EDPSY 500 Field Study (*) Individual study of an educational problem in the field under the direction of a faculty member. Prerequisite: approved plan of study and permission of the instructor must be filed in the Office of Educational Psychology in the College of Education. Offered: AWSp.

EDPSY 501 Human Learning and Educational Practice (3) Systematic examination of current research about human learning in educational settings, including the study of behavioral, information

processing, social construction, and the developmental perspectives on learning. Offered: AWSp.

EDPSY 502 Developmental Foundations of Early Learning (3) Perceptual-motor, language, and overall cognitive development in children from birth through primary-school age. Emphasis on Piagetian and Vygotskian approaches to development with a special focus on the connections between learning and development. Field-based course projects may be required. Prerequisite: EDPSY 501 or permission. Offered: Sp.

EDPSY 503 Theories of Intelligence (3) Reading and discussion of theoretical and research papers from the extensive literature on Piagetian, psychometric, and information processing conceptions of intelligence. A historical approach to the topic is followed by analysis of current writings on intelligence and its measurement. Credit/no credit only. Prerequisite: EDPSY 501 and graduate status in education or psychology. Offered: alternate years; W.

EDPSY 506 Instructional Theory (3) Sources, current state, and utility of prescriptive instructional theories with emphasis upon theories having a potential for guiding the design of instruction. Prerequisite: EDPSY 501 or equivalent.

EDPSY 507 Reading, Writing, and Arithmetic: Educational Assessment and Consultation (5) Students administer and interpret tests of reading, writing, arithmetic, and related developmental skills; integrate test, observational, interview, and portfolio information in staffings and written reports; and consult with teachers regarding educational interventions. Prerequisite: graduate standing in the school psychology specialization and permission of instructor. Offered: A.

EDPSY 508 Clinical Supervision-Practicum (2-6, max. 12) Practicum in supervising counseling, group counseling, diagnostic activities, and remedial academic therapy. Prerequisite: advanced graduate standing. Offered: AWSp.

EDPSY 509 Educational Issues in Human Development (5) Human development theories and models. Educational implications of theory, methodology, and application. Current research complements the historical antecedents of current practice. Age range covered varies as function of current issues in professional literature. Prerequisite: 15 credits in educational psychology or psychology. Offered: alternate years; W.

EDPSY 510 Cognition in the Context of the School Curriculum (3) Contemporary issues and trends in human learning, with a focus on reasoning within subject-matter areas such as mathematics, history, and science. Prerequisite: EDPSY 501 or equivalent. Offered: alternate years.

EDPSY 511 Seminar in Applied Educational Psychology (1, max. 6) Designed for graduate students in educational psychology. Applications of theoretical constructs to particular problems encountered in school counseling, practice.

EDPSY 512 Classroom Assessment Strategies (3) Development and evaluation of traditional, observational, essay, performance-based, portfolio assessments and grading models as they are used in classroom assessment; some review of current research on classroom-based assessment; classroom assessment ethics.

EDPSY 513 Instrument Development (3) Instrument development techniques including construct development, test and item specifications, item writing, planning for reliability and validity studies; ethics in test administration and interpretation. Intended for doctoral or masters students to develop

instruments for their own research. Prerequisite: EDPSY 490 or equivalent.

EDPSY 518 Assessment and Diagnosis of Reading Disabilities (3) Techniques for individual assessment of students with reading difficulties (K-12) including formal assessment using standard assessment tools and informal diagnostic teaching. Appropriate for classroom teachers, reading specialists, and school psychologists. Includes conducting and analyzing case studies. Prerequisite: EDC&I 460, EDC&I 462, other reading courses, or permission of instructor. Offered: alternate years; Sp.

EDPSY 519 Communication and Language in Young Exceptional Children (3) Review and discussion of theories of language acquisition as they relate to communication and language in young children. Review of research of language environments that relate to early literacy and education and how to use this information to modify environments for special needs children. Offered: jointly with EDSPE 521; W.

EDPSY 520 Psychology of Reading (3) Reviews current empirical research on cognitive processes in reading, including word and sub-word processes, syntax and comprehension, reading and perception, word recognition, concept development and meaning in reading, psychology of reading interests and skills. Prerequisite: EDPSY 501 or equivalent.

EDPSY 521 Psychology of Writing (3) Examines writing as a cognitive process and reviews current empirical research on writing, emphasizing primarily studies from a psychological perspective. Explores both developmental differences and individual differences in writing skills, together with instructional implications. Prerequisite: EDPSY 501 or equivalent.

EDPSY 522 Reading Disability Clinic (3-5) Supervised practicum in diagnosis and remediation of reading disabilities. Prerequisite: EDTEP 532, EDTEP 533 or equivalent; EDC&I 460 or permission of instructor.

EDPSY 524 Problem Solving and Critical Thinking in Education (3) Study of the classic and contemporary research literature concerned with human problem solving and critical thinking with emphasis upon applications to educational practice and further research. Prerequisite: EDPSY 501 or equivalent.

EDPSY 525 Creativity and Education (3) Study of the classic and contemporary research literature about creativity with emphasis upon applications to educational practice, evaluation of strategies to promote creativity in the schools, and further research. Prerequisite: EDPSY 501 or equivalent.

EDPSY 526 Seminar on Metacognition (3) Students read and discuss theoretical and research papers from the extensive literature on metacognition. Focuses on defining the concept of metacognition, establishing its range of applicability to educational matters, and becoming familiar with excellent examples of metacognitive research. Prerequisite: graduate status in education or psychology and permission of instructor.

EDPSY 527 Transfer of Teaching (3) Students read and discuss a representative sample of theoretical and research papers from extensive literature on teaching to promote transfer of what students learn to non-teaching environments. Historical approach to the topic is followed by analysis of current writings on transfer. Credit/no credit only. Prerequisite: EDPSY 501 and graduate status in education or psychology.

EDPSY 528 Achievement Motivation in Education (3) Critical review of current research and major theories of achievement motivation in schools and other educational settings. Emphasis on the relationship of theories to the contexts and practice of education.

Prerequisite: EDPSY 501 or permission of instructor. Offered: W.

EDPSY 531 Socialization of School-Age Children (3) Study of personal social development and behavior from preschool ages through adolescence. Developmental theory and research are reviewed on the socialization influences of parents and peers and on such topics as aggression, emotional regulation, and social cognition. Prerequisite: EDPSY 501 or equivalent. Offered: W.

EDPSY 532 Adolescence and Youth (3) Developmental processes and patterns examined with major theoretical and current research themes from behavioral sciences as applied to middle school and senior high students. Educational issues, social problems associated with adolescence in Western culture. Prerequisite: EDPSY 501 or equivalent.

EDPSY 533 Current Research in Adolescence (3) Contemporary trends and patterns of adolescent research are examined with emphasis upon theoretical foundations, contrasting methodologies, and implications for further research. Exemplary studies and integrative reviews of research on adolescence are featured. Prerequisite: EDPSY 532 and EDPSY 591 or equivalents.

EDPSY 534 School Problems of Adolescence (3) Study of the classic, contemporary, and emerging school problems of school age youth with emphasis upon problem solving strategies for educators and associated youth service personnel. Includes problems of academic achievement, interpersonal relations, and social deviancy in the schools. Prerequisite: EDPSY 532 or equivalent.

EDPSY 535 Education and the Highly Capable Learner (3) Examination of major issues and problems in study and nurturance of highly capable children and youth in the educational setting. Emphasis placed on contributions of theory and research to educational problem solving for multiple aspects of advanced human capacity. Prerequisite: EDPSY 501 or equivalent.

EDPSY 536 Learning Variables of Minority Children: Instructional Implications (3) Provides students with data base regarding (1) four variables (language/dialect, cognitive style, locus of control, and motivational systems) that affect learning among minority students, and (2) teaching strategies appropriate for these cultural socioeconomic variables. No credit given for students who have completed EDC&I 425.

EDPSY 540 School Psychological Assessment (5) Study of assessment of human intelligence with supervised training in the administration, scoring, and interpretation of individual intelligence tests with emphasis on Stanford-Binet and Wechsler scales. Prerequisite: graduate standing in the school psychology specialization and permission of instructor. Offered: A.

EDPSY 541 Group Tests in Counseling (5) Emphasis on the utilization of objective measures in counseling. Prerequisite: EDPSY 490 or equivalent. Offered: Sp.

EDPSY 542 Career Development (3) Emphasis on vocational development theory and research. Psychological, social, and economic determinants of vocational development and choice are examined as a basis for vocational counseling. Prerequisite: graduate standing or permission of instructor.

EDPSY 543 Facilitating Career Development (3) Theory and practice in exploring, self-identified strengths, interests, resources, and other considerations when developing career plans. Emphasizes career development in the schools. Offered: Sp.

EDPSY 544 Counseling (5) Emphasis on the theory and practice of counseling.

EDPSY 545 Prepracticum (3) Competency-based skills training for beginning counseling and school psychology students. Attending, listening, focusing, and intervening behaviors for use with adults and children. Introduction to theories of helping. Prerequisite: enrolled in school counseling or school psychology or permission of instructor. Offered: A.

EDPSY 546 Counseling Practicum (3-5) Supervised practice in counseling. Prerequisite: EDPSY 545 or permission of instructor. Offered: WSp.

EDPSY 548 Educational Implications of Personality Theory (5) Study of personality development and personality theories with continuous attention to the meaning of these in educational practice, testing, and counseling. Prerequisite: 15 credits of psychology or educational psychology. Offered: A.

EDPSY 549 Seminar in Consultation Methods (3) Theory and practice of process consultation in educational settings. Field practice in teams with clients. Offered: W.

EDPSY 550 Family Counseling (3) Introduction to family counseling theory and practice, emphasizing family dynamics and communication analysis. Prerequisite: permission of instructor. Offered: W.

EDPSY 551 Group and Behavioral Intervention (3) Introduction to competency-based skills for beginning school psychology students. Includes basic processes of group management skills with children including group process in social skills training, problem-solving techniques, behavioral principles, and parent training. Prerequisite: EDPSY 545 or course in counseling techniques or permission of instructor. Offered: Sp.

EDPSY 552 Multicultural Issues in School Counseling and School Psychology (3) Examination of multicultural issues as they relate to the delivery of services provided by school counselors and school psychologists. Theoretical and applied aspects emphasized and case study format utilized. Offered: Sp.

EDPSY 555 Seminar in Counseling Specialty (1-2, max. 6) Oriented toward the role of a counselor as a professional worker. Credit/no credit only. Offered: ASp.

EDPSY 561 Group Process Laboratory (3) Explores the theoretical concepts of group process with a special emphasis in how to conduct group process in school and agency settings. Offered: A.

EDPSY 562 Group Counseling in Schools (3) Provides students with the opportunity to co-facilitate groups in elementary, middle, and secondary schools, supplemented by weekly didactic presentations of counseling and guidance models. Prerequisite: EDPSY 561 or permission of instructor. Offered: W.

EDPSY 564 Practicum in School Psychology (1-6, max. 6) Practicum in assessment and consultation, emphasizing diagnosis of behavior and learning disabilities, and focusing on techniques acquired in 507 and 540. Offered: W.

EDPSY 566 Case Study Seminar (1-6, max. 6) Integrating theoretical concepts with practice/service issues. Cases selected for discussion represent a wide range of problems found in schools. Activities include group supervision and peer review. Offered: AWSp.

EDPSY 568 Seminar in Professional Issues and Ethics (2) Professional ethics codes and cases, history of counseling or school psychology, legal prob-

lems, credentialing issues, conditions of practice, continuing education, publishing, and presenting research papers. Credit/no credit only. Offered: W.

EDPSY 569 Seminar in Counseling Psychology Research (2) Methodological and professional issues related to research in counseling and psychological services. Counseling psychology research literature with focus on content and methods. Prerequisite: EDPSY 591 or equivalent.

EDPSY 570 Introduction to School Psychology (2, max. 4) Current issues in professional psychology practice and research. Limited to graduate students in school psychology. Offered: A.

EDPSY 571 Educational Applications of Neuropsychology: Assessment and Intervention (5) Students observe and administer neuropsychological tests and plan and carry out educational interventions for children with neuropsychological disorders. Content focuses on various neuropsychological disorders for which school psychologists can provide assessment and consultation. Prerequisite: EDPSY 540 or equivalent course in individual testing, and EDPSY 471 or permission of the instructor.

EDPSY 572 Social-Emotional Assessment (3) Techniques in social-emotional assessment of school-aged children. Diagnostic systems including DSM IV presented in conjunction with assessment techniques. Emphasis on integrative method for understanding social emotional assessment batteries and reliability and validity of their test score interpretation. Prerequisite: school psychology or counseling student or permission of instructor. Offered: A.

EDPSY 573 Psychological Assessment of Preschool Children (3) Students learn to give and interpret tests of intellectual development to assess language, play, and social/emotional functioning, and to write psychological assessment reports for infants, toddlers, and preschoolers. Credit/no credit only. Prerequisite: graduate standing in the school psychology specialization and permission of instructor. Offered: Sp.

EDPSY 575 Structural Equation Modeling (3) Theory and data analysis using linear structural equation models. Application to data in educational research. Prerequisite: EDPSY 594 or equivalent. Offered: alternate years.

EDPSY 576 Hierarchical Linear Models (3) Theory and data analysis for research models where random factors are nested, such as multi-level data, growth curve analysis, and meta-analysis. Prerequisite: EDPSY 593 or equivalent. Offered: alternate years.

EDPSY 580 Seminar: The Emergence of Educational Psychology (3) Examination of documents by selected contributors to the field of educational psychology. Special focus on period from mid-nineteenth century to the later twentieth century. Prerequisite: graduate standing.

EDPSY 581 Seminar in Educational Psychology (1-5, max. 15) Advanced seminar on selected topics in educational psychology. A critical appraisal of current research. Prerequisite: advanced degree work in educational psychology. Offered: AWSp.

EDPSY 582 Seminar in Development and Socialization (3, max. 15) Advanced seminar on selected topics concerned with human development and socialization processes. Emphasis placed upon empirical research and its theoretical underpinnings in such areas as cognitive development, moral development and education, self-concept development, and related concerns.

EDPSY 583 Seminar in Learning and Thinking (3, max. 15) Seminar in the psychology of learning language and language learning. Each seminar is

offered with predesignated emphasis in one of the following topics: linguistics, phonology, pragmatics, psycholinguistics, semantics.

EDPSY 584 Seminar in Quantitative Methods (3, max. 15) Seminar on such topics as measurement techniques, research design, psychometrics, and statistics.

EDPSY 586- Qualitative Methods of Educational Research (5-) Survey of various qualitative research methods from a variety of disciplinary perspectives (anthropology, sociology, applied linguistics, cognitive psychology, policy analysis, and evaluation) with intensive experience in collection, analysis, and reporting of data. Prerequisite: second year doctoral standing and one course in statistics, and permission of instructor. Offered: jointly with EDC&I 578; A.

EDPSY 587- Qualitative Methods of Educational Research (5-) Survey of various qualitative research methods from a variety of disciplinary perspectives (anthropology, sociology, applied linguistics, cognitive psychology, policy analysis, and evaluation) with intensive experience in collection, analysis, and reporting of data. Prerequisite: EDPSY 586/EDC&I 578; second-year doctoral standing and one course in statistics. Offered: jointly with EDC&I 579; Sp.

EDPSY 588 Survey Research Methodology and Theory (3) Survey research, research, theory, and methodology. Probability theory, sampling, human subjects considerations, instrumentation, and analysis techniques. Review and critique by students of theoretical issues in survey research and development of a survey instrument. Prerequisite: EDPSY 490 or equivalent. Offered: A.

EDPSY 589 Scholarly Writing in Education and Psychology (3) Introduction to the demands and expectations for technical writing in education and psychology, including aspects of the culture of scholarship. Designed for competent writers. Does not address basic grammar and composition. Credit/no credit only. Prerequisite: doctoral standing, and permission of instructor.

EDPSY 590 Computer Utilization in Educational Research (3) Computer utilization in solution of research problems, data reduction to forms amenable to computer solution, appropriate framing of problems for solutions by computer. Using an interactive system, editors, and program packages. Prerequisite: EDPSY 490. Offered: A.

EDPSY 591 Methods of Educational Research (3) Introduction to educational research. Primary focus on hypothesis development, experimental design, use of controls, data analysis and interpretation. Prerequisite: EDPSY 490. Offered: AWSp.

EDPSY 592 Advanced Educational Measurements (3) Theory of measurement; an examination of assumptions involved in test theory, errors of measurement, factors affecting reliability and validity, and item analysis and standards for educational and psychological tests. Prerequisite: EDPSY 490. Offered: Sp.

EDPSY 593 Experimental Design and Analysis (5) Experimental design with emphasis on the analysis of variance. Prerequisite: EDPSY 490 or equivalent. Offered: W.

EDPSY 594 Advanced Correlational Techniques (5) Multivariate analysis, including regression and multiple correlation; matrix algebra; factor analysis. Prerequisite: EDPSY 490 or equivalent. Offered: Sp.

EDPSY 595 Item Response Theory Models of Testing (3) In depth exploration of IRT models and their roles in the development of large scale educational and psychological tests. Prerequisite: EDPSY 490 or equivalent, EDPSY 592, EDPSY 594.

EDPSY 596 Program Evaluation (3) Advanced course in evaluation research emphasizing nontraditional designs, especially those that impose severe ecological constraints on the evaluators. Prerequisite: EDPSY 593, EDPSY 594, EDC&I 597, or permission of instructor.

EDPSY 597 Technical Requirements of Large Scale Tests (3) Theoretical and practical understanding of the quantitative aspects of large-scale tests, including: scaling, norms development, and the development of derived and interpretive scores, evidence for validity and reliability. Prerequisite: EDPSY 490 or equivalent, EDPSY 592, EDPSY 595.

EDPSY 599 Independent Studies in Education (*) Independent studies or readings of specialized aspects of education. Offered: AWSp.

EDPSY 600 Independent Study or Research (*) Prerequisite: permission of instructor. required. Offered: AWSp.

EDPSY 601 Internship (3-10, max. 10) Offered: AWSp.

Special Education

EDSPE 404 Exceptional Children (3) *Edgar, Rodriguez* Children with disabilities studied from the point of view of education. Offered: AWS.

EDSPE 414 Introduction to Early Childhood Special Education (3) *Schwartz* Provides students with a comprehensive overview of major aspects of the field of early childhood special education. Theoretical foundations and program development and implementation are presented in an approach that integrates theory, research, and practice. Offered: A.

EDSPE 419 Interventions for Families of Children with Disabilities (3) *Rodriguez* Upper-division course for professionals and paraprofessionals working with families of children with disabilities. Offered: SpS.

EDSPE 420 Classroom Management of the Physical Problems of Individuals with Severe or Profound Disabilities (3) Overview of physical management of pupils with severe or profound disabilities in educational settings. Principles of normal motor development, positioning, and handling are applied to the development of classroom strategies. Effects of abnormal motor development on educational programming. Offered: WS.

EDSPE 496 Workshop in Special Education (1-10, max. 15) Demonstration, observation, and/or participation with groups of disabled children in laboratory or controlled classroom settings. Offered: AWSpS.

EDSPE 499 Undergraduate Research (2-5, max. 5) Students developing studies under this rubric should be advised that a report or a paper setting forth the results of their investigations should be regarded as a basic part of the program. Offered: AWSpS.

EDSPE 500 Field Study (1-6, max. 6) Individual study of an educational problem in the field under the direction of a faculty member. Prerequisite: approved plan of study and permission of the instructor. Offered: AWSpS.

EDSPE 502 Collaboration: Working with Parents and Professionals (3) *Sandall* Provides students with knowledge and skills for working collaboratively with other professionals, family members, and paraprofessionals. Focus is on the role of the special educator in forming and sustaining school, family, and community partnerships. Offered: W.

EDSPE 504 Special Education and the Law (3) *Brown* Overview of major state and federal laws affecting the operation and management of special education programs in public schools. Emphasis on procedural and substantive rights of children with disabling conditions. Offered: jointly with EDLPS 516; W.

EDSPE 505 Curriculum Development of Students with Moderate to Severe Disabilities (3) Addresses issues and practices in the development of appropriate curricula for students with moderate to severe or profound disabilities. Includes curriculum models, methods for the selection of appropriate skills for inclusion in Individualized Education Plans, and establishing priorities for instruction. Offered: W.

EDSPE 507 Instructional Methods for Students with Moderate to Severe Disabilities (3) *Billingsley* Details a systematic instructional process for the education of students with moderate to severe or profound disabilities. Includes instructional methods and materials designed to promote the development of skills that are required in school, home, and community settings, and to reduce challenging behaviors. Offered: A.

EDSPE 510 Behavioral Measurement and Management in the Classroom (3) *White* Response measurement in the classroom; use of data analysis for instructional decisions and behavior management for children with disabilities. Offered: A.

EDSPE 511 Methods of Applied Behavior Analysis Research (3) *Billingsley, White* Characteristics of applied behavior analysis are presented: direct, daily measurement, and the systematic investigation of important variables. Representative studies from various applied situations are discussed in terms of dependent and independent variables, research design, reliability, validity, and data analysis. Prerequisite: EDSPE 510 or equivalent preparation. Offered: WSp.

EDSPE 513 Principles of Clinical Appraisal for Teachers of Exceptional Children (3) *Jenkins, Troia* Diagnostic instruments used in the clinical appraisal of exceptional children. Theoretical and measurement considerations are used to buttress practical experiences in appraisal related to eligibility and intervention. Offered: AS.

EDSPE 514 Fundamentals of Reading for Children with Disabilities (3) *Jenkins* Emphasis on basic pre-reading and reading skills, such as phonics and structural analysis, specifically for the disabled child. Acquisition of comprehension skills by the disabled. Diagnosis of reading problems, published materials appropriate for children with disabilities, material modification. Offered: WS.

EDSPE 515 Problems and Issues in Special Education (3, max. 9) *Edgar* Intensive examination of the issues pertinent to special education, such as legislation, interdisciplinary functions, and the role of special education in general education and placement practices. Offered: Sp.

EDSPE 517 Practicum in Research Design and Analysis in Special Education (1-4, max. 10) Critical analysis of current research in special education and related fields serves as background for designing applied research projects. Projects are examined, evaluated, and revised in seminar discussion. Prerequisite: EDPSY 490 and EDSPE 591 or equivalent and permission of instructor. Offered: AWSpS.

EDSPE 518 Seminar in Special Education Research (1-3, max. 9) Designed for doctoral students in special education during their first year of residency. Each candidate selects a dissertation problem and submits a proposal. Topics such as the procurement of subjects, the reporting and commu-

nication of research findings, and the evaluation of research are stressed. The seminar leads to the evolution of a viable dissertation proposal. Credit/no credit only. Offered: AWSp.

EDSPE 520 Seminar in Applied Special Education (1-12, max. 12) *Jenkins, Rodriguez, Sandall, Schwartz, Troia* Designed for graduate students in special education. Focus on contemporary topics relating to the application of the theoretical constructs to special education. Offered: AWSp.

EDSPE 521 Communication and Language in Young Exceptional Children (3) *Schwartz* Review and discussion of theories of language acquisition as they relate to communication and language in young children with special needs. Review of research of language environments that relate to early literacy and education and how to use this information to modify environments for children with special needs. Offered: jointly with EDPsy 519; W.

EDSPE 522 Seminar on the Education of Students with Severe Disabilities (3) *White* Advanced graduate seminar arranged to study and discuss the essential components of providing a comprehensive approach to the identification and education of infants, children, adolescents, and young adults with severe disabilities. Offered: Sp.

EDSPE 523 Specific Numeracy Techniques for Elementary Students with Mild Disabilities (3) *Neel* Provides the teacher with specific techniques for teaching numeracy to elementary students with mild disabilities in inclusive settings. Prerequisite: EDTEP 522 or equivalent. Offered: SpS.

EDSPE 525 Educating Students with Autism or Severe Behavior Disorders (3) *Schwartz* Consideration of the identification, etiology, education, and outcomes of individuals with autism or other severe behavior disorders. Offered: Sp.

EDSPE 526 Techniques for Instructing Social Behaviors for Elementary Students with Mild Disabilities (3) *Cheney, Troia* Provides prospective and practicing teachers with foundational theory and knowledge to select specific techniques to promote social competency in elementary children with mild disabilities. Discusses research related to use of these techniques and interventions. Develops schoolwide, classroom, and individual plans for teaching social skills. Offered: ASpS.

EDSPE 541 Education of Children with Behavior Disorders (3) *Cheney, Neel* Introductory course covering characteristics of and educational practices for children with emotional/behavioral disabilities. Reviews theory, definitional issues, models, assessment, and instructional methods for educating children with emotional and behavioral disorders. Students develop a working knowledge of educational approaches for teaching students with emotional/behavioral disabilities. Offered: alternate years; W.

EDSPE 545 Instructional Modifications for the Education of Children with Mild Disabilities (3) *Lovitt, Troia* In-depth analysis and application of several modifications of instructional techniques necessary for the education of students with mild disabilities. Offered: WS.

EDSPE 546 Seminar in Educating Children with Behavior Disorders (3, max. 9) *Cheney, Neel* Advanced-level seminars focus on contemporary research topics relating to the effective education of children with serious behavior disorders. Students analyze and review research pertinent to the chosen topics and prepare a scholarly manuscript for dissemination. Offered: alternate years; W.

EDSPE 548 Special Topics in the Education of the Learning Disabled (3, max. 12) In-depth analysis of

empirical findings in the specialty of learning disabilities with focus on the synthesis of research findings and their application to the educational environment. A paper suitable for publication required. Prerequisite: course in learning theory, introductory course in learning disabilities, or equivalent preparation.

EDSPE 561 Educational Assessment of Young Children with Special Needs (3) *Sandall* Special standardized and educational measurement and evaluation procedures for use with young children with a variety of disabling conditions. Observation, ecological assessment, and programming strategies are discussed in combination with practical application of the skills within an educational framework. Offered: A.

EDSPE 562 Curricula for Preschool Children with Disabilities (3) *Sandall* Basic theoretical models and approaches to curricula for preschoolers with disabilities. Promote specific preschool curricula and develop skills to assist students in critiquing and evaluating curricula. How to adapt materials for specific populations and to plan a program for exceptional preschoolers. Offered: Sp.

EDSPE 563 Issues in Working with Families of Young Children with Special Needs (3) *Rodriguez* Adjustment of parents to the presence of a young child with disabilities, transactions that occur between parents and their children, procedures that facilitate the child's development through these interactions, and strategies to promote relationships among families and professionals. Offered: W.

EDSPE 565 Seminar: Early Childhood Education for Children with Disabilities (3, max. 9) *Rodriguez, Sandall, Schwartz* Advanced seminar on early childhood education for infants and young children with disabilities. Historical and current research from special education and related fields reviewed with regard to their application to the education of young children with disabilities.

EDSPE 566 Current Research in Early Childhood Special Education (2, max. 6) Introduces students to theory and current research related to early intervention with infants and toddlers and how to evaluate research articles. Selected topics cover typical and atypical development in the areas of cognitive, social communication, and social development, as well as issues in assessment, curricula, and intervention strategies.

EDSPE 599 Independent Studies in Education (*) Independent studies or readings of specialized aspects of education. Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed. Offered: AWSpS.

EDSPE 600 Independent Study or Research (*) Registration must be accompanied by a study prospectus endorsed by the appropriate faculty adviser for the work proposed. Offered: AWSpS.

EDSPE 601 Internship (1-10) Prerequisite: graduate standing and permission based on prearrangement of internship placement and approval by adviser. Offered: AWSpS.

Teacher Education Program

EDTEP 501 First Quarter Field Experience—Elementary (2) Field experience and use of reflective process in small group discussions accompanying the first quarter of study in the Elementary Teacher Education Program. Field experience during the quarter in supervised school placements.

Credit/no credit only. Prerequisite: elementary TEP student.

EDTEP 502 Second Quarter Field Experience—Elementary (3) Field experience and use of reflective process in small group discussions accompanying the second quarter of study in the Elementary Teacher Education Program. Field experiences during the quarter in supervised school placements. Credit/no credit only. Prerequisite: elementary TEP student.

EDTEP 503 Third Quarter Field Experience—Elementary (4) Field experience and use of reflective process in small group discussions accompanying third quarter of study in Elementary Teacher Education Program. Observe school-year opening full-time in late August through September; field experiences during the quarter in supervised school placements. Credit/no credit only. Prerequisite: elementary TEP student.

EDTEP 505 Portfolio: Tool for Reflection—Elementary (2) Group discussions fostering integration of course work and field experience through reflection. Using program goals and targets, students illustrate their learning through multiple forms of evidence. Final portfolio is presented to an audience. Related field experiences may be arranged. Credit/no credit only. Prerequisite: elementary TEP student.

EDTEP 511 School and Society (3) Exploration of issues regarding schooling and society, such as matters of value and value tension in American schools. Consideration of social values such as equality, opportunity, pluralism, and community; historical and contemporary evidence of values in schooling; and how values can conflict in policy and practice. Prerequisite: elementary TEP student.

EDTEP 521 Teaching and Learning in Numeracy I (3) Focus on mathematics from the perspective of the learner and on the meaning of understanding a mathematics concept. Examination of cultural aspects of the development of these concepts. Prerequisite: elementary TEP student.

EDTEP 522 Teaching and Learning in Numeracy II (3) Focus on pedagogy of mathematics. In conjunction with field experience, students extend understanding of mathematics and successfully integrate mathematics as a tool for learning science and art. Prerequisite: elementary TEP student.

EDTEP 523 Teaching and Learning in Science (3) Science teaching in a manner consistent with how young children learn science concepts and skills. Opportunities are provided for work on science activities similar to those used with elementary school children and to experience many of the problems and successes of preadolescents. Prerequisite: elementary TEP student.

EDTEP 531 Teaching and Learning in Literacy I (3) Investigation of the multiple natures of literacy development. Students study the impact of culture and family on literacy development by reading and discussing a variety of texts while also experiencing the development of their own learning through literature study, the writing process, and oral presentations. Prerequisite: elementary TEP student.

EDTEP 532 Teaching and Learning in Literacy II (3) Introduces participants to the content and process of literacy learning in elementary school. Study of abilities needed for effective literacy use, instructional strategies to help children acquire these abilities, and assessment strategies to evaluate student progress. Prerequisite: elementary TEP student.

EDTEP 533 Teaching and Learning in Literacy III (3) Introduces participants to the content and process of literacy learning in elementary school.

Study of abilities needed for effective literacy use, instructional strategies to help children acquire these abilities, and assessment strategies to evaluate student progress. Prerequisite: elementary TEP student.

EDTEP 541 Dilemmas of Teaching and Learning in Elementary School (4) Covers human learning in the elementary school setting with emphasis on discipline-specific cognition and cognitive development. Prerequisite: elementary TEP student.

EDTEP 542 Meeting the Needs of All Students-Elementary (3) Overview of physical, cognitive, and social development of elementary school age children. Discussion of ways in which differences in development may affect children in school. Provides elementary teachers with understanding of how to facilitate the success of all children in general education classrooms. Prerequisite: elementary TEP student.

EDTEP 543 Teaching and Learning in Social Studies.(3) Introduction to objectives, content, and teaching strategies of social studies and the arts as taught in elementary school.

EDTEP 551 Multicultural Teaching (3) Concepts, theories, and strategies that constitute major dimensions of multicultural education. Focus on racial and ethnic groups, social class, and gender. Dimensions of multicultural education examined include content integration, knowledge construction process, prejudice reduction, equity pedagogy, and empowering school culture and social structure. Prerequisite: TEP student.

EDTEP 552 Assessment in Elementary Education (3) Emphasis on methods of assessment that reinforce understanding of the various disciplines. Includes performance assessments, assessments of student projects and papers, traditional exams, and observational exams. Prerequisite: elementary TEP student.

EDTEP 561 Dilemmas of Teaching and Learning (5) Study of human learning in an educational setting, with an emphasis on learning of school subjects. Topics include nature of learning, knowledge and teaching, motivation, culture, and cognition. Prerequisite: secondary TEP student.

EDTEP 562- Adolescent Development and Education I (3-) Overview of trends and issues of adolescent development and behavior in relation to contemporary secondary schooling. Psychological perspectives on adolescent identity, interpersonal relationships, academic engagement, and social deviancy in schools examined with special attention to classroom management and accommodating differences. Prerequisite: secondary TEP student.

EDTEP -563 Adolescent Development and Education II (-3) Overview of trends and issues of adolescent development and behavior in relation to contemporary secondary schooling. Psychological perspectives on adolescent identity, interpersonal relationships, academic engagement, and social deviancy in schools examined with special attention to classroom management and accommodating differences. Prerequisite: secondary TEP student.

EDTEP 564 Working in Secondary Schools (3) Organizational, personal, and interpersonal aspects of working as a teacher in a secondary school. Preparation for membership and leadership in a learning community and for continuing professional growth. Credit/no credit only. Prerequisite: secondary TEP student

EDTEP 565 Planning and Teaching an Integrated Curriculum (3) Introduction of models for integrating curriculum, congruent instructional and assessment strategies, and team planning skills. Provides direct and experiential learning activities and results in production of team-planned curricular units based on two different models of curriculum integration. Prerequisite: secondary TEP student.

EDTEP 571 Topics and Tensions in School and Society (3) Exploration of issues of value and value tension in American schools. Consideration of social values of equality, opportunity, pluralism, and community, historical and contemporary evidence of values in schooling, and how values can conflict in policy and practice. Prerequisite: secondary TEP student.

EDTEP 573 Assessment in Secondary Education (3) Strong emphasis on methods of assessment that reinforce understanding of the various disciplines, including performance assessments, assessments of student projects and papers, traditional exams, and observational exams. Prerequisite: secondary TEP student.

EDTEP 580- Teaching English and Language Arts in Secondary School I (5-) Teaching of English and Language Arts in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP -581 Teaching English and Language Arts in Secondary School II (-3) Teaching of English and Language Arts in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP 582- Teaching Mathematics in the Secondary School I (5-) Teaching of mathematics in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP -583 Teaching Mathematics in the Secondary School II (-3) Teaching of mathematics in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP 584- Teaching Social Studies in the Secondary School I (5-) Developing, teaching, and evaluating social studies courses on the middle, junior, and senior high school levels. Prerequisite: secondary TEP student.

EDTEP -585 Teaching Social Studies in the Secondary School II (-3) Developing, teaching, and evaluating social studies courses on the middle, junior, and senior high school levels. Prerequisite: secondary TEP student.

EDTEP 586- Teaching Science in the Secondary School I (5-) Teaching of science in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP -587 Teaching Science in the Secondary School I (-3) Teaching of science in middle, junior, or senior high school. Prerequisite: secondary TEP student.

EDTEP 588- Teaching World Languages I (5-) Introduction to currently used foreign language teaching methods and approaches, including learning and teaching strategies and techniques for the four skills—reading, writing, speaking, listening—and culture. Current and future trends in pedagogy and technology. Prerequisite: secondary TEP student.

EDTEP -589 Teaching World Languages II (-3) Introduction to currently used foreign language teaching methods and approaches, including learning and teaching strategies and techniques for the four skills—reading, writing, speaking, listening—and culture. Current and future trends in pedagogy and technology. Prerequisite: secondary TEP student.

EDTEP 591 First Quarter Field Experience—Secondary (3) Field experience and small group discussions accompanying the first quarter of study in the Secondary Teacher Education Program. Observe school year opening full-time for approximately one month in August and September and two weeks full-time during the quarter in supervised school placements. Credit/no credit only. Prerequisite: secondary TEP student.

EDTEP 592 Second Quarter Field Experience—Secondary (3) Field experience and small group discussions accompanying the second quarter of study in the Secondary Teacher Education Program. Three weeks full-time during the quarter in supervised school placements. Credit/no credit only. Prerequisite: secondary TEP student.

EDTEP 593 Third Quarter Field Experience—Secondary (3) Field experience and small group discussions accompanying third quarter of study in Secondary Teacher Education Program. Four weeks full-time during the quarter in supervised school placements. Credit/no credit only. Prerequisite: secondary TEP student.

EDTEP 595 Portfolio: Tool for Reflection—Secondary (3) Group discussions fostering integration of course work and field experience through reflection. Using program goals and targets, students illustrate their learning through multiple forms of evidence. Final portfolio is presented to an audience. Related field experience may be arranged. Credit/no credit only. Prerequisite: secondary TEP student.

EDTEP 600 Independent Study or Research (1, max. 6) Registration must be accompanied by a study prospectus endorsed by the Director of Teacher Education and the faculty adviser for the work proposed. Credit/no credit only.

EDTEP 601 Fourth Quarter Field Experience (2-10, max. 15) Field experience during the fourth quarter of study in the Teacher Education Program. Full-time student teaching in supervised school placements. Prerequisite: TEP student.

College of Engineering

General Catalog Web page:

www.washington.edu/students/genocat/academic/College_Engineering.html

College Web page: www.engr.washington.edu

Engineering is an increasingly critical societal enterprise. More than ever before, the engineer is challenged both to design products whose value is high by social and economic measures and to provide for efficient manufacture of such products within the constraints of environmental protection and diminishing raw-material resources. Requirements imposed on the transportation system and other elements of society's physical infrastructure pose analogous challenges. At the same time, reductions in computer costs and increases in sophistication are dramatically influencing both the products and processes designed by the engineer and the actual practice of engineering.

The primary goal of the College of Engineering educational programs is to prepare students for a professional career in engineering by providing the technical foundation required for success in industry, government, or academia. Other goals of the College are to instill within its students the highest ethical standards, the capability for lifelong learning, and a curiosity about the world. Excellence in undergraduate and graduate academic programs remains the College's highest priority.

The College offers active educational and research programs, both departmental and interdisciplinary, at the graduate levels. (See Interdisciplinary Engineering Studies Program for interdisciplinary undergraduate and graduate programs.)

The College of Engineering has been a major unit of the University since 1899. The first engineering degrees were authorized in mining engineering and metallurgical engineering in 1898. Degrees were added for civil engineering (1901), electrical engineering (1902), mechanical engineering (1906), chemical engineering (1907), ceramic engineering (1919), aeronautical engineering (1929), bioengineering (1983), industrial engineering (1986), and computer engineering (1987). A degree program in technical communication was implemented in 1991. In 1999, 1,566 upper-division undergraduate majors and 1,407 graduate students were enrolled in engineering programs taught by a faculty of 195 members.

College Facilities

Teaching and research activities of the College are conducted in thirteen major campus buildings (and portions of others), which contain the College's offices, classrooms, and research and teaching laboratories. The Engineering Library, a branch of the University Libraries, provides outstanding collections of books, periodicals, technical reports, and patents of interest to engineers. Computers and terminals are available in all departments and at the University's Academic Computer Center.

Student Organizations and Activities

All of the major professional engineering societies have student chapters on campus, and all engineering students are encouraged to join the chapter that represents his or her field of interest. The College also has student chapters of the Society of Women Engineers, American Indian Science and Engineering Society, National Society of Black Engineers, and the Society of Hispanic Professional Engineers. The Pre-Engineering Student Association (PESA) is the major College-wide organization for all students enrolled in a pre-engineering course of study but not yet admitted to a department. The Engineering Student Council, comprising student representatives from all departments and professional societies, is the major College-wide student organization and participates actively in College affairs. Honor societies open to engineering students are Tau Beta Pi and Sigma Xi.

Students serve with faculty members on engineering policy committees which make recommendations concerning instructor evaluation, curriculum revisions, advising, grading systems, and other matters of interest to students and faculty.

Educational Outreach

Engineering Professional Programs:

www.engr.washington.edu/~uw-epp/

Education at a Distance for Growth and

Excellence: www.engr.washington.edu/edge/

Fulfilling a commitment to lifelong learning, the College of Engineering offers courses, workshops, and conferences to respond to the professional development needs of practicing engineers and related technical professionals worldwide. Through Engineering Professional Programs (EPP) and Education at a Distance for Growth and Excellence (EDGE) thousands of practicing engineers update their technical knowledge or pursue advanced degrees each year. For more information contact Engineering Professional Programs at 206-543-5539, or Education at a Distance for Growth and Excellence at 206-685-2242.

Special Facilities

Office of Engineering Research

Coordinator, Mary Heusner
372 Loew, Box 352180

www.engr.washington.edu/research/

The Office of Engineering Research promotes, stimulates, and coordinates research in all fields of engineering. Its primary role is to coordinate interdisciplinary research programs and national research initiatives. The Office of Research also reviews grant and contract proposals, tracks awards, and provides information on funding opportunities. This office allocates limited matching funds to College units to increase the quality of research in the College of Engineering.

Interdisciplinary Engineering Studies Program

356 Loew

The College of Engineering directly administers non-departmental undergraduate and graduate degree programs. Some engineering fundamentals and writing courses required for admission to the departments are managed by specific engineering departments.

Graduate Programs

The College also offers graduate programs leading to the Master of Science in Engineering and Master of Science degrees, without designation of a specific major.

Approved programs lead to the M.S.E. degree in civil, mechanical, electrical, chemical, and interengineering, and approved programs lead to the M.S. degree in civil engineering, interengineering, and materials science and engineering. Admission requires a B.S. degree in engineering, mathematics, or physical science, and evidence of aptitude for graduate study. Submission of scores on the Graduate Record Examination is required.

Master of Science in Engineering

The Interengineering Master of Science in Engineering (M.S.E.) and Master of Science (M.S.) program is intended for students whose desired course of study includes two or more engineering departments and may also include study in departments outside the College of Engineering. Applications and files of students entering the M.S./M.S.E. option are handled in the Office of Organizational Infrastructure. Admission to the interengineering option requires a statement describing the applicant's objectives. This statement should state why the student wants to enter the M.S./M.S.E. program rather than one of the traditional engineering graduate programs. Applicants to the M.S./M.S.E. program must have well-defined educational objectives which cannot be satisfied by established engineering programs. Graduation and entrance requirements, which differ for the various programs, may be obtained from the Office of Organizational Infrastructure, College of Engineering, 206-543-8590.

Program in Engineering and Manufacturing Management—PEMM Fellows

For students interested in a career in manufacturing management, PEMM offers a two-year (24-month) joint degree program leading to both M.B.A. (Master of Business Administration) and M.S.E. (Master of Science in Engineering) degrees. PEMM applicants must apply to the M.B.A. program as well as the M.S.E. Interengineering/PEMM program. Prospective students must take the GMAT examination before applying. The Graduate Program Office in the School of Business must receive all M.B.A. applications by March 1. The deadline for submitting the PEMM application to the College of Engineering is March 1. Graduation and entrance requirements may be obtained from the Program in Engineering and Manufacturing Management (PEMM) at 206-543-5349 or 206-685-8047 or via email at pemm@u.washington.edu.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

ENGR 498 Special Topics in Engineering (1-5, max. 6) Offered: AWSpS.

ENGR 499 Special Projects in Engineering (1-3, max. 6) Offered: AWSpS.

Courses for Graduates Only

ENGR 598 Seminar Series in Engineering (1, max. 12) Kalonji, Reed Graduate seminar series on topics of interest to all engineering students.

Aeronautics and Astronautics

General Catalog Web page:
www.washington.edu/students/gencat/academic/Aeronautics_Astro.html

Department Web page:
www.aawashington.edu

206 Guggenheim

Aeronautics and Astronautics deals with the design and analysis of air and space vehicles and a broad spectrum of related engineering science, such as aerodynamics, structural mechanics, automatic controls, flight mechanics, space dynamics, propulsion, plasma dynamics, and related topics. Established in 1930, the department is the only one of its kind in the Pacific Northwest, a region whose vast aerospace industry is a major contributor to the technological development, economic vitality, and security of the United States. Educators and researchers in the department have contributed profusely to all major areas of aerospace engineering. Graduates at all degree levels have been successful and valued at local, national, and international industries, as well as at government organizations and institutions of higher learning. The department is unique at the University of Washington, in terms of its specific technological applications, its capacity for multidisciplinary integration of complex systems, and its long-term interaction with local industry.

Graduate Program

Graduate Program Coordinator
206 Guggenheim, Box 352400
206-616-1113
gradadvising@aa.washington.edu

The Department of Aeronautics and Astronautics offers programs that provide a foundation in the engineering sciences and study in various engineering applications. These lead to the degrees of Master of Science in Aeronautics and Astronautics, Master of Aerospace Engineering, or Doctor of Philosophy.

Master of Science in Aeronautics and Astronautics (M.S.A.A.)

The M.S.A.A. is a traditional research-oriented master's degree program intended for students who are interested in research and development careers in industry or government, or who plan to continue graduate studies toward a Ph.D.

The M.S.A.A. program of study is tailored to the needs and interests of the student. Each program must be approved by the department graduate committee and must provide breadth through a variety of subjects, depth through extensive study of a specialized field, and analytical strength. Minimum programs consist of either 13 courses, or 10 courses and a 9-credit thesis.

Master of Aerospace Engineering (M.A.E.)

The M.A.E. program is intended for recent graduates or engineers who wish to expand their knowledge in multidisciplinary areas while also learning other aspects of aerospace engineering, such as business, management, manufacturing, or technical communication. The student must complete a minimum of 37 credits of course work and 8 credits of independent or team project work in a program approved by the department graduate committee. The Master of Aerospace Engineering (M.A.E.) program is structured to permit completion of the degree requirements as a full-time or part-time student. The M.A.E. is a terminal degree and is not intended for those seeking a Ph.D.

Doctor of Philosophy (Ph.D.)

The doctoral program consists of lectures, seminars, discussions, and independent study, enabling the student to master and to make original contributions to a particular field. In addition to the formal steps for obtaining the degree listed in the Graduate School section of this catalog, the student must complete an approved program of study consisting of 30 credits of course work beyond that required for the Master of Science in Aeronautics and Astronautics.

Research Activities

Research facilities include the Kirsten 8x12-foot low-speed wind tunnel, a 3x3-foot low-speed wind tunnel, a water tunnel, a small supersonic blow-down tunnel, a hypervelocity projectile accelerator (ram accelerator), material and structural test machines, a composite-material laboratory, an unmanned aerial vehicle (UAV) laboratory, a controls laboratory, various plasma and fusion-research and engineering physics laboratories, and a development laboratory for small satellites. A variety of computer facilities is available, including 17-computer parallel cluster for a computational fluid dynamics research. The Aerospace and Energetics Research Program, which conducts interdisciplinary research in the Aerospace and Engineering Research Building, is also part of the Department of Aeronautics and Astronautics.

Externally funded research is carried out by faculty members and students on such topics as buoyant flows, flow separation control, combustor mixing, shear layers, computational fluid dynamics, internal flows, reacting flows, ram accelerators, space energy systems, space system design, control system design and engineering, robust and optimal control, wing optimization, impact mechanics, composite material structure and fracture, plasma dynamics, space propulsion, and fusion research.

Special Facilities/Programs

Aerospace and Energetics Research Program (AERP)

120 Aerospace and Engineering Research Building

The Aerospace and Energetics Research Program is directed toward high-technology engineering research and teaching through research. The program anticipates and tries to outpace the nation's critical technology needs. It therefore emphasizes those engineering skills that both match the requirements of the present and future, and develop in students a broad understanding of the impact of technology on

society. Suitable programs are designed to develop the student's imagination and a willingness to respond to the complex and rapidly changing future of engineering. This directs the faculty's efforts and creates within the principal investigators, research faculty, and students the concept of engineering as an adventure.

The program covers many fields, usually centered on energy or aerospace systems. Currently the program is active in plasma engineering related to fusion power and space propulsion, ram accelerators for direct space launch, and research on new terrestrial energy conversion and vehicle propulsion technologies.

University of Washington Aeronautical Laboratory (UWAL)

Kirsten Aeronautical Laboratory

The primary facility that UWAL operates is the Kirsten Wind Tunnel, a subsonic, closed-circuit, double-return tunnel with an 8x12-foot test section. Undergraduate students, usually from the Department of Aeronautics and Astronautics, are employed at UWAL to run tests for University research, commercial customers, and for instructional uses, such as student projects. UWAL provides departmental support for research projects such as the unmanned aerial vehicle (UAV) project.

Admission

Students who have earned a baccalaureate degree in an accredited program of aeronautics and astronautics or closely related field are eligible for the M.S.A.A. and M.A.E. programs. Backgrounds in related fields require review on a case-by-case basis and may require preparatory courses, depending on the student's educational objectives and previous studies. Admission is competitive, with the equivalent of a 3.00 GPA a minimum standard. Submission of verbal, quantitative, and analytical scores on the Graduate Record Examination is required. Entrance-requirement details, application deadlines, application forms, and advising literature may be obtained from the department office or the department's Web page (www.aawashington.edu).

Admission to the Doctor of Philosophy program requires a master's degree, preferably in aerospace or mechanical engineering, with a minimum GPA of 3.35 and satisfactory performance on a departmental qualifying examination.

Additional Information

Students who intend to work toward advanced degrees must apply for admission to the Graduate School. Most students are financially supported by the department as teaching or research assistants, or by their employers. For further information on this or other aspects of department programs, contact the Graduate Program Coordinator, 206 Guggenheim, Box 352400, or visit the department's Web site at www.aawashington.edu.

Faculty

Chair

Adam Bruckner

Professors

Breidenthal, Robert E. * 1980; PhD, 1979, California Institute of Technology; turbulence, entrainment, mixing, vorticity.

Bruckner, Adam * 1972; PhD, 1972, Princeton University; space systems, propulsion, hypervelocity accelerators, energy conservation astrobiology.

Christiansen, Walter H. * 1967, (Emeritus); PhD, 1961, California Institute of Technology; gas dynamics and gas physics, high-power gas lasers and their application, energy conversion.

Clark, Robert N. * 1957, (Emeritus); PhD, 1969, Stanford University; automatic control systems, fault detection in dynamic systems.

Decher, Reiner * 1973, (Emeritus); PhD, 1968, Massachusetts Institute of Technology; aircraft propulsion, fluid mechanics, energy conversion.

Eastman, Fred 1974, (Emeritus); MS, 1929, Massachusetts Institute of Technology; aeronautics and astronautics.

Fyfe, Ian M. * 1959, (Emeritus); PhD, 1957, Stanford University; dynamics, wave propagation in solids and fluids.

Hertzberg, Abraham * 1966, (Emeritus); MAE, 1949, Cornell University; energy systems, space systems, fusion, aeronautical systems.

Hoffman, Alan Lowell * 1989; PhD, 1967, California Institute of Technology; plasma physics and magnetic confinement fusion.

Holsapple, Keith A. * 1965; PhD, 1965, University of Washington; solid mechanics, continuum mechanics, structure waves, finite element methods.

Jarboe, Thomas R. * 1989; PhD, 1974, University of California (Berkeley); plasma physics and controlled fusion, magnetic reconnection and relaxation.

Joppa, Robert G. * 1947, (Emeritus); PhD, 1972, Princeton University; aircraft flight mechanics, stability and control, V/STOL testing, airplane design, flight testing.

Kurosaka, Mitsuru * 1987; PhD, 1968, California Institute of Technology; propulsion, turbo machinery, thermo-fluid mechanics, heat transfer and acoustics.

Lin, Kuen-Yuan * 1984; PhD, 1977, Massachusetts Institute of Technology; composite materials, structural mechanics, finite element methods.

Parmeter, R. Reid * 1963, (Emeritus); PhD, 1963, California Institute of Technology; structures, solid mechanics, fracture mechanics.

Russell, David A. * 1967, (Emeritus); PhD, 1961, California Institute of Technology; fluid mechanics and gas physics, aerodynamics, shock processes and laser fluid dynamics.

Street, Robert E. 1948, (Emeritus); PhD, 1939, Harvard University; aeronautics and astronautics.

Vagners, Juris * 1967; PhD, 1967, Stanford University; optimal control and estimation theory, applications to aircraft systems.

Winglee, Robert M. * 1991, (Adjunct); PhD, 1984, University of Sydney (Australia); space plasma physics, numerical simulation of space plasmas.

Associate Professors

Devasia, Santosh 2000, (Adjunct); PhD, 1993, University of California (Santa Barbara); control theory and applications: nanotechnology, distributed systems, and biomedical systems.

Eberhardt, David Scott * 1986; PhD, 1985, Stanford University; computational fluid dynamics, numerical analysis.

Livne, Eli * 1990; PhD, 1990, University of California (Los Angeles); multidisciplinary design, aeroelasticity, aeroservoelasticity, optimization, structural dynamics.

Ly, Uy-loi * 1988; PhD, 1983, Stanford University; robust controls, parameter optimization, model reduction, digital control, design integration.

Mattick, Arthur T. * 1975; PhD, 1975, Massachusetts Institute of Technology; gas physics, gas lasers, energy conversion, propulsion.

Slough, John T. * 1992; PhD, 1981, Columbia University; plasma physics, nuclear fusion and space propulsion.

Assistant Professors

Anderson, Todd A. * 2000; PhD, 1999, University of Arizona; composite materials, structural mechanics, rapid prototyping.

Campbell, Mark E. * 1997, (Affiliate); PhD, 1996, Massachusetts Institute of Technology; precision controlled structures, autonomous aerospace vehicles, smart materials.

Dabiri, Dana * 2002; PhD, 1992, University of California (San Diego); fluid dynamics, turbulent and vortical flows, thermal transport.

Mesbahi, Mehran 2002; PhD, 1996, University of Southern California (Los Angeles); distributed space systems, system and control theory, optimization, complex dynamical systems.

Morgansen, Kristi A. 2002; PhD, 1999, Harvard University; nonlinear controls, sensor design, biologically inspired locomotion and communication networks.

Rysdyk, Rolf * 2001; PhD, 1998, Georgia Institute of Technology; nonlinear adaptive control, robust nonlinear control, autonomous flight, fault-tolerant flight control.

Shumlak, Uri 1994; PhD, 1992, University of California (Berkeley); computational fluid dynamics, parallel computing, plasma physics, magneto-hydrodynamics.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crsctat/.

A A 400 Gas Dynamics (3) Introduction to kinetic theory and free molecule flow. Review of thermodynamics. One-dimensional gas dynamics: one-dimensional wave motion, combustion waves. Ideal and real gas application. Prerequisite: PHYS 123; CHEM E 260. Offered: W.

A A 402 Fluid Mechanics (3) Inviscid equations of motion, incompressible potential flows, small perturbation flows, bodies of revolution, viscous equations, exact solutions, laminar boundary-layer equations, similar solutions, integral methods. Compressibility, instability, turbulent boundary layers. Prerequisite: MATH 324; A A 300. Offered: Sp.

A A 405 Introduction to Aerospace Plasmas (3) Development of introductory electromagnetic theory including Lorentz force and Maxwell's equations. Plasma description. Single particle motions and drifts in magnetic and electric fields. Derivation of plasma fluid model. Introduction to plasma waves. Applications to electric propulsion, magnetic confinement, and plasmas in space and Earth's outer atmosphere. Prerequisite: PHYS 123; MATH 324. Offered: A.

A A 406 Gas Discharges for Plasma Processing and Other Applications (3) Lectures and demonstrations on direct-current and radio-frequency electrical discharges for sputtering, plasma etching and other plasma processing applications. Prerequisite: either MATH 136 or MATH 307; PHYS 122.

A A 409 Computer Tools for Aerospace III (2) Computer-aided drawing basics, three-dimensional drawing, projections, views. Computer-aided design and analysis tools for stress and heat transfer calculations. Offered: A.

A A 410- Aircraft Design I (4-) Conceptual design of a modern airplane to satisfy a given set of requirements. Estimation of size, selection of configuration, weight and balance, and performance. Satisfaction of stability, control, and handling qualities requirements. Offered: W.

A A -411 Aircraft Design II (-4) Preliminary design of a modern airplane to satisfy a given set of requirements. Estimation of size, selection of configuration, weight and balance, and performance. Satisfaction of stability, control, and handling qualities requirements. Prerequisite: A A 410. Offered: Sp.

A A 419 Aerospace Heat Transfer (3) Fundamentals of conductive, convective, and radiative heat transfer with emphasis on applications to atmospheric and space flight. Prerequisite: PHYS 123; MATH 307. Offered: W.

A A 420- Spacecraft and Space Systems Design I (4-) Design of space systems and spacecraft for advanced near-Earth and interplanetary missions. Astrodynamics, space environment, space systems engineering. Mission design and analysis, space vehicle propulsion, flight mechanics, atmospheric entry, aerobraking, configuration, structural design, power systems, thermal management, systems integration. Oral presentations and report writing. Design topics vary. Offered: W.

A A -421 Spacecraft and Space System Design II (-4) A continuation of 420. Course content varies from year to year and is dependent on the design topic chosen for 420. Prerequisite: A A 420. Offered: Sp.

A A 430 Finite Element Structural Analysis (3) Introduction to the finite element method and application. One-, two-, and three-dimensional problems including trusses, beams, box beams, plane stress and plane strain analysis, and heat transfer. Use of finite element software. Prerequisite: CEE 220. Offered: A.

A A 432 Composite Materials for Aerospace Structures (3) Introduction to analysis and design of aerospace structures utilizing filamentary composite materials. Basic elastic properties and constitutive relations of composite laminates. Failure criteria, buckling analysis, durability, and damage tolerance of composite structures. Aerospace structure design philosophy and practices. Prerequisite: A A 332. Offered: W.

A A 441 Flight Test Engineering (3) Determination in flight of performance, stability, and control characteristics of aircraft; and comparison with predicted and wind tunnel results. Prerequisite: A A 311. Offered: Sp.

A A 448 Control Systems Sensors and Actuators (3) Study of control systems components and mathematical models. Amplifiers, DC servomotors, reaction mass actuators. Accelerometers, potentiometers, shaft encoders and resolvers, proximity sensors, force transducers, piezoceramic materials, gyroscopes. Experimental determination of component models and model parameters. Two 3-hour laboratories per week. Prerequisite: either A A 450 or E E 446. Offered: jointly with E E 448; W.

A A 449 Design of Automatic Control Systems (4) Design problems for aerospace vehicles, systems with unstable dynamics, lightly damped modes, non-minimum phase, nonlinear dynamics. Computer-aided analysis, design and simulation, with laboratory hardware-in-the-loop testing. Team design reviews, oral presentations. Prerequisite: either A A 450, E E 446, or M E 471. Offered: jointly with E E 449; Sp.

A A 450 Control in Aerospace Systems (4) Overview of feedback control. Linearization of nonlinear models. Model properties: stability, controllability, observability. Dynamic response: time and frequency domain techniques. Frequency response design techniques. Design of aerospace control systems via case studies. Prerequisite: M E 230; MATH 308. Offered: A.

A A 461 Advanced Propulsion (3) Physical characteristics and components of rockets. Nozzle gasdynamics and non-ideal flow effects. Solid and liquid propulsion systems, components, and design. Aerodynamics of airbreathing engine components: inlets, compressors, turbines, afterburners, nozzles. Engine design methodology. Prerequisite: A A 360. Offered: A.

A A 480 Systems Dynamics (3) Equations of motion and solutions for selected dynamic problems; natural frequencies and mode shapes; response of simple systems to applied loads. Prerequisite: A A 312. Offered: Sp.

A A 497 Aerospace Industry Tour (1) Tours to local aerospace facilities to see how aerospace vehicles and systems are built, designed, and tested. Credit/no credit only. Offered: W.

A A 498 Special Topics in Aeronautics and Astronautics (0-1, max. 10) Lectures and discussions on topics of current interest in aviation and space engineering. Three quarters required for credit. Offered: AWSp.

A A 499 Special Projects (1-5, max. 10) Investigation on a special project by the student under the supervision of a faculty member. A maximum of 6 credits may be applied toward senior technical electives. Offered: AWSp.

Courses for Graduates Only

A A 501 Physical Gasdynamics I (3) Equilibrium kinetic theory; chemical thermodynamics; thermodynamic properties derived from quantum statistical mechanics; reacting gas mixtures; applications to real gas flows and gas dynamics. Offered: odd years; A.

A A 502 Physical Gasdynamics II (3) Introduction to vibrational relaxation and nonequilibrium chemistry. Nonequilibrium physics applied to flow. Brief introduction to nonequilibrium kinetic theory. Application to a variety of research and development areas such as high-temperature energy systems and gas lasers. Prerequisite: A A 501 or permission of instructor. Offered: even years; W.

A A 503 Kinetic Theory/Radiative Transfer (3) Boltzmann and Collisionless Boltzmann (Vlasov) equations. Instabilities in homogeneous and inhomogeneous plasma, quasi-linear diffusion, wave-particle interaction, collisional (Fokker-Planck) equation. Introduction to radiative non-equilibrium, scattering and absorption processes. Integral equation of radiative transfer. Prerequisite: A A 501 or permission of instructor. Offered: even years; Sp.

A A 504 Fluid Mechanics (3) Review of thermodynamics; vectors and dyads. Derivation of the Navier-Stokes equations, stream functions and potential functions; integrals of the equations of motion. Boundary conditions and discontinuity surfaces in fluids. Exact solutions. Dimensional analysis. Vorticity

dynamics. Highly viscous flows. Rotational flows. Offered: A.

A A 505 Fluid Mechanics of Inviscid Flow I (3) Ideal incompressible flow; potential and stream functions. Airfoil theory and lifting line theory. Introduction to nonsteady flow; sound waves and surface waves; special topics. Offered: even years; W.

A A 506 Fluid Mechanics of Inviscid Flow II (3) Ideal compressible flow; supersonic airfoils; shock waves; slender-body theory; lifting surface theory; approximate methods. Transonic flow; similarity; special topics. Prerequisite: A A 505. Offered: even years; Sp.

A A 507 Aerodynamics of Viscous Fluids I (3) Introduction to viscous flow; exact solutions of the laminar equations of motion; approximate equations. Exact solutions for laminar boundary-layer equations. Approximate methods for compressible laminar boundary layers. Offered: odd years; W.

A A 508 Aerodynamics of Viscous Fluids II (3) The phenomena of turbulence; transition prediction; Reynolds stresses; turbulent boundary-layer equations. Approximate methods for turbulent boundary layers. Prerequisite: A A 507 or permission of instructor. Offered: odd years; Sp.

A A 509 Computational Fluid Dynamics I (3) Numerical approximation of the inviscid compressible equations of fluid dynamics. Analysis of numerical accuracy, stability, and efficiency. Use of explicit, implicit, and flux split methods. Discussion of splitting, approximate factorization, discrete point, and finite volume approaches. Applications to the solution of simple hyperbolic systems of equations and the Euler equations. Offered: W.

A A 510 Computational Fluid Dynamics II (3) Numerical approximation of equations of compressible viscous flow. Mesh requirements for resolving viscous effects in high Reynolds number flows. Analysis of numerical accuracy, stability, and efficiency. Use of explicit and implicit methods, boundary condition procedures. Applications to solution of the Navier-Stokes equations. Prerequisite: A A 509 or permission of instructor. Offered: odd years; Sp.

A A 513 Gas Laser Theory and Practice (3) Physics and fluid mechanics of gas lasers, with emphasis on performance of gas dynamic lasers, flowing chemical lasers, and gaseous electric lasers. Development of laser optics, interaction of radiation and matter, laser oscillation conditions, and methods of obtaining population inversions. Applications of high-power lasers emphasized. Offered: even years; Sp.

A A 516 Stability and Control of Flight Vehicles (3) Static and dynamic stability and control of flight vehicles in the atmosphere. Determination of stability derivatives. Effects of stability derivatives on flight characteristics. Flight dynamic model. Responses to control inputs and external disturbances. Handling qualities. Control system components, sensor characteristics. Stability augmentation systems. Offered: A.

A A 518 Automatic Control of Flight Vehicles (3) Specifications of flight vehicle performance. Synthesis of stability augmentation systems and autopilot control laws in the frequency-domain and using multivariable control methods. Reduced-order controller synthesis, digital design, and implementation. Use of computer-aided control design packages. Prerequisite: A A 516 and A A 548. Offered: odd years; Sp.

A A 520- Seminar (1-, max. 10) Topics of current interest in aerospace engineering. Credit/no credit only. Prerequisite: A A major. Offered: AWSp.

A A 523 Special Topics in Fluid Physics (3) Offered: AWSp.

A A 524 Aircraft Engine Noise (3) Description and measurement of noise, power spectra. Elementary duct acoustics, rotor-stator interaction, effect of design blade loading. Turbine noise, core noise, acoustic linings. Jet noise, Lighthill theory, scaling laws. Offered: odd years; A.

A A 525 Aerothermodynamics of Aircraft Engines Components (3) Estimation of component performances. Inlets and nozzles. Aerodynamics of turbines and compressors. Radial equilibrium theory, through-flow theory. Offered: even years; W.

A A 526 Aerothermodynamics of Aircraft Engine Systems (3) Aircraft gas turbine engine, cycle analysis. Component performance measures. Preliminary design of engines, including component losses. Off-design performance. Variable geometry engines. Offered: even years; Sp.

A A 527 Energy Conversion I (3) Energy resources. Heat generation by combustion, solar collection. Analysis of power systems for space and advanced commercial power generation. High-temperature cycles. Offered: even years; A.

A A 528 Energy Conversion II (3) Heat exchangers, energy storage. Direct conversion of heat to electricity. Electrochemical processes. Recommended: A A 527. Offered: odd years; W.

A A 529 Space Propulsion (3) Nucleonics, and heat transfer of nuclear-heated rockets. Electrothermal, electromagnetic, and electrostatic thrusters. Power/propulsion systems. Prerequisite: permission. Offered: odd years; Sp.

A A 530 Mechanics of Solids (3) General concepts and theory of solid mechanics. Large deformations. Behavior of elastic, viscoelastic, and plastic solids. Linear theory of elasticity and thermoelasticity. Wave propagation in solids. Offered: A.

A A 531 Structural Reliability and Damage (3) Theory of plasticity, yield surfaces, flow rules, limit theorems. Concepts of failure and fatigue in aerospace structures, residual strength, cumulative damage, probability aspects and case histories. Prerequisite: A A 530 or equivalent or permission of instructor. Offered: odd years; W.

A A 532 Mechanics of Composite Materials (3) Analyses and design of composite materials for aerospace structures. Micromechanics. Anisotropic elasticity. Laminated plate theory. Thermo-viscoelastic behavior and fracture of composites. Prerequisite: A A 530 or permission of instructor. Offered: odd years; Sp.

A A 535 Analysis of Shells I (3) General development of the geometrically non-linear theory of thin elastic shells. Topics include an introduction to tensor analysis with applications to curved two dimensional spaces, theory of surfaces, Kirchhoff approximations, membrane theory and non-linear shallow shells. Offered: even years; Sp.

A A 540 Finite Element Analysis I (3) Formulation of the finite element method using variational and weighted residual methods. Element types and interpolation functions. Application to elasticity problems, thermal conduction, and other problems of engineering and physics. Offered: W.

A A 541 Finite Element Analysis II (3) Advanced concepts of the finite element method. Hybrid and boundary element methods. Nonlinear, eigenvalue, and time-dependent problems. Prerequisite: A A 540 or permission of instructor. Offered: Sp.

A A 546 Mathematical Foundations of Systems Theory (4) Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear

operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Prerequisite: graduate standing or permission of instructor. Offered: jointly with CHEM E 510/E 510/M E 510; A.

A A 547 Linear Systems Theory (3) Transfer-function and state-space description. Solution of the state equation; state transition matrix. Controllability and observability. Zeros and poles of multivariable systems; the Smith-McMillan form. Systems norms. Systems invertibility. State feedback. Outback feedback with observers. Prerequisite: graduate standing or permission of instructor. Offered: jointly with E E 584/ME 575 A.

A A 548 Linear Multivariable Control (3) Single loop feedback control theory; poles, zeros, Nyquist stability, performance, robustness of multivariable systems; multivariable control synthesis: Linear-Quadratic-Gaussian methods, loop transfer recovery, Youla parameterization, H-infinity techniques, parameter optimization design. Prerequisite: E E 584 or M E 575; E E 446 or A A 448 or M E 471 or equivalent. Offered: jointly with E E 548/M E 548; W.

A A 549 Estimation and System Identification (3) Review of system models, model structure, model parameterization; review of stochastic processes; state estimation: observers, the Kalman-Bucy filter, numerical issues in filter design and implementation; system identification: linear regression, least squares, maximum likelihood, instrumental variable techniques. Prerequisite: E E 505 or AMATH 506 or STAT 506; recommended: A A/E E/M E 548. Offered: jointly with E E 549/M E 549; Sp.

A A 550 Nonlinear Optimal Control (3) Calculus of variations for dynamical systems, definition of the dynamic optimization problem, constraints and Lagrange multipliers, the Pontryagin Maximum Principle, necessary conditions for optimality, the Hamilton-Jacobi-Bellman equation, singular arc problems, computational techniques for solution of the necessary conditions. Prerequisite: graduate standing; recommended: A A 548 or E E 548. Offered: jointly with E E 550/M E 550; odd years; A.

A A 553 Vibrations of Aerospace Systems (3) Continuous and discrete systems, natural frequencies, and modal analysis; forced vibrations and motion-dependent forces. Structural damping; control augmented structures. Measurements for structural dynamic testing. Prerequisite: A A 571 or equivalent. Offered: odd years; Sp.

A A 554 Aeroelasticity (3) Static and dynamic aeroelasticity, unsteady aerodynamics, aeroservoelastic modeling, and active control. Offered: even years; Sp

A A 556 Space and Laboratory Plasma Physics (3) Discussion of waves, equilibrium and stability, diffusion and resistivity, basic plasma kinetic theory, and wave-particle interactions. Prerequisite: either A A 405, ESS 515, or GPHYS 505, or permission of instructor. Offered: jointly with ESS 576; Sp.

A A 557 Physics of Fusion Plasmas (3) Review and comparison of single particle and fluid descriptions of plasmas. MDH equilibrium, flux surfaces, and basic toroidal description. Collisional processes including physical and velocity space diffusion. Introduction to island formation, stochasticity, and various plasma instabilities. Prerequisite: A A 405 or GPHYS 505. Offered: even years; W

A A 558 Plasma Theory (3) Equilibrium, stability, and confinement. Classical transport, collisionless and resistive skin depths. Ideal MHD equations formally derived and properties of plasmas in the ideal limit are studied. Straight and toroidal equilibrium. Linear stability analysis with examples. Taylor minimum energy principle. Prerequisite: either A A 405, A A

556, A A 557, ESS 576, or GPHYS 537. Offered: even years; Sp.

A A 559 Plasma Science Seminar (1, max. 10) Current topics in plasma science and controlled fusion with presentations by invited speakers, on-campus speakers, and students. Students expected to give a seminar once or twice a year with instructor reviewing the method of presentation and material used for the presentation. Credit/no credit only. Offered: AWSp.

A A 565 Fusion Reactor Fundamentals (3) Introduction to basic engineering features of fusion power plants. Brief description of basic fusion physics and discussion of power plants for leading thermonuclear concepts. Engineering problems; blanket, shield neutronics; materials, thermal hydraulics; tritium, superconducting systems. Prerequisite: completion of or concurrent enrollment in A A 405 or permission of instructor. Offered: odd years; W.

A A 571 Principles of Dynamics I (3) Systems of particles, rotating axes, rigid-body dynamics; calculus of variations. Lagrangian mechanics. Hamilton's principle. Kane's equations. Periodic and quasiperiodic motion. Stability of dynamical systems. Offered: A.

A A 575 Continuum Mechanics (3) General foundations of the fundamental concepts of motion, stress, energy, and electromagnetism for a continuum. General equations of conservation of mass, momentum, and energy. Linear and nonlinear elastic, viscous, and inelastic materials. Offered: jointly with CEE 508; even years; W.

A A 581 Digital Control I (3) Discrete-time and sampled-data systems, difference equations, and z-transform. Frequency response. Nyquist stability criterion. Gain and phase margins. Limitations of sampling. Sample rate selection. Controller design via discrete-time equivalents to continuous-time controllers, by direct-digital root locus and by loop shaping. Prerequisite: M E 471 or equivalent; recommended: M E 575 or equivalent. Offered: jointly with E E 581/M E 581; W.

A A 582 Digital Control II (3) Controller design via state feedback and observers. Introduction to discrete-time stochastic processes. Quantization effects. Introduction to parameter identification using noisy measurements. LQR optimal control. Kalman filter design. LQG optimal control. Prerequisite: A A 581 or permission of instructor. Offered: jointly with E E 582/M E 582; Sp.

A A 591 Robotics and Control Systems Colloquium (1, max. 3) Colloquium on current topics in robotics and control systems analysis and design. Topics presented by invited speakers as well as on-campus speakers. Emphasis on the cross-disciplinary nature of robotics and control systems. Credit/no credit only. Offered: jointly with CHEM E/E E/M E 591; AWSp.

A A 597 Aerospace Industry Tour (1) Tours to local aerospace facilities to see how aerospace vehicles and systems are built, designed, and tested. Credit/no credit only. Offered: W

A A 599 Special Projects (1-5, max. 15) Investigation on a special project by the student under the supervision of a faculty member. Offered: AWSpS.

A A 600 Independent Study or Research (*) Offered: AWSpS.

A A 700 Master's Thesis (*) Offered: AWSpS.

A A 800 Doctoral Dissertation (*) Offered: AWSpS.

Bioengineering

309 Harris Hydraulics Laboratory

General Catalog Web page:

www.washington.edu/students/gencat/academic/Bioengineering.html

Department Web page:

depts.washington.edu/bioe/

Bioengineering encompasses a wide range of activities in which the disciplines of engineering and biological or medical science intersect. Such multidisciplinary endeavors are yielding new discoveries and major advances that are revolutionizing the health-care system. The Department of Bioengineering, housed jointly in the School of Medicine and the College of Engineering, provides a comprehensive, multidisciplinary program of education and research, and is recognized as one of the finest bioengineering programs in the world. Programs of study lead to the Bachelor of Science, Master of Science, and Doctor of Philosophy degrees. Major areas of research and education include distributed diagnosis and home healthcare (D2H2), molecular bioengineering and nanotechnology, engineered biomaterials and tissue engineering, medical imaging and image-guided therapy, and computational bioengineering. Detailed information on Bioengineering appears in the Interschool or Intercollege Programs section of this catalog.

Chemical Engineering

105 Benson

General Catalog Web page:

www.washington.edu/students/gencat/academic/Chemical_Eng.html

Department Web page:

depts.washington.edu/chemeng/

Chemical engineering is concerned with processes for transforming raw materials into energy and consumer products, such as gasoline, electronic materials, pulp and paper, fertilizers, rubber, polymers and composites, and pharmaceuticals. Chemical engineering research explores the fundamental properties of these, the processes for making them, and the design and operation of chemical plants and equipment. Important issues include societal and environmental impact, safety, and production efficiency. Few other professions can match the diversity of job opportunities available to chemical engineering graduates.

Graduate Program

Graduate Program Coordinator
105 Benson, Box 351750
206-543-2250

The department offers studies leading to the degrees of Doctor of Philosophy, Master of Science in Chemical Engineering, and Master of Science in Engineering. The doctoral degree is centered on the dissertation with a foundation in course work; it is generally completed in four to five years beyond the baccalaureate degree.

In the master's program primary emphasis is placed on course work, and the degree generally requires 21 months of study. Thesis and non-thesis options are available.

The program of study includes basic subjects of importance to all chemical engineers, such as thermodynamics, transport phenomena, kinetics, and applied mathematics. In addition, students are invited to take more-specialized courses in chemical engineering or in other departments. Students usually take three courses during their first quarter. In subsequent quarters, less time is spent on course work, and more on research and independent study.

The department has about seventy full-time graduate students, most of whom are working toward a doctorate. They study and collaborate with faculty members in an atmosphere that is informal, friendly, and intellectually vigorous. Faculty interests are broad, so students become familiar with a variety of areas while receiving individual guidance in a specialty.

Research Facilities

The department is fortunate to have outstanding facilities. Benson Hall contains classrooms, offices, stockrooms, a machine shop, laboratories, and a variety of specialized research equipment. Each graduate student is provided desk space in a small laboratory or office as well as access to larger laboratories in the building. Students also may use the services of the Academic Computer Center, instrument-making shops, research centers (e.g., biomaterials, nanotechnology, chemical analysis), and the Chemistry and Engineering Libraries.

Admission Requirements

A student is accepted for admission to the Graduate School as a chemical engineering major by joint action of the Graduate School and the department after consideration of a formal application. Most students applying for graduate admission have a Bachelor of Science degree in chemical engineering. If a student has an undergraduate degree in chemistry, physics, mathematics, or another branch of engineering, he or she may obtain a graduate degree in chemical engineering by meeting certain additional requirements.

Financial Aid

The department has various sources of support for qualified graduate students. Those interested in applying for admission and support should visit the department's Web site at depts.washington.edu/chemeng/. The completed forms and reference letters should be received in the department office by January 15. Offers of admission with financial support are usually made in January through March.

Faculty

Chair

Eric M. Stuve

Professors

Allan, G. Graham * 1966; PhD, 1955, University of Glasgow (UK), DSc, 1970, University of Strathclyde (UK); creativity and innovation.

Babb, Albert L. * 1956, (Emeritus); MS, 1949, PhD, 1951, University of Illinois; reactor engineering, bioengineering.

Baneyx, Francois * 1992; PhD, 1991, University of Texas (Austin); biotechnology, protein technology, biochemical engineering.

Berg, John C. * 1964; PhD, 1964, University of California (Berkeley); interfacial phenomena, surface and colloid science.

Bowen, J. Ray * 1981, (Emeritus); PhD, 1963, University of California (Berkeley); combustion.

David, Morton 1983, (Emeritus); DEng, 1950, Yale University; chemical engineering.

Davis, E. James * 1983; PhD, 1960, University of Washington; transport in porous media, microparticle physics and chemistry, surface and colloid science.

Finlayson, Bruce A. * 1967; MS, 1963, Rice University, PhD, 1965, University of Minnesota; modeling of chemical engineering problems.

Garlid, Kermit L. * 1960, (Emeritus); PhD, 1961, University of Minnesota; nuclear fuel cycles, radioactive waste management.

Gustafson, Richard Roy * 1986, (Adjunct); PhD, 1982, University of Washington; process modeling and optimization, fiber composites.

Heideger, William J. * 1957, (Emeritus); PhD, 1959, Princeton University; biomedical transport phenomena.

Hodgson, Kevin T. * 1991, (Adjunct); MS, 1980, Mellon University, PhD, 1986, University of Washington; surface and colloid science, papermaking chemistry, secondary fiber recycling.

Hoffman, Allan S. * 1970; MS, 1955, DSc, 1957, Massachusetts Institute of Technology; synthesis, characterization, and biological interaction of biomaterials, mechanics of natural tissue.

Horbett, Thomas A. * 1973; PhD, 1970, University of Washington; interfacial proteins, cell interactions, foreign body reaction, nonfouling surfaces.

Jenekhe, Samson A. * 2000; MS, 1980, PhD, 1985, University of Minnesota; polymer science and engineering, optoelectronic/photonic materials.

Johanson, Lennart N. * 1983, (Emeritus); PhD, 1948, University of Wisconsin; chemical engineering.

Lidstrom, Mary E. * 1995; MS, 1975, PhD, 1977, University of Wisconsin; biomolecular engineering, metabolic engineering, bioremediation.

McKean, William T. * 1979; PhD, 1968, University of Washington; pulp and paper science, chemical engineering.

Morgan, Michael S. * 1974, (Adjunct); DSc, 1972, Massachusetts Institute of Technology; applied respiratory, physiology and inhalation toxicology.

Moulton, R. Wells 1941, (Emeritus); MS, 1934, PhD, 1938, University of Washington; chemical engineering.

Pilat, Michael J. * 1967, (Adjunct); PhD, 1967, University of Washington; air resources engineering (design of air-pollution-control equipment).

Ratner, Buddy D. * 1972; PhD, 1972, Polytechnic Institute of Brooklyn; synthesis and characterization of polymeric biomaterials.

Ricker, Neil L. * 1978; MS, 1972, PhD, 1978, University of California (Berkeley); process control and optimization.

Schwartz, Daniel T. * 1991; MS, 1985, PhD, 1989, University of California (Davis); electrochemical and environmental engineering.

Seferis, James C. * 1977; PhD, 1977, University of Delaware; polymers and their composites, manufacturing, scaling, and team concepts.

Sleicher, Charles A. * 1960, (Emeritus); PhD, 1955, University of Michigan; fluid mechanics, heat transfer.

Stuve, Eric M. * 1985; MS, 1979, PhD, 1983, Stanford University; electrochemical surface science, fuel cell engineering.

Woodruff, Gene L. * 1965, (Emeritus); PhD, 1965, Massachusetts Institute of Technology; reactor physics, fusion engineering, neutron spectroscopy, energy studies.

Yager, Paul * 1987, (Adjunct); PhD, 1980, University of Oregon; physical chemistry, applications of biomembranes, biosensors, microfluidics, biomedical diagnostics.

Associate Professors

Castner, David G. * 1986, (Research); PhD, 1979, University of California (Berkeley); polymer surfaces, metal-organic interfaces, catalytic materials.

Holt, Bradley R. * 1984; PhD, 1984, University of Wisconsin; process design and control.

Krieger-Brockett, Barbara * 1976; MS, 1972, PhD, 1976, Wayne State University; reaction engineering, chemical kinetics and catalysis simulation.

Overney, Rene M. * 1996; MS, 1989, PhD, 1992, University of Basel (Switzerland); nanoscale surface science and polymer rheology.

Assistant Professors

Adler, Stuart B. 2001; PhD, 1993, University of California (Berkeley); electrochemical engineering, solid-state electrochemistry.

Hayes, Brian * 1992, (Research); PhD, 1997, University of Washington; polymers and fiber-reinforced composites in aerospace and sporting goods industries.

Jiang, Shaoyi * 1999; PhD, 1993, Cornell University; molecular simulation, statistical mechanics, and scanning probe microscopy.

Senior Lecturer

Baratuci, William B. 1998; PhD, 1990, Case Western Reserve University.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

CHEM E 435 Transport Processes III (4) Mass transfer, basic principles, and applications to equipment design. Physical separation processes. Prerequisite: CHEM E 326; CHEM E 340. Offered: A.

CHEM E 436 Chemical Engineering Laboratory I (3) Lectures on experimental design, instrumentation, laboratory safety, and report writing; laboratory experiments on fluid mechanics and heat transfer. Emphasis on experimental planning, procedures, and report writing. Prerequisite: CHEM E 326; CHEM E 340 which may be taken concurrently; T C 231; recommended: T C 333. Offered: Asp.

CHEM E 437 Chemical Engineering Laboratory II (3) Continuation of 436. Laboratory investigation of chemical engineering principles applied to equipment design with emphasis on mass transfer operations and chemical reactors. Prerequisite: CHEM E 435; CHEM E 436; CHEM E 465. Offered: W.

CHEM E 445 Fuel Cell Engineering (3) Introduction to electrochemical fuel cells for use in transportation and stationary power applications. Topics covered include types of fuel cells, single cell operation, stack engineering, overall system design, and safety, with

emphasis on proton exchange membrane and solid oxide fuel cells. Prerequisite: CHEM E 330.

CHEM E 450 Solid State Materials and Chemical Processes (3) *Seferis* Fundamentals of solid state including process analysis, mechanical properties; heterogeneity; anisotropy; liquid/solid transformations; rate processes; thermal analysis; viscoelasticity; microscopy; molecular characterization techniques. Application of fundamentals in examining polymers, metals and ceramics as used in the electronics and aviation industries. Prerequisite: CHEM E 340; CHEM E 465. Offered: W.

CHEM E 455 Surface and Colloid Science Laboratory (1/3, max. 3) *Berg* Laboratory techniques, equipment, and underlying fundamentals in surface and colloid science. Experiments in the measurement of surface tension, adsorption, wetting and spreading, colloid properties, emulsion preparation and stability, electrophoresis, and interfacial hydrodynamics. Recommended: CHEM E 326; CHEM E 330; CHEM 461. Offered: Sp.

CHEM E 458 Surface Analysis (3) Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials science, wear, and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger): ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Offered: jointly with BIOEN 492; W.

CHEM E 461 Electrochemical Engineering (3) *Schwartz* Explores role of thermodynamics, charge transfer kinetics, and mass transfer on behavior of electrochemical systems. Includes cell thermodynamics, faradaic and non-faradaic rate processes, ionic transport, nucleation and growth theories. Applications to chemical sensors, batteries, corrosion, thin film deposition. In-class demonstrations to illustrate concepts. Offered: W.

CHEM E 462 Application of Chemical Engineering Principles to Environmental Problems (3) Environmental problems in chemical engineering. Team taught; topics vary from year to year. Includes: geo-media, flow and dispersion through porous media water flow in dry soils, chemistry of radioactive waste, in situ site cleanup, ex situ site cleanup, colloid and surface science. Prerequisite: CHEM E 330. Offered: Sp.

CHEM E 465 Reactor Design (4) Application of principles of chemical kinetics to the design of commercial-scale chemical reactors; characterization of batch and flow reactors in homogeneous and heterogeneous systems. Prerequisite: CHEM E 326; CHEM E 340. Offered: A.

CHEM E 467 Biochemical Engineering (3) *Baneyx* Application of basic chemical engineering principles to biochemical and biological process industries such as fermentation, enzyme technology, and biological waste treatment. Rapid overview of relevant microbiology, biochemistry, and molecular genetics. Design and analysis of biological reactors and product recovery operations. Prerequisite: CHEM E 340; either CHEM 223, CHEM 237, or CHEM 335; recommended: CHEM E 465. Offered: jointly with BIOEN 467; W.

CHEM E 468 Air-Pollution Control Equipment Design (3) Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption of gaseous pollutants; electrostatic precipitation and filtration of particular pollutants. Actual case studies. Offered: jointly with CEE 494/M E 468; W.

CHEM E 470 Chemistry of Wood (3) Chemical and physical properties of cellulose, lignin, hemicellulose, and extractives; wood as a raw material for the chemical industry. Prerequisite: either CHEM 220, CHEM 238, or CHEM 336. Offered: A.

CHEM E 471 Pulping and Bleaching Processes (3) Conversion of wood to mechanical and chemical pulps. Kraft, sulfite, and semichemical pulping processes. Chemical recovery systems. Bleaching of mechanical and chemical pulps. Offered: jointly with PSE 476; W.

CHEM E 472 Papermaking Processes (3) Fiber sources and properties. Secondary fibers. Stock preparation, sheet forming, water removal, finishing. Coating, lamination, and printing. Paper products. Offered: jointly with PSE 477; A.

CHEM E 473 Pulp and Paper Laboratory (2) Laboratory experiments in chemical and semichemical pulping of wood. Bleaching of chemical and high-yield pulps. Physical and chemical characteristics of pulp fibers. Prerequisite: PSE 476. Offered: jointly with PSE 478; Sp.

CHEM E 480 Process Dynamics and Control (4) Analysis of the dynamics of simple chemical process units and systems; applications to stability, control, and instrumentation of such processes. Weekly two-hour laboratory included. Majors only. Prerequisite: CHEM E 435; CHEM E 465. Offered: W.

CHEM E 481 Process Optimization (3) Concepts and techniques of optimizing chemical engineering processes and systems, including classical and direct methods of search, linear and nonlinear programming, dynamic programming, statistical experimental design, and evolutionary operation. Offered: Sp.

CHEM E 482 Advanced Topics in Process Control (3) *Holt, Ricker* Current topics in process control design and analysis. Possible topics include robustness analysis and design, time delay compensation, modern frequency response techniques, discrete control, adaptive control, model-based control, and nonlinear control. Prerequisite: CHEM E 480.

CHEM E 485 Process Design I (4) Applied economics in chemical engineering design and operations; market survey and plant location; introduction to plant and process design. Prerequisite: CHEM E 480 which may be taken concurrently. Offered: W.

CHEM E 486 Process Design II (5) Comprehensive design of a specific process, including economic feasibility studies, utilization of market survey and plant location studies, process equipment design and optimization, and overall plant integration and layout. Prerequisite: CHEM E 485. Offered: Sp.

CHEM E 490 Engineering Materials for Biomedical Applications (3) *Hoffman* Combined application of the principles of physical chemistry, biochemistry, materials engineering, mass transfer, and fluid mechanics to biomedical problems. Case studies include considerations of the selection of materials, the design and the operation of instruments, components of, or entire, artificial organs (heart, kidney, lung) and artificial structural elements (bone, teeth, skin), all for use in contact with body fluids. Offered: jointly with BIOEN 490; W.

CHEM E 491 Controlled Release Systems-Principles and Applications (3) *Hoffman* Mechanisms or controlled release of active agents and the development of useful systems for this purpose. Release mechanisms include diffusive, convective, or erosive driving forces. Applications to the biomedical, agricultural, forestry, and oceanography fields. Some special case studies covered in detail. Offered: jointly with BIOEN 491; even years; W.

CHEM E 497- Special Projects in Chemical Engineering Design ([1-6]- max. 12) Chemical engineering design instruction and experience in special projects, such as industrially motivated, timely, or interdisciplinary projects. Project subject and content varies. Majors only. Prerequisite: CHEM E 340.

CHEM E 498 Special Topics in Chemical Engineering (1-4, max. 12) Topics of current interest in the field. Subject matter changes from year to year.

CHEM E 499- Undergraduate Research ([1-6]-, max. 12) Independent research projects in chemical engineering. Offered: AWSPs.

Courses for Graduates Only

CHEM E 510 Mathematical Foundations of Systems Theory (4) *Damborg* Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Prerequisite: graduate standing or permission of instructor. Offered: jointly with A A 546/E E M 510; A.

CHEM E 511 Biomaterials Seminar (1) *Hoffman, Horbett, Ratner* Presentation of student research results. Credit/no credit only. Prerequisite: permission of instructor. Offered: jointly with BIOEN 511; AWSp.

CHEM E 512 Methods of Engineering Analysis (3) Applications of mathematics to problems in chemical engineering; vector calculus; properties and methods of solution of first and second order partial differential equations; similarity transforms, separation of variables, Laplace and Fourier transforms. Prerequisite: MATH 205, MATH 307 or AMATH 351, MATH 324 or permission of instructor. Offered: jointly with AMATH 512; A.

CHEM E 523 Seminar in Chemical Engineering (1) Topics of current interest in chemical engineering. Credit/no credit only. Offered: AWSp.

CHEM E 525 Chemical Engineering Thermodynamics (4) Review of principles of thermodynamics. Applications to problems in multiphase and multicomponent systems; theories of solutions. Prerequisite: undergraduate thermodynamics. Offered: A.

CHEM E 526 Topics in Thermodynamics (3) Classical and molecular thermodynamics of phase equilibria, solution theory, thermodynamic stability, and critical phenomena. Prerequisite: CHEM E 525 or permission of instructor.

CHEM E 530 Momentum, Heat, and Mass Transfer I (4) Derivation of the differential equations for mass, energy, and momentum transport. Principles of fluid mechanics; creeping flow, turbulence, boundary-layer theory. Offered: A.

CHEM E 531 Momentum, Heat, and Mass Transfer II (3) Continuation of 530. Flows of fluid-particle systems; convective heat transfer, natural convection. Prerequisite: CHEM E 530. Offered: W.

CHEM E 554 Nanoscale Science I: Contact Mechanics and Rheology on the Nanoscale (3) *Overney* Introductory nanoscale science with emphasis on contact mechanics, principle and concept of forces, scanning force microscopy, tribology (friction, wear, lubrication), rheology, ultrathin organic films, physical properties of polymers, and computer simulation.

CHEM E 556 Principles and Applications of Colloidal Materials (3/4) *Berg, Hoffman* Preparation, stabilization, properties, and destruction of important colloidal materials. The theory and structure of the electrical double layer, electrokinetics. Includes selected case studies pertinent to air and water pol-

lution, biological fluids, industrial processes. Offered: odd years.

CHEM E 557 Research in Interfacial and Colloid Science (1) *Berg* Weekly research seminar and discussion of scientific literature pertaining to interfacial and colloid science. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

CHEM E 558 Surface Analysis (3) *Ratner* Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials science, wear, and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger); ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Offered: jointly with BIOEN 592; W.

CHEM E 559 Thin Film Science, Engineering, and Technology (3) *Stuve* The physics, chemistry, and engineering aspects of thin film deposition and technology. Vapor phase deposition emphasized. Topics include reactor types, vapor phase transport and hydrodynamics, surface and mass transport limited kinetics, nucleation and growth, homoepitaxy, heteroepitaxy, and thin film characterization. Prerequisite: permission of instructor. Offered: jointly with MSE 559.

CHEM E 560 Reactions at Solid Surfaces (3) *Stuve* Fundamental studies of adsorption systems and reactions that occur at surfaces with application toward heterogeneous catalysis, electrochemistry, etching, and corrosion. Analysis of reaction poisons and promoters, acid-base theory of metal surfaces, jellium theory of metals, and water and ion adsorption, plus other topics of current interest. Recommended: CHEM E 558 or CHEM 560.

CHEM E 562 Hazardous Air Pollution (3) Control of emission of hazardous or toxic air pollutants. Government regulations, determination of needed control efficiency. Emission control by thermal incineration, catalytic incineration, flares, condensation, carbon adsorption, and adsorption (wet and dry). Hazardous waste incinerators. Case studies. Offered: jointly with CEE 556; W.

CHEM E 565 Kinetics and Catalysis (3) *Finlayson, Krieger, Stuve* Homogeneous and heterogeneous systems with emphasis on chemical engineering principles applied to industrial reactor design. Prerequisite: CHEM E 525. Offered: W.

CHEM E 566 Control of Gaseous Air Pollutants (3) *Pilat* Physical and chemical processes used to control gaseous air pollutants. Absorption into liquids. Aqueous spray dryer scrubbers. Adsorption beds. Control of sulfur oxide and nitrogen oxide. Case studies of control systems. Prerequisite: CHEM E 435 or CHEM E 468 or permission of instructor. Offered: jointly with CEE 558; even years; Sp.

CHEM E 567 Control of Particulate Air Pollutants (3) *Pilat* Processes used to control emissions of particulate air pollutants. Use of settling chambers, cyclones, fabric filters, wet scrubbers, and electrostatic precipitators to control aerosol particles. Case studies of particulate air-pollutant control systems. Prerequisite: CHEM E 468 or permission of instructor. Offered: jointly with CEE 559; odd years; A.

CHEM E 570 Chemistry of High Polymers (3, max. 6) *Allan* Fundamentals of high polymer chemistry, including kinetics of addition and condensation polymerization, the determination of average molecular weights and chain length distributions, solution properties and the relationship between molecular structure and plastic film and fiber properties of various polymers. Prerequisite: an undergraduate sequence in organic chemistry. Offered: W.

CHEM E 571 Polymer Physics and Engineering (3) *Seferis* Description and analysis of methods for processing polymeric materials. Introduction to solid polymer physics with emphasis on the coupling of structure morphology and properties. Development of structure-property models for quantitative description and control of properties in synthetic and natural polymers and composite materials. Offered: A.

CHEM E 572 Advanced Polymeric Composites (3) *Seferis* Design, manufacture, and properties of organic and inorganic particle and fiber-reinforced polymers. Advanced techniques for characterization of processing and properties, including anisotropic elasticity/viscoelasticity theory, polymerization and network formation of matrices, theory of reinforcement, environmental and chemical effects. Prerequisite: CHEM E 571 or MSE 423 or permission of instructor. Offered: Sp.

CHEM E 575 Nonlinear Analysis in Chemical Engineering (3) *Finlayson* Comparison of numerical techniques: similarity, perturbation, finite difference, Galerkin, orthogonal collocation methods as applied to nonlinear chemical engineering problems.

CHEM E 588 Research in Applied Microbiology (1) *Lidstrom* Weekly research seminar and discussion of scientific literature pertaining to applied microbiology. Credit/no credit only. Prerequisite: permission of instructor. Offered: jointly with MICROM 588; AWSpS.

CHEM E 590 Advanced Topics in Biomaterials (3) Major, controversial issues in application of synthetic materials to medical problems. Blood compatibility, bioadhesion, intraocular lenses, contact lenses, polyurethanes, biodegradation, protein adsorption, corrosion, bone fixation, new materials, artificial heart, medical device regulation. Prerequisite: CHEM E 490 or BIOEN 490. Offered: jointly with BIOEN 590; odd years; Sp.

CHEM E 591 Robotics and Control Systems Colloquium (1, max. 3) Colloquium on current topics in robotics and control systems analysis and design. Topics presented by invited speakers as well as on-campus speakers. Emphasis on the cross-disciplinary nature of robotics and control systems. Credit/no credit only. Offered: jointly with A A/E E/M E 591; AWSp.

CHEM E 598- Effective Teaching of Chemical Engineering ([1/2]-, max. 3) *Finlayson* Topics/activities include: curriculum development: outlining a course, comparing textbooks, preparing lectures, use of lectures versus quiz sections, microteaching, other modes of instruction, e.g., self-paced, use of design problems. Tests: creating and grading. Role of computers, review of engineering software, diversity, international teaching assistants, sexual harassment, assessment of teaching, resume. Offered: WSp.

CHEM E 599 Current Topics in Chemical Engineering (1-3, max. 12) Readings or lectures and discussions of topics of current interest in the field of chemical engineering. Subject matter changes from year to year. Prerequisite: permission of instructor.

CHEM E 600 Independent Study or Research (*) Offered: AWSpS.

CHEM E 700 Master's Thesis (*) Offered: AWSpS.

CHEM E 800 Doctoral Dissertation (*) Offered: AWSpS.

Civil and Environmental Engineering

201 More

General Catalog Web page:
www.washington.edu/students/gencat/academic/Civil_Engineering.html

Department Web page:
www.ce.washington.edu

Civil and environmental engineering is a profession which interfaces closely with society in the planning, design, construction, and management of facilities serving the needs of people. These activities include all transportation modes: highways, aerospace, rivers, and harbors; water resources, hydraulics, and coastal engineering; structures, mechanics, and geotechnical engineering; surveying, mapping, and photogrammetry; urban planning and development; water supply, wastewater treatment, and water-quality management; solid- and hazardous-waste disposal; and quality control and management of the air resources.

A civil engineer may specialize in one or several of these activities and may further specialize in a particular function, such as design or management. The work frequently provides close associations with the legal profession, urban and regional planners, economists, public officials, biologists, chemists, financial consultants, architects, and system analysts. Education and practice require a consideration not only of the technological-science aspects of a particular problem but also of its relationship to social, economic, political, and environmental constraints.

To accommodate these wide interests, the department is organized into six academic areas: construction management; transportation engineering; geotechnical engineering; structural engineering and mechanics; environmental engineering; and water resources, hydrology, and hydraulic systems.

Graduate Program

Graduate Program Coordinator
309 More, Box 352700
206-543-2574

The Department of Civil and Environmental Engineering offers courses leading to the degrees of Master of Science in Civil Engineering and Doctor of Philosophy. The department also provides authorized options leading to the College-wide Master of Science and Master of Science in Engineering degrees.

The three master's programs are intended to accommodate the needs of three categories of students: the M.S.C.E. degree is for those who have completed an undergraduate degree in civil engineering and plan to continue with their professional training; the College-wide M.S.E. degree is for other engineering graduates who wish to do graduate work in civil and environmental engineering; and the College-wide M.S. degree is for those whose Bachelor of Science degrees are not in engineering, but who desire to apply their training in science to the solution of problems in some specific sector related to civil and environmental engineering. The non-engineer may be required to take additional course work to obtain an M.S.E. degree.

Graduate work is offered in most fields of civil and environmental engineering, including construction

management; transportation engineering; geotechnical engineering; structural engineering and mechanics; environmental engineering; and water resources, hydrology, and hydraulic systems.

Priority for admission is based on an applicant's apparent ability to progress satisfactorily in a graduate degree program. The applicant's scholastic record is of major importance; usually, at least a "B" or 3.00 GPA in the junior and senior years is required. Consideration is also given to Graduate Record Examination scores and other information.

Degree Requirements

The master's degree requires a minimum of 42 credits. A student may choose between a thesis and a course-work-only master's degree. The thesis option requires 30 course-work credits, 3 seminar credits, and 9 thesis credits. The course-work-only master's degree requires 39 course-work credits and 3 seminar credits. Both master's degrees require 3 credits outside the major field of study, 5 credits minimum of 400- and 500-level courses in Civil and Environmental Engineering, and a minimum of one-half of the course-work credits in courses numbered 500 and above. Students working for the Ph.D. degree must complete an approved program of studies and research normally requiring an additional two or three years beyond the master's degree.

Financial Aid

Research and teaching assistantships are available on a competitive basis. The number of positions depends upon the current level of funding. Additionally, there are a limited number of fellowships, scholarships, and traineeships.

Research Facilities

More Hall and Wilcox Hall have structural, concrete, bituminous materials, soil mechanics, computer, water-quality, solid-wastes, and air-quality laboratories as well as an air-monitoring station and equipment for fieldwork in the construction, water, air, and solid-waste programs. Facilities for experimental studies in hydraulics and coastal engineering and in fluid mechanics are located in the Harris Hydraulics Laboratory.

Faculty

Chair

G. Scott Rutherford

Professors

Benjamin, Mark M. * 1977; MS, 1973, MS, 1975, PhD, 1979, Stanford University; chemistry of natural waters, chemical and biological treatment of water and wastewater.

Bogan, Richard H. * 1954, (Emeritus); DSc, 1954, Massachusetts Institute of Technology; water and air resources, environmental engineering.

Brown, Colin B. * 1969, (Emeritus); PhD, 1962, University of Minnesota; structural engineering and systems.

Burges, Stephen J. * 1970; PhD, 1970, Stanford University; surface and ground water hydrology, water resource systems analysis and design.

Carlson, Dale A. * 1955, (Emeritus); PhD, 1960, University of Wisconsin; water resources and solid-waste management.

Colcord, J. E. * 1949, (Emeritus); MSCE, 1949, University of Minnesota; surveying engineering.

Covert, David S. * 1975, (Adjunct Research); MS, 1971, PhD, 1974, University of Washington; atmospheric chemistry; aerosol physics, chemistry, optics, and instrumentation.

Elias, Ziad * 1969, (Emeritus); DSc, 1963, Massachusetts Institute of Technology; engineering mechanics.

Evans, Roger J. * 1966, (Emeritus); PhD, 1965, University of California (Berkeley); engineering mechanics, structural engineering.

Ferguson, John F. * 1974; PhD, 1970, Stanford University; chemical and biological processes in water and waste treatment and in natural water systems.

Hammer, Vernon B. 1981, (Emeritus); MS, 1941, Harvard University; solid-waste management.

Hartz, Billy J. * 1983, (Emeritus); PhD, 1955, University of California (Berkeley); engineering mechanics, structural mechanics.

Hodge, David C. * 1975, (Adjunct); MS, 1973, PhD, 1975, Pennsylvania State University; urban geography, urban transportation geography, equity, gender.

Holtz, Robert Dean * 1988; PhD, 1970, Northwestern University; geotechnical engineering.

Karr, James * 1991, (Adjunct); PhD, 1970, University of Illinois; stream and watershed ecology, tropical forest ecology, conservation biology, environmental policy.

Kramer, Steven * 1984; PhD, 1984, University of California (Berkeley); soil mechanics, foundation engineering, geotechnical earthquake engineering.

Larson, Timothy * 1970; PhD, 1976, University of Washington; airborne particles, air quality modeling, and instrument development.

Lettenmaier, Dennis P. * 1973; PhD, 1975, University of Washington; systems analysis and water resources planning.

Mahoney, Joseph P. * 1978; PhD, 1979, Texas A&M University; construction materials, pavement systems, airport design.

Manning, Fred L. * 1986, (Affiliate); PhD, 1983, Massachusetts Institute of Technology; traffic flow theory, networks, econometric methods, equilibration in transportation markets.

Mar, Brian W. * 1967, (Emeritus); PhD, 1958, University of Washington; system engineering, environmental management, interdisciplinary management.

Mattock, Alan * 1964, (Emeritus); PhD, 1955, University of London (UK); structural behavior and design.

Miller, Gregory * 1983; PhD, 1984, Northwestern University; structural materials, solid mechanics, nonlinear dynamics.

Morgan, Michael S. * 1974, (Adjunct); DSc, 1972, Massachusetts Institute of Technology; applied respiratory, physiology and inhalation toxicology.

Nece, Ronald E. * 1959, (Emeritus); DSc, 1958, Massachusetts Institute of Technology; hydraulic and coastal engineering.

Nihan, Nancy L. * 1973; PhD, 1970, Northwestern University; transportation planning and systems analysis.

Palmer, Richard * 1979; PhD, 1979, Johns Hopkins University; civil engineering systems, computer methods, water resources planning and management.

Pilat, Michael J. * 1967; PhD, 1967, University of Washington; air resources engineering (design of air-pollution-control equipment).

Reed, Dorothy * 1983; MSE, 1977, PhD, 1980, Princeton University; structural and wind engineering.

Richey, Eugene 1982, (Emeritus); MS, 1947, MSCE, 1948, California Institute of Technology, PhD, 1955, Stanford University; hydraulic engineering.

Roeder, Charles W. * 1977; PhD, 1977, University of California (Berkeley); structures and materials.

Rossano, August T. 1981, (Emeritus); MS, 1941, ScD, 1954, Harvard University; air resources.

Rutherford, G. Scott * 1981; PhD, 1974, Northwestern University; transportation planning and engineering, transit planning, demand forecasting.

Sawhill, Roy 1983, (Emeritus); MEng, 1952, University of California (Berkeley).

Schneider, Jerry * 1967, (Emeritus); PhD, 1966, University of Pennsylvania; metropolitan area and regional planning, transportation and other urban models.

Seabloom, Robert * 1954, (Emeritus); MSCE, 1956, University of Washington; water-quality and solid-waste management.

Stahl, David A. 2000; MS, 1975, PhD, 1978, University of Illinois (Urbana).

Stanton, John F. * 1978; PhD, 1978, University of California (Berkeley); structural engineering, analysis and design.

Stensel, H. David * 1983; PhD, 1971, Cornell University; biological wastewater treatment, fixed film reactors, mass transfer mechanics, modeling.

Strand, Stuart E. * 1982, (Adjunct Research); MS, 1975, Ohio State University, PhD, 1982, Pennsylvania State University; forest biotechnology, environmental pollution control.

Sylvester, Robert O. 1947, (Emeritus); MS, 1941, Harvard University; water resources.

Terrel, Ronald L. 1967, (Emeritus); MSCE, 1961, Purdue University, PhD, 1967, University of California (Berkeley).

Welch, Eugene B. * 1968, (Emeritus); PhD, 1967, University of Washington; water resources and aquatic biology.

Wenk, Edward 1970, (Emeritus); MS, 1947, Harvard University, PhD, 1950, Johns Hopkins University.

Yeh, Harry H. * 1983; PhD, 1983, University of California (Berkeley); fluid mechanics, water wave motions, coastal and hydraulic engineering.

Zabinsky, Zelda * 1985, (Adjunct); PhD, 1985, University of Michigan; operations research, applications in industrial engineering, optimization with stochastic elements.

Associate Professors

Booth, Derek B. * 1980, (Research); PhD, 1984, University of Washington; environmental geology, particularly human influences on hillslopes, runoff, and rivers.

Brett, Michael T. * 1997; PhD, 1990, University of Uppsala (Sweden); eutrophication and food web and nutrient regulation of algal biomass and secondary production.

Chenoweth, Harry H. 1979, (Emeritus); MSCE, 1957, University of Washington; engineering mechanics and hydraulic engineering.

Dailey, Daniel J. * 1982, (Adjunct Research); MS, 1982, PhD, 1988, University of Washington; time series modeling of physical phenomena, optimization, distributed computing, networking.

Eberhard, Marc O. * 1989; PhD, 1989, University of Illinois; structural analysis and design, reinforced concrete, earthquake engineering, nondestructive testing.

Goldblatt, Steven M. 1982, (Adjunct); JD, 1977, Golden Gate University; construction law, labor relations, and accounting.

Horner, Richard R. * 1981, (Adjunct Research); PhD, 1978, University of Washington; effects of human activities on water resources in urban areas.

Jacoby, Jean M. * 1994, (Affiliate); PhD, 1986, University of Washington; applied aquatic ecology and restoration; water quality management.

Janssen, Donald J. * 1985; PhD, 1985, University of Illinois; construction materials, pavements.

Jessup, Andrew T. * 1990, (Affiliate); PhD, 1990, Massachusetts Institute of Technology; applications of remote sensing to air-sea interaction.

Kent, Joseph C. *, (Emeritus); PhD, 1952, University of California (Berkeley); hydraulic engineering.

Korshin, Gregory * 1991; PhD, 1983, Chemical Engineering Institute (Russia); environmental chemistry and engineering, aquatic chemistry.

MacRae, Gregory Anthony * 1994; PhD, 1990, University of Canterbury (New Zealand); design of structures to withstand earthquakes.

Massmann, Joel W. * 1991; PhD, 1987, University of British Columbia (Canada); groundwater hydrology, subsurface contaminant transport, site remediation, applied decision analysis.

Miller, William * 1983, (Emeritus); MSCE, 1952, University of Washington; materials.

Nemati, Kamran M. * 1998, (Adjunct); PhD, 1994, University of California (Berkeley); civil engineering materials, concrete technology, mechanical behavior of concrete.

Spyridakis, Dimitris * 1970, (Emeritus); PhD, 1965, University of Wisconsin; soil and water chemistry.

Strausser, Howard * 1955, (Emeritus); MEng, 1950, Johns Hopkins University; hydraulic engineering.

Turkiyyah, George * 1991; PhD, 1990, Carnegie Mellon University; computer-aided engineering, finite element modeling.

Waddell, Paul A. * 1997, (Adjunct); PhD, 1989, University of Texas (Dallas); urban policy, regional planning, growth management, land use, transportation, GIS.

Assistant Professors

Arduino, Pedro * 1997; PhD, 1996, Georgia Institute of Technology; mechanics of porous media, constitutive modeling of soils, numerical methods of geomechanics.

Lowes, Laura N. 2000; PhD, 1999, University of California (Berkeley); structural engineering, numerical modeling.

Petroff, Catherine * 1993, (Affiliate); PhD, 1993, California Institute of Technology; sediment transport,

coastal engineering, and environmental fluid mechanics.

Shankar, Venkataraman * 1999; PhD, 1997, University of Washington; modeling of transportation infrastructure and civil engineering systems.

Zeitler, Teresa Taylor * 1992, (Affiliate); PhD, 1988, Washington State University; geotechnical/geological engineering, physical modeling, centrifuge modeling.

Senior Lecturer

Bucknam, Ronald E. 1985; PhD, 1964, University of Illinois; Professional Engineering Practice Liaison (PEPL).

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

CEE 405 Construction Planning and Scheduling (3) Principles of construction planning and scheduling, including network analysis of construction activities, examination of arrow and precedence diagrams, time-cost tradeoffs, resource leveling, resource allocation, PERT, integrated cost/schedule systems, computer applications, and a CPM project.

CEE 406 Construction Engineering II (3) Heavy construction equipment. Equipment economics, contractor equipment policies, equipment specifications, selection and performance of equipment, estimating productivity of construction equipment, and engineering support for construction operating. Prerequisite: CEE 306.

CEE 407 Contracts and Specifications (3) Construction industry, forms of organizations, real property laws, and bidding procedures. Basic elements of contracts, types of specifications, general conditions of standard construction contracts, legal disputes related to construction contract provisions, surety bonds and construction insurance. Prerequisite: CEE 306.

CEE 410 Traffic Engineering Fundamentals and Surveys (3) General review of the fundamentals of traffic engineering, including their relationship to transportation operations management and planning, with special emphasis on traffic engineering field surveys and data analysis. Prerequisite: CEE 320. Offered: A.

CEE 416 Urban Transportation Planning and Design (3) Brief review of major issues in urban transportation planning. Planning process discussed and transportation models introduced. Uses a systems framework, including goals and objectives, evaluation, implementation, and monitoring. A design term project, individual or small groups, utilizes material presented on a contemporary problem. Prerequisite: CEE 320. Offered: A.

CEE 418 Computer-Aided Planning of Urban Systems (3) Survey of on-line planning applications; use of various on-line systems to solve urban systems design problems; investigations of hardware/software tradeoffs; human factors in man-computer systems design theory as it relates to problem-solving activity. Offered: jointly with URBPD 429.

CEE 421 Pavement Design (3) Current and developing procedures for the structural thickness design of pavements. Bituminous and concrete pavements for highways, airports, and special heavy loading.

Elastic layered systems, slab theory. Performance evaluation for maintenance and overlay design. Offered: ASP.

CEE 422 Construction Materials II (4) Types, sources, uses, performance behavior from construction point of view of aggregates; asphalt products and mixtures; Portland cement, concrete, and other materials the civil engineer is responsible for selecting and manufacturing on job site. Includes laboratory work. Prerequisite: CEE 363. Offered: A.

CEE 423 Heritage of Civil Engineering (3/4) I&S Contribution of civil engineering to civilization based on the lives and projects of prominent engineers and cultures. Incidents and individuals from prehistory to the nineteenth century give the student an awareness of the profession and its influence on society. Industrial archaeology and historic sites are considered. An additional 1 credit may be earned by participating in a special project. Emphasis on the control of elements and the methodology, planning, objectives, and reasons for the project. May be used as social science distribution. Offered: W.

CEE 431 Seismology and Earthquake Engineering (3) NW Presents an overview of earthquake processes and details of the characteristics of destructive ground motion; illustrates the effects of such motion on engineering structures; reviews current practice in estimating earthquake hazards for important structures such as nuclear power plants. Prerequisite: either MATH 136 or both MATH 307 and MATH 308. Offered: jointly with ESS 465.

CEE 436 Foundation Design (3) Design considerations for foundations and retaining structures. Subsurface investigations and determination of soil properties for design. Design of shallow and deep foundations and retaining structures. Foundations and soil considerations for waterfront structures.

CEE 437 Engineering Geology I (3) General overview of engineering geology and its importance to civil engineers. Topics include geologic processes, hazards, origin and classification of geologic materials, data synthesis, and natural construction materials.

CEE 440 Design Seminar (2) Fundamentals of integrated civil engineering design, professional services marketing, project management, team dynamics, total quality management, value engineering, professional liability, and applied ethics in engineering practice. Emphasis on written and oral communications and on ethical, social, and economic factors.

CEE 441 Highway and Traffic Engineering-Geometric Design (4) Factors and elements in geometric design of arterials, intersections, freeways, interchanges, including problem solution. Prerequisite: CEE 320; CEE 440 which may be taken concurrently.

CEE 442 Structural Geotechnical Design Project (4) Comprehensive team design project focusing on structural and geotechnical engineering. Requires design drawings, written reports, and oral presentations interfacing with related fields such as aesthetics and architecture, mechanical systems, traffic, environmental planning. Prerequisite: CEE 440; two courses from CEE 436, CEE 451, CEE 452, CEE 453, CEE 454, or CEE 457.

CEE 443 Design of Subsurface Remediation Activities (4) Technologies for cleaning sites with subsurface contamination, including groundwater extraction, vapor extraction, groundwater containment, and in-situ treatment. Analytical tools and methods for making design calculations are emphasized. Comprehensive design project involving design and evaluation of site remediation activities required. Prerequisite: CEE 440.

CEE 444 Water Resources and Hydraulic Engineering Design (4) Opportunity to effect design solutions for projects or major project components in such representative areas as reservoirs and associated systems for flood control, water supply, irrigation, and hydroelectric power, surface water control systems, fisheries related projects, small harbors, and coastal engineering problems. Prerequisite: CEE 440.

CEE 445 Environmental Engineering Design Studies (4) Individual and group design studies addressing environmental engineering problems such as stormwater management, water and wastewater treatment facilities, and residual processing. Prepare proposals, engineering reports, and alternative evaluations; process equipment design, present reports on selected design problems. Prerequisite: CEE 345; CEE 482; CEE 440 which may be taken concurrently.

CEE 451 Design of Metal Structures (3) Introduction to the design and behavior of metal structures using LRFD concepts. Application of design methods and codes to columns, beams, frames, connections, and tension members. Prerequisite: CEE 380; recommended: CEE 457, CEE 458.

CEE 452 Design of Reinforced Concrete Structures (3) Fundamentals of design of buildings in reinforced concrete in accordance with current codes and practices. Prerequisite: CEE 380.

CEE 453 Prestressed Concrete Design (3) Analysis, design, and construction of prestressed concrete structures. Prerequisite: CEE 452.

CEE 454 Design of Timber Structures (3) The design and construction of timber structures, using elements made of sawn wood, glued-laminated wood, and plywood. Prerequisite: CEE 380.

CEE 455 Structural Unit Masonry (3) Structural behavior and design of reinforced brick, tile, and unit concrete masonry structures. Prerequisite: CEE 380. Offered: jointly with ARCH 426.

CEE 457 Advanced Structures I (3) The displacement method in matrix form with programming applications. Fundamentals of modeling of various types of structures. Prerequisite: CEE 380.

CEE 458 Advanced Structures II (3) Introduction to stability, including a consideration of elastic and inelastic buckling with applications to beam-columns and plates. Introduction to plastic analysis. Prerequisite: CEE 379.

CEE 459 Advanced Structural Mechanics (3) Formulation and solution of the basic equations of elasticity. Applications in 2-D stress analysis, torsion, thermal stresses, and beams on elastic foundation. Plate theory optional. Prerequisite: CEE 379.

CEE 461 Biological Problems in Water Pollution (3/5) NW Ecological risk assessment of toxic chemicals and problems associated with electrical power production. Considers safety and toxicity and effects on individuals, populations, and communities. Laboratory covers simulation models of chemical exposure and community effects. Recommended: senior or graduate standing in fisheries, engineering, or related field. Offered: jointly with FISH 430.

CEE 462 Ecological Effects of Waste Water (3/5) NW Principles of aquatic ecology that relate to causes and effects of water quality problems in lakes and streams. Population growth kinetics, nutrient cycling, eutrophication; acidification, oxygen/temperature requirements, and effects of various wastes on aquatic animals. Offered: jointly with FISH 434.

CEE 464 Subsurface Contaminant Transport (3) Principles of transport through porous media used to study fate and movement of subsurface contamina-

tion. Processes include aqueous phase transport, flow of immiscible fluids, vapor transport, solid-liquid-vapor interactions. Techniques for simulating transport processes presented. Effects of subsurface heterogeneities and uncertainties are emphasized. Prerequisite: CEE 342.

CEE 472 Introduction to Hydraulics in Water Resources (3) Hydraulics related to environmental issues. Global hydrology; stratified flows; two-phase (bubble) flows; pollutant transport and mixing in reservoirs, lakes, coastal waters, and oceans; diffuser design and related case studies. Prerequisite: CEE 342; CEE 345.

CEE 473 Coastal Engineering I (3) Linear theory of water waves, wave transformations due to boundary conditions, sediment motion, elementary tidal theory; applications illustrated by laboratory experiments and selected case histories. Prerequisite: CEE 342.

CEE 474 Hydraulics of Sediment Transport (3) Introduction to sediment transport in steady flows with emphasis on physical principles governing the motion of sediment particles. Topics include sediment characteristics, initiation of particle motion, particle suspension, bedforms, streambed roughness analysis, sediment discharge formulae, and modeling of scour and deposition in rivers and channels. Prerequisite: CEE 345.

CEE 475 Analysis Techniques for Groundwater Flow (3) Development of appropriate equations to describe saturated groundwater flow, and application of numerical methods for solving groundwater flow problems and flow to wells. Participants required to solve specific problems using numerical techniques developed during the course. Prerequisite: CEE 342.

CEE 476 Physical Hydrology (3) Global water picture, data sources and data homogeneity, precipitation, evapotranspiration, hydrographs. Hydrologic data frequency analysis. Hydrologic design: flood mitigation, drainage. Introduction to deterministic and stochastic models.

CEE 477 Open-Channel Engineering (3) Water flow in natural and constructed channels. Analysis and design of canals, transitions, energy dissipators, and similar structures. Analysis of surface profiles and effect of nonlinear alignment on flow. Introduction to river mechanics. Design-oriented problems. Prerequisite: CEE 345.

CEE 480 Air-Quality Modeling (3) Evaluation of air-quality models relating air pollution emissions to environmental concentrations. Topics include meteorological dispersion models and various "receptor" models based on chemical "fingerprinting" of sources. Emphasizes current problems. Prerequisite: either CEE 490, ATM S 458, or CHEM 458. Offered: jointly with ATM S 480.

CEE 481 Environmental Engineering Design (3) Stensel Introduction to the theory and the practice of planning and design of urban water supply distribution, pump stations, and sewage and storm-water collection systems. Evaluation of service areas and service requirements and their relationships to urban and regional planning activities. Engineering methods and computer programs for designing basic system elements. Prerequisite: CEE 345; CEE 350.

CEE 482 Water and Wastewater Treatment (3) Fundamental mechanisms, basic design models, and applications of engineered treatment processes for water treatment, water reuse, nutrient removal, and protection of public health and the environment. Prerequisite: CEE 350.

CEE 484 On-Site Wastewater Disposal (3) Latest information on design, construction, operation, maintenance of individual and small community waste-

water disposal systems. Conventional water carriage septic tank soil absorption systems considered with new alternatives, such as mounds, evapotranspiration systems, anaerobic filters, pressure drainfields, sand filters. Nonwater carriage methods studied. Pressure and vacuum sewers introduced.

CEE 485 Aquatic Chemistry (3) Benjamin, Korshin Fundamentals of chemical equilibrium in natural water systems. Behavior of open and closed aqueous and multi-media (air/water/solids) systems. Chemistry of major species affecting the environment. Identification of key parameters for characterizing water quality and of chemical processes. Recommended: one year of general chemistry or equivalent.

CEE 486 Water-Quality Analysis (3) Introduction to water quality parameters; theory of instrumentation and methods used for the environmental analysis. Laboratory analysis of environmental samples using a variety of techniques including titrations, chromatography, and absorption and emission spectrophotometry. Recommended: one year of general chemistry.

CEE 487 Solid-Waste Disposal (3) Describes sources and handling of municipal and industrial solid waste, with examination of collection, processing, recycling and resource recovery, and disposal alternatives. Public policy issues, local agencies and solid waste facilities, the legal and regulatory framework are all addressed in context of solid waste engineering.

CEE 488 Hazardous Wastes Engineering (3) Classification of hazardous wastes; resource conservation, Recovery Act regulations; characteristics and behavior of toxic organics; superfund; groundwater contamination, solutions. Hazardous waste site remedial action; case histories; sampling; landfill design. Stabilization and processing technologies, including incineration, carbon adsorption, emerging techniques. Prerequisite: CEE 351.

CEE 489 Water and Air Quality Sampling (2) Samples collected from lakes, streams, precipitation, and air and resulting (and supplemental) data interpreted for cause-effect and statistical inference. Design for water and air quality monitoring programs. Prerequisite: CEE 462.

CEE 490 Air-Pollution Control (4) Fundamental concepts of air pollution. Emission sources, atmospheric dispersion, ambient concentrations, adverse effects, governmental regulations, emission standards, air-quality standards, processes and equipment for controlling emissions. Offered: jointly with ENV H 461.

CEE 491 Deterministic Systems (3) Development of quantitative methods for mathematical problem solving with emphasis on computer applications. Linear programming, mathematics of the simplex algorithm, sensitivity analysis, dynamic programming, systems simulation, and goal programming. Class project required. Prerequisite: CEE 390.

CEE 492 Stochastic Systems (3) Introduction to probability distributions and statistics useful in systems analysis, conditional distributions, queuing theory and applications, Monte Carlo simulation, chance-constrained mathematical programming, and stochastic dynamic programming. Emphasis on application of the techniques to civil engineering systems problems, including transportation, water resources, and structures. Prerequisite: CEE 491.

CEE 493 Air-Pollution Source Testing and Equipment Evaluation (3) Engineering evaluation of air pollutant sources and air control equipment. Air-pollutant source testing and stack sampling. Analysis of equivalence and source emissions in the field and in the laboratory.

CEE 494 Air-Pollution Control Equipment Design (3) Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption of gaseous pollutants; electrostatic precipitation and filtration of particulate pollutants. Actual case studies. Offered: jointly with CHEM E/M E 468.

CEE 495 Sustainability and Design for Environment (3) *Cooper* Analysis and design of technology systems within the context of the environment, economy, and society. Applies the concepts of resource conservation, pollution prevention, life cycle assessment, and extended product responsibility. Examines the practice, opportunities, and role of engineering, management, and public policy. Offered: jointly with ENVIR 415/M E 415; S.

CEE 498 Special Topics (1-5, max. 5) Special topics in civil engineering offered as course with lecture and/or laboratory. Maximum of 6 credits in combination of 498 and 499 may be applied toward an undergraduate degree.

CEE 499 Special Projects (1-5, max. 5) Individual undergraduate research projects. Maximum of 6 credits in combination of 498 and 499 may be applied toward an undergraduate degree. Recommended: 400-level CEE course.

Courses for Graduates Only

CEE 500 Structures Seminar (1) Credit/no credit only. Prerequisite: graduate standing in Civil and Environmental Engineering.

CEE 501 Structural Mechanics (6) *Elias, Miller, Turkiyyah* Equations of a continuum for small displacements, applications to linear elasticity. Kirchhoff plate theory, problems in advanced strength of materials. Virtual work, minimum potential energy, force and displacement methods of structural analysis. Direct stiffness method. Approximate solutions, geometric stiffness matrix. Linearized buckling. Offered: A.

CEE 502 Structural Dynamics (3) *Eberhard, MacRae, Reed* Lagrange's equations. Free vibrations of linear, single, and multiple degree of freedom systems. Damping. Mode superposition. Forced vibrations by time history and by response spectrum methods. Free and forced vibrations of continuous systems. Wave propagation in rods and beams. Prerequisite: CEE 501. Offered: W.

CEE 503 Materials Modeling (3) *Miller, Reed, Roeder* Behavior of materials used in civil engineering structures. Yield and failure surfaces. Physical and phenomenological models of plastic and viscoelastic behavior. Fracture mechanics. Fatigue models and predictions. Damping and friction. Behavior of anisotropic and composite materials.

CEE 508 Continuum Mechanics (3) *Elias, Miller* General foundation of fundamental concepts of motion, stress, and energy for a continuum. General equations of conservation of mass, momentum, and energy. Linear and nonlinear elastic, viscous, and inelastic materials. Prerequisite: CEE 501. Offered: jointly with A A 575.

CEE 511 Advanced Reinforced Concrete (3) *Eberhard, MacRae, Stanton* Behavior and design of reinforced concrete members and structures. Members subject to torsion and torsion combined with flexure and shear; members with small shear span/depth ratios, slabs. Offered: A.

CEE 512 Advanced Structural Systems (3) *Eberhard, Stanton* Prestress loss. Design of statically indeterminate prestressed concrete structures; continuous beam, frame, and slab structures (cast in

place or assembled from precast units). Prerequisite: CEE 453 or equivalent. Offered: Sp.

CEE 513 Advanced Steel I (3) *MacRae, Roeder* Factors influencing strength and serviceability of steel structures; LRFD limit state design procedures. Use of theories of plasticity and stability in development of design methods and specifications, bolted and welded connections, temperature effects, and effect of different fabrication methods on behavior of structure. Prerequisite: CEE 501, CEE 503. Offered: W.

CEE 515 Earthquake Engineering I (3) Earthquake mechanism and ground shaking, response spectra, linear elastic methods for prediction of behavior, displacement prediction methods for inelastically behaving structures, modeling and solution schemes, earthquake design philosophy, capacity design. Reinforced concrete, steel, and base-isolated structures. Prerequisite: CESM 501, CESM 502.

CEE 516 Earthquake Engineering II (3) Performance-based design, development of fragility curves, characteristics and effects of ground-shaking records, design methods, passive and active control, dynamic inelastic time history analysis, design of parts, system detailing, soil-structure interaction, repair and retrofit of structures. Prerequisite: CEE 515.

CEE 517 Fundamentals of Wind Engineering (3) Wind effects on structures, including atmospheric boundary layer flow; bluff body aerodynamics; structural dynamics and aeroelasticity; development and use of the ASCE Standards; estimation of along-wind, across-wind, and torsional response of tall buildings; design strategies for avoiding wind-induced discomfort. Fundamentals of wind tunnel testing.

CEE 518 Reliability and Design (3) Introduction to theory of structural reliability and its application to design procedures in civil engineering, including probability theory; assessment of uncertainties; code specification (first-order, second-moment format) and the related concept of risk and the influence of socioeconomic factors; loads, load combinations, and probabilities of damage.

CEE 521 Seepage and Consolidation (3) Confined and unconfined seepage through porous media, flow net solutions, consolidation, settlement, numerical solution of seepage, and consolidation problems. Prerequisite: CEE 366 or equivalent.

CEE 522 Shear Strength and Slope Stability (3) Shear strength of cohesive and cohesionless soils and slope stability analysis of natural and man-made slopes. Prerequisite: CESM 561.

CEE 523 Advanced Foundation Engineering (3) Design of shallow and deep foundations for bearing capacity and settlement. Construction considerations. Prerequisite: CEE 522 and CEE 527.

CEE 524 Lateral Earth Pressures and Retaining Structures (3) Lateral earth pressure theory. Design of temporary and permanent retaining structures including in situ reinforcement. Prerequisite: CEE 522, CEE 527.

CEE 526 Geotechnical Earthquake Engineering (3) Plate tectonics and elastic rebound theory of earthquakes and faults; characterization of ground motions; seismicity; seismic risk analysis; effect of local soil conditions on ground response; development of design ground motions; liquefaction; dynamic lateral earth pressures; seismic slope stability. Prerequisite: CEE 525 or permission of instructor.

CEE 527 Advanced Geotechnical Laboratory (4) Soil and site investigation, classification and engineering properties of soils and rock as determined by standard and advanced test procedures and

equipment. Evaluation of test data. Report writing. Prerequisite: CEE 366 or equivalent.

CEE 528 Geosynthetic Engineering (3) Identification and testing of geosynthetics. Design of geosynthetic filters, roadway stabilization, earth reinforcement, and waste containment systems. Prerequisite: CEE 522 and CEE 523.

CEE 529 Foundation Soil Improvement (3) Analysis and design of physical and chemical treatment techniques commonly applied to problem foundation soils for civil engineering structure. Prerequisite: CEE 523.

CEE 530 Engineering Geology II (3) Application of engineering geology fundamentals to: location, design and maintenance of engineered structures; policy decisions related to potential geological hazards. Case histories, governmental policy discussions, interpretation of geological maps for engineering purposes. Prerequisite: graduate standing and CEE 437 or permission of instructor.

CEE 531 Rock Engineering (3) Engineering classification, physical and mechanical properties of rocks, failure modes and initial stresses in rocks, laboratory and field testing of rocks, rock slope engineering, underground openings, foundations on rocks. Prerequisite: graduate standing and CEE 366 or permission of instructor.

CEE 540 Microbiological Process Fundamentals (3) *Stensel* Fundamental concepts for microbial processes including organic chemical structure, nomenclature and environmental properties, principles of microbial metabolism, study of specific types of bacteria important to environmental engineering and their metabolism, development of microbial kinetic equations, including substrate utilization, energetics, and stoichiometry. Prerequisite: permission of instructor.

CEE 541 Biological Treatment Systems (3) Basic reactions, design principles, current design models, and operational considerations for biological treatment systems used in environmental engineering. Applications include activated sludge design and optimization, fixed film reactors, nitrification, nitrogen removal, phosphorus removal, anaerobic treatment, and toxic organics removal. Prerequisite: CEE 550 and CEE 482 or equivalent.

CEE 542 Microbial Degradation of Toxic Contaminants (3) *Herwig, Strand* Detailed survey of current understanding of microbiology and degradative pathways of industrial organic compounds, pesticides, plastics, oil, and metals. Microbial requirements for bioremediation. Methods of scientific investigation of microbial transformations. Requires basic understanding of metabolism and organic chemistry. Prerequisite: biological science course. Offered: jointly with ESC 518/MICROM 518; W.

CEE 543 Aquatic Chemistry (3) *Benjamin, Ferguson, Murray* Principles of chemical equilibrium applicable to natural water systems and water and waste treatment processes. Chemical thermodynamics. Characteristics of acid/base, gas/liquid, solid/liquid, oxidation/reduction, and adsorption and equilibria. Computer models for chemical speciation. Offered: jointly with OCEAN 521. Prerequisite: Graduate standing or permission of instructor.

CEE 544 Physical-Chemical Treatment Processes (4) Principles and design of major physical-chemical unit processes used in water, wastewater, and hazardous waste treatment. Processes include chemical and reactor kinetics, filtration, chemical coagulation, ion exchange, adsorption, and gas transfer. Development of mathematical models, laboratory demonstrations, and evaluation of current design practice. Prerequisite: CEE 485 or permission of instructor.

CEE 545 Advanced Environmental Chemistry (3)

Behavior of controlled chemical species (heavy metals, pesticides, disinfection by-products, and endocrine disruptors) and persistent organic pollutants in the environment. Modeling of chemical interactions pertinent to environmental technologies (ozonation, advanced oxidation, photochemical transformations, halogenation, dehalogenation, application of zero-valence metals and electrochemical controls). Prerequisite: aquatic chemistry or permission of instructor.

CEE 546 Topics in Ecological Effects of Wastewater (3)

Application of ecological concepts for analysis and interpretation of bioenvironmental problems and data (eutrophication, acid rain, and toxicity). Students participate in presentation and discussion of current research. Prerequisite: CEE 462 or BIOL 473 or permission of instructor.

CEE 547 Lake Management (3) Application of current techniques for lake and watershed analysis and modeling using fundamentals of limnology. Approaches to restoring eutrophic lakes, land use impacts on water quality. Practical exercises using data from real lake systems. Prerequisite: CEE 462/FISH 434, BIOL 473, or permission of instructor.

CEE 548 Industrial Waste Treatment (3) Survey of laws and regulations governing industrial waste discharge. Sources, amounts, and characteristics of wastes from various industries. Specialized treatment processes, case studies, and site visits. Prerequisite: CEE 540 or CEE 541 or permission of instructor.

CEE 549 Advanced Topics in Environmental Engineering, Chemistry, and Biology (3) Special topics of current importance in environmental engineering. Application of fundamental chemical and biological principles to the study of such phenomena as the behavior of aqueous colloids, corrosion processes, bacterial metabolism in chemically complex solutions, and acid precipitation. May be taken more than once for credit. Prerequisite: CEE 540, CEE 541.

CEE 553 Seminar-Topics in Atmospheric Chemistry (1-3, max. 6) *Charlson, Harrison* Seminar for atmospheric scientists, chemists, engineers in problems associated with the chemical composition of the atmosphere. Covers wide variety of topics, ranging from the natural system to urban pollution and global atmospheric change. Faculty lectures, student participation. Prerequisite: ATM S 301 or permission of instructor. Offered: jointly with ATM S 525.

CEE 554 Acoustics of Environmental Noise (4) Offered: jointly with M E 528.

CEE 555 Topics in Environmental Health (3) Introduction to human biology, including physiology, epidemiology, and toxicology. Study of contemporary environmental health problems and practices as they relate to radiological health, solid-waste disposal, occupational health, biometeorology, and bioengineering.

CEE 556 Hazardous Air Pollution (3) Control of emissions of hazardous or toxic air pollutants. Government regulations, determination of needed control efficiency. Emission control by thermal incineration, catalytic incineration, flares, condensation, carbon adsorption, and absorption (wet and dry). Hazardous waste incinerators. Case studies. Offered: jointly with CHEM E 562.

CEE 557 Air Resources Management (3) Technical, administrative, and legal aspects of air conservation. Current case studies involving engineering analysis, air-quality modeling, and regulatory aspects at local, state, and federal governmental levels.

CEE 558 Control of Gaseous Air Pollutants (3) Physical and chemical processes used to control

gaseous air pollutants. Absorption into liquids. Aqueous spray dryer scrubbers. Adsorption beds. Control of sulfur oxide and nitrogen oxide. Case studies of control systems. Prerequisite: CEE 468 or CHEM E 435 or permission of instructor. Offered: jointly with CHEM E 566; even years.

CEE 559 Control of Particulate Air Pollutants (3)

Processes used to control emissions of particulate air pollutants. Use of settling chambers, cyclones, fabric filters, wet scrubbers, and electrostatic precipitators to control aerosol particles. Case studies of particulate air-pollutant control systems. Prerequisite: CEE 468 or permission of instructor. Offered: jointly with CHEM E 567; odd years.

CEE 560 Risk Assessment for Environmental Health Hazards (3/4)

Faustman Examines context, methodologies, data, uncertainties, and institutional arrangements for risk assessment. Qualitative and quantitative approaches to identification, characterization, and control of environmental hazards to health emphasized through didactic and case studies. Offered: jointly with ENV H 577/PB AF 589; A.

CEE 570 Hydrodynamics (4) Applications of the equations of motion to the flow of ideal and real fluids. Fundamentals of fluid potential motion. Viscous flows; Navier-Stokes equations and some exact solutions. Boundary-layer theory. Introduction to turbulence. Two- and three-dimensional examples, including free surface flows. Applications of field equations to problems of engineering significance. Prerequisite: CEE 342 or equivalent.

CEE 571 Hydrodynamics in Water Quality (3)

Theoretical, field study, and laboratory model approaches to diffusion in transport problems of concern to water resources engineers. Prerequisite: CEE 342 or permission of instructor.

CEE 572 Water Wave Mechanics (3) Theory of water waves. Classical water wave problem and approximate solution techniques. Evolution equations for and their solutions wave systems. Viscous damping effects and mass transport. Nonlinear shallow-water waves and the Korteweg-deVries equation. Waves on beaches. Recommended: graduate-level course in fluid mechanics.

CEE 573 Advanced Computational Hydraulics (4)

Review of hydrodynamic and transport equations for hydraulic engineering application; numerical solution methods; implementation and practice with existing two- and three-dimensional numerical models; numerical model calibration and verification techniques; case studies. Theoretical and civil engineering decision makers aspects. Prerequisite: CEWA 474, CEE 570, CEE 571 or permission of instructor.

CEE 575 Groundwater Transport Modeling (3)

Review of equations for flow and transport in porous media; techniques for simulating transport as boundary value problems; analytical and numerical solution techniques; finite element models; field-scale applications and case histories.

CEE 576 Water Resources Planning (3)

Mar, Palmer Engineering, social, and economic factors involved in water resource development and management; water policies, programs, and administration; use relationships and conflicts; considerations for regional water resource systems. Offered: W.

CEE 577 Water-Quality Management (3)

Application of biological, ecological, and chemical processes to modeling of water quality and use of such models in appropriate management of water resource systems. Includes units on the modeling of temperature, BOD, nutrient, phytoplankton, zooplankton, and other processes in lakes, streams, and estuaries. Recommended: CEE 476, CEE 485, CEE 462/FISH 434, and CEE 491.

CEE 578 Water Resource System Management and Operations (3)

Burges, Mar, Palmer A readings course in recent literature related to the modeling and management of water resources. Topics include drought management, expansion of existing water supplies, hydropower production, streamflow forecasting, water demand forecasting, regional water planning, climate change, and other topical issues. Recommended: 557, 558. Offered: A.

CEE 580 Urban Transportation Planning (4)

Rutherford Introduction to transportation planning, including trends and issues, land use and transportation interaction, surveys, public involvement, demand management, technology, forecasting, impacts, and policy strategies.

CEE 581 Travel Demand Forecasting (4)

Rutherford Application of mathematical models to forecast urban travel behavior. Introduces emerging methods, land use models, travel demand models, including trip generation, trip distribution, mode choice, and network assignment. Discusses validation and ethics.

CEE 582 Intelligent Transportation Systems (3)

Application of modern computer and communication technologies to transportation systems. Benefits to public agencies, commercial companies, and travelers. Coordination between private and public sectors. Intelligent Transportation System's (ITS) social, organizational, and operational changes.

CEE 583 Airport Engineering (3)

Definitions and terminology relating to airport engineering. Characteristics of aircraft, air traffic control, and resulting impact upon design process. Airport capacity, configuration, and planning associated with terminal design. Emphasis on geometric and structural design of pavements and airside. Design projects relating to airport engineering required. Prerequisite: permission of instructor.

CEE 584 Analytical Methods in Transportation I (3)

Mannerling Application of analytical and statistical methods to transportation planning problems. Analysis of probability distributions that describe variables. Development of statistical models for predicting transportation phenomena. Elementary sampling theory hypothesis testing, regression analysis, time series analysis, applied to transportation data. Prerequisite: graduate standing or permission of instructor. Offered: Sp.

CEE 585 Analytical Methods in Transportation II (3)

Shankar Applications of advanced econometric methods to transportation issues. Topics include, but not limited to, systems of equations, duration models, limited dependent variable approaches, and count models. Hands-on modeling, with numerous data sets, available for application. Collaborative projects. Prerequisite: CEE 584 or permission of instructor.

CEE 586 Transportation Infrastructure Management (3)

Shankar Integrated perspective on the management of transportation infrastructure with special attention to the roadside, pavements, and bridges. Topics include needs assessment, design and construction of new facilities, management and monitoring of built systems to maintenance, rehabilitation and construction of facilities in-service. Emphasizes empirical applications.

CEE 587 Transportation Networks (3)

Mannerling, Shankar Traffic flow, theories of traffic, user equilibrium and system-optimal assignments, and algorithms used for network assignment. Theoretical and empirical traffic assignments, multivariate characteristics of traffic flow on networks. Interactive work with network and econometric models.

CEE 588 Land Use/Transportation Models (3)

Review of theoretical basis of several existing models used to forecast urban growth patterns and their associated land use, transportation, and energy

requirements. Model validation studies in relation to empirical studies of urban growth and change. Environmental implications of alternative urban growth patterns. Offered: jointly with URBDP 530.

CEE 589 Transit Systems Planning (3) Planning, operational methods for urban public transportation. Review of technological, operating characteristics of vehicles and systems; financing, management, institutional aspects. Paratransit. Short-range planning, operational strategies, revenue-fare structures. Service monitoring. Mode choice, transit demand relating to service. Computer-aided methods for planning, design of transit systems. Prerequisite: graduate standing or permission of instructor.

CEE 590 Traffic Systems Operations (3) Operational planning, management of arterial and freeway traffic systems. Review of transportation system management strategies to achieve more efficient use of existing infrastructure, including improved and innovative traffic control systems and demand management policies, measures of effectiveness, impact assessment, traveler response. Introduction to use of relevant computer models and packages.

CEE 591 Freight Transportation (3)

CEE 593 Construction Labor Law (3) *Goldblatt* In-depth study of construction labor topics, including labor-management organization, legislation, and regulation, collective bargaining, and job site administration. Examines importance of labor relations in construction firms, whether in a union setting or an open shop environment.

CEE 594 Construction Automation (3) *Dunston* Motivations, methods, and technologies for developing automation and robotics in the construction industry. Examples range from computers to mechanical systems, from laboratory research to field applications. Topics include database management systems (DBMS), artificial intelligence, data collection and communications technologies, sensor technologies, and robotic mechanical systems.

CEE 597 Construction Productivity (3) Work improvement techniques applied to construction operations. Review of major contributions in behavioral science that may be applicable to the construction industry. Case studies. Innovative productivity programs successfully implemented on construction projects. Safety on construction projects, especially as influenced by managerial practices.

CEE 599 Special Topics in Civil and Environmental Engineering (1-3, max. 15) *Rutherford* Special topics in civil and environmental engineering offered occasionally by permanent or visiting faculty members.

CEE 600 Independent Study or Research (2-5, max. 5) *Rutherford* Topics covered depend on the faculty who offer the course and student interest. Prerequisite: permission of instructor.

CEE 601 Internship (2) Internship in an established program between industry, government, and the University. Prerequisite: permission of graduate program coordinator and committee chair.

CEE 700 Master's Thesis (*) Prerequisite: permission of adviser.

CEE 800 Doctoral Dissertation (*) Prerequisite: permission of adviser.

Department Web page:

www.cs.washington.edu

Computer science and computer engineering are fields of unparalleled excitement and opportunity, now and for the future—fields where the smartest young men and women are choosing to study and to work. Whether your goal is graduate study and research, employment in the Northwest's vibrant information technology industry, business leadership, or public service, the UW Department of Computer Science and Engineering should be on your "short list." Ranked among the top ten research programs in the nation (along with MIT, Stanford, Berkeley and Princeton), UW CSE's focus on educational excellence was recognized in 1999 by the Brotman Award for Instructional Excellence.

Computer science is the study of information and algorithms within the context of real and abstract computing devices. Computer scientists are interested in such topics as the representation and storage of information; algorithms to access, display, edit, and transform information; programming languages to express algorithms; and hardware and software processors to execute algorithms. These concerns lead to practical developments in computer systems software, such as operating systems and compilers; in application areas, such as artificial intelligence, computer graphics, and computational biology; and also lead to theoretical investigations of computers, algorithms, and data.

Computer engineering is a closely related field that is concerned with the design and practical application of computer hardware and software systems to the solution of technological, economic, and societal problems. The computer engineer analyzes a problem and selects from a variety of tools and technologies those most appropriate for its solution. A computer engineer can expect to be involved in hardware design, software creation, and systems integration. The program provides an in-depth education in computer engineering while retaining strong foundations in traditional electrical engineering and computer science. The computer engineering program involves digital hardware, software, and architecture. Mathematics, engineering design, laboratory work, and communication-skills development are emphasized. A capstone design course is used to apply the knowledge and skills collected during the program to a major team project that must be completed during the senior year. The objective of undergraduate education in computer engineering is to develop broadly educated and competent graduates for professional careers or graduate studies. Especially important is a foundation that will endure as technology advances and changes.

Instructional and Special Research Facilities

The Computer Science laboratories provides extensive, efficient, and powerful state-of-the-art facilities for undergraduate, graduate, and faculty instruction and research. The equipment base is upgraded frequently; for an up-to-date description please see the descriptions in the online undergraduate and graduate brochures, which can be accessed through the department's Web page. The same is true for the department's software base, where there are several

modern operating systems including Windows NT, Unix, Solaris, and Linux, as well as extensive collections of software applications and development tools for each. Students have access to these resources in several laboratories in Sieg Hall and through direct modem access administered by the University. All the department's workstations provide users with full Internet access and almost all the department's courses make extensive use of the World Wide Web. In addition to general computing laboratories, the department also supports specialized laboratories for computer graphics, hardware, and embedded system design that also support more-advanced computing platforms and software.

Graduate Program

grad-admissions@cs.washington.edu

The Department of Computer Science and Engineering offers programs of study leading to the degrees of Master of Science and Doctor of Philosophy. Students can pursue full-time graduate study leading to an M.S. or Ph.D. Students can also pursue part-time graduate study in the evening, leading to an M.S. Individual programs can be designed to provide considerable breadth of knowledge, as well as depth in an area of specialization.

The department has 40 faculty and is authorized to grow over the next few years. In addition, there are nearly 40 adjunct, affiliate and emeritus faculty members. The faculty is currently conducting research in the following areas: embedded systems and reconfigurable computing; computer architecture; networking; operating systems and distributed systems; programming systems; information retrieval, database systems, and intelligent Internet systems; software engineering; computer graphics, vision, and animation; human interface to computing; artificial intelligence; theory of computation; and computing and biology.

Full-Time Graduate Program

The full-time graduate program offers both M.S. and Ph.D. degrees. An M.S. degree can usually be completed in one to two years, and a Ph.D. degree can be completed in four to five years. It is not necessary to complete an M.S. program before entering the Ph.D. program. Degree requirements are outlined in *The Computer Science and Engineering Graduate Program Brochure*, available from the department.

Application Requirements

Most entering graduate students are expected to have a solid background in computer science, including programming, machine organization, data structures, discrete mathematics, automata theory, and programming systems (i.e., the equivalent of CSE 378, 326, 321, 322, and either 401 or 451). Some exceptions to these requirements are made for otherwise-promising students. Graduate Record Examination scores are required; a GRE subject-test score (not necessarily in computer science) is recommended. Scores should be earned within the preceding five years. *The Computer Science and Engineering Graduate Program Brochure* gives full details of application procedures.

Complete applications must be received by January 1 (December 1 for international students) for autumn-quarter admission.

Assistantships

Research and teaching assistantships are available and are allocated on the basis of scholastic excel-

lence and potential. All students accepted to the program are awarded three years of funding. Students who are applying for assistantships to start in autumn quarter should have all applications to the Graduate School and the department completed by January 1 (December 1 for international students).

The application packet contains all the necessary forms for applying to the Graduate School and to the graduate program in Computer Science and Engineering and for consideration for assistantships.

Professional Master's Program

The Professional Master's degree program (PMP) is designed for active professionals in the vibrant information-technology industry who wish to further their educational and professional goals. Courses are offered in the evening and by distance to accommodate students working full-time.

To satisfy the requirements of the Professional Master's Program, students must successfully complete eight core PMP courses and other courses providing 8 additional credits. The additional credits may be earned through participation in the department's colloquium series, which features leading-edge researchers and developers in computer science from around the world. This series airs throughout the Puget Sound region on UWTV and through live Internet video. Students who take one course per quarter, plus 1 credit of colloquium, complete the program in two-and-a-half years.

Successful applicants to the program will have a bachelor's degree in computer science or a related field and professional experience in advanced computing technology. Most incoming students will have taken the following courses at the undergraduate level: data structures, discrete math, machine organization, automata theory, and programming languages, and will have programming experience.

Applications are accepted quarterly. Deadlines are July 1 for autumn quarter; November 1 for the winter quarter; and February 1 for spring quarter. For more information, see the department's Web site.

Faculty

Chair

David S. Notkin

Professors

Anderson, Richard J. * 1986; PhD, 1985, Stanford University; educational technology, algorithms.

Anderson, Thomas E. * 1997; MS, 1990, PhD, 1991, University of Washington; Internetworking, local and wide area distributed systems, operating systems, computer architecture.

Atlas, Les Eugene * 1983, (Adjunct); MS, 1979, PhD, 1984, Stanford University; time-frequency representations, digital signal processing applied to speech, audio, manufacturing.

Baer, Jean-Loup * 1969; MS, 1963, Grenoble (France), PhD, 1968, University of California (Los Angeles); computer architecture and performance evaluation.

Beame, Paul W. 1987; MS, 1982, PhD, 1987, University of Toronto (Canada); computational complexity, proof complexity.

Böhringer, Karl F. * 1998, (Adjunct); MS, 1993, PhD, 1997, Cornell University.

Borning, Alan H. * 1980; MS, 1974, PhD, 1979, Stanford University; human-computer interaction; constraint-based languages and systems.

Borriello, Gaetano * 1988; MS, 1981, Stanford University, PhD, 1988, University of California (Berkeley); invisible and ubiquitous computing, embedded and network systems.

Brinkley, James F., III * 1988, (Adjunct Research); MD, 1974, University of Washington, PhD, 1984, Stanford University; computer applications in medicine and biology; structural informatics.

De Rose, Anthony David * 1985, (Affiliate); PhD, 1985, University of California (Berkeley); computer-aided geometric design and modeling, graphical user interfaces, high resolution graphics.

Duchamp, Thomas E. * 1979, (Adjunct); PhD, 1976, University of Illinois; differential geometry.

Ebeling, William H.C. * 1986; MS, 1976, Southern Illinois University, PhD, 1986, Carnegie Mellon University; VLSI architectures, configurable computing, computer-aided design.

Eggers, Susan Jane * 1989; PhD, 1989, University of California (Berkeley); uniprocessor and parallel architectures and program behavior, back-end compiler optimizations.

Golde, Hellmut * 1959, (Emeritus); PhD, 1959, Stanford University; programming languages, programming systems, compilers, computer networks.

Green, Philip * 1994, (Adjunct); PhD, 1976, University of California (Berkeley); mathematical and computer methods for genome analysis.

Hood, Leroy E. * 1992, (Affiliate); PhD, 1968, California Institute of Technology; molecular immunology, large-scale DNA mapping and sequencing, molecular evolution.

Karlin, Anna R. * 1996; PhD, 1987, Stanford University; online algorithms, probabilistic algorithms and probabilistic analysis.

Kehl, Theodore * 1963, (Emeritus); PhD, 1961, University of Wisconsin; hardware design (VLSI), telephony and API programming.

Kim, Yongmin * 1982, (Adjunct); MS, 1979, PhD, 1982, University of Wisconsin; computer architecture, imaging systems, medical imaging, computer graphics, multimedia.

Ladner, Richard E. * 1971; PhD, 1971, University of California (Berkeley); design and analysis of algorithms, data compression, network algorithms, cache performance.

Lazowska, Edward D. * 1977; MSc, 1974, PhD, 1977, University of Toronto (Canada); computer systems: modeling and analysis, design and implementation, distributed and parallel systems.

Levy, Henry M. * 1983; MS, 1981, University of Washington; operating systems, distributed and parallel systems, Web systems and performance.

Noe, Jerre D. * 1968, (Emeritus); PhD, 1948, Stanford University; operating systems, computer measurement and evaluation, distributed computer networks, simulation.

Notkin, David S. * 1984; PhD, 1984, Carnegie Mellon University; software engineering, software evolution, software tools and environments.

Olson, Maynard V. 1992, (Adjunct); PhD, 1970, Stanford University; methods and applications of large-scale DNA analysis.

Ruzzo, Walter L. * 1977; PhD, 1978, University of California (Berkeley); computational biology.

Salesin, David Henry * 1992; PhD, 1991, Stanford University; computer graphics.

Shapiro, Linda G. 1986; MS, 1972, PhD, 1974, University of Iowa; computer vision, multimedia information systems, medical informatics, pattern recognition.

Shaw, Alan Cary * 1971, (Emeritus); PhD, 1968, Stanford University; operating systems, software specifications, real-time systems.

Snyder, Lawrence * 1983; PhD, 1973, Carnegie Mellon University; parallel computation, especially hardware, languages and algorithmic issues, computer fluency.

Stuetzle, Werner * 1984, (Adjunct); PhD, 1977, Swiss Federal Institute of Technology; nonparametric methods in multivariate analysis, statistical applications of computer graphics.

Tanimoto, Steven L. * 1977; MA, 1974, PhD, 1975, Princeton University; visual languages, image analysis, computer graphics, artificial intelligence, educational technology.

Tomp, Martin * 1978; MSc, 1975, PhD, 1978, University of Toronto (Canada); computational complexity, computational biology.

Weld, Daniel Sabey * 1988; MS, 1984, PhD, 1988, Massachusetts Institute of Technology; artificial intelligence, intelligent user interfaces, software agents, planning.

Zahorjan, John * 1980; MSc, 1976, PhD, 1980, University of Toronto (Canada); computer systems, performance analysis, parallel programming models, scheduling and runtime support.

Associate Professors

Bershad, Brian * 1993; MS, 1989, PhD, 1990, University of Washington; operating systems, architecture, distributed systems, parallel systems.

Chambers, Craig D. * 1991; PhD, 1992, Stanford University; programming language design, optimizing compilation, object-oriented systems.

Dekker, David B. 1948, (Emeritus); PhD, 1948, University of California (Berkeley); numerical analysis, curve fitting, numerical solutions of differential equations.

Diorio, Christopher J. * 1997; MS, 1984, California Institute of Technology; silicon learning chips, neural networks and learning algorithms.

Etzioni, Oren 1991; MSc, 1988, PhD, 1990, Carnegie Mellon University; artificial intelligence and information retrieval, natural language interfaces, software agents.

Friedman, Batya * 1999, (Adjunct); PhD, 1988, University of California (Berkeley); value-sensitive design, social-cognitive and cultural aspects of information systems.

Halevy, Alon Y. * 1998; PhD, 1993, Stanford University; database systems, artificial intelligence, data integration, peer-based data management.

Hauck, Scott * 1990, (Adjunct); MS, 1992, PhD, 1995, University of Washington; FPGAs, reconfigurable computing, VLSI/CAD, digital logic, adaptive computing.

Johnson, Ronald A. 1986, (Adjunct); MA, 1972, University of Chicago, MS, 1975, University of Southern California; information sciences.

Kalet, Ira J. * 1980, (Adjunct); PhD, 1968, Princeton University; computer simulation of radiation therapy, artificial intelligence, computer graphics.

Kautz, Henry 2000; MS, 1982, University of Toronto (Canada), PhD, 1988, University of Rochester; artificial intelligence, knowledge representation, decision-theoretic control of reasoning.

Assistant Professors

Arnstein, Lawrence 1999, (Research); MS, 1991, PhD, 1993, Carnegie Mellon University; ubiquitous computing, bioinformatics, embedded systems design.

Böhringer, Karl F. * 1998, (Adjunct); PhD, 1997, Cornell University; microelectromechanical systems (MEMS), applied microtechnology, micro spacecraft.

Curlless, Brian L. 1998; MS, 1991, PhD, 1997, Stanford University; computer graphics; active machine vision.

Domingos, Pedro Morais Del 1999; MS, 1992, Instituto Superior Tecnico (Portugal), MS, 1994, PhD, 1997, University of California (Irvine); artificial intelligence, machine learning, data mining.

Fox, Dieter 2000; MS, 1993, PhD, 1998, University of Bonn (Germany); artificial intelligence and mobile robotics, probabilistic state estimation, particle filters.

Gribble, Steven 2000; MS, 1997, PhD, 2000, University of California (Berkeley); cluster computing, operating systems, Internet infrastructure and services, distributed computing.

Oskin, Mark H. * 2001; PhD, 2001, University of California (Davis); computer architecture, intelligent memory systems.

Padmanabhan, Venkata N. Z. * 1999, (Affiliate); PhD, 1998, University of California (Berkeley); Internet performance analysis, wireless networking and mobile computing.

Popovic, Zoran * 1999; MS, 1993, PhD, 1999, Carnegie Mellon University; computer graphics, character animation, physically based modeling and modeling, simulation.

Rao, Rajesh P. N. 2000; MS, 1994, PhD, 1998, University of Rochester; neural computing, machine vision and learning, robotics, computational neuroscience.

Seitz, Steven M. 2000; PhD, 1997, University of Wisconsin; computer vision, computer graphics.

Sengupta, Rimli 1999, (Research); MS, 1993, PhD, 1995, Georgia Institute of Technology; computational complexity, computational biology.

Suciu, Dan 2000; MS, 1991, University of Bucharest (Romania), PhD, 1995, University of Pennsylvania; databases, XML.

Wetherall, David James 1999; MS, 1994, PhD, 1998, Massachusetts Institute of Technology; networks and distributed systems.

Senior Lecturers

Dickey, Martin 1996; MS, 1971, University of Kentucky, PhD, 1992, Arizona State University; computer science education, computational linguistics.

Mones, Barbara 1999; MFA, 1979, Rhode Island School of Design; computer graphics, character animation.

Perkins, John H., Jr. 1998; MS, 1982, Cornell University; computer science education, programming languages and compilers.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

CSE 401 Introduction to Compiler Construction (3) Fundamentals of compilers and interpreters; symbol tables; lexical analysis, syntax analysis, semantic analysis, code generation, and optimizations for general purpose programming languages. No credit to students who have taken 413. Prerequisite: CSE 322; CSE 326; CSE 341; CSE 378.

CSE 403 Software Engineering (4) Fundamentals of software engineering using a group project as the basic vehicle. Topics covered include the software crisis, managing complexity, requirements specification, architectural and detailed design, testing and analysis, software process, and tools and environments. Prerequisite: CSE 321; CSE 341; CSE 378; recommended: CSE 401; CSE 451; project experience in an academic or work setting.

CSE 410 Computer Systems (3) Structure and components of hardware and software systems. Machine organization, including central processor and input-output architectures; assembly language programming; operating systems, including process, storage, and file management. No credit to students who have completed 378 or 451. Prerequisite: CSE 373.

CSE 413 Programming Languages and Their Implementation (3) Concepts and implementation strategies for ALGOL-class languages, including Pascal, Modula, ALGOL 60, Ada. Compilers for ALGOL-class languages. Languages with late binding times, including LISP, APL, Smalltalk. No credit to students who have completed 341 or 401. Prerequisite: CSE 373.

CSE 415 Introduction to Artificial Intelligence (5) NW Principles and programming techniques of artificial intelligence: LISP, symbol manipulation, knowledge representation, logical and probabilistic reasoning, learning, language understanding, vision, expert systems, and social issues. Not open for credit to students who have completed 473. Prerequisite: CSE 373.

CSE 417 Algorithms and Computational Complexity (3) Design and analysis of algorithms and data structures. Efficient algorithms for manipulating graphs and strings. Fast Fourier Transform. Models of computation, including Turing machines. Time and space complexity. NP-complete problems and undecidable problems. Prerequisite: CSE 373. Offered: W.

CSE 421 Introduction to Algorithms (3) Techniques for design of efficient algorithms. Methods for showing lower bounds on computational complexity. Particular algorithms for sorting, searching, set manipulation, arithmetic, graph problems, pattern matching. Prerequisite: CSE 322; CSE 326.

CSE 431 Introduction to Theory of Computation (3) Models of computation, computable and noncomputable functions, space and time complexity, tractable and intractable functions. Prerequisite: CSE 322.

CSE 444 Introduction to Database Systems (3) Fundamental concepts, system organization, and implementation of database systems. Relational, hierarchical, and network data models; file organizations and data structures; query languages; query optimization; database design; concurrency control;

security; issues involving distributed database systems. Prerequisite: CSE 326.

CSE 451 Introduction to Operating Systems (4) Principles of operating systems. Process management, memory management, auxiliary storage management, resource allocation. No credit to students who have completed 410 or E E 474. Prerequisite: CSE 326; CSE 378.

CSE 457 Computer Graphics (4) Introduction to computer image synthesis, modeling, and animation. Topics may include visual perception, color theory, displays and framebuffers, image processing, affine and projective transformations, quaternions, hierarchical modeling, hidden surface elimination, shading, ray-tracing, anti-aliasing, texture mapping, curves, surfaces, particle systems, dynamics, realistic character animation, and traditional animation principles. Prerequisite: CSE 326.

CSE 458 Computer Animation (5) Introduction to basic principles of computer generated animation. Focus on the modeling and lighting of animated characters. Students from Art, CSE, and Music team up on projects to be built on commercially-available modeling and lighting packages. Prerequisite: either CSE 457, ART 380, or MUSIC 403.

CSE 461 Introduction to Computer-Communication Networks (4) Computer network architectures, protocol layers, network programming. Transmission media, encoding systems, switching, multiple access arbitration. Network routing, congestion control, flow control. Transport protocols, real-time, multicast, network security. Prerequisite: CSE 143; either MATH 390/STAT 390, STAT 391, IND E 315, or CSE 321. Offered: jointly with E E 461.

CSE 466 Software for Embedded Systems (4) Software issues in the design of embedded systems. Microcontroller architectures and peripherals, embedded operating systems and device drivers, compilers and debuggers, timer and interrupt systems, interfacing of devices, communications and networking. Emphasis on practical application of development platforms. Prerequisite: CSE 326; CSE 370; CSE 378.

CSE 467 Advanced Digital Design (4) Advanced techniques in the design of digital systems. Hardware description languages, combinational and sequential logic synthesis and optimization methods, partitioning, mapping to regular structures. Emphasis on reconfigurable logic as an implementation medium. Memory system design. Digital communication including serial/parallel and synchronous/asynchronous methods. Prerequisite: CSE 326; CSE 370.

CSE 468 Very Large Scale Integration (5) Introduction to CMOS technology and circuit design; implementation of combinational and sequential logic; VLSI design methodologies; CAD tools for layout, simulation, and validation. Students design a VLSI chip using modern CAD tools. Prerequisite: CSE 370.

CSE 471 Computer Design and Organization (4) CPU instruction addressing models, CPU structure and functions, computer arithmetic and logic unit, register transfer level design, hardware and microprogram control, memory hierarchy design and organization, I/O and system components interconnection. Laboratory project involves design and simulation of an instruction set processor. Prerequisite: CSE 370; CSE 378.

CSE 472 Introduction to Computational Linguistics (3) NW/VLPA Introduction to computer applications of linguistic theory, including syntactic processing, semantic, and pragmatic interpretation and natural language generation. Prerequisite: either ANTH 461 or LING 461. Offered: jointly with LING 472.

CSE 473 Introduction to Artificial Intelligence (3) Principal ideas and developments in artificial intelligence: theorem proving, problem-solving methods, representation of knowledge, natural language analysis and synthesis, programming languages for artificial intelligence. Not open for credit to students who have completed 415. Prerequisite: CSE 326; recommended: CSE 341.

CSE 476 Embedded System Design (5) System building course to provide students with a complete experience in embedded system design. Students will design, simulate, construct, debug, and document a substantial project of their choosing. Lectures will focus on case studies and emerging components and platforms. Prerequisite: CSE 451; CSE 466.

CSE 477 Digital System Design (5) Students use laboratory to design, simulate, construct, and debug a substantial project that includes hardware, software, and communication components. Lectures focus on use of embedded processors in digital system design and interfacing techniques. Writing and debugging of real-time reactive software emphasized. Prerequisite: CSE 378; CSE 467.

CSE 481 Capstone Software Design (5) Students work in teams to design and implement a software project involving multiple areas of the CSE curriculum. Emphasis is placed on the development process itself, rather than on the product. Prerequisite: CSE major; CSE 326; CSE 341; CSE 378 and substantial programming experience, such as in CSE 451 or 457.

CSE 490 Special Topics in Computer Science and Engineering (1-5, max. 15) Lectures, discussions, and possibly labs on topics of current interest in computer science and engineering not covered by other CSE undergraduate courses. Offered: AWSpS.

CSE 498- Senior Project ([1-9]-, max. 9) A report (and perhaps demonstration) describing a development, survey, or small research project in computer science or an application to another field. Objectives are: (1) integrating material from several courses, (2) introducing the professional literature, (3) gaining experience in writing a technical document, and (4) showing evidence of independent work. Work normally extends over more than one quarter, for a maximum of 6 credits for 498; 9 credits are required for 498H. Offered: AWSpS.

CSE 499 Reading and Research (1-24, max. 24) Available in special situations for advanced computer science majors to do reading and research in field, subject to approval of undergraduate adviser and CSE faculty member. Free elective, but does not replace core course or computer science elective. Credit/no credit only. Offered: AWSpS.

Courses for Graduates Only

CSE 501 Implementation of Programming Languages (3) Design of compilers and run-time systems for traditional and non-traditional programming languages. Intra- and interprocedural analyses and optimization. Compile-time and run-time implementation techniques for LISP-like, functional, and object-oriented languages. Students construct an optimizing compiler. Prerequisite: CSE major and CSE 401 and CSE 505.

CSE 503 Software Engineering (3) Specification, implementation, and testing of large, multiperson, software systems. Topics include abstraction, information hiding, software development environments, and formal specifications. Prerequisite: CSE major and CSE 322, CSE 326, and CSE 378 or equivalents.

CSE 504 Advanced Topic in Software Engineering (3) Topics vary but may include software design and evolution, formal methods, requirements specifications, software and system safety, reverse engineering, real-time software, metrics and measurement,

programming environments, and verification and validation. Prerequisite: CSE major or permission of instructor.

CSE 505 Concepts of Programming Languages (3) Data structures, types, control structures. Languages in the ALGOL family; functional, object-oriented, and logic programming languages. Prerequisite: CSE major, CSE 401 and a working knowledge of Pascal and LISP.

CSE 510 Advanced Topics in Human-Computer Interaction (3) Content varies, including interface issues for networks, embedded systems, education applications, safety and critical systems, graphics and virtual reality, databases, and computer-supported cooperative work. Offered: odd years.

CSE 519 Computer Science Research Seminar (1, max. 3) Weekly presentations on current research activities by members of the department. Only Computer Science graduate students may register, although others are encouraged to attend. Credit/no credit only. Offered: AWSp.

CSE 520 Computer Science Colloquium (1, max. 9) Weekly public presentations on topics of current interest by visiting computer scientists. Credit/no credit only. Offered: AWSp.

CSE 521 Design and Analysis of Algorithms I (3) Principles of design of efficient algorithms: recursion, divide and conquer, balancing, dynamic programming, greedy method, data structure selection. Correctness and analysis of algorithms. Examples drawn from problems in sorting, searching, set manipulation, pattern-matching, graphs, matrices, polynomials, and integers. Prerequisite: CSE major and CSE 326 or equivalent.

CSE 522 Design and Analysis of Algorithms II (3) Analysis of algorithms more sophisticated than those treated in 521. Content varies and may include such topics as algebraic algorithms, combinatorial algorithms, techniques for proving lower bounds on complexity, and algorithms for special computing devices such as networks or formulas. Prerequisite: CSE major and CSE 521. Offered: alternate years.

CSE 523 Computational Geometry (3) Algorithms for discrete computational geometry. Geometric computation, range searching, convex hulls, proximity, Voronoi diagrams, intersection. Application areas include VLSI design and computer graphics. Prerequisite: CSE major and CSE 521; recommended: CSE 457 or equivalent. Offered: alternate years.

CSE 527 Computational Biology (3) Introduces computational methods for understanding biological systems at the molecular level. Problem areas such as mapping and sequencing, sequence analysis, structure prediction, phylogenetic inference, regulatory analysis. Techniques such as dynamic programming, Markov models, expectation-maximization, local search. Prerequisite: graduate standing in biological, computer, mathematical or statistical science, or permission of instructor.

CSE 531 Computability and Complexity (3) Computational models including deterministic and nondeterministic Turing machines, and techniques for analyzing them. Fundamentals of computability theory and undecidability. Fundamentals of computational complexity theory and NP-completeness. Prerequisite: CSE majors only; CSE 322 or equivalent.

CSE 532 Complexity Theory (3) Deterministic, non-deterministic, alternating, and probabilistic Turing machines. Time and space complexity, complexity classes, complexity hierarchies, and provably intractable problems. Prerequisite: CSE major and CSE 531.

CSE 533 Advanced Topics in Complexity Theory (3) Topics in computational complexity more sophisticated than those treated in 532. Topics are expected to vary from year to year, but might typically focus on such areas as parallel complexity, probabilistic complexity, circuit- or automaton-based complexity, or logic. Prerequisite: CSE major. Offered: alternate years.

CSE 544 Principles of Database Systems (3) Data models and query languages (SQL, datalog, OQL). Relational databases, enforcement of integrity constraints. Object-oriented databases and object-relational databases. Principles of data storage and indexing. Query-execution methods and query optimization algorithms. Static analysis of queries and rewriting of queries using views. Data integration. Data mining. Principles of transaction processing.

CSE 546 Data Mining (3) Methods for identifying valid, novel, useful, and understandable patterns in data. Induction of predictive models from data: classification, regression, and probability estimation. Discovery of clusters and association rules.

CSE 548 Computer Systems Architecture (3) Notations for computer systems. Processor design (single chip, look-ahead, pipelined, data flow). Memory hierarchy organization and management (virtual memory and caches). Microprogramming. I/O processing. Multiprocessors (SIMD and MIMD). Prerequisite: CSE major and CSE 451.

CSE 549 High-Performance Computer Architectures (3) Algorithm design, software techniques, computer organizations for high-performance computing systems. Selected topics from: VLSI complexity for parallel algorithms, compiling techniques for parallel and vector machines, large MIMD machines, interconnection networks, reconfigurable systems, memory hierarchies in multiprocessors, algorithmically specialized processors, data flow architectures. Prerequisite: CSE major and CSE 548 or permission of instructor. Offered: alternate years.

CSE 551 Operating Systems (3) Operating system design and construction techniques. Concurrent programming, operating system kernels, correctness, deadlock, protection, transaction processing, design methodologies, comparative structure of different kinds of operating systems, and other topics. Prerequisite: CSE major and CSE 451.

CSE 552 Distributed and Parallel Systems (3) Principles, techniques, and examples related to the design, implementation, and analysis of distributed and parallel computer systems. Prerequisite: CSE major and CSE 551.

CSE 553 Real-Time Systems (3) Design and construction of software for real-time computer systems. Software architectures. Requirements and specification methods. Scheduling algorithms and timing analysis. Real-time operating systems. Real-time programming languages. Selected case studies. Prerequisite: CSE major and CSE 451. Offered: alternate years.

CSE 557 Computer Graphics (3) Introduction to image synthesis and computer modeling, emphasizing the underlying theory required for undertaking computer graphics research. Topics include color theory, image processing, affine and projective geometry, hidden-surface determination, photorealistic image synthesis, advanced curve and surface design, dynamics, realistic character animation. Prerequisite: CSE major, solid knowledge of linear algebra.

CSE 558 Special Topics in Computer Graphics (3) Advanced topics in computer graphics not treated in CSE 557. Topics vary from year to year but typically include advanced aspects of image synthesis, animation, and 3D photography. Prerequisite: CSE major

and CSE 557 or permission of instructor. Offered: alternate years.

CSE 561 Computer Communication and Networks (3) Fundamentals of data transmission: coding, message formats, and protocols. Organization of computer networks. Examples of network implementations. Prerequisite: CSE or E E major and CSE 451 or equivalent.

CSE 563 Fault Tolerant Computing (3) Faults and their manifestation, issues, theory, and techniques of reliable systems design, testing, design for testability, self-checking and fail-safe circuits, coding techniques, system-level fault diagnosis, fault-tolerant communication, reliable software design, and evaluation criteria. Prerequisite: basic knowledge of digital systems design or permission of instructor. Offered: jointly with E E 563.

CSE 567 Principles of Digital Systems Design (3) Principles of logic design, combinational and sequential circuits, minimization techniques, structured design methods, CMOS technology, complementary and ratioed gates, delay estimation and performance analysis, arithmetic circuits, memories, clocking methodologies, synthesis and simulation tools, VLSI processor architecture. Prerequisite: CSE major and basic knowledge of logic design.

CSE 568 Introduction to VLSI Systems (3) Introduction to CMOS technology and circuit design; combinational logic-design alternatives; register-design and system-clocking methodologies; datapath and subsystem design; VLSI system-design methodologies; CAD tools for synthesis, layout, simulation, and validation; design of a complex VLSI chip. Prerequisite: CSE 567 or permission of instructor. CSE majors only

CSE 573 Artificial Intelligence I (3) Introduction to computational models of thought and construction of intelligent information systems. Topics include search algorithms, data dependencies and truth-maintenance systems, approaches to knowledge representation, automated deduction, reasoning under uncertainty, and machine learning. Prerequisite: CSE 421 or equivalent; exposure to logic, LISP programming experience, CSE major.

CSE 574 Artificial Intelligence II (3) Advanced topics in artificial intelligence. Subjects include planning, natural language understanding, qualitative physics, machine learning, and formal models of time and action. Students are required to do projects. Prerequisite: CSE major and CSE 573.

