiritual, and artistic climates of the period. Covers the evolution of narrative and lyric prose and verse in both their traditional and learned manifestations. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 481 Sixteenth- and Seventeenth-Century Spanish Literature (5) VLPA Spanish literature of the sixteenth and seventeenth centuries. Close study of key texts from all genres as well as their sociohistorical contexts. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 482 Eighteenth- Through Twentieth-Century Spanish Literature (5) VLPA Survey of Spanish literature since 1700, and its historical context. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 483 Latin American Literature: Origins to Independence (5) VLPA Principal literary movements of Latin America, fifteenth through nineteenth centuries: native American cultures, chronicles of the Spanish conquest and resistance, colonial Baroque, independence movement, romanticism and naturalism. Includes the definition of genres and of American cultural identity within a dependent context. Prerequisite: SPAN 303; SPAN 321; one additional 300level course above SPAN 303.

SPAN 484 Latin American Literature: Modernismo to the Present (5) VLPA Principal literary movements of Latin America, late nineteenth century to the present, with particular emphasis on poetry and narrative: modernismo, postmodernismo, the vanguard, nueva and novisima narrativa. Includes essays and autobiographical writings to help place the literary works in socio-historical perspective. Prerequisite: SPAN 303; SPAN 321; one additional 300level course above SPAN 303.

SPAN 485 Cultural Studies of Latin America (5) VLPA/I&S Interdisciplinary exploration of connections among culture, identity, and power, and among popular, mass, and elite cultures in one or more regions of Latin America. Topics vary. Prerequisite: SPAN 303; SPAN 322; one additional 300-level course above SPAN 303. Offered: jointly with SISLA 485.

SPAN 486 Photography and Cultural Studies in Latin America (5) VLPA/I&S Interdisciplinary exploration of the connections between visual anthropology (ethnography through photography and film), documentary and art photography, and colonial and post-colonial discourse in Latin America during the twentieth century. Offered jointly with SISLA 486.

SPAN 490 Honors Seminar (2-5, max. 10) VLPA Special studies in Spanish literature. Required of candidates for Honors and Distinction in Spanish.

SPAN 491 Individual Authors and Special Topics in Spanish Literature (5, max. 10) VLPA Focus on an individual Spanish author or a special problem in Spanish literature. Prerequisite: SPAN 303; SPAN 321; one additional 300-level course above SPAN 303.

SPAN 493 Foreign Study (2-10, max. 20) VLPA Advanced study in Spanish speaking country outside the standard Spanish curriculum of the University of Washington. Prerequisite: SPAN 303; one additional 300-level course above SPAN 303.

SPAN 495 Study in Spain (12) VLPA Study in Spain. Course content varies from year to year. Consult the Division of Spanish and Portuguese for availability and further requirements.

SPAN 499 Special Topics (1-5, max. 10) Topics to meet special needs.

Courses in English

These courses are recommended as appropriate supporting studies for students majoring in other departments. Courses in English translation are not usually applicable toward undergraduate or graduate major programs in the Department of Romance Languages and Literature. Majors may take any of these courses for credit as one of their electives.

SPAN 317 Spanish Masterworks in English Translation (5) VLPA Spanish literary masterpieces of the twelfth to sixteenth centuries, in English translation, with consideration of their background and influence.

SPAN 318 Spanish Masterworks in English Translation (5) VLPA Spanish literary masterpieces of the seventeenth to twentieth centuries, in English translation, with consideration of their background and influence.

SPAN 320 Contemporary Latin American Literature in English Translation (3) VLPA Flores, Steele Selected texts of contemporary Latin American literature, including examples of magical realism, the New Novel, and Central American poetry, in their sociohistorical context. SPAN 353 Cervantes' Don Quixote in English (5) VLPA Shipley Cervantes's Don Quixote de la Mancha: close study of this comic masterpiece, and the life, times, and works of its author. Consideration of the work's enduring influence and vitality.

Courses for Graduates Only

Romance Languages and Literature ROMAN 411 Critical Approaches to Romance Lit-

erature (5) VLPA Explores theoretical as well as fictional texts in a least two Romance languages.

ROMAN 593 Literary Problems: Early Modern Period (5)

Scandinavian Studies

318 Raitt

The Department of Scandinavian Studies is concerned with the study of languages, literature, history, politics, and cultures of Denmark, Finland, Iceland, Norway, Sweden, and the Baltic States of Estonia, Latvia, and Lithuania. Emphasis is placed both on contemporary literature and culture and on historical development. Although most courses designed for majors are taught in the original languages, a broad spectrum of courses designed primarily for nonmajors is offered in English.

Undergraduate Program

Adviser Lotta Gavel Adams 305P Raitt, Box 353420 (206) 543-0643

Bachelor of Arts

Admission: Students in good academic standing may declare this major at any time.

Suggested Introductory Course Work: First-year Danish, Norwegian, or Swedish.

Major Requirements

Danish, Norwegian, or Swedish: At least 65 credits, of which 35 are in upper-division courses. The 65 credits include 30 credits in first- and second-year language training, 15 credits in literature courses in the chosen language, one course in Scandinavian area studies, a course in the history of Scandinavian languages, a course in Scandinavian literature in translation, and a senior essay.

Scandinavian Area Studies: 65 credits, of which 35 are in upper-division courses. The 65 credits include 30 credits in the chosen Scandinavian or Baltic language (normally first and second year), a minimum of one course from each of four area-studies fields (Scandinavian folklore and popular culture, literature, history, society and politics), and a senior essay.

Minor

Minor Requirements

Danish, Norwegian, or Swedish: 35 credits to include 15 credits of second-year language; 10 credits in literature courses in the chosen language; 10 credits of additional course work (minimum 5 credits at the 300 level or above) from the fields of Scandinavian folklore and popular culture, literature, history, society and politics.

Finnish: 35 credits to include 20 credits of language training; SCAND 340 (or approved substitute); and 10 credits of additional course work at the 300 level or above from the fields of Scandinavian folklore and popular culture, literature, history, society and politics.

Scandinavian Area Studies: 35 credits to include 15 credits of second-year language courses in Danish, Finnish, Norwegian, or Swedish; 20 credits of additional course work (minimum 15 credits at the 300 level or above) in two of the following fields: Scandinavian folklore and popular culture, literature, history, society and politics.

Graduate Program

Graduate Program Coordinator 318 Raitt, Box 353420 (206) 543-0645 uwscand@u.washington.edu

The Department of Scandinavian Studies offers graduate programs of study leading to the Master of Arts and Doctor of Philosophy degrees. For the M.A. degree, the emphasis may be placed on Old Icelandic (Old Norse), Danish, Finnish, Norwegian, Swedish, or Scandinavian area studies. Ph.D. degree aspirants must complete one year's study of Old Icelandic and concentrate their studies primarily within one of four areas: Danish language and literature, Finnish language and literature, Norwegian language and literature, Swedish language and literature, or Scandinavian philology and linguistics.

For the graduate student, the programs in Scandinavian languages and literature open several areas of study: medieval, with extensive study of Old Scandinavian languages and literature, particularly Old Icelandic; modern, including the eighteenth century, romanticism, the modern breakthrough, and the twentieth century. Attention is paid to the history of the Scandinavian languages, prose fiction, drama, and poetry. Opportunities for supervised study and specialization also exist in such areas as Scandinavian history, politics, mythology, and folklore. There are also opportunities for comparative-literature study.

Master of Arts

For the M.A. degree, two options are available, each allowing the student to emphasize a target language while pursuing courses in Scandinavian languages, literature, or area studies.

1. An emphasis on Scandinavian languages and literature includes acquisition of a working knowledge of literary history, critical theory and text analysis, plus study of one secondary area.

2. An emphasis on Scandinavian area studies includes the study of Scandinavian folklore, mythology, history, politics, and society, with an emphasis in one of these areas.

Admission Requirement: Bachelor of Arts degree with major in Danish, Finnish, Norwegian, Swedish, or Scandinavian area studies, or equivalent background.

Graduation Requirements: Minimum of 40 credits in courses or seminars in Scandinavian and related subjects approved by the department, of which at least 20 credits must be in courses numbered 500 and above; reading knowledge of French or German (another non-Scandinavian language may be substituted with faculty approval); written and oral examination; option between thesis and non-thesis program. Candidates in Scandinavian languages and literature must satisfy the departmental requirements in Old Icelandic.

Doctor of Philosophy

For the Ph.D. degree, the student concentrates primarily on one of two areas: Scandinavian languages and literature, or Scandinavian philology and linguistics, with an emphasis on the student's chosen target language. Major attention is given to the history of the Scandinavian languages, literary history and theory, and genre study. Opportunities for graduate work also exist in such areas as Scandinavian history, politics, mythology, and folklore.

Admission Requirement: Master of Arts degree with major in Scandinavian languages and literature or equivalent background.

Graduation Requirements: 40 credits beyond the master's degree in courses or seminars in Scandinavian languages and literature and related subjects approved by the department, one year's study of Old Icelandic, a reading knowledge of French and German (other non-Scandinavian languages may be substituted with faculty approval), General Examination for admission to candidacy, 27 credits of SCAND 800 (dissertation) taken over at least three quarters, and a Final Examination on the dissertation.

Financial Aid

Teaching assistantships in Danish, Finnish, Norwegian, Swedish, and Scandinavian Area Studies are available, as well as occasional research assistantships. If funding allows, a Baltic-language teaching assistantship may be available.

Faculty

Chair

Terje I. Leiren

Professors

Nyberg, Folke E. * 1969, (Adjunct); MArch, 1960, Yale University; theory, urban design, professional practice.

DANISH 312 The Danish Novel (5) VLPA Selected Danish novels since the Modern Breakthrough. Works by Jacobsen, Bang, Jensen, Kirk, Blixen, Scherfig, Ditlevsen, and Rifbjerg. Recommended: DANISH 203.

DANISH 395 Foreign Study: Danish Area Studies (1-5, max. 10) I&S Courses in Danish history, society, and/or politics.

DANISH 399 Foreign Study: Topics in Danish Literature and Culture (1-5, max. 15) VLPA Topics in Danish literature, life, and civilization.

DANISH 490 Supervised Reading (* max. 10) Readings in a selected area of Danish language, literature, or related fields.

Estonian

ESTO 101, 102, 103 Elementary Estonian (5, 5, 5) Fundamentals of oral and written Estonian. **ESTO 490 Supervised Reading (1-10)** Readings in a selected area of Estonian language, culture, or society.

Finnish

FINN 101, 102, 103 Elementary Finnish (5, 5, 5) Fundamentals of oral and written Finnish.

FINN 150 Intensive First-Year Finnish (1-15) Fundamentals of oral and written Finnish. Intensive practice in speaking, reading, and writing. Interactive classroom, computer-assisted learning, and language and reading laboratories. Emphasis on contemporary Finnish culture and society.

FINN 199 Foreign Study: Elementary Finnish (1-15) Fundamentals of oral and written Finnish.

FINN 201, 202, 203 Second-Year Finnish (5, 5, 5) VLPA Intensive practice in speaking, reading, and writing. Functional review of grammar. Recommended: FINN 103.

FINN 299 Foreign Study: Intermediate Finnish (1-15) VLPA Intensive practice in speaking, reading, and writing. Functional review of grammar. Discussion of culture and current events in Finland.

FINN 310 Topics in Finnish Language and Culture (5, max. 15) VLPA Topics related to Finnish literature, life, and civilization. Recommended: FINN 203.

FINN 395 Foreign Study: Finnish Area Studies (1-5, max. 10) I&S Courses in Finnish history, society, and/or politics.

FINN 399 Foreign Study: Topics in Finnish Literature and Culture (1-5, max. 15) VLPA Topics in Finnish literature, life, and civilization.

FINN 490 Supervised Reading (1-5, max. 10) Readings in a selected area of Finnish language, culture, or society.

Latvian

LATV 101, 102, 103 Elementary Latvian (5, 5, 5) Fundamentals of oral and written Latvian.

LATV 490 Supervised Reading (1-10) Readings in a selected area of Latvian language, culture, or society.

Lithuanian

LITH 101, 102, 103 Elementary Lithuanian (5, 5, 5) Fundamentals of oral and written Lithuanian.

LITH 490 Supervised Reading (1-10) Readings in a selected area of Lithuanian language, culture, or society.

Norwegian

NORW 101, 102, 103 Elementary Norwegian (5, 5, 5) Fundamentals of oral and written Norwegian.

NORW 150 Intensive First-Year Norwegian (15) Fundamentals of oral and written Norwegian. Intensive practice in speaking, reading, and writing. Interactive classroom, computer-assisted learning, language and reading laboratories. Emphasis on contemporary Norwegian culture and society.

NORW 199 Foreign Study: Elementary Norwegian (1-15) Fundamentals of oral and written Norwegian.

NORW 201, 202, 203 Second-Year Norwegian (5, 5, 5) VLPA Intensive practice in speaking, reading, and writing. Functional review of grammar. Recommended: NORW 103.

NORW 299 Foreign Study: Intermediate Norwegian (1-15) VLPA Intensive practice in speaking, reading, and writing. Functional review of grammar. Discussion of culture and current events in Norway.

NORW 310 The Norwegian Short Story (5) VLPA Generic study of the Norwegian short story. Recommended: NORW 203. NORW 311 Drama After Ibsen (5) VLPA Recommended: NORW 203.

NORW 312 Topics in Norwegian Literature and Culture (5, max. 15) VLPA Topics related to Norwegian literature, life, and civilization. Recommended: NORW 203.

NORW 321 The Plays of Henrik Ibsen (5) VLPA Study of selected plays of Ibsen. Recommended: NORW 203.

NORW 395 Foreign Study: Norwegian Area Studies (1-5, max. 10) I&S Courses in Norwegian history, society, and/or politics.

NORW 399 Foreign Study: Topics in Norwegian Literature and Culture VLPA (1-5, max. 15) Topics in Norwegian literature, life, and civilization.

NORW 490 Supervised Reading (* max. 10) Readings in a selected area of Norwegian language, literature, or related fields.

Swedish

SWED 101, 102, 103 Elementary Swedish (5, 5, 5) Fundamentals of oral and written Swedish.

SWED 150 Intensive First-Year Swedish (15) Fundamentals of oral and written Swedish. Intensive practice in speaking, reading, and writing. Interactive classroom, computer-assisted learning, language and reading laboratories. Emphasis on contemporary Swedish culture and society.

SWED 199 Foreign Study: Elementary Swedish (1-15) Fundamentals of oral and written Swedish.

SWED 201, 202, 203 Second-year Swedish (5, 5, 5) VLPA Intensive practice in speaking, reading, and writing. Functional review of grammar. Recommended: SWED 103.

SWED 299 Foreign Study: Intermediate Swedish (1-15) VLPA Intensive practice in speaking, reading, and writing. Functional review of grammar. Discussion of culture and current events in Sweden.

SWED 300 Swedish Women Writers (5) VLPA Readings from works by Swedish women writers. Recommended: SWED 203.

SWED 301 Topics in Swedish Literature and Culture (5, max. 15) VLPA Topics in Swedish literature, life, and civilization. Recommended: SWED 203.

SWED 302 The Swedish Novel (5) VLPA Selected works by novelists of the nineteenth and twentieth centuries. Recommended: SWED 203.

SWED 352 Strindberg and His Works (5) VLPA Representative short stories, dramas, autobiographical works, poems, and one novel. Recommended: SWED 203.

SWED 395 Foreign Study: Swedish Area Studies (1-5, max. 10) I&S Courses in Swedish history, society, and/or politics.

SWED 399 Foreign Study: Topics in Swedish Literature and Culture (1-5, max. 15) VLPA Topics in Swedish literature, life, and civilization.

SWED 490 Supervised Reading (* max. 12) Readings in a selected area of Swedish language, literature, or related fields.

Scandinavian

Courses in English

SCAND 100 Introduction to Scandinavian Culture (5) VLPA/I&S The Scandinavian experience from the Viking Age to the present day; the background for contemporary Scandinavian democracy, with major emphasis on the cultural, political, and religious development of the Scandinavian countries. **SCAND 200** Contemporary Scandinavian Society (5) I&S Examines the distinctive policies, institutions, and social norms of contemporary Scandinavian societies. Topics include: Nordic geography, the development of a "middle way" between capitalism and socialism, universal social policies, Scandinavia in the international system, and contemporary challenges to Scandinavian societies. Recommended: SCAND 100.

SCAND 230 Introduction to Folklore Studies (5) VLPA/I&S Comprehensive overview of the field of folkloristics, focusing on verbal genres, customs, belief, and material culture. Particular attention to the issues of community, identity, and ethnicity. Offered: jointly with C LIT 230.

SCAND 232 Hans Christian Andersen and the Fairy Tale Tradition (5) VLPA Influence of Hans Christian Andersen and the fairy tale on modern Scandinavian tales and stories. Investigates the significance of the fairy tale in modern world, with attentions to writers such as Isak Dinesen, Knut Hamsun, Villy Sørensen, William Heinesen.

SCAND 251 Holberg and His Comedies in English (2) VLPA Holberg and his major dramas, with attention to the comic tradition in the Scandinavian theatre.

SCAND 270 Sagas of the Vikings (5) VLPA Icelandic sagas and poetry about Vikings in the context of thirteenth-century society.

SCAND 280 Ibsen and His Major Plays in English (5) VLPA Reading and discussion of Ibsen's major plays.

SCAND 330 Scandinavian Mythology (5) VLPA Integrative study of religious life in the pre-Christian North. Emphasis on source materials, including the *Prose Edda* and *Poetic Edda*. Discussion of historical, archeological, and folkloric evidence.

SCAND 331 Folk Narrative (5) VLPA Survey of various genres of folk narratives studied in performance contexts to reveal their socio-cultural functions in a variety of milieux. Theory and history of folk narrative study, taxonomy, genre classification, and interpretative approaches. Recommended: SCAND 230 or C LIT 230. Offered: jointly with C LIT 331.

SCAND 332 Folk Belief and World View (5) VLPA Study of folk belief and world view expressed in memorats, legends, magic formulas, and other examples of oral tradition. Analysis of forms and origins of belief genres, their esthetic and social functions, and the role of oral tradition as a tool of social control and change. Offered: jointly with C LIT 332.

SCAND 333 Folklife and Material Culture (5) VLPA Material culture in traditional and contemporary Scandinavia. Comprehensive examination of nonverbal genres (including vernacular architecture, settlement, textile foodways) with an emphasis on broad theoretical issues such as community, identity, ethnicity. Recommended: SCAND 230 or C LIT 230. Offered: jointly with C LIT 333.

SCAND 334 Immigrant and Ethnic Folklore (5) VLPA/I&S Survey of verbal, customary, and material folk traditions in ethnic context. Theories of ethnic folklore research applied to the traditions of American communities of Scandinavian, Baltic, or other European ancestry. Recommended: SCAND 230 or C LIT 230. Offered: jointly with C LIT 334.

SCAND 335 Scandinavian Childrens Literature (3) VLPA Scandinavian children's literature from the authored fairytale to the stories of such writers as Hans Christian Andersen, Elsa Beskow, Astrid Lindgren, Maria Gripe, and Tove Jansson.

SCAND 340 Finno-Ugric Epic and Nationalism (5) VLPA An interdisciplinary approach to the Finnish national epic Kalevala, Estonian Kalevipoeg, and Saami Peivebarnen suongah jehtanasan maajisn. Discussion of traditional worldview, cultural revitalization, and emergent nationalism in nineteenth- and twentieth-century Finland, Estonia, and Saamiland.

SCAND 344 The Baltic States and Scandinavia (5) I&S Survey of the cultures and history of Estonia, Latvia, and Lithuania from the Viking Age to the present, with particular attention to Baltic-Scandinavian contacts.

SCAND 345 Baltic Cultures (5) VLPA/I&S Cultures and peoples of Estonia, Latvia, and Lithuania. Baltic literature, music, art, and film in social and historical context. Traditional contacts with Scandinavia and Central and East Europe. Offered: jointly with SISRE 345.

SCAND 360 Scandinavian Cinema (3/5) VLPA Major Scandinavian films and film directors from the 1920s to the present.

SCAND 367 Sexuality in Scandinavia: Myth and Reality (5) VLPA/I&S Examines selected Scandinavian literary and socio-political texts, films, and art to manifest the reality behind the myths of sexual freedom in Scandinavia.

SCAND 370 The Vikings (5) VLPA/I&S Vikings at home in Scandinavia and abroad, with particular emphasis on their activities as revealed in archaeological finds and in historical and literary sources. Offered: jointly with HSTAM 370.

SCAND 380 History of Scandinavia to 1720 (5) I&S Scandinavian history from the Viking Age to 1720, with an emphasis on the political, social, and economic development of Denmark, Norway, Sweden, Finland, and Iceland from the Middle Ages to the Enlightenment. Offered: jointly with HSTEU 380.

SCAND 381 History of Scandinavia since 1720 (5) I&S Scandinavian history from the Enlightenment to the Welfare State with emphasis on the political, social, and economic development of the modern Scandinavian nations of Denmark, Norway, Sweden, Finland, and Iceland. Offered: jointly with HSTEU 381.

SCAND 383 Scandinavian Immigration in History and Literature (3) VLPA History and literature of Scandinavian emigration to North America, including immigrant life and culture, community structures and traditions, and the literature about, and by, Scandinavian emigrants.

SCAND 399 Foreign Study in Scandinavia (1-5, max. 20) Pan-Scandinavian coursework in Scandinavia, including courses in English.

SCAND 427 Scandinavian Women Writers in English Translation (5) VLPA Selected works by major Scandinavian women writers from mid-nineteenthcentury bourgeois realism to the present with focus on feminist issues in literary criticism. Offered: jointly with WOMEN 429.

SCAND 430 Readings in Folklore (5) VLPA Exploration of theoretical and methodological issues in folklore studies through independent reading of journal articles published during the last five years. Recommended: SCAND 230 or C LIT 230. Offered: jointly with C LIT 430.

SCAND 431 The Northern European Ballad (5) VLPA Integrative study of the Northern European Ballad, with an emphasis on texts, performance, context, history, theory, genre classification, and interpretive approaches. Offered: jointly with C LIT 431.

SCAND 437 Politics in Scandinavia (5) I&S Twentieth-century politics in Scandinavia. How Scandinavian countries have been governed. Costs and consequences of their governmental style and its uncertain future. Optimal size of polities, problems of mature welfare states, process of leadership and representation in multiparty systems, decline of political parties. Offered: jointly with POL S 437.

SCAND 450 Scandinavian Literary History (3) VLPA Survey of Scandinavian literary history. Recommended: DANISH 203, FINN 203, NORW 203, or SWED 203.

SCAND 460 History of the Scandinavian Languages (5) VLPA Development of languages from common Scandinavian to contemporary Danish, Norwegian, Swedish, Faroese, and Icelandic. Recommended: DANISH 203, FINN 203, NORW 203, or SWED 203.

SCAND 462 Isak Dinesen and Karen Blixen (5) VLPA The fiction of Isak Dinesen (pseudonym for Karen Blixen) re-evaluated in light of current issues in literary criticism, particularly feminist criticism. Close readings of selected tales, essays, and criticism. Offered: jointly with WOMEN 462.

SCAND 470 Senior Seminar in Folklore (5) VLPA Investigates ethnic and several American folk traditions in the Pacific Northwest through extensive fieldwork. Recommended: SCAND 230 or C LIT 230. Offered: jointly with C LIT 470.

SCAND 484 The Films of Ingmar Bergman (5) VLPA Major films of Ingmar Bergman.

SCAND 490 Special Topics (1-5, max. 15) Special topics in Scandinavian art, literature, culture, and history. Course offerings based on instructor's specialty and student demand.

SCAND 495 Foreign Study: Research Project (1-5, max. 10) Research on approved topic.

SCAND 498 Senior Essay (5) VLPA Undergraduate research and the writing of a senior essay in Scandinavian area studies.

SCAND 499 Independent Study or Research (1-5, max. 10) Independent study or research in Scandinavian area studies. May be done in a Scandinavian language or in English.

Courses for Graduates Only

SCAND 500 Introductory Readings in Old Icelandic (5) Systematic study of the grammatical structure of Old Icelandic and the reading of several short prose works.

SCAND 501 Old Icelandic Language and Literature (5) Reading of a major work in Old Icelandic literature as a vehicle for discussions about literary history and genre, narrative, and rhetorical strategies. **SCAND 503** Methods of Scandinavian Studies (5) Introduction to Scandinavian studies on the graduate level with emphasis on Scandinavian literature, folklore, history, and politics.

SCAND 504 Contemporary Literary Theory (5) Contemporary literary theory and its application to Scandinavian texts. Prerequisite: graduate student standing or permission of instructor.

SCAND 505 Topics in Scandinavian Drama and Film (5, max. 15) Seminar on a selected topic in Scandinavian drama or film, such as an author (Holberg, Ibsen, Strindberg, Bergman), a period, a genre, or a movement.

SCAND 508 Topics in Scandinavian Prose (5, max. 15) Seminar on various topics in Scandinavian prose, including shorter prose texts, as well as a selection of the significant novels of the nineteenth and twentieth centuries.

SCAND 513 Scandinavian Linguistics (3) Selected topics in Scandinavian linguistics.

SCAND 515 Pre-Nineteenth-Century Scandinavian Literature (5) Seminar on Scandinavian literature of the sixteenth, seventeenth, and eighteenth centuries.

SCAND 518 Foreign Language Teaching Methodology (2) Current foreign language teaching methods and approaches. Learning and teaching strategies and techniques for the four skills (reading, writing, speaking, listening) including cultural notions. Current and future trends in pedagogy and technology. Offered: jointly with ASIAN 518/GERMAN 518/ NEAR E 518/SCAND 518/SLAV 518.

SCAND 519 Modern Scandinavian Politics (5) Analyzes the political, economic, and historical development of Sweden, Norway, Denmark, Iceland, and Finland from World War II to the present. Readings focus on domestic and foreign policies that distinguish these countries from other advanced industrial societies. Offered: jointly with POL S 519.

SCAND 520 Topics in Scandinavian Poetry (5, max. 15) Seminar on selected periods of Scandinavian poetry: romanticism, symbolism, modernism, and contemporary poetry. Poetry examined in relation to the literary canon of each country and to Scandinavian literature as a whole. International influences also discussed.

SCAND 525 Topics in Scandinavian History (5, max. 15) Seminar on selected topics in Scandinavian history.

SCAND 530 Old Norse Literature (3) Studies in the poetry and prose tradition of medieval Iceland and Norway.

SCAND 533 Interdisciplinary Approaches to Community in Scandinavia (5) Humanistic examination of community creation, maintenance, and change in the Nordic region. Examples drawn from folklore, literature, activism, popular culture, history. Focus on issues of gender, belief, and art in relation to community. Course work includes both individual and collaborative assignments.

SCAND 590 Special Topics in Scandinavian Literature (1-5, max. 15)

SCAND 595 Teaching Assistant Workshop (1) Focuses on topics in language pedagogy. Required for teaching assistants in Scandinavian languages. Required for all teaching assistants. Credit/no credit only.

SCAND 600 Independent Study or Research (*) Prerequisite: permission of instructor.

SCAND 700 Master's Thesis (*)

SCAND 800 Doctoral Dissertation (*)

Slavic Languages and Literatures

M253 Smith

The Department of Slavic Languages and Literatures offers instruction in the principal East European languages and literatures and in Slavic linguistics, working closely with the School of International Studies. Languages may include Bulgarian, Czech, Polish, Romanian, Russian, Croatian/Serbian, and Ukrainian.

Undergraduate Program

Adviser David Miles M253A Smith, Box 353580 (206) 543-6848 slavicll@u.washington.edu

The Department of Slavic Languages and Literatures offers undergraduate courses in Russian and other Slavic and East European languages, cultures, and literatures. The courses are designed both for majors planning careers in teaching, translation, government service, communications, and international business, and for all students wishing to acquire a knowledge of East European regions of the world and their languages and cultures. The department sponsors the Russian House, where students are provided an opportunity to enhance their knowledge of Russian in a Russian-speaking environment.

Bachelor of Arts

Admission: Students in good academic standing may declare this major at any time.

Suggested Introductory Course Work: First- and second-year Russian. Courses that develop writing skills.

Major Requirements

Russian Language and Literature Concentration: RUSS 301, 302, 303, or the equivalent; RUSS 401, 402, 403, or the equivalent; RUSS 321, 322, 323; 15 credits from the following: RUSS 324, 351, 352, 420, 421, 422, 430, 451, 461, 490, SLAV 351, 420, 423, 425, 490.

Russian Language and History Concentration: RUSS 301, 302, 303, or the equivalent; RUSS 401, 402, 403, or the equivalent; RUSS 321, 322, 323; HSTAM 443, HSTEU 444, 445.

East European Languages and Culture Concentration: Two years of a principal East European language, or the equivalent; SLAV 351; 20 credits of literature, culture, linguistics, and history, as appropriate.

Minor

Minor Requirements

Russian Language: 25 credits to include RUSS 301, 302, 303 and 10 credits from RUSS 351, 352, 401, 402, 403, 451, SLAV 351, 425.

Russian Literature/Slavic Literatures: 25 credits to include RUSS 321, 322, 323 and 10 credits from RUSS 420, 421, 422, 430, 461, 490 (Russian-literature option), or 10 credits from CR SB 420, CZECH 420, POLSH 420, SLAV 420, 423, 490 (Slavic-literatures option).

Slavic Languages: 25 credits to include language courses in a Slavic language other than Russian numbered 404, 405, 406; SLAV 351; and 5 credits from CR SB 420, CZECH 420, POLSH 420, SLAV 420, 423, 425, 490.

Graduate Program

Graduate Program Coordinator M264 Smith, Box 353580 (206) 543-6848

The Department of Slavic Languages and Literatures offers a complete program of courses and seminars leading to the Master of Arts and Doctor of Philosophy degrees in Russian and East European Languages, Literatures, and Cultures. Languages taught in the department include Czech, Old Church Slavonic, Polish, Russian, and Croatian/Serbian.

The graduate program is organized to permit completion of the master's degree in four to six quarters and the doctoral degree in three additional years. The duration of each program, however, will depend on the extent of the student's preparation upon entrance into the program.

Research Facilities

The Suzzallo Library holdings include some 200,000 titles in the languages of Eastern Europe. While the majority of these titles are in Russian, the collection is well provided with resources in Bulgarian, Czech, Hungarian, Polish, Romanian, and Croatian/Serbian languages and literatures.

Admission Qualifications

For the Master of Arts Program: Bachelor of Arts degree with major in Russian or Eastern European languages and literatures, or equivalent background.

For the Doctor of Philosophy Program: Master of Arts degree with major in Slavic Languages, Literatures, and Cultures.

Assistantship Opportunities

The department regularly offers a number of teaching assistantships. In conjunction with the Henry M. Jackson School of International Studies, students in the department are eligible for several other types of fellowships.

Faculty

Chair

Karl D. Kramer

Professors

Augerot, James E. * 1960; MA, 1959, New Mexico Highlands University; PhD, 1968, University of Washington; Slavic linguistics, Romanian, Bulgarian.

West, James D. * 1972; PhD, 1970, Cambridge University (UK); modern Russian literature, art and philosophy.

Assistant Professors

Crnkovic, Gordana * 1993; MA, 1991, PhD, 1993, Stanford University; East European literature, film and cultural studies, former Yugoslavia, theory, American literature.

Dziwirek, Katarzyna A. * 1993; MA, 1984, University of Illinois; MA, 1985, University of Lodz (Poland); PhD, 1991, University of California (San Diego); linguistics, syntax and typology.

Senior Lecturer

Polack, Zoya M. 1973; MA, 1975, University of Washington; Russian and Ukrainian languages.

Lecturer

Boyle, Eloise M. 1995; MA, 1983, PhD, 1988, Ohio State University; twentieth-century Russian literature, pedagogy, teaching methodology.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

Language Courses

Bulgarian

BULGR 401, 402, 403 Elementary Bulgarian (5, 5, 5) 401, 402: Introduction to Bulgarian phonology and grammar in terms of the modern spoken language. Writing conventions of literary Bulgarian. 403: reading of modern texts to increase command of grammar and vocabulary. 402 - Prerequisite: BULGR 401. 403 - Prerequisite: BULGR 402. Offered: A,W,Sp.

BULGR 404, 405, 406 Advanced Bulgarian (5, 5, 5) VLPA Continuation of 401, 402, 403. Selected readings in Bulgarian literature, history, and culture. Reinforces and extends basic knowledge of Bulgarian grammar and vocabulary. 404 - Prerequisite: BULGR 403. 405 - Prerequisite: BULGR 404. 406 - Prerequisite: BULGR 405. Offered: A,W,Sp.

Croatian/Serbian

CR SB 401, 402, 403 Elementary Croatian/Serbian (5, 5, 5) Comprehensive introduction to spoken and written literary Croatian and Serbian. 402 - Prerequisite: CR SB 401. 403 - Prerequisite: CR SB 402. Offered: A,W,Sp.

CR SB 404, 405, 406 Advanced Croatian/Serbian (5, 5, 5) VLPA Continuation of 401, 402, 403; reinforces basic grasp of language and enlarges both vocabulary and command of grammatical patterns through the reading of contemporary short stories both Croatian and Serbian. 404 - Prerequisite: CR SB 403. 405 - Prerequisite: CR SB 404. 406 - Prerequisite: CR SB 405. Offered: A,W,Sp.

Czech

CZECH 401, 402, 403 Elementary Czech (5, 5, 5) 401, 402: introduction to spoken and written Czech. 403: modern Czech prose, leading to a command of the language as a research tool and providing an adequate basis for further study. 402 - Prerequisite: CZECH 401. 403 - Prerequisite: CZECH 402. Offered: A,W,Sp.

CZECH 404, 405, 406 Advanced Czech (5, 5, 5) VLPA Continuation of 401, 402, 403. Selected readings from the main works of Czech authors of the nineteenth and twentieth centuries. Reinforces and extends basic knowledge of Czech grammar and vocabulary. 404 - Prerequisite: 403. 405 - Prerequisite: 404. 406 - Prerequisite: 405. Offered: A,W,Sp.

Polish

POLSH 401, 402, 403 Elementary Polish (5, 5, 5) 401, 402: Principal morphological and syntactic features of the Polish language through the medium of a basic vocabulary. 403: designed to enlarge general vocabulary by the reading of short texts selected from Polish authors of the nineteenth and twentieth centuries. 402 - Prerequisite: POLSH 401. 403 - Prerequisite: POLSH 402. Offered: A,W,Sp.

POLSH 404, 405, 406 Advanced Polish (5, 5, 5) VLPA Continuation of 401, 402, 403. Selected readings of the main works from nineteenth and twentieth centuries. Reinforces basic knowledge of vocabulary, grammatical patterns, and conversation. 404 -Prerequisite: POLSH 403. 405 - Prerequisite: POLSH 404. 406 - Prerequisite: POLSH 405. Offered: A,W,Sp.

Romanian

ROMN 401, 402, 403 Elementary Romanian (5, 5, 5) 401, 402: comprehensive introduction to spoken and literary Romanian. 403: designed to increase vocabulary and enhance knowledge of grammar through readings in modern Romanian. 402 - Prerequisite: RMN/ROMN 401. 403 - Prerequisite: RMN/ROMN 402. Offered: jointly with RMN 401, 402, 403; A, W, Sp.

ROMN 404, 405, 406 Advanced Romanian (5, 5, 5) VLPA Continuation of 401, 402, 403. Introduction to Romanian literature, history, and culture through selected readings. Reinforces and extends basic knowledge of grammar and vocabulary. 404 - Prerequisite: RMN/ROMN 403. 405 - Prerequisite: RMN/ ROMN 404. 406 - Prerequisite: RMN/ROMN 405. Offered: jointly with RMN 404, 495, 406; A, W, Sp.

Russian

Undergraduate Russian language sequences: (A) RUSS 101 (5), 102 (5), 103 (5), 201 (5), 202 (5), 203 (5), 301 (5), 302 (5), 303 (5), 401 (5), 402 (5), 403 (5); (B) 150 (15), 250 (15), 350 (15), 450 (15).

Credit: Credit is not allowed for overlapping courses in two sequences (e.g., a student may receive a maximum of 15 credits for 101, 102, 103, and 150). Credit is allowed for courses in different sequences, though, if the courses are taken in progressively more advanced order (e.g., 150 followed by 201).

Placement Policy: While students may enroll for whatever language level seems appropriate, final placement in a language course is determined by their score on a diagnostic test administered at the beginning of the quarter. The Russian program reserves the right to place students in a higher or lower course, according to the test results.

RUSS 101, 102, 103 First-Year Russian (5, 5, 5) Introduction to Russian. Emphasis on oral communication with limited vocabulary. Short readings and writing exercises. Basic grammar. Conducted mostly in Russian. See credit note above. 102 - Prerequisite: RUSS 101. 103 - Prerequisite: RUSS 102. Offered: A,W,Sp.

RUSS 150 Intensive First-Year Russian (15) Covers material of 101, 102, 103 in one quarter. Meets three to four hours daily. For continuation, see 250 or 201, 202, 203. See credit note above. Offered: S.

RUSS 201, 202, 203 Second-Year Russian (5, 5, 5) VLPA Comprehensive review of Russian grammar with continuing oral practice and elementary composition. Conducted mostly in Russian. See credit note above. 201 - Prerequisite: either RUSS 103 or RUSS 150. 202 - Prerequisite: RUSS 201. 203 - Prerequisite: RUSS 202. Offered: A,W,Sp.

RUSS 250 Intensive Second-Year Russian (15) VLPA Covers material of 201, 202, 203 in one quarter. Meets three to four hours daily. See credit note above. Prerequisite: either RUSS 103 or RUSS 150. Offered: S. RUSS 301, 302, 303 Intermediate Russian (5, 5, 5) VLPA Extensive practice in spoken and written Russian based on a variety of prose readings. Intensive review and supplementation of strategic grammatical concepts. See credit note above. 301 - Prerequisite: either RUSS 203 or RUSS 250. 302 - Prerequisite: RUSS 301. 303 - Prerequisite: RUSS 302. Offered: A,W,Sp.

RUSS 304 Reading and Translation (1, max. 3) VLPA Translation techniques with emphasis on development of vocabulary and reading skills. Primarily for Russian regional studies majors. Credit/no credit only. Prerequisite: either RUSS 203 or RUSS 250. Offered: AWSp.

RUSS 313 Business Russian (5) VLPA Emphasizes the language and practice of business in Russia today. Prerequisite: either RUSS 203 or RUSS 250.

RUSS 350 Intensive Third-Year Russian (15) VLPA Covers material of 301, 302, 303 in one quarter. Meets three hours daily. See credit note above. Prerequisite: either RUSS 203 or RUSS 250. Offered: S.

RUSS 351 Intermediate Russian Phonetics (3) VLPA Systematic study of the Russian sound system, including phonetic transcription and intonational patterns. Instruction in correcting individual pronunciation errors. Conducted partly in Russian. Prerequisite: either RUSS 203 or RUSS 250.

RUSS 352 Intermediate Russian Morphology (3) VLPA Examination of Russian morphology with emphasis on topics that help to prepare the student for advanced courses in Russian. Conducted partly in Russian. Prerequisite: either RUSS 203 or RUSS 250.

RUSS 381 Phonetics in St. Petersburg (2, max. 6) VLPA Systematic analysis of the Russian sound system as well as intonational patterns. Practical reading exercises. Special attention to correcting individual pronunciation errors. (2 credits for Summer Quarter program, 5 credits for semester program.) Offered: AWSpS.

RUSS 382 Advanced Syntax and Composition in St. Petersburg (2, max. 6) VLPA Class lectures on Russian syntactic structures. Oral drilling and written exercises and compositions. (2 credits are offered for the six-week Summer Quarter program, 5 credits for the fourteen-week semester program.) Offered: AWSpS.

RUSS 383 Conversation in St. Petersburg (4, max. 12) VLPA Designed to increase active vocabulary, to further the student's control of idiomatic Russian, and to develop oral skills. (4 credits are offered for the six-week Summer Quarter program, 8 credits for the fourteen-week semester program.) Offered: AWSpS.

RUSS 384 Culture in St. Petersburg (4, max. 12) VLPA/I&S Lectures on education, history, economics, law, the arts, ethnography, architecture; complemented by visits to places of cultural and historical interest and meetings with Russian groups. 4 credits for summer program, 6 for semester program. Offered: AWSpS.

RUSS 401, 402, 403 Advanced Russian (5, 5, 5) VLPA Class discussion, oral presentations, and composition, based on reading a variety of texts, both literary and non-literary. Advanced grammar. Translation one full course period per week. See credit note above. 401 - Prerequisite: either RUSS 303 or RUSS 350. 402 - Prerequisite: RUSS 401. 403 - Prerequisite: RUSS 402. Offered: AWSp.

RUSS 404 Russian Literary Translation (5) VLPA Intensive practical work in the translation of Russian literary texts. Specific problems associated with the translation of particular kinds of texts. RUSS 420 Topics in Russian Literary and Cultural History (5, max. 20) VLPA A special topic in the literary and cultural history of Russia. Topics vary.

RUSS 430 Major Authors (5, max. 15) VLPA Major Russian writers of the nineteenth and twentieth centuries. Among authors read are Pushkin, Gogol, Lermontov, Turgenev, Tolstoy, Dostoevsky, Chekhov, Babel, IIf and Petrov, Olesha. Content varies.

RUSS 450 Intensive Fourth-Year Russian (15) VLPA Covers material of 401, 402, 403 in one quarter. Meets three hours daily. See credit note above. Prerequisite: either RUSS 303 or RUSS 350. Offered: S.

RUSS 451, 452 Structure of Russian (5, 5) VLPA Descriptive analysis of contemporary standard Russian. Detailed phonetic transcription, discussion of major Great Russian dialects as well as variations in popular speech, examination of common roots and productive derivational elements in Russian words, and elementary principles of syntax. 451 - Prerequisite: either RUSS 303 or RUSS 350. 452 - Prerequisite: RUSS 451. Offered: A,W.

RUSS 461, 463 Introduction to Russian Literature in Russian (5, 5) VLPA Analysis of original Russian literary texts representative of different varieties of Russian writing. Vocabulary of Russian literary analysis; typically Russian approaches to literature, some readings of secondary critical texts; discussion in Russian of passages studied. 461 - Prerequisite: RUSS 403 or RUSS 450. 463 - Prerequisite: either RUSS 403 or RUSS 450.

RUSS 481 Russian Language in St. Petersburg (15) VLPA Daily work in phonetics, grammar, conversation, translation, analytical reading, stylistics, newspaper analysis, and advanced syntax. Prerequisite: either RUSS 403 or RUSS 450.

RUSS 482 Research Project in St. Petersburg (12) VLPA Supervised research in student's selected area of concentration, combined with language instruction tailored to the student's field. Successful completion of course requires a 15-page term paper in Russian. Prerequisite: either RUSS 403 or RUSS 450.

RUSS 483 Russian Literature in St. Petersburg (5, max. 10) VLPA Selection of courses on specialized topics in Russian literature; specific authors or periods. Prerequisite: either RUSS 403 or RUSS 450.

RUSS 484 Russian History in St. Petersburg (5, max. 10) VLPA/I&S Selection of courses on specialized topics in Russian political, economic, social, cultural, or art history. Prerequisite: either RUSS 403 or RUSS 450.

RUSS 485 Economics in St. Petersburg (5, max. 10) VLPA/I&S Selection of courses on topics relating to economic issues.

RUSS 499 Directed Study or Research (1-5, max. 15) Individual study of topics to meet specific needs. By arrangement with the instructor and the Department of Slavic Languages and Literatures office. Offered: AWSpS.

Slavic

SLAV 351 History of the Slavic Languages (5) VLPA External and internal history of Slavic literary languages from the beginnings to the present time, including the development of writing systems, external attempts at reform, and the development of vocabulary.

SLAV 499 Directed Study or Research (1-5, max. 15) Individual study of topics to meet specific needs. By arrangement with the instructor and the Department of Slavic Languages and Literatures office. Prerequisite: permission of instructor and undergraduate adviser. Offered: AWSpS.

Slavic Languages and Literatures

SLAVIC 498- Senior Honors Thesis ([3-9]-) VLPA Directed research on a topic approved by department for a thesis presented in partial fulfillment of requirement for degrees "with honors" or "with distinction." Offered: AWSpS.

Ukrainian

UKR 401, 402, 403 Elementary Ukrainian (5, 5, 5) Introduction to spoken and written Ukrainian.

Literature Courses in English

Courses in this section usually do not require prerequisites. The 300-level courses generally deal with particular themes running through a body of literature or involve a comprehensive study of cultural history. The 400-level courses deal with Slavic literatures other than Russian or specific authors and periods in Russian literature. Both levels are primarily for juniors and seniors, but are open to freshmen and sophomores with an interest or background in the subject of the course.

Croatian/Serbian

CR SB 420 Drawn from the Fire: Literature of the Former Yugoslavia in English (5) VLPA Twentiethcentury prose of the former Yugoslavia. Cultural identity at the crossroads between East and West. Relation of Yugoslav literature, created on the European margin, to the European cultural centers. Literature and the myths of socialism and nationalism. Yugoslav oral tradition. Issues of gender.

Czech

CZECH 420 Modern Czech Literature in English (5) VLPA Representative works of Czech literature from the 1920s to the present in the context of earlier Czech and general European literary trends. Emphasis on prose and drama of major writers, including Hasek, Capek, Vancura, Skvorecky, Kundera, Vaculik, and Havel.

Polish

POLSH 420 Modern Polish Literature in English (5) VLPA Representative prose works by leading twentieth-century Polish writers. Polish literature's critique of modern European civilization. The relation of historical memory, collective victimization, and the utopian imagination in Polish literature to political power and national survival.

Russian

RUSS 321 Russian Literature and Culture to 1700 (5) VLPA/I&S Literature as an element in Russian culture. Art, architecture, music, philosophy, and folklore also treated. Periods covered include medieval, Renaissance, Reformation, and baroque. Offered: A.

RUSS 322 Russian Literature and Culture 1700-1900 (5) VLPA/I&S Literature as an element in Russian culture. Art, architecture, music, and philosophy also treated. Periods covered include the age of Peter the Great, romanticism, realism, and impressionism. Offered: W.

RUSS 323 Russian Literature and Culture of the Twentieth Century (5) VLPA/I&S Literature as an element in modern Russian culture. Art, architecture, and music also treated. Periods covered include symbolism, revolution, postrevolution, Stalinist, the "thaw," and contemporary. Offered: Sp.

RUSS 324 Russian Folk Literature in English (5) VLPA/I&S Russian popular tradition, including paganism and its survival into modern times. Genres of the oral tradition, including the folktale, the epic, spiritual and historical songs, and legends. Special attention to modern theories and western European analogues. RUSS 421 Post-Soviet Literary and Cultural Scene (5, max. 15) VLPA Russian literature of the second half of the twentieth century. In English.

RUSS 422 Russian Literature in Emigration and Exile (5) VLPA Examines writers who left the Soviet Union during the post-Stalin period up to the fall of communism or who, though they resided in the USSR, published through unofficial channels. Discussion of Aksyonov, Siniavsky, Voinovich, Zinoviev, and others.

RUSS 490Studies in Russian Literature (3-5, max.15) VLPAIn either Russian or English. Topics vary.

Slavic

SLAV 420 The Other Europe: Contemporary East European Fiction (5, max. 15) VLPA Crnkoviç Contemporary fiction by Czech, East German, Hungarian, Polish, Baltic, and Balkan writers. Topics include: history of colonization, the imagination of social utopia, socialism and nationalism, everyday life under communism, cultural identify between East and West, experimental writing, new fiction in postcommunist Eastern Europe. All readings in English.

SLAV 423 East European Film (5) VLPA Crnkoviç Survey of major East European film makers. Compares East European and Western production of those directors who worked partially in the West, e.g., Polanski, Forman, Holland, Makavejev. Topics include film in socialist versus market economy, politics, gender, sexuality.

SLAV 425 Russia, Eastern Europe, and the West: Comparative Pragmatics and Discourse (5) VLPA/ I&S Dziwirek Social and cultural conditioning of language use. Language as a mirror of culture and national character. Universal and culture/language specific components in linguistic expression of emotions, courtesy/politeness and rudeness, prejudice and (in)sensitivities, linguistic expression of gender differences in different cultures. Offered: Sp.

SLAV 490 Studies in Slavic Literatures (3-5, max. 15) VLPA Topics vary.

Courses for Graduates Only

Russian

RUSS 501 Russian Language for Graduate Students (2, max. 10) Develops skills of particular use to graduate students. Emphasis on rapid assimilation of variety of written materials with sophisticated understanding and maximum retention of vocabulary, and ability to discuss in Russian the more theoretical and abstract kinds of material. Prerequisite: 403 or equivalent and graduate standing in Russian, East European, and Central Asian Studies.

RUSS 502 Russian Translation (3) Introduction to the theory of translation; translation to and from Russian of selected prose passages in a variety of styles, with emphasis on idiomatic accuracy and stylistic compatibility. Prerequisite: two quarters of 501 or permission of instructor.

RUSS 512 Russian Literary Criticism (3) A study of critical positions, problems, and literary values of major Russian literary critics from Belinsky to the present.

RUSS 520 Seminar in Russian Poetry (5) Topics in Russian poetry and poetry criticism to be selected by the instructor and students. Some emphasis on recent theoretical approaches to poetry criticism that are current in Russia and eastern Europe. For advanced MA and Ph.D. students. Offered: alternate years.

RUSS 521 Russian Literature to 1800 (5) Representative works of East Slavic, Muscovite, and Russian literature from the beginnings to 1800. Studies include a varied selection of primary texts. Intended as an introduction to the study of modern literature for beginning graduate students in Russian literature. Offered: alternate years.

RUSS 522 Russian Literature of the Nineteenth Century (5) Survey of nineteenth-century Russian poetry and prose. Representative works of Russia's major and minor authors, literary trends, and genres. Offered: alternate years.

RUSS 523 Russian Literature of the Twentieth Century (5) Survey of twentieth-century Russian poetry and prose. Pre-revolutionary, Soviet, and Émigré authors, trends, and genres. Includes survey of twentieth-century Literary Criticism as well, in particular Russian Formalists and Mikhail Bakhtin. Offered: alternate vears.

RUSS 526 Literary, Cultural, and Film Studies of the Post-Soviet Era (5, max. 15) Contemporary post-Soviet literature and film. Topics include postcolonialism, gender, reflections of social upheavals, artistic experimentation, issues of commercialism in art, search for new cultural expressions and identity. Readings in both Russian and English. Offered: Sp.

RUSS 542 Seminar in Contemporary Russian Poetry (5) One specific problem or theme in contemporary Russian poetry, seen in its widest possible dimensions. Students must read, in Russian, the literary works involved and become familiar with the social, historical, and philosophical backgrounds that inspire them. Offered: alternate years.

RUSS 543 Seminar in Contemporary Russian **Prose (5)** Analysis of Russian prose fiction of the post-1917 period. Selected authors and topics. Offered: alternate years.

RUSS 554 History of the Russian Literary Language (5) Russian literary language from the eleventh through the twentieth centuries, with special attention to syntax and lexicon and to the development of notions of literary styles. Offered in Russian. Prerequisite: 555 or SLAV 565, or permission of instructor. Offered: alternate years.

RUSS 570 Research Seminar in Russian Literature (5) Diment, Haney, Kramer, West Working in consultation with a faculty adviser, students formulate a topic and prepare a 30-minute oral presentation to be delivered at the seminar and submit a written paper to be read and critiqued. by all participants.

RUSS 577 Russian Folk Literature (5) Analysis of representative works of the various genres of folk literature, including the byliny, skazki, historical and lyrical songs, and the spiritual stikhi.

RUSS 600 Independent Study or Research (*)

Slavic

SLAV 501 Using Slavic Resources (2) Introduction to graduate studies in Slavic languages, literatures, and cultures. Discusses field of study and research materials and techniques employed.

SLAV 518 Foreign Language Teaching Methodology (2) Brandl Current foreign language teaching methods and approaches. Learning and teaching strategies and techniques for the four skills (reading, writing, speaking, listening) including cultural notions. Current and future trends in pedagogy and technology. Offered: jointly with ASIAN 518/GERMAN 518/NEAR E 518/SCAND 518.

SLAV 519 Slavic Language Pedadogy (3) Boyle Introduction to current issues of foreign language pedagogy. Concentrates on the practical classroom application of methodological theory through lectures and micro-teaching presentation. Topics discussed and practiced include testing, proficiency teaching, teaching listening and reading skills, writing, teaching grammar, and computers. Offered: A. SLAV 520 Slavic Literary Theory (3) Crnkoviç Slavic and East European theoretical works and their place in contemporary theoretical landscape. Includes survey of Russian formalism, Czech structuralism, and Tartu school semiotics. Literary theory, film theory, cultural studies, feminist theory. Special emphasis on Mikhail Bahktin.

SLAV 550 Synchronic Slavic Linguistics (5) Linguistic analysis of the phonology, morphology, and syntax of Russian and other Slavic languages. Investigation of current theological work in these areas.

SLAV 551 The Introduction to the Study of Slavic Languages (3) External and internal history of Slavic literary languages from the beginnings to the present time, including the development of writing systems, external attempts at reform, and the development of vocabulary.

SLAV 560 Diachronic Slavic Linguistics (5) Development of the phonological and morphological system of Common Slavic from Indo-European. Evolution of Russian and other modern Slavic languages from Common Slavic. Offered: A.

SLAV 561 History of the East Slavic Languages (5) Designed to acquaint majors in Slavic linguistics with the details of the historical development of the phonological and morphological structure of the Ukrainian and Byelorussian literary languages. Prerequisite: 560. Offered: alternate years.

SLAV 562 History of the West Slavic Languages (5) Designed to acquaint majors in Slavic linguistics with the details of the historical development of the phonological and morphological structure of literary Polish, Czech, Slovak, and Upper and Lower Sorbian languages. Prerequisite: 560. Offered: alternate years.

SLAV 563 History of the South Slavic Languages (5) Designed to acquaint majors in Slavic linguistics with the details of the historical development of the phonological and morphological structure of the South Slavic languages. Prerequisite: 560.

SLAV 565 Old Church Slavonic (4) Rise and development of earliest Slavic literary language and a descriptive study of its orthography, phonology, morphology, and syntax. Readings from normalized texts. Offered: alternate years.

SLAV 566 Readings in Old Church Slavonic (4) Reading and grammatical interpretation of a selected group of canonical texts, as well as some examples of the various later recensions of Old Church Slavonic. Prerequisite: 555. Offered: alternate years.

SLAV 570 Seminar on Slavic Linguistics (3) Investigation and discussion of special topics in Slavic linguistics.

SLAVIC 800 Doctoral Dissertation (*)

Society and Justice

107 Gowen

A multi-disciplinary approach to the study of law, social relations, and justice, with particular emphasis on the study of criminal behavior and the criminal justice process in American society. Students select from a wide range of course offerings and are provided with research and field-experience opportunities.

Undergraduate Program

Adviser Bonnie Lyon 215 Smith, Box 353530 (206) 543-1898 polsadvc@u.washington.edu

Bachelor of Arts

Admission Requirements:

1. A minimum cumulative GPA of 2.00.

2. Completion of the following courses with a minimum cumulative GPA of 2.50: POL S/SO JU 363; SOC 271 or 371; SOC 372. One research methods or statistics course from the program requirement list.

3. Admission is competitive, based on the following: GPA, with emphasis on grades received in courses required for admission (applicants accepted normally present cumulative GPAs considerably above 2.50); personal statement representing the student's interest in and commitment to becoming a society and justice major; other evidence of a commitment to the study of society, justice, and law. Junior standing preferred.

4. Admission is twice a year during spring and autumn quarters. Students admitted in the spring begin the Society and Justice major in the autumn; students admitted in the autumn begin the Society and Justice major in the winter. The application deadline is the second Friday of spring or autumn quarter; admission decisions are made by the end of the fifth week of the quarter.

Additional Information: Credits earned in administration of justice or law enforcement programs at community colleges are accepted on a limited basis at the UW.

Major Requirements: 60 credits from the society and justice list of affiliated courses to include (1) the three required core courses listed under admission requirements above (15 credits); (2) at least 15 credits from one of three designated options of study: criminal justice; law and politics; society, justice, and law in theoretical and comparative perspective; and at least 5 credits from each of the other two tracks; (3) SO JU 400 and 401; and (4) at least 8 credits of research methodology. See adviser for option track courses.

Minor

Minor Requirements: 30 credits to include three courses from SO JU/POL S 363, SOC 271, SOC 371, SOC 372 (15 credits); three courses from Society and Justice major options (two courses from one option, one course from another option) (15 credits). See adviser for option track courses.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

SO JU 275 Murder (5) I&S Introduces topics related to the crime of murder, including: laws of homicide; research on the characteristics of victims, killers, and murders; theories of murder and related violence; investigation strategies; and crime and control policies. Offered: jointly with SOC 275.

SO JU 310 Research in Society and Justice (1-5, max. 15) I&S Supervised introductory individual and/or seminar based research on some aspect of society and justice.

SO JU 363 Law in Society (5) I&S Inquiry into how law matters in social practice. Examines general theories of law, the workings of legal institutions, and the character of legally constituted practices and relationships in diverse terrains of social life. Offered: jointly with POL S 363.

SO JU 380 Contemporary Issues in Criminal Justice (5) I&S Overview of selected contemporary issues in the criminal justice system. Theoretical, empirical, and practical aspects of such topics as the war on drugs, sexual predators, community policing, family and crime, media, and criminal justice. Recommended: POL S 101, POL S 202, POL S 204, or SOC 110.

SO JU 400 Seminar in Society and Justice (3, max. 6) I&S Aspects of the administration of justice.

SO JU 401 Field Experience in Society and Justice (5) Participant observation in some public or private agency relevant to the system of justice.

SO JU 405 Introduction to Organized and White Collar Crime (3) I&S Overview of organized and white collar crime. Exposure to definitional problems, distinctive characteristics, potential areas of overlap, and barriers to more effective social control. Addresses impediments resulting from inadequate conceptualizations, legal and operational difficulties in pursuing offenders, and effects of corruption and discretion in the justice system.

SO JU 410 Feminist Legal Studies: Theory and Practice (5) I&S Examines feminist theoretical analyses of the law. Engages in current debate on the study of critical race, gender, and class theory. Includes: women in prison, public assistance, the sex industry, women and health care, and immigration law. Recommended: WOMEN 200 or WOMEN 310. Offered: jointly with POL S 466/WOMEN 410.

SO JU 425 Introduction to the American Court System (3) I&S Philosophical and structural bases of the American court system; roles of attorneys, judges and the public in that system. Some focus also on current challenges to the courts posed by court congestion and alternative dispute resolution, and on future prospects for the courts.

SO JU 430 The Police (5) I&S Conceptual and empirical issues concerning multifaceted and changing roles of the American police.

SO JU 440 Criminal Law and Procedure (4) I&S Substantive and procedural criminal law for lay persons; analysis of the philosophy behind the law, with an emphasis on due process in adult and juvenile courts; case-analysis teaching technique.

SO JU 450 Special Topics in Society and Justice (1-5, max. 15) I&S Examination of various current topics or issues concerning the criminal justice system in our society.

SO JU 470 Evaluation Research in Criminal Justice (5) I&S Social science research methods relevant to criminal justice evaluation and operations research. Ethical considerations, formulation of goals and objectives, problem definition and research design, sources and methods of data collection, descriptive statistics, data interpretation, and utilizations of research results.

SO JU 473 Corrections (5) I&S Analyzes research on diversionary methods, treatment of convicted offenders. Emphasis on program evaluation. Community treatment, fines, restitution, probation, parole, halfway houses, other alternatives to incarceration; correctional institutions. Organization of state, federal systems. Problems of administration. Subsidies, governmental control. Planning, public participation. Recommended: SOC 371 and SOC 372. Offered: jointly with SOC 473.

SO JU 499 Readings in Society and Justice (1-5, max. 10) Individual readings in society and justice.

Sociology

202 Savery

The Department of Sociology has a strong commitment to research, publication, and training and is dedicated to providing a rich undergraduate program, both for students majoring in sociology and for others who wish to learn about human society and social relations.

Undergraduate Program

Director of Instructional Programs Bruce D. Bennett 210 Savery, Box 353340 (206) 543-5396 asksoc@u.washington.edu

Bachelor of Arts

Admission Requirements:

1. At least 10 credits of sociology courses to include SOC 110.

2. Cumulative GPA of 2.50 for all sociology courses completed at the time of application. Special circumstances will be reviewed on a case-by-case basis.

Suggested Introductory Course Work: SOC 110, 112, 240, 241, 270, 271. An introductory mathematics course may be helpful before SOC 328, but it is not a prerequisite.

Major Requirements: 50 credits in sociology, including (1) SOC 110 or equivalent; (2) SOC 328-329, to be fulfilled as soon as possible after declaration of a major in sociology (SOC 328-329 is a prerequisite for all 400level sociology courses); (3) 35 credits of sociology electives to include at least 15 credits at the 400 level and at least 5 additional credits at the 300 level or above; (4) at least one course in each of three different areas of sociological study and a second course (at the 400 level) in at least one of the areas: the eight designated areas for this requirement are demography and ecology, deviance and social control, family, macrosociology, organizations and industrial sociology, sex and gender, social psychology, and stratification and race relations; (5) minimum grade of 1.7 in any course used for the major; cumulative GPA of 2.50 or above in all sociology courses taken at the UW.

Graduate Program

Graduate Program Coordinator 206 Savery, Box 353340 (206) 543-5396 asksoc@u.washington.edu

Sociology seeks to explain social structure, social institutions, and social interaction. The department has graduate program specialization in demography and ecology, deviance and social control, race and ethnic relations, family systems, gender studies, macrosociology, organizations and occupations, quantitative research methodology, social psychology, sociological theory, and stratification.

Emphasis is on empirical research aimed at testing theories and generating new principles. Students are trained in problem formulation, research design, data

gathering and analysis, and bringing data to bear on significant questions. Instruction is offered in various methods: statistical, survey, computer, demographic and ecological, interaction observation, experimental, case study, field research, and historical. Students learn social research by participating in faculty projects or developing their own studies. Also available is an extensive program in training students to teach.

The graduate program aims at completion of the Master of Arts degree in two calendar years and the Doctor of Philosophy degree in three years beyond the M.A. degree, although not all students finish in this time. A thesis is required for the M.A. degree. For the Ph.D. degree, the student must be certified in general methodology and in a major and a minor substantive area, in addition to completing an approved dissertation.

Special Requirements

Applicants for admission to the Master of Arts program are evaluated on undergraduate performance, Graduate Record Examination scores, statement of educational plans, recommendations, and samples of written work. For admission to the Ph.D. program, students are expected to have completed an M.A. degree in sociology in this department or elsewhere. Occasionally, M.A. degrees in other fields are accepted as a basis for admission to the Ph.D. program. The department encourages applications from minority students.

Financial Aid

Fellowships, research assistantships, and teaching assistantships are available to qualified graduate students including those in their first year of training.

Chair

Charles Hirschman

Professors

Barth, Ernest A. T. 1955, (Emeritus); PhD, 1955, University of North Carolina.

Becker, Howard S. * 1991; PhD, 1951, University of Chicago; sociology of art, sociology of science, qualitative methods.

Borgatta, Edgar F. * 1980, (Emeritus); PhD, 1952, New York University; methodology, social psychology, de-mography-ecology, aging.

Burstein, Paul * 1985; PhD, 1974, Harvard University; political sociology, social stratification, public policy, law.

Campbell, Frederick L. * 1966; PhD, 1967, University of Michigan; population and ecology, social organization.

Chirot, Daniel * 1974; PhD, 1973, Columbia University; modernization, political sociology, Eastern Europe.

Costner, Herbert L. * 1959, (Emeritus); PhD, 1960, Indiana University; methodology, social change.

Faris, Robert 1948, (Emeritus); PhD, 1931, University of Chicago.

Grembowski, David * 1981, (Adjunct); MA, 1975, Washington State University; PhD, 1982, University of Washington; dental care demand, fluoridation, dental health services research.

Gross, Edward * 1965, (Emeritus); PhD, 1949, University of Chicago; formal organizations, industrial sociology, symbolic interaction, sociology of law.

Guest, Avery * 1972; MS, 1964, Columbia University; MA, 1967, PhD, 1970, University of Wisconsin; demography, ecology, stratification.

Hamilton, Gary G. * 1993; PhD, 1975, University of Washington; economic sociology, historical comparative, organizational studies, East Asia.

Hirschman, Charles * 1987; PhD, 1972, University of Wisconsin; demography, race and ethnic relations, social stratification, Southeast Asia.

Howard, Judith A. * 1982; PhD, 1982, University of Wisconsin; social psychology, sociology of gender, intersections of race/class/gender/sexuality.

Lang, Kurt * 1984, (Emeritus); PhD, 1953, University of Chicago; political and social effects of the media on mass communication.

Larsen, Otto * 1958, (Emeritus); PhD, 1955, University of Washington; mass communications, public opinion, collective behavior.

Locke, Hubert G. * 1976, (Adjunct); MA, 1962, University of Michigan; criminal justice, urban policy, race and ethnic relations, ethics and public policy.

Miyamoto, Frank 1941, (Emeritus); MA, 1938, University of Washington; PhD, 1950, University of Chicago; social psychology, collective behavior.

Raftery, Adrian Elmes * 1985; Doct, 1980, Universite de Paris (France); Bayesian statistics, spatial statistics, clustering, whales, sociology and demography.

Schmitt, David R. * 1968; PhD, 1963, Washington University; experimental social psychology, behavior analysis.

Schwartz, Pepper J. * 1972; PhD, 1974, Yale University; family, gender, human sexuality, field methods.

Scott, Joseph W. * 1985; PhD, 1963, Indiana University; political sociology, family sociology, race/ethnic relations.

Stark, Rodney * 1971; PhD, 1971, University of California (Berkeley); scientific methods in theory and research, religion, deviance, prejudice, police.

van den Berghe, Pierre L. * 1965; PhD, 1960, Harvard University; comparative sociology, stratification, race and ethnic relations, kinship, sociobiology.

Wager, L. Wesley * 1954, (Emeritus); PhD, 1959, University of Chicago; organizations/occupations, theory, culture.

Weis, Joseph G. * 1974; DCrim, 1974, University of California (Berkeley); crime, delinquency, social control, deviance.

Associate Professors

Bridges, George S. * 1982; PhD, 1979, University of Pennsylvania; deviance, social control, law, and legal institutions.

Crutchfield, Robert D. * 1979; PhD, 1980, Vanderbilt University; deviance, criminology, social control, stratification.

Friedman, Debra 1993, (Affiliate); PhD, 1983, University of Washington.

Gillmore, Mary Louise 1977, (Adjunct); MS, 1970, University of Michigan; MA, 1977, PhD, 1983, University of Washington; adolescent sexuality and substance abuse.

Kasaba, Resat * 1985, (Adjunct); PhD, 1985, State University of New York (Binghamton); historical sociology, world systems, social change in the Middle East.

Kashima, Tetsuden * 1976, (Adjunct); PhD, 1975, University of California (San Diego); Japanese American incarceration and social organization; sociology of race and ethnic relations.

Kiser, Edgar Vance * 1988; PhD, 1987, University of Arizona; political sociology, theory, historical sociology.

Lavely, William R. * 1985; PhD, 1982, University of Michigan; social demography of China.

Assistant Professors

Brines, Julie E. * 1993; PhD, 1990, Harvard University; gender, stratification, family, methods.

Kuo, Hsiang-Hui D. 1996; PhD, 1995, University of Wisconsin; social stratification, sibling resemblance, life course and aging, statistics and quantitative methods.

LePore, Paul C. * 1997; PhD, 1997, University of Wisconsin; social psychology, sociology of education, social structure and personality, sociological methods.

Reitman, Sharon L. * 1991; PhD, 1991, University of Michigan; comparative historical sociology, focusing on the politics of labor movements.

Stovel, Katherine W. 1997, (Acting); MA, 1994, University of North Carolina; historical sociology, social theory, social networks, adolescence.

Sunindyo, Saraswati * 1993, (Adjunct); PhD, 1993, University of Wisconsin; political economy, sociology of gender, popular culture, nationalism.

Senior Lecturer

Black, Albert W. * 1972; MA, 1968, Wayne State University; PhD, 1976, University of California (Berkeley); race and ethnic relations, stratification, social movements, race and poverty.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

Upper-division courses (300 and 400 levels) in the Department of Sociology generally require SOC 110, Survey of Sociology, or equivalent, as a prerequisite, unless another prerequisite course is designated in the course description. Courses at the 400 level generally require SOC 328-329, or instructor permission, as a prerequisite.

SOC 105 Sociology of Black Americans (5) I&S *Black* Sociocultural context of the Black person's environment and consequences of interaction with that environment.

SOC 110 Survey of Sociology (5) I&S *LePore, Stark* Human interaction, social institutions, social stratification, socialization, deviance, social control, social and cultural change. Course content may vary, depending upon instructor. Offered: AWSpS.

SOC 112 Evolution and Revolution: An Introduction to the Study of Comparative Social Change (5) I&S Chirot, Hirschman Examines the major aspects of human societies, including political and economic systems, family structure, social stratification, and demographic patterns as influenced by environmental conditions, technology, cultural traditions, and legacies of prior history and relationships to other societies.

SOC 195 Study Abroad: Sociology (2-5, max. 10) I&S Lower-division sociology courses for which there are no direct University of Washington equivalents, taken through a University of Washington study abroad program.

SOC 230 American Demographics (5) I&S Recent trends in American society from a demographic perspective. Topics include: fertility, mortality, migration, urbanization, marriage, family structure, aging, labor force, education, residential segregation, and income distribution. Discussion of how demographic change relates to changes in social, economic, political, and cultural life in the contemporary United States.

SOC 240 Introduction to Social Psychology: Perspectives on Individual Behavior (5) I&S Schmitt Major theoretical perspectives on individual behavior in social settings. Social cognition, behaviorism, symbolic interaction, and attitudes. Ways people develop as social beings. Traditional lecture format is not used in this course. Student learning is based on individualized programs of reading and frequent tests of student comprehension. Offered: AWSp.

SOC 241 Introduction to Social Psychology: Perspectives on Social Interaction (5) I&S Major perspectives on social interaction. Social exchange, cooperation and competition, group dynamics, social influence, leadership, altruism and aggression. Situational and personal variables that determine social interaction. Traditional lecture format is not used in this course. Student learning is based on individualized programs of reading and frequent tests of student comprehension. Offered: AWSp.

SOC 260 Black Male/Female Family Relationships (5) I&S The Black family in the United States as a social institution. Effects of residence in a race-conscious society on the interpersonal relationships between Black men and women. Exploration of proposals for strengthening the Black family in the United States. Offered: jointly with AFRAM 260.

SOC 261 The African-American Experience Through Literature (5) VLPA/I&S Instructs students in hermeneutical and sociological methods of analyses. Analyzes selected novels, essays, poems, short stories, and plays with the purpose of understanding the structures and functions of both society and personality. Offered: jointly with AFRAM 261.

SOC 266 Introduction to Labor Studies (5) I&S *Reitman* Conceptual and theoretical issues in the study of labor and work. Role of labor in national and international politics. Formation of labor movements. Historical and contemporary role of labor in the modern world. Offered: jointly with HIST 249/POL S 249.

SOC 270 Social Problems (5) I&S Processes of social and personal disorganization and reorganization in relation to poverty, crime, suicide, family disorganization, mental disorders, and similar social problems.

SOC 271 Introduction to the Sociology of Deviance (5) I&S Bridges, Crutchfield, Weis Examination of deviance, deviant behavior, and social control. Deviance as a social process; types of deviant behavior (e.g., suicide, mental illness, drug use, crime, "sexual deviance," delinquency); theories of deviance and deviant behavior; nature and social organization of societal reactions; and social and legal policy issues. Offered: AWSpS.

SOC 275 Murder (5) I&S *Weis* Introduces topics related to the crime of murder, including: laws of homicide; research on the characteristics of victims, killers, and murders; theories of murder and related violence; investigation strategies; and crime and control policies. Offered: jointly with SO JU 275.

SOC 299 Sociology Interest Group (2) I&S Provides opportunity for students new to the major, or contemplating the major, to meet twice weekly in a small group to discuss issues relating to two designated 5-credit sociology courses. Concurrent enrollment in the two 5-credit designated courses required. See department adviser. Offered: ASp.

SOC 301 War (5) I&S *Chirot* Origins and conduct of war, readings from anthropology, political science, economics, and history, as well as two novels and some recent articles on the arms-control controversy. Modern forms of warfare, including guerrilla war, world war, and nuclear war. Offered: jointly with SIS 301.

SOC 316 Introduction to Sociological Theory (5) I&S Introduction to sociological theory. Includes classical theorists Adam Smith, Karl Marx, Emile Durkheim, and Max Weber and their influence on contemporary theoretical debate.

SOC 328-329 Methodology of Sociological Research (5-5) I&S, QSR Logic of formulating, testing, and modifying hypotheses. Methods of producing social data (survey research, evaluation research, field observation) and utilizing stored data (census tapes, historical materials). Methods of quantitative data analysis techniques commonly used in contemporary sociological analysis. Not open for credit to students who have taken 320 or 323. Offered: AWS,WSpS.

SOC 330 Human Ecology (5) I&S Factors and forces that determine the distribution of people and institutions.

SOC 331 Population and Society (5) I&S *Guest, Lavely* Population growth and distribution, population composition, population theory, urbanization. Determinants and consequences of fertility and mortality trends and migration in economically developed and underdeveloped areas.

SOC 340 Symbolic Interaction (5) I&S Role of language and culture in changing the human organism into a socialized human being; interpersonal processes and how they are shaped by the symbolic environment.

SOC 341 Tutoring Sociology (2-4) Trains students to serve as tutors in designated courses. Teaches how to assist with writing assignments, explain course material, and lead group discussions. Credit/no credit only.

SOC 344 Cognitive Social Psychology (5) I&S *Howard* Cognitive structures and processes and their antecedents and consequences, both societal and individual. Reciprocal influences of social roles, social institutions, and social cognition.

SOC 345 Collective Behavior (5) I&S Behavior of large numbers in crowds, masses, publics, and social movements where institutional definitions for joint action are minimal and the collectivity seeks to define new patterns of collective action.

SOC 346 Group Processes (5) I&S Schmitt Systematic analysis of social processes in small groups, including conformity, deviance, cooperation, competition, coalition formation, status and role differentiation, inequity, communication, and authority and power. A variety of methods of research are considered: field studies, field experiments, laboratory studies, and the simulation of social processes.

SOC 350 Contemporary American Institutions (5) **I&S** *Guest* Origins and development of major social institutions. Sociology of economic structure, political organization, religion, education, recreation, and other institutionalized patterns.

SOC 352 The Family (5) I&S *Schwartz* The family as a social institution. Historical changes and societal variation in family patterns. Changes over the life cycle. Alternative family forms.

SOC 353 The Family in Cross-Cultural Perspective (5) I&S Form, content, and functions of families through case studies of different countries. Family organization, including family structure, inheritance, sexual division of labor, and socialization with attention given to life-cycle stages.

SOC 354 The Comparative Study of Societies (5) **I&S** Entire societies at various levels of technological complexity are compared to explore problems of their development and structural organization. Both historical and contemporary Western and non-Western societies are examined. Offered: jointly with ANTH 354.

SOC 355 Social Change in Latin America (5) I&S Problems of development and dependency in Latin America. Relations of power and production between social classes and ethnic groups. Offered: jointly with SISLA 355.

SOC 356 Society and Politics (5) I&S *Burstein* Causes of political change in democratic countries, including public opinion, social movements, interest group activity, and party organization. Offered: jointly with POL S 356. **SOC 360** Introduction to Social Stratification (5) **I&S** Social class and social inequality in American society. Status, power, authority, and unequal opportunity are examined in depth, using material from other societies to provide a comparative and historical perspective. Sociological origins of recurrent conflicts involving race, sex, poverty, and political ideology.

SOC 361 Age and Sex Differentiation (3) I&S Physiological and social bases of age and sex differentiation in human societies. The implications of age and sex distinctions for kinship, economic, and political structures. The relationship between age, sex, and other bases of social inequality.

SOC 362 Race Relations (5) I&S Black Interracial contacts and conflicts.

SOC 363 Ethnicity, Business, Unions, and Society (5) I&S Scott Interrelationships of ethnicity, business, unions, and the larger society. Examines financial and sociological structure of business and manufacturing sector, how this sector performs, and consequences of performance for selected ethnic groups in United States. Offered: jointly with AES 361.

SOC 364 Women in the Social Structure (5) I&S *Howard* Gender and social institutions; the family, politics, education, medicine, law, the labor force. Intersection of gender with other minority statuses such as race, age, socioeconomic status, and sexual orientation. Structural, ideological, and historical determinants of gender relations.

SOC 365 Urban Community (5) I&S *Conley, Guest* Comparative and analytic study of organization and activities of urban groups.

SOC 366 Bureaucracy in Society (5) I&S *Hamilton* The coming of organizational societies; historical causes of bureaucracy; informal relations and work groups; ideologies; authority and the division of labor; social change in bureaucracies; comparative organizations.

SOC 371 Criminology (5) I&S *Bridges, Crutchfield, Weis* Survey of legal definitions, types of criminal behavior, trends and patterns, recidivism, characteristics of offenders, environmental influences, diagnostic methods, prediction, theories of crime and delinquency prevention, social policy.

SOC 372 Introduction to Criminal Justice (5) I&S Examines role of police, courts, and corrections in criminal justice. Applies sociological theories and perspectives to issues in law enforcement, adjudication, and corrections. Legislative reforms. Innovations in policy.

SOC 373 Social Factors in White Collar Crime (5) I&S Weis Concept and etiology of white collar crime, its forms, costs, victims, and innovative developments. Prospects for theoretical explanations and social control.

SOC 395 Study Abroad: Sociology (2-5, max. 15) I&S Upper-division sociology courses for which there are no direct University of Washington equivalents, taken through a University of Washington study abroad program.

SOC 399 Undergraduate Internship (2-5, max. 10) Students serve in approved internships. Credit/no credit only.

SOC 401 Special Topics in Sociology (5, max. 15) **I&S** Selected topics of contemporary interest taught by a sociologist active in the field. Topics vary and may be substantive, theoretical, or methodological.

SOC 410 History of Sociological Thought (5) I&S Contributions of individual theorists (from Comte to the present); emphasis on cumulative development of concepts and principles, emergence of sociology as a science, probable future developments. SOC 411 Selected Topics in History of Sociological Thought (5) I&S Specific areas or eras in the history of sociological thought. Emphasis on the development of sociological theory in relation to the intellectual and social setting of the time. Topics change from quarter to quarter. Some topics are: the development of concepts of order in sociological thought; conflict theories; the development of action theory in sociology; German sociology; Marx, Weber, and Simmel.

SOC 412 Classics of Social Research (5) I&S *Becker* Analysis of classics of social research from various subfields in sociology, designed to discover and illustrate the varieties of quality such classics exhibit.

SOC 415 Theory of Social Organization (5) I&S State and usages of theory in social organization; importance of linkage between theory and methodology; major features of social organization demonstrated by intensive examination of representative theories of social organization with particular focus on complex forms.

SOC 416 Sociological Theory (5) I&S *Kiser* Theories of individual action, social order, and institutional change. Cumulative development of solutions rather than on works of given theorists. Theories of social order. How sociological treatments of these issues compare with those offered by economists and other social scientists.

SOC 419- Fieldwork: Observation and Interviewing (5-) I&S Becker Perspective, logic, and techniques of qualitative social research and analysis. Nature and uses of intensive interviewing, participant observation, and analytic ethnography. Application of field research principles. Research project required in addition to reading and analysis of classic studies. Offered: W.

SOC 420 Fieldwork: Observation and Interviewing (-5) I&S Becker Logic and techniques of qualitative social research and analysis. Intensive interviewing, participant observation, qualitative data analysis (including applications of data base technology, problem reformulation, and techniques of visual documentation). Results of student work reported and discussed in class. Offered: Sp.

SOC 424- 425 Applied Social Statistics (3-3) I&S Applications of statistics in sociology and related social sciences. Emphasis on problems of analysis with imperfect data. Probability in statistical inference. Analysis of variance; contingency table analysis, nonparametric procedures; regression analysis in social research. Offered: W,Sp.

SOC 426 Methodology: Quantitative Techniques in Sociology (3) I&S *Raftery* Applied regression analysis with emphasis on interactive computer graphics techniques and interpretation. Application to typical sociological problems. Offered: A.

SOC 427 Statistical Classification and Measurement (3) I&S Application of statistical principles and methods to problems of classification and measurement in social research.

SOC 428 Principles of Study Design (3) I&S *Crutchfield, Guest* Study design from problem formulation to the analysis and interpretation of data. Offered: Sp.

SOC 429 Practicum in Data Analysis (3) I&S *Bridges, Crutchfield, Guest* Introduction to selected programs for data analysis and practice in their application. Practice in coordination research problem, data, and mode of analysis into a coherent, interrelated set. Interpretation of results. Offered: A.

SOC 430 Urbanism and Urbanization (3) I&S *Guest, Hirschman* Human population distribution and migration patterns. Causes and consequences of world urbanization. Spatial and social patterns in the metropolis. Aggregate population movements and selectivity of migrants.

SOC 431 Fertility and Mortality (3) I&S *Lavely* Theories of fertility and mortality, demographic transitions, individual variations. Specific analytic approaches. Familiarity with basic fertility and mortality measures, and with the life table, is assumed.

SOC 432 Population and Modernization (3) I&S *Hirschman, Lavely* Examines role of demographic factors in the process of social modernization and economic growth. The approach is both historical, focusing on populations of developed countries since 1700, and analytic, stressing the attempts made by different disciplines to model demographic relationships, with attention to less-developed regions. Offered: jointly with SIS 432.

SOC 433 Research Methods in Demography (3) I&S *Hirschman* Basic measures and models used in demographic research. Sources and quality of demographic data. Rate construction, standardization, the life table, stable population models, migration models, population estimation and projection, measures of concentration and dispersion, measures of family formation and dissolution.

SOC 434 Demographic Issues in Asia (3-5) I&S *Lavely* Contemporary Asian countries face a number of issues with demographic components, including environmental and resource issues, ethnic rivalries, international migration, and public health. This seminar addresses a set of these issues by focusing on the demography of one or more countries in Asia. Offered: jointly with SISEA 434.

SOC 442 Public Opinion (3) I&S The nature of public opinion; formation and measurement of public opinion; the operation of public opinion polls.

SOC 443 Mass Communication (5) I&S Control, structure, and functioning of mass media of communications as a force in social life; methods of research.

SOC 445 Religious Movements: The Sociology of Cults and Sects (5) I&S Stark Understanding religion, what it is, and what it does. Examines the formation of new religious movements, cults, and sects, and the conditions under which they succeed or fail. Offered: jointly with RELIG 449.

SOC 447 Social Movements (5) I&S Social movements as collective attempts to change society: why people join; characteristics of successful and unsuccessful movements; consequences of social movement activities.

SOC 449 Social Relationships (5) I&S The structure of different kinds of relationships and the nature of interaction within them. Concept of social relationships in general; several specific types of relationships. Close personal relationships: marriage, nonmarital sexual relationships, and the parent-child relationship.

SOC 450 Political Economy of Women and Family in the Third World (5) I&S Theoretical and empirical aspects of the political economy of women and the family in the Third World during the process of development, with a focus on labor. Main theoretical approaches examined and applied to case studies from Asia and Latin America. Offered: jointly with SIS 450.

SOC 451 Theory and Process of Social Change (5) I&S Hamilton Basic trends in economic and social development; comparative and historical analysis of social and economic changes; the rise of capitalist societies.

SOC 453 Social Factors in the Family (5) I&S Review and analysis of empirical research in courtship and marriage, marital adjustment, and specific areas of marriage and family life. **SOC 456** Political Sociology (5) I&S Burstein Relationships between social change and political change. Focus on selected issues, including social bases of democracy, political organization, elections, and consequences of public policy.

SOC 457 Sociology of Religion (5) I&S The relations between religion, polity, economy, and social structure; in particular, the political, economic, and social impact of religious beliefs and organizations, as well as the social determination of these beliefs and organizations; the rise of secularism, the rationalization of modern life, and the emergence of political quasi-religions.

SOC 460 Social Differentiation (5) I&S Analysis of societal organization based on sex, age, residence, occupation, community, class, caste, and race.

SOC 461 Comparative Ethnic Race Relations in the Americas (5) I&S Scott Sketches the ethnoracial systems operating in American society. Studies these systems as systems and examines their institutional and interpersonal dynamics. Compares ethnoracial systems in order to arrive at empirical generalizations about race/ethnorelations in the Americas. Offered: jointly with AES 461.

SOC 462 Comparative Race and Ethnic Relations (5) I&S Scott Race and ethnicity as factors of social differentiation in a number of Western and non-Western societies in Europe, Africa, Asia, and the Americas. Offered; jointly with AES 462.

SOC 464 Contemporary Society in the Peoples Republic of China (5) I&S Lavely Separate development of rural and urban social institutions in the Peoples Republic of China since 1949 from a sociological perspective. Family and marriage, social control, educational institutions. Dilemmas of contemporary China and reasons for institutional change. Offered: jointly with SISEA 464.

SOC 465 Complex Organizations (5) I&S *Hamilton* Examination of the structure of complex organizations. Attention to developing generalizations applicable to industrial organizations, businesses, hospitals, prisons, labor unions, governments, universities, armies, and similar formally instituted organizations. The major focus is on empirical research, with some attention to methodological problems in studying such organizations.

SOC 466 Economic Sociology (5) I&S Hamilton, Reitman Changing focus of field; cultural variation, work, and the worker; technology, society, and the evolution of industrial forms; types and forms of industrial organizations; industrial organizations as social and technical systems; issues of control, process, and change; the individual in social and technical systems.

SOC 468 Sociology of Occupations and Professions (5) I&S Frameworks for study of occupations and professions; occupational structure and mobility in American society in relation to adult socialization and career development; occupational and professional associations and society.

SOC 469 Balkan Societies (5) I&S *Chirot* Examination of the roots of Balkan social problems (economic backwardness, minority-group conflicts, peasant problem), the failure of pre-1945 attempts to solve these problems, the post-1945 communist failures, the causes of the upheavals of 1989, and the prospects for success in the 1990s.

SOC 472 Juvenile Delinquency (5) I&S *Crutchfield, Weis* Factors in delinquency, juvenile courts. Programs of treatment and prevention.

SOC 473 Corrections (5) I&S *Weis* Analyzes research on diversionary methods and treatment of convicted offenders. Emphasis on program evaluation. Community treatment, fines, restitution; proba-

tion, parole, halfway houses, and other alternatives to incarceration; correctional institutions. Organization of state and federal systems. Problems of administration. Subsidies and governmental control. Planning and public participation. Recommended: SOC 371; SOC 372. Offered: jointly with SO JU 473.

SOC 481, 482, 483 Issues in Analytic Sociology (5, max. 15; 3, max. 9; 1-3, max. 9) I&S Examination of current issues in sociological analysis. Specific content of the course varies according to recent developments in sociology and the interests of the instructor.

SOC 485 Family Change in Western Europe and the United States (5) I&S Investigates patterns of recent family change. Explores similarities and differences in family life between Western Europe and US as well as variations among countries and among population subgroups within countries. Focuses on differences and similarities in social, economic, political, and cultural environments. Offered: jointly with EURO 485.

SOC 486 Human Family Systems: Biological and Social Aspects (5) I&S Biological bases for human mating and reproduction, and an examination of the range of cross-cultural variability in human systems of kinship and marriage. Compares wide range of human and nonhuman species, and Western and non-Western human societies. Interplay of biological, ecological, and sociocultural factors in determining the structure and function of human family systems. Offered: jointly with ANTH 486.

SOC 491 Sociology of Science (5) I&S Becker Sociological study of scientific activity. Social origins of scientific thought and practice, the organization of scientific work, and the process of change in science. Major theories in the area, including Merton, Kuhn, and Latour.

SOC 495 Honors Senior Thesis (1-5) I&S Preparation of senior honors thesis. Sociology majors only.

SOC 496- 497- 498 Honors Senior Seminar ([3/5]-[3/5]-[3/5]) I&S Exploration of selected sociological problems with emphasis on research experience and the interpretation of data. For sociology majors only, primarily for honors students. Offered: A-W-Sp.

SOC 499 Undergraduate Independent Study or Research (2-5, max. 10) Credit/no credit only.

Courses for Graduates Only

SOC 500 Teaching Sociology as a Teaching Assistant (1) Bridges Techniques of quiz section administration, advising of students, and student evaluation important to successful teaching as a teaching assistant. Students develop presentations and classroom materials and develop and grade student examinations. Credit/no credit only. Prerequisite: admission to graduate program in sociology.

SOC 501 Proseminar (3) Introduction for firstyear graduate students to substantive areas of sociology, research and information resources, and issues in graduate education and professional socialization. Credit/no credit only. Offered: A.

SOC 502 Seminar on Teaching Sociology (3) *Howard* Techniques of lecturing, leading discussion, evaluating student performance, and other pedagogical skills ancillary to successful teaching. Students develop a course and obtain videotaped feedback of presentations. Prerequisite: completion of MA. Offered: W.

SOC 503 Seminar on Writing Social Science (3) *Becker, Burstein, Howard* Techniques, skills, and strategies helpful for publishing in the social sciences. Includes writing and revision of own work and evaluation of the writing of other students. Also includes social scientific analysis of writing and other forms of academic communication. Prerequisite: completion of MA. Offered: A. **SOC 510 Seminar in Sociological Theory** (3) *Kiser* Macrosociological theories; functionalism and neoevolutionism; conflict and consensus approach; comparative strategies; models and longrange theories; ideology and sociology. From Marx and de Tocqueville to contemporary literature. Offered: A.

SOC 511 Classical Social Theory (3) *Chirot* Study of classical masters of social theory: Marx, Durkheim, and Weber, their precursors, and their immediate successors.

SOC 513 Demography and Ecology (3) *Hirschman* Theories and research on human fertility, mortality, mobility, migration, and urbanization in social/economic context. Comparative and historical materials on Europe, the United States, and the Third World.

SOC 514 Current Theories in Social Psychology (3) *Howard, LePore, Schmitt* Broad graduate-level introduction to the theories in the field of social psychology.

SOC 515 Current Research in Social Psychology(3) Howard Broad graduate-level introduction to the research in the field of social psychology.

SOC 516 Organizations (3) *Hamilton* Broad graduate-level introduction to the theory and research on complex organizations.

SOC 517 Deviance and Social Control (3) *Bridges, Crutchfield, Weis* Survey of current research on deviant behavior and mechanisms of social control; definitions and forms of deviant behavior, causal analysis, and legal or other methods of social control.

SOC 518 Social Stratification (3) *Burstein* Intensive preparation in theoretical, methodological, and substantive topics in social stratification.

SOC 519 Social Change (3) *Burstein* Basic perspectives in the study of social change. Classical works and exemplary contemporary contributions in the literature.

SOC 525 Experimental Methods in Social Research (3) For graduate students who wish additional understanding of techniques, problems, and issues involved in the design and conduct of experimental social research. Considers strengths and weaknesses of various experimental designs, artifacts and their control, problems in going from the laboratory to the field, and ethical issues. Prerequisite: 424-425 and 428, 429, or equivalents.

SOC 526 Causal Approach to Theory Building and Data Analysis (3) Theory construction and testing from a causal models perspective. Path analysis, standardized versus unstandardized measures, feedback models, identification problems, estimation in overidentified models, difference equations, differential equations, stability conditions. Multiplicative models as alternatives to additive ones. Causal approach to measurement error.

SOC 527 Measurement of Basic Sociological Concepts (3) Conceptualization and measurement problems in sociology, using major concepts as illustrations of basic issues. Causal approach to measurement to deal with problems of indirect measurement, cross-level measurement problems, aggregation and disaggregation. Consequences of crude measurement for data analyses. Prerequisite: 424; recommended: 426.

SOC 528 Seminar on Selected Statistical Problems in Social Research (3) Raftery Prerequisite: 426.

SOC 529 Multiple Indicators in Social Measurement (3) Repeated measures, alternate measures and multiple observers in estimating the reliability, assessing the validity, and analyzing conceptual and indicator problems in social measurement. Implications of measurement error for research conclusions. Prerequisite: 424, 426.

SOC 536 Log-Linear Modeling and Logistic Regression for the Social Sciences (3) Raftery Loglinear modeling of multidimensional contingency tables. Logistic regression. Applications to social mobility, educational opportunity, and assortative marriage. Applied and computing focus. Prerequisite: 425 or STAT 395 or permission of instructor. Offered: jointly with STAT 536.

SOC 539 Selected Topics in Demography and Ecology (3, max. 9) Specialized problems in demography or ecology are covered; for example, migration, fertility, mortality, language, race and ethnic relations, metropolitan community. See quarterly announcement for specific problem to be covered.

SOC 542 Selected Topics in Group Processes (3) *Schmitt* Theories, methodology, and studies in the area of small-group research. Prerequisite: permission of instructor for nonmajors.

SOC 544 Seminar on Social Power (3) Examination of basic principles concerning power, influence, and authority in small groups, organizations, and communities.

SOC 546 Seminar on Symbolic Interaction (3) Focuses on several key areas in, and related to, the symbolic interactionist perspective (e.g., language, the self, the dramaturgic perspective, ethnomethodology, stigma, the social construction of social problems). Prerequisite: permission of instructor for nonmajors.

SOC 547 Social Cognition and Attribution (3) *Howard* Theories and research on social cognition and attribution. Theoretical and methodological debates on cognition. Sociological aspects of attribution. Prerequisite: 514 or equivalent.

SOC 550 Changing Patterns of Family Organization (3) Schwartz History of the family with emphasis on changes in European and American families since 1600. Concomitant changes in other institutions and their relation to changes in the family.

SOC 551 Family and Gender Relations (3) *Lye*, *Schwartz* Overview of major research findings on marriage, the family, and gender, including demographic trends, the place of children in society, courtship, the internal management of intimate relationships, divorce, and social policy.

SOC 554 Seminar in the Sociology of Religion (3) Survey of significant and active areas of theory and research in contemporary social scientific studies of religion.

SOC 555 Methods in Macro, Comparative, and Historical Sociology (3) *Chirot, Reitman* Systems of conducting research with qualitative methods brought to bear on broad questions.

SOC 556 The Evolution of the Family (3) van den Berghe Biological evolution of species-specific behaviors and forms of sociality linked to human mating, reproduction, and parenting. Cultural evolution of human systems of kinship and marriage as fitnessmaximizing adaptations to a wide range of habitats. Prerequisite: upper-division course in evolutionary theory, population genetics, behavioral ecology, primatology, or animal behavior. Offered: jointly with ANTH 556.

SOC 559 Seminar on Gender Roles (3) *Brines, Howard* Broad graduate-level introduction to theoretical issues concerning gender and society. Current state of empirical knowledge on the sociology of gender and strategies for research. Cross-cultural variations in conception of gender roles and how gender intersects with social institutions and social interactions.

242 COLLEGE OF ARTS AND SCIENCES / SPEECH AND HEARING SCIENCES

SOC 561 Society, Chronic Illness, and Disability (3) Hedrick Definition and assessment of chronic illness, disability, and health status. Analysis of chronic illness and disability using frameworks from social sciences and public health. Dimensions of disablement as they affect provision of health services. Research on effectiveness of services and approaches to improvement. Prerequisite: permission of instructor. Offered: jointly with HSERV 580; Sp.

SOC 562 Seminar in Comparative Race Relations (3) *van den Berghe* Cross-cultural approach to race and ethnic relations, including case studies from Africa and Latin America. Prerequisite: graduate standing in social sciences.

SOC 566, 567 Seminar in Complex Organizations (3, 3) Special topic seminars in the field of complex organizations or industrial sociology.

SOC 568 Social Mobility (3) Description and measurement of social mobility. Determinants of mobility and cross-national comparisons. Consequences of mobility for social behaviors. Emphasizes movement from the socioeconomic position of family of origin to adult position. Prerequisite: 518.

SOC 569 Demographic Studies of Stratification (3) *Hirschman* Overview of development of models of socioeconomic achievement ("status attainment" paradigm) in the field of stratification. Begins with work of Blau and Duncan. Covers elaboration of basic models to include race and ethnicity, social psychological variables, class, school and labor market effects, and other structural variables. Prerequisite: 513, 518.

SOC 574 Seminar in Methods of Criminological Research (3) *Bridges, Weis* Provides training in the technical analysis of published research in criminology; designs and processes studies in parole prediction, prediction of prison adjustment, and prediction of treatment effect.

SOC 581 Special Topics in Theory and the History of Sociological Thought (3, max. 9) Examination of current topics in theory and the history of sociological thought. Content varies according to recent developments in the field and the interests of the instructor.

SOC 582 Special Topics in Research Methods and Statistical Analysis in Sociology (3, max. 9) Examination of current topics in research methods and statistical analysis in sociology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 583 Special Topics in Demography and Ecology (3, max. 9) Examination of current topics in demography and ecology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 584 Special Topics in Social Psychology (3, max. 9) Examination of current substantive topics in social psychology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 585 Special Topics in Marriage and Family (3, max. 9) Examination of current substantive topics in marriage and the family. Content varies according to recent developments in the field and the interests of the instructor.

SOC 586 Special Topics in Organization and Industrial Sociology (3, max. 9) *Reitman* Examination of current substantive topics in organizational and industrial sociology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 587 Special Topics in Deviance and Social Control (3, max. 9) Examination of current substantive topics in deviance and social control. Content varies according to recent developments in the field and the interests of the instructor.

SOC 588 Special Topics in Stratification and Race Relations (3, max. 9) Examination of current substantive topics in stratification and race relations. Content varies according to recent developments in the field and the interests of the instructor.

SOC 589 Special Topics in Macrosociology (3, max. 9) Examination of current substantive topics in macrosociology. Content varies according to recent developments in the field and the interests of the instructor.

SOC 590 Special Topics in Sociology (3, max. 9) Examination of current substantive topics in sociology. Content varies according to recent developments in the field and the interests of the instructor. Topics covered in courses with this number lie outside those covered by other special topics courses numbered 581 through 589.

SOC 591 Political Sociology (3) Introduction to political sociology, considering the rise of the modern state, power, political organization, social movements, and other related topics.

SOC 600 Independent Study or Research (*) Credit/no credit only.

SOC 700 Master's Thesis (*) Credit/no credit only.

SOC 800 Doctoral Dissertation (*) Credit/no credit only.

Speech and Hearing Sciences

210 Eagleson

The speech and hearing sciences concern the processes and disorders of human communication. The undergraduate programs include the study of normal hearing and language development, speech acoustics, speech physiology and perception, hearing, the nature of language, speech and hearing disorders in children and adults, social and cultural aspects of communication disorders, and the clinical processes involved in identification, prevention, and remediation of those disorders.

Undergraduate Program

Director of Academic Services Melissa Johnson 202 Eagleson, Box 354875 (206) 685-7400 sphscadv@u.washington.edu

Bachelor of Science

Admission Requirements: Admission is competitive. The Admissions Committee reviews all applicants based on the following criteria: GPA (minimum 2.50 overall GPA guarantees consideration but not admission), personal statement reflecting an interest in and commitment to speech and hearing sciences; other evidence of a commitment to becoming a speech and hearing sciences major. Students may apply any time after they have earned 60 credits. The deadline to apply is Friday of the first week of the quarter. Applicants will be notified of the department's decision within four weeks. Applications and additional information are available in 202 Eagleson.

Suggested Introductory Course Work: PHYS 114, 117; PSYCH 101 or 102; ZOOL 118; a course in abnormal psychology and a course in developmental psychology; college mathematics; general physiology and the physiology of behavior.

Students who meet admission requirements are eligible for one of two options: Option I, General Academic, is intended to provide broad perspectives of the discipline, but not to prepare students specifically for careers in clinical speech pathology and audiology. It is appropriate for students with interests in education, health care, and communication. Option II, Speech and Hearing Sciences and Disorders, is intended for students interested in speech and hearing sciences and clinical speech-language pathology and audiology. (Note that graduate study is required for the professions of speech language pathologist and audiologist.)

Major Requirements

Core Requirements for Both Options: 31 credits in the following courses: SPHSC 250, 261, 302, 303, 304, 320, 371, 461. A GPA of 3.00 is required in core courses for students following Option II.

Option I, General Academic: Core requirements listed above; 22 credits from the following: SPHSC 305, 308, 405, 406, 425, 435, 445, 462, 499; ZOOL 118; a 3-5 credit college-level mathematics (not including MATH 098, 100, 102, 103) or statistics course (not including STAT 111); minimum 9 credits at the 200 level or above in psychology, educational psychology, or special education, or 300-level or above in linguistics.

Option II, Speech and Hearing Sciences and Disorders: Core requirements listed above; SPHSC 305, 308, 405, 406, 425, 445, 471, 481; ZOOL 118; a 3-5 credit college-level mathematics (not including MATH 098, 100, 102, 103) or statistics course (not including STAT 111); minimum 9 credits at the 200 level or above in psychology, educational psychology, or special education, or 300 level or above in linguistics.

Graduate Program

Graduate Program Coordinator 202 Eagleson, Box 354875 (206) 685-7400 sphscadv@u.washington.edu

The Department of Speech and Hearing Sciences offers the Master of Science and Doctor of Philosophy degrees. The program consists of a wide range of course work and seminars providing opportunities for the development of scholarly and professional competence in various areas of specialization: language acquisition, phonetics, speech production, hearing, hearing development, psychoacoustics, physiological acoustics, speech perception, computer recognition and generation of speech, and human communication disorders related to language, speech, and hearing. At the master's level, the specific focus is on the clinical procedures involved in their identification, prevention, and remediation of communicative disorders. To complement departmental curricula in various specialization areas, close interdisciplinary relationships are maintained with other University departments and offcampus centers. Advanced degrees in the speech and hearing sciences equip the student to do research, to teach at the college and university level, and to provide clinical services to the communicatively impaired.

Special Requirements

Prospective candidates for advanced degrees are expected to have earned 50-60 credits in the speech and hearing sciences at the undergraduate level, depending upon the specific area of graduate specialization chosen. The M.S. degree is intended primarily for students who desire careers as speech-language pathologists and audiologists, but who may or may not continue study for the Ph.D. degree. Students complete the academic and practical experience requirements for the Certificate of Clinical Competence of the American Speech-Language-Hearing Association. Students must also meet all Graduate School requirements for the master's degree. A thesis is optional. A non-clinical M.S. degree, requiring a thesis, may be designed as well. (Please contact the graduate program coordinator.) For the Ph.D. degree, individually tailored programs of study are developed to focus on specialized areas of interest within speech science, hearing science, experimental and clinical audiology, and speech/language pathology.

Financial Aid

A number of teaching and research assistantships are available for qualified graduate students. In addition, the department has traineeships/fellowships supported by the U.S. Department of Education, the National Institutes of Health, and the Department of Veterans Affairs.

Research Facilities

The department's research laboratories, as well as those of the Virginia Merrill Bloedel Hearing Research Center, contain sophisticated equipment for the collection and analysis of data related to the study of human communication and its disorders. The University Speech and Hearing Clinic and the Center on Human Development and Disability also provide laboratories to support basic and applied research in speech, language and hearing development and disorders, across the life span.

Faculty

Chair

Patricia K. Kuhl

Professors

Dale, Philip S. * 1968, (Adjunct); PhD, 1968, University of Michigan; psycholinguistics, language and cognitive development in normal and exceptional children.

Folsom, Richard C. * 1976; PhD, 1979, University of Washington; pediatric audiology, auditory evoked potentials.

Gates, George A. 1993, (Adjunct); MD, 1959, University of Michigan; otology/neurotology, cochlear implantation.

Kuhl, Patricia K. * 1976; MA, 1971, PhD, 1973, University of Minnesota; speech perception.

Miner, Adah L. 1965, (Emeritus); MA, 1948, University of Washington; PhD, 1962, University of Wisconsin; speech pathology, clinical supervision.

Minifie, Fred D. * 1971; PhD, 1963, University of Iowa; speech acoustics.

Olswang, Lesley B. * 1977; PhD, 1978, University of Washington; language development and disorders/ clinical processes.

Prins, David * 1969, (Emeritus); PhD, 1961, University of Michigan; fluency disorders.

Stoel-Gammon, Carol * 1984; PhD, 1974, Stanford University; developmental phonology and phonetics.

Thompson, Gary * 1966, (Emeritus); PhD, 1967, University of Minnesota; pediatric audiology, clinical evaluation.

Thompson, Marie D. * 1979, (Adjunct); PhD, 1970, University of Washington; special education (hearing impaired).

Wilson, Wesley * 1966, (Emeritus); PhD, 1969, University of Washington; audiology, infant assessment and aural rehabilitation.

Yantis, Phillip A. * 1965, (Emeritus); PhD, 1955, University of Michigan; audiology, clinical evaluation.

Yorkston, Kathryn * 1975, (Adjunct); PhD, 1975, University of Oregon; neurogenic communication disorders in adults.

Associate Professors

Burns, Edward M. * 1984; PhD, 1977, University of Minnesota; psychoacoustics.

Carpenter, Robert L. * 1970; PhD, 1969, Northwestern University; language and language disorders.

Coggins, Truman E. * 1974; PhD, 1976, University of Wisconsin; language disorders in children.

Cooker, Harry S. * 1976, (Emeritus); PhD, 1963, University of Iowa; speech physiology.

Moore, Christopher A. * 1995; MA, 1981, PhD, 1985, Purdue University; speech production, development, and physiology; acoustics, motor control, coordination.

Norton, Susan J. * 1991, (Adjunct); PhD, 1982, University of Washington; normal and non-normal hearing, specifically cochlear mechanics, in humans and animals.

Reich, Alan R. * 1977; PhD, 1975, University of Iowa; speech physiology and voice disorders.

Strand, Edythe A. * 1990; PhD, 1987, University of Wisconsin; neurogenic speech/language disorders.

Werner, Lynne A. * 1986; PhD, 1980, Loyola University (Chicago); auditory development, infant psychoacoustics.

Assistant Professors

Rogers, Margaret A. * 1992; PhD, 1992, University of lowa; spoken language production including semantics, phonology, and motor control; speech aphasia/ apraxia.

Souza, Pamela E. * 1996; MS, 1992, PhD, 1996, Syracuse University; hearing aids, effects of sensorineural hearing loss on speech perception.

Lecturers

Alarcon, Nancy B. 1988; MS, 1981, University of Wisconsin; speech-language disorders/adult.

Labiak, James M. 1974; MA, 1971, University of Washington; audiologic evaluation/calibration.

Sanborn, E. Sue 1988; MA, 1967, PhD, 1971, University of Washington; clinical audiology/aural rehabilitation.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

SPHSC 100 Voice and Articulation Improvement (3) VLPA For native speakers of English only. Voice production and the sound system of standard American speech. Speech standards, regional and social dialects, voice quality and basic language-oriented characteristics. Practice for improving speech style. Offered: AWSp.

SPHSC 111 The American English Sound System (2, max. 4) For non-native speakers of English only. Speech sounds of American English. Practice in listening and using American speech sounds and intonation patterns. Credit/no credit only. Offered: AWSpS. SPHSC 250 Human Communication and Its Disorders (5) I&S/NW Overview of normal and impaired human oral communication, including speech, language, and hearing disorders. Required for majors, open to nonmajors. Offered: A.

SPHSC 261 The Nature of Sound (3) NW Fundamental principles of sound and vibration with emphasis on examples relevant to the speech and hearing systems. Required for majors: open to nonmajors. Recommended: MATH 101. Offered: A.

SPHSC 300 Speech Science (5) NW Basic physiological and acoustical attributes of normal speech and hearing. Offered: AWSp.

SPHSC 302 Phonetics (2) VLPA Introduction to the description and classification of speech sounds with a focus on American English. Phonetic analysis of segmental and suprasegmental properties of speech. Practice using the International Phonetic Alphabet to transcribe normal and disordered speech patterns. Required for majors; open to nonmajors. Offered: W.

SPHSC 303 Language Science (3) VLPA Stoel-Gammon Introduction to techniques of linguistic analysis used in the study of phonology, morphology, syntax, and semantics. Required for majors; open to nonmajors. Offered: A.

SPHSC 304 Developmental Aspects of Communication (5) I&S Patterns of communicative development in English speaking children and adolescents. Introduction to the study of language and communication from a developmental perspective. Application to children with various types of communication impairments. Required for majors; open to nonmajors. Prerequisite: either SPHSC 303, ANTH 203, LING 200, or LING 400. Offered: Sp.

SPHSC 305 Speech and Language Disorders (5) NW Etiology and nature of developmental and acquired communication disorders across the lifespan. Behavioral characteristics of language delay and disorders, developmental apraxia of speech, phonological disorders, stuttering, acquired aphasia, apraxia of speech and dysarthria, craniofacial anomalies, and voice disorders. Required for majors; open to nonmajors. Prerequisite: SPHSC 302; SPHSC 304. Offered: A.

SPHSC 308 Social-Cultural Aspects of Communication (3) 1&S Introduction to human communication in context. Exploration of ways communication is influenced by context, including situational, social/ interpersonal, and cultural variables. Studies systems and cultural practices as they influence communication. Required for majors; open to nonmajors.

SPHSC 320 Anatomy and Physiology of Speech (5) NW Anatomy and physiology of the respiratory, laryngeal, and articulatory systems. Examples and laboratory work are directed toward clinical issues in Speech-Language Pathology. Required for majors; open to nonmajors. Offered: WSp.

SPHSC 371 Hearing Disorders (3) I&S/NW Introduction to abnormal hearing. Pathologies of the ear and their treatments. Audiometric correlates, communicative and social consequences of hearing loss. Overview of management of children and adults. Required for majors; open to nonmajors. Offered: W.

SPHSC 391 Practicum in Audiology (1-4, max. 10) Guided experiences in audiological assessment and aural rehabilitation of children and adults. Credit/no credit only. Offered: AWSpS.

SPHSC 405 Diagnosis of Speech and Language Disorders (3) NW Principles and procedures for the diagnosis of speech and language disorders. Required for majors. Prerequisite: SPHSC 305. Offered: W. SPHSC 406 Treatment of Speech and Language Disorders (3) NW Principles and procedures for planning, implementing, and evaluating treatment for speech and language disorders. Required for majors. Prerequisite: SPHSC 405. Offered: SpS.

SPHSC 425 Speech, Language, and the Brain (5) NW Historical perspectives and current research on speech acoustics, speech perception, and brain processing of speech information; speech development; techniques used in speech analysis; machine recognition of speech; brain imaging techniques, animal communication systems; speech evolution; implications for impaired populations. Offered: A.

SPHSC 435 Forensic Acoustics: Courtroom Applications of Speech and Hearing Sciences (3) I&S/ NW Reich Forensic applications of speech and hearing sciences: audio tape enhancement; tape authentication; speech transcription; speech level and audibility; speaker identification; voice stress analysis; gunshot, aviation, microphone, and telephone sound analysis; train and emergency vehicle audibility; the judicial process; being an effective expert witness.

SPHSC 445 Models of Speech Processing (3) NW Examines models and basic issues concerning how spoken language is processed. Presents current issues, theories, and research relative to the levels of processing entailed in producing and comprehending speech. Required for majors; open to nonmajors. Recommended: SPHSC 302; SPHSC 303; SPHSC 320; SPHSC 425.

SPHSC 449 Special Studies in Speech Pathology and Audiology (* max. 30) Selected special problems in speech pathology and audiology. Offered: S.

SPHSC 453 Augmentative and Alternative Communication: Implementation Strategies (3) NW Communication needs of nonspeaking individuals. Interdisciplinary approaches to the evaluation, selection, and implementation of aided and unaided communication augmentation systems. Recommended: basic course work in either SPHSC, OT, PT, or ENGR. Offered: jointly with REHAB 458; WS.

SPHSC 454 Augmentative and Alternative Communication: Access for Technology (3) NW Communication technology and motor evaluation of augmentative and alternative users. Issues related to hardware, software, switch placement and access issues with opportunities for clinical trials. Recommended: SPHSC 453 or REHAB 458. Offered: A.

SPHSC 461 Introduction to Hearing Science (5) NW Basic aspects of hearing and the ear and auditory nervous system. How the auditory system constructs an image of the acoustic environment. How attention and memory influence hearing. Effects of damage to the auditory system. Prerequisite: SPHSC 261 or PSYCH 333. Offered: jointly with PSYCH 461; WSp.

SPHSC 462 Hearing Development (3) NW Description of the changes that occur in human hearing during development. Consideration of the possible explanations for early immaturity. Prerequisite: SPHSC 461. Offered: even years; A.

SPHSC 471 Basic Audiometry (5) NW Theory and practice of the assessment of hearing function, including standard pure-tone audiometry, speech audiometry, and basic impedance audiometry. Required for majors. Prerequisite: SPHSC 371 which may be taken concurrently; SPHSC 461. Offered: WSp.

SPHSC 481 Management of Hearing Loss (3) NW Introduction to methods of communicative rehabilitation of person with hearing loss. Remediation principles of auditory and visual perception, amplification, communication strategies, and information counseling. Required for majors. Prerequisite: SPHSC 471. Offered: WS. **SPHSC 491** Audiology Practicum in Schools (2) Special projects in clinical audiology practicum, offered only in the school setting. Provides an opportunity for students to extend audiology practicum experiences into the school environment. Prerequisite: SPHSC 471. Offered: A.

SPHSC 499 Undergraduate Research (1-5, max.15) Offered: AWSpS.

Courses for Graduates Only

SPHSC 500 Clinical Methodology for Documenting Change (4) Introduction to clinical methodology for examining efficacy of treatments for individuals with communication problems. Students consider nature of intervention designed to alter communication disorders and types of accountability questions that need to be raised. They learn methodology for collecting and analyzing data to document effectiveness, effects, and efficiency of treatments.

SPHSC 501 Neural Bases of Speech, Language, and Hearing (4) Neuroanatomical and neurophysiological bases of language, hearing, sensory, and motor function. Special emphasis given to brain behavior correlates and behavioral consequences to speech, language, and hearing as a result of neurologic injury or disease.

SPHSC 502 Advanced Anatomy of Speech and Hearing Structures (2) Directed independent dissection and study of selected anatomic structures of the speech or hearing mechanisms.

SPHSC 503 Current Issues in Speech and Hearing Sciences (3) Application of experimental methods to research in speech and hearing sciences.

SPHSC 504 Research Methods in Speech and Hearing Sciences (3) Introduction to empirical methods in the speech and hearing sciences.

SPHSC 505 Clinical Research in Communication Disorders (3) Introduction to clinical research. Methodological issues concerning the evaluation of treatment for speech, hearing, and language disorders. Primary emphasis on time series designs. Prerequisite: 504 or permission of instructor.

SPHSC 510 Physiological Acoustics (3) Study of pertinent literature and experimental techniques incident to the physiology of the normal and abnormal auditory system. Prerequisite: 461.

SPHSC 511 Psychoacoustics (3) Review of significant literature and theory pertinent to normal auditory sensitivity, pitch, loudness, and other attributes of auditory sensation. Prerequisite: 461, 510.

SPHSC 514 Speech Physiology (3) Study of the physiological parameters of acoustic speech production. Prerequisite: 310, 311.

SPHSC 515 Speech Acoustics (3) Study of the acoustical correlates of the distinctive parameters of speech. Prerequisite: 310, 311, 514.

SPHSC 516 Speech Perception (3) Study of the perceptual and linguistic parameters of speech perception. Prerequisite: 310, 311, 515.

SPHSC 519 Seminar in Speech Science (2, max. 6)

SPHSC 520 Advanced Instrumentation for Speech and Hearing Sciences (3) Design and use of electronic and electroacoustic devices in the speech and hearing sciences. Four hours of laboratory required each week.

SPHSC 521 Instrumentation for Audiology (5) Introduction to basic instrumentation used in audiology and hearing science; detailed instruction in audiometer calibration including a review of current national and international standards pertinent to audiology; emphasis on use rather than theory. Prerequisite: permission of instructor. SPHSC 525 Speech Signal Processing (3) Theory, evaluation, and use of speech signal processing algorithms such as sampling, filtering, spectral analysis, autocorrelation, and speech synthesis. Laboratory assignments develop skills in using signal analysis and synthesis software applied to normal and pathological speech.

SPHSC 530 Language Disorders in Children (4) Consideration of the nature of language impairment in children, the types of children in whom language impairment is an important dimension, and approaches to treatment.

 SPHSC 531 Neurogenic Motor Speech Disorders
(4) The nature of apraxia of speech and dysarthria and the assessment and treatment of those disorders. Prerequisite: 501 or permission of instructor.

SPHSC 532 Neurogenic Language Disorders (4) Nature of aphasia and other neurogenic language disorders; evaluation and treatment of those disorders. Prerequisite: 501 or permission of instructor.

SPHSC 533 Medical Speech Pathology (3) Nature of speech pathology practiced in medical settings. Prerequisite: 501, 531, 532, and 535 or permission of instructor.

SPHSC 534 Dysphagia and Associated Disorders (3) Anatophysiologic bases of function and dysfunction associated with speech-language disorders. Mastication and swallowing problems, their causes, assessments, and management. Prerequisite: 501 or permission of instructor.

SPHSC 535 Voice and Resonance Disorders (4) Physiology, acoustics, and perception of voice quality and speech resonance. Etiology, evaluation, and treatment of voice and resonance disorders.

SPHSC 536 Assessment of Language Impairment in Children (4) Principles and procedures used in the assessment of speech- and language-disordered children and adolescents.

SPHSC 537 Fluency Disorders (4) Characteristics of fluent speech and the nature and treatment of stuttering in children and adults are studied in relation to normal speech production processes, human learning, principal explanations of stuttering, and treatment systems.

SPHSC 538 Management of Acquired Cognitive Disorders (2) Epidemiology, neuropathology, assessment, and management of acquired cognitive disorders. Focus on traumatic brain injury in adults and children, dementia, and right brain injury. Prerequisite: 501 and 532 or permission of instructor.

SPHSC 539 Articulation and Phonological Disorders (4) Patterns of normal phonological development. Nature, assessment, and treatment of phonological disorders.

SPHSC 540 Phonological Development (3) Selected topics in the developmental sequence of phonological systems in normal-speaking children. Relationships between possible phonological inventories and rule systems in different languages. Prerequisite: LING 451, 452, or permission of instructor. Offered: jointly with LING 540.

SPHSC 541 Syntactic and Semantic Development (3) Advanced topics in the study of first-language acquisition by children, including cognitive bases of language, cross-linguistic research, early semantic systems and their reorganization, learnability theory, and other theories of acquisition. Prerequisite: LING/ PSYCH 447 or permission of instructor. Offered: jointly with LING 541.

SPHSC 542 Counseling and Interactive Skills for Speech-Language Pathologists and Audiologists (2-3) Introduction to counseling theory and practice in speech-language pathology, audiology, and related fields. Provides opportunities for learning and practicing counseling skills. Addresses key counseling issues, including professional boundaries, intense emotions, and counselor's feelings and reactions. Prerequisite: graduate standing or permission of instructor.

SPHSC 550 Educational Speech-Language Pathology and Audiology (3) Study of administrative and clinical issues in implementation of programs to remediate communication disorders in the schoolaged population. Field experiences and professional issues. Open to nonmatriculated students with permission of director of student services. Prerequisite: graduate student in speech and hearing sciences or permission of instructor.

SPHSC 551 Advanced Practicum in Speech Pathology Evaluation (1-10) Laboratory experience in the evaluation of speech and language disorders. Credit/no credit only. Prerequisite: 536 and permission of instructor.

SPHSC 552 Advanced Practicum in Speech Pathology Management (1-10) Laboratory experience in the management of speech and language disorders. Credit/no credit only. Prerequisite: permission of instructor.

SPHSC 555 Preinternship in Speech and Hearing Sciences (1-10) Practicum in speech pathology or audiology designed to teach the clinical regimen of a participating professional center prior to assuming a full internship assignment. Credit/no credit only.

SPHSC 560 Studies in Speech Science and Disorders (3) Examines contemporary models and research paradigms in speech science and disorders. Topics include respiratory physiology, laryngeal physiology, aerodynamics of speech production, articulatory dynamics, speech acoustics, and speech perception.

SPHSC 561 Studies in Hearing Sciences and Disorders (3) Examines contemporary models and research paradigms in the area of hear science and disorders. Topics include psychoacoustics; amplification; electrophysiological evaluation; physiological acoustics; and perceptual consequences of hearing loss.

SPHSC 562 Studies in Language Science and Disorders (3) Examines research in the area of language science and disorders including word recognition and production; storage of retrieval of word form and meaning; comprehension and production of sentences and discourse; and language in social context. Topics examined relative to development, language impairments, and normal language processing.

SPHSC 563 Proseminar: Instructional Development Forum (1, max. 3) Olswang Emphasizes instructional techniques and issues as they relate to teaching in the discipline of communication sciences and its disorders. Topics include course development, grading, student-faculty relations, teaching methods, and diversity. Credit/no credit only. Prerequisite: graduate standing in Speech and Hearing Sciences.

SPHSC 565 Speech and Language Pathology Proseminar (1, max. 6) Consideration of professional issues and student and faculty research. Credit/no credit only.

SPHSC 566 Seminar in Speech-Language Development (2, max. 6) Prerequisite: permission of instructor.

SPHSC 567 Research Seminar in Speech and Hearing Sciences (1) A platform for the presentation and exchange of scientific information 9research data, new hardware and hardware development, scientific papers) resulting from ongoing research projects by graduate students and faculty within the Speech and Hearing Sciences department. Credit/no credit only.

SPHSC 569 Seminar in Speech-Language Pathology (2, max. 6)

SPHSC 570- 571 Assessment of Auditory Dysfunction I-II (4-4) Strategies and procedures in the auditory evaluation of hearing-impaired adults. Use of diagnostic tests in the evaluation of auditory pathologies. Laboratory required. Prerequisite: 471.

SPHSC 572 Pediatric Audiology (3) Assessment of auditory disorders in infants and young children. Emphasis on behavioral and electrophysiologic techniques and on the role of the audiologist in the clinical management of the young hearing-impaired child. Prerequisite: 471 or equivalent.

SPHSC 573 Physiologic Assessment of Auditory Function (4) Consideration of physiologic techniques that may be used to evaluate the normal and disordered auditory system. Outside laboratory required. Prerequisite: 461, 571.

SPHSC 574 Assessment of Balance Function (4) Examines normal anatomy and physiology of the peripheral and central vestibular system. Reviews peripheral and central vestibular disorders and treatment protocols. Major focus of assessment on electronystagmography with associated lab. Provides overview of rotational and posturography measures of balance function. Prerequisite: permission of instructor.

SPHSC 575 Medical Backgrounds in Audiology (3) Diseases and injuries of the ear resulting in reduced audition. Prerequisite: 571 or permission of instructor.

SPHSC 580 Rehabilitative Audiology (3) Explores technology to enhance communication effectiveness of hearing impaired persons. Selection and training in the use of assistive systems and cochlear implants. Advanced perception assessment and training methodology. Prerequisite: 571 and 583.

SPHSC 581 Management of Hearing-Impaired Children (3) Management of hearing-impaired children, including identification of target behaviors and methods for modification such as individualized therapy programs and parent and teacher involvement.

SPHSC 582 Hearing Aid Amplification (4) Acoustic amplification and methods of determining electroacoustic characteristics. Includes earmold technology. Prerequisite: 471 and 570 or permission of instructor.

SPHSC 583 Hearing Aid Selection (4) Consideration of strategies utilized in selecting acoustic amplification for the hearing impaired, including review of pertinent research literature. Prerequisite: 582 or permission of instructor.

SPHSC 584 Industrial and Community Hearing Conservation (2) Psychophysiological effects of environmental noise on man. Techniques of noise measurement and attenuation, including the planning of hearing conservation programs in industry and in the community. Prerequisite: 471 or permission of instructor.

SPHSC 588 Audiology Proseminar (1, max.3) Consideration of professional issues and student/ faculty research in specific areas of interest. Credit/ no credit only.

SPHSC 589 Seminar in Audiology (2, max. 6) Prerequisite: permission of instructor.

SPHSC 591 Advanced Practicum in Audiology (1-10) Credit/no credit only. Prerequisite: permission of instructor.

SPHSC 599 Research Practicum (* max. 12) Supervised laboratory experience in experimental approach to problems in speech and hearing sciences. Prerequisite: permission of instructor. SPHSC 600 Independent Study or Research (* max. 10) Prerequisite: permission of instructor.

SPHSC 601 Internship (3-10) Supervised field experiences in settings other than public schools. Credit/no credit only. Prerequisite: permission of instructor.

SPHSC 602 Internship in the Schools (3-10) Supervised field experience in a public school setting. Credit/no credit only. Prerequisite: permission of instructor.

SPHSC 700 Master's Thesis (* max. 10)

SPHSC 800 Doctoral Dissertation (* max. 10)

Speech Communication

205 Raitt

Speech communication is the study of the ways people share meanings and ideas in face-to-face interaction and in other forms of discourse. The Department of Speech Communication integrates theory, criticism, and practice in its study of the field. The major in speech communication is designed to enable students (1) to enhance their theoretical knowledge by understanding speech communication as a form of behavior, a social activity, and an aesthetic endeavor; (2) to improve their critical faculties through analysis of communicative behavior and discourse; and (3) to develop their abilities to apply theory and criticism to the practice of communication.

Undergraduate Program

Advisers Robert M. Post 205G Raitt, Box 353415 (206) 543-4665 Beatrice Restoule 206B Raitt, Box 353415 (206) 543-4896

Students in the department begin their study in introductory courses in public speaking, interpersonal communication, oral interpretation, and small-group decision making. In advanced courses, students study and analyze specialized forms of communication persuasion, argumentation, small-group facilitation, and communication in instructional settings and large organizations.

Bachelor of Arts

Admission Requirements:

1. A minimum of 30 quarter credits completed and a minimum 2.50 overall GPA (2.50 guarantees consideration, but not acceptance).

2. Students submit an application packet that includes (a) application form, (b) copies of transcripts and grade reports, and (c) statement.

3. Admission is competitive, based on GPA in speech, recommended courses, cumulative GPA, and statement.

4. Applications are due the end of the third week of the quarter. Admission is once a quarter: autumn, winter, and spring. Transfer students must be enrolled at the UW before applying to the major.

Suggested Introductory Course Work: At least 5 credits of SP CMU; at least 5 credits in each of the following areas: (a) English composition, (b) quantitative/symbolic reasoning, (c) Visual, Literary, & Performing Arts, (d) Individuals & Societies, and (e) the Natural World. *Major Requirements:* 60 approved credits, including (1) core requirements (33 credits)—10 credits from SP CMU 103, 140, 220; 5 credits from 334, 373; 15 credits from 305, 310, 382, 476; and 400; and (2) electives (27 credits): 15 credits of electives must be in courses at the 400 level, excluding 499. Cumulative GPA of 2.50 for all speech communication courses taken.

Minor

Minor Requirements: 30 credits including at least 5 credits in theory (SP CMU 102, 103, 203, 305, 306, 308, 310, 384, 385, 434, 455, 456, 471, 472, 474, 475, 476, 478); at least 5 credits in criticism (SP CMU 222, 329, 375, 382, 424, 425, 426, 428); and at least 5 credits in practice (SP CMU 140, 220, 235, 301, 320, 334, 335, 341, 349, 368, 369, 373, 421, 440, 442, 444, 446, 473). SP CMU 400 and 499 do not count toward the minor. Minimum 10 credits at the 400 level. Minimum grade of 2.0 required in each course.

Graduate Program

Graduate Program Coordinator 205 Raitt, Box 353415 (206) 543-4860

Graduate study is guided by the principle that speech communication is a unified discipline concerned with the ways persons share meanings and how shared meanings affect, and are affected by, persons and society at large. Specialty areas include communication theory; interpersonal, small-group, organizational, instructional, cultural/intercultural, and developmental communication; communication education; oral interpretation; freedom of speech; argument; rhetorical theory; criticism; and public address. Emphasis is on both social scientific and humanistic methods of scholarly inquiry.

The M.A. program with thesis requires at least 31 credits of approved course work and a thesis (9 credits). The M.A. program without thesis requires at least 45 credits, including a creative project.

The Ph.D. program usually requires four years of study beyond the baccalaureate degree.

Special Research Facilities

A laboratory complex accommodates studies on individuals and groups of varying sizes and includes oneway mirrors, as well as audio and video capabilities. A computer lab houses several personal computers, terminals, and printers that are linked to the University's computer systems. An instructional resource center provides support for the development and use of electronic and print materials for teaching and research.

Admission Qualifications

A background of academic work adequate for pursuit of the degree sought is required. Applicants for the Ph.D. are normally expected to have an M.A. in speech communication or communications. A GPA and Graduate Record Examination scores that give promise of success in the department's graduate program are required.

Financial Assistance

The department annually awards a number of teaching assistantships.

Faculty

Chair

Barbara P. Warnick

Professors

Baskerville, Barnet 1940, (Emeritus); PhD, 1948, Northwestern University; public address, rhetorical criticism. Bennett, W. Lance * 1974, (Adjunct); MPhil, 1973, PhD, 1974, Yale University; American politics, comparative politics, political communication, mass media, political culture.

Bosmajian, Haig A. * 1965; PhD, 1960, Stanford University; rhetoric, freedom of speech.

Nilsen, Thomas R. 1946, (Emeritus); PhD, 1953, Northwestern University; contemporary rhetorical theory, ethics of rhetoric.

Philipsen, Gerry F. * 1978; PhD, 1972, Northwestern University; ethnography of communication.

Scheidel, Thomas M. * 1976, (Emeritus); PhD, 1958, University of Washington; communication theory and research, small group processes.

Stamm, Keith R. * 1973, (Adjunct); PhD, 1968, University of Wisconsin; communities and newspapers, political communication, communication and environmental problems.

Staton, Ann Q. * 1977; PhD, 1977, University of Texas (Austin); instructional communication.

Stewart, John R. * 1969; PhD, 1970, University of Southern California; philosophy of qualitative research and interpersonal communication.

Warnick, Barbara P. * 1980; PhD, 1977, University of Michigan; rhetorical theory and criticism.

Associate Professors

Manusov, Valerie L. * 1993; PhD, 1989, University of Southern California; the interplay between communication behaviors and cognitions in interpersonal interactions.

Parks, Malcolm R. * 1978; PhD, 1976, Michigan State University; communication theory, interpersonal communication, research methods.

Post, Robert M. * 1960; PhD, 1961, Ohio University; oral interpretation of literature.

Rivenburgh, Nancy * 1989, (Adjunct); MS, 1982, Boston University; PhD, 1991, University of Washington; international communications, the media, intercultural relations and identity, international news.

Assistant Professors

Ceccarelli, Leah M. * 1996; PhD, 1995, Northwestern University; rhetoric of science, rhetorical criticism.

Gastil, John W. 1997; PhD, 1994, University of Wisconsin; the role of communication in the democratic process.

Shome, Raka * 1996; PhD, 1996, University of Georgia; postcolonial, cultural, and feminist studies, including the study of popular culture.

Senior Lecturer

Nyquist, Jody D. * 1966; MA, 1967, University of Washington; communication occurring in higher education and/or business/industry training units.

Lecturer

Coutu, Lisa 1997; PhD, 1996, University of Washington; culture and communication.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

SP CMU 102 Speech, the Individual, and Society (5) VLPA/I&S Provides a basic understanding of human speech communication. Covers three major areas: (1) the nature of human communication, including models, principles, settings; (2) elements of verbal and nonverbal communication; and (3) approaches to, and functions of, human communication including persuasion, interpersonal communication, argument, propaganda, free speech.

SP CMU 103 Interpersonal Communication (5) VLPA/I&S Emphasizes analyzing and understanding communication variables affecting human relationships, such as person perception, feedback, idea development, nonverbal cues. Focus on informal communication settings.

SP CMU 140 Oral Interpretation of Literature (5) VLPA Analysis and critical study of imaginative literature through the medium of oral performance in diverse cultural settings. Includes verse, prose, and drama.

SP CMU 203 Communication in the Classroom (5) VLPA/I&S Emphasizes understanding of the human communication process as it occurs in classrooms, as well as the practice of instructional communication. Designed to prepare prospective teachers to structure productive learning environments and to interact effectively with diverse student populations. Recommended for teacher candidates and prospective teachers of any subject area.

SP CMU 220 Introduction to Public Speaking (5) VLPA/I&S Designed to increase competence in public speaking and the critique of public speaking. Emphasizes choice and organization of material, sound reasoning, audience analysis, and delivery.

SP CMU 222 Speech Communication in a Free Society (3) VLPA/I&S Problems and arguments related to freedom of speech; early English writers on freedom of expression; background of freedom of speech in the United States; contemporary freedom of speech issues.

SP CMU 235 Parliamentary Procedure (3) VLPA/ I&S Principles and practice: a study of the historical bases and contemporary uses of parliamentary procedure; methods and practice in organizing and conducting public meetings.

SP CMU 301 Interviewing (5) VLPA/I&S Interviewing principles and practices, with emphasis on information gathering, selection, and persuasive interviews. Purposes and types of interviews, structure of interviews, and influence of communication patterns on interview outcomes.

SP CMU 305 Perspectives on Language in Speech Communication (5) VLPA/I&S Study of language and meaning, and survey of several influential modern approaches, including the semantic, general semantic, behavioral, and analytic philosophical. Relates theories of language and meaning to the study of speech communication.

SP CMU 306 Nonverbal Communication (5) VLPA/ I&S Reviews the nature of nonverbal communication as part of the human message system. Discusses research on the types of cues that are part of the nonverbal system, reviews some communicative functions allowed by nonverbal cues (e.g., emotional expressions, relational messages, deception, coordination, or interaction), and ties nonverbal communication to language.

SP CMU 308 Social Approaches to Interpersonal Communication (5) VLPA/I&S Exploration of several social approaches to interpersonal communication, emphasizing the theorists' philosophical orientations and practical applications.

SP CMU 310 The Rhetorical Tradition in Western Thought (5) VLPA/I&S Analysis of the major theories that prescribe and describe the use of symbols to change attitudes and behavior. Principal emphasis is placed upon defining the nature and scope of rhetoric and upon analyzing the art's underlying assumptions about human beings as symbol users. Some background in history, philosophy, and literature is desirable. **SP CMU 320 Public Speaking (5) VLPA/I&S** Practice in preparation and presentation of a variety of types of public speeches based on study of their structure and form; emphasis on organization and delivery. Prerequisite: SP CMU 220.

SP CMU 329 Rhetoric of Social and Political Movements (5) VLPA/I&S Inquiry into the rhetoric of social and political movements; emphasis on investigation of persuasive discourse; examination of the nonverbal symbols of persuasion.

SP CMU 334 Essentials of Argument (5) VLPA/l&S Argument as a technique in the investigation of social problems; evidence, proof, refutation, persuasion; training in argumentative speaking.

SP CMU 341 Oral Interpretation of Children's Literature (3) VLPA Study and performance of children's literature, emphasizing oral interpretation as a method of teaching literature in the elementary school.

SP CMU 349 Readers Theatre (2, max. 10) VLPA Preparation and public presentation of programs of literary works. Credit/no credit only.

SP CMU 368 Small-Group Facilitation (3) VLPA/ I&S Methods for facilitating discussion in small groups formed for the purposes of instruction. Emphasis is on each student's practical application of the insights derived. Corequisite: SP CMU 369; recommended: SP CMU 102.

SP CMU 369 Small-Group Facilitation Practicum (2) VLPA/I&S Implementation of the theoretical principles taught in 368. Emphasis on direct application of those principles to an assigned group of students from 102. Corequisite: SP CMU 368.

SP CMU 373 Principles of Group Discussion (5) VLPA/I&S Discussion as an everyday community activity, with emphasis on the informal cooperative decision-making methods of committee, conference, and roundtable groups.

SP CMU 375 Ethics in Interpersonal and Public Speech Communication (5) VLPA/I&S Ethical problems in interpersonal and public speech communication. Alternative ways of evaluating and responding to moral problems in a variety of communication situations.

SP CMU 382 Introduction to Communication Research (5) I&S Comprehensive introduction to research methods employed in basic and applied communication research, including sample surveys, content analysis, experimentation, and elementary statistics. Offered: jointly with CMU 382.

SP CMU 384 Cultural Codes in Communication (5) VLPA/I&S Social and cultural codes in interpersonal communication, with special reference to contemporary American subcultural groups and their communication patterns.

SP CMU 385 Fieldwork in Communication Studies (5) Theory and practice of participant observation, intensive interviewing, and discourse analysis in the study of communicative practices.

SP CMU 400 Theoretical Backgrounds in Speech Communication (3) VLPA/I&S Speech viewed as a form of individual and social behavior, with emphasis on the function of symbols in speech communication in informal and societal settings. The development of speech as a field of study and its contemporary emphases.

SP CMU 421 Advanced Speech Composition (5) VLPA/I&S Preparation and delivery of public speeches with emphasis on style, thought organization, and proof. Analysis of model speeches. Recommended: SP CMU 220.

SP CMU 424 Rhetorical Perspectives in Intellectual Revolutions (5) VLPA/I&S Rhetorical investigation of selected major writings. Examines the rhetorical dimension in the progress of ideas through analysis of documents of major intellectual revolutions as persuasive works. Relates principal revolutions in Western thought to contemporary controversy. Examines Rights of Man, Communist Manifesto, The Origin of Species.

SP CMU 425 American Public Address (5) VLPA/ I&S Historical and critical study of rhetorical discourse and movements and of their relationship to American political, social, and intellectual life. Examines the discourse of the American revolution, debates on the ratification of the federal constitution, the slavery question, Reconstruction, populism, imperialism.

SP CMU 426 American Public Address (5) VLPA/ **I&S** Historical and critical study of rhetorical discourse and movements and of their relationship to American political, social, and intellectual life. Examines Lyceum and Chautauqua movements, progressive era, World War I, the New Deal, isolationism, the Cold War era, civil rights movement, anti-nuclear movement.

SP CMU 434 Argumentation Theory (5) VLPA/I&S Theory and research on the structure and properties of argument, argument fields, argument modeling, the influence of audience, argument criticism, and related topics. Prerequisite: either SP CMU 220 or SP CMU 334.

SP CMU 440 Oral Interpretation of Poetry (3) VLPA Study of forms of verse, representing various literary movements and cultures, through analysis and oral presentation. Recommended: SP CMU 140.

SP CMU 442 Oral Interpretation of Fiction (3) VLPA Analysis and oral interpretation of narrative perspectives in diverse works of prose fiction. Recommended: SP CMU 140.

SP CMU 444 Oral Interpretation of Modern and Contemporary Dramatic Literature (3) VLPA Study of dramatic literature from Ibsen to the present for purposes of developing understanding, appreciation, and ability to communicate its meaning. Playwrights from various cultures represented. Recommended: SP CMU 140.

SP CMU 455 Communication in Children's Environments (5) VLPA/I&S Study of the communication capacity of children with emphasis on the analysis of the communication process in formal and informal learning environments. Includes examination of communication-based educational approaches and instructional strategies.

SP CMU 456 Communication in Adolescent Environments (5) VLPA/I&S Study of the communication process in youth environments with a primary focus on formal and informal learning. Includes critical analysis of communication in contemporary instructional settings and the development of communication strategies for teaching and learning.

SP CMU 471 Persuasion (3) VLPA/I&S Analysis of the ways in which beliefs, values, attitudes, and behavior are deliberately influenced through communication.

SP CMU 472 Empirical Approaches to Interpersonal Communication (5) I&S Examination of theories and research on the development and deterioration of interpersonal relationships. Emphasis on the nature of interpersonal interaction, the role of language and nonverbal communication in relationships, functional and dysfunctional interaction patterns, and the dynamics of interpersonal networks.

SP CMU 473 Problems of Discussion Leadership (3) VLPA/I&S Critical analysis of leadership in committee and conference, with emphasis on the development of speech effectiveness in the cooperative achievement of goals. Prerequisite: SP CMU 373. SP CMU 474 Communication, Conflict, and Cooperation (5) VLPA/I&S Role of communication in resolving informal conflicts and in facilitating interpersonal and intergroup cooperation. Review of empirical literature. In-class simulations and exercises.

SP CMU 475 Organizational Communication (5) VLPA/I&S Role of communication in organizations, the types of problems arising, and approaches to their resolution. Communication in the human relations and productivity of organizations. Applying communication skills in various organization roles.

SP CMU 476 Models and Theories in Speech Communication (5) I&S Examination of selected theories and models of speech communication as well as of criteria applicable to them. Emphasis on the nature and function of theories and models, especially as these relate to basic principles underlying the scientific interpretive, and critical study of speech communication phenomena. Offered: jointly with CMU 476.

SP CMU 478 Intercultural Communication (5) I&S Investigates intercultural communication theory and its application for varying levels of human interaction: interpersonal, intergroup, and international. Recommended: SP CMU 384. Offered: jointly with CMU 421.

SP CMU 482 Computer-Mediated Interpersonal Communication (5) I&S Examination of relationships and groups formed through computer-medi ated interpersonal communication. Focus on how people manage interactions and identities, develop interpersonal relationships, engage in collaboration and conflict, and develop communities in virtual environments. Involves both the study and use of network-based computer-mediated systems.

SP CMU 496 Honors Seminar (5) VLPA/I&S Preparation for researching and writing senior honors thesis.

SP CMU 497 Honors Thesis (5, max. 15) VLPA/I&S Researching and writing honors thesis.

SP CMU 498 Special Topics in Speech Communication (2-5, max. 15) Lecture, seminar, and/or team study. Topics vary.

SP CMU 499 Undergraduate Research (1-5, max. 10)

Courses for Graduates Only

SP CMU 501 Introduction to Graduate Research in Speech Communication (3)

SP CMU 506 Nonverbal Communication Theory and Research (5) Primary theories and research on nonverbal communication. Focus on developmental and social aspects of nonverbal cues, including review of communicative functions served by nonverbal channels. Topics include tie of paralinguistic systems to language, deception, relational messages, acquisition of cue use, and emotional expression. Research methods for studying nonverbal behavior also covered.

SP CMU 510 Rhetoric in Society (4) Selected works of major rhetorical theorists such as Aristotle, Cicero, Augustine, Campbell, Whately, Perelman, and Burke. Examines how rhetorical themes are responsive to and symptomatic of societal conditions and values.

SP CMU 521 Studies in Greek and Roman Rhetoric (5) Development of the Greek tradition in rhetorical theory, criticism, and pedagogy from Homer to Augustine; analysis of the contributions of major figures and works to that tradition.

SP CMU 523 Studies in Renaissance and Modern Rhetoric (5) Development of rhetorical theory from the mid-sixteenth to early nineteenth centuries. Examines the contributions of Wilson, Ramus, Bacon, Port Royalists, Vico, Campbell, Blair, and Whately. SP CMU 524 Studies in Contemporary Rhetoric(5) Critical analysis of theories of twentieth-century rhetoric.

SP CMU 525 Rhetorical Criticism (5) History and method of rhetorical criticism. Application of critical standards to various rhetorical artifacts.

SP CMU 526 The Rhetoric of Scientific Revolutions (3) Examines selected topics in the history of science, underscoring the interplay of language, situation, culture, and prior tradition in the quest for exact knowledge of the natural world. Focuses on one science: biology, geology or psychology, examining selected revolutions within that discipline.

SP CMU 530 Philosophical Issues in Rhetorical and Communication Theory (5) Survey of selected philosophical controversies among speech communication theorists, and analysis of one philosopher's approach to communication. Topics include paradigm descriptions of communication, rhetoric and knowledge, linguistic analysis and communication, hermeneutics and dialogue.

SP CMU 543 Studies in Theories of Performance and Criticism (3)

SP CMU 550 Instructional Design in Speech Communication (5) Research, theory, and practice relevant to instructional design in speech communication. Instructional models, writing instructional objectives, strategies, and evaluative measures.

SP CMU 551 Proseminar on Teaching Speech Communication (1-3, max. 9) Rotating special-topics proseminar for teaching assistants on issues related to teaching speech communication and professional development. Content varies. Topics include cultural diversity, reflective teaching, developing a teaching portfolio, assessing oral communication, discussion teaching. Credit/no credit only.

SP CMU 555 Instructional Communication (5) Communication in instructional environments. Nature of instructional communication, paradigms for instructional communication research, quantitative and qualitative approaches to instructional communication, verbal and nonverbal classroom interaction.

SP CMU 560 Social Scientific Perspectives on Interpersonal Communication (5) Social scientific research and theory on the role of communication in developing and maintaining interpersonal relationships. Nature of interpersonal communication, relationship change processes, interpersonal control through communication, and personal communication networks.

SP CMU 570 Organizational Communication (5) Examination of social scientific theory and research on communication in organizations. Topics include quantitative and qualitative approaches to process of organizational communication, function and structure of macro networks, superior-subordinate relationships, and the role of communication in organizational change, development, and effectiveness.

SP CMU 572 Theories of Human Communication (4) Description and evaluation of theoretical approaches to the study of human communication. Exploration of their applications to specific subject areas.

SP CMU 575 Philosophy of Interpretive Research in Communication (5) Introduces interpretive researchers to foundations of this approach in Dilthey, Gadamer, Schutz, Weber, Wittgenstein, and others. Emphasizes Gadamer's philosophical hermeneutics.

SP CMU 577 Fieldwork Research Methods (3-6, max. 12) Methods of fieldwork research in communication studies, with emphasis on participant observation, ethnography, and discourse analysis. **SP CMU 580 Research Methods in Speech Communication (5)** Application of behavioral research principles to problems in quantification, design, and analysis of data in speech communication research.

SP CMU 581 Advanced Research Methods in Speech Communication (4) Application of social scientific methods to problems in quantification, design, and analysis of communication data. Emphasis on advanced data collection concerns, multivariate data analysis, and computer operation. Prerequisite: 580.

SP CMU 584 Ways of Speaking (5) Theory and literature of the ethnography of communication, with special emphasis on the descriptive-comparative approach to culturally patterned styles of communicative conduct. Offered: jointly with ANTH 584.

SP CMU 588 Small-Group Communication (5) Major small-group theories relevant to communicative behavior. Descriptive and experimental research findings in current speech communication literature. Prerequisite: 473.

SP CMU 590 Seminar in Theory of Speech Communication (3-4, max. 12)

SP CMU 592 Seminar in Public Address (3-4, max. 12)

SP CMU 593 Seminar in Rhetorical Theory (3-4, max. 12)

SP CMU 594 Seminar in Oral Interpretation (2, max. 6)

SP CMU 595 Seminar in Speech Communication Education (3-4, max. 12)

SP CMU 597 Seminar in Interpersonal Communication (3-4, max. 12) Examination of experimental literature on selected topics. Subject changes from year to year; topics include conflict resolution, information processing, communication networks, feedback systems, audience composition research, communication effects.

SP CMU 598 Small-Group Discussion and Communication (3-4, max. 12) Introduction to study of communication within small problem-solving groups. Theoretical as well as methodological dimensions of selected studies. Emphasis on role communication in decision-making process. From a communication viewpoint, examines such topics as conformity, consensus, interpersonal attraction, and emergent phases of discussion.

SP CMU 600 Independent Study or Research (*)

SP CMU 700 Master's Thesis (*)

SP CMU 800 Doctoral Dissertation (*)

Statistics

B313 Padelford

Probability provides the conceptual foundation and mathematical language for the logic of uncertainty and induction. Statistics is concerned with procedures for the acquisition, management, exploration, and use of information in order to learn from experience in situations of uncertainty and to make decisions under risk. Statistical practice includes design of experiments and of sampling surveys; exploration, summarization, and display of observational data; drawing inferences, and assessing their uncertainty; and building mathematical models for systems with stochastic components.

By means of joint faculty appointments, courses, and seminars, the Department of Statistics maintains active academic contacts with the School of Business Administration; the College of Engineering; the departments of Applied Mathematics, Atmospheric Sciences, Cardiology, Computer Science, Economics, Genetics, Geological Sciences, Geophysics, Hematology, Mathematics, Psychology, Radiology, Sociology, and Zoology; the National Research Center for Statistics and the Environment; the Quantitative Ecology and Resource Management program; the Applied Physics Laboratory; and the Applied Statistics Division of the Boeing Company. The department has an especially close relationship with the Department of Biostatistics.

Undergraduate Program

Advisers Thomas Freng Kristin Sprague B309 Padelford, Box 354322 (206) 543-8296

Bachelor of Science

The Department of Statistics cooperates with the departments of Applied Mathematics, Computer Science and Engineering, and Mathematics in an interdepartmental Bachelor of Science degree program in Applied and Computational Mathematical Sciences. The program builds a broad foundation in the mathematical sciences and offers the option of specializing in statistics though choice of the Statistics option. Degree requirements can be found in the Applied and Computational Mathematical Sciences section.

The department also offers its own Bachelor of Science degree program. This program serves the need of future statisticians in science, industry, business, and government, as well as providing the necessary back-ground and stimulation for graduate study. It is also well suited for double-majoring in statistics and, especially, either mathematics or computer science.

Admission Requirements:

1. Completion of 45 credits, including MATH 124, 125, 126; a minimum 8 credits from one of the following groups of courses: ASTR 101, 102, 190, 201, 301; CHEM 120, 142, 145, 152, 155; GENET 351, 372, 453, 455; PHYS 114, 115, 116, 117, 118, 119, 121/131, 122/132, 123/133, 210, 211, 212; and one course from STAT 220, 301, 311, 390, or an approved substitute. The 8 credits must be from within the same group (e.g., CHEM 142, 152).

2. Minimum grade of 2.0 in each of the above listed prerequisites and a cumulative GPA of 2.80 for these courses.

 Students wishing to declare a statistics major must apply by bringing transcripts that include completed prerequisites to B309 Padelford during any quarter.

Suggested Introductory Course Work: CSE/ENGR 142; CSE 143; MATH 307, 308, 309, 327, 328. Additional courses in the sciences and quantitative methods. Speaking to the undergraduate adviser earlier than this is appropriate.

Additional Information: It is recommended that the student declare the major only after completion of STAT 341.

Major Requirements: MATH 124, 125, 126; 307, 308, 309; 327, 328 (the honors sequences in calculus may replace the corresponding regular sequences); ENGR/CSE 142, CSE 143; one course from STAT 220, 301, 311, 390, or approved substitute (311 is recommended); 394, 395, 341, 342, 421, 423. Electives (at least 9 credits): one upper-division course in statistics/ mathematics or computer science, plus two upperdivision courses in any discipline (including but not limited to statistics/mathematics and computer science), all subject to prior approval by the statistics adviser. The first elective gives an opportunity to define the flavor of the major within these interrelated mathematical fields, and the other two give a chance to broaden the basis of the major into a special-interest area, chosen from the full range of upper-division courses offered at the University. However, three Department of Statistics courses is the most common choice. Any other choice must fit into an approved coherent plan. A minimum grade of 2.0 is required in all courses used to satisfy major requirements. A minimum cumulative GPA of 2.50 in required statistics courses is necessary.

Minor

Minor Requirements: MATH 124, 125, 126; STAT 311 or approved substitute, 394, 341, 342, 421 (or 423); one elective from the following choices: 395 (strongly recommended), 396, 403, 423, 427, 428, CSE/ENGR 142, MATH 307, 308, AMATH 351, 353. A minimum grade of 2.0 is required in all courses used to satisfy minor requirements.

Graduate Programs

Graduate Program Coordinator B309 Padelford, Box 354322 (206) 543-8296

The graduate programs emphasize both the theory and application of statistics, including probability theory, mathematical statistics, data analysis, statistical computing, and scientific applications. An ongoing statistical consulting program provides the students with practical experience in using statistics and in communicating with clients. Under faculty supervision, participants in the program assist members of the University community in applying statistical methodology. The department offers Master of Science and Doctor of Philosophy degrees.

Admission Requirements

Background in mathematics, statistics, or a quantitative field, with 30 or more quarter credits in mathematics and statistics, to include a year of advanced (second-year) calculus, one course in linear algebra, and one course in probability theory; Graduate Record Examination scores, including the Advanced Mathematics subject test; and three letters of recommendation from appropriate former or current faculty.

Master of Science

Graduation Requirements: In addition to Graduate School requirements, at least twelve approved courses numbered 400 or above with a value of 36 credits or more; of these, at least six courses must be numbered in the 500 series (exclusive of STAT 512, 513) with a value of 18 credits or more, and with a coherent theme. Approved proficiency in statistical computing. Satisfactory participation in statistical computing. Satisfactory participation in statistical completion of a master's thesis can count as up to three courses worth 9 credits, but cannot replace any of the six courses in the 500 series mentioned above. All programs must be approved in advance by the departmental graduate program coordinator.

Doctor of Philosophy

Graduation Requirements: In addition to Graduate School requirements, appropriate training in statistics and related sciences. Appropriate General Examination of basic graduate-level knowledge in statistics and probability (including two preliminary examinations). Satisfactory performance in three approved corecourse sequences chosen from STAT 570, 571, 572; 581, 582, 583; 521, 522, 523; 534, 535, 538; and 516, 517, 518. (In some circumstances, other graduatelevel mathematical science courses may be used as a substitute.) Approved performance in statistical consulting (typically STAT 598 and 599). Demonstration of proficiency in computing. 1 credit of STAT 590 per guarter. Demonstration of ability to read technical literature in Chinese, French, German, Russian, or Spanish. Dissertation. Final Examination.

Computing Facilities

Computing facilities in the Department of Statistics rank among the best of any statistics programs in the country and reflect the department's expertise in the field of statistical computing. For graduate instruction, the department relies primarily on the Mathematical Sciences Computing Center's laboratory of UNIX workstations, PCs and Macintoshes. For research purposes, the department has a network of approximately 20 DEC, Sun, and Silicon Graphics workstations, an increasing number of PCs, and numerous X-terminals. Support is provided by a systems programmer/administrator.

Financial Aid

The department annually awards a limited number of teaching and research assistantships for the support of new and continuing graduate students on the basis of academic promise.

Faculty

Chair

Werner Stuetzle

Professors

Bass, Richard * 1977, (Adjunct); PhD, 1977, University of California (Berkeley); probability theory.

Besag, Julian E. * 1989; BS, 1963, University of Birmingham (UK); spatial statistics, applications to epidemiology, image analysis, agriculture; Bayesian inference.

Birnbaum, Z. W. * 1939, (Emeritus); PhD, 1929, John Casimir State University (Poland); probability, mathematical statistics (distribution-free statistics, reliability theory).

Burdzy, Krzysztof * 1988, (Adjunct); PhD, 1984, University of California (Berkeley); probability theory.

Felsenstein, Joseph * 1968, (Adjunct); PhD, 1968, University of Chicago; evolution and population genetics.

Fleming, Thomas Richard * 1984; MA, 1974, PhD, 1976, University of Maryland; survival analysis, cancer clinical trials, AIDS research, sequential analysis.

Ford, E. David * 1985, (Adjunct); PhD, 1968, University College, London (UK); forest ecology and ecophysiology, modeling, spatial statistics.

Guttorp, Peter * 1980; PhD, 1980, University of California (Berkeley); point processes, stochastic models, applications to hydrology and atmospheric science.

Kronmal, Richard A. * 1964; PhD, 1964, University of California (Los Angeles); nonparametric density estimation, computer algorithms, cardiovascular data analysis, clinical trials.

Lunneborg, Clifford E. * 1962, (Emeritus); PhD, 1959, University of Washington; psychometrics, multivariate models, individual differences in cognition.

Martin, R. Douglas * 1974; PhD, 1969, Princeton University; robust methods, time series, wavelets and neural networks.

Nelson, Charles R. * 1975, (Adjunct); PhD, 1969, University of Wisconsin; time series analysis, economic statistical analysis, advanced macroeconomic theory.

O'Sullivan, S. Finbarr * 1987; PhD, 1983, University of Wisconsin; nonparametric curve estimation, inverse problems, radiology.

Perlman, Michael D. * 1979; PhD, 1967, Stanford University; multivariate analysis, decision theory, probability inequalities, graphical Markov models.

Raftery, Adrian Elmes * 1985; Doct, 1980, Universite de Paris (France); Bayesian statistics, spatial statistics, clustering, whales, sociology and demography.

Scholz, Friedrich-Wilhelm * 1972, (Affiliate); PhD, 1971, University of California (Berkeley); large sample theory, reliability, risk and tolerance analysis, bootstrap, extreme value theory.

Shorack, Galen * 1965; PhD, 1965, Stanford University; empirical processes, robustness, nonparametric statistics, reliability, large sample theory.

Siegel, Andrew F. * 1983, (Adjunct); MS, 1975, PhD, 1977, Stanford University; statistics, computing, corporate finance, investments, data analysis.

Stuetzle, Werner * 1984; PhD, 1977, Swiss Federal Institute of Technology; nonparametric methods in multivariate analysis, statistical applications of computer graphics.

Thompson, Elizabeth A. * 1985; PhD, 1974, Cambridge University (UK); statistical analysis of human genetic data, statistics of conservation and computational biology.

Wellner, Jon A. * 1983; PhD, 1975, University of Washington; large-sample theory, asymptotic efficiency, empirical processes, semiparametric models.

Associate Professors

Haynor, David R. * 1984, (Adjunct); PhD, 1971, University of California (Berkeley); MD, 1979, Harvard University; neuroradiology, neurosurgery.

Madigan, David * 1990; PhD, 1990, Trinity College (Ireland); graphical models, Bayesian inference, computer supported learning, information retrieval.

Percival, Donald B. * 1979, (Affiliate); PhD, 1983, University of Washington; time series and signal analysis, computational environments, statistics of clocks.

Riskin, Eve A. * 1990, (Adjunct); MS, 1985, PhD, 1990, Stanford University; image compression and processing, and signal processing.

Sampson, Paul D. * 1981, (Research); PhD, 1979, University of Michigan; spatial statistics and environmetrics, morphometrics, statistical consulting.

Zeh, Judith * 1961, (Research); PhD, 1979, University of Washington; estimation of whale population size and dynamics, statistics in infectious disease research.

Assistant Professors

Gneiting, Tilmann 1997, (Acting); PhD, 1997, Bayreuth University (Germany); spatial and environmental statistics, positive definite functions.

Reynolds, Joel Howard 1989, (Acting); PhD, 1996, University of Washington.

Richardson, Thomas S. * 1996; PhD, 1996, Carnegie Mellon University; graphical models, algorithmic model selection, Bayesian inference, causal models.

Senior Lecturer

Morita, June G. * 1982; MA, 1978, PhD, 1985, University of California (Berkeley); sample surveys, quality control, survival analysis, statistical data analysis, statistics education.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

STAT 111 Lectures in Applied Statistics (1) NW Weekly lectures illustrating the importance of statisticians in a variety of fields, including medicine and the biological, physical, and social sciences. Contact instructor for information on emphasized fields of applications. Credit/no credit only. Offered: jointly with BIOST 111; Sp.

STAT 220 Basic Statistics (5) NW, QSR Objectives and pitfalls of statistical studies. Structure of data sets, histograms, means, and standard devia-

tions. Correlation and regression. Probability, binomial and normal. Interpretation of estimates, confidence intervals, and significance tests. (Students may receive credit for only one of 220, 301, 311, and ECON 311.) Offered: AWSpS.

STAT 301 Basic Statistics with Applications (5) NW, QSR Objectives, pitfalls of statistical studies. Structure of data sets, histograms, means, standard deviations. Correlation, regression. Probability, binomial and normal. Interpretation of estimates, confidence intervals, significance tests. Application to problems in student's major field. (Students may receive credit for only one of 220, 301, 311, and ECON 311.) Prerequisite: either MATH 111 or MATH 120. Offered: W.

STAT 311 Elements of Statistical Methods (5) NW, QSR Elementary concepts of probability and sampling; binomial and normal distributions. Basic concepts of hypothesis testing, estimation, and confidence intervals; t-tests and chi-square tests. Linear regression theory and the analysis of variance. (Students may receive credit for only one of 220, 301, 311, and ECON 311.) Prerequisite: either MATH 111 or MATH 120. Offered: AWSpS.

STAT 341, 342 Introduction to Probability and Statistical Inference I, II (4, 4) NW Brief review of: sample spaces, random variable, probability. Distribution: binomial, normal, Poisson, geometric. Followed by: expectation, variance, central limit theorem. Basic concepts of estimation, testing, and confidence intervals. Maximum likelihood estimators and likelihood ratio tests, efficiency. Introduction to regression. 341 - Prerequisite: STAT/ECON 311 which may be taken concurrently; MATH 126; STAT/MATH 394. 342 - Prerequisite: STAT 341. Offered: W, Sp.

STAT 361, 362 Statistics for Social Scientists (3, 3) NW Introduction to statistical methodology, measurement scales, design of surveys and experiments, descriptive statistics, exploratory data analysis, probability distributions, use of computer packages for statistical data analysis, point and interval estimation hypothesis testing. Comparisons, two sample tests, nonparametric methods, measuring and testing association, correlation, simple linear and multiple regression, time series, multivariate data analysis, analysis of variance (ANOVA) and analysis and covariance (ANCOVA). Computers used, but no prior experience required. 361 - Prerequisite: STAT/ECON 311. 362 - Prerequisite: either STAT/ECON 311 or STAT 361. Offered: A,W.

STAT 390 Probability and Statistics in Engineering and Science (4) NW Concepts of probability and statistics. Conditional probability, independence, random variables, distribution functions. Descriptive statistics, transformations, sampling errors, confidence intervals, least squares and maximum likelihood. Exploratory data analysis and interactive computing. Students may receive credit for only one of 390, STAT/ECON 481, and ECON 580. Prerequisite: either MATH 307 or MATH 327; either MATH 205 or MATH 308. Offered: jointly with MATH 390; AWSpS.

STAT 394 Probability I (3) NW Sample spaces; basic axioms of probability; combinatorial probability; conditional probability and independence; binomial, Poisson, and normal distributions. Prerequisite: either 2.0 in MATH 126 or 2.0 in MATH 136: recommended: MATH 324 or MATH 327. Offered: jointly with MATH 394; AWS.

STAT 395 Probability II (3) NW Random variables; expectation and variance; laws of large numbers; normal approximation and other limit theorems; multidimensional distributions and transformations. Prerequisite: STAT/MATH 394. Offered: jointly with MATH 395; WSpS.

STAT 396 Probability III (3) NW Characteristic functions and generating functions; recurrent events

and renewal theory; random walk. Prerequisite: either 2.0 in MATH 395 or 2.0 in STAT 511. Offered: jointly with MATH 396; Sp.

STAT 403 Introduction to Resampling Inference (4) NW Introduction to computer-intensive data analysis for experimental and observational studies in empirical sciences. Students design, program, carry out, and report applications of bootstrap resampling, rerandomization, and subsampling of cases. Credit allowed for 403 or 503 but not both. Prerequisite: either STAT 220, STAT 301, STAT/ECON 311, STAT 341, STAT 361, STAT/MATH 390, or STAT/ ECON 481. Offered: Sp.

STAT 421 Applied Statistics and Experimental Design (4) NW Computer-aided data analyses using comparisons between batches, analysis of variance and regression. Evaluation of assumptions, data transformation, reliability of statistical measures (jackknife, bootstrap). Fisher-Gosset controversy. Prerequisite: either STAT 342, STAT/MATH 390, or STAT/ECON 481: recommended: MATH 308. Offered: A.

STAT 423 Applied Regression and Analysis of Variance (4) NW Regression analysis. Problems in interpreting regression coefficients. Estimation, including two-stage least squares. Guided regression: building linear models, selecting carriers. Regression residuals. Analysis of variance. Nonparametric regression. Factorial designs, response surface methods. Prerequisite: either STAT 342, STAT/MATH 390, STAT 421, or STAT 481; recommended: MATH 308. Offered: W.

STAT 425 Introduction to Nonparametric Statistics (3) NW Overview of nonparametric methods, such as rank tests, goodness of fit tests, 2x2 tables, nonparametric estimation. Useful for students with only a statistical methods course background. Prerequisite: STAT/MATH 390. Offered: jointly with BIOST 425; when demand is sufficient.

STAT 427 Introduction to Analysis of Categorical Data (4) NW Techniques for analysis of count data. Log-linear models, logistic regression, and analysis of ordered response categories. Illustrations from the behavioral and biological sciences. Computational procedures. Prerequisite: either STAT 342, STAT 362, or STAT 421. Offered: alternate years.

STAT 428 Multivariate Analysis for the Social Sciences (4) NW Multivariate techniques commonly used in the social and behavioral sciences. Linear models for dependence analysis (multivariate regression, MANOVA, and discriminant analysis) and for interdependence analysis (principal components and factor analysis). Techniques applied to social science data using computer statistical packages. Prerequisite: either STAT 342, STAT 362, or STAT 421. Offered: alternate years.

STAT 480 Sampling Theory for Biologists (3) NW *Gallucci, Rustagi* Theory and applications of sampling finite populations including: simple random sampling, stratified random sampling, ratio estimates, regression estimates, systematic sampling, cluster sampling, sample size determinations, applications in fisheries and forestry. Other topics include sampling plant and animal populations, sampling distributions, estimation of parameters and statistical treatment of data. Prerequisite: Q SCI 482; recommended: Q SCI 483. Offered: jointly with Q SCI 480; even years.

STAT 481 Introduction to Mathematical Statistics (5) NW Probability, generating functions; the delta method, Jacobians, Bayes theorem; maximum likelihoods, Neyman-Pearson, efficiency, decision theory, regression, correlation, bivariate normal. (Credit allowed for only one of 390, 481, and ECON 580.) Prerequisite: STAT/ECON 311; MATH 126; either MATH 308 or MATH 309. Offered: jointly with ECON 481; A. **STAT 486 Experimental Design (3) NW** Topics in analysis of variance and experimental designs: choice of designs, comparison of efficiency, power, sample size, pseudoreplication, factor structure. Prerequisite: Q SCI 482; recommended: Q SCI 483. Offered: jointly with Q SCI 486.

STAT 491, 492 Introduction to Stochastic Processes (3, 3) NW Random walks, Markov chains, branching processes, Poisson process, point processes, birth and death processes, queuing theory, stationary processes. 491 - Prerequisite: 2.0 in MATH/STAT 396. 492 - Prerequisite: 2.0 in MATH/ STAT 491. Offered: jointly with MATH 491, 492; A,W.

STAT 498 Special Topics (1-5, max. 15) NW Reading and lecture course intended for special needs of students. Offered: when demand is sufficient.

STAT 499 Undergraduate Research (1-5, max. 15) Offered: AWSpS.

Courses for Graduates Only

STAT 503 Practical Methods for Data Analysis (4) Basic exploratory data analysis with business examples. Data summaries, multivariate data, time series, multiway tables. Techniques include graphical display, transformation, outlier identification, cluster analysis, smoothing, regression, robustness. Departmental credit allowed for only one of 403 and 503. Prerequisite: B A 500 or QMETH 500 or equivalent or permission of instructor. Offered: jointly with QMETH 503.

STAT 506 Applied Probability Models (4) Overview of probability models, random variables, independence and conditional probability, Markov chains, stationary time series. Prerequisite: some advanced calculus and linear algebra; familiarity with elementary discrete probability models. Offered: jointly with AMATH 506; Sp.

STAT 512, 513 Statistical Inference (4, 4) Review of random variables; transformations, conditional expectation, moment generating functions, convergence, limit theorems, Estimation; Crame'r-Rao Lower Bound, maximum likelihood estimation, sufficiency, ancillarity, completeness, Rao-Balcwell theorem. Hypothesis testing, size, power, Neyman-Pearson lemma, monotone likelihood ratio, likelihood ratio tests, large-sample case. Contingency Tables. Confidence intervals. Invariance. Introduction to inference and decision theory. Prerequisite: 395 and 421, 423, or BIOST 512 (concurrent registration permitted for these three) for 512; 512 for 513. Offered: A.W.

STAT 516- 517 Stochastic Modeling of Scientific Data (4-4) Markovian and semi-Markovian models, point processes, cluster models, queuing models, likelihood methods, estimating equations. Prerequisite: 511 or 396 for 516-; 516- for -517. Offered: A-W.

STAT 518 Stochastic Modeling Project (4) Supervised, applied project based on stochastic modeling of scientific data. Prerequisite: 517. Offered: Sp.

STAT 519 Time Series Analysis (3) Descriptive techniques. Stationary and nonstationary processes, including ARIMA processes. Estimation of process mean and autocovariance function. Fitting ARIMA models to data. Statistical tests for white noise. Forecasting. State space models and the Kalman filter. Robust time series analysis. Regression analysis with correlated errors. Statistical properties of long memory processes. Prerequisite: 513. Offered: A.

STAT 520 Spectral Analysis of Time Series (4) Estimation of spectral densities for single and multiple time series. Nonparametric estimation of spectral density, cross-spectral density, and coherency for stationary time series, real and complex spectrum techniques. Bispectrum. Digital filtering techniques. Aliasing, prewhitening. Choice of lag windows and data windows. Use of the fast Fourier transform. The parametric autoregressive spectral density estimate for single and multiple stationary time series. Spectral analysis of nonstationary random processes and for randomly sampled processes. Techniques of robust spectral analysis. Prerequisite: one of 342, 390, 481, or permission of instructor. Offered: jointly with E E 520; W.

STAT 521, 522, 523 Advanced Probability (3, 3, 3) Measure theory and integration, independence, laws of large numbers. Fourier analysis of distributions, central limit problem and infinitely divisible laws, conditional expectations, martingales. Prerequisite: MATH 426. Offered: jointly with MATH 521, 522, 523; A,W,Sp.

STAT 524 Design of Medical Studies (3) Emphasis on randomized controlled clinical trials. Bias elimination, controls, treatment assignment and randomization, precision, replication, power and sample size calculations, stratification, and ethics. Suitable for students in biostatistics and other scientific fields. Prerequisite: BIOST 511 or equivalent, and one of 421, 423, BIOST 513 or EPI 512; or permission of instructor. Offered: jointly with BIOST 524; even years.

STAT 529 Sample Survey Techniques (3) Design and implementation of selection and estimation procedures. Emphasis on human populations. Simple, stratified, and cluster sampling; multistage and twophase procedures; optimal allocation of resources; estimation theory; replicated designs; variance estimation; national samples and census materials. Prerequisite: 421, 423, QMETH 500 or BIOST 511 or equivalent; or permission of instructor. Offered: jointly with BIOST 529.

STAT 530 Wavelets: Data Analysis, Algorithms, and Theory (3) Review of spectral analysis. Theory of continuous and discrete wavelets. Multiresolution analysis. Computation of discrete wavelet transform. Time-scale analysis. Wavelet packets. Statistical properties of wavelet signal extraction and smoothers. Estimation of wavelet variance. Prerequisite: some Fourier theory and linear algebra; 390, 481, or 513; or permission of instructor. Offered: Sp.

STAT 533 Classical Theory of Linear Models (3) Introduction to one-, two-way analysis of variance; randomized blocks; fixed, random effects, multiple comparisons. Statistical distribution theory for quadratic forms of normal variables. Fitting of the general linear model by least squares. Prerequisite: 421 or 423; and 513, BIOST 513, and a course in matrix algebra. Offered: jointly with BIOST 533; Sp.

STAT 534, 535, 538 Statistical Computing (3, 3, 3) Introduction to scientific computing. Includes programming tools, modern programming methodologies, (modularization, object oriented design), design of data structures and algorithms, numerical computing and graphics. Uses C++ for several substantial scientific programming projects. Prerequisite: experience with programming in a high level language. Offered: jointly with BIOST 534, 535, 538; A, W, Sp.

STAT 536 Log-Linear Modeling and Logistic Regression for the Social Sciences (3) Log-linear modeling of multidimensional contingency tables. Logistic regression. Applications to social mobility, educational opportunity, and assortative marriage. Applied and computing focus. Prerequisite: 395 or SOC 425 or permission of instructor. Offered: jointly with SOC 536.

STAT 542 Multivariate Analysis (3) Multivariate normal distribution; partial and multiple correlation; Hotelling's T²; Bartlett's decomposition; various likelihood ratio tests; discriminant analysis; principal components. Prerequisite: 582 or permission of instructor. Offered: alternate years.

STAT 544 Bayesian Statistical Methods (3) Statistical methods based on the idea of a probability distribution over the parameter space. Coherence and utility. Subjective probability. Likelihood principle. Conjugate families. Structure of Bayesian inference. Limit theory for posterior distributions. Sequential experiments. Exchangeability. Bayesian nonparametrics. Empirical Bayes methods. Prerequisite: 513 or permission of instructor. Offered: alternate years.

STAT 565 Inference in Stochastic Processes (3) Methods for statistical inference from dependent observations. Emphasis on one or more of the following: Markov chains in discrete or continuous time; diffusion processes; point processes; asymptotic theory; filtering and smoothing of linear models. Prerequisite: 581 or permission of instructor. Offered: Sp.

STAT 570, 571, 572 Advanced Applied Statistics and Linear Models (3, 3, 3) Generalized linear models, REML in mixed models for randomized blocks, split plots, longitudinal data. Generalized estimating equations, empirical model building, cross validation, recursive partitioning, generalized additive models, projection pursuit. Prerequisite: 513; 533 or 421 and 423, and a course in matrix algebra for 570; 570 for 571; 571 for 572. Offered: jointly with BIOST 570, 571, 572; A,W,Sp.

STAT 573 Statistical Methods for Categorical Data (3) Advanced topics in generalized linear models and the analysis of categorical data: overdispersion, quasilikelihood, parameters in link and variance functions, exact conditional inference, random effects, saddlepoint approximations. Credit/ no credit only. Prerequisite: 571 and STAT 582. Offered: jointly with BIOST 573; alternate years.

STAT 574 Multivariate Statistical Methods (3) Use of multivariate normal sampling theory, linear transformations of random variables, one- and two-sample tests, profile analysis, partial and multiple correlation, multivariate ANOVA and least squares, discriminant analysis, principal components, factor analysis, robustness, and some special topics. Some computer use included. Prerequisite: 570 or permission of instructor. Offered: jointly with BIOST 574; alternate years.

STAT 576 Statistical Methods for Survival Data (3) Statistical methods for censored survival data. Covers parametric and nonparametric methods, Kaplan-Meier survival curve estimator, comparison of survival curves, log-rank test, regression models including the Cox proportional hazards model, competing risks. Prerequisite: 581 and either 423, BIOST 513, or Q SCI 483, or equivalent. Offered: jointly with BIOST 576; alternate years.

STAT 577 Advanced Design and Analysis of Experiments (3) Concepts important in experimental design: randomization, blocking, confounding. Application and analysis of data from randomized blocks designs, Latin and Greco-Latin squares, incomplete blocks designs, split-plot and repeated measures, factorial and fractional replicates, response surface experiments. Prerequisite: 570 or 421 (minimum grade 3.0), or permission of instructor. Offered: jointly with BIOST 577.

STAT 578 Special Topics in Advanced Biostatistics (* max. 3) Advanced-level topics in biostatistics offered by regular and visiting faculty members. Prerequisite: permission of instructor. Offered: jointly with BIOST 578.

STAT 579 Advanced Data Analysis (4) Resampling methods; jackknife, bootstrap, cross-validation. Smoothing techniques; local averages; projectionpursuit regression; recursive partitioning regression. Selected aspects of linear regression. Robust-resistant methods. Density estimation. Clustering techniques. The EM-algorithm. Graphical exploratory methods. Prim-81. Prerequisite: 513; one of 571, 421, 423; or permission of instructor. Offered: jointly with BIOST 579. STAT 581, 582, 583 Advanced Theory of Statistical Inference (3, 3, 3) Limit theorems, asymptotic methods, asymptotic efficiency and efficiency bounds for estimation, maximum likelihood estimation, Bayes methods, asymptotics via derivatives of functionals, sample-based estimates of variability: (bootstrap and jackknife); robustness; estimation for dependent data, nonparametric estimation and testing. Prerequisite: 513 and MATH 426 and 427 for 581; 581 for 582; 582 for 583. Offered: A,W,Sp.

STAT 586 Martingales: Survival Analysis (3) Fleming Theory of counting processes and martingales to provide unified study of survival analysis methods. Focus on survival distribution estimators, censored data rank statistics, regression methods with censored survival data. Development of small samples moments, asymptotic distributions, and efficiencies. Prerequisite: STAT 520 or equivalent; recommended: 576. Offered: jointly with BIOST 586; W.

STAT 590 Statistics Seminar (* max. 15) Credit/ no credit only. Prerequisite: permission of graduate program coordinator. Offered: AWSp.

STAT 591, 592, 593 Special Topics in Statistics (1-5, max. 15; 1-5, max. 15; 1-5, max. 15) Distributionfree inference, game and decision theory, advanced theory of estimation (including sequential estimation), robustness, advanced probability theory, stochastic processes or empirical processes. Prerequisite: permission of instructor. Offered: A,W,Sp.

STAT 598 Techniques of Statistical Consulting (3) Instruction and practice in planning studies, analyzing data, writing reports, and interacting with clients. Includes applied statistics and consulting literature not covered elsewhere in graduate curriculum. Significant data analysis projects and critiques of actual consulting sessions. Prerequisite: two or more courses in the application of statistical methods. Offered: ASp.

STAT 599 Statistical Consulting (* max. 12) Consulting experience in data analysis, applied statistics. Student required to provide consulting services to students and faculty three hours per week. Credit/no credit only. Prerequisite: permission of graduate program coordinator. Offered: AWSpS.

STAT 600 Independent Study or Research (*) Prerequisite: permission of graduate program coordinator. Offered: AWSpS.

STAT 700 Master's Thesis (*) Prerequisite: permission of graduate program coordinator. Offered: AWSpS.

STAT 800 Doctoral Dissertation (*) Prerequisite: permission of graduate program coordinator. Offered: AWSpS.

Women Studies

B110 Padelford

Women Studies is an interdisciplinary department that offers students a cohesive framework for the study of women's and men's lives within historical and contemporary contexts, and from multi-disciplinary, multi-cultural, and international perspectives. As a field of inquiry, Women Studies challenges traditional scholarship about human societies and fosters the construction of new theoretical and methodological approaches to understanding diverse experiences and realities. Students select a variety of courses offering breadth in Women Studies scholarship, while pursuing concentrated study in a particular track, such as women and arts; gender, race, ethnicity, women, and health; and women and the law; or self-designed programs.
Undergraduate Program

Adviser B110C Padelford, Box 354345 (206) 543-6900

Bachelor of Arts

Admission: Any student with a cumulative GPA of at least 2.00 can declare this major at any time.

Suggested Introductory Course Work: WOMEN 200, and any of the following: 205, 206, 250, 257, 283. Courses in ethnic studies and race relations or with a focus on women or gender studies in any discipline also provide a background for the Women Studies major. Transfer courses with a race, gender, and ethnicity focus from other disciplines may fulfill the lower-division Women Studies requirements.

Major Requirements: WOMEN 200 or equivalent; one of the following: 205, 206, 250, 257, 283, or transfer equivalent; 322 or 456 (may overlap with track or upper-division requirement); 455; senior-thesis sequence of 491, 492, and 493; 497 fieldwork; and 15 additional upper-division credits (excludes independent-study course options and may include ENGL 367 or 368). A 25-credit interdisciplinary focus of study called a track is also required. Tracks can include up to 15 credits of upper-division courses from other departments. Students may select pre-approved tracks or self-design tracks based on their own interests.

Minor

Minor Requirements: 30 credits to include WOMEN 200; one of the following: 205, 206, 250, 257, or 283 or transfer equivalent; 322 or 456; 15 additional upperdivision credits in women studies (excludes independent-study courses, but ENGL 367 and 368 may be included).

Graduate Program

The Department of Women Studies offers graduate training leading to the Master of Arts and Doctor of Philosophy degrees in interdisciplinary women studies as well as in a chosen discipline. The core faculty represent the following disciplines: anthropology, history, international studies, English, sociology, and psychology. Although students are required to work primarily with a core faculty member in Women Studies, they have the opportunity to study with more than 60 faculty members from a wide range of disciplines who are adjunct faculty to Women Studies, M.A. students must complete a thesis or practicum. Ph.D. students must complete a dissertation.

Admission Requirements

Applicants are admitted to begin study during autumn quarter only and are advised to have their application materials completed by the beginning of the prior January. A complete application file includes the Graduate School application, one copy of official transcripts, three recommendations, a statement of purpose, and scores from the Graduate Record Examination (GRE).

Program Requirements

All students are required to complete 15 credits of the core seminars: History of Feminism (WOMEN 501), Problems in Feminist Theory (WOMEN 502), and Feminist Research and Methods of Inquiry (WOMEN 503). Under the guidance of a core faculty mentor and advisory committee, the student shapes an individual program of study. The master's program usually requires two years of graduate study; the doctoral program usually requires three years of study beyond the master's level, including independent field research and preparation of a dissertation. Ph.D. students must exhibit proficiency in a language relevant to their theo-

retical and regional areas of specialization. Students are urged to establish foreign language competency as undergraduates before entering the graduate program or as early as possible in their graduate careers.

Financial Aid

A limited number of teaching and research assistantships are offered to Ph.D. students.

Faculty

Chair

Shirley J. Yee

Professors

Allen, Carolyn * 1972, (Adjunct); MA, 1966, Claremont Graduate School; PhD, 1972, University of Minnesota; twentieth-century literature, women writers, contemporary critical theory.

Allen, David G. * 1988, (Adjunct); PhD, 1975, University of Iowa; philosophy of science, critical and feminist theory, psychosocial nursing theory.

Baldasty, Gerald J. * 1974, (Adjunct); MA, 1974, University of Wisconsin; PhD, 1978, University of Washington; communications history, media and gender, race, government-press relations.

Barlow, Tani E. * 1994; MA, 1979, PhD, 1985, University of California (Davis); history of modern China, gender studies, feminist theory, historiography.

Bereano, Philip L. * 1975, (Adjunct); JD, 1965, Columbia University; MRP, 1971, Cornell University; technology assessment, public policy technology: social values, citizen participation.

Blake, Kathleen * 1971, (Adjunct); PhD, 1971, University of California (San Diego); Victorian literature, children's literature, women's studies.

Boersma, P. Dee * 1974, (Adjunct); PhD, 1974, Ohio State University; ecology and conservation biology, reproductive strategies, colonial seabird biology.

Butler, Johnnella E. * 1987, (Adjunct); EdD, 1979, University of Massachusetts; Afro-American, comparative American ethnic literature; African diaspora literatures.

Cauce, Ana Mari * 1986, (Adjunct); PhD, 1984, Yale University; community/developmental psychology, socialization of children/adolescents of color, ethnic identity.

Clatterbaugh, Kenneth C. * 1966, (Adjunct); PhD, 1966, Indiana University; modern philosophy, social philosophy, gender studies.

Goldsmith, Layne * 1983, (Adjunct); MA, 1975, San Jose State College; MFA, 1979, Cranbrook Academy of Art; fiber arts and related historic and contemporary textile structures and processes.

Gorbman, Claudia L. * 1990, (Adjunct); PhD, 1978, University of Washington; film studies: history, theory, criticism; film sound and music.

Gordon, Margaret T. * 1988, (Adjunct); PhD, 1972, Northwestern University; news media and public policy, trust in government, urban policy.

Graham, Katherine J. 1988, (Adjunct); MN, 1967, PhD, 1978, University of Washington; quality of life across life, work; health systems.

Hartsock, Nancy C. M. * 1984, (Adjunct); PhD, 1972, University of Chicago; feminist theory, Marxism, contemporary political theory.

Howard, Judith A. * 1982, (Adjunct); PhD, 1982, University of Wisconsin; social psychology, sociology of gender, intersections of race/class/gender/sexuality.

Jacobs, Sue-Ellen * 1974; PhD, 1970, University of Colorado (Boulder); anthropological studies of women, applied anthropology, ethnohistory, Native North America.

Jeffords, Susan E. * 1985; MA, 1977, PhD, 1981, University of Pennsylvania; feminist theory, American popular culture, and the representation of Vietnam.

Kaplan, Sydney J. * 1971, (Adjunct); PhD, 1971, University of California (Los Angeles); twentieth-century literature, women writers, feminist criticism.

Lawson, Victoria A. * 1986, (Adjunct); PhD, 1986, Ohio State University; Latin America, political economy of development, feminist theory in development.

McElroy, Colleen W. * 1972, (Adjunct); PhD, 1973, University of Washington; Black literature, women writers, poetry writing.

Richey, Cheryl A. * 1973, (Adjunct); DSW, 1974, University of California (Berkeley); cultural and gender issues, intervention design and research.

Schwartz, Pepper J. * 1972, (Adjunct); PhD, 1974, Yale University; family, gender, human sexuality, field methods.

Silberstein, Sandra V. * 1982, (Adjunct); PhD, 1982, University of Michigan; TESL, critical theory, discourse analysis, sociolinguistics, language and culture.

Steele, Cynthia 1986, (Adjunct); PhD, 1980, University of California (San Diego); Latin American literature and cultural studies; Mexican literature, film, and photography.

Treat, John W. * 1983, (Adjunct); PhD, 1982, Yale University; Japanese language and literature.

Woods, Nancy * 1978, (Adjunct); PhD, 1978, University of North Carolina; women's health.

Associate Professors

Anagnost, Ann S. * 1990, (Adjunct); PhD, 1985, University of Michigan; ethnography of the state, ideology and popular culture, peasant society; China.

Cummings, Katherine * 1985, (Adjunct); PhD, 1985, University of Wisconsin; feminist, psychoanalytical, and literary theory, modern and contemporary literature.

Di Stefano, Christine * 1985, (Adjunct); PhD, 1984, University of Massachusetts; political theory (modern and contemporary), feminist theory, political culture.

DuBois, Thomas A. * 1990, (Adjunct); PhD, 1990, University of Pennsylvania; Nordic folklore and mythology, Finnish, Sami.

Dubrow, Gail Lee * 1989, (Adjunct); MA, 1979, University of Oregon; PhD, 1991, University of California (Los Angeles); preservation, urban design, public art, public history, gender, multiculturalism.

Friedman-Kasaba, Kathie * 1987, (Adjunct); MA, 1979, PhD, 1992, State University of New York (Binghamton); sociology of gender, immigration, race, and ethnicity in the U.S.

Gavel-Adams, Ann-Charlotte * 1986, (Adjunct); PhD, 1990, University of Washington; August Strindberg, Scandinavian women's literature, Scandinavian turnof-the-century drama and art.

Glenn, Susan A. * 1993, (Adjunct); PhD, 1983, University of California (Berkeley); twentieth-century U.S. social and cultural history including women's history.

Heuving, Jeanne D. * 1990, (Adjunct); PhD, 1988, University of Washington.

Jarosz, Lucy A. * 1990, (Adjunct); PhD, 1990, University of California (Berkeley); political economy of development, food and agriculture, feminist geography, political ecology.

Kenney, Nancy J. * 1976; PhD, 1974, University of Virginia; neural and endocrine controls of food and fluid intake, physiological basis of motivation.

Klawitter, Marieka * 1990, (Adjunct); MS, 1986, PhD, 1992, University of Wisconsin; family and employment policy, sexual orientation, women's studies.

Magyary, Diane L. * 1981, (Adjunct); PhD, 1981, University of Washington; family centered health care of children at risk, disabled or handicapped.

Noble, Kathleen D. * 1984, (Research); PhD, 1984, University of Washington; talent development in women and girls, psychology of giftedness, psychology and spirituality.

Rhodes, Lorna A. * 1983, (Adjunct); PhD, 1973, Cornell University; medical anthropology, anthropology of institutions, religion, psychiatry.

Roberts, Jean Valerie * 1991, (Adjunct); PhD, 1982, University of Pittsburgh; ancient philosophy, ethics, philosophy of feminism.

Root, Maria P. P. 1995, (Adjunct); MA, 1979, Claremont Graduate School; PhD, 1983, University of Washington; multiethnic and multicultural identity, multiracial relationships.

Salas, Elizabeth 1987, (Adjunct); MA, 1977, California State University (Los Angeles); PhD, 1987, University of California (Los Angeles); New Mexican history and politics, Chicana, Mexicana and Chicano history, minorities in the military.

Schauman, Sally * 1979, (Adjunct); MS, 1971, University of Michigan; visual resource analysis and evaluation, resource planning and conservation of stressed landscapes.

Sears, Laurie J. * 1989, (Adjunct); PhD, 1986, University of Wisconsin; Southeast Asia, historiography.

Sokoloff, Naomi B. * 1985, (Adjunct); PhD, 1980, Princeton University; Hebrew language and literature.

Stacey, Robin C. * 1988, (Adjunct); PhD, 1986, Yale University; medieval history, Celtic.

Stecher Hansen, Marianne T * 1991, (Adjunct); MA, 1981, University of Washington; PhD, 1990, University of California (Berkeley); Danish language and literature, Scandinavian literature.

Stygall, Gail * 1990, (Adjunct); PhD, 1989, Indiana University; rhetoric and composition, English language linguistics, law and literature.

Twine, Frances Winddance 1994; MA, 1990, PhD, 1994, University of California (Berkeley); critical race feminisms, racism/antiracism, whiteness studies, multiracial families, Brazil, Britain.

Wald, Priscilla B. 1995, (Adjunct); MA, 1981, MPhil, 1983, PhD, 1989, Columbia University; concept of authorship in modern American literature.

Ward, Deborah * 1987, (Adjunct); PhD, 1987, Boston University; health policy and politics, women's paid and unpaid caregiving work.

Yee, Shirley J. * 1988; PhD, 1987, Ohio State University; U.S. women's history, African-American history, nineteenth-century U.S. social history.

Assistant Professors

Brines, Julie E. * 1993, (Adjunct); PhD, 1990, Harvard University; gender, stratification, family, methods.

Bryant-Bertail, Sarah * 1990, (Adjunct); PhD, 1986, University of Minnesota; dramatic criticism, semiotics, feminist theatre.

Cabeen, Louise * 1993, (Adjunct); MFA, 1989, The School of Art Institute of Chicago; socially critical art with research specialties in textile history and techniques.

Ensign, B. Josephine 1994, (Adjunct); MS, 1986, Virginia College of Medicine; MPH, 1992, DPH, 1994, Johns Hopkins University.

Ginorio, Angela B. * 1981; PhD, 1979, Fordham University; women and/in science, violence and women, socially defined identities, psychology issues for Latinas.

Henderson, Dorothy J. 1994, (Adjunct); MS, 1991, PhD, 1994, University of Michigan; women's substance abuse, incarcerated women's health, feminist theories and methodologies.

Mitchell, Katharyne 1993, (Adjunct); PhD, 1993, University of California (Berkeley); urban, cultural and economic geography, Pacific Rim.

Moody, Jocelyn K. 1991, (Adjunct); MA, 1980, University of Wisconsin; PhD, 1993, University of Kansas; nineteenth-century American, African-American, and women's literature, autobiography.

Ramamurthy, Priti * 1997; PhD, 1995, Syracuse University; political economy of development, third-world feminism, irrigation, agro-food systems, South Asia.

Rose, Elaina 1993, (Adjunct); PhD, 1993, University of Pennsylvania; labor, development, applied micro-economics.

Schroeder, Carole A. 1993, (Adjunct); MSN, 1985, University of Nevada; PhD, 1993, University of Colorado (Denver); women's health, community health, models of care delivery, health care systems.

Shome, Raka * 1996, (Adjunct); PhD, 1996, University of Georgia; postcolonial, cultural, and feminist studies, including the study of popular culture.

Simpson, Caroline Chung * 1994, (Adjunct); MA, 1989, University of Houston; PhD, 1994, University of Texas (Austin); Asian American literature and culture, postwar fiction and film.

Sunindyo, Saraswati * 1993; PhD, 1993, University of Wisconsin; political economy, sociology of gender, popular culture, nationalism.

Lecturer

Tupper, Kari Lynn 1997; PhD, 1997, University of Washington; literature and law, American studies, women writers.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

WOMEN 200 Introduction to Women Studies (5) I&S *Twine* Feminist analysis of the construction and enforcement of gender differences and gender inequalities in various contexts. Emphasis on the intersection of race, class, sexuality, and nationality in the lives of women. Topics include feminist theory, motherhood, popular culture, sexual autonomy, racism, and activism in the United States, Asia, Latin America. Offered: AWSpS.

WOMEN 206 Philosophy of Feminism (5) I&S Philosophical analysis of the concepts and assumptions central to feminism. Theoretical positions within the feminist movement; view of the ideal society, goals and strategies of the movement, intersections of the sex-gender system with other systems of oppression. Offered: jointly with PHIL 206/POL S 212.

WOMEN 250 Gender, War, and Peace (5) I&S Jeffords Examines extent to which issues of war and peace can be understood through gender. Discussion of long-accepted traditions that men go to war and women do not, that women are more inclined toward peace, that women need to be protected, that men are naturally aggressive or combative.

WOMEN 257 Psychology of Gender (5) I&S Kenney Major psychological theories of genderrole development; biological and environmental influences that determine and maintain gender differences in behavior; roles in children and adults; topics include aggression, cognitive abilities, achievement motivation, affiliation. Recommended: either PSYCH 101, PSYCH 102, or WOMEN 200. Offered: jointly with PSYCH 257; A.

WOMEN 283 Introduction to Women's History (5) **I&S** Includes units on American, European, and Third World women that examine centers of women's activities, women's place in male-dominated spheres (politics), women's impact on culture (health, arts), and the effect of larger changes on women's lives (technology, colonization). Offered: jointly with HIST 283; A.

COLLEGE OF ARTS AND SCIENCES / WOMEN STUDIES 253

WOMEN 302 Research Methods in Women Studies (5) I&S Jacobs, Yee Explores appropriate research methodologies for interdisciplinary work in women studies. Examines current debates and issues in feminist methodologies and critiques of methodology. Use of historical documents and theoretical texts. Computer applications in research in women studies. Prerequisite: either WOMEN 200 or WOMEN 206

WOMEN 305 Feminism in an International Context (5) I&S Ramamurthy, Sunindyo Women and feminism from global theoretical perspectives. Critical theoretical ways of thinking about feminism. How women are differently situated throughout the world. How they are represented affects women's agency. Focus on how race and gender affect one another. Representations of and by women throughout the world.

WOMEN 310 Women and the Law (5) I&S Examines how law addresses women, how the courts have made attempts to address women of color, poor women, lesbians, and women with disabilities. Topics include constitutional construction of equality, employment discrimination, reproductive rights, regulation of sexuality, families and motherhood, sexual harassment, violence against women and international women and human rights.

WOMEN 313 Women in Politics (5) I&S DiStefano Theoretical, historical, and empirical studies of women's participation in political and social movements. Women's diverse efforts to improve their political, social, and economic status. Policy issues of particular concern to women. Women's political experiences in household, local, regional, national, and international arenas Offered: jointly with POL S 313.

WOMEN 322 Race, Class, and Gender (5) I&S Sunindyo The intersection of race, class, and gender in the lives of women of color in the United States from historical and contemporary perspectives. Topics include racism, classism, sexism, activism, sexuality, and inter-racial dynamics between women of color groups. Offered: jointly with AES 322.

WOMEN 345 Women and International Economic Development (5) I&S Ramamurthy Questions how women are affected by economic development in Third World and celebrates redefinitions of what development means. Theoretical perspectives and methods to interrogate gender and development policies introduced. Current processes of globalization and potential for changing gender and economic inequalities assessed. Prerequisite: WOMEN 205. Offered: jointly with ANTH 345/SIS 345.

WOMEN 351 Women of the African Diaspora (5) **I&S** *Twine* Cross-cultural comparative analysis of African descent women in an international context. Topics include racism, post-colonialism, immigration, occupational segregation, transnational identities, and media representations. Prerequisite: WOMEN 200. Offered: jointly with ANTH 351.

WOMEN 353 Anthropological Studies of Women (5) I&S Jacobs Cross-cultural and comparative survey of the varieties of women's cultural experiences, statuses, and roles in cultural context and the anthropological theories used to account for them. Topics include: biological factors, studies of primates, woman the gatherer, work in preindustrial and industrial societies, matriarchy and matrilineal kinship, childbirth, and women's roles in economic development. Offered: jointly with ANTH 353; W.

WOMEN 354 Lesbian Lives and Culture (5) I&S An exploration and overview of lesbianism in historical, social, cultural, and interpersonal contexts. Prerequisite: either WOMEN 200 or WOMEN 206.

WOMEN 355 Men and Masculinity (5) I&S Clatterbaugh Critical study of systematic responses of men to feminist movements, including conservative, pro-feminist, men's rights, mytho-

254 COLLEGE OF ARTS AND SCIENCES / WOMEN STUDIES

poetic, and religious responses. How men of color and gay men view these various men's movements and their issues. Special attention given to philosophical problems such as nature of oppression, human nature, justice, and masculinity. Recommended: WOMEN 200.

WOMEN 357 Psychobiology of Women (5) NW Kenney Physiological and psychological aspects of women's lives: determinants of biological sex; physiological and psychological events of puberty, menstruation, and menopause; sexuality; pregnancy, childbirth; the role of culture in determining the psychological response to the physiological events. Recommended: PSYCH/WOMEN 257. Offered: jointly with PSYCH 357; WS.

WOMEN 374 Methods in Life History Research (5) I&S Jacobs Techniques and procedures for constructing life histories: use of diaries, letters, photography, and personal interviews. Technical instruction in use of tape recorder; indexing, cataloging, and writing summaries of tapes; use of cameras for copying documents and photography. Each student completes one life history per quarter. Recommended: WOMEN 200. Offered: Sp.

WOMEN 383 Social History of American Women (5) I&S Yee Survey of United States women, sixteenth century to present: emphasis on women's unpaid work; participation in paid labor force; charitable, reform activities; feminist movements of the nineteenth and twentieth centuries. Use of primary materials, i.e., diaries, letters, speeches, artifacts. Recommended: WOMEN 200, WOMEN 283, or HSTAA 201. Offered: jointly with HSTAA 373; W.

WOMEN 392 Asian-American Women (5) I&S Root History of and contemporary issues related to Asian-American women in the United States. Recommended: AAS 205 or AAS 206. Offered: jointly with AAS 392.

WOMEN 405 Comparative Women's Movements and Activism (5) I&S Sunindyo Comparative cultural, national, and historical study of women's movements and activisms. Critically analyzes multiple arenas of women's movements and resistance. Topics include feminist anti-racism, pre-nationalism and nationalism, economics, electoral politics, women's and human rights, and international/transnational feminisms. Prerequisite: either WOMEN 205 or SOC 364.

WOMEN 410 Feminist Legal Studies: Theory and Practice (5) I&S Examines feminist theoretical analyses of the law. Engages in current debate on the study of critical race, gender, and class theory. Includes: women in prison, public assistance, the sex industry, women and health care, and immigration Iaw. Recommended: WOMEN 200 or WOMEN 310. Offered: jointly with POL S 466/SO JU 410.

WOMEN 415 Gender and Education (5) I&S Gender bias, discrimination, and gender-equity efforts in education. Includes curriculum instruction, instructional materials, testing, counseling, athletics, teacher education, educational employment issues, and sexual harassment. Relevant federal and state laws, court decisions, and strategies for promoting gender equity also addressed. Recommended: WOMEN 200 or SOC 110. Offered: jointly with EDC&I 440; S.

WOMEN 423 Pueblo Women of the American Southwest: Ethnohistorical and Contemporary Perspectives (5) I&S *Jacobs* Examination of historical, archaeological, and anthropological writings about Native women of Pueblo homelands in New Mexico and Arizona. Emphasis on contemporary lives in modern upper Rio Grande Tewa Pueblos. Recommended: WOMEN 200; AIS 201, AIS 202, AIS 240, AIS 317, WOMEN 353, or ANTH 353. Offered: jointly with AIS 423. WOMEN 425 Femininity, Feminism, and Antifeminism in Popular Culture (5) VLPA/l&S Twine Explores shifting meanings and reconfigurations of femininity, feminism, and antifeminism in United States popular culture. Analyzes the incorporation and transformation of feminist critiques of dominant ideologies into popular culture. Popular forms examined may include television serials, music videos, advertisements, films, and novels. Prerequisite: WOMEN 200.

WOMEN 427 Women and Violence (5) I&S Ginorio Multi-disciplinary explorations of the continuum of violence which affects women's lives, ranging from experience in personal settings (family violence) to cultural or state policies (prisons, wars). Violence against women explored in the context of societal, political, and state violence. Recommended: WOMEN 200.

WOMEN 429 Scandinavian Women Writers in English Translation (5) VLPA *Gavel-Adams* Selected works by major Scandinavian women writers from mid-nineteenth-century bourgeois realism to the present with focus on feminist issues in literary criticism. Offered: jointly with SCAND 427.

WOMEN 447 Economics of Gender (5) I&S *Rose* Microeconomic analysis of the sources of gender differences in earnings, labor force participation, occupational choice, education, and consumption. Economic theories of discrimination, human capital, fertility and intrahousehold resource allocation. Economics of the family in developed and developing countries. Prerequisite: ECON 300. Offered: jointly with ECON 447.

WOMEN 454 Women, Words, Music, and Change (5) VLPA/I&S Jacobs Comparative analysis of use of myths, tales, music, and other forms of expressive culture to account for, reinforce, and change women's status and roles; cross-cultural analysis of planned change and development. Recommended: WOMEN 353. Offered: jointly with ANTH 454.

WOMEN 455 Contemporary Feminist Theory (5) I&S *Barlow* Raises the question of how political contexts condition the way some ideas become theory. Emphasizes the present crises in thinking about a transnational feminism.

WOMEN 456 Feminism, Racism, and Anti-Racism (5) I&S *Twine* Examines meaning of racism and feminism in women's lives in an international context. Building upon an analysis of racial hierarchies and institutionalized racism, explores strategies used by women engaged in feminist and anti-racist activism. Prerequisite: WOMEN 200.

WOMEN 458 Ideologies and Technologies of Motherhood (5) I&S Twine Examines how motherhood is culturally constituted, regulated, and managed within various ideological and technological milieus. Uses ethnographies from anthropology and case studies from feminist legal theory. Topics include slave mothers, surrogate mothers, lesbian mothers, transracial mothers, co-mothers, teen mothers. Prerequisite: WOMEN 200. Offered: jointly with ANTH 484.

WOMEN 462 Isak Dinesen and Karen Blixen (5) VLPA Stecher-Hansen The fiction of Isak Dinesen (pseudonym for Karen Blixen) reevaluated in light of current issues in literary criticism, particularly feminist criticism. Close readings of selected tales, essays, and criticism. Offered: jointly with SCAND 462.

WOMEN 468 Latin American Women (5) VLPA/ I&S Steele Issues in women's culture from various Latin American countries, social classes, ethnic groups. Includes female creativity, relationship between female artists and the male tradition, women's exploitation of women, relationship of middle-class to popular feminism, connections between feminism and social change. Prerequisite: SPAN 303; SPAN 322; one additional 300-level course above SPAN 303. Offered: jointly with SPAN 468. **WOMEN 488** Women and Science (5) I&S *Ginorio* Explores science as a method of inquiry and as a profession while also expanding knowledge about women through the use of biographies of women scientists, discipline-based and feminist critiques, and the psycho-social concept of socially defined identities. Recommended: one Women Studies course and one college-level science course.

WOMEN 489 Ethnicity, Gender, and Media (5) I&S Baldasty Media portrayal of women and people of color; creation of alternative media systems by women and people of color in the United States. Offered: jointly with CMU 489/AES 489.

WOMEN 490 Special Topics in Women Studies (2-5, max. 15) I&S Exploration of specific problems and issues relevant to the study of women. Offered by visiting or resident faculty members. Primarily for upper-division and graduate students.

WOMEN 491 Senior Thesis I (3) I&S Introductory course of the senior thesis sequence required of all majors. Students attend a weekly seminar, select a thesis topic, and contract with an appropriate faculty adviser. Successful completion of the course is contingent on submission of an acceptable thesis proposal. Majors and senior standing only. Offered: A.

WOMEN 492 Senior Thesis II (3) I&S Second course in senior thesis sequence required of majors. Majors and seniors only. Prerequisite: WOMEN 491. Offered: W.

WOMEN 493 Senior Thesis III (4) I&S Research and writing of thesis under supervision of a faculty member. Required of all majors. Prerequisite: WOMEN 492. Offered: Sp.

WOMEN 495 Tutoring Women Studies (5) Students train to serve as tutors in designated courses. Facilitate weekly group discussions, assist with writing assignments, explain course materials. Credit/no credit only.

WOMEN 497 Fieldwork in Women Studies (1-15, max. 15) Internships in local agencies. Allows development of specific skills in area of specialization. Credit/no credit only. Offered: AWSpS.

WOMEN 499 Undergraduate Research (1-5, max. 10) Independent study and research supervised by a faculty member with appropriate academic interest. Offered: AWSpS.

Courses for Graduates Only

WOMEN 501 History of Feminism (5) *Barlow, Yee* Study of feminism from the 18th through the 20th centuries in the national, international, and intranational world system, with a focus on imperialism, colonialism, nationalism, and modernity. Surveys the literature in a global context, supplemented by critical essays and historiographic reviews.

WOMEN 502 Cross Disciplinary Feminist Theory (5) *Barlow* Raises questions about how feminism becomes theory and what the relation of feminist theory is to conventional disciplines. Readings exemplify current crises in feminism (e.g., the emergence of neo-materialism; critical race theory; citizenship; identity; transnational and migrancy and questions of post-colonialism) to consider disciplinization.

WOMEN 503 Feminist Research and Methods of Inquiry (5) Allen Explores appropriate research methodologies for interdisciplinary work. Asks how scholarship is related to feminism as a social movement and to the institutions in which we work. Focuses on how similar objects of study are constituted in different disciplines for feminist scholars. Offered: Sp.

WOMEN 512 Critical and Interdisciplinary Approaches to Women's Health (3) Ensign, Schroeder Critical examination of the historical, socio-political, and scientific influences on women's

COLLEGE OF ARTS AND SCIENCES / ZOOLOGY 255

health. Issues of sexism, racism, and heterosexism discussed from the perspective of different disciplines. Offered: jointly with NURS 512; W.

WOMEN 553 Discourses in Feminist Anthropology Seminar (5) Jacobs Exploration of feminist anthropological theories and the works of their critics. Ways of using feminist anthropology in preparation for and conducting fieldwork. Topics include foundations in feminist anthropology, grand theories, variation in feminist theoretical foci within the "four fields," responses to critics. Prerequisite: graduate standing. Offered: jointly with ANTH 555; W.

Zoology

106 Kincaid

Zoology is a natural science concerned primarily with animals: their development, structure, and function, and their relationship with their environments.

Zoology field courses are offered both at the main campus and at the Friday Harbor Laboratories. See individual course listings for location.

Undergraduate Program

Advisers Joyce Fagel Peg Powell Clay Schwenn 318 Hitchcock, Box 355320 (206) 543-9120 bioladv@u.washington.edu

The department offers two degree programs. The Bachelor of Science provides a solid foundation in the biological and physical sciences in preparation for careers in biology and for graduate study. The Bachelor of Arts program has fewer requirements and is a good option for liberal arts students and those preparing for careers in biology not requiring math or physics.

Bachelor of Science

Admission: Students in good academic standing may declare this major at any time.

Suggested Introductory Course Work: BIOL 101-102 or 201, 202, 203; CHEM 120, 220, 221, or 142, 152, 162, 223, 224; one of the following three pairs: MATH 124, 125; Q SCI 291, 292; 482, 483; one of the following sequences: PHYS 114, 115 or 121/131, 122/132.

Maior Requirements: A minimum of 90 credits distributed as follows: (1) Supporting course work (minimum of 38 credits): (a) Chemistry (20 credits): Option 1: CHEM 120, 220, 221, 250, or Option 2: CHEM 142, 152, 162, and 223, 224 (or 237, 238, 239); (b) Physics (8 to 10 credits): PHYS 114 or 121/131, and 115 or 122/132; (c) Mathematics (10 credits): MATH 124, 125 or Q SCI 291, 292 or Q SCI 482, 483. Students who choose calculus for their mathematics requirement are encouraged to take a statistics course such as STAT 311 or Q SCI 381. (2) Introductory Biology (15 credits): BIOL 201, 202, 203; or BIOL 101, 102 (with a minimum grade of 2.5 in each), GENET 371; (3) 37 upper-division biological-science credits to include (a) Zoology Core: a minimum of 25 credits including at least two lecture courses from each of three groups and at least one course with a laboratory component from two groups: Group I-Cell Biology, Development, Gene Action; Group II-Morphology, Physiology; Group III-Ecology, Natural History, Evolution, Organisms. Consult zoology adviser for a list of approved courses. (b) Zoology Electives: 12 elective credits in the biological sciences. Consult zoology adviser for a list of approved courses. A minimum of 15 credits must be from 400level courses in zoology and biology. A minimum of 15 upper-division credits (300- and 400-level) in zoology and biology must be taken at the UW. A minimum GPA

of 2.00 is required, to include all courses required for the major.

Bachelor of Arts

Admission: Students in good academic standing may declare this major at any time.

Suggested Introductory Course Work: BIOL 101-102 or 201, 202, 203; CHEM 120, 220, 221; one of the following options: MATH 124, 125; Q SCI 291, 292; Q SCI 381; STAT 311.

Major Requirements: A minimum of 70 credits distributed as follows: (1) Supporting course work (minimum of 20 credits): (a) Chemistry (15 to 20 credits): Option 1: CHEM 120, 220, 221 or Option 2: CHEM 142, 152, 162, and 223, 224 (or 237, 238, 239); (b) Mathematics (5 to 10 credits): MATH 124, 125 or Q SCI 291, 292 or STAT 311 or Q SCI 381. General physics courses are recommended, but not required. (2) 50 credits in biology and zoology courses, with not more than 20 credits in 100- and 200-level courses, to include: (a) Introductory Biology: BIOL 201, 202, 203; or BIOL 101, 102 (with a minimum grade of 2.5 in each), GENET 371; (b) Zoology Core: a minimum of 20 credits including at least one lecture course from each of three groups and at least one course with a laboratory component: Group I-Cell Biology, Development, Gene Action; Group II—Morphology, Physiology; Group III—Ecol-ogy, Natural History, Evolution, Organisms. Consult zoology adviser for a list of approved courses. (c) Zoology Electives: elective credits to complete 50 total credits in the biological sciences. Consult zoology adviser for a list of approved courses. A minimum of 15 credits must be from 400-level courses in zoology and biology. A minimum of 15 upper-division credits (300and 400-level) in zoology and biology must be taken at the UW. A minimum GPA of 2.00 is required, to include all courses required for the major.

Graduate Program

Graduate Program Coordinator 106 Kincaid, Box 351800 (206) 685-8240

Programs of study leading to the degree of Doctor of Philosophy are available in the areas of cell biology, molecular biology, developmental biology, developmental genetics, ecology, evolution, behavior, invertebrate and vertebrate morphology, organismic and comparative physiology, endocrinology, and neurobiology, as well as mathematical approaches to the above topics. Interdisciplinary programs are offered in developmental biology, cell and molecular biology, and neurobiology.

Research Facilities

Modern instruments (TEM, confocal microscopy) and special facilities (radioisotope, neurophysiology, and sea-water rooms) needed for instructional and research purposes are available in Kincaid Hall. The department also houses a superb computational facility consisting of SGI machines and a variety of UNIX, Mac and PC workstations. Extensive natural-history collections are housed at the Burke Museum. The facilities of the Friday Harbor Laboratories on San Juan Island are available for research. The department is within 100 yards of the Magnuson Health Sciences Center, one of the top medical-research institutions in the country. Several researchers at the Fred Hutchinson Cancer Research Center are appointed as affiliate faculty in the department.

Special Requirements

Completed applications for entry in autumn quarter must be received by January 15.

Entering students should have preparation in several of the areas listed above, organic chemistry, physical chemistry in some cases, two quarters of college physics, and mathematics through calculus. All students are required to acquire at least three quarters of teaching experience regardless of their source of support.

Financial Aid

Normally all prospective candidates for the Ph.D. degree are supported by teaching or research assistantships or by fellowships or traineeships from national or private agencies. Summer appointments are available both on the Seattle campus and at the Friday Harbor Laboratories on San Juan Island.

Faculty

Chair

Robert T. Paine

Professors

Beecher, Michael D. * 1978, (Adjunct); MA, 1965, PhD, 1970, Boston University; animal communication, animal behavior, sensory processes.

Boersma, P. Dee * 1974; PhD, 1974, Ohio State University; ecology and conservation biology, reproductive strategies, colonial seabird biology.

Brenowitz, Eliot A. * 1987; PhD, 1982, Cornell University; animal behavior, neuroethology, neuroendocrinology, animal communication.

Cloney, Richard A. * 1962, (Emeritus); PhD, 1959, University of Washington; invertebrate embryology, histology, morphogenetic movements, metamorphosis, biology of ascidians.

Daniel, Thomas L. * 1984; PhD, 1982, Duke University; functional morphology, biomechanics, mechanics and energetics of animal locomotion.

Deyrup-Olsen, Ingrith J. * 1964, (Emeritus); PhD, 1944, Columbia University; general physiology, cell-membrane phenomena.

Edmondson, W. Thomas * 1949, (Emeritus); PhD, 1942, Yale University; ecology, rotifers, limnology with emphasis on productivity of lakes.

Edwards, John S. * 1967; PhD, 1960, Cambridge University (UK); arthropod neurobiology, insect physiology and development, tundra and alpine biology.

Felsenstein, Joseph * 1968, (Adjunct); PhD, 1968, University of Chicago; evolution and population genetics.

Gorbman, Aubrey * 1963, (Emeritus); PhD, 1940, University of California (Berkeley); endocrinology and neuroendocrinology.

Hauschka, Stephen D. * 1972, (Adjunct); PhD, 1966, Johns Hopkins University; muscle differentiation.

Herring, Susan W. * 1990, (Adjunct); PhD, 1971, University of Chicago; vertebrate functional morphology, relations between muscular function and skull growth.

Hille, Merrill B. * 1976; PhD, 1965, Rockefeller University; developmental biology, gastrulation in sea urchin embryos, translational regulation during meiosis.

Huey, Raymond B. * 1977; PhD, 1975, Harvard University; evolutionary and physiological ecology, herpetology, behavior.

Illg, Paul L. * 1952, (Emeritus); PhD, 1952, George Washington University; invertebrate zoology and systematics, copepods, symbiosis of crustaceans.

Kareiva, Peter M. * 1983; PhD, 1981, Cornell University; theoretical ecology, conservation biology, agricultural ecology, plant-insect interaction.

Karr, James * 1991; PhD, 1970, University of Illinois; ecology and conservation biology, water resources, environmental sciences, natural resources.

Kenagy, George James * 1976; PhD, 1972, University of California (Los Angeles); ecophysiology and behavior, reproduction and life history, population biology, evolution, mammalogy. Kingsolver, Joel * 1986; PhD, 1981, Stanford University; physiological ecology and evolutionary morphology of insects.

Kohn, Alan J. * 1961; PhD, 1957, Yale University; invertebrate zoology, ecology and functional morphology of marine invertebrates.

Kozloff, Eugene N. * 1966, (Emeritus); PhD, 1950, University of California (Berkeley); biology of lower invertebrates, ciliates, orthonectids, turbellarians and kinorhynches.

Laird, Charles D. * 1971; PhD, 1966, Stanford University; cell and developmental biology, human genetics.

Martin, Arthur W. 1937, (Emeritus); PhD, 1936, Stanford University; comparative invertebrate physiology.

Moody, William J. * 1982; PhD, 1977, Stanford University; single cell electrophysiology, development of electrical properties in embryos.

Murray, James D. * 1987, (Adjunct); PhD, 1956, DSc, 1968, Oxford University (UK); mathematical biology, biological pattern formation, wound healing, spread of epidemics.

Nordlander Edwards, Ruth 1997, (Acting); PhD, 1967, Case Western Reserve University; frog embryology and axonal guidance.

Odell, Garrett M. * 1985; PhD, 1972, Johns Hopkins University; mathematical biology, ecology, models in cell and developmental biology.

Orians, Gordon H. * 1960, (Emeritus); PhD, 1960, University of California (Berkeley); ecology and ethology, vertebrate social systems, community structure, plantherbivore interactions.

Paine, Robert T. * 1962; PhD, 1961, University of Michigan; experimental ecology, organization and structure of marine communities.

Palka, John M. * 1969; PhD, 1965, University of California (Los Angeles); neurophysiology, sensory physiology, developmental neurobiology.

Pietsch, Theodore W. * 1978, (Adjunct); PhD, 1973, University of Southern California; ichthyology.

Pinter, Robert B. * 1964, (Adjunct); MS, 1960, PhD, 1964, Northwestern University; cybernetics, robotics, biophysics.

Reeder, Ronald H. * 1981, (Affiliate); PhD, 1965, Massachusetts Institute of Technology; regulation of ribosomal RNA transcription by RNA polymerase I.

Riddiford, Lynn M. * 1973; PhD, 1961, Cornell University; insect development and physiology, invertebrate endocrinology, mechanisms of hormone action.

Rohwer, Sievert A. * 1973; PhD, 1971, University of Kansas; ecology and evolution of social behavior, avian biology and systematics.

Schubiger, Gerold A. * 1972; PhD, 1968, University of Zurich (Switzerland); developmental genetic control of Drosophila embryos, pattern formation in imaginal disks.

Steiner, Robert A. * 1977, (Adjunct); PhD, 1975, University of Oregon; neuroendocrinology.

Strathmann, Richard R. * 1973; PhD, 1970, University of Washington; invertebrate development, larval ecology and developmental strategies of marine invertebrates.

Truman, James W. * 1973; PhD, 1970, Harvard University; hormones and invertebrate behavior, insect neural development, circadian rhythms.

Wakimoto, Barbara T. * 1984; PhD, 1981, Indiana University; developmental genetics, gene expression and chromosome organization in eukaryotes.

Ward, Peter D. * 1984, (Adjunct); PhD, 1976, McMaster University (Canada); invertebrate paleontology, paleobiology.

Whiteley, Arthur H. * 1947, (Emeritus); PhD, 1945, Princeton University; comparative developmental physiology of invertebrates, gene action, fertilization.

Willows, A. O. Dennis * 1969; PhD, 1967, University of Oregon; invertebrate neurophysiology, neural mechanisms underlying behavior.

Wingfield, John C. * 1985; PhD, 1973, University College of North Wales (UK); environmental and hormonal control of avian reproductive cycles.

Yao, Meng Chao * 1986, (Affiliate); PhD, 1975, University of Rochester; regulation of gene amplification and chromosome rearrangements in Tetrahymena.

Associate Professors

Bakken, Aimee * 1973; PhD, 1970, University of Iowa; gene regulation during oogensis and embryogenesis, developmental, cellular and molecular biology.

Cooper, Mark S. * 1990; PhD, 1985, University of California (Berkeley); cellular physiology and cell motility in developing tissues.

Graubard, Katherine * 1979, (Research); PhD, 1973, University of Washington; cellular neurophysiology, neural basis of behavior.

Griffiths, W. Mary 1961, (Emeritus); MA, 1942, PhD, 1953, University of California (Berkeley); zoology.

Kimelman, David * 1989, (Adjunct); PhD, 1985, Harvard University; molecular biology of early development in the frog, Xenopus laevis.

Priess, James R. * 1993, (Affiliate); PhD, 1983, University of Colorado (Boulder); reliability models, fault trees.

Wright, Robin L. * 1990; PhD, 1985, Carnegie Mellon University; biogenesis of membranes, yeast cell biology.

Assistant Professors

Bosma, Martha * 1987; PhD, 1986, University of California (Los Angeles); development of CNS neuronal properties, electrophysiology and imaging of single cells.

Edwards, Scott V. 1994; PhD, 1992, University of California (Berkeley); molecular population genetics and evolution, avian comparative biology and systematics.

Schindler, Daniel E. * 1997; PhD, 1995, University of Wisconsin; ecosystem and community ecology, especially of aquatic systems; limnology.

Wasser, Samuel K. * 1982, (Adjunct); PhD, 1981, University of Washington; behavioral ecology, endocrinology, conservation genetics and reproductive biology.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

ZOOL 100 Evolution and Human Behavior (3) NW Introduction to evolution by natural selection, examining the light it can throw on human biology and behavior in such areas a s the nature of sex differences, sexual conflict, and conflict between parents and children. Does not fulfill major requirements. Offered: jointly with BIO A 100.

ZOOL 114 Evolution (2) NW *Kingsolver* Evolutionary biology for nonmajors. Evolutionary history of the earth and various theories of evolution.

ZOOL 118 Survey of Physiology (5) NW Human physiology, for nonmajors and health sciences students. Offered: AWSpS.

ZOOL 119 Elementary Physiology Laboratory (1) NW Prerequisite: ZOOL 118 which may be taken concurrently. Offered: AWSpS. **ZOOL 220** Diversity in Animals (5) NW Huey Morphological, functional, and ecological diversity within the major phyla of animals. Students who have taken 330, 362, 430, 433, 434, or 453 are strongly discouraged from taking this course, due to substantial overlap of material. Recommended: high school biology.

ZOOL 301 Introductory Physiology (3) NW Fundamentals of cellular, integrative, and organismal physiology: cell membranes, excitability, sensory systems, muscle structure and function, circulation, respiration, osmoregulation, digestion, thermoregulation. Prerequisite: either BIOL 101 or BIOL 202; either CHEM 120, or CHEM 152; either PHYS 115 or PHYS 122. Offered: WSp.

ZOOL 302 Introductory Physiology Laboratory (1) NW *Cooper* Student-initiated research projects, experimental design and techniques, data analysis, written reports. Prerequisite: ZOOL 301 which may be taken concurrently. Offered: Sp.

ZOOL 315 Mammalian Physiology (3) NW Principles of mammalian physiology with special emphasis on the cardiac, respiratory, renal, digestive, and immune systems taught at the organ and organ systems level. Prerequisite: either ZOOL 118, BIOL 101, or BIOL 202; recommended: 10 credits in biological science.

ZOOL 330 Natural History of Marine Invertebrates (5) NW Field and laboratory course emphasizing the habits, habitats, adaptations, and interrelationships of marine animals. Students are required to share a portion of the costs of field trips.

ZOOL 397 Preparing Avian Research Specimens (5) NW Preservation of avian study skins, skeletal specimens, extended wings, and tissues for genetic analyses. Standards required for deposit of specimens in research collections. Examines needs for continued collecting, uses of specimens in discovering new knowledge, and impacts of collecting on wild populations.

ZOOL 403 Comparative Vertebrate Histology (5) NW Microscopic and submicroscopic anatomy of vertebrates. Emphasis on mammals. Light microscopy and interpretation of ultrastructure. Functions of basic tissue types and organs as related to structure. Prerequisite: either BIOL 202 or BIOL 355.

ZOOL 408 Mechanisms of Animal Behavior (4) NW Beecher, Brenowitz Comparative exploration of physiological and perceptual mechanisms that control behaviors necessary for survival and reproduction in animals. Model systems discussed include animal communication, mate choice, escape behavior, learning and memory, orientation, biological rhythms, foraging behavior. Prerequisite: either BIOL 102, BIOL 203, or PSYCH 200. Offered: jointly with PSYCH 408; W.

ZOOL 409 Sociobiology (5) NW Rohwer Biological bases of social behavior, emphasizing evolution as a paradigm. Topics are: individual versus group selection, kin selection, altruism, group versus individual living, mating systems, parental care of offspring, and competitive strategies. Prerequisite: either PSYCH 200 or both BIOL 202 and BIOL 203. Offered: jointly with PSYCH 409.

ZOOL 410 Ethology and Ecology Laboratory (4) NW Boersma Field projects on foraging and social behavior, species interactions and structure of terrestrial and marine communities, including special student research problems. Students may be required to share a portion of the transportation costs of field trips. Prerequisite: BIOL 472. Offered: Sp.

ZOOL 414 Molecular Evolution (5) NW *S Edwards* Survey of empirical approaches to the study of molecular evolution and ecology, drawing on examples from a variety of taxa and the recent literature. Topics include DNA sequencing and systemat-

COLLEGE OF ARTS AND SCIENCES / ZOOLOGY 257

ics, fingerprinting approaches in behavioral ecology, and adaptive evolution at the molecular level.

ZOOL 430 Marine Zoology (8) NW Strathmann Survey of groups of invertebrate animals represented in marine environments; natural history, ecology, distribution, habitat, adaptation, and trophic interrelationships. Permission of Director, Friday Harbor Laboratories required for registration. Corequisite: BOTANY 445; recommended: 20 credits in biological sciences. Offered: at Friday Harbor Laboratories; Sp.

ZOOL 432 Marine Invertebrate Zoology (9) NW Comparative morphology and biology of marine invertebrates with emphasis on field and laboratory studies. Representatives of all major and most minor phyla are collected, observed alive, and studied in detail. Not open for credit to students who have taken 433 or 434. Recommended: 20 credits in biological sciences. Offered: at Friday Harbor Laboratories; S.

ZOOL 433, 434 Invertebrate Zoology (5, 5) NW Comparative biology and morphology of invertebrates. Laboratory work emphasizes structures and functions. 433 deals with principles of animal organization, Protista, simpler multicellular animals, echinoderms, and chordates. 434 emphasizes annelids and related worms, mollusks, and arthropods. Not open to students who have taken 430 or 432. 433, 434 -Prerequisite: BIOL 102 or BIOL 202. Offered: A,W.

ZOOL 435 Parasitology (5) NW General course covering the principles of parasitism and the major groups of animal parasites. Prerequisite: BIOL 102 or BIOL 202.

ZOOL 436 Invertebrate Endocrinology (3) NW Survey of endocrine mechanisms used by invertebrate groups to regulate homeostasis, growth, reproduction, and behavior. Special emphasis given to invertebrate model systems that provide unique insights into basic biological processes. Prerequisite: either BIOL 202, ZOOL 301, or ZOOL 315; either CHEM 220, CHEM 224, CHEM 239, or CHEM 337; either PHYS 115 or PHYS 122.

ZOOL 438 Comparative Endocrinology (3) NW Wingfield Hormonal integration of living processes at all levels in animals: molecules, cells, organs, organisms, populations. Prerequisite: either BIOL 202 or BIOL 102 with either ZOOL 301 or ZOOL 315; recommended: a 400-level course in physiology and biochemistry.

ZOOL 439 Comparative Endocrinology Laboratory (2) NW *Wingfield* A broad introduction to endocrine techniques with appropriate experiments to accompany and enlarge on material presented in 438. Prerequisite: ZOOL 438 which may be taken concurrently.

ZOOL 440 Biomechanics (4) NW Daniel Physical biology emphasizing a mechanical approach to ecological, evolutionary, and physiological questions. Basic principles underlying fluid and solid mechanics to explore responses of animals to flows, loads, and motions. Recommended: either BIOL 102 or BIOL 202; either MATH 125 or Q SCI 292; either PHYS 114 or PHYS 121.

ZOOL 444 Entomology (3) NW *J* Edwards Biology of terrestrial arthropods, with emphasis on insects. Structure, classification, physiology, and ecology of insects. Interrelationships of insects and man. Prerequisite: either BIOL 102 or BIOL 202 and BIOL 203. Offered: Sp.

ZOOL 445 Entomology Laboratory (2) NW *J Edwards* Structure and function of arthropods, with emphasis on insects. Field studies and taxonomy of important insect groups. Students may be required to share a portion of the transportation costs of field trips. Corequisite: ZOOL 444. Offered: Sp.

ZOOL 448 Concepts of Nervous System Function (3) NW Palka Broad examination of integrative mechanisms in central nervous system function, with emphasis on sensory processing, plasticity, and control of behavior. Examples are taken from a variety of animal groups. Prerequisite: BIOL 202.

ZOOL 449 Concepts of Nervous System Function Laboratory (2) NW Palka Experiments to accompany material presented in 448. Prerequisite: ZOOL 448 which may be taken concurrently.

ZOOL 451 Vertebrate Zoology (5) NW Kenagy The biology of vertebrate animals, emphasizing their diversity, adaptations, and evolutionary history. Introduces aspects of behavior, physiology, morphology, and ecology that emerge from the comparative study of vertebrates. Laboratory includes local field trips, films, and introduction to regional vertebrate fauna. Prerequisite: either BIOL 102 or BIOL 202 and BIOL 203.

ZOOL 453 Comparative Anatomy of Vertebrates (5) NW Comparison of the structure of vertebrates with emphasis on evolution and organ system functions. Prerequisite: BIOL 202: recommended: B STR 301; ZOOL 451. Offered: W.

ZOOL 455 Developmental Biology of Animals (4) NW Schubiger Embryology and subsequent development of vertebrate and invertebrate animals, including Xenopus, mammals, chicks, Drosophila, echinoderms. Morphological changes in developing animals; experimental analysis of developing systems; underlying genetic and biochemical regulation of development. Prerequisite: either BIOL 202, BIOL 355, BIOL 401, BIOC 405, BIOC 440, GENET 371, or GENET 372.

ZOOL 456 Developmental Biology of Animals Laboratory (3) NW Shellenbarger Normal development of living embryos (frog, chick, insect, echinoderm). Internal anatomy of embryos on prepared slides. Comparisons between vertebrate and invertebrate animals. Scientific style reports on experiments. Prerequisite: ZOOL 455 which may be taken concurrently.

ZOOL 457 Methods and Problems in Development (3) NW Schubiger, Kimelman Special topics in development. Integrating classical and current approaches. Developmental genetics, experimental embryology, molecular mechanisms of developmental regulation, and gene function in cell determination and cell differentiation in animal systems. Prerequisite: either ZOOL 455 or BIOL 202 with BIOL 401 and either GENET 371 or GENET 372.

ZOOL 459 Developmental Neurobiology (3) NW *Bosma* Invertebrate and vertebrate examples illustrate the mechanisms used in constructing nervous systems. Focus on the cellular and molecular mechanisms that underlie questions about the basis of neuronal diversity, axonal pathfinding and target recognition, synaptogenesis, and activity-dependent plasticity. Prerequisite: either BIOL 202, BIOL 355, or ZOOL 301; either BIOL 401 or ZOOL 455.

ZOOL 464 Natural History of Birds (5) NW *S Edwards, Wingfield* Field, lecture, and laboratory study of birds framed in biological theory rather than taxonomy. Breeding systems, brood parasitism, appearance, molt, migration, orientation, social behavior, song, and flight are emphasized. Includes Saturday and weekend field trips for which students are required to share a portion of transportation costs. Prerequisite: either BIOL 102 or both BIOL 202 and BIOL 203. Offered: Sp.

ZOOL 465 Natural History of Mammals (5) NW Kenagy Field, lecture, and laboratory course introducing mammals in a general biological context, emphasizing ecology, evolution, behavior, morphology, and adaptation to the environment. Includes weekend field trips, for which students may be required to share a portion of transportation costs. either BIOL 102 or both BIOL 202 and BIOL 203; recommended: ZOOL 451. ZOOL 467 Comparative Animal Reproduction (3) NW Ramenofsky, Wingfield Reproductive mechanisms, environmental influences on reproductive endocrinology, physiology, behavior, ecology of vertebrates. Discussions extend from organismal to cellular level, and focus on diversity of reproductive patterns among vertebrates. Prerequisite: BIOL 102 or both BIOL 202 and BIOL 203; recommended: biochemistry and physiology.

ZOOL 468 Comparative Animal Reproduction Laboratory (2) NW Ramenofsky, Wingfield Laboratory and field studies on animal reproduction involving endocrinology, anatomy, behavior, and ecology. Accompanies, supplements, and extends material presented in 467. Prerequisite: ZOOL 467 which may be taken concurrently.

ZOOL 470 Techniques for Mathematical Biology (3) NW Odell Equips students to use, rather than prove, many applied mathematics techniques essential in mathematical biology. Includes instruction to use symbolic computation software (Mathematica, Macsyma) to do by computer the kind of mathematical formula manipulation that mathematicians formerly performed by hand. Recommended: calculus, linear algebra.

ZOOL 471 Models in Biology (4) NW Odell Explores use of models in biology in a wide range of topics, including morphogenesis, nerve signals, ecological interactions, population biology, and evolutionary theory. Emphasis on the biological insights models can provide rather than mathematical techniques. Prerequisite: either ZOOL 470, MATH 125, or Q SCI 292.

ZOOL 475 Biogeography (3) NW Analysis of historical and ecological determinants of current and past distributions of organisms. Integrates techniques developed by taxonomists, paleontologists, geologists, evolutionists, ecologists, and biogeographers to elucidate relationships between geographical distributions and continental drift, ecological interactions, climate, and dispersal abilities of organisms. Recommended: one year college biology; background in ecology and evolution.

ZOOL 484, 485 Animal Physiology (3, 3) NW Huey, Riddiford, Truman Physiology at levels of organisms and behavior, organ systems, and cells—an evolutionary and integrative perspective. 484 Organismal physiology: metabolism, temperature, locomotion, osmoregulation, respiration, circulation, digestion. 485 Integrative physiology: neurons, muscles, and hormones. Prerequisite: either BIOL 202, ZOOL 301, ZOOL 315, or BIOL 355; either CHEM 162, CHEM 165, or CHEM 220; either PHYS 114 or PHYS 121.

ZOOL 486, 487 Animal Physiology Lab (2, 2) NW Huey, Riddiford, Truman Experimental design and techniques, data analysis, written reports. 486: project labs in organismal-level physiology. 487: experiments in integrative physiology. 486 - Prerequisite: ZOOL 484 which may be taken concurrently. 487 - Prerequisite: ZOOL 485 which may be taken concurrently.

ZOOL 490 Undergraduate Seminar (3, max. 6) NW Supervised reading and group discussion on selected concepts of zoology. Recommended: one upper-division zoology course.

ZOOL 491 Topics in Zoological Research (1, max. 3) NW Undergraduate seminar on research problems currently under investigation by department faculty members. Includes discussions and laboratory demonstrations of aims, techniques, and results of zoological research. Credit/no credit only. Recommended: one upper-division zoology course.

ZOOL 492 Animal Migration (3) NW Undergraduate seminar on evolution, ecology, behavior, and physiology of migration. Student presents a seminar and leads class discussion on a selected topic. Prerequisite: either BIOL 102 or BIOL 203; recommended: course in physiology, ecology, or animal behavior.

ZOOL 498 Special Problems in Zoology (1-5, max. 15) Recommended: one upper-division zoology course. Offered: AWSpS.

Courses for Graduates Only

ZOOL 506 Topics in Developmental Biology (1-2, max. 15) Seminars and discussions of aspects of growth of special current interest.

ZOOL 509 Topics in Vertebrate Biology (1-3, max. 15) *Rohwer* Detailed consideration of topics in behavioral integration, communication, and social organization. Prerequisite: 409 or PSYCH 409 or equivalent.

ZOOL 517 Analytical Development Physiology (9) Modern analysis of oogenesis, fertilization, embryonic organization and differentiation from an experimental and comparative point of view, and other advanced topics. Laboratory emphasizes experimental study of metabolic, biochemical, and biophysical properties, structural and mechanical features, subcellular localization, and microscopic organization of gametes and embryos of various marine invertebrates.

ZOOL 520, 521, 522 Seminar (1, 1, 1) Credit/no credit only. Offered: A,W,Sp.

ZOOL 525 Seminar in Mathematical Biology (2, max. 12) Daniel, Kareiva, Odell Examines mathematical models in a broad range of topics in biology, from cellular and subcellular to organismal and population phenomena. Participants present research topics, supplemented with selected readings from the primary literature, showing how mathematical methods and experimental or field biology are merged to predict observable phenomena. Credit/no credit only.

ZOOL 528 Advanced Topics in Physiology (1-3, max. 15) Recent developments. Prerequisite: one 400-level course in physiology.

ZOOL 529 Advanced Topics in Physiology (1-3, max. 15) Recent developments. Credit/no credit only. Prerequisite: one 400-level course in physiology.

ZOOL 530 Science and Environmental Policy (3) Role of science and scientists in formulating public policy related to the environment. Conceptualizes policy processes as a means of understanding opportunities for, and limits of, science in development and implementation of public policy. Prerequisite: concurrent registration in 531. Offered: W.

ZOOL 531 Science and Environmental Policy: Case Histories (2) Examples of the use of scientific analysis in the development of environmental policies. Prerequisite: concurrent registration in 530. Offered: W. **ZOOL 532** Internship Seminar (1) Preparation for an analytical paper concerning the role of science in decision making. Focuses on the agency or firm in which the student served as an intern. Prerequisite: 530, 531.

ZOOL 533 Advanced Invertebrate Zoology (9) Invertebrate fauna of the San Juan Archipelago. Topic changes from year to year. Individual research projects are emphasized. Prerequisite: course in invertebrate zoology and permission of Director of Friday Harbor Laboratories. Offered: at Friday Harbor Laboratories; SpS.

ZOOL 536 Comparative Invertebrate Embryology (9) Diversity in developmental patterns in major marine taxa. Analysis of evolutionary changes in development. Emphasis on observation of live embryos and larvae. Prerequisite: permission of Director of Friday Harbor Laboratories; recommended: courses in invertebrate zoology and developmental biology. Offered: at Friday Harbor Laboratories; Sp,S.

ZOOL 538 Advanced Invertebrate Physiology (9) General and comparative aspects of nerve and muscle physiology with particular emphasis upon neuronal control of behavior, neuronal interactions, and other advanced topics determined by visiting faculty. Extensive laboratory experience, including intracellular and extracellular stimulating and recording techniques. Offered: at Friday Harbor Laboratories; Sp.

ZOOL 540 Topics in Cellular Developmental Biology (1, max. 16) Bakken, Cooper, Hille, Moody Seminar on current topics dealing with cellular aspects of developmental biology. Variable topics on both vertebrate and invertebrate development. Credit/no credit only.

ZOOL 543 Morphogenesis and Gene Networks (1, max. 12) Odell Seminar on current topics in genetic networks and the mechanics of morphogenesis. Topics vary.

ZOOL 556 Insect Development (3) Characterizes developmental processes and their adaptations in diverse insect groups. Emphasizes hormonal control mechanisms in metamorphosis, polymorphism and diapause, regeneration and genetic analysis of development. Prerequisite: 456 or equivalent, BIOL 202 or equivalent.

ZOOL 557 Topics in Molecular Insect Endocrinology (1, max. 12) *Riddiford* Assigned reading and discussion of current topics in molecular insect endocrinology. Prerequisite: 438 or 485 or equivalent.

ZOOL 568 Chemical Integration (2, max. 6) *Wingfield* Graduate seminar dealing with current problems in endocrinology and neuroendocrinology. Credit/no credit only. **ZOOL 570** Evolutionary Physiological Ecology (2, max. 16) *Huey, Kingsolver* Assigned reading, discussion, and student presentations on issues in physiological and ecological aspects of evolution. Topics variable. Credit/no credit only. Prerequisite: BIOL 454 and 472 or equivalent.

ZOOL 571 Current Topics in Evolution (1, max.16) *Huey, Kingsolver* Assigned reading and discussion of current topics in evolution. Topics variable. Credit/no credit only. Prerequisite: BIOL 454 or equivalent.

ZOOL 572 Topics in Ecology (1-3, max. 15) Graduate seminar on modern problems in ecology. Prerequisite: BIOL 472 or equivalent.

ZOOL 573 Physiological Ecology (1-3, max. 15) *Huey, Kenagy, Kingsolver* Perspectives and principles of research in the physiology and behavior of animals in an ecological and evolutionary context, emphasizing whole animals and integration with diverse levels of biological organization.

ZOOL 575 Topics in Historical Ecology (2, max.
 14) Paine Assigned reading and discussion of the history of conceptual issues or significant individuals. Topics variable. Credit/no credit only. Prerequisite: BIOL 472 or equivalent.

ZOOL 577 Marine Invertebrate Biology (1, max. 8) Seminar on current topics in biology or marine invertebrates at all levels of biological organization. Topics variable. Credit/no credit only. Prerequisite: 433 and 434 or equivalent.

ZOOL 578 Advanced Ecology (5) Kareiva Strategies of reproduction, habitat selection, foraging and spacing; theory of competition and predator-prey interactions; niche theory and community structure. Prerequisite: BIOL 472 or equivalent.

ZOOL 579 Criticism in Evolutionary Ecology and Behavior (2, max. 16) Rohwer Critical analysis of manuscripts under preparation that treat evolutionary ecology, morphology, and behavior. Topics variable. Credit/no credit only. Prerequisite: 409 or equivalent introduction to evolutionary thinking.

ZOOL 580 Environmental Physiology and Behavior (2, max. 14) *Kenagy, Wingfield* Current conceptual issues and research results. Topics vary. Credit/no credit only. Prerequisite: two upper-division courses in physiology or behavior or equivalent.

ZOOL 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

ZOOL 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

ZOOL 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

School of Business Administration

Dean

William D. Bradford 114 Mackenzie

Associate Dean for Academic Programs

Douglas L. MacLachlan 116 Mackenzie busadmin@u.washington.edu

Men and women embarking on business careers will have the opportunity to influence many of the social, political, and economic forces in today's world. The School of Business Administration prepares students for professional careers in management and related disciplines in both the private and public sectors.

The School of Business Administration offers an undergraduate program leading to the degree of Bachelor of Arts (BA) in Business Administration and graduate programs leading to the degrees of Master of Business Administration (MBA), Executive Master of Business Administration (EMBA), Master of Professional Accounting (MPAcc), and Doctor of Philosophy (PhD). Evening and part-time BA and MBA programs are recent additions.

Business Administration became an independent unit within the University system in 1917. It has been accredited by the American Assembly of Collegiate Schools of Business since 1921.

Facilities and Services

Most business administration classes and activities are in four buildings. Balmer Hall, named for Thomas Balmer, former president of the University Board of Regents, contains classrooms and computer labs. There are four computer labs in Balmer Hall that are available to Business School students. Mackenzie Hall, named in memory of Prof. Donald Mackenzie, Chair of the Department of Accounting from 1949 to 1955, contains the Dean's Office, the Undergraduate Program Office, the Graduate Program Office, the PhD Program Office, Business Administration Computer Services (BACS), Office of Development and Community Relations, faculty offices, five department offices, and other business administration program offices. Nearby Lewis Hall contains the Business Career Center and other faculty and administrative offices. A fourth building, newly constructed on the north side of Balmer, has three distinct components: the Seafirst Executive Education Center (which includes the James B. Douglas Executive Forum), the Boeing Auditorium, and the Albert O. and Evelyn Foster Business Administration Library.

To serve the continuing education needs of middleand senior-level managers, the School of Business Administration offers a number of certificate programs, either University-initiated or co-sponsored with various community and industry organizations. The Management Program, a nine-month, one night per week program, strengthens understanding and skills in all areas of management and provides an opportunity for successful managers to learn from a distinguished faculty and each other. Short courses and seminars are offered throughout the year in all areas of management, including marketing strategy, finance and accounting for non-financial executives, negotiation skills, and many others. In addition, the School develops and runs custom programs under contract with individual companies and organizations. Information on continuing education programs may be obtained from the Office of Executive Programs, (206) 543-8560, fax (206) 685-9236, uwexp@u.washington.edu.

International Business Programs

International business programs are coordinated and developed by the School's Center for International Business Education and Research (CIBER). These activities include special graduate and undergraduate certificate programs, seminars, internships, business foreign-language programs, special guest-speaker programs, and graduate foreign-exchange programs. Although the Marketing and International Business Department offers a general curriculum in international business, each of the five academic departments within the School maintains faculty with special international luce oriented courses are offered by each department.

At the undergraduate level, the School offers the Certificate of International Studies in Business (CISB) Program. Students in the program complete the same demanding business curriculum as other students and enhance this training with foreign language study, area studies, and an international experience. The program requires that students have a solid foundation in one of six language tracks: Chinese, French, German, Japanese, Russian, and Spanish; a seventh custom track for other languages is also an option.

The Education for the Global Entrepreneur (EDGE) program teams undergraduate and graduate students with local businesses to provide information and assistance necessary to compete successfully in the international arena. This is accomplished through student consulting teams, overseas research projects which involve Business School students on exchange programs, and student interns.

At the MBA level, the Business School offers an International Management Program (IMP) that provides opportunities for MBA students to build on the international business foundation that every MBA develops through the first year of the program. In addition to international business electives, the IMP includes overseas travel through study tours, quarter-long exchange programs, and international internships. IMP students also participate in the weekly Global Business Forum which brings top international business leaders to campus to discuss important issues facing their companies and industries.

Questions regarding these programs may be directed to the Program Assistant, CIBER, 303 Lewis, (206) 685-3432, fax (206) 543-6872, uwciber@u.washington.edu.

Business Career Center

The Business Career Center coordinates all MBA and MPAcc career services. These include career counseling and career management workshops, the administration of special career events such as firm nights, company presentations, on-campus MBA and MPAcc recruitment, and a job-listing service. The Business Career Center also administers ASK (Alumni Sharing Knowledge), an alumni mentoring program. Questions regarding these programs and services may be directed to the director, 202 Lewis, (206) 685-2410.

Undergraduate business-career counseling and oncampus recruitment is provided by the UW Center for Career Services, 301 Loew.

Instructional Resources Office

The Instructional Resources Office promotes excellence in teaching by providing resources in current practice and research in teaching and learning. The office serves faculty and teaching assistants with individual consultations, coordinates a teaching preparation program for doctoral students, and offers assistance with instructional innovations.

The Business Writing Center

The mission of the Business Writing Center is to help undergraduates develop the writing skills essential to professional success. The center offers one-on-one tutoring, workshops and peer feedback for special class projects, and opportunities for advanced students to be peer tutors.

Honor Societies

Beta Gamma Sigma is the national scholastic honor society in the field of business. Election to membership is available to both undergraduate and graduate students in business. Selection is based on outstanding scholastic achievement.

Beta Alpha Psi is the accounting honor society. Membership is based primarily on scholastic achievement, but some community service is also required. Beta Alpha Psi provides a mechanism for students, professionals, and educators to meet on both formal and informal bases.

Student Organizations

Chapters of Alpha Kappa Psi, Association of Black Business Students, Association of Collegiate Entrepreneurs, International Association of Students in Economics and Business Management (AIESEC), American Marketing Association, Business Information Technology Association, Northwest Human Resources Management Association, Student Advisory Council, Undergraduate Finance Club, Undergraduate Management Consulting Association, and University Sales Club provide opportunities for undergraduate students to meet informally and to participate in a variety of projects and events.

The goals and interests of graduate students are served by the MBA Association, the Entrepreneurship and Innovation Group, Challenge for Charity, Graduate Consulting Club, Graduate Finance Club, Graduate International Business Association, Business Diagnostic Center, Graduate Accounting Club, Environmental Business Alliance, Graduate Marketing Club, Toastmasters, and the Doctoral Association.

Undergraduate Programs

137 Mackenzie Director Patsy Wosepka

Associate Director Elaine G. Solomon

Academic Advisers Holly Bauman Nancy Clarke Jacqueline Hoekstra William Jackson—Evening Degree Program 137 Mackenzie, Box 353200 (206) 543-4350 bizinfo@u.washington.edu

The Business School admits only for autumn quarter, offering application for early admission to those attending the UW and prepared to declare a business major during their freshman year, and application for upperdivision admission to all other students. Admitted students may elect to take classes the summer quarter prior to autumn-quarter admission.

Academic advisers are available to help with selecting classes, adding and dropping classes, long-range planning, applying for graduation, making referrals to other campus resources and programs, and providing any needed general assistance.

Evening Degree Program

Students may earn a Bachelor of Arts in Business Administration through the Evening Degree Program. Admission and graduation requirements are identical to requirements for the day business program, shown below. The Evening Degree Program offers concentrations in Marketing, Human Resources Management, and General Business.

Undergraduate Business Educational Opportunity Program

Director Jeffrey Hedgepeth

Recruitment, admissions counseling, advising, and support services are available for minority students underrepresented at the University, and students from educationally and economically disadvantaged backgrounds. Any student who qualifies for the UW Educational Opportunity Program is eligible. Special scholarships are also available for underrepresented minority students. Academic advisers have information on the Business Educational Opportunity Program.

Bachelor of Arts in Business Administration

Admission Requirements

Applicants are considered in two admission cycles, the Early Admission Group and the Upper-Division Admission Group, described below. The following requirements apply to both groups:

1. A minimum cumulative GPA of 2.50 for all college course work.

2. A minimum cumulative GPA of 2.50 for all required business administration courses.

3. A student who has previously attended the UW also must have GPAs of at least 2.50, both UW cumulative and in UW business administration courses.

4. Since eligible applicants exceed the space available, acceptance is competitive. Admission will be based on evaluation of five factors: (a) for Early Admission Group, pre-college test scores from SAT I or ACT; (b) overall scholastic record; (c) grades in pre-business courses, described below; (d) written communication skills; and (e) evidence of leadership skills, community activities, and the promise of achievement in a business or professional career. In addition, the School of Business is committed to the University's affirmative action policy. Consideration will therefore be given in the admissions process to creating diversity.

5. Admission is offered once a year, for autumn quarter only. A Business School application, together with all supporting materials, must be on file by April 1 (April 15 for transfer students). Records of all course work completed by the deadline must be submitted at the time of application.

Early Admission Group (EAG)

1. This admission path is open to students who began their studies at the UW as freshmen, have been enrolled no more than three quarters, and have completed 30 graded credits at the UW.

2. Completion of the following courses: ECON 200; MATH 112 or 124; an approved English composition course chosen from C LIT 240, ENGL 104-105, 111, 121, 131, 182, 197, 198, 199, or 281; and pre-college test scores (ACT or SAT I). Applicants should take general education or elective courses to complete the minimum of 30 graded credits.

3. Students must be currently enrolled UW students who have completed autumn and winter quarters in residence.

Upper-Division Admission Group (UAG)

1. Students must present a minimum of 60 academic credits at the time of application including the following graded credits: ACCTG 215; ECON 200 or 201; MATH 112 or 124; an approved English composition course, chosen from C LIT 240, ENGL 104-105, 111, 121, 131, 182, 197, 198, 199, or 281; O E 200. In addition, the following courses must be completed prior to admission in autumn quarter: ACCTG 225; ECON 200 and 201; QMETH 201. Applicants should take general education or elective courses to complete the minimum of 60 graded credits.

2. Students admitted to the UW as freshmen are expected to take ACCTG 215, 225; O E 200; and QMETH 201 in residence.

3. Transfer Applicants: Qualified applicants with at least 45 credits and a minimum 2.85 GPA who meet University admission requirements, but not Business School requirements, are eligible to be placed in the College of Arts and Sciences as pre-business majors.

Graduation Requirements

General Education Requirements: The following must be selected from the University Areas of Knowledge courses: 20 credits in Visual, Literary, & Performing Arts; 20 credits in Individuals & Societies, including 10 credits in microeconomics and macroeconomics (ECON 200 and 201); 20 credits in the Natural World, including 5 credits in calculus (MATH 112 or 124); most students need precalculus before taking college calculus (some precalculus courses qualify for the Natural World requirement); 5 credits in English composition.

Students from community colleges in Washington should check the *Transfer Guide* or consult with their community college adviser for equivalent courses. Students from other four-year schools should see an adviser at their school. Students entering the School of Business under the terms of the Associate Degree Agreement may apply courses selected from the community college's breadth list toward the general education requirements.

Business School Requirements: ACCTG 215, 225 (previously 210, 220, 230); QMETH 201; O E 200; B ECON 300: MKTG 301: I S 300: I BUS 300: OPMGT 301: FIN 350; HRMOB 300; O E 302; B POL 470 or 471 or 480; and 300- or 400-level business administration electives (or area of concentration) to bring total number of business administration credits to 72; two writing-intensive courses, one from B CMU 301, B CMU 410, ENGL 281, ENGL 381; one from English composition, or from the remaining three courses listed immediately above, or from any W course. No more than 7 lower-division business elective credits: a minimum of 72 non-business-administration credits, and 72 business administration credits, including those listed under the preceding requirements sections; a cumulative GPA of at least 2.50 in all business administration credits earned at the UW; and a cumulative GPA of 2.50 for all UW credits. Students must complete six of the nine upper-division core courses, including Business Policy, and 35 of the 53 required upper-division business credits at the UW. Students who have taken more than three of the nine upper-division core business courses at another school should consult an academic adviser in the Business School Undergraduate Program Office prior to applying

Accounting Option: The notation "Accounting" will be included on the permanent record, or transcript, of a student who graduates with a degree of Bachelor of Arts in Business Administration and who completes the following courses with a minimum cumulative GPA of 2.00: ACCTG 301, 302, 303, 311, 330, 411, 421, and 6 elective credits in 400-level accounting courses, except 401 and 499. Students who have completed ACCTG 505 may not apply to the accounting concentration.

Information Systems Option: The notation "Information Systems" will be indicated on the transcript of all stu-

dents who are accepted into this option and successfully complete the following courses with a minimum cumulative of GPA of 2.50: I S 320, 460, 470, and 480.

Students who apply to the IS option will be admitted at the same time they are admitted to the Business School. Admission to the IS option is based on the same criteria as admission to the Business School. Currently demand is greater than space in this option. Therefore, admission is competitive. Admission to the Business School does not guarantee admission to the IS option.

Double Baccalaureate and Second Baccalaureate

Students who wish to earn more than one baccalaureate degree should consult an academic adviser in the Business School Undergraduate Program Office, either during or before their junior year. Persons seeking a second baccalaureate should apply at the University's Office of Undergraduate Admissions. To be considered, applicants must complete by quarter of entry the same prerequisites for admission as applicants for the first baccalaureate degree. Since the number of eligible applicants exceeds that for which space is available, acceptance will be competitive, based on the criteria listed above for selection of first baccalaureate degree applicants. The Business School will use the GPA for the last 90 credits earned.

Graduate Programs

Graduate Program Coordinator 110 Mackenzie Hall, Box 353200 (206) 543-4661 mba@u.washington.edu

Admission

Qualified students who are graduates of the University of Washington or of other accredited colleges or universities may be admitted autumn quarter to graduate degree programs. GPA, Graduate Management Admission Test score, work experience, educational and professional objectives, and other factors are considered in the admission process. Inquiries concerning the details of admission should be made to the specific degree program of interest, University of Washington, Graduate School of Business Administration, Mackenzie Hall, Box 353200, Seattle, WA 98195.

Application Procedure

Applications to graduate programs are considered for entry in autumn quarter only. The formal deadlines for application are: February 1 for the PhD program; February 20 for international applicants; December 1, January 16, February 20, and March 27 for domestic applicants for the MBA; and April 15 for the Executive MBA, MPAcc, and Evening MBA programs. Students are encouraged to apply as early as possible for the full-time MBA program.

The Graduate School of Business Administration offers programs of study leading to the advanced degrees of Master of Business Administration, Executive Master of Business Administration, Master of Professional Accounting (Taxation), and Doctor of Philosophy.

Master of Business Administration

The Master of Business Administration degree program has been designed for students who are preparing for a professional career in management. A period of two academic years, or 96 academic credits, is required for most students to complete the MBA program. The program consists of 48 credits of required first-year courses and 48 elective credits. The student may take no more than 16 credits in any one elective area.

The evening MBA program, initiated in the fall of 1996, is targeted toward fully employed college graduates

who seek a management degree that can be earned outside their regular working hours. Instruction takes place two evenings per week and students typically take two courses per quarter. The program consists of 88 academic credits, with normal completion of degree requirements in eleven quarters.

Special Programs

Within the MBA program, there are options for special study: International Management; Program in Business, Technology and Environment; Program in Entrepreneurship and Innovation; and the interdisciplinary Global Trade, Transportation, and Logistics Studies. The following concurrent degree programs are also available: MBA/JD with the School of Law, MBA/MAIS with the Henry M. Jackson School of International Studies, MBA/MEA with the College of Engineering's Program in Engineering and Manufacturing Management, and MBA/MHA with the School of Public Health and Community Medicine.

Executive Master of Business Administration

Since the autumn of 1983, the Executive MBA Program has provided an additional pathway to the Master of Business Administration degree. The EMBA program provides an intensive executive-development experience to a select group of midcareer managers who continue to work full-time while pursuing the MBA degree. Candidates for this two-year program should have seven or more years of increasingly successful work experience including three to four years in management, and currently hold mid- or top-level management positions. They are typically sponsored by their organizations and have been identified as employees with high potential to advance as general managers. Students are selected to ensure diversity of industry, functional areas and organizational size.

The Executive MBA degree program is offered in two scheduling options. Both run for two academic years, September through June. (1) The Puget Sound Option meets on campus for a full day once a week, on alternating Fridays and Saturdays. In addition, students attend spring and fall residence sessions each year. (2) The Northwest and Beyond Option meets on campus once a month, generally for three consecutive days, Thursday through Saturday. Between monthly sessions, students continue to interact with faculty and classmates online via the Internet and interactive groupware. This format is designed for individuals from the greater Northwest as well as those from the Puget Sound area whose schedules preclude weekly attendance.

While the scope of the curriculum is comparable to that of the regular MBA program, the pace is more intense and the perspective is that of a general manager. There are 21 required courses and no electives.

Applications are accepted throughout the year, with an application deadline of April 15 for the class beginning each autumn. Late applications are handled on a space-available basis.

Master of Professional Accounting (Taxation)

The Master of Professional Accounting degree in Taxation prepares individuals for high-level tax careers in government, industry, and professional accounting. The MPAcc (Taxation) provides an opportunity for graduate study in taxation beyond the typical undergraduate accounting major. The program is an intensive, detailed study of federal taxation that is designed to provide a working knowledge of tax law in both a transactional and theoretical framework. The program is designed to be completed in two years for individuals with prior study in accounting or business. For those who have an undergraduate degree in accounting or an MBA, the MPAcc degree program may be completed in one calendar year.

Doctor of Philosophy

The Doctor of Philosophy degree in Business Administration is designed primarily for students who wish to pursue academic careers, although the training is also useful for students oriented toward research positions in business or other institutions. Students must select a major area of concentration and two or three minor supporting areas. Major areas of concentration include accounting, finance, human resource management and organizational behavior, information systems, marketing, operations management, operations research, and strategic management. All students must take research methods as a minor area. The other minor areas can be chosen from either international business, the above list of major areas, or from other areas in the University outside the School of Business Administration, such as economics, psychology, statistics, mathematics, and computer science. The minor areas should support and complement the major area.

Graduation Requirements: Each PhD student must successfully complete course work in the major and minor areas, pass area examinations, successfully defend the dissertation proposal in the General Examination, and finally, defend the completed dissertation in the Final Examination.

Doctoral students with strong backgrounds can complete the doctoral program in three years, but most students take four to five years. The School's goal is to make financial aid available, in the form of research and teaching assistantships, to all of its doctoral students. In addition to service appointments, fellowships are available on a competitive basis to support students engaged in their dissertation research during the final part of their programs.

Special Requirements

Applicants to graduate business programs are required to submit scores on the Graduate Management Admission Test. Those admitted to the MBA program must demonstrate understanding of the fundamental concepts of calculus and proficiency in the use of computers.

Accounting

Accounting involves development and communication of financial and operational information for business and nonprofit economic entities. The curriculum includes understanding accounting information systems, using accounting information in managerial decision making, preparing and auditing financial statements under generally accepted accounting and auditing standards, and understanding the fundamental aspects of personal and corporate taxation. Elective courses provide in-depth instruction in managerial and financial accounting, not-for-profit accounting, and taxation. Courses provide a foundation for careers in accounting (public, industrial, private, or governmental), for a general business career, or for other professions such as law.

Faculty

Chair

Gary L. Sundem

Professors

Berg, Kenneth B. * 1950, (Emeritus); MS, 1941, PhD, 1952, University of Illinois; financial and managerial accounting.

Biddle, Gary Clark * 1984; PhD, 1980, University of Chicago; financial and managerial accounting.

Bowen, Robert M. * 1978; PhD, 1978, Stanford University; financial and managerial accounting.

Dukes, Roland E. * 1979; PhD, 1974, Stanford University; financial and managerial accounting.

Heath, Loyd C. * 1962; PhD, 1965, University of California (Berkeley); financial accounting.

Jiambalvo, James * 1977; PhD, 1977, Ohio State University; managerial accounting, auditing.

Mueller, Fred J. * 1953, (Emeritus); PhD, 1956, Ohio State University; auditing, not-for-profit, tax accounting.

Mueller, Gerhard G. * 1960, (Emeritus); MBA, 1957, PhD, 1962, University of California (Berkeley); financial accounting and reporting, international accounting.

Noreen, Eric W. * 1976; PhD, 1976, Stanford University; managerial accounting.

Ramanathan, K. V. * 1971; PhD, 1970, Northwestern University; managerial accounting.

Sefcik, Stephan E. * 1986; PhD, 1983, University of Illinois; financial reporting and environmental accounting issues.

Shevlin, Terrence J. * 1985; PhD, 1986, Stanford University; financial accounting, capital markets, taxation.

Sundem, Gary L. * 1971; PhD, 1971, Stanford University; information systems, managerial accounting, information economics.

Associate Professors

Burgstahler, David C. * 1980; PhD, 1981, University of lowa; financial and managerial accounting, statistical methods.

Shores, Donna J. * 1986; MS, 1980, University of Wisconsin; PhD, 1986, Stanford University; financial and managerial accounting.

Assistant Professors

Kennedy, S. Jane 1991; MBA, 1977, University of Alberta (Canada); PhD, 1992, Duke University; financial and managerial accounting.

Myers, James N. 1996; PhD, 1997, University of Michigan; accounting/financial statement analysis.

Paperman, Joseph B. 1995; MS, 1984, Purdue University; PhD, 1997, Cornell University; capital markets/ financial accounting.

Peecher, Mark E. 1993; MAS, 1989, PhD, 1994, University of Illinois; auditing and decision making.

Senior Lecturers

Resler, William M. 1982; JD, 1972, University of Washington; LLM, 1973, New York University; tax accounting.

Rice, Steven J. 1985; MS, 1971, Oklahoma State University; PhD, 1974, University of Texas (Austin); tax accounting.

Lecturers

Britzmann, Jeannie R. 1995; MPAcc, 1994, University of Washington; tax accounting.

Creech, William R. 1992; LLM, 1983, New York University; taxation.

Wells, William L. 1988; MPAcc, 1989, University of Washington; financial reporting, not-for-profit accounting.

Finance and Business Economics

Finance and Business Economics address the financial and economic aspects of decision making. The Finance curriculum focuses on financial management and the financial markets within which firms and individual investors operate. Business Economics courses concern the economic behavior of firms, including factors that determine costs and prices, and the real and monetary forces (such as government policies) that affect the national and international economic environment.

Hanson, Kermit O. 1948, (Emeritus); MS, 1940, PhD, 1950, Iowa State University; accounting and statistics.

Henning, Charles N. * 1948, (Emeritus); PhD, 1952, University of California (Los Angeles); finance and business economics.

Hess, Alan C. * 1967; PhD, 1969, Carnegie Mellon University; banking, financial markets, microeconomics and macroeconomics.

Higgins, Robert C. * 1967; PhD, 1969, Stanford University; financial management, international financial management.

Johnson, Dudley * 1960, (Emeritus); PhD, 1957, Northwestern University; business economics.

Kamara, Avraham * 1984; PhD, 1986, Columbia University; financial economics, investment, futures and options.

Karpoff, Jonathan M. * 1983; PhD, 1982, University of California (Los Angeles); corporate finance, micro-economics, natural resources.

Malatesta, Paul H. * 1980; PhD, 1982, University of Rochester; corporate finance, security and capital markets, corporate mergers, and empirical methods in finance.

Roley, V. Vance * 1983; PhD, 1977, Harvard University; financial markets, finance, monetary theory, monetary policy.

Schall, Lawrence D. * 1968; PhD, 1969, University of Chicago; corporate finance, valuation, leasing, performance evaluation, acquisitions.

Siegel, Andrew F. * 1983; MS, 1975, PhD, 1977, Stanford University; statistics, computing, corporate finance, investments, data analysis.

Associate Professors

Pigott, William 1954, (Emeritus); MA, 1955, PhD, 1957, University of Washington; finance and business economics.

Rice, Edward M. * 1979; PhD, 1978, University of California (Los Angeles); corporate finance, micro-economics, industrial organization.

Assistant Professors

Berk, Jonathan B. 1996; MPhil, 1989, MA, 1989, PhD, 1990, Yale University; finance, asset pricing, information economics, experimental economics.

Dewenter, Kathryn L. 1992; PhD, 1993, University of Chicago; international finance, macroeconomics.

Koski, Jennifer Lynch 1991; MBA, 1987, Harvard University; PhD, 1991, Stanford University; corporate finance, market microstructure.

Novaes, Walter 1993; PhD, 1993, Massachusetts Institute of Technology; corporate finance, contract theory, industrial organization.

Pontiff, Jeffrey E. 1992; PhD, 1994, University of Rochester; corporate finance, capital market theory, closedend mutual funds, investments.

Senior Lecturers

Hadjimichalakis, Karma G. 1982; MA, 1968, PhD, 1974, University of Rochester; monetary policy and domestic financial markets, macroeconomics.

Tarhouni, Ali A. 1985; MA, 1978, PhD, 1983, Michigan State University; economic theory, international trade and finance, financial markets.

Management and Organization

Management and Organization provides an understanding of the processes and structures of organizations through three distinct programs. The Human Resource Management and Organizational Behavior (HRMOB) courses address personnel and industrialrelations topics such as selection, performance appraisal, compensation, and negotiations, as well as behavioral topics such as leadership, motivation, and group dynamics. They prepare students for managing an organization's human resources effectively. The Organization and Environment (O E) courses examine organization theory, organization design, and management of technology and innovation, as well as the social, political, legal, and ethical environments in which organizations operate. They give students the knowledge, perspective, and analytical tools to deal effectively with organization-environment interactions. The Business Policy (B POL) courses focus on organizational effectiveness from the viewpoint of top management. Emphasis is placed on an integrated view through strategic management and control, planning, decision making, and entrepreneurship.

Hauser, Owen Shannon 1990; MBA, 1974, Pepperdine University; entrepreneurship.

Management Science

The Department of Management Science consists of three subareas: Information Systems (IS), Operations Management (OPMGT), and Quantitative Methods (QMETH). The Information Systems area focuses on the management of computer-based information systems. The IS curriculum is designed to give students a basic understanding of IS technology and its impact on all phases of an organization. Specific areas of study include telecommunications and network design, systems analysis and design, database management, expert systems, and applications programming. The Operations Management (OPMGT) area of study refers to the functional area of management which produces goods or services in an organization. Specifically, the OPMGT curriculum focuses on the many changes which have occurred in the past ten years in the way that managers think, plan, and operate manufacturing and service facilities. The area includes courses in logistics, quality, inventory and supply-chain management, project management, and waiting lines, among

others. The Quantitative Methods (QMETH) area focuses on the theory and application of mathematical and statistical tools in the modeling and analysis of business problems. The QMETH curriculum includes courses in statistics and data analysis as well as courses in operations research (e.g., linear programming, forecasting, using spread-sheets to construct decision support models).

Dey, Debabrata 1997; MS, 1989, Syracuse University; MS, 1992, PhD, 1994, University of Rochester; database theory/design, telecommunications, heterogeneous/distributed systems, software engineering.

Hillier, Mark S. 1993; MS, 1991, PhD, 1994, Stanford University; optimization problems, component commonality, production, inventory control, linear programming.

Mookerjee, Vijay * 1991; MBA, 1984, Indian Institute of Technology (India); PhD, 1991, Purdue University; artificial intelligence, decision support systems, expert systems.

Senior Lecturers

Burrows, William E. 1968; MA, 1972, MA, 1972, University of Washington; systems analysis/design methodologies and data/file structures.

Morita, June G. * 1982; MA, 1978, PhD, 1985, University of California (Berkeley); sample surveys, quality control, survival analysis, statistical data analysis, statistics education. Pilcher, Martha G. * 1987; MS, 1978, PhD, 1985, Georgia Institute of Technology; operations research/operations management, health care applications and logistics.

Marketing and International Business

Marketing (MKTG) provides knowledge of concepts and relationships in the areas of consumer behavior, channels of distribution, measurement and analysis of markets, pricing, physical movement of goods, product development, promotion, and sales administration. Marketing careers may involve specialization in product or brand management, advertising, selling, sales management, marketing research, retailing, wholesaling, and international marketing for a wide spectrum of firms and industries. International Business (I BUS) includes trade, payments, and multinational corporate systems and activities. The area prepares students for international responsibilities in domestic business firms, governmental agencies, and overseas business. Courses in Business Communications (B CMU) stress writing in organizations to accomplish goals, oral reporting, business plan presentation, and the use of computer graphics in communication.

Faculty

Chair

Gary Erickson

Professors

Erickson, Gary * 1980; MBA, 1973, PhD, 1978, Stanford University; quantitative models of marketing and analysis of competitive strategies.

Gautschi, David A. * 1992; MBA, 1974, University of Oregon; PhD, 1979, University of California (Berkeley); marketing management, marketing strategies in the global information telecommunications industries.

Gordon, Guy G. 1957, (Emeritus); MBA, 1950, University of Washington; PhD, 1957, University of California (Berkeley); marketing.

Harder, Virgil E. * 1955, (Emeritus); PhD, 1958, University of Illinois; business communications.

Ingene, Charles A. * 1982; MA, 1972, PhD, 1975, Brown University; retailing and distribution strategy and marketing management.

Jacobson, Robert L. * 1984; PhD, 1981, University of California (Berkeley); marketing strategy, marketing management and entrepreneurial management.

Kolde, Endel-Jakob * 1951, (Emeritus); DBA, 1954, University of Washington; international business and marketing.

MacLachlan, Douglas * 1970; MBA, 1965, MA, 1970, PhD, 1971, University of California (Berkeley); marketing research, sales forecasting, psychological measurement and statistics.

Moinpour, Reza * 1966; MBA, 1966, PhD, 1970, Ohio State University; consumer decision making, new product development and marketing research.

Murphy, Herta 1946, (Emeritus); MA, 1942, University of Washington; international business.

Narver, John C. * 1966; MBA, 1960, PhD, 1965, University of California (Berkeley); market strategy, market driven organization, pricing policies, marketing management.

Spratlen, Thaddeus H. * 1972; MA, 1957, PhD, 1962, Ohio State University; retailing, marketing management, marketing and the city. Sullivan, Jeremiah J. * 1975; MA, 1967, PhD, 1970, New York University; MBA, 1975, University of Washington; international business, Japanese management.

Wheatley, John J. * 1960; MBA, 1954, PhD, 1959, State University of New York (Buffalo); marketing management, marketing research, sales management.

Yalch, Richard F. * 1971; MS, 1970, Carnegie Mellon University; PhD, 1974, Northwestern University; advertising management and consumer behavior, marketing management, marketing research.

Yamamura, Kozo * 1972, (Adjunct); PhD, 1964, Northwestern University; economic development and economic history of Japan, comparative economic history.

Associate Professor

Grathwohl, Harrison L. * 1958, (Emeritus); DBA, 1957, Indiana University; marketing.

Assistant Professors

Forehand, Mark Robeck 1997; PhD, 1997, Stanford University; international business.

Louie, Therese A. * 1993; PhD, 1992, University of California (Los Angeles); behavioral biases that influence the perception of self and others.

Ruth, Julie A. * 1991; MA, 1987, University of Texas (Austin); PhD, 1991, University of Michigan; consumer behavior and marketing strategy.

Simonin, Bernard L. * 1991; MBA, 1986, Kent State University; PhD, 1991, University of Michigan; international strategic alliances, organizational learning, international strategy.

Lecturers

Buckner, David L. 1993; MFA, 1989, University of Washington; business communications.

Goethals, Catherine M. 1988; MFA, 1989, University of Washington; business communications.

Hellofs, Linda L. 1991; MS, 1977, Harvard University; PhD, 1995, University of Washington; brand management, marketing.

Quarton, Mary Ann O. 1995; MBA, 1971, PhD, 1980, Stanford University; retailing and retail management.

Ralston, Jerry W. 1984; PhD, 1969, University of Geneva (Switzerland); international business.

Stone, Jessica 1991; MA, 1979, University of Denver; PhD, 1984, University of Washington; advertising, consumer behavior.

Whelan, John F. 1985; MA, 1977, Yale University; business communications.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Accounting

Courses for Undergraduates

ACCTG 199 Accounting Problem Solving (2, max. 4) Supplementary lectures, discussion, and problem solving sessions in introductory accounting. Enrollment restricted to EOP students. Credit may not be applied to fulfill specific course requirements or to 180 credits required for graduation. Credit/no credit only. Corequisite: either ACCTG 215 or ACCTG 225.

ACCTG 215 Introduction to Accounting and Financial Reporting (5) Nature and social setting of accounting; uses of accounting information; introduction of basic accounting concepts and procedures; interpretation of financial statements. ACCTG 225 Fundamentals of Managerial Accounting (5) Analyses and evaluation of accounting information as part of the managerial process of planning, decision making, and control. Concentrates on information useful to enterprise managers. Prerequisite: ACCTG 215; ECON 200.

ACCTG 301, 302, 303 Intermediate Accounting I, II, III (3, 3, 3) Concepts and principles of financial accounting. Analysis of controversies and problems related to the measurement of enterprise income and asset and liability valuation. 301 - Prerequisite: 2.0 in ACCTG 225. 302 - Prerequisite: 2.0 in ACCTG 301. 303 - Prerequisite: 2.0 in ACCTG 302.

ACCTG 311 Cost Accounting (3) Introduction to the theory of cost accounting; job order, process, and standard cost systems; overhead accounting; problems in accumulation and allocation of costs; decision making with cost data. Prerequisite: 2.0 in ACCTG 301.

ACCTG 330 Introduction to Accounting Information Systems (3) Concepts of accounting information systems in organizations. Processes of analyzing and designing accounting information systems, with emphasis on those using computer facilities. Internal controls and auditing considerations. Prerequisite: 2.0 in ACCTG 302; 2.0 in 1 S 300.

ACCTG 371 Auditing or Industrial Internship (2) One quarter's internship with a certified public accounting firm, industrial organization, or government agency. Credit/no credit only.

ACCTG 375 Topics in Financial Reporting (4) Critical examination of the uses and limitations of general purpose financial statements that have been prepared in accordance with generally accepted accounting principles. Not open for credit to accounting majors or to students who have completed 301. Prerequisite: 2.0 in ACCTG 225.

ACCTG 401 Federal Income Tax Factors in Business Decisions (3) Service course in taxation recommended for the junior year for non-accounting majors. May also be taken by MBA students for graduate credit. Not open to accounting majors. Prerequisite: 2.0 in ACCTG 225.

ACCTG 411 Auditing Standards and Principles (3) Intensive introduction to the attest function in society today. The environment, the process, and the report of the public auditor are analyzed. Potential extensions of the attest function are examined. Prerequisite: 2.0 in ACCTG 303; 2.0 in ACCTG 311; 2.0 in ACCTG 330.

ACCTG 421 Tax Effects of Business Decisions (3) Issues in taxation, including tax considerations in business decision making, tax effects of business transactions, taxation of compensation, fringe benefits, capital gains, fixed asset transactions, disposition of business distribution from corporations. Prerequisite: 2.0 in ACCTG 302.

ACCTG 450 Business Taxation (3) Issues of taxation for entities other than individuals, including corporations, subchapter S corporations, partnerships, estates, and trusts. Includes corporate distributions, liquidations, and reorganizations. Prerequisite: 2.0 in ACCTG 421.

ACCTG 451 Individual Income Taxation (3) Political, economic, and social forces influencing federal income taxation, role of taxation in personal decisions. Coverage of individual income tax matters, including business and investment income, business and personal deductions, property transactions, and tax issues of employees. Prerequisite: 2.0 in ACCTG 421.

ACCTG 460 Advanced Cost Accounting (3) Advanced analysis of cost and management accounting problems; special applications of cost accounting techniques for management planning and control;

current developments in cost accounting. Prerequisite: 2.0 in ACCTG 311.

ACCTG 470 Case Studies in Auditing (3) Application of the theory, standards, and principles to a simulated audit engagement. Guest lecturers discuss the broad-ranging audit involvement. Prerequisite: 2.0 in ACCTG 411.

ACCTG 471 Internal Auditing (3) Independent appraisal function established within an organization. Role and nature of internal auditing; intensive review of internal control; management effectiveness audits; and financial audits from the point of view of the internal auditor. Prerequisite: 2.0 in ACCTG 411.

ACCTG 480 Accounting for Not-for-Profit Organizations (3) Fund and budgetary accounting as applied to public sector organizations, such as governments, foundations, hospitals, and colleges. Prerequisite: 2.0 in ACCTG 303.

ACCTG 485 Advanced Financial Accounting (3) Accounting for partnerships, accounting for business combinations, parent-subsidiary and branch relationships, foreign exchange. Prerequisite: 2.0 in ACCTG 303.

ACCTG 490 Special Topics in Accounting (1-6) Special topics of current concern to faculty and students. Offered only when faculty is available and student interest is sufficient. Class is announced in advance of scheduled offerings.

ACCTG 495 Advanced Accounting Theory (3) Theory of accounting related to income measurement, assets, and equities. Prerequisite: 2.0 in ACCTG 303.

ACCTG 499 Undergraduate Research (1-6, max. 9) Arranged and supervised by individual members of the faculty.

Courses for Graduates Only

Approval of graduate business program office required. Entry code required for nonmajors.

ACCTG 500 Financial Accounting (4) Introduction to concepts and procedures underlying determination and presentation of information for financial decisions by investors and other decision makers outside the business enterprise. Study of problems of valuation, income determination, and financial reporting.

ACCTG 501 Managerial Accounting (4) Study of the generation and the use of accounting information within the firm for purposes of planning and controlling operations. Topics covered include cost concepts, responsibility accounting systems, cost control, and the use of accounting information in shortand long-term management decision problems. Prerequisite: 500.

ACCTG 503 Introduction to Accounting for Managers (4) Noreen, Sundem Provides potential managers with a basic knowledge of financial and managerial accounting. Focuses on the use, not the preparation, of accounting information. Examples presented for a variety of for-profit and nonprofit organizations.

ACCTG 505 Intensive Analysis of Accounting Principles and Practices (18) Covers the subjects in the required core for undergraduate accounting majors: intermediate accounting, advanced accounting, cost accounting, auditing, and tax accounting. Credits will not count toward MBA degree. Prerequisite: 215 and 225 or equivalent, or permission of instructor.

ACCTG 510 Problems in Financial Reporting (4) Extension of 500 emphasizing financial reporting from a user's perspective. Alternative approaches to recognition, valuation, and measurement of assets, equities, and income considered. Choice of accounting methods and effects on the firm of accounting policy regulation also examined. Prerequisite: B A 502 or permission of instructor.

ACCTG 511 Problems in Managerial and Cost Accounting (4) Discussion and analysis of costing techniques, use of accounting data in planning and evaluating managerial performance, and use of accounting data in short-run and long-run decisions. Special attention directed to issues in human behavior involved in cost allocation, budgeting, and performance evaluation. Prerequisite: B A 502 or permission of instructor.

ACCTG 513 Tax Effects of Business Decisions (4) Importance of tax considerations in making business decisions. Relationship of taxable income to accounting and economic concepts of income, and the economic, political, and social background of important tax provisions. Prerequisite: B A 502 or permission of instructor.

ACCTG 520 Seminar in Financial Statement Analysis (4) Emphasizes use of published financial reports by decision makers external to the firm (e.g., investors, creditors). Within each decision context, traditional models and recent empirical research in accounting and finance are discussed. Project required as an application of course subject matter. Prerequisite: B A 502 or permission of instructor.

ACCTG 524 Seminar in International Accounting (4) Introduction to the conceptual, managerial, professional, and institutional issues of international accounting. Comparative and empirical studies receive special attention. Current interest topics (e.g., standard setting and transnational financial reporting) are explored. A research paper required. Prerequisite: B A 502 or permission of instructor.

ACCTG 530 Tax Issues in Property Ownership (4) Analysis of gain and loss realization, recognition, and characterization of such. Detailed exploration of statutory and case law regarding acquisition, ownership, and disposition of assets. Treatment of capital and ordinary gains and losses. Timing issues regarding deferral transactions and installment reporting are analyzed. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 531 Timing and Periods of Taxation (3) Analysis of the cash and accrual methods of accounting, choice of taxable period and multi-period transaction analysis. Consideration of statute of limitations and mitigation thereof. Details of passive activity losses. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 533 Procedural and Policy Issues (3) Analysis of the procedures of Federal taxation: assessment, collection, and refund claims. Detailed exploration of the rules governing the statute of limitations and the mitigation thereof. An introduction to tax policy considerations is given. Tax penalties are explored. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 534 Fundamentals of Corporate Taxation (3) Detailed analysis of contribution of assets to corporations. Calculation of recognized gains and basic effects of asset contributions. Treatment of income and deduction items of corporate operations. Analysis of distribution of assets to shareholders with respect to their stock. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 535 Advanced Issues in Corporate Taxation (3) A continuation of 534. Fundamentals of moving assets out of and within corporate solution. Basics of corporate reorganizations: acquisitive and divisive. The details of the election to obtain (or avoid) the Section 338 election are explored in detail. Prerequisite: Undergraduate accounting concentration or equivalent; 534 or permission of instructor. ACCTG 536 Advanced Issues in Corporate Taxation (3) Continuation of 534 and 535. Study of complex issues in corporate taxation planning. Substantial portion of course involves resolving case studies to improve analytic skills and to interrelate disparate corporate planning opportunities. Corporate reorganizations are analyzed in detail. Prerequisite: undergraduate accounting concentration or equivalent; 535 or permission of instructor.

ACCTG 537 Income Taxation of Conduits I (3) Resler, Rice Tax consequences to owners and entity from formation, operation, distributions from, and liquidation of partnerships and S corporations. Study of taxable and tax-free formations, nature of "bottom line" income and separately stated items, changes to owners' tax basis, basics of non-liquidating and liquidating distributions. Prerequisite: undergraduate accounting concentration or equivalent. Offered: W.

ACCTG 538 Income Taxation of Conduits II (3) A continuation of 537. Study of complex issues in partnership and S corporation taxation. Substantial portion involves resolving case studies to improve analytic skills and interrelate partnership and S corporation planning issues. Sections 751(b) and 736 examined in detail. Prerequisite: undergraduate accounting concentration or equivalent; 537 or permission of instructor.

ACCTG 540 Fundamentals of International Taxation (3) Resler, Rice Covers the basic tax considerations of U.S. taxation of income earned world-wide by U.S. taxation of non-resident aliens for income earned in the U.S. Source rules and treaty considerations examined in detail. Locating the proper source of income and optimal tax rates analyzed. Offered: S.

ACCTG 543 Income Taxation of Trusts and Estates (3) Development of fundamental skills regarding income taxation of trusts and estates. Calculation of distributable net income and the distribution deduction for the fiduciary entity. Basic analysis of the throwback rules. Case studies. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 547 Estate and Gift Taxation (3) Development of fundamental knowledge of the unified transfer tax on the transfer of property from one person to another. Calculation of gross estate, adjusted gross estate, and taxable estate. Calculation of gift and estate taxes owing. Discussion of estate planning concepts. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 548 State and Local Taxation (3) Resler, Rice Differences in definition of income at state and federal levels, treatment of state income taxes, piggyback for state income taxes, state tax rates, minimum tax, double taxation of income by home and host states, Uniform Division of Income for Tax Purposes Act, concept of nexus for taxation, multistate tax planning. Offered: S.

ACCTG 549 Employee Tax Problems and Deferred Compensation (3) Resler, Rice Covers the tax issues facing employees and self-employed tax payers, including deferred compensation arrangements, fringe benefit packages, restricted property, independent contractor status, achieving favorable tax treatment of retirement plans, and substantiating employee business expenses. Offered: S.

ACCTG 550 Communications in Professional Accounting (4) Introduction to the communications forms and to practices professional accountants and accounting managers. Development of effective written and oral skills employed in accounting presentations, such as audit reports and consultants' reports. Study of results of organizational communications research applicable to accounting firms and/or units within firms. Prerequisite: undergraduate accounting concentration or permission of instructor. ACCTG 551 Management Information Systems (4) Develops the professional accountant's responsibilities in designing and operating management information systems with an emphasis on accounting systems. Data organization and management, effects on accounting functions, responsibilities for controls and security, and planning and acquisition of system resources. Prerequisite: 330, I S 320 and B A 501 or equivalent.

ACCTG 555 Statistical Methods in Professional Auditing (4) Comparative analysis of the methods of statistical inference used in auditing and incorporation of these methods in the auditor's decision processes. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 557 Tax Consulting, Planning, and Research (4) Decision-making processes in relation to problems of taxation. Tools of tax analysis and research and the communication of conclusions flowing from professional tax work. Role of the professional accountant in client business transactions and in negotiations with taxing authorities is highlighted and simulated on the basis of actual case histories. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 558 Current Financial Accounting and Reporting Issues (4) Develops professional-level ability to understand, analyze, and report upon selected political, economic, social, and legal dimensions of current financial accounting and reporting issues. Issues vary each year. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 559 Advanced Auditing Problems and Cases (4) Analysis of current developments in auditing and comprehensive case studies. Designed to extend knowledge of audit decision making and advanced techniques. Topics covered vary depending upon current issues facing professional auditors. Prerequisite: undergraduate accounting concentration or equivalent.

ACCTG 560 Special Topics in Professional Accounting (1-4) Lectures, discussion, and case analyses dealing with special current topics relevant to professional accounting. Satisfies the professional accounting elective requirement for the M.P.Acc. degree program. Prerequisite: permission of instructor.

ACCTG 579 Special Topics in Accounting (4, max. 12) Accounting topics of current concern to faculty and students. Offered only when faculty are available and sufficient student interest exists. Seminar content announced in advance of scheduled offering. Prerequisite: permission of instructor.

ACCTG 580 Introduction to Accounting Research (4) Examination of research problems and techniques in accounting. Interdisciplinary nature of accounting research emphasized. Work in finance, economics, and psychology used to develop current trends in accounting research. Prerequisite: doctoral student status.

ACCTG 581 Seminar in Managerial Accounting (4) Critical examination of conceptual and practical issues of cost and managerial accounting. Specific topics may change from quarter to quarter, and they include application of behavioral, quantitative, and economic models to managerial accounting problems. Prerequisite: 511 or permission of instructor.

ACCTG 596 Seminar in Financial Accounting Research (4) Review and critical analysis of research strategies and methods applied to problems in financial reporting practice and financial accounting standard setting. Prerequisite: doctoral student status and 580 or equivalent or permission of graduate office.

ACCTG 597 Seminar in Managerial Accounting Research (4) Critical analysis of current managerial accounting research, both published and unpublished. Prerequisite: doctoral student status and 581 or equivalent or permission of graduate office.

ACCTG 599 Doctoral Seminar in Accounting (1, max. 12) Study and research in advanced topics of Accounting. The seminar is generally concerned with unpublished areas of research as well as research methodology and philosophy. It is conducted by departmental faculty and occasional distinguished visiting faculty. Prerequisite: doctoral student status.

ACCTG 600 Independent Study or Research (* max. 10)

Business Administration

Courses for Undergraduates

B A 300 Foreign Study—Business Administration (3-5, max. 15) For participants in approved foreignstudy programs where equivalent UW business administration courses are not available.

BA 371 Cooperative Education in Business (2,

max. 6) Business practicum: one or two quarter internship with approved business or governmental agency. Open only to students who meet requirements of internship program. Internship credit may not be applied to fulfill specific course requirements or to 180 credits required for graduation. Credit/no credit only.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required.

B A 500, 501, 502 **Business Administration I, II, III** (16, 16, 16) Coordinated series consisting of accounting, business economics, business ethics, business policy, finance, information systems, international business, legal environment of business, management, and organizational behavior, marketing, operations management, and quantitative methods for management. Prerequisite: permission of the School of Business Administration.

B A 541 Environmental Management I (4) Survey of environmental ethics, environmental laws and regulation, the economics of environmental decisions, and the relationship of business to public policy and the environment. Must be taken concurrently with B A 544. Prerequisite: permission of instructor.

B A 542 Environmental Management II (4) Applications of the functional areas of business to environmental concerns. Major federal legislation affecting these concerns applied to business problems in the areas of accounting, finance, marketing, management information systems, and organizational behavior. Must be taken concurrently with 544. Prerequisite: 541 or permission of instructor.

B A 543 Environmental Management III (4) Case studies that integrate the fundamentals of business and environmental management to address such issues as plant siting, regulatory compliance, production line changes, and innovative, proactive responses to environmental issues. Case studies include results of student consulting projects. Must be taken concurrently with 544. Prerequisite: 542 or permission of instructor.

B A 544 Environmental Management Seminar (1, max. 3) Guest lecturers from academia, business, government, and advocacy groups discuss environmental science, ethics, law, regulation, economics, finance, accounting, and policy issues. Seminar topics supplement course material in 541, 542, 543 which are to be taken concurrently.

B A 545 The Global Business Forum: Current Issues in Global Business (1, max. 3) Discussion of current trends in the global business environment and of international issues facing companies. Leaders from international businesses and other organizations, as well as faculty members from various departments and specializations, invited to share their perspectives with seminar participants. Topics change each quarter.

BA571-572 Research Reports (4-4) Independent study in business administration; critical evaluation of business analysis and research methods. Effective communication of ideas emphasized. Methods and content of independent research studies subjected to critical evaluation. Open only to MBA non-thesis students. Prerequisite: instructor's approval of preliminary research topic outline for 571; 571 for 572.

B A 700 Master's Thesis (*)

B A 800 Doctoral Dissertation (* max. 10)

Business Administration Research Methods

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

BA RM 580 Applied Econometrics I (4) Emphasizes the application of econometric methods rather than the mathematical proofs of statistical procedures. Introduction to the linear regression model, interpretation of summary statistics, bias and precision of regression estimates, analysis of the residuals. Prerequisite: STAT 342, or 395, or 481, or permission of instructor.

BA RM 581 Applied Econometrics II (4) Continuation of 580. Measurement errors, distributed lags, and simultaneous equation models. Prerequisite: 580.

BA RM 590 Behavioral Research Methods— Theory and Design (4) Philosophy of science, development of scientific method, and meaning of behavioral research. Historical perspective of scientific investigation and the evaluation of research. The development of theory and its relationship to research. Various strategies and designs in behavioral research. Prerequisite: STAT 361, 362, or permission of instructor.

BA RM 591 Behavioral Research Methods—Approaches and Applications (4) Considers alternative research approaches, such as laboratory and field experimentation, simulation, and surveys, with data-gathering techniques appropriate for each approach. It is primarily concerned with developing alternative approaches to research problems and with discussing specific applications. It builds upon a background of specific statistical tools and techniques and an understanding of theory development and research design. Prerequisite: STAT 361, 362, or permission of instructor.

Business Communications

Courses for Undergraduates

B CMU 301 Basic Written Business Communications (4) Broad analytical approach to written communications as a management tool. Analysis of the psychology, semantics, planning, and principles of effective business writing. Practical application through messages that inform and persuade, grant and refuse; plus short business reports and applications for positions.

B CMU 410 Business Reports and Other Specialized Communications (4) Covers both internal and external communications that businessmen and businesswomen write on the job. Emphasis on various types of internal reports, ranging from short informal memos to the more complex formal reports. Also covered are specialized external types of communications directed to customers. Prerequisite: B CMU 301.

B CMU 490 Special Topics in Business Communications (1-6, max. 12) Students and faculty focus on current topics of concern. Prerequisite: B CMU 301.

B CMU 499 Research in Business Communications (1-6, max. 9)

Courses for Graduates Only

B CMU 510 Business Communications for Managers (4) Seeks to develop understanding of communications and related theories, to describe strategies for planning managerial communications, and to build skills in oral and written reporting and persuading. Prerequisite: approval of graduate business office.

Business Economics

Courses for Undergraduates

B ECON 300 Managerial Economics (3) Analysis of economic factors affecting decisions made by business firms. Demand and cost analysis, and alternative policies from the firm's point of view. Prerequisite: ECON 200.

B ECON 301 Intermediate Macroeconomics (4) Analysis of economy including business cycle, output of goods and services (GNP), inflation, unemployment, and government's fiscal and monetary policies. How the economy affects individuals and firms and how to deal effectively with economic environment. Prerequisite: ECON 201.

B ECON 420 Financial Markets (4) Analysis of the structure and functions of the money and capital markets; the saving-investment process and financial intermediaries; supply and demand for lendable funds and the level and structure of interest rates, role of Federal Reserve and Treasury in money market developments. Prerequisite: either B ECON 301 or ECON 301.

B ECON 427 International Finance (4) Asset choice and institutional operations in international finance; foreign-exchange problems; the impact of international financial problems and operations on business; short- and long-term international financing. Prerequisite: either B ECON 301 or ECON 301.

B ECON 439 Business Forecasting (4) Analysis of basic variations affecting general business conditions as a background for business and investment decisions; appraisal of proposals for controlling cycles and of forecasting techniques. Prerequisite: either B ECON 301 or ECON 301; either ECON 311, QMETH 201, PSYCH 213, PSYCH 218, STAT 220, STAT 301, STAT 311, or STAT 390.

B ECON 490 Special Topics in Business Economics (1-6) Study and research on topics of current concern to faculty and students. Only offered when allowed by faculty availability and sufficient student interest. Seminar content to be announced in advance of scheduled offerings.

B ECON 499 Undergraduate Research (1-6) Research in selected areas of business economics. Prerequisite: either B ECON 300 with B ECON 301 or ECON 301.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

B ECON 500 Business Economics I (4) Factors underlying the determination of cost and prices for the industry and the firm, demand and supply analy-

SCHOOL OF BUSINESS ADMINISTRATION / COURSE DESCRIPTIONS 267

sis and firm behavior. The relation of the economic environment to the microeconomic decisions of the firm.

B ECON 501 Business Economics II (4) Analysis of real and monetary factors affecting the national and international economic environment, supply and demand for money, interest rates, stabilization problems and policies, in relation to government and policy effects on business and individual affairs. Prerequisite: 500.

B ECON 520 Financial Markets (4) Analysis of the functions and structure of money markets; the saving-investment process and financial intermediaries; supply and demand for lendable funds and the level and structure of interest rates, role of the Federal Reserve and Treasury in the money markets. Prerequisite: B A 501.

B ECON 527 International Finance and Investments (4) Study of selected problems in financing, international trade, investment, and foreign business operations; international aspects of money markets; problems of evaluation of foreign investments. Prerequisite: B A 502, FIN 502.

B ECON 528 International Financial Management (4) Analysis of financial problems facing businesses engaged in international activities: financing foreign investment, financial control of foreign operations, and working capital management including foreign-exchange positions using cases and readings.

B ECON 579 Special Topics in Business Economics (4, max. 12) Business economics topics of current concern to faculty and students. Offered only when faculty are available and sufficient student interest exists. Seminar content announced in advance of scheduled offering. Prerequisite: permission of instructor.

B ECON 600 Independent Study or Research (* max. 10)

Business Policy

Courses for Undergraduates

B POL 470 Business Policy (4) Policy making and administration from a general management point of view. Emphasis is on problem analysis, the decision-making process, administration and control, and continuous reappraisal of policies and objectives. This course integrates and builds upon the work of the core curriculum. Prerequisite: FIN 350; MKTG 301; HRMOB 300; recommended: OPMGT 301.

B POL 471 Small Business Management (4) Policy formulation and implementation in smaller firms from the top manager's point of view. Integrates and builds upon work of the core curriculum. Includes analysis of cases and field projects related to small firms. Prerequisite: FIN 350; MKTG 301; HRMOB 300; recommended: OPMGT 301.

B POL 472 Starting, Developing, and Managing a New Business (4) Focus on process of starting a new business venture. Topics include the entrepreneurial process, idea generation, developing and using a business plan, and buying a going business. Students develop ideas and a case based on the experience of a local entrepreneur.

B POL 473 Practicum in Entrepreneurship (4) Explores requirements and challenges in establishing a business in the State of Washington. Broad areas of interest include developing business concepts, marshalling resources, startup actions, and strategic and operation planning. Recommended: B POL 472.

B POL 480 Business Simulation (5) Critical analysis of integrated business policy formulation in a complex and dynamic industrial environment by

means of simulation (business gaming). Prerequisite: FIN 350; MKTG 301; HRMOB 300; recommended: OPMGT 301.

B POL 490 Special Topics in Business Policy (1-6) Study and research topics of current interest to faculty and students. Offered only when faculty is available and student interest is sufficient. Class is announced in advance of scheduled offerings.

B POL 499 Undergraduate Research (1-6, max. 9)

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

B POL 505 Business Policy and Strategy (4) Policy decisions and strategic leadership from the general management point of view. Determination of corporate product-service objectives, development of a network of internal operating policies and methods to achieve objectives at a cost satisfactory to the consumer and to society. Prerequisite: all first-year required courses in MBA curriculum.

B POL 530 Entrepreneurship (4) Entrepreneurship, both in the form of (1) establishment of new independent businesses owned largely by those who manage them and (2) initiation of new enterprises having exceptional autonomy within larger organizations that finance and own them. Basic knowledge in accounting, marketing, and finance is assumed.

B POL 555 Entrepreneurial Marketing and Management (4) Focuses on role of managers in fostering profitable growth and entrepreneurial actions within ongoing organizations. Class sessions utilize current analytical and conceptual methods, case and field studies, management development exercises, and *Foodcorp, Inc.* which allows students to simulate management of multinational corporations. Prerequisite: B A 502. Offered: jointly with MKTG 555.

B POL 570 Strategic Planning Systems (4) Formal institutional procedures for involving the entire organization in strategic planning and quantitative methods for doing such planning. These are applied to analyzing strategy and firm performance, predicting long-range industry and national environments, formulating corporate-level and business-level strategies, and integrating planning models into the planning process. Prerequisite: B A 502 or permission of graduate office.

B POL 575 Strategic Decision Making (4) Focuses on (1) role of strategic leadership in the success of organizations, (2) conceptual-logical methods for doing strategic planning, (3) organizationwide experience methods for formulating policies, and (4) decision methods for use within the strategic coalition. Prerequisite: B A 502 or permission of graduate office.

B POL 579 Special Topics in Business Policy (4, max. 12) Study and research in topics of current concern to faculty and students. Offered only when allowed by faculty availability and sufficient student interest. Seminar content announced in advance of scheduled offering.

B POL 599 Doctoral Seminar in Business Policy (1, max. 12)

B POL 600 Independent Study or Research (* max. 10)

Finance

Courses for Undergraduates

FIN 350 Business Finance (4) Sources, uses, cost, and control of funds in business enterprises. Internal management of working capital and income sources and cost of long-term funds; capital budgeting; financing of the growth and expansion of busi-

ness enterprises; government regulation of the financial process. Prerequisite: either B ECON 300 or ECON 300 either of which may be taken concurrently.

FIN 423 Banking and the Financial System (4) Role of banks and nonbank financial institutions in the financial system; asset choices of banks and nonbank financial institutions; problems in the management of financial institutions with emphasis on commercial banks. Prerequisite: FIN 350; B ECON 420.

FIN 450 Problems in Corporate Finance (4) Case problems in corporate financial management. Includes cases on management of current assets, obtaining short-term loans, raising long-term capital, capital budgeting, and dividend policy. The management point of view is stressed. Prerequisite: FIN 350; ACCTG 375.

FIN 453 Financial Theory and Analysis (4) Business financial strategic planning. Topics include business valuation and financing, performance evaluation, risk analysis, capital budgeting, and inflation and taxes. Emphasizes tools with real-world applications while incorporating modern finance concepts. Prerequisite: FIN 350; either ECON 311, QMETH 201, PSYCH 213, PSYCH 218, STAT 220, STAT 301, STAT 311, or STAT 390.

FIN 460 Investments (4) Introduction to the nature, problems, and process of evaluating particular securities and portfolio construction and administration. Special attention is directed to the risk and rateof-return aspects of particular securities portfolios, and total wealth. Prerequisite: FIN 350.

FIN 461 Financial Futures and Options Markets (4) Introduction to financial futures and options markets. Instructional aspects and social functions of these markets, pricing of options and futures, and risk shifting by hedging. Prerequisite: FIN 350.

FIN 490 Special Topics in Finance (1-6) Study and research topics of current concern to faculty and students. Only offered when faculty availability and sufficient student interest. Seminar content to be announced in advance of scheduled offerings.

FIN 499 Undergraduate Research (1-6) Research in selected areas of business finance, money and banking, or investments. Prerequisite: FIN 350.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

FIN 502 Business Finance (4) Financial management of the firm, including capital budgets, working capital analysis, and financing policy. Prerequisite: ACCTG 500, B ECON 500, QMETH 500.

FIN 530 Financial Management of Banks (4) Analysis of problems in the financial management of commercial banks and other financial institutions. Loan and investment policies, liability management, capital policies, and other selected issues are discussed. Prerequisite: B ECON 520 or permission of graduate office.

FIN 550 Advanced Business Finance (4) Systematic coverage of the theory of financial management. Application of quantitative analysis to financial problems of the firm, including the investment and financial decisions, lease analysis, and merger analysis. Prerequisite: B A 502.

FIN 551 Problems in Business Finance (4) The application of financial principles and techniques to problems in financial management. Topics include cash management, credit management, problems in short- and long-term financing, and capital budgeting. Prerequisite: B A 502.

FIN 552 Corporate Planning and Financing (4) Addresses management of working capital flows and finance operations. Topics include financial statement analysis, *pro forma* forecasting, case budgeting, sources of financing including bank, venture capital, private placements, and leases, and determinants of company financing policy. Cannot be taken for credit in combination with FIN 551. Prerequisite: B A 502.

FIN 553 Capital Investment Planning (4) Case discussions used to examine corporate resource allocation decisions. Topics include capital budgeting techniques, estimation of capital costs, capital budgeting systems, strategic investment decisions, and financial restructurings. Prerequisite: 552 or 555.

FIN 555 Corporate Financing Decisions (4) Framework for analyzing the effects of non-investment decisions on corporate value. Topics include financing policy, compensation policy, hedging, leasing, and dividend policy. Focus on the role of financial contracting. Prerequisite: B A 502.

FIN 556 Investment Planning and Evaluation (4) Analytic tools for valuing and evaluating business entities and for investment planning. Topics include business valuation, performance evaluation, risk analysis, capital budgeting, inflation and tax issues, leasing, and business acquisitions. Prerequisite: B A 502.

FIN 560 Investments (4) Introduction to the nature, problems, and process of evaluating particular securities and portfolio construction and administration. Special attention is directed to the risk and rate of return aspects of particular securities, securities portfolios, and total wealth. Prerequisite: B A 502 or permission of graduate office.

FIN 561 Financial Futures and Options Markets (4) The pricing of options and futures contracts are analyzed and available empirical evidence is examined. Particular attention is given to the ways these instruments can be used to reduce an investor's or a firm's exposure to risk.

FIN 579 Special Topics in Finance (4, max. 12) Finance topics of current concern to faculty and students. Offered only when faculty are available and sufficient student interest exists. Seminar content announced in advance of scheduled offerings. Prerequisite: permission of instructor.

FIN 580 Doctoral Seminar in Financial Economics (4) Study of the financing of the corporation, including recent theoretical and institutional developments. Extensive reading and discussion in designated areas covering problems relating to financial management and to the social and economic implications of the financial process. Prerequisite: ECON 500 or permission of instructor.

FIN 590 Doctoral Seminar in Capital Market Theory (4) Decision making under uncertainty, information and capital market efficiency, portfolio theory, capital asset pricing model, arbitrage pricing model, and options pricing model. Prerequisite: ECON 500 or permission of instructor.

FIN 591 Doctoral Seminar in Corporate Finance (4) Principles of intertemporal choice, alternative valuation models, theory of investment under uncertainty, impact of dividend and financing decisions on firm valuation in perfect and imperfect markets, and theory of firm organization and agency costs. Prerequisite: 590 and BA RM 581 or ECON 582 or permission of instructor.

FIN 592 Doctoral Seminar in Financial Research (4) Empirical research in finance with emphasis on methodology and scientific method. Empirical research in market efficiency, capital asset pricing model, options pricing model, and impact of firm's dividend and financing decisions on firm value. Prerequisite: 590 and BA RM 581 or ECON 582 or permission of instructor. FIN 599 Doctoral Seminar in Finance (1, max. 12) Study and research in advanced topics of finance. Generally concerned with unpublished areas of research, conducted by visiting professors and departmental faculty. Prerequisite: doctoral student status.

FIN 600 Independent Study or Research (* max. 10)

Human Resources Management and Organizational Behavior

Courses for Undergraduates

HRMOB 300 Managing for Organizational Effectiveness (4) Bell, Buck, Fuller, Lee Organizational behavior and organization theory concepts show how managers can improve organizational effectiveness by attending to the human side of the enterprise. Topics such as leadership, motivation, power and politics, and organization design are examined for their effects on performance. Offered: AWSpS.

HRMOB 301 Personnel Systems and Industrial Relations (3) The personnel/industrial relations function from a managerial perspective. Selection, compensation, performance appraisal, and training and development. Special emphasis on union-management relations and relevant behavior science research.

HRMOB 410 Staffing (4) Affirmative action, recruitment, testing, interviewing, placement, promotion, and overall human resource planning.

HRMOB 415 Performance Appraisal and Compensation (4) The various kinds of systems used by organizations to evaluate and reward employee performance. Job analysis, job evaluation, setting performance standards, giving appraisal feedback, designing incentive systems, administering a salary plan.

HRMOB 420 Collective Bargaining and Arbitration (4) Labor-management relations. The legal context, union organizing, grievance administration, collective bargaining. Individual and group simulations used.

HRMOB 450 Leadership and Decision Making (4) The manager as leader and decision maker. Various leadership theories, styles, and behaviors. Decisionmaking models and techniques.

HRMOB 460 Negotiations (4) The art and science of negotiations with the goal of making students more effective negotiators in a variety of business situations, such as budget negotiations, buying and selling, contracts, and merger negotiations. Concept and skill development.

HRMOB 470 Motivation and Performance (4) Various strategies for influencing employee motivation and performance. Reward systems, goal-setting procedures, and various techniques to enlarge and enrich ones job. Effects of these formal and informal strategies on job attitudes.

HRMOB 475 Organization Development and Change (4) Provides a conceptual understanding of organization development theory, practice, and research. Organization development is an umbrella term for a collection of behavioral science techniques for increasing individual, group, and organizational effectiveness.

HRMOB 490 Special Topics in Human Resources Management and Organizational Behavior (1-6) Topics of current interest to faculty and students. Offered when allowed by faculty availability and sufficient student interest. Content announced in advance of scheduled offerings. HRMOB 499 Undergraduate Research (1-6, max. 9)

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

HRMOB 500 The Management of Organizational Behavior (4) Behavioral aspects of management with emphasis on leadership, motivation, and decision making. May include communication, conflict management, group dynamics, and organizational change.

HRMOB 501 Human Resource Management (4) Fair employment practice, job analysis, selection, performance appraisal, and training. May include compensation and labor relations.

HRMOB 510 Staffing (4) Systems related to manpower planning, recruitment, interviewing, placement, and development. Advanced techniques, with emphasis on validating predictive measures of performance. Criteria development, psychological testing, validation procedures, and cost effectiveness of personnel research.

HRMOB 515 Performance Appraisal and Compensation (4) Strategies, procedures, and problems in evaluating and rewarding employees. Performance measurement methods, different appraisal systems, and ways of coaching employees. Ways to integrate performance appraisal into compensation systems.

HRMOB 520 Collective Bargaining (4) Traditional labor-management relations in private, public, and nonprofit sectors with special emphasis on grievance arbitration and collective bargaining processes. Simulations and case studies.

HRMOB 525 Dispute Settlement and Labor-Management Cooperation (4) Goes beyond traditional collective bargaining and grievance arbitration to examine the role of third parties as mediators, interest arbitrators, and fact finders. New forms of labormanagement cooperation, such as gain sharing, quality of work life programs and labor-management committees.

HRMOB 540 Managerial Behavior in Cross-Cultural Settings (4) The role of culture as it impacts managerial values and behavior in diverse national settings including the United States, western Europe, Latin America, and Japan.

HRMOB 550 Leadership (4) Various theories of leadership: trait theories, leader behavior theories, and situational theories. Concept of leadership within the broader framework of power-how power is gained, lost, and distributed within organizations.

HRMOB 560 Negotiations (4) Strategy used in negotiations other than labor-management bargaining to develop skills necessary to devise a negotiating strategy appropriate to situation. Negotiation of contracts in simulated business settings, case studies, readings.

HRMOB 570 Motivation (4) Approaches that emphasize people's needs, effects of reward systems, and goal setting, as well as topics that show how the social environment and the task itself influence motivation. Different motivational techniques to be used under various conditions.

HRMOB 575 Theory and Practice in Organizational Development (4) Theory, practice, and research in organizational development; the applied discipline that seeks to improve organizational effectiveness, efficiency, and morale through causing changes in managerial practices and organizational dynamics. History of the field, intervention techniques, diagnostic methods, and client-consultant relations. Concepts and skill development. HRMOB 579 Special Topics in Human Resources Management and Organizational Behavior (4, max. 12) In-depth study and research on topics of special interest to faculty members and students in the fields of human resources management and organizational behavior. Offered on an ad hoc basis. Content announced before scheduled offering.

HRMOB 580 The Individual and the Organization (3) Focuses on attributes the individual brings to the organization. Covers important performance-related processes such as learning, motivation, and decision-making as well as an understanding of personal attitudes and personality traits.

HRMOB 581 Groups, Teams, and Organizations (3) Focuses on importance of group processes for organizational effectiveness. Covers concepts of group dynamics including interpersonal communication, role and norm development, and group decision making as well as organizational processes such as team development and organizational culture.

HRMOB 582 Power, Influence, and Citizenship Behavior (3) Focuses on ways in which the individual and the organization get things done through working with others. Includes leadership, social influence, and the use and abuse of power, with attention given to positive organizational activities such as citizenship behavior and extra role activities.

HRMOB 590 Organization Entry, Training, and Exit (3) Focuses on the systems, processes, and experiences that newcomers to organizations undergo. Covers staffing, employee selection, training, socialization, and attachment.

HRMOB 591 Employee Appraisals and Rewards (3) Focuses on the organization's employee performance appraisal and compensation systems. Examines effects of different practices.

HRMOB 592 Employee Rights, Protection, and Justice (3) Focuses on the systems and procedures that safeguard an individual's employment and benefits. Topics include industrial relations and corporate performance, labor-management cooperation, grievance systems, dispute resolution, whistle blowing, and organizational justice.

HRMOB 599 Doctoral Seminar in Human Resources Management and Organizational Behavior (1, max. 12) Advanced topics in the fields of human resources management and organizational behavior. May be used by visiting faculty members to present topics of interest to students.

HRMOB 600 Independent Study or Research (* max. 10)

Information Systems

Courses for Undergraduates

I S 300 Introduction to Information Systems (5) Fundamentals of information systems, what they are, how they affect organizations. Technical and organizational foundations of information systems, building information systems, managing information system resources. Laboratory emphasizes using computer to analyze, coordinate, solve organizational decisionmaking problems. Prerequisite: ACCTG 225; ECON 200; either MATH 112 or MATH 124; either ECON 311, QMETH 201, PSYCH 213, PSYCH 218, STAT 220, STAT 301, STAT 311, or STAT 390.

I S 320 Fundamentals of Application Programming (4) Fundamental programming concepts including data types, control structures, modularization, and structure programming. Developing solutions for problems in interactive business applications. Introduction to data and file structures. Extensive use of an event-driven programming language. Prerequisite: I S 300. I S 423 Object-Oriented Systems (4) Covers the design and programming of object-oriented application software. Includes introduction to object-oriented principles, representing objects in software, object management, object analysis and design, construction of object-oriented applications, and use of object-oriented language to program working applications. Prerequisite: 3.5 in I S 320.

I S 460 Systems Analysis and Design I (4) First course in analysis and design of business information systems. Concentrates on analysis phase of systems development. Systems development life cycle, the feasibility study, analysis of user requirements, and the development of a logical model for the system under study. Prerequisite: I S 320.

I S 461 Systems Analysis and Design II (4) Second course in analysis and design of business information systems. Concentrates on design and implementation phases of systems development. Translation of logical system model into physical model, design of modules, file design, testing, implementation. Includes a project using third- and fourth-generation software development tools. Prerequisite: I S 460.

I S 470 Business Data Communications (4) Technology and applications of business data communications including characteristics of data, fundamentals of transmission, communications hardware and software, common-carrier services, network configurations (LAN, MAN, WAN), design, management, and security. Exercises in use of information retrieval/distribution systems, file transfer, and Internet resources. Prerequisite: I S 320.

I S 480 Data Base Management (4) Concepts of physical and logical data base organization. Physical file structures used in data management. Logical data models, including hierarchical, network, relational. Data base design, data dictionaries, data manipulation languages. Exercises in design, implementation, and use of data base systems. Survey of commercial data base management systems. Prerequisite: I S 320.

I S 490 Selected Topics in Information Systems (1-6, max. 20) Topics of current concern to faculty and students. Potential topics include networks and distributed information-processing systems, office automation, artificial intelligence and knowledge based systems, new approaches to systems development, fourth- and fifth-generation languages, economics of information systems. Prerequisite: I S 320.

I S 495 Practical Experience in Information Systems (1-4) Information Systems internship. Weekly status reports, internship value paper, and project related to internship. Prerequisite: either I S 422, I S 423, I S 460, I S 470, or I S 480.

I S 499 Undergraduate Research (1-6, max. 12) Selected problems in information systems and computer applications.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors. Students interested in probability and statistics are also urged to consider BA RM 500 and 501.

I S 504 Computer-Based Information Systems for Management (4) Introduction to information systems and computer technology. Covers concepts of information use in decision making. Use of decisionsupport problem-solving tools (e.g., spread sheet, database software). Management's responsibility in defining, developing, using information systems is focal point.

I S 530 Management of Information Systems Resources (4) Topics include general control problem in organizations; performance evaluation of data processing managers; technology and cost trends; software cost estimation; capacity planning; short term utilization; queueing and associated externalities; issues in centralization and decentralization of the information system facilities. Prerequisite: B A 501 or equivalent.

I S 545 Database Management (4) Concepts of physical, logical database organization. Physical file structures used in data management. Logical data models, including hierarchical, network, relational. Database design. Data dictionaries. Data manipulation languages. Exercise in design, implementation, use of several database management systems. Survey of commercial database management systems. Database administrator's role. Prerequisite: B A 501 and introductory knowledge of a programming language.

I S 560 Information Systems Development (4) Offers comprehensive look at information systems development from the initial stage of defining requirements to final evaluation of installed systems. Topics include analysis of use requirements, development of logical system model, translation of logical systems model into physical system model, testing, and implementation. Prerequisite: B A 501 or equivalent.

I S 579 Selected Topics in Information Systems (4, max. 12) Topics of current concern to faculty and students. Potential topics include networks and distributed information-processing systems, office automation, artificial intelligence and knowledge based systems, new approaches to systems development, fourth- and fifth-generation languages, economics of information systems. Prerequisite: B A 501.

I S 585 Advanced Database Research (4) Introduces topics of interest in database research including heterogeneous database, derived data manage ment, expert database systems, logical and physical database design, formal languages for data manipulation, and temporal databases. Prerequisite: doctoral student and previous course work and experience with database management system or permission of instructor.

I S 586 Data Structures and Algorithms in Information Systems (4) Design of computer algorithms in information systems. Methods for analyzing in terms of time and space. Data structures and design techniques used in the solution of frequently encountered problems. Prerequisite: doctoral student and working knowledge of a programming language or permission of instructor.

I S 588 Advanced Expert Systems (4) Study of methodological, behavioral, and economic considerations of uncertainty handling in expert systems. Topics include the Certainty Factor model, the Depster-Shaefer theory, and probabilistic belief networks. Prerequisite: doctoral student and introductory knowledge of a programming language and basic probability theory or permission of instructor.

I S 599 Doctoral Seminar (1, max. 12) Advanced topics of information systems. Generally concerned with unpublished areas of research and conducted by visiting professors and departmental faculty. Prerequisite: doctoral student status.

I S 600 Independent Study or Research (* max. 10)

International Business

Courses for Undergraduates

I BUS 300 The International Environment of Business (5) Prepares students to understand the most important aspects of the international political economy. Emphasis on the important relationships among nations and business and economic institutions that influence students' performances as managers, consumers, and citizens. Prerequisite: ECON 200.

270 SCHOOL OF BUSINESS ADMINISTRATION / COURSE DESCRIPTIONS

I BUS 330 Business Environment in Developing Nations (4) The international environment for transnational trade, investment, and operations in the less-developed countries; survey of the economics of underdevelopment; analysis of foreign economic, cultural, and political environments and their impact on international business; foreign investment in the development process; case studies. Prerequisite: I BUS 300.

I BUS 340 Business Environment in Industrial Countries (4) Factors and conditions affecting business operations and behavior in developed countries, international integration, business relations among nation states and integrated supranational systems, direct investment and multinational industrial activities, analysis of sources and causes of international change. Prerequisite: I BUS 300.

I BUS 440 Business in Japan (4) Major aspects of the Japanese business environment and how Japanese enterprises are managed. Problems and opportunities of foreign corporations in Japan. Prerequisite: I BUS 300.

I BUS 470- 471 Management of International Trade Operations 1-2 (4-4) Integrated study of international trade functions, practices, concepts, management, strategy, and policy. The approach utilizes lectures, case studies, research, guest speakers, and extensive practical application. Designed as a two-quarter sequence. Students may enroll at the beginning of any quarter, summer included. Prerequisite: I BUS 300.

I BUS 480 Multinational Operations Management (4) Case studies in foreign operations management: planning international objectives and strategies; developing multinational company structures and executives; adapting administrative practices and operating policies to international diversities. Prerequisite: I BUS 300.

I BUS 490 Special Topics in International Business (1-6, max. 12) Students and faculty focus on current topics of concern. Offered when faculty, student interest, and availability allow. Prerequisite: I BUS 300.

I BUS 495 International Business Practicum (4) Offers students opportunity to apply principles, concepts, and skills leaned previously to actual business situation. Working on projects provides students an exposure to the issues and choices facing managers operating in an international business environment. Prerequisite: I BUS 300; either I BUS 340 with I BUS 470 or I BUS 340 with I BUS 480 or I BUS 340 with MKTG 301 or I BUS 480 or I BUS 470 with MKTG 301 or I BUS 480 with MKTG 301.

I BUS 499 Undergraduate Research (1-6, max. 9) Prerequisite: I BUS 300.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

I BUS 530 International Business in Less-Developed Countries (4) Understanding the economic, sociocultural, and political environment in the less developed countries. Problems of international trade and investment, north-south relations, commodities, technology transfer, foreign aid, and capital flows. Prerequisite: B A 500 or course in international economics or trade or international finance, or permission of graduate office.

I BUS 540 International Business in Industrialized Countries (4) Understanding the economic, sociocultural, and political environment in developed, industrialized countries. Problems of international trade and payments relations, economic integration, national policies, and supranational organizations' impact on managerial environments. Prerequisite: B A 500 or course in international economics or trade or international finance, or permission of graduate office.

I BUS 550 Field Studies in International Business (4) Research, analysis, and report on a specific international business project with an existing organization involved with international trade. Possible tasks include identifying most viable foreign target markets, developing best market entry strategies, establishing international terms and conditions of sale, and completing a preliminary marketing or business plan for clients.

I BUS 560 Multinational Business Management (4) Managerial responses to problems of international business organizations and operations. Strategy formulation in an international context; design and control of multinational organization; adaptation of management systems and policies to different economic, sociocultural, and political environments. Prerequisite: B A 500 or course in international economics or trade or international finance, or permission of graduate office.

I BUS 575 Business Studies Abroad (* max. 24) Research and study of foreign business problems in the country or countries where the firms are located. Limited to students who have the approval of their major adviser and a faculty member who has agreed to direct their work in accordance with a definite program of studies. Credit/no credit only.

I BUS 579 Seminar: Special Topics in International Business (4, max. 12) Application of international business principles to the analysis of a specific issue in trade or resource transfer, or to the business conditions in a particular country. Japan and other Pacific Rim countries are frequent topics. Prerequisite: B A 500 or permission of instructor.

I BUS 600 Independent Study or Research (* max. 10)

Marketing

Courses for Undergraduates

MKTG 301 Marketing Concepts (4) Tools, factors, and concepts used by management in planning, establishing policies, and solving marketing problems. Marketing concepts, consumer demand and behavior, location analysis, marketing, functions, institutions, channels, prices, and public policy. Prerequisite: ECON 200.

MKTG 310 Product and Price Policies (4) Important aspects of product planning and development, product line decisions, packaging, brand policies, guarantees, and services. Price theory is considered but emphasis is placed on special pricing policies and problems and legal constraints on pricing activity. Prerequisite: MKTG 301; B ECON 300.

MKTG 335 Principles of Selling (4) Focuses on role of influence and persuasion in professional selling and other organizational settings. In addition to formal theoretical coursework in such areas as consumer behavior, negotiation, and communication, students practice sales skills in role plays, presentations, and other exercises requiring practical application of selling theory. Prerequisite: MKTG 301.

MKTG 340 Advertising (4) Management of the advertising function and its integration with other forms of promotion. Planning the program, determining the most effective approach, evaluation of media and budget, advertising research, advertising institutions, economic and social aspects. Prerequisite: MKTG 301.

MKTG 370 Retailing (4) Profit planning and business control; buying, stock control, pricing, promotion; store location, layout, organization, policies, systems; coordination of store activities. Prerequisite: MKTG 301.

MKTG 430 Sales Force Management (4) Sales and distribution planning; sales organization and training; management of the sales force; methods of sales, cost, and performance analysis. Prerequisite: MKTG 301.

MKTG 450 Consumer Behavior (4) Theory and practice pertinent to marketing decisions of individuals and business firms; utilization of theories from behavioral sciences in marketing research; theories of fashion, characteristics of goods, shopping behavior, product differentiation, market segmentation, and opinion leadership; application of concepts to management of advertising, personal selling, pricing, and channels of distribution. Prerequisite: 2.0 in MKTG 301; recommended: either ECON 311, QMETH 201, PSYCH 213, PSYCH 218, STAT 220, STAT 301, STAT 311, or STAT 390.

MKTG 460 Marketing Research (4) Marketing research process; preliminary steps and research design, questionnaires, secondary and primary data, sampling, processing and interpreting data, evaluation and effective presentation of findings. A class research project provides practical application of methods studied. Prerequisite: MKTG 301; either ECON 311, QMETH 201, PSYCH 213, PSYCH 218, STAT 220, STAT 301, STAT 311, or STAT 390.

MKTG 465 Marketing Research Topics (4) Topics such as experimental design, market analysis, positioning and segmentation research, advertising research, forecasting, and new product research covered in varying depths, depending on instructor's emphasis. Prerequisite: MKTG 301; MKTG 460.

MKTG 475 Retail Structure and Strategy (4) Analysis of the nature and scope of competition within and between sectors of retail trade. Emphasis is placed on the importance of demographic, environmental, and legal differences between geographical areas in determining the level of competition. Prerequisite: MKTG 370.

MKTG 480 Advanced Marketing Management (4) Introduction to advanced marketing management through the application of various decision-making models and selected computer routines to such marketing problems as advertising budgeting, media planning, sales forecasting, sales-force allocation, and pricing. Applications include market simulation, Bayesian approaches, and linear programming. Prerequisite: either MATH 112 or MATH 124.

MKTG 485 Cases in Marketing Management (4) Analysis of managerial marketing cases involving market trends, marketing research, product planning, distribution channels, pricing, promotion, and social trends. Prerequisite: MKTG 301.

MKTG 490 Special Topics and Issues in Marketing (1-6, max. 8) Contemporary topics and issues in marketing: marketing in nonprofit organizations, marketing of services, marketing in the public sector, and marketing in an economy of scarcity. Ordinarily only one topic area is addressed in any one quarter. Course content reflects contemporary developments and the current interests of instructors and students. Prerequisite: MKTG 301.

MKTG 499 Undergraduate Research (1-6, max. 9) Prerequisite: MKTG 301.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

MKTG 501 Marketing Management (4) Analysis and management of customer satisfaction in goods and services markets by profit and nonprofit organizations. Buyer behavior, market segmentation and product positioning, product policy, pricing, distribution, sales force and advertising management, and market research in the contexts of strategy development, decision making, implementation, and control.

MKTG 510 Product and Price Management (4) Identification of market opportunities, choice of which goods and services in what combinations to market, and prices at which to offer them. Considers product and price interrelationships in product-line management; product differentiation; the marketing mix; and multiple-market, oligopoly, and monopoly contexts. Includes policy considerations. Prerequisite: B A 501.

MKTG 511 Business-to-Business Marketing (4) Edwards, Narver Integrated approach to product marketing management in the business-to-business marketplace. Analysis of core competencies, competitive environment, positioning and segmentation strategies, cost structure, and customer satisfaction. Case-based and project-oriented approach to studying marketing management in the business-to-business market. Prerequisite: B A 502 or permission of instructor.

MKTG 512 Consumer Marketing (4) Louie, Ruth Analysis of marketing strategies for consumer products and services. Focuses on consumer satisfaction and brand management including product line and brand developments, pricing strategies, channel and retail relationships, and marketing communication strategies for consumer goods and services. Prerequisite: B A 502 or permission of instructor.

MKTG 520 Distribution Management (4) Location and distribution decisions for goods and services in profit and nonprofit organizations. Considers methods of optimizing the number and quality of institutions and activities employed in dealing with exchange, and space and time aspects of distribution. Relates distribution questions to the marketing mix and organizational objectives. Prerequisite: B A 501.

MKTG 525 Strategic Retail Management (4) Emphasis on strategic planning decisions faced by senior management in a wide range of retail industries. Taught exclusively by the case method. Prerequisite: B A 501.

MKTG 530 Management of Sales Operations (4) Management of personal selling activities within a marketing program. Setting objectives, determining sales strategies; recruiting, selection, and training of sales representatives; allocation of effort, supervision, compensation, and control. Emphasis on case studies. Prerequisite: B A 501.

MKTG 540 Advertising and Promotion Management (4) Management of advertising and promotional activities and their integration with other elements of the marketing mix. Topics include: understanding the communication process, analyzing markets, working with suppliers, establishing objectives, determining budgets, selecting media, measuring and evaluating effectiveness, using publicity and promotions. Legal, social, and economic consequences are considered. Prerequisite: B A 501.

MKTG 550 Consumer Behavior (4) Analysis of current research in consumer behavior. Topics include consumer decision making processes, models of buyer behavior, and contributions from the behavioral sciences. Prerequisite: B A 501.

MKTG 555 Entrepreneurial Marketing and Management (4) Focuses on role of managers in fostering profitable growth and entrepreneurial actions within ongoing organizations. Class sessions utilize current analytical and conceptual methods, case and field studies, management development exercises, and *Foodcorp, Inc.* which allows students to simulate management of multinational corporations. Prerequisite: B A 501. Offered: jointly with B POL 555. MKTG 560 Research for Marketing Decisions (4) Methods and applications of marketing research incorporating analytical procedures and relevant concepts from behavioral and quantitative sciences. Deals with various aspects of research: problem definition, research design, questionnaire construction, sampling, and data analysis. Introduces promising new developments: multivariate techniques of data analysis, laboratory and field experimentation, and demand analysis in both business and public environments. Prerequisite: B A 501.

MKTG 565 Analysis of Multivariate Marketing Data (4) Methods for analyzing multivariate data in such marketing research problems as market segmentation and product positioning. The analytical procedures include factor, cluster, and discriminant analysis, multidimensional scaling, and conjoint measurement. Prerequisite: B A 501, QMETH 500.

MKTG 570 International Marketing (4) Analysis of the marketing strategies and tactics of multinational corporations. Choice of entry strategies for foreign markets, analyzing international competition at home and abroad, and developing global marketing strategies. Prerequisite: B A 501; recommended: one I BUS course.

MKTG 575 Strategic Market Management (4) The marketing dimensions of strategic planning with emphasis on identifying market opportunities and implementing appropriate competitive-advantage strategies. Includes strategies to stimulate brand demand; defend ones market position; manage the behavior of competitors; manage the behavior of suppliers; and increase the market orientation of ones business. Prerequisite: B A 501.

MKTG 579 Special Topics in Marketing (4, max. 12) Marketing topics of current concern to faculty and students. Offered only when allowed by faculty availability and sufficient student interest. Seminar content to be announced in advance of scheduled offerings. Prerequisite: B A 501.

MKTG 581 Doctoral Seminar in Consumer Behavior (4) Ruth, Yalch Survey of the field of consumer behavior introduces fundamental topics in consumer behavior including cognitive processes, emotion, and consumer satisfaction. Provides exposure to a variety of research methods including experiments, surveys, and phenomenological research.

MKTG 582 Doctoral Seminar in Multivariate Analysis for Marketing Research (4) MacLachlan, Moinpour Survey of methods useful for empirical evaluation of multivariate marketing phenomena and relationships. Includes an overview of measurement theory and practice; multidimensional scaling; conjoint analysis; cluster, factor, and discriminant analyses; multivariate analysis of variance; structural equation modeling; and other methods commonly encountered in academic marketing research.

MKTG 583 Doctoral Seminar in Marketing Strategy (4) Jacobson, Narver Study of factors influencing business performance and role of marketing in achieving competitive advantage. Analysis of prevailing, and emerging, theories underlying strategic thinking and competitive process. Examination of empirical research regarding measurement, level, and persistence of business success and implications of findings for theory and strategy development. Prerequisite: BA RM 580.

MKTG 584 Doctoral Seminar in Marketing Systems (4) Gautschi, Ingene Examines fundamental and institutional dynamics within marketing systems. Addresses market intermediation, including conditions under which institutions survive, flourish, or retreat and relevant forces on marketing systems including public policy, transportation, infrastructure, information and communications systems, business cycles, levels of economic development, international trade. Prerequisite: B A 500 or permission of instructor. MKTG 591 Doctoral Seminar in Social Influences and Marketing (4) Louie, Ruth Investigates topics in social cognition as related to the field of marketing. Examination of ways the principles in social cognition influence consumers' individual responses to marketing-related activities and ways in which the field of marketing, in turn, influences one's understanding of the macro-social environment.

MKTG 592 Doctoral Seminar in Information Processing Theories of Consumer Behavior (4) Ruth, Yalch Considers the processes used by consumers to acquire and evaluate market information including advertising, publicity, word of mouth, packaging, product description, price, and retail outlets.

MKTG 593 Doctoral Seminar in Marketing Models (4) Erickson, Ingene Focuses on modeling research efforts in various areas of marketing. Discussion of mathematical and statistical modeling approaches which contribute to scientific development in the marketing area and ways in which modeling is used to characterize and summarize the nature of general marketing situations in complex environments.

MKTG 594 Doctoral Seminar in Pricing and Distribution Channels Models (4) Erickson, Ingene Provides current coverage of the marketing science literature on pricing and channels of distribution. Discussions focus on the conceptual and theoretical evaluation of mathematical modeling research as it applies to these two intertwined areas of marketing as well as on ways in which to contribute to that literature. Prerequisite: 593.

MKTG 599 Doctoral Seminar in Marketing (1, max. 12) Study and research in advanced topics of marketing. The seminar is generally concerned with unpublished areas of research and conducted by visiting professors and departmental faculty. Prerequisite: doctoral student status.

MKTG 600 Independent Study or Research (* max. 10)

Operations Management

Courses for Undergraduates

OPMGT 301 Principles of Operations Management (4) Examines problems encountered in planning, operating, and controlling production of goods and services. Topics include: waiting-line management, quality assurance, production systems, project management, and inventory management. Computer and quantitative models used in formulating managerial problems. Prerequisite: ACCTG 225; ECON 200; either MATH 112 or MATH 124; either ECON 311, QMETH 201, PSYCH 213, PSYCH 218, STAT 220, STAT 301, STAT 311, or STAT 390.

OPMGT 402 Introduction to Logistics (4) Logistics studies of the efficient delivery of goods and services. A total-cost approach recognizes this involves not only the obvious vehicle-routing issues but also shipment size and mix, warehouse location, product design, and customer services. Includes study of real companies' logistics problems. Prerequisite: OPMGT 301.

OPMGT 443 Inventory and Supply Chain Management (4) Use of material and supply chain management in manufacturing and service organizations to reduce inventory levels while providing adequate service to customers. Specific topics include forecasting, Just-in-Time production, deterministic and stochastic inventory models, and material requirements planning (MRP). Prerequisite: OPMGT 301.

OPMGT 450 Introduction to Project Management (4) Focuses on the management of complex projects and the tools and techniques which have been developed in the past 25 years to assist managers with such projects. The course covers all elements of project planning, scheduling and control as well as implementation and organizational issues. Prerequisite: OPMGT 301.

OPMGT 490 Special Topics in Operations Management (1-6, max. 20) Operations management topics of current concern to faculty and students. Potential topics are: logistics management, project scheduling, manufacturing strategy, site and location analysis, management of service operations. Prerequisite: OPMGT 301.

OPMGT 499 Undergraduate Research (1-6, max. 9)

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

OPMGT 502 Introduction to Operations Management (4) Production of goods or services in any type of organization or institution. Managerial decision making in operations problems, including application of quantitative analysis and use of computers. Inventory management, scheduling, facility location, management of service systems, and quality assurance. Prerequisite: B A 501, QMETH 501, or equivalent.

OPMGT 535 Logistics and Physical Distribution Management (4) Deals with management of the distribution process including all activities involved in physically moving raw materials and finished goods from point of origin to point of consumption. Topics include warehousing, locations, purchasing, and strategic planning in physical distribution organizations. Prerequisite: 502 or B A 502 or equivalent and permission of graduate office.

OPMGT 545 Strategic Management of Quality (4) Study of strategic role of quality of products and services. Managerial concepts for implementing quality strategy and improving quality including Total Quality Management (TQM), Statistical Process Control (SPC), economics of quality, and approaches suggested by Deming, Juran, and others. Prerequisite: 502 or B A 502 or equivalent.

OPMGT 550 Project Management (4) Management of complex projects, and tools and techniques (e.g., CPM and PERT) developed to aid the planning, scheduling, and control of projects. Includes work breakdown structures, precedence networks, Gantt charts, resource leveling and allocation, and the use of microcomputer programs. Prerequisite: B A 502.

OPMGT 570 Operations Strategy (4) Develops a general framework for creating and analyzing a strategy for domestic and international manufacturing based companies and industries. Identifying and integrating those categories of manufacturing decisions that have a strategic impact. Work-force management, capacity planning, and organization of the manufacturing function. Course based substantially on case studies. Prerequisite: B A 502.

OPMGT 575 Manufacturing Planning and Control (4) Focuses on planning decision for manufacturing firms with emphasis on Material Requirements Plan (MRP) system. Topics include inventory management, capacity planning, operations scheduling, assembly line balancing, cellular manufacturing, and Just-in-Time (JIT) techniques. Prerequisite: 502, B A 502, or permission of instructor.

OPMGT 577 System Dynamics (4) Presents applied systems thinking, strategic modeling, and learning organizations. Analysis of feedback system structure including cause and effect relations within feedback loops and dynamics of behavior and managerial, social and economic systems. Construction of continuous-flow computer simulation models using specialized languages such as ITHINK, STELLA, and DYNAMO. Prerequisite: 502 or B A 502.

OPMGT 579 Special Topics in Operations Management (4, max. 12) Major topics in operations management and systems analysis. Emphasis on research and, where appropriate, application of quantitative analysis and computers. Topics vary, including workforce planning, project management, research and development management, quality assurance, technology planning and forecasting, systems analysis. Prerequisite: B A 502.

OPMGT 580 Facility Layout and Location (4) Focuses on quantitative models used to analyze problems in the layout and location of economic facilities in both the public and the private sectors with emphasis on current research. Prerequisite: QMETH 580 or equivalent and doctoral student or permission of instructor.

OPMGT 587 Advanced Topics in Inventory Management (4) Survey of literature in inventory/production control with emphasis on current research. Topics include single-echelon deterministic and probabilistic models and multi-echelon stochastic models. Prerequisite: QMETH 592 and course in probability theory and in stochastic processes.

OPMGT 590 Theory of Scheduling (4) Considers scheduling problems in different production environments including assembly lines and flow shops as well as closed and open job shops. Discussion of optimization and heuristic techniques for sequencing, due-date assignment, release time determination, labor assignment, and lot sizing. Prerequisite: doctoral student or permission of instructor.

OPMGT 599 Doctoral Seminar in Operations Management (1, max. 12) Study and research in advanced topics of operations management. The seminar is generally concerned with unpublished areas of research and is conducted by visiting professors and departmental faculty. Credit/no credit only. Prerequisite: doctoral student status.

OPMGT 600 Independent Study or Research (* max. 10)

Organization and Environment

Courses for Undergraduates

O E 200 Introduction to Law (5) Legal institutions and processes; law as a system of social thought and behavior and a frame of order within which rival claims are resolved and compromised; legal reasoning; law as a process of protecting and facilitating voluntary arrangements in a business society.

O E 302 Organization and Environment (4) Political, social, and legal environment of business. Critical managerial issues from historical, theoretical, ethical perspectives; their impact on organization. Corporate political power, boards of directors, capitalism, industrial policy, business ethics and social responsibility, alternative corporate roles in society.

O E 310 Political and Regulatory Environment of Business (5) Managerial implications of restrictions imposed by government on corporations from legal point of view. Constitutional law impacting business managers; antitrust, administrative, and regulatory issues; environmental law, product liability law, and securities law. Not a business or commercial law course.

O E 314 Historical Development of the Business-Government Relationship (3) Business-government relationships in American history, with aim of defining and explaining patterns in attitudes and behavior rather than detailing events. Discussions organized in terms of policy areas (e.g., national banking, transportation, agriculture, energy, industry in wartime, trade, and research). **O E 316 Business Ethics and Corporate Social Responsibility (3)** Philosophical and pragmatic perspectives, including values and social/ethical premises in organizational decision making. Several issues covered in depth; investments abroad, hazardous products, bribery, industry practices, and others.

O E 403 Commercial Law (5) Principles of the law of contracts, agency, property, sales, negotiable instruments, and security transactions.

O E 440 Organization Structure (3) Concepts of formal organization structures, power, authority, and influence; delegation and decentralization, strategic planning, decision making; philosophy and values in management, the organization in the context of the environment and its impact on the organization's subsystems. Recommended: HRMOB 300.

O E 441 Advanced Organization Theory (3) Current research, measuring of organizational effectiveness, planning for alternate structural relationships, developments in related disciplines, and current issues. Recommended: O E 440.

O E 490 Special Topics and Issues in Organization and Environment (1-6) Topics and issues of business organization and a changing environment. Content reflects interests of faculty members and students not otherwise covered in the curriculum.

O E 499 Undergraduate Research (1-6, max. 9) Selected problem areas or issues in consultation among faculty members and students. Prerequisite: permission of the undergraduate office.

Courses for Graduates Only

Approval of the graduate business program office required. Entry code required for nonmajors.

O E 510 Organization and Environment (4) Business organization's political, social and legal environments. Critical managerial issues from historical, theoretical, and social/ethical perspectives. Corporate political power, corporate boards of directors, industrial power, social responsibility, business ethics, roles of the corporation in society, themes of change.

O E 511 Legal and Regulatory Constraints on Business (4) Managerial implications of restrictions imposed by government on corporations from legal point of view. Employment law, environmental law, product liability law, securities law, campaign finance law. Not a business or commercial law course.

O E 513 Business Ethics and Corporate Responsibility (4) Business ethics and corporate social responsibility from philosophical, theoretical, and pragmatic perspectives. Ethical theories and the role of values in business. Ethics and social responsibility put into a framework useful for practicing managers.

O E 514 Commercial Law (4) Principles of the law of property sales, negotiable instruments, and security transactions.

O E 550 Organization and Management (4) Integrates management as practice, theory, and research. Concepts and values, alternative theories, organizational rationality, cooperative and coordinated systems, bureaucracy and classical organization theory, executive function, accountability and legitimacy; manager's role in matching environment, culture goals, strategy, structure, technology, and control systems.

O E 560 Seminar in Organization Design (4) Top managers can choose among alternative organizational forms. Each is dependent on the current stage in the organization's life cycle, the organization's strategy, and internal organization practices. Conditions that lead to effective organization design. O E 570 Seminar in Management of Technology and Innovation (4) Critical issues relating to the management of technology and innovation. How to design innovative organizations in terms of strategy, structure, and process. The innovation process, creativity, management of professionals, technical and strategic leadership, entrepreneurship, intraentrepreneurship, and matrix management.

O E 575 Seminar in Advanced Organization Theory (4) Major issues and problems in the design and conduct of organization theory research. Organizational philosophy, structural congruence with environment, goals and effectiveness, culture and values, power and politics, information and control, and structure and bureaucracy.

O E 579 Special Topics in Organization and Environment (4, max. 12) Topics of current concern to faculty members and students. Offered only when faculty members are available and there is sufficient student interest.

O E 600 Independent Study or Research (*)

Quantitative Methods

Courses for Undergraduates

QMETH 201 Introduction to Statistical Methods (4) NW/QSR Survey of principles of data analysis and their applications for management problems. Elementary techniques of classification, summarization, and visual display of data. Applications of probability models for inference and decision making are illustrated through examples. Prerequisite: either MATH 112 or MATH 124.

QMETH 300 Quantitative Analysis for Business (4) Introduction to mathematical tools utilized for analysis of business problems; appreciation of the use of these tools in business situations; calculus; linear algebra. Prerequisite: either MATH 112 or MATH 124.

QMETH 302 Statistical Methods for Quality Management (4) Philosophies and statistical methods for quality management with applications to both manufacturing and service sectors. Topics include definition and measures of quality, seven QC tools, process capability, design of control charts, design of experiments, and multiple regression. Prerequisite: either ECON 311, QMETH 201, PSYCH 213, PSYCH 218, STAT 220, STAT 301, STAT 311, or STAT 390.

QMETH 450 Spreadsheet Models for Managerial Decision Making (4) Formulation and solution of business problems using operations research techniques in a spreadsheet environment. Techniques of linear and integer programming, dynamic programming, network optimization, queueing, and simulation. Applications from marketing, finance, and operations. Prerequisite: I S 300.

QMETH 490 Special Problems in Quantitative Analysis (1-6, max. 20) Specialized quantitative techniques useful for solving business problems. Topics from operation research, statistics, computer methods. Emphasis on application. Prerequisite: either ECON 311, QMETH 201, PSYCH 213, PSYCH 218, STAT 220, STAT 301, STAT 311, or STAT 390.

QMETH 499 Undergraduate Research (1-6, max. 9) Research in selected problems in business statistics, operations research, decision theory, and computer applications.

Courses for Graduates Only

QMETH 500 Statistical Data Analysis for Management (4) Introduction to statistical techniques useful for aiding management decisions. Use of interactive computer methods in basic business problems. Random sequences, probability distributions, linear regression, and elementary time series analysis. Prerequisite: 300 or equivalent preparation in elementary calculus.

QMETH 501 Decision Support Models (4) Introduction to computer-based modeling techniques for management decision making. Linear programming, networks, decision analysis, and simulation. Formulation and interpretation. Prerequisite: 300 or equivalent preparation in elementary calculus.

QMETH 503 Practical Methods for Data Analysis (4) Presentation of basic exploratory data analysis with business examples. Data summaries, multivariate date, time series, multiway tables. Techniques include graphical display, transformation, outlier identification, cluster analysis, smoothing, regression, robustness. Prerequisite: B A 500 or equivalent or permission of instructor. Offered: jointly with STAT 503.

QMETH 520 Managerial Applications of Regression Models (4) Data exploration and inference using regression models for business forecasting and management. Models include simple, multiple, logistic, and nonlinear regression, use of dummy variables, transformations, variable selection, and diagnostics. Prerequisite: 500 or B A 500.

QMETH 528 Survey Sampling Applications (4) Introduction to design and implementation of sample surveys with emphasis on business applications. Simple random, stratified, cluster, multistage sample methods. Probability sampling, optimal allocation of sampling units. Mail, telephone, interview methods. Estimation methods, Questionnaire design. Non-response. Prerequisite: 500 or B A 500 or equivalent or permission of instructor.

QMETH 530 Forecasting Models in Business (4) Introduction to time series analysis and forecasting. Topics include seasonal adjustment, decomposition, exponential smoothing, moving average, and autoregression as well as model identification, estimation, diagnostics, and adaptive forecasting illustrations using real data. Prerequisite: 500 or B A 500.

QMETH 551 Linear and Integer Programming (4) Advanced modeling in linear and integer programming. Linear programming includes formulations, simplex method and variations, duality theory, sensitivity and parametric analysis, quadratic and separable programming; integer programming includes formulations and algorithms (branch and bound and cutting planes). Application areas include production, scheduling, distribution, marketing, finance. Prerequisite: B A 501 or equivalent.

QMETH 579 Special Topics in Quantitative Methods (4, max. 12) Presentation of topics of current concern to students and faculty in operations research and applied business statistics. Potential topics include applications and extensions of mathematical programming, stochastic processes, discrete programming, networks models, and the application of statistical techniques. **QMETH 580 Mathematical Programming (4)** Advanced survey of mathematical programming with applications to business problems. Includes linear, integer, stochastic, nonlinear, and dynamic programming and network optimization. Treatment includes formulation, optimality conditions, duality theory, solution algorithms. Applications to production, scheduling, marketing, finance, and equipment replacement. Prerequisite: B A 501 or equivalent and doctoral student or permission of instructor.

QMETH 592 Stochastic Models: Queueing and Simulation (4) Application of stochastic processes to business problems. Focuses on development and application of queueing theory and discrete event simulation. Prerequisite: stochastic processes, knowledge of high level programming language, and doctoral student or permission of instructor.

QMETH 599 Doctoral Seminar in Operations Research (1, max. 12) Study and research in advanced topics of operations research. The seminar is generally concerned with unpublished areas of research and is conducted by visiting professors and departmental faculty. Prerequisite: doctoral student status. Credit/no credit only.

QMETH 600 Independent Study or Research (*)

Strategic Management

Courses for Graduates Only

ST MGT 591 Theories of the Firm and Strategic Management: Economic Models (4) Reviews the economic theories that support strategies pursued by firms and explores the links between market processes, firm strategy, and firm performance. Topics include agency theory, transaction cost economics, resource dependence, population ecology, and neo-Austrian economics.

ST MGT 592 Theories of the Firm and Strategic Management : Sociological Models (4) Explores the sociology of organizations from multiple perspectives while introducing fundamental sociological questions and preparing students for conducting research in organizations. Emphasis on structural contingencies, institutions, resource dependence, population ecology, negotiated order and culture, organizational learning and decision making, organizational power and politics, networks, and inter-organizational relations.

ST MGT 593 Contemporary Strategic Management Research (4) Facilitates understanding of empirical foundations of theory development and testing in contemporary strategic management research. Focuses on evaluation of ways in which the empirical tradition has evolved in the strategic management area. Attention to evaluating research methodologies used in the field.

ST MGT 594 The Social and Political Environment of the Firm (4) Focuses on the social and political factors that help shape corporate strategy using stakeholder management as an integrating concept. Topics include corporate governance, corporate political activity, governmental regulation, comparative political economy, and normative aspects of strategic management, including ethics and corporate social responsibility.

School of Dentistry

Dean

Paul B. Robertson D322 Health Sciences

Established in 1945, the University of Washington School of Dentistry offers courses leading to the degrees of Bachelor of Science with a major in dental hygiene, Doctor of Dental Surgery, Master of Science in Dentistry, Master of Science, and Doctor of Philosophy, as well as postgraduate certificate programs and residency training in specific areas.

Opportunities to earn other degrees concurrently (M.S. or Ph.D. in other schools) may be arranged on an individual basis.

These educational programs are enriched by the School's strong commitment to research and the presence of a Regional Clinical Dental Research Center, a Research Center in Oral Biology, a Dentist-Scientist program, and a fellowship research training program for predoctoral students. The Regional Clinical Dental Research Center is one of two funded in the nation and its mission is to foster clinically relevant research that will advance dentistry's knowledge base, improve patient care, and promote oral health. State-of-the-art clinical research facilities are available for faculty and student use.

School of Dentistry Mission Statement: "The School of Dentistry shares the University's overall mission to generate, disseminate, and preserve knowledge and serve the community. The School is an integral part of the Health Sciences Center and is an oral health-care center of excellence serving the people of the state of Washington and the Pacific Northwest. Through its exemplary educational, research, and service programs, the School prepares students to be competent oral health-care professionals. Its research programs fundamentally contribute to the understanding of basic biologic processes and behavioral, biomedical, and clinical aspects of oral health. The School values and seeks diversity in its students, staff, faculty, and patient populations. It fosters an environment of mutual respect where objectivity, imaginative inquiry, and the free exchange of ideas can flourish to facilitate personal development, professionalism, and a strong sense of self-worth." (July 1994.)

The following departments participate in the curriculum for the School's programs: Dental Public Health Sciences is concerned with the social, legal, political, economic, and psychological aspects of dental healthcare delivery as well as the epidemiology of oral diseases and the application of biostatistical methods in studying them. Endodontics offers training in the diagnosis and treatment of diseases and injuries of the tooth pulp and periradicular tissues. Oral and Maxillofacial Surgery trains students in the procedures used for all types of operations in the oral cavity and all phases of dental pain control. Oral Biology encompasses the study of basic biological mechanisms in normal and diseased oral tissues and structures. Oral Medicine provides training in diagnostic techniques and nonsurgical treatments of oral disease. Orthodontics provides training in the prevention and correction of malocclusion of the teeth. Pediatric Dentistry provides students with a broad understanding of prevention, diagnosis, and treatment of most dental needs from infancy through adolescence with emphasis on the psychological and educational requirements of the patient and parent. Periodontics offers training relative to the periodontium in health and disease, with emphasis placed on the diagnosis, prevention, and treatment of diseases that affect the periodontium. *Prosthodontics* provides instruction in the fabrication and maintenance of removable, complete, and partial dentures. *Restorative Dentistry* offers training in the restoration or replacement of tooth structure and study of the form and function of the masticatory structures.

Undergraduate Program

Advisers Norma Wells

Reinhard Hahn D583 Health Sciences, Box 357440 (206) 543-5820 dhyg@u.washington.edu

Bachelor of Science

The goal of the University of Washington Dental Hygiene Degree Completion Program is to provide postlicensure education that comprises information management, analytic skills, and scientific methodology. This enables graduates to function professionally as dental hygienists who can adapt to new demands. To qualify for the Bachelor of Science degree with a major in dental hygiene, students must complete the residency, proficiencies, and Areas of Knowledge requirements of the University. Also required is a sequence of three dental-hygiene core courses, and at least one dental hygiene path. The University and affiliated sites provide the settings for projects. Majors may be eligible, following the completion of prerequisite courses, to participate in study-abroad programs that focus on oral-health issues.

Admission Requirements

This bachelor of science degree program is a postlicensure degree completion program. This means that the applicant must hold a certificate or diploma in dental hygiene as well as a license to practice clinical dental hygiene.

Admission for U.S. or Canadian Applicants

1. Completion of an associate degree or certificate/ diploma in dental hygiene from a program accredited by the Commission on Dental Accreditation of the American Dental Association.

2. Possession of a license to practice dental hygiene in at least one state or Canadian province.

Admission for Other Applicants

1. Possession of a certificate or diploma in dental hygiene granted by an officially recognized institution.

2. Verification that the practice of dental hygiene is authorized by the government of the home country.

 University admission requires that students whose native language is not English submit a score of 580 or higher on the Test of English as a Foreign Language (TOEFL).

Departmental Application Deadline: Students are admitted into the program summer and autumn quarters. The deadlines are the same for both quarters: April 15 for citizens and permanent residents, January 31 for international students.

Major Requirements

Completion of the required major and University requirements takes one to two years. Students planning to graduate in one year must have a faculty-approved plan of study within the first quarter of enrollment. Students planning a two-year program must have a faculty-approved plan of study within the first two quarters of enrollment. All students must meet with a program adviser yearly and are encouraged to meet with a program adviser quarterly. The completion of courses that fulfill graduation requirements is the responsibility of the student.

Core Requirement

Students must complete three courses (9 credits) which form the core of this program. These courses are designed to improve the student's skills in computer access to scientific information, English-language usage, and scientific investigative methods. The core courses must be taken in a prescribed sequence.

Path Requirement

Students must select at least one of four pathways to fulfill the path requirement. The options are:

Dental Hygiene Care and Education. This option focuses on dental hygiene care and management of clients with special health-care needs. Persons with physical, mental, developmental, and complex medical problems are prioritized. It includes principles of learning and tools for teaching in various settings. Major requirements for this option include a minimum of 10 credits beyond the core: at least 6 in education, of which 2 must be in teaching methods (D HYG 494) and 2 in educational internship (D HYG 595); and 6 in care of special clients, of which 2 must be in ORALM 404 and the remaining D HYG 404 or approved substitutes.

Oral Health Promotion. This option prepares dental hygienists to function as oral-health advocates in community settings. It focuses on national and international health problems and on oral-health program development and promotional strategies. Major requirements for this option include a minimum of 10 credits beyond the core: 2 in educational methods (D HYG 494), 3 in health-care delivery systems (D HYG 402 or approved substitute), 3 in health-promotion strategies (D HYG 403 or approved substitute), and 2 in community-health agencies (D HYG 404 or approved substitute).

Oral Health Administration. This option is for dental hygienists who want to increase their knowledge of how effective administrators function in complex organizations, or who want to advance their careers in marketing, business, or management. Students study organizational theory and administrative behavior, human resources management, resource allocation, systems operations and analysis, marketing, policy formulation, and strategic planning. This option requires a minimum of 17 credits beyond the core: 15 in ADMIN 510, and a minimum of 2 in an oral-health administration-related experience or internship (D HYG 595 or approved substitute).

Biological and Behavioral Sciences. This option is for students seeking entry into a graduate school program or a professional school while earning the Bachelor of Science degree in dental hygiene. While in the program, students are expected to prepare themselves for admission to specific graduate programs. Major requirements for this option include the following: the core, 6 credits in technical writing (T C 400, T C 401, or equivalent), plus a sufficient number of credits for admission eligibility to a graduate- or professionaldegree program.

Academic Standards

The School of Dentistry requires that a minimum numerical grade of 2.5 be earned in dental hygiene courses which are to be counted toward satisfaction of graduation requirements with a dental hygiene major. Graduation with a dental hygiene major also requires a minimum cumulative GPA of 2.00 for all work done in residence at the University. A student whose cumulative GPA falls below 2.00 in any quarter will be placed on academic probation. The status of academic probation shall be removed when the cumulative GPA is 2.00 or above. While on probation, the student must attain at least a 2.50 GPA for each succeeding quarter's work until the cumulative GPA is raised to 2.00.

Professional Programs

Doctor of Dental Surgery

The Doctor of Dental Surgery (D.D.S.) curriculum provides opportunities to learn the fundamental principles significant to the entire body of dental knowledge. Students are expected to learn fundamentals of basic health sciences, to attain proficiency in clinical skills, to develop an understanding of professional and ethical principles, and to develop reasoning and critical decision-making skills that will enable implementation of the dental knowledge base. The first year is divided among lecture, laboratory, and preclinical activities in basic sciences, dental anatomy, and dental materials. In the second year, students develop further preclinical skills, learn how basic science principles are applied to the clinical setting, and begin clinical treatment. In the third and fourth years, students concentrate on providing clinical treatment, attend lectures that refine technical and diagnostic skills, and participate in electives. Students are required to take one elective in each of the junior and senior year. Electives are chosen by students from courses offered by all departments. including opportunities in independent study, research, seminars on various topics, and specialty clinical topics.

The curriculum extends for 42 months or 14 quarters, including two summer quarters. If needed, students may be allowed additional time to complete required course work.

Admission

To be considered for admission to the predoctoral program, a student will need to have completed the required courses listed below, have taken the Dental Admission Test, and have attended a personal interview. The School does not select or give preference to a particular undergraduate major field; in fact, the Admissions Committee encourages diversity in majors. Courses in the social sciences and the humanities are important and reviewed by the committee.

The School of Dentistry is state supported and participates in the student exchange program provided by the Western Interstate Commission for Higher Education (WICHE), which supports students from western states without dental schools. Although all applications are carefully reviewed, preference in admission is given to residents of Washington and WICHE states. Required courses are: general chemistry-2 quarters or 1 semester; organic chemistry-2 quarters or 1 semester; general biochemistry-2 quarters or 1 semester, general physics-3 quarters or 2 semesters; general biology or zoology-3 quarters or 2 semesters; general microbiology-2 quarters or 1 semester. Although a majority of students have baccalaureate degrees, students with outstanding academic qualifications may be considered for admission after only three years. The School enrolls a first-year class of 50 students. The School is committed to diversity within the dental school student body and the dental community.

Transfer Applicants: The School rarely, and only under exceptional circumstances, admits transfer students from other dental schools.

Foreign Applicants: The School does not provide a special program for foreign-trained dentists. Foreign dentists applying for admission into the D.D.S. program will be considered for entry into the first-year class. Foreign applicants whose first language is not English will be required to present TOEFL (Test of English as a Foreign Applicants on norresident visas must submit a written statement from a bank indicating financial support is available to complete the program.

Dental Readiness Program: To achieve the School's mission of a diverse student body, the School has instituted the Dental Readiness Program. The goals of

the Dental Readiness Program are (1) to correct academic deficiencies of students who have not met the University of Washington School of Dentistry's GPA or Dental Admission Test admission-criteria eligibility, (2) to assist students in gaining admission to dental school, and (3) to prepare students for successful completion of the predoctoral dental (D.D.S. or D.M.D.) degree. The Admissions Committee may offer admission to the program to provide entrants with a year of preparation prior to entry into dental school. Entrants may be enrolled in several first-year dental courses, as well as study-skills seminars, learning-method assessment seminars, and other University courses that will strengthen academic background. Entrants' schedules will be unique and based on individual needs and strengths. A mentor and tutors will be provided as needed. The minimum requirements for eligibility are an overall GPA of 2.70, a predental-science GPA of 2.50, and Dental Admission Test scores of at least 16. The first step of the program requires the completion of a summer histology course. During the program year, the entrant must successfully complete all designated courses of the Dental Readiness Program, and receive no failing, deficient, or withdrawal grades, while attaining a 2.50 overall GPA. Entrants successfully meeting these criteria will be admitted to the four-year Doctor of Dental Surgery curriculum.

To achieve the mission of diversity within the student body, the School participates in, and provides funding for, activities through the Health Sciences Center Office of Minority Students. In addition to academic counseling, this Office sponsors the Minority Students Health Sciences Organization, and manages several grants designed to stimulate interest among minority students in pursuing careers in biomedical research and health science fields. For example, the Stipends for Training Aspiring Researchers (STAR) Program is funded by the National Institutes for Heart, Lungs and Blood; and the Seattle School District Partnership Program is funded by the Seattle School District. Students from each of these programs interact with School of Dentistry faculty and students, and/or participate in research

The School belongs to the American Association of Dental Schools Application Service (AADSAS). The School has established December 1, 1998, and November 1, 1999, as its AADSAS priority filing deadlines. Only those applications received in the AADSAS Washington, D.C. office (see address information below) by the priority filing date will be forwarded to the University of Washington for consideration by the Admissions Committee. Applications may be requested from the AADS Web site: http://www.aads.ihu.edu/ aadsas.html. Information about the application by status mav be requested email at aadsas.status@aads.jhu.edu, or by regular mail at 1625 Massachusetts Avenue NW, Washington, D.C. 20036-2212; (202) 667-1886.

Information regarding the Dental Admission Test should be requested from the American Dental Association, Division of Education Measurement, 211 East Chicago Ave., Chicago, IL 60611-2678, (312) 440-4651, http://www.ada.org.

For information on the University of Washington School of Dentistry application or admissions contact either Kathy Craig, Office of Student Admissions, School of Dentistry, University of Washington, Box 356365, Seattle, WA 98195-6365, (206) 543-5840, fax (206) 616-2612, evrgreen@u.washington.edu, or Debbie Prince, Predental Advising Office, University of Washington, 008 Communications, Box 353760, Seattle, WA 98195-3760, (206) 543-2598, debbiepf@u.washington.edu.

Once the School has received the applicant's AADSAS application, the School will send competitive applicants a supplementary application and a request for the following materials:

1. A supplementary application that includes a short autobiographical essay.

2. A non-refundable application fee of \$35.

3. Three letters of recommendation. Letters of recommendation should include one from a science instructor who can evaluate the applicant's academic and intellectual qualifications, one from a dentist who is familiar with the applicant's knowledge of and motivation toward the dental profession, and one (character reference) from someone who can indicate the applicant's contribution to the community, etc. If a predental committee exists on the applicant's campus, a combined recommendation from that committee may be used to replace all three recommendations.

4. Dental Admission Test scores.

5. Transcripts from all higher education institutions attended.

6. A list of current and future courses.

7. Acknowledgment of having read, understood, and of being able to meet, with or without reasonable accommodation, the *Essential Requirements of Dental Education at the University of Washington School of Dentistry*, to be sent with the supplemental application form.

8. Conviction/criminal history information. Washington state law requires that all School faculty, students, and staff disclose background information concerning crimes and offenses against vulnerable populations. A complete copy of the law is available from the School's Office of Student Services and will be forwarded upon request. Applications will not be considered until complete disclosure forms have been returned.

The application will be considered complete once all materials noted above (1-8) are returned. Upon receipt of the completed application, invitations for an interview are sent to applicants based on a preliminary screening of grades and DAT scores. The interview is an opportunity for an open and friendly discussion of the applicant's interests, background, and reasons for selecting dentistry as a profession. The interview allows the applicant to ask questions about the School, faculty, and student life. The interview is conducted by a member of the Admissions Committee. In addition to the interview, the applicant will have an opportunity to hear information about financial aid, meet with enrolled students, take a tour of the School, and meet one of the School's deans.

Following the interview, the Admissions Committee, which is composed of faculty, students, and alumni, will make a decision concerning admission status. In their deliberations, the following seven areas are considered, with the first two areas receiving the most weight in assessing the applicant's merits as a candidate:

1. *Grades.* Overall grade-point average (GPA) and GPA of predental required science courses are reviewed. College grades are an important indicator of dental-school performance and success. The committee members review these grades for a strong, consistent GPA with very few withdrawals, incompletes, repeated courses or non-graded options.

2. DAT (Dental Admission Test). The test, sponsored by the American Dental Association, covers several areas: quantitative reasoning, survey of natural sciences (including biology, general and organic chemistry), and perceptual ability (including form development, apertures, angles, cubes, and orthographic projections). At the University of Washington the scores are reviewed to identify an applicant's areas of strength. The test must be taken no later than October, one year prior to admission.

3. Level of Pre-professional Education. The majority of applicants will have a baccalaureate degree by the time of entry. Admission may be offered to applicants without a baccalaureate degree but only to those applicants who have completed all predental requirements and have an extremely competitive academic record.

276 SCHOOL OF DENTISTRY / GRADUATE PROGRAMS

4. Dental Knowledge. Knowledge of the field of dentistry through experience in a dental setting (dentist's office, clinic, etc.), introductory dental course work, and exploration of the dental literature are considered as admission factors. A qualified applicant will have a clear understanding of the profession and a demonstrated interest in the field.

5. Unique Life Experiences. Research and teaching efforts, travel, and work experience are some of the life experiences that are considered important. Such experiences demonstrate the breadth and level of maturity of a candidate.

6. *Personal Attributes.* In addition to motivation, the applicant's poise and communication skills are examined by the Admissions Committee. Personal attributes such as integrity, responsibility, leadership, initiative, community service, perseverance, and diversity of interests are important.

7. *Contribution to Diversity.* Diversity in the student body contributes to the development of oral-health-care professionals prepared to address the needs of society.

Although interviews begin in October, the earliest the Admissions Committee will notify applicants of its decision is December 1. The School uses a "rolling admission" format, so interviews and committee decisions will continue to be made between December and March. The Admissions Committee will make one of three decisions regarding all applications:

1. Offer of Acceptance. Admission application has been accepted. The applicant will have a specified time to reply to reserve enrollment in the entering firstyear class. In addition, enrollment will be contingent on timely submission of the following requirements: required registration deposit, transcripts showing completion of predental courses, physician statement, registration for autumn quarter of the upcoming academic year, and completion of required immunizations.

2. Alternate Status. Applicant is offered a position on the Alternate List. The applicant will have a specified time to reserve a position on this list which is maintained until the beginning of the school year.

3. *Denial of Admission*. The committee has considered the application but cannot offer a position or alternate status.

Accepted applicants will receive follow-up letters and information. Letters detailing registration procedures and providing financial aid information will be sent in early summer. In late summer, accepted students will receive a packet of materials welcoming them to the School and describing the orientation program which provides an opportunity for the newly enrolled student to learn about the upcoming curriculum, immunization requirements, student rights and responsibilities, financial aid information, and student organizations. Orientation occurs during the first two weeks of the School of Dentistry's autumn quarter which begins September 14, 1998, September 13, 1999, and September 11, 2000. The accepted student must participate in the orientation program which includes an off-campus student retreat and first-year courses. Attendance at all activities is mandatory.

Western Interstate Commission for Higher Education (WICHE): The School participates in the program administered by WICHE for students who reside in Western states not served by a dental school (Alaska, Arizona, Hawaii, Montana, Nevada, New Mexico, North Dakota, and Wyoming). Such students should seek requests for certification from the WICHE commission office in their state of residence. Students who enroll in the School under the WICHE program pay in-state tuition rates, the nonresident portion being paid by the member state that sponsors the student.

| Projected costs for 1998-99 | First Year | Second Year | Third Year | Fourth Year | Total |
|--------------------------------------|------------|-------------|------------|-------------|---------|
| Tuition (resident)* | 8,490 | 11,320 | 11,320 | 8,490 | 39,620 |
| Technology fee (\$40/quarter) | 120 | 160 | 160 | 120 | 560 |
| Supplies | 3,369 | 4,226 | 1,043 | 0 | 8,638 |
| Books | 1,133 | 788 | 196 | 0 | 2,117 |
| Visc. Items | 225 | 338 | 118 | 532 | 1,213 |
| Total Educational Costs [†] | 13,337 | 16,832 | 12,837 | 9,142 | 52,148 |
| Costs‡ | 36,499 | 37,124 | 43,334 | 42,854 | 159,811 |

* Tuition calculated at 1998-99 schedule for Washington residents at \$2,830 per quarter.

⁺ Total Educational Costs do not include living and personal expenses. Non-rental instruments belong to the student, and should be considered a long-term investment and not part of the expendable educational costs.

[‡] Nonresident Total Educational Costs include Total Educational Costs plus the additional tuition for students with nonresident tuition status.

Information on loans and scholarships may be obtained from the Director of Financial Aid, D322 Health Sciences, Box 356365. Information relating to student life, including the Student Dress Code, Academic Regulations Manual, and Professional Ethics Code may be obtained from the Associate Dean for Student Services, D322 Health Sciences, Box 356365.

Facilities

School clinics, teaching laboratories, and lecture halls are up to date and well maintained. Third- and fourthyear students are provided an individual clinical module for patient care.

School Accreditation and Licensure

The School is fully accredited by the Commission on Dental Accreditation, the recognized accrediting body for dentistry and the related dental fields. For information, write to the Commission on Dental Accreditation, 211 East Chicago Ave., Chicago, IL 60611-2678. Admission to the practice of dentistry in any state is conditional upon meeting the requirements of the individual state dental licensure requirement. In order to practice in the state of Washington, the candidate for licensure must have a dental degree from a U.S. or Canadian dental school, and have successfully completed the American Dental Association National Board Examinations and the Western Regional Examining Board Examination. Additional information about licensure requirements should be requested from the Washington State Department of Health, Dental Quality Assurance Commission, PO Box 1099, Olympia WA 98504-1099, (360) 586-6898.

Health Care and Immunization Policy

Accepted students are required to meet the University and Health Sciences immunization requirements and are strongly encouraged to have sufficient health insurance to cover both day-to-day health-care requirements as well as any accidents or illnesses incurred during their educational experience. Students remain responsible for their own health care while enrolled in the School of Dentistry.

Graduate Programs

Through their respective departments, the graduate faculty members of the School offer programs leading to the degrees of Master of Science in Dentistry, Master of Science, and Doctor of Philosophy, as well as postgraduate certificate programs.

Master of Science in Dentistry/ Postgraduate Certificates

Fields of study for the M.S.D. programs are endodontics, oral biology, oral medicine, orthodontics, pediatric dentistry, periodontics, and prosthodontics. Although students may enroll in a graduate certificate program only, students graduating with the M.S.D. will also be awarded a certificate in the specialty. The programs are planned to prepare students to think independently, to evaluate their own services and the literature of the programs, and to develop their clinical skills to a level to permit successful clinical practice, teaching, or research in their chosen specialty. Emphasis is placed on the basic principles of diagnosis and treatment. The purpose of the programs is not only to train students in their respective specialties but also to encourage preparation for academic careers or for research. Research may be undertaken in basic or applied science. Opportunities for collaborative research are available with the cooperation of other colleges, schools, or departments of the University.

Applicants for admission to the M.S.D. and certificate programs must be graduates of a school of dentistry approved by the Commission on Dental Accreditation of the American Dental Association or a university dental school located outside the North American continent whose curriculum and admission requirements are similar to those of the UW School of Dentistry. Applications must be submitted to the appropriate department on or before the following deadlines: October 1 for oral medicine, orthodontics, periodontics and prosthodontics: October 15 for endodontics: November 1 for pediatric dentistry. A concurrent Application for Admission to the Graduate School also must be filed. International students must submit financial statements before the application deadlines and must demonstrate competency in the English language, for which TOEFL scores are required. Applicants who have not received dental degrees from an institution within the United States will be required to supply Graduate Record Examination scores for admission to the University of Washington Graduate School (graduates of U.S. institutions are not required to submit GRE scores). Requests for information or application forms may be forwarded to the department of the specialty field, School of Dentistry, University of Washington, Seattle, WA 98195-6365, (206) 543-5982.

A minimum of eight consecutive full-time quarters of residence is required except in the periodontics and prosthodontics programs. Certificate training in periodontics requires a minimum of 12 consecutive full-time quarters of enrollment and may be pursued concurrently with other advanced degrees which may extend the program length. The graduate prosthodontic program requires a minimum of 12 full-time quarters of didactic, clinical care, and research activities.

Postgraduate certificate programs are not administered by the Graduate School, and no thesis is required. The course content may vary somewhat from the M.S.D. program, although the same academic standards are applied in both programs. Tuition and fees are assessed at the graduate level for both programs.

Master of Science, Doctor of Philosophy

Curricula for the M.S. and Ph.D. programs are offered through the Department of Oral Biology.

Oral biology is concerned with the nature of the oral and paraoral tissues and with the applicability of basic scientific knowledge to oral tissues in health and disease. The courses and research programs in the department deal with the origin, growth and development, structure, and functions of oral tissues, as well as with the etiology and pathogenesis of oral diseases and malfunctions. By its nature, oral biology overlaps the basic medical sciences and clinical dental sciences.

The department contains well-equipped laboratories actively engaged in various aspects of research involving the following approaches: biochemical, including studies on protein synthesis and secretion and the structure of salivary macromolecules, as well as studies on the structural proteins of the cytoskeleton of oral epithelial and epidermal cells; pharmacological, including molecular mechanisms in the regulation of secretion; physiological, including ion fluxes and their control in secretory tissues; microbiological, including the molecular basis of bacterial colonization of oral surfaces, and the identification, taxonomy and pathogenicity of oral pathogens; pathological, including the growth and metastasis of oral tumors; tissue culture, including studies on factors regulating the growth and development of oral epithelial cells; and morphological, including studies on oral tissues at the light and electron microscopic levels.

Several programs are available through the Department of Oral Biology to accommodate students with different educational objectives.

A program of study and research leading to the Doctor of Philosophy degree is available for those students desiring extensive research training as well as in-depth course work in oral biology. In addition to the courses offered by this department, students in the Ph.D. program are expected to gain proficiency in one of the biomedical sciences.

A separate program of study and research leading to the Master of Science degree is available for those students who want less training than the Ph.D. program affords.

A non-thesis option exists in the Master of Science program for the purpose of training dental hygiene educators to instruct in certain basic and applied sciences as well as in the clinic.

For the more clinically oriented students, the School offers a program leading to the degree of Master of Science in Dentistry with specialization in oral pathology. Students enrolled in this program receive training that includes experience in the School's extensive biopsy service, participation in the teaching of oral pathology to dental students, participation in a residency program, and enrollment in a series of advanced courses in general and oral pathology.

Clinical specialty training (e.g., oral pathology, oral medicine, pediatric dentistry, periodontics) can also be obtained in conjunction with either the M.S. or Ph.D. programs.

Applicants for all programs must have either a baccalaureate or professional degree from a dental or medical school. Acceptance into the programs requires approval of both the Department of Oral Biology and the Graduate School. For information or application materials, contact the Graduate Program Adviser, Department of Oral Biology, B224 Health Sciences, Box 357132, University of Washington, Seattle, WA 98195-7132, (206) 543-5477.

United States Public Health Service traineeships in oral biology may be available to students who are U.S. citizens or permanent residents. These begin at \$18,600 at the postdoctoral level. An allowance for

tuition and fees is normally included. Applicants may also seek support via the institutional or the individual Dentist-Scientist Awards from the National Institutes of Health, which provide up to five years of stipend support for dental graduates seeking a combined clinical specialty-Ph.D. degree course of study. The M.S. and Ph.D. programs, including the non-thesis M.S. for dental hygienists, are identified as WICHE Regional Graduate Programs, making students from WICHEparticipating states eligible to receive support while pursuing these degree programs.

Residency Training

Residency training programs are available in oral and maxillofacial surgery and the general practice of dentistry. Both programs provide for rotation through several of the University-affiliated hospitals. Each is a fully accredited program that grants a certificate upon successful completion of the training. Stipends are provided.

The Oral and Maxillofacial Surgery Program is at least four years in duration and provides broad exposure to all aspects of the practice of oral and maxillofacial surgery. Application, selection, and administration of this training program is provided through the Department of Oral and Maxillofacial Surgery. Further information can be obtained by contacting the Residency Program Coordinator, Department of Oral and Maxillofacial Surgery, Box 357134, School of Dentistry, University of Washington, Seattle, WA 98195-7134, (206) 543-7722.

The General Practice Residency is a one-year training program that emphasizes the general dentist's role in a hospital and the management of medically, physically, and mentally compromised patients. Application, selection, and administration of the General Practice Residency is provided through the Department of Restorative Dentistry. Further information can be obtained by contacting Dr. Barton S. Johnson, Division of Hospital Dentistry, Department of Restorative Dentistry, Box 357456, School of Dentistry, University of Washington, Seattle, WA 98195-7456, (206) 543-7496.

Postdoctoral Fellowships

Postdoctoral training fellowships are available in behavioral or public-health research in dentistry in addition to those in oral biology. Programs vary in duration and many accommodate degree-seeking or research fellows pursuing an academic career. NIH-sponsored full tuition and a stipend for up to three years are provided for U.S. citizens, noncitizen nationals, and those foreign nationals with permanent-residency status in the United States. Members of ethnic minorities and women are especially invited to apply. Application, selection, and administration of the program are provided through the Departments of Dental Public Health Sciences and Oral Biology.

Graduate Training in Dental Public Health

Opportunities exist for pursuing graduate degrees in public health which emphasize applications to research in dentistry. Master of Public Health (M.P.H.) programs in the Departments of Epidemiology and Health Services of the School of Public Health and Community Medicine can be pursued in conjunction with postdoctoral training in the School of Dentistry's Department of Dental Public Health Sciences. Didactic course work is taken in the School of Public Health and Community Medicine, augmented with independent study and thesis research on selected topics in the School of Dentistry. Similar opportunities exist for pursuing the Ph.D. in epidemiology or biostatistics with an emphasis on research in dentistry. Further information may be obtained from the Department of Deptal Public Health Sciences, Box 357475, School of Dentistry, University of Washington, Seattle, WA 98195-7475, (206) 543-2034.

The Office of Continuing Dental Education, School of Dentistry, offers programs and courses throughout the

SCHOOL OF DENTISTRY / DENTAL HYGIENE 277

year to provide dentists, auxiliary personnel, and others involved in health care with current scientific knowledge and methodology of patient treatment. Utilizing local, national, and international experts, these programs provide a broad spectrum of information relevant to the needs of dental-health professionals. The instructional program consists of lectures, clinical courses, study clubs, extended clinical training, correspondence, and participation courses, some of which are offered in the new simulated-patient laboratory. Various programs are presented throughout the year in the Pacific Northwest, Alaska, Arizona, and Hawaii.

A list of courses offered may be obtained from the Office of Continuing Dental Education, Box 357137, University of Washington, School of Dentistry, Seattle, WA 98195-7137, (206) 543-7297.

Dental Hygiene

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

D HYG 402 Global Perspectives in Oral Health (3) Disease patterns and their impact on oral health care delivery systems. Cultural, demographic, economic, and political factors affecting the effectiveness of various systems. Offered: A.

D HYG 403 Oral Health Educational Strategies (3) Planning, preparing, and evaluating educational strategies for oral health promotion. Assessment of needs, development of objectives, creation of communication messages, review of behavioral and educational theories, mechanisms of evaluation. Offered: W.

D HYG 404 Field Experience in Delivery of Oral Health Care (2-12, max. 12) Focuses on healthcare delivery issues: environmental, social, educational, economic, or cultural. Students participate at approved health agencies to learn about societal, ethical, cultural, and client oral healthcare needs and demands. The 2-credit minimum includes 30 hours on-site, end-of-quarter seminar, written assignment, and weekly e-mail communication with faculty. Of fered: AWSpS.

D HYG 465 Theoretical and Scientific Basis for Dental Hygiene Practice (3) Lecture-discussion on science, theory, and dental hygiene practice. Focuses on clinical-decision making processes and evidence-based learning in management of oral health problems. Includes experience at selected sites. UW library system and computer resources used to search and retrieve information for reports. Offered: A.

D HYG 475 Orientation to Hospital Dentistry for Dental Hygienists (4) Operation of dental profession within hospital setting. Hospital rounds, surgical observation, participation in emergency dental treatment, clinic operations and management, and clinical dental hygiene.

D HYG 482 Local Anesthesia for Dental Hygienists (2) Techniques of local anesthesia and initial management of emergencies in the dental office.

D HYG 491 Issues in Professional Education (3) Seminar and discussions on topics influencing dental education. Academic freedom, accreditation, interdisciplinary relationships, legislation, licensure, tenure.

D HYG 492 Principles of Scientific Investigation for Oral Health Professionals (3) QSR Introduction to principles of scientific investigation, biostatistics and their application to relevant literature. Offered: W. D HYG 493 Review of Literature for Oral Health Professionals (3) QSR Application of modern methods of library search and critical analysis of relevant literature. Includes technical writing and oral reporting as a means of integrating knowledge and skills acquired in 465 and 492. Offered: Sp.

D HYG 494 Principles of Teaching for Oral Health Professionals (3) Application of principles of learning to teaching methods and techniques used in education, with opportunity for course planning, demonstration, and practice teaching. Offered: A.

D HYG 497 Directed Studies for Oral Health Professionals (* max. 14) Based on student interest in special areas. Independent study and tutorial student-faculty relationships. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

D HYG 565 Theoretical and Scientific Basis for Dental Hygiene Practice (3) Lecture-discussion on science, theory, and dental hygiene practice. Focuses on clinical decision making processes and evidence-based learning in management of oral health problems. Includes field experience at selected practice sites. UW library system and computer resources used to search and retrieve information essential to making oral and written reports. Offered: A.

D HYG 594 Principles of Teaching for Oral Health Professionals (3) Application of principles of learning to teaching methods and techniques used in education, with opportunity for course planning, demonstration, and practice teaching. Prerequisite: graduate program admission. Offered: A.

D HYG 595 Internship (* max. 12) Clinical and/or didactic teaching experience or program administration. Teaching and administration responsibilities assigned according to student's previous experience, education needs, and interest. Seminar required. Prerequisite: 494 or 594 and permission of instructor. Offered: AWSpS.

Dental Public Health Sciences

Faculty

Chair

Timothy De Rouen

Professors

Chapko, Michael K. * 1978, (Adjunct Research); MA, 1970, Hunter College; PhD, 1972, City University of New York; diffusion of health technologies, cost-effectiveness in health care.

Conrad, Douglas A. * 1977; MHA, 1973, University of Washington; MBA, 1977, PhD, 1978, University of Chicago; managed care, corporate finance in managed care.

De Rouen, Timothy * 1975; PhD, 1971, Virginia Polytechnic Institute & State University; applications of biostatistics to clinical epidemiology of oral and infectious diseases.

Domoto, Peter K. * 1973, (Adjunct); DDS, 1964, University of California (San Francisco); MPH, 1975, University of Washington; pediatric dentistry, dental behavioral science.

Fales, Martha H. * 1959, (Emeritus); PhD, 1978, University of Michigan; dental hygiene.

Grembowski, David * 1981; MA, 1975, Washington State University; PhD, 1982, University of Washington; dental care demand, fluoridation, dental health services research.

Milgrom, Peter M. * 1974; DDS, 1972, University of California (San Francisco); management of fearful and phobic dental patients, quality of dental care.

Weinstein, Philip * 1972; PhD, 1971, University of Kentucky; dental behavioral science, treatment and prevention of fear and pain, clinical assessment.

Associate Professors

Beaton, Randal D. * 1976, (Adjunct Research); PhD, 1972, University of Washington; assessment and treatment of temporomandibular joint pain and dysfunction.

Cameron, Cheryl A. 1979; MSEd, 1978, University of Kentucky; PhD, 1986, University of Washington; JD, 1994, Seattle University; dental hygiene.

Karl, Helen W. 1990, (Adjunct); MD, 1976, University of Virginia.

Leroux, Brian * 1991; PhD, 1989, University of British Columbia (Canada); random effect models, stochastic processes, dental research, toxicology.

Ramsay, Douglas S. * 1983, (Adjunct); DMD, 1983, University of Pennsylvania; PhD, 1988, MSD, 1990, University of Washington; behavioral medicine/dentistry, physiological psychology, orthodontics, pediatric dentistry.

Sharp, Lawrence J. 1962; MA, 1959, PhD, 1963, Washington State University; research methods, statistics.

Wells, Norma J. 1960; MPH, 1966, University of California (Los Angeles); international dental health.

Assistant Professors

Critchlow, Cathy W. * 1993; PhD, 1993, University of Washington; epidemiology of sexually transmitted diseases, virus-associated cancers, epidemiologic methods.

Hujoel, Philippe 1989, (Research); DDS, 1984, Free University of Brussels (Belgium); MS, 1988, University of Michigan; MSD, 1986, PhD, 1993, University of Washington.

Mancl, Lloyd A. * 1986, (Research); MS, 1988, PhD, 1992, University of Washington; statistical methodology in periodontal disease and TMD research.

Martin, Michael D. * 1986, (Adjunct); DMD, 1979, University of Kentucky; MPH, 1989, PhD, 1993, University of Washington; dental education in oral health care of persons with disability.

Whitney, Coralyn W. * 1990, (Research); PhD, 1990, University of Washington; biostatistical applications regarding quality control and adjustment for measurement errors.

Instructor

Drangsholt, Mark T. 1985, (Acting); DDS, 1984, MPH, 1992, University of Washington; epidemiology.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

DPHS 201 Planning a Career in Dentistry for the Future (2) Future-oriented overview of important concepts in dental science, contemporary modes of patient treatment, and dental-care delivery systems. Provides firsthand exposure to practice of dentistry and prerequisite materials in oral anatomy, epidemiology, and other basic sciences subjects. Open to all second-, and third-year undergraduate students. Offered: Sp.

DPHS 449 P-Directed Studies in Dental Public Health Sciences (*) Students and faculty with common academic interests pursue them together within the curriculum by means of independent study and a tutorial student-faculty relationship. Credit/no credit only. Offered: AWSpS. DPHS 510 Social and Historical Perspectives in Dentistry (2) Examines dental care problems involving biological, behavioral, and community elements and has student develop hypotheses regarding nature and complexity of problem, set objectives, seek resources and information, and contribute to development of outcomes. Offered: A.

DPHS 535 P-Scientific Literature in Clinical Decision Making (1) Introduction to critical reading of individual articles in professional journals and integrating the findings of several articles. Use of the literature to assist the practicing dentist in making clinical decisions. Offered: Sp.

DPHS 541 P-Ethics in Dentistry (1) Seminar improving ethical reasoning skills and conveying ethical and legal standards of the profession. Credit/no credit only. Offered: W.

DPHS 550 P-Directed Studies in Dental Public Health Sciences (* max. 6) Students and faculty members who have common academic interests can pursue them together within the curriculum by means of independent study and a tutorial student-faculty relationship. Credit/no credit only. Offered: AWSpS.

DPHS 568 Biostatistics in Dentistry (3) Introduction to concepts and methods of descriptive and inferential statistics with applications in dentistry emphasized. Topics include comparison of means and proportions, hypothesis testing, confidence intervals, non-parametric methods, linear regression, and correlation. Prerequisite: enrollment in School of Dentistry or permission of instructor. Offered: jointly with BIOST 510.

DPHS 569 Clinical Epidemiology and Study Design in Dentistry (2) An introduction to epidemiological methods as they relate to dental research. Topics covered include the estimation of dental disease occurrence at patient level and site level and the design and analysis of clinical trials with special emphasis on designs unique to dentistry, such as splitmouth designs. Credit/no credit only. Offered: S.

DPHS 575 Behavioral Dental Research (1) Survey of behavioral science research and methodology in dentistry and related fields. Emphasis in various quarters varies: literature review, research design, instrumentation, data analysis. Designed for advanced students who plan a research career. Credit/ no credit only. Prerequisite: doctoral degree or permission of instructor. Offered: AWSp.

DPHS 640 P-Professional Issues: Clinical Management of the Fearful and Phobic (1) Introduction to assessment process and treatment strategies for successful management of anxious, fearful, or phobic patient, combined with clinical observation of diagnostic and treatment appointments of active patients. Offered: AWSpS.

DPHS 660 Dental Fear Clinic (2) Clinical instruction in the care of the severely anxious or phobic adult or child. Strategies from behavioral and cognitive psychology. Credit/no credit only. Prerequisite: graduate standing in dentistry or permission of instructor. Offered: AWSpS.

Dentistry

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

DENT 520 P-Clinical Practice Management 1 (1) Designed to provide the student with the knowledge required to manage a patient pool during the clinical program and in future dental practice including: obtaining a patient pool, authorized treatment

SCHOOL OF DENTISTRY / ENDODONTICS 279

planning, patient management in accordance with professional codes, risk management strategies, patient financial account management, and contemporary biohazardous materials guidelines. Offered: S.

DENT 521, 522 P-Oral Pathology (3, 3) Survey of the diseases of the oral-facial regions in lecture and laboratory sessions. Among the conditions discussed are diseases of teeth and their supporting structures and diseases of the oral and paraoral soft tissues and bones. Correlations between clinical findings, etiologic factors, and histopathologic features are stressed. Attendance in the laboratory is required. Offered: A, W.

DENT 523 Prevention and Management of Medical Emergencies in Dentistry (1) Introduction to medical emergencies in the dental office, including cardiopulmonary resuscitation. Offered: A.

DENT 534 P-Geriatric Dentistry (1, max. 2) Special needs of older persons seeking dental care: oral health, psychology of aging, socioeconomic problems, effective communications, dental management, special problems in home health care, and problems with institutional and long-term care. Credit/no credit only. Offered: WSp.

DENT 537 P-Hospital Dentistry (1) Introductory course presenting hospital procedures and protocol and specific patient types. Offered: Sp.

DENT 540 Introduction to Dental Implants (2) Introduction to dental implant technology and treatment. Offered: S.

DENT 545 Review of Medical Emergencies and Basic Life Support (1) Review of medical emergency management in dentistry, including prevention and treatment. Review and update basic life support and airway management. Offered: S.

DENT 550 P-Special Studies in Dentistry (* max. 12) Series of courses offered by the various departments from which students may elect study in areas of special interest to them. These courses include subject matter applicable to all phases of dentistry. Credit/no credit only. Offered: AWSpS.

DENT 551, 552, 553, 554, 555, 556, 557 P-Clinical Practice Management 2 (1, 1, 1, 1, 1, 1) Designed to provide the student with the experience required to manage a patient pool during the clinical program and in future dental practice including: obtaining a patient pool, treatment planning, patient management in accordance with professional codes, risk management strategies, patient financial account management, and contemporary biohazardous materials guidelines.

DENT 561 Elective in Forensic Odontology (1) Elective opportunity in forensic odontology. Offered: SpS.

DENT 562 Elective Offering in Advanced Cardiac Life Support (2) Basics of advanced cardiac life support. Offered: A.

DENT 563 Elective Offering in Intravenous Sedation (2-5) Provides didactic and clinical training in the management of patients utilizing intravenous sedation. Offered: AWSp.

DENT 565 Dental Photography (2) Provides student with sufficient knowledge and experience to select and use correct photographic equipment for photographing patients (facial and interoral), casts, instruments, x-rays, charts, and objects. Offered: A.

DENT 568 Biostatistics and Research Design (2) Instruction in basic biostatistics, emphasizing the integration of statistics with research design and including measures of central tendency, regression, correlation, Chi-square, and comparison of samples. Credit/no credit only. Offered: S. **DENT 640 P-Extramural Clinics in Geriatric Dentistry (2)** Extramural geriatric clinical experience, including choice of hospital, nursing home, community clinic, and brief didactic component. Offered: AWSpS.

DENT 645 P-Hospital Rotation (2) Clinical experience that puts into practice the material presented in 537. The student is involved in hospital procedures and protocol and in dental care of the hospital patient. Offered: AWSpS.

DENT 650 P-Extramurals (* max. 12) Extramural sites arranged to provide dental students, at varying levels of their education, with opportunities to treat a wide variety of patients in the delivery systems outside the school. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

DENT 651 P-Anesthesia Rotation (6) 1.5-month rotation in anesthesia at one of three local hospitals. Objectives: administration of anesthesia, management of emergency situations and airway problems, familiarization with pharmacology of anesthetic drugs; increased efficiency with venipuncture. Credit/no credit only. Offered: AWSpS.

DENT 652 P-Clinical Medicine Clerkship (4) One-month clinical rotation in clinical medicine at a local hospital. Objective is to increase the student's ability in physical evaluation of patients as well as to give in-depth knowledge of hospital procedures and commonly prescribed medications. Credit/no credit only. Offered: AWSpS.

DENT 655 Medical Emergency Management: Basic Life Support (1) Review of principles and practical applications for the management of medical emergencies in dental practice in conjunction with training and certification in Basic Life Support. Offered: AWSpS.

DENT 657 Comprehensive Clinic (1-10) Clinical comprehensive care for patients. Offered: S.

DENT 659 Comprehensive Clinic (1-10) Clinical comprehensive care for patients. Offered: S.

DENT 660 Temporomandibular Joint Diagnosis and Treatment (2, max. 8) Seminar and clinic sequence for comprehensive examination, diagnosis, and treatment of patients with temporomandibular joint problems. Includes management of dysfunction and morphologic alterations in associated muscles and occlusion. Prerequisite: permission of instructor. Offered: AW.

DENT 690 P-Extended Clinical Dentistry (1) Educational experiences in clinical dentistry. Available to students who have successfully completed the University of Washington Doctor of Dental Surgery curriculum and seek additional supervised experience in the delivery of oral health care services within three quarters of graduation and prior to licensure. Prerequisite: permission of instructor. Offered: AWSpS.

DENT 700 Master's Thesis (*) Offered: AWSpS.

Endodontics

Faculty

Chair

Gerald W. Harrington

Professors

Byers, Margaret R. * 1972, (Adjunct Research); PhD, 1969, Harvard University; somatosensory receptor structure, cytochemistry, and pathologic reactions; neuroimmune interactions. Guild, Robert E. 1951, (Emeritus); PhD, 1955, University of Washington.

Harrington, Gerald W. * 1969; DDS, 1959, St Louis University; MSD, 1969, University of Washington; endodontics.

Natkin, Eugene * 1962, (Emeritus); DDS, 1957, New York University; MSD, 1962, University of Washington; endodontics.

Oswald, Robert J. * 1974, (Affiliate); DDS, 1969, Virginia Commonwealth University; endodontics.

Steiner, James C. * 1992, (Clinical); DDS, 1956, Case Western Reserve University; MSD, 1966, University of Washington; normal sensory mechanisms of human dental pulp and pathologic alterations causing pain.

Associate Professor

Pitts, David Leroy * 1977; DDS, 1972, Indiana University; MSD, 1977, University of Washington; endodontics.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

ENDO 520 P-Introduction to Endodontics (2) Lecture course dealing with the differential diagnosis and the treatment of pulp pathosis and associated periapical pathosis. This course also deals with criteria and procedures for the evaluation of success and failure of endodontic treatment.

ENDO 531 P-Endodontic Technique (4) Lecturelaboratory course in root canal therapy in terms of present-day concepts. Treatment of extracted teeth as practice for clinical cases.

ENDO 534 P-Endodontics (1) Lecture course dealing with diagnosis and treatment of endodontic emergencies, surgical management of endodontic problems, and clinical procedures particular to endodontics. Offered: W.

ENDO 535 P-Clinical Management of Endodontic Treatment Problems (1) Management of a variety of technical problems frequently encountered in the treatment of endodontic cases and the diagnosis and treatment of impact injuries to teeth. Offered: Sp.

ENDO 545 Honors Endodontics (2, max. 4) Seminar discussions of advanced endodontic diagnosis and treatment planning issues as well as clinical sessions on treatment of calcified negotiable canals, alternate instrumentation procedures and anterior endodontic surgery. Offered: WSp.

ENDO 550 P-Directed Studies in Endodontics (* max. 6) See DPHS 449 for course description and prerequisite.

ENDO 560 Advanced Endodontic Diagnosis and Treatment (2) Current concepts are presented and discussed relating to the diagnosis and treatment of pulpal and periapical pathosis. Criteria for evaluation of success or failure of root canal therapy are presented. Offered: W.

ENDO 561 Anatomical Basis for Clinical Endodontics (2) Root canal anatomy of significance in clinical endodontics is discussed in a seminar format. Offered: A.

ENDO 562 Advanced Endodontic Treatment Planning (2) Diagnosis and treatment of acute symptoms of dental origin, surgical endodontic therapy, traumatic dental injuries, and the relationship between periodontal and pulpal pathosis, including differential diagnosis and appropriate treatment planning, are discussed. Offered: Sp.

ENDO 563 Radiographic Interpretation (2) Various aspects of radiographic interpretation of particular relevance to endodontics, including interpretation

of normal structures, acquired and developmental abnormalities, infections, sialoliths, dysplasias, and cysts. Offered: A.

ENDO 566 Advanced Radiographic Interpretation (2) Various aspects of radiographic interpretation of particular relevance to endodontics, including malignant lesions, benign tumors, various diseases other than tumors, soft-tissue calcifications, and radiographic technique Offered: W.

ENDO 568 Endodontic Practice Management (1) Essential elements for establishing and managing a successful specialty practice in endodontics. Prerequisite: 562. Offered: A.

ENDO 580,581,582,583,584,585,586,587 Endodontic Seminar (2, 2, 2, 2, 2, 2, 2, 2) Continuous weekly seminar devoted to review of endodontic and related literature and discussion of research methods.

ENDO 590 Treatment Planning Seminar (2, max.16) Weekly seminar to discuss controversial treatment problems and difficult diagnostic cases.

ENDO 593 Clinical Practice Teaching (1, max. 3) Closely supervised experience in teaching clinical endodontics to the undergraduate dental student.

ENDO 597,598 Endodontics Teaching Seminar (2, 2) Weekly seminars devoted to an examination of general problems of teaching and learning and specific problems of endodontics teaching.

ENDO 600 Independent Study or Research (*) Prerequisite: permission of graduate program adviser.

ENDO 630 P-Clinical Endodontics (1-, max. 7) Student is required to complete endodontic treatment of anterior, premolar, and molar teeth. In addition to conservative treatment of several endodontic cases, the student assists in a periapical surgery. Student must complete at least six quarters of 630 and all course requirements before any grade is awarded.

ENDO 659 P-Endodontics Extended Learning (* max. 4) Supplemental work in endodontics to correct an area of student deficiency. Credit/no credit only.

ENDO 660 Clinical Endodontics (4, max. 32) Clinical diagnosis and treatment of pulpal pathosis and related sequelae.

Oral and Maxillofacial Surgery

Faculty

Chair

Philip Worthington

Professors

Beirne, Owen Ross * 1985; DMD, 1972, Harvard University; PhD, 1976, University of California (San Francisco); basic and clinical biology of bone tissue reconstruction.

Gehrig, John D. * 1954, (Emeritus); DDS, 1946, MSD, 1951, University of Minnesota; oral and maxillofacial surgery, biological structure.

Kiyak, H. Asuman * 1972; MA, 1974, PhD, 1977, Wayne State University; geriatric dentistry, behavioral aspects of health care.

Myall, Robert W. * 1977; BDentS, 1964, University of London (UK); MD, 1975, University of British Columbia (Canada); oral and maxillofacial surgery and biological structure. Oda, Dolphine * 1985; BDentS, 1975, University of Baghdad (Iraq); MSc, 1981, University of Manitoba (Canada); transformation and differentiation of cultured oral epithelial cells.

Worthington, Philip 1976; MD, 1956, BDentS, 1962, University of Liverpool (UK); oral and maxillofacial surgery.

Associate Professors

Bloomquist, Dale S. * 1972; DDS, 1969, University of Washington; oral and maxillofacial surgery.

Egbert, Mark A. 1982; DDS, 1981, University of Washington; oral and maxillofacial surgery.

Kinney, Lisa A. 1996; DDS, 1982, Case Western Reserve University; oral and maxillofacial surgery.

Rothwell, Bruce R. 1980; DMD, 1973, University of Oregon; MSD, 1977, University of Washington; general dentistry, hospital-based dentistry, forensic dentistry.

Assistant Professors

Dawson, Kenneth * 1993; BDentS, 1983, University of Sydney (Australia); MDSc, 1993, University of Melbourne (Australia); oral and maxillofacial surgery.

Johnson, Barton S. * 1991; DDS, 1985, MS, 1989, University of California (Los Angeles); hospital dentistry, medical compromise, oncology, sedation, pharmacology, molecular biology.

Instructor

Rubens, Brian C. 1990, (Acting); DDS, 1980, University of Washington; oral and maxillofacial surgery.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

O S 520 P-Local Anesthesia (2) Pharmacology, physiology, anatomy, and techniques of local anesthesia for dental students.

O S 530- Oral Surgery: Didactic (1-, max. 3) Covers the scope of oral and maxillofacial surgery as practiced in the United States today. Introductory course for predoctoral dental students.

O S 532 P-Sedation and Pain Control (2) Techniques of sedation (oral, inhalational, intravenous) and pain control.

 O S 550 P-Directed Studies in Oral Surgery (* max.
 16) See DPHS 449 for course description and prerequisite.

O S 560 Dental Sedation (2) For graduates of the various dental specialties on the theory, application, and techniques of dental sedation. All forms of sedation, including oral, intramuscular, intravenous, and inhalation, are covered. Clinical experience is provided in the second half of the quarter.

O S 630- P-Oral Surgery Clinic (2-, max. 6) Clinical experience in simple and complex dentoalveolar and pre-prosthetic surgery. A problem-based course using an auto-tutorial approach covering the extraction of teeth, impaction surgery, medications, surgical complications, treatment of infections, bone cysts, maxillary sinus complications, and salivary gland and mucosal pathology.

O S 651 P-Harborview Clerkship (2-10) Six-week rotation at Harborview Medical Center, including intensive instruction in oral surgery procedures and observing and assisting oral and maxillofacial surgery in the operating room. Credit/no credit only. Prerequisite: permission of department chairperson.

O S 652 P-Smith Hospital, Texas, Rotation (2-12) Six-week rotation at John Peter Smith Hospital in Fort Worth, Texas, including intensive instruction in oral surgery procedures and observing and assisting oral and maxillofacial surgery in the operating room. Credit/no credit only. Prerequisite: permission of department chairperson.

Oral Biology

Faculty

Chair

Kenneth Izutsu

Professors

Altman, Leonard * 1974, (Clinical); MD, 1969, Harvard University; mechanisms of tissue injury produced by bacteria, leukocytes, or toxins.

Binder, Marc D. * 1978, (Adjunct); PhD, 1974, University of Southern California; organization of spinal reflexes.

Byers, Margaret R. * 1972, (Adjunct Research); PhD, 1969, Harvard University; somatosensory receptor structure, cytochemistry, and pathologic reactions; neuroimmune interactions.

Byers, Peter H. * 1976, (Adjunct); MD, 1969, Case Western Reserve University; extracellular matrix synthesis, genetic disorders of collagen metabolism, secretion.

Dale-Crunk, Beverly A. * 1972; PhD, 1968, University of Michigan; keratin biochemistry.

Eyre, David R. * 1985, (Adjunct); PhD, 1969, University of Leeds (UK); connective tissue biology, collagen chemistry, bone and cartilage metabolism.

Herring, Susan W. * 1990, (Adjunct); PhD, 1971, University of Chicago; vertebrate functional morphology, relations between muscular function and skull growth.

Izutsu, Kenneth * 1971; PhD, 1970, University of Washington; salivary gland physiology and pathophysiology.

Keller, Patricia J. * 1955, (Emeritus); PhD, 1953, Washington University; protein structure and function.

Lee, Minako Y. * 1977, (Adjunct Research); MD, 1963, Tokyo Women's Medical College (Japan); hematopoiesis and osteoclast development.

Robinovitch, Murray * 1966; DDS, 1961, University of Minnesota; PhD, 1967, University of Washington; salivary biochemistry and saliva-bacterial interactions.

Tamarin, Arnold * 1961, (Emeritus); DDS, 1951, University of Illinois; MSD, 1961, University of Washington; oral embryology and histology, electron microscopy.

Verdugo, Pedro * 1974, (Adjunct); MD, 1965, State University of Chile; microrheology, biomechanics, polymer gel physics, laser spectroscopy, cell biology.

Watson, Eileen L. * 1972; PhD, 1970, University of Utah; salivary gland pharmacology and regulation.

Associate Professors

Anderson, Leigh C. * 1988; DDS, 1977, PhD, 1979, University of Minnesota; salivary gland physiology, neural and hormonal regulation of secretion.

Lamont, Richard J. * 1988; PhD, 1985, University of Aberdeen (UK); pathogenic mechanisms and taxonomy of oral bacteria.

Morton, Thomas H. * 1975; DDS, 1972, Creighton University; MSD, 1975, University of Washington; oral pathology, oral medicine.

Wells, Norma J. 1960, (Adjunct); MPH, 1966, University of California (Los Angeles); international dental health.

Assistant Professors

Cangelosi, Gerard A. * 1985, (Adjunct); PhD, 1983, University of California (Davis); molecular biology of tuberculosis.

Presland, Richard B. 1989, (Research); PhD, 1987, University of Adelaide (Australia); molecular basis of epithelial cell differentiation.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

ORALB 449 Undergraduate Research Topics in Oral Biology (*) Individual research on topics selected in collaboration with a faculty member. Credit/ no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

ORALB 510 P-Development, Structure, and Function of Oral Tissues (3-3) Development, microscopic and submicroscopic structure, functional aspects of hard and soft oral tissues. Embryonic development of head and neck; morphodifferentiation of face and oral structures. Structure-function relationships in descriptions of development and histologyultrastructure of oral tissues by integration of traditional oral histology and oral physiology topics. Offered: WSp.

ORALB 520 P-Molecular Microbiology and Oral Diseases (3) Applies students' background knowledge in basic sciences to an understanding of the molecular bases of the interactions between microorganisms and oral tissues that lead to plaque formation and dental diseases. Principles of clinical asepsis and diagnosis of caries and periodontal diseases also covered. Offered: A.

ORALB 540 P-Clinical Oral Pathology Conference (2) Seminar stressing basic science aspects and clinical findings of various oral lesions through exploration of etiology, pathogenesis, histopathology, and treatment modalities for oral pathology cases drawn from files of the Division of Oral Pathology. Offered: A.

ORALB 550 P-Directed Studies in Oral Biology (* max. 12) Selected readings and seminars on a topic chosen by individual arrangement in collaboration with a faculty member. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

ORALB 560 Dental Plaque and Oral Disease (3) Series of lectures and review of current literature pertaining to the formation and microbiological and biochemical characteristics of dental plaque, and the relationship, etiologically, of dental plaque to dental caries, periodontal disease, and the sequels of these conditions. Offered: A.

ORALB 561- Oral Tissue Development, Structure, and Function (2-, max. 4) Selected readings and discussions explore recent advances in cellular and molecular biology relevant to oral biology and medicine. Special emphasis on craniofacial and dental development, oral mucosa and periodontal tissues, salivary gland function, and olfaction and gustation. Credit/no credit only. Prerequisite: permission of instructor. Offered: WSp.

ORALB 562 Supervised Teaching in Oral Biology (1-5, max. 10) Directed and guided experience in selected topics in teaching techniques, teaching philosophy, and course design of courses given by the Department of Oral Biology. Students are required to participate in lecture and laboratory teaching under the supervision of the course director. Prerequisite: permission of instructor. Offered: AWSp. ORALB 565 Clinical Oral Pathology (1-3, max. 10) Presentation of interesting oral lesions from the dental school and the University of Washington Medical Center and the correlation of the clinical findings with the underlying morphologic and biochemical changes in the tissues. The relation of these oral lesions to systemic disease is stressed. Primarily designed for students with DDS, MD, or DVM. degrees. Prerequisite: permission of instructor. Offered: AWSpS.

ORALB 566 Surgical Oral Pathology (2-4, max. 16) Students are trained to interpret microscopic slides of lesions from the oral cavity and related areas, and to correlate these with the clinical findings. Each student is responsible for the grossing of specimens and the preparation of histology reports. Primarily designed for students with DDS, MD, or DVM degrees. Prerequisite: permission of instructor. Offered: AWSpS.

ORALB 569 Periodontal Microbiology (2) Viral, bacterial classification; physiology; toxicity mechanisms reviewed. Formation and composition of plaque and calculus, and chemical methods of control discussed. Specific microbial floras of acute and chronic gingivitis, early onset forms of periodontitis, and adult periodontitis studied. Principles of antibiotic use reviewed. Offered: jointly with PERIO 574; A.

ORALB 570 Seminar in Oral Pathology (1-3, max. 9) Consists of in-depth studies of specific oral diseases through use of seminar and discussion. Students are required to present literature reviews and to act as discussion leaders. Primarily designed for students with DDS, MD, or DVM degrees. Prerequisite: permission of instructor. Offered: AWSpS.

ORALB 572 Oral Pathology (5) Survey of the diseases of the oral facial regions in lecture and laboratory sessions. Diseases of teeth and their supporting structures and diseases of the oral and paraoral soft tissues and bones. Correlations between clinical findings and histopathologic features. Attendance in the laboratory is required. Offered: AW.

ORALB 574 Clinical Stomatology (3) Diseases of the oral cavity and jaw are presented as the practitioner encounters them-detailed clinical pictures, laboratory tests, radiographic findings, surgical exploration for the establishment of a therapeutic diagnosis. Offered: Sp.

ORALB 575 Oral Biology Seminar (1-3, max. 10) Presentation and discussion of current research problems by members of the staff, investigators from other departments in the University, visiting scientists, and trainees. Prerequisite: permission of instructor. Offered: AWSp.

ORALB 576 Molecular Aspects of Epithelial Biology (2) In-depth discussion of cytoskeleton, cell junctions, influence of growth factors, retinoids, and other exogenous agents on differentiation and function of normal stratified epithelia. Prerequisite: BIOC 440 (or equivalent) or permission of instructor. Offered: alternate years; A.

ORAL B 577 Applied Therapeutics in Dentistry (2) Practical information about drugs included in practice of dentistry. Topics include evaluation of case histories, dental considerations pertaining to medical conditions and drug therapies, types of drugs and dosages used for common medical conditions, the pharmacology of drugs prescribed by the clinician, and the mechanisms involved in drug interactions. Offered: A.

ORALB 578 Research Techniques in Oral Biology (2-4, max. 15) Introduction to biochemical, analytical, or morphological techniques employed in biochemical cytology or molecular pathology as well as *in vitro* techniques of tissue and organ culture. Prerequisite: permission of instructor. Offered: AWSpS. ORALB 581- 582- 583 Secretory Process in Exocrine Glands ([1-3]-[1-3]-[1-3]) Biostructural, physiological, and biochemical aspects of individual secretory systems as integrated units. Faculty members with appropriate expertise participate in discussions and presentations during each of the three quarters. Offered: A-W-Sp.

ORALB 600 Independent Study or Research (*) Prerequisite: permission of instructor. Offered: AWSpS.

ORALB 700 Master's Thesis (*) Offered: AWSpS.

ORALB 800 Doctoral Dissertation (*) Offered: AWSpS.

Oral Medicine

Faculty

Chair

Edmond L. Truelove

Professors

Dworkin, Samuel F. * 1974; DDS, 1958, PhD, 1969, New York University; dentistry and clinical psychology, pain, psychosomatic and illness-related behavior.

Hollender, Lars Gosta * 1988; DDS, 1958, Royal Dental School (Sweden); PhD, 1964, University of Lund (Sweden); oral radiology.

Izutsu, Kenneth * 1971; PhD, 1970, University of Washington; salivary gland physiology and pathophysiology.

Le Resche, Linda A. * 1983, (Research); DSc, 1977, Johns Hopkins University; nonverbal behavior (facial expression) related to pain; pain epidemiology.

Omnell, Karl-Åke * 1981; DDS, 1950, Royal Dental School (Sweden); DO, 1957, University of Lund (Sweden); oral radiology.

Truelove, Edmond L. * 1972; DDS, 1967, MSD, 1971, Indiana University; oral medicine, orofacial pain, stomatitis, and salivary gland disorders.

Associate Professors

Chasteen, Joseph E. 1989; DDS, 1967, MA, 1976, University of Michigan.

Epstein, Joel B. 1977, (Research); DMD, 1976, University of Saskatchewan (Canada); MSD, 1979, University of Washington.

Moore, Rodney A. 1987, (Research); DDS, 1973, Ohio State University; PhD, 1991, Royal Dental College, Arhus (Denmark); illness behavior.

Morton, Thomas H. * 1975; DDS, 1972, Creighton University; MSD, 1975, University of Washington; oral pathology, oral medicine.

Persson, Rigmor E. 1988, (Research); DDS, 1969, University of Lund (Sweden); MSD, 1989, University of Washington; oral health, geriatric and medically compromised patients, general dentistry.

Schubert, Mark M. * 1974; DDS, 1974, MSD, 1981, University of Washington; oral medicine/oral oncology.

Stiefel, Doris * 1972, (Emeritus); DDS, 1954, University of Washington; dental education in oral health care of persons with disability.

Assistant Professors

Jackson, Douglass L. * 1996; DMD, 1986, University of Pittsburgh; MS, 1989, University of Michigan; PhD, 1996, University of Minnesota; peripheral regulation of sensory neurons during tissue injury.

Martin, Michael D. * 1986; DMD, 1979, University of Kentucky; MPH, 1989, PhD, 1993, University of Washington; dental education in oral health care of persons with disability.

Massoth, Donna L. 1984, (Research); DDS, 1983, University of California (Los Angeles); MSD, 1985, PhD, 1992, University of Washington; chronic pain, illness behavior, somitization.

Middaugh, Dan 1967; DDS, 1961, University of Minnesota; MPA, 1972, University of Washington; oral medicine.

Instructor

Drangsholt, Mark T. 1985, (Acting); DDS, 1984, MPH, 1992, University of Washington; epidemiology.

Lecturers

Day, James K. 1995; DDS, 1973, Georgetown University.

Gandara, Beatrice 1985; DDS, 1978, University of Southern California; MSD, 1985, University of Washington.

Griffith, Mickaella V. 1984; DDS, 1960, University of Tehran (Iran).

Rumberg, Hester 1989; DDS, 1983, University of Washington.

Sommers, Earl E. * 1972; DDS, 1971, Indiana University; diagnosis/management of orofacial pain, stomatitis, and salivary gland disorders.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

ORALM 404 Considerations in Care of the Patient With a Disability (* max. 6) Role of auxiliaries in dental treatment of the special patient, including psychosocial issues, communication techniques, wheelchair transfers; dental prevention, medical and dental management of specific disabilities; drug therapy, sedation, and anesthesia. Offered: AWSpS.

ORALM 460 Clinical Management of Patients With Disabilities (* max. 10) Participation in chair/bedside dental treatment of a broad range of disabled populations, including homebound and institutionalized patients. Offered: AWSpS.

ORALM 465 Dental Care of the Disabled Literature Review (1) Review of the current scientific literature pertaining to disability issues, research, clinical management, resources, and legislation relating to oral health of persons with disabilities. Credit/no credit only. Offered: AWSpS.

ORALM 525, 526, 527 P-Detection and Management of Systemic and Oral Disease I, II, III (1, 2, 1) Clinical presentation of diseases of oral cavity and appropriate treatment conditions. Offered: A, W, Sp.

ORALM 528 Problem Oriented Case Planning (2) Basic concepts of treatment planning. Offered: S.

ORALM 529 Physical Diagnosis (1) Techniques and methods for examination and analysis of patient needs. Offered: S.

ORALM 530 Normal and Abnormal Growth and Development: Dental Education in Care of the Disabled (3) Introduction to acquired and developmental disabilities and dental management considerations of patients with disabilities. Offered: S.

ORALM 531, 532, 533 P-Acute and Chronic Orofacial Pain (1, 1, 2) Essential clinical and technical information and skills for diagnosis and treatment of acute and chronic pain, including differential diagnosis, and behavioral factors. Offered: A, W, Sp. **ORALM 540 P-Oral Medicine Senior Seminar (2)** Clinical conference devoted to case presentations of patients with dental treatment needs and complicating medical problems. Offered: AW.

ORALM 545- P-Clinical Conference in Oral Medicine (1-, max. 2) Clinical pathologic conference utilizing interdisciplinary approach to patient care and emphasizing basic science application. Offered: AW.

ORALM 547, 548, 549 Dental Practice Administration (2, 2, 2) Material essential to persons entering dentistry in a time of rapid change in health care systems, including practice management, career opportunities, and starting out in a private practice. Offered: A, W, Sp.

ORALM 550 P-Directed Studies in Oral Diagnosis (* max. 12) See DPHS 449 for course description and prerequisite. Offered: AWSpS.

ORALM 560 Advanced Diagnostic Techniques (2) Advanced diagnostic procedures used to identify oral and perioral diseases. Included are in-depth discussions of history analysis, methods for psychologic evaluation, soft and hard tissue diagnostic procedures, neurologic, salivary gland, and other tissue analyses requiring special procedures. Offered: AWSpS.

ORALM 564 Dental Care of the Disabled I (* max. 10) Advanced topics in rehabilitation dentistry including psychosocial issues; characteristics and needs of patients with specific disabilities; patient management and use of portable equipment; drug therapy, sedation and anesthesia; dental prevention, and emergency procedures. Seminars and self-directed study. Prerequisite: permission of instructor. Offered: AWSpS.

ORALM 565 Oral Medicine Clinical Conference (* max. 16) Clinical conference in which diagnostic data concerning patients seen in the oral medicine clinic are presented for evaluation. When possible, the patient is present with laboratory findings, radiographs, and the results of special tests. Offered: AWSpS.

ORALM 567 Behavioral Management of Acute and Chronic Orofacial Pain (2) Overview of psychosomatic concepts, as related to acute and chronic pain. Behavioral management strategies for acute and chronic pain integrated into clinical care provided by primary dentist. Review biofeedbacks, relaxation, hypnosis, placebos, and related psychophysiological approaches. Open to graduate students, postdoctoral fellows, residents in dentistry, medicine, psychology. Offered: AWSpS.

ORALM 570- Oral Medicine and Therapy (2-, max. 6) Lecture directed toward the presentation and discussion of oral diseases and oral manifestations of systemic disease. Primarily the clinical manifestations' relationship to generalized disease processes and patient management with in-depth discussions of therapy. Offered: AWSpS.

ORALM 576 Oral Medicine Literature Review (1) Seminar analyzes the recent literature concerning the area of oral medicine, diagnosis, and therapy for oral disease. Offered: AWSpS.

ORALM 578 Dental Care of the Disabled Literature Review (1, max. 3) Review of the current scientific literature pertaining to disability issues, including research, clinical management, resources, and legislation pertaining to oral health of persons with disabilities. Credit/no credit only. Offered: AWSpS.

ORALM 580 Current Concepts in Oral Radiology (2) Lecture/seminar covering current concepts in oral radiology including technical factors, radiation risks, observer characteristics and variation, radiographic localization, interpretation, and overview of current extraoral techniques. Offered: AWSpS. ORALM 581 Advanced Seminars in Oral Radiology (2, max. 8) Explores aspects of oral and maxillofacial radiology and related fields. Offered: AWSpS.

ORALM 584 Dental Care of the Disabled III (* max. 10) Field practice in community outreach to facilities and agencies serving disabled populations. Includes observation, dental screenings, patient education and in-service training of direct care staff. Prerequisite: 404 or 664. Offered: AWSpS.

ORALM 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

ORALM 601 Oral Medicine Research Seminar (1, max. 10) Presentation and discussion of current research problems by graduate students, faculty, and investigators from other departments in the university. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

ORALM 630- P-Clinical Diagnosis and Oral Medicine ([1/2]-, max. 5) Opportunity for examining, performing x-ray survey, and planning treatment for lessinvolved patients. Students also participate in rendering diagnosis and emergency treatment. Offered: AWSpS.

ORALM 640- Advanced Clinical Diagnosis and Oral Medicine ([1/2]-, max. 3) Advanced instruction in diagnosis and in the examination and handling of patients. Students are in block assignment and perform radiographic surveys, oral diagnosis, and treatment plans for prospective patients. Offered: AWSpS.

ORALM 650 P-Oral Medicine Clinical Elective (1-6) Opportunities for students to work in various clinical activities at local hospitals or other sites outside the school. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

ORALM 660 Rotations in Medical Disciplines (1-4, max. 24) Clinic, oriented to the hospital practice of oral medicine, deals with examination and nonsurgical therapy of hospital patients. The conditions treated include primary oral diseases, oral manifestations of systemic diseases, and oral defects resulting from medical treatment of serious systemic disease. Credit/no credit only. Offered: AWSpS.

ORALM 663 Introduction to Educational Methods in Dentistry (2) Principles of teaching and learning, their applications in dental education. Basic principles include learning theory and cognitive processing, identifying prerequisite knowledge of learners, determining objectives of outcomes of learning, selecting appropriate methods and materials, using evaluation procedures. Increases understanding of instruction process to provide a sound foundation for teaching. Offered: AWSpS.

ORALM 664 Dental Care of the Disabled II (* max. 10) Practicum in chair/bedside delivery of dental care to different disabled populations. Includes rotations to institutions, long-term care facilities, and homebound service, using mobile equipment. Prerequisite: 564 and permission of instructor. Offered: AWSpS.

ORALM 665 Clinical Oral Medicine (* max. 33) Clinic involving the diagnostic evaluation of patients with difficult and unusual oral diseases. The student diagnoses and treats the patient. Types of therapy include medications and chemical agents, functional physical therapy, and counseling. Offered: AWSpS.

ORALM 670 Clinical Oral Medicine Teaching (1-4, max. 16) Clinic designed to give the student experience and instruction in the teaching of clinical oral diagnosis. Treatment of emergency dental problems as well as routine and special diagnostic procedures is emphasized. Offered: AWSpS.

SCHOOL OF DENTISTRY / PEDIATRIC DENTISTRY 283

Orthodontics

Faculty

Chair

Gregory J. King

Professors

Artun, Jon 1988; DDS, 1969, PhD, 1987, University of Oslo (Norway); MSD, 1979, Norwegian Dental Association; orthodontics.

Herring, Susan W. * 1990; PhD, 1971, University of Chicago; vertebrate functional morphology, relations between muscular function and skull growth.

King, Gregory J. * 1996; DMD, 1969, Tufts University; DMSc, 1976, Harvard University; bone remodeling, bone cells, mineral metabolism, bone paracrine/endocrine mechanisms.

Little, Robert M. * 1974; DDS, 1966, Northwestern University; MSD, 1970, PhD, 1974, University of Washington; orthodontics.

Moffett, Benjamin C. * 1964, (Emeritus); PhD, 1952, New York University; anatomy.

Moore, Alton W. 1948, (Emeritus); DDS, 1941, University of California (San Francisco); MS, 1948, University of Illinois; orthodontics.

Newell, Laura L. * 1957, (Adjunct); PhD, 1967, University of Washington; primatology growth and development, human biology, evolutionary aspects of dermatoglyphics.

Shapiro, Peter A. * 1977; DDS, 1970, Howard University; MSD, 1973, University of Washington; craniofacial biology, long-term evaluation of orthodontic treatment.

Associate Professors

Joondeph, Donald R. * 1971; DDS, 1967, MS, 1969, Northwestern University; orthodontics.

Ramsay, Douglas S. * 1983; DMD, 1983, University of Pennsylvania; PhD, 1988, MSD, 1990, University of Washington; behavioral medicine/dentistry, physiological psychology, orthodontics, pediatric dentistry.

Assistant Professor

Bollen, Anne-Marie 1993; DDS, 1984, University of Brussels (Belgium); MSD, 1986, PhD, 1990, University of Michigan; orthopaedics.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

ORTHO 449 Directed Studies in Orthodontics (*) See DPHS 449 for course description and prerequisite. Credit/no credit only. Offered: AWSpS.

ORTHO 520 P-Craniofacial Growth and Development in Orthodontic Diagnosis and Treatment (4) Basic principles of pre- and postnatal growth and development integrated with the recognition, analysis, and treatment planning of problems encountered in dental and skeletal malocclusions. Offered: Sp.

ORTHO 522 P-Beginning Adjunctive Orthodontics (2) Lecture/laboratory instruction in indications for, and techniques of, simple orthodontic tipping, rotational and extrusive movements, as well as orthodontic study model fabrication. Prerequisite: 520. Offered: S.

ORTHO 550 P-Directed Studies in Orthodontics (* max. 6) See DPHS 449 for course description and prerequisite. Offered: AWSpS. **ORTHO 551 Review of Selected Literature in Orthodontics (1)** Students select a topic for review, review appropriate literature, and prepare written critique. Offered: AWSp.

ORTHO 552 Journal Club (1) Predoctoral students join graduate students in review of current orthodontic literature. Offered: AWSp.

ORTHO 560 Orthodontics Seminar (1-5, max. 25) Methods of diagnosis, analysis, and treatment planning of malocclusion; analysis of methods and theoretical principles used in the treatment of malocclusion. The student presents a detailed case analysis and plan of treatment for each clinical patient supervised. Offered: AWSpS.

ORTHO 562, 563, 564, 565, 566, 567 Orthodontic Theory (2, 2, 2, 2, 2, 2) Lecture-seminar sequence dealing with interpretation and application of orthodontic principles and concepts. Pertinent literature, research findings, and current orthodontic theory are analyzed in depth. Offered: AWSpS.

ORTHO 570 Roentgenographic Cephalometry (2) Basic principles, history, and techniques of roentgenographic cephalometry. Offered: AS.

ORTHO 575 Post-Retention Seminar (1, max. 2) Each student is required to locate three or more former orthodontic patients who qualify as at least ten years postretention. Complete orthodontic records must be obtained, analyzed, and discussed in the seminar. Instructor critiques the presentation and offers similar or contrasting cases for comparison. Offered: WSp.

ORTHO 580 Orofacial Biology (* max. 8) Threequarter sequence pertaining to craniofacial anatomy, development, and function. Summer quarter is combined lecture/laboratory on clinical and functional anatomy and may be taken separately. Autumn and winter quarters are lecture/seminars on development, growth, and function. Outside reading assignments by the students are discussed and critiqued during sessions. Offered: AWS.

ORTHO 582 Adult Orthodontics Seminar (2) Seminar for orthodontic, periodontic, and restorative dentistry graduate students in comprehensive, integrated diagnosis and treatment planning of the dental problems of the adult patient. Offered: AWSpS.

ORTHO 585 Surgical Orthodontic Diagnosis and Treatment Planning (3) Seminar and clinic for orthodontic graduate students and oral surgery residents in comprehensive, integrated diagnosis, and treatment planning for patients with major facial deformities. Offered: AWSpS.

ORTHO 584 Clinical Management of Cleft Lip and Palate and Craniofacial Anomalies (2) Management of these complex patients involves members of a dedicated, highly specialized multidisciplinary team. Insight gained into specific evaluation and treatment modalities of each discipline through lectures, seminars, assigned readings. Integrated approach to management is illustrated by attendance at craniofacial staffing and clinics. Prerequisite: graduate students in orthodontics. Offered: AW.

ORTHO 587 Management of Debilitated Dentitions (1-, max. 2) Integrated diagnosis and treatment planning for patients with edentulous spaces, emphasizing use of osseointegrated implants. Offered: AW.

ORTHO 589 Applied Psychology in Orthodontics and Pediatric Dentistry (1) Application of psychological theories, research, and intervention strategies to orthodontics and pediatric dentistry. Topics include the principles of behavior change, patient compliance with therapeutic regimens, and motivations for orthodontic treatment. Prerequisite: graduate standing in dentistry or permission of instructor. Offered: A. **ORTHO 590** Scientific Methodology in Dental Research (2) Review of the scientific method. Evaluation of dental literature. Discussion of proposed master's degree research projects. Formulation and discussion of hypothetical research projects related to orthodontics. Offered: W.

ORTHO 597 Preclinical Technique (1) Techniques of construction and manipulation of the edgewise arch mechanism. Offered: AWS.

ORTHO 598 Archwire Formation (1) Principles of wire bending and the use of orthodontic pliers. Offered: AS.

ORTHO 599 Biomechanics (1) Principles of biologic reactions to application of orthodontic forces. Offered: S.

ORTHO 600 Independent Study or Research (*) Managing the experimental protocol. Data collection and analysis. Preparation and writing of a thesis or publishable manuscript. Prerequisite: permission of instructor. Offered: SpS.

ORTHO 630- P-Orthodontic Clinic (1-, max. 6) Direct clinical application of principles of orthodontic diagnosis and treatment planning for simple orthodontic appliances to modify tooth position in preparation for definitive restorative and/or periodontal therapy. Prerequisite: 522. Offered: ASpS.

ORTHO 660 P-Clinical Orthodontics (1-6, max. 24) Clinical application of the techniques in the treatment of malocclusion. Offered: AWSpS.

ORTHO 682 Adult Orthodontics Clinic (1) Clinic for orthodontic graduate students in the treatment of the dental problems of the adult patient. Offered: AWSpS.

Pediatric Dentistry

Faculty

Chair

Peter K. Domoto

Professors

Domoto, Peter K. * 1973; DDS, 1964, University of California (San Francisco); MPH, 1975, University of Washington; pediatric dentistry, dental behavioral science.

Lewis, Thompson M. * 1955, (Emeritus); DDS, 1950, Northwestern University; MSD, 1955, University of Washington; pediatric dentistry.

Weinstein, Philip * 1972, (Adjunct); PhD, 1971, University of Kentucky; dental behavioral science, treatment and prevention of fear and pain, clinical assessment.

Associate Professors

Davis, John M. * 1967; DDS, 1961, MSD, 1967, University of Washington; pediatric dentistry.

Leggott, Penelope J. * 1993; BDentS, 1969, University of Bristol (UK); MSc, 1980, University of Illinois; pediatric dentistry.

Peterson, Devereaux * 1982; DMD, 1975, MSD, 1977, PhD, 1980, University of Pittsburgh; computer-based instructional programs.

Ramsay, Douglas S. * 1983; DMD, 1983, University of Pennsylvania; PhD, 1988, MSD, 1990, University of Washington; behavioral medicine/dentistry, physiological psychology, orthodontics, pediatric dentistry.

Lecturer

Williams, Bryan J. 1991; DDS, 1974, Western Ontario University (Canada); MSD, 1979, University of Washington; pediatric dentistry, orthodontics.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

PEDO 520 P-Pediatric Dentistry (4) Introduction to clinical pediatric dentistry, including behavior management, oral diagnosis, preventive dentistry, dental anomalies, radiography, anesthesia, restorative procedures, pulpal therapy, interceptive orthodontics, and traumatic dental injuries of the child patient. Offered: S.

PEDO 523 P-Communication Skills I (1) Introductory communication skills with emphasis on interviewing, presented in seminar format. Credit/no credit only. Offered: A.

PEDO 524 P-Communication Skills II (1) Continuation of basic communication skills. Credit/no credit only. Offered: A.

PED0 525 P-Management of Pediatric Patient Behavior (1) Introduction to selected theories of child development and application in dental setting; pediatric cognitive, affective, and social development and introduction to problematic child behaviors; use of social systems approach to overview child psychosocial development for the dentist. Credit/no credit only. Offered: W.

PED0 550 P-Directed Studies in Pediatric Dentistry (* max. 6) See DPHS 449 for course description and prerequisite. Offered: S.

PEDO 560 Fundamentals of Pediatric Dentistry (1) Preclinical laboratory, lecture course covering fundamentals of primary care in pediatric dentistry, including behavior management, dental emergencies, prevention, diagnosis and treatment planning, and infection control Offered: S.

PED0 570,571,572,573,574,575,576,577 Pediatric Dentistry Seminar I, II, III, IV, V, VI, VII, VIII (2, 2, 2, 2, 2, 2, 2, 2) Series of seminars covering principles and theory of child development and behavior management for pediatric patient, including sedation, general anesthesia, and principles of informed consent, pathology of oral manifestations of diseases of children and adolescents, pediatric radiology, and use of computers in didactic, clinical, and research endeavors, and the scientific basis for the prevention and treatment of dental caries, periodontal disease, and developmental anomalies. Offered: S, A, W, Sp, S, A, W, Sp.

PEDO 580,581,582,583 Developmental Disabilities Seminar (1, 1, 1, 1) Multidisciplinary approach to managing children with developmental disabilities. Offered: S, A, W, Sp.

PEDO 600 Independent Study or Research (*) Prerequisite: permission of instructor. Offered: AW.

PEDO 630- P-Clinical Pediatric Dentistry (1-, max. 7) Educational experiences in comprehensive clinical pediatric dentistry. Students register third and fourth years for 24 sessions in the pediatric dentistry clinic, a 3-day rotation at a community clinic, computer assisted clinical simulations, behavioral change projects, and a written analysis of videotaped patient/student clinic encounters. Offered: AWSpS.

PEDO 650 P-Pediatric Dentistry Extramurals (1-6) Clinical extramurals in the field of children's dentistry. Prerequisite: permission of instructor. Offered: AWSpS. PEDO 668 Clinical Clerkship in Pediatric Dentistry: Yakima Valley (* max. 5) Comprehensive dental care for economically-disadvantaged children in a rural community health center. Offered: AWSpS.

PEDO 669 Supervised Clinical Teaching (1-3, max. 4) Graduate pediatric dental students provide clinical instruction for predoctoral dental students by supervising clinical sessions. Offered: AWSpS.

PEDO 679 Care of the Disabled Pediatric Patient (1) Clinical experiences in the management of disabled patients. Offered: S.

PEDO 680,681,682,683,684,685,686,687 Pediatric Dentistry under General Anesthesia (1-4, 1-4, 1-4, 1-4, 1-4, 1-4, 1-4, 1-4) Clinical course involving preoperative assessment of comprehensive dental treatment under general anesthesia and follow-up care. Offered: S, A, W, Sp, S, A, W, Sp.

PEDO 699 Pediatric Orthodontic Clinic (1-4) Clinical orthodontic care for pediatric patients. Offered: AWSpS.

Periodontics

Faculty

Chair

Murray Robinovitch

Professors

Ammons, William F. * 1970, (Emeritus); DDS, 1959, University of Texas (Houston); MSD, 1970, University of Washington; periodontics.

Dale-Crunk, Beverly A. * 1972, (Adjunct); PhD, 1968, University of Michigan; keratin biochemistry.

Johnson, Robert H. * 1981; DDS, 1962, McGill University (Canada); MSD, 1964, Indiana University; periodontics.

Lukehart, Sheila A. * 1980, (Adjunct Research); PhD, 1978, University of California (Los Angeles); infectious diseases.

Page, Roy C. * 1967; DDS, 1957, University of Maryland; PhD, 1967, University of Washington; connectivetissue pathology, chronic inflammation, immunopathology, periodontal disease.

Persson, Gosta Rutger * 1985; DDS, 1967, PhD, 1978, University of Lund (Sweden); diagnosis of periodontal diseases and the consecutive process of clinical decision making.

Robertson, Paul B. * 1992; DDS, 1966, MS, 1972, University of Alabama; host-bacterial interactions in the etiology and pathogenesis of the periodontal diseases.

Robinovitch, Murray * 1966; DDS, 1961, University of Minnesota; PhD, 1967, University of Washington; salivary biochemistry and saliva-bacterial interactions.

Associate Professors

Bordin, Sandra * 1981, (Research); PhD, 1966, University of Ferrara (Italy); regulation of connective tissue repair by immune-inflammatory complement components.

O'Neal, Robert B. * 1995; DMD, 1971, University of South Carolina; MEd, 1971, Wayne State University; periodontics.

Assistant Professors

Roberts, Frank A. 1996; DDS, 1990, University of Tennessee; PhD, 1996, University of Alabama; immunological and biochemical regulatory mechanisms of inflammatory periodontal disease progression.

Weinberg, Aaron * 1991; DMD, 1981, PhD, 1990, Hebrew University (Israel); molecular pathogenesis of gram-negative anaerobic bacteria involved in periodontal diseases.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

PERIO 449 Directed Studies in Periodontics (*) See DPHS 449 for course description and prerequisite.

PERIO 525- 526 P-Prevention/Periodontics (2-2) Overview of preventive dentistry, introduction to periodontal therapy. Offered: WSp.

PERIO 527 P-Introduction to Periodontics (1) Epidemiology, natural history, etiology, and histopathology of various periodontal diseases. Offered: S.

PERIO 530, 531 P-Principles of Periodontics (2, 2) Diagnosis of periodontal diseases and development of a treatment plan including maintenance program, rationale for non-surgical, surgical, and antibacterial management of periodontal diseases. Discussion of principles of various periodontal procedures. Prerequisite: 525-526 and 527. Offered: A, W.

PERIO 542 Advanced Periodontics (1) Designed to improve the understanding of sequencing of patient care and providing periodontal therapy into the perspective of a comprehensive care system. Offered: Sp.

PERIO 550 P-Directed Studies in Periodontics (* max. 6) See DPHS 449 for course description and prerequisite.

PERIO 561- Periodontal Case Management (2-, max. 8) Didactic presentation of clinical periodontics to provide a comprehensive view of the field and a grasp of modern therapeutics.

PERIO 565 Periodontal Surgical Anatomy (2) Lecture and dissection course in intraoral anatomy (maxilla and mandible only) from a periodontal surgical approach. Prerequisite: graduate standing in periodontics. Offered: S.

PERIO 566 Practice Management (1) Aspects of setting up and administering a private periodontal practice. Financing, insurance, office design, equipment, employees, professional forms, marketing strategies, and patient management. Prerequisite: 561. Offered: S.

PERIO 567 Oral Medicine Case Studies (1, max. 3) Weekly seminar discussing series of unknown oral and perioral conditions. Discussion of history taking, differential diagnoses, relevant tests, therapeutic approaches, and outcomes. Offered: AWSp. PERIO 574 Periodontal Microbiology (2) Viral, bacterial classification; physiology; toxicity mechanisms reviewed. Formation and composition of plaque and calculus, and chemical methods of control discussed. Specific microbial floras of acute and chronic gingivitis, early onset forms of periodontitis, and adult periodontitis studied. Principles of antibiotic use reviewed. Offered: jointly with ORALB 569; A.

PERIO 575 Immunologic Aspects of Oral Diseases (2) Lecture course designed to acquaint students with basic concepts of immunology and immunopathology. Topics include cellular immunology, antibody structure and function, complement system, immunopathologic mechanisms, tumor immunology and immunologic manifestations in mucocutaneous oral lesions as well as immunology of caries and periodontal disease. Offered: W.

PERIO 576 The Molecular and Cellular Biology of the Periodontium (2) Nucleic acid, protein, and carbohydrate biochemistry reviewed. Roles of collagens and proteoglycans in gingival tissues and the organization of oral epithelia discussed. Structures of human and animal periodontal lesions compared. Cellular and molecular inflammatory and immunological mechanisms in periodontal disease discussed. History, classification, and epidemiology of periodontal diseases described. Offered: Sp.

PERIO 577 Review of Literature (2, max.16) Concise review of the scientific periodontal literature with specific focus on studies of periodontal diagnosis, wound healing, periodontal regeneration, microbiology, and implant procedures. Offered: AWSpS.

PERIO 582- Periodontic Treatment Planning Seminar (1-, max. 12) Weekly seminar involved with the presentation, discussion, and tentative solution of moderate to complex problems in diagnosis and treatment. Offered: AWSpS.

PERIO 585- Periodontal Therapy Seminar (1-, max. 12) Weekly seminar utilizing the case review method and dealing with the treatment of moderate to advanced periodontal disease. Offered: AWSpS.

PERIO 586- Longitudinal Evaluation of Periodontal Therapy (1-, max. 9) Close examination of case progress from initial therapy to most recent maintenance visits to determine efficacy of method, demands upon patient, and temporal effect of therapy and survival. Preparation and delivery of a lecture on a therapeutic modality. Offered: AWSp.

PERIO 587 Periodontal Diseases Research Seminar (1, max. 12) Weekly seminar devoted to advances in periodontal research. Topics include research design, methodology, and data derived from recent and/or ongoing periodontal research. Credit/ no credit only. Offered: WSp.

PERIO 592 Prescription Surgery (1-1-1) Clinical course in periodontal surgery in which surgical procedures are performed on prescription basis for patients undergoing therapy in the undergraduate dental clinic. Exposes student to a wider spectrum of patients and to stimulate an environment in which the student can encounter the problems in communication and patient management that occur in the private sector.

PERIO 600 Independent Study or Research (*) Prerequisite: permission of graduate program adviser.

PERIO 620 P-Introduction to Clinical Periodontics (1) Clinical periodontics, with emphasis on examination and assessment.

PERIO 630- 631- 632 P-Periodontics (1-1-1) Students diagnose periodontal disease and plan and perform periodontal therapies, treating patients in a stepwise manner, describing clinical conditions, and integrating periodontal therapy in a comprehensive plan of care. Prerequisite: 525-526 and 527. Offered: A-W-Sp.

PERIO 640- 641- 642 P-Advanced Clinical Periodontics (1-1-1) Maintenance and treatment of patients with more complex periodontal involvement. Development of skill in comprehensive treatment planning and execution by the individual student. Allowance made for surgical periodontics and experience in assisting in the treatment of advanced cases. Offered: A, W, Sp.

PERIO 659 P-Periodontics Extended Learning (* max. 4) Supplemental work in periodontics to correct an area of student deficiency. Credit/no credit only.

PERIO 660- Clinical Periodontics ([2-6]-, max. 60) Clinical experience in diagnosis and treatment of periodontal disease.

PERIO 662 Stomatology Clinic (1, max. 4) The diagnosis and treatment of oral and perioral lesions including history taking, biopsies, hematological laboratory tests and chemotherapy. Periodontal therapy in medically compromised patients in the hospital setting. Microscopic review of biopsy specimens. Offered: AWSpS.

PERIO 663 Pre-Prosthodontics Clinical Periodontics (*) Clinical diagnosis and treatment of periodontal disease for nonperiodontics student. Prerequisite: permission of department chairperson.

PERIO 665 Clinical Practice Teaching (*) Supervised experience in teaching clinical periodontics to undergraduate dental students.

PERIO 685 Hospital Periodontics (1) Preparation in periodontics to practice in hospital situations, including experience in operation of nitrous oxide analgesia, general anesthesia, intravenous premedication, treating of out- and inpatients.

Prosthodontics

Faculty

Chair

L. Brian Toolson

Professors

Bolender, Charles L. * 1959; DDS, 1956, MS, 1957, University of Iowa; removable prosthodontics.

Brudvik, James S. * 1979; DDS, 1957, University of Minnesota; removable prosthodontics.

Frank, Richard P. * 1971; DDS, 1962, University of lowa; MSD, 1968, University of Washington; removable prosthodontics.

Smith, Dale E. * 1972, (Emeritus); DDS, 1952, University of Pittsburgh; MSD, 1962, University of Washington; removable prosthodontics.

Associate Professors

Faine, Mary P. 1982; MS, 1975, University of Washington; nutrition.

Rubenstein, Jeffrey E. * 1989; DMD, 1975, Tufts University; MS, 1980, University of Texas (Houston); maxillofacial and implant prosthodontics.

Toolson, L. Brian * 1970; DDS, 1967, MSD, 1977, University of Washington; removable prosthodontics.

Assistant Professor

Nabadalung, Darunee 1992; DDS, 1984, University of Texas (Houston); maxillofacial prosthodontics and oncology.

Lecturer

Phillips, Sandra L. 1988; MPA, 1985, University of Washington.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

PROS 510 P-Introduction to Dental Nutrition (3) Basic principles of normal human nutrition, including nutrient requirements at various ages, assessment of nutritional status, nutritive values of foods, with special emphasis on the role of diet in development and maintenance of oral tissues.

PROS 520 P-Introduction to Complete Dentures-Lecture (3) Didactic course in the treatment of completely edentulous patients. Instruction is provided in diagnostic procedures, complete denture construction, and maintenance care.

PROS 521 P-Management of Immediate Denture Patients (1) Lecture course describing and illustrating the clinical management of immediate denture patients (typical and overdenture). Offered: S.

PROS 523 P-Removable Partial Denture Design (2) Lectures in the basic principles of removable partial denture design. Practical drawings and more advanced designs are discussed in seminars. Certain technical aspects of design procedures are done in the classroom. Offered: W.

PROS 525 P-Removable Partial Denture Clinical Preparatory Course (4) Lecture-laboratory course dealing with those procedures the dentist must perform in order to fabricate a physiologically acceptable removable partial denture. The student gains experience via clinically simulated laboratory exercises prior to beginning prosthodontic treatment of a partially edentulous patient.

PROS 542 P-Special Topics in Prosthodontics (1) Lecture describing and illustrating the following topics: implant procedure, management of difficult patients, maxillofacial prosthesis, quality-control problems in private practice, and other special topics. Offered: W.

PROS 550 P-Directed Studies in Prosthodontics (* max. 6) See DPHS 449 for course description and prerequisite.

PROS 560 Complete and Immediate Dentures (2) Lecture/seminar devoted to the diagnosis and treatment of the completely edentulous patient and the immediate denture patient, with emphasis on management of patients with difficulties in treatment. Offered: A.

PROS 562 Removable Partial Dentures (2) Lecture/seminar concentrating on factors peculiar to fabrication of removable partial dentures, with emphasis on management of combined fixed and removable therapy. Offered: W.

PROS 563 Maxillofacial Prosthetics I (1) Introductory lecture/seminar series with emphasis on diagnosis and prosthodontic rehabilitative treatment of patients who have experienced trauma or have congenital or acquired defects in the oral region. Offered: S.

PROS 564 Maxillofacial Prosthetics II (1) Introductory lecture series focusing on the prosthodontic rehabilitation of patients with loss and compromise of facial anatomy, i.e., ocular, orbital, nasal, auricular, combination intraoral/extraoral, and other related facial deformities.

PROS 571 Review of Literature Seminar (1, max.12) Continuous weekly seminar devoted to the review of prosthodontic and related literature.

PROS 572 Special Topics Related to Prosthodontics (1) Lecture-seminar series focusing on relating principles of basic science to clinical application in prosthodontics. A wide and varied range of topics including surgery, psychology, speech, pharmacology, practice management, physiology, temporomandibular/myofascial joint dysfunction.

PROS 600 Independent Study or Research (*) Prerequisite: permission of graduate program adviser.

PROS 620- P-Clinical Complete Dentures (1/3) Basic principles of complete denture fabrication and of diagnosis and treatment of completely edentulous patient. In second quarter student completes denture patient care, provides follow-up treatment, and participates in four competency examinations. Offered: AW.

PROS 621 P-Complete Denture Prosthodontics (1) Clinical course using the didactic material presented in 620. The student manages a second complete-denture patient during winter quarter with less supervision than in 620, and also provides follow-up care to the 620 and 621 patients during winter quarter and spring quarter.

PROS 630 P-Clinical Prosthodontics (1, max. 3) Clinical course involving the diagnosis and management of completely and partially edentulous patients. Removable partial dentures and immediate dentures are fabricated. Follow-up care provided for patients previously treated.

PROS 640 P-Clinical Prosthodontic Maintenance (1, max. 3) Clinic involving additional patient treatment with complete, partial, or intermediate dentures, plus indirect relines, managing adjustment chair, peer review, recall clinic, and follow-up care for patients previously treated. Offered: AWSp.

PROS 650 P-Extramurals in Prosthodontics (* max. 12) Elective clinical experiences or clinical practice teaching. Credit/no credit only. Prerequisite: permission of instructor.

PROS 660 Clinical Prosthodontics (2, max. 6) Practical application of material covered in 560 and 562.

PROS 665- Clinical Practice Teaching (1-, max. 4) Supervised experience in teaching clinical prosthodontics to the undergraduate dental student.

Restorative Dentistry

Faculty

Chair

Bruce R. Rothwell

Professors

Canfield, Robert C. * 1951, (Emeritus); DDS, 1951, University of Washington; restorative dentistry.

Hamilton, A. Ian * 1949, (Emeritus); DDS, 1936, University of Toronto (Canada); MA, 1958, University of Washington; PhD, 1968, University of London (UK); restorative dentistry.

Hodson, Jean Turnbaugh * 1952, (Emeritus); MS, 1958, University of Washington; restorative dentistry.

Johnson, Glen H. * 1980; DDS, 1978, University of Washington; MS, 1983, University of Michigan; instruction, clinical trials and laboratory research with dental bio-materials.

Morrison, Kenneth N. * 1948, (Emeritus); DDS, 1943, University of Toronto (Canada); MSD, 1952, University of Washington; restorative dentistry. Nicholls, Jack I. * 1965; PhD, 1965, Purdue University; dental materials.

Warnick, Myron E. * 1956; DDS, 1955, University of Alberta (Canada); restorative dentistry, fixed prosthodontics.

Yuodelis, Ralph A. * 1963, (Emeritus); DDS, 1955, University of Alberta (Canada); MSD, 1964, University of Washington; restorative dentistry, prosthodontics, periodontics, implants.

Associate Professors

Bales, David J. 1983; DDS, 1957, University of Washington; MSD, 1972, Indiana University; restorative dentistry.

Chasteen, Joseph E. 1989, (Adjunct); DDS, 1967, MA, 1976, University of Michigan.

Ostlund, Lyle E. 1972, (Emeritus); DMD, 1947, University of Oregon; PhD, 1993, Johns Hopkins University; restorative dentistry.

Powell, Laurri Virginia 1986; DMD, 1982, University of Mississippi; restorative dentistry.

Rothwell, Bruce R. 1980; DMD, 1973, University of Oregon; MSD, 1977, University of Washington; general dentistry, hospital-based dentistry, forensic dentistry.

Assistant Professors

Aw, Tar C. 1995; DDS, 1990, Northwestern University; MS, 1995, University of Michigan; restorative dentistry, operative dentistry, dental materials, computers.

Butson, Timothy J. 1993, (Acting); DMD, 1982, University of Pennsylvania; MSD, 1992, University of Washington; restorative dentistry, fixed prosthodontics.

Johnson, Barton S. * 1991; DDS, 1985, MS, 1989, University of California (Los Angeles); hospital dentistry, medical compromise, oncology, sedation, pharmacology, molecular biology.

Lepe, Xavier * 1993; DDS, 1980, University of Guadalajara (Mexico); MS, 1987, Loyola University (Chicago); restorative dentistry, dental materials.

Morgan, John P. 1997, (Clinical); DDS, 1977, State University of New York (Buffalo); restorative dentistry, hospital-based dentistry.

Phillips, Keith M. 1990, (Acting); DMD, 1987, University of Pennsylvania; MSD, 1991, University of Washington; restorative dentistry, fixed prosthodontics, implants.

Senior Lecturer

McCoy, Richard B. 1992; DDS, 1961, University of Washington; MS, 1973, Loma Linda University; restorative dentistry.

Lecturers

Anderson, J. Martin 1966; DDS, 1965, University of Washington; restorative dentistry, gold foil, operative dentistry.

Libman, Warren J. 1990; DDS, 1986, McGill University; MSD, 1990, University of Washington; restorative dentistry, fixed prosthodontics.

Stoddard, James W. 1965; DDS, 1961, University of Washington; restorative dentistry, operative dentistry.

Townsend, John D. 1978; DDS, 1967, McGill University (Canada); MSD, 1973, University of Washington; restorative dentistry, fixed prosthodontics, periodontics.

Weaver, James D. 1970; DDS, 1965, Ohio State University; restorative dentistry, implants.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

RES D 410 Dental Anatomy (3) Lecture and laboratory exercises on the morphology and nomencla-

ture of individual human adult and primary teeth. Introduction to function, internal tooth morphology, and the influence of tooth anatomy on selected clinical procedures. For dental hygiene students.

RES D 449 Directed Studies in Restorative Dentistry (*) See DPHS 449 for course description and prerequisite. Offered: AWSpS.

RES D 510 P-Dental Materials Science (3) Physical and chemical properties of dental materials. Offered: W.

RES D 511 P-Applied Dental Materials (3) Lecture/laboratory in use of dental materials relative to restorative dentistry. Clinical application and student self-evaluation of laboratory work emphasized. Offered: Sp.

RES D 515 P-Dental Anatomy (3) Lecture and laboratory on the morphology and nomenclature of individual teeth of the adult human dentition. Introduction to tooth histology and function and the influence of tooth anatomy on clinical dental procedures. Offered: A.

RES D 516 P-Introduction to Occlusion (3) Lecture/laboratory in the functional determinants of occlusal morphology. Preparation and waxing techniques for developing opposing quadrants by the additive waxing technique. Offered: W.

RES D 517 P-Functional Analysis of Occlusion (3) Clinical and laboratory experiences in examination and charting of patient's occlusion, record-taking for analysis of occlusion on a dental articulator, and preclinical diagnostic correction of problems of occlusion on articulated clinical casts. Provides basic background or technique information relative to laboratory and clinical experiences. Offered: Sp.

RES D 519 P-Operative Dentistry (1) Lecture series introducing operative dentistry. Nomenclature, cavity classification, instrumentation, pulp protection, and principles of cavity preparation. Offered: Sp.

RES D 520, 521, 522, 523 P-Introduction to Operative Dentistry Technique (3, 3, 3, 2) Introduces processes of restoring diseased or damaged tooth structure to proper health, form, function, and esthetics. Emphasis on basic principles of cavity preparation, preparation and restorative materials, and clinical considerations for restorative treatment planning. Following demonstration of competence in didactic and practical aspects. Limited opportunity available for introduction to restorative care. Offered: A, W, Sp, C

RES D 525, 526, 527 P-Fixed Prosthodontics (3, 3, 3) Serve as introduction to area of restorative dentistry dealing with indirect restorations. Preclinical experience provided in tooth preparation and restoration, fabrication for various crown designs, singly and in conjunction with various pontic types to serve as fixed partial denture prostheses. Projects emphasize single-tooth preparation/restoration, multipletooth preparation/restoration, and esthetic veneer restorations. Offered: A, W, Sp.

RES D 530, 531, 532 P-Restorative Dentistry (2, 2, 2)
Lecture series related to 630 presenting restorative dentistry principles, including supportive material on clinical procedures. Offered: A, W, Sp.

RES D 540, 541 P-Advanced Restorative Dentistry (2, 2) Broadens base of restorative procedures. Introduction of new techniques and preparation for state board examination. Offered: A, W.

RES D 542 P-New Developments in Dental Materials (1) Dental materials recently introduced to dental profession reviewed, compared to current materials, and clinically demonstrated. Offered: Sp.

RES D 550 P-Directed Studies in Restorative Dentistry (* max. 6) See DPHS 449 for course description and prerequisite. Offered: AWSpS.

RES D 570 Review of Literature Seminar (1, max.
6) Continuous weekly seminar devoted to a review of restorative and related literature, and discussion of teaching methods, philosophy of teaching and treatment. Offered: AWSpS.

RES D 580- Restorative Treatment Planning Seminar (1-, max. 8) Continuous weekly seminar to discuss controversial treatment problems and difficult diagnostic cases selected for graduate students. Offered: AWSp.

RES D 581- Comprehensive Treatment Planning (2-, max. 4) Seminar devoted to the diagnosis and treatment of comprehensive dental cases with special emphasis given to the relationship of periodontics to restorative dentistry. Offered: Sp.

RES D 585 Dental Materials Science (2) Introductory course in dental materials science, including research design, testing methods, and selection of materials appropriate for clinical use. Offered: W.

RES D 588 Masticatory Functional Analysis and Occlusal Adjustment (2) Lecture/seminar and clinical sessions in the study of the physiology of occlusion. Pertinent literature reviewed and discussed from the multidisciplinary viewpoint. The clinical sessions include training in masticatory functional analysis and treatment of occlusally related diseases. Offered: A. **RES D 589 Review of Literature in Occlusion (2)** Seminar to review pertinent literature in occlusion. Offered: S.

RES D 590- Fundamentals of Fixed Prosthodontics (2-, max. 4) Lecture/laboratory/clinical sessions in the study of gnathological principles and procedures as they pertain to the treatment of comprehensive cases assigned to the students. Use and application of several fully adjustable articulators. Offered: AW.

RES D 600 Independent Study or Research (*) Prerequisite: permission of graduate program adviser. Offered: AWSpS.

RES D 620 P-Introduction to Clinical Restorative Dentistry (1) Orientation to clinical operations, administrative procedures associated with restorative clinical, initial treatment plan, and limited treatment of patients. Offered: S.

RES D 630- P-Clinical Restorative Dentistry ([1-3]-, max. 9) Clinical training in fundamental restorative dentistry procedures, including diagnostic, treatment planning, and therapeutic aspects of operative dentistry, fixed prosthodontics, and occlusal treatment. Offered: AWSp.

RES D 640- P-Advanced Clinical Restorative Dentistry ([1-3]-, max. 12) Clinical training in restorative dentistry procedures, including diagnostic, treatment planning, and therapeutic aspects of operative dentistry, fixed prosthodontics, and occlusal treatment. Offered: AWSp.

RES D 650 Restorative Dentistry Clinical Elective (1-6, max. 12) Elective offering in clinical areas related to discipline. Offered: Sp.

RES D 659 P-Restorative Dentistry Extended Learning (* max. 4) Supplemental work in restorative dentistry to correct an area of student deficiency. Credit/no credit only. Offered: S.

RES D 660- Oral Rehabilitation ([2-6]-, max. 32) Clinical course to provide experience in diagnosis and treatment of patients requiring restorative procedures from single restorations to complex oral rehabilitative methods. Special emphasis is directed toward the integration of periodontics and occlusion as they relate to restorative dentistry. Offered: AWSpS.

RES D 665 Clinical Practice Teaching (1, max. 4) Supervised experience in teaching clinical fixed prosthodontics to undergraduate dental students. Offered: AWSpS.

College of Education

Dean

Allen D. Glenn 222 Miller

Associate Deans

Sheila Lowenbraun Richard S. Neel

The College of Education is a graduate and professional school dedicated to the improvement of education through the research and study of important educational problems. The College has four broad curricular areas: Curriculum and Instruction, Educational Leadership and Policy Studies, Educational Psychology, and Special Education. Degrees conferred are M.Ed., Ph.D., Ed.D., and M.I.T. Certificates can be earned in teaching (elementary, secondary, and special education), school administration (principals, program administrators, and superintendents), school counseling, and school psychology.

As one of the oldest colleges at the University of Washington, the College is committed to the preparation of caring, knowledgeable, and reflective practitioners grounded in the best practices and dedicated to meeting the needs of all students.

Special Offices and Services

The College of Education maintains a number of special offices to assist in the fulfillment of its goals. Among these are the Office of Teacher Education, the Office of Student Services, and the Office of Minority Recruitment and Retention. In addition, the College of Education maintains formal relationships with a number of school districts in the area to provide research and field experience opportunities for the students in the various programs. Individuals interested in teacher certification or in graduate degree programs should contact the Office of Student Services, 206 Miller.

Professional Certification

The College of Education is authorized by the State Board of Education to offer professional certificate programs in education for administrators, educational staff associates, and teachers. Academic counselors are available to help with pre-program counseling, applications, long-range planning, continuing certificate needs, referrals to other campus resources, general program advising, and registration.

Administrator Certificates

Administrator Certificate preparation programs for superintendents, principals, and program administrators are offered in the College of Education. Information concerning admission and requirements for these programs is available from the Area of Educational Leadership and Policy Studies, M209 Miller.

Educational Staff Associate Certificates

Educational Staff Associate Certificate preparation programs are offered for the school speech language pathologist or audiologist (SLP), occupational therapist, school counselor, school psychologist, and school social worker. These programs are offered in various departments of the University or in the College of Education. Information concerning requirements and admission may be obtained as follows: school speech language pathologist or audiologist—Department of Speech and Hearing Sciences, 203 Eagleson, Box 354875, University of Washington, Seattle, Washington 98195-4875; occupational therapist—Department of Rehabilitation Medicine, CC902 University of Washington Medical Center, Box 356490, Seattle, Washington 98195-6490; school counselor and school psychologist—College of Education Office of Student Services, 206 Miller, or Area of Educational Psychology, 312 Miller, Box 353600, University of Washington, Seattle, Washington 98195-3600; school social worker—School of Social Work, Box 354900, University of Washington, Seattle, Washington 98195-4900.

Teaching Certificates

The College of Education is authorized by the State Board of Education to prepare and recommend individuals for Initial and Continuing Teaching Certificates. The Teacher Education Program is accredited by the National Association of State Directors of Teacher Education and Certification. Graduates are qualified for certification in all states party to the Interstate Certification Compact and in other states as well.

Initial Teaching Certification Program

The College of Education offers initial teaching certification for individuals desiring careers as elementary or middle/secondary school teachers, or as special education teachers working with students with severe disabilities or infants, toddlers, and preschool children with disabilities. Candidates may also select a teacher education/special education option which provides initial certification in elementary education with an endorsement in special education. All programs are offered at the master's level. For additional information contact the Office of Student Services, 206 Miller.

An undergraduate program leading to certification in music education, grades K-12, is offered through the School of Music. For additional information contact the School of Music Advising Office.

Continuing Teaching Certificates

Teachers may obtain an initial renewal or a continuing certificate either through a state-approved teaching institution or through the Office of the Superintendent of Public Instruction. For information on the OSPI guidelines, contact any Educational Service District or the Office of Professional Licensing and Certification, OSPI, Box 47200, Old Capitol Building, Olympia, Washington 98504.

Endorsements on Teaching Certificates

Teachers holding an initial or continuing teaching certificate under the 1988 guidelines may add endorsements to their certificates which will qualify them to teach subjects and at grade levels in addition to those in which they were originally endorsed. For information on state requirements and on endorsement course work through the University of Washington, contact the Office of Teacher Education, 211 Miller, or UW Extension, Box 354221, Seattle, Washington 98105-4190. Teachers may also obtain applications and information and apply for endorsements directly through OSPI or an Educational Service District.

Graduate Degree Programs

Graduate Program Coordinator 206 Miller, Box 353600 (206) 543-7833 edinfo@u.washington.edu

The College of Education currently offers four advanced degrees: Master in Teaching, Master of Education, Doctor of Education, and Doctor of Philosophy. The M.I.T. degree will be awarded to elementary and secondary certification students at the completion of their program. Graduate students may specialize their degree studies in teacher preparation, curriculum and instruction, educational psychology, educational leadership and policy studies, or special education. A focus on higher education is offered through the Evening Degree Program. Questions regarding graduate study in education should be directed to the Office of Student Services, 206 Miller, Box 353600, College of Education, University of Washington, Seattle, Washington 98195-3600.

Master in Teaching

The Master in Teaching (M.I.T.) degree program results in a Washington initial teaching certificate for elementary or secondary (specific subjects) school teaching. The program is an integrated sequence of full-time, daytime course work and field experiences spanning five quarters. One quarter is devoted to fulltime placement in a school. Field experiences are in schools in the Seattle/Puget Sound area chosen to provide a variety of situations in regard to level, school population, and location.

Master of Education

The Master of Education (M.Ed.) degree requires a minimum of 45 credits, including at least 15 credits in a specialized area of study in education; 9 credits related to, but outside of, the specialization, some course work outside education; 9 thesis credits or, for the non-thesis option, 9 credits in a field study or other approved project; and a final examination.

Doctor of Education

The Doctor of Education (Ed.D.) degree is designed to prepare professionals whose primary interest is to deal directly with problems of educational practice. The program of study leading to the Ed.D., as a professional degree, focuses on the utilization of research and practitioners' knowledge, rather than on the production of research knowledge. Those who aspire to positions as master teachers, curriculum designers, or learning resource specialists, for example, would appropriately seek the Doctor of Education degree.

This professional degree requires at least two years of resident study, a program of specialized study with credit in education and related fields, sufficient preparation in research methodology to interpret research findings for use in practice, an internship and leadership training, a General Examination, a dissertation on a problem of educational practice, and a Final Examination.

Doctor of Philosophy

The Doctor of Philosophy (Ph.D.) in education is a research degree. It offers preparation for a career of research on issues fundamental to education-issues that range from fairly narrow questions about human learning to macroquestions regarding the form of societies' educational institutions. The scope of the Ph.D. degree in education is broad. It is possible to pursue a degree organized around traditional study areas such as educational psychology, curriculum and instruction, special education, or educational leadership and policy making. A student may develop a course of study that integrates various elements of more than one study area (e.g., multiethnic education and literacy). One of the study options in the Ph.D. program is school psychology, which prepares students for the professional practice of psychology with school-age children, as well as for research.

Degree requirements include a minimum of two years of resident study, a program of specialized study with credits both in education and in other academic units, preparation in research methodology adequate to design and assess research in the field of specialization, sufficient study in cognate fields inside and outside of education to ensure that the candidate can place the specialized research in a broader context, a General Examination, a research dissertation, and a Final Examination.

COLLEGE OF EDUCATION / FACULTY 289

Accreditation

The College of Education has the following formal accreditation: American Psychological Association (APA) and National Association of School Psychology, Washington State Board of Education for initial and continuing teaching certificates and initial certification for school psychology, National Association of State Directors of Teacher Education and Certification (pending), and University Council for Educational Administration (UCEA) for the administrator preparation programs. Graduates qualify for certification in all states party to the Interstate Certification Compact.

Admission Requirements

Applicants to the Master of Education and Master in Teaching degree programs must hold a baccalaureate degree from an accredited institution. Admission decisions are based on the applicant's grade-point average, Graduate Record Examination general test scores, goal statement, and other prerequisites stipulated by the area of specialization within the College. Application deadlines vary by program.

Consideration for admission to either doctoral program requires a master's degree or equivalent preparation in a field appropriate to the area of specialization, usually a 3.50 GPA in the master's program, a sample of scholarly writing, goal statement, and other prerequisites stipulated by the individual program of study. Graduate Record Examination general test scores are required.

Although admission is competitive, admitted students have exhibited a wide range of performance on traditional criteria such as GPA and GRE scores. The College values diversity and encourages all applicants to apply. For more information contact the Office of Student Services, 206 Miller, Box 353600.

Financial Aid

The College of Education offers a limited number of awards with varying stipends for graduate students in education. Primary consideration is given to doctoral students with a background of successful teaching or administrative experience. Specific information on the various types of remunerative appointments for graduate students in education, amounts of stipends, and application procedures may be obtained from the College of Education, Office of Student Services, 206 Miller, Box 353600, Seattle, Washington 98195-3600. The annual application deadline is March 1.

Special Research and Service Facilities

Within the College of Education opportunities exist for students to gain research and service experience.

The Center for Multicultural Education focuses on research projects and activities designed to improve practices related to equity issues, intergroup relations, and the achievement of students of color.

The Clinical Training Laboratory, operating under the aegis of Educational Psychology, offers observation rooms equipped with video recorders where trainees and clients can be observed and taped through one-way mirrors.

The world-renowned **Experimental Education Unit** offers an interdisciplinary approach to research, training, and service, providing integrated classes for 150-200 young children, toddlers, and infants with disabilities and their typically developing peers, and services for their families.

The Multidisciplinary Learning Disabilities Center conducts research on preventing and treating reading and writing disabilities and on the biological basis of learning disabilities. The center disseminates its findings to teachers through its Teacher Training Project. The National Center for the Study of Teaching and Policy, a consortium of five universities headed by the University of Washington, conducts a wide range of studies aimed at local, state, and national policy strategies to promote teacher excellence.

The Institute for the Study of Educational Policy promotes interdisciplinary studies that bring together research and practice for the benefit of children and youth, educators, policy makers, and the larger community. The institute includes (a) The Center for Educational Renewal, which responds to a growing nationwide interest in the renewal of schools and teacher education by creating partnerships, promoting innovative programs and policies for the education of educators, and reforming leadership and governance structures; (b) The Center for Effective Schools, which is committed to engaging in research and service activities designed to promote instructionally effective schools through collaboration and self-evaluation: (c) The Center for Students At-Risk, which was established to foster interprofessional projects to encourage students to stay in school; and (d) The School Law Division, which deals with the improvement of professional practices of school administrators, including superintendents, principals, and program directors. Additionally, the institute conducts policy research pursuant to grants and contracts with school districts, state and federal agencies, and other educational organizations

Faculty

Professors

Abbott, Robert D. * 1975; PhD, 1970, University of Washington; measurement, statistics and research design.

Anderson, Robert A. * 1965, (Emeritus); PhD, 1964, University of Minnesota; educational administration.

Banks, James A. * 1969; MA, 1967, PhD, 1969, Michigan State University; social studies, multiethnic education.

Berninger, Virginia Wise * 1986; PhD, 1981, Johns Hopkins University; educational psychology.

Billingsley, Felix F. * 1977; PhD, 1974, University of Washington; special education (severely handi-capped).

Bolton, Dale Leroy * 1965, (Emeritus); PhD, 1958, University of Wisconsin; educational administration.

Boroughs, Homer Jr. 1946, (Emeritus); MA, 1947, PhD, 1949, University of Washington; history and philosophy of education.

Brammer, Lawrence M. * 1963, (Emeritus); PhD, 1950, Stanford University; counseling, adult development.

Briggs, Robert 1947, (Emeritus); MA, 1950, EdD, 1954, University of Washington; business education.

Brown, Frances A. 1953, (Emeritus); MA, 1950, Columbia University; business education.

Burgess, Charles O. * 1964, (Emeritus); PhD, 1962, University of Wisconsin; history of education.

Dohner, Charles W. * 1967; PhD, 1966, Ohio State University; program evaluation, administration, faculty development.

Doi, James I. * 1979, (Emeritus); PhD, 1952, University of Chicago; finance and management of colleges and universities.

Driscoll, John P. * 1967, (Emeritus); PhD, 1957, Pennsylvania State University; educational communications. Edgar, Eugene Bayard * 1972; PhD, 1972, George Peabody College; special education.

Evans, Ellis D. * 1964, (Emeritus); EdD, 1964, Indiana University; human development and cognition.

Fea, Henry R. 1954, (Emeritus); MEd, 1948, University of Saskatchewan (Canada); PhD, 1950, University of California (Berkeley); educational psychology.

Forster, Jerald R. * 1966; PhD, 1966, University of Minnesota; counseling.

Foster, Clifford D. * 1959, (Emeritus); PhD, 1957, University of Washington; curriculum and instruction.

Freehill, Maurice F. * 1962, (Emeritus); EdD, 1948, Stanford University; school psychology/human development and cognition.

Gay, Geneva * 1989; PhD, 1972, University of Texas (Austin); general curriculum theory, multicultural education, and educating African American students.

Gehrke, Nathalie J. * 1979; PhD, 1976, Arizona State University; curriculum.

Glenn, Allen D. * 1989; PhD, 1970, University of Michigan; teacher education, social studies education, and instructional computing.

Goodlad, John I. * 1983, (Emeritus); PhD, 1949, University of Chicago; EdD, 1982, Eastern Michigan University; education reform, curriculum theory.

Haring, Norris Grover * 1965, (Emeritus); EdD, 1956, Syracuse University; special education (early childhood).

Hunkins, Francis Peter * 1966; PhD, 1966, Kent State University; curriculum.

Jarolimek, John * 1962, (Emeritus); PhD, 1955, University of Minnesota; social studies.

Jenkins, Joseph R. * 1978; PhD, 1967, University of Minnesota; special education (mildly handicapped).

Kaltsounis, Theodore * 1967; PhD, 1961, University of Illinois; social studies.

Kerr, Donna H. * 1973; PhD, 1973, Columbia University; philosophy and education.

Kerr, Stephen T. * 1985; PhD, 1975, University of Washington; information technology and telecommunications.

Klockars, Alan J. * 1963; PhD, 1967, University of Washington; measurement, statistics and research design.

Knapp, Michael S. * 1990; PhD, 1981, Stanford University; public policy in education; policy research; sociology of education.

Lovitt, Thomas C. * 1966, (Emeritus); EdD, 1966, University of Kansas; special education (mildly handicapped).

Lowenbraun, Sheila * 1968; PhD, 1969, Columbia University; special education (hearing impaired).

Madsen, David L. * 1962, (Emeritus); PhD, 1961, University of Chicago; history of education.

McCartin, Rosemarie E. * 1969, (Emeritus); PhD, 1964, University of Southern California; school psychology/ human development and cognition.

McCutchen, Deborah Elaine * 1986; PhD, 1985, University of Pittsburgh; cognitive processes underlying reading and writing skills.

Meacham, Merle L. * 1964, (Emeritus); MS, 1956, University of Washington; school psychology.

Mizokawa, Donald T. * 1973; PhD, 1974, Indiana University; human development and cognition.

Morishima, James K. * 1960; PhD, 1967, University of Washington; human development and cognition.

Morris, Arval * 1955, (Adjunct); JD, 1955, University of Colorado (Boulder); LLM, 1958, Yale University; LLD, 1972, Colorado College; constitutional law, jurisprudence, education law, civil rights.

Neel, Richard S. * 1972; PhD, 1972, University of Southern California; special education (severely handicapped).

Odegaard, Charles E. 1979, (Emeritus); MA, 1933, PhD, 1937, Harvard University; history of medical education.

Olstad, Roger G. * 1964, (Emeritus); PhD, 1963, University of Minnesota; science education, teacher education.

Olswang, Steven G. * 1975; JD, 1971, University of Illinois; PhD, 1977, University of Washington; higher education administration and policy, law, faculty government, collective bargaining.

Parker, Walter C. * 1985; PhD, 1982, University of Washington; social studies.

Peckham, Percy D. * 1968, (Emeritus); PhD, 1968, University of Colorado (Denver); measurement, statistics and research design.

Reitan, Henry M. 1967, (Emeritus); PhD, 1950, University of North Dakota; educational leadership and policy studies, higher education.

Robinson, Nancy M. * 1969, (Adjunct); PhD, 1958, Stanford University; developmental psychology, giftedness.

Ryckman, David B. * 1969; EdD, 1966, University of Illinois; special education (mildly handicapped).

Sax, Gilbert * 1965, (Emeritus); PhD, 1958, University of Southern California; measurement, statistics and research design.

Sebesta, Sam L. * 1963, (Emeritus); EdD, 1963, Stanford University; reading/language arts.

Sirotnik, Kenneth A. * 1985; PhD, 1969, University of California (Los Angeles); measurement, statistics, research design and evaluation, educational change and school renewal.

Standal, Timothy * 1976; PhD, 1976, University of Minnesota; reading/language arts.

Stowitschek, Joseph James * 1986, (Research); EdD, 1973, Utah State University; vocational and social development, service policies regarding disabled youth.

Strayer, George D. 1949, (Emeritus); MA, 1928, PhD, 1934, Columbia University; educational administration.

Thompson, Marie D. * 1979, (Emeritus); PhD, 1970, University of Washington; special education (hearing impaired).

Torkelson, Gerald M. * 1965, (Emeritus); EdD, 1953, Pennsylvania State University; learning resources.

Tostberg, Robert E. * 1962, (Emeritus); PhD, 1960, University of Wisconsin; philosophy of education.

White, Owen R. * 1973; PhD, 1971, University of Oregon; special education (severely handicapped).

Williams, Donald T. * 1969, (Emeritus); PhD, 1963, Stanford University; higher education.

Williams, Richard C. * 1990; PhD, 1966, University of Minnesota; career socialization of school principals; the process of school reform.

Winn, William David * 1985; PhD, 1972, Indiana University; educational technology, instructional theory, instructional design, visual information processing.

Associate Professors

Beal, Jack L. * 1973; MS, 1962, University of Kansas; PhD, 1972, University of Nebraska; secondary mathematics education.

Brown, Robert Lewis * 1965, (Emeritus); EdD, 1961, University of Arkansas; school psychology.

Cohen, Marilyn A. 1987, (Research); PhD, 1975, University of Washington; educational psychology, media literacy education as it influences teen attitudes and behaviors.

Cunningham, Anne 1991, (Research); PhD, 1987, University of Michigan; educational psychology, instruction and reading processes.

Dimmitt, Norma M. 1969, (Emeritus); MEd, 1963, University of Washington; EdD, 1970, Stanford University; curriculum and instruction, teacher education.

Frerichs, Alberta J. 1955, (Emeritus); MEd, 1951, University of Nebraska; business education.

Frey, Karin S. * 1983, (Research); PhD, 1978, University of Washington; educational psychology, relationships between social cognitions and behaviors.

Gray, Carol A. * 1971, (Emeritus); PhD, 1971, University of Washington; educational psychology, human development and cognition, school psychology.

Grossman, Pamela * 1987; PhD, 1988, Stanford University; research on teaching and teacher education, teacher knowledge, and qualitative research methods.

Hansen-Krening, Nancy M. * 1974; PhD, 1974, University of Oregon; reading/language arts.

James, William H. 1979, (Research); PhD, 1979, University of Massachusetts; educational psychology, adolescent development and drug prevention, intervention, and treatment.

Jones, Diane Carlson * 1996; MA, 1969, University of Texas (Austin); MA, 1977, PhD, 1980, Wayne State University; development of social-cognitive/emotional competencies and peer relations, especially friendships.

Kelly, Samuel E. 1970, (Emeritus); MA, 1960, Marshall University; PhD, 1971, University of Washington; educational leadership and policy study, higher education.

Kerdeman, Deborah * 1990; MA, 1988, PhD, 1991, Stanford University; philosophy of education, philosophy of social inquiry, and hermeneutics.

Nolen, Patricia A. * 1970, (Emeritus); PhD, 1970, University of Washington; school psychology/human development and cognition.

Nolen, Susan B. * 1990; PhD, 1986, Purdue University; development of students' achievement motivation and learning strategies.

Ostrander, Kenneth H. * 1968; EdD, 1968, University of Tennessee; educational administration.

Schwartz, Ilene Sharon * 1991; PhD, 1989, University of Kansas; early childhood, classroom-based interventions, and applied behavior analysis.

Smith, John P. * 1969; EdD, 1969, Stanford University; science education.

Sulzbacher, Stephen 1976, (Adjunct); MA, 1964, Hollins College (Virginia); PhD, 1971, University of Washington; psychiatry and behavioral sciences.

Taylor, Catherine S. * 1991; MS, 1978, PhD, 1986, University of Kansas; educational psychology.

Thalberg, Stanton P. * 1965, (Emeritus); PhD, 1964, University of Iowa; school psychology.

Valadez, James R. * 1996; PhD, 1990, University of California (Santa Barbara); sociology of education, social and cultural influences that shape student education/career decisions.

Valencia, Sheila Denise W. * 1987; PhD, 1978, University of Colorado (Boulder); reading remediation, comprehension, instruction and assessment.

Vasquez, James A. * 1975, (Emeritus); PhD, 1973, University of California (Los Angeles); learning (minority youth)/bilingual education.

Wineburg, Samuel S. * 1989; PhD, 1990, Stanford University; educational psychology, cognitive psychology of school subjects, historical cognition.

Zumeta, William M. * 1985, (Adjunct); PhD, 1978, University of California (Berkeley); public management, policy analysis, education and workforce policy.

Assistant Professors

Anderson, Andrea 1996, (Research); PhD, 1991, University of Washington.

Antony, James Soto 1995; PhD, 1996, University of California (Los Angeles); college student aspirations and college faculty research.

Bashey, Husain Ismail 1968; MA, 1955, Bombay University (India); MA, 1960, MacMurray College; PhD, 1975, University of Oregon; counseling.

Beadie, Nancy Elizabeth * 1993; PhD, 1989, Syracuse University; history of education.

Brown, Sharan E. 1987, (Research); PhD, 1991, University of Washington; educational leadership and policy studies, school law and education.

Cheney, Douglas A. * 1989; PhD, 1992, University of Washington; education, treatment and support of students with behavioral/learning disabilities.

Herrenkohl, Leslie R. * 1996; PhD, 1995, Clark University; cognitive and social processes of students in preschool and elementary school settings.

Janko, Kathleen S. * 1989; MS, 1984, PhD, 1991, University of Oregon; early childhood special education.

Mazza, James J. * 1996; MS, 1990, PhD, 1993, University of Wisconsin; educational psychology/child and adolescent mental health.

Mukhopadhyay, Swapna * 1991; PhD, 1989, Syracuse University; curriculum and instruction.

Nelson, Mary Lee * 1990; PhD, 1989, University of Oregon; counseling, interpersonal theory, process research, supervision, gender issues.

Plecki, Margaret L. * 1994; MS, 1976, University of Illinois; PhD, 1991, University of California (Berkeley); school finance, economics of education, policy analysis, school choice, study of education reform.

Portin, Bradley S. 1995; MEd, 1987, Seattle Pacific University; DPhil, 1995, Oxford University (UK); school administration/educational leadership.

Smith, Albert J. 1988, (Research); PhD, 1983, University of Washington; educational leadership and policy studies, director of Center for the Study and Teaching of At-Risk Students.

Stage, Scott A. * 1995; MS, 1988, PhD, 1991, Florida State University; educational psychology.

Taylor, Edward Jr. * 1995; MA, 1983, Gonzaga University; PhD, 1994, University of Washington; leadership, critical theory and discourse concerning race in education and society.

Windschitl, Mark A. * 1996; MS, 1993, PhD, 1995, Iowa State University; area of curriculum and instruction, use of technology in learning environments, constructivism.

Senior Lecturer

Bamburg, Jerry D. * 1985; EdD, 1989, University of Washington; educational reform, organizational change.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Education Curriculum and Instruction

EDC&I 324 Physical Education and Health in the Schools (2) Techniques and procedures for teaching physical education and health in elementary and secondary schools. For students in Teacher Education Program. Credit/no credit only.

EDC&I 341 The Teaching of Art in the Secondary School (3) For majors in secondary art education planning to teach on the junior or senior high school level.

EDC&I 353 Teaching in the Elementary School (3) Emphasizes selected teaching modes; lesson planning; classroom management procedures; grouping to accommodate pupils with special needs; utilization of learning resources; evaluation of teaching. Attention also given to school culture.

EDC&I 354 Teaching in the Secondary School (3) Development of basic skills in instructional methods, lesson planning, classroom management procedures, evaluation of teaching. Attention also given to school culture.

EDC&I 355 Language Arts in the Elementary School (3) Hansen-Krening, Valencia Basic course in planning and teaching elementary language arts: listening and speaking, written composition, handwriting, spelling, creative and practical writing.

EDC&I 356 The Teaching of English (3) Combines theoretical understanding of teaching with specific techniques and materials for literature, language, composition, and mass media at the secondary level; coordinated with concurrent experience in schools.

EDC&I 357 The Teaching of Speech (3) Staton Special methods course in the teaching of speech communication at the elementary and secondary levels.

EDC&I 360 Reading in the Elementary School (3) Basic course in methods, techniques, and materials used the teaching reading through decoding, comprehension, strategies, and literature in primary and intermediate grades.

EDC&I 424 Multiethnic Curriculum and Instruction (3) Banks, Gay Primarily for preservice and in-service teachers who have little or no previous exposure to issues related to ethnicity and schooling. Designed to help teachers better understand the school's role in the ethnic education of students and acquire the insights, understandings, and skills needed to design and implement curricular and instructional strategies that reflect ethnic diversity.

EDC&I 425 Instructional Strategies for Minority Students (3) Designed to equip educators with appropriate skills in effective teaching of culturally and socioeconomically different students. Attention is directed to understanding how these students differ from mainstream youth and what the implications are for instructional strategies in the classroom.

EDC&I 434 Introduction to Computers in the Classroom (3) Overview of the uses of computers in education. Uses of computers in instruction, classroom management (gradebooks, utilities), evaluation of software, overview of programming, and word processing. Prior experience not required.

EDC&I 436 Design and Authoring of CAI (3) *Winn* Introduction to the design of computer-assisted-instructional programs. Types of learning, characteristics of effective instruction. Students design and produce CAI programs using authoring systems for computers. Offered: jointly with T C 436.

EDC&I 437 Uses of Computer Application Packages in Schools (3) Introduction to the instructional and management uses of application programs. Topics may include: databases, spreadsheets, word processing, graphics packages, graphing utilities, telecommunication, desktop publishing. Emphasis is on K-12 setting. Prerequisite: EDC&I 434.

EDC&I 440 Gender and Education (5) I&S Gender bias, discrimination, and gender-equity efforts in education. Includes curriculum instruction, instructional materials, testing, counseling, athletics, teacher education, educational employment issues, and sexual harassment. Relevant federal and state laws, court decisions, and strategies for promoting gender equity also addressed. Recommended: WOMEN 200 or SOC 110. Offered: jointly with WOMEN 415.

EDC&I 443 Improvement of Teaching: Elementary School Music (3) Advanced studies in the teaching of music in the elementary school. For experienced teachers.

EDC&I 453 Teaching the Bilingual-Bicultural Student (3) Educational needs of bilingual students: research findings, special programs, materials, and methodologies that bilingual-bicultural education can provide to meet those needs. Cultural combinations of bilingual populations in American culture; historical, social, and linguistic factors affecting their K-12 education.

EDC&I 454 Cooperative Learning in the Classroom (3) Theory and research on cooperative learning and current practices of managing such learning. Team learning activities and opportunities to plan and try out lessons and materials using several different cooperative strategies. Credit/no credit only.

EDC&I 455 The Language Arts: Instructional Problems and Practices in the Elementary School (3) Hansen-Krening, Valencia Study of important and recent research in elementary school language arts and consideration of its practical implications for teaching. For experienced teachers.

EDC&I 456 Workshop in Instructional Improvement: Language Arts (1-6, max. 15) Individual or group study projects on the improvement of instruction in language arts.

EDC&I 457 Methods in Teaching English as a Second Language (3) Prepares preservice and in-service teachers to teach English as a second language and to meet the educational and linguistic needs of students who have little or no English language skills. Emphasis on a survey of first- and second-language acquisition research and its educational implications, as well as instructional strategies consistent with the audiolingual, cognitive, and creative construction approaches to second-language learning. Includes diagnostic-prescriptive strategies for classroom application.

EDC&I 459 Workshop in Instructional Improvement: Reading (1-6, max. 15) Projects on the improvement of instruction in reading. For experienced teachers and students in Teacher Education Program.

EDC&I 460 The Teaching of Reading (3) Hansen-Krening, Valencia Improvement of teaching reading in the elementary school, including comprehension and decoding, reading in the content fields, motivation of voluntary reading and teaching of literature. For experienced teachers and students in Teacher Education Program.

EDC&I 461 Materials for Teaching Reading (3) *Hansen-Krening, Valencia* Designed to provide acquaintance with materials used in the teaching of reading. Trade books and materials from content areas are examined.

EDC&I 462 Reading in the Secondary School (3) Standal Teaching of reading in the secondary schools, including vocabulary development, comprehension, reading in the content fields, and organization of reading programs at the secondary level. Teaching experience desirable.

EDC&I 463 Hands-On Science for Elementary School Teachers (5) Offers prospective and practicing teachers an opportunity to learn science through the hands-on teaching methods recommended for teaching science at the elementary level. Offered: jointly with MBT 463.

EDC&I 464 Educating Native-American Youth (3) Assists students in understanding the North American Indian child from cultural, socioeconomic, and psychological points of view. Provides opportunities for the student to apply knowledge and skills gained in other courses to prepare programs and learning

aids relevant to the educational situation of the Indian

EDC&I 465 Social Studies Education: Elementary School Programs and Practices (3) Banks, Kaltsounis, Parker Stresses curriculum patterns, instructional procedures, resource materials, and the selection of content in social studies. For elementary and middle school teachers and students in Teacher Education Program.

EDC&I 466 Social Studies Education: Secondary School Programs and Practices (3) Kaltsounis, Parker Stresses curriculum patterns, instructional procedures, resource materials, and a selection of content in social studies for middle, junior, and senior high school teachers. For experienced teachers and students in Teacher Education Program.

EDC&I 467 Geography in the Social Studies Curriculum (3) I&S Discussion of the concepts and content of geography essential to effective social studies curricula. Offered: jointly with GEOG 467.

EDC&I 468 Workshop in Instructional Improvement: Social Studies (1-6, max. 15) Individual or group study projects on the improvement of instruction in social studies.

EDC&I 469 Educating the Black Inner-City Child (3) *Banks, Gay* Intensive analysis and review of the research and literature, both theoretical and empirical, relevant to curriculum patterns and programs designed especially for Black inner-city children. Special attention is given to the implications of the research reviewed for devising effective teaching strategies for Black inner-city children.

EDC&I 470 Science Education: Elementary School Programs and Practices (3) Smith, Windschitl Designed for classroom teachers with reference to the teaching and learning of science from kindergarten through grade 6. Emphasis is placed on objectives, methods, and materials as related to the concepts and processes of science.

EDC&I 471 Science Education: Secondary School Programs and Practices (3) Smith, Windschill Survey of the status and potential role of science in education; trends and their implications for the teaching of both biological and physical sciences in the junior and senior high schools; representative curricula and related teaching procedures; the psychology of concept formation and problem solving; and organization of science programs.

EDC&I 472 Environmental Education for Teachers (3) Smith, Windschitl Status, selected problems, and role of environmental education in program of elementary, middle, and junior high schools. Opportunity to examine and receive instruction in use of existing environmental education instructional materials. Instruction is in the spirit of inquiry/discovery.

EDC&I 473 Workshop in Instructional Improvement: Science (1-6, max. 15) *Smith, Windschitl* Individual or group study projects on the improvement of instruction in science.

EDC&I 474 Multi-Ethnic Studies: Methods, Content, and Materials (3) Banks, Gay Designed to help preservice and in-service teachers identify content and materials and devise methods for implementing ethnic studies programs and for incorporating ethnic content into regular K-12 social studies, language arts, and humanities curricula. Special attention is given to teaching about American Indians, Mexican Americans, African Americans, Asian Americans, Puerto Rican Americans, and White ethnic groups.

COLLEGE OF EDUCATION/COURSE DESCRIPTIONS 291

child

EDC&I 475 Improvement of Teaching: Elementary School Mathematics (3) Beal, Mukhopadhyay Designed for elementary teachers. Emphasis is placed on the contributions of research to the improvement of the teaching of mathematics in the elementary school. For experienced teachers.

EDC&I 476 Improvement of Teaching: Junior High School Mathematics (5) Beal, Mukhopadhyay Exploration of mathematical concepts for the purpose of improving the teaching of middle school mathematics.

EDC&I 477 Improvement of Teaching: Secondary School Mathematics (5) Beal, Mukhopadhyay Exploration of mathematical concepts for the purpose of improving the teaching of secondary-school mathematics. For experienced teachers.

EDC&I 478 Special Topics in Mathematics for Teachers (2-9) NW Study of selected areas of mathematics. Designed for the improvement of teachers of mathematics. Offered: jointly with MATH 497.

EDC&I 479 Workshop in Instructional Improvement: Mathematics (1-6, max. 15) Individual or group study projects for the improvement of instruction in mathematics.

EDC&I 480 Introduction to Graduate Study in Educational Technology (3) Winn Introduction to the theoretical and practical aspects of educational technology. Introduces the history, conceptual orientation, and research of the field. The practical application of theory and research through the procedures of instructional design and development are also examined.

EDC&I 481 Introduction to Instructional Design (3) Students design a unit of instruction that relies upon a technology for its delivery. Steps in the design process discussed and practiced, and principles that guide selection of methods and materials applied.

EDC&I 482 Educational Technology in Schooling (3) Introduction to the application of technologies (computers, telecommunications, interactive video) in schools. Designed primarily for pre- and in-service teachers, but of interest to anyone involved in technology in education.

EDC&I 485 Workshop in Instructional Improvement: Educational Communication and Technology (2-6) Kerr Individual or group study projects on the improvement of instruction through use of educational communication and technology.

EDC&I 488 Educational Technology and Learning in Alternative Settings (3) How educational technology can be used to encourage learning in nonschool environments, such as museums, radio and television broadcasts, parks and recreation centers, and distance education programs. Students investigate one of these areas and prepare a project.

EDC&I 494 Workshop in Improvement of Curriculum (1-6, max. 15) Stresses the application of procedures for curriculum development, maintenance, and evaluation. Opportunities furnished to develop and perfect strategies for program development with occasions given to utilize the strategies in master plan and materials preparation for simulated or real school situations. Specific focus of workshop is determined by instructor or by arrangement with district.

EDC&I 495 Workshop in Improvement of Teaching: Selected Topics, Issues, or Problems (1-6, max. 15) Individual or group projects to help teachers adapt instruction to selected topics, issues, or problems and to identify the approaches and instructional resources that provide the soundest learning experiences.

EDC&I 496 Workshop in Instructional Improvement (2-6) Individual or group study projects on the improvement of instruction with attention to designing instructional plans.

EDC&I 497 Dealing Effectively with the Disruptive Student (3) Several approaches to discipline. Using research, theory, and practice, participants develop individual action plans for classroom management, create formats to identify disruptive behavior, develop strategies for intervention of disruptive behavior, and devise means for evaluating the effectiveness of teacher interventions. Credit/no credit only.

EDC&I 499 Undergraduate Research (2-5) Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program.

EDC&I 500 Field Study (1-10) Individual study of an educational problem in the field under the direction of a faculty member. Prerequisite: approved plan of study and permission of the instructor must be filed in the Office of Curriculum and Instruction in the College of Education.

EDC&I 505 Seminar in Curriculum and Instruction (1-3, max. 15) Seminar on advanced topics in curriculum and instruction. Critical examination of current research and practice. Content varies, check quarterly Time Schedule for topics to be covered. Prerequisite: permission of instructor.

EDC&I 524 Seminar in Teacher Education (3, max. 6) Gehrke, Grossman Focus on recent research, issues, and proposals for future development in teacher education, certification, and continuing professional growth. Alternate year offering focuses on either preservice or inservice issues. Prerequisite: permission of instructor.

EDC&I 530 Seminar in Analysis of Approaches for Teaching Reading (3) Valencia Designed to aid experienced teachers who possess background in the teaching of reading, this course presents a variety of approaches and actual analysis of approaches. Prerequisite: teaching experience and a basic course in the teaching of reading.

EDC&I 531 Seminar: Analysis of Reading Materials (3) Valencia Students formulate and apply criteria for assessing materials, with emphasis on linguistic, cultural, and psychological factors; instruction effectiveness, interest level; and educational objectives. Prerequisite: teaching experience and one basic course in the teaching of reading.

EDC&I 532 Seminar in Research in Reading (3) Standal, Valencia Primary focus on those aspects of the reading process that are of concern in a developmental reading program. Emphasis is on research design, evaluation of research, and research findings dealing with factors influencing reading ability, problems in skill development, and recreational reading. Course work includes group and individual analysis of studies with attention to research design and measurement. Prerequisite: permission of instructor.

EDC&I 533 Seminar: Conducting Research in Reading (3, max. 6) *Standal* Students design and conduct original research studies in the field of reading. Emphasis on research rationale, choice of productive research types, and reporting of research results and implications. Prerequisite: 532.

EDC&I 534 Seminar in the Reading of Literature (3) Hansen-Krening Reading of literature and its effect on reading skills, language development, social values, and literary judgment of children and adolescents. Emphasis on analysis of research in these areas and on the development of action research designed to study response to literature. Prerequisite: one 400- or 500-level education curriculum and instruction course in reading or language arts or one graduate course in literature for children or young adults. EDC&I 535 Seminar: Conducting Research in Response to Literature (3, max. 6) Hansen-Krening Students design, conduct, and interpret original research studies in the field of reading literature within the context of the school curriculum. Emphasis on the analysis of literary content and structure and the relationship of those qualities to the literary experence. Prerequisite: 534.

EDC&I 541 Seminar in Bilingual Education: Organization and Structure (4) Study of the structure and organization of bilingual programs. Includes study of the developmental and organizational factors affecting bilingual education. Assists graduate students in reviewing the historical antecedents in bilingual education and in developing a personal philosophy about bilingual education.

EDC&I 542 Seminar in Bilingual Education: Instructional Foundations and Issues (4) Study of the theoretical foundations and instructional implications of psychology and linguistics as they apply to bilingual education. Assists graduate students in exploring learning styles of bilingual children and in becoming familiar with the crucial issues in bilingual education.

EDC&I 543 Seminar in Bilingual Education: Instructional Strategies (4) Study of instructional factors affecting bilingual education. Particular emphasis is given to research related to the variables involved in teaching in a bilingual environment. Assists graduate students in exploring instructional methodologies and formats as they apply to bilingual education and in becoming familiar with the current issues in bilingual education.

EDC&I 550 Educational Technology Research (3) Winn Analysis, critique, and practical experience with research studies of all types (experimental, ethnographic, evaluation) concerning questions of interest to educational technologists. Prerequisite: 480, a research methods course, or permission of instructor.

EDC&I 555 Educational Futures (3) Hunkins Concept of alternative futures stressing manageability of the future. Attention is given to current and future events that can or might impact education. Basic future studies methods are considered with opportunities to apply such methods within educational arena. Prerequisite: prior graduate course work or experience in education.

EDC&I 556 Elementary School Curriculum (3) *Gay, Gehrke, Hunkins* Study of elementary school curriculum, its design, rationale, and delivery. Current trends and issues affecting elementary school curriculum analyzed.

EDC&I 558 Secondary School Curriculum (3) *Gay, Gehrke, Grossman, Hunkins* Systematic analysis of current curriculum practices, with particular emphasis on the social and historical forces affecting secondary-school curriculum.

EDC&I 559 Principles and Procedures of Curricu-Ium Development (3) *Gay, Gehrke, Grossman, Hunkins* Intensive study of basic principles and procedures utilized in development of curricula. Participants have opportunities to apply such procedures in class activities. Attention given to curriculum foundations.

EDC&I 561 Seminar in Language Arts (3) Hansen-Krening Study of language with special attention to research pertaining to the social context of language in the classroom. Course work includes group and individual analysis of language arts studies with attention to research design and measurement. Prerequisite: 455.

EDC&I 562 Seminar in Reading and Language Arts: Secondary Emphasis (3) *Standal* Study of recent research in listening, oral language, reading, and written language, emphasizing psychological and interrelated aspects. Prerequisite: permission of instructor.

EDC&I 563 Current Issues in Language Arts Education (1-3, max. 6) Hansen-Krening Discussion of problems and issues of current interest and importance in language arts education. Prerequisite: 561.

EDC&I 565 Seminar in Social Studies Education: Elementary Emphasis (3) Kaltsounis Intensive study of the social studies curriculum, with particular emphasis on current literature and research. Prerequisite: 465 or equivalent.

EDC&I 566 Seminar in Social Studies Education: Secondary Emphasis (3) Kaltsounis Intensive study of the social studies curriculum, with particular emphasis on current literature and research. Prerequisite: 466 or equivalent.

EDC&I 567 Current Issues in Social Studies Education (1-3, max. 6) *Parker* Discussion of problems and issues of current interest and importance in social studies education.

EDC&I 569 Educating Ethnic Minority Youths (4) Banks Intensive analysis and review of the research and curricular programs related to the social, psychological, and political factors that influence the school experiences of ethnic minority youths. Special attention given to instructional and curricular programs for African-American, American-Indian, Mexican-American, Puerto Rican-American, and Asian-American students. Prerequisite: graduate standing or permission of instructor.

EDC&I 570 Seminar in Science Education: Elementary Emphasis (3) Smith, Windschitl Investigation of curriculum and instruction in science at elementary-school levels, with particular emphasis on current literature and research. Prerequisite: 470 or equivalent.

EDC&I 571 Seminar in Science Education: Secondary Emphasis (3) Smith, Windschitl Investigation of curriculum and instruction in science at secondary-school levels, with particular emphasis on current literature and research. Prerequisite: 471 or equivalent.

EDC&I 572 Current Issues in Science Education (1, max. 6) Smith, Windschitl Discussion of topics and problems of current interest and importance in science education. Prerequisite: graduate standing.

EDC&I 573 School Reform and Multicultural Education (3) *Gay* Similarities and differences among the visions, goals, and strategies of proposals for school reform and multicultural education are analyzed; implications for practice in curriculum and instruction are deduced from these analyses. Prerequisite: one course in multicultural education or permission of instructor.

EDC&I 574 Race, Gender, and Knowledge Construction: Curriculum Considerations (3) Banks Using historical and contemporary perspectives, considers ways in which knowledge related to race and gender has been and is constructed and the implications of ways in which knowledge is constructed for curriculum reform and teaching. Prerequisite: one course in ethnic studies, multicultural education, or women studies or permission or instructor.

EDC&I 575 Seminar in Mathematics Education: Elementary Emphasis (3) *Beal, Mukhopadhyay* Investigation of curriculum and instruction in mathematics at the elementary-school level; review of research and preparation of proposals. Prerequisite: graduate standing.

EDC&I 576 Seminar in Mathematics Education: Secondary Emphasis (3) Beal, Mukhopadhyay Investigation of curriculum and instruction in mathematics at the secondary-school level; review of research and preparation of proposals. Prerequisite: graduate standing. EDC&I 577 Current Issues in Mathematics Education (1, max. 6) *Beal, Mukhopadhyay* Discussion of problems and issues of current interest and importance in mathematics education. Prerequisite: graduate standing.

EDC&I 578- 579 Qualitative Methods of Educational Research (3-3) Survey of various qualitative research methods from a variety of disciplinary perspectives (anthropology, cognitive psychology, policy analysis and evaluation) with intensive experience in collection, analysis, and reporting of data. Prerequisite: second year doctoral standing and one course in statistics. Students must enroll for both quarters. Offered: jointly with EDPSY 586-587.

EDC&I 580 Seminar in Educational Communication and Technology (3) Kerr, Winn History, basic assumptions, and current controversies of the field. Discussion of appropriate research, theory, and practice for educational technologists. Prerequisite: 480 or permission of instructor.

EDC&I 581 Management of Educational Technology Programs (3) Factors contributing to effective management of programs incorporating educational technology and microcomputers. Manager's role as agent of instructional change and processes leading to successful adoption and long-term implementation of a new instructional system. Prerequisite: 480 or permission of instructor.

EDC&I 582 Seminar on Instructional Systems Development (3) Critical analysis of processes involved in the development of instructional systems. Prerequisite: 481 or permission of instructor.

EDC&I 583 Message Design (3) *Kerr* Research and theory on design of instructional messages in various modalities (visual, auditory), and in various formats (pictorial, verbal, graphic). Prerequisite: 480 or permission of instructor.

EDC&I 584 Instructional Graphics for Microcomputers (3) Winn Study of current research on instructional uses of computer graphics. Development, selection, and application of design principles for graphically-based instructional and training programs. Prerequisite: 436, 481.

EDC&I 585 Technology and the Culture of Education (3) Kerr, Winn Social impact of technology on education in the United States and elsewhere: social, political, and cultural factors affecting educational communication and technology; roles and relationships among instructors and learners; appropriate technology in developing countries; technology's long-term influence on thought and values. Prerequisite: 480 or permission of instructor.

EDC&I 586 Current Issues for Computers in the Classroom (1, max. 6) Addresses many of the current topics in computer-related education. Issues and research related to computer uses in curriculum, instruction, and management of instruction.

EDC&I 587 Design and Application of Interactive and Immersive Instructional Systems (3) Theoretical and empirical questions involved in design of interactive instructional systems using such technologies as virtual reality and CAI. Specific problems inherent in design of complex learning environments: immersion, control, structure, sequence of experiences, navigation, learner guidance. Educational uses of systems. Prerequisite: 481 or 583, 436, or permission of instructor.

EDC&I 588 Seminar: Computers in Education (3) *Kerr, Winn* Provides opportunity for graduate students to analyze, discuss, and design research in areas of computers in education. Includes historical development of research in this area as well as a platform for the development of research proposals and refinement of ongoing research. Prerequisite: 434 or 436. EDC&I 589 Current Issues in Educational Communications (1, max. 9) Kerr, Winn Discussion of problems and issues of current interest and importance in the field of educational communications. Serves also as a forum for discussion of doctoral research. Designed for master's and doctoral candidates in educational communications. Credit/no credit only. Prerequisite: graduate standing.

EDC&I 590 Seminar in Elementary Education (3) *Hunkins* Exploration of the philosophy, history, purposes, curriculum, methods, and school organization of elementary education. Prerequisite: elementaryschool teaching experience, 556.

EDC&I 591 Seminar in Curriculum Research (3) Gehrke, Hunkins Analysis of past and current empirical, historical, ethnographic research, and philosophical analysis of the curriculum field. Studies considered include research in curriculum development, the curriculum plan, contextual characteristics, and factors related to curriculum participants. Group and individual analyses focus on theory generation and practical applications of research. Prerequisite: 559 or permission of instructor.

EDC&I 592 Seminar in Secondary Education (3) *Gehrke, Hunkins* Research and study of secondary education. Primary focus on factors involving change in secondary-school curriculum and organization. Prerequisite: 558.

EDC&I 593 Seminar in Curriculum: Theory and Practice (3) *Gay, Gehrke, Hunkins* Investigation of curriculum theory and practice. Consideration is given to theoretical writings that address the relationships between various curricular variables. Theoretical positions are related to curricular practices and innovations. Prerequisite: 559.

EDC&I 594 Seminar in Curriculum: Issues, Systems, Models (3) *Gay, Gehrke, Hunkins* Emphasis on the current approaches to curriculum and curriculum innovation. Attention is given to major educational issues as they affect curricular activity. Prerequisite: 559.

EDC&I 595 Seminar in Analysis of Teaching (3) *Gay, Gehrke, Grossman, Hunkins* Investigation of the ways in which classroom teaching has been analyzed from a variety of disciplinary perspectives. Focus on methods, findings, and implications of research on teaching. Prerequisite: teaching experience.

EDC&I 596 Seminar in Strategies of Instruction (3) *Gay, Gehrke, Grossman, Hunkins* Various instructional models applicable to all levels of schooling. Theoretical and philosophical bases for these instructional models are considered.

EDC&I 597 Curriculum Evaluation Seminar (3, max. 6) Smith, Windschitl Focuses on the evaluators' roles, evaluation theory and models, and selected curricular evaluations. Examples are drawn from the several disciplines commonly offered in the elementary and secondary schools. Students are expected to identify an evaluation problem and to develop an evaluation design that can be implemented as a practical solution to the problem. Prerequisite: 559 and permission of instructor.

EDC&I 599 Independent Studies in Education (*) Independent studies or readings of specialized aspects of education. Prerequisite: permission of instructor.

EDC&I 600 Independent Study or Research (*) Prerequisite: permission of instructor.

EDC&I 601 Internship (1-10) Credit/no credit only. Prerequisite: graduate standing and permission based on approval of proposal submitted during quarter preceding the internship.

Educational Leadership and Policy Studies

EDLPS 444 Constitution and American Public Education (3-6) I&S Emphasis on the principles, processes, and content of constitutional law in an effort to provide new insights and new tools with which school administrators and teachers may examine questions involving political and civil rights in the United States, especially as these affect the conduct of education. Specific topics on constitutional freedom include the obligation to go to school; legal controls over curriculum, teachers, and students; and racial integration and equal financing of public schools. Open to law students and to nonlaw students enrolled as graduate students or as upperdivision undergraduates. Credit/no credit only. Offered: jointly with LAW 444.

EDLPS 479 Crucial Issues in Education (3) Selected educational issues, policies, and contexts. Evolution of the American education enterprise, legal issues, professionalism, finance, and other vital educational concerns.

EDLPS 496 Workshop: Education Programs and Problems (1-6, max. 12) Study of such topics as planning, development, supervision, organization, operation, or evaluation of current or emerging programs or problems in education.

EDLPS 499 Undergraduate Research (*) Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program.

EDLPS 501 Introduction: Leadership Beyond the Classroom (3-6) First course in principal certification program; explores Washington state laws, legal principles, context of public schools, multicultural issues, changing population. Essential skills of leadership: communication, human relations, strategies for shared decision making, and dealing with conflict. (Open only to students admitted to the EDLPS Principal/Program Administrator Preparation Program.)

EDLPS 502- 503- 504 Leadership Core ([3-6]-[3-6]-[3-6]-[3-6]]) Topics include moral dimensions of leadership; modes of inquiry; organizational theory and change; history of educational reform; curriculum deliberation and instructional leadership and supervision; school-centered inquiry and decision-making; policy, planning, and program evaluation; issues on diversity and multicultural education; American and Washington State school law; school finance and resource allocation; school-community relations. Instruction occurs in units and seminar throughout the academic year. Prerequisite: admission to Principal/ Program Administrator Preparation Program.

EDLPS 505 Transition to Leadership (3-6) Development and administration of systems for selection, evaluation and clinical supervision of certificated and classified personnel. Focuses on leadership models and transition to a leadership role, including opening a school or program and dealing with student/school crises. (Only for students admitted to the EDLPS Principal/Program Administrator Program.)

EDLPS 507 Reflective Seminar (1-6) Integration of theory and internship experience; group process laboratory and peer feedback and review of written work, oral presentations, and journals. Reading and discussion of crucial issues. (Only for students admitted to the EDLPS Principal/Program Administrator Preparation Program.) Credit/no credit only.

EDLPS 509 Planning, Organizing, and Decision Making (3) Application of principles utilized in planning, organizing, and decision making in districts and schools. Formation of policy and procedures; formal and informal organization; power, authority, and responsibility; utilization of people, time, and space. **EDLPS 510** School Finance (3) Financial practices and problems in districts and schools considered, including state and federal support plans, school plant planning, school business management, resource allocation, and budgeting and educational accountability.

EDLPS 514 Washington School Law (3) Overview of Washington state specific legal provisions affecting the operations and management of public schools, including school organization and operations, school finance, separation of church and state, school employment, student conduct, discipline and rights, equity, intergovernmental agreements, and student health and safety. Prerequisite: 562 or equivalent.

EDLPS 516 Special Education and the Law (3) Overview of major state and federal laws affecting the operation and management of special education programs in public schools. Emphasis upon procedural and substantive rights of children with disabling conditions. Offered: jointly with EDSPE 504.

EDLPS 518 Reflective seminar: The Superintendency (1-6) Integration of theory and internship experience. Readings and discussion of crucial issues, presentations by local school superintendents: district budgeting processes, personnel, staff relations and collective bargaining, superintendent-board relations, bond issues, facilities planning, superintendent as instructional leader. Credit/no credit only.

EDLPS 519 Special Topics in Educational Leadership (1-4, max. 12) Readings, lectures and discussions pertaining to significant topics of special and current interest to educators. Focus is on issues of particular concern to K-12 administrators and other educators in leadership roles in districts and schools. Topics vary; check Time Schedule for topic(s) to be covered.

EDLPS 520 Education as a Moral Endeavor (3) An exploration of fundamental questions that have faced educational leaders in the past and most likely will continue to face them in the future. Foundational studies in history, philosophy, and sociology provide the basis for discussion and writing about these fundamental questions. Credit/no credit only.

EDLPS 521 Philosophy of Education (3) Philosophy of education considered as a study of the conceptual basis for educational policy and practice. Emphasis on relationships between enduring educational problems and fundamental philosophic issues; concepts that feature centrally in educational discourse; and conceptual analysis as a means for clarifying decisions regarding educational policy and practice.

EDLPS 522 Contemporary Philosophies of Education (3) Intensive study of the writings of selected contemporary philosophers of education.

EDLPS 523 Analysis of Educational Concepts (3) Selected concepts central to conduct and understanding of education.

EDLPS 524 Seminar in Philosophy of Education (3, max. 6) Philosophical examination of ways in which education might be studied. Uses and limits of conventional scientific approaches in education inquiry. Consideration of alternatives.

EDLPS 525, 526 Educational Inquiry (3, 3) General survey of epistemological issues underlying the several schools of thought or families of inquiry. Overview of various methods used in conduct of educational inquiry, examples of ways those methods are typically used, and exploration of strengths and weaknesses of those methods. Discussion throughout is in terms of assumptions regarding the nature of knowledge and purposes of inquiry. Must be taken in sequence. Credit/no credit only. Prerequisite: doctoral status in education.

EDLPS 530 History of Education (3) Historical survey of education. Emphasis on relationship between idea and practice. Topics include education and colonialism, formation of state school systems, progressive education, equal educational opportunity, changes in textbooks and curricula, education and social structure, and education in the history of cultures.

EDLPS 531 History of American Higher Education (3) Examination of the historical development of the American higher education enterprise, including precolonial origins. Includes attention to the colonial colleges, the rise of new institutions in the nineteenth century, and the further development of American colleges and universities in the twentieth century. Leaders in these developments are identified.

EDLPS 532 Seminar: American Education in the Twentieth Century (3, max. 6) Selected problems in American education over the last century, with special emphasis on contemporary issues and trends.

EDLPS 535 Historical Inquiry in Education Research (3, max. 6) Methods and critique of historical research in education. Examination of landmark works in education history and historiography. Hands-on experience framing historical questions, finding historical sources, using historical evidence, substantiating historical claims, and addressing issues in the history of education.

EDLPS 536 Historical Analysis of Educational Issues (3) Analysis and interpretation of the history of education in its broadest sense: the transfer of culture across generations. Examination of the problems of evidence and interpretation with which the authors of exemplary works in the history of education struggled.

EDLPS 540 Sociology of Education (3) Examination of education and educational institutions by using the major conceptual tools of sociology. Emphasis on sociological thought and findings that have particular bearing on the understandings and judgments of educators.

EDLPS 541 Comparative Education (3) International efforts in education, including the role of the United States in overseas programs. Analysis of the relation of education and society in foreign areas, stressing social change and conflict. Regions of the world considered in the course vary from one offering to another.

EDLPS 542 Seminar in Educational Sociology (3) Application of sociological principles to school problems; individual problems and investigations. For teachers, administrators, and those using educational sociology as a field for advanced degrees.

EDLPS 543 Seminar: Research in Educational Sociology (3) Theory, concept, and method of sociological inquiry as applied to problems in education.

EDLPS 549 Special Topics in Educational Studies (1-4, max. 12) Readings, lectures, and discussions pertaining to significant and enduring ideas in the philosophy, history and sociology of education. Specific topics are critically examined in light of contemporary problems in education. Topics vary; check Time Schedule for topic(s) to be covered.

EDLPS 550 The Dynamics of Educational Organizations (3) Exploration of the literature in organizational theory and leadership, the assumptions that underlie the development of various approaches to organizational theory and how these approaches are applied, and an acquaintance with different conceptual frames that can be used to determine how to improve and change organizations. Credit/no credit only.

EDLPS 551 Foundational Studies in Complex Organizations (3) Examination of conceptual and theoretical bases for complex organizations, characterized by problematic goals, knotty decision-making processes, and fluid participation. Impact of information, power, beliefs, resources, organizational structure, and environment. Although issues discussed are generic, examples focus on educational organizations.

EDLPS 552 Organizational Change in Education (3) Change and innovation in educational organizations. Theoretical approaches include sociopsychological, rational planning, political perspectives, and those associated with notion of organized anarchies. Specific topics related to change and innovation (e.g., roles of beliefs, symbols and norms, diffusion of innovations, and research issues).

EDLPS 553 Human Resources in Educational Organizations (3) Analysis of factors involved in human resource problems related to operation of educational organizations. Motivation, perception, communication, role analysis, and dynamics of groups are studied through use of cases and seminal literature.

EDLPS 560 Perspectives on Policy & Policy Making in Education (3) This course introduces a variety of theoretical perspectives that can be used to analyze policy content, processes and outcomes. Includes a consideration of the power and limits of policy and a discussion of the many ways people in different positions in organizations can influence policy. Credit/no credit only.

EDLPS 561 Education Policies and Leadership in Political Context (3) Systematic consideration of the structure and function of educational policies and problems of research in political context.

EDLPS 562 American School Law (3) Examination of persistent legal issues, including an analysis of how these issues are manifest in public policy debates.

EDLPS 563 Education, The Workforce, and Public Policy (3, max. 6) Examination of policy issues involving education, training, the economy, and the development of the nation's human resources. Relationship between education, training, and work, underutilized workers, race and gender discrimination issues, and the role of education and training in economic development. Offered: jointly with PB AF 571.

EDLPS 564 Seminar in Economics of Education (3) Current problems in school finance, including costs, ability to support schools, and financial implications of educational principles. The economics of public education. Problems of federal, state, and local school support. Financing capital outlay, research, and public relations.

EDLPS 565 Power and Politics in Organizational Leadership and Decisionmaking (3) Focuses on conceptual frameworks that can be used to analyze power-influence processes in complex organizations and research methods that are well-suited to the study of these processes. Opportunities to design studies of power relations and political processes are provided.

EDLPS 566 Education Policy Serving Disenfranchised Groups (3) This seminar examines programs and policies aimed at ameliorating conditions that face disenfranchised groups in contemporary K-12 schooling. Seminar members critically analyze the assumptions, design, and likely impact of these programs and policies on institutions and individuals. Designed for advanced doctoral students. Others admitted with permission of instructor.

EDLPS 567 Education Policy and the Improvement of Teaching and Learning (3) Examines connections between policies and classroom practice, in P-12 and higher education settings. Of particular concern is the capacity of policy to improve the quality of curriculum and instruction. Students design and critique policies, drawing on research and feedback from policymakers.

EDLPS 568 Policy Evaluation in Education (3) Examination of methods for evaluating educational policies across the educational continuum. Students design and conduct a policy evaluation which draws on the policy evaluation literature. Examination of the uses of policy evaluation information in shaping organization-decision making is also included.

EDLPS 579 Special Topics in Organizational & Policy Analysis (1-4, max. 12) Readings, lectures and discussions pertaining to significant topics of special and current interest to educators. Focus is on issues related to the analysis of educational organizations, policies, and policy making. Topics vary; check *Time Schedule* for topic(s) to be covered.

EDLPS 580 The American College and University (3) Introduction to contemporary United States higher education, with special emphasis on emerging trends, roles of the several kinds of institutions, the composition and character of student bodies and faculty, and the state coordination of colleges and universities.

EDLPS 583 Higher Education and the Law (3) Legal implications of university operations and an explanation of the legal and constitutional rights of students, faculty, and staff within the university. Special attention given to faculty employment and termination decisions; student protections, including due process; and university liabilities.

EDLPS 584 Academic Governance and Collective Bargaining in Higher Education (3) Explores the concept and operation of collective bargaining in higher education: its origin; the reasons for its growing popularity as a governance mechanism; the legal framework within which it operates; the rights, powers, and duties subsumed under its operation; and its relationship to the traditional form of faculty governance mechanisms.

EDLPS 585 Resource Allocation in Higher Education (3) After attention to the basic tools of economic analysis, focus is on application of those tools to specific topics in higher education (e.g., access, budgeting, finance and policies, and funding alternatives).

EDLPS 589 The Community College (3) Intensive study of the community college—its history and present and future status. Curriculum, instruction, financial, and governance issues are also discussed.

EDLPS 598 Special Topics in Higher Education (1-4, max. 12) Readings, lectures, and discussions pertaining to significant topics of special and current interest to educators. Focus is on issues related to education in community colleges, four-year colleges and universities. Topics vary; check for topic(s) to be covered.

EDLPS 599 Independent Studies in Education (1-10) Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed, and which with permission of the instructor, must be filed with the Office of Leadership & Policy Studies in the College of Education. Prerequisite: permission of instructor.

EDLPS 600 Independent Study or Research (*) Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed, and which with permission of the instructor, must be filed with the Office of Leadership & Policy Studies in the College of Education. Credit/no credit only. Prerequisite: permission of instructor. **EDLPS 601** Internship (1-4, max. 12) Name of faculty member responsible for supervising the student should be indicated on program of studies. Credit/no credit only. Prerequisite: permission of Supervisory Committee chairperson or graduate program adviser.

Educational Psychology

EDPSY 304 Educational Psychology (5) Human learning in the educational setting. Cognition, development, learning, motivation, affective processes, and socialization. Emphasis on skills in influencing classroom learning and discipline. Open to students in the Music Education program or by permission of instructor. Offered: Sp.

EDPSY 425 Reading Disability: Remedial Techniques (3) Evaluation of methods for diagnosing and minimizing reading retardation. Descriptions of in-class and clinical procedures. Prerequisite: EDC&I 360. Offered: Sp.

EDPSY 449 Laboratory in Educational Psychology (2-6) Special studies for counselors, teachers, administrators, and others concerned with student personnel and psychological services in schools and colleges. The course focuses on special topics that have either local or contemporary significance.

EDPSY 471 Neuropsychology of School Learning and Behavioral Problems (5) The microstructure, macrostructure, and structural and functional development of the brain are reviewed with a focus on the educational relevance of developmental neuropsychology. Four areas are covered: Hemispheric differences and integration; neurological soft signs, attention deficit, and hyperactivity; language, reading, and learning disabilities; and medical syndromes. Credit/no credit only. Offered: Sp.

EDPSY 490 Basic Educational Statistics (3) Measures of central tendency and variability, point and interval estimation, linear correlation, hypothesis testing. Offered: AWSp.

EDPSY 495 Introduction to Educational Measurement (3) Practical understanding of test reliability, validity, and derived scores as they apply to external educational assessments; concepts of criterion and norm-referenced testing; review of group administered norm-referenced and criterion-referenced tests and/or testing programs; test interpretation; issues and ethics in large scale assessment. Prerequisite: EDPSY 490. Offered: AS.

EDPSY 499 Undergraduate Research (*) Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program. Offered: AWSp.

EDPSY 500 Field Study (*) Individual study of an educational problem in the field under the direction of a faculty member. Prerequisite: approved plan of study and permission of the instructor must be filed in the Office of Educational Psychology in the College of Education. Offered: AWSp.

EDPSY 501 Human Learning and Educational Practice (3) Systematic examination of current research about human learning in educational settings, including the study of behavioral, information processing, social construction, and the developmental perspectives on learning. Offered: AWSp.

EDPSY 502 Developmental Foundations of Early Learning (3) Perceptual-motor, language, and overall cognitive development in children from birth through primary-school age. Emphasis on Piagetian and Vygotskian approaches to development with a special focus on the connections between learning and development. Field-based course projects may be required. Prerequisite: 501 or permission. Offered: Sp.

EDPSY 503 Theories of Intelligence (3) Reading and discussion of theoretical and research papers from the extensive literature on Piagetian, psychometric, and information processing conceptions of intelligence. A historical approach to the topic is followed by analysis of current writings on intelligence and its measurement. Credit/no credit only. Prerequisite: 501 and graduate status in education or psychology. Offered: alternate years; W.

EDPSY 506 Instructional Theory (3) Sources, current state, and utility of prescriptive instructional theories with emphasis upon theories having a potential for guiding the design of instruction. Prerequisite: 501 or equivalent. Offered: Sp.

EDPSY 507 Reading, Writing, and Arithmetic: Educational Assessment and Consultation (5) Students administer and interpret tests of reading, writing, arithmetic, and related developmental skills; integrate test, observational, interview, and portfolio information in staffings and written reports; and consult with teachers regarding educational interventions. Prerequisite: graduate standing in the school psychology specialization and permission of instructor. Offered: A.

EDPSY 508 Clinical Supervision-Practicum (2-6, max. 12) Practicum in supervising counseling, group counseling, diagnostic activities, and remedial academic therapy. Prerequisite: advanced graduate standing. Offered: AWSp.

EDPSY 509 Educational Issues in Human Development (5) Human development theories. Educational implications of theory, methodology, and application. Current research complements the historical antecedents of current practice. Age range covered varies as function of current issues in professional literature. Prerequisite: 15 credits in educational psychology or psychology. Offered: alternate years; W.

EDPSY 510 Educational Issues in Human Learning (3) Contemporary issues and trends in human learning, with a focus on reasoning within subjectmatter areas such as mathematics, history, and science. Prerequisite: 501 or equivalent. Offered: alternate years.

EDPSY 511 Seminar in Applied Educational Psychology (1, max. 6) Designed for graduate students in educational psychology. Applications of theoretical constructs to particular problems encountered in school counseling, practice.

EDPSY 512 Classroom Assessment Strategies (3) Development and evaluation of traditional, observational, essay, performance-based, portfolio assessments and grading models as they are used in classroom assessment; some review of current research on classroom-based assessment; classroom assessment ethics.

EDPSY 513 Instrument Development (3) Instrument development techniques including construct development, test and item specifications, item writing, planning for reliability and validity studies; ethics in test administration and interpretation. Intended for doctoral or masters students to develop instruments for their own research Prerequisite: 490 or equivalent.

EDPSY 519 Communication and Language in Young Exceptional Children (3) Review and discussion of theories of language acquisition as they relate to communication and language in young children. Review of research of language environments that relate to early literacy and education and how to use this information to modify environments for special needs children. Offered: jointly with EDSPE 521; A.

EDPSY 520 Psychology of Reading (3) Reviews current empirical research on cognitive processes in reading, including word and sub-word processes, syntax and comprehension, reading and perception,

word recognition, concept development and meaning in reading, psychology of reading interests and skills. Prerequisite: 501 or equivalent.

EDPSY 521 Psychology of Writing (3) Examines writing as a cognitive process and reviews current empirical research on writing, emphasizing primarily studies from a psychological perspective. Explores both developmental differences and individual differences in writing skills, together with instructional implications. Prerequisite: 501 or equivalent.

EDPSY 522 Reading Disability Clinic (3-5) Supervised practicum in diagnosis and remediation of reading disabilities. Prerequisite: EDTEP 532, 533 or equivalent; EDC&I 460 or permission of instructor.

EDPSY 524 Problem Solving and Critical Thinking in Education (3) Study of the classic and contemporary research literature concerned with human problem solving and critical thinking with emphasis upon applications to educational practice and further research. Prerequisite: 501 or equivalent.

EDPSY 525 Creativity and Education (3) Study of the classic and contemporary research literature about creativity with emphasis upon applications to educational practice, evaluation of strategies to promote creativity in the schools, and further research. Prerequisite: 501 or equivalent.

EDPSY 526 Seminar on Metacognition (3) Students read and discuss theoretical and research papers from the extensive literature on metacognition. Focuses on defining the concept of metacognition, establishing its range of applicability to educational matters, and becoming familiar with excellent examples of metacognitive research. Prerequisite: graduate status in education or psychology and permission of instructor. Offered: alternate years; Sp.

EDPSY 527 Transfer of Teaching (3) Students read and discuss a representative sample of theoretical and research papers from extensive literature on teaching to promote transfer of what students learn to non-teaching environments. Historical approach to the topic is followed by analysis of current writings on transfer. Credit/no credit only. Prerequisite: 501 and graduate status in education or psychology. Offered: alternate years; Sp.

EDPSY 528 Achievement Motivation in Education (3) Critical review of current research and major theories of achievement motivation in schools and other educational settings. Emphasis on the relationship of theories to the contexts and practice of education. Prerequisite: EDPSY 501 or permission of instructor. Offered: W.

EDPSY 531 Socialization of School-Age Children (3) Study of personal social development and behavior from preschool ages through preadolescence. Developmental theory and research are reviewed on the socialization influences of parents and peers and on such topics as aggression, emotional regulation, and social cognition. Prerequisite: 501 or equivalent. Offered: W.

EDPSY 532 Adolescence and Youth (3) Developmental processes and patterns examined with major theoretical and current research themes from behavioral sciences as applied to middle school and senior high students. Educational issues, social problems associated with adolescence in Western culture. Prerequisite: 501 or equivalent.

EDPSY 533 Current Research in Adolescence (3) Contemporary trends and patterns of adolescent research are examined with emphasis upon theoretical foundations, contrasting methodologies, and implications for further research. Exemplary studies and integrative reviews of research on adolescence are featured. Prerequisite: 532 and 591 or equivalents.

EDPSY 534 School Problems of Adolescence (3) Study of the classic, contemporary, and emerging school problems of school age youth with emphasis upon problem solving strategies for educators and associated youth service personnel. Includes problems of academic achievement, interpersonal relations, and social deviancy in the schools. Prerequisite: 532 or equivalent.

EDPSY 535 Education and the Highly Capable Learner (3) Examination of major issues and problems in study and nurturance of highly capable children and youth in the educational setting. Emphasis placed on contributions of theory and research to educational problem solving for multiple aspects of advanced human capacity. Prerequisite: 501 or equivalent.

EDPSY 536 Learning Variables of Minority Children: Instructional Implications (3) Provides students with data base regarding (1) four variables (language/dialect, cognitive style, locus of control, and motivational systems) that affect learning among minority students, and (2) teaching strategies appropriate for these cultural socioeconomic variables. No credit given for students who have completed EDC&I 425. Offered: ASp.

EDPSY 540 School Psychological Assessment (5) Study of assessment of human intelligence with supervised training in the administration, scoring, and interpretation of individual intelligence tests with emphasis on Stanford-Binet and Wechsler scales. Prerequisite: graduate standing in the school psychology specialization and permission of instructor. Offered: A.

EDPSY 541 Group Tests in Counseling (5) Emphasis on the utilization of objective measures in counseling. Prerequisite: 490 or equivalent. Offered: Sp.

EDPSY 542 Career Development (3) Emphasis on vocational development theory and research. Psychological, social, and economic determinants of vocational development and choice are examined as a basis for vocational counseling. Prerequisite: graduate standing or permission of instructor.

EDPSY 543 Facilitating Career Development (3) Theory and practice in exploring, self-identified strengths, interests, resources, and other considerations when developing career plans. Emphasizes career development in the schools. Offered: Sp.