CSE 576 Image Understanding (3) Overview of computer vision, emphasizing the middle ground between image processing and artificial intelligence. Image formation, preattentive image processing, boundary and region representations, and case studies of vision architectures. Prerequisite: CSE 573 or E E 562 or equivalent or permission of instructor. Offered: jointly with E E 576.

CSE 577 Mathematical Morphology (3) Theory of mathematical morphology and its application in various commercial, industrial, medical, and research applications. Contents include binary and grayscale morphologic dilation, erosion, opening and closing, morphological sampling theorem, structuring element decomposition, thinning, skeletonizing, and relational shape description. Group project. Prerequisite: CSE 576 or E E 568 or permission of instructor. Offered: jointly with E E 577; alternate years.

CSE 578 Data Mining (4) Methods for identifying valid, novel, useful, and understandable patterns in data. Induction of predictive models from data: classification, regression, probability estimation. Discovery of clusters and association rules.

CSE 581 Parallel Computation in Image Processing (3) Parallel architectures, algorithms, and languages for image processing. Cellular array, pipelined and pyramid machines, instruction sets, and design issues. Parallel implementations of filtering, edge detection, segmentation, shape, stereo, motion, relaxation algorithms, multiresolution methods, and iconic-to-symbolic transforms. Students write and debug programs for parallel computers. Prerequisite: permission of instructor. Offered: alternate years.

CSE 582 Compiler Construction (4) Principles and practice of building efficient implementations of modern programming languages. Lexical, syntactic, and semantic analysis of programs. Intermediate program representations. Intra- and interprocedural analysis and optimization. Run-time system techniques. Related programming environment facilities such as source-level debuggers and profilers. Prerequisite: CSE majors only.

CSE 583 Programming Languages (4) A study of non-imperative programming paradigms such as functional, object-oriented, logic, and constraint programming. Programming language semantics and type theory. Prerequisite: CSE majors only.

CSE 584 Principles of Software Engineering (4) Study of major developments in software engineering over the past three decades. Topics may include design (information hiding, layering, open implementations), requirements specification (informal and formal approaches), quality assurance (testing, verification and analysis, inspections), reverse and re-engineering (tools, models, approaches). Prerequisite: CSE majors only.

CSE 585 Design and Implementation of Digital Systems (4) Overview of current implementation technologies for digital systems including custom integrated circuits, field-programmable logic, and embedded processors. Systems components such as buses and communications structures, interfaces, memory architectures, embedded systems, and application-specific devices. Focus on the design of large systems using modern CAD tools. Prerequisite: CSE majors only.

CSE 586 Computer Architecture (4) Architecture of the single-chip microprocessor: instruction set design and processor implementation (pipelining, multiple issue, speculative execution). Memory hierarchy: on-chip and off-chip caches, TLBs and their management, virtual memory from the hardware viewpoint. I/O devices and control: buses, disks, and RAIDs. Prerequisite: CSE majors only.

CSE 587 Computer Operating Systems (4) A study of developments in operating systems from the 1960s to the present. Topics include operating system structure, protection, virtual memory, communication mechanisms, concurrency, lightweight threads, object-oriented systems, distributed systems, and transaction support in operating systems. Prerequisite: CSE majors only.

CSE 588 Network Systems (4) Current choices and challenges in network systems. Fundamental concepts combined with emphasis on evaluation of design/operations alternatives. Topics include: alternative link, network, and transport-layer technologies, topologies, routing, congestion control multimedia, IPv6, aTM v. IP, network management and policy issues. Prerequisite: CSE majors only.

CSE 589 Applied Algorithms (4) Principles of design of efficient algorithms with emphasis on algorithms with real world applications. Examples drawn from computational geometry, biology, scientific computation, image processing, combinatorial optimization, cryptography, and operations research. Prerequisite: CSE majors only.

CSE 590 Special Topics in Computer Science (*) Several offerings each quarter, on topics of current interest. Prerequisite: permission of instructor. Offered: AWSp.

CSE 591 Current Trends in Computer Graphics (4) Introduction to computer image synthesis, modeling, and animation emphasizing the state-of-the-art algorithm applications. Topics may include visual perception, image processing, geometric transformations, hierarchical modeling, hidden-surface elimination, shading, ray-tracing, anti-aliasing, texture mapping, curves, surfaces, particle systems, dynamics, realistic character animation, and traditional animation principles. Prerequisite: CSE majors only.

CSE 592 Applications of Artificial Intelligence (4) Introduction to the use of Artificial Intelligence tools and techniques in industrial and company settings. Topics include: foundations (search, knowledge representation) and tools such as expert systems, natural language interfaces and machine learning techniques. Prerequisite: CSE majors only.

CSE 593 Transaction Processing (4) Technology supporting reliable large-scale distributed computing, including transaction programming models, TP monitors, transactional communications, persistent queuing, software fault tolerance, concurrency control and recovery algorithms, distributed transactions, two-phase commit, data replication. Prerequisite: CSE majors only.

CSE 594 Database Management System (4) Introduction to the principles of database management systems. Topics include database system architecture, data models, theory of database design, query optimization, concurrency control, crash recovery, and storage strategies. CSE majors only.

CSE 595 Human Computer Interaction (4) Topics in human-computer interaction, including tools and skills for user interface design, user interface software architecture, rapid prototyping and iterative design, safety and critical systems, evaluation techniques, and computer supported cooperative work. Prerequisite: CSE majors only.

CSE 596 Parallel Computation (4) Survey of parallel computing including the processing modes of pipelining, data parallelism, thread parallelism, and task parallelism; algorithmic implications of memory models; shared memory and message passing; hardware implementations; bandwidth and latency; synchronization, consistency, interprocessor communication; programming issues including implicit and explicit parallelism, locality, portability. CSE majors only.

CSE 597 Performance Analysis (4) Broad introduction to computer system performance evaluation techniques and their application. Includes measurement/benchmarking, stochastic and trace driven simulation, stochastic queuing networks, and timed Petri nets. Applications of the techniques are studied using case study papers. CSE majors only. Not open for credit to students who have completed CSE 543. Offered: AWSp.

CSE 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

CSE 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

CSE 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Electrical Engineering

253 Electrical Engineering

General Catalog Web page:
www.washington.edu/students/gencat/academic/Electrical_Eng.html

Department Web page:
www.ee.washington.edu/ee.html

Electrical engineering is concerned with the understanding and utilization of electricity and with providing society useful, efficient, and economic products and services. Electrical engineering is an amazingly broad-based and rapidly growing discipline. It encompasses everything from batteries and power supplies to crystal fabrication, autonomous robots, and devices that can recognize human speech. Electrical engineers design, produce, study, and operate all manners of devices and systems that use electric and electromagnetic energy. Electrical engineers work on systems at the macro scale of electric power grids and at the micro scale of nano-technology.

Contemporary society is in the midst of an information revolution, created in large part from the fruits of electrical engineering. Rapid improvements in communication technologies, computer visualization, and information access continue to have a significant impact on manufacturing, medicine, transportation, and environmental monitoring. Dramatic advances in personal communication services, digital imaging, and network hardware and software are changing the texture of everyday life for an increasing portion of the world's population.

Graduates with a degree in electrical engineering find employment in industries such as aerospace, communications, computer manufacturing, power distribution, consumer electronics, and biomedical engineering. Positions can be found focusing on the research, design, and testing of new products; in technical sales and marketing; business consulting; and even growing areas such as intellectual property. Students who pursue graduate studies are quite successful in highly competitive programs nationally and internationally.

Graduate Program

Graduate Program Coordinator
 253 EE/CSE Building, Box 352500
 206-543-4924
grad@ee.washington.edu

The Department of Electrical Engineering offers graduate programs leading to the degrees of Master of Science in Electrical Engineering (M.S.E.E.) and Doctor of Philosophy (Ph.D.). Graduate courses and research programs are offered in biosystems, circuits and network theory, computational intelligence, computer networks and distributed systems, computer architecture, digital systems, software engineering, operating systems, microprocessors, VLSI design, control systems, electromagnetics (including optics and radio science), electronic materials (including devices and micro-electronics), energy systems (including power electronics and electric drives), signal and image processing, telecommunications, and virtual reality. Numerous interdisciplinary research opportunities exist, including projects relating to bio-engineering, computer engineering, and marine acoustics. The department does extensive research in coordination with the University of Washington's Applied Physics Laboratory and Washington Technology Center.

The M.S.E.E. degree may be earned in three ways, each of which requires the accumulation of 45 credits. A student may perform research and write a thesis; a student may pursue a one-quarter project as part of their studies; or a student may simply accumulate a suitable distribution of 45 credits of course work. Course work for each of the options is developed with the advice of faculty advisers as well as through the department advising staff.

The M.S.E.E. degree is also offered to part-time students employed in local industries through the Education at a Distance for Growth and Excellence (EDGE) program. Regular graduate courses are offered over cable television or by videotape to enable working engineers to participate in the program without traveling to campus.

For the Ph.D. degree, students must pass the departmental qualifying examination, pass an advanced General Examination, pursue an original research problem, and report the results of that research in a dissertation that must be a contribution to knowledge. At least one year of course work beyond the M.S.E.E. degree is usually desirable.

Research Groups

Facilities in the Department of Electrical Engineering include research laboratories for advanced digital systems, advanced power technology, applied electromagnetics, optics, remote sensing, applied signal and image processing, mechatronics and intelligent control, modern sensors, and semiconductor technology.

Admissions Qualifications

In addition to meeting Graduate School admission requirements, the Graduate Record Examination (GRE) general test is required of all students. Official test scores must be submitted, along with a formal application, a statement of purpose, and a minimum of two reference letters.

Although most applicants have baccalaureate degrees in electrical engineering, applicants with degrees in other branches of engineering, the physical sciences, computer science, or mathematics often are able to pursue graduate study in electrical engineering following some additional preparation. Such applicants are strongly encouraged to contact the department for further information.

For more information on admissions qualifications, visit the department's Web site at www.ee.washington.edu/graduate/admissions.html.

Financial Aid

Research assistantships, teaching assistantships, scholarships, and graduate fellowships are available to qualified graduate students in all areas of electrical engineering. Most awards include a monthly stipend plus payment of tuition and fees.

Faculty

Chair

Howard Jay Chizeck

Professors

Afromowitz, Martin * 1975; MS, 1966, PhD, 1969, Columbia University; microtechnology, solid-state and fiber-optics sensors, biomedical instrumentation.

Alexandro, Frank J. * 1964, (Emeritus); MSEE, 1959, DSc, 1964, New York University; control systems, stochastic estimation methods.

Allstot, David James * 1999; PhD, 1979, University of California (Berkeley); design and simulation of RF and mixed-signal integrated circuits.

Atlas, Les Eugene * 1983; MS, 1979, PhD, 1984, Stanford University; time-frequency representations, digital signal processing applied to speech, audio, manufacturing.

Baer, Jean-Loup * 1969, (Adjunct); MS, 1963, Grenoble (France), PhD, 1968, University of California (Los Angeles); computer architecture and performance evaluation.

Beach, Kirk Watson * 1976, (Adjunct Research); MSChE, 1968, PhD, 1971, University of California (Berkeley), MD, 1976, University of Washington; arterial disease in diabetes, blood flow studies with ultrasonic Doppler.

Bernard, Gary D. * 1989, (Affiliate); PhD, 1964, University of Washington; advanced sensors for manufacturing, time-frequency classification, visual information processing.

Borriello, Gaetano * 1988, (Adjunct); MS, 1981, Stanford University, PhD, 1988, University of California (Berkeley); invisible and ubiquitous computing, embedded and network systems.

Chizeck, Howard Jay * 1998; MS, 1976, Case Western Reserve University, ScD, 1982, Massachusetts Institute of Technology; biologically inspired control systems for autonomous robotics, prosthetics, and rehabilitation.

Crum, Lawrence A. * 1992; PhD, 1967, Ohio University; physical acoustics, underwater acoustics, medical ultrasound, acoustic cavitation, sonoluminescence.

Damborg, Mark J. * 1969; MSEE, 1963, PhD, 1969, University of Michigan; control systems theory, and applications, power system dynamics and control, database methods.

Darling, Robert B. * 1985; MS, 1982, PhD, 1985, Georgia Institute of Technology; semiconductor devices, solid state, optoelectronics, microelectronics.

Denton, Denise Dee 1996; MS, 1982, PhD, 1987, Massachusetts Institute of Technology; micromachining for the design and fabrication of microelectronic systems.

Dow, Daniel G. * 1968, (Emeritus); PhD, 1958, Stanford University; microwaves, physical electronics, semiconductor devices, sensors.

Dunham, Scott T. * 1999; MS, 1980, PhD, 1985, Stanford University; modeling and simulation of microfabrication processes and device behavior.

Ehrenberg, John E. * 1970, (Affiliate); PhD, 1973, University of Washington; communications, signal processing, underwater acoustics.

El-Sharkawi, Mohamed A. * 1980; MS, 1977, PhD, 1980, University of British Columbia (Canada); analysis and control of power electronics, systems, and electric drives; artificial neural networks.

Furness, Thomas A. * 1989, (Adjunct); PhD, 1981, University of Southampton (UK); display systems engineering, human factors, computer graphics, virtual reality.

Guilford, Edward C. * 1983, (Emeritus); PhD, 1959, University of California (Berkeley); electronics, computers.

Hannaford, Blake * 1989; MS, 1982, University of California (Berkeley), PhD, 1985, University of California (Berkeley); haptic interfaces, robotics, bio-

mechanics, bioengineering, controls, human-machine interaction.

Haralick, Robert M. * 1986, (Emeritus); MS, 1967, PhD, 1969, University of Kansas; computer vision, artificial intelligence, pattern recognition, image processing.

Hsu, Chih-Chi * 1958, (Emeritus); PhD, 1951, Ohio State University; control systems and cybernetics.

Huang, Xuecong D. * 1997, (Affiliate); PhD, 1989, University of Edinburgh (UK); speech recognition and synthesis, user interfaces, artificial intelligence, computational linguistics.

Hwang, Jenq-Neng * 1989; MS, 1983, National Taiwan University (Taiwan), PhD, 1988, University of Southern California; parallel architectures, signal and image processing, neural networks.

Johnson, David L. 1955, (Emeritus); PhD, 1955, Purdue University; digital design, artificial intelligence, models of learning systems.

Kim, Yongmin * 1982; MS, 1979, PhD, 1982, University of Wisconsin; computer architecture, imaging systems, medical imaging, computer graphics, multimedia.

Kuga, Yasuo * 1991; MS, 1979, PhD, 1983, University of Washington; microwave and millimeter-wave remote sensing, optics, and electromagnetics.

Ladner, Richard E. * 1971, (Adjunct); PhD, 1971, University of California (Berkeley); design and analysis of algorithms, data compression, network algorithms, cache performance.

Lauritzen, Peter O. * 1968, (Emeritus); MS, 1958, PhD, 1961, Stanford University; power electronics, electronic devices, instrumentation.

Lewellen, Thomas * 1967, (Adjunct); PhD, 1972, University of Washington; bioengineering, electrical engineering.

Lewis, Laurel J. 1946, (Emeritus); PhD, 1947, Stanford University; circuits and systems.

Liu, Chen-Ching * 1983; MS, 1978, National Taiwan University, PhD, 1983, University of California (Berkeley); power system analysis/computing, intelligent system methodologies/applications, power electronics.

Marks, Robert * 1977; MS, 1973, Rose Hulman Institute of Technology, PhD, 1977, Texas Technological University; neural networks, computational intelligence, fuzzy systems, statistical communication theory.

Meditch, James S. * 1977, (Emeritus); MS, 1957, Massachusetts Institute of Technology, PhD, 1961, Purdue University; broadband communication networks, video and multimedia systems.

Meldrum, Deirdre R. * 1992; MS, 1985, Rensselaer Polytechnic Institute, PhD, 1993, Stanford University; laboratory automation systems, genome analysis, modeling and control of dynamic systems, robots.

Moritz, William E. * 1973, (Emeritus); PhD, 1969, Stanford University; human-powered transportation.

Noges, Endrik * 1958, (Emeritus); PhD, 1959, Northwestern University; automatic control systems, nonlinear and discontinuous control.

Ostendorf, Mari 1999; MS, 1981, PhD, 1985, Stanford University; speech synthesis and understanding; spoken document retrieval; statistical pattern recognition.

Pearsall, Thomas P. * 1989, (Affiliate); PhD, 1973, Cornell University; physics of semiconductor devices and the technology of semiconductor devices.

Peden, Irene Carswell * 1961, (Emeritus); PhD, 1962, Stanford University; subsurface remote sensing and applied electromagnetics.

Porter, Robert P. * 1985, (Emeritus); PhD, 1970, Northeastern University; acoustics, electromagnetics, signal processing.

Ritcey, James A. * 1985; MS, 1979, Syracuse University, PhD, 1985, University of California (San Diego); communications, signal processing, radar/sonar.

Sechen, Carl M. * 1992; MS, 1979, Massachusetts Institute of Technology, PhD, 1986, University of California (Berkeley); design and computer-aided design of digital integrated circuits and systems.

Shapiro, Linda G. 1986; MS, 1972, PhD, 1974, University of Iowa; computer vision, multimedia information systems, medical informatics, pattern recognition.

Sigelmann, Rubens A. * 1959, (Emeritus); PhD, 1963, University of Washington; bioengineering, ultrasonics, propagation, acoustics.

Soma, Mani * 1982; MS, 1977, PhD, 1980, Stanford University; computer-aided design, device modeling, I.C. technology and design, bioengineering.

Spindel, Robert C. 1987; MS, 1966, PhD, 1971, Yale University; ocean acoustics, signal processing, acoustic navigation systems, acoustic tomography.

Sun, Ming-Ting * 1996; MS, 1981, University of Texas (Arlington), PhD, 1985, University of California (Los Angeles); multimedia/video processing/networking VLSI.

Szabalya, John F. * 1984, (Affiliate); PhD, 1948, Josef Nador University (Hungary).

Tanimoto, Steven L. * 1977, (Adjunct); MA, 1974, PhD, 1975, Princeton University; visual languages, image analysis, computer graphics, artificial intelligence, educational technology.

Taya, Minoru * 1986, (Adjunct); PhD, 1977, Northwestern University; composite materials, elasticity and plasticity, impact physics, fracture theory.

Tsang, Leung * 1983; MS, 1973, PhD, 1976, Massachusetts Institute of Technology; wave propagation and scattering, remote sensing and optics.

Vagners, Juris * 1967, (Adjunct); PhD, 1967, Stanford University; optimal control and estimation theory, applications to aircraft systems.

Yee, Sinclair S. * 1966; MS, 1961, PhD, 1965, University of California (Berkeley); physical electronics, semiconductor devices, microsensors.

Yuan, Chun 1991, (Adjunct); PhD, 1988, University of Utah; magnetic resonance imaging in medical application.

Zabinsky, Zelda * 1985, (Adjunct); PhD, 1985, University of Michigan; operations research, applications in industrial engineering, optimization with stochastic elements.

Zick, Gregory L. * 1974; MS, 1972, PhD, 1974, University of Michigan; multimedia and digital information management systems.

Associate Professors

Babbitt, William R. * 1993, (Affiliate); MAE, 1986, PhD, 1987, Harvard University; optical memories, processors, and optical interconnects and nonlinear optics.

Berg, Martin C. * 1986, (Adjunct); PhD, 1986, Stanford University; digital control system design, control of structurally flexible electromechanical systems.

Cho, Paul S. 1990, (Adjunct); PhD, 1989, University of California (Los Angeles); medical radiation physics.

Chou, Philip A. * 1998, (Affiliate); PhD, 1998, Stanford University; compression and recognition of video images, audio, speech and documents.

Christie, Richard Dunstan, Jr. * 1989; MSEE, 1974, Rensselaer Polytechnic Institute, PhD, 1989, Carnegie Mellon University; power systems analysis, expert systems applications, user interfaces.

Dailey, Daniel J. * 1982; MS, 1982, PhD, 1988, University of Washington; time series modeling of physical phenomena, optimization, distributed computing, networking.

Falk, Robert Aaron 1995, (Affiliate); MS, 1974, PhD, 1979, University of Washington.

Giri, Jay * 1990, (Affiliate); MS, 1971, State University of New York (Stony Brook), PhD, 1977, Clarkson University; power system analysis, software development and user interfaces for real-time power system control.

Gu, Chuang * 1999, (Affiliate); PhD, 1995, Swiss Federal Institute of Technology; video processing, video analysis and video coding.

Hauck, Scott * 1990; MS, 1992, PhD, 1995, University of Washington; FPGAs, reconfigurable computing, VLSI/CAD, digital logic, adaptive computing.

Healy, Michael J. * 1995, (Affiliate); MS, 1967, University of Idaho; formal semantics; mathematical semantic analysis and design of systems.

Helms, Ward J. * 1964; PhD, 1968, University of Washington; VLSI analog and digital circuit design, integrated circuits, acoustics and audio, silicon compilers.

Kim, Jae H. 2000; MSc, 1978, Seoul National University (Korea), PhD, 1987, University of Florida.

Liu, Hui * 1998; PhD, 1995, University of Texas (Austin); wireless system and network design: DSP and VLSI for communications, numerical computing.

Ly, Uy-Loi * 1988, (Adjunct); PhD, 1983, Stanford University; robust controls, parameter optimization, model reduction, digital control, design integration.

Mar, Monte 2000; MS, 1989, PhD, 1993, University of California (Berkeley).

Nelson, Brian A. * 1987; PhD, 1987, University of Wisconsin; fusion plasma physics, plasma processing of materials, data acquisition software.

Phillips, Ihsin Tsai-Yun * 1988, (Affiliate); PhD, 1984, University of Maryland; computer vision, document image understanding, image database, software engineering.

Redeker, Charles C. 1963, (Emeritus); MS, 1964, University of Washington.

Riskin, Eve A. * 1990; MS, 1985, PhD, 1990, Stanford University; image compression and processing, and signal processing.

Roy, Sumit * 1998; MA, 1985, MSEE, 1985, PhD, 1988, University of California (Santa Barbara); performance analysis of communications networks; statistical and numerical computing.

Sahr, John D. * 1991; PhD, 1990, Cornell University; radar remote sensing, ionospheric physics; signal processing; wireless communications.

Shi, Chuan Jin 1998; PhD, 1994, University of Waterloo (Canada); VLSI and VLSI-CAD, optimization.

Sinanan, Mika N. * 1980, (Adjunct); MD, 1980, Johns Hopkins University, PhD, 1986, University of British Columbia (Canada); surgical education, biorobotic surgical instrument development, and clinical procedure development.

Thorsos, Eric I. * 1980; PhD, 1972, Massachusetts Institute of Technology; rough surface scattering, numerical simulation and theory, underwater acoustics.

Troll, Mark 2001, (Research); PhD, 1983, University of California (San Diego).

Vivekanandan, J. 1994, (Affiliate); PhD, 1986, Colorado State University.

Wilson, Denise M. * 1999; PhD, 1995, Georgia Institute of Technology; distributed sensing systems design with emphasis on electronics interface.

Winebrenner, Dale P. * 1986; PhD, 1985, University of Washington; optical and radiowave propagation and scattering, remote sensing of planetary surfaces.

Yuan, Chun 1991, (Adjunct); PhD, 1988, University of Utah; magnetic resonance imaging in medical application.

Assistant Professors

Alilovic-Curgus, Jadranka 1997, (Affiliate); PhD, 1993, University of British Columbia (Canada).

Belcher, Edward O. * 1982, (Affiliate); MA, 1970, Stanford University, MSEE, 1973, Purdue University; signal processing, artificial intelligence, underwater acoustics.

Bilmes, Jeffrey A. * 1999; PhD, 1999, University of California (Berkeley); speech and pattern recognition, learning, audio processing, high-performance computing, human-computer.

Böhringer, Karl F. * 1998; MS, 1993, PhD, 1997, Cornell University; microelectromechanical systems (MEMS), applied microtechnology, micro spacecraft.

Bushnell, Linda 2000; MS, 1987, University of Connecticut, MA, 1989, PhD, 1994, University of California (Berkeley).

Chen, Tai-Chang 1991, (Research); MS, 1993, PhD, 1997, University of Washington.

Chinowsky, Timothy M. 2000, (Research); MS, 1997, PhD, 2000, University of Washington.

Choi, Jai Joon * 1988, (Affiliate); PhD, 1990, University of Washington; adaptive signal processing, neural networks, and fuzzy logic.

Diorio, Christopher J. * 1997, (Adjunct); MS, 1984, PhD, 1997, California Institute of Technology; silicon learning chips, neural networks, and learning algorithms.

Goldschneider, Jill * 1989, (Affiliate); PhD, 1997, University of Washington; data compression, image processing and clustering.

Jandhyala, Vikram 2000; PhD, 1998, University of Illinois; computational and applied electromagnetics, high-speed circuit applications of field solvers.

Liu, Hui * 1998; PhD, 1995, University of Texas (Austin); wireless system and network design: DSP and VLSI for communications, numerical computing.

Luby, James C. * 1979, (Affiliate); PhD, 1984, University of Washington; signal processing, under-

water acoustics, computer simulation, adaptive array processing, tracking.

Mamishhev, Alexander V. * 1999; PhD, 1999, Massachusetts Institute of Technology; sensors, non-destructive testing, power, MEMS, inverse problems, optimization.

Matula, Thomas J. * 1993, (Affiliate); PhD, 1993, Washington State University.

Oh, Seho * 1987, (Affiliate); PhD, 1989, University of Washington; neural networks and fuzzy systems.

Padmanabhan, Venkata N. Z. * 1999, (Affiliate); PhD, 1998, University of California (Berkeley); Internet performance analysis, wireless networking and mobile computing.

Poovendran, Raadhakrishnan 2000; PhD, 1999, University of Maryland; communications and networking, network security, cryptography.

Senior Lecturers

Peckol, James 1994; PhD, 1985, University of Washington; real-time embedded systems, hardware/software co-design, computer architecture, digital fuzzy logic.

Yee, Hsian-Pei 1985; MS, 1989, PhD, 1992, University of Washington.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For current course descriptions, visit the online course catalog at www.washington.edu/students/crscat/.

E E 400 Advanced Topics in Electrical Engineering (1-5, max. 10) Contemporary topics at the advanced undergraduate elective level. Faculty presents advanced elective topics not included in the established curriculum. Offered: AWSp.

E E 411 Network Synthesis (4) Network representation in the complex frequency domain, realizability criteria for driving-point and singly and doubly terminated transfer function, canonical forms, Butterworth and Bessel Approximation methods, and application of the digital computer in synthesis procedures. Prerequisite: 1.0 in E E 233. Offered: A.

E E 415 Computer-Aided System Analysis and Design (3) Concepts, principles, and techniques concerned with the design, testing, and application of general-purpose problem-oriented computer programs for analyzing large-scale systems. Offered: Sp.

E E 416 Communications I: Random Signals (4) Probability and random processes in communications. Random variables, distributions, and expectation. Statistical filter design for detection and estimation. Prerequisite: 1.0 in E E 341; 1.0 in STAT 390.

E E 417 Communications II: Modulation and Coding (4) Modulation techniques for modern digital communication systems. Signal space, optimum receiver design, error performance. Energy-band width tradeoff in modulation. Error control coding for high reliability, block coding, convolutional coding. Multipath fading and its effects on performance, diversity signaling. Spread spectrum signaling and code division multiple access for wireless communications. Prerequisite: 1.0 in E E 416. Offered: W.

E E 418 Communications III: Multiple Access (3) Issues in communication systems with multiple users. Multiplexing based on time, frequency, and code. Error performance and power control in multiuser communications. Random access in networks, Aloha

protocol and carrier sensing. Queuing theory for performance analysis. Delay-throughput tradeoff. Switch architectures and performance. Prerequisite: 1.0 in E E 417. Offered: Sp.

E E 420 Design in Communications (4) Design projects in communications. Frequent projects solved by student teams. Reports and presentations. Prerequisite: 1.0 in E E 417 which may be taken concurrently. Offered: Sp.

E E 433 Analog Circuit Design (5) Design of analog circuits and systems applying modern integrated circuit technology: operational amplifiers, differential amplifiers, active filters, voltage references and regulators. Prerequisite: 1.0 in E E 332. Offered: AW.

E E 436 Medical Instrumentation (4) Introductory course in the application of instrumentation to medicine. Topics include transducers, signal-conditioning amplifiers, electrodes and electrochemistry, ultrasound systems, electrical safety, and the design of clinical electronics. Laboratory included. For upper-division and first-year graduate students who are preparing for careers in bioengineering—both research and industrial. Offered: jointly with BIOEN 436; Sp.

E E 440 Introduction to Digital Imaging Systems (4) *Hwang* Image representation and standards, visual perception and color spaces, spatial domain image filtering and enhancement, image restoration, image transforms, image and video coding, image geometrical transformation and camera modeling. Prerequisite: E E 341. Offered: A.

E E 442 Digital Signals and Filtering (3) Methods and techniques for digital signal processing. Review of sampling theorems, A/D and D/A converters. Demodulation by quadrature sampling. Z-transform methods, system functions, linear shift-invariant systems, difference equations. Signal flow graphs for digital networks, canonical forms. Design of digital filters, practical considerations, IIR and FIR filters. Digital Fourier transforms and FFT techniques. Prerequisite: 1.0 in E E 341. Offered: W.

E E 443 Design and Application of Digital Signal Processing (5) Application of learned theories/algorithms and available computer technologies to modern image and speech processing problems. Two-dimensional signals and systems. Image transform, enhancement, restoration, coding. Characteristics of speech signals, linear predictive coding (LPC) of speech, pitch detection, and LPC speech synthesis, speech recognition, hardware designs for signal processing. Prerequisite: 1.0 in E E 442. Offered: Sp.

E E 445 Nonlinear Systems Analysis (4) Dynamic analysis of nonlinear circuits, neural networks and of other simple systems. Exact methods, graphical methods, approximate methods, including linearization and numerical and analog computer solutions. Stability. Forced oscillations. Prerequisite: 1.0 in E E 235. Offered: A.

E E 446 Control System Analysis I (4) Linear Servomechanism theory and design principles. Pole-zero analysis, stability of feedback systems by root locus and real-frequency response methods. Design methods of Bode and Nichols. Introduction to advanced topics in automatic control theory, state variable methods. Prerequisite: 1.0 in E E 233. Offered: A.

E E 448 Control Systems Sensors and Actuators (3) Study of control systems components and mathematical models. Amplifiers, DC servomotors, reaction mass actuators. Accelerometers, potentiometers, shaft encoders and resolvers, proximity sensors, force transducers, piezoceramic materials, gyroscopes. Experimental determination of component models and model parameters. Two 3-hour laboratory

ries per week. Prerequisite: either A A 450 or E E 446. Offered: jointly with A A 448; W.

E E 449 Design of Automatic Control Systems (4) Design problems for aerospace vehicles, systems with unstable dynamics, lightly damped modes, non-minimum phase, nonlinear dynamics. Computer-aided analysis, design, and simulation, with laboratory hardware-in-the-loop testing. Team design reviews, oral presentations. Prerequisite: either 1.0 in A A 450, 1.0 in E E 448, or 1.0 in M E 471. Offered: jointly with A A 449; Sp.

E E 452 Power Electronics Design (5) Electronic conversion and control of electrical power. Includes semiconductor switching devices, power converter circuits, design of magnetics, and control of power converters. Also ac/ac, ac/dc, and dc/dc power converters; circuit simulation; extensive laboratory work a four-week power converter design project. Prerequisite: 1.0 in E E 332; 1.0 in E E 351. Offered: A.

E E 453 Electric Drives (5) Elements of drive systems, speed-torque characteristics of electric motors and industrial loads, solid-state converter. Starting and braking methods of loaded motors. Speed control of electric motors. Solid-state drives. Transient analysis of loaded motors. Special forms of individual- and multimotor drives. Prerequisite: 1.0 in E E 351. Offered: W.

E E 454 Power System Analysis (4) Introduction to methods of analyzing power systems. Includes symmetrical components, calculation of line parameters, representation of transmission lines and power components, and power flow control. Prerequisite: 1.0 in E E 351. Offered: A.

E E 455 Power System Dynamics and Protection (4) Analysis of symmetrical and unsymmetrical power systems' networks, fault analysis, and stability studies. Prerequisite: 1.0 in E E 351. Offered: W.

E E 456 Computer-Aided Design in Power Systems (4) Design-oriented course in power system engineering. Students are assigned a project concerning system operation and planning, steady-state and dynamic behaviors of power systems, or distribution systems. Each involves formulation of design criteria, development of approach, application of existing software. Prerequisite: either 1.0 in E E 454 or 1.0 in E E 455. Offered: Sp.

E E 457 Electric Energy Distribution Systems (4) Introduction to electric utility distribution systems. Primary and secondary network analysis and design, distribution substation problems, distribution transformers, capacitor application, overcurrent and over-voltage protection. System planning and reliability. Prerequisite: 1.0 in E E 351. Offered: Sp.

E E 461 Introduction to Computer-Communication Networks (4) Computer network architectures, protocol layers, network programming. Transmission media, encoding systems, switching, multiple access arbitration. Network routing, congestion control, flow control. Transport protocols, real-time, multicast, network security. Prerequisite: CSE 143; either MATH 390/STAT 390, STAT 391, IND E 315, or CSE 321. Offered: jointly with CSE 461.

E E 462 Principles of Mobile Robotics (4) Design-oriented course in autonomous mobile robots. C programming, microprocessors, motors, gears, sensors, advanced sensing techniques, serial communications, PID control, algorithmic control, reactive control, multi-tasking. Laboratory exercises include design, construction, and testing of autonomous mobile robots, which compete at the end of the term. Offered: A.

E E 463 Autonomous Mobile Robots (4) Design-oriented course in autonomous mobile robots. C pro-

gramming, motors, sensors, IR and RF wireless communication, digital image processing, and robot motion control. Laboratory exercises include design, construction, and testing of autonomous mobile robots, which compete at the end of term. Offered: W.

E E 465 Fiber Optics, Devices, and Applications (4) Wave propagation in optical waveguiding structures, signal distortion, coupling of modes, modulation, sources and detectors, fabrication and measurement methods, communication and sensor systems. Prerequisite: 1.0 in E E 332; recommended: E E 361. Offered: W.

E E 467 Antennas: Analysis and Design (4) Fundamentals of antennas, analysis, synthesis and computer-aided design, and applications in communications, remote sensing, and radars. Radiation pattern, directivity, impedance, wire antennas, arrays, numerical methods for analysis, horn antennas, microstrip antennas, and reflector antennas. Prerequisite: 1.0 in E E 235; 1.0 in E E 361. Offered: Sp.

E E 471 Computer Design and Organization (5) Introduction to computer architecture, algorithms, hardware design for various computer subsystems, CPU control unit design, hardwired and microprogrammed control, memory organization, cache design, virtual memory, I/O organization, and I/O hardware design. Prerequisite: 1.0 in E E 371. Offered: ASP.

E E 472 Microcomputer Systems (5) Concepts of multi-level machines and computer systems organization. Utilizing microprocessors, digital computer studied at assembly- and high-language levels with emphasis on concepts of central processor architecture, memory organization, input/output and interrupts. Assembly language programming concepts applied to solution of various laboratory problems including I/O programming. Prerequisite: E E 371. Offered: AW.

E E 476 Digital Integrated Circuit Design (5) *Sechen* Comprehensive view of digital integrated circuit design. Topics to be covered include the design of inverters, static logic circuits, switch logic, and synchronous logic. Students design, simulate, and layout a complete digital IC using modern computer-aided design tools. Prerequisite: 1.0 in E E 331; 1.0 in E E 371. Offered: A.

E E 477 VLSI II (5) *Sechen* Provides a fairly deep understanding of how IC-based memory and datapath blocks are designed using static and dynamic CMOS technologies. Gives students extensive experience with industry-standard computer-aided design tools, including Cadence (Virtuoso, DRC, LVS) and Avanti (Hspice). Credit not allowed for both E E 477 and E E 525. Prerequisite: E E 476.

E E 478 Design of Computer Subsystems (5) Design of digital computer subsystems and systems, using SSI, MSI, and LSI digital components. Combinational logic, sequential logic, memory hardware designs, I/O hardware and interface design, system design steps, high-speed digital circuit design, noise reduction techniques, and hardware description language. One four-hour laboratory each week and design project. Prerequisite: 1.0 in E E 331; 1.0 in E E 472. Offered: WSp.

E E 480 Microwave Engineering I (4) Analysis and design of transmission lines and matching circuits. Lossy transmission lines. Mode structures in metallic and dielectric waveguides. Microwave resonators and magnetic devices. Smith chart and matching techniques. Prerequisite: 1.0 in E E 361. Offered: A

E E 481 Microwave Electronic Design (4) Design of microwave circuits using S-parameter techniques. Measurement techniques, CAD of microwave systems. Includes design, fabrication, and evaluation of

a microwave amplifier. Prerequisite: 1.0 in E E 332; 1.0 in E E 361. Offered: W.

E E 482 Semiconductor Devices (4) Fundamentals of semiconductor theory: carrier diffusion and drift; concept of direct and indirect energy materials, effective mass of mobile carriers; device physics: homo- and heterojunctions, operating principles of bipolar, junction, and MOS field-effect transistors. Prerequisite: 1.0 in E E 332. Offered: A.

E E 484 Sensors and Sensor Systems (4) Introduction to optical and solid-state chemical and physical sensors. Topics include transduction mechanisms, design parameters, fabrication methods and applications. Offered: Sp.

E E 485 Introduction to Photonics (4) The properties, characterization, and use of photonic devices in the design of electronic circuits are studied in the laboratory through experiments and projects. Laboratory work is supplemented by classroom examination of the principles behind measures device properties. Offered: Sp.

E E 486 Fundamentals of Integrated Circuit Technology (3) Processing physics, chemistry and technology, including evaporation, sputtering, epitaxial growth, diffusion, ion implantation, laser annealing, oxidation, chemical vapor deposition, photore-sists. Design considerations for bipolar and MOS devices, materials and process characterization. Future trends. Prerequisite: either E E 482 or MSE 466. Offered: jointly with MSE 486. Offered: W.

E E 489 Integrated Circuit Laboratory (1) Hands-on experience in the building of a PMOS device, complete with oxidation, diffusion, photolithography, etching, metallization, and testing. Credit/no credit only. Prerequisite: E E 486/MSE 486, which may be taken concurrently. Offered: jointly with MSE 489; W.

E E 498 Design of Consumer Electronics (4) NW Design of consumer electronics products. Typical products include conventional audio systems, CD players, VCRs, camcorders, and FAX systems. Choice of products varies from quarter to quarter. Course includes an integrated laboratory and design project. Prerequisite: 1.0 in E E 233; recommended: E E 332. Offered: ASP.

E E 499 Special Projects (2-5, max. 10) Assigned construction or design projects carried out under the supervision of the instructor. Offered: AWSp.

Courses for Graduates Only

E E 500 Graduate Seminar (1, max. 3) Weekly seminars on current topics in electrical engineering. More than one section may be offered in a given quarter. Credit/no credit only.

E E 501 Radar Remote Sensing (3) *Sahr* General introduction to radar remote sensing of geophysical targets. Fundamentals of radar systems, range-time diagram, ambiguity function, pulse compression, spectrum estimation for underspread and overspread targets; multi-antenna correlations, interferometry, closure phases; maximum entropy source imaging; Aperture Synthesis (SAR and ISAR).

E E 502 Introduction to Microelectro Mechanical Systems (4) Theoretical and practical aspects in design, analysis, and fabrication of MEMS devices. Fabrication processes, including bulk and surface micromachining. MEMS design and layout. MEMS CAD tools. Mechanical and electrical design. Applications such as micro sensors and actuators, or chemical and thermal transducers, recent advances. Offered jointly with M E 504/MSE 504.

E E 505 Probability and Random Processes (4) Foundations for the engineering analysis of random processes: set theoretic fundamentals, basic axioms of probability models, conditional probabilities and

independence, discrete and continuous random variables, multiple random variables, sequences of random variables, limit theorems, models of stochastic processes, noise, stationarity and ergodicity, Gaussian processes, power spectral densities. Prerequisite: graduate standing and understanding of probability at the level of E E 416.

E E 506 Communication Theory I (3) *Ritcey* Review of stochastic processes. Communication system models. Channel noise and capacity. Optimum detection, modulation and coding, convolutional coders and decoders. Typical channels, random and fading channels. Waveform communication, optimum filters. Prerequisite: E E 505 or equivalent.

E E 507 Communication Theory II (3) *Ritcey* Review of stochastic processes. Communication system models. Channel noise and capacity. Optimum detection, modulation and coding, convolutional coders and decoders. Typical channels, random and fading channels. Waveform communication, optimum filters. Prerequisite: E E 506 or equivalent.

E E 508 Stochastic Processes (3) *Ritcey* Modeling and analysis of random processes encountered in engineering applications. Stationarity and ergodicity. Harmonic analysis, power spectral densities. Karhunen-Loeve expansions. Poisson, Gaussian, and Markov processes. Stochastic integrals and differential equations. Prerequisite: E E 505 or permission of instructor.

E E 510 Mathematical Foundations of Systems Theory (4) *Damborg* Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Prerequisite: graduate standing or permission of instructor. Offered: jointly with A A 546/CHEM E 510/M E 510.

E E 513 Active Circuit Theory (3) *Andersen* Principles of analysis and synthesis of linear active circuits. Emphasis on general principles, including conservation theorems, invariants, performance limitations in the presence of parasitic elements and realizability conditions. Illustrative applications related to negative resistance amplifiers, feedback amplifiers, and active filters. Prerequisite: E E 341 or permission of instructor.

E E 516 Computer Speech Processing (4) *Bilmes, Kirchhoff, Ostendorf* Introduction to automatic speech processing. Overview of human speech production and perception. Fundamental theory in speech coding, synthesis and reproduction, as well as system design methodologies. Advanced topics include speaker and language identification and adaptation. Prerequisite: E E 505; E E 518.

E E 517 Statistical Language Processing (4) *Bilmes, Kirchhoff, Ostendorf* Introduction to major issues in natural language processing and human language technology, with emphasis on statistical approaches. Addresses topics in statistical parsing and tagging, dialogue systems, information extraction, and machine translation. Prerequisite: E E 505.

E E 518 Digital Signal Processing (4) *Atlas* Digital representation of analog signals. Frequency domain and Z-transforms of digital signals and systems design of digital systems; IIR and FIR filter design techniques, fast Fourier transform algorithms. Sources of error in digital systems. Analysis of noise in digital systems. Prerequisite: knowledge of Fourier analysis techniques and graduate standing, or permission of instructor.

E E 519 Stochastic Analysis of Data From Physical Systems (4) *Atlas* Computer systems for acquisition and processing of stochastic signals. Calculation of

typical descriptors of such random processes as correlation functions, spectral densities, probability densities. Interpretation of statistical measurements made on a variety of physical systems (e.g., electrical, mechanical, acoustic, nuclear). Lecture plus laboratory. Prerequisite: E E 505 or equivalent.

E E 520 Spectral Analysis of Time Series (4) *Ritcey* Estimation of spectral densities for single and multiple time series. Basic theory for nonparametric estimation of spectral density, cross-spectral density and coherency for stationary time series, real and complex spectrum techniques. Bispectrum. Digital filtering techniques. Aliasing, prewhitening. Choice of lag windows and data windows. Use of the fast Fourier transform in spectral estimation and computation of correlation functions. The parametric autoregressive spectral density estimate for single and multiple stationary time series. Spectral analysis of nonstationary random processes, and for randomly sampled processes. Techniques of robust spectral analysis. Prerequisite: one of STAT 342, STAT 390, STAT 481, E E 505, or permission of instructor. Offered: jointly with STAT 520; W.

E E 521 Multidimensional Signal Processing (3) *Marks* Multidimensional (MD) signals and systems, MD sampling theorem, sample dependence in higher dimensions, MD FIR filter design using windows and the McClellan transform, MD IIR filter stability and design. Current topics in MD signals and systems. Prerequisite: E E 442 or E E 518 or equivalent.

E E 522 Shannon Sampling and Interpolation Theory (4) *Marks* Historical overview of Shannon sampling theorem; fundamentals of the cardinal series; generalizations including those of Papoulis, Kramer, and Lagrange; effects of jitter, truncation and data noise on interpolation; continuous sampling restoration using prolate spheroidal wave functions and the Papoulis-Gerchberg algorithm. Prerequisite: E E 508.

E E 523 Computational Neural Networks (3) *Atlas, Hwang, Marks* Fundamentals of computational neural networks from perspectives of system theory and electrical engineering applications: historical review, adaptive parameter estimation, nonlinear optimization, combinational optimization, learning rules, neural network models, data clustering and regression, pattern classification, speech recognition, image modeling, nonlinear control, principal component analysis, probability density estimation. Prerequisite: permission of instructor.

E E 525 VLSI II (5) *Sechen* Analyzes how IC-based memory and datapath blocks are designed using static and dynamic CMOS technologies. Gives students extensive experience with industry-standard computer-aided design tools, including Cadence (Virtuoso, DRC, LVS) and Avant! (Hspice). Credit not allowed for both E E 477 and E E 525. Prerequisite: E E 476.

E E 526 VLSI III (4) *Helms, Sechen, Soma* Ultra-high speed digital logical families based on output prediction logic; high-speed division; input and output pad design; state-of-the-art latch and flip-flop design; clock distribution, including PLLs and DLLs; noise considerations in high-speed digital IC design. Prerequisite: E E 477 or E E 525.

E E 527 Solid-State Laboratory Techniques (4) *Darling* Principles and laboratory techniques used in solid-state electronics research. Basic familiarity with practices and equipment used on-campus. Laboratory safety; materials handling, storage and disposal; clean room use; photoresist characteristics; mounting, bonding, and probing; wet chemical etching; vacuum evaporation; patterning of metal films using photoresist. Extensive laboratory with limited enrollment. Prerequisite: graduate standing and permission of instructor.

E E 529 Semiconductor Optics and Optical Devices (4) *Afromowitz, Yee* Perturbations of energy states in semiconductors; direct and indirect transitions; absorption processes; optical constants; absorption spectroscopy; radiative and nonradiative transitions; processes occurring at p-n junctions; junction devices; LEDs and lasers, photovoltaics; self-electro-optic effect device; modern laser structures. Prerequisite: graduate standing or permission of instructor.

E E 531 Semiconductor Devices and Device Simulation (4) *Darling, Lauritzen, Yee* Physical principles in semiconductor devices. Generation, recombination, p-n junctions, MOS, metal-semiconductor and other interface structures. Carrier transport at low and high level injection levels. Device simulation used to demonstrate physical principles and basic device operation. Project using device simulation. Prerequisite: E E 482 or graduate standing.

E E 532 Device Modeling for Circuit Simulation (4) *Darling* Compact modeling of semiconductor devices. Analytical models, standard SPICE models, lumped-charge models using AHDL language. Emphasis on basic diodes, MOSFET, BJTs, and other models of interest, including sensor, photonic, and power models. Compact models using AHDL language model design project. Prerequisite: E E 531 or permission of instructor.

E E 533 Photodetectors and Photodetection (4) *Afromowitz, Yee* Includes both the device physics and signal processing aspects of photodetection. Photodiodes, photoconductors, photomultipliers, and solar cells are covered. Noise, signal to noise ratios and imaging considerations are also discussed. Prerequisite: E E 482 or graduate standing.

E E 534 Power Electronics (4) Detailed study of DC-to-AC inverters, pulse-width modulated and resonant DC-to-DC converter topologies; drive and protection circuits for efficient switching of semiconductor devices. Includes extensive computer-aided circuit simulation and power supply control. Prerequisite: graduate standing.

E E 536 Design of Analog Integrated Circuits and Systems (4) *Helms, Soma* Design of analog VLSI: specifications, design, simulation, layout. Covering CMOS and Bi CMOS technologies. Prerequisite: E E 433 or equivalent and graduate standing in electrical or computer engineering, or permission of instructor.

E E 537 Computation Methods for Circuit Analysis and Simulation (3) Introduction to numerical algorithms and computer-aided techniques for the simulation of electronic circuits. Theoretical and practical aspects of important analyses: large-signal nonlinear DC, small-signal AC, nonlinear transient, and large-signal steady-state. Simulation concepts applied to the modeling and characterization of various electronic devices.

E E 538 Topics in Electronic Circuit Design (1-5, max. 5) Topics of current interest in electronic circuit and system design. Course content varies from year to year, based on current professional interests of the faculty member in charge. Prerequisite: permission of instructor.

E E 539 Advanced Topics in Solid-State Electronics (1-5, max. 5) Lectures or discussions of topics of current interest in the field of solid-state electronics for advanced graduate students having adequate preparation in solid-state theory. Subject matter may vary according to the interests of students and faculty. Prerequisite: permission of instructor.

E E 540 VLSI Testing (3) *Soma* VLSI testing and design-for-test techniques. Reliability predictions and characterizations for integrated circuits and systems. Circuits fabricated in 536 are tested as laboratory work. Prerequisite: E E 535, E E 536.

E E 541 Automatic Layout of Integrated Circuits

(4) Sechen Examines the algorithms behind the following commonly used physical design automation tools: floorplanning, partitioning, placement, routing, compaction, and verification. Prerequisite: E E 371; CSE 373 or CSE 326 or equivalent.

E E 543 Models of Robot Manipulation (3)

Hannaford Mathematical models of arbitrary articulated robotic (or biological) arms and their application to realistic arms and tasks, including the homogeneous coordinate model of positioning tasks, the forward and inverse kinematic models, the Jacobian Matrix, and the recursive Newton-Euler dynamic model. Prerequisite: linear algebra and graduate standing or permission of instructor.

E E 544 Advanced Robot Manipulation (4)

Hannaford, Meldrum Continuation of the analysis of robot manipulation, considering kinematic redundancy, control of robot manipulators in contact with the environment, teleoperation, and grasping with multi-fingered hands. Students will perform a project and critique a research paper in the area of the project. Prerequisite: E E 543.

E E 545 Autonomous Robots (3)

Exploration of deliberate-thinking and emergent-functionality paradigms to achieve autonomy. Exploration of hybrids incorporating elements of both of these approaches. Review of other potential approaches with assessment of successes and failures. Directed reading of current literature. Prerequisite: graduate standing or permission of instructor.

E E 546 Advanced Topics in Control System Theory (1-5, max. 5)

Topics of current interest in control system theory for advanced graduate students with adequate preparation in linear and nonlinear system theory. Prerequisite: permission of instructor. Offered when adequate enrollment develops prior to close of advance registration.

E E 547 Neural Communication and Control in Biological Systems (3)

Neural processing of the visual image and communication between levels of the central nervous system. Feedback and its role in movement by organisms. Description and analysis of the means by which electrochemical events generate, modulate, and demodulate neuronal signals, and the parallel interaction between these signals in transduction of images and other information. Prerequisite: advanced graduate standing or permission of instructor.

E E 548 Linear Multivariable Control (3) Ly, Meldrum

Single loop feedback control theory; poles, zeros, Nyquist stability, performance, robustness of multivariable systems; multivariable control syntheses: Linear-Quadratic-Gaussian methods, loop transfer recovery, Youla parametrization, H-infinity techniques, parameter optimization design. Prerequisite: E E 584 or M E 575; E E 446 or A A 451 or M E 471 or equivalent. Offered: jointly with A A/M E 548.

E E 549 Estimation and System Identification (3)

Review of system models, model structure, model parametrization; review of stochastic processes; state estimation: observers, the Kalman-Bucy filter, numerical issues in filter design and implementation; system identification: linear regression, least squares, maximum likelihood, instrumental variable techniques. Prerequisite: E E 505 or AMATH 506 or STAT 506; recommended: 548 or A A 548. Offered: jointly with A A 549/M E 549.

E E 550 Nonlinear Optimal Control (3)

Calculus of variations for dynamical systems, definition of the dynamic optimization problem, constraints and Lagrange multipliers, the Pontryagin Maximum Principle, necessary conditions for optimality, the Hamilton-Jacobi-Bellman equation, singular arc problems, computational techniques for solution of the necessary conditions. Prerequisite: graduate

standing; recommended: A A 548 or E E 548. Offered: jointly with A A 550/M E 550.

E E 551 Power System Protection (4) Liu

The protection of electric power systems from overcurrents and overvoltages. Analysis and design of overcurrents resulting from faults, lightning induced or otherwise, or from excessive loads or power swings. Analysis and design of overvoltages resulting from switching transients or lightning. Principal concern is with relays and lightning arrestors as protection means. Prerequisite: E E 455 or equivalent.

E E 552 Power Systems Dynamics and Control (4)

Damborg, El-Sharkawi Advanced computer modeling and analysis of power systems. Application of modern systems and control theories. Prerequisite: E E 351 and E E 455 or permission of instructor. Offered: odd years; Sp.

E E 553 Power System Economics (4) Christie, Damborg, Liu

Economic structure of power systems. Problem formulation, optimization methods and programming for economic analysis of power system operation and planning. Economic dispatch, load forecasting, unit commitment, interchange, planning and reliability analysis. Provides background to pursue advanced work in planning and operation. Prerequisite: graduate standing or permission of instructor.

E E 554 Large Electric Energy Systems Analysis (4) Christie, Liu

Deals with problems whose solution depends upon the inversion of sparse matrices that occur in the planning and operational studies of large interconnected energy systems. Application studies include system model development, state estimation, and load flow. Prerequisite: E E 456 or permission of instructor.

E E 555 Fundamentals of Intelligent Systems (4)

Fundamentals and applications of intelligent systems and biologically inspired algorithms such as neural networks, evolutionary computations, swarm optimization and fuzzy systems. Solving complex engineering applications with a combination of these technologies as well as with more traditional approaches such as statistical system theories. Offered: Sp.

E E 559 Special Topics in Electrical Energy Systems (1-5, max. 5)

Topics of current interest in electrical power and energy devices and systems. Content varies from year to year, based on current professional interests of faculty member in charge. Prerequisite: permission of instructor.

E E 562 Artificial Intelligence for Engineers (3)

Shapiro Covers main areas of artificial intelligence (AI) without need for extensive prerequisites. Programming languages for AI; problem solving; representations; control strategies; searching strategies; predicate calculus; rule-based deduction; goal-directed planning; knowledge-based systems. Prerequisite: CSE 373 or equivalent.

E E 563 Fault-Tolerant Computing (3) Soma

Faults and their manifestation, issues, theory, and techniques of reliable systems design, testing, design for testability, self-checking and fail-safe circuits, coding techniques, system-level fault diagnosis, fault-tolerant communication, reliable software design, and evaluation criteria. Prerequisite: basic knowledge of digital systems design or permission of instructor. Offered: jointly with CSE 563.

E E 564 Parallel Computer Systems (3) Hwang, Kim

Pipelined and vector processors; interconnection network for parallel processing, array and associative processors; multiprocessors; data-flow machines; systolic arrays and impact of the VLSI technology on parallel processors and processing. Prerequisite: E E 471, permission of instructor.

E E 565 Computer-Communication Networks I (3)

Network architectures and protocols; Broadband-ISDN and Asynchronous Transfer Mode (ATM); performance modeling and analysis of packet-switched networks, digital switching systems. Prerequisite: E E 505 or equivalent.

E E 566 Computer-Communication Networks II (3)

Local area, metropolitan area, satellite, and packet radio networks; routing algorithms for wide area networks; optimal design of packet-switched networks; congestion and flow control; fast packet switching; gigabit networks. Prerequisite: E E 565 or permission of instructor.

E E 568 Image Processing Computer Systems (4)

Kim All components of digital image-processing computer systems. Two-dimensional filtering and optimal filter design as well as basic image processing operations. Selected advanced image processing topics. Individual student project. Prerequisite: permission of instructor. Offered: jointly with BIOEN 568; Sp.

E E 571 High Frequency Circuits and Antennas: Computation of Fields and Waves (4)

Planar microstrip structures are high frequency circuits and antennas used in communication, aerospace and computer industries. Examines the computation of fields and waves in such structures. How to calculate circuit parameters and radiation characteristics. Structures studied include microstrip lines, coupled lines, antennas, resonators, and discontinuities. Prerequisite: E E 482, E E 572, or equivalent.

E E 572 Electromagnetic Theory and Applications I (4)

Electromagnetic waves in layered media; complex waves, leaky and slow waves, waves in periodic structures, optical fibers, ionosphere and other guiding structures; transients and dispersive media; waveguides and cavities; beam waves; eigenfunctions and eigenvalues. Prerequisite: graduate standing or permission of instructor.

E E 573 Electromagnetic Computations and Applications I (4) Tsang

Fundamentals of computational electromagnetics, method of moments, integral equations, basis functions, iterative methods, periodic structures and Green's Functions finite difference time domain method, Yee's lattice, absorbing boundary conditions, variational principles, and finite element method. Applications in antennas, waveguides, and scattering problems. Prerequisite: E E 572 or permission of instructor.

E E 574 Electromagnetic Computations and Applications (4) Tsang

Current topics in computational electromagnetics, fast multipole multilevel method, sparse matrix canonical grid method, wavelet based methods, recursive method, spectral time domain method. Applications in large scale problems such as array antennas, radar cross section, rough surface scattering, and dense media scattering. Prerequisite: EE 573 or permission of instructor.

E E 575 Waves in Random Media (4) Tsang

Propagation and scattering of electromagnetic, optical, and acoustic waves in turbulence and random media, scattering from rough surfaces and randomly distributed particles. Atmospheric turbulence, fog, rain, smog, clear-air turbulence detection, remote sensing, terrain scattering, scattering from blood cells and tissues, scattering by ocean waves. Applications to atmospheric sciences, bioengineering, geoscience, ocean engineering. Prerequisite: graduate standing or permission of instructor.

E E 576 Image Understanding (3) Haralick, Shapiro, Tanimoto

Overview of computer vision, emphasizing the middle ground between image processing and artificial intelligence. Image formation, preattentive image processing, boundary and region representations, and case studies of vision architectures.

Prerequisite: E E 573 or E E 562 or equivalent or permission of instructor. Offered: jointly with CSE 576.

E E 577 Mathematical Morphology (3) *Haralick* Theory of mathematical morphology and its application in various commercial, industrial, medical, and research applications. Contents include binary and grayscale morphologic dilation, erosion, opening, and closing, morphological sampling theorem, structuring element decomposition, thinning, skeletonizing, and relational shape description. Group project. Prerequisite: E E 568 or E E 576 or permission of instructor. Offered: jointly with CSE 577.

E E 579 Advanced Topics in Electromagnetics, Optics, and Acoustics (1-5, max. 5) Topics of current interest in electromagnetics, optics, and acoustics. Content varies from year to year, based on current professional interests of faculty member in charge. Prerequisite: permission of instructor.

E E 581 Digital Control I (3) *Alexandro, Berg, Ly* Discrete-time and sampled-data systems, difference equations, and z-transform. Frequency response. Nyquist stability criterion. Gain and phase margins. Limitations of sampling. Sample rate selection. Controller design via discrete-time equivalents to continuous-time controllers, by direct-digital root locus and by loop shaping. Prerequisite: E E 471 or equivalent; recommended: E E 575 or equivalent. Offered: jointly with A A 581/M E 581.

E E 582 Digital Control II (3) *Alexandro, Berg, Ly, Vagners* Controller design via state feedback and observers. Introduction to discrete-time stochastic processes. Quantization effects. Introduction to parameter identification using noisy measurements. LQR optimal control. Kalman filter design. LQG optimal control. Prerequisite: E E 581 or permission of instructor. Offered: jointly with A A 582/M E 582.

E E 583 Nonlinear Control Systems (3) Analysis and synthesis of nonlinear controls systems. Assessment of stability by phase plane and describing function methods, circle and Popov criteria, Lyapunov criteria. Construction of Lyapunov functions by method of Kraasovskii and Lu're. Introduction to nonlinear control system design. Prerequisite: E E 446, E E 584, or permission of instructor. Offered: jointly with M E 583; odd years; Sp.

E E 584 Linear Systems Theory (3) *Campbell, Ly* Transfer-function and state-space description. Solution of the state transition matrix. Controllability and observability. Zeros and poles of multivariable systems; the Smith-McMillan form. System norms. System invertibility. State feedback. Output feedback and observers. Prerequisite: graduate standing or permission of instructor. Offered: jointly with M E 575 and A A 547.

E E 586 Digital Video Coding Systems (3) *Sun* Introduction to digital video coding algorithms and systems. Theoretical and practical aspects of important topics on digital video coding algorithms, motion estimation, video coding standards, systems issues, and visual communications. Prerequisite: graduate standing or permission of instructor.

E E 587 Vector Quantization and Data Compression (3) *Kim, Riskin* Introduction to data compression and information theory; vector quantization including theory, applications, design, performance criteria, variable rate systems, and reduced complexity structure including transform coding, wavelets, lossless compression algorithms, and applications of compression to images, speech, and video. Prerequisite: E E 505 or STAT 390 and computer programming experience.

E E 590 Advanced Topics in Digital Computers (2-5, max. 15) Lectures or discussions of topics of current interest in the field of digital systems. Subject

matter may vary from year to year. Prerequisite: permission of instructor.

E E 591 Robotics and Control Systems Colloquium (1, max. 3) Colloquium on current topics in robotics and control systems analysis and design. Topics presented by invited speakers as well as on-campus speakers. Emphasis on the cross-disciplinary nature of robotics and control systems. Credit/no credit only. Offered: jointly with A A/CHEM E/M E 591.

E E 592 Electrical Engineering Research Survey (1) Weekly presentations on current research activities by members of the department. Credit/no credit only.

E E 595 Advanced Topics in Communication Theory (1-5, max. 5) Extension of 507, 508, 518, 519, 520. Material differs each year, covering such topics as: detection theory, decision theory, game theory, adaptive communication systems, nonlinear random processes. Prerequisite: permission of instructor.

E E 596 Advanced Topics in Signal and Image Processing (2-5, max. 5) Topics of current interest in signal and image processing. Content may vary from offering to offering. Prerequisite: permission of instructor.

E E 599 Selected Topics in Electrical Engineering (*) Prerequisite: permission of instructor. Offered: AWSp.

E E 600 Independent Study or Research (*) Offered: AWSp.

E E 700 Master's Thesis (*) Offered: AWSp.

E E 800 Doctoral Dissertation (*) Offered: AWSp.

Industrial Engineering

G-7 Mechanical Engineering Building

General Catalog Web page:
www.washington.edu/students/gencat/academic/Industrial_Eng.html

Department Web page:
depts.washington.edu/ie/

The formal definition of industrial engineering, as adopted by the Institute of Industrial Engineers, is as follows: industrial engineering is concerned with the design, improvement, and installation of integrated systems of people, materials, information, equipment, and energy. It draws upon specialized knowledge and skill in the mathematical, physical, and social sciences together with principles and methods of engineering analysis and design to specify, predict, and evaluate the results obtained from such systems.

Industrial engineering is set apart from other engineering disciplines by its broader scope. Industrial engineers are, by definition, specialists in designing and operating systems that make optimal use of resources when labor, materials, capital, and technology are constrained. They deal with people as well as things, looking at the "big picture" of what makes society perform best: the right combination of human resources, natural resources, and man-made structures and equipment. Bridging the gap between management and operations, they deal with and motivate people as well as determine what tools should be used and how they should be used.

Industrial engineers are the "productivity people" who must provide leadership and integrate technology. They include the human factor in finding workable, effective solutions to production problems while retaining high standards of quality. Demand for industrial

engineers has grown dramatically over the past two decades for one chief reason: the need for organizations to raise their levels of productivity through thoughtful, systematic applications. The profit-making organization must have high productivity in order to compete in the domestic and world market place. The nonprofit organization must have high productivity in order to sustain its position as a useful service unit.

Graduate Program

Graduate Program Coordinator
G7 Mechanical Engineering, Box 352650
206-543-5041
leadvise@u.washington.edu

Industrial Engineering offers graduate programs leading to the Master of Science in Industrial Engineering (M.S.I.E.) and Doctor of Philosophy (Ph.D.). Graduate courses and research programs are offered in manufacturing, operations research, large-scale assembly, experimental statistics, production planning, quality control, reliability engineering, computer-integrated manufacturing, simulation, supply chain, human factors, virtual reality, and human interface technology.

For the M.S.I.E. degree, a minimum of 41 credits is required, with both a thesis and course-work-only option. Students pursuing the thesis option must complete a minimum of 9 credits of master's thesis (IND E 700).

For the Ph.D. degree, students must initially pass the departmental qualifying examination, followed by successful completion of an advanced General Examination and subsequent Final Examination in which the student defends his or her dissertation.

Faculty

Chair

Tony C. Woo

Professors

Furness, Thomas A. * 1989; PhD, 1981, University of Southampton (UK); display systems engineering, human factors, computer graphics, virtual reality.

Kapur, Kailash C. * 1992; PhD, 1969, University of California (Berkeley); quality/reliability engineering, system design/optimization, total quality/reliability management.

Klasterin, Theodore * 1974, (Adjunct); PhD, 1973, University of Texas (Austin); operations management, facility location, project management, waiting lines, logistics, inventory.

Moinzadeh, Kamran * 1984, (Adjunct); MS, 1982, PhD, 1984, Stanford University; operations management, production management, inventory, quality and supply chain management.

Ramey, Judith A. * 1983, (Adjunct); PhD, 1983, University of Texas (Austin); computer-assisted communication user-centered design, usability testing.

Ramulu, M. * 1978, (Adjunct); PhD, 1982, University of Washington; manufacturing processes, production engineering, applied mechanics, fatigue and fracture mechanics.

Rockafellar, R. T. * 1966, (Adjunct); PhD, 1963, Harvard University; variational analysis and optimization.

Storch, Richard L. * 1975; PhD, 1978, University of Washington; ship production, large scale assembly and manufacturing systems, statistical quality control, design.

Tuttle, Mark E. * 1985, (Adjunct); PhD, 1984, Virginia Polytechnic Institute and State University; applied solid mechanics, composite materials and structures, adhesion mechanics.

Wilson, William R. D. * 1999, (Adjunct); PhD, 1967, Queen's University of Belfast (Ireland); manufacturing and tribology, particularly metal forming.

Woo, Tony C. * 1995; MSEE, 1974, PhD, 1975, University of Illinois; graphics, imaging, robotics, design, manufacturing, differential geometry, optimization.

Zabinsky, Zelda * 1985; PhD, 1985, University of Michigan; operations research, applications in industrial engineering, optimization with stochastic elements.

Associate Professors

Atman, Cynthia J. * 1998; PhD, 1990, Carnegie Mellon University; engineering education issues and developing cognitive models of engineering design.

Drui, Albert B. * 1959, (Emeritus); MS, 1957, Washington University; industrial engineering, human factors.

Kumar, Vipin * 1988, (Adjunct); PhD, 1988, Massachusetts Institute of Technology; manufacturing, polymer processing, microcellular plastics, design theory and methodology.

Reinhall, Per G. * 1982, (Adjunct); PhD, 1982, California Institute of Technology; nonlinear dynamics, vibrations, vibration control, acoustics, biomedical engineering.

Roberts, Norman H. * 1953, (Emeritus); PhD, 1958, University of Washington; reliability and probability theory.

Assistant Professors

Beamon, Benita M. * 1999; PhD, 1994, Georgia Institute of Technology; production, material handling, and transportation systems.

Yen, Joyce Wen-Hwei * 2000; PhD, 2001, University of Michigan; operations research, stochastic programming.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

IND E 421 Statistical Quality Control (3) *Kapur, Storch* Design of quality control and assurance systems. Statistical Process Control (SPC) design and implementation. Control charts for attributes and variables. Process capability analysis and process improvement techniques. Statistical tolerance design. Quality management and recent developments. Prerequisite: IND E 315. Offered: A.

IND E 424 Simulation (4) *Beamon* Discrete-event simulation methodology emphasizing model formulation and construction with modern simulation languages and environments, statistical basis for evaluating model results, design and management of simulation projects. Application to manufacturing, retail, and service industries. Prerequisite: IND E 237, which may be taken concurrently; IND E 325. Offered: W.

IND E 426 Reliability Engineering and System Safety (3) *Kapur* Reliability and system safety meas-

ures. Life distributions and their applications in reliability. System reliability models. Design by reliability and probabilistic design. Reliability and safety analysis through FMECA and FTA. Reliability estimation and measurement by testing for binomial, exponential, and Weibull distributions. Prerequisite: IND E 315. Offered: Sp.

IND E 430 Manufacturing Scheduling and Inventory (4) *Beamon, Storch* Manufacturing scheduling and inventory control for different work organizations. Coverage of workforce scheduling, job- and flow-shop scheduling and order release, production line balancing, MRP II, Lean Production, and data management. Particular attention to computer-based aspects of management and scheduling for manufacturing and service industries. Prerequisite: IND E 237; IND E 325.

IND E 433 Introduction to Computational Manufacturing (3) *Woo* Fundamentals in computer aided design/manufacturing. Visualization, 3-D wireframes, curves and surfaces, solid modeling. Numerical control machining, robotics, and assembly. Prerequisite: IND E 237; IND E 324. Offered: W.

IND E 439 Plant Layout and Material Handling (4) *Beamon, Storch* Design of new or expanding industrial facilities. Consideration of work organization and layout. Study of basic design of plant systems, including plumbing, electrical, HVAC, illumination, acoustics, and waste handling. In depth coverage of material handling system design and equipment choices.

IND E 455 User Interface Design (3) *Furness* Design oriented to cover fundamentals of user interface design; models on human computer interaction, software psychology, input devices, usability, cognitive and perceptual aspects of human-computer interaction, advanced interface, and research methodologies are discussed. Prerequisite: IND E 316. Offered: jointly with T C 455; A.

IND E 494 Design in the Manufacturing Firm (4) Engineering design in manufacturing firms is presented. Topics include design methodology, concurrent engineering, and project management. Focus on the relationship between product design and manufacturing (design for production and assembly). Prerequisite: IND E 237; T C 333. Offered: W.

IND E 495 Industrial Engineering Design (3) Capstone senior design project involving identification and synthesis of industrial engineering skills. Students apply their knowledge of industrial engineering to actual industrial problems. Prerequisite: IND E 494. Offered: Sp.

IND E 496 Technology-Based Entrepreneurship (3) Concentrates on hands-on aspects of innovation and entrepreneurial enterprise development. Examines relationships between innovation, iterative prototyping, and marketing testing. Students identify market opportunities, create new technology-based products and services to satisfy customer needs, and construct and test prototypes. Prerequisite: IND E 250. Offered: jointly with M E 496.

IND E 498 Special Topics in Industrial Engineering (1-5, max. 9) Lecture and/or laboratory.

IND E 499 Special Projects (2-5, max. 9)

Courses for Graduates Only

IND E 510 Applications of Optimization in Engineering Design (3) *Zabinsky* Discussion of issues arising in applications of optimization to engineering design. Emphasis on formulating problems and selecting appropriate solution techniques. Random search methods for problems otherwise computationally intractable. Individual projects in engineering optimal design. Prerequisite:

AMATH/MATH/IND E 515 and MATH 328 or permission of instructor. Offered: jointly with AMATH 510.

IND E 511 Management Decision Models (3) Quantitative approaches, using decision models. Topics include elements of a decision, theory of optimal decisions, resource allocation, simulated decision making, decisions under uncertainty, risk and pressure, utility theory, and game theory. Projects in manufacturing, community health, construction, and urban development. Prerequisite: IND E 324, IND E 250, and IND E 315, or permission of instructor.

IND E 513 Linear Optimization Models in Engineering (3) *Zabinsky* Advanced formulation techniques to expand applications of linear programming to large-scale models. Appreciation of role of optimization models in engineering applications through introduction of techniques such as decomposition. Individual engineering projects. Prerequisite: IND E 324 and MATH 308 or permission of instructor.

IND E 515 Fundamentals of Optimization (5) Maximization and minimization of functions of finitely many variables subject to constraints. Basic problem types and examples of applications; linear, convex, smooth, and nonsmooth programming. Optimality conditions. Saddlepoints and dual problems. Penalties, decomposition. Overview of computational approaches. Prerequisite: linear algebra and advanced calculus. Offered: jointly with AMATH 515/MATH 515.

IND E 518 Seminars on Advances in Manufacturing and Management (1) *Mescher, Ramulu, Woo* Current topics and advances made in manufacturing and management. Topics presented by invited speakers from academia and industry. Emphasis on the multidisciplinary nature of manufacturing and management. Offered: jointly with M E 518 AWSp.

IND E 521 Quality Control in Manufacturing (3) *Kapur, Storch* Design of quality control systems in manufacturing. Use of advanced statistical process controls, sampling inspection techniques, process capability, and other statistical tools. Also include vendor sourcing and control tools, methods for establishing specifications and tolerances, quality function deployment, and other quality control techniques. Prerequisite: graduate standing.

IND E 524 Robust Design and Quality Engineering (3) *Kapur* Introduction to robust design and quality engineering. Applications of design of experiments for product and process design optimization. Experimental design using orthogonal arrays and linear graphs. System models using Chebyshev's orthogonal polynomials. Robustness in design and quality improvement for complex systems including Taguchi methods for quality engineering. Prerequisite: IND E 316 or equivalent.

IND E 526 Reliability in Product Design and Testing (3) *Kapur* Product assurance including reliability and quality engineering. Reliability design, measurement, and optimization. Advanced topics in probabilistic design. Design of reliability test plans and analysis of test data. Design of reliability programs and their management. Prerequisite: graduate standing.

IND E 531 Computer Integrated Manufacturing (3) Design and analysis of advanced manufacturing systems from a strategic as well as technological perspective. Focus on information generation, management, and coordination aspects of complex manufacturing organizations. Examination of system integration alternatives and consequences for relationships with customers and suppliers. Prerequisite: IND E 431 or equivalent.

IND E 532 Geometric Modeling (3) *Woo* Mathematics and computations in geometric model-

ing of three-dimensional objects. Parametric representation of curves and surfaces. Topology for data structure design. Visibility for line-of-sight computations.

IND E 533 Computational Methods in Design and Manufacturing (3) *Woo* Sampling size and accuracy: uniform, random, and Hammersley. Approximation of curves and surfaces. Optimization: minima and maxima. Search and gradient techniques. Line integral for geodesic and optimal path.

IND E 535 Engineering Simulation (3) *Beamon* Advanced applications of discrete event, continuous, and combined discrete-continuous simulation modeling, detailed examination of fundamental computer programming concepts underlying the design and development of simulation languages, variance reduction techniques, and output analysis for various engineering, service systems, and manufacturing applications. Prerequisite: IND E 424 or equivalent.

IND E 538 Large Assembly Manufacturing Systems (3) *Storch* Presents principles of group technology, zone construction, product-oriented work breakdown structure. Application to shipbuilding, aircraft, rail-car, and truck manufacture. Techniques of production planning, scheduling and control, organization, and plant layout, as well as the role of the computer, are studied in detail. Prerequisite: graduate standing.

IND E 543 Virtual Interface Technology (1/3, max. 3) *Furness* Explores advanced concepts and technologies for interfacing humans to complex machines, with focus on virtual interfaces. Interface design principles reviewed from psychological and technological perspectives. Hardware, software, and mindware aspects of virtual interfaces investigated. Applications postulated and designed. Prerequisite: graduate standing in College of Engineering or permission of instructor.

IND E 544 Virtual World Development (3) *Furness* Software implementation, physiological and cognitive constraints, and the mathematics and philosophy of inclusion. Development of software tools, editing and interaction techniques, disposition of virtual world entities, nature of space, situated knowledge, divergent models for multiple participants, experiential mathematics, cyberspace. Cultural, legal, moral, ethical issues. Prerequisite: IND E 543 or permission of instructor.

IND E 570 Supply Chain Systems (3) *Beamon* Develops concepts related to the design, evaluation, and performance of supply chain systems through an exploration of contemporary practice and research, focusing on current issues, analytical frameworks, and case studies. Prerequisite: IND E 315 or equivalent.

IND E 591- Seminar (1). Credit/no credit only. Topics of current interest in industrial engineering. Prerequisite: graduate standing in Industrial Engineering or permission of instructor.

IND E -592- Seminar (1) Credit/no credit only. Topics of current interest in industrial engineering. Prerequisite: graduate standing in Industrial Engineering or permission of instructor.

IND E -593 Seminar (-1) Credit/no credit only. Topics of current interest in industrial engineering. Prerequisite: graduate standing in Industrial Engineering or permission of instructor.

IND E 599 Special Topics in Industrial Engineering (1-5, max. 9) Prerequisite: permission of supervisor.

IND E 600 Independent Study or Research (*)

IND E 700 Master's Thesis (*)

IND E 800 Doctoral Dissertation (*)

Materials Science and Engineering

General Catalog Web page:

www.washington.edu/students/gencat/academic/Material_Sci.html

Department Web page:

depts.washington.edu/mse/

Materials science and engineering is an interdisciplinary field that addresses the structure, processing, and property relationships in materials for engineering applications. Basic principles of chemistry and physics are applied to provide an understanding of the structure of materials and the manner in which the structure determines the properties. Scientific processing methods are then applied to yield the necessary properties, which then can be integrated with, and designed to accommodate, the needs of modern technology.

The faculty of the Department of Materials Science and Engineering recognizes that a strong graduate program is an essential component of a balanced educational effort in materials. The department's graduate programs in materials science and engineering are designed to build on and enhance the educational experience imparted in its undergraduate programs. Therefore, a related department goal is to provide coordination and balance between the undergraduate and graduate degree programs, and to ensure that each program is allocated the resources necessary to meet its goals.

Within the overall field of materials science and engineering, students are offered both broad options and in-depth core. The program provides the needed background and understanding of all types of engineering materials, including metals, ceramics, polymers, biomaterials, composites and hybrids, electronic materials, nanomaterials, and photonic materials.

Ceramic materials are resistant to high temperatures, chemically durable, strong, rigid, and exhibit a broad range of functional and electronic properties. The ceramic engineering program provides students with an understanding of the chemical, electrical, optical, mechanical, and thermal properties of ceramics; of processing methods and their effects on the structure and properties; and of the feasibility and economics of manufacture of ceramic materials for engineering applications.

Metallurgical engineering is concerned with the processing, fabrication, and utilization of metals, alloys, and other engineering materials. Extractive metallurgy relates to the processing and refining of metals and their compounds. Physical metallurgy is concerned with the structure and properties of materials, the development of new materials with improved properties, and the application and performance of materials in modern engineering systems and design.

Electronic and optical materials are utilized in a variety of modern technology, from fiber optic communications to computer technology. Semiconductor and insulating materials are utilized in many applications from computer chips to light emitting diodes; these materials have special properties provided by structural modification, impurity incorporation, and special processing techniques. Conducting materials of high purity are needed for many electronic applications. Fiber optics depend on glass fiber of special composition and are made using specific processes. Optical materials such as those used in lasers are specially modified using crystal growth and doping techniques. The University's materials engineering pro-

grams provide students with the background and experience needed for a career in this broad area.

The M.S.E. program has recently experienced rapid expansion into new research areas. These include polymers, hybrids, biomaterials, nanomaterials, and photonic materials. These research areas demand a broad spectrum of interdisciplinary knowledge from chemistry, physics, optics, device fabrication, and biology. Many new synthesis techniques are developed or applied in these materials processing. New physical properties are found in these atomically engineered materials with well-controlled microstructures. Potential applications of nanomaterials, biomaterials, and photonic materials exist in modern industry and cutting-edge technologies.

Graduate Program

Graduate Program Coordinator

302 Roberts, Box 352120

206-543-2600

mse@u.washington.edu

The Department of Materials Science and Engineering offers programs of study leading to the degree of Master of Science in Materials Science and Engineering with defined options in materials science, ceramic engineering, metallurgical engineering, and engineering materials. The Doctor of Philosophy program is offered with defined pathways in ceramic engineering, metallurgical engineering, and materials science.

The materials science option or pathway is a course of study that combines the basic elements of understanding ceramics, metals, polymers, composites, and electronic materials. Many specialized courses, including engineering fracture mechanics, semiconductor devices, and polymer chemistry, may be taken in other departments to provide a broad, yet basic, materials-study program.

Ceramic engineering graduate programs are designed to develop a fundamental understanding of the physical, chemical, and structural relationships that influence the properties and applications of ceramic materials. Processing, the development of microstructure, and the relationships of microstructure to properties are considered from a basic viewpoint that is applicable to a broad range of materials.

Graduate programs in metallurgical engineering encompass a variety of courses and research programs that are related to the physical and chemical aspects of metals, alloys, and related engineering materials. Programs in the physical-metallurgy and materials-science areas include the structure and properties of alloys, phase transformations, biomaterials, lattice defects, the optical properties of non-metallic solids, failure analysis, x-ray diffraction, and the mechanical behavior of materials. Programs include metallurgical thermodynamics, rate phenomena, and carbothermic reduction processes.

The engineering materials option is open to students with industrial experience. In this option, students take practice-oriented courses, complete an analysis, and develop a recommended solution to an engineering-materials problem in place of a research thesis. Programs of study generally are related to a specific field of materials-engineering practice.

Graduates in material science become professionals in multiple industries, including electronics, automotive, and aerospace. They work in material design and manufacturing, including electronic and optical material and devices, microelectromechanical systems (MEMS), system design, and materials selection as related to the structure, properties, processing, and applications of materials.

Master of Science in Materials Science and Engineering

All Master of Science degrees offered by the department require course work and the satisfactory completion of an M.S. thesis research problem, with the exception of the engineering-materials option, which requires 32 credits plus 4 credits for the problem-solution project. Of the course credits, 12 are specified to include courses on thermodynamics, crystal structure, imperfections, microstructure and phase transformations, and a graduate seminar. Other courses may be required for specific program options. The residence and grading requirements follow those of the Graduate School.

The department is authorized to supervise an option in materials science and engineering that leads to the College of Engineering Master of Science degree. This degree program is intended to accommodate students who have a strong science background but lack an undergraduate engineering degree. The required courses are the same for all of the above degrees. Students with deficiencies in their intended area of engineering specialization may be required to take undergraduate courses in addition to the normal graduate course requirements.

Doctor of Philosophy

Students who have completed one year of graduate work must take the Ph.D. qualifying evaluation to determine whether the faculty will advise continued study proceeding to the General Examination for the degree of Doctor of Philosophy. Students are required to pass the Ph.D. Qualifying Examination which includes an evaluation portfolio. This portfolio consists of both a written fundamental exam and a research report and presentation. A critical examination of the applicant's complete academic record, recommendations, and proposed course of study will be pertinent to this decision. In addition to course work, each student is required to pass the General Examination, which is sufficiently comprehensive to demonstrate the student's ability to deal with broad aspects of materials science, as well as with a specialized subject area. Proficiency in basic research is of paramount importance. Each prospective candidate is required to present a written dissertation that makes an original and independent contribution to knowledge in the student's field of specialization.

Research Facilities

The research laboratories in the Department of Materials Science and Engineering are well equipped for a variety of research endeavors. Facilities include equipment for electron and optical microscopy, x-ray diffraction, a variety of spectroscopies, high-temperature heat treatment, electrical, optical and mechanical property testing, specialized processing equipment, including hot and cold isostatic presses, nitrogen reaction furnaces, and automated TGA, DTA analysis systems. Equipment for analyses of particle size, surface area, and pore size is also available. Students have liberal access to the University computing facilities.

Financial Aid

A number of teaching-assistant and research-assistant appointments are available. Early application and direct correspondence or interviews with faculty members who may have open positions on research projects are encouraged. Requests for application forms and financial aid should be directed to the academic counselor. Further information about financial aid and the graduate application process is available from the department's Web site at depts.washington.edu/mse/.

Faculty

Chair

Rajendra Kumar Bordia

Professors

Allan, G. Graham * 1966, (Adjunct); PhD, 1956, University of Glasgow (UK), DSc, 1971, University of Strathclyde (UK); creativity and innovation.

Anderson, Donald 1947, (Emeritus); BS, 1941, University of Illinois; mining and exploration.

Archbold, Thomas F. * 1961, (Emeritus); PhD, 1961, Purdue University; corrosion, thermal diffusion, substructure characterization, fatigue.

Dunham, Scott T. * 1999, (Adjunct); MS, 1980, PhD, 1985, Stanford University; modeling and simulation of microfabrication processes and device behavior.

Fischbach, David B. * 1969, (Emeritus); PhD, 1955, Yale University; structure and properties of carbons graphite, other non-oxide ceramics, and composite materials.

Ghose, Subrata * 1972, (Adjunct); MS, 1955, Calcutta University (India), PhD, 1959, University of Chicago; mineral physics, crystallography, mineralogy.

Inoue, Kanryu * 1993, (Research); PhD, 1977, Osaka City University (Japan); mechanical, physical, and magnetic properties, phase transformations of intermetallic alloys.

Jen, Alex K.Y. * 1999; PhD, 1984, University of Pennsylvania; organic and polymer chemistry, interdisciplinary materials science.

Jonsson, Hannes * 1988, (Adjunct); PhD, 1985, University of California (San Diego); computer simulations and scattering calculation in materials and surface science.

Kalonji, Gretchen * 1990; PhD, 1982, Massachusetts Institute of Technology; defects in crystalline solids, atomistic computer simulation techniques, rapid solidification of ceramics.

Krishnan, Kannan M. 2001; PHD, 1984, University of California (Berkeley); thin films/nanostructures, magnetism/transport, metals/alloys, complex oxides, functional ceramics.

Kumar, Vipin * 1988, (Adjunct); PhD, 1988, Massachusetts Institute of Technology; manufacturing, polymer processing, microcellular plastics, design theory and methodology.

Mayer, George 2000, (Research); PhD, 1967, Massachusetts Institute of Technology; durability of materials, micro-mechanical behavior and failure of materials, biomimetics.

Ohuchi, Fumio * 1992; PhD, 1981, University of Florida; thin films, electronic materials, physics and chemistry of layered materials, nanostructures.

Rao, Y. Krishna * 1976; PhD, 1965, University of Pennsylvania; kinetics and thermodynamics in materials systems, materials processing, mineral engineering.

Stoebe, Thomas Gaines * 1966, (Emeritus); PhD, 1965, Stanford University; physics of solids, compound semiconductors, thermoluminescence, materials education.

Taya, Minoru * 1986, (Adjunct); PhD, 1977, Northwestern University; composite materials, elasticity and plasticity, impact physics, fracture theory.

Whittemore, Osgood J. * 1964, (Emeritus); MS, 1941, University of Washington, PhD, 1950, Iowa State University; ceramic processing, refractories, industrial minerals.

Associate Professors

Bordia, Rajendra Kumar * 1991; PhD, 1986, Cornell University; processing and mechanical properties of ceramics, polymer and ceramic composites.

Brush, Lucien N. * 1990; PhD, 1988, Carnegie Mellon University; computational modeling of solidification, modeling studies of materials processing.

Dogan, Fatih * 1990; PhD, 1989, Technische Universität (Germany); ceramic processing; electronic and magnetic materials, crystal growth of high Tc superconductors.

Kumar, Vipin * 1988, (Adjunct); PhD, 1988, Massachusetts Institute of Technology; manufacturing, polymer processing, microcellular plastics, design theory and methodology.

Sarikaya, Mehmet * 1984; PhD, 1982, University of California (Berkeley); biomimetics, nanocomposites, dielectrics, high-temperature semi/superconductors, electron microscopy.

Stang, Robert George * 1973, (Emeritus); PhD, 1972, Stanford University; mechanical behavior of materials, elastic/plastic materials deformation.

Assistant Professors

Cao, Guozhong * 1996; PhD, 1991, Eindhoven University (Netherlands); inorganic materials (films) by sol-gel processing and chemical vapor deposition (CVD).

Flinn, Brian D. * 1991, (Research); PhD, 1991, University of California (Santa Barbara); processing-structure-property relationships of advanced structural materials.

Xia, Younan * 1997, (Adjunct); PhD, 1996, Harvard University; materials chemistry and nanotechnology.

Zhang, Miqin 1999; PhD, 1998, University of California (Berkeley); biomaterials, BioMEMS, surface/protein/cell interactions, cell micropatterning for tissue engineering.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

Materials Science and Engineering

MSE 421 Thermodynamics of Solids (3)
Applications of thermodynamics to the solid state. Statistical interpretation of entropy. Heterogeneous equilibria. Theories of solutions. Thermodynamics of surfaces and of defects in solids. Offered: W.

MSE 423 Fiber-Reinforced Composite Materials (4)
Introduction to composites in polymer, metal, or ceramic matrices. Properties of individual phases and of fiber/matrix interface; micromechanisms of load transfer from matrix to fiber; fabrication and elastic and failure properties. Laboratory studies of processing and properties of composites. Offered: A.

MSE 433 Polymeric Materials (3) Relationship between configuration, conformation, molecular ordering, microstructure and properties of polymeric

materials. Application of materials characterization and processing techniques to polymers. Tailoring polymer molecules and microstructures for high-technology applications. Liquid crystalline polymers. Interaction between polymers and their in-service environment. Offered: A.

MSE 442 Seminar in Ethics and Safety (1) Deals with issues of engineering ethics and industrial safety within the context of materials science and engineering. Requires short updates on the senior project progress (MSE 499). Credit/no credit only. Offered: W.

MSE 466 Physical Properties of Materials (4) Introduction to elementary solid-state concepts in materials. Atom bonding, statistical mechanics, free electron and band theories, thermal properties. Application of principles to conduction in metals, insulators, semiconductors, and to magnetic and optical processes in solids. Offered: W.

MSE 485 Introduction to Electronic Packaging and Materials (3) The governing equations of transport phenomena: mechanical, thermal, and electromagnetism behavior, thermomechanical and electromagnetic properties of packaging materials, electromagnetic characteristics of circuit and transmission lines, thermal management and reliability analysis of packaging, interconnect and material processing technology. Prerequisite: MSE 170. Offered: jointly with M E 485; A.

MSE 486 Fundamentals of Integrated Circuit Technology (3) Processing physics, chemistry and technology, including evaporation, sputtering, epitaxial growth, diffusion, ion implantation, laser annealing, oxidation, chemical vapor deposition, photolithography. Design considerations for bipolar and MOS devices, materials and process characterization. Future trends. Prerequisite: either E E 482 or MSE 466. Offered: jointly with E E 486; W.

MSE 487 Laboratory in Electronic Packaging and Materials (1) Laboratory course to accompany ME 485 Experiments related to design, processing and reliability of electronic packaging used in consumer electronics. Corequisite: MSE 485. Offered: jointly with M E 487; A.

MSE 489 Integrated Circuit Laboratory (1) Hands-on experience in the building of a PMOS device, complete with oxidation, diffusion, photolithography, etching, metallization, and testing. Prerequisite: E E 486/MSE 486, which may be taken concurrently. Offered: jointly with E E 489; W.

MSE 498 Special Topics (1-5, max. 8) Special topics in materials science and engineering offered as a course with lectures, conferences, or laboratory. Offered: A/W/Sp.

MSE 499- Special Project (*-, max. 5) Materials science and engineering field or laboratory investigations in group or individual setting. Written report required. Offered: A/W/Sp.

Courses for Graduates Only

MSE 501 Advanced Processing of Inorganic Materials (3) Discusses advanced processes of inorganic materials including metals, ceramics and electronic materials, such as high temperature processing, sintering, solidification, single crystal growth from liquid, and vapor phase deposition. Emphasizes both the fundamentals and practical approaches of these processing techniques. Offered: even years; A.

MSE 502 Sol-Gel Processing (3) Fundamentals of colloid science and the physics and chemistry of the sol-gel process. Emphasizes the synthesis and applications of various materials, such as multi-component oxides, nano-composites, meso- and microporous materials, organic/inorganic hybrids, and bio-

materials that have important applications in both leading technologies and modern industries. Offered: odd years; A.

MSE 504 Introduction to Microelectro Mechanical Systems (4) Theoretical and practical aspects in design, analysis, and fabrication of MEMS devices. Fabrication processes, including bulk and surface micromachining. MEMS design and layout. MEMS CAD tools. Mechanical and electrical design. Applications such as micro sensors and actuators, or chemical and thermal transducers, recent advances. Offered: jointly with E E 502/M E 504; A.

MSE 510 Crystallography and Symmetry-Related Properties of Materials (3) Detailed analysis of crystallographic structures, lattice transformations, reciprocal lattice, diffraction from crystals. Elements of symmetry operations, point groups, space groups, transformations. Tensor properties of crystal related to crystallography and symmetry. Offered: A.

MSE 512 Experimental Transmission Electron Microscopy (3) Fundamentals of electron optics as applied to microscopy; applications of contrast theories and electron diffraction with emphasis on defects and multiphase structures in crystalline solids. Prerequisite: MSE 510. Offered: W.

MSE 513 Transmission Electron Microscopy Laboratory (2) One four-hour laboratory and one two-hour discussion/demonstration per week; metallic, ceramic, electronic biological sample preparation techniques; diffraction, imaging, and spectroscopy techniques in electron microscopy. Prerequisite: MSE 512 which may be taken concurrently. Offered: W.

MSE 515 Advanced Transmission Electron Microscopy (3) Principles of image formation in crystalline and amorphous materials at the atomic resolution level; high spatial resolution electron diffraction with emphasis on convergent beam electron diffraction; quantitative elemental compositional and chemical analysis with energy dispersive x-ray spectroscopy and electron energy loss spectroscopy; high voltage electron microscopy. Prerequisite: MSE 512 and MSE 513. Offered: odd years; Sp.

MSE 518 Advanced Mineralogy (3) Crystal symmetry: point groups, space groups. Mathematical description of crystal structures; group theory and irreducible representations; tensor description of physical properties; stress, strain, piezoelectricity, elasticity; structural and magnetic phase transition, Landau theory, deformation and creep in crystals; elasto-viscous properties of Earth's mantle, crystal chemistry and solid state reactions. Offered: jointly with ESS 537; Sp.

MSE 520 Seminar (1, max. 6) Review of research problems in recent literature. Registration required for all graduate students. Credit/no credit only. Offered: A/W/Sp.

MSE 524 Applied Rate Phenomena (3) Introduction to rate theory and transport processes. The principal thrust is on applications in ceramics and metallurgy. Prerequisite: basic course in transport phenomena or permission of instructor. Offered: W.

MSE 525 Kinetics and Phase Transformations (3) Thermodynamic basis for kinetic processes, including diffusion and phase transformation kinetics. Diffusion problems and solution methodologies, statistical treatment of diffusion, solid-liquid and solid-solid transformations, ordering transitions. Special topics related to grain growth, sintering, martensitic transformations. Prerequisite: MSE 315 and MSE 421 or equivalent. Offered: Sp.

MSE 530 Fundamentals and Applications of Metal Finishing (3) Fundamentals and applications of corrosion to the finishing and processing of metals. Corrosion, electrochemical fundamentals, materials

cleaning processes, electrodeposition, surface treatments, finishing processes. Offered: odd years; A.

MSE 541 Defects in Materials (3) Detailed study of the general properties and effects of point, line, and planar defects in crystalline solids. Prerequisite: MSE 314, MSE 316, or equivalent. Offered: W.

MSE 544 Mechanical Behavior of Materials (3) Mechanical properties of metals, ceramics, and polymers. Elasticity and viscoelasticity. Macroscopic and microscopic aspects of deformation and fracture. Continuum plasticity and microscopic hardening mechanisms. High temperature deformation. Fracture mechanics, brittle and ductile fracture. Deformation and fracture mechanisms maps. Prerequisite: MSE 510 and MSE 541 or permission of instructor.

MSE 553 Vacuum Science and Technology (3) Fundamental theory and gas kinetics and treatment of gas flow, working principles of vacuum pumps and gauges, characteristics required of the vacuum components, material selection, fundamentals essential to vacuum system design. Covers both fundamental and practical aspects of modern vacuum science and technology.

MSE 555 Biomimetics: Bioinspired Design and Processing of Materials (4) How biological organisms produce materials with controlled structure, chemistry and hierarchy to attain physical properties far superior to traditional engineering materials. Fundamental biological building materials, their synthesis, and their self-assembly with emphasis on examples of soft and hard tissues.

MSE 559 Thin Film Science, Engineering, and Technology (3) The physics, chemistry, and engineering aspects of thin film deposition and technology. Vapor phase deposition emphasized. Topics include reactor types, vapor phase transport and hydrodynamics, surface and mass transport limited kinetics, nucleation and growth, homoepitaxy, heteroepitaxy, and thin film characterization. Prerequisite: permission of instructor. Offered: jointly with CHEM E 559.

MSE 562 Introduction to Electronic Composites (3) Fundamentals of microstructure-macro-property relation of electronic composites. This course covers applications (computers, laser packages, medical devices, MEMS, avionics), functions (mechanical, thermal, electromagnetic and optical), microstructure-macro-property relations, processing issues, and modeling of electronic composites. Recommended: 423 or M E 450. Offered: jointly with M E 562; odd years; Sp.

MSE 563 Advanced Composites: Design and Manufacturing (3) Manufacturing and processing techniques of metal-, polymer-, and ceramic-matrix composites; design considerations related to manufacturing techniques; non-destructive testing of composite structures. Fiber-matrix interfacial features and interactions. Interfacial thermodynamics applied to selection of fiber-matrix combinations. Prerequisite: MSE 423 or M E 450 or equivalent by permission of instructor. Offered: jointly with ME 563; Sp.

MSE 565 Electron Theory of Materials (3) Solid-state concepts of materials. Atomic bonding, statistical mechanics, Brillouin zone theory. Applications to conduction, optical, and magnetic properties of metals, semiconductors, and insulators. Prerequisite: MSE 466 or equivalent. Offered: W.

MSE 590 Advanced Seminar in Materials Science and Engineering (2) Advanced topics in material science, led by faculty with specific expertise in the area of interest. Topics to be chosen and announced quarterly.

MSE 598 Engineering Materials Problems (4) Involves a concentrated project which may include the design of a system or process, or analysis of a set of data related to the materials engineering area. Requires a professional quality report and an oral presentation of the results.

MSE 599 Special Topics in Materials Science (1-5, max. 5) Studies of special advanced topics in materials science. Prerequisite: permission of instructor. Offered: AWWSpS.

MSE 600 Independent Study or Research (*) Offered: AWWSpS.

MSE 700 Master's Thesis (*) Offered: AWWSpS.

MSE 800 Doctoral Dissertation (*) Offered: AWWSpS.

Ceramic Engineering

CER E 401 Equipment and Plant Design (3) The design process and its application in ceramic engineering. Design projects. Offered: Sp.

CER E 411 Vitreous State (4) Chemistry and physics of glass, glazes, and porcelain enamels; structure, properties and processing of vitreous materials. Offered: Sp.

CER E 413 Physical Ceramics: Mechanical Properties (3) Mechanical properties, elasticity, strength, thermal shock, and high temperature effects relative to structural design. Fracture mechanics and notch sensitivity of brittle materials. Environmental effects, plastic flow, and high temperature deformation. Offered: W.

CER E 414 Electrical Properties of Ceramics (3) Ionic and electronic conduction in crystalline and noncrystalline inorganic solids. Dielectric and ferroelectric behavior, magnetic properties of ferrimagnetic materials, optical properties of dielectrics. Undergraduate ceramic engineering majors must take 415 concurrently. Offered: W.

CER E 415 Electrical Properties of Ceramics/Laboratory (1) Ionic and electronic conduction in crystalline and noncrystalline inorganic solids. Dielectric and ferroelectric behavior, magnetic properties of ferrimagnetic materials, optical properties of dielectrics. Offered: W.

CER E 416 Mechanical Properties Laboratory (1) Measurements of the mechanical properties of ceramics: strength, fracture, toughness, thermal shock damage. Use of Weibull statistics to characterize strength and failure. Offered: W.

CER E 421 Ceramic Processing (4) Technology of ceramic fabrication processes. Material characterization at processing stages for control. Laboratory study of all operations in the manufacture of selected ceramic products. Offered: A.

CER E 470 Refractories (4) Chemical and mineralogical composition; processing methods; thermal, physical, and chemical properties and tests; application in high-temperature processes.

Metallurgical Engineering

MET E 421 Metallurgical Processing (4) Principles and applications of techniques used to process metals and alloys including solidification and casting, heat treating, forming, joining and machining and their effects on microstructure and properties. Offered: A.

MET E 432 Corrosion of Engineering Materials (3) Applications of physical chemical principles to the reaction of materials with their environments. Prevention and control of corrosion and oxidation processes. Corrosion problems in materials applications. Offered: W.

MET E 435 Corrosion (1) Laboratory experiences in application of physical chemical principles to reaction of materials with their environments. To accompany 432. Offered: W.

MET E 461 Engineering Physical Metallurgy (4) Phase transformations and strengthening mechanisms in ferrous and nonferrous alloys; heat treatment and microstructure control; physical metallurgy of carbon and alloy steels, aluminum and titanium alloys; microstructure-property relationships and alloy design. Offered: A.

MET E 462 Mechanical Behavior of Metals (3) Theories of elastic and plastic deformation in materials. Application of these theories in design, stress and strain, tensile and compression loading, yielding and plastic deformation, fracture, introduction to fracture mechanics, creep and fatigue. Offered: W.

MET E 463 Reliability and Design in Metallurgical Systems (4) Metallurgical design problems and failure analysis. Properties of commercially important engineering alloys. Offered: Sp.

MET E 464 Extractive Process Analysis (3) Extractive processes analyzed by the methods of material and energy balances, computational thermodynamics, process kinetics and reactor theory. Introduction to process optimization. Offered: Sp.

MET E 465 Mechanical Behavior Laboratory (1) Laboratory experience in mechanical behavior of metals. To accompany 462. Offered: W.

Mechanical Engineering

143 Mechanical Engineering Building

General Catalog Web page:
www.washington.edu/students/gencat/academic/Mechanical_Eng.html

Department Web page:
www.me.washington.edu

Mechanical engineering is one of the broadest and oldest of the engineering disciplines and therefore provides some of the strongest interdisciplinary opportunities in the engineering profession. Power utilization (and power generation) is often used to describe the focus of Mechanical engineering. Within this focus are such diverse topics as thermodynamics, heat transfer, fluid mechanics, machine design, mechanics of materials, manufacturing, stress analysis, system dynamics, numerical modeling, vibrations, turbomachinery, combustion, heating, ventilating, and air conditioning. Degrees in mechanical engineering open doors to careers not only in the engineering profession but also in business, law, medicine, finance, and other non-technical professions.

Undergraduate (B.S.M.E.) and graduate (M.S.M.E. and Ph.D.) degree programs are offered by the department. Courses are presented in both traditional class room lecture and laboratory settings as well as via distance learning through either televised instruction or Webcast methods. Interest groups within the faculty provide instruction in four areas: Design; Energy and Fluids; Mechanics, Materials and Manufacturing; and Systems and Dynamics. Departmental thrust areas for graduate and undergraduate research include: environment; health care; information technology; and manufacturing. Several on-going senior capstone design projects provide both undergraduate and graduate students with hands-on, interdisciplinary, team-driven opportunities that encompass such diverse topics as Formula

SAE car; human-powered submarine, mechatronics, and fuel cell technology.

Graduate Program

Graduate Program Coordinator
143 Mechanical Engineering Bldg, Box 352600
206-543-5090
megrad@u.washington.edu

The Department of Mechanical Engineering offers graduate programs leading to the degrees of Master of Science in Mechanical Engineering (M.S.M.E.) and Doctor of Philosophy (Ph.D.). The department also provides authorized options leading to the College-wide Master of Science in Engineering (M.S.E.) degree (e.g., Masters in Manufacturing Engineering, and Program in Engineering and Manufacturing Management). These degrees provide balanced combinations of formal instruction and independent research or design experience. Although there are thesis and non-thesis options for the M.S.M.E., completion of a thesis is highly recommended. Individual projects may be drawn from a wide spectrum of topics, which include mechanical and energy conservation systems, heat transfer, combustion, fluid mechanics, applied mechanics, computational mechanics, computer-aided design and manufacturing, production systems, materials behavior, robotics, controls, vibrations, and applications of mechanical engineering science to a variety of such interdisciplinary fields as bioengineering, ocean engineering, environmental engineering, nanotechnology, micro electro-mechanical systems, and acoustics. Flexible requirements for course work provide opportunities both for a broad scientific and professional background and for specialty training.

Research Facilities

The department has well-equipped laboratories for pursuing research in various disciplinary fields in mechanical engineering and for fabricating specialized research equipment. These include experimental stress analysis; materials testing/characterization; synthesis and simulation of electromechanical control systems; foundry, welding, and other metal fabrication operations; computer facilities for CAD/CAM/CIM and CFD research; wind tunnels for boundary-layer and high-speed flow analysis; combustion systems performance, exhaust emissions control, and combustion engines; acoustics, vibration, and dynamic testing and measurements and modal analysis; radiation, conduction, and convection (including multiphase) heat-transfer analysis, and a bioengineering flow facility.

Financial Aid

Financial aid is offered to full-time graduate students as funds permit. Funds, however, are limited and the assignment of assistantships and fellowships is highly competitive. This aid may be in the form of a research assistantship for sponsored programs, a fellowship provided by the University or industry, or a teaching assistantship.

Faculty

Chair

William R. D. Wilson

Professors

Alexander, Daniel 1960, (Emeritus); MS, 1954, University of Washington, PhD, 1977, Washington State University; engineering design.

- Balise, Peter * 1950, (Emeritus); MS, 1950, Massachusetts Institute of Technology; systems analysis and control.
- Böhringer, Karl F. * 1998, (Adjunct); MS, 1993, PhD, 1997, Cornell University.
- Chalupnik, James * 1964, (Emeritus); PhD, 1964, University of Texas (Austin); sound and vibration, wave propagation.
- Corlett, Richard * 1964, (Emeritus); PhD, 1963, Harvard University; energy systems and combustion.
- Daly, Colin H. * 1967; PhD, 1966, University of Strathclyde (UK); bioengineering, materials.
- Day, Emmett E. * 1947, (Emeritus); PhD, 1962, University of California (Berkeley); materials, experimental stress analysis.
- Depew, Creighton A. * 1960, (Emeritus); PhD, 1960, University of California (Berkeley); heat transfer, fluid mechanics.
- Emery, Ashley F. * 1961; MS, 1958, PhD, 1961, University of California (Berkeley); experimental design, heat transfer, HVAC, thermal stress/fracture, bioengineering.
- Firey, Joseph C. 1983, (Emeritus); MSME, 1941, University of Wisconsin; combustion, lubrication.
- Fridley, James * 1988; MS, 1981, University of Michigan, PhD, 1984, University of Washington; forest engineering systems design, interactive computer simulation.
- Galle, Kurt R. * 1960, (Emeritus); PhD, 1951, Purdue University; instrumentation, controls, bioengineering.
- Ganter, Mark * 1986; PhD, 1985, University of Wisconsin; solid modeling, computer graphics and geometry, kinematics, rapid prototyping, manufacturing design.
- Garbini, Joseph * 1979; PhD, 1977, University of Washington; systems and controls analysis, instrumentation, manufacturing automation.
- Gessner, Frederick B. * 1967; PhD, 1964, Purdue University; fluid mechanics, turbulence.
- Hyman, Barry * 1975; PhD, 1965, Virginia Polytechnic Institute and State University; engineering design, energy systems and policy, technology and public policy.
- Jenkins, Michael G. * 1992; PhD, 1987, University of Washington; mechanical properties, characterization, thermomechanical testing, design analysis of brittle materials.
- Jorgensen, Jens E. * 1968, (Emeritus); DSc, 1969, Massachusetts Institute of Technology; systems analysis, manufacturing, automation and controls, forest engineering.
- Kippenhan, Charles J. * 1963, (Emeritus); PhD, 1948, University of Iowa; energy conservation in buildings, heating ventilating and air conditioning, heat transfer.
- Kobayashi, Albert S. * 1958, (Emeritus); PhD, 1958, Illinois Institute of Technology; fracture mechanics.
- Kosaly, George * 1980; PhD, 1974, Eotvos Lorand University (Hungary), DSc, 1979, Hungarian Academy of Sciences; turbulent combustion, nuclear reactor dynamics.
- Kramlich, John C. * 1991; PhD, 1980, Washington State University; heterogeneous combustion, pollutant formation and control from thermal systems, waste remediation.
- Love, William J. * 1970, (Emeritus); PhD, 1952, University of Illinois; design, mechanics, power systems.
- Malte, Philip C. * 1979; PhD, 1971, University of Michigan; energy, combustion, thermodynamics.
- McCormick, Norman J. * 1966; PhD, 1965, University of Michigan; radiative transfer, optical oceanography, reliability/risk analysis, mechanical engineering design.
- McFeron, Dean E. * 1958, (Emeritus); PhD, 1956, University of Illinois; heat transfer and thermal power processes.
- Meldrum, Deirdre R. * 1992, (Adjunct); MS, 1985, Rensselaer Polytechnic Institute, PhD, 1993, Stanford University; laboratory automation systems, genome analysis, modeling and control of dynamic systems, robots.
- Morrison, James B. * 1946, (Emeritus); MS, 1954, University of Washington; design, dynamics.
- Pratt, David T. * 1981, (Emeritus); PhD, 1968, University of California (Berkeley); turbulent combustion, computer simulation.
- Ramulu, M. * 1978; PhD, 1982, University of Washington; manufacturing processes, production engineering, applied mechanics, fatigue and fracture mechanics.
- Reinhal, Per G. * 1982; PhD, 1982, California Institute of Technology; nonlinear dynamics, vibrations, vibration control, acoustics, biomedical engineering.
- Riley, James J. * 1983; PhD, 1971, Johns Hopkins University; fluid mechanics, especially turbulent flows.
- Sidles, John Arthur 1984, (Adjunct); PhD, 1983, University of Washington; seeing molecules (i.e., quantum-coherent instrumentation); regenerating cartilage.
- Taggart, Raymond * 1959, (Emeritus); PhD, 1956, Queen's University (UK); mechanical metallurgy.
- Taya, Minoru * 1986; PhD, 1977, Northwestern University; composite materials, elasticity and plasticity, impact physics, fracture theory.
- Tuttle, Mark E. * 1985; PhD, 1984, Virginia Polytechnic Institute and State University; applied solid mechanics, composite materials and structures, adhesion mechanics.
- Vesper, Karl H. * 1969; PhD, 1969, Stanford University; business policy, mechanical engineering, marine studies.
- Wilson, William R. D. * 1999; PhD, 1967, Queen's University of Belfast (Ireland); manufacturing and tribology, particularly metal forming.
- Wolak, Jan * 1965, (Emeritus); PhD, 1965, University of California (Berkeley); mechanics of materials, manufacturing processes.
- Woo, Tony C. * 1995, (Adjunct); MSEE, 1974, PhD, 1975, University of Illinois; graphics, imaging, robotics, design, manufacturing, differential geometry, optimization.
- Zabinsky, Zelda * 1985, (Adjunct); PhD, 1985, University of Michigan; operations research, applications in industrial engineering, optimization with stochastic elements.
- stability, floating structures, waves, ship resistance, model testing.
- Atman, Cynthia J. * 1998, (Adjunct); PhD, 1990, Carnegie Mellon University; engineering education issues and developing cognitive models of engineering design.
- Berg, Martin C. * 1986; PhD, 1986, Stanford University; digital control system design, control of structurally flexible electromechanical systems.
- Bodoia, John R. * 1964, (Emeritus); PhD, 1959, Carnegie Mellon University; fluid mechanics, heat transfer, solar energy.
- Chalk, William 1957, (Emeritus); MSME, 1961, University of Washington; design graphics.
- Ching, Randal Preston * 1992, (Adjunct); PhD, 1992, University of Washington; orthopaedic biomechanisms related to injury prevention, injury mechanisms and injury repair.
- Dahl, Peter H. * 1989; PhD, 1989, Massachusetts Institute of Technology; underwater acoustics; sound scattering from the sea surface, bubbles, marine life.
- Devasia, Santosh 2000; PhD, 1993, University of California (Santa Barbara); control theory and applications: nanotechnology, distributed systems, and biomedical systems.
- Fabien, Brian C. * 1993; PhD, 1990, Columbia University; kinematics, modeling and simulation of physical systems, optimal control.
- Ford, Paul W. * 1957, (Emeritus); MSEng, 1959, University of Washington; manufacturing processes, metal casting.
- Forster, Fred * 1977; PhD, 1972, Stanford University; fluid mechanics, acoustics, micro-fluidics, biomedical applications.
- Holt, Richard * 1947, (Emeritus); MSME, 1957, University of Washington; manufacturing processes, welding.
- Jenkins, Michael G. * 1992; PhD, 1987, University of Washington; mechanical properties, characterization, and thermomechanical testing of brittle materials.
- Kieling, William C. * 1956, (Emeritus); MSME, 1959, University of Washington; design, dynamics, and kinematics.
- Kumar, Vipin * 1988; PhD, 1988, Massachusetts Institute of Technology; manufacturing, polymer processing, microcellular plastics, design theory and methodology.
- Kunzelman, Karyn S. * 1991, (Affiliate); PhD, 1991, University of Texas (Dallas); biomedical engineering, cardiac; anatomy and physiology.
- Reinhal, Per G. * 1982; PhD, 1982, California Institute of Technology; nonlinear dynamics, vibrations.
- Sanders, Joan Elizabeth * 1985, (Adjunct); PhD, 1991, University of Washington; soft tissue biomechanics and tissue adaptation to mechanical stress.
- Sandwith, Colin J. * 1966; PhD, 1966, Oregon State University; corrosion, material science, design, manufacturing.
- Shen, I-yeu (Steve) * 1993; PhD, 1991, University of California (Berkeley); linear and nonlinear vibrations, disk and machine dynamics, damping and vibration control.
- Sherrer, Robert E. * 1960, (Emeritus); PhD, 1958, University of Wisconsin; solid mechanics.

Associate Professors

Adee, Bruce H. * 1970; MS, 1968, PhD, 1972, University of California (Berkeley); vessel safety and

Storti, Duane W. * 1983; PhD, 1983, Cornell University; nonlinear dynamics and vibrations, dynamical systems, perturbations and bifurcations.

Assistant Professors

Cooper, Joyce S. * 1998; PhD, 1996, Duke University; design for environment and industrial ecology methodologies and models.

Labossiere, Paul E. 2000; PhD, 2000, University of Colorado (Boulder); the study of deformation and failure of solids and structures.

Li, Wei 2000; PhD, 1999, University of Michigan; monitoring and control of manufacturing processes, material processing in micro- and nano-scales.

Mescher, Ann M. * 1996; PhD, 1995, Ohio State University; polymer composites and manufacturing, polymer optics, heat transfer, design.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

Mechanical Engineering

M E 403 Material-Removal Processes (3) *Ramulu* Cutting and noncutting processes for material removal in the shaping of manufactured products. Study of forces and of power consumption and relative costs in the various processes. Prerequisite: M E 355 which may be taken concurrently. Offered: A.

M E 406 Corrosion and Surface Treatment of Materials (3) *Sandwith* Corrosion fundamentals and forms (galvanic, crevice, pitting, stress corrosion, erosion, hydrogen and leaching). Principles of design, materials selection, cathodic protection and surface treatments (coatings, carburizing, nitriding and plating) applied to reduce corrosion. Failure analysis applied to case studies. Offered: Sp.

M E 409 Introduction to Numerical Control and Computer-Aided Manufacturing (3) *Li* Control system fundamentals, numerical control (NC) machine control systems, and the design aspect of NC machine tools, programming methods of NC machines, computer-aided manufacturing, CNC, DNC, and process optimization. Prerequisite: M E 355 which may be taken concurrently. Offered: ASp.

M E 415 Sustainability and Design for Environment (3) *Cooper* Analysis and design of technology systems within the context of the environment, economy, and society. Applies the concepts of resource conservation, pollution prevention, life cycle assessment, and extended product responsibility. Examines the practice, opportunities, and role of engineering, management, and public policy. Offered: jointly with ENVIR 415/CEE 495; W.

M E 424 Combustion Systems and Pollutant Formation (4) *Malte* Combustion theory, including chemical thermodynamics, chemical kinetics, mixing and diffusion, and flame structure. Combustion chamber design concepts and performance. Pollutant formation and combustion methods for minimizing pollutant formation. Prerequisite: M E 323; recommended: M E 331; M E 333. Offered: even years; Sp.

M E 425 HVAC Engineering (4) *Emery* Heating, ventilating, and air conditioning of built environment. Human comfort, psychometric processes, load computations, fluid distribution, and controls. Design analysis of HVAC system is taught in the lectures and

applied in the class project. Prerequisite: M E 323; M E 331. Offered: Sp.

M E 426 Sustainable Energy Design (4) *Malte* Energy systems with renewable (solar) energy and efficient use of energy. Project-based learning: analysis, systems engineering, design, component characteristics, and environmental impacts. Prerequisite: CHEM E/ENVIR/M E/PHYS 342 or M E 430; recommended: M E 331. Offered: Sp.

M E 430 Advanced Energy Conversion Systems (4) *Kramlich* Advanced and renewable energy conversion systems and technologies are treated. Included are high efficiency combined cycles; renewable energy conversion involving solar, wind, and biomass; direct energy conversion and fuel cells; and nuclear energy. Environmental consequences of energy conversion and environmental control are discussed. Prerequisite: M E 323. Offered: W.

M E 431 Advanced Fluid Mechanics (4) *Forster* Advanced topics in fluid mechanics, including kinematics, potential theory and vortex dynamics, viscous flow, turbulence, experimental and numerical methods, and design. Prerequisite: M E 333. Offered: A.

M E 432 Gas Dynamics (3) *Gessner* Dynamic and thermodynamic relationships for the flow of a gas. Application of thermodynamic processes involving nozzles, diffusers, compressors, and turbines. Prerequisite: either M E 333 or CEE 342. Offered: by request only.

M E 433 Turbomachinery (4) *Gessner* Thermodynamics, gas dynamics, and fluid mechanics of axial and centrifugal compressors, pumps, and turbines. Selection of components for engineering applications. Design problems and/or laboratory experiments to illustrate operating characteristics of turbomachines. Offered: Sp.

M E 436 Friction and Wear of Materials (3) *Wilson* Study of principles of friction and wear behavior of materials and of those material properties that affect such behavior. Principles of lubrication. Applications to design of surfaces for wear resistance. Prerequisite: M E 333; M E 356. Offered: Sp.

M E 440 Advanced Mechanics of Materials and Solids (3) *Jenkins* Study of mechanics of deformable bodies, including three-dimensional stress and strain tensors and their transformations. Equations of compatibility, continuity and equilibrium. Elastic constants. Failure criteria including fracture, yield and instability. Deflection relations for complex loading and shapes. Indeterminate problems. Design applications and numerical methods. Prerequisite: M E 354. Offered: Sp.

M E 445 Introduction to Biomechanics (4) *Sanders* Presents the mechanical behavior of tissues in the body and the application to design of prostheses. Tissues studies include bone, skin, fascia, ligaments, tendons, heart valves, and blood vessels. Discussion of the structure of these tissues and their mechanical response to different loading configurations. An important part of the class is a final project. Offered: jointly with BIOEN 440; Sp.

M E 450 Introduction to Composite Materials and Design (3) *Tuttle* Stress and strain analysis of continuous fiber composite materials. Orthotropic elasticity, lamination theory, failure criterion, and design philosophies, as applied to structural polymeric composites. recommended: MSE 423. Offered: W.

M E 459 Introduction to Fracture Mechanics (3) *Ramulu* Deformation processes leading to fracture, and linear elastic fracture mechanics. Fatigue crack propagation. Fracture control and failure analysis. Prerequisite: M E 354; M E 356. Offered: W.

M E 460 Kinematics and Linkage Design (3) *Ganter* Synthesis of linkage-type mechanisms using graphical and computer methods. Offered: W.

M E 468 Air-Pollution Control Equipment Design (3) *Pilat* Designs to control air pollutants from stationary sources. Procedures for calculating design and operating parameters. Fundamental mechanisms and processes of gaseous and particulate control equipment for absorption and adsorption of gaseous pollutants; electrostatic precipitation and filtration of particular pollutants. Actual case studies. Offered: jointly with CHEM E 468/CEE 494; W.

M E 469 Applications of Dynamics in Engineering (4) *Storti* Application of the principles of dynamics to selected engineering problems, such as suspension systems, gyroscopes, electromechanical devices. Includes introduction to energy methods, Hamilton's principle and Lagrange equations and the design of dynamic system. Prerequisite: M E 374. Offered: A.

M E 470 Mechanical Vibrations (3) *Reinhall* Single-degree-of-freedom linear systems techniques. Matrix techniques for multi-degree-of-freedom linear systems. Applications in vibration isolation, transmission, and absorption problems and instrumentation. Prerequisite: M E 373. Offered: A.

M E 471 Automatic Control (4) *Berg* Dynamic system modeling; control system stability and performance analysis; compensator design by Bode and root-locus methods. Prerequisite: M E 374. Offered: A.

M E 473 Instrumentation (4) *Garbini* Principles and practice of industrial and laboratory measurement. Dynamics of instrument response; generalized performance analysis of sensor systems; theory of transducers for motion, force, pressure, flow, and other measurements. Lecture and laboratory. Prerequisite: M E 374. Offered: A.

M E 474 Systems Modeling and Simulation (3) *Fabien* Unified approach to modeling of systems, and computer simulation of systems behavior. Selecting system variables; writing state, loop, and node equations; modal response and state transition response; system functions and convolution; analogs. Applications to control, vibrations, and other problems. Prerequisite: M E 374. Offered: W.

M E 477 Embedded Computing in Mechanical Systems (4) *Garbini* Analysis of electromechanical systems employing microcomputers for control or data acquisition. Microcomputer architecture, memory organization, assembly language programming, interfaces, and communications. Particular emphasis on design of hardware and software interfaces for real-time interaction with mechanical systems. Weekly laboratory. Prerequisite: M E 374; M E 470; M E 473. Offered: W.

M E 478 Finite Element Analysis (4) *Labossiere, Reinhall* Development of theory and concepts of finite element analysis. Applications in all areas of mechanical engineering, including mechanics of solids, heat transfer, and design of dynamical systems. Weekly computer exercises. Prerequisite: M E 123; M E 374; either MATH 308 or AMATH 352. Offered: ASpS.

M E 480 Introduction to Computer-Aided Technology (4) Principles of computer-aided technology. Computer-aided design, engineering, drafting, and manufacturing; computer-aided design systems, geometry, computer graphics, hardware, computer-aided vehicle/system design synthesis. System demonstrations, laboratories, and site visits. Prerequisite: M E 123; CSE 142. Offered: ASp.

M E 481 Combustion Engines and Alternatives (4) *Kramlich, Malte* Thermodynamics, fuels, performance, combustion, and exhaust emissions control for spark ignition and compression ignition piston

engines. New technologies, including hybrid combustion-electric fuel cell engines. Principles and practice. Prerequisite: M E 323. Recommended: M E 333.

M E 485 Introduction to Electronic Packaging and Materials (3) *Taya* The governing equations of transport phenomena: mechanical, thermal, and electromagnetic behavior, thermomechanical and electromagnetic properties of packaging materials, electromagnetic characteristics of circuit and transmission lines, thermal management and reliability analysis of packaging, interconnect and material processing technology. Prerequisite: MSE 170. Offered: jointly with MSE 485; A.

M E 487 Laboratory in Electronic Packaging and Materials (1) *Taya, Stoebe* Laboratory course to accompany ME 485 Experiments related to design, processing and reliability of electronic packaging used in consumer electronics. Corequisite: M E 485. Offered: jointly with MSE 487 A.

M E 490 Naval Architecture (3) *Adee* Theory of naval architecture; ship's lines, hydrostatic curves, intact and damaged stability, launching. Offered: A.

M E 491 Naval Architecture (3) *Adee* Theory of naval architecture; strength, ABS rules, water waves, ship and platform motions. Offered: W.

M E 492 Naval Architecture (3) *Adee* Theory of naval architecture; dimensional analysis, resistance, model testing, propellers, steering. Offered: Sp.

M E 495 Mechanical Engineering Design (4) *Hyman* Design laboratory involving the identification and synthesis of engineering factors to plan and achieve specific project goals. Current literature and prerequisite texts are used as reference sources. Lecture and laboratory. Prerequisite: M E 395. Offered: WSp.

M E 496 Technology-Based Entrepreneurship (3) Concentrates on hands-on aspects of innovation and entrepreneurial enterprise development. Examines relationships between innovation, iterative prototyping, and marketing testing. Students identify market opportunities, create new technology-based products and services to satisfy customer needs, and construct and test prototypes. Prerequisite: IND E 250. Offered: jointly with IND E 496.

M E 498 Special Topics in Mechanical Engineering (1-5, max. 6) Lecture and/or laboratory. Maximum of 6 credits may be applied toward an undergraduate degree.

M E 499 Special Projects (2-5, max. 9) Written report required. Offered: AWSpS.

Courses for Graduates Only

M E 501 Modern Manufacturing Processes (3) *Ramulu* General survey and introduction to modern manufacturing engineering processes. Fundamental principles and practices of modern manufacturing processes. Case studies and exercises relating the course material directly to modern industrial practice. Offered: A.

M E 502 Plasticity and Metal Forming (3) *Wilson* Stress-strain and stress-strain-rate relations in metal forming; plastic instability. Work of deformation. The slip-line field, load bounding, applications to frames, drawing, forging, and extrusion. Offered: odd years; Sp.

M E 504 Introduction to Microelectro Mechanical Systems (4) Theoretical and practical aspects in design, analysis, and fabrication of MEMS devices. Fabrication processes, including bulk and surface micromachining. MEMS design and layout. MEMS CAD tools. Mechanical and electrical design. Applications such as micro sensors and actuators, or

chemical and thermal transducers, recent advances. Offered: jointly with E E 502/MSE 504.

M E 510 Mathematical Foundations of Systems Theory (4) *Damborg* Mathematical foundations for system theory presented from an engineering viewpoint. Includes set theory; functions, inverse functions; metric spaces; finite dimensional linear spaces; linear operators on finite dimensional spaces; projections on Hilbert spaces. Applications to engineering systems stressed. Prerequisite: graduate standing or permission of instructor. Offered: jointly with A A 546/CHEM E 510/E E 510; A.

M E 518 Seminars on Advances in Manufacturing and Management (1) *Ramulu* Current topics and advances made in manufacturing and management. Topics presented by invited speakers from academia and industry. Emphasis on the multidisciplinary nature of manufacturing and management Offered: jointly with IND E 518; AWSp.

M E 519- Seminar (0-) Credit/no credit only. Offered: AWSp.

M E -520 Seminar (-1, max. 6) Credit/no credit only. Offered: AWSp.

M E 521 Thermodynamics (3) *Kramlich* Fundamental concepts of temperature, thermodynamic properties, and systems. The first, second, and combined laws. Development of the relations of classical thermodynamics. Introduction to statistical thermodynamics. Prerequisite: M E 323 and graduate standing in mechanical engineering or permission of instructor. Offered: A.

M E 523 Energy and Environment Seminar (1) *Malte* Student discussions of topics in combustion science and technology, alternative fuels, renewable energy, environmental consequences of energy conversion, and design for environment. Also, presentations by outside experts. May be repeated for credit. Credit/no credit only. Offered: AWSp.

M E 524 Combustion (3) *Kramlich* Chemical and physical processes of combustion with applications to design of combustors, fuel selection, and consideration of environmental effects. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: odd years; Sp.

M E 525 Acoustics in Engineering I (3) *Forster* Acoustic wave transmission, reflection, refraction, and diffraction. Review of continuum mechanics and examples from electromechanical systems. Prerequisite: graduate standing in mechanical or electrical engineering, or permission of instructor. Offered: W.

M E 526 Acoustics in Engineering II (3) *Forster* Continuation of 525. Material differs each year, covering such topics as scattering, moving media, ultrasonics, acoustic holography, optoacoustics, transducer design, propagation in an isotropic medium. Prerequisite: M E 525 or permission of instructor. Offered: Sp.

M E 528 Acoustics of Environmental Noise (4) Offered: jointly with CEE 554.

M E 530 Heat Conduction and Radiation (3) *McCormick* Heat conduction advanced fundamentals, emphasizing microscale applications. Radiative transfer for transparent and for absorbing and scattering media, emphasizing combustion, biomedical, and atmospheric/oceanic environmental applications. Forward and inverse problems for both conduction and radiation. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: W.

M E 531 Conductive Heat Transfer (3) *McCormick* Analysis of steady-state and transient heat conduction in single- and multidimensional systems by math-

ematical, graphical, numerical, and analogical methods. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: by request only.

M E 532 Convective Heat Transfer (3) *Kramlich* Introduction to fluid flow and boundary-layer theory as applicable to forced- and natural-convection heat transfer. Condensation and boiling heat transfer. Prerequisite: graduate standing or permission of instructor. Offered: Sp.

M E 533 Fluid Mechanics I (3) *Riley* Basic conservation laws and kinematics of fluid flow constitutive relationships, Newtonian fluids, dimensional analysis, vorticity dynamics, inviscid flows, applications. Offered: A.

M E 534 Fluid Mechanics II (3) *Riley* Review of basic principles, some exact solutions and their interpretation, waves (water waves, sound waves, shock waves), boundary layers, jets and wakes, flow stability, turbulence, applications. Prerequisite: M E 533 or permission of instructor. Offered: W.

M E 535 Computational Techniques in Mechanical Engineering (3) *Emery* Advanced heat transfer studies of interest to mechanical engineers. Subject coverage varies from year to year. Prerequisite: permission of instructor. Offered: Sp.

M E 537 Topics in Fluid Mechanics (3) *Gessner* Selected fluid mechanics relevant to current advances in research and application. Topics selected vary with faculty and student interest, but have included flow stability, special topics in turbulence, and turbulent reacting flows. Offered: by request only.

M E 538 Turbulent Boundary Layer Theory (3) *Gessner* Characteristic features of turbulent boundary layers; development of the turbulent boundary layer equations; equilibrium boundary layers; integral methods of solution based on power law and wall-wake velocity profiles; methods of solution based on higher order constitutive equations; application to diffuser flows and free shear flows; new developments and physical models. Offered: odd years; A.

M E 541 Fatigue of Materials (3) *Ramulu* Macro and micro aspects of fatigue of metals and fatigue mechanisms. Analytical methods for fatigue and life assessment in advanced materials. Offered: W.

M E 543 Fluid Turbulence (3) *Gessner* Methods of characterizing fluid turbulence; probability concepts; spatial and temporal velocity correlations; spectral energy transfer; turbulent diffusion; isotropic turbulence and Kolmogoroff's hypothesis; Taylor's hypothesis; hot-wire measurement techniques. Prerequisite: 3 credits of graduate level fluid mechanics or permission of instructor. Offered: even years; W.

M E 544 Advanced Turbulence Modeling Techniques (3) *Riley* The Reynolds stress transport equations; plane homogeneous shear flow; modeling the pressure-strain, diffusion, and dissipation rate correlation tensors; one and two-equation turbulence models; near-wall turbulence and wall functions; limitations of length scale and eddy viscosity modeling. Prerequisite: 3 credits of turbulence related course work. Offered: even years by request only; Sp.

M E 548 Linear Multivariable Control (3) Single loop feedback control theory; poles, zeros, Nyquist stability, performance, robustness of multivariable systems; multivariable control synthesis: Linear-Quadratic-Gaussian methods, loop transfer recovery, Youla parametrization, H-infinity techniques, parameter optimization design. Prerequisite: E E 584 or M E 575; E E 446 or A A 448 or M E 471 or equivalent. Offered: jointly with A A 548/E E 548; W.

M E 549 Estimation and System Identification (3) Review of system models, model structure, model

parametrization; review of stochastic processes; state estimation: observers, the Kalman-Bucy filter, numerical issues in filter design and implementation; system identification: linear regression, least squares, maximum likelihood, instrumental variable techniques. Prerequisite: E E 505 or AMATH 506 or STAT 506; recommended: 548 or E E 548. Offered: jointly with A A 549/E E 549; Sp.

M E 550 Nonlinear Optimal Control (3) Calculus of variations for dynamical systems, definition of the dynamic optimization problem, constraints and Lagrange multipliers, the Pontryagin Maximum Principle, necessary conditions for optimality, the Hamilton-Jacobi-Bellman equation, singular arc problems, computational techniques for solution of the necessary conditions. Prerequisite: graduate standing; recommended: A A 548 or E E 548. Offered: jointly with A A 550/E E 550; odd years.

M E 551 Elasticity I: Elastostatics (3) *Taya* Elastostatics, including general formulations of 2D and 3D elastostatic problems (stress function method, complex variable method, displacement potential method). Eshelby's method is emphasized and used to solve 2D and 3D problems with special application to composite materials. Offered: W.

M E 552 Elasticity II: Viscoelasticity and Elastodynamics (3) *Taya* Elastodynamics includes wave propagation in linear elastic and linear viscoelastic solids where solids are monolithic materials, composite materials. Viscoelasticity part includes the stress-strain equations in terms of convolution integral, Fourier transform and Laplace transform modes. Simple and fundamental problems are solved by several techniques as demonstration. Offered: even years; Sp.

M E 553 Adhesion Mechanics (3) *Tuttle* Introduction to adhesive systems and test/evaluation techniques. Stress/strain analysis methods used with adhesive joints. Examples of practical applications. Prerequisite: graduate student status or permission of instructor. Offered: even years; Sp.

M E 555 Thermoelasticity (3) *Emery* Basic equations of thermoelasticity for isotropic elastic solids. Analysis of disks, cylinders, spheres, beams, and plates under steady temperature and sudden and slow heating and cooling. Introduction to thermoelastic stability. Prerequisite: M E 551 or permission of instructor. Offered: by request only.

M E 556 Experimental Stress Analysis I (3) *Tuttle* Theory and practice of experimental techniques including strain gages and strain gage-based devices, thermocouples, LVDTs, and transducer design. Lecture and laboratory. Prerequisite: graduate standing or permission of instructor. Offered: A.

M E 557 Experimental Stress Analysis II (3) *Tuttle* Theory and practice of optical mechanics, including interferometric techniques (moiré and holographic), geometric moiré methods, and photoelasticity. Lecture and laboratory. Prerequisite: graduate standing or permission of instructor. Offered: even years; W.

M E 559 Introduction to Fracture Mechanics (3) *Ramulu* Applications of linear fracture mechanics to failure analysis and fracture control based on actual case studies. Fracture toughness and fatigue testing techniques, crack initiation and propagation fatigue life prediction of mechanical components subjected to environmental effects. Offered: W.

M E 560 Advanced Theory of Fracture (3) *Ramulu* Theories of linear fracture mechanics, fracture dynamics, ductile fracture, stable crack growth and mixed mode fracture. Discussion of advanced topics from recent literature. Prerequisite: M E 559 or permission of instructor. Offered: even years; Sp.

M E 562 Introduction to Electronic Composites (3) *Taya* Fundamentals of microstructure-macro-property relation of electronic composites. This course covers applications (computers, laser packages, medical devices, MEMS, avionics), functions (mechanical, thermal, electromagnetic and optical), microstructure-macro-property relations, processing issues, and modeling of electronic composites. Recommended: 450 or MSE 423. Offered: jointly with MSE 562; Sp.

M E 563 Advanced Composites: Design and Manufacturing (3) Manufacturing and processing techniques of metal-, polymer-, and ceramic-matrix composites; design considerations related to manufacturing techniques; non-destructive testing of composite structures. Fiber-matrix interfacial features and interactions. Interfacial thermodynamics applied to selection of fiber-matrix combinations. Prerequisite: M E 450 or MSE 423 or equivalent by permission of instructor. Offered: jointly with MSE 563; Sp.

M E 564 Mechanical Engineering Analysis (3) *Storti* Application of mathematical methods to the description and analysis of systems in mechanical engineering. Analogies in heat transfer, fluid flow, stress distribution, dynamics, and feedback control. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: A.

M E 565 Mechanical Engineering Analysis (3) *Storti* Applications of vectors, matrices, and partial differential equations to mechanical engineering systems, including computational techniques and analogies. Prerequisite: graduate standing in mechanical engineering or permission of instructor. Offered: W.

M E 566 Introduction to Random Processes (3) *Kosály* Probability and random variables. Ensemble averaging, probability density function, auto- and cross-correlation functions. Brownian motion, Poisson process. Ergodicity. Frequency domain analysis, auto- and cross-spectrum, transfer function. Fundamentals of digital spectral analysis. Applications in fluid mechanics, acoustics and vibrations. Offered: by request only; even years; A.

M E 572 Methodologies for Engineering Design: Conceptual Design (3) *Kumar* Methodologies particularly useful in the conceptual or preliminary phase of a design. The design process. Impact of formulating independent functional requirements. Physical and functional coupling in design. Case studies in conceptual design of products and processes. Prerequisite: graduate standing or permission of instructor. Offered: even years; W.

M E 573 Methodologies for Engineering Design: Probabilistic Mechanical Design (3) *Jenkins* Study, implementation of probabilistic methods to design. Loading, geometry, stress, strain/deflection described as random variables, compared to material properties/behavior in terms of random variables. Design, analysis, reliability, risk analyses conducted on common structures with results compared to conventional deterministic approaches. Projects using probabilistic methods to optimize selected component designs. Offered: even years; Sp.

M E 575 Linear Systems Theory (3) Transfer-function and state-space descriptions. Solution of the state equation; state transition matrix. Controllability and observability. Zeros and poles of multivariable systems; the Smith McMillan form. Systems invertibility. Prerequisite: graduate standing or permission of instructor. Offered: A.

M E 579 Fluid Power Systems (3) Design, analysis, and control of fluid power systems. Steady-state analysis of valves, actuators, and transmissions. Dynamic modeling, response, stability, and control analysis via linear element representation and computer simulation. Prerequisite: graduate standing in

mechanical engineering or permission of instructor. Offered: Sp.

M E 581 Digital Control I (3) *Berg* Discrete-time and sampled-data systems, difference equations, and z-transform. Frequency response. Nyquist stability criterion. Gain and phase margins. Limitations of sampling. Sample rate selection. Controller design via discrete-time equivalents to continuous-time controllers, by direct-digital root locus and by loop shaping. Prerequisite: M E 471 or equivalent; recommended: M E 575 or equivalent. A A/E E 581; W.

M E 582 Digital Control II (3) *Berg* Controller design via state feedback and observers. Introduction to discrete-time stochastic processes. Quantization effects. Introduction to parameter identification using noisy measurements. LQR optimal control. Kalman filter design. LQG optimal control. Prerequisite: M E 581 or permission of instructor. Offered: jointly with A A 582/E E 582; Sp.

M E 583 Nonlinear Control Systems (3) *Hannaford* Analysis and synthesis of nonlinear controls systems. Assessment of stability by phase plane and describing function methods, circle and Popov criteria, Lyapunov criteria. construction of Lyapunov functions by method of Krasovskii and Lu're. Introduction to nonlinear control system design. Prerequisite: M E 446, M E 584, or permission of instructor. Offered: jointly with E E 583; odd years; Sp.

M E 584 Combustion in Airbreathing Propulsion (3) *Gessner* Fundamentals of gasdynamics, mixing, and thermodynamics applies to the analysis and design of gas turbine, ramjet and scramjet engine combustors, with treatment of computer simulation. Offered: by request only.

M E 588 Dynamics and Vibrations (3) *Shen* Variational techniques, Hamilton's principle, Lagrange's equations applied to dynamics of particles and rigid bodies. Vibration analysis of multi-degree-of-freedom and continuous systems. Prerequisite: graduate standing in engineering or permission of instructor. Offered: A.

M E 589 Vibrations (3) *Storti* Study of systems with nonlinear damping and restoring forces excited by deterministic or random inputs. Applications in measurement, testing, and design of mechanical systems. Nonlinear systems are emphasized. Prerequisite: M E 588 or permission of instructor. Offered: even years; W.

M E 590 Vibrations (3) *Reinhal* Study of systems with nonlinear damping and restoring forces excited by deterministic or random inputs. Applications in measurement, testing, and design of mechanical systems. Random inputs are emphasized. Prerequisite: M E 588 or permission of instructor. Offered: even years; Sp.

M E 591 Robotics and Control Systems Colloquium (1, max. 3) *Berg* Colloquium on current topics in robotics and control systems analysis and design. Topics presented by invited speakers as well as on-campus speakers. Emphasis on the cross-disciplinary nature of robotics and control systems. Credit/no credit only. Offered: jointly with A A/CHEM E/E E 591; AWSp.

M E 598 Topics in Research (1) Doctoral seminar. Credit/no credit only. Offered: AWSp.

M E 599 Special Projects (1-5, max. 9) Written report required. Prerequisite: permission of department Chairperson. Offered: AWSp.

M E 600 Independent Study or Research (*) Written report required. Offered: AWSp.

M E 700 Master's Thesis (*) Offered: AWSp.

M E 800 Doctoral Dissertation (*) Offered: AWSp.

Mechanical Engineering Industrial Engineering

Courses for Graduates Only

MEIE 516 Advanced Topics in Engineering Statistics (3) *Roberts, Zabinsky* Topics are flexible and tailored to the needs of the particular student group involved. Topics usually considered: regression, correlation, experimental design, Monte Carlo techniques, Markov processes, extreme value theory, time-series analysis. Prerequisite: graduate standing or permission of instructor.

MEIE 599 Special Projects in Industrial Engineering (1-5, max. 9) Prerequisite: permission of industrial engineering program director. Offered: AWSp.

Technical Communication

14 Loew

General Catalog Web page:

www.washington.edu/students/gencat/academic/Tech_Communication.html

Department Web page:

www.uwtc.washington.edu

Technical communicators use their language, visual, and analytical skills, as well as training and research in electronic and other media, to create and enhance communication in scientific and technical environments. The Department of Technical Communication prepares students to design, create, edit, and evaluate technical and scientific discourse. The department also provides course work in the development of online help systems and in the design of general-audience content for delivery by means of advanced communication technologies such as the Web.

The complexities of modern life have greatly increased the number of people who need to communicate about technical and other specialized topics. Scientific journal articles, manuals, proposals, and other genres have become important for a vast array of readers. With the Information Age, gaining and sharing technological understanding and capability has become a constant and crucial human activity. We communicate in more genres, address broader (often global) audiences, and face more complex rhetorical problems than ever before.

To achieve success in their communication activities, progressive organizations are employing sophisticated planning and development methods, including user-centered design and evaluation, content management, and systems-based analyses. In addition, they undertake research projects and apply existing research to their own needs. Contemporary research in technical communication ranges from controlled empirical research on the processing of text, graphics, and multimedia content to observational research on how meaning is created and negotiated in business environments and virtual communities.

The Department of Technical Communication prepares students to assume positions of intellectual leadership in industry, government, and non-profit organizations. Students also specialize in science writing or Web site design. The Technical Japanese program provides a unique opportunity to develop cross-cultural experience and expertise.

Whatever their professional direction, technical communication students learn the newest communication technologies and practices, the most effective information-design strategies, and the research skills appropriate to their interests. They also learn the

enduring theory and principles that enable them to understand the constant changes they will encounter throughout their careers. Finally, their coursework takes place in the context of social and political issues and human needs.

Other major interests of the department are the human-computer interface, hypermedia, communications technology, the rhetoric of technical discourse, international communication, visual communication, international technical communication, publications and communications management, policy analysis of technological systems, and research and testing.

Graduate Programs

Master of Science, Day Program

Technical Communication offers a Master of Science (M.S.) in technical communication. (An evening program is offered through UW Educational Outreach.) A total of 45-48 credits is required for the M.S. degree, which includes 25 credits of required T C graduate courses; 11 credits of approved electives; and 9 to 12 credits of degree-completion credits. To complete their degrees, students choose from one of three options: 9 credits of thesis; 5 credits of internship and 4 credits of a project report related to the internship; or 12 credits of a linked set of courses.

In making recommendations for admission, the faculty consider the following from an applicant's record: (1) undergraduate GPA; (2) undergraduate degree program and work experience; (3) the Graduate Record Examination (GRE) Verbal score; (4) the Test of English as a Foreign Language (TOEFL) score (if applicable); (5) letters of recommendation; and (6) Statement of Goals and Career Objectives. A limited number of prerequisite undergraduate courses may be required.

Research Facilities

The Department of Technical Communication has a well-equipped computer laboratory that effectively supports its courses and research projects. In addition, there are two specialized departmental research laboratories: the Technical Japanese Lab and the Laboratory for Usability Testing and Evaluation (LUTE). An award-winning magazine, *Northwest Science and Technology*, is produced in the department and serves as a kind of laboratory for science-writing students. Finally, technical communication graduate students can utilize significant College of Engineering and University-level research facilities.

Financial Aid

A limited number of teaching and research assistantships and scholarships are available for the financial support of graduate students in technical communication. More information and application forms can be obtained by contacting the department.

Master of Science in Engineering—Technical Japanese Program

The Technical Japanese Master's Program, within the College of Engineering Interengineering Program, offers a range of classes in advanced, practical Japanese for both master's and non-master's track students. Master's track students follow a two-year, 54-credit program which combines graduate work in an engineering or science field with advanced instruction in technical Japanese language. Non-

master's track students may take any combination of technical Japanese oral communication or reading classes. These courses equip students with the skills necessary to read business/technical literature in Japanese and to work effectively with Japanese engineers, scientists, and business people in research and business environments. The complete program includes an internship in Japan in an industrial or research setting.

Master's track students are admitted to the program autumn quarter only, and the application deadline is February 28. Other students may begin any quarter.

To be admitted, master's track applicants must have a bachelor's degree in engineering or science, a minimum undergraduate GPA of 3.00, three years of college-level Japanese or equivalent training, satisfactory scores on the GRE, and satisfactory scores on the Japanese Proficiency Test (administered by the Technical Japanese Program).

Applicants with a bachelor's degree in areas other than engineering or science can also earn a master's degree through the Technical Japanese Master's Program by specializing in technical communication as their inter-engineering track.

Faculty

Chair

Judith A. Ramey

Professors

Bereano, Philip L. * 1975; JD, 1965, Columbia University, MRP, 1971, Cornell University; technology assessment, biotech policies, policy and technology, social values, citizen participation.

Coney, Mary B. * 1976; PhD, 1973, University of Washington; writing style and theories of technical communication, rhetoric, reader response theory.

Farkas, David K. * 1983; PhD, 1976, University of Minnesota; information design, Web design, computer documentation.

Furness, Thomas A. * 1989, (Adjunct); PhD, 1981, University of Southampton (UK); display systems engineering, human factors, computer graphics, virtual reality.

Haselkorn, Mark P. * 1985; PhD, 1977, University of Michigan; strategic management of information and communication systems, human/machine interaction.

Ramey, Judith A. * 1983; PhD, 1983, University of Texas (Austin); computer-assisted communication user-centered design, usability testing.

Spyridakis, Jan * 1982; PhD, 1986, University of Washington; comprehension and usability, document design, Web design, research methods.

Warnick, Barbara P. * 1980, (Adjunct); PhD, 1977, University of Michigan; rhetorical theory and criticism.

White, Myron 1947, (Emeritus); PhD, 1958, University of Washington; technical editing, publications management, bibliography for document design.

Winn, William David * 1985, (Adjunct); PhD, 1972, Indiana University; educational technology, instructional theory, instructional design, visual information processing.

Associate Professors

Brainard, Suzanne Gage 1987, (Affiliate); PhD, 1989, Ohio State University; educational evaluation,

methodology and gender and ethnic issues in science and engineering.

Ceccarelli, Leah M. * 1996, (Adjunct); MA, 1992, PhD, 1995, Northwestern University; rhetoric of science, rhetorical criticism.

Kolko, Beth E. * 2000; MA, 1991, PhD, 1994, University of Texas (Austin); computer-mediated communication; virtual environments.

McClintock, Marshall 1997, (Affiliate); MA, 1977, PhD, 1980, State University of New York (Binghamton), MA, 1990, George Mason University; philosophy of science, human factors.

Tsutsui, Michio * 1990; PhD, 1984, University of Illinois; computer-aided instruction, international communication, Japanese linguistics, technical Japanese.

Williams, Thomas R. * 1976; MCP, 1981, PhD, 1988, University of Washington; text and visual information processing, document design, interactive multimedia.

Assistant Professors

Illman, Deborah L. 1982; PhD, 1981, Universidad Estadual de Campinas (Brazil); science/engineering news reporting, public understanding of science and technology.

Sauer, Geoffrey F. * 2000; MA, 1992, PhD, 1998, Carnegie Mellon University; new media within the context of the history of publishing.

Senior Lecturer

Plumb, Carolyn Sue * 1986; PhD, 1991, University of Washington; cognitive dimensions of reading, writing, and the human/computer interface.

Lecturer

Kato, Masashi 1988; MA, 1980, University of Washington; technology-enhanced instruction, distance learning, research methods, international communication.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

T C 400 Scientific and Technical Communication (3) *Haselkorn, Kolko* Principles and practices of writing to communicate scientific and technical information to a variety of readers, including the expert, general scientific and technical reader, manager, and general public. Required of technical communication majors. Prerequisite: T C 231. Offered: ASP.

T C 401 Style in Scientific and Technical Writing (3) *Coney, Spyridakis* Grammatical structures and stylistic strategies within specific professional contexts. Achieving clarity and conciseness through word choice and placement, using a variety of sentence structures for appropriate emphasis, handling details, establishing effective tone. Required of technical communication majors. Offered: ASP.

T C 402 Scientific and Technical Editing (3) *Farkas, Kolko* Editorial responsibilities and practice in the communication of scientific and technical information; the editor's role both as editor and as supervisor of publication groups. Required of technical communication majors. Prerequisite: T C 401. Offered: AW.

T C 403 Publication Project Management (3) *Plumb* Responsibilities and practice in managing publication projects in scientific and technical organizations. Project design, coordination, production, and evaluation, including planning, organizing, staffing, and directing. Required of technical communication majors. Prerequisite: T C 402. Offered: WSp.

T C 406 Understanding Research in Technical Communication (3) *Spyridakis* Provides a basis for integrating knowledge acquired in other technical communication courses. Students examine the research literature of various disciplines that impact technical writing. Structured around theoretical and empirical literature as it relates to different textual issues in technical writing. Offered: W.

T C 407 Computer Documentation (3) *Farkas, Ramey* Concepts and skills for preparing online help systems, performance-support systems, print manuals, and other forms of computer documentation. Analysis of users, their tasks, and the product's interface. Usability testing of documentation. Relationship between documentation process and product development cycles. Recommended: T C 310. Offered: ASP.

T C 411 Visual Media in Technical Communication (5) *I&S/VLPA Williams* Use of visuals in print and electronic communication. Topics include vision, perception, comparison of text and visual media principles for the selection and use of visual media, information graphics icons, page and screen design typography, and color. Offered: ASP.

T C 412 Print Production (3) *Sauer, Williams* Introduction to print production for technical communicators. Topics include digital pre-press, printing, binding, and finishing. Prerequisite: T C 411. Offered: W.

T C 415 Production Editing (4) *Williams* The editorial role in the preparation of text and visual materials for production. The editor's responsibilities and prerogatives as they relate to those of other professionals in the production phase of the publications field.

T C 420 Introduction to Technology as a Social and Political Phenomenon (5) *I&S Bereano* Introductory survey presenting some of the issues pertaining to technology and social change, technology and values. Emphasis on the social, political, and economic aspects of current problems that have important technological components. Prior technical background not required; readings from diverse sources. Offered: A.

T C 425 Technology Assessment (5) *I&S Bereano* In-depth analysis of the concept, practice, and methods of technology assessment (policy analysis that concentrates on social consequences of technological development): social, political, economic, and environmental impacts of new technologies; options for channeling these developments; and relevant decision-making institutions and processes. Offered: W.

T C 428 Policy Dimensions of Genetic Engineering (3) *I&S Bereano* Explores technological discourse in public policy formation and decision-making regarding genetic engineering, analyzing a variety of media and formats to explore the contending ideological paradigms, imagery, and argumentation used by the major policy actors. No prerequisite, although prior work in biology, communication, or policy sciences is useful. Offered: Sp.

T C 435 Content Management (3) Principles and practices of building, managing and using content management systems in the technical communication workplace. Examines both the intricacies of collaborative workflow technologies and the organizational contexts that surround them.

T C 436 Design and Authoring of CAI (3) *Winn* Introduction to the design of computer-assisted instructional programs. Types of learning, characteristics of effective instruction. Students design and produce CAI programs using authoring systems for computers. Offered: jointly with EDC&I 436; A.

T C 437 Interactive Multimedia (3) *I&S/VLPA Farkas* Study of concepts and design principles with an emphasis on communicating technical and workplace information. Includes hypertext theory, interface design principles for content computing, and societal issues. Implementation of designs is encouraged but not required. Prerequisite: T C 411. Offered: W.

T C 438 Advanced Interactive Multimedia (3) The building of advanced multimedia systems to communicate technical and workplace information. Topics include effective information hierarchies, user interface elements for complex navigation, the special challenges of redesigning existing multimedia, and techniques for collaborative multimedia development. Implementation of designs suitable for a portfolio is required. Prerequisite: T C 437.

T C 440 Science and Engineering News Writing (3) *Illman* Explores the science news publishing process, from researching topics and interviewing sources to the structure of news articles and production. Writing assignments address the press release, news brief, and news articles. Offered: A.

T C 455 User Interface Design (3) *Furness* Design oriented to cover fundamentals of user interface design; models on human computer interaction, software psychology, input devices, usability, cognitive and perceptual aspects of human-computer interaction, advanced interfaces, and research methodologies are discussed. Offered: jointly with IND E 455; A.

T C 461 Reading in Technical Japanese I (3) *VLPA Kato* Students review and strengthen their basic knowledge of grammar, vocabulary, and kanji and apply this in reading authentic materials on technology related topics. Skills to analyze sentence structures for accurate interpretation are taught. Prerequisite: JAPAN 423. Offered: A.

T C 462 Reading in Technical Japanese II (3) *VLPA Kato* Students improve skills for analyzing complex sentence structures, and learn skills (such as predictions) for more effective reading. Additional grammar, vocabulary, and kanji necessary for reading technology-related materials are introduced. Prerequisite: T C 461. Offered: W.

T C 463 Reading in Technical Japanese III (3) *VLPA Kato* Students further improve skills introduced in previous courses. Covers the skills for understanding inter-sentential and paragraph structure. Additional grammar, vocabulary, and kanji necessary for reading technology-related materials are introduced. Prerequisite: T C 462. Offered: Sp.

T C 471 Oral Communication in Japanese in Technical and Business Settings I (3) *VLPA Kato* Students review and strengthen their knowledge of grammar, vocabulary and apply this to basic technical and business communication situations. Covers the cultural concepts underlying these situations. Lab work is required for conversation practice and listening comprehension. Prerequisite: JAPAN 423. Offered: A.

T C 472 Oral Communication in Japanese in Technical and Business Settings II (3) *VLPA Kato* Students learn the functional and situational skills necessary to communicate in technical and business settings. Covers the cultural concepts underlying these situations. Lab work is required for conversation practice and listening comprehension. Prerequisite: T C 471. Offered: W.

T C 473 Oral Communication in Japanese in Technical and Business Settings III (3) VLP *Kato* Students learn the functional and situational skills necessary to communicate in more complex technical and business settings. Covers the cultural concepts underlying these situations. Lab work is required for conversation practice and listening comprehension. Prerequisite: T C 472. Offered: Sp.

T C 493 Senior Study (5) Integration of knowledge and skills acquired during major program into one paper or project. Offered: AWSpS.

T C 495 Professional Practice (3-10, max. 10) *Williams* Supervised internship in a publications organization approved by the faculty adviser. A minimum of one internship is required of students majoring in technical communication. Credit/no credit only. Offered: AWSpS.

T C 496 Directed Research in Technical Communication (1-3, max. 10) Students, working in teams under the supervision of individual faculty members, review relevant literature, pose research questions, design and conduct studies, and present the results in papers prepared either for submission to a professional journal or for presentation at a professional conference. Credit/no credit only. Offered: AWSpS.

T C 497 Study Abroad: Technical Communication (3-5, max. 15) Upper-division technical communication courses, for which there are no direct University of Washington equivalents, taken through the Department of Technical Communication's Study Abroad Program. Offered: S.

T C 498 Special Topics (1-5, max. 10) Special topics in technical communication to be offered occasionally by permanent or visiting faculty members.

T C 499 Special Projects (1-5, max. 10) Individual undergraduate projects in technical communication. Offered: AWSpS.

Courses for Graduates Only

T C 501 Theoretical Dimensions of Technical Communication (4) *Coney, Sauer* Theories and research drawn from a variety of fields that inform such topics as the historical and social context of technical communication, the aims of technical discourse, readability, invention and audience, audience analysis, technical style, and graphics. Prerequisite: admission to an engineering master's program or permission of instructor. Offered: A.

T C 502 Empirical Traditions in Technical Communication (4) *Williams* Introduction to empirical traditions that inform research and practice in field of technical communication. Topics include epistemological assumptions underlying empirical research, empirical methods, and survey of results of empirical research on effects of text and visual media on comprehension, recall, and performance. Prerequisite: graduate standing or permission of instructor. Offered: W.

T C 505 Computer-Assisted Communication (4) *Kolko* Explores computer-assisted communication from three perspectives: (1) cultural roles of communication technologies; (2) relationships between communication and information including information technologies in the workplace, academe, and other settings; and (3) application to design including models for audience analysis, task analysis, and cognitive systems engineering. Prerequisite: graduate standing or permission of instructor. Offered: A.

T C 509 Writing the Scientific Article (3) *Haselkorn, Illman* Examination of principles and practice of writing research manuscripts, articles, abstracts, and oral presentations. Detailed examination of scientific

publication process includes issues of style, organization, and ethics. Students draft, critique, and revise their own manuscripts and learn to review the manuscripts of others. Offered: Sp.

T C 510 Information Design (4) *Farkas* Examination of the design principles and procedures underlying the creation of both print and electronic information presentations. Topics include: print vs. electronic media, designing for the page and screen, information topologies, and hypermedia. Seminar includes a design project. Prerequisite: T C 501 or permission of instructor. Offered: Sp.

T C 511 Visual Media in Technical Communication (5) *Williams* Use of visuals in print and electronic media. Topics include vision, attention and perception, semiotics, depiction, information graphics, icons, typography, and principles of page and screen design.

T C 512 International Technical Communication (4) *Spyridakis* Examines theory, research, and practice in the internationalization and localization of paper and electronic documents. Topics include cultural models and schemata, contrastive rhetoric, controlled languages, translation, visuals, and usability testing. Prerequisite: graduate standing or permission of instructor. Offered: W.

T C 516 Research Theory and Application in Technical Communication (4) *Spyridakis* Introduction to research methods in technical communication. Students examine the relationship between theory and research, hypothesis testing, experimental designs, modes of observation, sampling, validity, and data analysis and interpretation. Prerequisite: introductory statistics course. Offered: Sp.

T C 517 Usability Testing (4) *Ramey* Discusses the human-computer interface (HCI) as the communicative aspect of a computer system. Analyzes usability issues in HCI design, explores design-phase methods of predictability, and introduces evaluative methods of usability testing. Prerequisite: substantial experience with computers and graduate standing, or permission of instructor. Offered: W.

T C 520 Technical Communication Systems (4) *Haselkorn* Emphasizes the role and function of communication as a key to understanding organizational frameworks and managerial practices. Traditional and innovative approaches to viewing and managing technical communication. Roles, responsibilities, impact of technology. Offered: Sp.

T C 521 Seminar: Current Issues in Technical Communication (1-2, max. 3) Presentations on current issues in technical communication. Credit/no credit only. Prerequisite: T C graduate student status or permission of instructor. Offered: AW.

T C 525 Assessing Communications Technologies (4) *Bereano* Analysis of development, deployment of new communication technologies; emphasis on public policy issues they present (e.g., videotelephone, mobile telephoning, hypermedia, electronic message transfer, virtual reality). Impacts explored include access, privacy, civil liberties; power of elites; changes in social organization. Prerequisite: T C 425 or other background in policy analysis, technology, and society. Offered: Sp.

T C 540 SciTech Writing Practicum I (4) *Illman* An advanced experience in science and engineering news writing for graduate students and upper division undergraduates. Participants serve as science writing interns on the staff of Northwest Science & Technology magazine and develop a portfolio of professional quality science/technology news articles which may be eligible for publication in the maga-

zine. Prerequisite: T C 498 or permission of instructor. Offered: W.

T C 541 SciTech Writing Practicum II (4) *Illman* Advanced science writing, focusing on the narrative feature and other forms of creative non-fiction used to present technical content to general audiences. Participants develop a portfolio of professional quality science/technology news articles which may be eligible for publication in Northwest Science and Technology magazine. Prerequisite: T C 540 or permission of instructor. Offered: Sp.

T C 561 Advanced Japanese for Technical and Business Professions 1 (3) *Tsutsui* Focuses on reading skills (e.g., sight reading, vocabulary, grasping main ideas) and familiarizes students with Japanese news media sites and Web reading tools. Students also develop the oral communication skills necessary for giving technical and business reports and the writing skills for business emails. Prerequisite: T C 463 and T C 473. Offered: A.

T C 562 Advanced Japanese for Technical and Business Professions 2 (3) *Tsutsui* Focuses on developing reading speed. Students read more extensively, expand their technical/business vocabulary, and further improve skills for grasping main ideas quickly. Students also improve oral skills for report-giving and discussion and writing skills for business emails and reports. Prerequisite: either T C 561 or T C 463; and T C 473 and TC 601. Offered: W.

T C 563 Advanced Japanese for Technical and Business Professions 3 (3) *Tsutsui* Integrates the reading, oral, and writing skills acquired through the first-year and second-year technical/business Japanese sequences. Students work on research projects, give formal presentations, and submit project reports. Substantial individual readings are involved as well as individual conferences with the instructor on readings and report drafts. Prerequisite: T C 562. Offered: Sp.

T C 596 Directed Research in Technical Communication (1-3, max. 10) Students, working in teams under the supervision of individual faculty members, review relevant literature, pose research questions, design and conduct studies, and present the results in papers prepared either for submission to a professional journal or for presentation at a professional conference. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

T C 597 Approaches to Teaching Technical Communication (1-2, max. 2) *Plumb* Readings in pedagogical theory of technical communication and discussion of practical applications. Credit/no credit only. Prerequisite: concurrent teaching appointment or permission of instructor. Offered: AWSpS.

T C 598 Special Topics (1-5, max. 6) Prerequisite: permission of instructor.

T C 599 Special Projects (1-5, max. 5) Written report required. Prerequisite: permission of graduate adviser or committee chair. Offered: AWSpS.

T C 600 Independent Study or Research (*) Written report required. Prerequisite: permission of committee chair. Offered: AWSpS.

T C 601 Internship (2-10, max. 10) Written report required. Prerequisite: permission of committee chair. Offered: AWSpS.

T C 700 Master's Thesis (*) Prerequisite: permission of thesis adviser. Offered: AWSpS.

College of Forest Resources

Dean

B. Bruce Bare
107 Anderson

Associate Dean for Infrastructure

Robert Edmonds
264 Bloedel

General Catalog Web page:

www.washington.edu/students/gencat/academic/College_Forest_Res.html

College Web page: www.cfr.washington.edu

Founded in 1907, when professional forestry education was in its infancy, the College holds a position of national and international leadership in both instruction and research. Its location in one of the world's largest forest regions provides unique opportunities for field classes and research, experience in the management of forested lands for multiple uses, exposure to wood-based industries, and awareness of resource-use issues. Enrolled in the College are approximately 300 undergraduate and 180 graduate students, taught by more than 50 faculty members. Thus, students enjoy small classes and close association with faculty, as well as the diversity and superior facilities of a large research university.

The College of Forest Resources is dedicated to generating and disseminating knowledge for the stewardship of natural and managed environments and the sustainable use of their products and services. Its vision is to be internationally recognized as the source for solutions to environmental and natural resource issues.

The College's goals are (1) to provide students with a premier educational and training experience in integrated natural resource management, utilization, environmental sciences, and stewardship; and (2) in a timely and efficient manner, to develop and deliver the following to the public and the professions throughout the state, region, and world:

- educational information related to the College's mission, and
- findings from the College's applied and basic research programs.

College Facilities

The College occupies three central campus buildings: Alfred H. Anderson Hall, the Hugo Winkenwerder Forest Sciences Laboratory, and Julius H. Bloedel Hall. In addition, the Center for Urban Horticulture is located in an east campus building complex. Overall, the College has excellent areas and equipment on the Seattle campus for scientific laboratories, classrooms, seminar rooms, special collections, and administrative offices.

The Forest Resources Library, a separate branch of the University of Washington Libraries, contains more than 50,000 books, reports, conference proceedings, and bound journal volumes, and subscribes to more than 1,100 active journals. Disciplines covered by the collection support the programs of the College, including forestry and silviculture, forest products,

forest engineering, soils, wildlife, wildland conservation, paper sciences, and urban forestry. The Forest Resources Library provides a gateway to the larger University Libraries collection of more than five-million volumes through the systemwide electronic catalog, and provides access to numerous electronic and print indices as well as Internet resources. The library is located in Bloedel Hall.

The Center for Urban Horticulture also maintains a library that serves students, faculty, landscape professionals, and the public. The Center's herbarium supports forest resources students' fieldwork in urban horticulture, restoration ecology, and dendrology. Containing representative plant material from all parts of the United States, the collection includes dried, mounted specimens of shrubs, hardwood trees, and conifers. Another herbarium, complete in plants native to the Pacific Northwest and maintained by the Department of Botany, is available for use by forest resources students.

The laboratory facilities of the College represent an extensive array of modern equipment for research. The many available research tools include optical equipment, electronic instrumentation for a wide variety of uses, gas chromatographs, spectrophotometers, and physical-test equipment. Specific laboratories are designed to study soil chemistry and soil physics, hydrology, polymer chemistry, tree physiology, genetics, wood and extractives chemistry, physics of fibrous composites, applied mechanics, wood process technology, silviculture, ecology, paleoecology, pathology, entomology, wildlife, horticultural physiology, and horticultural plant materials.

The College computing facilities include microcomputer systems dedicated to specific research areas, a microcomputer student laboratory, a geographical information systems (GIS) laboratory, and several servers offering access to the Internet and shared printers.

Office of Student Services

Director, Student Services
Michelle M. Trudeau
115 Anderson
cfradv@u.washington.edu

The Office of Student Services in the College of Forest Resources assists prospective undergraduate and graduate students with admission to the College and advises current students, including interpretation of College and University requirements and assistance in course registration to meet graduation requirements. Faculty advisers are available to assist students in choosing elective courses to help them build an appropriate academic background for their chosen professional specialty.

The Office of Student Services keeps job listings and employer resources to help students obtain summer employment and internships while in school, and permanent employment upon graduation. The office also sponsors a career fair every year. Summer work may be available through federal and state agencies and in the numerous private companies associated with the wood-using industry of the region. Although field experience is not required for graduation, students are strongly urged to seek summer employment or field experience relevant to their major and career goals.

The College has a strong scholarship and financial assistance program. Through the generous donations of alumni and friends, the College has established scholarships, fellowships, and loan programs to assist students in paying for their tuition. The Washington Pulp and Paper Foundation provides scholarships for students enrolled in the Paper Science and Engineering curriculum. The foundation is supported by companies of the pulp and paper industry and by supplier companies. Information

about paper science and engineering scholarships may be obtained from Professor William McKean, 318 Bloedel. Information on all College scholarships is available through the Office of Student Services, 115 Anderson.

Students seeking information about financial aid offered outside the College should contact the Office of Student Financial Aid, 105 Schmitz.

Institute of Forest Resources

The overall research program of the College is administered by the Institute of Forest Resources. Because of the size and complexity of this program, the institute assumes a broad scope of responsibility and provides vital support to the College administration, faculty, staff, and students. Major functions include administering all research projects funded by federal, state, and private agencies, monitoring the McIntire-Stennis research program, ensuring College compliance with federal reporting requirements, and producing College publications and special research reports.

Institute staff coordinate and facilitate the submission of research proposals for the faculty with the University administration and numerous funding agencies. Students earn research and thesis credit toward advanced degrees by working on major forest resources problems supported by grants or contracts.

Areas of current and future research cover a broad array of topics including forest policy analysis, stand management, streamside and riparian zone management, forest ecosystem analysis, international trade in forest products, forest-products marketing, forest biotechnology, wildlife science, forest soils, urban horticulture, forest engineering, hydrology, and paper science and engineering. Research projects include studies by individual faculty, as well as interdisciplinary programs, which combine the interests of College faculty with those from other academic units of the University and other institutions.

The College also collaborates with Cooperative Extension of Washington State University to undertake and promote continuing education for citizens of the state, particularly in the nonindustrial forestry area.

The Institute Publications Office provides a wide range of services in producing College research publications: technical editing, desktop-publishing systems, format and layout design, computer graphics, printing/publishing coordination, and distribution. College publications are distributed to national and international institutions and libraries, as well as to forestry professionals, to organizations in the private sector, and to the general public.

Field Research Areas and Facilities

The College field facilities include two major forested areas covering more than 4,000 acres, an arboretum, a reserve, and several cooperative research centers and stations. These lands offer a wide variety of terrestrial and aquatic characteristics favorable to a full range of scientific investigations. They also provide a general natural-science laboratory for the many disciplines in the College specifically related to, or concerned with, the research and teaching of natural resources behavioral patterns and management.

The Charles Lathrop Pack Experimental Forest of approximately 4,200 acres is located 65 miles south of the University, near Eatonville. This forested property is the focal point for on-the-ground academic work in forest management, resource science, and forest engineering, both at the undergraduate and graduate levels. Broad forest and soil diversity has led to extensive biological, management, and engi-

neering research, much of which may be characterized as a pioneering effort. A full-time resident staff manages this facility, harmonizing its public-education objectives with academic and research objectives. Rustic but comfortable facilities which provide housing and support to academic and research programs are also used extensively for conferences both within and outside the University.

The Olympic Natural Resources Center (ONRC) is a 19,000-square-foot research and education facility located on the west side of the Olympic Peninsula. The mission of the Center is to conduct research and education on natural-resources management practices which integrate ecological and economic values. Innovative management methods that integrate environmental and economic interests into pragmatic management of forest and ocean resources are demonstrated. A forest management program as well as a marine program are in place to study the relationship between the terrestrial and marine environment.

The Lee Memorial Forest, approximately 160 acres, is located about 22 miles northeast of the University, near Maltby. This forested property provides valuable academic and research opportunities near the campus. Characterized by forest types and soils common to western Washington lowlands, Lee Forest is used extensively for part-day trips and for long-term research and demonstration projects especially related to changing land uses.

The Allan H. Thompson Research Center and the Joe E. Monahan Findley Lake Reserve and Research Area in the Cedar River watershed are utilized by the College in cooperation with Seattle Public Utilities for studies in forest physiology and mineral cycling in the forest ecosystem.

The Center for Urban Horticulture has offices, laboratories, public-education resources, and field sites for teaching and experimentation along the shore of Union Bay. Its 10-acre Union Bay Gardens, for research, teaching, and display, currently emphasize unusual ornamental and native woody landscape plants. The 60-acre Union Bay Natural Area, a former dumpsite now a naturalized habitat, is used by classes in four different colleges and the public to study principles and practices of restoration ecology. The Douglas Research Conservatory is a modern plant-growing facility with greenhouses, growth chambers, nursery, and classrooms. The Otis Douglas Hyde Hortorium is an herbarium dedicated to plants of urban horticultural significance. The Elisabeth C. Miller Horticultural Library is the Northwest's foremost public horticultural library, with books, journals, and other materials available to the gardening public, students, and professional horticulturists. The Center also conducts courses, lectures, and special events for the public and professionals as part of the College's Continuing and Public Education program. Cooperative programs are in place with Washington State University/King County Cooperative Extension, whose horticulture program is housed at the Center.

The Center's largest facility is the Washington Park Arboretum, a 230-acre collection of trees and shrubs growing in a naturalistic setting on the south shore of Lake Washington. Managed in cooperation with the City of Seattle Department of Parks and Recreation and the Arboretum Foundation, the arboretum contains some 5,200 different kinds of woody plants that are available for research and academic study, making it the third most diverse arboretum in the United States. Displays and programs educate students and visitors about woody plants' diversity, natural ecology, and urban landscape use, as well as conserving endangered natural and cultivated plants. Classes in botany, dendrology, horticulture, wildlife, and landscape architecture make use of the collections, while the grounds are used for studies in soil science, ecology, and various research projects, including many

independent student projects. The arboretum, established in 1934, also serves as an important public-service area to the University, offering numerous formal and informal classes for the general public and, in addition, serving the community as a public park and open space.

Summer Opportunities

During summer quarter, there are many internships and independent study courses in which a student may get credit for summer work.

In late summer, there is a four-week intensive program that combines work and study in Pacific Northwest forests with the study of English as an international language for forestry. The College and the Department of English As A Second Language schedule the program.

For more information, contact Aaron Bidelsbach, UW Educational Outreach, 206-543-2300.

Ecosystem Sciences Division

Chair

David Manuwal
104 Winkenwerder

Courses included in the Ecosystem Sciences Division cover basic and applied subject matters in forest biology, wildlife science, and urban horticulture. Urban horticulture is concerned with the selection, management, and role of plants and ecosystems in urban environments. Subjects covered include plant and animal ecology, wildlife biology and conservation, dendrology and autecology, soils, ecosystem analysis, environmental horticulture, public horticulture, and urban forestry.

Graduate programs leading to the Master of Science and Doctor of Philosophy degrees include ecosystem analysis (ecology, tree physiology and genetics, and soils and mineral cycling), wildlife science, and urban horticulture. A Master of Forest Resources degree in urban horticulture is also available.

Management and Engineering Division

Chair

Richard R. Gustafson
332 Bloedel

Courses for which the Management and Engineering Division is responsible deal with all the facets of the forest resources arena, from management of forests to the production and recycling of paper products. Multiple uses of forests including timber, water, wildlife habitat, and recreation are embraced in the forest management curriculum. Courses in the forest and ecological engineering curriculum emphasize the scientific and engineering design principles that enable graduates to find technical solutions to problems facing forest-related enterprises and rural communities. Paper science and engineering courses provide students with the skills to work as technical and management professionals in the paper and allied industries.

Graduate programs leading to the Master of Science and Doctor of Philosophy degrees are offered by this division and include social sciences, forest economics, forest engineering/hydrology, forest products marketing, silviculture and forest protection, quantitative resources management, and paper sciences and engineering. A practice-oriented degree leading to

the Master of Forest Resources in the area of silviculture is also available.

Graduate Programs

Graduate Program Coordinator
115 Anderson, Box 352100
206-543-7081
cfradv@u.washington.edu

Graduate programs in forest resources are designed to accommodate a wide range of education and career objectives. A student may concentrate on development of advanced professional skills and knowledge or on exploration of sciences basic to forest resources.

Graduate programs offered in forest resources lead to the degrees of Master of Forest Resources, Master of Science, and Doctor of Philosophy. Graduate students may center their graduate study in one of the special fields of study within the College divisions.

Master of Forest Resources

The Master of Forest Resources degree is a professional degree offered for students who wish to acquire a greater competence in a specific subject area of forest resources. This is a non-thesis option open to professionals who are returning to study and to obtain expertise in areas such as silviculture and urban horticulture. Interested persons should contact the graduate program coordinator to determine eligibility for this degree program.

Master of Science

The Master of Science degree is a learned degree, often precursory to the Doctor of Philosophy degree. Some areas of study allow non-thesis work while most areas of study require the completion of a thesis. The non-thesis program requires at least 6 credits of research; the thesis program requires a minimum of 9 credits of research. A foreign language is not required. Students must complete a set of core courses prescribed for the major area of study.

Doctor of Philosophy

The Doctor of Philosophy degree may be preceded by education in either forest resources or another discipline. The program comprises an appropriate selection of core courses in forest resources and in the related natural and social sciences. The program requires passage of the General Examination in forest resources; research, analysis, and interpretation; and completion of a dissertation. A minimum of two years of residence at the UW also is required. The time necessary to complete the degree requirements depends upon the thoroughness and applicability of prior course work. Reading proficiency in one foreign language may be required by the supervisory committee when the language is essential to the student's program of study.

Mid-Career Education

The College has established the National Resources Institute, a certificate program in natural resources to provide mid-career education for professionals. Participants in the mid-career program take courses to prepare themselves for new or broader responsibilities in their current career. In this certificate program, courses can be taught in a more flexible time arrangement to meet the specific career and scheduling needs of participants. Additionally, a variety of programs are offered to enhance professional education in natural resources. Interested natural resources and forest products professionals should contact the College of Forest Resources Continuing Education Office, 206-543-0867, fax 206-685-6705.

Graduate Areas

Graduate education is offered through the Division of Management and Engineering and the Division of Ecosystem Science, Horticulture and Conservation. Major areas of study and emphasis include paper science and engineering (wood chemistry, polymer and fiber science); forest engineering/hydrology; forest products marketing; forest economics; forest ecosystem analysis (forest ecosystems, forest ecology, forest genetics, biotechnology, streamside/riparian management, tree physiology, and forest soils); quantitative resources management (biometry, quantitative management, aerial photogrammetry/remote sensing); silviculture and forest protection (silviculture, forest entomology, fire management, forest pathology); social sciences (forest land use planning, forest policy and law, forest sociology and leisure studies); wildlife science; and urban horticulture (environmental horticulture, horticultural taxonomy, horticultural physiology, wetlands management).

In all areas of study, the College maintains a close working relationship with faculties of other colleges and schools throughout the University, including service on graduate committees. Faculty advisers assist graduate students in determining those courses in other departments on campus which will lend to students' intended areas of expertise.

Admission Qualifications, Background

A student who intends to work toward an advanced degree must apply for admission to the Graduate School and must meet the requirements set forth by the Graduate School and by the College of Forest Resources.

Basic requirements for admission to the Graduate School are a baccalaureate degree from an institution of recognized standing, a minimum GPA of 3.00 in the junior and senior years of college work, approval of the Dean of the Graduate School, and approval of the faculty of the College. An applicant may obtain a graduate admission form and supplemental admission and reference forms from the College of Forest Resources Office of Student Services, 115 Anderson, 206-543-7081, cfradv@u.washington.edu.

The Graduate Record Examination (GRE) general test is required by the College, and test scores must be submitted to the College by the applicant. Students interested in forest-products marketing may take the Graduate Management Admission Test (GMAT) or the GRE.

In addition, international students are required to take the Test of English as a Foreign Language (TOEFL). International students hoping to obtain teaching assistantships must also complete the Test of Spoken English (TSE). Please refer to the Graduate School section for minimum scores and exceptions.

Upon enrollment, the student is assigned a graduate program committee that is responsible for guidance in the early stages of the graduate program, to be followed by more formal committees as the student's program develops.

Applicants for the College are considered quarterly within the enrollment limitations for the College and the available faculty and workload limitations within the specific program area of study selected. Students with both undergraduate forestry degrees and other related fields are considered, although a prior forestry degree is normally expected of applicants for the professional Master of Forest Resources degree in silviculture.

Financial Aid

The College has available a limited number of appointments for teaching and research assistantships. Teaching and research responsibilities allow time to pursue a full academic load. Students may contact faculty about research assistantships or the Office of Student Services about teaching assistantships.

Fellowships and scholarships without teaching or research obligations are also available. Requests for financial aid must be submitted by February 1 for priority consideration for the following academic year. Applications are in the College's admissions packet which may be requested from the Office of Student Services.

Teaching and Research Centers

Center for International Trade in Forest Products

The Center for International Trade in Forest Products (CINTRAFOR) was established in 1984 to respond to opportunities and problems relating to the export and import of wood products. Through programs of research, education, and outreach, CINTRAFOR works to improve knowledge of export trade and to train professionals competent in the analysis and interpretation of trade problems, issues, and policies. The Center serves as a focal point for dissemination of information on world trade in forest products by means of seminars, conferences, workshops, and publications.

CINTRAFOR activities involve the cooperative effort of the forest-products industry, state and federal organizations, and other organizations at the University such as the School of Business Administration and the Northwest Policy Center. The research undertaken by CINTRAFOR includes country-market analyses; a global competitive-trade model; new product and market opportunities; and studies of the linkage between forest-products trade and environmental impacts, regional socioeconomic stability, and policy impact analyses.

Students interested in participating in specific research activities sponsored by CINTRAFOR may enroll for study in graduate programs in one of the College's two academic divisions or in programs offered by other academic divisions on campus.

Center for Streamside Studies

Director

Susan M. Bolton
244 Bloedel

The Center for Streamside Studies (CSS) was established in 1987 as a joint effort of the College of Forest Resources, the College of Ocean and Fishery Sciences, and the Center for Quantitative Science in Forestry, Fisheries, and Wildlife. CSS provides information for the resolution of management issues related to the production and protection of forest, fish, wildlife, and water resources associated with the streams and rivers in the Pacific Northwest.

The Center conducts research activities related to the understanding of ecological and physical processes and their relation to governmental regulations. Projects are solution-oriented, centering around biological, physical, and social aspects of management issues. Cooperative projects are undertaken with state and federal agencies, tribes, private industry, and national and international research institutions, and involve faculty and students of the College of

Forest Resources, the College of Ocean and Fishery Sciences, the College of Engineering, and the College of Arts and Sciences.

To provide interdisciplinary training necessary to deal with the management of interacting resources, CSS conducts symposia, workshops, conferences, and seminar series as forums for resource-conflict discussion and resolution. Students interested in participating in specific research activities sponsored by CSS may enroll for study in graduate programs in one of the College of Forest Resources' two academic divisions or in programs offered by other academic units on campus.

Olympic Natural Resources Center

Director

John M. Calhoun

The mission of the Olympic Natural Resources Center (ONRC) is to conduct research and education on natural-resource-management practices that integrate ecological and economic values. Created by the Washington State Legislature in 1989, the Center conducts biological, physical, economic, and social-science research in both terrestrial and coastal/marine systems, focusing on its strategic priorities. The Center's programs aimed at pragmatic management solutions span a spectrum from developing new knowledge through applied research to education and outreach.

Much of the Center's work is conducted cooperatively with other research institutions, state and federal agencies, resource owners, and interest groups. The Center is housed in facilities at Forks, Washington, on the Olympic Peninsula. It is well suited for education, research, and conference activities. The natural resources of the area are a major focus of the work of the Center. The Center is jointly administered by the College of Forest Resources and the College of Ocean and Fishery Sciences.

Center for Urban Horticulture

Director

Thomas Hinckley

The Center for Urban Horticulture is dedicated to research, teaching, and public service concerning the selection, management, and role of plants and of ecosystems in urban landscapes. Urban landscapes—landscapes that are subject to direct impacts of human activity—include city streets, urban parks, public gardens, residential areas, and natural (and naturalized) areas bounded by commercial and residential development. Urban horticulture concerns those landscapes as they are used for aesthetic amenity, for amelioration and control of the physical environment, for public and professional education, for conservation of biodiversity and of natural resources, and for public recreation.

Faculty in four colleges—Forest Resources, Arts and Sciences, Architecture and Urban Planning, and Engineering—are affiliated formally and informally with the Center, participating in urban horticultural research, teaching, and collections curation. The Center serves as a primary focus of the UW's curricula in urban environmental studies, which comprise the most comprehensive program in the United States.

Faculty

Professors

- Agee, James K. * 1982; PhD, 1973, University of California (Berkeley); management of natural systems, forest ecology, fire ecology.
- Allan, G. Graham * 1966; PhD, 1956, University of Glasgow (UK), DSc, 1971, University of Strathclyde (UK); creativity and innovation.
- Ammirati, Joseph F. * 1979, (Adjunct); MA, 1967, San Francisco State, PhD, 1972, University of Michigan; mycology, taxonomy and ecology of fungi.
- Bare, B. Bruce * 1969; MS, 1965, University of Minnesota, PhD, 1969, Purdue University; forest land management and valuation, taxation, finance, management science.
- Bradley, Gordon A. * 1972; MLA, 1972, University of California (Berkeley), PhD, 1986, University of Michigan; forest land use planning, Conservation area planning and design.
- Briggs, David G. * 1973; PhD, 1980, University of Washington; operations research in forest products industries.
- Brubaker, Linda B. * 1973; MS, 1967, PhD, 1973, University of Michigan; dendrochronology, forest ecology, quaternary paleoecology.
- Bryant, Benjamin S. * 1987, (Emeritus); DF, 1951, Yale University; wood utilization technology, wood gluing, plywood and board technology.
- Cole, Dale W. * 1960, (Emeritus); MS, 1957, University of Wisconsin, PhD, 1963, University of Washington; forest soils, mineral cycling in forest ecosystems.
- Conquest, Loveday L. * 1976, (Adjunct); PhD, 1975, University of Washington; statistics in forestry, fisheries, and environmental pollution monitoring.
- Dowdle, Barney * 1962, (Emeritus); PhD, 1962, Yale University; development of forest products industries, public forest land management.
- Driver, Charles H. * 1965, (Emeritus); PhD, 1954, Louisiana State University; processes of wood decay, forest diseases, range ecology.
- Edmonds, Robert L. * 1973; MS, 1968, PhD, 1971, University of Washington; forest soil microbiology, biology of forest diseases, aerobiology.
- Erickson, Harvey D. 1977, (Emeritus); PhD, 1937, University of Minnesota; wood science and technology.
- Ford, E. David * 1985; PhD, 1968, University College, London (UK); quantitative science, ecosystem analysis, forest productivity.
- Franklin, Jerry F. * 1986; MS, 1961, Oregon State University, PhD, 1966, Washington State University; forest ecosystem analysis, vegetation patterns, tree mortality in natural landscapes.
- Fridley, James * 1988; MS, 1981, University of Michigan, PhD, 1984, University of Washington; forest engineering systems design, interactive computer simulation.
- Fritschen, Leo J. * 1966, (Emeritus); PhD, 1960, Iowa State University; biometeorology, micrometeorology, measurement and instrumentation of the environment.
- Ganter, Mark * 1986, (Adjunct); PhD, 1985, University of Wisconsin; solid modeling, computer graphics and geometry, kinematics, rapid prototyping, manufacturing design.
- Gara, Robert I. * 1968; MS, 1962, PhD, 1964, Oregon State University; bark beetle, forest insect ecology, forest insect behavior, international forestry.
- Greulich, Francis E. * 1977; MS, 1967, PhD, 1976, University of California (Berkeley); forest engineering, statistics, operations research.
- Gustafson, Richard Roy * 1986; PhD, 1982, University of Washington; process modeling and optimization, fiber composites.
- Hamilton, Clement Wilson * 1985, (Affiliate); PhD, 1985, Washington University; higher plant systematics, environmental horticulture, Californian vegetation ecology.
- Hanley, Donald P. * 1983; MS, 1973, University of Montana, PhD, 1981, University of Idaho; extension forestry, small-forest management, forestry continuing education.
- Harrison, Robert B. * 1987; MS, 1981, University of New Hampshire, PhD, 1985, Auburn University; soil chemistry and fertility, mineral cycling, carbon sequestration, long-term forest productivity.
- Hatheway, William H. * 1969, (Emeritus); PhD, 1956, Harvard University; quantitative ecology, physiological ecology, tropical forestry.
- Hinckley, Thomas M. * 1980; PhD, 1971, University of Washington; forest tree physiology and autecology, subalpine ecosystems, water stress problems.
- Hodgson, Kevin T. * 1991; MS, 1980, Mellon University, PhD, 1986, University of Washington; surface and colloid science, papermaking chemistry, secondary fiber recycling.
- Hrutfjord, Bjorn F. * 1959, (Emeritus); PhD, 1959, University of North Carolina; wood extractive chemicals, air and water quality in forest products industries.
- Johnson, Jay A. * 1983; MS, 1970, State University of New York (Syracuse), PhD, 1973, University of Washington; mechanical and physical properties of wood and wood composite materials, wood quality.
- Larson, Bruce C. 2000; MFS, 1978, Yale University, PhD, 1982, University of Washington.
- Lee, Robert G. * 1978; MS, 1969, Yale University, PhD, 1973, University of California (Berkeley); natural resource sociology, multiresource management, development/change of forestry institutions.
- Leney, Lawrence * 1983, (Emeritus); PhD, 1960, State College of Forestry At Syracuse; wood anatomy, microtechniques, machining wood, photomicrography, seasoning and preservation of wood.
- Lettenmaier, Dennis P. * 1973, (Adjunct); PhD, 1975, University of Washington; systems analysis and water resources planning.
- Lippke, Bruce R. * 1990; MSEE, 1959, New Mexico State University, MSIE, 1966, University of California (Berkeley); international trade and environmental linkages, investment analysis, economics of forest industry.
- Manuwal, David * 1972; MS, 1968, University of Montana, PhD, 1972, University of California (Los Angeles); effect of forest management on birds and mammals, characteristics of high-elevation bird communities.
- McKean, William T. * 1979; PhD, 1968, University of Washington; pulp and paper science, chemical engineering.
- Naiman, Robert J. * 1988; PhD, 1974, Arizona State University; forest stream ecosystems, aquatic landscape dynamics.
- Peterson, David L. * 1989; PhD, 1980, University of Illinois; mountain ecology, subalpine forests, global climate change, forest ecology.
- Pickford, Stewart G. * 1976, (Emeritus); PhD, 1972, University of Washington; forest fire science, wildland fire management.
- Richey, Jeffrey E. * 1973; PhD, 1973, University of California (Davis); quantitative problems of aquatic ecosystems, primary Amazon River, limnology.
- Ricker, Neil L. * 1978, (Adjunct); MS, 1972, PhD, 1978, University of California (Berkeley); process control and optimization.
- Schaeffer, Walter H. 1976, (Emeritus); PhD, 1952, University of Washington; forestry.
- Schiess, Peter * 1975; MS, 1968, Swiss Federal Institute of Technology, PhD, 1975, University of Washington; forest engineering, mechanized harvest and thinning operations, forest road design and construction.
- Schreuder, Gerard Fritz * 1971; MS, 1967, University of North Carolina, PhD, 1968, Yale University; statistical analysis in resource economics, international forestry, trade, aerial photos.
- Scott, David R. M. * 1955, (Emeritus); PhD, 1950, Yale University; silviculture, forest ecology.
- Sharpe, Grant William * 1966, (Emeritus); PhD, 1956, University of Washington; wildland recreation, interpretation and management of recreation areas.
- Skalski, John R. * 1987, (Adjunct); PhD, 1985, Cornell University; environmental sampling and effects assessment on wild populations, parameter estimation.
- Sprugel, Douglas George * 1984; PhD, 1974, Yale University; forest ecology, tree ecophysiology, natural disturbance.
- Stenzel, George 1949, (Emeritus); MF, 1939, Yale University; forest resources.
- Stettler, Reinhard F. * 1995, (Emeritus); PhD, 1963, University of California (Berkeley); genetics of forest tree populations, biotechnology, biomass production.
- Strand, Stuart E. * 1982; MS, 1975, Ohio State University, PhD, 1982, Pennsylvania State University; forest biotechnology, environmental pollution control.
- Taber, Richard D. * 1968, (Emeritus); PhD, 1951, University of California (Berkeley); biology and conservation of free-living birds and mammals, wildlife and human culture.
- Thomas, David P. 1950, (Emeritus); MA, 1948, University of Washington; economics and technology of utilizing forest crops.
- Thorud, David B. * 1981, (Emeritus); MS, 1960, PhD, 1964, University of Minnesota; watershed management, international forest policy and development.
- Tukey, Harold B. * 1980, (Emeritus); PhD, 1958, Michigan State University; urban horticulture, horticultural physiology.
- Vogt, Kristiina 2000; MS, 1974, PhD, 1976, New Mexico State University.
- Wagar, John Alan * 1988; MF, 1956, PhD, 1961, University of Michigan; urban forestry, urban forest inventory and cost-effective management.

Waggener, Thomas R. * 1969, (Emeritus); PhD, 1969, University of Washington; forest policy and economics, international forestry development.

Wissmar, Robert C. * 1972; PhD, 1972, University of Idaho; ecology.

Wott, John A. * 1981; MS, 1966, PhD, 1968, Cornell University; public horticulture, horticultural education, public gardens and administration, urban horticulture.

Associate Professors

Bolton, Susan M. * 1992; MS, 1979, University of North Dakota, MS, 1985, PhD, 1991, New Mexico State University; hydrology, watershed management, stream restoration, ecological engineering.

Booth, Derek B. * 1980, (Adjunct Research); PhD, 1984, University of Washington; environmental geology, particularly human influences on hillslopes, runoff, and rivers.

Bradshaw, Harvey D. * 1984; PhD, 1984, Louisiana State University; plant molecular genetics, evolutionary biology, genetic engineering of forest trees.

Chalker-Scott, Linda * 1997; MS, 1982, PhD, 1988, Oregon State University; environmental stress physiology of woody plants.

Eastin, Ivan * 1987; MS, 1989, PhD, 1992, University of Washington; marketing strategies and international trade of forest products.

Edwards, Richard T. * 1993, (Affiliate); PhD, 1985, University of Georgia; aquatic ecology, biogeochemistry.

Ewing, Kern * 1990; MS, 1978, PhD, 1982, University of Washington; wetland plant ecology, restoration ecology, ecosystem management.

Grue, Christian E. * 1989, (Adjunct); PhD, 1977, Texas A&M University; wildlife toxicology, wildlife and fisheries science.

Halpern, Charles * 1991; PhD, 1987, Oregon State University; plant community ecology, plant succession, effects of forest management on plant diversity.

Henry, Charles L. * 1982; MS, 1977, Oregon State University, PhD, 1989, University of Washington; ecological restoration, recycling organic wastes as soil amendments, sustainable resources.

Horner, Richard R. * 1981, (Adjunct Research); PhD, 1978, University of Washington; effects of human activities on water resources in urban areas.

Marzluff, John M. * 1997; MS, 1983, PhD, 1987, Northern Arizona University; behavior, ecology, and conservation of birds and mammals.

Paun, Dorothy Ann * 1993; PhD, 1993, University of Oregon; financial performance analyses; international countertrade; business-to-business relationships.

Perez-Garcia, John * 1990; MS, 1982, Mayaguez (Puerto Rico), DF, 1991, Yale University; forest economics, analysis of trade policy, global trade modeling, climatic change, carbon cycling.

Raedeke, Kenneth J. * 1981; PhD, 1979, University of Washington; wildlife biology and conservation, population dynamics, ungulate ecology, international conservation.

Robertson, Iain M. * 1982, (Adjunct); MLA, 1975, University of Pennsylvania; designing with plants, planning and design of botanical gardens/arboreta.

Vanblaricom, Glenn R. * 1993, (Adjunct); PhD, 1978, University of California (San Diego); aquatic wildlife,

ecology of marine communities, wildlife-fisheries interactions.

Vogt, Daniel 2000; MS, 1976, New Mexico State University, PhD, 1987, University of Washington; soil ecology, nutrient cycling, carbon sequestration, ecosystem biomass and productivity.

Wasser, Samuel K. * 1982, (Adjunct Research); PhD, 1981, University of Washington; behavioral ecology, endocrinology, conservation genetics and reproductive biology.

West, Stephen D. * 1979; MS, 1974, University of Alaska, PhD, 1979, University of California (Berkeley); vertebrate wildlife ecology and conservation.

Zabowski, Darlene * 1992; MS, 1983, PhD, 1988, University of Washington; forest soils and productivity, soil genesis and classification, biogeochemical cycling of soils.

Assistant Professors

Jacobs-Young, Chavonda J. * 1995; MS, 1992, PhD, 1998, North Carolina State University; integrating biotechnology and pulp processing to improve papermaking efficiency.

Newman, Lee A. * 1993, (Affiliate); MS, 1989, PhD, 1993, Rutgers University; phytoremediation of organics and metals, plant molecular genetics.

Northey, Robert A. * 1998; PhD, 1985, University of Washington; wood and pulping chemistry, bleaching.

Reichard, Sarah E. 1986; MS, 1989, PhD, 1994, University of Washington; conservation biology of plants, biological invasions.

Ryan, Clare * 1997; PhD, 1996, University of Michigan; natural resource policy and administration, environmental conflict management, water policy.

Turnblom, Eric * 1994; MSc, 1986, University of British Columbia (Canada), PhD, 1994, University of Minnesota; forest growth modeling, quantitative stand dynamics, biometrics and natural resources inventory.

Wolf, Kathleen L. 1994, (Research); PhD, 1993, University of Michigan; urban and community forestry, environment and behavior, urban landscape visual assessment.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

CFR 400 Natural Resource Conflict Management (3) I&S/NW *Ryan* Introduction to the causes, dynamics, and consequences of natural resource conflicts as well as the range of procedural interventions used to manage conflict. Specific cases of environmental conflict and alternative dispute resolution procedures are examined. Emphasis on developing skills to effectively analyze, manage, and resolve natural resource conflicts. Offered: W.

CFR 429 Seminar in Streamside Studies (1, max. 6) *Bolton* Discussion by invited speakers on current research and issues related to streamside studies. Speakers are a mix of on-campus and off-campus experts. Credit/ no credit only. Offered: jointly with FISH 429; AWSp.

CFR 450 Senior Planning Project (3) *Ford* How to choose a topic, develop a written plan, prepare for field or laboratory work, and write the senior project. Projects may be related to resource management, conservation, urban forestry, or scientific research. Assistance provided in selection of faculty project coordinator. Offered: A.

CFR 474 Problem Analysis in Urban Ecology (5) *NW Alberti, Bradley, Hill, Marzluff, Ryan, ZumBrunnen* Investigates pressing local issues in urban ecology and develops each into a researchable project proposal. Examines and evaluates how different disciplines study environmental issues, explores criteria for conducting and evaluating quality research, develops skills in problem formulation, and sharpens proposal writing skills. Offered: jointly with GEOG 486; A.

CFR 475 Applied Theory and Methods in Urban Ecology (5) I&S/NW *Alberti, Bradley, Hill, Marzluff, Ryan, ZumBrunnen* Discusses broad perspectives in urban ecology and how to analyze data relevant to urban ecology problems. Students write objectives and methods for a selected urban ecology problem that critiques different methodological approaches and reviews/synthesizes literature. Prerequisite: CFR 474/GEOG 486. Offered: jointly with GEOG 487. Offered: W.

CFR 476 Research in Urban Ecology (5) NW *Alberti, Bradley, Hill, Marzluff, Ryan, ZumBrunnen* Teams analyze, present, and begin to interpret data that is relevant to addressing issues in urban ecology. Write and orally present revised objectives and methods sections of interdisciplinary project and present results section. Prerequisite: CFR 475. Offered: S.

CFR 480 Field Studies in Wood Utilization (1) *Briggs* Students choose 3 of 5 full day field trips offered on alternate Fridays, beginning with the second Friday of the quarter. Visits include sawmills, plywood mills, pulp mills, wood preservers, door/window manufacturers, pallet producers, modular home producers. Field trip fee for transportation expenses. Students are required to bring hard hats and suitable field clothing. Offered: S.

Courses for Graduates Only

CFR 500 Graduate Orientation Seminar (1) Introduction to graduate study. Presentations on College resources and services and current research in each College division. Division chairs share teaching responsibilities. Offered: ASP.

CFR 529 Topics in Streamside Studies (1) Discussion by invited speakers on current research related to streamside studies. Offered: jointly with FISH 529; AWSp.

CFR 574 Problem Analysis in Urban Ecology (5) *Alberti, Bradley, Hill, Marzluff, Ryan, ZumBrunnen* Investigates pressing local issues in urban ecology and develops each into a researchable project proposal. Examines and evaluates how different disciplines study environmental issues, explores criteria for conducting and evaluating quality research, develops skills in problem formulation, and sharpens proposal writing skills. Offered: A.

CFR 575 Applied Theory and Methods in Urban Ecology (5) *Alberti, Bradley, Hill, Marzluff, Ryan, ZumBrunnen* Discusses broad perspectives in urban ecology and how to analyze data relevant to urban ecology problems. Students write objectives and methods for selected urban ecology problem that critiques different methodological approaches and reviews/synthesizes literature. Prerequisites: CFR 574 or permission of instructor. Offered: W.

CFR 576 Research in Urban Ecology (5) *Alberti, Bradley, Hill, Marzluff, Ryan, ZumBrunnen* Teams analyze, present, and begin to interpret data that is relevant to addressing issues in urban ecology. Write and orally present revised objectives and methods sections of interdisciplinary project and present results section. Prerequisite: CFR 575. Offered: S.

vant to addressing issues in urban ecology. Write and orally present revised Objectives and Methods sections of interdisciplinary project and present a draft Results section. Prerequisites: CFR 574, 575. Offered: S.

CFR 580 Advanced Urban Ecology (5) *Alberti, Bradley, Hill, Marzluff, Ryan, ZumBrunnen* Discussion of current and important theoretical and empirical papers in urban ecology. Students continue to research interdisciplinary urban ecology projects while developing publishable manuscripts and oral presentations. Offered: jointly with GEOG 588. Offered: A/WSp.

CFR 590 Graduate Studies (1-5, max. 5) Study in fields for which there is not sufficient demand to warrant the organization of regular courses. Offered: A/WSp.

CFR 591 Seminar in Resource Policy and Management (1) *Ryan* Introduction and orientation for concurrent degree program between the Evans School of Public Affairs and the College of Forest Resources. Examines research and literature on contemporary issues related to the integration of natural resource science, policy, and management, through discussion among faculty, students, and invited speakers. Offered: jointly with PB AF 591; A.

CFR 592 Environmental Policy Processes (3) *Cullen* Presents background to establish the need for environmental policy. Explores in a comparative manner, examining both successes and failures, various strategies that have been used or proposed to protect the environment. Offered: jointly with PB AF 590.

CFR 600 Independent Study or Research (*) Offered: A/WSp.

CFR 700 Master's Thesis (*) Offered: A/WSp.

CFR 800 Doctoral Dissertation (*) Offered: A/WSp.

Ecosystem Science and Conservation

ESC 402 Forest Conservation Biology (5) *NW Peterson* Management strategies for conserving natural resources are examined in forest ecosystems of the Pacific Northwest and other North American bioregions. Alternative approaches to producing and restoring sustainable flows of wildlife habitat, water, fiber, and other resources are examined in the context of forest productivity, biophysical environment, disturbance, and public policy. Offered: Sp.

ESC 410 Forest Soils and Site Productivity (5) *NW Harrison* Considers unique properties and processes occurring in forest soils throughout the world with emphasis on soils of Pacific Northwest and aspects of forest soils that affect productivity. Two all-day Saturday field trips and one Saturday-Sunday field trip required. Recommended: ESC 210. Offered: A; odd years.

ESC 411 Forest Soil Microbiology (4) *NW Edmonds* Soil organisms in forest ecosystems, decomposition, nutrient cycling. N transformation, mycorrhizae, effects of forest management. Recommended: ESC 210. Offered: even years; A.

ESC 412 Field Survey of Wildland Soils (3) *NW Harrison, Henry, Zabowski* Study of soils in remote sites about which little information is available. Focus is field trip in Cascade Mountains just north of Glacier Peak with prior study of hiking area, soil and ecosystem changes, and wilderness use. Offered: S.

ESC 413 Soil Genesis and Classification (5) *NW Zabowski* Soil formation, morphology, classification, and relationship to the environment. Labs and weekend field trips illustrate properties and processes of

forest and grassland soils in Washington. Recommended: ESC 210. Offered: Sp.

ESC 414 Forest Soil Fertility and Chemistry (3) *NW Harrison* Tree growth depends, in part, on the interaction between chemical and biological activities within a given soil: the biological and chemical parameters that influence the growth; soil solution chemistry and surface reactions; reactions and processes that control essential plant nutrient levels and forms in soil solutions. Recommended: ESC 210. Offered: Sp; odd years.

ESC 416 Introduction to Bioremediation (3) *NW Brown* Introduces bioremediation as a remediation strategy for contaminated soils and sediments, including in situ remediation with organic residuals, microbial degradation, and phytoremediation. Sources and fate of soil contaminants, conventional remediation strategies, and applications of strategies will be presented. Offered: W.

ESC 418 Compost and Organic Soil Amendments (5) *NW Henry* Introduction to the science of land application of organic soil amendments, including benefits, opportunities, and considerations for land application, management of nutrients and contaminants, and guidelines/regulations. Special focus on composting and use of compost. Offered: Sp.

ESC 421 Dendrochronology (4) *NW Brubaker, Peterson* Analysis of important physiological and environmental factors controlling annual tree-ring growth and a critical review of the applications of tree-ring analysis to study forest productivity, watershed hydrology, forest fires, insect epidemics in relation to yearly weather conditions. Laboratory and field exercises construct tree-ring chronologies to study environmental histories of selected forest stands. Prerequisite: BOTANY 113. Offered: odd years; W.

ESC 432 Forest Pathology (4) *NW Edmonds* Ecology and management of forest diseases. Abiotic diseases caused by air pollution, adverse weather, and biotic diseases caused by bacteria, fungi, viruses, parasitic plants, and nematodes. Forest health. Disease management including silvicultural, chemical, and biological control. Disease modeling. Offered: odd years; A.

ESC 440 Theory and Case Studies of Ecosystem Management (5) *NW Franklin* Applying ecological principles in ecosystem management at stand and landscape levels based on observations of problems and practices during a 10-12 day field trip held prior to beginning of quarter. Students observe innovative forest management programs and experiments and prepare written and oral scientific analyses of specific topics. Offered: A.

ESC 441 Landscape Ecology (5) *NW Franklin* Basic landscape ecology concepts, including patches, corridors, networks, spatial dynamics; island biogeographic principles; landscape analysis methods; landscape models. Applications of landscape ecology in resources management (e.g., cumulative effects, cutting, patterns, anadromous fisheries, management of wildlife populations, and open-space planning). Recommended: ESC 326. Offered: W.

ESC 445 Ecology of Managed Forests (3) *NW Ford* Defines patterns of environmental change and habitat development occurring as forests are managed with different objectives. Particular attention is paid to changing microclimates and how they influence the physical environment and biodiversity. Worldwide occurrence of large-scale, man-made forests is described and their ecological significance. Offered: A.

ESC 450 Wildlife Ecology and Conservation (5) *NW West* Covers advanced principles of wildlife ecology such as habitat selection, population viability, and landscape ecology, and illustrates how they apply to

wildlife conservation problems with terrestrial, aquatic, and marine wildlife. Students must share costs of field trips. Prerequisite: ESC 350. Offered: W.

ESC 451 Biology and Conservation of Birds (3) *NW Manuwal* Major principles of natural history, avian reproductive biology, population ecology, and national and international conservation strategies for both hunted and unhunted birds. Emphasis on western United States. Prerequisite: either BIOL 102, BIOL 180, BIOL 202, BIOL 203, or BIOL 220, any of which may be taken concurrently. Offered: odd years; A.

ESC 452 Field Ornithology (3) *NW Manuwal* Students learn field identification skills and are introduced to field methodologies through required indoor labs, field trips, and field exercises. Exercises include study of survey techniques, feeding ecology, and behavior. Students are required to share field trip costs. Prerequisite: either BIOL 102, BIOL 180, BIOL 202, BIOL 203, or BIOL 220, any of which may be taken concurrently. Offered: odd years; A.

ESC 453 Biology and Conservation of Mammals (3) *NW West* Introduction to mammals of the world: mammalian evolution, taxonomy, morphology, reproduction, population biology, ecology, and conservation. Prerequisite: ESC 350; recommended: concurrent registration in ESC 454. Offered: even years; A.

ESC 454 Biology and Conservation of Mammals Laboratory (3) *West* Identification and natural history of mammals of the Pacific Northwest. Laboratory work on morphology, taxonomy, and natural history; fieldwork on natural history and sampling methods. Two weekend field trips required; students share travel costs. Prerequisite: ESC 350; recommended: concurrent registration in ESC 453.

ESC 455 Wildlife Seminar (1, max. 4) *NW Manuwal, West* Discussion of current research and application in wildlife biology and conservation. Credit/no credit only. Prerequisite: ESC 350. Offered: AW.

ESC 456 Dynamics of Managed Wildlife Populations (3) *NW Raedeke* Advanced principles of managed wildlife populations dynamics. Application of harvest management models and regulations applied to ungulates, upland game birds, waterfowl, furbearers, carnivores. Topics include population models, compensatory mortality, predation role, sustained yield harvest models, measured populations characteristics, computer simulation models with emphasis on management issues. Prerequisite: ESC 350. Offered: W.

ESC 457 Fish and Wildlife Toxicology (3/5) *NW* Overview of fish/wildlife toxicology: history of the field; regulations; methods used to assess risks contaminants pose to fish/wildlife; classes of contaminants and their direct, sublethal and indirect effects; and contemporary threats of contaminants to fish/wildlife, their habitats and prey. Includes laboratory. Offered: jointly with FISH 455; W.

ESC 458 Management of Endangered, Threatened, and Sensitive Species (5) *NW Marzluff* Biological underpinnings and political realities of endangered species management, including: legal issues, recovery teams, citizen rights, extinction, rarity, proactive management, captive propagation, reintroduction, species endangered in the Pacific Northwest. Students revise endangered species recovery plans. Offered: A.

ESC 459 Wildlife Conservation in Northwest Ecosystems (3) *NW Agee, Manuwal, West* Extended field course offers Wildlife Science students personal interactions with wildlife managers and wildlife populations in strategic public and private lands in the northwestern United States and southern Canada. Students will share costs of trip. Offered when there is sufficient student demand. Prerequisite: ESC 350; may not be repeated. Offered: Sp.

ESC 460 Institutionalizing Sustainable Ecological Practices. (3) I&S/NW *Lee* The purpose of this course is to introduce how sustainable resource activities are put into practice. Case studies of successful institutional of sustainable resource practices are presented, including curb-side and biosolids recycling, ecological restoration, bioremediation, sustainable wood production, and material certification. Offered: jointly with ENVIR 460; W.

ESC 490 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp.

ESC 491 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp.

ESC 492 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSpS.

ESC 494 Wildlife Senior Project Proposal (3) Selection of research topic, literature review, and preparation of a formal research proposal. Students select a faculty advisor or a faculty committee to assist them in the proposal writing process. Prerequisite: ESC 351; may not be repeated. Offered: AWSpS.

ESC 495 Senior Project in Conservation of Wildland Resources (5) Individual study of an ecosystem science and conservation problem under direction of a faculty member. Generally taken in last year of residence. Offered: AWSpS.

ESC 496 Wildlife Senior Thesis (5) Statistical analysis and presentation of research results and discussion of results of the senior research project. Students work with faculty advisors to complete field or laboratory research and then prepare the senior thesis. Prerequisite: ESC 494; may not be repeated. Offered: AWSpS.

ESC 499 Undergraduate Research (1-5, max. 15) Individual research supervised by a faculty member. For advanced students desiring to extend their educational experience. Credit/no credit only. Offered: AWSpS.

Courses for Graduates Only

ESC 501 Forest Ecosystems-Community Ecology (5) *Brubaker* Community ecology of forest ecosystems. Quantitative methods of community description. Role of limiting factors, competition and disturbance in determining community composition, structure and stability. Introduction to forest ecosystem productivity. History and application of successional theory. Prerequisite: basic ecology course or permission of instructor. Offered: A.

ESC 502 Forest Conservation Biology (5) *Peterson* Examines management strategies for conserving natural resources in forest ecosystems of the Pacific Northwest and other North American bioregions. Examines alternative approaches to producing and restoring sustainable flows of wildlife habitat, water, fiber, and other resources in the context of forest productivity, biophysical environment, disturbance, and public policy. Offered: Sp.

ESC 507 Soils and Land Use Problems (4) *Harrison* Environmental concerns of soils; how soil properties control potential and reasonable possibilities of land use. Includes factors controlling soil stability, hydrology, fertility, and movement of pollutants. Field trip oriented with weekly activity summaries. Students also conduct field trips to soil-use problem sites. Offered: W.

ESC 509 Review of Forest Autecology (4) *Hinckley* Review of concepts of soil formation, soil fertility, microclimate, hydrology, tree anatomy and morphology, physiology, water relations, mineral nutrition, and genetic and evolutionary mechanisms, as they relate to the adaptation and manipulation of forest-tree populations. For mid-career students only. Offered: A.

ESC 510 Graduate Studies in Forest Soils (1-5, max. 5) Offered: AWSpS.

ESC 511 Advanced Forest Soil Microbiology (5) *Edmonds* Detailed examination of microbial processes in forest ecosystems; types of organisms, biomass, decomposition and nutrient cycling, microbial transformations of N, impacts of management-clear-cutting, fertilization, pesticide addition. Graduate project required. Prerequisite: general biology, basic soils or permission of instructor. Offered: even years; A.

ESC 512 Biogeochemical Cycling in Soils and Forest Ecosystems (3) *Zabowski* Elemental cycles in forests and soils. Fundamentals of processes involved in cycling are addressed along with alterations resulting from environment, vegetation, and soil types. Consideration of cycles of nutrients, metals, and other elements. Weekly discussion section reviews literature on biogeochemical cycling. Prerequisite: one soils course or permission of instructor. Offered: W.

ESC 513 Advanced Soil Genesis and Classification (5) *Zabowski* Soil formation, morphology, classification, and relationship to the environment. Labs and field trips illustrate properties and processes of forest and grassland soils in Washington. Requires two weekend field trips and a graduate project. Prerequisite: ESC 210 or permission of instructor. Offered: Sp.

ESC 514 Advanced Forest Soil Fertility and Chemistry (4) *Harrison* Chemical properties of soil, nutrient and toxic elements; supply, retention, and loss of nutrients in soils; utilization of geochemical and ecosystem models such as GEOCHEM, MAGIC, TRICL-DOWN, and ILWAS in developing a quantitative understanding of the chemical function of forest ecosystems. Prerequisite: general chemistry and geology of soils. Offered: Sp; odd years.

ESC 515 Advanced Soil and Plant Analysis (3) *Harrison* Plants and animals must acquire nutrient elements from their environment. Quantifying the composition of samples is the first step in understanding the processes in natural and manmade systems. Sampling, handling, preparation, storage, and analysis stressed. Prerequisite: one botany or plant science course, instrumental analysis, soils. Offered: Sp.

ESC 517 Biotransformations of Hazardous Compounds (1) *Strand* Presentation and discussion of the current literature in biotransformation and biological degradation of organic and inorganic compounds, particularly in the microbial environment. Credit/no credit only. Offered: ASp.

ESC 518 Microbial Degradation of Toxic Contaminants (3) *Herwig, Strand* Detailed survey of current understanding of microbiology and degradative pathways of industrial organic compounds, pesticides, plastics, oil, and metals. Microbial requirements for bioremediation. Methods of scientific investigation of microbial transformations. Requires basic understanding of metabolism and organic chemistry. Prerequisite: biological science course. Offered: jointly with CEE 542/MICROM 518; W.

ESC 520 Graduate Studies in Ecosystem Science (1-5, max. 5) Offered: AWSpS.

ESC 521 Current Topics in Ecosystem Science (2, max. 6) Consideration of current literature and topics

in forest ecosystems and tree physiology. Offered: AWSp.

ESC 529 Ecosystems Seminar (1) *Sprugel* Discussion by invited speakers on current research related to ecosystems. Credit/no credit only. Offered: A.

ESC 535 Fire Ecology (3) *Agee* Fire regime concept as applied to fire ecology. Methodology for fire history research. History and function of forest fire in western United States with emphasis on Pacific Northwest. One weekend field trip. Prerequisite: permission of instructor. Offered: A.

ESC 538 Graduate Studies in Forest Pathology (1-5, max. 5) Offered: AWSpS.

ESC 547 Stream and River Ecology (5) *Naiman* Characterizations of stream and river ecosystems from a watershed perspective. Emphasis on fundamental processes affecting the structure and dynamics of aquatic communities and the riparian zone. Resource conflicts, new technologies, field trips, and class projects. Recommended: general ecology, forestry-fisheries interactions. Offered: jointly with FISH 547; Sp.

ESC 548 Special Topics in Streamside Studies (2, max. 6) Contemporary problems and issues in forestry, fisheries, and wildlife management in watersheds. Topics vary, yet focus on interactions of land and water resources in the forests of the Pacific Northwest. Prerequisite: permission of instructor. Offered: jointly with FISH 548; AW.

ESC 554 Wildlife Seminar (1-2, max. 10) *Manuwal, West* Discussion of current research and application in wildlife biology and conservation. Prerequisite: permission of instructor. Offered: AW.

ESC 555 Graduate Studies in Wildlife Science (1-5, max. 5) Offered: AWSpS.

ESC 557 Topics in Wildlife Science (2, max. 6) *West* Graduate seminar on applied and basic topics in wildlife ecology and conservation. Different topics selected each offering. Offered: AWSp.

ESC 591 Graduate Teaching Practicum (1-5, max. 5) Principles of teaching and learning applied to undergraduate instruction in Ecosystem Science and Conservation. Development, delivery, and evaluation of lectures and homework assignments. Graduate teaching experience for ESC students only. Credit/no credit only. Offered: AWSp.

ESC 601 Graduate Internship in Ecosystem Science and Conservation (3-9, max. 9) Credit/no credit only. Offered: AWSpS.

Environmental Horticultural and Urban Forestry

EHUF 401 Urban Forest Management (3) I&S Explores issues of urban forest benefits, planning, administration, public policy, and career opportunities, utilizing Urban Forestry faculty and leaders of city, county, and state agencies. Emphasizes the urban forest's diverse managers and constituents and their varied responsibilities, values, and resources. Offered: W.

EHUF 402 Curation and Education in Public Gardens (3) I&S/NW *Wott* Techniques of curatorial practice relevant to living collections of plants, including documentation, policies, conservation, and display. Aspects of establishing and implementation of a public horticulture program including assessment, program tools and methods, and funding in a public environment. Offered: W; odd years.

EHUF 411 Plant Propagation: Principles, and Practice (3) NW *Wott* Science and practice of plant propagation including sexual (seed) and asexual (cutting, layering, grafting) propagation. Includes discussion of physiological effects, methodology and laboratory exercises. Wide variety of plants covered. Intended for majors in urban horticulture and urban forestry and others interested in reproducing landscape plants. Recommended: 10 credits of introductory biology or botany, or equivalent. Offered: Sp.

EHUF 451 Urban Plant Protection (5) NW *Gara* Working knowledge on insects and diseases of plants growing in the urban environment. Emphasis placed on pest and damage recognition, control methods, and integrated pest management systems. Offered: Sp.

EHUF 462 Restoration Ecology Capstone: Introduction (2) First of a three-course capstone sequence in restoration ecology. Students review and assess project plans and installations. Class meets with members of previous capstone classes to review their projects.

EHUF 463 Restoration Ecology Capstone: Proposal and Plan (3) Student teams prepare proposals in response to requests for proposals (RFPs) from actual clients. Clients may be governments, non-profit organizations, and others. Upon acceptance of the proposal, teams prepare restoration plans. Prerequisite: EHUF 462.

EHUF 464 Restoration Ecology Capstone: Field Site Restoration (5) Teams take a restoration plan developed in EHUF 463 and complete the installation. Team participation may include supervision of volunteers. Teams prepare management guidelines for the client and conduct a training class for their use. Prerequisite: EHUF 463. Offered: jointly with BES 464/TESC 464; Sp.

EHUF 470 Urban Forest Landscapes (5) NW *Bradley, Wagar, Wolf* Comprehensive view of urban forest and urban forest landscapes. Includes close examination of factors that differentiate urban forest landscapes along the urban to wildland gradient. Compare legal, social, political, administrative, physical, and biological variations. Offered: SpS.

EHUF 471 Ecological Concepts and Urban Ecosystems (3) NW Ecological concepts introduced in an urban context with emphasis on autecological relationships of plants in an urban environment. General framework for development of urban ecological concepts followed by case studies and exploring applications in new areas. Offered: W.

EHUF 473 Principles of Ecological Restoration (5) NW *Ewing* Philosophy of restoration, structural components of ecosystem degradation, analysis of restoration projects and methods, and an ecosystem by ecosystem review of how systems are restored. An ecology courses that emphasizes applied scientific knowledge of ecosystems. Recommended: BIOL 472 or BOTANY 354 or BOTANY 371. Offered: W.

EHUF 475 Wetland Ecology and Management (5) NW *Ewing, Harrison* Wetland types and functions, global and North American distribution, wetland plant types, soil chemistry. The influence of stresses on wetland composition and form. Autecology of wetland plants; response to and detection of stresses. Impacts of urbanization; management techniques. Recommended: either BIOL 472, BOTANY 354, or BOTANY 371. Offered: A.

EHUF 477 Wetland Restoration (5) *Ewing* A Web-delivered, self-paced course covering wetland science, restoration ecology, freshwater restoration, coastal restoration, monitoring/maintenance, and case histories. Completion of extensive readings, assignment and test required for each module. Prerequisite: either BIOL 102, BIOL 180, or BIOL 203;

recommended: either EHUF 473, EHUF 475, BOTANY 354, BOTANY 456, or BIOL 472. Offered: AWSp.

EHUF 478 Horticultural Stress Physiology (3) NW *Chalker-Scott* Impact of environmental stresses (e.g., temperature, light, moisture, nutrients, allelopathy, salt, ultraviolet) on the performance of horticulture plant species and their subsequent physiological responses. Particular emphasis is given to problems common in urban and restored environments (e.g., pollution, soil compaction, heat). Group and individual projects. Prerequisite: BOTANY 371. Offered: W.

EHUF 480 Selection and Management of Landscape Plant (5) NW *Chalker-Scott* Principles of plant selection and management in urban and modified environments. Site analysis and preparation; physiological basis for plant selection; techniques for successful plant installation and aftercare; plant performance evaluation; long-term management and plant health care. Group and individual projects. Prerequisite: ESC 210; recommended: BOTANY 110. Offered: A.

EHUF 481 Field Practicum in Plant Selection and Management (2) NW *Chalker-Scott* Practical application of plant selection and management in urban and modified environments. Site analysis and preparation; evaluation of nurseries; techniques for successful plant installation and aftercare; plant performance evaluation; plant health care assessment. Group project. Prerequisite: EHUF 480, which may be taken concurrently. Offered: A.

EHUF 482 Field Practicum in Plant Selection and Management (2) *Chalker-Scott* Practical application of plant selection and management in urban and modified environments. Site analysis and preparation; evaluation of nurseries; techniques for successful plant installation and aftercare; plant performance evaluation; plant health care assessment. Group project. Prerequisite: EHUF 480, which may be taken concurrently. Offered: Sp.

EHUF 490 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp.

EHUF 491 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp.

EHUF 492 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSpS.

EHUF 495 Senior Project in Urban Forestry (5) Individual study of an urban forestry problem under direction of a faculty member. Offered: AWSpS.

EHUF 499 Undergraduate Research (1-5, max. 15) Individual research supervised by a faculty member. For advanced students desiring to extend their educational experience. Credit/no credit only. Offered: AWSpS.

Courses for Graduates Only

EHUF 502 Data Collection, Analysis, and Presentation (3) *Ewing* Design of scientific experiments, collection of data, and use of computers to store, analyze and present data. Limited by equipment availability to 8 students; UH students have priority. Offered: Sp.

EHUF 503 Current Issues in Urban Horticulture (1) Critical evaluation and discussion of published research in urban horticulture and restoration. Students and faculty present and discuss research methods and questions from current literature. Offered: AWSp.

EHUF 531 Seminar in Horticultural Taxonomy and Landscape Plant Selection (1-3, max. 12) Special topics in horticultural taxonomy (nomenclature and systematics of cultivated plants, evolution of diverse genera and families, methods of analysis) and landscape plant selection (natural ecology and biogeography of landscape plants, plant exploration, introduction and testing). Offered: W.

EHUF 549 Urban Horticulture Seminar (1, max. 6) Discussion by invited speakers on current topics in urban horticulture. Credit/no credit only. Offered: A.

EHUF 561 Public Presentation in Urban Horticulture (2) *Wott* Students learn to make public presentations in scientific, professional, and popular contexts and to interpret technical information for professional and lay audiences. Support materials, such as audiovisuals and graphics are discussed. Offered: W.

EHUF 572 Urban Ecosystem Management Seminar (1-3, max. 9) *Ewing* Graduate seminar in urban ecosystem management. Special topics of current importance in urban ecosystem management. Ecological aspects of ecosystem conservation, restoration, and management. Students participate in presentation and discussion of current work. Prerequisite: EHUF 471, EHUF 475. Offered: W.

EHUF 601 Internship in Urban Horticulture (1-9, max. 9) Credit/no credit only. Prerequisite: permission of graduate program adviser. Offered: AWSpS.

Forest Engineering

F E 404 Forest Engineering Field Seminar (1, max. 6) *I&S Bolton, Schiess* Forest engineering activities examined and discussed during three all-day site visits. Opportunity for forest engineering practitioners, faculty, and students to interact in an informal, content-rich environment. Credit/no credit only. Offered: AWSp.

F E 423 Watershed Analysis (4) NW *Schiess* Inventory and historical analysis of the interactions between natural resources, climate, and forest management. Development of management objectives and design of forest management activities based on inventory and analysis. Includes the use of modeling and simulation in predicting the influence of forest management activities on other resources. Offered: W.

F E 425 Wildland Hydrology (4) NW *Bolton* Introduction to the hydrologic cycle and basic hydrologic methods as applied to wildlands. Effects of forest management activities on hydrologic processes. Offered: W.

F E 430 Aerial Photos/Remote Sensing Natural Resources (3) NW *Schreuder* Principles of photogrammetry, interpretation, and remote sensing; and their application to management of natural resources and wildlands. Uses for watersheds, forest resources, wildlife, point and nonpoint pollution, land-use planning, and outdoor recreation. Offered: Asp.

F E 444 Introduction to Forest Engineering Design (4) *Schiess* Design process and methodology; decision making; creativity; project planning and management; engineering economics; probabilistic and statistical aspects of forest engineering design; ethical and legal issues; presentation of design project results. Lecture, laboratory, and design projects. Offered: W.

F E 445 Management Science in Forest Engineering (5) Management science methods used in data collection, analysis, and decision making examined within a systems framework. Statistical methods of point and interval estimation and regres-

sion analysis applied to logging and construction time studies and work sampling. Linear, non-linear, and dynamic programming optimization techniques are applied to forest engineering problems. Offered: W.

F E 450 Advanced Forest Engineering Design (5) *Schiess* Capstone design course emphasizes application of forest engineering design principles. State-of-the-art methods and technology used to craft an implementable natural resource development plan. Prerequisite: either 1.7 in F E 341 or 1.7 in F E 346; 1.7 in F E 444. Offered: Sp.

F E 451 GIS-based Landscape Modeling (5) *I&S/NW Schiess* Use of GIS to investigate forest operations at the landscape scale. Focus on transportation, land-use, and environmental issues. Problem definition, data collection, and data structuring strategies. As part of a design team, students develop an implementable, natural resources management plan for a client. Offered: Sp. Prerequisite: either F E 423 or F M 425.

F E 452 Stream-Road System Interactions (5) *I&S/NW Schiess* Design and evaluation of road systems and stream impacts. Road locations and decommissioning are addressed meeting management objectives and minimizing sediment delivery. Modeling and field verifications of road impacts. As part of a design team, students develop an implementable, natural resources management strategy for a client. Offered: Sp. Prerequisite: either F E 345 or F E 346.

F E 465 Introduction to Photogrammetry (2) NW Photogrammetric measurements from aerial photos. Aerial cameras and camera calibration. Interior orientation from ground control. Exterior orientation and derivation of ground coordinates. Ground control. Use of analytical equipment for stereoplotting. Offered: W.

F E 470 Wood Science and Forest Products Manufacturing (3) *Breitsprecher* Coverage of the physical and chemical properties of wood and how they relate to its use, followed by a discussion of the major manufacturing processes used to convert wood to products for society. Field trips are taken to representative processing plants. Offered: W.

F E 480 Silvicultural Engineering Systems (3) *Fridley* Engineering design of systems for establishing, nurturing, and culturing trees for eventual harvest and use as industrial feedstock. Lecture/discussion. Prerequisite: CSE 142; CEE 220; M E 230; IND E 250; F E 332; F E 368. Offered: A.

F E 490 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp.

F E 491 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp.

F E 492 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSpS.

F E 499 Undergraduate Research (1-5, max. 15) Individual research supervised by a faculty member. For advanced students desiring to extend their educational experience. Credit/no credit only. Offered: AWSpS.

Courses for Graduates Only

F E 523 Advanced Watershed Analysis (4) *Schiess* Inventory and historical analysis of interactions between natural resources, climate, and forest management. Develop management objectives and

design forest management activities based on inventory and analysis. Use of modeling and simulation for predicting influence of forest management activities on other resources. Site-specific mitigation design and remediation projects. Prerequisite: F E 425. Offered: W.

F E 524 Watershed Design (4) *Fridley* Study of the principles and processes related to forest engineering design of watershed scale systems. Prerequisite: F E 523 and graduate standing or permission of instructor. Offered: Sp.

F E 525 Advanced Wildland Hydrology (4) *Bolton* Advanced treatment of hydrologic cycle and basic hydrologic methods as applied to wildlands. Effects of forest management activities on hydrologic processes. Graduate focus on a detailed field or modeling hydrologic analysis. Offered: W.

F E 529 Current Topics in Wildland Hydrology (1) *Bolton* Students present detailed analysis of research papers on selected topics in wildland hydrology. Topics cover measurement techniques, experimental data, and theoretical models of hydrologic processes. Credit/no credit only. Prerequisite: senior or graduate standing and permission of instructor. Offered: AWSp.

F E 540 Graduate Studies in Forest Engineering (1-5, max. 5) Offered: AWSpS.

F E 541 Advanced Forest Engineering (5) *Fridley, Schiess* Logging organization and management; logging cost analysis and budgeting. Offered: W.

F E 542 Advanced Logging Engineering (3) Detailed consideration of problems of logging planning and truck road engineering, including the preparation and field layout of logging plans; location, design, and construction of forest roads. Offered: Sp.

F E 591 Graduate Teaching Practicum (*, max. 5) Principles of teaching and learning applied to undergraduate instruction in forest engineering. Development, delivery, and evaluation of actual lectures and homework assignments in the student's area of expertise are required. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

Forest Management

F M 400 Forest Science Inquiry for Teachers (5) *Lee* Inquiry-based scientific methods for K-12 instruction; asking how and why questions; stating answerable questions; forming hypothesis to answer questions; testing hypothesis by making observations, making measurements, and conducting experiments; displaying results. Writing curriculum plans to implement district and state requirements. Offered: S.

F M 402 Forest and Economic Development in the Developing World (3) Examines the relationship between forests and economic development in tropical countries. Topics include the role of population growth, poverty, land tenure, and international trade on forest use as well as theories of economic development. Case examples of forest-based economic development in different countries and regions.

F M 422 Marketing of Forest Products (3) I&S/NW *Eastin* Introduction to forest products marketing in North America. Examines products marketing, industry structure, and strategic management issues utilizing marketing concepts. Topics include product management, distribution channels, strategic industry analysis, and marketing research techniques. Case studies used to understand forest products industry decision making. Offered: W.

F M 423 International Marketing of Forest Products (3) I&S/NW *Eastin* Introduction to international marketing concepts and their application to forest prod-

ucts. Analysis of forest products trade patterns, resource base changes, policy, industrial policies, and environmental concerns. Discussion of market distorting practices including log export bans and tariff and non-tariff barriers. Offered: Sp.

F M 424 Forest Stand Dynamics (3) NW Forest stand development and manipulation response. Forest stand dynamics and stand structure in pure and mixed species forests, response to minor and major disturbances, interactive changes with time, and patterns and response to manipulation. Offered: A.

F M 425 Ecosystem Management (3) NW Advanced concepts and practices in ecosystem management, integrating landscape management principles, inventory, planning, silviculture, objective/tradeoff/policy considerations, stand growth, adaptive management, and systems organization and management. Case study emphasizes integration. Prerequisite: F M 323. Offered: W.

F M 435 Forest Entomology (3) NW *Gara* Introduction to general entomology, characteristics, life histories, ecological relations, prevention, and control of forest insects. Offered: A.

F M 436 Laboratory in Forest Entomology (2) NW *Gara* Introduction to the insect orders; identification of forest insects and their damage. One field trip to study insect problems required. Offered: A.

F M 461 Forest Management and Economics II (4) *I&S/NW Bare* Basic concepts of timber harvest scheduling, sustained-yield models, contemporary analytical techniques, timber supply, and forest product markets. Prerequisite: F M 360. Offered: W.

F M 464 Economics of Conservation (3) I&S/NW Economic principles and their use in the analysis of contemporary conservation problems. Particular emphasis directed toward the conservation of forest resources in the Pacific Northwest and related policy issues.

F M 466 Economics of Timber Production (3) *I&S/NW* Application of basic economic concepts to the production of timber as a commercial land use. Analysis of timber investments, alternative management programs, and regulation models. Prerequisite: F M 360.

F M 469 Forest Biometry (5) NW *Turnblom* Quantitative techniques commonly used in forecasting future forest conditions and developing volume equations: site quality assessment methods, development of site index equations, measurement of stand density and its effects on growth, growth and yield prediction, and familiarization with current computerized forest growth simulation models. Prerequisite: Q SCI 381. Offered: odd years; A.

F M 470 Natural Resource Policy Processes (5) *I&S/NW Ryan* Introduction to and analysis of environmental policy-making processes, with a focus on forest and land policy and law. Use of policy models to examine the interaction of agencies, interest groups, Congress, and the courts in the legislative process. Policy implementation, evaluation, and change are also addressed. Offered: A.

F M 481 Management of Wildland Recreation and Amenities (3) NW *Lee* Introduction and overview of wildland recreation and amenities management. Agency history and objectives explored along with integration of recreation with other land uses. Water, forestry, wildlife, and wilderness resources for recreational uses discussed along with role of private enterprise in recreation and amenities. Topics of current and local interest. Offered: W.

F M 490 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is

not sufficient demand to warrant the organization of regular classes. Offered: AWSp.

F M 491 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp.

F M 492 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp.

F M 495 Senior Project in Forest Management (5) Individual study of a forest management problem under the direction of a faculty member. Students utilize knowledge gained in field studies and required course work to present possible solutions to a specific forest management problem. Prerequisite: F E 345; F M 323; F M 362. Offered: AWSp.

F M 496 Forest Management Case Studies (5) Focus on preparation and presentation of management plan for forested area. All aspects of multiple use and ecosystem health considered within multiplicity of economic, biological, legal, social, and political constraints. Case studies to familiarize students with complexities of modern decision making. Offered: Sp.

F M 499 Undergraduate Research (1-5, max. 15) Individual research supervised by a faculty member. For advanced students desiring to extend their educational experience. Credit/no credit only. Offered: AWSp.

Courses for Graduates Only

F M 503 Advanced Forest Stand Dynamics (3) *Oliver* Emphasizes current research and sources of knowledge about forest stand development and responses to manipulations. Development of pure and mixed species forests, even-aged and uneven-aged stands. Responses to disturbances, interactive changes with time, patterns and responses to manipulation, growth and yield quantification. Prerequisite: previous ecology courses. Offered: A.

F M 504 Research Processes in Forest Resources (4) *Lee* Comprehensive survey of research processes for entering graduate students. Diagnostic and prescriptive evaluation of student research capabilities. Problem and hypothesis formulation, study design, multi-method strategies for gathering and analyzing data, and interpretation and presentation of results. Prerequisite: graduate standing. Offered: A.

F M 520 Fundamentals of Marketing and Management from a Forest Products Perspective (3) *Paun* Overview of business concepts as they relate to the following topics in the context of the forest products industry: launching a business and entrepreneurship; marketing; human resources management; and global business. Offered: A

F M 521 Fundamentals of Finance and Accounting from a Forest Products Perspective (3) *I&S/NW Paun* Provides an overview of business concepts as they relate to the following topics in the context of the forest products industry: business economics; financial planning and management; securities and insurance; accounting; and operations management. Offered: W

F M 522 Current Topics in Silviculture/Protection (2, max. 6) *Edmonds, Gara* Detailed study of current issues, information, and literature in silviculture/protection. Offered: AWSp.

F M 528 International Silviculture (3) *Gara* Background of biological, social, and economic basis for silvicultural practices in different areas; case examples of silvicultural practices in different localities; consideration of selected international issues in

silviculture. Prerequisite: permission of instructor. Offered: even years; W.

F M 530 Graduate Studies in Forest Fire Control (1-5, max. 5) Offered: AWSp.

F M 537 Graduate Studies in Forest Entomology (1-5, max. 5) Offered: AWSp.

F M 541 Readings in Silviculture (1-5, max. 6) Detailed study of national and international literature pertaining to silviculture. Offered: AWSp.

F M 545 Principles of Forest Entomology (3) *Gara* Historical perspective of the discipline, introduction to general entomology and taxonomy, forest insect ecology, integrated pest management concepts for defoliators, bark beetles, wood borers, and urban forestry pests. Prerequisite: general biology, botany, zoology or permission of instructor. Offered: A.

F M 552 Seminar in Forest Products Marketing (3) *Eastin, Paun* Evaluate and discuss current research topics in marketing, marketing research, and international marketing of forest products. Presentation of a critical review of published research or administration of an empirical project. Offered: AWSp.

F M 553 Graduate Studies in Forest Product Marketing (1-5, max. 5) Independent study and research conducted on issues related to forest products marketing. Offered: AWSp.

F M 562 Advanced Forest Resources Management (3) *Bare* Overview of concepts and procedures involved in managing forested lands for the production of commodity and amenity values. Use of systems analysis techniques for evaluating alternative land-use programs and manipulations of the forest ecosystem. Prerequisite: graduate standing. Offered: A.

F M 563 Graduate Studies in Forest Mensuration (1-5, max. 5) Offered: AWSp.

F M 564 Advanced Forest Biometry (3/5) *Turnblom* Classical problems in analysis of forest populations and growth theory, and principles of parametric analysis and estimation processes in forest biometry. Offered: odd years; A.

F M 565 Graduate Studies in Forest Management (1-5, max. 5) Offered: AWSp.

F M 566 Graduate Studies in Forest Photogrammetry (1-5, max. 5) Offered: AWSp.

F M 568 Graduate Studies in Forest Economics (1-5, max. 5) Topical issues including log export controversy, capturing value added products, economics of environmentalism, sustainable forestry, and forest products certification. Offered: AWSp.

F M 570 Graduate Studies in Forest Policy Analysis (1-5, max. 5) Offered: AWSp.

F M 571 Policy Analysis Design (5) Study based on understanding of the actors, arenas, issues, and policy communities that form the context for policy development and implementation. Exploration of approaches to policy inquiry. Consideration of implications for both policy and management. Students develop a study design for course project. Offered: jointly with PB AF 592.

F M 572 Graduate Studies in Forest Resource Planning (1-5, max. 5) Offered: AWSp.

F M 573 Forest Environmental Resource Planning (3) *Bradley* Origins and evolution of environmental planning in the forest environment. Discussion of the planning process and methodologies for environmental management and planning; selected case studies of environmental resource plans. Prerequisite: graduate standing. Offered: even years; A.

F M 575 Advanced Natural Resources Sociology (3) *Lee* Comparative study of institutional and organizational aspects of natural resources management, with special attention to forest resources. Development, persistence, and change of selected institutions in the context of pre-industrial, industrial, and advanced industrial societies. Implications for policy formulation, decision making, and technology transfer. Offered: even years; A.

F M 576 Current Topics in Forest Policy and Management (1-2, max. 2) *Ryan* Contemporary problems in forest policy and management. Topics vary but focus on the development of specific political or philosophical issues; empirical questions of concern to the forestry profession; or the development of new tools for management, planning, or policy analysis. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

F M 577 Global Forest Resource and Environmental Markets (3) *Perez-Garcia* Economic analysis of global forest resource markets. Models of timber supply and international trade. Linkages to environmental resources including carbon, biodiversity, and climate change. Offered: Sp.

F M 579 Graduate Studies in Forest Sociology (1-5, max. 5) Offered: AWSp.

F M 587 Current Topics in International Forest Products Trade: Marketing Research (2, max. 6) *Eastin* Current research topics in marketing, market research, and technology related to the forest products sector. Presented by faculty and invited professionals, supplemented by student presentations. Offered: Sp.

F M 588 Current Topics in International Forest Products Trade (2, max. 6) *Perez-Garcia* Current research topics in a variety of business related areas, including international marketing of forest products, forest economics, international business and global trade modeling. Seminars by faculty and invited professionals supplemented by student presentations. Credit/no credit only. Offered: A.

F M 589 Current Topics in International Forest Products Trade: Forest Economics (2, max. 6) *Perez-Garcia* Current research topics in forest economics as related to forest products sector. Presented by faculty and invited professionals, supplemented by student presentations. Credit/no credit only. Offered: W.

F M 591 Graduate Teaching Practicum (1-5, max. 5) Principles of teaching and learning applied to undergraduate instruction in Forest Management. Development, delivery, and evaluation of actual lectures and homework assignments are required in the student area of expertise. Credit/no credit only. Offered: AWSp.

F M 601 Graduate Internship in Forest Management (*) Credit/no credit only. Offered: AWSp.

Paper Science and Engineering

PSE 400 Wood Properties and Utilization (4) *I&S/NW Breitsprecher, Briggs* Relationship of physical and chemical properties of wood to its use. Role of silviculture and genetics in modifying wood products and value of products. Manufacturing processes of major wood products, examining material and energy balances and environmental effects. Comparison of wood with steel, concrete, plastics, and other materials. Offered: A.

PSE 401 Wood and Fiber Identification (2) NW Briggs Laboratory in identification of wood fibers of

North American species. Use of microscope and image analyzer in obtaining wood and fiber measurements. Offered: A.

PSE 402 Paper Properties and Additives (4) NW McKean Material science of paper and paperboard. Measurement and characterization of structural, mechanical, and optical properties of paper. Standard testing methods, paper colorants, effect of additives on paper properties, and relationship of fundamental paper properties to end use requirements. Offered: A.

PSE 406 Wood Chemistry I (3) NW Chemistry of cellulose, hemicellulose, and lignin. Pulping and bleaching chemistry of wood. Prerequisite: either CHEM 237 or CHEM 335. Offered: A.

PSE 407 Wood Chemistry I Laboratory (2) NW Proximate analysis of wood. Use of instrumental methods for wood component analyses. Prerequisite: PSE 406. Offered: W.

PSE 409 Wood Extractives Chemistry (2) NW Northey Nature, origin, and occurrence of the extraneous components of wood, their influence on pulp and paper preparation, and their utilization. Prerequisite: either CHEM 237 or CHEM 335. Offered: even years; Sp.

PSE 450 Paper Science and Engineering Seminar (1) Discussion of current topics in the science and technology of pulp and paper production. Emphasis on employer expectations of students in the paper science industry. Offered: AWSp.

PSE 475 Microtechnique (3) Breitsprecher Covers the principles and the practice of specimen preparation for light and electron microscopy. Tailored to meet the research interests of the participants. Students prepare mounts by several techniques and examine them with the appropriate instrumentation. Offered: odd years; Sp.

PSE 476 Pulping and Bleaching Processes (3) Gustafson Conversion of wood to mechanical and chemical pulps. Kraft, sulfite, and semi-chemical pulping processes. Chemical recovery systems. Bleaching of mechanical and chemical pulps. Offered: jointly with CHEM E 471; W.

PSE 477 Papermaking Processes (3) McKean Fiber sources and properties. Secondary fibers. Stock preparation, sheet forming, water removal, finishing. Coating, lamination, and printing. Paper products. Offered: jointly with CHEM E 472; A.

PSE 478 Pulp and Paper Laboratory (2) Jacobs-Young Laboratory experiments in chemical and semi-chemical pulping of wood. Bleaching of chemical and high-yield pulps. Physical and chemical characteristics of pulp fibers. Prerequisite: PSE 476. Offered: jointly with CHEM E 473; Sp.

PSE 479 Pulp and Paper Laboratory II (3) McKean Paper testing, paper additives, flocculation, drainage, retention, heat transfer, and fluid dynamics in papermaking from virgin and recycled raw materials. Prerequisite: PSE 402; PSE 477. Offered: W.

PSE 480 Pulp and Paper Process Control (3) Gustafson Control of pulp and paper processes. Sensors, actuators, interface equipment, and computer control strategies common to this industry. Prerequisite: PSE 476; PSE 477. Offered: W.

PSE 481 Pulp and Paper Unit Operation (3) Unit operations of particular interest in the pulp and paper

industry in addition to those covered in CHEM E 330 and 340. Prerequisite: CHEM E 340. Offered: W.

PSE 482 Paper Science and Engineering Design I (3) I&S/NW Briggs, Gustafson Basic engineering economics applied to design of pulp and paper facilities. Analysis of engineering alternatives based on use cost analysis and accounting tools. Introduction to process and mill design. Prerequisite: 2.0 in PSE 406; 2.0 in PSE 476; 2.0 in PSE 477. Offered: W.

PSE 483 Paper Coating and Converting (3) Barlow Coatings and their preparation, rheology, process equipment, drying, and product evaluation. Prerequisite: PSE 477. Offered: A.

PSE 484 Secondary Fiber (3) Hodgson Recycling of paper. Sources of secondary fiber. Processing methods for contaminants and ink removal. Properties and uses of recycled fiber. Prerequisite: PSE 406; PSE 476; PSE 477. Offered: Sp.

PSE 485- Undergraduate Research (1-, max. 3) Johnson Undergraduate research or independent study project under the supervision of the faculty; usually one credit per quarter. Offered: AWSp.

PSE 486 Environmental Management (3) I&S/NW Effects of pollution and environmental regulations on industry and community. Sources, regulations, and control of air, water, solid waste emissions as generated by the paper science industry. Offered: W.

PSE 487 Paper Science and Engineering Design II (5) Comprehensive design of pulp and paper processes, including: economic feasibility studies; process equipment design, optimization, and control; and overall process integration and layout. Safety and ethics in the design process. Prerequisite: PSE 482. Offered: Sp.

PSE 488 Polymer Chemistry (3) Allan Fundamental review of synthetic and natural polymers, including kinetics of formation, molecular weight distributions, and solid-state and solution properties. Prerequisite: either CHEM 237 or CHEM 335. Offered: W.

PSE 490 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp.

PSE 491 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp.

PSE 492 Undergraduate Studies (1-5, max. 5) Individual tutorial study of topics for which there is not sufficient demand to warrant the organization of regular classes. Offered: AWSp.

PSE 497 Pulp and Paper Internship (1-2, max. 3) Technical and economic analysis of commercial pulp and paper installations. Structured visits to industrial operations to observe technical aspects of pulp and paper curriculum in practice. Preparation of visitation reports and analysis in seminar setting. Offered: AWSp.

Courses for Graduates Only

PSE 502 Pulp and Paper Technology (4) Hodgson, Jacobs-Young Overview of the sources of fiber raw material and processes for pulp and papermaking (mechanical and chemical pulping, papermaking and bleaching processes). Laboratory study of converting raw materials to pulp and paper products. Offered: A.

PSE 505 Biotechnology in Pulp and Paper Industry (3) Jacobs-Young Explores biotechnology terminology, the utilization of biological agents in pulp processes, and analytical testing methods, as well as the economic and environmental impacts of bioprocesses.

PSE 508 Advanced Wood Chemistry (3) Biogenesis of lignins and isotope labeling methods. Oxidative coupling phenols. Alkaline degradation of polysaccharides and oxygen-based bleaching chemistry. Prerequisite: PSE 406. Offered: odd years; A.

PSE 514 Pulp and Paper Process Simulation (3) Gustafson Presentation of process simulation techniques currently used in the pulp and paper industry. Large-scale simulations of pulp and paper unit operations developed and analyzed. Use of simulations for control, process optimization, and statistical quality control purposes. Offered: even years; A.

PSE 555 Surface and Colloid Science of Papermaking (3) Hodgson Introduction to principles of surface and colloid science, particularly as they pertain to the wet end of the papermaking process. Surface and colloidal properties of wet end additives. Examination of specific examples and case studies in papermaking situations. Prerequisite: PSE 477 or equivalent. Offered: odd years; A.

PSE 570 Graduate Studies in Forest Products (1-5, max. 5) Offered: AWSp.

PSE 576 Microscopy and Photomicrography (3) Breitsprecher Principles of microscopy as well as the techniques of using microscopes and taking photographs with them. Darkroom practice for black and white photography included. Students take photographs, develop negatives, and make enlargements. Offered: even years; Sp.

PSE 577 Wood and Paper Science Seminar (1, max. 6) Discussion of current topics in the science and technology of pulp and paper production, including wood and polymer chemistry. Offered: ASP.

PSE 579 Wood Properties and Utilization (4) Breitsprecher, Briggs Biology of wood formation and basic properties of wood, processes that create wood products, performance attributes required of these products, understanding of linkages between biology, silviculture, and product technology and performance. Offered: AW.

PSE 580 Field Studies in Wood Utilization (2) Briggs Five-day field trips visiting a diverse mix of wood products industries in the Puget Sound region. Students observe manufacturing technologies for various products, learn about markets from these products, and discuss resource, market, and technical issues with management in these facilities. Offered: Sp.

PSE 589 Wood Biosynthesis (3) Biosynthesis of carbohydrates, phenolic and terpenoid compounds in forest trees, and biochemistry of wood degradation. Prerequisite: PSE 406. Offered: even years, Sp.

PSE 591 Graduate Teaching Practicum (*, max. 5) Principles of teaching and learning applied to undergraduate instruction in paper science and engineering. Development, delivery, and evaluation of actual lectures and homework assignments. Graduate teaching experience for PSE students only. Credit/no credit only. Offered: AWSp.

The Information School

Dean

Michael Eisenberg

Associate Dean

Harry Bruce

370 Mary Gates Hall

General Catalog Web page:

www.washington.edu/students/gencat/academic/Info_School.html

School Web page:

www.ischool.washington.edu

The Information School is dedicated to preparing individuals for professional careers and leadership roles in the information professions. As a broad-based information school, the School embraces a wide range of academic interests reflected in its main academic degree areas: information science, library science, information management, and informatics. Graduates of the School assume a variety of professional roles in the public and private sectors, with positions that span from information architects to children's librarians, from taxonomists to Web developers.

The signature of the School is its human-centered approach to information studies and technology. This focus holds the human perspective as a critical and integral component in the study of information and technology; it encourages increasing understanding of human involvement with information and its social and technological ramifications.

Through its specific goals and objectives in instruction, research, service, and outreach, the School creates and continues to foster a dynamic learning environment dedicated to preparing our students for emerging opportunities and challenges of the 21st century.

Degrees Offered

The School offers degree programs leading to the Bachelor of Science in Informatics, the Master of Library and Information Science (MLIS), the Master of Science in Information Management (MSIM), and the Doctor of Philosophy in Information Science. The School also provides continuing education opportunities for professionals as well as service courses for undergraduates in information fluency, research strategies, and technology.

History

Originally established as the School of Librarianship in 1911, the Information School is the oldest library and information school west of the Mississippi. The School has been continuously accredited by the American Library Association since 1926 and offers the most extensive ALA-accredited library and information science degree program in the Northwest region of the United States.

In 1998, the University set out to transform the School by charging it with a new mission, to become what it is today: a broad-based information school that meets the challenges and opportunities of the infor-

mation age. With the addition of three new degree programs, a new dean, an esteemed faculty, and state-of-the-art facilities, the Information School became the University's sixteenth independently organized school and college in 2001.

Continuing its long tradition of excellence and innovation, the School continues to explore the theoretical and applied cutting edges of the information field and to nurture the best of both worlds: traditional library values and ever-changing information frontiers.

The vision statement adopted by the School is "*People and Knowledge: Building Information Connections*. The faculty, staff, students, and alumni of the Information School believe that connecting people with knowledge is of fundamental individual and societal importance; further, we believe access to information is a basic human right. We commit ourselves to sustain this vision."

The Information School is actively committed to cultivating diversity in the School and in the information professions.

Graduate Programs

Graduate Program Coordinator
470 Mary Gates Hall, Box 352840
206-543-1794
info@ischool.washington.edu

The School offers graduate programs leading to the Master of Library and Information Science, the Master of Science in Information Management, and the Doctor of Philosophy in Information Science.

Admission Requirements:

Minimum requirements for admission to the graduate programs in the School are a baccalaureate degree from an accredited institution, a GPA of 3.00 in the last two years of college work, and approval of the School and the UW Graduate School. A master's degree is expected for applicants to the Ph.D. program. Students enter the School from varied disciplines.

A complete application file includes the copy of the UW Graduate School application for admission; official transcripts; Graduate Record Examination general test scores (GMAT scores are acceptable for MSIM applicants only); three letters of recommendation; a curriculum vitae or resume, and a personal statement.

International applicants, must also meet requirements outlined by the UW Graduate Admissions for international students, including requirements for the Test of English as a Foreign Language (TOEFL). For additional information, see www.grad.washington.edu/admissions/index.htm.

Deadlines for admissions vary by program. For more information and to request application materials, visit the School's Web site at www.ischool.washington.edu.

Financial Aid

The University of Washington Financial Aid Office administers a variety of government and University funded financial aid programs for which applicants must submit the Free Application for Federal Student Aid form (FAFSA). For more information, contact the UW Financial Aid Office, 105 Schmitz Hall. Information on the FAFSA is also available online at www.fafsa.org.

Graduate Assistantships and Scholarships

Financial aid options for full-time students may include graduate assistantships and scholarships. Graduate assistants generally work 20 hours per week and receive a tuition waiver as well as a monthly stipend and medical benefits. To apply for a MLIS Graduate Assistantship, prospective students should submit a cover letter and resume along with their application to the MLIS program. Ph.D. students are automatically considered for graduate assistantships, upon request.

MLIS scholarships are awarded on a basis of financial need, based on information from the Free Application for Federal Student Aid (FAFSA) and academic merit.

Information regarding additional sources of financial aid, from sources outside of the Information School, is available at the Information School Financial Resources Web pages at www.ischool.washington.edu/services/finaidgeneral.htm.

Special Research Facilities

Located on the third and fourth floors of Mary Gates Hall, one of the University's flagship high-technology buildings, the School offers an extensive software collection, a state-of-the-art computer classroom, an innovative Technology Exploration (TE) Lab, and excellent network connectivity. Students have access to software applications including titles for database and text management, programming, graphics, Web page creation, Internet exploration and collaboration, and office productivity. Students also have access to a large number of bibliographic databases and commercial information services.

The TE Lab is a unique facility that includes twenty-four student stations and thirty-two servers on a "server wall." The lab is designed to promote exploration of a variety of technologies. Students can install alternative operating systems such as Linux, setup their own file, Web, or database server, and become the system administrator of their machine. Each machine includes a removable hard drive so that students can use either a "production setup" with all software previously installed and configured, or an "experimental setup" where students are free to do as they desire.

For more information, visit the School's Web site at www.ischool.washington.edu/technology/.

Continuing and Professional Education

The Information School works with UW Educational Outreach to offer classes, workshops, and certificate programs for continuing education and professional development. Current certificate programs include Web technology essentials; data resource management; electronic information and records management; Web administration; and small-business Webmaster. Those interested in continuing education or certificate programs should contact UW Educational Outreach, 5001 25th Avenue N.E., Box 354221, University of Washington, Seattle, WA 98105; phone 206-616-0783; or see www.extension.washington.edu.

Master of Library and Information Science

The MLIS program prepares graduates for an ever-expanding variety of information professions including information architecture, school library media, knowledge management, librarianship, and other information-related positions.

The 63-credit MLIS degree includes three program options: full-time (day), part-time (evening), and the

distance program. In addition, the Information School offers a 45-credit law librarianship program for individuals who have an earned J.D. degree.

The curriculum includes nine core courses, which cover theoretical and applied aspects of the information life cycle. The remaining 29 elective credits allow student to pursue their preferred areas of interest or emphasis.

The Distance MLIS is a part-time program that generally requires three years to complete. The delivery of instruction is primarily Internet-based with a brief, quarterly, on-campus residency. Students attend course meetings in-residence at the University of Washington in Seattle for two to five days each quarter, excluding summer quarter.

Law Librarianship Program

The law librarianship program is designed to prepare lawyers to serve as law librarians in courts, federal and state units of government, law schools, corporations, and law firms. Attorneys enrolled in the program earn the Master of Library and Information Science degree after successful completion of 45 quarter credits. The highly structured law librarianship program includes seven MLIS core courses, five law librarianship courses and a directed fieldwork experience.

Law MLIS applicants, who must hold a degree from an accredited U.S. law school or from a law program in one of the common-law countries, are encouraged to submit LSAT rather than GRE scores.

The law librarianship program begins in the autumn quarter and is sequential, ending with the following summer quarter. Please contact Professor Penny Hazelton (206-543-4089; pennyh@u.washington.edu) for further information.

School Library Media Specialist

Requirements for the Washington State Library Media endorsement may be pursued concurrently with the MLIS degree. Individuals interested in earning a Library Media endorsement without pursuing the MLIS should contact UW Educational Outreach at 206-685-6404 or see www.extension.washington.edu. In Washington, Library Media Specialists working in public schools must hold a current state teaching certificate.

Master of Science in Information Management

The Master of Science in Information Management is a mid-career degree that combines information management and information technology with a focus on the user perspective. Prospective students are professionals in management, information technology and library and information science, from both the public and private sectors, who wish to deepen their understanding of information technology, further their education and advance professionally. The Friday-evening and Saturday course scheduling enables students to maintain full-time workloads.

MSIM students must complete 47 credits of graduate coursework to obtain the degree. Degree requirements feature the foundation, core, integration, and elective coursework. Students generally take two courses each quarter during autumn, winter, and spring to graduate in two years. Summer attendance is not required, but the elective requirement can be satisfied during the summer.

MSIM degree requirements include the following components:

Foundations (4 credits): Students begin with IMT 510, a signature course that introduces user-centered

concerns. Basic concepts and core areas covered throughout the curriculum are introduced.

Information Management and Technology Core (35 credits): The core course work provides students with a concrete understanding of the relationship between the technical and organizational aspects of information management. *Information Technology core courses:* IMT 530, 540, 546, 548. *Information Management core courses:* IMT 551, 580, 581, 582, 598.

Integration (5 credits): The MSIM curriculum requires a capstone experience, IMT 595. The capstone addresses the increasing demand for the application of IT to the information needs of diverse user groups. Integration offers students the opportunity to synthesize the ideas presented earlier in the program and to help implement comprehensive information systems within an organization.

Electives (3 credits): MSIM students select electives from a broad range of academic disciplines in consultation with the Student Services Administrator or the program chair.

Admission to the MSIM program is for autumn quarter. The application deadline for autumn admission is May 15.

Doctor of Philosophy in Information Science

The Ph.D. in Information Science is a theoretical, research-based doctorate that focuses on creating and advancing new knowledge that makes a difference. The program provides research education and scholarly mentoring for doctoral students who have an interest in the issues and concerns that are central to the domain of the discipline of information science. Students are selected on their ability to engage in theoretical discourse and to conduct empirical investigation.

The areas of inquiry for doctoral research in the Information School are aimed at increasing our understanding of human involvement with information and its social and technological ramifications. It addresses those issues that affect the transfer and use of information by people in social, organizational and individual contexts. This may include areas such as information and technology literacy, access to information, human-computer interaction, information organization and knowledge management, information systems design, information retrieval, information policy, social aspects of information technology, and information behavior.

Many of these issues are associated with information and communication technologies and for this reason students are highly competent and creative users of technology.

Admission to the doctoral program is for autumn quarter only. The application deadline is February 1 for U.S. citizens and eligible residents. International applicants are strongly encouraged to submit their applications by November 1 for full consideration. A master's degree is required, but this may be waived under exceptional circumstances evidenced by significant professional or research experiences. The program does not have a point of exit within the Ph.D. course work program to take a master's award.

Degree Requirements: To be awarded a Ph.D. in information science, the following requirements must be met:

1. Pass a Preliminary Examination determined by a school-based advisory committee at the end of the required first-year of full-time study.

2. Successfully complete (minimum cumulative GPA 3.25) all course requirements as stipulated by the School.
3. Complete the School's requirement for teaching and research practica.
4. Pass the General Examination upon completion of course work and practica components to attain formal candidacy for the Ph.D. program (candidate's certificate).
5. Successfully defend a dissertation proposal before a Supervisory Committee.
6. Successfully defend a dissertation before a Reading Committee (Final Exam).

For more information and to request application materials, visit the School's Web site at www.ischool.washington.edu/phd/.

Faculty

Professors

Benne, Mae M. * 1971, (Emeritus); MS, 1955, University of Illinois; children's literature, public library services for children.

Borning, Alan H. * 1980, (Adjunct); MS, 1974, PhD, 1979, Stanford University; human-computer interaction; constraint-based languages and systems.

Eisenberg, Michael B. * 1998; MLS, 1973, State University of New York (Albany), PhD, 1986, Syracuse University; information problem-solving; use of information and information technology; information science.

Fidel, Raya * 1982; PhD, 1982, University of Maryland; information systems, systems analysis, user interaction, classification research.

Fuller, Sherrilynne S. * 1988; PhD, 1984, University of Southern California; analysis, representation and mapping of research findings (data mining).

Grudin, Jonathan T. 1999, (Affiliate); PhD, 1981, University of California (San Diego); computer-supported cooperative work, collaboration technologies, human-computer interaction.

Hazelton, Penny A. * 1985, (Adjunct); JD, 1975, Lewis And Clark College, MLL, 1976, University of Washington; law librarianship, legal bibliography, computer-assisted legal research, law, Indian law.

Hiatt, Peter * 1974, (Emeritus); PhD, 1963, Rutgers University; adult services, special populations, library education, staff development, continuing education.

Levy, David M. * 2000; PhD, 1979, Stanford University; nature of documents and the tools and practices through which they are created and used.

Pejtersen, Annelise Mark 2002; PhD, 1971, University of Copenhagen (Denmark); human-work interaction, cognitive work analysis, collaborative information systems.

Shaw, Spencer G. * 1970, (Emeritus); BLS, 1941, University of Wisconsin; librarianship.

Wilson, Elizabeth A. 1992, (Affiliate); MLS, 1978, University of Illinois (Urbana-Champaign).

Associate Professors

Brooks, Terrence A. * 1986; PhD, 1981, University of Texas (Austin); interest scripting and programming, Web page design, post-alphabetic information designs.

Bruce, Harry * 1998; PhD, 1996, University of New South Wales(Australia); human factors in information and communication technology.

Efthimiadis, Efthimis * 1997; PhD, 1992, City University, London (England); user-centered design and evaluation of information retrieval systems.

Friedman, Batya * 1999; PhD, 1988, University of California (Berkeley); value-sensitive design, social-cognitive and cultural aspects of information systems.

Johnson, Ronald A. 1986; MA, 1972, University of Chicago, MS, 1975, University of Southern California; information sciences.

Mignon, Edmond * 1970, (Emeritus); PhD, 1976, University of California (Berkeley); information retrieval, bibliographic organization, information studies, methods of research.

Skelley, Grant T. * 1969, (Emeritus); PhD, 1968, University of California (Berkeley); bibliography and reference, subject literature, history of the book.

Sutton, Stuart A. * 1999; JD, 1981, Golden Gate University, LLM, 1982, MLS, 1987, PhD, 1991, University of California (Berkeley); metadata and networked information discovery and retrieval, law and policy of intellectual property.

Assistant Professors

Carlyle, Allyson * 1996; MLS, 1986, PhD, 1994, University of California (Los Angeles); online catalog use and design, conceptual foundations of descriptive cataloging.

Green, Maurice W. * 1998; PhD, 1999, State University of New York (Albany); information decision systems, leadership and analysis.

Janes, Joseph W. * 1998; MLS, 1983, PhD, 1989, Syracuse University; evolution of models of practice of digital reference.

Kim, Jeffrey Y. * 2000; PhD, 2000, University of California (Irvine); computer-supported cooperative work, ubiquitous computing.

Mai, Jens-Erik * 2000; PhD, 2000, University of Texas (Austin); philosophy, theory and practice of organization and representation of information.

McDonald, David W. 2002; PhD, 2000, University of California (Irvine); social impacts of computing, ethnographic field study, CSCW, HCI, system design and implementation.

Nelson, Jerold A. * 1971, (Emeritus); PhD, 1971, University of California (Berkeley); interpersonal relations in libraries, intellectual freedom.

Pettigrew, Karen E. * 1999; MLS, 1991, PhD, 1998, Western Ontario University (Canada); information behavior.

Pratt, Wanda 2002; PhD, 1999, Stanford University; information retrieval, human-computer interaction, text mining, medical informatics.

Saxton, Matthew * 2000; MLS, 1994, PhD, 2000, University of California (Los Angeles); evaluation of information services, intermediation, collection management, information competencies.

Senior Lecturers

Barker, Scott F. 1999; MS, 1987, Syracuse University; computer networks, Internet applications, information management.

Jones, William P. 2000; PhD, 1982, Carnegie Mellon University; personal information management,

human factors in information and communication technology.

Smith, Sharyl G. 1999; MLS, 1970, University of Washington, DLS, 1985, Columbia University; materials for children and the field of school library media.

Lecturers

Boiko, Robert B. 2000; MS, 1989, University of Utah; content management, sociology of information management, self-generating metadata systems.

Oyler, Mel R. 1993; MS, 1985, University of California (Davis), PhD, 1997, University of Washington; database systems, technology strategy, commercial applications of information science.

Whiteaker, Grace B. 2001; MLIS, 2000, University of Washington; database design, information literacy, socio-cultural effects of technology, technology in education.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

Informatics

INFO 414 Information Behavior (5) Advanced study of information behavior. Focus on the user-centered approach and the research literature of human information behavior. Introduces methods for evaluating and translating the results of user behavior studies into the design of information services and systems. Prerequisite: INFO 310.

INFO 419 Special Topics in Social Aspects of Information (1-5, max. 10) Various topics in the social aspects of information. Offered by visitors or resident faculty.

INFO 424 Information Visualization and Aesthetics (5) VLPA Examines the visualization of information: the effects of human perception, the aesthetics of information design, the mechanics of visual display, and the semiotics of iconography. Examples may include census, epidemiological, crime, earth satellite, and medical data in the contexts of special computer applications, user populations, and cultures. Prerequisite: CSE 143.

INFO 440 Information System Design (5) NW Theoretical and practical examination of the information systems design process. Techniques for assessing the need for technology, specifying the system design, and involving users in the design process are explored. Design methods include social impact statements, future scenarios, mock-ups, rapid prototyping, field-testing, heuristic evaluation. Prerequisite: CSE 373.

INFO 444 Value-Sensitive Design (5) Introduction to value-sensitive design (VSD), information system design that accounts for human values in a principled and comprehensive manner. Examination of existing systems from a VSD perspective. Explores VSD research methods including conceptual, technical, empirical investigations. Key values include accountability, autonomy, consent, privacy, property, trust, sustainability. Prerequisite: CSE 373.

INFO 445 Advanced Database Design, Management, and Maintenance (5) Advanced perspectives on DBMS theory, architecture, and implementation. Conceptual, logical, physical modeling. Index structures, query optimization and perform-

ance tuning, relational algebra, transaction processing, and concurrency control. Operational databases, decision support systems, and data warehousing. Projects in database implementation and integration. Social implications of large distributed database systems. Prerequisite: INFO 340; CSE 373.

INFO 446 Advanced Search Engine Systems (5) Focus on design, development and evaluation of search engines. Theories and models in information retrieval for text and multimedia databases, Web search engines, recommendation systems, and digital libraries. Topics include language issues, data-mining, machine learning, user-profiling, visualization, user interfaces, usability. Coursework involves analytical comparisons of search engines. Prerequisite: INFO 340.

INFO 447 Computer Supported Cooperative Work (5) Focuses on design and use of collaboration technologies to communicate, share information, and coordinate activity. Emphasis on behavioral and social aspects of adopting and using these technologies. Topics include the history of work in this and related fields, collaboration support for teams, organizations, and communities. Prerequisite: INFO 310.

INFO 449 Special Topics in Information Technology (1-5, max. 10) Various topics in information technology. Offered by visitors or resident faculty.

INFO 454 Information Policy: Domestic and Global (5) National and international information policy: public and private sector policy in terms of privacy, access, and exploitation; technology infrastructures and policies supporting the information industries; digital convergence and the emerging mega-industries. Prerequisite: INFO 311.

INFO 459 Special Topics in Information Policy (1-5, max. 10) Various topics in information policy. Offered by visitors or resident faculty.

INFO 484 Information Entrepreneurship (5) Investigates the development of innovative human-centered informatics products, with emphasis on the unique challenges and opportunities in high-value information products. Includes competition, strategic planning, tactical marketing, informatics product launches, and applied entrepreneurship. Teamwork to create and present plans for innovative informatics products/services. Prerequisite: either INFO 300, INFO 310, or INFO 311.

INFO 489 Special Topics in Information Management (1-5, max. 10) Various topics in information management, offered by visitors or resident faculty.

INFO 490 Design and Development of Interactive Systems (5-8) Design and formative evaluation of an interactive information system to solve a real problem. Student-organized team projects are encouraged. Must be taken for a minimum of 5 credits. Prerequisite: INFO 340; INFO 381; INFO 440.

INFO 491 Research in Informatics (5-8) Provides hands-on experience conducting a research project related to information behavior and technology. This project may be carried out in a natural setting or in the laboratory by preparing students to carry out similar research projects in their professional work. Prerequisite: INFO 370.

INFO 495 Internship in Informatics (1-5, max. 12) Internship in the private or public sector, as approved by faculty member. Work jointly supervised by faculty member (or approved academic sponsor) and an on-site work supervisor.

INFO 498 Special Topics in Informatics (1-5, max. 15) Various topics in informatics. Offered by visitors or resident faculty. Topics vary.

INFO 499 Independent Study (1-5, max. 15) Readings, design projects, or research under faculty supervision.

Information Management and Technology

Courses for Graduates Only

IMT 510 Human Aspects of Information Systems (4) Social, cognitive, behavioral and contextual aspects of information technology, including information behavior, interpersonal interaction, and social responses to information technology. Emphasis on human well-being and information exchange as a communicative event. Exposure to experimental and interview methodologies.

IMT 530 Taxonomy, Classification, and Metadata (4) Introduction to principles of taxonomy construction using classification theory. Examines conceptual foundations underlying a wide variety of indexing languages. Surveys the use of metadata and metadata standards for the management of information systems. Considers technological frameworks to support the implementation of metadata standards and taxonomies, such as CXML and RDF.

IMT 540 Information Systems, Architectures, and Retrieval (5) Introduction to user-centered information system development processes. Overview of Web-based, stand-alone, and distributed search engines, database management systems, architectures, and retrieval models. Prerequisite: IMT 510.

IMT 546 Data Communications and Networking (4) Local and wide area computer networking including network topologies and hardware, packet switching, client/server architectures, network protocols, and network servers and applications. Addresses server operating systems, management, security, authentication, and policy issues associated with distributed networks. Prerequisite: IMT 510.

IMT 548 Information System Design (5) Theoretical and practical examination of information systems analysis and design processes as they apply in the workplace. Explores techniques for assessing the need for technology, defining specifications, and involving users in the design process. Design methods include social impact statements, future scenarios, mock-ups, rapid prototyping, and field-testing. Prerequisite: IMT 540.

IMT 551 Law and Ethics in Information Management (3) Select concepts, processes, and issues related to the organizational contexts within which information professionals practice. Topics include information as public/private good, intellectual property, privacy, confidentiality, information liability, and information policy. Focus on contemporary issues affecting the role of the information manager.

IMT 580 Management of Information Systems (4) Information technology context, planning, decision-making, unit organization, CIO leadership, unit controls related to managing information resources to achieve organizational goals. Topics include information technology management challenges, operational, strategic planning, decision-making, unit infrastructure, CIO competence, aligning information technology initiatives with organizational objectives.

IMT 581 Leadership and the Management of Change (4) Recognizing the need for change, preparing for change initiatives, and institutionalizing change. Topics include vision development, shared vision, transforming the vision into reality. Prerequisite: IMT 510.

IMT 582 Strategic Planning and Evaluation (3) Strategic planning, information system resources, information technology functions, and the chief information officer as critical components for leveraging

information to achieve organizational goals. Topics include vision, mission and goals, strategic planning, information technology functions, chief information officer competence, and aligning information technology initiatives with organizational objectives. Prerequisite: IMT 510.

IMT 589 Special Topics in Information Management (1-4, max. 12) Special study and research in topics of current concern to faculty and students.

IMT 595 Stakeholders, Information, and Technology (5) Capstone experience. Addresses system integration and the increasing demand to apply a broad range of technologies to the information needs of diverse user groups during the implementation of comprehensive information systems across an organization. Student-organized individual/team projects are encouraged. Credit/no credit only. Prerequisite: all MSIM core courses.

IMT 598 Emerging Trends in Information Management and Technology (3) Focus on emerging trends in information management and information technology. Attention given to their impact on the functions of the chief information officer and others managing the acquisition, retention, use and disposition of information and the enabling technologies. Exploration of methods and resources for trend discovery and tracking. Prerequisite: IMT 510.

IMT 590 Fieldwork in Information Management (1-4, max. 12) Supervised fieldwork. May be taken in as many as six consecutive quarters. Prerequisite: enrollment in the MSIM program.

IMT 600 Independent Study or Research in Information Management (1-4, max. 12) Supervised independent study or research. May be taken in as many as six consecutive quarters. Prerequisite: enrollment in the MSIM program.

Information Science

Courses for Graduates Only

INSC 500 Theoretical Foundations of Human Information Behavior (5) Study of constructs, concepts, models, and theories information scientists use in studying human information behavior. Socio-cognitive aspects of individuals needing, seeking, giving, and using information. Models of information behavior, conceptual frameworks, assumptions, analytical tools, and the factors that differentiate groupings of information users and predict or influence information behavior.

INSC 530 Knowledge Representation (5) In-depth survey of the various approaches to knowledge representations in areas such as taxonomy, library classification, anthropology, cognitive psychology, linguistics, and artificial intelligence.

INSC 540 Information Retrieval and Systems (5) Seminar in theories and models in information retrieval. Reviews user-centered and system-centered approaches and issues involved in system design, development, and evaluation of information retrieval and systems. Includes methods and tools for document analysis, retrieval techniques, search engines, interfaces, usability, and evaluation. Prerequisite: permission of instructor.

INSC 550 Information Policy (5) Doctoral seminar in the foundations of information policy including intellectual freedom, public/private good, intellectual property, privacy, and digital convergence, and the reshaping of information practices and information industries. Prerequisite: Permission of instructor.

INSC 565 Teaching Practicum I (3) Doctoral student participation in teaching in a faculty-taught course. Credit/no credit only.

INSC 566 Teaching Practicum II (3) Doctoral student takes primary teaching responsibility for a course under supervision of a faculty liaison. Credit/no credit only. Prerequisite: INSC 565.

INSC 570 Research Design (5) Introduction to empirical research, basics of theory construction and research design, types of research, ethical issues, instruments and techniques for descriptive research, measures of association. Employs an integrated (qualitative and quantitative) and focused approach.

INSC 571 Quantitative Methods in Information Science (5) Describes uses, characteristics, and theoretical bases of research methods and data analysis techniques used in quantitative research, emphasizing uses in information and library science. Topics include experimental design, descriptive and inferential statistics, the normal distribution, elementary probability, nonparametric statistics, and exploratory data analysis techniques. Prerequisite: INSC 570.

INSC 572 Qualitative Methods in Information Science (5) Principles and approaches to conducting qualitative research in information science, including how to design a qualitative study, role of context, methods of data collection and analysis, increasing the trustworthiness of data, minimizing observer effect, how to incorporate and build theory. Exposure to field research and data analysis. Prerequisite: INSC 570.

INSC 575 Research Practicum I (3) Students work with a researcher from the Information School as an active member of a research team. Credit/no credit only.

INSC 576 Research Practicum II (3) Students will work with an approved researcher as an active member of a research team. Credit/no credit only. Prerequisite: INSC 575 or permission of instructor.

INSC 600 Independent Study or Research (*) Credit/no credit only.

INSC 800 Doctoral Dissertation (*) Credit/no credit only.

Library and Information Science

LIS 498 Special Topics (1-5, max. 15) Library service and information science subject matter in seminars, workshops, or other appropriate formats. Topics vary and may be repeated for credit. Credit/no credit only.

Courses for Graduates Only

LIS 500 The Life Cycle of Information (2) Overview of the major concepts, processes and systems, actors, and operations in the life cycle of information. Introduction to the creation, publishing and distribution, evaluation and selection, organization, access, retrieval, and use of information. Exploration of the social context in which these processes and their stakeholders interact. Credit/no credit only.

LIS 505 Archival and Manuscript Services (3) Selection, organization, and uses of archival and manuscript collections. Emphasis on the principles and techniques; some attention to the administration of state archival and historical institutions' collections. Lecture, demonstration, and laboratory.

LIS 507 Preservation and Conservation of Library Materials (3) Consideration of the many factors contributing to the physical vulnerability of library materials of all kinds and an overview of resources and strategies for those who determine preservation policy or manage the application of such policy. No technical background necessary.

LIS 508 History of Recorded Information (4) Exploration of the history and ongoing transforma-

tion of recorded information within three broad spheres of human life: public communication, administrative and commercial operation, and personal communication.

LIS 510 Information Behavior (4) Introduction to the user-centered approach to information behavior. Theoretical foundations of various information behaviors such as information need, utilizing, gathering, seeking, and evaluating. Synthesis of user studies, construction of user profiles, performance of gap analysis, and application of the results of user studies to improve services and system design. Prerequisite: LIS 500.

LIS 511 Systems Analysis (4) Introduction to the systems approach including basic concepts in the approach, dimensions of systems and steps in systems design. Emphasis is on the analysis, evaluation and design of information systems and services. Prerequisite: LIS 500.

LIS 519 Special Topics in Information Behavior (1-4, max. 18) Introduction to innovative and specialized topics in information behavior. Course may be offered irregularly and may be repeated for credit. Prerequisite: LIS 510; others as determined by the specific topics covered.

LIS 520 Information Resources, Services, and Collections (4) Concepts, processes, and skills related to parts of the life cycle of knowledge involving creation, production, distribution, selection, collection, and services to facilitate access. Specific discussion topics include characteristics of recorded knowledge; organizations and services devoted to managing access to recorded knowledge; principles associated with development of recorded knowledge and collections. Prerequisite: LIS 500.

LIS 521 Principles of Information Services (4) Analysis of the information mediation process, including determination and analysis of information needs; searching for, evaluation, and presentation of appropriate results; modalities for delivery of services; and current and future techniques. Prerequisite: LIS 520.

LIS 522 Collection Development (3) Access to materials as context for development and management of library collections in academic, public, school libraries. Community analysis, library mission; collection development policies, criteria, levels, responsibilities; aids to selection; collection evaluation, use studies; controversial materials.

LIS 523 Advanced Information Services (4) Investigation of the development, administration, and evaluation of information services for supporting the research process both within and across organizations. Prerequisite: LIS 521 or permission of instructor.

LIS 526 Government Publications (3) Government publications of the United States and foreign countries, their acquisition, organization, and use. Credit/no credit only.

LIS 527 Business Information Resources (3) Survey of the extent and nature of business information and its sources, and of business information producers and consumers. Study and use of both print and on-line sources.

LIS 528 Information Access in Health Sciences (3) Characteristics of users of health sciences information, environments including academic health sciences centers, hospitals, clinics, and public libraries, evaluation of information resources, types of uses of information management systems, health information policy, professional standards, education and certification of health professionals including health science librarians. Credit/no credit only. Prerequisite:

LIS 520, LIS 521, or permission of instructor. Offered jointly with MEDE 570.

LIS 529 Special Topics in Information Resources, Services and Collections (1-5, max. 18) Introduction to innovation and specialized topics in information resources, services and collections. Prerequisite: LIS 500, LIS 520; others as determined by the specific topic covered.

LIS 530 Organization of Information and Resources (4) Introduction to issues in organization of information and documents including: analysis of intellectual and physical characteristics of documents; principles and practice in surrogate creation, including standards and selection of metadata elements; theory of classification, including semantic relationships and facet analysis; creation of controlled vocabularies; and display and arrangement. Prerequisite: LIS 500, which may be taken concurrently.

LIS 531 Catalogs, Cataloging, and Classification (4) Develops an understanding of library catalogs as information retrieval systems. Introduces library cataloging and classification. Focus on principles and standards in the creation of catalogs and cataloging records. Includes practice in descriptive and subject cataloging and classification. User perspective emphasized throughout. Prerequisite: LIS 500, LIS 530.

LIS 533 Advanced Cataloging and Classification (4) In-depth theory and practice in library cataloging and classification. Includes introduction to cataloging materials in a variety of formats. Prerequisite: LIS 500, LIS 530, and LIS 531.

LIS 535 Classification Theory (3) Survey of classificatory principles from bibliographic, philosophical, socio-cognitive, and linguistic perspectives. Overview of history of bibliographic classification and exploration of some existing bibliographic classification systems. Ramification of theoretical approach for classification practice. Prerequisite: LIS 530.

LIS 536 Indexing and Abstracting (3) Exploration of issues in subject representation. Survey of different approaches, techniques, and methods for representing the subject matter of documents, including an evaluation of the role of users and context in subject representation. Formulation of policies for indexing and abstracting services. Prerequisite: LIS 530.

LIS 537 Construction of Indexing Languages (4) Exploration of the design, construction, evaluation, and maintenance of controlled indexing languages, including studies of how users are integrated into the design process. Through completion of thesaurus construction project, prepares students to design index languages, plan and implement a design project, and evaluate indexing languages. Prerequisite: LIS 530.

LIS 539 Special Topics in Organization of Information and Resources (1-4, max. 18) Introduction to innovative and specialized topics in the organization of information and resources. Prerequisite: LIS 500, LIS 530; others as determined by the specific topic covered.

LIS 540 Information Systems, Architectures and Retrieval (5) Introduction and overview of information systems, system architectures, and retrieval models. Emphasis given to the role of users in the design, development, and evaluation of information retrieval and database management systems. Prerequisite: LIS 500, which may be taken concurrently.

LIS 541 Internet Technologies and Applications (3) Overview of Internet technologies including networking hardware, the TCP/IP protocol suite,

addressing, packets and routing, the client/server model. End-user applications for communication and collaboration such as telnet, FTP, email, conferencing, and streaming media. Web site creation, development, and management. Credit/no credit only.

LIS 542 Conceptual Database Design (3) Preliminary design of data bases for decision support systems. Introduces methods of collecting user requirements, requirement analysis, data dictionary, the entity-relationship model, methods for database integration, preparation for data collection, and evaluation. Credit/no credit only.

LIS 543 Design of Information Systems (3) Discusses how theories of conceptual data modeling affect design of database and information systems, examines relationships between modeling and implementation, and bridges gaps between theoretical understanding of database design and implementation issues. Implements conceptual schemata development in 542.

LIS 544 Information Retrieval System (3) Covers theories and models in information retrieval (IR) and reviews user-centered and system-centered approaches. Issues involved in the design, development and evaluation of IR systems are examined including: methods and tools for document analysis, retrieval techniques, search engines, interfaces, usability, evaluation.

LIS 545 Programming for Information Systems (5) Introduction to structured object-oriented programming for information systems. Focus on fundamental principles of programming with attention to elementary algorithms and data structures, interface design, user testing, and knowledge representation. Prerequisite: LIS 540 or permission of instructor.

LIS 546 Network System Administration (4) Introduction to local area network hardware, topologies, operating systems, and applications. Covers aspects of network setup and management including network and application protocols, system configuration, security and Internet connectivity. Hands-on experience with network applications and operating systems. Prerequisite: LIS 500.

LIS 549 Special Topics in Information Systems, Architectures, and Retrieval (1-4, max. 18) Introduction to innovative and specialized topics in information systems, architectures, and retrieval. Prerequisite: LIS 540, plus others as determined by topic.

LIS 550 Information in Social Context (4) Concepts, processes, and issues related to the larger social context within which the life cycle of knowledge is played out. Discussion topics include intellectual freedom, information as public/private good, intellectual property, privacy, confidentiality, information liability, information and telecommunications policy, the economics of information, and other professional values. Prerequisite: LIS 500, which may be taken concurrently.

LIS 551 Intellectual Freedom in Libraries (3) Analysis of issues related to intellectual freedom, particularly to implications for libraries and librarians. Consideration of current legal climate, conformity versus freedom in modern world, librarian as censor, social responsibility and individual freedom, intellectual freedom of children, prospects for future. Credit/no credit only.

LIS 554 Information Policy: Domestic and Global (5) National and international information policy: public and private sector policy in terms of privacy, access, and exploitation; technology infrastructures and policies supporting the information industries; digital convergence and the emerging mega-industries. Prerequisite: LIS 550 or permission of instructor.

LIS 559 Special Topics in the Social Context of Information (1-4, max. 18) Introduction to innovative and specialized topics in the social context of information. Course may be offered irregularly and may be repeated for credit. Prerequisite: LIS 550 and others as determined by the specific topic covered.

LIS 560 Instructional and Training Strategies for Information Professionals (3) Develops knowledge and skills in instruction and training functions for library and information settings. Issues and strategies for learning and teaching. Design, development, and evaluation of information and technology literacy programs. Addresses the needs of users when designing and delivering instruction. Prerequisite: LIS 500, which may be taken concurrently.

LIS 561 Storytelling: Art and Techniques (3) Storytelling, past and present, noting its development as an art form. Analyzing storytellers materials (folk literature and literary forms) throughout historical periods. Essential techniques necessary to this artistic skill. Planning storytelling programs for various ages, interest groups, and situations, utilizing folk, classic, and contemporary literature.

LIS 565 Children's Materials: Evaluation and Use (4) Library materials for children from infancy through elementary grades. Focus on resources in all media that serve informational, educational, cultural, and recreational needs of the young. Focuses on standard bibliographies and other resources designed to meet informational needs of adults serving children. Prerequisite: LIS 500, LIS 510, LIS 520, or permission of instructor.

LIS 566 Young Adult Materials: Evaluation and Use (4) An overview of materials reflecting adolescents' interest in media and addressing their educational, cultural, and recreational needs. Students evaluate print literature, electronic and other non-print media for young adults. Content also designed to assist adult caregivers of adolescents. Prerequisite: LIS 500, LIS 510, and LIS 520 or permission of instructor.

LIS 567 Public Library Services for Youth (3) Administration of youth departments in public libraries; planning and promoting programs and services; evaluation of library collections; community and professional roles of the youth librarian. Prerequisite: LIS 500 or permission of instructor.

LIS 568 Information Literacy for Teaching and Learning (5) Theories, process, and practical applications of information literacy. Development of information literacy programs for libraries, community agencies, business, education or other information settings. Intrinsic themes include the integral relationship between technology and information literacy, and continual evaluation.

LIS 569 Special Topics in Instructional and Training Strategies for Information Professionals (1-5, max. 18) Introduction to innovative and specialized topics in instructional and training strategies for information professionals. Prerequisite: LIS 560 and others as determined by the specific topic covered.

LIS 570 Research Methods (4) Research as a process from problem definition and formulation of questions to design, data collection, analysis, and reporting. Students recognize research opportunities, translate them into researchable frameworks, design research projects, and implement results in

libraries and other information agencies. Prerequisite: LIS 500, which may be taken concurrently.

LIS 579 Special Topics in Research Methods (1-4, max. 18) Introduction to innovative and specialized topics in research methods. Prerequisite: LIS 500, LIS 570; others as determined by specific topic covered.

LIS 580 Management for Information Organizations (4) Introduction to internal and external management issues and practices in information organizations. Internal issues include organizational behavior, organizational theory, personnel, budgeting, planning. External issues include organizational environments, politics, marketing, strategic planning, funding sources. Prerequisite: LIS 500, which may be taken concurrently.

LIS 581 Marketing and Planning for Libraries (3) Approaches to planning and marketing library products/services. Examines partnerships that can be forged between elements of marketing and appropriate futures strategies for libraries. Discusses marketing and planning as integrated processes with attention to short- and long-term goals and objectives. No particular library institutional setting is assumed. Prerequisite: LIS 500, which may be taken concurrently.

LIS 582 Strategic Planning and Management of Information Technology (3) Exploration of methods of strategic planning for managing information resources and technology to support online information services and the role of the systems librarian and CIO. Topics include mission and goals, strategic planning, the information technology function within organizations, and the desirable abilities of managers and leaders. Prerequisite: LIS 580.

LIS 583 Staffing Information and Information Technology Positions (3) Staffing and human resources related to information organizations and the information technology unit. Examination of demand for and supply of information and information technology workers, recruitment, training, and retention. Prerequisite: LIS 580.

LIS 585 Administration of the School Library Media Program (3) Develops competency in administering materials, equipment, and services of library media program as integral part of educational process of school. Focuses on developing skills in acquiring, organizing, and managing full range of learning resources for access and use, and communicating the program to users. Required for school library media specialists. Prerequisite: LIS 580.

LIS 586 Public Libraries and Advocacy (3) Examines the purpose and role of public libraries in an information society. Includes governance, services, and planning with special emphasis on advocacy for the library and community.

LIS 587 Library Technology Systems (4) Developing criteria for selection and design of information technology systems for libraries and information centers. Applying criteria in evaluation of hardware and software. Examining related management challenges, such as vendor relations, financing options, personnel requirements, and design of auxiliary activities. Prerequisite: LIS 540, LIS 580, or permission of instructor.

LIS 588 Special Librarianship (3) Seminar in the practice of special librarianship in business and industrial firms, government agencies, and the free-lance sector. User services and information resources. Credit/no credit only. Prerequisite: LIS 580.

LIS 589 Special Topics in Management of Information Organization (1-4, max. 18) Introduction to innovative and specialized topics in management of information organizations. Prerequisite: LIS 500, LIS 580; others as determined by the specific topic covered.

LIS 590- Directed Fieldwork (2-4, max. 8) Minimum of 100 hours, maximum of 200 hours of professional, supervised fieldwork in a library or professional information setting. May be taken in one quarter or as many as three consecutive quarters. May be repeated once in a different setting. Library and Information Science majors only. Credit/no credit only. Prerequisite: 30 credits in Library and Information Science program.

LIS 591 Legal Research I (3) Introduction to legal bibliography and law librarianship. Basic primary and secondary legal bibliographic tools. Integration of manual and computer resources for effective legal research. Emphasis on state materials. Offered jointly with LAW A 598.

LIS 592 Legal Research II (4) Legal tools that answer more complex legal research problems, such as federal legislative histories, sources of administrative law, specialized subject research. Federal emphasis. Builds on skills and techniques taught in LIS 591/LAW A 598. Extensive work with online resources. Prerequisite: LIS 591 or permission of instructor. Offered: jointly with LAW A 599.

LIS 593 Selection and Processing of Law Library Materials (3) Study of tools for collection development and collection development plans in law libraries. All law library technical processes, including acquisitions, budgeting, cataloging, and serials. Credit/no credit only. Prerequisite: LIS 591 or permission of instructor.

LIS 594 Law Library Administration (4) Administration in law libraries, including organization, personnel, and management issues (e.g., interviewing, hiring, firing), communications, library planning, and bookkeeping. Credit/no credit only. Prerequisite: LIS 591 or permission of instructor.

LIS 595 Current Issues in Law Librarianship (1) From a list of current topics in law librarianship, students select a topic, research it fully, write a major paper, and present their paper. Topics may include citation reform, ethics, and publisher practices. Credit/no credit only. Prerequisite: Law Librarianship majors or permission of instructor.

LIS 598 Special Topics in Information and Library Science (1-6, max. 18) Seminar dealing with various topics in information and library science. Offered by visitors or resident faculty. Topics are changed from quarter to quarter. May not be offered every quarter. May be repeated for credit. Credit/no credit only. Prerequisite: determined by specific course.

LIS 600 Independent Study or Research (*) Credit/no credit only.

LIS 700 Master's Thesis (*) Credit/no credit only.

Interdisciplinary Graduate Degree Programs

These programs are administered by interdisciplinary groups of the Graduate School. Certain courses carrying the particular program prefix appear below; other courses with the same prefix appear elsewhere as indicated. Other courses included in these programs are selected from many disciplines throughout the University and carry the prefix of the respective discipline.

Biology Teaching

General Catalog Web page:

www.washington.edu/students/genocat/academic/Biology_Teaching.html

Program Web page:

www.biology.washington.edu/teachers/

Graduate Program Coordinator
222 Hitchcock, Box 355320
206-543-1689

The Graduate School Biology Teaching Group offers an interdisciplinary program that leads to the degree of Master of Science in biology for teachers. Although designed specifically for biology teachers in K-12 schools and community colleges, other life science educators, such as those in environmental learning centers, may find the program especially worthwhile. The program emphasizes broadening the student's understanding of the various fields of biological science, with the improvement of the student's effectiveness as a teacher as the primary goal. Opportunities for course work within the departments of the University in biological science and science education are provided. Each student is asked to perform an in-depth study of a biological science problem in the context of its relevance to the teaching of biological science. Facilities and guidance are provided by a sponsoring professor and advisory committee drawn from the Biology Teaching Group and the several biological science departments of the University.

Special Requirements

Prospective candidates for the degree should have an initial or continuing certificate for teaching biology at the secondary level, or be able to demonstrate professional commitment in the area of biology education.

Assistantships and fellowships are generally not provided under the aegis of this program.

Faculty

Chair

John M. Palka

Professors

Ammirati, Joseph F. * 1979; MA, 1967, San Francisco State, PhD, 1972, University of Michigan; mycology, taxonomy and ecology of fungi.

Armstrong, David A. * 1978; MS, 1974, Oregon State University, PhD, 1978, University of California (Davis); crustean ecology and fisheries, estuarine habitat protection, impacts on dragging, pesticides.

Boersma, P. Dee * 1974; PhD, 1974, Ohio State University; population, ecology.

Cleland, Robert E. * 1964, (Emeritus); PhD, 1957, California Institute of Technology; physiology of plant growth.

Deyrup-Olsen, Ingrid J. * 1964, (Emeritus); PhD, 1944, Columbia University; general physiology cell-membrane phenomena.

Edwards, John S. * 1967, (Emeritus); PhD, 1960, Cambridge University (UK); arthropod neurobiology, insect physiology and development, tundra and alpine biology.

Hille, Merrill B. * 1976; PhD, 1965, Rockefeller University; developmental biology, gastrulation in sea urchin embryos, translational regulation during meiosis.

Laird, Charles D. * 1971; PhD, 1966, Stanford University; cell and developmental biology, human genetics.

Leopold, Estella B. * 1976, (Emeritus); PhD, 1955, Yale University; paleoecology, pollen and seed analysis, late Cenozoic environments and climate history.

Nester, Eugene W. * 1962; PhD, 1959, Case Western Reserve University; genetics and biochemistry, of bacterial-plant cell interactions.

Olson, Maynard V. 1992; PhD, 1970, Stanford University; methods and applications of large-scale DNA analysis.

Palka, John M. * 1969; PhD, 1965, University of California (Los Angeles); neurophysiology, sensory physiology, developmental neurobiology.

Van Volkenburgh, Elizabeth * 1982; PhD, 1980, University of Washington; leaf growth and development, photobiology and electrophysiology.

Wakimoto, Barbara T. * 1984; PhD, 1981, Indiana University; developmental genetics, gene expression and chromosome organization in eukaryotes.

Associate Professor

Windschitl, Mark A. * 1996; MS, 1993, PhD, 1995, Iowa State University; the impact of technology, constructivism, and epistemological beliefs on learning.

Conservation Biology Policy

274 Mary Gates Hall

General Catalog Web page:

www.washington.edu/students/genocat/academic/cons_bio_pol.html

Program Web page:

depts.washington.edu/conbiol/

If present trends continue, the Earth may lose one-quarter of its species, much of its temperate forests and other critical habitats, along with many of the resources and services that biological systems provide to humanity. Civilization depends on living resources, but ongoing environmental degradation demonstrates the need for fundamental changes in the relationship between human society and biological resources.

The graduate certificate in conservation biology policy provides students with education and skills to assess impacts on biological diversity and to develop practical approaches to prevent species extinction. Conservation biology is a synthesis of many disciplines, including anthropology, biogeography, ecology, environmental studies, genetics, molecular biology, population biology, sociology, and taxonomy. By integrating ecology and natural science with studies in law, public policy, and social sciences, the program prepares students to balance competing interests in developing effective conservation programs.

Eligibility

Any matriculated graduate student at the University of Washington is eligible for the graduate certificate in conservation biology policy. Students must submit a statement of interest form with the proposed course sequence prior to being enrolled in the program.

Steering Committee

The Steering Committee for Conservation Biology Policy oversees the structure and content of the graduate certificate in conservation biology policy, and periodically reviews course requirements. The committee is assisted in these tasks by the graduate program coordinator. The committee is also responsible for admission policy. Advising is shared among the Steering Committee and the graduate program coordinator.

Graduate Program

Graduate Program Coordinator
274 Mary Gates Hall
Box 352802
206-221-6129
conbiol@u.washington.edu

Program Requirements: One course in conservation biology; one course each in two of the following three core areas: law and policy, economics, and social Ecology; one capstone course; and additional courses from the approved list to complete the required 21 credits.

The graduate certificate is awarded upon successful completion of all program and degree requirements.

Environmental Management

274 Mary Gates Hall

General Catalog Web page:

www.washington.edu/students/genocat/academic/Env_Mang.html

Program Web page:

depts.washington.edu/envismgt/

The graduate certificate in environmental management (EM) is an interdisciplinary program designed to prepare students to contribute to sustainable utilization and enhancement of the natural and human environment. Through coursework, seminars, and a capstone experience, students acquire the tools to solve real-world environmental problems via the three avenues of science, policy, and business. The program provides an excellent education and training opportunity for a diverse array of graduate students preparing for careers in the broad field of environmental affairs.

Key benefits of the program are:

- Students participate in a community of faculty and students from a multitude of departments

who share the common goal of environmental stewardship and sustainability.

- Students explore environmental problems, and develop solutions, in a multidisciplinary environment, incorporating a wide range of perspectives and priorities.
- Students receive a printed certificate and record in their transcript from the Graduate School to document completion of the interdisciplinary program in Environmental Management.

The flexible curriculum is suitable for students from many backgrounds, such as engineering, physical and natural sciences, public policy, economics, geography, public health, and political science, to name a few.

There is no other such interdisciplinary educational experience available to graduate students at the University of Washington at this time.

Eligibility

All students enrolled in graduate and professional degree programs in any school of the University of Washington are eligible to apply.

Prior to admission, students must have completed a one-quarter upper-level or graduate-level course in applied quantitative methods (e.g., microeconomics, numerical modeling, applied statistical methods) or pure quantitative methods (e.g., mathematics or statistics); and social or natural science.

Facility with written argument and communication is a prerequisite. This requirement is demonstrated in the letter of application.

Steering Committee

The program is governed by the Steering Committee for Environmental Management.

Graduate Program

Graduate Program Coordinator
274 Mary Gates Hall
Box 352802
206-221-6129
envirmgt@u.washington.edu

The certificate's courses and projects have been chosen to prepare students to contribute legal, scientific, social science, and technical expertise to environmental decision making at the local, national, and international scales. Students are required to broaden their knowledge and skills base beyond their home discipline; to read material from other fields with critical facility; to understand and appreciate the goals and analysis methods common to other fields; and, perhaps most importantly, to appreciate, communicate with, and collaborate with experts from other fields, who have different perspectives and priorities.

Program Requirements: Three core courses (10-12 credits); a capstone project completed as part of the core course in business; the spring quarter seminar series (1 or 2 credits); and 6 credits of electives. Award of the certificate is contingent on completion of the student's graduate degree. Further details on these requirements can be found by visiting the Environmental Management homepage.

Global Trade, Transportation, and Logistics Studies

2 Smith

General Catalog Web page:

www.washington.edu/students/gencat/academic/Global_Trade.html

Program Web page:

depts.washington.edu/gttl/

The aim of the graduate certificate program in Global Trade, Transportation, and Logistics (GTTL) is to enable graduate students to augment their degree programs in preparation for careers that demand the combined knowledge of trade, transportation, and logistics. Particular attention is directed to the study of activities involved in the flow of goods from point of origin to point of consumption on a global scale. The wide range of issues addressed include the management of the intermodal connections among maritime, aviation, and overland modes of transport; environmental and energy concerns; advancements in telecommunications; and the legal, regulatory, and technological infrastructures that facilitate global commerce and transportation.

The GTTL graduate certificate program is responsive to the needs of government and industry for trained university graduates. The program is overseen by the Interdisciplinary Committee on Global Trade, Transportation, and Logistics. Members come from the University and the private and public sectors. GTTL works with leaders in business and government organizations to develop internships and jobs, in addition to offering a number of scholarship opportunities for graduate students. The GTTL certificate is based on a set of course requirements to be fulfilled in conjunction with the student's existing graduate degree program.

Interdisciplinary Committee

The Interdisciplinary Committee periodically reviews the content of the core courses, recommends instructors, maintains the list of eligible electives, and coordinates with course instructors regarding scheduling and prerequisites. The committee is assisted in these tasks by the lead core-course instructor, the program director, the program assistant director, and the Graduate School staff, as appropriate. The committee also oversees the policy on admission to the graduate certificate program.

Graduate Program

Graduate Program Coordinator
2 Smith, Box 353585
206-616-5778
gttl@u.washington.edu

Students associated with GTTL receive the Graduate Certificate upon completing the program's requirements and obtain their degrees through cooperating academic units. Students admitted into graduate degree programs in the following units are eligible for the GTTL graduate certificate: Aeronautics and Astronautics, Business Administration, Civil and Environmental Engineering, Communications, Economics, Education, Forest Resources, Geography, International Studies, Law, Marine Affairs, Political Science, Public Affairs, Technical Communication, and Urban Design and Planning. Graduate students from other departments may be admitted on an ad hoc basis. GTTL prepares students for careers in international trade, transporta-

tion, and logistics by offering a comprehensive program encompassing selected courses from the aforementioned separate disciplines. Those students completing the graduate certificate receive an appropriate notation on their transcript and a Letter of Achievement, signed by the head of the student's academic unit and the Dean of the Graduate School.

Certificate Requirements

The requirements consist of a minimum of 20 credits: two core courses (8 credits) and four elective courses (at least 12 credits).

The core courses—GTTL 501 and 502—provide a basic overview of the academic theories, political-economic structures, industrial dynamics, public policies, and strategic issues concerning the study, business, and regulation of global trade, transportation, and logistics.

Students select electives from a continually updated list. Most electives (and core courses) may also satisfy a student's home department requirements. At least one elective must come from outside the home department to reinforce the interdisciplinary objective of the certificate program. A substitution policy developed by the committee assures that an appropriate mix of electives can be found for each student. GTTL 600 (Independent Study) and GTTL 601 (Internship) provide an alternative means to gain elective credits.

Faculty

Director

Thomas G. Schmitt

Associate Professor

Schmitt, Thomas G. * 1979; MBA, 1974, University of Cincinnati, DBA, 1979, Indiana University; management of service and manufacturing operations.

Lecturer

McKay, Mark 1992; MS, 1989, Clemson University, PhD, 1999, University of Washington.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

GTTL 501 Global Logistics Management (4)

Provides an overview of the concepts and substance of trade, transportation, and logistics. Deals with management of physical, documentation, and information flows within supply chains, including purchasing, distribution, intermodal transportation, ERP e-commerce and e-fulfillment, financial transactions, and regulations. Prerequisite: permission of instructor. Offered: jointly with OPMGT 535; AW.

GTTL 502 Seminar in Global Trade, Transportation, and Logistics (4)

Interdisciplinary seminar that brings together students with academics and practitioners at the forefront of trade, transportation, and logistics in discussions of selected topics. Additionally, students research issues of special interest. Prerequisite: OPMGT 535, GTTL 501, or permission of instructor. Offered: jointly with OPMGT 536; Sp.

GTTL 599 Special Topics in Global Trade, Transportation, and Logistics Studies (1-5, max.

15) Selected topics with special emphasis on issues of pressing importance to the world trading community. Topics vary with departmental discretion. Prerequisite: Graduate students or permission of instructor.

GTTL 600 Independent GTTL Studies(*, max. 30) Opportunity to pursue GTTL-related issues that may not be explored in established UW courses. May involve projects undertaken in conjunction with entities beyond the University, subject to instructor approval.

GTTL 601 Internship in GTTL Studies(3-5, max. 9) Opportunity to pursue relevant research or to gain practicum experience in the employment of a department-approved public or private entity.

Health Services Administration

Graduate Program Coordinator – In-Residence and Executive Programs
H672 Health Sciences, Box 357660
206-616-2976
mhap@u.washington.edu

The Health Services Administration Group offers two programs of study leading to the Master of Health Administration (M.H.A.) degree: a two-year in-residence program and a three-year evening/week-end executive program. The M.H.A. degree is fully accredited by the Accrediting Commission for Education in Health Services Administration. It provides the educational foundation for careers in management, planning, consulting and policy-making in ambulatory care organizations, hospitals, long-term care facilities, mental health care organizations, government agencies, planning agencies, and other organizational settings in the health field. The curriculum is designed to be interdisciplinary with a faculty drawn from the Graduate Schools of Public Health and Community Medicine, Business Administration, Public Affairs, Nursing, Medicine, and Law. Concentrations of study vary according to the student's academic interests and career objectives. In addition to academic work, students are required to participate in an internship experience in a health facility or agency under the preceptorship of the administrator or director of that organization.

Concurrent degree programs combining health administration with business administration, medicine, nursing, or public administration are also offered. These curricula (with the exception of the M.H.A./M.D.) typically require three years of intensive academic study and culminate in joint degrees (M.H.A./M.B.A., M.H.A./M.D., M.H.A./M.N., M.H.A./M.P.A.).

The Executive Master of Health Administration program, launched in January 1998, is an evening/week-end program designed primarily for mid-career physicians, other clinical practitioners, and experienced health services-oriented professionals who have demonstrated interest or competency in administration or management. It offers advanced curriculum in planning, organizing, and implementing programs that improve the cost-effectiveness and quality of patient care. The program structure allows practicing professionals to continue their careers while gaining a graduate degree.

Course listings may be found under the School of Public Health and Community Medicine, Department of Health Services section of this catalog.

Special Requirements

Applicants to the in-residence program must submit, in addition to Graduate School admission requirements, a narrative statement of objectives, a resume, at least three letters of recommendation, and scores from either the GRE or the GMAT. Interviews by members of the program faculty may also be requested. Relevant health services experience is preferred. Applicants are accepted only for autumn quarter of each year. The application deadline is February 15. Applications received after this date (U.S. and Canadian only) will be considered on a space-available basis.

Applicants to the executive program must submit, in addition to Graduate School admission requirements, a narrative statement of objectives, a resume, three letters of recommendation, and either GRE or GMAT scores (excluding applicants with doctoral-level degrees from U.S.-accredited institutions). Priority of admission is given to applicants with medical/clinical training and professional experience. Applicants are accepted only for autumn quarter of each year. Applications for autumn quarter are reviewed following the preferred deadline of April 30. Applications received after this date (U.S. and Canadian only) are reviewed on a space-available basis. Applicants can expect to hear about the status of their application within four to six weeks of submission. Those interested in applying should contact the program office as soon as possible to inquire about availability and the application process.

Financial Aid

Financial support for current M.H.A. students is available from several areas: loans, work study positions, internships, a limited number of competitive scholarships in the program, possible outside fellowships, and possible teaching or research assistantships outside the program. For more information on financial aid, contact the UW Office of Student Financial Aid (105 Schmitz Hall, Box 355880, 206-543-6101, osfa@u.washington.edu) or the M.H.A. program office.

Research Facilities

In addition to its University facilities, the program makes extensive use of community health facilities and agencies for research and training.

Faculty

Director

William E. Welton

Professors

Conrad, Douglas A. * 1977; MHA, 1973, University of Washington, MBA, 1977, PhD, 1978, University of Chicago; alternative vertical and horizontal market structures in health care.

Dowling, William L. * 1982; MBA, 1961, University of Chicago, MA, 1970, PhD, 1971, University of Michigan; strategic management of health-care organizations, managed care.

Grembowski, David * 1981; MA, 1975, Washington State University, PhD, 1982, University of Washington; health services research, survey research, program evaluation, performance of health care systems.

Klasterin, Theodore * 1974; PhD, 1973, University of Texas (Austin); operations management, facility loca-

tion, project management, waiting lines, logistics, inventory.

Kuszler, Patricia Carol * 1994; MD, 1978, Mayo Medical School/graduate School, JD, 1991, Yale University; law and medicine: health-care finance and regulation, medical malpractice, biotechnology and law.

Martin, Diane P. * 1978; MA, 1972, Temple University, PhD, 1979, University of Washington; research methods, health services quality, use, and outcomes.

Mitchell, Pamela H. * 1971; MS, 1965, University of California (San Francisco), PhD, 1991, University of Washington; neuroscience nursing, diagnostic strategies.

Ross, Austin, Jr. 1982, (Emeritus); MPH, 1955, University of California (Berkeley); ambulatory care, health care delivery systems.

Sundem, Gary L. * 1971; PhD, 1971, Stanford University; managerial accounting.

Watts, Carolyn A. * 1975; MA, 1974, Johns Hopkins University, PhD, 1976, Johns Hopkins University; health economics and policy.

Wickizer, Thomas M. * 1988; MSW, 1974, University of Washington, MPH, 1979, MA, 1987, PhD, 1989, University of Michigan; health economics, health policy, program evaluation, quality improvement, occupational health.

Associate Professors

Klawitter, Marieka * 1990; MPP, 1982, University of Michigan, PhD, 1992, University of Wisconsin; family and employment policy, women's studies, sexual orientation discrimination.

Kopjar, Branko 1997; PhD, 1996, University of Oslo (Norway); prevention effectiveness, outcomes research, health care reform, quality of care.

Lafferty, William E. 1988; MD, 1978, University of Kansas; STDs, HIV/AIDS, surveillance and epidemiology of STD, managed care.

Richardson, Mary L. * 1977; MHA, 1978, PhD, 1984, University of Washington; organization, management, and analysis of policy relevant to health services.

Assistant Professors

Mastroianni, Anna C. * 1996, (Adjunct); JD, 1986, University of Pennsylvania, MPH, 1997, University of Washington; law, ethics and policy genetics, reproduction, human subjects research.

Zierler, Brenda * 1988, (Adjunct); PhD, 1996, University of Washington; research in patient with venous thromboembolism; clinical outcomes, process outcomes.

Senior Lecturers

Cormick, Gerald W. 1975; PhD, 1971, University of Michigan; mediation and negotiation.

Katz, Aaron 1988; CPH, 1975, University of Toronto (Canada); health policy, public health, determinants of health.

Thompson, John (Jack) R. 1989; MSW, 1976, University of Washington; public health practice, health policy analysis, work force development.

Welton, William E. 2001; MHA, 1972, DPH, 1999, University of Michigan; strategic and organizational effectiveness of health systems.

Lecturers

Masuda, David 1997, (Adjunct); MD, 1980, University of North Dakota, MS, 1996, University of Wisconsin; biomedical and health informatics.

Sappington, Jeremy L. 1992; MPH, 1964, University of North Carolina; systems theory, human resources management, undergraduate studies in public health.

Stillman, Dennis 1987; MHA, 1979, University of Washington; health care financial management, management development.

Molecular and Cellular Biology

Graduate Program

Graduate Program Coordinator
T466 Health Sciences, Box 357275
206-543-0253
mcb@u.washington.edu

The Molecular and Cellular Biology Program (MCB) is a leader in applying the techniques of molecular and cellular biology to advance the understanding of basic biological sciences. The goal of the doctoral program is to broadly train students to think about science in a rigorous and critical manner. Since scientific methods, equipment, and knowledge are changing rapidly, students learn to focus on important issues in an evolving research environment. This program is appropriate for students interested in future careers in research and teaching in academia as well as biotechnology and pharmaceutical companies.

Thirteen departments across three schools have faculty members actively pursuing research in molecular and cellular biology. The departments participating in the program include Biochemistry, Bioengineering, Biological Structure, Botany, Environmental Health, Genome Sciences, Immunology, Microbiology, Pathobiology, Pathology, Pharmacology, Physiology and Biophysics, and Zoology.

At the Fred Hutchinson Cancer Research Center (FHCRC), the divisions of Basic Sciences and Molecular Medicine participate in the joint Molecular and Cellular Biology graduate program. Shared FHCRC facilities are available for electron microscopy, flow cytometry, tissue culture, and image analysis. A biotechnology center for DNA and protein synthesis and sequencing, animal facilities, a biological production facility that focuses on monoclonal antibody production, extensive libraries, and a biocomputing center provide further support for the research effort.

Faculty Interests

Over 160 faculty members from the UW and FHCRC are researching molecular and cellular biology and are skilled in the training of graduate students. Faculty research interests encompass both prokaryotic and eukaryotic cells in the following general areas: genetics, cell biology, neurobiology, immunology, virology, molecular structure, developmental biology, cancer biology, plant biology, genomics/proteomics, and microbiology.

Admission

The Molecular and Cellular Biology Program is a highly competitive interdisciplinary program which receives applications from outstanding students nationwide. MCB Program information and requirements are listed at its Web site. Applications are due January 2 each year and are available on-line via a link from the program homepage (depts.washington.edu/mcb/). Applications can also be requested by email (mcb@u.washington.edu) or by calling 206-543-0253. Applicants may apply both to the MCB Program and to any of the thirteen participating UW departments. Since application requirements or deadlines may differ, applicants should contact the participating departments for information.

In addition to the Graduate School application requirements, prospective students must submit an MCB Program application form, a personal statement of research interests and career goals, three letters of recommendation, and Graduate Record Examination scores with a subject test.

Financial Aid

The MCB Program provides a stipend plus tuition for the first year of study. At the end of the first year of study, students choose a doctoral committee, and subsequent years of support are provided by the department of the committee chair. Students maintaining satisfactory academic progress receive funding for the duration of their graduate training.

Ph.D. Requirements

The program, which culminates in the Ph.D. degree, includes training in laboratory research, supervised teaching experience, lectures and seminars on current research topics, rigorous course work in molecular and cellular biology, and graduate-level electives in the student's area of interest. During the first year, students participate in research rotations in three laboratories. Lab rotations offer students an opportunity to learn basic research techniques and to become familiar with the various research areas in molecular and cellular biology of participating faculty members. First-year course work includes a three quarter series of modular courses in molecular and cellular biology and a three-quarter literature review course. Selection from a large list of elective courses is based on the student's background and interests. During the summer of the first year, students choose their permanent advisor and form their Doctoral Supervisory Committee. Students may also elect to participate in a summer biotechnology externship course during their first summer.

During the second year, students generally complete their supervised teaching experience and their elective course work. Autumn quarter of the third year, students take the General Examination. Formal course work is usually completed by this time, although students may take elective courses of interest. Students continue to participate in various department seminar courses and journal clubs.

After completing their course work and General Exam during autumn quarter of the third year, students work full-time on the dissertation research project. The final requirements for the Ph.D. degree include a written dissertation and an oral dissertation defense.

MCB Program students participate in a monthly seminar program which involves student and faculty presentations. The purpose of these seminars is to acquaint students with the research carried on in many laboratories involved in the program and to give students practical experience in making presentations before their peers. In addition, MCB Program students are invited to seminar programs in the participating departments and the Fred Hutchinson Cancer Research Center.

Faculty

Professors

Aderem, Alan A. * 1996, (Affiliate); PhD, 1979, University of Capetown (South Africa); signal transduction and the cytoskeleton.

Bassingthwaite, James * 1975; MD, 1955, University of Toronto (Canada), PhD, 1964, Mayo Medical School/graduate School; computer analysis of transport mechanisms in blood and tissues.

Beavo, Joseph A. * 1977; PhD, 1970, Vanderbilt University; roles and molecular mechanisms of cyclic nucleotide phosphodiesterase regulation of cell function.

Bendich, Arnold J. * 1970; PhD, 1969, University of Washington; structure and replication of chromosomal DNA molecules in mitochondria, chloroplasts, and bacteria.

Berger, Albert J. * 1978; MA, 1965, PhD, 1967, Princeton University, PhD, 1976, University of California (San Francisco); neural and chemical control of respiration, neurobiology, synaptic transmission.

Bevan, Michael J. * 1990; PhD, 1972, National Institute for Medical Research (UK); T lymphocyte development and specificity.

Bomszyk, Karol 1983; MD, 1977, University of Rochester; role of cytokine-induced protein kinases in the regulation of gene expression.

Bornstein, Paul * 1967; MD, 1958, New York University; structure and function of connective tissue macromolecules, wound healing.

Bothwell, Mark A. * 1985; PhD, 1975, University of California (Berkeley); molecular and cellular physiology.

Bowen-Pope, Daniel * 1979; PhD, 1979, University of California (Berkeley); gene regulation, growth factors and receptors.

Byers, Breck E. * 1970; PhD, 1967, Harvard University; cell biology: mitosis and meiosis, mechanisms of nuclear division and crossing-over in yeast.

Byers, Peter H. * 1976; MD, 1969, Case Western Reserve University; extracellular matrix synthesis, genetic disorders of collagen metabolism, secretion, human genetics.

Campbell, Lee Ann * 1985; PhD, 1982, Pennsylvania State University; molecular biology and pathogenic mechanisms of chlamydiae.

Carlson, Steven S. * 1985; PhD, 1975, University of California (Berkeley); molecular and cellular physiology of synaptic transmission.

Carter, William G. * 1981; PhD, 1974, University of California (Davis); elucidation of components in cell attachment and cell spreading in normal cells.

Catterall, William A. * 1977; PhD, 1972, Johns Hopkins University; molecular biology of ion channels, molecular pharmacology and neurobiology.

Cattolico, Rose A. * 1975; PhD, 1973, State University of New York (Stony Brook); signal transduction and calcium cycle processes in toxic marine algae.

Champoux, James J. * 1972; PhD, 1970, Stanford University; DNA replication, tumor virology.

Chavkin, Charles * 1984; PhD, 1982, Stanford University; cell and molecular mechanisms of psychoactive opiate drugs to understand normal and pathophysiology.

- Clark, John I. * 1982; PhD, 1974, University of Washington; development and maintenance of lens transparency.
- Collins, Steven J. * 1982; MD, 1973, Columbia University; retinoic acid receptors and the pathogenesis of malignancy.
- Comai, Luca * 1989; PhD, 1980, University of California (Davis); chromatin and gene regulation, genetics of polyploidy, functional genomics, plant transformation.
- Cooper, Jonathan A. * 1987; PhD, 1976, University of Warwick (UK); regulation of cellular metabolism and proliferation by protein phosphorylation.
- Corey, Lawrence * 1977, (Adjunct); MD, 1971, University of Michigan; DX, therapy and pathogenesis of viral infections, AIDS/herpes viruses.
- Costa, Lucio Guido * 1983; PharmD, 1977, University of Milan (Italy); neurotoxicology; developmental and molecular mechanisms/biological markers of neurotoxicity.
- Dale-Crunk, Beverly A. * 1972; PhD, 1968, University of Michigan; keratin biochemistry, epithelial differentiation, antimicrobial peptides.
- Davie, Earl Warren * 1962; PhD, 1954, University of Washington; protein synthesis, mechanism of blood clotting, cloning of plasma proteins.
- Davis, Trisha Nell * 1987; PhD, 1983, Yale University; control of the cell cycle, chromosome segregation, proteomics.
- Detwiler, Peter B. * 1977; PhD, 1970, Georgetown University; physiology of photoreceptors.
- Disteche, Christine M. * 1980; PhD, 1976, University of Liege (Belgium); molecular genetics of sex chromosomes, X inactivation, human and mouse cytogenetics.
- Ebrey, Thomas 1997; PhD, 1968, University of Chicago; light energy transduction by retinal proteins, especially visual pigments and bacteriorhodopsin.
- Eisenman, Robert M. * 1982; PhD, 1971, University of Chicago; viral oncology, oncogenes, retrovirus multiplication.
- Elkon, Keith B. * 2001; MD, University of Witwatersrand (South Africa), MRCP, 1978, University of London; rheumatology.
- Emerman, Michael 1994; PhD, 1986, University of Wisconsin; molecular biology of HIV.
- Farr, Andrew G. * 1982; PhD, 1975, University of Chicago; cell interactions governing lymphocyte production and function.
- Faustman, Elaine M. * 1981; PhD, 1980, Michigan State University; developmental toxicology, risk assessment methodologies, toxicology of N-nitroso compounds.
- Fausto, Nelson * 1994; MD, 1960, Sao Paulo State University (Brazil); liver regeneration, tumor biology, carcinogenesis, growth factors.
- Fields, Stanley * 1995; MA, 1978, PhD, 1981, Cambridge University (UK); yeast molecular biology and genetics.
- Froehner, Stanley C. 2000; PhD, 1973, California Institute of Technology; molecular mechanisms of synapse formation and muscle disease.
- Furlong, Clement E. * 1977; PhD, 1968, University of California (Davis); human biochemical genetics in biochemistry of membrane transport systems.
- Galloway, Denise A. * 1982, (Research); PhD, 1976, City University of New York; viral pathogenesis and neoplasia.
- Gelb, Michael H. * 1985; PhD, 1982, Yale University; mechanistic enzymology, bioorganic and medicinal chemistry.
- Gordon, Albert M. * 1964, (Emeritus); PhD, 1961, Cornell University; skeletal and cardiac muscle physiology/biophysics.
- Gordon, Milton * 1959; PhD, 1953, University of Illinois; molecular basis of plant tumors, control of gene expression in plants.
- Gottschling, Daniel E. * 1996; PhD, 1984, University of Colorado; dissection of telomere attributes and understanding telomerase in *S. Cerevisiae*.
- Graubard, Katherine * 1979; PhD, 1973, University of Washington; cellular neurophysiology, neural basis of behavior.
- Groudine, Mark * 1982; MD, 1975, PhD, 1976, University of Pennsylvania; chromatin structure and gene activity.
- Hall, Benjamin D. * 1963; MA, 1956, PhD, 1959, Harvard University; the evolution of nuclear genes in plants and fungi.
- Hauschka, Stephen D. * 1967; PhD, 1966, Johns Hopkins University; regulation of skeletal muscle differentiation, growth factor-receptor signaling mechanisms.
- Hille, Bertil * 1968; PhD, 1967, Rockefeller University; receptors and ion channels of excitable membranes; cell signaling; intracellular calcium dynamics.
- Hille, Merrill B. * 1976; PhD, 1965, Rockefeller University; developmental biology, gastrulation in sea urchin embryos, translational regulation during meiosis.
- Hol, Wilhelmus G. J. * 1992; PhD, 1971, University of Groningen (Netherlands); protein crystallography, drug design, vaccine development, and protein engineering.
- Hughes, Kelly T. * 1989; PhD, 1984, University of Utah; genetics, gene regulation, microbial physiology, and metabolism.
- Hurley, James Bryant * 1985; PhD, 1979, University of Illinois; molecular basis of vision.
- Katze, Michael Gerald * 1987; PhD, 1980, Hahnemann Medical College; regulation of viral gene expression at the translational level.
- Kimelman, David * 1989; PhD, 1985, Harvard University (UK); molecular biology of early development in the frog, *Xenopus laevis*, and the fish, *Danio rerio*.
- King, Mary-Claire * 1995; PhD, 1973, University of California (Berkeley); genetic analysis of complex human phenotypes, human diversity and evolution.
- Klevit, Rachel E. * 1983; DPhil, 1981, Oxford University (UK); protein structure and function; molecular recognition; protein NMR.
- Laird, Charles D. * 1971; PhD, 1966, Stanford University; cell and developmental biology, human genetics.
- Lernmark, Ake * 1988; MD, 1970, PhD, 1971, University of Umea; immunogenetics of organ-specific autoimmunity with emphasis on insulin-dependent diabetes.
- Lidstrom, Mary E. * 1995; MS, 1975, PhD, 1977, University of Wisconsin; biomolecular engineering, metabolic engineering, bioremediation.
- Linial, Maxine L. * 1982; PhD, 1970, Tufts University; retroviral replication and genetics, retroviral transformation.
- Loeb, Lawrence A. * 1978; MD, 1961, New York University, PhD, 1967, University of California (Berkeley); DNA replication, cancer and AIDS.
- Luchtel, Daniel L. * 1972; PhD, 1969, University of Washington; electron microscopy and cell biology, lung anatomy/pathophysiology, fiber toxicology.
- Maizels, Nancy * 2000; PhD, 1974, Harvard University; recombination and repair in mammalian cells, especially activated B cells.
- Manoil, Colin C. * 1986; PhD, 1979, Stanford University; molecular genetics, protein localization in bacteria.
- Martin, George * 1957; MD, 1953, University of Washington; somatic cell genetics, pathobiology of aging, neurodegenerative disorders.
- McElrath, Margaret Juliana * 1990; PhD, 1978, MD, 1980, Medical University of South Carolina; infectious diseases.
- McKnight, G. Stanley * 1979; PhD, 1976, Stanford University; phosphorylation; gene expression and neuro/endocrine physiology in mice using genetic approaches.
- Miller, Arthur D. * 1987; PhD, 1982, Stanford University; retrovirus biology, gene transfer, gene therapy.
- Miller, Samuel I. * 1995; MD, 1979, Baylor University; salmonella pathogenesis and bacterial-eucaryotic cell interactions.
- Monnat, Raymond J, Jr. * 1982; MD, 1976, University of Chicago; somatic mutation, somatic cell molecular genetics, human genetic disease.
- Moody, William J. * 1982; PhD, 1977, Stanford University; single cell electrophysiology, development of electrical properties in embryos.
- Moon, Randall T. * 1985; PhD, 1982, University of Washington; embryonic development; signal transduction; cancer biology.
- Morris, David R. * 1966; PhD, 1964, University of Illinois; regulation of growth in eukaryotes and prokaryotes, translational control.
- Nathanson, Neil M. * 1979; PhD, 1975, Brandeis University; neurobiology; molecular analysis of neural signal transduction by muscarinic and neurokinin receptors.
- Neiman, Paul E. * 1971, (Adjunct); MD, 1964, University of Washington; oncology.
- Olson, Maynard V. 1992; PhD, 1970, Stanford University; methods and applications of large-scale DNA analysis.
- Omiecinski, Curtis J. 1983; PhD, 1980, University of Washington; molecular toxicology, genetic regulation/expression of drug/chemical metabolizing enzymes.
- Overbaugh, Julie Maureen *; PhD, 1983, University of Colorado (Boulder); molecular mechanisms of virus-host cell interactions/retroviral pathogenesis/AIDS.
- Palczewski, Krzysztof * 1992; MS, 1980, PhD, 1986, Technical University of Wroclaw (Poland); visual transduction.
- Palmiter, Richard D. * 1974; PhD, 1968, Stanford University; regulation of gene expression in transgenic mice.

- Parsons, Marilyn * 1981; PhD, 1979, Stanford University; parasite cell biology.
- Rabinovitch, Peter S. * 1980; MD, 1979, University of Washington, PhD, 1980, University of Washington; cellular aging, preneoplastic disease, cell cycle abnormalities, DNA change.
- Reh, Thomas A. * 1989; PhD, 1981, University of Wisconsin; regeneration and development of central nervous system.
- Reid, Brian J. * 1983; PhD, 1975, MD, 1980, University of Washington; genetic and cell cycle abnormalities in neoplastic progression in Barrett's esophagus.
- Riddiford, Lynn M. * 1973; PhD, 1961, Cornell University; insect development and physiology, invertebrate endocrinology.
- Roberts, James Michael * 1989; PhD, 1984, MD, 1984, Columbia University; regulation of DNA replication by cyclin-kinase complexes.
- Roberts, Marilyn C. * 1981; PhD, 1978, University of Washington; antibiotic resistance genes, plasmids, sexually transmitted diseases, oral microbiology.
- Rohrschneider, Larry R. * 1982; PhD, 1973, University of Wisconsin; control of growth, differentiation, transformation by the c-fms proto-oncogene.
- Rosenfeld, Michael E. * 1992; PhD, 1981, University of Wisconsin; mechanisms of atherogenesis and macrophage gene expression.
- Schubiger, Gerold A. * 1972; PhD, 1968, University of Zurich (Switzerland); developmental biology of insects, embryonic determination in *Drosophila*.
- Schwartz, Stephen Mark * 1974; MD, 1967, Boston University, PhD, 1973, University of Washington; vascular biology, atherosclerosis, molecular basis of lineage, developmental biology, cell kinetics.
- Sibley, Carol Hopkins * 1976; PhD, 1974, University of California (San Francisco); molecular parasitology and drug resistance.
- Smith, Gerald R. * 1983; PhD, 1970, Massachusetts Institute of Technology; molecular biology of genetic recombination and regulation of gene expression.
- Staley, James T. * 1971; PhD, 1967, University of California (Davis); freshwater bacteriology, microbial ecology, general microbiology.
- Stamatoyannopoulos, George 1964, (Adjunct); MD, 1958, DrMedS, 1960, University of Athens (Greece); medical genetics.
- Stayton, Patrick S. * 1992; PhD, 1989, University of Illinois; engineering proteins for biotechnology, biomaterials, and biomedical therapies/diagnostics.
- Steiner, Robert A. * 1977; PhD, 1975, University of Oregon; neuroendocrinology, neuroscience, endocrinology.
- Storm, Daniel R. * 1978; PhD, 1971, University of California (Berkeley); molecular basis of neuroplasticity; cAMP and Ca²⁺ signal transduction systems in the CNS.
- Stuart, Kenneth Daniel * 1985; PhD, 1969, University of Iowa; molecular biology of parasites.
- Tempel, Bruce L. 1988; PhD, 1983, Princeton University; molecular neurobiology/neurogenetics, especially potassium channel gene structure and function.
- Thomas, James H. * 1988; PhD, 1985, Massachusetts Institute of Technology; genetics of development and the nervous system in nematodes.
- Trask, Barbara J. * 1992; PhD, 1985, University of Leiden (Netherlands); in situ hybridization, analytical cytogenetics, analysis of large-scale DNA polymorphism.
- Truman, James W. * 1973; PhD, 1970, Harvard University; hormones and invertebrate behavior, insect physiology, circadian rhythms.
- Van Volkenburgh, Elizabeth * 1982; PhD, 1980, University of Washington; leaf growth and development, photobiology and electrophysiology.
- Van Voorhis, Wesley C. * 1986; PhD, 1983, Rockefeller University, MD, 1984, Cornell University; infectious diseases.
- Varani, Gabriele * 2001; PhD, 1987, University of Milan (Italy); physical biophysical.
- Wakimoto, Barbara T. * 1984; PhD, 1981, Indiana University; developmental genetics, gene expression and chromosome organization in eukaryotes.
- Weiner, Alan * 2000; PhD, 1973, Harvard University; genome structure, function of small nuclear and cytoplasmic RNA species, CCA-adding enzyme.
- Westrum, Lesnick E. * 1966; MD, 1963, University of Washington, PhD, 1966, University College, London (UK); neuroanatomy, synaptology, plasticity, olfactory and trigeminal systems, dental pathways.
- Wight, Thomas * 1978; PhD, 1972, University of New Hampshire; connective tissue biology and pathology, proteoglycans metabolism, atherosclerosis.
- Willows, A. O. Dennis * 1969; PhD, 1967, University of Oregon; invertebrate neurophysiology, neural mechanisms underlying behavior.
- Wilson, Christopher B. * 1980; MD, 1972, University of California (Los Angeles); immunology, infectious diseases.
- Wolf, Norman S. * 1968; DVM, 1953, Kansas State University, PhD, 1960, Northwestern University; hematopoietic stem cell dynamics and transplantation in radiation biology.
- Yablonka-Reuveni, Zipora * 1982; MSc, 1975, Weizmann Institute for Science (Israel), PhD, 1979, University of Windsor (Canada); myogenesis during growth, aging, and regeneration of skeletal muscle.
- Yao, Meng Chao * 1988; PhD, 1975, University of Rochester; regulation of gene amplification and chromosome rearrangements in *Tetrahymena*.
- Young, Elton * 1969; PhD, 1967, California Institute of Technology; regulation of gene activity in the yeast *Saccharomyces cerevisiae*.
- Zagotta, William N. * 1993; PhD, 1989, Stanford University; molecular mechanisms of ion channel function.
- Zarbl, Helmut * 1996; PhD, 1983, McGill University (Canada).
- Associate Professors**
- Baker, David * 1993; PhD, 1989, University of California (Berkeley); protein folding, genomics.
- Bakken, Aimee * 1973; PhD, 1970, University of Iowa; developmental and cell biology, chromosome structure and function in oogenesis and embryogenesis.
- Berg, Celeste A. * 1990; PhD, 1986, Yale University; *Drosophila* developmental genetics: Cell communication and cell migration during oogenesis.
- Bornfeldt, Karin E. * 1991; PhD, 1991, Linköping University (Sweden); cardiovascular disease in diabetes, focusing on vascular muscle cells.
- Braun, Robert Elmer * 1986; PhD, 1985, Tufts University; mammalian genetics, germ cell development and reproduction.
- Breeden, Linda 1994; PhD, 1981, University of California (Boulder); cell cycle regulation in budding yeast.
- Concannon, Patrick J. * 1989; PhD, 1984, University of California (Los Angeles); development of the human T cell receptor repertoire, genetics of diabetes and ataxia-telangiectasia.
- Cooper, Mark S. * 1990; PhD, 1985, University of California (Berkeley); cellular physiology and cell motility in developing tissues.
- Cunningham, Michael L. * 1988, (Adjunct); MD, 1988, University of Vermont, PhD, 1996, University of Washington; molecular, development, craniofacial, malformation, human, mouse, craniosynostosis, birth defects.
- Edwards, Scott V. 1994; PhD, 1992, University of California (Berkeley); molecular evolution and population genetics; evolutionary history of birds.
- Feagin, Jean E. * 1993; PhD, 1982, Stanford University; molecular parasitology, emphasizing gene organization and expression in protozoans.
- Fink, Pamela J. * 1990; PhD, 1981, Massachusetts Institute of Technology; T cell differentiation, tolerance induction, molecular and cellular immunology.
- Foote, Jefferson * 1994; PhD, 1985, University of California (Berkeley); biophysics of immune maturation, antibody engineering and immunotherapy, x-ray crystallography.
- Geballe, Adam Philip * 1988; MD, 1978, Duke University; translational regulation of viral and cellular gene expression.
- Giachelli, Cecilia * 1982; PhD, 1987, University of Washington; adhesion molecules and vascular biology processes.
- Giniger, Edward Scott * 1994; PhD, 1988, Harvard University; neural development, mechanism of axon guidance, genetic specification of brain structure.
- Goverman, Joan M. * 1992; PhD, 1981, University of California (Los Angeles); immune recognition and tolerance, autoimmunity, T cell development, activation, antibody diversity.
- Hahn, Steven M. * 1994; PhD, 1984, Brandeis University; transcription initiation in yeast.
- Haigwood, Nancy L. * 1994; PhD, 1980, University of North Carolina; host immunity in the control and prevention of AIDS.
- Henikoff, Steven 1982; PhD, 1977, Harvard University; chromosome organization, epigenetic effects, analysis of protein sequence information.
- Hockenbery, David M. * 1994; MD, 1982, Washington University; gastroenterology.
- Horwitz, Marshall S. * 1983, (Adjunct); PhD, 1988, MD, 1990, University of Washington; inherited white blood cell disorders, including leukemia.
- Kapur, Raj P. * 1988; MD, 1988, University of Southern California; normal and abnormal development of the enteric nervous system.
- Kruglyak, Leonid * 1998; PhD, 1990, University of California (Berkeley); population genetics, statistical genetics, genomics, computational biology.
- Lampe, Paul D. * 1996; PhD, 1984, University of Minnesota; regulation of intercellular communication via gap junctions.

298 INTERDISCIPLINARY GRADUATE DEGREE PROGRAMS / MOLECULAR AND CELLULAR BIOLOGY

Leigh, John A. * 1985; PhD, 1983, University of Illinois; bacterial physiology, biochemistry, genetics.

Mandoli, Dina F. * 1988; PhD, 1982, Stanford University; plant development and morphogenesis using genetics, molecular biology, physiology.

Moseley, Stephen L. * 1985; PhD, 1981, University of Washington; molecular basis of pathogenesis in *E. coli* diarrhea.

Mullins, James I. * 1994; PhD, 1978, University of Minnesota; retroviruses and AIDS, molecular virology.

Murry, Charles E. * 1989; PhD, 1989, MD, 1989, Duke University; myocardial infarction, heart regeneration, skeletal/cardiac muscle differentiation.

Ostrander, Elaine A. * 1994; PhD, 1987, Oregon Health Sciences University; genetic mapping of simple and complex traits.

Parkhurst, Susan M. 1994; PhD, 1995, Johns Hopkins University; developmental, genetic and molecular analysis of *Drosophila* embryogenesis.

Porter, Peggy L. * 1987; MD, 1987, University of New Mexico; identifying/understanding the molecular events associated with the initiation/progression of cancer.

Priess, James R. * 1993; PhD, 1983, University of Colorado (Boulder); reliability models, fault trees.

Raible, David W. * 1995; PhD, 1989, University of Pennsylvania; zebrafish neural development.

Roelink, Henk * 1996; MSc, 1985, University of Groningen (Netherlands), PhD, 1991, University of Amsterdam (Netherlands); role of signaling molecules in mediating neural tissue differentiation during vertebrate development.

Rose, Timothy M. * 1991; PhD, 1981, University of Geneva (Switzerland); molecular biology of tumor viruses, cell growth, differentiation, and transformation.

Roth, Mark * 1994; PhD, 1988, University of Colorado (Boulder); nuclear proteins involved in the regulation of gene expression.

Rudensky, Alexander Y. * 1992; PhD, 1986, Gabrichevsky Institute for Epidemiology and Microbiology; antigen processing and presentation, T-cell recognition, T cell development.

Ruohola-Baker, Hannele * 1993; PhD, 1989, Helsinki University (Finland); oogenesis, developmental genetics.

Soriano, Philippe 1994; PhD, 1978, University of Paris (France); vertebrate developmental genetics.

Stenkamp, Ronald E. * 1978; PhD, 1975, University of Washington; crystallography, metalloproteins, protein engineering, rhodopsin, G-protein coupled receptors.

Stoddard, Barry L. * 1994; PhD, 1990, Massachusetts Institute of Technology; physical and structural studies of biological macromolecules.

Swalla, Billie J. 1999; PhD, 1988, University of Iowa; how developmental and evolutionary processes influence animal body plans.

Tapscott, Stephen J. * 1986; PhD, 1982, MD, 1982, University of Pennsylvania; molecular and developmental biology.

Thouless, Margaret E. * 1980; PhD, 1974, University of Birmingham (UK); retroviruses, herpes viruses, enteric viruses, immunodiagnosis, virus variability.

Traxler, Beth A. * 1992; PhD, 1987, Carnegie Mellon University; bacterial physiology, genetics, and membrane protein biochemistry.

Verlinde, Christophe L. M. J. * 1992; PhD, 1988, Catholic University of Leuven (Belgium); structure-based drug design and protein crystallography.

Vogel, Viola * 1990; Doct, 1987, Johann Wolfgang Goethe University (Germany); molecular assemblies and Langmuir-Blodgett films, liquid interfaces, nonlinear optics, microscopy.

White, Theodore C. * 1996; PhD, 1984, University of Michigan; molecular mechanisms of virulence and drug resistance in pathogenic yeasts.

Wordeman, Linda * 1994; PhD, 1988, University of California (Berkeley); mitosis and myofibril formation.

Wright, Robin L. * 1990; PhD, 1985, Carnegie Mellon University; membrane dynamics and regulation of sterol biosynthesis in yeast.

Xia, Zhengui * 1987; MS, 1985, Wuhan University (China), PhD, 1991, University of Washington; neuronal apoptosis, neuronal gene regulation.

Assistant Professors

Bajjalieh, Sandra M. * 1995; PhD, 1989, University of Wisconsin; molecular neurobiology.

Biggins, Susan 2000; PhD, 1995, Princeton University.

Clurman, Bruce E. * 1991; PhD, 1988, MD, 1989, Cornell University.

Cookson, Brad T. * 1996; PhD, 1991, MD, 1991, Washington University; cellular immune response to intracellular bacteria; microbial pathogenesis; clinical microbiology.

Dong, Chen * 2000; PhD, 1996, University of Alabama; molecular mechanisms of immune and autoimmune responses.

Edgar, Bruce A. 1994; PhD, 1987, University of Washington; cell cycle control in *Drosophila*.

Ferre-D'Amare, Adrian Riu * 1999; PhD, 1994, Rockefeller University; structural biology of RNA, X-ray crystallography, biological catalysis.

Gordon, Sharona E. * 1993; PhD, 1994, Brown University; molecular mechanisms of ion channel gating in visual and olfactory transduction.

Kemp, Christopher James * 1996; PhD, 1989, University of Wisconsin; genetic and environmental influence on multistage cancer in the mouse.

La Spada, Albert R. 1998; PhD, 1993, MD, 1993, University of Pennsylvania; inherited neurodegenerative disease.

Lagunoff, Michael * 2001; PhD, 1995, University of Chicago; molecular virology of Kaposi's sarcoma-associated herpesvirus.

Moens, Cecilia B. * 1998; PhD, 1993, University of Toronto; development of segmentation and segment identity in the vertebrate hindbrain.

Muchowski, Paul J. 2001; PhD, 1998, University of Washington; molecular chaperones, neurodegeneration.

Nelson, Peter S. * 1993; MD, 1986, University of Kansas; the study of human carcinogenesis using tools of genomics and bioinformatics.

Olson, James M. 1991; MD, 1991, University of Michigan; hematology, oncology.

Pallanck, Leo J. * 1997; PhD, 1992, Albert Einstein College of Medicine; genetic and molecular analysis of symptomatic transmission in *Drosophila melanogaster*.

Ramakrishnan, Lalita * 2001; MD, 1983, Baroda Medical College (India), PhD, 1990, Tufts University; contributions of mycobacteria and hosts to maintenance of chronic tuberculosis.

Rutherford, Suzanne L. 1999; PhD, 1995, University of California (San Diego); developmental canalization and the evolution of networks of signal transduction pathways.

Salama, Nina R. 2001; PhD, 1995, University of California (Berkeley).

Samudrala, Vaikuntanath V. * 2001; PhD, 1997, Center for Advanced Research in Biotechnology; modeling the structure and function of whole genomes.

Sherman, David R. * 1998; PhD, 1987, Vanderbilt University; molecular genetics, microbiology and biochemistry of pathogenic mycobacteria.

Simon, Julian A. * 1996; PhD, 1991, Columbia University; identification and characterization of new anticancer agents.

Stella, Nephi * 1999; PhD, 1995, Ecole Polytechnique Federale De Lausanne; microglia cells activation: involvement of endogenous cannabinoid ligands and their allied receptors.

Strong, Roland K. * 1994; PhD, 1990, Harvard University; structural immunology: analysis of the functions of proteins mediating immune responses.

Torii, Keiko * 1999; PhD, 1993, University of Tsukuba (Japan); Arabidopsis developmental genetics; receptor-mediated signal transduction in higher plants.

Tsukiyama, Toshio * 1999; PhD, 1991, University of Hiroshima (Japan).

Wang, Edith H. * 1996; PhD, 1991, Columbia University; regulation of genes that control cellular proliferation and differentiation.

Xu, Wenqing * 1999; PhD, 1995, Massachusetts Institute of Technology; structural studies of proteins involved in cancer, immune dysfunction and neuronal diseases.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

MCB 511 Cell Cycle Control (3) *Breeden, Roberts, Edgar* Studies recent advances in understanding cell-cycle control, arising from genetics and biochemical studies of fission and budding yeast, marine invertebrates, *Drosophila*, amphibians, and cultured cells. Addresses the biochemical processes and molecular interactions and the rate-limiting events in the cell cycle, and the coupling of those events to physiological signals. Offered: A.

MCB 514 Molecular and Cellular Biology Literature Review (2) *Roelink, Stoddard* Emphasizes critical evaluation of the original literature orally and in writing. Open only to first-year students in the Molecular and Cellular Biology Program.

MCB 515 Molecular and Cellular Biology Literature Review (2) *Roelink, Stoddard* Emphasizes critical

evaluation of the original literature orally and in writing. Open only to first-year students in the Molecular and Cellular Biology Program. Offered: W.

MCB 516 Molecular and Cellular Biology Literature Review (2) *Roelink, Stoddard* Emphasizes critical evaluation of the original literature orally and in writing. Open only to first-year students in the Molecular and Cellular Biology Program. Offered: S.

MCB 517 Topics in Molecular and Cellular Biology (1-5, max. 12) Advanced in-depth coverage of specific areas of molecular and cellular biology of current interest. Lectures by University of Washington faculty and invited speakers involved in research in this area. A basic knowledge of principles of molecular and cellular biology assumed.

MCB 519 Topics in Cancer (1, max. 6) Examination of ways to integrate basic, clinical, and public health sciences to increase understanding of human biology and disease. Seminars in introduction to cancer research as viewed by basic, clinical, and public health sciences, origins of cancer, cancer prevention, cancer progression, and therapies for cancer. Credit/no credit only.

MCB 520 Tutorial in Molecular and Cellular Biology (1-2, max. 2) *Stoddard* Special topics reading and discussion. Offered: A.

MCB 521 Embryos, Genes and Development (4) *Parkhurst, Priess, Soriano* Introduction to vertebrate and invertebrate development emphasizing cellular, genetic, and molecular mechanisms. Focuses on development of fruit flies, nematodes, and mice. Emphasizes embryological processes including induction, determination, pattern formation. Relationship between development and evolution. Technologies include transgenic animals, genetics, mosaic analysis, homologous recombination, somatic cell genetics, embryonic manipulations. Offered: W.

MCB 532 Human Pathogenic Viruses (3) *Galloway, Linail* Replication, regulation, and pathogenesis of several groups of human viruses, including human immunodeficiency virus and papillomaviruses. Emphasis on the unique aspects of the viral-like cycles as they relate to effects on infected cells and organisms. Guest lecturers focus on viral immunology, measles, herpes simplex virus and HHV-8. Offered: Sp.

MCB 542 Structural Molecular Biology (3) *Strong, Stoddard* Overview of structure/function studies and methods, and current results in key areas of molecular biology. Introduction to the methods of structural biology, with emphasis on how to read and assess a structural paper. Analysis and discussion of recently published studies of macromolecular structure/function relationships. Extensive, interactive computer modeling and graphics tutorials. Offered: A.

MCB 560 Biotechnology Externship (2-12, max. 12) *Moon* Supervised research in a biotechnology company. Prerequisite: permission of instructor and doctoral candidacy. Offered: AWSpS.

MCB 562 Cell Signaling and Oncogenesis (3) *Cooper, Tappscott* Discusses the roles of cell architecture, signal transduction, and the nucleus in homeostasis of normal tissues and in cancer. Regulation of cell proliferation and differentiation in normal tissues. Protooncogenes and oncogenes. Tumor suppressor genes. Cell-cell and cell-matrix interactions. The development, vascularization, metastasis of tumors. Offered: Sp.

MCB 580 Teaching Practicum in Molecular and Cellular Biology (3, max. 6) Supervised training in the teaching of molecular and cellular biology. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MCB 599 Introduction to Research in Molecular and Cellular Biology (*, max. 20) The student rotates through one research laboratory involved in the Molecular and Cellular Biology Program per quarter. Open only to first-year students in the Molecular and Cellular Biology Program. Credit/no credit only. Offered: AWSpS.

MCB 600 Independent Study or Research (*)

MCB 700 Master's Thesis (*) Offered: AWSpS.

MCB 800 Doctoral Dissertation (*)

Museology

General Catalog Web page:

www.washington.edu/students/gencat/academic/museology.html

Program Web page:

www.grad.washington.edu/inter/museo.htm

Graduate Program Coordinator
Burke Museum, Box 353010
206-543-9680

The Museology Program is designed to provide the generalized training, knowledge, and skills necessary to pursue a professional career in museum work. The program is directed toward the training of a broad range of museum professionals interested in curation and management of collections in anthropology, art, botany, geology, history, and zoology as well as in interpretive programs and museum administration.

Courses include required core museology subjects as well as a range of classes offering students the chance to specialize in interest areas. Course work is divided between the theoretical and practical aspects of museum operations. Classes take the form of lecture courses, seminars, special lectures by guest speakers, field trips, laboratory and collection management courses, practicums and internships. Since admission to the program is highly selective, classes are small and students have close contact with faculty.

Practical experience, an essential component of the program, is provided by several museological institutions at the University of Washington, including the Thomas Burke Memorial Washington State Museum, the Henry Art Gallery, the Herbarium, the Arboretum, the Fish Collection, and the University Libraries. The Burke Museum acts as the coordinating unit of the program. Located on the campus of the University of Washington, the Burke Museum is Washington state's natural-history and anthropology museum, and is the oldest and largest natural-history museum in the Northwest. It has nationally and internationally ranked collections focusing on the anthropology, geology, and zoology of the Pacific region and Pacific Rim.