EDPSY 544 Counseling (5) Emphasis on the theory and practice of counseling.

EDPSY 545 Prepracticum (3) Competency-based skills training for beginning counseling and school psychology students. Attending, listening, focusing, and intervening behaviors for use with adults and children. Introduction to theories of helping. Prerequisite: enrolled in school counseling or school psychology or permission of instructor. Offered: A.

EDPSY 546 Counseling Practicum (3) Supervised practice in counseling. Prerequisite: 545. Offered: WSp.

EDPSY 548 Educational Implications of Personality Theory (5) Study of personality development and personality theories with continuous attention to the meaning of these in educational practice, testing, and counseling. Prerequisite: 15 credits of psychology or educational psychology. Offered: A.

EDPSY 549 Seminar in Consultation Methods (3) Theory and practice of process consultation in educational settings. Field practice in teams with clients. Offered: W.

EDPSY 550 Family Counseling (3) Introduction to family counseling theory and practice, emphasizing family dynamics and communication analysis. Prerequisite: 544 or permission of instructor. Offered: W.

EDPSY 551 Group and Behavioral Intervention (3) Introduction to competency-based skills for beginning school psychology students. Includes basic processes of group management skills with children including group process in social skills training, problem-solving techniques, behavioral principles, and parent training. Prerequisite: 545 or course in counseling techniques or permission of instructor. Offered: Sp.

EDPSY 552 Multicultural Issues in School Counseling and School Psychology (3) Examination of multicultural issues as they relate to the delivery of services provided by school counselors and school psychologists. Theoretical and applied aspects emphasized and case study format utilized.

EDPSY 555 Seminar in Counseling Specialty (1-2, max. 6) Oriented toward the role of a counselor as a professional worker. Credit/no credit only. Offered: ASp.

EDPSY 561 Group Process Laboratory (3) Explores the theoretical concepts of group process with a special emphasis in how to conduct group process in school and agency settings. Offered: A.

EDPSY 562 Group Counseling in Schools (3) Provides students with the opportunity to co-facilitate groups in elementary, middle, and secondary schools, supplemented by weekly didactic presentations of counseling and guidance models. Prerequisite: 561 or permission of instructor. Offered: W.

EDPSY 564 Practicum in School Psychology (1-6) Practicum in appraisal and counseling, emphasizing diagnosis and counseling with behavior and learning disabilities, and focusing on techniques acquired in 540, 545, and 565. Offered: W.

EDPSY 566 Case Study Seminar (1, max. 4) Integrating theoretical concepts with practice/service issues. Cases selected for discussion represent a wide range of problems found in schools. Activities include group supervision and peer review. Offered: AWSp.

EDPSY 568 Seminar in Professional Issues and Ethics (2) Professional ethics codes and cases, history of counseling or school psychology, legal problems, credentialing issues, conditions of practice, continuing education, publishing, and presenting research papers. Credit/no credit only. Offered: W.

EDPSY 569 Seminar in Counseling Psychology Research (2) Methodological and professional issues related to research in counseling and psychological services. Counseling psychology research literature with focus on content and methods. Prerequisite: 591 or equivalent. Offered: A.

EDPSY 570 Introduction to School Psychology (2, max. 4) Current issues in professional psychology practice and research. Limited to graduate students in school psychology. Offered: A.

EDPSY 571 Educational Applications of Neuropsychology: Assessment and Intervention (5) Students observe and administer neuropsychological tests and plan and carry out educational interventions for children with neuropsychological disorders. Content focuses on various neuropsychological disorders for which school psychologists can provide assessment and consultation. Prerequisite: 540 or equivalent course in individual testing, and 471 or permission of the instructor.

ESPSY 572 Social-Emotional Assessment (3) Techniques in social-emotional assessment of school-aged children. Diagnostic systems including DSM IV and ICD-10 presented in conjunction with assessment techniques. Emphasis on integrative method for understanding social emotional assessment batteries and their test score interpretation. Prerequisite: school psychology or counseling student or permission of instructor. Offered: A. EDPSY 573 Psychological Assessment of Preschool Children (3) Students learn to give and interpret tests of intellectual development to assess language, play, and social/emotional functioning, and to write psychological assessment reports for infants, toddlers, and preschoolers. Credit/no credit only. Prerequisite: graduate standing in the school psychology specialization and permission of instructor. Offered: Sp.

EDPSY 575 Structural Equation Modeling (3) Theory and data analysis using linear structural equation models. Application to data in educational research. Prerequisite: 594 or equivalent. Offered: alternate years.

EDPSY 576 Hierarchical Linear Models (3) Theory and data analysis for research models where random factors are nested, such as multi-level data, growth curve analysis, and meta-analysis. Prerequisite: 593 or equivalent. Offered: alternate years.

EDPSY 580 Seminar: The Emergence of Educational Psychology (3) Examination of documents by selected contributors to the field of educational psychology. Special focus on period from mid-nineteenth century to the later twentieth century. Prerequisite: graduate standing. Offered: A.

EDPSY 581 Seminar in Educational Psychology (1-3, max. 15) Advanced seminar on selected topics in educational psychology. A critical appraisal of current research. Prerequisite: advanced degree work in educational psychology. Offered: AWSp.

EDPSY 582 Seminar in Development and Socialization (3, max. 15) Advanced seminar on selected topics concerned with human development and socialization processes. Emphasis placed upon empirical research and its theoretical underpinnings in such areas as cognitive development, moral development and education, self-concept development, and related concerns.

EDPSY 583 Seminar in Learning and Thinking (3, max. 15) Seminar in the psychology of learning language and language learning. Each seminar is offered with predesignated emphasis in one of the following topics: linguistics, phonology, pragmatics, psycholinguistics, semantics.

EDPSY 584 Seminar in Quantitative Methods (3, max. 15) Seminar on such topics as measurement techniques, research design, psychometrics, and statistics.

EDPSY 586- 587 Qualitative Methods of Educational Research (3-3) Survey of various qualitative research methods from a variety of disciplinary perspectives (anthropology, cognitive psychology, policy analysis, and evaluation) with intensive experience in collection, analysis, and reporting of data. Prerequisite: second year doctoral standing and one course in statistics. Offered: jointly with EDC&I 578-579; WSp.

EDPSY 588 Survey Research Methodology and Theory (3) Survey research, research, theory, and methodology. Probability theory, sampling, human subjects considerations, instrumentation, and analysis techniques. Review and critique by students of theoretical issues in survey research and development of a survey instrument. Prerequisite: 490 or equivalent. Offered: A.

EDPSY 589 Scholarly Writing in Education and Psychology (3) Introduction to the demands and expectations for technical writing in education and psychology, including aspects of the culture of scholarship. Designed for competent writers. Does not address basic grammar and composition. Credit/no credit only. Prerequisite: doctoral standing, and permission of instructor. Offered: W.

EDPSY 590 Computer Utilization in Educational Research (3) Computer utilization in solution of re-

search problems, data reduction to forms amenable to computer solution, appropriate framing of problems for solutions by computer. Using an interactive system, editors, and program packages. Prerequisite: 490. Offered: A.

EDPSY 591 Methods of Educational Research (3) Introduction to educational research. Primary focus on hypothesis development, experimental design, use of controls, data analysis and interpretation. Prerequisite: 490. Offered: AWSp.

EDPSY 592 Advanced Educational Measurements (3) Theory of measurement; an examination of assumptions involved in test theory, errors of measurement, factors affecting reliability and validity, and item analysis standards for educational and psychological tests. Prerequisite: 490. Offered: A.

EDPSY 593 Experimental Design and Analysis (5) Experimental design with emphasis on the analysis of variance. Prerequisite: 490 or equivalent. Offered: W.

EDPSY 594 Advanced Correlational Techniques (5) Multivariate analysis, including regression and multiple correlation; matrix algebra; factor analysis. Prerequisite: 490 or equivalent. Offered: Sp.

EDPSY 595 Item Response Theory Models of Testing (3) In depth exploration of IRT and binomial test theory models and their roles in the development of large scale educational and psychological tests. Prerequisite: 490 or equivalent, 592, 594.

EDPSY 596 Program Evaluation (3) Advanced course in evaluation research emphasizing nontraditional designs, especially those that impose severe ecological constraints on the evaluators. Prerequisite: 593, 594, EDC&I 597, or permission of instructor.

EDPSY 597 Technical Requirements of Large Scale Tests (3) Theoretical and practical understanding of the quantitative aspects of large scale test, including: scaling, norms development, and the development of derived and interpretive scores, evidence for validity and reliability. Prerequisite: 490 or equivalent, 592.

EDPSY 599 Independent Studies in Education (*) Independent studies or readings of specialized aspects of education. Offered: AWSp.

EDPSY 600 Independent Study or Research (*) Prerequisite: permission of instructor. required. Offered: AWSp.

EDPSY 601 Internship (3-10) Offered: AWSp.

Special Education

EDSPE 404 Exceptional Children (3) *Edgar* Children with disabilities studied from the point of view of education. Offered: AWS.

EDSPE 414 Introduction to Early Childhood Special Education (3) Schwartz Provides students with a comprehensive overview of major aspects of the field of early childhood special education. Theoretical foundations and program development and implementation are presented in an approach that integrates theory, research, and practice. Offered: AS.

EDSPE 419 Interventions for Families of Children with Disabilities (3) *Edgar* Upper-division course for professionals and paraprofessionals working with families of children with disabilities. Offered: WS.

EDSPE 420 Classroom Management of the Physical Problems of Individuals With Severe or Profound Disabilities (3) Kartin Overview of physical management of pupils with severe or profound disabilities in educational settings. Principles of normal motor development, positioning, and handling are applied to the development of classroom strategies. Effects of abnormal motor development on educational programming. Offered: WS.

EDSPE 496 Workshop in Special Education (1-10, max. 15) Demonstration, observation, and/or participation with groups of disabled children in laboratory or controlled classroom settings. Offered: AWSpS.

EDSPE 499 Undergraduate Research (2-5) Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program. Offered: AWSpS.

EDSPE 500 Field Study (1-6) Individual study of an educational problem in the field under the direction of a faculty member. Prerequisite: approved plan of study and permission of the instructor. Offered: AWSpS.

EDSPE 504 Special Education and the Law (3) Overview of major state and federal laws affecting the operation and management of special education programs in public schools. Emphasis on procedural and substantive rights of children with disabling conditions. Offered: jointly with EDLPS 516.

EDSPE 505 Curriculum Development of Students with Moderate to Severe Disabilities (3) Addresses issues and practices in the development of appropriate curricula for students with moderate to severe or profound disabilities. Includes curriculum models, methods for the selection of appropriate skills for inclusion in Individualized Education Plans, and establishing priorities for instruction. Offered: W.

EDSPE 507 Instructional Methods for Students with Moderate to Severe Disabilities (3) Billingsley Details a systematic instructional process for the education of students with moderate to severe or profound disabilities. Includes instructional methods and materials designed to promote the development of functional skills and reduce challenging behaviors. Offered: A.

EDSPE 510 Behavioral Measurement and Management in the Classroom (3) White Response measurement in the classroom; use of data analysis for instructional decisions and behavior management; instructional programming for children with disabilities. Offered: A.

EDSPE 511 Methods of Applied Behavior Analysis Research (3) *Billingsley, White* Characteristics of applied behavior analysis are presented: direct, daily measurement, and the systematic investigation of important variables. Representative studies from various applied situations are discussed in terms of dependent and independent variables, research design, reliability, validity, and data analysis. Prerequisite: 510 or equivalent preparation. Offered: WSp.

EDSPE 513 Principles of Clinical Appraisal for Teachers of Exceptional Children (3) Cheney, Jenkins Diagnostic instruments used in the clinical appraisal of exceptional children. Theoretical and measurement considerations are used to buttress practical experiences in appraisal related to intervention. Offered: AS.

EDSPE 514 Fundamentals of Reading for Children with Disabilities (3) Jenkins Emphasis on basic prereading and reading skills, such as phonics and structural analysis, specifically for the disabled child. Acquisition of comprehension skills by the disabled. Diagnosis of reading problems, published materials appropriate for children with disabilities, material modification. Offered: WS.

EDSPE 515 Problems and Issues in Special Education (3, max. 9) Edgar Intensive examination of the issues pertinent to special education, such as legislation, interdisciplinary functions, and the role of special education in general education and placement practices. Offered: Sp. EDSPE 517 Practicum in Research Design and Analysis in Special Education (1-4, max. 10) Critical analysis of current research in special education and related fields serves as background for designing applied research projects. Projects are examined, evaluated, and revised in seminar discussion. Prerequisite: EDPSY 490 and 591 or equivalent and permission of instructor. Offered: AWSpS.

EDPSE 518 Seminar in Special Education Research (1-3, max. 9) Designed for doctoral students in special education during their first year of residency. Each candidate selects a dissertation problem and submits a proposal. Topics such as the procurement of subjects, the reporting and communication of research findings, and the evaluation of research are stressed. The seminar leads to the evolution of a viable dissertation proposal. Credit/no credit only. Offered: AWSp.

EDSPE 520 Seminar in Applied Special Education (1-12) Janko, Schwartz, Thompson Designed for graduate students in special education. Focus on contemporary topics relating to the application of the theoretical constructs to special education. Offered: AW.

EDSPE 521 Communication and Language in Young Exceptional Children (3) Schwartz Review and discussion of theories of language acquisition as they relate to communication and language in young children with special needs. Review of research of language environments that relate to early literacy and education and how to use this information to modify environments for children with special needs. Offered: jointly with EDPSY 519; W.

EDSPE 522 Seminar on the Education of Students with Severe Disabilities (3) White Advanced graduate seminar arranged to study and discuss the essential components of providing a comprehensive approach to the identification and education of infants, children, adolescents, and young adults with severe disabilities. Offered: Sp.

EDSPE 523 Specific Numeracy Techniques for Elementary Students with Mild Disabilities (3) Provides the teacher with specific techniques for teaching numeracy to elementary students with mild disabilities in inclusive settings. Prerequisite: EDTEP 522 or equivalent. Offered: SpS.

EDSPE 525 Educating Students with Autism or Severe Behavior Disorders (3) Schwartz Consideration of the identification, etiology, education, and outcomes of individuals with autism or other severe behavior-disorders. Offered: Sp.

EDSPE 526 Techniques for Instructing Social Behaviors for Elementary Students with Mild Disabilities (3) Cheney, Neel Provides prospective and practicing teachers with specific techniques to promote social competency in elementary children with mild disabilities. Research related to specific interventions is discussed and individual and classroom instructional plans are developed for teaching social skills. Offered: ASpS.

EDSPE 541 Education of Children with Behavior Disorders (3) Cheney, Neel Introductory course covering characteristics of children with behavior disorders; introduction to the various theoretical approaches to education practices. Offered: alternate years; W.

EDSPE 542 Introduction to Mental Retardation (3) Introductory course on intellectual disabilities and the challenges they present to individuals with such disabilities, the community, the schools, and society.

EDSPE 545 Instructional Modifications for the Education of Children with Mild Disabilities (3) Cheney, Lovitt In-depth analysis and application of several modifications of instructional techniques necessary for the education of students with mild disabilities. Offered: WSpS. EDSPE 546 Seminar in Educating Children with Behavior Disorders (3, max. 9) Neel Advancedlevel seminars focus on contemporary research topics relating to the effective education of children with serious behavior disorders. Students analyze and review research pertinent to the chosen topics and prepare a scholarly manuscript for dissemination. Offered: alternate years; W.

EDSPE 548 Special Topics in the Education of the Learning Disabled (3, max. 12) In-depth analysis of empirical findings in the specialty of learning disabilities with focus on the synthesis of research findings and their application to the educational environment. A paper suitable for publication required. Prerequisite: course in learning theory, introductory course in learning disabilities, or equivalent preparation.

EDSPE 551 Grant Proposal Writing—Special Education (3) Doctoral level seminar focusing on the preparation of research grant proposals in Special Education and related fields. Students utilize computer data bases to locate funding sources and prepare competitive applications. Peer and instructor feedback based on application criteria provided weekly. Credit/no credit only. Prerequisite: doctoral standing in EDSPE or permission of instructor.

EDSPE 561 Educational Assessment of Young Children with Special Needs (3) Janko Special standardized and educational measurement and evaluation procedures for use with young children with a variety of disabling conditions. Observation, ecological assessment, and programming strategies are discussed in combination with practical application of the skills within an educational framework. Offered: A.

EDSPE 562 Curricula for Preschool Children with **Disabilities (3)** Schwartz Basic theoretical models and approaches to curricula for preschoolers with disabilities. Promote specific preschool curricula and develop skills to assist students in critiquing and evaluating curricula. How to adapt materials for specific populations and to plan a program for exceptional preschoolers. Offered: Sp.

EDSPE 563 Issues in Working with Families of Young Children with Special Needs (3) Janko Adjustment of parents to the birth of an infant with disabilities, transactions that occur between parents and their infant, procedures that facilitate the infant's development through these interactions, and strategies to promote relationships among families and professionals. Offered: W.

EDSPE 565 Seminar: Early Childhood Education for Children with Disabilities (3, max. 9) Janko, Schwartz Advanced seminar on early childhood education for infants and young children with disabilities. Historical and current research from special education and related fields reviewed with regard to their application to the education of young children with disabilities. Offered: Sp.

EDSPE 566 Current Research in Early Childhood Special Education (2, max. 6) Introduces students to theory and current research related to early intervention with infants and toddlers and how to evaluate research articles. Selected topics cover typical and atypical development in the areas of cognitive, social communication, and social development, as well as issues in assessment, curricula, and intervention strategies.

EDSPE 599 Independent Studies in Education (*) Independent studies or readings of specialized aspects of education. Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed. Offered: AWSpS.

EDSPE 600 Independent Study or Research (*) Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed. Offered: AWSpS.

EDSPE 601 Internship (1-10) Prerequisite: graduate standing and permission based on prearrangement of internship placement and approval by adviser. Offered: AWSpS.

Teacher Education Program

EDTEP 501 First Quarter Field Experience—Elementary (2) Field experience and small group discussions accompanying the first quarter of study in the Elementary Teacher Education Program. Two weeks full-time during the quarter in supervised school placements. Credit/no credit only. Prerequisite: elementary TEP student.

EDTEP 502 Second Quarter Field Experience—Elementary (3) Field experience and small group discussions accompanying the second quarter of study in the Elementary Teacher Education Program. Four weeks full-time during the quarter in supervised school placements. Credit/no credit only. Prerequisite: elementary TEP student.

EDTEP 503 Third Quarter Field Experience—Elementary (4) Field experience and small group discussions accompanying third quarter of study in Elementary Teacher Education Program. Observe school year opening full-time for approximately one month in August and September and spend full-time days as assigned during the quarter in supervised school placements. Credit/no credit only. Prerequisite: elementary TEP student.

EDTEP 505 Fifth Quarter Field Experience—Elementary (2) Field experience accompanying the fifth quarter of study in the Elementary Teacher Education Program. School placements and small group discussions. Credit/no credit only. Prerequisite: elementary TEP student.

EDTEP 511 School and Society (3) Exploration of issues regarding schooling and society, such as matters of value and value tension in American schools. Consideration of social values such as equality, opportunity, pluralism, and community; historical and contemporary evidence of values in schooling; and how values can conflict in policy and practice. Prerequisite: elementary TEP student.

EDTEP 521 Topics and Issues in Numeracy (3) Focus on mathematics from the perspective of the learner and on the meaning of understanding a mathematics concept. Examination of cultural aspects of the development of these concepts. Prerequisite: elementary TEP student.

EDTEP 522 Teaching and Learning in Numeracy (3) Focus on pedagogy of mathematics. In conjunction with field experience, students extend understanding of mathematics and successfully integrate mathematics as a tool for learning science and art. Prerequisite: elementary TEP student.

EDTEP 523 Teaching and Learning in Science (3) Science teaching in a manner consistent with how young children learn science concepts and skills. Opportunities are provided for work on science activities similar to those used with elementary school children and to experience many of the problems and successes of preadolescents. Prerequisite: elementary TEP student.

EDTEP 531 Topics and Issues in Literacy (3) Investigation of the multiple natures of literacy development. Students study the impact of culture and family on literacy development by reading and discussing a variety of texts while also experiencing the development of their own learning through literature study, the writing process, and oral presentations. Prerequisite: elementary TEP student.

EDTEP 532, 533 Teaching and Learning in Literacy I, II (3, 3) Introduces participants to the content and process of literacy learning in elementary school. Study of abilities needed for effective literacy use, instructional strategies to help children acquire these abilities, and assessment strategies to evaluate student progress. Prerequisite: elementary TEP student.

EDTEP 541 Dilemmas of Teaching and Learning in Elementary School (3) Covers human learning in the elementary school setting with emphasis on discipline-specific cognition and cognitive development. Prerequisite: elementary TEP student.

EDTEP 542 Meeting the Needs of All Students— Elementary (4) Overview of physical, cognitive, and social development of elementary school age children. Discussion of ways in which differences in development may affect children in school. Provides elementary teachers with understanding of how to facilitate the success of all children in general education classrooms. Prerequisite: elementary TEP student.

EDTEP 543 Integrating Social Studies and the Arts (3) Introduction to objectives, content, and teaching strategies of social studies and the arts as taught in elementary school. Emphasis on integration of the two subjects, as well as other curricular areas, within the context of instructional units. Prerequisite: elementary TEP student.

EDTEP 551 Introduction to Multicultural Education (3) Concepts, theories, and strategies that constitute major dimensions of multicultural education. Focus on racial and ethnic groups, social class, and gender. Dimensions of multicultural education examined include content integration, knowledge construction process, prejudice reduction, equity pedagogy, and empowering school culture and social structure. Prerequisite: TEP student.

EDTEP 552 Assessment in Elementary Education (3) Emphasis on methods of assessment that reinforce understanding of the various disciplines. Includes performance assessments, assessments of student projects and papers, traditional exams, and observational exams. Prerequisite: elementary TEP student.

EDTEP 561 Dilemmas of Teaching and Learning (5) Study of human learning in an educational setting, with an emphasis on learning of school subjects. Topics include nature of learning, knowledge and teaching, motivation, culture, and cognition. Prerequisite: secondary TEP student.

EDTEP 562-563 Adolescent Development and Education I-II (3-3) Overview of trends and issues of adolescent development and behavior in relation to contemporary secondary schooling. Psychological perspectives on adolescent identity, interpersonal relationships, academic engagement, and social deviancy in schools examined with special attention to classroom management and accommodating differences. Prerequisite: secondary TEP student.

EDTEP 564 Working in Secondary Schools (3) Organizational, personal, and interpersonal aspects of working as a teacher in a secondary school. Preparation for membership and leadership in a learning community and for continuing professional growth. Credit/no credit only. Prerequisite: secondary TEP student.

EDTEP 565 Planning and Teaching an Integrated Curriculum (3) Introduction of models for integrating curriculum, congruent instructional and assessment strategies, and team planning skills. Provides direct and experiential learning activities and results in production of team-planned curricular units based on two different models of curriculum integration. Prerequisite: secondary TEP student.

EDTEP 571 Topics and Tensions in School and Society (3) Exploration of issues of value and value tension in American schools. Consideration of social values of equality, opportunity, pluralism, and community, historical and contemporary evidence of values in schooling, and how values can conflict in policy and practice. Prerequisite: secondary TEP student.

EDTEP 573 Assessment in Secondary Education (3) Strong emphasis on methods of assessment that reinforce understanding of the various disciplines, including performance assessments, assessments of student projects and papers, traditional exams, and observational exams. Prerequisite: secondary TEP student.

EDTEP 580- 581 Teaching English and Language Arts in Secondary School I-II (5-3) Teaching of English and Language Arts in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP 582-583 Teaching Mathematics in the Secondary School I-II (5-3) Teaching of mathematics in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP 584-585 Teaching Social Studies in the Secondary School I-II (5-3) Developing, teaching, and evaluating social studies courses on the middle, junior, and senior high school levels. Prerequisite: secondary TEP student.

EDTEP 586-587 Teaching Science in the Secondary School I-II (5-3) Teaching of science in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP 588- 589 Teaching World Languages I-II (5-3) Introduction to currently used foreign language teaching methods and approaches, including learning and teaching strategies and techniques for the four skills—reading, writing, speaking, listening and culture. Current and future trends in pedagogy and technology. Prerequisite: secondary TEP student.

EDTEP 591 First Quarter Field Experience—Secondary (3) Field experience and small group discussions accompanying the first quarter of study in the Secondary Teacher Education Program. Observe school year opening full-time for approximately one month in August and September and two weeks fulltime during the quarter in supervised school placements. Credit/no credit only. Prerequisite: secondary TEP student.

EDTEP 592 Second Quarter Field Experience— Secondary (3) Field experience and small group discussions accompanying the second quarter of study in the Secondary Teacher Education Program. Three weeks full-time during the quarter in supervised school placements. Credit/no credit only. Prerequisite: secondary TEP student.

EDTEP 593 Third Quarter Field Experience—Secondary (3) Field experience and small group discussions accompanying third quarter of study in Secondary Teacher Education Program. Four weeks fulltime during the quarter in supervised school placements. Credit/no credit only. Prerequisite: secondary TEP student.

EDTEP 595 Fifth Quarter Field Experience—Secondary (3) Field experience accompanying the fifth quarter of study in the Secondary Teacher Education Program. School placements and small group discussions. Credit/no credit only. Prerequisite: secondary TEP student.

EDTEP 600 Independent Study or Research (1, max. 6) Registration must be accompanied by a study prospectus endorsed by the Director of Teacher Education or the Associate Dean for Professional Programs and the faculty adviser for the work proposed. Credit/no credit only.

EDTEP 601 Fourth Quarter Field Experience (2-10, max. 15) Field experience during the fourth quarter of study in the Teacher Education Program. Full-time student teaching in supervised school placements. Prerequisite: TEP student.

Independent Study, Research, and Field Experiences

EDUC 301 Introductory Practice in Community Service Activity (3) Observation and participation in a variety of activities in a K-12 classroom, placement made according to participant interests and needs. Sixty hours of scheduled participation plus scheduled seminars are required. Offered: AWSp.

EDUC 401 Practicum in Community Service Activity (3-18) Tutoring and teaching experiences in a school or community service organization, placement made according to participant interests and needs. Approximately twenty hours of participation on a predetermined schedule plus scheduled seminars are required for each credit earned. Offered: AWSp.

EDUC 700 Master's Thesis (*) Prerequisite: permission of supervisory committee chairperson and graduate program coordinator. Offered: AWSp.

EDUC 800 Doctoral Dissertation (*) Prerequisite: permission of supervisory committee chairperson and graduate program coordinator. Offered: AWSp.

College of Engineering

Dean

Denice D. Denton 371 Loew

Associate Deans

Mary E. Lidstrom Mani Soma

Engineering is an increasingly critical societal enterprise. More than ever before, the engineer is challenged both to design products whose value is high by social and economic measures and to provide for efficient manufacture of such products within the constraints of environmental protection and diminishing raw-material resources. Requirements imposed on the transportation system and other elements of society's physical infrastructure pose analogous challenges. At the same time, reductions in computer costs and increases in sophistication are dramatically influencing both the products and processes designed by the engineer and the actual practice of engineering.

The primary goal of the College of Engineering educational programs is to prepare students for a professional career in engineering by providing the technical foundation required for success in industry, government, or academia. Other goals of the College are to instill within its students the highest ethical standards, the capability for lifelong learning, and a curiosity about the world. Excellence in undergraduate and graduate academic programs remains the College's highest priority.

For undergraduates, the College of Engineering offers a flexible curriculum that not only accommodates varied student needs, both in established departmental programs and interdisciplinary studies, but also culminates in a major and meaningful design experience. The College also offers active educational and research programs, both departmental and interdisciplinary, at the graduate levels. (See Interdisciplinary Engineering Studies Program for interdisciplinary undergraduate and graduate programs.)

The College of Engineering has been a major unit of the University since 1899. The first engineering degrees were authorized in mining engineering and metallurgical engineering in 1898. Degrees were added for civil engineering (1901), electrical engineering (1902), mechanical engineering (1906), chemical engineering (1907), ceramic engineering (1919), aeronautical engineering (1929), industrial engineering (1986), and computer engineering (1987). A degree program in technical communication was implemented in 1991. In 1996, 1,667 upper-division undergraduate majors and 1,165 graduate students were enrolled in engineering programs taught by a faculty of 205 members.

College Facilities

Teaching and research activities of the College are conducted in thirteen major campus buildings (and portions of others), which contain the College's offices, classrooms, and research and teaching laboratories. The Engineering Library, a branch of the University Libraries, provides outstanding collections of books, periodicals, technical reports, and patents of interest to engineers. Computers and terminals are available in all departments and at the University's Academic Computer Center.

Student Organizations and Activities

All of the major professional engineering societies have student chapters on campus, and all engineering students are encouraged to join the chapter that represents his or her field of interest. The College also has student chapters of the Society of Women Engineers, American Indian Science and Engineering Society, National Society of Black Engineers, and the Society of Hispanic Professional Engineers. The Pre-Engineering Student Association (PESA) is the major College-wide organization for all students enrolled in a pre-engineering course of study but not yet admitted to a department. The Engineering Student Council, comprising student representatives from all departments and professional societies, is the major College-wide student organization and participates actively in College affairs. Honor societies open to engineering students are Tau Beta Pi and Sigma Xi.

Students serve with faculty members on engineering policy committees which make recommendations concerning instructor evaluation, curriculum revisions, advising, grading systems, and other matters of interest to students and faculty.

Undergraduate Program

Engineering Adviser 356 Loew, Box 352180 (206) 543-1770 engradv@engr.washington.edu

The College of Engineering provides curricula that offer a variety of educational experiences to its students. The curricula also facilitate transfer from community colleges and from other four-year colleges and universities.

Engineering Advising Center

356 Loew

Students are urged to contact the Engineering Advising Center for program, course, or career information and discussion. The center assists any student interested in planning the initial portion of an engineering degree program, and distributes information about prerequisites for application for admission to one of the departments in the College. A student who is interested in engineering is urged to identify engineering as the intended major while still in the College of Arts and Sciences and to seek advice in the center.

Financial Aid

The College offers financial assistance to undergraduates through industrial scholarships and loan funds. Scholarship information is available at the College Advising Center and the Office of Organizational Infrastructure, 356 Loew, and at the Office of Student Financial Aid, 105 Schmitz. Most scholarships are given after a year or more in residence by the student.

Honors Program

356 Loew

The College of Engineering Honors Program offers students of outstanding performance and achievement a course of study designed to provide intellectual challenge in a stimulating learning atmosphere which draws on the resources of a large, diversified university. Students entering the Honors Program become candidates for the degree "With College Honors" or "With Distinction."

The College Honors Degree

Students who complete this program receive a degree "With College Honors."

The College honors degree requires that students participate in the University Honors Program while taking engineering prerequisites in the College of Arts and Sciences. When these students are admitted to engineering departments, they may be nominated to enroll in the Engineering Honors Program. Completion of the College Honors degree involves both an honors general-education component and advanced honors work completed after students have been admitted to the College of Engineering.

Admission Requirements: Minimum cumulative GPA of 3.30, minimum departmental GPA, and participation in the University Honors Program as a pre-engineer.

Graduation Requirements: The College honors curriculum consists of two parts: a general-education component and a component in the student's major department. The general-education component is completed while the student is in the College of Arts and Sciences prior to application to the College of Engineering. Students select three sequences, each three quarters long, from honors A&S courses, the Natural World, and Mathematics (selecting at least one from each).

The second component begins when a student is admitted to an engineering department. Students then select a minimum of 9 credits of honors courses from either College or departmental 498H and 499H course work.

The Departmental Honors Degree

Students who complete this program receive a degree "With Distinction."

Admission Requirements: Minimum cumulative GPA of 3.30, minimum departmental GPA.

Graduation Requirements: Students are nominated for the Departmental Honors Program when they have been in their department for a minimum of one quarter. Students are required to select a minimum of 9 credits of honors courses from either College or departmental 498H and 499H course work.

At present, departmental honors degrees are offered in the following degree programs: Bioengineering, Chemical Engineering, Civil Engineering, Computer Engineering, Blectrical Engineering, Industrial Engineering, Materials Science and Engineering, Mechanical Engineering, and Technical Communication.

International Study

Given the increased likelihood that engineering students will have overseas work experiences or will do business with international clients and competitors, the College encourages students to study foreign languages in addition to their engineering course work and to take advantage of opportunities for study at foreign universities either at the undergraduate or graduate level. The College has active exchange agreements with approximately thirty-six universities in twenty-four countries. Foreign-language courses at the third-quarter level or above (e.g., GERMAN 103) may be applied toward VLPA distribution. Students may contact the Office of Organizational Infrastructure, 356 Loew, for information about opportunities for international study.

Recommended High School Preparation

Substantial high school preparation in mathematics, physical science, and communication is essential for entrance to engineering studies. Required and recommended courses may be determined from the Engineering Advising Center.

Admission

Students who indicate an interest in engineering on their University admission application are assigned pre-engineering status. Students without pre-engineering status who wish to pursue an engineering degree may have their coding changed to pre-engineering upon request at the Undergraduate Advising Center. As a pre-engineering major, a student will take

302 COLLEGE OF ENGINEERING / UNDERGRADUATE PROGRAM

the mathematics, chemistry, physics, English composition, and other courses prerequisite for admission to the desired engineering departmental program. In addition, courses in the Visual, Literary, & Performing Arts and in Individuals & Societies will be taken.

Admission requirements vary for departments or programs within the College of Engineering. Some departments or programs offer early admission, while others do not. For specific, up-to-date information regarding the admission requirements for a department or program, the applicant should contact the undergraduate adviser for the department or program directly. In addition, all departments and programs within the College provide up-to-date course and admission information on the World Wide Web (http://www.washington.edu).

For general upper-division admission, students must apply to the engineering department or program after completion of the prerequisite courses for the program, with at least 64 credits applicable to the degree program. In general, the prerequisite courses include one year of calculus, differential equations, one or two quarters of inorganic chemistry, two to three quarters of physics, and English composition. The Engineering Advising Center or the individual department or program may be consulted for a listing of specific entrance requirements. All engineering departments and programs have enrollment quotas, and admission is on a competitive basis.

Admission for the Disadvantaged

While the sole purpose of the admission requirement is to limit enrollment to a number that can be taught well with the resources available, the College recognizes that this may eliminate some disadvantaged students whose potential is high but who, through extenuating background circumstances, have had limited access to early education that provides adequate experience in abstract reasoning. For purposes of special consideration for admission, a disadvantaged student is defined as one who (1) is economically disadvantaged as shown by eligibility for a Basic Need Grant on the National Financial Aid Program; (2) is educationally disadvantaged, having attended a school without a full and available complement of college preparatory work; or (3) has ethnic minority status with a group showing historic underrepresentation in the field of engineering. These students are encouraged to apply for admission to departments and to attach to their application a letter to the admissions committee that provides information on the applicant that is relevant to the admission decision

Types of Programs

The College offers three basic programs leading to Bachelor of Science degrees:

Departmental Major: This program leads to a Bachelor of Science degree in a designated field of engineering (e.g., Bachelor of Science in Civil Engineering). It is designed for students who intend to practice as professional engineers in a standard branch of engineering or who plan to undertake graduate study in that field. The curricula for these degrees are accredited by the Accreditation Board for Engineering and Technology (ABET), the principal engineering accrediting agency in the United States. Accreditation requirements stipulate certain course-distribution requirements for the undergraduate degree. A description of how each of the accredited baccalaureate programs meets the ABET requirements is available from the department office and from the College office. Accredited four-year curricula leading to baccalaureate degrees are offered in aeronautics and astronautics, and in ceramic, chemical, civil, computer, electrical, industrial, mechanical, and metallurgical engineering.

Application to a department or program at the upperdivision level is made at the time that lower-division requirements are satisfied. Currently, enrollment limits imposed by faculty size and laboratory/classroom space available are such that entry into a specific department or program may be competitive. In general, a student applicant must demonstrate scholastic aptitude, as evidenced by the attainment of grades whose average is a minimum of 2.50 or above (depending upon the program) in mathematics, the Natural World, English composition, and other courses. The student is urged to plan ahead by learning the intended department or program requirements and particularly by noting which requirements must be fulfilled by the time the application is made.

Nondepartmental Professional Program: This program leads to a Bachelor of Science in Engineering degree and is designed for students who have well-defined, special educational objectives that departmental programs do not satisfy. Graduates can practice as professional engineers in newly developing fields, or they may embark on graduate study in these or allied fields (see Interdisciplinary Engineering Studies Program).

Nonprofessional Program: Leading to a Bachelor of Science degree, this program is intended for students who wish to have significant exposure to science and engineering courses, but who do not plan to engage in professional engineering practice (see Interdisciplinary Engineering Studies Program).

Graduation Requirements

To graduate, students must meet or exceed the requirements of the University, the College, and their particular program or department. College requirements are listed in this section, and program or departmental requirements are given in the specific section that describes that program or department.

All departments of the College have continuation policies that specify a minimum rate of progress as well as minimum academic-performance levels. These policies may be more restrictive than those generally applied by the University and may change with time. Information on current policy is available at the departmental offices.

Selecting courses that fulfill graduation requirements is the responsibility of each student. Students are urged to check carefully the course and credit requirements of the program in which they are enrolled.

The College requires a minimum number of credits within certain areas of study and some specific courses within certain areas. All programs require the following:

General Education Requirements: 85 Credits

Areas of Knowledge: 49 Credits

Visual, Literary, & Performing Arts and Individuals & Societies: 24 credits minimum. Some programs within the College require 30 credits. Visual, Literary, & Performing Arts (VLPA) includes courses in literature, art, music and drama which stress the essential qualities of individual forms of expression. First- and secondquarter language courses may not be counted toward the VLPA requirement. Individuals & Societies includes courses in history, economics, psychology, and sociology which stress the social nature of mankind, and the development and analysis of societies and social institutions. Courses that count toward these requirements are identified as VLPA or I&S in the General Catalog and in the quarterly Time Schedule. A minimum of 10 credits is required in each area. Also required is one indepth sequence consisting of two or more related courses

Natural World: 20-25 credits. Most departments within the College require chemistry (10 credits): CHEM 142, 152; and physics (15 credits): PHYS 121/131, 122/132, 123/133. Some departments do not require CHEM 152. Please consult the departmental adviser.

Mathematics: 24 Credits

Specifically required are MATH 124, 125, 126, 307, and 308. The remaining 3 credits are specified or recommended by the department or program.

Written and Oral Communication: 12 Credits

One 5-credit English composition course from the approved University list. ENGR 231, Introduction to Technical Writing (3 credits), and ENGR 333, Advanced Technical Writing and Oral Presentations (4 credits, or department-approved alternative).

Engineering Departmental Course of Study: 95 Credits

Major departments or specific programs require at least 95 credits in their curricula. These course sequences were developed to culminate in a major, meaningful design experience.

Special Programs

Engineering Co-op Program Director, Lorena McLaren 353 Loew

The Co-op Program provides the opportunity for preengineering students and departmental students to combine practical, full-time, on-the-job engineering experience with full-time academic study. Students typically stop out of school for six months to work fulltime and return to full-time academic status upon completion of the co-op assignment. In addition, students receive academic credit for the co-op experience. Advantages to participation include assistance in deciding which branch of engineering to follow, additional income to help defray college expenses, relevance and motivation for study based on real engineering work, and work experience and employment contacts that may result in a permanent position after graduation.

Information may be obtained from the Co-op Program Office, College of Engineering, Box 352180.

Educational Outreach

Fulfilling a commitment to lifelong learning, the College of Engineering offers courses, workshops, and conferences to respond to the professional development needs of practicing engineers and related technical professionals worldwide. Through Engineering Professional Programs (EPP) and Televised Instruction in Engineering (TIE) thousands of practicing engineers update their technical knowledge or pursue advanced degrees each year. For more information contact Engineering Professional Programs, (206) 543-5539, or Televised Instruction in Engineering, (206) 685-2242.

Special Facilities

Office of Engineering Research

Coordinator, Mary Heusner 372 Loew

The Office of Engineering Research promotes, stimulates, and coordinates research in all fields of engineering. Its primary role is to coordinate interdisciplinary research programs and national research initiatives. The Office of Research also reviews grant and contract proposals, tracks awards, and provides information on funding opportunities. This office allocates limited matching funds to College units to increase the quality of research in the College of Engineering.

Interdisciplinary Engineering Studies Program

356 Loew

The College of Engineering directly administers nondepartmental undergraduate and graduate degree programs, all of the College's lower-level courses, and upper-level courses not encompassed by regular departmental offerings. These courses are designated with the ENGR prefix. In general, ENGR courses are supervised and taught by College of Engineering faculty members.

Undergraduate Programs

356 Loew

The Interdisciplinary Engineering Studies (IES) Program is intended for students whose desired course of study does not fall within one of the traditional engineering departments. An interdisciplinary program combines in-depth course work from two or more departments. Although course work may involve departments outside the College of Engineering, the major thrust must be in engineering.

The IES Program offers a nonprofessional degree program leading to the Bachelor of Science (B.S.) and a professional degree program for the Bachelor of Science in Engineering (B.S.E.).

Due to the uniqueness of each interdisciplinary student's program of studies, the B.S. and B.S.E. degrees are not accredited by the American Board of Engineering and Technology (ABET). The experience requirement to obtain a professional engineering license is two years longer for a B.S.E. graduate, except in surveying, than for a graduate of an accredited program. A B.S. graduate is not eligible for a professional engineering license.

Interdisciplinary students develop personal programs of study approved by a faculty adviser with similar interests. Programs are reviewed and approved by the Interdisciplinary Committee which oversees all interdisciplinary-study programs. Contact the Office of Organizational Infrastructure, (206) 543-8590, for information on established procedures and applications for entry into the B.S.E. and B.S. programs. Entrance requirements and the continuation policy for participation in these programs are consistent with those of other departments in the College.

Bachelor of Science in Engineering

A typical B.S.E. program could combine course work from civil and mechanical engineering and oceanography for a program in ocean engineering, course work from civil and chemical engineering to form a program in environmental engineering or course work from one or more of the engineering programs and from physics for a program in engineering physics. Admission to this program (usually after completion of 90 credits) is competitive with a minimum GPA of 2.80 in technical courses required for entry. A minimum of 75 credits must be completed after entering the program before a B.S.E. degree is awarded.

Bachelor of Science

The nonprofessional Bachelor of Science degree provides greater flexibility than does the Bachelor of Science in Engineering degree. It can be an excellent base for subsequent professional studies in law, medicine, or business. It may also be the primary educational objective in such fields as technical writing, engineering sales, or environmental studies. Detailed requirements are available from the coordinator in the Office of Organizational Infrastructure.

Graduate Programs

The College also offers graduate programs leading to the Master of Science in Engineering and Master of Science degrees, without designation of a specific major.

Approved programs lead to the M.S.E. degree in civil, mechanical, electrical, chemical, and interengineering, and approved programs lead to the M.S. degree in civil engineering, interengineering, and materials science and engineering. Admission requires a B.S. degree in engineering, mathematics, or physical science, and evidence of aptitude for graduate study. Submission of scores on the Graduate Record Examination is required.

Master of Science in Engineering

The Interengineering Master of Science in Engineering (M.S.E.) and Master of Science (M.S.) program is intended for students whose desired course of study includes two or more engineering departments and may also include study in departments outside the College of Engineering. Applications and files of students entering the M.S./M.S.E. option are handled in the Office of Organizational Infrastructure. Admission to the interengineering option requires a statement describing the applicant's objectives. This statement should state why the student wants to enter the M.S./ M.S.E. program rather than one of the traditional engineering graduate programs. Applicants to the M.S./ M.S.E. program must have well-defined educational objectives which cannot be satisfied by established engineering programs. Graduation and entrance requirements, which differ for the various programs, may be obtained from the Office of Organizational Infrastructure, College of Engineering, (206) 543-8590.

Program in Engineering and Manufacturing Management— PEMM Fellows

For students interested in a career in manufacturing management, PEMM offers a two-year (24-month) joint degree program leading to both M.B.A. (Master of Business Administration) and M.S.E. (Master of Science in Engineering) degrees. PEMM applicants must apply to the M.B.A. program, the M.S.E. interengineering program, and the PEMM program. Prospective students must take the GMAT examination before applying. The Graduate Program Office in the School of Business must receive all M.B.A. applications by March 1. The deadline for submitting M.S.E. and PEMM applications to the College of Engineering is March 1. Graduation and entrance requirements may be obtained from the Office of Organizational Infrastructure, College of Engineering, (206) 543-8590, and the Program in Engineering and Manufacturing Management (PEMM), (206) 685-7023, (206) 543-5349, or (206) 543-1932.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

ENGR 100 Introduction to Engineering Design (5) **I&S** Introduction to design and communication principles through engineering project approach, stressing teamwork, design process, specialties and tools of engineering, creative and analytical thinking, professionalism and ethics, social, economic and political context, open-ended problems. Grading based on quality of engineering projects and presentation of design through written, oral, and graphical communication. Offered: AWSp.

ENGR 110 Career Planning I (1) Presentations by various faculty and staff members, students, and recent graduates offer an introduction to the College

of Engineering, curricular options, fields of engineering, interdisciplinary programs, and information of general interest. Credit/no credit only. Limited to freshmen, sophomores, or transfer juniors. Offered: AW.

ENGR 123 Introduction to Engineering Graphics (4) NW Communicating technical information in engineering design and research: freehand sketching, use of instruments, layout drawings, projection theory, descriptive geometry, and basic dimensioning. Introduction to computer-aided design drafting. Offered: AWSp.

ENGR 142 Computer Programming for Engineers and Scientists I (4) NW/QSR Basic programming-in-the-small abilities and concepts. Highlights include procedural and functional abstraction with simple built-in data type manipulation. Basic abilities of writing, executing, and debugging programs. Not available for credit to students who have completed 141 or CSE 210. Offered: jointly with CSE 142; AWSpS.

ENGR 170 Fundamentals of Materials Science (4) NW Fundamental principles of structure and properties of materials utilized in practice of engineering. Properties of materials are related to atomic, molecular, crystalline structure. Metals, ceramics, multiphase systems, and polymeric materials. Relationships between structure and electrical, mechanical, thermal, chemical properties. For advanced freshmen and sophomores. Prerequisite: CHEM 150. Offered: AWSpS.

ENGR 197 Engineering Problem Solving (1, max. 12) Lectures and problem sessions in mathematics, chemistry, and physics with engineering applications. Enrollment restricted to Minority Science and Engineering Program (MSEP) students. Credit/no credit only. Offered: AWSp.

ENGR 199 Special Projects (1-3) Students propose problems to solve to an engineering faculty member. The problems may be selected from the student's own experiences and interests, from the interest of the faculty member, or from other sources such as faculty or graduate students doing research projects, or from personnel in the physical medicine area, occupational therapy, hospital, industry, government. Corroboration by an engineering faculty member is required. Project suggestions are available. Offered: AWSpS.

ENGR 202 Special Projects (1-3) Projects on topics of current interest in engineering. Offered: A.

ENGR 210 Engineering Statics (4) NW Vector analysis applied to equilibrium of rigid body systems and subsystems. Force and moment resultants, free body diagrams, internal forces, and friction. Analysis of basic structural and machine systems and components. Prerequisite: MATH 126; PHYS 121; recommended: graphics background. Offered: AWSpS.

ENGR 215 Fundamentals of Electrical Engineering (4) NW Introduction to electrical engineering. Basic circuit and systems concepts. Mathematical models of components. Kirchoff's laws. Resistors, sources, capacitors, inductors, and operational amplifiers. Solution of first and second order linear differential equations associated with basic circuit forms. Steady state sinusoidal excitation and phasors. Prerequisite: MATH 126; PHYS 122. Offered: AWSp.

ENGR 220 Introduction to Mechanics of Materials (4) NW Introduction to the concepts of stress, deformation, and strain in solid materials. Development of basic relationships between loads, stresses, and deflections of structural and machine elements such as rods, shafts, and beams. Load-carrying capacity of these elements under tension, compression, torsion, bending, and shear forces. Prerequisite: ENGR 210. Offered: AWSpS.

ENGR 230 Kinematics and Dynamics (4) NW Kinematics of particles, systems of particles, and rigid bodies; moving reference frames; kinetics of particles, systems of particles, and rigid bodies; equilibrium, energy, linear momentum, angular momentum. Prerequisite: ENGR 210. Offered: AWSpS.

ENGR 231 Introduction to Technical Writing (3) Principles of organizing, developing, and writing technical information. Report forms and rhetorical patterns common to scientific and technical disciplines. Technical writing conventions such as headings, illustrations, style, and tone. Numerous written assignments required. Required for all engineering majors. Prerequisite: either C LIT 240, both ENGL 104 and ENGL 105, ENGL 111, ENGL 121, ENGL 131, ENGL 182, ENGL 197, ENGL 198, ENGL 199, or ENGL 281. Offered: AWSpS.

ENGR 250 Fundamentals of Engineering Economy (4) NW Basics of industrial cost analysis and accounting. Application of interest computations to engineering decision making. Analysis of engineering alternatives based on use of interest computations, valuations, depreciation, and cost estimates in process and product manufacturing. Offered: AWSp.

ENGR 260 Thermodynamics (4) NW Introduction to the basic principles of thermodynamics from a macroscopic point of view. Emphasis on the First and Second Laws and their applications to engineering devices and thermodynamic cycles. Problem solving methodology. Prerequisite: either CHEM 140 or CHEM 142; MATH 126; PHYS 121. Offered: AWSpS.

ENGR 280 Introduction to System Engineering (4) Concepts of system approach, system hierarchies, functional analysis, requirements, trade studies, and other concepts used to define and integrate complex engineering systems. Prerequisite: ENGR 142. Offered: W.

ENGR 301 Creating the Future (3) I&S *Douthwaite* Examines the concept of alternative individual and societal futures and the opportunities for creating them. Many authors are reviewed, a number of scenarios for the future are explored, and several methods of forecasting are investigated.

ENGR 310 Social Constraints on Engineering Design (3) I&S Ways in which social goals affect engineering design decisions. Social values and public policy issues that generate design criteria using engineering cases such as space travel, energy conservation, nuclear waste disposal. For students from any discipline.

ENGR 315 Probability and Statistics for Engineers (3) NW Application of probability theory and statistics to engineering problems, distribution theory and discussion of particular distributions of interest in engineering, statistical estimation, and data analysis. Illustrative statistical applications may include quality control, linear regression, analysis of variance, and experimental design. Prerequisite: MATH 307. Offered: AWSpS.

ENGR 321- Engineering Cooperative Education ([1-2]-, max. 16) Engineering practicum; integration of classroom theory with on-the-job training. Periods of full-time work alternate with periods of full-time study. Open only to students who have been admitted to the Engineering Cooperative Education Program. Requires subsequent completion of ENGR 322 to obtain credit. Credit/no credit only. Offered: AWSpS.

ENGR -322 Engineering Cooperative Education Postwork Seminar (-0) Reporting and evaluation of co-op work experience, and discussion of current topics in engineering. To be taken during the first quarter in school following each work session. Offered: AWSpS. ENGR 333 Advanced Technical Writing and Oral Presentation (4) Emphasis on the presentation of technical information to various audiences. Style of writing required for proposals, reports, and journal articles. Oral presentation principles, including use of visuals, as well as organizing and presenting an effective talk. Prerequisite: ENGR 231. Offered: AWSpS.

ENGR 341 Energy and Environment I (3) NW Kramlich, Malte Survey of energy production, consumption, and technologies. Fossil fuels with emphasis on energy conversion methods, fuel resources, and environmental consequences, including air pollution, acid rain, and global climate change. Offered: jointly with PHYS 341; A.

ENGR 342 Energy and Environment II (3) NW Kramlich, Malte Technology of nuclear energy, especially fission, the major forms of solar energy, including solar thermal electric, wind energy, hydroelectric, and biomass, and direct energy conversion, especially photovoltaic and fuel cells. Environmental consequences. Offered: jointly with PHYS 342; W.

ENGR 343 Environmental Radioactivity (3) NW Woodruff Sources of radioactivity in the environment, including both natural sources, especially radon, and man-made sources, especially nuclear power and nuclear explosions. Emphasis given to methods for determining radiation doses from the significant sources. Offered: jointly with ENV H 343/ PHYS 343; Sp.

ENGR 351 Inventions and Patents (1) I&S Law and procedures for patenting inventions, employer-employee relationship, and trademarks. Primarily for engineering students. Offered: Sp.

ENGR 360 Introductory Acoustics (3) NW Introduction to propagation of acoustical waves; emphasis on propagation of sound waves in air, but material is applicable to propagation of sound waves in liquids, including underwater acoustics, and to propagation of stress waves in solids. Includes a historical development of acoustics, terminology, and units employed. Prerequisite: MATH 307; PHYS 123. Offered: Sp.

ENGR 450 Gas Discharges for Plasma Processing and Other Applications (3) Nelson Lectures and demonstrations on direct-current and radio-frequency electrical discharges for sputtering, plasma etching, and other plasma processing applications. Prerequisite: MATH 307; PHYS 122.

ENGR 498 Special Topics in Engineering (1-5, max. 6) Offered: AWSpS.

ENGR 499 Special Projects in Engineering (1-3, max. 6) Offered: AWSpS.

Courses for Graduates Only

ENGR 598 Seminar Series in Engineering (1, max. 12) *Kalonji, Reed* Seminar series on topics of interest to all engineering students.

Aeronautics and Astronautics

206 Guggenheim

Aeronautics and Astronautics deals with atmospheric and space flight and a broad spectrum of related engineering science. Established in 1930, the department offers a full complement of degree programs and is unique in the Pacific Northwest.

Undergraduate Program

Undergraduate Program Coordinator 206 Guggenheim, Box 352400 (206) 543-1950 ug_advising@aa.washington.edu

Bachelor of Science in Aeronautical and Astronautical Engineering

The department offers the Bachelor of Science in Aeronautical and Astronautical Engineering degree, based on a program of study of engineering science with emphasis on the design and development of vehicles operating within the atmosphere or space. The goals and objectives of the undergraduate program are to provide a challenging and comprehensive education, to develop necessary functional skills and an understanding of the societal context in which engineering is practiced, to provide a solid foundation in the engineering sciences related to aerospace engineering, to develop engineering creativity through design experience, and to prepare graduates to succeed in engineering careers and lifelong learning. The program is accredited by the Accreditation Board for Engineering and Technology (ABET) and all graduates must meet certain specific distribution requirements.

Admission Requirements: Both early and upper-division admission are offered. Entrance-requirement details, application deadlines, application forms, and advising literature may be obtained from the department office.

Admission to the department is competitive. Completion of the requirements specified below does not guarantee admission.

A diverse student body adds an important element to the education of all students in the program. All students who meet the minimum admission requirements will be considered for admission with special consideration given to ethnic-minority applicants to ensure diversity in the engineering student body.

All applicants have the right to petition and appeal the decision of the department.

The application deadline is July 1 for autumn quarter only.

1. Early Admission Group (EAG):

a. Open to students enrolled at the UW.

b. Completion of the following courses prior to application: MATH 124, 125, 126; 10 credits of physicalscience courses plus accompanying laboratory, at the level of PHYS 121/131, 122/132, 123/133, or CHEM 142, 152 or above; and 5 credits of English composition.

c. A minimum grade of 2.0 in each prerequisite course and a minimum GPA of 2.50. At least 15 of the credits must have been taken at the UW.

Early admission students may start the autumn-quarter, junior-year program after meeting the requirements and standards for upper-division admission.

2. Upper-Division Admission Group (UAG):

a. Completion of at least 75 credits with a minimum overall GPA of 2.50 and a minimum grade of 2.0 in specific courses.

 b. Completion of the following courses before admission: MATH 124, 125, 126, 307; PHYS 121/131, 122/ 132,123/133; CHEM 142; ENGR 142, 210, 230, 260; and 5 credits of English composition, or their equivalent.

Graduation Requirements: Students must complete a minimum of 180 credits distributed as follows:

General-Education Requirements: 85 credits. These are listed under the College of Engineering and revised to allow a minimum of 24 credits in the Visual, Literary & Performing Arts, and Individuals & Societies.

Engineering Fundamentals: 24 credits. In addition to the admission requirements of ENGR 142, 210, 230, and 260, ENGR 215 is required and recommended to be taken before starting the professional courses.

Professional Courses: 69 credits. The department program begins in the autumn quarter of the junior year. Exceptions are very unusual and must be coordinated with the undergraduate adviser. All junior-year program courses are required. The senior year consists of A A 410-411 or 420-421, 450, 460, 498, and 15 credits of senior technical electives. With approval, 3 credits of the latter may be chosen from another area of engineering science. 2 credits of free electives may be needed to meet the 180 credits required for graduation.

Graduate Program

Graduate Program Coordinator 206 Guggenheim, Box 352400 (206) 543-1950 grad_advising@aa.washington.edu

The Department of Aeronautics and Astronautics offers programs that provide a foundation in the engineering sciences and study in various engineering applications. These lead to the degrees of Master of Science in Aeronautics and Astronautics, Master of Aerospace Engineering, or Doctor of Philosophy.

Master of Science in Aeronautics and Astronautics (M.S.A.A.)

The program of study is tailored to the needs and interests of the student. Each program must be approved by the department graduate committee and must provide breadth through a variety of subjects, depth through extensive study of a specialized field, and analytical strength. Minimum programs consist of either 39 credits of course work, or 30 credits of course work and a 9-credit thesis.

Master of Aerospace Engineering (M.A.E.)

The program is intended for recent graduates or engineers who wish to expand their knowledge in multidisciplinary areas while also learning other aspects of aerospace engineering, such as business, management, manufacturing, or communication. The student must complete a minimum of 37 credits of course work and 8 credits of independent or team project work in a program approved by the department graduate committee. The Master of Aerospace Engineering (M.A.E.) program is structured to permit completion of the degree requirements as a full-time or part-time student. The M.A.E. is a terminal degree and is not intended for those seeking a Ph.D.

Doctor of Philosophy (Ph.D.)

The doctoral program consists of lectures, seminars, discussions, and independent study, enabling the student to master and to make original contributions to a particular field. In addition to the formal steps for obtaining the degree listed in the Graduate School section of this catalog, the student must complete an approved program of study consisting of 30 credits of course work beyond that required for the Master of Science in Aeronautics and Astronautics, and is expected to be in continuous full-time residence for a minimum of one academic year after advancement to Candidate standing.

Research Activities

Research facilities include the Kirsten 8x12-foot lowspeed wind tunnel, a water tunnel, a blow-down tunnel, shock tunnels and Ludwieg tubes, a projectile accelerator, material and structural test machines, a dynamic-fracture laboratory, a composite-material laboratory, and various fusion-research and engineering physics laboratories. A variety of computer facilities are available, including a computational fluid dynamics laboratory and a new controls laboratory. The Aerospace and Energetics Research Program, which conducts interdisciplinary research in the Aerospace and Engineering Research Building, is also part of the Department of Aeronautics and Astronautics.

Externally funded research is carried out by faculty members and students on such topics as buoyant flows, separation control, combustor mixing, shear layers, computational fluid dynamics, internal flows, reacting flows, ram accelerators, space energy systems, space system design, control system design and engineering, robust and optimal control, wing optimization, impact mechanics, cylinder failure, composite material structure and fracture, plasma science, and fusion research.

Special Facilities/Programs

Aerospace and Energetics Research Program (AERP)

120 Aerospace and Engineering Research Building

The Aerospace and Energetics Research Program is directed toward high-technology engineering research and teaching through research. The program anticipates and tries to outpace the nation's critical technology needs. It therefore emphasizes those engineering skills that both match the requirements of the present and future, and develop in students a broad understanding of the impact of technology on society. Suitable programs are designed to develop the student's imagination and a willingness to respond to the complex and rapidly changing future of engineering. This directs the faculty's efforts and creates within the principal investigators, research faculty, and students the concept of engineering as an adventure.

The program covers many fields, usually centered on energy or aerospace. Currently the program is active in plasma engineering related to fusion power, space energy systems, ram accelerators, advanced gasdynamics research involving new propulsive techniques, cryogenic automobile propulsion, and the use of shock waves to process chemicals.

University of Washington Aeronautical Laboratory (UWAL)

Kirsten Aeronautical Laboratory

The primary facility that UWAL operates is the Kirsten Wind Tunnel, a subsonic, closed-circuit, double-return tunnel with an 8x12-foot test section. Undergraduate students, usually from the Department of Aeronautics and Astronautics, are employed at UWAL to run tests for University research, commercial customers, and for instructional uses, such as student projects. UWAL provides departmental support for research projects such as the Remotely Piloted Vehicle Project (RPV).

Admission

Students who have earned a baccalaureate degree in an accredited program of aeronautics and astronautics or closely related field are eligible for the M.S.A.A. and M.A.E. programs. Backgrounds in related fields require review on a case-by-case basis and preparatory courses may be required, depending on the student's previous studies and educational objectives. Admission is competitive, with the equivalent of a 3.00 GPA in previous technical study a minimum standard. Submission of verbal, quantitative, and analytical scores on the Graduate Record Examination is required. Entrance-requirement details, application deadlines, application forms, and advising literature may be obtained from the department office. Admission to the Doctor of Philosophy program is based on satisfactory performance on a departmental qualifying examination. Admission to that examination is based on evidence of superior academic ability.

Additional Information

Students who intend to work toward advanced degrees must apply for admission to the Graduate School. Most students are financially supported by the department as teaching or research assistants, or by their employers. For further information on this or other aspects of department programs, contact the Graduate Program Coordinator, 206 Guggenheim, Box 352400.

Faculty

Chair

Walter H. Christiansen

Professors

Bollard, R. John * 1961, (Emeritus); PhD, 1954, Purdue University; mechanics of materials, structural mechanics, aeroelasticity, design and crashworthiness of aircraft.

Breidenthal, Robert E. * 1980; PhD, 1979, California Institute of Technology; turbulence, mixing, combustion, vorticity.

Bruckner, Adam * 1972; PhD, 1972, Princeton University; space propulsion, power, and systems design; hypersonics, hypervelocity accelerators; lasers.

Christiansen, Walter H. * 1967; PhD, 1961, California Institute of Technology; gas dynamics and gas physics, high-power gas lasers, energy conversion.

Clark, Robert N. * 1957, (Emeritus); PhD, 1969, Stanford University; automatic control systems, fault detection in dynamic systems.

Decher, Reiner * 1967; PhD, 1968, Massachusetts Institute of Technology; aircraft propulsion, fluid mechanics, energy conversion.

Eastman, Fred 1927, (Emeritus); MS, 1929, Massachusetts Institute of Technology; aeronautics and astronautics.

Fyfe, Ian M. * 1959, (Emeritus); PhD, 1957, Stanford University; dynamics, fracture mechanics.

Hertzberg, Abraham * 1966, (Emeritus); MAEE, 1949, Cornell University; high-power lasers, fusion research, solar energy, space systems, energy systems, heat transfer.

Hoffman, Alan Lowell * 1989; PhD, 1967, California Institute of Technology; plasma physics and magnetic confinement fusion.

Holsapple, Keith A. * 1965; PhD, 1965, University of Washington; solid mechanics, continuum mechanics, structure waves, finite element methods.

Jarboe, Thomas R. * 1989; PhD, 1974, University of California (Berkeley); plasma physics and controlled fusion, magnetic reconnection and relaxation.

Kevorkian, Jirair * 1964; PhD, 1961, California Institute of Technology; partial differential equations, perturbation theory.

Kurosaka, Mitsuru * 1987; PhD, 1968, California Institute of Technology; propulsion, turbo machinery, thermo-fluid mechanics, heat transfer and acoustics.

Lin, Kuen-Yuan * 1984; PhD, 1977, Massachusetts Institute of Technology; composite materials, structural mechanics, finite element methods.

Parmerter, R. Reid * 1963; PhD, 1963, California Institute of Technology; structures, solid mechanics, fracture mechanics.

Pearson, Carl E. * 1967, (Emeritus); PhD, 1949, Brown University; wave propagation, fluid dynamics, numerical analysis, optimization.

Russell, David A. * 1967; PhD, 1961, California Institute of Technology; fluid mechanics and gas physics, aerodynamics, shock processes and laser fluid dynamics.

Street, Robert E. 1948, (Emeritus); PhD, 1939, Harvard University; aeronautics and astronautics.

Vagners, Juris * 1967; PhD, 1967, Stanford University; dynamics, controls and optimization.

Associate Professors

Eberhardt, David Scott * 1986; PhD, 1985, Stanford University; computational fluid dynamics, flight mechanics.

Livne, Eli * 1990; PhD, 1990, University of California (Los Angeles); aeroelasticity, aeroservoelasticity, optimization, structural dynamics.

Ly, Uy-Loi * 1988; PhD, 1983, Stanford University; robust controls, parameter optimization, model reduction, digital control, design integration.

Mattick, Arthur T. * 1975; PhD, 1975, Massachusetts Institute of Technology; gas physics, gas lasers, energy conversion.

Assistant Professors

Campbell, Mark E. 1997; PhD, 1996, Massachusetts Institute of Technology; active controlled structure and materials.

Shumlak, Uri 1995, (Research); PhD, 1992, University of California (Berkeley); computational fluid dynamics, plasma science, plasma propulsion.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

A A 101 Air and Space Vehicles (5) NW Introduction to aircraft and spacecraft; how airplanes fly, how airplanes and rockets are made, how they are controlled, and how space missions are designed. Laboratory and computer simulations used as illustrations. Emphasis on conceptual, rather than mathematical, comprehension. Not open for upperdivision students in physical sciences and engineering. Offered: A.

A A 300, 301, 302 Aerodynamics I, II, III (4, 4, 4) Breidenthal, Decher, Eberhardt, Russell Aerodynamics as applied to the problems of performance of flight vehicles in the atmosphere. Kinematics and dynamics of flow fields; incompressible flow about bodies. Thin airfoil theory; finite wing theory. Compressible fluids; one-dimensional compressible flow; two-dimensional supersonic flow. Offered: A, W, Sp.

A A 310 Orbital and Space Flight Mechanics (4) Bruckner, Campbell, Vagners Newton's law of gravitation. Two-body problem, central force motion, Kepler's laws. Trajectories and conic sections. Position and velocity as functions of time. Orbit determination and coordinate transformations. Rocket dynamics, orbital maneuvers, Hohmann transfer. Interplanetary trajectories, patched conics. Planetary escape and capture. Gravity assist maneuvers. Offered: A.

A A 311 Atmospheric Flight Mechanics (4) Livne, Ly, Russell Applied Aerodynamics, aircraft flight 'envelope', minimum and maximum speeds, climb and glide performance. Range and endurance, take-off and landing performance, using both jet and propeller power plants. Longitudinal and dynamic stability and control, wing downwash, stabilizer and elevator effectiveness, power effects. Lateral and directional stability and control. Offered: Sp.

A A 312 Structural Vibrations (4) Campbell, Ly, Parmerter, Vagners Vibration theory. Characteristics of single and multidegree-of-freedom linear systems with forced inputs. Approximate methods for determining principal frequencies and mode shapes. Application to simple aeroelastic problems. Offered: W.

A A 321, 322 Junior Laboratory II, III (2, 2) *Christiansen, Livne, Parmerter* The design and conduct of experimental inquiry with consequent introduction to experimental equipment and techniques relative to the general field of mechanics with emphasis in the applied fields of aeronautics and astronautics. Offered: W, Sp.

A A 330, 331, 332 Structural Analysis I, II, III (4, 4, 4) Holsapple, Livne, Parmerter Analysis and design of aerospace structures. Review of concepts of stress, deformation, strain, and displacement and of the equations of elasticity. Applications to aerospace structural elements, including beams, torsion, plane stress and strain, thin walled structures, plates, buckling: energy principles: introduction to finite element analysis. Fatigue, yielding, and fracture. Offered: A, W, Sp.

A A 370 Introduction to Applied Analysis (3) Analytical and numerical methods for Aerospace engineering. Function analysis, linearization, and approximation. Vector analysis, line, surface, and volume integrals. Linear algebra, eigensystems. Computer methods, iteration, nonlinear equations, matrices. Offered: A.

A A 400 Gas Dynamics (3) Christiansen, Eberhardt, Russell Introduction to kinetic theory and free molecule flows. Review of thermodynamics. One-dimensional gas dynamics: one-dimensional wave motion, waves in supersonic flow, flow in ducts and wind tunnels. Offered: W.

A A 402 Fluid Mechanics (3) Christiansen, Russell Inviscid equations of motion, incompressible potential flows, small perturbation flows, bodies of revolution, viscous equations, exact solutions, laminar boundary-layer equations, similar solutions, integral methods. Compressibility, instability, turbulent boundary layers. Offered: Sp.

A A 405 Introduction to Aerospace Plasmas (3) NW Review of vector analysis. Development of introductory electromagnetic theory including Lorentz force and Maxwell's equations. Plasma description. Single particle motions and drifts in magnetic and electric fields. Derivation of plasma fluid model. Introduction to plasma waves. Applications to electric propulsion, magnetic confinement, and plasmas in space and Earth's outer atmosphere. Offered: W.

A A 410- Aircraft Design I (4) Livne Conceptual design of a modern airplane to satisfy a given set of requirements. Estimation of size, selection of configuration, weight and balance, and performance. Satisfaction of stability, control, and handling qualities requirements. Offered: W.

A A -411 Aircraft Design II (4) Livne Preliminary design of a modern airplane to satisfy a given set of requirements. Estimation of size, selection of configuration, weight and balance, and performance. Satisfaction of stability, control, and handling qualities requirements. Prerequisite: A A 410. Offered: Sp.

A A 419 Aerospace Heat Transfer (3) Bruckner, Jarboe, Mattick Fundamentals of conductive, convective, and radiative heat transfer with emphasis on applications to atmospheric space flight. Offered: A.

A A 420- Spacecraft and Space Systems Design I (4-) Bruckner Design of space systems and spacecraft for advanced near-Earth and interplanetary missions. Astrodynamics, space environment, space systems engineering. Mission design and analysis, space vehicle propulsion, flight mechanics, atmospheric entry, aerobraking, configuration, structural design, power systems. thermal management, systems integration. Design topics vary. Offered: W. A A -421 Spacecraft and Space System Design II (-4) Bruckner A continuation of 420. Course content varies from year to year and is dependent on the design topic chosen for 420. Prerequisite: A A 420. Offered: Sp.

A A 430 Finite Element Structural Analysis (3) Holsapple, Lin, Parmerter Introduction to the finite element method and application. One- and twodimensional problems including trusses, beams, box beams, plane stress and plane strain analysis, and heat transfer. Use of finite element software. Offered: A.

A A 432 Composite Materials for Aerospace Structures (3) Lin Introduction to analysis and design of aerospace structures utilizing filamentary composite materials. Basic elastic properties and constitutive relations of composite laminates. Failure criteria, buckling analysis, durability, and damage tolerance of composite structures. Aerospace structure design philosophy and practices. Offered: W.

A A 441 Flight Mechanics (3) Eberhardt Determination in flight of performance, stability, and control characteristics of aircraft; and comparison with predicted and wind tunnel results. Offered: Sp.

A A 448 Control Systems Sensors and Actuators (3) Study of control systems components and mathematical models. Amplifiers, DC servomotors, reaction mass actuators. Accelerometers, potentiometers, shaft encoders and resolvers, proximity sensors, force transducers, piezoceramic materials, gyroscopes. Experimental determination of component models and model parameters. Two 3-hour laboratories per week. Offered: jointly with E E 448; W.

A A 449 Design of Automatic Control Systems (4) Design problems for aerospace vehicles, systems with unstable dynamics, lightly damped modes, nonminimum phase, nonlinear dynamics. Computeraided analysis, design and simulation, with laboratory hardware-in-the-loop testing. Team design reviews, oral presentations. Offered: jointly with E E 449; Sp.

A A 450 Control in Aerospace Systems (4) Campbell, Ly, Vagners Overview of feedback control. Linearization of nonlinear models. Model properties: stability, controllability, observability. Dynamic response: time and frequency domain techniques. Frequency response design techniques. Design of aerospace control systems via case studies. Offered: A.

A A 460 Propulsion I (3) *Breidenthal, Bruckner, Decher, Kurosaka* Study of the aero- and thermodynamics of jet and rocket engines. Air-breathing engines as propulsion systems. Turbojets, turbofans, turboprops, ramjets, hybrid engines. Aerodynamics of gas-turbine engine components. Rocket vehicle performance. Introduction to space propulsion. Offered: A.

A A 461 Propulsion II (3) Bruckner, Decher, Kurosaka, Mattick Physical characteristics and components of rockets. Nozzle gasdynamics and non-ideal flow effects. Solid and liquid propulsion systems, components, and design. Electric propulsion fundamentals and applications. Aerodynamics of airbreathing engine components: inlets, compressors, turbines, afterburners, nozzles. Engine design methodology. Offered: W.

A A 480 Systems Dynamics (3) Campbell, Livne, Parmerter Equations of motion and solutions for selected problems; natural frequencies and mode shapes; response of simple systems to applied loads. Offered: Sp.

A A 498 Special Topics in Aeronautics and Astronautics (0-1) Lectures and discussions on topics of current interest in aviation and space engineering. Three quarters required for credit. Offered: AWSp. A A 499 Special Projects (2-5, max. 10) Investigation on a special project by the student under the supervision of a faculty member. A maximum of 6 credits may be applied toward senior technical electives. Offered: AWSpS.

Courses for Graduates Only

A A 501 Physical Gasdynamics I (3) Christiansen, Hoffman, Mattick quilibrium kinetic theory; chemical thermodynamics; thermodynamic properties derived from quantum statistical mechanics; reacting gas mixtures; applications to real gas flows and gas dynamics. Offered: odd years; A.

A A 502 Physical Gasdynamics II (3) Christiansen, Mattick Introduction to vibrational relaxation and nonequilibrium chemistry. Nonequilibrium physics applied to flow. Brief introduction to nonequilibrium kinetic theory. Application to a variety of research and development areas such as hightemperature energy systems and gas lasers. Prerequisite: 501 or permission of instructor. Offered: even years; W.

A A 503 Kinetic Theory/Radiative Transfer (3) Christiansen, Hoffman Boltzmann and Collisionless Boltzmann (Vlasov) equations. Instabilities in homogeneous and inhomogeneous plasma, quasi-linear diffusion, wave-particle interaction, collisional (Fokker-Plank) equation. Introduction to radiative nonequilibrium, scattering and absorption processes. Integral equation of radiative transfer. Prerequisite: 501 or permission of instructor. Offered: even years; Sp.

A A 504 Fluid Mechanics (3) Breidenthal, Kurosaka, Russell Review of thermodynamics; vectors and dyads. Derivation of the Navier-Stokes equations, stream functions and potential functions; integrals of the equations of motion. Boundary conditions and discontinuity surfaces in fluids. Exact solutions. Dimensional analysis. Vorticity dynamics. Highly viscous flows. Rotational flows. Offered: A.

A A 505 Fluid Mechanics of Inviscid Flow I (3) Christiansen, Kurosaka, Russell Ideal incompressible flow; potential and stream functions. Airfoil theory and lifting line theory. Introduction to nonsteady flow; sound waves and surface waves; special topics. Offered: even years; W.

A A 506 Fluid Mechanics of Inviscid Flow II (3) Breidenthal, Kurosaka, Russell Ideal compressible flow; supersonic airfoils; shock waves; slender-body theory; lifting surface theory; approximate methods. Transonic flow; similarity; special topics. Prerequisite: 505. Offered: even years; Sp.

A A 507 Aerodynamics of Viscous Fluids I (3) *Kurosaka, Russell* Introduction to viscous flow; exact solutions of the laminar equations of motion; approximate equations. Exact solutions for laminar boundary-layer equations. Approximate methods for compressible laminar boundary layers. Offered: odd years; W.

A A 508 Aerodynamics of Viscous Fluids II (3) Breidenthal, Kurosaka, Russell The phenomena of turbulence; transition prediction; Reynolds stresses; turbulent boundary-layer equations. Approximate methods for turbulent boundary layers. Prerequisite: 507 or permission of instructor. Offered: odd years; Sp.

A A 509 Computational Fluid Dynamics I (3) Eberhardt Numerical approximation of the inviscid compressible equations of fluid dynamics. Analysis of numerical accuracy, stability, and efficiency. Use of explicit, implicit, and flux split methods. Discussion of splitting, approximate factorization, discrete point, and finite volume approaches. Applications to the solution of simple hyperbolic systems of equations and the Euler equations. Offered: W. A A 510 Computational Fluid Dynamics II (3) Eberhardt Numerical approximation of equations of compressible viscous flow. Mesh requirements for resolving viscous effects in high Reynolds number flows. Analysis of numerical accuracy, stability, and efficiency. Use of explicit and implicit methods, boundary condition procedures. Applications to solution of the Navier-Stokes equations. Prerequisite: 509 or permission of instructor. Offered: odd years; Sp.

A A 513 Gas Laser Theory and Practice (3) Christiansen, Mattick Physics and fluid mechanics of gas lasers, with emphasis on performance of gas dynamic lasers, flowing chemical lasers, and gaseous electric lasers. Development of laser optics, interaction of radiation and matter, laser oscillation conditions, and methods of obtaining population inversions. Applications of high-power lasers emphasized. Offered: even years; Sp.

A A 516 Stability and Control of Flight Vehicles (3) Eberhardt, Livne, Ly Static and dynamic stability and control of flight vehicles in the atmosphere. Determination of stability derivatives. Effects of stability derivatives on flight characteristics. Flight dynamic model. Responses to control inputs and external disturbances. Handling qualities. Control system components, sensor characteristics. Stability augmentation systems. Offered: W.

A A 518 Automatic Control of Flight Vehicles (3) *Ly, Vagners* Specifications of flight vehicle performance. Synthesis of stability augmentation systems and autopilot control laws in the frequency-domain and using multivariable control methods. Reducedorder controller synthesis, digital design, and implementation. Use of computer-aided control design packages. Prerequisite: 516 and 548. Offered: Sp.

A A 520- Seminar (1, max. 10) Topics of current interest in aerospace engineering. Credit/no credit only. Prerequisite: A A major. Offered: AWSp.

A A 523 Special Topics in Fluid Physics (3) Offered: AWSp.

A A 524 Aircraft Engine Noise (3) Kurosaka Description and measurement of noise, power spectra. Elementary duct acoustics, rotor-stator interaction, effect of design blade loading. Turbine noise, core noise, acoustic linings. Jet noise, Lighthill theory, scaling laws. Offered: odd years; A.

A A 525 Aerothermodynamics of Aircraft Engines Components (3) Decher, Kurosaka Estimation of component performances. Inlets and nozzles. Aerodynamics of turbines and compressors. Radial equilibrium theory, through-flow theory. Offered: even years; W.

A A 526 Aerothermodynamics of Aircraft Engine Systems (3) Decher, Kurosaka Aircraft gas turbine engine, cycle analysis. Component performance measures. Preliminary design of engines, including component losses. Off-design performance. Variable geometry engines. Offered: even years; Sp.

A A 527 Energy Conversion I (3) Decher Energy resources. Heat generation by combustion, solar collection. Analysis of power systems for space and advanced commercial power generation. Hightemperature cycles. Offered: even years; A.

A A 528 Energy Conversion II (3) Decher Heat exchangers, energy storage. Direct conversion of heat to electricity. Electrochemical processes. Recommended: 527. Offered: odd years; W.

A A 529 Space Propulsion (3) Decher, Jarboe, Shumlak Nucleonics, and heat transfer of nuclearheated rockets. Electrothermal, electromagnetic, and electrostatic thrusters. Power/propulsion systems. Prerequisite: permission. Offered: odd years; Sp.

A A 530 Mechanics of Solids (3) Holsapple, Lin, Livne General concepts and theory of solid mechanics. Large deformations. Behavior of elastic, viscoelastic, and plastic solids. Linear theory of elasticity and thermoelasticity. Wave propagation in solids. Offered: A.

A A 531 Structural Reliability and Damage (3) Holsapple, Parmerter Theory of plasticity, yield surfaces, flow rules, limit theorems. Concepts of failure and fatigue in aerospace structures, residual strength, cumulative damage, probability aspects and case histories. Prerequisite: 530 or equivalent or permission of instructor. Offered: odd years; W.

A A 532 Mechanics of Composite Materials (3) Holsapple, Lin Analyses and design of composite materials for aerospace structures. Micromechanics. Anisotropic elasticity. Laminated plate theory. Thermo-viscoelastic behavior and fracture of composites. Prerequisite: 530 or permission of instructor. Offered: odd years; Sp.

A A 535 Analysis of Shells I (3) Parmerter General development of the geometrically non-linear theory of thin elastic shells. Topics include an introduction to tensor analysis with applications to curved two dimensional spaces, theory of surfaces, Kirchhoff approximations, membrane theory and nonlinear shallow shells. Offered: even years; Sp.

A A 540 Finite Element Analysis I (3) Holsapple, Lin Formulation of the finite element method using variational and weighted residual methods. Element types and interpolation functions. Application to elasticity problems, thermal conduction, and other problems of engineering and physics. Offered: W.

A A 541 Finite Element Analysis II (3) Holsapple, Lin Advanced concepts of the finite element method. Hybrid and boundary element methods. Nonlinear, eigenvalue, and time-dependent problems. Prerequisite: 540 or permission of instructor. Offered: Sp.

A A 545 Transportation Vehicles and Infrastructure (3) Decher, Mahoney Introduction to transportation vehicles and infrastructure. Technical and economic characteristics of the four principal transportation modes—air, highway, water, and rail. Provides a historical context, consideration of energy, power, and environmental impact, operational understanding of transportation vehicles, and infrastructure. Offered: jointly with CETS 545; Sp.

A A 546 Mathematical Foundations of Systems Theory (4) Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Prerequisite: graduate standing or permission of instructor. Offered: jointly with CHEM E 510/ E E 510/M E 510; A.

A A 548 Linear Multivariable Control (3) *Ly*, *Vagners* Single loop feedback control theory; poles, zeros, Nyquist stability, performance, robustness of multivariable systems; multivariable control synthesis: Linear-Quadratic-Gaussian methods, loop transfer recovery, Youla parameterization, H-infinity techniques, parameter optimization design. Prerequisite: E 584 or M E 575; E E 446 or A A 448 or M E 471 or equivalent. Offered: jointly with E E 548/M E 548; W.

A A 549 Estimation and System Identification (3) *Vagners* Review of system models, model structure, model parameterization; review of stochastic processes; state estimation: observers, the Kalman-Bucy filter, numerical issues in filter design and implementation; system identification: linear regression, least squares, maximum likelihood, instrumental variable techniques. Prerequisite: E E 505 or 548. Offered: jointly with E E 548/M E 549; Sp.

308 COLLEGE OF ENGINEERING / BIOENGINEERING

A A 550 Nonlinear Optimal Control (3) Vagners Calculus of variations for dynamical systems, definition of the dynamic optimization problem, constraints and Lagrange multipliers, the Pontryagin Maximum Principle, necessary conditions for optimality, the Hamilton-Jacobi-Bellman equation, singular arc problems, computational techniques for solution of the necessary conditions. Prerequisite: graduate standing; recommended: A A 548 or E E 548. Offered: jointly with E E 550/M E 550; odd years.

A A 553 Vibrations of Aerospace Systems (3) Livne Continuous and discrete systems, natural frequencies, and modal analysis; forced vibrations and motion-dependent forces. Structural damping; control augmented structures. Measurements for structural dynamic testing. Prerequisite: 571 or equivalent. Offered: odd years; Sp.

A A 554 Aeroelasticity (3) *Livne* Static and dynamic aeroelasticity, unsteady aerodynamics, aeroservoelastic modeling, and active control. Offered: even years; Sp.

A A 556 Space and Laboratory Plasma Physics (3) Hoffman, Jarboe Discussion of waves, equilibrium and stability, diffusion and resistivity, basic plasma kinetic theory, and wave-particle interactions. Prerequisite: A A 405, GPHYS 505, or permission of instructor. Offered: jointly with GPHYS 537; Sp.

A A 557 Physics of Fusion Plasmas (3) Hoffman, Jarboe, Shumlak Review and comparison of single particle and fluid descriptions of plasmas. MDH equilibrium, flux surfaces, and basic toroidal description. Collisional processes including physical and velocity space diffusion. Introduction to island formation, stochasticity, and various plasma instabilities. Prerequisite: 405 or GPHYS 505. Offered: even years; W.

A A 558 Plasma Theory (3) Hoffman, Jarboe Equilibrium, stability, and confinement. Classical transport, collisionless and resistive skin depths. Ideal MHD equations formally derived and properties of plasmas in the ideal limit are studied. Straight and toroidal equilibrium. Linear stability analysis with examples. Taylor minimum energy principle. Prerequisite: 405, 556, 557, or GPHYS 505. Offered: even years; Sp.

A A 559 Plasma Science Seminar (1, max. 10) Hoffman, Jarboe, Shumlak Current topics in plasma science and controlled fusion with presentations by invited speakers, on-campus speakers, and students. Students expected to give a seminar once or twice a year with instructor reviewing the method of presentation and material used for the presentation. Credit/no credit only. Offered: AWSp.

A A 565 Fusion Reactor Fundamentals (3) Jarboe Introduction to basic engineering features of fusion power plants. Brief description of basic fusion physics and discussion of power plants for leading thermonuclear concepts. Engineering problems; blanket, shield neutronics; materials, thermal hydraulics; tritium, superconducting systems. Prerequisite: completion of or concurrent enrollment in 405 or permission of instructor. Offered: odd years; W.

A A 571 Principles of Dynamics I (3) *Livne, Ly, Vagners* Systems of particles, rotating axes, rigidbody dynamics; calculus of variations. Lagrangian mechanics. Hamilton's principle. Kane's equations. Periodic and quasiperiodic motion. Stability of dynamical systems. Offered: A.

A A 575 Continuum Mechanics I (3) Holsapple, Parmerter General foundations of the fundamental concepts of motion, stress, energy, and electromagnetism for a continuum. General equations of conservation of mass, momentum, and energy. Linear and nonlinear elastic, viscous, and inelastic materials. Offered: jointly with CESM 521; even years; W. A A 581 Digital Control I (3) Berg, Garbini, Ly, Murray Discrete-time and sampled-data systems, difference equations, and z-transform. Frequency response. Nyquist stability criterion. Gain and phase margins. Limitations of sampling. Sample rate selection. Controller design via discrete-time equivalents to continuous-time controllers, by direct-digital root locus and by loop shaping. Prerequisite: 471 or equivalent; recommended: 575 or equivalent. E E 581/M E 581; W.

A A 582 Digital Control II (3) Alexandro, Berg, Fabien, Vagners Controller design via state feedback and observers. Introduction to discrete-time stochastic processes. Quantization effects. Introduction to parameter identification using noisy measurements. LQR optimal control. Kalman filter design. LQG optimal control. Prerequisite: 581 or permission of instructor. Offered: jointly with E E 582/M E 582; Sp.

A A 583 Special Topics in Solid Mechanics (3) Offered: AWSp.

A A 590 Special Topics in Applied Analysis (3) Offered: AWSp.

A A 591 Robotics and Control Systems Colloquium (1, max. 3) Colloquium on current topics in robotics and control systems analysis and design. Topics presented by invited speakers as well as on campus speakers. Emphasis on the cross-disciplinary nature of robotics and control systems. Offered: jointly with CHEM E/E E/M E 591; AWSp.

A A 599 Special Projects (1-5, max. 15) Investigation on a special project by the student under the supervision of a faculty member. Offered: AWSpS.

A A 600 Independent Study or Research (*) Offered: AWSpS.

A A 700 Master's Thesis (*) Offered: AWSpS.

A A 800 Doctoral Dissertation (*) Offered: AWSpS.

Bioengineering

309 Harris Hydraulics Laboratory

The Center for Bioengineering provides a multidisciplinary program of collaborative research and training designed to accelerate the application of new engineering technologies to clinical practice and research. Major areas of current bioengineering research include bioinstrumentation, biomaterials, biomechanics, controlled drug-release systems, imaging, microsensors, bioelectromagnetics, molecular bioengineering, microcirculation, cell mechanics, muscle, and simulation of biosystems. There are options for study leading to master's and doctoral degrees with different levels of specialization. Detailed information on Bioengineering, its faculty, and courses appears in the Interschool or Intercollege Programs section of this catalog.

Chemical Engineering

105 Benson

Chemical engineering is concerned with processes for transforming raw materials into energy and into a great variety of consumer products, such as gasoline, electronic materials, pulp and paper, fertilizers, rubber, polymers and composites, and pharmaceuticals. Chemical engineers work on research and development of these materials and on the processes for making them, as well as on the design and operation of chemical plants and equipment by which production is achieved. This must be done with efficiency, economy, and concern for society and the environment. Some chemical engineers are employed by government agencies. Few other professions can match the diversity of job opportunities available to graduates in chemical engineering.

Chemical engineers employ the skills of mathematics, physics, chemistry, and, increasingly, biology, along with oral and written communication skills. The chemical engineer develops competence in the use of fundamental tools for engineering analysis and design: thermodynamics, chemical kinetics and reactor design, fluid mechanics, heat and mass transfer, process control, and economics. At the University, students study intensively in these fields and work in teams, often to solve real-life problems, to acquire knowledge and skills applicable in a variety of specialized fields and industries. Flexibility, in fact, is the hallmark of the chemical engineer.

Undergraduate Program

Adviser Devota Madrano 105 Benson, Box 351750 (206) 543-2252 advising@cheme.washington.edu

Bachelor of Science in Chemical Engineering

The Bachelor of Science in Chemical Engineering degree offered by the department is an accredited, professional program. Its completion should enable the graduate either to find employment in industry or to continue on to graduate school.

Advising

All students, including freshmen and sophomores, who are considering chemical engineering as a major are encouraged to be advised in the department.

Admission Requirements

Admission to the department is competitive, and completion of the requirements does not guarantee admission.

A diverse student body adds an important element to the education of all students in the program. All students who meet the minimum admission requirements will be considered for admission with special consideration given to ethnic-minority applicants to ensure diversity in the engineering student body.

All applicants have the right to petition and appeal the decision of the department.

Requirements are subject to change. Students should consult an adviser about current requirements.

Application Deadlines: July 1 for autumn quarter only. Application is made by filling out an application form available in the department office.

- 1. Early Admission Group (EAG):
- a. Open to students enrolled at the UW.

b. Completion of the following courses prior to application: MATH 124, 125, 126; CHEM 142, 152, 162; PHYS 121/131; and 5 credits of English composition.

c. A minimum grade of 2.0 in each prerequisite course and a minimum GPA of 2.50. At least 15 of the credits must have been taken at the UW.

2. Upper-Division Group (UAG):

a. Completion of the following courses: MATH 124, 125, 126, 307 (18 credits); CHEM 142, 152, 162, 223 or 237 (20); PHYS 121/131, 122/132 (10), CSE/ENGR 142, ENGR 260 (8); and one 5-credit English composition course. In addition, it is strongly recommended that students complete PHYS 123/133, and CHEM 224 or 238.

b. Students with a GPA lower than 2.50 for these specified courses or an overall GPA lower than 2.50 for all courses applicable to the B.S.Ch.E. degree seldom succeed in the department. Historically, a minimum GPA of 2.80 in these categories is required for admission to and success in the department.

c. Factors included in the admissions decision include the course record as indicated above and qualitative considerations such as difficulty of completed courses, frequency of incomplete or withdrawal grades, number of repeated courses, applicable work experience and maturity of attitude, record of honors, and a demonstrated ability to take at least 12 credits per quarter.

Admission for the Disadvantaged

While the sole purpose of the admission requirement is to limit enrollment to a number that can be taught well with the resources available, the department recognizes that this may eliminate some disadvantaged students whose potential is high but who, through extenuating circumstances of their background, have had limited access to early education that provides adequate experience in abstract reasoning. For purposes of special consideration for admission, a disadvantaged student is here defined as one who (1) is economically disadvantaged as shown by eligibility for a Basic Need Grant on the National Financial Aid Program; (2) is educationally disadvantaged, having attended a school without a full and available complement of college-preparatory courses; or (3) has ethnicminority status with a group showing historic underrepresentation in the field of engineering. These students are encouraged to apply for admission and to attach to their application a letter to the admissions committee that provides information on the applicant that is relevant to the admission decision.

Entrance to Chemical Engineering Courses

Entrance into most chemical engineering courses is ordinarily limited to majors in chemical engineering, paper science, and the B.S.E. program. Other students who wish to take departmental courses must meet the admission requirements of the department, complete the course prerequisites, and fill out a chemical engineering course request form.

Graduation Requirements

Information on degree requirements is available in detail from the department. In brief, the required 180 credits include the College of Engineering generaleducation requirements as specified above, 12 credits of engineering electives, 45 credits of chemical engineering, and 5 credits of electives. Many engineers design new equipment and processes or design modifications to them. The design experience is integrated throughout the curriculum, with open-ended problems (sometimes involving economic constraints) in several courses: design of heat exchangers (CHEM E 340) and distillation towers (CHEM E 435), design by piping and pumping systems (CHEM E 330), design of packedbed and fluidized-bed reactors (CHEM E 465). The design experience culminates in two capstone design courses (CHEM E 485 and 486) which involve the design of a chemical plant. An optional 9-credit specialty area allows each student to develop special competence in a selected subject by taking a minimum of three courses in that area. Engineering and free electives may be used for this purpose. The areas are biotechnology; polymers, composites, colloids, and interfaces; computers applied to chemical engineering; electronic materials; and environmental engineering. A minimum GPA of 2.00 in chemical engineering courses, based on the first time each course is taken, is required for graduation.

Most courses are offered twice a year so that students can participate in the Cooperative Education Program of the College.

Continuation Policy

The department policy on continuation is consistent with the continuation policy of the College. Details may be obtained from the department.

Graduate Program

Graduate Program Coordinator 105 Benson, Box 351750 (206) 543-2250

The department offers studies leading to the degrees of Doctor of Philosophy, Master of Science in Chemical Engineering, and Master of Science in Engineering. The doctoral degree is centered on the dissertation with a foundation in course work; it is generally completed in four to five years beyond the baccalaureate degree.

In the master's program primary emphasis is placed on course work, and the degree generally requires 24 months of study. Thesis and non-thesis options are available, with the former requiring both course work and research.

The program of study normally includes basic subjects of importance to all chemical engineers, such as thermodynamics, transport phenomena, kinetics, and applied mathematics. In addition, students are invited to take more-specialized courses in chemical engineering or in other departments. Students usually take four courses during their first quarter. In subsequent quarters, less time is spent on course work and more on research.

The department has about sixty full-time graduate students, most of whom are working toward a doctorate. They study and collaborate with members of the faculty in an atmosphere that is informal, friendly, and intellectually vigorous. The range of interests among the faculty members is quite broad, so students in courses and in research work have access to a variety of fields while receiving individual attention and guidance.

Research Facilities

The department is fortunate to have outstanding facilities. The chemical engineering building, Benson Hall, is supplied with much new research equipment. The building contains classrooms, offices, stockrooms, a well-staffed machine shop, laboratories, and a variety of specialized research equipment, including many microcomputers. Each graduate student is provided desk space in a small laboratory or office as well as access to larger laboratories in the building. Students also may use the services of the Academic Computer Center, the glassblowing shop, and the Chemistry-Chemical Engineering Library.

Admission Requirements

A student is accepted for admission to the Graduate School as a chemical engineering major by joint action of the Graduate School and the department after consideration of a formal application. Most students applying for admission as graduate students have a Bachelor of Science degree in chemical engineering. If a student has an undergraduate degree in chemistry, physics, mathematics, or another branch of engineering, he or she may obtain a graduate degree in chemical engineering by meeting certain additional requirements. The Graduate Record Examination (GRE), not including the advanced test, is generally required of all applicants. In addition, applicants who do not have a baccalaureate degree in chemical engineering from an accredited university in the United States must take the advanced test in chemistry or engineering.

Financial Aid

The department has various sources of support for qualified graduate students. Prospective students interested in applying for admission and support should request application forms from the department. The completed forms and reference letters should be received in the department office by January 15, if possible, and by February 15 at the latest. Offers of admission with financial support are usually made in February and March.

Faculty

Chair

Bruce A. Finlayson

Professors

Allan, G. Graham * 1966; PhD, 1956, University of Glasgow (UK); DSc, 1971, University of Strathclyde (UK); fiber and polymer science, creativity and innovation.

Babb, Albert L. * 1956, (Emeritus); MS, 1949, PhD, 1951, University of Illinois; nuclear reactor engineering, bioengineering.

Berg, John C. * 1964; PhD, 1964, University of California (Berkeley); interfacial phenomena, surface and colloid science.

Bowen, J. Ray * 1981; PhD, 1963, University of California (Berkeley); combustion.

David, Morton 1983, (Emeritus); DEng, 1950, Yale University; chemical engineering.

Davis, E. James * 1983; PhD, 1960, University of Washington; transport in porous media, microparticle physics and chemistry, surface and colloid science.

Finlayson, Bruce A. * 1967; PhD, 1965, University of Minnesota; modeling of chemical reactors, polymer flow, flow through porous media.

Garlid, Kermit L. * 1960, (Emeritus); PhD, 1961, University of Minnesota; nuclear fuel cycles, radioactive waste management.

Heideger, William J. * 1957, (Emeritus); PhD, 1959, Princeton University; biomedical transport phenomena.

Hoffman, Allan S. * 1970; DSc, 1957, Massachusetts Institute of Technology; polymer materials science and engineering.

Johanson, Lennart N. * 1951, (Emeritus); PhD, 1948, University of Wisconsin; chemical engineering.

Lidstrom, Mary E. 1995; MS, 1975, PhD, 1977, University of Wisconsin; environmental biotechnology, molecular bioengineering.

McCarthy, Joseph L. * 1941, (Emeritus); PhD, 1938, McGill University (Canada); thermodynamics, lignin and cellulose, chemistry, pulp and paper science, biochemical engineering.

McKean, William T. * 1979; PhD, 1968, University of Washington; pulp and paper science, chemical engineering.

Moulton, R. Wells 1941, (Emeritus); MS, 1934, PhD, 1938, University of Washington; chemical engineering.

Pilat, Michael J. * 1967, (Adjunct); PhD, 1967, University of Washington; air resources engineering (design of air-pollution-control equipment).

Ratner, Buddy D. * 1972; PhD, 1972, Polytechnic Institute of Brooklyn; synthesis and characterization of polymeric biomaterials.

Ricker, Neil L. * 1978; PhD, 1978, University of California (Berkeley); chemical process design, simulation, and control.

Rogers, J. William Jr. * 1990; PhD, 1979, University of Texas (Austin); surface chemistry and engineering, applications to thin film deposition.

Seferis, James C. * 1977; PhD, 1977, University of Delaware; polymer science and engineering, polymeric composites.

Sleicher, Charles A. * 1960, (Emeritus); PhD, 1955, University of Michigan; fluid mechanics, heat transfer.

Stuve, Eric M. * 1985; PhD, 1983, Stanford University; catalytic and electrochemical surface science.

Woodruff, Gene L. * 1975; PhD, 1965, Massachusetts Institute of Technology; reactor physics, fusion engineering, neutron spectroscopy, energy studies.

Yager, Paul * 1987, (Adjunct); PhD, 1980, University of Oregon; physical chemistry and applications of biomembranes.

Associate Professors

Baneyx, Francois * 1992; PhD, 1991, University of Texas (Austin); biotechnology, protein technology, biochemical engineering.

Castner, David G. * 1986, (Research); PhD, 1979, University of California (Berkeley); surface analysis characterization of biomedical and catalytic materials.

Gustafson, Richard Roy * 1986, (Adjunct); PhD, 1982, University of Washington; process modeling and optimization, fiber composites.

Hodgson, Kevin T. * 1991, (Adjunct); PhD, 1986, University of Washington; surface and colloid science, papermaking chemistry, secondary fiber recycling.

Holt, Bradley R. * 1984; PhD, 1984, University of Wisconsin; process control, process design.

Krieger-Brockett, Barbara * 1976; PhD, 1976, Wayne State University; reaction engineering, chemical kinetics and catalysis simulation.

Schwartz, Daniel T. * 1991; PhD, 1989, University of California (Davis); electrochemical engineering and electrolytic thin film science.

Assistant Professors

Chang, Michael Wei * 1992, (Adjunct); MD, 1988, University of Texas (Galveston); physical medicine and rehabilitation, electrophysiology biomechanics.

Overney, Rene M. * 1996; MS, 1989, PhD, 1992, University of Basel (Switzerland); nanorheology, nanotribology, fluid dynamics, development of scanning probe microscopy.

Wedgewood, Lewis E. * 1990; PhD, 1988, University of Wisconsin; computational fluid mechanics, macromolecular fluid flow, transport phenomena, stochastic simulation.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

CHEM E 260 Thermodynamics (4) Introduction to the basic principles of thermodynamics from a macroscopic point of view. Emphasis on the First and Second Laws and the State Principle, problem solving methodology. Prerequisite: either CHEM 140 or CHEM 142; MATH 126; PHYS 121. Offered: W.

CHEM E 309 Creativity and Innovation (2) VLPA Allan Understanding creativity and creative thinking; its challenges and dynamics through knowledge, judgment, planning, and observation. Techniques of creative thinking. Design and development of creative games. Computer-aided creative thinking. Creation, protection, and exploitation of a useful idea, including bargaining and negotiations. Offered: jointly with PSE 309; Sp.

CHEM E 310 Material and Energy Balances (4) Chemical and physical process calculations: steadyand unsteady-state material and energy balances with specific examples in vapor-liquid contact operations and multiphase extraction, and introductory thermochemistry. Prerequisite: either CHEM E 260 or both ENGR 142 and ENGR 260. Offered: ASp. CHEM E 326 Chemical Engineering Thermodynamics (4) Phase equilibria and chemical equilibria in multicomponent systems; theories of solution; chemical reaction analysis. Prerequisite: CHEM E 310 with either CHEM E 260, CHEM 456 or ENGR 260. Offered: AW.

CHEM E 330 Transport Processes I (4) Diffusive transport of momentum, heat and mass; general aspects of fluid flow; the Navier-Stokes equations; one-dimensional flow with engineering applications. Pre-requisite: CHEM E 310; MATH 307. Offered: AW.

CHEM E 340 Transport Processes II (4) Heat transfer, basic principles, and applications. Conduction, convection, and radiation. Prerequisite: CHEM E 330. Offered: WSp.

CHEM E 435 Transport Processes III (4) Mass transfer, basic principles, and applications to equipment design. Physical separation processes. Prerequisite: CHEM E 326; CHEM E 340. Offered: ASp.

CHEM E 436 Chemical Engineering Laboratory I (3) Lectures on experimental design, instrumentation, laboratory safety, and report writing; laboratory experiments on fluid mechanics and heat transfer. Emphasis on experimental planning, procedures, and report writing. Prerequisite: CHEM E 326; CHEM E 340 which may be taken concurrently; ENGR 231; recommended: ENGR 333. Offered: AWSp.

CHEM E 437 Chemical Engineering Laboratory II (3) Continuation of 436. Laboratory investigation of chemical engineering principles applied to equipment design with emphasis on mass transfer operations and chemical reactors. Prerequisite: CHEM E 435; CHEM E 436; CHEM E 465. Offered: AW.

CHEM E 450 Solid State Materials and Chemical Processes (3) Seferis Fundamentals of solid state including process analysis, mechanical properties; heterogeneity; anisotropy; liquid/solid transformations; rate processes; thermal analysis; viscoelasticity; microscopy; molecular characterization techniques. Application of fundamentals in examining polymers, metals, and ceramics as used in the electronics and aviation industries. Prerequisite: CHEM E 340; CHEM E 465. Offered: W.

CHEM E 455 Surface and Colloid Science Laboratory (1/3) Berg Laboratory techniques, equipment, and underlying fundamentals in surface and colloid science. Experiments in the measurement of surface tension, adsorption, wetting and spreading, colloid properties, emulsion preparation and stability, electrophoresis, and interfacial hydrodynamics. Prerequisite: CHEM E 326; CHEM E 330; CHEM 461. Offered: Sp.

CHEM E 458 Surface Analysis (3) Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials science, wear, and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger): ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Offered: jointly with BIOEN 492; W.

CHEM E 461 Electrochemical Engineering (3) Schwartz Explores role of thermodynamics, charge transfer kinetics, and mass transfer on behavior of electrochemical systems. Includes cell thermodynamics, faradaic and non-faradaic rate processes, ionic transport, nucleation and growth theories. Applications to chemical sensors, batteries, corrosion, thin film deposition. In-class demonstrations to illustrate concepts. Offered: W.

CHEM E 462 Application of Chemical Engineering Principles to Environmental Problems (3) Environmental problems in chemical engineering. Team taught; topics vary from year to year. Includes: geomedia, flow and dispersion through porous media water flow in dry soils, chemistry of radioactive waste, in situ site cleanup, ex situ site cleanup, colloid and surface science. Prerequisite: CHEM E 330.Offered: Sp.

CHEM E 465 Reactor Design (3) Application of principles of chemical kinetics to the design of commercial-scale chemical reactors; characterization of batch and flow reactors in homogeneous and heterogeneous systems. Prerequisite: CHEM E 326; CHEM E 340. Offered: ASp.

CHEM E 467 Biochemical Engineering (3) *Baneyx* Application of basic chemical engineering principles to biochemical and biological process industries such as fermentation, enzyme technology, and biological waste treatment. Rapid overview of relevant microbiology, biochemistry, and molecular genetics. Design and analysis of biological reactors and product recovery operations. Prerequisite: CHEM E 340; either CHEM 223 or CHEM 237; recommended: CHEM E 465. Offered: jointly with BIOEN 467; W.

CHEM E 468 Air-Pollution Control Equipment Design (3) Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption of gaseous pollutants; electrostatic precipitation and filtration of particular pollutants. Actual case studies. Offered: jointly with CIVE 494/M E 468; W.

CHEM E 470 Chemistry of Wood (3) Chemical and physical properties of cellulose, lignin, hemicellulose, and extractives; wood as a raw material for the chemical industry. Prerequisite: either CHEM 220 or CHEM 238.Offered: A.

CHEM E 471 Pulping and Bleaching Processes (3) Conversion of wood to mechanical and chemical pulps. Kraft, sulfite, and semichemical pulping processes. Chemical recovery systems. Bleaching of mechanical and chemical pulps. Offered: jointly with PSE 476; W.

CHEM E 472 Papermaking Processes (3) Fiber sources and properties. Secondary fibers. Stock preparation, sheet forming, water removal, finishing. Coating, lamination, and printing. Paper products. Offered: jointly with PSE 477; W.

CHEM E 473 Pulp and Paper Laboratory (2) Laboratory experiments in chemical and semichemical pulping of wood. Bleaching of chemical and high-yield pulps. Physical and chemical characteristics of pulp fibers. Prerequisite: PSE 476. Offered: jointly with PSE 478; Sp.

CHEM E 475 Computer Analysis in Chemical Engineering (3) Model building/simulation of chemical engineering processes: reactor design, fiber spinning, electrochemistry, biotech processes. Numerical methods include integrating ordinary differential equations as initial and boundary-value problems; finite difference, collocation, Galerkin methods. For each model the appropriate tool is developed. Offered: A.

CHEM E 477 Prokaryotic Molecular Biology Applications to Engineering (3) Lidstrom For engineers with no prior experience in the biological sciences. Covers fundamentals and concepts of molecular biology and directed genetic modification strategies using prokaryotic microorganisms as examples. Focus on approaches, techniques, and relevance to engineered systems. Prerequisite: either CHEM 223 or CHEM 237; recommended: either CHEM E 467 or BIOEN 450.

CHEM E 480 Process Dynamics and Control (4) Analysis of the dynamics of simple chemical process units and systems; applications to stability, control, and instrumentation of such processes. Weekly twohour laboratory included. Prerequisite: CHEM E 435; CHEM E 465. Offered: AW.

COLLEGE OF ENGINEERING / CHEMICAL ENGINEERING 311

CHEM E 481 Process Optimization (3) Concepts and techniques of optimizing chemical engineering processes and systems, including classical and direct methods of search, linear and nonlinear programming, dynamic programming, statistical experimental design, and evolutionary operation. Offered: Sp.

CHEM E 482 Advanced Topics in Process Control (3) *Holt, Ricker* Current topics in process control design and analysis. Possible topics include robustness analysis and design, time delay compensation, modern frequency response techniques, discrete control, adaptive control, model-based control, and nonlinear control. Prerequisite: CHEM E 480.

CHEM E 485 Process Design I (3) Applied economics in chemical engineering design and operations; market survey and plant location; introduction to plant and process design. Prerequisite: CHEM E 480 which may be taken concurrently. Offered: W.

CHEM E 486 Process Design II (5) Comprehensive design of a specific process, including economic feasibility studies, utilization of market survey and plant location studies, process equipment design and optimization, and overall plant integration and layout. Prerequisite: CHEM E 485. Offered: Sp.

CHEM E 490 Engineering Materials for Biomedical Applications (3) Hoffman Combined application of the principles of physical chemistry, biochemistry, materials engineering, mass transfer, and fluid mechanics to biomedical problems. Case studies include considerations of the selection of materials, the design and the operation of instruments, components of, or entire, artificial organs (heart, kidney, lung) and artificial structural elements (bone, teeth, skin), all for use in contact with body fluids. Offered: jointly with BIOEN 490; odd years; W.

CHEM E 491 Controlled Release Systems—Principles and Applications (3) Hoffman Mechanisms or controlled release of active agents and the development of useful systems for this purpose. Release mechanisms include diffusive, convective, or erosive driving forces. Applications to the biomedical, agricultural, forestry, and oceanography fields. Some special case studies covered in detail. Offered: jointly with BIOEN 491; even years; W.

CHEM E 498 Special Topics in Chemical Engineering (1-4, max. 12) Topics of current interest in the field. Subject matter changes from year to year.

CHEM E 499- Undergraduate Research ([1-6]-, max. 12) Independent research projects in chemical engineering. Offered: AWSpS.

Courses for Graduates Only

CHEM E 510 Mathematical Foundations of Systems Theory (4) Damborg Mathematical foundations for systems theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Prerequisite: graduate standing or permission of instructor. Offered: jointly with A A 546/E E/M E 510; A.

CHEM E 511 Biomaterials Seminar (1) Hoffman, Horbett, Ratner Presentation of student research results. Credit/no credit only. Prerequisite: permission of instructor. Offered: jointly with BIOEN 511; AWSp.

CHEM E 512 Methods of Engineering Analysis (3) Applications of mathematics to problems in chemical engineering; vector calculus; properties and methods of solution of first and second order partial differential equations; similarity transforms, separation of variables, Laplace and Fourier transforms. Prerequisite: MATH 205, MATH 307 or AMATH 351, MATH 324 or permission of instructor. Offered: jointly with AMATH 512; A. **CHEM E 523 Seminar in Chemical Engineering** (1) Topics of current interest in chemical engineering. Credit/no credit only. Offered: AWSp.

CHEM E 525 Chemical Engineering Thermodynamics (4) Review of principles of thermodynamics. Applications to problems in multiphase and multicomponent systems; theories of solutions. Prerequisite: undergraduate thermodynamics. Offered: A.

CHEM E 526 Topics in Thermodynamics (3) Classical and molecular thermodynamics of phase equilibria, solution theory, thermodynamic stability, and critical phenomena. Prerequisite: 525 or permission of instructor.

CHEM E 530 Momentum, Heat, and Mass Transfer I (4) Derivation of the differential equations for mass, energy, and momentum transport. Principles of fluid mechanics; creeping flow, turbulence, boundary-layer theory. Offered: A.

CHEM E 531 Momentum, Heat, and Mass Transfer II (4) Continuation of 530. Flows of fluid-particle systems; convective heat transfer, natural convection. Prerequisite: 530. Offered: W.

CHEM E 532 Separation Processes (3) Design of industrial processes for separation and purification of materials. Covers classification and selection of separation techniques, efficiency of separators, energy conservation concepts, and methods for design calculations.

CHEM E 533 Mass Transfer (3) Molecular mass transport; single-phase mixing; age distributions and residence time analysis; transfer across interfaces; coupled heat and mass transfer; effects of chemical reaction; design considerations.

CHEM E 554 Nanoscale Science I: Contact Mechanics and Rheology on the Nanoscale (3) Overney Introductory nanoscale science with emphasis on contact mechanics, principle and concept of forces, scanning force microscopy, tribology (friction, wear, lubrication), rheology, ultrathin organic films, physical properties of polymers, and computer simulation.

CHEM E 555 Interfacial Phenomena (4) Berg Surface tension, capillary statics, wetting and spreading phenomena; thermodynamics of capillary systems, adsorption, surfactant monolayers and micellar solutions; capillary hydrodynamics, interfacial turbulence and applications in distillation, absorption, and extraction. Prerequisite: 525, 530, or permission of instructor. Offered: even years.

CHEM E 556 Principles and Applications of Colloidal Materials (3/4) Berg, Hoffman Preparation, stabilization, properties, and destruction of important colloidal materials. The theory and structure of the electrical double layer, electrokinetics. Includes selected case studies pertinent to air and water pollution, biological fluids, industrial processes. Offered: odd years.

CHEM E 557 Research in Interfacial and Colloid Science (1) Berg Weekly research seminar and discussion of scientific literature pertaining to interfacial and colloid science. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

CHEM E 558 Surface Analysis (3) Ratner Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials science, wear, and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger); ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Offered: jointly with BIOEN 592; W.

CHEM E 559 Thin Film Science, Engineering, and Technology (3) *Rogers* The physics, chemistry, and engineering aspects of thin film deposition and technology. Vapor phase deposition emphasized.

Topics include reactor types, vapor phase transport and hydrodynamics, surface and mass transport limited kinetics, nucleation and growth, homoepitaxy, heteroepitaxy, and thin film characterization. Prerequisite: permission of instructor. Offered: jointly with MSE 559.

CHEM E 560 Reactions at Solid Surfaces (3) *Stuve* Fundamental studies of adsorption systems and reactions that occur at surfaces with application toward heterogeneous catalysis, electrochemistry, etching, and corrosion. Analysis of reaction poisons and promoters, acid-base theory of metal surfaces, jellium theory of metals, and water and ion adsorption, plus other topics of current interest. Recommended: 558 or CHEM 560.

CHEM E 561 Electrons at Surfaces (3) *Stuve* Properties of electrons at solid surfaces and their role in surface chemical reactions pertaining to electrochemistry, corrosion/etching, and catalysis. Topics include the jellium model of surfaces, surface electronic structure, work function, surface electric fields, reactions involving electrons, ions, and net charge transfer, and relationships between catalysis and electrochemistry.

CHEM E 562 Hazardous Air Pollution (3) Control of emission of hazardous or toxic air pollutants. Government regulations, determination of needed control efficiency. Emission control by thermal incineration, catalytic incineration, flares, condensation, carbon adsorption, and adsorption (wet and dry). Hazardous waste incinerators. Case studies. Offered: jointly with CEWA 562; W.

CHEM E 564 Applications of Chemical Kinetics (3) Fast reactions and highly energetic reactions with applications to combustion, explosions, and lasers. Coupling of transport processes and reaction rates, photochemical kinetics, intermolecular energy transfer, free radical, and chain reaction kinetics. Rate plasmas, flames, and biological systems.

CHEM E 565 Kinetics and Catalysis (3) Finlayson, Krieger, Stuve Homogeneous and heterogeneous systems with emphasis on chemical engineering principles applied to industrial reactor design. Prerequisite: 525. Offered: W.

CHEM E 566 Control of Gaseous Air Pollutants (3) *Pilat* Physical and chemical processes used to control gaseous air pollutants. Absorption into liquids. Aqueous spray dryer scrubbers. Adsorption beds. Control of sulfur oxide and nitrogen oxide. Case studies of control systems. Prerequisite: 435 or 468 or permission of instructor. Offered: jointly with CEWA 566; even years; Sp.

CHEM E 567 Control of Particulate Air Pollutants (3) *Pilat* Processes used to control emissions of particulate air pollutants. Use of settling chambers, cyclones, fabric filters, wet scrubbers, and electrostatic precipitators to control aerosol particles. Case studies of particulate air-pollutant control systems. Prerequisite: 468 or permission of instructor. Offered: jointly with CEWA 567; odd years; A.

CHEM E 570 Chemistry of High Polymers (3, max. 6) Allan Fundamentals of high polymer chemistry, including kinetics of addition and condensation polymerization, the determination of average molecular weights and chain length distributions, solution properties and the relationship between molecular structure and plastic film and fiber properties of various polymers. Prerequisite: an undergraduate sequence in organic chemistry. Offered: W.

CHEM E 571 Polymer Physics and Engineering (3) *Seferis* Description and analysis of methods for processing polymeric materials. Introduction to solid polymer physics with emphasis on the coupling of structure morphology and properties. Development of structure-property models for quantitative description and control of properties in synthetic and natural polymers and composite materials. Offered: A. **CHEM E 572** Advanced Polymeric Composites (3) Seferis Design, manufacture, and properties of organic and inorganic particle and fiber-reinforced polymers. Advanced techniques for characterization of processing and properties, including anisotropic elasticity/viscoelasticity theory, polymerization and network formation of matrices, theory of reinforcement, environmental and chemical effects. Prerequisite: 571 or MSE 423 or permission of instructor. Offered: Sp.

CHEM E 575 Nonlinear Analysis in Chemical Engineering (3) *Finlayson* Comparison of numerical techniques: similarity, perturbation, finite difference, Galerkin, orthogonal collocation methods as applied to nonlinear chemical engineering problems. Offered: odd years.

CHEM E 580 Topics in Chemical Engineering Design (3, max. 9) Lectures and seminars on current design methods in chemical engineering, including technical and economic feasibility of processes, design and optimization of process equipment, and environmental and social constraints. Prerequisite: undergraduate chemical engineering design, admission to chemical engineering non-thesis master's program, or permission of instructor.

CHEM E 582 Advanced Topics in Process Control (3) *Holt, Ricker* Current topics in process control design and analysis. Possible topics include robustness analysis and design, time delay compensation, modern frequency response techniques, discrete control, adaptive control, model-based control, and nonlinear control. Prerequisite: undergraduate control class and graduate standing.

CHEM E 588 Research in Applied Microbiology (1) Lidstrom Weekly research seminar and discussion of scientific literature pertaining to applied microbiology. Credit/no credit only. Prerequisite: permission of instructor. Offered: jointly with MICROM 588; AWSpS.

CHEM E 590 Advanced Topics in Biomaterials (3) Major, controversial issues in application of synthetic materials to medical problems. Blood compatibility, bioadhesion, intraocular lenses, contact lenses, polyurethanes, biodegradation, protein adsorption, corrosion, bone fixation, new materials, artificial heart, medical device regulation. Prerequisite: 490 or BIOEN 490. Offered: jointly with BIOEN 590.

CHEM E 591 Robotics and Control Systems Colloquium (1, max. 3) Colloquium on current topics in robotics and control systems analysis and design. Topics presented by invited speakers as well as on campus speakers. Emphasis on the cross-disciplinary nature of robotics and control systems. Offered: jointly with A A/E E/M E 591; AWSp.

CHEM E 598- Effective Teaching of Chemical Engineering ([1/2]-, max. 3) Finlayson Topics/activities include: curriculum development: outlining a course, comparing textbooks, preparing lectures, use of lectures versus quiz sections, microteaching, other modes of instruction, e.g., self-paced, use of design problems. Tests: creating and grading. Role of computers, review of engineering software, diversity, international teaching assistants, sexual harassment, assessment of teaching, résumé. Offered: WSp.

CHEM E 599 Current Topics in Chemical Engineering (1-3, max. 12) Readings or lectures and discussions of topics of current interest in the field of chemical engineering. Subject matter changes from year to year. Prerequisite: permission of instructor.

CHEM E 600 Independent Study or Research (*) Offered: AWSpS.

CHEM E 700 Master's Thesis (*) Offered: AWSpS.

CHEM E 800 Doctoral Dissertation (*) Offered: AWSpS.

Civil Engineering

201 More

Civil engineering is a profession which interfaces closely with society in the planning, design, construction, and management of facilities serving the needs of people. These activities include all transportation modes: highways, aerospace, rivers, and harbors; water resources, hydraulics, and coastal engineering; structures, mechanics, and geotechnical engineering; surveying, mapping, and photogrammetry; urban planning and development; water supply, wastewater treatment, and water-quality management; solid- and hazardous-waste disposal; and quality control and management of the air resources.

A civil engineer may specialize in one or several of these activities and may further specialize in a particular function, such as design or management. The work frequently provides close associations with the legal profession, urban and regional planners, economists, public officials, biologists, chemists, financial consultants, architects, and system analysts. Education and practice require a consideration not only of the technological-science aspects of a particular problem but also of its relationship to social, economic, political, and environmental constraints.

To accommodate these wide interests, the department is organized into three academic programs: Structural and Geotechnical Engineering and Mechanics; Transportation, Surveying, and Construction Engineering; Environmental Engineering and Science.

Undergraduate Program

Adviser Lynn Girardeau 201 More, Box 352700 (206) 685-2610 ceadvice@u.washington.edu

Bachelor of Science in Civil Engineering

Departmental Objectives

The department's objectives are to provide a quality, broad-based education with breadth and depth in major areas of civil engineering; to prepare students for entry into professional-engineering practice and lifelong learning; to prepare well-qualified students for graduate studies in specialty fields within civil engineering, leading to careers in professional practice, research, or academics; and to maintain a tradition of excellence in classroom teaching, encourage innovation, and use evaluation by students and faculty to improve continually. The department meets these objectives by providing a curriculum that includes introduction to major areas of civil engineering, development of engineering analysis in each area (drawing on mathematics and basic sciences), and utilization of modern methodologies, theories, and tools.

The curriculum integrates engineering design throughout, incorporating key elements of the design process in a wide range of courses. Each student is required to take a design seminar and at least one major, comprehensive design course in the senior year, building on fundamentals from mathematics, sciences, major areas of civil engineering, and communication skills. Additionally, students may take independent-study or research courses, working one-on-one with faculty and advanced graduate students. Special attention is focused on prospective students, seeking excellence, emphasizing recruitment of women, underrepresented minorities, and persons of disability.

Admission Requirements:

1. Admission to the department is usually at the junior level.

2. Enrollment in the department is limited; students who desire admission must formally apply to, and be accepted by, the departmental admissions committee.

3. The primary admission criterion is degree of qualification for probable success in the engineering degree program as evidenced by academic performance, work experience, and other factors.

4. Completion of the following courses with a minimum grade of 2.0 in each course and a minimum cumulative GPA of 2.50: MATH 124, 125, 126, 308; CHEM 142; PHYS 121/131, 122/132; CSE/ENGR 142; ENGR 210, 220, 230; and 5 credits of English composition.

5. Prospective students should obtain a copy of the departmental undergraduate advising guide and the departmental application form, both of which are available in 201A More.

6. Departmental application deadline: July 1 for autumn quarter; February 1 for spring quarter.

Graduation Requirements: The minimum number of credits required for graduation with the Bachelor of Science in Civil Engineering degree is 180, of which 75 credits are Civil Engineering departmental requirements and 105 are College of Engineering and general-education requirements. Upper-division requirements in civil engineering include a common core of specified courses taken in the junior year.

Graduate Program

Graduate Program Coordinator 201A More, Box 352700 (206) 685-2610

The Department of Civil Engineering offers courses leading to the degrees of Master of Science in Civil Engineering and Doctor of Philosophy. The department also provides authorized options leading to the College-wide Master of Science and Master of Science in Engineering degrees.

The three master's programs are intended to accommodate the needs of three categories of students: the M.S.C.E. degree is for those who have completed an undergraduate degree in civil engineering and plan to continue with their professional training; the Collegewide M.S.E. degree is for other engineering graduates who wish to do graduate work in civil engineering; and the College-wide M.S. degree is for those whose Bachelor of Science degrees are not in engineering, but who desire to apply their training in science to the solution of problems in some specific sector related to civil engineering. The non-engineer may be required to take additional course work to obtain an M.S.E. degree.

Graduate work is offered in most fields of civil engineering, including Structural and Geotechnical Engineering and Mechanics; Transportation and Construction Materials and Construction Engineering; and Environmental Engineering and Science.

Priority for admission is based on an applicant's apparent ability to progress satisfactorily in a graduate degree program. The applicant's scholastic record is of major importance; usually, at least a "B" or 3.00 GPA in the junior and senior years is required. Consideration is also given to Graduate Record Examination scores and other information.

Degree Requirements

The requirement for the master's degree is a minimum of 39 credits, of which 30 must be in formal course work and 9 in thesis. A non-thesis program is available, requiring a minimum of 45 credits, of which at least 3 credits will be individual study with the advisory committee chairperson. The Environmental Engineering and Science Program requires 45 credits for both the thesis and non-thesis options. For all master's degrees, at least 3 credits must be from outside the major field of study. Students working for the Ph.D. degree must complete an approved program of studies and research normally requiring an additional two or three years beyond the master's degree.

Financial Aid

Research and teaching assistantships are available on a competitive basis. The number of positions depends upon the current level of funding. Additionally, there are a limited number of fellowships, scholarships, and traineeships.

Research Facilities

More Hall and Wilcox Hall have structural, concrete, bituminous materials, soil mechanics, computer, waterquality, solid-wastes, and air-quality laboratories as well as an air-monitoring station and equipment for fieldwork in the construction, water, air, and solid-waste programs. Facilities for experimental studies in hydraulics and coastal engineering and in fluid mechanics are located in the Harris Hydraulics Laboratory.

Faculty

Chair

Fred L. Mannering

Professors

Benjamin, Mark M. * 1977; MS, 1973, MS, 1975, PhD, 1979, Stanford University; chemistry of natural waters, chemical and biological treatment of water and wastewater.

Bogan, Richard H. * 1954, (Emeritus); DSc, 1954, Massachusetts Institute of Technology; environmental engineering.

Brown, Colin B. * 1969, (Emeritus); PhD, 1962, University of Minnesota; structural engineering and systems.

Burges, Stephen J. * 1970; PhD, 1970, Stanford University; surface and ground water hydrology, water resource systems analysis and design.

Carlson, Dale A. * 1955, (Emeritus); PhD, 1960, University of Wisconsin; water resources and solid-waste management.

Charlson, Robert J. * 1965, (Adjunct); MS, 1959, Stanford University; PhD, 1964, University of Washington; atmospheric chemistry, aerosol physics, aerosol/ cloud/climate interaction and instrumentation.

Clanton, Jack R. 1947, (Emeritus); MS, 1939, University of Pittsburgh; structural engineering.

Colcord, J. E. * 1949, (Emeritus); MSCE, 1949, University of Minnesota; surveying engineering.

Covert, David S. * 1975, (Adjunct Research); MS, 1971, PhD, 1974, University of Washington; aerosol instrumentation, aerosol physics and chemistry, atmospheric chemistry.

Decher, Reiner * 1967, (Adjunct); PhD, 1968, Massachusetts Institute of Technology; aircraft propulsion, fluid mechanics, energy conversion.

Elias, Ziad * 1969; DSc, 1963, Massachusetts Institute of Technology; engineering mechanics.

Evans, Roger J. * 1966, (Emeritus); PhD, 1965, University of California (Berkeley); engineering mechanics, structural engineering.

Ferguson, John F. * 1974; PhD, 1970, Stanford University; chemical and biological processes in water and waste treatment and in natural water systems.

Hammer, Vernon B. 1947, (Emeritus); MS, 1941, Harvard University; solid-waste management.

Hartz, Billy J. * 1955, (Emeritus); PhD, 1955, University of California (Berkeley); engineering mechanics, structural mechanics.

Hennes, Robert G. 1934, (Emeritus); MS, 1928, Massachusetts Institute of Technology; transportation engineering. Hodge, David C. * 1975, (Adjunct); MS, 1973, PhD, 1975, Pennsylvania State University; urban geography, urban transportation geography, equity, gender.

Holtz, Robert Dean * 1988; PhD, 1970, Northwestern University; geotechnical engineering.

Karr, James * 1991, (Adjunct); PhD, 1970, University of Illinois; ecology and conservation biology, water resources, environmental sciences, natural resources.

Kramer, Steven * 1984; PhD, 1984, University of California (Berkeley); soil mechanics, foundation engineering, geotechnical earthquake engineering.

Larson, Timothy * 1970; PhD, 1976, University of Washington; airborne particles, air quality modeling, and instrument development.

Lettenmaier, Dennis P. * 1973; PhD, 1975, University of Washington; systems analysis and water resources planning.

Mahoney, Joseph P. * 1978; PhD, 1979, Texas A&M University; construction materials, pavement systems.

Mannering, Fred L. * 1986; PhD, 1983, Massachusetts Institute of Technology; traffic flow theory, networks, econometric methods, equilibration in transportation markets.

Mar, Brian W. * 1967; PhD, 1958, University of Washington; system engineering, environmental management, interdisciplinary management.

Mattock, Alan * 1964, (Emeritus); PhD, 1955, University of London (UK); structural behavior and design.

Meese, Richard H. 1975, (Emeritus); MS, 1941, Harvard University; soil mechanics and foundations.

Miller, Gregory * 1983; PhD, 1984, Northwestern University; structural materials, solid mechanics, nonlinear dynamics.

Nece, Ronald E. * 1959, (Emeritus); DSc, 1958, Massachusetts Institute of Technology; hydraulic and coastal engineering.

Nihan, Nancy L. * 1973; PhD, 1970, Northwestern University; transportation planning and systems analysis.

Palmer, Richard * 1979; PhD, 1979, Johns Hopkins University; civil engineering systems, computer methods, water resources planning and management.

Pilat, Michael J. * 1967; PhD, 1967, University of Washington; air resources engineering (design of air-pollution-control equipment).

Reed, Dorothy * 1983; MSE, 1977, PhD, 1980, Princeton University; structural and wind engineering, and expert systems.

Richey, Eugene 1954, (Emeritus); MS, 1947, MSCE, 1948, California Institute of Technology; PhD, 1955, Stanford University; hydraulic engineering.

Roeder, Charles W. * 1977; PhD, 1977, University of California (Berkeley); structures and materials.

Rossano, August T. 1963, (Emeritus); MS, 1941, ScD, 1954, Harvard University; air resources.

Rutherford, G. Scott * 1981; PhD, 1974, Northwestern University; transportation planning and engineering.

Sawhill, Roy 1952, (Emeritus); MEng, 1952, University of California (Berkeley).

Schneider, Jerry * 1967, (Emeritus); PhD, 1966, University of Pennsylvania; metropolitan area and regional planning, transportation and other urban models.

Seabloom, Robert * 1954, (Emeritus); MSCE, 1956, University of Washington; water-quality and solid-waste management.

Stanton, John F. * 1978; PhD, 1978, University of California (Berkeley); structural engineering, analysis and design.

Stensel, H. David * 1983; PhD, 1971, Cornell University; biological wastewater treatment, fixed film reactors, mass transfer mechanics, modeling.

Sylvester, Robert O. 1947, (Emeritus); MS, 1941,

Harvard University; water resources. Terrel, Ronald L. 1967, (Emeritus); MSCE, 1961,

Purdue University; PhD, 1967, University of California (Berkeley).

Veress, Sandor A. * 1965, (Emeritus); PhD, 1969, Laval University (Canada); photogrammetry.

Welch, Eugene B. * 1968, (Emeritus); PhD, 1967, University of Washington; water resources and aquatic biology.

Wenk, Edward 1970, (Emeritus); MS, 1947, Harvard University; PhD, 1950, Johns Hopkins University.

Yeh, Harry H. * 1983; PhD, 1983, University of California (Berkeley); fluid mechanics, water wave motions, coastal and hydraulic engineering.

Associate Professors

Chenoweth, Harry H. 1946, (Emeritus); MSCE, 1957, University of Washington; engineering mechanics and hydraulic engineering.

Eberhard, Marc O. * 1989; PhD, 1989, University of Illinois; structural analysis and design, reinforced concrete, earthquake engineering, nondestructive testing.

Goldblatt, Steven M. 1982, (Adjunct); JD, 1977, Golden Gate University; construction law, labor relations, and accounting.

Harrison, Halstead * 1971, (Adjunct); PhD, 1960, Stanford University; atmospheric chemistry, dispersion modeling, radiative transfer.

Horner, Richard R. * 1981, (Adjunct Research); PhD, 1978, University of Washington; wetlands, conservation and storm water management.

Janssen, Donald J. * 1985; PhD, 1985, University of Illinois; construction materials, pavements.

Kent, Joseph C. * 1952, (Emeritus); PhD, 1952, University of California (Berkeley); hydraulic engineering.

Massmann, Joel W. * 1991; PhD, 1987, University of British Columbia (Canada); groundwater hydrology, subsurface contaminant transport, site remediation, applied decision analysis.

Miller, William * 1951, (Emeritus); MSCE, 1952, University of Washington; materials.

Morgan, Michael S. * 1974, (Adjunct); DSc, 1972, Massachusetts Institute of Technology; applied respiratory, physiology and inhalation toxicology.

Pivo, Gary E. * 1987, (Adjunct); PhD, 1987, University of California (Berkeley); land use and physical planning, environmental planning, growth management.

Spyridakis, Dimitris * 1970, (Emeritus); PhD, 1965, University of Wisconsin; soil and water chemistry.

Strand, Stuart E. * 1982, (Adjunct Research); PhD, 1982, Pennsylvania State University; forest biotechnology, environmental pollution control.

Strausser, Howard * 1955, (Emeritus); MSEng, 1950, Johns Hopkins University; hydraulic engineering.

Turkiyyah, George * 1991; PhD, 1990, Carnegie Mellon University; computer-aided engineering, finite element modeling.

Zabinsky, Zelda * 1985, (Adjunct); PhD, 1985, University of Michigan; operations research, applications in industrial engineering, optimization with stochastic elements.

Assistant Professors

Arduino, Pedro * 1997; PhD, 1996, Georgia Institute of Technology; mechanics of porous media, constitutive modeling of soils, numerical methods of geomechanics.

Brett, Michael T. * 1997; PhD, 1990, University of Uppsala (Sweden); applied limnology.

COLLEGE OF ENGINEERING / CIVIL ENGINEERING 313

314 COLLEGE OF ENGINEERING / CIVIL ENGINEERING

Dailey, Daniel J. * 1982, (Adjunct Research); MS, 1982, PhD, 1988, University of Washington; time series modeling of physical phenomena, optimization, distributed computing, networking.

Dunston, Phillip S. * 1994; MS, 1992, PhD, 1994, North Carolina State University; construction engineering process, quality, productivity, and management, emphasizing automation.

Jessup, Andrew T. * 1990, (Affiliate); PhD, 1990, Massachusetts Institute of Technology; applications of remote sensing to air-sea interaction.

MacRae, Gregory Anthony * 1994; PhD, 1990, University of Canterbury (New Zealand); design of structures to withstand earthquakes.

Petroff, Catherine * 1993; PhD, 1993, California Institute of Technology; sediment transport, coastal engineering, and environmental fluid mechanics.

Zeitler, Teresa Taylor * 1992; PhD, 1988, Washington State University; geotechnical/geological engineering, physical modeling, centrifuge modeling.

Senior Lecturer

Bucknam, Ronald E. 1985; PhD, 1964, University of Illinois.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

CIVE 250 Environmental Pollution: Assessing Problems and Solutions (5) NW, QSR Problems in air, water, land environment caused by increasing demands on resources; their definition, control or prospects for control from engineering viewpoint. Ecological cycles, quantity/quality of wastes, biological effects of pollutants, energy, legislation and policy.

CIVE 306 Construction Engineering I (3) *Dunston* Introduction to construction engineering, planning, scheduling, methods, contracts, and specifications. Production estimates; equipment selection; ownership and operating costs; role of the engineer in construction and cost estimating. Offered: WSp.

CIVE 316 Surveying Engineering (4) Application of geodesy to engineering surveys. Modern measurement and mapping techniques. Computer adjustment of measurements and analysis of error. Plane coordinate systems and transformation. Horizontal and vertical curve computations and layout. Leveling and datum considerations. Introduction to photogrammetry, cadastral surveys and construction surveys. Prerequisite: either CSE 142 or ENGR 142; recommended: statistics. Offered: ASp.

CIVE 320 Transportation Engineering I (3) *Mannering, Rutherford* Review of operating characteristics of vehicles and methods used to predict travel demand and capacity supply. Study of basic geometric fundamentals and their relationship to design with emphasis on highways, and management of transportation systems. Prerequisite: CIVE 316 which may be taken concurrently. Offered: AW.

CIVE 342 Fluid Mechanics (4) Burges, Petroff, Yeh Elementary mechanics of incompressible fluids. Hydrostatics. Continuity, energy, and momentum equations. Introduction to potential flow. Resistance phenomena for laminar and turbulent flows. Dynamic similitude. Prerequisite: ENGR 210; ENGR 230. Offered: ASp.

CIVE 345 Hydraulic Engineering (4) Massmann, Petroff, Yeh Extension and application of fluid mechanics principles to hydraulic engineering problems. Open channel flow, pipeline systems, turbomachinery, unsteady flow in pipes, diffusion and mixing processes, groundwater, surface water hydrology. Prerequisite: CIVE 342. Offered: AW.

CIVE 350 Environmental Engineering-Water and Air Quality (4) Benjamin, Ferguson, Pilat, Stensel Description of water and air resources and parame eters that characterize their quality, how their use alters their properties. Emphasis on effects of civil engineering projects; significance to engineer/scientist and society. Laboratory sessions stress waterquality analysis techniques and significance. Offered: AW.

CIVE 351 Water Supply and Waste Management (3) *Benjamin, Stensel* Fundamentals of water supply: surface- and ground-water sources, demand, and system design. Municipal sewerage systems: wastewater quantity and quality, and fundamentals of engineering design for collection, treatment, and disposal. Solid wastes: characteristics and quantities, collection, treatment, and disposal. Prerequisite: CIVE 345 which may be taken concurrently; CIVE 350. Offered: WSp.

CIVE 363 Constructional Materials (4) *Janssen, MacRae, Mahoney* General treatment of physical and mechanical properties and engineering behavior of metallic and nonmetallic materials. Steel, aluminum, concrete, wood. Laboratory testing, instrumentation, and investigation into macrobehavior. Correlation with microstructure and various aspects of materials science. Prerequisite: ENGR 220. Offered: ASp.

CIVE 366 Basic Soil Mechanics (4) *Kramer, Taylor* Introduction to basic soil properties, soil classification, volumetric relationships, compaction, consolidation, soil rheology, shear strength, bearing capacity, and lateral stresses against retaining structures. Prerequisite: ENGR 220. Offered: WSp.

CIVE 379 Elementary Structures I (3) *Elias, MacRae* Review of engineering theory of beams, combined stresses, beam deflections, indeterminate beams, principle of virtual work, application to beams, unsymmetrical bending, shear center, torsion of open and thin-walled sections, composite beams, inelastic bending of beams, elastic stability, beamcolumns, column design formulas. Prerequisite: ENGR 220. Offered: ASp.

CIVE 380 Elementary Structures II (3) *Elias, Roeder* Classification and idealization of structures. Theorem of virtual work. Unit load method for beams, frames, and trusses. Matrix formulation of theorem of virtual work. Force method for statically determinate and indeterminate method. Moment distribution for beams and frames including sway analysis. Prerequisite: CIVE 379. Offered: AW.

CIVE 381 Concepts of Structural Design (3) *MacRae, Reed, Stanton* Planning, design, and constructional aspects of structures. Criteria for structural adequacy and efficiency. Examination of the design process. Introduction to design of components. Use of influence lines. Prerequisite: CIVE 380. Offered: WSp.

CIVE 390 Civil Engineering Systems (3) *Massman, Palmer* Introduction to civil engineering system processes. Decision methods, economic considerations, and optimization. Examples illustrating quantitative and subjective aspects of civil engineering practice. Offered: Sp.

CIVE 400 Computer-Aided Design (3) Review and evaluation of computer-aided design hardware, software, and applications in civil engineering. Use of interactive graphic software to solve complex, multiobjective design problems. Recommended: ENGR 123. Offered: A.

CIVE 405 Construction Planning and Scheduling (3) Principles of construction planning and scheduling, including network analysis of construction activities, examination of arrow and precedence diagrams, time-cost tradeoffs, resource leveling, resource allocation, PERT, integrated cost/schedule systems, computer applications, and a CPM project. Offered: W.

CIVE 406 Construction Engineering II (3) *Dunston* Heavy construction equipment. Equipment economics, contractor equipment policies, equipment specifications, selection and performance of equipment, estimating productivity of construction equipment, and engineering support for construction operating. Prerequisite: CIVE 306. Offered: A.

CIVE 407 Contracts and Specifications (3) Construction industry, forms of organizations, real property laws, and bidding procedures. Basic elements of contracts, types of specifications, general conditions of standard construction contracts, legal disputes related to construction contract provisions, surety bonds and construction insurance. Prerequisite: CIVE 306. Offered: ASp.

CIVE 410 Traffic Engineering Fundamentals and Surveys (3) Nihan General review of the fundamentals of traffic engineering, including their relationship to transportation operations management and planning, with special emphasis on traffic engineering field surveys and data analysis. Prerequisite: CIVE 320. Offered: A.

CIVE 412 Traffic Flow Theory (3) Mannering Introduction to traffic flow theory, characteristics. Measurement, statistical representation of traffic characteristics. Speed-flow-concentration models and relationship to level of service, highway capacity. Application of queuing theory to traffic events; introduction to traffic flow simulation. Prerequisite: CIVE 320. Offered: W.

CIVE 416 Urban Transportation Planning and Design (3) *Nihan, Rutherford* Brief review of major issues in urban transportation planning. Planning process discussed and transportation models introduced. Uses a systems framework, including goals and objectives, evaluation, implementation, and monitoring. A design term project, individual or small groups, utilizes material presented on a contemporary problem. Prerequisite: CIVE 320. Offered: A.

CIVE 418 Computer-Aided Planning of Urban Systems (3) Survey of on-line planning applications; use of various on-line systems to solve urban systems design problems; investigations of hardware/software tradeoffs; human factors in man-computer systems design theory as it relates to problem-solving activity. Offered: jointly with URBDP 429.

CIVE 421 Pavement Design (3) Janssen, Mahoney Current and developing procedures for the structural thickness design of pavements. Bituminous and concrete pavements for highways, airports, and special heavy loading. Elastic layered systems, slab theory. Performance evaluation for maintenance and overlay design. Offered: ASp.

CIVE 422 Construction Materials II (4) Janssen Types, sources, uses, performance behavior from construction point of view of aggregates; asphalt products and mixtures; Portland cement, concrete, and other materials the civil engineer is responsible for selecting and manufacturing on job site. Includes laboratory work. Prerequisite: CIVE 363. Offered: A.

CIVE 423 Heritage of Civil Engineering (3/4) I&S Colcord Contribution of civil engineering to civilization based on the lives and projects of prominent engineers and cultures. Incidents and individuals from prehistory to the nineteenth century give the student an awareness of the profession and its influence on society. Industrial archaeology and historic sites are considered. An additional 1 credit may be earned by participating in a special project. Emphasis on the control of elements and the methodology, planning, objectives, and reasons for the project. May be used as social science distribution. Offered: W.

COLLEGE OF ENGINEERING / CIVIL ENGINEERING 315

CIVE 431 Seismology and Earthquake Engineering (3) NW *Reed, Roeder* Presents an overview of earthquake processes and details of the characteristics of destructive ground motion; illustrates the effects of such motion on engineering structures; reviews current practice in estimating earthquake hazards for important structures such as nuclear power plants. Prerequisite: MATH 307; MATH 308. Offered: jointly with GPHYS 431; W.

CIVE 436 Foundation Design (3) Holtz, Taylor Design considerations for foundations and retaining structures. Subsurface investigations and determination of soil properties for design. Design of shallow and deep foundations and retaining structures. Foundations and soil considerations for waterfront structures. Offered: AWSp.

CIVE 437 Engineering Geology I (3) Taylor General overview of engineering geology and its importance to civil engineers. Topics include geologic processes, hazards, oring and classification of geologic materials, data synthesis, and natural construction materials. Prerequisite: GEOL 205. Offered: A.

CIVE 440 Design Seminar (2) Fundamentals of integrated civil engineering design, professional services marketing, project management, team dynamics, total quality management, value engineering, professional liability, and applied ethics in engineering practice. Emphasis on written and oral communications and on ethical, social, and economic factors. Offered: AW.

CIVE 441 Highway and Traffic Engineering—Geometric Design (4) *Mannering* Factors and elements in geometric design of arterials, intersections, freeways, interchanges, including problem solution. Prerequisite: CIVE 320; CIVE 440 which may be taken concurrently. Offered: W.

CIVE 442 Structural Geotechnical Design Project (4) *Holtz, Roeder* Comprehensive team design project focusing on structural and geotechnical engineering. Requires design drawings, written reports, and oral presentations interfacing with related fields such as aesthetics and architecture, mechanical systems, traffic, environmental planning. Prerequisite: CIVE 440; two courses from CIVE 436, CIVE 451, CIVE 452, CIVE 453, CIVE 454, or CIVE 457. Offered: WSp.

CIVE 443 Design of Subsurface Remediation Activities (4) Massmann Technologies for cleaning groundwater extraction, vapor extraction, groundwater containment, and in-situ treatment. Analytical tools and methods for making design calculations are emphasized. Comprehensive design project involving design and evaluation of site remediation activities required. Prerequisite: CIVE 440. Offered: Sp.

CIVE 444 Water Resources and Hydraulic Engineering Design (4) *Burges, Petroff, Yeh* Opportunity to effect design solutions for projects or major project components in such representative areas as reservoirs and associated systems for flood control, water supply, irrigation, and hydroelectric power, surface water control systems, fisheries related projects, small harbors, and coastal engineering problems. Prerequisite: CIVE 440. Offered: W.

CIVE 445 Environmental Engineering Design Studies (4) Stensel Individual and group design studies involving environmental engineering water and wastewater treatment facilities. Topics include proposal preparation, engineering reports, alternative evaluations, process equipment design, and environmental engineering projects. Presentation of engineering reports on selected design problems. Prerequisite: CIVE 345; CIVE 351; CIVE 440 which may be taken concurrently. Offered: Sp.

CIVE 451 Design of Metal Structures (3) *Miller, Roeder, Stanton, Turkiyyah* Introduction to the design and behavior of metal structures using LRFD concepts. Application of design methods and codes to columns, beams, frames, connections, and tension members. Prerequisite: CIVE 381; recommended: CIVE 457, CIVE 458. Offered: ASp.

CIVE 452 Design of Reinforced Concrete Structures (3) *Eberhard, MacRae, Stanton* Fundamentals of design of buildings in reinforced concrete in accordance with current codes and practices. Prerequisite: CIVE 381. Offered: ASp.

CIVE 453 Prestressed Concrete Design (3) *Stanton* Analysis, design, and construction of prestressed concrete structures. Prerequisite: CIVE 452. Offered: W.

CIVE 454 Design of Timber Structures (3) *Eberhard, Reed* The design and construction of timber structures, using elements made of sawn wood, glued-laminated wood, and plywood. Prerequisite: CIVE 381. Offered: W.

CIVE 455 Structural Unit Masonry (3) *Tawresey* Structural behavior and design of reinforced brick, tile, and unit concrete masonry structures. Prerequisite: CIVE 381. Offered: jointly with ARCH 426; Sp.

CIVE 457 Advanced Structures I (3) Eberhard, Elias, Turkiyyah The displacement method in matrix form with programming applications. Fundamentals of modeling of various types of structures. Prerequisite: CIVE 380. Offered: WSp.

CIVE 458 Advanced Structures II (3) Stanton Introduction to stability, including a consideration of elastic and inelastic buckling with applications to beam-columns and plates. Introduction to plastic analysis. Prerequisite: CIVE 379. Offered: W.

CIVE 459 Advanced Structural Mechanics (3) *Elias* Formulation and solution of the basic equations of elasticity. Applications in 2-D stress analysis, torsion, thermal stresses, and beams on elastic foundation. Plate theory optional. Prerequisite: CIVE 379. Offered: A.

CIVE 461 Biological Problems in Water Pollution (3/5) NW Ecological risk assessment of toxic chemicals and problems associated with electrical power production. Considers safety and toxicity and effects on individuals, populations, and communities. Laboratory covers simulation models of chemical exposure and community effects. Recommended: senior or graduate standing in fisheries, engineering, or related field. Offered: jointly with FISH 430; W.

CIVE 462 Ecological Effects of Waste Water (3/5) **NW** Brett Principles of aquatic ecology that relate to causes and effects of water quality problems in lakes and streams. Population growth kinetics, nutrient cycling, eutrophication; acidification, oxygen/ temperature requirements, and effects of various wastes on aquatic animals. Offered: jointly with FISH 434; A.

CIVE 464 Subsurface Contaminant Transport (3) *Massmann* Principles of transport through porous media used to study fate and movement of subsurface contamination. Processes include aqueous phase transport, flow of immiscible fluids, vapor transport, solid-liquid-vapor interactions. Techniques for simulating transport processes presented. Effects of subsurface heterogeneities and uncertainties are emphasized. Prerequisite: CIVE 342. Offered: A.

CIVE 472 Introduction to Hydraulics in Water Resources (3) *Yeh* Physics of water movements in natural freshwater bodies and inshore marine waters. Brief review of some essential fluid mechanics. Flow in rivers and streams; motions in lakes, reservoirs, and estuaries. Some aspects of diffusion. Not open to students with undergraduate civil engineering backgrounds. Offered: Sp.

CIVE 473 Coastal Engineering I (3) Yeh Linear theory of water waves, wave transformations due to boundary conditions, sediment motion, elementary

tidal theory; applications illustrated by laboratory experiments and selected case histories. Prerequisite: CIVE 342. Offered: Sp.

CIVE 474 Hydraulics of Sediment Transport (3) *Petroff* Introduction to sediment transport in steady flows with emphasis on physical principles governing the motion of sediment particles. Topics include sediment characteristics, initiation of particle motion, particle suspension, bedforms, streambed roughness analysis, sediment discharge formulae, and modeling of scour and deposition in rivers and channels. Prerequisite: CIVE 345. Offered: W.

CIVE 475 Analysis Techniques for Groundwater Flow (3) *Burges, Massmann* Development of appropriate equations to describe saturated groundwater flow, and application of numerical methods for solving groundwater flow problems and flow to wells. Participants required to solve specific problems using numerical techniques developed during the course. Prerequisite: CIVE 342. Offered: W.

CIVE 476 Physical Hydrology (3) Burges Global water picture, data sources and data homogeneity, precipitation, evapotranspiration, hydrographs. Hydrologic data frequency analysis. Hydrologic design: flood mitigation, drainage. Introduction to deterministic and stochastic models. Offered: A.

CIVE 477 Open-Channel Engineering (3) *Petroff, Yeh* Water flow in natural and constructed channels. Analysis and design of canals, transitions, energy dissipators, and similar structures. Analysis of surface profiles and effect of nonlinear alignment on flow. Introduction to river mechanics. Design-oriented problems. Prerequisite: CIVE 345. Offered: AW.

CIVE 480 Air-Quality Modeling (3) *Larson* Evaluation of air-quality models relating air pollution emissions to environmental concentrations. Topics include meteorological dispersion models and various "receptor" models based on chemical "fingerprinting" of sources. Emphasizes current problems. Prerequisite: either CIVE 381, ATM S 458, or CHEM 458. Offered: jointly with ATM S 480; W.

CIVE 481 Environmental Engineering Design (3) *Bogan* Introduction to the theory and the practice of planning and design of urban water supply, sewerage, solid wastes, and drainage collection systems. Evaluation of service areas and service requirements and their relationships to urban and regional planning activities. Engineering methods and computer programs for designing basic system elements. Prerequisite: CIVE 351.Offered: AW.

CIVE 482 Water and Wastewater Treatment (3) *Benjamin, Stensel* Objectives of water and wastewater treatment; associated physical, chemical, and biological phenomena; design of common treatment systems. Prerequisite: CIVE 351. Offered: Sp.

CIVE 484 On-Site Wastewater Disposal (3) Seabloom Latest information on design, construction, operation, maintenance of individual and small community wastewater disposal systems. Conventional water carriage septic tank soil absorption systems considered with new alternatives, such as mounds, evapotranspiration systems, anaerobic filters, pressure drainfields, sand filters. Nonwater carriage methods studied. Pressure and vacuum sewers introduced. Offered: Sp.

CIVE 485 Aquatic Chemistry (3) Benjamin, Ferguson Principles of chemical equilibrium relevant to natural water systems; the nature and effect of chemical interactions of domestic and industrial waste effluents on natural water systems; chemical principles involved in the treatment of water and wastewaters. Offered: ASp.

CIVE 486 Water-Quality Analysis (3) Laboratory evaluation of chemical quality of natural and waste-

waters. Theory and application of instrumentation used in water-guality measurement. Offered: W.

CIVE 487 Solid-Waste Disposal (3) Describes sources and handling of municipal and industrial solid waste, with examination of collection, processing, recycling and resource recovery, and disposal alternatives. Public policy issues, local agencies and solid waste facilities, the legal and regulatory framework are all addressed in context of solid waste engineering. Offered: W.

CIVE 488 Hazardous Wastes Engineering (3) *Stensel* Classification of hazardous wastes; resource conservation, Recovery Act regulations; characteristics and behavior of toxic organics; superfund; groundwater contamination, solutions. Hazardous waste site remedial action; case histories; sampling; landfill design. Stabilization and processing technologies, including incineration, carbon adsorption, emerging techniques. Prerequisite: CIVE 351. Offered: A.

CIVE 489 Water and Air Quality Sampling (2) *Larson, Welch* Samples collected from lakes, streams, precipitation, and air and resulting (and supplemental) data interpreted for cause-effect and statistical inference. Design for water and air quality monitoring programs. Prerequisite: CIVE 462. Offered: A.

CIVE 490 Air-Pollution Control (4) *Pilat* Fundamental concepts of air pollution. Emission sources, atmospheric dispersion, ambient concentrations, adverse effects, governmental regulations, emission standards, air-quality standards, processes and equipment for controlling emissions. Offered: jointly with ENV H 461; A.

CIVE 491 Deterministic Systems (3) *Mar, Palmer* Development of quantitative methods for mathematical problem solving with emphasis on computer applications. Linear programming, mathematics of the simplex algorithm, sensitivity analysis, dynamic programming, systems simulation, and goal programming. Class project required. Prerequisite: CIVE 390. Offered: A.

CIVE 492 Stochastic Systems (3) *Mar, Palmer* Introduction to probability distributions and statistics useful in systems analysis, conditional distributions, queuing theory and applications, Monte Carlo simulation, chance-constrained mathematical programming, and stochastic dynamic programming. Emphasis on application of the techniques to civil engineering systems problems, including transportation, water resources, and structures. Prerequisite: CIVE 491. Offered: W.

CIVE 493 Air-Pollution Source Testing and Equipment Evaluation (3) *Larson, Pilat* Engineering evaluation of air pollutant sources and air control equipment. Air-pollutant source testing and stack sampling. Analysis of equiformance and source emissions in the field and in the laboratory. Offered: Sp.

CIVE 494 Air-Pollution Control Equipment Design (3) *Pilat* Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption of gaseous pollutants; electrostatic precipitation and filtration of particulate pollutants. Actual case studies. Offered: jointly with CHEM E/M E 468; W.

CIVE 498 Special Topics (1-5) Special topics in civil engineering offered as course with lecture and/ or laboratory. Maximum of 6 credits in combination of 498 and 499 may be applied toward an undergraduate degree. Offered: AWSpS.

CIVE 499 Special Projects (1-5) Individual undergraduate research projects. Maximum of 6 credits in combination of 498 and 499 may be applied toward an undergraduate degree. Recommended: 400-level CIVE course. Offered: AWSpS.

Courses for Graduates Only

CIVE 700 Master's Thesis (*) Prerequisite: permission of adviser. Offered: AWSpS.

CIVE 800 Doctoral Dissertation (*) Prerequisite: permission of adviser. Offered: AWSpS.

Structural and Geotechnical Engineering and Mechanics

CESM 501 Structural Mechanics I—Statics (6) *Elias, Miller, Turkiyyah* Equations of a continuum for small displacements, applications to linear elasticity. Kirchoff plate theory, problems in advanced strength of materials. Virtual work, minimum potential energy, force and displacement methods of structural analysis. Direct stiffness method. Approximate solutions, geometric stiffness matrix. Linearized buckling. Offered: A.

CESM 502 Structural Mechanics II—Dynamics (3) *Eberhard, MacRae, Reed* Lagrange's equations. Free vibrations of linear, single, and multiple degree of freedom systems. Damping. Mode superposition. Forced vibrations by time history and by response spectrum methods. Free and forced vibrations of continuous systems. Wave propagation in rods and beams. Prerequisite: 501. Offered: W.

CESM 503 Materials (3) *Miller, Reed, Roeder* Behavior of materials used in civil engineering structures. Yield and failure surfaces. Physical and phenomenological models of plastic and viscoelastic behavior. Fracture mechanics. Fatigue models and predictions. Damping and friction. Behavior of anisotropic and composite materials.

CESM 504 Finite Element Methods in Structural Mechanics (3) *Elias, Miller, Turkiyyah* Extension of the matrix methods of structural analysis to the solution of elasticity, plate, and shell problems by use of finite element approximations. Discussion of convergence and bounding and extension to investigation of stability and finite deformations. Prerequisite: 501 or permission of instructor. Offered: W.

CESM 511 Advanced Reinforced Concrete Design (3) Eberhard, MacRae, Stanton Behavior and design of reinforced concrete members and structures. Members subject to torsion and torsion combined with flexure and shear; members with small shear span/depth ratios, slabs. Offered: A.

CESM 512 Advanced Prestressed Concrete Design (3) Eberhard, Stanton Prestress loss. Design of statically indeterminate prestressed concrete structures; continuous beam, frame, and slab structures (cast in place or assembled from precast units). Prerequisite: CIVE 453 or equivalent. Offered: Sp.

CESM 513 Advanced Steel Design (3) MacRae, Roeder Factors influencing strength and serviceability of steel structures; LRFD limit state design procedures. Use of theories of plasticity and stability in development of design methods and specifications, bolted and welded connections, temperature effects, and effect of different fabrication methods on behavior of structure. Prerequisite: 501, 503. Offered: W.

CESM 514 Design for Earthquakes I (3) *MacRae, Roeder, Stanton* Linear elastic analysis for prediction of structural behavior in earthquakes. Groundshaking and earthquake mechanism. Factors affecting severity and frequency of shaking. Ductility and multilevel design approach. Response spectra and design codes such as UBC and ATC, and evaluation of rationale for these specifications. Design problem. Prerequisite: 501, 502. Offered: Sp.

CESM 516 Design for Wind (3) Reed Wind effects on structures, including atmospheric boundary layer flow, bluff body aerodynamics, structural dynamics, and aeroelasticity; development and use of ANSI standards; estimation of along-wind, acrosswind, and torsional response of tall buildings; design

strategies for avoiding wind-induced discomfort in humans. Fundamentals of wind-tunnel testing. Pre-requisite: 501, 502. Offered: Sp.

CESM 520 Seminar (1, max. 6) Required for doctoral students. Prerequisite: permission of thesis supervisor. Offered: AWSp.

CESM 521 Continuum Mechanics I (3) Elias, Miller General foundation of fundamental concepts of motion, stress, and energy for a continuum. General equations of conservation of mass, momentum, and energy. Linear and nonlinear elastic, viscous, and inelastic materials. Prerequisite: 501. Offered: jointly with A A 575.

CESM 522 Continuum Mechanics II (3) *Elias, Miller* Development of classical and nonclassical constitutive theories relating to real materials. Applications in metals, concrete, ice, wood, rock, soils, and composites. Prerequisite: 521.

CESM 523 Reliability and Design (3) Reed Introduction to theory of structural reliability and its application to design procedures in civil engineering, including probability theory; assessment of uncertainties; code specification (first-order, second-moment format) and the related concept of risk and the influence of socioeconomic factors; loads, load combinations, and probabilities of damage.

CESM 524 Random Vibrations of Structures (3) Reed Random vibration theory, emphasis on estimation and analysis of dynamic response of civil engineering structures, including probability theory; analysis of stationary random processes in time and frequency domains; statistics of narrow-band processes; modeling of stationary and nonstationary signals, such as wind velocity and earthquake acceleration data. Prerequisite: 501, 502.

CESM 531 Special Structures (3, max. 6) Special topics such as shells; inflated structures, suspended structures, or other specialized forms of civil engineering structures.

CESM 561 Seepage and Consolidation (3) Holtz, Kramer, Taylor Confined and unconfined seepage through porous media, flow net solutions, consolidation, settlement, numerical solution of seepage, and consolidation problems. Prerequisite: CIVE 366 or equivalent. Offered: A.

CESM 562 Shear Strength and Slope Stability (3) Holtz, Kramer, Taylor Shear strength of cohesive and cohesionless soils and slope stability analysis of natural and man-made slopes. Prerequisite: 561. Offered: A.

CESM 563 Advanced Foundation Engineering (3) Holtz, Kramer, Taylor Design of shallow and deep foundations for bearing capacity and settlement. Construction considerations. Prerequisite: 562 and 567. Offered: W.

CESM 564 Lateral Earth Pressures and Retaining Structures (3) Holtz, Kramer Analysis of groundwater flow and seepage through dams using analytical and numerical techniques. Various one- and twodimensional methods of analysis of soil slopes under static and seismic conditions. Computer application of stability analysis methods to slope-stability problems. Prerequisite: 437 or equivalent or permission of instructor. Offered: W.

CESM 565 Soil Dynamics (3) *Kramer* Dynamics of discrete systems; dynamics of continuous systems, wave propagation; dynamic soil properties; linear, nonlinear, and equivalent linear ground response analysis; vibrations of footings; construction vibrations; vibration isolation. Offered: W.

CESM 566 Geotechnical Earthquake Engineering (3) *Kramer* Plate tectonics and elastic rebound theory of earthquakes and faults; characterization of ground motions; seismicity; seismic risk analysis; effect of local soil conditions on ground response; development of design ground motions; liquefaction; dynamic lateral earth pressures; seismic slope stability. Prerequisite: 565 or permission of instructor. Offered: Sp.

CESM 567 Advanced Geotechnical Laboratory (4) Holtz, Kramer, Taylor Soil and site investigation, classification and engineering properties of soils and rock as determined by standard and advanced test procedures and equipment. Evaluation of test data. Report writing. Prerequisite: CIVE 366 or equivalent. Offered: A.

CESM 568 Geosynthetic Engineering (3) Holtz Identification and testing of geosynthetics. Design of geosynthetic filters, roadway stabilization, earth reinforcement, and waste containment systems. Prerequisite: 562 and 563. Offered: Sp.

CESM 569 Foundation Soil Improvement (3) *Holtz* Analysis and design of physical and chemical treatment techniques commonly applied to problem foundation soils for civil engineering structure. Prerequisite: 563. Offered: Sp.

CESM 570 Engineering Geology II (3) Taylor Application of engineering geology fundamentals to: location, design and maintenance of engineered structures; policy decisions related to potential geological hazards. Case histories, governmental policy discussions, interpretation of geological maps for engineering purposes. Prerequisite: graduate standing and CIVE 437 or permission of instructor. Offered: Sp.

CESM 571 Rock Engineering (3) *Taylor* Engineering classification, physical and mechanical properties of rocks, failure modes and initial stresses in rocks, laboratory and field testing of rocks, rock slope engineering, underground openings, foundations on rocks. Prerequisite: graduate standing and CIVE 366 or permission of instructor.

CESM 599 Special Topics: Structures and Mechanics (2-5, max. 15) Prerequisite: permission of instructor. Offered: AWSpS.

CESM 600 Independent Study or Research (*) Prerequisite: permission of adviser. Offered: AWSpS.

Transportation, Surveying, and Construction Engineering

CETS 506 Design of Temporary Structures in Construction (3) Dunston Fundamental criteria to be considered in the design of various temporary structures in construction. Temporary structures include rock crushing plants, belt conveying systems, concrete forms, cellular fill cofferdams, braced cofferdams. Manual and computer-aided design approaches. Prerequisite: 406 which may be taken concurrently, CIVE 454 or equivalent, or permission of instructor. Offered: W.

CETS 508 Construction Administration (3) *Dunston* Conceptual estimating and detailed estimating. Estimating as it applies to labor, materials, equipment, and overhead. Cost control for construction operations. Quality control. Accounting and taxation in construction. Managing project security, subcontractors, submittals, change orders, correspondence, testing, and start-up. Offered: Sp.

CETS 509 Construction Productivity (3) Work improvement techniques applied to construction operations. Review of major contributions in behavioral science that may be applicable to the construction industry. Case studies. Innovative productivity programs successfully implemented on construction projects. Safety on construction projects, especially as influenced by managerial practices. Offered: A.

CETS 511 Traffic Systems Operations (3) *Nihan* Operational planning, management of arterial and freeway traffic systems. Review of transportation system management strategies to achieve more efficient use of existing infrastructure, including improved and

innovative traffic control systems and demand management policies, measures of effectiveness, impact assessment, traveler response. Introduction to use of relevant computer models and packages. Offered: W.

CETS 520 Seminar (1, max. 6) Prerequisite: permission of thesis supervisor. Offered: AW.

CETS 526 Portland Cement Concrete Laboratory (4) *Janssen* The examination of strength, stiffness, and durability properties of conventional and high-performance portland cement concrete mixes through laboratory analysis and classroom lectures. Topics include mix design parameters, the effects of admixtures, methods of testing, and non-destructive analysis. Prerequisite: BSCE with CIVE 363 or CIVE 422 or equivalent. Offered: W.

CETS 541 Transit Systems Planning (3) *Rutherford* Planning, operational methods for urban public transportation. Review of technological, operating characteristics of vehicles and systems; financing, management, institutional aspects. Paratransit. Short-range planning, operational strategies, revenue-fare structures. Service monitoring. Mode choice, transit demand relating to service. Computeraided methods for planning, design of transit systems. Prerequisite: graduate standing or permission of instructor. Offered: W.

CETS 543 Airport Engineering (3) *Mahoney* Definitions and terminology relating to airport engineering. Characteristics of aircraft, air traffic control, and resulting impact upon design process. Airport capacity, configuration, and planning associated with terminal design. Emphasis on geometric and structural design of pavements and airside. Design projects relating to airport engineering required. Pre-requisite: permission of instructor. Offered: Sp.

CETS 545 Transportation Vehicles and Infrastructure (3) *Decher, Mahoney, Reiner* Introduction to transportation vehicles and infrastructure. Technical and economic characteristics of the four principal transportation modes—air, highway, water, and rail. Provides an historical context, consideration of energy, power, and environmental impact, operational understanding of transportation vehicles, and infrastructure. Offered: jointly with A A 545; Sp.

CETS 571 Analytical Methods in Transportation (3) Mannering Application of analytical and statistical methods to transportation planning problems. Analysis of probability distributions that describe variables. Development of statistical models for predicting transportation phenomena. Elementary sampling theory hypothesis testing, regression analysis, time series analysis, applied to transportation data. Prerequisite: graduate standing or permission of instructor. Offered: Sp.

CETS 574 Advanced Travel Demand Theory and Applications (3) Mannering New methods for estimating and forecasting travel demand. Individual as economic, psychological decision-making unit. Theoretical background to models, model structures, model specification, attitudinal measurement, empirical estimation, market segmentation, aggregation issues, model transferability, parameter updating. Practical applications, directions of present and future research. Prerequisite: graduate standing or permission of instructor. Offered: A.

CETS 599 Special Topics: Transportation, Construction, and Geometronics (2-5, max. 15) Prerequisite: permission of instructor. Offered: AWSpS.

CETS 600 Independent Study or Research (*) Prerequisite: permission of adviser. Offered: AWSpS.

Environmental Engineering and Science

CEWA 518 Microbial Degradation of Toxic Contaminants (3) Herwig, Strand Detailed survey of current understanding of microbiology and degradative pathways of industrial organic compounds, pesticides, plastics, oil, and metals. Microbial requirements for bioremediation. Methods of scientific investigation of microbial transformations. Requires basic understanding of metabolism and organic chemistry. Prerequisite: biological science course. Offered: jointly with ESC 518/MICROM 518; Sp.

CEWA 520 Seminar (1, max. 6) Required of all graduate students in Environmental and Engineering Science each quarter. Credit/no credit only. Offered: AWSp.

CEWA 525 Seminar—Topics in Atmospheric Chemistry (1-3, max. 6) Charlson, Harrison Seminar for atmospheric scientists, chemists, engineers in problems associated with the chemical composition of the atmosphere. Covers wide variety of topics, ranging from the natural system to urban pollution and global atmospheric change. Faculty lectures, student participation. Prerequisite: ATM S 301 or permission of instructor. Offered: jointly with ATM S 525.

CEWA 540 Hydrodynamics (4) *Petroff, Yeh* Applications of the equations of motion to the flow of ideal and real fluids. Fundamentals of fluid potential motion. Viscous flows; Navier-Stokes equations and some exact solutions. Boundary-layer theory. Introduction to turbulence. Two- and three-dimensional examples, including free surface flows. Applications of field equations to problems of engineering significance. Prerequisite: CIVE 342 or equivalent. Offered: A.

CEWA 541 Hydrodynamics in Water Quality (3) *Petroff* Theoretical, field study, and laboratory model approaches to diffusion in transport problems of concern to water resources engineers. Prerequisite: CIVE 342 or permission of instructor. Offered: Sp.

CEWA 544 Water Wave Mechanics (3) *Yeh* Theory of water waves. Classical water wave problem and approximate solution techniques. Evolution equations for and their solutions wave systems. Viscous damping effects and mass transport. Nonlinear shallow-water waves and the Korteweg-deVries equation. Waves on beaches. Recommended: graduate-level course in fluid mechanics. Offered: W.

CEWA 545 Advanced Computational Hydraulics (4) Yeh Review of hydrodynamic and transport equations for hydraulic engineering application; numerical solution methods; implementation and practice with existing two- and three-dimensional numerical models; numerical model calibration and verification techniques; case studies. Theoretical and civil engineering decision makers aspects. Prerequisite: CIVE 474, CEWA 540, CEWA 541 or permission of instructor.

CEWA 547 Advanced Hydrology (3) Burges Detailed treatment of statistical methods used in hydrologic analysis. Stochastic hydrology, detailed examination and use of a deterministic watershed model (e.g., Stanford Watershed Model). Prerequisite: graduate standing in civil engineering or permission of instructor. Offered: W.

CEWA 548 Groundwater Transport Modeling (3) *Massmann* Review of equations for flow and transport in porous media; techniques for simulating transport as boundary value problems; analytical and numerical solution techniques; finite element models; field-scale applications and case histories. Offered: Sp.

CEWA 550 Microbiological Process Fundamentals (3) Ferguson, Stensel Fundamental concepts

for microbial processes including organic chemical structure, nomenclature and environmental properties, principles of microbial metabolism, study of specific types of bacteria important to environmental engineering and their metabolism and development of microbial kinetic equations including substrate utilization, energetics, and stoichiometry. Prerequisite: permission of instructor. Offered: A.

CEWA 551 Biological Treatment Systems (3) *Stensel* Basic reactions, design principles, models, and operational considerations for biological treatment systems in environmental engineering. Applications include activated sludge, bulking sludge control, fixed film reactors, nitrification, nitrogen removal, phosphorus removal, anaerobic treatment, and toxic organics removal. Prerequisite: 550. Offered: W.

CEWA 552 Physical-Chemical Treatment Processes (4) Benjamin Principles and design of major physical-chemical unit processes used in water, wastewater, and hazardous waste treatment. Processes include chemical and reactor kinetics, filtration, chemical coagulation, ion exchange, adsorption, and gas transfer. Development of mathematical models, laboratory demonstrations, and evaluation of current design practice. Prerequisite: CIVE 485 or permission of instructor. Offered: W.

CEWA 553 Topics in Ecological Effects of Wastewater (3) Application of ecological concepts for analysis and interpretation of bioenvironmental problems and data (eutrophication, acid rain, and toxicity). Students participate in presentation and discussion of current research. Prerequisite: CIVE 462 or BIOL 473 or permission of instructor. Offered: W.

CEWA 554 Advanced Topics in Environmental Engineering, Chemistry, and Biology (3) Benjamin, Ferguson Special topics of current importance in environmental engineering. Application of fundamental chemical and biological principles to the study of such phenomena as the behavior of aqueous colloids, corrosion processes, bacterial metabolism in chemically complex solutions, and acid precipitation. May be taken more than once for credit. Prerequisite: 550, 551. Offered: W.

CEWA 555 Lake Management (2) Application of recognized techniques/approaches to restore and manage eutrophic lakes. Includes critiques of restoration proposals. Credit/no credit only. Prerequisite: CIVE 462/FISH 434, BIOL 473, or permission of instructor. Offered: A.

CEWA 556 Industrial Waste Treatment (3) Benjamin, Ferguson, Stensel Survey of laws and regulations governing industrial waste discharge. Sources, amounts, and characteristics of wastes from various industries. Specialized treatment processes, case studies, and site visits. Prerequisite: 550 or 551 or permission of instructor.

CEWA 557 Water Resources Management (3) *Mar, Palmer* Engineering, social, and economic factors involved in water resource development and management; water policies, programs, and administration; use relationships and conflicts; considerations for regional water resource systems. Offered: W.

CEWA 558 Water-Quality Management (3) Mar, Palmer Application of biological, ecological, and chemical processes to modeling of water quality and use of such models in appropriate management of water resource systems. Includes units on the modeling of temperature, BOD, nutrient, phytoplankton, zooplankton, and other processes in lakes, streams, and estuaries. Recommended: CIVE 476, CIVE 485, CIVE 462/FISH 434, and CIVE 491. Offered: Sp.

CEWA 559 Water Resources System Management (3) Burges, Mar, Palmer A readings course in recent literature related to the modeling and management of water resources. Topics include drought management, expansion of existing water supplies, hydropower production, streamflow forecasting, water demand forecasting, regional water planning, climate change, and other topical issues. Recommended: 557, 558. Offered: A.

CEWA 560 Topics in Environmental Health (3) *Larson* Introduction to human biology, including physiology, epidemiology, and toxicology. Study of contemporary environmental health problems and practices as they relate to radiological health, solidwaste disposal, occupational health, biometeorology, and bioengineering.

CEWA 562 Hazardous Air Pollution (3) *Pilat* Control of emissions of hazardous or toxic air pollutants. Government regulations, determination of needed control efficiency. Emission control by thermal incineration, catalytic incineration, flares, condensation, carbon adsorption, and absorption (wet and dry). Hazardous waste incinerators. Case studies. Offered: jointly with CHEM E 562; W.

CEWA 563 Air Resources Management (3) *Larson, Pilat* Technical, administrative, and legal aspects of air conservation. Current case studies involving engineering analysis, air-quality modeling, and regulatory aspects at local, state, and federal governmental levels. Offered: A.

CEWA 566 Control of Gaseous Air Pollutants (3) *Larson, Pilat* Physical and chemical processes used to control gaseous air pollutants. Absorption into liquids. Aqueous spray dryer scrubbers. Adsorption beds. Control of sulfur oxide and nitrogen oxide. Case studies of control systems. Prerequisite: CIVE 468 or CHEM E 435 or permission of instructor. Offered: jointly with CHEM E 566; even years.

CEWA 567 Control of Particulate Air Pollutants (3) *Larson, Pilat* Processes used to control emissions of particulate air pollutants. Use of settling chambers, cyclones, fabric filters, wet scrubbers, and electrostatic precipitators to control aerosol particles. Case studies of particulate air-pollutant control systems. Prerequisite: CIVE 468 or permission of instructor. Offered: jointly with CHEM E 567; odd years; Sp.

CEWA 577 Risk Assessment for Environmental Health Hazards (3/4) Faustman Examines context, methodologies, data, uncertainties, and institutional arrangements for risk assessment. Qualitative and quantitative approaches to identification, characterization, and control of environmental hazards to health emphasized through didactic and case studies. Offered: jointly with ENV H 577/PB AF 577; A.

CEWA 599 Special Topics: Water and Air Resources (2-5, max. 15) Prerequisite: permission of instructor. Offered: AWSpS.

CEWA 600 Independent Study or Research (*) Prerequisite: permission of adviser. Offered: AWSpS.

Computer Science and Engineering

114 Sieg

A Bachelor of Science in Computer Engineering degree is offered by the Department of Computer Science and Engineering, and is administered through the College of Engineering. The department also offers a Bachelor of Science degree in computer science administered through the College of Arts and Sciences. Information concerning the B.S. degree in computer science can be found under Computer Science in the College of Arts and Sciences section of this catalog.

Computer science is the study of information and algorithms within the context of real and abstract computing devices. Computer scientists are interested in such topics as the representation and storage of information; algorithms to access, display, edit, and transform information; programming languages to express algorithms; and hardware and software processors to execute algorithms. These concerns lead to practical developments in computer systems software, such as operating systems and compilers; in application areas, such as artificial intelligence, computer graphics, and computational biology; and also lead to theoretical investigations of computers, algorithms, and data.

Computer engineering is a closely related field that is concerned with the design and practical application of computer hardware and software systems to the solution of technological, economic, and societal problems. The computer engineer analyzes a problem and selects from a variety of tools and technologies those most appropriate for its solution. A computer engineer can expect to be involved in hardware design, software creation, and systems integration. The program provides an in-depth education in computer engineering while retaining strong foundations in traditional electrical engineering and computer science. The computer engineering program involves digital hardware, software, and architecture. Mathematics, engineering design, laboratory work, and communication-skills development are emphasized. A capstone design course is used to apply the knowledge and skills collected during the program to a major team project that must be completed during the senior year. The objective of undergraduate education in computer engineering is to develop broadly educated and competent graduates for professional careers or graduate studies. Especially important is a foundation that will endure as technology advances and changes.

The departmental core requirements of the two undergraduate majors are identical. The computer engineering major may be more appropriate for students who are interested in creating and building systems that include both hardware and software components and that must be engineered to meet a variety of cost and performance constraints. The program includes a general foundation in engineering fundamentals to enable interdisciplinary work with other departments in the College of Engineering and the University as a whole.

The computer science major may be more appropriate for students who want to have a double major with another College of Arts and Sciences program (for example, mathematics or economics), who want the additional flexibility of the computer science requirements (the computer engineering major has more required courses and fewer electives), or who may be more interested in the theory, design, and implementation of software systems and applications (for example, the techniques of modern compilers or the algorithms behind computer graphics and animation).

The core and many senior-level courses are shared between the two programs. The department has options for a wide variety of interests and offers a wide range of senior electives that allow students to tailor their program to their interests.

Instructional and Special Research Facilities

The Computer Science Laboratory provides extensive, effective, efficient, and powerful state-of-the-art facilities for undergraduate, graduate, and faculty instruction and research. The equipment base is upgraded frequently: for an up-to-date description please see the descriptions in the online undergraduate and graduate brochures, which can be accessed through the department's Web page (via the University's homepage at http://www.washington.edu). The same is true for the department's software base, where there are several modern operating systems including Windows NT, Unix, Solaris, and Linux, as well as extensive collections of software applications and development tools for each. Students have access to these resources in several laboratories in Sieg Hall and through direct modem access administered by the department. All the department's workstations provide users with full Internet access and almost all the department's courses make extensive use of the World Wide Web. In addition to general computing laboratories, the department also supports specialized laboratories for computer graphics and hardware, and embedded system design that also support more-advanced computing platforms and software.

Bachelor of Science in Computer Engineering

Adviser Catherine Provost 114 Sieg, Box 352350 (206) 543-1695 ugrad-ce-advisor@cs.washington.edu

Admission Requirements: Because resources are limited, students must apply for admission to the computer engineering program. Application forms and a comprehensive booklet, *The Computer Engineering Handbook for Undergraduates*, can be obtained from the receptionist in the main office, 114 Sieg. The handbook is also available via the department's Web page. The department classifies applicants by admission group; the specific requirements for each are described below.

1. Early Admission Group (EAG): Open to students enrolled at the UW. Applicants must have completed 15 credits of mathematics at the level of MATH 124, 125, 126, or equivalent; 10 credits of laboratory physical sciences at the level of PHYS 121/131, 122/132, 123/133, or CHEM 142 or equivalent; and 5 credits of English composition. At least 15 of these 30 credits above, the department requires the completion of CSE/ ENGR 142. Admission is for autumn quarter only; the application deadline is given in the departmental handbook.

2. Upper-Division Admission Group (UAG): Students must have completed 64 credits applicable to the degree, including MATH 124, 125, 126, 307; PHYS 121/131, 122/132, 123/133; CHEM 142; CSE/ENGR 142; and at least 5 credits of English composition. Admission is for autumn or spring quarter; application deadlines are given in the departmental handbook.

Graduation Requirements (in addition to the generaleducation requirements of the College of Engineering as specified above):

1. Computer Engineering Required Courses (66 credits): CSE/ENGR 142; CSE 143; CSE 321, 322, 326, 341, 370, 378, 451, 467, 471, 477; ENGR 215; E E 233, 331, 332.

2. Computer Engineering Elective Component (14 credits): Selected from the approved list of computer engineering electives in the undergraduate handbook.

3. Engineering, Mathematics, and Science Electives (8 credits): Selected from any graded ENGR course, any graded course at the 300 level and above in an engineering department or in a science department (selected from the approved list in the computer engineering handbook), BIOL 200, CHEM 152, 162, E 235.

4. *Free Electives* (4 credits): To graduate, a student must earn a total of 180 credits with a grade of at least 2.0 in all required or elective computer engineering courses taken. The engineering design credits must total at least 26, while the engineering science credits must total at least 50. For a complete description of the current requirements, please consult the undergraduate handbook.

Graduate Program

Graduate Program Coordinator 114 Sieg, Box 352350 (206) 543-1695 grad-admissions@cs.washington.edu

The Department of Computer Science and Engineering offers programs of study leading to the degrees of Master of Science and Doctor of Philosophy. Students can pursue full-time graduate study leading to an M.S. or Ph.D. Students can also pursue part-time graduate study in the evening, leading to an M.S. Individual programs can be designed to provide considerable breadth of knowledge, as well as depth in an area of specialization.

The department has 34 faculty members with appointments in Computer Science and Engineering and 26 adjunct, affiliate, and emeritus faculty members. The faculty is currently conducting research in the following areas: VLSI, computer-aided design, computer architecture, operating systems, networks, programming environments, parallel and distributed computing, programming languages, compilers, software engineering, artificial intelligence, image analysis, computer graphics, computer vision, computational complexity, analysis of algorithms, and computational molecular biology.

Full-Time Graduate Program

The full-time graduate program offers both M.S. and Ph.D. degrees. An M.S. degree can usually be completed in one to two years, and a Ph.D. degree can be completed in four to five years. It is not necessary to complete an M.S. program before entering the Ph.D. program. Degree requirements are outlined in *The Computer Science and Engineering Graduate Program Brochure*, available from the department.

Application Requirements

Most entering graduate students are expected to have a solid background in computer science, including programming, machine organization, data structures, discrete mathematics, automata theory, and programming systems (i.e., the equivalent of CSE 378, 326, 321, 322, and either 401 or 451). Some exceptions to these requirements are made for otherwise-promising students. Graduate Record Examination scores are required; a GRE subject-test score (not necessarily in computer science) is recommended. Scores should be earned within the preceding five years. The Computer Science and Engineering Graduate Program Brochure gives full details of application procedures.

Complete applications must be received by January 10 for autumn-quarter admission.

Assistantships

Some research assistantships are available in the Computer Science Laboratory and through research grants. Teaching assistantships are also available. In general, this support is allocated on the basis of scholastic excellence and potential. Students who are applying for assistantships to start in autumn quarter should have all applications to the Graduate School and the department completed by January 10.

The application packet contains all the necessary forms for applying to the Graduate School and to the graduate program in Computer Science and Engineering and for consideration for assistantships.

Professional Master's Program

The Professional Master's degree program is designed for professionals in the information-technology industry who wish to further their educational and professional goals. Courses are offered in the evening and by distance to accommodate students working full-time. To graduate, a student must complete 40 credits. This includes eight 4-credit courses from the approved list of courses and 8 additional credits. Students are expected to complete one course per quarter, finishing the program in two and a half years.

Successful applicants to the program will have a bachelor's degree in computer science or a related field and professional experience in advanced computing technology. Most incoming students will have taken the following courses at the undergraduate level: data structures, discrete math, machine organization, automata theory, and programming languages, and will have programming experience.

Applications are accepted quarterly. Deadlines are July 1 for autumn quarter; Nov. 1 for winter quarter; and Feb. 1 for spring quarter. For more information, see the department's Web site.

Faculty

Chair

Edward D. Lazowska

Professors

Atlas, Les Eugene * 1983, (Adjunct); MS, 1978, University of Wisconsin; PhD, 1983, Stanford University; timefrequency representations, nonstationary signal and time-varying system analysis.

Baer, Jean-Loup * 1969; MS, 1963, Grenoble (France); PhD, 1968, University of California (Los Angeles); parallel processing, computer architecture.

Borning, Alan H. * 1980; PhD, 1979, Stanford University; programming languages and environments, user interfaces, computers and society.

De Rose, Anthony David * 1985, (Affiliate); PhD, 1985, University of California (Berkeley); computer-aided geometric design and modeling, graphical user interfaces, high resolution graphics.

Duchamp, Thomas E. * 1976, (Adjunct); PhD, 1976, University of Illinois; differential geometry, computer graphics.

Ebeling, William H. C. * 1986; PhD, 1986, Carnegie Mellon University; computer-aided design, VLSI architectures.

Golde, Hellmut * 1959, (Emeritus); PhD, 1959, Stanford University; computer networks, compilers.

Haralick, Robert M. * 1986, (Adjunct); MS, 1967, PhD, 1969, University of Kansas; computer vision, artificial intelligence, pattern recognition, image processing.

Holden, Alistair D. * 1958; PhD, 1964, University of Washington; artificial intelligence and applications, speech understanding, neural networks.

Hood, Leroy E. * 1992, (Adjunct); PhD, 1968, California Institute of Technology; molecular immunology, largescale DNA mapping and sequencing, molecular evolution.

Hunt, Earl B. * 1966, (Adjunct); PhD, 1960, Yale University; individual differences in cognition, cognition in education and the workplace.

Kalonji, Gretchen * 1990, (Adjunct); PhD, 1982, Massachusetts Institute of Technology; crystalline defects, computer simulation, rapid solidification of ceramics.

Karp, Richard Manning * 1995; PhD, 1959, Harvard University; combinatorial algorithms, computational complexity, parallel algorithms, computational biology.

Kehl, Theodore 1961, (Emeritus); PhD, 1961, University of Wisconsin; real-time hardware and software systems, computer design, VLSI.

Kim, Yongmin * 1982, (Adjunct); MS, 1979, PhD, 1982, University of Wisconsin; computer architecture, media processors, imaging and video systems, medical imaging modeling.

Klee, Victor * 1953, (Adjunct); PhD, 1949, University of Virginia; convex sets, functional analysis, analysis of algorithms, optimization, combinatorics.

Ladner, Richard E. * 1971; PhD, 1971, University of California (Berkeley); distributed and parallel computing theory, computational complexity, computers to aid the disabled.

Lazowska, Edward D. * 1977; PhD, 1977, University of Toronto (Canada); computer systems: modeling and analysis, design and implementation, distributed and parallel systems.

Leveson, Nancy G. * 1992; PhD, 1980, University of California (Los Angeles); software engineering, software and system safety, software reliability and fault tolerance.

Levy, Henry M. * 1983; MS, 1981, University of Washington; computer architecture, operating systems, distributed and parallel systems, object-oriented systems.

Noe, Jerre D. * 1968, (Emeritus); PhD, 1948, Stanford University; distributed computer systems, computer measurement and evaluation, simulation.

Notkin, David S. * 1984; PhD, 1984, Carnegie Mellon University; software engineering, evolution, environments, and systems; parallel systems and environments.

Olson, Maynard V. 1992, (Adjunct); PhD, 1970, Stanford University; large-scale genome mapping and sequencing.

Ruzzo, Walter L. * 1977; PhD, 1978, University of California (Berkeley); computational complexity, parallel computation, computational biology.

Shapiro, Linda G. * 1986; PhD, 1974, University of lowa; computer vision, artificial intelligence, pattern recognition, robotics.

Shaw, Alan Cary * 1971; PhD, 1968, Stanford University; operating systems, software specifications, real-time systems.

Snyder, Lawrence * 1983; PhD, 1973, Carnegie Mellon University; the theory, algorithms, languages, architecture, and VLSI issues of parallel computation.

Stuetzle, Werner * 1984, (Adjunct); PhD, 1977, Swiss Federal Institute of Technology; nonparametric methods in multivariate analysis, statistical applications of computer graphics.

Tanimoto, Steven L. * 1977; PhD, 1975, Princeton University; image analysis, artificial intelligence, computer graphics, educational technology.

Tompa, Martin * 1978; PhD, 1978, University of Toronto (Canada); computational complexity, computational biology.

Weld, Daniel Sabey * 1988; PhD, 1988, Massachusetts Institute of Technology; artificial intelligence, planning, model based reasoning.

Young, Paul R. * 1983; PhD, 1963, Massachusetts Institute of Technology; computational complexity, computability, connections with mathematical logic.

Zahorjan, John * 1980; PhD, 1980, University of Toronto (Canada); computer systems, performance analysis, parallel programming models, scheduling and runtime support.

Zick, Gregory L. * 1974, (Adjunct); MS, 1972, PhD, 1974, University of Michigan; image and multimedia databases, medical imaging.

Associate Professors

Adams, Loyce M. * 1985, (Adjunct); PhD, 1983, University of Virginia; numerical algorithms for parallel computers.

Anderson, Richard J. * 1986; PhD, 1985, Stanford University; parallel algorithms, computational geometry, combinatorial optimization.

Anderson, Thomas E. 1997; PhD, 1991, University of Washington; local and wide area distributed systems, operating systems, computer architecture.

Beame, Paul W. * 1987; PhD, 1987, University of Toronto (Canada); computational complexity, parallel computation, circuit-based complexity.

Bershad, Brian * 1993; PhD, 1990, University of Washington; operating systems, architecture, distributed systems, parallel systems.

Borriello, Gaetano * 1988; PhD, 1988, University of California (Berkeley); computer-aided design and synthesis of digital circuits, special purpose architectures.

Brinkley, James F. III * 1988, (Adjunct Research); MD, 1974, University of Washington; PhD, 1984, Stanford University; computer applications in medicine and biology.

Chambers, Craig D. * 1991; PhD, 1992, Stanford University; object-oriented language design and implementation.

Dekker, David B. 1948, (Emeritus); PhD, 1948, University of California (Berkeley); numerical analysis, curve fitting, numerical solutions of differential equations.

Eggers, Susan Jane * 1989; PhD, 1989, University of California (Berkeley); compiler-directed parallelization, code and threadscheduling, trace driven methodology.

Etzioni, Oren * 1991; PhD, 1990, Carnegie Mellon University; artificial intelligence, machine learning, integrated architectures, planning.

Green, Philip 1994, (Adjunct); PhD, 1976, University of California (Berkeley); mathematical and computer methods for genome analysis.

Hanks, Steven John * 1989; PhD, 1990, Yale University; planning, reasoning, decision making under uncertainty, logic for artificial intelligence.

Kalet, Ira J. * 1980, (Adjunct); PhD, 1968, Princeton University; computer simulation of radiation therapy, artificial intelligence, computer graphics.

Karlin, Anna R. * 1996; PhD, 1987, Stanford University; online algorithms, probabilistic algorithms and probablistic analysis.

Salesin, David Henry * 1991; PhD, 1991, Stanford University; computer graphics, user interfaces, computational geometry.

Assistant Professors

Curless, Brian L. 1998; PhD, 1997, Stanford University; computer graphics, active machine vision.

Diorio, Christopher J. 1997; PhD, 1997, California Institute of Technology; neurally inspired silicon learning chips, neutral networks and learning algorithms.

Levy, Alon Y. 1998; PhD, 1993, Stanford University; database systems, artificial intelligence, query optimization.

Lecturer

Dickey, Martin 1996; PhD, 1992, Arizona State University; computational linguistics, computer science education.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

CSE 135 Computational Techniques (4) NW/ QSR Principles of computation and techniques for using the computer as a tool in science and engineering. Basic programming techniques (conditionals, iteration, procedural, and data abstraction). Introduction to simulation, visualization, and symbolic mathematics. Solving engineering and science problems using programmable tools rather than conventional programming languages. Prerequisite: MATH 124.

CSE 142 Computer Programming for Engineers and Scientists I (4) NW/OSR Basic programmingin-the-small abilities and concepts. Highlights include procedural and functional abstraction with simple built-in data type manipulation. Basic abilities of writing, executing, and debugging programs. Not available for credit to students who have completed CSE 210 or ENGR 141. Offered: jointly with ENGR 142; AWSpS.

CSE 143 Computer Programming for Engineers and Scientists II (5) NW, QSR Continuation of 142. Concepts of modularity and ecapsulation, focusing on modules and abstract data types. Covers some basic data structures. Not available for credit to students who have completed CSE 211. Prerequisite: either CSE 142 or ENGR 142. Offered: AWSpS.

Courses for Nonmajors

The following courses are intended to give a technical introduction to fundamental topics in computer science to non-computer science majors who are likely to use computers as tools in their own disciplines.

CSE 373 Data Structures and Algorithms (3) Fundamental algorithms and data structures for implementation. Techniques for solving problems by programming. Linked lists, stacks, queues, directed graphs. Trees: representations, traversals. Searching (hashing, binary search trees, multiway trees). Garbage collection, memory management. Internal and external sorting. No credit to students who have completed 326, 374, or E E 374. Prerequisite: CSE 143.

CSE 410 Computer Systems (3) Structure and components of hardware and software systems. Machine organization, including central processor and input-output architectures; assembly language programming; operating systems, including process, storage, and file management. No credit to students who have completed 378 or 451. Prerequisite: CSE 373.

CSE 413 Programming Languages and Their Implementation (3) Concepts and implementation strategies for ALGOL-class languages, including Pascal, Modula, ALGOL 60, Ada. Compilers for ALGOL-class languages. Languages with late binding times, including LISP, APL, Smalltalk. No credit to students who have completed 341 or 401. Prerequisite: CSE 373.

CSE 415 Introduction to Artificial Intelligence (5) **NE** Principles and programming techniques of artificial intelligence: LISP, symbol manipulation, knowledge representation, logical and probabilistic reasoning, learning, language understanding, vision, expert systems, and social issues. Not open for credit to students who have completed 473. Prerequisite: CSE 373.

Courses for Majors

CSE 321 Discrete Structures (4) Fundamentals of set theory, graph theory, enumeration, and algebraic structures, with applications in computing. Pre-requisite: CSE 143; MATH 126. Offered: AWSp.

CSE 322 Introduction to Formal Models in Computer Science (3) Finite automata and regular expressions; context-free grammars and pushdown automata; nondeterminism; Turing machines and the halting problem. Emphasis on understanding models and their applications and on rigorous use of basic techniques of analysis. Induction proofs, simulation, diagonalization, and reduction arguments. Prerequisite: CSE 321. Offered: AW.

CSE 326 Data Structures (4) Data types, abstract data types, and data structures. Efficiency of algorithms. Sequential and linked implementation of lists.

Binary tree representations and traversals. Searching: dictionaries, priority queues, hashing. Directed graphs, depth-first algorithms. Garbage collection. Dynamic storage allocation. Internal and external sorting. No credit to students who have completed 373, 374, or E E 374. Prerequisite: CSE 321. Offered: AWSp.

CSE 341 Programming Languages (4) Basic concepts of programming languages, including abstraction mechanisms, types, and scoping. Detailed study of several different programming paradigms, such as functional, object-oriented, and logic programming. No credit if 413 has been taken. Prerequisite: CSE 143. Offered: AWSp.

CSE 370 Introduction to Digital Design (4) Introductory course in digital logic and its specification and simulation. Boolean algebra, combinational circuits including arithmetic circuits and regular structures, sequential circuits including finite-state-machines, use of programmable logic devices. Simulation and high-level specification techniques are emphasized. Offered: AWSp.

CSE 378 Machine Organization and Assembly Language (4) Differences and similarities in machine organization; central processors; fundamentals of machine language and addressing; assembly language programming, including macros; operating system interfaces. No credit to students who have completed 410. Prerequisite: CSE 143. Offered: AWSp.

CSE 401 Introduction to Compiler Construction (4) Fundamentals of compilers and interpreters for symbol tables; lexical analysis, syntax analysis, semantic analysis, code generation, and optimizations for general purpose programming languages. No credit to students who have taken 413. Prerequisite: CSE 326; CSE 341; CSE 378.

CSE 403 Software Engineering (4) Fundamentals of software engineering using a group project as the basic vehicle. Topics covered include the software crisis, managing complexity, requirements specification, architectural and detailed design, testing and analysis, software process, and tools and environments. Prerequisite: CSE 321; CSE 341; CSE 378; recommended: CSE 401; CSE 451.

CSE 421 Introduction to Algorithms (3) Techniques for design of efficient algorithms. Methods for showing lower bounds on computational complexity. Particular algorithms for sorting, searching, set main algorithmetic, graph problems, pattern matching. Prerequisite: CSE 322; CSE 326.

CSE 431 Introduction to Theory of Computation (3) Models of computation, computable and noncomputable functions, space and time complexity, tractable and intractable functions. Prerequisite: CSE 322.

CSE 444 Introduction to Database Systems (3) Fundamental concepts, system organization, and implementation of database systems. Relational, hierarchical, and network data models; file organizations and data structures; query languages; query optimization; database design; concurrency control; security; issues involving distributed database systems. Prerequisite: CSE 326.

CSE 451 Introduction to Operating Systems (4) Principles of operating systems. Process management, memory management, auxiliary storage management, resource allocation. No credit to students who have completed 410 or E E 474. Prerequisite: CSE 326; CSE 378.

CSE 457 Computer Graphics (3) Introduction to computer image synthesis and interactive computer graphics applications. Topics include computer graphics hardware, color image display, event-driven programming, line drawing, polygon scan conversion, texture mapping, image morphing, im-

age compositing, curves and surfaces, hidden surface algorithms, local illumination models, ray tracing, and photorealistic image synthesis. Prerequisite: CSE 326.

CSE 458 Computer Animation (5) Introduction to basic principles of computer generated animation. Focus on the modeling and lighting of animated characters. Students from Art, CSE, and Music team up on projects to be built on commercially available modeling and lighting packages. Prerequisite: either CSE 457 or ART 380 or MUSIC 403.

CSE 461 Introduction to Computer-Communication Networks (3) Computer network architectures, protocol layers. Transmission media, encoding systems, error detection, multiplexing, switching. Data link, multiple access channel protocols. Methods for network routing, congestion control, flow control. End-to-end transport services, protocols. Network security, privacy. Applications including electronic mail, virtual terminals, distributed operating systems. Offered: jointly with E E 461.

CSE 467 Advanced Digital Design (3) Advanced techniques in the design of digital systems. Hardware description languages, combinational and sequential logic synthesis and optimization methods, partitioning, mapping to regular structures. Emphasis on reconfigurable logic as an implementation medium. Memory system design. Digital communication including serial/parallel and synchronous/asynchronous methods. Prerequisite: CSE 326; CSE 370.

CSE 468 Very Large Scale Integration (5) Introduction to CMOS technology and circuit design; implementation of combinational and sequential logic; VLSI design methodologies; CAD tools for layout, simulation, and validation. Students design a VLSI chip using modern CAD tools. Prerequisite: CSE 467.

CSE 471 Computer Design and Organization (4) CPU instruction addressing models, CPU structure and functions, computer arithmetic and logic unit, register transfer level design, hardware and microprogram control, memory hierarchy design and organization, I/O and system components interconnection. Laboratory project involves design and simulation of an instruction set processor. Prerequisite: CSE 370; CSE 378.

CSE 472 Introduction to Computational Linguistics (3) Introduction to computer applications of linguistic theory, including syntactic processing, semantic, and pragmatic interpretation and natural language generation. Prerequisite: either ANTH 461 or LING 461. Offered: jointly with LING 472.

CSE 473 Introduction to Artificial Intelligence (3) Principal ideas and developments in artificial intelligence: theorem proving, problem-solving methods, representation of knowledge, natural language analysis and synthesis, programming languages for artificial intelligence. Not open for credit to students who have completed 415. Prerequisite: CSE 326; recommended: CSE 341.

CSE 477 Digital System Design (4) Students use laboratory to design, simulate, construct, and debug a substantial project that includes hardware, software, and communication components. Lectures focus on use of embedded processors in digital system design and interfacing techniques. Writing and debugging of real-time reactive software emphasized. Prerequisite: CSE 378; CSE 467.

CSE 490 Special Topics in Computer Science and Engineering (1-5) Lectures, discussions, and possibly labs on topics of current interest in computer science and engineering not covered by other CSE undergraduate courses. Offered: AWSpS.

CSE 498- Senior Project ([1-9]-) A report (and perhaps demonstration) describing a development, survey, or small research project in computer science

or an application to another field. Objectives are: (1) integrating material from several courses, (2) introducing the professional literature, (3) gaining experience in writing a technical document, and (4) showing evidence of independent work. Work normally extends over more than one quarter, for a maximum of 6 credits for 498-; 9 credits are required for 498H-. Offered: AWSpS.

CSE 499 Reading and Research (1-24) Available in special situations for advanced computer science majors to do reading and research in field, subject to approval of undergraduate adviser and CSE faculty member. Free elective, but does not replace core course or computer science elective. Credit/no credit only. Offered: AWSpS.

Courses for Graduates Only

All graduate courses are primarily for computer science graduate students. Others must petition for entry codes.

CSE 500 Computers and Society (2) Study of impact of computer technology on present and future society, including political, economic, cultural, social, and moral issues. Includes guest lecturers and discussion leaders. Each student is required to complete a term project. Credit/no credit only. Prerequisite: graduate standing in computer science or permission of instructor. Offered: alternate years.

CSE 501 Implementation of Programming Languages (3) Design of compilers and run-time systems for traditional and non-traditional programming languages. Intra- and interprocedural analyses and optimization. Compile-time and run-time implementation techniques for LISP-like, functional, and object-oriented languages. Students construct an optimizing compiler. Prerequisite: CSE major and 401 and 505.

CSE 503 Software Engineering (3) Specification, implementation, and testing of large, multiperson, software systems. Topics include abstraction, information hiding, software development environments, and formal specifications. Prerequisite: CSE major and 322, 326, and 378 or equivalents.

CSE 504 Advanced Topic in Software Engineering (3) Topics vary but may include software design and evolution, formal methods, requirements specifications, software and system safety, reverse engineering, real-time software, metrics and measurement, programming environments, and verification and validation. Prerequisite: CSE major or permission of instructor.

CSE 505 Concepts of Programming Languages (3) Data structures, types, control structures. Languages in the ALGOL family; functional, object-oriented, and logic programming languages. Prerequisite: CSE major, 401 and a working knowledge of Pascal and LISP.

CSE 506 Advanced Topics in Programming Languages (3) May include functional, object-oriented, parallel, and logic programming languages; semantics for languages of these kinds; type declaration, inference, and checking (including polymorphic types); implementation issues, such as compilation, lazy evaluation, combinators, parallelism, various optimization techniques. Implementation project required. Prerequisite: CSE major, 501 which may be taken concurrently, and 505. Offered: alternate years.

CSE 519 Computer Science Research Seminar (1, max. 3) Weekly presentations on current research activities by members of the department. Only Computer Science graduate students may register, although others are encouraged to attend. Credit/no credit only. Offered: AWSp.

CSE 520 Computer Science Colloquium (1, max. 9) Weekly public presentations on topics of current interest by visiting computer scientists. Credit/no credit only. Offered: AWSp.

CSE 521 Design and Analysis of Algorithms I (3) Principles of design of efficient algorithms: recursion, divide and conquer, balancing, dynamic programming, greedy method, data structure selection. Correctness and analysis of algorithms. Examples drawn from problems in sorting, searching, set manipulation, pattern-matching, graphs, matrices, polynomials, and integers. Prerequisite: CSE major and 326 or equivalent.

CSE 522 Design and Analysis of Algorithms II (3) Analysis of algorithms more sophisticated than those treated in 521. Content varies and may include such topics as algebraic algorithms, combinational algorithms, techniques for proving lower bounds on complexity, and algorithms for special computing devices such as networks or formulas. Prerequisite: CSE major and 521. Offered: alternate years.

CSE 523 Computational Geometry (3) Algorithms for discrete computational geometry. Geometric computation, range searching, convex hulls, proximity, Vornoi diagrams, intersection. Application areas include VLSI design and computer graphics. Prerequisite: CSE major and 521; recommended: 457 or equivalent. Offered: alternate years.

CSE 524 Parallel Algorithms (3) Design and analysis of parallel algorithms: fundamental parallel algorithms for sorting, arithmetic, matrix and graph problems and additional selected topics. Emphasis on general techniques and approaches used for developing fast and efficient parallel algorithms and on limitations to their efficacy. Prerequisite: CSE major and 521. Offered: alternate years.

CSE 531 Automata, Computability, and Complexity (3) Computational models including finite automata, regular expressions, context-free grammars, pushdown automata, Turing machines, and techniques for analyzing them. Basic computability theory and undecidability. Fundamentals of computational complexity theory and NP-completeness. Prerequisite: CSE majors only.

CSE 532 Complexity Theory (3) Deterministic, nondeterministic, alternating, and probabilistic Turing machines. Time and space complexity, complexity classes, complexity hierarchies, and provably intractable problems. Prerequisite: CSE major and 531.

CSE 533 Advanced Topics in Complexity Theory (3) Topics in computational complexity more sophisticated than those treated in 532. Topics are expected to vary from year to year, but might typically focus on such areas as parallel complexity, probabilistic complexity, circuit- or automaton-based complexity, or logic. Prerequisite: CSE major. Offered: alternate years.

CSE 536 Theory of Distributed Computing (3) Formal approaches to distributed computing problems. Topics vary, but typically include models of distributed computing, agreement problems, impossibility results, mutual exclusion protocols, concurrent reading while writing protocols, knowledge analysis of protocols, and distributed algorithms. Prerequisite: CSE major. Offered: alternate years.

CSE 540 Discrete System Simulation (3) Principles of simulation of discrete, event-oriented systems. Model construction, simulation and validation. Distributed and parallel simulation techniques. Basic statistical analysis of simulation inputs and outputs. Use of C, an object-oriented language, and S, a statistical analysis package. Prior familiarity with the concepts of probability and statistics desirable. Prerequisite: CSE major.

CSE 543 Computer System Performance (3) Emphasizes the use of analytic models as tools for evaluating the performance of centralized, distributed, and parallel computer systems. Prerequisite: CSE major and 451.

CSE 548 Computer Systems Architecture (3) Notations for computer systems. Processor design (single chip, look-ahead, pipelined, data flow). Memory hierarchy organization and management (virtual memory and caches). Microprogramming. I/O processing. Multiprocessors (SIMD and MIMD). Prerequisite: CSE major and 451.

CSE 549 High-Performance Computer Architectures (3) Algorithm design, software techniques, computer organizations for high-performance computing systems. Selected topics from: VLSI complexity for parallel algorithms, compiling techniques for parallel and vector machines, large MIMD machines, interconnection networks, reconfigurable systems, memory hierarchies in multiprocessors, algorithmically specialized processors, data flow architectures. Prerequisite: CSE major and 548 or permission of instructor. Offered: alternate years.

CSE 551 Operating Systems (3) Operating system design and construction techniques. Concurrent programming, operating system kernels, correctness, deadlock, protection, transaction processing, design methodologies, comparative structure of different kinds of operating systems, and other topics. Prerequisite: CSE major and 451.

CSE 552 Distributed and Parallel Systems (3) Principles, techniques, and examples related to the design, implementation, and analysis of distributed and parallel computer systems. Prerequisite: CSE major and 551.

CSE 553 Real-Time Systems (3) Design and construction of software for real-time computer systems. Software architectures. Requirements and specification methods. Scheduling algorithms and timing analysis. Real-time operating systems. Real-time programming languages. Selected case studies. Prerequisite: CSE major and 451. Offered: alternate years.

CSE 557 Computer Graphics (3) Introduction to computer image synthesis, emphasizing the underlying theoretical principles in preparation for undertaking computer graphics research. Topics include color theory, photorealistic image synthesis, affine and projective geometry, curve and surface design, numerical methods, sampling theory, physical dynamics. Laboratory project. CSE majors only. Prerequisite: CSE major and knowledge of data structures and linear algebra.

CSE 558 Special Topics in Computer Graphics (3) Advanced topics in computer graphics not treated in CSE 557. Topics vary from year-to-year but typically include advanced image synthesis and/or computer aided geometric design. Prerequisite: CSE major and 557 or permission of instructor. Offered: alternate years.

CSE 561 Computer Communication and Networks (3) Fundamentals of data transmission: coding, message formats, and protocols. Organization of computer networks. Examples of network implementations. Prerequisite: CSE or E E major and 451 or equivalent.

CSE 563 Fault Tolerant Computing (3) Faults and their manifestation, issues, theory, and techniques of reliable systems design, testing, design for testability, self-checking and fail-safe circuits, coding techniques, system-level fault diagnosis, fault-tolerant communication, reliable software design, and evaluation criteria. Prerequisite: basic knowledge of digital systems design or permission of instructor. Offered: jointly with E E 563.

CSE 567 Principles of Digital Systems Design (3) Principles of logic design, combinational and sequential circuits, minimization techniques, structured design methods, CMOS technology, complementary and ratioed gates, delay estimation and performance analysis, arithmetic circuits, memories, clocking methodologies, synthesis and simulation tools, VLSI processor architecture. Prerequisite: CSE major and basic knowledge of logic design.

CSE 568 Advanced VLSI Laboratory (3) Advanced topics on MOS technology and CAD software; students design a large chip (more than 10K transistors) to be fabricated at end of term; laboratory activities include circuit and logic design, graphic layout of a chip, extraction, checking, and simulation. Prerequisite: CSE major and 567 or permission of instructor.

CSE 573 Artificial Intelligence I (3) Introduction to computational models of thought and construction of intelligent information systems. Topics include search algorithms, data dependencies and truthmaintenance systems, approaches to knowledge representation, automated deduction, reasoning under uncertainty, and machine learning. Prerequisite: 421 or equivalent; exposure to logic, LISP programming experience, CSE major.

CSE 574 Artificial Intelligence II (3) Advanced topics in artificial intelligence. Subjects include planning, natural language understanding, qualitative physics, machine learning, and formal models of time and action. Students are required to do projects. Prerequisite: CSE major and 573.

CSE 576 Image Understanding (3) Overview of computer vision, emphasizing the middle ground between image processing and artificial intelligence. Image formation, preattentive image processing, boundary and region representations, and case studies of vision architectures. Prerequisite: 573 or E E 562 or equivalent or permission of instructor. Offered: jointly with E E 576.

CSE 577 Mathematical Morphology (3) Theory of mathematical morphology and its application in various commercial, industrial, medical, and research applications. Contents include binary and grayscale morphologic dilation, erosion, opening and closing, morphological sampling theorem, structuring element decomposition, thinning, skeletonizing, and relational shape description. Group project. Prerequisite: 576 or E E 568 or permission of instructor. Offered: jointly with E E 577; alternate years.

CSE 581 Parallel Computation in Image Processing (3) Parallel architectures, algorithms, and languages for image processing. Cellular array, pipelined and pyramid machines, instruction sets, and design issues. Parallel implementations of filtering, edge detection, segmentation, shape, stereo, motion, relaxation algorithms, multiresolution methods, and iconic-to-symbolic transforms. Students write and debug programs for parallel computers. Prerequisite: permission of instructor. Offered: alternate years.

CSE 582 Compiler Construction (4) Principles and practice of building efficient implementations of modern programming languages. Lexical, syntactic, and semantic analysis of programs. Intermediate program representations. Intra- and interprocedural analysis and optimization. Run-time system techniques. Related programming environment facilities such as source-level debuggers and profilers. Prerequisite: CSE majors only.

CSE 583 Programming Languages (4) A study of non-imperative programming paradigms such as functional, object-oriented, logic, and constraint programming. Programming language semantics and type theory. Prerequisite: CSE majors only.

CSE 584 Principles of Software Engineering (4) Study of major developments in software engineering over the past three decades. Topics may include design (information hiding, layering, open implementations), requirements specification (informal and formal approaches), quality assurance (testing, verification and analysis, inspections), reverse and re-engineering (tools, models, approaches). Prerequisite: CSE majors only. CSE 585 Design and Implementation of Digital Systems (4) Overview of current implementation technologies for digital systems including custom integrated circuits, field-programmable logic, and embedded processors. Systems components such as buses and communications structures, interfaces, memory architectures, embedded systems, and application-specific devices. Focus on the design of large systems using modern CAD tools. Prerequisite: CSE majors only.

CSE 586 Computer Architecture (4) Architecture of the single-chip microprocessor: instruction set design and processor implementation (pipelining, multiple issue, speculative execution). Memory hierarchy: on-chip and off-chip caches, TLBs and their management, virtual memory from the hardware viewpoint. I/O devices and control: buses, disks, and RAIDs. Prerequisite: CSE majors only.

CSE 587 Computer Operating Systems (4) A study of developments in operating systems from the 1960s to the present. Topics include operating system structure, protection, virtual memory, communication mechanisms, concurrency, lightweight threads, object-oriented systems, distributed systems, and transaction support in operating systems. Prerequisite: CSE majors only.

CSE 588 Network Systems (4) Current choices and challenges in network systems. Fundamental concepts combined with emphasis on evaluation of design/operations alternatives. Topics include: alternative link, network, and transport-layer technologies, topologies, routing, congestion control multimedia, Ipv6, aTM v. IP, network management and policy issues. Prerequisite: CSE majors only.

CSE 589 Applied Algorithms (4) Principles of design of efficient algorithms with emphasis on algorithms with real world applications. Examples drawn from computational geometry, biology, scientific computation, image processing, combinatorial optimization, cryptography, and operations research. Prerequisite: CSE majors only.

CSE 590 Special Topics in Computer Science (*) Several offerings each quarter, on topics of current interest. Prerequisite: permission of instructor. Offered: AWSp.

CSE 591 Current Trends in Computer Graphics (4) Introduction to computer image synthesis and interactive computer graphics applications, emphasizing the state-of-the-art algorithms and applications. Topics may include hardware, color image display, event-driven programming, texture mapping, image morphing, image compositing, curves and surfaces, photorealistic image synthesis, and physical dynamics for modeling and animation. Prerequisite: CSE majors only.

CSE 592 Applications of Artificial Intelligence (4) Introduction to the use of Artificial Intelligence tools and techniques in industrial and company settings. Topics include: foundations (search, knowledge representation) and tools such as expert systems, natural language interfaces and machine learning techniques. Prerequisite: CSE majors only.

CSE 593 Transaction Processing (4) Technology supporting reliable large-scale distributed computing, including transaction programming models, TP monitors, transactional communications, persistent queuing, software fault tolerance, concurrency control and recovery algorithms, distributed transactions, two-phase commit, data replication. Prerequisite: CSE majors only.

CSE 595 Human Computer Interaction (4) Topics in human-computer interaction, including tools and skills for user interface design, user interface software architecture, rapid prototyping and iterative design, safety and critical systems, evaluation techniques, and computer supported cooperative work. Prerequisite: CSE majors only. **CSE 597 Performance Analysis (4)** Broad introduction to computer system performance evaluation techniques and their application. Includes measurement/benchmarking, stochastic and trace driven simulation, stochastic queuing networks, and timed Petri nets. Applications of the techniques are studied using case study papers. CSE majors only. Not open for credit to students who have completed CSE 543. Offered: AWSp.

CSE 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

CSE 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

CSE 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Electrical Engineering

253 Electrical Engineering

Electrical engineering is concerned with the understanding and utilization of electricity and with providing society useful, efficient, and economic products and services. The scope of activity is wide-ranging and diversified, covering such topics as planning, design, implementation, and maintenance of large-scale systems for worldwide communication: computer systems and their applications; information management; design and use of microelectronic and photonic devices; signal and image processing; instrumentation and control systems; and power generation and distribution. In electrical engineering, rapid technological innovation is the rule rather than the exception. Preparation for a professional career in the field builds on a solid foundation in mathematics and the physical sciences, plus practice in the application of these basic principles to practical problems. In addition to technical education, the practice of engineering in contemporary society requires significant emphasis in the humanities and social sciences.

The mission of the Department of Electrical Engineering (EE) is to be among the best in terms of quality of classroom and laboratory instruction, student and faculty research, and the preparation of graduates for engineering careers. The objectives of the EE undergraduate program are to provide students with a broad coverage of topics in electrical engineering with a solid foundation in mathematics, natural and physical sciences, and engineering fundamentals; to provide students with relevant laboratory experience throughout the program, culminating in a senior capstone design project required of all students; and to provide students with intellectual tools, analytical and design skills, communication techniques, ethical principles and values, humanistic and social-studies experience, and a scholarly and professional attitude that will establish a foundation for a lifetime of learning, professional growth, and development as an engineering professional and a responsible citizen of society.

The core curriculum consists of required courses in the College and department that focus on mathematical and physical principles and on modern techniques that have applications to real-world problems. Technical electives offer the opportunity to obtain breadth and depth in such areas as electronic materials, devices and circuits, power systems and energy conversion, computers and information systems, communication systems, automatic controls, robotics, and signal processing.

The department's graduates are actively recruited by high-technology industries. Those who pursue further graduate studies are quite successful in highly competitive programs nationally and internationally.

Undergraduate Program

Undergraduate Adviser 222 Electrical Engineering, Box 352500 (206) 543-2142 undergrad@ee.washington.edu

Bachelor of Science in Electrical Engineering

Admission Requirements: Because resources are limited, students must apply for admission to the electrical engineering program. Application forms and a comprehensive booklet, *The Electrical Engineering Handbook for Undergraduates*, can be obtained from the undergraduate adviser for electrical engineering. The department classifies applicants by admission group; the specific requirements for each are described below.

Admission to the department is competitive, and completion of the requirements does not guarantee admission.

A diverse student body adds an important element to the education of all students in the program. All students who meet the minimum admission requirements will be considered for admission with special consideration given to ethnic-minority applicants to ensure diversity in the engineering student body.

All applicants have the right to petition and appeal the decision of the department. Please see the undergraduate handbook for more information on petitions.

1. Early Admission Group (EAG):

a. Open to students enrolled at the UW.

b. Completion of the following courses prior to application: MATH 124, 125, 126; 10 credits of physicalscience courses plus accompanying laboratory, at the level of PHYS 121/131, 122/132, 123/133, or CHEM 142, 152 or above; and 5 credits of English composition. In addition to the College of Engineering requirements above, the department requires the completion of CSE/ENGR 142.

c. A minimum grade of 2.0 in each prerequisite course, a minimum GPA of 2.50 in the required prerequisites, and a minimum overall GPA of 2.50. At least 15 credits must have been taken at the UW.

d. The application deadline is July 1 for autumn quarter only.

2. Upper-Division Admission Group (UAG):

a. Completion of at least 64 credits applicable to the degree, to include: MATH 124, 125, 126, 307; PHYS 121/131, 122/132, 123/133; CHEM 142; CSE/ENGR 142; and at least 5 credits of English composition.

b. A minimum grade of 2.0 in each prerequisite course, a minimum GPA of 2.50 in the required prerequisites, and a minimum overall GPA of 2.50. At least 15 credits must have been taken at the UW.

c. Application deadlines are July 1 for autumn quarter and February 1 for spring quarter.

Graduation Requirements: In addition to the College of Engineering requirements in general education and engineering fundamentals listed above, the following courses are required for the B.S.E.L. degree: a core of 35 credits of specified electrical engineering courses normally taken in the junior year and 25 credits of electrical engineering electives. To graduate, a student must earn a total of 180 credits with a minimum cumulative GPA of 2.00 in all electrical engineering courses, with no grade below 1.0 in any of these courses. In addition, it is required that each student's program of study conform with the Accreditation Board for Engineering and Technology (ABET) requirement of at least 48 credits in engineering science and 24 credits in engineering design. The requirements are
324 COLLEGE OF ENGINEERING / ELECTRICAL ENGINEERING

discussed in more detail in the *Electrical Engineering Undergraduate Handbook*. Additional graduation requirements include:

Natural World: 25 credits to include CHEM 142 (5); PHYS 121/131 (5), 122/132 (5), and 123/133 (5).

Mathematics: 24 credits to include MATH 124 (5), 125 (5), 126 (5), 307 (3), 308 (3), and 324 (3).

Written and Oral Communication: 12 credits to include one 5-credit English composition course from the approved University list; ENGR 231 (3) and ENGR 333 (4).

Engineering Fundamentals: 17 credits to include CSE/ ENGR 142 (4), CSE 143 (5), ENGR 215 (4), and E E 235 (4).

Approved Non-Electrical Engineering Electives: 10 credits selected from courses listed in the departmental handbook.

Statistics: 4 credits of STAT/MATH 390.

Areas of Knowledge (Visual, Literary, & Performing Arts and Individuals & Societies): 25 credits to include a minimum of 10 credits in each area. Courses that count toward these requirements are identified as VLPA or I&S in the *General Catalog* and in the quarterly *Time Schedule*. Also required is one in-depth sequence (minimum 8 credits) consisting of two or more related courses.

Free Electives: 8 credits.

The departmental policy on continuation is consistent with the continuation policy of the College but also includes supplementary requirements specific to the department. Details may be obtained from the department advising office.

Many scholarships specifically for electrical engineering majors and based on merit and financial need are awarded each year. Students interested in applying for these and other College of Engineering scholarships may obtain information from the Department of Electrical Engineering Scholarship Award Committee Chair.

Graduate Program

Graduate Program Coordinator 222 Electrical Engineering, Box 352500 (206) 543-4924 grad@ee.washington.edu

The Department of Electrical Engineering offers graduate programs leading to the degrees of Master of Science in Electrical Engineering (M.S.E.E.) and Doctor of Philosophy (Ph.D.). Graduate courses and research programs are offered in acoustics, biosystems. circuits and network theory, computational intelligence, computer networks and distributed systems, computer architecture, digital systems, software engineering, operating systems, microprocessors, VLSI design, control systems, electromagnetics (including optics and radio science), electronic materials (including devices and micro-electronics), energy systems (including power electronics and electric drives), signal and image processing, telecommunications, and virtual reality. Numerous interdisciplinary research opportunities exist, including projects relating to bioengineering, computer engineering, and marine acoustics. The department does extensive research in coordination with the University of Washington's Applied Physics Laboratory and Washington Technology Center.

For the M.S.E.E. degree, a minimum of 45 credits is required. Students writing a thesis must register for 9-12 credits. Students selecting the non-thesis option can either complete their degree by total course work or by a one-term project of 4 credits.

Course work for any of the above-mentioned options must be selected with each student's supervisory committee's approval to prepare the student in an area of specialization. If more flexibility is desired than the M.S.E.E. requirements allow, the interdisciplinary degree of Master of Science in Engineering is available.

The M.S.E.E. degree is also offered to part-time students employed in local industries through the Televised Instruction in Engineering (TIE) program. Regular graduate courses are offered over cable television or by videotape to enable working engineers to participate in the program without traveling to campus.

For the Ph.D. degree, students must pass the departmental qualifying examination, pass an advanced General Examination, pursue an original research problem, and report the results of that research in a dissertation that must be a contribution to knowledge. At least one year of course work beyond the M.S.E.E. degree is usually desirable.

Research Groups

Facilities in the Department of Electrical Engineering include research laboratories for advanced digital systems, advanced power technology, applied electromagnetics, optics, remote sensing, applied signal and image processing, mechatronics and intelligent control, modern sensors, and semiconductor technology.

Admissions Qualifications

In addition to meeting Graduate School admission requirements, the Graduate Record Examination (GRE) general test is required of all students. Official test scores must be submitted, along with a formal application and a minimum of two reference letters.

Although most applicants have baccalaureate degrees in electrical engineering, applicants with degrees in other branches of engineering, the physical sciences, computer science, or mathematics often are able to pursue graduate study in electrical engineering following some additional preparation.

Financial Aid

Research assistantships, teaching assistantships, scholarships, and graduate fellowships are available to qualified graduate students in all areas of electrical engineering. Most awards include a monthly stipend plus payment of tuition and fees.

Faculty

Chair

Gregory L. Zick

Professors

Afromowitz, Martin * 1975; MS, 1966, PhD, 1969, Columbia University; microtechnology, solid-state and fiber-optics sensors, biomedical instrumentation.

Albrecht, Robert W. * 1961; MS, 1958, PhD, 1961, University of Michigan; robotics, stochastic analysis, nuclear reactor theory.

Alexandro, Frank J. * 1964; MSEE, 1959, EngScD, 1964, New York University; control systems.

Andersen, Jonny * 1967; MS, 1962, PhD, 1965, Massachusetts Institute of Technology; analog circuit design, modeling and CAD.

Atlas, Les Eugene * 1983; MS, 1978, PhD, 1984, Stanford University; time-frequency representations, nonstationary signal and time-varying system analysis.

Baer, Jean-Loup * 1969, (Adjunct); MS, 1963, Grenoble (France); PhD, 1968, University of California (Los Angeles); parallel processing, computer architecture.

Beach, Kirk Watson * 1976, (Adjunct Research); MSChE, 1968, PhD, 1971, University of California (Berkeley); MD, 1976, University of Washington; arterial disease in diabetes, blood flow studies with ultrasonic Doppler.

Bergseth, F. Robert 1947, (Emeritus); MSEE, 1938, Massachusetts Institute of Technology; electric power systems.

Bernard, Gary D. * 1989, (Affiliate); PhD, 1964, University of Washington; advanced sensors for manufacturing, time-frequency classification, visual information processing.

Bjorkstam, John L. * 1950, (Emeritus); PhD, 1958, University of Washington; electromagnetic properties of materials, magnetic resonance spectroscopy.

Clark, Robert N. * 1957, (Emeritus); PhD, 1969, Stanford University; automatic control systems, fault detection in dynamic systems.

Crum, Lawrence A. * 1992, (Research); PhD, 1967, Ohio University.

Damborg, Mark J. * 1969; MSEE, 1963, PhD, 1969, University of Michigan; control systems theory, power system dynamics, expert systems and database applications.

Daniels, Patricia D. 1996, (Affiliate); PhD, 1974, University of California (Berkeley).

Denton, Denice Dee 1996; MS, 1982, PhD, 1987, Massachusetts Institute of Technology; micromachining for the design and fabrication of microelectronic systems.

Dow, Daniel G. * 1968, (Emeritus); PhD, 1958, Stanford University; microwaves, physical electronics, semiconductor devices, sensors.

Ehrenberg, John E. * 1970, (Affiliate); PhD, 1973, University of Washington; communications, signal processing, underwater acoustics.

El-Sharkawi, Mohamed A. * 1980; MS, 1977, PhD, 1980, University of British Columbia (Canada); intelligent systems applications; analysis and control of power electronics and systems.

Furness, Thomas A. * 1989, (Adjunct); PhD, 1981, University of Southampton (UK); display systems engineering, human factors, computer graphics.

Guilford, Edward C. * 1959, (Emeritus); PhD, 1959, University of California (Berkeley); electronics, computers.

Haralick, Robert M. * 1986; MS, 1967, PhD, 1969, University of Kansas; computer vision, artificial intelligence, pattern recognition, image processing.

Hsu, Chih-Chi * 1958, (Emeritus); PhD, 1951, Ohio State University; control systems and cybernetics.

Ishimaru, Akira * 1953; PhD, 1958, University of Washington; electromagnetics, optics, acoustics, applied mathematics, scattering theory.

Jackson, Darrell R. * 1976, (Research); PhD, 1966, University of Washington; PhD, 1977, California Institute of Technology; signal processing, underwater acoustics, wave scattering.

Johnson, David L. 1955, (Emeritus); PhD, 1955, Purdue University; digital design, artificial intelligence, models of learning systems.

Kerszenbaum, Isidor 1996, (Affiliate); PhD, 1983, University of the Witwatersrand (South Africa).

Kim, Yongmin * 1982; MS, 1979, PhD, 1982, University of Wisconsin; computer architecture, media processors, imaging and video systems, medical imaging modeling.

Kuga, Yasuo * 1991; MS, 1979, PhD, 1983, University of Washington; microwave and millimeter-wave remote sensing, optics, and electromagnetics.

Lauritzen, Peter O. * 1968; MS, 1958, PhD, 1961, Stanford University; power electronics, device modeling for circuit simulation, electronic devices.

Lewellen, Thomas * 1975, (Adjunct); PhD, 1972, University of Washington; bioengineering, electrical engineering.

Lewis, Laurel J. 1946, (Emeritus); PhD, 1947, Stanford University; circuits and systems.

Liu, Chen-Ching * 1983; MS, 1978, National Taiwan University; PhD, 1983, University of California (Berkeley); power system analysis/computing, intelligent system methodologies/applications, power electronics.

Marks, Robert * 1977; MS, 1973, Rose Hulman Institute of Technology; PhD, 1977, Texas Technological University; neural networks, computational intelligence, fuzzy systems, statistical communication theory.

Meditch, James S. * 1977; MS, 1957, Massachusetts Institute of Technology; PhD, 1961, Purdue University; broadband communication networks, video and multimedia systems.

Mitchell, Gordon L. 1993, (Affiliate); PhD, 1978, University of Washington.

Noges, Endrik * 1958, (Emeritus); PhD, 1959, Northwestern University; automatic control systems, nonlinear and discontinuous control.

Pearsall, Thomas P. * 1989; PhD, 1973, Cornell University; physics of semiconductors and the technology of semiconductor devices.

Peden, Irene Carswell * 1961, (Emeritus); PhD, 1962, Stanford University; subsurface remote sensing and applied electromagnetics.

Pinter, Robert B. * 1964; MS, 1960, PhD, 1964, Northwestern University; cybernetics, robotics, biophysics.

Porter, Robert P. * 1985; PhD, 1970, Northeastern University; acoustics, electromagnetics, signal processing.

Ritcey, James A. * 1985; MS, 1979, Syracuse University; PhD, 1985, University of California (San Diego); communications, signal processing, radar/sonar.

Shapiro, Linda G. * 1986; PhD, 1974, University of lowa; computer vision, artificial intelligence, pattern recognition, robotics.

Sigelmann, Rubens A. * 1959, (Emeritus); PhD, 1963, University of Washington; bioengineering, ultrasonics, propagation, acoustics.

Soma, Mani * 1982; MS, 1977, PhD, 1980, Stanford University; IC design and testing, mixed signal testing, bioengineering.

Spelman, Francis A. * 1961, (Adjunct); PhD, 1975, University of Washington; biophysics of implanted cochlea, bioinstrumentation for primate research.

Spindel, Robert C. 1987; MS, 1966, PhD, 1971, Yale University; ocean acoustics, signal processing, acoustic navigation systems, acoustic tomography.

Szablya, John F. * 1984, (Affiliate); PhD, 1948, Josef Nador University (Hungary).

Tanimoto, Steven L. * 1977, (Adjunct); PhD, 1975, Princeton University; image analysis, artificial intelligence, computer graphics, educational technology.

Tsang, Leung * 1983; MS, 1973, PhD, 1976, Massachusetts Institute of Technology; electromagnetics, propagation and scattering, remote sensing, and optics.

Vagners, Juris * 1967, (Adjunct); PhD, 1967, Stanford University; dynamics, controls and optimization.

Venkata, Subrahmanyam S. * 1997, (Affiliate); MS, 1965, Indian Institute of Technology (India); PhD, 1971, University of South Carolina; computer applications to power systems, AI applications, transmission and distribution.

Yee, Sinclair S. * 1966; MS, 1961, PhD, 1965, University of California (Berkeley); physical electronics, semiconductor devices, optical sensors.

Zick, Gregory L. * 1974; MS, 1972, PhD, 1974, University of Michigan; image and multimedia databases, medical imaging.

Associate Professors

Azizoglu, Murat 1994; PhD, 1991, Massachusetts Institute of Technology; communication networks, optical networks, communication theory, information theory.

Babbitt, William R. * 1993, (Affiliate); AM, 1986, PhD, 1987, Harvard University; optical memories, processors, optical interconnects and nonlinear optics.

Borriello, Gaetano * 1988, (Adjunct); PhD, 1988, University of California (Berkeley); computer-aided design and synthesis of digital circuits, special purpose architectures.

Chan, Chi H. * 1989; MS, 1982, Ohio State University; PhD, 1987, University of Illinois; computational electromagnetics, microwave ICs, scattering and antennas.

Christie, Richard Dunstan * 1989; ME, 1974, Rensselaer Polytechnic Institute; PhD, 1989, Carnegie Mellon University; power systems analysis, distribution system reliability, user interfaces.

Clopton, Ben M. * 1994, (Adjunct Research); PhD, 1970, University of Washington; auditory neurophysiology, cochlear implants, multiunit recording, neuron compartmental modeling.

Darling, Robert Bruce * 1985; MSEE, 1982, PhD, 1985, Georgia Institute of Technology; semiconductor devices, microelectronics, optoelectronics, sensors, microfabrication.

Falk, Robert Aaron 1995, (Affiliate); MS, 1974, PhD, 1979, University of Washington.

Giri, Jay * 1990, (Affiliate); MS, 1971, State University of New York (Stony Brook); PhD, 1977, Clarkson University; power system analysis, software development and user interfaces for real-time power system control.

Hannaford, Blake * 1989; MS, 1982, PhD, 1985, University of California (Berkeley); human and robotic movement control, bioengineering, controls, human-machine interaction.

Healy, Michael J. * 1995, (Affiliate); MS, 1967, University of Idaho; formal semantics, mathematical semantic analysis and design of systems.

Helms, Ward J. * 1964; PhD, 1968, University of Washington; VLSI analog and digital circuit design, integrated circuits, acoustics and audio.

Hwang, Jenq-Neng * 1989; PhD, 1988, University of Southern California; signal and image processing, neural networks, pattern recognition.

Katz, Phillip L. * 1980, (Research); MS, 1965, PhD, 1970, University of Michigan.

Kuhn, Kelin J. * 1987, (Affiliate); PhD, 1985, Stanford University; optics and photonics, environmental sensing, laser development.

Ly, Uy-Loi * 1988, (Adjunct); PhD, 1983, Stanford University; robust controls, parameter optimization, model reduction, digital control, design integration.

Meldrum, Deirdre R. * 1992; MS, 1985, Rensselaer Polytechnic Institute; PhD, 1992, Stanford University; laboratory automation systems, genome analysis, modeling and control of dynamic systems, robots.

Nelson, Brian A. * 1987, (Research); PhD, 1987, University of Wisconsin; fusion plasma physics, plasma processing of materials, data acquisition software.

Phillips, Ihsin Tsai-Yun * 1988, (Affiliate); PhD, 1984, University of Maryland; computer vision, document image understanding, image database, software engineering.

Redeker, Charles C. 1963, (Emeritus); MS, 1964, University of Washington.

Riskin, Eve A. * 1990; MS, 1985, PhD, 1990, Stanford University; image compression and processing, and signal processing.

Sahr, John D. * 1991; PhD, 1990, Cornell University; radar remote sensing, ionospheric physics; signal processing; wireless communications.

Sechen, Carl M. * 1992; PhD, 1987, University of California (Berkeley); design and computer-aided design of digital integrated circuits and systems.

Sharma, Tilak Chand * 1990, (Affiliate); PhD, 1972, University of Alberta (Canada); reliability methodology for very highly reliable fault-tolerant systems.

Sinanan, Mika N. 1980, (Adjunct); MD, 1980, Johns Hopkins University; PhD, 1986, University of British Columbia (Canada); general and laparoscopic surgery.

Sun, Ming-Ting * 1996; MS, 1981, University of Texas (Arlington); PhD, 1985, University of California (Los Angeles); multimedia, video processing, networking, VLSI.

Thorsos, Eric I. * 1980, (Research); PhD, 1972, Massachusetts Institute of Technology; rough surface scattering, numerical simulation and theory, underwater acoustics.

Vivekanandan, Jothivam 1994, (Affiliate); PhD, 1986, Colorado State University.

Winebrenner, Dale P. * 1986, (Research); PhD, 1985, University of Washington; wave propagation and scattering and remote sensing of planetary surfaces.

Yuan, Chun 1991, (Adjunct); PhD, 1988, University of Utah; medical biophysics, MRI.

Assistant Professors

Aggoune, El-Hadi 1997, (Affiliate); MS, 1984, PhD, 1988, University of Washington.

Alilovic-Curgus, Jadranka 1997, (Affiliate); MS, 1987, University of Sarajevo (Yugoslavia); PhD, 1993, University of British Columbia (Canada).

Belcher, Edward O. * 1982, (Affiliate); MA, 1970, Stanford University; MSEE, 1973, Purdue University; signal processing, artificial intelligence, underwater acoustics.

Chalana, Vikram 1996, (Affiliate); MS, 1993, PhD, 1996, University of Washington.

Choi, Jai Joon * 1988, (Affiliate); PhD, 1990, University of Washington; adaptive signal processing, neural networks, and fuzzy logic.

Dailey, Daniel J. * 1982, (Research); MS, 1982, PhD, 1988, University of Washington; time series modeling of physical phenomena, optimization, distributed computing, networking.

Green, Lynne 1993, (Affiliate); MS, 1978, PhD, 1990, University of Washington.

Jung, Chuck C. 1995, (Affiliate); MS, 1991, PhD, 1994, University of Washington.

Luby, James C. * 1979, (Affiliate); PhD, 1984, University of Washington; signal processing, underwater acoustics, computer simulation, adaptive array processing, tracking.

Matula, Thomas J. * 1993, (Affiliate); PhD, 1993, Washington State University.

Melendez, Jose 1997, (Affiliate); MS, 1991, Massachusetts Institute of Technology; PhD, 1994, Stanford University.

Oh, Seho * 1987, (Affiliate); PhD, 1989, University of Washington; neural networks and fuzzy systems.

Ramon, Ceon * 1989, (Adjunct Research); PhD, 1973, University of Utah; biomagnetic imaging and its application to detect cardiac dysrhythmia problems.

Yee, H. P. 1992, (Research); MS, 1989, PhD, 1992, University of Washington.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

E E 233 Circuit Theory (5) Electric circuit theory. Analysis of circuits with sinusoidal signals. Phasors, system functions, and complex frequency. Frequency response. Computer analysis of electrical circuits. Power and energy. Two port network theory. Laboratory in basic electrical engineering topics. Offered: AWSp.

E E 235 Continuous Time Linear Systems (4) Introduction to continuous time signal analysis. Basic signals including impulses, pulses, and unit steps. Periodic signals. Convolution of signals. Fourier series and transforms in discrete and continuous time. Computer laboratory. Offered: AWSp.

E E 299 Special Topics in Electrical Engineering (1-5) New and experimental approaches to basic electrical engineering. May include design and construction projects. Offered: AWSp.

E E 331 Devices and Circuits I (5) Physics, characteristics, applications, analysis, and design of circuits using semiconductor diodes and field-effect transistors with an emphasis on large-signal behavior and digital logic circuits. Classroom concepts are reinforced through laboratory experiments and design exercises. Offered: AWSp.

E E 332 Devices and Circuits II (5) Characteristics of bipolar transistors, large- and small- signal models for bipolar and field effect transistors, linear circuit applications, including low and high frequency analysis of differential amplifiers, current sources, gain stages and output stages, internal circuitry of op-amps, op-amp configurations, op-amp stability and compensation. Weekly laboratory. Offered: AWSp.

E E 341 Discrete Time Linear Systems (5) Discrete time signals and systems, impulse response, convolution, Z-transforms, discrete time Fourier analysis. Computer laboratory. Offered: AWSp.

E E 351 Energy Systems (5) Introduction to theory and methods of analysis in the use of typical apparatus to generate, transmit, utilize energy in electrical form. Includes conventions of circuit description, balanced polyphase circuits, complex power concept, transformer, fundamentals of electromechanical energy conversion, practical synchronous induction and commutator machines, an introduction to power electronics circuits. Offered: AWSp.

E E 361 Applied Electromagnetics (5) Introductory electromagnetic field theory and Maxwell's equations in integral and differential forms; uniform plane waves in linear media; boundary conditions and reflection and transmission of waves; guided waves; transmission lines and Smith chart; electrostatics. Offered: AWSp.

E E 371 Digital Circuits and Systems (5) Overview of digital computer systems. Digital logic, Boolean algebra, combinational and sequential circuits and logic design, programmable logic devices, and the design and operation of digital computers, including ALU, memory, and I/O. Four-hour laboratories every other week. Offered: AWSp.

E E 399 Special Topics in Electrical Engineering (1-5) New and experimental approaches to current electrical engineering problems. May include design and construction projects. Offered: AWSpS.

E 411 Introductory Network Synthesis (3) Network representation in the complex frequency domain, realiability criteria for driving-point and transfer functions, canonical forms, and application of the digital computer in synthesis procedures. Offered: A. **E E 415** Computer-Aided System Analysis and Design (3) Concepts, principles, and techniques concerned with the design, testing, and application of general-purpose problem-oriented computer programs for analyzing large-scale systems. Offered: Sp.

E E 416 Communications I: Random Signals (4) Probability and random processes in communications. Random variables, distributions, and expectation. Statistical filter design for detection and estimation. Prerequisite: E E 341; STAT 390.

E E 417 Communications II: Modulation and Coding (4) Modulation techniques for modern digital communication systems. Signal space, optimum receiver design, error performance. Energy-band width tradeoff in modulation. Error control coding for high reliability, block coding, convolutional coding. Multipath fading and its effects on performance, diversity signaling. Spread spectrum signaling and code division multiple access for wireless communications. Prerequisite: E E 416. Offered: W.

E E 418 Communications III: Multiple Access (3) Issues in communication systems with multiple users. Multiplexing based on time, frequency, and code. Error performance and power control in multiuser communications. Random access in networks, Aloha protocol and carrier sensing. Queuing theory for performance analysis. Delay-throughput tradeoff. Switch architectures and performance. Prerequisite: E E 417. Offered: Sp.

E E 420 Design in Communications (4) Prerequisite: E E 417 which may be taken concurrently. Offered: Sp.

E E 433 Analog Circuit Design (5) Design of analog circuits and systems applying modern integrated circuit technology: operational amplifiers, differential amplifiers, active filters, voltage references and regulators. Offered: AW.

E E 436 Medical Instrumentation (4) Spelman Introductory course in the application of instrumentation to medicine. Topics include transducers, signalconditioning amplifiers, electrodes and electrochemistry, ultrasound systems, electrical safety, and the design of clinical electronics. Laboratory included. For upper-division and first-year graduate students who are preparing for careers in bioengineering-both research and industrial. Offered: jointly with BIOEN 436; Sp.

E E 442 Digital Signals and Filtering (3) Methods and techniques for digital signal processing. Review of sampling theorems, A/D and D/A converters. Demodulation by quadrature sampling. Z-transform methods, system functions, linear shift-invariant systems, difference equations. Signal flow graphs for digital networks, canonical forms. Design of digital filters, practical considerations, IIR and FIR filters. Digital Fourier transforms and FFT techniques. Offered: W.

E E 443 Design and Application of Digital Signal Processing (5) Application of learned theories/algorithms and available computer technologies to modern image and speech processing problems. Two-dimensional signals and systems. Image transform, enhancement, restoration, coding. Characteristics of speech signals, linear predictive coding (LPC) of speech, pitch detection, and LPC speech synthesis, speech recognition, hardware designs for signal processing. Offered: Sp.

E E 445 Nonlinear Systems Analysis (4) Dynamic analysis of nonlinear circuits, neural networks and of other simple systems. Exact methods, graphical methods, approximate methods, including linearization and numerical and analog computer solutions. Stability. Forced oscillations. Offered: A.

E E 446 Control System Analysis I (4) Linear Servomechanism theory and design principles. Pole-

zero analysis, stability of feedback systems by root locus and real-frequency response methods. Design methods of Bode and Nichols. Introduction to advanced topics in automatic control theory, state variable methods. Offered: AWSp.

E E 448 Control Systems Sensors and Actuators (3) Study of control systems components and mathematical models. Amplifiers, DC servomotors, reaction mass actuators. Accelerometers, potentiometers, shaft encoders and resolvers, proximity sensors, force transducers, piezoceramic materials, gyroscopes. Experimental determination of component models and model parameters. Two 3-hour laboratories per week. Offered: jointly with A A 448; W.

E E 449 Design of Automatic Control Systems (4) Design problems for aerospace vehicles, systems with unstable dynamics, lightly damped modes, nonminimum phase, nonlinear dynamics. Computeraided analysis, design, and simulation, with laboratory hardware-in-the-loop testing. Team design reviews, oral presentations. Offered: jointly with A A 449. Sp.

E E 452 Power Electronics Design (5) Electronic conversion and control of electrical power. Includes semiconductor switching devices, power converter circuits, design of magnetics, and control of power converters. Also ac/ac, ac/dc, and dc/dc power converters; circuit simulation; extensive laboratory work; a four-week power converter design project. Offered: A.

E E 453 Electric Drives (5) Elements of drive systems, speed-torque characteristics of electric motors and industrial loads, solid-state converter. Starting and braking methods of loaded motors. Speed control of electric motors. Solid-state drives. Transient analysis of loaded motors. Special forms of individual- and multimotor drives. Offered: W.

E E 454 Power System Analysis I (4) Introduction to methods of analyzing power systems. Includes symmetrical components, calculation of line parameters, representation of transmission lines and power components, and power flow control. Offered: A.

E E 455 Power System Analysis II (4) Analysis of symmetrical and unsymmetrical power systems' networks, fault analysis, and stability studies. Offered: W.

E E 456 Computer-Aided Design in Power Systems (4) Design-oriented course in power system engineering. Students are assigned a project concerning system operation and planning, steady-state and dynamic behaviors of power systems, or distribution systems. Each involves formulation of design criteria, development of approach, application of existing software. Offered: Sp.

E E 457 Electric Energy Distribution Systems (4) Introduction to electric utility distribution systems. Primary and secondary network analysis and design, distribution substation problems, distribution transformers, capacitor application, overcurrent and overvoltage protection. System planning and reliability. Offered: Sp.

E E 461 Introduction to Computer-Communication Networks (3) Computer network architectures, protocol layers. Transmission media, encoding systems, error detection, multiplexing, switching. Data link, multiple access channel protocols. Methods for network routing, congestion control, flow control. End-to-end transport services, protocols. Network security, privacy. Applications including electronic mail, virtual terminals, distributed operating systems. Offered: jointly with CSE 461; A.

E E 462 Principles of Mobile Robotics (4) Principles of autonomous vehicles and their operation environments. Typical configuration of indoor vehicles, sensors, controllers, communications with base stations, systems for planning, cartography,

COLLEGE OF ENGINEERING / ELECTRICAL ENGINEERING 327

navigation, piloting, and learning to achieve autonomous performances. Laboratory exercises to illustrate real-time expert system development and integration expert system knowledge into robotic system. Offered: A.

E E 463 Simulation of Autonomous Systems (4) Study principles of simulation of and sensory interaction between vehicles and environments. Study of requirements to simulate complex mechatronic devices such as multi-legged mobile robots. Implementation of hexapod simulator. Simulation of computer command structures, motors, controllers, chassis, sensors, and environments. Animation to provide human interface to simulation. Offered: W.

E E 465 Fiber Optics, Devices, and Applications (4) Wave propagation in optical waveguiding structures, signal distortion, coupling of modes, modulation, sources and detectors, fabrication and measurement methods, communication and sensor systems. Offered: W.

E E 466 Design in Electromagnetics, Optics, and Acoustics (4) Design of electromagnetic, optical, and acoustic (EOA) devices and systems. Measurements of material properties and system characteristics. Utilization of software for simulation of propagation, interaction and devices in optics, microwave, millimeter wave, acoustic, and ultrasound. A list of projects available prior to registration. Offered: Sp.

E E 467 Antennas: Analysis and Design (4) Sahr, *Tsang* Fundamentals of antennas, analysis, synthesis and computer-aided design, and applications in communications, remote sensing, and radars. Radiation pattern, directivity, impedance, wire antennas, arrays, numerical methods for analysis, horn antennas, microstrip antennas, and reflector antennas. Offered: Sp.

E E 471 Computer Design and Organization (5) Introduction to computer architecture, algorithms, hardware design for various computer subsystems, CPU control unit design, hardwired and microprogrammed control, memory organization, cache design, virtual memory, I/O organization, and I/O hardware design. Offered: ASp.

E E 472 Microcomputer Systems (5) Concepts of multi-level machines and computer systems organization. Utilizing microprocessors, digital computer studied at assembly- and high-language levels with emphasis on concepts of central processor architecture, memory organization, input/output and interrupts. Assembly language programming concepts applied to solution of various laboratory problems including I/O programming. Offered: AW.

E E 476 Digital Integrated Circuit Design (5) Sechen Comprehensive view of digital integrated circuit design. Topics to be covered include the design of inverters, static logic circuits, switch logic, and synchronous logic. Students design, simulate, and layout a complete digital IC using modern computer-aided design tools. Offered: A.

E E 477 Custom Digital CMOS Circuit Design (4) Sechen, Yang Design and analysis of custom CMOS digital integrated circuits. Interface circuit design, memory design, datapath design. VLSI design methodologies, scaling properties and design tradeoffs.

E E 478 Design of Computer Subsystems (5) Design of digital computer subsystems and systems, using SSI, MSI, and LSI digital components. Combinational logic, sequential logic, memory hardware designs, I/O hardware and interface design, system design steps, high-speed digital circuit design, noise reduction techniques, and hardware description language. One four-hour laboratory each week and design project. Offered: WSp.

E E 480 Microwave Engineering I (4) Analysis and design of transmission lines and matching cir-

cuits. Lossy transmission lines. Mode structures in metallic and dielectric waveguides. Microwave resonators and magnetic devices. Smith chart and matching techniques. Offered: A

E E 481 Microwave Electronic Design (4) Design of microwave circuits using S-parameter techniques. Measurement techniques, CAD of microwave systems. Includes design, fabrication, and evaluation of a microwave amplifier. Offered: W.

E E 482 Semiconductor Devices (4) Fundamentals of semiconductor theory: carrier diffusion and drift; concept of direct and indirect energy materials, effective mass of mobile carriers; device physics: homo- and heterojunctions, operating principles of bipolar, junction, and MOS field-effect transistors. Offered: A.

E E 483 Design in Semiconductor Devices (4) The design and characterization of semiconductor devices using commercial CAD tools; SPICE-type device models; device optimization; measurements and/or parameter extraction. Taught in seminar format with student teams working on design projects. Offered: W.

E E 484 Sensors and Sensor Systems (3) Introduction to optical and electro-chemical sensors and sensor systems. Topics include optical and electrochemical sensor transduction mechanisms, design parameters of optical sensors to biological and electro-chemical systems, and some relevant sensor fabrication technology. Offered: W.

E E 486 Fundamentals of Integrated Circuit Technology (3) *Afromowitz* Processing physics, chemistry, and technology, including evaporation, sputtering, epitaxial growth, diffusion, ion implantation, laser annealing, oxidation, chemical vapor deposition, photoresists. Design considerations for bipolar and MOS devices, material and process characterization. Future trends. Offered: Sp.

E E 488 Laser Electronics (4) Analysis and design of laser systems. Basic resonator design, Gaussian beams, longitudinal and transverse modes, rate equations, oscillation, gain, Q-switching, modelocking, and important non-linear processes. Design concepts underlying various laser systems discussed. Offered: A.

E E 498 Design of Consumer Electronics (4) NW Design of consumer electronics products. Typical products include conventional audio systems, CD players, VCRs, camcorders, and FAX systems. Choice of products varies from quarter to quarter. Course includes an integrated laboratory and design project. Offered: ASp.

E E 499 Special Projects (2-5, max. 10) Assigned construction or design projects carried out under the supervision of the instructor. Offered: AWSpS.

Courses for Graduates Only

E E 500 Graduate Seminar (1, max. 3) Weekly seminars on current topics in electrical engineering. More than one section may be offered in a given guarter. Credit/no credit only. Offered: AWSp.

E E 501 Radar Remote Sensing (3) Sahr General introduction to radar remote sensing of geophysical targets. Fundamentals of radar systems, ange-time diagram, ambiguity function, pulse compression, spectrum estimation for underspread and overspread targets; multi-antenna correlations, interferometry, closure phases; maximum entropy source imaging; Aperture Synthesis (SAR and ISAR). Offered: odd years; W.

E E 505 Introduction to Probability and Random Processes (4) *Ritcey* Foundations for the engineering analysis of random processes: set theoretic fundamentals, basic axioms of probability models, conditional probabilities and independence, discrete and continuous random variables, multiple random variables, sequences of random variables, limit theorems, models of stochastic processes, noise, stationarity and ergodicity, Gaussian processes, power spectral densities. Prerequisite: graduate standing. Offered: AS.

E E 506, 507 Communication Theory I, II (3, 3) *Ritcey* Review of stochastic processes. Communication system models. Channel noise and capacity. Optimum detection, modulation and coding, convolutional coders and decoders. Typical channels, random and fading channels. Waveform communication, optimum filters. Prerequisite: 505 or equivalent. Offered: W, Sp.

E E 508 Stochastic Processes (3) *Ritcey* Modeling and analysis of random processes encountered in engineering applications. Stationarity and ergodicity. Harmonic analysis, power spectral densities. Karhunen-Loeve expansions. Poisson, Gaussian, and Markov processes. Stochastic integrals and differential equations. Prerequisite: 505 or permission of instructor. Offered: W.

E E 509 Engineering Applications of Linear Graphs (3) Andersen Elementary theory of linear graphs, incidence, cut-set and circuit matrices, matrix formulation of loop, node, and state equations, topological analysis and synthesis of networks, signal flow graphs, applications to switching circuits, automata and communication nets. Prerequisite: graduate standing or permission of instructor. Offered: odd years; W.

E E 510 Mathematical Foundations of Systems Theory (4) Damborg Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Prerequisite: graduate standing or permission of instructor. Offered: jointly with A A 546/CHEM E 510/M E 510; odd years; A.

E E 511 Principles of Network Synthesis (3) *Andersen* Network representation in the complex frequency domain, realizability criteria, synthesis of driving point and transfer impedance and coupling networks for prescribed transfer characteristics, canonical forms, and network equivalents, frequency and time domain aspects of approximating response functions. Prerequisite: graduate standing or permission of instructor. Offered: W.

E E 513 Active Circuit Theory (3) Andersen Principles of analysis and synthesis of linear active circuits. Emphasis on general principles, including conservation theorems, invariants, performance limitations in the presence of parasitic elements and realizability conditions. Illustrative applications related to negative resistance amplifiers, feedback amplifiers, and active filters. Prerequisite: 341 or permission of instructor. Offered: Sp.

E E 518 Digital Signal Processing (4) Atlas Digital representation of analog signals. Frequency domain and Z-transforms of digital signals and systems design of digital systems; IIR and FIR filter design techniques, fast Fourier transform algorithms. Sources of error in digital systems. Analysis of noise in digital systems. Prerequisite: knowledge of Fourier analysis techniques and graduate standing, or permission of instructor. Offered: A.

E E 519 Stochastic Analysis of Data from Physical Systems (4) *Atlas* Computer systems for acquisition and processing of stochastic signals. Calculation of typical descriptors of such random processes as correlation functions, spectral densities, probability densities. Interpretation of statistical measurements made on a variety of physical systems (e.g., electrical, mechanical, acoustic, nuclear). Lecture plus laboratory. Prerequisite: 505 or equivalent. Offered: W.

328 COLLEGE OF ENGINEERING / ELECTRICAL ENGINEERING

E E 520 Spectral Analysis of Time Series (4) Ritcey Estimation of spectral densities for single and multiple time series. Basic theory for nonparametric estimation of spectral density, cross-spectral density and coherency for stationary time series, real and complex spectrum techniques. Bispectrum. Digital filtering techniques. Aliasing, prewhitening. Choice of lag windows and data windows. Use of the fast Fourier transform in spectral estimation and computation of correlation functions. The parametric autoregressive spectral density estimate for single and multiple stationary time series. Spectral analysis of nonstationary random processes, and for randomly sampled processes. Techniques of robust spectral analysis. Prerequisite: one of STAT 342, 390, 481, E E 505, or permission of instructor. Offered: jointly with STAT 520; W.

E E 521 Multidimensional Signal Processing (3) *Marks* Multidimensional (MD) signals and systems, MD sampling theorem, sample dependence in higher dimensions, MD FIR filter design using windows and the McClellan transform, MD IIR filter stability and design. Current topics in MD signals and systems. Prerequisite: 442 or 518 or equivalent. Offered: odd years; A.

E E 522 Shannon Sampling and Interpolation Theory (4) Marks Historical overview of Shannon sampling theorem; fundamentals of the cardinal series; generalizations including those of Papoulis, Kramer, and Lagrange; effects of jitter, truncation and data noise on interpolation; continuous sampling restoration using prolate spheroidal wave functions and the Papoulis-Gerchberg algorithm. Prerequisite: 508. Offered: odd years; Sp.

E E 523 Computational Neural Networks (3) *Hwang* Fundamentals of computational neural networks from perspectives of system theory and electrical engineering applications: historical review, adaptive parameter estimation, nonlinear optimization, combinational optimization, learning rules, neural network models, data clustering and regression, pattern classification, speech recognition, image modeling, nonlinear control, principal component analysis, probability density estimation. Prerequisite: permission of instructor. Offered: Sp.

E E 524 Waves in Random Media II (4) *Tsang* Continuation of 575, treating recent developments and advanced topics in wave scattering by discrete random media, random rough surfaces, photon localization, and their engineering applications. Emphasis on multiple scattering field theory, polarimetry, transport theory, Monte-Carlo simulations and media characterization. Prerequisite: 572 and 575 or equivalent. Offered: even years; A.

E E 525 Acoustics in Engineering I (3) Porter Acoustic wave transmission, reflection, refraction, and diffraction in solids, liquids, and gases. Includes review of continuum mechanics and examples from electromechanical systems. Prerequisite: graduate standing in electrical or mechanical engineering or permission of instructor. Offered: jointly with M E 525; W.

E E 526 Acoustics in Engineering II (3) Porter Continuation of 525. Material differs each year, covering such topics as scattering, moving media, ultrasonics, acoustic holography, optoacoustics, transducer propagation in an isotropic medium. Prerequisite: 525 or permission of instructor. Offered: jointly with M E 526; Sp.

E E 527 Solid-State Laboratory Techniques (4) Darling Principles and laboratory techniques used in solid-state electronics research. Basic familiarity with practices and equipment used on-campus. Laboratory safety; materials handling, storage and disposal; clean room use; photoresist characteristics; mounting, bonding, and probing; wet chemicatics; vacuum evaporation; patterning of metal films using photoresist. Extensive laboratory with limited enrollment. Prerequisite: graduate standing and permission of instructor. Offered: Sp.

E E 528 Semiconductor Band Theory (4) *Pearsall, Tsang* Limits of classical physics, Schrodinger's equation, eigenvalues of simple systems; postulates of quantum mechanics, matrix methods, Dirac notation, operator methods; basic crystallography, real and reciprocal lattices, Brillouin zones, phonons, E(k) diagrams, band structure calculations in solids; effective mass equation, spinorbit splitting; application to quantum wells, superlattices, tunneling devices. Prerequisite: graduate standing or permission of instructor.

E E 529 Semiconductor Optics and Optical Devices (4) Afromowitz, Pearsall, Yee Perturbations of energy states in semiconductors; direct and indirect transitions; absorption processes; optical constants; absorption spectroscopy; radiative and nonradiative transitions; processes occurring at p-n junctions; junction devices; LEDs and lasers, photovoltaics; self-electro-optic effect device; modern laser structures. Prerequisite: graduate standing or permission of instructor. Offered: A.

E E 530 Optical Properties of Matter: A Quantum Mechanical Approach (4) *Pearsall, Tsang* Application of quantum mechanics principles and mathematical techniques to interactions of electrons, phonons, and photons. Electron states, transitions and selection rules; field quantization; coherent and incoherent interactions of radiation with matter. Prerequisite: graduate standing or permission of instructor. Offered: W.

E E 531 Semiconductor Devices and Device Simulation (4) Darling, Lauritzen, Pearsall, Yee Physical principles in semiconductor devices. Generation, recombination, p-n junctions, MOS, metalsemiconductor and other interface structures. Carrier transport at low and high level injection levels. Device simulation used to demonstrate physical principles and basic device operation. Project using device simulation. Prerequisite: 482 or graduate standing. Offered: W.

E E 532 Device Modeling for Circuit Simulation (4) *Darling, Lauritzen* Compact modeling of semiconductor devices. Analytical models, standard SPICE models, lumped-charge models using AHDL language. Emphasis on basic diodes, MOSFET, BJTs, and other models of interest, including sensor, photonic, and power models. Compact models using AHDL language model design project. Prerequisite: 531 or permission of instructor. Offered: odd years; Sp.

E E 533 Photodetectors and Photodetection (4) *Afromowitz, Pearsall, Yee* Includes both the device physics and signal processing aspects of photodetection. Photodiodes, photoconductors, photomultipliers, and solar cells are covered. Noise, signal to noise ratios and imaging considerations are also discussed. Prerequisite: 482 or graduate standing. Offered: odd years; W.

E E 534 Power Electronics (4) *Lauritzen* Detailed study of DC-to-AC inverters, pulse-width modulated and resonant DC-to-DC converter topologies; drive and protection circuits for efficient switching of semiconductor devices. Includes extensive computer-aided circuit simulation and power supply control. Prerequisite: graduate standing. Offered: odd years; W.

E E 535 Design of Digital Integrated Circuits and Systems (4) *Helms, Sechen, Soma* Design of digital VLSI, system specifications, architectures, synthesis, simulation, and layout. Covering CMOS technologies with minor emphasis on ECL, GaAS. Prerequisite: graduate standing in electrical or computer engineering, 476 or equivalent, or permission of instructor. Offered: Sp. **E E 536 Design of Analog Integrated Circuits and Systems (4)** *Helms, Soma* Design of analog VLSI: specifications, design, simulation, layout. Covering CMOS and Bi CMOS technologies. Prerequisite: 433 or equivalent and graduate standing in electrical or computer engineering, or permission of instructor. Offered: W.

E E 537 Computation Methods for Circuit Analysis and Simulation (3) Yang Introduction to numerical algorithms and computer-aided techniques for the simulation of electronic circuits. Theoretical and practical aspects of important analyses: largesignal nonlinear DC, small-signal AC, nonlinear transient, and large-signal steady-state. Simulation concepts applied to the modeling and characterization of various electronic devices. Offered: A.

E E 538 Topics in Electronic Circuit Design (1-5) *Sechen* Topics of current interest in electronic circuit and system design. Course content varies from year to year, based on current professional interests of the faculty member in charge. Prerequisite: permission of instructor. Offered: A.

E E 539 Advanced Topics in Solid-State Electronics (1-5) Lectures or discussions of topics of current interest in the field of solid-state electronics for advanced graduate students having adequate preparation in solid-state theory. Subject matter may vary according to the interests of students and faculty. Prerequisite: permission of instructor. Offered: Sp.

E E 540 VLSI Testing (3) Soma VLSI testing and design-for-test techniques. Reliability predictions and characterizations for integrated circuits and systems. Circuits fabricated in 536 are tested as laboratory work. Prerequisite: 535, 536. Offered: A.