Program Requirements

The graduate program in museology is designed to take two years to complete, consisting of six quarters of academic study and research. During the first year, students carry on average between 10 and 15 credits each quarter; during the second year, the number of credits may vary depending on research, practicum, and internship work. Students may enroll for part-time study, but this is discouraged during the first year.

Requirements for successful completion of the Master of Arts degree include:

1. Completion of a minimum of 36 quarter credits, including 27 course credits and 9 thesis or thesis-project credits, with at least 18 credits of course

work numbered 500 or above, including a thesis or thesis project.

2. A minimum of three quarters of full-time residence credit or part-time equivalent.
3. Demonstration of reading competence in one foreign language, if required by the student's supervisory committee due to the student's area of specialization.
4. Completion of an internship in an off-campus museum or related agency approved by the supervisory committee prior to submission of the student's thesis or thesis project.
5. Presentation of a thesis proposal by the beginning of the fourth quarter of study.
6. Successful completion of an oral examination, covering both the thesis topic and the field of museology in general, following submission of the thesis or thesis project.
7. Completion of all degree requirements within six years.

The following courses are required of all students unless exempted by petition to the Program Coordinating Committee or credited for relevant course work completed at other universities: MUSEUM 480, 481 or 490 or 491, 482, 483, 498, 590, 591, 592, 593 or 594, 595, 600, 700 or 710. In addition, two or more courses are required in an academic discipline relevant to the area of specialization.

The Museology Program also offers a Graduate Certificate in Museum Studies as an option for graduate students in other degree programs at the University. To qualify, students must take a specified minimum set of four key courses in areas that emphasize either collection research and management, or museum administration and interpretation, and that include hands-on work experience. Information and application materials for the certificate can be obtained from the Museology Program office.

Admission Deadline

The application deadline for autumn quarter admission is February 1. Applications completed and postmarked on or before this date will be reviewed by the appropriate admission committee. Late applications may be submitted until April 15, although consideration is not guaranteed if enrollment targets have been met.

MUSEUM 480 Introduction to Museology (3) I&S Museum history, philosophy, and basic operations, including organization, income, collection management, conservation, exhibition, security, education, research, and ethics. Offered: jointly with ANTH 480.

MUSEUM 481 Museum Collection Management: Ethnology (3) I&S Lecture and work experience in museum collection management in the ethnology collections of the Burke Memorial Washington State Museum, including identification, cataloging, fumigation, storage, cleaning, inventory, and specimen preparation for exhibition of archival and nonarchival museum specimens from North America, the Pacific, and Pacific Rim areas. Offered: jointly with ANTH 481.

MUSEUM 482 Museum Conservation (3) I&S Lecture and demonstrations in the recognition and treatment of museum conservation problems for specimens of all types. Application of basic principles to specific preventive and active conservation and restoration problems encountered by curatorial personnel. Offered: jointly with ANTH 482.

MUSEUM 483 Museum Operations Practicum (3, max. 9) Provides students with the opportunity to apply their general museological training in one or more areas of supervised museum operation areas, e.g., registration, education, or exhibition through project-oriented work in the Burke Museum.

MUSEUM 488 Special Topics in Museology (3-5) In-depth examination of selected current issues within the field of museology.

MUSEUM 490 Museum Curation Practicum (1-5, max. 15) Application of museological training in cura-

tion of ethnographic, archeological, geological, or zoological collection materials in the Burke Museum. Supervised work ranges from fundamental collection documentation and research to preventive conservation, storage, and other special curation projects. Offered: jointly with ARCHY 490.

MUSEUM 491 Museum Curation Practicum: General Collections (1-5, max. 15) The application of museological training in the curation of art, botanical, geological, historic, zoological, or other collections. Work under the supervision of faculty curators ranges from fundamental collection documentation to preventive conservation or storage.

MUSEUM 498 Museum Internship (3-15, max. 15) Faculty supervised off-campus internships in museums and allied institutions. Each internship is individually established and provides students with practical experience and the opportunity to apply and learn new professional skills. Prerequisite: permission of instructor.

Courses for Graduate Students Only

MUSEUM 590 Seminar in Museum Theory (3) Fundamental theoretical issues involved in current museum administrative and operations work, including administrative structure, organizational conflicts, museum-community relations, and museum educational programming. Prerequisite: permission of instructor. Offered: jointly with ANTH 590.

MUSEUM 591 Seminar in Museum Operations (3) Designing hypothetical museums and creating a first year of operations. Design elements include architectural plan, staffing plan, initial and recurring budgets, security system, records system, educational plan, and policy making. Recommended: 590. Offered: jointly with ANTH 591.

MUSEUM 592 Seminar in Museum Specimen Documentation (3) Seminar discussion of museum specimen documentation research approaches, including technological and raw material analyses, contextual studies, and esthetic studies. Documentation of a collection and reference work. Recommended: 590 and 591. Offered: jointly with ANTH 592.

MUSEUM 593 Museum Exhibition Seminar (3) Review of critical issues in the planning, design, preparation, and installation of museum exhibits, including exhibit conservation, visitor-based design factors, ideological aspects of interpretation, and community relations. Readings and examination of exhibits are combined with case study work.

MUSEUM 594 Seminar in Museum Education (3) Focus on museums as educational institutions with consideration of the place of education in the mission of museums, the educational role of museums compared to that of other institutions, the museum's diverse audiences and their needs, and the educational methods and techniques museums may employ in pursuing their goals. Recommended: 480.

MUSEUM 595 Museum Legal and Ethical Issues (3) Survey of the legal and ethical issues regarding international and national museum operations, including the control and movement of cultural property, artistic and intellectual rights and copyright, concepts of patrimony and issues of repatriation, as well as other relevant policies and regulations.

MUSEUM 600 Independent Study or Research (1-10, max. 10)

MUSEUM 700 Master's Thesis (1-10, max. 10)

MUSEUM 710 Master's Project (1-10, max. 10) Credit/no credit only.

Near and Middle Eastern Studies

General Catalog Web page:
www.washington.edu/students/gencat/academic/Near_Middle_East.html

Program Web page:
www.grad.washington.edu/inter/nme.htm

Graduate Program Coordinator
34A Communications Building, Box 353770
206-543-6398

The interdisciplinary Ph.D. program in Near and Middle Eastern Studies is designed for students who wish to pursue research with a comparative perspective in Near Eastern languages and literature: Arabic, Hebrew, Persian (or Dari or Tajik), Turkish and Central Asian Turkic languages; Near Eastern linguistics; Islamic topics, namely, Islamic law, history, institutions, theology, and mysticism; comparative religion: Judaism, Christianity, and Islam; and interdisciplinary investigations of modern topics using the social sciences. The program is administered by an interdisciplinary Graduate School faculty group. The program of studies includes courses offered in the Department of Near Eastern Languages and Civilization, the Jackson School of International Studies, and other departments on campus. Students in the program must take courses in both the humanities and social sciences.

Degree Requirements and Satisfactory Progress

Specific course work and areas of concentration will be determined by the student's interests within the framework of the degree and satisfactory progress requirements listed below.

1. Within 18 months of admission, demonstration of a general knowledge of history and culture in one of the following general fields: Islamic civilization; Arabic, Hebrew, Persian, Turkish, or Central Asian Turkic languages and literature; the modern Middle East; or comparative religion either through previous degree work or through examination administered by the program.
2. Within three years of admission, completion of two advanced courses in the humanities, one of which must be in the Department of Near Eastern Languages and Civilization (NELC), and two advanced courses in the social sciences, one of which must be in the Department of History. These courses are in addition to work the student may have done at the B.A. and M.A. level.
3. Within three years of admission, completion of a graduate seminar. Two graduate seminars are required if none was taken at the M.A. level.
4. A student will be expected to have studied three languages, two of which must be regional languages and one of which must be a "Western" European language other than English, such as French, German, Italian, Russian, or Spanish. The student's Supervisory Committee will decide whether a fourth language will be required and whether the fourth required language will be European or regional. Students pursuing language-related work may anticipate a fourth required language, whereas those pursuing social-science-related studies may not. Before the General Exam listed below may be taken, the student must complete the language requirements including the second-year level in a regional language different from the two languages offered at the time of admission if both were not regional languages.

5. **Disciplinary Method and Theory Requirements.** For all students conducting field work or working with documents, whether social science or humanities focused, and for all social science-oriented students, the following courses are strongly encouraged: (a) ANTH 550, Field Techniques of Anthropology, and (b) POL S 491, Political Research Design and Analysis; or (c) their equivalents in appropriate disciplines.

For those students doing both humanities-oriented research and not conducting field work, two method and theory courses in the appropriate discipline or disciplines (e.g., comparative literature, philosophy) are required.

6. **Disciplinary Core Courses.** Each student is required to take two disciplinary core courses in the appropriate fields. Core courses (or field courses) survey the literature, methods, and theoretical issues involved in a broad field of inquiry, as opposed to elective topical courses, which cover a much smaller area. Core courses should be chosen according to the anticipated research interests and fields for preliminary examination of each student. For example, these core disciplinary courses might focus on comparative politics, comparative religion, feminist theory, ethnicity and nationalism, analysis of linguistic structures, seminar in cognitive anthropology, comparative legal institutions, or international political economy. Courses on a narrow field of inquiry (such as Arab-Israeli conflict) do not constitute field or core courses, though they may contribute to a student's general field.

Annual Review

A subcommittee of the Near and Middle Eastern Studies program faculty will meet each spring to review the progress of all students in the Ph.D. program. Either the chair of the student's committee, the program's graduate adviser, or the program's director will inform students of the results of this annual review.

Ph.D. Examinations and Dissertation

The student will be expected to take the following examinations: (1) preliminary exams consisting of an area of specialization exam and a theory and discipline exam; (2) a General Examination, consisting of a take-home part and an oral part; and (3) a Final Examination, which is the Ph.D. thesis defense.

Students must meet the general University requirements concerning admission to candidacy for the doctoral degree, the dissertation, and final examinations, including an oral examination.

A student's Ph.D. supervisory committee shall consist of no less than three members of the University of Washington's Graduate School faculty as well as a representative of the Graduate School (GSR). The chair of the committee must be an active member of the Graduate School faculty. At least two members of the committee must be members of the Near and Middle Eastern Studies faculty group. Additional members may be asked to join the committee.

Students will write a dissertation as the final requirement for the Ph.D. degree. The topic of the dissertation will be set in consultation with the Ph.D. candidate's supervisory committee.

Admission Deadline

The application deadline for autumn quarter admission is February 1. Applications which are completed and postmarked on or before this date will be reviewed by the appropriate admission committee. Late applications may be submitted until April 15, although consideration is not guaranteed if enrollment targets have been met.

Ellis Goldberg

Professors

Andrews, Walter G. 2001, (Research); PhD, 1970, University of Michigan.

Bacharach, Jere L. * 1967, (Adjunct); MA, 1962, Harvard University, PhD, 1967, University of Michigan; history of the Near East.

Brame, Michael K. * 1970; PhD, 1970, Massachusetts Institute of Technology; syntax, phonology, structure of Arabic and English, cross-linguistic comparisons, poetics.

Bravmann, Rene A. 1972; MA, 1963, University of Wisconsin, PhD, 1971, Indiana University; African art.

Cirtautas, Ilse D. * 1968; PhD, 1958, University of Hamburg (Germany); Turkic languages and literatures.

Close, Angela E. * 1995; MA, 1974, PhD, 1976, Cambridge University (UK); archaeology; lithic analysis; prehistory of North Africa; human origins.

Heer, Nicholas L. * 1965, (Emeritus); PhD, 1955, Princeton University; Arabic language and literature, Islamic theology and philosophy.

Jaffee, Martin S. * 1987, (Adjunct); PhD, 1980, Brown University; Rabbinic religion and literature in late antiquity.

Kaisse, Ellen * 1976; PhD, 1977, Harvard University; phonology, historical linguistics, ancient and modern Greek/Spanish, syntax-phonology interface.

Karimi-Hakkak, Ahmad * 1985; PhD, 1979, Rutgers University; Persian language and literature, Iranian culture and civilization.

Kartsonis, Anna D. 1983; MA, 1968, PhD, 1982, New York University; Byzantine and medieval art.

Kasaba, Reşat * 1985; PhD, 1985, State University of New York (Binghamton); historical sociology, world systems, social change in the Middle East.

Mackay, Pierre A. * 1966, (Emeritus); PhD, 1964, University of California (Berkeley); Greek literature, post classical and Byzantine Greek literature, numismatics.

Migdal, Joel S. * 1980; MA, 1968, PhD, 1972, Harvard University; state and society in the Third World; Middle East politics.

Murray, James W. * 1973; PhD, 1973, Massachusetts Institute of Technology; marine geochemistry, aquatic chemistry.

Sokoloff, Naomi B. * 1985; PhD, 1980, Princeton University; Hebrew language and literature.

Wenke, Robert J. * 1975; PhD, 1975, University of Michigan; archaeology of Egypt, the Middle East, and quantitative methods.

Williams, Michael A. * 1976; PhD, 1977, Harvard University; early Christianity and religions of antiquity.

Ziadeh, Farhat J. * 1966, (Emeritus); LLB, 1940, University of London (UK); Arabic language and literature, Islamic law, Islamic institutions.

Zumbrunnen, Craig * 1977; PhD, 1973, University of California (Berkeley); resource analysis, Russia and NIS, environment, mathematical programming, urban ecology.

Associate Professors

Deyoung, Terri L. * 1991; PhD, 1988, University of California (Berkeley); Arabic language and literature.

Goldberg, Ellis * 1985; PhD, 1983, University of California (Berkeley); political economy of the Middle East, comparative politics.

Noegel, Scott B. * 1995; PhD, 1994, Cornell University; Ancient Near Eastern languages, literatures, cultures and history.

Schuyler, Philip D. 1999; MA, 1974, PhD, 1979, University of Washington; Near Eastern musics and cultures; contemporary music and art in the United States.

Waugh, Daniel Clarke * 1972; PhD, 1972, Harvard University; medieval Russian history.

Wheeler, Brannon M. * 1996; PhD, 1993, University of Chicago; Islamic studies, comparative religion, late antique, Jewish studies and legal studies.

Assistant Professors

Kuru, Selim Sirri 1999; PhD, 2000, Harvard University; Ottoman, Turkish, Language, Literature.

McLaren, Brian 2001; MSc, 1986, Columbia University, PhD, 2001, Massachusetts Institute of Technology; architectural history, theory and design.

Walker, Joel T. 1997, (Adjunct); PhD, 1998, Princeton University; late antiquity, Byzantine, early Middle Ages.

Senior Lecturer

Green, James W. * 1975; PhD, 1972, University of Washington; cross cultural, mental health, comparative aging, religion, West Indies, Pakistan, Islam.

Salehi-Esfahani, Haideh 1990; PhD, 1985, University of Pennsylvania; international economics, economic development.

neubehav@u.washington.edu

Understanding the brain represents both a major scientific challenge and a wonderful research opportunity. Investigations into the mechanisms of neural function require an interdisciplinary approach using the knowledge base and techniques of anatomy, biochemistry, molecular biology, physiology, pharmacology, and the behavioral sciences. Neuroscientists and their students must use these different approaches in their research and training if they are to make inroads to solving the major questions in neuroscience.

The University of Washington has met this challenge by emphasizing neuroscience research in many departments in both the School of Medicine and the

College of Arts and Sciences, and by establishing the interdisciplinary graduate program in Neurobiology and Behavior. The laboratories of more than 90 faculty members in 15 departments have combined efforts to form the doctoral training program, continuing a long history of collaborative efforts that cross both departmental and University boundaries.

The program is designed to allow students to obtain both broad training in the neurosciences and more intensive course work in specific areas of interest. The program emphasizes flexibility and encourages students to take responsibility in the design of their own curriculum. Students have the opportunity to work with faculty whose interests span the breadth of neuroscience research. Graduates of the program are well prepared for a variety of careers involving academic, research, industrial, and public policy positions.

Key aspects of the graduate program that are common to all students include (1) a year-long course which provides a core of knowledge in the neurosciences, (2) quarterly first-year laboratory rotations and rotation talks attended by all students in the program, (3) a biweekly seminar series featuring both visiting and local scientists, (4) a biweekly journal club designed to provide students with an introduction to the subsequent week's seminar, and (5) a program-wide retreat, combined with a campus-wide poster session where students and postdoctoral candidates can present their Society for Neuroscience Annual Meeting posters. Thus, the program exposes students throughout their graduate career to the most exciting and current research and concepts covering all areas of neuroscience.

Application Process

Students who have emphasized either biological or physical sciences in their undergraduate careers are invited to apply. Applicants are requested to send a copy of their academic record; GRE scores, including, if possible, scores on a subject test such as chemistry, physics, molecular and cellular biology, psychology, or biology; and three letters of recommendation from the persons who can best evaluate their potential for success in graduate study. New students enter the graduate program September 15. Applications received on or before the deadline are given full consideration. Applications received after the deadline are considered at the discretion of the directors.

Research Facilities

Participating departments are located in the Health Sciences Center and in the College of Arts and Sciences. Because the program is interdisciplinary, extensive research facilities in all areas of neurosciences are available to the student. The University maintains two major natural and health-sciences libraries in addition to individual departmental libraries. Facilities in the participating departments include electronics and machine shops, instrumentation for synthesis and sequence determination of nucleic acids and proteins, calcium imaging, confocal microscopy, and computer facilities. Equipment for ultrastructural studies is readily available. The resources of the Regional Primate Research Center, the W. M. Keck Center for Advanced Studies in Neural Signaling, and the Friday Harbor Laboratories are also available to the student.

Financial Aid

The program offers full stipend and tuition support to students through traineeships derived from NIH training grants and private foundation support and through research assistantships supported by the University or research grant funds. Students with satisfactory academic progress can anticipate that funding will continue for the duration of their program.

Faculty

Directors

Michael Shadlen

Professors

Anderson, Marjorie E. * 1971; PhD, 1969, University of Washington; physiology of basal ganglia and thalamus; neural control of movement.

Baskin, Denis G. * 1979; PhD, 1969, University of California (Berkeley); neuroendocrinology; obesity; CNS regulation of body weight; histochemistry; expression of receptors.

Beavo, Joseph A. * 1977; PhD, 1970, Vanderbilt University; roles and molecular mechanisms of cyclic nucleotide phosphodiesterase regulation of cell function.

Beecher, Michael D. * 1978; MA, 1965, PhD, 1970, Boston University; animal behavior, animal communication, sensory processes.

Berger, Albert J. * 1978; MA, 1965, PhD, 1967, Princeton University, PhD, 1976, University of California (San Francisco); neural and chemical control of respiration, neurobiology, synaptic transmission.

Bernstein, Ilene L. * 1974; MA, 1967, Columbia University, PhD, 1972, University of California (Los Angeles); neurobiology of taste aversion learning; developmental and genetic contributions to taste preference.

Binder, Marc D. * 1978; PhD, 1974, University of Southern California; organization of spinal reflexes.

Bothwell, Mark A. * 1985; PhD, 1975, University of California (Berkeley); molecular and cellular physiology.

Brenowitz, Eliot A. * 1987; PhD, 1982, Cornell University; animal behavior, neuroethology, neuroendocrinology, animal communication.

Buck, Steven L. * 1979; PhD, 1976, University of California (San Diego); human visual psychophysics, color vision, animal learning.

Byers, Margaret R. * 1972, (Research); PhD, 1969, Harvard University; sensory neurobiology, neurocytochemistry, and neuropathologic reactions; neuroimmune interactions.

Carlson, Steven S. * 1985; PhD, 1975, University of California (Berkeley); molecular and cellular physiology of synaptic transmission.

Casseday, John H. * 1996; MA, 1963, PhD, 1970, Indiana University; neuroethology of sensory systems, echolocation and function of auditory midbrain.

Catterall, William A. * 1977; PhD, 1972, Johns Hopkins University; molecular biology of ion channels, molecular pharmacology and neurobiology.

Chavkin, Charles * 1984; PhD, 1982, Stanford University; cell and molecular mechanisms of psychoactive opiate drugs to understand normal and pathophysiology.

Dacey, Dennis M. * 1986; PhD, 1983, University of Chicago; the neural basis of vision and the organization of primate retina.

Daniel, Thomas L. * 1984; PhD, 1982, Duke University; functional morphology, biomechanics, mechanics and energetics of animal locomotion.

Detwiler, Peter B. * 1977; PhD, 1970, Georgetown University; physiology of photoreceptors.

Diaz, Jaime * 1978; PhD, 1975, University of California (Los Angeles); psychological brain development, neurophysiology, developmental psychopharmacology, effects of drugs.

Fetz, Eberhard * 1975; PhD, 1966, Massachusetts Institute of Technology; cortical regulation of movement.

Froehner, Stanley C. 2000; PhD, 1973, California Institute of Technology; molecular mechanisms of synapse formation and muscle disease.

Fuchs, Albert F. * 1969; PhD, 1966, Johns Hopkins University; oculomotor physiology, vision.

Graubard, Katherine * 1979; PhD, 1973, University of Washington; cellular neurophysiology, neural basis of behavior.

Hendrickson, Anita E. * 1969; PhD, 1964, University of Washington; neuroanatomy, morphology and development of primate visual system.

Hille, Bertil * 1968; PhD, 1967, Rockefeller University; receptors and ion channels of excitable membranes; cell signaling; intracellular calcium dynamics.

Hurley, James Bryant * 1985; PhD, 1979, University of Illinois; molecular basis of vision.

Kuhl, Patricia K. * 1976; MA, 1971, University of Minnesota, PhD, 1973, University of Minnesota; speech perception.

Mackie, Kenneth P. * 1987; MD, 1984, Yale University; molecular and cell biological studies of cannabinoid receptor signaling.

McKnight, G. Stanley * 1979; PhD, 1976, Stanford University; phosphorylation; gene expression and neuro/endocrine physiology in mice using genetic approaches.

Moody, William J. * 1982; PhD, 1977, Stanford University; single cell electrophysiology, development of electrical properties in embryos.

Moon, Randall T. * 1985; PhD, 1982, University of Washington; embryonic development; signal transduction; cancer biology.

Morrison, Richard S. * 1994; PhD, 1982, University of California (Los Angeles); genetic pathways regulating neuronal cell death in disease and injury.

Nathanson, Neil M. * 1979; PhD, 1975, Brandeis University; neurobiology; molecular analysis of neural signal transduction by muscarinic and neurokinin receptors.

Palczewski, Krzysztof * 1992, (Adjunct); MS, 1980, PhD, 1986, Technical University of Wroclaw (Poland); visual transduction.

Palmiter, Richard D. * 1974; PhD, 1968, Stanford University; regulation of gene expression in transgenic mice.

Ransom, Bruce Robert * 1995; PhD, 1972, MD, 1972, Washington University; neurology, neuroscience research.

Reh, Thomas A. * 1989; PhD, 1981, University of Wisconsin; regeneration and development of central nervous system.

Riddiford, Lynn M. * 1973; PhD, 1961, Cornell University; insect development and physiology, invertebrate endocrinology.

Rubel, Edwin W. * 1986; PhD, 1969, Michigan State University; developmental neurobiology, with special

emphasis on vertebrate auditory system development.

Steiner, Robert A. * 1977; PhD, 1975, University of Oregon; neuroendocrinology, neuroscience, endocrinology.

Storm, Daniel R. * 1978; PhD, 1971, University of California (Berkeley); molecular basis of neuroplasticity; cAMP and Ca²⁺ signal transduction systems in the CNS.

Teller, Davida Y. * 1965; PhD, 1965, University of California (Berkeley); vision, psychophysics, development of vision.

Tempel, Bruce L. 1988; PhD, 1983, Princeton University; molecular neurobiology/neurogenetics, especially potassium channel gene structure and function.

Thomas, James H. * 1988; PhD, 1985, Massachusetts Institute of Technology; genetics of development and the nervous system in nematodes.

Truman, James W. * 1973; PhD, 1970, Harvard University; hormones and invertebrate behavior, insect physiology, circadian rhythms.

Westrum, Lesnick E. * 1966; MD, 1963, University of Washington, PhD, 1966, University College, London (UK); neuroanatomy, synaptology, plasticity, olfactory and trigeminal systems, dental pathways.

Willows, A. O. Dennis * 1969; PhD, 1967, University of Oregon; invertebrate neurophysiology, neural mechanisms underlying behavior.

Wingfield, John C. * 1985; PhD, 1973, University College of North Wales (UK); hormone-behavior interactions; environmental and hormonal control of life history cycles of vertebrate.

Winn, H. Richard * 1983; MD, 1968, University of Pennsylvania; physiology of cerebral blood flow regulation.

Zagotta, William N. * 1993; PhD, 1989, Stanford University; molecular mechanisms of ion channel function.

Associate Professors

Cooper, Mark S. * 1990; PhD, 1985, University of California (Berkeley); cellular physiology and cell motility in developing tissues.

Corina, David P. * 1993; PhD, 1991, University of California (San Diego); cognitive neuropsychology, psycholinguistics, computational modeling.

Covey, Ellen * 1996; MS, 1976, University of Houston, PhD, 1980, Duke University; structure and function of the central auditory system.

Diorio, Christopher J. * 1997; MS, 1984, California Institute of Technology; silicon learning chips, neural networks and learning algorithms.

Giniger, Edward Scott * 1994; PhD, 1988, Harvard University; neural development, mechanism of axon guidance, genetic specification of brain structure.

Hicks, Ramona R. * 1999; PhD, 1993, University of Connecticut; brain injury, neural plasticity, cell death and regeneration.

Mizumori, Sheri J. 2000; PhD, 1985, University of California (Berkeley); plasticity of neural and behavioral function during learning and memory.

Neumaier, John F. 1983; PhD, 1989, MD, 1990, University of Washington; neurobiology of stress and depression; regulation of serotonin receptors.

Olavarria, Jaime F. * 1990; MD, 1974, State University of Chile, PhD, 1984, University of California (Berkeley); neurophysiological and neuroanatomical basis of vision.

Osterhout, Lee E. * 1991; PhD, 1990, Tufts University; psycholinguistics, cognitive psychophysiology.

Raible, David W. * 1995; PhD, 1989, University of Pennsylvania; zebrafish neural development.

Robinson, Farrel R. * 1986; PhD, 1982, Brown University; study of the cerebellum via monkey eye movements.

Roelink, Henk * 1996; MSc, 1985, University of Groningen (Netherlands), PhD, 1991, University of Amsterdam (Netherlands); role of signaling molecules in mediating neural tissue differentiation during vertebrate development.

Shadlen, Michael N. * 1995; PhD, 1985, University of California (Berkeley), MD, 1988, Brown University; neurobiology of vision and cognition.

Sherk, Helen * 1982; PhD, 1978, Massachusetts Institute of Technology; neural mechanisms underlying vision, especially visual guidance during locomotion.

Spain, William * 1981; MD, 1977, Columbia University; signal transduction in the central nervous system.

Terman, Gregory W. * 1987; MA, 1981, PhD, 1985, University of California (Los Angeles), MD, 1987, University of Miami (Florida).

Assistant Professors

Bajjalieh, Sandra M. * 1995; PhD, 1989, University of Wisconsin; molecular neurobiology.

Bosma, Martha * 1987; PhD, 1986, University of California (Los Angeles); electrophysiological and secretory development of central nervous system neurons.

Cramer, Steven C. 1997; MD, 1988, University of Southern California, MMSc, 1997, Harvard University; stroke, sensorimotor human brain mapping, in healthy and diseased subjects.

Garden, Gwenn A. 2000; PhD, 1994, MD, 1994, University of Washington; caspase enzymes and apoptosis in HIV neural injury.

Gordon, Sharona E. * 1993; PhD, 1994, Brown University; molecular mechanisms of ion channel gating in visual and olfactory transduction.

Horner, Philip J. 2001; PhD, 1995, Ohio State University; stem cells and regeneration of the central nervous system.

Jagadeesh, Bharathi * 1999; PhD, 1993, Northwestern University; neural basis of visual learning and memory.

La Spada, Albert R. 1998; PhD, 1993, MD, 1993, University of Pennsylvania; inherited neurodegenerative disease.

Moeller, Thomas 2000, (Research); PhD, 1996, Freie University of Berlin (Germany); neurophysiology.

Moens, Cecilia B. * 1998, (Affiliate); PhD, 1993, University of Toronto; development of segmentation and segment identity in the vertebrate hindbrain.

Muchowski, Paul J. 2001; PhD, 1998, University of Washington; molecular chaperones, neurodegeneration.

O'Donnell, Sean * 1996; PhD, 1993, University of Wisconsin; genotypic and endocrine effects on social organization and division of labor in insects.

Pallanck, Leo J. * 1997; PhD, 1992, Albert Einstein College of Medicine; genetic and molecular analysis of symptomatic transmission in *Drosophila melanogaster*.

Perkel, David J. 2000; PhD, 1992, University of California (San Francisco); neural mechanisms of learning; focus on vocal learning in songbirds.

Pham, Tony A. 2000; PhD, 1993, MD, 1993, Baylor University; development and plasticity of neural connections in the mammalian forebrain.

Rao, Rajesh P. N. 2000; MS, 1994, PhD, 1998, University of Rochester; neural computing, machine vision and learning, robotics, computational neuroscience.

Rieke, Frederick Martin * 1997; PhD, 1991, University of California (Berkeley); sensory signal processing and computation.

Stella, Nephi * 1999; PhD, 1995, Ecole Polytechnique Federale De Lausanne; microglia cells activation: involvement of endogenous cannabinoid ligands and their allied receptors.

Von Der Emde, Gerhard 2000; PhD, 1997, University of Erlangen (Germany); neurobiology, behavioral science, sensory physiology, sensory-motor integration, electroreception.

Xia, Zhengui * 1987; MS, 1985, Wuhan University (China), PhD, 1991, University of Washington; neuronal apoptosis, neuronal gene regulation.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crsctat/.

NEUBEH 501 Introduction to Neurobiology (3)

Survey of all aspects of neuroscience, including molecular and cellular neurobiology. Lecture and laboratory discussion of original literature, observation of demonstrations, and examination of macroscopic and microscopic neural tissue. Offered: A.

NEUBEH 502 Introduction to Neurobiology (4)

Survey of all aspects of neuroscience, including an introduction to neuroanatomy and modules on sensory and motor systems. Lecture and laboratory discussion of original literature, observation of demonstrations, and examination of macroscopic and microscopic neural tissue. Offered: W.

NEUBEH 503 Introduction to Neurobiology (4)

Survey of all aspects of neuroscience, including a discussion of higher neural processes like learning, memory, and neuroendocrinology. Lecture and laboratory discussion of original literature, observation of demonstrations, and examination of macroscopic and microscopic neural tissue. Offered: Sp.

NEUBEH 510 Seminar in Neurobiology and Behavior (0.5)

Biweekly seminar on current topics. Required for students in the Graduate Program in Neurobiology and Behavior and for students supported on Graduate Neuroscience Program Training Grant. Credit/no credit only. Offered: AWSp.

NEUBEH 526 Introduction to Laboratory Research in Neurobiology (4)

Students become familiar with, and assist in, the performance of research on ongoing projects in designated laboratories. Emphasis on

employed methodology and techniques. Credit/no credit only. Prerequisite: first year graduate students in neurobiology. Offered: AWSpS.

NEUBEH 527 Current Topics in Neurobiology and Behavior (1) Presentation and discussion of current research provides exposure to diverse areas of neurobiology and behavior research. Credit/no credit only. Prerequisite: graduate student in neurobiology and behavior program or permission of instructor. Offered: AWSp.

NEUBEH 541 Neuroendocrinology (3) *Steiner* Emphasizes the cellular and molecular aspects of several topics in neuroendocrinology, including neuropeptide genes, reproduction, steroid hormone regulation of gene expression, mechanisms of hormone action, endocrine rhythms, and neural oscillations. Prerequisite: either BIOL 201, BIOL 202, and BIOL 203, or BIOL 180, BIOL 200, and BIOL 220; BIOC 440, BIOC 441, BIOC 442 or permission of instructor. Offered: jointly with P BIO 509; W.

NEUBEH 600 Independent Study or Research (*, max. 10) Credit/no credit only. Offered: AWSpS.

NEUBEH 700 Master's Thesis (*, max. 10) Offered: AWSpS.

NEUBEH 800 Doctoral Dissertation (*, max. 10) Offered: AWSpS.

Nutritional Sciences

General Catalog Web page:

depts.washington.edu/nutr/

Graduate Program Coordinator
305 Raitt, Box 353410
206-543-1730
nutr@u.washington.edu

The Interdisciplinary Graduate Program in Nutritional Sciences offers programs of study leading to Master of Science (M.S.), Doctor of Philosophy (Ph.D.), and Master of Public Health Nutrition (M.P.H.) degrees. The graduate program best serves the needs of students with a strong science background who wish to pursue (1) advanced training in nutritional science or clinical research, (2) advanced training in nutritional epidemiology and diet-disease interactions, or (3) training in public health nutrition with a community focus. Additional training in clinical and community nutrition is provided to those students who wish to satisfy the didactic and internship requirements of the American Dietetic Association, prior to obtaining Registered Dietitian (R.D.) status.

The principal areas of study are biochemical and molecular nutrition, clinical nutrition, and community or public health nutrition. Members of the core faculty represent the School of Public Health and Community Medicine, the Fred Hutchinson Cancer Research Center, and the University of Washington Medical Center. The program also draws on a larger group of interdisciplinary faculty from the College of Arts and Sciences, Schools of Medicine and Nursing, other units on campus, and from affiliated institutions in the Seattle area.

Each program of study is designed by the student in consultation with, and with the approval of, a supervisory committee. Ideally, M.S. and Ph.D. students begin working on a research project under the supervision of an appropriate faculty member in the early stages of their graduate experience. Public health field placements are an integral part of the M.P.H. curriculum and generally follow required coursework.

Students pursuing courses in clinical nutrition work closely with the coordinator of clinical activities and are supervised by teaching assistants.

The University of Washington has an extensive research environment. Research facilities in Raitt Hall include modern laboratories, computer facilities, and a vivarium. Students also have access to faculty mentors and research facilities through the Medical Center, the Fred Hutchinson CRC, the Clinical Research Center, and the Clinical Nutrition Research Unit. Additional clinical facilities include Harborview Medical Center, Northwest Kidney Center, Children's Hospital and Medical Center, Pacific Medical Center, and the Center for Human Development and Disabilities. Among facilities for M.P.H. placements are Seattle King County Health Department.

Students may enter the graduate degree program after completing a bachelor's or a master's degree in biological sciences. Background in chemistry, biochemistry, and human physiology is especially desirable. Students who wish to supplement their degree program with ADA-approved training leading to R.D. status must complete all didactic requirements before being admitted to the supervised dietetic internship.

The internship specialty areas are clinical and community nutrition. Applicants should contact Program Director for detailed admission requirements.

Faculty

Director

Adam Drewnowski

Professors

Beresford, Shirley A. * 1987; PhD, 1981, University of London (UK); nutritional epidemiology, folic acid, fruit and vegetables.

Chait, Alan * 1977; MBChB, 1967, MD, 1974, University of Capetown (South Africa); clinical nutrition with special emphasis on lipid metabolism.

Drewnowski, Adam * 1998; PhD, 1977, Rockefeller University; taste and psychology of food choice in disease prevention.

Kristal, Alan R. * 1987; DPH, 1983, Columbia University; nutritional epidemiology, dietary behavior, nutrition intervention, and cancer control.

Leboeuf, Renee C. * 1987, (Adjunct); PhD, 1985, Harvard University, MD, 1987, University of Massachusetts; genetic and nutritional regulation of proteins involved in lipid transport.

Monsen, Elaine R. * 1969; MS, 1959, PhD, 1961, University of California (Berkeley); nutrition, dietetics.

Rosenfeld, Michael E. * 1992; PhD, 1981, University of Wisconsin; mechanisms of atherogenesis and macrophage gene expression.

Associate Professors

Patterson, Ruth E. * 1994; PhD, 1992, University of North Carolina; dietary assessment in adult populations, dietary change, vitamin supplements in cancer prevention.

Assistant Professors

Cheney, Carrie L. * 1990; PhD, 1989, University of Washington; nutrition in autism spectrum disorder; role of nutrition in cancer prognosis, secondary prevention.

Johnson, Donna 1990; MS, 1979, Syracuse University, PhD, 1995, University of Washington; pub-

lic health nutrition practice: obesity, maternal and child nutrition.

Lampe, Johanna W. * 1998, (Research); MS, 1982, PhD, 1990, University of Minnesota; gene-diet interactions and cancer susceptibility: phytochemicals, biotransformation enzymes, colon.

Lecturers

Rees, Jane * 1973, (Adjunct); MS, 1972, University of Washington; nutritional support of adolescent health, especially during pregnancy; eating disorders.

Trahms, Cristine M. * 1973; MS, 1972, University of Washington; growth and development of young children: metabolic disorders, special health care needs.

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

NUTR 300 Nutrition for Today (3) *NW Bruemmer* Science of nutrition as it relates to individual food choices, health behaviors, public health. Health topics include wellness, obesity, eating disorders, sports nutrition, prevention of chronic disease. Nutrients and nutritional needs across the lifespan. Issues facing society including food safety, biotechnology, use of supplements and botanicals. Offered: W.

NUTR 301 Nutrition and Nursing (3) *NW Dong* Basic principles of nutrition and their relationship to health problems. Normal nutrition needs of individuals at various age levels; environmental influences on nutrition; assessment of nutritional status; nutritional values of foods; dietary modifications as appropriate in the nutritional component of medical treatment. Recommended: CHEM 220; ZOOL 118. Offered: A.

NUTR 441 Chemistry of Foods (3) *Bruemmer* Principles of food science integrated with laboratory sessions that observe the effects of various parameters of food composition, and applied sensory evaluation. Explores current trends in the culinary sciences to promote pleasurable eating. Recommended: general and organic chemistry. Offered: odd years; S.

NUTR 445 Food Policy and Food Safety (3-5) *Bruemmer* Presentation of emerging issues in food safety, food policy, including food and nutrition regulatory and legal issues, labeling; sanitation; biotechnology; and consumer perception of nutritional risk. Lab element examines objectives of management in the delivery of safe food; receiving systems; inventory control, menu planning, and cost control. Recommended: microbiology. Offered: even years; S.

NUTR 462 Medical Nutrition Therapy I (2) *Bruemmer* Intervention strategies, counseling skills, and diet modifications that pertain to chronic disease prevention and management. Co-requisite: NUTR 562.

NUTR 463 Medical Nutrition Therapy II (2) *Bruemmer* Didactic training in nutrition support theories and skill development for interpretation of laboratory values. Management of fluids and electrolytes, and nutrition interventions in acute care. Prerequisite: NUTR 462; co-requisite: NUTR 563. Offered: Sp.

NUTR 465 Nutritional Anthropology (3) *I&S/NW Shell-Duncan* Concerns interrelationships between biomedical, sociocultural, and ecological factors, and their influence on the ability of humans to respond to variability in nutritional resources. Topics covered include diet and human evolution, nutrition-related

biobehavioral influences on human growth, development, and disease resistance. Prerequisite: BIO A 201. Offered: jointly with BIO A 465.

NUTR 499 Undergraduate Research (1-5, max. 10) *Drewnowski, Rosenfeld* Independent study and research supervised by a faculty member with appropriate academic interest. Offered: AWSpS.

Courses for Graduate Students Only

NUTR 500 Graduate Seminar: Current Issues in Nutrition (1, max. 4) A review of current topics in nutritional science and public health nutrition. Provides a forum for student and faculty presentation, and review of current research efforts. Prerequisite: graduate student in nutrition. Offered: AWSp.

NUTR 520 Protein and Carbohydrate Nutrition (4) *Kirk, Rosenfeld* Metabolic/physiologic concepts related to protein and carbohydrate nutrition. Areas addressed include composition of foods, requirements through the life cycle, quality of protein, vegetarianism, protein deficiency, carbohydrates of physiological importance, low carbohydrate diets, glycemic response to foods, carbohydrates and dental caries, inborn errors in carbohydrate and protein metabolism. Prerequisite: biochemistry. Offered: A.

NUTR 521 Lipid Nutrition (4) *Kirk, Rosenfeld* Normal lipid components of animal fluids and tissues, with review of their metabolism and physiological functions. Effect of diet and the normal development during the life span of these lipid metabolism. Changes of lipids with various types of disease states and means of nutritional modification of these changes. Prerequisite: biochemistry. Offered: W.

NUTR 522 Vitamin and Mineral Nutrition (4) *Kirk, Rosenfeld* Advanced study of biologically essential minerals and vitamins. To include absorption, transport, function, storage, excretion; imbalance, deficiency and toxicity; dietary sources; role of these nutrients in prevention diseases directly or indirectly (such as cancer, dental caries); role of modern food technology on availability of these nutrients in our food supply. Prerequisite: biochemistry. Offered: Sp.

NUTR 525 Evaluation of Nutritional Status (3) *Monsen* Dietary, clinical, and biochemical components in the assessment of nutritional status of individuals and groups. Interrelationships of nutrients and effects of varying levels of nutrient intake. Critical appraisal of nutritional status surveys. Experimental design and dietary methodology. Prerequisite: human nutrition and biochemistry. Offered: odd years; A.

NUTR 526 Maternal and Infant Nutrition (3) *Johnson* Influence of maternal and infant nutrition on the health of populations. Nutrition-related physiological, psychological, and social factors in pregnancy, lactation, and infancy. Application of evidence-based approaches to maternal and infant nutrition recommendations and interventions for populations and high-risk individuals. Prerequisite: human nutrition and human physiology. Offered: A.

NUTR 527 Nutrition: Childhood Through Adolescence (3) *Rees, Trahms* Interactions of nourishment with behavior, growth, and development of children, from infancy through adolescence. Critical evaluation of normative data and special problems, as well as strategies for individual and public health interventions. Prerequisite: graduate student in nutritional sciences or permission of instructor. Offered: even years; Sp.

NUTR 528 Nutrition in Aging (3) *Drewnowski, Monsen* Physiological, psychological, social, cultural, and economic factors affecting nutrition in the middle and later years. Prerequisite: human nutrition and human physiology. Offered: odd years; Sp.

NUTR 529 Nutrition Research Design (3) *Cheney* Critical review of selected nutrition literature. Evaluation of experimental design, research protocols, data analyses, and application in nutritional science. Prerequisite: BIOST 511. Offered: even years; AWSpS.

NUTR 530 Nutrition for Children with Special Health Care Needs (3) *Lucas* Principles of nutrition screening and assessment, clinical nutritional care, family-centered care, and health services as applied to meeting nutritional needs of children with special health care needs. Both population-based and individual care concepts are explored for children with a variety of chronic conditions. Offered: odd years; Sp.

NUTR 531 Community Nutrition (3) *Johnson* The functions of public health as applied to nutrition: nutrition monitoring and assessment, assuring access to food and a safe food supply, and national nutrition policy. The practice of public health nutrition: the nutrition environment, program planning, implementation, and evaluation. Offered: W.

NUTR 532 Fieldwork in Public Health Nutrition (1-12, max. 12) *Johnson* Experience and service learning in organizations that plan, deliver, and promote population-based nutrition education and nutrition services. Prerequisite: Nutritional Sciences graduate student and permission of instructor. Offered: AWSpS.

NUTR 536 Nutrition Education Principles and Practice (3) *Drewnowski* Integrated course designed to prepare students of the practical application of nutrition education theories and principles in diverse behavioral change settings for a variety of learner-population groups. Prerequisite: permission of instructor. Offered: even years; Sp.

NUTR 537 Laboratory Rotation (1-4, max. 6) *Drewnowski, Rosenfeld* Exposure to research being conducted in the laboratories of the graduate nutrition faculty. Provides hands-on experience in laboratory research. Introduces the student to on-going research for preparation of dissertation topics. Prerequisite: permission of instructor. Offered: AWSpS.

NUTR 538 Nutritional Epidemiology (3) *Beresford, Drewnowski* Application of epidemiological methods to current studies of diet, nutrition, and chronic disease. A discussion of current issues and controversies enable students to plan studies in nutritional epidemiology and disease prevention. Prerequisite: EPI 511 or EPI 512 and BIOST 511 or permission of instructors. Offered: jointly with EPI 538; A.

NUTR 539 Seminar in Nutrition (1-3, max. 9) *Monsen* Library seminar and research on selected topics in recent developments in the field of nutrition. Prerequisite: advanced nutrition.

NUTR 551 Nutrition and Gene Expression (3) *Rosenfeld* Lectures, student presentations, and discussions of current research on nutrient:gene interactions. Focus on how dietary factors act both directly as transcriptional regulators or indirectly as inducers of signal transduction cascades leading to alterations in expression of proteins associated with cellular nutrient metabolism. Prerequisite: NUTR 520, NUTR 521, NUTR 522, or permission of instructor. Offered: odd years; W.

NUTR 561 Dietetics Internship (10, max. 30) *Leader* Focuses on the competencies for entry-level practice in dietetics. Autumn and winter quarters include core experiences in wellness, public health, food service, ambulatory care, home health, and clinical services. Spring quarter activities are devoted to either nutrition therapy or public health, depending on student's career goals. Prerequisite: clinical students only. Offered: AWSp.

NUTR 562 Nutrition and Chronic Disease (4-6) *Bruemmer, Drewnowski* Epidemiology/pathophysiology of chronic disease related to nutrition (e.g., obesity, cardiovascular disease, osteoporosis, hypertension, diabetes). Examines nutritional risk/protective factors in relation to public health, individual nutrition, and clinical intervention. Lab focuses on medical nutrition therapy/application of nutrition interventions related to chronic disease prevention/management. Prerequisite: physiology, biochemistry. Offered: W.

NUTR 563 Nutrition in Acute Care (4-6) *Bruemmer* Assessment of the nutritional demands and hypermetabolic response of trauma, surgery, organ failure, burns, AIDS, and neoplastic disease. Examines specialized nutritional support and substrate requirements in the acute care setting. Lab explores medical nutrition therapy and application of nutrition interventions related to acute care. Prerequisite: NUTR 562, or permission of instructor. Offered: Sp.

NUTR 564 Management of Nutrition Services (4) *Bruemmer, Monsen* Policy and administrative issues that impact delivery of nutrition services in health care environments. Topics include organization behavior, productivity, financial environments, clinical management, and human resources. Offered: S.

NUTR 600 Independent Study or Research (*) Offered: AWSpS.

NUTR 700 Master's Thesis (*) Offered: AWSpS.

NUTR 800 Doctoral Dissertation (*) Credit/no credit only. Prerequisite: permission of program adviser. Offered: AWSpS.

Quantitative Ecology and Resource Management

General Catalog Web page:
www.washington.edu/students/gencat/academic/Quant_Ecology.html

Program Web page:
depts.washington.edu/qerm/

Graduate Program Coordinator
 304 Loew Hall, Box 352182
 206-616-9571
qerm@u.washington.edu

The graduate program offered by the Quantitative Ecology and Resource Management (QERM) interdisciplinary group provides a unique opportunity for students to study the application of statistical, mathematical, and decision sciences to a broad array of terrestrial and marine ecology, natural resource management, and biometrical and mathematical biology problems. The QERM program of study leads to Master of Science and Doctor of Philosophy degrees, and is designed to attract mathematically trained students interested in working on contemporary ecological or resource-management problems from a quantitative perspective.

Faculty associated with this interdisciplinary program come from thirteen campus units, including Statistics, Applied Mathematics, Forest Resources, Aquatic and Fishery Sciences, Zoology, Biostatistics, and Marine Affairs. This pool of faculty talent is available to enrich the academic experience of all QERM students.

Degree Requirements

Students entering the QERM program are expected to have either a strong mathematical or biological (ecological) background. Master of Science coursework requirements include two courses in statistical

theory; one course in optimization; one applied statistical methods course; two courses in either applied quantitative ecology or quantitative resource management; a seminar in quantitative ecology; plus approved electives. All master's degree holders must pass a first-year qualifying statistical theory and ecological modeling examinations, prepare and defend a thesis, take a total of at least 18 graded quarter credits, and satisfy all Graduate School requirements.

Students passing the first-year qualifying examinations at the Ph.D. level are eligible to enter the doctoral program of study. Course requirements equivalent to the master's program also must be completed. Doctor of Philosophy degree requirements include a minimum of 18 credits of graded course work beyond the master's; a minimum of 27 credits of dissertation research; and satisfaction of all Graduate School requirements. The 18 credits of course work must be taken from an approved list of courses.

Admission Requirements

Students entering this graduate program are expected to perform well on the quantitative and analytical sections of the Graduate Record Examination. Background in a biological or ecological field is also highly desirable. To enter the Ph.D. program, students must pass the first-year qualifying examination at the Ph.D. level. In addition, all course requirements equivalent to the master's program must be completed. At least three letters of recommendation and a brief narrative statement of objectives must accompany each application for admission. Applications are accepted only for autumn quarter. The application deadline is February 1.

Financial Aid

Fellowships, teaching assistantships, and research assistantships are available each year. These come from either the Graduate School or one of the campus units contributing faculty to the QERM program. They generally cover the nine-month academic year, although provisions can be made for summer support. Tuition is normally included as part of the financial package. Funding decisions are made yearly, but attempts are made to continue support for students making satisfactory progress.

Faculty

Director

Loveday L. Conquest

Professors

Bare, B. Bruce * 1969; MS, 1965, University of Minnesota, PhD, 1969, Purdue University; forest land management and valuation, taxation, finance, management science.

Bassingthwaight, James * 1975; MD, 1955, University of Toronto (Canada), PhD, 1964, Mayo Medical School/graduate School; computer analysis of transport mechanisms in blood and tissues.

Briggs, David G. * 1973; PhD, 1980, University of Washington; operations research in forest products industries.

Brown, Gardner * 1965, (Emeritus); PhD, 1964, University of California (Berkeley); resource economics.

Conquest, Loveday L. * 1976; PhD, 1975, University of Washington; statistics in forestry, fisheries, and environmental pollution monitoring.

Ford, E. David * 1985; PhD, 1968, University College, London (UK); quantitative science, ecosystem analysis, forest productivity.

Francis, Robert C. * 1983; PhD, 1970, University of Washington; fisheries management, marine ecosystem dynamics, fisheries oceanography and global climate change.

Gallucci, Vincent * 1976; PhD, 1971, North Carolina State University; stock assessment, fisheries management.

Greulich, Francis E. * 1977; MS, 1967, PhD, 1976, University of California (Berkeley); forest engineering, statistics, operations research.

Guttorp, Peter * 1980; PhD, 1980, University of California (Berkeley); point processes, stochastic models, applications to hydrology, environmental and atmospheric science.

Hilborn, Ray * 1987; PhD, 1974, University of British Columbia (Canada); stock assessment, population dynamics, fisheries policy.

Johnson, Jay A. * 1983; MS, 1970, State University of New York (Syracuse), PhD, 1973, University of Washington; mechanical and physical properties of wood and wood composite materials, wood quality.

Sampson, Paul D. * 1981; PhD, 1979, University of Michigan; spatial statistics, environmetrics; morphometrics, multivariate analysis; statistical consulting.

Schreuder, Gerard Fritz * 1971; MS, 1967, University of North Carolina, PhD, 1968, Yale University; statistical analysis in resource economics, international forestry, trade, aerial photos.

Skalski, John R. * 1987; PhD, 1985, Cornell University; population estimation, environmental statistics and sampling, effects assessment.

Swartzman, Gordon Leni * 1973, (Research); PhD, 1969, University of Michigan; ecological modeling, quantitative natural resources management.

Zeh, Judith * 1982; PhD, 1979, University of Washington; estimation of population size and dynamics; robust methods, computing in infectious disease research.

Associate Professors

Anderson, James J. * 1981; PhD, 1977, University of Washington; biomathematics, ecology, fisheries oceanography, toxicology, fish protection at power plants.

Cullen, Alison * 1995; DSc, 1992, Harvard University; environmental policy, environmental health risk assessment, decision analysis, information and uncertainty analysis.

Kot, Mark * 1989; PhD, 1987, University of Arizona; mathematical ecology, nonlinear dynamics, and population biology.

Leschine, Thomas M. * 1983; PhD, 1975, University of Pittsburgh; marine pollution management, ocean policy studies.

Punt, Andre * 2001, (Research); PhD, 1991, University of Cape Town (South Africa); methods for assessing and managing marine renewable resource populations, Bayesian assessment.

Assistant Professors

Horne, John K. * 2000, (Research); PhD, 1995, Memorial University of Newfoundland (Canada); spatial ecology, predator-prey interactions, fisheries acoustics.

Turnblom, Eric * 1994; MSc, 1986, University of British Columbia (Canada), PhD, 1994, University of Minnesota; forest growth modeling, quantitative stand dynamics, biometrics and natural resources inventory.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

QERM 502 Statistical Consulting for the Life Sciences (1-4)

Conquest Consulting experience in data analysis, applied statistics, experimental design, parameter estimation, and sampling. Student provides consultation services to students and faculty. Students spend one classroom hour per week under faculty supervision discussing problems encountered. Prerequisite: QERM 482, QERM 483, STAT 421, STAT 423, or BIOST 514, BIOST 515, or equivalents, and permission of instructor. Offered: W.

QERM 514 Analysis of Ecological and Environmental Data I (4)

Conquest Factors affecting optimal growth of individuals in their habitat. Estimation of growth and mortality parameters. Response of organisms to changes in environment (bioassay, environmental monitoring). Stochastic viewpoint emphasized. Research design issues for ecological or environmental studies. Analysis of unwieldy data sets. Prerequisite: calculus and either STAT 341, STAT 342 or STAT 512. Offered: Sp.

QERM 521 Scientific Method in Resource Management (4)

Ford Describes process of scientific discovery and strategies used for problems in ecology and natural resources management. Relationships between growth and use of objective knowledge in natural resources management is explored through case studies.

QERM 550 Applied Ecological Modeling (5)

Ford Methods of applied ecological modeling at individual community and ecosystem levels. Analysis of ecological problems suitable for modeling and assessment of models. Students construct a model of their own. Offered: W.

QERM 551 Modeling Organism Dynamics (3)

Anderson Application of techniques of stochastic differential equations, time series analysis, and simulating dynamic processes to plant and animal growth.

QERM 552 Spatial Processes in Ecology (3)

Ford Spatial distribution of organisms, the mechanisms that produce different distributions, and how they may be described mathematically and modeled. Spatial distribution of communities, how this arises, and what its consequences are. Prerequisite: QERM 482, QERM 483, QERM 550.

QERM 597 Seminar in Quantitative Ecology (2)

Current topics in quantitative ecology and resource management. Fisheries, forestry, and marine resources. Offered: ASP.

QERM 598 Special Topics in Quantitative Resource Management (1-3, max. 12)

Population and community ecology, systems ecology, and physical processes in ecosystems. Prerequisite: permission of instructor.

QERM 599 Research in Quantitative Resource Management and Ecology (*, max. 12)

Topics can be theoretical in nature or combined theory and experiment. Research might be a prelude to thesis or dissertation research. Credit/no credit only.

QERM 600 Independent Study or Research (*)

QERM 700 Master's Thesis (*)

QERM 800 Doctoral Dissertation (*)

Quaternary Research Center

19 Johnson

General Catalog Web page:
www.washington.edu/students/gencat/academic/Quaternary.html

Program Web page:
depts.washington.edu/qrc/

Quaternary studies focus on the processes that presently shape the natural environment and have operated over approximately the past two and a half million years (Quaternary period). A knowledge of Quaternary events facilitates an understanding of earth history in relation to the modern environment and has predictive value with regard to present-day and future environmental changes.

Quaternary research is typically interdisciplinary, and thus it commonly involves related interests of two or more academic units. The Quaternary Research Center was established in 1967 to foster such interdisciplinary studies on a cooperative basis.

The center has the following goals:

1. To understand environments and climate changes of the past two and a half million years in the context of modern surface processes, which include historical changes, prehistoric postglacial environments, and Ice Age events.
2. To serve as an effective catalyst in fostering interdisciplinary studies in the fields of atmospheric sciences, archaeology/anthropology, botany, engineering, fisheries, forestry, geology, geophysics, oceanography, pedology, and zoology.
3. To provide a scientific perspective on the scale of modern and man-made environmental changes, including climate changes, in the context of recent earth history.
4. To conduct a curriculum jointly with other disciplines in the training of graduate students in Quaternary-oriented studies.
5. To seek applications of Quaternary studies to modern environmental problems that will help predict consequences of policy decisions.

Graduate Program

Students associated with the center obtain their degrees through cooperating departments. Students interested in graduate work at the center should apply to the department of their choice but plan to do their research in a Quaternary-related subject.

Research Facilities

The research laboratories of the center provide an array of modern facilities for investigation of Quaternary problems.

Periglacial Laboratory. The laboratory contains cold rooms equipped for manipulating and studying the freezing and thawing of soils, rocks, and building materials. A large, unique tilt table permits the study of soils under controlled conditions of slope, temperature, and moisture. Research stress is placed on frost action in arctic and alpine environments.

Quaternary Palynology and Paleocology Laboratories. These facilities foster studies of the biotic environment through time and of the uses of plant and animal fossils in Quaternary environmental and ecological reconstruction. Studies of vegetational changes are supported by an extensive modern

pollen and plant reference collection from Asia and western North America.

QRC Library. This specialized collection, dealing with a wide range of Quaternary topics, is among the most extensive in North America. It includes books, monographs, theses, journals, and maps, and houses a large, diverse reprint collection. Searches for library material can be conducted via the QRC Web page (depts.washington.edu/qrc/).

Gillespie, Alan R. * 1985; MS, 1977, PhD, 1982, California Institute of Technology; Quaternary geology, glacial geomorphology, remote sensing.

Grayson, Donald K. * 1975, (Adjunct); PhD, 1973, University of Oregon; North American prehistory, paleoecology, vertebrate faunal analysis, history of archaeology.

Hallet, Bernard * 1980; PhD, 1975, University of California (Los Angeles); glacial and periglacial geomorphology (alpine and Arctic).

Hartmann, Dennis L. * 1977, (Adjunct); PhD, 1975, Princeton University; climate change, dynamic meteorology, radiation and remote sensing.

Heath, G. Ross * 1984, (Adjunct); PhD, 1968, University of California (San Diego); geochemistry and mineralogy of deep-sea sediments.

Montgomery, David R. * 1991, (Adjunct); PhD, 1991, University of California (Berkeley); geomorphology (fluvial and hillslope).

Nitttrouer, Charles * 1998, (Adjunct); PhD, 1978, University of Washington; geological oceanography, continental-margin sedimentation.

Porter, Stephen C. * 1962, (Adjunct); MS, 1958, PhD, 1962, Yale University; Quaternary stratigraphy, geochronology, paleoclimatology.

Quay, Paul D. * 1977; PhD, 1977, Columbia University; chemical oceanography, stable isotope geochemistry, ocean tracers and mixing.

Raymond, Charles F. * 1969, (Adjunct); PhD, 1969, California Institute of Technology; glaciology, ice sheet dynamics.

Richey, Jeffrey E. * 1973, (Adjunct); PhD, 1973, University of California (Davis); quantitative problems of aquatic ecosystems, primary Amazon River, limnology.

Shreve, Ronald L. 2000, (Research Adjunct); PhD, 1959, California Institute of Technology; geology, geomorphology, glaciology, geological physics, and geophysics.

Stein, Julie K. * 1980, (Adjunct); MA, 1976, PhD, 1980, University of Minnesota; New World archaeology,

Northwest coast archaeology, geoarchaeology, shell middens.

Waddington, Edwin D. * 1984, (Adjunct); MS, 1973, University of Alberta (Canada), PhD, 1981, University of British Columbia (Canada); glacier and ice sheet dynamics, paleoclimatology.

Warren, Stephen G. * 1981, (Adjunct); MA, 1969, PhD, 1973, Harvard University; atmospheric radiation, radiative properties of clouds, snow and sea ice, Antarctic climate.

Associate Professors

Anderson, Patricia M. * 1982; MA, 1976, PhD, 1982, Brown University; paleoecology, paleoclimatology, Quaternary environments (Arctic).

Bourgeois, Joanne * 1980, (Adjunct); PhD, 1980, University of Wisconsin; stratigraphy, sedimentology, Quaternary paleoseismology.

Eck, Gerald G. * 1974, (Adjunct); PhD, 1977, University of California (Berkeley); primate paleontology, especially African Pliocene-Pleistocene monkeys and hominids.

Assistant Professors

Brown, Tom 1999, (Affiliate); MSc, 1985, Simon Fraser University (Canada), PhD, 1994, University of Washington.

Fitzhugh, J. Ben * 1997, (Adjunct); PhD, 1996, University of Michigan; archaeology, anthropology, evolutionary ecology, complex hunter-gatherers, social evolution, settlement.

Putkonen, Jaakko K. 2001, (Adjunct Research); MS, 1990, Helsinki University (Finland), PhD, 1997, University of Washington; Quaternary geology, frozen ground research, cosmogenic isotope dating.

Sletten, Ronald S. * 1997, (Research Adjunct); MS, 1987, PhD, 1995, University of Washington; soils, environmental chemistry.

Steig, Eric J. * 1998; MS, 1992, PhD, 1996, University of Washington; stable and cosmogenic isotope geochemistry, glaciology.

Stone, John O. H. * 1998; PhD, 1986, Cambridge University (UK); cosmogenic isotope geochemistry.

Senior Lecturer

Swanson, Terry W. 1988, (Adjunct); MA, 1989, University of California (Davis), PhD, 1994, University of Washington; Quaternary geology, geochronology.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

QUAT 417 Environmental Change in the Glacial Ages (3) NW Porter Physical, biological evidence of climatic change during Quaternary Period; emphasizing stratigraphy, chronology. Impact of alternating glacial/interglacial cycles on earth's terrestrial, marine environments. Theories on causes of climatic variation. Offered: jointly with ESS 433.

Courses for Graduate Students Only

QUAT 501 Seminar/Conference in Quaternary Environments (1, max. 6) Interdisciplinary seminar or conference in the changing natural environments

of the Quaternary Period, with emphasis on climatic changes and their effects. Speakers from the University and elsewhere present lectures on their specialties, followed by discussion. Credit/no credit only.

QUAT 502 Interdisciplinary Quaternary Investigations (2, max. 6) Research course for interdisciplinary investigation of Quaternary problems. Student attends sessions of QUAT 501 and pursues a problem-oriented case study concurrently under faculty direction. Required paper on case study. Credit/no credit only. Prerequisite: graduate standing.

QUAT 504 Special Topics in Quaternary Sciences (1-3, max. 3) Environments and climate changes of past two million years (Quaternary Period) in context of modern surface processes, including historical changes, prehistorical environments of postglacial period, and Ice Age events. Provides scientific perspective on scale of modern and man-made environmental changes, including those of climate, in context of recent earth history. Credit/no credit only. Prerequisite: background courses in earth sciences and ecology.

Urban Design and Planning

General Catalog Web page:

www.washington.edu/students/gencat/academic/Urban_Design.html

Program Web page:

www.grad.washington.edu/inter/urbdpindex.htm

Graduate Program Coordinator
34A Communications Building, Box 353770
206-543-6398

The Interdisciplinary Group for Urban Design and Planning offers the Doctor of Philosophy degree. The program seeks to prepare scholars who can advance the state of research, practice, and education related to the built environment and its relationship to society and nature in metropolitan regions throughout the world. The program provides a strong interdisciplinary educational experience that draws on the resources of the entire university, and the laboratory provided by the Seattle metropolitan region and the Pacific Northwest. The program emphasizes the educational values of interdisciplinarity, intellectual leadership and integrity, and the social values of equity, democracy and sustainability. It seeks to promote deeper understanding of the ways in which public decisions shape and are shaped by the urban physical, social, economic, and natural environment. The program envisions its graduates becoming leaders in the international community of researchers, practitioners and educators who focus on improving the quality of life and environment in metropolitan regions.

The intellectual focus of the Ph.D. program is unique in bringing together interdisciplinary perspectives from the social and natural sciences, humanities, and design and planning disciplines, and applying them to the formation and evaluation of urban and environmental plans and policies. It seeks to explore interactions among built urban form; urban markets for real estate, labor, public services and infrastructure; urban social and political institutions and processes; and urban ecological patterns and processes. Study of these interactions draws on the disciplines of economics, geography, history, sociology, political science, and ecology, among others. The program of study is divided into three phases.

Phase one—the core curriculum—defines the intellectual foundation of the program. While the program retains considerable flexibility in defining a research agenda within the broad umbrella of urban and environmental planning and policy, it provides a common foundation for all students to build upon. The core curriculum consists of required classes and a qualifying examination.

Upon passing the qualifying examination, the student forms a supervisory committee to oversee progress through the rest of the academic program. The committee must consist of at least three faculty members in the interdisciplinary group representing at least two academic departments. Students develop with their supervisory committee a description of their proposed areas of study. These define an area of scholarship that must demonstrate an interdisciplinary research approach to an application within urban and environmental planning and policy.

Phase three focuses on original work which is presented as a dissertation.

Admission Criteria

Admission to the Ph.D. program is based on evidence of promise of high scholarly achievement and research orientation. The applicant's statement of purpose, Graduate Record Examination (GRE) test results, letters of recommendation, and examples of past work constitute the basis for the admissions evaluation. Further, to ensure the highest level of faculty support and proper level of faculty guidance, the program accepts those students whose research interests match areas of specialized faculty competence. Students are encouraged to identify faculty whose interests coincide with theirs in their statement of purpose.

Applicants typically have a master's degree in fields ranging from planning and public affairs to natural and social sciences. In some cases, students can be admitted to the program on the condition that certain master's-level core courses are completed during the first year of study. Students interested in a professional degree in urban design and planning should apply to the master's program in Urban Design and Planning (www.caup.washington.edu/html/URBDP/ or jcbrooks@u.washington.edu). The application deadline is February 1, for entry into the program autumn quarter.

Financial Aid

The Interdisciplinary Ph.D. Program in Urban Design and Planning attempts to provide funding for doctoral program applicants in a way that makes the program attractive to the strongest potential applicants, ensures their effective mentoring while in the program, and actively engages and energizes faculty to improve the program and to bring research funding to support students.

Professors

Beyers, William B. * 1962; PhD, 1967, University of Washington; regional science, economic geography, location theory, regional analysis.

Borning, Alan H. * 1980; MS, 1974, PhD, 1979, Stanford University; human-computer interaction; constraint-based languages and systems.

Bradley, Gordon A. * 1972; MLA, 1972, University of California (Berkeley), PhD, 1986, University of

Michigan; forest land use planning, Conservation area planning and design.

Chrisman, Nicholas R. * 1987; PhD, 1982, University of Bristol (UK); geographic information systems, science and technology studies, geography of geographic information.

Ellis, John Mark 1999; PhD, 1988, Indiana University; race, ethnicity, immigration and local labor markets.

Findlay, John M. * 1987; PhD, 1982, University of California (Berkeley); history of the American West.

Guest, Avery * 1972; MS, 1964, Columbia University, MA, 1967, PhD, 1970, University of Wisconsin; demography, ecology, stratification.

Handcock, Mark S. * 2000; PhD, 1989, University of Chicago; methodology for the social sciences; spatial, environmental modeling; distributional comparison.

Harrington, James W. * 1997; PhD, 1983, University of Washington; roles of industrial change and labor processes in sub-national, regional economic development.

Hershman, Marc * 1976; JD, 1967, Temple University, LLM, 1970, University of Miami (Florida); coastal zone management law.

Lee, Robert G. * 1978; MS, 1969, Yale University, PhD, 1973, University of California (Berkeley); natural resource sociology, multiresource management, development/change of forestry institutions.

May, Peter J. * 1979; PhD, 1979, University of California (Berkeley); policy processes; policy design and implementation; environmental regulation.

Miller, Donald H. * 1970; PhD, 1972, University of California (Berkeley); urbanization processes, urban spatial structure, planning theory and evaluation, public service plan.

Miller, Marc * 1979; PhD, 1974, University of California (Irvine); maritime anthropology, cognitive anthropology and social/cultural change.

Morrill, Richard L. * 1955, (Emeritus); PhD, 1959, University of Washington; social and economic geography, theory and quantitative methods, spatial organization, migration.

Mugerauer, Robert 2000; PhD, 1973, University of Texas (Austin); built and natural environments.

Nyerges, Timothy L. * 1985; PhD, 1980, Ohio State University; GIS, spatial decision support, urban, transportation, environment, groupware.

Ochsner, Jeffrey K. * 1987; MArch, 1976, Rice University; design, history, preservation design, urban design.

Rutherford, G. Scott * 1981; PhD, 1974, Northwestern University; transportation planning and engineering, transit planning, demand forecasting.

Streatfield, David C. * 1974; MLA, 1965, University of Pennsylvania; regional landscape planning, environmental history, landscape studies.

Vernez Moudon, Anne * 1980; DSc, 1987, Ecole Polytechnique Federale de Lausanne; urban design, city form and neighborhood studies, design research.

Zerbe, Richard O. * 1975; PhD, 1969, Duke University; law and economics, cost-benefit analysis, economic history, environmental regulation.

Associate Professors

Alberti, Marina * 1996; PhD, 1992, Massachusetts Institute of Technology; environmental planning, urban ecology, impact assessment, geographic information systems.

Blanco, Hilda J. * 1996; MRP, 1984, PhD, 1989, University of California (Berkeley); factors influencing urban sprawl; the implications of cognitive science and evolutionary theory.

Chang, Kuei-Sheng * 1966, (Emeritus); PhD, 1955, University of Michigan; economic geography of China, historical geography of exploration, Third World development.

Dubrow, Gail Lee * 1989; MA, 1979, University of Oregon, PhD, 1991, University of California (Los Angeles); the social history of the built environment; historic preservation; issues of race, class and gender.

Gross, Mark D. * 1999; PhD, 1986, Massachusetts Institute of Technology; design and planning methods, architecture, computational models, human computer interaction.

Hill, Kristina * 1997; MLA, 1990, PhD, 1997, Harvard University; human dimensions of landscape change; urban ecology; urban design; urban hydrology.

Marzluff, John M. * 1997; MS, 1983, PhD, 1987, Northern Arizona University; behavior, ecology, and conservation of birds and mammals.

Prakash, Vikramaditya * 1996; MA, 1989, PhD, 1994, Cornell University; Non-western, Asian, Indian Architecture; cultural and postcolonial studies; LeCorbusier; modernism.

Waddell, Paul A. * 1997; PhD, 1989, University of Texas (Dallas); urban policy, regional planning, growth management, land use, transportation, GIS.

Assistant Professors

Bae, Christine * 1996; MRP, 1986, State University of New York (Albany), PhD, 1994, University of Southern California; transportation; environmental planning; land use; planning methodologies.

Do, Yi-Luen Ellen * 1999; MDes, 1991, Harvard University, PhD, 1998, Georgia Institute of

Technology; diagramming and freehand sketching, creativity, computer-aided design, cognitive studies.

Kleit, Rachel G. 1999; PhD, 1999, University of North Carolina; urban politics, public housing, urban planning.

Layton, David F. 2001; PhD, 1995, University of Washington; environmental and natural resource policy.

Ryan, Clare * 1997; PhD, 1996, University of Michigan; natural resource policy and administration, environmental conflict management, water policy.

Shankar, Venkataraman * 1999; PhD, 1997, University of Washington; modeling of transportation infrastructure and civil engineering systems.

Withers, Suzanne D. * 1997; PhD, 1992, University of California (Los Angeles); urban housing, residential mobility and migration, longitudinal methods, life-course dynamics.

Interschool or Intercollege Programs

Bioengineering

309 Harris Hydraulics Laboratory

General Catalog Web page:
www.washington.edu/students/gencat/academic/Bioengineering.html

Department Web page:
depts.washington.edu/bioe/

Bioengineering encompasses a wide range of activities in which the disciplines of engineering and biological or medical science intersect. Such multidisciplinary endeavors are yielding new discoveries and major advances that are revolutionizing the health care system. The Department of Bioengineering, housed jointly in the School of Medicine and the College of Engineering, provides a comprehensive, multidisciplinary program of education and research and is recognized as one of the finest bioengineering programs in the world. major areas of research and education include distributed diagnosis and home healthcare (d2h2), molecular bioengineering and nanotechnology, engineered biomaterials and tissue engineering, medical imaging and image-guided therapy, and computational bioengineering.

The Department is home to the University of Washington Engineered Biomaterials ERC funded by NSF, the Center for Nanotechnology, the National Simulation Resource, the Resource Facility for Population Kinetics, the Cell Systems Initiative, the Image Computing Systems Laboratory, and the National ESCA and Surface Analysis Center for Biomedical Problems (NESAC/BIO).

Graduate Program

Graduate Program Coordinator
Box 357962
206-685-2000
bioeng@u.washington.edu

The Department of Bioengineering offers programs of study which lead to the Master of Science (M.S.) and Doctor of Philosophy (Ph.D.) degrees.

Master of Science

The Master of Science degree program provides breadth of knowledge of engineering, biology, and medicine, and depth of knowledge in a particular research area. The degree will prepare students for careers in academic, industrial, or hospital environments. A thesis is required.

Doctor of Philosophy

The objective of the Ph.D. program is to train individuals for careers in bioengineering research and teaching. The program has three major objectives: (1) breadth of knowledge about engineering, biology, medicine, and the interdisciplinary interface between these different fields; (2) depth of knowledge and expertise in a particular scientific specialty; (3) demonstrated independence as a bioengineering researcher. These objectives are fulfilled through a

combination of educational and research experiences. The program is rigorous but maintains flexibility to accommodate qualified students from diverse backgrounds. Entrance to the Ph.D. program does not require prior completion of the M.S. degree and may be made directly after the B.S.

Medical Scientist Program

A Medical Scientist Training Program exists for the support of individuals interested in coordinated graduate school/medical school study leading to both the M.D. and Ph.D. degrees. Students entering this highly competitive program are given an opportunity to pursue a flexible, combined course of study and research. Early inquiry is essential for this option. Contact the MSTP office at 206-685-0762.

Research Facilities

Offices and laboratories are located in the College of Engineering and the School of Medicine. Students have access to the University of Washington Medical Center, Vivarium, Primate Center, Computer Center, and libraries, as well as to all engineering and health-sciences departments and facilities. A wide range of technologies and virtually all aspects of biomedical science are available.

Admission Requirements

Applicants for the M.S. or Ph.D. should have a baccalaureate degree in engineering, biological science, or a related field. Preparation for both programs must include ordinary differential equations, linear algebra, instrumentation, signal processing, engineering systems analysis, thermodynamics or physical chemistry, and cellular and molecular biology. Strong students who are missing some of these background courses can be admitted but will be expected to take the appropriate courses as part of their graduate program. Admission to graduate study in bioengineering is highly selective. Successful applicants have strong academic credentials, research experience, and demonstrated potential for advanced study. The application form and further information can be found on the department's Web page.

Financial Aid

Financial aid is available to qualified graduate students in the form of traineeships, fellowships, and teaching and research assistantships. Funding is derived from federal research and training programs, the Graduate School Fund for Excellence and Innovation, and programs sponsored by private agencies. Questions regarding financial support may be directed to the Academic Counselor.

Faculty

Chair

Yongmin Kim

Professors

Afromowitz, Martin * 1975, (Adjunct); MS, 1966, PhD, 1969, Columbia University; microtechnology, solid-state and fiber-optics sensors, biomedical instrumentation.

Auth, David C. * 1969, (Affiliate); PhD, 1969, Georgetown University; lasers and electro-optical system design, electrophysics, medical instrumentation.

Baneyx, Francois * 1992, (Adjunct); PhD, 1991, University of Texas (Austin); biotechnology, protein technology, biochemical engineering.

Bashein, Gerard * 1974, (Adjunct); PhD, 1969, Carnegie Mellon University, MD, 1974, University of

New Mexico; automation techniques in anesthesia, transesophageal ultrasonic cardiac assessment.

Bassingthwaite, James * 1975; MD, 1955, University of Toronto (Canada), PhD, 1964, Mayo Medical School/graduate School; computer analysis of transport mechanisms in blood and tissues.

Beach, Kirk Watson * 1976, (Adjunct Research); MSChE, 1968, PhD, 1971, University of California (Berkeley), MD, 1976, University of Washington; arterial disease in diabetes, blood flow studies with ultrasonic Doppler.

Burke, James V. * 1985, (Adjunct); PhD, 1983, University of Illinois; optimization, nonsmooth analysis.

Caldwell, James H. 1983, (Adjunct); MD, 1970, University of Missouri; positron emission tomography imaging of myocardial oxygenation, metabolism and sympathetic function.

Callis, James B. * 1973, (Adjunct); PhD, 1970, University of Washington; instrumentation development, process analytical chemistry, non-invasive clinical chemistry.

Conley, Kevin E. * 1988, (Adjunct); PhD, 1983, University of Wisconsin; muscle metabolism and energetics in vivo.

Crum, Lawrence A. * 1992; PhD, 1967, Ohio University; physical acoustics, underwater acoustics, medical ultrasound, acoustic cavitation, sonoluminescence.

Dager, Stephen R. * 1979, (Adjunct); MD, 1978, University of Nebraska; application of functional brain imaging techniques to investigate neuropsychiatric disorders.

Feijen, Jan 1990, (Affiliate); PhD, 1970, University of Groningen (Netherlands).

Foster, David M. * 1980, (Research Emeritus); PhD, 1969, University of British Columbia (Canada).

Guy, Arthur W. * 1955, (Emeritus); PhD, 1966, University of Washington; biological effects and medical applications of electromagnetic fields.

Hannaford, Blake * 1989, (Adjunct); MS, 1982, PhD, 1985, University of California (Berkeley); haptic interfaces, robotics, biomechanics, bioengineering, controls, human-machine interaction.

Haynor, David R. * 1979, (Adjunct); PhD, 1971, University of California (Berkeley), MD, 1979, Harvard University; medical image processing and segmentation; image deformation; functional MRI; expression arrays.

Hlastala, Michael P. * 1972, (Adjunct); PhD, 1969, State University of New York (Buffalo); respiratory physiology, inert gas analysis of respiratory function.

Hoffman, Allan S. * 1970; DSc, 1957, Massachusetts Institute of Technology; synthesis, characterization, and biological interaction of biomaterials, mechanics of natural tissue.

Hol, Wilhelmus G. J. * 1992, (Adjunct); PhD, 1971, University of Groningen (Netherlands); protein crystallography, drug design, vaccine development, and protein engineering.

Hood, Leroy E. * 1992, (Affiliate); PhD, 1968, California Institute of Technology; molecular immunology, large-scale DNA mapping and sequencing, molecular evolution.

Horbett, Thomas A. * 1973; PhD, 1970, University of Washington; interfacial proteins, cell interactions, foreign body reaction, nonfouling surfaces.

Huntsman, Lee L. * 1968; PhD, 1968, University of Pennsylvania; mechanics of heart and heart muscle, cardiovascular system assessment, new measurement techniques.

Kim, Yongmin * 1982; MS, 1979, PhD, 1982, University of Wisconsin; computer architecture, imaging systems, medical imaging, computer graphics, multimedia.

Lai, Henry C. 1981, (Research); PhD, 1978, University of Washington; cellular effects of electromagnetic fields.

Lidstrom, Mary E. * 1995, (Adjunct); MS, 1975, PhD, 1977, University of Wisconsin; biomolecular engineering, metabolic engineering, bioremediation.

Matsen, Frederick A., III * 1973, (Adjunct); MD, 1968, Baylor University; orthopaedics, bone and joint research, robotics.

Meldrum, Deirdre R. * 1992, (Adjunct); MS, 1985, Rensselaer Polytechnic Institute, PhD, 1993, Stanford University; laboratory automation systems, genome analysis, modeling and control of dynamic systems, robots.

Pollack, Gerald H. * 1968; PhD, 1968, University of Pennsylvania; muscular contraction.

Ratner, Buddy D. * 1972; PhD, 1972, Polytechnic Institute of Brooklyn; synthesis and characterization of polymeric biomaterials.

Richards, Todd L. * 1985, (Adjunct); PhD, 1984, University of California (Berkeley); nuclear magnetic resonance imaging, spectroscopy of the brain in demyelinating diseases.

Schurr, J. Michael * 1966, (Adjunct); PhD, 1965, University of California (Berkeley); physical chemistry of DNA and other biopolymers, photon correlation techniques.

Schwartz, Stephen Mark * 1974, (Adjunct); MD, 1967, Boston University, PhD, 1973, University of Washington; vascular biology, atherosclerosis, molecular basis of lineage, developmental biology, cell kinetics.

Soma, Mani * 1982, (Adjunct); MS, 1977, PhD, 1980, Stanford University; computer-aided design, device modeling, I.C. technology and design, bioengineering.

Spelman, Francis A. * 1961, (Emeritus); PhD, 1975, University of Washington; biophysics of implanted cochlea, bioinstrumentation for primate research.

Stayton, Patrick S. * 1992; PhD, 1989, University of Illinois; engineering proteins for biotechnology, biomaterials, and biomedical therapies/diagnostics.

Stewart, Brent K. * 1993, (Adjunct); PhD, 1988, University of California (Los Angeles); biomedical physics, biomedical image processing, medical imaging, medical information systems.

Trask, Barbara J. * 1992, (Adjunct); PhD, 1985, University of Leiden (Netherlands); in situ hybridization, analytical cytogenetics, analysis of large-scale DNA polymorphism.

Verdugo, Pedro * 1974; MD, 1965, State University of Chile; microrheology, biomechanics, polymer gel physics, laser spectroscopy, cell biology.

Viney, Christopher * 1987, (Affiliate); PhD, 1983, Cambridge University (UK); phase transformations and microstructure/property relationships in polymers and liquid crystals.

Yager, Paul * 1987; PhD, 1980, University of Oregon; physical chemistry, biophysics of biomembranes, biosensors, microfluidics.

Yuan, Chun 1991, (Adjunct); PhD, 1988, University of Utah; magnetic resonance imaging in medical application.

Associate Professors

Baker, David * 1993, (Adjunct); PhD, 1989, University of California (Berkeley); protein folding, genomics.

Barrett, P. Hugh R. * 1988, (Affiliate); PhD, 1989, University of Adelaide (Australia); biomathematics and modeling methodology, simulation analyses, lipid and lipoprotein metabolism.

Bonadio, Jeffrey 2000; MD, 1979, Medical College of Wisconsin.

Burns, David H. 1984, (Affiliate); PhD, 1984, University of Washington.

Castner, David G. * 1986, (Research); PhD, 1979, University of California (Berkeley); polymer surfaces, metal-organic interfaces, catalytic materials.

Ching, Randal Preston * 1992, (Adjunct); PhD, 1992, University of Washington; orthopaedic biomechanisms related to injury prevention, injury mechanisms and injury repair.

Giachelli, Cecilia * 1982; PhD, 1987, University of Washington; adhesion molecules and vascular biology processes.

Gross, Ted S. 2000, (Adjunct); PhD, 1993, State University of New York (Stony Brook); biomechanics.

Kalet, Ira J. * 1980, (Adjunct); PhD, 1968, Princeton University; computer simulation of radiation therapy, artificial intelligence, computer graphics.

Kunzelman, Karyn S. * 1991, (Affiliate); PhD, 1991, University of Texas (Dallas); biomedical engineering - cardiac; anatomy and physiology.

Linker, David T. 1993, (Adjunct); MD, 1976, Stanford University; diagnostic ultrasound in cardiology and cardiovascular pathophysiology.

Martyn, Donald A. * 1978; PhD, 1975, University of Southern California; basic mechanisms of contractile regulation in skeletal and cardiac muscle.

Murry, Charles E. * 1989, (Adjunct); PhD, 1989, MD, 1989, Duke University; myocardial infarction, heart regeneration, skeletal/cardiac muscle differentiation.

Nelson, Alan C. * 1986, (Affiliate); PhD, 1980, University of California (Berkeley); biomedical imaging using image analysis for tissue and tumor studies.

Nickerson, Deborah A. * 1992, (Adjunct); PhD, 1978, University of Tennessee; automating the analysis of single nucleotide polymorphisms, human genetics, DNA diagnostics.

Sanders, Joan Elizabeth * 1985; PhD, 1991, University of Washington; soft tissue biomechanics and tissue adaptation to mechanical stress.

Vogel, Viola * 1990; Doct, 1987, Johann Wolfgang Goethe University (Germany); molecular assemblies and Langmuir-Blodgett films, liquid interfaces, nonlinear optics, microscopy.

Assistant Professors

Beyer, Richard P. 1989, (Affiliate); PhD, 1989, University of Washington.

Folch, Albert 2000; PhD, 1994, University of Barcelona (Spain); cell-based microfabricated devices, microscale engineering, high-throughput biological measurements.

Kaiser, Robert J. * 1992; PhD, 1984, California Institute of Technology.

Li, Xingde 2001; PhD, 1998, University of Pennsylvania.

Qian, Hong 1997, (Adjunct); PhD, 1989, Washington University; mathematical, physical chemistry and biology, statistical physics, stochastic mathematics.

Regnier, Michael * 1995, (Research); PhD, 1991, University of Southern California; mechanics, kinetics and computational modeling of cardiac/skeletal muscle contraction.

Schenkman, Kenneth A. 1990, (Adjunct); MD, 1986, Indiana University; pediatric anesthesia.

Singh, Narendra Pal 1993, (Research); MBBS, 1972, King George's Medical College (India).

Vaezy, Shahram * 1983, (Research); PhD, 1991, University of Washington; therapeutic ultrasound, image-guided therapy, three dimensional visualization and computation.

Vicini, Paolo 1996; PhD, 1996, Polytechnic of Milan (Italy).

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

BIOEN 420 Medical Imaging (4) *Kim, Yuan* Various medical imaging modalities (x-rays, CT, MRI, ultrasound, PET, SPECT, etc.) and their applications in medicine and biology. Extends basic concepts of signal processing (BIOEN 303) to the two and three dimensions relevant to imaging physics, image reconstruction, image processing, and visualization. Prerequisite: BIOEN 303; MATH 308; CSE 143. Offered: A.

BIOEN 436 Medical Instrumentation (4) Introduction to the application of instrumentation to medicine. Topics include transducers, signal-conditioning amplifiers, electrodes and electrochemistry, ultrasound systems, electrical safety, and the design of clinical electronics. Laboratory included. For juniors, seniors, and first-year graduate students who are preparing for careers in bioengineering, both research and industrial. Offered: jointly with E E 436; Sp.

BIOEN 440 Introduction to Biomechanics (4) *Sanders* Presents the mechanical behavior of tissues in the body and the application to design of prostheses. Tissues studies include bone, skin, fascia, ligaments, tendons, heart valves, and blood vessels. Discussion of the structure of these tissues and their mechanical response to different loading configurations. An important part of the class is a final project. Offered: jointly with M E 445; Sp.

BIOEN 455 BioMEMS (4) *Folch* Introduction to BioMEMS. State-of-the-art techniques in patterning biomolecules, machining three-dimensional microstructures and building microfluidic devices. Various biomedical problems that can be addressed with microfabrication technology and the engineering challenges associated with it. Biweekly labs. Prerequisite: BIOEN 303. Offered: Sp.

BIOEN 457 Advanced Molecular Bioengineering (4) *Stayton* Fundamentals of molecular recognition: thermodynamics, forces, kinetics. Manipulation of recognition processes for current molecular bioengi-

312 INTERSCHOOL OR INTERCOLLEGE PROGRAMS / BIOENGINEERING

neering research and development. Fundamental physical chemistry of molecular recognition in the context of biomedicine. Therapeutics based on cells. Prerequisite: BIOEN 357; BIOC 405. Offered: Sp.

BIOEN 467 Biochemical Engineering (3) *Baneyx* Application of basic chemical engineering principles to biochemical and biological process industries such as fermentation, enzyme technology, and biological waste treatment. Rapid overview of relevant microbiology, biochemistry, and molecular genetics. Design and analysis of biological reactors and product recovery operations. Prerequisite: either CHEM 223 with CHEM E 340 or either CHEM 237 or CHEM 335; recommended: CHEM E 465. Offered: jointly with CHEM E 467; W.

BIOEN 470 Systems Engineering and Electronic Medicine (4) *Kim* Provides students with understanding and hands-on experience in systems engineering, healthcare information systems, and core technologies for electronic medicine; including how large-scale engineering systems are defined, architected, built, and tested. Focus is on current and future medical systems. Prerequisite: BIOEN 303; MATH 308. Offered: W.

BIOEN 480 Bioengineering Research/Capstone Design (2-6, max. 12) Students formulate a problem, develop a detailed experimental or design plan, and report results of their work in written and oral form. Prerequisite: BIOEN303; BIOEN 305; BIOEN 357. Offered: AWWSpS.

BIOEN 485 Computational Bioengineering (4) *Vicini* Introduction to computational, mathematical and statistical approaches to the analysis of biological systems, including systems and control theory, molecular models and bioinformatics. Lectures and laboratory sessions emphasize practical problems in kinetics, metabolism and genomics. Prerequisite: CSE 143; BIOEN 305; MATH 308. Offered: W.

BIOEN 490 Engineering Materials for Biomedical Applications (3) *Bonadio, Horbett* Combined application of principles of physical chemistry and biochemistry, materials engineering, to biomedical problems and products. Applications include implants and medical devices, drug delivery systems, cell culture processes, diagnostics, and bioseparations. Offered: jointly with CHEM E 490; Sp.

BIOEN 491 Controlled-Release Systems: Principles and Applications (3) *Hoffman* Mechanisms for controlled release of active agents and the development of useful drug delivery systems for this purpose. Release mechanisms considered include diffusive, convective, and erosive driving forces. Delivery routes include topical, oral and in vivo. Some special case studies covered in detail. Offered: jointly with CHEM E 491; even years; W.

BIOEN 492 Surface Analysis (3) *Ratner* Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials, science wear, and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger): ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Offered: jointly with CHEM E 458; W.

BIOEN 499 Special Projects (2-6, max. 6) Individual undergraduate bioengineering projects under the supervision of an instructor. In addition, classes on selected topics of current interests as announced. Offered: AWWSpS.

Courses for Graduates Only

BIOEN 510- Bioengineering Seminars (3) Topics of current bioengineering interests presented by resident and visiting faculty members and students. Graduate students actively involved in bioengineering

research are eligible to enroll for credit and can be expected to attend regularly, participate in discussions, and make presentations. Offered: A.

BIOEN 511 Biomaterials Seminar (1) *Hoffman, Horbett, Ratner* Presentation of student research results. Credit/no credit only. Prerequisite: permission of instructor. Offered: jointly with CHEM E 511; AWWSp.

BIOEN 520 Orthopedic Biomechanics (4) *Ching* Mechanical engineering applied to musculoskeletal system with emphasis on techniques in orthopedic surgery. Measurement of mechanical properties of tissues. mechanics of bone, soft tissue, and muscle, mechanics of upper extremity, spine, and lower extremity. Engineering in surgery, gait analysis, joint replacement, fracture fixation. Prerequisite: M E 556 and M E 557 or permission of instructor. Offered: odd years; W.

BIOEN 540 Biosystem Identification (4) *Vicini* Fundamentals of mathematical modeling in medicine and biology, Introduction to compartmental models: a priori, a priori identifiability. Data measurement error, parameter estimation. Maximum likelihood, least squares. Introduction to tracer-tracee models, pharmacokinetics, pharmacodynamics. Models to test hypotheses. Hands-on computer experience. Prerequisite: ordinary differential equations, introductory statistics, or permission of instructor. Offered: even years; A.

BIOEN 542 Computer Simulation in Biology (3) *Bassingthwaighe, Graham* Introduction to mathematical modeling of biological phenomena. Tutorial text explains how to derive equations for simple models and apply them to generate simulation data. Application topics include kinetics of biomolecular reactions and enzyme saturation, membrane transport, organismal predation, competition and growth, compartmental and spatially distributed models, physiological control systems, probabilistic models. Prerequisite: P BIO 405 and P BIO 406 or equivalent or permission of instructor. Offered: even years; A.

BIOEN 545 Fractals in Biology and Medicine (3) *Bassingthwaighe* Introduction to fractal and chaos. Conceptual approaches to using fractals for characterizing structures and growth processes, describing heterogeneities, and evaluating properties of tissues. The behavior of non-linear systems, often chaotic, describes physiological homeodynamics, regulation without set points in feedback control.

BIOEN 550 Mass Transport and Exchange in Biological Systems (3) *Bassingthwaighe* Review of basic mechanisms of transport; transport through vascular system and blood-tissue exchange processes in organs; integrated system analysis of closed systems and applications to physiological regulation, medical imaging, and pharmacokinetics. Prerequisite: calculus, introduction to differential equations; cardiovascular physiology; E E network analysis or systems analysis, chemical engineering transport. Offered: Sp.

BIOEN 555 Introduction to Biomechanics (3) *Pollack* Mechanical properties of biological tissues, with emphasis on the underlying histological bases. Bones, joints, cartilage, blood vessels, connective tissue, muscle, heart. Many laboratory sessions. Offered: odd years; W.

BIOEN 560 Ultrasound in Bioengineering (4) *Vaezy* Fundamentals of ultrasonic generation, formation, reception, and treatment of absorption, scattering, and transmission. Conventional and new methodology. (A, B, T-M mode, imaging, Doppler, tissue characterization, and nonlinear effects.) Prerequisite: E E/M E 525 for nonbioengineering students or permission of instructor. Offered: odd years; Sp.

BIOEN 561 Biomedical Optics (4) Advanced theories of optical and spectroscopic measurement with

emphasis on biomedical laser applications. Laser principles, instrumentation, and current practice in various biomedical uses, covering such areas as medicine, surgery, and biology. Prerequisite: BIOEN 302 or equivalent, or permission of instructor. Offered: even years; Sp.

BIOEN 565 Nuclear Magnetic Resonance in Biomedicine (2) Basic physics of nuclear magnetic resonance (NMR) imaging and spectroscopy are presented. Research applications of NMR in physiology and biochemistry are reviewed with emphasis on the brain. Grade based on written tests and small research paper. Prerequisite: permission of instructor. Offered: jointly with RADGY 550; odd years; W.

BIOEN 568 Image-Processing Computer Systems (4) *Kim* Components of digital processing computer systems. Two-dimensional filtering and optimal filter design as well as basic image-processing operations. Selected advanced image-processing topics introduced. Individual student project. Prerequisite: permission of instructor. Offered: jointly with E E 568; Sp.

BIOEN 571 Polymeric Materials (3) *Ratner* Relationships between configuration, conformation, molecular order, microstructure, properties of polymeric materials. Concepts relevant to tailoring polymer molecules and microstructures for specific applications. Interactions between polymers and their in-service environment. Characterization and processing techniques relevant to polymeric materials. Prerequisite: one semester or two quarters of organic chemistry. Offered: jointly with MSE 571.

BIOEN 573 Biosensors and Biomedical Sensing (3) *Yager* In-depth overview of the principal types of biosensors. Topics include: how biological molecules are used in sensing, how the sensors operate, how different sensors compare, under what circumstances sensors can be useful, and the applicability of sensors to biomedical sensing. Prerequisite: BIOEN 436 or permission of instructor. Offered: odd years; A.

BIOEN 575 Molecular Modeling Methods (4) *Beard* Introduction to theory and practice of computer simulation studies of molecules with emphasis on applications to biological molecules and complexes. Discussion of background theory, implementation details, capabilities and practical limitations of these methods. Prerequisite: previous coursework in biochemistry and physical chemistry and/or permission of instructor. Offered: jointly with CHEM 575; A.

BIOEN 576 Laboratory Techniques in Protein Engineering (4) *Stayton* Practical introduction to fundamentals of recombinant DNA technology and protein engineering. Gene design, bacterial molecular biology, genetic engineering strategy. Laboratory project focused on making site-directed protein mutations. Techniques include the Polymerase Chain Reaction, DNA sequencing, DNA cutting/splicing, protein expression. Prerequisite: background in biochemistry or molecular biology or consent of instructor. Offered: W.

BIOEN 577 Cell and Protein Reaction with Foreign Materials (3) *Horbett* Study of ways in which cell and protein interactions with foreign materials affect the biocompatibility of biomaterials. Description of the phenomenology and mechanisms of protein adsorption, mammalian cell adhesion, and cell receptor biology and of methods used to study these phenomena. Surface properties of materials discussed in context of the course. Prerequisite: permission of instructor. Offered: even years; A.

BIOEN 578 Biomembranes (3) *Yager* Develops an understanding of the molecular principles that underlie the self-assembly of surfactants into natural and model membranes; in particular, on the relationship between the chemical structure of lipid molecules

and the three-dimensional aggregates that they form in water. Offered: A.

BIOEN 579 Host Response to Biomaterials (3) *Giachelli* Basic cell and molecular biology of the pathologies associated with biomaterial implantation that limit bioprosthetic use, including hemostasis, infection, acute and chronic inflammation, wound healing and fibrosis, and structural alterations. Major methods for histological analysis of retrieved implants. Prerequisite: general biology, BIOEN 490 (may be taken concurrently) or permission of instructor. Offered: odd years; W.

BIOEN 584 Computational and Integrative Bioengineering (4) *Vicini* Advanced computational, mathematical, and statistical approaches to the analysis of biological systems, including molecular models, time series, fractal systems, population kinetic analysis, and stochastic simulation. Lectures and laboratory sessions emphasize practical problems in kinetic analysis, metabolism, and genomics. Final project, written and oral reports. Prerequisite: BIOEN 485. Offered: odd years; Sp.

BIOEN 588 Bioengineering Principles of Physiology (4) *Bonadio, Kushmerick* Muscle exemplifies: protein-protein interactions; molecular recognition; proteins as machines; functional scaling; computing and signaling with metabolic machines; metabolic processes as chemical networks; membrane separation into functions; channels as communication machines; neural control and function. Prerequisite: BIOL 200 or equivalent or permission of instructor; recommended: BIOEN 304, P BIO 405. Offered: A.

BIOEN 589 Integrative Physiological Systems Analysis (4) *Bassingthwaite* Physiological systems, emphasizing cardiovascular, pulmonary and to a lesser extent, renal, hepatic, and endocrine systems, described in quantitative terms, using model representation for examples and problems. Laboratories. Prerequisite: BIOEN 588, calculus and ordinary differential equations. Offered: W.

BIOEN 590 Advanced Topics in Biomaterials (3) *Bonadio* Major, controversial issues in application of synthetic materials to medical problems. Blood compatibility, bioadhesion, intraocular lenses, contact lenses, polyurethanes, biodegradation, protein adsorption, corrosion, bone fixation, new materials, artificial heart, medical device regulation. Prerequisite: BIOEN 490 or CHEM E 490. Offered: jointly with CHEM E 590; odd years; Sp.

BIOEN 592 Surface Analysis (3) *Ratner* Understanding of solid surfaces for research and development in microelectronics, catalysis, adhesion, biomaterials science, wear and corrosion science. Newer methods available to study surfaces of materials. Electron emission spectroscopies (ESCA, Auger); ion scattering, ion spectroscopic, photon spectroscopic, and thermodynamic methods. Offered: jointly with CHEM E 558; W.

BIOEN 599 Special Topics in Bioengineering (1-6, max. 15) Offered at a graduate level periodically by faculty members within the Department of Bioengineering; concerns areas of research activities with current and topical interest to bioengineers. Prerequisite: undergraduate or graduate courses (or equivalent) determined individually for each special topic. Offered: AWSpS.

BIOEN 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

BIOEN 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

BIOEN 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Program on the Environment

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crsctat/.

ENVIR 415 Sustainability and Design for Environment (3) *Cooper* Analysis and design of technology systems within the context of the environment, economy, and society. Applies the concepts of resource conservation, pollution prevention, life cycle assessment, and extended product responsibility. Examines the practice, opportunities, and role of engineering, management, and public policy. Offered: jointly with CEE 495/M E 415; S.

ENVIR 439 Attaining a Sustainable Society (1/3, max. 3) *I&S/NW Karr* Discusses diverse environmental issues, the importance of all areas of scholarship to evaluating environmental challenges, and the connections between the past and the future, to reveal integrative approaches to protect the long-term interests of human society. Offered: jointly with FISH 439; A.

ENVIR 450 Special Topics in Environmental Studies (1-5, max. 15) Format may range from seminar/discussion to formal lectures to laboratory or modeling work.

ENVIR 451 Comparative Historical and Social Ecology of the Tropics (5) *I&S Sivaramakrishnan* Historical and social aspects of tropical environmental change. Comparative analysis of resource management, conservation, and environmental regulation issues in Asia, Africa, and Latin America from cultural and political economic perspectives. Special focus on issues of state policy, expert knowledge, social conflict, and international politics. Prerequisite: ANTH 210. Offered: jointly with ANTH 451.

ENVIR 459 Culture, Ecology and Politics (5) *I&S Pena* Critical studies of class, gender and race differences in environmental politics. The political-economic dimensions of ecological change. Contemporary environmental movements including the varieties of bioregionalism, deep ecology, ecofeminism, ecosocialism, environmental justice, and social ecology. Offered: jointly with ANTH 459.

ENVIR 460 Institutionalizing Sustainable Ecological Practices. (3) *I&S/NW Lee* The purpose of this course is to introduce how sustainable resource activities are put into practice. Case studies of successful institutional of sustainable resource practices are presented, including curb-side and biosolids recycling, ecological restoration, bioremediation, sustainable wood production, and material certification. Offered: jointly with ESC 460; W.

ENVIR 470 Communications and the Environment (5) *I&S* Examines the role of mass media in the resolution of environmental problems. Topics include strengths and weaknesses of media coverage, use of media by environmental groups and government agencies, media effects on public opinion, and mass communication and social movements. Offered: jointly with COM 418.

ENVIR 475 Environmental Impacts of Small Scale Societies (5) *I&S/NW Grayson, Smith* Examines the environmental impacts (positive and negative) among prehistoric and historic/ethnographic small-

scale (hunter-gatherer and horticultural) societies worldwide, and debates these impacts, within a theoretical framework provided by evolutionary ecology and biogeography. Offered: jointly with BIO A 475.

ENVIR 477 Marine Conservation (3) *NW Parrish* Terrestrially based concepts of conservation biology applied to marine systems: human activities affecting the marine environment including fishing and pollution, influence of legal and cultural frameworks, and ecosystem management. Offered: jointly with BIOL 477; W.

ENVIR 478 Topics in Sustainable Fisheries (3, max. 9) *Parrish* Seminar series featuring local, national and internationally known speakers in fisheries management and conservation. Case studies. Conservation/restoration in practice. Pre-seminar discussion section focusing on select readings. Final paper. Topics may include harvest management, whaling, by-catch, salmon, marine protected areas, introduced species, citizen action, co-management, and marine ethics. Offered: jointly with FISH 478/BIOL 478; odd years; W.

ENVIR 480 Marine Resource Conservation and Management (3) *I&S/NW Gallucci, Miller* Techniques and philosophy for conservation, management and development of harvested marine populations. Emphasis on integration of ecological, sociological, and economic dimensions of institutional decision making for policy formation in uncertain environments. Offered: jointly with FISH 480/SMA 480.

ENVIR 490 Capstone Experience I (1) Preparation for ENVIR 491. Students attend presentations and critiques given by students who are taking or have completed 492 and will make arrangements for their own capstone experience (internship, group or individual project). Credit/no credit only. Recommended: 15 credits of ENVIR 201/202/203. Offered: AWSpS.

ENVIR 491 Capstone Experience II (2-8, max. 8) Internship, group project, or individualized project in Environmental Studies. May be taken in a single quarter or distributed over two or three quarters of the student's final year. Recommended: ENVIR 490 and 15 credits ENVIR 201/202/203. Credit/no credit only. Offered: AWSpS.

ENVIR 492 Capstone Experience III (2) Critique and discussion of projects undertaken in 491. May be taken concurrently with the final quarter of 491. Credit/no credit only. Prerequisite: ENVIR 491. Offered: AWSpS.

ENVIR 498 Independent Study (1-3, max. 5) Independent reading and/or research. Limited to majors and minors in Environmental Studies.

Courses for Graduates Only

ENVIR 500 Graduate Seminar in Environmental Studies (1-5, max. 15) Exploration of multidisciplinary themes in environmental studies. Topics vary.

ENVIR 535 Foresight in Science and Technology: Choices and Consequences (3) Examination of the foresight (or lack of it) with which we practice science and use technology. Contrasts potential risks of various choices with potential benefits. Credit/no credit only. Offered: jointly with PHYS 535/PHIL 501/ZOOL 523.

Quantitative Science

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

Q SCI 456 Introduction to Quantitative Fishery Science (5) NW Conveys fundamental concepts of fish population dynamics and fishery management within context of real-world fisheries problems. Lectures discuss notation, terminology, mathematical models, fisheries principles, and case studies. Laboratory time devoted to practical applications, problems. Recommended: either MATH 125, MATH 135, or Q SCI 292; Q SCI 381. Offered: jointly with FISH 456; A.

Q SCI 457 Methods of Abundance Estimation (4) NW Methods of estimating fish abundance by direct sampling and indirectly from tagging, catch, and effort analysis. Confidence limits and bias adjustments. Design of marine fishery surveys using statistical sampling principles. Laboratory work with real fishery data and data collected during trawl sampling survey. Recommended: Q SCI 292; Q SCI 381; Q SCI 456 or FISH 456. Offered: jointly with FISH 457.

Q SCI 458 Fisheries Stock Assessment (4) NW *Francis* Emphasizes quantitative analysis of fisheries data to determine how the fishery would respond to alternative management actions. Major topics include production models, stocks and recruitment, catch at age analysis, and formulation of harvest strategies. Recommended: either Q SCI 456 or FISH 456. Offered: jointly with FISH 458 Sp.

Q SCI 477 Quantitative Wildlife Assessment (5) NW *Skalski* Focuses on wildlife sampling techniques for estimating animal abundance, home range, and survival rates in terrestrial populations. The design of wildlife investigations for the purposes of impact assessment, research, and resource management is integrated with estimation schemes and demographic models in a quantitative framework. Prerequisite: Q SCI 292; Q SCI 482.

Q SCI 480 Sampling Theory for Biologists (3) NW *Gallucci, Rustagi* Theory and applications of sampling finite populations including: simple random sampling, stratified random sampling, ratio estimates, regression estimates, systematic sampling, cluster sampling, sample size determinations, applications in fisheries and forestry. Other topics include sampling plant and animal populations, sampling distributions, estimation of parameters and statistical treatment of data. Prerequisite: Q SCI 482; recommended: Q SCI 483. Offered: jointly with STAT 480; even years.

Q SCI 482 Statistical Inference in Applied Research (5) NW Analysis of variance and covariance; chi square tests; nonparametric procedures multiple and curvilinear regression; experimental design and power of tests. Application to biological problems. Use of computer programs in standard statistical problems. Prerequisite: either STAT 311 or Q SCI 381. Offered: AWS.

Q SCI 483 Statistical Inference in Applied Research (5) NW Analysis of variance and covariance; chi square tests; nonparametric procedures multiple and curvilinear regression; experimental design and power of tests. Application to biological problems. Use of computer programs in standard sta-

tistical problems. Prerequisite: either Q SCI 381 or Q SCI 482. Offered: WSp.

Q SCI 486 Experimental Design (3) NW Topics in analysis of variance and experimental designs: choice of designs, comparison of efficiency, power, sample size, pseudoreplication, factor structure. Prerequisite: Q SCI 482; recommended: Q SCI 483. Offered: jointly with STAT 486.

Q SCI 499 Undergraduate Research (1-5, max. 5) Special studies in quantitative ecology and resource management for which there is not sufficient demand to warrant the organization of regular courses. Credit/no credit only.

University Conjoint Courses

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

Each of the following courses is administered by two or more schools or colleges within the University. No degree program is offered.

UNCONJ 411 Psychology of Aging (3) Kiyak Focuses on developing the skills necessary for critically evaluating current psychological theories of aging, research findings in this area, and the implications of findings on the aging person. Special consideration given to the effects of socioeconomic, sex, and ethnic differences in the psychology of aging. Open to upper-division undergraduates and beginning graduate students interested in the field of gerontology.

UNCONJ 420 Biological Safety Practices (1) Kenny General introduction to appropriate laboratory procedures used for handling potentially hazardous biological agents. Particular focus on laboratory safety and appropriate protocols that should be employed by those engaged in infectious disease and recombinant DNA research. Credit/no credit only.

UNCONJ 422 Sexually Transmitted Diseases: An Overview (2) Gardner Clinically oriented course designed to provide a knowledge base for upper division health science students to participate effectively in community outreach programs for the prevention of sexually-transmitted diseases. Offered cooperatively by the departments of Pharmacy and Medicine.

UNCONJ 440 Biological Aspects of Aging (3) Introductory course on aspects of the biology of human aging and of functional changes associated with normal aging and with those illnesses that may be present in the elderly. Focus on the relationship between changes in physical function, environment, and quality of life. Includes theoretical perspective on aging as well as the aging process in specific physiological systems. Designed for upper-level undergraduate students with an interest in aging.

UNCONJ 442 Social and Cultural Aspects of Aging (3) Involves faculty members from the various social science fields examining the range and variation of relationships among age-linked attitudes and cultural values related to aging; the social and economic factors that influence the elderly in contemporary society; the effects of ethnic and sex differences in sociocultural aging. Open to upper-division undergraduates and beginning graduate students interested in gerontology.

UNCONJ 443 Interdisciplinary Seminar on Aging (1-6, max. 15) Borgatta Interdisciplinary examination of the contemporary theoretical literature on gerontology and long-term care. For upper-level undergraduate and graduate students with an interest in aging. Quarterly offerings available from the Institute on Aging.

UNCONJ 444 Interdisciplinary Collaborative Teams in Health Care (1-5, max. 10) Course open to students in UW Health Sciences schools. Students function as an interdisciplinary learning group within a problem based learning framework. The primary goal of the course is to promote the development of interdisciplinary practice in the care of urban and rural underserved patient populations. Credit/no credit only.

UNCONJ 490 Social Sensitivity in Health Care (3) I&S Multidisciplinary course for health professions students. Health professionals' roles in dealing with social, cultural, and physical barriers to health care of low-income groups and ethnic people of color. Personal involvement through field experiences and faculty drawn from affected communities as well as health sciences, social work schools. Credit/no credit only.

Courses for Graduates Only

UNCONJ 500- Seminar in Interprofessional Collaboration ([1-3]-, max. 7) Interdisciplinary teams composed of students and community members placed in diverse urban settings to address an identified community need by developing and implementing collaborative, community-based projects. Seminars emphasize interprofessional collaborative practice, intrapersonal understanding, interpersonal group process skills, organizational savvy, community awareness, and sociocultural sensitivity. Graduate School of Public Affairs. Offered: AWSp.

UNCONJ 501 International Health (1) Hunt Weekly seminar introduces students to issues and opportunities of participating in health care systems in other countries. Guest speakers bring many perspectives of international health care experiences. Class discussions help prepare students for international placements.

UNCONJ 502 International Health (1) Hunt Weekly seminar introduces students to issues and opportunities of participating in health care systems in other countries. Guest speakers bring many perspectives of international health care experiences. Class discussions help prepare students for international placements.

UNCONJ 503 International Health (1) Hunt Weekly seminar introduces students to issues and opportunities of participating in health care systems in other countries. Guest speakers bring many perspectives of international health care experiences. Class discussions help prepare students for international placements.

UNCONJ 510 Integrating Arts in the Classroom (4) Prepares prospective elementary education teachers to understand and acquire arts literacy through a comprehensive approach to learning and teaching in and through the arts. Course is school and arts-site based, inclusive of multiple art forms. Based on comprehensive art principles, and project oriented. Credit/no credit only. Offered: Sp.

UNCONJ 513 Dynamics of Patient Management: Diabetes Mellitus (2) Analysis of advanced knowledge related to interdisciplinary management of diabetes. Commonalities and differences in provider approaches, recent research and its effect on management practices, collaborative communication, knowledge application. Brief interactive presentations, decision-making opportunities, discussion. Credit/no credit only. Prerequisite: graduate standing

in pharmacy, dietetics, nursing; third- or fourth-year medical student; or permission of instructor.

UCONJ 520 Molecular Biophysics Research Seminar (1) *Parson* A series of research seminars for faculty and students involved with the molecular biophysics program. Credit/no credit only.

UCONJ 524 Developmental Neurobiology (3) *Raible, Reh, Roelink, Rubel* Survey of contemporary issues in developmental neurobiology, including neurogenesis and differentiation; electrophysiological, morphological, and neurochemical regulation of cellular phenotype; neuronal pathways and synaptic contacts; cellular and synaptic plasticity; and behavior. Examination of molecular biological, morphologi-

cal, electrophysiological, and behavioral approaches. Prerequisite: background in neurophysiology, neuroanatomy, molecular neurobiology. Offered: Sp.

UCONJ 530 Issues in Indian Health (3) Survey of historical and contemporary issues in Indian Health. Covers Indian contributions to health, traditional Indian Medicine, current disease epidemiology, development of Federal Indian Health policy, the Indian Health Service, tribal health programs, and consequences of major legislation on Indian Health. Prerequisite: current health science student or permission of instructor.

UCONJ 555 Principles of STD/HIV Research (3) Provides MD and PhD fellows and graduate students

with a comprehensive overview of the current state of knowledge in specific areas of STD/HIV research, including study design, laboratory methods, production of instruments for data collection, and methods for data analysis. Credit/no credit only.

UCONJ 584 Plant Tumors (1, max. 9) *Gordon* Discussion of the literature of plant tumors and current research work being carried on in this area at the University. Offered cooperatively by the departments of Biochemistry, Botany, and Microbiology and Immunology. Credit/no credit only. Prerequisite: offered only to persons actively pursuing work in this area.

School Web page:
www.law.washington.edu

Established in 1889, the School of Law is a member of the Association of American Law Schools and is on the American Bar Association's list of approved law schools. Graduates of the School are prepared to practice law anywhere in the United States. Additional information about the School is contained in the current *School of Law* catalog.

Facilities and Services

The School of Law is housed in Condon Hall, adjacent to the University's main campus. It is equipped with classroom, library, lounge, and office facilities.

The Marian Gould Gallagher Law Library is one of the finest law libraries in the country. Its collection, among the largest university law collections on the West Coast, currently contains more than 450,000 bound volumes and volume equivalents of microform. In addition to the extensive main collection, it houses important materials that support the Asian, marine, sustainable international development, and tax law graduate programs and serves as a federal depository for selected United States government documents. An experienced audiovisual staff directs the use of video equipment in the trial advocacy and moot court programs. The library is equipped with the latest in microreaders and printers in order to make full use of the growing microform collection. The library is a subscriber to LEXIS, WESTLAW, the Western Library Network, and other research databases.

Juris Doctor Program

The Juris Doctor degree is conferred upon a student who has met the residence requirements, consisting of nine quarters of at least 12 credits each, and has earned at least 135 credits satisfactory to the School of Law.

As with most law schools in the United States, the first-year courses are required and are designed to introduce students to basic legal skills, foundational subject matter, and the variety of public and private processes with which the profession is concerned. Those courses deal with contracts, torts, property,

civil procedure, criminal law, constitutional law, and basic legal skills.

Except for a required course in professional responsibility, the public service requirement, and an advanced writing project requirement, courses in the second and third years are elective. Therefore, a student may choose a program designed to suit his or her interests and needs. J.D. candidates are required to perform 60 hours of public-service legal work during the second or third year.

Admission

New students may enter the School of Law only in autumn quarter. Instruction begins for first-year students a few days earlier than the time set for upper-class students. Beginning students must have received a baccalaureate degree from an accredited college or university prior to commencing the study of law.

All applicants are required to take the Law School Admission Test (LSAT) and to register for the Law School Data Assembly Service (LSDAS). Registration packets and test information are available at most law schools and from Law School Admission Council, Box 2000, 661 Penn Street, Newtown, PA 18940-0998. Email: lsacinfo@lasac.org.

No specific prelaw course is required or recommended, and the School of Law subscribes to the remarks set forth on prelaw preparation in *The Official Guide to U.S. Law Schools (2000 Edition)*. Applications for admission to the next entering class must be postmarked no later than January 15. To be assured of consideration for admission, an applicant must have complete credentials, including the LSDAS report, filed in the School of Law by February 1. An application fee (at this writing, \$50) also is required.

Transfer Applicants

Students who have completed at least one year at a member school of the Association of American Law Schools may apply to this school for admission with advanced standing with credit for no more than one year of such work. A student who has completed or expects to complete at least two years of work at a member school of the Association of American Law Schools and who expects to graduate from that member school may apply to this school for admission as a non-degree candidate.

Applicants should request application forms and instructions from the admissions office in time to permit filing of all application materials by July 7.

Applications are considered only if vacancies exist. Selection of the applicants is based on evidence either (1) that the candidate can produce above-average work at this law school, or (2) that the candidate will contribute to the diversity of the student body.

Students working on law degrees to be conferred by the University have priority over non-degree candidates in the selection of courses. This policy is in accordance with the general University policy on the registration of nonmatriculated students.

Financial Aid

Students in need of financial assistance may receive University aid, School of Law aid, federal loans, or aid from all of these sources. To be considered for aid, applicants must submit the Free Application for Federal Student Aid (FAFSA) by February 28. FAFSAs are available in December at most college financial aid offices, or may be obtained by writing or calling the Office of Student Financial Aid, 105 Schmitz Hall, Box 355880, University of Washington, Seattle, WA 98195, 206-543-6101, offa@u.washington.edu. Applicants for

admission should not wait until they have been admitted before applying for financial aid.

School of Law grants are awarded primarily on the basis of financial need, although scholarship, or other factors may be considered with regard to certain awards. Inquiries concerning School of Law aid should be addressed to Financial Aid Coordinator, School of Law, Condon Hall, Box 354600, University of Washington, Seattle, WA 98195-4600; uwlawaid@u.washington.edu.

Inquiries

A more detailed statement on admission policy and application procedure is available in the School of Law. Requests for application materials and the University law school bulletin should be addressed to Law School Admissions, Condon Hall, Box 354600, University of Washington, Seattle, WA 98195-4617; admissions@law.washington.edu; 206-543-4078.

Graduate Program

Graduate Program Coordinator
712 Condon, Box 354600
206-543-4937
gradlaw@u.washington.edu

In addition to the professional law program leading to the Juris Doctor degree, the law faculty offers graduate programs leading to the Master of Laws (LL.M.) in law and marine affairs, Asian and comparative law, the law of sustainable international development, and taxation. The School of Law offers the Doctor of Philosophy (Ph.D.) degree in Asian and comparative law only. The requirements for each program are as follows:

Asian Law Program

The Master of Laws degree program in Asian and comparative law is designed for students with career and research interests in one or more of the legal systems of East Asia, with particular emphasis on that of Japan, as well as for lawyers from East Asia seeking advanced comparative study of American law. The Asian law program is structured around extensive course offerings involving comparative study of basic areas of United States and East Asian law and tutorials in areas of special interest to each student.

Admission to the LL.M. degree program in Asian and comparative law is limited to language-qualified applicants who have received the first degree in law and who have a record of superior academic achievement. Graduates of American law schools must have a degree from an ABA-accredited institution. The applicant must be competent in an East Asian language (or, in the case of foreign students, in English). Students without the required competence may be admitted to the program, but must successfully complete an approved program of intensive study of an East Asian language before beginning their studies. The program contemplates one year in residence, at least 36 credits, and an acceptable major research undertaking.

Admission to the Ph.D. program in law is limited to exceptional scholar-lawyers who are fluent in English and in either Japanese, Chinese, or Korean. Prospective Ph.D. students must normally complete the LL.M. program before being accepted as Ph.D. students. The core of the program is a major creative research project using Asian-language sources as well as English-language sources. At least two, and usually three, years in residence are necessary in order to accomplish the work that must be done in order to pass the General Examination that precedes candidacy for the doctoral degree. An acceptable dissertation must thereafter be submitted to complete the requirements for the degree. The Candidate

may spend a year abroad while working on the dissertation but must be in residence during the quarter in which the degree is to be conferred.

Law and Marine Affairs Emphasis

Students who have acquired a first degree in law can become prospective candidates for the LL.M. degree in law and marine affairs. Graduates of American law schools must have a degree from an ABA-accredited school. Particular emphasis is placed on interdisciplinary aspects of marine affairs and coastal zone management. Attainment of the LL.M. degree with specialization in law and marine affairs requires satisfactory completion of 40 credits of course and research work, at least 15 of which must be in the School of Law. In the School of Law, courses include U.S. Coastal and Ocean Law, International Law of the Sea, Marine Law and Policy, and Admiralty and Maritime Law. Pertinent courses are also offered in the Schools of Aquatic and Fishery Sciences, Marine Affairs, and Oceanography, the Graduate School of Public Affairs, the College of Engineering, and the Departments of Economics and Geography.

Law of Sustainable International Development Emphasis

Students may earn an LL.M. degree in the law of sustainable international development. This LL.M. degree option is open to students with a first degree in law. Graduates of American law schools must have a degree from an ABA-accredited school. Emphasis is placed on the interdisciplinary study of sustainable international development, and students may earn more than half their credits in courses outside the School of Law, including courses offered by the Schools of International Studies and Public Health, and the Departments of Economics, Political Science, and Sociology. In the School of Law, courses offered include Legal Problems of Economic Development (required); International Environmental Law (required); Public Land Law; International Commercial Law; and Land, American Culture, and the Law. Attainment of the LL.M. degree with specialization in the law of sustainable international development requires satisfactory completion of 40 credits of course and research work, at least 15 of which must be in the School of Law, and the taking of courses in at least three other departments other than law. As part of their work, students must write one substantial paper.

Taxation

Students may earn an LL.M. degree in taxation. This LL.M. degree option is open to students with a first degree in law. Graduates of American law schools must have a degree from an ABA-accredited school. International students must have a first degree in law or equivalent and may be admitted by the permission of the director. A candidate for the LL.M. degree must successfully complete 36 quarter hours of course work. Students who qualify may be enrolled either on a full-time or a part-time basis. Full-time students can complete the course of study within one nine-month academic year, while those participating on a part-time basis are allowed six academic years to complete the degree. Generally all courses must be taken from the Graduate Tax curriculum, although candidates for the LL.M. may, with the permission of the director, take up to 6 credits of course work in the Law School's J.D. curriculum. Certain core courses are required: Federal Tax Controversies and Procedure, Taxation of Corporations and Shareholders, Tax Accounting, Property Dispositions and Transactions, and Taxation of Partners and Partnerships. The remainder of the curriculum is elective.

Financial Aid

Scholarship funds for graduate students in law are quite limited. Inquiries should be made to Law School Graduate Admissions, Condon Hall, Box 354600, University of Washington, Seattle, WA 98195, U.S.A.; gradlaw@u.washington.edu; 206-543-4937.

Inquiries

Requests for applications and program brochures for all School of Law LL.M. programs except the LL.M. in taxation, as well as information regarding application procedures, should be addressed to Law School Graduate Admissions, Condon Hall, Box 354600, University of Washington, Seattle, WA 98195, U.S.A.; gradlaw@u.washington.edu.

Requests for applications and program brochures for the LL.M. in taxation should be addressed to Gloria Strickland, Law School Graduate Tax Admissions, Condon Hall, Box 354600, University of Washington, Seattle, WA 98195; gradlaw@u.washington.edu.

Faculty

Professors

Allen, Craig H. 1994; JD, 1989, University of Washington; marine affairs, evidence, environmental regulation.

Andersen, William * 1964; LLB, 1956, University of Colorado (Denver), LL.M., 1958, Yale University; administrative law, regulated industries, urban government.

Andrews, Thomas R. * 1985; MA, 1973, Northwestern University, JD, 1979, University of Pennsylvania; professional responsibility in legal practice, community property, decedents' estates, torts, proper.

Fitzpatrick, Joan M. * 1983; JD, 1975, Harvard University; international human rights and civil rights, federal courts, contracts.

Fletcher, Robert L. * 1956, (Emeritus); LLB, 1947, Stanford University; property.

Hardisty, James * 1970; LLB, 1966, Harvard University; criminal law, psychiatry and law, juvenile courts, torts.

Hazelton, Penny A. * 1985; JD, 1975, Lewis and Clark College, MLL, 1976, University of Washington; law librarianship, legal bibliography, computer-assisted legal research, law, Indian law.

Hershman, Marc * 1976, (Adjunct); JD, 1967, Temple University, LL.M., 1970, University of Miami (Florida); coastal zone management law.

Hicks, Gregory A. 1984; JD, 1978, University of Texas (Austin); property, environmental law, water law, public lands.

Hjorth, Roland L. * 1964; LLB, 1961, New York University; transnational tax, Common Market, federal taxation.

Hume, Linda S. * 1972; JD, 1970, University of California (Los Angeles); commercial transactions, property, equal rights.

Huston, John * 1967, (Emeritus); JD, 1952, University of Washington, LL.M., 1955, New York University; federal taxation.

Jay, Stewart M. * 1980; JD, 1976, Harvard University; constitutional law, legal history, legal philosophy, federal courts.

Jecker, Nancy A. S. * 1982, (Adjunct); MA, 1982, Stanford University, MA, 1984, PhD, 1986, University of Washington; philosophical and ethical aspects of health care delivery and policy.

Junker, John M. * 1964; JD, 1962, University of Chicago; criminal law and procedure.

Knight, W. H., Jr. 2001; JD, 1979, Columbia University.

Kummert, Richard O. * 1964; MBA, 1955, Northwestern University, LLB, 1961, Stanford University; business planning, corporations, federal tax.

Kuszler, Patricia Carol * 1994; MD, 1978, Mayo Medical School/graduate school, JD, 1991, Yale University; law and medicine: health-care finance and regulation, medical malpractice, biotechnology and law.

Loftus, Elizabeth F. * 1973, (Adjunct); PhD, 1970, Stanford University; cognition, memory, eye-witness testimony, psychology and law.

McCann, Michael W. * 1982, (Adjunct); MA, 1976, PhD, 1983, University of California (Berkeley); American government and politics, public law, political theory.

Morris, Arval * 1955, (Emeritus); JD, 1955, University of Colorado (Boulder), LL.M., 1958, Yale University, LL.D., 1972, Colorado College; constitutional law, jurisprudence.

Olswang, Steven G. * 1975, (Adjunct); JD, 1971, University of Illinois, PhD, 1977, University of Washington; law and education.

Peck, Cornelius J. * 1954, (Emeritus); LLB, 1949, Harvard University; administrative law, labor law, torts.

Prosterman, Roy L. * 1965; LLB, 1958, Harvard University; international law.

Rieke, Luvern V. * 1949, (Emeritus); LLB, 1949, University of Washington, LL.M., 1953, University of Chicago, LL.D., 1959, Pacific Lutheran University; contracts, domestic relations.

Rodgers, William H. * 1979; LLB, 1965, Columbia University; legislation, environmental law, resource management, property.

Rombauer, Marjorie D. * 1960, (Emeritus); LLB, 1960, University of Washington; creditor and debtor, personal property.

Schnapper, Eric 1995; MA, 1963, Johns Hopkins University, LLB, 1968, Yale University; constitutional law, civil procedure, civil rights, employment discrimination.

Smith, Charles Z. * 1973, (Emeritus); JD, 1955, University of Washington; evidence, judicial administration.

Stoebuck, William B. * 1967, (Emeritus); MA, 1953, Indiana University, JD, 1959, University of Washington, SJD, 1973, Harvard University; property, land use, legal history.

Taylor, Veronica 2001; LL.M., 1992, University of Washington.

Vaughn, Lea B. * 1984; JD, 1978, University of Michigan; labor law, alternate dispute resolution, civil procedure.

Wolcher, Louis E. * 1986; JD, 1973, Harvard University; contracts, critical legal studies, torts, remedies, philosophy of law.

Zerbe, Richard O. * 1975, (Adjunct); PhD, 1969, Duke University; law and economics, cost-benefit analysis, economic history, environmental regulation.

Associate Professors

Boxx, Karen E. 1996; JD, 1983, University of Washington; decedents' estates, community property.

Kirtley, Alan * 1984; JD, 1972, Indiana University; negotiation, mediation, alternative dispute resolution generally, and clinical legal education.

Maranville, Deborah 1989; JD, 1975, Harvard University; civil clinic, unemployment law, feminist legal theory.

O'Neill, Kathleen M. 1993; JD, 1980, Columbia University; legal research, writing, and analysis.

Takenaka, Toshiko * 1992; LLM, 1990, PhD, 1992, University of Washington; U.S. patent and intellectual property law; international and comparative intellectual property law.

Townsend, Michael E. *; MA, 1978, PhD, 1982, University of Michigan, JD, 1989, Yale University; law and science; intellectual property; use of quantitative methods.

Wiehl, Lis W. * 1993; MA, 1985, University of Queensland (Australia), JD, 1987, Harvard University; criminal law, especially federal prosecution; legal ethics; evidence; trial advocacy.

Assistant Professors

Anderson, Robert T. 2000; JD, 1983, University of Minnesota.

Calandrillo, Steve P. 2000; JD, 1998, Harvard University.

Donaldson, Samuel A. 1995; JD, 1993, University of Arizona, LLM, 1994, University of Florida; taxation.

Mastroianni, Anna C. * 1996; JD, 1986, University of Pennsylvania, MPH, 1997, University of Washington; law, ethics and policy genetics, reproduction, human subjects research.

Nicolas, Peter 2000; MPP, 1992, University of Michigan, JD, 1999, Harvard University.

Ramasastri, Anita G. 1996; MA, 1989, University of Sydney (Australia), JD, 1992, Harvard University; commercial law, legal history, contracts, non-profit organizations.

Walsh, Walter J. 1996; LLM, 1989, Yale University; torts, legal history, European community, constitutional law.

Senior Lecturers

Anderson, Helen A. 1994; JD, 1984, University of Washington; legal research, writing, and analysis.

Gold, Julia Ann 1995; JD, 1983, University of South Carolina; alternative dispute resolution, mediation.

Hotchkiss, Mary A. 1995; JD, 1983, LLM, 1985, George Washington University; legal research, writing, and analysis.

McGinnis, Kathleen M. 1994; JD, 1984, University of California (Berkeley); legal research, writing and analysis.

McMurtrie, Jacqueline 1989; JD, 1983, University of Michigan; criminal law and practice.

Lecturers

Berry, Melissa M. 2000; JD, 1993, Northwestern University; legal research, writing and analysis, administrative law.

Schumacher, Scott A. 2000; JD, 1990, Seattle University; LLM, 1991, New York University; low income tax clinic.

Victoria, Maria de Lourdes 1999; JD, 1992, University of Washington.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For current course descriptions, visit the online course catalog at www.washington.edu/students/crscat/.

LAW 300 Introduction to Law (3-6, max. 5) I&S Understanding the legal system, its functions in the social-economic order, legal reasoning, and the world of legal education and the legal profession. Open to nonlaw students only.

LAW 410 Problems in Professional Responsibility (4) I&S

LAW 415 Criminal Justice (3) I&S Examines pre-trial rights of persons suspected or accused of crime, primarily those rights covered by the Fourth, Fifth, Sixth, and Fourteenth Amendments of the U.S. Constitution.

LAW 422 Copyright (3) I&S

LAW 429 Public Land Law (3) I&S

LAW 440 Legal Issues of Internet Law (3) I&S Introduces the basic legal issues raised by networked digital technologies, such as the Internet. Covers jurisdiction, speech, privacy/access, property rights (copyrights, domain names), emerging law, leading policy debates, as well as fundamental Internet technical skills. Offered: S.

LAW 476 International Economic Relations and Trade Policy (3) I&S Consideration of international control of national trade policies and permissible transnational reach of national trade or other regulation. The General Agreement on Tariffs and Trade (GATT) and the international monetary system examined from legal and economic perspective. Examination and comparison of prescriptive jurisdiction to public international law.

LAW 477 Law Literature and Film (2-4, max. 4) I&S/VLPA An examination of literary and cinematic portrayals of and issues important to law, lawyers, and the legal system. Considers both portrayals purporting to depict the legal system as well as works envisioning lawyers and the legal system in a "better world."

First-Year Courses

The courses below are intended for law students; other students are admitted only rarely with special permission of the dean. Only the course titles are given. For complete course descriptions, see the School of Law Bulletin.

LAW A 501- Contracts ([2-8]-, max. 8)

LAW A 502- Civil Procedure I ([2-6]-, max. 6)

LAW A 503- Property I ([2-8]-, max. 8)

LAW A 504- Torts ([2-8]-, max. 8)

LAW A 505- Criminal Law ([2-5]-, max. 5)

LAW A 506- Basic Legal Skills ([1-6]-, max. 6)

LAW A 507 Constitutional Law I: Constitutional Structures of Government (4)

Second- and Third-Year Courses

LAW A 508 Payment Systems (3)

LAW A 509 Administrative Law (3-4, max. 4)

LAW A 510 Sales: A Comparative Perspective (3)

LAW A 511 Transmission of Wealth (5)

LAW A 512 Secured Transactions III (3)

LAW A 513- Creditor-Debtor Law ([2-3]-)

LAW A 514 Corporations (3/4)

LAW A 515 Business Organizations (5)

LAW A 517 Securities Regulations (4)

LAW A 518 Restitution (3)

LAW A 520- Property II ([2-8]-, max. 8)

LAW A 521 Community Property (2/3)

LAW A 522 Copyright (3)

LAW A 523 Real Property Security (3/4)

LAW A 524 Private Land Development (3)

LAW A 525 Water Law (4)

LAW A 526 Copyrights and Trademarks (5)

LAW A 527 Environmental Law: Pollution Control (4)

LAW A 529 Public Land Law (3)

LAW A 530- Basic Income Tax ([2-6]-, max. 6)

LAW A 531 Death and Gift Taxation (2-5, max. 5)

LAW A 532 Taxation of Business Entities (5)

LAW A 534- The Beginning and End of Life: Rights and Choices ([1-4]-)

LAW A 538 Estate Planning Workshop (3-4)

LAW A 539- Medical Ethics and Jurisprudence (3-)

LAW A 540 Land Use Planning (3)

LAW A 543 Business Reorganization Under the Bankruptcy Code (4)

LAW A 545 International Environmental Law (4)

LAW A 546- Patents ([2-4]-, max. 4)

LAW A 547- Critical Perspectives in Law (3-)

LAW A 548- Civil Rights ([2-6]-, max. 6)

LAW A 549 Advanced Legal Research (4)

LAW A 551 Constitution and American Public Education (3-6)

LAW A 552- Antitrust Law and Policy ([2-5]-, max. 5)

LAW A 553 Sex, Gender, Sexuality: Law and Theory (4)

LAW A 554- Labor Relations and the Law ([1-5]-, max. 5)

LAW A 556- Employment Discrimination ([2-4]-, max. 4)

LAW A 557 Foreign Affairs and the Constitution (3)

LAW A 558- Jurisprudence and Legal Philosophy ([2-4]-, max. 4)

LAW A 561 Law and Economics (4) Offered: jointly with PB AF 519.

LAW A 562 Employment Law (3/4)

LAW A 563 Urban Government (3)

LAW A 564 Legal History (1-4, max. 4)

LAW A 565 American Indian Law (4)

LAW A 566- Theories of Justice ([2-4]-, max. 4)

LAW A 567 Disability Law (3)

LAW A 574 The International Legal Process (2-4)

LAW A 576 International Economic Relations and Comparative Trade Policy (3/4)

LAW A 577 Immigration Law (4)

LAW A 578- International Commercial Law ([1-4]-, max. 4)

LAW A 579 Child Advocacy (4)

LAW A 580 Family Law (4-5)

LAW A 581- Washington Constitutional Law Seminar ([1-4]-, max. 4)

LAW A 583 Insurance Law (4)

LAW A 584 American Public School Law (3)

LAW A 585 Admiralty (4)

LAW A 586 Secured Transactions IV (4)

LAW A 590 Constitutional Law: Equal Protection, Fundamental Rights, and Due Process of Law (4)

LAW A 591 Constitutional Law: Freedom of Expression (4)

LAW A 592- Constitutional Law II: The Fourteenth and First Amendments—Equal Protection, Fundamental Rights, Due Process of Law, Freedom of Expression and Religion ([2-8]-, max. 8)

LAW A 594 International and Comparative Intellectual Property Law (2)

LAW A 596- Law, Medicine, and Health Care Delivery ([1-4]-, max. 4)

LAW A 597 Fundamentals of Health Law (4)

LAW A 598 Legal Research I (3) Offered: jointly with LIS 591.

LAW A 599 Legal Research II (4) Offered: jointly with LIS 592.

LAW B 500 Civil Procedure II (3)

LAW B 503- Evidence ([2-6]-, max. 6)

LAW B 504 Law, Medicine, and Ethics in the Context of Pain Management (2)

LAW B 505 Medical Malpractice (3)

LAW B 506- Conflicts of Laws ([2-6]-, max. 6)

LAW B 507 Federal Courts and the Federal System (3/4)

LAW B 510- Problems of Professional Responsibility (2-4, max. 4)

LAW B 511- Seminar on Problems in International Environmental Law ([1-4]-, max. 4)

LAW B 513 Evidence IV (4)

LAW B 514 Street Law ([1-8]-, max. 8)

LAW B 515 Criminal Procedure (5)

LAW B 516- International Contracting: Negotiations and Drafting ([2-4]-, max. 4) Credit/no credit only.

LAW B 517- Juvenile Justice Seminar ([1-6]-, max. 6)

LAW B 519 Pre-Trial Practice (3)

LAW B 520- Trial Advocacy ([2-6]-, max. 6) Credit/no credit only.

LAW B 521- Appellate Advocacy ([1-3]-, max. 3) Credit/no credit only.

LAW B 522 Mediation of Disputes (3) Credit/no credit only.

LAW B 523 Negotiation (4) Credit/no credit only.

LAW B 525 Alternative Dispute Resolution (3) Credit/no credit only.

LAW B 526 Mediation Clinic (1-7, max. 7) Credit/no credit only.

LAW B 527 Criminal Law Clinic (8) Credit/no credit only.

LAW B 528 Unemployment Clinic (2-8, max. 8) Credit/no credit only.

LAW B 529 Advanced Environmental Law and Practice (1-4, max. 4)

LAW B 530 Judicial Externship (1-15, max. 15)

LAW B 531- Immigration Law Clinic ([1-8]-, max. 8) Credit/no credit only.

LAW B 532- Supervised Analytic Writing ([1-3]-, max. 3)

LAW B 533 Interviewing and Counseling for Lawyers (2/3) Credit/no credit only.

LAW B 534- Affordable Housing Development Clinic ([1-12]-, max. 12)

LAW B 535 Legislative Externship (1-15, max. 15) Credit/no credit only.

LAW B 536 Drafting Basic Business Documents (1-3, max. 3)-

LAW B 537- Refugee Advocacy Clinic ([1-12]-, max. 12) Credit/no credit only.

LAW B 538 Agency Externships (1-15, max. 15) Credit/no credit only.

LAW B 539 Public Interest Law Externship ([1-15]-, max. 15) Credit/no credit only.

LAW B 545 Survey of American Law and Practice (6) Credit/no credit only.

LAW B 560 Criminal Justice Externship (1-15, max. 15) Credit/no credit only.

LAW B 593 Natural Resources Commons Property (3)

LAW E 500 Advanced Writing Project (1-3, max. 3)

LAW E 502 White Collar Crime (4)

LAW E 503 Analytic Writing (3)

LAW E 504 Emerging Issues in Urban Government Seminar (6)

LAW E 505 Frontiers of Tort Law (3)

LAW E 506 Asian Contract Law and Practice (3)

LAW E 507 Access to Justice Seminar (2) Credit/no credit only.

LAW E 509 European Union Law (3)

LAW E 512 Law, Globalization, and Multinational Corporations (3) Offered: jointly with SIS 562.

LAW E 514 The Law of Nonprofit Organizations (4)

LAW E 515 Criminal Justice (3)

LAW E 516- Advanced Criminal Procedure (5)

LAW E 517- Foreign Trade and Investment Law of the People's Republic of China (1-4, max. 4) Offered: jointly with SISEA 517.

LAW E 519 Philosophy of Law (4)

LAW E 521 Advanced Trial Advocacy (3)

LAW E 523 Intellectual Property Law Clinic (3)

LAW E 524- Child Advocacy Clinic ([6-12]-, max. 12) Credit/no credit only.

LAW E 525 Poverty Law (4)

LAW E 527 Driving While License Suspended Impoundment Clinic (3)

LAW E 528- Appellate Advocacy Clinic (2-, max. 4)

LAW E 531 Basic Income Tax Concepts (3)

LAW E 536 Practical and Professional Responsibility Issues in the Small or Solo Law Practice (2) Credit/no credit only.

LAW E 537 Refugee Law (2)

LAW E 540 Legal Issues of Internet Law (3)

LAW E 541 Internet Law and Commerce (3)

LAW E 547 Legal Protection for Computer Software (3)

LAW E 548 Litigation Strategies in Technology Protection (3)

LAW E 550 Patent Prosecution (4)

LAW E 551 Representing Start-ups (2)

LAW E 552 Strategic Technology Licensing (3)

LAW E 558 Law of Democracy: Voting Rights and Election Law (3)

LAW E 560 Advanced Health Law (3)

LAW E 562 Legal, Ethical, and Social Issues in Public Health Genetics (3) *Kuszler, Mastroianni* Offered: jointly with PHG 512/MHE 514.

LAW E 563 Mental Health and the Law (3)

LAW E 564 Genetics and the Law (2) *Kuszler* Offered: jointly with PHG 523.

LAW E 565 Health and Human Rights (2)

LAW E 568- Indian Law Clinic (4, max. 12)

LAW E 570 Biotechnology and the Law (3)

LAW E 575 Telecommunications Law and Policy (2)

LAW E 577 Drafting Technology Contracts (3)

LAW E 579 International and Foreign Law Research (2)

LAW E 582 Information Policy: Domestic and Global (5)

Asian and Comparative Law

LAW B 540 Law in East Asia: Japan (4) Offered: jointly with SISEA 540.

LAW B 541 Law in East Asia: China (3) Offered: jointly with SISEA 543.

LAW B 542 Law in East Asia: Korea and Southeast Asia (3)

LAW B 543 Intellectual Property Law in East Asia (3)

LAW B 544- Transnational Litigation: United States-Japan ([2-4]-, max. 4)

LAW B 546- United States-Japanese Corporate Relations ([2-4]-, max. 4)

LAW B 550- Legal Analysis and Research for Students Not Trained in the Common-Law System ([1-4]-, max. 4)

LAW B 551- Comparative Law Seminar ([2-6]-, max. 6)

LAW B 552- Tutorial in Comparative Law ([1-4]-, max. 4)

LAW B 555 Roman Law (3)

LAW B 556 Islamic Law (3) Offered: jointly with NEAR E 524.

LAW B 559 Comparative Law: Europe, Latin America, and East Asia (4)

Law and Marine Affairs

LAW B 561 International Law of the Sea (4) Offered: jointly with SMA 506.

LAW B 562 Quantitative Methods (4)

LAW B 563- Ocean Policy and Resources Seminar (3-)

LAW B 565 U.S. Coastal and Ocean Law (4) *Allen* Offered: jointly with SMA 515.

Seminars

LAW B 567 General Externship Perspectives Seminar (2) Credit/no credit only.

LAW B 577- Law, Literature and Film ([2-4]-, max. 4)

LAW B 578- Seminar on Legal Problems of Economic Development ([1-6]-, max. 6)

LAW B 580 Externship Tutorial (2) Credit/no credit only.

LAW B 584- Indian Law Seminar ([2-6]-, max. 6)

 Philip D. Cleveland, Spokane, Washington
 Michael B. Laskowski, University of Idaho and Washington State University
 Sylvia J. Moore, University of Wyoming
 Dwight E. Phillips, Montana State University (interim)

Established in 1946, the School of Medicine is the only medical school directly serving the states of Washington, Wyoming, Alaska, Montana, and Idaho (WWAMI). Located in the Warren G. Magnuson Health Sciences Center, the School operates a decentralized program of medical education (WWAMI) via a regional network of teaching affiliates.

The School's basic-science departments provide educational opportunities for students from all schools and colleges within the University. Clinical teaching programs are conducted at the University of Washington Medical Center, Harborview Medical Center, Children's Hospital and Regional Medical Center, and the Veterans Affairs Puget Sound Health Care System, as well as at other clinical affiliates in Seattle and throughout the WWAMI states.

The School admits 178 medical students to its first-year class and has a total enrollment of about 750 students pursuing the Doctor of Medicine degree. The full-time faculty numbers approximately 1,700 members. The affiliated University residency-training network enrolls approximately 900 house officers. Enrollment in the graduate programs in the basic sciences exceeds 500 students, and approximately 800 postdoctoral fellows are enrolled in various advanced training programs. The School has baccalaureate and graduate programs in occupational therapy, physical therapy, prosthetics and orthotics, and medical technology. The School participates in training a broad spectrum of other allied health professionals.

The School is also home for the Physician Assistant Training Program known as MEDEX.

Academic Programs

Doctor of Medicine

Upon completion of the curriculum of the School of Medicine, the M.D. degree is awarded to those candidates who (1) have given evidence of good moral character, (2) have satisfactorily completed the requirements of the curriculum, (3) have fulfilled all special requirements, and (4) have discharged all indebtedness to the University.

MEDEX Northwest Certificate Program

MEDEX Northwest is a program designed to train physician assistants. It provides primary-care, midlevel practitioners by training medical personnel with prior clinical experience. The program is accredited by ARC-PA, the Accreditation Review Commission on Education for the Physician Assistant. MEDEX Northwest places 70 to 75 students annually in a variety of sites in Alaska, Idaho, Montana, Nevada, Oregon, Washington, and Wyoming. Successful completion of the program culminates in the award of a Bachelor of Clinical Health Services degree (see description in the undergraduate program volume) and in a certificate.

MEDEX Northwest is an eight-quarter program. The first four quarters consist of intense clinical and didactic instruction at one of three training locations: Seattle, Spokane, or Yakima. The final four quarters are spent in clinical experiences throughout the WWAMI region. The first five months are spent in a variety of inpatient and outpatient clinical rotations and the last five months are spent in a family-practice preceptorship. The preceptorship is an on-the-job experience tailored to the practice of individual primary-care physicians and emphasizes diagnosis and treatment. At the completion of the program, students are eligible to sit for the national certifying examination for physician assistants.

Special Requirements

Applicants must have a minimum of two years of recent, full-time, hands-on experience in the direct delivery of medical care to patients, or current professional credentials and at least two years of recent experience in an allied health field. Applicants must have completed two college-level English courses (at least one must be in composition), human anatomy and physiology course work totaling at least 10 quarter-credit hours, and at least one science course in a discipline relevant to medicine, such as biology or chemistry. English prerequisite courses must have been taken in a college or university in the United States, Canada, the United Kingdom, Australia, New Zealand, or Ireland. All academic prerequisites must have been awarded with college-level credit with grades of 2.7 (B-) or better.

For additional information, contact MEDEX Northwest Physician Assistant Program, Box 354725; 206-598-2600. Web site: www.washington.edu/medical/som/depts/medex/. Email: medex@u.washington.edu.

Master of Occupational Therapy

The Department of Rehabilitation Medicine offers graduate degrees in occupational therapy. The curriculum provides professional training in the health sciences and in the theory and practice of occupational therapy as it impacts *occupational performance* across the life span and in the various arenas of practice. Occupational therapy addresses daily living skills including self-care, work, and leisure/play.

Information concerning admission to the occupational therapy program appears under Rehabilitation Medicine in this catalog.

Master of Physical Therapy

The Department of Rehabilitation Medicine offers graduate degrees in physical therapy. The curriculum provides professional education in the basic sciences and in the clinical use of physical therapy evaluation and management strategies in the treatment or prevention of neuromusculoskeletal dysfunction. Information concerning admission to the physical therapy program appears under Rehabilitation Medicine in this catalog.

Master of Science and Doctor of Philosophy

Work leading to master's and doctoral degrees is offered, in accordance with the requirements of the Graduate School, in the departments of Biochemistry, Bioengineering, Biological Structure, Immunology, Microbiology, Pathology, Pharmacology, and Physiology and Biophysics. Master's degree programs are offered by the departments of Laboratory Medicine, Medical History and Ethics, and Rehabilitation Medicine. Students may work toward these degrees concurrently with the M.D. degree, taking additional years beyond the typical four-year medical curriculum.

Concurrent degrees are possible in many other departments and colleges of the University. Recent graduates have pursued concurrent degrees in the basic sciences of medicine and the School of Public Health and Community Medicine. A student who intends to work toward a graduate degree should confer with the chairperson of the department in which graduate study is to be pursued and with the Associate Dean for Academic Affairs of the School of Medicine. Specific requirements for admission to work for advanced degrees appear in the Graduate School section of this catalog. Permission to pursue advanced degrees is granted to medical students only if they are progressing normally in the medical curriculum and show evidence of being able to take on this additional work load.

Doctor of Medicine

Admissions

(These procedures and policies described are subject to change. Information regarding changes is available from the School of Medicine Admissions Office.)

Selection Factors

Candidates for admission to the University of Washington School of Medicine are considered comparatively on the basis of academic performance, motivation, maturity, personal integrity, and demonstrated humanitarian qualities. A knowledge of and exposure to the needs of individuals and society and an awareness of health-care delivery systems are desired. Extenuating circumstances in an applicant's background are evaluated as they relate to these selection factors.

Applicants must submit scores from the Medical College Admission Test (MCAT). This exam must be taken no later than autumn of the year before matriculation and cannot be more than three years old at the time of matriculation. MCAT registration blanks are available through premedical advisers or through the Office of Admissions. Under exceptional circumstances, to be determined by the Admissions Committee, the GRE may be considered during the admissions process; however, if accepted, the appli-

cant will be required to take the MCAT prior to matriculation.

The following science course requirements must be completed before matriculation but preferably should be completed by the time of application: A total of 32 semester hours or 48 quarter hours of undergraduate courses divided into (a) *Chemistry*, 12 semester/18 quarter hours, which can be satisfied by taking any combination of inorganic, organic, biochemistry, or molecular biology courses; (b) *Physics*, 4 semester/6 quarter hours; (c) *Biology*, 8 semester/12 quarter hours; and (d) *Other ("open") science subjects*, 8 semester/12 quarter hours, which can be met by taking other courses in any of the three categories above.

Under exceptional circumstances certain course requirements may be waived for individuals who present unusual achievements and academic promise. All candidates must demonstrate substantial academic ability in their major field as well as in the required courses. Candidates should be proficient in the use of the English language and basic mathematics and are expected to have a basic understanding of personal computing and information technologies. In the field of biochemistry/molecular biology, applicants should know the chemical nature of DNA, RNA, genes, and in general how genes are organized in chromosomes; understand the nature of eukaryotic DNA replication; be familiar with transcription of genes and intron splicing; have an overview of the mechanism of protein synthesis; understand principles of recombinant DNA technology (e.g., restriction endonucleases, PCR, southern blots, transformation); understand pH, pKa, and buffers; understand how proteins fold and how ligand binding and enzymatic activity depend upon three-dimensional folding; understand principles of enzyme kinetics (Km, Vmax, competitive inhibition, allosteric, and regulation by phosphorylation); understand principles of energetics (e.g., free energy change, equilibrium constants, concentration gradients, and redox potentials); understand glycolysis, the TCA cycle, and how ATP is produced by oxidative phosphorylation; be familiar with how fatty acids are oxidized and synthesized; be familiar with patterns of amino acid catabolism and the urea cycle; understand the nature of phospholipids, lipid bilayers, and membranes; and have an overview of nucleotide biosynthesis. All of this is generally covered in a beginning biochemistry course.

Those students who entered in the fall of 2001 had a mean GPA of 3.64 and the following mean MCAT scores: Verbal, 10.0; Physical Science, 10.5; Biological Science, 10.7; and a median Writing Sample of Q.

Completion of three years of course work at an accredited college or university is the minimum required before possible matriculation; however, all entrants in recent years have earned bachelor's degrees. No specific major is advised. A broad background in the humanities and liberal arts is encouraged, indeed expected.

Application Procedure

The University of Washington participates in the American Medical College Application Service (AMCAS). The deadline for submitting an application to AMCAS is November 1. After receiving the application from AMCAS, the School of Medicine will ask qualified individuals to submit a \$35 application fee and supplemental application materials. Every attempt will be made to notify applicants of the final action by the end of March of the year of matriculation.

Residents of the states of Washington, Wyoming, Alaska, Montana, or Idaho are eligible to apply. Individuals with a demonstrated interest in research may apply for the M.D./Ph.D. program (MSTP)

regardless of residency. Applicants from outside this five-state region who come from disadvantaged backgrounds or who have demonstrated a commitment to serving underserved populations will be considered. Foreign applicants, in addition to the above requirements, must also have a permanent-resident visa. Applications will not be considered from persons who have failed to meet minimum standards in another medical or dental school.

The deadline for submitting the additional application materials is January 15. These supplemental materials include:

1. A supplemental application form. This will be sent to qualified applicants after the School of Medicine has received the AMCAS application.
2. A 300-word autobiographical statement in which the candidate describes the origin and development of his or her motivation to be a physician and any other issues of importance to the candidate. The applicant may request that the Personal Comments section of the AMCAS application be used to fulfill this requirement.
3. A concise statement, not exceeding 200 words, as to why the candidate wants to attend the University of Washington School of Medicine.
4. A premedical-committee letter of recommendation or three letters from instructors from whom the candidate has taken courses. These letters should be critical evaluations of the candidate's academic ability, strengths and weaknesses, the difficulty of course work undertaken, motivation for medicine, personal maturity, and special attributes and assets.
5. A \$35 fee. This will automatically be waived for those who have qualified for AMCAS fee waivers. Others seeking a waiver of this fee should submit their requests directly to the School of Medicine Admissions Office.
6. Acknowledgment of having read, understood, and of being able to meet, with or without reasonable accommodation, the Essential Requirements of Medical Education at the University of Washington School of Medicine: Admission, Retention and Graduation Standards to be sent with the supplemental application form.
7. Conviction/Criminal History Information Form. Washington state law requires that all individuals who have access to children under 16 years of age, developmentally disabled people, and other vulnerable persons, disclose background information concerning crimes and offenses against these populations.

Candidates from Wyoming, Alaska, Montana, and Idaho will be required to submit residency certifications from their respective state certifying officers. Proof of legal residence for Washington residents also may be requested. Determination of state of legal residence is not made by the School of Medicine; specific instructions regarding this requirement are furnished at the time of application. Those who enter as residents of Wyoming, Alaska, Montana, and Idaho are expected to spend their first year at the university site in their particular state. Twenty Washington students begin their medical education by spending the first year at Washington State University. Offers of acceptance, therefore, are conditional upon agreement to participate in the WWAMI Program.

Inquiries, address changes, or other information regarding the application should be transmitted in writing and directed to the Committee on Admissions, Office of Admissions, Box 356340, School of Medicine, University of Washington, Seattle, Washington 98195-6340; or email askuwsom@u.washington.edu.

Office of Multicultural Affairs

The Office of Multicultural Affairs assists students from minority or disadvantaged backgrounds who are pursuing M.D. or M.D.-Ph.D. degrees. The program nurtures interests in medical careers by providing a variety of support services and enrichment activities in the areas of recruitment, education, admission, retention, and professional development. The School actively recruits applicants from disadvantaged backgrounds or those who have a demonstrated commitment to work with underserved populations. Students should contact the Office of Multicultural Affairs for assistance during the application process. The program offers counseling and advocacy, referrals to University and community resources, tutoring, financial-aid information, and numerous opportunities to interact with other minority health-care professionals within the community. Various student organizations also provide minority medical students a means to interact socially and pursue shared interests, to offer peer support, and to assist with community-outreach activities.

U-DOC is a high-school summer-enrichment program offered by the Office of Multicultural Affairs. It is a six-week program for students who have completed their junior year in high school. U-DOC's goal is to foster, affirm, and encourage high school students' interest in the medical profession by allowing them to further explore medical careers and to obtain a valuable introduction to college life. U-DOC is offered in each of the five WWAMI states.

The Western Consortium Minority Medical Education Program (MMEP) offers undergraduate and some qualified postbaccalaureate students a six-week summer academic-enrichment program that includes biology, chemistry, physics, communications, study skills, and MCAT preparation. Structured clinical and research activities are also offered. Housing, stipends, and travel assistance are available.

A Prematriculation Program for entering minority or disadvantaged medical students is offered for six weeks during the summer. The program is designed to facilitate students' entry into medical school by providing instruction in histology as well as enrichment activities in areas such as study skills, stress management, test-taking skills, research, clinical practice, and community health. Stipends and travel assistance are available to students who qualify.

During the regular school year, the Office of Multicultural Affairs serves as a support network for both the academic and nonacademic needs of students, and facilitates students' access to the multiple resources in the School of Medicine, the WWAMI region, and the community.

The Native American Center of Excellence was established in 1992 as part of the Office of Multicultural Affairs to encourage Native American students to pursue medicine as a career, to promote research on Native American health issues, and to foster the preparation of Native American students for faculty roles in academic medicine. The Center of Excellence provides educational experiences that integrate western medicine with the Native American way of life, offers a variety of support services to promote the academic development of students, and sponsors a variety of educational opportunities within the Native American community.

Inquiries and requests for additional information may be obtained from the Office of Multicultural Affairs, Box 357430, School of Medicine, University of Washington, Seattle, Washington 98195-7430; 206-685-2489.

Medical Scientist Training (M.D.-Ph.D.) Program

A limited number of highly qualified candidates who wish to pursue both the M.D. and Ph.D. degrees are considered annually. M.D./Ph.D. students are permitted a wide choice of research specializations from among numerous disciplines and interdisciplinary areas of biomedical sciences. The program emphasizes continuity of both clinical and basic sciences exposure. Among participating graduate departments and interdepartmental disciplines are biochemistry, bioengineering, chemistry, environmental health, epidemiology, genetics, immunology, microbiology, molecular biotechnology, pathology, pharmacology, physiology and biophysics, and zoology. The participating interdepartmental and affiliate programs are neurobiology and behavior, molecular and cellular biology. Students can also conduct their research at the Fred Hutchinson Cancer Research Center.

Applicants who wish to be considered for the M.D./Ph.D. program must submit the Medical Scientist Training Program application as soon as possible. Both the application and any supplemental material requested must be completed by January 15. Serious consideration is rarely given to applicants with minimal research experience and/or a cumulative GPA of less than 3.50 or MCAT scores of less than 10 in each category.

Applicants should correspond directly with the administrator of the Medical Scientist Training Program:

MSTP
University of Washington
Health Sciences Building, Room I264
Box 357470
Seattle WA 98195-7470
206-685-0762
mstp@pathology.washington.edu

Financial Information

Fees and Other Charges

All fees and extra service charges are payable in U.S. dollars and due at the time specified for such fees and charges. The University reserves the right to change any of its fees and charges without notice. Resident tuition for 2001-2002 is \$3,381 per quarter; nonresident tuition is \$8,556 per quarter.

Financial Assistance

Financial aid awards are based on the demonstrated need of the students. All applicants for aid must submit data for an analysis of need using the Free Application for Federal Student Aid (FAFSA). This requires disclosure of financial information from the student and the student's parents. The Federal Direct Stafford Loan (subsidized and unsubsidized), Perkins Loan, and the Primary Care Loan are the primary sources of aid. Loans are also available from the School of Medicine provided students meet the need requirement that is based on both the student's and parents' financial information. Limited amounts of grant funds are available to Washington state residents who meet specific funding criteria.

Scholarships are available through the School of Medicine scholarship fund. These awards vary in amount and require financial information from the student and the student's parents. There is a separate application for the School of Medicine scholarship, which has a May 30 due date.

Financial aid information is distributed to all accepted applicants. The FAFSA form may be obtained at www.fafsa.ed.gov or from the UW Office of Student Financial Aid or the School of Medicine Financial Aid

Office. The deadline for receipt of the financial-aid application by the processor is February 28. Applicants must meet this deadline to be considered for all available aid sources regardless of the status of their admission file. Late applicants are awarded only Stafford and Unsubsidized Stafford loans.

Outside employment is discouraged while the student is enrolled in medical-school course work.

Medical Curriculum

Basic Science Curriculum (124 Credits)

The first two years of the medical-student curriculum is identified as the Basic Science Curriculum. It consists of three phases, or groups, of courses in the human biology series: courses in the sciences basic to medicine, organ systems courses taught by basic and clinical disciplines, and introduction to clinical medicine. The first phase is designed to provide the background in basic disciplines required for the organ-system courses. In the second phase, the student is concerned with learning the normal and pathophysiologic properties of several human organ systems. Emphasis is placed upon correlating these properties with clinical methods of data collection and problem formulation. Students pursue the Introduction to Clinical Medicine course throughout the first two years, learning to interview patients, obtain a medical history, and perform physical examinations.

Students pursue the Basic Science Curriculum during their first two years in the School of Medicine. The academic demands of the Basic Science Curriculum are scaled so that most students also will be able to take elective courses that will broaden the student's background.

First Year

Microscopic Anatomy (Histology)
Gross Anatomy and Embryology
Mechanisms in Cell Physiology
Biochemistry
Systems of Human Behavior I
Cell and Tissue Response to Injury
Microbiology and Infectious Disease
Introduction to Immunology
Head, Neck, Ear, Nose, and Throat
Nervous System
Critical Reading and Evaluation of Medical Literature
Introduction to Clinical Medicine

Second Year

Cardiovascular System
Respiratory System
Principles of Pharmacology I
Endocrine System
Systemic Pathology
Genetics
Skin System
Gastrointestinal System
Epidemiology
Hematology
Musculoskeletal System
Medicine, Health, and Society
Urinary System
Systems of Human Behavior II
Principles of Pharmacology II
Reproduction
Nutrition for Physicians
Introduction to Clinical Medicine

Clinical Curriculum (148 Credits)

The clinical curriculum is pursued in the third and fourth years of medical school. It includes prescribed clerkships to be completed by all students (84 credits or 42 weeks) in family medicine, internal medicine,

obstetrics and gynecology, pediatrics, psychiatry, and surgery, plus clinical selectives (32 credits or 16 weeks) in four clinical areas including clerkships in rehabilitation medicine/chronic care, emergency care/trauma, neurology, and surgery electives. Additional clinical or non-clinical selectives (a minimum of 32 credits or 16 weeks) are also required.

Education in the clinical curriculum utilizes the case-study method. Students gain clinical knowledge and gradually increase their clinical problem-solving abilities while working as junior members of the medical-care team. Each team is headed by a faculty clinician working in one of the medical school-affiliated hospitals or practice units.

Independent Investigative Inquiry

In addition to the basic and clinical curricula, each student must complete 8 credits in independent study and investigation in one or more of the biological, behavioral, sociocultural, or epidemiological sciences basic to medicine, culminating in a written paper. The purpose of this requirement is for the student to gain an understanding of the philosophy and methods of science.

WWAMI Program

The WWAMI Program was initiated in 1971 as an effort to decentralize medical education to provide a broader range of educational opportunities for students, and to address the need for primary-care physicians oriented toward rural practice. It is an integral part of the undergraduate medical curriculum and is a fully accredited program of the School of Medicine. The WWAMI Program is named for the five states (Washington, Wyoming, Alaska, Montana, and Idaho) that share resources and responsibilities in the regional educational program. Funds appropriated to the WWAMI Program by the Wyoming, Alaska, Montana, and Idaho legislatures assure each state of positions for its students in the entering medical class each year.

First-Year Training

In the first year of the WWAMI Program, approximately 40 percent of the students admitted to the University's School of Medicine receive the first year of medical school training at Washington State University, the University of Wyoming, the University of Alaska, Montana State University, or the University of Idaho. Washington State University positions not filled by volunteers are assigned by lottery. Every Washington-resident applicant should recognize the possibility of assignment to Washington State University during the first year. Students from Wyoming, Alaska, Montana, and Idaho attend their home-state institutions. While at one of these institutions, they enroll in prescribed one-year medical school basic-science courses taught by the science faculty and are provided supplemental resources from the University of Washington's School of Medicine faculty. These students join their classmates at the University of Washington's campus in Seattle for the second year of medical studies.

Third- and Fourth-Year Training

At the conclusion of the second year, students enter the portion of the curriculum that is predominantly clinical. Required and selective clerkships are described above. As part of the clinical training, students complete clerkships at the University of Washington, at its affiliated hospitals, or at community clinical units located in the five-state region. During the third and fourth year clerkships, School of Medicine full-time and clinical faculty members provide supervised clinical training in required as well as elective clerkships throughout the WWAMI region.

Enrichment Opportunities

Students may enhance their medical education through a variety of sponsored activities that offer students an opportunity to explore areas of special interest, such as working in rural or urban clinics that serve medically underserved communities, undertaking medical research projects, or participating in an international exchange program with a developing country. Brief descriptions of three of the more formally structured programs follow.

Rural/Underserved Opportunities Program (RUOP)

This program exposes students to rural medicine and utilizes clinical training sites in all five states. For one month during the summer between the first and second years, students work with physicians in small communities, offering a chance to better understand the challenges and opportunities in these settings. Students receive a stipend supported by the Family Health Foundation, the Academy of Family Physicians, Area Health Education Centers, and the School of Medicine.

Medical Student Research Training Program

Research opportunities are offered to UW medical students interested in gaining valuable experience from training in medical research. The purpose of the program is to encourage students to participate in a research project as part of their medical education. This research is planned and carried out under the supervision of a faculty sponsor and is undertaken during the summer between the first and second years. Student trainees in the program receive a stipend supported largely by a special fund from the School of Medicine. The project is twelve weeks, full-time, on a working schedule of forty hours per week, and the student may not be enrolled in courses for credit during this time.

Student Evaluation and Promotion

The awarding of the Doctor of Medicine degree is contingent upon satisfactory completion of academic and noncognitive requirements. The latter includes the acquisition of behavioral patterns and attitudes consistent with the oath that all students take at the time of graduation. As such, student evaluation is based upon the faculty's observation of the student's behavior and conduct as well as papers and examinations. Every student is required to pass Steps 1 and 2 of the United States Medical Licensing Examination, all University of Washington examinations, and complete an approved Independent Investigative Inquiry project before receiving the Doctor of Medicine degree. Periodic reviews of student performance are conducted by the School's Student Progress Committee. Students are informed of their deficiencies and the remedial requirements, if any, for these deficiencies. Dismissal from the School may occur if the student fails to maintain an acceptable academic record, fails to follow academic directives provided by the School's committees, or fails to develop attitudes and behavioral patterns appropriate to a career in medicine.

The Faculty Council on Academic Affairs reviews the Student Progress Committee's actions, and the Dean of the School of Medicine has final approval of the committee's and council's recommendations. A review mechanism is available within this process. Once dismissal or withdrawal from the School has occurred, the student may petition for reinstatement through the Faculty Council on Academic Affairs. Reinstatement will not be considered without substantial evidence that the problems causing the dismissal or withdrawal have been resolved. Only one reinstatement petition through the Faculty Council on

Academic Affairs is allowed. If more than one year elapses after the withdrawal or dismissal, the individual may be required to apply for readmission through the admissions process. If a reinstatement petition is denied by the Faculty Council, the decision is final with no further avenue for review. Subsequent requests for admission must be directed through the standard admissions procedures.

Grading System

The grades awarded in each course in the M.D. curriculum are Honors, Pass, or Fail in the basic-science curriculum, and Honors, High Pass, Pass, or Fail in the clinical curriculum. The School's goal is to provide a curriculum that defines the competencies to be achieved by the student at each level. However, a pattern of documented evaluator concerns about a student's performance may indicate unsatisfactory performance when the record is viewed as a whole, even though passing grades have been assigned. Honors may be awarded in a course on predetermined criteria that may involve additional work in the subject as selected by the student. The grading system precludes the ranking of students in class standing by a grade-point average.

The School of Medicine reserves the right to revise or modify the curriculum, system of evaluation, or graduation requirements.

Honors

A charter as Alpha of Washington was granted to the School of Medicine in 1950 by Alpha Omega Alpha, the honorary medical society. Members are elected by the membership of Alpha Omega Alpha on the basis of high scholarship and good moral character.

Graduation with Honors

A degree of Doctor of Medicine with Honors may be awarded to students with high achievement who, in addition, have demonstrated initiative and success in clinical and scholarly pursuits related to medicine. Candidates for graduation with honors are nominated by the departments each year and are selected on the basis of a review of their academic records by the Honors and Awards Committee.

Graduate Medical Education and Postdoctoral Training

The University of Washington School of Medicine offers a broad array of residency and fellowship programs. Training occurs at the University of Washington Medical Center, Harborview Medical Center, Veterans Affairs Puget Sound Health Care System, Children's Hospital and Regional Medical Center, and other affiliated training sites in Seattle and throughout the WWAMI region. Postdoctoral research fellowship opportunities in the basic sciences are also offered.

Continuing Medical Education

The Office of Continuing Medical Education, School of Medicine, offers a wide variety of courses for physicians and health-care professionals in the Pacific Northwest and throughout the nation.

Offerings include short courses of one to three days, one- to two-week board-review courses, visiting professorships, preceptorships, and mini-residencies. Other offerings include lecture series at hospitals, video-tape presentations, self-directed instructional materials, and other specific courses requested by members of the medical community throughout the

WWAMI region. Information on offerings is available from its Web site at www.uwcme.org.

All physicians also are invited to participate in continuing medical education programs offered by clinical departments, such as grand rounds and regular conference series.

The University of Washington School of Medicine is accredited by the Accreditation Council for Continuing Medical Education to sponsor continuing medical education for physicians. All programs sponsored by the Office of Continuing Medical Education are applicable to physician relicensure requirements of the Washington Board of Medical Examiners and for Category I credit of the Physician's Recognition Award of the American Medical Association. Prescribed credit for the American Academy of Family Physicians and other types of credit are included in the program offerings when appropriate.

Brochures and calendars for courses are available for more detailed information. For information concerning Continuing Medical Education programs, contact:

Anesthesiology

BB1459 Health Sciences

 General Catalog Web page:
www.washington.edu/students/genocat/academic/Anesthesiology.html

 Department Web page:
depts.washington.edu/anesth/

The Department of Anesthesiology maintains an active program of teaching and research for both the specialist and nonspecialist. Medical students are introduced to the principles of anesthetic management and the effects of anesthetic agents on circulatory and respiratory physiology. The clinical-clerkship program provides basic training in airway management and care of the unconscious patient. A three-year residency program is available for physicians who desire specialty training in anesthesiology. In addition, advanced clinical and research training is offered in several major subspecialty areas (cardiac anesthesia, neuroanesthesia, pediatric anesthesia, obstetrical anesthesia, pain management, and regional anesthesia). Opportunities for collaborative research are available to undergraduate and graduate students. The department conducts a regular series of clinical conferences, didactic lectures, and research seminars. Questions regarding medical student clerkships may be directed to Dr. John Bramhall at 206-231-2847 or bramhall@u.washington.edu. Other training questions may be directed to the Residency Coordinator at 206-543-2773 or lfg@u.washington.edu.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

ANEST 498 Undergraduate Thesis (*) *Geiduschek* By special arrangement. Time and credit to be arranged. Offered: AWSpS.

ANEST 499 Undergraduate Research (*) *Geiduschek* Specific research problems relating to pulmonary, cardiovascular, renal, obstetric, and central nervous system functions, and their alteration by anesthetic techniques and agents. (Six weeks, full-time. Limit: two students.) Offered: AWSpS.

ANEST 501 P-Preceptorship in Anesthesiology (1) *Geiduschek* An opportunity for first- and second-year medical students to gain experience with medical practice situations by observing clinical faculty members in their offices. Prerequisite: permission of instructor. Offered: AWSpS.

ANEST 680 P-Basic Anesthesia Clerkship (4) *Geiduschek* Introduction to the principles of airway management, ventilatory support, use of local anesthetics, techniques of patient monitoring and fluid therapy. Skills taught include airway management, venipuncture, lumbar puncture and endotracheal intubation. Prerequisite: third- or fourth-year student. (Two weeks, full-time. Limit: three to five students each two-week period.) Affiliated hospitals. Offered: AWSpS.

ANEST 681 P-Advanced Clerkship in Anesthesiology (8) *Geiduschek* Clerkship for students desiring greater exposure to anesthesiology as a specialty. Individual programs can be arranged in

the following areas: surgical anesthesia, obstetrical anesthesia, and pain clinic. Prerequisite: Third- or fourth-year student. (Four weeks, full-time. Limit: two students per period.) Affiliated hospitals. Offered: AWWSpS.

ANEST 697 P-Anesthesiology Special Electives (*, max. 24) *Geiduschek* Special clerkships, externships, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain a special assignment form from the Dean's office at least one month before advance registration. Prerequisite: permission of instructor. (Four to twelve weeks, full-time.) Offered: AWWSpS.

Modern biochemistry involves the study of biological processes at a molecular level. Specific research projects may entail study in such diverse fields as molecular biology, molecular biophysics, genetics, microbiology, immunology, developmental biology, organic chemistry, pharmacology, and physiology. Graduate students enrolled in the Department of Biochemistry engage in studies and research that prepare them for the challenging opportunities open to the professional biochemist/molecular biologist in colleges and universities, research institutes, medical schools and hospitals, government laboratories, and the laboratories of chemical, biotechnology, and pharmaceutical industries.

The course of advanced study is designed to give each student a firm foundation upon which to base further professional progress. In the first year of academic work, students attend courses in biochemistry and molecular biology, and in related fields such as chemistry, biophysics, genetics, cell biology, and microbiology. In the second and succeeding years, an increasing amount of time is devoted to research and independent study. For the Ph.D. degree, each student is required to gain teaching experience, usually during the second year of the graduate program.

An accredited major in biology, chemistry, or biochemistry fulfills admission prerequisites. Students with other majors are required to have completed the following undergraduate courses: two years of chemistry, mathematics through calculus, one year of physics, and at least one year of biology. Experience in a research laboratory during or following baccalaureate study is highly desirable. Applicants must also meet the general admission requirements of the Graduate School.

Normally, all graduate students admitted to the Department of Biochemistry are provided with financial assistance.