E E 541 Automatic Layout of Integrated Circuits (4) Sechen Examines the algorithms behind the following commonly used physical design automation tools: floorplanning, partitioning, placement, routing, compaction, and verification. Prerequisite: 371; CSE 373 or 326 or equivalent. Offered: A.

E E 543 Models of Robot Manipulation (3) *Hannaford* Mathematical models of arbitrary articulated robotic (or biological) arms and their application to realistic arms and tasks, including the homogeneous coordinate model of positioning tasks, the forward and inverse kinematic models, the Jacobian Matrix, and the recursive Newton-Euler dynamic model. Prerequisite: linear algebra and graduate standing or permission of instructor. Offered: W.

E E 544 Advanced Robot Manipulation (4) *Hannaford* Continuation of the analysis of robot manipulation, considering kinematic redundancy, control of robot manipulators in contact with the environment, teleoperation, and grasping with multi-fingered hands. Students will perform a project and critique a research paper in the area of the project. Prerequisite: 543. Offered: Sp.

E E 545 Autonomous Robots (3) Exploration of deliberate-thinking and emergent-functionality paradigms to achieve autonomy. Exploration of hybrids incorporating elements of both of these approaches. Review of other potential approaches with assessment of successes and failures. Directed reading of current literature. Prerequisite: graduate standing or permission of instructor.

E E 546 Advanced Topics in Control System Theory (1-5) Topics of current interest in control system theory for advanced graduate students with adequate preparation in linear and nonlinear system theory. Prerequisite: permission of instructor. Offered when adequate enrollment develops prior to close of advance registration. Offered: AWSp.

E E 547 Neural Communication and Control in **Biological Systems (3)** *Pinter* Neural processing of the visual image and communication between levels of the central nervous system. Feedback and its role in movement by organisms. Description and analysis of the means by which electrochemical events generate, modulate, and demodulate neuronal signals, and the parallel interaction between these signals in transduction of images and other information. Prerequisite: advanced graduate standing or permission of instructor. Offered: Sp.

E E 548 Linear Multivariable Control (3) *Ly, Meldrum* Single loop feedback control theory; poles, zeros, Nyquist stability, performance, robustness of multivariable systems; multivariable control syntheses: Linear-Quadratic-Gaussian methods, loop transfer recovery, Youla parametrization, H-infinity techniques, parameter optimization design. Prerequisite: 584 or M E 575; 446 or A A 451 or M E 471 or equivalent. Offered: jointly with A A/M E 548; W.

E E 549 Estimation and System Identification (3) *Alexandro* Review of system models, model structure, model parametrization; review of stochastic processes; state estimation: observers, the Kalman-Bucy filter, numerical issues in filter design and implementation; system identification: linear regression, least squares, maximum likelihood, instrumental variable techniques. Prerequisite: E E 505 or A A 548. Offered: jointly with A A 549/M E 549; Sp.

E E 550 Nonlinear Optimal Control (3) Vagners Calculus of variations for dynamical systems, definition of the dynamic optimization problem, constraints and Lagrange mutipliers, the Pontryagin Maximum Principle, necessary conditions for optimality, the Hamilton-Jacobi-Bellman equation, singular arc problems, computational techniques for solution of the necessary conditions. Prerequisite: graduate standing; recommended: A A 548 or E E 548. Offered: jointly with A A 550/M E 550; odd years; A.

E E 551 Power System Protection (4) *Liu* The protection of electric power systems from overcurrents and overvoltages. Analysis and design of overcurrents resulting from faults, lightning induced or otherwise, or from excessive loads or power swings. Analysis and design of overvoltages resulting from switching transients or lightning. Principal concern is with relays and lightning arrestors as protection means. Prerequisite: 455 or equivalent. Offered: even years; A.

E E 552 Power Systems Dynamics and Control (4) *Damborg, El-Sharkawi* Advanced computer modeling and analysis of power systems. Application of modern systems and control theories. Prerequisite: 344 and 455 or permission of instructor. Offered: odd years; Sp.

E E 553 Power System Economics (4) *Christie, Damborg, Liu* Economic structure of power systems. Problem formulation, optimization methods and programming for economic analysis of power system operation and planning. Economic dispatch, load forecasting, unit commitment, interchange, planning and reliability analysis. Provides background to pursue advanced work in planning and operation. Prerequisite: graduate standing or permission of instructor. Offered: odd years; A.

E E 554 Large Electric Energy Systems Analysis (4) *Christie, Liu* Deals with problems whose solution depends upon the inversion of sparse matrices that occur in the planning and operational studies of large interconnected energy systems. Application studies include system model development, state estimation, and load flow. Prerequisite: 456 or permission of instructor. Offered: even years; W.

E E 559 Special Topics in Electrical Energy Systems (1-5) Topics of current interest in electrical power and energy devices and systems. Content varies from year to year, based on current professional interests of faculty member in charge. Prerequisite: permission of instructor. Offered: AWSpS.

E E 562 Artificial Intelligence for Engineers (3) Holden, Shapiro Covers main areas of artificial intelligence (AI) without need for extensive prerequisites. Programming languages for AI; problem solving; representations; control strategies; searching strategies; predicate calculus; rule-based deduction; goal-directed planning; knowledge-based systems. Prerequisite: 371 and CSE 374 or equivalents. Offered: W.

E E 563 Fault-Tolerant Computing (3) Soma, Somani Faults and their manifestation, issues, theory, and techniques of reliable systems design, testing, design for testability, self-checking and failsafe circuits, coding techniques, system-level fault diagnosis, fault-tolerant communication, reliable software design, and evaluation criteria. Prerequisite: basic knowledge of digital systems design or permission of instructor. Offered: jointly with CSE 563; Sp.

E E 564 Parallel Computer Systems (3) *Hwang, Kim* Pipelined and vector processors; interconnection network for parallel processing, array and associative processors; multiprocessors; data-flow machines; systolic arrays and impact of the VLSI technology on parallel processors and processing. Prerequisite: 471, permission of instructor. Offered: A.

E E 565 Computer-Communication Networks I (3) Meditch Network architectures and protocols; Broadband-ISDN and Asynchronous Transfer Mode (ATM); performance modeling and analysis of packet-switched networks, digital switching systems. Prerequisite: 505 or equivalent. Offered: W.

E E 566 Computer-Communication Networks II (3) Meditch Local area, metropolitan area, satellite, and packet radio networks; routing algorithms for wide area networks; optimal design of packetswitched networks; congestion and flow control; fast packet switching; gigabit networks. Prerequisite: 565 or permission of instructor. Offered: Sp.

E E 568 Image Processing Computer Systems (4) *Haralick, Kim* All components of digital image-processing computer systems. Two-dimensional filtering and optimal filter design as well as basic image processing operations. Selected advanced image processing topics. Individual student project. Prerequisite: permission of instructor. Offered: jointly with BIOEN 568; W.

E E 570 Antenna Engineering (3) *Chan, Kuga, Sahr* Theory of radiation; impedance characteristics and radiation patterns of thin linear antenna elements; antenna arrays; pattern synthesis; aperture antennas. Prerequisite: graduate standing or permission of instructor. Offered: odd years; A.

E E 571 Applications of Finite Difference and Finite Element Methods in Fields and Waves (4) *Chan, Kuga, Tseng* General principles of finite difference and finite element methods; finite difference and finite element discretization schemes; finite-difference time-domain method: Galerkin's method and functional minimization; construction of FEM matrices for electromagnetic problems; absorbing boundary conditions; sparse matrix solvers. Prerequisite: 482, 572, or permission of instructor. Of fered: odd years; W.

E E 572 Electromagnetic Theory and Applications I (4) *Ishimaru* Electromagnetic waves in layered media; complex waves, leaky and slow waves, waves in periodic structures, optical fibers, ionosphere and other guiding structures; transients and dispersive media; waveguides and cavities; beam waves; eigenfunctions and eigenvalues. Prerequisite: graduate standing or permission of instructor. Offered: A.

E E 573 Electromagnetic Theory and Applications **II** (4) Chan, Ishimaru, Kuga, Tsang Scattering and absorption of electromagnetic waves, Rayleigh scattering, Born approximations, Green's functions, integral equations, anisotropic media, chira media, T- matrix, high- and low-frequency approximations, saddle-point method, and variational principle. Pre-requisite: 572 or permission of instructor. Offered: W.

E E 574 Electromagnetic Theory and Applications III (4) *Ishimaru* Geometric theory of diffraction, wave fluctuations, antenna noise temperature, radar polarimetry, remote-sensing techniques and tomography applications, diffraction and inverse scattering, radon transform. Prerequisite: 573 or permission of instructor. Offered: Sp.

E E 575 Waves in Random Media (4) Ishimaru, Tsang Propagation and scattering of electromagnetic, optical, and acoustic waves in turbulence and random media, scattering from rough surfaces and randomly distributed particles. Atmospheric turbulence, fog, rain, smog, clear-air turbulence detection, remote sensing, terrain scattering, scattering from blood cells and tissues, scattering by ocean waves. Applications to atmospheric sciences, bioengineering, geoscience, ocean engineering. Prerequisite: graduate standing or permission of instructor. Offered: Sp.

E E 576 Image Understanding (3) Haralick, Shapiro, Tanimoto Overview of computer vision, emphasizing the middle ground between image processing and artificial intelligence. Image formation, preattentive image processing, boundary and region representations, and case studies of vision architectures. Prerequisite: 573 or E E 562 or equivalent or permission of instructor. Offered: jointly with CSE 576; Sp.

E E 577 Mathematical Morphology (3) *Haralick* Theory of mathematical morphology and its application in various commercial, industrial, medical, and research applications. Contents include binary and grayscale morphologic dilation, erosion, opening, and closing, morphological sampling theorem, structuring element decomposition, thinning, skeletonizing, and relational shape description. Group project. Prerequisite: 568 or 576 or permission of instructor. Offered: jointly with CSE 577; A.

E E 578 Tomographic and Holographic Imaging in Acoustics and Electromagnetics (3) Porter Imaging problems including holographic shape determination, inverse source problems, diffraction tomography. Holographic tomography as a general imaging method for weak scatterer. Applications in ultrasound, geophysics, oceanography, optics, medicine. Methods that simplify experimental techniques and computer reconstructions. Prerequisite: graduate standing. Offered: even years; A.

E E 579 Advanced Topics in Electromagnetics, **Optics, and Acoustics (1-5)** Topics of current interest in electromagnetics, optics, and acoustics. Content varies from year to year, based on current professional interests of faculty member in charge. Prerequisite: permission of instructor. Offered: AWSp.

E E 580 Volterra and Wiener Nonlinear Systems (3) *Pinter* Methods of the Volterra and Wiener integral series for input-output description of nonlinear systems. Generalization of the linear convolution integral to multiple convolutions, transforms of kernels, derivation of kernels from parametric (differential equation) models. Orthogonalization of series. Applications. Prerequisite: 235. Offered: even years; Sp.

E E 581 Digital Control I (3) Alexandro, Berg, Fabien, Vagners Discrete-time and sampled-data systems, difference equations, and z-transform. Frequency response. Nyquist stability criterion. Gain and phase margins. Limitations of sampling. Sample rate selection. Controller design via discrete-time equivalents to continuous-time controllers, by directdigital root locus and by loop shaping. Prerequisite: 471 or equivalent; recommended: 575 or equivalent. A A 581/M E 581; W. **E E 582 Digital Control II (3)** Alexandro, Berg, Fabien, Vagners: Controller design via state feedback and observers. Introduction to discrete-time stochastic processes. Quantization effects. Introduction to parameter identification using noisy measurements. LQR optimal control. Kalman filter design. LQG optimal control. Prerequisite: 581 or permission of instructor. Offered: jointly with A A 582/M E 582; Sp.

E E 583 Nonlinear Control Systems (4) *Hannaford, Noges* Analysis and synthesis of nonlinear controls systems. Assessment of stability by: Phase Plane and Describing Function Methods, Circle and Popov Criteria, Lyapunov Criteria. Construction of Lyapunov Functions by method of Kraasovskii and Lu're. Introduction to nonlinear control system design. Prerequisite: 446, 584, or permission of instructor. Offered: jointly with M E 583; odd years; Sp.

E E 584 Continuous and Discrete State Variable Methods (3) Alexandro, Berg Dynamic analysis of automatic control systems using state variable methods. Vector space concepts, modeling of physical systems in state space format, canonical forms for continuous and discrete time systems, controllability and observability, full-state feedback, state estimators, eigenstructure design. Prerequisite: graduate standing or permission of instructor. Offered: AW.

E E 587 Vector Quantization and Data Compression (3) *Kim, Riskin* Introduction to data compression and information theory; vector quantization including theory, applications, design, performance criteria, variable rate systems, and reduced complexity structure including transform coding, wavelets, lossless compression algorithms, and applications of compression to images, speech, and video. Prerequisite: 505 or STAT 390 and computer programming experience. Offered: A.

E E 588 Advanced Laser Engineering (4) Kuhn, Tsang Electromagnetic principles and optical components important in laser engineering. Resonator design. Gain and laser rate equations (steady state and transient). Nonlinear processes. The principles underlying common laser systems, including argon and krypton, diode pumped Nd:YAG, conventional and femtosecond pulse dye, and excimers. Prerequisite: 488 or permission of instructor. Offered: Sp.

E E 589 Advanced Topics in Sensors and Sensor Systems (3) Topics of current interest in sensors and sensor systems. Prerequisite: permission of instructor. Offered: alternate years; Sp.

E E 590 Advanced Topics in Digital Computers (2-5, max. 15) Lectures or discussions of topics of current interest in the field of digital systems. Subject matter may vary from year to year. Prerequisite: permission of instructor. Offered: AWSp.

E E 591 Robotics and Control Systems Colloquium (1, max. 3) Colloquium on current topics in robotics and control systems analysis and design. Topics presented by invited speakers as well as oncampus speakers. Emphasis on the cross-disciplinary nature of robotics and control systems. Offered: jointly with A A/CHEM E/M E 591; AWSp.

E E 592 Electrical Engineering Research Survey (1) Weekly presentations on current research activities by members of the department. Credit/no credit only. Offered: AWSp.

E E 595 Advanced Topics in Communication Theory (1-5) Azizoglu Extension of 507, 508, 518, 519, 520. Material differs each year, covering such topics as: detection theory, decision theory, game theory, adaptive communication systems, nonlinear random processes. Prerequisite: permission of instructor. Offered: AWSp. **E E 599 Selected Topics in Electrical Engineering** (*) Prerequisite: permission of instructor. Offered: AWSpS.

E E 600 Independent Study or Research (*) Offered: AWSpS.

E E 700 Master's Thesis (*) Offered: AWSpS.

E E 800 Doctoral Dissertation (*) Offered: AWSpS.

Industrial Engineering

G6B Mechanical Engineering Building

The formal definition of industrial engineering, as adopted by the Institute of Industrial Engineers, is as follows: industrial engineering is concerned with the design, improvement, and installation of integrated systems of people, materials, information, equipment, and energy. It draws upon specialized knowledge and skill in the mathematical, physical, and social sciences together with principles and methods of engineering analysis and design to specify, predict, and evaluate the results obtained from such systems.

Industrial engineering is set apart from other engineering disciplines by its broader scope. Industrial engineers are, by definition, specialists in designing and operating systems that make optimal use of resources when labor, materials, capital, and technology are constrained. They deal with people as well as things, looking at the "big picture" of what makes society perform best: the right combination of human resources, natural resources, and man-made structures and equipment. Bridging the gap between management and operations, they deal with and motivate people as well as determine what tools should be used and how they should be used.

Industrial engineers are the "productivity people" who must provide leadership and integrate technology. They include the human factor in finding workable, effective solutions to production problems while retaining high standards of quality. Demand for industrial engineers has grown dramatically over the past two decades for one chief reason: the need for organizations to raise their levels of productivity through thoughtful, systematic applications. The profit-making organization must have high productivity in order to compete in the domestic and world market place. The nonprofit organization must have high productivity in order to sustain its position as a useful service unit.

The goal of the undergraduate program is to provide a comprehensive education to prepare students for the profession. The first two years of the curriculum include pre-engineering courses, basic mathematics, natural science, engineering science, and humanities and social science. The industrial engineering curriculum focuses on system integration and methods to analyze, design, and improve manufacturing and service systems. The last two years are devoted to studies in the professional industrial engineering program: operations research including optimization and stochastic models, manufacturing engineering, production planning and plant layout, human factors and human interface technology, statistics and design of experiments, quality and reliability engineering, and a comprehensive senior design experience.

Undergraduate Program

Advising Office G6B Mechanical Engineering Building Box 352650 (206) 543-5041 ieadvise@u.washington.edu

Bachelor of Science in Industrial Engineering

The Bachelor of Science in Industrial Engineering (B.S.I.E.) degree is accredited by the Accreditation Board for Engineering and Technology (ABET).

Admission Requirements: Students must apply for admission to the industrial engineering program. There are two categories of admission groups, as detailed below. UW students are eligible for the Early Admission Group (as early as the end of the freshman year). UW and transfer students may apply to be in the Upper-Division Admission Group.

Admission to the department is competitive, and completion of the requirements does not guarantee admission.

A diverse student body adds an important element to the education of all students in the program. All students who meet the minimum admission requirements will be considered for admission with special consideration given to ethnic-minority applicants to ensure diversity in the engineering student body.

All applicants have the right to petition and appeal the decision of the department.

1. Early Admission Group (EAG):

a. Open to students enrolled at the UW.

b. Completion of the following courses prior to application: MATH 124, 125, 126; 10 credits of physicalscience courses plus accompanying laboratory, at the level of PHYS 121/131, 122/132, 123/133, or CHEM 142, 152 or above; and 5 credits of English composition.

c. A minimum grade of 2.0 in each prerequisite course and a minimum GPA of 2.50. At least 15 of the credits must have been taken at the UW.

d. Application deadline is July 1 for autumn quarter only.

2. Upper-Division Admission Group (UAG):

a. Completion of 63 credits applicable to the degree, to include: MATH 124, 125, 126; PHYS 121/131, 122/132, 123/133; CHEM 142, 152; and at least 5 credits of English composition.

b. Application deadlines are July 1 for autumn quarter and February 1 for spring quarter.

Graduation Requirements:

Program Requirements: Courses required for the B.S.I.E. degree include a core of 38 credits of specified industrial engineering courses normally taken after admission to the program, 16 credits of technical electives including at least two classes from a specified short list, and 35 credits of fundamental courses representing several engineering disciplines. The B.S.I.E. degree also requires specific courses in mathematics, science, and oral and written communication, as well as 30 credits in humanities and social science.

The professional program consists of courses listed in the *Industrial Engineering Undergraduate Advising Guide*. Typical courses are statistics, operations research, engineering economy, human factors, workplace and work design, manufacturing processes, planning and scheduling, reliability engineering, simulation, quality control, and computer-integrated manufacturing. To graduate, a student must earn a total of 180 credits with a minimum cumulative GPA of 2.00 in all engineering courses, with no grade below 1.0 in any of these courses. Courses counting toward the B.S.I.E. degree may not be taken on a satisfactory/not-satisfactory basis. In addition, each student's program of study must conform with the ABET requirement of at least 48 credits in engineering science and 24 credits in engineering design.

Graduate Program

Graduate Program Coordinator G6 Mechanical Engineering Building Box 352650 (206) 543-1427

Faculty members in the industrial engineering program participate in offering the authorized interengineering degree option within the College-wide Master of Science in Engineering degree program. Students may earn a Ph.D. by enrolling in the mechanical engineering doctoral program and specializing in industrial engineering. Areas of faculty expertise include manufacturing, operations research, large-scale assembly, experimental statistics, production planning, quality control, reliability engineering, computer-integrated manufacturing, concurrent engineering, robotics, human factors, virtual reality, and human interface technology.

A proposal to offer the specific degrees of Master of Science in Industrial Engineering and Doctor of Philosophy in Industrial Engineering is currently under review.

Faculty

Chair

Kailash C. Kapur

Professors

Furness, Thomas A. * 1989; PhD, 1981, University of Southampton (UK); display systems engineering, human factors, computer graphics.

Jorgensen, Jens E. * 1968, (Adjunct); DSc, 1969, Massachusetts Institute of Technology; systems analysis, automation, design, manufacturing, forest engineering.

Kapur, Kailash C. * 1992; PhD, 1969, University of California (Berkeley); quality/reliability engineering, system design/optimization, total quality/reliability management.

Woo, Tony C. * 1995; MSEE, 1974, PhD, 1975, University of Illinois; manufacturing systems, computer graphics and computational geometry.

Associate Professors

Drui, Albert B. * 1959, (Emeritus); MS, 1957, Washington University; industrial engineering, human factors.

Iverson, Scott Christian * 1983; PhD, 1974, University of Colorado (Boulder); health care systems, operations research and systems design and engineering.

Roberts, Norman H. * 1953, (Emeritus); PhD, 1958, University of Washington; reliability and probability theory.

Storch, Richard L. * 1975; PhD, 1978, University of Washington; ship vessel stability and safety, large scale assembly and manufacturing systems.

Zabinsky, Zelda * 1985; PhD, 1985, University of Michigan; operations research, applications in industrial engineering, optimization with stochastic elements.

Assistant Professors

Heim, Joseph A. * 1993; PhD, 1990, Purdue University; computer simulations, manufacturing systems and manufacturing engineering.

Smith, Robert P. * 1993; PhD, 1992, Massachusetts Institute of Technology; design methodology, manufacturing systems, concurrent engineering.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

IND E 237 Introduction to Manufacturing Systems (3) Storch Description of manufacturing systems. Includes discussion of current trends in manufacturing. Introduces process flow analysis, manufacturing organizations including job-shop, assembly lines, and group technology, manufacturing inventory philosophies (just-in-time, MRP, OPT), work environment, and work simplification. Offered: Sp.

IND E 295 Product Dissection (3) *Kumar, Jorgensen* Examination of the way products and machines work, their physical operation, the manner in which they are constructed, and the interaction between design, materials, and manufacture. Laboratories involve dissection and assembly of several common industrial and consumer products by student teams. Offered: jointly with M E 295; Sp.

IND E 324 Engineering Applications of Linear Programming (3) Zabinsky Optimization of linear systems, mathematical model design, simplex methods, primal-dual algorithms, parametric programming, network theory, integer and goal programming and game theory. Design aspects of models with applications involving transportation, allocation, and total industrial engineering systems. Prerequisite: MATH 308; ENGR 142. Offered: A.

IND E 325 Nonlinear Programming and Stochastic Models (3) *Zabinsky* Nonlinear optimization and stochastic systems analysis to industrial engineering problems. Topics include: nonlinear programming, dynamic programming, geometric programming, and Markov chains, queueing theory and queueing applications. Prerequisite: IND E 324; ENGR 315. Offered: W.

IND E 326 Methodology of Operations Research (3) Fundamental concepts of mathematical systems theory and decision theory. Application of general systems approach for specification of requirements, analysis, design, implementation of industrial engineering, and information systems. Generalized techniques and applications common to industrial and mechanical engineers. Class project concerning analysis of large-scale systems problem utilizing operational research. Prerequisite: IND E 325.

IND E 351 Human Factors in Design (3) Engineering considerations of the abilities and limitations of the human aspect in the design of operational systems and components. Functional, psychological, physiological, and environmental considerations. Prerequisite: ENGR 315.

IND E 392 Concurrent Engineering (3) *Smith* Focus on the need for and the tools of concurrent engineering in all engineering disciplines. Functional and cross-function organizations, new product development, market-need identification and design for manufacturing are explored. Prerequisite: either IND E 295, CER E 401, CHEM E 485, CIVE 306, E E 331, M E 295, M E 304, or MET E 421. Offered: jointly with M E 392.

IND E 421 Statistical Quality Control (3) *Kapur, Storch* Design of quality control and assurance systems. Statistical Process Control (SPC) design and implementation. Control charts for attributes and variables. Process capability analysis and process improvement techniques. Statistical tolerance design. Quality management and recent developments. Prerequisite: ENGR 315. Offered: A.

IND E 424 Simulation (4) *Heim* Discrete-event simulation methodology emphasizing model formulation and construction with modern simulation languages and environments, statistical basis for evaluating model results, design and management of simulation projects. Application to manufacturing, retail, and service industries. Prerequisite: IND E 237; IND E 325.

IND E 426 Reliability Engineering and System Safety (3) Kapur Reliability and system safety measures. Life distributions and their applications in reliability. System reliability models. Design by reliability and probabilistic design. Reliability and safety analysis through FMECA and FTA. Reliability estimation and measurement by testing for binomial, exponential, and Weibull distributions. Prerequisite: ENGR 315. Offered: Sp.

IND E 430 Manufacturing Scheduling and Inventory (4) Heim, Storch Manufacturing scheduling and inventory control for different work organizations. Coverage of workforce scheduling, job- and flowshop scheduling and order release, production line balancing, MRP II, Lean Production, and data management. Particular attention to computer-based aspects of management and scheduling for manufacturing and service industries. Prerequisite: IND E 237; IND E 325.

IND E 431 Computer Integrated Manufacturing (4) *Heim* Design and control of computer-based production systems. Focus on selection and integration of flexible manufacturing technology, computer hardware, application and operating system software, data communication networks, data management systems. Laboratory assignments concentrate on programming and integration of system components. Current literature and recommended texts used as reference sources. Prerequisite: IND 237; ENGR 142.

IND E 433 Introduction to Computational Manufacturing (3) *Woo* Fundamentals in computer aided design/manufacturing. Visualization, 3-D wireframes, curves and surfaces, solid modeling. Numerical control machining, robotics, and assembly. Prerequisite: IND E 237; IND E 325.

IND E 439 Plant Layout and Material Handling (4) *Storch* Design of new or expanding industrial facilities. Consideration of work organization and layout. Study of basic design of plant systems, including plumbing, electrical, HVAC, illumination, acoustics, and waste handling. In depth coverage of material handling system design and equipment choices.

IND E 455 User Interface Design (3) *Furness* Design oriented to cover fundamentals of user interface design; models on human computer interaction, software psychology, input devices, usability, cognitive and perceptual aspects of human-computer interaction, advanced interface, and research methodologies are discussed. Prerequisite: IND E 316. Offered: jointly with T C 455.

IND E 494 Design in the Manufacturing Firm (4) *Smith* Engineering design in manufacturing firms is presented. Topics include design methodology, concurrent engineering, and project management. Focus on the relationship between product design and manufacturing (design for production and assembly). Prerequisite: IND E 237; ENGR 315; M E 304.Offered: W.

IND E 495 Industrial Engineering Design (3) *Smith* Capstone senior design project involving identification and synthesis of industrial engineering skills. Students apply their knowledge of industrial engineering to actual industrial problems. Prerequisite: IND E 494.Offered: Sp. **IND E 496 Technology-Based Entrepreneurship** (3) *Heim* Concentrates on hands-on aspects of innovation and entrepreneurial enterprise development. Examines relationships between innovation, iterative prototyping, and marketing testing. Students identify market opportunities, create new technologybased products and services to satisfy customer needs, and construct and test prototypes. Prerequisite: ENGR 250.Offered: jointly with M E 496.

IND E 498 Special Topics in Industrial Engineering (1-5, max. 9) Lecture and/or laboratory.

IND E 499 Special Projects (2-5, max. 9)

Courses for Graduates Only

IND E 510 Applications of Optimization in Engineering Design (3) Zabinsky Discussion of issues arising in applications of optimization to engineering design. Emphasis on formulating problems and selecting appropriate solution techniques. Random search methods for problems otherwise computationally intractable. Individual projects in engineering optimal design. Prerequisite: AMATH/ MATH/IND E 515 and MATH 328 or permission of instructor. Offered: jointly with AMATH 510.

IND E 511 Management Decision Models (3) Quantitative approaches, using decision models. Topics include elements of a decision, theory of optimal decisions, resource allocation, simulated decision making, decisions under uncertainty, risk and pressure, utility theory, and game theory. Projects in manufacturing, community health, construction, and urban development. Prerequisite: 324, ENGR 250 and ENGR 315 or permission of instructor.

IND E 513 Linear Optimization Models in Engineering (3) Zabinsky Advanced formulation techniques to expand applications of linear programming to large-scale models. Appreciation of role of optimization models in engineering applications through introduction of techniques such as decomposition. Individual engineering projects. Prerequisite: 324 and MATH 308 or permission of instructor.

IND E 515 Fundamentals of Optimization (5) Maximization and minimization of functions of finitely many variables subject to constraints. Basic problem types and examples of applications; linear, convex, smooth, and nonsmooth programming. Optimality conditions. Saddlepoints and dual problems. Penalties, decomposition. Overview of computational approaches. Prerequisite: linear algebra and advanced calculus. Offered: jointly with AMATH 515/MATH 515.

IND E 521 Quality Control in Manufacturing (3) *Kapur, Storch* Design of quality control systems in manufacturing. Use of advanced statistical process controls, sampling inspection techniques, process capability, and other statistical tools. Also included are vendor sourcing and control tools, methods for establishing specifications and tolerances, quality function deployment, and other quality control techniques. Prerequisite: graduate standing.

IND E 524 Robust Design and Quality Engineering (3) *Kapur* Introduction to robust design and quality engineering. Applications of design of experiments for product and process design optimization. Experimental design using orthogonal arrays and linear graphs. System models using Chebyshev's orthogonal polynomials. Robustness in design and quality improvement for complex systems including Taguchi methods for quality engineering. Prerequisite: 316 or equivalent.

IND E 526 Reliability in Product Design and Testing (3) *Kapur* Product assurance including reliability and quality engineering. Reliability design, measurement, and optimization. Advanced topics in probabilistic design. Design of reliability test plans and analysis of test data. Design of reliability programs and their management. Prerequisite: graduate standing. **IND E 531 Computer Integrated Manufacturing (3)** *Heim* Design and analysis of advanced manufacturing systems from a strategic as well as technological perspective. Focus on information generation, management, and coordination aspects of complex manufacturing organizations. Examination of system integration alternatives and consequences for relationships with customers and suppliers. Prerequisite: 431 or equivalent.

IND E 532 Geometric Modeling (3) *Woo* Mathematics and computations in geometric modeling of three-dimensional objects. Parametric representation of curves and surfaces. Topology for data structure design. Visibility for line-of-sight computations.

IND E 533 Computational Methods in Design and Manufacturing (3) *Woo* Sampling size and accuracy: uniform, random, and Hammersley. Approximation of curves and surfaces. Optimization: minima and maxima. Search and gradient techniques. Line integral for geodesic and optimal path.

IND E 535 Engineering Simulation (3) *Heim* Advanced applications of discrete event, continuous, and combined discrete-continuous simulation modeling, detailed examination of fundamental computer programming concepts underlying the design and development of simulation languages, variance reduction techniques, and output analysis for various engineering, service systems, and manufacturing applications. Prerequisite: 424 or equivalent.

IND E 538 Large Assembly Manufacturing Systems (3) Storch Presents principles of group technology, zone construction, product-oriented work breakdown structure. Application to shipbuilding, aircraft, rail-car, and truck manufacture. Techniques of production planning, scheduling and control, organization, and plant layout, as well as the role of the computer, are studied in detail. Prerequisite: graduate standing.

IND E 541 Human Factors Engineering (3) Focus on three-dimensional spatialized sound, stereoscopic displays, and human-computer interaction. Some discussion on hardware for producing stereoscopic images and computer synthesized spatialized sound and/or auditory and visual modalities as related to interface design. Prerequisite: 351 or PSYCH 335 and one course in design of experiments.

IND E 542 Haptic Interface Design (3) Research oriented seminar focusing on tactile and kinesthetic modalities of haptic interface design, including tactile displays, the kinesthetic sense, input devices, and virtual environments. Hardware for producing haptic interfaces and psychological literature related to tactile and kinesthetic modalities as related to interface design. Prerequisite: 541 or permission of instructor.

IND E 543 Virtual Interface Technology (1/3) *Furness* Explores advanced concepts and technologies for interfacing humans to complex machines, with focus on virtual interfaces. Interface design principles reviewed from psychological and technological perspectives. Hardware, software, and mindware aspects of virtual interfaces investigated. Applications postulated and designed. Prerequisite: graduate standing in College of Engineering or permission of instructor.

IND E 544 Virtual World Development (3) *Furness* Software implementation, physiological and cognitive constraints, and the mathematics and philosophy of inclusion. Development of software tools, editing and interaction techniques, disposition of virtual world entities, nature of space, situated knowledge, divergent models for multiple participants, experiential mathematics, cyberspace. Cultural, legal, moral, ethical issues. Prerequisite: 543 or permission of instructor.

IND E 554 Environmental Decision Modeling (3) Current environmental issues concerning industrial engineers and the decision modeling techniques appropriate to industrial ecology, conflict resolution, simulation, and assessment of impacts. Modeling techniques applied to topics ranging from stress management and quality improvement in the workplace to the principles of sustainable resource management. Prerequisite: 511 or permission of instructor.

IND E 555 Health Systems Engineering (3) Applications of industrial engineering techniques, processes, and methodologies to the operations and management decisions of hospitals and to policy analysis in health care systems, including quality improvement, decision analysis, system dynamics modeling, and simulation. Prerequisite: 511 or permission of instructor.

IND E 569 Occupational Biomechanics (4) Lectures and laboratories address human occupational biomechanical and physiological limits and measurement, analysis, and modeling techniques that are used by ergonomists for design of safe, healthful, and productive physical work. Prerequisite: 566 or permission of instructor. Offered: jointly with ENV H 569; Sp.

IND E 591- 592- 593 Seminar (0-0-1) Credit/no credit only. Prerequisite: graduate standing in Industrial Engineering or permission of instructor.

IND E 594 Management of Engineering Design (3) *Smith* Examination of methods used and issues explored in research on engineering design management, a technical and organizational activity practiced in, and crucial to the financial success of, almost every industry.

IND E 599 Special Topics in Industrial Engineering (1-5, max. 9) Written report required. Prerequisite: permission of supervisor.

Materials Science and Engineering

302 Roberts

Materials science and engineering is an interdisciplinary field that addresses the structure, processing, and property relationships in materials for engineering applications. Basic principles of chemistry and physics are applied to provide an understanding of the structure of materials and the manner in which the structure determines the properties. Scientific processing is then applied to yield the necessary properties, which then can be integrated with, and designed to accommodate, the needs of modern technology.

The general goals of the undergraduate programs in the department include the following:

 To provide educational programs of the highest quality in materials science, metallurgical engineering, ceramic engineering, electronic materials, and composites materials; to educate students in the application of basic and engineering sciences to the solution of problems related to the processing, properties, and utilization of materials; to prepare students for entrance into professional careers or into graduate studies in materials science and materials engineering.

2. To expose students to design concepts and societal issues (e.g., ethical, economic, environmental) as part of the curriculum; to instill in students the importance of human values and to develop sensitivity to social problems and ways in which technology can provide a basis for solutions to these problems; to provide industrial experience as part of the educational process.

 To provide students with a sound basic-science foundation together with educational breadth in subjects outside of their major to help them function as productive members of the engineering profession and of society in general.

COLLEGE OF ENGINEERING / MATERIALS SCIENCE AND ENGINEERING 333

4. To develop in students the ability to communicate effectively, both orally and in writing, the concepts and results of engineering investigations to both technical and non-technical audiences.

5. To promote an awareness of and pride in the professional image of materials engineering, to encourage participation in professional societies, and to develop an awareness of the professional responsibilities of engineers in general.

To participate actively in programs designed to attract and retain underrepresented minority students in order to enhance the diversity of the student body.

7. To provide educational services in the materials area for the College of Engineering, the University of Washington, and to the state of Washington, recognizing that materials is a subject area of interest to other engineering disciplines, to industry, and to society in general.

The faculty of the Department of Materials Science and Engineering recognizes that a strong graduate program is an essential component of a balanced educational effort in materials. The department's graduate programs in materials science and engineering are designed to build on and enhance the educational experience imparted in its two undergraduate programs. Therefore, a related department goal is to provide coordination and balance between the undergraduate and graduate degree programs, and to ensure that each program is allocated the resources necessary to meet its goals.

Within the overall field of materials science and engineering, students are offered both a broad core and indepth options. The broad core provides the needed background and understanding of all types of engineering materials, including metals, ceramics, electronic materials, and composites.

Ceramic materials are resistant to high temperatures, chemically durable, strong, rigid, and exhibit a broad range of functional and electronic properties. The ceramic engineering program provides students with an understanding of the chemical, electrical, optical, mechanical, and thermal properties of ceramics; of processing methods and their effects on the structure and properties; and of the feasibility and economics of manufacture of ceramic materials for engineering applications. The study of electronic and optical materials is also available in the program.

Metallurgical engineering is concerned with the processing, fabrication, and utilization of metals, alloys, and other engineering materials. Extractive metallurgy relates to the processing and refining of metals and their compounds. Physical metallurgy is concerned with the structure and properties of materials, the development of new materials with improved properties, and the application and performance of materials in modern engineering systems and design. The study of electronic and optical materials is also available in the program.

Undergraduate Program

Adviser 302 Roberts, Box 352120 (206) 543-2600 mse@u.washington.edu

Bachelor of Science in Ceramic Engineering

Admission Requirements: Application information, forms, and deadlines are available from the department office along with a detailed advising guide for the program. Students are urged to consult with a department adviser early in their University career regarding plans of study in preparation for their major and for assistance in preparing their application for admission to the program. Admission to the department is competitive, and completion of the requirements does not guarantee admission.

A diverse student body adds an important element to the education of all students in the program. All students who meet the minimum admission requirements will be considered for admission with special consideration given to ethnic-minority applicants to ensure diversity in the engineering student body.

All applicants have the right to petition and appeal the decision of the department.

1. Early Admission Group (EAG):

a. Open to students enrolled at the UW.

b. Completion of the following courses prior to application: MATH 124, 125, 126; 10 credits of physical-science courses plus accompanying laboratory at the level of PHYS 121/131, 122/132, 123/133, or CHEM 142, 152, or above; and 5 credits of English composition.

c. A minimum grade of 2.0 in each prerequisite course and a minimum GPA of 2.50. At least 15 of the credits must have been taken at the UW.

d. Application deadline for early admission is July 1 for autumn quarter only.

2. Upper-Division Admission Group (UAG):

a. Completion of 64 credits with a minimum cumulative GPA of 2.00 and a minimum grade of 2.0 in each prerequisite course.

b. Completion of the following courses prior to admission: MATH 124, 125, 126, 307; CHEM 142, 152; PHYS 121/131, 122/132; 5 credits of English composition; ENGR 142, 170. Strongly recommended before admission are ENGR 210, 220, 231.

c. Applications for admission are accepted autumn, winter, and spring quarters.

Graduation Requirements: Students must complete the College of Engineering general-education requirements and select the following courses from the engineering-fundamentals category: ENGR 170, 210, 215, 220, and one of ENGR 123, 230, 250 or 260. The upperdivision professional program consists of 67 credits of required courses including courses in materials structure and properties, analysis techniques, and thermodynamics, plus a 4-credit senior problem or design alternate. Courses in ceramic processing and properties are designed to develop technical expertise applicable to modern ceramic engineering practice. Additional courses must be completed for a total of 185 credits for the B.S.Cer.E. degree.

A variety of financial aid is available to students in ceramic engineering. In addition to need-based aid provided through the University's Office of Student Financial Aid, companies and individuals with interest in developing ceramic engineering students have provided scholarships for students at all levels who have been admitted to the program. Specific information and application forms are available in the department office, 302 Roberts.

Bachelor of Science in Metallurgical Engineering

Admission Requirements: Application information, forms, and deadlines are available from the department office along with a detailed advising guide for the program. Students are urged to consult with a department adviser early in their University career regarding plans of study in preparation for their major and for assistance in preparing their application for admission to the program.

Admission to the department is competitive, and completion of the requirements does not guarantee admission.

A diverse student body adds an important element to the education of all students in the program. All students who meet the minimum admission requirements will be considered for admission with special consideration given to ethnic-minority applicants to ensure diversity in the engineering student body.

All applicants have the right to petition and appeal the decision of the department.

1. Early Admission Group (EAG):

a. Open to students enrolled at the UW.

b. Completion of the following courses prior to application: MATH 124, 125, 126; 10 credits of physicalscience courses plus accompanying laboratory, at the level of PHYS 121/131, 122/132, 123/133, or CHEM 142, 152, or above; and 5 credits of English composition.

c. A grade of at least 2.0 together with a minimum GPA of 2.50 must have been obtained in these courses, and at least 15 of the credits must have been taken at the UW.

d. Application deadline for early admission is July 1 for autumn quarter only.

2. Upper-Division Admission Group (UAG):

a. Completion of 64 credits with a cumulative GPA of 2.00 and a minimum grade of 2.0 in each prerequisite course.

b. Completion of the following courses prior to admission: MATH 124, 125, 126, 307; CHEM 142, 152; PHYS 121/131, 122/132; 5 credits of English composition; ENGR 142, 170. Strongly recommended before admission are ENGR 210, 220, 231.

c. Applications for admission are accepted autumn, winter, and spring quarters.

Graduation Requirements: Students must complete the College of Engineering general-education requirements and select the following courses from the engineering-fundamentals category: ENGR 170, 210, 215, 220, and one of ENGR 123, 230, 250 or 260. Remaining lower-division courses are selected from among those recommended. Metallurgy majors must complete a 6credit, upper-level science requirement, chosen with the adviser's approval. Recommended courses to fulfill this requirement include CHEM 223, 224; 350, 351; 455, 456; or PHYS 224, 225. Of the required 14 credits of technical electives, 3 credits are to be in design. The design and technical elective courses must meet standards specified in the advising guide. A 4-credit senior problem or design alternate is required. In addition to the College and departmental requirements specified above, additional courses must be completed to satisfy the minimum graduation requirement of 185 credits

In addition to need-based aid provided through the University's Office of Student Financial Aid, companies and individuals with interest in developing metallurgical engineering students have provided scholarships for students at all levels who have been admitted to the program. Specific information and application forms are available in the department office, 302 Roberts.

Minors

Students majoring in other departments at the UW can receive a minor in materials science and engineering.

Minor Requirements: 30 credits to include MSE 305 (4 credits), 314 (4), 315 (4), 317 (1), 318 (1), and an additional 16 credits in an approved course sequence with a minimum grade of 2.0 in each. The minorprogram course sequence is offered with specialization in ceramics, composites, electronic materials, metallurgy, or structural materials. The required/recommended courses for each specialization are different. Contact the department for further details.

Graduate Program

Graduate Program Coordinator 302 Roberts, Box 352120 (206) 543-2600 mse@u.washington.edu

The Department of Materials Science and Engineering offers programs of study leading to the degree of Master of Science in Materials Science and Engineering with defined options in materials science, ceramic engineering, metallurgical engineering, and engineering materials. The Doctor of Philosophy program is offered with defined pathways in ceramic engineering, metallurgical engineering, and materials science.

The materials science option or pathway is a course of study that combines the basic elements of understanding ceramics, metals, polymers, composites, and electronic materials. Many specialized courses, including engineering fracture mechanics, semiconductor devices, and polymer chemistry, may be taken in other departments to provide a broad, yet basic, materialsstudy program.

Ceramic engineering graduate programs are designed to develop a fundamental understanding of the physical, chemical, and structural relationships that influence the properties and applications of ceramic materials. Processing, the development of microstructure, and the relationships of microstructure to properties are considered from a basic viewpoint that is applicable to a broad range of materials.

Graduate programs in metallurgical engineering encompass a variety of courses and research programs that are related to the physical and chemical aspects of metals, alloys, and related engineering materials. Programs in the physical-metallurgy and materials-science areas include the structure and properties of alloys, phase transformations, biomaterials, lattice defects, the optical properties of nonmetallic solids, failure analysis, x-ray diffraction, and the mechanical behavior of materials. Programs include metallurgical thermodynamics, rate phenomena, and carbothermic reduction processes.

The engineering materials option is open to students with industrial experience. In this option, students take practice-oriented courses, complete an analysis, and develop a recommended solution to an engineeringmaterials problem in place of a research thesis. Programs of study generally are related to a specific field of materials-engineering practice.

Master of Science in Materials Science and Engineering and Master of Science

The department is authorized to supervise an option in materials science and engineering that leads to the College of Engineering Master of Science degree. This degree program is intended to accommodate students who have a strong science background but lack an undergraduate engineering degree. The required courses are the same for all of the above degrees. Students with deficiencies in their intended area of engineering specialization may be required to take undergraduate courses in addition to the normal graduate course requirements.

All master's degrees offered by the department require course work and the satisfactory completion of an M.S. thesis research problem, with the exception of the engineering-materials option, which requires 32 credits plus 4 credits for the problem-solution project. Of the course credits, 15 are specified to include courses on thermodynamics, crystal structure, imperfections, microstructure and phase transformations, and graduate seminar. Other courses may be required for specific program options. The residence and grading requirements follow those of the Graduate School.

Doctor of Philosophy

Students who have completed one year of graduate work must take the Ph.D. qualifying examination the next time it is offered to determine whether the faculty will advise continued study proceeding to the General Examination for the degree of Doctor of Philosophy. A critical examination of the applicant's complete academic record, recommendations, and proposed course of study will be pertinent to this decision. In addition to course work, each student is required to pass the General Examination, which is sufficiently comprehensive to demonstrate the student's ability to deal with broad aspects of materials science, as well as with a specialized subject area. Proficiency in basic research is of paramount importance. Each prospective candidate is required to present a written dissertation that makes an original and independent contribution to knowledge in the student's field of specialization.

Research Facilities

The research laboratories in the Department of Materials Science and Engineering are well equipped for a variety of research endeavors. Facilities include equipment for electron and optical microscopy, x-ray diffraction, a variety of spectroscopies, high-temperature heat treatment and mechanical testing, specialized processing equipment, including hot and cold isostatic presses, nitrogen reaction furnaces, and automated TGA, DTA analysis systems. Equipment for analyses of particle size, surface area, and pore size is also available. Students have liberal access to the University computing facilities.

Financial Aid

A limited number of teaching-assistant and researchassistant appointments are available. Early application and direct correspondence or interviews with faculty members who may have open positions on research projects are encouraged. Requests for application forms and financial aid should be directed to the graduate program coordinator.

Faculty

Chair

Rajendra Kumar Bordia

Professors

Allan, G. Graham * 1966, (Adjunct); PhD, 1956, University of Glasgow (UK); DSc, 1971, University of Strathclyde (UK); fiber and polymer science, creativity and innovation.

Anderson, Donald 1947, (Emeritus); BS, 1941, University of Illinois; mining and exploration.

Archbold, Thomas F. * 1961, (Emeritus); MS, 1957, PhD, 1961, Purdue University; physical metallurgy corrosion, diffraction, oxidation, metal failures.

Fischbach, David B. * 1969, (Emeritus); PhD, 1955, Yale University; structure and properties of carbons graphite, other non-oxide ceramics, and composite materials.

Fisher, Robert M. * 1987, (Research); PhD, 1962, Cambridge University (UK); materials characterized by microscopy, spectroscopy, diffraction, fused quartz, polymers.

Ghose, Subrata * 1972, (Adjunct); PhD, 1959, University of Chicago; mineralogy.

Inoue, Kanryu * 1993, (Research); PhD, 1977, Osaka City University (Japan); mechanical and physical properties, phase transformations, smart materials.

Kalonji, Gretchen * 1990; PhD, 1982, Massachusetts Institute of Technology; crystalline defects, computer simulation, rapid solidification of ceramics. Krivanek, Ondrej L. * 1997, (Research); PhD, 1975, Cambridge University (UK); electronic materials and devices, structures of interfaces, electron microscopy and electron optics.

Ohuchi, Fumio * 1992; PhD, 1981, University of Florida; nucleation and growth of thin film materials, surface science, glass, device applications.

Pearsall, Thomas P. * 1989; PhD, 1973, Cornell University; physics of semiconductors and the technology of semiconductor devices.

Polonis, Douglas H. * 1955, (Emeritus); PhD, 1955, University of British Columbia (Canada); physical metallurgy, phase transformations, mechanical properties of materials.

Rao, Y. Krishna * 1976; PhD, 1965, University of Pennsylvania; chemical and extractive metallurgy, ore processing and environmental engineering.

Rogers, J. William Jr. * 1990, (Adjunct); PhD, 1979, University of Texas (Austin); surface chemistry and engineering, applications to thin film deposition.

Scott, William D. * 1965, (Emeritus); PhD, 1961, University of California (Berkeley); mechanical properties of ceramics, composites, twinning in alumina, optical microscopy.

Stoebe, Thomas Gaines * 1966; PhD, 1965, Stanford University; physics of solids, optical properties, thermoluminescence, compound semiconductors.

Taya, Minoru * 1986, (Adjunct); PhD, 1977, Northwestern University; composite materials, elasticity and plasticity, impact physics, fracture theory.

Whittemore, Osgood J. * 1964, (Emeritus); MS, 1941, University of Washington; ceramic processing, refractories, industrial minerals.

Associate Professors

Bordia, Rajendra Kumar * 1991; PhD, 1986, Cornell University; processing and mechanical properties of ceramics, polymer and ceramic composites.

Brush, Lucien N. * 1990; PhD, 1988, Carnegie Mellon University; computational modeling of solidification, modeling studies of materials processing.

Miller, Alan D. * 1967, (Emeritus); PhD, 1967, University of Washington; instrumental analysis, high-temp equilibria processing, electronic ceramics, cooperative education.

Sarikaya, Mehmet * 1984; PhD, 1982, University of California (Berkeley); nanoscopical (TEM), imaging, diffraction and spectroscopy, phase transformations, biocrystallization.

Stang, Robert George * 1973; PhD, 1972, Stanford University; mechanical behavior, elastic and plastic deformation, and high-temperature creep in materials.

Assistant Professors

Cao, Guozhong * 1996; MS, 1985, Academy of Sciences (China); PhD, Eindhoven University of Technology (Netherlands); inorganic materials (films) by solgel processing and chemical vapor deposition.

Dogan, Fatih * 1990, (Research); PhD, 1989, Technische Universitat (Germany); ceramic processing: electronic and magnetic materials, crystal growth of high Tc superconductors.

Flinn, Brian D. * 1991, (Research); PhD, 1991, University of California (Santa Barbara); structure-processing-property relationships in structural materials.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

Ceramic Engineering

CER E 336 Ceramic Engineering Excursion (1, max. 2) Plant inspection trip. Credit/no credit only. Offered: A.

CER E 401 Equipment and Plant Design (3) The design process and its application in ceramic engineering. Design projects. Offered: Sp.

CER E 411 Vitreous State (4) Chemistry and physics of glass, glazes, and porcelain enamels; structure, properties and processing of vitreous materials. Offered: Sp.

CER E 413 Physical Ceramics: Mechanical Properties (3) Mechanical properties, elasticity, strength, thermal shock, and high temperature effects relative to structural design. Fracture mechanics and notch sensitivity of brittle materials. Environmental effects, plastic flow, and high temperature deformation. Offered: A.

CER E 414 Electrical Properties of Ceramics (3) lonic and electronic conduction in crystalline and noncrystalline inorganic solids. Dielectric and ferroelectric behavior, magnetic properties of ferrimagnetic materials, optical properties of dielectrics. Undergraduate ceramic engineering majors must take 415 concurrently. Offered: W.

CER E 415 Electrical Properties of Ceramics/ Laboratory (1) Ionic and electronic conduction in crystalline and noncrystalline inorganic solids. Dielectric and ferroelectric behavior, magnetic properties of ferrimagnetic materials, optical properties of dielectrics. Offered: W.

CER E 416 Mechanical Properties Laboratory (1) Measurements of the mechanical properties of ceramics: strength, fracture, toughness, thermal shock damage. Use of Weibull statistics to characterize strength and failure. Offered: A.

CER E 420 Colloidal Ceramics (3) Properties and surface chemistry of ceramic colloids. Topics include absorption, adsorption, gels and their contributions to cementitious bonding, ion exchange, rheological properties, and analytical techniques applicable to these studies.

CER E 421 Ceramic Processing (4) Technology of ceramic fabrication processes. Material characterization at processing stages for control. Laboratory study of all operations in the manufacture of selected ceramic products. Offered: A.

CER E 470 Refractories (3) Chemical and mineralogical composition; processing methods; thermal, physical, and chemical properties and tests; application in high-temperature processes.

Materials Science and Engineering

MSE 300 Introduction to Materials Science and Engineering (2) Introduces the materials field to new department majors. Examples are drawn from ceramics, metals, polymers, electronic materials and composites. Structure/properties/manufacturing/design relationships are emphasized. Offered: A.

MSE 305 Phase Equilibria (4) Phase equilibria in ceramic and metal systems of one, two, and three components. Use and determination of phase equilibrium diagrams. Offered: W.

MSE 314 X-ray Diffraction and Crystallography (4) Theory and practice of x-ray diffraction with applications to materials systems. Principles of crystal symmetry, reciprocal lattice, and stereographic projections. Offered: A.

MSE 315 Kinetic Processes and Transformations in Materials (4) Applications of thermodynamic and kinetic principles to the study of transformations and reactions in engineering materials. Thermal activation and rate equations; solid state diffusion; nucleation and growth; phase transformations; examples of important reactions including crystal growth, recrystallization, precipitation in solids, sintering, and devitrification. Offered: W.

MSE 316 Mechanical Behavior of Materials (4) Influence of structure on the mechanical properties of ideal and real solids. Mechanical behavior in metallic and ceramic systems. Offered: Sp.

MSE 317 Physical Materials Laboratory (1) Experimental techniques, computer applications, elements of optical microscopy. Offered: A.

MSE 318, 319 Physical Materials Laboratory (1, 1) Experimental work to accompany 315, 316. Microstructure development and mechanical behavior of inorganic materials. Offered: W, Sp.

MSE 322 Thermodynamics in Materials Systems (4) Quantitative applications of thermodynamics to systems of interest to metallurgical and ceramic engineers. Detailed review of thermodynamic quantities and equations of state. Offered: A.

MSE 330 Processing of Inorganic Materials (4) Fundamental and technological aspects of processing of metals, ceramics and semiconductor materials, transport processes relevant to materials processing; low and high temperature routes for refining materials; liquid state and vapor phase processing inorganic materials. Offered: Sp.

MSE 399 Introduction to Research and Design (1) Research planning and design in materials science and engineering introduced by the faculty to facilitate student selection of senior project topic. Offered: Sp.

MSE 421 Thermodynamics of Solids (3) Applications of thermodynamics to the solid state. Statistical interpretation of entropy. Heterogeneous equilibria. Theories of solutions. Thermodynamics of surfaces and of defects in solids. Offered: W.

MSE 423 Fiber-Reinforced Composite Materials (4) Introduction to composites in polymer, metal, or ceramic matrices. Properties of individual phases and of fiber/matrix interface; micromechanisms of load transfer from matrix to fiber; fabrication and elastic and failure properties. Laboratory studies of processing and properties of composites. Offered: W.

MSE 433 Polymeric Materials (3) Relationship between configuration, conformation, molecular ordering, microstructure and properties of polymeric materials. Application of materials characterization and processing techniques to polymers. Tailoring polymer molecules and microstructures for hightechnology applications. Liquid crystalline polymers. Interaction between polymers and their in-service environment. Offered: A.

MSE 442 Seminar in Ethics and Safety (1) Deals with issues of engineering ethics and industrial safety within the context of materials science and engineering. Credit/no credit only. Offered: W.

MSE 455 Characterization Methods in Materials Science (4) Principles and applications of analytical techniques for materials characterization: x-ray, neutron, and electron diffraction; scanning and transmission electron microscopy; Auger electron spectrometry.

MSE 456 Experimental Techniques in Materials Science (3) Analysis of measurement uncertainty and error; data analysis and plotting; vacuum technology; production and measurement of high temperatures; experiment and apparatus design; selected other measurement technique topics. **MSE 466 Physical Properties of Materials (4)** Introduction to elementary solid-state concepts in materials. Atom bonding, statistical mechanics, free electron and band theories, thermal properties. Application of principles to conduction in metals, insulators, semiconductors, and to magnetic and optical processes in solids. Offered: W.

MSE 467 Electronic Materials Processing (3) Materials and processes used in the manufacture of electronic components. Basic principles of crystal growth, deposition, doping, diffusion, component delineation, and packaging as they apply to hybrid and integrated circuits and devices. Offered: Sp.

MSE 485 Introduction to Electronic Packaging and Materials (3) *Kuga, Pearsall, Taya* The governing equations of transport phenomena: mechanical, thermal, and electromagnetic behavior, thermomechanical and electromagnetic properties of packaging materials, electromagnetic characteristics of circuit and transmission lines, thermal management and reliability analysis of packaging, interconnect and material processing technology. Offered: jointly with M E 485; W.

MSE 498 Special Topics (1-5, max. 8) Special topics in materials science and engineering offered as a course with lectures, conferences, or laboratory. Offered: AWSpS.

MSE 499- Special Project (*-, max. 5) Materials science and engineering field or laboratory investigations in group or individual setting. Offered: AWSpS.

Metallurgical Engineering

MET E 421 Metallurgical Processing (4) Principles and applications of techniques used to process metals and alloys including solidification and casting, heat treating, forming, joining and machining and their effects on microstructure and properties. Offered: A.

MET E 432 Corrosion of Engineering Materials (3) Applications of physical chemical principles to the reaction of materials with their environments. Prevention and control of corrosion and oxidation processes. Corrosion problems in materials applications. Offered: W.

MET E 435 Corrosion (1) Laboratory experiences in application of physical chemical principles to reaction of materials with their environments. To accompany 432. Offered: W.

MET E 461 Engineering Physical Metallurgy (4) Phase transformations and strengthening mechanisms in ferrous and nonferrous alloys; heat treatment and microstructure control; physical metallurgy of carbon and alloy steels, aluminum and titanium alloys; microstructure-property relationships and alloy design. Offered: A.

MET E 462 Mechanical Behavior of Metals (3) Theories of elastic and plastic deformation in materials. Application of these theories in design, stress and strain, tensile and compression loading, yielding and plastic deformation, fracture, introduction to fracture mechanics, creep and fatigue. Offered: W.

MET E 463 Reliability and Design in Metallurgical Systems (4) Metallurgical design problems and failure analysis. Properties of commercially important engineering alloys. Offered: Sp.

MET E 464 Extractive Process Analysis (3) Extractive processes analyzed by the methods of material and energy balances, computational thermodynamics, process kinetics and reactor theory. Introduction to process optimization. Offered: Sp.

MET E 465 Mechanical Behavior Laboratory (1) Laboratory experience in mechanical behavior of metals. To accompany 462. Offered: W.

Courses for Graduates Only

Materials Science and Engineering

MSE 501 Ceramic Processing (3) Technology of ceramic fabrication processes. Characterization of ceramic materials at stages of processing.

MSE 510 Bonding, Symmetry, and Crystallography (4) Atomic bonding, coordination; structures, stability of organic and inorganic compounds in the solis state. Reciprocal lattice concept, its vectorial basis. Crystallography of solids, emphasis on point and space group symmetries. Structures of complex organic, inorganic compounds. Introduction to physical properties described by tensors: elasticity, optical magnetic, electrical, thermal properties. Offered: A.

MSE 511 Advanced Theory of X-ray Diffraction (3) Use of the reciprocal lattice concept and Fourier analysis in the study of atomic arrangements in crystals. Line shape and diffuse scattering analysis. Analytical interpretation of diffraction patterns. Prerequisite: MSE 314 or equivalent.

MSE 512 Experimental Transmission Electron Microscopy (3) Fundamentals of electron optics as applied to microscopy; applications of contrast theories and electron diffraction with emphasis on defects and multiphase structures in crystalline solids. Prerequisite: 510. Offered: W.

MSE 513 Transmission Electron Microscopy Laboratory (2) One four-hour laboratory and one two-hour discussion/demonstration per week; metallic, ceramic, electronic biological sample preparation techniques; diffraction, imaging, and spectroscopy techniques in electron microscopy. Prerequisite: 512 which may be taken concurrently. Offered: W.

MSE 515 Advanced Transmission Electron Microscopy (3) Principles of image formation in crystalline and amorphous materials at the atomic resolution level; high spatial resolution electron diffraction; quantitative elemental compositional and chemical analysis with energy dispersive x-ray spectroscopy and electron microscopy. Prerequisite: 512 and 513. Offered: even years; Sp.

MSE 518 Advanced Mineralogy (3) Crystal symmetry: point groups, space groups. Mathematical description of crystal structures; group theory and irreducible representations; tensor description of physical properties; stress, strain, piezoelectricity, elasticity; structural and magnetic phase transition, Landau theory, deformation and creep in crystals; elasto-viscous properties of Earth's mantle, crystal chemistry and solid state reactions. Offered: jointly with GEOL 520; even years; Sp.

MSE 520 Seminar (1, max. 6) Review of research problems in recent literature. Registration required for all graduate students. Credit/no credit only. Offered: AWSp.

MSE 523 Advanced Extractive Metallurgy (3) Physical chemistry of solutions, mattes, fused salts, and slags. Discussion of papers from current literature. Prerequisite: basic course in thermodynamics or physical chemistry or permission of instructor. Offered: W.

MSE 524 Applied Rate Phenomena (3) Introduction to rate theory and transport processes. The principal thrust is on applications in ceramics and metallurgy. Prerequisite: basic course in transport phenomena or permission of instructor. Offered: W.

MSE 525 Thermodynamic Topics in Materials Science (3) Selected topics in application of classical and statistical thermodynamics to systems of current interest. Offered: Sp.

MSE 526 Dynamic Behavior of Metallurgical Systems (3) Interpretation of the behavior of systems by application of the methods of process analysis and control theory; modeling of systems, exploration

of their characteristics by stimulus-response, and review of current industrial control processes. Prerequisite: graduate standing in engineering or permission of instructor. Offered: Sp.

MSE 541 Theoretical Structural Metallurgy (3) Detailed study of the general properties and effects of point, line, and surface defects in crystalline solids. Prerequisite: MET E 462.

MSE 544 Mechanical Behavior of Materials (3) Mechanical properties of metals, ceramics, and polymers. Elasticity and viscoelasticity. Macroscopic and microscopic aspects of deformation and fracture. Continuum plasticity and microscopic hardening mechanisms. High temperature deformation. Fracture mechanics, brittle and ductile fracture. Deformation and fracture mechanisms maps. Prerequisite: 510 and 541 or permission of instructor.

MSE 551 Diffusion in Solids (3) Theories and principles of diffusion in solids; phenomenological and atomistic concepts; equilibrium defects; impurity, chemical potential gradient, grain boundary and dislocation effects in metals and nonmetals.

MSE 553 Vacuum Science and Technology (3) Fundamental theory and gas kinetics and treatment of gas flow, working principles of vacuum pumps and gauges, characteristics required of the vacuum components, material selection, fundamentals essential to vacuum system design. Covers both fundamental and practical aspects of modern vacuum science and technology.

MSE 555 Biomimetics: Bioinspired Design and Processing of Materials (4) How biological organisms produce materials with controlled structure, chemistry and hierarchy to attain physical properties far superior to traditional engineering materials. Fundamental biological building materials, their synthesis, and their self-assembly with emphasis on examples of soft and hard tissues.

MSE 559 Thin Film Science, Engineering, and Technology (3) The physics, chemistry, and engineering aspects of thin film deposition and technology. Vapor phase deposition emphasized. Topics include reactor types, vapor phase transport and hydrodynamics, surface and mass transport limited kinetics, nucleation and growth, homoepitaxy, heteroepitaxy, and thin film characterization. Prerequisite: permission of instructor. Offered: jointly with CHEM E 559.

MSE 561 Phase Transformations in Material Systems (3) Thermodynamics and kinetics of solid state reactions; phase stability, transition phases, theories of nucleation and spinodal decomposition, growth models, phase morphology and microstructure development, precipitation from solid solutions, examples of specific transformation types. Offered: Sp.

MSE 562 High Temperature Composites (3) Thermo-mechanical behavior and environmental degradation of high temperature composites (metal, ceramic, and intermetallic matrix composites) and carbon/carbon composites addressed. Covers related topics such as processing (primary and secondary). Recommended: 423 or M E 450. Offered: jointly with M E 562; odd years.

MSE 565 Electron Theory of Materials (3) Solidstate concepts of materials. Atomic bonding, statistical mechanics, Brillouin zone theory. Applications to conduction, optical, and magnetic properties of metals, semiconductors, and insulators. Prerequisite: 466. Offered: A.

MSE 566 Superconductors and Magnetic Materials (3) Theories of magnetic phenomena: dia-, para-, ferri-, and ferromagnetism; theories of superconductivity. Applicants in current technology superconductor materials and magnetic devices. Prerequisite: 466 or equivalent. MSE 567 Electronic Materials: Preparation and Properties (3) Physics and technology of semiconductor materials growth. Physics of growth, quantum wells, superlattices, strained layers. High vacuum technology and III-V characterization techniques. Limited enrollment. Prerequisite: permission of instructor.

MSE 571 Polymeric Materials (3) Relationships between configuration, conformation, molecular order, microstructure, properties of polymer molecules and microstructures for specific applications. Interactions between polymers and their in-service environment. Characterization and processing techniques relevant to polymeric materials. Prerequisite: one semester or two quarters of organic chemistry. Offered: jointly with BIOEN 571; A.

MSE 572 Liquid Crystals (3) Properties of the liquid crystalline state are discussed in fundamental chemical and physical terms. Engineering and biological uses of liquid crystals are described in detail. Appropriate microstructural and nanostructural characterization techniques are emphasized throughout. Prerequisite: Molecular Bioengineering Fundamentals. Offered: jointly with BIOEN 572; Sp.

MSE 599 Special Topics in Materials Science (1-5, max. 5) Studies of special advanced topics in materials science. Prerequisite: permission of instructor. Offered: AWSpS.

MSE 600 Independent Study or Research (*) Offered: AWSpS.

MSE 700 Master's Thesis (*) Offered: AWSpS.

MSE 800 Doctoral Dissertation (*) Offered: AWSpS.

Mechanical Engineering

143 Mechanical Engineering

The Department of Mechanical Engineering focuses on increased productivity through modern design methods, automated manufacturing, and introduction of new materials. It also continues its strong history of involvement with conversion and management of energy. The department offers instruction and research in four principal areas: materials and manufacturing, systems and design, energy and fluids, and design.

The department offers undergraduate and graduate degree programs, with courses in design, analysis, and fabrication of mechanical devices; analysis of vibration and failure; automated manufacturing; combustion and energy systems; fluid mechanics; computer-aided design; robotics; and applications of mechanical engineering to interdisciplinary fields.

Undergraduate Program

Adviser Dina Meske 143B Mechanical Engineering, Box 352600 (206) 685-0908 meadvice@u.washington.edu

Bachelor of Science in Mechanical Engineering

The general goal of the undergraduate program is to provide high-quality, baccalaureate-level preparation for professional practice by graduating students with the knowledge of the basic disciplines in mechanical engineering and with proficiency to solve and to communicate their solutions of open-ended problems. A student's success in achieving this goal is measured by success in specific technical courses (both required and optional) and particularly in the capstone design courses (M E 395 and 495). These capstone courses especially provide an assessment of the student's ability to integrate basic technical knowledge to achieve analysis and design goals in solving a wide range of open-ended problems and communicating the results effectively.

The undergraduate program in mechanical engineering provides the sound educational basis in the mathematical, chemical, and physical sciences, and in computational, graphical, and written communication skills that is needed for professional work in the field.

Prospective students should obtain a copy of the Mechanical Engineering Admission Guide that contains more details regarding admission, and the Mechanical Engineering Undergraduate Advising Guide that contains a curriculum flow chart and information on scholarships, scheduling, and the continuation policy.

Admission Requirements: Admission to the department is by application. Details of admission requirements, application deadlines, application forms, and advising literature may be obtained from the departmental office.

Admission to the department is competitive, and completion of the requirements does not guarantee admission.

A diverse student body adds an important element to the education of all students in the program. All students who meet the minimum admission requirements will be considered for admission with special consideration given to ethnic-minority applicants to ensure diversity in the engineering student body.

All applicants have the right to petition and appeal the decision of the department.

Both regular admission and early admission are offered. Early admission is suggested for academically gifted students.

1. *Regular Admission:* Students must have completed the following 62 credits: MATH 124, 125, 126, 307; PHYS 121/131, 122/132; CHEM 142, 152; ENGR 142, 210, 220, 230, 231; and 5 credits of English composition. The application deadlines are July 1 for autumn quarter and February 1 for spring quarter.

2. *Early Admission* is open to students enrolled at the UW who, prior to admission, have completed MATH 124, 125, 126; 10 credits of physical-science courses plus accompanying laboratory, at the level of PHYS 121/131, 122/132, 123/133, or CHEM 142, 152, or above; and 5 credits of English composition. At least 15 of the credits must have been taken at the UW. The application deadline is July 1 for autumn quarter only. ENGR 231 must be taken no later than the academic vear of admission.

Both regular admission and early admission require a minimum grade of 2.0 in each prerequisite course together with an overall minimum GPA of 2.50 in the prerequisite classes.

Graduation Requirements: The student must satisfactorily complete a minimum of 180 credits, with 100 credits in general education and engineering fundamentals, as well as 62 credits of department-required courses and 18 credits of mechanical-engineering option courses (400 level). A minimum cumulative GPA of 2.00, including a minimum GPA of 2.00 in all professional courses, is required.

Typical department-required courses include machine design analysis, behavior of engineering materials, manufacturing processes, mechanics of solids, system dynamics, thermodynamics, heat transfer, fluid mechanics, and mechanical engineering design.

Graduate Program

Graduate Program Coordinator 143C Mechanical Engineering, Box 352600 (206) 543-7963 megrad@u.washington.edu

The Department of Mechanical Engineering offers graduate programs leading to the degrees of Master of Science in Mechanical Engineering and Doctor of Philosophy. The department also provides an authorized option leading to the College-wide Master of Science in Engineering degree. These provide a balanced combination of formal instruction and independent research or design experience. Individual projects may be drawn from a wide spectrum of topics, which include mechanical and energy conservation systems, heat transfer, combustion, fluid mechanics, applied mechanics, computational mechanics, computer-aided design and manufacturing, production systems, materials behavior, robotics, and applications of mechanical engineering science to a variety of such interdisciplinary fields as bioengineering, ocean engineering, and acoustics. Flexible requirements for course work provide opportunities both for a broad scientific and professional background and for specialty training.

Research Facilities

The department has well-equipped laboratories for pursuing research in various disciplinary fields in mechanical engineering and for constructing specialized research equipment. These include experimental stress analysis; materials testing; synthesis and simulation of electromechanical control systems; foundry, welding, and other metal fabrication operations; computer facilities for CAD/CAM research; wind tunnels for boundary-layer and high-speed flow analysis; combustion systems performance, exhaust emissions control, and combustion engines; acoustics, vibration, and dynamic testing and measurements and modal analysis; radiation, conduction, and convection (including multiphase) heat-transfer analysis, and a bioengineering flow facility.

Financial Aid

Financial aid is offered to full-time graduate students as funds permit. This aid may be in the form of a research assistantship for sponsored programs, a fellowship provided by the University or industry, or a teaching assistantship.

Faculty

Chair

James J. Riley

Professors

Alexander, Daniel 1960, (Emeritus); MS, 1954, University of Washington; PhD, 1977, Washington State University; engineering design.

Balise, Peter * 1950, (Emeritus); MS, 1950, Massachusetts Institute of Technology; systems analysis and control.

Chalupnik, James * 1964, (Emeritus); PhD, 1964, University of Texas (Austin); sound and vibration, wave propagation.

Corlett, Richard * 1964, (Emeritus); PhD, 1963, Harvard University; combustion, heat transfer, and energy management.

Daly, Colin H. * 1967; PhD, 1966, University of Strathclyde (UK); bioengineering, materials.

Day, Emmett E. * 1947, (Emeritus); PhD, 1962, University of California (Berkeley); materials, experimental stress analysis. Depew, Creighton A. * 1960, (Emeritus); PhD, 1960, University of California (Berkeley); heat transfer, fluid mechanics.

Emery, Ashley F. * 1961; MS, 1958, PhD, 1961, University of California (Berkeley); energy and buildings, HVAC, thermal stresses, experimental design, stochastic finite elements.

Firey, Joseph C. 1983, (Emeritus); MSME, 1941, University of Wisconsin; combustion, lubrication.

Fridley, James * 1988; PhD, 1984, University of Washington; forest engineering systems design, interactive computer simulation.

Galle, Kurt R. * 1960, (Emeritus); PhD, 1951, Purdue University; instrumentation, controls, bioengineering.

Garbini, Joseph * 1979; PhD, 1977, University of Washington; systems and controls analysis, instrumentation, manufacturing automation.

Gessner, Frederick B. * 1967; PhD, 1964, Purdue University; fluid mechanics, turbulence.

Hyman, Barry * 1975; PhD, 1965, Virginia Polytechnic Institute and State University; mechanical design, energy systems and policy.

Jorgensen, Jens E. * 1968; DSc, 1969, Massachusetts Institute of Technology; systems analysis, automation, design, manufacturing, forest engineering.

Kapur, Kailash C. * 1992, (Adjunct); PhD, 1969, University of California (Berkeley); quality/reliability engineering, system design/optimization, total quality/reliability management.

Kippenhan, Charles J. * 1963, (Emeritus); PhD, 1948, University of Iowa; heat transfer, energy management.

Kobayashi, Albert S. * 1958, (Emeritus); PhD, 1958, Illinois Institute of Technology; fracture mechanics; experimental, computational and structural mechanics.

Kosály, George * 1980; PhD, 1974, Eotvos Lorand University (Hungary); DSc, 1979, Hungarian Academy of Sciences; applications of stochastic processes in engineering, reacting turbulent flows.

Kramlich, John C. * 1991; PhD, 1980, Washington State University; heterogenous combustion, pollutant formation and control from thermal systems, waste remediation.

Love, William J. * 1970, (Emeritus); PhD, 1952, University of Illinois; design, mechanics, power systems.

Malte, Philip C. * 1979; PhD, 1971, University of Michigan; energy conversion, including environmental control and environmental consequences.

McCormick, Norman J. * 1966; PhD, 1965, University of Michigan; thermal and optical radiative transfer, optical oceanography, reliability and risk analysis.

McFeron, Dean E. * 1958, (Emeritus); PhD, 1956, University of Illinois; heat transfer and thermal power processes.

Morrison, James B. * 1946, (Emeritus); MS, 1954, University of Washington; design, dynamics.

Murphy, Stanley R. 1952, (Emeritus); PhD, 1959, University of Washington.

Pratt, David T. * 1981, (Emeritus); PhD, 1968, University of California (Berkeley); turbulent combustion, computer simulation.

Ramulu, M. * 1978; PhD, 1982, University of Washington; manufacturing processes, production engineering, applied mechanics, fatigue and fracture mechanics.

Riley, James J. * 1983; PhD, 1971, Johns Hopkins University; fluid mechanics, especially turbulent flows.

Taggart, Raymond * 1959, (Emeritus); PhD, 1956, Queen's University (UK); mechanical metallurgy.

Taya, Minoru * 1986; PhD, 1977, Northwestern University; composite materials, elasticity and plasticity, impact physics, fracture theory. Tuttle, Mark E. * 1985; PhD, 1984, Virginia Polytechnic Institute and State University; experimental stress analysis, composite materials, adhesion mechanics.

Vesper, Karl H. * 1969; PhD, 1969, Stanford University; business policy, mechanical engineering, marine studies.

Wolak, Jan * 1965, (Emeritus); PhD, 1965, University of California (Berkeley); mechanics of materials, manufacturing processes.

Woo, Tony C. * 1995, (Adjunct); MSEE, 1974, PhD, 1975, University of Illinois; manufacturing systems, computer graphics and computational geometry.

Associate Professors

Adee, Bruce H. * 1970; MS, 1968, PhD, 1972, University of California (Berkeley); vessel safety and stability, floating structures, waves, ship resistance, model testing.

Berg, Martin C. * 1986; PhD, 1986, Stanford University; digital control system design, control of structurally flexible electromechanical systems.

Bodoia, John R. * 1964, (Emeritus); PhD, 1959, Carnegie Mellon University; fluid mechanics, heat transfer, solar energy.

Calkins, Dale * 1979; DEng, 1976, University of California (Berkeley); knowledge-based engineering, transportation systems design, computer-aided design and engineering.

Chalk, William 1957, (Emeritus); MSME, 1961, University of Washington; design graphics.

Fabien, Brian C. * 1993; PhD, 1990, Columbia University; kinematics, modeling and simulation of physical systems, optimal control.

Ford, Paul W. * 1957, (Emeritus); MSEng, 1959, University of Washington; manufacturing processes, metal casting.

Forster, Fred * 1977; PhD, 1972, Stanford University; fluid mechanics, acoustics, micro-fluidics, biomedical applications.

Ganter, Mark * 1986; PhD, 1985, University of Wisconsin; solid modeling, computer graphics, kinematics and automated manufacturing.

Holt, Richard * 1947, (Emeritus); MSME, 1957, University of Washington; manufacturing processes, welding.

Iverson, Scott Christian * 1983, (Adjunct); PhD, 1974, University of Colorado (Boulder); health care systems, operations research and systems design and engineering.

Jenkins, Michael G. * 1992; PhD, 1987, University of Washington; thermo-mechanical behavior of monolithic/composite ceramics, standards and design code development.

Kieling, William C. * 1956, (Emeritus); MSME, 1959, University of Washington; design, dynamics, and kinematics.

Kumar, Vipin * 1988; PhD, 1988, Massachusetts Institute of Technology; manufacturing, polymer processing, microcellular plastics, design theory and methodology.

Kunzelman, Karyn S. * 1991, (Adjunct Research); PhD, 1991, University of Texas (Dallas); biomedical engineering, cardiac; anatomy and physiology.

Messer, Rowland E. 1946, (Emeritus); MSME, 1935, University of Washington; graphics.

Reinhall, Per G. * 1982; PhD, 1982, California Institute of Technology; nonlinear dynamics, vibrations.

Sanders, Joan Elizabeth * 1993, (Adjunct); PhD, 1991, University of Washington; soft tissue biomechanics and tissue adaptation to mechanical stress.

Sandwith, Colin J. * 1966, (Research); PhD, 1966, Oregon State University; corrosion, material science, design, manufacturing.

Shen, I-Yeu (Steve) * 1993; PhD, 1991, University of California (Berkeley); linear and nonlinear vibrations; disk, spindle, and machine dynamics; damping and vibration control.

Sherrer, Robert E. * 1960, (Emeritus); PhD, 1958, University of Wisconsin; solid mechanics.

Sidles, John Arthur 1984, (Adjunct); PhD, 1983, University of Washington.

Storti, Duane W. * 1983; PhD, 1983, Cornell University; nonlinear dynamics and vibrations, dynamic systems, perturbations and bifurcations.

Tencer, Allan Fred * 1988, (Adjunct); PhD, 1981, McGill University (Canada).

Zabinsky, Zelda * 1985, (Adjunct); PhD, 1985, University of Michigan; operations research, applications in industrial engineering, optimization with stochastic elements.

Assistant Professors

Armstrong, William D. 1997, (Research); PhD, 1991, University of Washington; smart materials.

Dahl, Peter H. * 1989, (Research); PhD, 1989, Massachusetts Institute of Technology; underwater acoustics; sound scattering from the sea surface, bubbles, marine life.

Dougherty, William M. 1997, (Acting); PhD, 1994, University of Washington; magnetic resonance force microscopy, instrumentation.

Heim, Joseph A. * 1993, (Adjunct); PhD, 1990, Purdue University; computer simulations, manufacturing systems and manufacturing engineering.

Mescher, Ann M. * 1996; PhD, 1995, Ohio State University; materials processing, thermo-fluids sciences.

Murray, William R. * 1989; PhD, 1988, Massachusetts Institute of Technology; modeling and control applied to automated manufacturing; robotics and instrumentation.

Smith, Robert P. * 1993, (Adjunct); PhD, 1992, Massachusetts Institute of Technology; design methodology, manufacturing systems, concurrent engineering.

Weller, John 1997, (Acting); PhD, 1996, University of Washington; processing and mechanical behavior of microcellular forms.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

M E 295 Product Dissection (3) *Kumar* Examination of the way products and machines work, their physical operation, the manner in which they are constructed, and the interaction between design, materials, and manufacture. Laboratories involve dissection and assembly of several common industrial and consumer products by student teams. Offered: jointly with IND E 295; Sp.

M E 304 Manufacturing Processes (3) Ramulu Study of manufacturing processes, including interrelationships between the properties of the material, the manufacturing process, and the design of component parts. Offered: AWSpS.

M E 320 Thermodynamics I (3) Emery, Gessner, Kosály, Kramlich, Malte, McCormick, Mescher, Riley Introduction to classical macroscopic thermodynamics, including basic laws underlying energy conversion and management with emphasis on engineering design applications. Offered: AWSp.

M E 323 Thermodynamics II (4) Emery, Gessner, Kosály, Kramlich, Malte, McCormick, Mescher Applications of thermodynamic principles: properties of pure substances from an advanced point of view, nonreactive gas mixtures, energy analysis of reactive mixtures, chemical equilibria, combustion, power, and refrigeration cycle analysis. Offered: AWSp.

M E 331 Introduction to Heat Transfer (4) Emery, Forster, Kramlich, McCormick, Mescher, Riley Study of heat transfer by conduction, radiation, and convection; elementary heat-exchanger design. Offered: AWSp.

M E 333 Introduction to Fluid Mechanics (4) Forster, Gessner, Kosály, Mescher, Riley Introduction to the basic fluid laws and their application. Conservation equations, dynamic similarity, potential flow, boundary-layer concepts, effects of friction, compressible flow, fluid machinery, measurement techniques. Offered: AWSpS.

ME 352 Mechanics of Solids (3) Kumar Development of relationships among loads, stresses, and deformations in the elastic behavior of machine or structural elements in tension, compression, bending, or torsion. Offered: AWSp.

ME 354 Mechanics of Materials Laboratory (3) Jenkins Study of the properties and behavior of engineering materials, including stress-strain relations, strength, deformation, fracture, creep, and cyclic fatigue. Introduction to experimental techniques common to structural engineering, interpretation of experimental data, comparison of measurements to numerical and analytical predictions, and formal engineering report writing. Offered: AWSp.

M E 356 Machine Design Analysis (4) *Kumar* Analysis, design, and selection of mechanical subsystems and elements, such as gears, linkages, cams, and bearings. Lecture and laboratory. Offered: AWSpS.

M E 373 Introduction to System Dynamics (5) *Garbini* Mathematical modeling, analysis, and design of physical dynamic systems involving energy storage and transfer by lumped-parameter linear elements. Time-domain response by analytical methods and numeric simulation. Laboratory experiments. Offered: AW.

M E 374 Systems Dynamic Analysis and Design (5) *Garbini* Extension of 373. Frequency response analysis, generalized impedance concepts and applications, Fourier series analysis and Laplace transform techniques. Modeling and analysis of electromechanical actuators and rotating machinery. Laboratory experiments and design projects. Offered: WSp.

M E 392 Concurrent Engineering (3) Smith Focus on the need for and the tools of concurrent engineering in all engineering disciplines. Functional and cross-function organizations, new product development, market-need identification and design for manufacturing are explored. Prerequisite: either IND E 295, CER E 401, CHEM E 485, CIVE 306, E E 331, M E 295, M E 304, or MET E 421. Offered: jointly with IND E 392.

M E 395 Introduction to Mechanical Design (4) *Calkins* Design process and methodology; decision making; optimization techniques; project planning; engineering economics; probabilistic and statistical aspects of mechanical design; ethical and legal issues. Lecture and laboratory. Offered: AWSpS.

M E 403 Material-Removal Processes (3) Ramulu Cutting and noncutting processes for material removal in the shaping of manufactured products. Study of forces and of power consumption and relative costs in the various processes. Offered: A.

M E 406 Corrosion and Surface Treatment of Materials (3) Sandwith Corrosion fundamentals and forms (galvanic, crevice, pitting, stress corrosion, erosion, hydrogen and leaching). Principles of de-

COLLEGE OF ENGINEERING / MECHANICAL ENGINEERING 339

sign, materials selection, cathodic protection and surface treatments (coatings, carburizing, nitriding and plating) applied to reduce corrosion. Failure analysis applied to case studies. Offered: W.

M E 409 Introduction to Numerical Control and Computer-Aided Manufacturing (3) Ramulu Control system fundamentals, numerical control (NC) machine control systems, and the design aspect of NC machine tools, programming methods of NC machines, computer-aided manufacturing, CNC, DNC, and process optimization. Offered: Sp.

M E 424 Combustion Systems and Pollutant Formation (4) *Kramlich, Malte* Combustion theory, including chemical thermodynamics, chemical kinetics, mixing and diffusion, and flame structure. Combustion chamber design concepts and performance. Pollutant formation and combustion methods for minimizing pollutant formation. Weekly laboratory. Offered: even years; Sp.

M E 425 Air Conditioning (4) Emery Air conditioning, heating, and ventilating of buildings. Comfort and health, psychometric processes, load calculations, fluid distribution systems, simultaneous heat and mass transfer devices, controls. Design calculations involving these criteria, devices and systems. Offered: Sp.

M E 428 Noise Control (3) *Reinhall* Introduction to design for noise control. Includes summary of acoustical phenomena as they pertain to noise control and measurement. Noise rating schemes, particularly in relation to machine noise in the work environment.

M E 430 Advanced Energy Conversion Systems (4) Emery, Kramlich, Malte Advanced and renewable energy conversion systems and technologies are treated. Included are high efficiency combined cycles; renewable energy conversion involving solar, wind, and biomass; direct energy conversion and fuel cells; and nuclear energy. Environmental consequences of energy conversion and environmental control are discussed. Prerequisite: M E 323. Offered: W.

M E 431 Advanced Fluid Mechanics (4) Forster, Riley Advanced topics in fluid mechanics, including kinematics, potential theory and vortex dynamics, viscous flow, turbulence, experimental and numerical methods, and design. Offered: A.

M E 433 Turbomachinery (4) *Gessner, Malte* Thermodynamics, gas dynamics, and fluid mechanics of axial and centrifugal compressors, pumps, and turbines. Selection of components for engineering applications. Design problems and/or laboratory experiments to illustrate operating characteristics of turbomachines. Prerequisite: M E 320; M E 333. Offered: Sp.

M E 450 Introduction to Composite Materials and Design (3) Taya, Tuttle Stress and strain analysis of continuous fiber composite materials. Orthotropic elasticity, lamination theory, failure criterion, and design philosophies, as applied to structural polymeric composites. Offered: W.

M E 459 Introduction to Fracture Mechanics (3) Ramulu Deformation processes leading to fracture, and the linear elastic fracture mechanics. Fatigue crack propagation. Fracture control and failure analysis. Offered: A.

M E 460 Kinematics and Linkage Design (3) *Ganter* Synthesis of linkage-type mechanisms using graphical and computer methods. Offered: W.

M E 468 Air-Pollution Control Equipment Design (3) *Pilat* Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption of gaseous pollutants; electrostatic precipitation and filtration of particular pollutants. Actual case studies. Offered: jointly with CHEM E 468/CIVE 494; W.

M E 469 Applications of Dynamics in Engineering (4) Reinhall, Shen, Storti Application of the principles of dynamics to selected engineering problems, such as suspension systems, gyroscopes, electromechanical devices. Includes introduction to energy methods, Hamilton's principle and Lagrange equations and the design of dynamic system. Offered: A.

M E 470 Mechanical Vibrations (3) Reinhall, Shen, Storti Single-degree-of-freedom linear systems techniques. Matrix techniques for multi-degreeof-freedom linear systems. Applications in vibration isolation, transmission, and absorption problems and instrumentation. Offered: W.

M E 471 Automatic Control (4) Berg, Garbini, Murray Dynamic system modeling; control system stability and performance analysis; compensator design by Bode and root-locus methods. Offered: A.

M E 473 Instrumentation (3) *Garbini, Murray* Principles and practice of industrial measurement. Dynamics of instrument response; theory of transducers for temperature, pressure, flow, and other measurements. Lecture and laboratory. Offered: A.

M E 474 Systems Modeling and Simulation (3) *Fabien* Unified approach to modeling of systems, and computer simulation of systems behavior. Selecting system variables; writing state, loop, and node equations; modal response and state transition response; system functions and convolution; analogs. Applications to control, vibrations, and other problems. Offered: W.

M E 477 Embedded Computing in Mechanical Systems (4) Garbini, Murray Analysis of electromechanical systems employing microcomputers for control or data acquisition. Microcomputer architecture, memory organization, assembly language programming, interfaces, and communications. Particular emphasis on design of hardware and software interfaces for real-time interaction with mechanical systems. Weekly laboratory. Offered: W.

M E 478 Finite Element Analysis (4) *Reinhall* Development of theory and concepts of finite element analysis. Applications in all areas of mechanical engineering, including mechanics of solids, heat transfer, and design of dynamical systems. Weekly computer exercises. Offered: ASp.

M E 480 Introduction to Computer-Aided Technology (4) Calkins Principles of computer-aided technology. Computer-aided design, engineering, drafting, and manufacturing; computer-aided design systems, geometry, computer graphics, hardware, computer-aided vehicle/system design synthesis. System demonstrations, laboratories, and site visits. Offered: ASp.

M E 481 Internal Combustion Engines (5) *Kramlich, Malte* Spark ignition and diesel engines. Thermodynamic cycles, fuels, carburetion and injection, ignition, combustion, friction, turbocharging, and performance of engines. Lecture and laboratory. Offered: A.

M E 485 Introduction to Electronic Packaging and Materials (3) *Kuga, Pearsall, Taya* The governing equations of transport phenomena: mechanical, thermal, and electromagnetic behavior, thermomechanical and electromagnetic properties of packaging materials, electromagnetic characteristics of circuit and transmission lines, thermal management and reliability analysis of packaging, interconnect and material processing technology. Offered: jointly with MSE 485; W. **M E 490** Naval Architecture (3) Adee Theory of naval architecture; ship's lines, hydrostatic curves, intact and damaged stability, launching. Offered: A.

M E 491 Naval Architecture (3) Adee Theory of naval architecture; strength, ABS rules, water waves, ship and platform motions. Offered: W.

M E 492 Naval Architecture (3) Adee Theory of naval architecture; dimensional analysis, resistance, model testing, propellers, steering. Offered: Sp.

M E 495 Mechanical Engineering Design (4) *Hyman* Design laboratory involving the identification and synthesis of engineering factors to plan and achieve specific project goals. Current literature and prerequisite texts are used as reference sources. Lecture and laboratory. Offered: AWSp.

M E 496 Technology-Based Entrepreneurship (3) Heim Concentrates on hands-on aspects of innovation and entrepreneurial enterprise development. Examines relationships between innovation, iterative prototyping, and marketing testing. Students identify market opportunities, create new technology-based products and services to satisfy customer needs, and construct and test prototypes. Prerequisite: ENGR 250. Offered: jointly with IND E 496.

M E 498 Special Topics in Mechanical Engineering (1-5, max. 6) Lecture and/or laboratory. Maximum of 6 credits may be applied toward an undergraduate degree.

M E 499 Special Projects (2-5, max. 9) Written report required. Offered: AWSpS.

Courses for Graduates Only

M E 502 Plasticity and Metal Forming (3) *Ramulu* Stress-strain and stress-strain-rate relations in metal forming; plastic instability. Work of deformation. The slip-line field, load bounding, applications to frames, drawing, forging, and extrusion. Offered: odd years; Sp.

M E 510 Mathematical Foundations of Systems Theory (4) *Damborg* Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Prerequisite: graduate standing or permission of instructor. Off fered: jointly with A A 546/CHEM E 510/E E 510; A.

M E 518- 519- 520 Seminar (0-0-1, max. 6) Credit/no credit only. Offered: A-W-Sp.

M E 521 Thermodynamics (3) *Emery, Kramlich, Malte* Fundamental concepts of temperature, thermodynamic properties, and systems. The first, second, and combined laws. Development of the relations of classical thermodynamics. Introduction to statistical thermodynamics. Prerequisite: 323 and graduate standing in mechanical engineering or permission of instructor. Offered: A.

M E 522 Thermodynamics (3) *Emery, Kramlich, Malte* Topics from statistical thermodynamics, including the Boltzmann, Bose-Einstein, and Fermi-Dirac statistics. Solutions of the Schrodinger wave equation and evaluation of the partition function for translation, rotation, and vibration. Prerequisite: 521 or permission of instructor. Offered: by request only.

M E 523 Combustion Seminar (1) *Kramlich, Malte* Seminar on combustion and energy systems, including discussions on current topics in combustion science and technology, and presentations by experts in the field. Credit/no credit only. Offered: AWSp.

M E 524 Combustion (3) *Kramlich, Malte* Chemical and physical processes of combustion with applications to design of combustors, fuel selection, and con-

340 COLLEGE OF ENGINEERING / MECHANICAL ENGINEERING

sideration of environmental effects. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: odd years; Sp.

M E 525 Acoustics in Engineering I (3) Forster, Porter Acoustic wave transmission, reflection, refraction, and diffraction. Review of continuum mechanics and examples from electromechanical systems. Prerequisite: graduate standing in mechanical or electrical engineering, or permission of instructor. Offered: jointly with E E 525; W.

M E 526 Acoustics in Engineering II (3) Forster, Porter Continuation of 525. Material differs each year, covering such topics as scattering, moving media, ultrasonics, acoustic holography, optoacoustics, transducer design, propagation in an isotropic medium. Prerequisite: 525 or permission of instructor. Offered: jointly with E E 526; Sp.

M E 530 Radiative Heat Transfer (3) *Emery, McCormick* Fundamentals of thermal radiation for black, gray, nongray, diffuse, and specular surfaces. Gaseous radiation and special applications of thermal radiation. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: W.

M E 531 Conductive Heat Transfer (3) *Emery, McCormick* Analysis of steady-state and transient heat conduction in single- and multidimensional systems by mathematical, graphical, numerical, and analogical methods. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: by request only.

M E 532 Convective Heat Transfer (3) *Emery, Kramlich, McCormick, Mescher* Introduction to fluid flow and boundary-layer theory as applicable to forced- and natural-convection heat transfer. Condensation and boiling heat transfer. Prerequisite: graduate standing or permission of instructor. Offered: Sp.

M E 533, 534 Fluid Mechanics (3, 3) *Gessner, Kosály, Riley* Basic conservation laws and kinematics of fluid flow, two-dimensional inviscid flow, wave motion and shock waves in inviscid compressible flow, exact solutions and boundary layer analyses of laminar and turbulent viscous flow, analysis of non-Newtonian flow, applications. Prerequisite: 533 or permission of instructor for 534. Offered: A, W.

M E 535 Computational Techniques in Mechanical Engineering (3) *Emery* Advanced heat transfer studies of interest to mechanical engineers. Subject coverage varies from year to year. Prerequisite: permission of instructor. Offered: Sp.

M E 537 Topics in Fluid Mechanics (3) *Gessner, Kosály, Riley* Selected fluid mechanics research topics relevant to current advances in mechanical engineering practice. Topics selected vary with faculty and student interest, but are drawn predominantly from the general areas of energy conversion, energy management, and manufacturing processes. Offered: even years; A.

ME 538 Turbulent Boundary Layer Theory (3) Gessner, Riley Characteristic features of turbulent boundary layers; development of the turbulent boundary layer equations; equilibrium boundary layers; integral methods of solution based on power law and wall-wake velocity profiles; methods of solution based on higher order constitutive equations; application to diffuser flows and free shear flows; new developments and physical models. Offered: odd years; A.

M E 541 Fatigue of Materials (3) *Ramulu* Macro and micro aspects of fatigue of metals and fatigue mechanisms. Analytical methods for fatigue and life assessment in advanced materials. Offered: W.

M E 543 Fluid Turbulence (3) *Gessner, Kosály, Riley* Methods of characterizing fluid turbulence;

probability concepts; spatial and temporal velocity correlations; spectral energy transfer; turbulent diffusion; isotropic turbulence and Kolmogoroff's hypothesis; Taylor's hypothesis; hot-wire measurement techniques. Prerequisite: 3 credits of graduate level fluid mechanics or permission of instructor. Offered: even years; W.

M E 544 Advanced Turbulence Modeling Techniques (3) Gessner, Riley The Reynolds stress transport equations; plane homogeneous shear flow; modeling the pressure-strain, diffusion, and dissipation rate correlation tensors; one and two-equation turbulence models; near-wall turbulence and wall functions; limitations of length scale and eddy viscosity modeling. Prerequisite: 3 credits of turbulence related course work. Offered: even years by request only; Sp.

M E 548 Linear Multivariable Control (3) *Ly*, *Vagners* Single loop feedback control theory; poles, zeros, Nyquist stability, performance, robustness of multivariable systems; multivariable control synthesis: Linear-Quadratic-Gaussian methods, loop transfer recovery, Youla parametrization, H-infinity techniques, parameter optimization design. Prerequisite: E E 584 or M E 575; E E 446 or A A 448 or M E 471 or equivalent. Offered: jointly with A A 548/E E 548; W.

M E 549 Estimation and System Identification (3) *Vagners* Review of system models, model structure, model parametrization; review of stochastic processes; state estimation: observers, the Kalman-Bucy filter, numerical issues in filter design and implementation; system identification: linear regression, least squares, maximum likelihood, instrumental variable techniques. Prerequisite: E E 505 or AMATH 506 or STAT 506; recommended: 548 or E E 548. Offered: jointly with A A 549/E E 549; Sp.

ME 550 Nonlinear Optimal Control (3) Vagners Calculus of variations for dynamical systems, definition of the dynamic optimization problem, constraints and Lagrange multipliers, the Pontryagin Maximum Principle, necessary conditions for optimality, the Hamilton-Jacobi-Bellman equation, singular arc problems, computational techniques for solution of the necessary conditions. Prerequisite: graduate standing; recommended: A A 548 or E E 548. Offered: jointly with A A 550/E E 550; odd years.

M E 551 Elasticity I: Elastostatics (3) *Taya* Elastostatics, including general formulations of 2D and 3D elastostatic problems (stress function method, complex variable method, displacement potential method). Eth Eshelby's method is emphasized and used to solve 2D and 3D problems with special application to composite materials. Offered: A.

M E 552 Elasticity II: Viscoelasticity and Elastodynamics (3) *Taya* Elastodynamics includes wave propagation in linear elastic and linear viscoelastic solids where solids are monolithic materials, composite materials. Viscoelasticity part includes the stress-strain equations in terms of convolution integral, Fourier transform and Laplace transform modes. Simple and fundamental problems are solved by several techniques as demonstration. Offered: even years; W.

M E 553 Adhesion Mechanics (3) *Tuttle* Introduction to adhesive systems and test/evaluation techniques. Stress/strain analysis methods used with adhesive joints. Examples of practical applications. Prerequisite: graduate student status or permission of instructor. Offered: even years; Sp.

M E 555 Thermoelasticity (3) Emery Basic equations of thermoelasticity for isotropic elastic solids. Analysis of disks, cylinders, spheres, beams, and plates under steady temperature and sudden and slow heating and cooling. Introduction to thermoelastic stability. Prerequisite: 551 or permission of instructor. Offered: by request only. **M E 556 Experimental Stress Analysis I (3)** *Tuttle* Theory and practice of experimental techniques including brittle coatings, strain gages, thermocouples, LVDT's, and transducer design. Lecture and laboratory. Prerequisite: graduate standing or permission of instructor. Offered: A.

M E 557 Experimental Stress Analysis II (3) *Tuttle* Theory and practice of optical mechanics, including 2- and 3-dimensional photoelasticity, birefringent coatings, moire, interferometry, and holography. Lecture and laboratory. Prerequisite: graduate standing or permission of instructor. Offered: even years W.

M E 559 Introduction to Fracture Mechanics (3) *Ramulu* Applications of linear fracture mechanics to failure analysis and fracture control based on actual case studies. Fracture toughness and fatigue testing techniques, crack initiation and propagation fatigue life prediction of mechanical components subjected to environmental effects. Offered: W.

M E 560 Advanced Theory of Fracture (3) *Ramulu* Theories of linear fracture mechanics, fracture dynamics, ductile fracture, stable crack growth and mixed mode fracture. Discussion of advanced topics from recent literature. Prerequisite: 559 or permission of instructor. Offered: even years; Sp.

M E 562 High Temperature Composites (3) *Taya* Thermo-mechanical behavior and environmental degradation of high temperature composites (metal, ceramic, and intermetallic matrix composites) and carbon/carbon composites addressed. Covers related topics such as processing (primary and secondary). Recommended: 450 or MSE 423. Offered: jointly with MSE 562; even years; Sp.

ME 564 Mechanical Engineering Analysis (3) *Kosály, Shen, Storti* Application of mathematical methods to the description and analysis of systems in mechanical engineering. Analogies in heat transfer, fluid flow, stress distribution, dynamics, and feedback control. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: A.

M E 565 Mechanical Engineering Analysis (3) *Kosály, Shen, Storti* Applications of vectors, matrices, and partial differential equations to mechanical engineering systems, including computational techniques and analogies. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: W.

M E 566 Introduction to Random Processes (3) Kosály, Reinhall Probability and random variables. Ensemble averaging, probability density function, auto- and cross-correlation functions. Brownian motion, Poisson process. Ergodicity. Frequency domain analysis, auto- and cross-spectrum, transfer function. Fundamentals of digital spectral analysis. Applications in fluid mechanics, acoustics and vibrations. Offered: by request only; even years; A.

M E 570 Methodologies for Engineering Design: Knowledge Based Engineering Design (3) Calkins Based on emerging technology of Knowledge Based Engineering (KBE), course covers a design methodology that is rapidly being embraced as the next step beyond CAD. Uses heuristically developed design rules to cover tool development for components, assemblies, and systems. Offered: A.

M E 572 Methodologies for Engineering Design: Conceptual Design (3) *Kumar* Methodologies particularly useful in the conceptual or preliminary phase of a design. The design process. Impact of formulating independent functional requirements. Physical and functional coupling in design. Case studies in conceptual design of products and processes. Prerequisite: graduate standing or permission of instructor. Offered: even years; Sp.

COLLEGE OF ENGINEERING / TECHNICAL COMMUNICATION 341

M E 573 Methodologies for Engineering Design: Probabilistic Mechanical Design (3) Jenkins Study and implementation of probabilistic methods to design. Loading, geometry, stress, stain/deflection described as random variables and compared to material properties/behavior in terms of random variables. Design, analysis, reliability, risk conducted on common structures with results compared to conventional deterministic approaches. Projects using probabilistic methods to optimize selected component designs. Offered: Sp.

M E 575 Systems Theory (3) *Berg* State-space representations. Solution of the state equation; state transition matrix. Controllability and observability. State feedback, observer design; the separation principle. Zeros and poles of multivariable systems; the Smith McMillan form. Systems invertibility. Prerequisite: graduate standing or permission of instructor. Offered: A.

M E 579 Fluid Power Systems (3) Jorgensen Design, analysis, and control of fluid power systems. Steady-state analysis of valves, actuators, and transmissions. Dynamic modeling, response, stability, and control analysis via linear element representation and computer simulation. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: Sp.

ME 581 Digital Control I (3) Berg, Fabien, Garbini Discrete-time and sampled-data systems, difference equations, and z-transform. Frequency response. Nyquist stability criterion. Gain and phase margins. Limitations of sampling. Sample rate selection. Controller design via discrete-time equivalents to continuous-time controllers, by direct-digital root locus and by loop shaping. Prerequisite: 471 or equivalent; recommended: 575 or equivalent. A A/ E 581; W.

ME 582 Digital Control II (3) Alexandro, Berg, Fabien, Garbini Controller design via state feedback and observers. Introduction to discrete-time stochastic processes. Quantization effects. Introduction to parameter identification using noisy measurements. LQR optimal control. Kalman filter design. LQG optimal control. Prerequisite: 581 or permission of instructor. Offered: jointly with A A 582/E E 582; Sp.

ME 583 Nonlinear Control Systems (4) Hannaford, Noges Analysis and synthesis of nonlinear controls systems. Assessment of stability by: Phase Plane and Describing Function Methods, Circle and Popov Criteria, Lyapunov Criteria. Construction of Lyapunov Functions by method of Kraasovskii and Lu're. Introduction to nonlinear control system design. Prerequisite: 446, 584, or permission of instructor. Offered: jointly with E E 583; odd years; Sp.

M E 584 Combustion in Airbreathing Propulsion (3) *Gessner, Kramlich, Malte* Fundamentals of gasdynamics, mixing, and thermodynamics applies to the analysis and design of gas turbine, ramjet and scramjet engine combustors, with treatment of computer simulation. Offered: even years; Sp.

M E 588 Dynamics and Vibrations (3) *Reinhall, Shen, Storti* Variational techniques, Hamilton's principle, Lagrange's equations applied to dynamics of particles and rigid bodies. Vibration analysis of multidegree-of-freedom and continuous systems. Prerequisite: graduate standing in engineering or permission of instructor. Offered: A.

M E 589, 590 Vibrations (3, 3) Reinhall, Shen, Storti Study of systems with nonlinear damping and restoring forces excited by deterministic or random inputs. Applications in measurement, testing, and design of mechanical systems. Nonlinear systems are emphasized in 589 and random inputs in 590. Prerequisite: 588 or permission of instructor. Offered: even years; W, Sp. M E 591 Robotics and Control Systems Colloquium (1, max. 3) Berg Colloquium on current topics in robotics and control systems analysis and design. Topics presented by invited speakers as well as on-campus speakers. Emphasis on the crossdisciplinary nature of robotics and control systems. Offered: jointly with A A/CHEM E/E E 591; AWSp.

M E 598 Topics in Research (1) Doctoral seminar. Credit/no credit only. Offered: AWSp.

M E 599 Special Projects (1-5, max. 9) Written report required. Prerequisite: permission of department Chairperson. Offered: AWSpS.

M E 600 Independent Study or Research (*) Written report required. Offered: AWSpS.

M E 700 Master's Thesis (*) Offered: AWSpS.

M E 800 Doctoral Dissertation (*) Offered: AWSpS.

Mechanical Engineering Industrial Engineering

MEIE 516 Advanced Topics in Engineering Statistics (3) *Roberts, Zabinsky* Topics are flexible and tailored to the needs of the particular student group involved. Topics usually considered: regression, correlation, experimental design, Monte Carlo techniques, Markov processes, extreme value theory, time-series analysis. Prerequisite: graduate standing or permission of instructor.

MEIE 599 Special Projects in Industrial Engineering (1-5, max. 9) Prerequisite: permission of industrial engineering program director. Offered: AWSp.

Technical Communication

14 Loew

Technical communicators use their language, visual, and analytical skills, as well as training and research in electronic and other media, to create and enhance communication in scientific and technical environments. The Department of Technical Communication prepares students to design, create, edit, and evaluate technical and scientific materials. The department also provides course work in the development of online support systems and in electronic information presentations. Other major interests of the department are the human-computer interface, hypermedia, communications technology, the rhetoric of technical discourse, publications and communications management, policy analyses of technological systems, and research and testing.

Undergraduate Program

Adviser Carolyn Plumb 14G Loew, Box 352195 (206) 543-7611

Bachelor of Science in Technical Communication

The Department of Technical Communication offers a Bachelor of Science in Technical Communication (B.S.T.C.).

Admission Requirements: The department classifies applicants by admission group; the specific requirements for each are described below.

Admission to the department is competitive, and completion of the requirements does not guarantee admission.

A diverse student body adds an important element to the education of all students in the program. All students who meet the minimum admission requirements will be considered for admission with special consideration given to ethnic-minority applicants to ensure diversity in the engineering student body.

All applicants have the right to petition and appeal the decision of the department.

1. Early Admission Group (EAG):

a. Open to students enrolled at the UW.

b. Completion of 38 credits to include 10 credits of approved mathematics or statistics; 15 credits of approved natural science; and 13 credits of approved written and oral communications (including ENGR 231).

c. Applicants must have a minimum GPA of 3.00 in the written and oral communications courses and a minimum overall GPA of 2.00.

d. The application deadline is July 1 for autumn quarter only.

2. Upper-Division Admission Group (UAG):

a. Completion of 60 credits to include 10 credits of approved mathematics or statistics; 15 credits of approved natural science; and 13 credits of approved written and oral communications (including ENGR 231).

b. Applicants must have a minimum GPA of 3.00 in the written and oral communications courses and a minimum overall GPA of 2.00.

c. Students applying for admission in their senior year will be expected to spend a minimum of four quarters in the degree program, which allows students time to grow, to develop the necessary skills, and to integrate the knowledge necessary to enter the profession.

d. The application deadlines are July 1 for autumn quarter and February 1 for spring quarter.

Graduation Requirements: The B.S.T.C. degree requires 180 credits, distributed according to the following minimum number of credits in each component: 50 credits in mathematics and natural science (with a minimum of 15 credits in mathematics or statistics, and 15 credits in natural science); 13 credits of written and oral communications (including ENGR 231); 12 credits of technical/analytical course work (including either CSE/ENGR 142 or PHIL 120); 35 credits of VLPA and I&S (with one in-depth sequence); 34 credits of required T C courses; 24 credits of approved electives that demonstrate a coherent and relevant area of specialization; and 12 credits of free electives.

Minor

Minor Requirements: Minimum of 25 credits to include ENGR 231 (3), T C 400 (3), T C 401 (3), T C 402 (3), T C 411 (4), and either T C 412 (3) or T C 437 (3). Plus at least 6 credits selected from the departmental list of approved upper-division electives.

Graduate Programs

Graduate Program Coordinator 14 Loew, Box 352195 (206) 543-2567 tc@uwtc.washington.edu

Master of Science

Technical Communication offers a Master of Science (M.S.) in technical communication. A total of 45-48 credits is required for the M.S. degree, which includes 18 credits of required T C graduate courses; 18 credits of technical and general electives; and 9 to 12 credits of degree-completion credits. To complete their degrees, students choose from one of three options: 9

credits of thesis; 5 credits of internship and 4 credits of a project report related to the internship; or 12 credits of a linked set of courses.

In making recommendations for admission, the faculty consider the following from an applicant's record: (1) undergraduate GPA; (2) undergraduate degree program and work experience; (3) the Graduate Record Examination (GRE) Verbal score; (4) the Test of English as a Foreign Language (TOEFL) score (if applicable); (5) letters of recommendation; and (6) Statement of Goals and Career Objectives. A limited number of prerequisite undergraduate courses may be required.

Research Facilities

Technical communication students enjoy access to a variety of computer systems and services. They have the opportunity to participate in the development of new information products, document formats, insights into human information processing, and publications practices and technologies. Technical Communication also currently supports the following specialized laboratories: the Hypermedia Lab, Laboratory for Usability Testing and Evaluation (LUTE), and the Technical Japanese Lab.

Financial Aid

A limited number of teaching and research assistantships and scholarships are available for the financial support of graduate students in technical communication. More information and application forms can be obtained by contacting the department.

Master of Science in Engineering—Technical Japanese Program

The Technical Japanese Master's Program, within the College of Engineering Interengineering Program, is a two-year, 50-credit master's degree program which combines graduate work in a science or engineering field with advanced instruction in technical Japanese language. The degree equips students with the skills necessary to read technical literature in Japanese and to work effectively with Japanese engineers and scientists in research and business environments. The program includes an internship in Japan in an industrial or research setting.

Students are admitted to the program autumn quarter only and the application deadline is February 15. To be admitted, applicants must have a bachelor's degree in engineering or science, a minimum undergraduate GPA of 3.00, two years of college-level Japanese or equivalent training, satisfactory scores on the GRE, and satisfactory scores on the Japanese Proficiency Test (administered by the Technical Japanese Program).

Faculty

Chair

Judith A. Ramey

Professors

Bereano, Philip L. * 1975; JD, 1965, Columbia University; MRP, 1971, Cornell University; technology assessment, public policy technology: social values, citizen participation.

Coney, Mary B. * 1976; PhD, 1973, University of Washington; writing style and theories of technical communication, rhetoric.

Farkas, David K. * 1983; PhD, 1976, University of Minnesota; advisory interface of computer systems, interactive multimedia, information design.

Furness, Thomas A. * 1989, (Adjunct); PhD, 1981, University of Southampton (UK); display systems engineering, human factors, computer graphics.

Haselkorn, Mark P. * 1985; PhD, 1977, University of Michigan; real-time information systems, human/machine interaction, the computer in technical communication.

Skeels, Dell R. 1949, (Emeritus); MA, 1942, University of Idaho; PhD, 1949, University of Washington; folklore, myth, and folktale.

White, Myron 1943, (Emeritus); PhD, 1958, University of Washington; technical editing and publications management.

Winn, William David * 1985, (Adjunct); PhD, 1972, Indiana University; educational technology, instructional theory, instructional design, visual information processing.

Associate Professors

Ramey, Judith A. * 1983; PhD, 1983, University of Texas (Austin); computer documentation, online documentation, user interface design and usability testing.

Spyridakis, Jan * 1978; PhD, 1986, University of Washington; comprehension and usability, research methods, document design.

Tsutsui, Michio * 1990; PhD, 1984, University of Illinois; technical Japanese, international communication, Japanese linguistics, computer-aided instruction.

Williams, Thomas R. * 1976; MDCM, 1981, PhD, 1988, University of Washington; text and visual information processing, document design, interactive multimedia.

Assistant Professor

Dailey, Daniel J. * 1982, (Adjunct Research); MS, 1982, PhD, 1988, University of Washington; time series modeling of physical phenomena, optimization, distributed computing, networking.

Lecturers

Kato, Masashi 1988; MA, 1980, University of Washington; research methods, Japanese curriculum design, computer-assisted language learning.

McDavid, Miyako Imai 1996; MA, 1992, University of Pittsburgh; Japanese curriculum design, computerassisted language learning, Japanese language linguistics.

Nakamura, Keiko 1995; MA, 1995, University of Illinois; Japanese language pedagogy; Japanese language linguistics.

Plumb, Carolyn Sue 1986; PhD, 1991, University of Washington; cognitive dimensions of writing, reading, and the human/computer interface.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

TC 300 Practice in Technical Reporting (1-2) Application of the fundamentals of technical reporting to the specific reporting activity of students who are enrolled in a jointly designated engineering, scientific, or technical course. Offered: A.

T C 310 The Computer in Technical Communication (4) Functions of, and relationships among, computer applications, systems software, and computer hardware in technical publications and communication. Required of technical communication majors. Offered: ASp.

T C 400 Scientific and Technical Communication (3) Coney, Spyridakis Principles and practices of writing to communicate scientific and technical information to a variety of readers, including the expert, general scientific and technical reader, manager, and general public. Required of technical communication majors. Offered: ASp. **T C 401 Style in Scientific and Technical Writing** (3) *Coney, Spyridakis* Grammatical structures and stylistic strategies within specific professional contexts. Achieving clarity and conciseness through word choice and placement, using a variety of sentence structures for appropriate emphasis, handling details, establishing effective tone. Required of technical communication majors. Offered: ASp.

T C 402 Scientific and Technical Editing (3) *Farkas, Williams* Editorial responsibilities and practice in the communication of scientific and technical information; the editor's role both as editor and as supervisor of publication groups. Required of technical communication majors. Offered: AW.

T C 403 Publication Project Management (3) *Plumb* Responsibilities and practice in managing publication projects in scientific and technical organizations. Project design, coordination, production, and evaluation, including planning, organizing, staffing, and directing. Required of technical communication majors. Offered: WSp.

T C 406 Understanding Research in Technical Communication (3) Spyridakis Provides a basis for integrating knowledge acquired in other technical communication courses. Students examine the research literature of various disciplines that impact technical writing. Structured around theoretical and empirical literature as it relates to different textual issues in technical writing. Offered: W.

T C 407 Computer Documentation (3) Farkas, Ramey Concepts and skills for preparing online help systems, performance-support systems, print manuals, and other forms of computer documentation. Analysis of users, their tasks, and the product's interface. Usability testing of documentation. Relationship between documentation process and product development cycles. Recommended: T C 310. Offered: ASp.

T C 408 Public Documents: Proposals, EISs, Assessments (3) Bereano Analyzing special documents of public character: proposals, EISs, questionnaires, technology assessments. Understanding socio-political milieu in which they are planned, organized, written; the specialized audiences (e.g., agencies with their missions, guidelines, constituencies; citizen groups; commercial interests) they serve. Documents, the decision-making process. Offered: odd years; Sp.

T C 409 Writing for Publication (3) Coney Writing for professional and trade periodicals in science, engineering, and technology; examination of the publication process, including the roles of author, editor, and reviewer; selecting the appropriate periodical; organizing and writing the article. Offered: W.

T C 411 Visual Media in Technical Communication (3) VLPA/I&S Williams Use of visuals in print and electronic communication. Topics include vision, perception, comparison of text and visual media principles for the selection and use of visual media, information graphics icons, page and screen design typography, and color. Offered: ASp.

T C 412 Print Production (3) *Williams* Introduction to print production for technical communicators. Topics include digital pre-press, printing, binding, and finishing. Offered: W.

T C 415 Production Editing (5) *Williams* The editorial role in the preparation of text and visual materials for production. The editor's responsibilities and prerogatives as they relate to those of other professionals in the production phase of the publications field. Offered: W.

T C 420 Introduction to Technology as a Social and Political Phenomenon (3/5) I&S Bereano Introductory survey presenting some of the issues pertaining to technology and social change, technology and values. Emphasis on the social, political, and economic aspects of current problems that have important technological components. Prior technical background not required; readings from diverse sources. Offered: A.

T C 425 Technology Assessment (3/5) I&S *Bereano* In-depth analysis of the concept, practice, and methods of technology assessment (policy analysis that concentrates on social consequences of technological development): social, political, economic, and environmental impacts of new technologies; options for channeling these developments; and relevant decision-making institutions and processes. Offered: W.

T C 436 Design and Authoring of CAI (3) Winn Introduction to the design of computer-assisted-instructional programs. Types of learning, characteristics of effective instruction. Students design and produce CAI programs using authoring systems for computers. Offered: jointly with EDC&I 436; A.

T C 437 Interactive Multimedia (3) VLPA/I&S Farkas Study of concepts and design principles with an emphasis on communicating technical and workplace information. Includes hypertext theory, interface design principles for content computing, and societal issues. Implementation of designs is encouraged but not required. Offered: Sp.

T C 454 Alternative Technology (3) I&S Bereano Exploration of the evolution of technological forms that are small-scaled, decentralized, emphasizing the public policy aspects of these developments. Topics include the relationship between alternative technologies and worker-controlled enterprises, community planning, the politics of technological change, the Third World, and decentralized development. Background in engineering or technical design is not required. Offered: A.

T C 455 User Interface Design (3) Furness Design oriented to cover fundamentals of user interface design; models on human computer interaction, software psychology, input devices, usability, cognitive and perceptual aspects of human-computer interaction, advanced interfaces, and research methodologies are discussed. Offered: jointly with IND E 455; A.

T C 493 Senior Study (5) Integration of knowledge and skills acquired during major program into one paper or project. Offered: AWSpS.

T C 495 Professional Practice (3-5, max. 10) Williams Supervised internship in a publications organization approved by the faculty adviser. A minimum of one internship is required of students majoring in technical communication. Credit/no credit only. Offered: AWSpS.

T C 498 Special Topics (1-5, max. 10) Special topics in technical communication to be offered occasionally by permanent or visiting faculty members.

T C 499 Special Projects (1-5, max. 10) Individual undergraduate projects in technical communication. Offered: AWSpS.

Courses for Graduates Only

T C 501 Theoretical Dimensions of Technical Communication (3) Coney Theories and research drawn from a variety of fields that inform such topics as the historical and social context of technical communication, the aims of technical discourse, readability, invention and audience, audience analysis, technical style, and graphics. Prerequisite: admission to an engineering master's program or permission of instructor. Offered: A. TC 502 Empirical Traditions in Technical Communication (4) Williams Introduction to empirical traditions that inform research and practice in field of technical communication. Topics include epistemological assumptions underlying empirical research, empirical methods, and survey of results of empirical research on effects of text and visual media on comprehension, recall, and performance. Prerequisite: graduate standing or permission of instructor. Offered: W.

T C 505 Computer-Assisted Communication (4) Ramey Explores computer-assisted communication from three perspectives: (1) cultural roles of communication technologies; (2) relationships between communication and information including information technologies in the workplace, academe, and other settings; and (3) application to design including models for audience analysis, task analysis, and cognitive systems engineering. Prerequisite: graduate standing or permission of instructor. Offered: A.

T C 509 Writing the Scientific Article (3) Coney, Illman Examination of principles and practice of writing research manuscripts, articles, abstracts, and oral presentations. Detailed examination of scientific publication process includes issues of style, organization, and ethics. Students draft, critique, and revise their own manuscripts and learn to review the manuscripts of others. Offered: Sp.

T C 510 Information Design (4) Farkas Examination of the design principles and procedures underlying the creation of both print and electronic information presentations. Topics include: print vs. electronic media, designing for the page and screen, information topologies, and hypermedia. Seminar includes a design project. Prerequisite: 501 or permission of instructor. Offered: Sp.

T C 516 Research Methods in Technical Communication (3) *Spyridakis* Introduction to research methods in technical communication. Students examine the relationship between theory and research, hypothesis testing, experimental designs, modes of observation, sampling, validity, and data analysis and interpretation. Prerequisite: introductory statistics course. Offered: Sp.

T C 517 Usability Testing (3) Ramey Discusses the human-computer interface (HCI) as the communicative aspect of a computer system. Analyzes usability issues in HCI design, explores design-phase methods of predictability, and introduces evaluative methods of usability testing. Prerequisite: substantial experience with computers and graduate standing, or permission of instructor. Offered: W.

T C 520 Technical Communication Management (3) Emphasizes the role and function of communication as a key to understanding organizational frameworks and managerial practices. Traditional and innovative approaches to viewing and managing technical communication. Roles, responsibilities, impact of technology. Prerequisite: T C graduate standing or permission of instructor. Offered: Sp.

T C 521 Seminar: Current Issues in Technical Communication (1-2, max. 3) Presentations on current issues in technical communication. Credit/no credit only. Prerequisite: T C graduate student status or permission of instructor. Offered: ASp. T C 525 Assessing Communications Technologies (3) Bereano Analysis of development, deployment of new communication technologies; emphasis on public policy issues they present (e.g., videotelephone, mobile telephoning, hypermedia, electronic message transfer, virtual reality). Impacts explored include: access, privacy, civil liberties; power of elites; changes in social organization. Prerequisite: 425 or other background in policy analysis, technology, and society. Offered: even years; Sp.

T C 530 Technical Japanese 1 (4) Kato Focus on oral communication and reading. Students review and strengthen their basic knowledge of grammar and kanji and apply this to practical communication situations and technical reading. Lab work required for kanji building, grammar review, and oral drills. Japanese word-processing introduced. Prerequisite: JAPAN 213 or equivalent. Offered: A.

T C 531 Technical Japanese 2 (4) Kato Focus on oral communication and reading. Additional vocabulary and kanji necessary for practical communication and technical reading are introduced. Lab work required for kanji building, grammar review, and oral drills. Prerequisite: 530. Offered: W.

T C 532 Technical Japanese 3 (4) Kato Focus on oral communication and reading. Additional vocabulary and kanji necessary for practical communication and technical reading are introduced. Develop skills for short technical presentations and discussion. Prepares students for internships in Japan. Lab work required for kanji building, grammar review, and oral drills. Prerequisite: 531. Offered: Sp.

T C 536 Advanced Technical Japanese 1 (4) *Kato, Tsutsui* Focuses on reading and oral/aural skills in technical Japanese. Develops advanced reading skills, technical vocabulary in the student's specialty, and skills for technical presentation, discussion, and presentation comprehension. Lab work is required for oral communication and vocabulary building. Prerequisite: 532. Offered: W.

T C 537 Advanced Technical Japanese 2 (4) Kato, Tsutsui Focuses on reading and oral/aural skills in technical Japanese. Further development of advanced reading skills, technical vocabulary in the student's specialty, and skills for technical presentation, discussion, and presentation comprehension. Introduction of technical translation from Japanese to English. Lab work is required. Prerequisite: 536. Offered: Sp.

T C 597 Approaches to Teaching Technical Communication (1-2) *Plumb* Readings in pedagogical theory of technical communication and discussion of practical applications. Credit/no credit only. Prerequisite: concurrent teaching appointment or permission of instructor. Offered: AWSpS.

T C 598 Special Topics (1-5, max. 6) Prerequisite: permission of instructor.

T C 599 Special Projects (1-5) Written report required. Prerequisite: permission of graduate adviser or committee chair. Offered: AWSpS.

T C 600 Independent Study or Research (*) Written report required. Prerequisite: permission of committee chair. Offered: AWSpS.

T C 601 Internship (2-10) Written report required. Prerequisite: permission of committee chair. Offered: AWSpS.

T C 700 Master's Thesis (*) Prerequisite: permission of thesis adviser. Offered: AWSpS.

College of Forest Resources

Dean

David B. Thorud 107 Anderson

Associate Dean for Academic Affairs

Gordon A. Bradley 123G Anderson

Associate Dean for External Initiatives

Bruce R. Lippke 123J Anderson

Founded in 1907, when professional forestry education was in its infancy, the College holds a position of national and international leadership in both instruction and research. Its location in one of the world's largest forest regions provides unique opportunities for field classes and research, experience in the management of forested lands, exposure to wood-based industries, and awareness of resource-use issues. Enrolled in the College are over 300 undergraduate and approximately 170 graduate students, taught by more than 50 faculty members. Thus, students enjoy small classes and close association with faculty, as well as the diversity and superior facilities of a large university.

The College of Forest Resources is dedicated to generating and disseminating knowledge for the stewardship of natural and managed environments and the use of their products and services through teaching, research, and professional and public outreach. Its vision is to be pre-eminent in teaching and advancing the frontiers of knowledge in integrated resource stewardship and utilization in natural and managed environments.

The College's goals are (1) to provide students with a premier educational and training experience in integrated natural resource management, utilization, and environmental sciences and stewardship; and (2) in a timely and efficient manner, to develop and deliver the following to the public and the professions throughout the state, region, and world:

- educational information related to the College's mission, and
- findings from the College's applied and basic research programs.

College Facilities

The College occupies three buildings: Alfred H. Anderson Hall, the Hugo Winkenwerder Forest Sciences Laboratory, and Julius H. Bloedel Hall. In addition, the Center for Urban Horticulture is located in a building complex on Union Bay. Thus, the College has excellent areas and equipment on the Seattle campus for scientific laboratories, classrooms, seminar rooms, special collections, and administrative offices.

The Forest Resources Library, a branch of the University of Washington Libraries, contains more than 50,000 books, reports, conference proceedings, and bound journal volumes, and subscribes to more than 1,100 active journals. Disciplines covered by the collection support the programs of the College, including forestry and silviculture, forest products, forest engineering, soils, wildlife, wildland conservation, paper sciences, and urban forestry. The Forest Resources Library provides a gateway to the larger University Libraries collection of more than five-million volumes through the systemwide electronic catalog, and provides access to numerous electronic and print indices as well as Internet resources.

The Center for Urban Horticulture also maintains a library that serves students, faculty, landscape professionals, and the public. The center's herbarium supports forest resources students' fieldwork in urban horticulture, restoration ecology, and dendrology. Containing representative plant material from all parts of the United States, the collection includes dried, mounted specimens of shrubs, hardwood trees, and conifers. Another herbarium, complete in plants native to the Pacific Northwest and maintained by the Department of Botany, is available for use by forest resources students.

The laboratory facilities of the College represent an extensive array of modern equipment for research. The many available research tools include optical equipment, electronic instrumentation for a wide variety of uses, gas chromatographs, spectrophotometers, and physical-test equipment. Specific laboratories are designed to study soil chemistry and soil physics, hydrology, polymer chemistry, tree physiology, genetics, wood and extractives chemistry, physics of fibrous composites, applied mechanics, wood process technology, silviculture, ecology, paleoecology, pathology, entomology, wildlife, horticultural physiology, and horticultural plant materials.

The College computing facilities include microcomputer systems dedicated to specific research areas, a microcomputer student laboratory, a geographical information systems (GIS) laboratory, and several servers offering access to the Internet and shared printers.

Office of Student Services

Director

Donald E. Whitney 116 Anderson

The Office of Student Services in the College of Forest Resources assists prospective undergraduate and graduate students with admission to the College and advises current students, including interpretation of College and University requirements and assistance in course registration to meet graduation requirements. Faculty advisers are available to assist students in choosing elective courses to help them build an appropriate academic background for their chosen professional specialty. A Mentor Program is also administered by the Office of Student Services and assists undergraduate students in establishing mentoring relationships with faculty, graduate students, alumni, and industry or agency representatives.

The Office of Student Services also houses the College's Career Development Center which assists students in obtaining summer employment and internships while in school and permanent employment upon graduation. Summer work may be available through federal and state agencies and in the numerous private companies associated with the wood-using industry of the region. Although field experience is not required for graduation, students are strongly urged to seek summer employment or field experience relevant to their major and career goals.

The College has a strong scholarship and financial assistance program. Through the generous donations of alumni and friends, the College has established scholarships, fellowships, and loan programs to assist students in paying for their tuition. The Washington Pulp and Paper Foundation provides scholarships for students enrolled in the paper science and engineering curriculum. The foundation is supported by companies of the pulp and paper industry and by supplier companies. Information about paper science and engineering scholarships may be obtained from Professor William McKean, 318 Bloedel. Information on all College scholarships is available through the Office of Student Services, 116 Anderson. Students seeking information about financial aid offered outside the College should contact the Office of Student Financial Aid, 105 Schmitz.

Institute of Forest Resources

Director

David B. Thorud 107 Anderson

Associate Director

Gordon A. Bradley 123G Anderson

The overall research program of the College is administered by the Institute of Forest Resources. Because of the size and complexity of this program, the institute assumes a broad scope of responsibility and provides vital support to the College administration, faculty, staff, and students. Major functions include administering all research projects funded by federal, state, and private agencies, monitoring the McIntire-Stennis research program, ensuring College compliance with federal reporting requirements, and producing College publications and special research reports.

Institute staff coordinate and facilitate the submission of research proposals for the faculty with the University administration and numerous funding agencies. Students earn research and thesis credit toward advanced degrees by working on major forest resources problems supported by grants or contracts.

Areas of current and future research cover a broad array of topics including forest policy analysis, stand management, streamside and riparian zone management, forest ecosystem analysis, international trade in forest products, forest-products marketing, forest biotechnology, wildlife science, forest soils, urban horticulture, forestry engineering and hydrology, and paper science and engineering. Research projects include studies by individual faculty, as well as interdisciplinary programs, which combine the interests of College faculty with those from other academic units of the University and other institutions.

The College also collaborates with Cooperative Extension of Washington State University to undertake and promote continuing education for citizens of the state, particularly in the nonindustrial forestry area.

The Institute Publications Office provides a wide range of services in producing College research publications: technical editing, desktop-publishing systems, format and layout design, computer graphics, printing/ publishing coordination, and distribution. College publications are distributed to national and international institutions and libraries, as well as to forestry professionals, to organizations in the private sector, and to the general public.

Field Research Areas and Facilities

The College field facilities include two major forested areas covering more than 4,000 acres, an arboretum, a reserve, and several cooperative research centers and stations. These lands offer a wide variety of terrestrial and aquatic characteristics favorable to a full range of scientific investigations. They also provide a general natural-science laboratory for the many disciplines in the College specifically related to, or concerned with, the research and teaching of natural resources behavioral patterns and management.

The Charles Lathrop Pack Experimental Forest of approximately 4,200 acres is located 65 miles south of the University, near Eatonville. This forested property is the focal point for on-the-ground academic work in forest management, resource science, and forest engineering, both at the undergraduate and graduate levels. Broad forest and soil diversity has led to extensive biological, management, and engineering research, much of which may be characterized as a pioneering effort. A full-time resident staff manages this facility, harmonizing its public-education objectives with academic and research objectives. Rustic but comfortable facilities which provide housing and support to academic and research programs are also used extensively for conferences both within and outside the University.

The Olympic Natural Resources Center (ONRC) is a 19,000-square-foot research and education facility located on the west side of the Olympic Peninsula. The mission of the center is to conduct research and education on natural-resources management practices which integrate ecological and economic values. Innovative management methods that integrate environmental and economic interests into pragmatic management of forest and ocean resources are demonstrated. A forest management program as well as a marine program are in place to study the relationship between the terrestrial and marine environment.

The Lee Memorial Forest, approximately 160 acres, is located about 22 miles northeast of the University, near Maltby. This forested property provides valuable academic and research opportunities near the campus. Characterized by forest types and soils common to western Washington lowlands, Lee Forest is used extensively for part-day trips and for long-term research and demonstration projects especially related to changing land uses.

The Allan H. Thompson Research Center and the Joe E. Monahan Findley Lake Reserve and Research Area in the Cedar River watershed are utilized by the College in cooperation with Seattle Public Utilities for studies in forest physiology and mineral cycling in the forest ecosystem.

The Center for Urban Horticulture has offices, laboratories, public-education resources, and field sites for teaching and experimentation along the shore of Union Bay. Its 10-acre Union Bay Gardens, for research, teaching, and display, currently emphasize unusual ornamental and native woody landscape plants. The 60-acre Union Bay Natural Area, a former dumpsite now a naturalized habitat, is used by classes in four different colleges and the public to study principles and practices of restoration ecology. The Douglas Research Conservatory is a modern plant-growing facility with greenhouses, growth chambers, nursery, and classrooms. The Otis Douglas Hyde Hortorium is an herbarium dedicated to plants of urban horticultural significance. The Elisabeth C. Miller Horticultural Library is the Northwest's foremost public horticultural library, with books, journals, and other materials available to the gardening public, students, and professional horticulturists. The Center also conducts courses, lectures, and special events for the public and professionals as part of the College's Continuing and Public Education program. Cooperative programs are in place with Washington State University/King County Cooperative Extension, whose horticulture program is housed at the Center.

The center's largest facility is the Washington Park Arboretum, a 230-acre collection of trees and shrubs growing in a naturalistic setting on the south shore of Lake Union. Managed in cooperation with the City of Seattle Department of Parks and Recreation and the Arboretum Foundation, the arboretum contains some 5,200 different kinds of woody plants that are available for research and academic study, making it the third most diverse arboretum in the United States. Displays and programs educate students and visitors about woody plants' diversity, natural ecology, and urban landscape use, as well as conserving endangered natural and cultivated plants. Classes in botany, dendrology, horticulture, wildlife, and landscape architecture make use of the collections, while the grounds are used for studies in soil science, ecology, and various research projects, including many independent student projects. The arboretum, established in 1934, also serves as an important public-service area to the University, offering numerous formal and informal classes for the general public and, in addition, serving the community as a public park and open space.

Summer Opportunities

During summer quarter, courses are offered on the Seattle campus and at the Charles Lathrop Pack Experimental Forest near Eatonville. Consult the summerquarter *Time Schedule* for courses.

The courses at Pack Forest are part of the Cascade Ecology Institute (CEI) and will occur during the first four weeks of summer quarter 1998. Forest ecosystems, forest entomology, and field ornithology are among the courses that may be offered. Students, staff, and faculty live in summer cabins. Modern classrooms and labs are used.

For more information on CEI, contact Dr. David Manuwal, (206) 543-1585.

In late summer, there is a four-week intensive program that combines work and study in Pacific Northwest forests with the study of English as an international language for forestry. The College and the Department of English As A Second Language schedule the program.

For more information, contact Aaron Bidelspach, UW Educational Outreach, (206) 543-2300.

Management and Engineering Division

Chair

Richard R. Gustafson 332 Bloedel

Courses for which the Management and Engineering Division is responsible deal with all the facets of the forest resources arena, from management of forests to the production and recycling of paper products. Multiple uses of forests including timber, water, wildlife habitat, and recreation are embraced in the forest management curriculum. Courses in the forest engineering design principles that enable graduates to find technical solutions to problems facing forest-related enterprises and rural communities. Paper science and engineering courses provide students with the skills to work as technical and management professionals in the paper and allied industries.

The Division of Management and Engineering offers three undergraduate majors leading to the Bachelor of Science in Forest Resources: forest management, forest engineering), and paper science and engineering. The goal of the forest management curriculum, which is accredited by the Society of American Foresters, is to educate undergraduate students to perform as professional forest land managers. Forest lands range from public bioreserves, wilderness, and parks where preservation issues are paramount, to extensively managed private tracts, watersheds, and commercial tree farms where utilization is the guiding paradigm. Courses emphasize intensive management as well as multiple use of forest resources and forest lands.

The four curriculum objectives for forest management are to (1) educate and train students for entry-level employment, (2) educate students to be effective managers in both the private and public sectors, (3) prepare students to learn how to be future leaders of the profession and community, and (4) prepare students for a lifetime of learning. The curriculum provides a firm grounding in the physical, natural, and social sciences at the lower-division level along with an introduction to forest resources management. At the upper division, a core of professional forestry courses emphasizes the integration of forest-resources biological sciences with the social and management sciences. Restricted electives are also required to enhance the understanding of business-management and economic principles.

Students in forest management spend the spring quarter of their junior year at the College's Pack Forest where specialized field instruction is provided. Forest engineering is a profession in which knowledge of the mathematical and natural sciences gained by study and experience is applied with judgment to design systems and processes to meet society's many demands from forested landscapes. Forest engineers design timber harvest, road construction, watershed protection, and resource enhancement activities over a wide variety of space and time scales. The overall goal of the forest engineering curriculum is to provide the highest quality education in engineering principles as well as forest ecosystems in an undergraduate degree program. An admissions application, including specific course and grade-point prerequisites, is required.

The objectives of the curriculum are (1) to provide a broad education, including a strong liberal arts background emphasizing critical thinking and life-long learning, which will enable students to be informed, responsible, and effective professionals in society; (2) to develop students' written and oral communications skills so that they can organize and express information and ideas logically and convincingly; (3) to develop students' understanding of fundamental scientific principles, including forest science and ecology, which serve as a sound basis for the synthesis of knowledge leading to rational problem-solving; (4) to develop students' knowledge and ability to employ engineering methods including analysis, computation, modeling, experimental techniques, and design to solve forest engineering problems; and (5) to develop students' understanding of their legal, ethical, and professional relationships with society to prepare them for the professional practice of forest engineering.

While the first two years of the forest engineering curriculum are consistent with pre-engineering status within the University, and the core forest engineering courses begin in the junior year, design is a theme that is emphasized throughout the program. The design theme culminates in the senior year when all forest engineering students participate in a real-world, teamoriented design project combining most, if not all, aspects of their studies. Students also generally sit for the Fundamentals of Engineering Exam, Engineer in Training (EIT), during their senior year as a first step toward eventual licensure as professional engineers.

The paper and allied industries need technically trained professionals to resolve challenges faced by the industries. Students in the paper science and engineering program are instructed in chemistry, chemical engineering, wood chemistry, and pulp and paper processing. The goal of the paper science and engineering curriculum is to provide the highest quality education in engineering principles as well as pulp and paper fundamentals in an undergraduate program. Course subjects in this curriculum include wood chemistry, pulping and bleaching, recycling, paper physics, papermaking, process control, and process design.

The objectives of the paper science and engineering undergraduate program are (1) to provide students with a strong foundation in mathematics, natural and physical sciences, and engineering fundamentals. In addition, students are trained in the techniques, skills, and modern engineering tools necessary for engineering practice; (2) to provide students with a thorough knowledge of the technology used in the modern pulp and paper mill and to provide a complete understanding of the underlying phenomena that govern the unit operations of that technology; (3) to provide students with relevant laboratory experiences that demonstrate basic principles and teach students to conduct experiments as well as analyze and interpret data; (4) to provide students with a capstone design experience that integrates the knowledge and skills acquired in previous courses; design problems are solved by multidisciplinary teams and demonstrate the students' capabilities in identifying, formulating, and then solving engineering problems; (5) to provide students with a broad range of skills that they need to function as professionals in an engineering career. These include analytical and design skills, communication techniques, ethical principles and values, and knowledge

of contemporary issues. The students are also provided an education in the humanities and social sciences to understand the impact of engineering solutions in a global and societal context.

The first two years of the paper science and engineering curriculum are similar to other pre-engineering curricula, especially chemical engineering. The core paper science and engineering courses begin in the junior year and continue through the senior year. A fifth-year option is available for qualified students who want to pursue a bachelor's degree in chemical engineering.

Graduate programs leading to the Master of Science and Doctor of Philosophy degrees are offered by this division and include social sciences, forest economics, forest engineering, forest hydrology, forest products marketing, silviculture and forest protection, quantitative resources management, and paper sciences and engineering. A practice-oriented degree leading to the Master of Forest Resources in the area of silviculture is also available.

Ecosystems, Horticulture and Conservation Division

Chair

Thomas M. Hinckley 204 Winkenwerder

Courses included in the Ecosystems, Horticulture and Conservation Division cover basic and applied subject matters in forest biology and urban horticulture. Subjects covered include plant and animal ecology, wildlife biology and conservation, dendrology and autecology, soils, ecosystem analysis, and urban horticulture. Urban horticulture is concerned with the selection, management, and role of plants and ecosystems in urban environments.

The Division of Ecosystems, Horticulture and Conservation offers three undergraduate majors leading to the Bachelor of Science in Forest Resources: wildlife science, conservation of wildland resources, and urban forestry. Wildlife science focuses on the application of ecological knowledge to wildlife biology and management, with the intent of preparing students for graduate education in wildlife science. The undergraduate curriculum on the conservation of wildland resources provides a broad education in forest-related natural resources. It emphasizes vegetation and animal components of ecosystems and how they interact with environmental and social components. Urban forestry focuses on the ecological, institutional, and human issues at work in the urban landscape. Topics include the planning, management, and restoration of urban forest trees and ecosystems in cities, suburbs, and wildland settings to produce multiple benefits for communities.

Graduate programs leading to the Master of Science and Doctor of Philosophy degrees include ecosystem analysis (ecology, tree physiology and genetics, and soils and mineral cycling), wildlife science, and urban horticulture. A Master of Forest Resources degree in urban horticulture is also available.

Undergraduate Program

Information may be requested by contacting the faculty adviser listed with each program or through the Office of Student Services, cfradv@u.washington.edu.

The College of Forest Resources offers six undergraduate majors leading to a Bachelor of Science in Forest Resources degree: forest management, wildlife science, conservation of wildland resources, forest engineering, paper science and engineering, and urban forestry. The first two years of study emphasize general preparation, followed by an upper-division professional program. Each curriculum contains a number of elective credits selected by the student with the assistance of faculty advisers. Students are encouraged to take a number of these credits outside the College to broaden their preparation.

In addition to University regulations concerning requirements and grading, College regulations state that no required course may be taken on a satisfactory/notsatisfactory basis. Some classes include field trips, laboratory supplies, or material duplication at extra expense to the students.

High School Preparation

In addition to the University's general admission requirements, students who plan to enter the College of Forest Resources should have completed at least one unit each of biological and physical science.

Admission

UW students in good academic standing may declare a major in the College at any time except for Forest Engineering which requires an application for admission, available in 116 Anderson. The specific major is declared during the initial interview with a College adviser in the Office of Student Services, 116 Anderson.

Transfer students, upon admission to the University, are accepted directly into the College as premajors and declare a specific major during the initial interview with a College adviser. However, transfer students must complete an application for admission for acceptance into the Forest Engineering major.

Applicants for the Forest Engineering major may refer to the admissions criteria listed with the Forest Engineering requirements.

Advising

Student advising is the joint responsibility of the College's Office of Student Services, 116 Anderson, and the divisions. Student files are centrally located in the Office of Student Services. Degree applications are completed with advisers in the Office of Student Services. Faculty serve as advisers for curriculum and career planning.

Pack Forest Residential Field Classes

Students enrolled in the forest management and forest engineering curricula must attend the Pack Forest program. This program is typically completed during the spring of the junior year for forest management students and during the spring of the senior year for forest engineering students. Courses are conducted as part of the field residential program at the Charles Lathrop Pack Experimental Forest near Eatonville, 65 miles from Seattle.

Students in other majors such as Conservation of Wildland Resources may also attend Pack Forest, but it is not required.

Students taking course work at Pack Forest must live at the field residential station, paying room-and-board charges in addition to regular tuition. Information is available from the Office of Student Services, 116 Anderson.

Accreditation

The curriculum in forest management is accredited by the Society of American Foresters (SAF). Other curricula include electives that may be used toward qualifications for SAF and the Forester rating for the United States Civil Service.

The curriculum in forest engineering is accredited by the Accreditation Board for Engineering and Technology (ABET). SAF and ABET are recognized by the Council on Postsecondary Accreditation and the U.S. Department of Education as the accrediting agencies for forestry and engineering, respectively, in the United States.

Students should consult with faculty advisers when planning their schedules to include the specific class requirements for SAF and civil-service qualifications.

To meet civil-service and certified wildlife-biologist requirements, students in wildlife sciences should consult with the faculty adviser.

Bachelor of Science in Forest Resources

For information concerning the general-education, lower-division, and upper-division (major) requirements, see a College adviser in the Forest Resources Office of Student Services, 116 Anderson.

Conservation of Wildland Resources

Faculty Adviser Thomas M. Hinckley (206) 543-1588

Course Work for Prospective Students: BIOL 101-102; CHEM 120, 220; ECON 200; ENGL 131; GEOL 101; PHYS 114, 117; Q SCI 291, 292 or MATH 124,125; POL S 202; SP CMU 220; introductory statistics course such as Q SCI 381.

General Education Requirements: English composition—5 credits from the University list (ENGL 131 is preferred); writing-intensive courses—10 credits minimum to include ESC 495 (5) and 5 credits of ENGL 111 or other University composition or writing-intensive (W) course; Visual, Literary, & Performing Arts—10 credits to include SP CMU 220 (5) or other similar Collegeapproved course from University VLPA list plus 5 additional credits from University VLPA list; Individuals & Societies—18 credits to include ECON 200 (5); POL S 202 (5); F M 370 (3), and F M 470 (5).

Requirements Expected to Be Taken During the First Two Years: CFR 101 (5 credits); GEOL 101 (5); Q SCI 291, 292 (5, 5), or MATH 124, 125 (5, 5); BIOL 101 (5); BIOL 102 (5); CHEM 120 (5); CHEM 220 (5); PHYS 114 (4); PHYS 117 (1); Q SCI 381 (5); free electives (17).

Additional Major Requirements: ESC 202 (5 credits); ESC 210 (4); ESC 221 (6); ESC 322 (3); ESC 350 (4); ESC 495 (5); ECON 435 (5), F M 360 (5), or F M 464 (3); F M 370 (3); F M 470 (5); optional electives (45).

Minor

Minor Requirements: Minimum 35 credits with a minimum grade of 2.0 in each course, to include CFR 101 (5 credits); ESC 200 (5) or ESC 221 (6); ESC 202 (5) or F M 324 (5); ESC 210 (4); ESC 320 (5); ESC 322 (3); F M 328 (4); ESC 350 (4). Recommended additional courses include ESC 411 (4), ESC 421 (4), ESC 441 (5).

Forest Engineering

Faculty Adviser Peter Schiess (206) 543-1583

Admission

Students may apply for Early Admission or Upper-Division Admission. Applications are available in Student Services, 116 Anderson, or through the College of Engineering, 356 Loew. Departmental deadlines are July 1 for autumn quarter, October 15 for winter quarter, and January 15 for spring quarter.

For Early Admission, a student may apply after completing the following courses at the UW with a minimum GPA of 3.60 or higher in MATH 125, 126; PHYS 121,122; and CHEM 142. For Upper-Division Admission:

1. Minimum cumulative GPA of 2.50.

2. Completion of the following courses with a minimum grade of 2.0 in each course: CHEM 142, 152; ENGR 142, 210, 220, 230; MATH 124, 125, 126, 307; PHYS 121/131, 122/132, 123/133; a 5-credit English composition course (ENGL 131 is preferred).

3. Admission is competitive.

4. Transfer students are accepted directly into the College as premajors and, after admission to the College, become Forest Engineering majors.

General Education Requirements: English Composition—5 credits from the University list (ENGL 131 is preferred); writing-intensive courses—7 credits minimum to include ENGR 231 (3 credits) and ENGR 333 (4) or other writing courses as approved by the College of Engineering and the College of Forest Resources; 30 credits total from the Visual, Literary, & Performing Arts list and from the Individuals & Societies list including a minimum of 10 credits from each of these two Areas of Knowledge.

Requirements Expected to Be Taken During the First Two Years: MATH 124, 125, 126 (5, 5, 5); MATH 307 (3); MATH 308 (3); PHYS 121/131 (4/1); PHYS 122/132 (4/1); PHYS 123/133 (4/1); CHEM 142 (5), 152 (5); CSE/ ENGR 142 (4); ENGR 123 (4); ENGR 210 (4); ENGR 220 (4); ENGR 230 (4); ENGR 250 (4); ENGR 315 (3).

Upper-Division (Major) Requirements: F E 330 (4 credits); F E 332 (4); F E 340 (4); F E 341 (5); F E 346 (5); F E 368 (4); F E 425 (4); F E 444 (4); F E 450 (15); F E 470 (3); F E 480 (3); CIVE 342 (4); CIVE 366 (4); restricted Forest Engineering electives (14).

Forest Management

Faculty Adviser B. Bruce Bare (206) 685-0878

Course Work for Prospective Students: BIOL 101-102; CHEM 120, 220; ECON 200, 201; ENGL 131; GEOL 101; MATH 124 or Q SCI 291-292; POL S 202; SP CMU 220; introductory statistics course such as Q SCI 381.

General Education Requirements: English composition—5 credits from the University list (ENGL 131 is preferred); writing-intensive courses—7 credits minimum to include F M 495 (5 credits) or 496 (5), and 2 credits of additional writing-intensive course work; Visual, Literary, & Performing Arts—10 credits to include SP CMU 220 (5) or other similar College-approved course from the University VLPA list and 5 additional credits from the University VLPA list; Individuals & Societies—20 credits to include ECON 200 (5); ECON 201 (5); POL S 202 (5); F M 370 (3), and F M 470 (5).

Requirements Expected to Be Taken During the First Two Years: CFR 101 (5 credits); BIOL 101 (5); BIOL 102 (5); MATH 124 (5) or Q SCI 291-292 (10); CHEM 120 (5); CHEM 220 (5); GEOL 101 (5); CFR 250 (5); F M 270 (3); ESC 210 (4); ESC 221 (6); Q SCI 381 (5); free electives (10).

Upper-Division (Major) Requirements: F M 323 (5 credits); F M 324 (5); F M 328 (4); F M 360 (5); F M 362 (5); F M 370 (5) F M 425 (3); F M 470 (5); F M 481 (3); F E 345 (5); ESC 322 (3); ESC 350 (4); restricted business/ management electives (15); free electives (12).

Minor

Minor Requirements: Minimum 35 credits with a grade of at least 2.0 in each course, to include the following: Biology—minimum 9 credits from ESC 200 (5 credits), ESC 210 (4), ESC 322 (3), F M 328 (4), ESC 350 (4); Social Sciences—minimum 9 credits from F M 270 (3), F M 320 (3), F M 360 (5), F M 370 (3), F M 422 (3), F M 423 (3), F M 470 (5); Forest Management—minimum 9 credits from CFR 101 (5), CFR 250 (5), F M 323 (5), F M 324 (5), F M 328 (4), F M 362 (5), F M 377 (3), F M 425 (3), F M 481 (3), F E 345 (5); Electives—minimum 8 credits from any F M course at the 300 level or above.

Paper Science and Engineering

Faculty Adviser William T. McKean (206) 543-1626

Course Work for Prospective Students: BIOL 101-102; CHEM 142, 152, 162, 237/241, 238/242; ECON 200; ENGL 131; ENGR 260; GEOL 101; MATH 124, 125, 126; PHYS 121/131, 122/132, 123/133; introductory statistics course such as Q SCI 381.

General Education Requirements: English Composition—5 credits from the University list (ENGL 131 is preferred); writing-intensive courses—7 credits minimum; Visual, Literary, & Performing Arts—10 credits from University VLPA list; Individuals & Societies—10 credits to include ECON 200 (5 credits) or other similar College-approved course from the University I&S list and 5 additional credits from the University I&S list.

Requirements Expected to Be Taken During the First Two Years: MATH 124, 125, 126 (5, 5, 5); MATH 307 (3); CHEM 142 (5), 152 (5), 162 (6); CHEM 237 (4), 238 (4); Q SCI 381 (5); PHYS 121/131 (4/1); PHYS 122/132 (4/1); PHYS 123/133 (4/1); CSE/ENG R 142 (4); ENGR 260 (4); PSE 302 (4); PSE 306 (3).

Upper-Division (Major) Requirements: CHEM 455 (3 credits); CHEM 457 (3); CHEM E 310 (4); CHEM E 330 (4); CHEM E 340 (4); CHEM E 436 (3); PSE 400 (3); PSE 401 (2); PSE 402 (4); PSE 406 (3); PSE 407 (2); PSE 476 (3); PSE 477 (3); PSE 478 (2); PSE 479 (2); PSE 480 (3); PSE 481 (3); PSE 482 (4); PSE 485-(1-1-1); PSE 483 (3) or PSE 488 (3); PSE 497 (1-2); technical electives (13).

Urban Forestry

Faculty Adviser J. Alan Wagar (206) 543-0389

Course Work for Prospective Students: BIOL 101-102; CHEM 120, 220; ECON 200; ENGL 131; GEOL 101; Q SCI 291 or MATH 124; POL S 202; SP CMU 220; introductory statistics course such as Q SCI 381.

General Education Requirements: English composition—5 credits from the University list (ENGL 131 is preferred); writing-intensive courses—7 credits minimum to include UHF 495 (5 credits) and 2 credits of additional writing-intensive course work; Visual, Literary, & Performing Arts—10 credits to include SP CMU 220 (5) or other similar College-approved course from the University VLPA list and 5 additional credits from the University VLPA list; Individuals & Societies—10 credits to include ECON 200 (5) and POL S 202 (5) or other similar College-approved course from the University I&S list.

Requirements Expected to Be Taken During the First Two Years: Q SCI 291 (5 credits) or MATH 124 (5); Q SCI 381 (5); UHF 201 (3); UHF 202 (3); BIOL 101 (5); BIOL 102 (5); PSYCH 102 (5); CHEM 120 (5); CHEM 220 (5); GEOL 101 (5); free electives (13).

Upper-Division (Major) Requirements: UHF 331 (3 credits); UHF 411 (3); UHF 431 (5); UHF 444 (5); UHF 445 (5); UHF 451 (5); UHF 470 (5); UHF 471 (3); ESC 210 (4); ESC 311 (3); F M 270 (3); BOTANY 354 (5); L ARCH 322 (3); restricted electives (36).

Minor

Minor Requirements: Minimum 25 credits with a grade of at least 2.0 in each course, to include UHF 331 (3 credits), and either UHF 201 (3) or UHF 471 (3), plus 19 credits from the following: UHF 202 (3), UHF 406 (3), UHF 411 (3), UHF 431 (5), UHF 420 (5), UHF 445 (5), UHF 451 (5), UHF 461 (3), UHF 470 (5), UHF 473 (5), UHF 475 (5).

Wildlife Science

Faculty Adviser David A. Manuwal (206) 543-1585

Course Work for Prospective Students: BIOL 101-102; BOT 113; CHEM 120, 220; ECON 200; ENGL 131; PHYS 114, 117; Q SCI 291, 292 or MATH 124, 125; SP CMU 220; computer programming course; introductory statistics course such as Q SCI 381.

General Education Requirements: English composition—5 credits from the University list (ENGL 131 is preferred); writing-intensive courses—8 credits minimum to include ESC 494 (3 credits) and ESC 496 (5); Visual, Literary, & Performing Arts—10 credits to include SP CMU 220 (5) or other similar College-approved course from the University VLPA list; Individuals & Societies—10 credits minimum to include ECON 200 (5) or other similar College-approved course from the University I&S list and 5 additional credits from the University I&S list and 5

Requirements Expected to Be Taken During the First Two Years: ESC 101 (1 credit); ESC 210 (4); ESC 221 (6); Q SCI 291, 292 (5, 5) or MATH 124, 125 (5, 5); Q SCI 381 (5); PHYS 114 (4); PHYS 117 (1); CHEM 120 (5); CHEM 220 (5); BIOL 101 (5); BIOL 102 (5); BOTANY 113 (5); GENET 371 (5) or College-approved substitute; free electives (5).

Upper-Division (Major) Requirements: ESC 322 (3 credits); ESC 326 (3); F M 370 (3); ESC 350 (4); ESC 351 (5); ESC 450 (5); ESC 455 (1, 1), to be taken twice; Q SCI 477 (5); Q SCI 482, 483 (5, 5); restricted electives (41).

Minor

Minor Requirements: Minimum 25 credits with a grade of at least 2.0 in each course, to include ESC 101 (1 credit), ESC 322 (3) or another ecology course approved by the faculty adviser, ESC 326 (3), ESC 350 (4), ESC 450 (5), ESC 455 (1, 1) to be taken twice. 7 credits selected from ESC 451 (3), ESC 452 (3), ESC 453 (5), ESC 454 (3), ESC 456 (3), F M 328 (4), FISH 475 (3), FISH 476 (2), ZOOL 362 (5), ZOOL 451 (5).

Graduate Programs

Graduate Program Coordinator 123G Anderson, Box 352100 (206) 685-0881 cfradv@u.washington.edu

Graduate programs in forest resources are designed to accommodate a wide range of education and career objectives. A student may concentrate on development of advanced professional skills and knowledge or on exploration of sciences basic to forest resources.

Graduate programs offered in forest resources lead to the degrees of Master of Forest Resources, Master of Science, and Doctor of Philosophy. Graduate students may center their graduate study in one of the special fields of study within the College divisions.

Master of Forest Resources

The Master of Forest Resources degree is a professional degree offered for students who wish to acquire a greater competence in a specific subject area of forest resources. This is a non-thesis option open to professionals who are returning to study and to obtain expertise in areas such as silviculture and urban horticulture. Interested persons should contact the graduate program coordinator to determine eligibility for this degree program.

Master of Science

The Master of Science degree is a learned degree, often precursory to the Doctor of Philosophy degree. Some areas of study allow non-thesis work while most areas of study require the completion of a thesis. The non-thesis program requires at least 6 credits of research; the thesis program requires a minimum of 9 credits of research. A foreign language is not required. Students must complete a set of core courses prescribed for the major area of study.

Doctor of Philosophy

The Doctor of Philosophy degree may be preceded by education in either forest resources or another discipline. The program comprises an appropriate selection of core courses in forest resources and in the related natural and social sciences. The program requires passage of the General Examination in forest resources; research, analysis, and interpretation; and completion of a dissertation. A minimum of two years of residence at the UW also is required. The time necessary to complete the degree requirements depends upon the thoroughness and applicability of prior course work. Reading proficiency in one foreign language may be required by the supervisory committee when the language is essential to the student's program of study.

Mid-Career Education

The College has established a certificate program in natural resources to provide mid-career education for professionals. Participants in the mid-career program take courses to prepare themselves for new or broader responsibilities in their current career. In this certificate program, courses can be taught in a more flexible time arrangement to meet the specific career and scheduling needs of participants. Additionally, a variety of programs are offered to enhance professional education in natural resources. Interested natural resource professionals should contact the College of Forest Resources Continuing and Public Education Office, (206) 543-0867.

Graduate Areas

Graduate education is offered through the Division of Management and Engineering and the Division of Ecosystems, Horticulture and Conservation. Major areas of study and emphasis include paper science and engineering (wood chemistry, polymer and fiber science); forest engineering; forest hydrology; forest products marketing; forest economics; forest ecosystem analysis (forest ecosystems, forest ecology, forest genetics, biotechnology, streamside/riparian management, tree physiology, and forest soils); quantitative resources management (biometry, quantitative management, aerial photogrammetry/remote sensing); silviculture and forest protection (silviculture, forest entomology, fire management, forest pathology); social sciences (forest land use planning, forest policy and law, forest sociology and leisure studies); wildlife science; and urban horticulture (environmental horticulture, horticultural taxonomy, horticultural physiology, wetlands management)

In all areas of study, the College maintains a close working relationship with faculties of other colleges and schools throughout the University, including service on graduate committees. Faculty advisers assist graduate students in determining those courses in other departments on campus which will lend to students' intended areas of expertise.

Admission Qualifications, Background

A student who intends to work toward an advanced degree must apply for admission to the Graduate School and must meet the requirements set forth by the Graduate School and by the College of Forest Resources.

Basic requirements for admission to the Graduate School are a baccalaureate degree from an institution of recognized standing, a minimum GPA of 3.00 in the junior and senior years of college work, approval of the Dean of the Graduate School, and approval of the faculty of the College.

An applicant may obtain a graduate admission form and supplemental admission and reference forms from the College of Forest Resources Office of Student Services, 116 Anderson, (206) 543-7081, cfradv@u.washington.edu.

The Graduate Record Examination (GRE) general test is required, and test scores must be submitted to the College by the applicant. Students interested in forestproducts marketing may take the Graduate Management Admission Test (GMAT) or the GRE.

In addition, international students are required to take the Test of English as a Foreign Language (TOEFL). International students hoping to obtain teaching assistantships must also complete the Test of Spoken English (TSE). Please Refer to the Graduate School section for minimum scores and exceptions.

Upon enrollment, the student is assigned a graduate program committee that is responsible for guidance in the early stages of the graduate program, to be followed by more formal committees as the student's program develops.

Applicants for the College are considered quarterly within the enrollment limitations for the College and the available faculty and workload limitations within the specific program area of study selected. Students with both undergraduate forestry degrees and other related fields are considered, although a prior forestry degree is normally expected of applicants for the professional Master of Forest Resources degree in silviculture.

Financial Aid

The College has available a limited number of appointments for teaching and research assistantships. Teaching and research responsibilities allow time to pursue a full academic load. Students may contact faculty about research assistantships or the Office of Student Services about teaching assistantships.

Fellowships and scholarships without teaching or research obligations are also available. Requests for financial aid must be submitted by February 1 for priority consideration for the following academic year. Applications are in the College's admissions packet which may be requested from the Office of Student Services.

Teaching and Research Centers

Center for Quantitative Science in Forestry, Fisheries, and Wildlife

Director

B. Bruce Bare 246 Fisheries Center

The Center for Quantitative Science in Forestry, Fisheries, and Wildlife is an intercollege academic unit sponsored by the Office of Undergraduate Education, the School of Fisheries of the College of Ocean and Fishery Sciences, and the College of Forest Resources. The Center offers a comprehensive program of study in mathematics and statistical methods as applied to problems in biology, ecology, the environment, and renewable-resource management for undergraduate students. The faculty of the center include members of the College of Forest Resources and the School of Fisheries, as well as other units. The Center offers a minor program designed to give undergraduates majoring in biology, ecology, the environment, and renewable-resource management programs a thorough grounding in relevant statistical and mathematical modeling methodology.

Minor

Minor Requirements: Minimum 26 credits with a grade of at least 2.0 in each course, to include Q SCI 291 (5 credits), Q SCI 292 (5), Q SCI 381 (5), Q SCI 482 (5), and 6-10 credits from two 300- or 400-level Q SCI courses to include one course from Q SCI 480 (3), Q SCI 483 (5), or Q SCI 486 (3). MATH 124 and 125 may be substituted for Q SCI 291 and 292.

Center for International Trade in Forest Products

Director

Bruce R. Lippke 123J Anderson

The Center for International Trade in Forest Products (CINTRAFOR) was established in 1984 to respond to opportunities and problems relating to the export and import of wood products. Through programs of research, education, and outreach, CINTRAFOR works to improve knowledge of export trade and to train professionals competent in the analysis and interpretation of trade problems, issues, and policies. The Center serves as a focal point for dissemination of information on world trade in forest products by means of seminars, conferences, workshops, and publications.

CINTRAFOR activities involve the cooperative effort of the forest-products industry, state and federal organizations, and other organizations at the University such as the School of Business Administration and the Northwest Policy Center. The research undertaken by CINTRAFOR includes country-market analyses; a global competitive-trade model; new product and market opportunities; and studies of the linkage between forest-products trade and environmental impacts, regional socioeconomic stability, and policy impact analyses.

Students interested in participating in specific research activities sponsored by CINTRAFOR may enroll for study in graduate programs in one of the College's two academic divisions or in programs offered by other academic divisions on campus.

Center for Streamside Studies

Director

Susan M. Bolton 244 Bloedel

The Center for Streamside Studies (CSS) was established in 1987 as a joint effort of the College of Forest Resources, the College of Ocean and Fishery Sciences, and the Center for Quantitative Science in Forestry, Fisheries, and Wildlife. CSS provides information for the resolution of management issues related to the production and protection of forest, fish, wildlife, and water resources associated with the streams and rivers in the Pacific Northwest.

The Center conducts research activities related to the understanding of ecological and physical processes and their relation to governmental regulations. Projects are solution-oriented, centering around biological, physical, and social aspects of management issues. Cooperative projects are undertaken with state and federal agencies, tribes, private industry, and national and international research institutions, and involve faculty and students of the College of Forest Resources, the College of Ocean and Fishery Sciences, the College of Engineering, and the College of Arts and Sciences.

To provide interdisciplinary training necessary to deal with the management of interacting resources, CSS conducts symposia, workshops, conferences, and seminar series as forums for resource-conflict discussion and resolution. Students interested in participating in specific research activities sponsored by CSS may enroll for study in graduate programs in one of the College of Forest Resources' two academic divisions or in programs offered by other academic units on campus.

COLLEGE OF FOREST RESOURCES / FACULTY 349

Olympic Natural Resources Center

Director

John M. Calhoun

The mission of the Olympic Natural Resources Center (ONRC) is to conduct research and education on natural-resource-management practices that integrate ecological and economic values. Created by the Washington State Legislature in 1989, the Center conducts biological, physical, economic, and socialscience research in both terrestrial and coastal/marine systems, focusing on its strategic priorities. The center's programs aimed at pragmatic management solutions span a spectrum from developing new knowledge through applied research to education and outreach.

Much of the Center's work is conducted cooperatively with other research institutions, state and federal agencies, resource owners, and interest groups. The Center is housed in facilities at Forks, Washington, on the Olympic Peninsula. It is well suited for education, research, and conference activities. The natural resources of the area are a major focus of the work of the Center. The Center is jointly administered by the College of Forest Resources and the College of Ocean and Fishery Sciences.

Center for Urban Horticulture

Director

Clement W. Hamilton 119 Merrill

The Center for Urban Horticulture is dedicated to research, teaching, and public service concerning the selection, management, and role of plants and of ecosystems in urban landscapes. Urban landscapes landscapes that are subject to direct impacts of human activity—include city streets, urban parks, public gardens, residential areas, and natural (and naturalized) areas bounded by commercial and residential development. Urban horticulture concerns those landscapes as they are used for aesthetic amenity, for amelioration and control of the physical environment, for public and professional education, for conservation of biodiversity and of natural resources, and for public recreation.

Faculty in four colleges—Forest Resources, Arts and Sciences, Architecture and Urban Planning, and Engineering—are affiliated formally and informally with the Center, participating in urban horticultural research, teaching, and collections curation. The Center serves as a primary focus of the UW's curricula in urban environmental studies, which comprise the most comprehensive program in the United States.

Faculty

Professors

Agee, James K. * 1982; PhD, 1973, University of California (Berkeley); management of natural systems, forest ecology, fire ecology.

Allan, G. Graham * 1966; PhD, 1956, University of Glasgow (UK); DSc, 1971, University of Strathclyde (UK); fiber and polymer science, creativity and innovation.

Ammirati, Joseph F. * 1979, (Adjunct); MA, 1967, San Francisco State; PhD, 1972, University of Michigan; mycology, taxonomy and ecology of fungi.

Bare, B. Bruce * 1969; MS, 1965, University of Minnesota; PhD, 1969, Purdue University; harvest scheduling, biometry, forest land management, taxation, finance, management science. Bethel, James S. * 1962, (Emeritus); PhD, 1947, Duke University; wood science, wood energy, international forestry.

Bradley, Gordon A. * 1972; PhD, 1986, University of Michigan; forest land use planning, recreation site planning and design.

Briggs, David G. * 1973; PhD, 1980, University of Washington; operations research in forest products industries.

Brubaker, Linda B. * 1973; PhD, 1973, University of Michigan; dendrochronology, forest ecology, quaternary paleocology.

Bryant, Benjamin S. * 1949, (Emeritus); DF, 1951, Yale University; wood utilization technology, wood gluing, plywood and board technology.

Cole, Dale W. * 1958, (Emeritus); MS, 1957, University of Wisconsin; PhD, 1963, University of Washington; mineral cycling in forest ecosystems, forest soils.

Conquest, Loveday L. * 1978, (Adjunct); PhD, 1975, University of Washington; statistics in forestry, fisheries, and environmental pollution monitoring.

Dowdle, Barney * 1962; PhD, 1962, Yale University; markets for timber and forest products, public forest land management.

Edmonds, Robert L. * 1973; PhD, 1971, University of Washington; forest soil microbiology, biology of forest diseases, aerobiology.

Edwards, John S. * 1967, (Adjunct); PhD, 1960, Cambridge University (UK); arthropod neurobiology, insect physiology and development, tundra and alpine biology.

Erickson, Harvey D. 1947, (Emeritus); PhD, 1937, University of Minnesota; wood science and technology.

Ford, E. David * 1985; PhD, 1968, University College, London (UK); forest ecology and ecophysiology, modeling, spatial statistics.

Franklin, Jerry F. * 1986; PhD, 1966, Washington State University; forest ecosystem analysis, vegetation patterns, tree mortality in natural landscapes.

Fridley, James * 1988; PhD, 1984, University of Washington; forest engineering systems design, interactive computer simulation.

Fritschen, Leo J. * 1966, (Emeritus); PhD, 1960, Iowa State University; biometeorology, micrometeorology, measurement and instrumentation of the environment.

Gallucci, Vincent * 1972, (Adjunct); PhD, 1971, North Carolina State University; biomathematics and population dynamics.

Gara, Robert I. * 1968; PhD, 1964, Oregon State University; bark beetle ecology, forest insect behavior, international forestry.

Greulich, Francis E. * 1977; PhD, 1976, University of California (Berkeley); forest engineering, statistics, operations research.

Gustafson, Richard Roy * 1986; PhD, 1982, University of Washington; process modeling and optimization, fiber composites.

Hanley, Donald P. * 1983; PhD, 1981, University of Idaho; extension forestry, small-forest management, forestry continuing education.

Hatheway, William H. * 1969, (Emeritus); PhD, 1956, Harvard University; quantitative ecology, physiological ecology, tropical forestry.

Hinckley, Thomas M. * 1980; PhD, 1971, University of Washington; forest tree physiology and autecology, subalpine ecosystems, water stress problems.

Hrutfiord, Bjorn F. * 1959, (Emeritus); PhD, 1959, University of North Carolina; wood extractive chemicals, air and water quality in forest products industries.

Johnson, Jay A. * 1983; PhD, 1973, University of Washington; mechanical and physical properties of wood and wood composite materials, wood quality. Jorgensen, Jens E. * 1968, (Adjunct); DSc, 1969, Massachusetts Institute of Technology; systems analysis, automation, design, manufacturing, forest engineering.

Lee, Robert G. * 1978; PhD, 1973, University of California (Berkeley); natural resource sociology, multiresource management, development/change of forestry institutions.

Leney, Lawrence * 1960, (Emeritus); PhD, 1960, State College of Forestry at Syracuse; wood anatomy, microtechniques, machining wood, photomicrography, seasoning and preservation of wood.

Leopold, Estella B. * 1976, (Adjunct); PhD, 1955, Yale University; paleoecology, pollen and seed analysis, late Cenozoic environment.

Lettenmaier, Dennis P. * 1973, (Adjunct); PhD, 1975, University of Washington; systems analysis and water resources planning.

Lippke, Bruce R. * 1990; MSEE, 1959, New Mexico State University; MSIE, 1966, University of California (Berkeley); international trade and environmental linkages, investment analysis, economics of forest industry.

Manuwal, David * 1972; PhD, 1962, University of California (Los Angeles); avian ecology, effects of forest management on birds.

McCarthy, Joseph L. * 1941, (Emeritus); PhD, 1938, McGill University (Canada); thermodynamics, lignin and cellulose, chemistry, pulp and paper science, biochemical engineering.

McKean, William T. * 1979; PhD, 1968, University of Washington; pulp and paper science, chemical engineering.

Naiman, Robert J. * 1988; PhD, 1974, Arizona State University; forest stream ecosystems, aquatic land-scape dynamics.

Oliver, Chadwick D. * 1975; PhD, 1975, Yale University; silviculture and forest ecology, culture of single- and mixed-species forest stands.

Peterson, David L. * 1989; PhD, 1980, University of Illinois; environmental stress on tree growth and forest ecosystems, subalpine forests, global climate change.

Pickford, Stewart G. * 1976; PhD, 1972, University of Washington; forest fire science, wildland fire management.

Richey, Jeffrey E. * 1973; PhD, 1973, University of California (Davis); quantitative problems of aquatic ecosystems, primary Amazon River, limnology.

Ricker, Neil L. * 1978, (Adjunct); PhD, 1978, University of California (Berkeley); chemical process design, simulation, and control.

Schaeffer, Walter H. 1952, (Emeritus); PhD, 1952, University of Washington; forestry.

Schiess, Peter * 1975; PhD, 1975, University of Washington; forest engineering, mechanical harvest operations, forest road design and construction.

Schreuder, Gerard Fritz * 1971; PhD, 1968, Yale University; statistical analysis in resource economics, international forestry, trade, aerial photos.

Scott, David R. M. * 1955, (Emeritus); PhD, 1950, Yale University; silviculture, forest ecology.

Sharpe, Grant William * 1966, (Emeritus); PhD, 1956, University of Washington; wildland recreation, interpretation and management of recreation areas.

Skalski, John R. * 1987, (Adjunct); PhD, 1985, Cornell University; environmental sampling and effects assessment on wild populations, parameter estimation.

Sprugel, Douglas George * 1984; PhD, 1974, Yale University; community and ecosystem ecology, tree ecophysiology, subalpine systems.

Stenzel, George 1949, (Emeritus); MF, 1939, Yale University; forest resources.

Stettler, Reinhard F. * 1963, (Emeritus); PhD, 1963, University of California (Berkeley); genetics of forest tree populations, biotechnology, biomass production.

Taber, Richard D. * 1968, (Emeritus); PhD, 1951, University of California (Berkeley); wildlife science.

Thomas, David P. 1950, (Emeritus); MF, 1948, University of Washington; economics and technology of utilizing forest crop.

Thorud, David B. * 1981; MS, 1960, PhD, 1964, University of Minnesota; watershed management, international forest policy and development.

Tukey, Harold B. * 1980, (Emeritus); PhD, 1958, Michigan State University; urban horticulture, horticultural physiology.

Wagar, John Alan * 1988, (Research); PhD, 1961, University of Michigan; urban forestry, urban forest inventory and cost-effective management.

Waggener, Thomas R. * 1969; PhD, 1966, University of Washington; policy and economics, regional impact analysis, marketing and international trade in forest products.

Wissmar, Robert C. * 1972; PhD, 1972, University of Idaho; ecology.

Wott, John A. * 1981; PhD, 1968, Cornell University; urban horticulture, public programs in horticulture, public gardens, arboreta.

Associate Professors

Bolton, Susan M. * 1992; PhD, 1991, New Mexico State University; hydrology, watershed management.

Bradshaw, Harvey D. * 1984, (Research); PhD, 1984, Louisiana State University; plant molecular biology and genetic modification of poplars.

Chalker-Scott, Linda 1997; PhD, 1988, Oregon State University; plant selection, plant management, urban ecology, plant stress physiology.

Eastin, Ivan * 1987; PhD, 1992, University of Washington; marketing strategies and international trade of forest products.

Ewing, Kern * 1990; PhD, 1982, University of Washington; wetland plant ecology, urban ecology, ecosystem management.

Ganter, Mark * 1986, (Adjunct); PhD, 1985, University of Wisconsin; solid modeling, computer graphics, kinematics and automated manufacturing.

Grue, Christian E. * 1989, (Adjunct); PhD, 1977, Texas A&M University; wildlife toxicology, wildlife and fisheries science.

Halpern, Charles * 1991, (Research); PhD, 1987, Oregon State University; plant community ecology, plant succession, montane/subapline meadow ecology.

Hamilton, Clement Wilson * 1985; PhD, 1985, Washington University; landscape plant selection, taxonomy of horticultural and tropical plants.

Harrison, Robert B. * 1987; PhD, 1985, Auburn University; forest soil chemistry and fertility, mineral cycling.

Henry, Charles L. * 1982, (Research); PhD, 1989, University of Washington; recycling organic wastes as soil amendments.

Hodgson, Kevin T. * 1991; PhD, 1986, University of Washington; surface and colloid science, papermaking chemistry, secondary fiber recycling.

Horner, Richard R. * 1981, (Adjunct Research); PhD, 1978, University of Washington; wetlands, conservation and storm water management.

Perez-Garcia, John * 1990; MS, 1982, University of Puerto Rico (Mayaguez); DF, 1991, Yale University; analysis of trade policy, global trade modeling.

Raedeke, Kenneth J. * 1981, (Research); PhD, 1979, University of Washington; wildlife biology and conservation, population dynamics.

Robertson, Iain M. * 1982, (Adjunct); MLA, 1975, University of Pennsylvania; designing with plants, planning and design of botanical gardens/arboreta.

Rustagi, Krishna P. * 1973, (Emeritus); PhD, 1973, Yale University; operations research and statistical applications in resource management, forest inventory.

Strand, Stuart E. * 1982, (Research); PhD, 1982, Pennsylvania State University; forest biotechnology, environmental pollution control.

VanBlaricom, Glenn R. * 1992, (Adjunct); PhD, 1978, University of California (San Diego); aquatic wildlife, ecology of marine communities, wildlife-fisheries interactions.

West, Stephen D. * 1979; PhD, 1979, University of California (Berkeley); wildlife ecology and management, population dynamics.

Zabowski, Darlene * 1992; PhD, 1988, University of Washington; forest soils and their productivity, soil genesis, biogeochemical cycling of soils.

Assistant Professors

Edwards, Richard T. * 1993, (Research); PhD, 1985, University of Georgia; aquatic ecology, biogeochemistry.

Jacobs-Young, Chavonda J. 1995, (Acting); MS, 1992, North Carolina State University; wood/paper science.

Marzluff, John M. 1997; PhD, 1987, Northern Arizona University; wildlife habitat management, avian ecology, forested ecosystems.

Paun, Dorothy Ann * 1993; PhD, 1993, University of Oregon; marketing of forest products, international marketing.

Reichard, Sarah E. 1997; PhD, 1994, University of Washington; conservation biology of plants, invasive non-native plants, reintroduction of rare plants.

Ryan, Clare 1997; PhD, 1996, University of Michigan; natural resource management, policy, and law; environmental conflict management.

Turnblom, Eric * 1994; MSc, 1986, University of British Columbia (Canada); PhD, 1994, University of Minnesota; forest biometrics; growth and yield.

Wasser, Samuel K. * 1982, (Adjunct); PhD, 1981, University of Washington; behavioral ecology, endocrinology, conservation genetics and reproductive biology.

Wolf, Kathleen L. 1994, (Research); PhD, 1993, University of Michigan; urban forest environment, behavior.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

Students taking undergraduate and graduate courses, structured or unstructured, that require field trips, special laboratory supplies, or special material duplications are required to pay appropriate amounts to cover such expenses. If a student fails to pay, the transcript may be withheld and the degree may not be conferred.

CFR 101 Forests and Society (5) NW Bare, Edmonds, Gara Survey course covering forest ecosystems of the world, history of forestry and forest conservation, how forest ecosystems function, wildlife in forests, environmental issues in forestry, forest management, economics and products, and new approaches to forest management. Open to majors and nonmajors. Offered: AWSpS.

CFR 250 Introduction to Geographic Information Systems in Forest Resources (5) NW, QSR Hurvitz, Schiess Applications of GIS tech, nology to forest science and management. Fundamentals of GIS systems: data sources, preprocessing, map analysis, output; remote sensing as a source of GIS data, image analysis, and classification. Emphasis on GIS as a source of management and technical information requests. Offered: AW.

CFR 400 Natural Resource Conflict Management (2) I&S/NW Ryan Introduction to the causes, dynamics, and consequences of natural resource conflicts as well as the range of procedural interventions used to manage conflict. Specific cases of environmental conflict and alternative dispute resolution procedures are examined. Emphasis on developing skills to effectively analyze, manage, and resolve

CFR 450 Senior Planning Project (3) Ford How to choose a topic, develop a written plan, prepare for field or laboratory work, and write the senior project. Projects may be related to resource management, conservation, urban forestry, or scientific research. Assistance provided in selection of faculty project coordinator. Offered: A.

Courses for Graduates Only

natural resource conflicts. Offered: W.

CFR 500 Graduate Orientation Seminar (1) Introduction to graduate study. Presentations on College resources and services and current research in each College division. Division chairs will share teaching responsibilities. Credit/no credit only. Offered: A.

CFR 529 Topics in Streamside Studies (1) Discussion by invited speakers on current research related to streamside studies. Offered: jointly with FISH 529; AWSp.

CFR 590 Graduate Studies (1-5) Study in fields for which there is not sufficient demand to warrant the organization of regular courses. Offered: AWSpS.

CFR 600 Independent Study or Research (*) Offered: AWSpS.

CFR 700 Master's Thesis (*) Offered: AWSpS.

CFR 800 Doctoral Dissertation (*) Offered: AWSpS.

Ecosystem Science and Conservation

Courses for Undergraduates

ESC 101 Introduction to Wildlife Science (1) NW Manuwal Survey of historical development, present status and future of professional field of wildlife science and how it interacts with other disciplines. Natural resource agency speakers discuss how their agencies work and administer wildlife conservation programs. Students discuss wildlife science with faculty and graduate students. Credit/no credit only. Offered: A.

ESC 110 The Terrestrial Environment (5) NW Harrison Covers the importance of the terrestrial environment in society with particular emphasis on worldwide distribution and uses of soil and vegetation, the role of soil in natural and man-made environments, and causes of environmental degradation. Introduction to ethics of soil conservation. Offered: A.

ESC 200 Trees in Our Environment (5) NW *Brubaker* Students learn form and function of fifty to sixty tree species as well as the principles and concepts of biology. Students also develop an awareness of trees as integral to the human environment through lectures, laboratory demonstrations, and field studies in the Arboretum. Offered: Sp.

ESC 202 Global Changes and Forest Biology (3/5) NW *Hinckley* Ecological and biological effects of atmospheric pollutants, acid precipitation, and climate change on forest trees and ecosystems. Potential climate changes are compared to current and historical climates. Students taking this course for 5

credits must enroll in optional laboratory which introduces major tree species, old-growth forests, small group problem analysis. Offered: W.

ESC 210 Introductory Soils (4) NW Harrison, Zabowski Physical, chemical, and biological properties that affect distribution and use patterns of this important ecosystem component. Includes soil morphology and genesis, plant nutrition and nutrient cycling, soil water, microbiology, and application of soil properties to environmental concerns. One Saturday field trip. Offered: ASp.

ESC 221 Dendrology and Autecology (6) NW *Brubaker, Hinckley* Introduction to the systematics, identification, life histories, genetics, and physiological ecology of forest trees and shrubs. Field trips to regional forest ecosystems. Includes one hour of technical writing instruction per week. Offered: A.

ESC 250 Wildlife and Society (5) I&S/NW Covers ecological processes, wildlife habitats, conservation theory, and historical as well as contemporary issues in wildlife conservation.

ESC 300 Internship in Ecosystem Science and Conservation (3-5, max. 8) Internship experience with a public agency or private company. Preparation of professional report and presentation of oral report. Offered: AWSpS.

ESC 311 Soils and Land Use (3) NW Harrison Intended for students concerned with environmental problems in the Puget Sound basin; also for those who intend to become professionally involved in landplanning decisions. Focus is on the significance of soils in understanding environmental problems and in promoting intelligent land-use decisions. Basic concepts of soil systems are presented, stressing those aspects important in making land-planning decisions. Offered: W.

ESC 320 Natural Resource Issues: Old-Growth and Forest Management (5) I&S/NW Franklin Biological and social elements of current conflicts, especially those associated with old-growth and its disposition. Ecology of Pacific Northwest forests and landscapes, history of forest practices, application of emerging science, proposed alternative practices and policies, including analysis of current proposal and its predecessors and successors. Open to majors and nonmajors. Offered: Sp.

ESC 322 Forest Ecosystems (3) NW Agee, Edmonds, Gara Introduction to forest ecosystems, principles of forest ecology, vegetation classification, history of development of Pacific Northwest vegetation, succession, competition, nutrient cycling, ecology and classification of decomposers and insects, use of ecological information in forest management. One Saturday field trip required. Offered: W.

ESC 326 Wildlife Habitat and Silviculture (3) NW Agee Principles of wildlife habitat in forest and range ecosystems. Silvicultural principles applicable to wildlife conservation and management. Prerequisite: ESC 322; ESC 350. Offered: Sp.

ESC 333 Plant Communities: Resilience and Restoration (5) NW Leopold Biological and ecological effects of human impact on native plant communities. Effects of grazing, timber removal, habitat draining and filling, fire control, and application of chemicals. Potential for ecological restoration of plant communities. Field trips. Prerequisite: either BIOL 102 or BIOL 203; BOTANY 113. Offered: jointly with BIOL/ BOTANY 333; Sp.

ESC 350 Wildlife Biology and Conservation (4) NW Marzluff Wildlife ecology and population biology, and interrelationships between wild animals and humans, including encouragement of wildlife population growth and productivity, control of pest populations, and preservation of endangered species with emphasis on forest environments and forest faunas. Open to nonmajors. Prerequisite: either BIOL 102, BIOL 202, or BIOL 203, any of which may be taken concurrently. Offered: W.

ESC 351 Wildlife Research Techniques (3) NW *Agee, Manuwal, West* Scientific approaches to the field study of wildlife populations and habitat, including basic considerations in experimental design and development of scientific papers. Emphasis is on direct experience with current field techniques used in the study of vertebrate populations and habitat. Prerequisite: ESC 326 which may be taken concurrently. Offered: Sp.

ESC 410 Forest Soils and Site Productivity (5) NW Harrison Considers unique properties and processes occurring in forest soils throughout the world with emphasis on soils of Pacific Northwest and aspects of forest soils that affect productivity. Two allday Saturday field trips and one Saturday-Sunday field trip required. Recommended: ESC 210. Offered: A.

ESC 411 Forest Soil Microbiology (4) NW Edmonds Soil organisms in forest ecosystems, decomposition, nutrient cycling. N transformation, mycorrhizae, effects of forest management. Recommended: ESC 210. Offered: even years; A.

ESC 412 Field Survey of Wildland Soils (3) NW Harrison, Henry, Zabowski Study of soils in remote sites about which little information is available. Focus is field trip in Cascade Mountains just north of Glacier Peak with prior study of hiking area, soil and ecosystem changes, and wilderness use. Offered: S.

ESC 413 Soil Genesis and Classification (5) NW *Zabowski* Soil formation, morphology, classification, and relationship to the environment. Labs and weekend field trip illustrate properties and processes of forest and grassland soils in Washington. Recommended: ESC 210. Offered: Sp.

ESC 414 Forest Soil Fertility and Chemistry (3) NW Harrison Tree growth depends, in part, on the interaction between chemical and biological activities within a given soil: the biological and chemical parameters that influence the growth; soil solution chemistry and surface reactions; reactions and processes that control essential plant nutrient levels and forms in soil solutions. Recommended: ESC 210. Offered: Sp.

ESC 417 Recycling: Ethics, Opportunities, and Realities (3) NW Henry Introductory course on recycling as a current and future way of life in terms of waste management. Introduction to the ways waste is currently managed and discussion of public attitudes and perceptions of waste management and recycling, current and future opportunities for waste management, and true costs of recycling. Offered: W.

ESC 418 The Science of Composting (3) NW Henry Introduction to composting as a timely tool for waste management. Designed to give an understanding of the science of composting, an overview of the processes from large-scale composting, an understanding of what acceptable contaminant levels are, and an evaluation of the benefits of compost. Offered: A.

ESC 419 Land Use and Residuals Management (3) NW *Henry* Introduction to the use of soils for residuals management and to the use of residuals as soil amendments. Includes science of land application, opportunities and considerations of land application, management of nutrients and contaminants, and benefits of organic soil amendments. Offered: Sp.

ESC 421 Dendrochronology (4) NW Brubaker, Peterson Analysis of important physiological and environmental factors controlling annual tree-ring growth and a critical review of the applications of tree-ring analysis to study forest productivity, watershed hydrology, forest fires, insect epidemics in relation to yearly weather conditions. Laboratory and field exercises construct tree-ring chronologies to study environmental histories of selected forest stands. Prerequisite: BOTANY 113. Offered: odd years; W.

ESC 432 Forest Pathology (4) NW Edmonds Ecology and management of forest diseases. Abiotic diseases caused by air pollution, adverse weather, and biotic diseases caused by bacteria, fungi, viruses, parasitic plants, and nematodes. Forest health. Disease management including silvicultural, chemical, and biological control. Disease modeling. Offered: odd years; A.

ESC 440 Theory and Case Studies of Ecosystem Management (5) NW Franklin Applying ecological principles in ecosystem management at stand and landscape levels based on observations of problems and practices during a 10-12 day field trip held prior to beginning of quarter. Students observe innovative forest management programs and experiments and prepare written and oral scientific analyses of specific topics. Offered: A.

ESC 441 Landscape Ecology (5) NW Franklin Basic landscape ecology concepts, including patches, corridors, networks, spatial dynamics; island biogeographic principles; landscape analysis methods; landscape models. Applications of landscape ecology in resources management (e.g., cumulative effects, cutting, patterns, anadromous fisheries, management of wildlife populations, and open-space planning). Recommended: ESC 326. Offered: W.

ESC 442 Geographic Information System Applications to Forest Resources (3) NW Experience with Geographic Information System (GIS) applications as they relate to forest resource management and ecosystem management including remote sensing, data integration, and modeling. Offered: W.

ESC 450 Wildlife Ecology and Conservation (5) NW *West* Covers advanced principles of wildlife ecology such as habitat selection, population viability, and landscape ecology, and illustrates how they apply to wildlife conservation problems with terrestrial, aquatic, and marine wildlife. Students must share costs of field trips. Prerequisite: ESC 350. Offered: W.

ESC 451 Biology and Conservation of Birds (3) NW Manuwal Major principles of natural history, avian reproductive biology, population ecology, and national and international conservation strategies for both hunted and unhunted birds. Emphasis on western United States. Prerequisite: either BIOL 102, BIOL 202, or BIOL 203, any of which may be taken concurrently. Offered: odd years; A.

ESC 452 Field Ornithology (3) NW Manuwal Students learn field identification skills and are introduced to field methodologies through required indoor labs, field trips, and field exercises. Exercises include study of survey techniques, feeding ecology, and behavior. Students are required to share field trip costs. Prerequisite: either BIOL 102, BIOL 202, or BIOL 203, any of which may be taken concurrently. Offered: odd years; A.

ESC 453 Biology and Conservation of Mammals (5) NW *West* Introduction to mammalian evolution, morphology, reproduction, population biology, ecology, and conservation. Lectures address mammals worldwide. Laboratories and fieldwork focus on mammals of Pacific Northwest. Laboratories and two weekend field trips required. Students share travel costs. Prerequisite: ESC 350. Offered: even years; A.

ESC 454 Aquatic Wildlife Ecology (3) NW Grue, Manuwal, VanBlaricom, West Conceptual examination of relationships of aquatic wildlife populations (mammals, birds, reptiles, amphibians) to one another and to the aquatic realm. Application of conceptual background to contemporary high-profile issues in aquatic wildlife ecology, conservation, and

management. Included is exposure to primary technical literature in the field. Offered: jointly with FISH 454; even years; Sp.

ESC 455 Wildlife Seminar (1, max. 4) NW Manuwal, West Discussion of current research and application in wildlife biology and conservation. Credit/no credit only. Prerequisite: ESC 350. Offered: AW.

ESC 456 Dynamics of Managed Wildlife Populations (3) NW Raedeke Advanced principles of managed wildlife populations dynamics. Application of harvest management models and regulations applied to ungulates, upland game birds, waterfowl, furbearers, carnivores. Topics include population models, compensatory mortality, predation role, sustained yield harvest models, measured populations characteristics, computer simulation models with emphasis on management issues. Prerequisite: ESC 350. Offered: W.

ESC 457 Introduction to Wildlife Toxicology (3) NW Overview of wildlife toxicology: history/development of the field, regulatory framework; methods used to assess risks contaminants pose to wildlife; major classes of contaminants and their direct, sublethal, and indirect effects; and contemporary threats of contaminants to wildlife, their habitats, and prey. Offered: jointly with FISH 455; even years; W.

ESC 458 Management of Endangered, Threatened, and Sensitive Species (5) NW Marzluff Biological underpinnings and political realities of endangered species management, including: legal issues, recovery teams, citizen rights, extinction, rarity, proactive management, captive propagation, reintroduction, species endangered in the Pacific Northwest. Students revise endangered species recovery plans. Offered: W.

ESC 459 Wildlife Conservation in Northwest Ecosystems (3) NW Agee, Manuwal, West Extended field course offers Wildlife Science students personal interactions with wildlife managers and wildlife populations in strategic public and private lands in the northwestern United States and southern Canada. Students will share costs of trip. Offered when there is sufficient student demand. Prerequisite: ESC 350. Offered: Sp.

ESC 490, 491, 492 Undergraduate Studies (1-5, 1-5, 1-5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp, AWSp, AWSpS.

ESC 494 Wildlife Senior Project Proposal (3) Selection of research topic, literature review, and preparation of a formal research proposal. Students select a faculty advisor or a faculty committee to assist them in the proposal writing process. Prerequisite: ESC 351. Offered: AWSpS.

ESC 495 Senior Project in Conservation of Wildland Resources (5) Individual study of a ecosystem science and conservation problem under direction of a faculty member. Generally taken in last quarter of residence. Offered: AWSpS.

ESC 496 Wildlife Senior Thesis (5) Statistical analysis and presentation of research results and discussion of results of the senior research project. Students work with faculty advisors to complete field or laboratory research and then prepare the senior thesis. Prerequisite: ESC 494. Offered: AWSpS.

Courses for Graduates Only

ESC 501 Forest Ecosystems—Community Ecology (5) Brubaker Community ecology of forest ecosystems. Quantitative methods of community description. Role of limiting factors, competition and disturbance in determining community composition, structure and stability. Introduction to forest ecosystem productivity. History and application of successional theory. Prerequisite: basic ecology course or permission of instructor. Offered: A.

ESC 502 Forest Ecosystems Dynamics (5) *Peterson* Behavior of forest ecosystems: carbon, nutrient, and hydrologic cycling; factors controlling paths and flow rates of materials; contrasts in ecosystem structure and function among forest types. Offered: Sp.

ESC 506 Graduate Ecosystems Seminar (1) *Halpern* Formal seminar presentations by graduate students in ecosystems and related programs. Information is given on how to give effective seminar presentations and prepare slides. Credit/no credit only.

ESC 507 Soils and Land Use Problems (4) Harrison Environmental concerns of soils; how soil properties control potential and reasonable possibilities of land use. Includes factors controlling soil stability, hydrology, fertility, and movement of pollutants. Field trip oriented with weekly activity summaries. Students also conduct field trips to soil-use problem sites. Offered: W.

ESC 509 Review of Forest Autecology (4) Hinckley Review of concepts of soil formation, soil fertility, microclimate, hydrology, tree anatomy and morphology, physiology, water relations, mineral nutrition, and genetic and evolutionary mechanisms, as they relate to the adaptation and manipulation of forest-tree populations. For mid-career students only. Offered: A.

ESC 510 Graduate Studies in Forest Soils (1-5) Offered: AWSpS.

ESC 511 Advanced Forest Soil Microbiology (5) Edmonds Detailed examination of microbial processes in forest ecosystems; types of organisms, biomass, decomposition and nutrient cycling, microbial transformations of N, impacts of managementclear-cutting, fertilization, pesticide addition. Graduate project required. Prerequisite: general biology, basic soils or permission of instructor. Offered: even years; A.

ESC 512 Biogeochemical Cycling in Soils and Forest Ecosystems (3) Zabowski Elemental cycles in forests and soils. Fundamentals of processes involved in cycling are addressed along with alterations resulting from environment, vegetation, and soil types. Consideration of cycles of nutrients, metals, and other elements. Weekly discussion section reviews literature on biogeochemical cycling. Prerequisite: one soils course or permission of instructor. Offered: W.

ESC 513 Advanced Soil Genesis and Classification (5) Zabowski Soil formation, morphology, classification, and relationship to the environment. Labs and field trips illustrate properties and processes of forest and grassland soils in Washington. Requires two weekend field trips and a graduate project. Prerequisite: ESC 210 or permission of instructor. Offered: Sp.

ESC 514 Advanced Forest Soil Fertility and Chemistry (4) Harrison Chemical properties of soil, nutrient and toxic elements; supply, retention, and loss of nutrients in soils; utilization of geochemical and ecosystem models such as GEOCHEM, MAGIC, TRICLE-DOWN, and ILWAS in developing a quantitative understanding of the chemical function of forest ecosystems. Prerequisite: general chemistry and geology of soils. Offered: Sp.

ESC 515 Advanced Soil and Plant Analysis (3) Harrison Plants and animals must acquire nutrient elements from their environment. Quantifying the composition of samples is the first step in understanding the processes in natural and manmade systems. Sampling, handling, preparation, storage, and analysis stressed. Prerequisite: one botany or plant science course, instrumental analysis, soils. Offered: Sp. ESC 517 Biotransformations of Hazardous Compounds (1) Strand Presentation and discussion of the current literature in biotransformation and biological degradation of organic and inorganic compounds, particularly in the microbial environment. Credit/no credit only. Offered: ASp.

ESC 518 Microbial Degradation of Toxic Contaminants (3) Herwig, Strand Detailed survey of current understanding of microbiology and degradative pathways of industrial organic compounds, pesticides, plastics, oil, and metals. Microbial requirements for bioremediation. Methods of scientific investigation of microbial transformations. Requires basic understanding of metabolism and organic chemistry. Prerequisite: biological science course. Offered: jointly with CEWA 518/MICROM 518; Sp.

ESC 520 Graduate Studies in Ecosystem Science (1-5) Offered: AWSpS.

ESC 521 Current Topics in Ecosystem Science (2, max. 6) Brubaker, Franklin, Hinckley Consideration of current literature and topics in forest ecosystems and tree physiology. Offered: AWSp.

ESC 524 Tree Physiology I: Growth and Development (3) Hinckley Review of major developmental processes in trees, concentrating on regulatory mechanisms. Role of genetic, hormonal, mechanical, environmental, and ecological mechanisms in regulation of shoot, diameter, root, and reproductive development examined in lecture-discussion format. Seniors in forestry, botany, or related fields may enroll. Offered: W.

ESC 525 Tree Physiology II: Stress (4) *Hinckley* Review of principles and examples of stress physiology, concentrating on processes impacted and mechanisms of resistance. Stress and stress resistance defined and following examples examined: high, low temperature, radiation, anoxia, and pollutants. Prerequisite: ESC 524. Offered: Sp.

ESC 529 Ecosystems Seminar (1) Sprugel Discussion by invited speakers on current research related to ecosystems. Credit/no credit only. Offered: A.

ESC 535 Fire Ecology (3) Agee Fire regime concept as applied to fire ecology. Methodology for fire history research. History and function of forest fire in western United States with emphasis on Pacific Northwest. One weekend field trip. Prerequisite: permission of instructor. Offered: A.

ESC 538 Graduate Studies in Forest Pathology (1-5) *Edmonds* Offered: AWSpS.

ESC 539 Forestry-Fisheries Interactions: Case Studies (3) Naiman Case studies of streamside management situation at the watershed and basin level. Topics include resource conflict resolution, current and future management alternatives, landscape dynamics, role of disturbance, and policy options. Prerequisite: graduate standing in forestry, fisheries, or related field; undergraduates by permission of instructor. Offered: jointly with FISH 539; odd years; A.

ESC 547 Stream and River Ecology (5) Naiman Characterizations of stream and river ecosystems from a watershed perspective. Emphasis on fundamental processes affecting the structure and dynamics of aquatic communities and the riparian zone. Resource conflicts, new technologies, field trips, and class projects. Recommended: general ecology, forestry-fisheries interactions. Offered: jointly with FISH 547; Sp.

ESC 548 Special Topics in Streamside Studies (2, max. 6) Edwards Contemporary problems and issues in forestry, fisheries, and wildlife management in watersheds. Topics vary, yet focus on interactions of land and water resources in the forests of the Pacific Northwest. Prerequisite: permission of instructor. Offered: jointly with FISH 548; AW.

ESC 554 Wildlife Seminar (1-2, max. 10) *Manuwal, West* Discussion of current research and application in wildlife biology and conservation. Prerequisite: permission of instructor. Offered: AW.

ESC 555 Graduate Studies in Wildlife Science (1-5) Manuwal, Marzluff, Raedeke, West Offered: AWSpS.

ESC 557 Topics in Wildlife Science (2, max. 6) *West* Graduate seminar on applied and basic topics in wildlife ecology and conservation. Different topics selected each offering. Offered: AWSp.

ESC 591 Graduate Teaching Practicum (1-5) Principles of teaching and learning applied to undergraduate instruction in Ecosystem Science and Conservation. Development, delivery, and evaluation of lectures and homework assignments. Graduate teaching experience for ESC students only. Credit/no credit only. Offered: AWSp.

ESC 601 Graduate Internship in Ecosystem Science and Conservation (3-9) Credit/no credit only. Offered: AWSpS.

Forest Engineering

Courses for Undergraduates

F E 300 Timber Harvesting Management (3) *Dowdle* Study of timber harvesting methods and planning procedures. Logging and production costs are covered as well as safety and environmental considerations necessary for harvesting methods and practices. Offered: W.

F E 330 Forest Engineering in Society (4) I&S Forest engineering as a profession in a social, political, and regulatory context including: who engineers work for and what they do; professional ethics and leadership responsibilities, psychological issues in engineering work, state and federal regulatory environment affecting engineering practices; relationships to employees, special interest groups, and attentive publics. Offered: Sp.

F E 332 Ecological Basis of Forest Engineering (4) NW Bolton The recognition and characteristics of forest and wild land organisms in plant and animal kingdoms; their structure, function, development, site requirements, and role within the forest and wild land communities in which they are found. Ecological and biological basis for environmental regulations affecting forest engineering projects and tasks. Offered: A.

F E 340 Plane Surveying (4) Breitsprecher, Pickford Surveying theory and practice with emphasis on plane surveying. Proper use of survey instruments including engineer's tape, theodolite, level, and rods to measure and establish angles and distances. Appropriate technique for data recording, reduction and written form presentation, drafting using CADD and COGO packages, and incorporation into GIS. Offered: ASpS.

F E 341 Timber Harvesting (5) *Greulich* Timber harvesting methods and planning procedures. Logging cost and production control. Environmental and safety considerations as related to logging and road construction. Prerequisite: F E 340; F E 368. Offered: A.

FE 345 Forest Surveying and Transportation (5) NW Schiess Concepts of timber harvesting requirements, road-access planning, and forest land surveying. Basic road design principles, processes, and practical application of field road location. Basic road drainage design review, overview of road construction techniques and maintenance. A concentrated field experience at Pack Forest for non-forest engineering majors. Offered: Sp.

F E 346 Design of Low Volume Roads (5) NW Greulich Theory combined with strong emphasis on field practice. Engineering activities from pre-reconnaissance through construction staking discussed in context of class project involving location, field survey, and design of a forest road. Engineering design theory covered includes horizontal and vertical curves (including spirals), earthwork, minor drainage structures. Prerequisite: F E 340. Offered: W.

F E 368 Natural Resource Measurements (4) NW *Turnblom* Introduction to principles of measurement, basic field measurement skills, measurement of vegetation, including stand examination, timber cruising, size, weight, volume and biomass of trees, and stream flow. Laboratories include field exercises on sampling techniques for trees and lesser vegetation and linear regression modeling to predict quantities from basic measurements. Prerequisite: either ENGR 315 or Q SCI 381. Offered: W.

F E 404 Forest Engineering Field Seminar (1, max. 6) Schiess Forest engineering activities examined and discussed during three all-day site visits. Opportunity for forest engineering practitioners, faculty, and students to interact in an informal, contentrich environment. Offered: A.

F E 423 Watershed Analysis (4) NW Schiess Inventory and historical analysis of the interactions between natural resources, climate, and forest management. Development of management objectives and design of forest management activities based on inventory and analysis. Includes the use of modeling and simulation in predicting the influence of forest management activities on other resources. Prerequisite: F E 425. Offered: W.

F E 425 Wildland Hydrology (4) NW Bolton Introduction to the hydrologic cycle and basic hydrologic methods as applied to wildlands. Effects of forest management activities on hydrologic processes. Offered: W.

F E 427 Hillslope Stability and Land Use (4) I&S/ NW *Bolton* Effects of land management, especially forest land management, on slope stability. Forest harvesting, road construction, and species conversion. Slope stability analyzed on both large (landscape) and small (hillslope) spatial scales. Prerequisite: F E 425. Offered: even years; Sp.

F E 430 Aerial Photos/Remote Sensing Natural Resources (3) NW Schreuder Principles of photogrammetry, interpretation, and remote sensing; and their application to management of natural resources and wildlands. Uses for watersheds, forest resources, wildlife, point and nonpoint pollution, landuse planning, and outdoor recreation. Offered: ASp.

F E 435 Soil Physics (4) Bolton, Zabowski Physical properties of soil and water. Thermodynamic properties of soil-water mixtures and osmotic effects. Darcy's law and application to the movement of the water table. Horizontal and vertical unsaturated lows: rain infiltration, capillary rise, soil evaporation, water redistribution and hysteresis, heterogeneous soils and instability. Soil-plant-atmosphere continuum: water balance in the root zone; movement through the plant. Prerequisite: either MATH 125 or Q SCI 292. Offered: odd years; Sp.

F E 444 Introduction to Forest Engineering Design (4) Schiess Design process and methodology; decision making; creativity; project planning and management; engineering economics; probabalistic and statistical aspects of forest engineering design; ethical and legal issues; presentation of design project results. Lecture, laboratory, and design projects. Offered: W.

F E 445 Management Science in Forest Engineering (5) Greulich Management science methods used in data collection, analysis, and decision making examined within a systems framework. Statistical methods of point and interval estimation and regression analysis applied to logging and construction time studies and work sampling. Linear, nonlinear, and dynamic programming optimization techniques are applied to forest engineering problems. Offered: W.

F E 450 Advanced Forest Engineering Design (15) *Schiess* Capstone design course emphasizes application of forest engineering design principles. State-of-the-art methods and technology used to craft an implementable natural resource development plan. Prerequisite: 1.7 in F E 341; 1.7 in F E 346; 1.7 in F E 444; 1.7 in F E 480.

FE 465 Introduction to Photogrammetry (2) Pickford Photogrammetric measurements from aerial photos. Aerial cameras and camera calibration. Interior orientation from ground control. Exterior orientation and derivation of ground coordinates. Ground control. Use of analytical equipment for stereoplotting. Offered: W.

F E 470 Wood Science and Forest Products Manufacturing (3) Breitsprecher Coverage of the physical and chemical properties of wood and how they relate to its use, followed by a discussion of the major manufacturing processes used to convert wood to products for society. Field trips are taken to representative processing plants. Offered: W.

F E 480 Silvicultural Engineering Systems (3) *Fridley* Engineering design of systems for establishing, nurturing, and culturing trees for eventual harvest and use as industrial feedstock. Lecture/ discussion. Prerequisite: either CSE 142 or ENGR 142; ENGR 220; ENGR 230; ENGR 250; F E 332; F E 368. Offered: A.

F E 490, 491, 492 Undergraduate Studies (1-5, 1-5, 1-5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp, AWSp, AWSpS.

Courses for Graduates Only

F E 523 Advanced Watershed Analysis (4) Schiess Inventory and historical analysis of interactions between natural resources, climate, and forest management. Development management objectives and design forest management activities based on inventory and analysis. Use of modeling and simulation for predicting influence of forest management activities on other resources. Site-specific mitigation design and remediation projects. Prerequisite: F E 425. Offered: W.

F E 524 Watershed Design (4) *Fridley* Study of the principles and processes related to forest engineering design of watershed scale systems. Prerequisite: F E 523 and graduate standing or permission of instructor. Offered: Sp.

F E 525 Advanced Wildland Hydrology (4) Bolton Advanced treatment of hydrologic cycle and basic hydrologic methods as applied to wildlands. Effects of forest management activities on hydrologic processes. Graduate focus on a detailed field or modeling hydrologic analysis. Offered: W.

F E 527 Advanced Hillslope Stability (4) Bolton Advanced exposure to the effects of land management, especially forest land management, on slope stability. Forest harvesting, road construction, and species conversion. Focus on modeling slope stability in space and time. Offered: even years; Sp.

FE 528 Advanced Hillslope Hydrology (4) Bolton Advanced treatment of runoff processes from hillslopes and small drainage basins. Processes of infiltration, overland flow, and subsurface flow described mathematically. Focus on linking soil water and runoff processes in a computer model. Offered: odd years; Sp.

F E 529 Current Topics in Wildland Hydrology (1) Bolton Students present detailed analysis of research papers on selected topics in wildland hydrology. Topics cover measurement techniques, experimental data, and theoretical models of hydrologic

processes. Credit/no credit only. Prerequisite: senior or graduate standing and permission of instructor. Offered: AWSp.

F E 540 Graduate Studies in Forest Engineering (1-5) Offered: AWSpS.

F E 541 Advanced Forest Engineering (5) *Fridley, Greulich, Schiess* Logging organization and management; logging cost analysis and budgeting. Offered: W.

F E 542 Advanced Logging Engineering (3) Detailed consideration of problems of logging planning and truck road engineering, including the preparation and field layout of logging plans; location, design, and construction of forest roads. Offered: Sp.

F E 591 Graduate Teaching Practicum (* max. 5) Principles of teaching and learning applied to undergraduate instruction in forest engineering. Development, delivery, and evaluation of actual lectures and homework assignments in the student's area of expertise are required. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

Forest Management

Courses for Undergraduates

F M 270 Forest Land Use Planning (3) I&S/NW Bradley Introduction to the theory and practice of forest land use planning. Emphasis on the process of developing, implementing, and monitoring multipleresource land management plans. Discussion of laws and regulations influencing forest land use planning. Selected forest resource planning case studies along the urban to wildland gradient. Two weekend field trips. Offered: W.

F M 300 Professional Forestry Internship (3-5, max.8) Humann Comprehensive examination of an acceptable experience in professional forestry within a public or private agency, including operational policies and procedures. Preparation of professional assessment report and presentation of seminar based on internship in forest management in broad aspects. Prerequisite: F M 323; F M 362; F E 345. Offered: AWSpS.

F M 320 Fundamentals of Marketing and Management from a Forest Products Perspective (3) I&S/ NW Paun Overview of business concepts as they relate to the following topics in the context of the forest products industry: launching a business and entrepreneurship; marketing; human resources management; and global business. Offered: A.

F M 321 Fundamentals of Finance and Accounting from a Forest Products Perspective (3) I&S/NW Paun Provides an overview of business concepts as they relate to the following topics in the context of the forest products industry: business economics; financial planning and management; securities and insurance; accounting; and operations management. Offered: W.

F M 323 Silviculture (5) NW *Oliver* Silviculture techniques, including nursery practices, clear-cutting, seed trees, shelterwood, selection cutting, site preparation, regeneration methods, thinning, fertilization, chemicals, and regional silviculture in the Northeast, Southeast, Midwest, Rocky Mountains, California, Pacific Northwest, and Alaska. Taught at Pack Forest. Multiple-use field trips. Offered: Sp.

F M 324 Forest Protection (5) NW Agee, Edmonds, Gara Effects of fire, diseases, and insects on forest ecosystems, fire ecology and management, abiotic and biotic diseases, disease management, effects of defoliators, bark beetles and wood boring insects, pests of intensive forest management and principles of insect management. Offered: W. F M 328 Forestry-Fisheries Interactions (4) NW Bolton Characteristics of forestry-fisheries interactions in terrestrial and aquatic landscapes. Effects of changes in landforms on forest and aquatic communities. River basin and watershed features. Forest stand dynamics, forest hydrology, fish and wildlife histories and behavior. Resource conflicts and resolution. Offered: jointly with FISH 328; even years; W.

F M 360 Forest Management and Economics I (5) I&S/NW Dowdle Basic concepts of production theory, accounting, investment analysis, supply and demand, and their application to the management of forested properties. Prerequisite: ECON 200; Q SCI 292. Offered: W.

F M 362 Field Measurements (5) NW Turnblom Basic field measurement skills, interpretation of aerial photos, measurement of vegetation, including stand examination and timber cruising. Concentrated field experience taught at Pack Forest. Prerequisite: Q SCI 381. Offered: Sp.

F M 370 Social Functions of Forest Ecosystems (3) I&S/NW Lee Introduction to structure and function of forest ecosystems; resources as social functions; role of social institutions in modifying ecosystem structure and processes; multi-resource case studies and field trips. Offered: A.

F M 377 Environmental Impact Assessment and Regulation in Forest Resource Management (3) I&S/NW Bradley Current environmental, forest resource, and land-use legislation affecting resource management; origin and evolution of federal, state, and local legislation and their relationship to forest resource planning and management; environmental impact assessment and its relationship to forest practices. Selected case studies of prepared forest land use plans and environmental impact statements. Offered: A.

F M 400 Forestry in Washington (5) Wagar Examines the components of contemporary forestry practices and issues and their importance to the economy and quality of life in Washington state. For education majors, selected laboratory sessions provide hands-on experience for classrooms K-12 using the Project Learning Tree activity guides. One all-day field trip. Offered: S.

F M 422 Marketing of Forest Products (3) I&S/ NW Eastin Introduction to forest products marketing in North America. Examines products marketing, industry structure, and strategic management issues utilizing marketing concepts. Topics include product management, distribution channels, strategic industry analysis, and marketing research techniques. Case studies used to understand forest products industry decision making. Offered: W.

F M 423 International Marketing of Forest Products (3) I&S/NW Eastin Introduction to international marketing concepts and their application to forest products. Analysis of forest products trade patterns, resource base changes, policy, industrial policies, and environmental concerns. Discussion of market distorting practices including log export bans and tariff and non-tariff barriers. Offered: Sp.

F M 424 Forest Stand Dynamics (3) NW Oliver Forest stand development and manipulation response. Forest stand dynamics and stand structure in pure and mixed species forests, response to minor and major disturbances, interactive changes with time, and patterns and response to manipulation. Offered: A.

F M 425 Ecosystem Management (3) NW Oliver Advanced concepts and practices in ecosystem management, integrating landscape management principles, inventory, planning, silviculture, objective/ tradeoff/policy considerations, stand growth, adaptive management, and systems organization and management. Case study emphasizes integration. Prerequisite: F M 323. Offered: W. **F M 435** Forest Entomology (3) NW *Gara* Introduction to general entomology, characteristics, life histories, ecological relations, prevention, and control of forest insects. Offered: W.

F M 436 Laboratory in Forest Entomology (2) NW *Gara* Introduction to the insect orders; identification of forest insects and their damage. One field trip to study insect problems required. Offered: A.

F M 461 Forest Management and Economics II (4) I&S/NW Bare Basic concepts of timber harvest scheduling, sustained-yield models, contemporary analytical techniques, timber supply, and forest product markets. Prerequisite: F M 360. Offered: W.

F M 464 Economics of Conservation (3) I&S/NW Dowdle Economic principles and their use in the analysis of contemporary conservation problems. Particular emphasis directed toward the conservation of forest resources in the Pacific Northwest and related policy issues. Offered: Sp.

F M 466 Economics of Timber Production (3) I&S/ NW Dowdle Application of basic economic concepts to the production of timber as a commercial land use. Analysis of timber investments, alternative management programs, and regulation models. Prerequisite: F M 360. Offered: even years; A.

F M 469 Forest Biometry (5) NW Turnblom Quantitative techniques commonly used in forecasting future forest conditions and developing volume equations: site quality assessment methods, development of site index equations, measurement of stand density and its effects on growth, growth and yield prediction, and familiarization with current computerized forest growth simulation models. Prerequisite: Q SCI 381. Offered: A.

F M 470 Forest Policy and Law (5) I&S/NW *Byan* Introduction to and analysis of environmental policymaking processes, with a focus on forest and land policy and law. Use of policy models to examine the interaction of agencies, interest groups, Congress, and the courts in the legislative process. Policy implementation, evaluation, and change are also addressed. Offered: A.

F M 481 Management of Wildland Recreation and Amenities (3) NW Introduction and overview of wildland recreation and amenities management. Agency history and objectives explored along with integration of recreation with other land uses. Water, forestry, wildlife, and wilderness resources for recreational uses discussed along with role of private enterprise in recreation and amenities. Topics of current and local interest. Offered: W.

F M 485 Conservation Area Planning and Design (5) NW Bradley Integrated consideration of the resource base, social factors, and management objectives in providing conservation, environmental education, open space, and wildland recreation opportunities. Application of contemporary resource planning processes and technology in the development of ecologically-based, multiple resource plans. Case study approach. Offered: odd years; A.

F M 490, 491, 492 Undergraduate Studies (1-5, 1-5, 1-5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp, AWSp, AWSpS.

F M 495 Senior Project in Forest Management (5) Individual study of a forest management problem under the direction of a faculty member. Students utilize knowledge gained in field studies and required course work to present possible solutions to a specific forest management problem. Prerequisite: F E 345; F M 323; F M 362. Offered: AWSpS.

F M 496 Forest Management Case Studies (5) *Bare, Bradley* Focus on preparation and presentation of management plan for forested area. All aspects of multiple use and ecosystem health considered within multiplicity of economic, biological, legal, social, and political constraints. Case studies to familiarize students with complexities of modern decision making. Offered: Sp.

Courses for Graduates Only

F M 503 Advanced Forest Stand Dynamics (3) Oliver Emphasizes current research and sources of knowledge about forest stand development and responses to manipulations. Development of pure and mixed species forests, even-aged and uneven-aged stands. Responses to disturbances, interactive changes with time, patterns and responses to manipulation, growth and yield quantification. Prerequisite: previous ecology courses. Offered: A.

F M 504 Research Processes in Forest Resources (4) Lee Comprehensive survey of research processes for entering graduate students. Diagnostic and prescriptive evaluation of student research capabilities. Problem and hypothesis formulation, study design, multi-method strategies for gathering and analyzing data, and interpretation and presentation of results. Prerequisite: graduate standing. Offered: W.

F M 520 Fundamentals of Marketing and Management from a Forest Products Perspective (3) Paun Overview of business concepts as they relate to the following topics in the context of the forest products industry: launching a business and entrepreneurship; marketing; human resources management; and global business. Offered: A.

F M 521 Fundamentals of Finance and Accounting from a Forest Products Perspective (3) Paun Provides an overview of business concepts as they relate to the following topics in the context of the forest products industry: business economics; financial planning and management; securities and insurance; accounting; and operations management. Offered: W.

F M 522 Current Topics in Silviculture/Protection (2, max. 6) *Edmonds, Gara, Oliver* Detailed study of current issues, information, and literature in silviculture/protection. Offered: AWSp.

F M 528 International Silviculture (3) *Gara, Oliver* Background of biological, social, and economic basis for silvicultural practices in different areas; case examples of silvicultural practices in different localities; consideration of selected international issues in silviculture. Prerequisite: permission of instructor. Offered: even years; W.

F M 530 Graduate Studies in Forest Fire Control (1-5) Offered: AWSpS.

F M 537 Graduate Studies in Forest Entomology (1-5) Offered: AWSpS.

F M 541 Readings in Silviculture (1-5, max. 6) *Oliver* Detailed study of national and international literature pertaining to silviculture. Offered: AWSpS.

F M 545 Principles of Forest Entomology (3) Gara Historical perspective of the discipline, introduction to general entomology and taxonomy, forest insect ecology, integrated pest management concepts for defoliators, bark beetles, wood borers, and urban forestry pests. Prerequisite: general biology, botany, zoology or permission of instructor. Offered: W.

F M 552 Seminar in Forest Products Marketing (3) Eastin, Paun Evaluate and discuss current research topics in marketing, marketing research, and international marketing of forest products. Presentation of a critical review of published research or administration of an empirical project. Offered: AWSp.

F M 553 Graduate Studies in Forest Product Marketing (1-5) Eastin, Lippke, Paun, Schreuder Independent study and research conducted on issues related to forest products marketing. Offered: AWSp. **F M 562** Advanced Forest Resources Management (3) Bare Overview of concepts and procedures involved in managing forested lands for the production of commodity and amenity values. Use of systems analysis techniques for evaluating alternative land-use programs and manipulations of the forest ecosystem. Prerequisite: graduate standing. Offered: A.

F M 563 Graduate Studies in Forest Mensuration (1-5) *Bare, Turnblom* Offered: AWSpS.

F M 564 Advanced Forest Biometry (3/5) *Turnblom* Classical problems in analysis of forest populations and growth theory, and principles of parametric analysis and estimation processes in forest biometry. Offered: odd years; Sp.

F M 565 Graduate Studies in Forest Management (1-5) *Bare* Offered: AWSpS.

F M 566 Graduate Studies in Forest Photogrammetry (1-5) *Schreuder* Offered: AWSpS.

F M 568 Graduate Studies in Forest Economics (1-5) *Bare, Perez-Garcia, Schreuder* Topical issues including log export controversy, capturing value added products, economics of environmentalism, sustainable forestry, and forest products certification. Offered: AWSpS.

F M 569 Economics of Forest Products Trade (3) Perez-Garcia Structure and trends in world forest products trade, trade barriers, trade policies, and methods of modeling and forecasting international forest products markets. Prerequisite: permission of instructor. Offered: Sp.

F M 570 Graduate Studies in Forest Policy Analysis (1-5) Ryan Offered: AWSpS.

F M 571 Policy Analysis Design (5) *Ryan* Study based on understanding of the actors, arenas, issues, and policy communities that form the context for policy development and implementation. Exploration of approaches to policy inquiry. Consideration of implications for both policy and management. Students develop a study design for course project. Offered: Sp.

F M 572 Graduate Studies in Forest Resource Planning (1-5) *Bradley* Offered: AWSpS.

F M 573 Forest Environmental Resource Planning (3) *Bradley* Origins and evolution of environmental planning in the forest environment. Discussion of the planning process and methodologies for environmental management and planning; selected case studies of environmental resource plans. Prerequisite: graduate standing. Offered: odd years; A.

F M 575 Advanced Natural Resources Sociology (3) Lee Comparative study of institutional and organizational aspects of natural resources management, with special attention to forest resources. Development, persistence, and change of selected institutions in the context of pre-industrial, industrial, and advanced industrial societies. Implications for policy formulation, decision making, and technology transfer. Offered: odd years; W.

F M 576 Current Topics in Forest Policy and Management (1-2) Ryan Contemporary problems in forest policy and management. Topics vary but focus on the development of specific political or philosophical issues; empirical questions of concern to the forestry profession; or the development of new tools for management, planning, or policy analysis. Credit/ no credit only. Prerequisite: permission of instructor. Offered: AWSp.

F M 577 Forest Resource Economics: Supply (3) *Perez-Garcia* Economic analysis of forest resource and forest products production decisions. Problems of optimal management at stand and forest level. Models of timber supply from public and private lands. Production and supply characteristics of secondary forest products processing. Prerequisite: ECON 400, 401, and permission of instructor. Offered: Sp.

F M 579 Graduate Studies in Forest Sociology (1-5) *Lee* Offered: AWSpS.

F M 587 Current Topics in International Forest Products Trade: Marketing Research (2, max. 6) Eastin Current research topics in marketing, market research, and technology related to the forest products sector. Presented by faculty and invited professionals, supplemented by student presentations. Offered: Sp.

F M 588 Current Topics in International Forest Products Trade (2, max. 6) Perez-Garcia Current research topics in a variety of business related areas, including international marketing of forest products, forest economics, international business and global trade modeling. Seminars by faculty and invited professionals supplemented by student presentations. Credit/no credit only. Offered: A.

F M 589 Current Topics in International Forest Products Trade: Forest Economics (2, max. 6) Perez-Garcia Current research topics in forest economics as related to forest products sector. Presented by faculty and invited professionals, supplemented by student presentations. Offered: W.

F M 591 Graduate Teaching Practicum (1-5) Principles of teaching and learning applied to undergraduate instruction in Forest Management. Development, delivery, and evaluation of actual lectures and homework assignments are required in the student area of expertise. Credit/no credit only. Offered: AWSp.

F M 601 Graduate Internship in Forest Management (*) Credit/no credit only. Offered: AWSpS.

Paper Science and Engineering

Courses for Undergraduates

PSE 102 Paper, Society, and the Environment (5) NW *McKean* Types of products and patterns of use. Overview of manufacturing processes in terms of raw material, costs, world trade and consumer requirements. Environmental implications of manufacturing, recycling, and disposal of paper and its byproducts. Societal and environmental costs of substituting petroleum-based or nonwood raw materials in paper products. Offered: A.

PSE 302 Pulp and Paper Technology (4) NW *Jacobs* Sources of fiber raw material. Mechanical and chemical pulping and bleaching processes. Conversion of pulp to paper. Laboratory study of raw material, mechanical pulping, and paper making. Offered: A.

PSE 306 Pulp and Paper Processes Analysis (3) NW Inorganic chemistry of pulping and bleaching inclusive of sulfur, chlorine, and oxygen-based chemicals, reactivities, and chemical analysis. Wood raw material and conversion to mechanical pulps. Computer-aided material balances on mechanical separation processes. Prerequisite: CHEM 162. Offered: W.

PSE 309 Creativity and Innovation (2) VLPA Allan Understanding creativity and creative thinking; its challenges and dynamics through knowledge, judgment, planning, and observation. Techniques of creative thinking. Design and development of creative games. Computer-aided creative thinking. Creation, protection, and exploitation of a useful idea, including bargaining and negotiations. Offered: jointly with CHEM E 309; Sp.

PSE 400 Wood Properties and Utilization (4) I&S/ NW *Breitsprecher, Briggs* Relationship of physical and chemical properties of wood to its use. Role

of silviculture and genetics in modifying wood products and value of products. Manufacturing processes of major wood products, examining material and energy balances and environmental effects. Comparison of wood with steel, concrete, plastics, and other materials. Offered: A.

PSE 401 Wood and Fiber Identification (2) NW *Briggs* Laboratory in identification of wood fibers of North American species. Use of microscope and image analyzer in obtaining wood and fiber measurements. Offered: A.

PSE 402 Paper Properties and Additives (4) NW *McKean* Material science of paper and paperboard. Measurement and characterization of structural, mechanical, and optical properties of paper. Standard testing methods, paper colorants, effect of additives on paper properties, and relationship of fundamental paper properties to end use requirements. Offered: A.

PSE 406 Wood Chemistry I (3) NW Chemistry of cellulose, hemicellulose, and lignin. Pulping and bleaching chemistry of wood. Prerequisite: CHEM 237. Offered: A.

PSE 407 Wood Chemistry I Laboratory (2) NW Proximate analysis of wood. Use of instrumental methods for wood component analyses. Prerequisite: PSE 406. Offered: W.

PSE 409 Wood Extractives Chemistry (2) NW Nature, origin, and occurrence of the extraneous components of wood, their influence on pulp and paper preparation, and their utilization. Prerequisite: CHEM 237. Offered: odd years; Sp.

PSE 450 Paper Science and Engineering Seminar (1) Discussion of current topics in the science and technology of pulp and paper production. Emphasis on employer expectations of students in the paper science industry. Offered: AWSp.

PSE 475 Microtechnique (3) Breitsprecher Covers the principles and the practice of specimen preparation for light and electron microscopy. Tailored to meet the research interests of the participants. Students prepare mounts by several techniques and examine them with the appropriate instrumentation. Offered: odd years; Sp.

PSE 476 Pulping and Bleaching Processes (3) *Gustafson* Conversion of wood to mechanical and chemical pulps. Kraft, sulfite, and semi-chemical pulping processes. Chemical recovery systems. Bleaching of mechanical and chemical pulps. Offered: jointly with CHEM E 471; W.

PSE 477 Papermaking Processes (3) *McKean* Fiber sources and properties. Secondary fibers. Stock preparation, sheet forming, water removal, finishing. Coating, lamination, and printing. Paper products. Offered: jointly with CHEM E 472; W.

PSE 478 Pulp and Paper Laboratory (2) Jacobs Laboratory experiments in chemical and semi-chemical pulping of wood. Bleaching of chemical and highyield pulps. Physical and chemical characteristics of pulp fibers. Prerequisite: PSE 476. Offered: jointly with CHEM E 473; Sp.

PSE 479 Pulp and Paper Laboratory II (2) *McKean* Paper testing, paper additives, flocculation, drainage, retention, heat transfer, and fluid dynamics in papermaking. Sensors and process control. Prerequisite: PSE 402; PSE 477. Offered: Sp.

PSE 480 Pulp and Paper Process Control (3) *Gustafson* Control of pulp and paper processes. Sensors, actuators, interface equipment, and computer control strategies common to this industry. Prerequisite: PSE 476; PSE 477. Offered: Sp.

PSE 481 Pulp and Paper Unit Operation (3) Unit operations of particular interest in the pulp and paper industry in addition to those covered in CHEM E 330 and 340. Prerequisite: CHEM E 340. Offered: W.

PSE 482 Pulp and Paper, Process Design and Economics (4) I&S/NW Briggs, Gustafson Analysis of industrial pulping, bleaching, papermaking, recovery, and steam and power operations, using systems analysis approach. Material and energy balances, process economics, process control, and design calculations. Prerequisite: 2.0 in PSE 406; 2.0 in PSE 476; 2.0 in PSE 477; PSE 481. Offered: Sp.

PSE 483 Paper Coating and Converting (3) *Barlow* Coatings and their preparation, rheology, process equipment, drying, and product evaluation. Prerequisite: PSE 477. Offered: W.

PSE 484 Secondary Fiber (3) Hodgson Recycling of paper. Sources of secondary fiber. Processing methods for contaminants and ink removal. Properties and uses of recycled fiber. Prerequisite: PSE 406; PSE 476; PSE 477. Offered: Sp.

PSE 485- Undergraduate Research (1-, max. 3) *Johnson* Undergraduate research or independent study project under the supervision of the faculty; usually one credit per quarter. Offered: AWSp.

PSE 486 Environmental Management (3) I&S/NW Effects of pollution and environmental regulations on industry and community. Sources, regulations, and control of air, water, solid waste emissions as generated by the paper science industry. Offered: W.

PSE 488 Polymer Chemistry (3) Allan Fundamental review of synthetic and natural polymers, including kinetics of formation, molecular weight distributions, and solid-state and solution properties. Prerequisite: CHEM 237. Offered: W.

PSE 490, 491, 492 Undergraduate Studies (1-5, 1-5, 1-5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp, AWSp, AWSpS.

PSE 497 Pulp and Paper Internship (1-2, max. 3) *Jacobs* Technical and economic analysis of commercial pulp and paper installations. Structured visits to industrial operations to observe technical aspects of pulp and paper curriculum in practice. Preparation of visitation reports and analysis in seminar setting. Offered: AWSpS.

Courses for Graduates Only

PSE 508 Advanced Wood Chemistry (3) Biogenesis of lignins and isotope labeling methods. Oxidative coupling phenols. Alkaline degradation of polysaccharides and oxygen-based bleaching chemistry. Prerequisite: PSE 406. Offered: odd years; A.

PSE 514 Pulp and Paper Process Simulation (3) *Gustafson* Presentation of process simulation techniques currently used in the pulp and paper industry. Large-scale simulations of pulp and paper unit operations developed and analyzed. Use of simulations for control, process optimization, and statistical quality control purposes. Offered: even years; A.

PSE 555 Surface and Colloid Science of Papermaking (3) Hodgson Introduction to principles of surface and colloid science, particularly as they pertain to the wet end of the papermaking process. Surface and colloidal properties of wet end additives. Examination of specific examples and case studies in papermaking situations. Prerequisite: PSE 477 or equivalent. Offered: odd years; A.

PSE 570 Graduate Studies in Forest Products (1-5) Offered: AWSpS.

PSE 572 Wood Chemistry and Analysis (3-5) Application of instrumental methods of analysis to wood, wood products, and forest products processing effluents. Emphasis on separation systems, including gas and liquid chromatography, and on spectral analysis. Offered: odd years; W.

PSE 576 Microscopy and Photomicrography (3) *Breitsprecher* Principles of microscopy as well as the techniques of using microscopes and taking photographs with them. Darkroom practice for black and white photography included. Students take photographs, develop negatives, and make enlargements. Offered: Sp.

PSE 577 Wood and Paper Science Seminar (1, max. 6) Discussion of current topics in the science and technology of pulp and paper production, including wood and polymer chemistry. Offered: ASp.

PSE 579 Wood Properties and Utilization (4) *Breitsprecher, Briggs* Biology of wood formation and basic properties of wood, processes that create wood products, performance attributes required of these products, understanding of linkages between biology, silviculture, and product technology and performance. Offered: AW.

PSE 580 Field Studies in Wood Utilization (2) *Briggs* Five-day field trips visiting a diverse mix of wood products industries in the Puget Sound region. Students observe manufacturing technologies for various products, learn about markets from these products, and discuss resource, market, and technical issues with management in these facilities. Offered: Sp.

PSE 589 Wood Biosynthesis (3) Biosynthesis of carbohydrates, phenolic and terpenoid compounds in forest trees, and biochemistry of wood degradation. Prerequisite: PSE 406. Offered: even years, Sp.

PSE 591 Graduate Teaching Practicum (* max. 5) Principles of teaching and learning applied to undergraduate instruction in paper science and engineering. Development, delivery, and evaluation of actual lectures and homework assignments. Graduate teaching experience for PSE students only. Credit/no credit only. Offered: AWSp.

Urban Horticulture

Courses for Undergraduates

UHF 201 Ecology of Urban Environments (3) I&S/ NW Hamilton Biological, chemical, and physical processes and components of urban environments, plus human impacts. Each urban environment, from city cores to naturalized open space, is discussed for above- and below-ground conditions, key plant and animal species, and biological implications of management practices. Offered: A.

UHF 202 Plants in Cities: An Introduction to Urban Horticulture (3) I&S/NW Tukey Introduction to use of plants in cities for the benefit of people who live there, including plant selection, production, design, utilization, maintenance, and management with implications in society, business, environment, and quality of life in urban areas. Offered: W.

UHF 331 Landscape Plant Recognition (3) NW Hamilton, Tsukada Field recognition of important groups of woody and herbaceous landscape plants, emphasizing diversity at the genus and family levels. Cultivated plant nomenclature. Plant descriptive characters evident in the field with eye and hand lens. Hardiness and landscape applications. Recommended: BOTANY 113. Offered: jointly with BOTANY 331; SpS.

UHF 406 Curatorial Practices in Public Gardens (3) **I&S/NW** Hamilton, Wott Techniques of curatorial practice relevant to living collections of plants. Includes developing and using collections policies, collection documentation, plant acquisition, conservation, display methods, exchange programs and procedures, and plant introduction programs. Offered: Sp. tice (3) NW *Wott* Science and practice of plant propagation including sexual (seed) and asexual (cutting, layering, grafting) propagation. Includes discussion of physiological effects, methodology and laboratory exercises. Wide variety of plants covered. Intended for majors in urban horticulture and urban forestry and others interested in reproducing landscape plants. Offered: Sp.

UHF 431 Landscape Plant Selection (5) NW *Chalker-Scott* Principles of selecting plants for urban landscape sites. Biological basis of plant selection; site analysis of above-ground and soil conditions, including microclimate; assessment of plant performance; plant geography, genetics, exploration, and introduction. Two student projects: study one urban site and analyze one particular plant species. Recommended: BOTANY 331 or UHF 331. Offered: A.

UHF 444 Plant Materials in Urban Landscapes (5) NW Laboratory and field course on urban plant materials. Emphasis on cultural requirements, pest and disease susceptibility, and ornamental characteristics of commonly used landscape plants. Introduction to species and cultivars currently available in the nursery trade is integrated with selection and site use in a variety of landscapes. Prerequisite: either BOTANY 331 or UHF 331. Offered: Sp.

UHF 445 Landscape Plant Management (5) NW Chalker-Scott Principles and practices of plant management in cultivated situations. Review of landscape design from the horticultural perspective, management schedules and budgets, arboricultural practices, and care of specialized plant materials. Recommended: UHF 331. Offered: A.

UHF 451 Urban Plant Protection (5) NW *Gara* Working knowledge on insects and diseases of plants growing in the urban environment. Emphasis placed on pest and damage recognition, control methods, and integrated pest management systems. Offered: Sp.

UHF 461 Public Outreach in Urban Horticulture (3) I&S/NW Watt Aspects of establishing and implementing programs of public urban horticulture outreach (extension) education in university, public institutions, and private contexts. Includes quantitative audience assessment, organization, objective building, lecture and class management, publications, interpretation for diverse audiences, funding, volunteers, and evaluation techniques. Offered: W. UHF 470 Urban Forest Landscapes (5) NW Bradley, Wagar, Wolf Comprehensive view of urban forest and urban forest landscapes. Includes close examination of factors that differentiate urban forest landscapes along the urban to wildlife gradient. Compare legal, social, political, administrative, physical, and biological variations. Offered: SpS.

UHF 471 Ecological Concepts and Urban Ecosystems (3) NW Ecological concepts introduced in an urban context with emphasis on autecological relationships of plants in an urban environment. General framework for development of urban ecological concepts followed by case studies and exploring applications in new areas. Offered: W.

UHF 473 Principles of Ecological Restoration (5) NW Ewing Philosophy of restoration, structural components of ecosystem degradation, analysis of restoration projects and methods, and an ecosystem by ecosystem review of how systems are restored. An ecology courses that emphasizes applied scientific knowledge of ecosystems. Recommended: BIOL 472 or BOTANY 354 or BOTANY 371. Offered: W.

UHF 475 Wetland Ecology and Management (5) NW Ewing, Harrison Wetland types and functions, global and North American distribution, wetland plant types, soil chemistry. The influence of stresses on wetland composition and form. Autecology of wetland plants; response to and detection of stresses. Impacts of urbanization; management techniques. Recommended: either BIOL 472, BOTANY 354, or BOTANY 371. Offered: A.

UHF 490, 491, 492 Undergraduate Studies (1-5, 1-5, 1-5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp, AWSp, AWSpS.

UHF 495 Senior Project in Urban Forestry (5) Individual study of an urban forestry problem under direction of a faculty member. Offered: AWSpS.

Courses for Graduates Only

UHF 502 Data Collection, Analysis, and Presentation (3) Ewing Design of scientific experiments, collection of data, and use of computers to store, analyze and present data. Limited by equipment availability to 8 students; UH students have priority. Offered: Sp.

UHF 503 Current Issues in Urban Horticulture (1) Critical evaluation and discussion of published research in urban horticulture and restoration. Students and faculty present and discuss research methods and questions from current literature. Credit/no credit only. Offered: AWSp.

UHF 531 Seminar in Horticultural Taxonomy and Landscape Plant Selection (1-3, max. 12) Hamilton Special topics in horticultural taxonomy (nomenclature and systematics of cultivated plants, evolution of diverse genera and families, methods of analysis) and landscape plant selection (natural ecology and biogeography of landscape plants, plant exploration, introduction and testing). Offered: W.

UHF 549 Urban Horticulture Seminar (1, max. 6) Discussion by invited speakers on current topics in urban horticulture. Credit/no credit only. Offered: A.

UHF 561 Public Presentation in Urban Horticulture (2) *Wott* Students learn to make public presentations in scientific, professional, and popular contexts and to interpret technical information for professional and lay audiences. Support materials, such as audiovisuals and graphics are discussed. Offered: W.

UHF 572 Urban Ecosystem Management Seminar (1-3, max. 9) Ewing Graduate seminar in urban ecosystem management. Special topics of current importance in urban ecosystem management. Ecological aspects of ecosystem conservation, restoration, and management. Students participate in presentation and discussion of current work. Prerequisite: UHF 471, 475. Offered: W.

UHF 601 Internship in Urban Horticulture (1-9) Credit/no credit only. Prerequisite: permission of graduate program adviser. Offered: AWSpS.

Interdisciplinary Graduate Degree Programs

These programs are administered by interdisciplinary groups of the Graduate School. Certain courses carrying the particular program prefix appear below; other courses with the same prefix appear elsewhere as indicated. Other courses included in these programs are selected from many disciplines throughout the University and carry the prefix of the respective discipline.

Biology Teaching

Graduate Program Coordinator 222 Hitchcock, Box 355320 (206) 543-1689

The Graduate School Biology Teaching Group offers an interdisciplinary program that leads to the degree of Master of Arts for Teachers in the field of biological science. Designed specifically for biology teachers in secondary schools and community colleges, the program emphasizes broadening the student's understanding of the various fields of biological science, with improvement of the student's effectiveness as a teacher as the primary goal. The program offers opportunities for course work within the departments of the University in biological science and science education. Each student is asked to perform an in-depth study of a biological problem in the context of its relevance to the teaching of biological science. Facilities and guidance are provided by a sponsoring professor and advisory committee drawn from the Biology Teaching Group and the several biological-science departments of the University

Special Requirements

Prospective candidates for the degree must have an initial or continuing certificate for teaching biology at the secondary level.

Assistantships and fellowships are not provided under the aegis of this program.

Faculty

Chair

John S. Edwards

Professors

Ammirati, Joseph F. * 1979; MA, 1967, San Francisco State; PhD, 1972, University of Michigan; mycology, taxonomy and ecology of fungi.

Armstrong, David A. * 1978; MS, 1974, Oregon State University; PhD, 1978, University of California (Davis); shellfish physiology.

Boersma, P. Dee * 1974, (Adjunct); PhD, 1974, Ohio State University; ecology and conservation biology, reproductive strategies, colonial seabird biology.

Deyrup-Olsen, Ingrith J. * 1964, (Emeritus); PhD, 1944, Columbia University; general physiology, cell-membrane phenomena. Edwards, John S. * 1967; PhD, 1960, Cambridge University (UK); arthropod neurobiology, insect physiology and development, tundra and alpine biology.

Hille, Merrill B. * 1976; PhD, 1965, Rockefeller University; developmental biology, gastrulation in sea urchin embryos, translational regulation during meiosis.

Kohn, Alan J. * 1961; PhD, 1957, Yale University; invertebrate zoology, ecology and functional morphology of marine invertebrates.

Laird, Charles D. * 1971, (Adjunct); PhD, 1966, Stanford University; cell and developmental biology, human genetics.

Leopold, Estella B. * 1976; PhD, 1955, Yale University; paleoecology, pollen and seed analysis, late Cenozoic environment.

Nester, Eugene W. * 1962, (Adjunct); PhD, 1959, Case Western Reserve University; genetics and biochemistry of bacterial-plant cell interactions, tumorigenesis.

Olson, Maynard V. 1992; PhD, 1970, Stanford University; large-scale genome mapping and sequencing.

Sprugel, Douglas George * 1984; PhD, 1974, Yale University; community and ecosystem ecology, tree ecophysiology, subalpine systems.

Associate Professor

Van Volkenburgh, Elizabeth * 1987; PhD, 1980, University of Washington; leaf growth and development, photobiology and electrophysiology.

Assistant Professor

Windschitl, Mark A. * 1996; MS, 1993, PhD, 1995, Iowa State University; area of curriculum and instruction, use of technology in learning environments, constructivism.

Global Trade, Transportation, and Logistics Studies

2 Smith

The aim of the graduate option program in Global Trade, Transportation, and Logistics (GTTL), is to enable graduate students to augment their degree programs in preparation for careers that demand the combined knowledge of trade, transportation, and logistics. Particular attention is directed to activities involved in the flow of goods from point of origin to point of consumption across international boundaries. These activities involve maritime, aviation, and overland modes of transport, and the intermodal connections among them, as well as logistics management. The full range of activities also includes telecommunications, information, technological, environmental, energy, regulatory, and other systems that facilitate the negotiation and implementation of international trade and transportation.

The GTTL option is wide ranging and is tied to the needs of government and industry for people trained in the methods of today's global commerce. The program is overseen by the Interdisciplinary Committee on Global Trade, Transportation, and Logistics. Members come from the University and the private and public sectors. GTTL works with leaders in business and government organizations to develop internships and jobs for graduate students in the option program. The GTTL option is based on a set of course requirements to be fulfilled in conjunction with the student's existing araduate degree program.

Interdisciplinary Committee

The Interdisciplinary Committee oversees the core courses and recommends instructors, maintains the list of eligible electives, and coordinates with course instructors regarding scheduling and prerequisites. It periodically reviews core courses and promotes internships and placement. The committee is assisted in these tasks by the lead core-course instructor, the program director, and the Graduate School staff, as appropriate. The committee is responsible for policy on admission to the option program. This is tailored to the desired enrollment in the core courses, employment opportunities, and other factors. Currently the option is open to all eligible students. Advising is the primary responsibility of the student's departmental representative on the committee.

Graduate Program

Graduate Program Coordinator 2 Smith, Box 353585 (206) 616-5778 gttl@u.washington.edu

Students associated with GTTL receive the Graduate Certificate upon completing the program's requirements and obtain their degrees through cooperating academic units. Students admitted into graduate degree programs in the following units are eligible for the GTTL option with concurrence of their faculty adviser: Aeronautics and Astronautics, Business Administration, Civil Engineering, Communications, Economics, Education, Forest Resources, Geography, International Studies, Law, Marine Affairs, Political Science, Public Affairs, Technical Communication, and Urban Design and Planning. GTTL prepares students for careers in international trade, transportation, and logistics by offering a comprehensive program encompassing selected courses from heretofore separate disciplines. Those students completing the option receive an appropriate notation on their transcript. In addition, a Letter of Achievement is given, signed by the head of the student's academic unit and the Dean of the Graduate School.

Option Requirements

The option consists of a minimum of 18 credits: two core courses (6 credits) and four elective courses (at least 12 credits).

The core courses—GTTL 501, 502 (3, 3)—provide a basic overview of the academic theories, political economic structures, industrial dynamics, public policies, and strategic issues concerning the study, business, and/or regulation of global trade, transportation, and logistics.

Students select electives from a continually updated list prepared by a curriculum committee. Most electives (and core courses) may also satisfy a student's home department requirements. At least one elective must come from outside the home department to reinforce the interdisciplinary aspects of the option. A substitution policy developed by the committee assures that an appropriate mix of electives can be found for each student.

Faculty

Director

Jess Browning

Professors

Beyers, William B. * 1962, (Adjunct); PhD, 1967, University of Washington; economic geography, regional analysis, regional development.

Caporaso, James A. * 1988; PhD, 1968, University of Pennsylvania; international political economy, comparative politics, European Community, research methodology.

Decher, Reiner * 1967; PhD, 1968, Massachusetts Institute of Technology; aircraft propulsion, fluid mechanics, energy conversion. Dowd, Thomas J. 1986, (Affiliate); MMA, 1982, University of Washington; port and shipping management, operations, planning, and development.

Fleming, Douglas K. * 1963, (Emeritus); PhD, 1965, University of Washington; transportation geography (especially ocean and air), regional organization of western Europe.

Gautschi, David A. * 1992; MBA, 1974, University of Oregon; PhD, 1979, University of California (Berkeley); marketing management, marketing strategies in the global information telecommunications industries.

Giffard, Charles A. * 1978; PhD, 1968, University of Washington; international communication systems, news flow, editing and reporting.

Haselkorn, Mark P. * 1985; PhD, 1977, University of Michigan; real-time information systems, human/machine interaction, the computer in technical communication.

Hershman, Marc * 1976; JD, 1967, Temple University; LLM, 1970, University of Miami (Florida); coastal zone management law.

Krumme, Gunter * 1970; PhD, 1966, University of Washington; economic, organizational and marketing geography, location theory, regional development.

Lippke, Bruce R. * 1990; MSEE, 1959, New Mexico State University; MSIE, 1966, University of California (Berkeley); international trade and environmental linkages, investment analysis, economics of forest industry.

Ludwig, Richard L. * 1971; PhD, 1971, University of Pittsburgh; housing development planning, social factors in development planning.

Mahoney, Joseph P. * 1978; PhD, 1979, Texas A&M University; construction materials, pavement systems.

Mannering, Fred L. * 1986; PhD, 1983, Massachusetts Institute of Technology; traffic flow theory, networks, econometric methods, equilibration in transportation markets.

Modelski, George * 1967, (Emeritus); PhD, 1954, University of London (UK); international relations, international political economy.

Morrill, Richard L. * 1955, (Emeritus); PhD, 1959, University of Washington; spatial organization, migration, population, diffusion, regional planning/development, inequality.

Nihan, Nancy L. * 1973; PhD, 1970, Northwestern University; transportation planning and systems analysis.

Olson, David J. * 1974; PhD, 1971, University of Wisconsin; American government and politics (urban, state, and labor relations).

Poznanski, Kazimierz * 1987; PhD, 1974, University of Warsaw (Poland); comparative economic systems, technological change, political economy of Eastern Europe.

Rutherford, G. Scott * 1981, (Adjunct); PhD, 1974, Northwestern University; transportation planning and engineering.

Wong, Kar-Yiu * 1983; PhD, 1983, Columbia University; international trade and commercial policy.

Associate Professors

Bachman, David M. * 1991; PhD, 1984, Stanford University; Chinese politics and foreign policy and China's political economy (1949-present); US-China relations.

Blanco, Hilda J. 1996; MRP, 1984, PhD, 1989, University of California (Berkeley); comprehensive and neighborhood planning, environmental planning, infrastructure, finance.

Bowes, John E. * 1974; PhD, 1971, Michigan State University; man-machine communication, public opinion, international communication.

Chan, Kam Wing * 1991; PhD, 1988, University of Toronto (Canada); economic development, urbanization, migration, China, Hong Kong.

Kaczynski, Wlodzimierz M. * 1977, (Adjunct); PhD, 1973, University of Gdansk (Poland); fishery economics, international joint ventures in marine fisheries, international fisheries policy.

Moxon, Richard W. * 1971; DBA, 1973, Harvard University; international business.

Nyerges, Timothy L. * 1985; PhD, 1980, Ohio State University; GIS, spatial decision support, urban, transportation, environment, groupware.

Perez-Garcia, John * 1990; MS, 1982, University of Puerto Rico (Mayaguez); DF, 1991, Yale University; analysis of trade policy, global trade modeling.

Pivo, Gary E. * 1987; PhD, 1987, University of California (Berkeley); land use and physical planning, environmental planning, growth management.

Schmitt, Thomas G. * 1979; MBA, 1974, University of Cincinnati; DBA, 1979, Indiana University; management of service and manufacturing operations.

Waddell, Paul A. * 1997; PhD, 1989, University of Texas (Dallas); urban policy, land use and transportation, growth management, poverty concentration.

Assistant Professors

Allen, Craig H. 1994; JD, 1989, University of Washington; marine affairs, evidence, environmental regulation.

Bae, Christine * 1996; MRP, 1986, State University of New York (Albany); PhD, 1994, University of Southern California; transportation, environment, land use, growth management, quantitative methods.

Hillier, Mark S. 1993; MS, 1991, PhD, 1994, Stanford University; optimization problems, component commonality, production, inventory control, linear programming.

Simonin, Bernard L. * 1991; MBA, 1986, Kent State University; PhD, 1991, University of Michigan; international strategic alliances, organizational learning, international strategy.

Senior Lecturer

Pilcher, Martha G. * 1987; MS, 1978, PhD, 1985, Georgia Institute of Technology; operations research/operations management, health care applications and logistics.

Lecturer

Ralston, Jerry W. 1984; PhD, 1969, University of Geneva (Switzerland); international business.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

GTTL 501 Introduction to Global Trade, Transportation, and Logistics (3) Provides an overview of the concepts and substance of trade, transportation, and logistics. Introduces the interdisciplinary dynamics and the relevant literature, and orients students toward appropriate elective courses. Offered: AW.

GTTL 502 Seminar in Global Trade, Transportation, and Logistics (3) Interdisciplinary seminar involving two or more faculty from the GGTL committee, designed to build a bridge between practitioners and researchers who are at the forefront of trade, transportation, and logistics. Topical seminar emphasizing specific issue or problem. Offered: Sp.

Health Services Administration

Graduate Program Coordinator H660 Health Sciences, Box 357660 (206) 543-8778

The Health Services Administration Group offers a twoyear program of study leading to the Master of Health Administration degree. It provides preparation for careers in management, planning, and policy analysis in ambulatory-care organizations, hospitals, long-termcare facilities, mental-health-care organizations, government agencies, planning agencies, and other organizational settings in the health field. The curriculum is designed to be interdisciplinary with a faculty drawn from the School of Public Health and Community Medicine, and from the Graduate Schools of Business Administration and Public Affairs. Programs of study may vary according to the student's concentration of study and career objectives. In addition to academic work. students are required to participate in an internship experience in a health facility or agency under the preceptorship of the administrator or director of that organization

A concurrent degree program combining the M.H.A. and M.B.A. degrees is also offered. This curriculum requires three years of intensive academic study and culminates in a joint M.H.A.-M.B.A. degree.

Course listings may be found under the School of Public Health and Community Medicine, Department of Health Services.

Special Requirements

Applicants must submit, in addition to Graduate School admission requirements, at least three letters of recommendation and scores from the Graduate Record Examination. A narrative statement of objectives is also required, and interviews by members of the program faculty may be required. Relevant health-field experience is preferred. Applicants are accepted only for autumn quarter of each year. The application deadline is February 15.

Financial Aid

The M.H.A. Alumni Association sponsors a fund-raising "phonathon" from which some of the proceeds go toward program scholarships. The Foster G. McGaw Scholarship, administered by the Association of University Programs in Health Administration, may be awarded. A scholarship sponsored by the Association of Medical Group Administrators is available for students concentrating in ambulatory care management. Group Health Cooperative of Puget Sound sponsors a Graduate Research Associate position for an underrepresented-minority student (particularly Black, Hispanic, or Native American). Health Education Assistance Loans (HEAL) monies are also available to graduate students in health services. However, students admitted should be prepared to use their own resources to finance graduate education.

Research Facilities

In addition to its University facilities, the program makes extensive use of community health facilities and agencies for research and training.

Faculty

Director

Mary L. Richardson

Professors

Conrad, Douglas A. * 1977, (Adjunct); MHA, 1973, University of Washington; MBA, 1977, PhD, 1978, Uni-
360 INTERDISCIPLINARY GRADUATE DEGREE PROGRAMS / MOLECULAR AND CELLULAR BIOLOGY

versity of Chicago; managed care, corporate finance in managed care.

Dowling, William L. * 1977; MBA, 1961, University of Chicago; MA, 1970, PhD, 1971, University of Michigan; strategic management of health-care organizations.

Grembowski, David * 1981, (Adjunct); MA, 1975, Washington State University; PhD, 1982, University of Washington; dental care demand, fluoridation, dental health services research.

Klastorin, Theodore * 1974; PhD, 1973, University of Texas (Austin); operations management, facility location, project management, waiting lines, logistics, inventory.

Madden, Carolyn Watts * 1975; MA, 1974, PhD, 1976, Johns Hopkins University; health economics and policy.

Martin, Diane P. * 1973; MA, 1972, Temple University; PhD, 1979, University of Washington; health services use and cost, alternative delivery systems and insurance.

Miller, Donald H. * 1970; PhD, 1972, University of California (Berkeley); land use and urban spatial structure, data analysis and forecasting, planning theory.

Ross, Austin Jr. 1977; MPH, 1955, University of California (Berkeley); ambulatory care, health care delivery systems.

Wing, Kenneth * 1990; JD, 1971, MPH, 1972, Harvard University; law; politics and policy; financing health care.

Zuckerman, Howard S. * 1997; MBA, 1968, Xavier University; PhD, 1976, University of Michigan; health management research, health administration.

Associate Professors

Richardson, Mary L. * 1978; MHA, 1978, PhD, 1984, University of Washington; organization, management, and analysis of policy relevant to health services.

Schultz, Phyllis R. * 1989; PhD, 1981, University of Denver; nursing systems research, impact of nursing services on population's health.

Wickizer, Thomas M. * 1988; MSW, 1974, University of Washington; MPH, 1979, MA, 1987, PhD, 1989, University of Michigan; health promotion evaluation.

Assistant Professors

Klawitter, Marieka * 1990, (Adjunct); MS, 1986, PhD, 1992, University of Wisconsin; family and employment policy, sexual orientation, women's studies.

Kuszler, Patricia Carol 1994, (Adjunct); MD, 1978, Mayo Medical School/Graduate School; JD, 1991, Yale University; regulation and financing of health care, medical malpractice, biotechnology, insurance law, torts.

Senior Lecturers

Katz, Aaron 1993; CPH, 1975, University of Toronto (Canada); health policy analysis.

Thompson, John R. 1989; MSW, 1976, University of Washington; public health practice, health policy analysis.

Molecular and Cellular Biology

Graduate Program

Graduate Program Coordinator T466 Health Sciences, Box 357275 (206) 543-0253 mcb@u.washington.edu The Molecular and Cellular Biology Program (MCB) is a leader in applying the techniques of molecular and cellular biology to advance the understanding of basic biological sciences. Thirteen departments across three schools have faculty members actively pursuing research in molecular and cellular biology. The departments participating in the program include Biochemistry, Bioengineering, Biological Structure, Botany, Environmental Health, Genetics, Immunology, Microbiology, Pathobiology, Pathology, Pharmacology, Physiology and Biophysics, and Zoology.

At the Fred Hutchinson Cancer Research Center (FHCRC), the divisions of Basic Sciences and Molecular Medicine participate in the joint Molecular and Cellular Biology graduate program. Shared FHCRC facilities are available for electron microscopy, flow cytometry, tissue culture, and image analysis. A biotechnology center for DNA and protein synthesis and sequencing, animal facilities, a biological production facility that focuses on monoclonal antibody production, extensive libraries , and a biocomputing center provide further support for the research effort.

Faculty Interests

Over 160 faculty members from the UW and FHCRC are researching molecular and cellular biology and are skilled in the training of graduate students. Faculty research interests encompass both prokaryotic and eukaryotic cells in the following general areas: regulation of gene expression/growth factors/hormones, molecular genetics/gene structure/gene families, microbiology/microbial genetics; DNA replication/mutagenesis/repair and recombination, developmental biology/developmental genetics/cell differentiation, virus/retroviruses, immunobiology, cell division/cell proliferation/cell cycle, cell motility/cytoskeleton/biomechanics, neurobiology, cell matrix interactions/extracellular matrix, and molecular structure.

Admission

The Molecular and Cellular Biology Program is a highly competitive interdisciplinary program which receives applications from outstanding students nationwide. MCB Program information and requirements are listed at its Web site, accessible through the University's homepage (http://www.washington.edu). Applications are due January 2 each year and are available on-line via a link from the homepage. Applications can also be requested by email (mcb@u.washington.edu) or by calling (206) 543-0253. Applicants may apply both to the MCB Program and to any of the thirteen participating UW departments. Since application requirements or deadlines may differ, applicants should contact the participating departments for information.

In addition to the Graduate School application requirements, prospective students must submit an MCB Program application form, a personal statement of research interests and career goals, three letters of recommendation, and Graduate Record Examination scores with a subject test.

Financial Aid

The MCB Program provides a stipend plus tuition for the first year of study. At the end of the first year of study, students choose a doctoral committee, and subsequent years of support are provided by the department of the committee chair. Students maintaining satisfactory academic progress receive funding for the duration of their graduate training.

Ph.D. Requirements

The program, which culminates in the Ph.D. degree, includes training in laboratory research, supervised teaching experience, lectures and seminars on current research topics, rigorous course work in molecular and cellular biology, and graduate-level electives in the student's area of interest. During the first year, students participate in research rotations in three laboratories. Lab rotations offer students an opportunity to learn basic research techniques and to become familiar with the various research areas in molecular and cellular biology of participating faculty members. First-year course work includes a three-quarter course in molecular and cellular biology and a three-quarter literature review course. Selection from a large list of elective courses is based on the student's background and interests. During the summer of the first year, students choose their permanent advisor and form their Doctoral Supervisory Committee.

During the second year, students generally complete their supervised teaching experience and their elective course work. Autumn quarter of the third year, students take the General Examination. Formal course work is usually completed by this time, although students may take elective courses of interest. Students continue to participate in various department seminar courses and journal clubs.

After completing their General Exam and course work, students work full-time on the dissertation research project. The final requirements for the Ph.D. degree include a written dissertation and an oral dissertation defense.

MCB Program students participate in a monthly seminar program which involves student and faculty presentations. The purpose of these seminars is to acquaint students with the research carried on in many laboratories involved in the program and to give students practical experience in making presentations before their peers. In addition, MCB Program students are invited to seminar programs in the participating departments and the Fred Hutchinson Cancer Research Center.

Faculty

Professors

Aderem, Alan * 1996; PhD, 1979, University of Capetown (South Africa); macrophage development and differentiation, phagocytosis, signal transduction and the cytoskeleton.

Bassingthwaighte, James * 1975; MD, 1955, University of Toronto (Canada); PhD, 1964, Mayo Medical School/ graduate School; computer analysis of transport mechanisms in blood and tissues.

Beavo, Joseph A. * 1977; PhD, 1970, Vanderbilt University; roles and molecular mechanisms of cyclic nucleotide phosphodiesterase regulation of cell function.

Bendich, Arnold J. * 1970; PhD, 1969, University of Washington; chromosome structure in mitochondria, chloropasts, and bacteria.

Bevan, Michael J. * 1990; PhD, 1972, National Institute for Medical Research (UK); T lymphocyte development and specificity, response to pathogens.

Bomsztyk, Karol 1983; MD, 1977, University of Rochester; nephrology.

Bornstein, Paul * 1967; MD, 1958, New York University; extracellular matrix.

Bothwell, Mark A. * 1985; PhD, 1975, University of California (Berkeley); molecular and cellular physiology of nerve growth factors.

Byers, Breck E. * 1970; PhD, 1967, Harvard University; cell biology: mitosis and meiosis, mechanisms of nuclear division and crossing-over in yeast.

Byers, Peter H. * 1976, (Adjunct); MD, 1969, Case Western Reserve University; extracellular matrix synthesis, genetic disorders of collagen metabolism, secretion.

Campbell, Lee Ann * 1985; PhD, 1982, Pennsylvania State University; molecular biology and pathogenic mechanisms of chlamydiae.

Carter, William G. * 1981; PhD, 1974, University of California (Davis); elucidation of components in cell attachment and cell spreading in normal cells.

Catterall, William A. * 1977; PhD, 1972, Johns Hopkins University; molecular biology of ion channels, molecular pharmacology and neurobiology.

Cattolico, Rose A. * 1975; PhD, 1973, State University of New York (Stony Brook); plastid replication, nucleic acid biochemistry in synchronized unicellular algae.

Champoux, James J. * 1972; PhD, 1970, Stanford University; DNA replication, tumor virology.

Chavkin, Charles * 1984; PhD, 1982, Stanford University; molecular mechanisms of opiate tolerance, the physiological role of neurophiles in brain function.

Clark, John I. 1982, (Adjunct); PhD, 1974, University of Washington; structural and developmental basis of lens-cell transparency and cataract formation.

Cleland, Robert E. * 1964; PhD, 1957, California Institute of Technology; physiology, plant hormones, cell wall.

Collins, Steven J. 1980; MD, 1973, Columbia University; oncology.

Cooper, Jonathan A. * 1987, (Affiliate); PhD, 1976, University of Warwick (UK); regulation of cellular metabolism and proliferation by protein phosphorylation.

Costa, Lucio Guido * 1983; PharmD, 1977, University of Milan (Italy); neurotoxicology; developmental and molecular mechanisms/biological markers of neurotoxicity.

Dale-Crunk, Beverly A. * 1972; PhD, 1968, University of Michigan; keratin biochemistry.

Detwiler, Peter B. * 1977; PhD, 1970, Georgetown University; physiology of photoreceptors.

Disteche, Christine M. * 1980, (Adjunct); PhD, 1976, University of Liege (Belgium); molecular genetics of sex chromosomes, X inactivation, human and mouse cytogenetics.

Dorsa, Daniel M. * 1981, (Adjunct); PhD, 1977, University of California (Davis); neuropharmacology, neuro-chemistry.

Eisenman, Robert M. * 1982, (Affiliate); PhD, 1971, University of Chicago; viral oncology, oncogenes, retrovirus multiplication.

Emerman, Michael 1990, (Affiliate); PhD, 1986, University of Wisconsin; molecular biology of HIV.

Fangman, Walton L. * 1967; PhD, 1965, Purdue University; molecular genetics: control of replication of yeast chromosomes, plasmid and mitochondrial DNA.

Farr, Andrew G. * 1982; PhD, 1975, University of Chicago; cell interactions governing lymphocyte production and function.

Faustman, Elaine M. * 1983; PhD, 1980, Michigan State University; developmental toxicology, risk assessment methodologies, toxicology of N-nitroso compounds.

Fausto, Nelson * 1994; MD, 1960, Sao Paulo State University (Brazil); liver regeneration, tumor biology, carcinogenesis, growth factors.

Fields, Stanley 1995; MA, 1978, PhD, 1981, Cambridge University (UK); molecular genetics.

Furlong, Clement E. * 1977, (Research); PhD, 1968, University of California (Davis); human biochemical genetics in biochemistry of membrane transport systems.

Galloway, Denise A. * 1982, (Research); PhD, 1976, City University of New York; viral pathogenesis and neoplasia.

Gelb, Michael H. * 1985; PhD, 1982, Yale University; mechanistic enzymology, bioorganic and medicinal chemistry.

Gordon, Albert M. * 1964; PhD, 1961, Cornell University; skeletal muscle physiology.

Gordon, Milton * 1959; PhD, 1953, University of Illinois; molecular basis of plant tumors, control of gene expression in plants. Gottschling, Daniel E. 1996; PhD, 1984, University of Colorado; telemerase in S. cerevisiae.

Groudine, Mark * 1982; MD, 1975, PhD, 1976, University of Pennsylvania; chromatin structure and gene activity in development and transformation.

Hauschka, Stephen D. * 1972, (Adjunct); PhD, 1966, Johns Hopkins University; muscle differentiation.

Henikoff, Steven 1981, (Adjunct); PhD, 1977, Harvard University; chromosome organization, epigenetic effects, analysis of protein sequence information.

Hille, Bertil * 1968; PhD, 1967, Rockefeller University; ion channels of excitable membranes.

Hille, Merrill B. * 1976; PhD, 1965, Rockefeller University; developmental biology, gastrulation in sea urchin embryos, translational regulation during meiosis.

Hol, Wilhelmus G. J. * 1992; PhD, 1971, University of Groningen (Netherlands); protein crystallography, drug design, vaccine development, and protein engineering.

Howard, Jonathon * 1989; PhD, 1983, Australian National University; biophysics of molecular motors.

Hurley, James Bryant * 1985; PhD, 1979, University of Illinois; molecular basis of vision.

Katze, Michael Gerald * 1987; PhD, 1980, Hahnemann Medical College; regulation of viral gene expression at the translational level.

King, Mary-Claire * 1995; PhD, 1973, University of California (Berkeley); genetic analysis of complex human phenotypes, human diversity and evolution.

Klevit, Rachel E. * 1983, (Adjunct); DPhil, 1981, Oxford University (UK); molecular recognition, protein NMR.

Laird, Charles D. * 1971, (Adjunct); PhD, 1966, Stanford University; cell and developmental biology, human genetics.

Lernmark, Ake * 1994; MD, 1970, PhD, 1971, University of Umea (Sweden); immunogenetics of organ-specific autoimmunity, with emphasis on insulin-dependent diabetes.

Lidstrom, Mary E. 1995; MS, 1975, PhD, 1977, University of Wisconsin; environmental biotechnology, molecular bioengineering.

Linial, Maxine L. * 1982, (Research); PhD, 1970, Tufts University; retrovirol replication and genetics, retroviral transformation.

Loeb, Lawrence A. * 1978; MD, 1961, New York University; PhD, 1967, University of California (Berkeley); DNA replication, cancer and AIDS.

Luchtel, Daniel L. * 1973; PhD, 1969, University of Washington; electron microscopy and cell biology, lung anatomy/pathophysiology, fiber toxicology.

Martin, George * 1957, (Adjunct); MD, 1953, University of Washington; somatic cell genetics, pathobiology of aging, Alzheimer's disease, Werner's syndrome.

McKnight, G. Stanley * 1979; PhD, 1976, Stanford University; phosphorylation; gene expression and neuro/endocrine physiology in mice using genetic approaches.

Miller, Arthur D. * 1987, (Affiliate); PhD, 1982, Stanford University; retrovirus biology, gene transfer, gene therapy.

Moody, William J. * 1982; PhD, 1977, Stanford University; single cell electrophysiology, development of electrical properties in embryos.

Moon, Randall T. * 1985; PhD, 1982, University of Washington; embryonic development; signal transduction.

Morris, David R. * 1966; PhD, 1964, University of Illinois; cell growth, gene expression, polyamines.

Mullins, James I. * 1994; PhD, 1978, University of Minnesota; cell biology and biochemistry.

Nathanson, Neil M. * 1979; PhD, 1975, Brandeis University; molecular analysis of neural signal transduction by muscarinic and neurokine receptors.

Neiman, Paul E. * 1971; MD, 1964, University of Washington; oncology.

Omiecinski, Curtis J. * 1983; PhD, 1980, University of Washington; molecular toxicology, genetic regulation/ expression of drug/chemical metabolizing enzymes.

Palczewski, Krzysztof * 1992; MS, 1980, PhD, 1986, Technical University of Wroclaw (Poland); visual transduction.

Palmiter, Richard D. * 1982; PhD, 1968, Stanford University; genetic approaches to neuromodulator function in mammalian nervous system.

Parsons, Marilyn * 1981; PhD, 1979, Stanford University; molecular and cellular parasitology.

Pious, Donald A. * 1964, (Adjunct); MD, 1956, University of Pennsylvania; antigen processing, function of nonclassical MHC genes, MHC gene regulation.

Rabinovitch, Peter S. * 1980; MD, 1979, PhD, 1980, University of Washington; cellular aging, preneoplastic disease, cell cycle abnormalities, DNA change.

Reeder, Ronald H. * 1981, (Affiliate); PhD, 1965, Massachusetts Institute of Technology; regulation of ribosomal RNA transcription by RNA polymerase I.

Reh, Thomas A. * 1989; PhD, 1981, University of Wisconsin; regeneration and development of central nervous system.

Riddiford, Lynn M. * 1973; PhD, 1961, Cornell University; insect development and physiology, invertebrate endocrinology, mechanisms of hormone action.

Roberts, James Michael * 1989, (Affiliate); MD, 1984, PhD, 1984, Columbia University; how cyclin-kinase complexes regulate events necessary for chromosomal DNA replication.

Roberts, Marilyn C. * 1981; PhD, 1978, University of Washington; antibiotic resistance genes.

Sage, E. Helene * 1980; PhD, 1977, University of Utah; extracellular matrix and vascular biology.

Schubiger, Gerold A. * 1972, (Adjunct); PhD, 1968, University of Zurich (Switzerland); developmental genetic control of Drosophila embryos, pattern formation in imaginal disks.

Schwartz, Stephen Mark * 1974, (Adjunct); MD, 1967, Boston University; PhD, 1973, University of Washington; vascular biology, atherosclerosis, molecular basis of lineage, developmental biology, cell kinetics.

Sibley, Carol Hopkins * 1976; PhD, 1974, University of California (San Francisco); mammalian cell genetics and molecular parasitology.

Smith, Gerald R. * 1983, (Affiliate); PhD, 1970, Massachusetts Institute of Technology; molecular biology of genetic recombination and regulation of gene expression.

Soriano, Philippe 1994, (Affiliate); PhD, 1982, University of Paris (France); vertebrate developmental genetics.

Staley, James T. * 1971; PhD, 1967, University of California (Davis); microbial ecology, bacterial systematics, general microbiology.

Stamatoyannopoulos, George 1965; MD, 1958, DMedSc, 1960, University of Athens (Greece); medical genetics.

Steiner, Robert A. * 1977, (Adjunct); PhD, 1975, University of Oregon; neuroendocrinology.

Storm, Daniel R. * 1978; PhD, 1971, University of California (Berkeley); molecular basis of neuroplasticity; cAMP and Ca2+ signal transduction systems in the CNS.

Stuart, Kenneth Daniel * 1985; PhD, 1969, University of lowa; molecular biology of protozoan pathogens.

Truman, James W. * 1973; PhD, 1970, Harvard University; hormones and invertebrate behavior, insect neural development, circadian rhythms.

Wakimoto, Barbara T. * 1984, (Adjunct); PhD, 1981, Indiana University; developmental genetics, gene expression and chromosome organization in eukaryotes.

Westrum, Lesnick E. * 1966, (Adjunct); MD, 1963, University of Washington; PhD, 1966, University College, London (UK); neuroanatomy, synaptology, plasticity, olfactory and trigeminal systems, dental pathways.

Wight, Thomas * 1978; PhD, 1972, University of New Hampshire; connective tissue biology and pathology, proteoglycans metabolism, atherosclerosis.

Willows, A. O. Dennis * 1969; PhD, 1967, University of Oregon; invertebrate neurophysiology, neural mechanisms underlying behavior.

Wilson, Christopher B. * 1980; MD, 1972, University of California (Los Angeles); immunology, rheumatology, infectious diseases.

Yao, Meng Chao * 1986, (Affiliate); PhD, 1975, University of Rochester; regulation of gene amplification and chromosome rearrangements in Tetrahymena.

Young, Elton * 1969, (Adjunct); PhD, 1967, California Institute of Technology; regulation of gene activity in the yeast Saccharomyces cerevisiae.

Associate Professors

Bakken, Aimee * 1973; PhD, 1970, University of Iowa; gene regulation during oogensis and embryogenesis, developmental, cellular and molecular biology.

Berg, Celeste A. * 1990; PhD, 1986, Yale University; Drosophila developmental genetics: cell communication and cell migration during oogenesis.

Braun, Robert Elmer * 1986; PhD, 1985, Tufts University; mouse molecular genetics and male germ cell development.

Breeden, Linda 1989, (Affiliate); PhD, 1981, University of Colorado; cell cycle regulation in budding yeast.

Carlson, Steven S. * 1985; PhD, 1975, University of California (Berkeley); molecular and cellular physiology of synaptic transmission.

Comai, Luca * 1989; PhD, 1980, University of California (Davis); chromatin and gene regulation in polyploid plants.

Cooper, Mark S. * 1990; PhD, 1985, University of California (Berkeley); cellular physiology and cell motility in developing tissues.

Davis, Trisha Nell * 1987; PhD, 1983, Yale University; the function of calcium-binding proteins in cell growth, molecular analysis of mitosis.

Edgar, Bruce A. 1993, (Affiliate); PhD, 1987, University of Washington; cell cycle control in Drosophila.

Feagin, Jean E. * 1993; PhD, 1982, Stanford University; molecular parasitology, emphasizing organelle gene organization and expression in protozoans.

Fink, Pamela J. * 1990; PhD, 1981, Massachusetts Institute of Technology; murine T cell differentiation and self tolerance.

Geballe, Adam Philip 1988; MD, 1978, Duke University; virology.

Giachelli, Cecilia * 1982, (Research); PhD, 1987, University of Washington; adhesion molecules and vascular biology processes.

Graubard, Katherine * 1979, (Research); PhD, 1973, University of Washington; cellular neurophysiology, neural basis of behavior.

Hahn, Steven M. * 1994, (Affiliate); PhD, 1984, Brandeis University; transcription initiation in yeast.

Hughes, Kelly T. * 1989; PhD, 1984, University of Utah; genetics, gene regulation, microbial physiology, and metabolism.

Kay, Mark A. 1993; PhD, 1985, MD, 1987, Case Western Reserve University; medical genetics.

Kemp, Christopher J. 1995, (Affiliate); PhD, 1989, University of Wisconsin; oncogenes and tumor suppressor genes in multistage carcinogenesis.

Kimelman, David * 1989, (Adjunct); PhD, 1985, Harvard University; molecular biology of early development in the frog, Xenopus laevis.

Leigh, John A. * 1985; PhD, 1983, University of Illinois; bacterial physiology, biochemistry, genetics.

Mandoli, Dina F. 1991, (Research); PhD, 1983, Stanford University; development and morphogenesis in a giant unicell using genetics, physiology, and molecular biology.

Manoil, Colin C. * 1986; PhD, 1979, Stanford University; molecular genetics, protein localization in bacteria.

Miller, Samuel I. 1995; MD, 1979, Baylor University; molecular pathogenesis of bacterial diseases.

Monnat, Raymond J. Jr. * 1982, (Adjunct); MD, 1976, University of Chicago; somatic mutation, somatic cell molecular genetics, human genetic disease.

Moseley, Stephen L. * 1985, (Adjunct); PhD, 1981, University of Washington; molecular basis of pathogenesis in E. coli diarrhea.

Overbaugh, Julie Maureen * 1988; PhD, 1983, University of Colorado (Boulder); molecular mechanisms of virus-host cell interactions/retroviral pathogenesis/aids.

Priess, James R. * 1993, (Affiliate); PhD, 1983, University of Colorado (Boulder); reliability models, fault trees.

Rosenfeld, Michael E. * 1992; PhD, 1981, University of Wisconsin; mechanisms of atherogenesis and macrophage gene expression.

Roth, Mark * 1994, (Affiliate); PhD, 1984, University of Colorado (Boulder); nuclear proteins involved in the regulation of gene expression.

Rudensky, Alexander Y. * 1992; PhD, 1986, Gabrichevsky Institute for Epidemiology and Microbiology; antigen processing and presentation, T-cell development.

Stayton, Patrick S. * 1992; PhD, 1989, University of Illinois; engineering proteins for biotechnology, biomaterials, and biomedical therapies/diagnostics.

Stenkamp, Ronald E. * 1978, (Adjunct); PhD, 1975, University of Washington; crystallography, metalloproteins, protein engineering, blood clotting proteins, streptavidin.

Swindle, John * 1996; PhD, 1985, University of Utah; molecular pathogenesis of trypanosomes.

Tempel, Bruce L. * 1988, (Adjunct); PhD, 1983, Princeton University; molecular neurobiology/ neurogenetics, especially potassium channel gene structure and function.

Thomas, James H. * 1988; PhD, 1985, Massachusetts Institute of Technology; genetics of development and the nervous system in nematodes.

Thouless, Margaret E. * 1980; PhD, 1974, University of Birmingham (UK); retroviruses, herpes viruses, enteric viruses, immunodiagnosis, virus variability.

Van Volkenburgh, Elizabeth * 1987; PhD, 1980, University of Washington; leaf growth and development, photobiology and electrophysiology.

Van Voorhis, Wesley C. * 1986, (Adjunct); PhD, 1983, Rockefeller University; MD, 1984, Cornell University; infectious diseases.

Vogel, Viola * 1990, (Adjunct); DPhil, 1987, Johann Wolfgang Goethe University (Germany); molecular assemblies and Langmuir-Blodgett films, liquid interfaces, nonlinear optics, microscopy.

Wong, Timothy Chee-Hing * 1983; PhD, 1979, University of Texas (Southwestern); viral gene expression in chronic infections and oncogenesis. Wright, Robin L. * 1990, (Adjunct); PhD, 1985, Carnegie Mellon University; biogenesis of membranes, yeast cell biology.

Yablonka-Reuveni, Zipora * 1982, (Research); MSc, 1975, Weizmann Institute for Science (Israel); PhD, 1979, University of Windsor (Canada); myogenesis during growth, development, and regeneration of skeletal muscle.

Zagotta, William N. * 1993; PhD, 1989, Stanford University; molecular mechanisms of ion channel function.

Assistant Professors

Bajjalieh, Sandra M. * 1995; MS, 1983, University of Illinois; PhD, 1989, University of Wisconsin; molecular neurobiology.

Baker, David * 1993, (Adjunct); PhD, 1989, University of California (Berkeley); protein folding.

Edwards, Scott V. 1994; PhD, 1992, University of California (Berkeley); molecular population genetics and evolution, avian comparative biology and systematics.

Foote, Jefferson * 1994, (Affiliate); PhD, 1985, University of California (Berkeley); biophysics of immune maturation, antibody engineering and immunotherapy, x-ray crystallography.

Giniger, Edward Scott * 1994, (Research); PhD, 1988, Harvard University; neural development, mechanism of axon guidance, genetic specification of brain structure.

Goverman, Joan M. * 1992, (Adjunct); PhD, 1981, University of California (Los Angeles); immune recognition and tolerance, autoimmunity, T cell development, activation, antibody diversity.

Hockenbery, David M. * 1994; MD, 1982, Washington University; gastroenterology.

Howard, Randall F. * 1993; PhD, 1978, University of Minnesota; molecular and cellular biology of malaria parasites, host immune responses.

Kapur, Raj P. * 1992, (Adjunct); MD, 1988, University of Southern California; human embryology, birth defects.

Ostrander, Elaine A. 1993, (Affiliate); PhD, 1981, Oregon Health Sciences University; study of human cancer susceptibility genes.

Pallanck, Leo J. * 1997; PhD, 1992, Albert Einstein College of Medicine; neurogenetics.

Raible, David W. * 1995; PhD, 1989, University of Pennsylvania; zebrafish neural development.

Roelink, Henk * 1996; MSc, 1985, University of Groningen (Netherlands); PhD, 1991, University of Amsterdam (Netherlands); role of signaling molecules in mediating neural tissue differentiation during vertebrate development.

Rose, Timothy M. * 1991; PhD, 1981, University of Geneva (Switzerland); molecular biology of tumor viruses, cell growth, differentiation, and transformation.

Ruohola-Baker, Hannele * 1993; PhD, 1989, Helsinki University (Finland); oogenesis, developmental genetics.

Stoddard, Barry L. * 1994, (Affiliate); PhD, 1990, Massachusetts Institute of Technology; structure and function of enzyme catalysts, bacterial signal transduction.

Strong, Roland K. * 1994, (Affiliate); PhD, 1990, Harvard University; structural molecular biology and crystallography of proteins mediating mucosal immune responses.

Tapscott, Stephen J. 1990; MD, 1982, University of Pennsylvania; neurology, molecular biology.

Traxler, Beth A. * 1992; PhD, 1987, Carnegie Mellon University; bacterial physiology, genetics, and membrane protein biochemistry.

Wang, Edith H. * 1996; PhD, 1991, Columbia University; regulation of genes that control cellular proliferation.

White, Theodore C. * 1996; PhD, 1984, University of Michigan; molecular mechanisms of virulence and drug resistance in pathogenic yeasts.

Wordeman, Linda * 1994; PhD, 1988, University of California (Berkeley); mitosis and myofibril formation.

Xia, Zhengui * 1987; MS, 1985, Wuhan University (China); PhD, 1991, University of Washington; neuronal apoptosis, neuronal gene regulation.

Zarbl, Helmut 1996, (Affiliate); PhD, 1983, McGill University (Canada); molecular mechanisms and genetic regulation of carcinogenesis, breast cancer.

Zhang, Kam * 1995, (Affiliate); PhD, 1990, Massachusetts Institute of Technology; structure and function of enzyme catalysts, bacterial signal transduction.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

MCB 514, 515, 516 Molecular and Cellular Biology Literature Review (2, 2, 2) Cooper, Moon Emphasizes critical evaluation of the original literature orally and in writing. Subject matter coordinated with CONJ 501, 502, 503. Open only to first-year students in the Molecular and Cellular Biology Program.

MCB 517, 518 Topics in Molecular and Cellular Biology (1-5, max. 12, 1-5, max. 12) Advanced indepth coverage of specific areas of molecular and cellular biology of current interest. Lectures by University of Washington faculty and invited speakers involved in research in this area. A basic knowledge of principles of molecular and cellular biology assumed.

MCB 519 Topics in Cancer (1, max. 6) Examination of ways to integrate basic, clinical, and public health sciences to increase understanding of human biology and disease. Seminars in introduction to cancer research as viewed by basic, clinical, and public health sciences, origins of cancer, cancer prevention, cancer progression, and therapies for cancer. Credit/no credit only. Offered: AWSp.

MCB 520 Tutorial in Molecular and Cellular Biology (1-2) Cooper Special topics reading and discussion. Credit/no credit only.

MCB 560 Biotechnology Externship (2-12) *Cooper, Moon* Supervised research in a biotechnology company. Prerequisite: permission of instructor and doctoral candidacy.

MCB 580 Teaching Practicum in Molecular and Cellular Biology (3, max. 6) Supervised training in the teaching of molecular and cellular biology. Credit/ no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MCB 599 Introduction to Research in Molecular and Cellular Biology (* max. 20) The student rotates through one research laboratory involved in the Molecular and Cellular Biology Program per quarter. Open only to first-year students in the Molecular and Cellular Biology Program. Credit/no credit only.

MCB 600 Independent Study or Research (*)

MCB 800 Doctoral Dissertation (*)

Museology

Graduate Program Coordinator Burke Museum, Box 353010 (206) 543-9680

The Museology Program is designed to provide the generalized training, knowledge, and skills necessary to pursue a professional career in museum work. The program is directed toward the training of a broad

range of museum professionals interested in curation and management of collections in anthropology, art, botany, geology, history, and zoology as well as in interpretive programs and museum administration.

Courses include required core museology subjects as well as a range of classes offering students the chance to specialize in interest areas. Course work is divided between the theoretical and practical aspects of museum operations. Classes take the form of lecture courses, seminars, special lectures by guest speakers, field trips, laboratory and collection management courses, practicums and internships. Since admission to the program is highly selective, classes are small and students have close contact with faculty.

Practical experience, an essential component of the program, is provided by several museological institutions at the University of Washington, including the Thomas Burke Memorial Washington State Museum, the Henry Art Gallery, the Herbarium, the Arboretum, the Fish Collection, and the University Libraries. The Burke Museum acts as the coordinating unit of the program. Located on the campus of the University of Washington, the Burke Museum is Washington state's natural-history and anthropology museum, and is the oldest and largest natural-history museum in the Northwest. It has nationally and internationally ranked collections focusing on the anthropology, geology, and zoology of the Pacific region and Pacific Rim.

Program Requirements

The graduate program in museology is designed to take two years to complete, consisting of six quarters of academic study and research. During the first year, students carry on average between 10 and 15 credits each quarter; during the second year, the number of credits may vary depending on research, practicum, and internship work. Students may enroll for part-time study, but this is discouraged during the first year.

Requirements for successful completion of the Master of Arts degree include (1) completion of a minimum of 36 quarter credits, including 27 course credits and 9 thesis or thesis-project credits, with at least 18 credits of course work numbered 500 or above, including a thesis or thesis project; (2) a minimum of three quarters of full-time residence credit or part-time equivalent; (3) demonstration of reading competence in one foreign language, if required by the student's supervisory committee due to the student's area of specialization; (4) completion of an internship in an off-campus museum or related agency approved by the supervisory committee prior to submission of the student's thesis or thesis project; (5) presentation of a thesis proposal by the beginning of the fourth quarter of study; (6) successful completion of an oral examination, covering both the thesis topic and the field of museology in general, following submission of the thesis or thesis project; and (7) completion of all degree requirements within six years.

The following courses are required of all students unless exempted by petition to the Program Coordinating Committee or credited for relevant course work completed at other universities: MUSEUM 480, 481 or 490 or 491, 482, 483, 498, 590, 591, 592, 593 or 594, 595, 600, 700 or 710. In addition, two or more courses are required in an academic discipline relevant to the area of specialization.

The Museology Program also offers a Graduate Certificate in Museum Studies as an option for graduate students in other degree programs at the University. To qualify, students must take a specified minimum set of four key courses in areas that emphasize either collection research and management, or museum administration and interpretation, and that include hands-on work experience. Information and application materials for the certificate can be obtained from the Museology Program office.

Admission Deadline

The application deadline for autumn quarter admission is February 15. Applications completed and postmarked on or before this date will be reviewed by the appropriate admission committee. Late applications may be submitted until April 15, although consideration is not guaranteed if enrollment targets have been met.

Professors

Ammirati, Joseph F. * 1979; MA, 1967, San Francisco State; PhD, 1972, University of Michigan; mycology, taxonomy and ecology of fungi.

Anderson, Judy M. * 1988; MA, 1977, University of California (Berkeley); graphic and informational design for business and institutions, book artist.

Hutterer, Karl L. * 1990; PhD, 1973, University of Hawaii; prehistory, ethnology of Southeast Asia, East Asia.

Kenagy, George James * 1976; PhD, 1972, University of California (Los Angeles); ecophysiology and behavior, reproduction and life history, population biology, evolution, mammalogy.

Kingsbury, Martha * 1968; PhD, 1969, Harvard University; nineteenth- and twentieth-century European and American art.

Lockard, Joan S. * 1974, (Adjunct); PhD, 1963, University of Wisconsin; primate social behavior, animal behavior, sociobiology, human ethology, neurobehavior.

Nason, James * 1970; PhD, 1970, University of Washington; sociocultural anthropology, museology, material culture, cultural heritage, Micronesia,North America.

Olstad, Roger G. * 1964, (Emeritus); PhD, 1963, University of Minnesota; science education, teacher education.

Pietsch, Theodore W. * 1978, (Adjunct); PhD, 1973, University of Southern California; ichthyology.

Silbergeld, Jerome * 1975; PhD, 1974, Stanford University; Chinese art.

Stein, Julie K. * 1980; MA, 1976, PhD, 1980, University of Minnesota; New World archaeology, Northwest coast archaeology, geoarchaeology, shell middens.

Associate Professors

Failing, Patricia A. * 1982; MA, 1974, University of California (Berkeley); contemporary art and criticism.

Fidel, Raya * 1982; PhD, 1982, University of Maryland; information retrieval systems, user interaction, classification research.

Hamilton, Clement Wilson * 1985, (Adjunct); PhD, 1985, Washington University; landscape plant selection, taxonomy of horticultural and tropical plants.

Kahn, Miriam * 1986; PhD, 1980, Bryn Mawr College; cultural representations, museums, concepts of place, Melanasia, Polynesia.

Minah, Galen F. * 1970; MArch, 1968, University of Pennsylvania; design process, design, professional practice.

Wright, Robin K. * 1983; PhD, 1985, University of Washington; Native American art, particularly Northwest coast Indian art.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

MUSEUM 480 Introduction to Museology (3) I&S Museum history, philosophy, and basic operations, including organization, income, collection manage ment, conservation, exhibition, security, education, research, and ethics. Offered: jointly with ANTH 480.

MUSEUM 481 Museum Collection Management: Ethnology (3) I&S Lecture and work experience in museum collection management in the ethnology collections of the Burke Memorial Washington State Museum, including identification, cataloging, fumigation, storage, cleaning, inventory, and specimen preparation for exhibition of archival and nonarchival museum specimens from North America, the Pacific, and Pacific Rim areas. Offered: jointly with ANTH 481.

MUSEUM 482 Museum Conservation (3) 1&S Lecture and demonstrations in the recognition and treatment of museum conservation problems for specimens of all types. Application of basic principles to specific preventive and active conservation and restoration problems encountered by curatorial personnel. Offered: jointly with ANTH 482.

MUSEUM 483 Museum Operations Practicum (3, max. 9) Provides students with the opportunity to apply their general museological training in one or more areas of supervised museum operation areas, e.g., registration, education, or exhibition through project-oriented work in the Burke Museum.

MUSEUM 488 Special Topics in Museology (3-5) In-depth examination of selected current issues within the field of museology.

MUSEUM 490 Museum Curation Practicum (1-5, max. 15) Application of museological training in curation of ethnographic, archeological, geological, or zoological collection materials in the Burke Museum. Supervised work ranges from fundamental collection documentation and research to preventive conservation, storage, and other special curation projects. Offered: jointly with ARCHY 490.

MUSEUM 491 Museum Curation Practicum: General Collections (1-5, max. 15) The application of museological training in the curation of art, botanical, geological, historic, zoological, or other collections. Work under the supervision of faculty curators ranges from fundamental collection documentation to preventive conservation or storage.

MUSEUM 498 Museum Internship (3-5) Faculty supervised off-campus internships in museums and allied institutions. Each internship is individually established and provides students with practical experience and the opportunity to apply and learn new professional skills. Prerequisite: permission of instructor.

MUSEUM 590 Seminar in Museum Theory (3) Fundamental theoretical issues involved in current museum administrative and operations work, including administrative structure, organizational conflicts, museum-community relations, and museum educational programming. Prerequisite: permission of instructor. Offered: jointly with ANTH 590.

MUSEUM 591 Seminar in Museum Operations (3) Designing hypothetical museums and creating a first year of operations. Design elements include architectural plan, staffing plan, initial and recurring budgets, security system, records system, educational plan, and policy making. Recommended: 590. Offered: jointly with ANTH 591.

MUSEUM 592 Seminar in Museum Specimen Documentation (3) Seminar discussion of museum specimen documentation research approaches, including technological and raw material analyses, contextual studies, and esthetic studies. Documentation of a collection and reference work. Recommended: 590 and 591. Offered: jointly with ANTH 592.

MUSEUM 593 Museum Exhibition Seminar (3) Review of critical issues in the planning, design, preparation, and installation of museum exhibits, including exhibit conservation, visitor-based design factors, ideological aspects of interpretation, and community relations. Readings and examination of exhibits are combined with case study work.

MUSEUM 594 Seminar in Museum Education (3) Focus on museums as educational institutions with consideration of the place of education in the mission of museums, the educational role of museums compared to that of other institutions, the museum's diverse audiences and their needs, and the educational methods and techniques museums may employ in pursuing their goals. Recommended: 480.

MUSEUM 595 Museum Legal and Ethical Issues (3) Survey of the legal and ethical issues regarding international and national museum operations, including the control and movement of cultural property, artistic and intellectual rights and copyright, concepts of patrimony and issues of repatriation, as well as other relevant policies and regulations.

MUSEUM 600 Independent Study or Research (1-10)

MUSEUM 700 Master's Thesis (1-10)

MUSEUM 710 Master's Project (1-10) Credit/no credit only.

Near and Middle Eastern Studies

Graduate Program Coordinator 200 Gerberding, Box 351240 (206) 543-6398

The interdisciplinary Ph.D. program in Near and Middle Eastern Studies is designed for students who wish to pursue research with a comparative perspective in Near Eastern languages and literature: Arabic, Hebrew, Persian (or Dari or Tajik), Turkish, and Central Asian Turkic languages; Near Eastern linguistics; Islamic topics, namely, Islamic law, history, institutions, theology, and mysticism; comparative religion: Judaism, Christianity, and Islam; and interdisciplinary investigations of modern topics using the social sciences. The program is administered by an interdisciplinary Graduate School faculty group. The program of studies includes courses offered in the Department of Near Eastern Languages and Civilization, the Jackson School of International Studies, and other departments on campus. Students in the program must take courses in both the humanities and social sciences

Degree Requirements and Satisfactory Progress

Specific course work and areas of concentration will be determined by the student's interests within the framework of the degree and satisfactory progress requirements listed below.

1. Within 18 months of admission, demonstration of a general knowledge of history and culture in one of the following general fields: Islamic civilization; Arabic, Hebrew, Persian, Turkish, or Central Asian Turkic languages and literature; the modern Middle East; or comparative religion either through previous degree work or through examination administered by the program.

2. Within three years of admission, completion of two advanced courses in the humanities, one of which must be in the Department of Near Eastern Languages

and Civilization (NELC), and two advanced courses in the social sciences, one of which must be in the Department of History. These courses are in addition to work the student may have done at the B.A. and M.A. level.

3. Within three years of admission, completion of a graduate seminar. Two graduate seminars are required if none was taken at the M.A. level.

4. A student will be expected to have studied four languages, two of which must be regional languages and one of which must be a "Western" European language other than English, such as French, German, Italian, Russian, or Spanish. Within three years of admission, a student must acquire a reading knowledge of a pertinent research language different from the two languages offered at the time of admission. Before the oral examination listed below may be taken, the student must complete the language requirements including the second-year level in a regional language different from the two languages offered at the time of admission if both were not regional languages.

Annual Review

A subcommittee of the Near and Middle Eastern Studies program faculty will meet each spring to review the progress of all students in the Ph.D. program. Either the chair of the student's committee, the program's graduate adviser, or the program's director will inform students of the results of this annual review.

Ph.D. Examinations and Dissertation

The student will be expected to take the following examinations: (1) preliminary exams consisting of an area of specialization exam and a theory and discipline exam; (2) a General Examination, consisting of a takehome part and an oral part; and (3) a Final Examination, which is the Ph.D. thesis defense.

Students must meet the general University requirements concerning admission to candidacy for the doctoral degree, the dissertation, and final examinations, including an oral examination.

A student's Ph.D. supervisory committee shall consist of no less than three members of the University of Washington's Graduate School faculty as well as a representative of the Graduate School (GSR). The chair of the committee must be an active member of the Graduate School faculty. At least two members of the committee must be members of the Near and Middle Eastern Studies faculty group. Additional members may be asked to join the committee.

Students will write a dissertation as the final requirement for the Ph.D. degree. The topic of the dissertation will be set in consultation with the Ph.D. candidate's supervisory committee.

Admission Deadline

The application deadline for autumn quarter admission is February 1. Applications which are completed and postmarked on or before this date will be reviewed by the appropriate admission committee. Late applications may be submitted until April 15, although consideration is not guaranteed if enrollment targets have been met.

Faculty

Professors

Bacharach, Jere L. * 1967; MA, 1962, Harvard University; PhD, 1967, University of Michigan; history of the Middle East, Islamic.

Brame, Michael K. * 1974; PhD, 1970, Massachusetts Institute of Technology; syntax, phonology, structure of Arabic and English.

Cirtautas, Ilse D. * 1968, (Adjunct); PhD, 1958, University of Hamburg (Germany); Turkic languages and literatures.

Heer, Nicholas L. * 1965, (Emeritus); PhD, 1955, Princeton University; Arabic language and literature, Islamic theology and philosophy.

Jaffee, Martin S. * 1987; PhD, 1980, Brown University; rabbinic religion and literature in late antiquity.

Kaisse, Ellen * 1976; PhD, 1977, Harvard University; phonology, historical linguistics, ancient and modern Greek, Spanish, syntax-phonology interface.

Kartsonis, Anna D. * 1983; PhD, 1982, New York University; Byzantine and medieval art.

MacKay, Pierre A. * 1966, (Emeritus); PhD, 1964, University of California (Berkeley); Greek literature, postclassical and Byzantine Greek literature, numismatics.

Migdal, Joel S. * 1980; MA, 1968, PhD, 1972, Harvard University; state and society in the Third World; Middle East politics.

Sakata, Hiromi L. * 1977; MA, 1968, PhD, 1976, University of Washington; ethnomusicology.

Wenke, Robert J. * 1975; PhD, 1975, University of Michigan; archaeology of Egypt, the Middle East, and quantitative methods.

Williams, Michael A. * 1976; PhD, 1977, Harvard University; early Christianity and religions of antiquity.

Ziadeh, Farhat J. * 1966, (Emeritus); LLB, 1940, University of London (UK); Arabic language and literature, Islamic law, Islamic institutions.

Associate Professors

Close, Angela E. * 1995; MA, 1974, PhD, 1976, Cambridge University (UK); prehistory of North Africa, lithics, paleolithic.

DeYoung, Terri L. * 1991; PhD, 1988, University of California (Berkeley); Arabic language and literature.

Goldberg, Ellis * 1985; PhD, 1983, University of California (Berkeley); political economy of the Middle East, comparative politics.

Karimi-Hakkak, Ahmad * 1985; PhD, 1979, Rutgers University; Persian language and literature, Iranian culture and civilization.

Kasaba, Resat * 1985; PhD, 1985, State University of New York (Binghamton); historical sociology, world systems, social change in the Middle East.

Sokoloff, Naomi B. * 1985; PhD, 1980, Princeton University; Hebrew language and literature.

Waugh, Daniel Clarke * 1972; PhD, 1972, Harvard University; medieval Russian history.

Assistant Professor

Wheeler, Brannon M. * 1996; PhD, 1993, University of Chicago; Islamic studies, comparative religion, late antiquity, Jewish studies, legal studies.

Neurobiology and Behavior

Graduate Program

Graduate Program Coordinator K546 Health Sciences, Box 357750 (206) 685-1647 neubehav@u.washington.edu

Understanding the brain represents both a major scientific challenge and a wonderful research opportunity. Investigations into the mechanisms of neural function require an interdisciplinary approach using the knowledge base and techniques of anatomy, biochemistry, molecular biology, physiology, pharmacology, and the behavioral sciences. Neuroscientists and their students must use these different approaches in their research and training if they are to make inroads to solving the major questions in neuroscience.

The University of Washington has met this challenge by emphasizing neuroscience research in many departments in both the School of Medicine and the College of Arts and Sciences, and by establishing the interdisciplinary graduate program in Neurobiology and Behavior. The laboratories of more than 65 faculty members in 14 departments have combined efforts to form the doctoral training program, continuing a long history of collaborative efforts that cross both departmental and University boundaries.

The program is designed to allow students to obtain both broad training in the neurosciences and more intensive course work in specific areas of interest. The program emphasizes flexibility and encourages students to take responsibility in the design of their own curriculum. Students have the opportunity to work with faculty whose interests span the breadth of neuroscience research. Graduates of the program are well prepared for a variety of careers involving academic, research, industrial, and public policy positions.

Key aspects of the graduate program that are common to all students include (1) a year-long course which provides a core of knowledge in the neurosciences, (2) quarterly first-year laboratory rotations and rotation talks attended by all students in the program, (3) a weekly program-wide journal club with presentations by both students and faculty, (4) a bi-weekly seminar series featuring both outside and UW speakers, and (5) a program-wide retreat, combined with a campus-wide poster session where students and postdoctoral candidates can present their Society for Neuroscience Annual Meeting posters. Thus, the program exposes students throughout their graduate career to the most exciting and current research and concepts covering all areas of neuroscience.

Application Process

Students who have emphasized either biological or physical sciences in their undergraduate careers are invited to apply. Applicants are requested to send a copy of their academic record; GRE scores, including, if possible, scores on a subject test such as chemistry, physics, molecular and cellular biology, psychology, or biology; and three letters of recommendation from the persons who can best evaluate their potential for success in graduate study. New students enter the graduate program September 15. Applications are considered until January 15. Applications received after January 15 are considered only in unusual circumstances.

Research Facilities

Participating departments are located in the Health Sciences Center and in the College of Arts and Sciences. Because the program is interdisciplinary, extensive research facilities in all areas of neurosciences are available to the student. The University maintains two major natural and health-sciences libraries in addition to individual departmental libraries. Facilities in the participating departments include electronics and machine shops, instrumentation for synthesis and sequence determination of nucleic acids and proteins. calcium imaging, confocal microscopy, and computer facilities. Equipment for ultrastructural studies is readily available. The resources of the Regional Primate Research Center, the W. M. Keck Center for Advanced Studies in Neural Signaling, and the Friday Harbor Laboratories are also available to the student.

Financial Aid

The program offers full stipend and tuition support to students through traineeships derived from NIH training grants and private foundation support and through research assistantships supported by the University or research grant funds. Students with satisfactory academic progress can anticipate that funding will continue for the duration of their program.

Jones, Theresa A. * 1996; PhD, 1992, University of Texas (Austin); behavioral and neural plasticity after brain damage.

Raible, David W. * 1995; PhD, 1989, University of Pennsylvania; zebrafish neural development.

Roelink, Henk * 1996; MSc, 1985, University of Groningen (Netherlands); PhD, 1991, University of Amsterdam (Netherlands); role of signaling molecules in mediating neural tissue differentiation during vertebrate development.

Shadlen, Michael N. * 1995; PhD, 1985, University of California (Berkeley); MD, 1988, Brown University; visual perception.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

NEUBEH 501, 502, 503 Introduction to Neurobiology (3, 4, 4) Survey of all aspects of neuroscience, including (501) molecular and cellular neurobiology, (502) introduction to neuroanatomy and modules on sensory and motor systems, and (503) a discussion of higher neural processes like learning, memory, and neuroendocrinology. Lecture and laboratory discussion of original literature, observation of demonstrations, and examination of macroscopic and microscopic neural tissue.

NEUBEH 510 Seminar in Neurobiology and Behavior (0.5) Biweekly seminar on current topics. Required for students in the Graduate Program in Neurobiology and Behavior and for students supported on Graduate Neuroscience Program Training Grant. Credit/no credit only.

NEUBEH 526 Introduction to Laboratory Research in Neurobiology (4) Students become familiar with, and assist in, the performance of research on ongoing projects in designated laboratories. Emphasis on employed methodology and techniques. Credit/no credit only. Prerequisite: first-year graduate students in neurobiology. **NEUBEH 527** Current Topics in Neurobiology and **Behavior (1)** Presentation and discussion of current research provides exposure to diverse areas of neurobiology and behavior research. Credit/no credit only. Prerequisite: graduate student in neurobiology and behavior program or permission of instructor.

NEUBEH 564, 565 Current Issues in Behavioral Neuroscience (3, 3) Considers the neural substrate of several different behaviors, e.g., learning and memory, visual perception, vocal communication, taste aversion, through lectures and reading of original literature. Students have opportunities to lead discussion groups and develop writing skills. Prerequisite: knowledge of basics of neuroscience.

NEUBEH 600 Independent Study or Research (* max. 10) Credit/no credit only.

NEUBEH 700 Master's Thesis (* max. 10) Offered: AWSpS.

NEUBEH 800 Doctoral Dissertation (* max. 10) Offered: AWSpS.

Nutritional Sciences

Graduate Program Coordinator 305 Raitt, Box 353410 (206) 543-1730 brochure@u.washington.edu

The Nutritional Sciences Program offers an interdisciplinary graduate program of study leading to a Master of Science, Master of Public Health-Nutrition, or Doctor of Philosophy degree. In addition, training is provided in advanced nutrition and its application to the field of clinical dietetics through both didactic and clinical experiences. Three types of students are best served by this program: (1) the individual with a strong science background who wishes to pursue advanced training in nutritional sciences; (2) the individual who is a registered dietitian or registered dietetic-eligible, and wishes to pursue an advanced degree in Public Health Nutrition; and (3) the individual who, while pursuing a graduate degree in nutritional sciences, wishes to complete academic requirements (American Dietetic Association-approved didactic plan) for becoming a registered dietitian or wishes to obtain the supervised clinical experience (American Dietetic Association Dietetic Internship) required for registered dietitian status.

Principal areas of study include public health nutrition, experimental nutrition, and clinical nutrition. The faculty is composed of a core group in nutrition plus a larger affiliated group representing relevant fields within the schools of Public Health, Medicine, and Nursing, the Division of Food Science in the College of Ocean and Fishery Sciences, and the College of Arts and Sciences.

Each individual program of study is designed by the student in consultation with, and with the approval of, a supervisory committee. Not only will appropriate course work be carefully defined, but collaboration between student and faculty in appropriate (thesis) research will begin as early in the graduate experience as possible. Those students receiving supervised clinical experience will work closely with the coordinator of clinical activities to ensure the program of experiences.

Research Facilities

Support facilities are available in the form of libraries, laboratories, a nutrient database, computer facilities, a human metabolic unit, and a vivarium. Additional support is available through the Clinical Research Center, the Clinical Nutrition Research Unit, the Northwest Lipid Research Center, and the Nutrition Metabolism Division of the Department of Laboratory Medicine in the School of Medicine. Clinical facilities available for supervised clinical experience include the University of Washington Medical Center, Harborview Medical Center, Fred Hutchinson Cancer Research Center, Northwest Kidney Center, Children's Hospital and Medical Center, Pacific Medical Center, and the Center for Human Development and Disabilities.

Admission Requirements

Students may enter the graduate degree program after completing a bachelor's or master's degree in the biological sciences; background in human physiology and biochemistry is especially desirable. Those students who wish to pursue registration status with the Commission on Dietetic Registration must complete American Dietetic Association–approved didactic requirements prior to applying for the supervised clinical dietetic internship. Students who wish to pursue graduate degrees in Nutritional Sciences should correspond with the Director of the Nutritional Sciences Interdisciplinary Graduate Program for detailed admission requirements.

Faculty

Interim Director

Carrie L. Cheney

Professors

Albers, John J. * 1971, (Research); MS, 1967, PhD, 1969, University of Illinois; lipoprotein metabolism and pathophysiology.

Austin, Melissa A. * 1988; PhD, 1985, University of California (Berkeley); genetic and cardiovascular disease epidemiology, quantitative methods.

Benedetti, Thomas J. * 1979; MD, 1973, University of Washington; perinatal medicine.

Beresford, Shirley A. * 1987; PhD, 1981, University of London (UK); nutritional and cancer epidemiology, health promotion.

Blagg, Christopher R. 1966; MD, 1954, MBChB, 1954, University of Leeds (UK); nephrology.

Bowen-Pope, Daniel * 1979; PhD, 1979, University of California (Berkeley); gene regulation, growth factors and receptors.

Brown, B. Greg 1981; MD, 1969, PhD, 1969, Johns Hopkins University; cardiology.

Brown, Zane A. * 1977; MD, 1966, Temple University; insulin requiring diabetes complicating pregnancy, genital herpes complicating pregnancy.

Brunzell, John D. * 1969; MD, 1963, University of Washington; nutritional and metabolic aspects of lipoproteins and diabetes.

Chait, Alan * 1977; MBChB, 1967, MD, 1974, University of Capetown (South Africa); clinical nutrition with special emphasis on lipid metabolism.

Chesnut, Charles * 1974; MD, 1966, University of Florida; nuclear medicine.

Dellinger, E. Patchen * 1977; MD, 1970, Harvard University; general and gastrointestinal surgery.

Emanuel, Irvin * 1966; MA, 1956, University of Arizona; MD, 1960, University of Rochester; MSPM, 1966, University of Washington; epidemiology of maternal and child health problems, childhood factors in adult diseases.

Ensinck, John W. * 1961, (Emeritus); MDCM, 1956, McGill University (Canada); the role of GI hormones in fuel homeostasis.

Fujimoto, Wilfred Y. * 1970; MD, 1965, Johns Hopkins University; metabolism, endocrinology, nutrition.

Heitkemper, Margaret M. * 1981; MN, 1975, University of Washington; PhD, 1981, University of Illinois; gastroenterology, enteral nutrition, gerontology.

Henderson, Maureen M. * 1975, (Emeritus); MBBS, 1949, DPH, 1956, University of Durham (UK); applica-

tion of epidemiology to disease prevention, dietary prevention of disease.

Jurkovich, Gregory J. 1988; MD, 1978, University of Minnesota; general surgery.

Kiyak, H. Asuman * 1972, (Adjunct); MA, 1974, PhD, 1977, Wayne State University; geriatric dentistry, behavioral aspects of health care.

Knopp, Robert H. * 1974; MD, 1964, Cornell University; metabolism and endocrinology.

Koepsell, Thomas D. * 1979; MD, 1972, Harvard University; MPH, 1979, University of Washington; injury, cardiovascular epidemiology, neuroepidemiology, methods, application to health services.

Kronmal, Richard A. * 1964; PhD, 1964, University of California (Los Angeles); nonparametric density estimation, computer algorithms, cardiovascular data analysis, clinical trials.

Marlatt, G. Alan * 1972; PhD, 1968, Indiana University; health psychology and addictive behaviors (relapse prevention and harm reduction).

Monsen, Elaine R. * 1969; MS, 1959, PhD, 1961, University of California (Berkeley); nutrition, dietetics.

Porte, Daniel Jr. 1965; MD, 1957, University of Chicago; metabolism and endocrinology.

Potter, John D. * 1995; MBBS, 1971, PhD, 1984, University of Queensland (Australia); cancer, nutritional and molecular epidemiology, cancer prevention.

Ross, Russell * 1962, (Adjunct); DDS, 1955, Columbia University; PhD, 1962, University of Washington; atherosclerosis, growth factors, inflammation, vascular biology.

Schwartz, Robert S. * 1982; MD, 1974, Ohio State University; internal medicine and geriatrics.

Scott, C. Ronald * 1965; MD, 1959, University of Washington; diagnosis and nutritional management of genetic disorders of children.

Siscovick, David S. * 1987; MD, 1976, University of Maryland; epidemiology.

White, J. Emily * 1982; PhD, 1982, University of Washington; cancer epidemiology and prevention, epidemiologic methods.

Whorton, James C. * 1970, (Adjunct); PhD, 1969, University of Wisconsin; history of medicine, public health, pharmacy and alternative healing.

Woods, Stephen C. * 1972; PhD, 1970, University of Washington; physiological psychology, regulatory behavior, conditioned drug effects.

Associate Professors

Ahmad, Suhail 1976; MBBS, 1968, University of Allahabad (India); nephrology.

Dong, Faye M. * 1984; PhD, 1976, University of California (Davis); fish nutrition, seafood quality.

Elmer, Gary W. * 1971; PhD, 1970, Rutgers University; medicinal chemistry.

Faine, Mary P. 1982; MS, 1975, University of Washington; nutrition.

Kestin, Mark * 1990, (Affiliate); PhD, 1989, Flinders University (Australia); MPH, 1990, Harvard University; relationship between nutrition, cancer and cardiovascular disease.

Kristal, Alan R. * 1987; DPH, 1983, Columbia University; nutritional epidemiology, relationship between diet and cancer.

Lipkin, Edward W. * 1981; PhD, 1977, MD, 1978, Case Western Reserve University; mineral metabolism, nutrition support, non-human primate physiology.

McCann, Barbara S. * 1986, (Adjunct); MS, 1982, PhD, 1984, Rutgers University; behavior change, adult ADHD, psychological stress, cardiovascular disease, diabetes, obesity.

Pearlman, Robert A. * 1981, (Adjunct); MD, 1975, Boston University; gerontology.

Rasco, Barbara A. * 1984; PhD, 1983, University of Massachusetts; JD, 1995, Seattle University; food chemistry, fisheries technology, aquaculture, food safety, food law, products liability.

Rosenfeld, Michael E. * 1992; PhD, 1981, University of Wisconsin; mechanisms of atherogenesis and macrophage gene expression.

Schwartz, Michael W. 1987; MD, 1983, Rush Medical College; metabolism and endocrinology.

Weigle, David S. 1981; MD, 1978, Harvard University; endocrinology and metabolism.

Assistant Professors

Cheney, Carrie L. * 1990, (Affiliate); PhD, 1989, University of Washington; role of nutrition in cancer prognosis and secondary prevention.

Patterson, Ruth E. * 1994, (Research); PhD, 1992, University of North Carolina; dietary assessment in adult populations, vitamin supplements in cancer prevention.

Shell-Duncan, Bettina * 1995; MS, 1988, University of Wisconsin; PhD, 1994, Pennsylvania State University; nutrition, maternal and child health, demography, Africa.

Swisshelm, Karen * 1980; PhD, 1989, University of Washington; senescence, breast cancer, gene expression, DNA methylation, cytogenetics.

Instructor

Aker, Saundra 1977; BS, 1961, University of Utah; medically optimal nutrition support for immunocompromised patients.

Lecturers

Rees, Jane * 1973; MS, 1972, University of Washington; nutritional support of adolescent health, especially during pregnancy; eating disorders.

Trahms, Cristine M. * 1973; MS, 1972, University of Washington; growth and development of young children: metabolic disorders, special health care needs.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

NUTR 300 Nutrition for Today (3) NW Basic and applied nutrition and food science. Includes identification and physiological roles of nutrients, nutritional requirements, problems with over- and undernutrition, and nutritional and food-related diseases. Food additives, processing, safety, and their effects on overall nutrition. Current issues of public significance. Offered: jointly with FD SC 300.

NUTR 301 Nutrition and Nursing (3) NW Basic principles of nutrition and their relationship to health problems. Normal nutrition needs of individuals at various age levels; environmental influences on nutrition; assessment of nutritional status; nutritional values of foods; dietary modifications as appropriate in the nutritional component of medical treatment. Recommended: CHEM 220, CHEM 237, CHEM 335, or ZOOL 118. Offered: A.

NUTR 441 Food Structure and Preparation (3) Review of relationships between food quality and food handling. Principles of food science integrated with laboratory sessions that observe the effects of various parameters on food composition and quality. For nutrition students only.

NUTR 445 Food Service Management (3) Objectives of management in a food service system; pur-

chasing systems currently in use, receiving systems, inventory control, menu planning, cost control, service styles, and sanitation requirements. Prerequisite: NUTR 441.

NUTR 461 Diet Therapy (4) Nutrition in the etiology and treatment of disease and in the maintenance of health. Various organ systems are discussed: pathology, medical/surgical treatment and dietary management, with emphasis on counseling skills. For nutrition students only. Prerequisite: either CONJ 403 or both P BIO 405 and P BIO 406.

NUTR 465 Nutritional Anthropology (3) I&S/NW Concerns interrelationships between biomedical, sociocultural, and ecological factors, and their influence on the ability of humans to respond to variability in nutritional resources. Topics covered include diet and human evolution, nutrition-related biobehavioral influences on human growth, development, and disease resistance. Prerequisite: BIO A 201. Offered: jointly with BIO A 465.

Courses for Graduates Only

NUTR 500 Graduate Seminar: Current Issues in Nutrition (1, max. 4) Addresses current topics in the Nutrition and Applied Nutrition literature and provides a forum for student and faculty presentation and review of current research efforts. Prerequisite: graduate student in nutrition. Offered: AWSp.

NUTR 520 Protein and Carbohydrate Nutrition (4) Monsen, Rosenfeld Metabolic and physiologic concepts related to protein and carbohydrate nutrition. Areas address include composition of foods, requirements through the life cycle, quality of protein, vegetarianism, protein deficiency, low carbohydrate diets, glycemic response to foods, carbohydrates and dental caries, inborn errors in carbohydrate and protein metabolism. Prerequisite: biochemistry. Offered: A.

NUTR 521 Lipid Nutrition (4) Monsen, Rosenfeld Normal lipid components of animal fluids and tissues, with review of their metabolism and physiological functions. Effect of diet and the normal development during the life span of these lipid metabolism. Changes of lipids with various types of disease states and means of nutritional modification of these changes. Prerequisite: biochemistry. Offered: W.

NUTR 522 Vitamin and Mineral Nutrition (4) Monsen, Rosenfeld Advanced study of biologically essential minerals and vitamins. To include absorption, transport, function, storage, excretion; imbalance, deficiency and toxicity; dietary sources; role of these nutrients in prevention diseases directly on indirectly (such as cancer, dental caries); role of modern food technology on availability of these nutrients in our food supply. Prerequisite: biochemistry. Offered: Sp.

NUTR 525 Evaluation of Nutritional Status (3) Monsen Dietary, clinical, and biochemical-biophysical components in the assessment of nutritional status. Interrelationships of nutrients and effects of varying levels of nutrient intake. Critical appraisal of nutritional status surveys. Experimental design and dietary methodology. Prerequisite: human nutrition and biochemistry. Offered: odd years; A.

NUTR 526 Maternal and Infant Nutrition (3) Influence of nutrition on fertility and on the course and outcome of pregnancy. Nutritional management of high-risk pregnancy. Nutritional needs during lactation and effect of maternal diet on milk composition. Breast-feeding versus bottle-feeding; fundamentals of infant nutrition. Nutritional management of high-risk infants. Prerequisite: human nutrition and human physiology. Offered: W.

NUTR 527 Nutrition: Childhood Through Adolescence (3) Rees, Trahms Influence of nourishment on growth, development, and behavior of children, toddlers through adolescents. Critical evaluation of normative data, special problems, and intervention strategies for individual as well as public health programs. Prerequisite: human nutrition and human physiology. Prerequisite: human nutrition and human physiology. Offered: even years; Sp.

NUTR 528 Nutrition in Aging (3) Physiological, psychological, social, cultural, and economic factors affecting nutrition in the middle and later years. Pre-requisite: human nutrition and human physiology.

NUTR 529 Evaluation of Nutrition Research and Literature (3) Cheney, Monsen Critical review of selected nutrition literature. Evaluation of experimental design, research protocols, data analyses, and application in nutritional science. Offered: odd years; Sp.

NUTR 530 Nutrition for Children with Special Health Care Needs (3) Principles of nutrition screening and assessment, clinical nutritional care, family-centered care, and health services as applied to meeting nutritional needs of children with special health care needs. Both population-based and individual care concepts are explored for children with a variety of chronic conditions. Offered: Sp.

NUTR 531 Community Nutrition (3) Nutrition-related health issues in the United States. Surveillance strategies and available data. Review of nutrition programs designed to improve status of high risk populations and methods of evaluation. Prerequisite: course in general nutrition. Offered: even years; A.

NUTR 532 Fieldwork in Public Health Nutrition (2-12) Observation and participation in community agency nutrition programs. Prerequisite: graduate student in nutrition and permission of instructor. Offered: AWSpS.

NUTR 535 Laboratory Methods in Nutrition (3) Rosenfeld Techniques used in nutrition research. Spectroscopy, isotopes, ultracentrifugation, chromatography; vitamin, lipid, and mineral analysis; methods for animal and human research. Prerequisite: laboratory experience in chemistry, biochemistry.

NUTR 536 Nutrition Education Principles and Practice (3) Integrated course designed to prepare students of the practical application of nutrition education theories and principles in diverse behavioral change settings for a variety of learner-population groups. Prerequisite: permission of instructor. Offered: even years; Sp.

NUTR 537 Laboratory Rotation (1-4, max. 6) LeBoeuf, Rosenfeld Exposure to research being conducted in the laboratories of the graduate nutrition faculty. Provides hands-on experience in laboratory research. Introduces the student to on-going research for preparation of dissertation topics. Prerequisite: 535, permission of graduate adviser. Offered: AWSpS.

NUTR 538 Nutritional Epidemiology (3) Beresford Application of epidemiology methods to current studies of nutrition and disease. Special methodological problems of importance in nutritional epidemiological studies. Enables students to plan studies in nutritional epidemiology. Prerequisite: EPI 511 or 512 and BIOST 511 or permission of instructors. Offered: jointly with EPI 538; A.

NUTR 539 Seminar in Nutrition (1-3, max. 9) Library seminar and research on selected topics in recent developments in the field of nutrition. Prerequisite: advanced nutrition.

NUTR 551 Nutrition and Gene Expression (3) LeBoeuf, Rosenfeld Lectures, student presentations, and discussions of current research on nutrient:gene interactions. Focus on how dietary factors act both directly as transcriptional regulators or indirectly as inducers of signal transduction cascades leading to alterations in expression of proteins associated with cellular nutrient metabolism. Prerequisite: 520, 521, 522, or permission of instructor. Offered: odd years W. NUTR 560 Practicum in Dietetic Education (1-5) Adams Supervised instructional experiences for dietetic education in both classroom and clinical situations. Individually arranged. Prerequisite: clinical students only. Offered: AWSpS.

NUTR 561 Advanced Clinical Nutrition Fieldwork (1-3, max. 12) Adams Participation in a healthcare team assessing nutrition status and needs, designing care plans to optimize nutritional support of patients, and establishing appropriate criteria for the evaluation of the nutrition care provided. Supervised clinical experience provided in a variety of local health-care institutions. Prerequisite: clinical students only. Offered: AWSpS.

NUTR 562 Advanced Clinical Nutrition I (4) Karkeck Epidemiology and pathophysiology of acute of chronic disease related to nutrition (e.g., cardiovascular, endocrinologic, and hematologic diseases). Nutritional interventions and their relationship to medical, surgical, and pharmacologic treatment. Prerequisite: diet therapy; permission of instructor. Offered: A.

NUTR 563 Advanced Clinical Nutrition II (4) Assessment of the nutritional demands and hypermetabolic response of trauma, surgery, acute and neoplastic disease; determination of the appropriate amounts and sources of nutrients supplied through enteral and/or parenteral routes. Prerequisite: diet therapy; clinical students only. Offered: W.

NUTR 564 Management of Nutrition Services (3) Administrative processes affecting health care, specific focus on management of nutritional support systems. Includes productivity and cost effectiveness of nutrition care, establishing and achieving quality of health-care professionals and varying health-care systems. For clinical nutritionists working in standard health-care systems. Prerequisite: clinical students only. Offered: Sp.

NUTR 565 Seminar in Clinical Nutrition Practice (1-3) Adams Selected topics and learning experiences in nutritional care delivery. Prepares students for practical application of nutritional concepts in diverse clinical settings. Prerequisite: concurrent registration in 561 and permission of clinical instructor. Offered: AWSp.

NUTR 600 Independent Study or Research (*) Offered: AWSpS.

NUTR 700 Master's Thesis (*) Offered: AWSpS.

NUTR 800 Doctoral Dissertation (*) Credit/no credit only. Prerequisite: permission of program adviser. Offered: AWSpS.

Quantitative Ecology and Resource Management

Graduate Program Coordinator 416 Bagley, Box 351720 (206) 616-9571 qerm@cqs.washington.edu

The graduate program offered by the Quantitative Ecology and Resource Management (QERM) interdisciplinary group provides a unique opportunity for students to study the application of statistical, mathematical, and decision sciences to a broad array of terrestrial and marine ecology, natural resource management, and biometrical and mathematical biology problems. The QERM program of study leads to Master of Science and Doctor of Philosophy degrees, and is designed to attract mathematically trained students interested in working on contemporary ecological or resource-management problems from a quantitative perspective. Faculty associated with this interdisciplinary program come from thirteen campus units, including Statistics, Applied Mathematics, Forest Resources, Fisheries, Zoology, Biostatistics, and Marine Affairs. This pool of faculty talent is available to enrich the academic experience of all QERM students.

Degree Requirements

Students entering the QERM program are expected to have either a strong mathematical or biological (ecological) background. Master of Science course-work requirements include two courses in statistical theory; one course in optimization; one applied statistical methods course; two courses in either applied quantitative ecology or quantitative resource management; a seminar in quantitative ecology; plus approved electives. All master's degree holders must pass a first-year qualifying examination, prepare and defend a thesis, take a total of at least 45 graded quarter credits, and satisfy all Graduate School requirements.

Students passing the first-year qualifying examination at the Ph.D. level are eligible to enter the doctoral program of study. Course requirements equivalent to the master's program also must be completed. Doctor of Philosophy degree requirements include a minimum of 36 credits of graded course work beyond the master's; a minimum of 27 credits of dissertation research; and satisfaction of all Graduate School requirements. The 36 credits of course work must be taken from an approved list of courses.

Admission Requirements

Students entering this graduate program are expected to perform well on the quantitative and analytical sections of the Graduate Record Examination Background in a biological or ecological field is also highly desirable. To enter the Ph.D. program, students must pass the first-year qualifying examination at the Ph.D. level. In addition, all course requirements equivalent to the master's program must be completed. At least three letters of recommendation and a brief narrative statement of objectives must accompany each application for admission. Applications are accepted only for autumn quarter. The application deadline is February 1.

Financial Aid

Fellowships, teaching assistantships, and research assistantships are available each year. These come from either the Graduate School or one of the campus units contributing faculty to the QERM program. They generally cover the nine-month academic year, although provisions can be made for summer support. Tuition is normally included as part of the financial package. Funding decisions are made yearly, but attempts are made to continue support for students making satisfactory progress.

Faculty

Chair

E. David Ford

Professors

Bare, B. Bruce * 1969, (Adjunct); MS, 1965, University of Minnesota; PhD, 1969, Purdue University; harvest scheduling, biometry, forest land management, taxation, finance, management science.

Bassingthwaighte, James * 1975; MD, 1955, University of Toronto (Canada); PhD, 1964, Mayo Medical School/ Graduate School; computer analysis of transport mechanisms in blood and tissues.

Bell, Earl J. * 1966, (Emeritus); PhD, 1965, University of California (Berkeley); operations research, statistics, quantitative methods and geographic information systems.

Briggs, David G. * 1973; PhD, 1980, University of Washington; operations research in forest products industries.

Brown, Gardner * 1965; PhD, 1964, University of California (Berkeley); resource and environmental economics.

Conquest, Loveday L. * 1978; PhD, 1975, University of Washington; statistics in forestry, fisheries, and environmental pollution monitoring.

Felsenstein, Joseph * 1968; PhD, 1968, University of Chicago; evolution and population genetics.

Ford, E. David * 1985, (Adjunct); PhD, 1968, University College, London (UK); forest ecology and ecophysiology, modeling, spatial statistics.

Francis, Robert C. * 1986, (Adjunct); PhD, 1970, University of Washington; fishery oceanography, effects of climate on marine ecosystems, paleoecology, fisheries management.

Gallucci, Vincent * 1972, (Adjunct); PhD, 1971, North Carolina State University; biomathematics and population dynamics.

Greulich, Francis E. * 1977; PhD, 1976, University of California (Berkeley); forest engineering, statistics, operations research.

Guttorp, Peter * 1980; PhD, 1980, University of California (Berkeley); point processes, stochastic models, applications to hydrology and atmospheric science.

Hilborn, Ray * 1987; PhD, 1974, University of British Columbia (Canada); population dynamics and resource policy.

Johnson, Jay A. * 1983; PhD, 1973, University of Washington; mechanical and physical properties of wood and wood composite materials, wood quality.

Kareiva, Peter M. * 1983; PhD, 1981, Cornell University; theoretical ecology, conservation biology, agricultural ecology, plant-insect interaction.

Mathews, Stephen B. * 1969; PhD, 1967, University of Washington; quantitative fishery management.

Schreuder, Gerard Fritz * 1971; PhD, 1968, Yale University; statistical analysis in resource economics, international forestry, trade, aerial photos.

Skalski, John R. * 1987; PhD, 1985, Cornell University; environmental sampling and effects assessment on wild populations, parameter estimation.

Swartzman, Gordon Leni * 1973, (Research); PhD, 1969, University of Michigan.

Thompson, Elizabeth A. * 1985; PhD, 1974, Cambridge University (UK); statistical analysis of human genetic data, statistics of conservation and computational biology.

Associate Professors

Anderson, James J. * 1969; PhD, 1977, University of Washington; fisheries and oceanography.

Leschine, Thomas M. * 1983; PhD, 1975, University of Pittsburgh; marine pollution management, ocean policy studies.

Sampson, Paul D. * 1981, (Research); PhD, 1979, University of Michigan; spatial statistics and environmetrics, morphometrics, statistical consulting.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

QERM 502 Statistical Consulting for the Life Sciences (1-4) Conquest Consulting experience in data analysis, applied statistics, experimental design, parameter estimation, and sampling. Student provides consultation services to students and faculty. Students spend one classroom hour per week under faculty supervision discussing problems encountered. Prerequisite: 482, 483, STAT 421, 423, or BIOST 514, 515, or equivalents, and permission of instructor.

QERM 514 Analysis of Ecological and Environmental Data 1 (3) *Conquest, Skalski* Factors affecting optimal growth of individuals in their habitat. Estimation of growth and mortality parameters. Response of organisms to changes in environment (bioassay, environmental monitoring). Stochastic viewpoint emphasized. Research design issues for ecological or environmental studies. Analysis of unwieldy data sets. Prerequisite: calculus and either STAT 341, 342 or 512.

QERM 521 Scientific Method in Resource Management (4) Ford Describes process of scientific discovery and strategies used for problems in ecology and natural resources management. Relationships between growth and use of objective knowledge in natural resources management is explored through case studies.

QERM 550 Applied Ecological Modeling (4) *Ford, Francis, Leschine* Methods of applied ecological modeling at individual community and ecosystem levels. Analysis of ecological problems suitable for modeling and assessment of models. Students construct a model of their own.

QERM 551 Modeling Organism Dynamics (3) Anderson Application of techniques of stochastic differential equations, time series analysis, and simulating dynamic processes to plant and animal growth.

QERM 552 Spatial Processes in Ecology (3) *Ford* Spatial distribution of organisms, the mechanisms that produce different distributions, and how they may be described mathematically and modeled. Spatial distribution of communities, how this arises, and what its consequences are. Prerequisite: 482, 483, 550.

QERM 597 Seminar in Quantitative Ecology (2) Current topics in quantitative ecology and resource management. Fisheries, forestry, and marine resources. Offered: AWSp.

QERM 598 Special Topics in Quantitative Resource Management (1-3, max. 12) Population and community ecology, systems ecology, and physical processes in ecosystems. Prerequisite: permission of instructor.

QERM 599 Research in Quantitative Resource Management and Ecology (* max. 12) Topics can be theoretical in nature or combined theory and experiment. Research might be a prelude to thesis or dissertation research. Credit/no credit only.

QERM 600 Independent Study or Research (*)

QERM 700 Master's Thesis (*)

QERM 800 Doctoral Dissertation (*)

Quaternary Research Center

19 Johnson

Quaternary studies focus on the processes that presently shape the natural environment and have operated over approximately the past two and a half million years (Quaternary period). A knowledge of Quaternary events facilitates an understanding of earth history in relation to the modern environment and has predictive value with regard to present-day and future environmental changes.

Quaternary research is typically interdisciplinary, and thus it commonly involves related interests of two or more academic units. The Quaternary Research Center was established in 1967 to foster such interdisciplinary studies on a cooperative basis. The center has the following goals: (1) to understand environments and climate changes of the past two and a half million years in the context of modern surface processes, which include historical changes, prehistoric postglacial environments, and Ice Age events; (2) to serve as an effective catalyst in fostering interdisciplinary studies in the fields of atmospheric sciences, archaeology/anthropology, botany, engineering, fisheries, forestry, geology, geophysics, oceanography, pedology, and zoology; (3) to provide a scientific perspective on the scale of modern and man-made environmental changes, including climate changes, in the context of recent earth history; (4) to conduct a curriculum jointly with other disciplines in the training of graduate students in Quaternary-oriented studies; and (5) to seek applications of Quaternary studies to modern environmental problems that will help predict consequences of policy decisions.

Graduate Program

Students associated with the center obtain their degrees through cooperating departments. Students interested in graduate work at the center should apply to the department of their choice but plan to do their research in a Quaternary-related subject.

Research Facilities

The research laboratories of the center provide an array of modern facilities for investigation of Quaternary problems.

Quaternary Isotope Laboratory. The work of this laboratory emphasizes use of carbon and oxygen isotopes to study various aspects of the carbon and hydrological cycles. Major interests include radiocarbon dating, as applied to time-scale calibration and the study of climate change, and the use of cosmogenic nuclides to study landscape evolution and chronology.

Periglacial Laboratory. The laboratory contains cold rooms equipped for manipulating and studying the freezing and thawing of soils, rocks, and building materials. A large, unique tilt table permits the study of soils under controlled conditions of slope, temperature, and moisture. Research stress is placed on frost action in arctic and alpine environments.

Quaternary Palynology and Paleoecology Laboratories. These facilities foster studies of the biotic environment through time and of the uses of plant and animal fossils in Quaternary environmental and ecological reconstruction. Studies of vegetational changes are supported by an extensive modern pollen and plant reference collection from Asia and western North America.

QRC Library. This specialized collection, dealing with a wide range of Quaternary topics, is among the most extensive in North America. It includes books, monographs, theses, journals, and maps, and houses a large, diverse reprint collection.

Bernard Hallet

Professors

Atwater, Brian F. * 1986, (Affiliate); MS, 1974, Stanford University; PhD, 1980, University of Delaware; paleoseismology, neotectonics, regional geology, seismic hazards.

Brubaker, Linda B. * 1973, (Adjunct); PhD, 1973, University of Michigan; dendrochronology, forest ecology, quaternary paleocology.

Emerson, Steven R. * 1976, (Adjunct); PhD, 1974, Columbia University; marine geochemistry, chemical oceanography, sediment diagenesis. Gillespie, Alan R. * 1985, (Research); PhD, 1982, California Institute of Technology; landscape evolution, paleoclimate, geochronology, and applications of remote sensing.

Grayson, Donald K. * 1975, (Adjunct); PhD, 1973, University of Oregon; North American prehistory, paleoecology, European paleolithic, zooarchaeology.

Hallet, Bernard * 1980, (Adjunct); PhD, 1975, University of California (Los Angeles); glaciology, permafrost studies, geomorphology.

Hartmann, Dennis L. * 1977, (Adjunct); PhD, 1975, Princeton University; climate theory, dynamic meteorology, radiation and remote sensing.

Kohn, Alan J. * 1961, (Adjunct); PhD, 1957, Yale University; invertebrate zoology, ecology and functional morphology of marine invertebrates.

Leopold, Estella B. * 1976, (Adjunct); PhD, 1955, Yale University; paleoecology, pollen and seed analysis, late Cenozoic environment.

Porter, Stephen C. * 1962, (Adjunct); PhD, 1962, Yale University; Quaternary geology and geomorphology.

Quay, Paul D. * 1977; PhD, 1977, Columbia University; chemical oceanography, stable isotope geochemistry, ocean tracers and mixing.

Raymond, Charles F. * 1969, (Adjunct); PhD, 1969, California Institute of Technology; glaciology, glacier and ice sheet dynamics.

Richey, Jeffrey E. * 1973, (Adjunct); PhD, 1973, University of California (Davis); quantitative problems of aquatic ecosystems, primary Amazon River, limnology.

Stein, Julie K. * 1980, (Adjunct); MA, 1976, PhD, 1980, University of Minnesota; New World archaeology, Northwest coast archaeology, geoarchaeology, shell middens.

Stuiver, Minze * 1969; PhD, 1958, University of Groningen (Netherlands); geochronology, isotope geology.

Tsukada, Matsuo * 1969, (Adjunct); PhD, 1961, Osaka City University (Japan); interpretation of Quaternary events from palyngological and kindred data.

Warren, Stephen G. * 1981, (Adjunct); MA, 1969, PhD, 1973, Harvard University; atmospheric radiation, radiative properties of clouds, snow, and sea ice, Antarctic climate.

Associate Professors

Anderson, Patricia M. * 1994, (Research); MA, 1976, PhD, 1982, Brown University; paleoecology, paleoclimatology, Quaternary studies, biogeography, North American archaeology.

Close, Angela E. * 1995, (Adjunct); MA, 1974, PhD, 1976, Cambridge University (UK); prehistory of North Africa, lithics, paleolithic.

Eck, Gerald G. * 1974, (Adjunct); PhD, 1977, University of California (Berkeley); primate paleontology, especially African Pliocene-Pleistocene monkeys and hominids.

Montgomery, David R. * 1991, (Adjunct); PhD, 1991, University of California (Berkeley); earth surface processes, especially those occurring in mountain drainage basins.

Lecturer

Swanson, Terry W. 1991, (Adjunct); MA, 1989, University of California (Davis); PhD, 1994, University of Washington; cosmogenic isotopes, Quaternary studies.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

QUAT 417 Quaternary Glacial Ages (3) Porter Physical, biological evidence of climatic change during Quaternary Period, emphasizing stratigraphy and chronology. Impact of alternating glacial/interglacial cycles on earth's terrestrial, marine environments. Use of these data to assess theories on causes of climatic variation. Prerequisite: introductory course in earth science and biological science. Offered: jointly with GEOL 417.

QUAT 501 Seminar/Conference in Quaternary Environments (1, max. 6) Interdisciplinary seminar or conference in the changing natural environments of the Quaternary Period, with emphasis on climatic changes and their effects. Speakers from the University and elsewhere present lectures on their specialties, followed by discussion. Credit/no credit only.

QUAT 502 Interdisciplinary Quaternary Investigations (2, max. 6) Research course for interdisciplinary investigation of Quaternary problems. Student attends sessions of QUAT 501 and pursues a problem- oriented case study concurrently under faculty direction. Required paper on case study. Credit/no credit only. Prerequisite: graduate standing.

QUAT 504 Special Topics in Quaternary Sciences (1-3) Environments and climate changes of past two million years (Quaternary Period) in context of modern surface processes, including historical changes, prehistorical environments of postglacial period, and lce Age events. Provides scientific perspective on scale of modern and man-made environmental changes, including those of climate, in context of recent earth history. Credit/no credit only. Prerequisite: background courses in earth sciences and ecology.

Urban Design and Planning

Graduate Program Coordinator 410 Gould, Box 353650 (206) 543-4190

The Interdisciplinary Group for Urban Design and Planning offers the Doctor of Philosophy degree. The program offers a course of study for those seeking to pursue academic or research careers in the public or private sector. The program is concerned with research in urban design and planning and focuses on five areas of concentration: history of urban development, planning, and design; urban design; land-use planning; transportation planning; and environmental planning. Please write for a more detailed description of these areas of concentration.

The research focus of the program is aimed at achieving a better understanding of cities and of urban regions, city planning and urban design as manifestations of society and culture, and at developing better tools to plan for future physical development. It includes the development of new methods and the application of methods from other disciplines to expand knowledge of urbanization processes. The program stresses the link which exists between urban planning, its legislative context, and the resulting built environment. Objectives of the program are to help students and researchers master general knowledge, to train them to be scholars and researchers in a particular subject area, and to guide them in the development of original research. The program of study is divided into three phases.

Phase one provides advanced knowledge in major aspects of planning and design. Included are three doctoral seminars, as well as elective courses from a structured list. Each student must prepare and present a research paper.

Phase two prepares the student in the interdisciplinary content of the field and involves the development of two areas of concentration. These areas must be matched with the interests and experience of faculty on the student's supervisory committee. The supervisory committee members, most of whom will be from the interdisciplinary group, have primary responsibility for student progress and evaluation. Students are expected to develop knowledge in at least one area outside urban design and planning. Completion of phase two is marked by passage of the General Examination.

Phase three focuses on original work which is presented as a dissertation.

Admission Criteria

Applicants must possess a Master of Urban Planning degree or its equivalent in urban design and practice. Students may be asked to complete appropriate background work. Admission into the program is very limited and is based on evidence of promise for high scholarly achievement. The applicant's statement of purpose, prior course work, GRE examination scores, letters of recommendation, and examples of past written work are all considered. Students may begin the program autumn quarter only.

Financial Aid

A very limited number of fellowships and assistantships are available each year. Tuition is normally included as part of the financial package.

Professors

Bell, Earl J. * 1966, (Emeritus); PhD, 1965, University of California (Berkeley); operations research, statistics, quantitative methods and geographic information systems.

Beyers, William B. * 1962, (Adjunct); PhD, 1967, University of Washington; economic geography, regional analysis, regional development.

Bradley, Gordon A. * 1972, (Adjunct); PhD, 1986, University of Michigan; forest land use planning, recreation site planning and design.

Findlay, John M. * 1987; PhD, 1982, University of California (Berkeley); history of the American West, Pacific.

Guest, Avery * 1972, (Adjunct); MS, 1964, Columbia University; MA, 1967, PhD, 1970, University of Wisconsin; demography, ecology, stratification.

Hancock, John L. * 1969, (Emeritus); PhD, 1964, University of Pennsylvania; urban and planning history, society, planning and environmental policy.

Hershman, Marc * 1976; JD, 1967, Temple University; LLM, 1970, University of Miami (Florida); coastal zone management law.

Hirschman, Charles * 1987; PhD, 1972, University of Wisconsin; demography, race and ethnic relations, social stratification, Southeast Asia.

Hodge, David C. * 1975; MS, 1973, PhD, 1975, Pennsylvania State University; urban geography, urban transportation geography, equity, gender.

Karr, James * 1991; PhD, 1970, University of Illinois; ecology and conservation biology, water resources, environmental sciences, natural resources.

Krumme, Gunter * 1970; PhD, 1966, University of Washington; economic, organizational and marketing geography, location theory, regional development.

Lee, Robert G. * 1978; PhD, 1973, University of California (Berkeley); natural resource sociology, multiresource management, development/change of forestry institutions.

Mar, Brian W. * 1967, (Adjunct); PhD, 1958, University of Washington; system engineering, environmental management, interdisciplinary management.

May, Peter J. * 1979; PhD, 1979, University of California (Berkeley); policy analysis, quantitative methods, federal disaster policy.

Miller, Donald H. * 1970; PhD, 1972, University of California (Berkeley); land use and urban spatial structure, data analysis and forecasting, planning theory.

Miller, Marc * 1979; PhD, 1974, University of California (Irvine); maritime anthropology, cognitive anthropology and social/cultural change.

Morrill, Richard L. * 1955, (Emeritus); PhD, 1959, University of Washington; spatial organization, migration, population, diffusion, regional planning/development, inequality.

Olson, David J. * 1974; PhD, 1971, University of Wisconsin; American government and politics (urban, state, and labor relations).

Rutherford, G. Scott * 1981, (Adjunct); PhD, 1974, Northwestern University; transportation planning and engineering.

Spain, David H. * 1968; PhD, 1969, Northwestern University; psychocultural anthropology, African studies, research methods.

Streatfield, David C. * 1974, (Adjunct); MLA, 1965, University of Pennsylvania; landscape, architectural and environmental history.

Vernez Moudon, Anne * 1980; DSc, 1987, Ecole Polytechnique Federale de Lausanne (France); urban design, city form and neighborhood studies, design research.

White, Richard * 1990; PhD, 1975, University of Washington; American West, American Indian, environmental history.

Zerbe, Richard O. * 1975; PhD, 1969, Duke University; law and economics, cost-benefit analysis, economic history, environmental policy.

Associate Professors

Chrisman, Nicholas R. * 1987; PhD, 1982, University of Bristol (UK); geographic information systems, spatial error analysis.

Dubrow, Gail Lee * 1989; MA, 1979, University of Oregon; PhD, 1991, University of California (Los Angeles); preservation, ubran design, public art, public history, gender, multiculturalism.

Nyerges, Timothy L. * 1985; PhD, 1980, Ohio State University; GIS, spatial decision support, urban, transportation, environment, groupware.

Pivo, Gary E. * 1987; PhD, 1987, University of California (Berkeley); land use and physical planning, environmental planning, growth management.

Assistant Professors

Alberti, Marina * 1996; PhD, 1992, Massachusetts Institute of Technology; environmental planning, urban ecology, impact assessment, geographic information systems.

Bae, Christine * 1996; MRP, 1986, State University of New York (Albany); PhD, 1994, University of Southern California; transportation, environment, land use, growth management, quantitative methods.

Interschool or Intercollege Programs

Bioengineering

309 Harris Hydraulics Laboratory

The Department of Bioengineering provides a comprehensive, multidisciplinary program of education and research. The concepts and techniques of engineering are applied to the challenges in biology and medicine. Major areas of current bioengineering research include bioinstrumentation, biomaterials, biomechanics, controlled drug-release systems, imaging, microsensors, bioelectromagnetics, molecular bioengineering, microcirculation, cell mechanics, muscle, and simulation of biosystems.

Undergraduate Program

Adviser Isabel Landsberg 309B Harris, Box 357962 (206) 685-2022

The undergraduate bioengineering program at the University of Washington is an honors program tailored for students bound for an M.D.-Ph.D. degree with a Ph.D. component in bioengineering. It is designed to bridge the gap between emphasis and curriculum that has traditionally alienated students in biology and in engineering. The curriculum leads to a B.S.E. and consists of a blend of engineering and biological sciences that provides students with unusual opportunities and qualifications for a future biomedical-bioengineering research career. This program is administered by the Department of Bioengineering via the Interdisciplinary Engineering Studies Program of the College of Engineering. Admission is restricted to a small number of highly motivated individuals with an outstanding record of academic performance. Applicants must have completed at least 50 credits of pre-engineering course work at the UW, with a minimum GPA of 3.60.

Graduate Program

Graduate Program Coordinator 309 Harris, Box 357962 (206) 685-2021

The Department of Bioengineering offers programs of study which lead to the Master of Science (M.S.), Master of Science in Engineering (M.S.E.), and Doctor of Philosophy (Ph.D.) degrees.

Master of Science

The Master of Science degree program provides essential training in the engineering sciences, which aids students with strong backgrounds in the biological sciences to prepare for careers in research and development in either basic medical sciences or clinical investigations. A thesis is required.

Master of Science in Engineering

The Master of Science in Engineering degree program provides essential training in the life sciences that assists students with sound engineering backgrounds to prepare for careers in academic, industrial, or hospital environments. A thesis is required.

Doctor of Philosophy

The objective of the Ph.D. program is to train individuals for careers in bioengineering research and teaching. The training has three major components: (1) acquisition of a breadth of knowledge about engineering, biology, and medicine, and the interdisciplinary interface between these quite disparate fields; (2) development of a depth of knowledge and expertise in a particular scientific specialty; (3) development of a potential for independent research that can be demonstrated. The objectives are fulfilled through use of a combination of research and teaching experiences. The program is designed to be rigorous while maintaining sufficient flexibility to accommodate qualified students with diverse backgrounds. Entrance to the Ph.D. program may be made directly after the B.S. or following completion of the M.S. or M.S.E.

Medical Scientist Program

A Medical Scientist Program exists for the support of individuals interested in coordinated graduate school/ medical school study leading to both the M.D. and Ph.D. degrees. Students entering this highly competitive program are given an opportunity to pursue a flexible, combined course of study and research. Early inquiry regarding this program is urged since admission to the Graduate School and to the School of Medicine must be secured independently.

Research Facilities

Offices and laboratories are located in the College of Engineering and the School of Medicine. Students have access to the University of Washington Medical Center, Vivarium, Primate Center, Computer Center, and libraries, as well as to all engineering and healthsciences departments and facilities. A wide range of technologies and virtually all aspects of biomedical science are available. Cellular and molecular bioengineering are strong components of the research programs of the center. State-of-the-art facilities are available to support both research and instructional activities. Computer resources are abundant, and their use is an integral part of most laboratory and course work.

Admission Requirements

Applicants for the M.S. degree should have a baccalaureate degree in a science or the equivalent; applicants for the M.S.E. degree should have a baccalaureate degree in engineering or the equivalent. Preparation for both programs must include, at minimum, one year each of calculus, physics, and chemistry. Applicants to the Ph.D. program should have strong academic credentials, a bachelor's degree in science or engineering, and demonstrated potential for advanced study. Admission to the program is highly selective.

In addition to completing the application requirements for the Graduate School, an applicant should also forward the following items to the Academic Counselor, Department of Bioengineering, Box 357962, University of Washington, Seattle, WA 98195: (1) a one- or twopage written statement outlining academic and professional goals; (2) official copies of Graduate Record Examination scores for the general tests; (3) three letters of recommendation from persons acquainted with the applicant's background; and (4) a departmental information form.

Financial Aid

Financial aid is available to qualified graduate students in the form of traineeships, fellowships, and assistantships. Funding is derived from federal research and training programs, the Graduate School Fund for Excellence and Innovation, and programs sponsored by private agencies. Information concerning these fellowships is available from the Department of Bioengineering.

Kushmerick, Martin J. * 1988; MD, 1963, PhD, 1966, University of Pennsylvania; muscle contraction, magnetic resonance, metabolic imaging NMR spectroscopy.

Lewellen, Thomas * 1975, (Adjunct); PhD, 1972, University of Washington; bioengineering, electrical engineering.

Martin, Roy W. * 1971, (Research); PhD, 1975, University of Washington; bioinstrumentation, ultrasonic Doppler, echo, tissue characterization, signal processing.

Matsen, Frederick A. * 1973, (Adjunct); MD, 1968, Baylor University; orthopaedics, bone and joint research, robotics.

Nelson, James A. * 1986, (Adjunct); MD, 1965, Harvard University; diagnostic radiology with basic research in related sciences.

Pollack, Gerald H. * 1968; PhD, 1968, University of Pennsylvania; muscular contraction.

Ratner, Buddy D. * 1972; PhD, 1972, Polytechnic Institute of Brooklyn; synthesis and characterization of polymeric biomaterials.

Rushmer, Robert F. * 1947, (Emeritus); MD, 1939, University of Chicago; health care delivery systems, technology transfer.

Schwartz, Stephen Mark * 1974, (Adjunct); MD, 1967, Boston University; PhD, 1973, University of Washington; vascular biology, atherosclerosis, molecular basis of lineage, developmental biology, cell kinetics.

Soma, Mani * 1982, (Adjunct); MS, 1977, PhD, 1980, Stanford University; IC design and testing, mixed signal testing, bioengineering.

Spelman, Francis A. * 1961; PhD, 1975, University of Washington; biophysics of implanted cochlea, bioinstrumentation for primate research.

Trask, Barbara J. * 1992, (Adjunct Research); PhD, 1985, University of Leiden (Netherlands); in situ hybridization, analytical cytogenetics, analysis of large-scale DNA polymorphism.

Verdugo, Pedro * 1974; MD, 1965, State University of Chile; microrheology, biomechanics, polymer gel physics, laser spectroscopy, cell biology.

Yager, Paul * 1987; PhD, 1980, University of Oregon; physical chemistry and applications of biomembranes.

Associate Professors

Baneyx, Francois * 1992, (Adjunct); PhD, 1991, University of Texas (Austin); biotechnology, protein technology, biochemical engineering.

Barrett, P. Hugh R. * 1991, (Research); PhD, 1989, University of Adelaide (Australia); biomathematics and modeling methodology, simulation analyses, lipid and lipoprotein metabolism.

Castner, David G. * 1986, (Research); PhD, 1979, University of California (Berkeley); surface analysis characterization of biomedical and catalytic materials.

Clopton, Ben M. * 1994, (Research); PhD, 1970, University of Washington; auditory neurophysiology, cochlear implants, multiunit recording, neuron compartmental modeling.

Conley, Kevin E. 1988, (Adjunct); PhD, 1983, University of Wisconsin; muscle physiology.

Hannaford, Blake * 1989, (Adjunct); MS, 1982, PhD, 1985, University of California (Berkeley); human and robotic movement control, bioengineering, controls, human-machine interaction.

Kalet, Ira J. * 1980, (Adjunct); PhD, 1968, Princeton University; computer simulation of radiation therapy, artificial intelligence, computer graphics.

Kunzelman, Karyn S. * 1991, (Adjunct Research); PhD, 1991, University of Texas (Dallas); biomedical engineering, cardiac; anatomy and physiology.

Linker, David T. 1993, (Adjunct); MD, 1976, Stanford University; cardiology.

Lybrand, Terry Paul * 1990; PhD, 1984, University of California (San Francisco); molecular modeling, computer simulation of biomacromolecules, development of simulation analysis.

Martyn, Donald A. * 1995, (Research); PhD, 1975, University of Southern California; regulation and mechanical properties of contraction in skeletal and cardiac muscle.

Nelson, Alan C. * 1986, (Affiliate); PhD, 1980, University of California (Berkeley); biomedical imaging using image analysis for tissue and tumor studies.

Richards, Todd L. * 1985, (Adjunct); PhD, 1984, University of California (Berkeley); nuclear magnetic resonance imaging, spectroscopy of the brain in demyelinating diseases.

Rowberg, Alan H. * 1982, (Adjunct); MD, 1970, University of Washington; computed imaging.

Sanders, Joan Elizabeth * 1993; PhD, 1991, University of Washington; soft tissue biomechanics and tissue adaptation to mechanical stress.

Stayton, Patrick S. * 1992; PhD, 1989, University of Illinois; engineering proteins for biotechnology, biomaterials, and biomedical therapies/diagnostics.

Stewart, Brent K. * 1993, (Adjunct); PhD, 1988, University of California (Los Angeles); physics.

Tencer, Allan Fred * 1988, (Adjunct); PhD, 1981, McGill University (Canada).

Viney, Christopher * 1987, (Affiliate); PhD, 1983, Cambridge University (UK); phase transformations and microstructure/property relationships in polymers and liquid crystals.

Vogel, Viola * 1990; DPhil, 1987, Johann Wolfgang Goethe University (Germany); molecular assemblies and Langmuir-Blodgett films, liquid interfaces, nonlinear optics, microscopy.

Yuan, Chun 1991, (Adjunct); PhD, 1988, University of Utah; medical biophysics, MRI.

Assistant Professors

Baker, David * 1993, (Adjunct); PhD, 1989, University of California (Berkeley); protein folding.

Brody, James 1996, (Research); PhD, 1994, Princeton University; experimental biophysics, microfabricated analytical instrument development.

Hunkapiller, Tim * 1992, (Adjunct Research); PhD, 1992, California Institute of Technology; biological computation and genomic methodologies and analysis.

Li, Zheng 1997, (Research); PhD, 1995, State University of New York (Buffalo); modeling of pulmonary hemodynamics.

Medina, John 1995, (Acting); PhD, 1988, Washington State University; communication of science to the lay public.

Nickerson, Deborah A. * 1992, (Adjunct); PhD, 1978, University of Tennessee; automating the identification and typing of human DNA variations, genetic mapping, DNA diagnostics.

Regnier, Michael 1997, (Research); PhD, 1991, University of Southern California; regulation of muscle contraction, chemomechanical transduction, neuromuscular plasticity.

Yates, John R. * 1992, (Adjunct); PhD, 1987, University of Virginia; biological mass spectrometry, protein sequencing, computational methods for data analysis.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

BIOEN 299 Introduction to Bioengineering (1) Verdugo Lectures on the various aspects of bioengineering; orientation in bioengineering studies and practice. Credit/no credit only. Offered: ASp.

BIOEN 436 Medical Instrumentation (4) Spelman Introduction to the application of instrumentation to medicine. Topics include transducers, signal-conditioning amplifiers, electrodes and electrochemistry, ultrasound systems, electrical safety, and the design of clinical electronics. Laboratory included. For juniors, seniors, and first-year graduate students who are preparing for careers in bioengineering, both research and industrial. Offered: jointly with E E 436; Sp.

BIOEN 450 Molecular Biology for Engineers I (4) Medina Basic foundation in DNA biochemistry, description of molecular processes within the eucaryotic nucleus, and basic techniques in molecular biology. Offered: A.

BIOEN 451 Molecular Biology for Engineers II (4) Medina Utilization of recombinant DNA technology in research disciplines, including medicine, agriculture, forensics, anthropology, and embryology. Discussion of future research directions and increasing role of bioethics in the research community. Offered: W.

BIOEN 467 Biochemical Engineering (3) Baneyx Application of basic chemical engineering principles to biochemical and biological process industries such as fermentation, enzyme technology, and biological waste treatment. Rapid overview of relevant microbiology, biochemistry, and molecular genetics. Design and analysis of biological reactors and product recovery operations. Prerequisite: either CHEM 223 with CHEM E 340 or CHEM 237; recommended: CHEM E 465. Offered: jointly with CHEM E 467; W.

BIOEN 490 Engineering Materials for Biomedical Applications (3) Hoffman Combined application of principles of physical chemistry and biochemistry, materials engineering, to biomedical problems and products. Applications include implants and medical devices, drug delivery systems, cell culture processes, diagnostics, and bioseparations. Offered: jointly with CHEM E 490; odd years; W.

BIOEN 491 Controlled-Release Systems: Principles and Applications (3) Hoffman Mechanisms for controlled release of active agents and the development of useful drug delivery systems for this purpose. Release mechanisms considered include diffusive, convective, and erosive driving forces. Delivery routes include topical, oral and in vivo. Some special case studies covered in detail. Offered: jointly with CHEM E 491; even years; W.

BIOEN 492 Surface Analysis (3) Ratner Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials, science wear, and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger): ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Offered: jointly with CHEM E 458; W.

BIOEN 499 Special Projects (2-6) Individual undergraduate bioengineering projects under the supervision of an instructor. In addition, classes on selected topics of current interests as announced. Offered: AWSpS.

Courses for Graduates Only

BIOEN 508 Physical Aspects of Medical Imaging (4) Stewart Quantitative physical principles of medical imaging are presented for electromagnetic and sonic radiation. Methods of image formation and analysis are discussed for conventional film radiography, CT, DSA, PET, B-mode ultrasound and Doppler ultrasound. Offered: jointly with RADGY 508/ENV H 528; W.

BIOEN 510- Bioengineering Seminars ([1-2]-, max. 3) Topics of current bioengineering interests presented by resident and visiting faculty members and students. Graduate students actively involved in bioengineering research are eligible to enroll for credit and can be expected to attend regularly, participate in discussions, and make presentations. Credit/no credit only. Offered: AW.

BIOEN 511 Biomaterials Seminar (1) Hoffman, Horbett, Ratner Presentation of student research results. Credit/no credit only. Prerequisite: permission of instructor. Offered: jointly with CHEM E 511; AWSp.

BIOEN 512 Biomechanics Seminar (1) Sanders Designed to expose students to current research topics in the area of biomechanics and permit them the opportunity to present their work for discussion. Subjects include presentations of on-going laboratory research, as well as related topics, journal article review, and summaries of national meetings. Credit/ no credit only.

BIOEN 513 Cellular Bioengineering Seminar (1) *Pollack* Presentation of student research results. Credit/no credit only. Prerequisite: permission of instructor.

BIOEN 515 Introduction to Clinical Medicine for Engineers (3) Introduction to concepts and methods used in clinical medicine for students with engineering and physical science backgrounds. How and where engineering principles and methodologies can be applied to health-care problems. Prerequisite: basic physiology or permission of instructor. Offered: odd years; W.

BIOEN 520 Orthopedic Biomechanics (4) Tencer Mechanical engineering applied to musculoskeletal system with emphasis on techniques in orthopedic surgery. Measurement of mechanical properties of tissues, mechanics of bone, soft tissue, and muscle, mechanics of upper extremity, spine, and lower extremity. Engineering in surgery, gait analysis, joint replacement, fracture fixation. Prerequisite: M E 556 and 557 or permission of instructor. Offered: odd years; W.

BIOEN 534 Introduction to Biomedical Instrumentation: Analog (4) Spelman Techniques of biological systems analysis using Fourier and Laplace transforms. Electronic circuit analysis techniques applied to biological problems. Operational amplifiers as interfaces to transducers and as signal processors. Computer-aided design used in both homework and weekly laboratory. Prerequisite: MATH 307, PHYS 121-123, or equivalents. Offered: A.

BIOEN 535 Introduction to Biomedical Instrumentation: Digital (4) Instrumentation systems (power supplies, transducers, amplifiers, recording and display devices); techniques of signal/noise enhancement (grounding, shielding, averaging); digital logic and instrumentation; A/D and D/A conversion; use of laboratory computers and laboratory experience in these areas. Biomedical applications. Prerequisite: permission of instructor. Offered: W.

BIOEN 537 Case Studies in Biomedical Instrumentation (3) Spelman Current applications of medical instrumentation to neural prosthesis, microscopy, and the interaction of electromagnetic fields with biological tissues. Prerequisite: 436, 534, and 535 or permission of instructor. Offered: W. **BIOEN 540 Problem Solving in Bioengineering (3)** *Foster* Introduction to techniques of mathematical modeling. How to use computer methods to solve selected bioengineering problems in data analysis and modeling, and use models to test hypotheses. Hands-on computer experience. Prerequisite: permission of instructor.

BIOEN 542 Computer Simulation in Biology (3) Bassingthwaighte, Graham Introduction to mathematical modeling of biological phenomena. Tutorial text explains how to derive equations for simple models and apply them to generate simulation data. Application topics include kinetics of biomolecular reactions and enzyme saturation, membrane transport, organismal predation, competition and growth, compartmental and spatially distributed models, physiological control systems, probabilistic models. Prerequisite: P BIO 405 and 406 or equivalent or permission of instructor. Offered: W.

BIOEN 545 Fractals in Biology and Medicine (3) Bassingthwaighte Introduction to fractal and chaos. Conceptual approaches to using fractals for characterizing structures and growth processes, describing heterogeneities, and evaluating properties of tissues. The behavior of non-linear systems, often chaotic, describes physiological homeodynamics, regulation without set points in feedback control. Offered: A.

BIOEN 550 Mass Transport and Exchange in Biological Systems (3) Bassingthwaighte Review of basic mechanisms of transport; transport through vascular system and blood-tissue exchange processes in organs; integrated system analysis of closed systems and applications to physiological regulation, medical imaging, and pharmacokinetics. Prerequisite: calculus, introduction to differential equations; cardiovascular physiology; E E network analysis or systems analysis, chemical engineering transport. Offered: W.

BIOEN 555 Introduction to Biomechanics (3) *Pollack* Mechanical properties of biological tissues, with emphasis on the underlying histological bases. Bones, joints, cartilage, blood vessels, connective tissue, muscle, heart. Many laboratory sessions. Offered: odd years; Sp.

BIOEN 560 Ultrasound in Bioengineering (4) Martin Fundamentals of ultrasonic generation, formation, reception, and treatment of absorption, scattering, and transmission. Conventional and new methodology. (A, B, T-M mode, imaging, Doppler, tissue characterization, and nonlinear effects.) Prerequisite: E E/M E 525 for nonbioengineering students or permission of instructor. Offered: odd years; A.

BIOEN 561 Biomedical Optics (4) Advanced theories of optical and spectroscopic measurement with emphasis on biomedical laser applications. Laser principles, instrumentation, and current practice in various biomedical uses, covering such areas as medicine, surgery, and biology. Prerequisite: E E 381 or permission of instructor.

BIOEN 565 Nuclear Magnetic Resonance in Biomedicine (2) Hayes, Kushmerick, Richards, Yuan Basic physics of nuclear magnetic resonance (NMR) imaging and spectroscopy are presented. Research applications of NMR in physiology and biochemistry are reviewed with emphasis on the brain. Grade based on written tests and small research paper. Prerequisite: permission of instructor. Offered: jointly with RADGY 550; odd years; W.

BIOEN 568 Image-Processing Computer Systems (4) Haralick, Kim Components of digital processing computer systems. Two-dimensional filtering and optimal filter design as well as basic image-processing operations. Selected advanced image-processing topics introduced. Individual student project. Prerequisite: permission of instructor. Offered: jointly with E E 568; W. BIOEN 571 Polymeric Materials (3) Ratner Relationships between configuration, conformation, molecular order, microstructure, properties of polymer molecules and microstructures for specific applications. Interactions between polymers and their inservice environment. Characterization and processing techniques relevant to polymeric materials. Prerequisite: one semester or two quarters of organic chemistry. Offered: jointly with MSE 571; odd years; A.

BIOEN 573 Biosensors and Biomedical Sensing (3) *Yager* In-depth overview of the principal types of biosensors. Topics include: how biological molecules are used in sensing, how the sensors operate, how different sensors compare, under what circumstances sensors can be useful, and the applicability of sensors to biomedical sensing. Prerequisite: 436 or 534 and 535 or permission of instructor. Offered: even years; A.

BIOEN 575 Molecular Modeling Methods (4) Lybrand Introduction to theory and practice of computer simulation studies of molecules with emphasis on applications to biological molecules and complexes. Discussion of background theory, implementation details, capabilities and practical limitations of these methods. Prerequisite: previous coursework in biochemistry and physical chemistry and/or permission of instructor. Offered: jointly with CHEM 575; W.

BIOEN 576 Laboratory Techniques in Protein Engineering (4) Stayton Practical introduction to fundamentals of recombinant DNA technology and protein engineering. Gene design, bacterial molecular biology, genetic engineering strategy. Laboratory project focused on making site-directed protein mutations. Techniques include the Polymerase Chain Reaction, DNA sequencing, DNA cutting/splicing, protein expression. Prerequisite: background in biochemistry or molecular biology or consent of instructor. Offered: W.

BIOEN 577 Cell and Protein Reaction with Foreign Materials (3) Horbett Study of ways in which cell and protein interactions with foreign materials affect the biocompatibility of biomaterials. Description of the phenomenology and mechanisms of protein adsorption, mammalian cell adhesion, and cell receptor biology and of methods used to study these phenomena. Surface properties of materials discussed in context of the course. Prerequisite: permission of instructor.

BIOEN 590 Advanced Topics in Biomaterials (3) Ratner, Hoffman, Horbett, Yager Major, controversial issues in application of synthetic materials to medical problems. Blood compatibility, bioadhesion, intraocular lenses, contact lenses, polyurethanes, biodegradation, protein adsorption, corrosion, bone fixation, new materials, artificial heart, medical device regulation. Prerequisite: 490 or CHEM E 490. Offered: jointly with CHEM E 590; even years; Sp.

BIOEN 592 Surface Analysis (3) Ratner Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials science, wear and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger); ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Offered: jointly with CHEM E 558; W.

BIOEN 599 Special Topics in Bioengineering (1-6, max. 15) Offered at a graduate level periodically by faculty members within the Center for Bioengineering; concerns areas of research activities with current and topical interest to bioengineers. Prerequisite: undergraduate or graduate courses (or equivalent) determined individually for each special topic. Offered: AWSpS. **BIOEN 600** Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

BIOEN 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

BIOEN 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Quantitative Science

Director

B. Bruce Bare 246 Fisheries Center, Box 357981 (206) 543-1191 cqs@u.washington.edu

The Center for Quantitative Science in Forestry, Fisheries, and Wildlife is an intercollege academic unit sponsored by the Office of Undergraduate Education, the School of Fisheries in the College of Ocean and Fishery Sciences, and the College of Forest Resources. The Center offers a comprehensive program of study in mathematical and statistical methods applied to problems in biology, ecology, and renewable resource management for undergraduate students. The Center's faculty include members of the College of Forest Resources and the School of Fisheries, as well as other campus units. The Center offers a minor program designed to give undergraduate students majoring in biology, ecology, and renewable resource management programs a thorough grounding in relevant statistical and mathematical modeling methodology.

Minor

Minor Requirements: A total of 26-30 credits, as follows: Core courses (20 credits)—Q SCI 291, 292 (or MATH 124, 125); Q SCI 381, 482. Electives (6-10 credits)—Two Q SCI courses at the 300 or 400 level to include one course from Q SCI 480, 483, 486. A minimum grade of 2.0 is required in all courses taken as part of the minor.

Faculty

Professors

Bare, B. Bruce * 1969; MS, 1965, University of Minnesota; PhD, 1969, Purdue University; harvest scheduling, biometry, forest land management, taxation, finance, management science.

Briggs, David G. * 1973; PhD, 1980, University of Washington; operations research in forest products industries.

Conquest, Loveday L. * 1978; PhD, 1975, University of Washington; statistics in forestry, fisheries, and environmental pollution monitoring.

Dowdle, Barney * 1962; PhD, 1962, Yale University; markets for timber and forest products, public forest land management.

Ford, E. David * 1985; PhD, 1968, University College, London (UK); forest ecology and ecophysiology, modeling, spatial statistics.

Francis, Robert C. * 1986; PhD, 1970, University of Washington; fishery oceanography, effects of climate on marine ecosystems, paleoecology, fisheries management.

Gallucci, Vincent * 1972; PhD, 1971, North Carolina State University; biomathematics and population dynamics.

Greulich, Francis E. * 1977; PhD, 1976, University of California (Berkeley); forest engineering, statistics, operations research.

Gunderson, Donald R. * 1978; PhD, 1975, University of Washington; marine fisheries and stock assessment.

Hilborn, Ray * 1987; PhD, 1974, University of British Columbia (Canada); population dynamics and resource policy.

Johnson, Jay A. * 1983; PhD, 1973, University of Washington; mechanical and physical properties of wood and wood composite materials, wood quality.

Schreuder, Gerard Fritz * 1971; PhD, 1968, Yale University; statistical analysis in resource economics, international forestry, trade, aerial photos.

Skalski, John R. * 1987; PhD, 1985, Cornell University; environmental sampling and effects assessment on wild populations, parameter estimation.

Swartzman, Gordon Leni * 1973, (Research); PhD, 1969, University of Michigan.

Associate Professors

Anderson, James J. * 1969; PhD, 1977, University of Washington; fisheries and oceanography.

Leschine, Thomas M. * 1983; PhD, 1975, University of Pittsburgh; marine pollution management, ocean policy studies.

McCaughran, Donald A. 1979, (Affiliate); PhD, 1970, Cornell University.

Perez-Garcia, John * 1990; MS, 1982, University of Puerto Rico (Mayaguez); DF, 1991, Yale University; analysis of trade policy, global trade modeling.

Rustagi, Krishna P. * 1973, (Emeritus); PhD, 1973, Yale University; operations research and statistical applications in resource management, forest inventory.

Assistant Professors

Marzluff, John M. 1997; PhD, 1987, Northern Arizona University; wildlife habitat management, avian ecology, forested ecosystems.

Turnblom, Eric * 1994; MSc, 1986, University of British Columbia (Canada); PhD, 1994, University of Minnesota; forest biometrics; growth and yield.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

Q SCI 291, 292 Analysis for Biologists (5, 5) NW, QSR Differentiation; integration, including multiple integrals and partial derivatives. Numerical and computing techniques in analysis. Emphasis on biological problems, particularly in ecology. 291 - Prerequisite: MATH 120. 292 - Prerequisite: Q SCI 291. Offered: AWS, WSpS.

Q SCI 381 Introduction to Probability and Statistics (5) NW, QSR Elementary concepts of probability and statistical inference. Sample space, set theory, random variables, expectations, variances, covariance; binomial, normal, hypergeometric, Poisson, chi square, "t" and "F" distributions. Point and confidence interval estimation, basic concepts of hypothesis testing; applications to biological problems. Prerequisite: MATH 120. Offered: AWSpS.

Q SCI 392 Techniques of Applied Mathematics in Biology I (3) NW Ordinary differential equations linear and nonlinear; systems of differential equations; approximation techniques, numerical solution techniques; applications to biological processes. Prerequisite: Q SCI 292.

Q SCI 393 Techniques of Applied Mathematics in Biology II (3) NW Applications of advanced ordinary differential equations, special functions, and partial differential equations to descriptions of biological phenomena. Particular emphasis on transport in biological systems, including diffusion and fluid flow. Prerequisite: Q SCI 392. Q SCI 456 Fundamentals of Fish Population Dynamics and Management (4) NW Conveys fundamental concepts of fish population dynamics and fishery management within concept of real-world fisheries problems. Lectures discuss notation, terminology, mathematical models, fisheries principles, and case studies. Laboratory time devoted to practical applications, problems. Recommended: either MATH 125, MATH 135, or Q SCI 292; Q SCI 381. Offered: jointly with FISH 456.

Q SCI 457 Methods of Abundance Estimation (4) NW Methods of estimating fish abundance by direct sampling and indirectly from tagging, catch, and effort analysis. Confidence limits and bias adjustments. Design of marine fishery surveys using statistical sampling principles. Laboratory work with real fishery data and data collected during trawl sampling survey. Recommended: Q SCI 292; Q SCI 381; Q SCI 456 or FISH 456. Offered: jointly with FISH 457.

Q SCI 458 Fisheries Stock Assessment (4) NW Emphasizes quantitative analysis of fisheries data to determine how the fishery would respond to alternative management actions. Major topics include production models, stocks and recruitment, catch at age analysis, and formulation of harvest strategies. Prerequisite: either Q SCI 456 or FISH 456. Offered: jointly with FISH 458.

Q SCI 477 Quantitative Wildlife Assessment (5) NW *Skalski* Focuses on wildlife sampling techniques for estimating animal abundance, home range, and survival rates in terrestrial populations. The design of wildlife investigations for the purposes of impact assessment, research, and resource management is integrated with estimation schemes and demographic models in a quantitative framework. Prerequisite: Q SCI 292; Q SCI 482.

Q SCI 480 Sampling Theory for Biologists (3) NW *Gallucci, Rustagi* Theory and applications of sampling finite populations including: simple random sampling, stratified random sampling, ratio estimates, regression estimates, systematic sampling, cluster sampling, sample size determinations, applications in fisheries and forestry. Other topics include sampling plant and animal populations, sampling distributions, estimation of parameters and statistical treatment of data. Prerequisite: Q SCI 482; recommended: Q SCI 483. Offered: jointly with STAT 480; even years.

Q SCI 482, 483 Statistical Inference in Applied Research (5, 5) NW Analysis of variance and covariance; chi square tests; nonparametric procedures multiple and curvilinear regression; experimental design and power of tests. Application to biological problems. Use of computer programs in standard statistical problems. 482 - Prerequisite: either STAT 311 or Q SCI 381. 483 - Prerequisite: either Q SCI 381 or Q SCI 482. Offered: AWS, WSp.

Q SCI 486 Experimental Design (3) NW Topics in analysis of variance and experimental designs: choice of designs, comparison of efficiency, power, sample size, pseudoreplication, factor structure. Prerequisite: Q SCI 482; recommended: Q SCI 483. Offered: jointly with STAT 486.

Q SCI 499 Undergraduate Research (1-5) Special studies in quantitative ecology and resource management for which there is not sufficient demand to warrant the organization of regular courses. Credit/no credit only.

University Conjoint Courses

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Each of the following courses is administered by two or more schools or colleges within the University. No degree program is offered.

Courses for Undergraduates

UCONJ 100 Introduction to Health Professions (1) Garcia Opportunities in health professions. Information on educational requirements, professional/ patient interaction, licensing, registering for practice in profession, salaries, and career opportunities.

UCONJ 290 Diversity Issues in the Health Care Environment (1-2) I&S Introduction to the complexity of the issues surrounding culture and health, the interrelatedness of ethic and cultural characteristics and health care access, health and health care concerns of specific communities, traditional and alternative health care practices, and community-based promotion and disease prevention programs.

UCONJ 411 Psychology of Aging (3) *Kiyak* Focuses on developing the skills necessary for critically evaluating current psychological theories of aging, research findings in this area, and the implications of findings on the aging person. Special consideration given to the effects of socioeconomic, sex, and ethnic differences in the psychology of aging. Open to upper-division undergraduates and beginning graduate students interested in the field of gerontology.

UCONJ 420 Biological Safety Practices (1) Kenny General introduction to appropriate laboratory procedures used for handling potentially hazardous biological agents. Particular focus on laboratory safety and appropriate protocols that should be employed by those engaged in infectious disease and recombinant DNA research. Credit/no credit only.

UCONJ 422 Sexually Transmitted Diseases: An Overview (2) Elmer, Holmes Clinically oriented course designed to provide a knowledge base for upper division health science students to participate effectively in community outreach programs for the prevention of sexually-transmitted diseases. Offered cooperatively by the departments of Medicinal Chemistry and Medicine. Credit/no credit only.

UCONJ 440 Biological Aspects of Aging (3) Introductory course on aspects of the biology of human aging and of functional changes associated with normal aging and with those illnesses that may be present in the elderly. Focus on the relationship between changes in physical function, environment, and quality of life. Includes theoretical perspective on aging as well as the aging process in specific physiological systems. Designed for upper-level undergraduate students with an interest in aging. **UCONJ 442** Social and Cultural Aspects of Aging (3) Involves faculty members from the various social science fields examining the range and variation of relationships among age-linked attitudes and cultural values related to aging; the social and economic factors that influence the elderly in contemporary society; the effects of ethnic and sex differences in sociocultural aging. Open to upper-division undergraduates and beginning graduate students interested in gerontology.

UCONJ 443 Interdisciplinary Seminar on Aging (1-6, max. 15) Borgatta Interdisciplinary examination of the contemporary theoretical literature on gerontology and long-term care. For upper-level undergraduate and graduate students with an interest in aging. Quarterly offerings available from the Institute on Aging.

UCONJ 444 Interdisciplinary Collaborative Teams in Health Care (1) Almgren, Crittenden, Fuller, Hunt, Kimball, Kradjan, Mitchell, Morton An interdisciplinary course open to students enrolled in Health Science schools. Students work in interdisciplinary teams with a problem-based learning methodology to learn more about the role of other health care providers in the care of urban and undeserved patient problems. Credit/no credit only.

UCONJ 490 Social Sensitivity in Health Care (3) I&S Multidisciplinary course for health professions students. Health professionals' roles in dealing with social, cultural, and physical barriers to health care of low-income groups and ethnic people of color. Personal involvement through field experiences and faculty drawn from affected communities as well as health sciences, social work schools. Credit/no credit only.

UCONJ 497 Health Care in a Rural Community (3) Critical analysis built upon concepts relative to interdisciplinary health-care delivery in a rural community. Students develop an organizational model for rural health care and study innovative ways of mobilizing community resources and support for a comprehensive rural health-care system. Pharmacy students, nurses, and other health professionals study application of theory in an appropriate clinical setting within the conceptual framework of each student's professional field.

Courses for Graduates Only

UCONJ 500- Seminar in Interprofessional Collaboration ([1-3]-, max. 7) Interdisciplinary teams composed of students and community members placed in diverse urban settings to address an identified community need by developing and implementing collaborative, community-based projects. Seminars emphasize interprofessional collaborative practice, intrapersonal understanding, interpersonal group process skills, organizational savvy, community awareness, and sociocultural sensitivity. Graduate School of Public Affairs. Offered: AWSp. UCONJ 501, 502, 503 International Health (1, 1, 1) Hunt Weekly seminar introduces students to issues and opportunities of participating in health care systems in other countries. Guest speakers bring many perspectives of international health care experiences. Class discussions help prepare students for international placements. Credit/no credit only.

UCONJ 511 Issues in Home Health Care Delivery (3) Service delivery issues relevant to provision of health care services across the life span in the home setting. Home health care as an important component in health care system. Individual and multidisciplinary practice of health care disciplines. Emphasis on research literature. Prerequisite: graduate student standing, upper division with permission of instructor.

UCONJ 513 Dynamics of Patient Management: Diabetes Mellitus (2) Analysis of advanced knowledge related to interdisciplinary management of diabetes. Commonalities and differences in provider approaches, recent research and its effect on management practices, collaborative communication, knowledge application. Brief interactive presentations, decision-making opportunities, discussion. Credit/no credit only. Prerequisite: graduate standing in pharmacy, dietetics, nursing; third- or fourth-year medical student; or permission of instructor.

UCONJ 520 Molecular Biophysics Research Seminar (1) Parson A series of research seminars for faculty and students involved with the molecular biophysics program. Credit/no credit only.

UCONJ 524 Developmental Neurobiology (3) *Raible, Reh, Roelink, Rubel* Survey of contemporary issues in developmental neurobiology, including neurogenesis and differentiation; electrophysiological, morphological, and neurochemical regulation of cellular phenotype; neuronal pathways and synaptic contacts; cellular and synaptic plasticity; and behavior. Examination of molecular biological, morphological, electrophysiological, and behavioral approaches. Prerequisite: background in neurophysiology, neuroanatomy, molecular neurobiology.

UCONJ 525 Overview of Faculty Research in Neurobiology (1) Reviews research topics currently being studied in neurobiology. Student preparation consists of reading pertinent articles published on each topic. Credit/no credit only. Prerequisite: firstyear graduate student in neurobiology.

UCONJ 530 Issues in Indian Health (3) Survey of historical and contemporary issues in Indian Health. Covers Indian contributions to health, traditional Indian Medicine, current disease epidemiology, development of Federal Indian Health policy, the Indian Health Service, tribal health programs, and consequences of major legislation on Indian Health. Prerequisite: current health science student or permission of instructor.

UCONJ 555 Principles of STD/HIV Research (3) Provides MD and PhD fellows and graduate students with a comprehensive overview of the current state of knowledge in specific areas of STD/HIV research, including study design, laboratory methods, production of instruments for data collection, and methods for data analysis. Credit/no credit only.

UCONJ 584 Plant Tumors (1, max. 9) *M* Gordon Discussion of the literature of plant tumors and current research work being carried on in this area at the University. Offered cooperatively by the departments of Biochemistry, Botany, Microbiology, and Immunology. Credit/no credit only. Prerequisite: offered only to persons actively pursuing work in this area.

School of Law

Dean

Roland L. Hjorth 326 Condon

Associate Dean

Thomas R. Andrews 306 Condon

Assistant Dean

Sandra E. Madrid 338 Condon

Established in 1889, the School of Law is a member of the Association of American Law Schools and is on the American Bar Association's list of approved law schools. Graduates of the School are prepared to practice law anywhere in the United States. Additional information about the School is contained in the current *School of Law* catalog.

Facilities and Services

The School of Law is housed in Condon Hall, adjacent to the University's main campus. It is equipped with classroom, library, lounge, and office facilities.

The Marian Gould Gallagher Law Library is one of the finest law libraries in the country. Its collection, among the largest university law collections on the West Coast, currently contains more than 450,000 bound volumes and volume equivalents of microform. In addition to the extensive main collection, it houses important materials that support the Asian and marine law graduate programs and serves as a federal depository for selected United States government documents. An experienced audiovisual staff directs the use of video equipment in the trial advocacy and moot court programs. The library is equipped with the latest in microreaders and printers in order to make full use of the growing microform collection. The library is a subscriber to LEXIS, WESTLAW, the Western Library Network, and other research databases.

Juris Doctor Program

The Juris Doctor degree is conferred upon a student who has met the residence requirements, consisting of nine quarters of at least 12 credits each, and has earned at least 135 credits satisfactory to the School of Law.

As with most law schools in the United States, the firstyear courses are required and are designed to introduce students to basic legal skills, foundational subject matter, and the variety of public and private processes with which the profession is concerned. Those courses deal with contracts, torts, property, civil procedure, criminal law, constitutional law, and basic legal skills.

Except for a required course in professional responsibility, the public service requirement, and an analytical writing requirement, courses in the second and third years are elective. Therefore, a student may choose a program designed to suit his or her interests and needs. J.D. candidates are required to perform 60 hours of public-service legal work during the second or third year.

Admission

New students may enter the School of Law only in autumn quarter. Instruction begins for first-year students a few days earlier than the time set for upperclass students. Beginning students must have received a baccalaureate degree from an accredited college or university prior to commencing the study of law.

All applicants are required to take the Law School Admission Test (LSAT) and to register for the Law School Data Assembly Service (LSDAS). Registration packets and test information are available at most law schools and from Law School Admission Services, Box 2000, Newtown, PA 18940.

No specific prelaw course is required or recommended, and the School of Law subscribes to the remarks set forth on prelaw preparation in the *Prelaw Handbook—Official Guide to U.S. Law Schools.* Applications for admission to the next entering class must be received by January 15. To be assured of consideration for admission, an applicant must have complete credentials, including the LSDAS report, filed in the School of Law by February 1. An application fee (at this writing, \$50) also is required.

Transfer Applicants

Students who have completed at least one year at a member school of the Association of American Law Schools may apply to this school for admission with advanced standing with credit for no more than one year of such work. A student who has completed or expects to complete at least two years of work at a member school of the Association of American Law Schools and who expects to graduate from that member school may apply to this school for admission as a non-degree candidate.

Applicants should request application forms and instructions from the admissions office in time to permit filing of the application by July 15. To be assured of consideration, the applicant must complete the application file by August 1.

Applications are considered only if vacancies exist. Selection of the applicants is based on evidence either (1) that the candidate can produce above-average work at this law school, or (2) that the candidate will contribute to the diversity of the student body.

Students working on law degrees to be conferred by the University have priority over non-degree candidates in the selection of courses. This policy is in accordance with the general University policy on the registration of nonmatriculated students.

Financial Aid

Students in need of financial assistance may receive University aid, School of Law aid, federal loans, or aid from all of these sources. To be considered for aid, applicants must submit the Free Application for Federal Student Aid (FAFSA) by February 28. FAFSAs are available in December at most college financial aid offices, or may be obtained by writing or calling the Office of Student Financial Aid, 105 Schmitz Hall, Box 355880, University of Washington, Seattle, WA 98195, (206) 543-6101. Applicants for admission should not wait until they have been admitted before applying for financial aid.

School of Law grants are awarded primarily on the basis of financial need, although scholarship, minority status, or other factors may be considered with regard to certain awards. Inquiries concerning School of Law aid should be addressed to Financial Aid Coordinator, School of Law, Condon Hall, Box 354600, University of Washington, Seattle, WA 98195.

Inquiries

A more detailed statement on admission policy and application procedure is available in the School of Law. Requests for application materials and the University law school bulletin should be addressed to Law School Admissions, Condon Hall, Box 354600, University of Washington, Seattle, WA 98195.

Graduate Program

Graduate Program Coordinator 712 Condon, Box 354600 (206) 543-4937 gradlaw@u.washington.edu

In addition to the professional law program leading to the Juris Doctor degree, the law faculty offers graduate programs leading to the Master of Laws (LL.M.) in law and marine affairs, Asian and comparative law, international environmental law, the law of sustainable international development, and taxation. The School of Law offers the Doctor of Philosophy (Ph.D.) degree in Asian and comparative law only. The requirements for each program are as follows:

Asian Law Program

The Master of Laws degree program in Asian and comparative law is designed for students with career and research interests in one or more of the legal systems of East Asia, with particular emphasis on that of Japan, as well as for lawyers from East Asia seeking advanced comparative study of American law. The Asian law program is structured around extensive course offerings involving comparative study of basic areas of United States and East Asian law and tutorials in areas of special interest to each student.

Admission to the LL.M. degree program in Asian and comparative law is limited to language-qualified applicants who have received the first degree in law and who have a record of superior academic achievement. Graduates of American law schools must have a degree from an ABA-accredited institution. The applicant must be competent in an East Asian language (or, in the case of foreign students, in English). Students without the required competence may be admitted to the program, but must successfully complete an approved program of intensive study of an East Asian language before beginning their studies. The program contemplates one year in residence, at least 36 credits, and an acceptable major research undertaking.

Admission to the Ph.D. program in law is limited to exceptional scholar-lawyers who are fluent in English and in either Japanese, Chinese, or Korean. Prospective Ph.D. students must normally complete the LL.M. program before being accepted as Ph.D. students. The core of the program is a major creative research project using Asian-language sources as well as English-language sources. At least two, and usually three, years in residence are necessary in order to accomplish the work that must be done in order to pass the General Examination that precedes candidacy for the doctoral degree. An acceptable dissertation must thereafter be submitted to complete the requirements for the degree. The Candidate may spend a year abroad while working on the dissertation but must be in residence during the quarter in which the degree is to be conferred.

Law and Marine Affairs Emphasis

Students who have acquired a first degree in law can become prospective candidates for the LL.M. degree in law and marine affairs. Graduates of American law schools must have a degree from an ABA-accredited school. Particular emphasis is placed on interdisciplinary aspects of marine affairs and coastal zone management. Attainment of the LL.M. degree with specialization in law and marine affairs requires satisfactory completion of 40 credits of course and research work, at least 15 of which must be in the School of Law. In the School of Law, courses include Law of the Coastal Zone, International Law of the Sea, Ocean Policy and Resources, United States Law and the Marine Environment, and Admiralty. Pertinent courses are also offered in the Schools of Fisheries, Marine Affairs, and Oceanography, the Graduate School of Public Affairs, the College of Engineering, and the Departments of Economics and Geography.

International Environmental Law Emphasis

Students may earn an LL.M. degree in international environmental law. This LL.M. degree option is open to students with a first degree in law. Graduates of American law schools must have a degree from an ABAaccredited school. Emphasis is placed on the interdisciplinary study of environmental problems, and students may earn more than half of their credits in courses outside of the School of Law, including courses offered by the Schools of Fisheries and Marine Affairs, the Graduate School of Public Affairs, the Colleges of Engineering and Forest Resources, and the Departments of Atmospheric Sciences, Economics, Environmental Health, and Geography. Courses offered in the School of Law include Environmental Law: Pollution Control, Natural Resources: Energy, U.S. Law and the Marine Environment, International Environmental Law, and Land Use Planning. To earn the LL.M. degree, students must satisfactorily complete 40 credits of course and research work, at least 15 of which must be in the School of Law. Students must take LAW A 527, Environmental Law: Pollution Control, and LAW A 574, The International Legal Process, unless they have had equivalent courses; and one course on international environmental law. As part of their course work or an independent study project, students must write one substantial paper.

Law of Sustainable International Development Emphasis

Students may earn an LL.M. degree in the law of sustainable international development. This LL.M. degree option is open to students with a first degree in law. Graduates of American law schools must have a degree from an ABA-accredited school. Emphasis is placed on the interdisciplinary study of sustainable international development, and students may earn more than half their credits in courses outside the School of Law, including courses offered by the Schools of International Studies and Public Health, and the Departments of Economics. Political Science, and Sociology. In the School of Law, courses offered include Legal Problems of Economic Development (required); International Environmental Law (required); Public Land Law; International Commercial Law; and Land, American Culture, and the Law. Attainment of the LL.M. degree with specialization in the law of sustainable international development requires satisfactory completion of 40 credits of course and research work, at least 15 of which must be in the School of Law. and the taking of courses in at least three other departments other than law. As part of their work, students must write one substantial paper.

Taxation

Students may earn an LL.M. degree in taxation. This LL.M. degree option is open to students with a first degree in law. Graduates of American law schools must have a degree from an ABA-accredited school. International students must have a first degree in law or equivalent and may be admitted by the permission of the director. A candidate for the LL.M. degree must successfully complete 36 quarter hours of course work. Students who qualify may be enrolled either on a full-time or a part-time basis. Full-time students can complete the course of study within one nine-month academic year, while those participating on a part-time basis are allowed six academic years to complete the degree. Generally all courses must be taken from the Graduate Tax curriculum, although candidates for the LL.M. may, with the permission of the director, take up to 6 credits of course work in the Law School's J.D. curriculum. Certain core courses are required: Federal Tax Controversies and Procedure, Taxation of Corporations and Shareholders, Tax Accounting, Property Dispositions and Transactions, and Taxation of Partners and Partnerships. The remainder of the curriculum is elective.

Financial Aid

Scholarship funds for graduate students in law are quite limited. Inquiries should be made to Law School Graduate Admissions, Condon Hall, Box 354600, University of Washington, Seattle, WA 98195, U.S.A.

Inquiries

Requests for applications and program brochures for all School of Law LL.M. programs except the LL.M. in taxation, as well as information regarding application procedures, should be addressed to William Jackson, Law School Graduate Admissions, Condon Hall, Box 354600, University of Washington, Seattle, WA 98195, U.S.A.; gradlaw@u.washington.edu.

Requests for applications and program brochures for the LL.M. in taxation should be addressed to Gloria Strickland, Law School Graduate Tax Admissions, Condon Hall, Box 354600, University of Washington, Seattle, WA 98195; gradlaw@u.washington.edu.

Senior Lecturers

Anderson, Helen A. 1994; JD, 1984, University of Washington; legal research, writing, and analysis

Gold, Julia Ann 1995; JD, 1983, University of South Carolina; alternative dispute resolution, mediation.

Jones-Garling, Michele 1993; JD, 1987, Gonzaga University; family law, children's rights.

McMurtrie, Jacqueline 1989; JD, 1983, University of Michigan; criminal law and practice.

Stearns, Janet E. 1993; JD, 1988, Yale University; affordable housing, clinic, real estate.

Lecturers

Mathewson, Gwen C. 1993; JD, 1990, University of Chicago; MA, 1993, University of Washington; legal research, writing and analysis.

McGinnis. Kathleen M. 1994; JD, 1984, University of California (Berkeley); legal research, writing and analysis.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

LAW 300 Introduction to Law (3-6) I&S Understanding the legal system, its functions in the socialeconomic order, legal reasoning, and the world of legal education and the legal profession. Open to nonlaw students only.

LAW 410 Problems in Professional Responsibility (4) I&S

LAW 415 Criminal Justice (3) I&S Examines pretrial rights of persons suspected or accused of crime, primarily those rights covered by the Fourth, Fifth, Sixth, and Fourteenth Amendments of the U.S. Constitution.

LAW 416 International Contracting: Negotiation and Drafting (3) I&S Skills course designed to introduce process and problems of negotiating and drafting international agreements. Client interviewing and counseling and negotiation and drafting of a contract between parties in the United States and Japan. Credit/no credit only. Open to nonlaw students only.

LAW 422 Copyright (3) I&S

LAW 429 Public Land Law (3) I&S

LAW 442 Land Law and the Urban Environment (3) I&S Examination of the major legal tools available to shape the urban environment by controlling the use of land. Considers zoning, subdivision controls, urban renewal, private land-use restrictions, and the rules of nuisance law. Credit/no credit only. Open to law and nonlaw students.

LAW 443 The Legal Process I (3/5) I&S The system of law and its functions rather than substantive law pertaining to any particular subject or discipline. Open only to nonlaw students. Credit/no credit only.

LAW 444 Constitution and American Public Education (3-6) I&S Examines the relationships between the Constitution of the United States and the American system of public education, excluding higher education, in areas of constitutional freedom and legal controls, racial desegregation, and equal educational opportunity, including equal financing of the public schools. Credit/no credit only. Offered: jointly with EDLPS 444.

LAW 445 Major Issues in American Constitutional Law (3) I&S Significant themes in American constitutional law. Doctrine of judicial review, application of the Bill of Rights to the states, Supreme Court's recognition of fundamental rights, the Equal Protection clause, the Religion clauses, freedom of speech, and Presidential powers. Open to law and nonlaw students

LAW 446 Race, Age, and Sex Discrimination in Employment (3) I&S What constitutes race, age, and sex discrimination in employment, and related prohibited practices that limit employment opportunities. Methods of proving such discrimination and establishing that a practice should be prohibited. Remedies for violations considered. Open to law and nonlaw students.

LAW 447 Critical Perspectives in Law (3) I&S Examination of modern critical legal thought and critics views regarding proposed alternative forms of social ordering.

LAW 467 American Law and the American Indian (3) I&S Relationship between Indians and the United States from 1789 to the present. Significant constitutional, legislative, and judicial actions. Legal events explored within their political, military, social, and cultural contexts. Comparisons with other minority-group experiences. Offered: jointly with HSTAA 416

LAW 475 Introduction to Law: A Social Science Perspective (4) I&S Policy-oriented, interdisciplinary study of uses and limits of social science in the law-making process on appeal and fact-finding process at trial. Critical perspectives on roles of social science, especially social psychology, in adjudication. Offered: jointly with PSYCH 475.

LAW 476 International Economic Relations and Trade Policy (3) I&S Consideration of international control of national trade policies and permissible

transnational reach of national trade or other regulation The General Agreement on Tariffs and Trade (GATT) and the international monetary system examined from legal and economic perspective. Examination and comparison of prescriptive jurisdiction to public international law

LAW 477 Law and Literature (3) VLPA/I&S Examines literary portrayals of law, lawyers, and the legal system. Considers portrayals purporting to depict accurately the character of lawyers or the efficacy of the legal system, and works envisioning lawyers and the legal system in a "better world". Explores the interrelations between literary works and appellate decisions

LAW 481 Land, American Culture and the Law: Perspectives on the Use and Ownership of the Natural Environment (1-6) I&S

LAW 489 Law and Aging (3) I&S Survey of principal areas of law of special concern to aging population, considering health care and health care decision-making, public and private income maintenance programs, taxation, guardianships, conservatorships and other methods of protecting the property of the elderly, counseling, and professional responsibility.

First-Year Courses

The courses below are intended for law students: other students are admitted only rarely with special permission of the dean. Only the course titles are given. For complete course descriptions, see the School of Law Bulletin

LAW B 552- Tutorial in Comparative Law ([1-4]-)

LAW B 553 Chinese Legal Tradition (3) Offered: jointly with SISEA 553.

LAW B 554 Survey of Russian Law (3)

LAW B 555 Roman Law (3)

LAW B 559 Comparative Law: Europe, Latin America, and East Asia (4)

Law and Marine Affairs

LAW B 561 International Law of the Sea (4) Offered: jointly with SMA 506.

LAW B 562 Quantitative Methods (4)

LAW B 563- Ocean Policy and Resources Seminar (3-)

LAW B -564 Ocean Policy and Resources Seminar (-3)

LAW B 565 Untied States Law and the Marine Environment (3) Offered: jointly with SMA 515.

LAW B 566 Principles of Coastal Zone Management (3) Offered: jointly with SMA 509.

Seminars

- LAW B 567 General Externship Perspectives Seminar (2) Credit/no credit only. LAW B 568 Advanced Professional Responsibility (2)
- LAW B 569 Judicial Externship Perspectives Seminar (2) Credit/no credit only.
- LAW B 574- Consumer Protection Seminar ([2-6]-)

LAW B 575- The Supreme Court and the Constitution ([2-6]-)

LAW B 576- Selected Problems on Environmental Protection Seminar ([2-6]-)

LAW B 577- Law and Literature Seminar ([1-6]-)

LAW B 578- Seminar on Legal Problems of Economic Development ([1-6]-)

LAW B 579 Criminal Justice Externship Perspective Seminar (2) Credit/no credit only.

LAW B 580 Externship Tutorial (2) Credit/no credit only.

LAW B 581- Land, American Culture, and the Law: Perspectives on the Use and Ownership of the Natural Environment ([1-6]-)

LAW B 582 Parents, Children, and Dissolution (1-6)

LAW B 584- Indian Law Seminar ([2-6]-)

LAW B 585 Natural Resources Damages Seminar (1-4)

LAW B 586- Biology and Law Seminar ([1-6]-)

LAW B 587 Lawyers, the Legal System, and Professionalism (2)

LAW B 588- Advanced Antitrust Seminar ([1-4]-)

LAW B 589- Intellectual Property Law Seminar ([1-4]-)

LAW B 590 The United States Constitution: Past, Present, and Future (2)

LAW B 591 Seminar: The Legal Orders of Northeast Asia: An Historical Perspective (2-6)

LAW B 592- Seminar on the Legal Rights of Handicapped Persons ([1-4]-)

LAW B 594- Public Land Law Seminar ([2-6]-)

LAW B 595- Mental Health Law Seminar ([1-4]-)

LAW B 596 International Protection of Human Rights Seminar (2-4)

LAW B 597 History of the Formation of the United States Constitution Seminar (2-6)

LAW B 598- Advanced Research and Writing in Property Seminar ([1-4]-)

LAW B 599 Special Topics (1-12)

LAW 800 Doctoral Dissertation (*)

Graduate School of Library and Information Science

Acting Director

Betty G. Bengtson

133 Suzzallo

Graduate Program

Graduate Program Coordinator 133 Suzzallo, Box 352930 (206) 543-1794 gslis@u.washington.edu

"People and Knowledge: Building Information Connections" is the vision statement adopted by the School.

A 63-credit course of study leads to the Master of Library and Information Science degree, which prepares graduates for professional information-related positions in libraries and other environments. The School's curriculum incorporates a significant number of courses in the organization, storage, retrieval, and management of information through the use of diverse technologies. Foundation courses provide the theoretical base for the program. Technical and advanced courses are organized around five areas of concentration: managerial tools, organization of resources, information resources and retrieval, design and provision of information services, and environments of information service.

The law librarianship program requires a J.D. degree for admission and may be completed in one calendar year. This specialized program of study prepares lawyers to serve as law librarians in courts, federal and state governmental agencies, schools of law, corporations, and law firms. The law librarianship courses are open to all GSLIS students.

Special Research Facilities

The School's computer laboratory provides a dedicated facility for research and instruction in the design and use of information systems. Students use databases, applications software, programming packages, and have access to the University's computer network and off-campus bibliographic utilities and information services.

Admission Requirements

Admission is subject to the approval of the School's admissions committee. A complete application file includes application for admission; official transcripts; Graduate Record Examination scores, general test section (an exception is made for those who have completed a Ph.D. program); three letters of recommendation; and a statement of educational and professional goals. International students (except those from English-speaking countries) are required to take the Test of English as a Foreign Language (TOEFL) examination. Completed applications for admission for summer or autumn quarter must be received prior to March 15. If the Graduate School has space available, applications will be considered for winter quarter by November 1, and for spring quarter by February 1. Students are strongly advised to complete their applications early because the School receives more applications than there are spaces available in the program.

In addition to the above requirements, an applicant for the law librarianship program must hold a degree from an accredited American law school or from a law school in one of the common-law countries.

The Graduate School of Library and Information Science brochure gives full details of application procedures.

Financial Aid

The School has funding available each year for one research assistantship. In addition, fellowships/scholarships from the Cobb, Finley Multiethnic, Henry, Koon, McAlpin, and Page endowment funds are awarded each year. The amount of assistance and number of awards vary from year to year. All awards have financial need as one criterion, which is based on the figures the applicant provides on the Free Application for Federal Student Aid (FAFSA). This form is available from the Office of Student Financial Aid in mid-December and must be submitted by February 28 each year. The School is unable to offer financial assistance to international students. Other fellowships are described in Financial Assistance for Library Education, available from the American Library Association, 50 East Huron Street, Chicago, Illinois 60611.

Faculty

Professors

Bengtson, Betty G. 1988, (Affiliate); MSLS, 1967, Catholic University of America; MSD, 1986, University of Maryland.

Benne, Mae M. * 1971, (Emeritus); MS, 1955, University of Illinois; children's literature, public library services for children.

Chisholm, Margaret E. * 1975, (Emeritus); PhD, 1966, University of Washington; organization and administration, library education.

Hazelton, Penny A. * 1985, (Adjunct); JD, 1975, Lewis and Clark College; MLL, 1976, University of Washington; law librarianship, legal bibliography, computerassisted legal research, law, Indian law.

Hiatt, Peter * 1974; PhD, 1963, Rutgers University; adult services, special populations, management assessment, community analysis, library education.

Lieberman, Irving 1956, (Emeritus); MA, 1950, EdD, 1955, Columbia University; librarianship.

Shaw, Spencer G. * 1970, (Emeritus); BLS, 1941, University of Wisconsin; librarianship.

Associate Professors

Brooks, Terrence A. * 1986; PhD, 1981, University of Texas (Austin); information storage and retrieval, query language design, bibliometrics, relevance research.

Efthimiadis, Efthimis 1997; PhD, 1992, City University, London (England); information retrieval, evaluation, query expansion, front ends, user interaction.

Fidel, Raya * 1982; PhD, 1982, University of Maryland; information retrieval systems, user interaction, classification research.

Fuller, Sherrilynne S. 1988, (Adjunct); PhD, 1984, University of Southern California; library and information management.

Johnson, Ronald A. 1986; MA, 1972, University of Chicago; MS, 1975, University of Southern California; information sciences.

Mignon, Edmond * 1970, (Emeritus); PhD, 1976, University of California (Berkeley); information retrieval and information policy.

Skelley, Grant T. * 1969, (Emeritus); PhD, 1968, University of California (Berkeley); history of the book, preservation, bibliography and reference.

Assistant Professors

Carlyle, Allyson 1996; MLS, 1986, PhD, 1994, University of California (Los Angeles); online catalog use and design, descriptive cataloging principles and theory.

Nelson, Jerold A. * 1971; PhD, 1971, University of California (Berkeley); information access and use, intellectual freedom.

Soper, Mary E. * 1972, (Emeritus); PhD, 1972, University of Illinois; technical services, organization of library materials, cataloging, subject analysis, serials.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

LIS 470 History of the Book (3) Development of book from hieroglyphics, clay tablets, to present, emphasizing printed book in Western world since Gutenberg. Book as physical object, processes and materials of its production viewed in context of changing technologies and various cultural, esthetic, economic, trade influences. Aspects of book collecting. Credit/no credit only.

LIS 498 Special Topics (1-5, max. 15) Library service and information science subject matter in seminars, workshops, or other appropriate formats. Topics vary and may be repeated for credit. Credit/no credit only.

LIS 500 Society, Users, and Libraries (4) Technological, societal change as it relates to information. Society's information processes, ways individuals use information in their environments. Skills basic to other courses developed, including awareness of resources for study of library and information science. Intellectual context of librarianship as service profession. Prerequisite: major standing.

LIS 501 Bibliographic Control (4) Survey of the major types of instruments for the bibliographic control of the various kinds of library materials and of the conventions used in describing them. Basic concepts, historical background, and theoretical and practical aspects of bibliographic control; evaluation and methodology. Prerequisite: major standing.

LIS 502 Introduction to Information Science (3) Theory, understanding, and perspectives for the analysis of design and operation of information retrieval systems. Systems analysis applied to the process of information transfer. Consideration of user needs assessment, performance evaluation, and control of terminology.

LIS 503 Bibliographic Databases (4) Concepts and conventions of bibliographic record structure, file organization, and search protocols. Elementary techniques in the use of bibliographic utilities and online search services. Prerequisite: major standing.

LIS 510 Management for Librarianship (3) Management concepts critical to provision of library services. The planning process applied to library problems and opportunities. Communications awareness and skills in the professional environment. Organizational concerns, including personnel, budgeting, control techniques, theories of management, and evaluation of effectiveness.

LIS 511 Library Administration Skills (3) Provides practice in the administrative skills related to personnel selection, supervision, and management, and to planning and budgeting processes in the library setting. Topics include work specification, performance evaluation, personnel policy formulation, budget types, and budget preparation and control.

LIS 512 Community Analysis and Library Change (3) Review of the concepts, strategies, and tools for study of the community, response to community change, and promotion of desired library change. Includes experiential exercises, analysis of case studies, and investigation of the literature of relevant fields. Prerequisite: 500 or permission of instructor.

LIS 513 Management of Automated Systems in Libraries (3) Developing criteria for selection and design of computer systems for libraries and information centers. Applying criteria in evaluation of hardware and software. Examining related management challenges such as vendor relations, financing options, personnel requirements, and design of auxiliary activities. Credit/no credit only. Prerequisite: 501, 503, or permission of instructor.

LIS 520 Organization of Library Materials: Introduction (3) Principles and techniques of standard methods of organizing library materials for use. Includes fundamentals of descriptive cataloging, primary systems of subject analysis, and developments in technical services. Prerequisite: 501, 503, or permission of instructor; recommended: 500.

LIS 521 Knowledge Representation (3) Introduction to variety of models for representing knowledge and structuring information, focusing on commonalities and distinctive contributions to understanding of information and communication processes. Drawing on approaches from areas such as library and information science, psychology, anthropology, and linguistics, emphasizing their significance for design of retrieval systems. Credit/no credit only.

LIS 522 Descriptive Cataloging (3) Continuation of 520, with emphasis on rules of descriptive cataloging for monographic print materials of all kinds and nonbook materials. Includes applications of automation to bibliographic control of library materials. Prerequisite: 520 or permission of instructor.

LIS 523 Subject Analysis of Library Materials (3) Continuation of 520, with emphasis on subject analysis of library materials. Includes work with Library of Congress and Dewey decimal classifications, Sears and Library of Congress subject headings, and other systems used in libraries today. Prerequisite: 520 or permission of instructor.

LIS 525 Organization and Use of Serials (3) Management of serials, including acquisition and replacement, control, subject access, preservation, and use of all types in all kinds of libraries. Includes application of new technology and international developments as they affect serials. Credit/no credit only. Prerequisite: 520 or permission of instructor; recommended: 522.

LIS 526 Indexing and Abstracting (3) Techniques of vocabulary control and thesaurus construction as applied to indexing and abstracting processes. Design, selection, and evaluation of indexing systems. Computerized methods for free text, full text, and controlled vocabulary procedures. Application of methods to information retrieval systems. Credit/no credit only. Prerequisite: 501, 503, or permission of instructor.

LIS 527 Construction of Index Languages (3) Explanations of design options, features of index languages or thesauri, and criteria to use in their selection. After completing the thesaurus construction project, students are prepared to design index languages, plan and implement a design project, and evaluate index languages. Credit/no credit only. Prerequisite: 501, 502, 503 or permission of instructor.

LIS 528 Literature Searching (3) Concepts and techniques of professional literature searches, using a variety of standard search languages on representative types of bibliographic databases and on-line reference resources. Analysis and evaluation of data bases. Prerequisite: 503 or permission of instructor; recommended: 501.

LIS 530 Organizing Information Using Internet (3) Covers the underpinnings of Internet access and system design, including the application of principles of information organization to arrange the chaotic array of information resources on the Internet; evaluation of websites and search engines; and basic interface consideration. Credit/no credit only.

LIS 531 Conceptual Database Design (3) Preliminary design of databases for decision support systems. Introduces methods of collecting user requirements, requirement analysis, data dictionary, the entity-relationship model, methods for database integration, preparation for data collection, and evaluation. Credit/no credit only. Prerequisite: 501, 503, or permission of instructor.

LIS 532 Design of Information Systems (3) Discusses how theories of conceptual data modeling affect design of database and information systems, examines relationships between modeling and implementation, and bridges gaps between theoretical understanding of database design and implementation issues. Implements conceptual schemata development in 531. Prerequisite: 531 or permission of instructor.

LIS 533 Bibliographic Knowledge Bases (3) Practical application of appropriate software for design of bibliographic databases and knowledge bases. Emphasis on creation of real working systems. Focus on bibliographic data structures, creation of indices and user interfaces. Considers approaches to artificial intelligence and expert systems with bibliographic data. Prerequisite: 503 or permission of instructor.

LIS 540 Materials for General Information Needs (3) Consideration of the individual in the generalized information environment. Interdisciplinary sources for the selection of library materials. Forms of materials for nonspecialized information retrieval and referral. Development of skills in question negotiation and search strategy. Prerequisite: 501, or permission of instructor; recommended: 500, 503.

LIS 541 Information Access in the Humanities (3) Description and analysis of information problems and information sources in the humanities. Fields considered are philosophy, religion, visual arts, performing arts, language, and literature. Prerequisite: 501 or permission of instructor; recommended: 500, 503.

LIS 542 Information Access in the Social Sciences (3) Description and analysis of information problems and information sources in the social sciences. Fields considered are anthropology, business economics, education, geography, history, political science, psychology, and sociology. Prerequisite: 501, 503, or permission of instructor.

LIS 543 Information Access in Science and Technology (3) Includes topics as applied in literature of natural sciences and engineering: nature of information transfer; characteristics and organization of bibliographic and reference sources; information retrieval from manual and computer on-line sources; search strategy; practice with specific data bases and manual sources. Prerequisite: 501, 503, or permission of instructor: recommended: 528.

LIS 544 Legal Bibliography (3) Introduction to legal bibliography and law librarianship. Basic primary and secondary legal bibliographic tools. Integration of manual and computer resources for effective legal research. Prerequisite: law librarianship major or 501 and 503 which may be taken concurrently. Offered: jointly with LAW A 598.

LIS 545 Government Publications (3) Government publications of the United States and foreign countries, their acquisition, organization, and use. Credit/no credit only. Prerequisite: 501, 503, or permission of instructor; recommended: 500.

LIS 546 Business Information Resources (3) Survey of the extent and nature of business information and its sources, and of business information producers and consumers. Study and use of both print and on-line sources. Prerequisite: 501, 503, or permission of instructor.

LIS 547 Evaluation and Selection of Audiovisual Materials (3) Develops competency in applying criteria to the evaluation, selection, and use of audiovisual materials and their accompanying technologies. Focuses on previewing the full range of audiovisual formats found in all types of libraries.

LIS 548 Picture Books: Evaluation and Use (3) In-depth study of picture books and other media associated with them, the primary means for introducing young children to books and reading. Emphasis on evaluation and use of Mother Goose, poetry, concept, alphabet, counting, wordless, informational, contemporary realist, folktale, and memorable animal picture books and materials for children.

LIS 549 Children's Materials: Evaluation and Use (3) Study of library materials for children with emphasis on literature in its various forms. Attention also given to criteria used in evaluation, issues in selection, and use of materials with children.

LIS 550 Youth Materials: Bibliography and Resources (3) Sources of information about youth materials. Includes reviewing journals, selection aids, general and subject bibliographies, books of readings and criticism, textbooks, and biographical tools. Emphasis on the critical evaluation of these sources. Includes brief history of children's literature and the function of special collections. Prerequisite: 503 or permission of instructor.

LIS 551 Young Adult Materials: Evaluation and Use (3) Reading, evaluation, and sharing of literature currently appropriate to the needs, interests, and abilities of young adults, ages twelve through twenty. Application of criteria to the assessment of young adult reading materials and consideration of the uses of these materials with young people.

LIS 553 Information Access in Health Sciences (3) Characteristics of users of biomedical literature. Information resources in health sciences and healthcare planning. Use of information retrieval systems, emphasizing services of National Library of Medicine. Organization of medical, hospital libraries. Problems of information policy, professional standards, certification. Credit/no credit only. Prerequisite: 528 or permission of instructor; recommended: 543.

LIS 557 Advanced Legal Bibliography (4) Legal bibliographic tools that answer more complex legal research problems, such as federal legislative histories, sources of administrative law, specialized research (e.g., tax, securities). Builds on skill, techniques utilized in 544. Extensive work with computerassisted legal retrieval. Prerequisite: 544 or permission of instructor. Offered: jointly with LAW A 599.

LIS 558 Selection and Processing of Law Library Materials (3) Study of tools for collection development and collection development plans in law libraries. All law library technical processes, including acquisitions, budgeting, cataloging, and serials. Credit/no credit only. Prerequisite: 544 or permission of instructor.

LIS 560- User Education: Issues and Practice (3-, max. 6) User education as professional activity in libraries. Teaching methods, instructional design, special populations, learning styles, impact of technology, critical thinking skills. Practical teaching experience through University of Washington Libraries' user education program. Material covered over two consecutive quarters. Credit/no credit only. Prerequisite: 501 and 503; recommended: one reference course. **LIS 561** Serving Individual Information Needs (3) Training in awareness and skills for perceiving and responding to the information requests of users. Effective strategies for meeting information needs are learned through use of simulations, role playing, experiential exercises, discussion, and practice. Credit/ no credit only. Prerequisite: 500 or permission of instructor.

LIS 562 Planning for Library and Information Services (3) Principles underlying library and information services, and the selection and design of services to meet user needs. Emphasis on adult clientele in academic, public, and special libraries, but attention given to school library media centers and all age levels. Prerequisite: 500 or permission of instructor; recommended: 501.

LIS 563 Services for Special Groups (3) Needs analysis and design of library services for the blind and visually handicapped, deaf and hearing impaired, institutionalized, mentally and physically handicapped, functionally illiterate, minorities, and aging. Skills, insights, and knowledge to work with these groups. Current research, practice, and experimental programs. Prerequisite: 500 or permission of instructor; recommended: 562.

LIS 566 Special Librarianship (3) Seminar in the practice of special librarianship in business and industrial firms, government agencies, and the freelance sector. User services and information resources. Credit/no credit only. Prerequisite: 24 credits in Library and Information Sciences program.

LIS 567 Public Library Services for Youth (3) Administration of youth departments in public libraries; planning and promoting programs and services; evaluation of library collections; community and professional roles of the youth librarian. Prerequisite: 500 or permission of instructor.

LIS 568 Administration of the School Library Media Program (3) Develops competency in administering materials, equipment, and services of library media program as integral part of educational process of school. Focuses on developing skills in acquiring, organizing, and managing full range of learning resources for access and use, and communicating the program to users. Required for school library media specialists.

LIS 571 Storytelling: Art and Techniques (3) Storytelling, past and present, noting its development as an art form. Analyzing storytellers materials (folk literature and literary forms) throughout historical periods. Essential techniques necessary to this artistic skill. Planning storytelling programs for various ages, interest groups, and situations, utilizing folk, classic, and contemporary literature.

LIS 572 Archival and Manuscript Services (3) Selection, organization, and uses of archival and manuscript collections. Emphasis on the principles and techniques; some attention to the administration of state archival and historical institutions' collections. Lecture, demonstration, and laboratory. Prerequisite: 501, or permission of instructor.

LIS 577 Law Library Administration (4) Administration in law libraries, including organization, personnel, and management issues (e.g., interviewing, hiring, firing), communications, library planning, and bookkeeping. Credit/no credit only. Prerequisite: 544 or permission of instructor.

LIS 580 Seminar (1, max. 6) Weekly seminar on current library and information science-related topics. Credit/no credit only.

LIS 581 Intellectual Freedom in Libraries (3) Analysis of issues related to intellectual freedom, particularly to implications for libraries and librarians. Consideration of current legal climate, conformity versus freedom in modern world, librarian as censor, social responsibility and individual freedom, intellectual freedom of children, prospects for future. Credit/ no credit only. Prerequisite: 500 or permission of instructor.

LIS 583 Cooperative Information Systems (3) Analysis of cooperative information systems found among all types of libraries and information centers. Emphasis on developments in the United States and also treatment of foreign and multinational systems, with assessment of their contributions. Prerequisite: 500 or permission of instructor; recommended: 501.

LIS 584 Information Policy (3) Review of efforts to develop national information policy and assessment of where we are in process. Legislation, issues pertinent to national information policy (e.g., freedom of information, privacy, copyright, management of government information, telecommunications, transborder data flow, and satellite technology). Prerequisite: 500, 503, or permission of instructor; recommended: 501, 545.

LIS 585 Information in the Public Policymaking Process (3) Demystifying information base for policymaking in democracy. Theoretical needs and opportunities for input of information associated with three branches of government and each phase of policymaking. Focus on actors bringing information to policymakers. Federal, state, and local comparison. Credit/no credit only. Prerequisite: 500 or permission of instructor; recommended: 501, 503.

LIS 590- Directed Fieldwork (4-) Library and information science majors only. A minimum of 200 hours of professional, supervised fieldwork in a library or professional information agency. May be taken in one quarter or as many as three consecutive quarters. Credit/no credit only. Prerequisite: 33 credits in Library and Information Science program.

LIS 592 Aspects of Publishing (3) Examination of selected topics in book and periodical publishing from Renaissance through present. Focus on publishing practices, processes, and strategies in given economic, cultural, and social contexts. Covers the combination of activities, entrepreneurial or otherwise, that constitute publishing but not the technical means involved in producing the published product.

LIS 593 Preservation and Conservation of Library Materials (3) Consideration of the many factors contributing to the physical vulnerability of library materials of all kinds and an overview of resources and strategies for those who determine preservation policy or manage the application of such policy. No technical background necessary.

LIS 594 Collection Development (3) Access to materials as context for development and management of library collections in academic, public, school libraries. Community analysis, library mission; collection development policies, criteria, levels, responsibilities; aids to selection; collection evaluation, use studies; controversial materials. Prerequisite: 500, 501, 503, or permission of instructor; recommended: course in 540 sequence.

LIS 598 Special Topics in Librarianship (3) Seminar dealing with various topics in library and information science. Offered by visitors or resident faculty. Topics are changed from quarter to quarter. May not be offered every quarter. May be repeated for credit. Credit/no credit only. Prerequisite: determined by specific course.

LIS 599 Methods of Research in Librarianship (3) Introduction to research methods commonly used in library and information science. Emphasis on problem selection, study design, data interpretation, and dissemination of results.

LIS 600 Independent Study or Research (*) Credit/no credit only.

LIS 700 Master's Thesis (*) Credit/no credit only.

School of Medicine

Dean

Paul G. Ramsey C314 Health Sciences

Associate Deans

Daniel M. Dorsa Bruce C. Gilliland Robert J. Gust D. Daniel Hunt Eric B. Larson James P. LoGerfo John M. Neff Thomas E. Norris Charles B. Smith

Assistant Deans

Joseph Chu Carol F. MacLaren Werner E. Samson

WWAMI Coordinators/Assistant Deans

James R. Blackman, Boise, Idaho Philip D. Cleveland, Spokane, Washington Michael J. Dimino, University of Alaska Stephen J. Guggenheim, Montana State University Michael B. Laskowski, University of Idaho and Washington State University Sylvia J. Moore, University of Wyoming

Established in 1946, the School of Medicine is the only medical school directly serving the states of Washington, Wyoming, Alaska, Montana, and Idaho (WWAMI). Located in the Warren G. Magnuson Health Sciences Building, the School operates a decentralized program of medical education (WWAMI) via a regional network of teaching affiliates.

The School's basic-science departments provide educational opportunities for students from all schools and colleges within the University. Clinical teaching programs are conducted at the University of Washington Medical Center, Harborview Medical Center, Children's Hospital and Regional Medical Center, and the Seattle Veterans Affairs Medical Center, as well as at other clinical affiliates in Seattle and throughout the WWAMI states.

The School admits 176 medical students to its first-year class and has a total enrollment of about 700 students pursuing the Doctor of Medicine degree. The full-time faculty numbers nearly 1,300 members. The affiliated University residency-training network enrolls approximately 700 house officers. Enrollment in the graduate programs in the basic sciences exceeds 400 students. and approximately 800 postdoctoral fellows are enrolled in various advanced training programs. The School has baccalaureate and graduate programs in occupational therapy, physical therapy, prosthetics and orthotics, and medical technology. The School participates in training a broad spectrum of other allied health professionals. The School is also home for the Physician Assistant Training Program known as MÉDEX

Academic Programs

Doctor of Medicine

Upon completion of the curriculum of the School of Medicine, the M.D. degree is awarded to those candidates who (1) have given evidence of good moral

character, (2) have satisfactorily completed the requirements of the curriculum, (3) have fulfilled all special requirements, and (4) have discharged all indebtedness to the University.

Bachelor of Clinical Health Services

Candidates for the Bachelor of Clinical Health Services degree must be admitted to the University of Washington at the junior-year level. They will pursue a sevenquarter sequence of prescribed studies in the MEDEX Northwest Physician Assistant Training Program. Admission to the professional training program is via a competitive process administered by MEDEX Northwest within the School of Medicine. Because of the program's emphasis on prior medical experience, the great majority of applicants are working adults who have completed their pre-professional undergraduate course work at other colleges and universities.

Matriculation in the Bachelor of Clinical Health Services degree option is dependent upon both admission to the University and acceptance by MEDEX Northwest. Students who are accepted by MEDEX Northwest but who are not admissible to the University will be classified as nonmatriculated students. They will earn official University credits and receive a certificate upon completion of the program.

MEDEX Northwest Certificate Program

MEDEX Northwest is a program designed to train physician assistants. It provides primary-care, midlevel practitioners by training medical personnel with prior clinical experience. A fully accredited physician assistant program conforming to standards developed and administered by the American Medical Association, MEDEX Northwest places 66 students annually in a variety of sites in Washington, Alaska, Idaho, Montana, and Oregon.

MEDEX Northwest is a seven-quarter program. The first three quarters consist of intense clinical and didactic instruction at one of three training locations: Seattle, Spokane, or Yakima. The final four quarters are spent in clinical experiences throughout the WWAMI region. The first six months are spent in a variety of inpatient and outpatient clinical rotations and the last six months. are spent in a family-practice preceptorship. The preceptorship is an on-the-job experience tailored to the practice of individual primary-care physicians and emphasizes diagnosis and treatment. At the completion of the program, students are eligible to sit for the national certifying examination for physician assistants. Besides the full-time program, MEDEX offers a part-time option on the Seattle campus that takes three years to complete.

Special Requirements

Applicants must have a minimum of two years of recent, full-time, hands-on experience in the direct delivery of medical care to patients, or current professional credentials and at least two years of recent experience in an allied health field. Applicants must have completed two college-level English courses (at least one must be in composition), human anatomy and physiology course work totaling at least 10 quarter-credit hours, and at least one science course in a discipline relevant to medicine, such as biology or chemistry. Beginning with 1999 applications, all prerequisite courses must have been taken in a college or university in the United States, Canada, the United Kingdom, Australia, New Zealand, or Ireland. Starting with 1999 admissions, all academic prerequisites must have been awarded with college-level credit with grades of 2.5 or better.

For additional information, contact MEDEX Northwest Physician Assistant Program, Box 354725; (206) 548-2600.

SCHOOL OF MEDICINE / ACADEMIC PROGRAMS 385

Bachelor of Science

Programs leading to a baccalaureate degree with a major in microbiology are offered through the College of Arts and Sciences. Those programs are described in the College of Arts and Sciences section of this catalog.

Bachelor of Science in Medical Technology

A curriculum in medical technology is offered by the Department of Laboratory Medicine. This program provides study in the basic sciences plus clinical laboratory training designed to prepare competent laboratory scientists for varied employment opportunities. Information concerning admission to the medical technology program appears under Laboratory Medicine in this catalog.

Bachelor of Science in Occupational Therapy

A curriculum in occupational therapy leading to a Bachelor of Science is offered by the Department of Rehabilitation Medicine. It provides professional training in the basic sciences and in the theory and practice of occupational therapy as it impacts *occupational performance* across the life span and in the various arenas of practice. *Occupation* refers to daily living skills that include self-care, work, and leisure/play. Information concerning admission to the occupational therapy program appears under Rehabilitation Medicine in this catalog.

Bachelor of Science in Physical Therapy

A curriculum in physical therapy is offered by the Department of Rehabilitation Medicine. It provides professional education in the basic sciences and in the clinical use of physical therapy evaluation and management strategies in the treatment or prevention of neuromusculoskeletal dysfunction. Information concerning admission to the physical therapy program appears under Rehabilitation Medicine in this catalog.

Bachelor of Science in Prosthetics and Orthotics

A curriculum in prosthetics and orthotics leading to the degree of Bachelor of Science is offered by the Department of Rehabilitation Medicine. It provides professional training in the basic sciences and the clinical application, design, and fabrication of prostheses and orthoses. Information concerning admission to the curriculum in prosthetics and orthotics may be found under Rehabilitation Medicine in this catalog.

Master of Science and Doctor of Philosophy

Work leading to master's and doctoral degrees is offered, in accordance with the requirements of the Graduate School, in the departments of Biochemistry, Bioengineering, Biological Structure, Immunology, Microbiology, Pathology, Pharmacology, and Physiology and Biophysics. Master's degree programs are offered by the departments of Laboratory Medicine, Medical History and Ethics, and Rehabilitation Medicine. Students may work toward these degrees concurrently with the M.D. degree, taking additional years beyond the typical four-year medical curriculum.

Concurrent degrees are possible in many other departments and colleges of the University. Recent graduates have pursued concurrent degrees in education and engineering, as well as in the basic sciences of medicine and the School of Public Health and Community Medicine. A student who intends to work toward a graduate degree should confer with the chairperson of the department in which graduate study is to be pursued and with the Associate Dean for Academic Affairs of the School of Medicine. Specific requirements for admission to work for advanced degrees appear in the Graduate School section of this catalog. Permission to pursue advanced degrees is granted to medical students only if they are progressing normally in the medical curriculum and show evidence of being able to take on this additional work load.

Doctor of Medicine

Admissions

(These procedures and policies described are subject to change. Information regarding changes is available from the School of Medicine Admissions Office.)

Selection Factors

Candidates for admission to the University of Washington School of Medicine are considered comparatively on the basis of academic performance, motivation, maturity, personal integrity, and demonstrated humanitarian qualities. A knowledge of and exposure to the needs of individuals and society and an awareness of health-care delivery systems are desired. Extenuating circumstances in an applicant's background are evaluated as they relate to these selection factors.

Applicants must submit scores from the Medical College Admission Test (MCAT). This exam must be taken no later than autumn of the year before matriculation and cannot be more than three years old at the time of matriculation. MCAT registration blanks are available through premedical advisers or through the Office of Admissions. Under exceptional circumstances, to be determined by the Admissions Committee, the GRE may be considered during the admissions process; however, if accepted, the applicant will be required to take the MCAT prior to matriculation.

The following science course requirements must be completed before matriculation but preferably should be completed by the time of application: A total of 32 semester hours or 48 quarter hours of undergraduate courses divided into (a) *Chemistry*, 12 semester/18 quarter hours, which can be satisfied by taking any combination of inorganic, organic, biochemistry, or molecular biology courses; (b) *Physics*, 4 semester/6 quarter hours; (c) *Biology*, 8 semester/12 quarter hours; and (d) *Other ("open") science subjects*, 8 semester/12 quarter hours, which can be met by taking other courses in any of the three categories above.

Under exceptional circumstances certain course requirements may be waived for individuals who present unusual achievements and academic promise. All candidates must demonstrate substantial academic ability in their major field as well as in the required courses. Candidates should be proficient in the use of the English language and basic mathematics and are expected to have a basic understanding of personal computing and information technologies. It is strongly recommended that an understanding of the concepts underlying biochemistry or molecular biology be acquired prior to entering medical school. Those students who entered in the fall of 1997 had a mean GPA of 3.59 and the following mean MCAT scores: Verbal, 10.1; Physical Science, 10.0; and Biological Science, 10.3.

Completion of three years of course work at an accredited college or university is the minimum required before possible matriculation; however, 99 to 100 percent of entrants in recent years have earned bachelor's degrees. No specific major is advised. A broad background in the humanities and liberal arts is encouraged, indeed expected.

Application Procedure

The University of Washington participates in the American Medical College Application Service (AMCAS). The deadline for submitting an application to AMCAS is November 1. After receiving the application from AMCAS, the School of Medicine will ask qualified individuals to submit a \$35 application fee and supplemental application materials. Every attempt will be made to notify applicants of the final action by the end of March. Preference is given to legal residents of Washington, Wyoming, Alaska, Montana, and Idaho. Out-of-region African Americans, Native Americans, Alaskan Natives, Mexican Americans, and mainland Puerto Ricans are considered and should contact the Minority Affairs Program for additional information regarding student support services. Medical Scientist Train ing Program applicants will also be considered. Non-U.S. citizens who fall in the above categories also must have a permanent resident's visa. Applications from persons who have failed to meet minimum standards in another medical or dental school will not be considered.

The deadline for submitting the additional application materials is January 15. These supplemental materials include:

1. A supplemental application form. This will be sent to qualified applicants after the School of Medicine has received the AMCAS application.

2. A 300-word autobiographical statement in which the candidate describes the origin and development of his or her motivation to be a physician, the reasons for desiring to attend the University of Washington School of Medicine, and any other issues of importance to the candidate. The applicant may request that the Personal Comments section of the AMCAS application be used to fulfill this requirement.

3. A premedical-committee letter of recommendation or three letters from instructors from whom the candidate has taken courses. These letters should be critical evaluations of the candidate's academic ability, strengths and weaknesses, the difficulty of course work undertaken, motivation for medicine, personal maturity, and special attributes and assets.

4. A \$35 fee. This will automatically be waived for those who have qualified for AMCAS fee waivers. Others seeking a waiver of this fee should submit their requests directly to the School of Medicine Office of Admissions.

5. Acknowledgment of having read, understood, and of being able to meet, with or without reasonable accommodation, the Essential Requirements of Medical Education at the University of Washington School of Medicine: Admission, Retention and Graduation Standards to be sent with the supplemental application form.

6. Conviction/Criminal History Information Form. Washington state law requires that all individuals who have access to children under 16 years of age, developmentally disabled people, and other vulnerable persons, disclose background information concerning crimes and offenses against these populations.

Candidates from Wyoming, Alaska, Montana, and Idaho will be required to submit residency certifications from their respective state certifying officers. Proof of legal residence for Washington residents also may be requested. Determination of state of legal residence is not made by the School of Medicine; specific instructions regarding this requirement are furnished at the time of application. Those who enter as residents of Wyoming, Alaska, Montana, and Idaho are expected to spend their first year at the university site in their particular state. Twenty Washington students begin their medical education by spending the first year at Washington State University. Offers of acceptance, therefore, are conditional upon agreement to participate in the WWAMI Program.

Inquiries, address changes, or other information regarding the application should be transmitted in writing and directed to the Committee on Admissions, Office of Admissions, Box 356340, School of Medicine, University of Washington, Seattle, Washington 98195-6340.

Minority Affairs Program

The Minority Affairs Program assists students from minority or disadvantaged backgrounds who are pursuing M.D. or M.D.-Ph.D. degrees. The program nurtures interests in medical careers by providing a variety of support services and enrichment activities in the areas of recruitment, education, admission, retention, and professional development. The School actively recruits ethnic-minority applicants, particularly those from African American, mainland Puerto Rican, Mexican American, Native American, and Alaska Native backgrounds. While the School does target residents of the five WWAMI states, underrepresented applicants from other states are encouraged to apply. Students should contact the Minority Affairs Program for assistance during the application process. The program offers counseling and advocacy, referrals to University and community resources, tutoring, financialaid information, and numerous opportunities to interact with other minority health-care professionals within the community. Various student organizations also provide minority medical students a means to interact socially and pursue shared interests, to offer peer support, and to assist with student recruitment and communityoutreach activities.

U-DOC is a high-school summer-enrichment program offered by the Minority Affairs Program. It is a five- to six-week program for students who have completed their junior year in high school. U-DOC's goal is to foster, affirm, and encourage high school students' interest in the medical profession by allowing them to further explore medical careers and to obtain a valuable introduction to college life. U-DOC is offered in each of the five WWAMI states.

The Western Consortium Minority Medical Education Program (MMEP) offers undergraduate and some qualified postbaccalaureate students a six-week summer academic-enrichment program that includes science, mathematics, writing, study skills, and MCAT preparation. Structured clinical and research activities are also offered. Housing, stipends, and travel assistance are available.

A five-week Prematriculation Program for entering minority and disadvantaged medical students is offered during the summer. The program is designed to facilitate students' entry into medical school by providing instruction in histology as well as enrichment activities in areas such as study skills, stress management, testtaking skills, research, clinical practice, and community health. Stipends and travel assistance are available to students who qualify.

During the regular school year, the Minority Affairs Program serves as a general-information resource for both the academic and nonacademic needs of students, and facilitates students' access to the multiple resources in the School of Medicine, the WWAMI region, and the community. Annual events include a Preadmission Workshop and a Cross-Cultural Medicine Workshop.

The Native American Center of Excellence was established in 1992 as part of the Minority Affairs Program to encourage Native American students to pursue medicine as a career, to promote research on Native American health issues, and to foster the preparation of Native American students for faculty roles in academic medicine. The Center of Excellence provides educational experiences that integrate western medicine with the Native American way of life, offers a variety of support services to promote the academic development of students, and sponsors a variety of educational opportunities within the Native American community.

Inquiries and requests for additional information may be obtained by contacting the Minority Affairs Program, Box 357430, School of Medicine, University of Washington, Seattle, Washington 98195-7430; (206) 685-2489.

Medical Scientist Training (M.D.-Ph.D.) Program

A limited number of highly qualified candidates who wish to pursue both the M.D. and Ph.D. degrees are considered annually. Medical-scientist trainees must be accepted by the School of Medicine for the M.D. degree and by the Graduate School for the Ph.D. degree. They are permitted a wide choice of research specializations from among numerous disciplines and interdisciplinary areas of biomedical sciences. The program emphasizes continuity of both clinical and basic-sciences exposure. Among participating graduate departments and interdepartmental disciplines are biochemistry, bioengineering, biological structure, biostatistics, environmental health, epidemiology, genetics, immunology, the interdisciplinary molecular and cellular biology program, microbiology, molecular biotechnology, neurobiology, pathology, pharmacology, physiology and biophysics, and zoology

Applicants should correspond directly with the Director of the Medical Scientist Training Program, C423 Health Sciences, Box 357470, University of Washington, Seattle, Washington 98195-7470; (206) 685-0762, as well as proceed with the regular School of Medicine application.

Applicants who wish to be considered for the M.D.-Ph.D. program must submit the Medical Scientist Training Program application as quickly as possible. Both the application and any supplemental material requested must be complete by January 15. This application form is sent to all eligible applicants together with acknowledgment of receipt of their medical school application. Serious consideration is rarely given to applicants with minimal research experience and either a cumulative GPA of less than 3.50 or MCAT scores of less than 10.

Financial Information

Fees and Other Charges

All fees and extra service charges are payable in U.S. dollars and due at the time specified for such fees and charges. The University reserves the right to change any of its fees and charges without notice. Resident tuition for 1997-98 is \$2,830 per quarter; nonresident tuition is \$7,134 per quarter.

Financial Assistance

All financial aid is based on the demonstrated need of the student. All applicants for aid from the School must submit data for an analysis of need using the Free Application for Federal Student Aid. This requires full disclosure of resources available to the student from individual and family sources. The Federal Direct Stafford Loan (subsidized and unsubsidized), Perkins Loan, and the Primary Care Loan are the primary sources of aid. Loans are also available from the School of Medicine provided students meet the need requirement that is based on both the student's and parents' financial information.

Scholarships are available through the School of Medicine scholarship fund. These awards vary in amount and require financial information from the student and the student's parents. There is a separate application for the School of Medicine scholarship whose due date is May 30.

Financial aid information is distributed to all accepted applicants. Application forms for financial aid may be obtained from the UW Office of Student Financial Aid or the School of Medicine Financial Aid Office. Each year a deadline is set for receipt of the financial-aid application by the processor, usually February 28. Applicants must meet this deadline to be considered for all available aid sources regardless of the status of their admission file. In case of emergency or special need, an application for financial assistance may be made at any time.

Outside employment is discouraged while the student is enrolled in medical-school course work.

Medical Curriculum

Basic Curriculum (122 Credits)

The first two years of the medical-student curriculum is identified as the Basic Curriculum. It consists of three phases, or groups, of courses in the human biology series: pre-organ-system courses in the sciences basic to medicine, organ systems taught by basic and clinical disciplines, and introduction to clinical medicine. The first phase is designed to provide the background in basic disciplines required for the organsystem courses. In the second phase, the student is concerned with learning the normal and pathophysiologic properties of the several human organ systems. Emphasis is placed upon correlating these properties with clinical methods of data collection and problem formulation. Students pursue the Introduction to Clinical Medicine course throughout the first two years, learning to interview patients, obtain a medical history, and perform physical examinations.

Students are expected to pursue the Basic Curriculum during their first two years in the School of Medicine. The academic demands of the Basic Curriculum are scaled so that most students also will be able to take elective courses which are used to broaden the student's background.

First Year

Microscopic Anatomy (Histology) Gross Anatomy and Embryology Mechanisms in Cell Physiology Introduction to Clinical Medicine Biochemistry Systems of Human Behavior I Cell and Tissue Response to Injury Natural History of Infectious Disease and Chemotherapy Introduction to Immunology Epidemiology Head, Neck, Ear, Nose, and Throat

Nervous System

Introduction to Clinical Medicine

Second Year

Cardiovascular System Respiratory System Introduction to Clinical Medicine Principles of Pharmacology I Endocrine System Systemic Pathology Genetics Skin System Gastrointestinal System Hematology Musculoskeletal System Medicine, Health, and Society Urinary System Systems of Human Behavior II Principles of Pharmacology II

Reproduction

Nutrition for Physicians

Clinical Curriculum (144 Credits)

The clinical curriculum is pursued predominantly in the third and fourth years of medical school. It includes three elements: prescribed clerkships to be completed by all students (84 credits or 42 weeks in family medicine, obstetrics and gynecology, pediatrics, psychiatry, and surgery); a clinical selective series requiring a minimum number of credits (12) in two clinical areas

(rehabilitation medicine/chronic care and emergency care/trauma); and a minimum of 48 credits of clinical clerkships elected by the student.

Education in the clinical curriculum utilizes the casestudy method. Students gain clinical knowledge and gradually increase their clinical problem-solving abilities while working as junior members of a medical-care team. Each such team is headed by a faculty clinician working in one of the medical school–affiliated hospitals or practice units.

Independent Study in Medical Science

In addition to the basic and clinical curricula, each student must complete 10 credits in courses, independent study, and investigation in one or more of the biological, behavioral, sociocultural, or epidemiological sciences basic to medicine. The purpose of this requirement is for the student to gain an understanding of the philosophy and methods of science. Of the 10 credits, 6 are earned by the satisfactory completion of a project in Independent Study in Medical Science (ISMS) that includes a written paper. The remaining 4 may be satisfied by taking 500-level courses in a variety of subjects at any time during the student's enrollment in the M.D. program.

WWAMI Program

The WWAMI Program was initiated in 1971 as an experiment in decentralized medical education to provide a broader range of educational opportunities for students, and to address the need for primary-care physicians oriented toward rural practice. It is an integral part of the undergraduate medical curriculum and is a fully accredited program of the School of Medicine. The WWAMI Program is named for the five states (Washington, Wyoming, Alaska, Montana, and Idaho) that share resources and responsibilities in the regional educational program. Funds appropriated to the WWAMI Program by the Wyoming, Alaska, Montana, and Idaho legislatures assure each state of positions for its students in the entering medical class each year.

First-Year Training

In the first year of the WWAMI Program, approximately 40 percent of the students admitted to the University's School of Medicine receive the first year of medical school training at Washington State University, the University of Wyoming, the University of Alaska, Montana State University, or the University of Idaho. Washington State University positions not filled by volunteers are assigned by lottery. Every Washington-resident applicant should recognize the possibility of assignment to Washington State University during the first year. Students from Wyoming, Alaska, Montana, and Idaho attend their home-state institutions. While in one of these institutions, they enroll in basic-science courses taught by the science faculty and are provided supplemental resources from this University's School of Medicine faculty. These students join their classmates at the University's campus in Seattle for the second year of medical studies

Third- and Fourth-Year Training

At the conclusion of the second year, students enter the portion of the curriculum that is predominantly clinical. As part of the clinical training, they complete clerkships at the University of Washington, at its affiliated hospitals, or at Community Clinical Units located in the five-state region. At these sites, physicians in practice serve as School of Medicine clinical faculty members to provide supervised clinical training in six specialties: family medicine, internal medicine, obstetrics and gynecology, pediatrics, psychiatry, and surgery. The WWAMI Community Clinical Units may also use a portion of the residency training in the respective disciplines. Training experiences at the WWAMI Community Clinical Units include outpatient contact at local physicians' private offices, hospital rounds, followthrough inpatient care, emergency-room duty, service at local community special clinics, lectures, and didactic and participatory discussions.

388 SCHOOL OF MEDICINE / ANESTHESIOLOGY

By capitalizing on the resources of neighboring state universities, the clinical expertise of community practitioners, and the medical center, the WWAMI Program has been able to expand medical-school admissions for students from all five states, to enlarge clinical training opportunities in the primary-care disciplines, and to address the shortage of physicians in rural areas.

Enrichment Opportunities

Students may enhance their medical education through a variety of sponsored activities that offer students an opportunity to explore areas of special interest, such as working in rural or urban clinics that serve medically underserved communities, undertaking medical research projects or clinical investigations, or participating in an international exchange program with a developing country. Brief descriptions of three of the more formally structured programs follow. Information on other opportunities may be obtained from the Academic Affairs Office.

Rural/Underserved Opportunities Program (RUOP)

This program exposes students to rural medicine and utilizes clinical training sites in all five states. For one month during the summer between the first and second years, students work with physicians in small communities, offering a chance to better understand the challenges and opportunities in these settings. Students receive a stipend supported by the Family Health Foundation, the Academy of Family Physicians, Area Health Education Centers, and the School of Medicine.

Medical Student Research Training Program

Research opportunities are offered to UW medical students interested in gaining valuable experience from training in medical research. The purpose of the program is to encourage students to participate in a research project as part of their medical education. This research is planned and carried out under the supervision of a faculty sponsor and may be under-taken during any quarter. Student trainees in the program receive a stipend supported largely by a special fund from the School of Medicine. The project is expected to be twelve weeks, full-time, on a working schedule of forty hours per week, and the student may not be enrolled in courses for credit during this time.

Medical Thesis Program

The Medical Thesis program of the School of Medicine is voluntary, and participation is initiated by the student. Often a student will develop a special interest may create a desire to do more in-depth research to learn more about the field. The thesis program is a means of fulfilling that desire. The medical thesis represents work of original and superior scientific merit that is conducted independently by the student. A faculty committee reviews the theses submitted by medical students. Additional information concerning the thesis program can be obtained from the Academic Affairs Office.

Student Evaluation and Promotion

The awarding of the Doctor of Medicine degree is contingent upon satisfactory completion of academic and noncognitive requirements. The latter includes the acquisition of behavioral patterns and attitudes consistent with the oath that all students take at the time of graduation. As such, student evaluation is based upon the faculty's observation of the student's behavior and conduct as well as papers and examinations. Every student is required to pass Steps 1 and 2 of the United States Medical Licensing Examination, all University of Washington examinations, and complete an approved Independent Study in Medical Science project before receiving the Doctor of Medicine degree. Periodic reviews of student performance are conducted by the School's Student Progress Committee. Students are informed of their deficiencies and the remedial requirements, if any, for these deficiencies. Dismissal from the School may occur if the student fails to maintain an acceptable academic record, fails to follow academic directives provided by the School's committees, or fails to develop attitudes and behavioral patterns appropriate to a career in medicine. The Faculty Council on Academic Affairs reviews the Student Progress Committee's actions, and the Dean of the School of Medicine has final approval of the committee's and council's recommendations. A review mechanism is available within this process. Once dismissal or withdrawal from the School has occurred, the student may petition for reinstatement through the Faculty Council on Academic Affairs. Reinstatement will not be considered without substantial evidence that the problems causing the dismissal or withdrawal have been resolved. Only one reinstatement petition through the Faculty Council on Academic Affairs is allowed. If more than one year elapses after the withdrawal or dismissal. the individual may be required to apply for readmission through the admissions process. If a reinstatement petition is denied, subsequent requests for admission must be directed through the standard admissions procedures.

Grading System

The grades awarded in each course in the M.D. curriculum are Honors, Pass, or Fail in the basic-science curriculum, and Honors, High Pass, Pass, or Fail in the clinical curriculum. The School's goal is to provide a curriculum that defines the competencies to be achieved by the student at each level. However, a pattern of documented evaluator concerns about a student's performance may indicate not-satisfactory performance when the record is viewed as a whole, even though passing grades have been assigned. Honors may be awarded in a course on predetermined criteria that may involve additional work in the subject as selected by the student. The grading system precludes the ranking of students in class standing by a grade-point average.

The School of Medicine reserves the right to revise or modify the curriculum, system of evaluation, or graduation requirements.

Honors

A charter as Alpha of Washington was granted to the School of Medicine in 1950 by Alpha Omega Alpha, the honorary medical society. Members are elected by the membership of Alpha Omega Alpha on the basis of high scholarship and good moral character.

Graduation with Honors

A degree of Doctor of Medicine with Honors may be awarded to students with high achievement who, in addition, have demonstrated initiative and success in clinical and scholarly pursuits related to medicine. Candidates for graduation with honors are nominated by the departments each year and are selected on the basis of a review of their academic records by the Honors and Awards Committee.

Graduate Medical Education and Postdoctoral Training

The University of Washington School of Medicine offers a broad array of residency and fellowship programs. Training occurs at the University of Washington Medical Center, Harborview Medical Center, Seattle Veterans Affairs Medical Center, Children's Hospital and Medical Center, and other affiliated training sites in Seattle and throughout the WWAMI region. Postdoctoral research fellowship opportunities in the basic sciences are also offered.

Continuing Medical Education

The Office of Continuing Medical Education, School of Medicine, offers a wide variety of courses for physicians and health-care professionals in the Pacific Northwest and throughout the nation.

Offerings include short courses of one to three days, one- to two-week board-review courses, visiting professorships, preceptorships, and mini-residencies. Other offerings include lecture series at hospitals, video-tape presentations, self-directed instructional materials, and other specific courses requested by members of the medical community throughout the WWAMI region. New offerings are also being developed for the World Wide Web.

All physicians also are invited to participate in continuing medical education programs offered by clinical departments, such as grand rounds and regular conference series.

The University of Washington School of Medicine is accredited by the Accreditation Council for Continuing Medical Education to sponsor continuing medical education for physicians. All programs sponsored by the Office of Continuing Medical Education are applicable to physician relicensure requirements of the Washington Board of Medical Examiners and for Category I credit of the Physician's Recognition Award of the American Medical Association. Prescribed credit for the American Academy of Family Physicians and other types of credit are included in the program offerings when appropriate.

Brochures and calendars for courses are available for more detailed information. For information concerning Continuing Medical Education programs, contact:

University of Washington School of Medicine Office of Continuing Medical Education Box 358220 1325 4th Avenue, Suite 2000 Seattle, Washington 98101-8220 Telephone: (206) 543-1050 or 1-800-869-2633

Anesthesiology

BB1459 Health Sciences

The Department of Anesthesiology maintains an active program of teaching and research for both the specialist and nonspecialist. Medical students are introduced to the principles of anesthetic management and the effects of anesthetic agents on circulatory and respiratory physiology. The clinical-clerkship program provides basic training in airway management and care of the unconscious patient. A three-year residency program is available for physicians who desire specialty training in anesthesiology. In addition, advanced clinical and research training is offered in several major subspecialty areas (cardiac anesthesia, neuroanesthesia, pediatric anesthesia, obstetrical anesthesia, pain management, and regional anesthesia). Opportunities for collaborative research are available to undergraduate and graduate students. The department conducts a regular series of clinical conferences, didactic lectures, and research seminars. Questions regarding clinical clerkships may be directed to Dr. Jeremy Geiduschek at (206) 526-2518. Other training questions may be directed to the Residency Coordinator at (206) 543-2773.

Sorensen, Gregory K. 1982; MD, 1978, University of Nebraska.

Spiess, Bruce D. 1990; MD, 1980, Rush Medical College.

Tyler, Donald C. 1977; MD, 1970, University of Pennsylvania; anesthesiology, pediatrics.

Assistant Professors

Bramhall, John S. 1995; PhD, 1976, Aston University (England); MD, 1991, University of California (San Diego); pain management.

Bratton, Susan L. 1990; MD, 1987, University of Arkansas; pediatric care.

Coda-Chambers, Barbara 1984; MD, 1984, Yale University.

Deem, Steven A. 1992; MD, 1984, Southern Illinois University; critical care.

Dunbar, Peter J. 1991; MBChB, 1978, University of Aberdeen (UK); pain management.

Fitzgibbon, Dermot R. 1992; MBBCh, 1983, Cork Regional Hospital; pain management.

Gavrin, Jonathan R. 1991; MD, 1978, Dartmouth College; pain management.

Geiduschek, Jeremy M. 1983; MD, 1983, Vanderbilt University.

Mackie, Kenneth P. 1987; MD, 1984, Yale University.

Martin, Lynn D. 1994; MD, 1982, University of Washington; pediatric anesthesiology.

Ramamoorthy, Chandra 1991; MBBS, 1978, Jawaharlal Institute of Postgraduate Medical Education and Research (India).

Rapp, Suzanne E. 1984; MD, 1981, University of Washington.

Sasaki, Steven 1990; MD, 1986, University of California (San Diego); pediatric anesthesia.

Terman, Gregory W. * 1987; MA, 1981, PhD, 1985, University of California (Los Angeles); MD, 1987, University of Miami (Florida).

Van Norman, Gail 1986; MD, 1981, University of Washington.

Williams, Glyn D. 1988; MBChB, 1976, University of Rhodesia.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

ANEST 498 Undergraduate Thesis (*) *Geiduschek* By special arrangement. Time and credit to be arranged. Offered: AWSpS.

ANEST 499 Undergraduate Research (*) Geiduschek Specific research problems relating to pulmonary, cardiovascular, renal, obstetric, and central nervous system functions, and their alteration by anesthetic techniques and agents. (Six weeks, fulltime. Limit: two students.) Offered: AWSpS.

ANEST 501 P-Preceptorship in Anesthesiology (1) *Geiduschek* An opportunity for first- and second-year medical students to gain experience with medical practice situations by observing clinical faculty members in their offices. Prerequisite: permission of instructor. Offered: AWSpS.

ANEST 680 P-Basic Anesthesia Clerkship (4) Geiduschek Introduction to the principles of airway management, ventilatory support, use of local anesthetics, techniques of patient monitoring and fluid therapy. Skills taught include airway management, venipuncture, lumbar puncture and endotracheal intubation. Prerequisite: third- or fourth-year student. (Two weeks, full-time. Limit: three to five students each two-week period.) Affiliated hospitals. Offered: AWSpS.

ANEST 681 P-Advanced Clerkship in Anesthesiology (8) Geiduschek Clerkship for students desiring greater exposure to anesthesiology as a specialty. Individual programs can be arranged in the following areas: surgical anesthesia, obstetrical anesthesia, and pain clinic. Prerequisite: 680 or permission of instructor. (Four weeks, full-time. Limit: two students per period.) Affiliated hospitals. Offered: AWSpS.

ANEST 697 P-Anesthesiology Special Electives (* max. 24) Geiduschek Special clerkships, externships, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain a special assignment form from the Dean's office at least one month before advance registration. Prerequisite: permission of instructor. (Six to twelve weeks, full-time.) Offered: AWSpS.

ANEST 699 P-WWAMI Anesthesiology Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Biochemistry

Graduate Program Coordinator J405 Health Sciences, Box 357350 (206) 543-1660 biocgrad@u.washington.edu

Modern biochemistry involves the study of biological processes at a molecular level. Specific research projects may entail study in such diverse fields as molecular biology, molecular biophysics, genetics, microbiology, immunology, developmental biology, organic chemistry, pharmacology, and physiology. Graduate students enrolled in the Department of Biochemistry engage in studies and research that prepare them for the challenging opportunities open to the professional biochemist/molecular biologist in colleges and universities, research institutes, medical schools and hospitals, government laboratories, and the laboratories of chemical, biotechnology, and pharmaceutical industries.

The course of advanced study is designed to give each student a firm foundation upon which to base further professional progress. In the first year of academic work, students attend courses in biochemistry and molecular biology, and in related fields such as chemistry, biophysics, genetics, cell biology, and microbiology. In the second and succeeding years, an increasing amount of time is devoted to research and independent study. For the Ph.D. degree, each student is required to gain teaching experience, usually during the second year of the graduate program.

An accredited major in biology, chemistry, or biochemistry fulfills admission prerequisites. Students with other majors are required to have completed the following undergraduate courses: two years of chemistry, mathematics through calculus, one year of physics, and at least one year of biology. Experience in a research laboratory during or following baccalaureate study is highly desirable. Applicants must also meet the general admission requirements of the Graduate School.

Normally, all graduate students admitted to the Department of Biochemistry are provided with financial assistance.

Research facilities for the department are housed in the Biochemistry-Genetics Building, which provides approximately 52,000 square feet of excellent research space, conference rooms, and a departmental library. In the immediate vicinity are the departments of Immunology, Genetics, Microbiology, Molecular Biotechnology, and Pharmacology, as well as programs in biomolecular structure, molecular medicine, neurobiology, and molecular and cellular biology, with whom the department has common research interests. The laboratories are equipped with modern research equipment and are supported by external, centralized research facilities, which include a modern computer center, the Marine Biology Laboratory at Friday Harbor, and the Health Sciences Library. An emphasis on biomedical research is facilitated by the location of the department within the School of Medicine.

Faculty

Chair

Kenneth A. Walsh

Professors

Adman, Elinor T. * 1967, (Adjunct Research); MA, 1964, PhD, 1967, Brandeis University; molecular structure visualization, macromolecular crystallography, metalloproteins.

Bornstein, Paul * 1967; MD, 1958, New York University; extracellular matrix.

Byers, Breck E. * 1970, (Adjunct); PhD, 1967, Harvard University; cell biology: mitosis and meiosis, mechanisms of nuclear division and crossing-over in yeast.

Cooper, Jonathan A. * 1987, (Affiliate); PhD, 1976, University of Warwick (UK); regulation of cellular metabolism and proliferation by protein phosphorylation.

Dale-Crunk, Beverly A. * 1972, (Adjunct); PhD, 1968, University of Michigan; keratin biochemistry.

Davie, Earl Warren * 1962; PhD, 1954, University of Washington; mechanism of blood clotting, cloning of plasma proteins.

Eisenman, Robert M. * 1982, (Affiliate); PhD, 1971, University of Chicago; viral oncology, oncogenes, retrovirus multiplication.

Eyre, David R. * 1985, (Adjunct); PhD, 1969, University of Leeds (UK); connective tissue biology, collagen chemistry, bone and cartilage metabolism.

Fischer, Edmond H. * 1953, (Emeritus); PhD, 1947, University of Geneva (Switzerland); regulation by phosphorylation.

Gelb, Michael H. * 1985, (Adjunct); PhD, 1982, Yale University; mechanistic enzymology, bioorganic and medicinal chemistry.

Glomset, John A. * 1960; MD, 1960, University of Uppsala (Sweden); membrane structure and function.

Gordon, Milton * 1959; PhD, 1953, University of Illinois; molecular basis of plant tumors, control of gene expression in plants.

Hauschka, Stephen D. * 1972; PhD, 1966, Johns Hopkins University; muscle differentiation.

Hol, Wilhelmus G. J. * 1992; PhD, 1971, University of Groningen (Netherlands); protein crystallography, drug design, vaccine development, and protein engineering.

Hurley, James Bryant * 1985; PhD, 1979, University of Illinois; molecular basis of vision.

Jensen, Lyle H. * 1949, (Emeritus); PhD, 1943, University of Washington; molecular structure, x-ray diffraction.

Kaushansky, Kenneth * 1986, (Adjunct); MD, 1979, University of California (Los Angeles); hematology.

Klevit, Rachel E. * 1983; DPhil, 1981, Oxford University (UK); molecular recognition, protein NMR.

Krebs, Edwin G. * 1977, (Emeritus); MD, 1943, Washington University; intracellular signaling mechanisms involving protein phosphorylation.

Loeb, Lawrence A. * 1978; MD, 1961, New York University; PhD, 1967, University of California (Berkeley); DNA replication, cancer and AIDS.

Morris, David R. * 1966; PhD, 1964, University of Illinois; cell growth, gene expression, polyamines.

Palmiter, Richard D. * 1982; PhD, 1968, Stanford University; genetic approaches to neuromodulator function in mammalian nervous system.

Parson, William W. * 1971; PhD, 1965, Case Western Reserve University; bioenergetics, with particular emphasis on photosynthesis, picosecond spectroscopy. Petra, Philip H. * 1966; PhD, 1966, Tulane University; protein chemistry with emphasis on steroid-protein interaction.

Reid, Brian R. * 1980; PhD, 1965, University of California (Berkeley); biophysical chemistry.

Roberts, James Michael * 1989, (Affiliate); MD, 1984, PhD, 1984, Columbia University; how cyclin-kinase complexes regulate events necessary for chromosomal DNA replication.

Ross, Russell * 1962, (Adjunct); DDS, 1955, Columbia University; PhD, 1962, University of Washington; atherosclerosis, growth factors, inflammation, vascular biology.

Saari, John C. * 1974; PhD, 1970, University of Washington; retinal biochemistry.

Shapiro, Bennett M. * 1970, (Affiliate); MD, 1964, Jefferson Medical College; molecular basis of reproduction.

Teller, David C. * 1965; PhD, 1964, University of California (Berkeley); physical chemistry of macromolecules, association reactions of proteins.

Walsh, Kenneth A. * 1958; PhD, 1959, University of Toronto (Canada); structure and functions of proteins; protein mass spectrometry.

Young, Elton * 1969; PhD, 1967, California Institute of Technology; regulation of gene activity in the yeast Saccharomyces cerevisiae.

Associate Professors

Davis, Trisha Nell * 1987; PhD, 1983, Yale University; the function of calcium-binding proteins in cell growth, molecular analysis of mitosis.

Hahn, Steven M. * 1994, (Affiliate); PhD, 1984, Brandeis University; transcription initiation in yeast.

Kimelman, David * 1989; PhD, 1985, Harvard University; molecular biology of early development in the frog, Xenopus laevis.

Muller, Eric D. * 1988, (Research); PhD, 1981, Yale University; the regulation of metabolism by the protein thioredoxin.

Roth, Mark * 1994, (Affiliate); PhD, 1984, University of Colorado (Boulder); nuclear proteins involved in the regulation of gene expression.

Stenkamp, Ronald E. * 1978, (Adjunct); PhD, 1975, University of Washington; crystallography, metalloproteins, protein engineering, blood clotting proteins, streptavidin.

Assistant Professors

Baker, David * 1993; PhD, 1989, University of California (Berkeley); protein folding.

Ruohola-Baker, Hannele * 1993; PhD, 1989, Helsinki University (Finland); oogenesis, developmental genetics.

Stoddard, Barry L. * 1994, (Affiliate); PhD, 1990, Massachusetts Institute of Technology; structure and function of enzyme catalysts, bacterial signal transduction.

Zhang, Kam * 1995, (Affiliate); PhD, 1990, Massachusetts Institute of Technology; structure and function of enzyme catalysts, bacterial signal transduction.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

BIOC 396 Research in Chemistry and the Chemical Sciences (1) NW Presentations by researchers in academia and industry describing the opportunities for research in chemistry and biochemistry. Credit does not count towards any chemistry major requirement. Credit/no credit only. Prerequisite: CHEM 337. Offered: jointly with BIOC 396; W.

BIOC 405, 406 Introduction to Biochemistry (3, 3) NW Hurley, Petra, Teller Survey of basic principles of biochemistry and molecular biology, emphasizing broad understanding of chemical events in living systems in terms of metabolism and structurefunction relationships of biologically important molecules. Suitable for pre-majors, for students interested in careers in medicine, dentistry, pharmacy, medical technology. 405 - Prerequisite: BIOL 201 or both BIOL 101 and GENET 371; either CHEM 223, CHEM 237, or CHEM335. 406 - Prerequisite: BIOC 405. Offered: AW.

BIOC 426 Basic Techniques in Biochemistry (3) NW Chung, Davie, Petra Introduction to basic biochemistry experiments. Acquaints students (largely Biochemistry majors) with basic biochemical laboratory techniques. Prerequisite: BIOC 440; BIOC 441. Offered: ASp.

BIOC 440, 441, 442 Biochemistry (4, 4, 4) NW Davis, Gordon, Kimelman, Klevit, Palmiter, Stenkamp, Young Biochemistry and molecular biology (with quiz sections) for undergraduate students in molecular and cellular biology, for biochemistry majors, and graduate students in other science departments. 440 - Prerequisite: 2.0 in BIOL 201; either CHEM 224, CHEM 239, or CHEM 337. 441 - Prerequisite: 1.7 in BIOL 440. 442 - Prerequisite: 1.7 in BIOL 441. Offered: AWSp.

BIOC 496 Research Seminar for Undergraduates (1, max. 2) NW Formal presentations of student research. One credit applies to research component of a relevant major. Credit/no credit only. Prerequisite: BIOC 396 or CHEM 396. Offered: jointly with BIOC 496; Sp.

BIOC 498 Undergraduate Thesis (*) For senior medical students. Offered: AWSpS.

BIOC 499 Undergraduate Research (*) Investigative work on enzymes, proteins, lipids, molecular biology, developmental biology, intermediary metabolism, physical biochemistry, and related fields. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

BIOC 515-519 (For description, see listing for "Current Literature Conferences" at the end of this section.)

BIOC 520 Seminar (1) Seminar dealing with timely topics in the field of biochemistry. Prerequisite: permission of instructor. Offered: AWSpS.

BIOC 525-529 (For description, see listing for "Current Literature Conferences" at the end of this section.)

BIOC 530 Advanced Biochemistry (3) Baker, Gelb, Hol, Klevit, Stenkamp, Stoddard Graduatelevel discussion of the structure, function, and chemistry of proteins, control of enzymatic reactions. Prerequisite: a comprehensive course in biochemistry and permission. Offered: A.

BIOC 533 Topics In Biochemistry (1-3) Provides in-depth examination of current topics in biochemistry, molecular biology, and structural biology. Designed to help participants in basic science departments become acquainted with latest ideas on selected topics. Emphasis on analysis of key concepts in the field with reference to classical papers and recent literature. Prerequisite: permission of instructor. Offered: AWSp.

BIOC 534 Topics In Molecular Biophysics (1.5) *Parson* Emphasis on methods used to study macromolecular structure and dynamics, including x-ray crystallography, NMR, optical spectroscopy, computer modeling, protein folding and ligand binding. Two topics covered each guarter; students may register for one or both. Prerequisite: permission of instructor. Offered: AWSp.

BIOC 535-539 (For description, see listing for "Current Literature Conferences" at the end of this section.)

BIOC 540, 541, 542 Literature Review (2, 2, 2) *Klevit, Morris, Palmiter* Emphasizes critical evaluation of original articles in the literature. For first-year graduate students in biochemistry and students of other science departments, with permission. Offered: AWSp.

BIOC 546-548 (For description, see listing for "Current Literature Conferences" at the end of this section.)

BIOC 555-559 (For description, see listing for "Current Research Conferences" at the end of this section.)

BIOC 565-569 (For description, see listing for "Current Research Conferences" at the end of this section.)

BIOC 575-579 (For description, see listing for "Current Research Conferences" at the end of this section.)

BIOC 581 Introduction to Biochemical Research (4, max. 16) Student works with one of the research groups within the department for one quarter and then rotates to other laboratories for second and third quarters. Credit/no credit only. Prerequisite: graduate standing in biochemistry or permission of instructor. Offered: AWSpS.

BIOC 586-588 (For description, see listing for "Current Research Conferences" at the end of this section.)

BIOC 600 Independent Study or Research (*) Offered: AWSpS.

BIOC 700 Master's Thesis (*) Offered: AWSpS.

BIOC 800 Doctoral Dissertation (*) Offered: AWSpS.

Current Literature Conferences

BIOC 515-519, 525-529, 535-539, 546-548 Current Literature Conference in Biochemistry Weekly literature reviews of topics pertinent to ongoing research in biochemistry. Students may register for more than one conference each quarter. Credit/no credit only. Prerequisite: permission of instructor. (Only 25 credits may be counted toward degree.)

BIOC 515 Matrix Macromolecules in Morphogenesis and Development (1, max. 30) Bornstein Offered: AWSp.

BIOC 516 Molecular Mechanisms of Blood Clotting (1, max. 30) Davie Offered: AWSp.

BIOC 517 Protein Structure (1, max. 30) *Baker* Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

BIOC 518 Signaling in Development (1) Ruohola-Baker Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

BIOC 525 Phytoremediation (1, max. 4) Gordon Literature survey of phytoremediation topics. Discussion of latest techniques for the use of plants to concentrate heavy metals in the soil and of plants and plant-bacteria combinations to detoxify various organic contaminants. Credit/no credit only. Offered: AWSpS.

BIOC 526 Control of Growth and Differentiation During Development (1, max. 30) Hauschka Offered: AWSpS.

BIOC 528 Signal Transduction (1, max. 30) Hurley Offered: AWSp.

BIOC 529 Molecular Biology of Early Development (1, max. 30) *Kimelman* Offered: AWSpS.

BIOC 535 Macromolecular Structure (1, max. 30) Klevit Offered: AWSp. BIOC 536 Control of Cell Growth (1, max. 30) *Morris* Offered: AWSp.

BIOC 537 Regulation of Gene Expression (1, max. 30) Palmiter Offered: AWSpS.

Current Research Conferences

BIOC 555-559, 565-569, 575-579, 586-588 Current Research Conferences in Biochemistry Weekly group conferences concerning ongoing graduate student and postdoctoral research in biochemistry. Students may register for more than one conference each quarter. Credit/no credit only. Prerequisite: permission of instructor. (Only 25 credits may be counted toward degree.)

BIOC 555 Cell and Molecular Biology of Connective Tissue Proteins (1, max. 30) Bornstein Offered: AWSpS.

BIOC 556 Enzymatic and Genetic Aspects of Blood Clotting (1, max. 30) Davie Offered: AWSp.

BIOC 557 Growth Regulation by Calcium Binding Proteins (1, max. 30) Davis Offered: AWSpS.

BIOC 559 Membrane Biochemistry and Cell Growth (1, max. 30) *Glomset* Offered: AWSpS.

BIOC 560 Protein Folding (1) *Baker* Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

BIOC 561 Origin of Polarity (1) Ruohola-Baker Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

BIOC 565 Plant Molecular Genetics (1, max. 30) Gordon Offered: AWSpS.

BIOC 566 Growth and Differentiation of Skeletal and Cardiac Muscle (1, max. 30) Hauschka Offered: AWSpS.

BIOC 568 Molecular and Genetic Aspects of G Protein Signal Transduction (1, max. 30) Hurley Offered: AWSpS.

BIOC 569 Inductive Events in Early Development (1, max. 30) Kimelman Offered: AWSpS.

BIOC 575 NMR Analysis of Proteins and Nucleic Acids (1, max. 30) *Klevit* Offered: AWSp.

BIOC 576 Sequential Analysis of Growth Regulation (1, max. 30) *Morris* Offered: AWSpS.

BIOC 577 Gene Regulation in Transgenic Mice (1, max. 30) Palmiter Offered: AWSpS.

BIOC 578 Electron Transport in Photosynthesis (1, max. 30) Parson Offered: AWSp.

BIOC 588 Molecular Biology of Yeast Gene Regulation (1, max. 30) Young Offered: AWSpS.

Bioengineering

309 Harris Hydraulics Laboratory

The Center for Bioengineering provides a multidisciplinary program of collaborative research and training designed to accelerate the application of new engineering technologies to clinical practice and research. Major areas of current bioengineering research include bioinstrumentation, biomaterials, biomechanics, controlled drug-release systems, imaging, microsensors, bioelectromagnetics, molecular bioengineering, microcirculation, cell mechanics, muscle, and simulation of biosystems. There are options for study leading to master's and doctoral degrees with different levels of specialization. Detailed information on Bioengineering, its faculty, and courses appears in the Interschool or Intercollege Programs section of this catalog.

Biological Structure

Graduate Program Coordinator G517 Health Sciences, Box 357420 (206) 543-5474 gradprog@biostr.washington.edu

The Department of Biological Structure offers graduate programs of study leading to the Master of Science and Doctor of Philosophy degrees. The department promotes an understanding of biological processes through the study and analysis of structure-function relationships. The research problems that interest members of the faculty are diverse, including cellular differentiation and development explored in a variety of biological systems, neuroscience, molecular biophysics, biomolecular structure, and quantitative biology with an emphasis on computer-graphic representations of biological structures. This diversity creates a lively atmosphere in the department that provides a stimulating environment for the training of scientists with a variety of backgrounds.

The department's graduate program is directed toward the education of doctoral students who anticipate careers that will involve teaching or research in the biomedical sciences. Graduates from the program are expected to have a broad knowledge of biological structure at all levels, from the molecular to the human anatomical, with major emphasis on the cellular level.

Graduate students select research and teaching options in their program. The research options are designed to provide training for a student in one or two of the following areas: cell and developmental biology, neurobiology, reproductive biology, quantitative biology, cellular immunology, molecular biology, and macromolecular structure. The purpose of the teaching options is to prepare the student to teach in one of the anatomical subdisciplines: human anatomy, neuroanatomy/neurobiology, histology, embryology/developmental biology, cell biology, and macromolecular structure.

Special Requirements

Applicants should have completed an undergraduate major in an appropriate field, such as anthropology, biochemistry, biology, chemistry, physics, psychology, or zoology.

The department is currently recruiting students into its labs and graduate program through the basic-science interdisciplinary programs. Students interested in working with particular department faculty members should apply for admission through one of the following programs: Molecular and Cellular Biology, Neurobiology and Behavior, Biomolecular Structure and Design, or the Medical Scientist Training Program. For further information, contact the graduate program coordinator.

Financial Aid

The department offers financial support through teaching assistantships and training-grant positions and from research funds.

Faculty

Chair

Anita E. Hendrickson

Professors

Adman, Elinor T. * 1967, (Research); MA, 1964, PhD, 1967, Brandeis University; molecular structure visualization, macromolecular crystallography, metalloproteins.

Baskin, Denis G. * 1979, (Research); PhD, 1969, University of California (Berkeley); histology, cytochemistry, neuroendocrinology.

Blandau, Richard J. 1949, (Emeritus); PhD, 1939, Brown University; MD, 1948, University of Rochester; endocrinology, embryology, phase microscopy, reproductive physiology.

Bolender, Robert P. * 1975; PhD, 1970, Harvard University; information systems for structural biology and biological stereology.

Byers, Margaret R. * 1972, (Research); PhD, 1969, Harvard University; somatosensory receptor structure, cytochemistry, and pathologic reactions; neuroimmune interactions.

Clark, John I. 1982; PhD, 1974, University of Washington; structural and developmental basis of lens-cell transparency and cataract formation.

Farr, Andrew G. * 1982; PhD, 1975, University of Chicago; cell interactions governing lymphocyte production and function.

Gehrig, John D. * 1954, (Emeritus); DDS, 1946, MSD, 1951, University of Minnesota; oral and maxillofacial surgery, biological structure.

Hendrickson, Anita E. * 1967; PhD, 1964, University of Washington; neuroanatomy, morphology and development of primate retina.

Herring, Susan W. * 1990, (Adjunct); PhD, 1971, University of Chicago; vertebrate functional morphology, relations between muscular function and skull growth.

Hol, Wilhelmus G. J. * 1992; PhD, 1971, University of Groningen (Netherlands); protein crystallography, drug design, vaccine development, and protein engineering.

Jensen, Lyle H. * 1949, (Emeritus); PhD, 1943, University of Washington; molecular structure, x-ray diffraction.

Lee, Minako Y. * 1977, (Research); MD, 1963, Tokyo Women's Medical College (Japan); hematopoiesis and osteoclast development.

Mirkes, Philip E. 1979, (Adjunct Research); PhD, 1970, University of Michigan; human embryology.

Myall, Robert W. * 1977, (Adjunct); BDentS, 1964, University of London (UK); MD, 1975, University of British Columbia (Canada); oral and maxillofacial surgery and biological structure.

Patton, Dorothy L. 1981, (Adjunct); PhD, 1981, University of Washington; infectious disease.

Press, Oliver W. * 1982, (Adjunct); PhD, 1977, MD, 1979, University of Washington; treatment of hematologic malignancies with monoclonal antibody immunoconjugates.

Reh, Thomas A. * 1989; PhD, 1981, University of Wisconsin; regeneration and development of central nervous system.

Rosse, Cornelius * 1967; MD, 1964, DSc, 1983, University of Bristol (UK); knowledge representation in anatomy.

Sage, E. Helene * 1980; PhD, 1977, University of Utah; extracellular matrix and vascular biology.

Westrum, Lesnick E. * 1966; MD, 1963, University of Washington; PhD, 1966, University College, London (UK); neuroanatomy, synaptology, plasticity, olfactory and trigeminal systems, dental pathways.

Associate Professors

Anderson, Leigh C. * 1988, (Adjunct); DDS, 1977, PhD, 1979, University of Minnesota; salivary gland physiology, neural and hormonal regulation of secretion.

Brinkley, James F. III * 1988, (Research); MD, 1974, University of Washington; PhD, 1984, Stanford University; computer applications in medicine and biology.

Dacey, Dennis M. * 1986, (Research); PhD, 1983, University of Chicago; the neural basis of vision and the organization of primate retina. Gaddum-Rosse, Penelope * 1969, (Emeritus); PhD, 1965, University of Liverpool (UK); reproductive biology.

Graney, Daniel O. * 1966; PhD, 1965, University of California (San Francisco); gross anatomy, clinical anatomy, computers in teaching.

Harris, Roger M. * 1982; PhD, 1975, University of Washington; neuro-anatomical recovery from spinal cord injury.

Kalet, Ira J. * 1980, (Adjunct); PhD, 1968, Princeton University; computer simulation of radiation therapy, artificial intelligence, computer graphics.

Landau, Barbara R. 1962, (Emeritus); MS, 1949, PhD, 1956, University of Wisconsin.

Merritt, Ethan A. * 1989, (Research); PhD, 1980, University of Wisconsin; x-ray crystallography and structure-based drug design.

Nameroff, Mark A. * 1970; MD, 1965, PhD, 1966, University of Pennsylvania; cell differentiation.

Prothero, John W. * 1965; PhD, 1960, Western Ontario University (Canada); scaling, model building, morphogenesis, cell kinetics.

Sherk, Helen * 1982; PhD, 1978, Massachusetts Institute of Technology; neural mechanisms underlying vision, especially visual guidance during locomotion.

Skahen, Julia G. 1941, (Emeritus); MS, 1928, University of Washington; PhD, 1941, University of Chicago.

Smith, Lynne T. * 1985, (Adjunct Research); PhD, 1985, University of Washington; synthesis and organization of connective tissue in development and in inherited disorders.

Stenkamp, Ronald E. * 1978; PhD, 1975, University of Washington; crystallography, metalloproteins, protein engineering, blood clotting proteins, streptavidin.

Sundsten, John Wallin 1962, (Emeritus); PhD, 1961, University of California (Los Angeles); neuroanatomy.

Yablonka-Reuveni, Zipora * 1982, (Research); MSc, 1975, Weizmann Institute for Science (Israel); PhD, 1979, University of Windsor (Canada); myogenesis during growth, development, and regeneration of skeletal muscle.

Assistant Professors

Bassuk, James A. 1992, (Research); PhD, 1983, Iowa State University.

Broderson, Stevan H. * 1967; PhD, 1967, State University of New York (Buffalo); computer graphics.

Cunningham, Michael L. 1993, (Adjunct); MD, 1988, University of Vermont; congenital defects.

Fan, Erkang 1996, (Research); PhD, 1993, University of Pittsburgh; synthesis and analysis of molecular receptors.

Raible, David W. * 1995; PhD, 1989, University of Pennsylvania; zebrafish neural development.

Roelink, Henk * 1996; MSc, 1985, University of Groningen (Netherlands); PhD, 1991, University of Amsterdam (Netherlands); role of signaling molecules in mediating neural tissue differentiation during vertebrate development.

Verlinde, Christophe L. M. * 1992, (Research); PhD, 1988, Catholic University of Leuven (Belgium); structure-based drug design and protein crystallography.

Lecturers

Mulligan, Kathleen A. 1987; PhD, 1985, University of New South Wales (Australia); neurobiology, gross anatomy, teaching innovations, technical communication.

Peterman, Annie K. 1989; PhD, 1987, University of Washington.

SCHOOL OF MEDICINE / BIOLOGICAL STRUCTURE 393

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

B STR 301 General Anatomy (4) NW Bolender, Broderson, Clark, Farr, Graney, Harris, Sherk Survey of systemic human anatomy, including human skeletal system, muscular system, respiratory system, circulatory system, nervous system, digestive system, endocrine system, urinary system, and reproductive system. For second, third, and fourth year undergraduates. Offered: Sp.

CONJ 401, 402, 403 Human Anatomy and Physiology (4, 4, 4) See Conjoint Courses.

B STR 431 Introduction to Neuroanatomy (4) NW *Mulligan, Prothero* General survey of the structure of the central nervous system, including an analysis of sensory and motor systems and higher integrative functions and clinical correlation. Restricted to OT, PT, and dental students. Offered: W.

B STR 498 Undergraduate Thesis (*) Individual research projects under the supervision of an instructor. For senior medical students. Offered: AWSpS.

B STR 499 Undergraduate Research (*) Individual research projects in cellular and developmental biology, experimental immunology, reproductive biology, neurobiology, molecular structure, morphometrics, computer modeling, and related fields under the supervision of an instructor. Offered: AWSpS.

B STR 501 Gross Anatomy (1-10, max. 10) Lecture and laboratory dissection course in regional anatomy: thorax, abdomen, pelvis, perineum. Prerequisite: permission of instructor. Offered: A.

B STR 502 Gross Anatomy (1-5) *Graney* Lecture and laboratory dissection course in regional anatomy: upper and lower extremities. Prerequisite: permission of instructor. Offered: W.

B STR 503 Gross Anatomy (1-5) *Graney* Lecture and laboratory dissection course in regional human anatomy; head and neck. Prerequisite: permission of instructor. Offered: Sp.

B STR 505 Histology in Biomedical Research (3) *Baskin* Selected topics in histology, with emphasis on analysis of research literature, methods, and laboratory exposure. Prerequisite: permission of instructor. Offered: even years; W.

CONJ 508 EM Methods and Interpretation (3-5) *Wight* See Conjoint Courses.

B STR 510 Seminar in Anatomy (1) Graney, Rosse Scientific and historical basis of selected studies in biological structure, anatomy, and human development. Original literature used as basis for textbook descriptions is reviewed. Prerequisite: permission of instructor. Offered: AWSp.

CONJ 511 Functional Neuroanatomy (4) Hendrickson, Smith See Conjoint Courses.

B STR 512 Human Microanatomy (4) Nameroff Lectures and laboratory treating the specialized tissues and organs of the body from the microscopic and ultramicroscopic points of view. Prerequisite: permission of instructor. Offered: A.

B STR 514 Methods in Quantitative Morphology (3) *Bolender* Lecture/laboratory course covering major techniques in areas of organ, tissue, cellular, and molecular biology. Emphasis on understanding the use of modern experimental methods for detecting and interpreting structural changes in biology. Prerequisite: familiarity with microcomputers and permission of instructor. Offered: even years; Sp.

B STR 515 Biological X-ray Structure Analysis (3) *Stenkamp* Theory of x-ray diffraction, with emphasis on applications to biological systems. Prerequisite: permission of instructor. Offered: W.

B STR 517 Embryology/Developmental Biology Seminar (1) Nameroff mbryology of a region or organ. Topics vary. Emphasis on original literature and developmental principles. Prerequisite: permission of instructor. Offered: AWSp.

B STR 519 Current Problems in Macromolecular Structure (2, max. 10) Hol A discussion of macromolecular structures related to specific areas of biological research. Emphasis on discussion of relevant research papers and use of computer graphics to visualize the molecular structures. Offered: AWSpS.

CONJ 520 Anatomy and Autopsy (1/2) Fligner See Conjoint Courses.

UCONJ 524 Developmental Neurobiology (3) Raible, Reh, Roelink, Rubel See University Conjoint Courses.

B STR 520 Structure Based Design of Drugs and Vaccines (3) Hol Lecture and discussion on research papers illustrating protein structure based design of new drugs and vaccines. Review of methods of structure-based drug design and problem of drug resistance. Discussion on importance of adjuvants, protein engineering methods, and immune evasion methods in vaccine design. Offered: W.

B STR 521 Advanced Biomacromolecular Crystallography (3) *Hol, Merritt, Stenkamp* Aspects of protein crystallography ranging from crystal growth, phase determination methods, density averaging to refinement, fiber diffraction of DNA and proteins. Offered: odd years; W.

B STR 530 P-Gross Anatomy and Embryology for Dental Students (7) Broderson, Clark, Rosse Normal anatomy of the thorax, abdomen, pelvis, and perineum are discussed and dissected employing cadavers. The development of the organ systems is presented and related to definitive adult structure. Developmental anomalies and diagnostic anatomy are also discussed. Prerequisite: admission to School of Dentistry. Offered: A.

B STR 540 Special Problems in Anatomy (1-6, max. 6) Special projects in anatomy under sponsorship of faculty member. Prerequisite: graduate, medical, or dental student standing and permission of instructor. Offered: AWSoS.

B STR 541 P-Microscopic Anatomy for Dental Students (4) Lecture and laboratory work in microscopic anatomy. For dental students taking HUBIO 510; others by permission of instructor. Offered: A.

B STR 550 P-Head and Neck Anatomy for Dental Students (4) Broderson, Clark, Graney Normal anatomy of the head is discussed and dissected employing human cadavers. The fundamentals of diagnostic anatomy are also discussed. Restricted to first-year dental students. Prerequisite: 530P. Offered: Sp.

B STR 555 Laboratory Rotation in Biological Structure (* max. 5) Introduction to experimental design, research methods, and scientific thought in laboratories of faculty members. Provides hands-on experience, an entrance into the literature of the field, and opportunities for discussion with all members of the laboratory. First year dental students only. Prerequisite: permission of instructor. Offered: AWSpS.

B STR 556 Topics in Developmental and Systemic Cell Biology (1-3) Recent advances in molecular and developmental aspects of cell biology. Emphasis on specific organ systems. Differentiation of lymphocytes, germ cells, muscle, epidermis; cell biology of lens, vessel wall, visual cortex; computer modeling; cell-cell and cell-matrix interactions. Prerequisite: undergraduate biochemistry and/or molecular biology and general cell biology or permission of instructor. Offered: AWSpS.

B STR 557 Biomolecular Structure Seminar (1) Hol Literature review of key research in Biomolecular Structure in the form of short presentations by participants followed by discussion. Critical evaluation of methods and results regarding properties and protein structure determination. Credit/no credit only. Prerequisite: graduate standing in biological structure or biochemistry and permission of instructor. Offered: AWSp.

B STR 559 Developing Research Proposals (2) Developing research proposals in cellular, molecular, and developmental biology; meurobiology; morphometrics and computer modeling; experimental immunology and hemopoiesis; reproductive biology; molecular structure. Weekly seminars by faculty and written proposals by students to include background and significance of projects specific hypotheses and aims, methodology, analyses of possible outcomes. Prerequisite: permission of instructor. Offered: even years; Sp.

B STR 580 P-Anatomy Teaching Practicum (* max. 8) Graney, Koehler, Rosse, Sherk Opportunity for medical student (or other professional student) to gain teaching experience in biological structure and human biology courses, including gross anatomy, histology, and neuroanatomy. May include lecture, laboratory, conference, depending on student interest, experience. Credit based on course credit in which student is assisting. Prerequisite: permission of course chairperson. Offered: AWSp.

B STR 584 Seminar in Neurogenesis (1) *Reh* Discussion of current research on process by which neurons are generated in the nervous system. Offered: AWSpS.

CONJ 585 Surgical Anatomy (1-3, max. 12) Graney See Conjoint Courses.

B STR 591 X-ray and NMR Analysis of Macromolecular Structure (1, max. 9) *Hol* Weekly discussion of current topics in research on molecular structure, usually emphasizing techniques of x-ray crystallography. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

B STR 594 Seminar in Myogenesis (1, max. 5) Nameroff Discussion of recent work on the differentiation of skeletal muscle and related cell types. Emphasis on the cell-biological aspects of differentiation both *in vivo* and *in vitro*. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

B STR 595 Skin Biology Seminar (1, max. 5) *Smith* Presentation, discussion of ongoing multidisciplinary research in basic and clinical problems of adult and fetal skin biology. Genetic diseases of epidermis and dermis, percutaneous absorption in adult and fetal skin, wound healing, cutaneous blood flow, development and prenatal diagnosis of inherited disorders, pigment cell biology. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

B STR 597 Topics in Neurobiology (1, max. 5) *Harris* Presentations by participants of topics in neuroanatomy, neurophysiology, neurochemistry, and other areas relating to the nervous system. Problems of current research interest. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

B STR 598 Reading in Biological Structure (2) Critical evaluation of research in biological structure, including current problems, methods and future directions by reading and discussing research and review papers. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS. **B STR 600 Independent Study or Research (*)** Offered: AWSpS.

B STR 700 Master's Thesis (*) Offered: AWSpS.

B STR 800 Doctoral Dissertation (*) Offered: AWSpS.

Comparative Medicine

T142 Health Sciences

The Department of Comparative Medicine provides education and research opportunities in the use of animals in biomedical research, testing, and education. In addition, training is provided for veterinarians in the diagnosis, treatment, and prevention of the diseases of laboratory animals. Current educational programs include scheduled courses in the principles and techniques of animal experimentation (C MED 407) for biomedical graduate students, zoonotic diseases, and training in laboratory-animal medicine for veterinary medical students and veterinarians, combined with a Master of Science degree program in comparative medicine. Areas of current research interests include immunohematology, biology of aging, generation and characterization of transgenic animal models, somatic cell gene transfer, and animal models of gene therapy.

Graduate Program Coordinator T136 Health Sciences, Box 351790 (206) 685-3261

Postdoctoral Program

Postdoctoral training in the areas of laboratory animal medicine and comparative pathology is offered to persons with a D.V.M. or equivalent degree. Training consists of a combination of course work, clinical residency rotations, and research leading to a Master of Science degree in comparative medicine. The program also prepares participants for specialty certification by the American College of Laboratory Animal Medicine. Stipend support is normally provided.

Master of Science

The Master of Science degree in comparative medicine provides advanced training in comparative medicine to veterinarians. Admission to the degree program requires acceptance into the department's Postdoctoral Training Program. The degree option involves additional elective courses, the completion of a moreinvolved research project, and a thesis.

Predoctoral Program

This program is designed to acquaint veterinary medical students with laboratory-animal medicine as a veterinary specialty. Specific areas covered include control/treatment of the principal diseases of common laboratory animals and their role in biomedical research. Blocks of four to eight weeks are available for fourth-year students year-round. Stipend support is normally provided.

Faculty

Chair

Melvin B. Dennis

Professors

Dennis, Melvin B. * 1971; DVM, 1961, Washington State University; comparative medicine, including animal models and experimental surgery.

Di Giacomo, Ronald F. * 1974; DVM, 1965, University of Pennsylvania; MPH, 1974, University of Washington; epidemiology and zoonoses. Liggitt, H. Denny * 1989; DVM, 1972, PhD, 1979, Colorado State University; using in vivo models to evaluate novel approaches for gene delivery, transgenic models.

Morton, William R. * 1976; VMD, 1967, University of Pennsylvania; animal models for AIDS-related research on vaccine development and pathogenesis studies.

Rausch, Robert L. * 1978, (Emeritus); DVM, 1945, Ohio State University; PhD, 1949, University of Wisconsin; parasitology, helminthic zoonoses.

Van Hoosier, Gerald * 1975; DVM, 1957, Texas A&M University; laboratory animal medicine with emphasis on effects of intercurrent infection on mouse phenotypes.

Wolf, Norman S. * 1968, (Adjunct); DVM, 1953, Kansas State University; PhD, 1960, Northwestern University; hematopoietic stem cell dynamics and transplantation, aging at the cellular level.

Associate Professors

Grossmann, Angelika * 1985, (Affiliate); DVM, 1978, PhD, 1982, Freie University of Berlin (Germany); immunosenecence in humans and mice; immunotoxicology; transmembrane signaling in T-lymphocytes.

Ladiges, Warren C. * 1982; DVM, 1971, Washington State University; molecular immunology of autoimmune disease, transgenic mouse models of aging.

Price, Lillian M. * 1984; DVM, 1972, PhD, 1983, University of Pennsylvania; t-cell development in the thymus, immunotoxicology, thymus development, retinoic acid embryopathy.

Thouless, Margaret E. * 1980, (Adjunct); PhD, 1974, University of Birmingham (UK); retroviruses, herpes viruses, enteric viruses, immunodiagnosis, virus variability.

Weigler, Benjamin J. 1997; DVM, 1986, Colorado State University; MPH, 1988, University of California (Berkeley); PhD, 1991, University of California (Davis).

Assistant Professor

Birkebak, Ted * 1994; DVM, 1989, University of Florida; PhD, 1994, Washington State University; pathology of laboratory animals and viral pathogenesis.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

C MED 407 Principles of Animal Experimentation (3) *Dennis, VanHoosier* Focus on biology and care of experimental animals, animal models of human disease, ethical use of animals in biomedical research and teaching; techniques of aseptic surgery. Includes lectures and animal-use laboratories. For graduate and advanced undergraduate students. Prerequisite: permission of instructor. Offered: A.

C MED 512 Introduction to the Anatomical Analysis of Animal Disease (5, max. 10) Liggitt Use of animals in experimental study of disease; techniques of animal necropsy, characterization, interpretation of gross and microscopic lesions, correlation of lesions with altered physiological processes, differentiation between naturally occurring and experimentally induced lesions. Prerequisite: PATH 444, 445, or equivalent, and permission of instructor. Enrollment limited: two students per quarter. Offered: AWSpS.

C MED 514 Comparative Pathology Conference (1, max. 6) Anderson, Birkebak, Liggitt Focus on histopathology of naturally occurring and experimentally induced lesions of primates, laboratory and domestic animals, fish, wildlife, and birds. Participants discuss the lesions and the basic pathogenetic mechanisms that underlie them. Prerequisite: PATH 500 or equivalent and permission of instructor. Offered: AWSpS.

C MED 516 Current Literature in Laboratory Animal Medicine (1, max. 12) Dennis, VanHoosier Critical evaluation of recent articles on laboratory animal medicine and science. Emphasis on literature dealing with spontaneous diseases of laboratory animals, biology and husbandry, zoonotic diseases, and animal models of human disease. Experimental design, use of animals in research, and methods of reviewing manuscripts. Prerequisite: permission of instructor. Offered: AWSpS.

C MED 518 Clinical Conference Seminar (1, max. 12) Ladiges, Price Clinical reports of cases of spontaneous and induced diseases, animal models of human disease, and zoonotic diseases discussed. Disease prevalence and preventive medicine measures. Diagnostic exercises. Prerequisite: permission of instructor. Offered: AWSpS.

C MED 520, 521 Biology of Laboratory Animals (2, 2) *DiGiacomo, Lichtenwalner, Pekow, VanHoosier* Fundamentals of the morphological, functional, and applied aspects of anatomy, physiology, pharmacology, biochemistry, and immunology of the commonly used laboratory animal species. Similarities and differences within, and between, species, including man. Husbandry, genetics, behavior, and nutrition. Prerequisite: permission of instructor. Offered: AS, WS.

C MED 526 Zoonotic Diseases (3) *DiGiacomo, Rausch* Explores the public health aspects of zoonotic diseases, their epidemiology and current approaches to control. Focuses on the major viral, rickettsial, bacterial, protozoal, helminthic, and fungal diseases transmitted from wild and domesticated animals to humans in North America. Prerequisite: 511, 512, or 520 or permission of instructor. Offered: jointly with EPI 526; S.

C MED 530, 531 Diseases of Laboratory Animals (3, 3) *DiGiacomo, VanHoosier* Analysis of etiology, pathogenesis, pathology, and disease processes in rodents, lagomorphs, carnivores, and nonhuman primates. Prerequisite: permission of instructor. Offered: AS, WS.

C MED 540 Animal Models (1) Dennis Naturally occurring and experimentally induced analogs of human diseases in animals with emphasis on diseases in search of animal models, and approaches to identifying new models. Animal models of categorical disease (e.g., cancer, atherosclerosis, gerontology) discussed. Prerequisite: permission of instructor. Offered: SpS.

C MED 590 Selected Topics in Animal Medicine (2) Dennis, VanHoosier Radiation biology, genetics, anesthesiology and experimental surgery, preventive medicine, and ethical aspects of use of animals in biomedical teaching and research. Specific topics vary from year to year, depending on the expertise of the annual visiting professor. Prerequisite: permission of instructor. Offered: SpS.

C MED 600 Independent Study or Research (*) Offered: AWSpS.

C MED 601 Internship Rotation—Laboratory Animal Medicine (1) Prerequisite: DVM degree. Offered: AWSpS.

C MED 700 Master's Thesis (*) Offered: AWSpS.

Conjoint Courses

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

CONJ 401, 402, 403 Human Anatomy and Physiology (4, 4, 4) Linder, Peterman An integrated course on the structure and function of the human body with laboratory work in gross anatomy, histology, and physiology. Primarily for pharmacy doctoral students. Others by special permission of instructors. 401 - Prerequisite: BIOL 201; BIOL 202; BIOL 203; CHEM 162. 402 - Prerequisite: CONJ 401. 403 - Prerequisite: CONJ 402. Offered: A, W, Sp.

CONJ 475 Alcoholism: A Course for Medical Students and Students in the Allied Health Sciences (2) *Kivlahan, Samson* A lecture course for medical students in the allied health sciences in any year that will cover an introduction to the epidemiology, diagnostic strategies, natural history, physiologic effects, and treatment of alcohol-related disorders. Offered: Sp.

CONJ 501, 502, 503 Molecular Basis of Cell Function (3, 3, 3)

CONJ 505 P-Pain Clinic Preceptorship (1) *Loeser* One morning a week for a total of 30 hours per quarter spent observing patient care in either inpatient or outpatient settings at University of Washington Medical Center; associated readings. Prerequisite: first- or second-year medical student standing. Coordinator: Pain Center.

CONJ 508 EM Methods and Interpretation (3-5) *Wight* Techniques used in biological transmission and scanning electron microscopy. Practical laboratory experience in research environment, tutorial discussions of cell architecture as related to the functional behavior of cells. Student projects required. Prerequisite: a basic cell biology course and graduate or postdoctoral status in pathology or biological structure.

CONJ 515 Interdisciplinary Health and Human Services Delivery in Rural Communities (1) House Provides opportunities for students in health and human services to explore current trends and issues of service delivery in rural communities. Demographics, economics, community structure, culture, and professional/personal issues are addressed. Prerequisite: major standing in a health or human services profession. Offered: W.

CONJ 520 Anatomy and Autopsy (1/2) *Fligner* Students attend autopsies at UWMC affiliated hospitals for demonstration of normal anatomic relationships and gross pathological changes in various diseases. Offered as elective concurrent with HUBIO 520P. Prerequisite: HUBIO 510P or equivalent, permission of instructor, and orientation. Offered: WSp.

CONJ 550 P-Clinical Infectious Diseases (3) *Miller* Lecture series by faculty members from various departments, authorities in the field of clinically important infectious diseases. Lectures, reading assignments, and handouts emphasize epidemiology, clinical manifestations, laboratory findings, diagnosis, treatment, and prevention. Oriented for secondyear medical students. Credit/no credit only. Prerequisite: HUBIO 521 or permission of coordinator, Department of Medicine. Offered: W.

CONJ 585 Surgical Anatomy (1-3, max. 12) *Graney* Guided dissection of selected regions, supplemented by conferences. Offered conjointly by the departments of Biological Structure and Surgery. Prerequisite: permission of department. Coordinator: Department of Biological Structure. CONJ 677 P-Clinical Allergy and Immunology (* max. 12) Henderson (University of Washington Medical Center) Clinic and office experience in diagnosing and managing allergic disease. Clinical conferences, hospital rounds on clinical immunology and allergy. Student may elect a flexible program, emphasizing adult or pediatric allergy. Prerequisite: MED 665 or basic clerkships in departments of Family Medicine or Pediatrics. (Four weeks, full-time.) Offered: AWSpS.

CONJ 678 P-Pain Clinic Clerkship (8) *Egan, Loeser* Full-time, four-week clerkship emphasizing comprehensive care of patients with chronic pain from benign diseases and cancer. Faculty members from multiple departments provide student with didactic and bedside experiences; student member of treatment team. Involves both inpatient and outpatient activities. Prerequisite: completion of human biology series, MED 665.

CONJ 680 P-Detoxification and Rehabilitation Program for Alcoholism and Drug Abuse (* max. 16) *Reoux* Supervised introduction to alcoholic detoxification and rehabilitation and drug abuse. Supervised clinical experience in a variety of alcoholism and drug abuse treatment programs; accompanied by a core series of lectures and discussions. For medical students only. Prerequisite: PBSCI 664, 665, 666, 667, or 668.

CONJ 696 P-WRITE Clinical Electives (* max. 24) Clinical electives for WRITE program. Offered: AWSpS.

CONJ 697 International Exchange Clerkship (12) *Hunt* Participation in health care delivery systems in developing countries; observation of relationship of host country's traditional medicine with Western medicine. Students live in cross-cultural setting to better understand their own assumptions about health care and life styles. Offered: Sp.

CONJ 698 P-Foreign Medical Student Clerkship (* max. 24) A limited number of students from foreign medical schools are accepted for individually designed clinical clerkships at available sites after all UWMC students are accommodated. Prerequisite: permission of Associate Dean for Academic Affairs, School of Medicine.

CONJ 699 P-Clinical Clerkships (* max. 32)

Family Medicine

C408 Health Sciences

Family medicine is the discipline concerned with the continuing and comprehensive care of individuals and their families. The prime instructional goal of the department is the education and training of physicians who will apply the knowledge and skills of this and other medical disciplines in family practice. Implicit in this goal is the necessity for continual development of new knowledge and its application in the clinical activities of the department.

The Department of Family Medicine was founded in 1971 and is involved with instruction of medical students in several ways. These include presentations in the basic curriculum of the first two years, clinical clerkships as part of the clinical core curriculum, and other elective courses open to all medical students. A graduate residency program in family practice provides training consistent with the standards of the American Board of Family Practice, the American Academy of Family Physicians, and the Council on Medical Education of the American Medical Association. Active teaching affiliations are maintained throughout the WWAMI region at both undergraduate and graduate levels.

Family-medicine fellowship training programs are available to develop teaching and research skills for future academic faculty.

Faculty

Chair

Ronald Schneeweiss

Professors

Berg, Alfred O. 1979; MD, 1974, Washington University; MPH, 1979, University of Washington; family medicine.

Chrisman, Noel J. * 1973, (Adjunct); PhD, 1966, University of California (Berkeley); community partnership research, clinical cultural competence, ethnic health beliefs and practices.

Coombs, John B. 1983; MD, 1972, Cornell University; rural health policy, nutrition and medicine.

Ellsworth, Allan J. 1981; PharmD, 1977, Philadelphia College of Pharmacy and Science; primary care, family medicine.

Geyman, John P. 1976, (Emeritus); MD, 1960, University of California (San Francisco); family medicine.

Gordon, Michael J. * 1973; PhD, 1973, Michigan State University; family medicine.

Katon, Wayne J. 1976, (Adjunct); MD, 1976, University of Oregon; consultation-liaison.

Mayer, Jonathan D. * 1977, (Adjunct); PhD, 1977, University of Michigan; medical geography, clinical applications, philosophy.

Norris, Thomas E. 1988; MD, 1973, University of Texas (Galveston); rural health policy, primary care policy, geriatrics.

Rosenblatt, Roger A. * 1977; MD, 1971, MPH, 1971, Harvard University; research into the organization and delivery of health services, rural health policy.

Schmer, Gottfried * 1969, (Adjunct); MD, 1956, University of Vienna (Austria); tropical medicine and public health, clinical parisitology, preventive medicine.

Schneeweiss, Ronald 1977; MBChB, 1964, University of Capetown (South Africa); family medicine.

Associate Professors

Baldwin, Laura M. 1984; MD, 1980, University of Southern California; MPH, 1986, University of Washington; family medicine.

Crittenden, Robert A. 1981; MD, 1976, MPH, 1987, University of Washington; health plans/policies.

Eggertsen, Sam C. 1982; MD, 1976, University of Washington; family medicine.

Ellsbury, Kathleen E. 1982; MD, 1977, Johns Hopkins University; MPH, 1982, University of Missouri; family medicine.

Gloyd, Stephen S. * 1986, (Adjunct); MD, 1973, University of Chicago; MPH, 1983, Harvard University; political economy, epidemiology, and primary health care in developing countries.

Goldbaum, Gary M. * 1989, (Adjunct); MD, 1978, University of Colorado (Denver); MPH, 1989, University of Washington; behavioral factors in HIV/AIDS preventive medicine.

Greer, H. Thomas 1977; MD, 1974, University of Mississippi; MPH, 1979, University of Washington; family medicine.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

FAMED 499 Undergraduate Research (*) Research activities arranged with University-based or community physicians in diversified areas relating to family medicine. Prerequisite: permission of course coordinator. Offered: AWSpS.

FAMED 501 P-Introduction to Family Medicine: Preceptorship (2.5) Students spend one morning per week for one quarter working with a practicing community family physician. Prerequisite: first- and second-year medical students, permission of course coordinator. Offered: AWSpS.

FAMED 505 P-Rural/Urban Preceptorship (* max.
12) Opportunity to work in a variety of underserved medical settings in rural and urban areas of Washington, Wyoming, Alaska, Idaho, and Montana. Prerequisite: permission of instructor. Offered: AWSpS.

FAMED 545 Preclinical Geriatric Elective (2) Baker, Franks Covers disease and disability prevention, health promotion, and positive attitudes that can contribute to successful aging. Emphasis on optimum aging, site visits, and extensive contact with diverse older people.

FAMED 546 Preclinical Hospice Volunteer Training Elective (1) Farber, McCormick Using lectures, small groups, role play, and readings, covers the basic knowledge, skills and attitudes that need to be mastered as a hospice volunteer. Students participate as hospice volunteers as part of their field experience. Offered: WSp.

FAMED 547 Spirituality in Medicine (1) Examination of the beliefs, values, meaning, and spirituality of health professionals for the well-being of their patients as well as for themselves. Content changes quarterly.

FAMED 555 P-Wilderness Medicine (2) Twoweek elective provides didactic and field experience for third-year medical students in types of medical emergencies and clinical problems unique to rural and wilderness communities, including trauma, survival hypothermia, altitude, frostbite, heat illness, lightning, and river rescue. **FAMED 556** Spanish for Health Professionals (1) Instruction in interviewing Spanish-speaking patient. Credit/no credit only. Prerequisite: health professions student.

FAMED 630 P-WRITE Family Medicine Clinical Clerkship (* max. 24) Basic clinical clerkship for students enrolled in the WRITE Program. Prerequisite: completion of basic curriculum; third- and fourthyear students; acceptance in the WRITE program.

FAMED 640 P-Clinical Clerkship in Family Medicine—Boise (12) Stresses ambulatory primary care with emphasis on comprehensive, integrated care to patients of both genders and all ages. Student functions as clerk in community/residency site. Participates in care of assigned patients, using office, hospital, home, community resources. Prerequisite: third- or fourth-year medical students. Offered: AWSpS.

FAMED 641 P-Clinical Clerkship in Family Medicine—Spokane (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 642 P-Clinical Clerkship in Family Medicine—Madigan (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 643 P-Clinical Clerkship in Family Medicine—Tacoma (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 644 P-Clinical Clerkship in Family Medicine—University of Washington Medical Center (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 645 P-Clinical Clerkship in Family Medicine—Group Health (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 646 P-Clinical Clerkship in Family Medicine—Swedish (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 647 P-Clinical Clerkship in Family Medicine—Providence (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 648 P-Clinical Clerkship in Family Medicine—Renton Valley (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 649 P-Clinical Clerkship in Family Medicine—Olympia (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 650 P-Clinical Clerkship in Family Medicine—Anacortes (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 651 P-Clinical Clerkship in Family Medicine—Omak (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 652 P-Clinical Clerkship in Family Medicine—Spokane Valley (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 653 P-Clinical Clerkship in Family Medicine—Anchorage (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 654 P-Clinical Clerkship in Family Medicine—Ketchikan (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 655 P-Clinical Clerkship in Family Medicine—Havre (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 656 P-Clinical Clerkship in Family Medicine—Whitefish (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 657 P-Clinical Clerkship in Family Medicine—Pocatello (12) For description and prerequisite, see 640. Offered: AWSpS. FAMED 658 P-Clinical Clerkship in Family Medicine—Sea Mar Clinic (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 659 P-Clinical Clerkship in Family Medicine—Country Doctor (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 660 P-Clinical Clerkship in Family Medicine—Yakima (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 661 P-Clinical Clerkship in Family Medicine—Bremerton (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 670 P-Advanced Preceptorship in Underserved WWAMI Area (* max. 24) Students gain experience, knowledge, and skills needed to care for rural, Native-American Indian, and other ethnic or underserved populations in Washington, Wyoming, Alaska, Montana, and Idaho. Prerequisite: third- or fourth-year medical students, permission of course coordinator. Offered: AWSpS.

FAMED 671 P-Advanced Preceptorship in United States (* max. 24) Supplemental experience in rural/urban practice or a family medicine department in a setting not already established through the family medicine curriculum. Prerequisite: third- or fourthyear medical students, permission of course coordinator. Offered: AWSpS.

FAMED 672 P-Advanced Preceptorship International (* max. 24) For medical students desiring primary care experience abroad. Special project deals with influences of social, cultural, educational, and economic forces on health care delivery. Prerequisite: third- or fourth-year medical students, permission of course coordinator. Offered: AWSpS.

FAMED 673 P-Advanced Preceptorship at WWAMI Clinical Centers (* max. 12) Supplemental experience in Family Medicine for late junior or senior medical students at selected WWAMI clinical centers. Prerequisite: completion of basic 6-week clerkship in Family Medicine.

FAMED 674 P-Advanced Preceptorship in Biopsychosocial Approaches in Primary Care (8) *Mauksch* Emphasizes the learning of patientcentered interviewing and counseling skills necessary for effective practice of primary care medicine. (Four weeks.) Offered: A.

FAMED 680 P-Traditional Indian Medicine Clerkship in Primary Care Setting (* max. 12) Students learn how western physicians collaborate with traditional Indian healers in the provision of health care to an urban Indian population. Prerequisite: completion of required third-year clerkship, UCONJ 530 or permission of instructor. Offered: AWSpS.

FAMED 681 P-Indian Health Care Clerkship (* max. 12) Individually designed learning experience allows student to choose training opportunities, including Indian IHS Clinics, Tribal 638 Health Programs, IHS Public Health Program, Urban Indian Health programs, Tribal Council Health activities, and Tribal/IHS Alcoholism Treatment programs. Prerequisite: completion of required third-year clerkships, UCONJ 530, and permission of instructor. Offered: AWSpS.

FAMED 698 P-Clinical Clerkship in Family Medicine, Away (12) For description and prerequisites, see 640. Offered: AWSpS.

FAMED 699 P-WWAMI Family Medicine Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Human Biology Courses

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only. This sequence is required for all medical students. Other students may enroll by permission of the Assistant Dean for Curriculum, School of Medicine.

HUBIO 500 P-Medical Practice Preceptorship at WWAMI Sites (1, max. 3) Personal experience with, and insight into, medical practice situations. Student is stationed with carefully selected clinical faculty members in their offices in accordance with the student's preference of discipline at the WWAMI sites. Registration limited to first-year medical students at WWAMI sites. Offered: AWSpS.

HUBIO 501 P-Human Biology Special Projects (*) Hunt, MacLaren Designed for medical students electing a special study project related to the Introduction to Clinical Medicine or other human biology courses, which are offered during the first and second years in the School of Medicine. Primarily intended for students in remedial or extended programs. Prerequisite: permission of assistant dean for curriculum. Offered: AWSpS.

HUBIO 505 P-WWAMI Preceptorship (1) Opportunity for first-year medical students at WWAMI sites to gain personal experience with medical practice situations by being assigned to selected clinical faculty members in their offices. Offered: ASp.

HUBIO 510 P-Microscopic Anatomy: Histology (3) Nameroff Lectures and laboratories in microscopic anatomy designed to provide the principles and concepts of histology, to define the morphological characteristics of the cells, tissues, and organs of the human body, and to relate this information to functional processes studied in concurrent and subsequent courses. Offered: A.

HUBIO 511 P-Gross Anatomy and Embryology (7) Rosse Structural organization of human body at the macroscopic level to provide a foundation for physical examination and functional assessment of the human organism. Integrates embryological development with study of the cadaver and examination of the normal living body. Concentrates on exploration of the body cavities and the viscera they contain. Offered: A.

HUBIO 512 P-Mechanisms in Cell Physiology (5) Crill Physiology of the cell membrane, including ionic and electrical potential gradients; active transport, excitability, and action potentials; biophysics of sensory receptors; neuromuscular transmission; muscle energetics and contractility; spinal reflexes and central synaptic transmission; autonomic nervous system; energy metabolism and temperature regulation; epithelial transport; gastrointestinal motility and secretions. Offered: A.

HUBIO 513- P-Introduction to Clinical Medicine (1) *Gibbons* Instruction in communication skills and interview techniques to form the basis for the doctor-patient relationship and for the skills of communicating with patients. The patient profile is obtained. Attention to developing comfort in the physician role. Offered: A.

HUBIO 514- 524 P-Biochemistry I-A-B (4-3) Walsh Classical molecular and cellular biochemistry, cellular physiology and molecular genetics. Metabolic interrelationships as they occur in the individual stressed and related to disturbances in disease states. Offered: A-W. HUBIO 516-526 P-Systems of Human Behavior I-A-B (3-1) Walker Effects of behavioral factors in major management problems faced in medical practice relating to cultural background, social role, sexual identity, and belief systems. Acquisition of skills in analyzing behavior, defining objectives, and designing precise treatment strategies. Offered: A-W.

HUBIO 520 P-Cell and Tissue Response to Injury (6) Norwood Patterns of cell and tissue response to injury. Mechanisms of cell injury, the inflammatory process, immunology, immunopathology, thrombosis, normal and abnormal growth, neoplasia, clinicopathological correlation. Offered: W.

HUBIO 521-534 P-Natural History of Infectious Disease and Chemotherapy I-A-B (4-2) Moseley Pathogenesis and immunity of infectious diseases, natural barriers. Microbiology, epidemiology, clinical manifestations and control of representative bacterial, fungal, parasitic, and viral infectious diseases. Chemotherapeutics and principles of chemotherapy. Sterilization, principles of asepsis, nosocomial and iatrogenic infections and their prevention. Offered: W-Sp.

HUBIO 522- P-Introduction to Clinical Medicine (2) *Gibbons* Medical history is introduced and instruction in data collection is begun. Experience in conducting medical interviews with patients to obtain the medical history and patient profile. Special problems related to interviewing are addressed. Offered: W.

HUBIO 523 P-Introduction to Immunology (2) Aderem Basic concepts such as antigens; antibodies; complement; B- and T-lymphocyte function, including interactions with each other and with accessory cells; immunological tolerance; major histocompatibility complex; and role of these basic concepts in immunopathology (immunodeficiencies, hypersensitivities, autoimmunity, blood transfusion, and transplantation). Offered: W.

HUBIO 530 P-Epidemiology (2) Becker Community health and disease, including assessment of disease risk and mechanisms of epidemic detection, spread, and control; interpretation of research design, data analysis, bias source; and clinical epidemiology, including evaluation and application of diagnostic tests, natural history of disease, and quantitative aids for clinical decision making. Offered: Sp.

HUBIO 531 P-Head, Neck, Ear, Nose, and Throat (5) *Graney* Gross anatomy (including skull, pharynx, and larynx), audition and balance, physiology and clinical evaluation, maxillofacial disorders, diseases of nasal passages, nasopharynx and oropharynx, accessory sinuses. Physical examination. Offered: Sp.

HUBIO 532 P-Nervous System (6) Reh Integrated approach to normal structure and function of the nervous system, including the eye. Neuropathological examples, as well as clinical manifestations of neurological disease are presented. Offered: Sp.

HUBIO 535 P-Introduction to Clinical Medicine (4) *Goldstein* Adult screening physical examination is taught through the use of lecture, audiovisual aids, and small-group tutorial, where students in supervised setting practice the physical examination on one other. Further practice in the performance and recording of the patient profile and medical history. Offered: Sp.

HUBIO 540 P-Cardiovascular System (5.5) Feigl Interdisciplinary approach to cardiovascular medicine, including anatomy, physiology, radiology, pathology, medicine, and surgery. Function of the cardiovascular system in health and disease. Offered: A.

HUBIO 541 P-Respiratory System (4) Culver Interdisciplinary approach to the respiratory system, including anatomy of thorax and lungs, ventilation mechanics, blood-gas transport, gas exchange, acid-base balance, and the physiology and pathology of obstructive, restrictive, and pulmonary-vascular diseases. Offered: A.

HUBIO 542- 550- 560 P-Introduction to Clinical Medicine (2.5-3.5-5) Goldstein Advanced instruction in interview technique, history taking, and physical examination, with emphasis on (542) detection of abnormalities, (550) identification of problems and correlation of findings with pathophysiological mechanisms, and (560) introduction to clinical and laboratory diagnosis. Offered: A-W-Sp.

HUBIO 543 P-Principles of Pharmacology I (4) Vincenzi Includes general principles of pharmacology and the specific pharmacology of major drugs acting on the autonomic and cardiovascular systems. Offered: A.

HUBIO 544 P-Endocrine System (2.5) Weigle Normal, gross, and microscopic anatomy and physiology of the endocrine system. Illustrations examining the clinical relevance of homeostasis, feedback, and other controlling mechanisms previously learned. Endocrine integration of metabolism. Clinically important endocrine pathophysiology. Offered: A.

HUBIO 546 P-Systemic Pathology (2) Schmidt Multidisciplinary approach to some diseases that affect more than one organ system (nervous, cardiovascular, respiratory) and that are caused by different mechanisms (congenital, inflammatory, vascular, traumatic, metabolic, neoplastic). Offered: A.

HUBIO 551 P-Gastro-Intestinal System (4) Saunders Anatomy of the gastrointestinal system; physiology and pathology of digestion and hepatic function; and physical and laboratory examination. Offered: W.

HUBIO 552 P-Hematology (3) Gernsheimer Familiarizes students with the basic pathophysiologic mechanisms leading to disturbances of red cell, white cell, and platelet production, as well as abnormalities of hemostasis presenting clinical problems. Pathophysiology, rather than minute details of individual disease, is stressed. Offered: W.

HUBIO 553 P-Musculoskeletal System (4.5) Teitz Gross, surface, applied, and x-ray anatomy of system, including entire spine but excluding head and neck. Histology of bone, cartilage, tendonmyotendinal junction and joints. Musculoskeletal trauma and healing. Pathology and clinical manifestations of other degenerative, inflammatory, metabolic, nutritional, and congenital disorders. Physical examination. Offered: W.

HUBIO 554 P-Genetics (2.5) Horwitz Review of basic genetic principles and their applications in clinical medicine. Includes human chromosomal disorders; patterns of inheritance, genetic counseling, amniocentesis; pathogenesis of hereditary diseases, monogenic and multifactorial; role of genetics in common diseases; behavioral genetics; drug-gene interactions; and prevention and treatment of genetic diseases, including prenatal diagnosis and population screening. Offered: A.

HUBIO 555 P-Medicine, Health, and Society (2.5) *Lafferty* Interrelationships between provision of medical care and nonbiological factors that influence health. Includes relative importance of society, environment, and individual choice in determining health status; impact of organizational, economic, and political influences on medical practice and choice; their importance in decision making. Offered: W.

HUBIO 562 P-Urinary System (4) Andress Anatomy, physiology, and pathology of the kidney, ureter, bladder, and prostate; pathophysiology and treatment of common fluid and electrolyte problems; renal pharmacology; major clinical urinary system syndromes, with current diagnostic approaches and therapy. Offered: Sp.

398 SCHOOL OF MEDICINE / IMMUNOLOGY

HUBIO 563 P-Systems of Human Behavior II (3) *N. Ward* Major psychiatric disorders are defined and described, and a systematic approach to differential diagnosis is presented. Conceptual development, pathogenesis, epidemiology, nomenclature, and the terminology used in psychiatry are discussed. Offered: Sp.

HUBIO 564 P-Principles of Pharmacology II (3) Horita Lectures and conferences on drugs that act on the central nervous system. Emphasis on physiological and biochemical mechanisms, with consideration of therapeutic and adverse effects. Offered: Sp.

HUBIO 565 P-Reproduction (3.5) Steiner Normal development of the human reproductive system. Sexual differentiation, puberty, endocrine control of testicular and ovarian function, gamete biology, fertilization, implantation, immunology and endocrinology of pregnancy, labor and delivery, pathology of the male and female reproductive organs, contraception, prolactin and lactation, aging and infertility. Offered: Sp.

HUBIO 567 P-Skin System (2) Raugi Gross and microscopic anatomy. Physiology, protection, temperature control, pigmentation, and photosensitivity. Pathology and genetics of skin abnormalities, including tumors. Introduction to clinical evaluation, including physical examination and illustrating examples of inflammatory, vascular, immunological (including drug hypersensitivity), and neoplastic diseases. Offered: A.

HUBIO 568 P-Nutrition for Physicians (1) Chait, Lipkin Principles and practice of clinical nutrition, including role of nutrients in normal growth and development, pathogenesis of chronic disease, and nutrition in the management of certain disease states. Offered: Sp.

HUBIO 598 P-WWAMI Non-Clinical Selectives (*) Courses offered at WWAMI university sites designed to satisfy the non-clinical selective graduation requirement for medical students. Offered: AWSp.

HUBIO 599 P-Independent Study in Medical Science (6) Chu Independent research with faculty sponsor and completion of paper as partial fulfillment of non-clinical selective graduation requirement. Offered: Sp.

Immunology

H564 Health Sciences

The science of immunology began in the nineteenth century as an outgrowth of microbiology. During the past few decades, immunology has emerged as a truly separate discipline, with a specialized technical armamentarium and a conceptual base that has had profound general impact on research in molecular and cellular biology. Indeed, immunological questions provide some of the most exciting intellectual challenges in contemporary science. In recognition of these facts, the University of Washington established the Department of Immunology in 1989.

Graduate Program Coordinator H564 Health Sciences, Box 357650 (206) 685-3955, fax (206) 616-4561 immuno@nucleus.immunol.washington.edu

Research facilities in the Department of Immunology include state-of-the-art equipment for gene manipulation and flow cytometry. A departmental library, extensive computer resources, and conference rooms are also available for students. Members of the faculty hold appointments in the departments of Biochemistry, Bioengineering, Biological Structure, Medicine, Microbiology, Molecular Biotechnology, and Pediatrics, and the department participates in the Molecular and Cellular Biology Program. Close interaction therefore exists between the Department of Immunology and other research units in the health sciences.

Students are admitted for autumn quarter; the application deadline is February 1. The requirements for admission are flexible; however, most successful applicants will have completed survey courses in biology, chemistry, and physics, one year of organic chemistry, and mathematics through integral calculus. Prior exposure to immunology through formal course work or laboratory research is desirable. All immunology graduate students are assured of financial support for the term of their studies.

Faculty

Chair

Michael J. Bevan

Professors

Aderem, Alan * 1996; PhD, 1979, University of Capetown (South Africa); macrophage development and differentiation, phagocytosis, signal transduction and the cytoskeleton.

Bevan, Michael J. * 1990; PhD, 1972, National Institute for Medical Research (UK); Tlymphocyte development and specificity, response to pathogens.

Clark, Edward A. * 1984, (Adjunct); PhD, 1977, University of California (Los Angeles); lymphocyte surface molecules, lymphocyte activation and cell communication.

Farr, Andrew G. * 1982, (Adjunct); PhD, 1975, University of Chicago; cell interactions governing lymphocyte production and function.

Greenberg, Philip D. * 1978; MD, 1971, State University of New York (Downstate); molecular, cellular, viral, and tumor immunology.

Hood, Leroy E. * 1992; PhD, 1968, California Institute of Technology; molecular immunology, large-scale DNA mapping and sequencing, molecular evolution.

Lernmark, Ake * 1994, (Adjunct); MD, 1970, PhD, 1971, University of Umea (Sweden); immunogenetics of organ-specific autoimmunity, with emphasis on insulindependent diabetes.

Nepom, Gerald T. * 1982, (Affiliate); PhD, 1977, MD, 1978, University of Washington; immunogenetics of human MHC, molecular and cellular immunology, immunoregulation, autoimmunity.

Pious, Donald A. * 1964; MD, 1956, University of Pennsylvania; antigen processing, function of nonclassical MHC genes, MHC gene regulation.

Van Den Engh, Ger * 1992, (Adjunct Research); PhD, 1976, University of Leiden (Netherlands); flow cytometry, quantitative cytogenetics, instrument design and development.

Wilson, Christopher B. * 1980; MD, 1972, University of California (Los Angeles); immunology, rheumatology, infectious diseases.

Associate Professors

Concannon, Patrick J. * 1989, (Affiliate); PhD, 1984, University of California (Los Angeles); juvenile and adult onset diabetes, genetics of radiation sensitivity/ cancer susceptibility syndromes.

Fink, Pamela J. * 1990; PhD, 1981, Massachusetts Institute of Technology; murine T cell differentiation and self tolerance.

Milner, Eric C. B. * 1987, (Affiliate); PhD, 1980, University of Montana; molecular biology of the B cell repertoire in normal, immunocompromised, and autoimmune subjects.

Rudensky, Alexander Y. * 1992; PhD, 1986, Gabrichevsky Institute for Epidemiology and Microbiology; antigen processing and presentation, T-cell development.

Ziegler, Steven F. 1997, (Affiliate); PhD, 1984, University of California (Los Angeles); genetic analysis of immune function: role of specific genes and use of induced mouse mutations.

Assistant Professors

Foote, Jefferson * 1994, (Affiliate); PhD, 1985, University of California (Berkeley); biophysics of immune maturation, antibody engineering and immunotherapy, x-ray crystallography.

Goverman, Joan M. * 1992, (Adjunct); PhD, 1981, University of California (Los Angeles); immune recognition and tolerance, autoimmunity, T cell development, activation, antibody diversity.

Hockenbery, David M. * 1994, (Adjunct); MD, 1982, Washington University; gastroenterology.

Nelson, Bradley H. 1997, (Affiliate); PhD, 1991, University of California (Berkeley); molecular control of T lymphocyte proliferation and effector function by cytokine receptors.

Strong, Roland K. * 1994, (Affiliate); PhD, 1990, Harvard University; structural molecular biology and crystallography of proteins mediating mucosal immune responses.

Willerford, Dennis M. 1996, (Adjunct); MD, 1995, Washington University; hematology.