Research facilities for the department are housed in the Biochemistry-Genetics Building, which provides approximately 52,000 square feet of excellent research space, conference rooms, and a departmental library. In the immediate vicinity are the departments of Immunology, Genome Sciences, Microbiology, and Pharmacology, as well as pro-

grams in biomolecular structure, molecular medicine, neurobiology, and molecular and cellular biology, with whom the department has common research interests. The laboratories are equipped with modern research equipment and are supported by external, centralized research facilities, which include a modern computer center, the Marine Biology Laboratory at Friday Harbor, and the Health Sciences Library. An emphasis on biomedical research is facilitated by the location of the department within the School of Medicine.

Faculty

Chair

Alan Weiner

Professors

Bornstein, Paul * 1967; MD, 1958, New York University; structure and function of connective tissue macromolecules, wound healing.

Cooper, Jonathan A. * 1987, (Affiliate); PhD, 1976, University of Warwick (UK); regulation of cellular metabolism and proliferation by protein phosphorylation.

Dale-Crunk, Beverly A. * 1972, (Adjunct); PhD, 1968, University of Michigan; keratin biochemistry, epithelial differentiation, antimicrobial peptides.

Davie, Earl Warren * 1962; PhD, 1954, University of Washington; protein synthesis, mechanism of blood clotting, cloning of plasma proteins.

Davis, Trisha Nell * 1987; PhD, 1983, Yale University; control of the cell cycle, chromosome segregation, proteomics.

Eisenman, Robert M. * 1982, (Affiliate); PhD, 1971, University of Chicago; viral oncology, oncogenes, retrovirus multiplication.

Eyre, David R. * 1985, (Adjunct); PhD, 1969, University of Leeds (UK); connective tissue biology, collagen chemistry, bone and cartilage metabolism.

Fischer, Edmond H. * 1953, (Emeritus); PhD, 1947, University of Geneva (Switzerland); relationship of protein structure to enzyme activity, hormonal regulation of metabolic processes.

Gelb, Michael H. * 1985, (Adjunct); PhD, 1982, Yale University; mechanistic enzymology, bioorganic and medicinal chemistry.

Glomset, John A. * 1977; MD, 1960, University of Uppsala (Sweden); membrane structure and function.

Gordon, Milton * 1959; PhD, 1953, University of Illinois; molecular basis of plant tumors, control of gene expression in plants.

Hauschka, Stephen D. * 1967; PhD, 1966, Johns Hopkins University; regulation of skeletal muscle differentiation, growth factor-receptor signaling mechanisms.

Hol, Wilhelmus G. J. * 1992; PhD, 1971, University of Groningen (Netherlands); protein crystallography, drug design, vaccine development, and protein engineering.

Hurley, James Bryant * 1985; PhD, 1979, University of Illinois; molecular basis of vision.

Jensen, Lyle H. * 1949, (Emeritus); PhD, 1943, University of Washington; molecular structure, x-ray diffraction.

Kimelman, David * 1989; PhD, 1985, Harvard University; molecular biology of early development in the frog, *Xenopus laevis*, and the fish, *Danio rerio*.

Klevit, Rachel E. * 1983; DPhil, 1981, Oxford University (UK); protein structure and function; molecular recognition; protein NMR.

Krebs, Edwin G. * 1977, (Emeritus); MD, 1943, Washington University; intracellular signaling mechanisms involving protein phosphorylation.

Loeb, Lawrence A. * 1978; MD, 1961, New York University, PhD, 1967, University of California (Berkeley); DNA replication, cancer and AIDS.

Maizels, Nancy * 2000; PhD, 1974, Harvard University; recombination and repair in mammalian cells, especially activated B cells.

Morris, David R. * 1966; PhD, 1964, University of Illinois; regulation of growth in eukaryotes and prokaryotes, translational control.

Neurath, Hans * 1982, (Emeritus); PhD, 1933, University of Vienna (Austria); structure and functions of proteolytic enzymes, zymogen activation, evolution of proteins.

Palmiter, Richard D. * 1974; PhD, 1968, Stanford University; regulation of gene expression in transgenic mice.

Parson, William W. * 1967; PhD, 1965, Case Western Reserve University; bioenergetics, with particular emphasis on photosynthesis, picosecond spectroscopy.

Reid, Brian R. * 1980; PhD, 1965, University of California (Berkeley); biophysical chemistry, NMR of DNA and tRNA.

Roberts, James Michael * 1989, (Affiliate); PhD, 1984, MD, 1984, Columbia University; regulation of DNA replication by cyclin-kinase complexes.

Saari, John C. * 1974; PhD, 1970, University of Washington; retinal biochemistry.

Teller, David C. * 1965; PhD, 1965, University of California (Berkeley); physical chemistry of macromolecules, protein interactions, X-ray crystallography.

Varani, Gabriele * 2001; PhD, 1987, University of Milan (Italy); physical biophysical.

Walsh, Kenneth A. * 1958, (Emeritus); PhD, 1959, University of Toronto (Canada); structure and functions of proteins, zymogens, and proteases.

Weiner, Alan * 2000; PhD, 1973, Harvard University; genome structure, function of small nuclear and cytoplasmic RNA species, CCA-adding enzyme.

Young, Elton * 1969; PhD, 1967, California Institute of Technology; regulation of gene activity in the yeast *Saccharomyces cerevisiae*.

Associate Professors

Baker, David * 1993; PhD, 1989, University of California (Berkeley); protein folding, genomics.

Daggett, Valerie D. * 1993, (Adjunct); PhD, 1990, University of California (San Francisco); molecular modelling studies of peptides and proteins.

Hahn, Steven M. * 1994, (Affiliate); PhD, 1984, Brandeis University; transcription initiation in yeast.

Merritt, Ethan A. * 1989; PhD, 1980, University of Wisconsin; x-ray crystallography, structure-based drug design, and structural genomics.

Muller, Eric D. * 1988; PhD, 1981, Yale University; proteomics and cell biology in yeast.

Roth, Mark * 1994, (Affiliate); PhD, 1988, University of Colorado (Boulder); nuclear proteins involved in the regulation of gene expression.

Ruohola-Baker, Hannele * 1993; PhD, 1989, Helsinki University (Finland); oogenesis, developmental genetics.

Stenkamp, Ronald E. * 1978, (Adjunct); PhD, 1975, University of Washington; crystallography, metallo-proteins, protein engineering, blood clotting proteins.

Stoddard, Barry L. * 1994, (Affiliate); PhD, 1990, Massachusetts Institute of Technology; physical and structural studies of biological macromolecules.

Verlinde, Christophe L. M. J. * 1992; PhD, 1988, Catholic University of Leuven (Belgium); structure-based drug design and protein crystallography.

Assistant Professors

Beeson, Craig C. * 1996, (Adjunct); PhD, 1993, University of California (Irvine); the chemistry and biochemistry of the immune system, regulation of energy metabolism.

Ferre-D'Amare, Adrian Riu * 1999, (Affiliate); PhD, 1994, Rockefeller University; structural biology of RNA, X-ray crystallography, biological catalysis.

Kennedy, Brian K. * 2001; PhD, 1996, Massachusetts Institute of Technology; cancer and control of DNA replication.

Tsukiyama, Toshio * 1999, (Affiliate); PhD, 1991, University of Hiroshima (Japan).

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

BIOC 405 Introduction to Biochemistry (3) NW *Daum, Teller, Wiseman* Survey of basic principles of biochemistry and molecular biology, emphasizing broad understanding of chemical events in living systems in terms of metabolism and structure-function relationships of biologically important molecules. Suitable for pre-majors, for students interested in careers in medicine, dentistry, pharmacy, medical technology. Prerequisite: BIOL 200; either BIOL 201 or both BIOL 101 and GENET 371; either CHEM 223, CHEM 237, or CHEM 335. Offered: A.

BIOC 406 Introduction to Biochemistry (3) NW *Hurley, Petra* Survey of basic principles of biochemistry and molecular biology, emphasizing broad understanding of chemical events in living systems in terms of metabolism and structure-function relationships of biologically important molecules. Suitable for pre-majors, for students interested in careers in medicine, dentistry, pharmacy, medical technology. Prerequisite: BIOC 405. Offered: W.

BIOC 426 Basic Techniques in Biochemistry (4) NW *Chung, Petra* Introduction to basic biochemistry experiments. Acquaints students (largely Biochemistry majors) with basic biochemical laboratory techniques. Prerequisite: BIOC 440, which may be taken concurrently. Offered: ASP.

BIOC 440 Biochemistry (4) NW *Davis, Klevit* Biochemistry and molecular biology (with quiz sections) for undergraduate students in molecular and cellular biology, for biochemistry majors, and graduate students in other science departments. Prerequisite: either 2.0 in BIOL 201 or both 2.0 in BIOL

180 and 2.0 in BIOL 200; either CHEM 224, CHEM 239, or CHEM 337. Offered: A.

BIOC 441 Biochemistry (4) NW *Gordon, Young* Biochemistry and molecular biology (with quiz sections) for undergraduate students in molecular and cellular biology, for biochemistry majors, and graduate students in other science departments. Prerequisite: 1.7 in BIOC 440. Offered: W.

BIOC 442 Biochemistry (4) NW *Kimelman, Palmiter* Biochemistry and molecular biology (with quiz sections) for undergraduate students in molecular and cellular biology, for biochemistry majors, and graduate students in other science departments. Prerequisite: either 1.7 in BIOC 406 or 1.7 in BIOC 441. Offered: Sp.

BIOC 496 Research Seminar for Undergraduates (1, max. 2) NW formal presentations of student research. One credit applies to research component of a relevant major. Credit/no credit only. Prerequisite: either BIOC 396 or CHEM 396. Offered: jointly with CHEM 496; Sp.

BIOC 498 Undergraduate Thesis (*) For senior medical students. Offered: AWSpS.

BIOC 499 Undergraduate Research (*) Investigative work on enzymes, proteins, lipids, molecular biology, developmental biology, intermediary metabolism, physical biochemistry, and related fields. Credit/no credit only. Offered: AWSpS.

BIOC 515-519 (For description, see listing for "Current Literature Conferences" at the end of this section.)

BIOC 520 Seminar (1) Seminar dealing with timely topics in the field of biochemistry. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

BIOC 525-529 (For description, see listing for "Current Literature Conferences" at the end of this section.)

BIOC 530 Advanced Biochemistry (3) Baker, Gelb, Hol, Klevit, Stenkamp, Stoddard Graduate-level discussion of the structure, function, and chemistry of proteins, control of enzymatic reactions. Prerequisite: a comprehensive course in biochemistry and permission. Offered: A.

BIOC 533 Topics In Biochemistry (1, max. 30) *Daum, Davie, Fischer* Provides in-depth examination of current topics in biochemistry, molecular biology, and structural biology. Designed to help participants in basic science departments become acquainted with latest ideas on selected topics. Emphasis on analysis of key concepts in the field with reference to classical papers and recent literature. Prerequisite: permission of instructor. Offered: AWSp.

BIOC 534 Topics In Molecular Biophysics (1.5) *Parson* Emphasis on methods used to study macromolecular structure and dynamics, including x-ray crystallography, NMR, optical spectroscopy, computer modeling, protein folding and ligand binding. Two topics covered each quarter; students may register for one or both. Prerequisite: permission of instructor. Offered: AWSp.

BIOC 535-539 (For description, see listing for "Current Literature Conferences" at the end of this section.)

BIOC 540 Literature Review (2) *Parson* Emphasizes critical evaluation of original articles in the literature. For first-year graduate students in biochemistry and students of other science departments, with permission. Offered: jointly with BMSD 540 A.

BIOC 541 Literature Review (2) *Palmiter* Emphasizes critical evaluation of original articles in

the literature. For first-year graduate students in biochemistry and students of other science departments, with permission. Offered: W.

BIOC 542 Literature Review (2) *Morris* Emphasizes critical evaluation of original articles in the literature. For first-year graduate students in biochemistry and students of other science departments, with permission. Offered: Sp.

BIOC 546-548 (For description, see listing for "Current Literature Conferences" at the end of this section.)

BIOC 555-559 (For description, see listing for "Current Research Conferences" at the end of this section.)

BIOC 565-569 (For description, see listing for "Current Research Conferences" at the end of this section.)

BIOC 575-579 (For description, see listing for "Current Research Conferences" at the end of this section.)

BIOC 581 Introduction to Biochemical Research (4, max. 16) Student works with one of the research groups within the department for one quarter and then rotates to other laboratories for second and third quarters. Credit/no credit only. Prerequisite: graduate standing in biochemistry or permission of instructor. Offered: AWSpS.

BIOC 586-588 (For description, see listing for "Current Research Conferences" at the end of this section.)

BIOC 600 Independent Study or Research (*) Offered: AWSpS.

BIOC 700 Master's Thesis (*) Offered: AWSpS.

BIOC 800 Doctoral Dissertation (*) Offered: AWSpS.

Current Literature Conferences

BIOC 515-519, 525-529, 535-539, 546-548 Current Literature Conference in Biochemistry Weekly literature reviews of topics pertinent to ongoing research in biochemistry. Students may register for more than one conference each quarter. Credit/no credit only. Prerequisite: permission of instructor. (Only 25 credits may be counted toward degree.)

BIOC 515 Matrix Macromolecules in Morphogenesis and Development (1, max. 30) *Bornstein* Offered: AWSp.

BIOC 516 Molecular Mechanisms of Blood Clotting (1, max. 30) *Davie* Offered: AWSp.

BIOC 517 Protein Structure (1, max. 30) *Baker* Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

BIOC 518 Signaling in Development (1, max. 30) *Ruohola-Baker* Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

BIOC 525 Phytoremediation (1, max. 4) *Gordon* Literature survey of phytoremediation topics. Discussion of latest techniques for the use of plants to concentrate heavy metals in the soil and of plants and plant-bacteria combinations to detoxify various organic contaminants. Credit/no credit only. Offered: AWSpS.

BIOC 526 Control of Growth and Differentiation During Development (1, max. 30) *Hauschka* Credit/no credit only. Offered: AWSpS.

BIOC 528 Signal Transduction (1, max. 30) *Hurley* Credit/no credit only. Offered: AWSp.

BIOC 529 Molecular Biology of Early Development (1, max. 30) *Kimelman* Offered: AWSpS.

BIOC 535 Macromolecular Structure (1, max. 30) Klevit Offered: AWSp.

BIOC 536 Control of Cell Growth (1, max. 30) Morris Offered: AWSp.

BIOC 537 Regulation of Gene Expression (1, max. 30) Palmiter Offered: AWSpS.

Current Research Conferences

BIOC 555-559, 565-569, 575-579, 586-588 Current Research Conferences in Biochemistry Weekly group conferences concerning ongoing graduate student and postdoctoral research in biochemistry. Students may register for more than one conference each quarter. Credit/no credit only. Prerequisite: permission of instructor. (Only 25 credits may be counted toward degree.)

BIOC 555 Cell and Molecular Biology of Connective Tissue Proteins (1, max. 30) Bornstein Offered: AWSpS.

BIOC 556 Enzymatic and Genetic Aspects of Blood Clotting (1, max. 30) Davie Offered: AWSp.

BIOC 557 Growth Regulation by Calcium Binding Proteins (1, max. 30) Davis Offered: AWSpS.

BIOC 559 Membrane Biochemistry and Cell Growth (1, max. 30) Glomset Offered: AWSpS.

BIOC 560 Protein Folding (1, max. 30) Baker Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

BIOC 561 Origin of Polarity (1, max. 30) Ruohola-Baker Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

BIOC 565 Plant Molecular Genetics (1, max. 30) Gordon Offered: AWSpS.

BIOC 566 Growth and Differentiation of Skeletal and Cardiac Muscle (1, max. 30) Hauschka Offered: AWSpS.

BIOC 568 Molecular and Genetic Aspects of G Protein Signal Transduction (1, max. 30) Hurlley Offered: AWSpS.

BIOC 569 Inductive Events in Early Development (1, max. 30) Kimelman Offered: AWSpS.

BIOC 575 NMR Analysis of Proteins and Nucleic Acids (1, max. 30) Klevit Offered: AWSp.

BIOC 576 Sequential Analysis of Growth Regulation (1, max. 30) Morris Offered: AWSpS.

BIOC 577 Gene Regulation in Transgenic Mice (1, max. 30) Palmiter Offered: AWSpS.

BIOC 578 Electron Transport in Photosynthesis (1, max. 30) Parson Offered: AWSp.

BIOC 588 Molecular Biology of Yeast Gene Regulation (1, max. 30) Young Offered: AWSpS.

major advances that are revolutionizing the health-care system. The Department of Bioengineering, housed jointly in the School of Medicine and the College of Engineering, provides a comprehensive, multidisciplinary program of education and research, and is recognized as one of the finest bioengineering programs in the world. Programs of study lead to the Bachelor of Science, Master of Science, and Doctor of Philosophy degrees. Major areas of research and education include distributed diagnosis and home healthcare (D2H2), molecular bioengineering and nanotechnology, engineered biomaterials and tissue engineering, medical imaging and image-guided therapy, and computational bioengineering. Detailed information on Bioengineering appears in the Interschool or Intercollege Programs section of this catalog.

Biological Structure

General Catalog Web page:
www.washington.edu/students/gencat/academic/Biological_Structure.html

Department Web page:
www.biostr.washington.edu/

Graduate Program Coordinator
G514 Health Sciences, Box 357420
206-543-5474

The Department of Biological Structure offers graduate programs of study leading to the Master of Science and Doctor of Philosophy degrees. The department promotes an understanding of biological processes through the study and analysis of structure-function relationships. The research problems that interest members of the faculty are diverse, including cellular differentiation and development explored in a variety of biological systems, neuroscience, molecular biophysics, biomolecular structure, and quantitative biology with an emphasis on computer-graphic representations of biological structures. This diversity creates a lively atmosphere in the department that provides a stimulating environment for the training of scientists with a variety of backgrounds.

The department's graduate program is directed toward the education of doctoral students who anticipate careers that will involve teaching or research in the biomedical sciences. Graduates from the program have a broad knowledge of biological structure at all levels, from the molecular to the human anatomical, with a major emphasis on the cellular level.

Graduate students select research and teaching options in their program. The research options are designed to provide training for a student in one or two of the following areas: cell and developmental biology, neurobiology, quantitative biology, cellular immunology, molecular biology, and macromolecular structure. Teaching options prepare the student to teach in one of the anatomical subdisciplines: human anatomy, neuroanatomy/neurobiology, histology, embryology/developmental biology, cell biology, and macromolecular structure.

Special Requirements

Applicants should have completed an undergraduate major in an appropriate field, such as anthropology, biochemistry, biology, chemistry, physics, psychology, or zoology.

The department is currently recruiting students into its labs and graduate program principally through the basic-science interdisciplinary programs. Students interested in working with particular departmental faculty members should apply for admission through one of the following programs: Molecular and Cellular

Biology, Neurobiology and Behavior, Biomolecular Structure and Design, or the Medical Scientist Training Program. Alternatively, some faculty sponsor students for application to the departmental program. For further information, contact the graduate program coordinator.

Financial Aid

The department offers financial support through training-grant positions and from research funds.

Faculty

Acting Chair

John I. Clark

Professors

Baskin, Denis G. * 1979; PhD, 1969, University of California (Berkeley); neuroendocrinology; obesity; CNS regulation of body weight; histochemistry; expression of receptors.

Brinkley, James F., III * 1988; MD, 1974, University of Washington; PhD, 1984, Stanford University; computer applications in medicine and biology; structural informatics.

Byers, Margaret R. * 1972, (Research); PhD, 1969, Harvard University; sensory neurobiology, neurocytochemistry, and neuropathologic reactions; neuroimmune interactions.

Clark, John I. * 1982; PhD, 1974, University of Washington; development and maintenance of lens transparency.

Dacey, Dennis M. * 1986; PhD, 1983, University of Chicago; the neural basis of vision and the organization of primate retina.

Farr, Andrew G. * 1982; PhD, 1975, University of Chicago; cell interactions governing lymphocyte production and function.

Gehrig, John D. * 1954, (Emeritus); DDS, 1946, MSD, 1951, University of Minnesota; oral and maxillofacial surgery, biological structure.

Graney, Daniel O. * 1966; PhD, 1965, University of California (San Francisco); gross anatomy, electron microscopy, intestinal absorption.

Hendrickson, Anita E. * 1969; PhD, 1964, University of Washington; neuroanatomy, morphology and development of primate visual system.

Herring, Susan W. * 1990, (Adjunct); PhD, 1971, University of Chicago; vertebrate functional morphology, relations between muscular function and skull growth.

Hol, Wilhelmus G. J. *, PhD, 1971, University of Groningen (Netherlands); protein crystallography, drug design, vaccine development, and protein engineering.

Jensen, Lyle H. * 1949, (Emeritus); PhD, 1943, University of Washington; molecular structure, x-ray diffraction.

Koehler, James K. * 1963, (Emeritus); PhD, 1961, University of California (Berkeley); electron microscope, cryobiology, reproductive biology.

Patton, Dorothy L. 1981, (Adjunct); PhD, 1981, University of Washington; infectious disease.

Press, Oliver W. * 1982, (Adjunct); PhD, 1977, MD, 1979, University of Washington; treatment of hematologic malignancies with monoclonal antibody immunoconjugates.

Bioengineering encompasses a wide range of activities in which the disciplines of engineering and biological or medical science intersect. Such multidisciplinary endeavors are yielding new discoveries and

Reh, Thomas A. * 1989; PhD, 1981, University of Wisconsin; regeneration and development of central nervous system.

Rosse, Cornelius * 1967, (Emeritus); MD, 1964, DSc, 1983, University of Bristol (UK); knowledge representation in anatomy.

Westrum, Lesnick E. * 1966; MD, 1963, University of Washington, PhD, 1966, University College, London (UK); neuroanatomy, synaptology, plasticity, olfactory and trigeminal systems, dental pathways.

Wilson, Steven E. 1998, (Adjunct); MD, 1984, University of California (San Diego); wound healing, apoptosis, growth factors, receptors.

Yablonka-Reuveni, Zipora * 1982; MSc, 1975, Weizmann Institute for Science (Israel), PhD, 1979, University of Windsor (Canada); myogenesis during growth, aging, and regeneration of skeletal muscle.

Associate Professors

Cunningham, Michael L. * 1988, (Adjunct); MD, 1988, University of Vermont, PhD, 1996, University of Washington; molecular, development, craniofacial, malformation, human, mouse, craniosynostosis, birth defects.

Gaddum-Rosse, Penelope * 1969, (Emeritus); PhD, 1965, University of Liverpool (UK); reproductive biology.

Harris, Roger M. * 1982; PhD, 1975, University of Washington; neuro-anatomical recovery from spinal cord injury.

Kalet, Ira J. * 1980, (Adjunct); PhD, 1968, Princeton University; computer simulation of radiation therapy, artificial intelligence, computer graphics.

Landau, Barbara R. 1962, (Emeritus); MS, 1949, PhD, 1956, University of Wisconsin.

Merritt, Ethan A. * 1989; PhD, 1980, University of Wisconsin; x-ray crystallography, structure-based drug design, and structural genomics.

Nameroff, Mark A. * 1970, (Emeritus); MD, 1965, PhD, 1966, University of Pennsylvania; cell differentiation.

Raible, David W. * 1995; PhD, 1989, University of Pennsylvania; zebrafish neural development.

Robinson, Farrel R. * 1986; PhD, 1982, Brown University; study of the cerebellum via monkey eye movements.

Roelink, Henk * 1996; MSc, 1985, University of Groningen (Netherlands), PhD, 1991, University of Amsterdam (Netherlands); role of signaling molecules in mediating neural tissue differentiation during vertebrate development.

Sherk, Helen * 1982; PhD, 1978, Massachusetts Institute of Technology; neural mechanisms underlying vision, especially visual guidance during locomotion.

Stenkamp, Ronald E. * 1978; PhD, 1975, University of Washington; crystallography, metalloproteins, protein engineering, rhodopsin, G-protein coupled receptors.

Sundsten, John Wallin 1962, (Emeritus); PhD, 1961, University of California (Los Angeles); neuroanatomy.

Verlinde, Christophe L. M. J. * 1992; PhD, 1988, Catholic University of Leuven (Belgium); structure-based drug design and protein crystallography.

Assistant Professors

Broderson, Stevan H. * 1967; PhD, 1967, State University of New York (Buffalo); computer graphics.

Fan, Erkang * 1996, (Research); PhD, 1993, University of Pittsburgh; organic and combinatorial chemistry, structure-based drug design, molecular recognition.

Moens, Cecilia B. * 1998, (Affiliate); PhD, 1993, University of Toronto; development of segmentation and segment identity in the vertebrate hindbrain.

Xu, Wenqing * 1999; PhD, 1995, Massachusetts Institute of Technology; structural studies of proteins involved in cancer, immune dysfunction and neuronal diseases.

Senior Lecturer

Mulligan, Kathleen A. 1987; PhD, 1985, University of New South Wales (Australia); neurobiology, gross anatomy, teaching innovations, technical communication.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

CONJ 401, 402, 403 Human Anatomy and Physiology (4, 4, 4) See Conjoint Courses.

B STR 431 Introduction to Neuroanatomy (4) NW *Broderson, Mulligan, Westrum* Survey of the anatomy and functional organization of the human central nervous system, with clinical applications. Prerequisite: admission to the School of Dentistry. Offered: W.

CONJ 480 Neuroscience and Rehabilitation Professionals (5) See Conjoint Courses.

B STR 498 Undergraduate Thesis (*) Individual research projects under the supervision of an instructor. For senior medical students. Offered: A/WSpS.

B STR 499 Undergraduate Research (*) Individual research projects in cellular and developmental biology, experimental immunology, reproductive biology, neurobiology, molecular structure, morphometrics, computer modeling, and related fields under the supervision of an instructor. Offered: A/WSpS.

B STR 501 Gross Anatomy (1-10, max. 10) *Clark* Lecture and laboratory dissection course in regional anatomy: thorax, abdomen, pelvis, perineum. Prerequisite: permission of instructor. Offered: A.

B STR 502 Gross Anatomy (1-5, max. 5) *Graney* Lecture and laboratory dissection course in regional anatomy: upper and lower extremities. Prerequisite: permission of instructor. Offered: W.

B STR 503 Gross Anatomy (1-5, max. 5) *Graney* Lecture and laboratory dissection course in regional human anatomy; head and neck. Prerequisite: permission of instructor. Offered: Sp.

B STR 510 Seminar in Anatomy (1) *Graney* Scientific and historical basis of selected studies in biological structure, anatomy, and human development. Original literature used as basis for textbook descriptions is reviewed. Credit/no credit only. Prerequisite: permission of instructor. Offered: A/WSp.

B STR 512 Human Microanatomy (4) Lectures and laboratory treating the specialized tissues and organs of the body from the microscopic and ultramicroscopic points of view. Prerequisite: permission of instructor. Offered: A.

B STR 515 Biological X-Ray Structure Analysis (3) *Stenkamp* Theory of x-ray diffraction, with emphasis on applications to biological systems. Prerequisite: permission of instructor. Offered: W.

B STR 519 Current Problems in Macromolecular Structure (2, max. 10) *Hol* A discussion of macromolecular structures related to specific areas of biological research. Emphasis on discussion of relevant research papers and use of computer graphics to visualize the molecular structures. Offered: A/WSpS.

CONJ 520 Anatomy and Autopsy (1/2, max. 2) *Fligner* See Conjoint Courses.

B STR 520 Structure Based Design of Drugs and Vaccines (3) *Hol* Lecture and discussion on research papers illustrating protein structure based design of new drugs and vaccines. Review of methods of structure-based drug design and problem of drug resistance. Discussion on importance of adjuvants, protein engineering methods, and immune evasion methods in vaccine design. Offered: even years; W.

B STR 521 Advanced Biomacromolecular Crystallography (3) *Hol, Merritt, Stenkamp* Aspects of protein crystallography ranging from crystal growth, phase determination methods, density averaging to refinement, fiber diffraction of DNA and proteins. Offered: odd years; W.

CONJ 524 Structural Basis of Neural Transduction (1.5) See Conjoint Courses.

UCONJ 524 Developmental Neurobiology (3) *Raible, Reh, Roelink, Rubel* See University Conjoint Courses.

B STR 530 P-Gross Anatomy and Embryology for Dental Students (7) *Broderson, Clark* Normal anatomy of the thorax, abdomen, pelvis, and perineum are discussed and dissected employing cadavers. The development of the organ systems is presented and related to definitive adult structure. Developmental anomalies and diagnostic anatomy are also discussed. Prerequisite: admission to School of Dentistry. Offered: A.

B STR 540 Special Problems in Anatomy (1-6, max. 6) Special projects in anatomy under sponsorship of faculty member. Prerequisite: graduate, medical, or dental student standing and permission of instructor. Offered: A/WSpS.

B STR 541 P-Microscopic Anatomy for Dental Students (4) Lecture and laboratory work in microscopic anatomy. For dental students taking HUBIO 510; others by permission of instructor. Offered: A.

CONJ 542 Development (1.5) See Conjoint Courses.

CONJ 545 Molecular Interactions and Medicine (1.5) See Conjoint Courses.

B STR 550 P-Head and Neck Anatomy for Dental Students (4) *Broderson, Clark, Graney* Normal anatomy of the head is discussed and dissected, employing human cadavers. The fundamentals of diagnostic anatomy are also discussed. Restricted to first-year dental students. Prerequisite: B STR 530. Offered: Sp.

B STR 555 Laboratory Rotation in Biological Structure (*, max. 5) Introduction to experimental design, research methods, and scientific thought in laboratories of faculty members. Provides hands-on experience, an entrance into the literature of the field, and opportunities for discussion with all members of the laboratory. first-year dental students only. Prerequisite: permission of instructor. Offered: A/WSpS.

B STR 557 Biomolecular Structure Seminar (1) *Hol* Literature review of key research in Biomolecular Structure in the form of short presentations by partic-

ipants followed by discussion. Critical evaluation of methods and results regarding properties and protein structure determination. Credit/no credit only. Prerequisite: graduate standing in biological structure or biochemistry and permission of instructor. Offered: AWSp.

B STR 580 P-Anatomy Teaching Practicum (*, max. 8) *Dacey, Graney, Mulligan* Opportunity for medical student (or other professional student) to gain teaching experience in biological structure and human biology courses, including gross anatomy, histology, and neuroanatomy. May include lecture, laboratory, conference, depending on student interest, experience. Credit based on course credit in which student is assisting. Prerequisite: permission of course chairperson. Offered: AWSp.

B STR 584 Seminar in Neurogenesis (1) *Reh* Discussion of current research on process by which neurons are generated in the nervous system. Offered: AWSpS.

CONJ 585 Surgical Anatomy (1-3, max. 12) *Graney* See Conjoint Courses.

B STR 591 X-Ray and NMR Analysis of Macromolecular Structure (1, max. 9) *Hol* Weekly discussion of current topics in research on molecular structure, usually emphasizing techniques of x-ray crystallography. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

B STR 595 Skin Biology Seminar (1, max. 5) *Smith* Presentation, discussion of ongoing multidisciplinary research in basic and clinical problems of adult and fetal skin biology. Genetic diseases of epidermis and dermis, percutaneous absorption in adult and fetal skin, wound healing, cutaneous blood flow, development and prenatal diagnosis of inherited disorders, pigment cell biology. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

B STR 597 Topics in Neurobiology (1, max. 5) *Harris* Presentations by participants of topics in neuroanatomy, neurophysiology, neurochemistry, and other areas relating to the nervous system. Problems of current research interest. Credit/no credit only. Prerequisite: permission of instructor. Offered: A.

B STR 598 Reading in Biological Structure (2) Critical evaluation of research in biological structure, including current problems, methods and future directions by reading and discussing research and review papers. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

B STR 600 Independent Study or Research (*) Offered: AWSpS.

B STR 700 Master's Thesis (*) Offered: AWSpS.

B STR 800 Doctoral Dissertation (*) Offered: AWSpS.

Comparative Medicine

T142 Health Sciences

General Catalog Web page:
www.washington.edu/students/gencat/academic/Comparative_Med.html

Department Web page:
www.washington.edu/medical/som/depts/compmed/overview.html

The Department of Comparative Medicine provides education and research opportunities in the use of animals in biomedical research, testing, and educa-

tion. In addition, training is provided for veterinarians in the diagnosis, treatment, and prevention of the diseases of laboratory animals. Current educational programs include scheduled courses in the principles and techniques of animal experimentation (C MED 407) for biomedical graduate students, zoonotic diseases, and training in laboratory-animal medicine for veterinary medical students and veterinarians, combined with a Master of Science degree program in comparative medicine. Areas of current research interests include enteric disease, lymphocyte biology, biology of aging, mouse genomics, generation and characterization of transgenic animal models, somatic cell gene transfer, and animal models of gene therapy.

Graduate Program Coordinator
T136 Health Sciences, Box 351790
206-685-3261

Postdoctoral Program

Postdoctoral training in the areas of laboratory animal medicine and comparative pathology is offered to persons with a D.V.M. or equivalent degree. Training consists of a combination of course work, clinical residency rotations, and research leading to a Master of Science degree in comparative medicine. The program also prepares participants for specialty certification by the American College of Laboratory Animal Medicine. Financial assistance is normally provided.

A detailed description of the postdoctoral program is available on the department's Web site at www.washington.edu/medical/som/depts/compmed/overview.html.

Master of Science

The Master of Science degree in comparative medicine provides advanced training in comparative medicine to veterinarians. Admission to the degree program requires acceptance into the department's Postdoctoral Training Program. The degree option involves additional elective courses, the completion of a more-involved research project, and a thesis.

Predocotoral Program

This program is designed to acquaint veterinary medical students with laboratory-animal medicine as a veterinary specialty. Specific areas covered include control/treatment of the principal diseases of common laboratory animals and their role in biomedical research. Blocks of four to eight weeks are available for fourth-year students year-round. Stipend support is normally provided.

Faculty

Chair

Melvin B. Dennis

Professors

Dennis, Melvin B. * 1971; DVM, 1961, Washington State University; comparative medicine, including animal models and experimental surgery.

Di Giacomo, Ronald F. * 1974, (Emeritus); VMD, 1965, University of Pennsylvania, MPH, 1974, University of Washington; comparative epidemiology and zoonoses.

Johnsen, Dennis O. 1997, (Clinical); DVM, 1961, University of California (Davis), MS, 1965, Ohio State University; comparative medicine including nonhuman primate medicine, international health.

Ladiges, Warren C. * 1982; DVM, 1971, Washington State University; immunobiology of aging, transgenic

mouse models of aging, DNA repair genes and age-associated cancer.

Liggitt, H. Denny * 1989; DVM, 1972, PhD, 1979, Colorado State University; using in vivo models to evaluate novel approaches for gene delivery, transgenic models.

Morton, William R. * 1976; VMD, 1967, University of Pennsylvania; animal models for AIDS-related research on vaccine development and pathogenesis studies.

Rausch, Robert L. * 1978, (Emeritus); DVM, 1945, Ohio State University, PhD, 1949, University of Wisconsin; parasitology, helminthic zoonoses.

Van Hoosier, Gerald * 1975; DVM, 1957, Texas A&M University; laboratory animal medicine with emphasis on effects of intercurrent infection on mouse phenotypes.

Whitney, Robert A. 1997, (Affiliate); DVM, 1959, Oklahoma State University, MS, 1965, Ohio State University.

Wolf, Norman S. * 1968, (Adjunct); DVM, 1953, Kansas State University, PhD, 1960, Northwestern University; hematopoietic stem cell dynamics and transplantation in radiation biology.

Associate Professors

Grossmann, Angelika * 1985, (Affiliate); DVM, 1978, PhD, 1982, Freie University of Berlin (Germany); immunosenescence in humans and mice; immunotoxicology; transmembrane signaling in T-lymphocytes.

Hargis, Ann M. 1990, (Affiliate); VMD, 1973, MS, 1976, Colorado State University.

Price, Lillian M. * 1984; DVM, 1972, PhD, 1983, University of Pennsylvania; t-cell development in the thymus, immunotoxicology, thymus development, retinoic acid embryopathy.

Thouless, Margaret E. * 1980, (Adjunct); PhD, 1974, University of Birmingham (UK); retroviruses, herpes viruses, enteric viruses, immunodiagnosis, virus variability.

Waggie, Kimberly S. 1997, (Affiliate); DVM, 1980, Iowa State University, MS, 1984, University of Missouri.

Weigler, Benjamin J. * 1997; DVM, 1986, Colorado State University, MPH, 1988, University of California (Berkeley), PhD, 1991, University of California (Davis); infectious disease epidemiology in laboratory animal medicine and management.

Assistant Professors

Anderson, David 1996, (Clinical); DVM, 1989, Washington State University; development and application of nonhuman primate animal models.

Iritani, Brian M. 1992; DVM, 1988, Washington State University, PhD, 1997, University of Washington; developmental immunology, cell signaling, oncogene function.

Pekow, Cynthia A. 1989, (Clinical); DVM, 1984, University of Illinois; comparative medicine, instruction of research staff and technicians in animal care and use.

Ware, Carol B. 1995, (Research); PhD, 1986, University College (Ireland); multi-systemic LIF receptor function in developing and adult mice.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

C MED 407 Principles of Animal Experimentation (3) *Dennis, VanHoosier* Focus on biology and care of experimental animals, animal models of human disease, ethical use of animals in biomedical research and teaching; techniques of aseptic surgery. Includes lectures and animal-use laboratories. For graduate and advanced undergraduate students. Prerequisite: permission of instructor. Offered: A.

C MED 499 Undergraduate Laboratory Research (1-6, max. 6) *Van Hoosier* Specific problems in comparative medicine. Credit/no credit only. Offered: AWSpS.

C MED 512 Introduction to the Anatomical Analysis of Animal Disease (5, max. 10) *Liggitt* Use of animals in experimental study of disease; techniques of animal necropsy, characterization, interpretation of gross and microscopic lesions, correlation of lesions with altered physiological processes, differentiation between naturally occurring and experimentally induced lesions. Prerequisite: PATH 444, PATH 445, or equivalent, and permission of instructor. Enrollment limited: two students per quarter. Offered: AWSpS.

C MED 514 Comparative Pathology Conference (1, max. 6) *Liggitt* Focus on histopathology of naturally occurring and experimentally induced lesions of primates, laboratory and domestic animals, fish, wildlife, and birds. Participants discuss the lesions and the basic pathogenetic mechanisms that underlie them. Prerequisite: PATH 500 or equivalent and permission of instructor. Credit/no credit only. Offered: AWSpS.

C MED 516 Current Literature in Laboratory Animal Medicine (1, max. 12) *VanHoosier* Critical evaluation of recent articles on laboratory animal medicine and science. Emphasis on literature dealing with spontaneous diseases of laboratory animals, biology and husbandry, zoonotic diseases, and animal models of human disease. Experimental design, use of animals in research, and methods of reviewing manuscripts. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

C MED 518 Clinical Conference Seminar (1, max. 12) *Price* Clinical reports of cases of spontaneous and induced diseases, animal models of human disease, and zoonotic diseases discussed. Disease prevalence and preventive medicine measures. Diagnostic exercises. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

C MED 520 Biology of Laboratory Animals (2) *Pekow, VanHoosier* Fundamentals of the morphological, functional, and applied aspects of anatomy, physiology, pharmacology, biochemistry, and immunology of the commonly used laboratory animal species. Similarities and differences within, and between, species, including man. Husbandry, genetics, behavior, and nutrition. Prerequisite: permission of instructor. Offered: AS.

C MED 521 Biology of Laboratory Animals (2) *Pekow, VanHoosier* Fundamentals of the morphological, functional, and applied aspects of anatomy, physiology, pharmacology, biochemistry, and immunology of the commonly used laboratory animal species. Similarities and differences within, and between, species, including man. Husbandry, genet-

ics, behavior, and nutrition. Prerequisite: permission of instructor. Offered: WS.

C MED 526 Epidemiology of Diseases Communicable from Nature (3) *DiGiacomo, Rausch* Explores the public health aspects of zoonotic diseases, their epidemiology and approaches to control. Focuses on the major viral, rickettsial, bacterial, protozoal, helminthic, and fungal diseases transmitted from wild and domesticated animals to humans. Prerequisite: C MED 511, C MED 512, or C MED 520 or permission of instructor. Offered: jointly with EPI 526; S.

C MED 530- Diseases of Laboratory Animals (3-) *VanHoosier* Analysis of etiology, pathogenesis, pathology, and disease processes in rodents, lagomorphs, carnivores, and nonhuman primates. Prerequisite: permission of instructor. Offered: AS.

C MED 531- Diseases of Laboratory Animals (3-) *VanHoosier* Analysis of etiology, pathogenesis, pathology, and disease processes in rodents, lagomorphs, carnivores, and nonhuman primates. Prerequisite: permission of instructor. Offered: WS.

C MED 540 Animal Models (1) *Dennis* Naturally occurring and experimentally induced analogs of human diseases in animals with emphasis on diseases in search of animal models, and approaches to identifying new models. Animal models of categorical disease (e.g., cancer, atherosclerosis, gerontology) discussed. Prerequisite: permission of instructor. Offered: SpS.

C MED 590 Selected Topics in Animal Medicine (2) *Dennis, VanHoosier* Radiation biology, genetics, anesthesiology and experimental surgery, preventive medicine, and ethical aspects of use of animals in biomedical teaching and research. Specific topics vary from year to year, depending on the expertise of the annual visiting professor. Prerequisite: permission of instructor. Offered: SpS.

C MED 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

C MED 601- Internship Rotation—Laboratory Animal Medicine (1-) Credit/no credit only. Prerequisite: DVM degree. Offered: AWSpS.

C MED 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

Conjoint Courses

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

CONJ 401 Human Anatomy and Physiology (4) *Linder, Melby* An integrated course on the structure and function of the human body with laboratory work in gross anatomy, histology, and physiology. Primarily for pharmacy doctoral students. Others by special permission of instructors. Prerequisite: either BIOL 201, BIOL 202, and BIOL 203, or BIOL 220; either CHEM 155, CHEM 160, or CHEM 162. Offered: A.

CONJ 402 Human Anatomy and Physiology (4) *Linder, Melby* An integrated course on the structure and function of the human body with laboratory work in gross anatomy, histology, and physiology. Primarily for pharmacy doctoral students. Others by special

permission of instructors. Prerequisite: CONJ 401. Offered: W.

CONJ 403 Human Anatomy and Physiology (4) *Linder, Melby* An integrated course on the structure and function of the human body with laboratory work in gross anatomy, histology, and physiology. Primarily for pharmacy doctoral students. Others by special permission of instructors. Prerequisite: CONJ 402. Offered: Sp.

CONJ 480 Neuroscience for Rehabilitation Professionals (5) *Anderson, Mulligan, Slimp* Survey of the structure and function of the central nervous system, emphasizing sensorimotor systems and higher integrative functions, coupled with clinical correlations. Required for occupational therapy, physical therapy, and prosthetic/orthotic students. Others by permission.

CONJ 505 P-Pain Clinic Preceptorship (1) One morning a week for a total of 30 hours per quarter spent observing patient care in either inpatient or outpatient settings at University of Washington Medical Center; associated readings. Prerequisite: first- or second-year medical student standing. Coordinator: Pain Center.

CONJ 515 Interdisciplinary Health and Human Services Delivery in Rural Communities (1) *House* Provides opportunities for students in health and human services to explore current trends and issues of service delivery in rural communities. Demographics, economics, community structure, culture, and professional/personal issues are addressed. Prerequisite: major standing in a health or human services profession. Credit/no credit only. Offered: W.

CONJ 520 Anatomy and Autopsy (1/2, max. 2) *Fligner* Students attend autopsies at UWMC affiliated hospitals for demonstration of normal anatomic relationships and gross pathological changes in various diseases. Offered as elective concurrent with HUBIO 520P. Prerequisite: HUBIO 510P or equivalent, permission of instructor, and orientation. Offered: WSp.

CONJ 524 Structural Basis of Signal Transduction (1.5) *Xu* Focuses on the structure-function relationship of key enzymes in signal transduction (protein/lipid kinases; phosphatases etc.) and the structural consequences of protein phosphorylation. Teaches students to look into critical structural details using PC or Mac. Prerequisite: undergraduate course in biochemistry and basic cell biology, or permission of instructor. Offered: W.

CONJ 531 Signaling Mechanisms in Excitable Cells (1.5) *Hille* Membrane electricity. Structure and roles of voltage-gated and ligand-gated ion channels in electrical signaling. Calcium as a second messenger. Exocytosis and its regulation. Phototransduction in photoreceptors. Prerequisite: comprehensive undergraduate course in general biochemistry and molecular biology, or permission of instructor. Offered: A.

CONJ 532 Signal Transduction from the Cell Membrane to the Nucleus (1.5) *Beavo, Moon, Storm* Intracellular signaling pathways leading from cell membrane receptors to nucleus. Pathways activated by seven transmembrane receptors and G-proteins, insulin/PI3 kinase, nitric oxide and WNTs and mechanisms of signal termination. Cytokine/Jak/Stat signaling and role of subcellular localization in signal transduction. Prerequisite: basic knowledge of biochemistry. Offered: A.

CONJ 533 The Dynamic Chromosome (1.5) *Henikoff, Roth* The chromosome viewed as the ultimate organelle. How chromosomes are maintained and propagated. Epigenetic regulation of genes. Genetic, biochemical, and cytologic methods for understanding chromosome functions. Prerequisite: cell biology, biochemistry, and genetics. Offered: A.

CONJ 534 Selected Problems in Nervous System Development (1.5) Introduces students to current issues in developmental neurobiology. Topics include regionalization of the neuroectoderm, mechanisms of neurogenesis, axon patterning and plasticity, and cell death. Not intended to be comprehensive; examines the experimental basis for current views in the field of a few topical issues.

CONJ 535 RNA Structure and Biological Function (1.5) *Ferre-D'Amare, Stoddard* Survey of the diversity of cell-biological roles played by RNA with emphasis on structural principles and structure-function relationships. Readings from the current literature to cover both, methods for the study of RNA, and examples of the function of this nucleic acid as part of the machinery for gene expression. Offered: W.

CONJ 536 Experimental Design in Cell Biology (1.5) *Wakimoto, Wright, Hille, Cooper* Focuses on experimental design in cell biology. A topic of current research interest is covered in depth in order to follow a line of investigation and critically evaluate the strengths and limitations of various experimental strategies. Offered: jointly with ZOOL 541; W.

CONJ 537 Mechanism of Transcriptional Regulations (1.5) *Tsukiyama* Focuses on biochemical mechanisms of gene transcription covering a broad range of transcriptional regulation, including mechanisms of transcriptional initiation, elongation and termination. Discusses regulation of transcription by chromatin. Includes a special lecture regarding regulation of transcription in cell growth and differentiation. Offered: A.

CONJ 538 Genetic Instability and Cancer (1/1.5) *Maizels, Monnat* Seminar focusing on molecular pathways that maintain genomic stability in all cells and that carry out programmed changes in genomic structure in the immune system. Special attention devoted to understanding how failure in these pathways leads to genomic instability and malignancy. Prerequisite: permission of instructor. Offered: W.

CONJ 539 Biological Basis of Neoplasia (1.5) *Foote, Neiman, Kemp, Zarbl* Lecture/discussion on cellular and molecular mechanisms underlying phenotypes associated with cancer, including genetic pre-disposition, injury, and instability; alteration in control of cell division and cell death; failure of differentiation; tumor angiogenesis and metastasis. Molecular biology of tractable model systems is emphasized. Prerequisite: introductory biochemistry and cell biology. Offered: W.

CONJ 541 Molecular Biology of Cellular Processes (1.5) *Bornstein* Translational control; cytoskeleton and molecular motors; protein targeting, sorting and secretion; apoptosis; regulation of cell function by extracellular matrix. Prerequisite: comprehensive undergraduate course in biochemistry and molecular biology or permission of instructor. Offered: Sp.

CONJ 542 Development (1.5) *Raible, Roelink* Molecular mechanisms of development; molecules and pathways used for the patterning of developing organisms. Similarities and differences in the making of plants, invertebrates, and vertebrates. Prerequisite: Comprehensive undergraduate courses in Biology, Molecular Biology, or permission of instructor. Offered: W.

CONJ 543 Problems in Genetic Analysis (1.5) *Emerman, Edgar, Ostrander* Introduction to the course in problems of genetic analysis using a variety of organisms. Focuses on the use of classical and modern genetic tools to understand fundamental problems in biology and medicine. Presents several widely used genetic approaches in detail. Offered: Sp.

CONJ 544 Protein Structure, Modification and Regulation (1.5) *Stoddard, Strong* Overview of general principles of protein structure, including forces that contribute to folding and stabilization, followed by an extended coverage of the means by which protein structure and function are modified and regulated. Examples from recent developments in protein folding, processing, and allosteric regulation. Prerequisite: introductory biochemistry and cell biology.

CONJ 545 Molecular Interactions and Medicine (1.5) *Verlinde* Forces governing molecular interactions in biology; with a focus on medicine. Principles of computer modeling techniques in use for predicting the molecular behavior of proteins, ligands and their complexes. In computer ligand discovery; drug design, and the understanding at the atomic level of some genetic diseases. Two computer lab sessions. Offered: Sp.

CONJ 546 Survey of Technologies for Molecular Biology (1.5) *Bumgarner* Provides a broad overview of modern technologies used in molecular biology with particular emphasis on DNA sequencing and gene expression. In addition to methods and applications for the technologies, examines the theoretical basis and underlying instrumentation through which these technologies are implemented. Offered: A.

CONJ 547 Molecular Evolution of Viral-Host Interactions (1.5) *Katze* Focuses on the interactions between viruses and the cells they infect, with special emphasis on evolutionary battle that occurs between the invading virus and its host. Examines new technologies being used to molecularly dissect virus-host interactions. Offered: Sp.

CONJ 550 P-Clinical Infectious Diseases (3) *Spach* Lecture series by faculty members from various departments, authorities in the field of clinically important infectious diseases. Lectures, reading assignments, and handouts emphasize epidemiology, clinical manifestations, laboratory findings, diagnosis, treatment, and prevention. Oriented for second-year medical students. Credit/no credit only. Prerequisite: HUBIO 521 or permission of coordinator, Department of Medicine. Offered: W.

CONJ 585 Surgical Anatomy (1-3, max. 12) *Graney* Guided dissection of selected regions, supplemented by conferences. Offered conjointly by the departments of Biological Structure and Surgery. Prerequisite: permission of department. Coordinator: Department of Biological Structure.

CONJ 677 P-Clinical Allergy and Immunology (*, max. 12) *Callanan (Boise Veterans Affairs Hospital), Henderson (University of Washington Medical Center)* Clinic and office experience in diagnosing and managing allergic disease. Clinical conferences, hospital rounds on clinical immunology and allergy. Student may elect a flexible program, emphasizing adult or pediatric allergy. Prerequisite: MED 665 or basic clerkships in Departments of Family Medicine or Pediatrics. (Four weeks, full-time.) Offered: AWSpS.

CONJ 678 P-Pain Clinic Clerkship (8) Full-time, four-week clerkship emphasizing comprehensive care of patients with chronic pain from benign diseases and cancer. Faculty members from multiple departments provide student with didactic and bedside experiences; student member of treatment team. Involves both inpatient and outpatient activities. Prerequisite: completion of human biology series, MED 665.

CONJ 680 P-Detoxification and Rehabilitation Program for Alcoholism and Drug Abuse (*, max. 16) *Reoux* Supervised introduction to alcoholic detoxification and rehabilitation and drug abuse. Supervised clinical experience in a variety of alcoholism and drug abuse treatment programs; accompanied by a core series of lectures and discussions.

For medical students only. Prerequisite: PBSCI 664, PBSCI 665, PBSCI 666, PBSCI 667, or PBSCI 668.

CONJ 696 P-WRITE Clinical Electives (*, max. 24) Clinical electives for WRITE program. Offered: AWSpS.

CONJ 697 International Exchange Clerkship (12) *Hunt* Participation in health care delivery systems in developing countries; observation of relationship of host country's traditional medicine with Western medicine. Students live in cross-cultural setting to better understand their own assumptions about health care and life styles. Offered: Sp.

CONJ 698 P-Foreign Medical Student Clerkship (*, max. 24) A limited number of students from foreign medical schools are accepted for individually designed clinical clerkships at available sites after all UWMC students are accommodated. Prerequisite: permission of Associate Dean for Academic Affairs, School of Medicine.

CONJ 699 P-Clinical Clerkships (*, max. 32)

Family Medicine

C408 Health Sciences

 General Catalog Web page:
www.washington.edu/students/gencat/academic/Family_Medicine.html

 Department Web page:
www.fammed.washington.edu

Family medicine is the discipline concerned with the continuing and comprehensive care of individuals and their families. The prime instructional goal of the department is the education and training of physicians who will apply the knowledge and skills of this and other medical disciplines in family practice. Implicit in this goal is the necessity for continual development of new knowledge and its application in the clinical activities of the department.

The Department of Family Medicine was founded in 1971 and is involved with instruction of medical students in several ways. These include presentations in the basic curriculum of the first two years, clinical clerkships as part of the clinical core curriculum, and other elective courses open to all medical students. A graduate residency program in family practice provides clinical training meeting the standards of the American Board of Family Practice and the Council on Graduate Medical Education of the American Medical Association. Active affiliations are maintained throughout the WWAMI region in predoctoral, residency, fellowship, and continuing medical education in clinical care, teaching, and research.

Norris, Thomas E. 1988; MD, 1973, University of Texas (Galveston); clinical applications, health policy and health workforce needs.

Rosenblatt, Roger A. * 1977; MPH, 1971, MD, 1971, Harvard University; research into the organization and delivery of health services, rural health policy.

Schneeweiss, Ronald 1977; MBChB, 1964, University of Capetown (South Africa); family medicine.

Taplin, Stephen H. 1983; MD, 1978, University of California (Davis), MPH, 1985, University of Washington; family medicine.

Walker, Edward A. 1983, (Adjunct); MD, 1983, University of Washington; consultation-liaison psychiatry, medically unexplained physical symptoms.

Associate Professors

Baldwin, Laura M. 1984; MD, 1980, University of Southern California, MPH, 1986, University of Washington; family medicine.

Church, Lili Lucille 1992; MD, 1985, University of Iowa; family medicine.

Crittenden, Robert A. 1981; MD, 1976, MPH, 1987, University of Washington; health plans/policies.

Dobie, Sharon A. 1987; MCP, 1971, University of California (Berkeley), MD, 1979, University of California (San Francisco); family medicine.

Ellsbury, Kathleen E. 1982; MD, 1977, Johns Hopkins University, MPH, 1982, University of Missouri; family medicine.

Farber, Stuart J. 1995, (Clinical); MD, 1974, University of Washington; family medicine, end of life/palliative care research/education, patient-/relationship-centered care.

Goldbaum, Gary M. * 1989, (Adjunct); MD, 1978, University of Colorado (Denver), MPH, 1989, University of Washington; preventive medicine, chronic diseases prevention, injury prevention.

Greer, H. Thomas 1977; MD, 1974, University of Mississippi, MPH, 1979, University of Washington; family medicine.

Leversee, John H. 1973, (Emeritus); MD, 1952, University of Minnesota; family medicine.

Losh, David Paul 1992; MD, 1974, University of Kansas; family medicine.

Mauksch, Larry B. 1985, (Clinical); MEd, 1982, University of Washington; physician/patient communication, underprivileged populations, mental health/primary care integration.

Neighbor, William E, Jr. 1983; MD, 1979, University of Washington; family medicine and preventive cardiology.

Oliver, Lynn M. 1988; MD, 1983, University of Washington; family medicine.

Pinsky, Linda E. 1989, (Adjunct); MD, 1989, University of Washington; general internal medicine.

Robins, Lynne S. * 1999, (Adjunct); PhD, 1990, University of Michigan; cultural competence, physician-patient communication, qualitative research assessment, ethnography.

Saver, Barry G. 1989; MA, 1978, Harvard University, MD, 1983, Columbia University, MPH, 1991, University of Washington; family medicine.

Stevens, Nancy G. * 1982; MD, 1979, MPH, 1982, University of Washington; family medicine.

Taylor, Thomas R. 1979; MBChB, 1957, PhD, 1972, University of Glasgow (UK); family medicine.

Wright, George 1997; MA, 1964, PhD, 1977, University of Michigan; health economics emphasizing primary care, physician competition, rural health.

Assistant Professors

Doescher, Mark 1996; MD, 1989, University of California (San Francisco), MSPH, 1992, University of Colorado; family medicine, medically vulnerable populations, primary care research.

Huntington, Jane 1991; MD, 1994, University of Washington; family medicine.

Kim, Sara 1995; MA, 1990, George Washington University, PhD, 1999, University of Washington; educational technology.

Lynge, Dana C. 1993, (Adjunct); MD, 1985, McGill University (Canada); general surgery.

O'Kane, John 1993, (Adjunct); MD, 1993, University of Vermont; family medicine, sports medicine, team care.

Paluska, Scott A. 2001; MD, 1995, University of Michigan; family medicine, sports medicine.

Spielberg, Freya 1992; MD, 1992, Cornell University, MPH, 1997, University of Washington; family medicine, HIV/STD prevention, behavior change.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

FAMED 499 Undergraduate Research (*) Research activities arranged with University-based or community physicians in diversified areas relating to family

medicine. Prerequisite: permission of course coordinator. Offered: AWSpS.

FAMED 501 P-Introduction to Family Medicine: Preceptorship (2.5) Students spend one morning per week for one or more quarters working with a practicing community family physician. Prerequisite: first- and second-year medical students, permission of course coordinator. Offered: AWSpS.

FAMED 505 P-Rural/Urban Preceptorship (*, max. 12) Opportunity to work in a variety of underserved medical settings in rural and urban areas of Washington, Wyoming, Alaska, Idaho, and Montana. Prerequisite: permission of course coordinator. Offered: AWSpS.

FAMED 545 Preclinical Geriatric Elective (2) Covers disease and disability prevention, health promotion, and positive attitudes that can contribute to successful aging. Emphasis on optimum aging, site visits, and extensive contact with diverse older people.

FAMED 546 Preclinical Hospice Volunteer Training Elective (3) Using lectures, small groups, role play, and readings, covers the basic knowledge, skills and attitudes that need to be mastered as a hospice volunteer. Students participate as hospice volunteers as part of their field experience. Offered: jointly with MHE 517.

FAMED 547 Spirituality in Medicine (2) Examination of the beliefs, values, meaning, and spirituality of health professionals for the well-being of their patients as well as for themselves. Offered: jointly with MHE 518.

FAMED 555 P-Wilderness Medicine (2) Elective provides didactic and field experience for third-year medical students in types of medical emergencies and clinical problems unique to rural and wilderness communities, including trauma, survival hypothermia, altitude, frostbite, heat illness, lightning, and river rescue. Prerequisite: permission of course coordinator.

FAMED 556 Spanish for Health Professionals (1) Instruction in interviewing Spanish-speaking patient. Credit/no credit only. Prerequisite: health professions student.

FAMED 560 P-Indian Health Problem-Based Learning Cases (1) For second-year medical students. Presents common Indian health problems via problem-based learning cases over two to three days per case. Offered: A.

FAMED 630 P-WRITE Family Medicine Clinical Clerkship (*, max. 24) Basic clinical clerkship for students enrolled in the WRITE Program.

FAMED 640 P-Clinical Clerkship in Family Medicine—Boise (12) Stresses ambulatory primary care with emphasis on comprehensive, integrated care to patients of both genders and all ages. Student functions as clerk in community/residency site. Participates in care of assigned patients, using office, hospital, home, community resources. Prerequisite: third- or fourth-year medical students. Offered: AWSpS.

FAMED 641 P-Clinical Clerkship in Family Medicine—Spokane (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 642 P-Clinical Clerkship in Family Medicine—Madigan (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 643 P-Clinical Clerkship in Family Medicine—Tacoma (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 644 P-Clinical Clerkship in Family Medicine—University of Washington Medical

Center (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 645 P-Clinical Clerkship in Family Medicine—Group Health (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 646 P-Clinical Clerkship in Family Medicine—Swedish (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 647 P-Clinical Clerkship in Family Medicine—Providence (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 648 P-Clinical Clerkship in Family Medicine—Renton Valley (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 649 P-Clinical Clerkship in Family Medicine—Olympia (12) For description and prerequisites, see 640. Offered: AWSpS.

FAMED 650 P-Clinical Clerkship in Family Medicine—Anacortes (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 651 P-Clinical Clerkship in Family Medicine—Omak (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 652 P-Clinical Clerkship in Family Medicine—Spokane Valley (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 653 P-Clinical Clerkship in Family Medicine—Anchorage (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 655 P-Clinical Clerkship in Family Medicine—Havre (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 656 P-Clinical Clerkship in Family Medicine—Whitefish (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 657 P-Clinical Clerkship in Family Medicine—Pocatello (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 658 P-Clinical Clerkship in Family Medicine—Sea Mar Clinic (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 659 P-Clinical Clerkship in Family Medicine—Country Doctor (12) For description and prerequisite, see 640. Offered: AWSpS.

FAMED 660 P-Clinical Clerkship in Family Medicine—Yakima (12) For description and prerequisites, see 640. Offered: AWSpS.

FAMED 661 P-Clinical Clerkship in Family Medicine—Bremerton (12) For description and prerequisites, see 640. Offered: AWSpS.

FAMED 670 P-Advanced Preceptorship in Underserved WWAMI Area (*, max. 24) Students gain experience, knowledge, and skills needed to care for rural, specific ethnic or underserved populations in Washington, Wyoming, Alaska, Montana, and Idaho. Prerequisite: third- or fourth-year medical students, permission of course coordinator. Offered: AWSpS.

FAMED 671 P-Advanced Preceptorship in United States (*, max. 24) Supplemental experience in rural/urban practice or a family medicine department in a setting not already established through the family medicine curriculum. Prerequisite: third- or fourth-year medical students, permission of course coordinator. Offered: AWSpS.

FAMED 672 P-Advanced Preceptorship International (*, max. 24) For medical students desiring

primary care experience abroad. Special project deals with influences of social, cultural, educational, and economic forces on health care delivery. Prerequisite: third- or fourth-year medical students, permission of course coordinator. Offered: AWSpS.

FAMED 673 P-Advanced Preceptorship at WWAMI Clinical Centers (*, max. 12) Supplemental experience in Family Medicine for late junior or senior medical students at selected WWAMI clinical centers. Prerequisite: completion of basic 6-week clerkship in Family Medicine. Offered: AWSpS.

FAMED 674 Advanced Interviewing in Primary Care (8) Emphasizes the learning of patient-centered interviewing and counseling skills necessary for effective practice of primary care medicine. Prerequisite: permission of course coordinator.

FAMED 680 P-Traditional Indian Medicine Clerkship in Primary Care Setting (*, max. 12) Students learn how western physician collaborate with traditional Indian healers in the provision of health care to an urban Indian population. Prerequisite: completion of required third-year clerkship, UCONJ 530 or permission of instructor. Offered: AWSpS.

FAMED 681 P-Indian Health Care Clerkship (*, max. 12) Individually designed learning experience allows student to choose training opportunities, including Indian IHS Clinics, Tribal 638 Health Programs, IHS Public Health Program, Urban Indian Health programs, Tribal Council Health activities, and Tribal/IHS Alcoholism Treatment programs. Prerequisite: completion of required third-year clerkships, UCONJ 530, and permission of instructor. Offered: AWSpS.

FAMED 698 P-Clinical Clerkship in Family Medicine, Away (12) For description and prerequisites, see 640. Offered: AWSpS.

FAMED 699 P-WWAMI Family Medicine Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of course coordinator. Offered: AWSpS.

Genome Sciences

K336 Health Sciences Building

General Catalog Web page:

www.washington.edu/students/gencat/academic/Genome_Sciences.html

Department Web page:

www.gs.washington.edu

The Department of Genome Sciences was created in 2001 with the merge of the Department of Genetics and the Department of Molecular Biotechnology.

Graduate Program

Graduate Program Coordinator
K336 Health Sciences, Box 357730
206-616-7297
gradprog@mbt.washington.edu

The Department of Genome Sciences offers two graduate programs leading to the degrees of Master of Science and Doctor of Philosophy, one in genetics and one in molecular biotechnology. Students are admitted only to the doctoral program and may be granted the Master of Science in lieu of or in conjunction with the Ph.D.

Genetics

In the genetics graduate program a student may choose among a wide variety of research areas, while at the same time receiving broad training in genetics. New graduate students join a research project in one of the faculty laboratories during each of the first three quarters in residence. New students thereby become acquainted with several different experimental approaches in genetics research and the projects help them choose an adviser for their thesis work at the end of the first year. In addition to graduate courses offered by the Department of Genome Sciences, students can choose among a large number of courses in related departments to broaden their perspective. Graduate students also participate in undergraduate teaching after gaining expertise in pertinent areas. A General Examination is taken during the second year to gain formal admittance to candidacy for the Ph.D. degree.

Applications for graduate work are invited from students who have emphasized biology, the physical sciences, or mathematics in their undergraduate careers. Applicants are asked to submit Graduate Record Examination scores and three letters of recommendation.

Financial Aid

The Department of Genome Sciences offers financial support to promising students who wish to work toward the doctoral degree.

Research Facilities

The department is currently housed in the H-, J-, and K-wings in the Health Sciences Complex. Students in the department are assigned in the laboratories of faculty members with whom they do their rotations or dissertation research. State-of-the-art research facilities are available in the department for cellular, protein, and DNA analysis. Extensive computer and library resources are also available to students.

Molecular Biotechnology

The graduate program in molecular biotechnology was created with the conviction that the future of biology and medicine lies in the ability to apply a multidisciplinary approach to the analysis of complex systems. The cellular interactions in the immunologic and neural networks regulate some of the most complex behaviors and responses of living organisms. The 100,000 genes that dictate the complex system of human development constitute another example. The organization of these genes on the chromosome, their sequence polymorphism, transcriptional control, and evolutionary relationships must be analyzed to understand fully the intricacies of development. Progress in understanding these systems is directly correlated to the sophistication of the available research tools. The program is committed to training students to focus on the development and/or the application of powerful new tools to leading-edge problems in biology and medicine. The nature of the tools will change in response to the challenges posed by contemporary biology.

The graduate program in molecular biotechnology trains students to bring the knowledge and recent advances in a variety of disciplines—e.g., physics, chemistry, engineering, and computer sciences—to bear on the complex problems of modern biology and medicine. The program emphasizes extensive research experience within an interdisciplinary and state-of-the-art research environment.

The program has a broad, interdisciplinary nature. Therefore, each student's educational objectives will differ. Students are guided by their Dissertation Supervisory Committee to obtain knowledge of selected topics in four areas, as well as a thorough knowledge of topics related to their chosen area of

research. The four areas are (1) molecular/cell biology and genetics, (2) chemistry, (3) physics and instrumentation, and (4) applied mathematics or computer science. This requirement can be met through a combination of molecular biotechnology courses, additional elective courses, and reading assignments tailored to the student's background and specific interests.

Doctor of Philosophy

The molecular biotechnology graduate program is designed to educate and stimulate students at the interface of biological, physical, and computational sciences. Students are trained to focus on the development and/or application of new tools to challenging biological problems. These tools include the development of new chemistries, instruments, and computer hardware or software for the analysis of DNA, proteins, or cells. The goal of the program is to provide students with a sound background in molecular and cellular biology, and a broad access to research expertise in disciplines outside biology. Accordingly, the faculty brings together skills in applied mathematics, biology, chemistry, computer sciences, physics, and instrument design. Particular areas of expertise include immunology, protein chemistry, nucleic-acid chemistry, analytical cytogenetics, large-scale DNA mapping and sequencing (genomics), and computational biology.

Research Facilities

The department is currently housed in the H-, J-, and K-wings in the Health Sciences Complex. Students in the department are assigned space in the laboratories of faculty members with whom they do their rotations or dissertation research. State-of-the-art research facilities are available in the department for cellular, protein, and DNA analysis. Extensive computer and library resources are also available to students.

Admission Requirements

Admission to the Graduate School requires that a prospective student hold a baccalaureate degree from an accredited college or university in the United States or its equivalent in a foreign country. Students are required to have a cumulative GPA of 3.00 ("B") or better, and to have taken and received high scores on the Graduate Record Examination (generally in the 80th percentile or higher).

In addition to completing the application requirements for the Graduate School, an applicant should also forward the following items to Graduate Student Services, Department of Genome Sciences, Box 357730, University of Washington, Seattle, WA 98195-7730: (1) the admissions form, available through the department Web site or through the program office; (2) a copy of the Graduate School Application; (3) official school transcripts; (4) official copies of Graduate Record Examination scores for the general test, as well as the results of an advanced-subject test; (5) a statement of objective; (6) a curriculum vitae, if available; (7) TOEFL scores, if applicable; and (8) three letters of recommendation with evaluation forms, available from the MBT Web site or through the program office. Students are admitted for autumn quarter only. The application deadline is January 15.

Faculty

Chair

Robert H. Waterson

Professors

Aebersold, Rudolf Hans * 1993, (Affiliate); MD, 1984, Yale University; protein biochemical investigation of signal transduction pathways.

Bendich, Arnold J. * 1970, (Adjunct); PhD, 1969, University of Washington; structure and replication of chromosomal DNA molecules in mitochondria, chloroplasts, and bacteria.

Byers, Breck E. * 1970; PhD, 1967, Harvard University; cell biology: mitosis and meiosis, mechanisms of nuclear division and crossing-over in yeast.

Deeb, Samir S. * 1983, (Adjunct Research); PhD, 1964, University of Illinois; genetic factors predisposing to hyperlipidemia and coronary artery disease.

Eisen, Harvey * 1986, (Affiliate); PhD, 1967, University of Toronto (Canada); host-parasite interactions, generation of genetic diversity.

Fangman, Walton L. * 1967, (Emeritus); PhD, 1965, Purdue University; molecular genetics: control of replication of yeast chromosomes, plasmid and mitochondrial DNA.

Felsenstein, Joseph * 1968; PhD, 1968, University of Chicago; estimation of evolutionary trees, models of long-term evolutionary processes.

Fields, Stanley * 1995; MA, 1978, PhD, 1981, Cambridge University (UK); yeast molecular biology and genetics.

Furlong, Clement E. * 1977; PhD, 1968, University of California (Davis); human biochemical genetics in biochemistry of membrane transport systems.

Gallant, Jonathan A. * 1961; PhD, 1961, Johns Hopkins University; molecular genetics, control mechanisms in bacteria, accuracy of translation.

Gartler, Stanley M. * 1957, (Emeritus); PhD, 1952, University of California (Berkeley); mammalian somatic cell genetics with emphasis on the mechanism of x-chromosome inactivation.

Gottschling, Daniel E. * 1996, (Affiliate); PhD, 1984, University of Colorado; dissection of telomere attributes and understanding telomerase in *S. Cerevisiae*.

Green, Philip * 1994; PhD, 1976, University of California (Berkeley); mathematical and computer methods for genome analysis.

Hall, Benjamin D. * 1963; MA, 1956, PhD, 1959, Harvard University; the evolution of nuclear genes in plants and fungi.

Hartwell, Leland H. * 1968; PhD, 1964, Massachusetts Institute of Technology; genetic analysis of chromosome transmission and of the control of division by hormones in yeast.

Hawthorne, Donald C. * 1980, (Emeritus); PhD, 1955, University of Washington; yeast genetics, chromosome mapping, suppressors.

Hood, Leroy E. * 1992, (Affiliate); PhD, 1968, California Institute of Technology; molecular immunology, large-scale DNA mapping and sequencing, molecular evolution.

King, Mary-Claire * 1995, (Adjunct); PhD, 1973, University of California (Berkeley); genetic analysis of complex human phenotypes, human diversity and evolution.

King, Mary-Claire * 1995; PhD, 1973, University of California (Berkeley); genetic analysis of complex human phenotypes, human diversity and evolution.

Laird, Charles D. * 1971, (Adjunct); PhD, 1966, Stanford University; cell and developmental biology, human genetics.

Manoil, Colin C. * 1986; PhD, 1979, Stanford University; molecular genetics, protein localization in bacteria.

Martin, George * 1957, (Adjunct); MD, 1953, University of Washington; somatic cell genetics, pathobiology of aging, neurodegenerative disorders.

Motulsky, Arno G. * 1953, (Emeritus); MD, 1947, University of Illinois; medical genetics.

Olson, Maynard V. 1992; PhD, 1970, Stanford University; methods and applications of large-scale DNA analysis.

Reid, Brian J. * 1983, (Adjunct); PhD, 1975, MD, 1980, University of Washington; genetic and cell cycle abnormalities in neoplastic progression in Barrett's esophagus.

Schubiger, Gerold A. * 1972, (Adjunct); PhD, 1968, University of Zurich (Switzerland); developmental biology of insects, embryonic determination in *Drosophila*.

Sibley, Carol Hopkins * 1976; PhD, 1974, University of California (San Francisco); molecular parasitology and drug resistance.

Smith, Gerald R. * 1983, (Affiliate); PhD, 1970, Massachusetts Institute of Technology; molecular biology of genetic recombination and regulation of gene expression.

Stadler, David R. *, (Emeritus); PhD, 1952, Princeton University.

Stamatoyannopoulos, George 1964; MD, 1958, DrMedS, 1960, University of Athens (Greece); medical genetics.

Thomas, James H. * 1988; PhD, 1985, Massachusetts Institute of Technology; genetics of development and the nervous system in nematodes.

Thompson, Elizabeth A. * 1985, (Adjunct); PhD, 1974, Cambridge University (UK); statistical analysis of human genetic data, population genetics, conservation and computational biology.

Trask, Barbara J. * 1992; PhD, 1985, University of Leiden (Netherlands); in situ hybridization, analytical cytogenetics, analysis of large-scale DNA polymorphism.

Wakimoto, Barbara T. * 1984, (Adjunct); PhD, 1981, Indiana University; developmental genetics, gene expression and chromosome organization in eukaryotes.

Young, Elton * 1969, (Adjunct); PhD, 1967, California Institute of Technology; regulation of gene activity in the yeast *Saccharomyces cerevisiae*.

Associate Professors

Berg, Celeste A. * 1990; PhD, 1986, Yale University; *Drosophila* developmental genetics: Cell communication and cell migration during oogenesis.

Braun, Robert Elmer * 1986; PhD, 1985, Tufts University; mammalian genetics, germ cell development and reproduction.

Goverman, Joan M. * 1992, (Adjunct); PhD, 1981, University of California (Los Angeles); immune recognition and tolerance, autoimmunity, T cell development, activation, antibody diversity.

Kruglyak, Leonid * 1998, (Affiliate); PhD, 1990, University of California (Berkeley); population genetics, statistical genetics, genomics, computational biology.

Monnat, Raymond J, Jr. * 1982, (Adjunct); MD, 1976, University of Chicago; somatic mutation, somatic cell molecular genetics, human genetic disease.

Nickerson, Deborah A. * 1992; PhD, 1978, University of Tennessee; automating the analysis of single nucleotide polymorphisms, human genetics, DNA diagnostics.

Ostrander, Elaine A. * 1994, (Affiliate); PhD, 1987, Oregon Health Sciences University; genetic mapping of simple and complex traits.

Ruohola-Baker, Hannele * 1993, (Adjunct); PhD, 1989, Helsinki University (Finland); oogenesis, developmental genetics.

Wright, Robin L. * 1990, (Adjunct); PhD, 1985, Carnegie Mellon University; membrane dynamics and regulation of sterol biosynthesis in yeast.

Yates, John R., II * 1992, (Affiliate); PhD, 1987, University of Virginia; biological mass spectrometry, protein sequencing, computational methods for data analysis.

Assistant Professors

Nelson, Peter S. * 1993, (Adjunct); MD, 1986, University of Kansas; the study of human carcinogenesis using tools of genomics and bioinformatics.

Pallanck, Leo J. * 1997; PhD, 1992, Albert Einstein College of Medicine; genetic and molecular analysis of symptomatic transmission in *Drosophila melanogaster*.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crsctat/.

Genetics

GENET 411 Gene Action (5) NW Molecular genetics: description of fundamental genetics processes such as mutation, repair, genetic exchange, recombination, and gene expression. Use of genetic strategies to analyze complex biological processes. Focus is on prokaryotic organisms. Prerequisite: BIOL 201; either CHEM 223, CHEM 237, or CHEM 335. Offered: jointly with MICROM 411; W.

GENET 453 Genetics of the Evolutionary Process (3) NW Contributions of genetics to the understanding of evolution. Processes of mutation, selection, and random genetic events as they affect the genetic architecture of natural populations and the process of speciation. Emphasis on experimental data and observation, rather than mathematical theory. Prerequisite: either GENET 371 or GENET 372.

GENET 454 The Origins of Genetics (4) NW Discovery and eventual triumph of Mendelism in the early twentieth century. Concepts of heredity from ancient times to the nineteenth century. Mendel's work and its rediscovery. Evidence contributing to cornerstone of classical genetics—the chromosome theory of heredity. Prerequisite: either GENET 351, GENET 371, or GENET 372. Offered: A.

GENET 465 Advanced Human Genetics (4) NW *King, Olson* Explores genetic analysis of naturally occurring variation in humans; origins and conse-

quences of mutation, as mediated by selection, migration, population structure and drift; approaches to finding human disease genes and characterizing them at the molecular level; relevance of to other species to analysis of human genes. Prerequisite: GENET 371; either GENET 372 or BIOC 440. Offered: W.

GENET 466 Cancer Genetics (3) NW Focuses on three types of cancer-related genetics. DNA repair, mitotic recombination, chromosome loss and imbalance, and other aspects of genomic instability. Metastatic cancer as an example of natural selection and evolution. Yeast and nematodes as models for the study of cancer genetics. Prerequisite: either GENET 371 or GENET 372. Offered: Sp.

GENET 490 Undergraduate Seminar (2, max. 6) NW Seminar for advanced undergraduate students engaged in individual research projects or those who wish to gain an understanding of genetic research by analysis of the primary literature. Assignments emphasize the rationale for research projects and the presentation and interpretation of research findings. Offered: AWSpS.

GENET 499 Undergraduate Research (*, max. 30) Credit/no credit only. Offered: AWSpS.

GENET 501 Introduction to Research Materials (3, max. 9) The student undertakes a research project in one of the research groups within the department for a quarter at a time. Credit/no credit only. Prerequisite: graduate standing in the Department of Genetics or permission of graduate program coordinator. Offered: AWSpS.

GENET 520 Seminar (1, max. 15) Credit/no credit only. Prerequisite: graduate standing in the Department of Genetics or permission of graduate program coordinator. Offered: AWSp.

GENET 525 Current Literature in Human Genetics (1) Topics from current literature in human genetics. Students and faculty each present one topic per quarter. Credit/no credit only. Prerequisite: graduate or postdoctoral status. Offered: AWSp.

GENET 531 Human Genetics (3) Modern approaches to the identification of human disease genes permitted by their isolation. Functional conservation of proteins throughout eukaryotic evolution as an approach to their function in model systems such as somatic cell culture, transgenic mice, nematodes, *Drosophila*, and yeast. Prerequisite: second-year graduate student. Offered: alternate years.

GENET 540 Introduction to Computational Molecular Biology: Genome and Protein Sequence Analysis (3) Algorithmic and probabilistic methods for analysis of DNA and protein analysis. Students must be able to write computer programs for data analysis. Prior coursework in biology and probability highly desirable. Prerequisite: permission of instructor. Offered: jointly with MBT 540; W.

GENET 541 Introduction to Computational Molecular Biology: Molecular Evolution (3) Computational methods for studying molecular evolution. Students must be able to write computer programs for data analysis. Prior coursework in biology and probability highly desirable. Prerequisite: MBT/GENET 540 or permission of instructor. Offered: jointly with MBT 541; Sp.

GENET 550 Methods and Logic in Genetics (3) Critical reading and detailed discussion of genetics-related scientific research papers. Material emphasizes methodological and logical themes of importance in modern genetics, for example: origin of mutants, genetic epistasis, pulse labelling, and in vivo gene function. Prerequisite: first-year genetics graduate students only. Offered: A.

GENET 551 Basics of Genetic Analysis (3) First course in a three-quarter sequence in formal, molecular, and microbial genetics. Offered: A.

GENET 552 Nature and Consequences of Mutation (3) Origin of mutations and their analysis in human and other genomes. Prerequisite: GENET 551 or permission of instructor. Offered: W.

GENET 553 Chromosome Structure and Mechanics (3) Chromosome structure and DNA replication; molecular basis of recombination and transposition. Prerequisite: GENET 552 or permission of instructor. Offered: Sp.

GENET 562 Population Genetics (4) *Felsenstein* Mathematical and experimental approaches to the genetics of natural populations, especially as they relate to evolution. Emphasis on theoretical population genetics. Prerequisite: permission of instructor. Offered: Sp.

GENET 570 Phylogenetic Inference (3) *Felsenstein* Methods for inferring phylogenies (evolutionary trees)—biological assumptions, statistical foundations, and computational methods. A comprehensive introduction for graduate students in the biological sciences to phylogenetic methods using data from molecular sequences, continuous and discrete characters, and gene frequencies. Prerequisite: introductory courses in evolution and in statistics. Offered: alternate years; Sp.

GENET 572 Population Biology I: Evolution and Systematics (3) Rigorous overview of historical foundations and current perspectives in the fields of evolutionary biology and systematics. Offered: jointly with BOTANY 560/ZOOL 560.

GENET 573 Population Biology II: Ecology and Conservation Biology (3) Rigorous overview of historical foundations and current perspectives in the fields of ecology, population biology, and conservation biology. Offered: jointly with BOTANY 561/ZOOL 561.

GENET 581 Seminar in *Drosophila* Genetics (1) *Berg* Discussions of contemporary research in and novel methods for genetic, cell biological, and molecular biological analysis of *Drosophila* development. Credit/no credit only. Offered: AWSp.

GENET 582 Seminar in Mouse Genetics (1) *Braun* Discussion of contemporary research in and novel methods for genetic, cell biological, and molecular analysis of mammalian development, with utilization of transgenic techniques. Credit/no credit only. Offered: AWSp.

GENET 583 Seminar in Molecular Cytology (1) *Byers* Discussions of contemporary research in and novel methods for genetic, cell biological, and molecular biological analysis of spindle behavior in the mitotic cell cycle of budding yeast. Credit/no credit only. Offered: AWSp.

GENET 584 Seminar in DNA Replication (1) *Brewer, Fangman* Discussions of contemporary research in and novel methods for genetic, cell biological, and molecular biological analysis of budding yeast, with emphasis on the mechanisms and control of DNA replication. Credit/no credit only. Offered: AWSp.

GENET 585 Seminar in Bacterial Genetics (1) *Manoil* Discussions of contemporary research in and novel methods for genetic, cell biological, and molecular biological analysis of bacterial assembly mechanisms, with emphasis on the topogenesis of membrane proteins. Credit/no credit only. Offered: AWSp.

GENET 586 Seminar in Mammalian Genetics (1) *Sibley* Discussions of contemporary research in and novel methods for genetic, cell biological, and molecular biological analysis of mammalian genetics, with

emphasis on lymphoblast development. Credit/no credit only. Offered: AWSp.

GENET 587 Seminar in Nematode Genetics (1) *Thomas* Discussions of contemporary research in and novel methods for genetic, cell biological, and molecular biological analysis of nematode development, with emphasis on neurogenesis and other developmental processes. Credit/no credit only. Offered: AWSp.

GENET 590 Population Genetics Seminar (1) *Felsenstein* Weekly presentation by participants of current literature and ongoing research in evolution, molecular evolution, evolutionary genetics of natural populations, human population genetics, and quantitative genetics applied to animal and plant breeding. Credit/no credit only. Prerequisite: GENET 562 or permission of instructor.

GENET 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

GENET 700 Master's Thesis (*) Offered: AWSpS.

GENET 800 Doctoral Dissertation (*) Offered: AWSpS.

Molecular Biotechnology

MBT 450 Introduction to Molecular Biotechnology (2) Highlights of the current research interests of Molecular Biotechnology faculty. Topics cover the interface between biology and technology for DNA and protein analysis. Credit/no credit only. Offered: A.

MBT 499 Undergraduate Research (1-5, max. 12) Individual research projects in Molecular Biotechnology related to: human genetics, cytogenetics, large-scale sequencing and mapping, protein structure and function, and computational analysis of protein and DNA sequences. Offered: AWSpS.

MBT 501 Introduction to Research (1-9, max. 15) Laboratory rotations for first-year graduate students. Research projects in faculty labs covering various laboratory methods. Prerequisite: graduate student in MBT. Offered: AWSpS.

MBT 510 Technologies for Genome Analysis (3) Discussion of current and newly-emerging technologies in genome analysis with regard to applications in biology and medicine and to potential advantages and limitations. Prerequisite: permission of instructor. Offered: A.

MBT 520 Technologies for Protein Analysis (3) Discussion of current and newly-emerging technologies in protein analysis with regard to applications in biology and medicine and to potential advantages and limitations. Prerequisite: permission of instructor. Offered: W.

MBT 530 Advanced Instrumentation for Genome Analysis (3) Presentation of principles and use of instruments for genome analysis. Discussion of limitations of present instruments and potential improvements. Theory of electrophoretic and fluorescence-based DNA analysis techniques. Prerequisite: permission of instructor. Offered: Sp.

MBT 540 Introduction to Computational Molecular Biology: Genome and Protein Sequence Analysis (3) Algorithmic and probabilistic methods for analysis of DNA and protein analysis. Students must be able to write computer programs for data analysis. Prior coursework in biology and probability highly desirable. Prerequisite: permission of instructor. Offered: jointly with GENET 540; W.

MBT 541 Introduction to Computational Molecular Biology: Molecular Evolution (3) Computational methods for studying molecular evolution. Students must be able to write computer programs for data

analysis. Prior coursework in biology and probability highly desirable. Prerequisite: MBT/GENET 540 or permission of instructor. Offered: jointly with GENET 541; Sp.

MBT 550 Seminar in Molecular Biotechnology (1, max. 12) Presentation of independent research by invited outside speakers and members of the Department of Molecular Biotechnology. Emphasis on new and original contributions to the field of molecular biotechnology. Credit/no credit only. Offered: AWSp.

MBT 551 Seminars in Computational Biology (1) Presentation and discussion of current topics in computational biology by guest speakers. Prerequisite: permission of instructor. Offered: AWSp.

MBT 560 Molecular Biotechnology Literature Conference (1, max. 12) A weekly presentation and discussion by faculty, postdoctorates, and graduate students on state-of-the-art research in molecular biotechnology. Journal Club sessions, during which results gleaned from current literature are discussed and critically analyzed, alternating with Research in Progress sessions, during which students and postdoctorates presents their own research work. Prerequisite: permission of instructor. Credit/no credit only. Offered: AWSp.

MBT 561 Research Discussions (1) Oral and written presentations of research objectives, techniques, results and perspectives obtained through laboratory rotations and independent research. Emphasis is placed on improving oral presentation skills. Prerequisite: graduate student standing, permission of Graduate Program Director. Offered: AWSp.

MBT 599 Special Topics in Molecular Biotechnology (*, max. 12) Prerequisite: permission of instructor. Offered: AWSp.

MBT 600 Independent Study or Research (*) Credit/no credit only.

MBT 700 Master's Thesis (*) Credit/no credit only.

MBT 800 Doctoral Dissertation (*) Credit/no credit only.

Human Biology

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

HUBIO 500 P-Medical Practice Preceptorship at WWAMI Sites (1, max. 3) Personal experience with, and insight into, medical practice situations. Student is stationed with carefully selected clinical faculty members in their offices in accordance with the student's preference of discipline at the WWAMI sites. Registration limited to first-year medical students at WWAMI sites. Offered: AWSpS.

HUBIO 501 P-Human Biology Special Projects (*) *Hunt, MacLaren* Designed for medical students electing a special study project related to the Introduction to Clinical Medicine or other human biology courses, which are offered during the first and second years in the School of Medicine. Primarily intended for students in remedial or extended programs. Prerequisite: permission of assistant dean for curriculum. Offered: AWSpS.

HUBIO 505 P-WWAMI Preceptorship (1) Opportunity for first-year medical students at WWAMI sites to gain personal experience with medical practice situations by being assigned to selected clinical faculty members in their offices. Offered: ASP.

HUBIO 510 P-Microscopic Anatomy: Histology (3) *Farr* Lectures and laboratories in microscopic anatomy designed to provide the principles and concepts of histology, to define the morphological characteristics of the cells, tissues, and organs of the human body, and to relate this information to functional processes studied in concurrent and subsequent courses. Offered: A.

HUBIO 511 P-Gross Anatomy and Embryology (7) *Clark* Structural organization of human body at the macroscopic level to provide a foundation for physical examination and functional assessment of the human organism. Integrates embryological development with study of the cadaver and examination of the normal living body. Concentrates on exploration of the body cavities and the viscera they contain. Offered: A.

HUBIO 512 P-Mechanisms in Cell Physiology (5) *Crill* Physiology of the cell membrane, including ionic and electrical potential gradients; active transport, excitability, and action potentials; biophysics of sensory receptors; neuromuscular transmission; muscle energetics and contractility; spinal reflexes and central synaptic transmission; autonomic nervous system; energy metabolism and temperature regulation; epithelial transport; gastrointestinal motility and secretions. Offered: A.

HUBIO 513- P-Introduction to Clinical Medicine (1-) *Goldstein* Instruction in communication skills and interview techniques to form the basis for the doctor-patient relationship and for the skills of communicating with patients. The patient profile is obtained. Attention to developing comfort in the physician role. Offered: A.

HUBIO 514- P-Biochemistry I-A (4-) *Maizels* Classical molecular and cellular biochemistry, cellular physiology and molecular genetics. Metabolic interrelationships as they occur in the individual stressed and related to disturbances in disease states. Offered: A.

HUBIO 516- P-Systems of Human Behavior I-A (3-) *Walker* Effects of behavioral factors in major management problems faced in medical practice relating to cultural background, social role, sexual identity, and belief systems. Acquisition of skills in analyzing behavior, defining objectives, and designing precise treatment strategies. Offered: A.

HUBIO 520 P-Cell and Tissue Response to Injury (6) *Norwood* Patterns of cell and tissue response to injury. Mechanisms of cell injury, the inflammatory process, immunology, immunopathology, thrombosis, normal and abnormal growth, neoplasia, clinicopathological correlation. Offered: W.

HUBIO 521- P-Microbiology and Infectious Disease I-A (4-) *Moseley* Pathogenesis and immunity of infectious diseases, natural barriers. Microbiology, epidemiology, clinical manifestations and control of representative bacterial, fungal, parasitic, and viral infectious diseases. Chemotherapeutics and principles of chemotherapy. Sterilization, principles of asepsis, nosocomial and iatrogenic infections and their prevention. Offered: W.

HUBIO -522- P-Introduction to Clinical Medicine (-2-) *Goldstein* Medical history is introduced and instruction in data collection is begun. Experience in conducting medical interviews with patients to obtain the medical history and patient profile. Special problems related to interviewing are addressed. Offered: W.

HUBIO 523 P-Introduction to Immunology (2) *Wilson* Basic concepts such as antigens; antibodies; complement; B- and T-lymphocyte function, including interactions with each other and with accessory cells; immunological tolerance; major histocompatibility complex; and role of these basic concepts in immunopathology (immunodeficiencies, hypersensitivities, autoimmunity, blood transfusion, and transplantation). Offered: W.

HUBIO -524 P-Biochemistry I-B (-3) *Maizels* Classical molecular and cellular biochemistry, cellular physiology and molecular genetics. Metabolic interrelationships as they occur in the individual stressed and related to disturbances in disease states. Offered: W.

HUBIO -526 P-Systems of Human Behavior I-B (-1) *Walker* Effects of behavioral factors in major management problems faced in medical practice relating to cultural background, social role, sexual identity, and belief systems. Acquisition of skills in analyzing behavior, defining objectives, and designing precise treatment strategies. Offered: W.

HUBIO 530 P-Epidemiology (2) *Wald* Community health and disease, including assessment of disease risk and mechanisms of epidemic detection, spread, and control; interpretation of research design, data analysis, bias source; and clinical epidemiology, including evaluation and application of diagnostic tests, natural history of disease, and quantitative aids for clinical decision making. Offered: W.

HUBIO 531 P-Head, Neck, Ear, Nose, and Throat (5) *Graney* Gross anatomy (including skull, pharynx, and larynx), audition and balance, physiology and clinical evaluation, maxillofacial disorders, diseases of nasal passages, nasopharynx and oropharynx, accessory sinuses. Physical examination. Offered: Sp.

HUBIO 532 P-Nervous System (6) *Dacey* Integrated approach to normal structure and function of the nervous system, including the eye. Neuropathological examples, as well as clinical manifestations of neurological disease are presented. Offered: Sp.

HUBIO -534 P-Microbiology and Infectious Disease I-B (-2) *Moseley* Pathogenesis and immunity of infectious diseases, natural barriers. Microbiology, epidemiology, clinical manifestations and control of representative bacterial, fungal, parasitic, and viral infectious diseases. Chemotherapeutics and principles of chemotherapy. Sterilization, principles of asepsis, nosocomial and iatrogenic infections and their prevention. Offered: Sp.

HUBIO -535 P-Introduction to Clinical Medicine (-4) *Goldstein* Adult screening physical examination is taught through the use of lecture, audiovisual aids, and small-group tutorial, where students in supervised setting practice the physical examination on one other. Further practice in the performance and recording of the patient profile and medical history. Offered: Sp.

HUBIO 540 P-Cardiovascular System (5.5) *Feigl* Interdisciplinary approach to cardiovascular medicine, including anatomy, physiology, radiology, pathology, medicine, and surgery. Function of the cardiovascular system in health and disease. Offered: A.

HUBIO 541 P-Respiratory System (4) *Culver* Interdisciplinary approach to the respiratory system, including anatomy of thorax and lungs, ventilation mechanics, blood-gas transport, gas exchange, acid-base balance, and the physiology and pathology of obstructive, restrictive, and pulmonary-vascular diseases. Offered: A.

HUBIO 542- P-Introduction to Clinical Medicine (2.5-) *Goldstein* Advanced instruction in interview

technique, history taking, and physical examination, with emphasis on detection of abnormalities. Offered: A.

HUBIO 543 P-Principles of Pharmacology I (4) *Vincenzi* Includes general principles of pharmacology and the specific pharmacology of major drugs acting on the autonomic and cardiovascular systems. Offered: A.

HUBIO 544 P-Endocrine System (2.5) *Weigle* Normal, gross, and microscopic anatomy and physiology of the endocrine system. Illustrations examining the clinical relevance of homeostasis, feedback, and other controlling mechanisms previously learned. Endocrine integration of metabolism. Clinically important endocrine pathophysiology. Offered: A.

HUBIO 546 P-Systemic Pathology (2) *Schmidt* Multidisciplinary approach to some diseases that affect more than one organ system (nervous, cardiovascular, respiratory) and that are caused by different mechanisms (congenital, inflammatory, vascular, traumatic, metabolic, neoplastic). Offered: Sp.

HUBIO -550- P-Introduction to Clinical Medicine (-3.5-) *Goldstein* Advanced instruction in interview technique, history taking, and physical examination, with emphasis on identification of problems and correlation of findings with pathophysiological mechanisms. Offered: W.

HUBIO 551 P-Gastro-Intestinal System (4) *Saunders* Anatomy of the gastrointestinal system; physiology and pathology of digestion and hepatic function; and physical and laboratory examination. Offered: W.

HUBIO 552 P-Hematology (3) *Gernsheimer* Familiarizes students with the basic pathophysiological mechanisms leading to disturbances of red cell, white cell, and platelet production, as well as abnormalities of hemostasis presenting clinical problems. Pathophysiology, rather than minute details of individual disease, is stressed. Offered: W.

HUBIO 553 P-Musculoskeletal System (4.5) *Teitz* Gross, surface, applied, and radiographic anatomy. Clinical manifestations in the musculoskeletal system and pathophysiology of trauma, aging, infection, and inflammation, as well as congenital and metabolic disorders. Dissections, physical examinations, and problem based learning. Offered: W.

HUBIO 554 P-Genetics (2.5) *Horwitz* Review of basic genetic principles and their applications in clinical medicine. Includes human chromosomal disorders; patterns of inheritance, genetic counseling, amniocentesis; pathogenesis of hereditary diseases, monogenic and multifactorial; role of genetics in common diseases; behavioral genetics; drug-gene interactions; and prevention and treatment of genetic diseases, including prenatal diagnosis and population screening. Offered: A.

HUBIO 555 P-Medicine, Health, and Society (3) *Lafferty* Interdisciplinary introduction to health services designed for future health care practitioners. Examines the history, organization, and effectiveness of the U.S. health care system. Stresses the student's ability to adopt a broad perspective across health care disciplines and traditional boundaries. Offered: W.

HUBIO -560 P-Introduction to Clinical Medicine (-5) *Goldstein* Introduction to clinical and laboratory diagnosis. Offered: Sp.

HUBIO 562 P-Urinary System (4) *Ryan* Anatomy, physiology, and pathology of the kidney, ureter, bladder, and prostate; pathophysiology and treatment of common fluid and electrolyte problems; renal pharmacology; major clinical urinary system syndromes,

with current diagnostic approaches and therapy. Offered: Sp.

HUBIO 563 P-Systems of Human Behavior II (3) *Pascualy* Major psychiatric disorders are defined and described, and a systematic approach to differential diagnosis is presented. Conceptual development, pathogenesis, epidemiology, nomenclature, and the terminology used in psychiatry are discussed. Offered: Sp.

HUBIO 564 P-Principles of Pharmacology II (3) *Chavkin* Lectures and conferences on drugs that act on the central nervous system. Emphasis on physiological and biochemical mechanisms, with consideration of therapeutic and adverse effects. Offered: Sp.

HUBIO 565 P-Reproduction (3.5) *Steiner* Normal development of the human reproductive system. Sexual differentiation, puberty, endocrine control of testicular and ovarian function, gamete biology, fertilization, implantation, immunology and endocrinology of pregnancy, labor and delivery, pathology of the male and female reproductive organs, contraception, prolactin and lactation, aging and infertility. Offered: Sp.

HUBIO 567 P-Skin System (2) *Colven* Gross and microscopic anatomy. Physiology, protection, temperature control, pigmentation, and photosensitivity. Pathology and genetics of skin abnormalities, including tumors. Introduction to clinical evaluation, including physical examination and illustrating examples of inflammatory, vascular, immunological (including drug hypersensitivity), and neoplastic diseases. Offered: A.

HUBIO 568 P-Nutrition for Physicians (1) *Lipkin* Principles and practice of clinical nutrition, including role of nutrients in normal growth and development, pathogenesis of chronic disease, and nutrition in the management of certain disease states. Offered: Sp.

HUBIO 590 P-Introduction to Critical Reading and Evaluation of the Medical Literature (1) *Wolf* An introduction to methods for identifying and retrieving Web-based high quality, relevant evidence, and to methods for describing and applying rigorous criteria when reading primary research studies or reviews of primary studies that report on the effectiveness of therapeutic or preventive interventions. Prerequisite: first-year medical student standing. Offered: W.

HUBIO 598 P-WWAMI Non-Clinical Selectives (*) Courses offered at WWAMI university sites designed to satisfy the non-clinical selective graduation requirement for medical students. Offered: AWSp.

HUBIO 599 P-Independent Study in Medical Science (6) *Marshall* Independent research with faculty sponsor and completion of paper as partial fulfillment of non-clinical selective graduation requirement. Offered: Sp.

Immunology

H564 Health Sciences

General Catalog Web page:
www.washington.edu/students/gencat/academic/immunology.html

Department Web page:
www.immunol.washington.edu

For those contemplating careers in biomedical research, immunology provides challenging and exciting intellectual opportunities. Progress in the discipline in the past decade has been extraordinary, a fact that is nowhere more visible than at the University of Washington. The Department of Immunology, launched in 1989, now boasts more than 200 scien-

tists, students, and technicians, all engaged in elucidating mechanisms underlying immune recognition and responsiveness. Current members of the department have distinguished records in the area of lymphocyte signaling, T and B cell development, macrophage function, antigen processing, immunotolerance, and the structure of antigen receptors.

Consider for a moment the fundamental processes that underlie immune function. First, millions of potentially injurious macromolecules must somehow be recognized. Second, recognition of these macromolecules, generally structures associated with potential pathogens, must trigger powerful effector mechanisms that permit elimination of the offending microorganisms. Finally, these recognition and effector systems must somehow distinguish the universe of potentially harmful molecules from an equally diverse repertoire of structurally similar 'self' components. How is such exquisitely specific molecular recognition achieved? How do the cells responsible for mediating host defense develop, and what signaling systems direct their responses? These questions can now be productively addressed using biochemical, genetic, and cell biological techniques.

Graduate Program Coordinator
H564 Health Sciences, Box 357650
206-685-3955, fax 206-543-1013

The Department of Immunology continues to grow and includes more than 25,000 square feet of laboratory space housed on three floors of the H and I wings of the Health Sciences Center. Joint faculty members (those holding primary appointments in other departments) have laboratory facilities in adjacent buildings. Individual laboratories are well equipped for modern biomedical research, and there are central departmental facilities for fluorescence-activated cell sorting, confocal microscopy, and the production of transgenic animals. Students have access to all the instruments and to state-of-the-art microcomputer-based data manipulation. The departmental library maintains recent copies of all major immunology journals and many more are available online or in the nearby University of Washington Health Sciences Library, which is one of the premier scientific libraries in the United States, providing access to scientific literature in all relevant disciplines.

Students are admitted for autumn quarter; the application deadline is January 1 for U.S. citizens, and November 1 for international applicants. The requirements for admission are flexible; however, most successful applicants will have completed survey courses in biology, chemistry, and physics, one year of organic chemistry, and mathematics through integral calculus. Prior exposure to immunology through formal course work or laboratory research is desirable. All immunology graduate students are assured of financial support for the term of their studies.

Faculty

Chair

Christopher B. Wilson

Professors

Aderem, Alan A. * 1996, (Affiliate); PhD, 1979, University of Capetown (South Africa); signal transduction and the cytoskeleton.

Bevan, Michael J. * 1990; PhD, 1972, National Institute for Medical Research (UK); T lymphocyte development and specificity.

Clark, Edward A. * 1984; PhD, 1977, University of California (Los Angeles); lymphocyte surface molecules, lymphocyte activation and cell communication.

Elkon, Keith B. * 2001; MD, University of Witwatersrand (South Africa), MRCP, 1978, University of London; rheumatology.

Greenberg, Philip D. * 1978; MD, 1971, State University of New York (Downstate Medical Center); molecular, cellular, viral, and tumor immunology.

Lernmark, Ake * 1988, (Adjunct); MD, 1970, PhD, 1971, University of Umea; immunogenetics of organ-specific autoimmunity with emphasis on insulin-dependent diabetes.

Maizels, Nancy * 2000; PhD, 1974, Harvard University; recombination and repair in mammalian cells, especially activated B cells.

Nepom, Gerald T. * 1982, (Affiliate); PhD, 1977, MD, 1978, University of Washington; immunogenetics, immunoregulation, neuroimmunology.

Wilson, Christopher B. * 1980; MD, 1972, University of California (Los Angeles); immunology, infectious diseases.

Associate Professors

Concannon, Patrick J. * 1989, (Affiliate); PhD, 1984, University of California (Los Angeles); development of the human T cell receptor repertoire, genetics of diabetes and ataxia-telangiectasia.

Farr, Andrew G. * 1982, (Adjunct); PhD, 1975, University of Chicago; cell interactions governing lymphocyte production and function.

Fink, Pamela J. * 1990; PhD, 1981, Massachusetts Institute of Technology; T cell differentiation, tolerance induction, molecular and cellular immunology.

Foote, Jefferson * 1994, (Affiliate); PhD, 1985, University of California (Berkeley); biophysics of immune maturation, antibody engineering and immunotherapy, x-ray crystallography.

Goverman, Joan M. * 1992; PhD, 1981, University of California (Los Angeles); immune recognition and tolerance, autoimmunity, T cell development, activation, antibody diversity.

Hockenbery, David M. * 1994, (Adjunct); MD, 1982, Washington University; gastroenterology.

Rawlings, David J. * 2001; MD, 1984, University of North Carolina; immunology and rheumatology.

Rudensky, Alexander Y. * 1992; PhD, 1986, Gabrichevsky Institute for Epidemiology and Microbiology; antigen processing and presentation, T-cell recognition, T cell development.

Willerford, Dennis M. * 1996, (Adjunct); MD, 1995, Washington University; hematology.

Ziegler, Steven F. * 1988, (Affiliate); PhD, 1984, University of California (Los Angeles); genetic and molecular analysis of immune system function.

Assistant Professors

Beeson, Craig C. * 1996, (Adjunct); PhD, 1993, University of California (Irvine); the chemistry and biochemistry of the immune system, regulation of energy metabolism.

Bix, Mark * 1999; PhD, 1993, Massachusetts Institute of Technology; regulation of cytokine gene expression during effector T cell development.

Dong, Chen * 2000; PhD, 1996, University of Alabama; molecular mechanisms of immune and autoimmune responses.

Gu, Yansong * 2001, (Adjunct); PhD, 1994, Thomas Jefferson University; DNA damage signaling and repair pathways.

Kaja, Murali Krishna * 2001; PhD, 1995, Indian Institute of Technology (India); generation and maintenance of immune memory.

Lagunoff, Michael * 2001, (Adjunct); PhD, 1995, University of Chicago; molecular virology of Kaposi's sarcoma-associated herpesvirus.

Nelson, Bradley H. * 1997, (Affiliate); PhD, 1991, University of California (Berkeley); molecular regulation of T lymphocyte proliferation by the interleukin-2 receptor.

Scharenberg, Andrew M. 2000, (Adjunct); MD, 1990, University of North Carolina; immunology.

Strong, Roland K. * 1994, (Affiliate); PhD, 1990, Harvard University; structural immunology: analysis of the functions of proteins mediating immune responses.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crsctat/.

IMMUN 441 Introduction to Immunology (4) NW

General properties of immune responses; cells and tissues of immune system; lymphocyte activation and specificity; effector mechanisms; immunity to microbes; immunodeficiency and AIDS; autoimmune diseases; transplantation. Prerequisite: BIOL 202; may not be repeated; recommended: GENET 371, GENET 372, BIOC 405, or BIOC 440. Offered: jointly with MICROM 441; A.

IMMUN 447 Immunity, Disease, and Society (2)

Clark Impact and controversies associated with breakthroughs in immunology and infectious diseases. Topics include vaccines, complementary medicine (herbal boosts of the immune system), the mind and the immune system, allergies (asthma), cancer immuno-therapy, genetic screening and autoimmune disease and natural history of infectious disease. Prerequisite: MICROM 441. Offered: jointly with MICROM 447.

IMMUN 499 Undergraduate Research (*, max. 24)

Investigative work on a variety of topics, including mechanisms of antigen recognition, T-cell development and differentiation, immunogenetics, lymphocyte activation, MHC gene structure and function, retrovirology, and the pathogenesis of autoimmune diseases, among others. Prerequisite: permission of instructor. Offered: AWSpS.

IMMUN 532 Advanced Immunology (4)

Examines the molecular and cellular basis of immune function. Students must have completed a baccalaureate degree in a biological specialty and be conversant with molecular genetics. Topics include: hematopoiesis, antigen receptor structure, lymphocyte development, antigen presentation, and cytokines. Offered: W.

IMMUN 533 Host Defense to Cancer and Infection (3)

Clark Addresses the immune response to cancer, immunity to infection that complicates cancer, and the mechanisms of cellular homeostasis need to prevent cancer of the immune system. Offered: Sp; even years.

IMMUN 534 Central Issues in Immunology (2, max. 4)

Presentations by participants of topics relating to the broad study of immunology. Prerequisite: graduate standing in Immunology. Offered: Sp.

Current Research Conferences Weekly group conferences concerning ongoing graduate students and postdoctoral research in immunology. Students may register for more than one conference each quarter.

IMMUN 550 Selected Topics in Immunology (1, max. 30) Formal seminar-discussion course for advanced students focused on recent developments in the field and consisting of literature research and intensive in-depth study of important and timely topics. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

IMMUN 551 Regulation of T Cell-Dependent B Cell Maturation (1, max. 30) *Clark* Credit/no credit only. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 552 Immunogenetics and Autoimmunity (1, max. 30) *Concannon* Credit/no credit only. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 553 Recombination and Repair in B Cell Development (1, max. 30) *Maizels* Weekly group conferences concerning ongoing graduate students and postdoctoral research in immunology. Students may register for more than one conference each quarter. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

IMMUN 554 Immunogenetic Aspects of Human Autoimmunity (1, max. 30) *Nepom* Credit/no credit only. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 555 Model of Autoimmune Disease and Their Regulation (1, max. 30) *Goverman* Credit/no credit only. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 557 Thymic Environment (1, max. 30) *Farr* Credit/no credit only. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 559 Cytokine Gene Regulation (1, max. 30) *Bix* Credit/no credit only. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 560 Progress in T Cell Research (1, max. 30) *Bevan, Fink, Rudensky* Credit/no credit only. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 561 Mechanisms of Peripheral Tolerance (1, max. 30) *Fink* Credit/no credit only. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 562 Developmental Regulation of T Cell Function (1, max. 30) *Wilson* Credit/no credit only. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 563 Macrophage Biology: Signaling and Phagocytosis (1, max. 30) *Aderem* Credit/no credit only. Prerequisite: graduate standing in Immunology.

IMMUN 564 Cellular/Molecular Regulation of T Cell Responses (1, max. 30) *Greenberg* Credit/no credit only. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 565 Signaling and Costimulatory Regulation of T Cell Function (1, max. 30) *Dong* Weekly group conferences concerning ongoing graduate students and postdoctoral research in immunology. Students may register for more than one conference each quarter. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

IMMUN 566 Role of Innate Mechanisms in Generation and Maintenance of Protective Immune Memory (1, max. 30) *Kaja* Weekly group conferences concerning ongoing graduate students

and postdoctoral research in immunology. Credit/no credit only. Offered: AWSpS.

IMMUN 567 Antigen Processing and Presentation (1, max. 30) *Rudensky* Credit/no credit only. Prerequisite: graduate standing in Immunology. Offered: AWSpS.

IMMUN 568 Antibody Structure and Function (1, max. 30) *Foote* Credit/no credit only. Prerequisite: graduate standing in Immunology.

IMMUN 569 Genetics of Diabetes (1, max. 30) *Lernmark* Credit/no credit only. Prerequisite: graduate standing in Immunology.

IMMUN 570 Cytokine Signaling in Lymphocytes (1, max. 30) *Nelson* Credit/no credit only. Prerequisite: graduate standing in Immunology.

IMMUN 573 Immunology Seminar Series (1, max. 30) Weekly discussion in which original research results are presented and discussed. Emphasis is on new and original contributions to field of immunology and related areas; occasional seminars are concerned with review of important topics. Credit/no credit only. Prerequisite: firm background in immunology, permission of instructor. Offered: AWSpS.

IMMUN 599 Introduction to Immunology Research (1-7, max. 7) Current problems in immunological research. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

IMMUN 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

IMMUN 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

IMMUN 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Laboratory Medicine

NW120 University of Washington Medical Center

General Catalog Web page:

www.washington.edu/students/gencat/academic/Laboratory_Med.html

Department Web page:

www.labmed.washington.edu

The Department of Laboratory Medicine provides service, education, and research. The divisions of the department include clinical chemistry, hematology, microbiology, coagulation, immunology, genetics, molecular diagnostics, virology, and medical informatics. In addition to courses for medical students, the department offers a Master of Science degree program. The department provides residency training in clinical pathology for graduate physicians and postdoctoral training in several subspecialty areas of laboratory medicine.

Graduate Program

Graduate Program Director
NW120 University of Washington Medical Center,
Box 357110
206-598-6131
Imedgrad@u.washington.edu

The Department of Laboratory Medicine offers a graduate program leading to the Master of Science degree. Each student in the program selects one of the major areas of concentration (chemistry, coagulation, hematology, immunology, microbiology, or virology). The chemistry option is approved by the Commission on Accreditation in Clinical Chemistry.

The other options have no comparable accrediting agencies.

A thesis based upon independent research in the student's selected area of concentration is required. Course requirements vary with the option selected. However, the program is flexible and permits each student (with the help of an adviser) to plan a course of study that meets individual needs. A full-time student normally completes the program in two years. The program prepares qualified candidates for supervisory positions in clinical laboratories and for careers in investigation or teaching in an area of clinical laboratory science.

Admission Requirements

Applicants must have a B.S. or B.A. degree in a field appropriate to the graduate study (medical technology, biochemistry, biology, chemistry, or microbiology) and meet the Graduate School requirements for admission. The applicant must also be certified as a medical technologist/clinical-laboratory scientist, or as a specialist in a particular area of laboratory medicine by one of the national certifying agencies. In addition, applicants must take the Graduate Record Examination aptitude test.

Major Requirements

Students must meet the minimum requirements for a master's degree as stated in the Graduate School section of this catalog. In addition, a core of courses is required for all students in the program as well as additional specific course requirements for the various major areas of concentration.

Financial Aid

Research assistantships may be available for second-year students. Opportunities for part-time employment in departmental laboratories may be available, and applications will be considered.

Research Facilities

Each division in the department is equipped with modern facilities for research in its specialty area.

Residency Training Program

The department provides residency training in clinical pathology (laboratory medicine) for graduate physicians in cooperation with the Department of Pathology. Persons who complete the program are eligible for certification by the American Board of Pathology. For additional information, contact the Resident Program Director, Department of Laboratory Medicine, Box 357110.

Faculty

Chair

James S. Fine

Professors

Ashley, Rhoda L. * 1981; PhD, 1977, University of California (Davis); pathogenesis of viral infections, immune response to herpes, rapid diagnosis.

Bauer, Larry * 1980, (Adjunct); PharmD, 1980, University of Kentucky; clinical pharmacokinetics and drug metabolism, drug interactions.

Chandler, Wayne L. * 1982; MD, 1982, St Louis University; clinical chemistry, clinical coagulation, hematology.

Chatrian, Gian E. 1981, (Emeritus); MD, 1951, University of Naples (Italy); electroencephalography and clinical neurophysiology.

Corey, Lawrence * 1977; MD, 1971, University of Michigan; DX, therapy and pathogenesis of viral infections, AIDS/herpes viruses.

Coyle, Marie B. * 1973, (Emeritus); PhD, 1965, Kansas State University; DNA probes and GLC for rapid identification of Mycobacteria and Corynebacteria.

Detter, James C. * 1970, (Emeritus); MD, 1962, University of Kansas; laboratory diagnosis of genetic disorders, red-cell disorders and laboratory instrumentation.

Fang, Ferric C. 2001; MD, 1983, Harvard University.

Gilliland, Bruce C. * 1970; MD, 1960, Northwestern University; hematology.

Kaplan, Alex 1960, (Emeritus); PhD, 1936, University of California (Berkeley); clinical chemistry.

Kenny, Margaret * 1970, (Emeritus); PhD, 1968, University of Illinois; clinical chemistry, new technologies for in vivo clinical biochemical analysis.

Labbé, Robert F. * 1957, (Emeritus); PhD, 1951, Oregon State University; porphyrin disorders, nutritional biochemistry.

McElrath, Margaret Juliana * 1990, (Adjunct); PhD, 1978, MD, 1980, Medical University of South Carolina; infectious diseases.

Mullins, James I. * 1994, (Adjunct); PhD, 1978, University of Minnesota; retroviruses and AIDS, molecular virology.

Plorde, James J. * 1982, (Emeritus); MD, 1959, University of Minnesota; infectious diseases, antibiotic-resistant nosocomial infections.

Raghu, Ganesh 1981, (Adjunct); MD, 1974, University of Mysore (India); respiratory disease.

Rainey, Petrie M. * 2000; PhD, 1973, University of California (Berkeley), MD, 1980, University of North Carolina; clinical chemistry, medical toxicology, pharmacology of antiviral and antiparasitic drugs.

Raisys, Vidmantas A. * 1971, (Emeritus); PhD, 1969, State University of New York (Buffalo); clinical toxicology, therapeutic drug monitoring.

Rutledge, Joe C. * 1989; MD, 1976, Vanderbilt University; genetic disease pathology, human embryology, mouse mutagenesis, pediatric chemistry/hematology.

Schmer, Gottfried * 1970, (Emeritus); MD, 1956, University of Vienna (Austria); tropical medicine and public health, clinical parasitology, preventive medicine.

Zeh, Judith * 1982, (Adjunct Research); PhD, 1979, University of Washington; estimation of population size and dynamics; robust methods, computing in infectious disease research.

Associate Professors

Astion, Michael L. * 1991; PhD, 1989, MD, 1989, University of Pennsylvania; multi media computer-aided tutorials, immunology.

Chou, David * 1998; MD, 1974, University of Pittsburgh, MS, 1979, University of Minnesota; medical informatics, instrument automation, clinical chemistry.

Clayson, Kathleen J. * 1969, (Emeritus); MS, 1968, University of Minnesota; enzymology in clinical chemistry.

Cookson, Brad T. * 1996; PhD, 1991, MD, 1991, Washington University; cellular immune response to

intracellular bacteria; microbial pathogenesis; clinical microbiology.

Coombs, Robert W. * 1985; PhD, 1977, MD, 1981, Dalhousie University (Canada); diagnosis and pathogenesis of HIV infection.

Delaney, Collene J. * 1982; PhD, 1972, University of Illinois; clinical chemistry, the study of diabetes and alcoholism.

Fine, James * 1977; MD, 1972, MS, 1977, University of Minnesota; enzymology, medical informatics.

Fligner, Corinne L. 1983, (Adjunct); MD, 1976, University of New Mexico; autopsy and forensic pathology, fetal and perinatal pathology, forensic toxicology.

Frenkel, Lisa M. 1994; MD, 1987, University of Kansas; infectious disease.

Fritsche, Thomas R. * 1981; MD, 1981, PhD, 1984, University of Minnesota; systematics and ecology of animal parasites, medical microbiology.

Gretch, David R. * 1990; PhD, 1990, University of Iowa, MD, 1990, University of Iowa; research and diagnostics related to viral hepatitis.

Hackman, Robert C. 1982; MD, 1971, Stanford University; infectious and pulmonary complications in immunocompromised patients.

Lampe, Mary F. * 1988; MS, 1976, University of Washington, PhD, 1984, University of North Carolina; medical technology education, molecular analysis of Chlamydia trachomatis pathogenesis.

Opheim, Kent E. * 1977; PhD, 1972, Cornell University; molecular cytogenetics, pediatric clinical toxicology.

Sabath, Daniel E. * 1993; PhD, 1989, MD, 1989, University of Pennsylvania; regulation of gene expression in hematopoietic cells.

Schiller, Harvey S. * 1982; MD, 1966, Washington University; clinical chemistry, hematology, interpretation of laboratory data.

Stephens, Karen G. * 1989, (Research); PhD, 1982, Indiana University; neurofibromatosis, tumorigenesis, gene mapping and regulation, human genetics.

Tait, Jonathan F. * 1985; PhD, 1983, Washington University, MD, 1983, Washington University; biochemistry of blood coagulation, laboratory diagnosis of genetic disorders.

Wener, Mark H. * 1980; MD, 1974, Washington University; diagnostic immunology, immune complex diseases.

Assistant Professors

Behrens, Joyce A. 1971; MS, 1971, University of Minnesota; clinical hematology and clinical coagulation methodologies.

Brodie, Scott J. 2000, (Research); DVM, 1989, Washington State University, PhD, 1992, Colorado State University.

Jerome, Keith R. 1998; PhD, 1992, MD, 1993, Duke University; virology, immunology, apoptosis.

Koelle, David 1988, (Adjunct); MD, 1985, University of Washington; allergy and infectious diseases.

La Spada, Albert R. 1998; PhD, 1993, MD, 1993, University of Pennsylvania; inherited neurodegenerative disease.

LeCrone, Carol N. * 1967, (Emeritus); MS, 1966, Colorado State University; hematology, hemoglobinopathies.

Limaye, Ajit P. 1998; MD, 1992, University of Washington.

McGonagle, Lee Anne 1969, (Emeritus); MPH, 1969, University of Michigan; clinical microbiology, procedures for diagnostic bacteriology.

Nester, Theresa 2001; MD, 1994, University of Rochester; clinical transfusion medicine, immunohematology, teaching.

Polyak, Stephen J. 1998, (Research); PhD, 1993, McMaster University (Canada); virology, hepatitis C, virus-host interactions.

Posavad, Christine 2001, (Research); PhD, 1993, McMaster University (Canada).

Szabo, La Verne 1970, (Emeritus); MS, 1970, University of Washington; general clinical chemistry, heavy metals in clinical chemistry.

Wald, Anna * 1989, (Adjunct); MD, 1985, Mt Sinai School of Medicine, MPH, 1994, University of Washington; the epidemiology, natural history and therapeutics of HSV and other herpesviruses infections.

Wood, Brent L. * 1998; PhD, 1988, MD, 1990, Loma Linda University; hematopathology, leukemia, lymphoma, flow cytometry, cell sorting.

Zhu, Tuofu 2002; MD, 1984, Jiangxi University (China), PhD, 1990, Peking Union Medical School (China).

Lecturer

Goodyear, Nancy 2000; PhD, 1997, Catholic University of America; clinical microbiology and education.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

LAB M 418 Topics in Clinical Chemistry (5) *Rainey* Continuation of LAB M 322. Lecture and laboratory exercises covering fundamentals of instrumentation and methodology in the clinical chemistry laboratory. Offered: Sp.

LAB M 419 Clinical Coagulation (4) *Behrens* Lecture and laboratory coverage of the theory of the hemostatic system, to include tests used in the diagnosis/monitoring of patients with abnormal bleeding and/or thrombosis. Instrumentation as appropriate for testing included. Quality control and quality assurance discussed. Offered: S.

LAB M 420 Laboratory Analysis of Urine and Body Fluids (3) *Rainey* Lecture and laboratory covering urinalysis testing procedures and associated disease entities. Analysis of other body fluids. Methods of microscopic examination by use of bright-field, phase, and polarizing microscopy. Offered: S.

LAB M 421 Medical Microbiology (1/6, max. 6) *Goodyear* Lecture and laboratory coverage of human infections and diagnostic procedures used for isolation, identification, and antimicrobial susceptibility testing of the microorganisms associated with disease. Offered: S.

LAB M 423- Clinical Chemistry (*-, max. 24) *Rainey* Clinical testing using automated and manual methods. Measurement of pancreatic function and intestinal absorption, renal and liver function, enzymes,

electrolytes, blood gases, lipids, toxicology, urinalysis, endocrinology, and immunology. Offered: AWSp.

LAB M 424- Clinical Microbiology (*-, max. 24) *Goodyear* Techniques used in the diagnostic microbiology laboratory, including quality control, specimen evaluation, identification of pathogenic microorganisms, and antimicrobial susceptibility testing. Offered: AWSp.

LAB M 425- Clinical Hematology (*-, max. 24) *Behrens* Clinical study of techniques used in the diagnostic evaluation of blood cells, including production, proliferation, survival, morphologic, and functional features. Assessment of proteins and cells important in hemostasis included. Quality control and quality assurance issues considered. Biomolecular techniques appropriate for evaluation of the hematologic and hemostatic systems discussed. Offered: AWSp.

LAB M 426 Clinical Immunohematology (7) *Behrens* Lecture and laboratory covering theory of transfusion medicine and serological procedures used in the evaluation of cellular antigen systems. Principles of immunology and genetics included as appropriate for the techniques performed; screening of donor units to provide a safe product discussed. Quality control and quality assurance issues considered. Offered: W.

LAB M 427- Selected Studies in Laboratory Medicine (*-, max. 24) *Behrens, Goodyear, Lampe, Rainey* Selected clinical study in the major scientific disciplines of laboratory medicine, to include molecular diagnostics, or pursuance of a clinical research study. Credit/no credit only. Offered: AWSpS.

LAB M 499 Undergraduate Research (*) Specific project in clinical laboratory investigation. Offered: AWSpS.

LAB M 502 Laboratory Medicine Grand Rounds (1, max. 6) *Gilliland* Grand rounds are concerned with current topics in the field of laboratory medicine. Credit/no credit only. Offered: AWSp.

LAB M 510 Laboratory Medicine Research Conference (1, max. 6) *Tait* Presentation and discussion of ongoing research and development projects by faculty, residents, fellows, and graduate students. Open to graduate students in laboratory medicine and other medical sciences. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

LAB M 520 Seminar in Organization and Management in Laboratory Medicine (3) *Chandler* Core course for the Master of Science degree in laboratory medicine. Prerequisite: graduate student standing in laboratory medicine or permission of instructor. Offered: odd years; Sp.

LAB M 521 Advanced Laboratory Hematology (1, max. 6) *Sabath* Lectures on diagnostic clinical hematology with emphasis on clinicopathological correlation. For laboratory medicine graduate students with special interest in diagnostic clinical hematology. Prerequisite: graduate standing and permission of instructor. Offered: AWSp.

LAB M 522 Hematopathology Seminar (2) *Wood* Identification of normal lymphocyte and bone marrow subpopulations, diagnosis of leukemias, lymphomas, and benign conditions that resemble them. Emphasis on histopathology, cytochemical, immunological, and molecular markers. Clinicopathologic correlation. Offered: jointly with PATH 522; even years; W.

LAB M 590 P-Research Projects in Laboratory Medicine (*) *Tait* Opportunity for laboratory experience on a research problem related to laboratory medicine. Students investigate areas of potential clinical importance. Projects selected from areas such as chemistry, coagulation, hematology, immunology, microbiology, virology, molecular diagnostics, and

computer applications. Research goals established by instructor in discussion with student. Prerequisite: permission of instructor. Offered: AWSpS.

LAB M 596 Clinical Chemistry Seminar (2) *Rainey* Theory and practice of clinical chemistry. For postdoctoral and graduate students in clinical chemistry. Prerequisite: permission of instructor. Offered: AWSp.

LAB M 601 Internship (3-9, max. 9) Credit/no credit only. Prerequisite: graduate standing in laboratory medicine. Offered: AWSpS.

LAB M 680 P-Clinical Laboratory Testing: Methods and Interpretation (*) *Wener* Provides the third- and fourth-year medical student with the opportunity to evaluate clinical laboratory data in the clinical laboratory setting. One-on-one teaching using case material and actual clinical samples. Offered: AWSpS.

LAB M 685 P-Laboratory Case Studies for Clinical Diagnosis (4) *Rutledge* Clinical case presentations and discussions aimed at test selection, disease-induced alterations, efficient algorithms, factors confounding interpretation, testing economics. Prerequisite: completion of required clerkships. (Four weeks half-time) Offered: A.

LAB M 699 P-WWAMI Laboratory Medicine Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

LAB M 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

Medical Education and Biomedical Informatics

E312 Health Sciences

General Catalog Web page:
www.washington.edu/students/gencat/academic/Medical_Ed.html

Department Web page:
www.dme.washington.edu

The Department of Medical Education and Biomedical Informatics is comprised of three divisions: General Medical Education, Biomedical and Health Informatics, and MEDEX Northwest. The Division of General Medical Education serves the medical school and medical education community through program support, evaluation, and research in the field of medical education. The Division of Biomedical and Health Informatics contributes to the conceptualization and development of innovative clinical, academic, and educational information systems, services, and tools for application within the Academic Medical Center, the University, regionally, and nationally. For more information, visit the Biomedical and Informatics Web site (www.dbhi.washington.edu). MEDEX Northwest is a regional program that selects experienced health care providers for training as physician assistants and is dedicated to improving access to medical care and emphasizes delivery of health care services to medically underserved populations in the Northwest. For more information, visit the MEDEX Web site (www.washington.edu/medical/som/depts/medex/).

The Department of Medical Education and Biomedical Informatics offers courses in the theory and application of medical education and biomedical and health informatics. Courses are designed for faculty, graduate and undergraduate students, post-

graduates and fellows in the health sciences who desire further training in the methods, issues, research, and technology of medical education and biomedical informatics. MEDEX Northwest, a physician assistant training program, offers a program of study leading to a certificate with an optional degree available (a Bachelor of Clinical Health Services).

For the most up-to-date program information, see the Department of Medical Education and Biomedical Informatics' Web site or contact the department, E312 Health Sciences, Box 357240, 206-543-2259.

Faculty

Chair

Fredric M. Wolf

Professors

Brinkley, James F., III * 1988; MD, 1974, University of Washington; PhD, 1984, Stanford University; computer applications in medicine and biology; structural informatics.

Carline, Jan D. * 1977; MEd, 1976, PhD, 1979, University of Washington; assessment of physician performance, evaluation of medical education programs.

Dohner, Charles W. * 1967, (Emeritus); PhD, 1966, Ohio State University; program evaluation, administration, faculty development.

Fuller, Sherrilynne S. * 1988; PhD, 1984, University of Southern California; analysis, representation and mapping of research findings (data mining).

Gordon, Michael J. * 1973, (Emeritus); PhD, 1973, Michigan State University; family medicine.

Irby, David M. * 1972, (Affiliate); PhD, 1977, University of Washington; the evaluation and improvement of clinical teaching in medicine.

Norris, Thomas E. 1988, (Adjunct); MD, 1973, University of Texas (Galveston); clinical applications, health policy and health workforce needs.

Scott, Craig S. * 1979; MEd, 1970, California State University, Sacramento, PhD, 1973, University of Iowa; performance-based teaching and evaluation; informatics fluency, medical education outcomes.

Shapiro, Linda G. 1986, (Adjunct); MS, 1972, PhD, 1974, University of Iowa; computer vision, multimedia information systems, medical informatics, pattern recognition.

Stewart, Brent K. * 1993, (Adjunct); PhD, 1988, University of California (Los Angeles); biomedical physics, biomedical image processing, medical imaging, medical information systems.

Wolf, Fredric M. * 1997; MEd, 1977, PhD, 1980, Kent State University; clinical decision making, evaluation of new technology, evidence-based health care.

Associate Professors

Aston, Michael L. * 1991, (Adjunct); PhD, 1989, MD, 1989, University of Pennsylvania; multi media computer-aided tutorials, immunology.

Chou, David * 1998, (Adjunct); MD, 1974, University of Pittsburgh, MS, 1979, University of Minnesota; medical informatics, instrument automation, clinical chemistry.

Dewitt, Dawn E. 1990, (Adjunct); MD, 1990, Harvard University; general internal medicine.

Fine, James * 1977, (Adjunct); MD, 1972, MS, 1977, University of Minnesota; enzymology, medical informatics.

Goldberg, Harold I. 1986, (Adjunct); MD, 1977, Stanford University; applying clinical informatics to health services delivery and quality improvement.

Kalet, Ira J. * 1980; PhD, 1968, Princeton University; computer simulation of radiation therapy, artificial intelligence, computer graphics.

Meyer, Kerry E. * 1992, (Adjunct); MN, 1981, Vanderbilt University, PhD, 1990, University of Maryland; health informatics, expert systems in support of clinical decision making, and geriatrics.

Pinsky, Linda E. 1989, (Adjunct); MD, 1989, University of Washington; general internal medicine.

Robins, Lynne S. * 1999; PhD, 1990, University of Michigan; cultural competence, physician-patient communication, qualitative research assessment, ethnography.

Smith, Curtis Scott 1987, (Adjunct); MD, 1980, University of Washington; general internal medicine.

Tarczy-Hornoch, Peter 1992; MD, 1989, Stanford University; bioinformatics and clinical informatics: clinical systems and integrating genetic databases.

Wright, Jeffrey A. 1988, (Adjunct); MD, 1978, University of Missouri; general pediatrics.

Assistant Professors

Brock, Douglas M. 1985; MEd, 1987, PhD, 1995, University of Washington; usability and human factors.

Doctor, Jason N. * 1995; PhD, 1995, University of California (San Diego); medical decision making, health economics, decision theory.

Dunbar, Peter J. 1991, (Adjunct); MBChB, 1978, University of Aberdeen (UK).

Gennari, John H. 2002; PhD, 1990, University of California (Irvine); medical informatics and knowledge representation.

Karras, Bryant Thomas 2000, (Adjunct); MD, 1995, University of Wisconsin; public health informatics, guidelines, bioterrorism surveillance.

Kim, Sara 1995, (Adjunct); MA, 1990, George Washington University, PhD, 1999, University of Washington; educational technology.

Langer, Steve G. 1996, (Adjunct); PhD, 1994, Oakland University; medical physics.

Lober, William B. 1997, (Research); MD, 1994, University of California (San Francisco); clinical informatics, public health informatics, bioterrorism surveillance, telemedicine.

Pratt, Wanda 2002; PhD, 1999, Stanford University; information retrieval, human-computer interaction, text mining, medical informatics.

Senior Lecturers

Ballweg, Ruth A. 1981; BS, 1969, Southern Oregon State College; women's health issues, physician assistant education.

Schaad, Douglas C. * 1975; MEd, 1974, PhD, 1986, University of Washington; medical education and evaluation; educational assessment; salmonid recovery; riparian restoration.

Stoll, Henry 1978; BA, 1971, Brown University; physician assistant education and professional issues, curriculum development.

Lecturers

Ambrozy, Donna M. 1995; MA, 1994, Eastern Michigan University, PhD, 1998, University of Washington; standardized patients, teaching methodology.

Cupp, Randal C. 1996; BCHS, 1999, University of Washington; physician assistant education.

Dale, Linda 1997; MSOD, 2001, Central Washington University; physician assistant education.

Flynn, Barbara G. 1994; BA, 1977, Seattle Pacific University; physician assistant education.

Gianola, Fred J. 1987; PA-C, 1975, University of Washington; physician assistant education.

Landel, Grace P. 1990; MEd, 1999, University of Washington; physician assistant education.

MacLaren, Carol F. 1989; MS, 1980, PhD, 1985, University of Pennsylvania; educational research.

Masuda, David 1997; MD, 1980, University of North Dakota, MS, 1996, University of Wisconsin; biomedical and health informatics.

Plummer, William T. 1992; BS, 1974, University of Nebraska; physician assistant education.

Roulston, Maria Carmen 1998; PA-C, 1997, University of Washington; physician assistant education.

Scott, Terry B. 1983; BS, 1993; physician assistant education, underserved and minority population health care.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

MEDED 499 Undergraduate Research (*, max. 12) Investigative research or directed readings in medical education and in biomedical and health informatics. Prerequisite: permission of instructor.

MEDED 510 Topics in Medical Education Research (1/3, max. 12) Selected research topics in medical education. Development of skills in critical analysis and production of original research. Optional: 1 additional credit for seminar focusing on application of issues in education practice. Credit/no credit only. Offered: AWSp.

MEDED 511 Current Issues in Medical Education (2) *Dohner, Robins, Scott, Wolf* Addresses current issues in medical education in the context of historic and contemporary developments. Topics include curriculum development, teaching, and learning, clinical knowledge and reasoning, assessment, professional development, program evaluation, and certification. Offered: A.

MEDED 512 Leadership in Academic Medicine (1) *Dohner, Robins, Scott, Wolf* Explores the theoretical and practical aspects of leadership in academic medicine. Topics include qualities of effective leadership, leadership styles, and impact of institutional organization and culture on leadership. Prerequisite: permission of instructor. Offered: S.

MEDED 520 Teaching Methods in Medical Education (2) *Ambrozy* Empirical and theoretical merits of different teaching methods as applied to medical education. Structuring and leading group discussions, using questions, organizing and delivering lectures, identifying styles of clinical supervi-

sion, providing constructive feedback, and presenting effective clinical demonstrations. Offered: W.

MEDED 521 Evaluation of Learning in the Health Sciences (3) *Carline* Basic issues and methods for evaluation of learning: cognitive performance, psychomotor skills, and reasoning abilities in classroom, laboratory, and clinical settings. Practical applications of instruments such as multiple-choice questions, essays, oral examinations, checklists, rating scales, simulations, and patient management problems. Recommended: 520. Offered: Sp.

MEDED 522 Research in Medical Education (2) *Scott* Individualized, problem-based overviews of research methods and research design pertinent to research and scholarship in medical education. Development and sequencing of research projects from conceptualization through literature review, including proposal development, project implementation, data management, analysis, and write-up. Assessment and critical reading of related literature stressed. Offered: A.

MEDED 530 Medical Informatics (3) *Masuda* Overview of biomedical and health informatics concepts, theories, and applications, including the historical evolution and the current and future research directions within the context of information flow in health care settings. Offered: A.

MEDED 531 Computing Concepts for Medical Informatics (3) *Kalet* Introduction to computing concepts underlying the solution of problems in medical information management, medical problem solving and medical informatics research. Algorithms, data structures, programming languages, object-oriented programming. Prerequisite: some prior experience with computer programming and application computers in medical care. Offered: A.

MEDED 532 Computing Concepts for Medical Informatics II (3) *Kalet* Continuation of topics begun in MEDED 531: multiprogramming and operating system principles, client-server, network programming with sockets, macros, higher level languages, software engineering. Prerequisite: MEDED 531 or equivalent. Offered: W.

MEDED 534 Biology for Informaticists (4) *Yarfitz A* computing and information oriented treatment of the core concepts of human biology, addressing structure and function at three levels or organization: organism, cell, and gene. Each level includes examples of key anatomic and physiologic concepts, presented from a computational perspective and with the use of electronic resources. Offered: A.

MEDED 535 Clinical Topics for Informaticists (3) *Karras* Builds on Biology for Informaticists and introduces the student to a variety of clinical disciplines, representative clinical problems from these disciplines, and informatics issues and applications within these disciplines. Lecturers include faculty from the Schools of Medicine, Nursing, Pharmacy, and Dentistry. Prerequisite: MEDED 530, MEDED 531, MEDED 534. Offered: W.

MEDED 536 Bioinformatics and Gene Sequence Analysis (3) *Rose* Nature and relevance of molecular sequence information, computer-based protein, and DNA sequence analysis, molecular sequence and genomic databases, and methods for database accession and interrogation. Prerequisite: background in molecular biology and permission of instructor. Offered: jointly with PABIO 536; W.

MEDED 537 Informatics Research and Evaluation Methods (4) *Carline, Brock* Introduces the many facets of evaluation and research for Biomedical and Health Informatics projects. Focuses on formal studies of the application of information technology in medicine, conducted while an information resource

is under development and after the resource is in routine service. Offered: W.

MEDED 540 Critically Appraising and Applying Evidence in Health Care (2) *Pinksy, Wolf* Literature appraisal skills for various articles (therapy effectiveness, diagnostic tests, literature reviews, clinical measurement, prognosis, quality of care, decision analysis, causation/etiology, guidelines, and economic evaluation). Appraisal of clinical information from literature, strengths/weaknesses of data, analyses, study design/applicability to a current patient's problem. Prerequisite: permission of instructor. Offered: jointly with HSERV 528; W.

MEDED 541 Introduction to Systematic Reviews and Meta-analysis of Evidence (2) *Wolf* Conceptual understanding of the quantitative methods used to synthesize evidence. Methods for pooling evidence across independent studies, pooling binary/continuous outcomes, differences between fixed and random effects models, and guidelines for appraising published systematic reviews/meta-analyses. Prerequisite: introductory level courses in statistics, epidemiology or biostatistics. Prerequisite: permission of instructor. Offered: jointly with HSERV 529; Sp.

MEDED 552 Clinical Decision Support (3) *Doctor* Provides foundation in clinical decision making and support (including decision analysis, Bayesian analysis, belief networks, artificial intelligence, neural networks) presented in the context of local and national decision support systems and the movement to decrease errors in healthcare. Prerequisite: MED 530, MED 531, MED 535, MED 537, CSE 415 or permission of instructor. Offered: A.

MEDED 570 Information Access in Health Sciences (3) *Fuller* Characteristics of users of health sciences information, environments including academic health sciences centers, hospitals, clinics, and public libraries, evaluation of information resources, types of uses of information management systems, health information policy, professional standards, education and certification of health professionals including health science librarians. Prerequisite: LIS 520, LIS 521, or permission of instructor. Offered: jointly with LIS 528.

MEDED 590 Selected Topics in Health Informatics (1-3, max. 12) Computers and information technology are improving and changing healthcare education, research, and clinical practice. Informatics faculty and researchers from the UW and affiliated institutions present their research findings as well as discuss their views of national developments in their respective disciplines. Credit/no credit only. Prerequisite: permission of instructor. Offered: jointly with HSMGMT 526; AWSp.

MEDED 598 Special Topics in Biomedical and Health Informatics (1-4, max. 12) Readings, lectures, and discussions pertaining to a significant biomedical and health informatics problem or an emerging issue. Topics vary. Offered: AWSpS.

MEDED 599 Independent Study or Research (*, max. 12)

MEDED 600 Independent Study/Research (1-10, max. 10) Individual readings or study, including independent study in preparation for doctoral examinations, research, etc. Prerequisite: permission of instructor.

MEDED 700 Master's Thesis (1-15, max. 15) Prerequisite: permission of instructor. Offered: AWSpS.

The Department of Medical History and Ethics offers a program of study leading to a Master of Arts in Bioethics which provides competencies in ethical theory, clinical ethics, and research ethics and methods, along with the historical foundations of bioethics. Students develop skills in research, writing, and public speaking about bioethics, as well as the ability to communicate about and frame ethical issues in health care and biomedical research from a multidisciplinary perspective.

The Master of Arts program brings together students from diverse backgrounds: those with a bachelor of arts in philosophy, or equivalent, who plan to pursue a Ph.D. in bioethics or a related humanities discipline, and those with a professional or master's degree in a health care or health policy field who wish to incorporate bioethics into their professional activities. Applicants with a B.A. must take the GRE. The GRE is not required of applicants with a professional or master's degree.

The program of study includes 45 to 56 credits, comprised of required courses, elective courses that enhance multidisciplinary understanding of ethical issues, and practicum experiences in the University's affiliated hospitals, ethics committees, and institutional review boards. All students complete a master's project in an area of personal scholarly interest.

While the program is designed to be completed in two years (six quarters), a very focused student might complete the program in five quarters. Options of earning a concurrent M.A. in bioethics are available for students enrolled in M.D. or J.D. programs at the University of Washington.

Faculty

Chair

Wylie Burke

Professors

Benson, Keith R. * 1981; MA, 1973, PhD, 1979, Oregon State University; history of modern American biology, marine biology, and evolutionary biology.

Berryman, Jack W. * 1975; MS, 1971, MA, 1974, University of Massachusetts, PhD, 1976, University of Maryland; history of exercise, sports medicine, and health behavior/philosophy.

Burke, Wylie 1984; PhD, 1974, MD, 1978, University of Washington; ethical and policy implications of genetic information.

Hudson, Leonard D. 1973, (Adjunct); MD, 1964, University of Washington; respiratory diseases.

Jecker, Nancy A. S. * 1982; MA, 1982, Stanford University, MA, 1984, PhD, 1986, University of Washington; philosophical and ethical aspects of health care delivery and policy.

Jonsen, Albert R. * 1987, (Emeritus); MA, 1956, Gonzaga University, PhD, 1967, Yale University; philosophical, historical values affecting practice and delivery of health care.

Kuszler, Patricia Carol * 1994, (Adjunct); MD, 1978, Mayo Medical School/graduate School, JD, 1991, Yale University; law and medicine: health-care finance and regulation, medical malpractice, biotechnology and law.

Pearlman, Robert A. * 1981, (Adjunct); MD, 1975, Boston University; gerontology.

Whorton, James C. * 1970; PhD, 1969, University of Wisconsin; history of American medicine, public health, alternative healing.

Associate Professors

Back, Anthony L. 1984, (Adjunct); MD, 1984, Harvard University; oncology.

Braddock, Clarence H. * 1993, (Adjunct); MD, 1981, University of Chicago; doctor-patient communication, informed consent, bioethics education.

Diekema, Douglas S. 1990, (Adjunct); MD, 1985, University of North Carolina, MPH, 1993, University of Washington; pediatric emergency medicine.

Shannon, Sarah E. 1984, (Adjunct); PhD, 1992, MSN, 1992, University of Washington; clinical ethics; decision-making surrounding use of life-sustaining therapies.

Sullivan, Mark D. 1985, (Adjunct); PhD, 1982, MD, 1984, Vanderbilt University; depression and chronic medical illness, chronic pain, ethics, quality of life.

Assistant Professors

Dudzinski, Denise M. 2001; MTS, 1993, PhD, 2001, Vanderbilt University; biomedical ethics, clinical ethics, philosophical and theological foundations of values.

Fryer-Edwards, Kelly 2001; MA, 1995, PhD, 2000, University of Washington; innovation in medical education, professional identity development, clinician-patient relationships.

Mastroianni, Anna C. * 1996, (Adjunct); JD, 1986, University of Pennsylvania, MPH, 1997, University of Washington; law, ethics and policy genetics, reproduction, human subjects research.

Tonelli, Mark R. 1993, (Adjunct); MD, 1989, University of Colorado (Boulder); pulmonary and critical care medicine.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crsat/.

MHE 401 History of Modern Medicine (3) I&S *Whorton* Survey of evolution of medical theory, practice, and institutions in European and American society from the late 18th century present. Medical back-

ground not required. Recommended: prior courses in sciences and/or history.

MHE 402 Ethical Theory (5) I&S *Jecker* Review of principal theories for normative ethical discourse, such as utilitarianism and deontology, and major metaethical commentary on those theories. Illustrated by classical and modern authors. Recommended: one basic course in ethics.

MHE 404 Metaethical Theory (5) I&S *Jecker* Study of major ethical writings in the twentieth century, with principal emphasis on the Anglo-American tradition. Recommended: one introductory philosophy course.

MHE 411 Introduction to Bioethics (3) I&S Basic concepts, principles, and methods of analysis, with application to some major issues in the field of bioethics. Case studies utilized to illustrate nature of questions arising in bioethics and to provide students with opportunity to develop skills in ethical analysis.

MHE 413 History of Alternative Healing (3) I&S *Whorton* Analysis of historical development of alternative healing in American society over last two centuries. Emphasis on evolution of theory, practice, and professional institutions for major alternative systems and interactions of alternative modalities with conventional medicine. Medical background not required.

MHE 417 Disease in History (3) I&S *Whorton* Study of Western civilization's experience with epidemic disease, the growth of understanding of the causes of disease, the formation of a philosophy of prevention, and the development of programs to protect the public health. Emphasis on the last two centuries. Medical background not required.

MHE 422 History of Evolution Theory (5) I&S *Benson* Development of evolution theory from its early-nineteenth-century roots through the work of Charles Darwin. Impact of evolution theory on society and the formulation of the theory in the twentieth century.

MHE 424 Modern Biology in Historical Perspective (5) I&S *Benson* Two diverse traditions of biology, natural history, and physiology, in their nineteenth-century development and their subsequent merging after Darwin's evolution theory. Emergence of specialized areas in biology after the beginning of the twentieth century.

MHE 440 Philosophy of Medicine (5) I&S *Jecker* Familiarizes students with central issues in the philosophy of medicine. Focuses on the nature of medical knowledge, the connection between theory and observation, the meaning of medical concepts, and the relationship between theories and the world. Recommended: prior courses in philosophy, history of science, or history of medicine. Offered: jointly with PHIL 459.

MHE 474 Justice in Health Care (5) I&S/VLPA *Jecker* Examination of the ethical problem of allocating scarce medical resources. Emphasis on fundamental principles of justice that support alternative health policies. Recommended: prior courses in philosophy or medical ethics. Offered: jointly with PHIL 411.

MHE 481 The Pursuit of Health in American Society (3) I&S *Berryman, Whorton* Examination of the development of concern for personal health over the past two centuries, and of the evolution of philosophies and practices of health promotion. Emphasis on the influence of both medicine and popular culture on shaping of attitudes toward diet, exercise, dress, sex, and other health behavior.

MHE 483 The Rise and Development of Sports Medicine (3) I&S *Berryman* Evolution of medical thought related to exercise for good health, training

for sport participation, and treatment of sport-related injuries. Begins with ancient period, concludes with present. Development of specialization in sports medicine, sport team physicians, preventive medicine, concepts of fitness and wellness as related to exercise prescription, and sports medicine clinics.

MHE 485 Concepts of the Body in Nineteenth- and Twentieth-Century America (3) I&S *Berryman* Investigation of ideas relating to corporeal self in nineteenth- and twentieth-century America. Evolution of physical ideals of manliness/femininity, how ideals related to surrounding culture, how different bodily activities developed to realize ideals. Athleticism, physiognomy, beauty contests, body building, decorations, cosmetics, anthropometry, artificial parts.

MHE 497 Medical History and Ethics Special Electives (*)

MHE 498 Undergraduate Thesis (*)

MHE 499 Undergraduate Research (*, max. 5) Investigative work in biomedical ethics or history of the biomedical sciences.

MHE 501 Alternative Approaches to Healing (2) *Whorton* Philosophies and practices of the major alternative approaches to healing. Historical characterization of alternative medicine accompanied by presentations by practitioners of chiropractic, naturopathic, homeopathic, and traditional Chinese medicine. Credit/no credit only.

MHE 505 Professional Seminar I (2) Methods for identifying a bioethics research question and developing a systematic approach to investigating it, including utilization of bibliographic sources in bioethics, philosophy, history. Prerequisite: permission of instructor.

MHE 506 Professional Seminar II (1) Capstone course for M.A. in Bioethics. Includes conducting research in ethics, writing, giving oral presentations, facilitating seminars, developing curriculum vitae, and career planning.

MHE 511 P-Medical Ethics (2) Ethics course designed especially for first- and second-year medical students. Study of ethical problems arising in clinical setting of medicine, introducing students to philosophical analysis and argument in practical contexts. Seminar-discussion format with readings from contemporary authors. Credit/no credit only.

MHE 512 P-The Human Face of Medicine (2) Foundation of human values undergirding medical practice. Images of physician—motivations for medicine, empathy *versus* detachment in doctor-patient relationship, health for the health-professional—the art of coping, limits of power—when medicine fails to cure, uses/abuses of technology, physician's role in public health issues, the healing process.

MHE 513 P-Ethical Responsibilities of Medical Practice (2) Provides intensive and practical guidance about management of principal ethical and legal problems that arise in clinical practice: informed consent, confidentiality, decisions regarding life-support, advance directives and surrogate decision-makers, duty to care for indigent and risky patients. Offered: one-week intensive; S.

MHE 514 Legal, Ethical, and Social Issues in Public Health Genetics (3) *Kusler, Mastroianni* Equips the student to anticipate and assess potential legal, ethical, and social barriers complicating the incursion of new genetic advances, information, and technologies into public and private health care delivery efforts. Prerequisite: GENET 371 or equivalent. Offered: jointly with PHG 512/LAW E 562.

MHE 516 Ethical Frameworks for Public Health Genetics (2) *Mastroianni* Case-based application of ethical principles in genetic medicine to range of

problems arising in genetics practice, policy, research. Examination of traditional problems including eugenics and testing/screening for genetic disease, as well as emerging problems in population and environmental genetics. Prerequisite: MHE 514/PHG 512. Offered: jointly with PHG 522.

MHE 517 Preclinical Hospice Volunteer Training Elective (3) *Farber, McCormick* Using lectures, small groups, role play, and readings, covers the basic knowledge, skills and attitudes that need to be mastered as a hospice volunteer. Students participate as hospice volunteers as part of their field experience. Offered: jointly with FAMED 546; WSp.

MHE 518 Spirituality in Medicine (2) *Farber, McCormick* Examination of the beliefs, values, meaning, and spirituality of health professionals for the well-being of their patients as well as for themselves. Offered: jointly with FAMED 547.

MHE 521 The Ethical Challenges of Modern Medicine (3) *McCormick* Case-study approach to contemporary ethical issues in medicine, utilizing techniques of ethical analysis and argument in examining actual cases arising in our pluralistic culture, where values are often in conflict. Open to graduate and professional students and others with appropriate background.

MHE 522 Ethical Problems Surrounding Death (3) *McCormick* Issues arising in care and treatment of dying patients and their families, including truthful disclosure, use of life-supports, "euthanasia," coping with death and grief. Intersection of patient and professional values related to care in terminal phase of illness. Open to graduate and professional students and others with appropriate background.

MHE 523 Biomedical Ethics (3) *McCormick* Selected topics in medical ethics emphasizing methods of ethical reasoning about moral dilemmas and contributions of philosophical theories and principles to practical problems of medicine. Students provided with opportunities to test their value assumptions and analytical skills. Open to graduate and professional students and others with appropriate background.

MHE 535 Medical Ethics and Jurisprudence (3) *Jonsen* Relationship between bioethics and law. Review of basic concepts of both disciplines; their theoretical and practical connections. Analysis of principal legal cases and statutes illustrating such issues as informed consent to treatment, foregoing life support, research with human subjects, confidentiality, allocation of health care resources. For graduate and professional students.

MHE 541 Exercise in Modern Medicine (1) *Berryman* Survey of role and place of exercise in modern medicine. Historical and contemporary analysis of physical activity and sports medicine in the American health system. Presentations by clinicians about their experiences in: orthopaedics, exercise physiology, sports nutrition, sports psychology, pediatric sports medicine, special issues of female athletes, environmental medicine.

MHE 548 Introduction to Clinical Ethics (5) *Burke* Introduction to history, practice, and research methods in clinical ethics. Case-based examination of methods including principlism, casuistry, narrative methods, virtue ethics. Prerequisite: permission of instructor.

MHE 549 Current Topics in Clinical Ethics I (3) *Dudzinski* Analysis of complex ethical cases from UWSOM clinical departments, literature, and media. Case discussion focuses on implications for delivery of medical care. Prerequisite: MHE 548.

MHE 550 Current Topics in Clinical Ethics II (3) *Fryer-Edwards* Analysis of complex ethical cases from UWSOM clinical departments, literature, and

media. Case discussion focuses on implications for delivery of medical care. Prerequisite: MHE 548.

MHE 595- Ethics Practicum (3-6, max. 6) Students participate in clinical ethics rounds, case discussions, review of research protocols, or other professional activities related to bioethics. For majors only.

MHE 596 Masters Research Project (1-12, max. 12) Research project culminating in a scholarly paper suitable for publication in a peer-reviewed journal. Credit/no credit only. Majors only.

MHE 600 Independent Study or Research (*)

Medicine

domchair@u.washington.edu

Active programs in teaching, research, and patient care are carried on at the University of Washington Medical Center, Seattle Veterans Affairs Medical Center, Harborview Medical Center, Pacific Medical Center, the Puget Sound Blood Center, the Northwest Kidney Center, and the Fred Hutchinson Cancer Research Center. Major affiliations for clinical teaching also exist with Providence Medical Center and Swedish Hospital Medical Center. There are many additional affiliations with community hospitals in Seattle, the state of Washington, and the WWAMI region. Medical students, interns, medical residents, and postdoctoral research fellows rotate through these various hospitals and participate in the learning experiences offered at each.

Faculty

Chair

William J. Bremner

Professors

Abkowitz, Janis L. 1980; MD, 1977, Harvard University; hematology.

Abrass, Christine K. 1984; MD, 1973, Case Western Reserve University; nephrology.

Abrass, Itamar B. 1983; MD, 1966, University of California (San Francisco); gerontology.

Aderem, Alan A. * 1996, (Affiliate); PhD, 1979, University of Capetown (South Africa); signal transduction and the cytoskeleton.

Albers, John J. * 1971; MS, 1967, PhD, 1969, University of Illinois; lipoprotein metabolism and pathophysiology.

Alpers, Charles E. 1986, (Adjunct); MD, 1978, University of Rochester; clinical/experimental glomerular disease, AIDS in man and experimental simian AIDS, vascular biology.

Altman, Leonard * 1974, (Clinical); MD, 1969, Harvard University; mechanisms of tissue injury produced by bacteria, leukocytes, or toxins.

Anasetti, Claudio 1985; MD, 1980, University of Perugia (Italy); oncology.

Andress, Dennis 1982; MD, 1978, University of Oklahoma; nephrology.

Appelbaum, Frederick R. 1978; MD, 1972, Tufts University; oncology.

Argenyi, Zsolt B. 2001; MD, 1978, Semmelweis Medical University (Hungary); dermatopathology.

Austin, Melissa A. * 1988, (Adjunct); PhD, 1985, University of California (Berkeley); genetic epidemiology of chronic diseases and public health genetics.

Baskin, Denis G. * 1979; PhD, 1969, University of California (Berkeley); neuroendocrinology; obesity; CNS regulation of body weight; histochemistry; expression of receptors.

Beeson, Paul B. 1982, (Emeritus); MD, 1933, McGill University (Canada).

Bensinger, William I. 1981; MD, 1973, Northwestern University; oncology.

Bird, Thomas D. 1976; MD, 1968, Cornell University; neurology, neurogenetics.

Bishop, Michael J. 1979, (Adjunct); MD, 1974, University of California (San Diego).

Blagg, Christopher R. 1966, (Emeritus); MD, 1954, MBChB, 1954, University of Leeds (UK); nephrology.

Bomsztyk, Karol 1983; MD, 1977, University of Rochester; role of cytokine-induced protein kinases in the regulation of gene expression.

Bornstein, Paul * 1967; MD, 1958, New York University; structure and function of connective tissue macromolecules, wound healing.

Boyko, Edward J. * 1989; MD, 1979, University of Pittsburgh; epidemiology of inflammatory bowel disease and non-insulin-dependent diabetes mellitus.

Bremner, William J. 1982; MD, 1969, University of Washington, PhD, 1977, Monash University (Australia); endocrinology.

Broudy, Virginia C. 1985; MD, 1980, University of California (San Francisco); hematology.

Brown, B. Greg 1981; PhD, 1969, MD, 1969, Johns Hopkins University; cardiology.

Bruce, Robert A. 1987, (Emeritus); MD, 1943, University of Rochester; cardiology.

Brunzell, John D. * 1975; MD, 1963, University of Washington; nutritional and metabolic aspects of lipoproteins and diabetes.

Buchwald, Dedra S. 1987; MD, 1981, University of California (San Diego); internal medicine.

Burke, Wylie 1984, (Adjunct); PhD, 1974, MD, 1978, University of Washington; ethical and policy implications of genetic information.

Byers, Peter H. * 1976; MD, 1969, Case Western Reserve University; extracellular matrix synthesis, genetic disorders of collagen metabolism, secretion, human genetics.

Caldwell, James H. 1983; MD, 1970, University of Missouri; positron emission tomography imaging of myocardial oxygenation, metabolism and sympathetic function.

Carithers, Robert L. 1990; MD, 1969, University of Pennsylvania; gastroenterology/hepatology.

Chait, Alan * 1977; MBChB, 1967, MD, 1974, University of Capetown (South Africa); clinical nutrition with special emphasis on lipid metabolism.

Charan, Nirmal B. 1980; MBBS, 1968, Christian Medical College of Ludhiana; respiratory disease.

Chesnut, Charles * 1974; MD, 1966, University of Florida; nuclear medicine.

Clark, Joan G. 1985; MD, 1974, Washington University; pulmonary and respiratory disease.

Cobb, Leonard A. 1957, (Emeritus); MD, 1952, University of Minnesota; cardiology.

Collier, Ann C. 1982; MD, 1978, Dartmouth College; infectious diseases.

Collins, Steven J. * 1982; MD, 1973, Columbia University; retinoic acid receptors and the pathogenesis of malignancy.

Copass, Michael K. 1971; MA, 1964, MD, 1964, Northwestern University; neurology/emergency services.

Corey, Lawrence * 1977; MD, 1971, University of Michigan; DX, therapy and pathogenesis of viral infections, AIDS/herpes viruses.

Counts, Richard B. 1973; MD, 1967, Washington University; hematology.

Couser, William G. 1982; MD, 1965, Harvard University; nephrology.

Cummins, Richard 1981; MD, 1972, Case Western Reserve University, MPH, 1977, University of Washington; emergency medicine.

Dale, David C. 1974; MD, 1966, Harvard University; internal medicine.

Dale-Crunk, Beverly A. * 1972, (Adjunct); PhD, 1968, University of Michigan; keratin biochemistry, epithelial differentiation, antimicrobial peptides.

Dean, Larry S. 2000; MD, 1980, University of Alabama; cardiology.

Deeb, Samir S. * 1983; PhD, 1964, University of Illinois; genetic factors predisposing to hyperlipidemia and coronary artery disease.

Deeg, H. Joachim 1994; DrMed, 1972, University of Bonn (Germany); oncology.

Dennis, Melvin B. * 1971, (Adjunct); DVM, 1961, Washington State University; comparative medicine, including animal models and experimental surgery.

Deyo, Richard A. * 1986; MD, 1975, Pennsylvania State University; health status measurement and evaluation of common medical practices.

Dichek, David A. 2001; MD, 1984, University of California (Los Angeles); cardiology.

Disteche, Christine M. * 1980, (Adjunct); PhD, 1976, University of Liege (Belgium); molecular genetics of sex chromosomes, X inactivation, human and mouse cytogenetics.

Drewnowski, Adam * 1998, (Adjunct); PhD, 1977, Rockefeller University; taste and psychology of food choice in disease prevention.

Eisenberg, Mickey * 1978; MD, 1971, Case Western Reserve University, PhD, 1978, University of Washington; sudden cardiac arrest and acute myocardial infarction.

Eliel, Leonard P. 1985, (Emeritus); MD, 1940, Harvard University; metabolism and endocrinology.

Elkon, Keith B. * 2001; MD, University of Witwatersrand (South Africa), MRCP, 1978, University of London; rheumatology.

Ensink, John W. * 1961, (Emeritus); MDCM, 1956, McGill University (Canada); the role of GI hormones in fuel homeostasis.

- Fefer, Alexander 1968; MD, 1964, Stanford University; oncology.
- Fields, Stanley * 1995; MA, 1978, PhD, 1981, Cambridge University (UK); yeast molecular biology and genetics.
- Figley, Melvin M. 1958, (Emeritus); MD, 1944, Harvard University; thoracic and pulmonary radiology.
- Fihn, Stephan * 1982; MD, 1977, St Louis University, MPH, 1981, University of Washington; internal medicine.
- Finch, Clement A. 1949, (Emeritus); MD, 1941, University of Rochester; hematology.
- Fleckman, Philip H. 1982; MD, 1973, Washington University; dermatology.
- Fujimoto, Wilfred Y. * 1969, (Emeritus); MD, 1965, Johns Hopkins University; metabolism, endocrinology, nutrition.
- Furlong, Clement E. * 1977; PhD, 1968, University of California (Davis); human biochemical genetics in biochemistry of membrane transport systems.
- Gartler, Stanley M. * 1957, (Emeritus); PhD, 1952, University of California (Berkeley); mammalian somatic cell genetics with emphasis on the mechanism of x-chromosome inactivation.
- Gilliland, Bruce C. * 1970; MD, 1960, Northwestern University; hematology.
- Glomset, John A. * 1977; MD, 1960, University of Uppsala (Sweden); membrane structure and function.
- Goodner, Charles J. * 1962, (Emeritus); MD, 1955, University of Utah; metabolism and endocrinology.
- Greenberg, Philip D. * 1978; MD, 1971, State University of New York (Downstate Medical Center); molecular, cellular, viral, and tumor immunology.
- Handsfield, Hunter 1979; MD, 1968, Columbia University; infectious diseases.
- Hansen, John A. 1977; MD, 1970, Stanford University; oncology.
- Harlan, John M. * 1978; MD, 1973, University of Chicago; vascular biology with emphasis on leukocyte-endothelial adhesion.
- Hartwell, Leland H. * 1968, (Adjunct); PhD, 1964, Massachusetts Institute of Technology; genetic analysis of chromosome transmission and of the control of division by hormones in yeast.
- Hazzard, William R. 2000; MD, 1962, Cornell University; gerontology and geriatric medicine.
- Heitkemper, Margaret M. * 1981, (Adjunct); MN, 1975, University of Washington, PhD, 1981, University of Illinois; gastroenterology, enteral nutrition, gerontology.
- Henderson, Maureen M. * 1975, (Emeritus); MBBS, 1949, DPH, 1956, University of Durham (UK); epidemiology of chronic diseases, dietary prevention of disease.
- Henderson, William R. 1979; MD, 1973, University of California (San Francisco); allergy and infectious disease.
- Hildebrandt, Jacob * 1966; PhD, 1966, University of Washington; respiratory physiology.
- Hirsch, Irl B. 1990; MD, 1984, University of Missouri; metabolism and endocrinology/diabetes.
- Hirschmann, Jan V. 1976; MD, 1970, University of Washington; internal medicine.
- Hlastala, Michael P. * 1972; PhD, 1969, State University of New York (Buffalo); respiratory physiology, inert gas analysis of respiratory function.
- Holmes, King K. * 1967; MD, 1963, Cornell University, PhD, 1967, University of Hawaii; clinical epidemiology and pathogenesis of infectious diseases.
- Hooton, Thomas M. 1982; MD, 1973, University of Texas (Dallas); internal medicine.
- Hudson, Leonard D. 1973; MD, 1964, University of Washington; respiratory diseases.
- Kahn, Steven Emanuel 1986; MBChB, 1978, University of Capetown (South Africa); metabolism and endocrinology.
- Kaushansky, Kenneth * 1979; MD, 1979, University of California (Los Angeles); blood cell development, its cellular and molecular components.
- Kennedy, J. Ward 1966; MD, 1959, University of Rochester; cardiology.
- Kimball, Ann M. * 1992, (Adjunct); MD, 1976, MPH, 1981, University of Washington; emerging infections, public health response to epidemic disease.
- Kimney, Michael 1979; MD, 1979, Washington University; gastroenterology/endoscopy.
- King, Mary-Claire * 1995; PhD, 1973, University of California (Berkeley); genetic analysis of complex human phenotypes, human diversity and evolution.
- Kiviat, Nancy C. * 1979, (Adjunct); MA, 1970, MD, 1975, University of Washington; epidemiologic and molecular biologic studies of the relationship between HPV, HIV, and neoplasia.
- Klebanoff, Seymour * 1962, (Emeritus); MD, 1951, University of Toronto (Canada), PhD, 1954, University of London (UK); infectious disease.
- Knopp, Robert H. * 1974; MD, 1964, Cornell University; metabolism and endocrinology.
- Koepsell, Thomas D. * 1979, (Adjunct); MD, 1972, Harvard University, MPH, 1979, University of Washington; injuries, neuroepidemiology, veterans health, epidemiologic methods, program and policy evaluation.
- Koerker, Donna J. * 1982; PhD, 1970, University of Michigan; endocrinology, intermediate metabolism of carbohydrates.
- Kreiss, Joan K. * 1984; MD, 1978, Washington University, MPH, 1984, University of California (Los Angeles); epidemiology of AIDS, particularly in Africa.
- Kudenchuk, Peter J. 1986; MD, 1979, University of Washington; cardiology.
- Lakshminarayan, S. 1977; MBBS, 1965, All-India Institute of Medical Sciences; pulmonary medicine.
- Larson, Eric B. * 1977; MD, 1973, Harvard University; internal medicine.
- Leboeuf, Renee C. * 1987, (Adjunct); PhD, 1985, Harvard University, MD, 1987, University of Massachusetts; genetic and nutritional regulation of proteins involved in lipid transport.
- Lee, Sum Ping 1985; MD, 1970, University of Hong Kong, PhD, 1978, University of Auckland (New Zealand); gastroenterology.
- Lernmark, Ake * 1988; MD, 1970, PhD, 1971, University of Umea; immunogenetics of organ-specific autoimmunity with emphasis on insulin-dependent diabetes.
- Lipsky, Benjamin A. 1982; MD, 1973, Cornell University; internal medicine.
- Livingston, Robert B. 1982; MD, 1967, University of Oklahoma; oncology.
- Logerfo Sr., James P. * 1974; MD, 1968, University of Rochester, MPH, 1974, University of Washington; quality-of-care assessment.
- Longstreth, W. T., Jr. * 1981, (Adjunct); MD, 1975, University of Pennsylvania, MPH, 1982, University of Washington; neurology.
- Lukehart, Sheila A. * 1980; PhD, 1978, University of California (Los Angeles); immunology of infectious diseases, microbiology, sexually transmitted diseases.
- Lukehart, Sheila A. * 1980; PhD, 1978, University of California (Los Angeles); immunology of infectious diseases, microbiology, sexually transmitted diseases.
- Mannik, Mart * 1966, (Emeritus); MD, 1959, Case Western Reserve University; rheumatology.
- Martin, Paul J. 1978; MD, 1974, University of Pennsylvania; oncology.
- Martin, Thomas R. 1982; MD, 1973, University of Pennsylvania; pulmonary medicine.
- Matsumoto, Alvin M. 1982; MD, 1975, University of Washington; metabolism and endocrinology.
- Mayer, Jonathan D. * 1977, (Adjunct); PhD, 1977, University of Michigan; medical geography, health policy, env. health, epidemiology, intl. health, infectious diseases.
- McArthur, James R. 1973, (Emeritus); MD, 1956, Harvard University; hematology.
- McDonald, George B. 1973; MD, 1967, Washington University; gastroenterology.
- McElrath, Margaret Juliana * 1990; PhD, 1978, MD, 1980, Medical University of South Carolina; infectious diseases.
- Merriam, George R. 1991; MD, 1976, Harvard University; metabolism and endocrinology.
- Miller, Samuel I. * 1995; MD, 1979, Baylor University; salmonella pathogenesis and bacterial-eucaryotic cell interactions.
- Monsen, Elaine R. * 1969, (Adjunct); MS, 1959, PhD, 1961, University of California (Berkeley); nutrition, dietetics.
- Motulsky, Arno G. * 1953, (Emeritus); MD, 1947, University of Illinois; medical genetics.
- Mullins, James I. * 1994; PhD, 1978, University of Minnesota; retroviruses and AIDS, molecular virology.
- Neiman, Paul E. * 1971; MD, 1964, University of Washington; oncology.
- Nelp, Wil B. 1962, (Emeritus); MD, 1955, Johns Hopkins University; nuclear medicine.
- Nelson, Judith Lee 1981; MD, 1977, University of California (Davis); rheumatology.
- Norris, Thomas E. 1988, (Adjunct); MD, 1973, University of Texas (Galveston); clinical applications, health policy and health workforce needs.
- Olerud, John E. 1975; MD, 1971, University of Washington; dermatology.
- Olson, Maynard V. 1992; PhD, 1970, Stanford University; methods and applications of large-scale DNA analysis.

Oram, John Fisher * 1975; PhD, 1972, Pennsylvania State University; cellular lipid transport and metabolism; lipoprotein interactions.

Otto, Catherine M. 1982; MD, 1979, University of Washington; cardiology.

Paauw, Douglas 1985; MD, 1979, University of Washington; general internal medicine.

Pagon, Roberta A. 1979, (Adjunct); MD, 1972, Harvard University; medical genetics.

Palmer, Jerry P. 1973; MD, 1970, State University of New York (Upstate Medical Center); metabolism and endocrinology, diabetes.

Papayannopoulou, Thalia 1974; MD, 1961, DrMedS, 1964, University of Athens (Greece); hematology.

Paulsen, C. Alvin 1958, (Emeritus); MD, 1952, University of Oregon; metabolism and endocrinology.

Pearlman, Alan S. 1978; MD, 1970, Harvard University; cardiology.

Pearlman, Robert A. * 1981; MD, 1975, Boston University; gerontology.

Petersdorf, Robert G. 1994; MD, 1952, Yale University.

Pierson, David John 1976; MD, 1969, Johns Hopkins University; respiratory diseases.

Plorde, James J. * 1982, (Emeritus); MD, 1959, University of Minnesota; infectious diseases, antibiotic-resistant nosocomial infections.

Pope, Charles E. 1964, (Emeritus); MD, 1957, Case Western Reserve University; gastroenterology.

Porte, Daniel, Jr. 1982, (Emeritus); MD, 1957, University of Chicago; metabolism and endocrinology.

Press, Oliver W. * 1982; PhD, 1977, MD, 1979, University of Washington; treatment of hematologic malignancies with monoclonal antibody immunoconjugates.

Preston, Thomas A. 1973; MD, 1962, University of Pennsylvania; cardiology.

Price, Thomas H. 1975; MD, 1966, Johns Hopkins University; hematology.

Probstfield, Jeffrey L. 1993; MD, 1967, University of Washington; cardiology.

Psaty, Bruce M. * 1984; PhD, 1979, MD, 1981, Indiana University; cardiovascular disease, coronary heart disease, hypertension, pharmacoepidemiology.

Raghu, Ganesh 1981; MD, 1974, University of Mysore (India); respiratory disease.

Ramsey, Paul G. 1980; MD, 1975, Harvard University; infectious diseases, internal medicine.

Reid, Brian J. * 1983; PhD, 1975, MD, 1980, University of Washington; genetic and cell cycle abnormalities in neoplastic progression in Barrett's esophagus.

Riddell, Stanley R. 1985; MD, 1979, University of Manitoba (Canada); oncology.

Robertson, H. Thomas 1975; MD, 1968, Harvard University; respiratory diseases.

Root, Richard K. 1991; MD, 1963, Johns Hopkins University; infectious diseases.

Rosen, Henry 1977; MD, 1972, University of Rochester; allergy and infectious diseases.

Roth, Gerald J. 1984; MD, 1967, Harvard University; hematology.

Rubin, Cyrus E. 1954, (Emeritus); MD, 1945, Harvard University; gastroenterology.

Saunders, David R. * 1969, (Emeritus); MD, 1957, McGill University (Canada); intestinal absorption, effect of drugs on GI mucosa.

Schoene, Robert B. 1981; MD, 1972, Columbia University; respiratory diseases.

Schuffler, Michael D. 1973; MD, 1966, University of Illinois; gastroenterology.

Schwartz, Michael W. 1983; MD, 1983, Rush Medical College; metabolism and endocrinology.

Schwartz, Robert S. * 1979, (Affiliate); MD, 1974, Ohio State University; internal medicine and geriatrics.

Schwartz, Stephen Mark * 1974, (Adjunct); MD, 1967, Boston University, PhD, 1973, University of Washington; vascular biology, atherosclerosis, molecular basis of lineage, developmental biology, cell kinetics.

Scott, C. Ronald * 1965, (Adjunct); MD, 1959, University of Washington; diagnosis and nutritional management of genetic disorders of children.

Scribner, Belding H. 1957, (Emeritus); MD, 1945, Stanford University, MS, 1951, University of Minnesota; nephrology.

Sherrard, Donald J. 1968; MD, 1960, University of Washington; nephrology.

Simkin, Peter A. 1969; MD, 1961, University of Pennsylvania; rheumatology.

Siscovick, David S. * 1987; MD, 1976, University of Maryland; epidemiology.