Instructor

Levin, Steven 1995, (Acting); PhD, 1993, University of Washington; signal transduction mechanisms in the function and development of hematopoietic cells.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

IMMUN 441 Introduction to Immunology (4) NW General properties of immune responses; cells and tissues of immune system; lymphocyte activation and specificity; effector mechanisms; immunity to microbes; immunodeficiency and AIDS; autoimmune diseases; transplantation. Prerequisite: BIOL 202: recommended: GENET 371, GENET 372, BIOC 405, or BIOC 440. Offered: jointly with MICROM 441; A.

IMMUN 499 Undergraduate Research (* max. 24) Investigative work on a variety of topics, including mechanisms of antigen recognition, T-cell development and differentiation, immunogenetics, lymphocyte activation, MHC gene structure and function, retrovirology, and the pathogenesis of autoimmune diseases, among others. Prerequisite: permission of instructor. Offered: AWSpS.

IMMUN 532 Advanced Immunology (4) Examines the molecular and cellular basis of immune function. Students must have completed a baccalaureate degree in a biological specialty and be conversant with molecular genetics. Topics include: hematopoiesis, antigen receptor structure, lymphocyte development, antigen presentation, and cytokines. Offered: W.

IMMUN 534 Central Issues in Immunology (2, max. 4) Presentations by participants of topics relating to the broad study of immunology. Prerequisite: graduate standing in Immunology. Offered: Sp.

Current Research Conferences Weekly group conferences concerning ongoing graduate students and postdoctoral research in immunology. Students may register for more than one conference each quarter.

SCHOOL OF MEDICINE / LABORATORY MEDICINE 399

IMMUN 550 Selected Topics in Immunology (1, max. 30) Formal seminar-discussion course for advanced students focused on recent developments in the field and consisting of literature research and intensive in-depth study of important and timely topics. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

IMMUN 551 Regulation of T Cell-Dependent B Cell Maturation (1, max. 30) *Clark* Credit/no credit. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 552 Immunogenetics and Autoimmunity (1, max. 30) Concannon Credit/no credit. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 553 Immunogenetics and Immunobiology (1, max. 30) *Pious* Credit/no credit. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 554 Immunogenetic Aspects of Human Autoimmunity (1, max. 30) Nepom Credit/no credit. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 555 Model of Autoimmune Disease and Their Regulation (1, max. 30) Goverman Credit/ no credit. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 556 Immune Recognition, Autoimmunity, and Immunogenetics (1, max. 30) Hood Credit/ no credit. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 557 Thymic Environment (1, max. 30) *Farr* Credit/no credit. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 558 Molecular Biology of the Human Antibody Repertoire (1, max. 30) *Milner* Credit/no credit. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 560 Progress in T Cell Research (1, max. 30) Bevan, Fink, Rudensky Credit/no credit. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 561 Mechanisms of Peripheral Tolerance (1, max. 30) *Fink* Credit/no credit. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 562 Developmental Regulation of T Cell Function (1, max. 30) *Wilson* Credit/no credit. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 563 Macrophage Biology: Signaling and Phagocytosis (1, max. 30) Aderem Credit/no credit only. Prerequisite: graduate standing in Immunology.

IMMUN 564 Cellular/Molecular Regulation of T Cell Responses (1, max. 30) Greenberg Credit/ no credit. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 565 T Cell Development and Cytokine Biology (1, max. 30) *Lewis* Credit/no credit. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 567 Antigen Processing and Presentation (1, max. 30) Rudensky Credit/no credit. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 568 Antibody Structure and Function (1, max. 30) Foote Credit/no credit only. Prerequisite: graduate standing in Immunology.

IMMUN 569 Genetics of Diabetes (1, max. 30) Lernmark Credit/no credit only. Prerequisite: graduate standing in Immunology. IMMUN 570 Cytokine Signaling in Lymphocytes (1, max. 30) *Nelson* Credit/no credit only. Prerequisite: graduate standing in Immunology.

IMMUN 573 Immunology Seminar Series (1, max. 30) Weekly discussion in which original research results are presented and discussed. Emphasis is on new and original contributions to field of immunology and related areas; occasional seminars are concerned with review of important topics. Credit/ no credit only. Prerequisite: firm background in immunology, permission of instructor. Offered: AWSp.

IMMUN 599 Introduction to Immunology Research (1-6) Current problems in immunological research. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

IMMUN 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

IMMUN 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

IMMUN 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Laboratory Medicine

NW120 University of Washington Medical Center

The Department of Laboratory Medicine provides service, education, and research. The divisions of the department include clinical chemistry, hematology, microbiology, coagulation, immunology, genetics, molecular diagnostics, virology, and medical informatics. In addition to courses for medical students, the department offers Bachelor of Science in Medical Technology and Master of Science degree programs. The department provides residency training in clinical pathology for graduate physicians and postdoctoral training in several subspecialty areas of laboratory medicine.

Undergraduate Program

Adviser

Medical Technology Program Director NW120 University of Washington Medical Center, Box 357110 (206) 548-6131 medtech@mail.labmed.washington.edu

Bachelor of Science in Medical Technology

Medical technology is a challenging and rewarding health-care profession. The medical technologist is a creative, knowledge-based professional who performs assays, analyzes problems, and helps evaluate test results. Seventy to eighty percent of the factual information used by physicians in making diagnostic and therapeutic decisions is based on laboratory test results.

Individuals who enjoy biology, chemistry, and physical sciences can find personal satisfaction and intellectual reward as a medical technologist, using scientific methods for the diagnosis and evaluation of disease. Advances in medical science and interest in health maintenance have resulted in exponential growth in the diversity and volume of laboratory procedures, including state-of-the-art molecular diagnostic tests.

The Medical Technology Program is a four-year course of study leading to a Bachelor of Science in Medical Technology degree. The freshman and sophomore years, known as the pre-professional phase (90 credits), are advised by the College of Arts and Sciences. The junior and senior years (seven quarters), known as the professional phase, are in the Department of Laboratory Medicine. Detailed information about program requirements, as well as application material, can be obtained from the Undergraduate Advising Center or the Department of Laboratory Medicine. Admission Requirements:

1. 90 credits to include: BIOL 201, 202; BIOL 203 or ZOOL 118; CHEM 142, 152, 162; CHEM 223, 224; MATH 124 or STAT 220.

2. Completion of University writing, reasoning, and general-education requirements. Writing and reasoning requirements include 5 credits of English composition, plus a minimum 7 credits of additional writingintensive courses, and 5 credits of quantitative reasoning. General-education requirements include a minimum of 40 credits from three Areas of Knowledge: Visual, Literary & Performing Arts; Individuals & Societies; and the Natural World. A minimum of 10 credits must be earned in each of the three Areas of Knowledge.

3. The Allied Health Professions Admissions Test (AHPAT) must be taken and scores received by the department's application deadline. Tests are given in September, November, January, and March.

4. Departmental application deadline: April 15 for autumn quarter only.

Suggested Introductory Course Work: CLAS 101; MICROM 301, 431; CHEM 321.

Graduation Requirements: Detailed requirements may be obtained from the Medical Technology Program Director, Department of Laboratory Medicine, Box 357110. A minimum of a "C" grade in all laboratorymedicine courses and a GPA of 2.00, both cumulative and in required courses, are required for graduation.

The Medical Technology Program and curriculum are accredited by the National Accrediting Agency for Clinical Laboratory Science (NAACLS). Graduates are eligible to take examinations that lead to nationally recognized certification. Examples of practice in medical technology include service in hospitals and clinics; research in industrial, public-health, and medical laboratories; sales and technical representatives in industry; and overseas work in missions and international health.

Graduate Program

Graduate Program Director NW120 University of Washington Medical Center, Box 357110 (206) 548-6131 gradprog@mail.labmed.washington.edu

The Department of Laboratory Medicine offers a graduate program leading to the Master of Science degree. Each student in the program selects one of the major areas of concentration (chemistry, coagulation, hematology, immunology, microbiology, or virology). The chemistry option is approved by the Commission on Accreditation in Clinical Chemistry. The other options have no comparable accrediting agencies.

A thesis based upon independent research in the student's selected area of concentration is required. Course requirements vary with the option selected. However, the program is flexible and permits each student (with the help of an adviser) to plan a course of study that meets individual needs. A full-time student normally completes the program in two years. The program prepares qualified candidates for supervisory positions in clinical laboratories and for careers in investigation or teaching in an area of clinical laboratory science.

Admission Requirements

Applicants must have a B.S. or B.A. degree in a field appropriate to the graduate study (medical technology, biochemistry, biology, chemistry, or microbiology) and meet the Graduate School requirements for admission. The applicant must also be certified as a medical technologist/clinical-laboratory scientist, or as a specialist in a particular area of laboratory medicine by one of the national certifying agencies. In addition, applicants must take the Graduate Record Examination aptitude test.

Major Requirements

Students must meet the minimum requirements for a master's degree as stated in the Graduate School section of this catalog. In addition, a core of courses is required for all students in the program as well as additional specific course requirements for the various major areas of concentration.

Financial Aid

Research assistantships may be available for secondyear students. Opportunities for part-time employment in departmental laboratories may be available, and applications will be considered.

Research Facilities

Each division in the department is equipped with modern facilities for research in its specialty area.

Residency Training Program

The department provides residency training in clinical pathology (laboratory medicine) for graduate physicians in cooperation with the Department of Pathology. Persons who complete the program are eligible for certification by the American Board of Pathology. For additional information, contact the Resident Program Director, Department of Laboratory Medicine, Box 357110.

Professors

Ashley, Rhoda L. * 1981; PhD, 1977, University of California (Davis); pathogenesis of viral infections, immune response to herpes, rapid diagnosis.

Benjamin, Denis R. * 1975; MBChB, 1968, University of Witwatersrand (South Africa); pediatric pathology, hematopathology, nutrition, circadian rhythms.

Chatrian, Gian E. 1959, (Emeritus); MD, 1951, University of Naples (Italy); electroencephalography and clinical neurophysiology.

Corey, Lawrence * 1977; MD, 1971, University of Michigan; laboratory medicine: diagnosis, therapy, and pathogenesis of viral infections, AIDS virus.

Coyle, Marie B. * 1973; PhD, 1965, Kansas State University; DNA probes and GLC for rapid identification of mycobacteria and corynebacteria.

Detter, James C. * 1969; MD, 1962, University of Kansas; laboratory diagnosis of genetic disorders, red-cell disorders and laboratory instrumentation.

Gilliland, Bruce C. * 1968; MD, 1960, Northwestern University; rheumatology/immunology.

Kaplan, Alex 1960, (Emeritus); PhD, 1936, University of California (Berkeley); clinical chemistry.

Kenny, Margaret * 1970, (Emeritus); PhD, 1968, University of Illinois; clinical chemistry, new technologies for in vivo clinical biochemical analysis.

Labbe, Robert F. * 1957, (Emeritus); PhD, 1951, Oregon State University; porphyrin disorders, nutritional biochemistry.

Mullins, James I. * 1994, (Adjunct); PhD, 1978, University of Minnesota; cell biology and biochemistry.

Plorde, James J. * 1967; MD, 1959, University of Minnesota; infectious diseases, antibiotic-resistant noso-comial infections.

Raisys, Vidmantas A. * 1971; PhD, 1969, State University of New York (Buffalo); clinical toxicology, therapeutic drug monitoring.

Schmer, Gottfried * 1969; MD, 1956, University of Vienna (Austria); tropical medicine and public health, clinical parisitology, preventive medicine.

Strandjord, Paul E. * 1969, (Emeritus); MD, 1959, Stanford University; clinical chemistry, leadership and management.

Associate Professors

Bauer, Larry * 1980, (Adjunct); PharmD, 1980, University of Kentucky; clinical pharmacokinetics and drug metabolism, drug interactions.

Chandler, Wayne L. * 1984; MD, 1982, St. Louis University; clinical chemistry, clinical coagulation, hematology.

Chou, David 1998; MD, 1974, University of Pittsburgh; medical informatics, instrument automation, clinical chemistry.

Clayson, Kathleen J. * 1969, (Emeritus); MS, 1968, University of Minnesota; enzymology in clinical chemistry.

Coombs, Robert W. * 1988; PhD, 1977, MD, 1981, Dalhousie University (Canada); diagnosis and pathogenesis of HIV infection.

Delaney, Collene J. * 1975; PhD, 1972, University of Illinois; clinical chemistry, the study of diabetes and alcoholism.

Fine, James * 1977; MD, 1972, MS, 1977, University of Minnesota; enzymology, medical informatics.

Fligner, Corinne L. 1983, (Adjunct); MD, 1976, University of New Mexico; autopsy and forensic pathology, fetal and perinatal pathology, forensic toxicology.

Fritsche, Thomas R. * 1984; MD, 1981, PhD, 1984, University of Minnesota; systematics and ecology of animal parasites; medical microbiology.

Hackman, Robert C. 1982; MD, 1971, Stanford University; infectious and pulmonary complications in immunocompromised patients.

Lampe, Mary F. 1988; MS, 1957, University of Washington; microbiology laboratory teaching.

Opheim, Kent E. * 1977; PhD, 1972, Cornell University; therapeutic drug monitoring, drug assay development, pediatric clinical chemistry.

Raghu, Ganesh 1981, (Adjunct); MD, 1974, University of Mysore (India); respiratory disease.

Rutledge, Joe C. * 1989; MD, 1976, Vanderbilt University; genetic disease pathology, human embryology, mouse mutagenesis, pediatric chemistry/hematology.

Schiller, Harvey S. * 1972; MD, 1966, Washington University; clinical chemistry, hematology, interpretation of laboratory data.

Stephens, Karen G. * 1989, (Research); PhD, 1982, Indiana University; molecular genetics of human inherited disease; gene mapping, regulation, and imprinting.

Tait, Jonathan F. * 1985; MD, 1983, PhD, 1983, Washington University; biochemistry of blood coagulation, laboratory diagnosis of genetic disorders.

Wener, Mark H. * 1981; MD, 1974, Washington University; diagnostic immunology, immune complex diseases.

Assistant Professors

Astion, Michael L. * 1993; PhD, 1989, MD, 1989, University of Pennsylvania; neural networks, multimedia computer-aided tutorials, immunology.

Battaglia, David 1980, (Adjunct); MS, 1978, PhD, 1985, University of Washington; gamete biology.

Behrens, Joyce A. 1972; MS, 1971, University of Minnesota; clinical hematology and clinical coagulation methodologies.

Cookson, Brad T. * 1993; MD, 1991, PhD, 1991, Washington University; cellular immune response to intracelluar bacteria, microbial pathogenesis, clinical microbiology.

Gretch, David R. * 1993; PhD, 1990, MD, 1990, University of lowa; research and diagnostics related to viral hepatitis.

Koelle, David 1992, (Adjunct); MD, 1985, University of Washington; allergy and infectious diseases.

Le Crone, Carol N. * 1967, (Emeritus); MS, 1966, Colorado State University; hematology, hemoglobinopathies.

McGonagle, Lee Anne 1970; MPH, 1969, University of Michigan; clinical microbiology, procedures for diagnostic bacteriology.

Sabath, Daniel E. * 1993; PhD, 1989, MD, 1989, University of Pennsylvania; regulation of gene expression in hematopoietic cells.

Szabo, La Verne 1970, (Emeritus); MS, 1970, University of Washington; general clinical chemistry, heavy metals in clinical chemistry.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

LAB M 321 Medical Technology: Introductory Clinical Hematology (6) Behrens Lecture and laboratory coverage of theoretical and practical aspects important in the evaluation of blood cells, to include their production, morphology, and function. Instrumentation used in testing included, as well as quality control and quality assurance issues. Offered: W.

LAB M 322 Medical Technology: Introductory Clinical Chemistry (5) Raisys Lecture and laboratory covering the theoretical and practical concepts associated with testing procedures performed in clinical chemistry. Offered: A.

LAB M 418 Topics in Clinical Chemistry (5) Raisys Lecture and laboratory exercises covering fundamentals of instrumentation, methodology, and quality control in the clinical chemistry laboratory. Offered: Sp.

LAB M 419 Clinical Coagulation (3.5) Behrens Lecture and laboratory coverage of the theory of the hemostatic system, to include tests used in the diagnosis/monitoring of patients with abnormal bleeding and/or thrombosis. Instrumentation as appropriate for testing included. Quality control and quality assurance discussed. Offered: S.

LAB M 420 Clinical Microscopy (3.5) Lampe, Raisys Lecture and laboratory covering urinalysis testing procedures and associated disease entities. Analysis of other body fluids. Methods of microscopic examination by use of bright-field, phase, and polarizing microscopy. Offered: S.

LAB M 421 Medical Microbiology (1/6) Lampe, McGonagle Lecture and laboratory coverage of human infections and diagnostic procedures used for isolation, identification, and antimicrobial susceptibility testing of the microorganisms associated with disease. Offered: S.

LAB M 423 Clinical Chemistry (* max. 24) Raisys Clinical testing related to protein and amino acid determinations, pancreatic function and intestinal absorption, renal and liver function, enzymes, electrolytes, and acid-base balance, lipids, toxicology, and endocrinology. Offered: AWSp. LAB M 424 Clinical Microbiology (* max. 24) Lampe, McGonagle Clinical study of techniques used in the diagnostic microbiology laboratory, including specimen evaluation, culture identification, and antimicrobial susceptibility testing of clinically significant organisms and quality-control. Offered: AWSp.

LAB M 425 Clinical Hematology (* max. 24) Behrens Clinical study of techniques used in the diagnostic evaluation of blood cells, including production, proliferation, survival, morphologic, and functional features. Assessment of proteins and cells important in hemostasis included. Quality control and quality assurance issues considered. Biomolecular techniques appropriate for evaluation of the hematologic and hemostatic systems discussed. Offered: AWSp.

LAB M 426 Clinical Immunohematology (7) Behrens Lecture and laboratory covering theory of transfusion medicine and serological procedures used in the evaluation of cellular antigen systems. Principles of immunology and genetics included as appropriate for the techniques performed; screening of donor units to provide a safe product discussed. Quality control and quality assurance issues considered. Offered: W.

LAB M 427 Selected Studies in Laboratory Medicine (* max. 24) Behrens, Lampe, McGonagle, Raisys Selected clinical study in the major scientific disciplines of laboratory medicine, to include molecular diagnostics, or pursuance of a clinical research study. Credit/no credit only. Offered: AWSpS.

LAB M 499 Undergraduate Research (*) Specific project in clinical laboratory investigation. Credit/no credit only. Offered: AWSpS.

LAB M 502 Laboratory Medicine Grand Rounds (1, max. 6) *Detter* Grand rounds are concerned with current topics in the field of laboratory medicine. Credit/no credit only. Offered: AWSp.

LAB M 510 Laboratory Medicine Research Conference (1, max. 6) *Tait* Presentation and discussion of ongoing research and development projects by faculty, residents, fellows, and graduate students. Open to graduate students in laboratory medicine and other medical sciences. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

LAB M 520 Seminar in Organization and Management in Laboratory Medicine (3) Chandler Core course for the Master of Science degree in laboratory medicine. Prerequisite: graduate student standing in laboratory medicine or permission of instructor. Offered: odd years; Sp.

LAB M 521 Advanced Laboratory Hematology (1, max. 6) Detter Lectures on diagnostic clinical hematology with emphasis on clinicopathological correlation. For laboratory medicine graduate students with special interest in diagnostic clinical hematology. Credit/no credit only. Prerequisite: graduate standing and permission of instructor. Offered: AWSp.

LAB M 522 Hematopathology Seminar (2) Sabath, Wood Identification of normal lymphocyte and bone marrow subpopulations, diagnosis of leukemias, lymphomas, and benign conditions that resemble them. Emphasis on histopathology, cytochemical, immunological, and molecular markers. Clinicopathologic correlation. Offered: jointly with PATH 522; even years; W.

LAB M 590 P-Research Projects in Laboratory Medicine (*) Tait Opportunity for laboratory experience on a research problem related to laboratory medicine. Students investigate new areas of potential clinical importance. Highly variable selection of projects includes chemistry, coagulation, hematology, immunology, microbiology, virology, and computer applications. Research goals established by instructor in discussion with each student. Prerequisite: permission of instructor. Offered: AWSpS.

LAB M 596 Clinical Chemistry Seminar (2) Raisys Conferences on research and development in clinical chemistry. For postdoctoral students in clinical chemistry and graduate students. Prerequisite: permission of instructor. Offered: AWSp.

LAB M 601 Internship (3-9, max. 9) Credit/no credit only. Prerequisite: graduate standing in laboratory medicine. Offered: AWSpS.

LAB M 680 P-Clinical Laboratory Testing: Methods and Interpretation (*) Detter Provides the third- and fourth-year medical student with the opportunity to evaluate clinical laboratory data in the clinical laboratory setting. One-on-one teaching using case material and actual clinical samples. Offered: AWSpS.

LAB M 685 P-Laboratory Case Studies for Clinical Diagnosis (4) Rutledge Clinical case presentations and discussions aimed at test selection, disease-induced alterations, efficient algorithms, factors confounding interpretation, testing economics. Prerequisite: completion of required clerkships. (Four weeks half-time) Offered: A.

LAB M 699 P-WWAMI Laboratory Medicine Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

LAB M 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

Medical Education

The objectives of the Department of Medical Education are to discover, disseminate, and apply knowledge of educational theory and practice in medical education. Research seeks to increase the basic fund of knowledge in educational theory and practice in medical education. Through teaching, the educational knowledge base is transmitted to the faculty, fellows, residents, and students. Through scholarly research, teaching, and service, educational expertise is used to enhance the quality of academic programs in medicine and the health sciences.

Faculty

Chair

Fredric M. Wolf

Professors

Dohner, Charles W. * 1967; PhD, 1966, Ohio State University; program evaluation, administration, faculty development.

Scott, Craig S. 1979; MEd, 1970, California State University, Sacramento; PhD, 1973, University of Iowa; performance based teaching and assessment.

Wolf, Fredric M. 1997; MEd, 1977, PhD, 1980, Kent State University; evidence-based medicine, clinical reasoning, decision support systems evaluation.

Associate Professors

Carline, Jan D. 1977; MEd, 1976, PhD, 1979, University of Washington; clinical evaluation, program evaluation.

Fuller, Sherrilynne S. 1988; PhD, 1984, University of Southern California; library and information management.

Senior Lecturers

Ballweg, Ruth A. 1981; BS, 1969, Southern Oregon State College; women's health issues.

Stoll, Henry 1978; BA, 1971, Brown University; physician assistant education and professional issues, curriculum development.

Lecturers

Asplin, Norma J. 1992; MS, 1978, University of Colorado (Denver); physician assistant education.

Flynn, Barbara G. 1994; BA, 1977, Seattle Pacific University; physician assistant education.

Gianola, Fred J. 1987; PA-C, 1973, University of Washington; physician assistant education.

Harder, Ellen J. 1988; PA-C, 1978, University of Washington; outpatient clinical problems, orthopedics and administration.

Landel, Grace P. 1990; BA, 1978, University of California (Santa Cruz); physician assistant education.

MacLaren, Carol F. 1989; MS, 1980, PhD, 1985, University of Pennsylvania; educational research.

Plummer, William T. 1992; BS, 1974, University of Nebraska; physician assistant education.

Schaad, Douglas C. 1975; MEd, 1974, PhD, 1986, University of Washington; educational outcomes, biomedical informatics, workforce analysis, viticulture.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Medical Education

MEDED 499 Undergraduate Research (* max. 12) *Scott* Investigative research or readings in medical education; topics include clinical reasoning, curriculum development, evaluation, use of computers in medical education, and educational research in medical settings. Credit/no credit only. Prerequisite: permission of instructor.

MEDED 510 Topics in Medical Education Research (1/3, max. 12) Selected research topics in medical education. Development of skills in critical analysis and production of original research. Optional: 1 additional credit for seminar focusing on application of issues in education practice. Credit/no credit only. Offered: Sp.

MEDED 511 Current Issues in Medical Education (2) Dohner, Scott, Wolf Addresses current issues in medical education in the context of historic and contemporary developments. Topics include curriculum development, teaching, and learning, clinical knowledge and reasoning, assessment, professional development, program evaluation, and certification. Offered: A.

MEDED 512 Leadership in Academic Medicine (1) Dohner, Scott Explores the theoretical and practical aspects of leadership in academic medicine. Topics include qualities of effective leadership, leadership styles, and impact of institutional organization and culture on leadership. Offered: S.

MEDED 520 Teaching Methods in Medical Education (2) Empirical and theoretical merits of different teaching methods as applied to medical education. Structuring and leading group discussions, using questions, organizing and delivering lectures, identifying styles of clinical supervision, providing constructive feedback, and presenting effective clinical demonstrations. Offered: W.

MEDED 521 Evaluation of Learning in the Health Sciences (3) Carline Basic issues and methods for evaluation of learning: cognitive performance, psychomotor skills, and reasoning abilities in classroom, laboratory, and clinical settings. Practical applications of instruments such as multiple-choice questions, essays, oral examinations, checklists, rating scales, simulations, and patient management problems. Recommended: 520. Offered: Sp.

MEDED 522 Research in Medical Education (2) *Scott* Individualized, problem-based overviews of research methods and research design pertinent to research and scholarship in medical education. Development and sequencing of research projects from conceptualization through literature review, including proposal development, project implementation, data management, analysis, and write-up. Assessment and critical reading of related literature stressed. Offered: A.

MEDED 530 Medical Informatics (3) Brinkley, Fine, Fuller, Kalet, Schaad, Tarczy-Hornoch Overview of medical informatics concepts and theories, historical evolution, current and future research directions in the context of information flow in health care settings. Offered: Sp.

MEDED 531 Computing Concepts for Medical Informatics (3) Kalet Survey of computer science concepts, oriented to students and practitioners in field of medical informatics. Introduction to algorithms, data structures, computational complexity, programming languages (including Common Lisp), operating systems, networks and protocols, databases and selected topics in software engineering. Examples from medical and biological applications of computing. Credit/no credit only. Offered: A.

MEDED 536 Bioinformatics and Gene Sequence Analysis (3) Rose Nature and relevance of molecular sequence information, computer-based protein, and DNA sequence analysis, molecular sequence and genomic databases, and methods for database accession and interrogation. Credit/no credit only. Prerequisite: background in molecular biology and permission of instructor. Offered: jointly with PABIO 536; W.

MEDED 540 Critically Appraising and Applying Evidence in Health Care (2) Wolf Literature appraisal skills for various articles (therapy effectiveness, diagnostic tests, literature reviews, clinical measurement, prognosis, quality of care, decision analysis, causation/etiology, guidelines, and economic evaluation). Appraisal of clinical information from literature, strengths/weaknesses of data, analyses, study design/applicability to a current patient's problem. Offered: W.

MEDED 541 Introduction to Systematic Reviews and Meta-analysis of Evidence (2) Wolf Conceptual understanding of the quantitative methods used to synthesize evidence. Methods for pooling evidence across independent studies, pooling binary/continuous outcomes, differences between fixed and random effects models, and guidelines for appraising published systematic reviews/metaanalyses. Prerequisite: introductory level courses in statistics, epidemiology or biostatistics. Offered: Sp.

MEDED 590 Selected Topics in Health Informatics (1-3, max. 12) Computers and information technology are improving and changing healthcare education, research, and clinical practice. Informatics faculty and researchers from the UW and affiliated institutions present their research findings as well as discuss their views of national developments in their respective disciplines. Offered: AWSp.

MEDED 599 Independent Study or Research (* max. 6) Credit/no credit only.

MEDEX Northwest

MEDEX 451 Anatomy and Physiology for the MEDEX Practitioner (6) *Blomstrand* Anatomy and physiology of the following organ systems: HEENT, respiratory, cardiovascular, gastrointestinal, reproductive, renal, musculoskeletal, and neurologic. Re-

quired for entering students to the MEDEX program who have not satisfied program prerequisites in anatomy and physiology. Offered: S.

MEDEX 452 Basic Clinical Pathology for the MEDEX Practitioner (6) *Stoll* Basic pathological and pathophysiological concepts of diseases commonly encountered in primary-care practice. Pathophysiology studied per organ system. Offered: A.

MEDEX 453 Basic Clinical Skills for the MEDEX Practitioner (6) Landel, Scott Provides the student with mastery of a screening history and physical examination and thoroughness in data-collection skills. Branching examinations of major organ systems and medical record-keeping and verbal presentation skills by the problem-oriented method are taught. Offered: A.

MEDEX 454 Adult Medicine I (7) Scott, Zakar Problem-oriented approach to the diagnosis and management of common primary care conditions. Introduction to relevant laboratory and radiological procedures. Organ system approach covers HEENT, respiratory, cardiovascular, gastrointestinal, and dermatologic systems. Offered: W.

MEDEX 455 Adult Medicine II (7) Scott, Zakar Continuation of 454. Introduction to relevant laboratory and radiological procedures. Organ system approach covers endocrine, renal, reproductive, hematologic, musculoskeletal, and neurological systems. Offered: Sp.

MEDEX 456 Maternal and Child Health for the MEDEX Practitioner I (3) Landel Designed to acquaint students with principles of prenatal care and primary-care pediatrics. Prenatal care, labor and delivery, newborn exam, developmental screening, growth and development. Offered: W.

MEDEX 457 Behavioral Science Skills for the MEDEX Practitioner I (3) Harder, Lurie Process skills and interpersonal skills needed for primarycare practice, assessment skills needed for the diagnosis of emotional problems, and management skills used in primary-care practice to deal with these problems. Offered: A.

MEDEX 458 Behavioral Science Skills for the MEDEX Practitioner II (3) Harder, Lurie In-depth coverage of common emotional problems seen in primary care. Topics include crisis intervention, child abuse, death and dying, life planning, behavioral modification, and family therapy techniques. Offered: W.

MEDEX 459 Behavioral Science Skills for MEDEX Practitioner III (3) Ballweg, Lurie In-depth approaches to assessment and management of specific primary-care problems, including posttraumatic stress disorders, SIDS, AIDS, violent patient, relevance of male/female issues to primary care, and emotional and sexual needs of disabled persons. Advanced interviewing skills with videotaped feedback included. Offered: Sp.

MEDEX 460 Principles of Patient Management for the MEDEX Practitioner I (3) *Stoll* Systematic approach to patient management applicable to a primary-care setting. Majority of course is devoted to drug therapy and its administration. The other half includes health maintenance, risk factor identification, and nonpharmacological models of therapy. Offered: W.

MEDEX 461 Principles of Patient Management for the MEDEX Practitioner II (3) *Stoll* Continuation of 460. Offered: Sp.

MEDEX 462 Maternal and Child Health for the **MEDEX Practitioner II (3)** *Landel* Continuation of 456. Emphasis on pediatric history taking and physical exam, and diagnosis and treatment of common pediatric problems. Offered: Sp.

MEDEX 463 Clinical Clerkships for the MEDEX Practitioner I (19) Gianola, Gunter-Flynn Full-time clinical clerkship spent in institution-based or specialty practice settings, such as occupational health, surgery, emergency medicine, psychiatry, or geriatrics. Offered: AWSpS.

MEDEX 465 Clinical Clerkships for the MEDEX Practitioner II (19) Gianola, Gunter-Flynn Continuation of clinical clerkships spent in institutionbased or specialty practice settings, with emphasis on inpatient medicine. Offered: AWSpS.

MEDEX 466 Family Practice Clerkship for the **MEDEX Practitioner I (19)** Ballweg, Landel Family practice under the supervision of physicians throughout the Pacific Northwest. Common primary-care problems. Students and preceptors are educated in the utilization and management of the physician assistant in practice. Students keep computerized records of patient encounters and complete a variety of written assignments. Credit/no credit only. Offered: AWSpS.

MEDEX 467 Family Practice Clerkship for the MEDEX Practitioner II (19) Ballweg, Landel Further experience in primary-care practice with emphasis on independent patient management by the student supervised by family practitioners. Credit/no credit only. Offered: AWSpS.

MEDEX 468 Emergency Medicine I for the MEDEX Practitioner (3) *Plummer* Approach to the diagnosis and management of common emergency conditions for primary care physician assistants. Topics include multiple trauma, chest trauma, abdominal trauma, shock, and cardiac emergencies. Offered: W

MEDEX 469 Emergency Medicine II for the MEDEX Practitioner (3) *Plummer* Approach to diagnosis and management of common emergency conditions for primary care physician assistant. Topics include poisonings and overdoses, environmental emergencies, thermal injuries, orthopedic emergencies, pediatric emergencies, and head trauma. Offered: Sp.

MEDEX 499 Special Field Projects/Independent Study (1-12) Clinical clerkships and independent study activities for students enrolled in the MEDEX Northwest Physician Assistant Program.

Medical History and Ethics

The Department of Medical History and Ethics offers a program of study leading to a Master of Arts in Bioethics designed for health-care professionals who desire to augment their professional education and practice with specialized training in ethical theory, practical methods for case analysis and decision making, and research methods.

Undergraduate students may select a minor in medical history and ethics. Departmental courses for undergraduates are also included the Program in History of Science, Technology and Medicine offered through the Department of History in the College of Arts and Sciences.

Minor

Minor Requirements: 25 credits of medical history and ethics and related courses, to include MHE 411; MHE 401 or 417; one of the following: MHE 440, PHIL 160, 459, or 460; plus an additional 12-14 credits selected from the following list, to total 25 credits (including core courses): MHE 402, 422, 424, 481, 483, 485, 497, 498, 499; ANTH 375, 475, 476, 477; ENGL 364; GEOG 280; HIST 311 or MHE 419; HIST 312 or MHE 421; PHIL 345, 411, or MHE 474. Minimum grade of 2.0 required in each course presented for the minor.

Graduate Program

Graduate Program Coordinator A204 Health Sciences, Box 357120 (206) 543-5145

Special Requirements

Applicants for the Master of Arts program must meet requirements for admission to the Graduate School and present a professional degree and work experience in a health-care setting. Additional information concerning acceptable preparation may be obtained by contacting the graduate program coordinator.

Requirements for the degree include three full-time quarters in residence; completion of a program of study including courses in history of medicine, ethical theory, medical jurisprudence, and ethical case analysis; a written comprehensive exam; and a master's degree project.

Faculty

Chair

Albert R. Jonsen

Professors

Benson, Keith R. * 1981; MA, 1973, PhD, 1979, Oregon State University; history of modern American biology, marine biology, and evolutionary biology.

Berryman, Jack W. * 1975; MS, 1971, MA, 1974, University of Massachusetts; PhD, 1976, University of Maryland; history of exercise, sports medicine, and health behavior/philosophy.

Jonsen, Albert R. * 1987; MA, 1956, Gonzaga University; PhD, 1967, Yale University; philosophical, historical values affecting practice and delivery of health care.

Odegaard, Charles E. 1979, (Emeritus); MA, 1933, PhD, 1937, Harvard University; history of medical education.

Whorton, James C. * 1970; PhD, 1969, University of Wisconsin; history of medicine, public health, pharmacy and alternative healing.

Associate Professors

Jecker, Nancy A. S. * 1988; MA, 1982, Stanford University; MA, 1984, PhD, 1986, University of Washington; philosophical and ethical aspects of health care delivery and policy.

Pearlman, Robert A. * 1981, (Adjunct); MD, 1975, Boston University; gerontology.

Sullivan, Mark D. 1985, (Adjunct); PhD, 1982, MD, 1984, Vanderbilt University; depression and chronic medical illness, chronic pain, ethics, quality of life.

Assistant Professors

Braddock, Clarence H. 1993, (Adjunct); MD, 1981, University of Chicago; internal medicine, critical care and public ethics.

Diekema, Douglas S. 1993, (Adjunct); MD, 1985, University of North Carolina; MPH, 1993, University of Washington; pediatric emergency medicine.

Durfy, Sharon J. * 1991, (Research); PhD, 1990, University of Toronto (Canada); ethical aspects of genetic testing, counseling, research, public policy.

Tonelli, Mark R. 1996, (Adjunct); MD, 1989, University of Colorado (Boulder); pulmonary and critical care medicine.

Senior Lecturer

McCormick, Thomas R. * 1974; BDiv, 1960, Drake University; DMin, 1976, Southern Methodist University; biomedical ethics, particularly relating to neonatology, and problems related to death and dying.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

MHE 401 History of Modern Medicine (5) I&S *Whorton* Analysis of the evolution of medical theory and practice in European and American society from antiquity to the present. Emphasis on the development of medicine since the Renaissance. medical background not required. Recommended: prior courses in sciences and/or history.

MHE 402 Normative Ethical Theory (5) I&S Jecker Development of moral thought from Hobbes through Nietzsche, with particular emphasis on the ethical writings of David Hume, Immanuel Kant, and Jeremy Bentham. Recommended: one basic course in ethics.

MHE 404 Metaethical Theory (5) I&S Jecker Study of major ethical writings in the twentieth century, with principal emphasis on the Anglo-American tradition. Recommended: one introductory philosophy course.

MHE 411 Introduction to Bioethics (3) I&S Basic concepts, principles, and methods of analysis, with application to some major issues in the field of bioethics. Case studies utilized to illustrate nature of questions arising in bioethics and to provide students with opportunity to develop skills in ethical analysis.

MHE 417 Disease in History (3) I&S *Whorton* Study of Western civilization's experience with epidemic disease, the growth of understanding of the causes of disease, the formation of a philosophy of prevention, and the development of programs to protect the public health. Emphasis on the last two centuries. Medical background not required.

MHE 422 History of Evolution Theory (3) I&S *Benson* Development of evolution theory from its early-nineteenth-century roots through the work of Charles Darwin. Impact of evolution theory on society and the formulation of the theory in the twentieth century.

MHE 424 Modern Biology in Historical Perspective (5) I&S Benson Two diverse traditions of biology, natural history, and physiology, in their nineteenth-century development and their subsequent merging after Darwin's evolution theory. Emergence of specialty areas in biology after the beginning of the twentieth century.

MHE 440 Philosophy of Medicine (5) I&S Jecker Familiarizes students with central issues in the philosophy of medicine. Focuses on the nature of medical knowledge, the connection between theory and observation, the meaning of medical concepts, and the relationship between theories and the world. Recommended: prior courses in philosophy, history of science, or history of medicine. Offered: jointly with PHIL 459.

MHE 474 Justice in Health Care (5) VLPA/I&S Jecker Examination of the ethical problem of allocating scarce medical resources. Emphasis on fundamental principles of justice that support alternative health policies. Recommended: prior courses in philosophy or medical ethics. Offered: jointly with PHIL 411.

MHE 481 The Pursuit of Health in American Society (5) I&S Berryman, Whorton Examination of the development of concern for personal health over the past two centuries, and of the evolution of philosophies and practices of health promotion. Emphasis on the influence of both medicine and popular culture on shaping of attitudes towards diet, exercise, dress, sex, and other health behavior.

MHE 483 The Rise and Development of Sports Medicine (3) 1&S Berryman Evolution of medical thought related to exercise for good health, training for sport participation, and treatment of sport-related injuries. Begins with ancient period, concludes with present. Development of specialization in sports medicine, sport team physicians, preventive medicine, concepts of fitness and wellness as related to exercise prescription, and sports medicine clinics.

MHE 485 Concepts of the Body in Nineteenth- and Twentieth-Century America (3) I&S Berryman Investigation of ideas relating to corporeal self in nineteenth- and twentieth-century America. Evolution of physical ideals of manliness/femininity, how ideals related to surrounding culture, how different bodily activities developed to realize ideals. Athleticism, physiognomy, beauty contests, body building, decorations, cosmetics, anthropometry, artificial parts.

MHE 497 Medical History and Ethics Special Electives (*)

MHE 498 Undergraduate Thesis (*)

MHE 499 Undergraduate Research (* max. 5) Investigative work in history of the biomedical sciences.

MHE 501 Alternative Approaches to Healing (2) *Whorton* Philosophies and practices of the major alternative approaches to healing. Historical characterization of alternative medicine accompanied by presentations by practitioners of chiropractic, naturopathic, homeopathic, and traditional Chinese medicine.

MHE 510 Topics in Medical History and Ethics (* max. 6) Detailed study of topics in medical history and ethics through lectures, seminars, and discussion. Open to majors and graduate students in medicine, the arts and sciences, and others with appropriate background and interest. Prerequisite: permission of instructor.

MHE 511 P-Medical Ethics (2) Ethics course designed especially for first- and second-year medical students. Study of ethical problems arising in clinical setting of medicine, introducing students to philosophical analysis and argument in practical contexts. Seminar-discussion format with readings from contemporary authors.

MHE 512 P-The Human Face of Medicine (2) *McCormick* Foundation of human values undergirding medical practice. Images of physician—motivations for medicine, empathy *versus* detachment in doctor-patient relationship, health for the health-professional—the art of coping, limits of power—when medicine fails to cure, uses/abuses of technology, physician's role in public health issues, the healing process.

MHE 513 P-Ethical Responsibilities of Medical Practice (2) Provides intensive and practical guidance about management of principal ethical and legal problems that arise in clinical practice: informed consent, confidentiality, decisions regarding life-support, advance directives and surrogate decisionmakers, duty to care for indigent and risky patients. Offered: one-week intensive; S.

MHE 516 Ethical Frameworks for Public Health Genetics (2) *Durfy* Case-based application of ethical principles in genetic medicine to range of problems arising in genetics practice, policy, research. Examination of traditional problems including eugenics and testing/screening for genetic disease, as well as emerging problems in population and environmental genetics. Prerequisite: MHE 514/PHG 512. Offered: jointly with PHG 522; W.

MHE 520 Seminar in the History and Philosophy of Medicine (3) Origins and philosophical foundations of medical sciences. Critical analysis of processes of evaluation and explanation in biomedical sciences. Consideration of evolution and nature of modern biomedical investigation; concepts of life/ death, health/disease; philosophical dimensions of clinical medicine. Open to majors, medical students, arts and sciences graduate students, and others.

MHE 521 The Ethical Challenges of Modern Medicine (3) *McCormick* Case-study approach to contemporary ethical issues in medicine, utilizing techniques of ethical analysis and argument in examining actual cases arising in our pluralistic culture, where values are often in conflict. Open to graduate and professional students and others with appropriate background.

MHE 522 Ethical Problems Surrounding Death (3) *McCormick* Issues arising in care and treatment of dying patients and their families, including truthful disclosure, use of life-supports, "euthanasia," coping with death and grief. Intersection of patient and professional values related to care in terminal phase of illness. Open to graduate and professional students and others with appropriate background.

MHE 523 Biomedical Ethics (3) *McCormick* Selected topics in medical ethics emphasizing methods of ethical reasoning about moral dilemmas and contributions of philosophical theories and principles to practical problems of medicine. Students provided with opportunities to test their value assumptions and analytical skills. Open to graduate and professional students and others with appropriate background.

MHE 525 Seminar in the History and Philosophy of Biology (3) Tailored to individual interests in certain areas of the history and philosophy of biology. Open to majors and graduate students in medicine, the arts and sciences, and others with appropriate background and interest.

MHE 535 Medical Ethics and Jurisprudence (3) Jonsen Relationship between bioethics and law. Review of basic concepts of both disciplines; their theoretical and practical connections. Analysis of principal legal cases and statutes illustrating such issues as informed consent to treatment, foregoing life support, research with human subjects, confidentiality, allocation of health care resources. For graduate and professional students.

MHE 540 Seminar in the History of Health and Physical Exercise (3) Selected topics in the development of medical thought as it relates to exercise, sport, and overall well-being. Open to majors and graduate students in medicine, the arts and sciences, and others with appropriate background and interest. Prerequisite: permission of instructor.

MHE 545 Seminar in Clinical Ethics (3) Jonsen Review of various approaches to analyzing ethical aspects of clinical decisions. Relationship between ethical theories and practical problems. Analysis of important current cases in medical ethics to demonstrate a systematic method of clinical-ethical analysis. Open only to graduate and professional students.

MHE 595- Clinical Ethics Practicum (4-) Students spend one week on each of four clinical services at University of Washington teaching hospitals. Under direction of clinicians, observe patient care activities, participate in care conferences, become familiar with relevant medical and ethical literature. For majors only.

MHE 600 Independent Study or Research (*)

MHE 700 Master's Thesis (*)

Medicine

RR512 University of Washington Medical Center

Active programs in teaching, research, and patient care are carried on at the University of Washington Medical Center, Seattle Veterans Affairs Medical Center, Harborview Medical Center, Pacific Medical Center, the Puget Sound Blood Center, the Northwest Kidney Center, and the Fred Hutchinson Cancer Research Center. Major affiliations for clinical teaching also exist with Providence Medical Center and Swedish Hospital Medical Center. There are many additional affiliations with community hospitals in Seattle, the state of Washington, and the WWAMI region. Medical students, interns, medical residents, and postdoctoral research fellows rotate through these various hospitals and participate in the learning experiences offered at each.

Faculty

Chair

Henry Rosen

Professors

Abkowitz, Janis L. 1980; MD, 1977, Harvard University; hematology.

Abrass, Christine K. 1984; MD, 1973, Case Western Reserve University; nephrology.

Abrass, Itamar B. 1983; MD, 1966, University of California (San Francisco); gerontology.

Aderem, Alan * 1996; PhD, 1979, University of Capetown (South Africa); macrophage development and differentiation, phagocytosis, signal transduction and the cytoskeleton.

Albers, John J. * 1971, (Research); MS, 1967, PhD, 1969, University of Illinois; lipoprotein metabolism and pathophysiology.

Alpers, Charles E. 1986, (Adjunct); MD, 1978, University of Rochester; clinical/experimental glomerular disease, AIDS in man and experimental simian AIDS, vascular biology.

Appelbaum, Frederick R. 1978; MD, 1972, Tufts University; oncology.

Austin, Melissa A. * 1988, (Adjunct); PhD, 1985, University of California (Berkeley); genetic and cardiovascular disease epidemiology, quantitative methods.

Bardy, Gust H. 1983; MD, 1977, Northwestern University; cardiology.

Baskin, Denis G. * 1979, (Research); PhD, 1969, University of California (Berkeley); histology, cytochemistry, neuroendocrinology.

Beeson, Paul B. 1974, (Emeritus); MD, 1933, McGill University (Canada).

Berk, Bradford Charles * 1994; MD, 1981, PhD, 1981, University of Rochester; cardiology.

Bird, Thomas D. 1976; MD, 1968, Cornell University; neurology.

Bishop, Michael J. 1979, (Adjunct); MD, 1974, University of California (San Diego).

Blagg, Christopher R. 1966; MD, 1954, MBChB, 1954, University of Leeds (UK); nephrology.

Bomsztyk, Karol 1983; MD, 1977, University of Rochester; nephrology.

Bornstein, Paul * 1967; MD, 1958, New York University; extracellular matrix.

Bremner, William J. 1980; MD, 1969, University of Washington; PhD, 1977, Monash University (Australia); endocrinology.

Brown, B. Greg 1981; MD, 1969, PhD, 1969, Johns Hopkins University; cardiology.

Bruce, Robert A. 1950, (Emeritus); MD, 1943, University of Rochester; cardiology.

Brunzell, John D. * 1969; MD, 1963, University of Washington; nutritional and metabolic aspects of lipoproteins and diabetes.

Buchner, David M. * 1984, (Adjunct); MD, 1977, University of Kansas; MPH, 1984, University of Washington; geriatric health promotion.

Byers, Peter H. * 1976; MD, 1969, Case Western Reserve University; extracellular matrix synthesis, genetic disorders of collagen metabolism, secretion.

Caldwell, James H. 1978; MD, 1970, University of Missouri; cardiology.

Carithers, Robert L. 1990; MD, 1969, University of Pennsylvania; gastroenterology/hepatology.

Chait, Alan * 1977; MBChB, 1967, MD, 1974, University of Capetown (South Africa); clinical nutrition with special emphasis on lipid metabolism.

Cheever, Martin A. 1975; MD, 1970, University of Michigan; oncology.

Chesnut, Charles * 1974; MD, 1966, University of Florida; nuclear medicine.

Cobb, Leonard A. 1957, (Emeritus); MD, 1952, University of Minnesota; cardiology.

Collier, Ann C. 1982; MD, 1978, Dartmouth College; infectious diseases.

Collins, Steven J. 1980; MD, 1973, Columbia University; oncology.

Copass, Michael K. 1973; MD, 1964, MA, 1964, Northwestern University; neurology/emergency services.

Corey, Lawrence * 1977; MD, 1971, University of Michigan; laboratory medicine: diagnosis, therapy, and pathogenesis of viral infections, AIDS virus.

Counts, Richard B. 1973; MD, 1967, Washington University; hematology.

Couser, William G. 1982; MD, 1965, Harvard University; nephrology.

Cummins, Richard 1977; MD, 1972, Case Western Reserve University; MPH, 1977, University of Washington; emergency medicine.

Dale, David C. 1974; MD, 1966, Harvard University; internal medicine.

Dale-Crunk, Beverly A. * 1972, (Adjunct); PhD, 1968, University of Michigan; keratin biochemistry.

Deeb, Samir S. * 1983, (Research); PhD, 1964, University of Illinois; genetic factors predisposing to hyperlipidemia and coronary artery disease.

Deeg, H. Joachim 1994; DrMed, 1972, University of Bonn (Germany); oncology.

Dennis, Melvin B. * 1971, (Adjunct); DVM, 1961, Washington State University; comparative medicine, including animal models and experimental surgery.

Deyo, Richard A. * 1986; MD, 1975, Pennsylvania State University; health status measurement and evaluation of common medical practices.

Disteche, Christine M. * 1980, (Adjunct); PhD, 1976, University of Liege (Belgium); molecular genetics of sex chromosomes, X inactivation, human and mouse cytogenetics.

Dodge, Harold T. 1969, (Emeritus); MD, 1948, Harvard University; cardiology.

Dorsa, Daniel M. * 1981, (Adjunct); PhD, 1977, University of California (Davis); neuropharmacology, neurochemistry.

Eisenberg, Mickey * 1975; MD, 1971, Case Western Reserve University; PhD, 1978, University of Washington; sudden cardiac arrest and acute myocardial infarction. Eliel, Leonard P. 1974, (Emeritus); MD, 1940, Harvard University; metabolism and endocrinology.

Ensinck, John W. * 1961, (Emeritus); MDCM, 1956, McGill University (Canada); the role of GI hormones in fuel homeostasis.

Fefer, Alexander 1968; MD, 1964, Stanford University; oncology.

Fields, Stanley 1995; MA, 1978, PhD, 1981, Cambridge University (UK); molecular genetics.

Figley, Melvin M. 1958, (Emeritus); MD, 1944, Harvard University; thoracic and pulmonary radiology.

Fihn, Stephan * 1979; MD, 1977, St. Louis University; MPH, 1981, University of Washington; internal medicine.

Finch, Clement A. 1949, (Emeritus); MD, 1941, University of Rochester; hematology.

Fujimoto, Wilfred Y. * 1970; MD, 1965, Johns Hopkins University; metabolism, endocrinology, nutrition.

Furlong, Clement E. * 1977, (Research); PhD, 1968, University of California (Davis); human biochemical genetics in biochemistry of membrane transport systems.

Gartler, Stanley M. * 1957, (Emeritus); PhD, 1952, University of California (Berkeley); mammalian somatic cell genetics with emphasis on the mechanism of x-chromosome inactivation.

Gilliland, Bruce C. * 1968; MD, 1960, Northwestern University; rheumatology/immunology.

Glomset, John A. * 1960; MD, 1960, University of Uppsala (Sweden); membrane structure and function.

Goodner, Charles J. * 1962, (Emeritus); MD, 1955, University of Utah; metabolism and endocrinology.

Graham, Michael M. * 1980, (Adjunct); PhD, 1973, University of California (Berkeley); MD, 1976, University of California (San Francisco); positron emission tomography, nuclear medicine.

Greenberg, Philip D. * 1978; MD, 1971, State University of New York (Downstate); molecular, cellular, viral, and tumor immunology.

Haggitt, Rodger C. 1984, (Adjunct); MD, 1967, University of Tennessee; anatomic pathology, gastrointestinal pathology.

Handsfield, Hunter 1979; MD, 1968, Columbia University; infectious diseases.

Hansen, John A. 1977; MD, 1970, Stanford University; oncology.

Harlan, John M. * 1978; MD, 1973, University of Chicago; hematology, leukocyte-endothelial interaction.

Henderson, Maureen M. * 1975, (Emeritus); MBBS, 1949, DPH, 1956, University of Durham (UK); application of epidemiology to disease prevention, dietary prevention of disease.

Henderson, William R. 1978; MD, 1973, University of California (San Francisco); allergy and infectious disease.

Hildebrandt, Jacob * 1966; PhD, 1966, University of Washington; respiratory physiology.

Hirschmann, Jan V. 1976; MD, 1970, University of Washington; internal medicine.

Hlastala, Michael P. * 1972; PhD, 1969, State University of New York (Buffalo); respiratory physiology, inert gas analysis of respiratory function.

Holmes, King K. * 1969; MD, 1963, Cornell University; PhD, 1967, University of Hawaii; clinical epidemiology and pathogenesis of infectious diseases.

Hood, Leroy E. * 1992, (Adjunct); PhD, 1968, California Institute of Technology; molecular immunology, largescale DNA mapping and sequencing, molecular evolution.

Hudson, Leonard D. 1973; MD, 1964, University of Washington: respiratory diseases.

Johnson, Richard J. 1986; MD, 1979, University of Minnesota; nephrology.

Jonsen, Albert R. * 1987, (Adjunct); MA, 1956, Gonzaga University; PhD, 1967, Yale University; philosophical, historical values affecting practice and delivery of health care.

Kaushansky, Kenneth * 1986; MD, 1979, University of California (Los Angeles); hematology.

Kennedy, J. Ward 1966; MD, 1959, University of Rochester; cardiology.

Kimmey, Michael 1982; MD, 1979, Washington University; gastroenterology/endoscopy.

King, Mary-Claire * 1995; PhD, 1973, University of California (Berkeley); genetic analysis of complex human phenotypes, human diversity and evolution.

Kiviat, Nancy B. * 1979, (Adjunct); MA, 1970, MD, 1975, University of Washington; epidemiologic and molecular biologic studies of the relationship between HPV, HIV, and neoplasia.

Klebanoff, Seymour * 1962; MD, 1951, University of Toronto (Canada); PhD, 1954, University of London (UK); infectious disease.

Knopp, Robert H. * 1974; MD, 1964, Cornell University; metabolism and endocrinology.

Koepsell, Thomas D. * 1979, (Adjunct); MD, 1972, Harvard University; MPH, 1979, University of Washington; injury, cardiovascular epidemiology, neuroepidemiology, methods, application to health services.

Koerker, Donna J. * 1982; PhD, 1970, University of Michigan; endocrinology, intermediate metabolism of carbohydrates.

Kreiss, Joan K. * 1986; MD, 1978, Washington University; MPH, 1984, University of California (Los Angeles); epidemiology of AIDS, particularly in Africa.

Lakshminarayanan, S. 1975; MBBS, 1965, All-India Institute of Medical Science; pulmonary medicine.

Larson, Eric B. * 1977; MD, 1973, Harvard University; internal medicine.

Lee, Sum Ping 1985; MD, 1970, University of Hong Kong; PhD, 1978, University of Auckland (New Zealand); gastroenterology.

Lernmark, Ake * 1994; MD, 1970, PhD, 1971, University of Umea (Sweden); immunogenetics of organ-specific autoimmunity, with emphasis on insulin-dependent diabetes.

Livingston, Robert B. 1982; MD, 1967, University of Oklahoma; oncology.

LoGerfo, James P. Sr. * 1974; MD, 1968, University of Rochester; MPH, 1974, University of Washington; quality-of-care assessment.

Longstreth, W. T. Jr. * 1977, (Adjunct); MD, 1975, University of Pennsylvania; MPH, 1982, University of Washington; neurology.

Lukehart, Sheila A. * 1980, (Research); PhD, 1978, University of California (Los Angeles); infectious diseases.

Mannik, Mart * 1966; MD, 1959, Case Western Reserve University; rheumatology.

Martin, Paul J. 1977; MD, 1974, University of Pennsylvania; oncology.

Martin, Thomas R. 1980; MD, 1973, University of Pennsylvania; pulmonary medicine.

Matsumoto, Alvin M. 1979; MD, 1975, University of Washington; metabolism and endocrinology.

Mayer, Jonathan D. * 1977, (Adjunct); PhD, 1977, University of Michigan; medical geography, clinical applications, philosophy.

McArthur, James R. 1973, (Emeritus); MD, 1956, Harvard University; hematology.

McDonald, George B. 1973; MD, 1967, Washington University; gastroenterology.

Monsen, Elaine R. * 1969, (Adjunct); MS, 1959, PhD, 1961, University of California (Berkeley); nutrition, dietetics.

Motulsky, Arno G. * 1953, (Emeritus); MD, 1947, University of Illinois; medical genetics.

Mullins, James I. * 1994; PhD, 1978, University of Minnesota; cell biology and biochemistry.

Neiman, Paul E. * 1971; MD, 1964, University of Washington; oncology.

Nelp, Wil B. 1962, (Emeritus); MD, 1955, Johns Hopkins University; nuclear medicine.

Olerud, John E. 1977; MD, 1971, University of Washington; dermatology.

Olson, Maynard V. 1992; PhD, 1970, Stanford University; large-scale genome mapping and sequencing.

Omenn, Gilbert S. * 1981; MD, 1965, Harvard University; PhD, 1972, University of Washington; genetic predisposition to environmental and occupational hazards.

Pagon, Roberta A. 1975, (Adjunct); MD, 1972, Harvard University; medical genetics.

Palmer, Jerry P. 1974; MD, 1970, State University of New York (Upstate); metabolism and endocrinology, diabetes.

Papayannopoulou, Thalia 1974; MD, 1961, DMedSc, 1964, University of Athens (Greece); hematology.

Paulsen, C. Alvin 1958, (Emeritus); MD, 1952, University of Oregon; metabolism and endocrinology.

Pearlman, Alan S. 1978; MD, 1970, Harvard University; cardiology.

Perine, Peter L. * 1981, (Adjunct); MD, 1966, University of Kansas; MPH, 1973, University of Washington; international health, sexually transmitted diseases.

Petersdorf, Robert G. 1994; MD, 1952, Yale University.

Piepkorn, Michael W. 1991; MD, 1973, University of Minnesota; PhD, 1980, University of Washington; dermatology.

Pierson, David John 1976; MD, 1969, Johns Hopkins University; respiratory diseases.

Plorde, James J. * 1967; MD, 1959, University of Minnesota; infectious diseases, antibiotic-resistant nosocomial infections.

Pope, Charles E. 1964, (Emeritus); MD, 1957, Case Western Reserve University; gastroenterology.

Porte, Daniel Jr. 1965; MD, 1957, University of Chicago; metabolism and endocrinology.

Press, Oliver W. * 1982; PhD, 1977, MD, 1979, University of Washington; treatment of hematologic malignancies with monoclonal antibody immunoconjugates.

Preston, Thomas A. 1972; MD, 1962, University of Pennsylvania; cardiology.

Price, Thomas H. 1975; MD, 1966, Johns Hopkins University; hematology.

Probstfield, Jeffrey L. 1994; MD, 1967, University of Washington; cardiology.

Ramsey, Paul G. 1980; MD, 1975, Harvard University; infectious diseases, internal medicine.

Ritchie, James L. 1974; MD, 1967, Case Western Reserve University; cardiology.

Robertson, H. Thomas 1973; MD, 1968, Harvard University; respiratory diseases.

Root, Richard K. 1991; MD, 1963, Johns Hopkins University; infectious diseases.

Rosen, Henry 1977; MD, 1972, University of Rochester; allergy and infectious diseases.

Rosenstock, Linda * 1980; MD, 1977, Johns Hopkins University; occupational/general internal medicine.

Roth, Gerald J. 1984; MD, 1967, Harvard University; hematology.

Rubin, Cyrus E. 1954, (Emeritus); MD, 1945, Harvard University; gastroenterology.

Saunders, David R. * 1965, (Emeritus); MD, 1957, McGill University (Canada); intestinal absorption, effect of drugs on Gl mucosa.

Schmer, Gottfried * 1969, (Adjunct); MD, 1956, University of Vienna (Austria); tropical medicine and public health, clinical parisitology, preventive medicine.

Schoene, Robert B. 1977; MD, 1972, Columbia University; respiratory diseases.

Schuffler, Michael D. 1973; MD, 1966, University of Illinois; gastroenterology.

Schwartz, Robert S. * 1982; MD, 1974, Ohio State University; internal medicine and geriatrics.

Schwartz, Stephen Mark * 1974, (Adjunct); MD, 1967, Boston University; PhD, 1973, University of Washington; vascular biology, atherosclerosis, molecular basis of lineage, developmental biology, cell kinetics.

Scribner, Belding H. 1951, (Emeritus); MD, 1945, Stanford University; MS, 1951, University of Minnesota; nephrology.

Sherrard, Donald J. 1968; MD, 1960, University of Washington; nephrology.

Simkin, Peter A. 1968; MD, 1961, University of Pennsylvania; rheumatology.

Siscovick, David S. * 1987; MD, 1976, University of Maryland; epidemiology.

Slichter, Sherrill J. 1968; MD, 1963, George Washington University; hematology.

Smith, Charles B. 1991; MD, 1962, Harvard University; infectious diseases.

Spence, Alexander M. 1974, (Adjunct); MD, 1965, University of Chicago; neurology, neuro-oncology.

Stamatoyannopoulos, George 1965; MD, 1958, DMedSc, 1960, University of Athens (Greece); medical genetics.

Stamm, Walter E. * 1976; MD, 1971, Harvard University; infectious disease.

Starkebaum, Gordon A. 1978; MD, 1970, Columbia University; rheumatology.

Stevens, Dennis L. 1979; PhD, 1967, Montana State University; MD, 1971, University of Utah; infectious diseases.

Stewart, Douglas 1971; MD, 1965, Harvard University; cardiology.

Storb, Rainer F. 1968; MD, 1960, University of Freiburg (Germany); oncology.

Stratton, John R. 1979; MD, 1973, Yale University; cardiology.

Sullivan, Keith 1976; MD, 1971, Indiana University; oncology.

Surawicz, Christina M. 1976; MD, 1973, University of Kentucky; gastroenterology.

Swanson, Phillip D. 1964, (Adjunct); MD, 1958, Johns Hopkins University; PhD, 1964, University of London (UK); movement disorders, neurology.

Sybert, Virginia 1979, (Adjunct); MD, 1974, State University of New York (Buffalo); genetics and dermatology.

Thomas, E. Donnall 1963, (Emeritus); MA, 1943, University of Texas (Austin); MD, 1946, Harvard University; oncology.

Thompson, Arthur R. 1973; MD, 1966, PhD, 1972, University of Washington; hematology.

Turck, Marvin 1964; MD, 1959, University of Illinois; infectious diseases.

Van Citters, Robert L. * 1962, (Emeritus); MD, 1953, University of Kansas; cardiovascular physiology.

Verdugo, Pedro * 1974, (Adjunct); MD, 1965, State University of Chile; microrheology, biomechanics, polymer gel physics, laser spectroscopy, cell biology. Vestal, Robert E. 1977; MD, 1971, University of California (San Francisco); gerontology.

Volwiler, Wade 1949, (Emeritus); MD, 1943, Harvard University; gastroenterology.

Wade, James C. 1997; MD, 1974, University of Utah; MPH, 1994, Johns Hopkins University; oncology.

Wallace, James F. 1968; MD, 1961, Washington University; internal medicine.

Wijsman, Ellen M. * 1987, (Research); PhD, 1981, University of Wisconsin; human quantitative and population genetics.

Woods, Stephen C. * 1972, (Adjunct); PhD, 1970, University of Washington; physiological psychology, regulatory behavior, conditioned drug effects.

Zager, Richard A. 1985; MD, 1969, Northwestern University; nephrology.

Associate Professors

Ahmad, Suhail 1976; MBBS, 1968, University of Allahabad (India); nephrology.

Aitken, Moira L. 1982; MBChB, 1978, University of Edinburgh (UK); respiratory disease.

Anasetti, Claudio 1983; MD, 1980, University of Perugia (Italy); oncology.

Andress, Dennis 1982; MD, 1978, University of Oklahoma; nephrology.

Barnhart, Scott * 1982; MD, 1979, George Washington University; occupationally related lung disease.

Belcher, Donald W. * 1976; MD, 1962, University of Pennsylvania; ambulatory medicine.

Benditt, Joshua O. 1994; MD, 1982, University of Washington; pulmonary and critical care medicine.

Benedetti, Jacqueline K. * 1980, (Adjunct); PhD, 1974, University of Washington; statistical methodology in infectious disease research, cancer clinical trials.

Bensinger, William I. 1977; MD, 1973, Northwestern University; oncology.

Berg, Daniel 1997; MD, 1985, University of Toronto (Canada); dermatological surgery.

Bowden, Raleigh A. 1983; MD, 1978, University of Washington; hematology/oncology.

Boyko, Edward J. * 1989; MD, 1979, University of Pittsburgh; epidemiology of inflammatory bowel disease and non-insulin-dependent diabetes mellitus.

Broudy, Virginia C. 1985; MD, 1980, University of California (San Francisco); hematology.

Buchwald, Dedra S. 1987; MD, 1981, University of California (San Diego); internal medicine.

Burke, Wylie 1981; PhD, 1974, MD, 1978, University of Washington; internal medicine.

Celum, Connie L. 1987; MD, 1984, University of California (San Francisco); infectious diseases.

Charan, Nirmal B. 1978; MBBS, 1968, Christian Medical College of Ludhiana (Bharat); respiratory disease.

Childs, Marian T. * 1968, (Emeritus); PhD, 1950, University of California (Berkeley); nutrition.

Clark, Joan G. 1985; MD, 1974, Washington University; pulmonary and respiratory disease.

Comess, Keith A. 1992; MD, 1979, University of Arizona; cardiology.

Coombs, Robert W. * 1988; PhD, 1977, MD, 1981, Dalhousie University (Canada); diagnosis and pathogenesis of HIV infection.

Culver, Bruce H. 1973; MD, 1969, University of Washington; respiratory diseases.

Cusack, Barry J. 1982; MD, 1980, University College of Dublin (Ireland); gerontology.

Daniell, William E. * 1984, (Adjunct); MD, 1979, Tufts University; MPH, 1986, University of Washington; health effects of occupational chemical exposures, multiple chemical sensitivity syndrome.

Davidson, Robert C. 1968, (Emeritus); MD, 1953, University of Washington; nephrology.

Davis, Connie 1991; MD, 1980, University of Washington; nephrology.

Doney, Kristine 1975; MD, 1972, University of Michigan; hematology/oncology.

Dugdale, David C. 1991; MD, 1982, University of Pennsylvania; general internal medicine.

Dugowson, Carin E. 1979; MD, 1976, University of Illinois; MPH, 1986, University of Washington; rheumatology.

Farrow, James A. 1979, (Adjunct); MD, 1973, Baylor University; adolescent medicine.

Fishbein, Daniel P. 1984; MD, 1980, Albert Einstein College of Medicine; cardiology.

Fleckman, Philip H. 1982; MD, 1973, Washington University; dermatology.

Fleet, Wendell P. 1971; MD, 1965, Creighton University; internal medicine.

Gardner, Gregory C. 1989; MD, 1984, Baylor University; rheumatology.

Geballe, Adam Philip 1988; MD, 1978, Duke University; virology.

Glenny, Robb 1987; MD, 1984, University of Virginia; pulmonary and critical care medicine.

Goldbaum, Gary M. * 1989, (Adjunct); MD, 1978, University of Colorado (Denver); MPH, 1989, University of Washington; behavioral factors in HIV/AIDS preventive medicine.

Goldberg, Harold I. 1986; MD, 1977, Stanford University; internal medicine.

Goldstein, Erika A. 1984; MD, 1981, University of Rochester; general internal medicine.

Goodman, Richard B. 1986; MD, 1982, University of Oklahoma; pulmonary and critical care medicine.

Griep, Robert J. 1967; MD, 1958, University of Texas (Galveston); internal medicine/radiology.

Hickstein, Dennis D. 1984; MD, 1978, University of Nebraska; hematology.

Higano, Celestia S. 1984; MD, 1979, University of Massachusetts; oncology.

Hirsch, Irl B. 1990; MD, 1984, University of Missouri; metabolism and endocrinology/diabetes.

Hooton, Thomas M. 1982; MD, 1973, University of Texas (Dallas); internal medicine.

Kahn, Steven Emanuel 1986; MBChB, 1978, University of Capetown (South Africa); metabolism and endocrinology.

Kavanagh, Terrance J. * 1989, (Adjunct Research); MS, 1980, PhD, 1985, Michigan State University; free radical toxicology, glutathione metabolism, toxicology and aging.

Kay, Mark A. * 1993; PhD, 1985, MD, 1987, Case Western Reserve University; medical genetics.

Kimball, Ann M. * 1993, (Adjunct); MD, 1976, MPH, 1981, University of Washington; emerging infections, public health response to epidemic disease.

Kowdley, Kris V. 1993; MD, 1985, Mt. Sinai School of Medicine; gastroenterology.

Kudenchuk, Peter J. 1986; MD, 1979, University of Washington; cardiology.

Lampe, Mary F. 1989; PhD, 1984, University of North Carolina; microbiology laboratory teaching.

Lehmann, Kenneth G. 1990; MD, 1979, University of California (San Diego); cardiology.

Lilly, Michael B. 1989; MD, 1975, Loma Linda University; oncology.

Lindner, Armando 1971; MD, 1964, University of Buenos Aires (Argentina); nephrology.

Linker, David T. 1993; MD, 1976, Stanford University; cardiology.

Lipkin, Edward W. * 1981; PhD, 1977, MD, 1978, Case Western Reserve University; mineral metabolism, nutrition support, non-human primate physiology.

Lipsky, Benjamin A. 1977; MD, 1973, Cornell University; internal medicine.

Madtes, David K. 1994; MD, 1979, University of Pittsburgh; pulmonary and critical care medicine.

Martin, Gary V. 1984; MD, 1980, University of Arizona; cardiology.

Martin, Thomas G. 1996; MD, 1977, Pennsylvania State University; general internal medicine.

McCormick, Wayne C. 1987; MD, 1983, Washington University; gerontology and preventative medicine.

McElrath, Margaret Juliana 1990; PhD, 1978, MD, 1980, Medical University of South Carolina; infectious diseases.

McGee, Steve R. 1987; MD, 1980, Washington University; general internal medicine.

McMullen, W. Russell 1981; MD, 1978, University of Cincinnati; internal medicine, emergency medicine.

Mengert, Terry J. 1987; MD, 1984, University of Washington; emergency medicine.

Miller, Richard A. 1983; MD, 1977, Harvard University; infectious diseases.

Miller, Samuel I. 1995; MD, 1979, Baylor University; molecular pathogenesis of bacterial diseases.

Nelson, Judith Lee 1981; MD, 1977, University of California (Davis); rheumatology.

Nguyen, Toan D. 1994; MD, 1978, University of Chicago; gastroenterology.

Nielson, Christopher P. 1983; MD, 1978, University of California (Los Angeles); gerontology and geriatric medicine.

Ott, Susan M. 1980; MD, 1974, University of Washington; nephrology.

Otto, Catherine M. 1984; MD, 1979, University of Washington; cardiology.

Paauw, Douglas 1988; MD, 1979, University of Washington; general internal medicine.

Pearlman, Robert A. * 1981; MD, 1975, Boston University; gerontology.

Petersdorf, Effie Wang 1985; MD, 1982, McGill University (Canada); oncology.

Petersdorf, Stephen H. 1986; MD, 1983, Brown University; oncology.

Poole, Jeanne E. 1985; MD, 1980, University of Washington; cardiology.

Psaty, Bruce M. * 1984; PhD, 1979, MD, 1981, Indiana University; cardiovascular disease, coronary heart disease, hypertension, and pharmacoepidemiology.

Quinn, Lebris S. * 1986, (Research); PhD, 1982, University of Washington; control of muscle precursor cell proliferation and differentiation; muscle growth.

Raghu, Ganesh 1981; MD, 1974, University of Mysore (India); respiratory disease.

Ralph, David D. 1979; MD, 1972, Stanford University; respiratory diseases.

Raskind, Wendy H. 1981; PhD, 1977, MD, 1978, University of Washington; medical genetics.

Raugi, Gregory J. 1980; MD, 1975, PhD, 1975, Duke University; dermatology.

Reid, Brian J. 1975; PhD, 1975, MD, 1980, University of Washington; gastroenterology.

Riddell, Stanley R. 1985; MD, 1979, University of Manitoba (Canada); oncology.

Rowley, Scott D. 1994; MD, 1978, University of Massachusetts; oncology.

Sasso, Eric H. 1984; MD, 1980, University of California (San Diego); rheumatology.

Schmidt, Rodney 1984, (Adjunct); MD, 1984, PhD, 1984, University of Washington; surgical pathology, pulmonary pathology, sarcomas, image analysis, electron microscopy.

Schubach, William H. 1994; PhD, 1971, University of California (Santa Cruz); MD, 1974, Columbia University; oncology.

Schwartz, Michael W. 1987; MD, 1983, Rush Medical College; metabolism and endocrinology.

Skerrett, Shawn J. 1983; MD, 1978, New York University; pulmonary and critical care medicine.

Smith, Lynne T. * 1985, (Research); PhD, 1985, University of Washington; synthesis and organization of connective tissue in development and in inherited disorders.

Spach, David H. 1989; MD, 1986, Duke University; infectious diseases.

Sparkman, Donal R. 1947, (Emeritus); MD, 1934, University of Pennsylvania.

Stadius, Michael L. 1993; MD, 1978, University of Oregon; cardiology.

Stern, Eric J. 1992, (Adjunct); MD, 1985, University of Medicine and Dentistry of New Jersey; chest radiology.

Stewart, Patricia S. 1975; MA, 1965, MD, 1969, University of West Virginia; oncology.

Swenson, Erik R. 1983; MD, 1979, University of California (San Diego); pulmonary medicine.

Tait, Jonathan F. * 1985, (Adjunct); MD, 1983, PhD, 1983, Washington University; biochemistry of blood coagulation, laboratory diagnosis of genetic disorders.

Tempel, Bruce L. * 1988, (Adjunct); PhD, 1983, Princeton University; molecular neurobiology/ neurogenetics, especially potassium channel gene structure and function.

Thompson, John A. 1982; MD, 1979, University of Alabama; oncology.

Van Voorhis, Wesley C. * 1986; PhD, 1983, Rockefeller University; MD, 1984, Cornell University; infectious diseases.

Watkins, Sandra L. 1986, (Adjunct); MD, 1981, University of Texas (Houston); nephrology.

Weigle, David S. 1981; MD, 1978, Harvard University; endocrinology and metabolism.

Wener, Mark H. * 1981; MD, 1974, Washington University; diagnostic immunology, immune complex diseases.

Willson, Richard 1973; MD, 1962, University of Minnesota; gastroenterology.

Wipf, Joyce E. 1987; MD, 1984, University of Minnesota; general internal medicine.

Witherspoon, Robert P. 1976; MD, 1970, MS, 1970, Baylor University; oncology.

Wood, Francis C. Jr. * 1961, (Emeritus); MD, 1954, Harvard University; metabolism and endocrinology.

Wood, Robert W. 1979; MD, 1970, University of Rochester; internal medicine.

Yeung, Raymond S. 1997, (Adjunct); MD, 1982, University of Toronto (Canada); general and surgical oncology.

Assistant Professors

Anawalt, Bradley D. 1992; MD, 1989, University of California (Davis); general internal medicine.

Back, Anthony L. 1988; MD, 1984, Harvard University; oncology.

Barrette, Ernie-Paul 1993; MD, 1990, Harvard University; general internal medicine.

Beaty, Christopher D. 1986; MD, 1983, University of Vermont; pulmonary and critical care medicine.

Blau, Carl A. 1994; MD, 1986, Ohio State University; hematology.

Braddock, Clarence H. 1993; MD, 1981, University of Chicago; internal medicine, critical care and public ethics.

Bradley, Katharine A. 1991; MD, 1987, Stanford University; MPH, 1993, University of Washington; general internal medicine.

Brentnall, Teresa A. 1995; MD, 1987, University of Washington; gastroenterology.

Brodkin, Carl * 1989; MD, 1983, University of Colorado (Denver); hepatic effects of occupational solvent exposure; ventillatory decline in asbestos-exposed workers.

Brodkin, Kayla I. 1994; MD, 1982, State University of New York (Stony Brook); gerontology and geriatric medicine.

Bronner, Mary P. 1993, (Adjunct); MD, 1989, University of Pennsylvania; gastrointestinal and hepatic pathology, neoplastic progression and transplantation pathology.

Carvalho, Paula G. 1991; MD, 1984, University of Washington; pulmonary and critical care medicine.

Chambers, Joseph W. 1987; MD, 1984, Yale University; cardiology.

Chauncey, Thomas R. 1988; MD, 1985, Rush Medical College; oncology.

Cheng, Edith Y. 1987, (Adjunct); MS, 1979, Sarah Lawrence College; MD, 1987, University of Washington; genetics.

Colven, Roy M. 1991; MD, 1987, University of Washington; dermatology.

Cooper, Minda A. 1994; MD, 1987, George Washington University; nephrology.

Corson, Marshall A. 1994; MD, 1981, Baylor University; cardiology.

Cress, Marie Elaine * 1989, (Research); PhD, 1989, University of Wisconsin; physiology, gerontology.

Curtis, Jared R. 1996; MD, 1988, Johns Hopkins University; MPH, 1994, University of Washington; pulmonary diseases and critical care medicine.

D'Alessio, David A. 1990; MD, 1983, University of Wisconsin; metabolism, endocrinology, nutrition.

Deem, Steven A. 1992, (Adjunct); MD, 1984, Southern Illinois University; critical care.

DeWitt, Dawn E. 1993; MD, 1990, Harvard University; general internal medicine.

Disis, Mary L. 1990; MD, 1986, MS, 1986, University of Nebraska; oncology.

Dominitz, Jason A. 1998; MD, 1991, University of Maryland; gastroenterology.

Ellis, Georgiana K. 1985; MD, 1982, University of Washington; oncology.

Elmore, Joann G. 1996; MD, 1987, Stanford University; MPH, 1992, Yale University; clinical epidemiology.

Epner, Elliot M. 1986; MD, 1983, PhD, 1985, Columbia University; oncology.

Every, Nathan R. 1991; MD, 1988, Emory University; MPH, 1993, University of Washington; cardiology.

Gernsheimer, Terry B. 1986; MD, 1979, State University of New York (Stony Brook); hematology.

Gralow, Julie R. 1994; MD, 1988, University of Southern California; oncology.

Greenbaum, Carla J. 1987; MD, 1981, Brown University; metabolism, endocrinology and nutrition.

Greenberg, Deborah L. 1993; MD, 1990, University of Washington; internal medicine.

Gretch, David R. * 1993, (Adjunct); PhD, 1990, MD, 1990, University of Iowa; research and diagnostics related to viral hepatitis.

Gruenewald, David A. 1987; MD, 1983, University of Chicago; gerontology and geriatric medicine.

Harrington, Robert D. 1996; MD, 1983, Tufts University; teaching and research studies involving HIV entry into CD4 cells.

Haycox, Claire L. 1997; PhD, 1992, MD, 1993, University of Washington; dermatology.

Herter, Christian D. 1992, (Adjunct); MD, 1986, University of Minnesota.

Hockenbery, David M. * 1994; MD, 1982, Washington University; gastroenterology.

Horwitz, Marshall S. 1992; PhD, 1988, MD, 1990, University of Washington; transcription regulation.

Hudgins, Louanne 1993, (Adjunct); MD, 1984, University of Kansas; medical genetics.

Jackson, J. Carey 1990; MPH, 1980, University of Hawaii; MD, 1986, Michigan State University; general internal medicine.

Jarvik, Gail P. 1991; PhD, 1986, University of Michigan; MD, 1987, University of Iowa; medical genetics.

Jobe, Kathleen A. 1989; MD, 1986, University of Colorado (Denver); internal medicine.

John, Grace C. 1996; MD, 1987, University of Michigan; MPH, 1995, University of Washington; clinical epidemiology.

Kearney, David J. 1996; MD, 1989, University of Missouri; gastroenterology.

Keifer, Matthew C. * 1987; MD, 1982, University of Illinois; the human health effects of pesticide exposure.

Kitahata, Mari M. 1991; MD, 1987, University of Pennsylvania; MPH, 1995, University of Washington; allergy and infectious diseases.

Koelle, David 1992; MD, 1985, University of Washington; allergy and infectious diseases.

Kovach, Nicholas L. 1987; MD, 1984, Oregon Health Sciences University; hematology.

Lafferty, William E. * 1988, (Adjunct); MD, 1978, University of Kansas; STD, HIV/AIDS, surveillance and epidemiology of STD, managed care.

Laya, Mary B. 1993; MD, 1982, Creighton University; MPH, 1995, University of Washington; general internal medicine.

Lessler, Daniel * 1990; MD, 1986, Stanford University; MHA, 1992, University of Washington; health services research pertaining to cost-effectiveness, quality of care, medical management.

Levy, Wayne C. 1985; MD, 1985, Loma Linda University; cardiology.

Liles, W. Conrad 1990; MD, 1987, PhD, 1987, University of Washington; infectious diseases.

Linenberger, Michael L. 1986; MD, 1982, University of Kansas; hematology.

Maloney, David G. 1995; MD, 1985, PhD, 1991, Stanford University; medical oncology.

Marra, Christina M. 1988, (Adjunct); MS, 1979, Oregon State University; MD, 1984, University of Oregon; neurology, infectious diseases. Martin, Harold L. 1996; MD, 1988, MPH, 1988, University of North Carolina; allergy and infectious diseases. Montgomery, R. Bruce 1993; MD, 1987, Duke University; oncology.

Muczynski, Kimberly Ann 1995; MD, 1984, PhD, 1984, University of Washington; nephrology.

Nash, Richard A. 1994; MD, 1977, University of Manitoba (Canada); oncology.

O'Brien, Kevin 1988; MD, 1984, University of Washington; cardiology.

Olson, Carin M. 1994; MD, 1978, Ohio State University; general internal medicine.

Pinsky, Linda E. 1992; MD, 1989, University of Washington; general internal medicine.

Radich, Jerald P. 1987; MS, 1979, Harvard University; MD, 1983, University of California (Davis); oncology.

Ramsey, Scott D. * 1994; MD, 1990, University of Iowa; PhD, 1994, University of Pennsylvania; cost effectiveness analysis and health care economics.

Reed, May J. 1990; MD, 1986, Harvard University; geriatric medicine and gerontology.

Reilly, Dominic F. 1991; MD, 1988, University of Washington; general internal medicine.

Reiner, Alexander P. 1988; MD, 1984, Johns Hopkins University; hematology.

Rhoads, Caroline S. 1992; MD, 1989, University of Pennsylvania; general internal medicine.

Rubenfeld, Gordon D. 1994; MD, 1987, Jefferson Medical College; MPH, 1996, University of Washington; pulmonary and critical care medicine.

Russell, David W. 1991; PhD, 1988, Rockefeller University; MD, 1989, Cornell University; hematology.

Sabath, Daniel E. * 1993, (Adjunct); PhD, 1989, MD, 1989, University of Pennsylvania; regulation of gene expression in hematopoietic cells.

Sandmaier, Brenda M. 1986; MD, 1983, University of Alberta (Canada); oncology.

Shankland, Stuart J. 1995; MBChB, 1983, University of Capetown (South Africa); nephrology.

Sheffield, John V. L. 1992; MD, 1989, Harvard University; general internal medicine.

Shuhart, Margaret C. 1994; MD, 1988, Dartmouth College; gastroenterology.

Smith, Curtis Scott 1989; MD, 1980, University of Washington; general internal medicine.

Stapleton, Ann E. 1987; MD, 1984, Albert Einstein College of Medicine; allergy and infectious diseases.

Steinberg, Kenneth P. 1989; MD, 1985, New York Medical College; pulmonary and critical care medicine.

Sugg, Nancy K. 1989; MD, 1983, University of Maryland; internal medicine.

Thompson, William H. 1995; MD, 1988, Johns Hopkins University; pulmonary and critical care medicine.

Tobin, Richard W. 1995; MD, 1987, University of Texas (Southwestern); gastroenterology.

Tonelli, Mark R. 1996; MD, 1989, University of Colorado (Boulder); pulmonary and critical care medicine.

Van Norman, Gail 1986, (Adjunct); MD, 1981, University of Washington.

Wald, Anna 1989; MD, 1985, Mt. Sinai School of Medicine; MPH, 1994, University of Washington; allergy and infectious diseases.

Wallace, Jeffrey I. 1987; MD, 1984, University of Michigan; MPH, 1992, University of Washington; gerontology and geriatric medicine.

Willerford, Dennis M. 1996; MD, 1995, Washington University; hematology.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

MED 498 Undergraduate Thesis (*) *Paauw* Offered: AWSpS.

MED 499 Undergraduate Research (*) *Paauw* Case studies, with laboratory research. Available to undergraduates and medical students. Offered: AWSpS.

MED 505 P-Preceptorship in Medicine (1) *Paauw* To provide opportunity for first- and second-year medical students to gain personal experience with medical practice situations by being stationed with carefully selected clinical faculty members in their offices. Prerequisite: permission of department. Offered: AWSpS.

MED 510 Health Issues of Sexual Minorities (1) *Greenberg* Introduction to the special health care issues and barriers confronting persons identified as bisexual, gay, lesbian, or transgendered. Includes lectures, panels, and case presentations by faculty and community experts. Offered: Sp.

MED 530 AIDS: A Multidisciplinary Approach (2) *Koutsky, Kreiss* Comprehensive overview of the public health, clinical, and laboratory aspects of human immunodeficiency virus (HIV) infection and disease. Topics include the pathogenesis, natural history, and management of (HIV) infections. The impact of HIV/AIDS on community and global health care and prospects for prevention and control. Offered: jointly with EPI 530; A.

MED 531 P-Human Genetics (*) Stamatoyannopoulos Weekly seminar dealing with a variety of topics in medical genetics given by faculty of the Division of Medical Genetics and related departments and divisions. Open to medical students with a good foundation in genetics.

MED 532 Statistical Methods in Medical Genetics (2) *Wijsman* Theory and application of statistical techniques used in medical genetics. In-depth discussion of linkage and segregation analysis and ascertainment problems. Applications stressed with reference to assumptions and limitations. Data sets analyzed with current computer programs. Prerequisite: knowledge of genetics or permission of instructor. Offered: jointly with BIOST 532.

MED 533 P-Clinical Endocrinology (2) *Chait* Emphasis on the most major and dependable symptoms, signs, laboratory tests, and therapy for clinical endocrinopathies. Patient illustrated. Limited to second-year medical students. Offered: W.

CONJ 550 P-Clinical Infectious Diseases (3) Miller See Conjoint Courses.

UCONJ 555 Principles of STD/HIV Research (3) Lukehart See University Conjoint Courses.

MED 599 P-Transfusion Machine (3) Reiner Group discussions and didactic sessions cover broad category of transfusion medicine. Hands-on laboratory experience in red cell seriology/compatibility, coagulation, and histocompatibility with emphasis on diagnosis and management of clinical problems. Based at Puget Sound Blood Center. Prerequisite: fourth-year medical student standing; thirdyear student standing with permission of instructor.

MED 604 P-Clinical Preceptorship in Internal Medicine (8) Patterson (Friday Harbor), Shima (Forks), Thorson (Longview) Working closely with primary-care physicians, the student is exposed to the private practice of internal medicine in a small community. Operating on a one-to-one basis with an internist, the student evaluates and manages inpatients and outpatients on a primary care, consultative, and emergency basis. Prerequisite: 665. (Four weeks, full-time.) Offered: AWSpS.

MED 630 P-WRITE Medicine Clinical Clerkship (* max. 24) Basic clinical clerkship for students enrolled in the WRITE Program. Prerequisite: completion of basic curriculum; third- and fourth-year students; acceptance in the WRITE program.

MED 640 P-Dermatology Clinic (* max. 5) Olerud Students attend dermatology clinic on Monday mornings and Thursday afternoons for twelve weeks. Two half-days per week. Prerequisite: 665. Offered: AWSpS.

MED 642 P-Clinical Oncology (8) Stewart (Fred Hutchinson Cancer Research Center) Students functioning as primary physicians are responsible for the workups and daily care of patients receiving marrow transplants, high-dose chemotherapy or immunotherapy on an intensive-care research ward. Emphasis is on the management and supportive care of patients with pancytopenia and immunosuppression, transplantation biology, cancer chemotherapy, and infectious disease problems. Prerequisite: 665. (Four weeks.) Offered: AWSpS.

MED 644 P-Management of Sexually Transmitted Diseases (2) Celum, Handsfield Instruction and clinical experience in diagnosis, treatment, and management of sexually transmitted diseases. Instruction in genitourinary physical examination skills; relevant laboratory techniques and management of patients with STDs. Prior to the elective, each student must review a packet of didactic materials. Prerequisite: 665, SURG 665, and OB GYN 665. Offered: AWSpS.

MED 645 P-Clinical Geriatric Medicine (8) *Matsumoto* Full time spent caring for patients in a half-day outpatient clinic each week, work up and follow inpatients on the geriatric evaluation unit, actively participate in twice-weekly attending and multidisciplinary team rounds, attend weekly conferences of the Division of Gerontology. Prerequisite: 665. (Limit: one student.) Offered: AWSpS.

MED 650 P-Advanced Medical Genetics (* max. 5) *Jarvik, Horwitz, Stamatoyannopoulos* Summer course intended for third-year students who would like to increase their background in specific areas of medical genetics. Involves seeing patients with the instructor, reviewing the literature, analyzing clinical information, and writing a review on a selected topic. Prerequisite: HUBIO 554. Offered: S.

MED 665 P-Clinical Clerkship (* max. 24) *Paauw* Third-year medical students assume increasing responsibility for care of hospitalized patients in a teaching-hospital setting and participate in a fourweek outpatient experience emphasizing continuity of care. Daily rounds with resident and attending physicians, with lectures and conferences. Progress evaluated by supervising physicians and a written examination. (Twelve weeks, full-time.) Offered: AWSpS.

MED 666 P-Advanced Clinical Clerkship in Internal Medicine—WWAMI (12) Paauw Advanced clinical clerkship in internal medicine in three small urban communities. Supervised, structured experience in dealing with situations commonly encountered by the practicing internist. Continuity of care and the relationship between care given in the ambulatory setting and in the hospital, as well as by other community health services, is emphasized. Prerequisite: 665. (Six weeks, full-time. Limit: six students.) Offered: AWSpS.

CONJ 677 P-Clinical Allergy and Immunology (* max. 12) Henderson See Conjoint Courses. **MED 678 P-Clinical Dermatology (8)** Olerud Participation in dermatology clinics and inpatient consultations at University of Washington Medical Center, Harborview Medical Center, Children's Hospital Medical Center, and Veterans Administration Hospital. Journal club and clinical conferences each week with entire staff. A continuing series of teaching seminars and weekly dermatopathology conferences. Prerequisite: 665. (Four weeks.) Offered: AWSpS.

MED 679 P-Clinical Gastroenterology (8) *Lee* Participation in consulting ward rounds, procedures, conferences, and selected clinics with full-time divisional staff at University and Veterans Administration hospitals, and at Pacific and Harborview medical centers, plus directed tutorial work. Prerequisite: 665. (Four weeks, full-time.) Offered: AWSpS.

MED 680 P-Rheumatology (8) *Mannik* Full-time inpatient-outpatient clerkship in rheumatology. Clinical experience provided in diagnosis and treatment of rheumatic diseases, utilizing outpatient clinics and hospitalized patients at the University of Washington Medical Center, Harborview Medical Center, or VAMC. Emphasis on concepts in pathophysiology, diagnosis, and treatment of these diseases. In addition to patient contact, reading, seminars, and preceptorial sessions are the methods of instruction. Prerequisite: 665. Offered: AWSp.

MED 682 P-Clinical Cardiology and Electrocardiography (8) Comess (Harborview Medical Center), Eiriksson (Boise Veterans Administration Medical Center), Otto (University of Washington Medical Center), Mascette (Madigan Hospital Medical Center), Caldwell (Veterans Administration Hospital) Clerkship in clinical cardiology—combined inpatient-outpatient assignments, ECG interpretation. Prerequisite: 665. (Four weeks.) Offered: AWSpS.

MED 683 P-Clinical Respiratory Disease and Critical Care Medicine (8) *Pierson* Training in respiratory disease diagnosis and pulmonary therapy, with special emphasis on cardiopulmonary function testing and interpretation. Inpatient and outpatient teaching rounds, conferences, and basic science integration. Prerequisite: 665. (Four weeks.) Offered: AWSpS.

MED 684 P-Clinical Hematology/Oncology (8) Abkowitz (University of Washington Medical Center), Harlan (Harborview Medical Center), Roth (Veterans Administration Hospital) Outpatient and inpatient experience with hematologic/oncologic disorders. The elective includes teaching rounds, conferences, and evaluation of laboratory work. Prerequisite: 665. (Four weeks.) Offered: AWSpS.

MED 685 P-Clinical Genetics (* max. 24) *Bird, Byers, Motulsky, Stamatoyannopoulos* Full-time clinical clerkship in medical genetics. Provides extensive exposure to variety of genetic diseases and genetic counseling. Students work in three clinics (Monday, Tuesday, Thursday), response to in-house consultation requests, attend rounds at Children's Hospital and Medical Center and University of Washington Medical Center and seminars at University of Washington Medical Center (Wednesday, Friday). Prerequisite: 665. Offered: AWSpS.

MED 687 P-Ambulatory Medicine Elective (* max. 12) *Paauw (University of Washington Medical Center)* Students acquire knowledge and skill in dealing with ambulatory patients with problems commonly encountered in the office practice of internal medicine. Prerequisite: 665. (Minimum: two quarters.) Offered: AWSpS.

MED 688 P-Ward Medicine Subinternship (* max. 24) Bremner (VAMC), Owen (Providence), R. Jones (Madigan Hospital Medical Center), McMahon (Anchorage), Robertson (Swedish Hospital Medical Center), Root (Harborview Medical Center) Students act in the capacity of interns on the medical wards under supervision of house staff and visiting physicians. They attend all regular medicine rounds and conferences as their schedules permit. Prerequisite: 665. (Four or six weeks.) Offered: AWSpS.

MED 689 P-Clinical Infectious Diseases (8) Stamm (University of Washington Medical Center) Students participate in the consulting service throughout the hospital, attend daily plate rounds, conferences, and seminars. (Four weeks.) Holmes (Harborview Medical Center), Miller (Veterans Administration Hospital). Participate in consulting service throughout hospital to learn microbiological aspects of infectious diseases through the clinical laboratories. Prerequisite: 665. (Four weeks.) Offered: AWSpS.

MED 690 P-Cardiology Subinternship (8) Otto (University of Washington Medical Center) Students act in the capacity of interns on the cardiology service under the supervision of house officer. Prerequisite: 665. (Four weeks.) Offered: AWSpS.

MED 691 P-Primary Care (8/12) *Paauw* Sixweek, full-time ambulatory care block in primary care internal medicine. Students participate in several clinics at University of Washington Medical Center following a panel of patients in medicine, rheumatology, and virology clinics. Prerequisite: 665 and permission of instructor. Offered: AWSpS.

MED 692 P-Clinical Endocrinology and Metabolism (* max. 12) Weigle (Seattle-based program); Bunner (Madigan) Clerkship in clinical endocrinology and metabolism combined inpatient and outpatient assignments at selected hospitals. Prerequisite: 665. Offered: AWSpS.

MED 693 P-Nephrology and Fluid Balance (8) Couser (University of Washington Medical Center), Zager (Harborview Medical Center), Sherrard (Veterans Administration Hospital) Students see clinical nephrologic problems under close supervision, participate in nephrology and transplant rounds, see consults with renal fellow and attending, and work up patients in renal clinics, participate in seminars with clerks from all three hospitals. Prerequisite: 665. (Four weeks.) Offered: AWSpS.

MED 694 P-Harborview Evening Clinic (2) *Grefenson* A longitudinal elective for senior medical students who assume primary responsibility for a panel of medical patients in an outpatient clinic. Direct care of patients is supplemented by didactic sessions dealing with issues in ambulatory care. Students are strongly encouraged to participate for four quarters. Prerequisite: 665 and permission of instructor. Offered: AWSpS.

MED 695 P-Clinical Aspects of Aging (8) *McCormick (Harborview Long Term Care Service and Harborview Medical Center)* Work with elderly patients as subintern with Senior Care Program. Inpatient and ambulatory setting in nursing homes and patients' homes. Interdisciplinary approach. Prerequisite: 665. Offered: AWSpS.

MED 697 P-Medicine Special Electives (* max. 24) *Paauw* Special clerkship, externship, or research opportunities that can at times be made available at institutions other than University of Washington. Faculty can advise students of opportunities. Students wishing to elect this course should obtain from Dean's office a special assignment form at least three months before preregistration. Prerequisite: permission of department. (Two, four, six, or twelve weeks.) Offered: AWSpS.

MED 699 P-WWAMI Medicine Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Microbiology

G315 Health Sciences

Microbiology is a natural science that deals with microorganisms such as bacteria, fungi, protozoa, algae, and viruses. It is concerned with the nature and properties of these organisms, their effects on humans and the environment, and how they can be exploited to provide useful products.

Undergraduate Program

The Bachelor of Science in microbiology is granted by the College of Arts and Sciences. For a description of the undergraduate program in microbiology, see College of Arts and Sciences section.

Graduate Program

Graduate Program Coordinator G315 Health Sciences, Box 357242 (206) 543-2572

The Department of Microbiology offers a graduate program leading to the Doctor of Philosophy degree. Students interested in graduate work should obtain the necessary application forms from the department.

The choice of an adviser and research problem are matters of mutual consent between the student and a faculty member. The course work taken by a graduate student depends to a certain extent upon the student's background and chosen area of specialization, but in general, courses are chosen from the fields of microbiology, immunology, biochemistry, genetics, and cell biology. A master's degree program either with or without thesis is available on a very limited basis. An M.S. degree is not necessarily a prerequisite for the Ph.D. degree.

Applicants are evaluated by a committee that considers the student's grades, scores on the Graduate Record Examination, research experience, letters of recommendation, and any other data that might provide an indication of the student's capabilities for success in a career in science.

Students are normally admitted into the graduate program only in autumn quarter, and all application materials should be received by the department no later than the preceding December 31. Graduate Record Examination aptitude scores are required as part of the application, and the examination should be taken no later than October. Three letters of recommendation must also be sent directly to the department.

Students with a variety of academic backgrounds are accepted for graduate study in microbiology, but it is highly desirable that their undergraduate preparation include at least a year of general chemistry and a year of college physics, courses in organic chemistry and quantitative analysis, calculus, one year of biology, and courses in genetics, biochemistry, and microbiology.

Students in the Ph.D. program are usually supported by funds from training grants, research grants, or teaching assistantships.

Faculty

Chair

James I. Mullins

Professors

Champoux, James J. * 1972; PhD, 1970, Stanford University; DNA replication, tumor virology.

Clark, Edward A. * 1984; PhD, 1977, University of California (Los Angeles); lymphocyte surface molecules, lymphocyte activation and cell communication.

Corey, Lawrence * 1977, (Adjunct); MD, 1971, University of Michigan; laboratory medicine: diagnosis, therapy, and pathogenesis of viral infections, AIDS virus.

Coyle, Marie B. * 1973; PhD, 1965, Kansas State University; DNA probes and GLC for rapid identification of mycobacteria and corynebacteria.

Douglas, Howard C. 1941, (Emeritus); PhD, 1949, University of California (Berkeley).

Evans, Charles A. 1946, (Emeritus); MD, 1937, PhD, 1943, University of Minnesota; microbial flora of human skin, medical virology.

Floss, Heinz G. * 1987, (Adjunct); PhD, 1961, Technical University of Munich (Germany); bioorganic and natural products chemistry.

Galloway, Denise A. * 1982, (Research); PhD, 1976, City University of New York; viral pathogenesis and neoplasia.

Gilliland, Bruce C. * 1968, (Adjunct); MD, 1960, Northwestern University; rheumatology/immunology.

Gordon, Milton * 1959, (Adjunct); PhD, 1953, University of Illinois; molecular basis of plant tumors, control of gene expression in plants.

Greenberg, Philip D. * 1978, (Adjunct); MD, 1971, State University of New York (Downstate); molecular, cellular, viral, and tumor immunology.

Groman, Neal B. * 1950, (Emeritus); PhD, 1950, University of Chicago.

Hakomori, Sen-Itiroh * 1967; MD, 1951, DMedSc, 1956, Tohoku Imperial University (Japan); role of glycosphingolipids in defining antigenicity, cellular interaction.

Holmes, King K. * 1969, (Adjunct); MD, 1963, Cornell University; PhD, 1967, University of Hawaii; clinical epidemiology and pathogenesis of infectious diseases.

Hu, Shiu-Lok 1997, (Research); PhD, 1978, University of Wisconsin.

Katze, Michael Gerald * 1987; PhD, 1980, Hahnemann Medical College; regulation of viral gene expression at the translational level.

Kenny, George E. * 1961, (Adjunct); PhD, 1961, University of Minnesota; human immune response to infectious diseases, detection and biology of mycoplasmas.

Klebanoff, Seymour * 1962, (Adjunct); MD, 1951, University of Toronto (Canada); PhD, 1954, University of London (UK); infectious disease.

Lidstrom, Mary E. 1995; MS, 1975, PhD, 1977, University of Wisconsin; environmental biotechnology, molecular bioengineering.

Linial, Maxine L. * 1982, (Research); PhD, 1970, Tufts University; retrovirol replication and genetics, retroviral transformation.

Lory, Stephen * 1984; PhD, 1980, University of California (Los Angeles); biochemistry, genetics of microbial virulence factors.

Lukehart, Sheila A. * 1980, (Adjunct Research); PhD, 1978, University of California (Los Angeles); infectious diseases.

Mannik, Mart * 1966, (Adjunct); MD, 1959, Case Western Reserve University; rheumatology.

Miller, Robert C. 1995; PhD, 1969, University of Pennsylvania; genetics and molecular biology.

Mullins, James I. * 1994; PhD, 1978, University of Minnesota; cell biology and biochemistry.

Nester, Eugene W. * 1962; PhD, 1959, Case Western Reserve University; genetics and biochemistry of bacterial-plant cell interactions, tumorigenesis. Plorde, James J. * 1967, (Adjunct); MD, 1959, University of Minnesota; infectious diseases, antibiotic-resistant nosocomial infections.

Rubens, Craig E. * 1984, (Adjunct); PhD, 1978, Medical University of South Carolina; MD, 1982, University of Washington; molecular pathogenesis of Group B streptococcal infections in newborn infants.

Sherris, John C. * 1959, (Emeritus); MBBS, 1948, MD, 1950, University of London (UK); medical microbiology, antibiotic action and resistance.

Staley, James T. * 1971; PhD, 1967, University of California (Davis); microbial ecology, bacterial systematics, general microbiology.

Stuart, Kenneth Daniel * 1985, (Adjunct); PhD, 1969, University of Iowa; molecular biology of protozoan pathogens.

Vessella, Robert L. 1989, (Adjunct); PhD, 1974, University of Mississippi; tumor markers and immunology.

Weiser, Russell S. 1931, (Emeritus); PhD, 1934, Washington University; microbiology and immunology.

Associate Professors

Fritsche, Thomas R. * 1984; MD, 1981, PhD, 1984, University of Minnesota; systematics and ecology of animal parasites; medical microbiology.

Geballe, Adam Philip 1988, (Adjunct); MD, 1978, Duke University; virology.

Hughes, Kelly T. * 1989; PhD, 1984, University of Utah; genetics, gene regulation, microbial physiology, and metabolism.

Lamont, Richard J. * 1988, (Adjunct); PhD, 1985, University of Aberdeen (UK); pathogenic mechanisms and taxonomy of oral bacteria.

Lampe, Mary F. 1988, (Adjunct); MS, 1957, University of Washington; microbiology laboratory teaching.

Lara, Jimmie Cano * 1972; PhD, 1970, University of California (Riverside); microbial physiology and crytology, sporulation and gas vesicle synthesis and regulation.

Leigh, John A. * 1985; PhD, 1983, University of Illinois; bacterial physiology, biochemistry, genetics.

Miller, Samuel I. 1995; MD, 1979, Baylor University; molecular pathogenesis of bacterial diseases.

Moseley, Stephen L. * 1985; PhD, 1981, University of Washington; molecular basis of pathogenesis in E. coli diarrhea.

Overbaugh, Julie Maureen * 1988; PhD, 1983, University of Colorado (Boulder); molecular mechanisms of virus-host cell interactions/retroviral pathogenesis/ aids.

Tarr, Phillip I. 1988, (Adjunct); MD, 1980, Yale University; gastroenterology/infectious diseases.

Wong, Timothy Chee-Hing * 1983; PhD, 1979, University of Texas (Southwestern); viral gene expression in chronic infections and oncogenesis.

Assistant Professors

Cookson, Brad T. * 1993; MD, 1991, PhD, 1991, Washington University; cellular immune response to intracelluar bacteria, microbial pathogenesis, clinical microbiology.

Herwig, Russell P. * 1991, (Adjunct Research); PhD, 1989, University of Washington; environmental microbiology, bioremediation, molecular microbial ecology, microbial phylogenetics.

Traxler, Beth A. * 1992; PhD, 1987, Carnegie Mellon University; bacterial physiology, genetics, and membrane protein biochemistry.

Lecturers

Anderson, Denise G. 1982; MS, 1985, University of Washington; microbiology laboratory teaching.

Barnes, Glover W. * 1969; MA, 1955, PhD, 1961, State University of New York (Buffalo); tissue, organ immunology.

Bicknell, Mary 1975; MS, 1962, University of Washington; microbiology laboratory teaching.

Cramer, Dorothy 1951, (Emeritus); BS, 1945, University of Washington.

Fulton, Janis R. 1983; MS, 1977, Montana State University; microbiology laboratory teaching.

Memmer, Ramona 1960, (Emeritus); MS, 1957, University of Washington.

Parkhurst, Dale J. 1959; BS, 1960, University of Washington; microbiology laboratory teaching.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

MICROM 301 General Microbiology (3) NW Anderson, Lara, Nester Acquaints students with microbial cell structure and function, metabolism, microbial genetics, and the role of microorganisms in disease, immunity, and other selected applied areas. Prerequisite: either CHEM 120, CHEM 140, CHEM 142, or CHEM 145: recommended: biology; organic chemistry. Offered: ASpS.

MICROM 302 General Microbiology Laboratory (2) NW Anderson, Bicknell, Fulton Laboratory course primarily for students taking 301. Covers a variety of microbiological techniques, with experiments designed to illustrate major concepts of bacteriology, virology, and immunology. No auditors. Recommended: MICROM 301 which may be taken concurrently. Offered: ASpS.

MICROM 320 Media Preparation (2) NW Practical work in the preparation of culture media. Nutritional requirements of microorganisms and sterilization methods are considered. For students expecting to enter vocations involving laboratory work with bacteria. Credit/no credit only. Recommended: MICROM 302.

MICROM 322 Applied Clinical Microbiology (5) NW Cookson, Fritsche Practical experience in a clinical or public health laboratory; fifteen hours per week. For students majoring in medical microbiology. Three quarters advance sign-up in G315 Health Sciences recommended. Applicants are selected by interview. Credit/no credit only. Prerequisite: MICROM 443. Offered: AWSp.

MICROM 402 Fundamentals of General Microbiology Laboratory (3) NW Bicknell, Fulton Isolation of a broad range of nonpathogenic bacteria from natural sources, using selective and enrichment techniques, with microscopic and biochemical identification. Related exercises include genetics, quantitation, and growth kinetics. Prerequisite: BIOL 201; recommended: MICROM 410 which may be taken concurrently. Offered: ASp.

MICROM 410 Fundamentals of General Microbiology I (3) NW Lara, Traxler Survey of the microbial world, metabolism, biosynthesis, regulation, growth, structure, and function. Required for students majoring in microbiology; recommended for students majoring in biology. Prerequisite: BIOL 201; either CHEM 223, CHEM 237, or CHEM 335. Offered: A.

MICROM 411 Gene Action (5) NW Hughes, Manoil Molecular genetics: description of fundamental genetic processes such as mutation, repair, genetic exchange, recombination, and gene expression. Use of genetic strategies to analyze complex biological processes. Focuses on prokaryotic organisms. Prerequisite: BIOL 201; either CHEM 223, CHEM 237, or CHEM 335. Offered: jointly with GENET 411; W. MICROM 412 Fundamentals of General Microbiology III (3) NW Leigh Structure, biochemical properties, and genetics of the major groups of prokaryotes. Prerequisite: either BIOL 201 or BIOL 203; recommended: either CHEM 223, CHEM 237, or CHEM 335; MICROM 410. Offered: Sp.

MICROM 431 Prokaryotic Recombinant DNA Techniques (3) NW Anderson Laboratory course emphasizing concepts and techniques/methodologies in recombinant DNA research employing bacteria and their viruses. Topics and experiments/demonstrations include genomic and plasmid DNA isolation, restriction mapping, cloning, transposon mutagenesis, sequencing, and Western and Southern blotting. No auditors. Offered: W.

MICROM 435 Microbial Ecology (3) NW Staley Consideration of the various roles that microorganisms, particularly bacteria and cyanobacteria, play in environmental processes. The interrelationships among microorganisms and the effects of the physical, chemical, and biological properties of their environment are discussed and assessed. Prerequisite: BIOL 203. Offered: even years; Sp.

MICROM 440 Introductory Bacteriology for Medical Technologists (1) NW Anderson Limited introduction to basic microbiology, with focus on structure, metabolism, and genetics of medically important organisms. Open only to medical technology students. Credit/no credit only. Offered: A.

MICROM 441 Introduction to Immunology (4) NW General properties of immune responses; cells and tissues of immune system; lymphocyte activation and specificity; effector mechanisms; immunity to microbes; immunodeficiency and AIDS; autoimmune diseases; transplantation. Prerequisite: BIOL 202; recommended: either GENET 371, GENET 372, BIOC 405, or BIOC 440. Offered: jointly with IMMUN 441; A.

MICROM 442 Medical Bacteriology (3) NW Cookson, Fritsche Medically important bacterial pathogens are discussed in terms of the clinical, therapeutic, and epidemiological aspects of diseases caused by them, molecular mechanisms of pathogenesis and their identification in the clinical laboratory. Laboratory course 443 coordinates. Prerequisite: BIOL 202; recommended: MICROM 410; MICROM 441. Offered: W.

MICROM 443 Medical Microbiology Laboratory (3) NW Anderson, Coyle, Fritsche, Fulton Required for medical technology students, microbiology majors; elective for medical students. Procedures for isolation and identification of pathogenic bacteria, testing their susceptibility to antibiotics. No auditors. Prerequisite: BIOL 201; recommended: MICROM 410. Offered: AW.

MICROM 444 Medical Mycology and Parasitology (4) NW Anderson, Coyle, Fritsche, Fulton Consideration of medically important fungi and parasites, with emphasis on their biology in relation to disease and its laboratory diagnosis. For medical technology students, microbiology majors, and medical students as an elective. Prerequisite: BIOL 202; recommended: immunology. Offered: Sp.

MICROM 445 Medical Virology (2) NW Thouless, Wong An introductory course emphasizing basic understanding of medical virology and viral pathogenesis. The biochemical, replication, host-parasite relationships and pathogenesis of animal viruses are examined. Prerequisite: BIOL 201; recommended: MICROM 441. Offered: jointly with PABIO 445; Sp.

MICROM 450 Molecular Biology of Viruses (3) NW Champoux, Wong Introduction to the molecular biology of viruses and virus-host relationships. Designed for advanced undergraduates and graduate students in the biological sciences. Coverage includes bacterial and animal viruses, with an emphasis on the molecular mechanisms of viral gene expression and regulation. Prerequisite: BIOL 201; recommended: MICROM 410, MICROM 411, GENET 371, or GENET 372. Offered: Sp.

MICROM 495- Honors Undergraduate Research (*-) *Leigh* Specific problems in microbiology or immunology. Offered: AWSpS.

MICROM 496 Undergraduate Library Research (2) Leigh Introduction to library research and to the microbiological literature. Topics are assigned and supervised by staff members. Credit/no credit only. Offered: AWSpS.

MICROM 499- Undergraduate Laboratory Research (*-) Leigh Specific problems in microbiology or immunology. Credit/no credit only. Offered: AWSpS.

Courses for Graduates Only

MICROM 500 Introduction to Research (* max. 20) Introduction to research areas of the faculty and the techniques employed in their investigations. Credit/ no credit only. Prerequisite: graduate standing in microbiology or permission of instructor. Offered: AWSpS.

MICROM 510 Physiology of Bacteria (3) Traxler Topics of current interest concerning the molecular biology and physiology of bacteria. Prerequisite: 410 and BIOC 440, 441, and 442, or permission of instructor. Offered: odd years; W.

MICROM 518 Microbial Degradation of Toxic Contaminants (3) Herwig, Strand Detailed survey of current understanding of microbiology and degradative pathways of industrial organic compounds, pesticides, plastics, oil, and metals. Microbial requirements for bioremediation. Methods of scientific investigation of microbial transformations. Requires basic understanding of metabolism and organic chemistry. Prerequisite: biological science course. Offered: jointly with CEWA 518/ESC 518; Sp.

MICROM 520 Seminar (1) Credit/no credit only. Offered: AWSp.

MICROM 522 Current Research in Microbiology (1) *Champoux* Weekly student and faculty seminar presentations based on the current literature. Credit/no credit only. Prerequisite: graduate standing in microbiology. Offered: AWSp.

MICROM 525 Cell Surface Membrane in Cell Sociology and Immunology (2) Carter, Hakomori Structure and function of cell surface membranes in relation to various immunobiological and pathobiological phenomena (differentiation, organization, infection, cancer) covered. Prerequisite: BIOC 440, 441, 442, and permission of instructor. Offered: jointly with PABIO 525.

MICROM 526 Research of Cell Surface Problems (1) *Traxler* Weekly research seminar and discussion of scientific literature pertaining to the process of membrane protein biogenesis. Credit/no credit only. Prerequisite: permission of instructor.

MICROM 527 Genetic Approach to Complex Biological Processes (1) *Hughes* Current research as it applies to genetic approaches to complex biological processes in the area of microbiology. Offered: AWSpS.

MICROM 528 Salmonella Genetics (1) Hughes Review current literature in the area of gene regulation in Salmonella typhimurium and related studies in Escherichia coli. Prerequisite: graduate student standing; advanced undergraduates by permission of instructor. Offered: AWSpS.

MICROM 530 Biology and Evolution of Prokaryotes (4) Leigh, Staley Selected eubacterial and archaebacterial groups studied. Students enrich, isolate, and characterize their own cultures as part of the laboratory. Prerequisite: 402, 412 or equivalents; open to qualified undergraduates by permission of instructor. Offered: even years; A. MICROM 532 Seminar in General Microbiology (1, max. 15) Leigh Weekly seminar concerning research topics in the genetics and biochemistry of selected bacteria. Credit/no credit only. Prerequisite: 410, permission of instructor. Offered: AWSpS.

MICROM 540 Virology (3) Katze Lecture-seminar course concerning host-viral interactions. Prerequisite: permission of instructor. Offered: even years; W.

MICROM 552 Pathogenic Microbiology (4) Katze, Lory Introduction to concepts and techniques of general microbiology, to major groups of infectious agents affecting the human body, and to mechanisms and models of pathogenesis. Prerequisite: BIOL 201, 202, 203, or equivalent and some basic immunology; for dental students, others by permission of instructor. Offered: Sp.

MICROM 553 Molecular Mechanisms of Bacterial Pathogenesis (3) Lory, Moseley, Rubens Mechanisms of bacterial pathogenesis explored at the molecular, genetic, and cellular levels through selected models as presented in the current scientific literature. Prerequisite: 411 or equivalent. Offered: odd years; A.

MICROM 554 Seminar in Molecular and Medical Microbiology (1, max. 15) Lory, Moseley Weekly one-hour seminar in which recent advances in molecular biology of microbial pathogenesis or the current research of the participants is presented and discussed critically. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

MICROM 555 Advanced Clinical Microbiology (2.5) Cookson, Fritsche Attendance at daily plate rounds of the Division of Clinical Microbiology. Designed to increase understanding of clinical microbiological work and its application to the care of the patient. Credit/no credit only. Prerequisite: 443 and permission of instructor. Offered: AWSp.

MICROM 556 Clinical Microbiology Training and Research (* max. 12) Fritsche Training in clinical microbiology and applied research. Attendance at daily laboratory rounds in addition to bench-side training and research. For medical students and microbiology graduate students only. Credit/no credit only. Prerequisite: 443 and permission of instructor.

MICROM 560 Research and Journal Club in Retrovirology (1) Linial Weekly research seminar and discussion of literature in areas of retroviral replication and transformation. Prerequisite: graduate or permission of instructor. Offered: AWSpS.

MICROM 562 Oncogene and Retrovirus Research Seminar (1) Linial, Overbaugh Weekly discussions of ongoing research related to retroviral replication, retroviral oncogeneses and pathology. Prerequisite: graduate standing or permission of instructor. Offered: AWSpS.

MICROM 585 Research in Cell and Molecular Biology (1, max. 15) *Champoux* Weekly research seminar. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MICROM 588 Research in Applied Microbiology (1) Lidstrom Weekly research seminar and discussion of scientific literature pertaining to applied microbiology. Credit/no credit only. Prerequisite: permission of instructor. Offered: jointly with CHEM E 588; AWSpS.

MICROM 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

MICROM 700 Master's Thesis (*) Credit/no credit only.

MICROM 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Molecular Biotechnology

The Department of Molecular Biotechnology was created with the conviction that the future of biology and medicine lies in the ability to apply a multidisciplinary approach to the analysis of complex systems. The cellular interactions in the immunologic and neural networks regulate some of the most complex behaviors and responses of living organisms. The 100,000 genes that dictate the complex system of human development constitute another example. The organization of these genes on the chromosome, their sequence polymorphism, transcriptional control, and evolutionary relationships must be analyzed to understand fully the intricacies of development. Progress in understanding these systems is directly correlated to the sophistication of the available research tools. The department is committed to training students to focus on the development and/or the application of powerful new tools to leading-edge problems in biology and medicine. The nature of the tools will change in response to the challenges posed by contemporary biology.

Graduate Program

Graduate Program Coordinator K336B Health Sciences, Box 357730 (206) 616-7297 molbiotk@u.washington.edu

The graduate program in molecular biotechnology trains students to bring the knowledge and recent advances in a variety of disciplines—e.g., physics, chemistry, engineering, and computer sciences—to bear on the complex problems of modern biology and medicine. The program emphasizes extensive research experience within an interdisciplinary and state-of-the-art research environment.

The program has a broad, interdisciplinary nature. Therefore, each student's educational objectives will differ. Students are guided by their Dissertation Supervisory Committee to obtain knowledge of selected topics in four areas, as well as a thorough knowledge of topics related to their chosen area of research. The four areas are (1) molecular/cell biology and genetics, (2) chemistry, (3) physics and instrumentation, and (4) applied mathematics or computer science. This requirement can be met through a combination of molecular biotechnology courses, additional elective courses, and reading assignments tailored to the student's background and specific interests.

Doctor of Philosophy

The molecular biotechnology graduate program is designed to educate and stimulate students at the interface of biological, physical, and computational sciences. Students are trained to focus on the development and/or application of new tools to challenging biological problems. These tools include the development of new chemistries, instruments, and computer hardware or software for the analysis of DNA, proteins, or cells. The goal of the program is to provide students with a sound background in molecular and cellular biology, and a broad access to research expertise in disciplines outside biology. Accordingly, the faculty brings together skills in applied mathematics, biology, chemistry, computer sciences, physics, and instrument design. Particular areas of expertise include immunology, protein chemistry, nucleic-acid chemistry, analytical cytogenetics, large-scale DNA mapping and sequencing (genomics), and informatics.

Research Facilities

The department is currently housed in the H- and Kwings in the Health Sciences Complex. Students in the department are assigned space in the laboratories of faculty members with whom they do their rotations or dissertation research. State-of-the-art research facilities are available in the department for cellular, protein, and DNA analysis. Extensive computer and library resources are also available to students.

Admission Requirements

Admission to the Graduate School requires that a prospective student hold a baccalaureate degree from an accredited college or university in the United States or its equivalent in a foreign country. Students are required to have a cumulative GPA of 3.30 ("B") or better, and to have taken and received high scores on the Graduate Record Examination (generally in the 80th percentile or higher).

In addition to completing the application requirements for the Graduate School, an applicant should also forward the following items to the Academic Counselor for the Graduate Program, Department of Molecular Biotechnology, Box 357730, University of Washington, Seattle, WA 98195-7730: (1) official copies of Graduate Record Examination scores for the general test, as well as the results of an advanced-subject test; (2) a one- or two-page written description of previous research experience, combined with a brief statement of education/career objectives; (3) a minimum of three letters of recommendation from persons acquainted with the applicant's background (no specific form required); and (4) where appropriate, the results of the Test of English as a Foreign Language, indicative of proficiency in the English language. Students are admitted for autumn quarter only. The application deadline is Februarv 1.

Faculty

Chair

Leroy E. Hood

Professors

Hood, Leroy E. * 1992; PhD, 1968, California Institute of Technology; molecular immunology, large-scale DNA mapping and sequencing, molecular evolution.

Karp, Richard Manning * 1995, (Adjunct); PhD, 1959, Harvard University; combinatorial algorithms, computational complexity, parallel algorithms, computational biology.

King, Mary-Claire * 1995, (Adjunct); PhD, 1973, University of California (Berkeley); genetic analysis of complex human phenotypes, human diversity and evolution.

Trask, Barbara J. * 1992; PhD, 1985, University of Leiden (Netherlands); in situ hybridization, analytical cytogenetics, analysis of large-scale DNA polymorphism.

Van Den Engh, Ger * 1992, (Research); PhD, 1976, University of Leiden (Netherlands); flow cytometry, quantitative cytogenetics, instrument design and development.

Associate Professors

Aebersold, Rudolf Hans 1993; PhD, 1983, University of Basel (Switzerland); development of technology for protein analysis, biochemistry of cell internal signaling pathways.

Green, Philip 1994; PhD, 1976, University of California (Berkeley); mathematical and computer methods for genome analysis.

Assistant Professors

Goverman, Joan M. * 1992; PhD, 1981, University of California (Los Angeles); immune recognition and tolerance, autoimmunity, T cell development, activation, antibody diversity. Hunkapiller, Tim * 1992, (Research); PhD, 1992, California Institute of Technology; biological computation and genomic methodologies and analysis.

Nickerson, Deborah A. * 1992; PhD, 1978, University of Tennessee; automating the identification and typing of human DNA variations, genetic mapping, DNA diagnostics.

Yates, John R. * 1992; PhD, 1987, University of Virginia; biological mass spectrometry, protein sequencing, computational methods for data analysis.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

MBT 450 Introduction to Molecular Biotechnology (2) Hood, Olson Rudiments of basic biology with emphasis on role of DNA and protein analysis. Credit/no credit only.

MBT 463 Hands-On Science for Elementary School Teachers (5) Offers prospective and practicing teachers an opportunity to learn science through the hands-on teaching methods recommended for teaching science at the elementary level. Offered: jointly with EDC&I 463; Sp.

MBT 499 Undergraduate Research (1-5, max. 12) Individual research projects in Molecular Biotechnology related to: human genetics, cytogenetics, largescale sequencing and mapping, protein structure and function, and computational analysis of protein and DNA sequences.

MBT 510 Technologies for Genome Analysis (3) Goverman, Nickerson, Trask Discussion of current and newly-emerging technologies in genome analysis with regard to applications in biology and medicine and to potential advantages and limitations. Prerequisite: permission of instructor. Offered: A.

MBT 520 Technologies for Protein Analysis (3) Aebersold, Yates Discussion of current and newlyemerging technologies in protein analysis with regard to applications in biology and medicine and to potential advantages and limitations. Prerequisite: permission of instructor. Offered: W.

MBT 530 Advanced Instrumentation for Genome Analysis (3) van den Engh Presentation of principles and use of instruments for genome analysis. Discussion of limitations of present instruments and potential improvements. Theory of electrophoretic and fluorescence-based DNA analysis techniques. Prerequisite: permission of instructor. Offered: Sp.

MBT 550 Seminar in Molecular Biotechnology (1, max. 12) Trask Presentation of independent research by invited outside speakers and members of the Department of Molecular Biotechnology. Emphasis on new and original contributions to the field of molecular biotechnology. Credit/no credit only. Offered: AWSpS.

MBT 560 Molecular Biotechnology Literature Conference (1, max. 12) Goverman Presentation, discussion, and critical analysis of research results from the current literature in molecular biotechnology. Credit/no credit only. Offered: AWSpS.

MBT 599 Special Topics in Molecular Biotechnology (* max. 12) *Nickerson* Prerequisite: permission of instructor. Offered: AWSpS.

MBT 600 Independent Study or Research (*) Credit/no credit only.

MBT 700 Master's Thesis (*) Credit/no credit only.

MBT 800 Doctoral Dissertation (*) Credit/no credit only.

Neurological Surgery

700 9th Avenue, Harborview Medical Center

The Department of Neurological Surgery is dedicated to teaching and research in the entire spectrum of diseases of the central and peripheral nervous system. Instruction in this area is provided for medical students and postgraduate physicians.

The department's medical-student instruction includes participation in the human-biology curriculum as well as in elective basic-science and clinical experiences. These are available at Harborview Medical Center, University of Washington Medical Center, Veterans Affairs Puget Sound Health Care Center, and Children's Hospital and Regional Medical Center. The department also has several course offerings correlating research and clinical problems of the nervous system, including the neuroscience research seminar, and clinical and basicscience correlates of the epilepsies.

Selected medical students also may elect research experience within the Department of Neurological Surgery. The department research facilities are housed in the Medical Research Tower of the University of Washington Medical Center, at Harborview Hall, and at Veterans Affairs Puget Sound Health Care System. Investigations are under way at these institutions in many areas of neurophysiology, in behavioral research, in light and electron microscopic examination of the anatomy of the nervous system, in cerebral vascular physiology, and in hemo-oncology.

In addition to undergraduate instruction, a fully certified residency program in neurological surgery is available for selected postgraduate physicians. The sevenyear program emphasizes preparation for a career in academic neurosurgery.

Faculty

Chair

H. Richard Winn

Professors

Alvord, Ellsworth C. * 1960, (Adjunct); MD, 1946, Cornell University; neuropathology, experimental allergic encephalitis, multiple sclerosis, brain tumors.

Chatrian, Gian E. 1959, (Emeritus); MD, 1951, University of Naples (Italy); electroencephalography and clinical neurophysiology.

Dikmen, Sureyya S. * 1974, (Adjunct); PhD, 1973, University of Washington; clinical neuropsychology, neuropsychological and psychosocial outcomes in traumatic head injury.

Dodrill, Carl B. 1973; MS, 1967, PhD, 1970, Purdue University; human neuropsychology, epilepsy, EEG and performance, antiepileptic medications and performance.

Fraser, Robert T. * 1976; PhD, 1976, University of Wisconsin; psychology.

Grady, M. Sean 1987; MD, 1981, Georgetown University; traumatic brain and spinal cord injury.

Gruss, Joseph S. 1991, (Adjunct); MBChB, 1969, University of Witwatersrand (South Africa); plastic surgery.

Harris, A. Basil 1967; MD, 1954, University of Alabama; neurosurgery, neuroanatomy, microvascular, arteriovenous malformations, epilepsy mechanisms.

Jaffe, Kenneth M. * 1981, (Adjunct); MD, 1975, Harvard University; pediatric rehabilitation, brain injury, neuromuscular diseases, congenital defects, electromyography.

Kelly, William A. 1959, (Emeritus); MD, 1954, University of Cincinnati; neurosurgery, neuroendocrinology.

Lam, Arthur M. 1986; MD, 1974, Western Ontario University (Canada); neuroanesthesia.

Levy, René H. * 1970; PhD, 1970, University of California (San Francisco); metabolic interactions among antiepileptic drugs and between cytokines and drugs.

Loeser, John D. 1969; MD, 1961, New York University; pain, neurophysiology.

Maravilla, Kenneth R. 1987; MD, 1970, State University of New York (Brooklyn); neuroradiology and neurosurgery.

Mayberg, Marc R. 1985; MD, 1978, Mayo Medical School/Graduate School; cerebrovascular disease, vasospasms, ultrastructure of cerebral arteries.

Mills, Richard P. 1978, (Adjunct); MD, 1968, Yale University; glaucoma, neuro-ophthalmology.

Ojemann, George A. 1966; MD, 1959, University of lowa; neurophysiology, organization of higher functions in brain, language, memory.

Roberts, Theodore S. 1985; MS, 1952, MD, 1955, University of Wisconsin; neurological surgery, stereotaxic surgery, pituitary and cerebrovascular disease.

Rubel, Edwin W. * 1986; PhD, 1969, Michigan State University; developmental neurobiology, with special emphasis on vertebrate auditory system development.

Schwartzkroin, Philip A. * 1978; PhD, 1972, Stanford University; mechanisms of cortical excitability.

Shaw, Cheng-Mei * 1963, (Adjunct); MD, 1950, National Taiwan University; neuropathology, immunopathology, neurotoxicology, congenital malformation.

Spence, Alexander M. 1974, (Adjunct); MD, 1965, University of Chicago; neurology, neuro-oncology.

Westrum, Lesnick E. * 1966; MD, 1963, University of Washington; PhD, 1966, University College, London (UK); neuroanatomy, synaptology, plasticity, olfactory and trigeminal systems, dental pathways.

Winn, H. Richard * 1983; MD, 1968, University of Pennsylvania; physiology of cerebral blood flow regulation.

Associate Professors

Anderson, Gail * 1981, (Adjunct); PhD, 1987, University of Washington; pharmacokinetics, metabolism and interactions of drugs in epilepsy and trauma.

Chapman, Jens R. 1990; MD, 1983, Technical University of Munich (Germany); orthopaedics, spine trauma/ reconstruction.

Cohen, Wendy A. 1987; MD, 1975, Harvard University; neuroradiology.

Dalley, Robert W. 1987; MD, 1982, University of Utah; neuroradiology.

Domino, Karen B. 1986, (Adjunct); MA, 1974, University of New Mexico; MD, 1978, University of Michigan; neuroanesthesia.

Ellenbogen, Richard G. 1997; MD, 1983, Brown University; pediatric neurosurgery, neuro-oncology, complex spine.

Eskridge, Joseph M. 1987; MD, 1981, University of Louisville; neuroradiology.

Goodkin, Robert 1987; MD, 1964, Chicago Medical School; neurological surgery.

Haynor, David R. * 1984, (Adjunct); PhD, 1971, University of California (Berkeley); MD, 1979, Harvard University; neuroradiology, neurosurgery.

Janigro, Damir 1990; PhD, 1982, University of Milan (Italy); blood-brain barrier, glial-neuronal interactions.

Kliot, Michel 1990; MD, 1984, Yale University; peripheral nerve injury and diseases, nerve injury/regeneration.

Mayberg, Teresa Slee 1983; MD, 1983, University of Washington.

414 SCHOOL OF MEDICINE / NEUROLOGY

Morrison, Richard S. 1994; PhD, 1982, University of California (Los Angeles); neurobiology and neurooncology; growth factors and regulation in brain cell function.

Newell, David W. 1982; MD, 1982, Case Western Reserve University; clinical neurosurgery and neurovascular mechanizing of cerebral ischemia.

Ojemann, Linda M. 1974; MD, 1960, University of Illinois; neurology, treatment of epilepsy.

Silbergeld, Daniel L. 1997; MD, 1984, University of Cincinnati; brain tumors, epilepsy.

Stelzer, Keith J. 1990; PhD, 1985, University of Kansas; MD, 1989, University of California (Los Angeles); therapeutic radiology.

Temkin, Nancy R. * 1977; PhD, 1976, State University of New York (Buffalo); clinical trials, recovery models, statistical modeling of epileptic phenomena, survival analysis.

Wilensky, Alan J. 1975; MD, 1967, Western Ontario University (Canada); PhD, 1973, University of Toronto (Canada); neurology, treatment of epilepsy, testing and use of anticonvulsants.

Assistant Professor

Becker, Kyra J. 1996; MD, 1989, Duke University.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

NEUR S 498 Undergraduate Thesis (*) Winn Offered: AWSpS.

NEUR S 499 Undergraduate Research (*) Winn Investigation of special problems as an intimate member of the research team in the neurological surgery laboratories. Research to lead to a thesis, if desired. List of projects available on request. Prerequisite: permission of instructor. Offered: AWSpS.

NEUR S 505 P-Preceptorship in Academic Neurosurgery (1) *Winn* Opportunity for first- and second-year medical students to observe the research, teaching, and patient-care activities of academic neurosurgery. Prerequisite: permission of instructor. Offered: AWSpS.

NEUR S 542 Clinical and Basic Research Correlates of Epilepsy (2) *G. Ojemann, Westrum* Clinical symptoms and treatment of epilepsy; related basic research in neuroanatomy, neurophysiology, neuropsychology, and neuropharmacology of epilepsy. Prerequisite: HUBIO 532 for medical students; permission of instructor for others.

NEUR S 680 P-Neurological Surgery Clerkship (* max. 8) Grady, Mayberg Student serves clinical clerkship as an intimate member of the staff, participating in inpatient and outpatient care, both preoperative and postoperative, involving neurological surgery patients. University of Washington Medical Center or a University-affiliated hospital may be selected, subject to approval of the department. Prerequisite: HUBIO 563. (Four weeks.) Offered: AWSpS.

NEUR S 697 P-Neurological Surgery Special Electives (* max. 24) Winn By specific arrangement, for qualified students, special clerkship, externship, or research opportunities can be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of instructor. Offered: AWSpS. NEUR S 699 P-WWAMI Neurological Surgery Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Neurology

RR650 University of Washington Medical Center

Neurology, previously a division of the Department of Medicine, became an independent department at the University of Washington School of Medicine in autumn of 1995. The four-year residency program (including an internship) has been expanded and offers superb training in all facets of neurology in a setting of great institutional strength in fundamental neuroscience research. In addition, the Department of Neurology offers exceptional training programs in the Division of Pediatric Neurology and in the Epilepsy Center. A clinical-clerkship program provides basic training in neurology patient care. The Neurology Department is active in teaching, research, and patient care at the University of Washington Medical Center, Seattle Veterans Affairs Medical Center, Harborview Medical Center, Children's Hospital and Medical Center, and the Fred Hutchinson Cancer Research Center. Medical students, interns, neurology residents, and postdoctoral research fellows rotate through these various hospitals and participate in the learning experiences offered at each.

Tirschwell, David L. 1995, (Acting); MD, 1991, Cornell University; neurology, stroke.

Zunt, Joseph R. 1997, (Acting); MD, 1991, University of Minnesota.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

NEURL 495 Community Rehabilitation of the Neurologically Impaired: Internship (* max. 5) Fraser, Clemmons Supervised work with a neurologically disabled vocational rehabilitation population within a multidisciplinary vocational rehabilitation unit. Offered: AWSpS.

NEURL 505 P-Preceptorship in Neurology (1) Provides an opportunity for first and second year medical students to gain personal experience with neurology practice situations by being stationed with carefully selected clinical faculty members in their offices. Prerequisite: permission of instructor.

NEURL 536 Topics in Clinical Neurology (1) *Spain* Lectures on epilepsy, stroke, coma, drug overdose, dementia, headache, myelopathies, infectious disease. Offered: S.

NEURL 646 P-Clinical Electroencephalography (* max. 12) Farrell, Holmes For third- and fourthyear medical students. Clinical applications of electroencephalography long-term EEG-video-audio monitoring, computer-averaged evoked potentials. Prerequisite: completion of Human Biology series. Offered: AWSpS.

NEURL 681 P-Seizure Clinic Clerkship (2.5) *A. Wilensky* Evaluation and follow-up of patients with seizure disorders. Limited contact with inpatients. Prerequisite: MED 665 and permission of instructor. Offered: AWSpS.

NEURL 686 P-Clinical Neurology (8) Swanson Clerkship including both inpatient and outpatient experiences and didactic sessions on neurological subjects. Student assigned to one of the affiliated hospitals and supervised by neurology residents and full-time staff. Offered: AWSpS.

NEURL 687 P-Advanced Clinical Clerkship in Child Neurology (* max. 8) Sarnat Advanced course in neurology dealing with neurological disease in children. Supervision by child neurology residents and attending. Prerequisite: 665, third- and fourth-year medical students. (Limit: one student.) Offered: AWSpS.

Obstetrics and Gynecology

BB617 Health Sciences

The Department of Obstetrics and Gynecology is involved with teaching, patient care, and research in the areas of normal and abnormal human reproduction growth and development of the fetus, normal and complicated obstetrics, and surgical and medical diseases of the female reproductive system, including endocrinology, oncology, infectious disease, psychosocial problems, primary and preventive health care, and ethics.

Wasser, Samuel K. * 1982; PhD, 1981, University of Washington; behavioral ecology, endocrinology, conservation genetics and reproductive biology.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

OB GYN 498 Undergraduate Thesis (*) Vontver By arrangement.

OB GYN 499 Undergraduate Research (*) Vontver

OB GYN 550 P-Voluntary Pregnancy Termination: An Overview of Medical and Social Issues (2) *Easterling, Miller* A flexible curriculum which allows the medical student to observe in an abortion clinic, read articles and a textbook on abortion. Prerequisite: 665 or equivalent.

OB GYN 579 P-Obstetric and Gynecologic Investigation (*) *Vontver* The investigation may cover any one of the following fields: toxemias of pregnancy, hormone assays in obstetrics and endocrinology, obstetric and gynecologic oncology, genetics. By arrangement.

OB GYN 665 P-Introduction to Obstetrics and Gynecology, UH-HMC (* max. 12) Vontver Introductory clerkship providing comprehensive medical care and counseling to female patients. Includes management and delivery of obstetrical patients, diagnosis and management of gynecologic diseases, hospital rounds, outpatient clinics, seminars, tutorial, and community health-care agencies for women. Rotations occur at UWMC and Harborview Medical Center. Prerequisite: HUBIO 565. (Six weeks. Limit: six students.)

OB GYN 666 P-Introduction to Obstetrics and Gynecology, Boise (* max. 12) Vontver Clerkship equivalent to 665 offered at Boise, Idaho (WWAMI). Includes experience in several private physician offices. Prerequisite: HUBIO 565. (Six weeks. Limit: two students.)

416 SCHOOL OF MEDICINE / OPHTHALMOLOGY

OB GYN 667 P-Introduction to Obstetrics and Gynecology, Madigan (* max. 12) Vontver Clerkship equivalent to 665 offered at Madigan Army Medical Center, Tacoma. Prerequisite: HUBIO 565. (Six weeks. Limit: three students.)

OB GYN 668 P-Introduction to Obstetrics and Gynecology, Spokane (12) Vontver Clerkship equivalent to 665 offered at Spokane (WWAMI). Includes experience in several private physicians' offices. Prerequisite: HUBIO 565. (Six weeks. Limit: three students.)

OB GYN 669 P-Introduction to Obstetrics and Gynecology, Swedish (12) Vontver Clerkship equivalent to 665 offered at Swedish Hospital Medical Center. Prerequisite: HUBIO 565. (Six weeks. Limit: two students.) Not offered summer quarter.

OB GYN 670 P-Introduction to Obstetrics and Gynecology, GH-Central (12) Vontver Clerkship equivalent to 665 offered at the Central facility of Group Health Cooperative of Puget Sound in Seattle. Students spend time in delivery room, surgery, and clinic, and have a specific preceptor assigned. Prerequisite: HUBIO 565. (Six weeks. Limit: two students.)

OB GYN 671 P-Introduction to Obstetrics and Gynecology, Anchorage (12) Vontver Clerkship equivalent to 665 offered at Anchorage, Alaska (WWAMI). Includes experience in several private physicians' offices as well as Providence Hospital. Prerequisite: HUBIO 565. (Six weeks. Limit: three students.)

OB GYN 672 P-Introduction to Obstetrics and Gynecology, GH-East (12) Vontver Clerkship equivalent to 665 offered at the Eastside facility of Group Health Cooperative of Puget Sound in Redmond. Students spend time in delivery room, surgery, and clinic, and have a specific preceptor assigned. Prerequisite: HUBIO 565. (Six weeks. Limit: one student.)

OB GYN 673 P-Introduction to Obstetrics and Gynecology, Military, Madigan (12) Vontver Clerkship equivalent to 665 offered at Madigan Army Medical Center. Students spend time in delivery room, surgery, and clinic, and have a specific preceptor assigned. Prerequisite: HUBIO 565. (Six weeks. Limit: two students.)

OB GYN 674 P-Introduction to Obstetrics and Gynecology, Tacoma (12) *Vontver* Clerkship equivalent to 665 offered at Tacoma General Hospital. Prerequisite: HUBIO 465.

OB GYN 681 P-Gynecological Oncology Subspecialty (8) *Vontver* Experience in reproductive tract malignancy, chemotherapy, and radiation therapy. Student follows selected patients through primary surgery, recovery, and initial adjuvant treatment, as well as continuing treatment in both clinic and inpatient settings. Prerequisite: basic OB GYN Clerkship. (Limit: two students each four weeks.)

OB GYN 682 P-Antenatal High-Risk Obstetrics (8) *Vontver* Four weeks on high-risk antenatal obstetrics ward and clinic. Students responsible for initial workups, daily laboratory evaluations, continuing care of high-risk antepartum patients. Weekly conference with obstetrics attending; presentation of one or more topics per rotation. Excellent coordination with resident and attending staff required to maintain patient-care continuity. (Limit: two students each four weeks.)

OB GYN 684 P-Endocrinology of Reproduction (* max. 12) *Vontver* The biochemistry of steroids. Steroid metabolism as related to clinical problems. Diagnosis and treatment of endocrine disorders. Case studies with special emphasis on modern methods of investigation and assisted reproductive technology. (Limit: one student each four weeks.) OB GYN 685 P-Obstetrics/Gynecology Preceptorship (* max. 8) Vontver Close working relationship with physician in private practice of obstetrics and gynecology, including: hospital rounds, surgery, deliveries, and office and business aspects of private practice as individually arranged. Forty hours minimum can be arranged to fit schedule not to exceed 8 credits. Prerequisite: 665 or equivalent and permission of instructor. (Limit: two students.)

OB GYN 697 P-Obstetrics and Gynecology Special Electives (* max. 24) Vontver By arrangement, for qualified students, special clerkship or research opportunities can sometimes be made available at other institutions. Students wishing this course should obtain special assignment form one month before preregistration. Department evaluates student performance. Prerequisite: permission of instructor.

OB GYN 698 P-Introduction to Obstetrics and Gynecology, Away (* max. 12) Vontver Clerkship equivalent to 665 at sites being evaluated as permanent WWAMI sites (currently includes Caldwell, Highline, Missoula, and Rock Springs). By arrangement. Subject to Dean's Office approval. Department evaluates student performance. Prerequisite: HUBIO 565; permission of instructor.

OB GYN 699 P-WWAMI Obstetrics and Gynecology Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located outside the WWAMI region. A special assignment form must be obtained one month in advance of preregistration. Prerequisite: permission of department.

Ophthalmology

RR801 University of Washington Medical Center

The Department of Ophthalmology is responsible for the instructional and research programs in diseases of the eye and its adnexae as well as the visual system.

Medical-student instruction is provided, including multiple electives in the clinical years. Graduate physicians are provided with three years of residency training at the affiliated hospitals. A two-year post-residency vitreoretinal fellowship is offered. Patient care is provided under the supervision of full- and part-time faculty physicians at the University of Washington Medical Center, Harborview Medical Center, Veterans Affairs Medical Center, and Children's Hospital and Regional Medical Center.

Clinical research programs relate to eye diseases. Laboratory research encompasses neurophysiology of vision, morphology of the retina and visual system, and biochemistry of ocular tissues. Postdoctoral training is offered in all these disciplines.

Faculty

Chair

Richard P. Mills

Professors

Clark, John I. 1982, (Adjunct); PhD, 1974, University of Washington; structural and developmental basis of lens-cell transparency and cataract formation.

Hendrickson, Anita E. * 1967, (Adjunct); PhD, 1964, University of Washington; neuroanatomy, morphology and development of primate retina.

Kalina, Robert E. 1967; MD, 1960, University of Minnesota; vitreoretinal diseases.

Kinyoun, James L. 1978; MD, 1971, University of Nebraska; vitreoretinal diseases. Milam, Ann H. 1971; PhD, 1967, University of Texas (Southwestern); electron microscopy, ophthalmic pathology, retinitis pigmentosa, retinal cell biology.

Mills, Richard P. 1978; MD, 1968, Yale University; glaucoma, neuro-ophthalmology.

Orcutt, James C. 1982; PhD, 1976, MD, 1977, University of Colorado (Denver); orbit, oculoplastics, neuroophthalmology.

Pagon, Roberta A. 1975, (Adjunct); MD, 1972, Harvard University; medical genetics.

Palczewski, Krzysztof * 1992; MS, 1980, PhD, 1986, Technical University of Wroclaw (Poland); visual transduction.

Patton, Dorothy L. 1981, (Adjunct); PhD, 1981, University of Washington; infectious disease.

Saari, John C. * 1974; PhD, 1970, University of Washington; retinal biochemistry.

Associate Professors

Barlow, William E. * 1989, (Adjunct Research); MS, 1982, PhD, 1986, University of Washington; survival analysis, residuals, and evaluation of screening programs.

Chuang, Elaine L. 1993; MD, 1979, University of Texas (San Antonio); vitreoretinal diseases, ocular inflammation.

Fritsche, Thomas R. * 1984, (Adjunct); MD, 1981, PhD, 1984, University of Minnesota; systematics and ecology of animal parasites; medical microbiology.

Weiss, Avery H. 1991; MD, 1974, Miami University (Ohio); pediatric ophthalmology, strabismus.

Assistant Professor

Chen, Philip P. 1996; MD, 1991, Yale University; glaucoma.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

OPHTH 498 Undergraduate Thesis (*) Kinyoun (University of Washington Medical Center) Thesisbased research in vision and ophthalmology. Elective. Offered: AWSpS.

OPHTH 499 Undergraduate Research (*) *Kinyoun (University of Washington Medical Center)* Laboratory or clinical research in morphology, biochemistry, immunology, experimental pathology, or clinical studies of the eye and visual system. Offered: AWSpS.

OPHTH 501 P-Ophthalmology Preceptorship (1) *Kinyoun* Individualized experiences with one or more of the full-time faculty members of the department covering research, teaching, and patient care. Student observes activities in the clinic, hospital ward, operating room, and research laboratories. Prerequisite: first- and second-year medical student standing and permission of instructor. Offered: AWSpS.

OPHTH 681 P-Ophthalmology Clerkship (4) *Mills* (*Harborview Medical Center*) Students gain experience in the diagnosis and treatment of common ocular disorders. Basic examination techniques, including tonometry, ophthalmoscopy, and biomicroscopy. Students work with an eye pathologist in gross and microscopic examination of surgical and autopsy eyes. Prerequisite: completion of human biology series. (Limit: one student.) Offered: AWSpS. **OPHTH 682 P-Ophthalmology Clerkship (4)** *Choy (Pacific Medical Center)* Student works with a faculty member in the diagnosis and treatment of ocular diseases in both outpatient and inpatient populations. Experience in common ocular disorders is gained, and neurological and other consultations seen. Prerequisite: completion of human biology series. (Limit: one student.) Offered: AWSpS.

OPHTH 683 P-Pediatric Ophthalmology Clerkship (4) Weiss (Children's Hospital and Medical Center) Student examines and observes treatment of children with ocular diseases and learns to differentiate trivial from potentially blinding disorders. Programmed text in general ophthalmology furnished. Prerequisite: University of Washington student and completion of human biology series. (Two weeks, full-time. Limit: one student.) Offered: WS.

OPHTH 685 P-Ophthalmology Clerkship (4) *Orcutt (VA Puget Sound Health Care System)* Participation in diagnosis and treatment of medical and surgical ocular disease. Outpatient examinations, inpatient surgery, and neuro-ophthalmologic, retinal, and medical consultations. Basic techniques involved in tonometry, ophthalmoscopy, and biomicroscopy of eye. Prerequisite: completion of human biology series. (Limit: one student.) Offered: AWSpS.

OPHTH 686 P-Ophthalmology Clerkship (4) *Gorman (Group Health Hospital)* Diagnosis and treatment of ocular diseases in outpatients. Weekly assignment to Group Health ophthalmologist responsible for the care of walk-in and urgent patients, which may demonstrate findings pertinent to the future practice of primary-care physicians. Examination techniques, including tonometry, ophthalmoscopy, and biomicroscopy. Prerequisite: completion of human biology series. (Limit: one student.) Offered: AWSp.

OPHTH 687 P-Ophthalmology Clerkship (4) *Kinyoun (University of Washington Medical Center)* Inpatient and outpatient diagnosis and treatment of eye diseases. Subspecialty clinics include cornea, retina, neuro-ophthalmology, glaucoma, contact lenses, and strabismus. Student attends regularly scheduled conferences in ophthalmic basic and clinical science. Prerequisite: completion of human biology series. (Limit: one student.) Offered: AWSpS.

OPHTH 688 P-Ophthalmology Clerkship (8) *Kinyoun, Werner* Four-week externship at Alaska Native Medical Center in Anchorage. Opportunity to learn and practice common eye examination techniques, including slit-lamp biomicroscopy, tonometry, and funduscopy. Patients seen three days a week; two days spent in the operating room. Prerequisite: completion of human biology series, fourthyear medical students only. Offered: AWSpS.

OPHTH 697 P-Ophthalmology Special Electives (* max. 24) *Kinyoun* By specific arrangement, for qualified students, special clerkship, externship, or research opportunities can at times be made available at other institutions. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of instructor. Offered: AWSpS.

OPHTH 699 P-WWAMI Ophthalmology Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department. Offered: AWSpS.

Orthopaedics

BB1043 University of Washington Medical Center

The Department of Orthopaedics is actively involved in quality patient care, teaching, and research concerning bone and joint problems. Special areas of expertise include foot and ankle, hand and microvascular, hip and knee, arthritis, sports medicine, pediatric orthopaedics, shoulder and elbow, spine, trauma, and tumors.

In addition to providing instruction for medical students, the department provides education at the graduate, residency, and post-residency levels. Selected medical students may elect research experience in the department. A fully approved residency offers opportunities to carry out fundamental and clinical research. Residents may work toward the Master of Science degree by meeting the requirements of the Graduate School and the academic unit offering the degree program.

Frederick A. Matsen

Professors

Bigos, Stanley J. 1981; MD, 1975, University of Missouri; orthopaedics, spine.

Chesnut, Charles * 1974, (Adjunct); MD, 1966, University of Florida; nuclear medicine.

Conrad, Ernest U. 1986; MD, 1979, University of Virginia; orthopaedics, tumors and bone transplantation.

Eyre, David R. * 1985; PhD, 1969, University of Leeds (UK); connective tissue biology, collagen chemistry, bone and cartilage metabolism.

Hansen, Sigvard T. 1968; MD, 1961, University of Washington; orthopaedics, foot, ankle and amputations.

Mann, Frederick A. 1993, (Adjunct); MD, 1975, Indiana University; emergency radiology.

Matsen, Frederick A. * 1973; MD, 1968, Baylor University; orthopaedics, bone and joint research, robotics.

Olerud, John E. 1977; MD, 1971, University of Washington; dermatology.

Richardson, Michael L. 1984, (Adjunct); MD, 1975, Baylor University; bone and joint radiology and musculoskeletal.

Sangeorzan, Bruce J. 1986; MD, 1981, Wayne State University; orthopaedics, foot, ankle and amputations.

Simkin, Peter A. 1968, (Adjunct); MD, 1961, University of Pennsylvania; rheumatology.

Smith, Nathan J. * 1965, (Emeritus); MD, 1945, University of Wisconsin; sports medicine.

Staheli, Lynn T. 1975, (Emeritus); MD, 1959, University of Utah; pediatric orthopaedics.

Tencer, Allan Fred * 1988; PhD, 1981, McGill University (Canada).

Wilson, Anthony J. 1994, (Adjunct); MBBCh, 1972, Otago University (New Zealand); orthopaedic trauma imaging, teleradiology, digital radiography, MRI/CT.

Associate Professors

Belza, Basia * 1991, (Adjunct); MN, 1982, University of Virginia; PhD, 1991, University of California (San Francisco); chronic illness, gerontology, fatigue prevention and management in rheumatic diseases. Benirschke, Stephen K. 1985; MD, 1979, Case Western Reserve University; traumatology.

Chapman, Jens R. 1990; MD, 1983, Technical University of Munich (Germany); orthopaedics, spine trauma/ reconstruction.

Clark, John M. Jr. 1982; PhD, 1975, MD, 1976, University of Chicago; orthopaedics, hip and knee arthritis.

Gardner, Gregory C. 1989, (Adjunct); MD, 1984, Baylor University; rheumatology.

Gillespy, Thurman 1990, (Adjunct); MD, 1980, Thomas Jefferson University; musculoskeletal radiology, orthopaedics.

Graney, Daniel O. * 1966, (Adjunct); PhD, 1965, University of California (San Francisco); gross anatomy, clinical anatomy, computers in teaching.

Greenlee, Theodore K. 1971; MD, 1959, Northwestern University; general orthopaedics.

Hanel, Douglas Paul 1992; MD, 1977, St. Louis University; orthopaedics, hand/microvascular surgery.

Harryman, Douglas T. 1988; MD, 1979, Virginia Commonwealth University; orthopaedics, shoulder and elbow.

Henley, Michael Bradford 1988; MD, 1979, University of Washington; orthopaedics, spine trauma and reconstruction.

Larson, Roger V. 1982; MD, 1973, University of Utah; orthopaedics, anthroscopy, sports medicine and knee ligament reconstruction.

Mosca, Vincent S. 1985; MD, 1978, University of Rochester; pediatric orthopaedics.

Ott, Susan M. 1980, (Adjunct); MD, 1974, University of Washington; nephrology.

Raskind, Wendy H. 1981, (Adjunct); PhD, 1977, MD, 1978, University of Washington; medical genetics.

Routt, Milton L. 1988; MD, 1983, University of Texas (Galveston); orthopaedics, traumatology.

Schoene, Robert B. 1977, (Adjunct); MD, 1972, Columbia University; respiratory diseases.

Sidles, John Arthur 1984; PhD, 1983, University of Washington.

Simonian, Peter Todd 1992; MD, 1991, University of Southern California; orthopaedics, general, sports medicine.

Smith, Douglas G. 1989; MD, 1984, University of Chicago; orthopaedics, foot, ankle and amputations.

Teitz, Carol Claire 1974; MD, 1974, Yale University; orthopaedics, anthroscopy, sports medicine and knee ligament reconstruction.

Trumble, Thomas E. 1989; MD, 1979, Yale University; orthopaedics, hand and microvascular surgery.

Assistant Professors

Bruckner, James 1990; MD, 1984, Creighton University; orthopaedics, tumors and bone transplantation.

Chansky, Howard Alan 1992; MD, 1987, University of Pennsylvania; orthopaedics, general.

Hunter, John C. 1992, (Adjunct); MD, 1970, University of Illinois.

Mirza, Sohail K. 1989; MD, 1989, University of Colorado (Denver); spinal surgery/spine biomechanics.

Smith, Kevin L. 1995; MD, 1990, Southern Illinois University; shoulder and elbow orthopaedics.

Song, Kit M. 1995; MD, 1985, University of Iowa; pediatric orthopaedics.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

ORTHP 435 Spine Resource Clinic Elective (2) A four-week course examining musculoskeletal pathology of spine. Introduction to physical and non-physical problems that can block patient's response to treatment and complicate care, outcome. Promotes understanding of role of helping patients identify, act upon options.

ORTHP 495 Athletic Health Care Administration (3) Organizational management of athletic healthcare aspects of operating organized athletic programs. For health professionals, school or community-based administrators/athletic directors/coaches, university-based health educators. Overview; generating awareness; needs assessment; educating coaches, student trainers; establishing central training room; standardization of procedures; record keeping; evaluation.

ORTHP 496 Advanced Athletic Health Care (3) Advanced sports medicine course on the prevention and management of athletic injuries. For coaches, school nurses, medical students. Problem-solving and hands-on approach emphasize wellness, conditioning, skills of injury evaluation, steps to recovery through rehabilitation, taping techniques, emergency first aid procedures.

ORTHP 498 Undergraduate Thesis (*) Eyre Student works directly with a preceptor in selecting a suitable area for laboratory or clinical research in the area of orthopaedics, and develops a thesis for recognition. Offered: AWSpS.

ORTHP 499 Undergraduate Research (*) *Eyre* Investigation of pertinent musculoskeletal problems in the orthopaedic laboratories as part of the research group. Offered: AWSpS.

ORTHP 505 P-Preceptorship in Orthopaedic Surgery (1) Opportunity for first- and second-year medical students to gain experience with clinical faculty members in the community. Students observe general aspects of private practice from a longitudinal perspective. Prerequisite: permission of department. Offered: AWSpS.

ORTHP 585 P-Sports Medicine (2) *Teitz* Lectures, patient problem presentations, and seminar discussions to explore impact of exercise and sport participation on various body systems. Includes nutritional concerns, biomechanics of certain sports injuries and cardiovascular, pulmonary, and musculosk-eletal concerns. Prerequisite: second-year medical student standing. Offered: Sp.

ORTHP 675 P-Preceptorship in Orthopaedics (* max. 4) Simonian Student spends full time with the preceptor during all his or her working day in order to gain a better understanding of the diagnosis and the management of problems of the musculoskeletal system as seen in the private orthopaedic practice. Prerequisite: SURG 665 or HUBIO 553 and permission of department. (Two weeks, full-time.) Offered: AWSpS.

ORTHP 676 P-Pediatric Orthopaedics (* max. 8) Mosca, Song, Staheli Acquaints students with all aspects of musculoskeletal problems in childhood. Didactic conferences and seminars, and opportunities for active participation in both inpatient and outpatient care at Children's Hospital and Medical Center, and correlative anatomy and pathology. Prerequisite: SURG 665 or HUBIO 553. (Four weeks, full-time.) Offered: AWSpS. **ORTHP 677 P-Musculoskeletal Trauma (* max. 8)** Benirschke, Chapman, Hanel, Hansen, Henley, Mirza, Routt, Sangeorzan, Smith Harborview Medical Center. Emergency room, wards, operating room, and outpatient clinics. Instruction in general and special clinics, including hand, hip, foot, and fracture, with emphasis placed on physical examination of the patient. Students take correlative anatomy and pathology. Prerequisite: SURG 665, HUBIO 553.(Four weeks, full-time.) Offered: AWSpS.

ORTHP 678 P-Musculoskeletal Oncology (8/12) *Conrad* In-depth experience on musculoskeletal oncology service with primary involvement in initial evaluation, staging, treatment, and postoperative follow-up of patients with various musculoskeletal malignancies. Elective involves experience in surgical, oncologic, radiologic, and pathologic principles of managing sarcomas. Prerequisite: basic orthopaedic elective or permission of instructor. Offered: AWSpS.

ORTHP 680 P-General Orthopaedic Clerkship (* max. 8) Sangeorzan Veteran's Administration Hospital: structured to provide a basic education in the fundamentals of the musculoskeletal system. Heavy emphasis is placed on the reconstructive alternatives in the treatment of degenerative joint diseases. Prerequisite: completion of HUBIO series; third- and fourth-year students. Enrollment limited to three. Offered: AWSpS.

ORTHP 681 P-University of Washington Medical Center Orthopaedics (8) Bigos, Bruckner, Clark, Conrad, Harryman, Larson, Matsen, Mirza, Simonian, Smith, Teitz, Trumble Orthopaedic subspecialty clerkship at University of Washington Medical Center. Preceptor-based outpatient, inpatient, emergency, or operative orthopaedic care. Students work primarily in one subspecialty area and in one general orthopaedic clinic. For students who plan careers in orthopaedic surgery. Prerequisite: completion of HUBIO series, third- and fourth-year medical students. Offered: AWSpS.

ORTHP 682 P-Outpatient Orthopaedics (8) Outpatient orthopaedic experience at University of Washington Medical Center. Emphasis on physical exam, diagnosis, radiographic evaluation, and non-operative treatment. Rotation through general orthopaedics as well as all subspecialty areas. For students who plan careers in primary care. Prerequisite: completion of HUBIO series. Offered: AWSpS.

ORTHP 685 P-Spine Resource Clinic Elective (2) *Bigos* Four-week part-time clerkship examining musculoskeletal pathology of the spine. Introduction to physical and non-physical problems that can block the patient's response to treatment and complicate care and outcome. Promotes understanding of the role of helping patients identify and act upon options. Prerequisite: any level medical student. Offered: AWSpS.

ORTHP 697 P-Orthopaedic External Elective (* max. 12) *Simonian* Special arrangements can be made for students desiring to take orthopaedic electives at other institutions. Programs generally approved include orthopaedic clerkships at other universities or at large orthopaedic institutes. Prerequisite: HUBIO 553 and permission of department. Offered: AWSpS.

ORTHP 699 P-WWAMI Orthopedics Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Otolaryngology— Head and Neck Surgery

BB1165 University of Washington Medical Center

The Department of Otolaryngology—Head and Neck Surgery provides clinical care for patients with a broad spectrum of disorders affecting the head and neck region, including the ears, nose, and throat. A major portion of departmental effort is directed toward basic research in the areas of sensorineural hearing disorders, physiology of the larynx, and cancer treatment and rehabilitation. The department supports a number of research fellows and advanced degree candidates, and is responsible for a four-year residency program and for the training of medical students in subjects relevant to the specialty.

Donaldson, James A. 1965, (Emeritus); MD, 1954, University of Minnesota; otology.

Duckert, Larry Gene 1978; MD, 1972, PhD, 1977, University of Minnesota; otology/neurotology.

Fuchs, Albert F. * 1969, (Adjunct); PhD, 1966, Johns Hopkins University; oculomotor physiology.

Gates, George A. 1993; MD, 1959, University of Michigan; otology/neurotology, cochlear implantation.

Kuhl, Patricia K. * 1976, (Adjunct); MA, 1971, PhD, 1973, University of Minnesota; speech perception.

Mayberg, Marc R. 1985, (Adjunct); MD, 1978, Mayo Medical School/Graduate School; cerebrovascular disease, vasospasms, ultrastructure of cerebral arteries.

Orcutt, James C. 1982, (Adjunct); PhD, 1976, MD, 1977, University of Colorado (Denver); orbit, oculoplastics, neuro-ophthalmology.

Rubel, Edwin W. * 1986; PhD, 1969, Michigan State University; developmental neurobiology, with special emphasis on vertebrate auditory system development.

Snyder, Jack 1969, (Emeritus); MA, 1956, PhD, 1971, University of Washington; audiology.

Spelman, Francis A. * 1961, (Adjunct); PhD, 1975, University of Washington; biophysics of implanted cochlea, bioinstrumentation for primate research.

Stanley, Robert B. 1993; MD, 1976, Duke University; otolaryngology/head and neck surgery, trauma, maxillofacial surgery.

Weymuller, Ernest A. Jr. 1978; MD, 1966, Harvard University; otolaryngology/head and neck surgery.

Associate Professors

Coltrera, Marc Dante 1986; MD, 1981, Yale University; otolaryngology/head and neck surgery.

Hillel, Allen D. * 1983; MD, 1976, Stanford University; peripheral nerve physiology after injury, swallowing disorders in neuromuscular disease.

Inglis, Andrew F. Jr. 1983; MD, 1981, Medical College of Pennsylvania; pediatric otolaryngology/head and neck surgery.

Makielski, Kathleen H. 1985; MD, 1978, University of Michigan; otolaryngology/head and neck surgery.

Manning, Scott C. 1995; MD, 1980, Tulane University; pediatric otolaryngology/head and neck surgery.

SCHOOL OF MEDICINE / PATHOLOGY 419

Murakami, Craig S. 1989; MD, 1983, University of Washington; facial cosmetic and reconstructive surgery.

Norton, Susan J. * 1991; PhD, 1982, University of Washington; normal and non-normal hearing, specifically cochlear mechanics, in humans and animals.

Rees, Thomas 1971; MA, 1969, University of Redlands; PhD, 1972, University of Washington; audiology.

Robinson, Lawrence R. * 1989, (Adjunct); MD, 1982, Baylor University; physiatry.

Schubert, Mark M. * 1974, (Adjunct); DDS, 1974, MSD, 1981, University of Washington; oral medicine/oral on-cology.

Tempel, Bruce L. * 1988; PhD, 1983, Princeton University; molecular neurobiology/neurogenetics, especially potassium channel gene structure and function.

Werner, Lynne A. * 1986, (Adjunct); PhD, 1980, Loyola University (Chicago); auditory development, infant psychoacoustics.

Assistant Professors

Calderon, Rosemary 1987, (Adjunct); PhD, 1988, University of Washington; mental health and deafness, childhood psychopathology, early intervention.

Futran, Neal David 1995; DMD, 1982, University of Pennsylvania; MD, 1987, State University of New York (Downstate); oral maxillofacial surgery.

Kujawa, Sharon Guilds 1997; PhD, 1993, University of Arizona; audiology.

Pinczower, Eric F. 1991; MD, 1986, University of California (Irvine); otolaryngology/head and neck surgery, facial reconstructive surgery.

Sie, Kathleen C. Y. 1984; MD, 1984, University of Michigan; pediatric otolaryngology/head and neck surgery.

Yueh, Bevan 1997; MD, 1989, Stanford University; otolaryngology/head and neck surgery, outcomes research.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

OTOHN 498 Undergraduate Thesis (*) Rubel, Weymuller Student works directly with department faculty in selecting a suitable area for laboratory or clinical research in the area of otolaryngology, and develops a thesis for recognition. Offered: AWSpS.

OTOHN 499 Undergraduate Research (*) *Rubel, Weymuller* Research opportunities offered under direction in the area of otolaryngology. (Twelve weeks.) Offered: AWSpS.

OTOHN 680 P-Introduction to Clinical Otolaryngology—Head and Neck Surgery (4/8, max. 24) Hillel, Makielski, Manning, Stanley, Weymuller Introduction to surgical subspecialty of otolaryngologyhead and neck surgery. Structured to allow broad introduction to breadth of specialty. Students see patients in clinic, join inpatient rounds, have opportunity to go to operating room. Rotations at UWMC, VAH, HMC, CHMC, PMC/Swedish. Prerequisite: human biology series; recommended: MED 665 or SURG 665. Offered: AWSpS.

OTOHN 683 P-Otolaryngology—Head and Neck Surgery Externship (* max. 8) (Madigan Army Medical Center) Individual externship training at outpatient clinic, where visits average twelve hundred per month, supplemented by inpatient assignments. Students may reside at the hospital during externship, using facilities of bachelor officer quarters and hospital mess. Prerequisite: completion of human biology series. (Two or four weeks, full-time.) Recommended: MED or SURG 665. Offered: AWSpS.

OTOHN 686 P-Otolaryngology—Head and Neck Surgery: Medical and Surgical Aspects (* max. 12) Weymuller Clinical in-depth study for the student whose interest lies in pathology of the head and neck. Reasonable flexibility to arrange course content that provides exposure to all aspects of patient care. Prerequisite: permission of chairman; recommended: MED or SURG 665. Offered: AWSpS.

OTOHN 697 P-Otolaryngology—Head and Neck Surgery Special Electives (* max. 24) Weymuller By specific arrangement. Special clerkship, externship, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of chairman. Offered: AWSpS.

OTOHN 699 P-WWAMI Otolaryngology—Head and Neck Surgery Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Pathology

C516 Health Sciences

Pathology is both a basic biological science and a specialty of medicine. As a basic science, it deals with the natural history and mechanisms of initiation and expression of disease processes. The principal aim of the pathologist is to understand disease manifestations and processes in whatever terms are required. Therefore, the techniques of the pathologist range from those of the physicist and physical chemist through those of the physiologist to the realm of the epidemiologist. Present emphasis in the department is on cellular and molecular pathology, environmental pathology, and analysis of disease by methods of cell and molecular biology, recombinant DNA techniques, light and electron microscopy, histochemistry and cytochemistry, analytical biochemistry, cell and organ culture, and the establishment and analysis of animal models of disease.

Graduate Program

Graduate Program Coordinator C516 Health Sciences, Box 357470 (206) 616-7551

The Department of Pathology offers graduate training in experimental pathology, with an emphasis on the cellular and molecular biological basis of disease, leading to the Doctor of Philosophy degree in experimental pathology. The aim of the graduate program is to train individuals for a career in the scientific investigation of basic disease mechanisms. The program encompasses students and faculty members with diverse interests, which range from investigation of specific disease conditions to the molecular basis of alterations in cell function and of gene expression. Faculty members' interests include the normal and pathological aspects of cardiovascular biology, tumor biology, environmental effects on normal processes, biology of aging, neurobiology, immune response, inflammation and repair, immunopathology and biology of extracellular matrix, as well as fundamental processes that underlie disease, such as regulation of gene expression and protein synthesis, structure and function of oncogenes, viral and nonviral transformation, chromatin structure, mutagenesis and DNA repair, and genetic recombination. The department's graduate faculty comprises 40 members, who are located at the Health Sciences Center, Veterans Affairs Medical Center, Harborview Medical Center, Children's Hospital and Medical Center, and Fred Hutchinson Cancer Research Center. Approximately 30 full-time students are pursuing the Ph.D. degree.

Students in the program are expected to fulfill coursework requirements during the first two years. In line with the diversity of faculty members' interests within the department, course requirements are kept to a minimum to provide students with maximum flexibility.

Special Requirements

Prospective candidates are expected to have had undergraduate experience in biology, physics, chemistry, and mathematics, and acceptable scores on the Graduate Record Examination, including advanced biology or chemistry. Those wishing to matriculate toward both the M.D. and Ph.D. degrees must gain admission to both the Graduate School and the School of Medicine.

Financial Aid

Funding for students is provided from departmental and University funds, training grants, a variety of institutional fellowships, and research grants of individual faculty members.

Research Facilities

The department emphasizes the cellular and molecular approach to the investigation of the pathogenesis of disease in mammalian species. Special facilities exist for training in electron microscopy; cell, tissue, and organ culture; recombinant DNA techniques; histochemistry and cytochemistry; analytical biochemistry; immunology; and molecular and cell biology.

Residency Training Program

The department supervises an internship and residency-training program in anatomic pathology and, jointly with the Department of Laboratory Medicine, in clinical pathology for qualified medical doctors. Persons who complete the residency program are eligible for certification by the American Board of Pathology. For additional information, contact the Resident Program Director, Department of Pathology, Box 356100.

Professors

Albers, John J. * 1971, (Adjunct Research); MS, 1967, PhD, 1969, University of Illinois; lipoprotein metabolism and pathophysiology.

Alpers, Charles E. 1986; MD, 1978, University of Rochester; clinical/experimental glomerular disease, AIDS in man and experimental simian AIDS, vascular biology.

Alvord, Ellsworth C. * 1960; MD, 1946, Cornell University; neuropathology, experimental allergic encephalitis, multiple sclerosis, brain tumors.

Benjamin, Denis R. * 1975; MBChB, 1968, University of Witwatersrand (South Africa); pediatric pathology, hematopathology, nutrition, circadian rhythms.

Berk, Bradford Charles * 1994, (Adjunct); MD, 1981, PhD, 1981, University of Rochester; cardiology.

Bowen-Pope, Daniel * 1979; PhD, 1979, University of California (Berkeley); gene regulation, growth factors and receptors.

420 SCHOOL OF MEDICINE / PATHOLOGY

Byers, Peter H. * 1976; MD, 1969, Case Western Reserve University; extracellular matrix synthesis, genetic disorders of collagen metabolism, secretion.

Chi, Emil Y. * 1972, (Research); PhD, 1971, University of California (Santa Barbara); lung structures and function, mast cell secretion and inflammation.

Clowes, Alexander W. * 1980, (Adjunct); MD, 1972, Harvard University; general and vascular surgery.

Collins, Steven J. 1980, (Adjunct); MD, 1973, Columbia University; oncology.

Disteche, Christine M. * 1980; PhD, 1976, University of Liege (Belgium); molecular genetics of sex chromosomes. X inactivation, human and mouse cvtogenetics.

Eary, Janet F. 1986, (Adjunct); MD, 1980, Michigan State University; nuclear medicine.

Eisen, Harvey * 1986, (Affiliate); PhD, 1967, University of Toronto (Canada); host-parasite interactions, generation of genetic diversity.

Fausto, Nelson * 1994; MD, 1960, Sao Paulo State University (Brazil); liver regeneration, tumor biology, carcinogenesis, growth factors.

Friend, Stephen H. 1997; PhD, 1979, MD, 1981, Indiana University; molecular biology of embryonal tumor, molecular pharmacology, tumor suppressor genes.

Galloway, Denise A. * 1982, (Adjunct Research); PhD, 1976, City University of New York; viral pathogenesis and neoplasia.

Groudine, Mark * 1982, (Adjunct); MD, 1975, PhD, 1976, University of Pennsylvania; chromatin structure and gene activity in development and transformation.

Guggenheim, Stephen J. 1984, (Affiliate); MD, 1984, Duke University; microbiology, renal pathology.

Haggitt, Rodger C. 1984; MD, 1967, University of Tennessee; anatomic pathology, gastrointestinal pathology.

Harlan, John M. * 1978, (Adjunct); MD, 1973, University of Chicago; hematology, leukocyte-endothelial interaction.

Hellstrom, Ingegerd * 1966, (Affiliate); DrMed, 1966, Karolinska Institute (Sweden); tumor immunology.

Hellstrom, Karl-Erik 1966, (Affiliate); DrMed, 1964, University of Stockholm (Sweden); tumor biology.

Johnson, Richard J. 1986, (Adjunct); MD, 1979, University of Minnesota; nephrology.

Kiviat, Nancy B. * 1979; MA, 1970, MD, 1975, University of Washington; epidemiologic and molecular biologic studies of the relationship between HPV, HIV, and neoplasia.

Loeb, Lawrence A. * 1978; MD, 1961, New York University; PhD, 1967, University of California (Berkeley); DNA replication, cancer and AIDS.

Martin, George * 1957; MD, 1953, University of Washington; somatic cell genetics, pathobiology of aging, Alzheimer's disease, Werner's syndrome.

McDougall, James K. * 1982; PhD, 1971, University of Birmingham (UK); cell cycle, genetic instability and neoplasia.

Miller, Arthur D. * 1987, (Affiliate); PhD, 1982, Stanford University; retrovirus biology, gene transfer, gene therapy.

Mottet, N. Karle * 1959, (Emeritus); MD, 1952, Yale University; effects of trace elements, especially methylmercury and arsenic, on growth and development.

Narayanan, A. Sampath * 1971, (Research); PhD, 1967, University of Madras (India); connective tissue, periodontal disease, regulation of fibroblast growth, matrix synthesis.

Neiman, Paul E. * 1971, (Adjunct); MD, 1964, University of Washington; oncology.

Norwood, Thomas H. * 1973; MD, 1968, University of Maryland; somatic cell genetics, pathobiology of aging, mitotic cell cycle regulation. Page, Roy C. * 1967; DDS, 1957, University of Maryland; PhD, 1967, University of Washington; connectivetissue pathology, chronic inflammation, immunopathology, periodontal disease.

Piepkorn, Michael W. 1991; MD, 1973, University of Minnesota; PhD, 1980, University of Washington; dermatology.

Prehn, Richmond T. 1958, (Affiliate); MD, 1947, Long Island University; cancer research.

Rabinovitch, Peter S. * 1980; MD, 1979, PhD, 1980, University of Washington; cellular aging, preneoplastic disease, cell cycle abnormalities, DNA change.

Raines, Elaine W. 1977, (Research); MS, 1975, University of California (San Francisco); growth factors, matrix, integrins, disintegrins, atherosclerosis, smooth muscle cells, macrophages.

Reay, Donald T. 1982; MD, 1963, University of Utah; MPA, 1978, Seattle University; forensic medicine.

Reichenbach, Dennis D. * 1966; MD, 1958, University of Washington; cardiovascular pathology, myocardial cell injury.

Reidy, Michael A. * 1980; PhD, 1976, Cambridge University (UK); identification of migration specific genes, expression of matrix metalloproteinases.

Rohrschneider, Larry R. * 1982, (Affiliate); PhD, 1973, University of Wisconsin; control of growth, differentiation, transformation by the c-fms proto-oncogene.

Ross, Russell * 1962; DDS, 1955, Columbia University; PhD, 1962, University of Washington; atherosclerosis, growth factors, inflammation, vascular biology.

Sale, George E. 1977; MD, 1968, Stanford University; immunopathology of bone marrow transplantation, graft-versus-host.

Sarnat, Harvey B. 1992, (Adjunct); MD, 1966, University of Illinois; pediatric neurology, neuromuscular diseases, neurodevelopment.

Schwartz, Stephen Mark * 1974; MD, 1967, Boston University; PhD, 1973, University of Washington; vascular biology, atherosclerosis, molecular basis of lineage, developmental biology, cell kinetics.

Shaw, Cheng-Mei * 1963; MD, 1950, National Taiwan University; neuropathology, immunopathology, neurotoxicology, congenital malformation.

Shulman, Howard M. 1982; MD, 1971, University of California (Los Angeles); graft-versus-host disease; venocclusive disease of the liver.

Smith, Gerald R. * 1983, (Affiliate); PhD, 1970, Massachusetts Institute of Technology; molecular biology of genetic recombination and regulation of gene expression.

Spence, Alexander M. 1974; MD, 1965, University of Chicago; neurology, neuro-oncology.

Stamatoyannopoulos, George 1965, (Adjunct); MD, 1958, DMedSc, 1960, University of Athens (Greece); medical genetics.

Sumi, Shuzo Mark * 1966, (Emeritus); MD, 1956, University of Toronto (Canada); neuropathology, neuromuscular disease, neurodegenerative diseases.

Todaro, George J. * 1983, (Adjunct); MD, 1963, New York University; growth regulation in normal and tumor cells.

Vessella, Robert L. 1989, (Adjunct); PhD, 1974, University of Mississippi; tumor markers and immunology.

Wight, Thomas * 1978; PhD, 1972, University of New Hampshire; connective tissue biology and pathology, proteoglycans metabolism, atherosclerosis.

Wolf, Norman S. * 1968; DVM, 1953, Kansas State University; PhD, 1960, Northwestern University; hematopoietic stem cell dynamics and transplantation, aging at the cellular level.

Associate Professors

Fligner, Corinne L. 1983; MD, 1976, University of New Mexico; autopsy and forensic pathology, fetal and perinatal pathology, forensic toxicology.

Giachelli, Cecilia * 1982, (Research); PhD, 1987, University of Washington; adhesion molecules and vascular biology processes.

Hackman, Robert C. 1982; MD, 1971, Stanford University; infectious and pulmonary complications in immunocompromised patients.

Kay, Mark A. * 1993, (Adjunct); PhD, 1985, MD, 1987, Case Western Reserve University; medical genetics.

Kinsella, Michael G. 1987, (Research); PhD, 1978, University of Oregon; endothelial cell biology.

Monnat, Raymond J. Jr. * 1982; MD, 1976, University of Chicago; somatic mutation, somatic cell molecular genetics, human genetic disease.

Myerson, David * 1985; PhD, 1979, Albert Einstein College of Medicine; the pathology of viral disease in humans.

Ott, Susan M. 1980, (Adjunct); MD, 1974, University of Washington; nephrology.

Patterson, Kathleen 1992; MD, 1976, University of lowa; pediatric pathology.

Rosenfeld, Michael E. * 1992, (Adjunct); PhD, 1981, University of Wisconsin; mechanisms of atherogenesis and macrophage gene expression.

Schmidt, Rodney 1984; MD, 1984, PhD, 1984, University of Washington; surgical pathology, pulmonary pathology, sarcomas, image analysis, electron microscopy.

Siebert, Joseph R. 1986, (Research); PhD, 1985, University of Washington; fetal pathology.

Snow, Alan D. 1989, (Research); PhD, 1986, Queen's University (Canada); Alzheimer's disease.

Stephens, Karen G. * 1989, (Adjunct Research); PhD, 1982, Indiana University; molecular genetics of human inherited disease; gene mapping, regulation, and imprinting.

Tait, Jonathan F. * 1985, (Adjunct); MD, 1983, PhD, 1983, Washington University; biochemistry of blood coagulation, laboratory diagnosis of genetic disorders.

Thorning, David R. 1982; MD, 1965, University of Kansas; anatomic pathology, pulmonary pathology, tissue biology, electron microscopy.

True, Lawrence D. * 1990; MD, 1971, Tulane University; urologic pathology, nuclear aspects of tumor differentiation.

Assistant Professors

Adler, David A. 1982, (Affiliate); PhD, 1996, University of Washington; mammalian x-chromosome inactivation.

Bornfeldt, Karin E. * 1995, (Research); PhD, 1991, University of Linkoping (Sweden); atherosclerosis, vascular biology, intercellular signalling, diabetics.

Bressler, Steven L. 1996, (Research); PhD, 1989, University of Washington; aging and neurodegenerative diseases.

Bronner, Mary P. 1993; MD, 1989, University of Pennsylvania; gastrointestinal and hepatic pathology, neoplastic progression and transplantation pathology.

Kapur, Raj P. * 1992; MD, 1988, University of Southern California; human embryology, birth defects.

Murry, Charles E. * 1989; PhD, 1989, MD, 1989, Duke University; myocardial infarction, heart regeneration, skeletal/cardiac muscle differentiation.

Porter, Peggy L. 1987; MD, 1987, University of New Mexico; cytology and breast cancer.

Rhim, Jonathan A. * 1995; MD, 1989, George Washington University; molecular mechanisms of medical disease.

Swisshelm, Karen * 1980; PhD, 1989, University of Washington; senescence, breast cancer, gene expression, DNA methylation, cytogenetics.

Tapscott, Stephen J. * 1990, (Adjunct); MD, 1982, University of Pennsylvania; neurology, molecular biology.

Tkachuk, Douglas C. 1995; MD, 1982, University of Manitoba (Canada); pathogenesis of acute leukemia.

Williams, Kandace J. 1988, (Affiliate); PhD, 1987, Dartmouth University; pathology, toxicology.

Wright, A. Morgan 1990, (Affiliate); MD, 1976, Pennsylvania State University; cytology, histology.

Lecturers

Ek, Marit 1970; MBChB, 1959, University of Cape Town (South Africa); gynecological and breast pathology.

Franklin, Christopher C. 1997; PhD, 1989, University of Missouri; molecular and cellular biology, cellular signaling, protein kinase phosphatase.

Grieco, Verena S. 1994; MD, 1983, University of Washington; gynecologic pathology.

Lee, Ming Jong 1972; MD, 1963, Gunma University (Japan); surgical pathology, anatomical pathology.

Pendergrass, William R. 1980; PhD, 1977, University of Washington; DNA replication, caloric restriction, gerontology, invitro senescence.

Seifert, Ronald A. 1981; PhD, 1983, University of Washington; growth factor/receptor structure and function.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

PATH 410 Introduction to Pathology (3) Wolf Basic pathologic processes, including cell and tissue involvement in degenerative processes, cell death, inflammation and repair, immunopathologies, cell cycle events, carcinogenesis, and responses to alterations in hormone and growth factor levels. Illustrative disease conditions are reviewed. Required for physical therapy students. Others with suitable biology background by permission of instructor. Offered: A.

PATH 444 General Pathology (5) Page Basic pathologic processes that underlie disease, including cell alterations, genetic and developmental pathology, environmental pathology, neoplasia, immunopathology, inflammation, infection, and systemic diseases. Correlates gross, functional, and biochemical alterations. For first-year dental students and graduate students. Requires reasonable grounding in biological and chemical sciences. Prerequisite for nondental students: permission of instructor.

PATH 445 Systemic Pathology (3) Survey of pathologic processes affecting organs and systems pertinent to the practice of dentistry. Lectures and demonstrations present a coherent picture of systemic disease. For first-year dental students, graduate students, and others with a reasonable background in biologic and chemical sciences.

PATH 498 Undergraduate Thesis (*) Elective.

PATH 499 Undergraduate Research (*) Elective.

PATH 500 Molecular Basis of Disease (3) *Rhim* Designed for first- and second-year graduate students to introduce the concepts of general pathology at the cellular and molecular levels.

PATH 501 Pathology Proseminars (1) Small group discussions and presentations by students based on critical reading of original papers, or on concurrent seminars, in many areas of experimental

pathology and medicine. Topic varies by quarter. Prerequisite: permission of instructor. Offered: AWSpS.

PATH 502 Inflammation and Repair (2) Lectureseminar; a seminar course dealing with an in-depth examination of the processes involved in inflammation and repair. Credit/no credit only. Prerequisite: permission of instructor. Offered: even years.

PATH 507 Introduction to Pathology Research (2) Bornfeldt, Swisshelm Current developments and approaches to investigation of the molecular and cellular basis of disease. Members of the Pathology faculty present and discuss their own research projects. Credit/no credit only. Prerequisite: permission of instructor. Offered: A.

CONJ 508 EM Methods and Interpretation (3-5) See Conjoint Courses.

PATH 510 Introduction to Pathology Methods (3) Bowen-Pope Laboratory course designed to introduce graduate students to the fundamentals of image analysis, histology, histopathology, post mortem evaluation, surgical pathology, and other methods used to investigate disease etiology, progression, and manifestation in humans and in animal models. Prerequisite: permission of instructor. Offered: Sp.

PATH 511 Topics in Experimental Pathology (1-2, max. 10) *Bornfeldt* Focus on areas of research relevant to experimental pathology. Prerequisite: permission of instructor. Offered: AWSpS.

C MED 512 Introduction to the Anatomical Analysis of Animal Disease (5, max. 10) See Comparative Medicine courses.

C MED 514 Comparative Pathology Conference (1, max. 6) See Comparative Medicine courses.

PATH 520 Experimental Pathology Seminar (1) *Giachelli* Review of current research in various areas of experimental pathology by members of the department and visiting scientists. Credit/no credit only.

CONJ 520 Anatomy and Autopsy (1/2) Fligner See Conjoint Courses.

PATH 522 Hematopathology Seminar (2) Sabath Identification of normal lymphocyte and bone marrow subpopulations, diagnosis of leukemias, lymphomas, and benign conditions that resemble them. Emphasis on histopathology, cytochemical, immunological, and molecular markers. Clinicopathologic correlation. Offered: jointly with LAB M 522; even years.

PATH 530 Human Cytogenetics (* max. 4) *Disteche* Sources and methods of preparation and identification of human chromosomes. Molecular structure and mapping of chromosomes. Human cytogenetic pathology: karyotype-phenotype interactions, chromosome breakage, and cancer cytogenetics. Prerequisite: permission of instructor. Offered: even years.

PATH 535 Fundamentals of Human Disease (* max. 20) Students study human pathology through participation in the autopsy service under direct supervision of a faculty member. They analyze the histologic, cellular, and biochemical aspects of selected cases, and present their observations in weekly seminars. Prerequisite: 444 or 555 and permission of course director: graduate students only.

PATH 551 Experimental and Molecular Pathology (2-5, max. 20) Introduction to experimental pathology. A tutorial course designed to introduce a graduate student (medical, dental) or senior undergraduate to selected methods and problems through literature surveys and/or laboratory experience. Exploration of causes at the cellular and molecular levels in the study of disease is emphasized. Prerequisite: permission of instructor. PATH 552 Contemporary Anatomic Pathology (2-5, max. 30) Schwartz Study of recent developments in anatomic pathology. Subject includes areas of basic science and review of systemic pathology. Recent developments and interpretation of these findings are stressed. For pathology residents, fellows, and trainees. Credit/no credit only. Prerequisite: permission of instructor.

PATH 555 Environmental Pathology (3) Monnat, Rhim Modern morphologic, cell biological, and molecular approaches to environmental disease associated with exposure/predisposition. Lectures, seminar discussion, and student presentations. Prerequisite: 410 or 444 or HUBIO 520; recommended: ENV H 514 and 515. Offered: alternate years.

CONJ 560, 561 Tumor Biology (3, 2) See Conjoint Courses.

PATH 560 Molecular Analysis of Human Disease (* max. 10) Review and discussion of contemporary research on molecular basis of human disease. Focus on mutational mechanisms, genetic instability, AIDS, and cancer. Students participate in weekly group discussion and work with faculty to select, develop, and present discussion topic. Prerequisite: medical, graduate, or professional standing and permission of instructor. Offered: AWSp.

PATH 562 P-Cardiovascular Pathology Conference (*) Reichenbach Course consists of two parts: a laboratory review of gross and microscopic cardiovascular pathology of selected autopsied cases followed by a combined clinical (medical and/ or surgical) and pathology conference discussing these cases. Prerequisite: HUBIO 540 and permission of instructor.

PATH 563 Neuropathology (*) Alvord, Shaw, Sumi Course consists of ten parts. Conferences on gross neuropathology (brain cutting and clinicopathologic correlations) held at six hospitals. Weekly neurology or surgical neuropathology conferences, neuropathology slide show, and neuropathology laboratory case studies. Prerequisite: permission of instructor.

PATH 564 Neuropathology Brain Modeling (4) *Alvord* Designed along clinically important, functional, neuroanatomic lines, generally based first on the embryologic development of the most primitive segmental elements (sensory, motor and association cells, and simple reflexes), followed by the more elaborate suprasegmental elements (cerebellum, colliculi, and forebrain).

PATH 571 Neuroanatomic Pathology (*) Alvord, Shaw, Sumi The particular diseases occurring in specific parts of the nervous system are considered in terms of the segmental, intersegmental, and suprasegmental components. Clinicopathologic correlations are emphasized. Prerequisite: permission of instructor; recommended as concurrent course: 563.

PATH 572 Neuropathologic Reactions (*) Alvord, Shaw, Sumi The reactions of the nervous system, considered in terms of congenital malformations, inflammations, vascular, traumatic, metabolic-toxic, degenerative, and neoplastic diseases peculiar to the nervous system as a whole. Clinicopathologic correlations are emphasized. Prerequisite: permission of instructor; recommended as concurrent course: 563.

PATH 576 Systemic Pathology II (3) Case examples of gastrointestinal, hematopoietic, lymphoreticular, musculoskeletal, urinary, skin systems, and forensic pathology discussed by students. Relevant laboratory interpretations. Student presentations. Prerequisite: HUBIO 520 or equivalent general pathology course, and permission of instructor.

PATH 584 Neuropathology Brain Modeling Laboratory (4) Alvord Clinically important, functional neuroanatomic study based on embryologic motor,

422 SCHOOL OF MEDICINE / PEDIATRICS

sensory, and association cells and simple reflexes, followed by the more elaborate suprasegmental elements (cerebellum, colliculi, forebrain). Three-dimensional neuroanatomical relationships, critical for understanding neuropathology, can best be obtained in constructing a brain model. Prerequisite: 564, which may be taken concurrently.

PATH 600 Independent Study or Research (*) Credit/no credit only.

PATH 665 P-Surgical Pathology (*) Study of fresh current gross surgical specimens and autopsy specimens and their correlation to a patient's clinical course through observation of pathologists working in a large hospital setting. Prerequisite: permission of instructor.

PATH 666 P-Renal Pathology Conference (1) Conference-seminar on the histopathologic aspects of renal disease. May be taken concurrently with MED 693. For third- and fourth-year students. Prerequisite: permission of instructor.

PATH 667 P-Renal Pathology Laboratory (* max. 6) Laboratory elective for third- and fourthyear medical students. Read current literature, review various renal biopsies and urine sediments, and read standard texts prior to a weekly topic-oriented conference. All students earn 1 credit for one-hour seminar per week. May be taken concurrently with MED 693. Prerequisite: permission of instructor.

PATH 668 P-Skin Pathology (*) Histopathological aspects of skin diseases are presented and discussed in a group-conference type of seminar. Current dermatologic cases also are discussed. Prerequisite: dermatology elective and permission of instructor.

PATH 673 P-Cardiovascular Pathology (*) Reichenbach Spectrum of cardiovascular pathology covered in depth by case studies and gross and microscopic material. Case analysis for presentation, including clinical and gross and microscopic material, prepared outside of class time. Clinicopathologic correlation is emphasized. Prerequisite: HUBIO 540 and permission of instructor and second-year medical student standing.

PATH 679 P-Pathology Summer Clerkship (* max. 24) Dissection, writeup, and literature review of autopsy and surgical pathology specimens by students. Emphasis on etiology and pathogenesis of disease as a biological process. Designed for students who have not completed organ systems as covered in Human Biology courses. Offered at University of Washington Medical Center, Harborview Medical Center, Veterans Administration Hospital, Madigan Army Medical Center, and Swedish Hospital. Prerequisite: HUBIO 520 and completion of first year of medical school.

PATH 680 P-Diagnostic Pathology Clerkship— University of Washington Medical Center (* max. 24) Fligner, Bronner Medical student participation in dissection and study of autopsy and surgical pathology cases. Cases worked up under senior staff, including dissection, microscopic examination, and literature review. Attendance at pathology conferences and seminars expected. Prerequisite: third- or fourth-year student standing.

PATH 681 P-Diagnostic Pathology Clerkship— Harborview Medical Center (* max. 24) *Reichenbach* For description and prerequisite, see 680.

PATH 682 P-Diagnostic Pathology Clerkship— Veterans Administration Hospital (* max. 24) Thorning For description and prerequisite, see 680.

PATH 683 P-Diagnostic Pathology Clerkship— Medical Examiner's Office (* max. 24) Harruff For description and prerequisite, see 680. PATH 684 P-Diagnostic Pathology Clerkship— Laboratory Pathology of Seattle (* max. 24) *Kulander* For description and prerequisite, see 680.

PATH 685 P-Diagnostic Pathology Clerkship— Sacred Heart Hospital, Spokane (* max. 24) *Williamson* For description and prerequisite, see 680.

PATH 686 P-Diagnostic Pathology Clerkship— Overlake Medical Center (* max. 24) For description and prerequisite, see 680.

PATH 687 P-Diagnostic Pathology Clerkship— Children's Hospital and Medical Center (* max. 24) Patterson For description and prerequisite, see 680.

PATH 688 P-Diagnostic Pathology Clerkship— Madigan Army Medical Center (* max. 24) Kelley For description and prerequisite, see 680.

PATH 689 P-Diagnostic Pathology Clerkship— Valley Medical Center (* max. 24) Treseler For description and prerequisite, see 680.

PATH 690 P-Diagnostic Pathology Clerkship— Northwest Medical Center (* max. 24) Patton For description and prerequisite, see 680.

PATH 691 P-Diagnostic Pathology Clerkship— General Hospital of Everett (* max. 24) Lipo For description and prerequisite, see 680.

PATH 692 P-Diagnostic Pathology Clerkship— Group Health Cooperative (* max. 24) Mullen For description and prerequisite, see 680.

PATH 697 P-Pathology Special Electives (* max. 24) By specific arrangement, students can have clerkships, externships, or research opportunities at institutions other than the University of Washington. Students who wish to elect this course should obtain Special Assignment forms from the Dean's office at least one month before advance registration. Prerequisite: permission of instructor.

PATH 699 P-WWAMI Pathology Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

PATH 700 Master's Thesis (*)

PATH 800 Doctoral Dissertation (*)

Pediatrics

RR314 Health Sciences

Pediatrics involves the study of physical and behavioral development of man, in health and disease, from conception to maturity.

Instruction is provided through conjoint courses, lectures, conferences, clerkships, and electives. Faculty members participate in teaching the basic curriculum and offer 24 electives, including the general pediatrics clerkship at multiple WWAMI sites. A residency program is offered with a wide variety of electives in addition to traditional hospital-inpatient and clinic experience. Postdoctoral fellowship training is available in many subspecialty areas of pediatrics. The major teaching hospitals in Seattle are Children's Hospital and Medical Center, University of Washington Medical Center, and Harborview Medical Center.

Faculty

Chair

F. Bruder Stapleton

Professors

Benjamin, Denis R. * 1975, (Adjunct); MBChB, 1968, University of Witwatersrand (South Africa); pediatric pathology, hematopathology, nutrition, circadian rhythms.

Bennett, Forrest C. 1977; MD, 1970, University of Minnesota; child development and handicapped children.

Bergman, Abraham 1964; MD, 1958, Case Western Reserve University; ambulatory pediatrics.

Bernstein, Irwin D. 1980; MD, 1967, New York University; hematology, oncology.

Chance, Phillip F. 1998; MD, 1978, University of Tennessee; pediatric neurology and genetics.

Christie, Dennis L. 1976; MD, 1968, Northwestern University; gastroenterology.

Clarren, Sterling K. 1978; MD, 1973, University of Minnesota; congenital defects.

Connell, Frederick A. * 1978, (Adjunct); MD, 1972, New York University; maternal and child care, health services.

Coombs, John B. 1983; MD, 1972, Cornell University; rural health policy, nutrition and medicine.

Corey, Lawrence * 1977, (Adjunct); MD, 1971, University of Michigan; laboratory medicine: diagnosis, therapy, and pathogenesis of viral infections, AIDS virus.

Deisher, Robert W. 1949, (Emeritus); MD, 1944, Washington University; adolescent medicine.

Eddy, Allison A. 1997; MD, 1975, McMaster University (Canada); nephrology.

Emanuel, Irvin * 1966; MA, 1956, University of Arizona; MD, 1960, University of Rochester; MS, 1966, University of Washington; epidemiology of maternal and child health problems, childhood factors in adult diseases.

Fantel, Alan G. * 1973, (Research); PhD, 1974, University of Washington; embryology, teratology.

French, James W. 1970; MD, 1963, University of Michigan; pediatric cardiology.

Gleason, Christine A. 1997; MD, 1979, University of Rochester; neonatology.

Graham, C. Benjamin 1956; MD, 1958, University of Washington; pediatric, neonatal radiology.

Guntheroth, Warren G. 1958; MD, 1952, Harvard University; pediatric cardiology.

Guralnick, Michael J. 1986; MS, 1964, PhD, 1967, Lehigh University; developmental disabilities, peer relations, social and language development, evaluation systems.

Hayden, Patricia 1958, (Emeritus); MD, 1953, University of Rochester; congenital defects.

Hodson, W. Alan 1966; MD, 1959, University of Manitoba (Canada); MMSc, 1964, Ohio State University; neonatal and respiratory diseases.

Jaffe, Kenneth M. * 1981, (Adjunct); MD, 1975, Harvard University; pediatric rehabilitation, brain injury, neuromuscular diseases, congenital defects, electromyography.

Lemire, Ronald J. 1967; MD, 1962, University of Washington; teratology.

Mackler, Bruce 1957, (Emeritus); MD, 1943, Temple University; developmental biology.

Marcuse, Edgar K. 1973; MD, 1967, Stanford University; MPH, 1973, University of Washington; general pediatrics. McLaughlin, John F. 1977; MD, 1970, Northwestern University; congenital defects.

Morray, Jeffrey P. 1980, (Adjunct); MD, 1974, University of Rochester.

Neff, John 1981; MD, 1960, Harvard University; infectious disease.

Novack, Alvin H. 1979; MD, 1958, Temple University; general pediatrics.

Ochs, Hans D. 1969; MD, 1962, University of Freiburg (Germany); immunology.

Pagon, Roberta A. 1975; MD, 1972, Harvard University; medical genetics.

Pious, Donald A. * 1964; MD, 1956, University of Pennsylvania; antigen processing, function of nonclassical MHC genes, MHC gene regulation.

Ramsey, Bonnie W. 1980; MD, 1976, Harvard University; cystic fibrosis, pulmonary.

Redding, Gregory J. 1980; MD, 1974, Stanford University; pediatric pulmonary medicine.

Rivara, Frederick P. * 1984; MD, 1974, University of Pennsylvania; pediatric epidemiology and injury prevention and research.

Robertson, William O. 1963; MD, 1949, University of Rochester; general pediatrics, toxicology.

Rothenberg, Michael B. 1967, (Emeritus); MD, 1954, Case Western Reserve University; psychiatry and behavioral sciences.

Rubens, Craig E. * 1984; PhD, 1978, Medical University of South Carolina; MD, 1982, University of Washington; molecular pathogenesis of Group B streptococcal infections in newborn infants.

Ruvalcaba, Rogelio 1965; MD, 1957, University of Guadalajara (Mexico); endocrinology.

Sanders, Jean E. 1975; MD, 1970, University of Iowa; hematology, oncology.

Sarnat, Harvey B. 1992; MD, 1966, University of Illinois; pediatric neurology, neuromuscular diseases, neurodevelopment.

Scott, C. Ronald * 1965; MD, 1959, University of Washington; diagnosis and nutritional management of genetic disorders of children.

Shepard, Thomas H. 1955, (Emeritus); MD, 1948, University of Rochester; embryology.

Shurtleff, David B. * 1960; MD, 1955, Tufts University; congenital defects.

Smith, Nathan J. * 1965, (Emeritus); MD, 1945, University of Wisconsin; sports medicine.

Stapleton, F. Bruder 1996; MD, 1972, University of Kansas; nephrology.

Stevenson, James G. 1976; MD, 1970, Baylor University; pediatric cardiology.

Sybert, Virginia 1979; MD, 1974, State University of New York (Buffalo); genetics and dermatology.

Tapper, David 1983, (Adjunct); MD, 1970, University of Maryland; pediatric surgery.

Wedgwood, Ralph J. 1962, (Emeritus); MD, 1947, Harvard University; rheumatology.

Wilson, Christopher B. * 1980; MD, 1972, University of California (Los Angeles); immunology, rheumatology, infectious diseases.

Woodrum, David E. 1971; MD, 1965, University of Illinois; neonatal and respiratory diseases.

Associate Professors

Andrews, Robert G. 1982; MD, 1976, University of Minnesota; hematology/oncology.

Astley, Susan J. * 1992, (Adjunct); PhD, 1990, University of Washington; etiology, diagnosis, prevention of fetal alcohol syndrome.

Bowden, Raleigh A. 1983; MD, 1978, University of Washington; hematology/oncology.

Brewer, David K. 1978, (Adjunct); MD, 1972, Harvard University; pediatric radiology, angiography, computed tomography.

Burns, Jane L. 1982; MD, 1978, University of Washington; infectious diseases.

Del Beccaro, Mark A. 1989; MD, 1985, University of Washington; pediatric emergency medicine.

Donat, Jane F. 1994; MD, 1970, Albert Einstein College of Medicine; pediatric neurology.

Farrow, James A. 1979; MD, 1973, Baylor University; adolescent medicine.

Frenkel, Lisa M. 1994; MD, 1987, University of Kansas; infectious diseases.

Geyer, Jeffrey R. 1986; MD, 1977, Wayne State University; hematology/oncology.

Gibson, Ronald L. Jr. 1987; MD, 1982, PhD, 1982, Washington University; pulmonology.

Grossman, David C. 1988; MD, 1982, University of California (Los Angeles); MPH, 1990, University of Washington; general pediatrics.

Haberkern, Charles M. 1988, (Adjunct); MD, 1974, Columbia University; anesthesiology.

Hays, Ross M. * 1983, (Adjunct); MD, 1978, University of Washington; pediatric rehabilitation, brain injury, neuromuscular diseases, congenital defects, electromyography.

Herndon, S. Paul 1975; MD, 1970, George Washington University; pediatric cardiology.

Holm, Vanja A. 1965, (Emeritus); MD, 1954, Karolinska Institute (Sweden); child development.

Jackson, J. Craig 1982; MD, 1979, Vanderbilt University; neonatal and respiratory diseases.

Jardine, David 1987, (Adjunct); MD, 1980, Johns Hopkins University.

Kawabori, Isamu 1973; MD, 1966, University of Washington; pediatric cardiology.

Kay, Mark A. * 1993, (Adjunct); PhD, 1985, MD, 1987, Case Western Reserve University; medical genetics.

Kletter, Gad B. 1995; MD, 1982, Sackler School of Medicine (Israel); pediatric endocrinology.

Marshall, Susan G. 1986; MD, 1980, University of California (Los Angeles); neonatal and respiratory diseases.

Massagli, Teresa L. * 1985, (Adjunct); MD, 1982, Yale University; medical and rehabilitation outcome after spinal cord injury in children.

Mayock, Dennis Edward 1985; MD, 1975, Ohio State University; neonatology and respiratory diseases.

Milstein, Jerrold M. 1977; MD, 1964, University of Minnesota; pediatric neurology.

Moseley, Stephen L. * 1985, (Adjunct); PhD, 1981, University of Washington; molecular basis of pathogenesis in E. coli diarrhea.

Murphy, Janet Haworth 1974; MBChB, 1967, Victoria University (UK); neonatal biology and respiratory disease.

Pendergrass, Thomas W. 1978; MD, 1971, University of Tennessee; MPH, 1979, University of Washington; hematology, oncology.

Portman, Michael A. 1992; MD, 1980, University of Cincinnati; pediatric cardiology.

Quan, Linda 1976; MS, 1969, Dartmouth College; MD, 1971, University of Washington; pediatric emergency medicine.

Rosenbaum, David M. 1983, (Adjunct); MD, 1977, Albert Einstein College of Medicine; pediatrics.

Sherry, David Dan 1984; MD, 1977, Texas Technological University; immunology/rheumatology.

Smith, Mark S. 1977; MD, 1969, University of Virginia; adolescent medicine.

Sorensen, Gregory K. 1982, (Adjunct); MD, 1978, University of Nebraska.

Tarr, Phillip I. 1988; MD, 1980, Yale University; gastroenterology/infectious diseases.

Taylor, James A. Jr. 1987; MD, 1980, University of North Carolina; general pediatrics.

Tyler, Donald C. 1977; MD, 1970, University of Pennsylvania; anesthesiology, pediatrics.

Wallace, Carol A. 1982; MD, 1973, University of Michigan; immunology/rheumatology.

Watkins, Sandra L. 1986; MD, 1981, University of Texas (Houston); nephrology.

Weinberger, Edward 1985, (Adjunct); MD, 1979, Harvard University; pediatric radiology.

Weiss, Avery H. 1991, (Adjunct); MD, 1974, Miami University (Ohio); pediatric ophthalmology, strabismus.

Wright, Jeffrey A. 1988; MD, 1978, University of Missouri; general pediatrics.

Assistant Professors

Bratton, Susan L. 1990, (Adjunct); MD, 1987, University of Arkansas; pediatric care.

Brownstein, Dena R. 1986; MD, 1982, University of Washington; pediatric emergency medicine.

Cecchin, Frank 1995; MD, 1987, East Carolina University; cardiology, pediatric.

Cunningham, Michael L. 1993; MD, 1988, University of Vermont; congenital defects.

Darmstadt, Gary L. 1998, (Acting); MD, 1989, University of California (San Diego); infectious diseases, dermatology.

Davis, Robert L. * 1991; MD, 1983, University of California (San Diego); MPH, 1993, University of Washington; childhood immunization, including adverse events; perinatal and pediatric epidemiology.

Diekema, Douglas S. 1993; MD, 1985, University of North Carolina; MPH, 1993, University of Washington; pediatric emergency medicine.

Dinulos, Mary Beth 1997, (Acting); MD, 1990, Medical College of Pennsylvania; genetics.

Fouser, Laurie S. 1989; MD, 1979, University of Nebraska; nephrology.

Graf, William D. 1991; MD, 1983, Freie University of Berlin (Germany); congenital defects.

Graham, Elinor A. 1982; MD, 1970, University of Rochester; MPH, 1993, Johns Hopkins University; general pediatrics.

Hawkins, Douglas S. 1996, (Acting); MD, 1990, Harvard University; hematology, oncology.

Hudgins, Louanne 1993; MD, 1984, University of Kansas; medical genetics.

Jones, Thomas K. 1983; MD, 1978, Jefferson Medical College; pediatric cardiology.

Kahn, Stuart J. 1991; MD, 1985, University of Medicine and Dentistry of New Jersey; rheumatology.

Kapur, Raj P. * 1992, (Adjunct); MD, 1988, University of Southern California; human embryology, birth defects.

Klein, Eileen J. 1988; MD, 1988, Johns Hopkins University; pediatric emergency medicine.

Lepping, Kathleen A. 1995, (Acting); MD, 1986, Case Western Reserve University; genetics.

Liu, Lenna 1995, (Acting); MD, 1992, University of Pennsylvania; general pediatrics.

424 SCHOOL OF MEDICINE / PEDIATRICS

Lozano, Paula 1989; MD, 1989, Harvard University; MPH, 1994, University of Washington; general pediatrics.

Matthews, Dana C. 1987; MD, 1981, University of Washington; hematology/oncology.

McDonald, Ruth A. 1987; MD, 1987, University of Minnesota; nephrology.

Melvin, Ann J. 1996, (Acting); MD, 1986, Tulane University; infectious diseases.

Melzer, Sanford M. 1990; MD, 1982, Mt. Sinai School of Medicine; general pediatrics.

Milner, Laurie A. 1989; MD, 1986, University of Texas (Austin); pediatric hematology/oncology.

Mouradian, Wendy 1994, (Acting); MD, 1977, Columbia University; craniofacial.

Murray, Karen F. 1997; MD, 1990, Johns Hopkins University; gastroenterology.

Park, Julie R. 1996, (Acting); MD, 1988, University of Vermont; hematology, oncology.

Pihoker, Catherine 1997; MD, 1987, Albany Medical College; endrocrinology.

Rho, Jong M. 1995; MD, 1987, University of Cincinnati; pediatric neurology.

Shugerman, Richard P. 1987; MD, 1984, University of Alabama; general pediatrics.

Simon, Michelle L. 1997; PhD, 1976, University of Florida; MD, 1978, University of California (Irvine); craniofacial and neuropathology.

Sotero De Menezes, Marcio 1996; MD, 1984, Rio de Janeiro State University (Brazil).

Stout, James W. 1994; MAT, 1981, Duke University; MD, 1986, Wake Forest University; general pediatrics.

Strandjord, Thomas P. 1990; MD, 1983, Johns Hopkins University; neonatal biology and respiratory diseases.

Tarczy-Hornoch, Peter 1995, (Acting); MD, 1989, Stanford University; neonatology and informatics.

Walters, Mark C. 1993; MD, 1985, University of California (San Diego); pediatric hematology/oncology.

Woolfrey, Ann E. 1996, (Acting); MD, 1984, University of Minnesota; pediatrichematology/oncology.

Lecturers

Johnson, Donna 1990; MS, 1979, Syracuse University; pediatric pulmonary medicine and nutrition.

Rees, Jane * 1973; MS, 1972, University of Washington; nutritional support of adolescent health, especially during pregnancy; eating disorders.

Trahms, Cristine M. * 1973; MS, 1972, University of Washington; growth and development of young children: metabolic disorders, special health care needs.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

PEDS 498 Undergraduate Thesis (*) *Robertson* For medical students. Offered: AWSpS.

PEDS 499 Undergraduate Research (*) Robertson Participation in various clinical or basic research programs in progress, specifically: child development, developmental biology, human embryology and teratology, medical genetics, infectious diseases, neonatology, neuroembryology, cardiology, endocrinology and metabolism, immunology, respiratory disease. Offered: AWSpS. **PEDS 505 P-Preceptorship in Pediatrics (1)** *Robertson* To provide opportunity for first- and second-year medical students to gain personal experience with medical practice situations for pediatricians by being stationed with carefully selected clinical faculty members in their offices. Prerequisite: permission of instructor. Enrollment limited. Coordinator: Department of Pediatrics. Offered: AWSpS.

PEDS 506 Interdisciplinary Seminars in Adolescent Health (1) Focus on interviewing adolescents, health problems, public health issues, and health care policy. Prerequisite: graduate or professional student status.

PEDS 512 P-Seminars in Human Embryology and Teratology (3) Lemire, Mirkes Presents in-depth discussions of human embryonic-fetal development and malformations that arise, correlations with experimental studies and molecular embryology are included. A laboratory experience is optional. Prerequisite: permission of instructor. Offered: AWSp.

PEDS 530 P-Pioneer Square Adolescent Seminar (1) Deisher Clinic-based setting for seminar and interview practice with Pioneer Square adolescents; students learn how to deal with special health problems and other related problems of "street kids" through interviews and observations. Credit/no credit only. Offered: W.

PEDS 551 P-Pediatric Electrocardiography (2) Guntheroth Brief review of the physiology and physics pertinent to clinical electrocardiography is followed by a presentation of terminology and methods in clinical use. Normal electrocardiograms are studied, followed by abnormal tracings, with emphasis on pediatric material, but including adult material such as myocardial infarction. Prerequisite: HUBIO 540. Offered: W.

PEDS 611 P-Pioneer Square Night Clinic (* max. 24) Deisher One night per week at free clinic in Pioneer Square area. Adolescent and young adult patients, generally poorly educated with low incomes and histories of inadequate health care. Seminars and interviews in conjunction with clinic focus on impact of nontraditional lifestyles and values on health status of individuals. (Limit: four students.) Offered: AWSpS.

PEDS 630 P-WRITE Pediatrics Clinical Clerkship (* max. 24) Basic clinical clerkship for students enrolled in the WRITE Program. Prerequisite: completion of basic curriculum; third- and fourth-year students; acceptance in the WRITE program.

PEDS 662, 663, 664, 665, 666, 667, 668 P-Pediatric General Clerkship (* max. 24, * *Robertson* General introductory pediatric clerkship. One-half in hospital setting; one-half in outpatient department, clinic, or private office. Location preferences are considered; twelve-week clerkship is broader, permits more individual selection of site. Open to all third- and fourth-year medical students. Prerequisite: HUBIO 563. (Six or twelve weeks, full time. Limit: twenty-four students.) Offered: AWSpS.

PEDS 669 P-Neonatal Pediatrics—Clerkship (* max. 24) Gleason Participation in the activities in the newborn and premature divisions; ward rounds, seminars, conferences, and familiarization with certain laboratory techniques, particularly those relating to acid-base balance. Prerequisite: 665. (Limit: two students.) Offered: AWSpS.

PEDS 670 P-Pediatric Infectious Diseases (* max. 24) Wilson Students see and work up clinic consultations and present in detail to attending physician. Daily rounds include problem-solving discussions and didactic presentations in broad category of infectious diseases. Opportunity for experience in clinical research and laboratory techniques. Prerequisite: 665 or permission; third- or fourth-year medical student standing. (Limit: one student.) Offered: AWSpS. **PEDS 673 P-Office Practice (* max. 12)** *Robertson* Opportunity to observe and function in the private office settings of a number of clinical pediatric faculty and to accompany pediatricians as they pursue their daily activities in the community. Prerequisite: 665. Offered: AWSpS.

PEDS 676 P-Pediatric Clerkship With the Mentally Handicapped (* max. 12) Ruvalcaba (Rainier School), Anderson (Fircrest School) Total care involvement with mentally handicapped patients, incorporating general pediatric knowledge of mental retardation and neurology, plus other specialties related to mental deficiencies. Additional information may be obtained from Dr. W. O. Robertson, Children's Hospital and Medical Center. Prerequisite: 665. (Four or six weeks, full-time.) Offered: AWSpS.

CONJ 677 P-Clinical Allergy and Immunology (* max. 12) See Conjoint Courses.

PEDS 679 P-Clinical Problems in Developmental Disabilities (* max.12) Bennett Experience in multidisciplinary evaluation and management of the handicapped child. Student performs pediatric evaluations, obtains appropriate consultations, observes additional professional assessments (e.g., psychological testing), and plans rehabilitation program. Opportunity to provide parent counseling. Prerequisite: 665. (Limit: one students.) Offered: AWSpS.

PEDS 680 P-Pediatric Clinics (* max. 24) Robertson One to ten half-day sessions may be elected each week for twelve weeks in the following areas: general pediatrics, endocrinology, neurology, immunology, arthritis, cardiology, congenital defects and retardation, well-child, teratology, adolescent medicine, allergy, cystic fibrosis, hematology, prematurity, neonatology, and poison control. Enrollment limited. Coordinator: Department of Pediatrics. Prerequisite: 665.

PEDS 681 P-Pediatric Genetics (* max. 24) Scott Clinical focus on evaluation and management of children with genetic disorders. Exposure to genetic counseling, the evaluation of children with hereditary structural defects, and diagnosis and management of children with inborn errors of metabolism. Emphasis on genetic mechanisms that cause human disease. Prerequisite: 665. (Two, four, six, or twelve weeks. Limit: one student.) Offered: AWSpS.

PEDS 682 P-Congenital Defects—Clinical Experience (* max. 24) Chance Advanced course in pediatrics providing experience in the clinical diagnosis and management of structural and metabolic congenital defects. Prerequisite: permission of instructor. (Limit: one student.) Offered: AWSpS.

PEDS 683 P-Pediatric Nephrology (8) Eddy Four-week elective clerkship at Children's Hospital and Medical Center. Students participate in nephrology and transplant rounds, consult with renal fellows and attendings, and work up patients in renal clinics. Participation in seminars; special course in fluid balance. Prerequisite: third- or fourth-year medical student, 665, and MED 665 or equivalent. (Limit: two students.) Offered: AWSpS.

PEDS 684 P-Pediatric Pulmonary Medicine (8) Redding Respiratory disorders, diagnostic techniques and treatments unique to children in the inpatient, intensive care, and outpatient settings. Application of principles of pulmonary physiology to clinical problems. Students conduct consultations under the supervision of the attending and present a topic of choice. Inpatient rounds and clinics. Prerequisite: 665, fourth-year medical student standing. (Limit: one student.) Offered: AWSpS.

PEDS 685 P-Pediatric Hematology and Oncology (* max. 24) Bernstein One-on-one teaching plus four weekly didactic sessions. Specific training in techniques and interpretation of bone marrow aspirations, intravenous chemotherapy, transfusions, and laboratory techniques of hematologic evaluation. Self-learning programs available. Prerequisite: 665. (Two, four, six, or twelve weeks, full-time.) (Limit: one student.) Offered: AWSpS.

PEDS 686 P-Pediatric Cardiology (* max. 24) Guntheroth, Kawabori Emphasis on physical diagnosis and electrocardiography and on clinical knowledge of diagnostic techniques and surgical possibilities for inpatients and outpatients with cardiovascular problems. Opportunity to observe catheterizations and cardiovascular operations. Weekly clinics and twice-daily inpatient rounds. Prerequisite: 665. (Limit: one student.) Offered: AWSpS.

PEDS 691 P-Advanced Pediatric Clerkship (* max. 24) Robertson Inpatient and/or outpatient experience with responsibilities comparable to intern for patient workup, diagnosis, and care. Available at any one, or combination, of affiliated hospitals, including WWAMI units in Alaska, Idaho, Montana, or Washington. Students interested in this option should make arrangements well in advance of registration. Prerequisite: 665. (Limit: two students.) Offered: AWSpS.

PEDS 697 P-Pediatric Special Electives (* max. 24) Robertson By specific arrangement, for qualified students, special clerkship externship or research opportunities at institutions other than University of Washington. The faculty can advise of possible opportunities. Obtain special assignment form from Dean's office at least one month before preregistration. Prerequisite: permission of instructor. Offered: AWSpS.

PEDS 699 P-WWAMI Pediatrics Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Pharmacology

E401 Health Sciences

Pharmacology is the science that deals with the nature of interactions between drugs and biological systems, and with the applications of such interactions to the treatment of disease. Courses in this field are given for medical, dental, pharmacy, nursing, and graduate students.

Graduate Program

Graduate Program Coordinator E401A Health Sciences, Box 357280 (206) 543-8930

The Department of Pharmacology offers programs leading to the Master of Science and Doctor of Philosophy degrees. The Master of Science degree may be elected by the student or requested by the department.

Master of Science and Doctor of Philosophy

Admission Requirement: A baccalaureate degree with a major in any of the sciences, such as biochemistry, chemistry, pharmacy, physics, physiology, psychology, or zoology.

Master of Science

Graduation Requirements: Completion of Graduate School requirements to include PHCOL 511, 512, 513, and three additional 500-level pharmacology courses. Demonstration of competence in pharmacology and a related discipline, such as biochemistry or physiology, and a thesis. A foreign language is not required.

Doctor of Philosophy

Graduation Requirements: Completion of Graduate School requirements to include PHCOL 511, 512, 513, 519, and five additional 500-level pharmacology courses plus 9 credits of CONJ 504, 505, 506, 3 nonseminar credits of physiology, and 3 non-seminar credits chosen from biochemistry, molecular biology, physiology, immunology, or cell biology for a total of 15 credits. All 15 credits must be at the approved 400 or 500 level. Students must pass a comprehensive General Examination covering general pharmacology and allied disciplines. A dissertation and Final Examination complete the program.

In the first year, students generally are expected to enroll in biochemistry, pharmacology, and physiology courses. For each of the academic quarters of the first year, a student may work with a different faculty member. The purpose of rotating among the faculty is to acquaint the student with various areas of pharmacology and research under investigation within the department. With this insight, the student should be better able to decide on a thesis or dissertation topic.

In the second year, while becoming more involved with research, the student continues attending courses in pharmacology and supporting disciplines. Immediately after spring quarter of the second year, the student will be given the written portion of the General Examination. Within three months after having taken the written portion, the student will be given the oral portion of the General Examination. The student's supervisory committee will then recommend that the student (1) continue to pursue the doctoral degree, (2) work for a master's degree, (3) undergo re-examination at a later date, or (4) terminate the program.

Continued work in the department for a Ph.D. or M.S. degree usually involves taking advanced biochemistry, pharmacology, and physiology courses, and research.

Financial Aid

A limited number of teaching assistantships, research assistantships, and traineeships are available.

Faculty

Chair

William A. Catterall

Professors

Beavo, Joseph A. * 1977; PhD, 1970, Vanderbilt University; roles and molecular mechanisms of cyclic nucleotide phosphodiesterase regulation of cell function.

Bomsztyk, Karol 1983, (Adjunct); MD, 1977, University of Rochester; nephrology.

Catterall, William A. * 1977; PhD, 1972, Johns Hopkins University; molecular biology of ion channels, molecular pharmacology and neurobiology.

Chavkin, Charles * 1984; PhD, 1982, Stanford University; molecular mechanisms of opiate tolerance, the physiological role of neurophiles in brain function.

Dorsa, Daniel M. * 1981; PhD, 1977, University of California (Davis); neuropharmacology, neurochemistry.

Hol, Wilhelmus G. J. * 1992, (Adjunct); PhD, 1971, University of Groningen (Netherlands); protein crystallography, drug design, vaccine development, and protein engineering.

Horita, Akira * 1950, (Emeritus); PhD, 1954, University of Washington; neuropsychopharmacology.

Juchau, Mont Rawlings * 1969; PhD, 1966, University of Iowa; developmental pharmacology, drug metabolism.

Krebs, Edwin G. * 1977, (Emeritus); MD, 1943, Washington University; intracellular signaling mechanisms involving protein phosphorylation.

McKnight, G. Stanley * 1979; PhD, 1976, Stanford University; phosphorylation; gene expression and neuro/endocrine physiology in mice using genetic approaches.

Moon, Randall T. * 1985; PhD, 1982, University of Washington; embryonic development; signal transduction.

Nathanson, Neil M. * 1979; PhD, 1975, Brandeis University; molecular analysis of neural signal transduction by muscarinic and neurokine receptors.

Omiecinski, Curtis J. * 1983, (Adjunct); PhD, 1980, University of Washington; molecular toxicology, genetic regulation/expression of drug/chemical metabolizing enzymes.

Palczewski, Krzysztof * 1992, (Adjunct); MS, 1980, PhD, 1986, Technical University of Wroclaw (Poland); visual transduction.

Storm, Daniel R. * 1978; PhD, 1971, University of California (Berkeley); molecular basis of neuroplasticity; cAMP and Ca2+ signal transduction systems in the CNS.

Vestal, Robert E. 1977, (Adjunct); MD, 1971, University of California (San Francisco); gerontology.

Vincenzi, Frank F. * 1967; PhD, 1965, University of Washington; ion transport and intracellular calcium, free radicals and disease, computers in education/ research.

Watson, Eileen L. * 1972, (Adjunct); PhD, 1970, University of Utah; salivary gland pharmacology and regulation.

Associate Professors

Halpern, Lawrence M. * 1965; PhD, 1961, Albert Einstein College of Medicine; neuropharmacology.

Hamblin, Mark W. 1990, (Adjunct); MD, 1982, PhD, 1982, University of California (San Diego); molecular and cell biology of serotonin receptors, geriatric psychiatry.

Idzerda, Rejean L. * 1990, (Research); PhD, 1986, University of Washington; cyclic AMP signaling pathway in mammalian testis development and function.

Tempel, Bruce L. * 1988; PhD, 1983, Princeton University; molecular neurobiology/neurogenetics, especially potassium channel gene structure and function.

Assistant Professors

Bajjalieh, Sandra M. * 1995; MS, 1983, University of Illinois; PhD, 1989, University of Wisconsin; molecular neurobiology.

Wang, Edith H. * 1996; PhD, 1991, Columbia University; regulation of genes that control cellular proliferation.

Lecturers

McGrew, L. Lynn 1990; PhD, 1990, University of Massachusetts; developmental neurobiology.

Westenbroek, Ruth E. 1984; PhD, 1987, University of Washington; expression of calcium channels in developing and adult nervous systems.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

PHCOL 401 General Pharmacology I (2-4) Juchau, Wang Principles governing drug-receptor interactions, dose-effect relationships, drug absorption, distribution, metabolism, and excretion. Drug toxicity, tolerance, allergy, and drug-induced mutagenesis and carcinogenesis. Drugs utilized as antimicrobial agents and cancer chemotherapeutic agents. Offered: A.

PHCOL 402 General Pharmacology II (3/4) Chavkin, Storm General pharmacology of drugs affecting the autonomic and central nervous systems. Prerequisite: PHCOL 401. Offered: W.

PHCOL 403 General Pharmacology III (3/4) Beavo, McKnight General pharmacology of drugs affecting the endocrine and cardiovascular systems. For pharmacy students and other undergraduates. Prerequisite: PHCOL 402. Offered: Sp.

PHCOL 434, 435 General Pharmacology (2, 2) Halpern, Watson Lectures concerning the action of drugs on physiological and pathological processes with special emphasis on agents of special importance in the practice of dentistry. For dental students. Offered: A, W.

PHCOL 498 Undergraduate Thesis (*) Offered: A.

PHCOL 499 Undergraduate Research (*) Participation in departmental research projects. Offered: AWSpS.

PHCOL 507 Pharmacology Seminar (1) Presentation of comprehensive reports on recent medical and scientific literature in fields of current importance. Research progress reports, and reports on results of completed research. Prerequisite: permission of instructor. Offered: AWSp.

PHCOL 511 General Pharmacology I (1-5) Juchau, Wang Consideration of principles governing drug-receptor interactions, dose-effect relationships, drug absorption, distribution, metabolism, and excretion. Introduction to drug toxicity, tolerance, allergy, and drug-induced mutagenesis and carcinogenesis. Drugs utilized as antimicrobial agents and cancer chemotherapeutic agents. For graduate students. Prerequisite: organic chemistry, biochemistry, and introductory anatomy and physiology. Offered: A.

PHCOL 512 General Pharmacology II (1-5) Chavkin, Storm General pharmacology of drugs affecting the autonomic and central nervous systems. Emphasis on current research approaches to understanding the basic mechanisms of drug action. For graduate students. Prerequisite: 511 or permission of instructor. Offered: W.

PHCOL 513 General Pharmacology III (1-5) Beavo, McKnight General pharmacology of drugs affecting the endocrine and cardiovascular systems. For graduate students. Prerequisite: 511, 512, or permission of instructor. Offered: Sp.

PHCOL 514 Current Topics in Pharmacology (1) McKnight Current research related to the mechanisms of drug action presented in a seminar format. Presentations include relevant background material as well as detailed experimental results taken from current research articles. Open to medical and graduate students. Prerequisite: permission of instructor. Offered: AWSp.

PHCOL 515 General Pharmacology Laboratory (* max. 9) Laboratory course for professional and graduate students who wish to do independent laboratory research under the direction of a specific faculty member. Prerequisite: permission of instructor. Offered: AWSp.

PHCOL 519 Introduction to Laboratory Research in Pharmacology (4) Krebs On a rotation basis students carry out individual research projects in the laboratories of different faculty members. At the end of each quarter students make formal presentations of their work. For first year graduate students in pharmacology. Offered: AWSpS.

PHCOL 527 Drug Metabolism (3) Juchau, Rettie Considerations of the biochemical mechanisms for the biotransformation of drugs and foreign compounds. Open to medical and graduate students. Prerequisite: one year graduate, medical, or dental biochemistry, or permission of instructor. Offered: jointly with MEDCH 527; odd years; W.

PHCOL 528 Neuropsychopharmacology (2) Halpern Advanced review and discussion of biochemical and pharmacodynamic mechanisms underlying the central nervous system actions of psychotropic, analgesic, sedative, and antiepileptic drugs. Prerequisite: CONJ 501, 502, and 503 or permission of instructor. Offered: even years; A.

PHCOL 529 Ion Channel Pharmacology (2) Catterall, Tempel Current topics in ion channel structure, function, genetics, and pharmacology, including consideration of role in electrical signaling in cell membranes and information transfer and processing in nervous system and of sites and mechanisms of action of drugs and toxins. Prerequisite: CONJ 501, 502, and 503 or permission of instructor. Offered: even years; W.

PHCOL 530 Pathways of Receptor Action (2) Beavo, Krebs, Storm Advanced consideration of the molecular events between drug or hormone binding to receptors and the resulting responses. Roles played by cyclic nucleotides and other second messengers. Adenylate cyclase, phosphoinositide-mediated regulation, phosphodiesterases and protein kinases. Prerequisite: 511, 512, 513, or permission of instructor. Offered: odd years; A.

PHCOL 531 Genetic Analysis of Signaling Systems (2) McKnight, Moon Current topics involving signal transduction are discussed with an emphasis on genetic analysis of multicellular systems and creative experimental design. Prerequisite: CONJ 501, 502, and 503 or permission of instructor. Offered: odd years; Sp.

PHCOL 533 Molecular Toxicology (2) Kavanagh, Omiecinski Advanced discussion of molecular mechanisms whereby chemical, physical, and biological agents produce their harmful effects on biological tissues. Prerequisite: permission of instructor. Offered: jointly with ENV H 533; even years; Sp.

PHCOL 534 Regulation of Neurotransmission (2) Chavkin, Dorsa Advanced consideration of the effects of drugs on neurotransmission and higher order neural systems including current topics in receptor pharmacology, effects of disease on neural circuits, regulation of synaptic plasticity, and mechanisms underlying neurodegeneration. Prerequisite: CONJ 501, 502, and 503 or permission of instructor. Offered: even years; Sp.

PHCOL 535 Transcriptional Control in Human Disease (2) *Bomsztyk, Wang* Advanced consideration and discussion of the mechanisms regulating transcription/gene expression and of aberrant transcription factors which disrupt this process found in cancer and other human diseases. Prerequisite: CONJ 501,502, 503 or permission of instructor. Offered: A.

PHCOL 536 Free Radicals in Health and Disease: A Pharmacological Perspective (2) Hinds, Vincenzi Exploration of chemistry and properties of free radicals and related reactive-oxygen and nitrogen species. Review of biological effects of free radicals and reactive oxygen and nitrogen species with a view toward pharmacological intervention. Analysis of literature implicating free radicals in disease processes. Prerequisite: permission of instructor. Offered: S.

PHCOL 537 Molecular Neurobiology of the Cell Membrane (2) Bajjalieh, Nathanson Advanced consideration of the structure and function of cell membranes, membrane trafficking, exocytosis, endocytosis, membrane proteins, and lipid-mediated signal transduction. Processes important to nervous system functioning emphasized. Prerequisite: CONJ 501, 520, 503 or permission of instructor. Offered: W.

PHCOL 549 Concepts in Pharmacology (2) Vincenzi Reading and participatory discussions of publications on fundamental concepts in pharmacology and development of concepts to present. Includes receptors, theories of receptor activation, chemical transmission, membrane potential, membrane responsiveness, transmembrane signaling, membrane ion pumps, voltage-operated channels, and drug absorption, distribution, metabolism, and elimination. Prerequisite: 511, 512, and 513 or permission.

PHCOL 550 An Overview of Faculty Research (1) Juchau Reviews research topics currently being studied in pharmacology. Student reads articles published on each topic. Credit/no credit only. Prerequisite: first-year student standing in pharmacology. Offered: A.

PHCOL 560 Regulation of Cell Function by Cyclic Nucleotide Phosphodiesterases (1) Beavo Discussion of research strategies, methodologies, and literature relating to regulation of cyclic nucleotide levels in the cell. Emphasis on practical problem solving, data analysis, and presentation of methods important to understanding published data and designing new experiments in this area of research. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 561 Molecular Properties of Ion Channels (1) Catterall Discussion of research strategies, methodologies, and literature concerning the structure, function, and regulation of sodium and calcium channels and the mechanism of action of drugs on them. Emphasis on experimental problem solving, data analysis, and presentation. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 562 Regulation of Synaptic Physiology (1) Chavkin Discussion of research strategies and methodologies involved in the regulation of signal transduction and synaptic physiology. Emphasis on practical problem solving, data analysis, and presentation methods important to modern scientific work. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 563 Developmental Toxicology (1) Juchau Presentation of theory and techniques with highest priority given to current literature and research advances. Emphasis on mechanisms whereby drugs and other foreign organic chemicals affect dysmorphogenesis, functional abnormalities, and other types of permanent and semi-permanent embryotoxic effects. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 564 Cellular Regulation by Protein Kinases (1) McKnight Analysis of research problems, techniques, and emerging concepts in the study of the function of protein kinases. Emphasis on critical evaluation of research and development of presentation skills. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 565 Intercellular Signaling in Development (1) Moon Molecular genetic approaches to dissecting the roles and mechanisms of intracellular signaling during development. Emphasis on vertebrate genes related to Drosophilia segment polarity genes. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 566 Molecular Pharmacology of Neurotransmitter and Neurokine Receptors (1) Nathanson Discussion of research strategies and methodologies in the areas of molecular neurobiology and signal transduction of muscarinic receptors, G-proteins, and neurokine receptors. Emphasis on practical problem solving, data analysis, and presentation methods important to modern scientific work. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 567 Signal Transduction Mechanisms in Neuroplasticity and Neuron Growth (1) Storm Discussion of research strategies, methodologies, and literature relating to signal transduction mechanisms important for neuroplasticity and regulation of neuron growth in the central nervous system. Emphasis on practical problem solving, data analysis, and presentation methods important to modern scientific work. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 568 Pharmacology of Free Radicals (1) Vincenzi Advanced considerations of current literature and experimental design, implementation and interpretation of research dealing with the effects of reactive oxygen species and free radicals on cell membranes and cells. Discussion of the relationships of such phenomena to human disease and the effects of drugs thereon. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 569 Molecular Genetics of Potassium Channel Function (1) Tempel Discussion of research strategies, methodologies, and literature concerning the structure, function, and regulation of potassium channel genes and their role in behavior as studied in mutant mice. Emphasis on experimental problem solving, data analysis, and presentation. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 570 Molecular Pharmacology of Neurotransmission (1) Dorsa Discussion of research strategies, methodologies, and literature concerning the structure, function, and regulation of neurotransmitter genes and the mechanism of action of drugs and hormones on their expression. Emphasis on experimental problem solving, data analysis, and presentation. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 571 Molecular Mechanisms of Neurosecretion (1) Bajjalieh Discussion of research strategies, methodologies, and literature relating to regulation of cyclic nucleotide levels in the cell. Emphasis on experimental problem solving, data analysis, and presentation. Credit/no credit only. Prerequisite: permission of instructor.

PHCOL 572 Transcriptional Regulation of Growth Control Genes (1) Wang Discussion of research strategies, methodologies, and literature relating to proliferative growth control and gene expression. Emphasis on practical problem solving, data analysis, and presentation. Credit/no credit only. Prerequisite: permission of instructor.

PHCOL 600 Independent Study or Research (*) Pharmacology graduate students only. Offered: AWSpS.

PHCOL 700 Master's Thesis (*) Pharmacology graduate students only. Offered: AWSpS.

PHCOL 800 Doctoral Dissertation (*) Pharmacology graduate students only. Offered: AWSpS.

Physiology and Biophysics

G424 Health Sciences

Physiology deals with the processes, activities, and phenomena incidental to, and characteristic of, life and living organisms. Based upon physics, chemistry, and mathematics, physiology interlocks closely with the other basic medical sciences—anatomy, molecular biology, immunology, biochemistry, pharmacology, and pathology—and with psychology. Research in physiology is accomplished by analyzing the molecular, cellular, and integrative properties of the system under study. For this reason, physiology appeals to students with diverse backgrounds and goals. Courses in this field are given for medical, dental, pharmacy, nursing, and graduate students.

Graduate Program

Graduate Program Coordinator G424 Health Sciences, Box 357290 (206) 685-0519 pbio@u.washington.edu

The Department of Physiology and Biophysics offers advanced instruction and training leading to both the Master of Science and Doctor of Philosophy degrees. Students aspiring only to the M.S. degree are rarely accepted. Students pursuing a Ph.D. degree in physiology and biophysics may emphasize molecular and cellular physiology, biophysics, neurobiology, respiratory physiology, or endocrinology. Studies leading to the doctoral degree require five to six years to complete. The first year is spent acquiring a broad knowledge of physiology via a sequence of courses and laboratory rotations. After selection of a special area of study, the second year is spent taking advanced seminars in the area of specialization and developing a thesis proposal. After admission to candidacy, the latter years are spent pursuing the area in depth and completing an original-research project.

The department participates in interdisciplinary Ph.D. degree programs in Neurobiology and Behavior, and in Molecular and Cellular Biology (see the Interschool or Intercollege Programs section of this catalog for a description of these programs).

Special Requirements

Admission to the physiology program normally requires a baccalaureate degree in biology, molecular biology, genetics, biochemistry, physics, mathematics, psychology, engineering, or chemistry.

Graduate Record Examination scores are required as part of the application. No subject tests are required.

Students are normally admitted to the graduate program in the autumn quarter. Applications and all relevant material should be submitted by January 15.

Research Facilities

The department is well equipped to provide instruction and research training in cellular and molecular physiology, neurobiology, membrane biophysics, cardiovascular physiology, respiratory physiology, muscle biophysics, temperature regulation, endocrinology, reproduction, and physiological psychology. The facilities of the Regional Primate Research Center, adjacent to the department, are available to qualified trainees who need to use primates in their research.

Faculty

Chair

Wayne E. Crill

Professors

Anderson, Marjorie E. * 1971; PhD, 1969, University of Washington; physiology of basal ganglia and cerebellum.

Berger, Albert J. * 1978; MA, 1965, PhD, 1967, Princeton University; PhD, 1976, University of California (San Francisco); neural and chemical control of respiration.

Binder, Marc D. * 1978; PhD, 1974, University of Southern California; organization of spinal reflexes. Blinks, John R. * 1990; MD, 1955, Harvard University; muscle calcium.

Bothwell, Mark A. * 1985; PhD, 1975, University of California (Berkeley); molecular and cellular physiology of nerve growth factors.

Brengelmann, George L. * 1966; PhD, 1967, University of Washington; temperature regulation, cutaneous blood flow.

Crill, Wayne E. * 1967; MD, 1962, University of Washington; properties of cortical neurons.

Detwiler, Peter B. * 1977; PhD, 1970, Georgetown University; physiology of photoreceptors.

Feigl, Eric O. * 1969; MD, 1958, University of Minnesota; cardiovascular physiology, coronary and cerebral circulation.

Fetz, Eberhard * 1975; PhD, 1966, Massachusetts Institute of Technology; cortical regulation of movement.

Freund, Peter 1980, (Adjunct); MA, 1971, Brown University; MD, 1975, Columbia University; temperature regulation, vasomotor control, physiology/biophysics.

Fuchs, Albert F. * 1969; PhD, 1966, Johns Hopkins University; oculomotor physiology.

Gordon, Albert M. * 1964; PhD, 1961, Cornell University; skeletal muscle physiology.

Hildebrandt, Jacob * 1966; PhD, 1966, University of Washington; respiratory physiology.

Hille, Bertil * 1968; PhD, 1967, Rockefeller University; ion channels of excitable membranes.

Hlastala, Michael P. * 1972; PhD, 1969, State University of New York (Buffalo); respiratory physiology, inert gas analysis of respiratory function.

Hornbein, Thomas F. * 1963; MD, 1956, Washington University; physiology, biophysics.

Howard, Jonathon * 1989; PhD, 1983, Australian National University; biophysics of molecular motors.

Kennedy, Thelma T. * 1958, (Emeritus); PhD, 1955, University of Chicago.

Koerker, Donna J. * 1982; PhD, 1970, University of Michigan; endocrinology, intermediate metabolism of carbohydrates.

Kushmerick, Martin J. * 1988; MD, 1963, PhD, 1966, University of Pennsylvania; muscle contraction, magnetic resonance, metabolic imaging NMR spectroscopy.

Patton, Harry D. 1947, (Emeritus); PhD, 1943, MD, 1946, Yale University.

Ransom, Bruce Robert * 1995, (Adjunct); MD, 1972, PhD, 1972, Washington University; neurology, neuro-science research.

Rowell, Loring B. * 1963, (Emeritus); PhD, 1962, University of Minnesota.

Rubel, Edwin W. * 1986; PhD, 1969, Michigan State University; developmental neurobiology, with special emphasis on vertebrate auditory system development.

Scher, Allen M. * 1950, (Emeritus); PhD, 1951, Yale University.

Schwartzkroin, Philip A. * 1978; PhD, 1972, Stanford University; mechanisms of cortical excitability.

Schwindt, Peter C. * 1974; PhD, 1972, University of Washington; properties of spinal and cortical neurons, mechanisms of repetitive firing and convulsive activity.

Smith, Orville A. * 1958, (Emeritus); PhD, 1953, Michigan State University.

Stahl, William L. * 1967; PhD, 1963, University of Pittsburgh; neurochemistry of brain ATPase systems.

Steiner, Robert A. * 1977; PhD, 1975, University of Oregon; neuroendocrinology.

Stirling, Charles E. * 1968; PhD, 1966, State University of New York (Upstate); epithelial transport mechanisms.

Teller, Davida Y. * 1965; PhD, 1965, University of California (Berkeley); vision, color vision, development of vision in infants.

Towe, Arnold L. * 1953, (Emeritus); PhD, 1953, University of Washington.

Van Citters, Robert L. * 1962, (Emeritus); MD, 1953, University of Kansas; cardiovascular physiology.

Winn, H. Richard * 1983, (Adjunct); MD, 1968, University of Pennsylvania; physiology of cerebral blood flow regulation.

Associate Professors

Carlson, Steven S. * 1985; PhD, 1975, University of California (Berkeley); molecular and cellular physiology of synaptic transmission.

Conley, Kevin E. 1988; PhD, 1983, University of Wisconsin; muscle physiology.

Cunningham, Susanna L. * 1978, (Adjunct); MN, 1969, PhD, 1978, University of Washington; risk factors for atherosclerotic cardiovascular disease.

Glenny, Robb 1987; MD, 1984, University of Virginia; pulmonary and critical care medicine.

Landau, Barbara R. 1962, (Emeritus); MS, 1949, PhD, 1956, University of Wisconsin.

Skahen, Julia G. 1941, (Emeritus); MS, 1928, University of Washington; PhD, 1941, University of Chicago.

Spain, William * 1987; MD, 1977, Columbia University; signal transduction in the central nervous system.

Zagotta, William N. * 1993; PhD, 1989, Stanford University; molecular mechanisms of ion channel function.

Assistant Professors

Giniger, Edward Scott * 1994, (Research); PhD, 1988, Harvard University; neural development, mechanism of axon guidance, genetic specification of brain structure.

Mackie, Kenneth P. 1987, (Adjunct); MD, 1984, Yale University.

Rieke, Frederick Martin * 1997; PhD, 1991, University of California (Berkeley); sensory signal processing and computation.

Shadlen, Michael N. * 1995; PhD, 1985, University of California (Berkeley); MD, 1988, Brown University; visual perception.

Wordeman, Linda * 1994; PhD, 1988, University of California (Berkeley); mitosis and myofibril formation.

Lecturers

Linder, Thomas M. 1982; PhD, 1971, University of Washington.

Peterman, Annie K. 1989; PhD, 1987, University of Washington.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

CONJ 401, 402, 403 Human Anatomy and Physiology (4, 4, 4) Linder, Peterman See Conjoint Courses.

P BIO 405- 406 Human Physiology (4-4) Feigl, Stirling Intensive coverage of physiology through lectures, conference. Autumn Quarter: excitable tissue, skeletal muscle; spinal reflex; cardiovascular, respiratory physiology; acid base balance; autonomic nervous system; temperature regulation. Winter Quarter: renal, body fluids; neuroendocrinology; reproductive, gastrointestinal, neurophysiology. Required for dental, graduate nursing, and bioengineering students. Also offered for graduate students. Offered: A-W.

P BIO 424 Vision and Its Physiological Basis (5) NW Teller Behavioral neurobiology of human vision: color vision, acuity and spatial vision, light and dark adaptation, visual development. Correlation of visual functioning with known optical, biochemical, physiological, and anatomical substrates. Prerequisite: either PSYCH 101, PSYCH 102, BIOL 202, or ZOOL 301. Offered: jointly with PSYCH 424; W.

P BIO 498 Undergraduate Thesis (*) Offered: AWSpS.

P BIO 499 Undergraduate Research (*) Offered: AWSpS.

CONJ 501, 502, 503 Molecular Basis of Cell Function (3, 3, 3) See Conjoint Courses.

P BIO 503 Physiological Instrumentation (4) Fetz, Schwindt Introduction to linear systems and electronic circuits. Topics include basic circuit theory; step and sinusoidal response of first- and second-order linear systems (RLC circuits, mechanical and hydraulic systems); bode plots; Fourier analysis; operational amplifier circuits. Associated laboratory exercises. Prerequisite: calculus, permission of instructor.

P BIO 505 Topics in Physiology (0.5) Gordon Topics include excitation-contraction coupling, muscle structure, and molecular basis of contraction, regulation of contraction, muscle mechanisms, energetics, and adaptation. Emphasis on skeletal muscle with some discussion of cardiac and smooth muscle. Series of six lecture discussions. Prerequisite: firstyear P BIO graduate student. Offered: A.

P BIO 507 Cardiovascular, Renal, Respiratory Physiology (3) Berger Cardiovascular physiology: the heart, microcirculation, hemodynamics, regional circulation, and reflex integration. Renal physiology: osmolarity, volume, and ion transport. Respiratory physiology: the lung, pulmonary circulation, alveolar ventilation, gas exchange, control of breathing, acidbase regulation, exercise. Offered: W.

P BIO 508 Introduction to Laboratory Research in Physiology (2-5) Students participate in the performance of ongoing projects in designated research laboratories. Emphasis is on experimental design, methodology and techniques. For first- and secondyear graduate students in physiology and biophysics to provide a basis for future independent research. Offered: AWSpS.

P BIO 509 Neuroendocrinology (3) Steiner Emphasizes the cellular and molecular aspects of several topics in neuroendocrinology, including neuropeptide systems, reproduction, growth hormone regulation, steroid hormone control of gene expression, feeding behavior, mechanisms of hormone action, and endocrine rhythms. Prerequisite: BIOL 200, 201, 202; BIOC 440, 441, 442 or permission of instructor. Offered: Sp.

P BIO 510, 511, 512 Physiology Survey (2, 2, 2) Reading and discussion of the research literature in cellular, molecular, and systems physiology. Students write a critical evaluation of each paper in the manner of a peer review. All three quarters are required for second-year P BIO students. Prerequisite: completion of one year of P BIO graduate study. Offered: A, W, Sp.

P BIO 516 Physiological Proseminar (7) Hlastala Guided survey of the experimental literature in cardiovascular and respiratory physiology. Course conducted as seminar with oral analysis of assigned papers and topics. Prerequisite: permission of instructor. Offered: A.

P BIO 518 Research Topics in Cardiovascular Physiology (1) Feigl Graduate students and faculty members present and discuss current literature and research. Prerequisite: permission of instructor.

P BIO 519 Membrane and Muscle Biophysics Seminar (1) Hille Lectures on current research topics in cell membrane function and muscle contraction. Credit/no credit only. Prerequisite: permission of instructor. Offered: Sp.

P BIO 520 Physiology Seminar (*) Selected topics in physiology. Prerequisite: permission of instructor.

P BIO 521 Biophysics Seminar (*) Selected topics in biophysics. Prerequisite: permission of instructor.

P BIO 522 Selected Topics in Respiratory Physiology (1-3) Hildebrandt Advanced seminar on selected topics, including pulmonary mechanics, gas exchange, lung fluid balance, regulation of breathing, pulmonary circulation, respiration in the neonate, liquid breathing, airway dynamics, lung structure and development, cardiopulmonary interactions, exercise physiology. Prerequisite: permission of instructor. Offered: AWSpS.

P BIO 523 Heat Transfer and Temperature Regulation (2-5) Brengelmann Thermal exchange between the body surface and the environment. Heat production and distribution within the body. Properties of cutaneous and deep temperature receptors. Neural integration and homeothermy. Prerequisite: permission of instructor. Offered: Sp.

P BIO 525, 526, 527 Readings in Advanced Physiology and Biophysics (*, *, *) Guided study of the experimental literature of physiology and biophysics. Essays are written and discussed with the staff. Emphasis is placed on critical analysis, accuracy of expression, bibliographical technique, and other factors of good scholarship. Prerequisite: permission of instructor. Offered: AWSpS.

P BIO 541 Motor Systems I: Peripheral, Spinal and Cortical Mechanisms (3) *Binder, Fetz* Discussion of research papers on the physiology of the motor unit and the spinal and cortical neurons that control motor unit activity. Prerequisite: NEUBEH 501-503 or permission of instructor.

P BIO 542 Motor Systems II: Brainstem Mechanisms (3) Anderson, Fuchs Critical discussion of research papers and resulting concepts regarding the roles of various brainstem systems in controlling somatic and ocular movements. Prerequisite: NEUBEH 502 and NEUBEH 503 or equivalent and permission of instructor.

P BIO 544 Properties of Neurons (3) Schwindt Critical reading and discussion of papers on passive, active, and integrative properties of single invertebrate and mammalian neurons. Provides understanding of how a variety of cellular mechanisms contribute to neuronal discharge patterns. Prerequisite: CONJ 501, 502, 503 and NEUBEH 501, 502, 503 or equivalent and permission of instructor. Offered: even years; A.

P BIO 547 Readings in Cell Physiology (2/3, max. 15) Hille Reading and discussion of research literature on excitable cells. Emphasis on membrane excitability, transport, contractility, growth factors, and extracellular matrix. Prerequisite: CONJ 501 or equivalent. Offered: W.

P BIO 549 Plasticity in the Vertebrate Nervous System (2) Schwartzkroin Emphasis on mammalian CNS. Examples of anatomical, pharmacological plasticity chosen from literature. Structure changes during development and in adult (hippocampus, spinal cord, nerve-muscle) studied and as correlates of learning. Students responsible for leading class discussion of one topic. Credit/no credit only. Prerequisite: graduate-level courses in neurophysiology and neuroanatomy; understanding of basic neuronal mechanisms. Offered: even years; Sp. P BIO 560 Muscle and Cell Motility (*) Gordon Selected topics in muscle contraction and cell motility. Reading of original papers. Presentations by students and faculty. Credit/no credit only. Prerequisite: permission of instructor.

P BIO 594 Neurological Study Unit (0.5) Spain Faculty and student discussion of neurological topics illustrated with clinical cases or demonstrations include the following: physiology, neuroanatomy, neurology, neuropathology, neurosurgery, and psychiatry. Credit/no credit only. Prerequisite for medical students: HUBIO 532. Offered: AW.

P BIO 600 Independent Study or Research (*) Offered: AWSp.

P BIO 700 Master's Thesis (*) Offered: AWSp.

P BIO 800 Doctoral Dissertation (*) Offered: AWSp.

Psychiatry and Behavioral Sciences

BB1644 Health Sciences

pbsci@u.washington.edu

The department offers course work, clinical training, and research opportunities for undergraduate students, medical students, graduate physicians, and graduate students in allied health programs such as psychology, social work, and psychiatric nursing.

A biobehavioral approach is emphasized, which incorporates intrapersonal, interpersonal, and sociocultural factors. Intrapersonal factors include emotion, perception, cognition, psychodynamics, neurochemistry, neuroanatomy, neurophysiology, and the developmental and aging processes. Interpersonal factors focus upon dyadic, familial, and group interactions. Sociocultural factors include the cultural, social, institutional, and community systems as well as the environment and epidemiology of health and disease.

Undergraduate Program

Contact: Ed Walker, Chair, Undergraduate Education Ed Walker, Nicholas Ward, Pre-clinical Curriculum Rebecca Jones, Maryonda Scher, Clinical Clerkships

A variety of courses in the behavioral sciences and psychiatry are available to medical students. Included among these are psychosocial growth and development, including aging and adult development, preventive methods for mental health, cross-cultural mental health, clinical psychiatry, and behavioral medicine.

Graduate Program

The medical school curriculum is divided into a core (basic) curriculum and an elective curriculum. Within its core curriculum the Department of Psychiatry and Behavioral Sciences offers material covering learning theory, cognition, memory, perception, neuropharmacology, social growth and development, epidemiology of health and disease, psychopathology, psychotherapy, and neuropsychiatry and behavioral medicine, as well as training in interviewing skills and assessment techniques. Its elective program includes a variety of clinical experiences and advanced didactics and seminars designed to further the knowledge and skills developed within the basic curriculum. In addition, the department encourages research and other scholarly pursuits by students in areas of interest to them. Stipends are available for research studies.

Residency Training in Psychiatry

Contact: Deborah Cowley

A four-year residency for medical school graduates and a three-year post-internship residency prepares physicians for Specialty Board Certification in Psychiatry. Clinical rotations on various inpatient, outpatient, and consultation/liaison services are augmented by individual supervision and didactic lectures. With the program's integrative orientation, residents become proficient in psychotherapy, psychopharmacology, and community liaison with patients of all ages. Fellowships in child, geriatric, community, forensic, and consultation-liaison psychiatry are available, as well as in substance abuse and various other specialty areas.

Clinical Psychology Internship Program

Contact: Joseph Becker

A one-year internship in clinical psychology approved by the American Psychological Association is offered as an interdepartmental program. This internship is open to candidates for the doctorate in clinical psychology from graduate programs approved by the American Psychological Association.

Postdoctoral Fellowship Training

Contact: Brenda Townes, Richard Veith

Postdoctoral fellowships for advanced clinical and research training in behavioral medicine, broadly construed, are also offered.

Faculty

Acting Chair

Richard Veith

Professors

Becker, Joseph * 1965, (Emeritus); PhD, 1958, Duke University; psychosocial aspects of depression.

Bird, Thomas D. 1976, (Adjunct); MD, 1968, Cornell University; neurology.

Bowden, Douglas M. 1969; MD, 1965, Stanford University; neural substrates of learning and memory.

Calsyn, Donald 1981; PhD, 1979, University of Washington; drug abuse treatment, AIDS prevention.

Carr, John E. * 1963; PhD, 1963, Syracuse University; clinical health psychology, behavioral medicine.

Chapman, C. Richard * 1971; PhD, 1969, University of Denver; human pain measurement, psychophysiology, sensation and perception, chronic pain.

Cowley, Deborah S. 1982; MD, 1980, University of Pennsylvania; anxiety disorders, psychiatric disorders during pregnancy and postpartum.

Dager, Stephen R. * 1979; MD, 1978, University of Nebraska; application of functional brain imaging techniques to investigate neuropsychiatric disorders.

Dikmen, Sureyya S. * 1974, (Adjunct); PhD, 1973, University of Washington; clinical neuropsychology, neuropsychological and psychosocial outcomes in traumatic head injury.

Doerr, Hans O. * 1967, (Emeritus); PhD, 1965, Florida State University; psychophysiology of central and autonomic nervous systems, neuropsychology.

Donovan, Dennis 1981; MA, 1972, Western Washington University; PhD, 1980, University of Washington; cognitive-behavioral factors in substance abuse and addictive behaviors.

Dorsa, Daniel M. * 1981; PhD, 1977, University of California (Davis); neuropharmacology, neurochemistry.

Dunner, David L. 1978; MD, 1965, Washington University; diagnosis and treatment of depression.

Dworkin, Samuel F. * 1974; DDS, 1958, PhD, 1969, New York University; dentistry and clinical psychology, pain, psychosomatic and illness-related behavior.

Hampson, John L. 1960, (Emeritus); MD, 1946, Johns Hopkins University.

Heiman, Julia R. * 1980; PhD, 1975, State University of New York (Stony Brook); sexuality and sexual relationships, prevention and treatment of family abuse.

Horita, Akira * 1950, (Emeritus); PhD, 1954, University of Washington; neuropsychopharmacology.

Hunt, D. Daniel 1977; MD, 1973, Cornell University; MBA, 1977, University of Pennsylvania; medical education, career choice.

Johnson, Merlin 1982, (Emeritus); MD, 1947, University of Iowa.

Katon, Wayne J. 1976; MD, 1976, University of Oregon; consultation-liaison.

Kogan, Kate L. 1957, (Emeritus); MA, 1935, PhD, 1943, Columbia University.

Linehan, Marsha M. * 1977, (Adjunct); PhD, 1971, Loyola University (Chicago); personality disorders, including borderline; suicidal behaviors, cognitive and behavior therapies.

Martin, Joan C. * 1972, (Emeritus); PhD, 1965, Florida State University.

Meltzoff, Andrew N. * 1984, (Adjunct); PhD, 1976, Oxford University (UK); cognitive and social development of human infants.

Prinz, Patricia * 1976; PhD, 1969, Stanford University; sleep and circadian physiology.

Raskind, Murray 1970; MD, 1968, Columbia University; aging and Alzheimer's disease.

Robinson, Nancy M. * 1969; PhD, 1958, Stanford University; developmental psychology, giftedness.

Rothenberg, Michael B. 1967, (Emeritus); MD, 1954, Case Western Reserve University; psychiatry and behavioral sciences.

Roy-Byrne, Peter 1986; MD, 1978, Tufts University; diagnosis and psychopharmacology of anxiety, depression, and ADHD in adults.

Schwartz, Pepper J. * 1972, (Adjunct); PhD, 1974, Yale University; family, gender, human sexuality, field methods.

Spain, David H. * 1968, (Adjunct); PhD, 1969, Northwestern University; psychocultural anthropology, African studies, research methods.

Streissguth, Ann P. 1964; MA, 1959, University of California (Berkeley); PhD, 1964, University of Washington; psychology and behavioral teratology.

Teri, Linda 1984; PhD, 1980, University of Vermont; clinical psychology.

Townes, Brenda D. * 1961; PhD, 1970, University of Washington; psychology.

Trupin, Eric W. 1973; MA, 1973, PhD, 1974, University of Wyoming; psychology.

Tucker, Gary J. 1985; MD, 1960, Case Western Reserve University; neuropsychiatry.

Turner, Judith A. 1980; MA, 1975, PhD, 1979, University of California (Los Angeles); psychology.

Veith, Richard 1977; MD, 1973, University of Washington; gerontology.

Vitaliano, Peter P. * 1978; PhD, 1975, Syracuse University; stress and coping.

Vitiello, Michael V. * 1982; PhD, 1980, University of Washington; sleep, sleep disorders and circadian rhythms in aging, age-related neuroendocrine/cognitive change.

Ward, Nicholas G. 1975; MD, 1973, Cornell University; treatment resistant mood disorders, psychopharma-cology.

Associate Professors

Armstrong, Hubert E. 1966, (Emeritus); PhD, 1963, Syracuse University; clinical psychology.

Avery, David H. 1980; MD, 1972, Washington University; treatment of depression, seasonal affective disorder, transcranial magnetic stimulation.

Barnes, Robert 1977; MD, 1973, University of Utah.

Borson, Soo 1972; MD, 1969, Stanford University; geriatric psychiatry.

Carlin, Albert S. 1964, (Emeritus); MA, 1961, PhD, 1964, Syracuse University; clinical psychology.

Chaney, Edmund 1977; PhD, 1976, University of Washington; clinical psychology.

Craft, Suzanne * 1994, (Research); PhD, 1985, University of Texas (Austin); neuropsychology of attention and memory in aging and Alzheimer's disease.

Dubach, Mark F. 1978; PhD, 1983, University of Washington; anthropology.

Egan, Kelly J. 1980; MA, 1968, Texas Technological University; PhD, 1980, University of Washington; clinical psychology.

Erickson, Richard C. 1991; PhD, 1969, University of Washington; clinical psychology.

Hamblin, Mark W. 1990; MD, 1982, PhD, 1982, University of California (San Diego); molecular and cell biology of serotonin receptors, geriatric psychiatry.

Kivlahan, Daniel R. * 1983; PhD, 1983, University of Missouri; evaluating assessment, prevention, and treatment approaches for addictive behaviors.

Lampe, Thomas H. 1982; MD, 1977, Indiana University; Alzheimer's disease, post-traumatic stress disorder, neuroendocrinology.

Maiuro, Roland D. 1978; PhD, 1978, Washington University; clinical psychology.

Maxim, Peter E. 1976; MD, 1966, PhD, 1971, Stanford University; in-patient care.

McCann, Barbara S. * 1986; MS, 1982, PhD, 1984, Rutgers University; behavior change, adult ADHD, psychological stress, cardiovascular disease, diabetes, obesity.

McCauley, Elizabeth 1979; PhD, 1973, State University of New York (Buffalo); clinical and developmental psychology.

McFall, Miles E. 1982; MA, 1979, PhD, 1981, University of Montana; clinical psychology.

Miller, Margaret A. 1981; PhD, 1984, University of Washington; neurobiology, neuroendocrinology.

Murburg, Michele 1982; MD, 1978, Albert Einstein College of Medicine.

Peskind, Elaine R. 1986; MD, 1986, University of Washington; neuroendrocrinology of aging, Alzheimer's and PTSD, neurobiology of noncognitive beahvioral problems.

Raskind, Wendy H. 1981, (Adjunct); PhD, 1977, MD, 1978, University of Washington; medical genetics.

Ries, Richard K. 1975; MD, 1975, Northwestern University; severe mental illness treatment, addictions, health services outcomes.

Romano, Joan 1982; MS, 1974, PhD, 1982, University of Pittsburgh; clinical psychology.

Saxon, Andrew J. 1982; MD, 1977, Tufts University; addiction psychiatry.

Scher, Maryonda 1961; MD, 1954, University of Washington; dissociative disorders/PTSD.

Schmaling, Karen B. 1992; MS, 1985, PhD, 1988, University of Washington; behavioral medicine (asthma, chronic fatigue syndrome), depression, treatment outcome research.

Scott, David T. 1993; PhD, 1978, Yale University; natural history of premature infants, efficacy of early intervention for premature infants.

Speltz, Matthew L. 1981; MA, 1975, Western Washington University; PhD, 1980, University of Missouri; developmental psychotherapy, family therapy, pediatric behavioral medicine.

Sullivan, Mark D. 1985; PhD, 1982, MD, 1984, Vanderbilt University; depression and chronic medical illness, chronic pain, ethics, quality of life.

Sulzbacher, Stephen 1976; MA, 1964, Hollins College (Virginia); PhD, 1971, University of Washington; psychiatry and behavioral sciences.

Syrjala, Karen L. 1985; PhD, 1983, MA, 1983, Boston University; oncology, pain.

Unis, Alan S. 1987; MD, 1976, University of Pittsburgh; early-onset psychopathology resulting from disrupted brain development.

Varley, Christopher K. 1978; MD, 1973, University of Washington; attention deficit hyperactivity disorder, pediatric psychopharmacology.

Verhulst, Johan 1977; MD, 1964, Catholic University of Louvain (Belgium); clinical psychiatry, marital therapy.

Walker, Edward A. 1983; MD, 1983, University of Washington; consultation-liaison psychiatry, medically unexplained physical symptoms.

Wells, Elizabeth 1990, (Research); PhD, 1984, University of Washington; clinical psychology, alcohol and drug use among adolescents.

Wilson, Lawrence G. 1978; MD, 1966, University of Kansas; cultural influences on manifestation of symptoms of psychiatric illness and psychological distress.

Womack, William M. 1969; MD, 1961, University of Virginia; behavioral medicine, pediatric headache, stress/anxiety disorders, juvenile offenders.

Assistant Professors

Calderon, Rosemary 1987; PhD, 1988, University of Washington; mental health and deafness, childhood psychopathology, early intervention.

Claypoole, Keith H. 1987; PhD, 1987, University of Wyoming; neuropsychological aspects of neurotensin, HIV, CFS, and diffusive cortical syndromes.

Comtois, Katherine Ann 1995, (Acting); PhD, 1992, University of Maryland; services research, borderline personality disorder, women, dual diagnosis.

Dobie, Dorcas J. 1984; MD, 1984, University of Michigan; geriatric psychiatry.

Fann, Jesse R. 1993, (Acting); MD, 1989, Northwestern University; MPH, 1995, University of Washington.

Harris, Victoria L. 1993, (Acting); MD, 1989, University of British Columbia (Canada).

Kohen, Ruth 1993, (Acting); MD, 1986, University of Aachen (Germany).

Logsdon, Rebecca G. 1986; PhD, 1986, Oklahoma State University; geriatric psychology, Alzheimer's disease, caregiving.

McClellan, Jon M. 1984; MD, 1984, University of Michigan; child psychiatry.

McCurry, Susan Melancon 1993; MS, 1977, MS, 1984, PhD, 1991, University of Nevada; Alzheimer's disease, sleep disturbances.

Moe, Karen 1992, (Research); PhD, 1981, University of Washington; estrogen replacement therapy in women.

Neumaier, John F. 1983; PhD, 1989, MD, 1990, University of Washington; serotonin receptors.

Pascualy, O. Marcella 1984; MD, 1982, Universidad Javeriana (Colombia); geriatric psychiatry.

Petrie, Eric C. 1990; MS, 1981, University of Wisconsin; MD, 1985, University of Washington; psychopharmacology, schizophrenia, post-traumatic stress disorder. Radant, Allen D. 1985; MD, 1985, University of California (Davis).

Reoux, Joseph P. 1995, (Acting); MD, 1985, University of Texas (Houston).

Rimmele, Carl T. 1988; PhD, 1988, University of New Mexico; clinical psychology.

Rubin, Audrey 1994, (Acting); MD, 1984, University of Pennsylvania.

Shores, Molly M. 1989, (Acting); MD, 1987, University of Washington.

Sloan, Kevin L. 1992, (Acting); MD, 1986, University of Chicago.

Srebnik, Debra S. 1993; PhD, 1992, University of Vermont; public mental health services research, program and policy evaluation, community psychology.

Szot, Patricia 1992, (Research); PhD, 1987, Oregon State University.

Tsuang, Debby W. 1993, (Acting); MD, 1988, University of Iowa.

Uldall, Karina K. 1991; MD, 1987, University of Missouri; HIV/AIDS, health services.

Wingerson, Dane K. 1992, (Acting); MD, 1987, University of Washington.

Instructors

Brace, Melanie J. 1995, (Acting); MD, 1990, University of Michigan; child psychiatry.

Chen, Jim C. 1992, (Acting); MD, 1991, Hahnemann Medical College; general adult, geriatric, and cross-cultural psychiatry.

Cherrier, Monique M. 1997, (Acting); PhD, 1994, Washington State University; neuropsychology, aging, neuroendocrinology.

Ciechanowski, Paul S. 1994, (Acting); MD, 1991, McGill University (Canada); consultation-liaison.

Elliott, Andrew J. 1992, (Acting); MD, 1992, University of Nevada; HIV/AIDS, psychotic disorders, dialectical behavior therapy.

Pages, Kenneth P. 1992, (Acting); MD, 1992, University of South Florida; diagnosis and treatment of mood disorders in people with substance-use disorders.

Smith, Cindy Jean 1991, (Acting); MD, 1990, Wright State University; child psychiatry.

Senior Lecturer

Dagadakis, Christos S. 1976; MD, 1974, MPH, 1975, University of Washington; emergency psychiatry, mental health managed care, psychiatric disability, stress management.

Lecturer

Jones, Rebecca M. 1992; MD, 1979, State University of New York (Stony Brook); in-patient psychiatry, psychodynamic psychotherapy.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

PBSCI 451 Principles of Personality Development (2) *Doerr* Development of the personality from infancy through advanced age traced to its physiologic, experiential, and cultural sources with emphasis on psychodynamic concepts and behavior.

CONJ 475 Alcoholism: A Course for Medical Students in the Allied Health Sciences (2) See Conjoint Courses. **PBSCI 498 Undergraduate Thesis (*)** Opportunity to complete work on psychiatric research projects or to pursue a specific psychiatric topic in depth, for instance, through library research.

PBSCI 499 Undergraduate Research (* max. 15) Opportunities are available for participation in a wide variety of ongoing research in the behavioral sciences and clinical psychiatry, or for the development of an individual investigative project under the supervision of a faculty sponsor.

PBSCI 525 P-Forensic Issues in Mental Health (3) Goldenberg Concentration on major issues in psychiatry and law. Outside speakers from legal, judicial, and psychiatric communities. Lectures on assessment in forensic settings, competence to stand trial, and criminal responsibility. Discussions on personality disorders and correctional environments. For psychiatric residents and medical, psychiatry, psychosocial nursing, graduate psychology, social work, and law students.

PBSCI 530 P-Developmental Psychoanalytic Psychotherapy (2) Schimmelbusch Study of mental functioning from a developmental point of view. How failures of psychological development lead to various psychiatric pathological states and how psychoanalytic treatment reinstitutes normal development.

PBSCI 535 Modern Concepts of Psychoanalysis (2) Schimmelbusch Childhood developmental stages studied in light of inborn and environmental determinates. Correlating developmental phases with all aspects of adult personality functioning. A hierarchy of different models of the mind used to explicate personality functioning on a clinical case discussion level.

PBSCI 548 P-Aging and Adult Development (1-3) Aging in Western technologically advanced societies frequently involves losses in status, stamina, and economic and social supports. Consideration given to losses among the aged. Students select projects in the area of aging and work at their own levels of expertise and sophistication. Seminar format with guided reading.

PBSCI 562 P-Principles of Hypnosis (2) *Dworkin* History and theory of hypnosis. Induction techniques. Application to the treatment of emotional and physical problems. Medical and dental students.

PBSCI 575 P-Community Psychiatry Seminar (2) *Trupin* Preparation for mental-health work in community agencies: cultural, social, and economic factors in mental illness and provision of services; history of community mental health; direct and indirect intervention; consultation and supervision; agency organization and leadership; psychiatric epidemiology; prevention; forensic psychiatry. Lectures, readings, case discussions.

PBSCI 591 P-Seminars and Conferences in Psychiatry: Seminar in Clinical Neuropsychology (*) Introduction to neuropsychological studies of brainbehavior relationships. Exposure to neuropsychological assessment procedures and manifestation of neurocognitive deficits in selected mental and medical disorders, e.g., epilepsy, AIDS, sleep disorders, trauma, toxin exposure, vascular disorders, psychiatric disorders. Develop knowledge of neuropsychological assessment procedures and applications to diverse medical conditions. Prerequisite: psychological assessment experience.

PBSCI 630 P-WRITE Psychiatry Clinical Clerkship (* max. 24) Basic clinical clerkship for students enrolled in the WRITE Program. Prerequisite: completion of basic curriculum; third- and fourth-year students; acceptance in the WRITE program.

PBSCI 664 P-Basic Clerkship in Ambulatory Services, HCMHC, or Clinic II (12) Opportunity to experience outpatient psychiatric ambulatory services. Focus on improving interviewing skills and developing an interviewing style and content appropriate to patients with psychiatric dysfunction; gaining familiarity with psychopharmacology; exposure to problems seen in psychiatric emergency medicine. (Six weeks, full-time. Limit: two students.)

PBSCI 665 P-Basic Clinical Clerkship (12) Bharucha, Dagadakis, Pascualy, Shores Inpatient clerkship in psychiatry. Students have primary responsibility under the direction of attending psychiatrists and residents for diagnosis and care of patients at University of Washington Medical Center, Harborview Medical Center, or Veterans Administration Hospital. Emergency room, crisis intervention, consultation to patients with psychiatric dysfunction. Familiarity with psychopharmacology and short-term hospitalization emphasized. (Six weeks, full-time.)

PBSCI 666 P-WWAMI Psychiatry and Behavioral Sciences Clerkship (12) Rotation aims to increase student's skills in basic psychiatry, social psychiatry, transcultural psychiatry, and community psychiatry. Orientation is around the diagnosis, treatment, and clinical management of White, Aleut, Indian, and Eskimo children and adults in outpatient, inpatient, and community settings. Third-, fourth-year medical students. Prerequisite: HUBIO 563. (Limit: three students.)

PBSCI 667 P-Basic Psychiatry Clerkship, Boise (12) *Leone* Basic psychiatry clerkship at Veterans Administration Medical Center in Boise, Idaho. Fulfills graduation requirement for clerkship in Psychiatry.

PBSCI 668 P-Psychiatry Clerkship, Spokane (12) Students work on adult, geriatric, and adolescent inpatient psychiatric units of Sacred Heart Medical Center, following patients after transfer to partial hospitalization or outpatient clinic. Didactics include basic psychiatric diagnosis, treatment, and pharmacotherapy. Prerequisite: completion of HUBIO series; third and fourth-year medical students.

PBSCI 670 P-Clerkship in Consultation/Liaison Psychiatry UWMC (* max. 24) Katon Assessment of patients with major psychosocial problems associated with physical disease, including: problems stemming from the way the illness is perceived and experienced, liaison with other clinical disciplines on complex diagnosis and treatment of problems. Prerequisite: HUBIO 563, 664, 665, 666 or 667.

PBSCI 671 P-Clerkship in Consultation/Liaison Psychiatry HMC (* max. 24) Wilson Prerequisite: 665, 666, 667, or 668. (Limit: one student.)

PBSCI 672 P-Elective Clerkship in Primary Care Psychiatry at Boise VAMC (8/12) Blackburn, Leone, Marsh Assessment and treatment of patients with acute psychiatric problems in a primary care/rural setting. Consultation work on general medicine and surgery; assessment and dealing with outpatient psychiatric problems as they initially present. Evaluations, crisis intervention strategies, and brief therapies stressed. Prerequisite: 664, 665, 666, 667, or 668. (Four to six weeks; UW students only.)

PBSCI 673 P-Outpatient Psychiatry Elective (* max. 24) Ries Offered at Harborview Outpatient Center. Students function as subinterns, conducting diagnostic interviews, initiating and managing pharmacotherapeutic treatment regimens, and providing crisis intervention, under the supervision of the full-time attending at Psychopharmacology Clinic. Prerequisite: 664, 665, 666, 667, or 668. (Four to six weeks, full-time.)

PBSCI 676 P-Inpatient Clerkship in Psychiatry at American Lake VA (8/12) Taylor For medical students with a defined interest in psychiatry who wish to develop their knowledge and skills in the evaluation, management, and treatment of a wide range of acute and chronic psychiatric conditions requiring inpatient hospital treatment. Prerequisite: 664, 665, 666, 667, or 668. (Four to six weeks, full-time.) PBSCI 677 P-Alcohol and Drug Treatment Clerkship at American Lake VA (8/12) Lim Student assists in every phase of the substance-abuse treatment, including admission interviews, patient evaluation, problem identification, group and individual psychotherapy, assertiveness training, anger control, human sexuality, medical evaluation and treatment, couples therapy, discharge and aftercare planning. Experience primarily clinical. Prerequisite: 664, 665, 666, 667, or 668. (Four to six weeks, full-time.)

PBSCI 678 P-Clerkship in Psychiatric Long-Term Care and Rehabilitation (* max. 12) Taylor Twoto six-week clerkship provides learning experiences in rehabilitation of long-term psychiatric patients with medical illness. Multidisciplinary team approach, working with homeless mentally ill. Diagnostic skills emphasized. Spectrum of diseases (cardiovascular, Huntington's, organic brain syndrome) is such that physical rehabilitation is not an emphasis. Prerequisite: HUBIO 563, 664, 665, 666, 667, or 668.

PBSCI 680 P-Clerkship in Emergency Psychiatry (* max. 24) Dagadakis Emphasis on clinical evaluation, acute management, and treatment planning for individual patients. Experience in coordinating these activities with other emergency room personnel, and various hospital and community resources. Emphasis on skills useful to physicians in any specialty. Third- and fourth-year medical students only. Prerequisite: either 664, 665, 666, 667, or 668. (Four or six weeks, full-time.)

PBSCI 685 P-Geriatric Psychiatry Clerkship (* max. 12) *Peskind* Two- to six-week elective. Participation in the evaluation and care of older persons with psychopathology, such as intellectual impairment and depression, in a variety of settings. Emphasis on improving clinical skills regarding diagnosis and treatment of common behavioral problems in the elderly. Prerequisite: 664, 665, 666, 667, or 668.

PBSCI 688 P-Subinternship in General Psychiatry (* max. 16) Jones, Scher Students function as interns under the supervision of house staff and attending psychiatrists. Further development of their diagnostic and therapeutic skills emphasized. Special areas of interest, such as family intervention, substance abuse, psychoses, neuropsychiatry, community psychiatry, administration, research pursued. Prerequisite: 664, 665, 666, 667, or 668. (Four or six weeks, full-time.)

PBSCI 696 P-Advanced Clerkship in Child Psychiatry (* max. 24) Varley Provides students an opportunity to participate in evaluation and treatment. Experiences in specialized clinics are also available. It is suggested that the student contact the instructor prior to enrollment. Prerequisite: 664, 665, 666, 667, or 668. (Four or six weeks, full-time. Limit: two students.)

PBSCI 697 P-Psychiatry Special Electives (* max. 24) Scher By special arrangement, clerkships, externships, and research opportunities can be made available at the University and other institutions. Students obtain permission from Dr. Hunt before obtaining a special assignment form from the Dean's office one month before advance registration. Students contact affiliating institutions. Does not fulfill the requirement for a basic clerkship in psychiatry.

PBSCI 699 P-WWAMI Psychiatry and Behavioral Sciences Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.
Radiation Oncology

NN106 University of Washington Medical Center

Radiation oncology is the branch of clinical medicine that utilizes high-energy radiation to treat disease, usually cancer. The department consists of three divisions: clinical radiation oncology, medical radiation physics, and experimental cancer biology. Training programs are offered in all three divisions. Research programs in the Department of Radiation Oncology are aimed at the physical and biological mechanisms of interactions between ionizing radiations, and normal and malignant tissues, with particular emphasis on high linear energy transfer (LET) radiation effects. Other programs involve the application of positron emission tomography (PET) to elucidate differences between cancers and normal tissues, and the development of specialized radiopharmaceuticals.

Faculty

Chair

George E. Laramore

Professors

Blasko, John C. 1983; MD, 1969, University of Maryland; therapeutic radiology.

Graham, Michael M. * 1980; PhD, 1973, University of California (Berkeley); MD, 1976, University of California (San Francisco); positron emission tomography, nuclear medicine.

Groudine, Mark * 1982; MD, 1975, PhD, 1976, University of Pennsylvania; chromatin structure and gene activity in development and transformation.

Krohn, Kenneth A. * 1981; PhD, 1971, University of California (Davis); chemistry, radiation oncology.

Laramore, George E. 1976; MS, 1966, PhD, 1969, University of Illinois; MD, 1976, University of Miami (Florida); therapeutic radiology.

Rasey, Janet S. 1979; MS, 1965, Oregon State University; PhD, 1970, University of Oregon; radiation biology.

Wootton, Peter 1959, (Emeritus); BSc (hon), 1944, University of Birmingham (UK); medical radiation physics.

Associate Professors

Austin-Seymour, Mary M. 1988; MD, 1978, University of Chicago; therapeutic radiology.

Kalet, Ira J. * 1980; PhD, 1968, Princeton University; computer simulation of radiation therapy, artificial intelligence, computer graphics.

Koh, Wui-Jin 1984; MD, 1984, Loma Linda University; therapeutic radiology.

Phillips, Mark H. 1991; PhD, 1982, University of Wisconsin; medical radiation physics.

Russell, Kenneth J. 1985; MD, 1979, Harvard University; therapeutic radiology.

Schwartz, Jeffrey L. 1995; PhD, 1979, University of Texas (Dallas); radiation biology.

Stelzer, Keith J. 1990; PhD, 1985, University of Kansas; MD, 1989, University of California (Los Angeles); therapeutic radiology.

Wallner, Kent E. 1997; MD, 1981, Ohio State University; therapeutic radiology.

Wilbur, D. Scott 1986; PhD, 1978, University of California (Irvine); radiochemistry.

Assistant Professors

Cho, Paul S. 1990; PhD, 1989, University of California (Los Angeles); medical radiation physics.

Lindsley, Karen L. 1993; MD, 1985, Vanderbilt University; therapeutic radiology.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

R ONC 499 Undergraduate Research (* max. 24) Austin-Seymour, Cho, Kalet, Koh, Laramore, Lindsley, Ling, Phillips, Rasey, Russell, Schwartz, Stelzer, Wallner, Wilbur Opportunities in clinical or laboratory investigation in radiation oncology, radiation physics, or computer-related research. Student participation in ongoing or new projects. Open to students in the biological or physical sciences. Credit/no credit only. Prerequisite: permission of instructor.

R ONC 695 P-Clinical Cancer Management (* max. 8) Lindsley Participation in the clinical management of patients with cancer, emphasizing a multimodality approach. Includes clinical assessment, planning of radiation treatment, and follow-up evaluation of patients. Special procedures include implant brachytherapy and intraoperative radiation. Daily teaching conferences with faculty and residents. Prerequisite: MED 665 or permission of instructor.

R ONC 697 P-Radiation Oncology Special Elective (* max. 24) Lindsley By specific arrangement for qualified students, special clerkship, externship or research opportunities can be made at institutions other than the University of Washington. Students should obtain a "Special Assignment" form from the Dean's office at least one month before advance registration. Prerequisite: permission of instructor.

R ONC 699 P-WWAMI Radiation Oncology Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Radiology

RR215 University of Washington Medical Center

Diagnostic radiology is that branch of clinical medicine that specializes in the interpretation of various imaging modalities in order to detect, to characterize, and (with increasing frequency) to treat a wide variety of diseases. Historically, x-rays were the first energy source utilized for these purposes, and they continue to be a mainstay of this discipline. More recently, the armamentarium has grown to include ultrasound, computed tomography, magnetic resonance, and positron-emission tomography. In nuclear medicine, one of radiology's major subspecialties, radionuclides are employed for both diagnostic and therapeutic purposes. Another subspecialty is interventional radiology, wherein aspirations and biopsies, as well as therapeutic procedures such as abcess drainage, tumor embolization, and vascular shunts are performed percutaneously.

The Department of Radiology consists of two clinical divisions: diagnostic radiology and nuclear medicine. Both divisions are ably supported by technologists and faculty members in the field of radiation physics. Instruction in radiology is provided for medical students, residents, and fellows as well as for other physicians. The faculty and its teaching and research activities are represented in each of the hospitals affiliated with the University.

Jacobson, Arnold F. 1987; MD, 1980, University of Illinois; PhD, 1980, University of Wisconsin; nuclear medicine.

Marglin, Stephen I. 1980; MD, 1968, Yale University; chest and oncologic radiology.

Nghiem, Hanh Vu 1992; MD, 1987, Wayne State University; abdominal imaging.

Phillips, Leon A. 1959, (Emeritus); MD, 1952, Yale University; general radiology, uroradiology.

Richards, Todd L. * 1985; PhD, 1984, University of California (Berkeley); nuclear magnetic resonance imaging, spectroscopy of the brain in demyelinating diseases.

Rosenbaum, David M. 1983; MD, 1977, Albert Einstein College of Medicine; pediatrics.

Rowberg, Alan H. * 1982; MD, 1970, University of Washington; computed imaging.

Schmiedl, Udo P. 1989; PhD, 1979, MD, 1982, University of Heidelberg (Germany); abdominal imaging.

Schulte, Scott J. 1988; MD, 1979, University of Washington; gastrointestinal radiology.

Stern, Eric J. 1992; MD, 1985, University of Medicine and Dentistry of New Jersey; chest radiology.

Stewart, Brent K. * 1993; PhD, 1988, University of California (Los Angeles); physics.

Taira, Ricky K. 1997; PhD, 1988, University of California (Los Angeles); biomedical physics.

Takasugi, Julie E. 1988; MD, 1982, University of California (Los Angeles); pulmonary radiology.

Tewson, Timothy J. 1994; PhD, 1972, University of London (UK); synthesis of PET radiopharmaceuticals and their behavior in vivo.

Weinberger, Edward 1985; MD, 1979, Harvard University; pediatric radiology.

Winter, Thomas C. 1990; MD, 1986, Duke University; ultrasound, computed tomography, MRI.

Yuan, Chun 1991; PhD, 1988, University of Utah; medical biophysics, MRI.

Assistant Professors

Baxter, Alexander B. 1995, (Acting); MD, 1985, University of Michigan.

Fontaine, Arthur B. 1997; MD, 1981, Union University; angio interventional radiology.

Georgian-Smith, Dianne 1996; MD, 1983, Case Western Reserve University; breast cancer, breast imaging.

Hoffer, Eric K. 1997; MD, 1984, University of California (Los Angeles); minimally invasive therapy, stent grafts for aneurysms, uterine artery embolization, dialysis access.

Jarvik, Jeffrey G. 1993; MD, 1987, University of California (San Diego); neuroradiology.

Kim, Thomas A. 1997; MD, 1988, Washington University; neuroradiology.

Langer, Steve G. 1996, (Acting); PhD, 1993, Oakland University.

Lehman, Constance D. 1990; MD, 1990, PhD, 1990, Yale University; mammography.

Lewis, David H. 1990; MD, 1985, Virginia Commonwealth University; nuclear medicine.

Murakami, James W. 1990; MD, 1990, University of California (San Diego); pediatrics radiology.

Shaw, Dennis 1985; MD, 1983, University of Washington; neuroradiology, pediatric radiology.

Winters, William D. 1989; MD, 1983, University of Utah; pediatric radiology.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

RADGY 498 Undergraduate Thesis (*) Nelson Supervised clinical and/or laboratory research in the broad field of medical imaging, culminating in a thesis. The thesis will be submitted to Dr. James Nelson for suitable recognition. Offered: AWSpS.

RADGY 499 Undergraduate Research (*) Nelson Opportunity to gain research experience and direct participation in either clinical or basic sciences investigation in diagnostic radiology and/or nuclear medicine. Written exposition of the results of this experience will be submitted to Dr. James Nelson. Offered: AWSpS.

RADGY 508 Physical Aspects of Medical Imaging (4) Stewart Quantitative physical principles of medical imaging are presented for electromagnetic and sonic radiation. Methods of image formation and analysis are discussed for conventional film radiography, CT, DSA, PET, B-mode ultrasound and Doppler ultrasound. Offered: jointly with BIOEN 508/ENV H 528.

RADGY 550 Nuclear Magnetic Resonance in Biomedicine (2) Hayes, Kushmerick, Richards, Yuan Basic physics of nuclear magnetic resonance (NMR) imaging and spectroscopy are presented. Research applications of NMR in physiology and biochemistry are reviewed with emphasis on the brain. Grade based on written tests and small research paper. Prerequisite: permission of instructor. Offered: jointly with BIOEN 565; odd years; Sp.

RADGY 580 P-Nuclear Medicine Technique, Physics, and Instrumentation (2.5) Lewellen Provides familiarization with basic nuclear phenomena and with the instrumentation used in the practice of nuclear medicine. There are discussions and laboratory exercises. Practical experience in instrument operation and sample counting are provided. Prerequisite: permission of instructor. Offered: S.

RADGY 600 Independent Study or Research (*) *Nelson* Prerequisite: permission of Dr. Nelson and faculty sponsor. Offered: AWSpS.

RADGY 693 P-Introduction to Diagnostic Radiology (4) *Schulte* Half-time clerkship in the field of medical imaging. Lectures, case discussions, film reading, and independent study provide an overview of the subspecialty areas of diagnostic radiology and nuclear medicine. Emphasis on utilization and selection of imaging tests, radiologic anatomy, and interpretation of commonly encountered studies. Offered: AWSpS.

RADGY 694 P-Advanced Clinical Clerkship (8) *Schulte* Full-time clerkship provides a more in depth experience in diagnostic radiology and nuclear medicine. Required rotations in the subspecialty areas of radiology augment the basic lecture series and case discussions of Radiology 693. For those with a special interest in diagnostic radiology. Prerequisite: permission of instructor. Offered: AWSpS.

RADGY 696 P-Nuclear Medicine Clerkship (* max. 12) Nelp Daily participation at University of Washington Medical Center nuclear medicine clinic emphasizing technical performance, diagnostic interpretation, and clinical relevance of nuclear imaging. Daily clinical teaching conferences of the division. Four- and six-week clerkships can be preplanned in areas such as pulmonary, cardiovascular, renal, bone, computer analysis. Prerequisite: permission of instructor. Offered: AWSpS.

RADGY 697 P-Radiology Special Electives (* max. 24) *Schulte* Radiologic training in a nonaffiliated institution. Permission and arrangements must be made at the time of registration through direct communication between the student and the education coordinator in Radiology. A written outline from a preceptor at the intended site required. Prerequisite: permission of radiology education coordinator. Offered: AWSpS.

RADGY 699 P-WWAMI Radiology Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Rehabilitation Medicine

BB919 Health Sciences

The Department of Rehabilitation Medicine provides instruction for medical students, interns, residents, and allied health students in occupational therapy, physical therapy, and prosthetics and orthotics in a comprehensive approach to rehabilitation problems. This includes special diagnostic and evaluative procedures; methods and rationale in the application of principles of occupational therapy, physical therapy, prosthetics and orthotics, and other health professions; and advanced investigation of special problems encountered in the field. In addition, the department conducts a residency training program for the specialty of physical medicine and rehabilitation.

The department offers baccalaureate curricula leading to the following degrees: Bachelor of Science in Occupational Therapy, Bachelor of Science in Physical Therapy, and a Bachelor of Science in the field of prosthetics and orthotics. The department also offers a Master of Science degree in rehabilitation medicine with options for occupational therapists, physical therapists, and residents in physical medicine and rehabilitation who wish to enter the academic field.

The divisions of Occupational Therapy and Physical Therapy are preparing to make the transition of their entry-level baccalaureate programs to the master's level, after which the Bachelor of Science will no longer be granted. Contact those divisions for exact dates and new requirements.

Occupational Therapy

Head

Elizabeth M. Kanny

Occupational therapy is a health profession that provides services related to functional performance in everyday life, whether it be in activities of daily living, work, or play and leisure activities. Occupational therapists work with people who have physical illness or injury, social or emotional difficulties, congenital or developmental problems, or who are in need of preventive strategies that promote well-being. They serve people in all age groups, and of diverse cultural and ethnic groups and socio-economic levels.

Occupational-therapy interventions focus on increasing independent function, enhancing development, and minimizing or preventing disability. Interventions include adaptation of activities or the environment to

434 SCHOOL OF MEDICINE / REHABILITATION MEDICINE

achieve maximum independence and to enhance quality of life. Services may include training in self-care activities; design, fabrication, and application of splints; sensorimotor activities; therapeutic group activities; selection and use of adaptive equipment; adaptation of physical environments in the home, school, work, or community; therapeutic activities to enhance functional performance in everyday life; work evaluation, work hardening, and workplace adaptations; and leisure exploration and performance.

Today's occupational therapists work in clinical practice, administration, education, research, private practice, and home health. Work settings include rehabilitation centers and hospitals, public and private schools, home health agencies, mental-health centers and psychiatric hospital settings, substance-abuse centers, vocational rehabilitation centers and industrial clinics, wellness and prevention programs, and hospices.

The program is designed to build on a pre-professional liberal-arts foundation. Then in the professional program, theoretical and technical knowledge in occupational therapy is linked with professional values, attitudes, and skills. The education of each student is based on the philosophy that "occupational performance" (including activities of daily living, work, and leisure/play) is central to and provides a purpose and meaning to one's life. Professional standards of practice, ethics, and continued professional growth are emphasized throughout the program. The program is accredited by the Accreditation Council for Occupational Therapy Education of the American Occupational Therapy Association. It includes two years of professional course work and six months of clinical field-work training. Completion of all University and program requirements leads to the Bachelor of Science in Occupational Therapy degree awarded by the School of Medicine, Department of Rehabilitation Medicine. Graduates of the program are eligible to sit for the national certification examination for the occupational therapist administered by the National Board for Certification in Occupational Therapy (NBCOT). After successful completion of this exam, the individual will be an Occupational Therapist, Registered (OTR). Most states, including Washington, require state licensure in order to practice; however, state licenses are usually based on the results of the NBCOT Certification Examination.

It is anticipated that the Bachelor of Science program will change to an entry-level master's degree program in the autumn of 1999. Applicants will be required to have completed a bachelor's degree in another field, have a minimum GPA of 3.00, and have taken the Graduate Record Examination (GRE). Please contact the Occupational Therapy Curriculum Office for detailed program information that is updated annually and available in April of each year. Call or write the Occupational Therapy Curriculum Office, Box 356490, University of Washington, Seattle, WA 98195; (206) 685-7411; or visit it on the Web through the UW's homepage at http://www.washington.edu.

Admission Requirements: Students are admitted to the baccalaureate program at the junior level; however, some applicants have completed three or more years of college work or may hold a baccalaureate degree before applying to the program.

1. Ninety credits to include the following courses: B STR 301; CHEM 120 or 142; PHYS 114, 117; PSYCH 305, 306; SOC 110; ZOOL 118. To apply, students must have completed five of the prerequisite courses, with at least two courses in the physical and biological sciences.

2. Completion of Arts and Sciences language, writing, reasoning, and general-education requirements. Please see UW requirements on page 72.

3. A minimum cumulative GPA of 2.70, with a minimum GPA of 3.00 in prerequisite courses with no single prerequisite course graded less than 2.0.

4. Admission is competitive, based on demonstrated academic ability, communication skills, and understanding and experience in occupational therapy. References from volunteer or paid work experiences in occupational therapy are required. Detailed program requirements and selection-process information may be obtained from the curriculum office.

5. Departmental application deadline: February 15 for autumn quarter only.

Graduation Requirements: The following courses must be completed satisfactorily in the scheduled sequence, beginning autumn quarter only, at the UW: REHAB 320, 321, 322, 332, 380, 414, 417, 435, 442, 444, 445, 446, 447, 448, 468, 470, 473, 481, 482, 483, 484, 485, 486, 487, 488, 489, 494, B STR 431, and HUBIO 563.

Student Evaluation: The University grade-point system is used in student evaluation. A student must maintain a cumulative GPA of 2.50 in all required professional course work to maintain satisfactory standing and to graduate. The student must attain a minimum grade of 2.0 in all required courses, with the exception of one course grade allowed between 1.7 and 1.9, or be required to repeat that course at the next offering.

At the end of any academic quarter in which a student's performance falls below the scholastic requirement, the student is placed on academic probation and is allowed two additional consecutive quarters to raise the GPA to 2.50. A student who fails to meet the above scholastic requirements is dismissed from the program and advised to transfer to an alternative major or withdraw from the University.

The student must satisfactorily complete all academic course work before being promoted to Level II Fieldwork (REHAB 494). Two Level II Fieldwork placements are required. If a student should fail to pass a Level II Fieldwork placement, the student must petition the Occupational Therapy Advisory and Evaluation Committee for approval to repeat it. A Level II Fieldwork placement can be repeated only once.

Physical Therapy

Head

Mark Guthrie

Physical therapy is a direct form of professional patient care that can be applied in most disciplines of medicine. The principal objective in physical therapy is to restore or improve motor function in individuals with musculoskeletal or neuromuscular problems.

Management of problems related to motor function is only part of the work of physical therapy. Equally important is a rebuilding of self-confidence and the creation of a desire to return to a normal, active life. Other primary objectives of physical therapy are prevention of disability and pain, and training in mobility skills for those who must adapt to permanent disability.

As a consequence of the scope of the profession, physical therapists function in a variety of settings, the most familiar being the hospital. Physical therapists also plan, provide, and supervise evaluation and direct patient care in outpatient clinics, rehabilitation centers, developmental centers, home-health agencies. schools, extended-care facilities, voluntary health programs, industry, and private practices. The physical therapist may be found anywhere that quality health care is needed. Increasingly, physical therapists are becoming involved in basic and clinical research; in the academic community, either as full-time faculty members or as supervisors of clinical education, and as consultants in local, state, and federal health-planning activities.

Physical therapists function in compliance with the licensing laws and ethical principles that govern the

practice of physical therapy. The steps to licensure as a physical therapist vary slightly from state to state, but all physical therapists graduate from an accredited curriculum of physical therapy that includes a specific period of clinical training. As physical therapy relates to the majority of medical specialties, the education program is broad in scope, including an emphasis on physical and social sciences. The physical therapist evaluates the patient's problem by testing such factors as range of joint motion, muscle strength, posture and gait, pulmonary function, sensation and sensory perception, orthotic and prosthetic fit, reflexes and muscle tone, and functional skills. Some of the procedures used may include ultrasound, superficial heat and cold, electrical stimulation, massage, traction, joint mobilization, biofeedback, therapeutic exercise, and training in the use of orthotic, prosthetic, and other assistive devices, such as crutches, canes, and wheelchairs

As with all professionals in health fields, physical therapists are responsible for subscribing to a program of continuing education. Some therapists also develop the knowledge and skills of a specialist via continuing education and concentrated practice in one area, such as sports or pediatric therapy. A formalized mechanism for certifying specialists is implemented by the national professional association, the American Physical Therapy Association.

The University of Washington program in physical therapy is accredited by the American Physical Therapy Association Commission on Accreditation in Physical Therapy Education.

Admission Requirements: It is anticipated that in 1999 the program will switch to the master's level. Applicants would be required to complete a bachelor's degree in another field prior to enrollment in the physical therapy curriculum. For current admission requirements, applicants should request detailed program information (which is updated annually and available after October 1 each year) from the Physical Therapy Curriculum Office, Box 356490, University of Washington, Seattle, Washington 98195-6490; (206) 685-7408. Students are urged to request these materials early, since the deadline for receipt of applications is February 15. At the time of entrance to the program (autumn quarter), applicants must be legal residents of Washington, Idaho, Alaska, Montana, Oregon, Hawaii, Wyoming, or Nevada. Preference is given to Washington residents.

Prosthetics and Orthotics

Head

John Fergason

The prosthetist-orthotist is a member of a professional medical team devoted to the evaluation and treatment of persons with physical disabilities. The prosthetistorthotist is responsible for the design and fabrication of prosthetic and orthotic devices (artificial limbs and braces) to enable patients of all ages with disabilities to enjoy more-functional and independent lives. The prosthetist-orthotist works primarily in private-practice clinical settings and private and public hospitals.

Bachelor of Science

The program is accredited by the Commission on Accreditation of Allied Health Education Programs. Completion of all University and program requirements leads to a Bachelor of Science with a major in prosthetics and orthotics awarded by the School of Medicine, Department of Rehabilitation Medicine. Graduates of the program are eligible to sit for the national certification examination administered by the American Board for Certification in Prosthetics and Orthotics after completion of an accredited residency program composed of 1,900 hours of supervised clinical practice in each discipline. Admission Requirements:

1. Minimum 2.70 cumulative GPA.

2. By the end of autumn quarter or semester of the year prior to expected admission into the program, applicants must complete at least 20 quarter credits with a minimum 2.70 GPA in the following prerequisite courses: B STR 301; BIOL 101-102 or MICROM 301, 302 (note that CHEM 220 is a prerequisite for microbiology); CHEM 120; PHYS 114, 115, 117, 118; PSYCH 101; ZOOL 118.

3. Completion of the University writing and reasoning requirements (5 credits of English composition and 5 credits of quantitative and symbolic reasoning with a minimum grade of 2.0; two additional writing courses totaling a minimum of 10 credits with a minimum grade of 0.7) and the College of Arts and Sciences Areas of Knowledge requirements (20 credits in Visual, Literary, & Performing Arts; 20 credits in Individuals & Societies; 20 credits in the Natural World). Prerequisite courses fulfill the 5-credit quantitative and symbolic reasoning requirement, 5 credits of the Individuals & Societies requirement and all 20 credits of the Natural World requirement. Postbaccalaureate (fifth-year) students are exempt from the writing and reasoning requirements but not from the Areas of Knowledge requirements

4. Admission to this program is competitive, based largely on GPA and other measures of academic success. High GPA alone, however, does not guarantee admission. Other factors, such as character, personality, maturity, interpersonal skills, organizational ability, and recommendations, are also assessed. Volunteer or paid work experience in health-related areas is extremely important. General Education: Complete all Arts and Sciences education requirements except foreign language.

5. At the time of application, a student must submit a reasonable plan for completion before the date of expected entry into the program of the balance of the prerequisite courses listed above. If by the time of expected entry into the program the student has not completed all prerequisite courses with a minimum GPA of 2.70 as well as a cumulative GPA of 2.70, that student will not be admitted to the program.

6. Departmental application deadline: February 15 for autumn quarter only.

Suggested Introductory Course Work: SOC 110, SP CMU 103 or 220; STAT 220; courses with practical applications of computers.

Graduation Requirements: The following courses must be taken in the scheduled sequence, beginning auturn quarter only, at the UW: REHAB 320, 321, 332, 340, 341, 342, 343, 414, 417, 420, 421, 423, 424, 427, 428, 429, 430, 442, 443, 444-445, 446, 447.

Student Evaluation: The University grade-point system is used in student evaluation. A student must maintain a GPA of 2.50 in all required professional course work to maintain satisfactory standing and to graduate. The student must attain a minimum grade of 2.0 in each required course and will be required to repeat any course work at the next offering with the exception of one course grade allowed between 1.7 and 1.9.

At the end of any academic quarter in which a student's performance falls below the scholastic requirement, the student is placed on academic probation and is allowed two additional consecutive quarters to raise the professional-phase GPA to 2.50. A student who fails to meet this scholastic requirement is dismissed from the program and advised to transfer to an alternative major or withdraw from the University.

Graduate Program

Graduate Program Coordinator BB919 Health Sciences, Box 356490 (206) 543-3600

The graduate programs in the Department of Rehabilitation Medicine lead to a Master of Science via one of three pathways: occupational therapy, physical therapy, and rehabilitation medicine.

It is anticipated that the Bachelor of Science programs in occupational therapy and physical therapy will change to entry-level master's degree programs in autumn of 1999. These programs are for individuals who have completed a bachelor's degree in another field. For detailed informatoin, please contact either the Occupational Therapy Curriculum Office, Box 356490, University of Washington, Seattle, WA 98195, (206) 685-7411, or the Physical Therapy Curriculum Office, Box 356490, University of Washington, Seattle, WA 98195, (206) 685-7408.

Master of Science, Rehabilitation Medicine (Occupational Therapy Pathway)

This degree program is designed to prepare occupational therapists to understand and apply occupational-therapy theories and frames of reference to clinical practice, to design and conduct research, to provide instruction, and to administer occupational therapy services and/or provide a higher level of clinical service. Independent-study options and electives offer flexibility, allowing the student to meet individual objectives. Completion of a data-based thesis is required. Full-time students generally complete the course work in four quarters. The additional time to complete the thesis requirement varies.

Admission Requirements: An applicant for admission must be a graduate of an approved occupationaltherapy program and must be certified to practice by the American Occupational Therapy Certification Board. A minimum of one year of professional experience is desirable. Detailed information on the program and admission requirements is available from the Division of Occupational Therapy Curriculum Office, (206) 685-7411.

Graduation Requirements: All students must meet the minimum requirements for a master's degree as outlined in the Graduate Study section of this catalog. In addition, students must satisfactorily complete (1) core courses required by the occupational-therapy program and the specialty track selected by the student, and (2) a data-based thesis contributing to the knowledge base in occupational therapy.

Master of Science, Rehabilitation Medicine (Physical Therapy Pathway)

This degree program is designed to prepare physical therapists to assume a career in teaching and administration within the field. The curriculum emphasizes preparation for research and contribution to the professional literature; therefore, a thesis is a requirement of this plan. Opportunities are provided to enhance specialized knowledge and skill in selected content areas of physical-therapy practice. Depending upon the student's educational goals and prior accomplishments, the program should require one to two calendar years for completion.

Admission Requirements: Selection for admission to the Master of Science degree program (physicaltherapy pathway) is based on an assessment of intellectual capacity, basic professional competence, promise for future contributions to the field, and availability of the program (due to funding limitations, the program is not offered every year). Students must have completed a baccalaureate degree and an accredited physical-therapy program with a minimum cumulative GPA of 3.00, based on a four-point scale, in all college work. Detailed information on program and admission requirements is available from the Division of Physical Therapy Curriculum Office, (206) 685-7408.

Graduation Requirements: All students must satisfactorily complete (1) a minimum of 36 credits, including specified core courses; (2) all Graduate School requirements for a master's degree; and (3) a databased thesis contributing to the knowledge base in physical therapy.

Master of Science, Rehabilitation Medicine (Rehabilitation Medicine Pathway)

This degree program is designed to prepare physicians, specifically physiatrists, as academicians in the field of physical medicine and rehabilitation. In addition to core course work in relevant medical sciences, an emphasis is placed on developing skills toward the goal of conducting independent or collaborative research projects.

Admission Requirements: An applicant for admission must be a physician from an approved medical school and must be concurrently enrolled, or have completed, an approved residency program in physical medicine and rehabilitation.

Graduation Requirements: All students must complete (1) a minimum of 36 credits, including specific core courses; (2) all Graduate School requirements for a master's degree; and (3) a data-based thesis contributing to the knowledge base in physical medicine and rehabilitation.

Stiens, Steve A. 1987; MD, 1986, University of Cincinnati; MS, 1991, University of Washington; spinal cord injury, disability, architecture, spasticity, neurogenic bowel function, wheelchairs.

Strand, Edythe A. * 1990, (Adjunct); PhD, 1987, University of Wisconsin; neurogenic speech/language disorders.

Senior Lecturer

Greenberg, Sharon L. 1979; MOT, 1978, University of Washington; occupational therapy.

Lecturers

Dudgeon, Brian J. 1982; MS, 1983, University of Washington; occupational therapy.

Fergason, John R. 1996; BA, 1985, California State University, Fresno; post-operative amputation care.

Hertling, Darlene 1964; BS, 1956, University of California (Berkeley); physical therapy.

Okumura, Ramona M. 1990; BS, 1981, University of Washington; prosthetics and orthotics.

Yamane, Ann 1979; BS, 1976, University of Washington; prosthetics and orthotics.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enroll-ment only.

REHAB 320, 321 Medical Science (4, 4) Lectures in fields related to: general surgery, obstetrics and gynecology, internal medicine, neurology, rehabilitation medicine, orthopaedics, psychiatry and behavioral sciences, rheumatology, and pediatrics. Required for occupational therapy, prosthetics and orthotics, and physical therapy students. Credit/no credit only.

REHAB 322 Medical Science Laboratory (1, max. 2) To introduce students to the role of allied health professionals in the treatment of pathologies presented in 320, 321 lectures. Credit/no credit only.

REHAB 332 Pathologic Physiology for Rehabilitation Professionals (5) Anderson, Slimp Emphasis on normal and pathologic physiology of the circulatory, respiratory, central nervous, and musculoskeletal systems as basis for treatment in occupational therapy, physical therapy, and prosthetics-orthotics. Required for students in these fields. Others by permission. **REHAB 340** Spinal Orthotics (5) Yamane Lecture and laboratory instruction in the use of orthotic components and materials, patient evaluation, and fitting of orthoses for management of spinal pathology. Required for prosthetics and orthotics majors; others by permission of instructor. Offered: W.

REHAB 341 Upper-Limb Prosthetics I (4) Okumura Instruction in, and experience with, the use of prosthetic components and materials, including preprosthetic care, prosthetic components, principles of fabrication and harnessing, and techniques of checkout and prosthetic training for all amputation types. Required for prosthetics and orthotics majors; others by permission of instructor. Offered: AWSp.

REHAB 342 Upper-Limb Prosthetics II (4) Okumura Instruction and experience in use of prosthetic components and materials, including preprosthetic care, principles of fabrication and harnessing, and techniques of checkout and prosthetic training, review of anatomy, biomechanics, locomotion, and motor disability as they pertain to upperlimb prosthetics, as well as medical management and prescription considerations. Immediate postsurgical fitting techniques. Offered: AWSp.

REHAB 343 Upper-Limb Orthotics (4) Okumura, Yamane Lecture and laboratory instruction in the use of orthotic components and materials, biomechanics, and clinical assessment. Required for prosthetics and orthotics majors; others by permission of instructor. Offered: AWSp.

REHAB 380 Occupational Therapy in the Health-Care System (3) Kanny Overview of the health services system and the role of occupational therapy. Covers social, economic, political, and demographic factors that influence health care delivery in U.S.; various service delivery providers; reimbursement and policy issues, regulation and credentialing; and health care personnel and roles. Offered: W.

REHAB 404, 405 Physical Therapy Management of Musculoskeletal Disorders: I, II (5, 5) Hertling Functional anatomy, biomechanics, clinical assessment and management as they relate to patients with common musculoskeletal disorders who have been referred to physical therapy services. Development of appropriate therapeutic strategies for management of extremity joints and spine.

REHAB 413 Special Studies in Physical Therapy (1-15, max. 24) Theory and practice in specialized areas of physical therapy. Credit/no credit only.

REHAB 414 Psychological Aspects of Rehabilitation (2) *Patterson* Psychological processes underlying adjustment to disability; application of behavioral/analysis systems in patient therapy management; effects of cognitive or personality deficits on patient performance and treatment strategies. Credit/ no credit only.

REHAB 415 Undergraduate Seminar for Physical Therapy Students (1-3, max. 10) Group seminar format focused on physical therapy topics pertaining to transcurricular and professional practice issues.

REHAB 416 Principles of Physical Therapy Administration (3) The nature of administration, economic trends, operational policy, aspects of supervision, ethical and legal influences applicable to a physical therapy department. Required for physical therapy students. Credit/no credit only.

REHAB 417 Introduction to Research in Occupational Therapy (3) *Deitz* Statistics, tests and measurements, and qualitative and quantitative research methods. Lectures, readings, and assignments related to occupational therapy and rehabilitation medicine research. Offered: W.

REHAB 420 Lower-Limb Prosthetics I (8) *Fergason* Instruction in fabrication, fitting, and alignment of the patellar-tendon-bearing prosthesis.

SCHOOL OF MEDICINE / REHABILITATION MEDICINE 437

Emphasis is placed on the biomechanics of belowknee fit and alignment, dynamic alignment, and the use of the below-knee adjustable leg and duplication devices, as well as methods of suspension. Required for prosthetics and orthotics majors; others by permission of instructor. Offered: AWS.

REHAB 421 Lower-Limb Prosthetics II (11) *Fergason* Instruction in above knee cast modification, socket fabrication, static and dynamic alignment, alignment duplication, and suspension system. Required for prosthetics and orthotics majors; others by permission of instructor. Offered: AWSp.

REHAB 423 Lower Extremity Orthotics I (6) *Yamane* Lecture and laboratory format. Developing clinical competency, the use of orthotic components and materials, patient evaluation, measurements, fabrication and fitting of lower-limb orthoses. Required for prosthetics and orthotics majors; others by permission of instructor. Offered: AWS.

REHAB 424 Lower Extremity Orthotics II (8) Orthotic treatment of pathological conditions that affect the knee and hip addressed. Focus is placed on development of prescription recommendation, fabrication, fitting, and follow-up of orthoses that support, assist, or stabilize the knee and hip. Required for prosthetics and orthotics majors; others by permission of instructor. Offered: Sp.

REHAB 427 Applied Prosthetics and Orthotics I (1, max. 3) Okumura, Yamane Experience in clinical patient management in a rehabilitation medicine setting, attendance at prosthetics and orthotics clinics at University of Washington Medical Center and university-affiliated Seattle hospitals. Required for prosthetics and orthotics majors; others by permission of instructor.

REHAB 428 Applied Prosthetics and Orthotics II (1-4. max. 13) Supervised clinical practice under the preceptorship of a certified practitioner for a minimum of 250 hours in each discipline.

REHAB 429 Immediate Post-Operative and Early Fitting (2) Fergason Lecture and laboratory designed to introduce the student to the principles of immediate postsurgical prosthetic fitting, including patient management for both upper and lower extremities. Required for prosthetic and orthotic majors; others by permission of instructor.

REHAB 430 Engineering Concepts (2) Yamane Exposure to principles underlying prosthetic/orthotic devices and practices including hydraulic control, material behavior, force analysis. Required for prosthetic and orthotic majors; others by permission of instructor. Offered: S.

REHAB 435 Professional and Therapeutic Communication in Occupational Therapy (2) Engel Provides knowledge and understanding of therapeutic use of self and communication skills with clients, their families and other professionals. Emphasis is placed on communication skills with individuals of diverse ages, educational levels, and cultural and ethnic backgrounds. Credit/no credit only.

REHAB 442 Kinesiology (4) *Guthrie* Study of joint motion and muscle function in relation to both the normal and abnormal state. Specific techniques employed in the field of rehabilitation medicine are analyzed. Required for Department of Rehabilitation Medicine students; others by permission.

REHAB 443 Introduction to Clinical Evaluation (5) Hertling, Yamane Lecture and laboratory format. Developing clinical competency in goniometric measurement of joint motion, manual muscle strength testing, postural analysis, and gait analysis of normal and pathological patterns.

REHAB 444- 445 Function of the Locomotor System (4-4) *Guthrie* Functions of musculoskeletal system as applied to patterns of motion. Anatomy of

peripheral-vascular and peripheral-nervous system. Required for occupational therapy students, prosthetics and orthotics students, and physical therapy students; others by permission of instructor.

REHAB 448 Applied Kinesiology for Occupational Therapists (1) Instruction and laboratory focus on practical experience and clinical problem solving related to muscle and joint motion testing procedures, sensory/perceptual testing, prosthetic and orthotic devices, and wheeled mobility devices utilized in occupational therapy treatment.

REHAB 451, 452 Functional Anatomy Laboratory (1, 1) Study of musculoskeletal, peripheral-vascular, and peripheral-nervous systems from prosected material. Required for physical therapy, occupational therapy, and prosthetic/orthotic students.

REHAB 458 Augmentative and Alternative Communication: Implementation Strategies (3) NW Communication needs of nonspeaking individuals. Interdisciplinary approaches to the evaluation, selection, and implementation of aided and unaided communication augmentation systems. Recommended: basic course work in either SPHSC, OT, PT, or ENGR. Offered: jointly with SPHSC 453; irregularly.

REHAB 463 Application of Physical Therapy Modalities (1-2, max. 3) Principles and concepts of basic physical therapy procedures. Laboratory practice of hydrotherapy and superficial heating modalities. Methods of application of diathermy and ultrasound, TENS, EMG-biofeedback, low and high voltage therapies and ultraviolet light. Lectures and laboratories. Credit/no credit only.

REHAB 466 Advanced Biophysical and Physiological Effects of Modalities (2) Esselman Biophysical principles of equipment employed in physical therapy, physiological effects produced. Required for physical therapy students; others by permission of instructor.

REHAB 468 Analysis of Therapeutic Activities (2) *Greenberg* Skills in the analysis, adaptation, and sequencing of therapeutic and functional activities as they apply to occupational performance. Analysis focuses on performance components (sensorimotor, cognitive, psychosocial, psychological), temporal aspects (chronological, developmental), and environmental aspects (physical, social, and cultural).

REHAB 470 Vocational Assessment and Training (3) *Dudgeon* Knowledge and skill competencies applicable to evaluation and training of individuals with vocational/work related disabilities. Emphasis placed on worker characteristics and job analysis as well as rules and techniques of accommodation within business and industrial settings.

REHAB 471 Therapeutic Exercise Procedures I (5) *Buford, Kartin* Theory and principles of basic exercise procedures used for treatment purposes in physical therapy: motor learning and control, variables of motor performance, risks and benefits of exercise, exercise prescription, selected patient assessment and exercise procedures. Lectures and laboratories. Simulated patient problems.

REHAB 472 Therapeutic Exercise Procedures II (5) *Kartin, Mullens, Shumway-Cook* Theory and principles of advanced therapeutic exercise procedures: normal motor development, facilitation and inhibition elements, adaptation of procedure to appropriate age level and impairment. Lectures and laboratories. Simulated patient problems.

REHAB 473 Administration of Occupational Therapy Services (3) Kanny Organizational and administrative techniques including strategic planning, program planning, fiscal management, productivity measures, quality assurance, personnel management, and marketing. Practice in developing skills through program-based learning. Offered: Sp. **REHAB 475 Physical Restoration (4)** *Hertling* Lectures and laboratory practice to develop special skills in physical therapy directed toward facilitation of movement as applied to treatment of severe neurological and musculoskeletal dysfunction. Treatment techniques in mobility, activities of daily living, selfcare, transfers, and ambulation activities. Required for physical therapy students.

REHAB 476 Prosthetic and Orthotic Evaluation and Use (2) Okumura Instruction in mechanical component substitution for functional losses. Emphasis is on biomechanical principles, prosthetic-orthotic components, and alignment and fitting techniques. Credit/no credit only. Required for physical therapy students.

REHAB 481 Introduction to Theory and Practice of Occupational Therapy (4) Greenberg History, philosophical base, theoretical foundations, frames of reference, and practice arenas of occupational therapy. Professional attitudes, values, and behavior explored. Clinical experiences enhance didactic coursework through observation in practice settings. Offered: A.

REHAB 482 Occupational Performance through the Life Span (3) *Dudgeon* Overview of human development and its relationship to occupational performance (life activities). Emphasis is on life activities and roles at specific ages and stages from infancy to old age. Lecture, lab, and community-based experiences. Offered: W.

REHAB 483 Occupational Therapy Theory and **Practice in Physical Disabilities I (5)** *Dudgeon* Theoretical bases and clinical skills in occupational therapy assessment and intervention with individuals experiencing sensorimotor and/or cognitive impairments impacting functional life performance of roles and tasks in activities of daily living, work, and/or leisure. Fieldwork enhances didactic coursework through selected participation in practice setting. Offered: A.

REHAB 484 Occupational Therapy Theory and Practice in Psychosocial Dysfunction I (4) Engel Theoretical bases and clinical practice skills in occupational therapy assessment and intervention with individuals who have psychological and/or cognitive impairments which impact performance of life roles and tasks in self-care, work, and leisure. Offered: A.

REHAB 485 Occupational Therapy Theory and Practice in Geriatrics (4) Dudgeon, Engel Occupational therapy assessments and interventions with older adults. Covers psychology of aging, physiology of aging, sociodemographics of aging, social interactions skills with elderly, and activity performance. Fieldwork enhances didactic coursework through participation in the practice setting. Offered: Sp.

REHAB 486 Occupational Therapy Theory and Practice in Pediatrics (5) Lectures, discussions, and clinically-oriented experiences related to occupational performance (life activities) of children with special needs and their families in diverse pediatric settings. Emphasis on assessing child in temporal and environmental contexts, applying pediatric frames of reference, and collaborating with families and team members. Offered: Sp.

REHAB 487 Assistive Technology in Rehabilitation (3) Overview of the field of assistive technology as it impacts occupational roles and tasks in selfcare, work, and leisure. Covers interface devices, computer applications, environmental controls, augmentative communications, power mobility, and sensory enhancement.

REHAB 488 Occupational Therapy Theory and Practice in Physical Disabilities II (4) Greenberg Integration of theoretical concepts and practice skills through case simulations and laboratory experiences. Emphasis on strategies and techniques of evaluation and goal setting as well as treatment planning and implementation within various service delivery systems. Offered: W.

REHAB 489 Occupational Therapy Theory and Practice in Psychosocial Dysfunction II (5) Engel Continuation of 484 with special emphasis on application of psychosocial occupational therapy frames of reference to client evaluation and intervention. Fieldwork enhances didactic coursework through participation in the mental health practice setting. Offered: W.

REHAB 490 Clinical Clerkships in Physical Therapy (2, max. 4) O'Malley Observation, instruction, and supervised practice in treatment of patients in diverse clinical settings. Emphasis is given to the application of previously learned material and skills to specific clinical problems. Required for physical therapy students. Credit/no credit only.

REHAB 492 Pathways in Occupational Therapy (* max. 3) Provides the opportunity for continued study in specific areas of interest under preceptorship of selected faculty members with guided readings and clinical experiences. Oral presentation of completed projects to students and faculty. Credit/no credit only.

REHAB 494 Clinical Fieldwork in Occupational Therapy (4-12) *Kannenberg, Kanny* A minimum of six months (940 hours) of directed and supervised experiences with persons across the lifespan, with various psychosocial and performance deficits, and in various service delivery systems reflective of current practice in the profession.

REHAB 495 Clinical Affiliation in Physical Therapy (2-12, max. 36) *O'Malley* Clinical practice of physical therapy techniques under supervision in community-based clinics. Credit/no credit only.

REHAB 496 Special Topics in Rehabilitation (1-9, max. 14) Guided opportunity for in-depth study in specific areas of rehabilitation. Topics vary.

REHAB 498 Undergraduate Thesis (*)

REHAB 499 Undergraduate Research (*) Opportunity to design, perform, and analyze research investigation in problem areas in rehabilitation medicine. These include clinical and basic research problems in, for example, head and spinal injury, chronic disease, pain neurophysiology, electrodiagnosis, communication, and bioengineering.

REHAB 500 Specialized Clinical Experience in Physical Therapy (1-5, max. 15) Kartin Student is assigned to an affiliated clinical facility. Activities focus on a variety of processes. These might include acquisition of an advanced and/or specialized treatment skill to be used in patient care; the development and presentation of an in-service training program; the analysis and assessment of existing supervisory problems. Credit/no credit only. Prerequisite: permission of instructor.

REHAB 501 Physical Therapy Management of Selected Motor Problems (2-5, max. 7) *Guthrie* Study of mechanisms involved in the control of movement. Critical examination of selected literature and techniques dealing with the evaluation or modification of motor behavior. Prerequisite: physical therapy graduate student standing.

REHAB 502 Perspectives in Pediatric Physical Therapy (3) Kartin, Mullens Overview of pediatric therapeutic practices for atypically developing children. Standardized assessment, development of functional goals and objectives, treatment efficacy, family-centered intervention, and treatment planning for specific disabilities. Assessment project with atypically developing child required. Credit/no credit only. Prerequisite: permission of instructor. **REHAB 505** Foundations of Occupational Therapy (2) *Kanny* In-depth exploration of philosophical base of occupational therapy and ways in which theories and frames of reference influence occupational therapy practice and research. Offered: A.

REHAB 510 Rehabilitation Psychology (2) Jensen Processes and management methods for assimilation of disability, enhancing patient participation in rehabilitation process, and for helping in maintenance of performance; behavioral management and case conference strategies; rehearsal of contingency management techniques. Required for residents; others by permission of instructor.

REHAB 513 Special Studies in Physical Therapy (1-5, max. 15) Kartin Theory and practice in specialized areas of physical therapy. Includes organization and administration of specialized programs, advanced evaluation and treatment techniques, role of the consultant. Credit/no credit only. Prerequisite: permission of instructor.

REHAB 514 Effective Service Delivery in Educational Settings (2) Development of knowledge, skills, and attitudes necessary for optimizing service delivery in educational settings to children with disabilities. Public laws, service delivery models, best practice issues, ethical decision making, cross-cultural competence, and interagency relationships addressed. For occupational and physical therapists, speech and hearing pathologist, and other related services personnel.

REHAB 515 Assessments and Interventions for Children with Emotional and Behavioral Disorder (2) Presentation of current knowledge regarding emotional and behavioral disorders in children for occupational and physical therapists and other personnel working in educational settings. Areas covered include contributing factors, frames of reference, intervention models, assessment and intervention strategies, individual educational plans, and medications.

REHAB 516 Medical Information for Rehabilitation Counselors (3) Johnson Lectures in medical science field regarding the etiology, prognosis, and physical restoration of common disabling conditions. Case studies are used extensively, and major emphasis is placed on vocational implications of physical disability. Prerequisite: permission of instructor.

REHAB 518 Infants and Young Children: Current Research (3) Deitz, Swanson Introduces students to recent research relating to assessment and intervention with infants and young children who are "at risk" or who are disabled. Critical evaluation of the current research emphasized. Prerequisite: clinical experience or coursework related to infants and young children with disabilities and permission of instructors.

REHAB 520 Seminar (1-5) Conferences, seminars, discussions of advanced physical medicine and rehabilitation topics for graduate students, residents and postdoctoral fellows in rehabilitation medicine. Lectures, discussion, and laboratory work in selected aspects appropriate to elected area of study for applicants for master-level decree.

REHAB 522 Neurophysiological Topics in Rehabilitation Medicine (2) Anderson Review of traditional neurophysiological concepts and an exposition of recent advances in neurophysiological research related to the practice of rehabilitation medicine. Prerequisite: resident standing in rehabilitation medicine or permission of instructor.

REHAB 530 Medical Aspects of Vocational Counseling (2/3) Johnson Introduction to vocational implications of physical and emotional disabilities. Methods, counseling techniques, therapeutic modalities, community resources used in producing vocational assistance for persons with disabilities. Prerequisite: resident standing in rehabilitation medicine or permission of instructor.

REHAB 532 Clinical Affiliation for Rehabilitation Counselors (5-6) Johnson Under preceptorship of rehabilitation counseling staff, students counsel and evaluate patients with severe physical, emotional, or social problems; administer vocational testing; obtain placement on job stations; work with community resources for vocational/educational placement; and develop activity-oriented schedules. Prerequisite: permission of instructor.

REHAB 539 Communication Disorders in Rehabilitation Medicine (1) Yorkston Overview of communication disorders secondary to central and peripheral nervous system impairment. Emphasis on facilitating identification of speech/language disorders with discussion of implications for rehabilitation. Prerequisite: graduate student status (postdoctoral fellow).

REHAB 540 Application of Measurement Systems (3) *Deitz* Introduction to reliability, validity, norms, the test development process, statistics relevant to tests and measurements, and ethical implications of testing. Critical evaluation of selected standardized tests used in occupational and physical therapy. Prerequisite: permission of instructor. Offered: A.

REHAB 544- 545 Functional Anatomy for Physiatrists (2-2) Goldstein Lectures and demonstrations to illustrate functional anatomy as applied by physicians in the practice of clinical rehabilitation. Intended to enhance functional assessments and to improve neuro-musculo-skeletal diagnosis and treatment through greater understanding of the underlying anatomy. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

REHAB 546 Teaching Practicum in Occupational and Physical Therapy (1-3) Integration of knowledge and skills in teaching through teaching in the classroom or presentation of a minicourse, workshop, or in-service training series. Prerequisite: MEDED 520 and permission of instructor.

REHAB 547 Application of Biomechanics to Clinical Problems (2) Application of biomechanical and kinematic principles to the analysis and management of clinical problems. Applicable to a variety of clinical problems including evaluation of gait and prescription of braces and prostheses. Prerequisite: knowledge of basic kinesiology and biomechanics or permission of instructor.

REHAB 550 Neuropsychology in Rehabilitation (2) *Dikmen* Examination and management of patients with brain lesions, as well as an understanding of the consequences of such conditions. Prerequisite: graduate standing in rehabilitation medicine.

REHAB 555 P-Neuromuscular Electrodiagnosis (2.5) *Kraft* Demonstration of fundamentals of electromyography and peripheral nerve stimulation followed by participation in clinical electrodiagnosis examinations. Develops awareness of the usefulness of knowing when such procedures are indicated for patients and interpret results rather than develop proficiency in performing these examinations. Prerequisite: HUBIO 560 and permission of instructor.

REHAB 565 Assistive Technology in Rehabilitation and School System Practice (3) Introduction to the use of assistive technology in rehabilitation and special education. Content includes set-up and use of alternative input systems on microcomputers and applications of technology to neuromuscular retraining, augmentative communication, and facilitation of learning in the classroom. Prerequisite: familiarity with basic computer operations and permission of instructor.

REHAB 566 Special Topics in Rehabilitation (1-9, max. 14) Philosophy and concepts in the interdisciplinary rehabilitation of persons with major disabili-

ties, including advanced content in the rehabilitation theory and process of selected categories.

REHAB 567 Practicum in Rehabilitation (1-12, max. 24) Specialized practicum experience in environment providing rehabilitation services. Practicum arrangements and permission by instructor.

REHAB 568 Biophysics as Applied to Physical Medicine (2) Esselman Propagation and absorption characteristics of physical forms of energy used for treatment in physical medicine. Physiologic effects basic to prescription of the physical therapy modalities. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

REHAB 570 Principles of Orthotic Use in Rehabilitation (2) *Chang* General principles and clinical applications of orthoses in patient management, with exposure to research issues in orthotic design.

REHAB 571 Principles of Prosthetic Use in Rehabilitation (2) *Czerniecki* General principles of prevention of amputation, prosthetic design, biomechanics, and clinical applications of upper and lower extremity prostheses.

REHAB 596 Electromyography and Clinical Neurophysiology (4) *Kraft* Didactic course covering electromyography and clinical neurophysiology. First part covers basic neurophysiology and second covers electromyography, nerve conduction studies, somatosensory-evoked potentials, residual- and auditory-evoked potentials, single fiber EMG, late response, quantitative analysis, and macro EMG. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

REHAB 597- 598- 599 Electromyography and Electrodiagnosis Laboratory (1-1-1) Kraft Elective work in clinical electromyography and other electrodiagnostic methods. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

REHAB 600 Independent Study or Research (*) Credit/no credit only.

REHAB 685 P-Chronic Disease and Disability (4) *Cox, Hays* Meets chronic-care requirement for medical students. Structured clinical experience on rehabilitation medicine services. Differences between acute and chronic medicine, identification of disability problems, and therapeutic techniques for removing disability. Hospitals are within University system, local area, and WWAMI area. Prerequisite: third-year medical student standing.

REHAB 686 P-Rehabilitation Medicine Clerkship—Pediatrics (8/12) Hays, Jaffe, Massagli Meets chronic-care requirement for medical students. Incorporates material of 685 and expands into disabling pediatric disease. School planning, family counseling, community support services included. Four- or six-week package permits inpatient, outpatient, and consultation experience. Recommended for students contemplating pediatrics. Prerequisite: third-year medical student standing.

REHAB 687 P-Rehabilitation Medicine Clerkship (8/12) *Hays* Meets chronic-care requirement for medical students. Incorporates material of 685 and expands into disability problems. Four- or six-week package permits inpatient, outpatient, and consultation experience. Recommended for careers in family medicine, internal medicine, rheumatology, cardiology, neurology, geriatrics, orthopedic surgery, neurossurgery, and cardiovascular surgery. Prerequisite: third-year medical student standing.

REHAB 689 P-Spinal Cord Injury (8/12) Hammond Introduction to diagnosis, management, rehabilitation of patients with spinal-cord injuries. Interaction with rehabilitation team, psychiatrists, and subspecialists in urology, neurosurgery, and plastic surgery. Performance at subintern level expected. Veterans Administration Medical Center only. Prerequisite: MED 665, SURG 665.

REHAB 695 P-Rural Rehabilitation Medicine Clerkship (8) Hays Structured clinical experience in identification and treatment of disability problems in rural (nonmajor urban) communities. Satisfies chronic care/rehabilitation medical graduation requirements. Prerequisite: completion of at least six months of clinical clerkships, permission of instructor.

REHAB 697 P-Rehabilitation Medicine Special Elective (* max. 24) Equivalent to 686, 687, or 688. Satisfies requirements in rehabilitation medicine/ chronic care. Student arranges with another university, using the. "Special Assignment Form." Students can qualify after review, similar experience at another university. Prerequisite: permission of instructor.

REHAB 699 P-WWAMI Rehabilitation Medicine Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

REHAB 700 Master's Thesis (*) Credit/no credit only.

Surgery

BB487 University of Washington Medical Center

The Department of Surgery carries out instruction during all four years of School of Medicine attendance. The third-year six-week clerkship constitutes the core of student exposure to general surgery and is required of all students. The fourth-year emergency-room clerkship is also a required part of the curriculum. The department offers a variety of fourth-year elective clerkships in a number of the specialty aspects of the department's clinical activities, including but not limited to trauma, cardiothoracic surgery, plastic surgery, vascular surgery, transplantation, surgical critical care, pediatric surgery, and the management of burn patients.

Faculty

Chair

Carlos A. Pellegrini

Professors

Ashbaugh, David G. 1982, (Emeritus); MD, 1957, Ohio State University; thoracic surgery.

Beach, Kirk Watson * 1976, (Research); MSChE, 1968, PhD, 1971, University of California (Berkeley); MD, 1976, University of Washington; arterial disease in diabetes, blood flow studies with ultrasonic Doppler.

Bell, Richard H. Jr. 1994; MD, 1971, Northwestern University; general surgery.

Clowes, Alexander W. * 1980; MD, 1972, Harvard University; general and vascular surgery.

Copass, Michael K. 1973, (Adjunct); MD, 1964, MA, 1964, Northwestern University; neurology/emergency services.

Dellinger, E. Patchen * 1977; MD, 1970, Harvard University; general and gastrointestinal surgery.

Engrav, Loren H. 1977; MD, 1969, University of California (Los Angeles); plastic and reconstructive surgery.

Gruss, Joseph S. 1991; MBChB, 1969, University of Witwatersrand (South Africa); plastic surgery.

Heimbach, David M. 1974; MD, 1964, Cornell University; burn and general surgery.

Herman, Clifford M. 1977, (Emeritus); MD, 1959, University of Vermont; general surgery.

Johansen, Kaj H. 1978; MD, 1970, University of Washington; PhD, 1977, University of California (San Diego); general and vascular surgery.

Jurkovich, Gregory J. 1988; MD, 1978, University of Minnesota; general surgery.

Kohler, Ted R. 1983; MD, 1976, Harvard University; general and vascular surgery.

Maier, Ronald V. 1981; MD, 1973, Duke University; general surgery, trauma-critical care surgery.

Merendino, K. Alvin 1948, (Emeritus); MD, 1940, Yale University; PhD, 1946, University of Minnesota; general surgery.

Moe, Roger E. 1967; MD, 1959, University of Washington; oncology and general surgery.

Patterson, David R. * 1984, (Adjunct); PhD, 1982, Florida State University; treatment of acute pain, psychology of burn patients, psychological outcome of physical trauma.

Pellegrini, Carlos A. 1993; MD, 1971, University of Rosario (Argentina); general and laparoscopic surgery.

Perkins, James D. 1989; MD, 1979, University of Arkansas; transplant surgery.

Schilling, John A. 1974, (Emeritus); MD, 1941, Harvard University; general surgery.

Strandness, D. Eugene 1965; MD, 1954, University of Washington; vascular surgery.

Tapper, David 1983; MD, 1970, University of Maryland; pediatric surgery.

Verrier, Edward D. 1989; MD, 1974, Tufts University; cardiothoracic surgery.

Winn, Robert K. 1984, (Research); PhD, 1974, University of Washington; pulmonary physiology, neutrophil immigration and monoclonal antibody.

Winterscheid, Loren C. 1957, (Emeritus); PhD, 1953, MD, 1954, University of Pennsylvania; general and thoracic surgery.

Zierler, R. Eugene 1984; MD, 1976, Johns Hopkins University; general and vascular surgery.

Associate Professors

Allen, Margaret D. 1985; MD, 1974, University of California (San Diego); cardiothoracic surgery.

Cochran, R. Pat 1990; MD, 1978, Emory University; cardiothoracic surgery.

Egbert, Mark A. 1982, (Adjunct); DDS, 1981, University of Washington; oral and maxillofacial surgery.

Foy, Hugh M. 1978; MD, 1978, University of Nebraska; general surgery.

Gentilello, Larry M. 1990; MD, 1982, Albert Einstein College of Medicine; general surgery.

Hanel, Douglas Paul 1992, (Adjunct); MD, 1977, St. Louis University; orthopaedics, hand/microvascular surgery.

Hannaford, Blake * 1989, (Adjunct); MS, 1982, PhD, 1985, University of California (Berkeley); human and robotic movement control, bioengineering, controls, human-machine interaction.

Kunzelman, Karyn S. * 1991, (Research); PhD, 1991, University of Texas (Dallas); biomedical engineering: cardiac; anatomy and physiology.

Langdale, Lorrie A. 1985; MD, 1979, University of Washington; general surgery.

Lupinetti, Flavian M. 1993; MD, 1978, Johns Hopkins University; cardiothoracic surgery.

Marsh, Christopher L. 1989; MD, 1980, Loma Linda University; transplant surgery.

440 SCHOOL OF MEDICINE / SURGERY

Nicholls, Stephen C. 1986; MBChB, 1975, University of Auckland (New Zealand); vascular surgery.

Pohlman, Timothy H. 1984; MD, 1978, Rush Medical College; general surgery.

Radke, Hubert M. 1977, (Emeritus); MD, 1954, University of Texas (Galveston); general and thoracic surgery.

Rand, Richard P. 1990; MD, 1981, University of Michigan; plastic and reconstructive surgery.

Sawin, Robert 1989; MD, 1982, University of Pittsburgh; pediatric surgery.

Sinanan, Mika N. 1980; MD, 1980, Johns Hopkins University; PhD, 1986, University of British Columbia (Canada); general and laparoscopic surgery.

Trumble, Thomas E. 1989, (Adjunct); MD, 1979, Yale University; orthopaedics, hand and microvascular surgery.

Vedder, Nicholas 1990; MD, 1981, Case Western Reserve University; case history, plastic and reconstructive surgery.

Yeung, Raymond S. 1997; MD, 1982, University of Toronto (Canada); general and surgical oncology.

Assistant Professors

Anderson, Benjamin O. 1994; MD, 1985, Albert Einstein College of Medicine; oncology, general surgery.

Anderson, Richard V. 1997, (Acting); MD, 1987, St. Louis University; cardiac surgery.

Byrd, David R. 1992; MD, 1982, Tulane University; general surgery and oncology.

Caps, Michael T. 1998, (Acting); MD, 1989, University of Chicago; vascular surgery.

Curtis, William E. 1997, (Acting); MD, 1988, University of Colorado; cardiac surgery.

Daum, Guenter 1995, (Research); PhD, 1989, University of Konstanz (Germany); cellular and molecular biology, tryosine phosphotase and kinases.

Duncan, Brian W. 1997; MD, 1985, Indiana University; congenital heart and cardiovascular.

Gibran, Nicole 1990; MD, 1985, Boston University; general, burn, and trauma surgery.

Hatsukami, Thomas 1988; MD, 1982, University of California (Los Angeles); vascular surgery.

Healey, Patrick J. 1993, (Acting); MD, 1987, Boston University; general and pediatric surgery.

Isik, F. Frank 1990; MD, 1985, Mt. Sinai School of Medicine; plastic surgery/control of angiogenesis.

Jong, Jing-Ming 1998, (Research); PhD, 1997, University of Washington; multidimensional ultrasound imaging.

Karmy-Jones, Riyad 1997, (Acting); MD, 1983, University of Alberta (Canada); thoracic surgery.

Lynge, Dana C. 1993; MD, 1985, McGill University (Canada); general surgery.

Meissner, Mark H. 1985; MD, 1985, University of Colorado (Denver); general, vascular, and critical care surgery.

Mock, Charles N. 1992; MD, 1980, Brown University; trauma-critical care surgery.

Stelzner, Matthias G. 1996; MD, 1983, University of Bonn (Germany); General surgery.

Stevens, Lucile E. 1997; MD, 1985, Pennsylvania State University; PhD, 1993, University of Minnesota; transplant.

Vallieres, Eric 1996; MD, 1982, Laval University (Canada); thoracic, lung transplant.

Waldhausen, John H. 1992; MD, 1986, Pennsylvania State University; pediatric surgery.

Williams, J. Kerwin 1997; MD, 1990, University of Mississippi; craniofacial.

Wood, Douglas E. 1992; MD, 1983, Harvard University; thoracic surgery.

Zierler, Brenda 1988, (Adjunct Research); PhD, 1996, University of Washington; clinical trials, vein graft, outcomes analysis.

Lecturers

Clowes, Monika M. 1981; BA, 1954, University of Geneva (Switzerland); vascular wall biology, kinetics of smooth muscle proliferation, restenosis of vessels of angiography.

Hofer, Brad 1987; MD, 1980, Northwestern University; cardiothoracic surgery.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only.

SURG 498 Undergraduate Thesis (*) Langdale Offered to those students who have engaged in undergraduate research in general surgery. (Full- or part-time.)

SURG 499 Undergraduate Research (*) Langdale Provides an opportunity to participate in ongoing research projects or carry out an independent research project under supervision of Department of Surgery faculty. Practical experience in experimental design and execution is provided under direct supervision of selected faculty members. (Full- or part-time.)

SURG 505 P-Preceptorship in Surgery (1) Langdale Opportunity for first- and second-year medical students to gain personal experience with clinical faculty members in the community. Students observe general aspects of private practice, including clinical problems seen; practice limitation; doctor-doctor, doctor-patient, and doctor-nurse relationships in the office and hospital. Prerequisite: permission of department.

SURG 600 Independent Study or Research (*) Langdale

SURG 630 P-WRITE Surgery Clinical Clerkship (* max. 24) Basic clinical clerkship for students enrolled in the WRITE Program. Prerequisite: completion of basic curriculum; third- and fourth-year students; acceptance in the WRITE program.

SURG 665 P-Clinical Clerkship (* max. 12) Langdale (Veterans Affairs Medical Center, Harborview Medical Center, Providence Medical Center, University of Washington Medical Center) Diagnosis and management of problems amenable to surgical therapy. Physiological basis of surgical care, differential diagnosis and decision making, and the basic principles of surgical management. Care of inpatients and outpatients, including participation in the operating rooms. Prerequisite: HUBIO 563. (Six weeks. Limit: twenty students.)

SURG 666 P-Clinical Clerkship Boise (12) Diagnosis and management of surgical problems. Physiological basis of surgical care, differential diagnosis and decision making, and basic principles of surgical management. Care of inpatients and outpatients, including participation in the operating rooms. Fulfills graduation requirement for Surgery. Prerequisite: completion of HUBIO series. (Six weeks. Limit: two students.)

SURG 681 P-Peripheral Vascular Disease (4/8) Clowes (Veterans Affairs Medical Center) Peripheral arterial and venous problems, including methods of clinical evaluation; new diagnostic procedures; and the available methods of treatment. Patient workup, performance of diagnostic studies, and presentation of case material to the staff. Prerequisite: 665, HUBIO 563. (Two or four weeks. Limit: one student.)

SURG 682 P-Clinical Burn Care (* max. 12) Heimbach (Harborview Medical Center) Offered on the burn unit of Harborview Medical Center. Exposure to the care of patients with thermal injury, including management of severe metabolic and septic problems and opportunity to participate in surgical procedures. Exposure to plastic and reconstructive surgery. Prerequisite: 665. (Four or six weeks. Limit: two students.)

SURG 683 P-Pediatric Surgery Externship (8/12) *Tapper (Children's Hospital and Medical Center)* Surgical conditions peculiar to the particular age group with a preponderance of congenital and neoplastic conditions that are amenable to surgical treatment. A reasonable background of knowledge in human embryology and genetics is recommended. Prerequisite: 665. (Four or six weeks. Limit: two students.)

SURG 684 P-Trauma and Emergency Care (* max. 16) Copass, Eisenberg (Harborview Medical Center, University of Washington Medical Center) Register for one or both segments of this course. Segment 1: emergency medicine and trauma at Harborview Medical Center with assignment to the emergency department. Emphasis on management of severely injured and critically ill patients. Segment 2: acute medicine at University of Washington Medical Center. Evaluate and treat ambulatory emergencies. Prerequisite: 665, MED 665. (Four weeks, thirdyear and fourth-year students. Limit: twelve students at Harborview Medical Center; three students at University of Washington Medical Center.)

SURG 685 P-Cardiothoracic Surgery Externship (* max. 12) Verrier (University of Washington Medical Center) Serve as subintern, participate in patient care while learning cardiopulmonary hemodynamics of cardiac and thoracic surgery. Observe a wide variety of both cardiac and thoracic disease entities. Participate in the open-heart procedures in the operating room. Opportunity to gain additional understanding of physiology of cardiopulmonary bypass. (Four or six weeks. Limit: two students.)

SURG 686 P-Plastic Surgery Clerkship and Preceptorship (* max. 12) Engrav (University of Washington Medical Center) Plastic surgery service at University-affiliated hospitals; includes patient workups and operating room experience with emphasis on learning the fundamentals of plastic surgery, wound management on animal specimens and in the emergency room. Includes wounds, burns, facial trauma, head and neck cancer, cosmetic surgery, skin tumors, hand surgery, and reconstructive surgery. Prerequisite: 665. (Four or six weeks. Limit: two students.)

SURG 687 P-Transplantation Surgery Clerkship (**6**) *Perkins (University of Washington Medical Center)* Clerkship is in the University regional multi-organ transplantation center. Student participates fully in the care of all transplant patients, on twice daily multidisciplinary rounds, in pre-operative conference, and in the operating room and on the donor harvest team. Weekly didactic teaching sessions. Prerequisite: 665 and MED 665. (Four weeks. Limit: two students.)

SURG 688 P-Subinternship in General Surgery (* max. 16) Langdale (Veterans Affairs Medical Center, Harborview Medical Center, Providence Medical Center, University of Washington Medical Center) Offered on the general surgery wards of the University-affiliated hospitals. Diagnosis, preoperative care, and postoperative care; management of surgical emergencies, the ICU patient, and outpatient follow-up of discharged patients. Students function at the intern level under close supervision of the staff and house staff. Prerequisite: 665. (Four or six weeks. Limit: seven students.)

SCHOOL OF MEDICINE / UROLOGY 441

SURG 689 P-Community Surgery Clerkship (8) Langdale Designed to supplement basics learned in 665. Excellent opportunity to participate in general, thoracic, vascular, and plastic surgery in a group practice in a smaller city. Recommended for students entering primary care. Prerequisite: 665 and permission of department. (Four weeks. Longview. Limit: one student. Couer d'Alene. Limit: one student.)

SURG 690 P-Alaska Native Medical Center Surgery Sub-Internship (8/12) Langdale Designed to supplement basics learned in 665. Excellent opportunity to participate in general, thoracic, vascular, and plastic surgery in a specialized population of patients. Recommended for students entering primary care. Prerequisite: 665 and permission of department. (Four or six weeks. Alaska Native Medical Center, Anchorage. Limit: one student.)

SURG 691 P-Surgical Intensive Care Unit Sub-Internship (8) Langdale Designed to augment experience gained in 665. Excellent opportunity to participate in the management of critically ill patients under the close supervision of the staff/house staff. Recommended for students entering surgery or primary care. Prerequisite: 665. (Harborview Medical Center. Limit: one student. Veterans' Affairs Medical Center. Limit: one student.)

SURG 697 P-Surgery Special Electives (* max. 24) Langdale Special clerkship, externship, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: 665 and departmental permission. (Four, six, or twelve weeks.)

SURG 699 P-WWAMI Surgery Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Urology

BB1115 Health Sciences

Urology is the surgical discipline concerned with diseases of the urinary tract in male and female systems, and the genital systems in the male. The science is broadly based: major areas of practical and investigative concern include congenital defects, cancer, renal diseases, reproductive biology, neuropathology, and transplantation.

Clinically, the field encompasses a large variety of technical skills including real-time imaging and manipulation, endoscopy, and open surgery. Medical diagnosis and treatment are a large part of the discipline.

The department is actively involved in patient care, instruction, and research concerning the problems of urology. Training for medical students starts in the second year and continues through the third and fourth years. Training is also provided for residents, fellows, nurses and applied specialists. The department is responsible for a fully approved urology residency program. Contact the Urology Clerkship Coordinator at (206) 685-3245 for further information.

Faculty

Chair

Paul Henry Lange

Professors

Ansell, Julian S. 1959, (Emeritus); MD, 1951, Tufts University; PhD, 1959, University of Minnesota; congenital defects and pediatric urology.

Barnes, Glover W. * 1969; MA, 1955, PhD, 1961, State University of New York (Buffalo); tissue, organ immunology.

Berger, Richard E. 1982; MD, 1973, University of Chicago; infertility, infectious diseases, impotence and prostrate disease.

Chapman, Warren H. 1962, (Emeritus); MD, 1952, University of Chicago; oncology and microsurgery.

Krieger, John N. 1982; MD, 1974, Cornell University; infectious diseases.

Lange, Paul Henry 1988; MD, 1967, Washington University; oncology, endourology and adult reconstruction.

Mayo, Michael Edward 1975; MBBS, 1962, St. Thomas' Hospital Medical School (UK); neuro-urology and reconstruction, urodynamics.

Mitchell, Michael E. 1989; MD, 1969, Harvard University; pediatric urology and reconstruction.

Vessella, Robert L. 1989; PhD, 1974, University of Mississippi; tumor markers and immunology.

Associate Professors

Ellis, William J. 1991; MD, 1985, Johns Hopkins University; oncology, prostate disease.

Higano, Celestia S. 1984, (Adjunct); MD, 1979, University of Massachusetts; oncology.

Riley, Donald E. * 1982, (Research); PhD, 1976, University of Washington; pathogenic research and diagnosis involving DNA sequences.

Assistant Professors

Carr, Michael C. 1993; MD, 1985, University of Cincinnati; pediatric urology.

Corey, Eva 1997, (Research); PhD, 1989, Academy of Sciences (Czechoslovakia); bone metastasis, detection by RT-PCR, markers of progression, prostate specific antigen.

Liu, Alvin Y. 1996, (Research); PhD, 1981, University of California (Los Angeles); cell biology, cancer, gene expression.

Miller, Jane L. 1985; MD, 1985, University of Oklahoma; female urology and urodynamics, urologic trauma.

Porter, James Roscoe 1992; MD, 1990, Medical College of Ohio; urologic trauma, laparoscopy, endourologic.

Takayama, Thomas K. 1989; MD, 1985, Tufts University; biochemistry of prostate specific antigen.

Yang, Claire C. 1993; MD, 1988, Vanderbilt University; neurourology and electrophysiology testing.

Instructor

Hart, Laura J. 1997, (Acting); MD, 1987, Case Western Reserve University; general and female urology.

Lecturer

Muller, Charles 1980; PhD, 1976, University of California (Berkeley); male fertility and sperm physiology.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Course numbers with a P suffix are not graduate courses and are restricted to medical student enrollment only. **UROL 498 Undergraduate Thesis (*)** Provides an opportunity for medical students to write in the area of urology.

UROL 499 Undergraduate Research (*) The student participates in current urologic research projects under supervision of full-time staff. Certain specific problems may be elected by the student. Elective for medical students.

UROL 501 P-Urology Preceptorship (1) Individual experiences with one or more of the full-time department faculty members covering research, teaching, and patient care. Students observe activities in the clinic, hospital ward, operating room, and research laboratories. Prerequisite: first- or second-year medical student standing; permission of instructor.

UROL 525 P-Medical Disciplinary Board Procedures (2) Ansell Students learn about physicianpatient interactions which produce complaints or malpractice claims. Students assigned to the Washington State Medical Disciplinary Board for two monthly meetings, evaluate current cases, present them to board members. Outstanding presentations go to the whole board. Warning: Cases are discussed only with the Board. Offered: AWSpS.

UROL 675 P-Urology Preceptorship (* max. 8) Student follows a private practice preceptor in all of his or her work. Becomes acquainted with the office management of urological problems. Prerequisite: 680, HUBIO 562. (Two or four weeks.)

UROL 680 P-Urology Clerkship (* max. 8) Berger, Ellis, Krieger, Mayo, Porter Full activities of clinical service. Basic principles of urology emphasized. Prerequisite: HUBIO 562. (Two or four weeks.)

UROL 681 P-Female Urology (4) *Miller* Observation of cases of lower urinary tract disorders specific to women, emphasizing behavioral management and multidisciplinary care. Ninety-five percent of cases observed are women. Not intended as the only exposure to urology for students considering urology as career choice. Prerequisite: third- or fourth-year standing and permission of instructor.

UROL 685 P-Urology Subinternship (* max. 12) *Berger, Ellis, Krieger, Mayo, Porter* Subintern is responsible for patient workups and for preoperative and postoperative care and participates in the operating room. Prerequisite: MED 665 or pediatrics basic clerkship, or permission of instructor.

UROL 690 P-Urology Specialties (* max. 8) For those who wish further exposure to a specific aspect of urology. Students can spend time with one attending at University of Washington Medical Center, Harborview Medical Center, Children's Hospital and Medical Center, or Veterans Administration Hospital studying oncology, infections, infertility, stone disease, impotence, or other aspects of urology. Prerequisite: 680 and permission of instructor.

UROL 697 P-Urology Special Electives (* max. 24) Special clerkship, externship, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of instructor. (Six or twelve weeks.)

UROL 699 P-WWAMI Urology Special Electives (* max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

School of Nursing

Dean

Sue T. Hegyvary T318 Health Sciences

Associate Deans

Sue Woods, Academic Programs Nancy Woods, Research and Practice

Assistant Dean for Educational Outreach

Ruth F. Craven

The School of Nursing offers programs leading to baccalaureate, master's, and doctoral degrees.

Undergraduate Program

Adviser Dagmar Jesse T310 Health Sciences, Box 357260 (206) 543-8736

The School of Nursing prepares its graduates to function as generalists in professional nursing practice and to collaborate with other health-care providers. The sixquarter undergraduate curriculum emphasizes theory and clinical practice to ensure critical thinking, human caring, and clinical expertise. Clinical experiences are provided in institutional and community settings for preventive and acute care. Completion of the curriculum leads to a Bachelor of Science in Nursing degree and eligibility to take the licensure examination to become a registered nurse.

A four-quarter modification of the basic curriculum is available for the registered nurse who is able to validate selected nursing courses through written examination and who intends to complete a master's degree program. This B.S.N. completion program is available at UW Bothell and UW Tacoma.

Admission Requirements

1. 90 credits to include the following courses:

a. Written communication, 10 credits: English composition and W-courses.

b. Problem-solving, 8 credits: one Q/SR course, chosen from MATH 107, 111, 112, 120, 124, 134, or PHIL 115, 120, 470. One statistics course, such as STAT 220, STAT 311, Q METH 201, or EDPSY 490.

c. Visual, Literary, & Performing Arts (VLPA), 15 credits.

d. Individuals and Societies (I&S), 15 credits, to include NURS 201.

e. Natural World (NW), 26 credits, to include CHEM 120, 220; ZOOL 118, 119; B STR 301; MICROM 301; and one course in nutrition.

f. Electives to complete 90 credits as needed.

2. A minimum 2.00 cumulative GPA is required, and a minimum grade of 2.0 must be obtained for each prerequisite course. Because admission is competitive, the GPA for admission is usually significantly higher.

3. Together with the application and transcript(s), applicants are asked to submit a statement discussing their choice of nursing as a professional career, a rèsumè outlining volunteer/paid health-care experience, community service, multicultural experience, and a recommendation from an employer/volunteer coordinator. Applicants are required to come in for a proctored essay after the application deadline.

4. Admission to the nursing major occurs once a year, in autumn quarter, with an application deadline of January 15. Selection is competitive. For information on admission criteria, specific prerequisites, and deadlines, as well as application forms, contact the Office of Academic Programs, School of Nursing, (206) 543-8735 or 1-800-759-NURSE.

Additional Information

Students may be admitted to the University of Washington as prenursing majors.

Graduate Program

Graduate Program Coordinator T310 Health Sciences, Box 357260 (206) 543-8736

The School of Nursing offers graduate study leading to the degrees of Master of Nursing, Master of Science, and Doctor of Philosophy. At the master's level, programs are designed to provide opportunity for advanced study and research in nursing. The Master of Nursing program develops increased competence in selected areas of advanced-practice nursing. The following focus areas are available: acute-care nurse practitioner (cardiovascular/AIDS/oncology), advanced community-health nursing (cross-cultural nursing/occupational-health nursing/policy and program development), care-systems management, familycentered pediatric nursing, nurse midwifery, perinatal nursing/neonatal nurse practitioner, psychosocial nursing, psychosocial nurse practitioner, family nurse practitioner, pediatric nurse practitioner, women's primary-care nurse practitioner, adult/older-adult nurse practitioner, and options for individualized study. Research is an integral part of all programs. A thesis is required in the Master of Science program. The Master of Nursing program provides the option of a thesis or non-thesis project. Opportunities for functional preparation in teaching, care-systems management, and clinical practice as a nurse practitioner are available. The School of Nursing offers a concurrent graduate degree program with the Department of Health Services in the School of Public Health and Community Medicine.

Part-time study is available in some programs. Course work may be started prior to formal admission to a program as a graduate nonmatriculated student (GNM). GNM status allows the student to earn up to 9 graduate-level credits which may be applied to a graduate program if the student is later admitted. Time limits for acceptance of courses taken as a GNM student are six years for a master's degree and ten years for a doctoral degree from the first course to completion of the degree.

The aim of the program at the doctoral level is to prepare scholars and researchers to expand the body of knowledge upon which the practice of nursing is based. The program provides for rigorous research training related to four fields of nursing science: (1) individual adaptations to health and illness, (2) family adaptations to health and illness, (3) environments: supporting and nonsupporting, and (4) clinical therapeutics. The Ph.D. in nursing science program is designed for individuals interested in careers in academia or for other types of leadership positions in health-service agencies in which the ability to design, plan, and implement research in nursing is a critical requirement.

Special Requirements

In addition to the basic requirements for graduate status in the University, admission to premaster's status in the School of Nursing requires baccalaureate preparation with an upper-division major in nursing or equivalent, a basic course in statistics, Graduate Record Examination scores within the past five years, a statement of goals, three references, and at least one year of practice for most clinical programs. Admission is usually for autumn quarter. The application deadline for most master's degree options is February 1. Early application is encouraged, although late applications may be accepted on a space-available basis. Additional information may be obtained from the School of Nursing Office of Academic Programs.

Admission requirements for the doctoral program, in addition to the above, include Graduate Record Examination scores within the past five years, three references, a statement of goals for doctoral study which includes a description of area-of-research interest, and an example of scholarly work. The deadline for application to the doctoral program is February 1.

Financial Aid

A limited number of nurse traineeships are available for premaster's study. Other financial aid is available on a limited basis. Teaching assistantships and research assistantships are available to a limited number of students. Priority for these appointments is given to predoctoral students.

Contact the Office of Academic Programs, School of Nursing, for current information.

Faculty

Professors

Allen, David G. * 1988; PhD, 1975, University of Iowa; philosophy of science, critical and feminist theory, psychosocial nursing theory.

Barnard, Kathryn E. * 1972; MSN, 1962, Boston University; PhD, 1972, University of Washington; ecological factors of child development.

Batey, Marjorie V. * 1956, (Emeritus); MS, 1956, PhD, 1968, University of Colorado (Boulder); sociological factors in health-care systems.

Benoliel, Jeanne 1970, (Emeritus); MS, 1961, University of California (Los Angeles); DNS, 1969, University of California (San Francisco).

Blackburn, Susan T. * 1973; PhD, 1979, University of Washington; high-risk infants and their families, infant care-giving interactions and environments.

Booth, Cathryn L. * 1980, (Research); PhD, 1974, Ohio State University; mother-infant interaction, observational methodology, child birth experiences and attachment.

Brandt, Patricia * 1982; PhD, 1981, University of Washington; influence of family functioning on early child development.

Brown, Marie A. * 1983; PhD, 1983, University of Washington; HIV infection, home care, women's health, death.

Budzynski, Helen Kogan * 1968, (Emeritus); PhD, 1968, University of California (Los Angeles); stress response: cognitive/physiologic interface in chronic dysfunctions, self-management teaching.

Chrisman, Noel J. * 1973; PhD, 1966, University of California (Berkeley); community partnership research, clinical cultural competence, ethnic health beliefs and practices.

Cowan, Marie J. * 1977, (Affiliate); MS, 1972, PhD, 1979, University of Washington; estimation of infarct size by electrocardiography, sudden cardiac death, physiological nursing. Craven, Ruth F. * 1968; MN, 1968, University of Washington; EdD, 1984, Seattle University; gerontological nursing.

De Tornyay, Rheba * 1975, (Emeritus); EdD, 1967, Stanford University; health services, nursing education.

Dimond, Margaret * 1988; MN, 1971, University of lowa; PhD, 1978, University of Wisconsin; aging, bereavement, family caregiving, Alzheimer's disease, chronic illness, long-term care.

Disbrow, Mildred A. * 1982, (Emeritus); PhD, 1968, University of Washington; maternal-infant interaction, child abuse.

Eggert, Leona * 1978; MA, 1970, PhD, 1984, University of Washington; adolescents, drug use, suicide, communication, personal relationships.

Eyres, Sandra J. * 1974; PhD, 1972, University of North Carolina; environmental resources promoting adaptation and health.

Gallucci, Betty J. * 1976; MS, 1971, PhD, 1973, North Carolina State University; oncology, nutritional assessment, pathophysiology of stomatitis, and graft versus host disease.

Giblin, Elizabeth C. * 1959, (Emeritus); MN, 1954, University of Washington; EdD, 1959, University of Colorado (Boulder); nursing assessment and nursing therapies, pathophysiological bases.

Graham, Katherine J. 1988; MN, 1967, PhD, 1978, University of Washington; quality of life across life, work; health systems.

Hegyvary, Sue T. * 1986; PhD, 1974, Vanderbilt University; administration and productivity of health care and nursing services.

Heitkemper, Margaret M. * 1981; MN, 1975, University of Washington; PhD, 1981, University of Illinois; gastroenterology, enteral nutrition, gerontology.

Horn, Barbara J. * 1977, (Emeritus); PhD, 1971, University of Michigan; effective organization of nursing resources.

Killien, Marcia G. * 1973; PhD, 1982, University of Washington; women's health, reproductive decision making, work and family.

Lewis, Frances M. * 1978; PhD, 1977, Stanford University; complex organizational analysis, evaluation research, psychosocial factors in chronic illness.

Little, Dolores E. 1951, (Emeritus); MN, 1957, University of Washington; physiological nursing.

Mansfield, Louise W. 1951, (Emeritus); MA, 1951, Columbia University; physiological nursing.

Mitchell, Pamela H. * 1971; MS, 1965, University of California (San Francisco); PhD, 1991, University of Washington; neuroscience nursing, diagnostic strategies.

Muecke, Marjorie A. * 1979; PhD, 1976, University of Washington; medical anthropology, women's health, refugee health, Southeast Asia.

Murphy, Shirley Ann * 1985; PhD, 1981, Portland State University; addictive processes in women, coping with undesirable life events.

Osborne, Oliver H. * 1969, (Emeritus); PhD, 1968, Michigan State University; ideology, policy and health care systems, transcultural health.

Patrick, Maxine L. * 1973, (Emeritus); DPH, 1970, University of California (Los Angeles); gerontology, geriatrics.

Price Spratlen, Lois * 1976; PhD, 1976, University of Washington; sexual harassment and perceived work-place mistreatment in higher education.

Siantz, Mary Lou de Leon 1998; PhD, 1984, University of Maryland; child/adolescent psychiatric nursing, risk and adaptation among migrant children and families. Webster-Stratton, Carolyn * 1976; PhD, 1980, University of Washington; parent intervention programs for behaviorally disturbed children.

Wolf-Wilets, Vivian * 1969; PhD, 1969, University of Chicago; curriculum development, instruction, stress management.

Woods, Nancy * 1978; PhD, 1978, University of North Carolina; women's health.

Woods, Susan L. * 1975; MA, 1975, University of Washington; PhD, 1991, Oregon Health Sciences University; cardiovascular clinical specialist, pulmonary artery catheter measurement.

Associate Professors

Beaton, Randal D. * 1976, (Research); PhD, 1972, University of Washington; assessment and treatment of temporomandibular joint pain and dysfunction.

Belza, Basia * 1991; MN, 1982, University of Virginia; PhD, 1991, University of California (San Francisco); chronic illness, gerontology, fatigue prevention and management in rheumatic diseases.

Betrus, Patricia * 1978; PhD, 1985, University of Washington; stress, cognitive behavioral therapy, depression, research design.

Bevens, Stella H. * 1955, (Emeritus); MA, 1951, University of Minnesota; physiological nursing.

Blainey, Carol * 1967; MN, 1967, University of Washington; clinical teaching and problems of patients with diabetes mellitus.

Bond, Eleanor * 1985; MN, 1976, PhD, 1985, University of Washington; critical care nursing, therapeutic effects of exercise.

Boozer, Mary Kathryn * 1960, (Emeritus); MN, 1955, University of Washington; physiological nursing, care of patients.

Brandt, Edna M. 1952, (Emeritus); MN, 1953, University of Washington; physiological nursing.

Burke, A. Evelyn 1943, (Emeritus); MA, 1941, Case Western Reserve University; community health-care systems.

Burr, Robert L. * 1976, (Research); PhD, 1986, University of Washington; cardiovascular/psychophysiology, autonomic nervous system.

Bush, James P. 1984; MN, 1973, University of Washington; EdD, 1984, University of San Francisco; pain management, power and powerlessness as perceived by professional nurses.

Carnevali, Doris 1982, (Emeritus); MN, 1961, University of Washington.

Cobb, Marguerite 1953, (Emeritus); MN, 1957, University of Washington; community and school health problems.

Cunningham, Susanna L. * 1978; MN, 1969, PhD, 1978, University of Washington; risk factors for atherosclerotic cardiovascular disease.

Elmore, Shawn K. * 1983; PhD, 1990, University of Washington; psychobiological aspects of women with mood disorders and light therapy.

Estes, Nada * 1972, (Emeritus); MS, 1958, University of Colorado (Boulder); counseling people with substance-use disorder, depression.

Fine, Ruth Barney 1958, (Emeritus); MN, 1957, University of Washington; physiological nursing.

Flagler, Susan B. * 1979; DNS, 1981, University of California (San Francisco); maternal role adjustment and early parent-infant interaction.

Gray, Florence I. 1949, (Emeritus); MS, 1950, Washington University; undergraduate nursing education.

Hammond, Mary A. * 1979, (Research); PhD, 1971, University of Wisconsin; child development, longitudinal research methods. Herting, Jerlad R. 1996, (Research); PhD, 1987, University of Washington; adolescence: quantitative methods, social demography, evaluation research.

Hoffman, Agnes * 1979, (Emeritus); PhD, 1977, University of Kansas; substance use disorders, mental health care of the elderly.

Horn, Beverly M. * 1976; PhD, 1975, University of Washington; cross-cultural research in maternal-child nursing.

Jarrett, Monica E. * 1980, (Research); MN, 1981, PhD, 1988, University of Washington; psychobiology of women.

Jordan, Pamela L. * 1984; PhD, 1984, University of Michigan; expectant/new fatherhood, transition to parenthood.

Kang, Rebecca R. * 1981; PhD, 1985, University of Washington; environment of at-risk infants and families.

Kelly, Jean F. * 1988, (Research); PhD, 1979, University of Washington; family factors that affect at-risk children.

Kieckhefer, Gail M. * 1987; PhD, 1985, University of Washington; motivation for health promotional and illness management behavior in children.

Landis, Carol A. * 1991; MS, 1973, DNS, 1988, University of California (San Francisco); health consequences of sleep loss, neuroendocrinimmune interactions, methods of inquiry.

Lentz, Martha J. * 1984, (Research); MN, 1975, PhD, 1984, University of Washington; physiological adaptation: the influence of sleep and other biological rhythms.

Lewis, Linda L. * 1989; MS, 1981, PhD, 1987, University of Illinois; reproductive neuroendocrinology mood changes related to the human menstrual cycle.

Magyary, Diane L. * 1981; PhD, 1981, University of Washington; family centered health care of children at risk, disabled or handicapped.

Martell, Louise K. * 1992; PhD, 1990, Oregon State University; maternal adaptations to childbearing.

Meyer, Kerry E. * 1992; MN, 1981, Vanderbilt University; PhD, 1990, University of Maryland.

Mitchell, Ellen S. * 1977; MN, 1967, University of Florida; PhD, 1986, University of Washington; women's health; menstrual cycle symptom experience, food cravings and eating control.

Molbo, Doris M. * 1969, (Emeritus); MA, 1968, University of Washington; oncology: prevention and screening, care and rehabilitation.

Munet-Vilaro, Frances * 1997; PhD, 1984, University of Washington; coping of Latinos with a family member with cancer and/or AIDS.

O'Connor, Frederica W. * 1986; PhD, 1986, Northwestern University; psychoeducation in schizophrenia, mental health services, program evaluation.

Olshansky, Ellen F. * 1985, (Affiliate); DNS, 1985, University of California (San Francisco); psychosocial implications of infertility related to the family, qualitative research.

Pesznecker, Betty L. 1970, (Emeritus); MN, 1957, University of Washington.

Pittman, Rosemary 1964, (Emeritus); MS, 1947, University of Chicago.

Salazar, Mary K. * 1986; MN, 1986, University of Washington; EdD, 1991, Seattle University; behavioral theory applied to health education, cancer control, occupational health.

Schepp, Karen G. * 1988; PhD, 1985, University of Arizona; stress and coping of physically and mentally ill youth and their families.

Schultz, Phyllis R. * 1989; PhD, 1981, University of Denver; nursing systems research, impact of nursing services on population's health.

444 SCHOOL OF NURSING / COURSE DESCRIPTIONS

Simpson, Terri A. * 1991; MN, 1975, University of California (San Francisco); PhD, 1988, University of Washington; critical care patients' physiological and psychological responses to environmental stressors.

Spieker, Susan J. * 1983, (Research); PhD, 1982, Cornell University; developmental psychology, infant security, mother-infant interaction.

Swanson, Kristen M. * 1985; PhD, 1983, University of Colorado (Boulder); caring therapeutics, responses to miscarriage.

Thomas, Karen A. * 1986; PhD, 1986, University of Washington; preterm infant development, care unit environments, acute care pediatrics, thermoregulation.

Thomas, Mary Durand * 1983; PhD, 1978, University of Hawaii; systems of care for psychiatric clients, assessment and diagnostic reasoning.

Thompson, Frances Elaine A * 1984, (Research); PhD, 1990, University of Washington; attribution theory, adolescent drug use, suicide.

Ward, Deborah * 1987; PhD, 1987, Boston University; health policy and politics, women's paid and unpaid caregiving work.

Whitney, Joanne D. * 1991; MS, 1979, University of Michigan; PhD, 1991, University of California (San Francisco); wound healing.

Wilkie, Diana J. * 1990; MN, 1984, PhD, 1990, University of California (San Francisco); cancer pain assessment and management, pain research.

Young, Heather M. * 1991, (Research); MN, 1989, PhD, 1991, University of Washington; community-based health care service for older adults.

Assistant Professors

Altman, Gaylene 1997, (Research); PhD, 1992, University of Washington.

Berry, Donna L. * 1994, (Research); MN, 1981, University of Texas (Houston); PhD, 1992, University of Washington; health care of persons with, and at risk for, cancer.

Cochrane, Barbara B. * 1985, (Affiliate); PhD, 1992, University of Washington; women's health; individual adaptations to health and illness, clinical therapeutics.

Davis, Shoni Kay * 1993, (Affiliate); DNSc, 1992, University of California (Los Angeles).

Dougherty, Cynthia 1997, (Research); PhD, 1990, University of Washington; adaptations of individuals and families to cardiac illness.

Draye, Mary A. 1982; MPH, 1968, University of Michigan; FNP practice, infertility, computer-aided instruction, risk appraisal.

Ensign, B. Josephine 1994; MS, 1986, Virginia College of Medicine; MPH, 1992, DPH, 1994, Johns Hopkins University.

Heerwagen, Judith * 1981, (Affiliate); PhD, 1982, University of Washington; behavioral ecology.

Henderson, Dorothy J. 1994; MS, 1991, PhD, 1994, University of Michigan; women's substance abuse, incarcerated women's health, feminist theories and methodologies.

Johnson, Leonard Clark 1994, (Research); MEd, 1973, PhD, 1978, University of Washington; adolescence: quantitative methods, social demography, evaluation research.

Jones, Mary C. 1964, (Emeritus); MS, 1962, Boston University.

Larson, Margaret L. * 1958, (Emeritus); MN, 1967, University of Washington; cross-cultural variables in mental illness, nursing interventions in disturbed behaviors.

Lovell, David 1994, (Research); PhD, 1975, University of Wisconsin; PhD, 1993, University of Washington;

policy and program issues in mental health treatment for prisoners.

MacLaren, Aileen * 1994, (Acting); MSN, 1982, University of Miami (Florida); midwifery.

McGrath, Barbara B. * 1987, (Research); PhD, 1993, University of Washington; medical anthropology, illness knowledge and practice, US Pacific Islander populations, HIV/AIDS.

Montano, Daniel E. * 1979, (Affiliate); PhD, 1983, University of Washington; attitude-behavior research and behavior change, cancer control, HIV prevention.

Motzer, Sandra 1998, (Research); PhD, 1992, Oregon Health Sciences University.

Oshio, Sachiko 1992; MS, 1981, Boston University; PhD, 1992, University of Washington; relationship development, particulary between mothers and newborn infants.

Patterson, Diana * 1989; DSN, 1984, University of Alabama; childbearing family, pediatric primary health care.

Randell, Brooke P. * 1993, (Research); MN, 1969, University of California (Los Angeles); DNSc, University of California (San Francisco); preventive community-based interventions with high-risk adolescents and their families.

Schroeder, Carole A. 1993; MSN, 1985, University of Nevada; PhD, 1993, University of Colorado (Denver); women's health, community health, models of care delivery, health care systems.

Shannon, Sarah E. 1993, (Research); MSN, 1992, PhD, 1992, University of Washington; health-care ethics, end-of-life decision making.

Strickland, Carolyn J. B. * 1991; MS, 1976, PhD, 1983, University of Washington; health related behavior, complex organizations, American Indian populations.

Ulrich, Yvonne M. Campbell 1998, (Research); PhD, 1989, University of Texas.

Venkatraman, Manorama M. 1997, (Research); MSW, 1984, PhD, 1990, University of Michigan; cross-cultural comparisons of mid-life women in United States and India.

Wild, Lorie 1996, (Research); PhD, 1996, University of Washington.

Worthy, Elizabeth J. * 1966, (Emeritus); MN, 1964, University of Washington; mother-infant interactions, handicapped child.

Zierler, Brenda 1995, (Research); PhD, 1996, University of Washington.

Lecturers

Flanagan, Carol A. 1995; MSN, 1980, Catholic University of America; public health.

Jensen, Marilee M. 1994; MSN, 1988, University of Washington; women's primary care nurse practitioner.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

NURS 201 Growth and Development Through the Life Span (5) Focuses on processes of human growth and development from prenatal life to old age. Emphasizes influence of growth and development on achievement of health, and how awareness of growth and development theory and research helps guide health promotional efforts directed towards persons of various ages and life styles. Open to nonmajors.

NURS 301 The Nature of Health and Caring (3) Scientific principles of nursing care of health clients. Emphasis on understanding multidimensional aspects of health; personal, environmental factors that support healthy functioning patterns of individual clients; health promotion interventions. Underlying concepts: health, adaptation to life transitions, personenvironment fit, client, caring, health promotion, health maintenance.

NURS 303 Introduction to Professional Nursing (4) Focuses on nature of nursing, development of identity as nursing students and professional practitioners. Students consider their choices to be nurses; nurses' experiences past, present; experience of illness, health-seeking; nursing issues in context of overall American health care system; perspectives on nursing education.

NURS 304 Bases for Understanding Human Responses I (3) This course and its companion, 308, are concerned with commonly occurring psychopathological and pathophysiological human responses to states of health and illness. They identify and describe the major concepts and principles necessary to understand disregulatory processes at the mind-body interface.

NURS 305 Threats to Health (3) Challenges to health during transitions: birth and death, developmental and role changes, acute changes in health, chronicity, and personal network. Assesses health patterns in terms of risk, vulnerability, and resilience. Examines personal and environmental demands, constraints, resources for interaction with individuals, families, communities/populations undergoing transitions.

NURS 308 Bases for Understanding Human Responses II (3) Continuation and extension of 304. The two courses introduce and describe commonly occurring psychopathological and pathophysiological human responses to states of health and illness. They identify and describe the major concepts and principles necessary to understand disregulatory processes at the mind-body interface.

NURS 309- 310 Pharmacotherapeutics in Nursing Practice I-II (2-2) Introduces professional nursing students to the principles of pharmacology and drug therapies, pharmacologic-therapeutic classes of drugs, and important drug information resources.

NURS 340 Clinical Nursing Phenomena (3) Selected clinical phenomena examined from the perspective of physiologic, pathophysiologic, experiential, and behavioral responses to life events and alterations in states of health and illness. Relationship of nursing therapies to each perspective and influence of life span and sociocultural factors identified.

NURS 350 Decision Making and Therapeutics in Nursing (3) Focuses on types of thinking and writing germane to learning and practice in nursing including self-assessment, understanding and producing written communication, abstract thinking, group dialogue, evaluating points of view, problem solving, clinical decision making. Provides opportunity for application in discipline-related issues and frameworks.

NURS 401 Care in Illness I (5) Selected psychopathologic and pathophysiologic health alterations and therapies across life span. Assesses human functioning, pathophysiology, pharmacology, psychosocial, cultural variation, health care resources, and person-environment relationships to select nursing strategies for acutely and chronically ill individuals of all ages.

NURS 404 Interpersonal Therapeutics (3) Nursing care within context of interpersonal relationships. Effective enactment of nursing role requires knowledge of relationship development, maintenance and termination, using skillful interpersonal communication in diverse health-care contexts. Emphasizes application of conceptual models in interpersonal processes and skills between professionals and clients, other professionals, and groups. NURS 405 Care in Illness II (5) Continuation of 401, further examining selected psychopathologic and pathophysiologic alterations in health of individuals in context of families across life span. Emphasizes assessing functioning in psychosocial, cultural, person-environment relationships, and health care resources to plan nursing strategies for acutely/chronically ill individuals of all ages.

NURS 407 Cultural Variation and Nursing Practice (3) Introduces knowledge and skills for culturally competent health care for all. Compares health related values, beliefs, and customs among major cultural groups. Views family and social network as culturally variable health seeking behavior contexts. Examines Western biomedicine and alternative healing methods within broader environment, including government, other social institutions.

NURS 408 Nursing Care with Families in the Community (3) Application of biopsychosocial and social environmental theories and assessments to diagnose alterations in health/mental health of families, small groups in community settings. Emphasizes interpersonal and clinical therapies; coordination of community resources, evaluating effectiveness of changes; characteristics of nursing care in home visiting.

NURS 410 Legal and Ethical Issues in Clinical Practice (3) Identification of ethical and legal issues and the ensuing dilemmas relevant to the profession of nursing and nurses as health professionals and citizens. Selected problems and dilemmas affecting nurses, nursing, and the delivery of health care analyzed using specific moral-ethical perspectives.

NURS 412 Nursing Care Systems (3) Introduction to analyzing current health care systems and their effectiveness in achieving desired health outcomes for selected client populations from a system perspective. Emphasizes key features of interface between client and health care professionals, and environmental factors and organizational structures which influence the transaction.

NURS 430 Interpersonal Relationships in Nursing (3) Theory, current research, and practice in communication to develop and maintain interpersonal relationships with clients and health care colleagues. Lecture/discussion and laboratory learning opportunities include concepts of relationship development and disorder, interpersonal and group therapeutic communication processes, health care interviewing, and social support.

NURS 445 Topics in Nursing (1-10) Guided survey and discussion of current literature on major topics in physiological nursing. Seminar/lecture with analysis and discussion of selected topics and readings. May have clinical component. Implications for nursing practice and health care emphasized.

NURS 450 Connected Learning I (1, max. 6) An opportunity and quarterly requirement for nursing students to participate in a learning community in small groups with a faculty member. Focus is on dialogue, understanding others perspectives, building community, and integration of concurrent learning in other courses.

NURS 451 Connected Learning II (1, max. 3) An opportunity and quarterly requirement for nursing students to participate in a learning community in small groups with a faculty member. Focus is on dialogue, understanding others perspectives, building community, and integration of concurrent learning in other courses.

NURS 466 Continuing Education in Nursing (3) Planning, developing, and evaluating continuing education programs in various institutions and agencies. Includes the application of adult learning principles to a variety of situations, such as workshops, in-service and staff development programs. NURS 488 Youth at High Risk for Drug Abuse, Suicide Behaviors, Aggression, and Depression (3) Study of adolescent problem behaviors: causes, connections, and contexts. Two central themes are understanding vulnerability to drug abuse, suicide behaviors, and other related behaviors within social network contexts and exploring implications for prevention and early intervention programming.

NURS 489 Alcohol Problems in Family and Society (3) Analysis of family problems associated with alcoholism. Emphasis on psychological, cultural, and social implications; examination of various counseling practices employed and theories of prevention.

NURS 492 Anthropology of Refugees (3) I&S The refugee phenomenon, its emergence in postcolonial world, and structure of life history of refugees. Ethnic change, involuntary deculturation, and acculturation as they occur in refugee life histories. Prerequisite: one 200-level ANTH course. Offered: jointly with ANTH 492.

NURS 495 Child Rearing, Culture, and Health (3) I&S Cross-cultural study of the child-rearing practices, cultural norms, and health behavior of children and adolescents in different societies. Comparative approaches, diverse theoretical postures, and empirical research findings are used. Offered: jointly with ANTH 440.

NURS 500 Children and Adolescents with Special Health Needs, their Families and Communities (2/ 4) Advanced practice with infants, children, and adolescents at risk for or with chronic physical, neurobiological, developmental, or psychosocial problems. Focus on assessment and referral with select management strategies relevant for primary and specialty health care. Includes care coordination, multidisciplinary, culturally competent, and family centered approaches. Prerequisite: permission of instructor.

NURS 501 Advanced Mental Health Interventions with Children (3) Developmentally based assessment and therapeutic approaches relevant for children with psychosocial health problems. Consideration to matching therapeutic approaches with specific nature of symptomatology and other child, family, cultural, and environmental characteristics, including social and educational systems. Individual and group evaluation research emphasized. Prerequisite: 500.

NURS 502 Human Responses in Health and IIIness I (3) Survey of selected human responses to environmental demands in health and illness as expressed at physiologic, pathophysiologic, experiential, and behavioral levels. Such concepts as host defenses, ventilation, circulation, elimination, and nutrition are discussed. Prerequisite: graduate standing.

NURS 503 Human Responses in Health and IIIness II (3) Survey of selected human responses to environmental demands in health and illness at physiologic, pathophysiologic, experiential, and behavioral levels. Such concepts as immune response, stress response, circadian rhythms, pain, sleep, cognition, and consciousness. Prerequisite: graduate standing.

NURS 504 Clinical Nursing Therapeutics (1-6) Critical analysis of therapeutic modalities to assist patients with a variety of responses to health problems. Includes selected therapies such as suction/drainage, positioning to address responses in critical, life threatening, and chronic/continuing health states. Varying credits assigned for modules covering particular therapies. Prerequisite: 502, 503, or permission of instructor.

NURS 505 Selected Topics in Psychosocial Nursing (2-10) In-depth exploration of the major theoretical issues in psychosocial nursing. Seminar with analysis and discussion of selected topics and readings and implications for research and health care. NURS 506 Foundations in Psychosocial Nursing (3) Introduces students to Psychosocial Nursing by study of classic published papers. Current status of the specialty analyzed by review of standards of practice, certification criteria, and discussion of ethical, clinical, and educational issues. Examines visions and projected needs for the future.

NURS 507 Behavior and Adaptation: Elder Adults (3) Theory and research of behavior and adaptation in elder adults. Functional impairments within personenvironment contexts. Intervention strategies based on psychodynamic, development, cognitive-behavioral, role theory, somatic, and self-help models. Prerequisite: permission of instructor.

NURS 508 Seminar in Group Treatment (2) Seminar on the theoretical basis for working with various treatment groups. Analysis of selected approaches to group treatment. Analysis of leader responsibilities and functions in the development of therapeutic group experiences.

NURS 509 Issues in Violence and Aggression for Health Professionals (3) Focuses on research and theory of violent/aggressive behavior. Perspectives of victim, offender, family, community, society examined. Focus is recognition of violence against women. Course is designed to challenge students to clarify beliefs, values related to topics such as rape, homicide, domestic violence. Prerequisite: graduate nursing student or permission of instructor.

NURS 510 Primary Care Foundations: Diagnosis and Management of Common Health Concerns (1-3 max. 9) Focus on diagnosis and management of common primary care problems of adolescents and adults, including older adults, within advanced nursing practice. Emphasizes individual and family responses and nursing strategies including differential diagnosis, treatment, patient education, and followup. Content focus changes each quarter. Prerequisite: permission of instructor; recommended: concurrent field work.

NURS 511 Seminar in Neonatal Nursing (3) Neonatal neurobehavioral and physiologic adaptation within context of physical and social environment. Neonatal responses to alterations in growth and illness. Assessment modalities and therapeutic strategies used during the neonatal period. Prerequisite: 529 or permission of instructor.

NURS 512 Critical and Interdisciplinary Approaches to Women's Health (3) Critical examination of the historical, socio-political, and scientific influences on women's health. Issues of sexism, racism, and heterosexism discussed from the perspective of different disciplines. Offered: jointly with WOMEN 512.

NURS 513 Women's Health: A Nursing Perspective (3) Critical analysis of contemporary and historical works relevant to nursing care for women across the life span. Synthesis of a holistic view of women's health to guide nursing practice and research. Prerequisite: graduate and senior undergraduate students.

NURS 514 Physiologic Adaptation in Women and Children (1-6) Analysis of developmental physiologic adaptations in four units: women/reproductive processes, pregnancy/postpartum, fetus/neonate, and infancy through adolescence. Emphasis on implications for nursing practice. Examination of research basis for selected intervention strategies.

NURS 515 Common Adolescent Health Problems (2) Focuses on assessment, clinical decision making, and management of common adolescent problems. Concepts and theories of health promotion, adolescent development, and intervention strategies are explored to provide a broad framework for caring for adolescents in primary settings. NURS 516 Nursing Management of Acutely III Children and Their Environments (1-5) Nursing management of children with acute illnesses. Scientific principles, theories, and research used in planning, implementing, and evaluating nursing care of children at different levels of acuity and their families. Prerequisite: permission of instructor.

NURS 517 Pediatric Pulmonary Anatomy and Physiology: Clinical Applications (2) Lung development, anatomy, and physiology; clinical application when caring for children with acute and chronic lung disease. Prerequisite: permission of instructor.

NURS 518 Advanced Practice Pediatric Primary Care Management (3) Focuses on use of clinical decision making framework to develop theoretically and empirically sound individualized comprehensive management plans for the young child who presents with common physical and behavioral symptoms in the primary care setting. Prerequisite: permission of instructor.

NURS 519 Curriculum Development in Nursing Education (3) Theoretical rationale for curriculum development, study of curricular problems in nursing in relation to the elements of the curriculum as described in a curricular design. Prerequisite: graduate standing.

NURS 520 Evaluation of Clinical Performance in Nursing (3) For graduate students preparing for faculty or staff development positions in nursing. Theory and principles of evaluation. Instruments to appraise clinical nursing performance developed as part of course requirements. Prerequisite: graduate standing or permission of instructor.

NURS 521 Communications in Complex Health-Care Systems (3) Forum for critically examining and conceptualizing various communication processes in complex health-care systems and their implications for practice. Analytic and theoretical perspectives for the study of communication within health care. Prerequisite: 577, permission of instructor.

NURS 522 Systems Analysis in Nursing Administration (3) Examines concepts and techniques in industrial engineering, system analysis, and operations research applicable to decision making, control and monitoring functions in nursing administration. Student demonstrates application and critical appraisal of concepts and techniques. Prerequisite: ADMIN 510, or equivalent, and permission of instructor.

NURS 523 Seminar in Care Systems Management (3) Nursing science framework for analysis of the performance of care systems and of innovative change in care systems. Improving care through the use of leadership, quality improvement, and clinical and organizational effectiveness. For non-majors in care systems management.

NURS 524 Conceptual Foundations for Care Systems Management (3) Critical analysis of nature and theoretical bases of care systems management practice. Concepts of nursing and organization science foundations to person-provider transaction management and leadership in context of economic, political, and social environments and health outcomes. Prerequisite: graduate standing.

NURS 525 Managing Clinical Effectiveness Within Care Systems (3) Optimizing person-provider clinical therapeutic transactions at multiple levels of care systems complexity and population aggregation. Emphasis on designing, managing and evaluating clinical effectiveness and efficiency within care systems. Prerequisite: NURS 524 or permission of instructor.

NURS 526 Managing Organizational Effectiveness Within Care Systems (3) Analysis of management strategies for attaining effective and efficient organizational structures and processes within health care systems. Prerequisite: 524 or permission of instructor.

NURS 527 Managing Effective Access and Utilization Within Care Systems (3) In-depth inquiry into health care access and resource utilization patterns among diverse populations, with emphasis on management strategies for establishing effective population-system fit.

NURS 528 Implications of Human Embryology and Genetics for Clinical Practice (3) Normal development of the human embryo and fetus and principles of human genetics. Alterations in development leading to common anomalies and implications for clinical practice. Prerequisite: graduate standing or permission of instructor.

NURS 529 Childhood Common Developmental and Behavior Issues (2) Focus on common developmental and behavioral issues presented by children and their families in primary care setting. Emphasis on the developmental, family, and cultural aspects of assessment and management of the common issues.

NURS 530 Conceptual Frameworks for Parent-Child Nursing (3) Designed to assist graduate students in exploration, criticism, and analysis of selected concepts, frameworks, and models relevant to parent-child nursing practice. Group seminar work focuses on the discussion of issues influencing the roles and practice of clinical nurse specialists in parent-child nursing. Skills necessary for developing a conceptual framework for practice.

NURS 531 Selected Topics in Parent and Child Nursing (1-6, max. 12) In-depth examination of the literature pertinent to major theoretical issues in parent and child nursing. Seminar with analysis and discussion of selected topics and readings. Implications for research, prevention, and health care stressed. Prerequisite: permission of instructor.

NURS 532 Professional Issues in Advanced Parent and Child Nursing (2-5) History and current issues in advanced parent and child nursing practice and interface with health care systems. Advanced practice roles in provision, implementation, and evaluation of health care services for women, children, and families. Opportunity for application to specific advanced practice roles. Prerequisite: permission of instructor.

NURS 533 Seminar in Cardiovascular Nursing (3) Systematic inquiry into the influence of physical and emotional factors on pathophysiology underlying selected cardiovascular conditions; group study of current therapies with emphasis on prevention and rehabilitation. Individual study of topic of interest.

NURS 534 Seminar in Nursing in Gerontology (3) Gerontological research findings applied to complex nursing problems in maintenance of health and maximum functioning in the aged.

NURS 535 Seminar in Neuroscience Nursing (3) Guided survey of clinical and experimental literatures regarding selected concepts of human functioning mediated by the nervous system: consciousness, mentation, movement, sensation, integrated regulation, coping with disability. Clinical and research measurement, current research and implications for further research, clinical applications.

NURS 536 Biological Aspects of Cancer: Implications for Care (3) Survey of major concepts from tumor biology and implications for advanced oncology nursing practice. Areas covered include carcinogenesis, cancer epidemiology, pathology, metastasis, treatments (chemotherapy, radiation, surgery, immunotherapy), and cancer detection and prevention. Discussion of role of advance nurse clinician and complex patient responses are incorporated into discussion of basic biological concepts. NURS 537 Pain Management: Pharmacological and Nonpharmacological Therapeutics (3) Course focuses on nursing management of pain as a multidimensional phenomenon. Pharmacologic and nonpharmacologic therapeutics are critically reviewed for appropriateness in treatment of acute, chronic, and cancer pain. Nursing actions to initiate and maintain optimal therapy, based on individual responses, are reviewed and evaluated. Researchbased clinical decisions are practiced.

NURS 538 Management of Adults With Respiratory Dysfunction (3) In-depth examination of problems such as abnormal secretions and shortness of breath associated with respiratory dysfunction due to pulmonary diseases and other pathophysiological states.

NURS 539 Seminar in Critical-Care Nursing (3, max. 9) Systematic inquiry into pathophysiology, initial nursing management, and systems of care for the critically ill adult or child.

NURS 540 Special Topics in Physiological Nursing (3-6, max. 9) Guided survey of the experimental literature of major topics in physiological nursing, including cardiopulmonary, biology of aging, neuromuscular, cancer, and endocrine. Course conducted as a seminar with analysis and discussion of selected topics and readings. Implications for future research and health care are emphasized.

NURS 541 Care of Well Women (4) Examines components the components of advanced nursing/ midwifery care of well women. Emphasis on assessment, diagnosis, and management of common health issues and problems of women across the life span. Prerequisite: permission of instructor.

NURS 542 Care During Childbearing I (4) Advanced nursing/midwifery care and management of the low-risk childbearing worman and fetus through preconception, prenatal, intrapartum, and postpartum periods. Prerequisite: NURS 514.

NURS 543 Care During Childbearing II (4) Advanced nursing/midwifery care and management of childbearing women and fetus at risk for health problems throughout the prenatal, intrapartum, and postpartum periods. Primary management, collaborative management, and referral of at-risk clients. Prerequisite: 514 and 542 or permission of instructor.

NURS 544 Psychosocial Adaptations of Individuals and Families during the Perinatal Period (3) Adaptation of individuals and families during the perinatal period, with emphasis on psychosocial adaptation, consumer education, transition to parenthood, parent-infant interaction and community based support. Prerequisite: permission of instructor.

NURS 545 Care of the Neonate and Infant (2) Adaptation of neonate to the extrauterine environment and continuum of care to promote the health of infants within the context of family, community, and other environments. Prerequisite: 514, 528, or permission of instructor.

NURS 546 Interpersonal Aspects of Behavior (3) Selected theories in relation to psychosocial development and adaptation across life span for individuals, families, and small groups and as explanatory models of major psychosocial disabilities. General and psychosocial nursing models evaluated for heuristic value for research and practice. Prerequisite: graduate standing or permission of instructor.

NURS 547 Biologic Aspects of Psychosocial Disabilities (3) Analysis of biological processes influencing psychosocial behavior in response to internal and external stimuli. Research and theory of neuroendocrine mechanisms in psychosocial disabilities. Analysis of nursing management and evaluation of biopsychosocial modalities used in modification of behavior. Prerequisite: graduate standing in nursing or permission of instructor.

SCHOOL OF NURSING / COURSE DESCRIPTIONS 447

NURS 548 Socioecological Dimensions of Community Mental Health (3) Socioecological and sociocultural theories of mental health disablements analyzed. Conceptual trends and intervention strategies evaluated with community and client-centered emphasis on mental health service delivery to highrisk and underserved populations, including the moderately and severely mentally disabled. Prerequisite: graduate standing in nursing or permission of instructor.

NURS 549 Assessment in Psychosocial Nursing (4) Concepts, methods, and clinical approaches to psychosocial nursing assessment. Basic principles of measurement as they apply to psychosocial nursing assessment diagnosis and intervention. Knowledge synthesized from psychosocial nursing and allied disciplines tested. Clinical assessment laboratory included.

NURS 550 People of Color, Psychosocial Health, and the Culture of Oppression (3) Explores relationships among the psychosocial health of people of color, American cultural patterns of intersecting forms of oppression (e.g., gender, race, and class) and the role of health professionals in defining, ameliorating and/or aggravating psychosocial distress. Prerequisite: experience with mental health professionals and ethnic identities among various people of color.

NURS 551 Theoretical Foundations of Primary Care (1-3) Presentation and interpretation of theoretical basis of advanced nursing practice in primary care. Provides students with conceptual foundation upon which to base their development as nurse practitioners. Prerequisite: graduate standing; permission of instructor.

NURS 552 Health Promotion (2-3) Emphasis on health promotion, screening, and disease prevention in primary care. Examination of individual and family wellness, models of risk assessment and behavior change, health promotion strategies, and barriers to achieving health. Opportunity to explore age-related health risks. Prerequisite: graduate standing and permission of instructor; recommended: nurse practition ner students take fieldwork concurrently.

NURS 553 The Mentally III Offender in Correctional and Community Settings (3) Survey of social, political, economic, legal, and moral problems posed by individuals with mental disorders who commit crimes. Covers historical antecedents and current responses of correctional and mental health systems to mentally ill offenders, prevalence and correlates of incarceration, and roles of professionals in correctional mental health field. Credit/no credit only. Offered: W.

NURS 554 Psychosocial Interventions in Nursing (3) Conceptual foundations and interpersonal skills for interventions to promote personal change. Application made to nursing care of persons with psychosocial or physical health problems. Lecture-discussion and in-class practice. Prerequisite: graduate standing in nursing or permission of instructor.

NURS 555 Memory Theory and Implications for Health Care (3) Presents comparative analysis of research, theories of memory and their physiological basis. Means of measuring memory are critically evaluated. Current clinical problems and the therapeutic and care interventions using memory theory and rehabilitation are evaluated. Prerequisite: graduate or advanced undergraduate standing, or GNM or NM standing with permission of instructor.

NURS 556 Biopsychosocial Perspectives on Addictions (3) Psychosocial and pathophysiological aspects of substance use examined for their effects on individuals and families throughout life span. Theories and empirical findings serve as basis for evaluating preventive and therapeutic nursing approaches to substance use disorders, including those related to target populations. Prerequisite: basic course in biological sciences.

NURS 557 Psychosocial Approaches to Assessment and Management of Pain (3) Critically analyzes and integrates psychological and sociocultural models of acute and chronic pain. Commonly employed psychosocial pain assessment protocols and treatment modalities reviewed and evaluated. Nonpharmacologica and non-invasive therapies evaluated for efficacy in treating pain. Prerequisite: advanced undergraduate or graduate studies in nursing, psychology, dentistry, medicine, or allied health professions.

NURS 558 Infancy: The Context of Relationships (4) Comprehensive overview of infancy. Topics include caregiving-child interaction, attachment, mental health diagnostic classifications, ecological aspects of the caregiving environment. The NCAST Parent-Child Interactive Scales and the Zero to Three Diagnostic Classification are presented.

NURS 559 Theories of Psychiatric Disabilities (3) Theories from psychosocial nursing, psychiatry, and behavioral sciences explanatory of psychiatric disabilities provide basis for identifying psychosocial problems and developing nursing diagnoses. Structure and functions of mental health organizations and social networks analyzed for more effective system management by nurses. Prerequisite: NURS 547 or permission of instructor.

NURS 560 Dynamics of Community Health Practice (3/5) Examination of and experience with principles of clinical practice in community settings. Included are family as community constituent, populations at risk, community assessment, and community development. Prerequisite: graduate standing or permission.

NURS 561 Selected Topics in Comparative Nursing Care Systems (2-3, max. 10) In-depth examination of the literature pertinent to major theoretical issues in cross-cultural nursing and health-care systems. Seminar with analysis and discussion of selected topics and readings. Implications for research and health care stressed.

NURS 562 Clinically Applied Anthropology (3) Anthropology as it relates to interdisciplinary delivery of culturally relevant health care. Cultural variation in illness beliefs and behavior, types of healing practices, illness prevention, social support networks. Prerequisite: graduate standing, permission of instructor. Offered: jointly with ANTH 562.

NURS 563 Advanced Community Health Nursing (3) Systematic inquiry into the nature and foundations of community health nursing. Analytic and theoretical perspectives on health risk assessment and nursing interventions in the community. Implications for community health nursing services. Prerequisite: permission of instructor and graduate standing.

NURS 564 Biopharmacological Management in Psychosocial Nursing (3) Biological and pharmacological interventions pertinent to practice of psychosocial nursing, including psychopharmacology, electroconvulsive therapy, and phototherapy. Emphasis on empirical neuroendocrine bases and then nursing management issues pertaining to these interventions. Legal and ethical issues pertaining to advanced practice and putative neurological mechanism are examined. Prerequisite: 547 or permission of instructor.

NURS 565 Self-Management Strategies and Techniques in Patient Care (3) Theories underlying cognitive/behavioral self-management strategies and techniques in patient care. Evaluation of the clinical appropriateness and utility for nursing. Application to such clinical problems as abstinence in the recovering alcoholic, depression, and eating disorders. Prerequisite: graduate standing or permission of faculty. NURS 566 Occupational Stress and Stress Management (3) Relationships between occupational stressors and worker's health, well-being, productivity. Analyzes models of occupational stress. Investigates similarities, differences between job-related stressors and stress responses in various occupations. Explores elements of worksite stress management programs. Prerequisite: graduate standing in nursing or allied health discipline; advanced undergraduates with permission of instructor.

NURS 567 Theoretical Basis of Management of Stress Response (3) Theories of physiologic responses linked to theories of cognitive/affective and behavioral responses to stressors. Conceptual basis of self-management techniques. Research findings relevant to these theories and techniques examined and analyzed. Prerequisite: course in human physiology or physiologic psychology, permission of instructor.

NURS 569 Consultation in Human Service Systems (3) Exploration of theoretical perspectives and concepts relevant to consultation in human service systems. Models for intervention evaluated. Students design consultation projects, implementation determined through negotiation with faculty and agency representatives. Prerequisite: fourth-quarter placement or faculty permission; access to consultee system.

NURS 570 Family Concepts: Health and Illness (3) Emphasizes the family as unit of care across the life span. Predominant themes: factors influencing family health promotion, including resilience, vulnerability, risk reduction, and health policy; continuity, change and transition; and promotion of family health during acute and chronic illness episodes.

NURS 571 Advanced Interpersonal Therapeutics with Families (3) Models and research on therapeutic relationships and interpersonal processes evaluated and applied to group interactions among family members, among professionals, and between the family, professionals, and macrosystems. Partnership building emphasized. Individual and group characteristics examined across the life span in social, cultural, and health contexts. Prerequisite: permission of instructor.

NURS 572 Family Nursing Therapeutics: Behavioral Models (3) Behavioral models of health-related behavior analyzed to develop therapeutic programs and services for families experiencing healthrelated concerns or disruptions. Seminars introduce didactic material and laboratory assignments facilitate development of therapeutic and programmatic content. Prerequisite: permission of instructor.

NURS 574 Family Nursing Therapeutics: A Systems Perspective (3) Family models and research evaluated for relevance to advanced nursing practice and the family, and social and health contexts examined. Experiential learning laboratories with family case analyses enhance knowledge and therapeutic skills. Prerequisite: permission of instructor.

NURS 575 Death Influence in Clinical Practice (2-4) Analysis and study of social, cultural, and psychological conditions that influence human death in modern society. Research findings, selected readings, and direct experience provide direction for examination of philosophic, theoretical, and pragmatic issues underlying choices and decisions in clinical practice. Open to graduate students with permission of instructor. (Limit: sixteen students.)

NURS 576 Populations at Risk in the Community (3) Health needs and risks of selected populations in the community and theoretical and analytical perspectives on assessment and intervention strategies in community health nursing practice with groups and populations whose health is at risk. Prerequisite: graduate standing and permission of instructor. NURS 577 Seminar in Nursing and the Social Order (3, max. 9) Changing patterns of nursing service and education in contemporary society. Implications of personal value systems. Prerequisite: permission of instructor.

NURS 578 Health, Care, and Community (3) Analysis of health care in community from nursing and behavioral science perspectives. Sociocultural influences on health beliefs and practices, naturalcare units, and community life patterns analyzed. Community as both context and target of change explored in relation to nursing approaches in health promotion and maintenance. Prerequisite: graduate standing.

NURS 579 Transcultural Nursing Practices (3) Study of nursing practices in different cultures. Seminar focus is on theoretical formulations and comparative analysis of values, patterns, techniques, and practices of nursing care in many societies. Rituals, myths, taboos, and beliefs are studied in relation to the subculture(s) of caring and nursing practices.

NURS 580 Current Issues in Occupational and Environmental Medicine (2, max. 6) Interdisciplinary seminar on current and emerging topics in the practice of environmental and occupational health. Faculty- and student-led presentations with an interdisciplinary focus, including occupational hygiene, nursing, and medical issues. Prerequisite: environmental health graduate student, occupational health nursing student, or permission of instructor. Offered: jointly with ENV H 596; AWSp.

NURS 581 Socio-Cultural Perspectives of Public Health Genetics (2) Examines social and cultural issues of human genome sequencing and control of genetic expression. Attitudes and behaviors toward health, illness, and disability are studied using historical, contemporary, and cross-cultural case study material. Offered: jointly with PHG 521.

NURS 587 Role Transition Seminar (2) Emphasis on transition to doctoral study and eventual postgraduate roles. Includes information to clarify expectations and skills to facilitate success: various forms of scholarly and interpersonal communication, principles of scholarly collaboration, giving and receiving critiques, and other topics developed by participants. Credit/no credit only.

NURS 588 Philosophical Basis of Nursing Inquiry (3) Overview and critical analysis of historical and contemporary views of knowledge development and of science, with particular emphasis on the ways these views influence approaches to nursing inquiry. Emphasis on analyzing the underlying epistemological and ontological assumptions and implications of diverse approaches to knowledge generation in nursing.

NURS 589 Theoretical Perspectives in Nursing (3) Critical analysis of theory development, including evaluation of relationships among theories, evidence, and explanation. Diverse approaches used to appraise historical and contemporary milestones in the development and evaluation of nursing knowledge. Emphasis on process and implications of theory development for nursing research, practice, education, and systems. Prerequisite: 588. Offered: W.

NURS 590 Ecology of Human Health (5) Focus on the pluralistic constructions of health as related to different environments. Personal and biological characteristics vary, interact with, and transform the person and the environment. Emphasis on nursing as a social construction which is interactive with the human's experience of health and healing.

NURS 591 Advanced Seminar in Nursing Science (3, max. 15) In-depth analysis and evaluation of literature in focused areas of research. Synthesis of literature related to selected fields of nursing science. Oral analysis of assigned papers and topics. Prerequisite: graduate standing or permission of instructor. NURS 592 The Science of Nursing Therapeutics (4) Addresses the state of the science of nursing therapeutics. Students examine the practices of nursing to promote, maintain, and restore human health from an ecological perspective. Therapeutics considered from the perspectives of the individual, family, and community systems.

NURS 595 Synthesis of Nursing Science (3) Provides a forum for critical analysis, integration, and synthesis of core content provided during the initial year of the Ph.D. in Nurse Scientist Program and further planning of program of study. Prerequisite: completion of first year required courses of doctoral program. Credit/no credit only.

NURS 596 Colloquium, Scientific Conduct, and Dissertation Seminar (2) Focuses on group discussion of issues pertinent to research conduct. Scientific conduct issues include: guidelines relevant to designing, conducting, and disseminating research; risk management in reference to scientific misconduct and negligence; and collaborative and peer review skills relevant to intra- and interdisciplinary research.

NURS 599 Selected Readings in Nursing Sciences (1-3, max. 18) Analysis of synthesis of selected readings with faculty mentor. Credit/no credit only. Prerequisite: permission of instructor.

Nursing Clinical

NCLIN 302 Practicum: The Nature of Health and Caring (3-5) Emphasizes beginning nursing skills in communication, interviewing, and health assessment and maintenance. Predominant themes include: personal health beliefs, values clarification, basic communication skills, and beginning physical and psychosocial assessment of the individual across the age span. Credit/no credit only.

NCLIN 306 Practicum: Threats to Health (4) Beginning nursing skills in communication, interviewing, health assessment, identification of threats to health in selected community/clinical settings. Predominant themes, skills: risk, vulnerability identification; communication; physical, psychosocial assessment of individuals across life span; nursing care planning, documentation; psychomotor skills development.

NCLIN 402 Practicum: Care in Illness I (4) Provides supervised nursing care to individuals and families with acute and chronic illness. Emphasis on increasing skill in systematic assessment, developing competency in selected nursing therapies, and developing role as care agent for persons of all ages. Credit/no credit only.

NCLIN 406 Practicum: Care in Illness II (4-10) Provides supervised nursing care to individuals and families with acute and chronic illness. Emphasis on increasing skill in systematic assessment, developing competency in selected nursing therapies, and developing role as caring agent for persons of all ages. Credit/no credit only.

NCLIN 409 Partnerships in Community Health (6) Analysis, application, and evaluation of nursing process at level of community. Formulation of community health diagnoses as basis for community-level interventions to maintain and promote biopsychosocial health, prevent disease, and enable self care by the community. Analysis of nursing's role in community health/mental health.

NCLIN 411 Transition to Professional Practice (12-20) Intensive field work in a nursing care specialty focusing on critical examination, synthesis, and evaluation of professional nursing care. Client populations include individuals and/or groups reflecting diverse settings, ages, ethnic communities. Emphasizes mastering theoretical concepts, applying research findings, improving skill competency, developing leadership capabilities. NCLIN 501 Health Assessment for Advanced Practice (1-5) Provides framework for systematic data collection, organization, precise recording, and accurate communication of health status data on individuals of all ages. Demonstrations of, and experiences with, the processes of symptom analysis and health screening with basically healthy individuals. Credit/no credit only. Prerequisite: graduate standing, permission of instructor.

NCLIN 502 Pediatric Health Assessment and Promotion (1-5) Gives experience in obtaining a health history and performing a physical assessment of infants, children, and adolescents. Interviewing techniques, problem-oriented charting, and a systems approach to the physical examination. Emphasis on screening principles, health promotion, and wellness care for children/families. Credit/no credit only. Prerequisite: permission of instructor.

NCLIN 503 Advanced Fieldwork Community Health Nursing (2-6, max. 12) Guided experience in delineating nursing roles in community settings. Development of a philosophy of community health nursing. Application of core concepts pertaining to health, ethics, care, and community. A minimum of four hours of guided experience weekly. Prerequisite: graduate standing and permission of instructor.

NCLIN 508 Seminar in Group Treatment (1) Seminar on the theoretical basis for working with various treatment groups. Analysis of selected approaches to group treatment. Analysis of leader responsibilities and functions in the development of therapeutic group experiences.

NCLIN 509 Practice Teaching in Physiological Nursing (3) Guided experience in selected teaching-learning situations in nursing, in both classroom and clinical situations. Identification, analysis, and solution of teaching-learning problems in clinical nursing. Minimum of seven hours of guided experience weekly.

NCLIN 510 Group Work with High-Risk Youth (3-6) Theory and application course in group counseling for high-risk youth. Central theme is group leader effectiveness in helping young people increase school performance, decrease drug involvement, and increase emotional well-being. Open to graduate students in nursing, education, and related human services professions.

NCLIN 512 Advanced Practicum in Parent and Child Nursing I (2-12, max. 25) Clinical seminar and practicum provide opportunities to develop advanced nursing practice competencies in the care of women, parents, children, and/or adolescents. Application of theory and principles to direct care, consultation, education and/or care coordinator roles with individuals and/or groups.

NCLIN 514 Seminar in Home Care for Chronic IIIness (3) Home-care services as component of community health nursing. Understanding effects of direct nursing functions on care of chronically ill persons and their families. Selected field study experiences in community health settings. Prerequisite: NURS 563, graduate standing, and permission of instructor.

NCLIN 518 Pediatric Pulmonary Nursing (2-5) Applies knowledge of pediatric anatomy and physiology to assessment and treatment of pulmonary pathophysiology in children. Nursing issues in caring for children and families with acute and chronic lung disease. Prerequisite: permission of instructor.

NCLIN 525 Managing Clinical Effectiveness Within Care Systems (1) Optimizing person-provider clinical therapeutic transactions at multiple levels of care systems complexity and population aggregation. Emphasis on designing, managing and evaluating clinical effectiveness and efficiency within care systems. Prerequisite: NURS 524 or permission of instructor.

NCLIN 526 Managing Organizational Effectiveness Within Care Systems (1) Analysis of management strategies for attaining effective and efficient organizational structures and processes within health care systems. Prerequisite: NURS 524 or permission of instructor

NCLIN 527 Managing Effective Access and Utilization Within Care Systems (1) In-depth inquiry into health care access and resource utilization patterns among diverse populations, with emphasis on management strategies for establishing effective population-system fit.

NCLIN 528 Advanced Practice in Care Systems Management (4-8) Analysis of relationship between theory and practice in real-time conditions. Comparative analysis of structure and behavior of management approaches. Prerequisite: core courses in Care Systems Management.

NCLIN 531 Nursing Process in Parent-Child Nursing (4) Includes lecture, seminar, and laboratory instruction designed to assist the student with knowledge and skill acquisition related to nursing care of individuals and families with regard to childbearing and childrearing, Prerequisite: NURS 530.

NCLIN 541 Clinical Physiological Nursing Seminar I (1-10, max. 10) Guided experience in nursing practice with selected individuals in a specialized field of nursing. Synthesis and application of relevant principles and theories from biological, behavioral, and pathological sciences; proficiency in comprehensive nursing assessments, interventions, and evaluations; effective collaborative functioning as a member of the health team.

NCLIN 544 Clinical Physiological Nursing Seminar II (1-10, max. 20) Continuation of 541. Guided experience in selected situations in area of clinical interest. Minimum of seven hours of guided experience weekly. Prerequisite: 541.

NCLIN 552 Internship in Advanced Practice Nursing of Adults and Older Adults (6-9) Capstone clinical experience with opportunities to synthesize theoretical knowledge and clinical skills in care of adults and older adults. Planning, implementing, documenting, and evaluating therapeutic processes and outcomes under supervision of advanced practice clinical preceptor. Credit/no credit only. Prerequisite: NCLIN 501, 541, and 544, and PHARM 514.

NCLIN 553 Seminar in Primary Care I: Health Promotion (2) Weekly seminars with supervised field study within selected primary-care and wellness settings. Emphasis on health assessment and strategies related to improving health in people of all ages. Analysis of, and counseling on, life-styles, nutrition, physical fitness, stress management, self-care, and prevention. Credit/no credit only. Prerequisite: graduate standing, permission of instructor.

NCLIN 554 Occupational Health Nursing: Practice Issues (2-6) In-depth overview of occupational health and safety. Includes discussion of American workforce, work environments, regulations, and political issues; identifies trends which affect practice; introduces prevalent health disorders which result from occupational exposure; examines and applies nursing theory to the prevention and control of occupational injuries and illnesses.

NCLIN 556, 557 Seminar in Primary Care II, III: Management of Common Health Concerns (3, 3) Focus on research questions, patient presentations, and group discussions drawn from field study. Supervised clinical field study within selected primary health-care settings and weekly seminar discussions related to theory presented in NURS 510. Credit/no credit only. Prerequisite: graduate standing and permission of instructor.

NCLIN 558 Occupational Health Nursing: Program Development (2-6) In-depth examination of occupational health and safety programs including organizational analyses, budgeting, marketing, case management, and workers' compensation; also political, economic, legal, and ethical issues. Focuses on development, implementation, and evaluation of programs including health promotion, EAP, and health surveillance. Applies public health and nursing sciences to selected work-related problems.

NCLIN 559 Seminar in Primary Care IV: Management of Common Health Concerns (3-5) Focus on research questions, patient presentations, and group discussions drawn from field study. Supervised clinical field study within selected primary care settings and weekly seminar discussions related to theory presented in NURS 510. Credit/no credit only. Prerequisite: permission of instructor; nurse practitioner students register for NURS 510 concurrently.

NCLIN 560 Seminar in Primary Care V: Complex Clinical Decision Making (1-11) Seminar with associated field study. Synthesis of advanced knowledge base and clinical family nurse practitioner skills with effective management of complex clinical problems. Credit/no credit only. Prerequisite: graduate standing and permission of instructor.

NCLIN 566 Advanced Clinical Practicum in Psychosocial Nursing (1-6, max. 12) Advanced clinical judgment emphasizing an inferential process proceeding from the observed to the conceptual. Students use theoretic knowledge base that provides multiple explanations for behaviors. Research applied to practice with selected clinical populations in varied psychosocial settings in concert with student's subspecialty interests. Credit/no credit only. Prerequisite: NURS 556, 559, 567.

NCLIN 569 Practicum in Biopsychosocial Assessment (2/4) Practicum in either physical health assessment with opportunity to refine skills in taking health history and performing physical examinations or psychosocial assessment with opportunity to refine skills in psychosocial assessment interview, mental status examination, standardized clinical assessment instruments. Credit/no credit only. Concurrent enrollment in NCLIN 501 and/or NURS 549 required.

NCLIN 573 Advanced Field Study in Family Nursing (2-9) Advanced practice development in direct care, consultation, and/or care coordination with individual families or groups of families across the life span. Opportunities provided to strengthen interpersonal therapeutic process skills, family nursing approaches relevant to family health promotion, problematic family health patterns. Prerequisite: concurrent registration in NURS 572, 574; recommended: NURS 571.

NCLIN 581 Seminar in Advanced Community Health Nursing (2-6) Focuses on construction and analysis of community health nursing theories/models, presentation of community problems, and interventions/evaluation strategies. Synthesizes nursing theories and organizational/community concepts into conceptual framework of CHN practice. Analyzes research questions that emerge from field of study. Prerequisite: NURS 563, 576, and 578 or permission of instructor.

Nursing Methods

NMETH 403 Introduction to Research in Nursing (3) Organization of the structure of nursing knowledge through research. Concepts and processes of research utilized in the investigation of nursing science.

NMETH 499 Undergraduate Research (1-5, max. 12) Supervised individual scholarly inquiry on a specific nursing problem.

NMETH 520 Methods of Research in Nursing (3) Research process as it applies to nursing. Use of the literature in building theoretical rationale. Se-

SCHOOL OF NURSING / COURSE DESCRIPTIONS 449

lection of appropriate methods. Presentation of findings. Minimum of two laboratory hours weekly. Prerequisite: a course in statistics.

NMETH 521 Methods of Research in Nursing (2) Continuation of 520, with emphasis on methods of research applied to the solution of problems in all fields of nursing.

NMETH 570 Seminar in Clinical Research in Nursing (3) Philosophy, problems of design; use of criterion measures in terms of patient care.

NMETH 575 Methodological Issues in Family Research (3) Emphasizes research with the family as unit of analysis. Examines patterns of family functioning in relation to responses to heal situations. Reviews family units from generational and intergenerational perspectives. Critiques methods assessing dyadic and triadic relationships and therapeutic interventions on family outcomes. Prerequisite: permission of instructor.

NMETH 580 Methodological Perspectives in Nursing Inquiry (5) Allows students to translate philosophical and theoretical perspectives into research methodologies. Foci will include: the relationship of theoretical perspectives to methodologies; the methodological issues among and between varying schools of thought (including contemporary empiricist, interpretive, and critical/postmodern); and how the methodologies influence choices of research design and methods.

NMETH 581 Observational Research Methods (2-6) Examines observational methods for conducting verbal and nonverbal behavioral research. Emphasizes critical analysis and rigor in research question formulation, measurement decisions, coding scheme development, data collection, and analysis and interpretation of data. In-depth application of observational method optional. Prerequisite: graduate standing and basic research methods course or permission of instructor. Offered: W.

NMETH 582- 583 Interpretative Methods in Nursing Research (4-4) Seminar and field practicum for interpretative research methods. Study on healthrelated issues using a selected tradition in interpretative methods. Prerequisite: permission of Instructor.

NMETH 584 Methods: Physiologic Measures (4) Exploration of the measurement of physiologic functioning in human and animal models. Examples include biochemical and biophysical measure. Students develop beginning skills with one physiologic measure. Prerequisite: physiology and chemistry and permission of instructor.

NMETH 585 Meta-Analysis (4) Meta-analysis examined as a method to synthesize research. Overview of meta-analytic methods; description of the collection, analysis, synthesis, and reporting of studies; explanation of statistical calculations; and discussion of reliability and validity measures incorporated into meta-analytic design. Prerequisite: permission of instructor.

NMETH 586 Instrument Development and Testing (4) Includes measurement theory, reliability, validity, level of measurement, and the process of scale development, modification, or translation. Students learn to evaluate, develop, modify, translate, and test instruments for use in research. Prerequisite: student in health science discipline and permission of instructor.

NMETH 587 Methods of Theory Testing: Causal Modeling with Path Analysis and Structural Equation Modeling (4) Includes causal inferencing and theory testing through causal modeling with path analysis and structural equations modeling. Students learn to evaluate theory models and to apply the content by developing and testing models. Prerequisite: student in health science discipline and permission of instructor.

450 SCHOOL OF NURSING / COURSE DESCRIPTIONS

NMETH 590 Special Topics in Nursing Research (2-3, max. 9) Examination of a specific research method, with evaluation of appropriateness, efficiency, rigor of measurement, and potential for inference for nursing research. Prerequisite: minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor.

NMETH 591 Clinical Outcome Research I (4) Examination of philosophical, analytical, and methodological decisions and processes in evaluating the effectiveness of interventions and programs designed to enhance health outcomes. Alternative designs are addressed in consideration of underlying assumptions about prevention/causation research; clinical human phenomena; design sensitivity; and threats to validity. Theory development emphasized. Prerequisite: permission of instructor.

NMETH 592 Clinical Outcome Research II (2-4) Application and evaluation of philosophical, methodological, and analytical concepts and issues examined in 591. Two modules are offered: a)case study and small-n studies and b) large-n studies. Students demonstrate application of decision-making process involved in development of clinical outcome study. Prerequisite: permission of instructor.

NMETH 598 Special Projects ([1-12]-) Fulfills the requirements of the non-thesis option for Master's students in nursing. Projects involve scholarly inquiry with in-depth focused analysis, culminating in a written product/report for dissemination. Credit/no credit only. Prerequisite: 520 and 521 or permission of instructor.

NMETH 600 Independent Study or Research (*) Credit/no credit only.

NMETH 700 Master's Thesis (*) Credit/no credit only.

NMETH 800 Doctoral Dissertation (*) Credit/no credit only. Prerequisite: permission of Supervisory Committee chairperson or graduate program adviser.

College of Ocean and Fishery Sciences

Dean

Arthur R.M. Nowell 557 Henderson

Associate Dean

Loveday L. Conquest

The marine environment has been a dominant factor in the history of the Pacific Northwest from the time of the first Native American settlements to the modern days of aquaculture, container ships, and waterfront condominiums. It is not surprising, therefore, that the University of Washington has a long tradition of commitment to teaching, research, and public service in subjects related to marine and freshwater activities.

The College of Ocean and Fishery Sciences comprises five of the major units of the University in the marine and freshwater sciences: the Applied Physics Laboratory; the Schools of Fisheries, Marine Affairs, and Oceanography; and the Office of Marine Environmental and Resource Programs, which includes the Washington Sea Grant Program. Each of the units of the College focuses on a difference aspect of the aquatic environment, but there is much overlap of interests.

The College offers both undergraduate and graduate instructional programs in fisheries and oceanography, and graduate programs in marine affairs. For undergraduates, it is easy to pursue joint undergraduate degrees with departments such as Zoology, Chemistry, and Geology in the College of Arts and Sciences. College faculty, staff, and students carry out research in oceans, estuaries, and freshwater lakes and rivers all over the world. Facilities for research and teaching range from ocean-going vessels to well-equipped laboratories and classrooms.

The College also supports career-oriented resources for students to complement traditional course work and research. An annual Career Fair, held each February. brings more than 30 potential employers to campus to meet with students and discuss career possibilities and employment opportunities. A well-equipped Career Center is available for students, providing information about career planning, rèsumè preparation, and job opportunities in the marine and freshwater sciences. Northwest Water Work, a semi-monthly summary of current employment opportunities and internships available in water-related areas, is published by the College and made available free of charge to students. Internships are encouraged as a way to help students bridge the transition from the classroom to employment after graduation. The College also supports educational outreach activities and innovative learning technologies.

In 1997, the College had 200 undergraduate and 250 graduate students enrolled, a faculty of 198 members, and a total budget of \$60 million, making it one of the largest institutions of its kind in the nation.

The School of Fisheries is concerned with wise management of fish and shellfish stocks, ecological relationships between aquatic organisms and their environment, culture of aquatic plants and animals, impacts of human population pressures on the aquatic environment, and development of seafood products. It offers both undergraduate and graduate degrees.

COLLEGE OF OCEAN AND FISHERY SCIENCES / FISHERIES 451

The School of Oceanography carries out research and teaching on the physical, chemical, geological and geophysical, and biological processes in the ocean, and interactions of the ocean with the earth, the bio-sphere, and the atmosphere. It is concerned with the study of ocean currents and mixing, life in the sea, the chemical composition and properties of seawater, the sediments and rocks beneath the sea, and the geophysics of the sea floor. It offers both undergraduate and graduate degrees.

The School of Marine Affairs is concerned with policy and institutional issues related to the ocean. It combines natural sciences and engineering with law, economics, international affairs, and public administration. Marine affairs, coastal zone management, ports and marine transportation, atmospheric and marine policy, living marine resources, and international law of the sea are all part of the School's teaching and research programs. It offers a Master of Marine Affairs degree.

The Applied Physics Laboratory is a research and development unit with strong capabilities in marine science and technology, acoustic sensors and sound propagation, marine instrumentation, and polar science and technology. No degrees are offered, but a regular seminar series is presented. APL faculty members with joint appointments in other University departments teach courses and advise graduate students on theses. Part-time employment for students, including a program offering four years of support to students who contemplate a career in engineering or science, is also provided.

The Washington Sea Grant Program is a component of the National Sea Grant Program which was created by Congress to enhance the wise use and protection of the nation's marine resources through coordinated efforts in research, education, and public service. The Washington Sea Grant Program is administered as a division of the College but has additional statewide and multiinstitutional responsibilities. It funds research and education throughout the state; supports advisory services; presents workshops, short courses, and lectures; and produces publications. The University of Washington was one of the first four universities in the country designated in 1971 as Sea Grant Colleges in recognition of outstanding sustained programs in research, education, and advisory services in the marine area.

Fisheries

213 Fisheries Center

The School of Fisheries, established in 1919, offers courses and conducts research on the conservation, management, and effective use of fish and shellfish resources. Education and areas of research in the School include ichthyology, aquatic ecology, conservation and management, population dynamics, management of free-ranging stocks, hatchery-based propagation of marine and freshwater organisms, aquatic food products, and effects of human activities on aquatic/marine ecosystems. Faculty and students in the School draw upon the disciplines of biology, botany, chemistry, food science, genetics, mathematics, nutrition, oceanography, physics, physiology, and zoology to conduct basic and applied research in the field of fishery science.

Courses

A full spectrum of undergraduate- and graduate-level courses allows students to learn the basic principles of fishery science and to develop expertise in specialized fields such as quantitative fishery management, public and private aquaculture, seafood technology, and aquatic ecology. Among the wide variety of courses open to students are ichthyology, world fisheries and aquaculture, salmonid behavior and life history, fisheries stock assessment, ecology of marine fishes, genetics in fish management and production, physiological effects of water pollutants, and food engineering.

The School cooperates with other units on campus (Biology, Civil Engineering, Forest Resources, Marine Affairs, Quantitative Science, Nutrition, and Oceanography) to offer jointly listed courses.

Summer-quarter instruction is offered both on the main campus and at the Friday Harbor Laboratories on San Juan Island.

Advising

The Student Services Office is located in 213 Fisheries Center. Students can receive assistance from the office staff with curriculum, course scheduling, and graduation requirements. Faculty mentors are also available to all undergraduate students.

Interdisciplinary Programs

The Center for Quantitative Science in Forestry, Fisheries, and Wildlife is an intercollege academic unit sponsored by the Office of Undergraduate Education, the School of Fisheries in the College of Ocean and Fishery Sciences, and the College of Forest Resources. The center offers a comprehensive program of study in mathematical and statistical methods applied to problems in biology, ecology, and renewable resource management for undergraduate students. The center's faculty include members of the College of Forest Resources and the School of Fisheries, as well as other units. The center offers a minor program designed to give undergraduate students majoring in biology, ecology, and renewable resource management programs a thorough grounding in relevant statistical- and mathematical-modeling methodology.

Joint Curriculum in Fishery Management: The School of Fisheries and the School of Marine Affairs offer a joint curriculum in fishery management, consisting of parallel two-year master's programs. The curriculum is designed to provide professional fisheries managers with the skills needed to participate effectively in contemporary fishery management. These skills require a multidisciplinary education in biology, economics, quantitative methods, law, policy analysis, and political science. Students may enter the fisheries management master's program through either the School of Fisheries or the School of Marine Affairs and must meet the sis and other requirements of their school.

Research

The faculty, staff, and students of the School conduct basic and applied research on regional, national, and international fishery problems. Examples of research projects include the following:

In the field of fisheries management-development of strategies for enhancing inland recreational fishing. reduction of bycatch discards in the North Pacific through improvements in fishing-gear design, influence of physical oceanographic factors on recruitment of larval fish and shellfish. In the field of aquacultureidentification of hormone receptors involved in reproduction and smoltification, development of DNA probes for rapid identification of pathogens, manipulation of chromosome complement to select for desirable traits in cultured fish and shellfish. In the fields of evolutionary biology and ecology-application of molecular biotechnology to the study of phylogeny, behavioral studies of homing and straying in Pacific salmon, analysis of energy flow in Pacific Northwest estuaries. In the field of habitat protection-contaminant transport through aquatic food chains, effects of forest practices on fish habitat, development of mitigation measures for restoring damaged wetlands. In the field of resource utilization-determination of fat content in edible fish tissue using noninvasive technology, development of techniques for tracing sources of contamination in shellfish beds, approaches for reducing pollution caused by aquaculture effluent.

Researchers in the School collaborate with scientists within the University and with investigators employed by other agencies. The School benefits from the presence in Seattle of laboratories of the National Marine

452 COLLEGE OF OCEAN AND FISHERY SCIENCES / FISHERIES

Fisheries Service, the National Biological Service, and the Washington State Department of Fish and Wildlife. The headquarters and research staff of the International Pacific Halibut Commission are located on the campus as well. Researchers also collaborate with the scientific staff of private companies located in the Puget Sound region and elsewhere. School of Fisheries researchers frequently participate in inter-institutional projects that involve scientists from other states and countries.

The research program is enhanced through the activities of several institutes and centers that are housed within the School.

The Fisheries Research Institute coordinates research throughout the School. Long-term projects include research on the origins, abundance, migratory patterns, and ocean distribution of Pacific salmon and steelhead trout; spawning distribution, growth, and abundance of sockeye salmon in Bristol Bay, Alaska; environmental (physical and biological) factors influencing salmonid productivity.

The *Institute for Food Science and Technology* conducts research on seafood composition, quality, safety, processing and utilization, nutrition, and related food science topics.

The Washington Cooperative Fish and Wildlife Research Unit is supported by the U.S. Department of Interior through the National Biological Service, the Wildlife Management Institute, and by the Washington State Departments of Ecology, Natural Resources, and Fish and Wildlife. The unit conducts research related to management and conservation of fisheries and wildlife.

The Center for Streamside Studies is an interdisciplinary unit of the College of Forest Resources and the College of Ocean and Fishery Sciences. The center conducts research related to management issues that surround the production and protection of forest, fish, wildlife, and water resources associated with streams and rivers in the Pacific Northwest.

The Western Regional Aquaculture Center is one of five regional aquaculture centers supported by the U.S. Department of Agriculture. Participating scientists from twelve Western states conduct research that is directed toward enhancement of commercial aquaculture production.

The *Olympic Natural Resources Center* is an interdisciplinary research and educational program related to the marine and forest resources of the Olympic Peninsula.

Facilities and Services

The Fisheries Center, the Fisheries Teaching and Research Building, and the Marine Studies Building are located adjacent to the Lake Washington Ship Canal. The buildings contain classrooms, laboratories, and support facilities. The Fisheries-Oceanography Library, a branch library offering research materials in fisheries, food science, oceanography, and wildlife science, is located nearby in the Oceanography Teaching Building. The Fish Collection has served as a resource for teaching and scientific investigations of all kinds for more than half a century. One of five major permanent facilities on the west coast of the United States, the collection is by far the largest in terms of number of specimens, containing in excess of 230,000 juvenile and adult specimens, and well over 3.3 million eggs and larvae. Together the collections represent some 3,778 species in 1,419 genera and 310 families.

An annual run of several thousand salmon has been developed and is maintained at the School by the release of thousands of fingerlings each spring. Returning adults use a fish ladder to enter the School's experimental fish hatchery. The run is the basis for both instruction and research on the life cycle of Pacific salmon. The Marine Molecular Biotechnology Laboratory is jointly operated by the Schools of Fisheries and Oceanography. State-of-the-art equipment is available for automatic sequencing of DNA as well as other techniques.

Other laboratories provide for the study of the physiology, biochemistry, and behavior of fishes and of the effects of pollutants on fishes. Physiological facilities include equipment for surgical procedures and biochemical analysis of body fluids and tissues from both freshwater and marine fishes.

There are four clusters of computers (two Sun-based UNIX clusters, one PC, and one Macintosh cluster) available for use by students, faculty, and staff. Two of the clusters are used for classroom instruction. Network access to the Internet for email and the World Wide Web, word processing, spreadsheet, math and statistical applications, and a Publications Office with expertise in graphics are all available within the School. Additionally, an extensive set of applications is provided through University Computing Services, which is directly accessible from the Fisheries computers.

The School uses various small vessels for instructional and research work, including tow netting, purse seining, and trawling. These vessels are used in regular courses or training cruises to introduce students to shipboard operations. Fisheries field stations in Alaska and at Big Beef Creek on Hood Canal provide additional opportunities for field studies and research in stream and estuarine ecology. Seafood research facilities, located in the Marine Studies Building, include well-equipped laboratories for microbiology, biochemistry, and chemical analysis. The seafood-processing and seafood-engineering laboratory pilot plant complex comprises several facilities containing equipment for teaching and experimental work in applied areas of unit operations and processing.

Student Organizations

There are several student organizations within the School that provide extracurricular social and educational activities and that serve as liaisons between students and faculty: Fish Club (formed in 1922, includes graduate and undergraduate students), Bass Club (undergraduates), and FINS (Fisheries Interdisciplinary Network of Students, a graduate student council). There is also a Food Science Club that promotes interest in food science and seafood technology; the club works closely with the Puget Sound section of the Institute of Food Technologists.

Financial Aid

The School offers limited financial assistance to undergraduates and graduates through scholarships. The *Handbook of Scholarships*, available from the Office of Student Financial Aid, 105 Schmitz, lists other available scholarships.

Employment

The College of Ocean and Fishery Sciences Career Center maintains a file of permanent and temporary job opportunities for its students. Both summer and parttime employment during the scholastic year are frequently available with the research organizations that are associated with the School on or near the campus and elsewhere in the Pacific Northwest. The Fisheries Research Institute normally hires some students for summer work in the field and usually has several parttime positions available during the school year.

Students receiving degrees in fisheries find employment in varied fields. Some graduates pursue careers in resource-management agencies such as the National Marine Fisheries Service, the U.S. Fish and Wildlife Service, the Northwest Indian Fish Commission, and state departments of fisheries or wildlife. Some work for enforcement agencies such as the U.S. Environmental Protection Agency, the U.S. Food and Drug Administration, or state or local departments of environmental quality. Many graduates find employment in the private sector, working for aquaculture companies, the seafood industry, the recreational fishing industry, and environmental consulting firms. Employment in international projects is available through organizations such as the Peace Corps, the United Nations Food and Agriculture Organization, the Agency for International Development, the World Bank, and private industry. Positions in academic institutions are open to students completing advanced degree programs.

Undergraduate Program

Student Services Office 213 Fisheries Center, Box 357980 (206) 543-7457 instruct@fish.washington.edu

Bachelor of Science in Fisheries

Admission: Students in good academic standing may declare this major at any time. After notification of admission and before registration, new students should visit or write to the School for help in planning their course programs and to be assigned a faculty mentor. Academic and other counseling of fisheries students is provided through the Student Services Office.

Suggested Introductory Course Work: High school students are urged to take four years of college preparatory mathematics (usually including precalculus or mathematical analysis), because these are prerequisites for the mathematics courses included in all School curricula. Taking high school courses in chemistry, physics, and biology, and training in computer use will prove valuable to the fisheries student.

Major Requirements

The baccalaureate degree requires completion of a core curriculum and no fewer than 40 credits in fisheries. The program includes the subjects listed below or their equivalents. Each student also must meet the general University requirements for graduation. See the academic adviser for updates of requirements.

The Natural World (minimum of 46 credits): BIOL 201, 202, 203 (5, 5, 5), or BIOL 101-102 and GENET 371 (5-5, 5). *Option A*: CHEM 142 (5), 152 (5), 162 (6), and CHEM 220 (5) or 223 and 224 (4, 4); *Option B*: CHEM 120, 220, 221 (5, 5, 5). PHYS 114 (4), 115 (4). OCEAN 200 (3). BIOL 472 (4).

Mathematics and Statistics (credits beyond MATH 120): Q SCI 291, 292 (5, 5) or MATH 124, 125 (5, 5). Q SCI 381 (5).

Individuals & Societies (I&S) and Visual, Literary, & Performing Arts (VLPA): Minimum 10 credits in each area.

Writing Proficiency (minimum of 12 credits): 5 credits of English composition drawn from the University list, and at least 7 additional credits of writing-intensive courses.

Fishery Sciences (31 credits required courses): FISH 210 (5), 310 (5), 311 (5), 312 (5), 323 (3), 324 (4), 325 (4), plus a minimum of three courses totaling at least 12 credits in 400-level fisheries courses, and FISH 495 (3). Additional elective courses should be taken to bring the total to 180 credits. Assistance in selection of elective courses can be obtained from the academic adviser in the School. Students wishing to specialize in ecology and evolution, aquaculture, seafood science, wildlife biology, or fisheries management and conservation may obtain flyers listing recommended courses in 213 Fisheries Center.

Minors

Minor Requirements—Fisheries Science: Minimum of 27-28 credits to include FISH 310 (5 credits) or 311 (5); FISH 312 (5); FISH 323 (3) or 324 (4) or 325 (4); Q SCI 381 (5) or 482 (5); a minimum of two 400-level fisheries courses totaling at least 8 credits.

Minor Requirements—Food Science/Seafood Science: Minimum 28 credits to include FISH 452 (5), 470 (5), 480 (5), 490 (5); ENV H 441 (3); MICROM 301 (3), 302 (2).

Graduate Program

Graduate Program Coordinator 213 Fisheries Center, Box 357980 (206) 543-7457 instruct@fish.washington.edu

The School offers programs leading to the Master of Science and Doctor of Philosophy degrees.

Admission Requirements

Minimum requirements for admission to the graduate program in the School are a bachelor's degree from an institution of recognized standing, a GPA of 3.00 in the last two years of college work, and approval of the School and the Graduate School. Students enter the School from varied disciplines at many universities. All have in common a strong background in the sciences and mathematics. Previous training in fisheries is not required.

Applicants for the graduate program must submit a completed application form and description of their interests and objectives, GRE scores (general test only is required), transcripts of all previous college course work, three letters of recommendation, and a TOEFL score (only for applicants who are non-native English speakers). Applications must be postmarked by January 5. Admissions are limited to autumn quarter. Final acceptance is contingent on matching each incoming student with a faculty member having space and similar research interests. Applicants may contact the School of Fisheries Student Services Office for complete application materials, including a list of faculty and their research interests.

Master of Science

Applicants without a master's degree from a recognized school are expected to start at the master's degree level. At least one year of study, with completion of a thesis project, leads to the Master of Science degree. A minimum of 45 senior or graduate credits must be earned including 18 credits of thesis research. Students must take 12 credit hours of specified courses (the graduate core curriculum). A seminar on the results of the thesis research and an oral defense of the thesis are required for graduation. There is no foreign language requirement for the master's degree. Further details can be obtained from the Student Services Office.

Doctor of Philosophy

The student must complete at least three years of graduate study and complete a dissertation to earn the Ph.D. Certain credits earned in conjunction with a master's degree program may be applied toward the doctoral program. The same graduate core curriculum as required for the master's degree must be completed unless the student has already taken these same courses at the School of Fisheries or their equivalent. Students must pass written Qualifying and oral General Examinations by the third year of residency. Presentation and defense of a dissertation proposal is normally a part of the oral examination. Further details can be obtained from the Student Services Office.

Financial Aid

General information on graduate student support is available from the Office of Student Financial Aid, 105 Schmitz. Scholarships, fellowships, and teaching and research assistantships are available from a wide variety of sources for qualified graduate students. Most student support comes from research grants and contracts under the direction of individual professors. Graduate applicants are, therefore, urged to discuss their financial needs with professors in their potential major fields and with the graduate program coordinator during the early stages of the graduate application process. The graduate application will automatically be considered for any fellowships, research assistantships, or teaching assistantships available from the School of Fisheries.

Faculty

Interim Director

Kenneth K. Chew

Professors

Armstrong, David A. * 1978; MS, 1974, Oregon State University; PhD, 1978, University of California (Davis); shellfish physiology.

Bare, B. Bruce * 1969, (Adjunct); MS, 1965, University of Minnesota; PhD, 1969, Purdue University; harvest scheduling, biometry, forest land management, taxation, finance, management science.

Bell, Milo C. 1940, (Emeritus); BS, 1930, University of Washington; hydrology and fish guidance.

Brown, George W. * 1967, (Emeritus); PhD, 1955, University of California (Berkeley); fish biochemistry and biochemical ecology.

Burgner, Robert L. * 1956, (Emeritus); PhD, 1958, University of Washington; freshwater ecology and salmon biology.

Chew, Kenneth K. * 1962; PhD, 1962, University of Washington; shellfish biology and aquaculture.

Conquest, Loveday L. * 1978; PhD, 1975, University of Washington; statistics in forestry, fisheries, and environmental pollution monitoring.

Dickhoff, Walton W. * 1984; PhD, 1976, University of California (Berkeley); fish physiology, endocrinology, aquaculture.

Donaldson, Lauren R. 1941, (Emeritus); PhD, 1939, University of Washington; freshwater fish biology.

Erickson, Albert W. * 1974, (Emeritus); PhD, 1964, Michigan State University; wildlife biology and marine mammals.

Francis, Robert C. * 1986; PhD, 1970, University of Washington; fisheries oceanography, effects of climate on marine ecosystems, paleoecology, fisheries management.

Gallucci, Vincent * 1972; PhD, 1971, North Carolina State University; biomathematics and population dynamics.

Gunderson, Donald R. * 1978; PhD, 1975, University of Washington; marine fisheries and stock assessment.

Halver, John E. * 1958, (Emeritus); PhD, 1953, University of Washington; nutrition, biochemistry, toxicology.

Hershberger, William K. * 1970; PhD, 1968, Pennsylvania State University; fish genetics.

Hilborn, Ray * 1987; PhD, 1974, University of British Columbia (Canada); population dynamics, resource policy, stock assessment.

Karr, James * 1991; PhD, 1970, University of Illinois; ecology and conservation biology, water resources, environmental sciences, natural resources.

Kocan, Richard M. * 1976; PhD, 1967, Michigan State University; aquatic toxicology, fish and wildlife diseases.

Landolt, Marsha L. * 1975; PhD, 1975, George Washington University; fish and shellfish disease.

Liston, John * 1957, (Emeritus); PhD, 1955, University of Aberdeen (UK); food science, marine microbiology.

Mathews, Stephen B. * 1969; PhD, 1967, University of Washington: guantitative fishery management.

Miller, Bruce S. * 1971; PhD, 1969, University of Washington; life history and ecology of marine fishes, especially early life history.

Miller, Marc * 1979, (Adjunct); PhD, 1974, University of California (Irvine); maritime anthropology, cognitive anthropology and social/cultural change.

Naiman, Robert J. * 1988; PhD, 1974, Arizona State University; forest stream ecosystems, aquatic land-scape dynamics.

Pietsch, Theodore W. * 1978; PhD, 1973, University of Southern California; ichthyology.

Pigott, George M. * 1963; PhD, 1963, University of Washington; food engineering.

Plisetskaya, Erika M. * 1989, (Research Emeritus); PhD, 1973, Academy of Sciences (USSR); hormonal regulation of growth and metabolism in lower vertebrates.

Rogers, Donald E. * 1969, (Research Emeritus); PhD, 1967, University of Washington; sockeye salmon research.

Royce, William F. 1958, (Emeritus); PhD, 1943, Cornell University; applications of fisheries science.

Seymour, Allyn H. 1945, (Emeritus); PhD, 1956, University of Washington; radioecology.

Skalski, John R. * 1987; PhD, 1985, Cornell University; environmental sampling and effects assessment on wild populations, parameter estimation.

Smith, Lynwood 1965, (Emeritus); PhD, 1962, University of Washington; fish physiology.

Swartzman, Gordon Leni * 1973, (Research); PhD, 1969, University of Michigan; ecological modeling, quantitative natural resource management.

Taub, Frieda B. * 1961; PhD, 1959, Rutgers University; aquatic ecology, ecotoxicology, ecological risk assessment, harmful algae, closed ecological systems.

Wissmar, Robert C. * 1972; PhD, 1972, University of Idaho; ecology.

Wooster, Warren S. * 1976, (Emeritus); PhD, 1953, University of California (San Diego); effects of climate change on marine ecosystems, use of scientific information in marine management.

Associate Professors

Anderson, James J. * 1969; PhD, 1977, University of Washington; fisheries and oceanography.

Dong, Faye M. * 1984; PhD, 1976, University of California (Davis); fish nutrition, seafood quality.

Grue, Christian E. * 1989; PhD, 1977, Texas A&M University; wildlife toxicology, wildlife and fisheries science.

Huppert, Daniel D. * 1987, (Adjunct); PhD, 1975, University of Washington; economics and management of natural resources, especially marine fisheries.

Leschine, Thomas M. * 1983, (Adjunct); PhD, 1975, University of Pittsburgh; marine pollution management, ocean policy studies.

Nevissi, Ahmad * 1973, (Adjunct Research); MS, 1966, University of Hannover (Germany); PhD, 1973, University of Arkansas; radiochemistry.

Quinn, Thomas P. * 1986; PhD, 1981, University of Washington; fish ecology, evolution and behavior.

Sibley, Thomas H. * 1978; PhD, 1976, University of California (Davis); freshwater ecology.

VanBlaricom, Glenn R. * 1992; PhD, 1978, University of California (San Diego); aquatic wildlife, ecology of marine communities, wildlife-fisheries interactions.

Assistant Professors

Bentzen, Paul * 1993; PhD, 1989, McGill University (Canada); molecular population/evolution genetics of fishes and other aquatic organisms.

Foote, Christopher * 1991; PhD, 1988, University of British Columbia (Canada); behavioral ecology, population genetics and evolutionary biology of fishes.

Herwig, Russell P. * 1991, (Research); PhD, 1989, University of Washington; environmental microbiology, bioremediation, molecular microbial ecology, microbial phylogenetics.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Food Science

Courses for Undergraduates

FD SC 300 Nutrition for Today (3) NW Basic and applied nutrition and food science. Identification and physiological roles of nutrients, nutritional requirements, problems with over- and undernutrition, and nutritional and food-related diseases. Food additives, processing, safety, and their effects on overall nutrition. Current issues of public significance. Offered: jointly with NUTR 300.

FD SC 350 Safety of our Food Supply (3) NW Current topics surrounding the safety of our food supply, including nutritional, microbiological, chemical, and regulatory issues. Offered: jointly with FISH 350.

Courses for Graduates Only

FD SC 521 Graduate Seminar in Food Science (1, max. 3) Lectures and discussions of current problems and current research in food science. Offered on credit/no credit basis only. Prerequisite: permission of instructor.

FD SC 524 Microorganisms in Foods (3) Occurrence and activity of microorganisms important in foods as agents of spoilage, fermentation, and foodborne disease; relationship to food or food process; control and detection. Prerequisite: permission of instructor.

FD SC 525 Advanced Food Engineering (3) Application of modern engineering principles to operations such as evaporation, drying, distillation, pumping, and heat transfer in the handling, processing, and packaging of foods. To be taken concurrently with 526. Prerequisite: 470 or permission of instructor. Offered: Sp.

FD SC 526 Advanced Food Engineering Laboratory (3) Laboratory investigations concerned with the engineering of food processes and processing facilities. To be taken concurrently with 525. Laboratory fee may be required. Offered: Sp.

FD SC 534 Microorganisms in Foods Laboratory (1) Special projects or selected experiments designed to study microorganisms in foods. Laboratory fee may be required.

FD SC 600 Independent Study or Research (*)

FD SC 700 Master's Thesis (*)

Fisheries

Courses for Undergraduates

FISH 101 Introduction to Fisheries Science (5) NW Identification, distribution, and life histories of selected fish and shellfish; commercial and recreational fishing; utilization of fisheries products; problems faced in fisheries conservation and management. Offered: ASp.

FISH 210 Fisheries Techniques (5) NW Theory and techniques of field research in fisheries; practical sampling design, collection, and interpretation of data from river, lake, and marine environments. Field trips and laboratory demonstrations. Offered: ASp.

FISH 297 Special Topics in Fisheries (1-5) NW Selected topics in aquatic science and fisheries.

FISH 310 Biology of Shellfish (5) NW Commercially important mollusks, crustaceans, and other harvested invertebrates highlighted with respect to systematics, anatomy, reproductive strategies, feeding, and growth. Examples of species that demonstrate variability in recruitment and complex life cycles. Laboratories, field trips. Recommended: 10 credits biological science. Offered: A.

FISH 311 Biology of Fishes (5) NW Lecture, laboratory, and field study of the morphological, physiological, behavioral, and ecological diversity of fishes of the world; designed to provide a basic foundation for advanced courses in all areas of finfish fisheries. Recommended: 10 credits biological science. Offered: W.

FISH 312 Fisheries Ecology (5) NW Ecological characteristics of fishes and shellfishes in the important freshwater and marine habitats of North America. Relationship between physical aspects of the habitats and community structure. Impacts of human activities on diversity and abundance. Recommended: FISH 210; FISH 311. Offered: ASp.

FISH 323 Fisheries Management and Conservation (3) NW Importance of aquatic living resources; current world fisheries and their future, biological principles of fisheries conservation and management; development and implementation of fisheries policy; case histories of successful and unsuccessful fishery management systems. Offered: Sp.

FISH 324 Utilization of Fishery Commodities (4) NW Overview of factors affecting food quality of finfish and shellfish; chemical/physical properties of aquatic food products; microbiological/parasitological environmental forces affecting food safety; byproduct utilization; effects of processing on quality; regulatory aspects; future of aquatic food products. Recommended: either CHEM 120 or CHEM 142; 10 credits of biological science. Offered: W.

FISH 325 Introduction to Aquaculture (4) NW Survey of fish and shellfish species involved in commercial and enhancement aquaculture. History of aquaculture and current world production levels are examined. Emphasis on design and operation of aquaculture facilities, water quality and management, nutrition and diseases of fish and shellfish, harvesting, marketing, economics. Visits to aquaculture and related facilities. Recommended: 10 credits of biological science. Offered: Sp.

FISH 328 Forestry-Fisheries Interactions (4) NW Characteristics of forestry-fisheries interactions in terrestrial and aquatic landscapes. Effects of changes in landforms on forest and aquatic communities. River basin and watershed features. Forest stand dynamics, forest hydrology, fish and wildlife histories and behavior. Resource conflicts and resolution. Offered: jointly with F M 328; W.

FISH 350 Safety of our Food Supply (3) NW Current topics surrounding the safety of our food supply, including nutritional, microbiological, chemical, and regulatory issues. Offered: jointly with FD SC 350. FISH 401 Systematics, Zoogeography, and Evolution of Fishes (5) NW Advanced course in ichthyology with emphasis on living bony fishes of the world; past and present biodiversity, evolutionary history, classification, comparative morphology, geographic distribution, and historical zoogeography. Recommended: 10 credits biological science. Offered: odd vears: So.

FISH 404 Diseases of Aquatic Animals (5) NW Overview of communicable and noncommunicable diseases that affect fish and shellfish. Major pathogens of free-ranging as well as captive animals discussed. Students learn to recognize, prevent, and control economically and ecologically important disease syndromes. Recommended: 10 credits biological science.

FISH 405 Molluscan Aquaculture and Fisheries (5) NW Biology, ecology, management, and economic importance of oysters, clams, scallops, mussels, abalones, cephalopods, and other mollusks. Emphasis on techniques for production through aquaculture as well as harvest strategies for wild stocks. Field trips. Recommended: 10 credits biological science. Offered: Sp.

FISH 406 Crustacean Fisheries and Aquaculture (4) NW Biology, ecology, management, and economic importance of shellfish, emphasizing crustaceans. Wild populations and aquaculture production of important phyla discussed. Field trips. Recommended: 10 credits biological science. Offered: W.

FISH 415 Physiology of Aquatic Animals (5) NW Types, occurrences, and roles of inorganic and organic substances in supporting physiological functions, including osmoregulation, respiration, circulation, bioenergetics, digestion, and musculo-skeletal systems. Shows the integration of these processes, including stress and reproductive responses, by neuroendocrine systems. Recommended: 10 credits biological science. Offered: odd years; W.

FISH 420 Early Life History of Marine Fish (4) NW Modes of reproduction; spawning; development, sampling, culture, and identification and systematics of eggs and larvae; ecology and survival of eggs and larvae; and larval and juvenile recruitment. Not available for credit to students who have received credit for 425. Recommended: FISH 311. Offered: odd years; W.

FISH 425 Life History of Marine Fishes (9) NW Miller Early life history, including modes of reproduction, spawning, fecundity, egg and larva development, and sampling and ecology of eggs and larvae; aging, food habits, subpopulation identification, and migrations of marine fishes. Application to Friday Harbor Laboratories required by February 1. Recommended: FISH 311. Offered: Friday Harbor Laboratories; even years; Sp.

FISH 428 Restoration of Fish Communities and Habitats in River Ecosystems (5) NW Examines opportunities to encourage recovery through natural developmental processes that enhance the complexity of habitats and connectivity between habitats in the river basin. Class discussion and participation on field trips focuses on current restoration concepts for ecosystems, designs of projects, and case studies. Recommended: fish ecology and hydrology courses. Offered: odd years; Sp.

FISH 430 Biological Problems in Water Pollution (3/5) NW Ecological risk assessment of toxic chemicals and problems associated with electrical power production. Considers safety and toxicity and effects on individuals, populations, and communities. Laboratory covers simulation models of chemical exposure and community effects. Recommended: senior or graduate standing in fisheries, engineering, or related field. Offered: jointly with CIVE 461; W. FISH 434 Ecological Effects of Waste Water (3/5) NW Principles of aquatic ecology that relate to causes and effects of water quality problems in lakes and streams. Population growth kinetics, nutrient cycling, eutrophication; acidification, oxygen/temperature requirements, and effects of various wastes on aquatic animals. Offered: jointly with CIVE 462; A.

FISH 438 Biological Monitoring and Assessment (5) NW Explores the technical questions (conceptual, sampling, and analytical), the rationale, policy relevance, and legal basis for tools—existing and needed—to assess ecological health. Prepares students to see the biological components of ecological systems in diverse ways. Offered: jointly with BIOL 438.

FISH 444 Aquatic Resource Conservation Genetics (4) NW Genetic concepts and methods in conservation and management of aquatic species. Population, evolutionary and quantitative genetic principles. Use of proteins, mitochondrial DNA, and microsatellite DNA in analyzing genetic variation. Genetic aspects of threatened populations and artificial propagation. Laboratory experience with analytical techniques. Recommended: GENET 371.

FISH 450 Salmonid Behavior and Life History (4) NW Marine distribution, homing migration, and spawning behavior of adult salmon: incubation, emergence, migration, and residence of fry; fingerling distribution and residence with reference to species interaction and population evolution. Recommended: FISH 311. Offered: A.

FISH 451 Reproduction and Early Development in Fish (4) NW Reproductive development, sexual maturation, spawning and incubation in selected fish species; embryology and developmental traits of different salmonid and non-salmonid species; practical experience in artificial spawning techniques, egg handling and care, incubation techniques and the handling of newly-hatched alevins. Recommended: FISH 310; FISH 311. Offered: A.

FISH 452 Fish and Shellfish Nutrition (5) NW Basic nutritional requirements and interactions of finfish and shellfish in nature and artificial environments. Feed ingredient classification, processing, and nutrient profiles. Fish feed formulation techniques. Experimental design and completion of laboratory nutritional study. Recommended: 10 credits biological science. Offered: Sp.

FISH 454 Aquatic Wildlife Ecology (3) NW Conceptual examination of relationships of aquatic wildlife populations (mammals, birds, reptiles, amphibians) to one another and to the aquatic realm. Application of conceptual background to contemporary high-profile issues in aquatic wildlife ecology, conservation, and management. Included is exposure to primary technical literature in the field. Offered: jointly with ESC 454; even years; Sp.

FISH 455 Introduction to Wildlife Toxicology (3) NW Overview of wildlife toxicology: history/development of the field, regulatory framework; methods used to assess risks contaminants pose to wildlife; major classes of contaminants and their direct, sublethal, and indirect effects; and contemporary threats of contaminants to wildlife, their habitats, and prey. Offered: jointly with ESC 457; even years; W.

FISH 456 Fundamentals of Fish Population Dynamics and Management (4) NW Conveys fundamental concepts of fish population dynamics and fishery management within context of real-world fisheries problems. Lectures discuss notation, terminology, mathematical models, fisheries principles, and case studies. Laboratory time devoted to practical applications, problems. Recommended: either MATH 125, MATH 135, or Q SCI 292; Q SCI 381. Offered: jointly with Q SCI 456; A. FISH 457 Methods of Abundance Estimation (4) NW Methods of estimating fish abundance by direct sampling and indirectly from tagging, catch, and effort analysis. Confidence limits and bias adjustments. Design of marine fishery surveys using statistical sampling principles. Laboratory work with real fishery data and data collected during trawl sampling survey. Recommended: Q SCI 292; Q SCI 381; Q SCI 456 or FISH 456. Offered: jointly with Q SCI 457; W.

FISH 458 Fisheries Stock Assessment (4) NW Emphasizes quantitative analysis of fisheries data to determine how the fishery would respond to alternative management actions. Major topics include production models, stock and recruitment, catch at age analysis, and formulation of harvest strategies. Prerequisite: either Q SCI 456 or FISH 456. Offered: jointly with Q SCI 458; Sp.

FISH 470 Aquatic Food Engineering (5) NW Quantitative physics/chemistry of harvesting, processing, storing, packaging, and marketing aquatic foods. Solving problems of mass and energy transfer with regard to processes and to changes in important food components. Use of computer process control involving basic food engineering principles. Recommended: either CHEM 120 or CHEM 142; MATH 125, MATH 135, or Q SCI 292; PHYS 115. Offered: W.

FISH 475 Marine Mammalogy (3) NW Evolution, taxonomy, physiology, life history, and behavior of marine mammals; the techniques of studying and the management and conservation of them. Offered: odd years; Sp.

FISH 476 Laboratory of Marine Mammalogy (2) NW Evolution, taxonomy, physiology, life history, and behavior of marine mammals; the techniques of studying and the management and conservation of them. Laboratory fee may be required. To be taken concurrently with 475. Recommended: 15 credits biological science; vertebrate anatomy; physiology. Offered: odd years; Sp.

FISH 480 Chemical and Analytical Methods in Fisheries (5) NW Chemical composition, structure, properties, and chemical changes of fishery and other food products. Principles of separation and identification of food components by chromatographic, spectroscopic, and immunochemical methods. Recommended: CHEM 120 or CHEM 142; FISH 324. Offered: Sp.

FISH 490 Aquatic Environmental and Seafood Microbiology (5) NW Considers role, identity, and distribution of microorganisms in aquatic environments; in fish, shellfish, and marine mammals. Control and identification of seafood-borne disease. Recommended: either BIOL 102 or BIOL 203; either CHEM 220, CHEM 224, or CHEM 239. Offered: A.

FISH 495 Senior Project (3) Self-directed research project. Applied or basic research in an area relating to fisheries science. Credit/no credit only. Offered: AWSpS.

FISH 497 Special Topics in Fisheries (1-5) NW One-time offerings of topics in fisheries by resident or visiting faculty.

FISH 498 Internship/Experiential Learning (1-15) Structured, practical training in the fishing industry, government agencies and other areas utilizing fisheries, food science, or quantitative science expertise. Experiences are supervised and evaluated. Written reports required. Credit/no credit only. Offered: AWSpS.

FISH 499 Undergraduate Research (1-15) Individual research within the School of Fisheries. Each project supervised by an individual faculty member. Written reports required. Credit/no credit only. Offered: AWSpS.

Courses for Graduates Only

FISH 504 Fish and Shellfish Pathology (5) Pathological effects of infectious and non-infectious diseases in fish and shellfish. Emphasis on immunological responses, contemporary diagnostic methods, control strategies, and environmental factors that influence disease transmission.

FISH 507 Special Topics in Fisheries (1-5, max. 15) Recommended: permission of instructor.

FISH 515 Advanced Topics in Physiology (3) Integration of physiological processes from molecular to organ system levels. Recent advances in control of reproduction, development, growth, metabolism, and osmoregulation. Recommended: 415 or equivalent and BIOC 405, 406 or BIOC 440, 441, 442 and ZOOL 438 or permission of instructor. Offered: even years, W.

FISH 520 Graduate Seminar (1) Introduction to research in fisheries. Required of all first-year graduate students. Credit/no credit only. Offered: AWSp.

FISH 521 Scientific Method in Fisheries (4) The process, strategies, and approach of scientific discovery and the scientific method as applied to areas of fisheries science. Principles are illustrated through case studies. Principles are applied to the development of a written research proposal. Offered: Sp.

FISH 522 Classical Literature of Fisheries Science and Aquaculture (2) Discussion of the classic literature of fisheries science and aquaculture. Both oral and writing communication skills stressed. Credit/no credit only. Offered: A.

FISH 525 Ecology and Behavior of Fishes (3) Basic principles of ecology and behavior (e.g., habitat associations, competition and predation, migrations and movements, reproductive patterns) as applied to fishes. Critical evaluation of current literature and fieldwork required. Recommended: 311 or equivalent or permission of instructor. Offered: Sp.

FISH 526 Advanced Fisheries Ecology II: Populations, Communities, and Ecosystems (5) Recent advances in the study of aquatic communities and ecosystems in relation to a number of contemporary issues in fisheries science and management. Focus on case histories drawn from freshwater, estuarine, and marine ecosystems. Emphasis on relationships between science and public policy in attempting to resolve these issues. Offered: A.

FISH 527 Aquatic Community Responses to Chemical Stress (3) Aquatic ecotoxicology; bridging the gap between physiological and ecosystem responses to toxic chemicals. Detecting effects against natural variability; altered species abundances and dominance, counter-intuitive responses. Case histories, controversies on data interpretation. Recommended: at least one course in ecology, limnology, oceanography or permission of instructor. Offered: Sp.

FISH 529 Topics in Streamside Studies (1) Discussion by invited speakers on current research related to streamside studies. Offered: jointly with CFR 529; AWSp.

FISH 535 Aquatic Toxicology (3) Principles of toxicology applied to aquatic organisms. Recognition of physiological and biochemical responses of organisms to toxins and practical application of toxicity testing methods to identification of pollution and toxins in aquatic environment. Toxicity test design, interpretation, and data analysis. Recommended: organic or biochemistry and physiology or equivalent or permission of instructor.

FISH 539 Forestry-Fisheries Interactions: Case Studies (3) Case studies of streamside management situation at the watershed and basin level. Topics include resource conflict resolution, current and future management alternatives, landscape dynamics, role of disturbance, and policy options. Prerequisite: graduate standing in forestry, fisheries, or related field; undergraduates by permission of instructor. Offered: jointly with ESC 539.

FISH 542 Principles and Applications of Molecular Methods (3) Techniques of molecular analysis with emphasis on DNA methods, including PCR, DNA sequencing, RFLP, RAPD and VNTR analysis and cloning. Applications of these techniques to fisheries, aquaculture, oceanography, population and evolutionary studies, and other areas of science. Prerequisite: permission of instructor. Offered: jointly with OCEAN 574; A.

FISH 543 Molecular Techniques (4) Laboratory on DNA methods. Experiments analyzing genetic variation at the intra- and interspecific level, including one experiment of student's own design. Techniques include DNA extraction and quantitation, PCR, DNA sequencing, RFLP analysis and cloning Prerequisite: FISH 542 or OCEAN 574 permission of instructor. Offered: jointly with OCEAN 575.

FISH 544 Genetics in Fish Management and Production (3) Possible changes in genetic characteristics and response of populations with the current types and levels of fisheries resource manipulation. Includes genetic considerations in population models, quantitative genetics and breeding, and use of genetic markers for population analysis. Recommended: 444, 451, Q SCI 482, 483, and upper-division or graduate standing. Offered: odd years.

FISH 547 Stream and River Ecology (5) Characterizations of stream and river ecosystems from a watershed perspective. Emphasis on fundamental processes affecting the structure and dynamics of aquatic communities and the riparian zone. Resource conflicts, new technologies, field trips, and class projects. Offered: jointly with ESC 547; Sp.

FISH 548 Special Topics in Streamside Studies (2, max. 6) Contemporary problems and issues in forestry, fisheries, and wildlife management in watersheds. Topics vary, yet focus on interactions of land and water resources in the forests of the Pacific Northwest. Recommended: permission of instructor. Offered: jointly with ESC 548.

FISH 551 Advanced Topics in Aquaculture (3) Critical review of the literature and hands-on application of skills and techniques in aquaculture.

FISH 552 Current Topics in Fish Nutrition (5) Nutrient requirements of finfish and shellfish for growth, development, and reproduction. Feed ingredient classification, processing, and nutrient profiles. Fish feed formulation techniques. Critical review of historical papers and current literature in finfish and shellfish nutrition. Offered: Sp.

FISH 556 Mathematical Analysis in Fisheries Stock Assessment (3) Analytic approaches to stock assessment and population management applications of parent-progeny models and logistic models; biological and economic yields of natural populations; analysis of population data on computers. Recommended: Q SCI 292, 392, 456, and 483 or permission of instructor.

FISH 557 Estimation of Population Parameters (4) Statistical analysis of population data; design and analysis of mark-recapture experiments on natural populations; laboratory work on computers. Recommended: probability theory and Q SCI 292 and 483.

FISH 558 Advanced Analysis in Fisheries Stock Assessment (3) Deterministic and stochastic representations of age-dependent and size-dependent models for stock assessment; analysis of multi-species models; risk analysis and uncertainty in fisheries management strategies; analysis of population data on computers. Recommended: 456, 458, 557, or permission of instructor. FISH 560 Methods of Acoustic Stock Assessment (3) Theory and implementation of processing of acoustic fish target signals. Application for estimation of fish stocks and the statistical properties of the estimation procedure. Offered: irregularly.

FISH 565 Marine Fish Biology (9) Taxonomy, ecology, and life history of the fishes of the San Juan Islands and northeast Pacific Ocean. Prerequisite: permission of instructor. Offered: Friday Harbor Laboratories; odd years; S.

FISH 580 Introduction to the Management of Fisheries (3) Introduction to fisheries and the multidisciplinary aspects of their management. Emphasis is on integration of biological, socio-economic, and institutional aspects of fisheries management. Offered: jointly with SMA 580.

FISH 581 Fishery Management: Case Studies (5) Examination of historical case studies chosen to illustrate specific fishery management problem areas. Faculty presentations occupy first half of quarter, student presentations the second half. Prerequisite: 580. Offered: jointly with SMA 581.

FISH 582 Fishery Management: Contemporary Issues (5) Focuses on multi-disciplinary, in-depth analysis of specific problems, including biological and economic assessments, evaluation of alternative management systems, and formulation of specific research, data collection, and management recommendations. Prerequisite: 581. Offered: jointly with SMA 582.

FISH 600 Independent Study or Research (*) Credit/no credit only.

FISH 700 Master's Thesis (*) Credit/no credit only.

FISH 800 Doctoral Dissertation (*) Credit/no credit only.

Marine Affairs

Graduate Program

Graduate Program Coordinator 3707 Brooklyn NE, Box 355685 (206) 543-4326, (206) 543-7004

Master of Marine Affairs

The School of Marine Affairs offers an interdisciplinary program of study leading to the Master of Marine Affairs degree. Marine affairs concerns management and policy questions on the uses of the coastal and offshore regions of the ocean and their resources. The core curriculum includes courses from marine affairs, economics, law, oceanography, political science, and public affairs. The School of Law has a related Master of Laws degree program with specialization in marine affairs.

A major program objective is to prepare students for professional careers in policy making, management, teaching, and research. Breadth of study is emphasized, and all students are expected to gain familiarity with relevant aspects of the social, technological, and environmental sciences. In addition, each student is expected to develop a professional and scholarly proficiency in a particular aspect of marine affairs.

Completion of the M.M.A. program normally requires two academic years for students who have recently received a baccalaureate degree. During the first year, students develop a comprehensive understanding of the marine affairs field and acquire analytic skills. During the second year, a special competence is developed in an area of concentration (e.g., coastal zone planning and management; marine societies, institutions, and decision processes; living marine resources and fishery management; marine environmental protection; ports and marine transportation), and a thesis is prepared and presented under the guidance of a faculty supervisory committee. Individual courses of study may be adjusted to accommodate prior experience and academic background, and especially qualified students, such as those in mid-career, may be able to meet the degree requirements in 18 months of study.

Joint Curriculum in Fisheries Management

The School of Fisheries and the School of Marine Affairs offer a joint curriculum in fishery management. The curriculum is designed to provide professional fisheries managers with the skills needed to participate effectively in the contemporary world of fisheries. These skills include a working understanding of fisheries stock assessment, fisheries economics, law, policy analysis, and political science. The curriculum consists of recommended courses in these fields of study and three special courses: SMA/FISH 580, Introduction to Fisheries Management and Development; SMA/FISH 581, Case Histories in Fishery Management; and SMA/ FISH 582, Contemporary Issues in Fishery Management. Structured to accommodate students with diverse backgrounds, these courses pursue a multidisciplinary approach to understanding, analysis, and practice of fishery management. A student in either school will develop an appropriate program of study which will include these core courses. This program of study is appropriate for graduate students without significant experience in fisheries management and for mid-career fishery professionals seeking additional formal training.

Admission Requirements

Admission to the School of Marine Affairs is based on evaluation of required application materials in competition with other applicants. Required materials include Graduate Record Examination general-test scores, completed departmental supplementary information form, three letters of recommendation, official academic transcripts, and a statement of career objectives. In addition, applicants must make separate application to, and be accepted by, the University's Graduate School. Course sequences begin each autumn quarter, and new students normally are admitted only at that time.

Financial Aid

The School of Marine Affairs has a limited number of positions for graduate student appointments as research assistants. Applicants in need of support are urged to investigate outside sources of funding.

Faculty

Director

Marc Hershman

Professors

Alverson, Dayton L. * 1980, (Affiliate); PhD, 1967, University of Washington; marine affairs.

Aron, William 1982, (Affiliate); PhD, 1960, University of Washington; management of living marine resources.

Bodansky, Daniel * 1989, (Adjunct); JD, 1984, Yale University; international law, international environmental and human rights law, civil procedure.

Crutchfield, James A. * 1960, (Emeritus); PhD, 1954, University of California (Berkeley); natural resources economics, policy and management, especially marine and environmental resources.

Delaney, John R. * 1977, (Adjunct); PhD, 1977, University of Arizona; geological oceanography, origin of oceanic crust, igneous petrology.

COLLEGE OF OCEAN AND FISHERY SCIENCES / MARINE AFFAIRS 457

Dowd, Thomas J. 1986, (Affiliate); MMA, 1982, University of Washington; port and shipping management, operations, planning, and development.

Echols, Louie S. 1985, (Affiliate); LLB, 1967, Yale University; legislative and budget process, program management, science and public policy.

Francis, Robert C. * 1986, (Adjunct); PhD, 1970, University of Washington; fishery oceanography, effects of climate on marine ecosystems, paleoecology, fisheries management.

Gallucci, Vincent * 1972, (Adjunct); PhD, 1971, North Carolina State University; biomathematics and population dynamics.

Hershman, Marc * 1976; JD, 1967, Temple University; LLM, 1970, University of Miami (Florida); coastal zone management law.

Miles, Edward L. * 1974; PhD, 1965, University of Denver; international law and organization, science and international relations, marine policy.

Miller, Marc * 1979; PhD, 1974, University of California (Irvine); maritime anthropology, cognitive anthropology and social/cultural change.

Olson, David J. * 1974, (Adjunct); PhD, 1971, University of Wisconsin; American government and politics (urban, state, and labor relations).

Vesper, Karl H. * 1969; PhD, 1969, Stanford University; business policy, mechanical engineering, marine studies.

Wooster, Warren S. * 1976, (Emeritus); PhD, 1953, University of California (San Diego); effects of climate change on marine ecosystems, use of scientific information in marine management.

Associate Professors

Broches, Charles F. 1992, (Affiliate); PhD, 1984, University of California (Santa Barbara); educational policy, Indian fishing rights in Washington.

Canning, Douglas 1997, (Affiliate); MES, 1987, Evergreen State College; coastal zone management, public trust doctrine, global climate change and sea level rise.

Copping, Andrea * 1992, (Affiliate); PhD, 1982, University of Washington; marine environment and water quality, marine science/marine policy.

De Master, Douglas Paul * 1994, (Affiliate); PhD, 1978, University of Minnesota; marine resource managment, conservation biology.

Denning, Michael 1992, (Affiliate); PhD, 1984, University of Washington; trade and transportation policy, shipping and port management.

Duxbury, Alyn C. * 1954, (Emeritus); PhD, 1963, Texas A&M University; estuarine processes and the management of human uses of these marine systems.

Fluharty, David L. * 1983, (Research); PhD, 1977, University of Michigan; natural resource and environmental policy.

Goodwin, Robert F. 1997, (Affiliate); MA, 1972, University of Washington; geography of the coastal zone, coastal zone management, urban waterfront development.

Huppert, Daniel D. * 1987; PhD, 1975, University of Washington; economics and management of natural resources, especially marine fisheries.

Jones, Linda L. 1984, (Affiliate); PhD, 1978, University of California (San Diego); marine mammal management, ecology of cetaceans.

Kaczynski, Wlodzimierz M. * 1977; PhD, 1973, University of Gdansk (Poland); fishery economics, international joint ventures in marine fisheries, international fisheries policy.

Leschine, Thomas M. * 1983; PhD, 1975, University of Pittsburgh; marine pollution management, ocean policy studies.

Marasco, Richard J. 1979, (Affiliate); PhD, 1970, University of California (Berkeley); fishery economics, fishery management.

Assistant Professors

Allen, Craig H. 1994; JD, 1989, University of Washington; marine affairs, evidence, environmental regulation.

Olson, Annette M. * 1991; PhD, 1992, Oregon State University; use of ecological models in environmental decision making.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

SMA 455 Marine Business Environment in Russia and Eastern Europe (3) I&S Kaczynski International marine business environment of Russia and the maritime nations of East Europe; their transition process from communist to free market economic systems. Covers aspects of doing business in marine-related fields such as shipping, fisheries, shipbuilding, ports, and land infrastructures, marine tourism, and water sports. Offered: jointly with SISRE 455.

SMA 499 Undergraduate Research (1-3, max. 6) Research on assigned topics under the supervision of faculty members. Prerequisite: permission of instructor.

Courses for Graduates Only

SMA 500 Marine Affairs (5) *Miller* Surveys a wide range of academic disciplines and substantive problems pertinent to interaction of human beings and the world's oceans and coasts. Management of living/nonliving resources, shipping, scientific research, pollution, recreation, and others. Lecture and discussion by invited specialists.

SMA 505 Introduction to Administrative Law and Process (2) Hershman Constitutional and administrative law applied to selected coastal and marine statutes. How to research legislative and administrative materials. Reading and briefing selected judicial opinions. Control of administrative agencies by the executive, legislative, and judicial branches. Designed for non-law graduate students pursuing natural resources and environmental subjects. Prerequisite: permission of instructor.

SMA 506 International Law of the Sea (4) Burke Ways nations claim authority to regulate activities at sea. Fundamental policies and decisions regarding navigation for commercial and military purposes, fisheries, exploitation and conservation, continental shelf resources, scientific research, protection of environment, deep-sea mining, and other uses of the ocean. Offered: jointly with LAW B 561.

SMA 507 International Organizations and Ocean Management (3) *Miles* Survey of the manner in which international organizations attempt to manage and regulate the uses of the ocean. Primary emphasis is on the analysis of processes that support or constrain these organizations and on the search for alternative policies and organizations. Prerequisite: 500 or permission of instructor. Offered: jointly with PB AF 507.

SMA 508 National Marine Policy Processes (3) *Miles* Comparative institutional dimensions of marine policy processes. Marine policy context at the national level and the dynamics that drive policy formulation and policy implementation.

SMA 509 Principles of Coastal Zone Management (3) Hershman Managing multiple uses of coastal waters and the adjacent land; conflicts arising from competition for space and resources; legal and organizational problems associated with overlapping jurisdiction; legal basis for management; planning and management experience in the United States and abroad. Prerequisite: 500 or permission of instructor. Offered: jointly with LAW B 566.

SMA 510 Ecological Concepts for Decisionmakers (3) Olson Evaluation of ecological assumptions implicit in discussion, development, and implementation of environmental policy. Lectures focus on marine environmental policy debates and decisions that exemplify the use of ecological concepts. Group projects to evaluate the ecological foundations of management plans, regulations, legislation, or other policy problems.

SMA 511 Coastal Environment Management (3) Olson Coastal zone planners and managers evaluate proposed and ongoing use activities that affect wetland, estuarine, and nearshore environments. Concepts and techniques for retrieving, analyzing, and using technical environmental information in planning and decision making. Washington state case examples and practical exercises.

SMA 514 Marine Pollution Management Issues (3) Leschine Management aspects of marine pollution, emphasizing two-way interaction between environmental managers and environmental and policy scientists which ideally shapes policy.

SMA 515 United States Law and the Marine Environment (3) Allen Federal/state boundary problems, living resources management, offshore oil and gas production, vessel and tanker safety. Offered: jointly with LAW B 565.

SMA 516 Seaport Management (3) Role of port authorities in management of marine uses: cargo and trade, economic development, tourism and recreation, and fisheries. Management functions of planning, marketing, finance, engineering. Examples and guest speakers from the Port of Seattle and other Puget Sound ports. Prerequisite: 500 or permission of instructor.

SMA 517 Marine Uses: Transportation and Commerce (3) Role of the oceans in the transportation of people and materials, character and trends in vessel design and terminal facilities, pattern and nature of industry organization, regulations, economics of the shipping industry, management of fleets and vessels, individuals at sea and ashore, national policies affecting the merchant marine and port facilities. Prerequisite: 500 or permission of instructor.

SMA 519 Marine Policy Analysis (3) Leschine Goal is appreciation for and basic working knowledge of techniques used in policy analysis. Techniques are explored in both quasi-realistic settings and in application to real world problems of marine policy.

SMA 536 Applied Microeconomics for Marine Affairs (3) Acquaints students with microeconomic tools commonly employed in policy analysis. Emphasis is placed on mastery of basic concepts, definitions, and models useful to marine policy, including determinants of price and outputs in competitive markets, effects of other market structures, market failure, and applied welfare economics.

SMA 537 Economic Aspects of Marine Policy I (3) Huppert Development of pertinent economic concepts and their application to selected topics in marine policy decision making, including maritime policy, OCS oil and gas development, and wetlands management. Prerequisite: 500 or permission of instructor. Offered: jointly with ECON 537.

SMA 538 Economic Aspects of Marine Policy II (3) Huppert Development of pertinent economic concepts and their application to fisheries management and development. Prerequisite: 508 or permission of instructor. Offered: jointly with ECON 538. SMA 540 International Strategic Planning for Marine Resources (3) Kaczynski Marine economies are affected by shrinking resources, population pressure, expanding economic globalization. Case studies from the third world and economies in transition illustrate strategic economic planning. Students research selected topics. Prerequisite: 500 or permission of instructor. Offered: A.

SMA 550 Special Topics in Marine Studies (1-3, max. 18) Examination of various aspects of marine studies. Content varies, depending upon the interests of the faculty and students. Intended for the joint participation by the faculty and advanced students in the investigation of selected topics. One or more groups are organized each quarter.

SMA 555 Russian Ocean Policy (3) Kaczynski Russian ocean policy following Perestroika and disintegration of Soviet empire. Discusses Russian navy, fishery industry, merchant marine, ocean research fleet in light of international agreements and joint ventures and new politic, economic, and social environments. Prerequisite: knowledge of Soviet/Russian socio-economic problems or permission of instructor. Offered: jointly with SISRE 555.

SMA 580 Introduction to the Management of Fisheries (3) *Miller* Introduction to fisheries and the multidisciplinary aspects of their management. Emphasis is on integration of biological, socio-economic, and institutional aspects of fisheries management. Offered: jointly with FISH 580.

SMA 581 Fishery Management: Case Studies (5) Huppert Examination of historical case studies chosen to illustrate specific fishery management problem areas. Faculty presentations occupy first half of quarter, student presentations the second half. Prerequisite: 580 or permission of instructor. Offered: jointly with FISH 581.

SMA 600 Independent Study or Research (*)

SMA 700 Master's Thesis (*)

Oceanography

108 Oceanography Teaching

The School of Oceanography, which had its beginnings in 1930, offers courses and conducts basic research in oceanography, the science that examines physical, geological, chemical, and biological processes in the ocean and interactions of the ocean with the earth, the biosphere, and the atmosphere. Education and research in the School include studies of seawater in motion; life in the sea; chemical composition and properties of seawater; interactions between the sea and the atmosphere, the sea and the land, sediments and rocks beneath the sea; and the geophysics of the ocean floor. Because the science of oceanography is interdisciplinary in nature, joint programs are maintained in the areas of geochemistry and biochemistry, geophysics, atmospheric sciences, marine biology and botany, and geophysical fluid dynamics, with the departments of Botany, Zoology, Atmospheric Sciences, Applied Mathematics, Geophysics, and Geological Sciences, and with the other units in the College of Ocean and Fishery Sciences.

Courses

A full spectrum of basic and advanced courses is offered in each area of specialization in oceanography: biological oceanography, chemical oceanography, marine geology and geophysics, and physical oceanography. Among the wide variety of courses open to students are the following: zooplankton ecology, marine microbiology, advanced problems in chemical oceanography, ocean and climate variation, sedimentary dynamics and history of the ocean, marine science of coastal zone management, and human impacts on the ocean. Summer-quarter instruction is offered both on the main campus and at the Friday Harbor Laboratories on San Juan Island.

Advising

The Student Services Office is staffed by an academic counselor, who assists students with curriculum, scheduling, and career counseling. Students also consult with a faculty adviser.

Research

Each year the School participates in a broad range of oceanographic investigations, ranging from individual research projects to multidisciplinary or multiuniversity projects. Major biological programs are carried out in Puget Sound, in the waters of the continental shelf off Washington and California, and in the North Pacific Ocean. These projects include investigations of the processes governing the communities or organisms in the water column, on the seabed, and in the surf zone, and the biota associated with deep-sea hydrothermal vents. Chemical oceanography includes work on the distribution of organic material and trace metals in Puget Sound and the open sea, the geochemistry of the sediment-water interface, and study of chemical processes in waters trapped in the sediments. Geological investigations include theoretical studies and field experiments on sediment motion and sedimentary processes. This work ranges from the deep waters of the Scotian Rise in the Atlantic Ocean to Prudhoe Bay, Barents Sea, New Guinea, the Amazon, and the east and west coasts of the United States.

The effect of organisms on sediment transport is a major interdisciplinary program among geological, biological, and physical oceanographers. Geophysical research is concerned with the oceanic crust and upper mantle. Topics include seismic experiments on plate boundaries, crustal formation, hydrothermal processes in the Juan de Fuca-Gorda Ridge System, and studies of the earth's magnetic field. Physical oceano-graphic programs range from large-scale circulation studies of the North Pacific, the North Atlantic, the tropical oceans, and the Antarctic circumpolar current to coastal circulation studies and small-scale mixing programs. The theoretical and experimental programs include studies of air-sea interaction, surface and internal waves, oceanic fronts, and sea ice.

Studies in local waters include sediment transport, mixing processes, subsurface structure, and biological communities in the fjords and inlets of Puget Sound. The UW Marine Bioremediation Program currently explores the potential remediative activities of organisms in polluted marine sediments. The newly launched Puget Sound Regional Synthesis Model (PRISM), an interdisciplinary initiative, proposes to develop and sustain a dynamic understanding of the environmental and human factors that will shape the estuary's future.

Facilities and Vessels

Housed in four large and several smaller buildings on campus by Portage Bay, the School is equipped with extensive laboratories and teaching facilities, including controlled-environment rooms, a paleomagnetics laboratory, a sea-ice laboratory, and a geophysical fluid dynamics laboratory. A new 100,000 square-foot oceanography research building is scheduled for completion in 1999, which will feature state-of-the-art laboratory facilities and provide additional office space for faculty and students.

The School operates its own midscale interactive computer and highly specialized laboratory instruments, such as mass spectrometers, scanning electron microscopes, and seawater sediment transport flumes. Access to other more sophisticated facilities and instruments, as well as super computers, is available on campus. Docks provide mooring for the School's two research vessels. Deep-ocean research programs are accommodated on the 274-foot *R/V Thomas G. Thompson.* Graduate students are involved in all of the cruises, most often for their thesis research. The 65foot *R/V Clifford A. Barnes* undertakes short cruises into Lake Washington and Puget Sound for the instructional and research programs.

Friday Harbor Laboratories on San Juan Island offer unique opportunities for research and study. Specialized courses in new areas of oceanography are offered each summer. The facilities are used by faculty members and students throughout the year for oceanographic research.

Funding

The School is supported primarily by funds from the state of Washington and federal agencies. Major sources of federal funding include the National Science Foundation, National Oceanic and Atmospheric Administration, Office of Naval Research, and Department of Energy. Funds are also provided by various state and local government agencies and private organizations.

Undergraduate Program

Adviser Della Rogers 108 Ocean Teaching, Box 357940 (206) 543-5039 student@ocean.washington.edu

Students may earn a Bachelor of Science or a Bachelor of Arts degree, with specialization in biological, chemical, or physical oceanography, or marine geology and geophysics.

Careers in Oceanography

Oceanographers are employed predominantly in research, both pure and applied. They seek to produce a new understanding of an ocean system and to explore the potential consequences to the marine environment of human activities. They collect samples and data, analyze and interpret them, and prepare and disseminate the results. Oceanographers work at sea, on land, in laboratories, and with computers.

In addition, a degree in oceanography can serve as a background for a career in teaching, administration, marine affairs, environmental studies, production, inspection, computing, instrumentation development, and statistical analysis.

Most oceanographers are employed in educational and research institutions. Many others work for federal government agencies, such as the National Oceanic and Atmospheric Administration, U.S. Geological Survey, Office of Naval Research, U.S. Department of Interior, U.S. Coast Guard, Naval Oceanographic Research and Development Activity, and National Marine Fisheries Service. Other employers include state and local governments in coastal areas and independent consulting firms that conduct research for companies and government agencies. Additional private-sector positions are available in research and development for companies extracting and harvesting products from the oceans.

An oceanographer's duties are diverse, dictated by the nature of the profession. Research projects are as varied as an oceanographer's responsibilities. The field is open to both women and men. Graduates from the oceanography program are prepared to enter the profession or to pursue graduate studies.

Admission: Students in good academic standing may declare this major at any time.

Suggested Introductory Course Work: A high school student considering oceanography as a career should be guided by an interest in natural sciences and a good record in high school science courses, and particularly mathematics. One year each of biology, chemistry, and physics is recommended.

At the college level: BIOL 101-102 or 201, 202, 203; CHEM 142, 152; GEOL 205; MATH 124, 125, 126; PHYS 121/131, 122/132, 123/133. It is recommended that students complete the calculus, general chemistry, and physics sequences before autumn quarter of the junior year.

Additional Information: OCEAN 101 and other transferable lower-division oceanography courses will count as electives and not as part of the major.

Bachelor of Science

Major Requirements: (1) MATH 124, 125, 126; CHEM 142, 152; PHYS 121/131, 122/132, 123/133; GEOL 205; and BIOL 101-102 or 201, 202, 203; (2) OCEAN 200, W201, 202, 401, 402, 421, 433, 450, W460, W485; (3) 20 credits of upper-division science, mathematics, or engineering to be selected in the student's area of specialization in consultation with a faculty adviser; (4) 20 credits of Visual, Literary, & Performing Arts and 20 credits of Individuals & Societies from the University Areas-of-Knowledge lists; and (5) 5 credits of English composition. University-approved W courses (writing) are included within the curriculum.

Bachelor of Arts

Major Requirements: Same as for the Bachelor of Science degree, except only 10 credits of upper-division science, mathematics, or engineering courses are required.

Minor

Minor Requirements: Minimum 27 credits to include OCEAN 200, 202, 401, 402, 421, 433, 450, 485. Prerequisites include MATH 124, 125, 126; PHYS 121/131, 122/132, 123/133; CHEM 142, 152; BIOL 101-102 (or 201, 202, 203); GEOL 205.

Undergraduate Forum and Research Program

Special opportunities for Oceanography majors are provided by the School's research program by involving students in undergraduate research projects and parttime employment. The Undergraduate Forum organizes meetings with faculty and other marine scientists to explore career and graduate-study opportunities.

Graduate Program

Graduate Student Services 108 Ocean Teaching, Box 357940 (206) 543-5039 student@ocean.washington.edu

The School of Oceanography provides excellent instruction and research opportunities at the graduate level in all areas of oceanography: biological oceanography, chemical oceanography, marine geology and geophysics, and physical oceanography. The program of study emphasizes independent research in conjunction with basic and specialized courses. Interdisciplinary research is encouraged, and students enjoy the opportunity to work across the usual scientific boundaries. Course work during the first two years is required in each option; specialized course work is structured to fit the student's background and objectives. Foreign-language proficiency is required only when deemed crucial to scholarly research.

Admission

Students enter the School from varied undergraduate disciplines at many universities. All have in common a strong background in the sciences and mathematics; most have never taken courses in oceanography. Evaluation of candidates is based on Graduate Record Examination scores, the undergraduate transcript (scholarship and depth), three letters of recommendation, and the applicant's statement of objectives and interests. Admission can be accommodated at the beginning of any quarter except winter, although autumn entry is most common.

Master of Science

The program of study includes course work in the student's area of interest and the other oceanography options, and the completion of an approved research project and oral presentation of the results. Thesis and non-thesis programs are offered; most students select the non-thesis option.

Doctor of Philosophy

The degree program places a strong emphasis on research following completion of course requirements and General Examination. Upon successful completion of the General Examination, the student undertakes an original research investigation, which is described in the dissertation and defended during the Final Examination.

Financial Aid

Normally all students pursuing a graduate degree are supported by research or teaching assistantships, or by fellowships and scholarships from national or private sources. Most appointments continue through the summer when students are engaged in research.

Faculty

Director

Richard Sternberg

Professors

Aagaard, Knut * 1968; PhD, 1966, University of Washington; physical oceanography, ocean circulation, arctic oceanography.

Ahmed, Saiyed I. * 1973; PhD, 1963, Johann Wolfgang Goethe University (Germany); marine phytoplankton, ecology and nitrogen assimilation, biofouling, anoxic marine environments.

Anderson, George C. * 1972, (Emeritus); PhD, 1954, University of Washington; plankton ecology, biological oceanography.

Banse, Karl * 1960, (Emeritus); Doctorate, 1955, University of Kiel (Germany); biological oceanography, plankton production and methodology, polychaete systematics.

Baross, John A. * 1984; PhD, 1973, University of Washington; microbial oceanography, bacterial ecology.

Burke, William T. * 1968; JD, Indiana University; JSD, 1959, Yale University; law of the sea, marine affairs.

Cannon, Glenn A. * 1983, (Affiliate); PhD, 1969, Johns Hopkins University; physical oceanography of coastal waters and deep-sea hydrothermal venting.

Carpenter, Roy * 1968; PhD, 1968, University of California (San Diego); marine geochemistry of metals and hydrocarbons in coastal zones.

Cattolico, Rose A. * 1975, (Adjunct); PhD, 1973, State University of New York (Stony Brook); plastid replication, nucleic acid biochemistry in synchronized unicellular algae.

Creager, Joe S. * 1958, (Emeritus); PhD, 1958, Texas A&M University; geological oceanography, sedimentology.

Criminale, William O. * 1968; PhD, 1960, Johns Hopkins University; fluid dynamics, mathematical physics, nonlinear mechanics, stability theory.

D'Asaro, Eric A. * 1980; PhD, 1980, Massachusetts Institute of Technology; physical oceanography, internal waves, turbulence and mixing processes.

Delaney, John R. * 1977; PhD, 1977, University of Arizona; geological oceanography, origin of oceanic crust, igneous petrology.

Deming, Jody W. * 1988; PhD, 1981, University of Maryland; evolution and ecology of marine bacteria in the pressurized ocean.

Devol, Allan H. * 1975; PhD, 1975, University of Washington; biogeochemistry, sediment diagenesis, anoxic systems, carbon fluxes.

Emerson, Steven R. * 1976; PhD, 1974, Columbia University; marine geochemistry, chemical oceanography, sediment diagenesis.

Eriksen, Charles C. * 1986; PhD, 1977, Massachusetts Institute of Technology; experimental physical oceanography; equatorial and upper ocean dynamics, internal waves.

Ewart, Terry E. * 1956, (Emeritus); PhD, 1965, University of Washington; physics, ocean microstructure, diffusion, acoustic transmission.

Francis, Robert C. * 1986, (Adjunct); PhD, 1970, University of Washington; fishery oceanography, effects of climate on marine ecosystems, paleoecology, fisheries management.

Frost, Bruce W. * 1969; PhD, 1969, University of California (San Diego); biological oceanography, marine zoogeography, plankton ecology and systematics.

Gammon, Richard H. * 1985; PhD, 1970, Harvard University; atmospheric, marine, and environmental chemistry; biogeochemical cycles, global climate change.

Gregg, Michael C. * 1974; PhD, 1971, University of California (San Diego); physical oceanography, ocean microstructure.

Harrison, Don Edmunds * 1985, (Affiliate); MS, 1973, PhD, 1977, Harvard University; ocean circulation modeling, large-scale atmosphere-ocean interaction, climate dynamics.

Heath, G. Ross 1984; PhD, 1968, University of California (San Diego); geochemistry of sediments.

Hedges, John I. * 1976; PhD, 1975, University of Texas (Austin); organic geochemistry, sources, transport, fate of organic material in coastal zones.

Hickey, Barbara M. * 1973; PhD, 1975, University of California (San Diego); physical oceanography, dynamics of equatorial and shelf circulation.

Holloway, Gregory * 1983, (Research); PhD, 1976, University of California (San Diego); physical oceanography, turbulence theory, geophysical fluid dynamics.

Holmes, Mark L. 1975, (Research); PhD, 1975, University of Washington; estuarine geologic processes, natural hazards in Puget Sound, crustal evolution at mid-ocean ridges.

Johnson, Harlan Paul * 1976; PhD, 1972, University of Washington; paleomagnetism and marine geophysics.

Jumars, Peter A. * 1975; PhD, 1974, University of California (San Diego); biological oceanography, benthos, biological sedimentary dynamics and spatial statistics.

Lewis, Brian T. * 1970; PhD, 1970, University of Wisconsin; marine geophysics, marine seismology, gravity, magnetics, and computer modeling of those processes.

Martin, Seelye * 1969; PhD, 1967, Johns Hopkins University; geophysical fluid dynamics, properties of sea ice.

McCormick, Norman J. * 1966, (Adjunct); PhD, 1965, University of Michigan; thermal and optical radiative transfer, optical oceanography, reliability and risk analysis.

McManus, Dean A. * 1959, (Emeritus); PhD, 1959, University of Kansas; geological oceanography, continental shelf sediments.

McPhaden, Michael J. * 1982, (Affiliate); PhD, 1980, Scripps Oceanographic Institution; equatorial ocean dynamics, climate scale air-sea interaction.

460 COLLEGE OF OCEAN AND FISHERY SCIENCES / OCEANOGRAPHY

Merrill, Ronald T. * 1967, (Adjunct); PhD, 1967, University of California (Berkeley); geomagnetism, geophysics of solids, rock magnetism.

Morison, James H. * 1972, (Affiliate); PhD, 1980, University of Washington; upper ocean physical processes in the polar regions.

Murray, James W. * 1973; PhD, 1973, Massachusetts Institute of Technology; marine geochemistry, aquatic chemistry.

Nowell, Arthur R. M. * 1978; PhD, 1975, University of British Columbia (Canada); physical oceanography, turbulent boundary layer dynamics, sediment transport.

Quay, Paul D. * 1977; PhD, 1977, Columbia University; chemical oceanography, stable isotope geochemistry, ocean tracers and mixing.

Rattray, Maurice * 1950, (Emeritus); PhD, 1951, California Institute of Technology; physical oceanography, hydrodynamics. ocean circulation modeling.

Rhines, Peter B. * 1984; PhD, 1967, Cambridge University (UK); the circulation of the oceans and evolution of climate.

Richey, Jeffrey E. * 1973; PhD, 1973, University of California (Davis); quantitative problems of aquatic ecosystems, primary Amazon River, limnology.

Sanford, Thomas B. * 1979; PhD, 1967, Massachusetts Institute of Technology; physical oceanography, dynamics of ocean currents, motional induction, instrumentation.

Sarachik, Edward S. * 1984, (Adjunct); PhD, 1966, Brandeis University; atmospheric dynamics, large scale atmosphere/ocean interactions, equatorial dynamics, climate change.

Spindel, Robert C. 1987, (Adjunct); MS, 1966, PhD, 1971, Yale University; ocean acoustics, signal processing, acoustic navigation systems, acoustic tomography.

Sternberg, Richard * 1965; PhD, 1965, University of Washington; geological oceanography, marine sedimentation processes.

Stuiver, Minze * 1969, (Adjunct); PhD, 1958, University of Groningen (Netherlands); geochronology, isotope geology.

Associate Professors

Duxbury, Alyn C. * 1954, (Emeritus); PhD, 1963, Texas A&M University; estuarine processes and the management of human uses of these marine systems.

Feely, Richard A. * 1983, (Affiliate); PhD, 1974, Texas A&M University; chemical oceanography, oceanic sources and sinks for carbon dioxide.

Howe, Bruce M. 1987, (Research); PhD, 1986, University of California (San Diego); physical oceanography, acoustic tomography.

Johnson, Gregory C. * 1990, (Affiliate); PhD, 1991, Massachusetts Institute of Technology; large-scale ocean circulation, dynamics, and variability.

Kawase, Mitsuhiro * 1988; PhD, 1986, Princeton University; geophysical fluid dynamics; oceanic general circulation; tracer oceanography.

Kelly, Kathryn A. * 1996, (Affiliate); PhD, 1983, University of California (San Diego); physical oceanography, combining models with satellite observations.

Kessler, William S. * 1995, (Affiliate); PhD, 1989, University of Washington; equatorial waves and circulation, tropical air-sea interaction and heat balance, climate variability.

Krieger-Brockett, Barbara * 1976, (Adjunct); PhD, 1976, Wayne State University; reaction engineering, chemical kinetics and catalysis simulation.

Kunze, Eric L. * 1987; PhD, 1985, University of Washington; mesoscale phenomena, wave/mean flow interaction double diffusion and mixing. Lessard, Evelyn J. * 1989; PhD, 1984, University of Rhode Island; microzooplankton ecology and physiology; physical/biological interactions at oceanic fronts.

Lilley, Marvin D. * 1984; PhD, 1983, Oregon State University; chemical oceanography.

McDuff, Russell E. * 1981; PhD, 1978, University of California (San Diego); marine geochemistry.

Perry, Mary J. * 1976; PhD, 1974, University of California (San Diego); biological oceanography, phytoplankton physiology, nutrient cycling.

Riser, Stephen C. * 1981; PhD, 1981, University of Rhode Island; physical oceanography, mesoscale mixing, physics of mesoscale eddies, numerical modeling.

Rothrock, David A. * 1970; PhD, 1969, Cambridge University (UK); physical oceanography, polar oceanography, polar ice remote sensing and modeling.

Assistant Professors

Armbrust, E. Virginia * 1996; PhD, 1990, Massachusetts Institute of Technology; chloroplast inheritance, sexual cycle of unicellular algae.

Hautala, Susan L. 1994; PhD, 1992, University of Washington; physical oceanography, abyssal and paleoabyssal circulation.

Keil, Richard G. 1991; PhD, 1991, University of Delaware; chemical oceanography, marine organic chemistry.

MacCready, Parker 1986, (Research); PhD, 1991, University of Washington; ocean circulation in estuaries and the southern ocean.

Napp, Jeffrey M. * 1991, (Affiliate); PhD, 1986, University of California (San Diego); biological-physical interactions in the epipelagic zone, zooplankton ecology, fisheries oceanography.

Thompson, Luanne * 1990; PhD, 1990, Massachusetts Institute of Technology; numerical modeling of mesoscale and general circulation of the oceans.

Warner, Mark J. * 1989, (Research); PhD, 1988, University of California (San Diego); physical oceanography, ocean ventilation and mixing processes.

Wilcock, William S. D. * 1993; PhD, 1992, Massachusetts Institute of Technology; marine seismology, dynamics of mid-ocean ridges, geological fluid dynamics.

Senior Lecturer

Emerick, Christina M. 1985; PhD, 1985, Oregon State University; marine geochemistry and tectonics.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

OCEAN 101 Survey of Oceanography (5) NW Origin and extent of the oceans; nature of the sea bottom; causes and effects of currents and tides; animal and plant life in the sea. Intended for nonmajors. Offered: AWSpS.

OCEAN 102 Environmental Oceanography (5) NW Designed to study in detail the benefits and the scientific problems created by human activities impinging on the oceanic environment. Prerequisite: either OCEAN 101 or OCEAN 200. Offered: Sp.

OCEAN 200 Introduction to Oceanography (3) NW Description of the oceans. Emphasis on relations of biology, chemistry, geology, and physics in marine environments. Examination of relationships and interactions at macro-, meso-, and microscales in the ocean. Intended for science majors. Offered: A.

OCEAN 201 Introduction to Field Oceanography (3) NW Methods of oceanographic field study. Instruments and sampling techniques. Writing assignment to teach report-writing skills. Prerequisite: OCEAN

202. Offered: Sp. OCEAN 202 Cocean Circulation (3) NW The largescale circulation of the ocean. Topics include tem-

scale circulation of the ocean. Topics include temperature-salinity analysis; water mass identification; water, salt, and heat budgets; chemical tracer distributions; advection and diffusion. Recommended: OCEAN 101 or OCEAN 200. Offered: W.

OCEAN 204 Contemporary Issues in Oceanography (1-3, max. 9) NW Selected topics of contemporary interest in oceanography such as hydrothermal vents, planetary volcanism, biogeochemical cycling, the ecology of Puget Sound, and the ocean's role in climate.

OCEAN 401, 402 General Physical Oceanography I, II (3, 3) NW Physical properties and processes; theories and methods describing ocean currents, waves, and tides. 401 - Prerequisite: either MATH 126 or MATH 136; PHYS 123; OCEAN 202. 402 - Prerequisite: OCEAN 401. Offered: A, W.

OCEAN 421 Chemical Oceanography (4) NW Physical and chemical properties of seawater and marine products; processes determining the chemical makeup of the oceans. Prerequisite: either CHEM 150, CHEM 152, or CHEM 155; OCEAN 202. Offered: Sp.

OCEAN 433 General Biological Oceanography (4) NW Marine organisms, their quantitative distribution in time and space and their interactions with the ocean. Prerequisite: either BIOL 102 or BIOL 203; OCEAN 401. Offered: W.

OCEAN 440 Instrumentation in Oceanography (3-6) NW Introduction to the general principles of instrument design, including discussions of sensors, signal processing, telemetry, and recording from the point of view of the experimental scientist. Laboratory work for variable credit is offered in the form of projects, preferably practical ones resulting in the completion of a small hardware device.

OCEAN 450 Marine Geology and Geophysics (4) NW Sedimentological and petrologic processes that determine the geologic record. Prerequisite: either GEOL 101 or GEOL 205. Offered: A.

OCEAN 451 Marine Geochemistry (3) NW Study of chemical aspects of more abundant minerals in marine sediments, origin or mode of formation, isotopic and chemical composition, rate of deposition, distribution and relative importance in major sedimentary cycle, influence on chemical composition of seawater. Prerequisite: either CHEM 150, CHEM 152, or CHEM 155.

OCEAN 452 Principles of Sediment Transport by Turbulent Flow (3) NW Theoretical and experimental techniques used in studying erosion, transportation, and deposition of sediment. Initial motion of sediments, bed-load motion, suspension of sediment by turbulent flows, erosion and deposition of sediments, and applications of sediment transport theory to problems of geological interest. Prerequisite: GEOL 455. Offered: jointly with GEOL 452.

OCEAN 460 Oceanic Data Interpretation (5) NW Collection and analysis of marine data. Laboratory analysis of samples, data handling, and modeling of marine problems. Prerequisite: OCEAN 402; OCEAN 433; OCEAN 450. Offered: Sp.

OCEAN 485 Topics in Oceanography (1-5, max. 12) NW Specialized topics in oceanography. Various techniques in solving oceanographic problems. For students with senior standing. Offered: WSp. **OCEAN 499 Undergraduate Research (1-12, max. 24)** Research on assigned topics that may involve laboratory work, fieldwork, or literature surveys. Offered: AWSpS.

Courses for Graduates Only

OCEAN 500 Current Problems in Oceanography (1) Discussion of research topics that are currently being investigated within the school. Credit/no credit only. Prerequisite: permission of instructor. Offered: AW.

OCEAN 501 Estuarine Circulation and Mixing (3) Observed patterns of currents, mixing, and stratification from deep fjords to shallow coastal plain estuaries. Physical understanding of basic processes, such as tides, wind stress, topographic effects on turbulence, sill hydraulics, and exchange flow. Vertical mixing and residence times important to biological and pollution studies. Prerequisite: permission of instructor.

OCEAN 506 Interdisciplinary Seminar in Oceanography (1-3, max. 12) Lectures, discussions, and work on selected problems of an interdisciplinary nature. Prerequisite: permission of instructor.

OCEAN 509 Seminar (1) Introduction to current research topics for beginning graduate students. Credit/no credit only. Offered: AWSp.

OCEAN 510 Physics of Ocean Circulation (5) Structure of ocean basins; physical properties of seawater and the equation of state; heat, salt, fresh water budgets; tidal potential; Coriolis effect and geostrophic balance; major current systems and water masses; mixing, stirring in the ocean; simple waves; modern experimental methods in physical oceanography. Prerequisite: permission of instructor. Offered: A.

OCEAN 511 Introduction to Fluid Dynamics (4) Eulerian equations for mass-motion; Navier-Stokes equation for viscous fluids, Cartesian tensors, stressstrain relations; Kelvin's theorem, vortex dynamics; potential flows, flows with high-low Reynolds numbers; boundary layers, introduction to singular perturbation techniques; water waves; linear instability theory. Prerequisite: AMATH 403 or permission of instructor. Offered: jointly with AMATH/ATM S 505; A.

OCEAN 512 Geophysical Fluid Dynamics I (4) Dynamics of rotating stratified fluid flow in the atmosphere/ocean and laboratory analogues. Equations of state, compressibility, Boussinesq approximation. Geostrophic balance, Rossby number. Poincare, Kelvin, Rossby waves, geostrophic adjustment. Ekman layers. Continuously stratified dynamics: Inertiagravity waves, potential vorticity, quasigeostrophy. Prerequisite: 511 or ATM S/AMATH 505. Offered: jointly with ATM S 509; W.

OCEAN 513 Geophysical Fluid Dynamics II (3) Theories, models of large-scale dynamics of oceans, atmospheres. Potential vorticity, Q principles; Rossby waves, ray tracing, Green's function, setup of general circulation; atmospheric "channels" versus ocean "basins;" wave-mean flow interaction, mountain drag, internal momentum flux; "Lagrangian" motion of particles, tracers; cascades, eddy flux of heat, moisture, Q. Prerequisite: 512. Offered: Sp.

OCEAN 514 Waves (3) Application of marine hydrodynamics principles to wave motion in oceans. Offered: W.

OCEAN 515 Ocean Circulation: Observations (3) Modern large- and mesoscale ocean observations, interpreted in terms of contemporary circulation theories. Spectrum of temporal variability; eddies and eddy fluxes; ventilation; advection and diffusion in the abyss; transports of heat and salt; climatic scale of variability; modern methods for determining circulation. Prerequisite: 510 or permission of instructor. Offered: Sp. **OCEAN 516 Ocean Circulation: Theories (3)** Hydrodynamic theories concerning origin and characteristics of major ocean currents. Prerequisite: 512 or permission of instructor. Offered: A.

OCEAN 517 Methods and Measurements in Physical Oceanography (2) Principal instruments and experimental methods of physical oceanography. Devices and systems that measure pressure, temperature, electrical conductivity, sea state, and velocity. Prerequisite: permission of instructor. Offered: alternate years.

OCEAN 519 Seminar in Physical Oceanography (1, max. 9) Discussion of selected problems of current interest in physical oceanography. Prerequisite: 510 or permission of instructor.

OCEAN 520 Marine Chemistry (5) Processes controlling the chemical composition of seawater. Chemical distributions in the ocean, marine physical chemistry, chemical equilibrium, and concepts of mass balance. Mechanisms and models used to explain distributions of stable and radioactive isotopes, gases, trace metals, and biochemicals in the world's oceans. Offered: A.

OCEAN 521 Aquatic Chemistry (3) Application of physical chemistry and thermodynamics to processes that control chemical composition of natural waters. Equilibrium approach. Acid/base chemistry, the carbonate system, dissolution and precipitation, metal ions in solution, oxidation-reduction chemistry, silicate mineral reactions. Prerequisite: 520 or permission of instructor. Offered: W.

OCEAN 522 Marine Organic Geochemistry (3) Sources, reactions, and fates of organic molecules in the marine environment along with the stable isotope geochemistry of marine organic substances. Prerequisite: CHEM 237 and 239 or permission of instructor.

OCEAN 529 Seminar on Chemical Oceanography (* max. 9) Lectures, discussions, and readings on selected problems of current interest. Prerequisite: permission of instructor. Offered: AWSp.

OCEAN 530 Biological Oceanography: Bacteria and Protozoa (3) Bacteria in the marine environment; fate of organic carbon in the ocean and the interrelationship of the carbon cycle with other biogeochemical cycles. Prerequisite: permission of instructor. Offered: W.

OCEAN 531 Biological Oceanography: Phytoplankton (3) Phytoplankton in the marine environment: ecology, primary productivity, and physiology. Phytoplankton growth and photosynthetic patterns; spatial and temporal distributions of phytoplankton; methods for determining distributions and rates of production and growth. Prerequisite: permission of instructor. Offered: W.

OCEAN 532 Biological Oceanography: Zooplankton (3) Distribution and abundance of pelagic animals in space and time; analysis of their interactions. Small-scale distributions and behavior, population dynamics and energetics, trophic structure and dynamics, pelagic community structure, models of populations and food chains, secondary production and biogeography. Prerequisite: permission of instructor. Offered: Sp.

OCEAN 533 Biological Oceanography: Benthos (3) Analysis of marine benthic communities; new research questions and method; ecologically important physics of benthic boundary layer; theories, mechanics, and observations of deposit feeding; succession as consequence of physical processes and biological interactions. Environments include deep-sea, continental shelves, estuaries, and intertidal, focusing on soft substrata. Prerequisite: permission of instructor. Offered: Sp.

OCEAN 534 Methods and Measurements in Biological Oceanography (2) Methods for bacteria, phytoplankton, and zooplankton population assessment. Rate measurements of phytoplankton, zooplankton, and bacterial production. Benthos measurements, including deep-sea environments. Prerequisite: permission of instructor. Offered: W.

OCEAN 535 Biological Oceanography for Physical Scientists (5) Principles and practice of biological oceanography for students with strong background in physical sciences but little recent exposure to biology. Ecological principles at individual, population, and community levels; overview of discipline of biological oceanography; case studies of interdisciplinary problems shared with the physical sciences. Prerequisite: permission of instructor. Offered: W.

OCEAN 536 Seminar in Geostatistics (1-3) Lectures and discussions on selected problems in the applications of statistics in earth science. Offered: alternate years.

OCEAN 539 Seminar in Biological Oceanography (* max. 9) Lectures, discussions, and work on selected problems of current interest. Prerequisite: permission of instructor. Offered: AWSp.

OCEAN 540 Marine Geological Processes (5) Principles of thermodynamics, heat and mass transfer, fluid mechanics, continuum mechanics, and time-series analysis applied to marine geological and geophysical data. Applications to thermal balance of the oceanic lithosphere; Pleistocene sedimentation and global climate change; and sediment transport in high energy environments. Prerequisite: permission of instructor. Offered: W.

OCEAN 541 Marine Sedimentary Processes (5) Erosion, transportation and deposition of sediment in estuarine, beach, continental shelf and slope, and deep sea environments. Development of equations characterizing boundary shear flows, initiation of grain motion, bedload and suspended load transport. Evolution of primary bed forms, processes of sediment accumulation, and measurement techniques. Prerequisite: permission of instructor.

OCEAN 544 Geochemical Evolution of Oceanic Lithosphere (3) Chemical principles of magmatic evolution and hydrothermal interaction as they apply to the formation and evolution of the oceanic lithosphere. Comparisons of theoretical models with field studies conducted using submersibles and deep ocean drilling. Prerequisite: permission of instructor.

OCEAN 545 Physics of the Oceanic Lithosphere I (3) Physical processes responsible for the formation and evolution of the oceanic lithosphere. Thermodynamic mechanisms of mantle creep; fluid dynamics of mantle flow, decompressional melting, formation of oceanic crust, and cooling of the oceanic lithosphere. Prerequisite: GPHYS 501 and 504 or permission of instructor. Offered: jointly with GPHYS 545; W.

OCEAN 546 Physics of the Oceanic Lithosphere II (3) Physical processes responsible for the formation and evolution of the oceanic lithosphere. Rheology, fault mechanics, plate flexure, marine gravity, the relationship between gravity and topography, magnetic properties of ocean crust, and character of marine magnetic anomalies. Prerequisite: 545 or permission of instructor. Offered: jointly with GPHYS 546; Sp.

OCEAN 549 Seminar in Geological and Geophysical Oceanography (* max. 9) Lectures, discussions, and field and laboratory work on selected problems of current interest. Prerequisite: permission of instructor. Offered: AWSp.

OCEAN 550 Geochemistry and Geophysics of Melt Generation (3) Mantle flow beneath mid-ocean ridges and hotspots, major element systematics, constraints from trace elements and isotopes on melting and mantle reservoirs, melt extraction, and crustal thickness and axial topography. Prerequisite: 544 or permission of instructor. Offered: alternate years.

462 COLLEGE OF OCEAN AND FISHERY SCIENCES / OCEANOGRAPHY

OCEAN 551 Marine Seismology (3) Practical application of seismic techniques to the study of the ocean basins. Analysis of refraction data, multichannel reflection profiling, surface wave studies, and earthquake analysis. Prerequisite: GPHYS 502 or permission of instructor. Offered: jointly with GPHYS 551; alternate years.

OCEAN 552 Seminar in Geophysics and Geological Data Analysis (1) Practical geophysical data analysis, map projections, gridding multibeam bathymetry processing, gravity and magnetic anomalies, downward continuation, magnetic inversion, seismic refraction and reflection, and microearthquake locations. Prerequisite: permission of instructor.

OCEAN 559 Advanced Seminar on Mid-Ocean Ridge Processes (* max. 9) Lectures, discussions, and practical work on selected topics of current interest in mid-ocean ridge research. Prerequisite: permission of instructor.

OCEAN 560 Atmosphere/Ocean Interactions (3) Observations and theory of phenomena of the coupled atmosphere-ocean system. El Niño Southern Oscillation; decadal tropical variability; atmospheric teleconnections; midlatitude atmosphere-ocean variability. Overview of essential ocean and atmospheric dynamics, where appropriate. Credit/no credit only. Prerequisite: ATM S 509 or OCEAN 512. Offered: jointly with ATM S 560; alternate years; Sp.

OCEAN 569 Topics in Physical Oceanography (1-4, max. 9) Lecture series on topics of major importance in physical oceanography. Offered: AWSp.

OCEAN 570 Marine Microbial Interactions (1-3, max. 9) Structure, function, and dynamics of natural mixed-species populations of marine bacteria and their interactions with higher organisms; mixed-species culture methods; synecological field methods; species assemblages in specialized environments; mutualisms; sites and patterns of genetic exchange. Prerequisite: 530 or permission of instructor. Offered: alternate years.

OCEAN 571 Marine Primary Productivity (1-3, max. 9) Patterns and mechanisms of marine phytoplankton primary production. Small-to-global-scale patterns of production; environmental regulation of production; absorption of electromagnetic radiation; fluorescence; carbon fixation; trophic interactions; remote sensing and other optical methods. Prerequisite: 531 or permission of instructor. Offered: alternate years.

OCEAN 572 Zooplankton Ecology (1-3, max. 9) Life history strategies, dynamics and production of populations, vertical migration, interspecific interactions and community structure, models of complex assemblages of zooplankton, sampling methods and analysis, spatial heterogeneity. Prerequisite: 532 or permission of instructor. Offered: alternate years. OCEAN 573 Benthic Biological Processes (1-3, max. 9) Processes characteristic of soft-bottom benthic environments; areas and methods of rapid current progress; open research questions; deposit feeding; passive larval recruitment; physical, chemical, geological, and biological feedbacks in ecological succession; scaling of laboratory systems. Prerequisite: 533 or permission of instructor. Offered: alternate years.

OCEAN 574 Principles and Applications of Molecular Methods (3) Techniques of molecular analysis with emphasis on DNA methods, including PCR, DNA sequencing, RFLP, RAPD and VNTR analysis and cloning. Applications of these techniques to fisheries, aquaculture, oceanography, population and evolutionary studies, and other areas of science. Prerequisite: permission of instructor. Offered: jointly with FISH 542; A.

OCEAN 575 Molecular Techniques (4) Laboratory on DNA methods. Experiments analyzing genetic variation at the intra- and interspecific level, including one experiment of student's own design. Techniques include DNA extraction and quantitation, PCR, DNA sequencing, RFLP analysis and cloning. Prerequisite: FISH 542 or OCEAN 574 permission of instructor. Offered: jointly with FISH 543; Sp.

OCEAN 578 Advanced Topics in Biological Oceanography (* max. 18) Specialized research areas. Topic varies each year. Offered at Friday Harbor Laboratories. Prerequisite: permission of director of Friday Harbor Laboratories. Offered: S.

OCEAN 580 Aquatic Kinetics (3) Reaction rates and mass transport in water. Theories of chemical kinetics; experimental results from: CO_2 hydrolysis, Fe, Mn, and H₂S oxidation, stable isotope fractionation, mineral dissolution; homogeneous, heterogeneous, microbial catalysis; reaction and transport at air-water, sediment-water, and O_2/H_2S interfaces. Prerequisite: CHEM 524 or equivalent and differential equations. Offered: alternate years.

OCEAN 581 Geochemical Modeling (3) Background to modeling concepts frequently encountered in chemical oceanography: box models, advection-diffusion problems, sediment diagenesis equations, and boundary layer (air-water and sedimentwater interface) models. Problems requiring application of the models to chemical distributions in the ocean. Prerequisite: permission of instructor. Offered: alternate years.

OCEAN 582 River Basin Biogeochemistry (3) The function of rivers and river basins in transporting materials to the oceans and their importance in biogeochemical cycles. Origin of water and water routing within drainage basins, sources and modification of dissolved and particulate materials in transport, ecological theory, and estuarine mixing zone transformations. Prerequisite: permission of instructor. Offered: alternate years.

OCEAN 583 Isotope Biogeochemistry (3) The use of stable isotopes to study biogeochemical cycles in the oceans and atmosphere; specifically carbon, nitrogen, and sulfur cycles. Isotopic effects during photosynthesis, respiration, organic matter degradation. CaCO₃ dissolution, methanogenesis, nitrification/denitrification, and sulfate reduction. Prerequisite: permission of instructor. Offered: alternate vears.

OCEAN 584 Radiochemical Tracers and Ocean Mixing (3) Distribution of natural and bomb-produced radioactive tracers in the ocean. Application of models used to derive information concerning time scales of (1) gas transfer at the water atmosphere interface; (2) whole ocean, thermocline, and deepocean water circulation; and (3) particulate settling in the marine environment. Knowledge of elementary differential equations suggested. Prerequisite: permission of instructor. Offered: alternate years.

OCEAN 585 Paleoceanography (3) History of environmental changes on earth over the past 100 million years as reconstructed from records in deep-sea sediments, ice sheets, and other ocean/terrestrial substrates. Examination of isotopic, geochemical, micropaleontological, and dating techniques. Role of the ocean in climate change. Prerequisite: permission of instructor. Offered: alternate years.

OCEAN 590 Advanced Topics in Oceanography (9-18) Advanced topics examining specialized and interdisciplinary areas of oceanographic research. Offered at Friday Harbor Laboratories. Prerequisite: permission of Director of Friday Harbor Laboratories. Offered: S.

OCEAN 591 Marine Science in the Coastal Zone (4) Major oceanic and nearshore processes, conditions, and their influence on human activities in coastal zone. Methods of understanding and accessing the accumulated knowledge on marine processes and its applications to decision-making process. Lectures and discussions of biological, chemical, geological, and physical oceanography. Generation and use of data bases as interpretative tools. Offered: A.

OCEAN 600 Independent Study or Research (*) Offered: AWSpS.

OCEAN 700 Master's Thesis (*) Offered: AWSpS.

OCEAN 800 Doctoral Dissertation (*) Offered: AWSpS.

School of Pharmacy

Dean

Sidney Nelson

Associate Dean Wayne A. Kradjan

Assistant Dean

Nanci L. Murphy

Established in 1894, the University of Washington School of Pharmacy strives to advance health care in the region through its educational, service, and research programs. The School's three departments— Medicinal Chemistry, Pharmaceutics, and Pharmacy as well as the Dean's Office are located in the H-Wing of the Health Sciences Building.

The School of Pharmacy offers a four-year professional program leading to the Doctor of Pharmacy (Pharm.D.) degree. The curriculum is designed to educate students to contribute to the safe, effective, and costefficient use of medications in a variety of settings Instruction emphasizes enhancing the critical-thinking and problem-solving skills necessary to provide rational drug therapy, promote healthy lifestyles and disease prevention, enhance patient compliance, reduce medication-related problems, and improve health outcomes. Students are given the opportunity to use elective choices to design a program compatible with individual areas of interest. In the final year of the program, students complete experiential training at pharmacy settings located primarily in the Puget Sound area. The School is fully accredited by the American Council on Pharmaceutical Education, and graduates meet the educational requirements for licensure in all fifty states.

Consideration for admission to the professional program requires a minimum of two years of prepharmacy training. An applicant who is admissible to the University is not assured admission to the School of Pharmacy. Admission is competitive and based on a number of factors. Academic preparedness, motivation, oral and written communication skills, critical-thinking ability, and decision-making skills are among the criteria used to determine a candidate's aptitude for the pharmacy program. An on-site interview and writing assignment are required as part of the admission process. Further details on admission requirements, application procedures, and program content may be obtained from the Office of Academic and Student Programs.

The School also seeks to promote the life-long learning of pharmacists by offering opportunities for postgraduate education and continuing-education seminars. An external Pharm.D. program is available for those pharmacists who would like to pursue an advanced degree beyond the baccalaureate degree. Continuing-education programs are provided throughout the year to meet the needs of the community.

To foster the interests of students who seek to engage in creative discovery and research, the School also offers graduate education in the pharmaceutical sciences. Graduate school information may be obtained from the individual departments offering the advanced degrees.

Medicinal Chemistry

Graduate Program

Graduate Program Coordinator H164 Health Sciences, Box 357610 (206) 543-2224 medchem@u.washington.edu

The Department of Medicinal Chemistry offers programs of graduate study leading to the degrees of Master of Science and Doctor of Philosophy. The primary areas of research training of the Department of Medicinal Chemistry are in chemical and molecular aspects of drug action and of drug metabolism including both laboratory experiments and theoretical work. Studies in the field include, for example, the relationship between chemical structure and biologic effect, function, and toxicity; delineation of the metabolic spectrum of drugs or foreign substances in man and animals, and the factors (environmental, disease, etc.) that affect this spectrum of metabolites; and the study of the nature and catalytic properties of the enzymes responsible for metabolic reactions and the molecular mechanisms by which such reactions occur. Theoretical studies on conformational aspects of important enzymes involved in these processes are under study.

Graduates from the program must possess the skills necessary to develop quantitative and qualitative methodologies to pursue studies at the whole-animal, organ, microsomal, or purified-enzyme levels; to elucidate and evaluate the chemical transformations that occur in metabolic processes by isolation, purification, spectroscopic investigation, structural determination, and chemical synthesis; and, ultimately, to provide an understanding and rationale at the molecular level for events that occur at the biological level.

Most students proceed directly to the doctoral degree program. Participation in a cumulative examination process and at least two quarters of teaching experience are additional requirements for the doctoral program. Satisfactory completion of cumulative examination requirements are necessary to work for the Ph.D. degree.

Admission Requirements

Students who intend to work toward the Doctor of Philosophy degree must apply for admission to the Graduate School and meet the requirements outlined in the Graduate Study section of this catalog. Graduate students must satisfy the requirements for an advanced degree in force at the time the degree is to be awarded. Graduate study requires approval of the Graduate School and the Department of Medicinal Chemistry.

Special Requirements

Students with undergraduate degrees in pharmacy or in the biological or physical sciences are accepted for graduate study in medicinal chemistry. Undergraduates who plan to pursue graduate study may expedite their programs by selection of pertinent electives. Although the choice of electives varies with the student's ultimate goals, graduate study in medicinal chemistry requires adequate preparation in mathematics and in the biological and physical sciences.

Master of Science

A student in the master's degree program must present at least 27 credits of course work, exclusive of thesis and non-thesis research. The student also must complete a research project, prepare an acceptable thesis, and pass a final examination.

Doctor of Philosophy

A student in the doctoral program must present a minimum of 45 credits of course work, exclusive of dissertation and non-thesis research. Credits earned for the master's degree may be applied toward the doctoral degree. The student must pass a General Examination for admission to candidacy for the doctoral degree. Satisfactory completion of departmental cumulative examinations precedes scheduling of the General Examination. The student must complete a research project, prepare an acceptable dissertation and pass a Final Examination. Research for the doctoral degree must be done at the UW.

Financial Aid

Financial support in the form of research assistantships and fellowships may be available to students in good standing throughout their graduate careers. Availability of financial support varies from year to year, and prospective applicants should contact the graduate program coordinator for additional information.