Slichter, Sherrill J. 1970; MD, 1963, George Washington University; hematology.

Smith, Charles B. 1991, (Emeritus); MD, 1962, Harvard University; infectious diseases.

Spence, Alexander M. 1974, (Adjunct); MD, 1965, University of Chicago; neurology, neuro-oncology.

Stamatoyannopoulos, George 1964; MD, 1958, DrMedS, 1960, University of Athens (Greece); medical genetics.

Stamm, Walter E. * 1979; MD, 1971, Harvard University; infectious disease.

Starkebaum, Gordon A. 1970; MD, 1970, Columbia University; rheumatology.

Stevens, Dennis L. 1982; PhD, 1967, Montana State University, MD, 1971, University of Utah; infectious diseases.

Stewart, Douglas 1972; MD, 1965, Harvard University; cardiology.

Stewart, Forrest Mark 2000; MD, 1997, Indiana University; oncology.

Storb, Rainer F. ; MD, 1960, University of Freiburg (Germany).

Stratton, John R. 1982; MD, 1973, Yale University; cardiology.

Sullivan, Sean * 1992, (Adjunct); PhD, 1992, University of California (Berkeley); health economics, pharmaceutical outcomes research and health policy.

Surawicz, Christina M. 1981; MD, 1973, University of Kentucky; gastroenterology.

Swanson, Phillip D. 1964, (Adjunct); MD, 1958, Johns Hopkins University, PhD, 1964, University of London (UK); movement disorders, neurology.

Swenson, Erik R. 1983; MD, 1979, University of California (San Diego); pulmonary medicine.

Sybert, Virginia 1979; MD, 1974, State University of New York (Buffalo); genetics and dermatology.

Tempel, Bruce L. 1988, (Adjunct); PhD, 1983, Princeton University; molecular neurobiology/neurogenetics, especially potassium channel gene structure and function.

Thomas, E. Donnell 1963, (Emeritus); MA, 1943, University of Texas (Austin), MD, 1946, Harvard University; oncology.

Thompson, Arthur R. 1982; MD, 1966, PhD, 1972, University of Washington; hematology.

Turck, Marvin 1964; MD, 1959, University of Illinois; infectious diseases.

Van Citters, Robert L. * 1962, (Emeritus); MD, 1953, University of Kansas; cardiovascular physiology.

Van Voorhis, Wesley C. * 1986; PhD, 1983, Rockefeller University, MD, 1984, Cornell University; infectious diseases.

Verdugo, Pedro * 1974, (Adjunct); MD, 1965, State University of Chile; microrheology, biomechanics, polymer gel physics, laser spectroscopy, cell biology.

Volwiler, Wade 1949, (Emeritus); MD, 1943, Harvard University; gastroenterology.

Wallace, James F. 1968; MD, 1961, Washington University; internal medicine.

Watkins, Sandra L. 1981, (Adjunct); MD, 1981, University of Texas (Houston); nephrology.

Wijsman, Ellen M. * 1987; PhD, 1981, University of Wisconsin; human quantitative and population genetics.

Zager, Richard A. 1985; MD, 1969, Northwestern University; nephrology.

Associate Professors

Ahmad, Suhail 1979; MBBS, 1968, University of Allahabad (India); nephrology.

Aitken, Moira L. 1982; MBChB, 1978, University of Edinburgh (UK); respiratory disease.

Anawalt, Bradley D. 1989; MD, 1989, University of California (Davis); general internal medicine.

Back, Anthony L. 1984; MD, 1984, Harvard University; oncology.

Barnhart, Scott * 1979; MD, 1979, George Washington University; occupationally related lung disease.

Belcher, Donald W. * 1976, (Emeritus); MD, 1962, University of Pennsylvania; ambulatory medicine.

Benditt, Joshua O. 1994; MD, 1982, University of Washington; pulmonary and critical care medicine.

Benedetti, Jacqueline K. * 1980, (Adjunct); PhD, 1974, University of Washington; statistical methodology in infectious disease research, cancer clinical trials.

Berg, Daniel 1997; MD, 1985, University of Toronto (Canada); dermatological surgery.

Blau, Carl A. 1989; MD, 1986, Ohio State University; hematology.

Braddock, Clarence H. * 1993; MD, 1981, University of Chicago; doctor-patient communication, informed consent, bioethics education.

- Bradley, Katharine A. 1990; MD, 1987, Stanford University, MPH, 1993, University of Washington; general internal medicine.
- Brodtkin, Carl * 1989; MD, 1983, University of Colorado (Denver); hepatic effects of occupational solvent exposure; ventilatory decline in asbestos-exposed workers.
- Bronner, Mary P. 1993, (Adjunct); MD, 1989, University of Pennsylvania; gastrointestinal and hepatic pathology, neoplastic progression and transplantation pathology.
- Buchter, Carol M. 2001; MD, 1978, Case Western Reserve University; cardiology.
- Carvalho, Paula G. 1984; MD, 1984, University of Washington; pulmonary and critical care medicine.
- Celum, Connie L. 1987; MD, 1984, University of California (San Francisco); infectious diseases.
- Chauncey, Thomas R. 1985; MD, 1985, Rush Medical College; oncology.
- Cheng, Edith Y. 1995, (Adjunct); MS, 1979, Sarah Lawrence College, MD, 1987, University of Washington; genetics, perinatal medicine.
- Childs, Marian T. * 1978, (Emeritus); PhD, 1950, University of California (Berkeley); nutrition.
- Coombs, Robert W. * 1985; PhD, 1977, MD, 1981, Dalhousie University (Canada); diagnosis and pathogenesis of HIV infection.
- Corson, Marshall A. 1994; MD, 1981, Baylor University; cardiology.
- Culver, Bruce H. 1974; MD, 1969, University of Washington; respiratory diseases.
- Curtis, Jared R. 1988; MD, 1988, Johns Hopkins University, MPH, 1994, University of Washington; pulmonary diseases and critical care medicine.
- Cusack, Barry J. 1982; MD, 1980, University College of Dublin (Ireland); gerontology.
- Davidson, Robert C. 1968, (Emeritus); MD, 1953, University of Washington; nephrology.
- Davis, Connie 1991; MD, 1980, University of Washington; nephrology.
- Deem, Steven A. 1992, (Adjunct); MD, 1984, Southern Illinois University; critical care.
- Dewitt, Dawn E. 1990; MD, 1990, Harvard University; general internal medicine.
- Disis, Mary L. 1990; MS, 1986, MD, 1986, University of Nebraska; oncology.
- Doney, Kristine 1981; MD, 1972, University of Michigan; hematology/oncology.
- Dugdale, David C. 1991; MD, 1982, University of Pennsylvania; general internal medicine.
- Dugowson, Carin E. 1977; MD, 1976, University of Illinois, MPH, 1986, University of Washington; rheumatology.
- Ellis, Georgiana K. 1982; MD, 1982, University of Washington; oncology.
- Elmore, Joann G. 1996; MD, 1987, Stanford University, MPH, 1992, Yale University; clinical epidemiology, breast cancer screening, diagnostic accuracy.
- Fishbein, Daniel P. 1981; MD, 1980, Albert Einstein College of Medicine; cardiology.
- Fleet, Wendell P. 1972; MD, 1965, Creighton University; internal medicine.
- Gardner, Gregory C. 1989; MD, 1984, Baylor University; rheumatology.
- Gavrin, Jonathan R. 1991, (Adjunct); MD, 1978, Dartmouth College.
- Geballe, Adam Philip * 1988; MD, 1978, Duke University; translational regulation of viral and cellular gene expression.
- Gibran, Nicole 1990, (Adjunct); MD, 1985, Boston University; general, burn, and trauma surgery.
- Gill, Edward A. 1984; MD, 1984, University of Washington; cardiology.
- Gilligan, Diana Mary 2001; PhD, 1985, MD, 1985, Albert Einstein College of Medicine; hematology.
- Glass, Ian 2000, (Adjunct); MD, 1991, University of Otago (New Zealand); genetics.
- Glenny, Robb * 1987; MD, 1984, University of Virginia; determinants of regional pulmonary blood flow and ventilation distribution.
- Goldberg, Harold I. 1986; MD, 1977, Stanford University; applying clinical informatics to health services delivery and quality improvement.
- Goldberg, Steven L. 2000; MD, 1984, University of Kansas; cardiology.
- Goldstein, Erika A. 1981; MD, 1981, University of Rochester; general internal medicine.
- Goodman, Richard B. 1986; MD, 1982, University of Oklahoma; pulmonary and critical care medicine.
- Gretch, David R. * 1990, (Adjunct); PhD, 1990, MD, 1990, University of Iowa; research and diagnostics related to viral hepatitis.
- Griep, Robert J. 1982; MD, 1958, University of Texas (Galveston); internal medicine/radiology.
- Gruenewald, David A. 1983; MD, 1983, University of Chicago; gerontology and geriatric medicine.
- Harrington, Robert D. 1989; MD, 1983, Tufts University; teaching and research studies involving HIV entry into CD4 cells.
- Higano, Celestia S. 1982; MD, 1979, University of Massachusetts; oncology.
- Hockenbery, David M. * 1994; MD, 1982, Washington University; gastroenterology.
- Horwitz, Marshall S. * 1983; PhD, 1988, MD, 1990, University of Washington; inherited white blood cell disorders, including leukemia.
- Jackson, J. Carey 1990; MPH, 1980, University of Hawaii, MD, 1986, Michigan State University; general internal medicine.
- Jarvik, Gail P. * 1991; PhD, 1986, University of Michigan, MD, 1987, University of Iowa; quantitative genetics and genetic epidemiology, focusing on common diseases.
- Jobe, Kathleen A. 1986; MD, 1986, University of Colorado (Denver); internal medicine.
- Kaufman, Joel D. * 1988; MD, 1986, University of Michigan, MPH, 1990, University of Washington; occupational and environmental epidemiology; etiologic research and public health surveillance.
- Kavanagh, Terrance J. 1985, (Adjunct); MS, 1980, PhD, 1985, Michigan State University; free radical toxicology, glutathione metabolism, toxicology and aging.
- Keifer, Matthew C. * 1982; MD, 1982, University of Illinois; the human health effects of pesticide exposure.
- Kowdley, Kris V. 1993; MD, 1985, Mt Sinai School of Medicine; gastroenterology.
- Lafferty, William E. 1988, (Adjunct); MD, 1978, University of Kansas; STDs, HIV/AIDS, surveillance and epidemiology of STD, managed care.
- Lampe, Mary F. * 1988; MS, 1976, University of Washington, PhD, 1984, University of North Carolina; medical technology education, molecular analysis of Chlamydia trachomatis pathogenesis.
- Lehmann, Kenneth G. 1990; MD, 1979, University of California (San Diego); cardiology.
- Lessler, Daniel * 1990; MD, 1986, Stanford University, MHA, 1992, University of Washington; health services research pertaining to cost-effectiveness, quality of care, medical management.
- Levy, Wayne C. 1985; MD, 1985, Loma Linda University; cardiology.
- Liles, W. Conrad 1990; PhD, 1987, MD, 1987, University of Washington; infectious diseases.
- Lindner, Armando 1970; MD, 1964, University of Buenos Aires (Argentina); nephrology.
- Linenberger, Michael L. 1986; MD, 1982, University of Kansas; hematology.
- Linker, David T. 1993; MD, 1976, Stanford University; diagnostic ultrasound in cardiology and cardiovascular pathophysiology.
- Lipkin, Edward W. * 1981; PhD, 1977, MD, 1978, Case Western Reserve University; mineral metabolism, nutrition support, non-human primate physiology.
- Madtes, David K. 1994; MD, 1979, University of Pittsburgh; pulmonary and critical care medicine.
- Maloney, David G. 1995; MD, 1985, PhD, 1991, Stanford University; medical oncology.
- Marra, Christina M. 1984, (Adjunct); MS, 1979, Oregon State University, MD, 1984, University of Oregon; neurology, infectious diseases.
- Martin, Gary V. 1984; MD, 1980, University of Arizona; cardiology.
- Martin, Thomas G. 1996; MD, 1977, Pennsylvania State University; general internal medicine.
- McMullen, W. Russell 1981; MD, 1978, University of Cincinnati; internal medicine, emergency medicine.
- McCormick, Wayne C. 1987; MD, 1983, Washington University; gerontology and preventative medicine.
- McGee, Steve R. 1987; MD, 1980, Washington University; general internal medicine.
- McTiernan, Anne * 1989, (Adjunct Research); PhD, 1982, University of Washington; breast and colon cancer, womens health, exercise and obesity.
- Mengert, Terry J. 1984; MD, 1984, University of Washington; emergency medicine.
- Miller, Richard A. 1981; MD, 1977, Harvard University; infectious diseases.
- Nash, Richard A. 1994; MD, 1977, University of Manitoba (Canada); oncology.
- Nguyen, Toan D. 1994; MD, 1978, University of Chicago; gastroenterology.
- Nielson, Christopher P. 1983; MD, 1978, University of California (Los Angeles); gerontology and geriatric medicine.
- O'Brien, Kevin 1984; MD, 1984, University of Washington; cardiology.

350 SCHOOL OF MEDICINE / MEDICINE

O'Donnell, Paul V. 2001; PhD, 1973, Cornell University, MD, 1992, Johns Hopkins University; oncology.

Olson, Carin M. 1994; MD, 1978, Ohio State University; general internal medicine.

Ott, Susan M. 1980; MD, 1974, University of Washington; nephrology.

Oxorn, Donald C. 1998, (Adjunct); MD, 1978, McGill University (Canada).

Petersdorf, Effie Wang 1982; MD, 1982, McGill University (Canada); oncology.

Petersdorf, Stephen H. 1983; MD, 1983, Brown University; oncology.

Pinsky, Linda E. 1989; MD, 1989, University of Washington; general internal medicine.

Poole, Jeanne E. 1981; MD, 1980, University of Washington; cardiology.

Presland, Richard B. * 1994, (Adjunct Research); PhD, 1987, University of Adelaide (Australia); epithelial/epidermal differentiation, genetic diseases, regulation of development.

Quinn, Lebris S. * 1980; PhD, 1982, University of Washington; control of muscle precursor cell proliferation and differentiation; muscle growth.

Radich, Jerald P. 1983; MS, 1979, Harvard University, MD, 1983, University of California (Davis); oncology.

Ralph, David D. 1981; MD, 1972, Stanford University; respiratory diseases.

Ramsey, Scott D. * 1990; MD, 1990, University of Iowa, PhD, 1994, University of Pennsylvania; economics in medicine.

Raskind, Wendy H. 1982; PhD, 1977, MD, 1978, University of Washington; medical genetics.

Raugi, Gregory J. 1980; PhD, 1975, Duke University, MD, 1975, Duke University; dermatology.

Reed, May J. 1990; MD, 1986, Harvard University; geriatric medicine and gerontology.

Reilly, Dominic F. 1991; MD, 1988, University of Washington; general internal medicine.

Russell, David W. 1991; PhD, 1988, Rockefeller University, MD, 1989, Cornell University; hematology.

Sabath, Daniel E. * 1993, (Adjunct); PhD, 1989, MD, 1989, University of Pennsylvania; regulation of gene expression in hematopoietic cells.

Sandmaier, Brenda M. 1987; MD, 1983, University of Alberta (Canada); oncology.

Sasso, Eric H. 1984; MD, 1980, University of California (San Diego); rheumatology.

Schmidt, Rodney 1984, (Adjunct); PhD, 1984, MD, 1984, University of Washington; surgical pathology, pulmonary pathology, sarcomas, image analysis, electron microscopy.

Schnapp, Lynn M. 2000; MD, 1986, University of Pennsylvania; pulmonary and critical care medicine.

Schubach, William H. 1994; PhD, 1971, University of California (Santa Cruz), MD, 1974, Columbia University; oncology.

Shankland, Stuart J. 1994; MBChB, 1983, University of Capetown (South Africa); nephrology.

Sheffield, John V. L. 1989; MD, 1989, Harvard University; general internal medicine.

Skerrett, Shawn J. 1983; MD, 1978, New York University; pulmonary and critical care medicine.

Smith, Curtis Scott 1987; MD, 1980, University of Washington; general internal medicine.

Spach, David H. 1986; MD, 1986, Duke University; infectious diseases.

Stadius, Michael L. 1993; MD, 1978, University of Oregon; cardiology.

Stapleton, Ann E. 1987; MD, 1984, Albert Einstein College of Medicine; allergy and infectious diseases.

Steinbach, Gideon 2001; PhD, 1975, City University of New York, MD, 1981, Albert Einstein College of Medicine; gastroenterology.

Steinberg, Kenneth P. 1989; MD, 1985, New York Medical College; pulmonary and critical care medicine.

Stephens, Karen G. * 1989, (Research); PhD, 1982, Indiana University; neurofibromatosis, tumorigenesis, gene mapping and regulation, human genetics.

Stern, Eric J. 1992, (Adjunct); MD, 1985, University of Medicine and Dentistry of New Jersey; chest radiology.

Stivelman, John C. 2000; MD, 1978, University of Pennsylvania; nephrology.

Sugg, Nancy K. 1983; MD, 1983, University of Maryland; internal medicine.

Tait, Jonathan F. * 1985, (Adjunct); PhD, 1983, MD, 1983, Washington University; biochemistry of blood coagulation, laboratory diagnosis of genetic disorders.

Thompson, John A. 1979; MD, 1979, University of Alabama; oncology.

Weigle, David S. 1981; MD, 1978, Harvard University; endocrinology and metabolism.

Wener, Mark H. * 1980, (Adjunct); MD, 1974, Washington University; diagnostic immunology, immune complex diseases.

Whimbey, Estella 2001; MD, 1978, Cornell University; allergy and infectious diseases.

Willerford, Dennis M. * 1996; MD, 1995, Washington University; hematology.

Willson, Richard 1973; MD, 1962, University of Minnesota; gastroenterology.

Wipf, Joyce E. 1984; MD, 1984, University of Minnesota; general internal medicine.

Witherspoon, Robert P. 1976; MS, 1970, MD, 1970, Baylor University; oncology.

Wood, Francis C, Jr. * 1961, (Emeritus); MD, 1954, Harvard University; metabolism and endocrinology.

Wood, Robert W. 1977; MD, 1970, University of Rochester; internal medicine.

Yeung, Raymond S. 1997, (Adjunct); MD, 1982, University of Toronto (Canada); general and surgical oncology.

Ziskind, Andrew A. 1999; MD, 1984, University of Pennsylvania; clinical programs.

Assistant Professors

Amory, John K. 1997; MD, 1994, University of California (San Francisco); endocrinology.

Ayub, Kamran 2001; MBBS, 1983, University of Peshawar (Pakistan), MRCP, 1989, Royal College of Physicians (UK); gastroenterology.

Baas, Arnold S. 1994; MD, 1989, University of Texas (Southwestern); cardiology.

Boeckh, Michael J. J. 1994; MD, 1985, Freie University of Berlin (Germany); allergy and infectious diseases.

Brentnall, Teresa A. 1991; MD, 1987, University of Washington; gastroenterology.

Bridge, Janis D. 1991; MPH, 1983, University of California (Los Angeles), MD, 1984, University of Washington; general internal medicine.

Brodtkin, Kayla I. 1989; MD, 1982, State University of New York (Stony Brook); gerontology and geriatric medicine.

Buckner, Frederick S. 1992; MD, 1988, University of Washington; infectious diseases.

Clurman, Bruce E. * 1991; PhD, 1988, MD, 1989, Cornell University.

Colven, Roy M. 1987; MD, 1987, University of Washington; dermatology.

Cook, David G. * 1998, (Research); PhD, 1991, Yale University; molecular mechanisms of Alzheimer's disease.

Cummings, David E. * 1987; MD, 1987, Harvard University; genetic determinants of obesity. Interplay between body weight and reproduction.

Dominitz, Jason A. 1998; MD, 1991, University of Maryland, MS, 1996, Duke University; gastroenterology.

Drachman, Jonathan G. 1989; MD, 1989, Harvard University; hematology.

Duchin, Jeffrey S. 1995; MD, 1985, Rutgers University; infectious diseases and epidemiology.

Evans, Timothy C. 1980; MD, 1974, PhD, 1976, University of Michigan; diabetes management.

Fero, Matthew L. 1993; MD, 1990, University of California (Irvine); oncology.

Fitzgibbon, Dermot R. 1992, (Adjunct); MBChB, 1983, Cork Regional Hospital; pain management.

Flowers, Mary E. 1994; MD, 1977, Centrol de Ciencias da Sande da Universiade Federal do Rio Grande do Norte Brazil (Brazil); oncology.

Frank, Leonard R. 1997; MD, 1988, Albany Medical College; emergency medicine.

Fredricks, David N. 2001; MD, 1990, Case Western Reserve University; allergy and infectious diseases.

Freeman, Rosario 2001; MD, 1995, Loyola University; cardiology.

Gaster, Barak 1993; MD, 1993, University of California (San Francisco); general internal medicine.

Georges, George E. 1994; MD, 1990, University of California (San Francisco); oncology.

Gernsheimer, Terry B. 1984; MD, 1979, State University of New York (Stony Brook); hematology.

Golden, Matthew R. 1994; MPH, 1993, MD, 1994, Johns Hopkins University; allergy and infectious diseases.

Goss, Christopher Hooper 1997; MD, 1992, University of Colorado (Denver); pulmonary and critical care medicine.

Goss, J. Richard 1993; MD, 1987, Oregon Health Sciences University, MPH, 1995, University of Washington; internal medicine.

Gralow, Julie R. 1992; MD, 1988, University of Southern California; oncology.

Greenberg, Deborah L. 1990; MD, 1990, Washington University; general internal medicine.

Holmberg, Leona A. 1987; MD, 1986, University of Miami (Florida); oncology.

Hornung, Robin L. 1999, (Adjunct); MD, 1990, Yale University, MPH, 1996, University of North Carolina; dermatology.

Iwamoto, Satori 1993; MD, 1989, Harvard University; dermatology.

Jain, Sanjeev 2001; MD, 1990, PhD, 1990, University of Wisconsin (Madison); allergy and infectious diseases.

John Stewart, Grace C. 1992; MD, 1987, University of Michigan, MPH, 1995, University of Washington; mother-to-child HIV-1 transmission (specifically, Africa, cofactors, breastmilk).

Johnson, Kay M. 1991; MD, 1991, University of Minnesota; general internal medicine.

Kapur, Vishesh 1993; MD, 1989, Yale University; pulmonary and critical-care medicine.

Kearney, David J. 1996; MD, 1989, University of Missouri; gastroenterology.

Kiem, Hans-Peter 1992; MD, 1987, University of Ulm (Germany); oncology/hematology.

Kitahata, Mari M. 1991; MD, 1987, University of Pennsylvania, MPH, 1995, University of Washington; allergy and infectious diseases.

Koelle, David 1988; MD, 1985, University of Washington; allergy and infectious diseases.

Kuechle, Melanie K. 1995; MD, 1989, Baylor University; dermatology.

Kuver, Rahul P. 1989; MD, 1989, University of Michigan; gastroenterology.

Larson, Anne M. 1991; MD, 1991, University of Washington; gastroenterology.

Laya, Mary B. 1993; MD, 1982, Creighton University, MPH, 1995, University of Washington; general internal medicine.

Limaye, Ajit P. 1998; MD, 1992, University of Washington.

Lingappa, Jaisri * 1999, (Adjunct); PhD, 1985, Harvard University, MD, 1987, University of Massachusetts; cell biology of virus assembly; host proteins involved in assembly of HIV and other viruses.

Marrazzo, Jeanne M. 1992; MD, 1988, Jefferson Medical College, MPH, 1994, University of Washington; infectious diseases.

McNeely, Marguerite J. 1991; MD, 1988, MPH, 1993, University of Washington; general internal medicine.

Migeon, Mary 1988; MD, 1993, University of Washington; general internal medicine.

Montgomery, R. Bruce 1990; MD, 1987, Duke University; oncology.

Muczynski, Kimberly Ann 1989; PhD, 1984, MD, 1984, University of Washington; nephrology.

Neff, Margaret J. 1997; MD, 1993, Stanford University, MSc, 2000, University of Washington; pulmonary and critical care medicine.

Nelson, Karin M. 2001; MD, 1995, University of Minnesota, MSHS, 2000, University of California (Los Angeles); general internal medicine.

Nelson, Peter S. * 1993; MD, 1986, University of Kansas; the study of human carcinogenesis using tools of genomics and bioinformatics.

Neuzil, Kathleen M. 1998; MD, 1987, Johns Hopkins University, MPH, 1998, Vanderbilt University; allergy and infectious diseases.

Park, David R. 1988; MD, 1988, University of Vermont; pulmonary and critical care medicine.

Pickett, Cheryl A. 1998; PhD, 1984, University of California (Davis), MD, 1988, University of Colorado (Denver); metabolism, endocrinology, nutrition.

Powell, Heidi Sara 1993; MD, 1986, Oregon Health Sciences University; general internal medicine.

Ramakrishnan, Lalita * 2001, (Adjunct); MD, 1983, Baroda Medical College (India), PhD, 1990, Tufts University; contributions of mycobacteria and hosts to maintenance of chronic tuberculosis.

Rhoads, Caroline S. 1989; MD, 1989, University of Pennsylvania; general internal medicine.

Rubenfeld, Gordon 1991; MD, 1987, Jefferson Medical College, MPH, 1996, University of Washington; pulmonary and critical care medicine.

Ryan, Michael J. 1986; MD, 1986, University of Michigan; nephrology.

Schuetze, Scott 1996; PhD, 1993, MD, 1993, Oregon Health Sciences University; oncology.

Schwarze, Ulrike 1993, (Adjunct); MD, 1989, Medical Academy of Dresden (Germany); inherited disorders of connective tissue.

Shadlen, Marie-Florence 1995; MD, 1983, Brown University; gerontology and geriatric medicine.

Shuhart, Margaret C. 1991; MD, 1988, Dartmouth College; gastroenterology.

Staiger, Thomas O. 1990; MD, 1985, University of Washington; general internal medicine.

Stehman-Breen, Catherine O. 1990; MD, 1990, University of Chicago, MS, 1996, University of Washington; cardiovascular epidemiology among patients with end-stage renal disease.

Stempien-Otero, April S. 1994; MD, 1990, University of Connecticut; cardiology.

Sutton, Paul R. 1999; PhD, 1992, University of Illinois, MD, 1994, University of Chicago; internal medicine.

Tabet, Stephen R. 1991; MD, 1991, University of New Mexico, MPH, 1993, University of Washington; infectious diseases.

Thompson, William H. 1988; MD, 1988, Johns Hopkins University; pulmonary and critical care medicine.

Tonelli, Mark R. 1993; MD, 1989, University of Colorado (Boulder); pulmonary and critical care medicine.

Townes, David A. 2001; MD, 1993, University of Massachusetts, MPH, 1998, University of Chicago; emergency medicine.

Trence, Dace L. 2000; MD, 1997, University of Minnesota; endocrinology.

Tu, Shin-Ping 1993; MD, 1989, University of Cincinnati, MPH, 1996, University of Washington; general internal medicine.

Tung, Bruce Y.; MD, 1992, University of Chicago; gastroenterology.

Wald, Anna * 1989; MD, 1985, Mt Sinai School of Medicine, MPH, 1994, University of Washington; the epidemiology, natural history and therapeutics of HSV and other herpes viruses infections.

Warren, Edus Houston 1993; PhD, 1988, MD, 1991, Harvard University; oncology.

Watanabe, Jill M. 1998; MD, 1990, MPH, 1991, Johns Hopkins University; general internal medicine.

Wong, Emily Y. 1995; MD, 1990, University of Washington; internal medicine.

Wu, Daniel Y. 1991; PhD, 1990, MD, 1991, Loma Linda University; oncology.

Yee, Cassian 1991; MD, 1986, University of Manitoba (Canada); oncology.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

MED 498 Undergraduate Thesis (*) *Paauw* Offered: AWSpS.

MED 499 Undergraduate Research (*) *Paauw* Case studies, with laboratory research. Available to undergraduates and medical students. Offered: AWSpS.

MED 505 P-Preceptorship in Medicine (1) *Paauw* To provide opportunity for first- and second-year medical students to gain personal experience with medical practice situations by being stationed with carefully selected clinical faculty members in their offices. Credit/no credit only. Prerequisite: permission of department. Offered: AWSpS.

MED 510 Health Issues of Sexual Minorities (1) *Greenberg* Introduction to the special health care issues and barriers confronting persons identified as bisexual, gay, lesbian, or transgendered. Includes lectures, panels, and case presentations by faculty and community experts. Offered: Sp.

MED 530 AIDS: A Multidisciplinary Approach (2) *Koutsky, Kreiss* Comprehensive overview of the public health, clinical, and laboratory aspects of human immunodeficiency virus (HIV) infection and disease. Topics include the pathogenesis, natural history, and management of (HIV) infections. The impact of HIV/AIDS on community and global health care and prospects for prevention and control. Credit/no credit only. Offered: jointly with EPI 530; A.

MED 531 P-Human Genetics (*) *Stamatoyannopoulos* Weekly seminar dealing with a variety of topics in medical genetics given by faculty of the Division of Medical Genetics and related departments and divisions. Open to medical students with a good foundation in genetics. Offered: AWSpS.

MED 532 Statistical Methods in Medical Genetics (2) *Wijsman* Theory and application of statistical techniques used in medical genetics. In-depth discussion of linkage and segregation analysis and ascertainment problems. Applications stressed with reference to assumptions and limitations. Data sets analyzed with current computer programs. Prerequisite: knowledge of genetics or permission of instructor. Offered: jointly with BIOS/PHG 532; Sp.

MED 533 P-Clinical Endocrinology (2) *Cummings* Emphasis on the most major and dependable symp-

toms, signs, laboratory tests, and therapy for clinical endocrinopathies. Patient illustrated. Limited to second-year medical students. Offered: W.

MED 546 Clinical Applications of Gene Therapy (2) *Lieber* Overview of the current status of gene therapy. Discusses its role in the future practice of medicine. Lecture and literature reviews. Offered: S.

MED 547 Quantitative Methods in Medical Genetics (2) Computational methods of use for medical genetics. Review of problem sets. Topics range from basic probability to linkage analysis. Prerequisite: genetics and permission of instructor.

MED 549 Clinical Medical Genetics (1) Review of current clinical advances in medical genetics. Includes lectures and discussion of cases from medical genetics clinic. Prerequisite: genetics or human genetics and permission of instructor. Offered: AWSp.

MED 550 P-An Introduction to Emergency Medicine (1) *Mengert* Presentation of common medical and surgical emergencies and their urgent management, especially within the framework of rapid patient assessment and stabilization. Lecture topics include chest pain and myocardial infarction, basic arrhythmia management, and burn and wound care. Offered: Sp.

CONJ 550 P-Clinical Infectious Diseases (3) *Spach* See Conjoint Courses.

MED 555 P-Mind, Body, and Pen: Writing and the Art of Becoming a Physician (1) Provides forum for medical students to write about issues in medicine and medical education. Focuses on writing as a process for giving voice to the conflicting demands and dilemmas of becoming a physician. Explores personal narratives, dreams and disappointments, chronic illness and death, empathy and revulsion, authenticity and power. Offered: W.

UCONJ 555 Principles of STD/HIV Research (3) *Lukehart* See University Conjoint Courses.

MED 599 P-Transfusion Machine (3) *Reiner* Group discussions and didactic sessions cover broad category of transfusion medicine. Hands-on laboratory experience in red cell serology/compatibility, coagulation, and histocompatibility with emphasis on diagnosis and management of clinical problems. Based at Puget Sound Blood Center. Prerequisite: fourth-year medical student standing; third-year student standing with permission of instructor.

MED 604 P-Clinical Preceptorship in Internal Medicine (8) *Shima (Forks)* Working closely with primary-care physicians, the student is exposed to the private practice of internal medicine in a small community. Operating on a one-to-one basis with an internist, the student evaluates and manages inpatients and outpatients on a primary care, consultative, and emergency basis. Prerequisite: MED 665. (Four weeks, full-time.) Offered: AWSpS.

MED 640 P-Dermatology Clinic (*, max. 5) *Olerud* Students attend dermatology clinic on Monday mornings and Thursday afternoons for twelve weeks. Two half-days per week. Prerequisite: MED 665. Offered: AWSpS.

MED 642 P-Clinical Oncology (8) *Stewart (Fred Hutchinson Cancer Research Center)* Students functioning as primary physicians are responsible for the workups and daily care of patients receiving marrow transplants, high-dose chemotherapy or immunotherapy on an intensive-care research ward. Emphasis is on the management and supportive care of patients with pancytopenia and immunosuppression, transplantation biology, cancer chemotherapy, and infectious disease problems. Prerequisite: MED 665. (Four weeks.) Offered: AWSpS.

MED 644 P-Management of Sexually Transmitted Diseases (2) *Golden, Handsfield* Instruction and clinical experience in diagnosis, treatment, management, and patient counseling of sexually transmitted diseases. Instruction in genitourinary physical examination skills; relevant laboratory techniques and management of patients with STDs. Prior to the elective, each student must review a packet of didactic materials. Prerequisite: MED 665, SURG 665, and OB GYN 665. Offered: AWSpS.

MED 650 P-Advanced Medical Genetics (*, max. 5) *Jarvik, Horwitz, Stamatoyanopoulos* Summer course intended for third-year students who would like to increase their background in specific areas of medical genetics. Involves seeing patients with the instructor, reviewing the literature, analyzing clinical information, and writing a review on a selected topic. Prerequisite: HUBIO 554. Offered: S.

MED 655 P-Clinical HIV Care (8) *Harrington* Full-time outpatient and inpatient elective in HIV care for senior medical students. Students see patients for routine care and acute medical problems that do not require hospitalization, as well as provide inpatient consults. Prerequisite: MED 665.

MED 656 P-Clinical Nutrition (8) *Bruemmer, Purnell, Weigle* Instruction in nutritional assessment and care of both inpatients and outpatients. Students work with preceptors at a variety of hospital and clinic teaching sites, attend nutrition-related seminars, and practice interview skills on standardized patients. Prerequisite: HUBIO 568; MED 665.

MED 665 P-Clinical Clerkship (*, max. 24) *Paauw* Third-year medical students assume increasing responsibility for care of hospitalized patients in a teaching-hospital setting and participate in a four-week outpatient experience emphasizing continuity of care. Daily rounds with resident and attending physicians, with lectures and conferences. Progress evaluated by supervising physicians and a written examination. (Twelve weeks, full-time.) Offered: AWSpS.

MED 666 P-Advanced Clinical Clerkship in Internal Medicine-WWAMI (12) *Paauw* Advanced clinical clerkship in internal medicine in three small urban communities. Supervised, structured experience in dealing with situations commonly encountered by the practicing internist. Continuity of care and the relationship between care given in the ambulatory setting and in the hospital, as well as by other community health services, is emphasized. Prerequisite: MED 665. (Six weeks, full time. Limit: six students.) Offered: AWSpS.

CONJ 677 P-Clinical Allergy and Immunology (*, max. 12) *Henderson* See Conjoint Courses.

MED 678 P-Clinical Dermatology (8) *Olerud* Participation in dermatology clinics and inpatient consultations at University of Washington Medical Center; Harborview Medical Center; Children's Hospital Medical Center; Seattle V.A. Hospital; Meridian, Idaho; Casper, Wyoming; and Bellingham, Washington. Journal club and clinical conferences each week with entire staff. A continuing series of teaching seminars and weekly dermatopathology conferences. Prerequisite: MED 665. (Four weeks.) Offered: AWSpS.

MED 679 P-Clinical Gastroenterology (8) *Lee, Novan (Sacred Heart Spokane)* Participation in consulting ward rounds, procedures, conferences, and selected clinics with full-time divisional staff at University and Veterans Administration hospitals, and at Pacific and Harborview medical centers, plus directed tutorial work. Prerequisite: MED 665. (Four weeks, full-time.) Offered: AWSpS.

MED 680 P-Rheumatology (8) *Elkon* Full-time inpatient-outpatient clerkship in rheumatology.

Clinical experience provided in diagnosis and treatment of rheumatic diseases, utilizing outpatient clinics and hospitalized patients at the University of Washington Medical Center, Harborview Medical Center, or VAMC. Emphasis on concepts in pathophysiology, diagnosis, and treatment of these diseases. In addition to patient contact, reading, seminars, and preceptorial sessions are the methods of instruction. Prerequisite: MED 665. Offered: AWSp.

MED 681 P- Dermatologic Surgery (8) Dermatologic surgery elective for senior medical students. Instruction in Mohs surgery, conventional skin surgery, cosmetic procedures, wound healing and closure, and intraoperative and postoperative patient management. Prerequisite: MED 665.

MED 682 P-Clinical Cardiology and Electrocardiography (8) *Caldwell (Seattle V.A. Hospital), Corson (Harborview Medical Center), Herzog (Anchorage Veterans Administration Hospital), Mascette (Madigan Hospital Medical Center), Novan (Sacred Heart, Spokane), Otto (University of Washington Medical Center)* Clerkship in clinical cardiology-combined inpatient-outpatient assignments, ECG interpretation. Prerequisite: MED 665. (Four weeks.) Offered: AWSpS.

MED 683 P-Clinical Respiratory Disease and Critical Care Medicine (8) *Lakshminahrayan (Seattle V.A. Hospital), Pierson (Harborview Medical Center), Roth (Madigan) Thompson (Boise Veterans Administration Medical Center), Tonelli (University of Washington Medical Center)* Training in respiratory disease diagnosis and pulmonary therapy, with special emphasis on cardiopulmonary function testing and interpretation. Inpatient and outpatient teaching rounds, conferences, and basic science integration. Prerequisite: MED 665. (Four weeks.) Offered: AWSpS.

MED 684 P-Clinical Hematology/Oncology (8) *Abkowitz (University of Washington Medical Center), Broudy (Harborview Medical Center), Collins (Boise Veterans Administration Medical Center), Roth (Seattle V.A. Hospital), Zuckerman (Boise Veterans Administration Medical Center)* Outpatient and inpatient experience with hematologic/oncologic disorders. The elective includes teaching rounds, conferences, and evaluation of laboratory work. Prerequisite: MED 665. (Four weeks.) Offered: AWSpS.

MED 685 P-Clinical Genetics (*, max. 24) *Bird, Byers, Motulsky, Stamatoyanopoulos* Full-time clinical clerkship in medical genetics. Provides extensive exposure to variety of genetic diseases and genetic counseling. Students work in three clinics (Monday, Tuesday, Thursday), response to in-house consultation requests, attend rounds at Children's Hospital and Medical Center and University of Washington Medical Center and seminars at University of Washington Medical Center (Wednesday, Friday). Prerequisite: MED 665. Offered: AWSpS.

MED 688 P-Ward Medicine Subinternship (*, max. 24) *Harvey (Anchorage), R. Jones (Madigan Hospital Medical Center), McGee (Veterans Administration Medical Center), Paauw (University of Washington Medical Center), Schoene (Providence), Sheffield (Harborview Medical Center)* Students act in the capacity of interns on the medical wards under supervision of house staff and visiting physicians. They attend all regular medicine rounds and conferences as their schedules permit. Prerequisite: MED 665. (Four or six weeks.) Offered: AWSpS.

MED 689 P-Clinical Infectious Diseases (8) *Stamm (University of Washington Medical Center)* Students participate in the consulting service throughout the hospital, attend daily plate rounds, conferences, and seminars. (Four weeks.) *Corey (Fred Hutchinson Cancer Research Center), Holmes (Harborview*

Medical Center), Miller (Seattle V.A. Hospital), Morris (Madigan Army Medical Center), Novan (Spokane), Stevens (Boise Veterans Administration Hospital). Participate in consulting service throughout hospital to learn microbiological aspects of infectious diseases through the clinical laboratories. Prerequisite: MED 665. (Four weeks.) Offered: AWSpS.

MED 690 P-Cardiology Subinternship (8) *Otto* (University of Washington Medical Center) Students act in the capacity of interns on the cardiology service under the supervision of house officer. Prerequisite: MED 665. (Four weeks.) Offered: AWSpS.

MED 691 P-Primary Care (8/12) *Paauw* Six-week, full-time ambulatory care block in primary care internal medicine. Students participate in several clinics at University of Washington Medical Center following a panel of patients in medicine, rheumatology, and virology clinics. Prerequisite: MED 665 and permission of instructor. Offered: AWSpS.

MED 692 P-Clinical Endocrinology and Metabolism (*, max. 12) *Weigle* (Seattle-based program); *Bunner* (Madigan) Clerkship in clinical endocrinology and metabolism combined inpatient and outpatient assignments at selected hospitals. Prerequisite: MED 665. Offered: AWSpS.

MED 693 P-Nephrology and Fluid Balance (8) *Couser* (University of Washington Medical Center), *Narasimhan* (Boise Veterans Administration Hospital), *Novan* (Spokane Sacred Heart), *Sherrard* (Seattle V.A. Hospital), *Zager* (Harborview Medical Center) Students see clinical nephrologic problems under close supervision, participate in nephrology and transplant rounds, see consults with renal fellow and attending, and work up patients in renal clinics, participate in seminars with clerks from all three hospitals. Prerequisite: MED 665. (Four weeks.) Offered: AWSpS.

MED 694 P-Harborview Evening Clinic (2) *Assefi* A longitudinal elective for senior medical students who assume primary responsibility for a panel of medical patients in an outpatient clinic. Direct care of patients is supplemented by didactic sessions dealing with issues in ambulatory care. Students are strongly encouraged to participate for four quarters. Prerequisite: MED 665 and permission of instructor. Offered: AWSpS.

MED 695 P-Clinical Aspects of Aging (8) *Abrass*, *Hazzard* (Harborview Long Term Care Service, Harborview Medical Center, and Seattle V.A. Medical Center), *Cusak* (Boise V.A. Medical Center) Work with elderly patients as subintern with Senior Care Program. Inpatient and ambulatory setting in nursing homes and patients' homes. Interdisciplinary approach. Prerequisite: MED 665. Offered: AWSpS.

MED 697 P-Medicine Special Electives (*, max. 24) *Paauw* Special clerkship, externship, or research opportunities that can at times be made available at institutions other than University of Washington. Faculty can advise students of opportunities. Students wishing to elect this course should obtain from Dean's office a special assignment form at least three months before preregistration. Prerequisite: permission of department. (Two, four, six, or twelve weeks.) Offered: AWSpS.

MEDEX Northwest

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

MEDEX 450 Basic Science in Clinical Medicine for PAs (6) *Evans*, *Stoll* Intensive review course on important basic science concepts relevant to clinical medicine at the physician assistant level. Topics covered include cell biology, microbiology, genetics and immunity. Prerequisite: admission to the MEDEX Program. Offered: S.

MEDEX 451 Anatomy and Physiology for the MEDEX Practitioner (6) *Cauldwell*, *Landel* Anatomy and physiology of the following organ systems: HEENT, respiratory, cardiovascular, gastrointestinal, reproductive, renal, musculoskeletal, and neurologic. Required for entering students to the MEDEX program who have not satisfied program prerequisites in anatomy and physiology. Offered: S.

MEDEX 452 Basic Clinical Pathology for the MEDEX Practitioner (6) *Stoll* Basic pathological and pathophysiological concepts of diseases commonly encountered in primary-care practice. Pathophysiology studied per organ system. Offered: A.

MEDEX 453 Basic Clinical Skills for the MEDEX Practitioner (6) *Cupp* Provides the student with mastery of a screening history and physical examination and thoroughness in data-collection skills. Branching examinations of major organ systems and medical record-keeping and verbal presentation skills by the problem-oriented method are taught. Offered: A.

MEDEX 454 Adult Medicine I (7) *Cupp*, *Evans* Problem-oriented approach to the diagnosis and management of common primary care conditions. Introduction to relevant laboratory and radiological procedures. Organ system approach. Offered: W.

MEDEX 455 Adult Medicine II (7) *Cupp*, *Evans* Continuation of MEDEX 454. Offered: Sp.

MEDEX 456 Maternal and Child Health for the MEDEX Practitioner I (3) *Dale* Designed to acquaint students with principles of prenatal care and primary-care pediatrics. Offered: W.

MEDEX 457 Behavioral Science Skills for the MEDEX Practitioner I (2) *Lurie* Process skills and interpersonal skills needed for primary-care practice, assessment skills needed for the diagnosis of emotional problems, and management skills used in primary-care practice to deal with these problems. Offered: A.

MEDEX 458 Behavioral Science Skills for the MEDEX Practitioner II (2) *Lurie* In-depth coverage of common emotional problems seen in primary care. Offered: W.

MEDEX 459 Behavioral Science Skills for MEDEX Practitioner III (2) *Lurie* Continuation of MEDEX 458. In-depth approaches to assessment and management of specific primary-care problems. Advanced interviewing skills with videotaped feedback included. Offered: Sp.

MEDEX 460 Principles of Patient Management for the MEDEX Practitioner I (3) *Stoll* Systematic approach to patient management applicable to a primary-care setting. Majority of course is devoted to

drug therapy and its administration. The other half includes health maintenance, risk factor identification, and nonpharmacological models of therapy. Offered: W.

MEDEX 461 Principles of Patient Management for the MEDEX Practitioner II (3) *Stoll* Continuation of 460. Offered: Sp.

MEDEX 462 Maternal and Child Health for the MEDEX Practitioner II (3) *Dale* Continuation of 456. Emphasis on diagnosis and treatment of common pediatric problems. Offered: Sp.

MEDEX 463 Clinical Clerkships for the MEDEX Practitioner I (19) *Scott* Full-time clinical clerkship spent in institution-based or specialty practice settings, such as occupational health, surgery, emergency medicine, psychiatry, or geriatrics. Credit/no credit only. Offered: AWSpS.

MEDEX 465 Clinical Clerkships for the MEDEX Practitioner II (19) *Plummer* Continuation of clinical clerkships spent in institution-based or specialty practice settings, with emphasis on inpatient medicine. Credit/no credit only. Offered: AWSpS.

MEDEX 466 Family Practice Clerkship for the MEDEX Practitioner I (19) *Ballweg* Family practice under the supervision of physicians throughout the Pacific Northwest. Common primary-care problems. Students and preceptors are educated in the utilization and management of the physician assistant in practice. Students keep computerized records of patient encounters and complete a variety of written assignments. Credit/no credit only. Offered: AWSpS.

MEDEX 467 Family Practice Clerkship for the MEDEX Practitioner II (19) *Flynn* Further experience in primary-care practice with emphasis on independent patient management by the student supervised by family practitioners. Credit/no credit only. Offered: AWSpS.

MEDEX 468 Emergency Medicine I for the MEDEX Practitioner (3) *Landel* Approach to the diagnosis and management of common emergency conditions for primary care physician assistants. Organ system approach. Offered: W.

MEDEX 469 Emergency Medicine II for the MEDEX Practitioner (3) *Landel* Continuation of MEDEX 468. Approach to diagnosis and management of common emergency conditions for primary care physician assistant. Organ system approach. Offered: Sp.

MEDEX 470 PA Role Course I (1) *Ballweg* Introduction to the history, current status and future development of the PA profession. Description and discussion of state medical practice acts and reimbursement status. Other course topics are the roles of physicians and nurse practitioners. Offered: A.

MEDEX 471 PA Role Course II (1) *Ballweg* Continuation of MEDEX 470. Health access issues, health care politics and managed care issues. Offered: W.

MEDEX 472 PA Role Course III (1) *Ballweg* Continuation of MEDEX 471. Focuses on health care issues for specific underserved populations. Cross-cultural simulations introduce course concepts. Students work in small groups and present their findings to fellow students. Offered: Sp.

MEDEX 499 Special Field Projects/Independent Study (1-12, max. 12) Clinical clerkships and independent study activities for students enrolled in the MEDEX Northwest Physician Assistant Program. Credit/no credit only. Offered: AWSpS.

depts.washington.edu/micro/

Microbiology is a natural science that deals with microorganisms such as bacteria, fungi, protozoa, algae, and viruses. It is concerned with the nature and properties of these organisms, their effects on humans and the environment, and how they can be exploited to provide useful products.

Graduate Program

Graduate Program Coordinator
G315 Health Sciences, Box 357242

advmicro@u.washington.edu

The Department of Microbiology offers a graduate program leading to the Doctor of Philosophy degree. Students interested in graduate work should obtain the necessary application forms from the department.

The choice of an adviser and research problem are matters of mutual consent between the student and a faculty member. The course work taken by a graduate student depends to a certain extent upon the student's background and chosen area of specialization, but in general, courses are chosen from the fields of microbiology, immunology, biochemistry, genetics, and cell biology. A master's degree program either with or without thesis is available on a very limited basis. An M.S. degree is not necessarily a prerequisite for the Ph.D. degree.

Applicants are evaluated by a committee that considers the student's grades, scores on the Graduate Record Examination, research experience, letters of recommendation, and any other data that might provide an indication of the student's capabilities for success in a career in science.

Students are normally admitted into the graduate program only in autumn quarter, and all application materials should be received by the department no later than the preceding December 31. Graduate Record Examination aptitude scores are required as part of the application, and the examination should be taken no later than October. Three letters of recommendation must also be sent directly to the department.

Students with a variety of academic backgrounds are accepted for graduate study in microbiology, but it is highly desirable that their undergraduate preparation include at least a year of general chemistry and a year of college physics, courses in organic chemistry and quantitative analysis, calculus, one year of biology, and courses in genetics, biochemistry, and microbiology.

Students in the Ph.D. program are usually supported by funds from training grants, research grants, or teaching assistantships.

Faculty

Chair

James I. Mullins

Professors

Aebersold, Rudolf Hans * 1993, (Affiliate); MD, 1984, Yale University; protein biochemical investigation of signal transduction pathways.

Champoux, James J. * 1972; PhD, 1970, Stanford University; DNA replication, tumor virology.

Clark, Edward A. * 1984; PhD, 1977, University of California (Los Angeles); lymphocyte surface molecules, lymphocyte activation and cell communication.

Corey, Lawrence * 1977, (Adjunct); MD, 1971, University of Michigan; DX, therapy and pathogenesis of viral infections, AIDS/herpes viruses.

Coyle, Marie B. * 1973, (Emeritus); PhD, 1965, Kansas State University; DNA probes and GLC for rapid identification of mycobacteria and corynebacteria.

Evans, Charles A. 1946, (Emeritus); MD, 1937, PhD, 1943, University of Minnesota; microbial flora of human skin, medical virology.

Fields, Stanley * 1995, (Adjunct); MA, 1978, PhD, 1981, Cambridge University (UK); yeast: molecular biology and genetics.

Galloway, Denise A. * 1982; PhD, 1976, City University of New York; viral pathogenesis and neoplasia.

Gilliland, Bruce C. * 1970, (Adjunct); MD, 1960, Northwestern University; hematology.

Gordon, Milton * 1959, (Adjunct); PhD, 1953, University of Illinois; molecular basis of plant tumors, control of gene expression in plants.

Greenberg, Philip D. * 1978, (Adjunct); MD, 1971, State University of New York (Downstate Medical Center); molecular, cellular, viral, and tumor immunology.

Hakomori, Sen-Itiroh * 1967; MD, 1951, DrMedS, 1956, Tohoku Imperial University (Japan); membrane biochemistry and glycoproteins.

Holmes, King K. * 1967, (Adjunct); MD, 1963, Cornell University, PhD, 1967, University of Hawaii; clinical epidemiology and pathogenesis of infectious diseases.

Hu, Shiu-Lok 1988; PhD, 1978, University of Wisconsin; virus-host interactions, AIDS vaccines and pathogenesis of primate lentivirus infection.

Hughes, Kelly T. * 1989; PhD, 1984, University of Utah; genetics, gene regulation, microbial physiology, and metabolism.

Katze, Michael Gerald * 1987; PhD, 1980, Hahnemann Medical College; regulation of viral gene expression at the translational level.

Kenny, George E. * 1961, (Adjunct); PhD, 1961, University of Minnesota; antigenic structure.

Lamont, Richard J. * 1988, (Adjunct); PhD, 1985, University of Aberdeen (UK); pathogenic mechanisms of oral bacteria, host pathogen interactions, biofilms, gene regulation.

Lidstrom, Mary E. * 1995; MS, 1975, PhD, 1977, University of Wisconsin; biomolecular engineering, metabolic engineering, bioremediation.

Linial, Maxine L. * 1982; PhD, 1970, Tufts University; retroviral replication and genetics, retroviral transformation.

Lory, Stephen * 1984, (Affiliate); PhD, 1980, University of California (Los Angeles); biochemistry, genetics of microbial virulence factors.

Lukehart, Sheila A. * 1980, (Adjunct Research); PhD, 1978, University of California (Los Angeles); immunology of infectious diseases, microbiology, sexually transmitted diseases.

Miller, Samuel I. * 1995; MD, 1979, Baylor University; salmonella pathogenesis and bacterial-eucaryotic cell interactions.

Mullins, James I. * 1994; PhD, 1978, University of Minnesota; retroviruses and AIDS, molecular virology.

Nester, Eugene W. * 1962; PhD, 1959, Case Western Reserve University; genetics and biochemistry, of bacterial-plant cell interactions.

Rubens, Craig E. * 1984, (Adjunct); PhD, 1978, Medical University of South Carolina, MD, 1982, University of Washington; infectious diseases/pathogenesis of gram(+) bacterial infections.

Sherris, John C. * 1959, (Emeritus); MBBS, 1948, MD, 1950, University of London (UK); medical microbiology, antibiotic action and resistance.

Stahl, David A. 2000, (Adjunct); MS, 1975, PhD, 1978, University of Illinois (Urbana).

Staley, James T. * 1971; PhD, 1967, University of California (Davis); freshwater bacteriology, microbial ecology, general microbiology.

Stuart, Kenneth Daniel * 1985, (Adjunct); PhD, 1969, University of Iowa; molecular biology of parasites.

Tarr, Phillip I. 1983, (Adjunct); MD, 1980, Yale University; gastroenterology/infectious diseases.

Vessella, Robert L. 1989, (Adjunct); PhD, 1974, University of Mississippi; tumor markers and immunology.

Associate Professors

Fritsche, Thomas R. * 1981; MD, 1981, PhD, 1984, University of Minnesota; systematics and ecology of animal parasites, medical microbiology.

Geballe, Adam Philip * 1988, (Adjunct); MD, 1978, Duke University; translational regulation of viral and cellular gene expression.

Haigwood, Nancy L. * 1994; PhD, 1980, University of North Carolina; host immunity in the control and prevention of AIDS.

Herwig, Russell P. * 1983, (Adjunct Research); PhD, 1989, University of Washington; environmental microbiology, bioremediation, molecular microbial ecology, microbial phylogenetics.

Hill, Walter E. * 1992, (Affiliate); PhD, 1972, University of Washington; genetic methods for detecting and characterizing food-borne microbial pathogens.

Lampe, Mary F. * 1988, (Adjunct); MS, 1976, University of Washington, PhD, 1984, University of North Carolina; medical technology education, molecular analysis of Chlamydia trachomatis pathogenesis.

Lara, Jimmie Cano * 1972; PhD, 1970, University of California (Riverside); microbial physiology and crytology, sporulation and gas vesicle synthesis and regulation.

Leigh, John A. * 1985; PhD, 1983, University of Illinois; bacterial physiology, biochemistry, genetics.

Moseley, Stephen L. * 1985; PhD, 1981, University of Washington; molecular basis of pathogenesis in *E. coli* diarrhea.

Rose, Timothy M. * 1991, (Adjunct); PhD, 1981, University of Geneva (Switzerland); molecular biology of tumor viruses, cell growth, differentiation, and transformation.

Traxler, Beth A. * 1992; PhD, 1987, Carnegie Mellon University; bacterial physiology, genetics, and membrane protein biochemistry.

Assistant Professors

Cookson, Brad T. * 1996; PhD, 1991, MD, 1991, Washington University; cellular immune response to intracellular bacteria; microbial pathogenesis; clinical microbiology.

Freitag, Nancy E. 2000, (Adjunct); PhD, 1989, University of California (Los Angeles); bacterial pathogenesis and regulation of gene expression.

Lagunoff, Michael * 2001; PhD, 1995, University of Chicago; molecular virology of Kaposi's sarcoma-associated herpesvirus.

Mittler, John E. * 1999; PhD, 1992, University of California (Irvine); microbial population biology, mathematical modeling of dynamical systems, HIV pathogenesis.

Ramakrishnan, Lalita * 2001; MD, 1983, Baroda Medical College (India), PhD, 1990, Tufts University; contributions of mycobacteria and hosts to maintenance of chronic tuberculosis.

Samudrala, Vaikuntanath V. * 2001; PhD, 1997, Center for Advanced Research in Biotechnology; modeling the structure and function of whole genomes.

Senior Lecturers

Anderson, Denise G. 1982; MS, 1985, University of Washington; microbiology laboratory teaching.

Fulton, Janis R. 1983; MS, 1977, Montana State University; microbiology laboratory teaching.

Lecturers

Barnes, Glover W. * 1969; MA, 1955, PhD, 1961, State University of New York (Buffalo); tissue, organ immunology.

Chandler, Mark S. 1998; PhD, 1998, University of Illinois; microbiology laboratory teaching.

Gray, Kendall M. 2000; PhD, 1989, University of Southern California; microbiology laboratory teaching.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crsca/.

MICROM 402 Fundamentals of General Microbiology Laboratory (3) NW Fulton, Gray Isolation of a broad range of nonpathogenic bacteria from natural sources, using selective and enrichment techniques, with microscopic, biochemical, and molecular identification. Related exercises include genetics, physiology, quantitation, and growth energetics. Prerequisite: either BIOL 200 or BIOL 201; recommended: MICROM 410 which may be taken concurrently. Offered: ASp.

ommended: MICROM 410 which may be taken concurrently. Offered: ASp.

MICROM 410 Fundamentals of General Microbiology I (3) NW Lara, Traxler Survey of the microbial world, metabolism, biosynthesis, regulation, growth, structure, and function. Required for students majoring in microbiology; recommended for students majoring in biology. Prerequisite: either BIOL 200 or BIOL 201; either CHEM 223, CHEM 237, or CHEM 335. Offered: A.

MICROM 411 Gene Action (5) NW Gray, Hughes, Manoil Molecular genetics: description of fundamental genetic processes such as mutation, repair, genetic exchange, recombination, and gene expression. Use of genetic strategies to analyze complex biological processes. Focuses on prokaryotic organisms. Prerequisite: either BIOL 200 or BIOL 201; either CHEM 223, CHEM 237, or CHEM 335. Offered: jointly with GENET 411; W.

MICROM 412 Fundamentals of General Microbiology III (3) NW Leigh Structure, biochemical properties, and genetics of the major groups of prokaryotes. Prerequisite: either BIOL 200, BIOL 201, or BIOL 203; recommended: either CHEM 223, CHEM 237, or CHEM 335; MICROM 410. Offered: Sp.

MICROM 431 Prokaryotic Recombinant DNA Techniques (3) NW Anderson, Chandler Laboratory course emphasizing concepts and techniques/methodologies in recombinant DNA research employing bacteria and their viruses. Topics and experiments/demonstrations include genomic and plasmid DNA isolation, restriction mapping, cloning, transposon mutagenesis, sequencing, and Western and Southern blotting. No auditors. Prerequisite: either BIOL 200, BIOL 201, or MICROM 301. Offered: W.

MICROM 435 Microbial Ecology (3) NW Staley Consideration of the various roles that microorganisms, particularly bacteria and cyanobacteria, play in environmental processes. The interrelationships among microorganisms and the effects of the physical, chemical, and biological properties of their environment are discussed and assessed. Prerequisite: either BIOL 180, BIOL 201, or BIOL 203. Offered: even years; Sp.

MICROM 440 Introductory Bacteriology for Medical Technologists (1) NW Anderson Limited introduction to basic microbiology, with focus on structure, metabolism, and genetics of medically important organisms. Open only to medical technology students. Credit/no credit only. Offered: A.

MICROM 441 Introduction to Immunology (4) NW General properties of immune responses; cells and tissues of immune system; lymphocyte activation and specificity; effector mechanisms; immunity to microbes; immunodeficiency and AIDS; autoimmune diseases; transplantation. Prerequisite: BIOL 202; recommended: either GENET 371, GENET 372, BIOC 405, or BIOC 440. Offered: jointly with IMMUN 441; A.

MICROM 442 Medical Bacteriology (3) NW Cookson, Lampe Medically important bacterial pathogens are discussed in terms of the clinical, therapeutic, and epidemiological aspects of diseases caused by them, molecular mechanisms of pathogenesis and their identification in the clinical laboratory. Laboratory course 443 coordinates. Prerequisite: either BIOL 200 or BIOL 201; recommended: MICROM 410; MICROM 441. Offered: W.

MICROM 443 Medical Microbiology Laboratory (3) NW Anderson, Chandler, Fritsche, Fulton Required for medical technology students, microbiology majors; elective for medical students. Procedures for isolation and identification of pathogenic bacteria, testing their susceptibility to antibiotics. No auditors.

Prerequisite: either BIOL 200 or BIOL 201; recommended: MICROM 410. Offered: AW.

MICROM 444 Medical Mycology and Parasitology (4) NW Anderson, Fritsche, Fulton, Novicki Consideration of medically important fungi and parasites, with emphasis on their biology in relation to disease and its laboratory diagnosis. For medical technology students, microbiology majors, and medical students as an elective. Prerequisite: either BIOL 200 or BIOL 201; recommended: immunology. Offered: Sp.

MICROM 445 Medical Virology (2) NW Lagunoff, Mullins, Thoulless An introductory course emphasizing basic understanding of medical virology and viral pathogenesis. The biochemical, replication, host-parasite relationships and pathogenesis of animal viruses are examined. Prerequisite: either BIOL 180, BIOL 200, or BIOL 201; recommended: MICROM 441. Offered: jointly with PABIO 445; Sp.

MICROM 447 Immunity, Disease and Society (2) Clark Impact and controversies associated with breakthroughs in immunology and infectious diseases. Topics include vaccines, complementary medicine (herbal boosts of the immune system), the mind and the immune system, allergies (asthma), cancer immuno-therapy, genetic screening and autoimmune disease and natural history of infectious disease. Prerequisite: MICROM 441. Offered: jointly with IMMUN 447.

MICROM 450 Molecular Biology of Viruses (3) NW Champoux Introduction to the molecular biology of viruses and virus-host relationships. Designed for advanced undergraduates and graduate students in the biological sciences. Coverage includes bacterial and animal viruses, with an emphasis on the molecular mechanisms of viral gene expression and regulation. Prerequisite: either BIOL 200 or BIOL 201; recommended: MICROM 410, MICROM 411, GENET 371, or GENET 372. Offered: W.

MICROM 495- Honors Undergraduate Research (*-) Leigh Specific problems in microbiology or immunology. Offered: AWSpS.

MICROM 496 Undergraduate Library Research (2) An introduction to library research techniques and to microbiological literature. Staff assign a topic and supervise the project. Offered: AWSpS.

MICROM 499- Undergraduate Laboratory Research (*-) Leigh Specific problems in microbiology or immunology. Credit/no credit only. Offered: AWSpS.

MICROM 500 Introduction to Research (*, max. 20) Introduction to research areas of the faculty and the techniques employed in their investigations. Credit/no credit only. Prerequisite: graduate standing in microbiology or permission of instructor. Offered: AWSpS.

MICROM 510 Physiology of Bacteria (3) Traxler Topics of current interest concerning the molecular biology and physiology of bacteria. Prerequisite: MICROM 410 and BIOC 440, 441, and 442, or permission of instructor. Offered: odd years; W.

MICROM 518 Microbial Degradation of Toxic Contaminants (3) Herwig, Strand Detailed survey of current understanding of microbiology and degradative pathways of industrial organic compounds, pesticides, plastics, oil, and metals. Microbial requirements for bioremediation. Methods of scientific investigation of microbial transformations. Requires basic understanding of metabolism and organic chemistry. Prerequisite: biological science course. Offered: jointly with CEE 542/ESC 518; W.

MICROM 520 Seminar (1) Leigh Credit/no credit only. Offered: AWSpS.

MICROM 522 Current Research in Microbiology (1) *Hughes* Weekly student and faculty seminar presentations based on the current literature. Credit/no credit only. Prerequisite: graduate standing in microbiology. Offered: AWSp.

MICROM 526 Research of Cell Surface Problems (1) *Traxler* Weekly research seminar and discussion of scientific literature pertaining to the process of membrane protein biogenesis. Credit/no credit only. Prerequisite: permission of instructor.

MICROM 527 Genetic Approach to Complex Biological Processes (1) *Hughes* Current research as it applies to genetic approaches to complex biological processes in the area of microbiology. Offered: AWSpS.

MICROM 528 Salmonella Genetics (1) *Hughes* Review current literature in the area of gene regulation in *Salmonella typhimurium* and related studies in *Escherichia coli*. Prerequisite: graduate student standing; advanced undergraduates by permission of instructor. Offered: AWSpS.

MICROM 530 Evolution of Prokaryotic Diversity (3) *Leigh* Evolution, diversity, and genomics of prokaryotic microorganisms. Lectures, discussions, and reading of current literature. Open to graduate students in the biological sciences and advanced undergraduates with permission of instructor. Offered: odd years; A.

MICROM 531 Prokaryotic Diversity and Evolution Laboratory (2) *Leigh* Enrichment, isolation, and molecular phylogenetic characterization of selected prokaryotic organisms. Prerequisite: permission of instructor. Offered: odd years; A.

MICROM 532 Seminar in General Microbiology (1, max. 15) *Leigh* Weekly seminar concerning research topics in the genetics and biochemistry of selected bacteria. Credit/no credit only. Prerequisite: MICROM 410, permission of instructor. Offered: AWSpS.

MICROM 553 Molecular Mechanisms of Bacterial Pathogenesis (3) *Hughes, Moseley, Rubens* Mechanisms of bacterial pathogenesis explored at the molecular, genetic, and cellular levels through selected models as presented in the current scientific literature. Prerequisite: MICROM 411 or equivalent. Offered: even years; A.

MICROM 554 Seminar in Molecular and Medical Microbiology (1, max. 15) *Hughes* Weekly one-hour seminar in which recent advances in molecular biology of microbial pathogenesis or the current research of the participants is presented and discussed critically. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

MICROM 555 Advanced Clinical Microbiology (2.5) *Cookson, Fritsche, Limaye* Attendance at daily plate rounds of the Division of Clinical Microbiology. Designed to increase understanding of clinical microbiological work and its application to the care of the patient. Credit/no credit only. Prerequisite: MICROM 443 and permission of instructor. Offered: AWSp.

MICROM 556 Clinical Microbiology Training and Research (*, max. 12) *Fritsche* Training in clinical microbiology and applied research. Attendance at daily laboratory rounds in addition to bench-side training and research. For medical students and microbiology graduate students only. Credit/no credit only. Prerequisite: MICROM 443 and permission of instructor.

MICROM 560 Research and Journal Club in Retrovirology (1) *Linial* Weekly research seminar and discussion of literature in areas of retroviral replication and transformation. Prerequisite: graduate or permission of instructor. Offered: AWSpS.

MICROM 562 Oncogene and Retrovirus Research Seminar (1) *Linial, Overbaugh* Weekly discussions of ongoing research related to retroviral replication, retroviral oncogenes and pathology. Prerequisite: graduate standing or permission of instructor. Offered: AWSpS.

MICROM 585 Research in Cell and Molecular Biology (1, max. 15) *Champoux* Weekly research seminar. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MICROM 588 Research in Applied Microbiology (1) *Lidstrom* Weekly research seminar and discussion of scientific literature pertaining to applied microbiology. Credit/no credit only. Prerequisite: permission of instructor. Offered: jointly with CHEM E 588; AWSpS.

MICROM 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

MICROM 700 Master's Thesis (*) Credit/no credit only.

MICROM 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Neurological Surgery

700 9th Avenue, Harborview Medical Center

General Catalog Web page:

www.washington.edu/students/gencat/academic/Neurological_Surgery.html

Department Web page:

depts.washington.edu/neurosurg/

askuwns@u.washington.edu

The Department of Neurological Surgery is dedicated to teaching and research in the entire spectrum of diseases of the central and peripheral nervous system. Instruction in this area is provided for medical students and postgraduate physicians.

The department's medical-student instruction includes participation in the human-biology curriculum as well as in elective basic-science and clinical experiences. These are available at Harborview Medical Center, University of Washington Medical Center, Veterans Affairs Puget Sound Health Care Center, and Children's Hospital and Regional Medical Center. The department also has several course offerings correlating research and clinical problems of the nervous system, including the neuroscience research seminar, and clinical and basic-science correlates of the epilepsies.

Selected medical students also may elect research experience within the Department of Neurological Surgery. The department research facilities are housed in the Medical Research Tower of the University of Washington Medical Center, at Harborview Research and Training Building, and at Veterans Affairs Puget Sound Health Care System. Investigations are under way at these institutions in many areas of neurophysiology, in behavioral research, in light and electron microscopic examination of the anatomy of the nervous system, in cerebrovascular physiology, and in neuro-oncology.

In addition to undergraduate instruction, a fully certified residency program in neurological surgery is available for selected postgraduate physicians. The eight-year program emphasizes preparation for a career in academic neurosurgery.

Faculty

Acting Chair

Richard G. Ellenbogen

Professors

Alvord, Ellsworth C. * 1960, (Adjunct); MD, 1946, Cornell University; neuropathology, experimental allergic encephalitis.

Anderson, Gail * 1981, (Adjunct); PhD, 1987, University of Washington; pharmacokinetics, metabolism and interactions of drugs in epilepsy and trauma.

Chatrian, Gian E. 1981, (Emeritus); MD, 1951, University of Naples (Italy); electroencephalography and clinical neurophysiology.

Cohen, Wendy A. 1987; MD, 1975, Harvard University; neuroradiology.

Dikmen, Sureyya S. * 1974, (Adjunct); PhD, 1973, University of Washington; clinical neuropsychology, traumatic brain injury.

Domino, Karen B. 1986, (Adjunct); MA, 1974, University of New Mexico; MD, 1978, University of Michigan; neuroanesthesia.

Eskridge, Joseph M. 1987; MD, 1981, University of Louisville; neuroradiology.

Fraser, Robert T. 1976; PhD, 1976, University of Wisconsin; psychology.

Gruss, Joseph S. 1991, (Adjunct); MBChB, 1969, University of Witwatersrand (South Africa); craniofacial and maxillofacial surgery.

Harris, A. Basil 1967, (Emeritus); MD, 1954, University of Alabama; neurosurgery, neuroanatomy, microvascular, arteriovenous malformations, epilepsy mechanisms.

Haynor, David R. * 1979, (Adjunct); PhD, 1971, University of California (Berkeley); MD, 1979, Harvard University; medical image processing and segmentation; image deformation; functional MRI; expression arrays.

Jaffe, Kenneth M. * 1981, (Adjunct); MD, 1975, Harvard University; pediatric rehabilitation, brain injury, neuromuscular diseases, congenital defects.

Kelly, William A. 1959, (Emeritus); MD, 1954, University of Cincinnati; neurosurgery, neuroendocrinology.

Lam, Arthur M. 1986; MD, 1974, Western Ontario University (Canada); neuroanesthesia.

Levy, Rene H. * 1970; PhD, 1970, University of California (San Francisco); metabolic interactions among antiepileptic drugs and between cytokines and drugs.

Loeser, John D. 1969; MD, 1961, New York University; pain, neurophysiology.

Maravilla, Kenneth R. 1986; MD, 1970, State University of New York (Brooklyn); neuroradiology and neurosurgery.

Miller, John W. 1999; MD, 1977, PhD, 1981, University of Illinois; epilepsy and clinical neurophysiology.

Morrison, Richard S. * 1994; PhD, 1982, University of California (Los Angeles); genetic pathways regulating neuronal cell death in disease and injury.

Newell, David W. 1989; MD, 1982, Case Western Reserve University; clinical neurosurgery and neurovascular mechanizing of cerebral ischemia.

Ojemann, George A. 1966; MD, 1959, University of Iowa; neurophysiology, organization of higher functions in brain, language, memory.

Pitkethly, David T. 1983, (Clinical); MD, 1961, Duke University; clinical neurosurgery.

Reh, Thomas A. * 1989, (Adjunct); PhD, 1981, University of Wisconsin; regeneration and development of central nervous system.

Roberts, Theodore S. 1985, (Emeritus); MS, 1952, MD, 1955, University of Wisconsin; neurological surgery, stereotaxic surgery, pituitary and cerebrovascular disease.

Rubel, Edwin W. * 1986; PhD, 1969, Michigan State University; developmental neurobiology, with special emphasis on vertebrate auditory system development.

Spence, Alexander M. 1974, (Adjunct); MD, 1965, University of Chicago; neurology, neuro-oncology.

Westrum, Lesnick E. * 1966; MD, 1963, University of Washington, PhD, 1966, University College, London (UK); neuroanatomy, synaptology, plasticity, olfactory and trigeminal systems, dental pathways.

Winn, H. Richard * 1983; MD, 1968, University of Pennsylvania; physiology of cerebral blood flow regulation.

Associate Professors

Chapman, Jens R. 1990; MD, 1983, Technical University of Munich (Germany); orthopaedics, spine trauma/reconstruction.

Dalley, Robert W. 1987; MD, 1982, University of Utah; neuroradiology.

Ellenbogen, Richard G. 1997; MD, 1983, Brown University; pediatric neurosurgery, neuro-oncology, complex spine.

Geyer, Jeffrey R. 1984; MD, 1977, Wayne State University; hematology/oncology.

Goodkin, Robert 1987; MD, 1964, Chicago Medical School; neurological surgery.

Hicks, Ramona R. * 1999, (Adjunct); PhD, 1993, University of Connecticut; brain injury, neural plasticity, cell death and regeneration.

Jarvik, Jeffrey G. 1993; MD, 1987, University of California (San Diego); neuroradiology, outcomes research.

Kliot, Michel 1990; MD, 1984, Yale University; peripheral nerve injury and diseases, nerve injury/regeneration.

Mirza, Sohail K. 1989; MD, 1989, University of Colorado (Denver); spinal surgery/spine biomechanics.

Ojemann, Linda M. 1974, (Emeritus); MD, 1960, University of Illinois; neurology, treatment of epilepsy.

Shaffrey, Christopher I. 1999; MD, 1986, University of Virginia; spinal disorders including fractures, tumors, spinal deformity, and degenerative conditions.

Silber, John R. 1990, (Research); PhD, 1977, University of Florida; neuro-oncology.

Silbergeld, Daniel L. 1984; MD, 1984, University of Cincinnati; brain tumors, epilepsy.

Temkin, Nancy R. * 1977; PhD, 1976, State University of New York (Buffalo); clinical trials, recovery models,

statistical modeling of epileptic phenomena, survival analysis.

Troster, Alexander I. 2000, (Adjunct); PhD, 1991, University of California (San Diego), San Diego State University; neuropsychology of movement disorders, cognitive and quality of life outcomes.

Wilensky, Alan J. 1975; MD, 1967, Western Ontario University (Canada), PhD, 1973, University of Toronto (Canada); neurology, treatment of epilepsy, testing and use of anticonvulsants.

Assistant Professors

Becker, Kyra J. 1996; MD, 1989, Duke University; stroke, neurophysiology.

Bobola, Michael S. 1997, (Research); PhD, 1991, University of New Hampshire; pediatric neuro-oncology.

D'Ambrosio, Raimondo 1995, (Research); PhD, 1995, University of Milan (Italy); glial cells and traumatic brain injury.

Diaz, Aidnag Z. 2000; MD, 1988, Columbia University.

Douglas, James G. 1988; MD, 1980, Case Western Reserve University.

Emmi, Adriana 1997, (Research); MD, 1992, PhD, 1996, University of Palermo (Italy); epilepsy and basic mechanism of ischemic damage.

Horner, Philip J. 2001; PhD, 1995, Ohio State University; stem cells and regeneration of the central nervous system.

Nelson, Peter S. * 1993, (Adjunct); MD, 1986, University of Kansas; the study of human carcinogenesis using tools of genomics and bioinformatics.

Park, Jongsoo 2000, (Clinical); MD, 1993, University of Rochester; clinical neurosurgery.

Rostomily, Robert C. 1987; MD, 1987, Case Western Reserve University; surgery of adult brain and cranial base tumors, molecular biology of nervous system tremors.

Samii, Ali 1998; MD, 1989, McGill University (Canada); movement disorders.

West, G. Alexander 1988; PhD, 1984, MD, 1989, University of Virginia; vascular disease, epilepsy, brain and spinal cord trauma.

Lecturer

Kinoshita, Yoshito 1990; PhD, 1982, Tohoku University (Japan); neuronal cell death..

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

NEUR S 498 Undergraduate Thesis (*) *Bobola, D'Ambrosio, Horner, Silber* Offered: AWSpS.

NEUR S 499 Undergraduate Research (*) *Bobola, D'Ambrosio, Horner, Silber* Investigation of special problems as an intimate member of the research team in the neurological surgery laboratories. Research to lead to a thesis, if desired. List of projects available on request. Prerequisite: permission of instructor. Offered: AWSpS.

NEUR S 505 P-Preceptorship in Academic Neurosurgery (1) *Ellenbogen, Goodkin, Kliot, Newell, Ojemann, Rostomily, Shaffney, Silbergeld, West, Winn* Opportunity for first- and second-year medical students to observe the research, teaching, and patient-care activities of academic neurosurgery. Prerequisite: permission of instructor. Offered: AWSpS.

NEUR S 542 Clinical and Basic Research Correlates of Epilepsy (2) *G. Ojemann, Westrum* Clinical symptoms and treatment of epilepsy; related basic research in neuroanatomy, neurophysiology, neuropsychology, and neuropharmacology of epilepsy. Prerequisite: HUBIO 532 for medical students; permission of instructor for others.

NEUR S 680 P-Neurological Surgery Clerkship (*, max. 8) *Newell, Silbergeld* Student serves clinical clerkship as an intimate member of the staff, participating in inpatient and outpatient care, both preoperative and postoperative, involving neurological surgery patients. University of Washington Medical Center or a University-affiliated hospital may be selected, subject to approval of the department. Prerequisite: HUBIO 563. (Four weeks.) Offered: AWSpS.

NEUR S 697 P-Neurological Surgery Special Electives (*, max. 24) *Ellenbogen, Goodkin, Kliot, Newell, Ojemann, Rostomily, Shaffney, Silbergeld, West, Winn* By specific arrangement, for qualified students, special clerkship, externship, or research opportunities can be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of instructor. Offered: AWSpS.

NEUR S 699 P-WWAMI Neurological Surgery Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Neurology

RR650 University of Washington Medical Center

General Catalog Web page:
www.washington.edu/students/gencat/academic/Neurology.html

Department Web page:
depts.washington.edu/neurolog/

Neurology, previously a division of the Department of Medicine, became an independent department at the University of Washington School of Medicine in autumn of 1995. The four-year residency program (including an internship) offers superb training in all facets of neurology in a setting of great institutional strength in fundamental neuroscience research. In addition, the Department of Neurology offers exceptional training programs in the Divisions of Neurogenetics and Pediatric Neurology and in the Epilepsy Center. A clinical-clerkship program provides basic training in neurology patient care. The Neurology Department is active in teaching, research, and patient care at the University of Washington Medical Center, Seattle Veterans Affairs Medical Center, Harborview Medical Center, Children's Hospital and Medical Center, and the Fred Hutchinson Cancer Research Center. Medical students, interns, neurology residents, and postdoctoral research fellows rotate through these various hospitals and participate in the learning experiences offered at each.

Faculty

Chair

Bruce R. Ransom

Professors

Bird, Thomas D. 1976; MD, 1968, Cornell University; neurology, neurogenetics.

Chamberlain, Jeffrey S. 2000; PhD, 1985, University of Washington; neurogenetics, Duchenne's muscular dystrophy.

Chance, Phillip F. 1998; MD, 1978, University of Tennessee; pediatric neurology and genetics.

Copass, Michael K. 1971; MA, 1964, MD, 1964, Northwestern University; neurology/emergency services.

Crill, Wayne E. * 1967; MD, 1962, University of Washington; properties of spinal and cortical neurons, mechanisms of repetitive firing of CNS neurons.

Dodrill, Carl B. 1987, (Emeritus); MS, 1967, PhD, 1970, Purdue University; neurophysiology of epilepsy.

Farrell, Donald F. 1971; MD, 1965, George Washington University; neurology, clinical neurophysiology including intraoperative monitoring, evoked potentials.

Franklin, Gary M. * 1988, (Adjunct Research); MD, 1969, George Washington University, MPH, 1982, University of California (Berkeley); occupational injury, neurological epidemiology, public health nutrition.

Fraser, Robert T. 1976; PhD, 1976, University of Wisconsin; psychology.

Gospe, Sidney M. 2000; PhD, 1980, MD, 1981, Duke University; pyridoxine-dependent seizures, developmental neurotoxicity of second-hand tobacco smoke and toluene.

Kraft, George Howard * 1969, (Adjunct); MD, 1963, Ohio State University; psychiatry.

Longstreth, W. T., Jr. * 1981; MD, 1975, University of Pennsylvania, MPH, 1982, University of Washington; neurology.

Miller, John W. 1999; MD, 1977, PhD, 1981, University of Illinois; epilepsy and clinical neurophysiology.

Ransom, Bruce Robert * 1995; PhD, 1972, MD, 1972, Washington University; neurology, neuroscience research.

Spence, Alexander M. 1974; MD, 1965, University of Chicago; neurology, neuro-oncology.

Stahl, William L. * 1975; PhD, 1963, University of Pittsburgh; neurochemistry of brain ATPase systems.

Sumi, Shuzo Mark 1966, (Emeritus); MD, 1956, University of Toronto (Canada); neuropathology, neuromuscular disease, neurodegenerative diseases.

Swanson, Phillip D. 1964; MD, 1958, Johns Hopkins University, PhD, 1964, University of London (UK); movement disorders, neurology.

Associate Professors

Marra, Christina M. 1984; MS, 1979, Oregon State University, MD, 1984, University of Oregon; neurology, infectious diseases.

Milstein, Jerrold M. 1980; MD, 1964, University of Minnesota; pediatric neurology.

Shadlen, Michael N. * 1995, (Adjunct); PhD, 1985, University of California (Berkeley), MD, 1988, Brown University; neurobiology of vision and cognition.

Spain, William * 1981; MD, 1977, Columbia University; signal transduction in the central nervous system.

Tapscott, Stephen J. * 1986; PhD, 1982, MD, 1982, University of Pennsylvania; molecular and developmental biology.

Van Brederode, Johannes 1987; PhD, 1987, Medical College of Wisconsin; neurophysiology of epilepsy.

Wilensky, Alan J. 1975; MD, 1967, Western Ontario University (Canada), PhD, 1973, University of Toronto (Canada); neurology, treatment of epilepsy, testing and use of anticonvulsants.

Assistant Professors

Becker, Kyra J. 1996; MD, 1989, Duke University; stroke, neurophysiology.

Bowen, James D. 1982; MD, 1982, Johns Hopkins University; multiple sclerosis.

Brown, Angus M. 1999, (Research); PhD, 1990, University of Manchester (UK); neuroscience research.

Cramer, Steven C. 1997; MD, 1988, University of Southern California, MMSc, 1997, Harvard University; stroke, sensorimotor human brain mapping, in healthy and diseased subjects.

Drane, Daniel L. 2001; MS, 1989, Georgia State University, PhD, 1994, Fuller Graduate School of Psychology; neuropsychology.

Garden, Gwenn A. 2000; PhD, 1994, MD, 1994, University of Washington; caspase enzymes and apoptosis in HIV neural injury.

Kraus, Eric E. 1991; MD, 1991, University of Minnesota; general neurology.

Kuratani, John D. 1999; MD, 1990, Tulane University; pediatric epilepsy, EEG.

Leverenz, James B. 1992; MD, 1985, University of Washington; neurology, psychiatry and behavioral sciences, Alzheimer's.

Moeller, Thomas 2000, (Research); PhD, 1996, Freie University of Berlin (Germany); neurophysiology.

Nichter, Charles A. 2001; MD, 1976, Temple University; pediatric movement disorders.

Pinter, Joseph D. 1990; MD, 1990, University of California (Los Angeles); pediatric neurology.

Poolos, Nicholas P. 2001; MD, 1991, PhD, 1991, Stanford University; epilepsy, functional properties of dendrites and neuronal excitability.

Samii, Ali 1998; MD, 1989, McGill University (Canada); movement disorders.

Saneto, Russell P. 2001; PhD, 1981, University of Texas; DO, 1994, Des Moines University; pediatric epilepsy.

Sotero De Menezes, Marcio 1996; MD, 1984, Rio De Janeiro State University Medical School (Brazil); pediatric neurology, epilepsy, EEG.

Tirschwell, David L. 1991; MD, 1991, Cornell University; neurology, stroke.

Weiss, Michael D. 2001; MD, 1991, Albert Einstein College of Medicine; EMG, EEG, neuropathology and neuromuscular disorders.

Yang, Claire C. 1993, (Adjunct); MD, 1988, Vanderbilt University; neurourology and electrophysiology testing.

Zunt, Joseph R. 1991; MD, 1991, University of Minnesota, MPH, 1998, University of Washington; infectious disease, neuroepidemiology of AIDS/HIV.

Instructors

Firestone, Jordan A. 1991, (Acting); PhD, 1993, MD, 1995, University of Colorado, MPH, 2000, University of Washington; neurotoxicology.

Golumbek, Paul T. 2000, (Acting); MD, 1995, PhD, 1995, Johns Hopkins University; pediatric neurology.

Meekins, Gregg D. 2000; MD, 1993, Tulane University; neurophysiology, EMG.

Watson, Nathaniel F. 2000; MD, 1996, University of North Carolina (Chapel Hill); clinical neurophysiology, sleep disorders.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

NEURL 495 Community Rehabilitation of the Neurologically Impaired: Internship (*, max. 5) *Fraser, Clemmons* Supervised work with a neurologically disabled vocational rehabilitation population within a multidisciplinary vocational rehabilitation unit. Offered: AWSpS.

NEURL 499 Undergraduate Research (*, max. 25) Provides an opportunity to gain research experience and direct participation in clinical or basic science investigation in neurological topics. Offered: AWSpS.

NEURL 505 P-Preceptorship in Neurology (1) *Kraus* Provides an opportunity for first and second year medical students to gain personal experience with neurology practice situations by being stationed with carefully selected clinical faculty members in their offices. Prerequisite: permission of instructor. Offered: Sp.

NEURL 510 Pathophysiology of Neurological Disease (2) *Fern* Analysis of the clinical features of a number of the major neurological diseases, integrated with a state-of-the-art overview of the cellular, molecular, and whole-system research pertaining to the disease.

NEURL 536 Topics in Clinical Neurology (1) *Spain* Lectures on epilepsy, stroke, coma, drug overdose, dementia, headache, myelopathies, infectious disease. Offered: S.

NEURL 646 P-Clinical Electroencephalography (*, max. 12) *Farrell, Holmes* For third- and fourth-year medical students. Clinical applications of electroencephalography long-term EEG-video-audio monitoring, computer-averaged evoked potentials. Prerequisite: completion of Human Biology series. Offered: AWSpS.

NEURL 681 P-Seizure Clinic Clerkship (2.5) *A. Wilensky* Evaluation and follow-up of patients with seizure disorders. Limited contact with inpatients. Prerequisite: MED 665 and permission of instructor. Offered: AWSpS.

NEURL 686 P-Clinical Neurology (8) *Swanson* Clerkship including both inpatient and outpatient experiences and didactic sessions on neurological subjects. Student assigned to one of the affiliated

hospitals and supervised by neurology residents and full-time staff. Offered: AWSpS.

NEURL 687 P-Advanced Clinical Clerkship in Child Neurology (*, max. 8) *Gospe* Advanced course in neurology dealing with neurological disease in children. Supervision by child neurology residents and attending. Prerequisite: NEURL 665, third and fourth year medical students. (Limit: one student.) Offered: AWSpS.

NEURL 697 P-Neurology Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions outside the WWAMI region. Students should obtain special assignment form from the Dean's Office at least one month prior to preregistration. Prerequisite: permission of department advisor. Offered: AWSpS.

NEURL 699 P-WWAMI Neurology Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of advisor. Offered: AWSpS.

Obstetrics and Gynecology

BB617 Health Sciences Building

General Catalog Web page:
www.washington.edu/students/gencat/academic/Obstetrics.html

Department Web page:
depts.washington.edu/obgyn/

The Department of Obstetrics and Gynecology is involved with teaching, patient care, and research in the areas of normal and abnormal human reproduction: growth and development of the fetus, normal and complicated obstetrics, and surgical and medical diseases of the female reproductive system, including endocrinology, oncology, infectious disease, urogynecology, psychosocial problems, primary and preventive health care, and ethics.

Faculty

Chair

David A. Eschenbach

Professors

Benedetti, Thomas J. * 1979; MD, 1973, University of Washington; perinatal medicine.

Bremner, William J. 1982, (Adjunct); MD, 1969, University of Washington, PhD, 1977, Monash University (Australia); endocrinology.

Brown, Zane A. * 1977; MD, 1966, Temple University; insulin requiring diabetes complicating pregnancy, genital herpes complicating pregnancy.

Clifton, Donald K. 1981; PhD, 1979, University of California (Los Angeles); reproductive physiology.

Eschenbach, David A. 1976; MD, 1968, University of Wisconsin; gynecology and infectious disease.

Greer, Benjamin E. 1980; MD, 1966, University of Pennsylvania; gynecologic oncology.

Knopp, Robert H. * 1974, (Adjunct); MD, 1964, Cornell University; metabolism and endocrinology.

Merriam, George R. 1991, (Adjunct); MD, 1976, Harvard University; metabolism and endocrinology.

Patton, Dorothy L. 1981; PhD, 1981, University of Washington; infectious disease.

Shy, Kirkwood K. * 1979; MD, 1973, Wayne State University; epidemiologic applications to problems in obstetrics and gynecology.

Soules, Michael R. 1980; MD, 1972, University of California (Los Angeles); reproductive endocrinology.

Spadoni, Leon R. 1963, (Emeritus); MD, 1957, University of Washington; reproductive endocrinology.

Steiner, Robert A. * 1977; PhD, 1975, University of Oregon; neuroendocrinology, neuroscience, endocrinology.

Stenchever, Morton A. 1977, (Emeritus); MD, 1956, State University of New York (Buffalo); gynecology, reproductive genetics, medical education.

Tamimi, Hisham K. 1977; MD, 1969, Cairo University (Egypt); gynecologic oncology.

Vontver, Louis A. 1977, (Emeritus); MD, 1960, University of Minnesota, MEd, 1970, University of Washington; medical education, gynecology.

Walker, Edward A. 1983; MD, 1983, University of Washington; consultation-liaison psychiatry, medically unexplained physical symptoms.

Associate Professors

Cheng, Edith Y. 1995; MS, 1979, Sarah Lawrence College, MD, 1987, University of Washington; genetics, perinatal medicine.

Dubinsky, Theodore J. 1997, (Adjunct); MD, 1983, University of Maryland; ultrasound, computed tomography, body imaging.

Easterling, Thomas R. 1985; MD, 1981, University of North Carolina; perinatal medicine, hypertension during pregnancy.

Goff, Barbara A. 1993; MD, 1986, University of Pennsylvania; gynecologic oncology.

Klein, Nancy A. 1993; MD, 1985, Vanderbilt University; reproductive aging in women, assisted reproductive technology.

Koh, Wui-Jin 1984, (Adjunct); MD, 1984, Loma Linda University; therapeutic radiology.

Lentz, Gretchen M. 1992; MD, 1986, University of Washington; urogynecology.

Moore, Donald E. 1977; MD, 1967, Case Western Reserve University; reproductive endocrinology.

Prince, C. Edward 1977, (Emeritus); MD, 1955, University of Washington.

Shields, Laurence E. 1993; MD, 1987, University of Texas (San Antonio); perinatal medicine.

Wasser, Samuel K. * 1982, (Adjunct Research); PhD, 1981, University of Washington; behavioral ecology, endocrinology, conservation genetics and reproductive biology.

Assistant Professors

Atkinson, M. Wendy 1997; MD, 1988, Baylor University; perinatal medicine, prevention of preterm birth and treatment of preterm labor.

Eckert, Linda O. 1992; MD, 1987, University of California (San Diego); gynecology.

Gardella, Carolyn M. 1999; MD, 1995, State University of New York (Stony Brook), MPH, 2001, University of Washington.

Hitti, Jane 1993; MD, 1989, University of Vermont, MPH, 1995, University of Washington; perinatal medicine, HIV and pregnancy.

Mendiratta, Vicki 1998; MD, 1994, Ohio State University.

Miller, Leslie R. 1994; MD, 1990, University of Washington; contraception, reproductive endocrinology, sexually transmitted disease.

Reed, Susan D. 1991; MS, 1979, Sarah Lawrence College, MD, 1986, Stanford University; gynecology, evidence-based medicine and clinical outcomes studies, hormone replacement therapy.

Swisher, Elizabeth M. 1996; MD, 1992, University of California (San Diego).

Van Blaricom, Amy Lee 1998; MD, 1994, University of Florida; general obstetrics and gynecology.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

OB GYN 498 Undergraduate Thesis (*) *Vontver* By arrangement.

OB GYN 499 Undergraduate Research (*) *Vontver*

OB GYN 550 P-Voluntary Pregnancy Termination: An Overview of Medical and Social Issues (2) *Easterling, Miller* A flexible curriculum which allows the medical student to observe in an abortion clinic, read articles and a textbook on abortion. Can be used by medical student as elective credit.

OB GYN 579 P-Obstetric and Gynecologic Investigation (*) *Vontver* The investigation may cover any one of the following fields: normal and complicated pregnancy, hormone assays in obstetrics and endocrinology, obstetric and gynecologic oncology, genetics. By arrangement.

OB GYN 665 P-Introduction to Obstetrics and Gynecology, UH-HMC (*, max. 12) *Vontver* Introductory clerkship providing comprehensive medical care and counseling to female patients. Includes management and delivery of obstetrical patients, diagnosis and management of gynecologic diseases, hospital rounds, outpatient clinics, seminars, tutorial, and community health-care agencies for women. Rotations occur at UWMC and Harborview Medical Center. Prerequisite: HUBIO 565. (Six weeks. Limit: six students.)

OB GYN 666 P-Introduction to Obstetrics and Gynecology, Boise (*, max. 12) *Vontver* Clerkship equivalent to 665 offered at Boise, Idaho (WWAMI). Includes experience in several private physician offices. Prerequisite: HUBIO 565. (Six weeks. Limit: two students. Not offered summer quarter.)

OB GYN 667 P-Introduction to Obstetrics and Gynecology, Madigan (*, max. 12) *Vontver* Clerkship equivalent to 665 offered at Madigan Army Medical Center, Tacoma. Prerequisite: HUBIO 565. (Six weeks. Limit: three students.)

OB GYN 668 P-Introduction to Obstetrics and Gynecology, Spokane (12) *Vontver* Clerkship equivalent to 665 offered at Spokane (WWAMI). Includes experience in several private physicians' offices.

Prerequisite: HUBIO 565. (Six weeks. Limit: three students.)

OB GYN 669 P-Introduction to Obstetrics and Gynecology, Swedish (12) *Vontver* Clerkship equivalent to 665 offered at Swedish Hospital Medical Center. Prerequisite: HUBIO 565. (Six weeks. Limit: two students.) Not offered summer quarter.

OB GYN 670 P-Introduction to Obstetrics and Gynecology, GH-Central (12) *Vontver* Clerkship equivalent to 665 offered at the Central facility of Group Health Cooperative of Puget Sound in Seattle. Students spend time in delivery room, surgery, and clinic, and have a specific preceptor assigned. Prerequisite: HUBIO 565. (Six weeks. Limit: two students.)

OB GYN 671 P-Introduction to Obstetrics and Gynecology, Anchorage (12) *Vontver* Clerkship equivalent to 665 offered at Anchorage, Alaska (WWAMI). Includes experience in several private physicians' offices as well as Providence Hospital. Prerequisite: HUBIO 565. (Six weeks. Limit: three students.)

OB GYN 672 P-Introduction to Obstetrics and Gynecology, GH-East (12) *Vontver* Clerkship equivalent to 665 offered at the Eastside facility of Group Health Cooperative of Puget Sound in Redmond. Students spend time in delivery room, surgery, and clinic, and have a specific preceptor assigned. Prerequisite: HUBIO 565. (Six weeks. Limit: one student.)

OB GYN 673 P-Introduction to Obstetrics and Gynecology, Military, Madigan (12) *Vontver* Clerkship equivalent to 665 offered at Madigan Army Medical Center. Students spend time in delivery room, surgery, and clinic, and have a specific preceptor assigned. Prerequisite: HUBIO 565. (Six weeks. Limit: two students.)

OB GYN 675 P-Introduction to Obstetrics and Gynecology, Highline (12) Clerkship equivalent to 665 offered at Highline Community Hospital. Students spend time in delivery room, surgery, and clinic, and have a specific preceptor assigned. Prerequisite: HUBIO 565. (Six weeks. Limit: one student.)

OB GYN 676 P-Introduction to Obstetrics and Gynecology, Missoula (12) Clerkship equivalent to 665 offered in Missoula, Montana. Students spend time in delivery room, surgery, and clinic, and have a specific preceptor assigned. Prerequisite: HUBIO 565. (Six weeks. Limit: one student.)

OB GYN 677 P-Introduction to Obstetrics and Gynecology, Rock Springs (12) Equivalent of OB GYN 665, offered in Rock Springs, Wyoming. Student rotates among outpatient clinic, labor and delivery, operating suites, and medical/surgical inpatient areas. (Limit: two students.) Offered: AWSpS.

OB GYN 681 P-Gynecological Oncology Subspecialty (8) *Vontver* Experience in reproductive tract malignancy, chemotherapy, and radiation therapy. Student follows selected patients through primary surgery, recovery, and initial adjuvant treatment, as well as continuing treatment in both clinic and inpatient settings. Prerequisite: basic OB GYN Clerkship. (Limit: two students each four weeks.)

OB GYN 682 P-Antenatal High-Risk Obstetrics (8) *Vontver* Four weeks on high-risk antenatal obstetrics ward and clinic. Students responsible for initial workups, daily laboratory evaluations, continuing care of high-risk antepartum patients. Weekly conference with obstetrics attending; presentation of one or more topics per rotation. Excellent coordination with resident and attending staff required to maintain patient-care continuity. (Limit: two students each four weeks.)

OB GYN 684 P-Endocrinology of Reproduction (*, max. 12) *Vontver* The biochemistry of steroids. Steroid metabolism as related to clinical problems. Diagnosis and treatment of endocrine disorders. Case studies with special emphasis on modern methods of investigation and assisted reproductive technology. (Limit: one student each four weeks.)

OB GYN 685 P-Obstetrics/Gynecology Preceptorship (*, max. 8) *Vontver* Close working relationship with physician in private practice of obstetrics and gynecology, including: hospital rounds, surgery, deliveries, and office and business aspects of private practice as individually arranged. Forty hours minimum can be arranged to fit schedule not to exceed 8 credits. Prerequisite: OB GYN 665 or equivalent and permission of instructor. (Limit: two students.)

OB GYN 697 P-Obstetrics and Gynecology Special Electives (*, max. 24) *Vontver* By arrangement, for qualified students, special clerkship or research opportunities can sometimes be made available at other institutions. Students wishing this course should obtain special assignment form one month before preregistration. Department evaluates student performance. Prerequisite: permission of instructor.

OB GYN 698 P-Introduction to Obstetrics and Gynecology, Away (*, max. 12) *Vontver* Clerkship equivalent to 665 at sites being evaluated as permanent WWAMI sites (currently includes Silverdale, Tacoma (St. Joseph), Evergreen, Lewiston, Cheyenne, and Billings). By arrangement. Subject to Dean's Office approval. Department evaluates student performance. Prerequisite: HUBIO 565; permission of instructor.

OB GYN 699 P-WWAMI Obstetrics and Gynecology Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located outside the WWAMI region. A special assignment form must be obtained one month in advance of preregistration. Prerequisite: permission of department.

Ophthalmology

RR801 University of Washington Medical Center

General Catalog Web page:

www.washington.edu/students/gencat/academic/Ophthalmology.html

Department Web page:

depts.washington.edu/ophthweb/

The Department of Ophthalmology is responsible for the instructional and research programs in diseases of the eye and its adnexae as well as the visual system.

Medical-student instruction is provided, including multiple electives in the clinical years. Graduate physicians are provided with three years of residency training at the affiliated hospitals. An optional internship is available in ophthalmology. A two-year ophthalmic plastics and orbit fellowship, a one-year refractive surgery/cornea fellowship, a one-year pediatric and strabismus fellowship, and a two-year surgical retina fellowship are offered. Patient care is provided under the supervision of full- and part-time faculty physicians at the University of Washington Medical Center, Harborview Medical Center, Veterans Affairs Medical Center, and Children's Hospital and Regional Medical Center.

Clinical research programs relate to eye diseases. Laboratory research encompasses neurophysiology of vision, morphology of the retina and visual system,

corneal wound healing, biochemistry of ocular tissues, and anatomy/physiology of the orbit. Postdoctoral training is offered in all these disciplines.

For more information on residencies and fellowships, contact Lynn DeJessa at lsd1@u.washington.edu. For more information on medical student clerkships, contact Dorrie Quirante at dorrieq@u.washington.edu.

Clark, John I. * 1982, (Adjunct); PhD, 1974, University of Washington; development and maintenance of lens transparency.

Hendrickson, Anita E. * 1969, (Adjunct); PhD, 1964, University of Washington; neuroanatomy, morphology and development of primate visual system.

Kalina, Robert E. 1967; MD, 1960, University of Minnesota; vitreoretinal diseases.

Kinyoun, James L. 1978; MD, 1971, University of Nebraska; vitreoretinal diseases.

Milam, Ann H. 1971, (Emeritus); PhD, 1967, University of Texas (Southwestern); electron microscopy, ophthalmic pathology, retinitis pigmentosa, retinal cell biology.

Orcutt, James C. 1982; PhD, 1976, MD, 1977, University of Colorado (Denver); orbit, oculoplastics, neuro-ophthalmology.

Pagon, Roberta A. 1979, (Adjunct); MD, 1972, Harvard University; medical genetics.

Palczewski, Krzysztof * 1992; MS, 1980, PhD, 1986, Technical University of Wroclaw (Poland); visual transduction.

Patton, Dorothy L. 1981, (Adjunct); PhD, 1981, University of Washington; infectious disease.

Reh, Thomas A. * 1989, (Adjunct); PhD, 1981, University of Wisconsin; regeneration and development of central nervous system.

Rodieck, Robert W. 1978, (Emeritus); PhD, 1964, University of Sydney (Australia); neurobiology of the retina.

Saari, John C. * 1974; PhD, 1970, University of Washington; retinal biochemistry.

Wilson, Steven E. 1998; MD, 1984, University of California (San Diego); wound healing, apoptosis, growth factors, receptors.

Associate Professors

Chen, Philip P. 1996; MD, 1991, Yale University; glaucoma.

Chuang, Elaine L. 1993; MD, 1979, University of Texas (San Antonio); vitreoretinal diseases, ocular inflammation.

Fritsche, Thomas R. * 1981, (Adjunct); MD, 1981, PhD, 1984, University of Minnesota; systematics and ecology of animal parasites, medical microbiology.

Greenwald, Mark J. 2001; MD, 1976, Harvard University; pediatric ophthalmology, strabismus.

Sires, Bryan S. 1995; PhD, 1986, MD, 1990, Northwestern University; plastic and reconstructive surgery.

Weiss, Avery H. 1991; MD, 1974, Miami University (Ohio); pediatric ophthalmology, strabismus.

Assistant Professors

Bhandari, Anuja 1996; MD, 1986, Madras University (India); glaucoma.

Gordon, Sharona E. * 1993; PhD, 1994, Brown University; molecular mechanisms of ion channel gating in visual and olfactory transduction.

Harrison, Devin A. 1997; MD, 1989, St Louis University; cornea and external disease.

Kim, Jeehee 1997; MD, 1992, University of Chicago; cornea and external disease.

Mudumbai, Raghu 2000; MD, 1994, State University of New York (Brooklyn); neuro-ophthalmology, glaucoma.

Pham, Tony A. 2000, (Adjunct); PhD, 1993, MD, 1993, Baylor University; development and plasticity of neural connections in the mammalian forebrain.

Rausch, Michael W. 1997; MD, 1997, University of Colorado (Denver); cataracts.

Rieke, Frederick Martin * 1997, (Adjunct); PhD, 1991, University of California (Berkeley); sensory signal processing and computation.

Saperstein, David A. 2000; MD, 1987, Pennsylvania State University; vitreoretinal diseases, macular degeneration.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

OPHTH 498 Undergraduate Thesis (*) *Kinyoun (University of Washington Medical Center)* Thesis-based research in vision and ophthalmology. Elective. Offered: AWPSP.

OPHTH 499 Undergraduate Research (*) *Kinyoun (University of Washington Medical Center)* Laboratory or clinical research in morphology, biochemistry, immunology, experimental pathology, or clinical studies of the eye and visual system. Offered: AWPSP.

OPHTH 501 P-Ophthalmology Preceptorship (1) *Kinyoun* Individualized experiences with one or more of the full-time faculty members of the department covering research, teaching, and patient care. Student observes activities in the clinic, hospital ward, operating room, and research laboratories. Prerequisite: first- and second-year medical student standing and permission of instructor. Offered: AWPSP.

OPHTH 681 P-Ophthalmology Clerkship (4) *Sires (Harborview Medical Center)* Students gain experience in the diagnosis and treatment of common ocular disorders. Basic examination techniques, including tonometry, ophthalmoscopy, and biomicroscopy. Prerequisite: completion of human biology series. (Limit: one student.) Offered: AWPSP.

OPHTH 683 P-Pediatric Ophthalmology Clerkship (4) *Weiss (Children's Hospital and Regional Medical Center)* Student examines and observes treatment of children with ocular diseases and learns to differentiate trivial from potentially blinding disorders. Programmed text in general ophthalmology furnished. Prerequisite: University of Washington stu-

dent and completion of human biology series. (Two weeks, full-time. Limit: one student.) Offered: WS.

OPHTH 685 P-Ophthalmology Clerkship (4) *Orcutt (VA. Puget Sound Health Care System)* Participation in diagnosis and treatment of medical and surgical ocular disease. Outpatient examinations, inpatient surgery, as well as neuro-ophthalmologic, retinal, and glaucoma consultations. Basic techniques involved in tonometry, ophthalmoscopy, and biomicroscopy of eye. Prerequisite: completion of human biology series. (Limit: one student.) Offered: AWPSP.

OPHTH 686 P-Ophthalmology Clerkship (4) *Gorman (Group Health Central)* Diagnosis and treatment of ocular diseases in outpatients. Weekly assignment to Group Health ophthalmologist responsible for the care of walk-in and urgent patients, which may demonstrate findings pertinent to the future practice of primary-care physicians. Examination techniques, including tonometry, ophthalmoscopy, and biomicroscopy. Prerequisite: completion of human biology series. (Limit: one student.) Offered: AWPSP.

OPHTH 687 P-Ophthalmology Clerkship (4) *Kinyoun (University of Washington Medical Center)* Diagnosis and management of commonly seen eye diseases. Subspecialty clinics include cornea, retina, neuro-ophthalmology, glaucoma, contact lenses, and strabismus. Student attends regularly scheduled conferences in ophthalmic basic and clinical science. Prerequisite: completion of human biology series. (Limit: one student.) Offered: AWPSP.

OPHTH 688 P-Ophthalmology Clerkship (8) *Kinyoun, Werner* Four-week externship at Alaska Native Medical Center in Anchorage. Opportunity to learn and practice common eye examination techniques, including slit-lamp biomicroscopy, tonometry, and funduscopy. Patients seen three days a week; two days spent in the operating room. Prerequisite: completion of human biology series, MED 665, and SURG 665; fourth-year medical students only. Offered: AWPSP.

OPHTH 697 P-Ophthalmology Special Electives (*, max. 24) *Kinyoun* By specific arrangement, for qualified students, special clerkship, externship, or research opportunities can at times be made available at institutions or clinics other than the UW. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of instructor. Offered: AWPSP.

OPHTH 699 P-WWAMI Ophthalmology Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department. Offered: AWPSP.

Orthopaedics

BB1043 University of Washington Medical Center

General Catalog Web page:
www.washington.edu/students/gencat/academic/Orthopaedics.html

Department Web page:
www.orthop.washington.edu

The Department of Orthopaedics is actively involved in quality patient care, teaching, and research concerning bone and joint problems. Special areas of expertise include foot and ankle, hand and microvascular, hip and knee, arthritis, sports medicine, pedi-

atric orthopaedics, shoulder and elbow, spine, trauma, and tumors.

In addition to providing instruction for medical students, the department provides education at the graduate, residency, and post-residency levels. Selected medical students may elect research experience in the department. A fully approved residency offers opportunities to carry out fundamental and clinical research. Residents may work toward the Master of Science degree by meeting the requirements of the Graduate School and the academic unit offering the degree program.

Faculty

Chair

Frederick A. Matsen III

Professors

Benirschke, Stephen K. 1985; MD, 1979, Case Western Reserve University; traumatology.

Berryman, Jack W. * 1975, (Adjunct); MS, 1971, MA, 1974, University of Massachusetts, PhD, 1976, University of Maryland; history of exercise, sports medicine, and health behavior/philosophy.

Chesnut, Charles * 1974, (Adjunct); MD, 1966, University of Florida; nuclear medicine.

Conrad, Ernest U. 1986; MD, 1979, University of Virginia; orthopaedics, tumors and bone transplantation.

Eyre, David R. * 1985; PhD, 1969, University of Leeds (UK); connective tissue biology, collagen chemistry, bone and cartilage metabolism.

Hanel, Douglas Paul 1992; MD, 1977, St Louis University; orthopaedics, hand/microvascular surgery.

Hansen, Sigvard T. 1968; MD, 1961, University of Washington; orthopaedics, foot, ankle and amputations.

Mann, Frederick A. 1993, (Adjunct); MD, 1975, Indiana University; emergency and trauma radiology.

Matsen, Frederick A., III * 1973; MD, 1968, Baylor University; orthopaedics, bone and joint research, robotics.

Newell, David W. 1982, (Adjunct); MD, 1982, Case Western Reserve University; clinical neurosurgery and neurovascular mechanizing of cerebral ischemia.

Olerud, John E. 1975; MD, 1971, University of Washington; dermatology.

Richardson, Michael L. 1984, (Adjunct); MD, 1975, Baylor University; bone and joint radiology and musculoskeletal radiology.

Sangeorzan, Bruce J. 1986; MD, 1981, Wayne State University; orthopaedics, trauma, and foot and ankle deformity.

Schoene, Robert B. 1981, (Adjunct); MD, 1972, Columbia University; respiratory diseases.

Sidles, John Arthur 1984; PhD, 1983, University of Washington; seeing molecules (i.e., quantum-coherent instrumentation); regenerating cartilage.

Simkin, Peter A. 1969, (Adjunct); MD, 1961, University of Pennsylvania; rheumatology.

Smith, Nathan J. * 1965, (Emeritus); MD, 1945, University of Wisconsin; sports medicine.

362 SCHOOL OF MEDICINE / ORTHOPAEDICS

Staheli, Lynn T. 1975, (Emeritus); MD, 1959, University of Utah; pediatric orthopaedics.

Teitz, Carol Claire 1974; MD, 1974, Yale University; orthopaedics, arthroscopy, sports medicine.

Tencer, Allan Fred * 1988; PhD, 1981, McGill University (Canada); biomechanics of joints, orthopaedic trauma implants.

Trumble, Thomas E. 1989; MD, 1979, Yale University; orthopaedics, hand and microvascular surgery.

Wilson, Anthony J. 1994, (Adjunct); MBBCh, 1972, Otago University (New Zealand); orthopaedic trauma imaging, teleradiology, digital radiography, MRI/CT.

Associate Professors

Belza, Basia * 1991, (Adjunct); MN, 1982, University of Virginia, PhD, 1991, University of California (San Francisco); chronic illness, gerontology, fatigue prevention and management in rheumatic diseases.

Bruckner, James 1990; MD, 1984, Creighton University; orthopaedics, tumors and bone transplantation.

Chapman, Jens R. 1990; MD, 1983, Technical University of Munich (Germany); orthopaedics, spine trauma/reconstruction.

Ching, Randal Preston * 1992; PhD, 1992, University of Washington; orthopaedic biomechanisms related to injury prevention, injury mechanisms and injury repair.

Clark, John M, Jr. 1982; PhD, 1975, MD, 1976, University of Chicago; orthopaedics, hip and knee arthritis.

Gardner, Gregory C. 1989, (Adjunct); MD, 1984, Baylor University; rheumatology.

Gillespy, Thurman 1990, (Adjunct); MD, 1980, Thomas Jefferson University; musculoskeletal radiology, orthopaedics.

Graney, Daniel O. * 1966, (Adjunct); PhD, 1965, University of California (San Francisco); gross anatomy, electron microscopy, intestinal absorption.

Greenlee, Theodore K. 1971; MD, 1959, Northwestern University; general orthopaedics.

Gross, Ted S. 2000; PhD, 1993, State University of New York (Stony Brook); biomechanics.

Henley, Michael Bradford 1988; MD, 1979, University of Washington; orthopaedics, trauma, post-traumatic reconstruction, spinal trauma.

Hunter, John C. 1992, (Adjunct); MD, 1970, University of Illinois; musculoskeletal, radiology, MRI.

Larson, Roger V. 1982; MD, 1973, University of Utah; orthopaedics, arthroscopy, sports medicine and knee ligament reconstruction.

Mirza, Sohail K. 1989; MD, 1989, University of Colorado (Denver); spinal surgery/spine biomechanics.

Mosca, Vincent S. 1985; MD, 1978, University of Rochester; pediatric orthopaedics, the child's foot, limb length discrepancies.

Ott, Susan M. 1980, (Adjunct); MD, 1974, University of Washington; nephrology.

Raskind, Wendy H. 1982, (Adjunct); PhD, 1977, MD, 1978, University of Washington; medical genetics.

Routt, Milton L. 1988; MD, 1983, University of Texas (Galveston); orthopaedics, traumatology.

Shaffrey, Christopher I. 1999, (Adjunct); MD, 1986, University of Virginia; spinal disorders including fractures, tumors, spinal deformity, and degenerative conditions.

Simonian, Peter Todd 1992; MD, 1991, University of Southern California; orthopaedics, general, sports medicine.

Smith, Douglas G. 1989; MD, 1984, University of Chicago; orthopaedics, traumatology, foot, ankle, amputations.

Song, Kit M. 1995; MD, 1985, University of Iowa; pediatric orthopaedics, spinal deformities of children.

Vedder, Nicholas 1990; MD, 1981, Case Western Reserve University; case history, plastic and reconstructive surgery.

Assistant Professors

Allan, Christopher H. 1998; MD, 1992, Northwestern University; hand and microvascular surgery.

Barei, David P. 1999; MD, 1991, University of Ottawa (Canada); traumatology.

Bellabarba, Carlo 1999; MD, 1992, McGill University (Canada); spine trauma and reconstruction, orthopaedic trauma.

Chansky, Howard Alan 1992; MD, 1987, University of Pennsylvania; orthopaedics, general.

Diab, Mohammad 1990; MD, 1990, Stanford University; pediatric orthopaedics.

Escobedo, Eva M. 1992, (Adjunct); MD, 1985, Stanford University; musculoskeletal trauma radiology.

Kadel, Nancy J. 1999; MD, 1988, University of Washington; orthopedic surgery, foot/ankle.

Mills, William J. 1998; MS, 1985, University of Minnesota, MD, 1989, University of Colorado (Denver); traumatology, knee ligament injury.

Nork, Sean E. 1997; MD, 1992, University of California (San Diego); traumatology.

O'Kane, John 1993; MD, 1993, University of Vermont; family medicine, sports medicine, team care.

Schmale, Gregory A. 2000; MEd, 1994, MD, 1994, University of Washington.

Smith, Kevin L. 1995; MD, 1990, Southern Illinois University; shoulder and elbow orthopaedics.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

ORTHP 498 Undergraduate Thesis (*) *Eyre* Student works directly with a preceptor in selecting a suitable area for laboratory or clinical research in the area of orthopaedics, and develops a thesis for recognition. Offered: AWSpS.

ORTHP 499 Undergraduate Research (*) *Eyre* Investigation of pertinent musculoskeletal problems in the orthopaedic laboratories as part of the research group. Offered: AWSpS.

ORTHP 505 P-Preceptorship in Orthopaedic Surgery (1) Opportunity for first- and second-year medical students to gain experience with clinical fac-

ulty members in the community. Students observe general aspects of private practice from a longitudinal perspective. Prerequisite: permission of department. Offered: AWSpS.

ORTHP 585 P-Sports Medicine (2) *O'Kane* Lectures, patient problem presentations, and seminar discussions to explore impact of exercise and sport participation on various body systems. Includes nutritional concerns, biomechanics of certain sports injuries and cardiovascular, pulmonary, and musculoskeletal concerns. Prerequisite: second-year medical student standing. Offered: Sp.

ORTHP 675 P-Preceptorship in Orthopaedics (*, max. 4) *Simonian* Student spends full time with the preceptor during all his or her working day in order to gain a better understanding of the diagnosis and the management of problems of the musculoskeletal system as seen in the private orthopaedic practice. Prerequisite: SURG 665 or HUBIO 553 and permission of department. (Two weeks, full-time.) Offered: AWSpS.

ORTHP 676 P-Pediatric Orthopaedics (*, max. 8) *Diab, Mosca, Song* Acquaints students with all aspects of musculoskeletal problems in childhood. Didactic conferences and seminars, and opportunities for active participation in both inpatient and outpatient care at Children's Hospital and Medical Center, and correlative anatomy and pathology. Prerequisite: SURG 665 or HUBIO 553. (Four weeks, full-time.) Offered: AWSpS.

ORTHP 677 P-Musculoskeletal Trauma (*, max. 8) *Benirschke, Chapman, Hanel, Hansen, Henley, Mills, Mirza, Nork, Routt, Sangeorzan, Smith* Harborview Medical Center. Emergency room, wards, operating room, and outpatient clinics. Instruction in general and special clinics, including hand, hip, foot, and fracture, with emphasis placed on physical examination of the patient. Students take correlative anatomy and pathology. Prerequisite: SURG 665, HUBIO 553. (Four weeks, full-time.) Offered: AWSpS.

ORTHP 678 P-Musculoskeletal Oncology (8/12) *Conrad* In-depth experience on musculoskeletal oncology service with primary involvement in initial evaluation, staging, treatment, and postoperative follow-up of patients with various musculoskeletal malignancies. Elective involves experience in surgical, oncologic, radiologic, and pathologic principles of managing sarcomas. Prerequisite: basic orthopaedic elective or permission of instructor. Offered: AWSpS.

ORTHP 680 P-General Orthopaedic Clerkship (*, max. 8) *Chansky* Veteran's Administration Hospital: structured to provide a basic education in the fundamentals of the musculoskeletal system. Heavy emphasis is placed on the reconstructive alternatives in the treatment of degenerative joint diseases. Prerequisite: completion of HUBIO series; third- and fourth-year students. Enrollment limited to three. Offered: AWSpS.

ORTHP 681 P-University of Washington Medical Center Orthopaedics (8) *Allan, Bigos, Bruckner, Clark, Conrad, Larson, Matsen, Mirza, Simonian, Smith, Teitz, Trumble* Orthopaedic subspecialty clerkship at University of Washington Medical Center. Preceptor-based outpatient, inpatient, emergency, or operative orthopaedic care. Students work primarily in one subspecialty area and in one general orthopaedic clinic. For students who plan careers in orthopaedic surgery. Prerequisite: completion of HUBIO series, third- and fourth-year medical students. Offered: AWSpS.

ORTHP 682 P-Outpatient Orthopaedics (8) Outpatient orthopaedic experience at University of Washington Medical Center. Emphasis on physical exam, diagnosis, radiographic evaluation, and non-operative treatment. Rotation through general

orthopaedics as well as all subspecialty areas. For students who plan careers in primary care. Prerequisite: completion of HUBIO series. Offered: AWSpS.

ORTHP 697 P-Orthopaedic External Elective (*, max. 12) *Simonian* Special arrangements can be made for students desiring to take orthopaedic electives at other institutions. Programs generally approved include orthopaedic clerkships at other universities or at large orthopaedic institutes. Prerequisite: HUBIO 553 and permission of department. Offered: AWSpS.

ORTHP 699 P-WWAMI Orthopedics Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Otolaryngology—Head and Neck Surgery

BB1165 University of Washington Medical Center

General Catalog Web page:
www.washington.edu/students/gencat/academic/Otolaryngology.html

Department Web page:
depts.washington.edu/otoweb/

The Department of Otolaryngology—Head and Neck Surgery provides clinical care for patients with a broad spectrum of disorders affecting the head and neck region, including the ears, nose, and throat. A major portion of departmental effort is directed toward basic research in the areas of sensorineural hearing disorders, physiology of the larynx, and cancer treatment and rehabilitation. The department supports a number of research fellows and advanced degree candidates, and is responsible for a four-year residency program and for the training of medical students in subjects relevant to the specialty.

Faculty

Chair

Ernest A. Weymuller, Jr.

Professors

Coltrera, Marc Dante 1986; MD, 1981, Yale University; otolaryngology/head and neck surgery.

Donaldson, James A. 1965, (Emeritus); MD, 1954, University of Minnesota; otology.

Duckert, Larry Gene 1978; MD, 1972, PhD, 1977, University of Minnesota; otology/neurotology.

Epstein, Joel B. 1983, (Adjunct); DMD, 1976, University of Saskatchewan (Canada), MSD, 1979, University of Washington.

Fuchs, Albert F. * 1969, (Adjunct); PhD, 1966, Johns Hopkins University; oculomotor physiology, vision.

Gates, George A. 1993; MD, 1959, University of Michigan; otology/neurotology, cochlear implantation.

Hillel, Allen D. * 1983; MD, 1976, Stanford University; peripheral nerve physiology after injury, swallowing disorders in neuromuscular disease.

Kuhl, Patricia K. * 1976, (Adjunct); MA, 1971, PhD, 1973, University of Minnesota; speech perception.

Manning, Scott C. 1995; MD, 1980, Tulane University; pediatric otolaryngology/head and neck surgery.

Norton, Susan J. * 1991; PhD, 1982, University of Washington; normal and non-normal hearing, specifically cochlear mechanics, in humans and animals.

Orcutt, James C. 1982, (Adjunct); PhD, 1976, MD, 1977, University of Colorado (Denver); orbit, oculoplastics, neuro-ophthalmology.

Robinson, Lawrence R. * 1989, (Adjunct); MD, 1982, Baylor University; psychiatry.

Rubel, Edwin W. * 1986; PhD, 1969, Michigan State University; developmental neurobiology, with special emphasis on vertebrate auditory system development.

Snyder, Jack 1969, (Emeritus); MA, 1956, PhD, 1971, University of Washington; audiology.

Stanley, Robert B. 1993; MD, 1976, Duke University; otolaryngology/head and neck surgery, trauma, maxillofacial surgery.

Tempel, Bruce L. 1988; PhD, 1983, Princeton University; molecular neurobiology/neurogenetics, especially potassium channel gene structure and function.

Weymuller, Ernest A, Jr. 1978; MD, 1966, Harvard University; otolaryngology/head and neck surgery.

Associate Professors

Calderon, Rosemary 1987, (Adjunct); PhD, 1988, University of Washington; mental health and deafness, childhood psychopathology, early intervention.

Futran, Neal David 1995; DMD, 1982, University of Pennsylvania, MD, 1987, State University of New York (Downstate Medical Center); oral maxillofacial surgery.

Inglis, Andrew F, Jr. 1983; MD, 1981, Medical College of Pennsylvania; pediatric otolaryngology/head and neck surgery.

Makielski, Kathleen H. 1985; MD, 1978, University of Michigan; otolaryngology/head and neck surgery.

Rees, Thomas 1971; MA, 1969, University of Redlands, PhD, 1972, University of Washington; audiology.

Schubert, Mark M. * 1974, (Adjunct); DDS, 1974, MSD, 1981, University of Washington; oral medicine/oral oncology.

Sie, Kathleen C. Y. 1984; MD, 1984, University of Michigan; pediatric otolaryngology/head and neck surgery.

Sires, Bryan S. 1995, (Adjunct); PhD, 1986, MD, 1990, Northwestern University; plastic and reconstructive surgery.

Tempel, Bruce L. 1988; PhD, 1983, Princeton University; molecular neurobiology/neurogenetics, especially potassium channel gene structure and function.

Werner, Lynne A. * 1986, (Adjunct); PhD, 1980, Loyola University (Chicago); auditory development, infant psychoacoustics.

Assistant Professors

Farwell, Donald Gregory 1995; MD, 1994, Washington University (St. Louis); trauma.

Maronian, Nicole 1998; MD, 1991, University of Rochester; laryngology, sleep apnea.

Perkel, David J. 2000; PhD, 1992, University of California (San Francisco); neural mechanisms of learning; focus on vocal learning in songbirds.

Perkins, Jonathan A. 1994; DO, 1987, Osteopathic Medicine and Surgery (Iowa); pediatric otolaryngology head and neck surgery.

Weaver, Edward M. 1998; MD, 1993, Yale University; otolaryngology/head and neck surgery, sleep apnea, snoring.

Yueh, Bevan 1997; MD, 1989, Stanford University; clinical epidemiology of hearing loss and head and neck cancer.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

OTOHN 498 Undergraduate Thesis (*) *Rubel, Weymuller* Student works directly with department faculty in selecting a suitable area for laboratory or clinical research in the area of otolaryngology, and develops a thesis for recognition. Offered: AWSpS.

OTOHN 499 Undergraduate Research (*) *Rubel, Weymuller* Research opportunities offered under direction in the area of otolaryngology. (Twelve weeks.) Offered: AWSpS.

OTOHN 501 P-Preceptorship in Otolaryngology—Head and Neck Surgery (1) *Hillel* One morning a week for a total of 30 hours per quarter spent observing patient care in either inpatient or outpatient settings at the University of Washington Medical Center; associated readings. Prerequisite: first- or second-year medical student standing. Coordinator: OTOHNS office. Offered: AWSpS.

OTOHN 680 P-Introduction to Clinical Otolaryngology—Head and Neck Surgery (4/8, max. 24) *Hillel, Makielski, Manning, Weymuller* Introduction to surgical subspecialty of otolaryngology—head and neck surgery. Structured to allow broad introduction to breadth of specialty. Students see patients in clinic, join inpatient rounds, have opportunity to go to operating room. Rotations at UWMC, VAH, HMC, CHMC, Swedish. Prerequisite: human biology series; recommended: MED 665 or SURG 665. Offered: AWSpS.

OTOHN 683 P-Otolaryngology—Head and Neck Surgery Externship (*, max. 8) *(Madigan Army Medical Center)* Individual externship training at outpatient clinic, where visits average twelve hundred per month, supplemented by inpatient assignments. Students may reside at the hospital during externship, using facilities of bachelor officer quarters and hospital mess. Prerequisite: completion of human biology series. (Two or four weeks, full-time.); recommended: MED or SURG 665. Offered: AWSpS.

OTOHN 686 P-Otolaryngology—Head and Neck Surgery: Medical and Surgical Aspects (*, max. 12) *Weymuller* Clinical in-depth study for the student whose interest lies in pathology of the head and neck. Reasonable flexibility to arrange course content that provides exposure to all aspects of patient care. Prerequisite: permission of chairman; recommended: MED 665 or SURG 665. Offered: AWSpS.

OTOHN 697 P-Otolaryngology—Head and Neck Surgery Special Electives (*, max. 24) *Weymuller* By specific arrangement. Special clerkship, externship, or research opportunities can at times be made available at institutions other than the University of

Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of chairman. Offered: AWSpS.

OTOHN 699 P-WWAMI Otolaryngology—Head and Neck Surgery Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Pathology

C516 Health Sciences

General Catalog Web page:
www.washington.edu/students/gencat/academic/Pathology.html

Department Web page:
www.pathology.washington.edu

Pathology is both a basic biological science and a specialty of medicine. As a basic science, it deals with the natural history and mechanisms of initiation and expression of disease processes. The principal aim of the pathologist is to understand disease manifestations and processes in whatever terms are required. Therefore, the techniques of the pathologist range from those of the physicist and physical chemist through those of the physiologist to the realm of the epidemiologist. Present emphasis in the department is on cellular and molecular pathology, environmental pathology, and analysis of disease by methods of cell and molecular biology, recombinant DNA techniques, light and electron microscopy, histochemistry and cytochemistry, analytical biochemistry, cell and organ culture, and the establishment and analysis of animal models of disease.

Graduate Program

Graduate Program Coordinator
C516 Health Sciences, Box 357470
206-616-7551

The Department of Pathology offers graduate training in experimental pathology, with an emphasis on the cellular and molecular biological basis of disease, leading to the Doctor of Philosophy degree in cellular and molecular pathology. The aim of the graduate program is to train individuals for a career in the scientific investigation of basic disease mechanisms. The program encompasses students and faculty members with diverse interests, which range from investigation of specific disease conditions to the molecular basis of alterations in cell function and of gene expression. Faculty members' interests include the normal and pathological aspects of cardiovascular biology, tumor biology, environmental effects on normal processes, biology of aging, neurobiology, immune response, inflammation and repair, immunopathology and biology of extracellular matrix, as well as fundamental processes that underlie disease, such as regulation of gene expression and protein synthesis, structure and function of oncogenes, viral and nonviral transformation, chromatin structure, mutagenesis and DNA repair, and genetic recombination. The department's graduate faculty comprises 40 members, who are located at the Health Sciences Center, Veterans Affairs Medical Center, Harborview Medical Center, Children's Hospital and Medical Center, and Fred Hutchinson Cancer Research Center. Approximately 30 full-time students are pursuing the Ph.D. degree.

Students in the program are expected to fulfill coursework requirements during the first two years. In line with the diversity of faculty members' interests within the department, course requirements are kept to a minimum to provide students with maximum flexibility.

The Ph.D. program in experimental pathology is designed to prepare students for careers as practicing scientists in biomedical research. The emphasis of the program is on development of skills in hypothesis generation and testing, including the design, accomplishment and critical interpretation of experiments. Experimental pathology uses the full range of biomedical research techniques (including biochemistry, molecular biology, cell biology, animal modeling) to attempt to elucidate the mechanisms underlying human disease. Graduates of the program usually continue research careers at biotechnology companies or universities/research institutes.

Special Requirements

Prospective candidates are expected to have had undergraduate experience in biology, physics, chemistry, and mathematics, and acceptable scores on the Graduate Record Examination, including advanced biology or chemistry. Those wishing to matriculate toward both the M.D. and Ph.D. degrees must gain admission to both the Graduate School and the School of Medicine.

Financial Aid

Funding for students is provided from departmental and University funds, training grants, a variety of institutional fellowships, and research grants of individual faculty members.

Research Facilities

The department emphasizes the cellular and molecular approach to the investigation of the pathogenesis of disease in mammalian species. Special facilities exist for training in electron microscopy; cell, tissue, and organ culture; recombinant DNA techniques; histochemistry and cytochemistry; analytical biochemistry; immunology; and molecular and cell biology.

Residency Training Program

The department supervises a residency-training program in anatomic pathology and, jointly with the Department of Laboratory Medicine, in clinical pathology for qualified medical doctors. Subspecialty training is also available through clinical fellowships. Persons who complete the residency program are eligible for certification by the American Board of Pathology. For additional information, contact the Resident Program Director, Department of Pathology, Box 356100.

Alpers, Charles E. 1986; MD, 1978, University of Rochester; clinical/experimental glomerular disease, AIDS in man and experimental simian AIDS, vascular biology.

Alvord, Ellsworth C. * 1960; MD, 1946, Cornell University; neuropathology, experimental allergic encephalitis.

Argenyi, Zsolt B. 2001; MD, 1978, Semmelweis Medical University (Hungary); dermatopathology.

Bowen-Pope, Daniel * 1979; PhD, 1979, University of California (Berkeley); gene regulation, growth factors and receptors.

Byers, Peter H. * 1976; MD, 1969, Case Western Reserve University; extracellular matrix synthesis, genetic disorders of collagen metabolism, secretion, human genetics.

Chi, Emil Y. * 1972, (Research); PhD, 1971, University of California (Santa Barbara); lung structures and function, mast cell secretion and inflammation.

Clowes, Alexander W. * 1980, (Adjunct); MD, 1972, Harvard University; vascular smooth muscle cell growth control arterial injury and repair.

Collins, Steven J. * 1982, (Adjunct); MD, 1973, Columbia University; retinoic acid receptors and the pathogenesis of malignancy.

Disteche, Christine M. * 1980; PhD, 1976, University of Liege (Belgium); molecular genetics of sex chromosomes, X inactivation, human and mouse cytogenetics.

Eary, Janet F. 1980, (Adjunct); MD, 1980, Michigan State University; nuclear medicine.

Eisen, Harvey * 1986, (Affiliate); PhD, 1967, University of Toronto (Canada); host-parasite interactions, generation of genetic diversity.

Fausto, Nelson * 1994; MD, 1960, Sao Paulo State University (Brazil); liver regeneration, tumor biology, carcinogenesis, growth factors.

Galloway, Denise A. * 1982, (Adjunct Research); PhD, 1976, City University of New York; viral pathogenesis and neoplasia.

Gelinas, Richard * 1985, (Affiliate); PhD, 1974, Harvard University.

Groudine, Mark * 1982, (Adjunct); MD, 1975, PhD, 1976, University of Pennsylvania; chromatin structure and gene activity.

Harlan, John M. * 1978, (Adjunct); MD, 1973, University of Chicago; vascular biology with emphasis on leukocyte-endothelial adhesion.

Hellstrom, Ingegerd * 1966, (Affiliate); DrMed, 1966, Karolinska Institute (Sweden); tumor immunology.

Kiviat, Nancy C. * 1979; MA, 1970, MD, 1975, University of Washington; epidemiologic and molecular biologic studies of the relationship between HPV, HIV, and neoplasia.

Loeb, Lawrence A. * 1978; MD, 1961, New York University, PhD, 1967, University of California (Berkeley); DNA replication, cancer and AIDS.

Martin, George * 1957; MD, 1953, University of Washington; somatic cell genetics, pathobiology of aging, neurodegenerative disorders.

McDougall, James K. * 1982; PhD, 1971, University of Birmingham (UK); cell cycle, genetic instability and neoplasia.

Miller, Arthur D. * 1987, (Affiliate); PhD, 1982, Stanford University; virology, gene therapy.

Monnat, Raymond J, Jr. * 1982; MD, 1976, University of Chicago; somatic mutation, somatic cell molecular genetics, human genetic disease.

Mottet, N. Karle * 1959, (Emeritus); MD, 1952, Yale University; effects of trace elements, especially methylmercury and arsenic, on growth and development.

Narayanan, A. Sampath * 1971, (Research); PhD, 1967, University of Madras (India); connective tissue, periodontal disease, regulation of fibroblast growth, matrix synthesis.

Neiman, Paul E. * 1971, (Adjunct); MD, 1964, University of Washington; oncology.

Nicosia, Roberto F. 1999; MD, 1976, University of Rome (Italy), PhD, 1984, Medical College of Pennsylvania; vascular and renal pathology.

Norwood, Thomas H. * 1973; MD, 1968, University of Maryland; somatic cell genetics, pathobiology of aging, mitotic cell cycle regulation.

Page, Roy C. * 1967; DDS, 1957, University of Maryland, PhD, 1967, University of Washington; connective-tissue pathology, chronic inflammation, immunopathology, periodontal disease.

Rabinovitch, Peter S. * 1980; MD, 1979, University of Washington, PhD, 1980, University of Washington; cellular aging, preneoplastic disease, cell cycle abnormalities, DNA change.

Raines, Elaine W. * 1975, (Research); MS, 1975, University of California (San Francisco); molecular mechanisms responsible for vascular cell migration.

Reay, Donald T. 1982, (Emeritus); MD, 1963, University of Utah, MPA, 1978, Seattle University; forensic medicine.

Reichenbach, Dennis D. 1966, (Emeritus); MD, 1958, University of Washington; cardiovascular pathology, myocardial cell injury.

Reidy, Michael A. * 1980; PhD, 1976, Cambridge University (UK); identification of migration specific genes, expression of matrix metalloproteinases.

Rohrschneider, Larry R. * 1982, (Affiliate); PhD, 1973, University of Wisconsin; control of growth, differentiation, transformation by the c-fms proto-oncogene.

Rosenfeld, Michael E. * 1992, (Adjunct); PhD, 1981, University of Wisconsin; mechanisms of atherogenesis and macrophage gene expression.

Sale, George E. 1977; MD, 1968, Stanford University; immunopathology of bone marrow transplantation, graft-versus-host.

Schwartz, Stephen Mark * 1974; MD, 1967, Boston University, PhD, 1973, University of Washington; vascular biology, atherosclerosis, molecular basis of lineage, developmental biology, cell kinetics.

Shaw, Cheng-Mei * 1963, (Emeritus); MD, 1950, National Taiwan University; neuropathology, immunopathology, trace metal neurotoxicology.

Shulman, Howard M. 1982; MD, 1971, University of California (Los Angeles); graft-versus-host disease; venocclusive disease of the liver.

Smith, Gerald R. * 1983, (Affiliate); PhD, 1970, Massachusetts Institute of Technology; molecular biology of genetic recombination and regulation of gene expression.

Spence, Alexander M. 1974; MD, 1965, University of Chicago; neurology, neuro-oncology.

Stamatoyannopoulos, George 1964, (Adjunct); MD, 1958, DrMedS, 1960, University of Athens (Greece); medical genetics.

Sumi, Shuzo Mark 1966, (Emeritus); MD, 1956, University of Toronto (Canada); neuropathology, neuromuscular disease, neurodegenerative diseases.

Swanson, Paul E. 2001; MD, 1984, Oregon Health Science University; surgical pathology, immunocytochemistry, soft tissue and GI pathology.

Todaro, George J. * 1983, (Adjunct); MD, 1963, New York University; growth regulation in normal/tumor cells, growth factors and their receptors, novel cell therapies.

Vessella, Robert L. 1989, (Adjunct); PhD, 1974, University of Mississippi; tumor markers and immunology.

Wight, Thomas * 1978, (Affiliate); PhD, 1972, University of New Hampshire; connective tissue biology and pathology, proteoglycans metabolism, atherosclerosis.

Wolf, Norman S. * 1968; DVM, 1953, Kansas State University, PhD, 1960, Northwestern University; hematopoietic stem cell dynamics and transplantation in radiation biology.

Associate Professors

Bornfeldt, Karin E. * 1991; PhD, 1991, Linköping University (Sweden); cardiovascular disease in diabetes, focusing on vascular muscle cells.

Bronner, Mary P. 1993; MD, 1989, University of Pennsylvania; gastrointestinal and hepatic pathology, neoplastic progression and transplantation pathology.

Fligner, Corinne L. 1983; MD, 1976, University of New Mexico; autopsy and forensic pathology, fetal and perinatal pathology, forensic toxicology.

Giachelli, Cecilia * 1982, (Adjunct); PhD, 1987, University of Washington; adhesion molecules and vascular biology processes.

Hackman, Robert C. 1982; MD, 1971, Stanford University; infectious and pulmonary complications in immunocompromised patients.

Horwitz, Marshall S. * 1983, (Adjunct); PhD, 1988, MD, 1990, University of Washington; inherited white blood cell disorders, including leukemia.

Kapur, Raj P. * 1988; MD, 1988, University of Southern California; normal and abnormal development of the enteric nervous system.

Murry, Charles E. * 1989; PhD, 1989, MD, 1989, Duke University; myocardial infarction, heart regeneration, skeletal/cardiac muscle differentiation.

Myerson, David * 1985; PhD, 1979, Albert Einstein College of Medicine; the pathology of viral disease in humans.

Oshima, Junko * 1996, (Research); PhD, 1992, Boston University; pathobiology of aging.

Ott, Susan M. 1980, (Adjunct); MD, 1974, University of Washington; nephrology.

Patterson, Kathleen 1992; MD, 1976, University of Iowa; pediatric pathology.

Porter, Peggy L. * 1987; MD, 1987, University of New Mexico; identifying/understanding the molecular events associated with the initiation/progression of cancer.

Schmidt, Rodney 1984; PhD, 1984, MD, 1984, University of Washington; surgical pathology, pulmonary pathology, sarcomas, image analysis, electron microscopy.

Siebert, Joseph Robert 1986, (Research); PhD, 1985, University of Washington; pediatric pathology.

Silbergeld, Daniel L. 1984, (Adjunct); MD, 1984, University of Cincinnati; brain tumors, epilepsy.

Stephens, Karen G. * 1989, (Adjunct Research); PhD, 1982, Indiana University; neurofibromatosis, tumorigenesis, gene mapping and regulation, human genetics.

Swisshelm, Karen * 1980; PhD, 1989, University of Washington; molecular biology of senescence and tumor suppression in breast cancer.

Tait, Jonathan F. * 1985, (Adjunct); PhD, 1983, MD, 1983, Washington University; biochemistry of blood coagulation, laboratory diagnosis of genetic disorders.

Tapscott, Stephen J. * 1986, (Adjunct); PhD, 1982, MD, 1982, University of Pennsylvania; molecular and developmental biology.

Thorning, David R. 1982; MD, 1965, University of Kansas; anatomic pathology, pulmonary pathology, tissue biology, electron microscopy.

True, Lawrence D. * 1990; MD, 1971, Tulane University; urologic pathology, nuclear aspects of tumor differentiation.

Vincent, Inez J. * 1998, (Research); PhD, 1987, Indiana University; pathogenesis of Alzheimer's disease.

Yeung, Raymond S. 1997, (Adjunct); MD, 1982, University of Toronto (Canada); general and surgical oncology.

Zarbl, Helmut * 1996, (Affiliate); PhD, 1983, McGill University (Canada).

Assistant Professors

Born, Donald E. 1987; PhD, 1986, MD, 1987, University of Virginia; family medicine, sports medicine, team care.

Brentnall, Teresa A. 1991; MD, 1987, University of Washington; gastroenterology.

Clurman, Bruce E. * 1991, (Adjunct); PhD, 1988, MD, 1989, Cornell University.

Finn, Laura S. 1998; MD, 1989, Pennsylvania State University; pediatric pathology.

Franklin, Christopher C. 1997, (Research); PhD, 1989, University of Missouri; signal transduction pathways in mammalian cells.

Garcia, Rochelle 1988; MD, 1989, University of Washington; cytology, gynecologic pathology.

Hevner, Robert F. 2000; PhD, 1992, MD, 1992, Medical College of Wisconsin; development of cerebral cortex.

Jin, Lee-Way 1996; MD, 1985, National Taiwan University, PhD, 1993, University of California (San Diego); molecular analysis and animal modeling of Alzheimer's disease.

Kemp, Christopher James * 1996, (Affiliate); PhD, 1989, University of Wisconsin; genetic and environmental influence on multistage cancer in the mouse.

Kuechle, Melanie K. 1995, (Adjunct); MD, 1989, Baylor University; dermatology.

Lawton, Thomas J. 1999; MD, 1990, University of Michigan; clinicopathologic research in breast cancer with particular interest in lobular carcinoma.

Mulvihill, Eileen R. 1999, (Research); PhD, 1982, Université Louis Pasteur (France); Marfan's syndrome.

Nelson, Peter S. * 1993, (Adjunct); MD, 1986, University of Kansas; the study of human carcinogenesis using tools of genomics and bioinformatics.

Rubin, Brian Paul 2000; PhD, 1995, MD, 1995, Cornell University; bone and soft tissue tumors.

Schwarze, Ulrike 1993; MD, 1989, Medical Academy of Dresden (Germany); inherited disorders of connective tissue.

Tkachuk, Douglas C. 1995; MD, 1982, University of Manitoba (Canada); pathogenesis of acute leukemia.

Virgin, Jeffrey B. 1988; PhD, 1986, MD, 1986, Case Western Reserve University; surgical pathology, cytopathology, autopsy pathology.

Senior Lecturer

Nochlin, David 1988; MD, 1972, Faculty of Medicine (Mexico); neuropathology.

Lecturer

Pendergrass, William R. 1980; PhD, 1977, University of Washington; DNA replication, caloric restriction, gerontology, invitro senescence.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

PATH 410 Introduction to Pathology (3) *Narayanan* Basic pathologic processes, including cell and tissue involvement in degenerative processes, cell death, inflammation and repair, immunopathologies, cell cycle events, carcinogenesis, and responses to alterations in hormone and growth factor levels. Illustrative disease conditions are reviewed. Required for physical therapy students. Others with suitable biology background by permission of instructor. Offered: A.

PATH 444- General and Systemic Pathology ([2-3]-, max. 5) *Narayanan* Basic pathologic processes that underlie disease, including cell alterations, genetic and developmental pathology, environmental pathology, neoplasia, immunopathology, inflammation, infection, and systemic diseases. Correlates gross, functional, and biochemical alterations. For first-year dental students and graduate students. Requires reasonable grounding in biological and chemical sciences. Prerequisite for nondental students: permission of instructor.

PATH 450 Cell Biology of Aging (3) *Martin, Rabinovitch, Wolf* Pathophysiology of aging at cell and tissue levels (cell replication limits, telomere shortening, accrual of oxidative damage, caloric restriction effects, loss of postreplicative cells, longevity assurance genes). Proseminar based on student participation. Undergraduate honors students, graduate students with biology, zoology, genetics or medical sciences backgrounds. Prerequisite: permission of instructor. Offered: W.

PATH 498 Undergraduate Thesis (*) Elective.

PATH 499 Undergraduate Research (*) Elective.

PATH 500 Molecular Basis of Disease (3) *Parks* Designed for first and second year graduate students to introduce the concepts of general pathology at the cellular and molecular levels.

PATH 501 Pathology Proseminars (1) Small group discussions and presentations by students based on critical reading of original papers, or on concurrent seminars, in many areas of experimental pathology

and medicine. Topic varies by quarter. Prerequisite: permission of instructor. Offered: AWSpS.

PATH 507 Introduction to Pathology Research (2) *Bornfeldt, Swisshelm* Current developments and approaches to investigation of the molecular and cellular basis of disease. Members of the Pathology faculty present and discuss their own research projects. Credit/no credit only. Prerequisite: permission of instructor. Offered: A.

PATH 510 Introduction to Pathology Methods (3) *Bowen-Pope* Laboratory course designed to introduce graduate students to the fundamentals of image analysis, histology, histopathology, post mortem evaluation, surgical pathology, and other methods used to investigate disease etiology, progression, and manifestation in humans and in animal models. Prerequisite: permission of instructor. Offered: Sp.

PATH 511 Topics in Experimental Pathology (1-2, max. 10) *Bornfeldt* Focus on areas of research relevant to experimental pathology. Prerequisite: permission of instructor. Offered: AWSpS.

C MED 512 Introduction to the Anatomical Analysis of Animal Disease (5, max. 10) See Comparative Medicine courses.

C MED 514 Comparative Pathology Conference (1, max. 6) See Comparative Medicine courses.

PATH 520 Experimental Pathology Seminar (1) Review of current research in various areas of experimental pathology by members of the department and visiting scientists. Credit/no credit only.

CONJ 520 Anatomy and Autopsy (1/2) *Fligner* See Conjoint Courses.

PATH 522 Hematopathology Seminar (2) *Sabath* Identification of normal lymphocyte and bone marrow subpopulations, diagnosis of leukemias, lymphomas, and benign conditions that resemble them. Emphasis on histopathology, cytochemical, immunological, and molecular markers. Clinicopathologic correlation. Offered: jointly with LAB M 522; even years.

PATH 530 Human Cytogenetics (*, max. 4) *Disteche* Sources and methods of preparation and identification of human chromosomes. Molecular structure and mapping of chromosomes. Human cytogenetic pathology: karyotype-phenotype interactions, chromosome breakage, and cancer cytogenetics. Prerequisite: permission of instructor. Offered: even years.

PATH 551 Experimental and Molecular Pathology (2-5, max. 20) Introduction to experimental pathology. A tutorial course designed to introduce a graduate student (medical, dental) or senior undergraduate to selected methods and problems through literature surveys and/or laboratory experience. Exploration of causes at the cellular and molecular levels in the study of disease is emphasized. Prerequisite: permission of instructor.

PATH 552 Contemporary Anatomic Pathology (2-5, max. 30) *Schwartz* Study of recent developments in anatomic pathology. Subject includes areas of basic science and review of systemic pathology. Recent developments and interpretation of these findings are stressed. For pathology residents, fellows, and trainees. Credit/no credit only. Prerequisite: permission of instructor.

PATH 555 Environmental Pathology (3) *Monnat, Rhim* Modern morphologic, cell biological, and molecular approaches to environmental disease associated with exposure/predisposition. Lectures, seminar discussion, and student presentations. Prerequisite: PATH 410 or PATH 444 or HUBIO 520; recommended: ENV H 514 and ENV H 515. Offered: alternate years.

CONJ 560, 561 Tumor Biology (3, 2) See Conjoint Courses.

PATH 563 Neuropathology (*) *Alvord, Shaw, Sumi* Course consists of ten parts. Conferences on gross neuropathology (brain cutting and clinicopathologic correlations) held at six hospitals. Weekly neurology or surgical neuropathology conferences, neuropathology slide show, and neuropathology laboratory case studies. Prerequisite: permission of instructor.

PATH 564 Neuropathology Brain Modeling (4) *Alvord* Designed along clinically important, functional, neuroanatomic lines, generally based first on the embryologic development of the most primitive segmental elements (sensory, motor and association cells, and simple reflexes), followed by the more elaborate suprasegmental elements (cerebellum, colliculi, and forebrain).

PATH 571 Neuroanatomic Pathology (*) *Alvord, Shaw, Sumi* The particular diseases occurring in specific parts of the nervous system are considered in terms of the segmental, intersegmental, and suprasegmental components. Clinicopathologic correlations are emphasized. Prerequisite: permission of instructor; recommended as concurrent course: PATH 563.

PATH 572 Neuropathologic Reactions (*) *Alvord, Shaw, Sumi* The reactions of the nervous system, considered in terms of congenital malformations, inflammations, vascular, traumatic, metabolic-toxic, degenerative, and neoplastic diseases peculiar to the nervous system as a whole. Clinicopathologic correlations are emphasized. Prerequisite: permission of instructor; recommended as concurrent course: PATH 563.

PATH 584 Neuropathology Brain Modeling Laboratory (4) *Alvord* Clinically important, functional neuroanatomic study based on embryologic motor, sensory, and association cells and simple reflexes, followed by the more elaborate suprasegmental elements (cerebellum, colliculi, forebrain). Three-dimensional neuroanatomical relationships, critical for understanding neuropathology, can best be obtained in constructing a brain model. Prerequisite: PATH 564, which may be taken concurrently.

PATH 600 Independent Study or Research (*) Credit/no credit only.

PATH 679 P-Pathology Summer Clerkship (*, max. 24) Dissection, writeup, and literature review of autopsy. Emphasis on etiology and pathogenesis of disease as a biological process. Designed for students who have not completed organ systems as covered in Human Biology courses. Prerequisite: HUBIO 520 and completion of first year of medical school.

PATH 680 P-Diagnostic Pathology Clerkship—University of Washington Medical Center (*, max. 24) *Swanson* Medical student participation in dissection and study of autopsy and surgical pathology cases. Cases worked up under senior staff, including dissection, microscopic examination, and literature review. Attendance at pathology conferences and seminars expected. Prerequisite: third- or fourth-year student standing.

PATH 681 P-Diagnostic Pathology Clerkship—Harborview Medical Center (*, max. 24) *Deubner*

PATH 682 P-Diagnostic Pathology Clerkship—Veterans Administration Hospital (*, max. 24) *Thorning*

PATH 683 P-Diagnostic Pathology Clerkship—Medical Examiner's Office (*, max. 24) *Raven*

PATH 685 P-Diagnostic Pathology Clerkship—Sacred Heart Hospital, Spokane (*, max. 24) *Williamson*

PATH 687 P-Diagnostic Pathology Clerkship—Children's Hospital and Medical Center (*, max. 24)
Patterson

PATH 688 P-Diagnostic Pathology Clerkship—Madigan Army Medical Center (*, max. 24)

PATH 689 P-Diagnostic Pathology Clerkship—Valley Medical Center (*, max. 24)

PATH 690 P-Diagnostic Pathology Clerkship—Northwest Medical Center (*, max. 24)
Patton

PATH 691 P-Diagnostic Pathology Clerkship—General Hospital of Everett (*, max. 24)

PATH 692 P-Diagnostic Pathology Clerkship—Group Health Cooperative (*, max. 24)

PATH 697 P-Pathology Special Electives (*, max. 24) By specific arrangement, students can have clerkships, externships, or research opportunities at institutions other than the University of Washington. Students who wish to elect this course should obtain Special Assignment forms from the Dean's office at least one month before advance registration. Prerequisite: permission of instructor.

PATH 699 P-WWAMI Pathology Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

PATH 700 Master's Thesis (*)

PATH 800 Doctoral Dissertation (*)

Bergman, Abraham 1964; MD, 1958, Case Western Reserve University; ambulatory pediatrics.

Bernstein, Irwin D. 1980; MD, 1967, New York University; hematology, oncology.

Chance, Phillip F. 1998; MD, 1978, University of Tennessee; pediatric neurology and genetics.

Christie, Dennis L. 1979; MD, 1968, Northwestern University; gastroenterology.

Clarren, Sterling K. 1978; MD, 1973, University of Minnesota; congenital defects.

Connell, Frederick A. * 1978, (Adjunct); MD, 1972, New York University; child health, child health services research, Medicaid, community health assessment.

Coombs, John B. 1983; MD, 1972, Cornell University; health care outcomes, rural health policy, healthcare workforce issues and applied nutrition.

Corey, Lawrence * 1977, (Adjunct); MD, 1971, University of Michigan; DX, therapy and pathogenesis of viral infections, AIDS/herpes viruses.

Deisher, Robert W. 1949, (Emeritus); MD, 1944, Washington University; adolescent medicine.

Eddy, Allison A. 1997; MD, 1975, McMaster University (Canada); nephrology.

Emanuel, Irvin * 1966, (Emeritus); MA, 1956, University of Arizona, MD, 1960, University of Rochester, MS, 1966, University of Washington; epidemiology of maternal and child health problems, growth and development.

Fantel, Alan G. * 1973; PhD, 1974, University of Washington; embryology, teratology.

French, James W. 1984; MD, 1963, University of Michigan; pediatric cardiology.

Gleason, Christine A. 1997; MD, 1979, University of Rochester; neonatology.

Grossman, David C. 1988; MD, 1982, University of California (Los Angeles), MPH, 1990, University of Washington; injury control, Native American health, and pediatric health services research.

Guntheroth, Warren G. 1958; MD, 1952, Harvard University; pediatric cardiology.

Guralnick, Michael J. 1986; MS, 1964, PhD, 1967, Lehigh University; developmental disabilities, peer relations, social and language development, evaluation systems.

Hayden, Patricia 1969, (Emeritus); MD, 1953, University of Rochester; congenital defects.

Hays, Ross M. * 1983, (Adjunct); MD, 1978, University of Washington; pediatric rehabilitation, medical ethics, neuromuscular diseases, congenital defects.

Hodson, W. Alan 1966; MD, 1959, University of Manitoba (Canada), MMSc, 1964, Ohio State University; neonatal and respiratory diseases.

Jaffe, Kenneth M. * 1981, (Adjunct); MD, 1975, Harvard University; pediatric rehabilitation, brain injury, neuromuscular diseases, congenital defects.

Lemire, Ronald J. 1968; MD, 1962, University of Washington; teratology.

Lynn, Anne 1981, (Adjunct); MD, 1975, Stanford University; pediatric anesthesiology.

Mackler, Bruce 1957, (Emeritus); MD, 1943, Temple University; developmental biology.

Marcuse, Edgar K. 1971; MD, 1967, Stanford University, MPH, 1973, University of Washington; general pediatrics.

McLaughlin, John F. 1977; MD, 1970, Northwestern University; congenital defects.

Neff, John 1982; MD, 1960, Harvard University; children with special health care needs.

Novack, Alvin H. 1979, (Emeritus); MD, 1958, Temple University; general pediatrics.

Ochs, Hans D. 1969; MD, 1962, University of Freiburg (Germany); immunology.

Pagon, Roberta A. 1979; MD, 1972, Harvard University; medical genetics.

Quan, Linda 1977; MS, 1969, Dartmouth College, MD, 1971, University of Washington; pediatric emergency medicine.

Ramsey, Bonnie W. 1978; MD, 1976, Harvard University; cystic fibrosis, pulmonary.

Redding, Gregory J. 1980; MD, 1974, Stanford University; pediatric pulmonary medicine.

Richards, Gail E. 2000; MD, 1970, MM, 1993, Northwestern University; endocrinology.

Rivara, Frederick P. * 1984; MD, 1974, University of Pennsylvania; pediatric epidemiology and injury prevention and research.

Robertson, William O. 1963, (Emeritus); MD, 1949, University of Rochester; general pediatrics, toxicology.

Rubens, Craig E. * 1984; PhD, 1978, Medical University of South Carolina, MD, 1982, University of Washington; infectious diseases/pathogenesis of gram(+) bacterial infections.

Sanders, Jean E. 1975; MD, 1970, University of Iowa; hematology, oncology.

Scott, C. Ronald * 1965; MD, 1959, University of Washington; diagnosis and nutritional management of genetic disorders of children.

Smith, Nathan J. * 1965, (Emeritus); MD, 1945, University of Wisconsin; sports medicine.

Stapleton, F. Bruder 1996; MD, 1972, University of Kansas; nephrology.

Stevenson, James G. 1976; MD, 1970, Baylor University; pediatric cardiology.

Tarr, Phillip I. 1983; MD, 1980, Yale University; gastroenterology/infectious diseases.

Watkins, Sandra L. 1981; MD, 1981, University of Texas (Houston); nephrology.

Wedgwood, Ralph J. 1962, (Emeritus); MD, 1947, Harvard University; rheumatology.

Weinberger, Edward 1979, (Adjunct); MD, 1979, Harvard University; pediatric radiology.

Wilson, Christopher B. * 1980; MD, 1972, University of California (Los Angeles); immunology, infectious diseases.

Woodrum, David E. 1971; MD, 1965, University of Illinois; neonatology.

Zimmerman, Jerry J. 1998; PhD, 1975, MD, 1979, University of Wisconsin; critical-care medicine.

Associate Professors

Andrews, Robert G. 1979; MD, 1976, University of Minnesota; hematology/oncology.

Pediatrics

General Catalog Web page:
www.washington.edu/students/gencat/academic/Pediatrics.html

Department Web page:
www.peds.washington.edu

Pediatrics involves the study of physical and behavioral development of humans, in health and disease, from conception to adulthood.

Instruction is provided through conjoint courses, lectures, conferences, clerkships, and electives. Faculty members participate in teaching the basic curriculum and offer 24 electives, including the general pediatrics clerkship at multiple WWAMI sites. A residency program is offered with a wide variety of electives in addition to traditional hospital-inpatient and clinic experience. Postdoctoral fellowship training is available in many subspecialty areas of pediatrics. The major teaching hospitals in Seattle are Children's Hospital and Regional Medical Center, University of Washington Medical Center, and Harborview Medical Center.

Faculty

Chair

F. Bruder Stapleton

Professors

Bennett, Forrest C. 1977; MD, 1970, University of Minnesota; child development and handicapped children.

Astley, Susan J. * 1980, (Adjunct); PhD, 1990, University of Washington; chronic childhood diseases.

Brewer, David K. 1978, (Adjunct); MD, 1972, Harvard University; pediatric radiology, angiography, computed tomography.

Brownstein, Dena R. 1986; MD, 1982, University of Washington; pediatric emergency medicine.

Burns, Jane L. 1982; MD, 1978, University of Washington; infectious diseases.

Cunningham, Michael L. * 1988; MD, 1988, University of Vermont, PhD, 1996, University of Washington; molecular, development, craniofacial, malformation, human, mouse, craniosynostosis, birth defects.

Davis, Robert L. * 1991; MD, 1983, University of California (San Diego), MPH, 1993, University of Washington; childhood immunization, including adverse events perinatal and pediatric epidemiology.

Del Beccaro, Mark A. 1985; MD, 1985, University of Washington; pediatric emergency medicine.

Diekema, Douglas S. 1990; MD, 1985, University of North Carolina, MPH, 1993, University of Washington; pediatric emergency medicine.

Frenkel, Lisa M. 1994; MD, 1987, University of Kansas; infectious diseases.

Geyer, Jeffrey R. 1984; MD, 1977, Wayne State University; hematology/oncology.

Gibson, Ronald L, Jr. 1982; PhD, 1982, MD, 1982, Washington University; pulmonology.

Glass, Ian 2000; MD, 1991, University of Otago (New Zealand); genetics.

Graham, Elinor A. 1982; MD, 1970, University of Rochester, MPH, 1993, Johns Hopkins University; general pediatrics.

Herndon, S. Paul 1973; MD, 1970, George Washington University; pediatric cardiology.

Holm, Vanja A. 1962, (Emeritus); MD, 1954, Karolinska Institute (Sweden); child development.

Jackson, J. Craig 1979; MD, 1979, Vanderbilt University; neonatal and respiratory diseases.

Jardine, David 1987; MD, 1980, Johns Hopkins University; pediatric anesthesiology.

Jones, Thomas K. 1983; MD, 1978, Jefferson Medical College; pediatric cardiology.

Kapur, Raj P. * 1988, (Adjunct); MD, 1988, University of Southern California; normal and abnormal development of the enteric nervous system.

Kawabori, Isamu 1973; MD, 1966, University of Washington; pediatric cardiology.

Kletter, Gad B. 1995; MD, 1982, Sackler School of Medicine (Israel); pediatric endocrinology.

Marshall, Susan G. 1979; MD, 1980, University of California (Los Angeles); neonatal and respiratory diseases.

Martin, Lynn D. 1994, (Adjunct); MD, 1982, University of Washington; pediatric anesthesiology.

Massagli, Teresa L. * 1985, (Adjunct); MD, 1982, Yale University; pediatric physiology.

Matthews, Dana C. 1984; MD, 1981, University of Washington; hematology/oncology.

Mayock, Dennis Edward 1985; MD, 1975, Ohio State University; neonatology and respiratory diseases.

McDonald, Ruth A. 1987; MD, 1987, University of Minnesota; nephrology.

Melzer, Sanford M. 1990; MD, 1982, Mt Sinai School of Medicine; general pediatrics.

Milstein, Jerrold M. 1980; MD, 1964, University of Minnesota; pediatric neurology.

Moseley, Stephen L. * 1985, (Adjunct); PhD, 1981, University of Washington; molecular basis of pathogenesis in *E. coli* diarrhea.

Murphy, Janet Haworth 1974; MBChB, 1967, Victoria University (UK); neonatal biology and respiratory disease.

Pendergrass, Thomas W. 1978; MD, 1971, University of Tennessee, MPH, 1979, University of Washington; hematology, oncology.

Pihoker, Catherine 1997; MD, 1987, Albany Me; endocrinology.

Portman, Michael A. 1992; MD, 1980, University of Cincinnati; pediatric cardiology.

Rawlings, David J. * 2001; MD, 1984, University of North Carolina; immunology and rheumatology.

Rosenbaum, David M. 1983, (Adjunct); MD, 1977, Albert Einstein College of Medicine; pediatric radiology.

Sherry, David Dan 1984; MD, 1977, Texas Technological University; immunology/rheumatology.

Shugerman, Richard P. 1984; MD, 1984, University of Alabama; general pediatrics.

Smith, Mark S. 1977; MD, 1969, University of Virginia; adolescent medicine.

Stout, James W. * 1986; MAT, 1981, Duke University, MD, 1986, Wake Forest University; childhood asthma, health services and epidemiology.

Strandjord, Thomas P. 1983; MD, 1983, Johns Hopkins University; neonatal biology and respiratory diseases.

Sulzbacher, Stephen 1976; MA, 1964, Hollins College (Virginia), PhD, 1971, University of Washington; psychiatry and behavioral sciences.

Tarczy-Hornoch, Peter 1992; MD, 1989, Stanford University; bioinformatics and clinical informatics; clinical systems and integrating genetic databases.

Taylor, James A., Jr. 1987; MD, 1980, University of North Carolina; general pediatrics.

Walker, William O., Jr. 1993; MD, 1979, Tulane University; developmental pediatrics.

Wallace, Carol A. 1983; MD, 1973, University of Michigan; immunology/rheumatology.

Weiss, Avery H. 1991, (Adjunct); MD, 1974, Miami University (Ohio); pediatric ophthalmology, strabismus.

Wright, Jeffrey A. 1988; MD, 1978, University of Missouri; general pediatrics.

Assistant Professors

Beitz, Laurie O. 2000; MD, 1990, University of North Carolina; rheumatology, lymphocyte signal transduction.

Bender, Michael A. 1989; MD, 1980, PhD, 1989, University of Washington; nematology/oncology.

Breuner, Cora C. 1991; MD, 1982, Jefferson Medical College, MPH, 1998, University of Washington; adolescent medicine.

Carpenter, Paul A. 1995; MBBS, 1988, University of Sydney (Australia); oncology.

Christakis, Dimitri A. 1993; MD, 1993, University of Pennsylvania, MPH, 1998, University of Washington; general pediatrics.

Dichek, Helen 2001; MD, 1980, Universite de Louvain (Belgium); endocrinology.

Dyamenahalli, Umesh 2000; MD, 1985, Bangalore University (India); pediatric cardiology.

Friedman, Debra L. 1998; MD, 1991, University of Medicine and Dentistry of New Jersey; hematology/oncology.

Gunther, Daniel F. 1998; MD, 1992, University of California (Davis); pediatric endocrinology.

Hawkins, Douglas S. 1990; MD, 1990, Harvard University; hematology/oncology.

Hornung, Robin L. 1999; MD, 1990, Yale University, MPH, 1996, University of North Carolina; dermatology.

Johnston, Brian D. 1997; MD, 1990, University of California (San Diego), MPH, 1999, University of Washington; general pediatrics, childhood injuries.

Klein, Eileen J. 1988; MD, 1988, Johns Hopkins University; pediatric emergency medicine.

Kuratani, John D. 1999, (Adjunct); MD, 1990, Tulane University; pediatric epilepsy, EEG.

Lewin, Mark 2001; MD, 1991, University of Southern California; pediatric cardiology.

Lewis, Charlotte W. 1998; MD, 1994, University of California (San Francisco), MPH, 2000, University of Washington; general pediatrics, oral health for children, craniofacial.

Liu, Lenna L. 1995; MD, 1992, University of Pennsylvania; general pediatrics, type 2 diabetes.

Lozano, Paula 1989; MD, 1989, Harvard University, MPH, 1994, University of Washington; general pediatrics, asthma, evidence-based medicine.

Melvin, Ann Jorns 1987; MD, 1986, Tulane University; infectious diseases.

Metinko, Andrew P. 1999; MD, 1985, University of Michigan; pediatric critical care.

Murray, Karen F. 1990; MD, 1990, Johns Hopkins University; gastroenterology.

Olson, James M. 1991; MD, 1991, University of Michigan; hematology, oncology.

Paris, Carolyn A. 1995; MD, 1991, Cornell University; pediatric emergency medicine.

Park, Julie R. 1988; MD, 1988, University of Vermont; hematology, oncology.

Pinter, Joseph D. 1990, (Adjunct); MD, 1990, University of California (Los Angeles); pediatric neurology.

Richardson, Laura P. 1998; MD, 1994, University of Michigan, MPH, 2001, University of Washington; adolescent medicine.

Rosenthal, Geoffrey L. 1998; PhD, 1992, MD, 1992, University of Maryland; cardiology.

Scharenberg, Andrew M. * 2000; MD, 1990, University of North Carolina; immunology.

Schenkman, Kenneth A. 1990; MD, 1986, Indiana University; pediatric anesthesia.

Shah, Maully J. 2000; MBBS, 1988, University of Gujarat (India); pediatric cardiology.

Sievers, Eric L. 1988; MD, 1988, Brown University; hematology, oncology.

Smith, Kendra 2001; MD, 1988, University of Minnesota; neonatology.

Smith, Sherilyn 1994; MD, 1989, Baylor University; infectious diseases.

Sotero De Menezes, Marcio 1996; MD, 1984, Rio De Janeiro St. U. Med. Sch. (Brazil); pediatric neurology, epilepsy, EEG.

Symons, Jordan 1999; MD, 1992, Columbia University; nephrology.

Vavilala, Monica S. 1994; MD, 1991, University of Texas (Houston).

Woolfrey, Ann E. 1989; MD, 1984, University of Minnesota; pediatric hematology/oncology.

Zerr, Danielle M. 1993; MD, 1993, Temple University, MPH, 1998, University of Washington; infectious diseases.

Lecturers

Polifka, Janine E. 1988; PhD, 1985, University of Louisville; teratology.

Rees, Jane * 1973; MS, 1972, University of Washington; nutritional support of adolescent health, especially during pregnancy; eating disorders.

Trahms, Cristine M. * 1973; MS, 1972, University of Washington; growth and development of young children; metabolic disorders, special health care needs.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

PEDS 498 Undergraduate Thesis (*) *Bennett* For medical students. Offered: AWSpS.

PEDS 499 Undergraduate Research (*) *Bennett* Participation in various clinical or basic research programs in progress, specifically: child development, developmental biology, human embryology and teratology, medical genetics, infectious diseases, neonatology, neuroembryology, cardiology, endocrinology and metabolism, immunology, respiratory disease. Offered: AWSpS.

PEDS 505 P-Preceptorship in Pediatrics (1) *Bennett* To provide opportunity for first- and second-year medical students to gain personal experience with medical practice situations for pediatricians by being stationed with carefully selected clinical faculty members in their offices. Prerequisite: permission of instructor. Enrollment limited. Coordinator: Department of Pediatrics. Offered: AWSpS.

PEDS 506 Interdisciplinary Seminars in Adolescent Health (1) Focus on interviewing adolescents, health problems, public health issues, and health care policy. Prerequisite: graduate or professional student status.

PEDS 512 P-Seminars in Human Embryology and Teratology (3) *Chance, Mirkes* Presents in depth discussions of human embryonic-fetal development and malformations that arise, correlations with experimental studies and molecular embryology are included.

A laboratory experience is optional. Prerequisite: permission of instructor. Offered: AWSpS.

PEDS 530 P-Adolescent Seminar (1) *Deisher, Smith* Clinic-based setting for seminar and interview practice with Pioneer Square adolescents; students learn how to deal with special health problems and other related problems of "street kids" through interviews and observations. Credit/no credit only. Offered: W.

PEDS 551 P-Pediatric Electrocardiography (2) *Guntheroth* Brief review of the physiology and physics pertinent to clinical electrocardiography is followed by a presentation of terminology and methods in clinical use. Normal electrocardiograms are studied, followed by abnormal tracings, with emphasis on pediatric material, but including adult material such as myocardial infarction. Prerequisite: HUBIO 540. Offered: W.

PEDS 611 City Doc FREE-TEEN Clinic (*, max. 24) *Breuner, Giesel* Participation in a free clinic for out-of-home youth, either Monday or Tuesday evenings. Clinical services include general medical care, with a focus on reproductive health, STD evaluations/treatment, and the impact of a homeless lifestyle on general health. Offered: AWSpS.

PEDS 630 P-WRITE Pediatrics Clinical Clerkship (*, max. 24) Basic clinical clerkship for students enrolled in the WRITE Program. Prerequisite: completion of basic curriculum; third- and fourth-year students; acceptance in the WRITE program.

PEDS 661 P-Pediatric General Clerkship, Anchorage (*, max. 24) *Lyon* General introductory pediatric clerkship. One-half in hospital setting; one-half in outpatient department, clinic, or private office. Open to all third- and fourth-year medical students. Prerequisite: HUBIO 563. (Six weeks, full time. Limit: twenty-four students.) Offered: AWSpS.

PEDS 662 P-Pediatric General Clerkship (*, max. 24) *Newman* General introductory pediatric clerkship. One-half in hospital setting; one-half in outpatient department, clinic, or private office. Location preferences are considered. Open to all third- and fourth-year medical students. Prerequisite: HUBIO 563. (Six weeks, full time. Limit: twenty-four students.) Offered: AWSpS.

PEDS 663 P-Pediatric General Clerkship (*, max. 24) *Schweich* General introductory pediatric clerkship. One-half in hospital setting; one-half in outpatient department, clinic, or private office. Location preferences are considered. Open to all third- and fourth-year medical students. Prerequisite: HUBIO 563. (Six weeks, full time. Limit: twenty-four students.) Offered: AWSpS.

PEDS 664 P-Pediatric General Clerkship (*, max. 24) *Bradford* General introductory pediatric clerkship. One-half in hospital setting; one-half in outpatient department, clinic, or private office. Open to all third- and fourth-year medical students. Prerequisite: HUBIO 563. (Six weeks, full time. Limit: twenty-four students.) Offered: AWSpS.

PEDS 665 P-Pediatric General Clerkship (*, max. 24) *Bennett* General introductory pediatric clerkship. One-half in hospital setting; one-half in outpatient department or clinic. Open to all third- and fourth-year medical students. Prerequisite: HUBIO 563. (Six weeks, full time. Limit: twenty-four students.) Offered: AWSpS.

PEDS 666 P-Pediatric General Clerkship (*, max. 24) *Marron* General introductory pediatric clerkship. One-half in hospital setting; one-half in outpatient department, clinic, or private office. Open to all third- and fourth-year medical students. Prerequisite: HUBIO 563. (Six weeks, full time. Limit: twenty-four students.) Offered: AWSpS.

PEDS 667 P-Pediatric General Clerkship (*, max. 24) *Newman* General introductory pediatric clerkship. One-half in hospital setting; one-half in outpatient department, clinic, or private office. Open to all third- and fourth-year medical students. Prerequisite: HUBIO 563. (Six weeks, full time. Limit: twenty-four students.) Offered: AWSpS.

PEDS 668 P-Pediatric General Clerkship (*, max. 24) *Stucky* General introductory pediatric clerkship. One-half in hospital setting; one-half in outpatient department, clinic, or private office. Open to all third- and fourth-year medical students. Prerequisite: HUBIO 563. (Six weeks, full time. Limit: twenty-four students.) Offered: AWSpS.

PEDS 669 P-Neonatal Pediatrics-Clerkship (*, max. 24) *Gleason* Participation in the activities in the newborn and premature divisions; ward rounds, seminars, conferences, and familiarization with certain laboratory techniques, particularly those relating to acid-base balance. Prerequisite: PEDS 665. (Limit: two students.) Offered: AWSpS.

PEDS 670 P-Pediatric Infectious Diseases (*, max. 24) *Rubens* Students see and work up clinic consultations and present in detail to attending physician. Daily rounds include problem-solving discussions and didactic presentations in broad category of infectious diseases. Opportunity for experience in clinical research and laboratory techniques. Prerequisite: PEDS 665 or permission; third- or fourth-year medical student standing. (Limit: one student.) Offered: AWSpS.

PEDS 673 P-Office Practice (*, max. 12) *Bennett* Opportunity to observe and function in the private office settings of a number of clinical pediatric faculty and to accompany pediatricians as they pursue their daily activities in the community. Prerequisite: PEDS 665. Offered: AWSpS.

PEDS 676 P-Pediatric Clerkship with the Mentally Handicapped (*, max. 12) *Dahl (Fircrest School), Ruvalcaba (Rainier School)* Total care involvement with mentally handicapped patients, incorporating general pediatric knowledge of mental retardation and neurology, plus other specialties related to mental deficiencies. Prerequisite: PEDS 665. (Four or six weeks, full-time.) Offered: AWSpS.

CONJ 677 P-Clinical Allergy and Immunology (*, max. 12) See Conjoint Courses.

PEDS 679 P-Clinical Problems in Developmental Disabilities (*, max. 12) *Bennett* Experience in multidisciplinary evaluation and management of the handicapped child. Student performs pediatric evaluations, obtains appropriate consultations, observes additional professional assessments (e.g., psychological testing), and plans rehabilitation program. Opportunity to provide parent counseling. Prerequisite: PEDS 665. (Limit: one students.) Offered: AWSpS.

PEDS 680 P-Pediatric Clinics (*, max. 24) *Bennett* One to ten half-day sessions may be elected each week for four weeks in the following areas: general pediatrics, endocrinology, neurology, immunology, arthritis, cardiology, congenital defects and retardation, well-child, teratology, adolescent medicine, allergy, cystic fibrosis, hematology, prematurity, neonatology, and poison control. Enrollment limited. Prerequisite: PEDS 665.

PEDS 681 P-Pediatric Genetics (*, max. 24) *Pagon* Clinical focus on evaluation and management of children with genetic disorders. Exposure to genetic counseling, the evaluation of children with hereditary structural defects, and diagnosis and management of children with inborn errors of metabolism. Emphasis on genetic mechanisms that cause human disease. Prerequisite: PEDS 665. (Two, four, six, or twelve weeks. Limit: one student.) Offered: AWSpS.

PEDS 682 P-Congenital Defects-Clinical Experience (*, max. 24) *Chance, Davis* Advanced course in pediatrics providing experience in the clinical diagnosis and management of structural and metabolic congenital defects. Prerequisite: permission of instructor. (Limit: one student.) Offered: AWSpS.

PEDS 683 P-Pediatric Nephrology (8) *Eddy* Four-week elective clerkship at Children's Hospital and Medical Center. Students participate in nephrology and transplant rounds, consult with renal fellows and attendings, and work up patients in renal clinics. Participation in seminars; special course in fluid balance. Prerequisite: third- or fourth-year medical student, PEDS 665, and MED 665 or equivalent. (Limit: two students.) Offered: AWSpS.

PEDS 684 P-Pediatric Pulmonary Medicine (8) *Redding* Respiratory disorders, diagnostic techniques and treatments unique to children in the inpatient, intensive care, and outpatient settings. Application of principles of pulmonary physiology to clinical problems. Students conduct consultations under the supervision of the attending and present a topic of choice. Inpatient rounds and clinics. Prerequisite: PEDS 665, fourth-year medical student standing. (Limit: one student.) Offered: AWSpS.

PEDS 685 P-Pediatric Hematology and Oncology (*, max. 24) *Bernstein* One-on-one teaching plus four weekly didactic sessions. Specific training in techniques and interpretation of bone marrow aspirations, intravenous chemotherapy, transfusions, and laboratory techniques of hematologic evaluation. Self-learning programs available. Prerequisite: PEDS 665. (Two, four, six, or twelve weeks, full-time.) (Limit: one student.) Offered: AWSpS.

PEDS 686 P-Pediatric Cardiology (*, max. 24) *Guntheroth, Kawabori* Emphasis on physical diagnosis and electrocardiography and on clinical knowledge of diagnostic techniques and surgical possibilities for inpatients and outpatients with cardiovascular problems. Opportunity to observe catheterizations and cardiovascular operations. Weekly clinics and twice-daily inpatient rounds. Prerequisite: PEDS 665. (Limit: one student.) Offered: AWSpS.

PEDS 691 P-Advanced Pediatric Clerkship (*, max. 24) *Bennett* Inpatient and/or outpatient experience with responsibilities comparable to intern for patient workup, diagnosis, and care. Available at any one, or combination, of affiliated hospitals, including WWAMI units in Alaska, Idaho, Montana, or Washington. Students interested in this option should make arrangements well in advance of registration. Prerequisite: PEDS 665. (Limit: two students.) Offered: AWSpS.

PEDS 697 P-Pediatric Special Electives (*, max. 24) *Benett* By specific arrangement, for qualified students, special clerkship externship or research opportunities at institutions other than University of Washington. The faculty can advise of possible opportunities. Obtain special assignment form from Dean's office at least one month before preregistration. Prerequisite: permission of instructor at away site. Offered: AWSpS.

PEDS 699 P-WWAMI Pediatrics Special Electives (*, max. 24) *Bennett* By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department at away site.

Pharmacology

E401 Health Sciences

General Catalog Web page:
www.washington.edu/students/gencat/academic/Pharmacology.html

Department Web page:
depts.washington.edu/phcol/

Pharmacology is the science that deals with the nature of interactions between drugs and biological systems, and with the applications of such interactions to the treatment of disease. Courses in this field are given for medical, dental, pharmacy, nursing, and graduate students.

Graduate Program

Graduate Program Coordinator
J-681F Health Sciences, Box 357280
206-543-9280
phcoladm@u.washington.edu

The Department of Pharmacology offers the Doctor of Philosophy degree. The Master of Science degree may be elected by the student or requested by the department.

Master of Science and Doctor of Philosophy

Admission Requirement: A baccalaureate degree with a major in any of the sciences, such as biochemistry, chemistry, pharmacy, physics, physiology, psychology, or zoology. Students are selected from the applicant pool based on several criteria, including academic records, recommendations, and previous research experience.

Master of Science

Graduation Requirements: PHCOL 511, 512, and 513 (4 credits each) with a grade of 2.7 or above for each class. PHCOL 519 (laboratory rotations) during the autumn, winter, and spring quarters of the first year. Two advanced pharmacology classes. PHCOL 507 (pharmacology seminar) throughout graduate school. PHCOL 514 (current topics in pharmacology) while enrolled in the pharmacology program or for 3 years, whichever is less. 9 credits of graded, graduate-level courses in other disciplines including physiology, biochemistry, molecular biology, cell biology, immunology. Creditable passage of a comprehensive written exam on general pharmacology.

Students are required to **write and successfully defend a Master's thesis** based on laboratory research work performed while in residence. The amount of research accomplished necessary to obtain the degree will be determined by the Master's thesis committee, to be formed by the student.

Doctor of Philosophy

Graduation Requirements:

PHCOL 511, 512, and 513 (4 credits each) with a grade of 2.7 or above for each class. Enrollment in PHCOL 507 throughout graduate school. PHCOL 514 in the first, second, and third years of graduate study.

PHCOL 519 (laboratory rotations) for autumn, winter, and spring quarters of the first year with the purpose of acquainting the student with various areas of pharmacology and research under investigation within the department. During each quarter, the student carries out a research project in the laboratory of a faculty member. At the end of the quarter, the student gives a presentation on the rotation research project that is

evaluated by the faculty, using the criteria of scientific content, delivery, knowledge of the subject, and organization of material. The student receives a grade and academic credit for PHCOL 519. Students entering into the Ph.D. program with an M.S. degree or equivalent may petition to be allowed to enroll in only one quarter of PHCOL 519 before selecting a lab. Rotations may occur outside the department by special permission only.

Four advanced 2-3 credit graded elective courses in pharmacology (at 500 level) in addition to the 511-513 series are required. Nine graded credits (non-seminar) in physiology, biochemistry, molecular biology, immunology, cell biology or other relevant areas are required. The courses should strengthen the foundation of the student's thesis proposal and must be at the approved 500 level.

Creditable passage of a comprehensive written exam on general pharmacology, to be taken during the summer quarter of the second year, is required. During the first quarter of the third year of study, students take the oral General Exam. This examination is given by the Supervisory Committee. The examination is based in part on an evaluation of the student's proposed research for the dissertation and on his or her knowledge of the major disciplines important to the research. As a result of the examination, the Committee may recommend termination, further work and subsequent reexamination, or approval of the student's performance and candidacy for the Ph.D. degree.

After successful completion of the General Exam, the student devotes most of his or her time to thesis research in the third and subsequent years of study.

The research project for the Ph.D. dissertation is chosen by the candidate and faculty sponsor and approved by the candidate's Supervisory Committee. The research must represent a worthy and fundamental contribution showing originality in concept and implementation.

When the candidate has concluded the research project and prepared a complete copy of the dissertation, the sponsor will obtain approval of the Graduate School and set a date for the Final Examination. The Final Examination is concerned principally with the subject matter of the dissertation, but may include the background and origins of the dissertation problem as well as its practical applications and extrapolations.

Financial Aid

Financial support is offered to students who maintain satisfactory academic progress. Tuition and stipends are provided by National Institutes of Health training grants, University of Washington teaching assistantships, individual research grants, and fellowships from private sources.

Faculty

Chair

William A. Catterall

Professors

Beavo, Joseph A. * 1977; PhD, 1970, Vanderbilt University; roles and molecular mechanisms of cyclic nucleotide phosphodiesterase regulation of cell function.

Bomsztyk, Karol 1983, (Adjunct); MD, 1977, University of Rochester; role of cytokine-induced protein kinases in the regulation of gene expression.

Catterall, William A. * 1977; PhD, 1972, Johns Hopkins University; molecular biology of ion channels, molecular pharmacology and neurobiology.

Chavkin, Charles * 1984; PhD, 1982, Stanford University; cell and molecular mechanisms of psychoactive opiate drugs to understand normal and pathophysiology.

Hol, Wilhelmus G. J. * 1992, (Adjunct); PhD, 1971, University of Groningen (Netherlands); protein crystallography, drug design, vaccine development, and protein engineering.

Horita, Akira *, (Emeritus); PhD, 1954, University of Washington; neuropsychopharmacology.

Krebs, Edwin G. * 1977, (Emeritus); MD, 1943, Washington University; intracellular signaling mechanisms involving protein phosphorylation.

McKnight, G. Stanley * 1979; PhD, 1976, Stanford University; phosphorylation; gene expression and neuro/endocrine physiology in mice using genetic approaches.

Moon, Randall T. * 1985; PhD, 1982, University of Washington; embryonic development; signal transduction; cancer biology.

Nathanson, Neil M. * 1979; PhD, 1975, Brandeis University; neurobiology; molecular analysis of neural signal transduction by muscarinic and neurokinin receptors.

Palczewski, Krzysztof * 1992, (Adjunct); MS, 1980, PhD, 1986, Technical University of Wrocław (Poland); visual transduction.

Storm, Daniel R. * 1978; PhD, 1971, University of California (Berkeley); molecular basis of neuroplasticity; cAMP and Ca²⁺ signal transduction systems in the CNS.

Tempel, Bruce L. 1988; PhD, 1983, Princeton University; molecular neurobiology/neurogenetics, especially potassium channel gene structure and function.

Vincenzi, Frank F. * 1967; PhD, 1965, University of Washington; membrane transport, autonomic and cardiovascular pharmacology.

Watson, Eileen L. * 1972, (Adjunct); PhD, 1970, University of Utah; salivary gland physiology and regulation.

Associate Professors

Halpern, Lawrence M. * 1965; PhD, 1961, Albert Einstein College of Medicine; neuropharmacology.

Hamblin, Mark W. 1990, (Adjunct); PhD, 1982, MD, 1982, University of California (San Diego); molecular and cell biology of serotonin receptors, geriatric psychiatry.

Assistant Professors

Bajjalieh, Sandra M. * 1995; PhD, 1989, University of Wisconsin; molecular neurobiology.

Cook, David G. * 1998, (Adjunct Research); PhD, 1991, Yale University; molecular mechanisms of Alzheimer's disease.

Muchowski, Paul J. 2001; PhD, 1998, University of Washington; molecular chaperones, neurodegeneration.

Stella, Nephi * 1999; PhD, 1995, Ecole Polytechnique Federale De Lausanne; microglia cells activation: involvement of endogenous cannabinoid ligands and their allied receptors.

Wang, Edith H. * 1996; PhD, 1991, Columbia University; regulation of genes that control cellular proliferation and differentiation.

Xia, Zhengui * 1987, (Adjunct); MS, 1985, Wuhan University (China), PhD, 1991, University of Washington; neuronal apoptosis, neuronal gene regulation.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

PHCOL 401 General Pharmacology I (2-4, max. 4)
Wang Principles governing drug-receptor interactions, dose-effect relationships, drug absorption, distribution, metabolism, and excretion. Drug toxicity, tolerance, allergy, and drug-induced mutagenesis and carcinogenesis. Drugs utilized as antimicrobial agents and cancer chemotherapeutic agents and anti-viral agents. Principles of gene therapy. Offered: A.

PHCOL 402 General Pharmacology II (3/4)
Bajjalieh, Storm General pharmacology of drugs affecting the autonomic and central nervous systems. Prerequisite: PHCOL 401. Offered: W.

PHCOL 403 General Pharmacology III (3/4)
McKnight General pharmacology of drugs affecting the endocrine and cardiovascular systems. For pharmacy students and other undergraduates. Prerequisite: PHCOL 402. Offered: Sp.

PHCOL 434 General Pharmacology (2) *Halpern, Watson* Lectures concerning the action of drugs on physiological and pathological processes with special emphasis on agents of special importance in the practice of dentistry. For dental students. Offered: A.

PHCOL 435 General Pharmacology (2) *Halpern, Watson* Lectures concerning the action of drugs on physiological and pathological processes with special emphasis on agents of special importance in the practice of dentistry. For dental students. Offered: W.

PHCOL 498 Undergraduate Thesis (*) Offered: A.

PHCOL 499 Undergraduate Research (*)
Participation in departmental research projects. Offered: AWSpS.

PHCOL 507 Pharmacology Seminar (1)
Presentation of comprehensive reports on recent medical and scientific literature in fields of current importance. Research progress reports, and reports on results of completed research. Prerequisite: permission of instructor. Offered: AWSp.

PHCOL 511 General Pharmacology I (1-5, max. 5)
Wang Consideration of principles governing drug-receptor interactions, dose-effect relationships, drug absorption, distribution, metabolism, and excretion. Introduction to drug toxicity, tolerance, allergy, and drug-induced mutagenesis and carcinogenesis. Drugs utilized as antimicrobial agents and cancer chemotherapeutic agents. For graduate students. Prerequisite: organic chemistry, biochemistry, and introductory anatomy and physiology. Offered: A.

PHCOL 512 General Pharmacology II (1-5, max. 5)
Bajjalieh, Storm General pharmacology of drugs affecting the autonomic and central nervous systems with an emphasis on current research approaches to understanding the basic mechanisms of drug action. For graduate students. Prerequisite: PHCOL 511 or permission of instructor. Offered: W.

PHCOL 513 General Pharmacology III (1-5, max. 5)
McKnight Current research related to the mechanisms of drug action presented in a seminar format. Presentations include relevant background material as well as detailed experimental results taken from current research articles. Prerequisite: PHCOL 511, PHCOL 512, or permission of instructor. Offered: Sp.

PHCOL 514 Current Topics in Pharmacology (1)
McKnight Current research related to the mechanisms of drug action presented in a seminar format. Presentations include relevant background material as well as detailed experimental results taken from current research articles. Prerequisite: permission of instructor. Offered: AWSp.

PHCOL 515 General Pharmacology Laboratory (*, max. 9)
Laboratory course for professional and graduate students who wish to do independent laboratory research under the direction of a specific faculty member. Prerequisite: permission of instructor. Offered: AWSp.

PHCOL 519 Introduction to Laboratory Research in Pharmacology (4)
Storm On a rotation basis students carry out individual research projects in the laboratories of different faculty members. At the end of each quarter students make formal presentations of their work. For first-year graduate students in pharmacology. Offered: AWSpS.

PHCOL 527 Drug Metabolism (3) *Rettie* Considerations of the biochemical mechanisms for the biotransformation of drugs and foreign compounds. Open to medical and graduate students. Prerequisite: one year graduate, medical, or dental biochemistry, or permission of instructor. Offered: jointly with MEDCH 527; odd years; W.

PHCOL 529 Ion Channel Pharmacology (2)
Catterall, Tempel Current topics in ion channel structure, function, genetics, and pharmacology, including consideration of role in electrical signaling in cell membranes and information transfer and processing in nervous system, inherited diseases of ion channels, and sites and mechanisms of action of drugs and toxins. Prerequisite: CONJ 532 and CONJ 536 or permission of instructor. Offered: odd years; A.

PHCOL 530 Neuronal Signaling Pathways (2)
Beavo, Pham, Storm, Xia Advanced consideration of the molecular events between drug or hormone binding to receptors and the resulting responses. Emphasizes roles played by signal transduction pathways in regulation of synaptic plasticity, memory formation, neuronal apoptosis and developmental neurobiology. Prerequisite: UCONJ 532 or permission of instructor. Offered: even years; W.

PHCOL 531 Genetic Analysis of Signaling Systems (3) *McKnight, Moon* Current topics involving signal transduction are discussed with an emphasis on genetic analysis of multicellular systems and creative experimental design. Prerequisite: 9 credits of graduate-level courses in molecular and cellular biology, biochemistry, or genetics, or permission of instructor. Offered: odd years; Sp.

PHCOL 534 Molecular Basis of Addictive Drug Action (2) *Chavkin, Mackie, Stella* Advanced consideration and discussion of current literature addressing the basis of opiate, psychostimulant, and cannabinoid effects on signal transduction events, electrical activity of neurons, and drug-motivated behaviors in animal models of human drug abuse. Prerequisite: PHCOL 512 or permission of instructor. Offered: even years; A.

PHCOL 535 Transcriptional Control in Human Disease (2) *Bomsztyk, Wang* Advanced consideration and discussion of the mechanisms regulating transcription/gene expression and of aberrant transcription factors which disrupt this process found in cancer and other human diseases. Prerequisite: PHCOL 512 or permission of instructor. Offered: even years; Sp.

PHCOL 536 Free Radicals in Health and Disease: A Pharmacological Perspective (2) *Hinds, Vincenzi* Exploration of chemistry and properties of free radicals and related reactive-oxygen and nitrogen species. Review of biological effects of free radicals and reactive oxygen and nitrogen species with a view toward pharmacological intervention. Analysis of literature implicating free radicals in disease processes. Prerequisite: permission of instructor. Offered: odd years; Sp.

PHCOL 550 An Overview of Faculty Research (1) *Wang* Reviews research topics currently being studied in pharmacology. Student reads articles published on each topic. Credit/no credit only. Prerequisite: first-year student standing in pharmacology. Offered: A.

PHCOL 560 Regulation of Cell Function by Cyclic Nucleotide Phosphodiesterases (1) *Beavo* Discussion of research strategies, methodologies, and literature relating to regulation of cyclic nucleotide levels in the cell. Emphasis on practical problem solving, data analysis, and presentation of methods important to understanding published data and designing new experiments in this area of research. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 561 Molecular Properties of Ion Channels (1) *Catterall* Discussion of research strategies, methodologies, and literature concerning the structure, function, and regulation of sodium and calcium channels and the mechanism of action of drugs on them. Emphasis on experimental problem solving, data analysis, and presentation. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 562 Regulation of Synaptic Physiology (1) *Chavkin* Discussion of research strategies and methodologies involved in the regulation of signal transduction and synaptic physiology. Emphasis on practical problem solving, data analysis, and presentation methods important to modern scientific work. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 563 Signal Transduction Mechanisms in Neuroplasticity and Neuron Growth (1) *Storm* Discussion of research strategies, methodologies, and literature relating to signal transduction mechanisms important for neuroplasticity and regulation of neuron growth in the central nervous system. Emphasis on practical problem solving, data analysis, and presentation methods important to modern scientific work. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 564 Cellular Regulation by Protein Kinases (1) *McKnight* Analysis of research problems, techniques, and emerging concepts in the study of the function of protein kinases. Emphasis on critical evaluation of research and development of presentation skills. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 565 Intercellular Signaling in Development (1) *Moon* Molecular genetic approaches to dissecting the roles and mechanisms of intracellular signaling during development. Emphasis on vertebrate genes related to *Drosophila* segment polarity genes. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 566 Molecular Pharmacology of Neurotransmitter and Neurokinin Receptors (1) *Nathanson* Discussion of research strategies and methodologies in the areas of molecular neurobiology and signal transduction of muscarinic receptors, G-proteins, and neurokinin receptors. Emphasis on practical problem solving, data analysis, and presentation methods important to modern scientific work.

Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 567 Mechanisms of Carcinogenesis (3) *Xia* Lectures/presentations of biochemical and molecular basis of carcinogenesis induced by environmental agents, including approaches to identification of carcinogens. Role of cell proliferation and cell death (apoptosis) in cancer formation and cancer treatment. Molecular mechanisms that regulate proliferation and apoptosis. Prerequisite: ENV H 516, ENV H 405, or permission of instructor. Offered: jointly with ENV H 567; A.

PHCOL 568 Pharmacology of Free Radicals (1) *Vincenzi* Advanced considerations of current literature and experimental design, implementation and interpretation of research dealing with the effects of reactive oxygen species and free radicals on cell membranes and cells. Discussion of the relationships of such phenomena to human disease and the effects of drugs thereon. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 569 Molecular Genetics of Potassium Channel Function (1) *Tempel* Discussion of research strategies, methodologies, and literature concerning the structure, function, and regulation of potassium channel genes and their role in behavior as studied in mutant mice. Emphasis on experimental problem solving, data analysis, and presentation. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 571 Molecular Mechanisms of Neurosecretion (1) *Bajjalieh* Discussion of research strategies, methodologies, and literature relating to regulation of cyclic nucleotide levels in the cell. Emphasis on experimental problem solving, data analysis, and presentation. Credit/no credit only. Prerequisite: permission of instructor.

PHCOL 572 Transcriptional Regulation of Growth Control Genes (1) *Wang* Discussion of research strategies, methodologies, and literature relating to proliferative growth control, cellular differentiation, and gene expression. Emphasis on practical problem solving, data analysis, and presentation. Credit/no credit only. Prerequisite: permission of instructor.

PHCOL 573 Signaling Systems Linked to Neuroinflammation (1) *Stella* Discussion of research strategies, methodologies and literature related to neuroinflammation, microglial cell activation, and the cannabinoid signaling pathway. Emphasis on solving practical problem, data analysis, and presentation. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 574 Molecular and Cellular Basis of Chaperone Function and Protein Misfolding Diseases (1) *Muchowski* Analysis of research problems, techniques and emerging concepts in the study of the molecular chaperones and protein misfolding diseases. Emphasizes experimental problem solving, data analysis, and development of presentation skills. Prerequisite: permission of instructor. Offered: AWSpS.

PHCOL 600 Independent Study or Research (*) Pharmacology graduate students only. Offered: AWSpS.

PHCOL 700 Master's Thesis (*) Pharmacology graduate students only. Offered: AWSpS.

PHCOL 800 Doctoral Dissertation (*) Pharmacology graduate students only. Offered: AWSpS.

Physiology and Biophysics

G424 Health Sciences

General Catalog Web page:
www.washington.edu/students/gencat/academic/Physiology_Biophys.html

Department Web page:
depts.washington.edu/pbiopage/

Physiology deals with the processes, activities, and phenomena incidental to, and characteristic of, life and living organisms. Based upon physics, chemistry, and mathematics, physiology interlocks closely with the other basic medical sciences-anatomy, molecular biology, immunology, biochemistry, pharmacology, and pathology-and with psychology. Research in physiology is accomplished by analyzing the molecular, cellular, and integrative properties of the system under study. For this reason, physiology appeals to students with diverse backgrounds and goals. Courses in this field are given for medical, dental, pharmacy, nursing, and graduate students.

Graduate Program

Graduate Program Coordinator
G424 Health Sciences, Box 357290
206-685-0519
pbiou@u.washington.edu

The Department of Physiology and Biophysics offers advanced instruction and training leading to both the Master of Science and Doctor of Philosophy degrees. Students aspiring only to the M.S. degree are rarely accepted. Students pursuing a Ph.D. degree in physiology and biophysics may emphasize molecular and cellular physiology, biophysics, neurobiology, respiratory physiology, or endocrinology. Studies leading to the doctoral degree require five to six years to complete. The first year is spent acquiring a broad knowledge of physiology via a sequence of courses and laboratory rotations. After selection of a special area of study, the second year is spent taking advanced seminars in the area of specialization and developing a thesis proposal. After admission to candidacy, the latter years are spent pursuing the area in depth and completing an original-research project.

Individuals with graduate degrees in physiology and biophysics often pursue careers in teaching and research in colleges and universities and in biotech industries. With additional training, graduates have been successful in medicine, law, creative writing, and high-level computer programming.

The department participates in interdisciplinary Ph.D. degree programs in Neurobiology and Behavior, and in Molecular and Cellular Biology.

Special Requirements

Admission to the physiology program normally requires a baccalaureate degree in biochemistry, biology, chemistry, engineering, genetics, mathematics, molecular biology, neuroscience, physics, or psychology.

Graduate Record Examination scores are required as part of the application. No subject tests are required.

Students are normally admitted to the graduate program in the autumn quarter. Applications and all relevant material should be submitted by January 15.

Research Facilities

The department is well equipped to provide instruction and research training in cellular and molecular physiology, neurobiology, membrane biophysics, respiratory physiology, muscle biophysics, endocrinology, reproduction, and physiological psychology. The facilities of the Regional Primate Research Center, adjacent to the department, are available to qualified trainees who need to use primates in their research.

Faculty

Chair

Stanley C. Froehner

Professors

Anderson, Marjorie E. * 1971; PhD, 1969, University of Washington; physiology of basal ganglia and thalamus; neural control of movement.

Berger, Albert J. * 1978; MA, 1965, PhD, 1967, Princeton University, PhD, 1976, University of California (San Francisco); neural and chemical control of respiration, neurobiology, synaptic transmission.

Binder, Marc D. * 1978; PhD, 1974, University of Southern California; organization of spinal reflexes.

Blinks, John R. * 1990; MD, 1955, Harvard University; muscle calcium, properties of calcium-regulated photoproteins.

Bothwell, Mark A. * 1985; PhD, 1975, University of California (Berkeley); molecular and cellular physiology.

Brengelmann, George L. * 1966, (Emeritus); PhD, 1967, University of Washington.

Carlson, Steven S. * 1985; PhD, 1975, University of California (Berkeley); molecular and cellular physiology of synaptic transmission.

Conley, Kevin E. * 1988; PhD, 1983, University of Wisconsin; muscle metabolism and energetics in vivo.

Crill, Wayne E. * 1967; MD, 1962, University of Washington; properties of spinal and cortical neurons, mechanisms of repetitive firing of CNS neurons.

Detwiler, Peter B. * 1977; PhD, 1970, Georgetown University; physiology of photoreceptors.

Feigl, Eric O. * 1969; MD, 1958, University of Minnesota; cardiovascular physiology, coronary and cerebral circulation.

Fetz, Eberhard * 1975; PhD, 1966, Massachusetts Institute of Technology; cortical regulation of movement.

Froehner, Stanley C. 2000; PhD, 1973, California Institute of Technology; molecular mechanisms of synapse formation and muscle disease.

Fuchs, Albert F. * 1969; PhD, 1966, Johns Hopkins University; oculomotor physiology, vision.

Gordon, Albert M. * 1964, (Emeritus); PhD, 1961, Cornell University; skeletal and cardiac muscle physiology/biophysics.

Hildebrandt, Jacob * 1966; PhD, 1966, University of Washington; respiratory physiology.

Hille, Bertil * 1968; PhD, 1967, Rockefeller University; receptors and ion channels of excitable membranes; cell signaling; intracellular calcium dynamics.

Hornbein, Thomas F. * 1963; MD, 1956, Washington University; physiology, biophysics.

Kennedy, Thelma T. * 1958, (Emeritus); PhD, 1955, University of Chicago.

Kushmerick, Martin J. * 1988; MD, 1963, PhD, 1966, University of Pennsylvania; muscle contraction, magnetic resonance, metabolic imaging NMR spectroscopy.

Mackie, Kenneth P. * 1987, (Adjunct); MD, 1984, Yale University; molecular and cell biological studies of cannabinoid receptor signaling.

Patton, Harry D. 1947, (Emeritus); PhD, 1943, MD, 1946, Yale University.

Powers, Randall K. 1988; PhD, 1982, University of Washington; spinal cord neurophysiology.

Ransom, Bruce Robert * 1995, (Adjunct); PhD, 1972, MD, 1972, Washington University; neurology, neuroscience research.

Rowell, Loring B. * 1963, (Emeritus); PhD, 1962, University of Minnesota.

Rubel, Edwin W. * 1986; PhD, 1969, Michigan State University; developmental neurobiology, with special emphasis on vertebrate auditory system development.

Scher, Allen M. * 1950, (Emeritus); PhD, 1951, Yale University.

Schwindt, Peter C. * 1974, (Emeritus); PhD, 1972, University of Washington.

Smith, Orville A. * 1958, (Emeritus); PhD, 1953, Michigan State University.

Stahl, William L. * 1975; PhD, 1963, University of Pittsburgh; neurochemistry of brain ATPase systems.

Steiner, Robert A. * 1977; PhD, 1975, University of Oregon; neuroendocrinology, neuroscience, endocrinology.

Stirling, Charles E. * 1968, (Emeritus); PhD, 1966, State University of New York (Upstate Medical Center).

Teller, Davida Y. * 1965; PhD, 1965, University of California (Berkeley); vision, psychophysics, development of vision.

Towe, Arnold L. * 1953, (Emeritus); PhD, 1953, University of Washington.

Van Citters, Robert L. * 1962, (Emeritus); MD, 1953, University of Kansas; cardiovascular physiology.

Winn, H. Richard * 1983, (Adjunct); MD, 1968, University of Pennsylvania; physiology of cerebral blood flow regulation.

Winn, Robert K. 1984; PhD, 1974, University of Washington; pulmonary physiology, neutrophil immigration and monoclonal antibody.

Zagotta, William N. * 1993; PhD, 1989, Stanford University; molecular mechanisms of ion channel function.

Associate Professors

Babcock, Donner 1986; PhD, 1971, Oregon State University; ion channels of sperm cells.

Cunningham, Susanna L. * 1978, (Adjunct); MN, 1969, PhD, 1978, University of Washington; risk factors for atherosclerotic cardiovascular disease.

Giniger, Edward Scott * 1994; PhD, 1988, Harvard University; neural development, mechanism of axon guidance, genetic specification of brain structure.

Glenny, Robb * 1987; MD, 1984, University of Virginia; determinants of regional pulmonary blood flow and ventilation distribution.

Gorman, Mark 1997; PhD, 1979, University of Michigan; control of coronary blood flow.

Landau, Barbara R. 1962, (Emeritus); MS, 1949, PhD, 1956, University of Wisconsin.

Modell, Harold I. 1981, (Affiliate); PhD, 1971, University of Mississippi.

Shadlen, Michael N. * 1995; PhD, 1985, University of California (Berkeley), MD, 1988, Brown University; neurobiology of vision and cognition.

Spain, William * 1981; MD, 1977, Columbia University; signal transduction in the central nervous system.

Wordeman, Linda * 1994; PhD, 1988, University of California (Berkeley); mitosis and myofibril formation.

Assistant Professors

Gordon, Sharona E. * 1993; PhD, 1994, Brown University; molecular mechanisms of ion channel gating in visual and olfactory transduction.

Jagadeesh, Bharathi * 1999; PhD, 1993, Northwestern University; neural basis of visual learning and memory.

Koh, Duk-Su 1995, (Research); PhD, 1992, University of Leipzig (Germany); regulation of exocytosis.

Perlmutter, Steve I. 1991, (Research); PhD, 1991, Northwestern University; neural control of movement.

Rieke, Frederick Martin * 1997; PhD, 1991, University of California (Berkeley); sensory signal processing and computation.

Santana, Luis F. * 2001; PhD, 1996, University of Maryland; molecular basis of heart failure via mouse genetic model.

Senior Lecturer

Linder, Thomas M. 1982; PhD, 1971, University of Washington.

Lecturer

Melby, Anna 1996; PhD, 1995, University of Oregon.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

CONJ 401, 402, 403 Human Anatomy and Physiology (4, 4, 4) Linder, Melby See Conjoint Courses.

P BIO 405- Human Physiology (4-) Wordeman Intensive coverage of physiology through lectures, conference. Autumn Quarter: excitable tissue, skeletal muscle; spinal reflex; cardiovascular, respiratory physiology; acid base balance; autonomic nervous system; temperature regulation. Winter Quarter: renal, body fluids; neuroendocrinology; reproductive, gastrointestinal, neurophysiology. Required for dental, graduate nursing, and bioengineering students. Also offered for graduate students. Offered: A.

P BIO -406 Human Physiology (-4) Hlastala Intensive coverage of physiology through lectures,

conference. Autumn Quarter: excitable tissue, skeletal muscle; spinal reflex; cardiovascular, respiratory physiology; acid base balance; autonomic nervous system; temperature regulation. Winter Quarter: renal, body fluids; neuroendocrinology; reproductive, gastrointestinal, neuropsychophysiology. Required for dental, graduate nursing, and bioengineering students. Also offered for graduate students. Offered: W.

P BIO 424 Vision and Its Physiological Basis (5) NW *Teller* Behavioral neurobiology of human vision: color vision, acuity and spatial vision, light and dark adaptation, visual development. Correlation of visual functioning with known optical, biochemical, physiological, and anatomical substrates. Prerequisite: either PSYCH 101, PSYCH 102, BIOL 202, or ZOOL 301. Offered: jointly with PSYCH 424; W.

P BIO 498 Undergraduate Thesis (*) Offered: AWWSpS.

P BIO 499 Undergraduate Research (*) Offered: AWWSpS.

P BIO 505 Topics in Physiology (0.5) Topics include excitation-contraction coupling, muscle structure, and molecular basis of contraction, regulation of contraction, muscle mechanisms, energetics, and adaptation. Emphasis on skeletal muscle with some discussion of cardiac and smooth muscle. Series of six lecture discussions. Prerequisite: first-year P BIO graduate student. Offered: A.

P BIO 507 Cardiovascular and Respiratory Physiology (3) Cardiovascular physiology: the heart, microcirculation, hemodynamics, regional circulation, and reflex integration. Respiratory physiology: the lung, pulmonary circulation, alveolar ventilation, gas exchange, control of breathing, acid-base regulation, exercise. Offered: W.

P BIO 508 Introduction to Laboratory Research in Physiology (2-5) Students participate in the performance of ongoing projects in designated research laboratories. Emphasis is on experimental design, methodology and techniques. For first- and second-year graduate students in physiology and biophysics to provide a basis for future independent research. Offered: AWWSpS.

P BIO 509 Neuroendocrinology (3) *Steiner* Emphasizes the cellular and molecular aspects of several topics in neuroendocrinology, including neuropeptide genes, reproduction, steroid hormone regulation of gene expression, mechanisms of hormone action, endocrine rhythms, and neural oscillations. Prerequisite: either BIOL 201, BIOL 202, and BIOL 203, or BIOL 180, BIOL 200, and BIOL 220; BIOC 440, BIOC 441, BIOC 442 or permission of instructor. Offered: jointly with NEUBEH 541; W.

P BIO 510 Physiology Survey (2) Reading and discussion of the research literature in cellular, molecular, and systems physiology. Students write a critical evaluation of each paper in the manner of a peer review. All three quarters are required for second-year P BIO students. Prerequisite: completion of one year of P BIO graduate study. Offered: A.

P BIO 511 Physiology Survey (2) Reading and discussion of the research literature in cellular, molecular, and systems physiology. Students write a critical evaluation of each paper in the manner of a peer review. All three quarters are required for second-year P BIO students. Prerequisite: completion of one year of P BIO graduate study. Offered: W.

P BIO 512 Physiology Survey (2) Reading and discussion of the research literature in cellular, molecular, and systems physiology. Students write a critical evaluation of each paper in the manner of a peer review. All three quarters are required for second-year P BIO students. Prerequisite: completion of one year of P BIO graduate study. Offered: Sp.

P BIO 513 Practicum in Teaching Physiology and Biophysics (4) Students undertake instructional material development, presentation of materials and develop problem-solving techniques. Credit/no credit only. Offered: AW.

P BIO 516 Physiological Proseminar (7) *Hlastala* Guided survey of the experimental literature in cardiovascular and respiratory physiology. Course conducted as seminar with oral analysis of assigned papers and topics. Prerequisite: permission of instructor. Offered: A.

P BIO 518 Research Topics in Cardiovascular Physiology (1) *Feigl* Graduate students and faculty members present and discuss current literature and research. Prerequisite: permission of instructor.

P BIO 519 Membrane and Muscle Biophysics Seminar (1) *Hille* Lectures on current research topics in cell membrane function and muscle contraction. Credit/no credit only. Prerequisite: permission of instructor. Offered: Sp.

P BIO 520 Physiology Seminar (*) Selected topics in physiology. Prerequisite: permission of instructor.

P BIO 521 Biophysics Seminar (*) Selected topics in biophysics. Prerequisite: permission of instructor.

P BIO 522 Selected Topics in Respiratory Physiology (1-3, max. 3) *Hildebrandt* Advanced seminar on selected topics, including pulmonary mechanics, gas exchange, lung fluid balance, regulation of breathing, pulmonary circulation, respiration in the neonate, liquid breathing, airway dynamics, lung structure and development, cardiopulmonary interactions, exercise physiology. Prerequisite: permission of instructor. Offered: AWWSpS.

P BIO 523 Heat Transfer and Temperature Regulation (2-5, max. 5) *Brengelmann* Thermal exchange between the body surface and the environment. Heat production and distribution within the body. Properties of cutaneous and deep temperature receptors. Neural integration and homeothermy. Prerequisite: permission of instructor.

P BIO 525 Readings in Advanced Physiology and Biophysics (*) Guided study of the experimental literature of physiology and biophysics. Essays are written and discussed with the staff. Emphasis is placed on critical analysis, accuracy of expression, bibliographical technique, and other factors of good scholarship. Prerequisite: permission of instructor. Offered: A.

P BIO 526 Readings in Advanced Physiology and Biophysics (*) Guided study of the experimental literature of physiology and biophysics. Essays are written and discussed with the staff. Emphasis is placed on critical analysis, accuracy of expression, bibliographical technique, and other factors of good scholarship. Prerequisite: permission of instructor. Offered: W.

P BIO 527 Readings in Advanced Physiology and Biophysics (*) Guided study of the experimental literature of physiology and biophysics. Essays are written and discussed with the staff. Emphasis is placed on critical analysis, accuracy of expression, bibliographical technique, and other factors of good scholarship. Prerequisite: permission of instructor. Offered: SpS.

CONJ 531 Signaling Mechanisms in Excitable Cells (1.5) See Conjoint Courses.

P BIO 541 Motor Systems I: Peripheral, Spinal, and Cortical Mechanisms (3) *Binder, Fetz* Discussion of research papers on the physiology of the motor unit and the spinal and cortical neurons that control motor unit activity. Prerequisite: NEUBEH 501-503 or permission of instructor.

P BIO 542 Motor Systems II: Brainstem Mechanisms (3) *Anderson, Fuchs* Critical discussion of research papers and resulting concepts regarding the roles of various brainstem systems in controlling somatic and ocular movements. Each student is responsible for leading the discussion of one topic. Prerequisite: NEUBEH 502 and NEUBEH 503 or equivalent and permission of instructor.

P BIO 547 Readings in Cell Physiology (2/3, max. 15) *Hille* Reading and discussion of research literature on excitable cells. Emphasis on membrane excitability, transport, contractility, growth factors, and extracellular matrix. Topics vary. Prerequisite: CONJ 501 or equivalent. Offered: W.

P BIO 560 Muscle and Cell Motility (*) Selected topics in muscle contraction and cell motility. Reading of original papers. Presentations by students and faculty. Topics vary. Prerequisite: permission of instructor.

P BIO 594 Neurological Study Unit (0.5) Faculty and student discussion of neurological topics illustrated with clinical cases or demonstrations include the following: physiology, neuroanatomy, neurology, neuropathology, neurosurgery, and psychiatry. Credit/no credit only. Prerequisite for medical students: HUBIO 532. Offered: AW.

P BIO 600 Independent Study or Research (*) Offered: AWWSpS.

P BIO 700 Master's Thesis (*) Offered: AWWSpS.

P BIO 800 Doctoral Dissertation (*) Offered: AWWSpS.

Psychiatry and Behavioral Sciences

BB1644 Health Sciences

General Catalog Web page:
www.washington.edu/students/genocat/academic/Psychiatry.html

Department Web page:
depts.washington.edu/psychweb/

pbsci@u.washington.edu

The department offers course work, clinical training, and research opportunities for undergraduate students, medical students, graduate physicians, and graduate students in allied health programs such as psychology, social work, and psychiatric nursing.

A biobehavioral approach is emphasized, which incorporates intrapersonal, interpersonal, and sociocultural factors. Intrapersonal factors include emotion, perception, cognition, psychodynamics, neurochemistry, neuroanatomy, neuropsychology, genetics, and the developmental and aging processes. Interpersonal factors focus upon dyadic, familial, and group interactions. Sociocultural factors include the cultural, social, institutional, and community systems as well as the environment and epidemiology of health and disease.

Graduate Program

The medical school curriculum is divided into a core (basic) curriculum and an elective curriculum. Within its core curriculum the Department of Psychiatry and Behavioral Sciences offers material covering learning theory, cognition, memory, perception, neuropsychopharmacology, social growth and development, epidemiology of health and disease, psychopathology, psychotherapy, and neuropsychiatry and behavioral medicine, as well as training in interviewing skills

and assessment techniques. Its elective program includes a variety of clinical experiences and advanced didactics and seminars designed to further the knowledge and skills developed within the basic curriculum. In addition, the department encourages research and other scholarly pursuits by students in areas of interest to them. Stipends are available for research studies.

Residency Training in Psychiatry

Contact: Deborah Cowley

A four-year residency for medical school graduates and a three-year post-internship residency prepares physicians for Specialty Board Certification in Psychiatry. Clinical rotations on inpatient, outpatient, emergency, and consultation/liaison services are augmented by individual supervision and didactic lectures. With the program's integrative orientation, residents become proficient in psychotherapy, psychopharmacology, and community liaison with patients of all ages. Fellowships in child, geriatric, addiction, community, forensic and consultation-liaison psychiatry, and psychiatric neuroscience are available.

Clinical Psychology Internship Program

Contact: Alexander Troster

A one-year internship in clinical psychology accredited by the American Psychological Association is offered as an interdepartmental program. This internship is open to candidates for the doctorate in clinical psychology from graduate programs accredited by the American Psychological Association.

Postdoctoral Fellowship Training

Contact: Richard Veith

Postdoctoral fellowships for advanced clinical and research training in behavioral medicine, broadly construed, are also offered.

Faculty

Chair

Richard C. Veith

Professors

Avery, David H. 1980; MD, 1972, Washington University; treatment of depression, seasonal affective disorder, transcranial magnetic stimulation.

Aylward, Elizabeth H. 1997, (Adjunct); MA, 1976, University of Connecticut, PhD, 1982, Cornell University; structural and functional neuroimaging in neuropsychiatric disorders, developmental psychology.

Becker, Joseph * 1965, (Emeritus); PhD, 1958, Duke University; psychosocial aspects of depression.

Bird, Thomas D. 1976, (Adjunct); MD, 1968, Cornell University; neurology, neurogenetics.

Borson, Soo 1972; MD, 1969, Stanford University; geriatric psychiatry.

Bowden, Douglas M. 1969; MD, 1965, Stanford University; neural substrates of learning and memory.

Breitner, John 2002; MD, 1970, University of Pennsylvania, MPH, 1979, Johns Hopkins University; geriatric psychiatry.

Buchwald, Dedra S. 1987, (Adjunct); MD, 1981, University of California (San Diego); internal medicine.

Calsyn, Donald 1981; PhD, 1979, University of Washington; drug abuse treatment, AIDS prevention.

Carr, John E. * 1963, (Emeritus); PhD, 1963, Syracuse University; phobic disorders, patient therapist matching and therapy outcome, cross-cultural psychopathology.

Cowley, Deborah S. 1982; MD, 1980, University of Pennsylvania; anxiety disorders, psychiatric disorders during pregnancy and postpartum.

Dager, Stephen R. * 1979; MD, 1978, University of Nebraska; application of functional brain imaging techniques to investigate neuropsychiatric disorders.

Dikmen, Sureyya S. * 1974, (Adjunct); PhD, 1973, University of Washington; clinical neuropsychology, traumatic brain injury.

Doerr, Hans O. * 1967, (Emeritus); PhD, 1965, Florida State University; psychophysiology of central and autonomic nervous systems, neuropsychology.

Donovan, Dennis 1981; MA, 1972, Western Washington University, PhD, 1980, University of Washington; cognitive-behavioral factors in substance abuse and addictive behaviors.

Dunner, David L. 1978; MD, 1965, Washington University; diagnosis and treatment of depression.

Heiman, Julia R. * 1980; PhD, 1975, State University of New York (Stony Brook); sexuality and sexual relationships, prevention and treatment of family abuse.

Horita, Akira * 1950, (Emeritus); PhD, 1954, University of Washington; neuropsychopharmacology.

Hunt, D. Daniel 1977; MD, 1973, Cornell University, MBA, 1977, University of Pennsylvania; medical education, career choice.

Johnson, Merlin 1982, (Emeritus); MD, 1947, University of Iowa.

Katon, Wayne J. * 1976; MD, 1976, University of Oregon; depression, panic disorder, somatization, adherence.

Linehan, Marsha M. * 1977, (Adjunct); PhD, 1971, Loyola University (Chicago); behavioral assessment and therapy, suicide and parasuicide, borderline personality disorders.

McCann, Barbara S. * 1986; MS, 1982, PhD, 1984, Rutgers University; behavior change, health, nutrition, psychological stress, cardiovascular disease, diabetes, obesity.

McCauley, Elizabeth 1979; PhD, 1973, State University of New York (Buffalo); developmental psychopathology focused on affective disorders, behavioral genetics.

Meltzoff, Andrew N. * 1977, (Adjunct); PhD, 1976, Oxford University (UK); perceptual, cognitive and social development in infants.

Peskind, Elaine R. 1986; MD, 1986, University of Washington; neuroendocrinology of aging, Alzheimer's and PTSD, neurobiology of noncognitive behavioral problems.

Raskind, Murray 1970; MD, 1968, Columbia University; aging and Alzheimer's disease.

Ries, Richard K. 1975; MD, 1975, Northwestern University; severe mental illness treatment, addictions, health services outcomes.

Robinson, Nancy M. * 1969, (Emeritus); PhD, 1958, Stanford University; psychology.

Roy-Byrne, Peter 1986; MD, 1978, Tufts University; diagnosis and psychopharmacology of anxiety, depression, and ADHD in adults.

Speltz, Matthew L. 1981; MA, 1975, Western Washington University, PhD, 1980, University of Missouri; developmental psychotherapy, family therapy, pediatric behavioral medicine.

Streissguth, Ann P. 1972; MA, 1959, University of California (Berkeley), PhD, 1964, University of Washington; psychology and behavioral teratology.

Teri, Linda * 1984, (Adjunct); PhD, 1980, University of Vermont; controlled clinical trials of caregiving training for patients with Alzheimer's.

Townes, Brenda D. * 1961, (Emeritus); PhD, 1970, University of Washington; psychology.

Trupin, Eric W. 1973; MA, 1973, PhD, 1974, University of Wyoming; psychology.

Tucker, Gary J. 1985, (Emeritus); MD, 1960, Case Western Reserve University; neuropsychiatry.

Turner, Judith A. 1980; MA, 1975, PhD, 1979, University of California (Los Angeles); psychology.

Veith, Richard 1977; MD, 1973, University of Washington; gerontology.

Vitaliano, Peter P. * 1978; PhD, 1975, Syracuse University; psychiatric methodology (epidemiology, design, psychometrics), behavioral medicine.

Vitiello, Michael V. * 1982; PhD, 1980, University of Washington; sleep, sleep disorders, circadian rhythms, aging, behavioral medicine.

Walker, Edward A. 1983; MD, 1983, University of Washington; consultation-liaison psychiatry, medically unexplained physical symptoms.

Ward, Nicholas G. 1975; MD, 1973, Cornell University; treatment resistant mood disorders, psychopharmacology.

Associate Professors

Armstrong, Hubert E. 1966, (Emeritus); PhD, 1963, Syracuse University; clinical psychology.

Barnes, Robert 1977; MD, 1973, University of Utah.

Calderon, Rosemary 1987; PhD, 1988, University of Washington; mental health and deafness, childhood psychopathology, early intervention.

Carlin, Albert S. 1964, (Emeritus); MA, 1961, PhD, 1964, Syracuse University; clinical psychology.

Chaney, Edmund 1977; PhD, 1976, University of Washington; clinical psychology.

Craft, Suzanne * 1994; PhD, 1985, University of Texas (Austin); neuropsychology of attention and memory in development and aging.

Dubach, Mark F. 1978; PhD, 1983, University of Washington; anthropology.

Erickson, Richard C. 1991; PhD, 1969, University of Washington; clinical psychology.

Hamblin, Mark W. 1990; PhD, 1982, MD, 1982, University of California (San Diego); molecular and cell biology of serotonin receptors, geriatric psychiatry.

Kivlahan, Daniel R. * 1983; PhD, 1983, University of Missouri; evaluating assessment, prevention, and treatment approaches for addictive behaviors.

Lampe, Thomas H. 1982; MD, 1977, Indiana University; Alzheimer's disease, post-traumatic stress disorder, neuroendocrinology.

Logsdon, Rebecca G. * 1986, (Adjunct Research); PhD, 1986, Oklahoma State University; geriatric psychology, Alzheimer's disease, caregiving.

376 SCHOOL OF MEDICINE / PSYCHIATRY AND BEHAVIORAL SCIENCES

Maiuro, Roland D. 1978; PhD, 1978, Washington University; clinical psychology.

Maxim, Peter E. 1976; MD, 1966, PhD, 1971, Stanford University; in-patient care.

McClellan, Jon M. 1984; MD, 1984, University of Michigan; child psychiatry.

McFall, Miles E. 1982; MA, 1979, PhD, 1981, University of Montana; clinical psychology.

McCurry, Susan Melancon * 1991, (Adjunct Research); MS, 1977, MS, 1984, PhD, 1991, University of Nevada; dementia, aging, older adults, depression, sleep, psychotherapy intervention research.

Moe, Karen E. 1990, (Research); PhD, 1981, University of Washington; sleep, hormones and cognition in aging; estrogen effects on sleep and circadian rhythms

Murburg, Michele 1982; MD, 1978, Albert Einstein College of Medicine; neurobiology of PTSD, PTSD in special populations, psychiatric consequences of workplace harassment.

Myers, Kathleen M. 1980; MD, 1979, MPH, 1979, University of Hawaii; child and adolescent psychiatry.

Neumaier, John F. 1983; PhD, 1989, MD, 1990, University of Washington; neurobiology of stress and depression; regulation of serotonin receptors.

Pascualy, O. Marcella 1984; MD, 1982, Universidad Javeriana (Colombia); geriatric psychiatry.

Pepping, Mary * 1994, (Adjunct); PhD, 1981, Washington State University; psychosocial outcome after TBI and mild TBI; neuropsychological features of dementia and mild TBI.

Petrie, Eric C. 1990; MS, 1981, University of Wisconsin, MD, 1985, University of Washington; psychopharmacology, schizophrenia, post-traumatic stress disorder.

Radant, Allen D. 1985; MD, 1985, University of California (Davis).

Raskind, Wendy H. 1982, (Adjunct); PhD, 1977, MD, 1978, University of Washington; medical genetics.

Romano, Joan 1982; MS, 1974, PhD, 1982, University of Pittsburgh; clinical psychology.

Russo, Joan E. 1982, (Research); PhD, 1989, University of Washington; psychiatric outcomes.

Saxon, Andrew J. 1982; MD, 1977, Tufts University; addiction psychiatry.

Scher, Maryonda 1961, (Emeritus); MD, 1954, University of Washington; dissociative disorders/PTSD.

Scott, David T. 1993; PhD, 1978, Yale University; natural history of premature infants, efficacy of early intervention for premature infants.

Simon, Gregory E. 1988, (Research); MD, 1982, University of North Carolina (Chapel Hill), MPH, 1990, University of Washington; mental health services research; primary care.

Sullivan, Mark D. 1985; PhD, 1982, MD, 1984, Vanderbilt University; depression and chronic medical illness, chronic pain, ethics, quality of life.

Sulzbacher, Stephen 1976; MA, 1964, Hollins College (Virginia), PhD, 1971, University of Washington; psychiatry and behavioral sciences.

Syrjala, Karen L. 1985; PhD, 1983, MA, 1983, Boston University; oncology, pain.

Troster, Alexander I. 2000; PhD, 1991, University of California (San Diego), San Diego State University; neuropsychology of movement disorders, cognitive and quality of life outcomes.

Unis, Alan S. * 1987; MD, 1976, University of Pittsburgh; researching the role of dopamine.

Varley, Christopher K. 1974; MD, 1973, University of Washington; attention deficit hyperactivity disorder, pediatric psychopharmacology.

Verhulst, Johan 1977; MD, 1964, Catholic University of Louvain (Belgium); clinical psychiatry, marital therapy.

Villacres, Enrique C. 1981; MD, 1981, Medical College of Wisconsin; signal transduction and role of cAMP cascade proteory and learning.

Wilkinson, Charles W. 1984, (Research); PhD, 1977, University of California (Santa Barbara); neuroendocrine concomitants of aging; Alzheimer's disease, depression.

Wilson, Lawrence G. 1978; MD, 1966, University of Kansas; cultural influences on manifestation of symptoms of psychiatric illness and psychological distress.

Womack, William M. 1969; MD, 1961, University of Virginia; behavioral medicine, pediatric headache, stress/anxiety disorders, juvenile offenders.

Assistant Professors

Comtois, Katherine Ann 1991; PhD, 1992, University of Maryland; services research, borderline personality disorder, women, dual diagnosis.

Dobie, Dorcas J. 1984; MD, 1984, University of Michigan; geriatric psychiatry.

Elliott, Andrew J. 1992; MD, 1992, University of Nevada; HIV/AIDS, psychotic disorders, dialectical behavior therapy.

Fann, Jesse R. 1990; MD, 1989, Northwestern University, MPH, 1995, University of Washington; neuropsychiatry, psycho-oncology, epidemiology, health services research, depression, delirium.

Felker, Bradford 1997; MD, 1987, University of Virginia (Charlottesville).

Grant, Therese M. 1984, (Research); PhD, 1999, University of Washington; fetal alcohol syndrome.

Harris, Victoria L. 1990; MD, 1989, University of British Columbia (Canada); subspecialty ABPN certification in forensic psychiatry.

Iwamoto, Satori 1993, (Adjunct); MD, 1989, Harvard University; dermatology.

Larimer, Mary E. * 1995; PhD, 1992, University of Washington; prevention of alcohol problems among college students.

Leverenz, James B. 1992; MD, 1985, University of Washington; neurology, psychiatry and behavioral sciences, Alzheimer's.

Pham, Tony A. 2000; PhD, 1993, MD, 1993, Baylor University; development and plasticity of neural connections in the mammalian forebrain.

Reoux, Joseph P. 1995; MD, 1985, University of Texas (Houston); addiction psychiatry, substance withdrawal syndromes, pharmacotherapy, clinical guidelines.

Richards, Henry J. 1999, (Research); PhD, 1987, Loyola University; mental health in the criminal justice system.

Rippeth, Julie D. 2001; PhD, 1997, San Diego State University/University of California (San Diego); neuropsychology.

Shores, Molly M. 1989; MD, 1987, University of Washington; geriatric psychiatry.

Simpson, Tracy L. 1997; PhD, 1999, University of New Mexico; post-traumatic stress disorder, addictions.

Sloan, Kevin L. 1992; MD, 1986, University of Chicago; dual disorders/addictions.

Snowden, Mark B. 1990; MD, 1990, University of Washington.

Srebnik, Debra S. 1992; PhD, 1992, University of Vermont; public mental health services research, program and policy evaluation, community psychology.

Stella, Nephi * 1999; PhD, 1995, Ecole Polytechnique Federale De Lausanne; microglia cells activation: involvement of endogenous cannabinoid ligands and their allied receptors.

Szot, Patricia 1987, (Research); PhD, 1987, Oregon State University.

Tsuang, Debby W. 1992; MD, 1988, University of Iowa; genetics of schizophrenia and late-life dementia.

Uldall, Karina K. 1987; MD, 1987, University of Missouri; HIV/AIDS, health services.

Vanderstoep, Ann 1994; PhD, 1997, University of Washington.

Wagner, Amy W. 2000; PhD, 1995, University of Washington.

Whitsett, Stan F. 2001; PhD, 1982, University of Tennessee; child adolescent psychology.

Wingerson, Dane K. 1987; MD, 1987, University of Washington; antipsychotic medications and pharmacoeconomic issues.

Zatzick, Douglas F. 2000; MD, 1989, University of California (San Diego); traumatic life events, post-traumatic behavioral and emotional disturbances.

Senior Lecturers

Carmichael Olson, Heather 1986; PhD, 1986, University of Washington.

Dagadakis, Christos S. 1976; MD, 1974, MPH, 1975, University of Washington; emergency psychiatry, mental health managed care, psychiatric disability, stress management.

Lecturer

Kohen, Ruth 1988; MD, 1986, University of Aachen (Germany).

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

CONJ 475 Alcoholism: A Course for Medical Students in the Allied Health Sciences (2) See Conjoint Courses.

PBSCI 498 Undergraduate Thesis (*) Opportunity to complete work on psychiatric research projects or to pursue a specific psychiatric topic in depth, for instance, through library research.

PBSCI 499 Undergraduate Research (*, max. 15) Opportunities are available for participation in a wide variety of ongoing research in the behavioral sciences and clinical psychiatry, or for the development of an individual investigative project under the supervision of a faculty sponsor.

PBSCI 525 P-Psychiatry and the Law (3) *Goldenberg* Concentration on major issues in psychiatry and law. Outside speakers from legal, judicial, and psychiatric communities. Lectures on assessment in forensic settings, competence to stand trial, and criminal responsibility. Discussions on personality disorders and correctional environments. For psychiatric residents and graduate psychology, psychosocial nursing, social work, and law students.

PBSCI 530 P-Developmental Psychoanalytic Psychotherapy (2) *Schimmelbusch* Examines how failures of psychological development lead to disorders of regulation of affects and cognition, and how psychoanalytic treatment reinstitutes normal development. Treatment process viewed from a psychoanalytic and psychobiological perspective. Clinical case discussion integrates theoretical concepts.

PBSCI 535 Modern Concepts of Psychoanalysis (2) *Schimmelbusch* Examines childhood developmental stages in light of inborn and environmental determinants. Correlates developmental phases with adult personality functioning. Views emotional development from a psychoanalytic and psychobiological point of view. Clinical case discussion integrates theoretical concepts.

PBSCI 546 Psychosocial Epidemiology (3) *Vander Stoep* Application of epidemiological methods to the study of mental illnesses. Topics include occurrence and distribution of mental illness, classification of psychiatric disorders; treatment-based vs. community-based studies; epidemiology of depression and schizophrenia; familial transmission; developmental epidemiology; mental illness and violence. Prerequisite: one course in epidemiology or permission of instructor. Offered: jointly with EPI 546; Sp.

PBSCI 548 P-Aging and Adult Development (1-3, max. 3) Aging in Western technologically advanced societies frequently involves losses in status, stamina, and economic and social supports. Consideration given to losses among the aged. Students select projects in the area of aging and work at their own levels of expertise and sophistication. Seminar format with guided reading.

PBSCI 591 P-Seminars and Conferences in Psychiatry: Seminar in Clinical Neuropsychology (*) Introduction to neuropsychological studies of brain-behavior relationships. Exposure to neuropsychological assessment procedures and manifestation of neurocognitive deficits in selected mental and medical disorders, e.g., epilepsy, AIDS, sleep disorders, trauma, toxin exposure, vascular disorders, psychiatric disorders. Develop knowledge of neuropsychological assessment procedures and applications to diverse medical conditions. Prerequisite: psychological assessment experience.

PBSCI 665 P-Basic Clinical Clerkship (12) *Dagadakis, McCreery, Mehta* Inpatient clerkship in psychiatry. Students have primary responsibility under the direction of attending psychiatrists and residents for diagnosis and care of patients at University of Washington Medical Center, Harborview Medical Center, or Veterans Administration Hospital. Emergency room, crisis intervention, consultation to patients with psychiatric dysfunction. Familiarity with psychopharmacology and short-term hospitalization emphasized. (Six weeks, full-time.)

PBSCI 666 P-WWAMI Psychiatry and Behavioral Sciences Clerkship (12) *Kletti* Rotation aims to increase student's skills in basic psychiatry, social psychiatry, transcultural psychiatry, and community

psychiatry. Orientation is around the diagnosis, treatment, and clinical management of White, Aleut, Indian, and Eskimo children and adults in outpatient, inpatient, and community settings. Third-, fourth-year medical students. Prerequisite: HUBIO 563. (Limit: three students.)

PBSCI 667 P-Basic Psychiatry Clerkship, Boise (12) *Hines* Basic psychiatry clerkship at Veterans Administration Medical Center in Boise, Idaho. Fulfills graduation requirement for clerkship in Psychiatry.

PBSCI 668 P-Psychiatry Clerkship, Spokane (12) *Bakker* Students work on adult, geriatric, and adolescent inpatient psychiatric units of Sacred Heart Medical Center, following patients after transfer to partial hospitalization or outpatient clinic. Didactics include basic psychiatric diagnosis, treatment, and pharmacotherapy. Prerequisite: completion of HUBIO series; third and fourth-year medical students.

PBSCI 670 P-Clerkship in Consultation/Liaison Psychiatry UWMC (*, max. 24) *Walker* Assessment of patients with major psychosocial problems associated with physical disease, including: problems stemming from the way the illness is perceived and experienced, liaison with other clinical disciplines on complex diagnosis and treatment of problems. (Limit: one student; four weeks.) Prerequisite: HUBIO 563; either PBSCI 665, PBSCI 666, PBSCI 667, or PBSCI 668.

PBSCI 671 P-Clerkship in Consultation/Liaison Psychiatry HMC (*, max. 24) *Elliot* Prerequisite: either PBSCI 665, PBSCI 666, PBSCI 667, or PBSCI 668. (Limit: two students.)

PBSCI 672 P-Selective Clerkship in Primary Care Psychiatry at Boise VAMC (8/12) *Blackburn, Leone, Marsh* Assessment and treatment of patients with acute psychiatric problems in a primary care/rural setting. Consultation work on general medicine and surgery; assessment and dealing with outpatient psychiatric problems as they initially present. Evaluations, crisis intervention strategies, and brief therapies stressed. Prerequisite: either PBSCI 665, PBSCI 666, PBSCI 667, or PBSCI 668. (Four to six weeks; UW students only.)

PBSCI 673 P-Outpatient Psychiatry Elective (*, max. 24) *Foster* Offered at Harborview Outpatient Center. Students function as subinterns, conducting diagnostic interviews, initiating and managing pharmacotherapeutic treatment regimens, and providing crisis intervention, under the supervision of the full-time attending at Psychopharmacology Clinic. Prerequisite: either PBSCI 665, PBSCI 666, PBSCI 667, or PBSCI 668. (Four to six weeks, full-time.)

PBSCI 676 P-Inpatient Clerkship in Psychiatry at American Lake VA (8/12) *Chandran* For medical students with a defined interest in psychiatry who wish to develop their knowledge and skills in the evaluation, management, and treatment of a wide range of acute and chronic psychiatric conditions requiring inpatient hospital treatment. Prerequisite: either PBSCI 665, PBSCI 666, PBSCI 667, or PBSCI 668. (Four to six weeks, full-time.)

PBSCI 677 P-Alcohol and Drug Treatment Clerkship at American Lake VA (8/12) *Lim* Student assists in every phase of the substance-abuse treatment, including admission interviews, patient evaluation, problem identification, group and individual psychotherapy, assertiveness training, anger control, human sexuality, medical evaluation and treatment, couples therapy, discharge and aftercare planning. Experience primarily clinical. Prerequisite: either PBSCI 665, PBSCI 666, PBSCI 667, or PBSCI 668. (Four to six weeks, full-time.)

PBSCI 678 P-Clerkship in Psychiatric Long-Term Care and Rehabilitation (*, max. 12) *Chandran* Two- to six-week clerkship provides learning experiences

in rehabilitation of long-term psychiatric patients with medical illness. Multidisciplinary team approach, working with homeless mentally ill. Diagnostic skills emphasized. Spectrum of diseases (cardiovascular, Huntington's, organic brain syndrome) is such that physical rehabilitation is not an emphasis. Prerequisite: HUBIO 563; either PBSCI 665, PBSCI 666, PBSCI 667, or PBSCI 668.

PBSCI 680 P-Clerkship in Emergency Psychiatry (*, max. 24) *Gardiner* Emphasis on clinical evaluation, acute management, and treatment planning for individual patients. Experience in coordinating these activities with other emergency room personnel, and various hospital and community resources. Emphasis on skills useful to physicians in any specialty. Third- and fourth-year medical students only. Prerequisite: either PBSCI 665, PBSCI 666, PBSCI 667, or PBSCI 668. (Four or six weeks, full-time.)

PBSCI 685 P-Geriatric Psychiatry Clerkship (*, max. 12) *Pascualy* Two- to six-week elective (four weeks highly recommended). Participation in the evaluation and care of older persons with psychopathology, such as intellectual impairment and depression, in a variety of settings. Emphasis on improving clinical skills regarding diagnosis and treatment of common behavioral problems in the elderly. Prerequisite: either PBSCI 665, PBSCI 666, PBSCI 667, or PBSCI 668.

PBSCI 688 P-Subinternship in General Psychiatry (*, max. 16) Students function as interns under the supervision of house staff and attending psychiatrists. Further development of their diagnostic and therapeutic skills emphasized. Special areas of interest, such as family intervention, substance abuse, psychoses, neuropsychiatry, community psychiatry, administration, research pursued. Prerequisite: either PBSCI 665, PBSCI 666, PBSCI 667, or PBSCI 668; permission of instructor. (Four or six weeks, full-time.)

PBSCI 696 P-Advanced Clerkship in Child Psychiatry (*, max. 24) *Varley* Provides students an opportunity to participate in evaluation and treatment. Experiences in specialized clinics are also available. It is suggested that the student contact the instructor prior to enrollment. Prerequisite: either PBSCI 665, PBSCI 666, PBSCI 667, or PBSCI 668. (Four or six weeks, full-time. Limit: two students.)

PBSCI 697 P-Psychiatry Special Electives (*, max. 24) By special arrangement, clerkships, externships, and research opportunities can be made available at the University and other institutions. Students obtain permission from Dr. Hunt before obtaining a special assignment form from the Dean's office one month before advance registration. Students contact affiliating institutions. Does not fulfill the requirement for a basic clerkship in psychiatry.

PBSCI 699 P-WWAMI Psychiatry and Behavioral Sciences Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Radiation Oncology

NN106 University of Washington Medical Center

General Catalog Web page:

www.washington.edu/students/gencat/academic/Radiation_Oncology.html

Department Web page:

www.radonc.washington.edu/

Radiation oncology is the branch of clinical medicine that utilizes high-energy radiation to treat disease, usually cancer. The department consists of three divisions: clinical radiation oncology, medical radiation physics, and experimental cancer biology. Training programs are offered in all three divisions. Research programs in the Department of Radiation Oncology are aimed at the physical and biological mechanisms of interactions between ionizing radiations, and normal and malignant tissues, with particular emphasis on high linear energy transfer (LET) radiation effects. The department is actively involved in radiation treatment planning work particularly in regard to intensity modulated radiation therapy (IMRT). Other programs involve the application of positron emission tomography (PET) to elucidate differences between cancers and normal tissues, and the development of specialized radiopharmaceuticals.

Faculty

Chair

George E. Larramore

Professors

Groudine, Mark * 1982; MD, 1975, PhD, 1976, University of Pennsylvania; chromatin structure and gene activity.

Krohn, Kenneth A. * 1981; PhD, 1971, University of California (Davis); chemistry, radiation oncology.

Laramore, George E. 1976; MS, 1966, PhD, 1969, University of Illinois, MD, 1976, University of Miami (Florida); therapeutic radiology.

Russell, Kenneth J. 1985; MD, 1979, Harvard University; therapeutic radiology.

Wootton, Peter 1964, (Emeritus); HonBSc, 1944, University of Birmingham (UK); medical radiation physics.

Associate Professors

Austin-Seymour, Mary M. 1988; MD, 1978, University of Chicago; therapeutic radiology.

Cho, Paul S. 1990; PhD, 1989, University of California (Los Angeles); medical radiation physics.

Kalet, Ira J. * 1980; PhD, 1968, Princeton University; computer simulation of radiation therapy, artificial intelligence, computer graphics.

Koh, Wui-Jin 1984; MD, 1984, Loma Linda University; therapeutic radiology.

Lindsley, Skyler 1993; MD, 1985, Vanderbilt University; therapeutic radiology.

Phillips, Mark H. 1991; PhD, 1982, University of Wisconsin; medical radiation physics.

Schwartz, Jeffrey L. 1995; PhD, 1979, University of Texas (Dallas); radiation biology.

Wallner, Kent E. 1997; MD, 1981, Ohio State University; therapeutic radiology.

Wilbur, D. Scott 1986; PhD, 1978, University of California (Irvine); radiochemistry.

Assistant Professors

Diaz, Aidnag Z. 2000; MD, 1988, Columbia University.

Douglas, James G. 1988; MD, 1980, Case Western Reserve University.

Gu, Yansong * 2001; PhD, 1994, Thomas Jefferson University; DNA damage signaling and repair pathways.

Yao, Michelle S. 2000; MD, 1993, University of Michigan; radiation oncology.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

R ONC 499 Undergraduate Research (*, max. 24)

Austin-Seymour, Cho, Douglas, Einck, Kalet, Koh, Laramore, Lindsley, Ling, Phillips, Rasey, Russell, Schwartz, Stelzer, Wilbur, Yas Opportunities in clinical or laboratory investigation in radiation oncology, radiation physics, or computer-related research. Student participation in ongoing or new projects. Open to students in the biological or physical sciences.

R ONC 695 P-Clinical Cancer Management (*, max. 8)

Koh Participation in the clinical management of patients with cancer, emphasizing a multi-modality approach. Includes clinical assessment, planning of radiation treatment, and follow-up evaluation of patients. Special procedures include three-dimensional treatment planning, implant brachytherapy and intraoperative radiation. Daily teaching conferences with faculty and residents. Prerequisite: MED 665 or permission of instructor.

R ONC 697 P-Radiation Oncology Special Elective (*, max. 24)

Koh By specific arrangement for qualified students, special clerkship, externship or research opportunities can be made at institutions other than the University of Washington. Students should obtain a "Special Assignment" form from the Dean's Office at least one month before advance registration. Prerequisite: permission of instructor.

R ONC 699 P-WWAMI Radiation Oncology Special Electives (*, max. 24)

By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Radiology

RR215 University of Washington Medical Center

General Catalog Web page:

www.washington.edu/students/gencat/academic/Radiology.html

Department Web page:

www.rad.washington.edu

Diagnostic radiology is that branch of clinical medicine that specializes in the interpretation of various imaging modalities in order to detect, to characterize, and (with increasing frequency) to treat a wide variety of diseases. Historically, x-rays were the first energy source utilized for these purposes, and they

continue to be a mainstay of this discipline. More recently, the armamentarium has grown to include ultrasound, computed tomography, magnetic resonance, and positron-emission tomography. In nuclear medicine, one of radiology's major subspecialties, radionuclides are employed for both diagnostic and therapeutic purposes. Another subspecialty is interventional radiology, wherein aspirations and biopsies, as well as therapeutic procedures such as abscess drainage, tumor embolization, and vascular stents are performed percutaneously.

The Department of Radiology consists of two clinical divisions: diagnostic radiology and nuclear medicine. Both divisions are ably supported by technologists and faculty members in the field of radiation physics. Instruction in radiology is provided for medical students, residents, and fellows as well as for other physicians. The faculty and its teaching and research activities are represented in each of the hospitals affiliated with the University.

Faculty

Chair

Albert A. Moss

Professors

Aylward, Elizabeth H. 1997; MA, 1976, University of Connecticut, PhD, 1982, Cornell University; structural and functional neuroimaging in neuropsychiatric disorders, developmental psychology.

Bassingthwaighe, James * 1975, (Adjunct); MD, 1955, University of Toronto (Canada), PhD, 1964, Mayo Medical School/graduate School; computer analysis of transport mechanisms in blood and tissues.

Bush, William H. 1979; MD, 1967, Oregon Health Sciences University; genitourinary radiology.

Caldwell, James H. 1983, (Adjunct); MD, 1970, University of Missouri; positron emission tomography imaging of myocardial oxygenation, metabolism and sympathetic function.

Chesnut, Charles * 1974; MD, 1966, University of Florida; nuclear medicine.

Cohen, Wendy A. 1987; MD, 1975, Harvard University; neuroradiology.

Conley, Kevin E. * 1988; PhD, 1983, University of Wisconsin; muscle metabolism and energetics in vivo.

Dager, Stephen R. * 1979; MD, 1978, University of Nebraska; application of functional brain imaging techniques to investigate neuropsychiatric disorders.

Eary, Janet F. 1980; MD, 1980, Michigan State University; nuclear medicine.

Effmann, Eric L. 1991; MD, 1967, Indiana University; pediatric radiology.

Eskridge, Joseph M. 1987; MD, 1981, University of Louisville; neuroradiology.

Figley, Melvin M. 1958, (Emeritus); MD, 1944, Harvard University; thoracic and pulmonary radiology.

Godwin, J. David 1986; MD, 1971, Stanford University; pulmonary radiology.

Harley, John D. 1975; MD, 1966, Washington University; general radiology and angiography.

Hayes, Cecil E. 1991; PhD, 1973, Harvard University; physics, MRI.

Haynor, David R. * 1979; PhD, 1971, University of California (Berkeley), MD, 1979, Harvard University; medical image processing and segmentation; image deformation; functional MRI; expression arrays.

Kim, Yongmin * 1982, (Adjunct); MS, 1979, PhD, 1982, University of Wisconsin; computer architecture, imaging systems, medical imaging, computer graphics, multimedia.

Krohn, Kenneth A. * 1981; PhD, 1971, University of California (Davis); chemistry, radiation oncology.

Kushmerick, Martin J. * 1988; MD, 1963, PhD, 1966, University of Pennsylvania; muscle contraction, magnetic resonance, metabolic imaging NMR spectroscopy.

Lewellen, Thomas * 1967; PhD, 1972, University of Washington; bioengineering, electrical engineering.

Lichtenstein, Joel E. 2000; MD, 1972, Ohio State University; gastrointestinal radiology, computed tomography.

Mann, Frederick A. 1993; MD, 1975, Indiana University; emergency and trauma radiology.

Maravilla, Kenneth R. 1986; MD, 1970, State University of New York (Brooklyn); neuroradiology and neurosurgery.

Minoshima, Satoshi 2000; MD, 1987, PhD, 1994, Chiba University (Japan); nuclear medicine.

Moss, Albert A. 1984; MD, 1967, State University of New York (Upstate Medical Center); gastrointestinal radiology, computed tomography.

Nelp, Wil B. 1962, (Emeritus); MD, 1955, Johns Hopkins University; nuclear medicine.

Nelson, James A. * 1986; MD, 1965, Harvard University; diagnostic radiology with basic research in related sciences.

O'Sullivan, S. Finbarr * 1987, (Affiliate); PhD, 1983, University of Wisconsin; nonparametric curve estimation, inverse problems, radiology.

Richards, Todd L. * 1985; PhD, 1984, University of California (Berkeley); nuclear magnetic resonance imaging, spectroscopy of the brain in demyelinating diseases.

Richardson, Michael L. 1984; MD, 1975, Baylor University; bone and joint radiology and musculoskeletal radiology.

Rohrmann, Charles A. 1975; MD, 1966, University of Washington; gastrointestinal radiology.

Schmiedl, Udo P. 1989; PhD, 1979, MD, 1982, University of Heidelberg (Germany); abdominal imaging, ultrasound, computed tomography.

Yuan, Chun 1991; PhD, 1988, University of Utah; magnetic resonance imaging in medical application.

Associate Professors

Brewer, David K. 1978; MD, 1972, Harvard University; pediatric radiology, angiography, computed tomography.

Dalley, Robert W. 1987; MD, 1982, University of Utah; neuroradiology.

Dubinsky, Theodore J. 1997; MD, 1983, University of Maryland; ultrasound, computed tomography, body imaging.

Gardner, Jill C. 1992, (Research); PhD, 1981, Dalhousie University (Canada); computed imaging processing and analysis.

Gillespy, Thurman 1990; MD, 1980, Thomas Jefferson University; musculoskeletal radiology, orthopaedics.

Glickerman, David J. 1990; MD, 1983, Albany Medical College; angiography, interventional radiology.

Griep, Robert J. 1982; MD, 1958, University of Texas (Galveston); internal medicine/radiology.

Hunter, John C. 1992; MD, 1970, University of Illinois; musculoskeletal, radiology, MRI.

Jarvik, Jeffrey G. 1993; MD, 1987, University of California (San Diego); neuroradiology, outcomes research.

Kimmey, Michael 1979, (Adjunct); MD, 1979, Washington University; gastroenterology/endoscopy.

Kinahan, Paul E. 2001; PhD, 1994, University of Pennsylvania; bioengineering.

Lehman, Constance D. 1990; PhD, 1990, MD, 1990, Yale University; mammography, women's breast imaging.

Lewis, David H. 1985; MD, 1985, Virginia Commonwealth University; nuclear medicine.

Link, Jeanne 1982; MS, 1982, PhD, 1998, University of Washington; radioanalytical chemistry.

Mankoff, David A. 1990; PhD, 1988, University of Pennsylvania, MD, 1988, University of Pennsylvania; high count rate PET imaging.

Marglin, Stephen I. 1980; MD, 1968, Yale University; chest and oncologic radiology.

Ott, Susan M. 1980, (Adjunct); MD, 1974, University of Washington; nephrology.

Parisi, Marguerite T. 2001; MD, 1977, State University of New York (Downstate Medical Center); pediatric radiology.

Phillips, Leon A. 1959, (Emeritus); MD, 1952, Yale University; general radiology, uroradiology.

Rosenbaum, David M. 1983; MD, 1977, Albert Einstein College of Medicine; pediatric radiology.

Schulte, Scott J. 1988; MD, 1979, University of Washington; gastrointestinal radiology.

Shaw, Dennis 1985; MD, 1983, University of Washington; neuroradiology, pediatric radiology.

Takasugi, Julie E. 1988; MD, 1982, University of California (Los Angeles); pulmonary radiology.

Wiseman, Robert W. * 1989, (Affiliate); PhD, 1988, Florida State University; cellular energetics, nmr spectroscopy, mitochondria, kinetics, gene expression, metabolism.

Assistant Professors

Anzai, Yoshimi 2000; MD, 1986, DSc, 1993, Chiba University (Japan); neuroradiology.

Blackmore, Christopher C. 1995; MD, 1990, University of Rochester, MPH, 1997, University of Washington; body imaging, teleradiology, digital radiology, MRI/CT.

Bloch, Robert D. 1998; PhD, 1991, MD, 1991, University of Health Sciences (Chicago); angiography, interventional radiology.

Borsa, John J. 1996; MD, 1991, University of Manitoba (Canada); angiography and interventional radiology.

Cordes, Dietmar 2001, (Research); PhD, 1989, University of Nevada (Reno); physics.

Dee, Katherine E. 1995; MD, 1994, Yale University; breast imaging.

Escobedo, Eva M. 1992; MD, 1985, Stanford University; musculoskeletal trauma radiology.

Eubank, William B. 1996; MPH, 1986, MD, 1986, Tulane University; body MR and GU imaging.

Friedman, Seth D. 2000, (Research); PhD, 1997, University of New Mexico; psychology.

Hallam, Danial K. 2000; MSc, 1988, Stanford University.

Hoffer, Eric K. 1997; MD, 1984, University of California (Los Angeles); minimally invasive therapy, stent grafts for aneurysms, uterine artery embolization, dialysis access.

Kerwin, William 2001, (Research); PhD, 1999, Johns Hopkins University; electrical and computer engineering.

Kim, Thomas A. 2001; MD, 1988, Washington University; neuroradiology.

Lalani, Tasneem A. 2000; MS, 1990, Harvard University, MD, 1993, University of Alberta (Canada); CT/US/MRI.

Langer, Steve G. 1996; PhD, 1994, Oakland University; medical physics.

Maki, Jeffrey H. 1998; MD, 1991, Duke University; MRI.

Marro, Kenneth I. 2001, (Research); PhD, 1995, University of Washington; bioengineering.

Miyaoka, Robert S. 2001, (Research); PhD, 1992, University of Washington; electrical engineering.

Paladin, Angelisa M. 1998; MD, 1999, Chicago Medical School; pediatric radiology.

Rajendran, Joseph 1994; MBBS, 1973, Madurai University (India), MD, 1980, Christian Medical College; nuclear medicine.

Shibata, Dean K. 2001; MD, 1989, Stanford University; neuroradiology.

Sidhu, Manrita K. 1995; MD, 1988, Medical College of Pennsylvania; pediatrics.

Sze, Raymond W. 2000; MD, 1990, University of Medicine and Dentistry of New Jersey; pediatrics.

Vesselle, Hubert J. 1997; PhD, 1990, MD, 1991, Case Western Reserve University; nuclear medicine.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

RADGY 498 Undergraduate Thesis(*) Supervised clinical and/or laboratory research in the broad field of medical imaging, culminating in a thesis. Offered: AWSpS.

RADGY 499 Undergraduate Research (*) Opportunity to gain research experience and direct participation in either clinical or basic sciences investigation in diagnostic and/or nuclear medicine. Offered: AWSpS.

RADGY 505- P-Preceptorship in Nuclear Medicine (1, max. 24) *Eary (University of Washington Medical Center)* Opportunity for first- and second-year medical students to gain experience with faculty in clinical and academic environments. Students observe general aspects of the Nuclear Medicine Division, including clinical problems, the different relationships in the clinic between physician and patient, and several research aspects of the division. Prerequisite: permission of instructor. Offered: AWSpS.

RADGY 508 Physical Aspects of Medical Imaging (4) *Stewart* Quantitative physical principles of medical imaging are presented for electromagnetic and sonic radiation. Methods of image formation and analysis are discussed for conventional film radiography, CT, DSA, PET, B-mode ultrasound and Doppler ultrasound. Offered: jointly with BIOEN 508/ENV H 528.

RADGY 550 Nuclear Magnetic Resonance in Biomedicine (2) *Hayes, Kushmerick, Richards, Yuan* Basic physics of nuclear magnetic resonance (NMR) imaging and spectroscopy are presented. Research applications of NMR in physiology and biochemistry are reviewed with emphasis on the brain. Grade based on written tests and small research paper. Prerequisite: permission of instructor. Offered: jointly with BIOEN 565; odd years; Sp.

RADGY 580 P-Nuclear Medicine Technique, Physics, and Instrumentation (2.5) *Lewellen* Provides familiarization with basic nuclear phenomena and with the instrumentation used in the practice of nuclear medicine. There are discussions and laboratory exercises. Practical experience in instrument operation and sample counting are provided. Prerequisite: permission of instructor. Offered: S.

RADGY 693 P-Introduction to Diagnostic Radiology (4) *Schulte* Half-time clerkship in the field of medical imaging. Lectures, case discussions, film reading, and independent study provide an overview of the subspecialty areas of diagnostic radiology and nuclear medicine. Emphasis on utilization and selection of imaging tests, radiologic anatomy, and interpretation of commonly encountered studies. Offered: AWSpS.

RADGY 694 P-Advanced Clinical Clerkship (8) *Schulte* Full-time clerkship provides a more in depth experience in diagnostic radiology and nuclear medicine. Required rotations in the subspecialty areas of radiology augment the basic lecture series and case discussions of Radiology 693. For those with a special interest in diagnostic radiology. Prerequisite: permission of instructor and departmental education coordinator. Offered: AWSpS.

RADGY 695 P-Radiology Sub-specialty Elective (*, max. 8) *Schulte* Clinical rotation in one of the subspecialty areas of radiology at the University of

Washington and affiliated hospitals. Requires special arrangements and permission from a preceptor and the education coordinator in Radiology. Two or four weeks. Offered: AWSpS.

RADGY 696 P-Nuclear Medicine Clerkship (*, max. 12) *Eary* Daily participation at University of Washington Medical Center nuclear medicine clinic emphasizing technical performance, diagnostic interpretation, and clinical relevance of nuclear imaging. Daily clinical teaching conferences of the division. Four- and six-week clerkships can be preplanned in areas such as pulmonary, cardiovascular, renal, bone, computer analysis. Prerequisite: permission of instructor. Offered: AWSpS.

RADGY 697 P-Radiology Special Electives (*, max. 24) *Schulte* Radiologic training in a nonaffiliated institution. Permission and arrangements must be made at the time of registration through direct communication between the student and the education coordinator in Radiology. A written outline from a preceptor at the intended site required. Prerequisite: permission of radiology education coordinator. Offered: AWSpS.

RADGY 699 P-WWAMI Radiology Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Rehabilitation Medicine

BB919 Health Sciences

General Catalog Web page:
www.washington.edu/students/gencat/academic/Rehab_Medicine.html

Department Web page:
depts.washington.edu/rehab/

The Department of Rehabilitation Medicine provides education for medical students, interns, residents, and allied health students in occupational therapy, physical therapy, and prosthetics and orthotics in a comprehensive approach to rehabilitation problems. This includes special diagnostic and evaluative procedures; methods and rationale in the application of principles of occupational therapy, physical therapy, prosthetics and orthotics, and other health professions; and advanced investigation of special problems encountered in the field. In addition, the department conducts a residency training program for the specialty of physical medicine and rehabilitation.

The department offers graduate curricula leading to the following degrees: Master of Occupational Therapy, Master of Physical Therapy, and a Bachelor of Science in the field of prosthetics and orthotics. The department also offers a Master of Science degree in rehabilitation medicine with options for occupational therapists, physical therapists, and residents in physical medicine and rehabilitation who wish to pursue academic or research careers.

Occupational Therapy

Head

Elizabeth M. Kanny

Occupational therapists provide services related to occupational performance in everyday life in the areas of self-care, work and productive activities, and play/leisure. Occupational therapists work with people

who have physical illness or injury, social or emotional difficulties, congenital or developmental problems, or who are in need of preventive strategies that promote well being. They work with people in all age groups from diverse cultural and ethnic groups and socioeconomic levels.

Occupational therapists help people with impairments or limitations to live as productive a life as possible. They work with people to increase independent function in life activities, enhance development, and to minimize or prevent disability. They use a variety of therapeutic methods including training in self-care activities; design, fabrication, and application of splints; sensorimotor activities; therapeutic group activities; selection and use of adaptive equipment; adaptation of physical environments in the home, school, work, or community; activities to enhance functional performance in everyday life; and work evaluation, work hardening, and workplace adaptations.

Today's occupational therapists work in clinical and community practice, administration, education, and research. Work settings include rehabilitation centers and hospitals; public and private schools; home health agencies; mental health centers and psychiatric hospitals; private practice; vocational rehabilitation centers and industrial clinics; private industry, wellness and prevention programs; and hospices.

The curriculum is designed to link theoretical and technical knowledge in occupational therapy with professional values, attitudes, and skills. The education of each student is based on the philosophy that "occupational performance" (including self-care, work, and leisure/play) is central and provides a purpose and meaning to one's life. Professional standards of practice, ethics, and continued professional growth are emphasized throughout the program. Program requirements include seven quarters of professional course work and six months of full-time fieldwork training. Fieldwork training must be completed within 24 months after completion of professional course work. Completion of all program requirements leads to a Master of Occupational Therapy degree awarded by the School of Medicine, Department of Rehabilitation Medicine.

The Occupational Therapy program is accredited by the Accreditation Council for Occupational Therapy Education (ACOTE) of the American Occupational Therapy Association (AOTA), 4720 Montgomery Lane, P.O. Box 31220, Bethesda, MD 20824-1220, phone 301-652-2682. Graduates of the program are eligible to sit for the national certification examination for the occupational therapist. The National Board for Certification in Occupational Therapy (NBCOT) is the certifying agency responsible for the development and implementation of this exam. Most states, including Washington, require state licensure in order to practice.

Admission Requirements: Applicants must have completed a bachelor's degree in any major and taken the Graduate Record Exam (GRE) within the past five years. In addition, there are eight prerequisite courses that must be completed prior to being admitted to the program. The admission process occurs once a year for entry to the program in autumn quarter of each year; applications are evaluated starting January 15 of each year.

Specific prerequisite courses at the UW include the following. For students who have attended schools outside of the UW, comparable courses must be taken:

Natural Sciences: Survey of Physiology (ZOOL 118), 5 credits; General Anatomy (B STR 301), 4 credits; Introduction to General Chemistry, (CHEM 120), 5 credits; General Physics (PHYS 114), 4 credits; General Physics Laboratory (PHYS 117), 1 credit; Basic Educational Statistics (EDPSY 490), 3 credits.

Social Sciences: Abnormal Psychology (PSYCH 305), 5 credits; Developmental Psychology (PSYCH 306), 5 credits; Survey of Sociology (SOC 110), 5 credits or Principles of Sociocultural Anthropology (ANTH 202), 5 credits.

To apply, students must have completed five of the prerequisite courses, with three courses in the natural sciences. They must have earned a minimum GPA of 3.0 in the prerequisite courses with no single course graded less than 2.0; and have a GPA of 3.0 on the most recent 60 semester or 90 quarter credits. Admission is based on academic ability, communication skills, and understanding and experience in occupational therapy. Detailed program requirements and selection process information may be obtained by calling 206-598-5392 or via the program's Web page (depts.washington.edu/rehab/education/ot.shtml).

Graduation Requirements: The following courses must be completed satisfactorily in the schedule sequence, beginning autumn quarter only, at the UW: REHAB 400, 401, 403, 414, 442, 444, 445, 448, 451, 452, 570, 571, 572, 574, 575, 576, 577, 578, 579, 580, 581, 582, 584, 585, 587, 591, 594, CONJ 480, and HUBIO 563.

Student Evaluation: The University grade-point system is used in student evaluation. A student must maintain a cumulative GPA of 3.0 in all required professional course work to maintain satisfactory standing and to graduate. Detailed scholastic requirements are available on the program's Web page (depts.washington.edu/rehab/education/ot.shtml).

If at any point the OT curriculum cumulative GPA falls below 3.0, the student is placed on academic probation and the student must raise it to 3.0 by the end of two subsequent quarters. If a student is unable to remove his/her probation status, he/she is subject to dismissal from the program.

The student must satisfactorily complete all academic course work before taking the two required Level II Fieldwork placements (REHAB 594). Both of the two required Level II Fieldwork placements must be satisfactorily completed within two years after the completion of the academic portion of the program in order to graduate from the program.

For more information on the Master of Occupational Therapy program, visit the department's Web site at depts.washington.edu/rehab/education/ot.shtml.

Physical Therapy

Head

Mark Guthrie

Physical therapy is a direct form of professional patient care that can be applied in most disciplines of medicine. The principal objective in physical therapy is to restore or improve motor function in individuals with musculoskeletal or neuromuscular problems.

Management of problems related to motor function is only part of the work of physical therapy. Equally important is a rebuilding of self-confidence and the creation of a desire to return to a normal, active life. Other primary objectives of physical therapy are prevention of disability and pain, and training in mobility skills for those who must adapt to permanent disability.

As a consequence of the scope of the profession, physical therapists function in a variety of settings, the most familiar being the hospital. Physical therapists also plan, provide, evaluate, and direct patient care in outpatient clinics, rehabilitation centers, health maintenance organizations, developmental centers, home-health agencies, schools, extended-care facilities, voluntary health programs, industry, and private

practices. The physical therapist may be found anywhere quality health care is needed. Increasingly, physical therapists are becoming involved in basic and clinical research, such as the academic community, either as full-time faculty members or as supervisors of clinical education, and as consultants in local, state, and federal health-planning activities.

Physical therapists function in compliance with the licensing laws and ethical principles that govern the practice of physical therapy. The steps to licensure as a physical therapist vary slightly from state to state, but all physical therapists graduate from an accredited curriculum of physical therapy that includes a specific period of clinical training. As physical therapy relates to the majority of medical specialties, the education program is broad in scope, including an emphasis on physical and social sciences. The physical therapist evaluates the patient's problem by testing such factors as range of joint motion, muscle strength, posture and gait, pulmonary function, sensation and sensory perception, orthotic and prosthetic fit, reflexes and muscle tone, and functional skills. Some of the procedures used may include ultrasound, superficial heat and cold, electrical stimulation, massage, traction, joint mobilization, biofeedback, therapeutic exercise, and training in the use of orthotic, prosthetic, and other assistive devices, such as crutches, canes, and wheelchairs.

As with all professionals in health fields, physical therapists are responsible for subscribing to a program of continuing education. Some therapists also develop the knowledge and skills of a specialist via continuing education and concentrated practice in one area, such as sports or pediatric therapy. A formalized mechanism for certifying specialists is implemented by the national professional association, the American Physical Therapy Association.

The University of Washington program in physical therapy is accredited by the American Physical Therapy Association Commission on Accreditation in Physical Therapy Education.

Master of Physical Therapy

Admission Requirements: Applicants are required to complete a bachelor's degree in another field prior to enrollment in the physical therapy curriculum. For current admission requirements, applicants should request detailed program information (which is updated annually and available after September 1 each year) from the Physical Therapy Curriculum Office, Box 356490, University of Washington, Seattle, Washington 98195-6490; 206-598-5333; or view the information online at depts.washington.edu/rehab/education/. Students are urged to request or check these materials early, since the deadline for receipt of applications is January 15. At the time of entrance to the program (autumn quarter), applicants must be U.S. citizens or permanent residents.

Prosthetics and Orthotics

Head

John Ferguson

Upon successful completion of the prosthetics and orthotics program, the student will have learned the skills necessary to function as an entry level resident in prosthetics-orthotics. The degree in prosthetics-orthotics gives the student eligibility to enter a one-year clinical residency for each discipline at a National Commission on Orthotics and Prosthetics Education (NCOPE) approved site. This residency requirement must be completed for eligibility to apply for the National Certification Boards administered by the American Board for Certification in Orthotics and Prosthetics, Inc.

The prosthetist-orthotist is a member of the rehabilitation health care team working together with disabled or physically challenged individuals to enhance their daily life and increase their functional abilities. The three groups of prosthetic-orthotic devices which can potentially enter into the rehabilitation of an individual are: (1) prosthetic devices, which replace or substitute for a missing limb or part of a limb; (2) orthotic devices, which help with the control of motion and the support of a weakened body segment; and (3) adaptive devices, which enable the person to perform specific activities. Practitioners design and fabricate the appropriate device and evaluate the fit and functional use for each patient. To evaluate function, the prosthetist-orthotist must have a detailed knowledge of anatomy and kinesiology, joint range of motion, muscle strength, and human locomotion.

Upon successful completion of the program, the student is awarded a Bachelor of Science degree by the University of Washington School of Medicine. The practitioner program is accredited through the Commission on Accreditation of Allied Health Education Programs (CAAHEP).

For more information on the Prosthetics and Orthotics undergraduate program, see the undergraduate volume of the *General Catalog* or visit the *General Catalog* online at www.washington.edu/students/gencat/.

Post-Professional Programs

The Master of Science in Rehabilitation Medicine has three primary pathways: occupational therapy, physical therapy, and rehabilitation medicine. This program is designed for rehabilitation practitioners who want to pursue a program of coursework and research to enhance their professional growth. Additional information may be found at the program's Web site (depts.washington.edu/rehab/education/).

Master of Science, Rehabilitation Medicine (Occupational Therapy Pathway)

This degree program is designed to prepare occupational therapists to discuss rehabilitation science, models of disability, and/or theory and frames of reference relating to occupational therapy; to design and conduct research; to provide instruction, and to administer occupational therapy services or provide a higher level of clinical service. Independent-study options and electives offer flexibility, allowing the student to meet individual objectives. Completion of a data-based thesis is required. Full-time students generally complete the course work in four quarters. The additional time to complete the thesis requirement varies.

Admission Requirements: An applicant for admission must be a graduate of an approved occupational therapy program and must be certified to practice by the American Occupational Therapy Certification Board. A minimum of one year of professional experience is desirable. Detailed information about the program is available from the Division of Occupational Therapy Curriculum Office at 206-598-5392 or from the Web site (depts.washington.edu/rehab/education/ot.shtml).

Graduation Requirements: All students must satisfactorily complete: (1) a minimum of 36 credits, including specific core courses; (2) all Graduate School requirements for a master's degree; and (3) a data-based thesis contributing to the knowledge base in occupational therapy.

Master of Science, Rehabilitation Medicine (Physical Therapy Pathway)

This degree program is designed to prepare physical therapists to assume a career in teaching and administration within the field. The curriculum emphasizes preparation for research and contribution to the professional literature; therefore, a thesis is a requirement of this plan. Opportunities are provided to enhance specialized knowledge and skill in selected content areas of physical-therapy practice. Depending upon the student's educational goals and prior accomplishments, the program should require one to two calendar years for completion.

Admission Requirements: Selection for admission to the Master of Science degree program (physical-therapy pathway) is based on an assessment of intellectual capacity, basic professional competence, promise for future contributions to the field, and availability of the program (due to funding limitations, the program is not offered every year). Students must have completed a baccalaureate degree and an accredited physical-therapy program with a minimum cumulative GPA of 3.00, based on a four-point scale, in all college work. Detailed information on program and admission requirements is available from the Division of Physical Therapy Curriculum Office, 206-598-5333; or email gleep@u.washington.edu.

Graduation Requirements: All students must satisfactorily complete (1) a minimum of 36 credits, including specified core courses; (2) all Graduate School requirements for a master's degree; and (3) a data-based thesis contributing to the knowledge base in physical therapy.

Master of Science, Rehabilitation Medicine (Rehabilitation Medicine Pathway)

This degree program is designed to prepare physicians, specifically physiatrists, as academicians in the field of physical medicine and rehabilitation. In addition to core course work in relevant medical sciences, an emphasis is placed on developing skills toward the goal of conducting independent or collaborative research projects.

Admission Requirements: An applicant for admission must be a physician from an approved medical school and must be concurrently enrolled, or have completed, an approved residency program in physical medicine and rehabilitation.

Graduation Requirements: All students must complete (1) a minimum of 36 credits, including specific core courses; (2) all Graduate School requirements for a master's degree; and (3) a data-based thesis contributing to the knowledge base in physical medicine and rehabilitation.

Fraser, Robert T. 1976; PhD, 1976, University of Wisconsin; psychology.

Halar, Eugen M. * 1968, (Emeritus); MD, 1959, University of Zagreb (Yugoslavia); psychiatry.

Hays, Ross M. * 1983; MD, 1978, University of Washington; pediatric rehabilitation, medical ethics, neuromuscular diseases, congenital defects.

Hillel, Allen D. * 1983, (Adjunct); MD, 1976, Stanford University; peripheral nerve physiology after injury, swallowing disorders in neuromuscular disease.

Jaffe, Kenneth M. * 1981; MD, 1975, Harvard University; pediatric rehabilitation, brain injury, neuromuscular diseases, congenital defects.

Jensen, Mark P. * 1987; PhD, 1989, Arizona State University; assessment and treatment of chronic pain, coping with medical illness, treatment outcome.

Kraft, George Howard * 1969; MD, 1963, Ohio State University; psychiatry.

Lehmann, Justus F. * 1956, (Emeritus); DrMed, 1945, Johann Wolfgang Goethe University (Germany); psychiatry.

Little, James Wendell * 1984; PhD, 1976, MD, 1977, University of Chicago; rehabilitation medicine, clinical neurophysiology, spinal cord injury.

Patrick, Donald L. * 1987, (Adjunct); MS, 1968, PhD, 1972, Columbia University; health status and quality of life, end of life, adolescents.

Patterson, David R. * 1984; PhD, 1982, Florida State University; treatment of acute pain, psychology of burn patients, psychological outcome of physical trauma.

Robinson, Lawrence R. * 1989; MD, 1982, Baylor University; psychiatry.

Stolov, Walter C. 1960, (Emeritus); MA, 1951, MD, 1956, University of Minnesota; psychiatry, electrodiagnostic medicine.

Turner, Judith A. 1980; MA, 1975, PhD, 1979, University of California (Los Angeles); psychology.

Yorkston, Kathryn * 1975; PhD, 1975, University of Oregon; neurogenic communication disorders in adults.

Associate Professors

Bell, Kathleen * 1981; MD, 1981, Temple University; brain injury and sleep disorders, community reintegration in brain injury, medical education.

Benditt, Joshua O. 1994, (Adjunct); MD, 1982, University of Washington; pulmonary and critical care medicine.

Berni, Rosemarian * 1962, (Emeritus); MN, 1973, University of Washington; rehabilitation nursing.

Bombardier, Charles H. * 1989; PhD, 1987, Washington State University; spinal cord injury, brain injury, alcohol abuse after injury, psychological comorbidities.

Chang, Michael Wei 1992; PhD, 1982, University of Washington, MD, 1988, University of Texas (Galveston); biomedical simulation, ultrasonography, electrophysiology, biomechanics.

Czerniecki, Joseph M. * 1982; MD, 1981, University of British Columbia (Canada), MS, 1985, University of Washington; rehabilitation engineering, prosthetics, biomechanics and gait analysis.

Egan, Kelly J. 1980, (Adjunct); MA, 1968, Texas Technological University, PhD, 1980, University of Washington; clinical psychology.

Engel Knowles, Joyce M. * 1993; PhD, 1988, University of Kansas; use of occupational therapy, pain management with children and persons with physical disabilities.

Esselman, Peter C. * 1986; MD, 1986, University of Washington; exercise in the elderly; treatment of traumatic brain injury and burn rehabilitation.

Gardner, Gregory C. 1989, (Adjunct); MD, 1984, Baylor University; rheumatology.

Goldstein, Barry * 1987; PhD, 1981, MD, 1986, University of California (Los Angeles); skin adaption to mechanical stress, pressure ulcers, overuse injuries of the upper extremity.

Guthrie, Mark R. * 1983; PhD, 1990, University of Washington; functional assessment, physical therapy efficacy.

Hammond, Margaret C. * 1979; MD, 1979, Medical College of Wisconsin; medical consequences of longstanding spinal cord injury.

Haselkorn, Jodie K. * 1985; MD, 1985, Louisiana State University; health services for the disabled; diagnostic accuracy of tests, effectiveness of interventions.

Hicks, Ramona R. * 1999; PhD, 1993, University of Connecticut; brain injury, neural plasticity, cell death and regeneration.

Johnson, Kurt Lewis * 1990; PhD, 1984, University of Wisconsin; counseling psychology; psychological, social vocational aspects of disability and chronic illness.

Kanny, Elizabeth M. * 1978; MA, 1977, Seattle University, PhD, 1996, University of Washington; education of allied health practitioners; ethical reasoning and ethics education.

Massagli, Teresa L. * 1985; MD, 1982, Yale University; pediatric psychiatry.

McMillan, Jo Ann * 1958, (Emeritus); MEd, 1968, University of Southern California; physical therapy.

Odderson, Ib R. * 1985; PhD, 1978, Indiana University, MD, 1985, Vanderbilt University; psychiatry, stroke, multiple sclerosis, spasticity, botulinum toxin.

Pepping, Mary * 1994; PhD, 1981, Washington State University; psychosocial outcome after TBI and mild TBI; neuropsychological features of dementia and mild TBI.

Reilly, Dominic F. 1991, (Adjunct); MD, 1988, University of Washington; general internal medicine.

Rodriguez, Arthur A. * 1999; MD, 1972, University of Wisconsin; musculoskeletal pain disorders and clinical neurophysiology.

Sanders, Joan Elizabeth * 1985, (Adjunct); PhD, 1991, University of Washington; soft tissue biomechanics and tissue adaptation to mechanical stress.

Shumway-Cook, Anne * 1995; MS, 1973, PhD, 1983, University of Oregon; physiologic basis for balance problems following neurological injury.

Slimp, Jefferson C. * 1979; PhD, 1976, University of Wisconsin; clinical neurophysiology, intraoperative neuromonitoring, evoked potentials, deep-brain stimulation.

Stiens, Steve A. 1987; MD, 1986, University of Cincinnati; MS, 1991, University of Washington; spinal cord injury medicine, rehabilitation, neurogenic bowel care, spinal cord neuroplasticity.

Assistant Professors

Barr, Karen P. 2001; MD, 1993, Northeastern Ohio University; musculoskeletal rehabilitation, sports medicine, acupuncture.

Bowen, James D. 1982, (Adjunct); MD, 1982, Johns Hopkins University; multiple sclerosis.

Brewer, Kristen K. 1999, (Clinical); PhD, 1997, University of Iowa.

Burns, Stephen P. 1992; MD, 1992, Brown University; medical complications and neurologic recovery in spinal cord injury, whiplash, sleep apnea.

Chan, Leighton * 1990; MD, 1990, University of California (Los Angeles); health service delivery related to Medicare patients.

Ciol, Marcia A. 2000, (Research); PhD, 1991, University of Washington; biostatistics.

Dudgeon, Brian J. 1982; MS, 1983, PhD, 2000, University of Washington; occupational therapy, assistive technology, disability studies.

Ehde, Dawn * 1991; PhD, 1992, University of North Dakota; chronic pain secondary to disability, psychological distress following disability.

Fann, Jesse R. 1990, (Adjunct); MD, 1989, Northwestern University, MPH, 1995, University of Washington; neuropsychiatry, psycho-oncology, epidemiology, health services research, depression, delirium.

Harrast, Mark A. 2001; MD, 1996, Northwestern University; spine, sports, and musculoskeletal medicine and rehabilitation.

James, Jennifer J. 1998, (Clinical); MD, 1994, University of Vermont; spine, sports, and musculoskeletal medicine and rehabilitation.

Kartin, Deborah * 1984; MS, 1988, PhD, 1996, University of Washington; developmental disabilities, prenatal drug exposure, high-risk infancy, postural development.

Kinney, Gregory A. 1997; PhD, 1996, Northwestern University; neuroscience.

Paynter, Kirsten S. 2001; MD, 1996, University of Florida; acute musculoskeletal injuries, sports medicine, back pain, amputee rehabilitation.

Powell, Janet M. 1998; PhD, 2001, University of Washington; vision, perception, and cognition following brain injury; rehabilitation outcomes.

Toshima, Michelle 1995, (Clinical); PhD, 1990, University of California (San Diego).

Washington, Kathleen A. * 1982, (Clinical); MS, 1980, University of Wisconsin.

Yu, David T. 2001; MD, 1992, Bowman Gray School of Medicine; stroke rehabilitation, motor recovery and shoulder pain in hemiplegia, neuromuscular stimulation.

Senior Lecturer

Ferguson, John R. 1996; BA, 1985, California State University, Fresno; post-operative amputation care.

Lecturers

Okumura, Ramona M. 1990; BS, 1981, University of Washington; pediatric limb deficiency, upper extremity prosthetics, prosthetic biomechanics.

Yamane, Ann 1979; BS, 1976, University of Washington; prosthetics and orthotics.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

REHAB 400 Medical Science (4) *Kanny, Powell* Lectures in fields related to: general surgery, obstetrics and gynecology, internal medicine, neurology, rehabilitation medicine, orthopaedics, psychiatry and behavioral sciences, rheumatology, and pediatrics. Required for occupational therapy, prosthetics and orthotics, and physical therapy students. Credit/no credit only.

REHAB 401 Medical Science (4) *Ferguson, Powell* Lectures in fields related to: general surgery, obstetrics and gynecology, internal medicine, neurology, rehabilitation medicine, orthopaedics, psychiatry and behavioral sciences, rheumatology, and pediatrics. Required for occupational therapy, prosthetics and orthotics, and physical therapy students. Credit/no credit only.

REHAB 402 Medical Science Laboratory (1, max. 2) To introduce students to the role of allied health professionals in the treatment of pathologies presented in 400, 401 lectures. Credit/no credit only.

REHAB 403 Exercise Physiology for Rehabilitation Professionals (2) *Anderson, Slimp* Normal and pathological physiology of the cardiovascular, respiratory, and musculoskeletal systems as a basis for evaluation and intervention in occupational therapy, physical therapy, and prosthetics/orthotics. Required for majors.

REHAB 413 Special Studies in Physical Therapy (1-15, max. 24) Theory and practice in specialized areas of physical therapy. Credit/no credit only.

REHAB 414 Psychological Aspects of Rehabilitation (2) *Patterson* Psychological processes underlying adjustment to disability; application of behavioral/analysis systems in patient therapy management; effects of cognitive or personality deficits on patient performance and treatment strategies. Credit/no credit only.

REHAB 416 Principles of Physical Therapy Administration (2, max. 4) *Guthrie, Jackins* The nature of administration, economic trends, operational policy, aspects of supervision, ethical and legal influences applicable to a physical therapy department. Required for physical therapy students. Credit/no credit only.

REHAB 420 Lower Extremity Prosthetics I (8) *Ferguson* Instruction in patient evaluation, casting, cast modification, socket fabrication, static and dynamic alignment, alignment duplication, suspension systems, and documentation for transtibial amputation. Required for prosthetics and orthotics majors; others by permission of instructor.

REHAB 421 Lower Extremity Prosthetics II (11) *Ferguson* Instruction in transfemoral patient evaluation, casting, cast modification, socket fabrication, static and dynamic alignment, alignment duplication, suspension systems, and documentation. Methods

of fitting through knee and hip disarticulation levels demonstrated. Required for prosthetics and orthotics majors; others by permission of instructor.

REHAB 423 Lower Extremity Orthotics I (6) *Yamane* Patient evaluation and prescription considerations for orthotic management of the lower extremity. Lectures provide instruction in the biomechanics of the lower extremity during ambulation, clinical indications and fitting criteria for a variety of orthotic devices. Laboratory sessions provide experience in fabrication principles, and impression and measurement techniques. Required for prosthetics and orthotics majors.

REHAB 424 Lower Extremity Orthotics II (8) *Yamane* Orthotic treatment of pathological conditions that affect the knee and hip addressed. Focus is placed on development of prescription recommendation, fabrication, fitting, and follow-up of orthoses that support, assist, or stabilize the knee and hip. Required for prosthetics and orthotics majors; others by permission of instructor.

REHAB 427- Applied Prosthetics and Orthotics I (1-, max. 4) Presentation and discussion of current clinical practice using research and journal articles and case presentations. Required for prosthetics and orthotics majors; others by permission of instructor.

REHAB 428 Applied Prosthetics and Orthotics II (1-4, max. 13) Experience in patient management under the preceptorship of certified practitioners at clinical affiliation sites. Required for prosthetics and orthotics majors.

REHAB 429 Immediate Post-Operative and Early Fitting (2) *Ferguson* Lecture and laboratory designed to introduce the student to the principles of immediate postsurgical prosthetic fitting, including patient management.

REHAB 430 Engineering Concepts (2) Principles of mechanics and strength of materials, force analysis, and hydraulic control in relationship to orthotics and prosthetics design. Required for prosthetics and orthotics majors.

REHAB 442 Applied Kinesiology (4) *Guthrie, Shumway-Cook* Study of joint motion and muscle function in relation to both the normal and abnormal state, emphasizing gait. Specific techniques employed in the field of rehabilitation medicine are analyzed. Required for Department of Rehabilitation Medicine students; others by permission.

REHAB 444- Functional Musculoskeletal Anatomy (4-) *Guthrie* Functions of musculoskeletal system as applied to patterns of motion. Anatomy of peripheral-vascular and peripheral-nervous system. Required for occupational therapy students, prosthetics and orthotics students, and physical therapy students; others by permission of instructor.

REHAB -445 Functional Musculoskeletal Anatomy (-4) *Guthrie* Functions of musculoskeletal system as applied to patterns of motion. Anatomy of peripheral-vascular and peripheral-nervous system. Required for occupational therapy students, prosthetics and orthotics students, and physical therapy students; others by permission of instructor.

REHAB 448 Applied Kinesiology Laboratory (1) *Guthrie, Okumura, Powell, Yamane* Instruction and laboratory focus on practical experience and clinical problem solving in kinesiology. Potential topics include muscle and joint motion testing, sensory/perceptual assessment, prosthetic and orthotic devices, wheelchair use, gait training.

REHAB 451 Functional Anatomy Laboratory (1) Study of musculoskeletal, peripheral-vascular, and peripheral-nervous systems from prosected material.

Required for physical therapy, occupational therapy, and prosthetic/orthotic students.

REHAB 452 Functional Anatomy Laboratory (1) Study of musculoskeletal, peripheral-vascular, and peripheral-nervous systems from prosected material. Required for physical therapy, occupational therapy, and prosthetic/orthotic students.

REHAB 458 Augmentative and Alternative Communication: Implementation Strategies (2-3) NW Communication needs of nonspeaking individuals. Interdisciplinary approaches to the evaluation, selection, and implementation of aided and unaided communication augmentation systems. Recommended: basic course work in either SPHSC, OT, PT, or ENGR. Offered: jointly with SPHSC 453; irregularly, S.

REHAB 459 Augmentative and Alternative Communication: Access for Technology (3) NW Communication technology and motor evaluation of augmentative and alternative users. Issues related to hardware, software, switch placement and access, with opportunities for clinical trials. Recommended: SPHSC 453 or REHAB 458. Offered: jointly with SPHSC 454.

REHAB 476 Prosthetic and Orthotic Evaluation and Use (2) Okumura Instruction in mechanical component substitution for functional losses. Emphasis is on biomechanical principles, prosthetic-orthotic components, and alignment and fitting techniques. Credit/no credit only. Required for physical therapy students.

REHAB 496 Special Topics in Rehabilitation (1-9, max. 14) Guided opportunity for in-depth study in specific areas of rehabilitation. Topics vary.

REHAB 498 Undergraduate Thesis (*)

REHAB 499 Undergraduate Research (*) Opportunity to design, perform, and analyze research investigation in problem areas in rehabilitation medicine. These include clinical and basic research problems in, for example, head and spinal injury, chronic disease, pain neurophysiology, electrodiagnosis, communication, and bioengineering.

REHAB 500 Clinical Clerkships in Physical Therapy (2, max. 8) Robinson Observation, instruction, and supervised practice in treatment of patients in diverse clinical settings. Emphasis is given to the application of previously learned material and skills to specific clinical problems. Required for physical therapy students. Credit/no credit only.

REHAB 501 Lifespan I: General Lifespan Development (2) Hicks Provides professional physical therapy students an overview of typical human development across the lifespan, with particular emphasis on motor development. Serves as framework for understanding atypical development and the effects of disease and disability across the lifespan.

REHAB 502 Lifespan II: Pediatrics (3) Kartin, Mullens, Washington Provides an overview of pediatric physical therapy practices for children with atypical development. Assessment, development of physical therapy plans of care for children with various disabilities will be presented within the frameworks of family-centered-care and disablement models.

REHAB 503 Lifespan III: Geriatric Physical Therapy (3) Theory and principles of exercise procedures used when treating the geriatric patient. Includes a discussion of age related changes in the systems essential to movement control; factors contributing to physical disability and frailty with aging; adaptation of assessment and treatment procedures to the geriatric patient. Lectures and laboratories.

REHAB 504 Physical Therapy Procedures I: Assessment (2) McGough Development of clinical

competence in patient assessment techniques from a neuromusculoskeletal perspective. Discussion of normal and pathological findings. Special emphasis on upper quadrant anatomy and patient handling skills. Lecture and laboratory format.

REHAB 506 Physical Therapy Procedures II: Assessment (2) McGough Development of clinical competence in patient assessment techniques from a neuromusculoskeletal perspective. Discussion of normal and pathological findings. Special emphasis on lower quadrant anatomy, posture evaluation, and medical record documentation skills. Lecture and laboratory format.

REHAB 507 Physical Therapy Procedures III: Modalities (3-4) McGough Principles and practice of physical therapy clinical treatment procedures utilizing therapeutic modalities. Lecture and laboratory format.

REHAB 508 Physical Therapy Procedures IV: Therapeutic Exercise (5) Hicks Theory, principles and practice of exercise procedures used for treatment purposes in physical therapy, including motor learning, variables of motor performance, and exercise prescription. Lectures and laboratories. Simulated patient problems.

REHAB 509 Physical Therapy Procedures V: Physical Restoration (5) McGough Development of physical therapy treatment skills used in rehabilitation of severe neuromusculoskeletal dysfunction. Lecture and laboratory format.

REHAB 510 Rehabilitation Psychology (2) Jensen Processes and management methods for assimilation of disability, enhancing patient participation in rehabilitation process, and for helping in maintenance of performance; behavioral management and case conference strategies; rehearsal of contingency management techniques. Required for residents; others by permission of instructor.

REHAB 511 Musculoskeletal IV: Clinical Management (5) VanBuuren Physical therapy clinical evaluation and management of patients with musculoskeletal dysfunction. Special emphasis on upper quadrant anatomy. Lecture and laboratory format.

REHAB 512 Musculoskeletal V: Clinical Management (4) VanBuuren Physical therapy clinical evaluation and management of patients with musculoskeletal dysfunction. Special emphasis on lower quadrant anatomy. Lecture and laboratory format.

REHAB 513 Special Studies in Physical Therapy (1-5, max. 15) Theory and practice in specialized areas of physical therapy. Includes organization and administration of specialized programs, advanced evaluation and treatment techniques, role of the consultant. Credit/no credit only.

REHAB 516 Medical Information for Rehabilitation Counselors (3) Johnson Lectures in medical science field regarding the etiology, prognosis, and physical restoration of common disabling conditions. Case studies are used extensively, and major emphasis is placed on vocational implications of physical disability. Prerequisite: permission of instructor.

REHAB 517 Physical Therapy Seminar (2-3, max. 21) Kartin Group seminar format focused on physical therapy topics pertaining to transcurricular and professional practice issues. Credit/no credit only.

REHAB 518 Infants and Young Children: Current Research (3) Deitz, Swanson Introduces students to recent research relating to assessment and intervention with infants and young children who are "at risk" or who are disabled. Critical evaluation of the current research emphasized. Prerequisite: clinical experience or coursework related to infants and young children with disabilities and permission of instructors.

REHAB 520 Seminar (1-5, max. 5) Conferences, seminars, discussions of advanced physical medicine and rehabilitation topics for graduate students, residents and postdoctoral fellows in rehabilitation medicine. Lectures, discussion, and laboratory work in selected aspects appropriate to elected area of study for applicants for master-level degree.

REHAB 522 Neurophysiological Topics in Rehabilitation Medicine (2) Anderson Review of traditional neurophysiological concepts and an exposition of recent advances in neurophysiological research related to the practice of rehabilitation medicine. Prerequisite: resident standing in rehabilitation medicine or permission of instructor.

REHAB 523 Neuroscience III: Applied Neurology (4) Shumway-Cook Theory and principles of advanced exercise procedures used when treating patients with neurologic pathology. Includes the application of principles of motor learning and control; facilitation and inhibition of variables affecting functional motor performance; adaptation of assessment and treatment procedures to patients with different types of neurologic impairments. Lectures and laboratories.

REHAB 527 Neuroscience IV: Physical Rehabilitation of Adult Neurological Disorders (2) Hicks Critical analysis and application of physical therapy assessment and treatment techniques to problems related to specific adult neurological disorders. Neurological disorders to be covered include stroke, spinal cord injury, traumatic brain injury, and multiple sclerosis.

REHAB 530 Medical Aspects of Vocational Counseling (2-3) Johnson Introduction to vocational implications of physical and emotional disabilities. Methods, counseling techniques, therapeutic modalities, community resources used in producing vocational assistance for persons with disabilities. Prerequisite: resident standing in rehabilitation medicine or permission of instructor.

REHAB 532 Clinical Affiliation for Rehabilitation Counselors (5-6) Johnson Under preceptorship of rehabilitation counseling staff, students counsel and evaluate patients with severe physical, emotional, or social problems; administer vocational testing; obtain placement on job stations; work with community resources for vocational/educational placement; and develop activity-oriented schedules. Prerequisite: permission of instructor.

REHAB 539 Communication Disorders in Rehabilitation Medicine (1) Yorkston Overview of communication disorders secondary to central and peripheral nervous system impairment. Emphasis on facilitating identification of speech/language disorders with discussion of implications for rehabilitation.

REHAB 544- Functional Anatomy for Physiatrists (2-) Goldstein Lectures and demonstrations to illustrate functional anatomy as applied by physicians in the practice of clinical rehabilitation. Intended to enhance functional assessments and to improve neuro/musculo/skeletal diagnosis and treatment through greater understanding of the underlying anatomy. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

REHAB -545 Functional Anatomy for Physiatrists (-2) Goldstein Lectures and demonstrations to illustrate functional anatomy as applied by physicians in the practice of clinical rehabilitation. Intended to enhance functional assessments and to improve neuro/musculo/skeletal diagnosis and treatment through greater understanding of the underlying anatomy. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

REHAB 546 Teaching Practicum in Occupational and Physical Therapy (1-3, max. 3) Integration of

knowledge and skills in teaching through teaching in the classroom or presentation of a minicourse, workshop, or in-service training series. Prerequisite: MEDED 520 and permission of instructor.

REHAB 550 Neuropsychology in Rehabilitation (2) *Bobardier, Ehde* Examination and management of patients with brain lesions, as well as an understanding of the consequences of such conditions. Prerequisite: graduate standing in rehabilitation medicine.

REHAB 555 P-Neuromuscular Electrodiagnosis (2.5) *Kraft* Demonstration of fundamentals of electromyography and peripheral nerve stimulation followed by participation in clinical electrodiagnosis examinations. Develops awareness of knowing when such procedures are indicated for patients and interpreting results rather than developing proficiency in performing these examinations. Prerequisite: HUBIO 560 and permission of instructor.

REHAB 566 Special Topics in Rehabilitation (1-9, max. 14) Philosophy and concepts in the interdisciplinary rehabilitation of persons with major disabilities, including advanced content in the rehabilitation theory and process of selected categories.

REHAB 567 Practicum in Rehabilitation (1-12, max. 24) Specialized practicum experience in environment providing rehabilitation services. Practicum arrangements and permission by instructor.

REHAB 568 Biophysics as Applied to Physical Medicine (2) *Esselman* Propagation and absorption characteristics of physical forms of energy used for treatment in physical medicine. Physiologic effects basic to prescription of the physical therapy modalities. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

REHAB 570 Foundations of Occupational Therapy (5) *Powell* An overview of the practice of occupational therapy, emphasizing the role of occupational performance in context, frames of reference, clinical reasoning, and purposeful activity. Introduces the diversity of occupational therapy practice environments through didactic and clinical experiences. Offered: A.

REHAB 571 Occupational Performance through the Life Span (4) Overview of human development as it relates to occupational performance and functional adaptation in the ages and stages of life from infancy through old-old age. Emphasis will be placed on environmental influences, activity, and occupational roles, tasks, and component behaviors as they relate to individuals in different ages and stages. Offered: W.

REHAB 572 Occupational Therapy Theory and Practice in Psychosocial Dysfunction I (5) *Engel-Knowles* An overview of bodies of knowledge in psychosocial practice as related to occupational performance. Learning topics include major frames of reference, effects of psychosocial disorders on occupational performance (life activities), and occupational therapy evaluation and intervention skills. Lectures, reading, class discussions, role-playing, problem-based learning, and fieldwork comprise the learning experiences. Offered: S.

REHAB 573 Occupational Therapy in Community Practice (4) *Engel-Knowles* Bodies of knowledge in occupational performance as they relate to the emerging area of community-based practice. Includes traditional and evidence based practice in the realms of health promotion, prevention, evaluation, and intervention. Lectures, assigned readings, class discussions, role playing, site visits, films, laboratory exercises, and problem-based learning tutorials. Offered: Sp.

REHAB 574 Occupational Therapy Theory and Practice in Physical Disabilities I (6) *Dudgeon* Provides theoretical bases and clinical practice skills used in evaluation and intervention of occupational performance (life activities). Focus is on individuals with sensorimotor (physical) and/or cognitive impairments. Practical applications of theory occur through lecture, laboratory, and problem-based learning approaches. Offered: A.

REHAB 575 Occupational Therapy Theory and Practice in Physical Disabilities II (5) *Powell* Provides theoretical bases and clinical practice skills used in evaluation and intervention of occupational performance (life activities). Focus is on individuals with sensorimotor (physical) and/or cognitive impairments. Practical applications of theory occur through lecture, laboratory, and problem-based learning approaches. Offered: W.

REHAB 576 Occupational Therapy Theory and Practice in Pediatrics (6) *Dietz* Provides knowledge and skills necessary for providing occupational therapy evaluation, intervention, and transition services focused on occupational performance (life activities) for children and teens with disabilities and their families. Offered: W.

REHAB 577 Occupational Therapy Theory and Practice in Geriatrics (5) *Powell* Occupational therapy evaluation and intervention with older adults. Covers psychology, physiology, and socio-demographics of aging. Emphasis on interaction skills with the elderly and occupational performance (life activities). Laboratory experiences and fieldwork in the practice setting enhance didactic coursework. Offered: Sp.

REHAB 578 Occupational Performance Analysis (3) *Dudgeon* Skills in the analysis, adaptation, and sequencing of therapeutic and functional activities as they apply to occupational performance. Analysis focuses on performance components (sensorimotor, cognitive, psychosocial, psychosocial, psychological), temporal aspects (chronological, developmental), and environmental aspects (physical, social, cultural). Offered: S.

REHAB 579 Therapeutic Communication (3) *Engel-Knowles* Introduces basic principles and skills of effective interpersonal communication in dyadic interactions and in groups. Emphasis on effective listening, interviewing, and principles and concepts of occupational therapy groups. Lectures, readings, class discussions, role playing, and in-class exercises comprise the learning experiences. Offered: Sp.

REHAB 580 Introduction to Research in Rehabilitation (3) *Deitz* Evaluation of rehabilitation research literature and design of research studies relevant to rehabilitation. Offered: S.

REHAB 581 Application of Measurement Systems (3) *Deitz* Provides basis for critically evaluating and using tests and measurements in occupational therapy evaluation. Focus on reliability, validity, norms, test development process, statistics relevant to tests and measurement, and ethical implications of testing. Critical evaluation of selected standardized test used in occupational therapy. Offered: A.

REHAB 582 Assistive Technology in Rehabilitation (3) *Dudgeon* Overview of the field of assistive technology as it impacts occupational performance in self-care, work, and leisure activities. Covers interface devices, computer applications, environmental controls, augmentative communications, power mobility, seating and positioning systems, and sensory enhancements. Offered: W.

REHAB 584 Health-Care Trends and Issues (3) *Kanny* Overview of the health services system in the United States and current trends and issues facing occupational therapists within this system. Content

includes: health service providers, reimbursement of health care services, regulation, personnel and role delineation, and health policy and advocacy. Offered: A.

REHAB 585 Leadership: Administration and Management (3) *Kanny* Provides student with knowledge and skills needed for leadership positions in occupational therapy practice. Focuses on administration and management functions including strategic planning, program planning, marketing, fiscal management, program evaluation, and personnel management. Offered: W.

REHAB 587 Industrial Rehabilitation (3) *Dudgeon* Provides knowledge and skills related to vocational assessment and industrial rehabilitation for individuals with medical or psychosocial problems. Emphasizes worker characteristics, job analysis, and accommodation in business and industrial settings. Clinical simulation components provide applications to specific diagnostic, impairment, or disability conditions. Offered: Sp.

REHAB 591 Master's Project (1-4, max. 7) Master's project focused on research, administration, education, practice, policy, or other scholarly or creative work. Offered: AWSpS.

REHAB 592 Principles of Orthotic Use in Rehabilitation (2) *Chang* General principles and clinical applications of orthoses in patient management, with exposure to research issues in orthotic design.

REHAB 593 Principles of Prosthetic Use in Rehabilitation (1) *Czerniecki* General principles of prevention of amputation, prosthetic design, biomechanics, and clinical applications of upper and lower extremity prostheses.

REHAB 594 Clinical Fieldwork in Occupational Therapy (10, max. 20) *Rollinger* Six months of supervised fieldwork education. Experience in delivering occupational therapy services to clients focusing on application of purposeful and meaningful occupation. Exposure to a variety of clients across the lifespan and in a variety of settings reflective of current practice in the profession. Credit/no credit only. Offered: AWSpS.

REHAB 595 Clinical Affiliation in Physical Therapy (2-10, max. 30) *Robinson* Clinical practice of physical therapy techniques under supervision in community-based clinics. Credit/no credit only.

REHAB 596 Electromyography and Clinical Neurophysiology (4) *Kraft* Didactic course covering electromyography and clinical neurophysiology. First part covers basic neurophysiology and second covers electromyography, nerve conduction studies, somatosensory-evoked potentials, residual- and auditory-evoked potentials, single fiber EMG, late response, quantitative analysis, and macro EMG. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

REHAB 597- Electromyography and Electrodiagnosis Laboratory (1-1) *Kraft* Elective work in clinical electromyography and other electrodiagnostic methods. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

REHAB -598- Electromyography and Electrodiagnosis Laboratory (-1-1) *Kraft* Elective work in clinical electromyography and other electrodiagnostic methods. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

REHAB -599 Electromyography and Electrodiagnosis Laboratory (-1-1) *Kraft* Elective work in clinical electromyography and other electrodiagnostic methods. Prerequisite: resident standing in rehabilitation medicine; others by permission of instructor.

REHAB 600 Independent Study or Research (*)
Credit/no credit only.

REHAB 685 P-Chronic Disease and Disability (4) *Cox, Hays* Meets chronic-care requirement for medical students. Structured clinical experience on rehabilitation medicine services. Differences between acute and chronic medicine, identification of disability problems, and therapeutic techniques for removing disability. Hospitals are within University system, local area, and WWAMI area. Prerequisite: third-year medical student standing.

REHAB 686 P-Rehabilitation Medicine Clerkship—Pediatrics (8/12) *Hays, Jaffe, Massagli* Meets chronic-care requirement for medical students. Incorporates material of 685 and expands into disabling pediatric disease. School planning, family counseling, community support services included. Four- or six-week package permits inpatient, outpatient, and consultation experience. Recommended for students contemplating pediatrics. Prerequisite: third-year medical student standing.

REHAB 687 P-Rehabilitation Medicine Clerkship (8/12) *Hays* Meets chronic-care requirement for medical students. Incorporates material of 685 and expands into disability problems. Four- or six-week package permits inpatient, outpatient, and consultation experience. Recommended for careers in family medicine, internal medicine, rheumatology, cardiology, neurology, geriatrics, orthopedic surgery, neurosurgery, and cardiovascular surgery. Prerequisite: third-year medical student standing.

REHAB 689 P-Spinal Cord Injury (8/12) *Little* Introduction to diagnosis, management, rehabilitation of patients with spinal-cord injuries. Interaction with rehabilitation team, psychiatrists, and subspecialists in urology, neurosurgery, and plastic surgery. Performance at subintern level expected. Veterans Administration Medical Center only. Prerequisite: MED 665, SURG 665.

REHAB 697 P-Rehabilitation Medicine Special Elective (*, max. 24) Equivalent to 686, 687, or 688. Satisfies requirements in rehabilitation medicine/chronic care. Student arranges with another university, using the "Special Assignment Form." Students can qualify after review, similar experience at another university. Prerequisite: permission of instructor.

REHAB 699 P-WWAMI Rehabilitation Medicine Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

REHAB 700 Master's Thesis (*) Credit/no credit only.

Surgery

BB487 University of Washington Medical Center

General Catalog Web page:
www.washington.edu/students/gencat/academic/Surgery.html

Department Web page:
depts.washington.edu/surgery/

The Department of Surgery carries out instruction during all four years of School of Medicine attendance. The third-year six-week clerkship constitutes the core of student exposure to general surgery and is required of all students. The fourth-year emergency-room clerkship is also a required part of the curriculum. The department offers a variety of fourth-year elective clerkships in a number of the specialty aspects of the department's clinical activities,

including but not limited to trauma, cardiothoracic surgery, plastic surgery, vascular surgery, transplantation, surgical critical care, pediatric surgery, and the management of burn patients.

Faculty

Chair

Carlos A. Pellegrini

Professors

Ashbaugh, David G. 1982, (Emeritus); MD, 1957, Ohio State University; thoracic surgery.

Beach, Kirk Watson * 1976; MSChE, 1968, PhD, 1971, University of California (Berkeley), MD, 1976, University of Washington; arterial disease in diabetes, blood flow studies with ultrasonic Doppler.

Clowes, Alexander W. * 1980; MD, 1972, Harvard University; vascular smooth muscle cell growth control arterial injury and repair.

Copass, Michael K. 1971, (Adjunct); MA, 1964, MD, 1964, Northwestern University; neurology/emergency services.

Dean, Larry S. 2000; MD, 1980, University of Alabama; cardiology.

Dellinger, E. Patchen * 1977; MD, 1970, Harvard University; general and gastrointestinal surgery.

Engrav, Loren H. 1977; MD, 1969, University of California (Los Angeles); plastic and reconstructive surgery.

Gruss, Joseph S. 1991; MBChB, 1969, University of Witwatersrand (South Africa); craniofacial and maxillofacial surgery.

Hanel, Douglas Paul 1992, (Adjunct); MD, 1977, St Louis University; orthopaedics, hand/microvascular surgery.

Hannaford, Blake * 1989, (Adjunct); MS, 1982, PhD, 1985, University of California (Berkeley); haptic interfaces, robotics, biomechanics, bioengineering, controls, human-machine interaction.

Heimbach, David M. 1974; MD, 1964, Cornell University; burn and general surgery.

Herman, Clifford M. 1977, (Emeritus); MD, 1959, University of Vermont; general surgery.

Jurkovich, Gregory J. 1988; MD, 1978, University of Minnesota; general surgery.

Kohler, Ted R. 1983; MD, 1976, Harvard University; general and vascular surgery.

Maier, Ronald V. 1981; MD, 1973, Duke University; general surgery, trauma-critical care surgery.

Merendino, K. Alvin 1948, (Emeritus); MD, 1940, Yale University, PhD, 1946, University of Minnesota; general surgery.

Moe, Roger E. 1967, (Emeritus); MD, 1959, University of Washington; oncology and general surgery.

Patterson, David R. * 1984, (Adjunct); PhD, 1982, Florida State University; treatment of acute pain, psychology of burn patients, psychological outcome of physical trauma.

Pellegrini, Carlos A. 1993; MD, 1971, University of Rosario Medical School (Argentina); general and laparoscopic surgery.

Perkins, James D. 1989; MD, 1979, University of Arkansas; transplant surgery.

Tapper, David 1983; MD, 1970, University of Maryland; pediatric surgery.

Trumble, Thomas E. 1989, (Adjunct); MD, 1979, Yale University; orthopaedics, hand and microvascular surgery.

Verrier, Edward D. 1989; MD, 1974, Tufts University; cardiothoracic surgery.

Winterscheid, Loren C. 1958, (Emeritus); PhD, 1953, MD, 1954, University of Pennsylvania; general and thoracic surgery.

Zierler, R. Eugene 1984; MD, 1976, Johns Hopkins University; general and vascular surgery.

Associate Professors

Aldea, Gabriel S. 1998; MD, 1981, Columbia University; cardiothoracic surgery.

Anderson, Benjamin O. 1994; MD, 1985, Albert Einstein College of Medicine; oncology, general surgery.

Byrd, David R. 1992; MD, 1982, Tulane University; general surgery and oncology.

Daum, Guenter 1993; PhD, 1989, University of Konstanz (Germany); cellular and molecular biology, tryosine phosphatase and kinases.

Egbert, Mark A. 1986, (Adjunct); DDS, 1981, University of Washington; oral and maxillofacial surgery.

Foy, Hugh M. 1978; MD, 1978, University of Nebraska; general surgery.

Gibran, Nicole 1990; MD, 1985, Boston University; general, burn, and trauma surgery.

Hatsukami, Thomas 1988; MD, 1982, University of California (Los Angeles); vascular surgery.

Isik, F. Frank 1990; MD, 1985, Mt Sinai School of Medicine; plastic surgery/control of angiogenesis.

Langdale, Lorrie A. 1985; MD, 1979, University of Washington; general surgery.

Ledbetter, Daniel J. 1981; MD, MD, 1981, University of Florida, University of Florida.

Lupinetti, Flavian M. 1993; MD, 1978, Johns Hopkins University; cardiothoracic surgery.

Marsh, Christopher L. 1989; MD, 1980, Loma Linda University; transplant surgery.

Meissner, Mark H. 1985; MD, 1985, University of Colorado (Denver); general, vascular, and critical care surgery.

Nicholls, Stephen C. 1986; MBChB, 1975, University of Auckland (New Zealand); vascular surgery.

Pohlman, Timothy H. 1984; MD, 1978, Rush Medical College; general surgery.

Sawin, Robert 1989; MD, 1982, University of Pittsburgh; pediatric surgery.

Sinanani, Mika N. * 1980; MD, 1980, Johns Hopkins University, PhD, 1986, University of British Columbia (Canada); surgical education, biorobotic surgical instrument development, and clinical procedure development.

Stelzner, Matthias G. 1996; MD, 1983, University of Bonn (Germany); general surgery.

Vallieres, Eric 1996; MD, 1982, Laval University (Canada); thoracic, lung transplant.

Vedder, Nicholas 1990; MD, 1981, Case Western Reserve University; case history, plastic and reconstructive surgery.

Waldhausen, John H. 1992; MD, 1986, Pennsylvania State University; pediatric surgery.

Wood, Douglas E. 1992; MD, 1983, Harvard University; thoracic surgery.

Yeung, Raymond S. 1997; MD, 1982, University of Toronto (Canada); general and surgical oncology.

Assistant Professors

Allan, Christopher H. 1998, (Adjunct); MD, 1992, Northwestern University; hand and microvascular surgery.

Anderson, Richard V. 1997; MD, 1987, St Louis University; cardiac surgery.

Billingsley, Kevin G. 1998; MD, 1989, Johns Hopkins University; general surgery.

Bulger, Eileen 1992; MBBS, 1984, Madras Medical College (India); trauma, critical care.

Cornejo, Carol J. 1991; MD, 1991, University of California (San Francisco); trauma/critical care.

Curtis, William E. 1997; MD, 1988, University of Colorado (Denver); cardiac surgery.

Healey, Patrick J. 1993; MD, 1987, Boston University; general and pediatric surgery.

Horvath, Karen D. 1998; MD, 1990, New York Medical College; surgical critical care, laparoscopic surgery.

Karmy-Jones, Riyad 1997; MD, 1983, University of Alberta (Canada); thoracic surgery.

Kuhr, Christian S. 1988; MD, 1988, University of Washington; multi-organ transplantation, urologic surgery.

Levy, Adam E. 1990; MD, 1990, University of Cincinnati; transplant.

Lynge, Dana C. 1993; MD, 1985, McGill University (Canada); general surgery.

Mann, Gary N. 2000; MBBCH, 1989, University of Witwatersand (South Africa); surgical oncology, breast cancer, endocrine neoplasia, melanoma, soft tissue sarcoma.

Mock, Charles N. * 1992; MD, 1980, Brown University; injury: epidemiology, prevention, treatment; especially in less-developed countries.

Mulligan, Michael S. 1999; MD, 1989, University of Connecticut; thoracic surgery.

Nathens, Avery B. 1998; MD, 1990, Queen's University (Canada), PhD, 1997, University of Toronto (Canada); trauma and critical care surgery, surgical infection.

Whelan, Michael F. 1998; DDS, 1988, University of California (Los Angeles), MD, 1992, St. Louis University; craniofacial surgery, cleft lip and palate, microsurgery, jaw reconstruction, orthognathic surgery.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crsca/.

SURG 498 Undergraduate Thesis (*) *Langdale* Offered to those students who have engaged in undergraduate research in general surgery. (Full- or part-time.)

SURG 499 Undergraduate Research (*) *Langdale* Provides an opportunity to participate in ongoing research projects or carry out an independent research project under supervision of Department of Surgery faculty. Practical experience in experimental design and execution is provided under direct supervision of selected faculty members. (Full- or part-time.)

SURG 505 P-Preceptorship in Surgery (1) *Langdale* Opportunity for first- and second-year medical students to gain personal experience with clinical faculty members in the community. Students observe general aspects of private practice, including clinical problems seen; practice limitation; doctor-doctor, doctor-patient, and doctor-nurse relationships in the office and hospital. Prerequisite: permission of department.

SURG 600 Independent Study or Research (*) *Langdale*

SURG 665 P-Clinical Clerkship (*, max. 12) *Langdale* (Harborview Medical Center, Providence Medical Center, University of Washington Medical Center, Veterans Affairs Medical Center, Virginia Mason Medical Center) Diagnosis and management of problems amenable to surgical therapy. Physiological basis of surgical care, differential diagnosis and decision making, and the basic principles of surgical management. Care of inpatients and outpatients, including participation in the operating rooms. Prerequisite: HUBIO 563. (Six weeks. Limit: twenty students.)

SURG 680 Emergency Medicine Elective (8) Basics of emergency medicine, including the primary survey, secondary survey, and approach to the critically ill patient. Students supervised by emergency board-certified staff physicians at Madigan Army Medical Center Emergency Department. Prerequisite: basic clerkship in medicine, surgery, obstetrics, or pediatrics.

SURG 681 P-Peripheral Vascular Disease (4/8, max. 8) *Clowes* (Veterans Affairs Medical Center) Peripheral arterial and venous problems, including methods of clinical evaluation; new diagnostic procedures; and the available methods of treatment. Patient workup, performance of diagnostic studies, and presentation of case material to the staff. Prerequisite: SURG 665, HUBIO 563. (Two or four weeks. Limit: one student.)

SURG 682 P-Clinical Burn Care (*, max. 12) *Heimbach* (Harborview Medical Center) Offered on the burn unit of Harborview Medical Center. Exposure to the care of patients with thermal injury, including management of severe metabolic and septic problems and opportunity to participate in surgical procedures. Exposure to plastic and reconstructive surgery. Prerequisite: SURG 665. (Four or six weeks. Limit: two students.)

SURG 683 P-Pediatric Surgery Externship (8/12) *Tapper* (Children's Hospital and Regional Medical Center) Surgical conditions peculiar to the particular age group with a preponderance of congenital and neoplastic conditions that are amenable to surgical treatment. A reasonable background of knowledge in human embryology and genetics is recommended. Prerequisite: SURG 665. (Four or six weeks. Limit: two students.)

SURG 684 P-Trauma and Emergency Care (*, max. 16) *Copass, Eisenberg* (Harborview Medical Center, University of Washington Medical Center) Register for one or both segments of this course. Segment 1: emergency medicine and trauma at Harborview Medical Center with assignment to the emergency

department. Emphasis on management of severely injured and critically ill patients. Segment 2: acute medicine at University of Washington Medical Center. Evaluate and treat ambulatory emergencies. Prerequisite: SURG 665, MED 665. (Four weeks, third-year and fourth-year students. Limit: twelve students at Harborview Medical Center; three students at University of Washington Medical Center.)

SURG 685 P-Cardiothoracic Surgery Externship (*, max. 12) *Verrier* (University of Washington Medical Center) Serve as subintern, participate in patient care while learning cardiopulmonary hemodynamics of cardiac and thoracic surgery. Observe a wide variety of both cardiac and thoracic disease entities. Participate in the open-heart procedures in the operating room. Opportunity to gain additional understanding of physiology of cardiopulmonary bypass. (Four or six weeks. Limit: two students.)

SURG 686 P-Plastic Surgery Clerkship and Preceptorship (*, max. 12) *Vedder* (University of Washington affiliated hospitals) Introduces fundamental techniques and enhances knowledge of plastic surgery, wounds, trauma, burns, cancers, and pediatric and adult cosmetic and reconstructive surgery. Participate in all surgery-related activities. Prerequisite: SURG 665; MED 665. MS III only, two weeks, 4 credits, limit 2; MS III/MS IV four/six weeks (recommended), 8/12 credits, limit 4.

SURG 687 P-Transplantation Surgery Clerkship (8) *Perkins* (University of Washington Medical Center) Clerkship is in the University regional multi-organ transplantation center. Student participates fully in the care of all transplant patients, on twice daily multidisciplinary rounds, in pre-operative conference, and in the operating room and on the donor harvest team. Weekly didactic teaching sessions. Prerequisite: SURG 665 and MED 665. (Four weeks. Limit: two students.)

SURG 688 P-Subinternship in General Surgery (*, max. 16) *Langdale* (Veterans Affairs Medical Center, Harborview Medical Center, Providence Medical Center, University of Washington Medical Center) Offered on the general surgery wards of the University-affiliated hospitals. Diagnosis, preoperative care, and postoperative care; management of surgical emergencies, the ICU patient, and outpatient follow-up of discharged patients. Students function at the intern level under close supervision of the staff and house staff. Prerequisite: SURG 665. (Four or six weeks. Limit: six students.)

SURG 689 P-Community Surgery Clerkship (8) *Langdale* Designed to supplement basics learned in 665. Excellent opportunity to participate in general, thoracic, vascular, and plastic surgery in a group practice in a smaller city. Recommended for students entering primary care. Prerequisite: SURG 665 and permission of department. (Four weeks. Longview. Limit: one student. Coeur d'Alene. Limit: one student.)

SURG 690 P-Alaska Native Medical Center Surgery Sub-Internship (8/12) *Langdale* Designed to supplement basics learned in 665. Excellent opportunity to participate in general, thoracic, vascular, and plastic surgery in a specialized population of patients. Recommended for students entering primary care. Prerequisite: SURG 665 and permission of department. (Four or six weeks. Alaska Native Medical Center, Anchorage. Limit: one student.)

SURG 691 P-Surgical Intensive Care Unit Sub-Internship (8) *Langdale* Designed to augment experience gained in 665. Excellent opportunity to participate in the management of critically ill patients under the close supervision of the staff/house staff. Recommended for students entering surgery or primary care. Prerequisite: SURG 665. (Harborview Medical Center. Limit: two students. Veterans' Affairs Medical Center. Limit: one student.)

SURG 697 P-Surgery Special Electives (*, max. 24) *Langdale* Special clerkship, externship, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: SURG 665 and departmental permission. (Four, six, or twelve weeks.)

SURG 698 P-Clinical Clerkship Away (*, max. 24) Clerkship equivalent to SURG 665, at sites outside the Seattle metropolitan area.

SURG 699 P-WWAMI Surgery Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

Urology

BB1115 Health Sciences

General Catalog Web page:
www.washington.edu/students/genocat/academic/Urology.html

Department Web page:
depts.washington.edu/uroweb/

Urology is the surgical discipline concerned with diseases of the urinary tract in males and females, and the genital system in the male. The science is broadly based: major areas of practical and investigative concern include congenital defects, cancer, renal diseases, reproductive biology, neuropathology, renal stone formation, and transplantation.

Clinically, the field encompasses a large variety of technical skills including real-time imaging and manipulation, endoscopy, and open surgery. Medical diagnosis and treatment are a large part of the discipline.

The department is actively involved in patient care, instruction, and research concerning the problems of urology. Training for medical students starts in the second year and continues through the third and fourth years. Training is also provided for residents, fellows, nurses and applied specialists. The department is responsible for a fully approved urology residency program. Contact the Urology Clerkship Coordinator at 206-731-3205 for further information.

Faculty

Chair

Paul Henry Lange

Professors

Ansell, Julian S. 1959, (Emeritus); MD, 1951, Tufts University, PhD, 1959, University of Minnesota; congenital defects and pediatric urology.

Barnes, Glover W. * 1969; MA, 1955, PhD, 1961, State University of New York (Buffalo); tissue, organ immunology.

Berger, Richard E. 1982; MD, 1973, University of Chicago; infertility, infectious diseases, impotence and prostate disease.

Brannen, George 1979; MD, 1969, Northwestern University; general adult urology, third-world medicine.

Chapman, Warren H. 1962, (Emeritus); MD, 1952, University of Chicago; oncology and microsurgery.

Krieger, John N. 1982; MD, 1974, Cornell University; infectious diseases.

Lange, Paul Henry 1988; MD, 1967, Washington University; oncology, endourology and adult reconstruction.

Mayo, Michael Edward 1975; MBBS, 1962, St Thomas' Hospital Medical School (UK); neuro-urology and reconstruction, urodynamics.

Mitchell, Michael E. 1989; MD, 1969, Harvard University; pediatric urology and reconstruction.

Vessella, Robert L. 1989; PhD, 1974, University of Mississippi; tumor markers and immunology.

Associate Professors

Berry, Donna L. * 1988, (Adjunct); MN, 1981, University of Texas (Houston), PhD, 1992, University of Washington; health care of persons with, and at risk for, cancer.

Ellis, William J. 1991; MD, 1985, Johns Hopkins University; oncology, prostate disease.

Joyner, Byron David 1999; MD, 1988, Harvard University; pediatric urology.

Lentz, Gretchen M. 1992, (Adjunct); MD, 1986, University of Washington; urogynecology.

Marsh, Christopher L. 1989; MD, 1980, Loma Linda University; transplant surgery.

Miller, Jane L. 1985; MD, 1985, University of Oklahoma; female urology and urodynamics, urologic trauma.

Riley, Donald E. * 1982; PhD, 1976, University of Washington; pathogenic research and diagnosis involving DNA sequences.

Wessells, Hunter 2000; MD, 1988, Georgetown University; genitourinary trauma, reconstructive surgery.

Assistant Professors

Grady, Richard W. 1996; MD, 1990, University of Michigan; pediatric urology.

Kuhr, Christian S. 1988; MD, 1988, University of Washington; multi-organ transplantation, urologic surgery.

Nelson, Peter S. * 1993, (Adjunct); MD, 1986, University of Kansas; the study of human carcinogenesis using tools of genomics and bioinformatics.

Penson, David F. 1999; MD, 1991, Boston University, MPH, 1999, Yale University; clinical epidemiology and health services research in the areas of urologic disease.

Porter, James Roscoe 1992; MD, 1990, Medical College of Ohio; urologic trauma, laparoscopy, endourology.

Takayama, Thomas K. 1989; MD, 1985, Tufts University; biochemistry of prostate specific antigen.

Yang, Claire C. 1993; MD, 1988, Vanderbilt University; neurourology and electrophysiology testing.

Lecturer

Muller, Charles 1980; PhD, 1976, University of California (Berkeley); male fertility and sperm physiology.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

UROL 498 Undergraduate Thesis (*) Provides an opportunity for medical students to write in the area of urology.

UROL 499 Undergraduate Research (*) The student participates in current urologic research projects under supervision of full-time staff. Certain specific problems may be elected by the student. Elective for medical students.

UROL 501 P-Urology Preceptorship (1) Individual experiences with one or more of the full-time department faculty members covering research, teaching, and patient care. Students observe activities in the clinic, hospital ward, operating room, and research laboratories. Prerequisite: first- or second-year medical student standing; permission of instructor.

UROL 675 P-Urology Preceptorship (*, max. 8) Student follows a private practice preceptor in all of his or her work. Becomes acquainted with the office management of urological problems. Prerequisite: UROL 680, HUBIO 562. (Two or four weeks.)

UROL 680 P-Urology Clerkship (*, max. 8) *Berger, Ellis, Grady, Krieger, Lange, Mayo, J. Miller, L. Miller, Mitchell, Penson, Porter, Takayama, Wessells* Full activities of clinical service. Basic principles of urology emphasized. Prerequisite: HUBIO 562. (Two or four weeks.)

UROL 681 P-Female Urology (4) *J. Miller, L. Miller* Observation of cases of lower urinary tract disorders specific to women, emphasizing behavioral management and multidisciplinary care. Ninety-five percent of cases observed are women. Not intended as the only exposure to urology for students considering urology as career choice. Prerequisite: third or fourth year standing and permission of instructor.

UROL 685 P-Urology Subinternship (*, max. 12) *Berger, Ellis, Grady, Krieger, Lange, Mayo, J. Miller, L. Miller, Mitchell, Penson, Porter, Takayama, Wessells* Subintern is responsible for patient workups and for preoperative and postoperative care and participates in the operating room. Prerequisite: MED 665 or pediatrics basic clerkship, or permission of instructor.

UROL 690 P-Urology Specialties (*, max. 8) For those who wish further exposure to a specific aspect of urology. Students can spend time with one attending at University of Washington Medical Center, Harborview Medical Center, Children's Hospital and Medical Center, or Veterans Administration Hospital studying oncology, infections, infertility, stone disease, impotence, or other aspects of urology. Prerequisite: UROL 680 and permission of instructor.

UROL 697 P-Urology Special Electives (*, max. 24) Special clerkship, externship, or research opportunities can at times be made available at institutions other than the University of Washington. Students wishing to elect this course should obtain from the Dean's office a special assignment form at least one month before preregistration. Prerequisite: permission of instructor. (Six or twelve weeks.)

UROL 699 P-WWAMI Urology Special Electives (*, max. 24) By special arrangement for qualified students, special clerkships or externships may be available at institutions other than the University of Washington located within the WWAMI region. Prerequisite: permission of department.

School of Nursing

School Web page:
www.son.washington.edu

Nurse professionals are members of interdisciplinary teams in clinics, hospitals, and community settings, and work with people of all ages, cultural backgrounds, and lifestyles to help them achieve the highest level of wellness possible. Nurse practitioners fill critical health care needs in both urban and rural settings for portions of the population who have not received adequate health care. Nurse scientists conduct important research about a variety of health problems and how best to promote health, prevent disease, and care for people who are ill. Nurses also teach in schools of nursing, in colleges and universities through the world.

The School of Nursing offers programs leading to baccalaureate, master's, and doctoral degrees.

Undergraduate Program

Graduate Program

Graduate Program Coordinator
T310 Health Sciences, Box 357260
206-543-8736
sonapo@u.washington.edu

The School of Nursing offers graduate study leading to the degrees of Master of Nursing, Master of Science, and Doctor of Philosophy in nursing science. At the master's level, programs are designed to meet the many needs of a diverse student body by providing opportunities for advanced study, practice, and research in nursing. The Master of Nursing program develops increased competence in selected areas of advanced practice nursing. The following focus areas are available: adult acute-care nurse practitioner (cardiovascular/AIDS/oncology), adult/older adult nurse practitioner, advanced community-health nursing (cross-cultural nursing/occupational health nursing/healthy aging/policy and program

development), advanced practice in care systems management, advanced practice home care nurse practitioner, advanced practice genetics nursing, advanced practice options in bio-behavioral nursing, family-centered pediatric nursing, nurse midwifery, perinatal nursing/neonatal nurse practitioner, psychosocial nurse practitioner, family nurse practitioner, pediatric nurse practitioner, women's primary care nurse practitioner, and an independent M.N. Research is an integral part of all programs. A thesis is required in the Master of Science program. The Master of Nursing program provides the option of a thesis or non-thesis project. The School of Nursing offers three concurrent graduate degree program with the School of Public Health and Community Medicine: The M.N./M.P.H., the M.S./M.H.A., and the M.N./M.H.A.

Part-time study is available in most focus areas of the M.N. program. Course work may be started prior to formal admission to a program as a graduate non-matriculated student (GNM). GNM status allows the student to earn up to 12 graduate-level credits which may be applied to a graduate program if the student is later admitted. Time limits for acceptance of courses taken as a GNM student are six years for a master's degree and ten years for a doctoral degree from the first course to completion of the degree.

The Doctor of Philosophy in Nursing Science program prepares scientists capable of advancing nursing practice and education through research and scholarly activity. The program provides for rigorous research training designed for individuals interested in careers in academia or for other types of leadership positions in health-service agencies in which the ability to design, plan, and implement research in nursing is a significant expectation.

Special Requirements

In addition to the basic requirements for graduate status in the University, admission to premaster's status in the School of Nursing requires baccalaureate preparation either in nursing or in another major, a basic course in statistics, Graduate Record Examination scores within the past five years, an admissions essay, and three references. Licensure as a registered nurse is required for application to the M.N. program. At least one year of practice is recommended for most clinical programs. Admission is usually for autumn quarter. The application deadline for most master's degree options is February 1. Early application is encouraged, although late applications may be accepted on a space-available basis. Additional information may be obtained from the School of Nursing Academic Programs Office

Admission requirements for the doctoral program, in addition to the above, include Graduate Record Examination scores within the past five years, three references, a statement of goals for doctoral study which includes a description of area-of-research interest, and an example of scholarly work. The deadline for application to the doctoral program is February 1.

Financial Aid

A limited number of nurse traineeships are available for premaster's study. Other financial aid is available on a limited basis. Teaching assistantships and research assistantships are available to a limited number of students. Priority for these appointments is given to predoctoral students.

Contact the Academic Programs Office, School of Nursing, for current information.

Faculty

Professors

Batey, Marjorie V. * 1956, (Emeritus); MS, 1956, PhD, 1968, University of Colorado (Boulder); sociological factors in health-care systems.

Beaton, Randal D. * 1976; PhD, 1972, University of Washington; assessment and treatment of temporomandibular joint pain and dysfunction.

Benoliel, Jeanne 1970, (Emeritus); MS, 1961, University of California (Los Angeles), DNS, 1969, University of California (San Francisco).

Berkowitz, Bobbie * 1988; PhD, 1990, Case Western Reserve University; administration, leadership and policy development within public health and nursing.

Blackburn, Susan T. * 1973; PhD, 1979, University of Washington; high-risk infants and their families, infant care-giving interactions and environments.

Bond, Eleanor * 1984; MN, 1976, PhD, 1985, University of Washington; acute care and critical care nursing, gut motility, effect of ovarian hormones on GI track, stress.

Booth, Cathryn L. * 1980; PhD, 1974, Ohio State University; mother-infant interaction, observational methodology, child birth experiences and attachment.

Brandt, Patricia * 1981; PhD, 1981, University of Washington; influence of family functioning on early child development.

Brown, Marie Annette * 1983; PhD, 1983, University of Washington; women's health, depression, mood disorders, lifestyle changes, exercise, and loss/grief/dying.

Budzynski, Helen Kogan * 1968, (Emeritus); PhD, 1968, University of California (Los Angeles); stress response: cognitive/physiologic interface in chronic dysfunctions, self-management teaching.

Carwein, Vicky * 1995, (Adjunct); MS, 1972, University of California (San Francisco), DNS, 1981, Indiana University; specializing in descriptive work related to the use of alternative therapies by persons with HIV.

Chrisman, Noel J. * 1973; PhD, 1966, University of California (Berkeley); health beliefs and practices, social networks and social support; clinically applied anthropology.

Cowan, Marie J. * 1977, (Affiliate); MS, 1972, PhD, 1979, University of Washington; estimation of infarct size by electrocardiography, sudden cardiac death, physiological nursing.

Craven, Ruth F. * 1968; MN, 1968, University of Washington, EdD, 1984, Seattle University; gerontological nursing.

Cunningham, Susanna L. * 1978; MN, 1969, PhD, 1978, University of Washington; risk factors for atherosclerotic cardiovascular disease.

De Tornay, Rheba * 1975, (Emeritus); EdD, 1967, Stanford University; health services, nursing education.

Dimond, Margaret * 1988; MN, 1971, University of Iowa, PhD, 1978, University of Wisconsin; aging, bereavement, family caregiving, Alzheimer's disease, chronic illness, long-term care.

Eggert, Leona * 1978, (Emeritus); MA, 1970, University of Washington, PhD, 1984, University of Washington; adolescents, drug use, suicide, communication, personal relationships.

Gallucci, Betty J. * 1973; MS, 1971, North Carolina State University, PhD, 1973, North Carolina State University; oncology, nutritional assessment, pathophysiology of stomatitis, and graft versus host disease.

Giblin, Elizabeth C. * 1982, (Emeritus); MN, 1954, University of Washington, EdD, 1959, University of Colorado (Boulder); nursing assessment and nursing therapies, pathophysiological bases.

Graham, Katherine J. * 1988, (Emeritus); MN, 1967, PhD, 1978, University of Washington; family adaptation; quality of life in wellness and illness; professional commitment.

Haberman, Mel R. 1982, (Affiliate); PhD, 1987, University of Washington; quality of life of cancer survivors, impact of breast cancer on family.

Hegyvary, Sue T. 1986; MN, 1966, University of Washington, PhD, 1974, Vanderbilt University; administration and productivity of health care and nursing services.

Heitkemper, Margaret M. * 1981; MN, 1975, University of Washington, PhD, 1981, University of Illinois; gastroenterology, enteral nutrition, gerontology.

Horn, Barbara J. * 1977, (Emeritus); PhD, 1971, University of Michigan; effective organization of nursing resources.

Kelly, Jean F. * 1986; PhD, 1979, University of Washington; family factors that affect at-risk children.

Killien, Marcia G. * 1973; PhD, 1982, University of Washington; women's health, reproductive decision making, work and family.

Kodadek, Sheila M. 1996, (Affiliate); PhD, 1985, University of Illinois; population-based nursing.

Landis, Carol A. * 1991; MS, 1973, DNS, 1988, University of California (San Francisco); health consequences of sleep loss, neuroendocrinimmune interactions, methods of inquiry.

Lewis, Frances M. * 1978; PhD, 1977, Stanford University; complex organizational analysis, evaluation research, psychosocial factors in chronic illness.

Little, Dolores E. 1951, (Emeritus); MN, 1957, University of Washington; physiological nursing.

Magyary, Diane L. * 1981; PhD, 1981, University of Washington; family centered health care of children at risk, disabled or handicapped.

Mansfield, Louise W. 1979, (Emeritus); MA, 1951, Columbia University; physiological nursing.

Mitchell, Pamela H. * 1971; MS, 1965, University of California (San Francisco), PhD, 1991, University of Washington; neuroscience nursing, diagnostic strategies.

Muecke, Marjorie A. * 1979; PhD, 1976, University of Washington; community health, medical anthropology, reproductive health, Southeast Asia (Thailand).

Murphy, Shirley Ann * 1985, (Emeritus); PhD, 1981, Portland State University; addictive processes in women, coping with undesirable life events.

Osborne, Oliver H. * 1969, (Emeritus); PhD, 1968, Michigan State University; ideology, policy and health-care systems, cross-cultural health, mental health, nursing.

Patrick, Maxine L. * 1973, (Emeritus); DPH, 1970, University of California (Los Angeles); gerontology, geriatrics.

Price Spratten, Lois * 1976; PhD, 1976, University of Washington; sexual harassment and perceived workplace mistreatment in higher education.

Prinz, Patricia * 1976; PhD, 1969, Stanford University; pharmacology.

Salazar, Mary K. * 1984; MN, 1986, University of Washington, EdD, 1991, Seattle University; behavioral theory applied to health education, occupational health, program evaluation.

Siantz, Mary Lou * 1998, (Affiliate); MN, 1971, University of California (Los Angeles), PhD, 1984, University of Maryland; child/adolescent psychiatric nursing, risk and adaptation among migrant children and families.

Spieker, Susan J. * 1983; PhD, 1982, Cornell University; developmental psychology, infant security, mother-infant interaction.

Swanson, Kristen M. * 1985; PhD, 1983, University of Colorado (Boulder); caring therapeutics, responses to miscarriage, women's health, loss, bereavement.

Teri, Linda * 1984; PhD, 1980, University of Vermont; controlled clinical trials of caregiving training for patients with Alzheimer's.

Thompson, Frances Elaine A. * 1984; PhD, 1990, University of Washington; attribution theory, adolescent drug use, suicide.

Vitiello, Michael V. * 1982, (Adjunct); PhD, 1980, University of Washington; sleep, sleep disorders, circadian rhythms, aging, behavioral medicine.

Webster-Stratton, Carolyn *; PhD, 1980, University of Washington; parent intervention programs for behaviorally disturbed children.

Whitney, Joanne D. * 1991; MS, 1979, University of Michigan, PhD, 1991, University of California (San Francisco); wound healing.

Wilkie, Diana J. * 1990; MN, 1984, PhD, 1990, University of California (San Francisco); cancer pain assessment and management, pain research.

Wolf-Wilets, Vivian * 1969, (Emeritus); PhD, 1969, University of Chicago; curriculum development, instruction, stress management.

Woods, Nancy * 1978; PhD, 1978, University of North Carolina; women's health.

Woods, Susan L. * 1975; MA, 1975, University of Washington, PhD, 1991, Oregon Health Sciences University; cardiovascular clinical specialist, pulmonary artery catheter measurement.

Associate Professors

Baydar, Nazli * 2001, (Research); PhD, 1984, Interuniversity Programme in Demography (Belgium); normative child development, family processes, multivariate statistical methods, psychometrics.

Belza, Basia * 1991; MN, 1982, University of Virginia, PhD, 1991, University of California (San Francisco); chronic illness, gerontology, fatigue prevention and management in rheumatic diseases.

Berry, Donna L. * 1988; MN, 1981, PhD, 1992, University of Washington; health care of persons with, and at risk for, cancer.

Betrus, Patricia * 1978; PhD, 1985, University of Washington; women and depression, epigenesis of emotions, mental health, stress, violence quantitative analysis.

Bevens, Stella Hay * 1983, (Emeritus); MA, 1951, University of Minnesota; physiological nursing.

Blainey, Carol * 1967; MN, 1967, University of Washington; clinical teaching and problems of patients with diabetes mellitus.

Brandt, Edna M. 1979, (Emeritus); MN, 1953, University of Washington; physiological nursing.

Burr, Robert L. 1976; MSEE, 1978, PhD, 1986, University of Washington; cardiovascular/psychophysiology, autonomic nervous system.

Bush, James P. 1984, (Emeritus); MN, 1973, University of Washington, EdD, 1984, University of San Francisco; pain management, power and powerlessness as perceived by professional nurses.

Carnevali, Doris 1982, (Emeritus); MN, 1961, University of Washington.

Elmore, Shawn K. * 1983; PhD, 1990, University of Washington; psychobiological aspects of women with mood disorders and light therapy.

Ensign, B. Josephine * 1994; MS, 1986, Virginia College of Medicine, MPH, 1992, DPH, 1994, Johns Hopkins University; health care program planning and evaluation for marginalized populations and high-risk youth.

Estes, Nada * 1972, (Emeritus); MS, 1958, University of Colorado (Boulder); counseling people with substance-use disorder, depression.

Flagler, Susan B. * 1979; DNS, 1981, University of California (San Francisco); maternal role adjustment and early parent-infant interaction.

Fought, Sharon G. * 1986, (Adjunct); PhD, 1983, University of Texas (Austin); emergency care/critical care nursing; simulation gaming educational strategies.

Herting, Jerald R. * 1996; PhD, 1987, University of Washington; research methodology and at-risk youth.

Hoffman, Agnes * 1979, (Emeritus); PhD, 1977, University of Kansas; substance use disorders, mental health care of the elderly.

Horn, Beverly M. * 1976, (Emeritus); PhD, 1975, University of Washington; cross-cultural research in maternal-child nursing.

Jarrett, Monica E. * 1980; MN, 1981, PhD, 1988, University of Washington; psychobiology of women.

Johnson, Clark * 1994; MEd, 1973, PhD, 1978, University of Washington; applied research methods including development in applied statistics, assessment, and analysis.

Jordan, Pamela L. * 1984; PhD, 1984, University of Michigan; expectant/new fatherhood, transition to parenthood.

Kang, Rebecca R. * 1981; PhD, 1985, University of Washington; environment of at-risk infants and families, Asian and Pacific Islander health.

Kieckhefer, Gail M. * 1987; PhD, 1985, University of Washington; motivation for health promotional and illness management behavior in children.

Lalonde, Bernadette 1980, (Adjunct Research); PhD, 1979, University of Toronto (Canada); public health program development, process and outcome program evaluation, evaluation research.

Lentz, Martha J. * 1983; MN, 1975, PhD, 1984, University of Washington; physiological adaption: the influence of sleep and other biological rhythms.

Leppa, Carol J. * 1990, (Adjunct); PhD, 1990, University of Illinois; ethics and comparative health care systems, palliative care approaches to end of life care.

Lewis, Linda L. * 1989, (Emeritus); MS, 1981, PhD, 1987, University of Illinois; reproductive neuroendocrinology mood changes related to the human menstrual cycle.

Lindenberg, Catherine S. 1998; DPH, 1985, Johns Hopkins University; public health management and policy.

Logsdon, Rebecca G. * 1986; PhD, 1986, Oklahoma State University; geriatric psychology, Alzheimer's disease, caregiving.

Lovell, David Gilbert * 1984; MSW, 1993, University of Washington; criminal justice policy and treatment of mentally ill offenders.

Martell, Louise K. * 1992; PhD, 1990, Oregon State University; maternal adaptations to childbearing.

McCurry, Susan Melancon * 1991; MS, 1977, MS, 1984, PhD, 1991, University of Nevada; dementia, aging, older adults, depression, sleep, psychotherapy intervention research.

McGrath, Barbara B. * 1987; PhD, 1993, University of Washington; ethnographic studies with U.S. Pacific Islanders on health issues, specifically, HIV/AIDS prevention.

Meyer, Kerry E. * 1992; MN, 1981, Vanderbilt University, PhD, 1990, University of Maryland; health informatics, expert systems in support of clinical decision making, and geriatrics.

Mitchell, Ellen S. * 1977; MN, 1967, University of Florida, PhD, 1986, University of Washington; women's health; menstrual cycle symptom experience, food cravings and eating control.

Molbo, Doris M. * 1969, (Emeritus); MA, 1968, University of Washington; oncology: prevention and screening, care and rehabilitation.

Montano, Daniel E. * 1979, (Affiliate); PhD, 1983, University of Washington; attitude-behavior research and behavior change, cancer control, HIV prevention.

Munet-Vilaro, Frances * 1997; PhD, 1984, University of Washington; coping of Latinos with a family member with cancer and/or AIDS.

O'Connor, Frederica W. * 1986; PhD, 1986, Northwestern University; public sector mental health treatment provision, interventions promoting desired life quality.

Olshansky, Ellen F. * 1985, (Affiliate); DNS, 1985, University of California (San Francisco); psychosocial implications of infertility related to the family, qualitative research, depression.

Patterson, Diana * 1989; DNS, 1984, University of Alabama; childbearing family, pediatric primary health care.

Pesznecker, Betty L. 1970, (Emeritus); MN, 1957, University of Washington.

Pittman, Rosemary 1964, (Emeritus); MS, 1947, University of Chicago.

Randell, Brooke P. * 1993; MN, 1969, University of California (Los Angeles), DNSc, 1987, University of California (San Francisco); preventive community-based interventions with high-risk adolescents and their families.

Richardson, Mary L. * 1977, (Adjunct); MHA, 1978, PhD, 1984, University of Washington; organization, management, and analysis of policy relevant to health services.

Schepp, Karen G. * 1988; PhD, 1985, University of Arizona; stress and coping of physically and mentally ill youth and their families.

Schroeder, Carole A. * 1993; MSN, 1985, University of Nevada, PhD, 1993, University of Colorado (Denver); women's health experiences, critical approaches to knowledge development, and developing partnership.

Schwartz, Anna L. * 1998, (Affiliate); MS, 1991, Florida State University, MS, 1994, Arizona State University, PhD, 1997, University of Utah; interventions and mechanisms to improve symptoms and quality of life for patients and survivors.

Shannon, Sarah E. 1984; PhD, 1992, University of Washington, MSN, 1992, University of Washington; clinical ethics; decision-making surrounding use of life-sustaining therapies.

Simpson, Terri A. * 1991; MN, 1975, University of California (San Francisco), PhD, 1988, University of Washington; critical care patients' physiological and psychological responses to environmental stressors.

Spitzer, Ada 1993, (Affiliate); PhD, 1990, University of Washington; migration, cross-cultural nursing, stress and coping of children with illness, nursing scholarship.

Thomas, Karen A. * 1981; PhD, 1986, University of Washington; preterm infant development, care unit environments, acute care pediatrics, thermoregulation.

Thomas, Mary Durand * 1983; PhD, 1978, University of Hawaii; psychiatric illnesses, assessment and diagnostic reasoning, cultural aspects of care.

Ward, Deborah * 1987; PhD, 1987, Boston University; health policy and politics, women's paid and unpaid caregiving work.

White-Traut, Rosemary 1994, (Affiliate); DSc, 1983, Rush University; preterm infant physiological and behavioral responsiveness to multimodal stimulation by caregivers.

Young, Heather M. * 1986; MN, 1989, PhD, 1991, University of Washington; community-based health care service for older adults.

Assistant Professors

Altman, Gaylene M. 1983; MN, 1973, PhD, 1992, University of Washington; women's health and inflammation; pain and endometriosis.

Bond, Gail E. 2000, (Research); PhD, 1995, University of Washington; aging, memory, substance-use disorders, long-term care.

Carr, Catherine A. * 1998; PhD, 1993, University of Michigan; factors the affect provider practice and clinical outcomes of midwifery care.

Carrere, Sybil 1989, (Research); PhD, 1990, University of California (Irvine); interface between family relationships, stress, and health.

Cochrane, Barbara B. * 1985, (Affiliate); PhD, 1992, University of Washington; women's health; individual adaptations to health and illness, clinical therapeutics.