Pharmaceutics

Graduate Program

Graduate Program Coordinator H272 Health Sciences, Box 357610 (206) 543-9434 pceut@u.washington.edu

The Department of Pharmaceutics offers programs of graduate study leading to the degrees of Master of Science and Doctor of Philosophy.

Program Description

The program provides research training in the fundamental aspects of drug disposition, drug delivery, and drug action in animals and man. Drug disposition includes the phenomena of absorption, distribution, and elimination. Pharmacokinetics is the study of the time course of these processes and the time course of pharmacological effects. Drug delivery includes targeting of drugs to tissues or specific cells to improve their therapeutic effect. These areas of research have a wide range of applications, particularly in the pharmacological characterization of new drug molecules in pharmaceutical development. Graduates of this program possess expertise in a variety of analytical techniques and the elaboration of mathematical models to describe drug disposition and pharmacological processes

During the first two years of study, students take courses in medicinal chemistry, pharmacology, physiology, biochemistry, mathematics, computer science, biostatistics, and pharmacokinetics.

The department's research program includes six NIHfunded laboratories addressing a variety of fundamental and clinical problems pertaining to drug transport, metabolism, and toxicity associated with several diseases (AIDS, cystic fibrosis, leukemia, epilepsy), as well as pain management and transplantation. Most projects involve collaborative arrangements with investigators from other departments in the University or at the Fred Hutchinson Cancer Research Center. The collaborative relationship of the faculty of the Departments of Pharmaceutics and Medicinal Chemistry in the field of drug metabolism has received worldwide recognition.

Thesis research can involve experimental animal work, in vitro studies, clinical investigation, or a combination of approaches. Graduate students are given the opportunity to participate in interdisciplinary research, providing an added dimension to their training.

A wide range of career paths are available to graduates of this program. Opportunities include research in the pharmaceutical industry; research in hospitals, institutes, and foundations; teaching and research in academic institutions; and positions with government regulatory agencies.

Admission Qualifications

Students with undergraduate degrees in pharmacy, chemistry, or in the biological sciences are accepted for graduate study in pharmaceutics. Undergraduates who plan to pursue graduate study may expedite their programs by selection of pertinent electives. This information can be obtained from the graduate program coordinator.

Financial Aid

All students in the program receive financial support in the form of research assistantships, Public Health Service predoctoral training fellowships and other fellowships such as the William E. Bradley Graduate Fellowship and those from the American Foundation for Pharmaceutical Education.

Pharmacy

Graduate Program

Graduate Program Coordinator H375 Health Sciences, Box 357630 (206) 543-6788

The Department of Pharmacy offers graduate training leading to the degrees of Master of Science and Doctor of Philosophy.

Program Description

The graduate program in pharmaceutical outcomes in the Department of Pharmacy provides M.S.- and Ph.D.level training with a focus on economic evaluation of pharmaceuticals, pharmaceutical outcomes research is the study of the health and cost consequences of pharmaceuticals and pharmaceutical-related policies on individuals and populations. Graduates of this program are trained to assess the use, outcomes, and cost of pharmaceuticals and pharmaceutical policies and practices. Students are prepared for careers in (1) teaching and research in colleges and universities; (2) pre- and post-marketing safety; (3) policy analysis for industry, health insurance, and governmental agencies; and (4) drug-use management and evaluation within managed health-care organizations.

Most students proceed directly to the doctoral degree program. Successful completion of a doctoral preliminary examination, comprehensive examination, teaching assistantships, and research experience are necessary requirements prior to advancement to candidacy.

Admission Requirements

Students with undergraduate or graduate degrees in pharmacy or any of the health-science disciplines or those with sufficient experience and interest in pharmaceutical outcomes and policy research will be considered for admission. Applicants must apply to the Graduate School and the Department of Pharmacy and meet the admission criteria outlined in the Graduate School section of this catalog. Applications materials can be obtained by contacting the graduate program coordinator in the Department of Pharmacy.

Financial Aid

Financial support in the form of research assistantships, teaching assistantships, and fellowships may be available to prospective and continuing students. Availability of financial support varies each year. Prospective students should contact the graduate program coordinator for more information on financial support.

Bauer, Larry * 1980; PharmD, 1980, University of Kentucky; clinical pharmacokinetics and drug metabolism, drug interactions.

SCHOOL OF PHARMACY / COURSE DESCRIPTIONS 465

Black, Douglas J. 1981; PharmD, 1983, University of Washington; infectious diseases.

Gardner, Jacqueline S. * 1990; PhD, 1980, University of Washington; pharmacoepidemiology, drug therapy use and effects, pharmacist practice patterns.

Hebert, Mary F. 1996; PharmD, 1987, University of California (San Francisco); transplantation, immunology pharmacotherapeutics.

Sullivan, Sean * 1992; PhD, 1992, University of California (Berkeley); pharmacoeconomics.

Weber, Stanley S. 1996; PharmD, 1975, University of Cincinnati; psychiatric pharmacy practice, pharmacy distance learning.

Assistant Professors

Gray, Shelly L. 1995; PharmD, 1989, University of Michigan; geriatric pharmacy.

Hazlet, Thomas K. * 1996; DPH, 1991, University of California (Berkeley); pharmaceuticals policy, outcomes, and bioethics.

Heckbert, Susan R. * 1990, (Adjunct); MD, 1981, Case Western Reserve University; MPH, 1987, PhD, 1990, University of Washington; clinical epidemiology, cardiovascular epidemiology, pharmacoepidemiology.

Joseph, Jutta C. 1997; PharmD, 1988, University of Michigan; pediatrics/child wellness, teen health, asthma, cross-cultural practices.

Lessler, Daniel * 1990, (Adjunct); MD, 1986, Stanford University; MHA, 1992, University of Washington; health services research pertaining to cost-effectiveness, quality of care, medical management.

Ramsey, Scott D. * 1994, (Adjunct); MD, 1990, University of Iowa; PhD, 1994, University of Pennsylvania; cost effectiveness analysis and health care economics.

Senior Lecturer

Dawson, Karan N. 1976; MS, 1978, University of Washington; psychotropics, geriatrics, teaching methods.

Lecturer

O'Sullivan, Teresa 1990; PharmD, 1990, University of Minnesota; cystic fibrosis, general medicine, practicerelated education, medical literature evaluation.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

For prerequisite information on Pharmacy courses, contact the Office of Academic and Student Programs in the School of Pharmacy.

Medicinal Chemistry

MEDCH 400 Fundamental Concepts in Medicinal Chemistry (3) Trager Principles of physical organic chemistry; chemical bonding, stereochemistry, acids/bases, and reaction mechanisms relevant to processes such as drug distribution, specificity, and metabolism. Prerequisite: CHEM 239. Offered: Sp.

MEDCH 401 Immunizing and Antimicrobial Agents (4) Daggett, Elmer Chemical and biologic properties of agents used to prevent or treat infectious diseases, including diagnostic, prophylactic, and therapeutic uses of immunizing biologicals and spectrum, action mechanisms, resistance patterns, toxicity, and therapeutic applications of antibiotics, antifungals, and antivirals. Prerequisite: MICROM 301; MICROM 302. Offered: Sp.

MEDCH 402, 403, 404 Medicinal Chemistry (3, 3, 4) Atkins, Daggett, Elmer, Hackett, S. Nelson, W. Nelson, Rettie, Trager Study of the various classes of medicinal compounds with particular emphasis on biological activity, mechanism of action, biotransformation, and the structural and physical properties governing absorption, distribution, and excretion. 402 - Prerequisite: passing score on departmental qualifying exam (qualex); CHEM 239; CONJ 403. Offered: A, W, Sp.

MEDCH 420 Alternative and Complementary **Medicines (2)** Elmer Study of popular alternative and complementary medicines used in the United States. Focus on herbal products with some coverage of homeopathic and other non-nutritional dietary supplements. Demonstration of resources for current objective information on these controversial medicines. Credit/no credit only. Offered: A.

MEDCH 435 Diagnostic Medicinal Chemistry (3) *S. Nelson* Examination of clinical diagnostic tests with regard to the chemical or biochemical rationale of the testing method, interpretation of test results, and major factors influencing test values with special emphasis on the effects of medications. Clinical laboratory data from patients considered in light of these factors. Prerequisite: BIOC 406. Offered: W.

MEDCH 490 Metabolism of Drugs (3) *Trager* Processes of drug metabolism, their mechanisms, and their implications in modern therapy. Bioactivation of prodrugs and biotransformations in the inactivation and elimination of drugs, and the relationship to drug toxicity and drug design. Prerequisite: CHEM 239. Offered: W.

MEDCH 495 Special Studies in Medicinal Chemistry (* max. 6) Opportunity to expand the breadth and depth of understanding in specific areas. Credit/ no credit only. Offered: AWSpS.

MEDCH 499 Independent Study/Research (* max. 24) Research problems in medicinal chemistry. Offered: AWSpS.

Courses for Graduate Students

MEDCH 501, 502, 503 Advanced Medicinal Chemistry (4, 4, 4) Atkins, Daggett, Elmer, Kunze, W. Nelson, Rettie, Trager Advanced study of the various classes of medicinal compounds, with particular emphasis on biological activity, mechanism of action, biotransformation, and the structural and physical properties governing absorption, distribution, and excretion. Prerequisite: permission of instructor. Offered: AWSp.

MEDCH 520 Seminar (1, max. 15) Graduate students attend seminars and make one formal presentation per year while in residence; maximum of three presentations. Credit/no credit only. Offered: jointly with PCEUT 520; AWSpS.

MEDCH 521 Advanced Medicinal Chemistry (3) Application of integrated data from the physical and biological sciences to problems of chemotherapy, including transport of drugs to site of action, biotransformation of drugs, interaction of drugs with enzyme systems, and recent advances in drug design. Prerequisite: CHEM 457, 531, and BIOC 442, or permission of instructor. Offered: Sp.

MEDCH 525 Laboratory Methods in Drug Metabolism (3) Atkins, Daggett, Kunze, Rettie, Thummel Advanced course covering techniques for the isolation of tissue subcellular fractions, characterization of product formation kinetics, enzyme inhibition kinetics, Western and Northern blot analysis, PCR, enzyme genotyping, and computer-based approaches for prediction of catalytically-sensitive sites on a drug molecule. Includes a weekly lab. Offered: jointly with PCEUT 525; even years; A.

MEDCH 527 Drug Metabolism (3) *Rettie* Considerations of the biochemical mechanisms for the biotransformation of drugs and foreign compounds. Includes reaction mechanisms, ultrastructural considerations, induction mechanisms, methodology, ki-

netics of inhibition and activation, steroid and amine metabolism. Offered: jointly with PHCOL 527; odd years; W.

MEDCH 528 Proteins in Therapy and Disease (3) *Atkins, Daggett* Examination of enzyme catalysis and of protein structure and dynamics. Principles applied to topics of therapeutic relevance including: peptides and proteins as drugs, structure-based drug design, drug metabolism, protein engineering, and role of mutant or incorrectly folded proteins in disease states. Prerequisite: comprehensive course in biochemistry or consent of instructor. Offered: even years; W.

MEDCH 530 Mass Spectrometry of Drugs, Toxicants, and Metabolites (3) Hackett Current approaches to the combination of liquid chromatography with mass spectrometry for small molecules. Mass spectrometry of drugs, toxicants, metabolites. Emphasis on interpretation skills, with problem sets each week. Introduction to LC/MS instrumentation. Ionization methods appropriate for small molecules. Capillary LC/MS and capillary electrophoresis. Offered: even years; Sp.

MEDCH 541 Macromolecular Mass Spectrometry (3) *Hackett* Emphasis on problem sets designed to teach basic interpretation skills with respect to proteins and peptides. Basics of mass spectrometry instrumentation for large molecules, including electrospray and MALDI-TOF. Classical techniques in protein chemistry, including Edman chemistry and amino acid analysis. Prerequisite: permission of instructor; recommended: concurrent registration in CHEM 520. Offered: even years; Sp.

MEDCH 550 Mechanistic Studies in Medicinal Chemistry (1) *S. Nelson* Discussion of research strategies and methods used to carry out studies of mechanisms of drug action, metabolism, and toxicities. Emphasis is on problem solving through theoretical and experimental approaches and on data analysis and interpretation. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 551 Flavin and Heme-Containing Monooxygenases (1) Retie Discussion of research strategies and methodologies concerning the structure, function, and polymorphic expression of human monooxygenases, especially the cytochrome P-450s and flavin-containing monooxygenases. Emphasis placed on experimental problem solving, data analysis, and presentation. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 552 Medicinal Chemistry Aspects of Drug Action and Drug Metabolism (1) *W. Nelson* Discussion of research strategies, methodologies, and literature concerning the mechanisms of drug action and drug metabolism, particularly as these apply to opiate drugs and beta blockers. Emphases placed on problem solving, data analysis, and presentation. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 553 Structure and Function of Macromolecuar Protein Assemblies (1) Atkins Discussion of research strategies, methods, and current literature concerning macromolecular self-assembly processes and protein-protein interactions as they relate to biological specificity. Emphasis on experimental approaches used in current literature. Credit/ no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 554 The Mechanism of Action and Pharmacokinetics of Biotherapeutic Agents and Other Natural Products (1) *Elmer* Discussion of the literature, research possibilities, and questions that need to be addressed in the area of the application of microorganisms and other natural products for therapeutic purposes. Emphases on problem solving, research strategies, literature evaluation, and data analysis. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS. MEDCH 555 Current Topics in Biological Mass Spectrometry (1) Hackett Emphasis on applications in the area of protein toxins, bioactive peptides, and microbial diseases and on current developments in the use of small scale separations with mass spectrometry. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 556 Mechanistic Aspects of Drug Metabolism (1) *Trager* Discussion of research strategies methodologies and new approaches with regard to elucidating the chemical mechanisms and enzymology of metabolic reactions catalyzed by cytochrome P-450. Emphasis on trying to develop in vitro techniques which are predictive of in vivo drug behavior. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 557 Molecular Modeling Studies of Medicinal Chemistry (1) *Daggett* Discussion of research strategies, simulation methodologies, and literature concerning protein and peptide structure, function, dynamics, and folding. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 558 Human Cytochrome P-450 Biochemistry (1) *Kunze* Presentation and discussion of research strategies and methodologies related to current problems in human drug metabolism by cytochrome P-450 enzymes. Emphasis on hypothesis testing and experimental problem solving in the areas of enzyme kinetics and mechanism. Prerequisite: permission of instructor. Offered: even years; AWSpS.

MEDCH 582 Topics in Medicinal Chemistry (1, max. 10) Discussion of pertinent articles from current literature. Credit/no credit only. Offered: AWSp.

MEDCH 590 Doctor of Pharmacy Thesis (1) Writing intensive course in which students develop a high quality scientific paper that demonstrates grammatical and organizational excellence and ability to critically evaluate biomedical literature. Credit/no credit only.

MEDCH 599 Cumulative Exams for Medicinal Chemistry (1) Quarterly cumulative examinations for graduate students. Offered: AWSp.

MEDCH 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

MEDCH 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

MEDCH 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Pharmaceutics

PCEUT 331 Pharmaceutical Formulation: Principles and Dosage Forms (4) Ho, Lee, Unadkat Physiochemical principles involved in formulating stable dosage forms suitable for human administration. Hands-on laboratory experience with formulating extemporaneous preparations routinely encountered in community and hospital pharmacy. Offered: A.

PCEUT 402 Drug Therapy and the Media (2) Gibaldi, Stergachis Review of media to provide a perspective on disease and drug therapy. Elements include drug discovery and development, clinical trials, the pharmaceutical industry, regulatory agencies, and socioeconomic consideration. Preparation of written and oral summaries of media reports. Offered: jointly with PHARM 402; W.

PCEUT 405 Clinical Pharmacokinetics (5) *G. Anderson, Levy* Basic principles of pharmacokinetics and their application to the clinical setting, including: single-dose intravenous and oral kinetics, multiple dosing, nonlinear pharmacokinetics, metabolite kinetics, pharmacogenetics, and the role of disease in drug clearance and dose requirements, and kinetics of drug-drug interactions. Prerequisite: PCEUT 331. Offered: W.

PCEUT 406 Biopharmaceutics and Drug Delivery (4) *Ho, Shen, Slattery* Principles and assessment of drug product bioavailability and bioequivalence, drug-drug and food-drug interactions for orally administered drugs, drug delivery via non-oral routes, and the systemic delivery of biotechnology drugs. Prerequisite: PCEUT 405. Offered: Sp.

PCEUT 493 Current Biomedical Literature (1) *Gibaldi* Discussion of current biomedical literature with emphasis on drug therapy. Credit/no credit only.

Courses for Graduate Students

PCEUT 501 Advanced Pharmacokinetics I (5) Ho, Shen, Slattery, Thummel, Unadkat Drug absorption, distribution, excretion, metabolism, and effects in mammalian systems. Compartmental model and model-independent approaches examined. Drug disposition studied in a physiologically realistic context taking nonlinear events into account. Aimed at development of innovative methods for data analysis and evaluation in biological systems. Prerequisite: 405, 506 or permission of instructor. Offered: Sp.

PCEUT 502 Advanced Pharmacokinetics Concepts (4) Levy, Shen, Slattery, Unadkat Recent developments and emerging concepts in theoretical and experimental pharmacokinetics. Clearance concepts and models, metabolite kinetics, mass balance relationship, protein binding, nonlinear systems. Prerequisite: 405, 506 or permission of instructor. Offered: Sp.

PCEUT 506 Pharmacokinetic Principles (2) Gibaldi, Hansten, Ho, Levy, Shen, Slattery, Thurmel, Unadkat Coverage of basic pharmacokinetic concepts in an interactive format. Students are given reading assignments prior to class as a point of entry into discussions of the material. Topics emphasize the physiological basis for mathematical models of drug distribution, clearance, and effect. Offered: W.

PCEUT 507 Drug Therapy Discussion Group (1, max. 12) Gibaldi New and important findings and trends in pharmacokinetics, biopharmaceutics, drug metabolism, and drug toxicity, with particular emphasis on clinical significance and applicability. Credit/ no credit only. Offered: AWSp.

PCEUT 508 Drug Discovery and Development (2) Gardner, Gibaldi, W. Nelson, Shen Overview of steps that lead to the introduction of new pharmacologic agents for the treatment of disease. Included are the scientific underpinnings of drug discovery, preclinical evaluation, clinical trials, regulatory considerations, and outcomes research. Credit/no credit only. Prerequisite: Pharm.D. student, graduate student, or permission of instructor.

PCEUT 510 Pharmacokinetics of Drug Interactions (2) Hansten, Levy, Shen, Slattery, Thummel Common pharmacokinetic mechanisms underlying the clinically important interactions between drugs. Interactions involving gastrointestinal absorption, serum drug protein binding, excretory and metabolic clearance processes are discussed. Prerequisite: 405 or equivalent. Offered: A.

PCEUT 513 Biotechnology, Bioinformatics, and Ecogenetics (3) Eaton, Rose, Thummel Methodologies currently used for characterization, storage, and retrieval of genetic information relevant to geneenvironment interactions that contribute to diseases of public health importance. Working knowledge of molecular genotyping and phenotyping, genomics, and bioinformatics related to genetic testing provided. Prerequisite: GENET 372 or permission of instructor. Offered: jointly with ENV H/PABIO/PHG 513; W. PCEUT 520 Seminar (1, max. 15) Graduate students attend seminars and make one formal presentation per year while in residence; maximum of three presentations. Credit/no credit only. Offered: jointly with MEDCH 520; AWSpS.

PCEUT 525 Laboratory Methods in Drug Metabolism (3) Atkins, Daggett, Kunze, Rettie, Thummel Advanced course covering techniques for the isolation of tissue subcellular fractions, characterization of product formation kinetics, enzyme inhibition kinetics, Western and Northern blot analysis, PCR, enzyme genotyping, and computer-based approaches for prediction of catalytically-sensitive sites on a drug molecule. Includes a weekly lab. Offered: jointly with MEDCH 525; even years; A.

PCEUT 534 Pharmaceutical Analysis (3) Slattery Methods of drug and metabolite analysis from biologic matrices. Emphasis on practical aspects of assay design, optimization, and validation. Approaches to troubleshooting both assay methodology and instrumentation problems are also covered. Credit/no credit only. Offered: W.

PCEUT 583 Topics in Pharmaceutics (1, max. 15) Discussion of pertinent articles from current literature and recent laboratory results. Credit/no credit only. Offered: AWSp.

PCEUT 584 Pharmacokinetic Discussion Group (2) Slattery Student initiated discussions of pharmaceutics concepts in relation to current literature. Preparatory to departmental cumulative examinations. Credit/no credit only.

PCEUT 586 Pharmaceutical Biotechnology (3) *Gibaldi, Ho, Thummel* Applications of biotechnology in designing therapeutic products, with emphasis on research and development of biopharmaceuticals. Molecular cloning, production, physical stability, delivery systems of protein therapeutics in relation to pharmacokinetic and therapeutic responses. Prerequisite: biochemistry courses or permission of instructor. Offered: Sp.

PCEUT 590 Doctor of Pharmacy Thesis (1) Writing intensive course in which students develop a high quality scientific paper that demonstrates grammatical and organizational excellence and the ability to critically evaluate biomedical literature. Credit/no credit only.

PCEUT 598 Independent Research (* max. 24) Basic and clinical research problems in drug disposition and effect. Prerequisite: 2.5 GPA and permission of instructor. Offered: AWSpS.

PCEUT 599 Cumulative Exams for Pharmaceutics (1) Quarterly cumulative examinations for graduate students. Offered: AWSp.

PCEUT 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

PCEUT 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

PCEUT 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Pharmacy

PHARM 304 Profession of Pharmacy (3) Kradjan Overview of the profession of pharmacy emphasizing practice opportunities and specialization. Introduction to clinical and ethics case evaluation techniques using the Pharmacist's Workup of Drug Therapy format. Off site pharmacy visitation required. Credit/no credit only. Prerequisite: PHARM 309.

PHARM 305 Introductory Pharmacy Practicum (3) O'Sullivan Preparation and dispensing of prescriptions at Rubenstein Memorial Pharmacy in Hall Health Center or other selected community pharmacies. Designed for Pharm.D. students with little or no expe-

SCHOOL OF PHARMACY / COURSE DESCRIPTIONS 467

rience in pharmacy. Under direct supervision of clinical faculty and other licensed pharmacy preceptors. Credit/no credit only.

PHARM 309 Quantitative Methods I (3) Murri, O'Sullivan, Stergachis Instruction in methods essential for conducting pharmacy calculations, interpreting and evaluating data and literature related to pharmacy, and responding to drug information inquiries from health professionals and patients. Introduction to statistical concepts necessary for pharmacy course work.

PHARM 334 Dispensing Practice Laboratory (2) *O'Sullivan* Medication dispensing issues include: prescription filling, OTC recommendation, patient records, vital signs, intravenous admixture, drug administration, patient counseling, use of computers for dispensing, and patient profiles. Prerequisite: PCEUT 331.

PHARM 335 Dispensing Practicum (2/4) O'Sullivan Under preceptor supervision, students master competencies necessary for distributional responsibilities in the institutional and ambulatory care pharmacy practice settings. Credit/no credit only.

PHARM 402 Drug Therapy and the Media (2) Gibaldi, Stergachis Review of media to provide a perspective on disease and drug therapy. Elements include drug discovery and development, clinical trials, the pharmaceutical industry, regulatory agencies, and socioeconomic consideration. Preparation of written and oral summaries of media reports. Offered: jointly with PCEUT 402; W.

PHARM 403 Chemical Dependency Concepts (1) Lippert Emphasis on dealing with substance abuse-related issues in pharmacy practice. The genesis of addiction, pharmacologic management of alcohol and other drug dependence, harm reduction strategies, legal and ethical considerations, medication management in the substance-abusing population and impaired pharmacist rehabilitation are covered in lecture-discussion format.

PHARM 409 Applied Pharmacokinetics (2) Anderson, Bauer Pharmacokinetics of specific drugs. Influence of age, weight, sex, and disease states on patient-specific dosage regimens emphasized. Advanced kinetic concepts are discussed and put into applied context. Prerequisite: PCEUT 405.

PHARM 411 Medical Devices for Home Health Care (3) Downing Study of medical devices commonly provided by pharmacists to their patients, including their selection and adaptation for specific patient needs. Lectures include display and demonstration of actual devices.

PHARM 412 Nonprescription Drugs and Self-Care (1, max. 3) *Kradjan* Overview of common classes of nonprescription medications with emphasis on product selection. Case examples demonstrate patient assessment, non-drug therapy, selection of non-prescription products if appropriate, and advice to patients. Oral presentation required.

PHARM 437 Substance Abuse Awareness (3) Lippert The etiology and patterns of substance abuse, drug classes, treatment options, codependency and recovery, drug testing, legal and ethical considerations, and community resources are covered in a lecture-discussion format. Students also participate in community service lectures and/or special projects. Credit/no credit only. Prerequisite: PHARM 403.

PHARM 438 Gerontological Communication Skills Seminar (2) Dawson Addresses special communication needs of the elderly, ranging from individualized patient counseling to patient advocacy through development and provision of pharmacy services. Communication techniques applicable to teaching, developing innovative services, supervising, motivating, conflict resolution, and interdisciplinary interactions are explored in lecture and laboratory. Credit/no credit only.

PHARM 440 Pharmaceutical Care Systems I (5) *Dawson* Focuses on how human behavior and communication influence the pharmacist's activities in designing, delivering, and managing patient-focused pharmaceutical care. Writing, listening, interview, teaching, and critical thinking as applied to pharmacy practice are emphasized.

PHARM 445 Public Health Applications in Pharmacy (3) Gardner Provides skills and knowledge required to administer vaccines, conduct smoking cessation and wellness assessment programs, administer and interpret tuberculin skin tests in ambulatory pharmacy practice, and initiate outreach activities in response to assessed community needs for medication-related information and services. Prerequisite: MEDCH 401.

PHARM 452 Contemporary Problems (1) Discussion of current trends affecting the role of pharmacy in health-care delivery. Credit/no credit only.

PHARM 460 Principles of Professional Practice Management (3) Topics include goal setting and management functions, management, computer simulations of management decision-making and assessing market opportunities for new pharmaceutical care services. Primarily for students who are interested in managerial careers in ambulatory pharmacy practice.

PHARM 462 Drug Use Review (3) Introduction to purpose, principles, and techniques of utilization review. Emphasis on steps in drug use review process, including criteria development, data collection, analysis, and interventions. Examples of drug use review and evaluation activities in a variety of practice settings, including hospitals, nursing homes, and ambulatory care pharmacy networks. Guest speakers.

PHARM 468 Case Studies in Pharmaceutical Care (3, max. 9) Dawson Small groups of students work with an instructor to review cases illustrating various aspects of specific diseases: pathophysiology, clinical features, psychosocial factors, therapeutic interventions with emphasis on drug therapies, and community resources. Analytic reasoning, self-study skills, and knowledge are emphasized.

PHARM 479 Quantitative Methods II (4) Blough, Sullivan Introduction to basic biostatistical concepts in the field of pharmacy. Prerequisite: PHARM 309.

PHARM 483 Institutional and Healthcare Systems Pharmacy Practice (2) Burkhart Presentation of topics regarding current contemporary institutions pharmacy practice. Discussion of new systems technology, home care programs, managed care, computer applications, budgeting, formulary systems, drug information services, intravenous admixture programs, quality assurance process, and patient oriented services.

PHARM 488 Elective Advanced Practicum (1-16, max. 40) Plein Advanced-level geriatric clinical pharmacy experience in institutional (hospital, nursing home, long-term-care facility) and ambulatory patient-care facilities under direct supervision of a clinical preceptor. Credit/no credit only.

PHARM 489 Drug Information (4-8) Murri Supervised experience in performing clinical pharmacy activities relating to retrieval and analysis of drug information from various resources; preparation of responses to consultation requests presented to Drug Information Service; techniques of preparing written and verbal drug information reports; participation in preparation of a pharmacy newsletter. Credit/no credit only. PHARM 490 Fluid and Electrolytes and Parenteral Nutrition (2) Edwards Principles of fluid and electrolyte therapy, including saline, water, and acid-base balance, carbohydrate, protein, lipid, vitamin, and mineral requirements in parenteral nutrition. Nutritional assessment, complications of parenteral nutrition, stability and compatibility of intravenous solutions, modifications of parenteral nutrition in pediatrics and specific disease states are also covered.

PHARM 491 Cancer Pharmacotherapeutics (2) *Kwok, McDonnell, O'Connor, Takeuchi* Pharmacotherapy of cancer, covering supportive care (antibiotics, antiemetics, analgesics, nutrition) to the antineoplastic agents themselves. Specialists in each area serve as quest lecturers.

PHARM 492 Pharmaceutical Services for Long-Term Care (2) Plein Scope of pharmaceutical services for long-term care (LTC) and systems for services. Responsibilities of the pharmacist for distributive, administrative, and clinical pharmacy services for nursing homes and other long-term-care facilities. Economic considerations in provision of LTC pharmaceutical services, role of the consultant pharmaccist for home-health-care organizations. Pharmaceutical services for independently living elderly.

PHARM 495 Special Studies in Pharmacy (* max. 6) Special studies of professional topics in pharmacy. An opportunity to expand the breadth and depth of understanding in specific areas. Students undertake independent study under the individual direction of a faculty member.

PHARM 497 Drug Therapy for the Elderly (4) *Plein* Current knowledge of the effects of aging on the clinical use of drugs for elderly and aged patients. Topics include drugs of choice, drug therapy monitoring, and multiple drug regimens in the treatment of multiple pathologies.

PHARM 498 Case Conference: Geriatrics (1) *Plein* Students taking geriatric pharmacy clerkships in various clinical settings meet with faculty to present case studies of elderly patients requiring complex drug therapies. Credit/no credit only.

PHARM 499 Independent Study/Research (* max.6) Applied pharmaceutical research problems. Credit/no credit only.

PHARM 502 Neonatal Drug Therapy (3) Clinical applications of drugs used with acute and chronically ill preterm and term neonates. Review of neonatal pharmacotherapeutics. Examination of selected therapeutic agents in relation to indications, efficacy, therapeutic and adverse effects, monitoring parameters, and dosing principles in the neonate.

PHARM 506 Clinical Pharmacokinetics (3) Bauer Discussions based on research papers from clinical kinetic and therapeutic literature regarding the pharmacokinetics of a drug or class of drugs. Credit/no credit only.

PHARM 509 Medical Literature Evaluation (2) Gibaldi, Harvey, Odegard, O'Sullivan, Watkins Introduction to the processes involved in the assessment of primary and tertiary medical literature. Students are required to read and critique medical literature. Classes are conducted in a journal club format.

PHARM 510 Current Topics in Infectious Disease Pharmacotherapy (3) Bauer, Black Specialty topics of infectious disease pharmacotherapeutics, emphasizing the optimum use of antibiotic therapy. Discussion format using primary medical literature. Topics chosen for discussion reflect contemporary issues. Prerequisite: 560.

PHARM 511 Current Topics in Immunology and Immunotherapeutics (2) Hebert Overview of the immune system and pharmacologic agents which modulate the immune response. Prerequisite: second-, third-, or fourth-year Pharm.D. student or permission of instructor.
PHARM 512 Clinical Applications of Drug Interactions (2) Hansten, Horn Discussion of clinical evaluation and management of drug-drug interactions using patient situations. Focus on patient- and drug-related factors that predispose patients to adverse drug interactions, as well as clinical management of patients found to be at risk. Prerequisite: third- or fourth-year Pharm.D. student.

PHARM 514 Primary Care Pharmacotherapeutics (3) Belza Explores clinical applications and therapeutic issues for selected drug categories commonly used in primary care settings and across age groups. Selected drug categories defined by pharmacokinetics, indications for use, efficacy, therapeutic and adverse effects, monitoring parameters, dosing principles, common drug interactions. Patient education, socioeconomic, and behavioral factors emphasized.

PHARM 515 Pharmacotherapeutics for Acute/ Critical Illness (3) Simpson Analysis of issues that impact the assessment, prescription, and evaluation of pharmacotherapeutic regimes for patients who are acutely or critically ill. Current research, clinical contextual considerations, and pharmacotherapeutic principles are emphasized as the basis for decisions relevant to the management of pharmacotherapy in acute care clinical practice.

PHARM 530 Methods in Pharmaceutical Outcomes Research (3) Stergachis Emphasis on design and methods of research. Overview of scientific methods, including theory construction. Instruction in writing research proposals and integration of statistical methods with design. Formulation and discussion of hypothetical research projects related to pharmaceutical outcomes. Prerequisite: graduate standing in pharmacy and one statistics course or permission of instructor.

PHARM 532 Methods in Pharmaceutical Policy Analysis (3) Hazlet Introduction to the tools used in and the framework and dominant contexts for pharmaceuticals policy development and analysis. Methods reviewed in a series of sessions presenting a specific method and case analyses involving pharmaceuticals development. Project and in-class presentation required. Prerequisite: graduate standing in pharmacy or permission of instructor.

PHARM 533 Pharmacoepidemiology (3) Gardner, Heckbert, Odegard, Stergachis Covers methods for recognition, study, and management of drug-induced problems, emphasizing research and public policy objectives. Core to doctoral program in Pharmaceutical Outcomes and offered as an elective for graduate students in other disciplines. Offered: jointly with EPI 533. PHARM 534, 535 Evaluating Cost and Outcomes in Health and Medicine 1, 2 (3, 3) Patrick, Sullivan Concepts and methods for evaluating cost and outcomes of health and medical interventions with a focus on cost-effectiveness analysis, pharmacoeconomics, health and quality of life assessment, resource allocation, and medical decision-making. Prerequisite: permission of instructor. Offered: jointly with HSERV 583, 584.

PHARM 541 Pharmaceutical Care Systems II (4) Gardner Relationship of pharmaceutical care systems to health care in the United States. Role of organizations, institutions, financing, reimbursement, mechanisms, and public policy in delivery of pharmaceutical care. Methods of analyzing medication use in patient populations. Contemporary health issues including access to care, cost containment, and quality assurance.

PHARM 542 Pharmaceutical Care Systems III (4) Gardner Introduction to management concepts, particularly as applied to drug benefit plans, pharmaceutical care services in managed care delivery systems. Management decision-making tools and techniques are presented. Students are provided experience in the application of management decisionmaking techniques through group case-studies using a problem solving format.

PHARM 543 Pharmacy Laws and Ethics (4) Hazlet, Ritchie, Williams Study of the laws regulating the practice of pharmacy. Professional liability, warranties, and contracts are discussed. Case studies of ethical considerations of pharmacy practice.

PHARM 550 Pharmacotherapeutics for Older Adults (4) Plein Clinical use of drugs for older adults. Age-related pharmacokinetics, pharmacodynamics, and pharmacotherapeutics as applied to selecting and monitoring drug regimens for elderly patients. Problem solving regarding drugs of choice for older people with multiple pathologies. Prerequisite: fourth-year Pharm.D. student or permission of instructor.

PHARM 560 Therapeutics I (10) Black, Hansten, Kradjan Clinical application of drug knowledge in the treatment of disease. Emphasis on problem-solving, using case examples.

PHARM 561 Therapeutics II (9) Bauer, Horn Clinical application of drug knowledge in the treatment of disease. Emphasis on problem-solving, using case examples.

PHARM 562 Therapeutics III (9) Anderson, Gray, Hebert Clinical application of drug knowledge in the treatment of disease. Emphasis on problem-solving, using case examples. **PHARM 574 Clinical Introductory Practicum (1)** *O'Sullivan* Students spend three days in a patient care setting, under the guidance of preceptors or advanced students, as an introduction to the practicum experience. Credit/no credit only.

PHARM 575 Institutional Clinical Practicum (5, max. 15) O'Sullivan Under faculty supervision, fourth year students provide pharmaceutical care in an inpatient environment. Credit/no credit only.

PHARM 576 Ambulatory Care Clinical Practicum (5, max. 15) O'Sullivan Under faculty supervision, fourth year students provide pharmaceutical care in an outpatient environment. Credit/no credit only.

PHARM 577 Advanced Practicum (5, max. 40) O'Sullivan Under faculty supervision, fourth-year students gain experience in practice settings of their choice. Credit/no credit only.

PHARM 578 Advanced Elective Practicum (1-10, max. 20) Gardner, Gray, O'Sullivan, Plein Facultysupervised practicums either in areas of traditional practice or in innovative practice plans designed by faculty and student. Objectives, activities, schedules, and lengths are site- and preceptor- specific. Credit/ no credit only.

PHARM 586 Clinical Case Conference (2) Bauer, Horn Weekly pharmacotherapy case conference emphasizing current therapeutics and clinical decision making. Credit/no credit only.

PHARM 590 Doctor of Pharmacy Thesis (1) Writing intensive course in which students develop a high quality scientific paper that demonstrates grammatical and organizational excellence and the ability to critically evaluate biomedical literature. Credit/no credit only.

PHARM 596 Seminars in Pediatric Pharmacotherapy (2) Joseph Overview of drug disposition and medication utilization as it applies to the pediatric patient. Specific emphasis on neonatology and ambulatory pediatrics. Prerequisite: third-year Pharm.D. student or permission of instructor.

PHARM 597 Graduate Seminar (1) Gardner, Hazlet, Stergachis, Sullivan Interactive discussion of topical issues, methods, or analytic techniques. Topics vary. Credit/no credit only. Prerequisite: graduate program student. Offered: AWSp.

PHARM 599 Cumulative Exams in Pharmacy (1) Credit/no credit only.

PHARM 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

PHARM 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

PHARM 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

GRADUATE SCHOOL OF PUBLIC AFFAIRS / GRADUATE PROGRAM 469

Graduate School of Public Affairs

Dean

Marc M. Lindenberg 208F Parrington

Associate Dean

J. Patrick Dobel 230 Parrington

The Graduate School of Public Affairs (GSPA) is a graduate professional school providing education and research for the public service. The School confers the Master of Public Administration (M.P.A.) degree with day and evening program options. GSPA's program of study is designed to train highly skilled managers and policy analysts for a wide range of careers in the public and nonprofit sectors. The academic and professional orientation of the degree program gives GSPA students the knowledge and skills necessary to make significant contributions to regional, national, and international policy. Graduates hold such leadership positions throughout the public sector as mayors and city managers; local and regional government administrators; foreign service officers; staff assistants to elected officials; analysts with budget offices, legislative staff units, and city councils; directors of social service agencies; leaders and staff of nonprofit advocacy and service organizations; and administrators of arts organizations. In addition, a number of alumni are employed in the private sector, usually in positions involving substantial contact with public agencies.

Graduate Program

Graduate Program Coordinator 230 Parrington, Box 353055 (206) 543-4900

Master of Public Administration

Day Program

The Master of Public Administration degree is awarded upon satisfactory completion of 60 credits of course work, including a final degree project. Students without substantial prior experience in public service work also are expected to complete a paid administrative internship. The program normally requires two full academic years, and, for those requiring an internship, the intervening summer. Students may attend the day program on a part-time basis. Concurrent degree programs in International Studies (M.P.A.-M.A.I.S.) and Law (M.P.A.-J.D.) are available.

The GSPA curriculum ensures the integration of public policy analysis and management while giving students the flexibility to specialize in substantive policy fields. Courses emphasize the practical application of the theory, values, and techniques needed to succeed in public life. The academic program is divided into three major components: (1) the required core curriculum, which introduces students to public organization theory, policy analysis, budgeting, microeconomic analysis, and quantitative methods; (2) more concentrated study in economics, management and analysis, and context and values of public life; and (3) specialized study in one of six policy gateways: education and social policy; environmental policy and natural resources management; international affairs; nonprofit management; urban and regional affairs; or individualized policy study. The policy gateways permit students to explore a wide range of academic disciplines and professional opportunities, and encourage students to take classes in other schools. Central to the gateways are courses offered by numerous other schools and departments at the University of Washington.

Midcareer Evening Program

GSPA offers an evening degree option for midcareer professionals pursuing the M.P.A. degree. The evening degree program blends academic and professional perspectives to provide public and nonprofit practitioners with the tools to lead their organizations in an effective and responsive fashion.

To receive the evening M.P.A. degree, students must complete 54 credits of course work over a three-year period. Students take, on average, two 3-credit courses per term, though they are able to reduce their academic year course load by enrolling in summer courses. Foreign-language proficiency or a thesis are not required for the evening M.P.A. degree.

The midcareer curriculum emphasizes the practical application of the theories, values, and managerial skills critical to success in public life. Over half (30 credits) of evening students' credits are in specialized courses taught from the perspective of the nonprofit or governmental administrator. This integrated core curriculum acknowledges the importance of the traditional core-curriculum topics taught in the day program, but presents them in a way that better reflects the actual practice of public managers and policy analysts. The integrated public management sequence (9 credits in three consecutive quarters) analyzes the institutional and political context of modern public management. The integrated analytic reasoning sequence (9 credits in three consecutive guarters) is an introduction to the major analytic concepts and tools needed by public managers, including economic, qualitative, and quantitative analysis. The public leadership seminars (12 credits in four quarters over the three-year program) are linked courses focusing on the personal values and commitments of managerial life, the integrated use of analytic and management concepts in the making of policy, analysis of selected problems confronting public and nonprofit managers, and a team project to analyze and propose solutions to major strategic challenges facing local organizations. Students are also required to take core courses in budgeting and ethics of public life.

Students accumulate their remaining credits from electives selected from GSPA's extensive evening curricul lum, as well as courses in other schools. This curricular structure permits midcareer students to design their own academic plan in a way that best suits their professional needs and interests.

Admission Requirements

The Graduate School of Public Affairs admits students on an annual basis, for summer or autumn quarter only. The application deadline for either quarter is February 1.

The prospective student must hold a baccalaureate degree from an accredited college or university in the United States, or its equivalent from a foreign institution. The student's academic record should be a strong one, with a minimum GPA of 3.00 on the last 90 (quarter) or 60 (semester) credits of undergraduate work. Scores on the Graduate Record Examination (GRE) general test are also required for admission.

The primary criterion for admission to the School is the applicant's demonstrated ability to complete the graduate program while sustaining a high level of achievement. GSPA's Admissions Committee considers grades and test scores, and gives considerable weight to professional experience, volunteer work, letters of recommendation, and the applicant's writing skills as demonstrated in a personal essay. Applicants for the evening degree program must demonstrate seven to ten years of progressively responsible administrative experience. If prospective students have spent most of their careers in the private sector, they will need to demonstrate an active interest in, and contact with, public issues.

Although the School has no formal undergraduate course requirements for admission, GSPA's core courses in economics and quantitative methods assume that entering students have been exposed to these subjects at the undergraduate level. Ideally, new students will possess an academic or professional background in governmental processes, excellent writing skills, and academic preparation in micro-economics and statistics. Students lacking sufficient preparation in these areas may be required to demonstrate aptitude prior to admission, or may be asked to take preparatory course work in addition to the basic M.P.A. degree requirements.

Financial Aid

The Graduate School of Public Affairs has limited departmental financial aid. The UW Office of Student Financial Aid is the primary source of financial assistance for M.P.A. students. The most common forms of University aid are work-study awards, and Stafford or Perkins loans. Only full-time students are eligible for non-loan forms of university financial aid.

In order to receive priority consideration for UW financial aid, the Free Application for Federal Student Aid (FAFSA) must be received by the central processor (located in lowa) by February 28 of the year of application to the school. Applicants should mail completed FAFSA forms at least two weeks ahead of this deadline. FAFSA forms can be obtained from the UW Office of Student Financial Aid, Box 355880, (206) 543-6101, or from the financial aid office of any college or university.

Each year the Graduate School of Public Affairs awards a limited number of departmental fellowships. In order to receive consideration for these awards, applicants must complete the GSPA financial aid application. These forms are included in the GSPA application packet. First-year students are also eligible to apply for some research assistantships. These appointments are generally made after autumn quarter begins. Teaching assistantships are reserved for second-year students. Paid internships with public agencies can also provide students with additional income during their tenure at GSPA.

Research Facilities

The culture of the Graduate School of Public Affairs promotes the integration of extensive applied research into the academic program. Students participate in independent research work related to their degree projects. In addition to supporting the independent research of its faculty members, the School houses several policy centers.

Institute for Public Policy and Management

The Institute for Public Policy and Management (IPPM) initiates and conducts major applied-research projects for public managers and elected officials, drawing upon the skills and knowledge of University researchers, faculty members, graduate students, and practitioners from various public and private organizations. Through research, consultancy, conferences, publications, and training, the IPPM enhances the ability of public sector officials and the general public to understand major public policy issues and to make sound public management decisions.

Northwest Policy Center

The Northwest Policy Center (NPC) was established in 1987 as a model regional program to develop and improve public strategies which promote economic vitality in the five-state Northwest region. NPC conducts policy research, designs and evaluates policy alternatives, and promotes the continuous exchange of information among regional policymakers.

Cascade Center for Public Service

The Cascade Center for Public Service was established in 1987 to enhance the quality of public management in the Northwest through the design and delivery of executive education programs. The center offers an extensive set of training programs tailored to senior and mid-level public managers and to elected officials in state and local government. In addition, the center's Curriculum Development Project is working to improve the development and availability of new teaching tools and techniques through the use of a computer distribution network to distribute new case studies, skill exercises, and teaching notes.

Human Services Policy Center

Founded in 1991, the Human Services Policy Center (HSPC) is an interdisciplinary research center focused on issues relating to families and children. It was created to help professionals forge links among schools and service agencies to improve service delivery to children and families. HSPC's mission includes program evaluation and data analysis to help policymakers and the general public better understand these critical issues. The center is a collaborative endeavor involving faculty from several University of Washington professional schools: Public Affairs, Public Health and Community Medicine, Education, Social Work, Nursing, and Communications.

Center on Reinventing Public Education

The Center on Reinventing Public Education seeks to develop and evaluate methods of public oversight that can allow schools to be focused, effective, and accountable. The center, which was established in 1993, pursues a national program of research and development on such proposals as charter schools, school contracting choice, and school system decentralization. It also conducts research into reform initiatives in Washington state and the Seattle public schools.

Fiscal Policy Center

The Fiscal Policy Center (FPC) studies the impact of state taxes and spending on the lives of those who live in or near poverty, or who are vulnerable to changing state tax policies. This center combines strong analytical capacity with extensive community advocacy and policymaker contacts and seeks to frame public debate on state tax and spending policies. In addition to research and analysis, the FPC hosts seminars, conferences, and specialized briefing sessions to communicate findings to decision makers and to the general public.

Faculty

Professors

Beyers, William B. * 1962, (Adjunct); PhD, 1967, University of Washington; economic geography, regional analysis, regional development.

Dobel, J. Patrick * 1985; PhD, 1976, Princeton University; ethics, public management, leadership.

Gordon, Andrew * 1988; PhD, 1970, Columbia University; information policy, organizational dynamics, social psychology, community research.

Gordon, Margaret T. * 1988; PhD, 1972, Northwestern University; news media and public policy, trust in government, urban policy.

Hill, Paul T. * 1993, (Research); PhD, 1972, Ohio State University; education policy and reform.

Hyman, Barry * 1975; PhD, 1965, Virginia Polytechnic Institute and State University; mechanical design, energy systems and policy.

Karr, James * 1991, (Adjunct); PhD, 1970, University of Illinois; ecology and conservation biology, water resources, environmental sciences, natural resources.

Lindenberg, Marc M. 1998; PhD, 1973, University of Southern California; comparative development policy and administration, public management.

Locke, Hubert G. * 1976; MA, 1962, University of Michigan; criminal justice, urban policy, race and ethnic relations, ethics and public policy.

Madden, Carolyn Watts * 1975, (Adjunct); MA, 1974, PhD, 1976, Johns Hopkins University; health economics and policy.

May, Peter J. * 1979, (Adjunct); PhD, 1979, University of California (Berkeley); policy analysis, quantitative methods, federal disaster policy.

Miles, Edward L. * 1974; PhD, 1965, University of Denver; international law and organization, science and international relations, marine policy.

Pierce, Lawrence C. 1997 (Research); PhD, 1970, Cornell University; education policy, public policy and management.

Plotnick, Robert D. * 1984; MA, 1973, PhD, 1976, University of California (Berkeley); poverty, labor and social welfare policy, economic policy analysis.

Wolfle, Dael L. * 1982, (Emeritus); PhD, 1931, Ohio State University; science and public policy.

Zerbe, Richard O. * 1975; PhD, 1969, Duke University; law and economics, cost-benefit analysis, economic history, environmental policy.

Associate Professors

Anderson, Leigh 1997; PhD, 1989, University of Washington; international trade and environmental policy, development, regulatory economics.

Brock, Jonathan 1982; MBA, 1973, Harvard University; public management, negotiation and mediation, labor relations, managing people.

Klawitter, Marieka * 1990; MS, 1986, PhD, 1992, University of Wisconsin; family and employment policy, sexual orientation, women's studies.

Miller, Ernest G. * 1965, (Emeritus); PhD, 1959, Princeton University; management and organizational development, organization theory, administrative behavior.

Pivo, Gary E. * 1987, (Adjunct); PhD, 1987, University of California (Berkeley); land use and physical planning, environmental planning, growth management.

Smith, Steven Rathgeb 1996; MSW, 1978, Washington University; PhD, 1988, Massachusetts Institute of Technology; nonprofit and public management, community development and urban policy.

Waddell, Paul A. * 1997; PhD, 1989, University of Texas (Dallas); urban policy, land use and transportation, growth management, poverty concentration.

Zumeta, William M. * 1985; PhD, 1978, University of California (Berkeley); public management, policy analysis, education and workforce policy.

Assistant Professors

Cullen, Alison * 1995; DSc, 1992, Harvard University; environmental policy and science, quantitative decision making and management.

Madison, John J. 1995; MS, 1981, American University; PhD, 1994, George Mason University; politics of public policy, technological innovation.

Weinberg, Lisa Ellen * 1993; PhD, 1993, Virginia Polytechnic Institute and State University; organization and management theory, public management.

Senior Lecturers

Cormick, Gerald W. 1975; PhD, 1971, University of Michigan; mediation and negotiation.

McIntire, James L. 1987; MPP, 1978, University of Michigan; PhD, 1993, University of Washington; housing policy, state tax policy, labor market policy.

Royer, Charles T. 1994; LLD (hon), 1983, Antioch College; urban policies, health policy.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

PB AF 498 Topics in Public Leadership (3-5) I&S Examines the nature and variety of public leadership in modern political life. Discussion of the political, managerial, and ethical challenges facing today's public leaders as well as strategies of leadership in a wide variety of settings. Offered: jointly with POL S 472.

PB AF 499 Topics in Public Policy (3-5) I&S Examines selected issues of importance in all areas of public policy. Focus on in-depth analysis of vital public policy issues and the integration of economic, political, and administrative perspectives on them. Offered: jointly with POL S 404.

Courses for Graduates Only

PB AF 500 General Seminar (1, max. 9)

PB AF 501 Bureaucratic Politics (3) Emerging literature on bureaucratic politics (e.g., principal-agent theories) and its relevance to policy processes at national or subnational levels. Offered: jointly with POL S 570.

PB AF 502 Political Management of Policy Process (3) Analyzes the issues which public managers address when they seek to make and implement public policy and programs. Pays particular attention to the institutional and political constraints on policy making and the skills needed to address them.

PB AF 503 Administrative and Executive Leadership (3) Nature of executive life in the public sector, the function of leadership in implementing, making, and changing policy. Leadership styles, the relation of leadership to its constituencies and communities. Offered: jointly with POL S 572.

PB AF 504 Administrative Ethics (3) Moral dilemmas that confront public managers. Critical view of societal and political values that prescribe moral behavior. Organizational and professional ethics. Ethical problems of public organization managers. Systematic means for understanding, analyzing, and coping with moral issues that appear in a career.

PB AF 505 The Law of Public Administration (3) Legal framework of public administrative action in the United States, emphasizing constitutional requirements; operation of the administrative process; management of personnel, funds, and contracts; and judicial review of administrative activity.

PB AF 506 Ethics and Public Policy (3) Teaches students to identify moral issues in public life. Special focus on the integration of moral concerns into public discussion in a manner which contributes to good policy and does not polarize issues. Discusses moral and political theory by focusing on contemporary cases and issues.

PB AF 507 International Organizations and Ocean Management (3) Survey of the manner in which international organizations attempt to manage and regulate the uses of the ocean. Primary emphasis on the analysis of processes that support or constrain these organizations and on the search for alternative policies and organizations. Prerequisite: SMA 500 or permission of instructor. Offered: jointly with SMA 507.

GRADUATE SCHOOL OF PUBLIC AFFAIRS / COURSE DESCRIPTIONS 471

PB AF 508 Management Approaches to Service Delivery (3) Examines how services can be delivered in a way that is responsive to the needs of those being served and maximizes the effective utilization of resources. Topics addressed include: needs assessment, process analysis, service strategy, sustaining the service organization, case management, and services integration.

PB AF 509 Public Organizational Theory (3) Approaches to the study of organizational behavior in a changing society, including consideration of formal and informal organization, personality needs, role playing, client relations, and the sociopolitical and technological environments.

PB AF 510 Management Analysis (3) Survey of the theory and current practice relating to governmental organizations and their program objectives.

PB AF 511 Management of Not-for-Profit Organizations (3) Focuses upon the roles played by not-for-profit organizations in meeting the public good. Examines internal management issues such as structure, budget, and operations; and external issues such as board functions, legal status, marketing, media relations, and fund-raising.

PB AF 512 Management of Public Enterprises (3) Examines issues in managing public enterprises. Provides comparative analysis of policies, development, and management approaches of such enterprises with regard to traditional government agencies, private sector business, and public enterprise of other countries. Special focus on "balancing" business and competitive requirements with public policy/process and the political environment.

PB AF 513 Public Policy Analysis (3) Production and use of analysis to support public policy decisions. Defining problems, devising alternative solutions, clarifying stakes in choices, predicting impacts of choices. Skills developed by working on specific policy problems. Assumes familiarity with statistics, microeconomic theory, and institutions and processes of American government. Prerequisite: 516 or permission of instructor.

PB AF 514 Policy Implementation (3) Presents set of analytic skills for anticipating and diagnosing implementation problems. Primarily for students who plan to become public-sector policy analysts or managers. Mastery of basic literature and its application to solving problems of public policy, including estimating feasibility of policy alternatives and identifying sources of implementation failure, is expected.

PB AF 515 Decision Making for Public Managers (3) Considers decision making from normative, prescriptive, and descriptive perspectives. Emphasizes individual decision making, with some discussion of organizational decision practice. Focuses on decision analysis; presents tools for structuring decisions; and considers the role of analysis as a basis for negotiation.

PB AF 516 Microeconomic Policy Analysis (3) Ways in which microeconomic analysis can contribute to the analysis of public sector issues. Supply and demand, consumer and firm behavior, competitive and monopoly markets, income distribution, market failure, government intervention. Policy applications of theory. Prerequisite: elementary economics.

PB AF 517 Economics of the Public Sector (3) Methods of analyzing effects of public expenditures and taxes on behavior of individuals and firms, on economic efficiency, and on equity and distribution of income. Theory and practice of intergovernmental fiscal relations. Application of theory to formulation of public policy. Prerequisite: 516.

PB AF 519 Policy Analysis Workshop (3) Techniques and methods required in social policy analysis, including the technical issues in developing, using, interpreting research relevant for social policy and bureaucratic problems. Designed to aid future administrators and analysts in performing policy analysis, working with researchers to develop relevant studies and with the agency bureaucracy to integrate research and analysis. Prerequisite: permission of instructor.

PB AF 520 Intergovernmental Relations (3) Comparative study of the issues involved in implementing government programs across multiple jurisdictions. Issues of accountability, feasibility, politics, and constitutional limits are examined by focusing upon various methods used to implement programs across federal, state, regional, and international jurisdictions.

PB AF 521 Public Management: Program Planning and Design (3) Policy context of planning and programming, the institutionalization of purpose, the planning process, activity design, work scheduling and measurement, and program evaluation.

PB AF 522 Public Management: Budgeting (3) Budgeting as a management process. Study of formulation and administration of government budgets, including role of budgeting in policy processes, approaches to budget formulation and analysis, development of the PPB approach, and aspects of budget administration, such as revenue estimating, allotment control, cost accounting. Prerequisite: 516 or permission of instructor.

PB AF 523 Public Management: Personnel (3) Study of line-staff decision making in acquisition and use of human resources in public organizations, including evaluation of job responsibilities, establishment of compensation levels, collective bargaining, selection and placement, performance appraisal, incentive management, and training.

PB AF 524 Managing People in Public and Nonprofit Agencies (3) Emphasizes the role of the program manager rather than that of the personnel of ficer. Managing people within a variety of programmatic, bureaucratic, and political settings. Case studies form basis of class discussion, assignments.

PB AF 525 Organizational Development in Public Agencies (3) Philosophies, theories, and models of behavioral science interventions in organizational diagnosis and development (OD). In addition to a review of the basic literature dealing with the OD approach, emphasis is placed on examination of case studies and class experience in OD applications, including organizational diagnosis, problem confrontation, and team building. Prerequisite: permission of instructor.

PB AF 526 Program Evaluation (3) Theory, practice, and politics of evaluation, from simple feedback mechanisms to evaluation of large-scale ongoing programs and social experiments. Emphasis on applications of experimental and quasi-experimental evaluation. Case studies illustrate various types of evaluation. Prerequisite: background in quantitative methods.

PB AF 527, 528 Quantitative Analysis; Quantitative Analysis for Public Managers (3, 3) Introduces quantitative methods in the context of public management and policy analysis. Covers descriptive statistics, hypothesis testing, linear models, and research design and modeling. Helps students become knowledgeable consumers of empirical evidence. Prerequisite: graduate status in School of Public Affairs or permission of instructor for 527, 527 for 528.

PB AF 529 Quantitative Applications in Public Affairs (3)

PB AF 530 Financial Management in the Public Sector (3) Exploration of the managerial uses of accounting and other processes of financial management in the public sector. Topics covered include: financial planning and control, fund accounting, cost accounting, asset accounting, internal controls, auditing, financial analysis, and financial reporting. Prerequisite: permission of instructor.

PB AF 532 Law and Economics (3) Offered: jointly with LAW A 561.

PB AF 534 International Affairs (3) Provides a broad understanding of international issues and United States policy. Students explore U.S. foreign policy and theories of major international actors in international trade, security, and strategic concerns, refugee policy, conflict resolution, development assistance, and the environment. Offered: jointly with POL S/SIS 534.

PB AF 537 Topics in International Affairs (3, max. 12) Examines topics of interest and import in foreign policy and international affairs. Focuses on the indepth analysis of issues and the integration of economic, institutional, and political dimensions.

PB AF 538 Legislative Relations (3) Studies role of legislative bodies in American public policy making. Builds on case studies and focuses on tactics, constraints, and options involved in working within a legislative process to achieve public policy goals.

PB AF 540, 541, 542 Integrated Public Management Sequence (3, 3, 3) Analyzes the institutional and political context of modern public management. Cases, readings, and discussion provide an integrated introduction to the major skills needed to successfully lead and manage government and nonprofit organizations.

PB AF 543, 544, 545 Integrated Analytic Reasoning Sequence (3, 3, 3) Introduction to the major analytic concepts and tools needed by public managers, including economic, qualitative, and quantitative analysis. Focus on learning to use and assess the different analytic tools and understand their proper use in the making of policy and the management of government and nonprofit organizations.

PB AF 546 Public Leadership Seminar (3) Focus on the societal context of managerial life. Credit/no credit only. Prerequisite: permission of instructor.

PB AF 547 Public Leadership Seminar (3) Integrated use of analytic and management concepts in the making of policy. Prerequisite: 546.

PB AF 548, 549 Public Leadership Seminar (3, 3) Team project for an outside client or organization and an analysis of selected problems confronting managers of public and nonprofit organizations. Prerequisite: 547.

PB AF 550 Public Arts Policy and Management (3) Role of government in arts. Range of public support at federal, state, and local levels; reasons for its development and viability. Nature, evolution, functions of public arts agencies in implementing arts policy; relation of such agencies to their constituencies. Seattle, King County, and Washington State serve as case studies.

PB AF 551 Comparative Administrative Systems (3) Methodological problems of research in comparative administration. Theoretical and substantive aspects of administrative systems in urban-industrial and developing nations. Offered: jointly with SIS 551.

PB AF 552 Administrative Problems of Development (3) Problems of administering developing nation-states and regions, including theoretical aspects of development administration, bureaucratic change, administrative-political interaction in policy making, organizational development, political impact of administering major programs. Prerequisite: permission of instructor.

PB AF 553 Applied Cost-Benefit Analysis (3) Familiarity developed through problems and applications. Techniques of use stressed. Prerequisite: 516 or permission of instructor. **PB AF 554** Nonprofit Organizations and Public Policy (3) Examines the changing role of nonprofit organizations in American society. Selected policy topics include privatization, for-profit/nonprofit competition, public-private partnerships, tax policy, and new sources of revenues.

PB AF 555 Topics in Nonprofit Management (3, max. 12) Examines various topics of public importance in nonprofit management. Integrates the political, managerial, and economic dimensions of these issues.

PB AF 558 Mediation and Negotiation as Instruments of Public Management and Policy-Making (3) Possibilities offered by mediation and negotiation methods using a mixture of cases, readings, discussions, lectures, and guest speakers. Use of negotiation and mediation techniques to resolve disputes and disagreements over public-policy issues.

PB AF 561-562 Policy Development and Administration: Urban Affairs (3-3) Two (noncumulative) courses to examine the structure, function, and process of city government, with special emphasis on the origin, content, and implementation of public policies. Focus on the political process at the municipal level including the distribution of influence, the political actors, the decision-making machinery, and the policy output.

PB AF 565 Topics in Urban and Regional Affairs (3, max. 12) Examines various issues of public policy importance in urban and regional affairs by integrating managerial, political, policy, and economic dimensions of the issues.

PB AF 568 Seminar in Law and Justice (3) The current volatility in American law enforcement revolves around a number of policy issues that have emerged in the past decade and are considered crucial to the future role, organization, and function of urban policing. These issues are explored, with emphasis on their historic settings, the "actors" who shape their articulation, the parameters of the debate, effects of legal constraints and sociopolitical factors on the development of policy alternatives, and emerging patterns of resolution.

PB AF 569 Race and Public Policy (3) Analyzes the way in which the persistent problem of race is expressed in the formation and implementation of social and public policy.

PB AF 570 Social Policy Analysis and Management (3) Examines major institutions and programs in the human resources policy area: education, regulation of labor market, health care, income maintenance, social services. Discusses alternative policy instruments, analytic perspectives, intergovernmental issues, and management issues arising across policy areas. Explores challenges of linking services and clients across separate agencies.

PB AF 571 Education, The Workforce, and Public Policy (3, max. 6) Examination of policy issues involving education, training, the economy, and the development of the nation's human resources. Relationship between education, training, and work, underutilized workers, race and gender discrimination issues, and the role of education and training in economic development. Offered: jointly with EDLPS 563. **PB AF 573 Topics in Education and Social Policy (3, max. 12)** Examines various issues of public importance in the areas of education and social policy. Focuses on in-depth analysis of relevant issues and the integration of the economic, administrative, and political dimensions of these issues.

PB AF 575 Public Policy Processes (5) Political science frameworks, approaches, and theories concerning development and implementation of public policies within American political systems. Governmental behaviors and processes, including rational, political, and bureaucratic models of governmental decision making; agenda-building processes; and normative perspectives concerning role of governmental entities. Offered: jointly with POL S 575.

PB AF 577 Risk Assessment for Environmental Health Hazards (3/4) Context, methodologies, types of data, uncertainties and institutional arrangements for risk assessment. Both qualitative and quantitative approaches to the identification, characterization, and control of environmental hazards to health emphasized through didactic and case studies. Offered: jointly with CEWA 577/ENV H 577.

PB AF 580 United States Energy Policy (3) Energy policy formulation and implementation with emphasis on post-1973 developments. Energy conservation programs; changing roles of oil, coal, gas, nuclear, and solar energy; institutional, environmental and equity considerations; government research and development programs.

PB AF 581 Information Technology and the Policy-Making Process (3) Demystifies information base for policy making in democracies. Examines theoretical and practical issues associated with information processing in the public sector. Considers role of new technologies in collecting, analyzing, and disseminating information with special attention to the relationship between these technologies and effective government service, public participation, and organizational accountability.

PB AF 582 News Media and Public Policy (3) Explores impacts of news coverage on public policy. Exposure to journalists' approaches to coverage of public affairs, as well as to strategies used by leaders of public/non-profit agencies to attract favorable coverage and minimize damaging coverage. Students learn techniques for assessing impacts of news coverage.

PB AF 583, 584 Seminar in Science and Public Policy (3, 3) Issues and problems relating to the interaction of science and scientists with the public policy-making process. Science versus the nature and values of political processes, and the continuing tensions between the two. The evolving interaction between scientific and technical knowledge and political power; scientific versus ethical judgments. Role of science in the establishment of national goals. Plans and proposals for increasing governmental competence to deal with public policy issues involving science and technology. PB AF 585 Topics in Science, Technology, and Public Policy (3) Examines relationship between advancement of technical knowledge and pace of technological change, and public policies to induce or respond to these trends. Generic issues of government research, development, and personnel training programs are addressed. Applications of policy issues involving biomedical, communications, energy, environmental, transportation, and weapons technologies.

PB AF 586 International Science and Technology Policy (3) Seminar is designed: first, to analyze the relationships between research and development policy, capabilities, and national technological strategies for advanced industrial and less-developed countries; second, to deal with the international implications of particular technologies as countries try to make policy for them in regional and global organizations. Examples of specific technologies are chosen from such fields as space telecommunication, weather and climate modification, airline transportation, nuclear energy, and seabed exploitation.

PB AF 590, 591 Midcareer Seminar (3, 3) Interdisciplinary seminar in public policy for midcareer professionals.

PB AF 593 Environmental Policy Processes (3) Presents background to establish the need for environmental policy. Explores in a comparative manner, examining both successes and failures, various strategies that have been used or proposed to protect the environment.

PB AF 594 Environmental Policy Analysis: Risks and Values (3) Emphasizes institutions involved in environmental policy including the government, environmental organizations, and private business. Examines ways in which the nature of these institutions affects the substance and ultimate effect of the environmental policy implemented.

PB AF 595 Topics in Environmental Policy and Management (3, max. 12) Examines various topics of public importance in environmental policy and management. Integrates the political, managerial, and economic dimensions of these issues.

PB AF 596 Ethics and Values in Environmental and Natural Resource Policy (3) Zerbe Explores environmental values and ethics and their relationship to the policy process. Includes content on value foundation of economic efficiency and its relationship to fairness, legal entitlements, duty to other creatures, and incommensurabilities in valuing goods. Current policy controversies are addressed.

PB AF 598 Administrative and Policy Skills Workshop (1-3) Teaches practical administrative, leadership, and analytic skills commonly required of managers and analysts in the public and non-profit sectors. The workshops emphasize hands-on problem resolution, simulations, and actual practice.

PB AF 599 Special Topics (2-6) Study and analysis of special topics in public affairs. Topics vary each quarter depending on curricular needs and interests of students and faculty. Prerequisite: permission of instructor.

PB AF 600 Independent Study or Research (*)

PB AF 605- Degree Project ([1-6]-)

School of Public Health and Community Medicine

Acting Dean

Patricia W. Wahl F350 Health Sciences

The School of Public Health and Community Medicine is composed of five departments: Biostatistics, Environmental Health, Epidemiology, Health Services, and Pathobiology. The School offers graduate programs leading to the degrees of Master of Public Health, Master of Science, and Doctor of Philosophy. The School also offers an undergraduate minor in public health and community medicine. A Bachelor of Science degree and an undergraduate minor are offered by the Department of Environmental Health. Admission requirements vary by degree and field and are described in the sections of each department.

Graduate Programs

Master of Public Health Degree: The M.P.H., a professional degree offered in environmental health, epidemiology, and health services, prepares public health practitioners. Students earning the M.P.H. may emphasize community medicine, epidemiology, maternal and child health, occupational medicine, public health genetics (as of autumn 1998), social and behavioral sciences, or international health.

Master of Science and Doctor of Philosophy Degrees: M.S. and Ph.D. programs in biostatistics, environmental health, epidemiology, and pathobiology preparestudents for academic or research careers. M.S. and Ph.D. programs in public health genetics through the Department of Epidemiology are planned for autumn 1999. Health Services offers the M.S. and a special doctoral program in conjunction with other departments at the University.

Special and Conjoint Programs: The Extended M.P.H. Program allows mid-career public health professionals to pursue the M.P.H. degree in health services or health education while continuing their employment. The School, together with the School of Business Administration and the Graduate School of Public Affairs. offers the Master of Health Administration (M.H.A.) degree in both day and evening programs. A conjoint program with the School of Business Administration leads to concurrent M.H.A.-M.B.A. degrees. A special program offered by the School of Public Health and Community Medicine and the Henry M. Jackson School of International Studies offers students the opportunity to earn concurrent M.P.H.-M.A.I.S. degrees. Conjoint with the School of Social Work, students may earn concurrent M.S.W.-M.P.H. degrees in maternal and child health and human services. Graduate students in the School of Nursing may pursue concurrent M.N.-M.P.H. degrees in community health care or in parent and child nursing. Medical students may earn concurrent M.D.-M.P.H. degrees.

The Department of Health Services offers a Certificate Program in Health Information Administration (HIA), a Certificate Program in Medical Management, and a Graduate Certificate Program in Public Health. A Certificate Program in Public Health Genetics will be offered by the Department of Epidemiology beginning autumn 1998.

Residency Programs: The School offers residencies in preventive medicine and occupational medicine. Physicians also are welcome to apply to any of the School's graduate programs.

Biostatistics

Graduate Program Coordinator F664 Health Sciences, Box 357232 (206) 543-1044 ssc@biostat.washington.edu

The Department of Biostatistics offers Master of Science and Doctor of Philosophy degrees in quantitative methods applied to the medical and biological sciences. Biology, medicine, and health services are undergoing major changes in their development as quantitative sciences. As technological advances find expression in new research tools, new theoretical concepts are being employed in the analysis of quantitative data. The techniques and viewpoints of mathematics and statistics, traditionally peripheral to biology and medicine, are now woven into the fabric of the life sciences, thereby providing exciting new opportunities in research and teaching.

Many universities have instituted programs relating mathematics or statistics to one particular biological field. The goal of the biostatistics graduate program is to equip students to develop and apply the quantitative techniques of mathematics, statistics, and computing appropriate to medicine, biology, and health services.

Because of the quality of the faculty and their involvement in a diversity of statistical applications, as well as the quality of the students, students receive an excellent education. Students are recruited from undergraduate programs in mathematics, statistics, and biology and are selected on the basis of outstanding quantitative ability.

Admission Requirements

Students may enter the program from an undergraduate major in mathematics, statistics, or a biological field. Applicants from other fields with the prerequisites will also be considered. An applicant must have completed or be in the process of completing two years of calculus (to include one year of advanced calculus), one course in linear algebra, and one course in probability theory.

In addition to fulfilling graduate admission requirements, an applicant must submit three letters of recommendation from persons competent to evaluate the applicant's abilities, a narrative statement concerning the applicant's purpose and interest in entering the program, and an official Graduate Record Examination score report. Recommendation for selection of candidates is made by a faculty admissions committee, with review of applicants beginning in January for autumnquarter admission.

Early application for financial aid is advantageous; support is offered throughout the process and may not be available for late applicants. The application deadline is April 15.

Master of Science

Students working for the Master of Science degree must complete required course work,

demonstrate proficiency in a computer language, write a thesis, take a consulting class, and pass the first-year theory examination. This examination is offered at the conclusion of a student's first year, and, if a student does not pass, it can be retaken the next year. A Ph.D. student may receive a non-thesis Master of Science degree by successfully passing the first- and secondyear qualifying examinations and all of the second-year course work.

Doctor of Philosophy

Students earning the Ph.D. degree develop statistical theory and applications particular to the health sciences.

Students in the Ph.D. program must complete required course work, write a dissertation, complete a consulting class, and demonstrate proficiency in a computer language. Students must also pass the Ph.D. statistical theory and applied theory qualifying examinations, a biology project, and pass the General and Final Examinations.

Faculty

Chair

Thomas Richard Fleming

Professors

Blumenstein, Brent A. * 1981, (Affiliate); PhD, 1974, Emory University; clinical trials, categorical data analysis, research data management.

Breslow, Norman E. * 1967; PhD, 1967, Stanford University; statistical methods in epidemiology, generalized linear models, childhood cancer.

Conquest, Loveday L. * 1978, (Adjunct); PhD, 1975, University of Washington; statistics in forestry, fisheries, and environmental pollution monitoring.

Crowley, John Jr. * 1982; MS, 1970, PhD, 1973, University of Washington; survival analysis, cancer clinical trials.

De Rouen, Timothy * 1975; PhD, 1971, Virginia Polytechnic Institute and State University; applications of biostatistics to clinical epidemiology of oral and infectious diseases.

Diehr, Paula K. * 1970; MS, 1967, PhD, 1970, University of California (Los Angeles); health services, small area analysis, health status.

Feigl, Polly * 1969, (Affiliate); MA, 1957, PhD, 1961, University of Minnesota; application of statistics to cancer control and prevention research.

Fisher, Lloyd D. * 1966; MA, 1965, PhD, 1966, Dartmouth College; sequential/clinical trial analysis, new drugs/biologics in humans, clinical trial methodology.

Fleming, Thomas Richard * 1984; MA, 1974, PhD, 1976, University of Maryland; survival analysis, cancer clinical trials, AIDS research, sequential analysis.

Green, Stephanie J. * 1984, (Affiliate); MA, 1973, Indiana University; PhD, 1979, University of Wisconsin; censored survival, data analysis, clinical trials, cancer research.

Grizzle, James E. * 1987, (Research); MS, 1953, Virginia Polytechnic Institute and State University; PhD, 1960, North Carolina State University; clinical trials, cancer prevention studies.

Hallstrom, Alfred * 1975; MSc, 1961, PhD, 1968, Brown University; clinical trial methodologies in cardiovascular research and emergency medical services applications.

Kennedy, Kathryn A. B. * 1974; MS, 1966, University of Michigan; PhD, 1974, University of Washington; density estimation, cardiovascular data analysis, clinical trials.

Kopecky, Kenneth J. * 1978, (Affiliate); MS, 1975, PhD, 1977, Oregon State University; clinical trials design and survival data analysis, epidemiologic methodology, radiation epidemiology.

474 SCHOOL OF PUBLIC HEALTH AND COMMUNITY MEDICINE / BIOSTATISTICS

Kronmal, Richard A. * 1964; PhD, 1964, University of California (Los Angeles); nonparametric density estimation, computer algorithms, cardiovascular data analysis, clinical trials.

McKnight, Barbara * 1981; PhD, 1981, University of Wisconsin; statistical methods in epidemiology, human genetics, and animal carcinogenicity testing.

Moolgavkar, Suresh H. * 1984, (Adjunct); MBBS, 1965, Bombay University (India); PhD, 1973, Johns Hopkins University; cancer epidemiology, development of quantitative methodology.

O'Sullivan, S. Finbarr * 1987; PhD, 1983, University of Wisconsin; nonparametric curve estimation, inverse problems, radiology.

Pepe, Margaret * 1982, (Affiliate); MS, 1984, PhD, 1986, University of Washington; medical diagnostic testing, screening, longitudinal data, standardization, cystic fibrosis.

Perrin, Edward * 1975, (Adjunct); MA, 1956, Columbia University; PhD, 1961, Stanford University; health information services, research methodology.

Peterson, Arthur V. * 1975; MS, 1971, PhD, 1976, Stanford University; survival data methodology, competing risks, design of disease prevention trials.

Prentice, Ross L. * 1974; MSc, 1968, PhD, 1970, University of Toronto (Canada); failure time analysis, disease prevention trials, epidemiologic methods, dietary factors and disease.

Self, Steven G. * 1984; MS, 1977, California State University (Long Beach); PhD, 1981, University of Washington; longitudinal data analysis, survival time models, cancer prevention, HIV vaccine evaluation.

Storer, Barry E. * 1996, (Affiliate); PhD, 1984, University of Washington; design and analysis of Phase I and II clinical trials and statistical methods for epidemiology.

Thompson, Elizabeth A. * 1985; PhD, 1974, Cambridge University (UK); statistical analysis of human genetic data, statistics of conservation and computational biology.

Wahl, Patricia W. * 1971; PhD, 1971, University of Washington; multivariate statistical techniques, especially regression analysis applied to cardiovascular data.

Wellner, Jon A. * 1983; PhD, 1975, University of Washington; large-sample theory, asymptotic efficiency, empirical processes, semiparametric models.

Wijsman, Ellen M. * 1987, (Research); PhD, 1981, University of Wisconsin; human quantitative and population genetics.

Associate Professors

Anderson, Garnet L. * 1983, (Affiliate); MA, 1983, State University of New York (Binghamton); PhD, 1989, University of Washington; clinical trial methodology, survival analysis, women's health, ovarian cancer screening.

Barlow, William E. * 1989, (Research); MS, 1982, PhD, 1986, University of Washington; survival analysis, residuals, and evaluation of screening programs.

Benedetti, Jacqueline K. * 1980; PhD, 1974, University of Washington; statistical methodology in infectious disease research, cancer clinical trials.

Emerson, Scott S. * 1995; MD, 1981, University of Virginia; PhD, 1988, University of Washington; clinical trials, sequential testing, survival analysis, categorical data.

Etzioni, Ruth B. * 1991, (Affiliate); MS, 1987, PhD, 1990, Carnegie Mellon University; statistical methods in cancer screening, Bayesian methods in biostatistics.

Feng, Ziding * 1990, (Affiliate); MS, 1985, PhD, 1990, Cornell University; correlated data methods, mixture models, cancer prevention.

Le Blanc, Michael * 1994, (Research); MA, 1984, University of Waterloo (Canada); PhD, 1989, University of Washington; tree-based models, survival analysis, clinical trials, adaptive statistical methods.

Leroux, Brian * 1991; PhD, 1989, University of British Columbia (Canada); random effect models, stochastic processes, dental research, toxicology.

Lin, Danyu * 1990; MS, 1986, PhD, 1989, University of Michigan; analysis of failure time data, designs and analysis of clinical and epidemiologic studies.

Polissar, Nayak Lincoln * 1980, (Affiliate); PhD, 1974, Princeton University; statistical consulting, community surveys, clinical trials, demography, epidemiology, environment.

Temkin, Nancy R. * 1977; PhD, 1976, State University of New York (Buffalo); clinical trials, recovery models, statistical modeling of epileptic phenomena, survival analysis.

Thompson, Mary Lou 1996, (Research); PhD, 1979, Georg-August Universitat (Germany); filtered point processes, diagnostic methods, longitudinal reference ranges, maternal and child health, occupational health.

Thornquist, Mark Daniel * 1985, (Affiliate); MS, 1982, PhD, 1985, University of Wisconsin; ordinal/categorical response, repeated measures data, chemoprevention, group-randomized trials.

Zhao, Lue-Ping * 1995, (Affiliate); MS, 1987, PhD, 1989, University of Washington; quantitative genetics, genetic epidemiology, correlated data analysis/sampling.

Assistant Professors

Emond, Mary Jane * 1994, (Research); MS, 1989, PhD, 1993, University of Washington; semiparametric models, statistical issues in GI cancer screening and surveillance.

Gooley, Theodore A. * 1993, (Affiliate); PhD, 1990, University of Arizona; design and analysis of clinical trials in bone marrow transplantation.

Heagerty, Patrick J. * 1995; MS, 1991, State University of New York (Albany); PhD, 1995, Johns Hopkins University; longitudinal and dependent data analysis.

Hsu, Li * 1996, (Affiliate); MS, 1991, PhD, 1994, University of Washington; multivariate survival analysis, design and analysis of genetic epidemiologic studies.

Huang, Yijian 1997; PhD, 1997, University of Minnesota; survival analysis, HIV/AIDS clinical trials and epidemiological studies.

Hughes, James P. * 1993, (Research); MS, 1980, PhD, 1993, University of Washington; statistical methods for infectious disease research, Markov models, environmental statistics.

Mancl, Lloyd A. * 1986, (Adjunct Research); MS, 1988, PhD, 1992, University of Washington; statistical methodology in periodontal disease and TMD research.

McIntosh, Martin * 1996, (Research); PhD, 1996, Harvard University; causal inference for observational studies, Bayes theory, meta-analysis.

Richardson, Barbra Ann * 1993, (Research); MS, 1989, PhD, 1993, University of California (Los Angeles); statistical methods for data from AIDS/STD clinical trials.

Rutter, Carolyn * 1996, (Affiliate); MS, 1988, PhD, 1991, University of California (Los Angeles); evaluation of diagnostic tests, ROC curve analysis and correlated data problems.

Sheppard, Lianne * 1989, (Research); MSc, 1985, Johns Hopkins University; PhD, 1992, University of Washington; observational study methods, grouping, environmental and occupational exposures.

Wang, Ching-Yun * 1993, (Affiliate); MS, 1985, National Taiwan University; PhD, 1993, Texas A&M University; case control studies, missing data, measurement error, kernel smoothing. Whitney, Coralyn W. * 1990, (Research); PhD, 1990, University of Washington; biostatistical applications regarding quality control and adjustment for measurement errors.

Yanez, Norbert David III * 1993; MS, 1989, PhD, 1993, Arizona State University; generalized linear models, overdispersion, measurement error models.

Yao, Qing * 1996, (Research); MSc, 1991, PhD, 1994, University of Toronto (Canada); statistical methods in design and analysis of clinical trials.

Yasui, Yutaka * 1996, (Affiliate); PhD, 1994, Johns Hopkins University; statistical methods in cancer epidemiology, spatial regression models, cancer prevention research.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

BIOST 111 Lectures in Applied Statistics (1) NW Weekly lectures illustrating the importance of statisticians in a variety of fields, including medicine and the biological, physical, and social sciences. Contact instructor for information on which fields of applications emphasized. Credit/no credit only. Offered: jointly with STAT 111; Sp.

BIOST 425 Introduction to Nonparametric Statistics (3) NW Overview of nonparametric methods, such as rank tests, goodness of fit tests, 2 x 2 tables, nonparametric estimation. Useful for students with only a statistical methods course background. Prerequisite: STAT/MATH 390. Offered: jointly with STAT 425.

BIOST 499 Undergraduate Research (*) Supervised reading programs; library and field research; special projects. Credit/no credit only.

Courses for Graduates Only

BIOST 502 Introduction to Statistics in Health Sciences (4) Description and examples of common concepts in biostatistics. Probability, point and confidence interval estimation, hypothesis testing including two-sample and paired t and chi-square tests, introduction to simple linear regression. Examples in health sciences stressed. Offered: S.

BIOST 503 Application of Statistics to Health Sciences (4) Standard statistical techniques presented with examples drawn from the health sciences literature. Critical interpretation of research results, and introduction to the computer for data processing and statistical analysis. Prerequisite: 502 or equivalent. Offered: S.

BIOST 505 Basic Epidemiologic and Biostatistical Methods (5) Epidemiologic concepts and methods to describe disease variation and how that variation is studied to understand causes of disease or adverse events. Includes introduction to basic biostatistical concepts. Written exercises, electronic discussion forums, and applications of epidemiologic research strategies to the critical review of scientific literature. Offered: jointly with EPI 505.

BIOST 510 Biostatistics in Dentistry (3) Introduction to concepts and methods of descriptive and inferential statistics with applications in dentistry emphasized. Topics include comparison of means and proportions, hypothesis testing, confidence intervals, non-parametric methods, linear regression, and correlation. Prerequisite: enrollment in School of Dentistry of Permission of instructor. Offered: jointly with DPHS 568.

BIOST 511 Medical Biometry I (4) Presentation of the principles and methods of data description and elementary parametric and nonparametric statistical analysis. Examples are drawn from the biomedical literature, and real data sets are analyzed by the

SCHOOL OF PUBLIC HEALTH AND COMMUNITY MEDICINE / ENVIRONMENTAL HEALTH 475

students after a brief introduction to the use of standard statistical computer packages. Statistical techniques covered include description of samples, comparison of two sample means and proportions, simple linear regression and correlation. Offered: AS.

BIOST 512 Medical Biometry II (4) Multiple regression, analysis of covariance, and an introduction to one-way and two-way analyses of variance: including assumptions, transformations, outlier detection, dummy variables, and variable selection procedures. Examples drawn from the biomedical literature with computer assignments using standard statistical computer packages. Prerequisite: 511 or equivalent. Offered: W.

BIOST 513 Medical Biometry III (4) Analysis of categorical data including two sample methods, sets of 2 x 2 tables, R x C tables, and logistic regression. Classification and discrimination techniques. Survival analysis including product limit estimates and the Cox proportional hazards model. Prerequisite: 512 or permission of instructor. Offered: Sp.

BIOST 514 Biostatistics I (4) Mathematically sophisticated presentation of principles and methods of data description; graphics; point, confidence interval estimation; hypothesis testing; relative risk; odds ratio; Mantel-Haenszel; chi-square test (matrix algebra required). Examples drawn from biomedical literature; real-data sets analyzed using statistical computer packages. Prerequisite: biostatistics majors or permission of instructor. Offered: A.

BIOST 515 Biostatistics II (4) Mathematically sophisticated introduction to linear models; multiple regression, correlation; residual analysis; dummy variables; analysis of covariance; one-, two-way analysis of variance; randomized blocks; fixed, random effects (repeated measure, factorial designs); multiple comparisons (matrix algebra required). Real biomedical data sets analyzed. Prerequisite: 514, biostatistics major, or permission of instructor. Offered: W.

BIOST 521 Biostatistics for Experimentalists (4) Statistical aspects of design, data analytic models appropriate to classes of experiments most commonly employed in biomedical sciences. One-, twoway analyses of variance; factorial, crossed, nested, repeated measures designs. Clean, messy real-data sets analyzed using standard statistical computer packages. Prerequisite: 511, 512, or equivalent. Offered: alternate years; Sp.

BIOST 524 Design of Medical Studies (3) Design of medical studies, with emphasis on randomized controlled clinical trials. Bias elimination, controls, treatment assignment and randomization, precision, replication, power and sample size calculations, stratification, and ethics. Suitable for graduate students in biostatistics and for research-oriented graduate students in other scientific fields. Prerequisite: 511 or equivalent, and one of 513, STAT 421, 423, 512, or EPI 512; or permission of instructor. Offered: jointly with STAT 524; Sp.

BIOST 529 Sample Survey Techniques (3) Design and implementation of selection and estimation procedures. Emphasis on human populations. Simple, stratified, and cluster sampling; multistage and two-phase procedures; optimal allocation of resources; estimation theory; replicated designs; variance estimation; national samples and census materials. Prerequisite: 421, 423, QMETH 500 or BIOST 511 or equivalent; or permission of instructor. Offered: jointly with STAT 529.

BIOST 532 Statistical Methods in Medical Genetics (2) Wijsman Theory and application of statistical techniques used in medical genetics. In-depth discussion of linkage and segregation analysis and ascertainment problems. Applications stressed with reference to assumptions and limitations. Data sets analyzed with current computer programs. Prerequisite: knowledge of genetics or permission of instructor. Offered: jointly with MED 532; Sp. BIOST 533 Classical Theory of Linear Models (3) Introduction to one-, two-way analysis of variance; randomized blocks; fixed, random effects, multiple comparisons. Statistical distribution theory for quadratic forms of normal variables. Fitting of the general linear model by least squares. Prerequisite: 513, STAT 421 or STAT 423; and STAT 513; and a course in matrix algebra. Offered: jointly with STAT 533; Sp.

BIOST 534, 535, 538 Statistical Computing (3, 3, 3) Introduction to scientific computing, Includes programming tools, modern programming methodologies, (modularization, object oriented design), design of data structures and algorithms, numerical computing and graphics. Uses C++ for several substantial scientific programming in a high-level language. Offered: jointly with STAT 534, 535, 538; A, W, Sp.

BIOST 536 Categorical Data Analysis in Epidemiology (4) Summary of univariate categorical data analysis; introduction to multivariate analysis of categorical epidemiologic data using multiplicative models. Experience at interpretation; familiarity with available programs gained by analysis of bona fide data, critiques of analyses appearing in literature. Prerequisite: 515; or 513 and EPI 514; or permission of instructor. Offered: jointly with EPI 536; A.

BIOST 537 Survival Data Analysis in Epidemiology (4) Introduction to multivariate analysis of survival data using multiplicative models. Application to epidemiologic studies. Familiarity with interpretation and available computer programs gained by analysis of bona fide sets of data and critiques of analyses appearing in the literature. Prerequisite: 536 or permission of instructor. Offered: jointly with EPI 537; W.

BIOST 570, 571, 572 Advanced Applied Statistics and Linear Models (3, 3, 3) Generalized linear models, REML in mixed models for randomized blocks, split plots, longitudinal data. Generalized estimating equations, empirical model building, cross validation, recursive partitioning, generalized additive models, projection pursuit. Prerequisite: STAT 512, 513; BIOST/STAT 533 or STAT 421 and 423, and a course in matrix algebra for 570; 570 for 571; 571 for 572. Offered: jointly with STAT 570, 571, 572.

BIOST 573 Statistical Methods for Categorical Data (3) Advanced topics in generalized linear models and the analysis of categorical data: overdispersion, quasilikelihood, parameters in link and variance functions, exact conditional inference, random effects, saddlepoint approximations. Credit/ no credit only. Prerequisite: 571 and 582. Offered: jointly with STAT 573, alternate years; Sp.

BIOST 574 Multivariate Statistical Methods (3) Use of multivariate normal sampling theory, linear transformations of random variables, one- and twosample tests, profile analysis, partial and multiple correlation, multivariate ANOVA and least squares, discriminant analysis, principal components, factor analysis, robustness, and some special topics. Some computer use included. Prerequisite: 570 or permission of instructor. Offered: jointly with STAT 574, alternate years.

BIOST 576 Statistical Methods for Survival Data (3) Statistical methods for censored survival data arising from follow-up studies on human or animal populations. Parametric and nonparametric methods, Kaplan-Meier survival curve estimator, comparison of survival curves, log-rank test, regression models including the Cox proportional hazards model, competing risks. Prerequisite: STAT 581 and either 513, STAT 473, or equivalent. Offered: jointly with STAT 576, alternate years.

BIOST 577 Advanced Design and Analysis of Experiments (3) Concepts important in experimental design: randomization, blocking, confounding. Application and analysis of data from randomized blocks designs, Latin and Graeco-Latin squares, incomplete blocks designs, split-plot and repeated measures, factorial and fractional replicates, response surface experiments. Prerequisite: 570 or STAT 421 (minimum 3.0) or permission of instructor. Offered: jointly with STAT 577.

BIOST 578 Special Topics in Advanced Biostatistics (* max. 3) Advanced-level topics in biostatistics offered by regular and visiting faculty. Prerequisite: permission of instructor. Offered: jointly with STAT 578; AWSpS.

BIOST 579 Advanced Data Analysis (4) Resampling methods; jackknife, bootstrap, cross-validation. Smoothing techniques; local averages; projection-pursuit regression; recursive partitioning regression. Selected aspects of linear regression. Robust-resistant methods. Density estimation. Clustering techniques. The EM-algorithm. Graphical exploratory methods. Prim -81. Prerequisite: 571 and STAT 513 or permission of instructor. Offered: jointly with STAT 579.

BIOST 580 Seminar in Biostatistics (* max. 9) Presentation and discussion of special topics and research results in biostatistics. Speakers include resident faculty, visiting scientists, and advanced graduate students. Offered: AWSp.

BIOST 586 Martingales: Survival Analysis (3) Fleming Theory of counting processes and martingales to provide unified study of survival analysis methods. Focus on survival distribution estimators, censored data rank statistics, regression methods with censored survival data. Development of small samples moments, asymptotic distributions, and efficiencies. Prerequisite: STAT 520 or equivalent; recommended: 576. Offered: jointly with STAT 586; alternate vears: W.

BIOST 590 Biostatistical Consulting (*) Training in consulting on the biostatistical aspect of research problems arising in the biomedical field. Students, initially under the close supervision of a faculty member, participate in discussions with investigators leading to the design and/or the analysis of a quantitative investigation of a problem. With experience, independent associations of student and research worker are encouraged, with subsequent review by faculty of resulting design and analysis. Prerequisite: permission of instructor. Offered: AWSpS.

BIOST 593 Cancer Prevention Research Laboratory (3) White Provides research experience on cancer prevention projects at the Fred Hutchinson Cancer Research Center. Offered: jointly with EPI 593; AWSpS.

BIOST 600 Independent Study or Research (*) Offered: AWSpS.

BIOST 700 Master's Thesis (*) Offered: AWSpS.

BIOST 800 Doctoral Dissertation (*) Offered: AWSpS.

Environmental Health

Undergraduate Program

Adviser Charles D. Treser T329 Health Sciences, Box 357234 (206) 543-4207 ehug@u.washington.edu

Bachelor of Science Degree

This curriculum focuses on environmental conditions in the community and workplace that adversely affect the health and well-being of people, and the means by which these conditions may be eliminated or controlled. Public-health topics include drinking-water supply, wastewater disposal, food protection, solid and hazardous waste management, industrial hygiene, housing, vectors, air quality, and epidemiology. Other subject matter covered includes toxicology, environmental health practice, and environmental health regulation. Graduates from this curriculum have career opportunities in public health, occupational health, environmental protection, and environmental consulting.

Admission Requirements:

1. 90 credits with a minimum cumulative GPA of 2.50.

2. Completion of the following courses: BIOL 201, 202, 203; CHEM 142, 152, 162, 223, 224, 241, 242; MATH 124; MICROM 301, 302; PHYS 114, 115, 116.

3. Applications are accepted for autumn and spring quarters only. Application deadlines are August 15 and January 15, respectively.

Suggested Introductory Course Work: ECON 200; POL S 202; SP CMU 220; STAT 220 or 311.

Additional Information: Students are encouraged to apply to the program during their sophomore year so they may begin the upper-division applied courses in their junior year.

Graduation Requirements: Completion of all College of Arts and Sciences general-education and basic-skills requirements except foreign language.

STAT 311 (or 220); ENGR 333; EPI 420; ENV H 311, 430, 431, 440, 441, 442, 445, 446, 453, 454, 470, 471, plus one quarter of internship.

Graduate Program

Graduate Program Coordinator F461 Health Sciences, Box 357234 (206) 543-3199

The Department of Environmental Health offers three graduate degrees: Master of Science, Master of Public Health, and Doctor of Philosophy. The areas of emphasis in the graduate programs are industrial hygiene and safety, toxicology, environmental health technology, and occupational and preventive medicine (M.P.H.).

The Industrial Hygiene and Safety Program (M.S., Ph.D.) focuses on technical and administrative aspects of preventing or controlling occupational illness and injury. Research opportunities include laboratory and field investigations of exposure to health and safety hazards such as toxic chemicals, radiation, and biomechanical stress. Students may elect one of two program options: industrial hygiene, emphasizing recognition, evaluation, and control of exposure to chemical and physical agents; or safety/ergonomics, emphasizing design and assessment of the worker-machine interface.

Students who are interested in the radiological sciences should inquire about the radiological health option in the industrial hygiene program.

The Toxicology Program (M.S., Ph.D.) focuses on research and application of basic scientific principles toward a better understanding of the health effects of toxic substances in the workplace and general environment. Students who select the toxicology option participate in laboratory research on molecular and biochemical processes involved in chemically induced toxic responses such as soft-tissue (e.g., brain, lung, kidney, and liver) damage, birth defects, cancer, and nervous-system impairment.

The Environmental Health Technology Program (M.S.) focuses on community problems associated with toxic substances or biological hazards and their control, hazardous-waste disposal, and traditional areas of environmental health, such as water and wastewater treatment, food protection, and ambient air quality. Students conduct research on the monitoring and control of hazardous substances and biological agents

contaminating surface and ground waters, on humanexposure assessment, or on hazardous-waste management. This involves field and laboratory activities.

The M.P.H. Program is for individuals with an earned doctorate. The goal of the program is to provide training in public-health sciences with a focus on occupational and environmental health. The program provides didactic instruction and participation in field studies. Research efforts focus on the etiology and prevention of occupational disease. Physicians have the option of also applying for a residency in occupational or preventive medicine.

The Department of Environmental Health cooperates with the Department of Health Services in a three-year, part-time Extended Master of Public Health degree program designed for mid-career public- and community-health professionals. Students continue their employment, are required to attend one-month summer sessions for three years, and must meet at the University for five weekends during the academic year.

Admission Requirements

Prerequisites for admission to the M.S. graduate programs in industrial hygiene and safety, toxicology, and environmental health technology include a Bachelor of Science or equivalent degree in environmental health, a physical science, a biological science, or engineering, and submission of Graduate Record Examination scores.

Prerequisite for admission to the M.P.H. program is a doctoral degree.

Prerequisites for admission into the Ph.D. program in environmental and occupational health sciences include a Bachelor of Science degree in science or engineering with adequate preparation in physics, chemistry, mathematics, and biology. Selection of an applicant will also be based upon an honors-level GPA, a statement of personal goals consistent with the program, supportive letters of reference, and high scores on the Graduate Record Examination.

Graduation Requirements

The M.S. and M.P.H. graduate programs are designed for seven quarters of study, including field applications and research, and require completion of departmental and program-specific courses, and submission of an acceptable thesis.

The Ph.D. program has a strong research focus, and requires completion of departmental and programspecific courses. A dissertation of original research suitable for publication in an appropriate peer-reviewed journal is required. For an entering student with a Bachelor of Science or engineering degree, the program of study can be expected to take approximately four to five years. A student entering with a Master of Science degree in a relevant area may complete the degree in less time.

Financial Aid

Support is available for many students in the form of traineeships or research assistantships, which include tuition. This support comes from federal and private sources awarded to the department or School.

Research Facilities

Specialized laboratories exist for research in industrial hygiene chemistry, optical remote sensing of chemicals, industrial ventilation, ergonomics, trace organics and heavy metals, environmental microbiology, electron microscopy, controlled exposure to environmental factors, and toxicology. Field research is facilitated through an extensive consultation-service program conducted by this department for labor and industry in Washington state.

Faculty

Chair

Gerald Van Belle

Professors

Altman, Leonard * 1974, (Clinical); MD, 1969, Harvard University; mechanisms of tissue injury produced by bacteria, leukocytes, or toxins.

Bigos, Stanley J. 1981, (Adjunct); MD, 1975, University of Missouri; orthopaedics, spine.

Checkoway, Harvey * 1987; MPH, 1975, Yale University; PhD, 1978, University of North Carolina; occupational and environmental epidemiology.

Costa, Lucio Guido * 1983; PharmD, 1977, University of Milan (Italy); neurotoxicology; developmental and molecular mechanisms/biological markers of neurotoxicity.

Covert, David S. * 1975, (Adjunct Research); MS, 1971, PhD, 1974, University of Washington; aerosol instrumentation, aerosol physics and chemistry, atmospheric chemistry.

De Walle, Foppe B. * 1988, (Affiliate); PhD, 1973, University of Washington; environmental health technology, hazardous waste, drinking water treatment, toxics reduction.

Eaton, David L. * 1979; PhD, 1978, University of Kansas; biochemical and environmental toxicology, aflatoxin carcinogenesis, metabolism of toxic chemicals.

Fantel, Alan G. * 1973, (Adjunct Research); PhD, 1974, University of Washington; embryology, teratology.

Faustman, Elaine M. * 1983; PhD, 1980, Michigan State University; developmental toxicology, risk assessment methodologies, toxicology of N-nitroso compounds.

Franklin, Gary M. * 1988, (Research); MD, 1969, George Washington University; MPH, 1982, University of California (Berkeley); occupational injury, neurological epidemiology, public health nutrition.

Jackson, Kenneth L. * 1963, (Emeritus); PhD, 1954, University of California (Berkeley); physiological and biochemical mechanisms in radiation biology.

Kalman, David A. * 1978; PhD, 1978, University of Washington; environmental chemistry, detection and fate of chemical hazards in natural and manmade environments.

Kapur, Kailash C. * 1992, (Adjunct); PhD, 1969, University of California (Berkeley); quality/reliability engineering, system design/optimization, total quality/reliability management.

Karr, James * 1991, (Adjunct); PhD, 1970, University of Illinois; ecology and conservation biology, water resources, environmental sciences, natural resources.

Koenig, Jane Q. * 1974; MS, 1961, PhD, 1963, University of Washington; respiratory physiology, health effects of air pollutants, lung response of susceptible groups.

Larson, Timothy * 1970, (Adjunct); PhD, 1976, University of Washington; airborne particles, air quality modeling, and instrument development.

Luchtel, Daniel L. * 1973; PhD, 1969, University of Washington; electron microscopy and cell biology, lung anatomy/pathophysiology, fiber toxicology.

Mottet, N. Karle * 1959, (Emeritus); MD, 1952, Yale University; effects of trace elements, especially methylmercury and arsenic, on growth and development.

Omenn, Gilbert S. * 1981, (Affiliate); MD, 1965, Harvard University; PhD, 1972, University of Washington; genetic predisposition to environmental and occupational hazards.

Omiecinski, Curtis J. * 1983; PhD, 1980, University of Washington; molecular toxicology, genetic regulation/ expression of drug/chemical metabolizing enzymes.

Rosenstock, Linda * 1980; MD, 1977, Johns Hopkins University; occupational/general internal medicine.

Van Belle, Gerald * 1975; MA, 1964, PhD, 1967, University of Toronto (Canada); biostatistics, environmental risk factors for neurodegenerative diseases, risk communication.

Woods, James S. * 1982, (Research); PhD, 1970, University of Washington; MPH, 1978, University of North Carolina; biochemical toxicology of trace metals; biological markers of metal exposure.

Associate Professors

Barnhart, Scott * 1982; MD, 1979, George Washington University; occupationally related lung disease.

Breysse, Peter * 1957, (Emeritus); MS, 1954, Washington State University; MPH, 1957, University of Pittsburgh; exposure of population to contaminants.

Burbacher, Thomas M. * 1974; PhD, 1983, University of Washington; neurotoxicology, specializing in the behavioral effects of agents on the central nervous system.

Daniell, William E. * 1984; MD, 1979, Tufts University; MPH, 1986, University of Washington; health effects of occupational chemical exposures, multiple chemical sensitivity syndrome.

Fenske, Richard A. * 1990; MA, 1976, MPH, 1978, PhD, 1984, University of California (Berkeley); human exposure and health risk assessment, pesticide exposure.

Gilbert, Steven G. * 1990, (Affiliate); PhD, 1986, University of Rochester; primate neurobehavioral toxicology and teratology, developmental effects of heavy metals.

Grossmann, Angelika * 1985, (Affiliate); DVM, 1978, PhD, 1982, Freie University of Berlin (Germany); immunosenecence in humans and mice; immunotoxicology; transmembrane signaling in T-lymphocytes.

Guffey, Steven E. * 1987; MSIE, 1973, North Carolina State University; PhD, 1987, University of North Carolina; industrial ventilation design, modeling of pressure and flow relationships, hood design research.

Hatlen, Jack B. * 1952, (Emeritus); MS, 1958, University of Washington; environmental health program planning and management, environmental health manpower training.

Iverson, Scott Christian * 1983, (Adjunct); PhD, 1974, University of Colorado (Boulder); health care systems, operations research and systems design and engineering.

Kaufman, Joel D. * 1988; MD, 1986, University of Michigan; MPH, 1990, University of Washington; epidemiology of occupational/environmental factors in respiratory, skin and cardiovascular disease.

Kavanagh, Terrance J. * 1989; MS, 1980, PhD, 1985, Michigan State University; free radical toxicology, glutathione metabolism, toxicology and aging.

Kissel, John C. * 1990; MS, 1974, Harvard University; PhD, 1985, Stanford University; solid and hazardous waste management practice, human exposure assessment.

Leroux, Brian * 1991, (Adjunct); PhD, 1989, University of British Columbia (Canada); random effect models, stochastic processes, dental research, toxicology.

Morgan, Michael S. * 1974; DSc, 1972, Massachusetts Institute of Technology; applied respiratory, physiology and inhalation toxicology.

Nevissi, Ahmad * 1973, (Research); MS, 1966, University of Hannover (Germany); PhD, 1973, University of Arkansas; radiochemistry.

Assistant Professors

Brodkin, Carl * 1989; MD, 1983, University of Colorado (Denver); hepatic effects of occupational solvent exposure; ventillatory decline in asbestos-exposed workers.

Keifer, Matthew C. * 1987; MD, 1982, University of Illinois; the human health effects of pesticide exposure.

Liu, Lee-Jane S. 1998; MS, 1991, ScD, 1994, Harvard University; multimedia exposure assessment in air environment, environmental epidemiology.

Samadpour, Mansour * 1995; MS, 1987, PhD, 1990, University of Washington; molecular epidemiology of microbial pathogens, bacterial population genetics and pathogenesis.

Seixas, Noah S. * 1992; MS, 1982, Harvard University; PhD, 1990, University of Michigan; exposure assessment methods for occupational/epidemiologic studies; small industrial plants.

Sheppard, Lianne * 1989, (Research); MSc, 1985, Johns Hopkins University; PhD, 1992, University of Washington; observational study methods, grouping, environmental and occupational exposures.

Xia, Zhengui * 1987; MS, 1985, Wuhan University (China); PhD, 1991, University of Washington; neuronal apoptosis, neuronal gene regulation.

Yost, Michael G. * 1993; MS, 1984, PhD, 1989, University of California (Berkeley); worker exposures to physical agents, electromagnetic fields, noise and vibration.

Senior Lecturers

Morris, Sharon L. 1982; BA, 1965, Reed College; occupational safety and health policy, continuing education.

Treser, Charles D. * 1980; MPH, 1976, University of Michigan; administrative law and process in environmental health; housing; vector control.

Lecturer

Camp, Janice E. 1982; MS, 1984, MN, 1984, University of Washington; workplace exposure assessment, evaluation of exposure, controls, program evaluation.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

ENV H 311 Introduction to Environmental Health (3) *Treser* Relationship of people to their environment, how it affects their physical well-being and what they can do to influence the quality of the environment and to enhance the protection of their health. Emphasis on environmental factors involved in transmission of communicable diseases and hazards due to exposure to chemical and physical materials in our environment. Offered: ASp.

ENV H 343 Environmental Radioactivity (3) Woodruff Sources of radioactivity in the environment, including both natural sources, especially radon, and manmade sources, especially nuclear power and nuclear explosions. Emphasis given to methods for determining radiation doses from the significant sources. Offered: jointly with ENGR 343/ PHYS 343; Sp.

ENV H 405 Toxic Chemicals in the Environment (3) *Eaton* Basic principles governing the behavior and effects of toxic chemicals released into the environment; sources, distribution, and fate of toxic chemicals in the environment; chemicals and cancer; chemicals and birth defects; government regulation of chemical hazards. Focus on human health impacts of chemicals found in the workplace and general environment. Prerequisite: BIOL 203; CHEM 242. Offered: Sp.

ENV H 415 Nuclear Instruments (3) *Nevissi* Principles, measurements, and detection of various types of radiation encountered in nuclear energy systems. Use of Geiger, proportional, and scintillation detectors; ionization chambers; analog-digital data-logging equipment; multichannel analyzers. Offered: W.

ENV H 417 Non-Ionizing Radiation and Electrical Safety (2) Yost Introduction to health hazards from UV, optical laser hazards, infrared radiation, radio-frequency radiation, heat stress, electrical shock, electric and magnetic fields. Application of current standards for these physical agents. Emphasis on occupational hazards with additional discussion of environmental exposures where appropriate. Offered: odd years: W.

ENV H 430 Methods in Environmental Sampling and Analysis (3) Samadpour Field sampling methods studied and selected laboratory analyses of food, drinking water, and waste waters conducted. Official methods for characterizing physical and chemical quality of water and wastes demonstrated. Microbiological criteria emphasized for student participation, including: enumeration of subgroups in populations, selective inhibitor, characteristics of normal flora, rationale of "indicator" organisms. Prerequisite: MICROM 302. Offered: A.

ENV H 440 Water and Waste Sanitation (4) *Lenning* Study of health problems associated with drinking water and wastewaters and minimization of problems. Focus on drinking water quality and quantity requirements; water pollutants and impacts on environment; individual drinking water, onsite sewage facilities, related site selection criteria/regulations, regulatory agency activities. Field performance of environmental health specialist emphasized. Prerequisite: BIOL 203. Offered: A.

ENV H 441 Food Protection (3) Easterberg Study of identification and characteristics of chemicals and biological agents implicated in foodborne disease outbreaks and conditions or circumstances by which food contamination occurs. Examination of food protection activities conducted by local and state government at the retail level. Prerequisite: CHEM 162: MICROM 302. Offered: W.

ENV H 442 Vector Control and Housing (3) *Treser* Study of the impact and control of rodents and arthropod vectors of disease, including consideration of economic poisons used, their regulation, and safety measures. Housing practices and conditions affecting health in residential (private and multiple dwelling) and institutional (schools and hospitals) settings are examined and control measures reviewed. Prerequisite: BIOL 203. Offered: Sp.

ENV H 445 Solid Waste Management (3) Kalman, Turnberg Examination of the public health, environmental, economic, and materials conservation aspects of solid wastes management; amounts and sources of solid wastes, waste reduction and recycling, methods of storage, transportation and disposal, integrated waste management, identification of present problems and future needs. Prerequisite: CHEM 162; MATH 124.Offered: A.

ENV H 446 Hazardous Waste Management (3) *Kissel* Characterization of hazardous wastes and introduction to pertinent federal and state regulations. Discussion of exposure pathways and description of management options at pre-generation, prerelease, and post-release stages. Emphasis on public health significance. Supplemented with case studies. Prerequisite: CHEM 162; either MATH 112 or MATH 124. Offered: W.

ENV H 449 Respiratory Effects of Air Pollution (2) *Koenig* Structure and function of the respiratory system and the changes that may be produced by specific air pollutants, such as ozone, SO₂. Air quality criteria and the economic costs of disease are discussed. Several classroom demonstrations. Offered: odd years; Sp. ENV H 453 Exposure Assessment for Occupational and Environmental Health (3) Fenske Introduction to principles and scientific foundations of human exposure assessment in workplace and community environments. Exposure assessments are essential for determining disease etiology and for characterizing health risks within a risk assessment framework. Special emphasis on workplace hazard evaluation and control. Prerequisite: BIOL 202; CHEM 224: either PHYS 116 or PHYS 123. Offered: A.

ENV H 454 Industrial Hygiene Measurements (3) *Guffey, Monteith* Series of lectures and laboratory demonstrations illustrate the use of a wide spectrum of industrial hygiene sampling equipment. Included are airflow calibration, chemical calibration, detector tubes, personnel sampling devices, both continuous and direct reading instruments. Instrumentation for noise and electromagnetic radiation. Prerequisite: ENV H 453. Offered: Sp.

ENV H 457 Industrial and Environmental Noise (3) Yost Survey of industrial and community noise problems, including sources, effects, measurement, control, and legislation. Prerequisite: PHYS 115. Offered: Sp.

ENV H 461 Air Pollution Control (4) *Pilat* Fundamental concepts of air pollution. Emission sources, atmospheric dispersion, ambient concentrations, adverse effects, governmental regulations, emission standards, air-quality standards, processes and equipment for controlling emissions. Offered: jointly with CIVE 490; A.

ENV H 470 Environmental Health Practice: Administration and Management (2) Osaki, Treser Explores selected aspects of the management of environmental health programs in the community, including organization theory and practice, budgeting, personnel management, program planning and evaluation, and community relations. Prerequisite: ENV H 482. Offered: A.

ENV H 471 Environmental Health Regulation (2) *Treser* Introduction to administrative regulation and process. Authority, jurisdiction, and structure of environmental control programs and agencies; the regulatory process; agency acquisition and retention of information; administrative actions; enforcement of environmental health laws; major statutes and cases affecting programs. Prerequisite: ENV H 482. Offered: W.

ENV H 472 Environmental Risk and Society (3) *Fenske* Examines scientific determinations of environmental risks and explores how such determinations are evaluated by affected communities and society. Employs risk analysis to integrate technical knowledge in hazard identification and exposure assessment to provide a more rational basis for environmental policies. Role of public participation in riskbased decisionmaking discussed. Prerequisite: either CHEM 162 or CHEM 203. Offered: W.

ENV H 480 Environmental Health Problems (* max. 6) *Treser* Individual projects involving library, laboratory, or field study of a specific environmental health problem. Offered: AWSpS.

ENV H 482 Environmental Health Internship (2-15) *Treser* Assignment to an environmental health or environmental protection agency for supervised observation and experience in environmental health technology, program planning and utilization of community resources. Prerequisite: ENV H 470; ENV H 471. Credit/no credit only. Offered: AWSpS.

ENV H 497 Environmental Health Special Electives (*) Offered: AWSpS.

ENV H 499 Undergraduate Research (*) Individual research on a specific topic in environmental health upon which specific conclusions, judgments, or evaluation can be made or upon which facts can be presented. Offered: AWSpS.

Courses for Graduates Only

ENV H 511 Environmental and Occupational Health (3) Effects of exposure to chemical, physical, and biological agents, embracing the community and workplace environments. Current issues, using specific cases from recent literature as basis for classroom discussion and written assignments. One section each year plus one physician-only section even years. Offered: W.

ENV H 512 Hazardous Waste Management Technology (3) *De Walle* Lecture and field study covering the role, design concepts, and capabilities of environmental technologies used in waste management, industrial, and related facilities. Lecture sessions, field site visits with site visit technical reports, and class paper addressing relevant topic in detail. Offered: S.

ENV H 513 Biotechnology, Bioinformatics, and Ecogenetics (3) Eaton, Rose, Thummel Methodologies currently used for characterization, storage, and retrieval of genetic information relevant to geneenvironment interactions that contribute to diseases of public health importance. Working knowledge of molecular genotyping and phenotyping, genomics, and bioinformatics related to genetic testing provided. Prerequisite: GENET 372 or permission of instructor. Offered: jointly with PABIO/PCEUT/PHG 513; W.

ENV H 514, 515, 516 Environmental and Occupational Toxicology I, II, III (3, 3, 3) Costa, Luchtel, Omiecinski Major topical areas in human and environmental toxicology, including the biochemical, cellular, and physiological mechanisms by which chemicals produce toxic responses; the toxicology of the major classes of chemicals; principles of toxicity testing; interpretation of toxicological data. Prerequisite: BIOL 212, BIOC 440, or permission of instructor. Offered: A, W, Sp.

ENV H 520 Biological Effects of Ionizing Radiation (3) Effects of ionizing radiation at the molecular, cellular, organ, and organism levels with emphasis on mammalian systems. Offered: S.

ENV H 524 Radioactive and Chemical Wastes (3) *Nevissi* Fate and effects of mixed radioactive and hazardous waste in the environment are discussed. Topics are: the generation, storage, disposal, environmental transport, pathways to humans, and evaluation of health effects of mixed wastes. Also includes: waste disposal at sea, and the current status and future trends in mixed waste disposal. Offered: Sp.

ENV H 527 Radiation Hazards Analysis and Control (1) *Addison* Emphasizes methods and procedures rather than facility or equipment design. Offered: Sp.

ENV H 528 Physical Aspects of Medical Imaging (4) *Stewart* Quantitative physical principles of medical imaging are presented for electromagnetic and ultrasonic radiation. Methods of radiation generation and image formation are discussed for conventional projection radiography, Computed Radiography, CT B-mode and Doppler Ultrasound, Nuclear Medicine, SPECT, PET, and Magnetic Resonance Imaging. Offered: jointly with RADGY/BIOEN 508; W.

ENV H 531 Neurotoxicology (3) Costa Advanced discussions of the principles and methodological approaches to neurotoxicology (including behavioral toxicology), classes of neurotoxic agents, types and mechanisms of neurotoxic effects, as well as the role of neurotoxicology in toxicology and public health. Prerequisite: 514, 515, 516 or 405 or permission of instructor. Offered: even years; W.

ENV H 532 Reproductive and Developmental Toxicology (2) Faustman Investigates chemicals that can induce adverse reproductive and developmental outcomes. Discussion topics include identification and characterization of specific classes of toxic agents, mechanisms of action of these agents at the molecular and cellular level, and risk assessment and regulatory issues. Prerequisite: 514 and 515 or 405 or permission of instructor. Offered: even years;

ENV H 533 Molecular Toxicology (2) Kavanagh, Omiecinski Advanced discussion of molecular mechanisms whereby chemical, physical, and biological agents produce their harmful effects on biological tissues. Prerequisite: permission of instructor. Offered: jointly with PHCOL 533; even years; Sp.

ENV H 535 Inhalation Toxicology (2) Koenig, Luchtel Advanced course on the toxicology of air pollutants and the response of the respiratory system to inhaled gaseous and particulate toxicants. Issues and concepts covered include biology of the respiratory system, exposure technology, experimental design and methodological issues, health effects of air pollutants, and regulatory aspects. Prerequisite: 514-516, or 405 or permission of instructor. Offered: even years; Sp.

ENV H 545 Drinking Water and Health (3) Samadpour Principles, requirements of public water supply for protection of public health. Includes essential characteristics of water quality and sources, water treatment and distribution systems with associated health hazards; public health engineering, epidemiology, risk assessment; surveillance, regulatory needs to assure safe public water supplies. Prerequisite: 440 or CIVE 351 or permission of instructor. Offered: Sp.

ENV H 546 Pesticides and Public Health (3) *Fenske, Keifer* Examines health risks and benefits associated with pesticide use in the United States and internationally; reviews exposure, toxicity, epidemiology, and regulation of pesticides, focusing on populations such as workers and children; discusses benefits derived from vector control, food production, and food preservation. Offered: W.

ENV H 550 Microscopy: Image Acquisition and Analysis (2) Luchtel Sample preparation methods, principles and practical aspects of light microscopy (bright-field, phase, differential interference, polarizing, and confocal), electron microscopy (transmission, scanning, electron diffraction, and energy dispersive x-ray analysis), photographic and digital imaging, computerized image analysis techniques. Student research project required. Prerequisite: permission of instructor. Offered: Sp.

ENV H 552 Environmental Chemistry of Pollution (3) *Kalman* Chemical and physical processes determining distribution and fate of chemical hazards, detection of low levels of hazardous compounds, and environmental evaluation and prediction. Fundamental chemical concepts and measurable properties of individual compounds to interpret and relate measurements. Prerequisite: admission to graduate program or permission of instructor. Offered: W.

ENV H 553 Instrumental Methods for Industrial Hygiene Measurement: Lecture (3) Morgan Strategy, methods, instrumentation, and theory of atmospheric sampling and analysis, emphasizing evaluation of potential occupational hazards and exposures to chemical agents. Prerequisite: 453 or permission of instructor. Offered: W.

ENV H 555 Instrumental Methods for Industrial Hygiene Measurement: Laboratory (3) Monteith, Yost Utilizes typical instrumental techniques and analytical methods for the evaluation of potential occupational exposures. Prerequisite: 453 and 553 or permission of instructor. Offered: Sp.

ENV H 556 Quantitative Occupational Exposure Analysis (3) Morgan, Seixas Exploration of industrial hygiene data to understand nature of airborne exposures in the occupational environment, and their interpretation for human health. Focus on reading and discussion of primary exposure assessment literature and statistical analysis of *real* dataset. Prerequisite: one quarter of statistics or biostatistics and basic industrial hygiene. Offered: A.

ENV H 557 Industrial Ventilation I (4) *Guffey* Principles of exhaust ventilation systems, design for contaminant control in industry. Offered: W.

ENV H 558 Industrial Ventilation II (3) *Guffey* Troubleshooting and redesign of existing exhaust ventilation systems for contaminant control. Includes measurement laboratories. Prerequisite: 557 or permission of instructor. Offered: Sp.

ENV H 559- Applied Industrial Hygiene (2-, max. 4) *Camp* Application of occupational safety and health principles through a combination of field investigations and classroom discussions. Teams conduct walkthrough evaluations, environmental sampling, exposure assessment, review of current health and safety programs, and development of control strategies to eliminate or reduce hazards at a local worksite. Extends over two quarters. Prerequisite: 453 or equivalent. Offered: AW.

ENV H 560 Organizing and Administering Industrial Safety and Health Programs (4) Explores industrial organization and methods of integrating afety and industrial hygiene programs with industrial operations. Philosophic issues related to industrial safety and health such as responsibility for safety, dependency on safe practice, and hierarchy of prevention are investigated. Contains numerous case problems and student involvement opportunities. Offered: A.

ENV H 562 Technical Aspects of Safety and Health (3) Explores specific hazards associated with major industries, as well as hazards common to all industries. Machine guarding, electrical safety, systems safety analysis, materials handling, and working at heights are among the subjects covered. Offered: A.

ENV H 564 Recognition of Health and Safety Problems in Industry (2) Seixas Develops skills in occupational health and safety hazard recognition in a variety of important northwest industries. Focuses on process understanding and hazard recognition skills during walk-through inspections of several local facilities, stressing a multidisciplinary approach. Offered: A.

ENV H 566 Introduction to Ergonomics (3) Basic principles of ergonomics in work environment applied to problems of worker and management. Topics include measurement of physical work capacity, problems of fatigue and heat stress, applied biomechanics, worker-machine interactions and communication, design of displays and controls. Prerequisite: basic human physiology or permission of instructor. Offered: W.

ENV H 567 Environmental Carcinogenesis (3) *Eaton, Zarbl* Biochemical and molecular basis of carcinogenesis induced by chemical and physical agents in the environment, including detailed discussion of multi-stage process of carcinogenesis, mechanisms of action of specific chemical and physical carcinogens; current approaches to identification of carcinogens, and chemoprevention strategies. Prerequisite: 516 or 405 or permission of instructor. Offered: even years; W.

ENV H 568 Molecular Epidemiology of Infectious Diseases (2) Application of molecular typing techniques to study of microbial pathogens to increase understanding of epidemiology of infectious diseases. Brief review of molecular biology. Evaluation of methods used in outbreaks and epidemics reported in literature. Prerequisite: 511 or 512 or permission of instructor. Offered: jointly with EPI 568/ PABIO 568; W.

ENV H 569 Occupational Biomechanics (4) Lectures and laboratories address human occupational

biomechanical and physiological limits and measurement, analysis, and modeling techniques that are used by ergonomists for design of safe, healthful, and productive physical work. Prerequisite: 566 or permission of instructor. Offered: jointly with IND E 569; Sp.

ENV H 570 Occupational and Environmental Epidemiology (3) Checkoway Research in occupational and environmental determinants of disease. Defining exposed populations, characterizing exposure levels, estimating disease risks relative to exposure. Cohort, case-control, cross-sectional designs for various health outcomes. Applications to exposure standard setting and risk assessment. Prerequisite: EPI 511 or EPI 512, 513 or permission of instructor. Offered: jointly with EPI 570; Sp.

ENV H 571 Neuroepidemiology and Environmental Risk Factors (3) Focus on neurologic diseases and neurotoxic exposures. Presentation of descriptive epidemiology, clinical features, and risk factors, including environmental, for stroke, Parkinson's disease, Alzheimer's disease, multiple sclerosis, and other disorders. Discussion of NIH grantsmanship. Guest experts present some topics. Recommended: EPI 511 or equivalent. Offered: jointly with EPI 571.

ENV H 572 Clinical Occupational Medicine (3) *Brodkin* For clinicians in training, comprehensive overview of occupational disease principles, occupational history-taking, and the provider's role in workers' compensation. Epidemiologic evidence and pathophysiologic basis for occupational diseases reviewed, emphasizing organ system approach to diagnosis and management. Prerequisite: occupational medicine or preventive medicine residents/fellows, nursing students, or permission of instructor. Offered: S.

ENV H 573 Methods and Issues in Using Biological Measurements in Epidemiologic Research (2) Introduction to use of measurements from biological specimens in epidemiologic studies. Prepares epidemiology and laboratory science students for conduct of interdisciplinary human studies. Evaluation of biomarkers, preliminary studies, methodologic issues, quality control. Brief review of molecular biology. Applications and current literature discussed. Prerequisite: EPI 511 or 512. Offered: jointly with EPI 573; W.

ENV H 574 Quantitative Methods for Environmental Exposure Assessment (3) *Kissel* Examination of methods used to predict human exposure to environmental contaminants. Emphasis on application to waste management strategies, site remediation, and land use. Development and use of probabilistic methods comparison to deterministic approaches. Offered: Sp.

ENV H 577 Risk Assessment for Environmental Health Hazards (3/4) Faustman Examines context, methodologies, data, uncertainties, and institutional arrangements for risk assessment. Qualitative and quantitative approaches to identification, characterization, and control of environmental hazards to health emphasized through didactic and case studies. Prerequisite: 515 and BIOST 511 or permission of instructor. Offered: jointly with CEWA 577/PB AF 577; A.

ENV H 580 Environmental Health Seminar (1, max. 6) Presentation of current environmental health research and environmental and public health issues. Credit/no credit only. Offered: AWSp.

ENV H 581 Environmental Health Reading I (1) *Burbacher, Luchtel* Critical reading of selected basic and applied research publications on environmental health problems and programs. Offered: A.

ENV H 582 Environmental Health Reading II (1) *Koenig, Luchtel* Discussion of controversial and current issues facing public health and the environmental health professional. Offered: W. **ENV H 583 Environmental Health Reading III (1)** *Burbacher, Koenig* Preparation and presentation of master's thesis proposal. Offered: Sp.

ENV H 584 Occupational Health and Safety: Policy and Politics (3) *Camp, Morris* Designed to provide a better understanding of the historical, political, and policy issues in occupational health and safety through selected readings and discussion with experts in the field. Particular emphasis on the Occupational Safety and Health Act. Students present testimony in a mock congressional hearing on a health and safety issue. Offered: Sp.

ENV H 590 Selected Topics (1-6) In-depth study of a current environmental health topic. For more information and permission, consult department program adviser. Offered: AWSpS.

ENV H 591 Current Topics in Toxicology (1, max. 6) Kavanagh Provides in-depth examination of current topics in environmental and occupational toxicology taken from recently published journal articles. Consists of presentations led by students, postdoctoral fellows, and faculty. Students expected to participate actively in discussion. Assigned weekly readings given according to the schedule of speakers and topics. Credit/no credit only. Offered: AWSp.

ENV H 593 Current Topics in Risk Assessment (1, max. 6) Faustman, Gilbert Examines current topics in risk assessment and risk communication with a focus on issues in environmental health. Consists of presentations led by students, postdoctoral fellows, and faculty. Students expected to participate actively in discussion. Credit/no credit only. Offered: AWSp.

ENV H 594 Current Topics in Environmental Health Technology (1, max. 2) Critical review and discussion of current scientific literature of particular relevance to the Environmental Health Technology program. Primary presentations rotate among faculty and students. Credit/no credit only. Offered: W.

ENV H 595 Research Rotation (3, max. 9) Research laboratory rotation for predoctoral graduate students. Students commit to a laboratory research project aimed at introducing the student to current methods in laboratory research, and to familiarize the student with specific faculty research interests. Prerequisite: graduate standing and permission of program director. Offered: AWSpS.

ENV H 596 Current Issues in Occupational and Environmental Medicine (2, max. 6) Kaufman Interdisciplinary seminar on current and emerging topics in the practice of environmental and occupational health. Faculty- and student-led presentations with an interdisciplinary focus, including occupational hygiene, nursing, and medical issues. Prerequisite: environmental health graduate student, occupational health nursing student, or permission of instructor. Offered: jointly with NURS 580; AWSp.

ENV H 599 Field Studies (2-6) Assignment to an environmental research or service program to develop field research and evaluation skills. Credit/no credit only. Offered: AWSpS.

ENV H 600 Independent Study or Research (*) Prerequisite: permission of departmental adviser. Offered: AWSpS.

ENV H 700 Master's Thesis (*) Prerequisite: permission of departmental adviser. Offered: AWSpS.

ENV H 800 Doctoral Dissertation (*) Credit/no credit only. Prerequisite: permission of departmental adviser. Offered: AWSpS.

Epidemiology

Graduate Program

Graduate Program Coordinator F342 Health Sciences, Box 357236 (206) 685-1762

The Department of Epidemiology offers three graduate degrees in the field of epidemiology for individuals intending to become academicians, highly qualified research specialists, or well-trained practitioners. The Master of Public Health degree requires course work in health services and environmental health in addition to epidemiology course work, thesis research, and a practicum. The Master of Science degree requires concentration on courses and research in epidemiology as preparation for technical specialization or as a prelude to the Doctor of Philosophy program. The Ph.D. course requirements differ from the M.S. program requirements primarily in the scope and complexity of research for the dissertation. Course work includes a basic series in epidemiology, biostatistics, and electives in chronic disease, infectious disease, and methodology. The department also offers postdoctoral research training and a two-year residency in general preventive medicine with emphasis on epidemiology for physicians.

Special Requirements

M.P.H. applicants who hold an M.D., D.V.M., D.D.S., or Ph.D.; possess a bachelor's degree and a healthrelated background; or seek a combined M.D./M.P.H. are considered. M.S. applications are welcomed from outstanding bachelor-level graduates, physicians, and other health professionals. Ph.D. applicants with prior master's- or doctoral-level training in a health-related field, equivalent postbaccalaureate experience, or who anticipate earning a joint M.D./P.D. are preferred.

Financial Aid

Research training stipends are available on a limited basis. Opportunities for work on various research projects or for aid in teaching may provide partial assistance.

Research Facilities

University facilities include well-equipped laboratories, an excellent library system, and access to computers. Various opportunities for field research are provided in Seattle and elsewhere in the state, including the Fred Hutchinson Cancer Research Center, Group Health Cooperative's Center for Health Studies, the Harborview Injury Prevention and Research Center, the Seattle-King County Department of Public Health, and several other local hospitals and health institutions.

Faculty

Chair

Thomas D. Koepsell

Professors

Alexander, E. Russell * 1990; MD, 1953, University of Chicago; infectious disease epidemiology, disease prevention, maternal-neonatal infection, STDs.

Austin, Melissa A. * 1988; PhD, 1985, University of California (Berkeley); genetic and cardiovascular disease epidemiology, quantitative methods.

Beresford, Shirley A. * 1987; PhD, 1981, University of London (UK); nutritional and cancer epidemiology, health promotion.

Checkoway, Harvey * 1987; MPH, 1975, Yale University; PhD, 1978, University of North Carolina; occupational and environmental epidemiology.

Connell, Frederick A. * 1978, (Adjunct); MD, 1972, New York University; maternal and child care, health services.

Daling, Janet R. * 1979; PhD, 1977, University of Washington; breast cancer, reproductive health, viruses, genital cancer.

Davis, Scott * 1980; PhD, 1980, University of Washington; epidemiology radiation and cancer; hematopoietic cancers, disease clustering, and aggregation.

Di Giacomo, Ronald F. * 1974, (Adjunct); DVM, 1965, University of Pennsylvania; MPH, 1974, University of Washington; epidemiology and zoonoses.

Eisenberg, Mickey * 1975, (Adjunct); MD, 1971, Case Western Reserve University; PhD, 1978, University of Washington; sudden cardiac arrest and acute myocardial infarction.

Emanuel, Irvin * 1966; MA, 1956, University of Arizona; MD, 1960, University of Rochester; MSPM, 1966, University of Washington; epidemiology of maternal and child health problems, childhood factors in adult diseases.

Foy, Hjordis * 1967; MD, 1953, Karolinska Institute (Sweden); PhD, 1968, University of Washington; epidemiology and control of infectious disease.

Gale, James L. * 1969; MD, 1961, Columbia University; MS, 1969, University of Washington; epidemiology and control of infectious disease, vaccine safety, public health practice.

Gates, George A. 1993, (Adjunct); MD, 1959, University of Michigan; otology/neurotology, cochlear implantation.

Grayston, J. Thomas * 1960; MD, 1948, MS, 1952, University of Chicago; epidemiology and control of infectious disease, especially respiratory infections.

Handsfield, Hunter 1979, (Adjunct); MD, 1968, Columbia University; infectious diseases.

Henderson, Maureen M. * 1975, (Emeritus); MBBS, 1949, DPH, 1956, University of Durham (UK); application of epidemiology to disease prevention, dietary prevention of disease.

Holmes, King K. * 1969, (Adjunct); MD, 1963, Cornell University; PhD, 1967, University of Hawaii; clinical epidemiology and pathogenesis of infectious diseases.

King, Mary-Claire * 1995, (Adjunct); PhD, 1973, University of California (Berkeley); genetic analysis of complex human phenotypes, human diversity and evolution.

Koepsell, Thomas D. * 1979; MD, 1972, Harvard University; MPH, 1979, University of Washington; injury, cardiovascular epidemiology, neuroepidemiology, methods, application to health services.

Kreiss, Joan K. * 1986; MD, 1978, Washington University; MPH, 1984, University of California (Los Angeles); epidemiology of AIDS, particularly in Africa.

Kukull, Walter A. * 1985; PhD, 1984, University of Washington; genetic, environmental, and clinical epidemiology of Alzheimer's disease.

LaCroix, Andrea Z. * 1989; PhD, 1984, University of North Carolina; older women's health, osteoporosis, cardiovascular disease and injury prevention.

Lee, John A. H. * 1966, (Emeritus); DPH, 1952, London School of Hygiene and Tropical Medicine (UK); MD, 1955, University of Edinburgh (UK); environmental etiology of melanoma of the skin and other organs.

Longstreth, W. T. Jr. * 1977, (Adjunct); MD, 1975, University of Pennsylvania; MPH, 1982, University of Washington; neurology.

Marcuse, Edgar K. 1973, (Adjunct); MD, 1967, Stanford University; MPH, 1973, University of Washington; general pediatrics. Martin, Diane P. * 1973, (Adjunct); MA, 1972, Temple University; PhD, 1979, University of Washington; health services use and cost, alternative delivery systems and insurance.

Moolgavkar, Suresh H. * 1984; MBBS, 1965, Bombay University (India); PhD, 1973, Johns Hopkins University; cancer epidemiology, development of quantitative methodology.

Patrick, Donald L. * 1987, (Adjunct); MS, 1968, PhD, 1972, Columbia University; aging, disablement, and health-related quality of life.

Perine, Peter L. * 1981; MD, 1966, University of Kansas; MPH, 1973, University of Washington; international health, sexually transmitted diseases.

Potter, John D. * 1995; MBBS, 1971, PhD, 1984, University of Queensland (Australia); cancer, nutritional and molecular epidemiology, cancer prevention.

Rivara, Frederick P. * 1984, (Adjunct); MD, 1974, University of Pennsylvania; pediatric epidemiology and injury prevention and research.

Sever, Lowell E. * 1991, (Affiliate); PhD, 1973, University of Washington; perinatal epidemiology, particularly reproductive effects of occupational/environmental exposures.

Shy, Kirkwood K. * 1979, (Adjunct); MD, 1973, Wayne State University; epidemiologic applications to problems in obstetrics and gynecology.

Siscovick, David S. * 1987; MD, 1976, University of Maryland; epidemiology.

Stamm, Walter E. * 1976, (Adjunct); MD, 1971, Harvard University; infectious disease.

Stergachis, Andy * 1989; PhD, 1979, University of Minnesota; pharmacoepidemiology, pharmacy administration.

Thomas, David B. * 1979; MD, 1963, University of Washington; DPH, 1972, Johns Hopkins University; breast and gynecologic cancer epidemiology and prevention.

Vaughan, Thomas L. * 1982; MD, 1978, University of Illinois; MPH, 1983, University of Washington; environmental and genetic factors in etiology of esophageal, nasopharyngeal and lung cancer.

Weiss, Noel S. * 1975; MD, 1967, Stanford University; DPH, 1971, Harvard University; chronic disease epidemiology and prevention, epidemiologic methods, clinical epidemiology.

White, J. Emily * 1982; PhD, 1982, University of Washington; cancer epidemiology and prevention, epidemiologic methods.

Associate Professors

Alderman, Beth W. * 1989, (Research); MD, 1981, University of Chicago; MPH, 1984, University of Washington; reproductive, birth defect, clinical, and environmental epidemiology.

Astley, Susan J. * 1992; PhD, 1990, University of Washington; etiology, diagnosis, prevention of fetal alcohol syndrome.

Bell, Thomas A. * 1980, (Clinical); MD, 1971, Tufts University; pediatrics, preventive care, sexually transmitted disease epidemiology.

Boyko, Edward J. * 1989, (Adjunct); MD, 1979, University of Pittsburgh; epidemiology of inflammatory bowel disease and non-insulin-dependent diabetes mellitus.

Chu, Joseph * 1982; MD, 1975, Georgetown University.

Dugowson, Carin E. 1979, (Adjunct); MD, 1976, University of Illinois; MPH, 1986, University of Washington; rheumatology.

Gloyd, Stephen S. * 1986, (Adjunct); MD, 1973, University of Chicago; MPH, 1983, Harvard University; political economy, epidemiology, and primary health care in developing countries.

SCHOOL OF PUBLIC HEALTH AND COMMUNITY MEDICINE / EPIDEMIOLOGY 481

Goldbaum, Gary M. * 1989; MD, 1978, University of Colorado (Denver); MPH, 1989, University of Washington; behavioral factors in HIV/AIDS, preventive medicine.

Haselkorn, Jodie K. * 1985, (Adjunct); MD, 1985, Louisiana State University; health services for the disabled: diagnostic accuracy of tests, effectiveness of interventions.

Helgerson, Steven D. * 1990, (Clinical); MD, 1973, MPH, 1976, University of Washington; Native American health issues.

Holt, Victoria L. * 1991; MPH, 1987, PhD, 1990, University of Washington; women's reproductive health, prenatal and perinatal care, domestic violence.

Kaufman, Joel D. * 1988, (Adjunct); MD, 1986, University of Michigan; MPH, 1990, University of Washington; epidemiology of occupational/environmental factors in respiratory, skin and cardiovascular disease.

Kestin, Mark * 1990, (Affiliate); PhD, 1989, Flinders University (Australia); MPH, 1990, Harvard University; relationship between nutrition, cancer and cardiovas-cular disease.

Kimball, Ann M. * 1993; MD, 1976, MPH, 1981, University of Washington; emerging infections, public health response to epidemic disease.

Koutsky, Laura A. * 1989; PhD, 1987, University of Washington; sexually transmitted diseases, HIV-AIDS, HPV, etiology and natural history of cervical neoplasia.

Kristal, Alan R. * 1987; DPH, 1983, Columbia University; nutritional epidemiology, relationship between diet and cancer.

Moore, Donald E. 1977, (Adjunct); MD, 1967, Case Western Reserve University; reproductive endocrinology.

Mueller, Beth A. * 1984; DPH, 1984, Tulane University; epidemiology of perinatal and reproductive diseases, cancer, and injury research, methods.

Pendergrass, Thomas W. 1978, (Adjunct); MD, 1971, University of Tennessee; MPH, 1979, University of Washington; hematology, oncology.

Psaty, Bruce M. * 1984; PhD, 1979, MD, 1981, Indiana University; cardiovascular disease, coronary heart disease, hypertension, and pharmacoepidemiology.

Reiber, Gayle * 1991; MPH, 1975, Johns Hopkins University; PhD, 1989, University of Washington; epidemiology and health services research on preventing complications of diabetes.

Schwartz, Stephen Marc * 1990; PhD, 1990, University of Washington; interaction of genetic and environmental factors in cancer and cardiovascular disease.

Stanford, Janet L. * 1986; PhD, 1986, Johns Hopkins University; chronic disease epidemiology including cancer and cardiovascular disorders; biochemical epidemiology.

Stehr-Green, Paul 1995; DPH, 1982, University of Pittsburgh; chronic, infectious, vaccine-preventable diseases, environmental health, health-care delivery.

Sugarman, Jonathan R. * 1991, (Clinical); MD, 1981, Albert Einstein College of Medicine; MPH, 1990, University of Washington.

Williams, Michelle A. * 1991; ScD, 1991, Harvard University; reproductive and perinatal epidemiology, perinatal screening.

Zhao, Lue-Ping * 1995, (Affiliate); MS, 1987, PhD, 1989, University of Washington; quantitative genetics, genetic epidemiology, correlated data analysis/sampling.

Assistant Professors

Bynum, Christian 1996; PhD, 1996, University of Washington; child abuse; injury, occupational epidemiology; reproductive health; epidemiologic methods. Cheney, Carrie L. * 1990, (Affiliate); PhD, 1989, University of Washington; role of nutrition in cancer prognosis and secondary prevention.

Critchlow, Cathy W. * 1993; PhD, 1993, University of Washington; epidemiology of sexually transmitted diseases, virus-associated cancers, epidemiologic methods.

Cummings, Peter * 1993; MD, 1970, Case Western Reserve University; MPH, 1993, University of Washington; injury and clinical epidemiology, emergency medicine research.

Davis, Robert L. * 1991; MD, 1983, University of California (San Diego); MPH, 1993, University of Washington; childhood immunization, including adverse events; perinatal and pediatric epidemiology.

Elmore, Joann G. 1996, (Adjunct); MD, 1987, Stanford University; MPH, 1992, Yale University; clinical epidemiology.

Farrow, Diana C. * 1991; MA, 1985, PhD, 1989, University of Washington; cancer etiology of gastrointestinal cancers and precursor lesions.

Heckbert, Susan R. * 1990; MD, 1981, Case Western Reserve University; MPH, 1987, PhD, 1990, University of Washington; clinical epidemiology, cardiovascular epidemiology, pharmacoepidemiology.

Jackson, Lisa A. * 1997, (Research); MD, 1988, University of Virginia; MPH, 1996, University of Washington; infectious disease epidemiology, vaccine efficacy, cost-benefit analysis.

Jarvik, Gail P. 1991, (Adjunct); PhD, 1986, University of Michigan; MD, 1987, University of Iowa; medical genetics.

McTiernan, Anne 1997, (Research); PhD, 1982, University of Washington; breast and colon cancer, women's health, exercise and obesity.

Mock, Charles N. 1992; MD, 1980, Brown University; trauma-critical care surgery.

Patterson, Ruth E. * 1994, (Research); PhD, 1992, University of North Carolina; dietary assessment in adult populations, vitamin supplements in cancer prevention.

Rossing, Mary Anne * 1988, (Research); DVM, 1980, University of Illinois; PhD, 1993, University of Washington; cancer epidemiology, reproductive health.

Stevens, Nancy G. * 1982, (Adjunct); MD, 1979, MPH, 1982, University of Washington; family medicine.

Tsu, Vivian D. * 1992, (Affiliate); PhD, 1991, University of Washington.

Tsuang, Debby W. 1993, (Adjunct); MD, 1988, University of Iowa.

Wald, Anna 1989; MD, 1985, Mt. Sinai School of Medicine; MPH, 1994, University of Washington; allergy and infectious diseases.

Wolf, Marsha E. * 1988; PhD, 1988, University of Washington; injury epidemiology and older adults and women, domestic violence.

Instructor

Voigt, Lynda F. * 1995, (Affiliate); MN, 1969, Emory University; PhD, 1990, University of Washington.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

Epidemiology

EPI 420 Introduction to Epidemiology (3) NW For the undergraduate student wishing to devote only one quarter to a course in epidemiologic methods. Description of ways in which variation in disease occurrence is documented and how that variation is studied to understand causes of disease. Offered: A.

EPI 497 Epidemiology Special Electives (*) Offcampus course for medical students. Offered: AWSpS.

EPI 499 Undergraduate Research (*) Offered: AWSpS.

Courses for Graduates Only

Epidemiology

EPI 501 Public Health Practice at the Local Level (3) *Gale, Thompson* History and development of local and state public health departments highlights traditional versus new roles and critical interactions with public and private agencies. Topics include health status assessment; health promotion, disease prevention; environmental hazards; substance abuse; emergency medical services. Prerequisite: 511 or permission of instructor. Offered: jointly with HSERV 501.

EPI 503 Public Health Surveillance: Epidemiology and Health Policy (3) Covers collection and use of public health surveillance data in formulating policy and managing programs through lectures and realworld interactive exercises. Discusses surveillance for birth defects, environmental exposures, and hospital-acquired infections, and use of tools such as small area analysis and geographic information systems. Offered: jointly with HSERV 503.

EPI 505 Basic Epidemiologic and Biostatistical Methods (5) Epidemiologic concepts and methods to describe disease variation and how that variation is studied to understand causes of disease or adverse events. Includes introduction to basic biostatistical concepts. Written exercises, electronic discussion forums, and applications of epidemiologic research strategies to the critical review of scientific literature. Offered: jointly with BIOST 505.

EPI 511 Introduction to Epidemiology (3-4) For the graduate student wishing to devote only one quarter to a course in epidemiologic methods. Description of ways in which variation in disease occurrence is documented, and how that variation is studied to understand causes of disease. Prerequisite: graduate standing. Offered: A.

EPI 512 Epidemiologic Methods I (4) *Koepsell, Weiss* Principles and methods of epidemiology. Covers measures of disease frequency, measures of effect, causal inferences, descriptive epidemiology, study types, misclassification, and effect modification. Designed for students who want to take 513. Prerequisite: prior or concurrent enrollment in BIOST 511 or equivalent. Offered: A.

EPI 513 Epidemiologic Methods II (4) Koepsell, Weiss Continuation of 512. Considers how designs of epidemiologic studies may be constructed to maximize etiologic inferences. Covers confounding, randomized trials, cohort studies, case-control studies, and selected topics. Prerequisite: 512. Offered: W.

EPI 514 Application of Epidemiologic Methods (4) *Critchlow, Mueller* Practical experience in analysis of data. Students analyze data sets currently on file using contemporary epidemiologic methods as taught in 512 and 513. Prerequisite: 512, 513 and epidemiology major. Offered: Sp.

EPI 517 Genetic Epidemiology (3) Austin Research methods for evaluating genetic influences on disease and risk factors and genetic-environmental interactions. Study designs and statistical methods include twin studies, family studies, populationbased association studies, segregation analysis, and linkage analysis. Prerequisite: EPI 511, BIOST 511, and GENET 371. Offered: jointly with PHG 511; Sp.

EPI 518 Computer Demonstrations in Genetic Epidemiology (2) Edwards Demonstrations and use of computer programs designed specifically for analysis of genetic epidemiologic data, including heritability, segregation, and sib-pair linkage analysis. Discussions focus on interpretation of results. Corequisite: EPI 517/PHG 511. Offered: jointly with PHG 518; Sp.

EPI 519 Epidemiology of Cardiovascular Disease (3) *Psaty, Siscorick* Principles, methods, and issues in the epidemiology of cardiovascular disease. Focuses on coronary heart disease and its major risk factors; also covers other topics such as stroke and sudden death. The format includes informal lectures and discussions of the current literature. Prerequisite: 511 or 512, 513. Offered: W.

EPI 520 Infectious Diseases Epidemiology (4) *Foy, Jackson* Principles and practices of epidemiology, focusing on communicable diseases. Methods for epidemiological investigation of infections taught by reading classical descriptions of disease outbreaks and analyzing current papers. Term paper required, consisting of an investigation of an infectious disease outbreak or a protocol for a research study. Prerequisite: 511 or permission of instructor. Offered: A.

EPI 521 Epidemiology of Maternal and Child Health Problems (4) Emanuel, Williams Contributions to understanding and prevention of major maternal and child health problems, including pregnancy outcome, infant and child morbidity and mortality, maternal morbidity and mortality, abnormal child growth and development. Prerequisite: graduate, medical, or dental school standing and 511 or 512 or permission of instructor. Offered: jointly with HSERV 542; W.

EPI 523 Injury Epidemiology (3) *Cummings* Overview of the field of injury epidemiology and injury prevention. Topics include the Haddon matrix, injury scoring systems, drowning, bicycle injuries, fires, poisoning, motor vehicle crashes, firearm injuries, social and financial costs of injuries, and prevention strategies. Includes discussion on the use of computer databases to study injuries. Prerequisite: 511 or 512 or permission of instructor. Offered: odd years; W.

EPI 524 Epidemiologic Studies of Cancer Etiology and Prevention (3) Farrow Current knowledge of the role that chemicals, radiation, viruses, familial factors, immunodeficiencies, and benign diseases play in the etiology of various cancers, as determined from studies in human populations; the epidemiologic characteristics of most major types of cancer; applications of epidemiologic principles to planning and evaluating programs of primary, secondary, and tertiary cancer prevention. Prerequisite: 511 or 513. Offered: Sp.

EPI 525 Topics in Preventive Medicine (2) *Foy, Henderson* Examine current scientific knowledge and state of the art of preventive medical interventions. Discuss and consider options for current practice. Prerequisite: MD, OD, NP or permission of instructor. Offered: jointly with HSERV 505.

EPI 526 Zoonotic Diseases (3) *DiGiacomo, Rausch* Explores the public health aspects of zoonotic diseases, their epidemiology and current approaches to control. Focuses on the major viral, rickettsial, bacterial, protozoal, helminthic, and fungal diseases transmitted from wild and domesticated animals to humans in North America. Prerequisite: 511, 512, or 520 or permission of instructor. Offered: jointly with C MED 526; Sp.

EPI 527 Practical Issues in the Conduct of Epidemiologic Studies (2) Seminar format focusing on practical aspects of conducting epidemiologic studies. Topics include selection of a research topic, grant sources and data collection tools, selection of study subjects, human subjects review, grant writing and budget development, and the peer review process. Credit/no credit only. Prerequisite: graduate standing or permission of instructor. Offered: odd years.

EPI 528 Exposure Measurement in Epidemiology (3) White Principles and methods of measuring exposures and covariates in epidemiological studies. Validity and reliability of measures, questionnaire design, effects of measurement error, maximizing response rates, quality-control procedures, measurement of specific exposures. Prerequisite: 513. Offered: Sp.

EPI 529 Emerging Infections of International Public Health Importance (3) *Kimball* Overview of current emerging infections worldwide and contributing factors. Design of a surveillance and prevention strategy required. Offered: jointly with HSERV 536; W.

EPI 530 AIDS: A Multidisciplinary Approach (2) *Koutsky, Kreiss* Comprehensive overview of the public health, clinical, and laboratory aspects of human immunodeficiency virus (HIV) infection and disease. Topics include the pathogenesis, natural history, and management of HIV infections. The impact of HIV/AIDS on community and global health care and prospects for prevention and control. Offered: jointly with MED 530.

EPI 531 Problems in International Health (4) *Gloyd* Explores social, political, economic, environmental determinants of developing countries' health; traces development of societal responses to problems. Includes: origins of primary health care; child survival; traditional systems; population; water; sanitation; international agencies; effects of economic policies. Case study formulating pharmaceutical policy in a developing country. Offered: jointly with HSERV 531; S.

EPI 532 Epidemiology of Infectious Diseases of Third-World Importance (3) Kreiss A review of major infectious disease problems of the developing world, including AIDS, malaria, tuberculosis, measles, diarrhea. Means of assessing the impact of infectious diseases on the health of communities through surveillance and appropriate survey techniques. Offered: odd years.

EPI 533 Pharmacoepidemiology (3) *Gardner, Heckbert, Odegard, Stergachis* Covers methods for recognition, study, and management of drug-induced problems, emphasizing research and public policy objectives. Core to doctoral program in Pharmaceutical Outcomes and offered as an elective for graduate students in other disciplines. Offered: jointly with PHARM 533.

EPI 535 Maternal and Child Health in Developing Countries (3) Emphasizes critical health problems of women and children in developing countries in social, economic, and cultural contexts. Practical approaches to developing MCH programs shared via lecture/discussions, exercises, and small group work. Students acquire skills in baseline assessment, setting objectives, planning and evaluating interventions, and involving communities. Offered: jointly with HSERV 535; Sp.

EPI 536 Categorical Data Analysis in Epidemiology (4) Summary of univariate categorical data analysis; introduction to multivariate analysis of categorical epidemiologic data using multiplicative models. Experience at interpretation; familiarity with available programs gained by analysis of bona fide data, critiques of analyses appearing in literature. Prerequisite: 514 and BIOST 513; or BIOST 515; or permission of instructor. Offered: jointly with BIOST 536.

EPI 537 Survival Data Analysis in Epidemiology (4) Introduction to the multivariate analysis of survival data using multiplicative models. Application to epidemiologic studies. Familiarity with interpretation and available computer programs gained by analysis of bona fide sets of data and critiques of analyses appearing in the literature. Prerequisite: 536 or permission of instructor. Offered: jointly with BIOST 537.

EPI 538 Nutritional Epidemiology (3) Beresford, Patterson Application of epidemiological methods to current studies of nutrition and disease. Special methodological problems of importance in nutritional epidemiological studies. Diet and heart disease, and diet and cancer relationships. Enables students to plan studies in nutritional epidemiology. Prerequisite: 511 or 512 or permission of instructor. Offered: jointly with NUTR 538.

EPI 539 Research Methods in Developing Countries (3/4) Gale, Gloyd Simple, practical methodologies to obtain and validate information regarding health status and health services in developing countries. Usefulness, validity, limitation of vital records, health reports, household (and cluster) surveys, nutritional anthropometry, and qualitative methods discussed. Lectures, computer lab, and student participation in community-based survey. Offered: jointly with HSERV 539; A.

EPI 542 Clinical Epidemiology (2) *Weiss* Principles and methods involved in studying outcome of illness. Prerequisite: 511, or 512 and 513. Offered: S.

EPI 568 Molecular Epidemiology of Infectious Diseases (2) DiGiacomo, Samadpour, Roberts Application of molecular typing techniques to study of microbial pathogens to increase understanding of epidemiology of infectious diseases. Brief review of molecular biology. Evaluation of methods used in outbreaks and epidemics reported in literature. Prerequisite: 511 or 512 or permission of instructor. Offered: jointly with ENV H 568/PABIO 568. Offered: W.

EPI 570 Occupational and Environmental Epidemiology (3) *Checkoway* Research methods for studying occupational and environmental determinants of disease. Defining exposed populations, characterizing exposure levels, estimating disease risks relative to exposure. Cohort, case-control, cross-sectional designs for various health outcomes. Applications to exposure standard setting and risk assessment. Prerequisite: 511 or 512, 513 or permission of instructor. Offered: jointly with ENV H 570. Offered: Sp.

EPI 571 Neuroepidemiology and Environmental Risk Factors (3) Focus on neurologic diseases and neurotoxic exposures. Presentation of descriptive epidemiology, clinical features, and risk factors, including environmental, for stroke, Parkinson's disease, Alzheimer's disease, multiple sclerosis, and other disorders. Discussion of NIH grantsmanship. Guest experts present some topics. Recommended: 511 or equivalent. Offered: jointly with ENV H 571.

EPI 573 Methods and Issues in Using Biological Measurements in Epidemiologic Research (2) Introduction to use of measurements from biological specimens in epidemiologic studies. Prepares epidemiology and laboratory science students for conduct of interdisciplinary human studies. Evaluation of biomarkers, preliminary studies, methodologic issues, quality control. Brief review of molecular biology. Applications and current literature discussed. Prerequisite: 511 or 512. Offered: jointly with ENV H 573: W.

EPI 583 Epidemiology Seminar (1, max. 3) Presentation of current epidemiologic research and application of epidemiologic research in the practice of public health. Offered: AWSp.

EPI 589 Epidemiologic Research in Aging Populations (3) LaCroix Emphasizes application of epidemiologic methods to the study of older populations. Topics include: compression of morbidity; successful aging; methodological challenges in studying older populations; physical, cognitive and social function as epidemiological endpoints; chronic conditions of the aging (heart disease, cancer, Alzheimer's disease, dementia, osteoporosis, fractures); health promotion strategies. Prerequisite: 511 or 513. Offered: jointly with HSERV 589.

EPI 590 Selected Topics in Epidemiology or International Health (1-6) Tutorials are arranged for a small number of students for in-depth examination of an area of epidemiology or international health, usually of current nature. Seminar format. Prerequisite: 511. Also a special summer format presenting introductory material. May be taken with ENV H 590 and/ or HSERV 590. For more information and permission, consult the department program adviser. Offered: AWSpS.

EPI 591 Current Literature in Epidemiology (1) Articles pertaining to epidemiology and related subjects selected from the current literature to be distributed and read by all participants. Faculty members and enrolled students alternate being responsible for conducting sessions and choosing articles to read. Prerequisite: 513. Offered: AWSp.

EPI 592 Program Seminars (1-6) Graduate seminars organized to address specific educational needs of students in various specialized programs within the Department of Epidemiology (i.e., Maternal and Child Health). Prerequisite: permission of instructor. Offered: AWSpS.

EPI 593 Cancer Prevention Research Laboratory (3) *White* Provides research experience on cancer prevention projects at the Fred Hutchinson Cancer Research Center. Offered: jointly with BIOST 593; AWSpS.

EPI 595 Epidemiology Master's Practicum (1-12) Supervised practice experience providing students an opportunity to learn how epidemiology is applied in a public health setting and in the formulation and application of public health policy. Credit/no credit only. Prerequisite: 512 and BIOST 511 or equivalent and permission of instructor; recommended: 501.

EPI 600 Independent Study or Research (*) Credit/no credit only. Prerequisite: permission of departmental adviser. Offered: AWSpS.

EPI 700 Master's Thesis (*) Credit/no credit only. Prerequisite: permission of departmental adviser. Offered: AWSpS.

EPI 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Public Health Genetics

The following courses for the program "Public Health Genetics in the Context of Law, Ethics, and Policy" are currently approved. Several new courses are also under development, including courses emphasizing legal, ethical, social, and policy issues in public health genetics, and advanced methods in genetics epidemiology. Please contact the program office for updated information.

PHG 511 Genetic Epidemiology (3) Austin Research methods for evaluating genetic influences on disease and risk factors and genetic-environmental interactions. Study designs and statistical methods include twin studies, family studies, populationbased association studies, segregation analysis, and linkage analysis. Prerequisite: EPI 511, BIOST 511, and GENET 371. Offered: jointly with EPI 517; Sp.

PHG 513 Biotechnology, Bioinformatics, and Ecogenetics (3) Eaton, Rose, Thummel Methodologies currently used for characterization, storage, and retrieval of genetic information relevant to geneenvironment interactions that contribute to diseases of public health importance. Working knowledge of molecular genotyping and phenotyping, genomics, and bioinformatics related to genetic testing provided. Prerequisite: GENET 372 or permission of instructor. Offered: jointly with ENV H/PABIO/PCEUT 513; W. PHG 518 Computer Demonstrations in Genetic Epidemiology (2) Edwards Demonstrations and use of computer programs designed specifically for analysis of genetic epidemiologic data, including heritability, segregation, and sib-pair linkage analysis. Discussions focus on interpretation of results. Corequisite: EPI 517/PHG 511. Offered: jointly with EPI 518; Sp.

PHG 521 Socio-Cultural Perspectives of Public Health Genetics (2) *McGrath* Examines social and cultural issues of human genome sequencing and control of genetic expression. Attitudes and behaviors toward health, illness, disability are studied using historical, contemporary, and cross-cultural case study material. Offered: jointly with NURS 581; A.

PHG 522 Ethical Frameworks for Public Health Genetics (2) Durfy Case-based application of ethical principles in genetic medicine to range of problems arising in genetics practice, policy, research. Examination of traditional problems including eugenics and testing/screening for genetic disease, as well as emerging problems in population and environmental genetics. Prerequisite: MHE 514/PHG 512. Offered: jointly with MHE 516; W.

PHG 580 Interactive Seminar (1, max. 6) Seminar series on topics related to public health genetics, including current bioethical, legal, medical, biotechnology, and public policy issues.

Health Services

Undergraduate Program

Health Information Administration Postbaccalaureate Certificate Program

The program in Health Information Administration is designed to prepare individuals for a career in an administrative health-care profession. Course work is enhanced by a field placement during one academic quarter. The program gives students the tools to become involved in a wide variety of health-care arenas upon graduation, including health information management, health information systems analysis supplementation with emphasis on electronic health records, health-care quality improvement, research, health-care financing, and consulting. Program requirements can be completed in three quarters (nine months) on a full-time basis, or over a longer period on a part-time basis.

The program is accredited by the Commission on Accreditation of Allied Health Education Programs (CAAHEP), or its successor, in cooperation with the American Health Information Management Association's (AHIMA) Council on Accreditation.

Special Requirements

Applicants need a baccalaureate degree from an accredited college or university with a minimum GPA of 2.50. They must also have taken courses in, or have the requisite knowledge and skills pertaining to, the following: human anatomy and physiology (laboratory course); pathophysiology; introduction to basic computer applications such as spreadsheets, databases, or word processing, or introductory programming; principles of management; statistics (any discipline); and medical terminology. Applicants who still need to complete any of these requirements may apply and submit a plan for completion of prerequisites.

Graduate Program

Graduate Program Coordinator H660 Health Sciences, Box 357660 (206) 616-2926

The Department of Health Services offers a two-year graduate program in health services leading to the Master of Public Health degree and maintains primary responsibility for the graduate program in Health Services Administration (an interdisciplinary degreegranting program of the Graduate School described in the Interdisciplinary Graduate Degree Programs section of this catalog). An evening M.H.A. degree for clinical health-care professionals was established winter quarter of 1998. The department also offers a threeyear extended degree program in community-health management leading to the M.P.H. degree for employed professionals working full-time and, in addition, participates in the training of doctoral students from other departments on campus by offering a specialization in health services under the Doctoral Studies Proaram.

Master of Public Health

The M.P.H. program in health services gives priority to individuals who have completed their professional health training such as physicians, dentists, and nurses. Others who have had substantial experience in the health field are also considered. This program offers a general curriculum that includes introduction to health systems, epidemiology, current issues regarding the provision of medical care, and methodological training for research and program evaluation. Examples of areas of concentration include studies of patient and provider behaviors; evaluation of local, state, and federal health programs; and the impact of technology on medical-care costs and benefits. The M.P.H. program is organized into four tracks: community medicine, international health, maternal and child health, and social and behavioral sciences. International health, and maternal and child health are offered jointly with the Department of Epidemiology.

The *Maternal and Child Health* option presents an interdisciplinary examination of the issues that influence the health and health care of children, women, and families. It combines practical and classroom experience to give students (1) an in-depth understanding of the behavioral, biological, social, and environmental factors that influence the health and well-being of maternal and child populations; (2) competency in public-health research and analytic methods; and (3) supervised experience in applying science and mangement tools to the planning, development, and evaluation of health programs and policy.

The academic option in International Health is an interdisciplinary graduate program leading to the Master of Public Health degree in health services or in epidemiology. The program's goal is to balance teaching, research, and service to contribute to improvements in health at home and worldwide. The program focuses on community health and primary health-care systems, bringing epidemiological and qualitative research skills to bear. The curriculum addresses understanding the social, political, economic, environmental, geographic, and health-systems factors that have an impact on health. Requirements include the completion of core M.P.H. courses, a series of international-health courses, a public-health practicum, and a thesis project on a topic related to health in developing countries. Students are encouraged to carry out their thesis projects in an international setting. Previous developing-country health-related experience is helpful for admission

The Social and Behavioral Sciences academic option is available to students enrolled in an M.P.H. degree program in the School of Public Health and Community Medicine. The program focus is on research and application of knowledge concerning the relationships among (1) social, cultural, and behavioral processes; (2) health and illness; and (3) what society does and can do to promote health and prevent illness. Students receive training in the general theories and methods of the social and behavioral sciences applied to publichealth interventions for well persons and people with disabilities. Students may choose to plan a course of study concentrating in a particular area of inquiry. Those areas supported within the department are (1) health promotion and disease prevention, (2) chronic illness and disability, and (3) community intervention and research.

If deemed appropriate by their advisers, students may take courses in other departments of the University. Community agencies and resources are used extensively. Students with a background in medicine may qualify to receive concurrent credit for residency training in preventive medicine.

Admission Requirements

In addition to completing Graduate School admission requirements, applicants to the M.P.H. program must submit at least three letters of recommendation, Graduate Record Examination scores, and a goal statement. At least three years of medical or health-care experience are usually required. In general, applicants are accepted only for summer and autumn quarters of each year. The application deadline is January 15.

Doctoral Studies Program

Doctoral study in health services is available to qualified students on campus who are enrolled in the doctoral programs of other departments (e.g., anthropology, biostatistics, economics, epidemiology, geography, medicine, nursing, operations research, organizational theory, political science, psychology, social work, or sociology). Students in the Doctoral Studies Program take four courses in health services and focus their disception to a specific health-services issue (e.g., health behavior, health-care organizations, costs, or quality and utilization of health-care services).

Financial Aid

Every attempt is made to ensure that students admitted are not prevented from pursuing graduate studies due to inadequate finances. A limited number of fellowships, assistantships, scholarships, and loans are available each year. However, students should be prepared to use their own resources to finance their graduate education.

Research Facilities

In addition to using University facilities, the program has extensive links with community health-care delivery systems and agencies for research and training.

Extended M.P.H.

Graduate Program Coordinator H685 Health Sciences, Box 357660 (206) 685-7580

The Extended M.P.H. degree program is a three-year, part-time program delivered through a combination of intensive four-week summer sessions on the University campus, directed independent study, and intensive weekend (Friday-Saturday) seminars during the academic year.

Designed for mid-career public and community health professionals with three or more years of experience in the health-care field, the program provides knowledge and skills required at mid- and upper-level practice and management positions for health professionals. In addition to the core courses in epidemiology, biostatistics, and environmental health, the prescribed course work includes a broad exposure to the health-care system plus specific management training in accounting, finance, personnel management, economics, organization theory, and program planning and evaluation. Options are also available in maternal and child health and in health education.

Admission Requirements

In addition to Graduate School admission requirements, applicants must submit a program application, at least three letters of recommendation, Graduate Record Examination scores, and a goal statement. A minimum of three years' work experience in the healthcare field is required.

Applicants are accepted to begin in the program summer quarter. The deadline for priority consideration is December 1. Applications will be accepted through March 1 and considered on a space-available basis. Because the program is self-sustaining, the tuition rate differs from the usual on-campus programs.

Faculty

Chair

William L. Dowling

Professors

Buchner, David M. * 1984; MD, 1977, University of Kansas; MPH, 1984, University of Washington; geriatric health promotion.

Chapko, Michael K. * 1978, (Research); MA, 1970, Hunter College; PhD, 1972, City University of New York; diffusion of health technologies, cost-effectiveness in health care.

Christensen, Dale B. * 1976, (Adjunct); PhD, 1977, University of Minnesota; pharmacy administration.

Connell, Frederick A. * 1978; MD, 1972, New York University; maternal and child care, health services.

Conrad, Douglas A. * 1977; MHA, 1973, University of Washington; MBA, 1977, PhD, 1978, University of Chicago; managed care, corporate finance in managed care.

Curry, Susan J. * 1985; MA, 1979, PhD, 1981, University of New Hampshire; health behavior change.

Day, Robert W. * 1968; MD, 1956, University of Chicago; MPH, 1958, PhD, 1962, University of California (Berkeley); health-information systems.

Deyo, Richard A. * 1986; MD, 1975, Pennsylvania State University; health status measurement and evaluation of common medical practices.

Diehr, Paula K. * 1970; MS, 1967, PhD, 1970, University of California (Los Angeles); health services, small area analysis, health status.

Dowling, William L. * 1977; MBA, 1961, University of Chicago; MA, 1970, PhD, 1971, University of Michigan; strategic management of health-care organizations, managed care.

Ellsworth, Allan J. 1981, (Adjunct); PharmD, 1977, Philadelphia College of Pharmacy and Science; primary care, family medicine.

Fihn, Stephan * 1979; MD, 1977, St. Louis University; MPH, 1981, University of Washington; internal medicine.

Gale, James L. * 1969, (Adjunct); MD, 1961, Columbia University; MS, 1969, University of Washington; epidemiology and control of infectious disease, vaccine safety, public health practice.

Gilson, Betty S. * 1969, (Emeritus); MD, 1943, University of Minnesota; health-status measurement.

Grembowski, David * 1981; MA, 1975, Washington State University; PhD, 1982, University of Washington; dental care demand, fluoridation, dental health services research.

Hale, Christiane B. * 1990, (Affiliate); PhD, 1978, University of Cincinnati; quantitative analyses of small area health outcomes.

Hart, Lawrence G. 1982, (Adjunct); PhD, 1985, University of Washington; rural health policy, medical geography.

Hedrick, Susan * 1983; MA, 1975, PhD, 1982, Michigan State University; long term care, health services.

Klastorin, Theodore * 1974, (Adjunct); PhD, 1973, University of Texas (Austin); operations management, facility location, project management, waiting lines, logistics, inventory.

Kukull, Walter A. * 1985, (Adjunct); PhD, 1984, University of Washington; genetic, environmental, and clinical epidemiology of Alzheimer's disease.

LaCroix, Andrea Z. * 1989, (Adjunct); PhD, 1984, University of North Carolina; older women's health, osteoporosis, cardiovascular disease and injury prevention.

Larson, Eric B. * 1977, (Adjunct); MD, 1973, Harvard University; internal medicine.

LoGerfo, James P. Sr. * 1974; MD, 1968, University of Rochester; MPH, 1974, University of Washington; quality-of-care assessment.

Madden, Carolyn Watts * 1975; MA, 1974, PhD, 1976, Johns Hopkins University; health economics and policy.

Martin, Diane P. * 1973; MA, 1972, Temple University; PhD, 1979, University of Washington; health services use and cost, alternative delivery systems and insurance.

Mayer, Jonathan D. * 1977, (Adjunct); PhD, 1977, University of Michigan; medical geography, clinical applications, philosophy.

Milgrom, Peter M. * 1974, (Adjunct); DDS, 1972, University of California (San Francisco); management of fearful and phobic dental patients, quality of dental care.

Monsen, Elaine R. * 1969; MS, 1959, PhD, 1961, University of California (Berkeley); nutrition, dietetics.

Muecke, Marjorie A. * 1979, (Adjunct); PhD, 1976, University of Washington; medical anthropology, women's health, refugee health, Southeast Asia.

Novack, Alvin H. 1979, (Adjunct); MD, 1958, Temple University; general pediatrics.

Patrick, Donald L. * 1987; MS, 1968, PhD, 1972, Columbia University; aging, disablement, and health-related quality of life.

Perrin, Edward * 1975; MA, 1956, Columbia University; PhD, 1961, Stanford University; health information services, research methodology.

Rosenblatt, Roger A. * 1977, (Adjunct); MD, 1971, MPH, 1971, Harvard University; research into the organization and delivery of health services, rural health policy.

Ross, Austin Jr. 1977; MPH, 1955, University of California (Berkeley); ambulatory care, health care delivery systems.

Stergachis, Andy * 1989, (Adjunct); PhD, 1979, University of Minnesota; pharmacoepidemiology, pharmacy administration.

Wagner, Edward H. * 1984; MD, 1965, State University of New York (Buffalo); MPH, 1972, University of North Carolina; clinical epidemiology and health services research, health promotion and disease prevention.

Wing, Kenneth * 1990; JD, 1971, MPH, 1972, Harvard University; law; politics and policy; financing health care.

Zuckerman, Howard S. * 1997; MBA, 1968, Xavier University; PhD, 1976, University of Michigan; health management research, health administration.

Associate Professors

Altamore, Rita A. * 1981, (Clinical); MD, 1977, Boston University; information systems in health services, quality of health care.

Belcher, Donald W. * 1976, (Adjunct); MD, 1962, University of Pennsylvania; ambulatory medicine.

Bell, Michelle * 1985; MSW, 1967, PhD, 1984, University of Washington; maternal and child health, and adolescent health.

Bowen, Deborah J. * 1986, (Affiliate); PhD, 1986, Uniformed Services University of the Health Sciences; health psychology.

Boyko, Edward J. * 1989, (Adjunct); MD, 1979, University of Pittsburgh; epidemiology of inflammatory bowel disease and non-insulin-dependent diabetes mellitus.

Cheadle, Allen D. * 1987, (Research); PhD, 1987, University of California (Berkeley); community-based research and program evaluation.

Fuller, Sherrilynne S. 1988, (Adjunct); PhD, 1984, University of Southern California; library and information management.

Gloyd, Stephen S. * 1986; MD, 1973, University of Chicago; MPH, 1983, Harvard University; political economy, epidemiology, and primary health care in developing countries.

Goldbaum, Gary M. * 1989, (Adjunct); MD, 1978, University of Colorado (Denver); MPH, 1989, University of Washington; behavioral factors in HIV/AIDS preventive medicine.

Goldberg, Harold I. 1986, (Adjunct); MD, 1977, Stanford University; internal medicine.

Grossman, David C. 1988, (Adjunct); MD, 1982, University of California (Los Angeles); MPH, 1990, University of Washington; general pediatrics.

Holt, Victoria L. * 1991; MPH, 1987, PhD, 1990, University of Washington; women's reproductive health, prenatal and perinatal care, domestic violence.

Kienast, Philip K. * 1970, (Adjunct); PhD, 1972, Michigan State University; human resources management.

Kimball, Ann M. * 1993; MD, 1976, MPH, 1981, University of Washington; emerging infections, public health response to epidemic disease.

Kristal, Alan R.* 1987, (Adjunct); DPH, 1983, Columbia University; nutritional epidemiology, relationship between diet and cancer.

Lalonde, Bernadette * 1986, (Research); PhD, 1980, University of Toronto (Canada); public health program evaluations including process and outcomes, evaluation research.

McCann, Barbara S. * 1986, (Adjunct); MS, 1982, PhD, 1984, Rutgers University; behavior change, adult ADHD, psychological stress, cardiovascular disease, diabetes, obesity.

Pearlman, Robert A. * 1981, (Adjunct); MD, 1975, Boston University; gerontology.

Plough, Alonzo L. * 1995; MA, 1975, PhD, 1978, Cornell University; MPH, 1977, Yale University; anthropology, sociology, or social welfare and public affairs/policy.

Psaty, Bruce M. * 1984, (Adjunct); PhD, 1979, MD, 1981, Indiana University; cardiovascular disease, coronary heart disease, hypertension, and pharmaco-epidemiology.

Reiber, Gayle * 1991; MPH, 1975, Johns Hopkins University; PhD, 1989, University of Washington; epidemiology and health services research on preventing complications of diabetes.

Rhodes, Lorna A. * 1983, (Adjunct); PhD, 1973, Cornell University; medical anthropology, anthropology of institutions, religion, psychiatry.

Richardson, Mary L. * 1978; MHA, 1978, PhD, 1984, University of Washington; organization, management, and analysis of policy relevant to health services.

Spigner, Clarence * 1994; MPH, 1982, DPH, 1987, University of California (Berkeley); health of the disadvantaged, race/ethnic relations, societal behavior, popular culture.

Sullivan, Sean * 1992; PhD, 1992, University of California (Berkeley); pharmacoeconomics. Thompson, Engelberta 1989; MA, 1978, PhD, 1981, Western Michigan University; smoking cessation.

Urban, Nicole D. * 1988; MS, 1973, DSc, 1978, Harvard University; analysis of the cost-effectiveness of disease prevention trials and interventions.

Watts, D. Heather * 1985, (Adjunct); MD, 1981, Jefferson Medical College; complications and prevention of perinatal transmission of STDs and HIV in pregnancy.

Wickizer, Thomas M. * 1988; MSW, 1974, University of Washington; MPH, 1979, MA, 1987, PhD, 1989, University of Michigan; health promotion evaluation.

Wood, Robert W. 1979, (Adjunct); MD, 1970, University of Rochester; internal medicine.

Assistant Professors

Braddock, Clarence H. 1993, (Adjunct); MD, 1981, University of Chicago; internal medicine, critical care and public ethics.

Bradley, Katharine A. 1991, (Adjunct); MD, 1987, Stanford University; MPH, 1993, University of Washington; general internal medicine.

Cress, Marie Elaine * 1989, (Research); PhD, 1989, University of Wisconsin; physiology, gerontology.

Crittenden, Robert A. 1981, (Adjunct); MD, 1976, MPH, 1987, University of Washington; health plans/policies.

Curtis, Jared R. 1996, (Adjunct); MD, 1988, Johns Hopkins University; MPH, 1994, University of Washington; pulmonary diseases and critical care medicine.

Ensign, B. Josephine 1994, (Adjunct); MS, 1986, Virginia College of Medicine; MPH, 1992, DPH, 1994, Johns Hopkins University.

Every, Nathan R. 1991, (Adjunct); MD, 1988, Emory University; MPH, 1993, University of Washington; cardiology.

Gray, Darryl 1997; MPH, 1981, University of Washington; MD, 1984, Case Western Reserve University; ScD, 1992, Harvard University; clinical and cost effectiveness analysis of diagnostic/surgical procedures, clinical epidemiology

Huebner, Colleen Ellen * 1982; PhD, 1991, MPH, 1994, University of Washington; social bases of developmental problems in early childhood.

Kuszler, Patricia Carol 1994, (Adjunct); MD, 1978, Mayo Medical School/Graduate School; JD, 1991, Yale University; regulation and financing of health care, medical malpractice, biotechnology, insurance law, torts.

Lafferty, William E. * 1988; MD, 1978, University of Kansas; STD, HIV/AIDS, surveillance and epidemiology of STD, managed care.

Lessler, Daniel * 1990; MD, 1986, Stanford University; MHA, 1992, University of Washington; health services research pertaining to cost-effectiveness, quality of care, medical management.

Meischke, Hendrika W. * 1991; MPH, 1987, PhD, 1992, University of Michigan; health communication, with an emphasis on mass media and health.

Montano, Daniel E. * 1979, (Affiliate); PhD, 1983, University of Washington; attitude-behavior research and behavior change, cancer control, HIV prevention.

Ramsey, Scott D. * 1994; MD, 1990, University of Iowa; PhD, 1994, University of Pennsylvania; cost effectiveness analysis and health care economics.

Sales, Ann 1997, (Acting); MSN, 1989, University of North Carolina; PhD, 1997, University of Minnesota; primary care nursing, health services research.

Taylor, Victoria M. * 1989, (Research); MD, 1978, University of Nottingham (UK); MPH, 1989, University of Washington; cancer control (breast and cervical screening) in minority populations.

Weaver, Marcia R. * 1987, (Research); MA, 1981, PhD, 1986, University of Chicago; economic aspects of

health-care reform, cost-effectiveness of communitybased health interventions.

Senior Lecturers

Berkowitz, Bobbie 1988; MN, 1981, University of Washington; PhD, 1990, Case Western Reserve University; public health education and training.

Collins, Robert N. 1991; MS, 1967, EdD, 1970, University of Oregon; health education.

Gish, Oscar * 1989; MSS, 1967, The Hague (Netherlands); MPH, 1969, University of Sussex (UK); socioeconomic dimensions of health and health services: third world development focus.

Hanken, Mary A. 1991; MEd, 1974, Seattle University; PhD, 1989, University of Washington; health information systems.

Katz, Aaron 1993; CPH, 1975, University of Toronto (Canada); health policy analysis.

Royer, Charles T. 1994; LLD (hon), 1983, Antioch College; urban policies, health policy.

Thompson, John R. 1989; MSW, 1976, University of Washington; public health practice, health policy analysis.

Lecturers

Gonzales, Virginia 1994; MSW, 1971, MPH, 1974, University of California (Berkeley); EdD, 1988, Harvard University.

Murphy, Gretchen C. 1992; MEd, 1973, University of Washington; health information administration.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

HSERV 475 Perspectives in Medical Anthropology (5) *Rhodes* Introduction to medical anthropology. Explores the relationship among culture, society, and medicine. Examples from Western medicine as well as from other medical systems, incorporating both interpretive and critical approaches. Offered: jointly with ANTH 475.

HSERV 480 Issues in Public Health (1, max. 6) Problems and issues in epidemiology, health services delivery and administration, environmental health, pathobiology, biostatistics, and related fields.

HSERV 499 Independent Study in Health Services (1-12) Individual library or field study project selected in consultation with a faculty adviser.

Courses for Graduates Only

Public Health/Preventive Medicine

HSERV 501 Public Health Practice at the Local Level (3) Gale, Thompson History and development of local and state public health departments highlights traditional versus new roles and critical interactions with public and private agencies. Topics include health status assessment; health promotion, disease prevention; environmental hazards; substance abuse; emergency medical services. Prerequisite: 511 or permission of instructor. Offered: jointly with EPI 501.

HSERV 503 Public Health Surveillance: Epidemiology and Health Policy (3) Covers collection and use of public health surveillance data in formulating policy and managing programs through lectures and real-world interactive exercises. Discusses surveillance for birth defects, environmental exposures, and hospital-acquired infections, and use of tools such as small area analysis and geographic information systems. Offered: jointly with EPI 503. HSERV 504 Mass Media and Health (3) Overview of role of mass media in public health. Offers rationale for improving skills of public health professionals involved in designing communication campaigns. Includes theoretical approaches to persuasion and behavior change; practical suggestions on design, implementation, evaluation of media interventions.

HSERV 505 Topics in Preventive Medicine (2) Foy, Henderson Examine current scientific knowledge and state of the art of preventive medical interventions. Discuss and consider options for current practice. Prerequisite: MD, OD, NP or permission of instructor. Offered: jointly with EPI 525.

Introductory Core Courses

HSERV 510 Society and Health (3) Spigner Analysis of social inequalities in health and service use by class, gender, and the social construction of race. Examines biological, cultural, social, political, and economic determinants which consistently put certain minority groups within Eurocentric societies at higher risk for inequitable health status and provision. Prerequisite: 511 or equivalent or permission of instructor.

HSERV 511 Introduction to Health Care and Public Health Services (3-4) Dowling History, organization, and effectiveness of United States health care and public health systems. Determinants of health, need, and utilization. Public and private financing. Supply and provision of personal and public health services. Managed care. Government and private sector roles. Prerequisite: graduate standing or permission of instructor.

HSERV 516 Introduction to Health Services- Extended Degree(4) Wickizer Provides overview of health care system, exposes students to current issues and developments affecting organization and delivery of health services, helps students develop ability to frame and analyze questions and issues related to health services. Prerequisite: registration in Extended Degree program.

HSERV 517 Provision of Health Services- Extended Degree (2) Baesler Builds on material covered in 516 and provides students with tools used to evaluate alternative health delivery systems; exposes students to various international health delivery systems; encourages students to decide how to organize such a system. Prerequisite: 516, registration in Extended M.P.H. Degree program.

HSERV 518 Social and Ethical Issues in Health Services (2) Presents an intensive introduction to ethical issues in the area of health service delivery. Readings and interaction with faculty offer more depth in the areas of health behavior, health politics, managerial ethics, and health law. Prerequisite: registration in Extended Degree program.

Methods Courses

HSERV 520- Methods in Applied Community Research (2-) Astley Skills/knowledge necessary to conduct orderly investigation of specific problems in preparation for M.P.H. thesis or project. Includes problem identification, posing research questions, literature review, consideration of theoretical/practical context, choosing study design, data collection, protection of human subjects, and recognizing potential errors. Prerequisite: registration in Extended M.P.H. Degree program.

HSERV 521 Health Services Research Methods (3) *Diehr, Reiber* Introduces range of research design, measurement, and data analysis issues from health services research on contemporary issues. Methodologic information with special importance to health services included. Students have opportunity to synthesize their knowledge through critiquing health services research proposal. Prerequisite: 511, BIOST 511, and EPI 511 or 512 or permission of instructor. HSERV 522- Health Program Evaluation (3-) Grembowski Politics, theory, and methods of evaluation, from simple feedback mechanisms to evaluation of large-scale ongoing programs and experiments. Emphasis on applications of experimental and quasi-experimental designs to estimate impacts, as well as evaluation of implementation. Case studies from health field illustrate various types of evaluation. Prerequisite: background in quantitative methods.

HSERV 523 Community Health Assessment (3) Connell Survey of approaches and tools to measure health status and health-care problems in defined communities. Topics include: uses and limitations of available data; community surveys; public health surveillance; problem identification and needs assessment; measurement of community health indices; analytic methods; and presentation techniques for program and policy planning.

HSERV 524 Quality of Care: It's Assessment and Assurance (3) Perrin, Sales Examination of strategies for assessing and assuring quality of care in the United States health care system, with an emphasis on methods of examining the structure, processes, and outcomes of health care and examples from a variety of organizational settings. Prerequisite: 511, BIOST 511, or permission of instructor.

HSERV 526 Qualitative Research Methods for Public Health (4) *Bezruchka* Covers a range of qualitative, ethnographic tools for practical applications in public health. Methods include direct observation, key informant interviews, focus groups, free lists, and pile sorts. Rapid Assessment Procedures and Participatory Action Research also covered. Student teams investigate research questions using field work techniques introduced in class.

International Health

HSERV 531 Problems in International Health (4) Gloyd Explores social, political, economic, environmental determinants of developing countries' health; traces development of societal responses to problems. Includes: origins of primary health care; child survival; traditional systems; population; water; sanitation; international agencies; effects of economic policies. Case study formulating pharmaceutical policy in a developing country. Offered: jointly with EPI 531.

HSERV 533 Population, Health, and Development (2) *Povey* Provides students with an introduction to demographic conditions in Third World countries and an understanding of the consequences of rapid population growth on health and the environment. The context and effectiveness of family planning programs is a major focus.

HSERV 534 Comparative International Health Systems (3) Belcher Eight countries reviewed by guest lecturers on quality, access, cost, performance. Assesses the effects of local culture, politics, resource constraints on health policy and organization, health status utilization, financing. Interprets information and feasibility of alternatives. Required paper on one country's health care system. Prerequisite: graduate standing or permission of instructor.

HSERV 536 Emerging Infections of International Public Health Importance (3) Mercer Overview of current emerging infections worldwide and contributing factors. Design of a surveillance and prevention strategy required. Offered: jointly with EPI 529.

HSERV 539 Research Methods in Developing Countries (3/4) *Gloyd, Mock* Simple, practical methodologies to obtain and validate information regarding health status and health services in developing countries. Usefulness, validity, limitation of vital records, health reports, household (and cluster) surveys, nutritional anthropometry, and qualitative methods discussed. Lectures, computer lab, and student participation in community-based survey. Offered: jointly with EPI 539.

Maternal and Child Health

HSERV 541- Topics in Maternal and Child Health I (3-) Bell Historic, legislative, organizational, and financial basis of health and social services for families and children in United States. Effects of changing family structure and norms; factors affecting health care needs of specific populations, including racially and ethnically diverse groups; impact of policies/ programs on health and well-being of families and children.

HSERV 542 Epidemiology of Maternal and Child Health Problems (4) Emanuel, Williams Contributions to understanding and prevention of major maternal and child health problems, including pregnancy outcome, infant and child morbidity and mortality, maternal morbidity and mortality, abnormal child growth and development. Prerequisite: graduate, medical, or dental school standing and 511 or 512 or permission of instructor. Offered: jointly with EPI 521.

HSERV 543 Topics in Maternal and Child Health III (3) *Huebner* Examines the major health and developmental problems of infants, children, adolescents in the United States. The etiology and epidemiology of each problem are discussed in light of their implications for health policy and broad based preventive intervention. Prerequisite: graduate standing; permission of instructor.

HSERV 544 Maternal and Child Health in Developing Countries (3) Mercer Emphasizes critical health problems of women and children in developing countries in social, economic, and cultural contexts. Practical approaches to developing MCH programs shared via lecture/discussions, exercises, and small group work. Students acquire skills in baseline assessment, setting objectives, planning and evaluating interventions, and involving communities. Offered: jointly with EPI 535.

Health Policy and Politics

HSERV 551 Health Law (3) *Wing* Analysis of law, the legal system and current legal problems as they relate to the financing and delivery of health care services.

HSERV 553 Politics of Health Care (3) Hagens Understanding of health policy making within the context of American politics. Health policy making is examined in light of political leadership, the legislature, the initiative process, rule making, interest groups, and lobbying. Prerequisite: 551, a basic understanding of the American health care system, or permission of instructor.

HSERV 554 Health Legislation Seminar (1) Hagens, Katz, Thompson Discussion of current state health policy topics with legislative staff and others involved with state health policy. In addition to two sessions on campus, course meets once during the quarter in Olympia.

HSERV 555 Health Policy (3) Provides an opportunity to gain and apply tools of policy analysis. Alternative techniques of gathering, synthesizing, and analyzing available information in a timely fashion. Attention focused on written and oral presentation to a policy audience on a "real" health issue.

Health Education

HSERV 560- Introduction to Health Promotion and Planning (3) *Spigner* Designed to increase skills of educators, program managers, administrators, or other health and education professionals with responsibility for developing implementing, or evaluating health promotion/education programs. PRE-CEDE/PROCEED health promotion planning model used as basic approach. Prerequisite: registration in Extended Degree Program. HSERV 561- Application of Learning Theory to Health Education (3) Designed to help students apply Popular Education theory and practice to preparation, presentation, and evaluation of health education. Students design, teach, and evaluate four separate teaching sessions (one between each seminar) using theory and principles of Popular Education learned to date. Prerequisite: registration in Extended Degree Program.

Social and Behavioral Sciences

HSERV 580 Society, Chronic Illness, and Disability (3) Hedrick Definition and assessment of chronic illness, disability, and health status. Analysis of chronic illness and disability using frameworks from social sciences and public health. Dimensions of disablement as they affect provision of health services. Research on effectiveness of services and approaches to improvement. Prerequisite: permission of instructor. Offered: jointly with SOC 561.

HSERV 581 Health Promotion and Disease Prevention (4) Bowen Heath promotion planning, implementation, and evaluation models studies regarding strengths, weaknesses, and effectiveness. Students critique strategies to modify behavioral factors that influence lifestyle of individuals, including decisions influencing their reciprocal relationship with environmental factors that affect the health of individuals, organizations, and communities. Prerequisite: 511.

HSERV 582- Health Behavior and Preventive Medicine ([3-4]-) Meischke Focuses on psychosocial and cultural factors related to health, preventive health behavior, illness perception, and behavior; theoretical basis for prevention; interaction of consumers and providers in the delivery of health care services; clinic and community based applications. Prerequisite: registration in Extended Degree Program.

HSERV 583, 584 Evaluating Cost and Outcomes in Health and Medicine 1, 2 (3, 3) Patrick, Sullivan Concepts and methods for evaluating cost and outcomes of health and medical interventions with a focus on cost-effectiveness analysis., pharmacoeconomics, health and quality of life assessment, resource allocation, and medical decision-making. Prerequisite: permission of instructor. Offered: jointly with PHARM 534, 535.

HSERV 586 Medical Geography (3) Mayer Geography of disease, consideration to health systems planning. Distributions, diffusion models, migration studies. Application of distance, optimal location models to health systems planning; emergency medical services, distribution of health professionals; cultural variations in health behavior. Prerequisite: familiarity with social science research, health-related issues. Offered: jointly with GEOG 580.

HSERV 587 Health Policy Economics (3) Madden Applies economic theory to selected topics in health care, including information, risk and insurance, industry organization, government regulation, and public health issues. Emphasizes policy implications of these applications. For students who have taken microeconomic theory or 585. Prerequisite: 585 or PB AF 516 or equivalent, or permission of instructor.

HSERV 588 Community Approaches to Health Promotion (3) Thompson Provides opportunities to critically examine community-based health promotion interventions and the design, evaluation, and implementation issues they raise. A wide range of disciplinary perspectives is presented. Case studies and class projects are designed to give students the skills needed to critically assess community projects around health promotion.

HSERV 589 Epidemiologic Research in Aging Populations (3) *LaCroix* Emphasizes application of epidemiologic methods to the study of older populations. Topics include: compression of morbidity; successful aging; methodological challenges in studying older populations; physical, cognitive and social function as epidemiological endpoints; chronic conditions of the aging (heart disease, cancer, Alzheimer's disease, dementia, osteoporosis, fractures); health promotion strategies. Prerequisite: EPI 511 or EPI 513. Offered: jointly with EPI 589.

HSERV 590- Selected Topics in Health Services (*-) By individual arrangement, the student and faculty member(s) develop a program of reading and conference appropriate to the topic selected by the student. The topic chosen will be within the special competence of the faculty participating in the course, in the areas of health-care delivery and health-care administration. Also special summer format presenting introductory material may be taken with ENV H 590 and/or EPI 590. For more information and permission, consult department program adviser.

HSERV 591 Tutorials and Special Seminars (1-4) Special topics related to current issues in health services. Topics determined by expressed interest of students and faculty; also includes participation of health professionals. Prerequisite: 511 or 513.

HSERV 592 Program Seminars (1-6) Graduate seminars organized to address specific educational needs of students in various fellowships, residencies, and other specialized programs within the Department of Health Sciences (i.e., maternal and child health, international health, preventive medicine, social and behavioral sciences). Prerequisite: permission of instructor.

HSERV 595 Practicum/Field Work in Community Medicine (1-12) Experience in variable time blocks in community health activities in agencies delivering and planning health services. Sites include neighborhood clinics, health planning bodies, medical practice settings, public health agencies, special problem clinics and facilities, environmental programs and services. Prerequisite: master's student in health services and permission of instructor.

HSERV 596- MHA Field Project (1-6-) Supervised research in a selected topic related to student's concentration in graduate study. Includes survey of literature, development of approach, and written paper on conclusions. Prerequisite: successful completion of first-year curriculum and internship in graduate program in health services administration and planning.

HSERV 598 Extended Degree Program Project Option (* max. 9) Supervised project work on a selected topic related to student's concentration in graduate study. Includes survey of literature, development of approach, and written paper on conclusions. Prerequisite: registration in Extended M.P.H. degree program and satisfactory completion of the first summer's course work.

HSERV 600 Independent Study or Research (*) Prerequisite: permission of instructor.

HSERV 700 Master's Thesis (*) Prerequisite: permission of instructor.

Health Services Management

HSMGMT 512 Introduction to Management in Health Services (3) Sappington Overview of managerial roles, such as supervising and motivating, approaches to organizational and environmental assessment and change, and development of systems analysis skills. For students pursuing careers in research and teaching who are likely to have management responsibilities.

HSMGMT 513 Allocating Health Care Resources: A Population Based Perspective (4) Conrad Analysis of health services financing in the United States, with comparison to systems of other developed countries. Develops analytic and normative frameworks for examining public and private health insurance. Study of pricing, underwriting, benefit design, and delivery system; financing integration issues. Prerequisite: 511 or equivalent or permission of instructor.

HSMGMT 514 Health Economics (3) Wickizer Uses economic concepts and tools to examine range of issues pertaining to health care, delivery of health care services. Includes demand analysis, production of health services, expenditure growth, markets for hospital and physician services, externalities. Emphasis on using economics to examine issues and solve problems. Prior economics courses not required.

HSMGMT 521 Information Systems (3) Altamore Assessing information system needs; planning, managing, and evaluating information systems (IS); behavioral issues in the implementation of IS. Current and evolving applications of IS in health care organizations and public health. Prerequisite: basic computer literacy required.

HSMGMT 544 Integrating Health Care Delivery Systems (4) Richardson, Ross Focuses on the integrating of health care delivery systems. While hospital and ambulatory care services provide a focal point for the course, the objective is to examine system linkages between providers, including public health, group practices, and community based health care delivery programs. Prerequisite: 511 or permission of instructor.

HSMGMT 545 Capstone Integrative Seminar (4) Ross, Scott Designed to assist students in the transition from theory to practice. Emphasis on sharpening analytical and intuitive leadership practices through the use of interactive case studies and team building exercises and field projects. Prerequisite: second year MHA students.

HSMGMT 546 Long-Term Care (3) Hawley Learning experience for graduate students in health services administration, planning, other graduate students to increase their ability to identify and solve problems related to long-term care they confront in their employment. Students are exposed to available knowledge in the field; effective problem-solving attitudes and techniques for organizing information and/or developing strategies, and agencies in the field. Prerequisite: 511 or permission of instructor.

HSMGMT 560 Management Practice in Health Care and Public Health Organization (3) *Richardson* Introduction to leadership and management, focusing on effective strategies for creating a productive work environment. Organizational structure and strategy introduced. Case studies and other problem-solving methods, using health services applications are utilized in order to apply theoretical material. Prerequisite: graduate student.

HSMGMT 561 Health Planning: The Management of Change (4) *Erbstoeszer* Designing realistic implementation strategies at beginning of planning process to optimize impact of planning on real problems. Discussion of ways in which change is brought about and decisions are made and implemented. Includes managing planning process, work plans, stakeholders, negotiation, and working with groups. Prerequisite: 511 or permission of instructor. Offered:

HSMGMT 562 Seminar in Health Services Management (4) Dowling Management of goals, strategy, and structure in health care organizations. Design of external relationships and internal structures., strategy-formulation, decision-making, and change. Integration of professional, social, and organizational values. Theory, student and practitioner experience, and case studies used to enhance repertoire of management approaches and skills. Prerequisite: 511 and 560 or equivalent.

HSMGMT 563 Personnel Management for Health Professionals (3) Designed for mid-career health services professionals developing strategies and skills in human resource management. Focuses on policy and practice issues important to handling dayto-day personnel problems-selection, promotion, performance appraisal, discipline, grievances. Prerequisite: registration in Extended M.P.H. Degree program or permission of instructor; non-business majors.

HSMGMT 564 Techniques For Strategic Planning and Marketing in Health Services (4) Blackman, Haines Teaches analytic techniques for planning health services and organizations in a managed care market. The techniques analyze the people to be served and the services to be provided. Teaches how to develop a marketing plan to grow health services and organizations. Prerequisite: 511 or permission of instructor.

HSMGMT 565 Quantitative Decision Making for Health Services Management (3) Pilcher Applications of various quantitative techniques for problem solving, monitoring, controlling, decision making in health services. Identifying problem area, communications with consultant, evaluation to the quality and applicability of analyst's work. Statistical, mathematical, operations research, industrial engineering techniques. Prerequisite: QMETH 500 or BIOST 511 or permission of instructor.

HSMGMT 566 Decision Support Models for Health Services (3) Pilcher Management science and approaches developed as applied to problems in public health. Emphasizes conceptual understanding of processes/application of systematic, and rational approach to managerial problem solving, including cost-benefit, cost effectiveness analysis. Prerequisite: BIOST 502 and 503, or BIOST 511; registration in Extended M.P.H. Degree program; non-business majors.

HSMGMT 571 Hospital Financial Management (3) Huebner, Tiscornia Third course in a three-course sequence dealing with the management of health services institutions and programs. Topics covered are: health services law, hospital and program policy decisions, financial planning, and hospital design and architecture; and the presentation of hospital survey and health services research project reports. Prerequisite: 511 and ACCTG 500 or 501 or permission of instructor.

HSMGMT 572 Financial Management for Health Professionals (3) Intensive review of basic accounting principles/terminology and an introduction to financial management/managerial accounting, including budgeting for managerial control, planning, cost accounting, financing health programs. Managerial accounting, program costing, rate setting, budget preparation. Prerequisite: BIOST 502 and 503, or BIOST 511; registration in Extended M.P.H. Degree program or permission of instructor; nonbusiness majors.

HSMGMT 573 Seminar in Health-Care Finance (3) Conrad Practical applications of corporate finance principles in health-care field. Applies theoretical framework to health-care financial problems of varying complexity, including capital investment analysis, leasing vs. borrow-to-buy decision, debt capacity analysis, bond refunding, control of capital, joint venture. Prerequisite: 585 or equivalent, ACCTG 500, 501; or permission of instructor.

Pathobiology

Graduate Program

Graduate Program Coordinator F161B Health Sciences, Box 357238 (206) 543-0317

The Department of Pathobiology offers a research training program leading to the Master of Science and Doctor of Philosophy degrees. Pathobiology is the study of pathogenic biological agents and their interaction with their hosts, primarily humans. As a discipline, pathobiology ties together the fundamental concepts of biology and clinical medicine. The Department of Pathobiology applies a multidisciplinary approach as well as the latest research technologies to the study of public-health problems such as cancer, HIV, and other infectious agents. Members of the department have diverse research interests including the molecular biology of cancer, molecular investigation of pathogenesis, drug resistance and host responses, diagnosis of diseases, development of vaccines and therapeutics, and fundamental biology of infectious agents. Course work provides the foundation for interfacing molecular and cellular biology with publichealth issues.

Admission Requirements

Students from a variety of academic backgrounds are accepted for graduate study in pathobiology. It is highly desirable that applicants have completed course work in biology, microbiology, organic chemistry, and biochemistry or molecular and cellular biology. Persons holding professional doctorates (medicine, dentistry, veterinary medicine) are also encouraged to enter the graduate program.

Financial Aid

Some financial aid may be available in the form of research assistantships funded primarily through federal research grants held by faculty members.

Research Facilities

In addition to the research facilities at the University of Washington, opportunities for training also exist at the Fred Hutchinson Cancer Research Center, the Pacific Northwest Research Foundation, the Seattle Biomedical Research Institute, and other biotech facilities.

Faculty

Chair

Kenneth Daniel Stuart

Professors

Campbell, Lee Ann * 1985; PhD, 1982, Pennsylvania State University; molecular biology and pathogenic mechanisms of chlamydiae.

Carter, William G. * 1981; PhD, 1974, University of California (Davis); elucidation of components in cell attachment and cell spreading in normal cells.

Grayston, J. Thomas * 1960, (Adjunct); MD, 1948, MS, 1952, University of Chicago; epidemiology and control of infectious disease, especially respiratory infections.

Hakomori, Sen-Itiroh * 1967; MD, 1951, DMedSc, 1956, Tohoku Imperial University (Japan); role of glycosphingolipids in defining antigenicity, cellular interaction.

Kenny, George E. * 1961; PhD, 1961, University of Minnesota; human immune response to infectious diseases, detection and biology of mycoplasmas.

Klebanoff, Seymour * 1962, (Adjunct); MD, 1951, University of Toronto (Canada); PhD, 1954, University of London (UK); infectious disease.

Kuo, Cho-Chou * 1969; MD, 1960, National Taiwan University; PhD, 1970, University of Washington; antigenic analysis, immunology and pathogenesis of chlamydiae.

Parsons, Marilyn * 1981; PhD, 1979, Stanford University; molecular and cellular parasitology.

Perine, Peter L. * 1981, (Adjunct); MD, 1966, University of Kansas; MPH, 1973, University of Washington; international health, sexually transmitted diseases.

Rausch, Robert L. * 1978, (Emeritus); DVM, 1945, Ohio State University; PhD, 1949, University of Wisconsin; parasitology, helminthic zoonoses.

Roberts, Marilyn C. * 1981; PhD, 1978, University of Washington; antibiotic resistance genes.

Stuart, Kenneth Daniel * 1985; PhD, 1969, University of lowa; molecular biology of protozoan pathogens.

Todaro, George J. * 1983; MD, 1963, New York University; growth regulation in normal and tumor cells.

Wang, San-Pin * 1961, (Emeritus); MD, 1944, DMedSc, 1959, Keio University (Japan); classification, pathogenesis, and epidemiology of chlamydiae.

Associate Professors

Feagin, Jean E. * 1993; PhD, 1982, Stanford University; molecular parasitology, emphasizing organelle gene organization and expression in protozoans.

Hill, Walter E. * 1992, (Affiliate); PhD, 1972, University of Washington; genetic methods for detecting and characterizing foodborne microbial pathogens.

Kahn, Michael * 1992, (Research); PhD, 1983, Yale University; molecular recognition, protein structurefunction relationships, peptidomimetics.

Kurath, Gael * 1994, (Affiliate); PhD, 1984, Oregon State University; molecular biology and evolution of RNA viruses that infect fish.

Myler, Peter J. * 1993, (Research); PhD, 1982, University of Queensland (Australia); regulation of gene expression in protozoan parasites.

Reed, Stephen G. * 1993; PhD, 1979, University of Montana; immunological response to mycobacteria infections.

Riley, Donald E. * 1982, (Research); PhD, 1976, University of Washington; pathogenic research and diagnosis involving DNA sequences.

Rosenfeld, Michael E. * 1992; PhD, 1981, University of Wisconsin; mechanisms of atherogenesis and macrophage gene expression.

Swindle, John * 1996; PhD, 1985, University of Utah; molecular pathogenesis of trypanosomes.

Thouless, Margaret E. * 1980; PhD, 1974, University of Birmingham (UK); retroviruses, herpes viruses, enteric viruses, immunodiagnosis, virus variability.

Van Voorhis, Wesley C. * 1986, (Adjunct); PhD, 1983, Rockefeller University; MD, 1984, Cornell University; infectious diseases.

Assistant Professors

Bartelmez, Stephen Hollis * 1988; PhD, 1979, University of Glasgow (UK); stem cell biology.

Bosch, Marnix L. * 1994; PhD, 1987, University of Leiden (Netherlands); molecular virology of lentiviruses and herpes viruses, as well as animal models for viral diseases.

Cangelosi, Gerard A. * 1985; PhD, 1983, University of California (Davis); molecular biology of tuberculosis.

Howard, Randall F. * 1993; PhD, 1978, University of Minnesota; molecular and cellular biology of malaria parasites, host immune responses. Kahn, Stuart J. 1991, (Adjunct); MD, 1985, University of Medicine and Dentistry of New Jersey; rheumatology.

Lampe, Paul D. * 1995, (Research); PhD, 1984, University of Minnesota; regulation of intercellular communication via gap junctions.

Rose, Timothy M. * 1991; PhD, 1981, University of Geneva (Switzerland); molecular biology of tumor viruses, cell growth, differentiation, and transformation.

White, Theodore C. * 1996; PhD, 1984, University of Michigan; molecular mechanisms of virulence and drug resistance in pathogenic yeasts.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

PABIO 201 Newly Emerging Diseases in Public Health (2) NW Kenny Newly recognized and emerging disease pose a major problem for public health. AIDS, hantavirus infections, Ebola virus infections, and the role of bacterial infection in the causation of stomach ulcers are examples of problems to be studied. Other timely diseases are presented in this lecture discussion course. Offered: Sp.

UCONJ 420 Biological Safety Practices (1) Kenny See University Conjoint courses.

PABIO 445 Medical Virology (2) NW Thouless, Wong An introductory course emphasizing basic understanding of medical virology and viral pathogenesis. The biochemical, replication, host-parasite relationships and pathogenesis of animal viruses are examined. Prerequisite: BIOL 201. Offered: jointly with MICROM 445; Sp.

PABIO 498 Undergraduate Thesis (*)

PABIO 499 Undergraduate Research (*)

Courses for Graduates Only

PABIO 500 Introduction to Pathobiology Research (3-9) Rotation through research laboratory. Credit/ no credit only.

PABIO 511 Pathobiological Frontiers (2) Kenny Molecular and immunological concepts of infectious and noninfectious diseases presented in format suitable for graduate students knowledgeable in healthrelated areas who are not in biology-oriented programs. Allergy, immune responses, nature of infectious agents, prevention of disease with emphasis on newly defined diseases and disease agents. Prerequisite: permission of instructor.

PABIO 513 Biotechnology, Bioinformatics, and Ecogenetics (3) Eaton, Rose, Thummel Methodologies currently used for characterization, storage, and retrieval of genetic information relevant to geneenvironment interactions that contribute to diseases of public health importance. Working knowledge of molecular genotyping and phenotyping, genomics, and bioinformatics related to genetic testing provided. Prerequisite: GENET 372 or permission of instructor. Offered: jointly with ENV H/PCEUT/PHG 513; W. PABIO 521 Tissue Culture and Virology (3) Kenny, Thouless General concepts, techniques, and applications of tissue culture with emphasis on use of tissue culture for viral diagnosis and propagation. Nutrition, growth characteristics, and metabolism of animal cell cultures. Laboratory experiments give practical experience in tissue culture and virology. Prerequisite: permission of instructor.

PABIO 522 Antigenic Analysis of Microorganisms (3) Kenny Theory and techniques for antigenic analysis of complex mixtures, including microorganisms. Recent advances in separating antigens, identifying antigenic determinants, and antigenic mapping of proteins. Laboratory includes a special problem of the student's choice. Prerequisite: permission of instructor.

PABIO 525 Cell Surface Membrane in Cell Sociology and Immunology (2) Carter, Hakomori Structure and function of cell surface membranes in relation to various immunobiological and pathobiological phenomena (differentiation, organization, infection, cancer) covered. Prerequisite: BIOC 440, 441, 442, and permission of instructor. Offered: jointly with MICROM 525.

PABIO 531 Applications of Molecular Biology to Public Health (2) Kuo Addresses the impact of molecular biology on public health. Lectures focus on the application of biotechnology to diagnostics, pharmaceuticals, vaccines, and environmental concerns. Considerations for developing and using biotechnology products also discussed. Prerequisite: courses in genetics, biochemistry, or microbiology, or permission of instructor. Offered: A.

PABIO 536 Bioinformatics and Gene Sequence Analysis (3) Rose Nature and relevance of molecular sequence information, computer-based protein, and DNA sequence analysis, molecular sequence and genomic databases, and methods for database accession and interrogation. Credit/no credit only. Prerequisite: background in molecular biology and permission of instructor. Offered: jointly with MEDED 536; ASp.

PABIO 540 Antibiotic Resistance Mechanisms and Their Impact on Public Health (3) Roberts Lectures covering resistance mechanisms against bacterial antibiotics, antiviral, antiparasitic, and cancer drugs. Topics also include the effects that resistant microorganisms have on therapy and cancer treatment and their impact on public health. Prerequisite: permission of instructor.

PABIO 548 Molecular and Cellular Parasitology (3) Feagin Molecular and cellular biology of parasites of health-related significance, emphasizing current research topics unique to parasites, particularly well-suited for study in parasites, and especially important to study in host-parasite systems. Prerequisite: familiarity with molecular and cellular biology and permission of instructor. Offered: even years; W.

PABIO 550 Diseases of Public Health Importance and Strategies for their Control (3) Public Health perspective of major disease of national and global importance. Discussion of origins, establishment, progression, and pathogenesis of diseases. Importance of immunological, intercellular and external factors, and strategies of disease prevention. Requires a grounding in cellular and molecular biology, microbiology, and immunology. Prerequisite: permission of instructor.

PABIO 551 The Application of Basic Research to Diseases of Public Health Importance (3) Diseases of major national and international public health significance. Discussion of epidemiological aspects and clinical approaches. Analysis of relevant biological systems and their application to the pathobiology of disease. Requires familiarity with molecular and cellular biology. Prerequisite: permission of instructor.

PABIO 568 Molecular Epidemiology of Infectious Diseases (2) Application of molecular typing techniques to study of microbial pathogens to increase understanding of epidemiology of infectious diseases. Brief review of molecular biology. Evaluation of methods used in outbreaks and epidemics reported in literature. Prerequisite: 511 or 512 or permission of instructor. Offered: jointly with ENV H 568/ EPI 568; W.

PABIO 580 Pathobiology Seminar (1, max.15) Research from students, faculty members, and invited speakers is presented and discussed. Topics include immunochemistry, viruses, membranes, infectious diseases, immune response and other related topics.

PABIO 581 Current Literature in Pathobiology (1, max. 15) Critical evaluation of recent articles related to human disease and disease agents. Prerequisite: graduate student in pathobiology or permission of instructor.

PABIO 583 Seminars on Frontier Membrane Research (1, max. 15) Hakomori Structure and functional roles of cell surface membrane molecules in cell recognition and transmembrane signaling with emphasis on pathological significance in development of various disease processes. Discussion on experimental design based on current knowledge among researchers in the Department of Pathobiology and at the Biomembrane Institute. Advanced sequel to 525.

PABIO 590 Selected Topics (1-8) In-depth study of an issue relating to pathobiology. Seminar format. Small groups of students by arrangement with faculty member. Prerequisite: enrollment in pathobiology graduate degree program and permission of instructor.

PABIO 598 Didactic Pathobiology (* max. 12) Supervised teaching experience in pathobiology courses for Ph.D. candidates. Prerequisite: permission of instructor.

PABIO 600 Independent Study or Research (*) Credit/no credit only. Prerequisite: permission of graduate program adviser.

PABIO 700 Master's Thesis (*) Credit/no credit only. Prerequisite: permission of graduate program adviser.

PABIO 800 Doctoral Dissertation (*) Credit/no credit only. Prerequisite: permission of graduate program adviser.

Reserve Officer Training Corps Programs

Aerospace Studies

204 Clark

The Air Force Reserve Officer Training Corps program (AFROTC) is designed to motivate, educate, and commission highly qualified students for active duty as officers in the U.S. Air Force. The curriculum provides the opportunity for students in any major to gain military knowledge and to become effective Air Force officers and leaders in the aerospace environment.

Adviser Lucy E. Lee 204 Clark, Box 353830 (206) 543-2360 imnco@u.washington.edu

General Program Requirements

The freshman- and sophomore-level general military courses are open to all students attending any two- or four-year college or university full time. Any student may enroll in these 1-credit courses.

Commissioning Requirements

Students who successfully complete the AFROTC program and receive an academic degree from the University are offered commissions as second lieutenants in the Air Force.

General Military Courses

The basic-division courses consist of one classroom hour and two leadership-laboratory hours per week during the freshman and sophomore years. Uniforms and textbooks are provided. Students may enter the freshman class at the start of autumn, winter, or spring quarter. Sophomore students may enter at the start of autumn or winter quarter and take the freshman- and sophomore-level courses concurrently. A four-week field training course, taken during the summer between the sophomore and junior years, is required for entry into the professional officer courses. Students receive pay and travel costs for field training.

Except for sophomore cadets on AFROTC scholarship, students incur no active-duty service commitment by taking general military courses, and students may drop the courses at any time.

Professional Officer Courses

Cadets selected for enrollment in professional officer courses are enlisted in the Air Force Reserve and receive tax-free monthly subsistence pay of \$150. They are furnished texts and uniforms. Junior- and seniorlevel classes consist of three hours of academic classes and one hour of leadership-laboratory per week.

Financial Assistance

The Air Force offers one-, two-, and three-year scholarships to college students. The following is a partial list of fields where most scholarships are granted: engineering, science and technology, nursing, medicine, computer science and engineering, meteorology, physics, and mathematics. AFROTC scholarships pay tuition, certain fees, and full textbook reimbursement. In addition, scholarship winners receive a \$150 subsistence allowance per month. To take advantage of these scholarships, students should apply directly to the Department of Aerospace Studies (AFROTC), (206) 543-2360.

Two-Year Program

To provide for those students unable to take the general military courses, a two-year professional officer course is available on a competitive basis. This program is open to graduate students and full-time undergraduate students who will complete a bachelor's degree in two years.

Students in this program are required to attend a sixweek field training course at an Air Force base during the summer preceding program entry. The student is paid during the six-week period. Upon return to the campus, students enter the professional officer course. Uniform, texts, and \$150 monthly subsistence are provided.

Two-year scholarships are available for qualified students in any major. Students interested in this program should contact the AFROTC department by May 1 prior to the autumn quarter they desire to enter, (206) 543-2360.

Faculty

Jack L. Johnson

Professor

Johnson, Jack L. 1996; MPA, 1979, Golden Gate University.

Assistant Professors

Damalas, Kimberley A. 1998; MS, 1997, University of North Dakota.

Kellerman, Gregory M. 1998; MBA, 1997, University of Nebraska.

Lee, Lucy E. 1997; MBA, 1995, Embry Riddle Aeronautical University.

McCann, Lisa E. 1996; MA, 1995, University of Dayton.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

A S 101, 102, 103 Aerospace Studies 100 (1, 1, 1) Focuses on the basic characteristics of air doctrine; US Air Force mission and organization; functions of United States strategic offensive and defensive, general-purpose, and aerospace support forces; officership/professionalism and an introduction to communicative skills. Additional one-hour leadership laboratory is mandatory. Offered: A, W, Sp.

A S 211, 212, 213 Aerospace Studies 200 (1, 1, 1) Factors contributing to the development of air power from its beginnings to the present, and the evolution of air power concepts and doctrine. History of air power employment in military and nonmilitary operations in support of national objectives. Assessment of communicative skills. Additional one-hour leadership laboratory is mandatory. Offered: A, W, Sp.

A S 331, 332, 333 Aerospace Studies 300 (3, 3, 3) Emphasis on leadership and management fundamentals, professional knowledge, leadership ethics, and communicative skills are required of an Air Force junior officer. Case studies used to examine leadership and management situations. Mandatory leadership laboratory provides advanced leadership experiences in officer-type activities, giving students the opportunity to apply learned principles. Offered: A, W, Sp.

A S 431, 432, 433 Aerospace Studies 400 (3, 3, 3) I&S Needs for national security, evolution of American defense strategy and policy, methods for managing conflict, alliances and regional security to preserve American interests. Arms control and terrorism. The military as a profession, officership, the military justice system, current military issues; refinement of communicative skills. A one-hour leadership laboratory is also required. Offered: A, W, Sp.

Military Science

104 Clark

The ROTC program provides the student an opportunity to learn and practice the art of leading people. Recognizing that there is a great difference between cognition and volition, the program is structured in such a way as to give the student actual practical experience in leading and managing resources.

The Army ROTC (AROTC) program enables the student to learn about the military profession and the role it plays in our democratic system of government. The courses enable such knowledge to be acquired on the campus without having to serve in the military forces.

The Army ROTC electives enrich the student's course of study. Taking these courses also opens up an additional career option, enabling the student to gain a commission and to serve in the Army as an officer, or in the Reserves or National Guard while pursuing another chosen career.

Army ROTC provides the student membership in a close-knit fraternal organization.

ROTC programs on college campuses are the nation's way of ensuring that all the influences of higher education are transported into the military services—a mandatory requirement in a democracy.

Adviser Daniel B. Hink 105 Clark, Box 353820 (206) 543-9010 pms@milsci.washington.edu

Traditional Four-Year Program

Open to freshman and sophomore men and women. Academic studies include courses in military history, principles of leadership, techniques of instruction, management and staff procedures, logistics, physical conditioning, and military law. Extra curricular activities include such options as Ranger Company, color guard, training exercises, field trips, and related activities. A non-scholarship student incurs no obligation of any kind during the first two years of the four-year AROTC program.

Placement credit toward completion of AROTC courses may be given for prior ROTC or military training. Veterans routinely receive full credit for the first two years of AROTC and may enter the advanced course when they are academic juniors. All military textbooks and uniform items are furnished without charge. Students in the advanced course receive tax-free monthly subsistence of \$150 for a maximum of twenty months. In the advanced course, cadets are required to participate in the leadership-development program, which is a practicum of skills and principles taught during the previous two years. Between their junior and senior vears, cadets attend a six-week summer camp during which they receive varied and challenging training and for which they are paid both for the time at camp and for travel expenses to and from the camp location. Upon entering the advanced course, students agree to complete the course, to accept a commission upon graduation and to serve on active duty for four years or three to six months' active-duty training, with the balance of service in the Army Reserve or National Guard upon commissioning.

Two-Year Program

This program is open to qualified undergraduate and graduate students who have at least two years remaining in school and who have completed 81 credits. Students may qualify for entrance into the advanced course under this program in two ways.

First, they may participate as qualified veterans who receive placement credit for the first two years of AROTC. Veterans are also eligible to compete for twoand three-year scholarships while receiving their educational benefits. Members of the Reserves and National Guard may also be eligible to participate in AROTC and receive their commission upon graduation.

The second alternative under this program requires attendance at Camp Challenge for six weeks at Fort Knox, Kentucky. Completion of this basic camp also qualifies students for direct entry into the advanced course. While at camp, students receive pay plus travel expenses to and from the camp location, and they may compete for two-year scholarships.

Two- and Three-Year Scholarship Program

This program is open to qualified students on campus. The scholarship provides financial assistance during the remaining years of the student's enrollment. Each scholarship pays for tuition and a flat rate for books and laboratory expenses and provides tax-free subsistence of \$150 per academic month. All other advantages and obligations are the same as those of the fouryear scholarship program.

Four-Year Scholarship Program

Application to this program should be made while the student is still in high school. Selection of students is made on a nationwide competitive basis. This program may lead to a commission in the Active Army, the Army Reserve, or the Army National Guard, All tuition, a flat rate for books and laboratory expenses, and uniform items, plus monthly tax-free subsistence of \$150 for a maximum of four years, are provided by the Army. The program requires four years of academic study on campus, as well as a five-week advanced camp training period between the junior and senior years, for which the cadet is paid for both time and travel expense to and from the camp location. Academic studies are identical to those of the traditional four-year program. The student must sign a contract wherein the student agrees to complete this program, along with a chosen academic program, to accept a commission, and to serve on active duty or in the reserve forces after commissioning

Seale, Denise B. 1996; BS, 1988, Auburn University; justice and public safety, education.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

M SCI 101, 102, 103 Military Science I: Basic (2, 2, 2) History, organization, and mission of the United States Army and the Reserve Officer Training Corps. Relationship to the citizen's military and civilian obligations. Functions and organization of the United States defense establishment. Fundamentals of leadership and management. Leadership laboratories and two field training exercises conducted during the year encompass training in field craft, survival, and small unit tactics. Offered: AWSp, AWSp.

M SCI 201, 202, 203 Military Science II: Basic (2, 2, 2) Develops proficiency in oral and written communications. Presents a perspective on the worldwide military threat; an evaluation of tactical methodologies of the hostile nations to include conventional weapon systems employment. Control, prevention, and treatment of combat or emergency medical situations. Fundamentals of military map reading, aerial photography, compass and field navigation, are taught and applied. Leadership laboratories and two field training exercises during the year. Offered: AWSp. AWSp. AWSp. AWSp.

M SCI 301, 302, 303 Military Science III: Advanced (3, 3, 3) Small-unit tactics, emphasizing the importance of firepower, movement, and communications. Duties, responsibilities, and methods of employment of basic military units. Leader's role in directing and coordinating individuals and military units from squad to company level. Students are introduced to the planning and conduct of individual and group physical-conditioning activities, stressing positive motivation to establish high standards of morale and esprit. Principles and techniques of command, control, military management, and leadership are taught and practiced throughout the academic year. Leadership laboratories and two field training exercises during the year. Offered: AWSp, AWSp.

M SCI 305 Practicum—Techniques of Military Instructions (1-3) Analysis, review of techniques used in military training and instructions. Students plan, rehearse, deliver, provide written critique on block of military instruction from the Military Qualification Skills Manual.

M SCI 401, 402, 403 Military Science IV: Advanced (2, 3, 2) The Army officer's position in contemporary world and impact on problems within the military service. Use of a developmental study to provide awareness of personal responsibilities and official relationships of an Army officer. Organization and functions of command and staff positions. Coordination of administration, logistics, and planning for military operations. Basic concepts of legislative and executive authority for the Uniform Code of Military Justice (to include a study of the officer's authority and responsibility within the military justice system). Problem-solving techniques used by small-unit leaders, emphasizing coordination and planning by the junior officer. Leadership laboratories and two field training exercises during the year. Offered: AWSp, AWSp, AWSp.

Naval Science

305 Clark

The Department of Naval Science offers University students an opportunity to engage in study that leads to a commission in the U.S. Navy or Marine Corps while working toward a baccalaureate degree. The Naval Reserve Officer Training Corps (NROTC) Unit functions in conjunction with the Department of Naval Science. An NROTC student may select an academic major within certain limitations (e.g., some majors that normally lead to immediate graduate education, such as prelaw or premedicine, are not consistent with the mission of the NROTC program).

In addition to their University curricula, NROTC students attend naval-science courses in history and customs, naval engineering/weapons systems, navigation, naval operations, and leadership/management. In addition, each student must attend one naval-science laboratory session per week. During the summer, students may have a four-to-six-week training cruise to put into practice earlier classroom training.

Any University student may take any naval science course without enrolling in the NROTC Program. Two programs are offered.

Adviser Freshman Instructor 305 Clark, Box 353840 (206) 543-0170 nrotc@u.washington.edu

Navy-Marine Scholarship Program

Each year, men and women are accepted for scholarship status in the four-year, three-year alternate, and two-year NROTC scholarship programs. Eligibility for the three- and four-year programs is based upon nationwide competition and selection by a central selection committee. Application must be made by December 1 of the academic year preceding appointment as midshipman. Those selected are provided educational benefits, including subsidy by the Navy of all tuition, fees, textbooks, and uniforms, plus \$150 per month in subsistence pay.

For the two-year scholarship program, applications from current sophomores, or juniors enrolled in fiveyear programs of study, must be received by March. Those chosen by a central selection committee attend a six-week course of instruction at the Naval Science Institute (NSI) at Newport, Rhode Island, during the summer prior to their junior year. Successful completion of NSI instruction qualifies these students for enrollment in the advanced courses in the NROTC program. All scholarship students are appointed as midshipmen, USNR, and upon graduation are commissioned as officers in the Navy or Marine Corps Reserve, after which they serve on active duty for a minimum of four years.

Navy-Marine College Program

Each year, men and women are accepted for four- and two-year nonscholarship college programs. Applications for the two-year program are accepted from current sophomores in community colleges or four-year colleges and must be received prior to March of their sophomore year (or third year, if in a five-year program).

Those students selected for the two-year program attend a six-week course of instruction at NSI during the summer prior to their junior year. Successful completion of NSI instruction qualifies students for enrollment in the advanced course in the NROTC program. Students in the NROTC college program pay their own college expenses but receive monthly subsistence pay of \$150 during their junior and senior years. The Navy furnishes all uniforms and textbooks used in navalscience courses. All college-program students are eligible for a scholarship after completing one academic term, with scholarship awards based on academic grades and participation within the midshipman battalion.

The two-year college-program students also may win a scholarship for superior performance at NSI. Upon graduation, college-program students are commissioned in the Navy Reserve or Marine Corps Reserve and serve on active duty for three years.

Loschinkohl, Victor J. 1995; BA, 1988, Central Michigan University; psychology, German.

Tippie, Jeffrey S. 1996; BA, 1988, University of Texas (Austin); anthropology, archaeology.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

N SCI 111 The Naval Service (3) General introduction to the Navy, its organization, missions, roles, tasks, and operating methods. The relationship to the other services within the Department of Defense is emphasized. Offered: A. N SCI 112, 113 Sea Power Practicum I, II (2, 2) A comprehensive study of the role of sea power in the history of the United States, the current status of the various elements of the nation's sea power as they influence the development and implementation of national security policy, and the economic effects of the elements of sea power (the Navy, the merchant marine, port facilities, fisheries, and oceanographic capabilities). Offered: W, Sp.

N SCI 211 Naval Weapon Systems (3) Concept of naval weapons systems and the systems approach, the techniques of linear analysis of ballistics and weapons, the dynamics of basic components of weapons control systems. The tools are provided for understanding the basic principles that are involved in all modern naval weapon systems, gas turbines, and auxiliary power systems. Offered: A.

N SCI 212, 213 Naval Ship Systems I, II (3, 3) Study of the varied ship systems operational in the Navy today, including the principles of characteristic propulsion systems and auxiliary machinery and the elements of ship stability and damage control. An introduction to nuclear propulsion, gas turbines, and auxiliary power systems. Offered: W, Sp.

N SCI 311 Navigation (3) NW The science and practice of maritime coastal navigation, including visual fixing, dead reckoning, and piloting methods. Computation of tides and currents and nautical rules of the road. Offered: A.

N SCI 312 Navigation II (3) NW Basic theory and practice of celestial and electronic navigation. Relative motion theory and contact coordination practice in a multiple ship environment. Offered: W.

N SCI 313 Naval Operations (3) Introduction to naval operations, the employment of naval forces, naval tactics, formulation of operations plans and orders, employment of detection equipment, and meteorology. Offered: Sp.

N SCI 411 Psychology of Leadership (3) I&S Introduction of the theory and techniques of naval leadership based on those principles of behavioral science that are pertinent to understanding individual and group behavior of adults. It introduces the student to the management process and the relationship of management functions to leadership. Acceptance of a traditional deep sense of moral responsibility on the part of the aspiring leader is stressed. Offered: A. N SCI 412, 413 Naval Organization and Management I, II (3, 3) I&S Study of organization, systems, and techniques employed in the Navy for management of its human, financial, and material resources. Some of the work relates to the administration of discipline in the Navy under the Uniform Code of Military Justice. Emphasis is placed on the leadership and management role of the junior officer in the fleet. Offered: W, Sp.

Marine Corps Option Courses

N SCI 321, 322, 323 Evolution of Warfare I, II, III (3, 3, 3) Introduction to the art of war, the evolution of warfare from the earliest recorded battles to the present day. Offered: A, W.

N SCI 421, 422 Amphibious Warfare I, II (3, 3) Provide basic knowledge of evolution of amphibious warfare from premodern era to present. Strategic and tactical considerations in planning specific operations and amphibious landings. Offered: A, W.

N SCI 423 USMC Leadership and Administration of Justice (3) Concepts, objectives, characteristic qualities, and practical techniques of leadership as exercised by the Marine Corps officer are studied. Emphasis is placed on the leadership and management role of the junior officer in the Fleet Marine Forces. Offered: Sp.

SCHOOL OF SOCIAL WORK / GRADUATE PROGRAM 493

School of Social Work

Dean

Nancy R. Hooyman 210 Social Work/Speech and Hearing Sciences

The School of Social Work offers two professional programs, one at the undergraduate level and one at the graduate level, as well as a Ph.D. program. The undergraduate program prepares students for entry-level generalist practice; students earn the Bachelor of Arts in Social Welfare degree. The graduate professional program prepares students for advanced practice within a field of concentration: students earn a Master of Social Work degree. Both professional programs are accredited by the Council on Social Work Education. The School also offers a Doctor of Philosophy degree in social welfare that prepares students for careers in research and education. For the three programs, no credit is granted on the basis of life experience or previous employment. All three programs are housed in the Social Work/Speech and Hearing Sciences Building, 4101 Fifteenth Avenue Northeast, Seattle, WA 98105-6299.

In addition, the School offers a concurrent degree program with the School of Public Health and Community Medicine leading to the M.S.W. and M.P.H. degrees.

Undergraduate Program

Adviser Sandra Kinoshita 23D Social Work, Box 354900 (206) 543-8617

Bachelor of Arts in Social Welfare

The undergraduate program leads to a Bachelor of Arts in Social Welfare degree. The program consists primarily of upper-division courses in social welfare, with additional requirements in human biology, economics, psychology, and sociology. Students enter the major at the start of their junior year after completing most of the liberal arts requirements established by the College of Arts and Sciences. Social welfare courses during a student's junior and senior years impart a basic knowledge of the social welfare system, including policy and working with culturally diverse and oppressed populations; of human behavior and the social environment; of the social work profession; of social welfare research; and of the skills necessary to prepare for entry-level, generalist social work practice.

Admission

1. Completion of a minimum of 65 credits.

2. Completion of a human-biology course.

3. A minimum 2.00 cumulative GPA.

4. Approximately 65 new juniors are admitted to the social welfare major each academic year for autumn quarter only. Admission to this program is competitive and completion of the above requirements does not guarantee admission.

5. Applicants must submit a completed application to the program and provide copies of their college transcripts.

Application forms and a more-detailed description of the social welfare major are available at the School's admissions office from January 1 to May 1 for entrance into the program starting the following autumn quarter. The School's admissions office is located in 23C Social Work/Speech and Hearing Sciences (SWS). Admission application forms also can be mailed upon request, (206) 543-5676. A student who wishes to discuss the program in person may arrange an interview by contacting the Director of Admissions, (206) 543-5676, sswadmis@u.washington.edu. Such inquiries are welcome.

Students accepted to the major at the end of their sophomore year surrender their premajor status by transferring their files and change-of-college forms to the School's Student Services Office, 23F SWS. Afterwards, they are advised by the Director of Student Services, located in the Student Services Office, 23E SWS. Students not accepted to the program may contact the Director of Admissions, 23A SWS, to discuss alternatives to the social welfare major, or the appeal process.

Suggested Introductory Course Work: Courses in psychology, sociology, and economics.

Major Requirements: The requirements and curriculum of the social welfare program may be summarized as follows:

Junior year—ECON 100, 200, or 201 (5); SOC WF 300 (3), 320 (3), 390 (5); 310, 311, 312 (3, 3, 3); 402 (5), 403 (3) and 404 (5).

Senior year—SOC WF 415 (12), 405 (6); social work electives (15).

Graduate Program

Graduate Program Coordinator Box 354900 (206) 685-1600

Master of Social Work

The School of Social Work offers a Master of Social Work degree with four options for completion: a twoyear full-time program; a one-year Advanced Standing program for qualified students with a degree in social work/social welfare from an accredited undergraduate program; a three-year Evening Degree program; and a three-year Distance Learning program for students on the Olympic Peninsula.

All program options prepare students for advanced professional practice with a culturally diverse range of at-risk populations in publicly funded social services. The curriculum encompasses two distinct but interconnected areas: the beginning content or professional foundation, and opportunities for advanced content in an area of concentration.

The professional foundation provides instruction in the basic knowledge and skills required for effective, generalist social work practice as well as socialization to the profession, its value orientation, ethics, and history.

The advanced curriculum provides in-depth knowledge and skills needed for advanced practice in a major area of the social work profession. These include four concentrations: health and mental health; children, youth, and families; multi-ethnic practice; and social welfare administration.

Students in the Evening Degree and Distance Learning options complete the children, youth, and families concentration.

Admission Qualifications

Admission to the M.S.W. program requires formal admission to the Graduate School as well as to the School of Social Work. Applicants are required to have a bachelor's degree, a strong academic background, and social-service experience. Applicants must submit transcripts, references, applications, Graduate Record Examination scores, and an admission essay to be considered for autumn-quarter entry. February 15 is the closing date for receipt of applications and materials. Admission is competitive and selection is based on a review of the applicant's submitted materials.

Financial Aid

A limited number of financial-aid opportunities are available to students. Applicants to the M.S.W. program are urged to apply for assistance through the Office of Student Financial Aid by February 15. Completion of the Free Application for Federal Student Aid (FAFSA) is requisite for consideration for any departmental funding. Departmental funding is limited to a few resident tuition scholarships which cover only one or two quarters of tuition. Inquiries may be directed to the Chair of the Scholarship Committee, School of Social Work.

Master of Social Work-Master of Public Health Concurrent Degree Program

The School of Social Work participates with the School of Public Health and Community Medicine in a concurrent degree program leading to the M.P.H. and M.S.W. degrees. The program offers interdisciplinary preparation in the fields of public health and social work. Historically, public health and social work have shared an interest in a preventive approach to health and social problems, a community perspective, and a focus on vulnerable populations. Both fields recognize the interrelationship of the health, social, and behavioral components of contemporary problems and the need for interventions and research that address all three components. The concurrent degree program prepares professionals who will function at the interface of both fields, in practice, research, planning, administration, and policy development.

Additional information concerning the concurrent degree program may be obtained from the Associate Dean for Academic Programs, School of Social Work, (206) 685-1660.

Ph.D. Program in Social Welfare

The Ph.D. program in social welfare prepares students to contribute to the advancement of knowledge and practice in the field of social welfare and the profession of social work. The program builds on the premise that social welfare scholarship must be scientifically based, responsive to service and practice needs, and informed of developments in related fields and disciplines.

After the first year of required courses, each student's program of study is individually designed and focuses on well-defined substantive and interventive areas of research relevant to the field of social welfare. In the basic core of required courses, which include teaching and research practice, students have an opportunity to pursue their particular interests with faculty members in the School of Social Work and in other schools and departments.

During the first two years, students are expected to define and develop the specialized areas that will be the focus of their General Examination and, typically, their subsequent dissertation research. The selected areas must have clear significance for the development of practice, programs, or policies in social work and social welfare.

The General Examination for advancement to candidacy generally occurs at the end of the second year or early in the third year. After advancement to candidacy, students devote themselves full time to completion of their dissertation research. The last step before award of the degree is the Final Examination, which consists mainly of the defense of the dissertation. Students are strongly encouraged to remain in residence at the University until the dissertation is accepted. The Ph.D. program is designed to take approximately three to four years, although academic excellence in learning and performance is always the first criterion for degree progress.

Admission

Admission is highly selective and students are admitted for autumn-quarter entry only. Applicants should have a master's degree in social work or comparable preparation in a closely related field.

The Council on Social Work Education requires that faculty who teach practice courses in accredited programs must have two years of supervised post-M.S.W. practice. Thus, obtaining the post-M.S.W. experience is highly important for those who seek academic positions following graduation.

Applicants selected for admission are those whose scholastic achievements, previous experience, and aptitude for social welfare research, scholarship, and teaching indicate the greatest promise for achieving the objectives of the program. In addition, an effort is made to maintain a balanced student group reflecting the range of concerns in social welfare and faculty resources as well as the diversity goals of the University. The deadline for receipt of admission material is January 15.

Financial Aid

A limited number of stipends, scholarships, teaching and research assistantships, and tuition waivers are available. While every effort is made to provide aid to each student who requires it, priority is given to firstand second-year Ph.D. students. However, it is unlikely that the financial assistance provided to any student would be adequate to cover all educational and living expenses. Financial-aid forms required for financial assistance must be submitted by February 15 by completing the Free Application for Federal Student Aid (FAFSA).

Faculty

Professors

Catalano, Richard F. * 1979; PhD, 1982, University of Washington; crime and drug abuse prevention and treatment, research methods and statistics.

Conte, Jon * 1990; PhD, 1979, University of Washington; effects of sexual abuse on children and adult survivors, prevention of sexual abuse.

Gilchrist, Lewayne D. * 1981; PhD, 1981, University of Washington; health promotion and disease prevention in community settings, women's health, research methods.

Hawkins, John D. * 1976; PhD, 1975, Northwestern University; crime and delinquency, substance abuse, social development, research, prevention.

Hooyman, Nancy * 1979; PhD, 1974, University of Michigan; aging, caregivers of dependents, feminist practice, community organization development.

Jaffee, Ben-Joshua * 1967, (Emeritus); DSW, 1972, Columbia University; loss, grief, mourning and social work practice; ethnic minority perspectives on loss and grief.

Levy, Rona L. * 1975; PhD, 1974, University of Michigan; research methodology, single-case evaluation, health care, behavioral medicine, biofeedback.

Longres, John F. * 1993; PhD, 1970, University of Michigan; race and ethnicity; children, youth, and families.

Maier, Henry W. * 1959, (Emeritus); PhD, 1959, University of Minnesota; child development, group child care; direct practice with individuals, families, and groups.

Nurius, Paula S. * 1984; PhD, 1984, University of Michigan; social cognition, violence against women, research/computer supports for practice, critical thinking.

Parsons, Jack R. 1978, (Emeritus); MA, 1940, University of the Pacific; MS, 1943, Columbia University; PhD, 1958, University of Chicago; social work.

Plotnick, Robert D. * 1984; MA, 1973, PhD, 1976, University of California (Berkeley); poverty, labor and social welfare policy, economic policy analysis.

Resnick, Herman * 1967; PhD, 1970, Bryn Mawr College; group process, organizational development, mediation, multimedia practice, international social work.

Richey, Cheryl A. * 1973; DSW, 1974, University of California (Berkeley); cultural and gender issues, intervention design and research.

Roffman, Roger Alan * 1972; DSW, 1983, University of California (Berkeley); alcoholism and drug abuse, AIDS prevention, domestic violence, research methodology.

Stier, Florence E. * 1964, (Emeritus); MS, 1941, University of Pittsburgh; social welfare planning and program development.

Takagi, Calvin Y. 1961, (Emeritus); MSW, 1952, PhD, 1958, University of Minnesota; mental health services, child development, services to minority populations.

Weatherley, Richard A. * 1975; PhD, 1975, Massachusetts Institute of Technology; social welfare policy and administration, poverty and inequality.

Whittaker, James * 1970; PhD, 1970, University of Minnesota; child welfare, in-home foster family care and residential services, social support networks.

Associate Professors

Anderson, James R. * 1968, (Emeritus); MA, 1954, Indiana University; social work and health care; growth and development, particularly Black Americans.

Arthur, Michael * 1991, (Research); PhD, 1990, University of Virginia; Project Director, Community Youth Activity, Six State Prevention Needs and Assessment.

Balassone, Mary Lou * 1986; DSW, 1987, University of California (Berkeley); health care policy and delivery systems, maternal and child health.

Berleman, William C. * 1965, (Emeritus); MSW, 1960, University of Washington; undergraduate social welfare, social welfare policy.

Dear, Ronald Bruce * 1970; DSW, 1972, Columbia University; American social welfare policy and services, poverty and inequality, legislative advocacy.

Duplica, Moya M. * 1963; MSW, 1956, St. Louis University; social welfare policy and history, women and social policy, values/ethics in social work practice.

Ellis, Jack A. N. * 1966, (Emeritus); MSW, 1955, University of British Columbia (Canada); social welfare administration and planning, social work and the social justice system.

Gillmore, Mary Louise 1977; MS, 1970, University of Michigan; MA, 1977, PhD, 1983, University of Washington; adolescent sexuality and substance abuse.

Hanneman, Carl F. 1967, (Emeritus); MA, 1951, Indiana University; aging, alcoholism, human services practice.

Harachi, Tracy * 1987, (Research); PhD, 1991, University of Washington; child development, interventions for children and families, cultural adaptation and ethnic identity.

Herrick, James E. * 1966; DSW, 1966, University of Southern California; social policy, social work and the justice system, research methodology, social and cultural change.

Icard, Larry * 1993; DSW, 1992, Columbia University; AIDS prevention intervention design and research, administration, race/ethnic minority group issues.

Ishisaka, Anthony H. * 1971; DSW, 1978, University of California (Berkeley); social work practice, mental health services, services to minority communities, human development.

Kelley, Jerry Lee * 1961, (Emeritus); MA, 1949, University of Chicago; social workers in schools, interviewing and counseling in human services.

Kruzich, Jean * 1991; PhD, 1982, University of Washington; maternal depression and child abuse, organizational impacts on residents of long-term care agencies.

Leigh, James William * 1967, (Emeritus); MSW, 1954, Wayne State University; social work practice with families, multiethnic and multicultural concerns, family life education.

Marcenko, Maureen * 1997; PhD, 1988, McGill University (Canada); developing and testing interventions for families at risk.

Miller, Sidney * 1962, (Emeritus); MS, 1953, Columbia University; children, adolescents, and their families; interviewing, crisis intervention, marital counseling.

Morrison, Diane M. * 1980, (Research); PhD, 1982, University of Washington; sexual decision-making, attitudes and behavior, teen pregnancy.

Mundt, Lenora B. 1985, (Emeritus); MSW, 1950, University of Washington; family treatment.

Pecora, Peter * 1990; PhD, 1982, University of Washington; child welfare practice, foster care, family preservation services, personnel management.

Ryan, Rosemary * 1991, (Research); PhD, 1987, University of Washington; behavioral HIV prevention research; AIDS services policy, planning and evaluation.

Sohng, Sue * 1990; PhD, 1989, University of Pittsburgh; action research and chronic mental illness, cross-cultural social work practice.

Teather, Edward Charles * 1966; MSW, 1962, University of British Columbia (Canada); family-centered practice, group work, program development.

Uehara, Edwina * 1990; PhD, 1987, University of Chicago; qualitative/quantitative research methods, cross-cultural mental health, human services organization.

Wells, Elizabeth 1990, (Research); PhD, 1984, University of Washington; clinical psychology, alcohol and drug use among adolescents.

Assistant Professors

Allen, Allethia Lee * 1966, (Emeritus); MSW, 1950, Boston University; PhD, 1986, Walden University; social welfare policy, multiculturalism, women's issues, social work practice.

Almgren, Gunnar R. 1986; MSW, 1979, Portland State University; PhD, 1990, University of Washington; health care policy and practice.

Erera, Pauline * 1993; PhD, 1983, Cornell University; step-families, remarriage, foster families, supervision, divorce and single-parent families.

Fredriksen, Karen Ilene * 1993; PhD, 1993, University of California (Berkeley); gerontology, work and family dependent care, non-traditional families, social policy.

Kemp, Susan 1994; MA, 1981, University of Auckland (New Zealand); PhD, 1994, Columbia University.

Nagda, Biren A. * 1996; PhD, 1996, University of Michigan.

Semke, Jeanette * 1988, (Research); PhD, 1991, University of Washington; mental health services research, older adults with neuropsychiatric disorders.

Seyfried, Sherri * 1994; MSW, 1979, Norfolk State; PhD, 1994, University of Illinois.

Senior Lecturers

Amidei, Nancy 1992; MSW, 1968, University of Michigan; poverty, public policy, advocacy.

Averill, Lloyd J. 1984, (Emeritus); MA, 1952, University of Rochester.

Bending, Raymond L. * 1987; MSW, 1983, University of California (Berkeley); PhD, 1992, University of Washington; American Indian child welfare practice and policy, social work in American Indian communities.

Lecturers

Cahn, Katharine C. 1985; MSW, 1989, University of Washington; Director, Northwest Resource Center for Children, Youth, and Families.

DeLong, James B. 1985; MSW, 1979, University of Washington; Director of Extended Degree Programs; aging, men's issues.

de Mello, Stan 1995; MSW, 1982, MPA, 1983, Dalhousie University (Canada); cross-cultural social work practice.

Haggerty, Kevin P. 1985; MSW, 1989, University of Washington; Project Director, Focus on Families, Raising Healthy Children.

Rivara, J'May B. 1985; MSS, 1975, Bryn Mawr College.

Roberts, Elizabeth A. 1982; MSW, 1975, University of Washington; Practicum Coordinator.

Spearmon, Margaret L. 1992; MSW, 1975, Washington University; multiculturalism, social welfare management.

Wilson, Stephen T. 1998; MSW, 1982, University of Washington; family, group, and emergency crisis services.

Wollin, Pearl 1987, (Affiliate); MSW, 1971, Portland State University; community organization, planning.

Wrenn, Rachel 1990; MSW, 1981, San Diego State University; PhD, 1987, University of Washington; human services, field education.

Course Descriptions

See page 56 for an explanation of course numbers, symbols, and abbreviations.

Courses for Undergraduates

Social Welfare BASW

SOC WF 200 Introduction to Social Work Practice (5) **I&S** Introduction to the practice of social work including the theoretical concepts and institutional framework that guide practice and the conceptual organization of the discipline. Three weekly lectures and two hours per week in field observation sessions. Lectures supplemented by audiovisual aids and by special guest practitioners. Offered: W.

SOC WF 300 Historical Approaches to Social Welfare (3) I&S *Duplica* Stresses the origins and development of social welfare policy and programs, starting with the Elizabethan Poor Law (1601) and ending with the Social Security Act of 1935. The issue of poverty and the development of publicly funded income maintenance programs are central concerns. Required of social welfare majors. Open to nonmajors. Offered: AW.

SOC WF 310, 311 Social Welfare Practice I, II (3, 3) Allen, Spearmon, Whittaker Provides an introduction to the roles, tasks, and functions of the social welfare practitioner and to theories and methods of intervention; a conceptual framework for social work practice with individuals, families, and small groups; and an opportunity to develop skills in problem assessment, intervention, termination, and evaluation. 311 - Prerequisite: SOC WF 310. Offered: A, W. **SOC WF 312 Social Welfare Practice III (3)** *Allen, Duplica, Spearmon, Whittaker* Focus on macro systems in a diverse society using the generalist perspective. The implications of system resources and configurations for meeting human needs are considered. The role and function of generalist social workers to understand and advocate for system development and change is emphasized. Prerequisite: SOC WF 311. Offered: Sp.

SOC WF 320 Contemporary Approaches to Social Welfare (3) I&S Duplica Policy and program developments in the social welfare field since 1935. Typical topics include current income maintenance proposals, the emergence of programs to treat specific social dysfunctioning (mental health services) and the growth of a service-oriented society. Required of social welfare majors. Open to nonmajors. Prerequisite: SOC WF 300. Offered: WSp.

SOC WF 390 Introduction to Social Welfare Research (5) Balassone, Roffman Introduction to the logic of the scientific method as applied to social work and social welfare practice, to the design and conduct of a research study, and to data collection and summarization. Skill development in critical consumption of social welfare research. Offered: W.

SOC WF 402 Human Behavior and Social Environment I (3) I&S Focuses on person-in-the-environment for individuals and family development across the life span. Utilizes developmental and social systems perspectives in seeking to understand and influence human behavior across diverse backgrounds. Addresses dynamics and processes of families, small groups, organizations, and community systems.

SOC WF 403 Human Behavior and Social Environment II (3) I&S Focuses on person-in-the-environment for small groups, organizations, community, and society as systems. Utilizes developmental and social systems perspectives in seeking to understand and influence human behavior across diverse backgrounds. Prerequisite: SOC WF 402.

SOC WF 404 Cultural Diversity and Justice (5) I&S *Duplica, Sohng* History and culture of disadvantaged and oppressed groups served by Social Welfare generalist practitioners. Offered: Sp.

SOC WF 405 Fieldwork Seminar (2/4, max. 6) *Balassone* Integrates social work practicum experiences with prior and concurrent course work in social sciences, social work, and research. Includes discussion of class presentations and simulations or practice situations that combine knowledge and skill utilization. Student logs provide a basis for individual goal identification and achievement. Required of social welfare seniors. Prerequisite: SOC WF 312. Offered: AWSp.

SOC WF 409 Readings in Social Welfare (1-5, max. 15)

SOC WF 415 Beginning Field Instruction (4-6, max. 12) Students are placed in selected social service agencies and accept beginning social service assignments under the supervision of competent agency personnel. Credit/no credit only. Prerequisite: SOC WF 312. Offered: AWSp.

SOC WF 419 Adult Development and Aging (3) I&S Introduces the field of adult development. Interdisciplinary perspective stressing the interaction of psychological, social, and physiological factors affecting the aging process. Goals are to help the student understand the processes and diversity in the aging process that can assist one's own aging and help the learner work with older adults. Offered: Sp.

SOC WF 421 Methods of Child Care and Treatment (3) *Whittaker* Focuses on an introduction to the continuum of child welfare services and presents practical approaches to working with children and adolescents in a wide variety of practice settings. Offered: alternate years; A.

SOC WF 430 Child Care Work Practice (3) *Whittaker* Specialized practice with emotionally disturbed and delinquent children in group-care settings with focus on providing child-care staff with specific tools for teaching alternative behavior. Major topics include: etiology and diagnosis, observing and recording children's behavior, special problems of group living, life-space interviewing, token economies, activity programming, group interventions, parental involvement, organizational requisites and community linkages. Offered: alternate years; A.

SOC WF 442 Building Competencies for Intergroup Dialogue Facilitation (3) Focuses on both knowledge and skills development for peer facilitators. Topics include philosophy and principles of dialogic education and dialogic communication; intergroup communication; social identity development; principles of working with conflict; group dynamics, observation, and facilitation; team building among co-facilitators; and creating a support system among instructors and facilitators.

SOC WF 443 Practicum in Intergroup Dialogue Facilitation (2) Practicum seminar providing instruction, consultation, and supervision of peer group facilitators. Focuses on comparison of facilitation experiences and consultations, trouble-shooting with other facilitators, co-facilitator team building, and planning for dialogues. Exploration of specific, current intergroup issues, such as affirmative action and immigration. Continuation of team-building work begun in 452.

Courses for Graduates Only

Social Work

SOC W 501 Social Policy and Economic Security (3) Dear, Duplica, Herrick, Weatherley Study of United States welfare system with emphasis on income maintenance programs. Analytical and descriptive focus on major income maintenance and social insurance programs, their strengths and weaknesses, and their historical, philosophical, and cultural foundations. Examines poverty, inequality, unemployment, and homelessness in context of emergent welfare state and related policies. Offered: A.

SOC W 502, 503 Human Behavior and Social Environment I, II (3, 3) *Erera, Icard, Lougres, Resnick, Seyfried* Human functioning in a social context across the life span. Includes human biological, psychological, social, and cultural functioning across the range of social systems in which individuals live, i.e., cultures, institutions, communities, organizations, groups, and families. Credit/no credit only. Offered: A, W.

SOC W 504 Cultural Diversity and Social Justice (3) *Bending, Nagdu, Sohng* History, culture, and status of disadvantaged and oppressed groups served in public sector social work practice. Credit/ no credit only. Offered: AW.

SOC W 505 Foundations of Social Welfare Research (3) Almgren, Balassone, Erera, Roffman Overview of research process/methods in social work, with focus on consuming and performing practice-related research and evaluating one's own practice. Emphasis on critical understanding of empirical literature, development of useful and appropriate questions about social work practice, and strategies and techniques for doing research and applying findings to practice. Offered: Sp.

SOC W 510 Practice I: Introduction to Social Work Practice (3) Kemp, Marcenko, Richey, Roffman Foundation knowledge and skills for direct practice with individuals, families, and groups. Assists students toward mastery of interviewing and relationship building skills and knowledge of cross-cultural communication and practice issues and of social work values and ethics. Provides opportunity to develop beginning level skills in assessment. Offered: ASp.

SOC W 511 Practice II: Intermediate Direct Service Practice (3) Kemp, Marcenko, Richey, Roffman Foundation knowledge and skills for direct practice with individuals, families, and groups. Course assists students toward mastery in assessment, development of treatment plans based on theory and assessment information, goalsetting skills, and selection of appropriate interventions. Offered: AW.

SOC W 512 Practice III: Managing Agencies for Service Effectiveness (3) Ezell, Fredriksen, Kruzich, Uehara Focuses on ways in which management activities contribute to service effectiveness for clients and quality of conditions for staff. Various managerial roles, functions, and skills examined. Impact of agency structure, culture, and mission on staff, clients, and organizational outcomes discussed with emphasis on ways social work managers influence change. Offered: W.

SOC W 513 Practice IV: Community Change Practice (3) *Dear, Herrick, Weatherley* Provides frame of reference and skills for community-based social work practice. Theories of social change are examined with examples drawn from community organizing and policy advocacy. Offered: Sp.

SOC W 514 Foundation Practice Skills (3) Bending, Conte, Resnick, Roffman Focus on the teaching of practice skills (micro, mezzo, and/or macro) associated with key contemporary themes in social work. Possible topics include social work with American Indian communities, adult interpersonal violence, and assessment and brief intervention in substance abuse and dependence. Offered: SpS.

SOC W 523 Introduction to Practicum (1) DeLong, Hanneman, Rivara, Roberts, Wollin, Wrenn Workshops for preparation for agencybased placement Interviewing and orientations occur at agencies. Credit/no credit.

SOC W 524 Foundation Practicum (1-8, max. 12) DeLong, Hanneman, Rivara, Roberts, Wrenn Agency-based practicum with emphasis on development of knowledge, perspectives, and skills needed for practice with individuals, families, groups, organizations, and communities. Credit/no credit only. Prerequisite: social work major. Offered: AWSpS.

SOC W 525 Advanced Practicum (2-10, max. 24) DeLong, Hanneman, Rivara, Roberts, Wrenn Agency-based advanced practicum. Credit/no credit only. Prerequisite: 515 and foundation courses. Offered: AWSpS.

SOC W 531 Child and Family Policy and Services (3) Pecora, Whittaker Examines selected areas of child and family services policy in terms of historical antecedents, expressed values, practice implications, and potential for policy reform. Representative topical areas include: foster care; family preservation and support; residential services; services to prevent and ameliorate child maltreatment. Offered: A.

SOC W 532 Children, Youth, and Family Practice I (3) Kemp, Marcenko, Teather Builds on foundation practice methods sequence to deepen individual, family, and community level assessment and intervention skills relevant for work with children, youth, and families. Offered: ASp.

SOC W 533 Children, Youth, and Family Practice II (3) Kemp, Marcenko, Teather Builds on 532 and focuses on the values, knowledge, and skills used in intensive case management and intensive family preservation services. Offered: A.

SOC W 535 Advanced Social Work Research: Children, Youth, and Families Practice (3) Richey Principles and procedures for evaluation of direct practice interventions, research methods involved in community-needs assessment, program evaluation, and management-information systems. For Children, Youth, and Families (CYF) concentration. Offered: W.

SOC W 536 Children, Youth, and Family Methods (3, max. 9) Bending, Cook, Dear, Kemp, Marcenko, Pecora, Roffman, Teather, Whiltaker Focuses on child welfare and family services intervention methods, including social work in schools, services for early intervention, prevention and family support, child and adolescent mental health services, work with families of developmentally disabled, permanency planning, group work, family violence and child maltreatment, and intensive family preservation services. Offered: AWSp.

SOC W 541 Policy Perspectives on Multi-Ethnic Practice (3) *Bending* Presentation of social welfare policies and services that meet societal problems, needs of specific client groups, and tools for evaluating various policies in the multi-ethnic area. Facilitates understanding of network of institutions that employ social workers. Offered: A.

SOC W 542 Introduction to Multi-Ethnic Practice (3) Bending, Longres Examination of selected social welfare problems as related to specific racialethnic minority groups. Attention is given to understanding of minority populations and the effective delivery of social work and social welfare services in minority communities. Offered: Sp.

SOC W 545 Advanced Social Work Research: Participatory Action Research for Multi-Ethnic Practice (3) Sohng Principles and procedures for the evaluation of direct practice interventions, research methods involved in community-needs assessment, program evaluation, and management-information systems. For Multi-Ethnic Practice (MEP) concentration. Offered: W.

SOC W 546 Multi-Ethnic Practice Methods (3, max. 9) Leigh, Weatherley Focus on specialized knowledge and skills necessary for effective social work with American-Indian, African-American, Asian-American, and Latino or Hispanic individuals, groups, and communities and for work in a variety of settings and fields of practice. Offered: AWSp.

SOC W 552 Leadership in Program Development (3) *Fredriksen, Kruzich* Introduces the practice skills and knowledge required for specialized practice in agency management. Offered: Sp.

SOC W 553 Social Work Supervision (3) *Kruzich, Pecora* Presents critical skills for major phases of the personnel process including recruiting, supervising, and supporting employees. Offered: A.

SOC W 554 Financial Management in Human Services (3) *Ezell* Focus on key budgeting concepts and techniques common to human service agencies including budget development, resource allocation, problems of fiscal control, fiscal record keeping, and cost analysis. Offered: W.

SOC W 555 Advanced Social Work Research: Using information to Improve Agency Performance for Administration (3) *Ezell, Uehara* Principles and procedures for the evaluation of direct practice interventions, research methods involved in communityneeds assessment, program evaluation, and management-information systems. For Administration (ADM) concentration. Offered: W.

SOC W 556 Social Work Administration Methods (3, max. 9) Ezell, Fredriksen, Kruzich, Pecora, Uehara Focus on relevant skills for social work administrators, including such topics as fundraising, grantwriting, and advocacy. Offered: WSp.

SOC W 560 Adult Psychopathology (1) Roffman Introduction to major categories of adult psychopathology, differential diagnosis, applying diagnostic criteria to case examples, and use of DSM-IV in social work practice settings, including strengths and weaknesses of DSM-IV. Offered: A. **SOC W 561 Health and Mental Health Policy (3)** *Almgren* Review of trends in the development of health and mental health policies and services in the United States, the linkage between key policies and care, initiatives for reform in policy and health/mental health care models, and social work roles. Offered: A.

SOC W 562 Chemical Dependency (2) Roffman Introduction to acute and chronic as well as physical and psychological effects of alcohol and other drugs. Current trends in alcohol and drug abuse. Addiction treatment options, outcome studies, and assessment issues in social work practice. Offered: Sp.

SOC W 563-564 Advanced Health and Mental Health Practice I-II (3-3) Almgren, Conte, Levy, Rivara Emphasizes advanced social work practice skills in health and/or mental health settings. Attention is given to key theoretical bases for assessment and intervention with clients and client systems. Offered: A

SOC W 565 Advanced Social Work Research: Health and Mental Health (3) Levy Covers methods of measurement, direct practice evaluation, ethical issues, and research methodology of special interest in health and mental health settings. Additional topics may include grant writing, community needs assessment, and management information systems. Offered: W.

SOC W 566 Health and Mental Health Methods (3, max. 9) Jaffee, Roffman Focus on a variety of specialized social work practice roles in such health and mental health fields as addiction and grief and loss. Emphasis is given to advanced skills and knowledge for specialized expertise. Offered: WSp.

SOC W 592 Social Problems and Social Welfare (3, max. 9) Analysis of major social problems and social welfare service systems providing a systematic approach to assessing the scope, causes, social cost, and public policy alternatives in the provision of services related to such problems. Selected social problems are studied and related to the student's field.

SOC W 594 Advanced Human Services Practice (3, max. 9) Integration of practice and research with an understanding of and an ability to perform practice skills such as specification of problems and goals, intervention planning, evaluation. Scientific reasoning applied to practice tasks with problems including value conflicts and ethical dilemmas.

SOC W 595 Problem-Focused Human Development (3, max. 9) Focus on the social and developmental determinants of specific human problems and their impact on individual development, families, and social institutions. Some time given to examining the nature of organized social responses that are designed to deal with the specified human problem.

SOC W 597 Seminar (3, max. 6) Seminar for special topics in social work.

SOC W 598 Integrative Seminar (1-3, max. 12) Integrates specialized knowledge in social work settings. Credit/no credit only. Offered: AWSp.

SOC W 599 Readings in Social Work (*) Independent Studies. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

SOC W 600 Independent Study or Research (*)

SOC W 700 Master's Thesis (*)

Social Welfare

SOC WL 552 Analytical Perspectives on Social Welfare Policy (3) Pecora Broad overview of the social welfare policy process, including content on social problem construction and definition, policy agendas and case study methodology. Introduction to analytical tools and concepts needed to take a proactive role in policy development, advocacy, implementation, and policy research. Offered: Sp.

SOC WL 553 Seminar in Contemporary Social Welfare Policy (3) Weatherley Major American social welfare policies and economic, political, and social factors that guide their development, implementation, and effectiveness. Critical review of contemporary income maintenance and related policies, evaluation of their effectiveness in reducing poverty and income inequality, and assessment of proposals for reform. Closely linked to 552. Offered: Sp.

SOC WL 558 Integrative Seminar (1-2) *Nurius* Topic-driven seminar that targets professional development of the first and second years (scholarship, research, teaching). Active participation expected in discussions and reflective papers. May require preparation for presentation or demonstration. Offered: ASp.

SOC WL 580, 581 Introduction to Advanced Research Method and Design (3, 3) Morrison Introduction to the broad scientific issues and the specific methodological strategies used in formulating and answering research questions within the field of social welfare. Offered: A, W.

SOC WL 582-583 Research Practicum (3-3) Development of specific methodological skills in social welfare research through participation in an ongoing research project. Learning contract used to target specific research competencies. Credit/no credit only. Offered: ASpS. **SOC WL 584 Teaching Practicum (3)** Supervised teaching of a required course or teaching as a coinstructor with a faculty member. Learning contract used to target specific teaching competencies, e.g., assessing and evaluating student outcomes, identifying class session goals and objectives, tailoring instruction methods to diverse learning styles. Offered: AWSpS.

SOC WL 587 Fundamentals of Social Work Statistics I (4) Almgren Descriptive and inferential statistics. Underlying logic of statistical inference. Statistical issues of special relevance in social work, including measurement, research design, and ethics in research. Prerequisite: concurrent registration in 580. Offered: A.

SOC WL 588 Fundamentals of Social Work Statistics II (4) *Gillmore* Issues in the use of descriptive and inferential statistics, especially the statistical control of extraneous variables. Applications of statistical inference in factorial design, and correlation and regression. Statistical issues of special relevance in social work. Ethics in the use of statistics. Prerequisite: concurrent registration in 581. Offered: W. SOC WL 598- 599 Research Problems and Priorities in Social Work and Social Welfare (3-3) Enables students to assess the state of social work and social welfare knowledge in a social problem/issue; examines conceptual and methodological concerns for identifying research priorities and implications for evaluating policy, programs, and practice. Emphasizes peer interchange and developing conceptual and analytical skills. Prerequisite: admission to social welfare Ph.D. program or permission of instructor. Offered: A, W.

SOC WL 600 Independent Study or Research (*) Prerequisite: approval of a well-specified plan by the instructor and program director. Includes a written product. Offered: AWSpS.

SOC WL 800 Doctoral Dissertation (*) Offered: AWSpS.