Davis, Shoni Kay * 1993, (Affiliate); DNSc, 1992, University of California (Los Angeles); program development, clinical treatment strategies, and research of perinatal chemically dependent.

Draye, Mary A. 1982; MPH, 1968, University of Michigan; primary health care, health promotion, risk appraisal, coping with infertility.

Huebner, Colleen Ellen * 1982, (Adjunct); PhD, 1991, MPH, 1994, University of Washington; the social bases of developmental problems in early childhood.

Jones, Mary C. 1964, (Emeritus); MS, 1962, Boston University.

Kasprzyk, Danuta M. 1991, (Affiliate); PhD, 1984, University of Washington; preventive and behavioral medicine and health psychology.

Kennedy, Michael 1987; PhD, 1994, University of Washington; symptom self-management, clinical nursing research.

Kim, Eunjung * 2001; PhD, 2001, University of Wisconsin (Madison); Korean-American parenting's influence on adolescents' developmental outcomes.

Kovalesky, Andrea H. 1992, (Adjunct); MSN, 1977, University of California (San Francisco), MA, 1990, Fuller Theological Seminary, PhD, 1997, University of Washington; maternal/child nursing.

Kozuki, Yoriko 2000; PhD, 1999, University of San Francisco; symptom awareness and neuroleptic adherence in schizophrenia spectrum disorders.

Labyak, Susan * 2001; PhD, 1993, University of Michigan; human sleep and circadian timing.

Larson, Margaret L. * 1958, (Emeritus); MN, 1967, University of Washington; cross-cultural variables in mental illness, nursing interventions in disturbed behaviors.

Lydon-Rochelle, Mona 2001; PhD, 1999, University of Washington; applied epidemiology in maternal health.

MacLaren, Aileen * 1994; MSN, 1982, University of Miami (Florida), PhD, 1998, Johns Hopkins University; nurse midwifery.

Moniz, Donna M. 1998, (Affiliate); MN, 1975, JD, 1982, University of Washington; nursing and the law.

Motzer, Sandra Adams * 1976; MN, 1976, University of Washington, PhD, 1992, Oregon Health Sciences University; NK cell function in women with chronic health disturbance (i.e., irritable bowel syndrome).

Sales, Anne * 1997, (Adjunct); MSN, 1989, University of North Carolina, PhD, 1998, University of Minnesota; patient and organizational outcomes, health care work force, health economics.

Sikma, Suzanne 1979, (Adjunct); MSN, 1979, Loyola University (Chicago), PhD, 1994, University of Washington; caring in organizations, development and evaluation of organizations, care delivery systems.

Solchany, JoAnne E. 1995; PhD, 2000, University of Washington; relationships between children and their primary caregivers.

Strickland, Carolyn J. B. * 1991; MS, 1976, PhD, 1983, University of Washington; health related behavior, complex organizations, American Indian populations.

Venkatraman, Manorama M. 1995, (Research); MSW, 1984, PhD, 1990, University of Michigan; cross-cultural comparison of mid-life women in the United States and India.

Weston, Donna 2001; PhD, 1983, University of California (Berkeley); methods for characterizing early manifestations of pathology.

Willgerodt, Mayumi * 2001; PhD, 1999, University of Illinois (Chicago); ethnic minority health issues as they relate to acculturation and cultural orientation.

Zierler, Brenda * 1988; PhD, 1996, University of Washington; research in patient with venous thromboembolism; clinical outcomes, process outcomes.

Senior Lecturers

Albert, Marilyn L. 1989; MSN, 1974, Boston University; health policy and politics; kin care and women's studies.

Christianson, Phyllis L. 1988; MN, 1990, University of Washington; gerontology.

Cornman, Barbara J. * 1979; PhD, 1988, University of Washington; sexual assault victims, kinetic family drawings, family having child with cancer.

Gilmore, Susan L. 1996; MN, 1993, University of Washington; cardiovascular nursing.

Gochmour, Michelle Kom 1994; MN, 1997, University of Washington; occupational health nursing, safety and ergonomics.

Gordon, Patricia E. 1993; MN, 1977, University of Washington; individuals, couples, and family therapy.

Hoffman, Martha A. 1978; MN, 1978, University of Washington; maternal-infant health.

Lecturers

Hoyle, Christine A. 1985; MN, 1979, University of Washington; women's health, peri and post menopausal years, primary care of pediatric patients, asthma, diabetes.

Jensen, Marilee M. 1990; MSN, 1988, University of Washington; women's primary care nurse practitioner.

Johnson, Gail 1987; MN, 1987, University of Washington; asthma management and education, pediatrics and women's health.

Petersen, Karla Renee 1990; MN, 1988, University of Washington; primary care of children.

Zimmer, Phyllis Arn 1983; MN, 1982, University of Washington; family nursing practitioner role, practice characteristics, education, and political advocacy.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

Nursing

NURS 401 Care in Illness I (5) Selected psychopathologic and pathophysiologic health alterations and therapies across life span. Assesses human functioning, pathophysiology, pharmacology, psychosocial, cultural variation, health care resources, and person-environment relationships to select nursing strategies for acutely and chronically ill individuals of all ages.

NURS 405 Care in Illness II (5) Continuation of 401, further examining selected psychopathologic and pathophysiologic alterations in health of individuals

in context of families across life span. Emphasizes assessing functioning in psychosocial, cultural, person-environment relationships, and health care resources to plan nursing strategies for acutely/chronically ill individuals of all ages.

NURS 407 Cultural Variation and Nursing Practice (3) Introduces knowledge and skills for culturally competent health care for all. Compares health related values, beliefs, and customs among major cultural groups. Views family and social network as culturally variable health seeking behavior contexts. Examines Western biomedicine and alternative healing methods within broader environment, including government, other social institutions.

NURS 408 Nursing Care with Families in the Community (3) Application of biopsychosocial and social environmental theories and assessments to diagnose alterations in health/mental health of families, small groups in community settings. Emphasizes interpersonal and clinical therapies; coordination of community resources, evaluating effectiveness of changes; characteristics of nursing care in home visiting.

NURS 410 Legal and Ethical Issues in Clinical Practice (3) Identification of ethical and legal issues and the ensuing dilemmas relevant to the profession of nursing and nurses as health professionals and citizens. Selected problems and dilemmas affecting nurses, nursing, and the delivery of health care analyzed using specific moral-ethical perspectives.

NURS 412 Nursing Care Systems (3) Introduction to analyzing current health care systems and their effectiveness in achieving desired health outcomes for selected client populations from a system perspective. Emphasizes key features of interface between client and health care professionals, and environmental factors and organizational structures which influence the transaction.

NURS 413 Nature of Health, Threats to Health, and Health Promotion (3) Introduction to scientific principles of nursing care to promote health, wellness, prevent disease in clients. Emphasis on understanding multidimensional aspects of health; personal, environmental factors that support healthy functional patterns of individual clients, health promotion interventions. Assessment of health patterns in terms of risk, vulnerability, resilience, protective factors. Corequisite: NCLIN 414. Offered: A.

NURS 445 Topics in Nursing (1-10, max. 10) Guided survey and discussion of current literature on major topics in physiological nursing. Seminar/lecture with analysis and discussion of selected topics and readings. May have clinical component. Implications for nursing practice and health care emphasized.

NURS 451 Connecting to Families in Transition (1-2, max. 6) Focuses on working with families as partners in care for clients who are experiencing personal or family life and health transitions. Begins with family experiences with transitions and the way health issues were learned from the family and widens the lens through discussions with classmates and experiences with other families.

NURS 495 Child Rearing, Culture, and Health (3) I&S Cross-cultural study of the child-rearing practices, cultural norms, and health behavior of children and adolescents in different societies. Comparative approaches, diverse theoretical postures, and empirical research findings are used. Offered: jointly with ANTH 440.

NURS 499 Special Electives (1-4, max. 15) Seminars on selected nursing issues of clinical problems, with independent study option, under supervision of nursing faculty. Offered: AWSpS.

NURS 500 Children and Adolescents with Special Health Needs, Their Families and Communities (2/4, max. 4) Advanced practice with infants, children, and adolescents at risk for or with chronic physical, neurobiological, developmental, or psychosocial problems. Focus on assessment and referral with select management strategies relevant for primary and specialty health care. Includes care coordination, multidisciplinary, culturally competent, and family centered approaches. Prerequisite: permission of instructor.

NURS 501 Advanced Mental Health Interventions with Children (3) Developmentally based assessment and therapeutic approaches relevant for children with psychosocial health problems. Consideration to matching therapeutic approaches with specific nature of symptomatology and other child, family, cultural, and environmental characteristics, including social and educational systems. Individual and group evaluation research emphasized. Prerequisite: NURS 500.

NURS 502 Human Responses in Health and Illness I (3) Survey of selected human responses to environmental demands in health and illness as expressed at physiologic, pathophysiologic, experiential, and behavioral levels. Such concepts as host defenses, ventilation, circulation, elimination, and nutrition are discussed. Prerequisite: graduate standing.

NURS 503 Human Responses in Health and Illness II (3) Survey of selected human responses to environmental demands in health and illness at physiologic, pathophysiologic, experiential, and behavioral levels. Such concepts as immune response, stress response, circadian rhythms, pain, sleep, cognition, and consciousness. Prerequisite: graduate standing.

NURS 504 Clinical Nursing Therapeutics (1-6, max. 6) Critical analysis of therapeutic modalities to assist patients with a variety of responses to health problems. Includes selected therapies such as suction/drainage, positioning to address responses in critical, life threatening, and chronic/continuing health states. Varying credits assigned for modules covering particular therapies. Prerequisite: NURS 502, NURS 503, or permission of instructor.

NURS 505 Selected Topics in Psychosocial and Community Health Nursing (2-10, max. 10) In-depth exploration of the major theoretical issues in psychosocial nursing. Seminar with analysis and discussion of selected topics and readings and implications for research and health care.

NURS 506 Foundations in Psychosocial Nursing (3) Introduces students to Psychosocial Nursing by study of classic published papers. Current status of the specialty analyzed by review of standards of practice, certification criteria, and discussion of ethical, clinical, and educational issues. Examines visions and projected needs for the future.

NURS 508 Seminar in Group Treatment (2) Seminar on the theoretical basis for working with various treatment groups. Analysis of selected approaches to group treatment. Analysis of leader responsibilities and functions in the development of therapeutic group experiences.

NURS 509 Issues in Violence and Aggression for Health Professionals (3) Focuses on research and theory of violent/aggressive behavior. Perspectives of victim, offender, family, community, society examined. Focus is recognition of violence against women. Course is designed to challenge students to clarify beliefs, values related to topics such as rape, homicide, domestic violence. Prerequisite: graduate nursing student or permission of instructor.

NURS 510 Primary Care Foundations: Diagnosis and Management of Common Health Concerns (1-3, max. 9) Focus on diagnosis and management of common primary care problems of adolescents and adults, including older adults, within advanced nursing practice. Emphasizes individual and family responses and nursing strategies including differential diagnosis, treatment, patient education, and follow-up. Content focus changes each quarter. Prerequisite: permission of instructor; recommended: concurrent field work.

NURS 511 Seminar in Neonatal Nursing (3) Neonatal neurobehavioral and physiologic adaptation within context of physical and social environment. Neonatal responses to alterations in growth and illness. Assessment modalities and therapeutic strategies used during the neonatal period. Prerequisite: NURS 514 or permission of instructor.

NURS 512 Critical and Interdisciplinary Approaches to Women's Health (3) Critical examination of the historical, socio-political, and scientific influences on women's health. Issues of sexism, racism, and heterosexism discussed from the perspective of different disciplines. Offered: jointly with WOMEN 512.

NURS 513 Seminar in Contemporary Women's Health Issues (3) Critical analysis of contemporary and historical literature relevant to health care for women across the life span. Synthesis of a holistic view of women's health to guide research and practice. Offered: jointly with WOMEN 513.

NURS 514 Physiologic Adaptation in Women and Children (1-6, max. 6) Analysis of developmental physiologic adaptations in four units: women/reproductive processes, pregnancy/postpartum, fetus/neonate, and infancy through adolescence. Emphasis on implications for nursing practice. Examination of research basis for selected intervention strategies.

NURS 515 Common Adolescent Health Problems (2) Focuses on assessment, clinical decision making, and management of common adolescent problems. Concepts and theories of health promotion, adolescent development, and intervention strategies are explored to provide a broad framework for caring for adolescents in primary settings.

NURS 516 Pediatric Pulmonary Anatomy and Physiology: Clinical Applications (2) Lung development, anatomy, and physiology; clinical application when caring for children with acute and chronic lung disease. Prerequisite: permission of instructor.

NURS 517 Pediatric Pulmonary Pathophysiology: Clinical Applications (2) Applies knowledge of pediatric anatomy and physiology to assessment and treatment of pulmonary pathophysiology in children. Nursing issues in caring for children and families with acute and chronic lung disease. Prerequisite: permission of instructor.

NURS 518 Advanced Practice Pediatric Primary Care Management (3) Focuses on use of clinical decision making framework to develop theoretically and empirically sound individualized comprehensive management plans for the young child who presents with common physical and behavioral symptoms in the primary care setting. Prerequisite: permission of instructor.

NURS 519 Curriculum Development in Nursing Education (3) Theoretical rationale for curriculum development, study of curricular problems in nursing in relation to the elements of the curriculum as described in a curricular design. Prerequisite: graduate standing.

NURS 520 Evaluation of Clinical Performance in Nursing (3) For graduate students preparing for fac-

ulty or staff development positions in nursing. Theory and principles of evaluation. Instruments to appraise clinical nursing performance developed as part of course requirements. Prerequisite: graduate standing or permission of instructor.

NURS 524 Conceptual Foundations for Care Systems Management (3) Critical analysis of nature and theoretical bases of care systems management practice. Concepts of nursing and organization science foundations to person-provider transaction management and leadership in context of economic, political, and social environments and health outcomes. Prerequisite: graduate standing.

NURS 525 Managing Clinical Effectiveness Within Care Systems (3) Optimizing person-provider clinical therapeutic transactions at multiple levels of care systems complexity and population aggregation. Emphasis on designing, managing and evaluating clinical effectiveness and efficiency within care systems. Prerequisite: NURS 524 or permission of instructor.

NURS 526 Managing Organizational Effectiveness Within Care Systems (3) Analysis of management strategies for attaining effective and efficient organizational structures and processes within health care systems. Prerequisite: NURS 524 or permission of instructor.

NURS 527 Managing Effective Access and Utilization Within Care Systems (3-4) In-depth inquiry into health care access and resource utilization patterns among diverse populations, with emphasis on management strategies for establishing effective population-system fit. Additional credit for exploring access and utilization patterns within specific populations.

NURS 528 Implications of Human Embryology and Genetics for Clinical Practice (3) Normal development of the human embryo and fetus and principles of human genetics. Alterations in development leading to common anomalies and implications for clinical practice. Prerequisite: graduate standing or permission of instructor.

NURS 529 Childhood Common Developmental and Behavior Issues (2) Focus on common developmental and behavioral issues presented by children and their families in primary care setting. Emphasis on the developmental, family, and cultural aspects of assessment and management of the common issues.

NURS 530 Conceptual Frameworks for Parent-Child Nursing (3) Designed to assist graduate students in exploration, criticism, and analysis of selected concepts, frameworks, and models relevant to parent-child nursing practice. Group seminar work focuses on the discussion of issues influencing the roles and practice of clinical nurse specialists in parent-child nursing. Skills necessary for developing a conceptual framework for practice.

NURS 531 Selected Topics in Family and Child Nursing (1-6, max. 12) In-depth examination of the literature pertinent to major theoretical issues in parent and child nursing. Seminar with analysis and discussion of selected topics and readings. Implications for research, prevention, and health care stressed. Prerequisite: permission of instructor.

NURS 533 Seminar in Cardiovascular Nursing (3) Systematic inquiry into the influence of physical and emotional factors on pathophysiology underlying selected cardiovascular conditions; group study of current therapies with emphasis on prevention and rehabilitation. Individual study of topic of interest.

NURS 534 Seminar in Nursing in Gerontology (3) Gerontological research findings applied to complex

nursing problems in maintenance of health and maximum functioning in the aged.

NURS 535 Seminar in Neuroscience Nursing (3) Guided survey of clinical and experimental literatures regarding selected concepts of human functioning mediated by the nervous system: consciousness, mentation, movement, sensation, integrated regulation, coping with disability. Clinical and research measurement, current research and implications for further research, clinical applications.

NURS 536 Biological Aspects of Cancer: Implications for Care (3) Survey of major concepts from tumor biology and implications for advanced oncology nursing practice. Areas covered include carcinogenesis, cancer epidemiology, pathology, metastasis, treatments (chemotherapy, radiation, surgery, immunotherapy), and cancer detection and prevention. Discussion of role of advance nurse clinician and complex patient responses are incorporated into discussion of basic biological concepts.

NURS 537 Pain Management: Pharmacological and Nonpharmacological Therapeutics (3) Course focuses on nursing management of pain as a multi-dimensional phenomenon. Pharmacologic and non-pharmacologic therapeutics are critically reviewed for appropriateness in treatment of acute, chronic, and cancer pain. Nursing actions to initiate and maintain optimal therapy, based on individual responses, are reviewed and evaluated. Research-based clinical decisions are practiced.

NURS 539 Seminar in Critical-Care Nursing (3, max. 9) Systematic inquiry into pathophysiology, initial nursing management, and systems of care for the critically ill adult or child.

NURS 540 Special Topics in Biobehavioral Nursing and Health Systems (3-6, max. 9) Guided survey of the experimental literature of major topics in physiological nursing, including cardiopulmonary, biology of aging, neuromuscular, cancer, and endocrine. Course conducted as a seminar with analysis and discussion of selected topics and readings. Implications for future research and health care are emphasized.

NURS 541 Care of Well Women (4) Examines components the components of advanced nursing/midwifery care of well women. Emphasis on assessment, diagnosis, and management of common health issues and problems of women across the life span. Prerequisite: permission of instructor.

NURS 542 Care During Childbearing I (4) Advanced nursing/midwifery care and management of the low-risk childbearing woman and fetus through preconception, prenatal, intrapartum, and postpartum periods. Prerequisite: NURS 514.

NURS 543 Advanced Practice Childbearing and Women's Health Care (1-4, max. 4) Assessment and management related to advanced nursing/midwifery perinatal care and women's health care problems. Topics covered are ambulatory antepartum and postpartum care, intrapartum care, and advanced women's health care and adolescents at risk. Module(s) selected depends on program requirements or student elective. Offered: W.

NURS 544 Psychosocial Adaptations of Individuals and Families during the Perinatal Period (3) Adaptation of individuals and families during the perinatal period, with emphasis on psychosocial adaptation, consumer education, transition to parenthood, parent-infant interaction and community based support. Prerequisite: permission of instructor.

NURS 545 Care of the Neonate and Infant (2) Adaptation of neonate to the extrauterine environment and continuum of care to promote the health of

infants within the context of family, community, and other environments. Prerequisite: NURS 514, NURS 528, or permission of instructor.

NURS 546 Interpersonal Aspects of Behavior (3)

Selected theories in relation to psychosocial development and adaptation across life span for individuals, families, and small groups and as explanatory models of major psychosocial disabilities. General and psychosocial nursing models evaluated for heuristic value for research and practice. Prerequisite: graduate standing or permission of instructor.

NURS 547 Biologic Aspects of Psychosocial Disabilities (3)

Analysis of biological processes influencing psychosocial behavior in response to internal and external stimuli. Research and theory of neuroendocrine mechanisms in psychosocial disabilities. Analysis of nursing management and evaluation of biopsychosocial modalities used in modification of behavior. Prerequisite: graduate standing in nursing or permission of instructor.

NURS 548 Seminar in Infant Mental Health (1-, max. 3)

Reviews four aspects of infant mental health: early development, prevention, multigenerational phenomena, and multidisciplinary perspectives. Includes presentations by faculty, visiting scholars, practitioners, and students. Exposes students to leading theories, major developmental issues, prevention models, and the long-term consequences of risk and protective factors. Credit/no credit only.

NURS 549 Assessment in Psychosocial Nursing (4)

Conceptual and clinical approaches to advanced-level data collection and diagnostic reasoning in psychiatric/psychosocial disorders. Synthesizes knowledge from psychosocial nursing and multiple allied fields to enhance learners' cognizance of principles for establishing accurate and comprehensive data bases and sound multifaceted diagnostic formulations. Emphasizes DSM diagnostic scheme.

NURS 550 People of Color, Psychosocial Health, and the Culture of Oppression (3)

Explores relationships among the psychosocial health of people of color, American cultural patterns of intersecting forms of oppression (e.g., gender, race, and class) and the role of health professionals in defining, ameliorating and/or aggravating psychosocial distress.

NURS 551 Theoretical Foundations of Primary Care (1-3, max. 3)

Presentation and interpretation of theoretical basis of advanced nursing practice in primary care. Provides students with conceptual foundation upon which to base their development as nurse practitioners. Prerequisite: graduate standing; permission of instructor.

NURS 552 Health Promotion (2-3)

Emphasis on health promotion, screening, and disease prevention in primary care. Examination of individual and family wellness, models of risk assessment and behavior change, health promotion strategies, and barriers to achieving health. Opportunity to explore age-related health risks. Prerequisite: graduate standing and permission of instructor; recommended: nurse practitioner students take fieldwork concurrently.

NURS 553 The Mentally Ill Offender in Correctional and Community Settings (3)

Survey of social, political, economic, legal, and moral problems posed by individuals with mental disorders who commit crimes. Covers historical antecedents and current responses of correctional and mental health systems to mentally ill offenders, prevalence and correlates of incarceration, and roles of professionals in correctional mental health field. Credit/no credit only. Offered: W.

NURS 554 Psychosocial Interventions in Nursing (3)

Conceptual foundations and interpersonal skills for interventions to promote personal change.

Application made to nursing care of persons with psychosocial or physical health problems. Lecture-discussion and in-class practice. Prerequisite: graduate standing in nursing or permission of instructor.

NURS 555 Psychopathology, Assessment, and Diagnostics of Children 3 and Under (2-, max. 4)

Psychopathology, mental health assessment, and diagnostics in children aged 3 and under, framed by the Diagnostic Classification for Developmental and Mental Health Disorders (DC:0-3). Develops skills and techniques necessary in infant mental health. Prerequisite: acceptance into Infant Mental Health Certificate program or permission of instructor. Offered: WSP.

NURS 556 Biopsychosocial Perspectives on Addictions (3)

Psychosocial and pathophysiological aspects of substance use examined for their effects on individuals and families throughout life span. Theories and empirical findings serve as basis for evaluating preventive and therapeutic nursing approaches to substance use disorders, including those related to target populations. Prerequisite: basic course in biological sciences.

NURS 558 Infancy: The Context of Relationships (4)

Comprehensive overview of infancy. Topics include caregiving-child interaction, attachment, mental health diagnostic classifications, ecological aspects of the caregiving environment. The NCAST Parent-Child Interactive Scales and the Zero to Three Diagnostic Classification are presented.

NURS 559 Theories of Psychiatric Disabilities (3)

Theories from psychosocial nursing, psychiatry, and behavioral sciences explanatory of psychiatric disabilities provide basis for identifying psychosocial problems. Structure and functions of mental health organizations and social networks analyzed. Prerequisite: NURS 547 or permission of instructor.

NURS 560 Dynamics of Community Health Practice (3/5)

Examination of and experience with principles of clinical practice in community settings. Included are family as community constituent, populations at risk, community assessment, and community development. Prerequisite: graduate standing or permission. Offered jointly with HSERV 508.

NURS 561 Selected Topics in Comparative Nursing Care Systems (2-3, max. 10)

In-depth examination of the literature pertinent to major theoretical issues in cross-cultural nursing and health-care systems. Seminar with analysis and discussion of selected topics and readings. Implications for research and health care stressed.

NURS 562 Clinically Applied Anthropology (3)

Anthropology as it relates to interdisciplinary delivery of culturally relevant health care. Cultural variation in illness beliefs and behavior, types of healing practices, illness prevention, social support networks. Prerequisite: graduate standing, permission of instructor. Offered: jointly with ANTH 562.

NURS 563 Advanced Community Health Nursing (3)

Systematic inquiry into the nature and foundations of community health nursing. Analytic and theoretical perspectives on health risk assessment and nursing interventions in the community. Implications for community health nursing services. Prerequisite: permission of instructor and graduate standing.

NURS 564 Biopharmacological Management in Psychosocial Nursing (3)

Biological and pharmacological interventions pertinent to practice of psychosocial nursing, including psychopharmacology, electroconvulsive therapy, and phototherapy. Emphasis on empirical neuroendocrine bases and then nursing management issues pertaining to these interventions. Legal and ethical issues pertaining to advanced practice and putative neurological mechanisms are examined. Prerequisite: NURS 547 or permission of instructor.

anism are examined. Prerequisite: NURS 547 or permission of instructor.

NURS 565 Self-Management Strategies and Techniques in Patient Care (3)

Theories underlying cognitive/behavioral self-management strategies and techniques in patient care. Evaluation of the clinical appropriateness and utility for nursing. Application to such clinical problems as abstinence in the recovering alcoholic, depression, and eating disorders. Prerequisite: graduate standing or permission of faculty.

NURS 566 Occupational Stress and Stress Management (3)

Relationships between occupational stressors and worker's health, well-being, productivity. Analyzes models of occupational stress. Investigates similarities, differences between job-related stressors and stress responses in various occupations. Explores elements of worksite stress management programs. Prerequisite: graduate standing in nursing or allied health discipline; advanced undergraduates with permission of instructor.

NURS 567 Theoretical Basis of Management of Stress Response (3)

Theories of physiologic responses linked to theories of cognitive/affective and behavioral responses to stressors. Conceptual basis of self-management techniques. Research findings relevant to these theories and techniques examined and analyzed. Prerequisite: course in human physiology or physiologic psychology, permission of instructor.

NURS 568 Health Politics and Policy (3)

Analyzes the formal and informal political context of health care delivery, professionals, and institutions in the United States. Addresses medical coverage and public persuasion, as well as policy analysis. Special attention is paid to women's political resources and participation. Credit/no credit only.

NURS 569 Observation and Assessment of Relationships (2-, max. 4)

Classification of attachment behaviors in infancy and preschool years according to systems developed by Ainsworth, Main and Solomon, Cassidy, Marvin et al., and Crittenden. Extensive first-hand experience in conducting and coding Strange Situation attachment assessments. Standardized national tests in attachment classification. Offered: WSP.

NURS 570 Family Concepts: Health and Illness (3)

Emphasizes the family as unit of care across the life span. Predominant themes: factors influencing family health promotion, including resilience, vulnerability, risk reduction, and health policy; continuity, change and transition; and promotion of family health during acute and chronic illness episodes.

NURS 571 Advanced Interpersonal Therapeutics with Families (3)

Models and research on therapeutic relationships and interpersonal processes evaluated and applied to group interactions among family members, among professionals, and between the family, professionals, and macrosystems. Partnership building emphasized. Individual and group characteristics examined across the life span in social, cultural, and health contexts. Prerequisite: permission of instructor.

NURS 572 Family Nursing Therapeutics: Behavioral Models (3)

Behavioral models of health-related behavior analyzed to develop therapeutic programs and services for families experiencing health-related concerns or disruptions. Seminars introduce didactic material and laboratory assignments facilitate development of therapeutic and programmatic content. Prerequisite: permission of instructor.

NURS 573 Professional Issues for Nurse Practitioners (2)

Presentation and analysis of cur-

rent health care trends and key professional issues influencing nurse practitioner practice. The NP's leadership role, role in influencing health policy, accountability to the profession/public, marketability, and legal dimensions of practice are stressed. Prerequisite: NP student nearing program completion or permission.

NURS 575 Grief and Loss in Clinical Practice (2-4, max. 4) Analysis and study of social, cultural, and psychological conditions that influence human loss, grief, and death in modern society. Research findings, selected readings, and direct experience provide direction for examination of philosophic, theoretical, and pragmatic issues underlying choices and decisions in clinical practice. Open to graduate students with permission of instructor. (Limit: sixteen students.)

NURS 576 Populations at Risk in the Community (3) Health needs and risks of selected populations in the community and theoretical and analytical perspectives on assessment and intervention strategies in community health nursing practice with groups and populations whose health is at risk. Prerequisite: graduate standing and permission of instructor.

NURS 577 Seminar in Infant Mental Health Intervention Models, Consultation, and Leadership (1-, max. 3) Capstone course in Infant Mental Health Certificate Program. Explores intervention models, role of consultation and leadership in the field. Field work in Infant Mental Health Program serves as context for exploring consultation and leadership roles. Synthesis and reflection of personal preparation and role encouraged. Offered: AWS.

NURS 578 Health, Care, and Community (3) Analysis of health care in community from nursing and behavioral science perspectives. Sociocultural influences on health beliefs and practices, natural-care units, and community life patterns analyzed. Community as both context and target of change explored in relation to nursing approaches in health promotion and maintenance. Prerequisite: graduate standing.

NURS 579 Transcultural Nursing Practices (3) Study of nursing practices in different cultures. Seminar focus is on theoretical formulations and comparative analysis of values, patterns, techniques, and practices of nursing care in many societies. Rituals, myths, taboos, and beliefs are studied in relation to the subculture(s) of caring and nursing practices.

NURS 580 Current Issues in Occupational and Environmental Medicine (2, max. 12) *Kaufman* Interdisciplinary seminar on current and emerging topics in the practice of environmental and occupational health. Faculty- and student-led presentations with an interdisciplinary focus, including occupational hygiene, nursing, and medical issues. Prerequisite: environmental health graduate student, occupational health nursing student, or permission of instructor. Offered: jointly with ENV H 596; AWSp.

NURS 581 Study of International Health (2-3) *Hegyvary* International health based on the concept of health ecology. Assigned readings, discussions, and analyses include different perspectives, strategies, systems, and the wide range of conditions and forces that affect global and local health and illness. Emphasizes roles of health care providers. Credit/no credit only.

NURS 582 Socio-Cultural Perspectives of Public Health Genetics (3) Examines social and cultural issues of human genome sequencing and control of genetic expression. Attitudes and behaviors toward health, illness, and disability are studied using historical, contemporary, and cross-cultural case study material. Offered: jointly with ANTH 574/PHG 521.

NURS 584 Critical and Interdisciplinary Approach to Health Policy (3) Advanced seminar to critically analyze various public health policies from a social justice framework.

NURS 587 Role Transition Seminar (2) Emphasis on transition to doctoral study and eventual post-graduate roles. Includes information to clarify expectations and skills to facilitate success: various forms of scholarly and interpersonal communication, principles of scholarly collaboration, giving and receiving critiques, and other topics developed by participants. Credit/no credit only.

NURS 588 Philosophical Basis of Nursing Inquiry (3) Overview and critical analysis of historical and contemporary views of knowledge development and of science, with particular emphasis on the ways these views influence approaches to nursing inquiry. Emphasis on analyzing the underlying epistemological and ontological assumptions and implications of diverse approaches to knowledge generation in nursing.

NURS 589 Theoretical Perspectives in Nursing (3) Critical analysis of theory development, including evaluation of relationships among theories, evidence, and explanation. Diverse approaches used to appraise historical and contemporary milestones in the development and evaluation of nursing knowledge. Emphasis on process and implications of theory development for nursing research, practice, education, and systems. Prerequisite: NURS 588. Offered: W.

NURS 590 Ecology of Human Health (5) Focus on the pluralistic constructions of health as related to different environments. Personal and biological characteristics vary, interact with, and transform the person and the environment. Emphasis on nursing as a social construction which is interactive with the human's experience of health and healing.

NURS 591 Advanced Seminar in Nursing Science (3, max. 15) In-depth analysis and evaluation of literature in focused areas of research. Synthesis of literature related to selected fields of nursing science. Oral analysis of assigned papers and topics. Prerequisite: graduate standing or permission of instructor.

NURS 592 The Science of Nursing Therapeutics (4) Addresses the state of the science of nursing therapeutics. Students examine the practices of nursing to promote, maintain, and restore human health from an ecological perspective. Therapeutics considered from the perspectives of the individual, family, and community systems.

NURS 593 Preventive Therapeutics (3) Examines literature in the field of health promotion and illness prevention with the purpose of students developing their individual model of health promotion and illness prevention in their own foci of interest considering the social and political forces prevailing.

NURS 594 Advanced Seminar on Healing (3) Advanced seminar to critically analyze current thinking and practice applications that fall under the heading of "healing." Credit/no credit only.

NURS 595 Synthesis of Nursing Science (3) Provides a forum for critical analysis, integration, and synthesis of core content provided during the initial year of the Ph.D. in Nurse Scientist Program and further planning of program of study. Prerequisite: completion of first year required courses of doctoral program. Credit/no credit only.

NURS 596 Colloquium, Scientific Conduct, and Dissertation Seminar (2, max. 12) Focuses on group discussion of issues pertinent to research conduct. Scientific conduct issues include guidelines relevant to designing, conducting, and disseminating

research; risk management in reference to scientific misconduct and negligence; and collaborative and peer-review skills relevant to intra- and interdisciplinary research.

NURS 599 Selected Readings in Nursing Science (1-3, max. 18) Analysis of synthesis of selected readings with faculty mentor. Credit/no credit only. Prerequisite: permission of instructor.

Nursing Clinical

NCLIN 402 Practicum: Care in Illness I (4) Provides supervised nursing care to individuals and families with acute and chronic illness. Emphasis on increasing skill in systematic assessment, developing competency in selected nursing therapies, and developing role as care agent for persons of all ages. Credit/no credit only.

NCLIN 406 Practicum: Care in Illness II (4-10, max. 10) Provides supervised nursing care to individuals and families with acute and chronic illness. Emphasis on increasing skill in systematic assessment, developing competency in selected nursing therapies, and developing role as caring agent for persons of all ages. Credit/no credit only.

NCLIN 409 Partnerships in Community Health (6) Analysis, application, and evaluation of nursing process at level of community. Formulation of community health diagnoses as basis for community-level interventions to maintain and promote biopsychosocial health, prevent disease, and enable self care by the community. Analysis of nursing's role in community health/mental health.

NCLIN 411 Transition to Professional Practice (12-20) Intensive field work in a nursing care specialty focusing on critical examination, synthesis, and evaluation of professional nursing care. Client populations include individuals and/or groups reflecting diverse settings, ages, ethnic communities. Emphasizes mastering theoretical concepts, applying research findings, improving skill competency, developing leadership capabilities.

NCLIN 414 Practicum: Health Promotion (4) Provides the opportunity to apply the nursing process to promote health and prevent illness. Integrates the perspectives of the client with the current scientific bases for health promotion. Incorporates analysis of the effect of multiple dimensions on health and wellness. Credit/no credit only. Corequisite: NURS 413. Offered: A.

NCLIN 500 Comprehensive Health Assessment (2) Provides framework for systematic collection, interpretation, and communication of data to determine health status of individuals. Develops beginning advanced practice competence in history-taking and screening physical examination of adolescents and adults. Analysis of multiple health indicators to determine health status. Credit/no credit only. Prerequisite: permission of instructor.

NCLIN 501 Diagnostic Health Assessment (1-5, max. 5) Provides framework for learning symptom analysis, selection/performance of examination techniques, and selection/interpretation of common diagnostic procedures. Develops beginning competence in focused history-taking and directed physical exam to evaluate common health problems in adolescents and adults. Credit/no credit only. Prerequisite: NCLIN 500, which may be taken concurrently.

NCLIN 502 Pediatric Health Assessment and Promotion (1-5, max. 5) Gives experience in obtaining a health history and performing a physical assessment of infants, children, and adolescents. Interviewing techniques, problem-oriented charting, and a systems approach to the physical examination. Emphasis on screening principles, health promotion, and wellness care for children/families.

Credit/no credit only. Prerequisite: permission of instructor.

NCLIN 503 Advanced Fieldwork Community Health Nursing (2-6, max. 12) Guided experience in delineating nursing roles in community settings. Development of a philosophy of community health nursing. Application of core concepts pertaining to health, ethics, care, and community. A minimum of four hours of guided experience weekly. Prerequisite: graduate standing and permission of instructor.

NCLIN 505 Diagnostic Testing and Monitoring in Serious Illness (2) Lecture, discussion, and laboratory sessions to develop students' assessment, diagnostic, and monitoring expertise in the care of acutely ill individuals. Students refine clinical decision-making skills, apply specialized assessments, gain insight into clinical experts' critical thinking, and refine assessment knowledge for a specific patient population. Prerequisite: NCLIN 501 or equivalent.

NCLIN 508 Seminar in Group Treatment (1) Seminar on the theoretical basis for working with various treatment groups. Analysis of selected approaches to group treatment. Analysis of leader responsibilities and functions in the development of therapeutic group experiences.

NCLIN 509 Teaching Methods and Practicum in Nursing Education (3) Guided experience in selected teaching-learning situations in nursing, in both classroom and clinical situations. Identification, analysis, and solution of teaching-learning problems in clinical nursing. Minimum of seven hours of guided experience weekly.

NCLIN 512 Advanced Practicum in Parent and Child Nursing I (2-12, max. 25) Clinical seminar and practicum provide opportunities to develop advanced nursing practice competencies in the care of women, parents, children, and/or adolescents. Application of theory and principles to direct care, consultation, education and/or care coordinator roles with individuals and/or groups.

NCLIN 525 Managing Clinical Effectiveness Within Care Systems (1) Optimizing person-provider clinical therapeutic transactions at multiple levels of care systems complexity and population aggregation. Emphasis on designing, managing and evaluating clinical effectiveness and efficiency within care systems. Prerequisite: NURS 524 or permission of instructor.

NCLIN 526 Managing Organizational Effectiveness Within Care Systems (1) Analysis of management strategies for attaining effective and efficient organizational structures and processes within health care systems. Prerequisite: NURS 524 or permission of instructor.

NCLIN 528 Advanced Practice in Care Systems Management (4-8, max. 8) Analysis of relationship between theory and practice in real-time conditions. Comparative analysis of structure and behavior of management approaches. Prerequisite: core courses in Care Systems Management.

NCLIN 540 Relationship Development and Intervention (3-, max. 15) Clinical work with infant and toddlers and their parents in relation to infant disorders of affect, self-regulation, attachment trauma, and stress disorders. Reflective supervision in groups and individually required. Restricted to candidates in the Infant Mental Health Certificate Program. Credit/no credit only. Offered: AWSpS.

NCLIN 541 Specialization in Clinical Practice (1-10, max. 10) Clinical fieldwork and seminar opportunities to synthesize, apply, evaluate, and communicate knowledge about a specific domain of advanced clinical practice. Clinical fieldwork emphasizes the refinement of assessment and diagnostic

skills. Seminars focus on critical analysis of clinical issues. Students develop a professional portfolio to highlight their expertise.

NCLIN 544 Roles in Clinical Practice (1-10, max. 20) Clinical fieldwork emphasizes analytical skills in the implementation of intervention and evaluation strategies for practice, education, and/or administration. Seminars focus on critical analysis of role-related issues. Students refine their professional portfolio of expertise. Credit/no credit only. Prerequisite: NCLIN 541.

NCLIN 546 Management of Acute and Chronic Wounds (2-3) Evaluation and treatment of acute and chronic wounds. Includes wound healing physiology, pathophysiology, patient evaluation, evaluation of environmental and systemic factors related to risk of impaired healing, methods for assessing wound progress, and evidenced based treatment options. Optional one credit clinical and lab experience. Prerequisite: graduate standing or permission of instructor.

NCLIN 549 Nurse Practitioner Clinical Practicum I: Adults/Older Adults (1-10, max. 10) Clinical fieldwork and seminar in advanced nursing practice with individual/groups. Students practice under clinical preceptor supervision. Focuses on data collection/critical thinking related to health status and threats to health, incorporating knowledge from the biological, behavioral, and social sciences. Credit/no credit only. Prerequisite: permission of instructor, or NCLIN 501 or equivalent.

NCLIN 550 Nurse Practitioner Clinical Practicum II: Adults/Older Adults (1-10, max. 10) Clinical fieldwork and seminar in advanced practice nursing. Builds on NCLIN 549, emphasizing critical thinking related to the differential diagnosis/management of health problems and human responses. Students practice under clinical preceptor supervision. Addresses selected role issues in advanced practice nursing. Credit/no credit only. Prerequisite: NCLIN 549 or permission of instructor.

NCLIN 551 Advanced Practice Nursing Clinical Practicum III: Adults/Older Adults (1-10, max. 10) Clinical fieldwork and seminar in advanced practice nursing. Builds on NCLIN 550, emphasizing the integration and application of previous learning in the care of people with multiple health problems. Students practice under preceptor supervision. Addresses selected role issues in advanced practice nursing. Credit/no credit only. Prerequisite: NCLIN 550 or permission of instructor.

NCLIN 552 Nurse Practitioner Clinical Practicum IV: Adults/Older Adults (1-10, max. 10) Intensive clinical experience in which students integrate previous learning to assume responsibility for care of older adults and/or adults with multiple health problems. Students practice as an advanced practice nurse supervised by a preceptor, assuming increasing responsibility for planning/implementing therapies and for documenting/evaluating outcomes. Credit/no credit only. Prerequisite: NCLIN 551.

NCLIN 553 Seminar in Primary Care I: Health Promotion (2) Weekly seminars with supervised field study within selected primary-care and wellness settings. Emphasis on health assessment and strategies related to improving health in people of all ages. Analysis of, and counseling on, life-styles, nutrition, physical fitness, stress management, self-care, and prevention. Credit/no credit only. Prerequisite: graduate standing, permission of instructor.

NCLIN 554 Occupational Health Nursing: Practice Issues (2-6, max. 6) In-depth overview of occupational health and safety. Includes discussion of American workforce, work environments, regulations, and political issues; identifies trends which affect practice; introduces prevalent health disorders which

result from occupational exposure; examines and applies nursing theory to the prevention and control of occupational injuries and illnesses.

NCLIN 556 Seminar in Primary Care II: Management of Common Health Concerns (3) Focus on research questions, patient presentations, and group discussions drawn from field study. Supervised clinical field study within selected primary health-care settings and weekly seminar discussions related to theory presented in NURS 510. Credit/no credit only. Prerequisite: graduate standing and permission of instructor.

NCLIN 557 Seminar in Primary Care III: Management of Common Health Concerns (3) Focus on research questions, patient presentations, and group discussions drawn from field study. Supervised clinical field study within selected primary health-care settings and weekly seminar discussions related to theory presented in NURS 510. Credit/no credit only. Prerequisite: graduate standing and permission of instructor.

NCLIN 558 Occupational Health Nursing: Program Development (2-6, max. 6) In-depth examination of occupational health and safety programs including organizational analyses, budgeting, marketing, case management, and workers' compensation; also political, economic, legal, and ethical issues. Focuses on development, implementation, and evaluation of programs including health promotion, EAP, and health surveillance. Applies public health and nursing sciences to selected work-related problems.

NCLIN 559 Seminar in Primary Care IV: Management of Common Health Concerns (3-5) Focus on research questions, patient presentations, and group discussions drawn from field study. Supervised clinical field study within selected primary care settings and weekly seminar discussions related to theory presented in NURS 510. Credit/no credit only. Prerequisite: permission of instructor; nurse practitioner students register for NURS 510 concurrently.

NCLIN 560 Seminar in Primary Care V: Complex Clinical Decision Making ([1-11]-, max. 11) Seminar with associated field study. Synthesis of advanced knowledge base and clinical family nurse practitioner skills with effective management of complex clinical problems. No grade given until 11 total credits completed. Credit/no credit only. Prerequisite: graduate standing and permission of instructor.

NCLIN 566 Advanced Clinical Practicum in Psychosocial Nursing (1-6, max. 12) Seminar and associated field study. Focuses on development of advanced clinical and role-function skills. Provides practice in settings with selected populations corresponding to subspecialty interests with supervision by expert clinicians. Seminar uses inferential process leading from the observed to the conceptual. Credit/no credit only. Prerequisite: NURS 556, NURS 559, NURS 567.

NCLIN 569 Practicum in Biopsychosocial Assessment (2/4, max. 4) Practicum in either physical health assessment with opportunity to refine skills in taking health history and performing physical examinations or psychosocial assessment with opportunity to refine skills in psychosocial assessment interview, mental status examination, standardized clinical assessment instruments. Credit/no credit only. Prerequisite: NCLIN 500 and NCLIN 501, NURS 549 which may be taken concurrently.

NCLIN 581 Seminar in Advanced Community Health Nursing (2-6, max. 6) Focuses on construction and analysis of community health nursing theories/models, presentation of community problems, and interventions/evaluation strategies. Synthesizes nursing theories and organizational/community concepts into conceptual framework of CHN practice.

Analyzes research questions that emerge from field of study. Prerequisite: NURS 563, NURS 576, and NURS 578 or permission of instructor.

NCLIN 599 Independent Study Clinical Practicum (1-12, max. 25) Clinical practicum to develop advanced-practice nursing skills in care of individuals, groups, communities, or care systems. Individually arranged with faculty member for application of theory and principles to direct care, consultation, education or care coordinator roles. Prerequisite: matriculated MN student or post-masters student, and permission of academic adviser and instructor. Offered: AWSpS.

Nursing Methods

NMETH 403 Introduction to Research in Nursing (3) Organization of the structure of nursing knowledge through research. Concepts and processes of research utilized in the investigation of nursing science.

NMETH 499 Undergraduate Research (1-5, max. 12) Supervised individual scholarly inquiry on a specific nursing problem.

NMETH 520 Methods of Research in Nursing (3) Research process as it applies to nursing. Use of the literature in building theoretical rationale. Selection of appropriate methods. Presentation of findings. Minimum of two laboratory hours weekly. Prerequisite: a course in statistics.

NMETH 521 Methods of Research in Nursing (2) Continuation of 520, with emphasis on methods of research applied to the solution of problems in all fields of nursing.

NMETH 575 Methodological Issues in Family Research (3) Emphasizes research with the family as unit of analysis. Examines patterns of family functioning in relation to responses to health situations. Reviews family units from generational and intergenerational perspectives. Critiques methods assessing dyadic and triadic relationships and therapeutic interventions on family outcomes. Prerequisite: permission of instructor.

NMETH 580 Methodological Perspectives in Nursing Inquiry (5) Allows students to translate philosophical and theoretical perspectives into research methodologies. Foci will include: the relationship of theoretical perspectives to methodologies; the methodological issues among and between varying schools of thought (including contemporary empiricist, interpretive, and critical/postmodern); and how the methodologies influence choices of research design and methods.

NMETH 581 Observational Research Methods (2-6, max. 6) Examines observational methods for conducting verbal and nonverbal behavioral research. Emphasizes critical analysis and rigor in research question formulation, measurement decisions, coding scheme development, data collection, and analysis and interpretation of data. In-depth application of observational method optional. Prerequisite: graduate standing and basic research methods course or permission of instructor. Offered: W.

NMETH 582- Interpretative Methods in Nursing Research (4-) Seminar and field practicum for interpretative research methods. Study on health-related issues using a selected tradition in interpretative methods. Prerequisite: permission of Instructor.

NMETH -583 Interpretative Methods in Nursing Research (-4) Seminar and field practicum for interpretative research methods. Study on health-related issues using a selected tradition in interpretative methods. Prerequisite: permission of Instructor.

NMETH 584 Methods: Physiologic Measures (4) Exploration of the measurement of physiologic functioning in human and animal models. Examples include biochemical and biophysical measure. Students develop beginning skills with one physiologic measure. Prerequisite: physiology and chemistry and permission of instructor.

NMETH 585 Meta-Analysis (4) Meta-analysis examined as a method to synthesize research. Overview of meta-analytic methods; description of the collection, analysis, synthesis, and reporting of studies; explanation of statistical calculations; and discussion of reliability and validity measures incorporated into meta-analytic design. Prerequisite: permission of instructor.

NMETH 586 Instrument Development and Testing (4) Includes measurement theory, reliability, validity, level of measurement, and the process of scale development, modification, or translation. Students learn to evaluate, develop, modify, translate, and test instruments for use in research. Prerequisite: student in health science discipline and permission of instructor.

NMETH 587 Methods of Theory Testing: Causal Modeling with Path Analysis and Structural Equation Modeling (4) Includes causal inferencing and theory testing through causal modeling with path analysis and structural equations modeling. Students learn to evaluate theory models and to apply the content by developing and testing models. Prerequisite: student in health science discipline and permission of instructor.

NMETH 590 Special Topics in Nursing Research (2-3, max. 9) Examination of a specific research method, with evaluation of appropriateness, efficiency, rigor of measurement, and potential for inference for nursing research. Prerequisite: minimum of 5 credits of basic nursing research methodology at graduate level and permission of instructor.

NMETH 591 Clinical Outcome Research I (4) Examination of philosophical, analytical, and methodological decisions and processes in evaluating the effectiveness of interventions and programs designed to enhance health outcomes. Alternative designs are addressed in consideration of underlying assumptions about prevention/causation research; clinical human phenomena; design sensitivity; and threats to validity. Theory development emphasized. Prerequisite: permission of instructor.

NMETH 592 Clinical Outcome Research II (2-4, max. 4) Application and evaluation of philosophical, methodological, and analytical concepts and issues examined in 591. Two modules are offered: a) case study and small-n studies and b) large-n studies. Students demonstrate application of decision-making process involved in development of clinical outcome study. Prerequisite: permission of instructor.

NMETH 593 Time Series and Sequential Analysis (4) Basic introduction to terminology and methods of time series and sequential analysis as applicable to nursing-relevant processes in the form of samples of interval and categorical data collected over time; autocorrelation, autoregression, spectrum, socinor, Markovian, lag sequential, and log-linear analyses. Development of practical analysis skills on real data sets. Prerequisite: permission of instructor. Credit/no credit only.

NMETH 598- Special Projects ([1-12]-, max. 12) Fulfills the requirements of the non-thesis option for Master's students in nursing. Projects involve scholarly inquiry with in-depth focused analysis, culminating in a written product/report for dissemination. Credit/no credit only. Prerequisite: NMETH 520 and NMETH 521 or permission of instructor.

NMETH 600 Independent Study or Research (*) Credit/no credit only.

NMETH 700 Master's Thesis (*) Credit/no credit only.

NMETH 800 Doctoral Dissertation (*) Credit/no credit only. Prerequisite: permission of Supervisory Committee chairperson or graduate program adviser.

College of Ocean and Fishery Sciences

Dean

Arthur R.M. Nowell
207 Ocean Sciences

Associate Dean

Ken Chew

General Catalog Web page:

www.washington.edu/students/gencat/academic/College_Ocean_Fish.html

College Web page: www.cofs.washington.edu

The marine environment has been a dominant factor in the history of the Pacific Northwest from the time of the first Native American settlements to the modern days of aquaculture, container ships, and waterfront condominiums. It is not surprising, therefore, that the University of Washington has a long tradition of commitment to teaching, research, and public service in subjects related to marine and freshwater activities.

The College of Ocean and Fishery Sciences comprises five of the major units of the University in the marine and freshwater sciences: the Applied Physics Laboratory; the Schools of Aquatic and Fishery Sciences, Marine Affairs, and Oceanography; and the Office of Marine Environmental and Resource Programs, which includes the Washington Sea Grant Program. Each of the units of the College focuses on a difference aspect of the aquatic environment, but there is much overlap of interests.

The College offers both undergraduate and graduate instructional programs in fisheries and oceanography, and graduate programs in marine affairs. For undergraduates, it is easy to pursue joint undergraduate degrees with departments such as Zoology, Chemistry, and Geology in the College of Arts and Sciences. College faculty, staff, and students carry out research in oceans, estuaries, and freshwater lakes and rivers all over the world. Facilities for research and teaching range from ocean-going vessels to well-equipped laboratories and classrooms.

The College also supports career-oriented resources for students to complement traditional course work and research. An annual Career Fair, held each February, brings more than 30 potential employers to campus to meet with students and discuss career possibilities and employment opportunities. A well-equipped Career Center is available for students, providing information about career planning, résumé preparation, and job opportunities in the marine and freshwater sciences. *Northwest Water Work*, a semi-monthly summary of current employment opportunities and internships available in water-related areas, is published by the College and made available free of charge to students. Internships are encouraged as a way to help students bridge the transition from the classroom to employment after graduation. The College also supports educational outreach activities and innovative learning technologies.

In 1999, the College had 200 undergraduate and 250 graduate students enrolled, a faculty of 198 mem-

bers, and a total budget of \$60 million, making it one of the largest institutions of its kind in the nation.

The School of Aquatic and Fishery Sciences is concerned with wise management of fish and shellfish stocks, ecological relationships between aquatic organisms and their environment, culture of aquatic plants and animals, and impacts of human population pressures on the aquatic environment.

The School of Oceanography carries out research and teaching on the physical, chemical, geological and geophysical, and biological processes in the ocean, and interactions of the ocean with the earth, the biosphere, and the atmosphere. It is concerned with the study of ocean currents and mixing, life in the sea, the chemical composition and properties of seawater, the sediments and rocks beneath the sea, and the geophysics of the sea floor. It offers both undergraduate and graduate degrees.

The School of Marine Affairs is concerned with policy and institutional issues related to the ocean. It combines natural sciences and engineering with law, economics, international affairs, and public administration. Marine affairs, coastal zone management, ports and marine transportation, atmospheric and marine policy, living marine resources, and international law of the sea are all part of the School's teaching and research programs. It offers a Master of Marine Affairs degree.

The Applied Physics Laboratory is a research and development unit with strong capabilities in marine science and technology, acoustic sensors and sound propagation, marine instrumentation, and polar science and technology. No degrees are offered, but a regular seminar series is presented. APL faculty members with joint appointments in other University departments teach courses and advise graduate students on theses. Part-time employment for students, including a program offering four years of support to students who contemplate a career in engineering or science, is also provided.

The Washington Sea Grant Program is a component of the National Sea Grant Program which was created by Congress to enhance the wise use and protection of the nation's marine resources through coordinated efforts in research, education, and public service. The Washington Sea Grant Program is administered as a division of the College but has additional statewide and multi-institutional responsibilities. It funds research and education throughout the state; supports advisory services; presents workshops, short courses, and lectures; and produces publications. The University of Washington was one of the first four universities in the country designated in 1971 as Sea Grant Colleges in recognition of outstanding sustained programs in research, education, and advisory services in the marine area.

Aquatic and Fishery Sciences

116 Fishery Sciences

General Catalog Web page:

www.washington.edu/students/gencat/academic/Fisheries.html

School Web page: www.fish.washington.edu

The School of Aquatic and Fishery Sciences, established in 1919, is the largest and most diverse academic fisheries program in the United States. Students benefit from our faculty, whose breadth of expertise includes marine biology, freshwater ecology, habitat restoration, quantitative fishery management, invertebrate and finfish aquaculture, and a number of disciplines related to physical, biological

and societal processes that bear on growing issues of fisheries conservation. Faculty and students in the School draw upon a wide range of disciplines including biology, botany, chemistry, genetics, mathematics, nutrition, oceanography, physics, physiology, and zoology to conduct basic and applied research in the field of fishery science.

Courses

A full spectrum of undergraduate- and graduate-level courses allows students to learn the basic principles of fishery science and to develop expertise in specialized fields such as quantitative fishery management, aquaculture, and aquatic ecology. Among the wide variety of courses open to students are ichthyology, world fisheries and aquaculture, freshwater ecosystems, forestry-fisheries interactions, marine biology, salmonid behavior and life history, fisheries stock assessment, ecology of marine fishes, conservation, and physiological effects of water pollutants.

The School cooperates with other units on campus (Biology, Civil and Environmental Engineering, Forest Resources, Marine Affairs, Quantitative Science, Program on the Environment, Zoology, and Oceanography) to offer jointly listed courses. Instruction is offered both on the main campus and at the Friday Harbor Laboratories on San Juan Island.

Advising

The Student Services Office is located in 116 Fishery Sciences. Students can receive assistance regarding curriculum, course scheduling, and graduation requirements. The Student Services Office may be reached by email at safs@u.washington.edu.

Related Programs

The Center for Quantitative Science is an interdisciplinary program sponsored by the Office of Undergraduate Education, the School of Aquatic and Fishery Sciences, and the College of Forest Resources. It is dedicated to providing high-quality instruction in mathematical and applied statistical methods for undergraduate students who major in the biological and ecological sciences, renewable resources management, and environmental studies. The philosophy of the center is to provide instruction in an atmosphere that emphasizes the use of quantitative methods to better understand a variety of scientific phenomena. Faculty represent various applied scientific disciplines within Forest Resources, Aquatic and Fishery Sciences, and other campus units. Students may wish to complete a minor in quantitative science to document their understanding of the mathematical and statistical methods used in the analysis of data.

Quantitative Ecology and Resource Management: The graduate program offered by the Quantitative Ecology and Resource Management (QERM) interdisciplinary group provides a unique opportunity for students to study the application of statistical, mathematical, and decision sciences to a broad array of terrestrial and marine ecology, natural resource management, and biometrical and mathematical biology problems. The QERM program of study leads to Master of Science and Doctor of Philosophy degrees, and is designed to attract mathematically trained students interested in working on contemporary ecological or resource-management problems from a quantitative perspective. Faculty associated with this interdisciplinary program come from thirteen campus units, including Statistics, Applied Mathematics, Forest Resources, Aquatic and Fishery Sciences, Zoology, Biostatistics, Marine Affairs, and Public Affairs. This pool of faculty talent is available to enrich the academic experience of all QERM students. Prospective students interested in QERM should contact the Graduate Program Coordinator at 206-616-9571 or qerm@u.washington.edu.

Research

The faculty, staff, and students of the School conduct basic and applied research on regional, national, and international fishery and aquatic resource problems. Research foci are grouped under major disciplines of aquatic biodiversity (e.g., microbiology, marine mammals, fish systematics), aquatic organismal processes (e.g., aquaculture, physiology, genetics, pollution/toxicology), and aquatic ecology (marine fisheries, stream/riparian ecology, policy, and management). Examples of research projects include the influence of physical oceanographic factors on recruitment of larval fish and shellfish, stock assessment of marine fishes, mechanisms controlling growth and growth efficiency in fishes, application of molecular biotechnology to the study of phylogeny, behavioral studies of homing and straying in Pacific salmon, contaminant transport through aquatic food chains, effects of forest practices on fish habitat, development of mitigation measures for restoring damaged wetlands, and approaches for reducing pollution caused by aquaculture effluent.

The School continues to coordinate long-term programmatic research on anadromous fishes. The Alaska Salmon Program, the High-Seas Salmon Program, and the Wetland Ecosystem Team, as well as individual projects collectively focus on the origins, abundance, migratory patterns, and ocean distribution of Pacific salmon and steelhead trout; spawning distribution, growth, and abundance of sockeye salmon in Bristol Bay, Alaska; and environmental (physical and biological) factors influencing salmonid productivity.

Researchers in the School collaborate with scientists within the University and with investigators employed by other agencies. The School benefits from the presence in Seattle of laboratories of the National Marine Fisheries Service, the U.S. Geological Service's Biological Resources Division, and the Washington State Departments of Ecology, Fish and Wildlife, and Natural Resources. The headquarters and research staff of the International Pacific Halibut Commission are located on the campus as well. Researchers also collaborate with the scientific staff of private companies located in the Puget Sound region and elsewhere. School of Aquatic and Fishery Sciences researchers frequently participate in inter-institutional projects that involve scientists from other states and countries.

The research program is enhanced through the activities of several institutes and centers with which the School collaborates closely.

The *Washington Cooperative Fish and Wildlife Research Unit* was established in 1967 and is part of the Biological Resources Division of the U.S. Geological Survey. The goal of the WACFWRU fish and wildlife research program is to facilitate studies on a variety of resource management issues. Base funding is provided by the USGS, the University of Washington School of Aquatic and Fishery Sciences, and the Washington Departments of Ecology, Fisheries, and Wildlife, and Natural Resources. Both graduate and undergraduate students are encouraged to participate in the research being conducted in the WACFWRU.

The *Center for Streamside Studies* is an interdisciplinary unit of the College of Forest Resources and the College of Ocean and Fishery Sciences. The center conducts research and offers classes related to management issues that surround the production and protection of forest, fish, wildlife, and water resources associated with streams and rivers in the Pacific Northwest. A minor in streamside studies is also available to students.

The *Western Regional Aquaculture Center* is one of five regional aquaculture centers supported by the U.S. Department of Agriculture. Participating scien-

tists from twelve Western states conduct research directed toward enhancement of commercial aquaculture production.

The *Olympic Natural Resources Center*, located in Forks, WA, is an interdisciplinary research and educational program related to the marine and forest resources of the Olympic Peninsula in Washington state.

Facilities and Services

The Fishery Sciences, Fisheries Teaching and Research, Marine Studies, and Fisheries Center buildings are located adjacent to the Lake Washington Ship Canal. The buildings contain classrooms, laboratories, and support facilities. The Fisheries-Oceanography Library, a branch library offering research materials in fisheries, food science, oceanography, and wildlife science, is located nearby in the Oceanography Teaching Building. The School's Fish Collection has served as a resource for teaching and varied scientific investigations for over 50 years. One of five major permanent facilities on the west coast of the United States, the collection is by far the largest in our region in terms of number of specimens, containing in excess of 230,000 juvenile and adult specimens, and well over 3.3 million eggs and larvae. Together the collections represent some 3,778 species in 1,419 genera and 310 families.

An annual run of several thousand salmon has been developed and is maintained at the School by the release of thousands of fingerlings each spring. Returning adults use a fish ladder to enter the School's Teaching and Research Hatchery facility. The run is the basis for both instruction and research on the life cycle of Pacific salmon, as well as the focus for the School's popular outreach programs, which accommodate thousands of school children annually.

The Marine Molecular Biotechnology Laboratory is jointly operated by the Schools of Aquatic and Fishery Sciences and Oceanography. Advanced equipment is available for semi-automated sequencing of DNA as well as other techniques of molecular biology.

Other laboratories provide for the study of the physiology, biochemistry, and behavior of fishes and of the effects of pollutants on fishes. Physiological facilities include equipment for surgical procedures and biochemical analysis of body fluids and tissues from both freshwater and marine fishes.

The School uses various small vessels for instructional and research work, including tow netting, purse seining, and trawling. These vessels, as well as chartered vessels, are used in regular courses or training cruises to introduce students to shipboard operations. Fisheries field stations in Alaska and at Big Beef Creek on Hood Canal provide additional opportunities for field studies and research in stream and estuarine ecology.

Financial Aid

The University of Washington Financial Aid Office administers a variety of government and University funded financial aid programs for which applicants must submit the Free Application for Federal Student Aid form (FAFSA). Please check with the Financial Aid Office, located in 105 Schmitz Hall, for applications and timelines. The FAFSA may also be obtained at any college, university, or high school in the United States.

Through the generous donations of alumni and friends, the School of Aquatic and Fishery Sciences has established a strong scholarship program to assist students. Scholarships are awarded on the basis of academic merit and other factors. The application process commences in spring; please check with the Office of Student Services for applications and deadlines to apply for scholarships.

Employment

Aquatic and fishery scientists are employed in three major sectors in the economy: public, private, and nonprofit. Jobs in the public sector are found with federal, state, county, and municipal agencies. The private sector includes fisheries and seafood companies and environmental consulting firms. Nonprofit agencies are involved in research, public policy, and public education. Much of their work is done by volunteers. Paid staff may be involved in field research, grant writing, public relations work and volunteer coordination.

One factor that has expanded the job base in aquatic and fishery sciences in recent years has to do with national policies on endangered species, marine mammals, environmental quality, and overharvesting or harvesting of nontarget species. For example, observers are required on all large commercial fishing vessels and much work is done in public agencies regarding the health of fish and shellfish stocks and the environments that support them. Much of the information gathering is done in the field and also might involve becoming familiar with important aspects of public policy and interacting with public groups.

There is a Career Center run through the College of Ocean and Fishery Sciences (COFS) located at 202 Ocean Sciences Building. In addition to collecting and disseminating job announcements, the Career Center also publishes an employment newsletter (*Northwest WaterWorks*) twice monthly, listing current openings. This publication can be picked up at Student Services. Those who are not members of the UW community may also subscribe to receive either an electronic or print version by calling 206-543-0719. Also, each winter the College organizes a Career Fair specifically for COFS students.

Graduate Program

Graduate Program Coordinator
116 Fishery Sciences, Box 355020
206-543-7457
safs@u.washington.edu

The School offers programs leading to the Master of Science and Doctor of Philosophy degrees.

Admission Requirements

Minimum requirements for admission to the graduate program in the School are a bachelor's degree from an institution of recognized standing, a GPA of 3.00 in the last two years of college work, and approval of the School and the Graduate School. Students enter the School from varied disciplines at many universities. All have in common a strong background in the sciences and mathematics. Previous training in fisheries is not required.

Applicants for the graduate program must submit a completed application form and description of their interests and objectives, GRE scores (general test only is required), transcripts of all previous college course work, three letters of recommendation, and a TOEFL score (only for applicants who are non-native English speakers). Admission is also dependent upon program resources and fit between student and program. Admissions are limited to autumn quarter. Applicants may contact the School of Aquatic and Fishery Sciences Student Services Office for complete application materials, including a list of faculty and their research interests. All application materials are also available on the School's Web page at www.fish.washington.edu.

Master of Science

Applicants without a master's degree from a recognized school are expected to start at the master's

level. A minimum of 45 quarter credits, including completion of a thesis research project, leads to the Master of Science degree. A minimum of 45 400-level or graduate credits must be earned, including successful completion of the School of Aquatic and Fishery Sciences core curriculum plus 18 credits of FISH 700 (Thesis Research). A seminar on results of the research and oral defense of the thesis are required for graduation. The degree must be completed within six years of initial enrollment.

Doctor of Philosophy

The student must complete at least three years of graduate study (90 credits) and complete a dissertation to earn the Ph.D. Completion of a master's degree program may be applied toward one year of the doctoral program. The core classes must be taken if the student has obtained a master's degree from another program or received a master's degree from the School of Aquatic and Fishery Sciences under a different set of requirements than those outlined here. In some instances, students who have initially been accepted into a master's program will be allowed to proceed directly to the Ph.D. Preparation for a Ph.D. dissertation requires registration for 27 credits of FISH 800 (Dissertation Research). Requirements must be completed within 10 years.

Financial Aid

General information on graduate student support is available from the Office of Student Financial Aid, 105 Schmitz. The majority of first-year graduate students are offered research assistantships by appropriate faculty members, depending on the availability of research funding. The School of Aquatic and Fishery Sciences also has a limited number of fellowship opportunities for outstanding entering students. Other students may have their studies supported by the agency for which they work or they may be international students with scholarships from their home countries.

Graduate applicants are urged to discuss their financial needs with professors in their potential major fields during the early stages of the graduate application process. The graduate applicant will automatically be considered for any fellowships, research assistantships, or teaching assistantships available from the School of Aquatic and Fishery Sciences.

Faculty

Chair

David A. Armstrong

Professors

Armstrong, David A. * 1978; MS, 1974, Oregon State University; PhD, 1978, University of California (Davis); crustean ecology and fisheries, estuarine habitat protection, impacts on dragging, pesticides.

Bare, B. Bruce * 1969, (Adjunct); MS, 1965, University of Minnesota; PhD, 1969, Purdue University; forest land management and valuation, taxation, finance, management science.

Brown, George W. * 1967, (Emeritus); PhD, 1955, University of California (Berkeley); fish biochemistry and biochemical ecology.

Burgner, Robert L. * 1956, (Emeritus); PhD, 1958, University of Washington; salmon ecology and salmon biology.

Chew, Kenneth K. * 1962, (Emeritus); PhD, 1962, University of Washington; shellfish biology and aquaculture; Director, Western Regional Aquaculture Center.

Conquest, Loveday L. * 1976; PhD, 1975, University of Washington; statistics in forestry, fisheries, and environmental pollution monitoring.

Dickhoff, Walton W. * 1977; PhD, 1976, University of California (Berkeley); fish physiology, endocrinology, aquaculture.

Erickson, Albert W. * 1974, (Emeritus); PhD, 1964, Michigan State University; wildlife biology and marine mammals.

Francis, Robert C. * 1983; PhD, 1970, University of Washington; fisheries management, marine ecosystem dynamics, fisheries oceanography and global climate change.

Gallucci, Vincent * 1976; PhD, 1971, North Carolina State University; stock assessment, fisheries management.

Gunderson, Donald R. * 1978; PhD, 1975, University of Washington; marine fisheries, stock assessment, recruitment processes.

Halver, John E. * 1949, (Emeritus); PhD, 1953, University of Washington; fundamental fish nutrition, physiology and metabolism, nutrients balance in feed formulations.

Hilborn, Ray * 1987; PhD, 1974, University of British Columbia (Canada); stock assessment, population dynamics, fisheries policy.

Karr, James * 1991; PhD, 1970, University of Illinois; stream and watershed ecology, tropical forest ecology, conservation biology, environmental policy.

Kocan, Richard M. * 1978, (Emeritus); PhD, 1967, Michigan State University; aquatic toxicology, fish and wildlife diseases.

Landolt, Marsha L. * 1975; PhD, 1976, George Washington University; fish and shellfish disease; aquatic toxicology.

Liston, John * 1957, (Emeritus); PhD, 1955, University of Aberdeen (UK); food science, marine microbiology.

Mathews, Stephen B. * 1972, (Emeritus); PhD, 1967, University of Washington; quantitative fishery management.

Miles, Edward L. * 1974, (Adjunct); PhD, 1965, University of Denver; international law and organization; science, technology, and international relations; marine policy.

Miller, Bruce S. * 1971, (Emeritus); PhD, 1969, University of Washington; life history and ecology of marine fishes, especially early life history.

Miller, Marc * 1979, (Adjunct); PhD, 1974, University of California (Irvine); maritime anthropology, cognitive anthropology and social/cultural change.

Naiman, Robert J. * 1988; PhD, 1974, Arizona State University; forest stream ecosystems, aquatic landscape dynamics.

Pietsch, Theodore W. * 1978; PhD, 1973, University of Southern California; systematic ichthyology, zoogeography, behavior, functional morphology, biotic survey.

Pigott, George M. * 1965, (Emeritus); PhD, 1963, University of Washington; food engineering.

Quinn, Thomas P. * 1986; PhD, 1981, University of Washington; fish ecology, fish behavior, ecology, evolution.

Royce, William F. 1983, (Emeritus); PhD, 1943, Cornell University; applications of fisheries science.

Seymour, Allyn H. 1962, (Emeritus); PhD, 1956, University of Washington; radioecology.

Skalski, John R. * 1987; PhD, 1985, Cornell University; population estimation, environmental statistics and sampling, effects assessment.

Smith, Lynwood S. * 1965, (Emeritus); PhD, 1962, University of Washington; fish physiology.

Swartzman, Gordon Leni * 1973, (Research); PhD, 1969, University of Michigan; ecological modeling, quantitative natural resources management.

Taub, Frieda B. * 1959, (Emeritus); PhD, 1959, Rutgers University; ecology.

Wissmar, Robert C. * 1972; PhD, 1972, University of Idaho; freshwater ecosystems, fish ecology, and trophic dynamics, river restoration.

Associate Professors

Anderson, James J. * 1981; PhD, 1977, University of Washington; biomathematics, ecology, fisheries oceanography, toxicology, fish protection at power plants.

Bolton, Susan M. * 1992, (Adjunct); MS, 1979, University of North Dakota, MS, 1985, PhD, 1991, New Mexico State University; hydrology, watershed management, stream restoration, ecological engineering.

Grue, Christian E. * 1989; PhD, 1977, Texas A&M University; wildlife toxicology, wildlife science.

Herwig, Russell P. * 1983; PhD, 1989, University of Washington; environmental applied aquatic microbiology, bioremediation-related microbiology.

Huppert, Daniel D. * 1987, (Adjunct); PhD, 1975, University of Washington; economics and management of natural resources, especially marine fisheries.

Punt, Andre * 2001, (Research); PhD, 1991, University of Cape Town (South Africa); methods for assessing and managing marine renewable resource populations, Bayesian assessment.

Sibley, Thomas H. * 1978; PhD, 1976, University of California (Davis); environmental effects on biota.

Simenstad, Charles A. * 2001, (Research); MS, 1971, University of Washington; estuarine/coastal ecology, food web structure, juvenile salmon ecology, wetland restoration.

VanBlaricom, Glenn R. * 1993; PhD, 1978, University of California (San Diego); marine wildlife, community ecology.

Assistant Professors

Beauchamp, David A. * 1987; PhD, 1987, University of Washington; aquatic community ecology, bioenergetics, food web modeling, predator-prey, interactions, behavior.

Friedman, Carolyn * 2001; PhD, 1990, University of California (Davis); examination of infectious and non-infectious diseases of wild and cultured marine invertebrates.

Horne, John K. * 2000, (Research); PhD, 1995, Memorial University of Newfoundland (Canada); spatial ecology, predator-prey interactions, fisheries acoustics.

Parrish, Julia * 1990; PhD, 1988, Duke University; animal aggregation, fish schooling, seabirds, marine conservation, by catch.

Schindler, Daniel E. * 1997, (Adjunct); PhD, 1995, University of Wisconsin; ecosystem and community ecology - especially of aquatic systems.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

FISH 401 Systematics, Zoogeography, and Evolution of Fishes (5) NW Advanced course in ichthyology with emphasis on living bony fishes of the world; past and present biodiversity, evolutionary history, classification, comparative morphology, geographic distribution, and historical zoogeography. Recommended: 10 credits biological science.

FISH 404 Diseases of Aquatic Animals (5) NW Overview of communicable and noncommunicable diseases that affect fish and shellfish. Major pathogens of free-ranging as well as captive animals discussed. Students learn to recognize, prevent, and control economically and ecologically important disease syndromes. Recommended: 10 credits biological science.

FISH 405 Molluscan Aquaculture and Fisheries (5) NW Biology, ecology, management, and economic importance of oysters, clams, scallops, mussels, abalones, cephalopods, and other mollusks. Emphasis on techniques for production through aquaculture as well as harvest strategies for wild stocks. Field trips. Recommended: 10 credits biological science.

FISH 406 Crustacean Fisheries and Aquaculture (4) NW Biology, ecology, management, and economic importance of shellfish, emphasizing crustaceans. Wild populations and aquaculture production of important phyla discussed. Field trips. Recommended: 10 credits biological science.

FISH 415 Fish Physiology (5) NW Examines physiological principles and adaptations of fish for growth, metabolism, salt and water balance, digestion, locomotion, special senses, stress, reproduction, and neural and endocrine control mechanisms. Emphasis on environmental physiology and evolution. A nine-week laboratory component involves original experiments with juvenile salmon in hatchery on campus.

FISH 420 Life History of Marine Fishes (5) NW Modes of reproduction, spawning, development, identification and ecology of eggs and larvae. Food and feeding, aging, subpopulation identification, movements, species assemblages/habitat associations of juvenile and adult fishes. Recommended: FISH 311.

FISH 428 Restoration of Fish Communities and Habitats in River Ecosystems (5) NW Examines opportunities to encourage recovery through natural developmental processes that enhance the complexity of habitats and connectivity between habitats in the river basin. Class discussion and participation on field trips focuses on current restoration concepts for ecosystems, designs of projects, and case studies. Recommended: fish ecology and hydrology courses. Offered: odd years; Sp.

FISH 429 Seminar in Streamside Studies (1, max. 6) Discussion by invited speakers on current research and issues related to streamside studies. Speakers are a mix of on-campus and off-campus experts. Credit/no credit only. Offered: jointly with CFR 429; AWPsp.

FISH 430 Biological Problems in Water Pollution (3/5) NW Ecological risk assessment of toxic chemicals and problems associated with electrical power production. Considers safety and toxicity and effects on individuals, populations, and communities.

Laboratory covers simulation models of chemical exposure and community effects. Recommended: senior or graduate standing in fisheries, engineering, or related field. Offered: jointly with CEE 461.

FISH 434 Ecological Effects of Waste Water (3/5) NW Principles of aquatic ecology that relate to causes and effects of water quality problems in lakes and streams. Population growth kinetics, nutrient cycling, eutrophication; acidification, oxygen/temperature requirements, and effects of various wastes on aquatic animals. Offered: jointly with CEE 462; A.

FISH 438 Biological Monitoring and Assessment (5) NW Explores the technical questions (conceptual, sampling, and analytical), the rationale, policy relevance, and legal basis for tools—existing and needed—to assess ecological health. Prepares students to see the biological components of ecological systems in diverse ways. Offered: jointly with BIOL 438.

FISH 439 Attaining a Sustainable Society (1/3, max. 3) I&S/NW *Karr* Discusses diverse environmental issues, the importance of all areas of scholarship to evaluating environmental challenges, and the connections between the past and the future, to reveal integrative approaches to protect the long-term interests of human society. Offered: jointly with ENVIR 439.

FISH 444 Conservation Genetics (5) NW Advanced genetic concepts and methods related to aquatic species' conservation and management. Includes genetic diversity, small populations and fragmentation, genetic viability, management of wild and captive populations (including aquaculture), reintroductions, hatchery-wild interactions and forensics. Labs include molecular techniques. Recommended: GENET 371.

FISH 447 Watershed Ecology and Management (3) NW Explores fundamental ecological processes at the watershed scale, identifies human-induced changes to ecological systems, and discusses approaches to improve watershed management. Includes lectures, field trips, and discussions with organizations and agencies about how they are addressing ways to improve watershed management. Offered: W.

FISH 450 Salmonid Behavior and Life History (3/5) NW Marine distribution, homing migration, and spawning behavior of adult salmon: incubation, emergence, migration, and residence of fry; fingerling distribution and residence with reference to species interaction and population evolution. Recommended: FISH 311. Offered: A.

FISH 451 Reproduction and Early Development of Fishes (4) NW Reproductive development, sexual maturation, spawning and incubation in selected fish species; embryology and developmental traits of different salmonid and non-salmonid species; practical experience in artificial spawning techniques, egg handling and care, incubation techniques and the handling of newly-hatched alevins. Recommended: FISH 310; FISH 311.

FISH 452 Aquatic Animal Nutrition (5) NW Nutritional requirements, nutrient interactions of aquatic animals in the wild or raised in captivity for purposes such as stock enhancement, food production, the aquarium/ornamental fish industry. Nutritional needs of marine mammals. Feed ingredients, formulation techniques, environmental impacts. Experimental design, completion of laboratory nutritional study. Recommended: 10 credits biological science.

FISH 453 Spatial Information Technologies in Ecosystem Sciences (3) NW *Logsdon* Introduction to the use of GPS, GIS, and Remote Sensing in the ecosystem sciences. Integrates these technologies in an applied research setting. Two overnight week-

end field trips required. Offered: jointly with OCEAN 452.

FISH 454 Aquatic Wildlife Ecology (3) NW Conceptual examination of relationships of aquatic wildlife populations (mammals, birds, reptiles, amphibians) to one another and to the aquatic realm. Application of conceptual background to contemporary high-profile issues in aquatic wildlife ecology, conservation, and management. Included is exposure to primary technical literature in the field.

FISH 455 Fish and Wildlife Toxicology (3/5) NW Overview of fish/wildlife toxicology: history of the field; regulations; methods used to assess risks contaminants pose to fish/wildlife; classes of contaminants and their direct, sublethal and indirect effects; and contemporary threats of contaminants to fish/wildlife, their habitats and prey. Includes laboratory. Offered: jointly with ESC 457; W.

FISH 456 Introduction to Quantitative Fishery Science (5) NW Conveys fundamental concepts of fish population dynamics and fishery management within context of real-world fisheries problems. Lectures discuss notation, terminology, mathematical models, fisheries principles, and case studies. Laboratory time devoted to practical applications, problems. Recommended: either MATH 125, MATH 135, or Q SCI 292; Q SCI 381. Offered: jointly with Q SCI 456; A.

FISH 457 Methods of Abundance Estimation (4) NW Methods of estimating fish abundance by direct sampling and indirectly from tagging, catch, and effort analysis. Confidence limits and bias adjustments. Design of marine fishery surveys using statistical sampling principles. Laboratory work with real fishery data and data collected during trawl sampling survey. Recommended: Q SCI 292; Q SCI 381; Q SCI 456 or FISH 456. Offered: jointly with Q SCI 457.

FISH 458 Fisheries Stock Assessment (4) NW *Francis* Emphasizes quantitative analysis of fisheries data to determine how the fishery would respond to alternative management actions. Major topics include production models, stock and recruitment, catch at age analysis, and formulation of harvest strategies. Recommended: either Q SCI 456 or FISH 456. Offered: jointly with Q SCI 458; Sp.

FISH 475 Marine Mammalogy (3/5) NW Evolution, taxonomy, physiology, life history, and behavior of marine mammals; the techniques of studying and the management and conservation of them. Recommended: 15 credits of biological science, vertebrate anatomy, and physiology, for laboratory sections.

FISH 478 Topics in Sustainable Fisheries (3, max. 9) Parrish Seminar series featuring local, national and internationally known speakers in fisheries management and conservation. Case studies. Conservation/restoration in practice. Pre-seminar discussion section focusing on select readings. Final paper. Topics may include harvest management, whaling, by-catch, salmon, marine protected areas, introduced species, citizen action, co-management, and marine ethics. Offered: jointly with BIOL/ENVIR 478.

FISH 480 Marine Resource Conservation and Management (3) I&S/NW *Gallucci, Miller* Techniques and philosophy for conservation, management and development of harvested marine populations. Emphasis on integration of ecological, sociological, and economic dimensions of institutional decision making for policy formation in uncertain environments. Offered: jointly with ENVIR 480/SMA 480.

FISH 490 Aquatic Microbiology (3/5) NW Basic principles of aquatic microbiology and aquatic microbial ecology: role and identity of aquatic microorganisms; introduction to modern methodologies for research. Laboratory work with local freshwater and marine samples for those enrolled in 5-credit section.

Recommended 15 credits of biological science, 10 credits of chemistry.

FISH 491 Aquatic Ecological Research in Alaska (12) NW Intensive, full-time research training experience where a team of students works on focused research problems guided by a group of faculty, post-doctoral, and graduate student mentors. Examines behavioral ecology, limnology, and population dynamics. Students also choose specific research questions for their own exploration. Course location: Alaska. Offered: S.

FISH 492 Friday Harbor Labs Apprenticeship (9/15) NW Intensive, full-time research training experience where teams of students work on focused research problems guided by a group of faculty, post-doctoral and graduate student mentors. Research questions vary. Course location: Friday Harbor Laboratories.

FISH 494 Capstone Project I (3-9, max. 9) Self-directed research or project under direction of a faculty member. Typically includes defining research question, determining methodology, data collection and analysis, writing a paper, and presenting findings. Course is first of two-quarter requirement for graduation for majors. May be taken concurrently with FISH 495, if approved.

FISH 495 Capstone Project II (3) Self-directed research project under direction of a faculty member. Typically includes defining a research question, determining methodology, data collection and analysis, writing a paper, and presenting findings. May be taken concurrently with FISH 494 with permission of instructor.

FISH 497 Special Topics in Fisheries (1-5, max. 5) NW One-time offerings of topics in fisheries by resident or visiting faculty.

FISH 498 Internship/Experiential Learning (1-15, max. 15) Structured, practical training in the fishing industry, government agencies and other areas utilizing fisheries, food science, or quantitative science expertise. Experiences are supervised and evaluated. Written reports required. Credit/no credit only. Offered: A/WSpS.

FISH 499 Undergraduate Research (1-15, max. 15) Individual research within the School of Aquatic and Fishery Sciences. Each project supervised by an individual faculty member. Written reports required.

Courses for Graduates Only

FISH 507 Special Topics in Fisheries (1-5, max. 15) Recommended: permission of instructor.

FISH 510 Current Topics in Genetics and Physiology (2, max. 8) Contemporary problems and issues in genetics and physiology as they relate to fisheries and aquatic sciences. Topics vary. Credit/no credit only.

FISH 511 Current Topics in Evolution, Ecology, and Behavior (2, max. 8) Contemporary problems and issues in evolution, ecology and behavior as they relate to fisheries and aquatic sciences. Topics vary. Credit/no credit only.

FISH 512 Current Topics in Quantitative Science (2, max. 8) Contemporary problems and issues in quantitative science as they relate to fisheries and aquatic sciences. Topics vary. Credit/no credit only.

FISH 513 Current Topics in Management, Conservation, and Restoration (2, max. 8) Contemporary problems and issues in management, conservation, and restoration as they relate to fisheries and aquatic sciences. Topics vary. Credit/no credit only.

FISH 514 Current Topics Aquaculture, Utilization, and Pathology (2, max. 8) Contemporary problems and issues in aquaculture, utilization, and pathology as they relate to fisheries and aquatic sciences. Topic varies. Credit/no credit only.

FISH 521 Research Proposal Writing for Graduate Students (4) Practice in reading, writing, critiquing, and evaluating research grant and contract proposals. Lecture and discussion of funding resources, structure of proposals, proposal review, evaluation criteria, and agency feedback. Examples of successful and unsuccessful grant applications. Preparing proposals and critiquing other's efforts.

FISH 522 Classical Literature of Fisheries Science and Aquaculture (2) Discussion of the classic literature of aquatic and fishery sciences. Both oral and writing communication skills stressed. Credit/no credit only. Offered: A.

FISH 525 Ecology and Behavior of Fishes (3) Basic principles of ecology and behavior (e.g., habitat associations, competition and predation, migrations and movements, reproductive patterns) as applied to fishes. Critical evaluation of current literature and fieldwork required. Recommended: 311 or equivalent or permission of instructor.

FISH 526 Advanced Fisheries Ecology II: Populations, Communities, and Ecosystems (5) Recent advances in the study of aquatic communities and ecosystems in relation to a number of contemporary issues in fisheries science and management. Focus on case histories drawn from freshwater, estuarine, and marine ecosystems. Emphasis on relationships between science and public policy in attempting to resolve these issues.

FISH 527 Aquatic Community Responses to Chemical Stress (3) Aquatic ecotoxicology; bridging the gap between physiological and ecosystem responses to toxic chemicals. Detecting effects against natural variability; altered species abundances and dominance, counter-intuitive responses. Case histories, controversies on data interpretation. Recommended: at least one course in ecology, limnology, oceanography or permission of instructor.

FISH 529 Topics in Streamside Studies (1) Discussion by invited speakers on current research related to streamside studies. Offered: jointly with CFR 529; A/WSp.

FISH 535 Aquatic Toxicology (3) Principles of toxicology applied to aquatic organisms. Recognition of physiological and biochemical responses of organisms to toxins and practical application of toxicity testing methods to identification of pollution and toxins in aquatic environment. Toxicity test design, interpretation, and data analysis. Recommended: organic or biochemistry and physiology or equivalent or permission of instructor.

FISH 542 Principles and Applications of Molecular Methods (3) Techniques of molecular analysis with emphasis on DNA methods, including PCR, DNA sequencing, RFLP, RAPD and VNTR analysis and cloning. Applications of these techniques to fisheries, aquaculture, oceanography, population and evolutionary studies, and other areas of science. Prerequisite: permission of instructor. Offered: jointly with OCEAN 574; A.

FISH 543 Molecular Techniques (4) Laboratory on DNA methods. Experiments analyzing genetic variation at the intra- and interspecific level, including one experiment of student's own design. Techniques include DNA extraction and quantitation, PCR, DNA sequencing, RFLP analysis and cloning. Prerequisite: FISH 542 or OCEAN 574 or permission of instructor. Offered: jointly with OCEAN 575.

FISH 547 Stream and River Ecology (5) Characterizations of stream and river ecosystems from a watershed perspective. Emphasis on fundamental processes affecting the structure and dynamics of aquatic communities and the riparian zone. Resource conflicts, new technologies, field trips, and class projects. Offered: jointly with ESC 547; Sp.

FISH 548 Special Topics in Streamside Studies (2, max. 6) Contemporary problems and issues in forestry, fisheries, and wildlife management in watersheds. Topics vary, yet focus on interactions of land and water resources in the forests of the Pacific Northwest. Recommended: permission of instructor. Offered: jointly with ESC 548.

FISH 552 Current Topics in Aquatic Animal Nutrition (5) Nutrient requirements of finfish, shellfish, ornamental fish, and marine mammals for growth, development, and reproduction. Fish feed formulation techniques. Critical review of historical papers and current literature in aquatic animal nutrition. Offered: Sp.

FISH 556 Mathematical Analysis in Fisheries Stock Assessment (3) Analytic approaches to stock assessment and population management applications of parent-progeny models and logistic models; biological and economic yields of natural populations; analysis of population data on computers. Recommended: Q SCI 292, 392, 456, and 483 or permission of instructor.

FISH 557 Estimation of Population Parameters (4) Statistical analysis of population data; design and analysis of mark-recapture experiments on natural populations; laboratory work on computers. Recommended: probability theory and Q SCI 292 and 483.

FISH 558 Advanced Analysis in Fisheries Stock Assessment (3) Deterministic and stochastic representations of age-dependent and size-dependent models for stock assessment; analysis of multi-species models; risk analysis and uncertainty in fisheries management strategies; analysis of population data on computers. Recommended: 456, 458, 557, or permission of instructor.

FISH 565 Marine Fish Biology (9) Taxonomy, ecology, and life history of the fishes of the San Juan Islands and northeast Pacific Ocean. Prerequisite: permission of instructor. Offered: Friday Harbor Laboratories.

FISH 578 Graduate Topics in Sustainable Fisheries (2, max. 6) Parrish Seminar series featuring local, national and internationally known speakers in fisheries management and conservation. Case studies. Conservation/restoration in practice. Post-seminar discussion section led by speaker on topics covered in lecture. Topics may include harvest management, whaling, by-catch, salmon, marine protected areas, introduced species, citizen action, co-management, and marine ethics. Offered: jointly with ZOOL 526.

FISH 581 Fishery Management: Case Studies (3) Examination of historical case studies chosen to illustrate specific fishery management problem areas. Faculty presentations occupy first half of quarter, student presentations the second half. Prerequisite: FISH 580. Offered: jointly with SMA 581.

FISH 600 Independent Study or Research (*) Credit/no credit only.

FISH 700 Master's Thesis (*) Credit/no credit only.

FISH 800 Doctoral Dissertation (*) Credit/no credit only.

uwsma@u.washington.edu

Master of Marine Affairs

The School of Marine Affairs offers an interdisciplinary program of study leading to the Master of Marine Affairs degree. Marine affairs concerns management and policy questions on the uses of the coastal and offshore regions of the ocean and their resources. The core curriculum includes courses from marine affairs, economics, law, oceanography, political science, and public affairs.

The School of Marine Affairs offers an internationally recognized master's degree program for launching careers in marine policy and administration. Students learn creative approaches to resolving marine problems and conflicts, charting rational use of living and non-living marine resources, and managing human activities on the coasts, at sea, and in estuaries, wetlands, and large inland bodies of water.

A major program objective is to prepare students for professional careers in policy making, management, teaching, and research. Breadth of study is emphasized, and all students are expected to gain familiarity with relevant aspects of the social, technological, and environmental sciences. In addition, each student is expected to develop a professional and scholarly proficiency in a particular aspect of marine affairs.

Completion of the M.M.A. program normally requires two academic years for students who have received a baccalaureate degree. During the first year, students develop a comprehensive understanding of the marine affairs field and acquire analytic skills. During the second year, a special competence is developed in an topical area of interest (e.g., ocean and coastal management, ports and marine transportation, marine environmental protection, marine resources management, ocean and coastal tourism and recreation), and a thesis is prepared and presented under the guidance of a faculty supervisory committee. Individual courses of study may be adjusted to accommodate prior experience and academic background.

Admission Requirements

Admission to the School of Marine Affairs is based on evaluation of required application materials in competition with other applicants. Required materials include Graduate Record Examination general-test scores, completed departmental supplementary information form, three letters of recommendation, official academic transcripts, and a statement of career objectives. Applicants must apply directly to, and be accepted by, the University's Graduate School. Course sequences begin each autumn quarter, and new students normally are admitted only at that time.

Financial Aid

The School of Marine Affairs has a limited number of positions for graduate student appointments as research assistants. Applicants in need of support are urged to investigate outside sources of funding.

Faculty

Chair

Marc Hershman

Professors

Allen, Craig H. 1994, (Adjunct); JD, 1989, University of Washington; marine affairs, evidence, environmental regulation.

Alverson, Dayton L. * 1982, (Affiliate); PhD, 1967, University of Washington; marine affairs.

Crutchfield, James A. * 1960, (Emeritus); PhD, 1954, University of California (Berkeley); natural resources economics, policy and management, especially marine and environmental resources.

Delaney, John R. * 1977, (Adjunct); PhD, 1977, University of Arizona; geological oceanography, origin of oceanic crust, igneous petrology.

Francis, Robert C. * 1983, (Adjunct); PhD, 1970, University of Washington; fishery oceanography, effects of climate on marine ecosystems, paleoecology, fisheries management.

Gallucci, Vincent * 1976, (Adjunct); PhD, 1971, North Carolina State University; biomathematics and population dynamics.

Heath, G. Ross * 1984, (Adjunct); PhD, 1968, University of California (San Diego); geochemistry and mineralogy of deep-sea sediments.

Hershman, Marc * 1976; JD, 1967, Temple University, LLM, 1970, University of Miami (Florida); coastal zone management law.

Miles, Edward L. * 1974; PhD, 1965, University of Denver; international law and organization; science, technology, and international relations; marine policy.

Miller, Marc * 1979; PhD, 1974, University of California (Irvine); maritime anthropology, cognitive anthropology and social/cultural change.

Olson, David J. * 1974, (Adjunct); PhD, 1971, University of Wisconsin; American government and politics (urban, state, and labor relations).

Vesper, Karl H. * 1969; PhD, 1969, Stanford University; business policy, mechanical engineering, marine studies.

Wooster, Warren S. * 1976, (Emeritus); PhD, 1953, University of California (San Diego); effects of climate change on marine ecosystems, use of scientific information in marine management.

Associate Professors

Canning, Douglas J. 1997, (Affiliate); MS, 1987, Evergreen State College; coastal zone management, public trust doctrine, global climate change and sea level rise.

Copping, Andrea * 1992, (Affiliate); PhD, 1982, University of Washington; marine environment and water quality, marine science/marine policy.

De Master, Douglas Paul * 1994, (Affiliate); PhD, 1978, University of Minnesota; marine mammals, population dynamics, conservation biology.

Duxbury, Alyn C. * 1954, (Emeritus); PhD, 1963, Texas A&M University; estuarine processes and the management of human uses of these marine systems.

Fluharty, David L. * 1983; PhD, 1977, University of Michigan; natural resource and environmental policy.

Goodwin, Robert F. 1973, (Affiliate); MA, 1972, University of Washington; geography of the coastal zone, coastal zone management, urban waterfront development.

Huppert, Daniel D. * 1987; PhD, 1975, University of Washington; economics and management of natural resources, especially marine fisheries.

Kaczynski, Włodzimierz M. * 1977; PhD, 1973, University of Gdansk (Poland); fishery economics, international joint ventures in marine fisheries, international fisheries policy.

Leschine, Thomas M. * 1983; PhD, 1975, University of Pittsburgh; marine pollution management, ocean policy studies.

Assistant Professors

Christie, Patrick 1999, (Research); PhD, 1999, University of Michigan; tropical coastal zone management.

Klinger, Terrie 1993; PhD, 1988, University of California (San Diego); marine ecology and conservation biology.

Mantua, Nathan J. * 1998, (Affiliate); PhD, 1994, University of Washington; climate change, El Niño, Southern Oscillation, climate impacts on human activities and ecosystems.

Parrish, Julia * 1990, (Adjunct); PhD, 1988, Duke University; animal aggregation, fish schooling, seabirds, marine conservation, by catch.

Ryan, Clare * 1997, (Adjunct); PhD, 1996, University of Michigan; natural resource policy and administration, environmental conflict management, water policy.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

SMA 455 Marine Business Environment in Russia and Eastern Europe (3) I&S *Kaczynski* International marine business environment of Russia and the maritime nations of East Europe; their transition process from communist to free market economic systems. Covers aspects of doing business in marine-related fields such as shipping, fisheries, shipbuilding, ports, and land infrastructures, marine tourism, and water sports. Offered: jointly with SISRE 455.

SMA 480 Marine Resource Conservation and Management (3) I&S/NW *Gallucci, Miller* Techniques and philosophy for conservation, management and development of harvested marine populations. Emphasis on integration of ecological, sociological, and economic dimensions of institutional decision making for policy formation in uncertain environments. Offered: jointly with FISH 480/ENVIR 480.

SMA 499 Undergraduate Research (1-15, max. 15) Research on assigned topics under the supervision of faculty members. Prerequisite: permission of instructor.

Courses for Graduate Students Only

SMA 500 Marine Affairs (5) *Hershman* Surveys a wide range of academic disciplines and substantive problems pertinent to interaction of human beings and the world's oceans and coasts. Management of living/nonliving resources, shipping, scientific research, pollution, recreation, and others. Lecture and discussion by invited specialists.

SMA 501 Integrated Marine Affairs Practice (3) Introduction to the practice of integrated assessment in marine affairs through the use of case studies and group analysis projects. Prerequisite: SMA 500 plus two of the following: SMA 519, SMA 536, SMA 591, or permission of instructor. Offered: A.

SMA 505 Introduction to Administrative Law and Process (2) *Hershman* Constitutional and administrative law applied to selected coastal and marine statutes. How to research legislative and administrative materials. Reading and briefing selected judicial opinions. Control of administrative agencies by the executive, legislative, and judicial branches. Designed for non-law graduate students pursuing natural resources and environmental subjects. Prerequisite: permission of instructor.

SMA 506 International Law of the Sea (4) *Allen* Ways nations claim authority to regulate activities at sea. Fundamental policies and decisions regarding navigation for commercial and military purposes, fisheries, exploitation and conservation, continental shelf resources, scientific research, protection of environment, deep-sea mining, and other uses of the ocean. Offered: jointly with LAW B 561.

SMA 507 International Organizations and Ocean Management (3) *Miles* Survey of the manner in which international regimes and organizations attempt to manage and regulate the uses of the ocean. Primary emphasis is on the analysis of the effectiveness of regimes and of processes that support or constrain these organizations. Prerequisite: SMA 500 or permission of instructor. Offered: jointly with PB AF 538.

SMA 508 National Marine Policy Processes (3) *Miles* Comparative institutional dimensions of marine policy processes. Marine policy context at the national level and the dynamics that drive policy formulation and policy implementation.

SMA 509 Integrated Coastal Management (3) *Christie, Hershman* Managing multiple uses of coastal waters and the adjacent land; conflicts arising from competition for space and resources; organization, scientific, and economic problems associated with coastal management; planning and management experience in the United States and Southeast Asia. Prerequisite: SMA 500 or permission of instructor.

SMA 510 Ecological Concepts for Decisionmakers (3) *Klinger* Evaluation of ecological assumptions implicit in discussion, development, and implementation of environmental policy. Lectures focus on marine environmental policy debates and decisions that exemplify the use of ecological concepts. Group projects to evaluate the ecological foundations of management plans, regulations, legislation, or other policy problems.

SMA 514 Marine Pollution Management Issues (3) *Leschine* Management and policy aspects of marine environmental protection, emphasizing the two-way interaction between environmental managers and environmental and policy scientists which shapes policy.

SMA 515 U.S. Coastal and Ocean Law (4) *Hershman* Study of the legal framework in the United States controlling allocation and use of coastal and marine resources. Topics include coastal zone management, fisheries management, protection of marine

mammals and endangered species, marine pollution, offshore oil and gas development, and marine transportation. Offered: jointly with LAW B 565.

SMA 516 Seaport Management (3) Role of port and harbor agencies in management of marine uses: cargo and trade, economic development, tourism and recreation, fisheries, environmental protection. Management functions of planning, marketing, finance, engineering, environmental assessment. Examples and guest speakers from Port of Seattle and other Puget Sound ports. Prerequisite: SMA 500 or permission of instructor.

SMA 517 Marine Uses: Transportation and Commerce (3) *Hershman* Role of the oceans in the transportation of people and materials, character and trends in vessel design and terminal facilities, pattern and nature of industry organization, regulations, economics of the shipping industry, management of fleets and vessels, individuals at sea and ashore, national policies affecting the merchant marine and port facilities. Prerequisite: SMA 500 or permission of instructor.

SMA 519 Marine Policy Analysis (3) *Leschine* Goal is appreciation for and basic working knowledge of techniques used in policy analysis. Techniques are explored in both quasi-realistic settings and in application to real world problems of marine policy.

SMA 521 Governmental Responses to Global Climate Change (3) *Miles* Exploration of major scientific, policy and legal issues pertaining to problems of global climate change including regime design, use of climate models, impact on hydrology water resources, and forests.

SMA 523 International Science and Technology Policy (3) *Miles* Analyzes the relationships between research and development policy, capabilities, and national technological strategies for advanced industrial and less-developed countries. Deals with international implications as countries make policies in regional and global organizations. Examples chosen from space telecommunication, weather and climate modification, airline transportation, nuclear energy, and seabed exploration.

SMA 525 Marine Protected Area Management and Science (3) *Fluharty, Klinger* Examines management and scientific issues involved with the design, establishment, operation, and maintenance of MPAs. Offered: Sp.

SMA 536 Applied Microeconomics for Marine Affairs (3) *Huppert* Acquaints students with microeconomic tools commonly employed in policy analysis. Emphasis is placed on mastery of basic concepts, definitions, and models useful to marine policy, including determinants of price and outputs in competitive markets, effects of other market structures, market failure, and applied welfare economics.

SMA 537 Economic Aspects of Marine Policy (3) *Huppert* Development of pertinent economic concepts and their application to selected topics in marine policy decision making, including maritime policy, OCS oil and gas development, and wetlands management. Prerequisite: SMA 500 or permission of instructor. Offered: jointly with ECON 537; W.

SMA 538 Economics of Living Marine Resources (3) *Huppert* Develops pertinent economic concepts and applications for conservation, regulation, and restoration of fisheries and other living resources. Gives special attention to fishery management, including harvest regulation and enforcement, recreational fisheries evaluation, property rights regimes, contemporary issues, and marine protected area management. Offered: jointly with ECON 538; Sp.

SMA 540 International Strategic Planning for Marine Resources (3) *Kaczynski* Marine economies

are affected by shrinking resources, population pressure, expanding economic globalization. Case studies from the third world and economies in transition illustrate strategic economic planning. Students research selected topics. Prerequisite: SMA 500 or permission of instructor. Offered: A.

SMA 550 Special Topics in Marine Studies (1-3, max. 18) Examination of various aspects of marine studies. Content varies, depending upon the interests of the faculty and students. Intended for the joint participation by the faculty and advanced students in the investigation of selected topics. One or more groups are organized each quarter.

SMA 555 Russian Ocean Policy (3) *Kaczynski* Russian ocean policy following Perestroika and disintegration of Soviet empire. Discusses Russian navy, fishery industry, merchant marine, ocean research fleet in light of international agreements and joint ventures and new politic, economic, and social environments. Prerequisite: knowledge of Soviet/Russian socio-economic problems or permission of instructor. Offered: jointly with SISRE 555.

SMA 570 Thesis Presentation (1) *Fluharty* Completion of the thesis requirement for SMA. Prepare a professional presentation to a peer audience. Offered: AWPSP.

SMA 581 Fishery Management: Case Studies (3) *Huppert* Examination of historical case studies chosen to illustrate specific fishery management problem areas. Faculty presentations occupy first half of quarter, student presentations the second half. Prerequisite: SMA 580 or permission of instructor. Offered: jointly with FISH 581.

SMA 591 Marine Science in the Coastal Zone (4) *Heath, Klinger* Major oceanic and nearshore processes, conditions, and their influence on human activities in coastal zone. Methods of understanding and accessing the accumulated knowledge on marine processes and its applications to decision-making process. Lectures and discussions of biological, chemical, geological, and physical oceanography. Generation and use of data bases as interpretative tools. Offered: jointly with OCEAN 591; A.

SMA 600 Independent Study or Research (*)

SMA 700 Master's Thesis (*)

Oceanography

108 Oceanography Teaching Building

 General Catalog Web page:
www.washington.edu/students/gencat/academic/Oceanography.html

 School Web page:
www.ocean.washington.edu

Oceanography is the study of the marine environment and its interactions with the earth, the biosphere, and the atmosphere. The study is prompted both by the intellectual desire to understand how the oceans move and how life develops in a salty, cold environment, and the need to use wisely the ocean's resources for the benefit of humanity. It is an interdisciplinary science integrating the basic principles of biology, chemistry, geology, physics, geophysics, mathematics, botany, zoology, meteorology, and geography. Applications of high technology to oceanographic instrumentation and vessels, increasingly sophisticated computers, satellite remote sensing, and innovative methodologies are rapidly opening new possibilities for exploration and study. Oceanography is divided into four areas of emphasis:

Biological Oceanography examines the processes governing the distribution, abundances, and production of plants, animals, and nutrients in the oceanic ecosystem. Emphasis is on investigations of bacteria, phytoplankton, zooplankton, and benthic organisms.

Chemical Oceanography investigates the complex chemistry, distribution and cycling of dissolved substances, nutrients, and gases in seawater, the mechanisms controlling them and their origins and fates.

Marine Geology and Geophysics studies marine sediments (their formation, transport, and deposition); ocean basin formation (plate tectonics); processes governing shoreline formation; and the origin, structure, and history of the oceanic crust and upper mantle.

Physical Oceanography endeavors to understand and predict motions in the sea from millimeters through tidal and current scales to the great ocean gyres, the distribution of physical properties (temperature, salinity, sea ice), and air-sea interaction and its implications for climate.

The School of Oceanography, which had its beginnings in 1930, offers courses and conducts basic research in oceanography, the science that examines physical, geological, chemical, and biological processes in the ocean and interactions of the ocean with the earth, the biosphere, and the atmosphere. Education and research in the School include studies of seawater in motion; life in the sea; chemical composition and properties of seawater; interactions between the sea and the atmosphere, the sea and the land, sediments and rocks beneath the sea; and the geophysics of the ocean floor. Because the science of oceanography is interdisciplinary in nature, joint programs are maintained in the areas of astrophysics, atmospheric sciences, biochemistry, environmental chemistry, geochemistry, geophysical fluid dynamics, geophysics, and marine biology and botany with the departments of Applied Mathematics, Astronomy, Atmospheric Sciences, Botany, Chemistry, Genetics, Geological Sciences, Geophysics, Microbiology, and Zoology, and with the other units in the College of Ocean and Fishery Sciences.

Courses

A full spectrum of basic and advanced courses is offered in each area of specialization: biological, chemical, and physical oceanography, and marine geology and geophysics. Among the wide variety of courses open to students are molecular approaches to oceanographic questions, marine microbiology, zooplankton ecology, aquatic organic geochemistry, estuarine circulation and mixing, ocean and climate variation, sedimentary dynamics and history of the ocean, marine science of coastal zone management, and human impacts on the ocean.

Summer-quarter instruction is offered both on the main campus and at the Friday Harbor Laboratories on San Juan Island.

Advising

The Student Services Office is staffed by an academic counselor, who assists students with curriculum, scheduling, and career counseling. Students also consult with a faculty adviser.

Research

Each year the School participates in a broad range of oceanographic investigations, ranging from individual research projects to multidisciplinary or multi-university projects. Major biological programs are carried out in Puget Sound, in the waters of the continental shelf off Washington and California, and in the North Pacific Ocean. These projects include investi-

gations of the processes governing the communities of organisms in the water column and on the seabed, and microorganisms occurring in extreme environments (hydrothermal vents, polar sea ice, abyssal habitats). Chemical oceanography includes study of the distribution and fluxes of organic and inorganic chemicals and stable and radioactive isotopes in the water column and sediments on local, regional, and global scales with special emphasis on the ocean carbon cycle. Geological investigations include theoretical studies and field experiments on sediment motion and sedimentary processes. This work ranges from the deep waters of the Scotian Rise in the Atlantic Ocean to Prudhoe Bay, Barents Sea, New Guinea, the Amazon, and the east and west coasts of the United States.

Geophysical research is concerned with the oceanic crust and upper mantle. Topics include seismic experiments on plate boundaries, crustal formation, hydrothermal processes in the Juan de Fuca-Gorda Ridge System, and studies of the earth's magnetic field. Physical oceanographic programs range from large-scale circulation studies of the North Pacific, the North Atlantic, the tropical oceans, and the Antarctic circumpolar current to coastal and estuarine circulation studies and small-scale mixing programs. The theoretical and experimental programs include studies of air-sea interaction, surface and internal waves, oceanic fronts, and sea ice.

Studies in local waters include sediment transport, mixing processes, subsurface structure, and biological communities in the fjords and inlets of Puget Sound. The Puget Sound Regional Synthesis Model (PRISM), an interdisciplinary initiative, proposes to develop and sustain a dynamic understanding of the environmental and human factors that will shape the estuary's future.

Facilities and Vessels

Housed in four large and several smaller buildings on campus by Portage Bay, the School is equipped with extensive laboratories and teaching facilities, including controlled-environment rooms, a paleomagnetism laboratory, a sea-ice laboratory, a marine molecular biotechnology laboratory, and a geophysical fluid dynamics laboratory. The new 100,000 square-foot Oceanography Sciences Building features state-of-the-art laboratory facilities and provides additional office space for faculty and students.

The School operates its own midscale interactive computer and highly specialized laboratory instruments, such as mass spectrometers, scanning electron microscopes, and seawater sediment transport flumes. Access to other more sophisticated facilities and instruments, as well as super computers, is available on campus. Docks provide mooring for the School's two research vessels. Deep-ocean research programs are accommodated on the 274-foot *R/V Thomas G. Thompson*. Graduate students are involved in all of the cruises, most often for their thesis research. The 65-foot *R/V Clifford A. Barnes* undertakes short cruises into Lake Washington and Puget Sound for the instructional and research programs.

Friday Harbor Laboratories on San Juan Island offer unique opportunities for research and study. Specialized courses in new areas of oceanography are offered each summer. The facilities are used by faculty members and students throughout the year for oceanographic research.

Funding

The School is supported primarily by funds from the state of Washington and federal agencies. Major sources of federal funding include the National Science Foundation, National Oceanic and Atmospheric Administration, Office of Naval Research, and Department of Energy. Funds are also

provided by various state and local government agencies and private organizations.

Graduate Program

Graduate Student Services
108 Ocean Teaching, Box 357940
206-543-5039
student@ocean.washington.edu

The School of Oceanography provides excellent instruction and research opportunities at the graduate level in all areas: biological, chemical, and physical oceanography, and marine geology and geophysics. The program of study emphasizes independent research in conjunction with basic and specialized courses. Interdisciplinary research is encouraged, and students enjoy the opportunity to work across the usual scientific boundaries. Course work during the first two years is required in each option; specialized course work is structured to fit the student's background and objectives. Foreign-language proficiency is required only when deemed crucial to scholarly research.

Admission

Students enter the School from varied undergraduate disciplines at many universities. All have in common a strong background in the sciences and mathematics; most have never taken courses in oceanography. Evaluation of candidates is based on Graduate Record Examination scores, the undergraduate transcript (scholarship and depth), three letters of recommendation, and the applicant's statement of objectives and interests. Admission can be accommodated at the beginning of any quarter except winter, although autumn entry is most common.

Master of Science

The program of study includes course work in the student's area of interest and the other oceanography options, and the completion of an approved research project and oral presentation of the results. Thesis and non-thesis programs are offered; most students select the non-thesis option.

Doctor of Philosophy

The degree program places a strong emphasis on research following completion of course requirements and General Examination. Upon successful completion of the General Examination, the student undertakes an original research investigation, which is described in the dissertation and defended during the Final Examination.

Financial Aid

Normally all students pursuing a graduate degree are supported by research or teaching assistantships, or by fellowships and scholarships from national or private sources. Most appointments continue through the summer when students are engaged in research.

Faculty

Chair

Bruce W. Frost

Professors

Aagaard, Knut * 1968; PhD, 1966, University of Washington; physical oceanography, ocean circulation, arctic oceanography.

Anderson, George C. 1972, (Emeritus); PhD, 1954, University of Washington; plankton ecology, biological oceanography.

- Baker, Edward T. 1973, (Affiliate); PhD, 1973, University of Washington; distribution, characterization, and impacts of hydrothermal emissions, linkage to tectonic processes.
- Banse, Karl * 1960, (Emeritus); Doct, 1955, University of Kiel (Germany); biological oceanography, plankton production and methodology, polychaete systematics.
- Baross, John A. * 1984; PhD, 1973, University of Washington; microbial oceanography, bacterial ecology.
- Cannon, Glenn A. * 1983, (Affiliate); PhD, 1969, Johns Hopkins University; physical oceanography of coastal waters and deep-sea hydrothermal venting.
- Carpenter, Roy * 1968; PhD, 1968, University of California (San Diego); marine geochemistry of metals and hydrocarbons in coastal zones.
- Cattolico, Rose A. * 1975, (Adjunct); PhD, 1973, State University of New York (Stony Brook); signal transduction and calcium cycle processes in toxic marine algae.
- Creager, Joe S. * 1958, (Emeritus); PhD, 1958, Texas A&M University; geological oceanography, sedimentology.
- Criminale, William O. * 1968; PhD, 1960, Johns Hopkins University; fluid dynamics, nonlinear mechanics, stability theory.
- D'Asaro, Eric A. * 1980; PhD, 1980, Massachusetts Institute of Technology; physical oceanography, internal waves, turbulence and mixing processes.
- Delaney, John R. * 1977; PhD, 1977, University of Arizona; geological oceanography, origin of oceanic crust, igneous petrology.
- Deming, Jody W. * 1988; PhD, 1981, University of Maryland; evolution and ecology of marine bacteria in the pressurized ocean.
- Devol, Allan H. * 1975; PhD, 1975, University of Washington; biogeochemistry, sediment diagenesis, anoxic systems, carbon fluxes.
- Emerson, Steven R. * 1976; PhD, 1974, Columbia University; marine geochemistry, chemical oceanography, sediment diagenesis.
- Eriksen, Charles C. * 1986; PhD, 1977, Massachusetts Institute of Technology; experimental physical oceanography; equatorial and upper ocean dynamics, internal waves.
- Ewart, Terry E. * 1956, (Emeritus); PhD, 1965, University of Washington; physics, ocean microstructure, diffusion, acoustic transmission.
- Francis, Robert C. * 1983, (Adjunct); PhD, 1970, University of Washington; fishery oceanography, effects of climate on marine ecosystems, paleoecology, fisheries management.
- Frost, Bruce W. * 1969; PhD, 1969, University of California (San Diego); biological oceanography, marine zoogeography, plankton ecology and systematics.
- Gammon, Richard H. * 1985; PhD, 1970, Harvard University; atmospheric chemistry, chemical oceanography, environmental chemistry; biogeochemical cycles.
- Gregg, Michael C. * 1974; PhD, 1971, University of California (San Diego); physical oceanography, ocean microstructure, coasts, estuaries, hydraulics, internal waves.
- Harrison, Don Edmunds * 1985, (Affiliate); MS, 1973, PhD, 1977, Harvard University; ocean circulation modeling, air-sea interaction, ocean and climate dynamics.
- Heath, G. Ross * 1984; PhD, 1968, University of California (San Diego); geochemistry and mineralogy of deep-sea sediments.
- Hedges, John I. * 1976; PhD, 1975, University of Texas (Austin); organic geochemistry, sources, transport, fate of organic material in coastal zones.
- Hickey, Barbara M. * 1973; PhD, 1975, University of California (San Diego); physical oceanography, dynamics of equatorial and shelf circulation.
- Holmes, Mark L. 1975; PhD, 1975, University of Washington; estuarine geologic processes, natural hazards in Puget Sound, crustal evolution at mid-ocean ridges.
- Johnson, Harlan Paul * 1976; PhD, 1972, University of Washington; paleomagnetism and marine geophysics.
- Jumars, Peter A. 1975, (Affiliate); PhD, 1974, University of California (San Diego); biological oceanography, benthos, biological sedimentary dynamics and spatial statistics.
- Kelly, Kathryn A. * 1996, (Affiliate); PhD, 1983, University of California (San Diego); physical oceanography, specializing in combining models with satellite observations.
- Kunze, Eric L. * 1987; PhD, 1985, University of Washington; mesoscale phenomena, wave/mean flow interaction double diffusion and mixing.
- Lewis, Brian T. R. * 1970, (Emeritus); PhD, 1970, University of Wisconsin; marine geophysics, marine seismology, gravity, magnetism, and computer modeling of those processes.
- Martin, Seelye * 1969; PhD, 1967, Johns Hopkins University; geophysical fluid dynamics, properties of sea ice.
- McCormick, Norman J. * 1966, (Adjunct); PhD, 1965, University of Michigan; radiative transfer, optical oceanography, reliability/risk analysis, mechanical engineering design.
- McDuff, Russell E. * 1981; PhD, 1978, University of California (San Diego); marine geochemistry.
- McManus, Dean A. * 1959, (Emeritus); PhD, 1959, University of Kansas; geological oceanography, continental shelf sediments, geoscience education.
- McPhaden, Michael J. * 1982, (Affiliate); PhD, 1980, Scripps Oceanographic Institution; equatorial ocean dynamics, climate scale air-sea interaction.
- Merrill, Ronald T. * 1967, (Adjunct); MS, 1961, University of Michigan, PhD, 1967, University of California (Berkeley); geomagnetism, paleomagnetism.
- Mobley, Curtis D. 1997, (Affiliate); PhD, 1977, University of Maryland; optical oceanography and radiative transfer, especially numerical modeling.
- Moore, Dennis W. 1996, (Affiliate); PhD, 1968, Harvard University; equatorial oceanography, geophysical fluid dynamics, and inertial boundary currents.
- Morison, James H. * 1972, (Affiliate); PhD, 1980, University of Washington; upper ocean physical processes in the polar regions.
- Murray, James W. * 1973; PhD, 1973, Massachusetts Institute of Technology; marine geochemistry, aquatic chemistry.
- Nelson, Bruce K. * 1986, (Adjunct); MS, 1979, University of Kansas, PhD, 1985, University of California (Los Angeles); isotope geochemistry, volcanism, mantle chemistry and evolution.
- Nittroer, Charles * 1998; PhD, 1978, University of Washington; geological oceanography, continental-margin sedimentation.
- Nowell, Arthur R. M. * 1978; PhD, 1975, University of British Columbia (Canada); physical oceanography, turbulent boundary layer dynamics, sediment transport.
- Perry, Mary J. 1976, (Affiliate); PhD, 1974, University of California (San Diego); biological oceanography, phytoplankton physiology, nutrient cycling.
- Quay, Paul D. * 1977; PhD, 1977, Columbia University; chemical oceanography, stable isotope geochemistry, ocean tracers and mixing.
- Rattray, Maurice 1950, (Emeritus); PhD, 1951, California Institute of Technology; physical oceanography, hydrodynamics, ocean circulation modeling.
- Rhines, Peter B. * 1984; PhD, 1967, Cambridge University (UK); the circulation of the oceans and evolution of climate.
- Richey, Jeffrey E. * 1973; PhD, 1973, University of California (Davis); quantitative problems of aquatic ecosystems, primary Amazon River, limnology.
- Sanford, Thomas B. * 1979; PhD, 1967, Massachusetts Institute of Technology; physical oceanography, dynamics of ocean currents, motional induction, instrumentation.
- Sarachik, Edward S. * 1984, (Adjunct); PhD, 1966, Brandeis University; atmospheric dynamics, air-sea interactions, greenhouse warming, equatorial dynamics, climate change.
- Shreve, Ronald L. 2000, (Research); PhD, 1959, California Institute of Technology; geology, geomorphology, glaciology, geological physics, and geophysics.
- Spindel, Robert C. 1987, (Adjunct); MS, 1966, PhD, 1971, Yale University; ocean acoustics, signal processing, acoustic navigation systems, acoustic tomography.
- Sternberg, Richard * 1965, (Emeritus); PhD, 1965, University of Washington; geological oceanography, marine sedimentation processes.

Associate Professors

- Balistreri, Laurie S. * 1995, (Affiliate); MS, 1977, University of Washington; aqueous and environmental geochemistry, processes controlling trace elements in aquatic systems.
- Duxbury, Alyn C. * 1954, (Emeritus); PhD, 1963, Texas A&M University; estuarine processes and the management of human uses of these marine systems.
- Feely, Richard A. * 1983, (Affiliate); PhD, 1974, Texas A&M University; chemical oceanography, oceanic sources and sinks for carbon dioxide.
- Holcomb, Robin T. 1988, (Affiliate); PhD, 1979, Stanford University; volcanology.
- Howe, Bruce M. 1987; PhD, 1986, University of California (San Diego); physical oceanography, acoustic tomography.
- Johnson, Gregory C. * 1990, (Affiliate); PhD, 1991, Massachusetts Institute of Technology; large-scale ocean circulation, dynamics and variability.
- Kawase, Mitsuhiro * 1988; PhD, 1986, Princeton University; geophysical fluid dynamics; oceanic general circulation; tracer oceanography.

Keil, Richard G. * 1991; PhD, 1991, University of Delaware; microbial degradation of organic compounds in aquatic and soil environments.

Kelley, Deborah S. * 1992; PhD, 1990, Dalhousie University (Canada); marine geology, volcanic-hosted submarine hydrothermal systems, sulfide-microbial habitats.

Kessler, William S. * 1995, (Affiliate); PhD, 1989, University of Washington; equatorial ocean circulation and waves; interannual climate variability.

Krieger-Brockett, Barbara * 1976, (Adjunct); MS, 1972, PhD, 1976, Wayne State University; reaction engineering, chemical kinetics and catalysis simulation.

Lessard, Evelyn J. * 1989; PhD, 1984, University of Rhode Island; microzooplankton ecology and physiology; physical/biological interactions at oceanic fronts.

Lilley, Marvin D. * 1984; PhD, 1983, Oregon State University; chemical oceanography.

MacCready, Parker * 1994; PhD, 1991, University of Washington; ocean circulation in estuaries and the southern ocean.

Mofjeld, Harold 1970, (Affiliate); PhD, 1970, University of Washington; tsunami dynamics, long waves and currents in the ocean, storm surge inundation.

Nystuen, Jeffrey A. 1999, (Affiliate); PhD, 1985, University of California (San Diego); acoustical oceanography, applied to oceanic rainfall and physics of the air-sea interface.

Riser, Stephen C. * 1981; PhD, 1981, University of Rhode Island; physical oceanography, mesoscale mixing, physics of mesoscale eddies, numerical modeling.

Shuman, Frank R. 1999, (Affiliate); PhD, 1978, University of Washington; monitoring activities in marine waters: sediment, water, plants and animals, toxic substances.

Thompson, Luanne * 1990; PhD, 1990, Massachusetts Institute of Technology; numerical modeling of mesoscale and general circulation of the oceans.

Warner, Mark J. * 1989; PhD, 1988, University of California (San Diego); physical oceanography, ocean ventilation and mixing processes.

Wilcock, William S. D. * 1993; PhD, 1992, Massachusetts Institute of Technology; marine seismology, dynamics of mid-ocean ridges, geological fluid dynamics.

Williams, Kevin L. * 1998; PhD, 1985, Washington State University; propagation and scattering of sound in the ocean: applied to remote sensing and sediment acoustics.

Assistant Professors

Alford, Matthew H. * 2001, (Affiliate); PhD, 1998, University of California (San Diego); internal waves, turbulence, double diffusion and mixing in the ocean.

Armbrust, E. Virginia * 1996; PhD, 1990, Massachusetts Institute of Technology; molecular ecology, genetic diversity of microbial populations, diatom sexual reproduction.

Bullister, John L. 1991, (Affiliate); PhD, 1984, University of California (San Diego); chemical tracers of large-scale ocean circulation and mixing, gases in the ocean and atmosphere.

Butterfield, David A. 1997, (Affiliate); PhD, 1990, University of Washington; geochemical systematics

of hydrothermal fluids, relation to seafloor volcanism, microbial activity.

Cronin, Meghan 1998, (Affiliate); PhD, 1993, University of Rhode Island; upper-ocean heat, salt, and momentum balances, western boundary currents, eddy-mean flow interaction.

Dushaw, Brian D. 1999, (Affiliate); PhD, 1992, University of California (San Diego); acoustic tomography, applications to ocean temperature, tidal dissipation, ocean mixing.

Grunbaum, Daniel * 1991; PhD, 1991, Cornell University; zooplankton ecology, population biology, behavioral ecology, mathematical biology, and biomechanics.

Hautala, Susan L. * 1994; PhD, 1992, University of Washington; physical oceanography, abyssal and paleoabyssal circulation.

Lee, Craig M. * 1987, (Affiliate); PhD, 1995, University of Washington; upper-ocean processes, internal waves, fronts, interactions between dynamics and biology.

Logsdon, Miles G. * 1989, (Research); PhD, 1997, University of Washington; spatial modeling and analysis of environmental systems in the earth sciences.

Napp, Jeffrey M. 1991, (Affiliate); PhD, 1986, University of California (San Diego); biological-physical interactions in the epipelagic zone, zooplankton ecology, fisheries oceanography.

Newton, Jan A. 1998, (Affiliate); PhD, 1989, University of Washington; production and export of organic material, estuarine/coastal dynamics and marine water quality.

Ogston, Andrea S. * 1997, (Research); PhD, 1997, University of Washington; sediment transport processes in the marine environment.

Oltman-Shay, Joan M. 1991, (Affiliate); PhD, 1986, University of California (San Diego); nearshore waves and currents: wave climatology, generation and dissipation, sediment dynamics.

Parsons, Jeffrey D. * 2000; PhD, 1998, University of Illinois (Urbana-Champaign); sediment dynamics, environmental fluid mechanics, submarine and Martian morphology.

Resing, Joseph A. 2001, (Affiliate); PhD, 1997, University of Hawaii; effects of submarine volcanism and hydrothermal effluent on the large-scale chemistry of the oceans.

Rocap, Gabrielle L. * 2001; PhD, 2000, Massachusetts Institute of Technology; ecology and evolution of cyanobacteria; comparative genomics and distribution of genetic diversity.

Sabine, Christopher L. 1999, (Affiliate); PhD, 1992, University of Hawaii; carbon cycling in the global oceans including air-sea fluxes and estimates of anthropogenic carbon.

Tynan, Cynthia T. 1999, (Affiliate); PhD, 1993, University of California (San Diego); biological-physical processes, distribution and abundances of plankton and marine mammals.

Woodgate, Rebecca A. 1999, (Research); PhD, 1990, University of Cambridge (UK); physical oceanography research, especially collection and analysis of in situ time series.

Senior Lecturer

Emerick, Christina M. 1985; PhD, 1985, Oregon State University; marine geochemistry and tectonics.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crsctat/.

OCEAN 400 Chemical Oceanography (4) NW Physical and chemical properties of seawater and marine products; processes determining the chemical makeup of the oceans. Prerequisite: either CHEM 150, CHEM 152, or CHEM 155; either OCEAN 202 or OCEAN 210. Offered: A.

OCEAN 401 Special Topics in Chemical Oceanography (3) NW

OCEAN 410 Marine Geology and Geophysics (4) NW Sedimentological and petrologic processes that determine the geologic record. Prerequisite: either ESS 101, ESS 101, ESS 210, GEOL 101, or GEOL 205. Offered: A.

OCEAN 411 Special Topics in Marine Geology and Geophysics (3) NW

OCEAN 420 Physical Processes in the Ocean (4) NW Physical properties and processes of the ocean: methods of describing ocean currents, waves, tides and mixing and their effect on movement of water parcels. Prerequisite: either PHYS 116 or PHYS 123; either MATH 126, MATH 129, MATH 146, or Q SCI 293; either OCEAN 202 or OCEAN 210. Offered: W.

OCEAN 421 Special Topics in Physical Oceanography (3) NW

OCEAN 422 Ocean Dynamics (3) NW Equations of motion governing flow of sea water. Conservation of mass, tracers, heat and momentum. Energy and vorticity balance. Buoyancy and rotational effects. Scale analysis. Applications to upper ocean dynamics, surface and internal waves, and wind-driven currents in the ocean. Prerequisite: MATH 126; PHYS 123; OCEAN 420.

OCEAN 423 Ocean Circulation and Climate (3) NW Quantitative treatment of ocean basin to global scale ocean circulation systems and their interaction with climate variability. Prerequisite: PHYS 123; either MATH 126 or MATH 129; OCEAN 401.

OCEAN 430 Biological Oceanography (4) NW Marine organisms, their quantitative distribution in time and space and their interactions with the ocean. Prerequisite: either BIOL 102, BIOL 203, or BIOL 220; either OCEAN 202 or OCEAN 210. Offered: W.

OCEAN 431 Special Topics in Biological Oceanography (3) NW

OCEAN 442 Oceanography of the Puget Sound (3) NW Explores the role of oceanography in regional issues. Field opportunities and active investigation of applied oceanographic problems. Lectures, research trip, student co-teaching, discussion. Prerequisite: either CHEM 221, BIOL 203, BIOL 220, ESS 210, or GEOL 205; OCEAN 433. Offered: A.

OCEAN 443 Design of Oceanographic Field Experiments (3) NW Case histories, presentations, and class exercises used to teach methods of formulating a research problem and proposal writing. Methods of data analysis, presentation, error estimation, library resource and data base use; web page implementation and design. Principles of cruise planning. Prerequisite: OCEAN 400; OCEAN 410; OCEAN 420; OCEAN 430; OCEAN 442. Offered: W.

OCEAN 444 Advanced Field Oceanography (5) NW Conduct field experiment (designed in OCEAN 443) during a week-long cruise aboard a research vessel. Analyze samples data and present results in a series of drafts and a final term paper. Results are presented at a two-day-long public research symposium and on the students' individual Web sites. Prerequisite: OCEAN 443. Offered: Sp.

OCEAN 450 Climatic Extremes (4) NW Course examines earth history for extreme climatic conditions to predict future climate changes. Numerical climate models use PC-based computer programs to identify processes and feedbacks that control climate. Prerequisite: MATH 125, MATH 145, or Q SCI 292; and PHYS 115 or PHYS 122.

OCEAN 451 Fluid Dynamics Laboratory (4) NW Individual projects in experimental fluid dynamics with applications to practical problems. Experimental design, visualization, and measurement techniques applied to a problem selected by each student. Prerequisite: PHYS 123.

OCEAN 452 Spatial information Technologies in Ecosystem Sciences (3) NW *Logsdon* Introduction to the use of GPS, GIS, and Remote Sensing in the ecosystem sciences. Integrates these technologies in an applied research setting. Two overnight weekend field trips required. Offered: jointly with FISH 453; A.

OCEAN 499 Undergraduate Research (1-12, max. 24) Research on assigned topics that may involve laboratory work, fieldwork, or literature surveys. Offered: AWSpS.

Courses for Graduates Only

OCEAN 500 Current Problems in Oceanography (1) Discussion of research topics that are currently being investigated within the school. Credit/no credit only. Prerequisite: permission of instructor. Offered: AW.

OCEAN 501 Estuarine Circulation and Mixing (3) Observed patterns of currents, mixing, and stratification from deep fjords to shallow coastal plain estuaries. Physical understanding of basic processes, such as tides, wind stress, topographic effects on turbulence, sill hydraulics, and exchange flow. Vertical mixing and residence times important to biological and pollution studies. Prerequisite: permission of instructor.

OCEAN 506 Interdisciplinary Seminar in Oceanography (1-3, max. 12) Lectures, discussions, and work on selected problems of an interdisciplinary nature. Prerequisite: permission of instructor.

OCEAN 509 Seminar (1) Introduction to current research topics for beginning graduate students. Credit/no credit only. Offered: AWSp.

OCEAN 510 Physics of Ocean Circulation (5) Structure of ocean basins; physical properties of seawater and the equation of state; heat, salt, fresh water budgets; tidal potential; Coriolis effect and geostrophic balance; major current systems and water masses; mixing, stirring in the ocean; simple waves; modern experimental methods in physical oceanography. Prerequisite: permission of instructor. Offered: A.

OCEAN 511 Introduction to Fluid Dynamics (4) Eulerian equations for mass-motion; Navier-Stokes equation for viscous fluids, Cartesian tensors, stress-strain relations; Kelvin's theorem, vortex dynamics; potential flows, flows with high-low Reynolds numbers; boundary layers, introduction to singular perturbation techniques; water waves; linear instability theory. Prerequisite: AMATH 403 or permission of instructor. Offered: jointly with AMATH/ATM S 505; A.

OCEAN 512 Geophysical Fluid Dynamics I (4) Dynamics of rotating stratified fluid flow in the atmosphere/ocean and laboratory analogues. Equations of state, compressibility, Boussinesq approximation. Geostrophic balance, Rossby number. Poincaré, Kelvin, Rossby waves, geostrophic adjustment. Ekman layers. Continuously stratified dynamics: Inertia-gravity waves, potential vorticity, quasigeostrophy. Prerequisite: OCEAN 511 or ATM S/AMATH 505. Offered: jointly with ATM S 509; W.

OCEAN 513 Geophysical Fluid Dynamics II (3) Theories, models of large-scale dynamics of oceans, atmospheres. Potential vorticity, Q principles; Rossby waves, ray tracing, Green's function, setup of general circulation; atmospheric "channels" versus ocean "basins"; wave-mean flow interaction, mountain drag, internal momentum flux; "Lagrangian" motion of particles, tracers; cascades, eddy flux of heat, moisture, Q. Prerequisite: OCEAN 512. Offered: Sp.

OCEAN 514 Waves (3) Application of marine hydrodynamics principles to wave motion in oceans. Offered: W.

OCEAN 515 Ocean Circulation: Observations (3) Modern large- and mesoscale ocean observations, interpreted in terms of contemporary circulation theories. Spectrum of temporal variability; eddies and eddy fluxes; ventilation; advection and diffusion in the abyss; transports of heat and salt; climatic scale of variability; modern methods for determining circulation. Prerequisite: OCEAN 510 or permission of instructor. Offered: Sp.

OCEAN 516 Ocean Circulation: Theories (3) Hydrodynamic theories concerning origin and characteristics of major ocean currents. Prerequisite: OCEAN 512 or permission of instructor.

OCEAN 517 Methods and Measurements in Physical Oceanography (2) Principal instruments and experimental methods of physical oceanography. Devices and systems that measure pressure, temperature, electrical conductivity, sea state, and velocity. Prerequisite: permission of instructor. Offered: alternate years.

OCEAN 520 Marine Chemistry (5) Processes controlling the chemical composition of seawater. Chemical distributions in the ocean, marine physical chemistry, chemical equilibrium, and concepts of mass balance. Mechanisms and models used to explain distributions of stable and radioactive isotopes, gases, trace metals, and biochemicals in the world's oceans. Offered: A.

OCEAN 521 Aquatic Chemistry (3) Application of physical chemistry and thermodynamics to processes that control chemical composition of natural waters. Equilibrium approach. Acid/base chemistry, the carbonate system, dissolution and precipitation, metal ions in solution, oxidation-reduction chemistry, silicate mineral reactions. Prerequisite: OCEAN 520 or permission of instructor. Offered: A.

OCEAN 522 Marine Organic Geochemistry (3) Sources, reactions, and fates of organic molecules in the marine environment along with the stable isotope geochemistry of marine organic substances. Prerequisite: CHEM 237 and CHEM 239 or permission of instructor.

OCEAN 523 Geochemical Cycles (4) Descriptive, quantitative aspects of earth as biogeochemical system. Study of equilibria, transport processes, chemical kinetics, biological processes; their application to carbon, sulfur, nitrogen, phosphorus, other elemental cycles. Stability of biogeochemical systems; nature of human perturbations of their dynamics. Prerequisite: permission of instructor. Offered: jointly with CHEM 523/ATM S 508.

OCEAN 524 Environmental Chemical Modeling (3) *Benjamin, Murray* Physical/chemical principles controlling the fate and distribution of environmental pollutants, and use of models to apply those principles. Includes modeling of physical transport in conjunction with chemical equilibrium and reaction kinetics. Applications include acid mine drainage, acid deposition, and groundwater and lake water contamination. Offered: jointly with CEE 550.

OCEAN 529 Seminar on Chemical Oceanography (*, max. 9) Lectures, discussions, and readings on selected problems of current interest. Prerequisite: permission of instructor. Offered: AWSp.

OCEAN 530 Biological Oceanography: Bacteria and Protozoa (3) Bacteria in the marine environment; fate of organic carbon in the ocean and the interrelationship of the carbon cycle with other biogeochemical cycles. Prerequisite: permission of instructor. Offered: W.

OCEAN 531 Biological Oceanography: Phytoplankton (3) Phytoplankton in the marine environment: ecology, primary productivity, and physiology. Phytoplankton growth and photosynthetic patterns; spatial and temporal distributions of phytoplankton; methods for determining distributions and rates of production and growth. Prerequisite: permission of instructor. Offered: W.

OCEAN 532 Biological Oceanography: Zooplankton (3) Distribution and abundance of pelagic animals in space and time; analysis of their interactions. Small-scale distributions and behavior, population dynamics and energetics, trophic structure and dynamics, pelagic community structure, models of populations and food chains, secondary production and biogeography. Prerequisite: permission of instructor. Offered: Sp.

OCEAN 533 Biological Oceanography: Benthos (3) Analysis of marine benthic communities; new research questions and method; ecologically important physics of benthic boundary layer; theories, mechanics, and observations of deposit feeding; succession as consequence of physical processes and biological interactions. Environments include deep-sea, continental shelves, estuaries, and intertidal, focusing on soft substrata. Prerequisite: permission of instructor. Offered: Sp.

OCEAN 535 Biological Oceanography for Physical Scientists (5) Principles and practice of biological oceanography for students with strong background in physical sciences but little recent exposure to biology. Ecological principles at individual, population, and community levels; overview of discipline of biological oceanography; case studies of interdisciplinary problems shared with the physical sciences. Prerequisite: permission of instructor. Offered: W.

OCEAN 539 Seminar in Biological Oceanography (*, max. 9) Lectures, discussions, and work on selected problems of current interest. Prerequisite: permission of instructor. Offered: AWSp.

OCEAN 540 Marine Geological Processes (5) Principles of thermodynamics, heat and mass transfer, fluid mechanics, continuum mechanics, and time-series analysis applied to marine geological and geophysical data. Applications to thermal balance of the oceanic lithosphere; Pleistocene sedimentation and global climate change; and sediment transport in high energy environments. Prerequisite: permission of instructor. Offered: W.

OCEAN 541 Marine Sedimentary Processes (5) Erosion, transportation and deposition of sediment in estuarine, beach, continental shelf and slope, and deep sea environments. Development of equations characterizing boundary shear flows, initiation of grain motion, bedload and suspended load transport. Evolution of primary bed forms, processes of sedi-

ment accumulation, and measurement techniques. Prerequisite: permission of instructor.

OCEAN 542 Sediment Dynamics and Boundary-Layer Physics (4) *Parsons* Theoretical descriptions of sediment transport processes constrained by laboratory demonstrations. The physics of boundary layers, initiation of motion, suspended load, bedload, bedforms, and continua transport (turbidity currents, debris flows, and suspensions) and its application to the geological record. Offered: jointly with ESS 526; W.

OCEAN 544 Geochemical Evolution of Oceanic Lithosphere (3) Chemical principles of magmatic evolution and hydrothermal interaction as they apply to the formation and evolution of the oceanic lithosphere. Comparisons of theoretical models with field studies conducted using submersibles and deep ocean drilling. Prerequisite: permission of instructor.

OCEAN 545 Physics of the Oceanic Lithosphere I (3) Physical processes responsible for the formation and evolution of the oceanic lithosphere. Thermodynamic mechanisms of mantle creep; fluid dynamics of mantle flow, decompressional melting, formation of oceanic crust, and cooling of the oceanic lithosphere. Prerequisite: either ESS 511 or GPHYS 501; either ESS 514 or GPHYS 504; or permission of instructor. Offered: jointly with ESS 568.

OCEAN 549 Seminar in Geological and Geophysical Oceanography (*, max. 9) Lectures, discussions, and field and laboratory work on selected problems of current interest. Prerequisite: permission of instructor. Offered: AWSp.

OCEAN 559 Advanced Seminar on Mid-Ocean Ridge Processes (*, max. 9) Lectures, discussions, and practical work on selected topics of current interest in mid-ocean ridge research. Prerequisite: permission of instructor.

OCEAN 560 Atmosphere/Ocean Interactions (3) Observations and theory of phenomena of the coupled atmosphere-ocean system. El Niño/Southern Oscillation; decadal tropical variability; atmospheric teleconnections; midlatitude atmosphere-ocean variability. Overview of essential ocean and atmospheric dynamics, where appropriate. Credit/no credit only. Prerequisite: ATM S 509 or OCEAN 512. Offered: jointly with ATM S 560; alternate years; Sp.

OCEAN 569 Topics in Physical Oceanography (1-4, max. 9) Lecture series on topics of major importance in physical oceanography. Offered: AWSp.

OCEAN 572 Zooplankton Ecology (1-3, max. 9) Life history strategies, dynamics and production of populations, vertical migration, interspecific interactions and community structure, models of complex assemblages of zooplankton, sampling methods and analysis, spatial heterogeneity. Prerequisite: OCEAN 532 or permission of instructor. Offered: alternate years.

OCEAN 573 Benthic Biological Processes (1-3, max. 9) Processes characteristic of soft-bottom benthic environments; areas and methods of rapid cur-

rent progress; open research questions; deposit feeding; passive larval recruitment; physical, chemical, geological, and biological feedbacks in ecological succession; scaling of laboratory systems. Prerequisite: OCEAN 533 or permission of instructor. Offered: alternate years.

OCEAN 574 Principles and Applications of Molecular Methods (3) Techniques of molecular analysis with emphasis on DNA methods, including PCR, DNA sequencing, RFLP, RAPD and VNTR analysis and cloning. Applications of these techniques to fisheries, aquaculture, oceanography, population and evolutionary studies, and other areas of science. Prerequisite: permission of instructor. Offered: jointly with FISH 542; A.

OCEAN 575 Molecular Techniques (4) Laboratory on DNA methods. Experiments analyzing genetic variation at the intra- and interspecific level, including one experiment of student's own design. Techniques include DNA extraction and quantitation, PCR, DNA sequencing, RFLP analysis and cloning. Prerequisite: FISH 542 or OCEAN 574 or permission of instructor. Offered: jointly with FISH 543; W.

OCEAN 578 Advanced Topics in Biological Oceanography (*, max. 18) Specialized research areas. Topic varies each year. Offered at Friday Harbor Laboratories. Prerequisite: permission of director of Friday Harbor Laboratories. Offered: S.

OCEAN 580 Aquatic Kinetics (3) Reaction rates and mass transport in water. Theories of chemical kinetics; experimental results from: CO₂ hydrolysis, Fe, Mn, and H₂S oxidation, stable isotope fractionation, mineral dissolution; homogeneous, heterogeneous, microbial catalysis; reaction and transport at air-water, sediment-water, and O₂/H₂S interfaces. Prerequisite: permission of instructor.

OCEAN 582 River Basin Biogeochemistry (3) The function of rivers and river basins in transporting materials to the oceans and their importance in biogeochemical cycles. Origin of water and water routing within drainage basins, sources and modification of dissolved and particulate materials in transport, ecological theory, and estuarine mixing zone transformations. Prerequisite: permission of instructor.

OCEAN 583 Isotope Biogeochemistry (3) The use of stable isotopes to study biogeochemical cycles in the oceans and atmosphere; specifically carbon, nitrogen, and sulfur cycles. Isotopic effects during photosynthesis, respiration, organic matter degradation. CaCO₃ dissolution, methanogenesis, nitrification/denitrification, and sulfate reduction. Prerequisite: permission of instructor.

OCEAN 585 Paleooceanography (3) History of environmental changes on earth over the past 100 million years as reconstructed from records in deep-sea sediments, ice sheets, and other ocean/terrestrial substrates. Examination of isotopic, geochemical, micropaleontological, and dating techniques. Role of the ocean in climate change. Prerequisite: permission of instructor.

OCEAN 586 Current Research in Climate Change (2, max. 20) Weekly lectures focusing on a particular aspect of climate (topic to change each year) from invited speakers (both UW and outside), plus one or two keynote speakers, followed by class discussion. Offered: jointly with ATM S 586/ESS 586.

OCEAN 587 Climate Dynamics (3) *Hartman, Thompson* Examines Earth's climate system; distribution of temperature, precipitation, wind, ice, salinity, and ocean currents; fundamental processes determining Earth's climate; energy and constituent transport mechanisms; climate sensitivity; natural climate variability on interannual to decadal time scales; global climate models; predicting future climate. Offered: jointly with ATM S 587/ESS 587; A.

OCEAN 588 The Global Carbon Cycle and Climate (3) *Quay* Oceanic and terrestrial biogeochemical processes controlling atmospheric CO₂ and other greenhouse gases. Records of past changes in the earth's carbon cycle from geological, oceanographic and terrestrial archives. Anthropogenic perturbations to cycles. Develop simple box models, discuss results of complex models. Offered: jointly with ATM S 588/ESS 588; W.

OCEAN 589 Paleoclimatology: Data, Modeling and Theory (3) *Battisti, Emerson, Steig* Evidence for past changes in land and sea surface temperature, in precipitation and atmospheric dynamics, and in ocean circulation: both long and interannual timescales. Paleoclimate modeling and theory. Time series analysis and climate noise. Rapid climate change. Statistical reconstruction of interannual variability. Offered: jointly with ATM S 589/ESS 589; Sp.

OCEAN 590 Advanced Topics in Oceanography (9-18, max. 18) Advanced topics examining specialized and interdisciplinary areas of oceanographic research. Offered at Friday Harbor Laboratories. Prerequisite: permission of Director of Friday Harbor Laboratories. Offered: S.

OCEAN 591 Marine Science in the Coastal Zone (4) Major oceanic and nearshore processes, conditions, and their influence on human activities in coastal zone. Methods of understanding and accessing the accumulated knowledge on marine processes and its applications to decision-making process. Lectures and discussions of biological, chemical, geological, and physical oceanography. Generation and use of data bases as interpretative tools. Offered: jointly with SMA 591; A.

OCEAN 600 Independent Study or Research (*) Offered: AWSpS.

OCEAN 700 Master's Thesis (*) Offered: AWSpS.

OCEAN 800 Doctoral Dissertation (*) Offered: AWSpS.

School of Pharmacy

Dean

Sidney D. Nelson

Associate Deans

Nanci L. Murphy
Stanley S. Weber

General Catalog Web page:
www.washington.edu/students/gencat/academic/School_Pharmacy.html

School Web page:
depts.washington.edu/pha/

Established in 1894, the University of Washington School of Pharmacy is proud of its strong commitment to excellence and the recognition given to its faculty and graduates for their outstanding educational, research, and service activities. The School's Dean's Office and three departments—Medicinal Chemistry, Pharmaceutics, and Pharmacy—are located in the H-Wing of the Health Sciences Building.

The School of Pharmacy offers a four-year professional program leading to the Doctor of Pharmacy (Pharm.D.) degree. The curriculum is designed to provide students with the scientific background and clinical skills necessary to render pharmaceutical care in a changing health care system. Instructional methods strive to enhance the critical-thinking and problem-solving skills necessary to provide rational drug therapy, promote healthy lifestyles and disease prevention, enhance patient compliance, reduce medication-related problems, and improve health outcomes. The School aspires to foster a commitment to life-long learning and provide an environment where students develop the knowledge, attitudes, and skills consistent with the profession's high standards.

Students have the opportunity to pursue elective choices to design a program compatible with individual areas of interest. Dual degree options include the Pharm.D./Ph.D. programs in pharmaceutics and medicinal chemistry, the Pharm.D./M.S. program in pharmaceutical outcomes research and policy, and the Pharm.D./Physician Assistant program. Students also have the option of earning the Geriatric Certificate in Pharmacy Practice, the Retail Management Certificate, and the Biomedical Regulatory Affairs Certificate concurrently with their degree. In the final year of the program students complete experiential training at a variety of practice settings. The School of Pharmacy is a member of the American Association of the Colleges of Pharmacy and its programs are accredited by the American Council on Pharmaceutical Education (www.acpe-accredit.org).

Consideration for admission to the professional program requires a minimum of two years of prepharmacy training. An applicant who is admissible to the University is not assured admission to the School of Pharmacy. Admission is competitive and based on a number of factors. Academic preparedness, motivation, oral and written communication skills, critical-thinking ability, and decision-making skills are among the criteria used to determine a candidate's aptitude for the pharmacy program. An on-site interview and writing assignment are required as part of the admission process. Further details on admission require-

ments, application procedures, and program content may be obtained from the School's Office of Academic and Student Programs or its Web site at depts.washington.edu/pharminf/.

The School also seeks to promote the life-long learning of pharmacists by offering opportunities for post-graduate education and continuing-education seminars. An external Pharm.D. program is available for those pharmacists who would like to pursue an advanced degree beyond the baccalaureate degree. Continuing-education programs are provided throughout the year to meet the needs of the community.

To foster the interests of students who seek to engage in creative discovery and research, the School also offers graduate education in the pharmaceutical sciences. Graduate school information may be obtained from the individual departments offering the advanced degrees.

Medicinal Chemistry

depts.washington.edu/medchem/

Graduate Program

Graduate Program Coordinator
H164 Health Sciences, Box 357610
206-543-2224
medchem@u.washington.edu

The Department of Medicinal Chemistry offers programs of graduate study leading to the degrees of Master of Science and Doctor of Philosophy. The primary mission of the program is to train versatile scientists for careers in the pharmaceutical and medical sciences. To this end, graduates of the program acquire a broad knowledge base in medicinal chemistry, pharmacology, and biochemistry, which is important in the rapidly evolving, multidisciplinary biomedical arena. The department further offers diverse opportunities for research at the interface between biology and chemistry, with emphasis on issues of biomedical importance.

Graduates of the program acquire the skills necessary to develop quantitative and qualitative methodologies necessary for the study of biochemical processes that occur at the cellular and subcellular levels. These include the elucidation of biochemical transformations and interactions using techniques such as protein engineering, molecular modeling and dynamics as well as a broad array of supportive spectroscopic techniques including mass spectrometry and NMR.

One major area of research interest is the role of biotransformation processes in the toxification and detoxification of drugs and environmental contaminants. A second area of interest is the determination of protein and small ligand structure and function using computational methods, NMR, mass spectroscopy, and other biophysical techniques. Issues of biomedical importance include elucidation of mechanisms of drug-induced cell toxicity, drug-drug and drug-herbal interactions, identification of enzyme attributes that dictate substrate specificity and catalytic mechanism, pharmacogenetics, structural immunology in vaccine design, biotherapeutics, protein folding in disease states and structural characterization of bacterial toxins.

Most students proceed directly to the doctoral degree program. Successful completion of a series of cumu-

lative examinations and at least two quarters of teaching experience are among the requirements for completion of the doctoral program.

Admission Requirements

Students who intend to work toward the Doctor of Philosophy degree must apply for admission to the Graduate School and meet the requirements outlined in the Graduate Study section of this catalog. Graduate students must satisfy the requirements for an advanced degree in force at the time the degree is to be awarded. Graduate study requires approval of the Graduate School and the Department of Medicinal Chemistry.

Special Requirements

Students with undergraduate degrees in pharmacy or in the biological or physical sciences are accepted for graduate study in medicinal chemistry. Undergraduates who plan to pursue graduate study are encouraged to expedite their programs by selection of pertinent electives. Although the choice of electives varies with the student's ultimate goals, graduate study in medicinal chemistry requires an adequate background in biological and physical sciences.

Master of Science

A student in the master's degree program must present at least 27 credits of course work, inclusive of thesis and non-thesis research. The student also must complete a research project, prepare an acceptable thesis, and pass a final examination.

Doctor of Philosophy

A student in the doctoral program must present a minimum of 45 credits of course work, inclusive of dissertation and non-thesis research. Credits earned for the master's degree may be applied toward the doctoral degree. The student must pass a General Examination for admission to candidacy for the doctoral degree. Satisfactory completion of departmental cumulative examinations precedes scheduling of the General Examination. The student must complete a research project, prepare an acceptable dissertation and pass a Final Examination. Research for the doctoral degree must be done at the UW.

Financial Aid

Financial support in the form of research assistantships and fellowships may be available to students in good standing throughout their graduate careers. Availability of financial support varies from year to year, and prospective applicants should contact the graduate program coordinator for additional information.

Department Web page:
depts.washington.edu/pceut/

Graduate Program

Graduate Program Coordinator
H272 Health Sciences, Box 357610
206-543-9434
pceut@u.washington.edu

The Department of Pharmaceutics offers programs of graduate study leading to the degrees of Master of Science and Doctor of Philosophy.

Program Description

The program provides research training in the fundamental aspects of drug disposition, drug delivery, and drug action in animals and man. Drug disposition includes the phenomena of absorption, distribution, and elimination. Pharmacokinetics is the study of the time course of these processes and the time course of pharmacological effects. Drug delivery includes targeting of drugs to tissues or specific cells to improve their therapeutic effect. These areas of research have a wide range of applications, particularly in the pharmacological characterization of new drug molecules in pharmaceutical development. Graduates of this program possess expertise in a variety of analytical techniques and the elaboration

of mathematical models to describe drug disposition and pharmacological processes.

During the first two years of study, students take courses in medicinal chemistry, pharmacology, physiology, biochemistry, mathematics, computer science, biostatistics, and pharmacokinetics.

The department's research program includes seven NIH-funded laboratories addressing a variety of fundamental and clinical problems pertaining to drug transport, metabolism, and toxicity associated with several diseases (AIDS, cystic fibrosis, leukemia, epilepsy), as well as pain management and transplantation. Most projects involve collaborative arrangements with investigators from other departments in the University or at the Fred Hutchinson Cancer Research Center. The collaborative relationship of the faculty of the Departments of Pharmaceutics and Medicinal Chemistry in the field of drug metabolism has received worldwide recognition.

Thesis research can involve experimental animal work, in vitro studies, clinical investigation, or a combination of approaches. Graduate students are given the opportunity to participate in interdisciplinary research, providing an added dimension to their training.

A wide range of career paths are available to graduates of this program. Opportunities include research in the pharmaceutical industry; research in hospitals, institutes, and foundations; teaching and research in academic institutions; and positions with government regulatory agencies.

Admission Qualifications

Students with undergraduate degrees in pharmacy, chemistry, or in the biological sciences are accepted for graduate study in pharmaceutics. Undergraduates who plan to pursue graduate study may expedite their programs by selection of pertinent electives. This information can be obtained from the graduate program coordinator.

Financial Aid

All students in the program receive financial support in the form of research assistantships, Public Health Service predoctoral training fellowships and other fellowships such as the William E. Bradley Graduate Fellowship and those from the American Foundation for Pharmaceutical Education and from several pharmaceutical companies.

depts.washington.edu/pharma/

Graduate Program

Graduate Program Coordinator
H375 Health Sciences, Box 357630
206-543-6788

The Department of Pharmacy offers graduate training leading to the Doctor of Philosophy degree.

Program Description

The graduate program in pharmaceutical outcomes research in the Department of Pharmacy provides M.S.- and Ph.D.-level training with a focus on economic evaluation of pharmaceuticals, pharmacoepidemiology, and drug-policy evaluation. Pharmaceutical outcomes research is the study of the health and cost consequences of pharmaceuticals and pharmaceutical-related policies on individuals and populations. Graduates of this program are trained to assess the use, outcomes, and cost of pharmaceuticals and pharmaceutical policies and practices. Students are prepared for careers in (1) teaching and research in colleges and universities; (2) pre- and post-marketing efficacy and safety; (3) policy analysis for industry, health insurance, and governmental agencies; and (4) drug-use management and evaluation within managed health-care organizations.

Successful completion of a doctoral preliminary examination, comprehensive examination, teaching assistantships, and research experience are necessary requirements prior to advancement to candidacy.

Admission Requirements

Students with undergraduate or graduate degrees in a health-science discipline or those with sufficient experience in pharmaceutical outcomes and policy research will be considered for admission. Applicants must apply to the Graduate School and the Department of Pharmacy and meet the admission criteria outlined in the Graduate School section of this catalog. Applications materials can be obtained by contacting the graduate program coordinator in the Department of Pharmacy or by visiting the graduate program Web page at depts.washington.edu/porpp/gradprog.htm.

Financial Aid

Financial support in the form of research assistantships, teaching assistantships, and fellowships may be available to prospective and continuing students. Availability of financial aid is limited, typically to the first and second academic year. Prospective students should contact the graduate program coordinator for more information on financial support.

Faculty

Chair

Danny D. Shen

Professors

Anderson, Gail * 1981; PhD, 1987, University of Washington; pharmacokinetics, metabolism and interactions of drugs in epilepsy and trauma.

Bauer, Larry * 1980; PharmD, 1980, University of Kentucky; clinical pharmacokinetics and drug metabolism, drug interactions.

Ellsworth, Allan J. 1981; PharmD, 1977, Philadelphia College of Pharmacy and Science; primary care, family medicine.

Gibaldi, Milo * 1978, (Adjunct); PhD, 1963, Columbia University; critical analysis of literature on drug discovery and development.

Hansten, Philip D. 1989; PharmD, 1968, University of California (San Francisco); drug interactions.

Horn, John R. * 1978; PharmD, 1977, University of Cincinnati; pharmacotherapeutics, with emphasis on drug interactions.

Patrick, Donald L. * 1987, (Adjunct); MS, 1968, PhD, 1972, Columbia University; health status and quality of life, end of life, adolescents.

Shen, Danny D. * 1984; PhD, 1975, State University of New York (Buffalo); CNS pharmacokinetics and pharmacodynamics of opioid analgesics and anticonvulsants.

Sullivan, Sean * 1992; PhD, 1992, University of California (Berkeley); health economics, pharmaceutical outcomes research and health policy.

Associate Professors

Black, Douglas J. 1981; PharmD, 1983, University of Washington; infectious diseases.

Downing, Donald F. 1982; (Clinical); BS, 1975, University of Washington; medical devices, innovative pharmaceutical care services.

Gardner, Jacqueline S. * 1990; PhD, 1980, University of Washington; pharmacoepidemiology, drug therapy use and effects, pharmacist practice patterns.

Gray, Shelly L. 1995; PharmD, 1989, University of Michigan; geriatric pharmacy.

Hebert, Mary F. 1996; PharmD, 1987, University of California (San Francisco); transplantation, immunology pharmacotherapeutics.

Heckbert, Susan R. * 1990, (Adjunct); MD, 1981, Case Western Reserve University, MPH, 1987, PhD, 1990, University of Washington; clinical and cardiovascular epidemiology, pharmacoepidemiology, pharmacogenetics.

Kwok, Karl 1982, (Clinical); PharmD, 1984, University of Washington.

Lippert, Michaelene 1988, (Clinical); BS, 1970, University of Wisconsin; substance abuse, community health care.

Paun, Dorothy Ann * 1993, (Adjunct); PhD, 1993, University of Oregon; financial performance analyses; international countertrade; business-to-business relationships.

Ramsey, Scott D. * 1990, (Adjunct); MD, 1990, University of Iowa, PhD, 1994, University of Pennsylvania; economics in medicine.

Somani, Shabir M. 1994; MS, 1982, MBA, 1992, University of Minnesota; hospital pharmacy administration.

Weber, Stanley S. 1996; PharmD, 1975, University of Cincinnati; psychiatric pharmacy practice, pharmacy distance learning.

Assistant Professors

Awan, Asaad B., (Clinical); PharmD, 1992, University of Washington.

Blough, David K. 1994, (Clinical); PhD, 1982, Iowa State University; biostatistics applications; generalized linear models; time series analysis.

Capoccia, Kam Lee 2000, (Clinical); PharmD, 1999, University of Colorado (Denver).

Devine, Emily E. 1999, (Research); PharmD, 1978, University of the Pacific, MBA, 1999, University of California (San Francisco).

Hazlet, Thomas K. * 1996; DPH, 1991, University of California (Berkeley); pharmaceuticals policy, outcomes and bioethics.

Johnson, Eric S. 1992; PhD, 1999, University of Washington; evaluate drug safety; describe burden of disease/clinical outcomes.

Joseph, Jutta C. 1997; PharmD, 1988, University of Michigan; child wellness, teen health, asthma, and development of culturally sensitive patient education.

McCune, Jeannine S. 1998; PharmD, 1995, University of North Carolina; drug metabolism.

Veenstra, David 1997; PhD, 1996, University of California (San Francisco), PharmD, 1996, University of California (San Francisco); economic modeling and cost-effectiveness analysis in health care.

Senior Lecturers

Dawson, Karan N. 1976; MS, 1978, University of Washington; psychotropics, geriatrics, teaching methods.

Odegard, Peggy Soule 1986; PharmD, 1990, University of Washington; clinical practice, pediatrics.

Lecturers

Hammer, Dana 2001; MS, 1995, PhD, 1999, Purdue University; student professional development and assessment.

Lam, Annie Y. 1996; PharmD, 1997, University of Washington; drug disposition and age, long-term-care pharmacy.

Murphy, Nanci L. 1989; PharmD, 1997, University of Washington; pharmacy education, geriatric practice and community pharmacy practice.

O'Sullivan, Teresa 1990; PharmD, 1990, University of Minnesota; cystic fibrosis, general medicine, practice-related education, medical literature evaluation.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

Medicinal Chemistry

MEDCH 400 Fundamental Concepts in Medicinal Chemistry (3) *Hackett* Principles of physical organic chemistry; chemical bonding, stereochemistry, acids/bases, and reaction mechanisms relevant to processes such as drug distribution, specificity, and metabolism. Prerequisite: either CHEM 239 or CHEM 337. Offered: A.

MEDCH 401 Immunizing and Antimicrobial Agents (4) *Daggett, Elmer* Chemical and biologic properties of agents used to prevent or treat infectious diseases, including diagnostic, prophylactic, and therapeutic uses of immunizing biologicals and spectrum, action mechanisms, resistance patterns, toxicity, and therapeutic applications of antibiotics, antifungals, and antivirals. Prerequisite: MICROM 301, MICROM 302, MEDCH 450, or equivalent, PharmD major, or permission of instructor. Offered: Sp.

MEDCH 402 Medicinal Chemistry (3) *Elmer, S. Nelson* Study of the various classes of medicinal compounds with particular emphasis on biological activity, mechanism of action, biotransformation, and the structural and physical properties governing absorption, distribution, and excretion. Prerequisite: MEDCH 400 or satisfactory completion of qualifying exam; CHEM 239; CONJ 403. Offered: A.

MEDCH 403 Medicinal Chemistry (3) *W. Nelson, Rettie* Study of the various classes of medicinal compounds with particular emphasis on biological activity, mechanism of action, biotransformation, and the structural and physical properties governing absorption, distribution, and excretion. Prerequisite: MEDCH 400 or satisfactory completion of qualifying exam; CHEM 239; CONJ 403. Offered: W.

MEDCH 404 Medicinal Chemistry (3) *Atkins, W. Nelson* Study of the various classes of medicinal compounds with particular emphasis on biological activity, mechanism of action, biotransformation, and the structural and physical properties governing absorption, distribution, and excretion. Prerequisite: MEDCH 400 or satisfactory completion of qualifying exam; CHEM 239; CONJ 403. Offered: Sp.

MEDCH 420 Alternative and Complementary Medicines (2) *Elmer* Study of popular alternative and complementary medicines used in the United States. Focus on herbal products with some coverage of homeopathic and other non-nutritional dietary supplements. Demonstration of resources for current objective information on these controversial medicines. Credit/no credit only. Offered: A.

MEDCH 435 Diagnostic Medicinal Chemistry (3) *S. Nelson* Examination of clinical diagnostic tests with

regard to the chemical or biochemical rationale of the testing method, interpretation of test results, and major factors influencing test values with special emphasis on the effects of medications. Clinical laboratory data from patients considered in light of these factors. Prerequisite: MEDCH 451 or BIOC 406 or equivalent, or permission of instructor. Offered: W.

MEDCH 450 Medicinal Biochemistry I (3) *Campbell, Kunze* Introduction to biochemistry for Pharm.D. students with an emphasis on those aspects of biochemistry which are particularly relevant to understanding human disease and therapeutic intervention strategies. Offered: W.

MEDCH 451 Medicinal Biochemistry II (3) *Campbell, Kunze* Continuation of discussions of those aspects of biochemistry which are particularly relevant to understanding human disease and therapeutic intervention strategies. Offered: Sp.

MEDCH 495 Special Studies in Medicinal Chemistry (*, max. 6) Opportunity to expand the breadth and depth of understanding in specific areas. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 499 Independent Study/Research (*, max. 24) Research problems in medicinal chemistry. Prerequisite: cumulative GPA of 2.50 and permission of instructor. Offered: AWSpS.

MEDCH 501 Advanced Medicinal Chemistry (4) *Elmer, S. Nelson* Advanced study of the various classes of medicinal compounds, with particular emphasis on biological activity, mechanism of action, biotransformation, and the structural and physical properties governing absorption, distribution, and excretion. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 502 Advanced Medicinal Chemistry (4) *W. Nelson, Rettie* Advanced study of the various classes of medicinal compounds, with particular emphasis on biological activity, mechanism of action, biotransformation, and the structural and physical properties governing absorption, distribution, and excretion. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 503 Advanced Medicinal Chemistry (4) *Atkins, W. Nelson* Advanced study of the various classes of medicinal compounds, with particular emphasis on biological activity, mechanism of action, biotransformation, and the structural and physical properties governing absorption, distribution, and excretion. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 520 Seminar (1, max. 15) *Campbell* Graduate students attend seminars and make one formal presentation per year while in residence; maximum of three presentations. Credit/no credit only. Offered: jointly with PCEUT 520; AWSpS.

MEDCH 521 Advanced Medicinal Chemistry (3) *Atkins, W. Nelson* Application of integrated data from the physical and biological sciences to problems of chemotherapy, including transport of drugs to site of action, biotransformation of drugs, interaction of drugs with enzyme systems, and recent advances in drug design. Prerequisite: CHEM 457, CHEM 531, and BIOC 442, or permission of instructor. Offered: Sp.

MEDCH 527 Drug Metabolism (3) *Rettie, Thummel* Considerations of the biochemical mechanisms for the biotransformation of drugs and foreign compounds. Includes reaction mechanisms, ultrastructural considerations, induction mechanisms, methodology, kinetics of inhibition and activation, steroid and amine metabolism. Offered: jointly with PHCOL 527; odd years; W.

MEDCH 528 Proteins in Therapy and Disease (3) *Atkins, Daggett* Examination of enzyme catalysis and of protein structure and dynamics. Principles applied to topics of therapeutic relevance including: peptides and proteins as drugs, structure-based drug design, drug metabolism, protein engineering, and role of mutant or incorrectly folded proteins in disease states. Prerequisite: comprehensive course in biochemistry or consent of instructor. Offered: even years; W.

MEDCH 530 Mass Spectrometry of Drugs, Toxicants, and Metabolites (3) *Hackett* Current approaches to the combination of liquid chromatography with mass spectrometry for small molecules. Mass spectrometry of drugs, toxicants, metabolites. Emphasis on interpretation skills, with problem sets each week. Introduction to LC/MS instrumentation. Ionization methods appropriate for small molecules. Capillary LC/MS and capillary electrophoresis. Offered: odd years; Sp.

MEDCH 541 Macromolecular Mass Spectrometry (3) *Hackett* Emphasis on problem sets designed to teach basic interpretation skills with respect to proteins and peptides. Basics of mass spectrometry instrumentation for large molecules, including electrospray and MALDI-TOF. Classical techniques in protein chemistry, including Edman chemistry and amino acid analysis. Prerequisite: permission of instructor; recommended: concurrent registration in CHEM 520. Offered: even years; Sp.

MEDCH 550 Mechanistic Studies in Medicinal Chemistry (1) *S. Nelson* Discussion of research strategies and methods used to carry out studies of mechanisms of drug action, metabolism, and toxicities. Emphasis is on problem solving through theoretical and experimental approaches and on data analysis and interpretation. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 551 Flavin and Heme-Containing Monooxygenases (1) *Rettie* Discussion of research strategies and methodologies concerning the structure, function, and polymorphic expression of human monooxygenases, especially the cytochrome P450s and flavin-containing monooxygenases. Emphasis placed on experimental problem solving, data analysis, and presentation. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 552 Medicinal Chemistry Aspects of Drug Action and Drug Metabolism (1) *W. Nelson* Discussion of research strategies, methodologies, and literature concerning the mechanisms of drug action and drug metabolism, particularly as these apply to opiate drugs and beta blockers. Emphases placed on problem solving, data analysis, and presentation. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 553 Structure and Function of Macromolecular Protein Assemblies (1) *Atkins* Discussion of research strategies, methods, and current literature concerning macromolecular self-assembly processes and protein-protein interactions as they relate to biological specificity. Emphasis on experimental approaches used in current literature. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 554 The Mechanism of Action and Pharmacokinetics of Biotherapeutic Agents and Other Natural Products (1) *Elmer* Discussion of the literature, research possibilities, and questions that need to be addressed in the area of the application of microorganisms and other natural products for therapeutic purposes. Emphases on problem solving, research strategies, literature evaluation, and

data analysis. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 555 Current Topics in Biological Mass Spectrometry (1) *Hackett* Emphasis on applications in the area of protein toxins, bioactive peptides, and microbial diseases and on current developments in the use of small scale separations with mass spectrometry. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 556 Mechanistic Aspects of Drug Metabolism (1) *Trager* Discussion of research strategies methodologies and new approaches with regard to elucidating the chemical mechanisms and enzymology of metabolic reactions catalyzed by cytochrome P-450. Emphasis on trying to develop in vitro techniques which are predictive of in vivo drug behavior. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 557 Molecular Modeling Studies of Medicinal Chemistry (1) *Daggett* Discussion of research strategies, simulation methodologies, and literature concerning protein and peptide structure, function, dynamics, and folding. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSpS.

MEDCH 558 Human Cytochrome P-450 Biochemistry (1) *Kunze* Presentation and discussion of research strategies and methodologies related to current problems in human drug metabolism by cytochrome P-450 enzymes. Emphasis on hypothesis testing and experimental problem solving in the areas of enzyme kinetics and mechanism. Credit/no credit only. Prerequisite: permission of instructor. Offered: even years; AWSpS.

MEDCH 559 Protein NMR Spectroscopy (1) *Campbell* Combines a comprehensive theoretical treatment of high resolution NMR spectroscopy with a practical description of the experimental techniques applicable to proteins and other biological macromolecules. Offered: AWSpS.

MEDCH 582 Topics in Medicinal Chemistry (1, max. 10) *W. Nelson, Rettie* Discussion of pertinent articles from current literature. Offered: AWSpS.

MEDCH 590 Doctor of Pharmacy Thesis (1) Writing intensive course in which students develop a high quality scientific paper that demonstrates grammatical and organizational excellence and the ability to critically evaluate biomedical literature. Credit/no credit only.

MEDCH 599 Cumulative Exams for Medicinal Chemistry (1) Quarterly cumulative examinations for graduate students. Credit/no credit only. Offered: AWSpS.

MEDCH 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

MEDCH 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

MEDCH 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Pharmaceutics

PCEUT 331 Pharmaceutical Formulation: Principles and Dosage Forms (4) *Ho, Lee, Unadkat* Physicochemical principles involved in formulating stable dosage forms suitable for human administration. Hands-on laboratory experience with formulating extemporaneous preparations routinely encountered in community and hospital pharmacies. Offered: A.

PCEUT 402 Drug Therapy and the Media (2) *Gibaldi* Review of media to provide a perspective on disease

and drug therapy. Elements include drug discovery and development, clinical trials, the pharmaceutical industry, regulatory agencies, and socioeconomic consideration. Preparation of written and oral summaries of media reports. Offered: jointly with PHARM 402; W.

PCEUT 405 Clinical Pharmacokinetics (5) *Anderson, Levy* Basic principles of pharmacokinetics and their application to the clinical setting, including: single-dose intravenous and oral kinetics, multiple dosing, nonlinear pharmacokinetics, metabolite kinetics, pharmacogenetics, and the role of disease in drug clearance and dose requirements, and kinetics of drug-drug interactions. Prerequisite: PCEUT 331. Offered: W.

PCEUT 406 Biopharmaceutics and Drug Delivery (3) *Ho, Levy, Slattery, Undakat* Principles and assessment of drug product bioavailability and bioequivalence, drug-drug and food-drug interactions for orally administered drugs, drug delivery via non-oral routes, and the systemic delivery of biotechnology drugs. Prerequisite: PCEUT 405. Offered: Sp.

PCEUT 493 Current Biomedical Literature (1, max. 6) *Gibaldi* Discussion of current biomedical literature with emphasis on drug therapy. Credit/no credit only. Offered: AWSp.

PCEUT 495 Special Studies in Pharmaceutics (*, max. 6) Opportunity to expand the breadth and depth of understanding in specific areas. Credit/no credit only. Prerequisite: Permission of instructor. Offered: AWSpS.

PCEUT 499 Undergraduate Research (1-6, max. 12) Research problems in drug disposition, drug targeting, and drug development. Prerequisite: Cumulative GPA of 2.5 and permission of the instructor. Offered: AWSpS.

PCEUT 501 Advanced Pharmacokinetics I (5) *Ho, Shen, Slattery, Undakat* Drug absorption, distribution, excretion, metabolism, and effects in mammalian systems. Compartmental model and model-independent approaches examined. Drug disposition studied in a physiologically realistic context taking nonlinear events into account. Aimed at development of innovative methods for data analysis and evaluation in biological systems. Prerequisite: PCEUT 405 or PCEUT 506, or permission of instructor. Offered: Sp.

PCEUT 502 Pharmacokinetics of Drug Metabolism (4) *Kunze, Levy, Thummel* Advanced study of drug metabolism pharmacokinetics. Topics emphasize linear and nonlinear metabolic clearance kinetics, metabolite kinetics, in vitro-in vivo predictions, and drug-drug interaction kinetics. Prerequisite: PCEUT 506. Offered: A; odd years.

PCEUT 503 Drug transport and delivery (4) *Ho, Hu, Shen, Undakat, Wang* Provides advance knowledge of the physico-chemical and biological concepts underlying in vivo transport and delivery of drugs. Prerequisite: PCEUT 506. Offered: Sp; odd years.

PCEUT 506 Pharmacokinetic Principles (2) *Levy, Shen, Thummel* Advanced study of pharmacokinetic concepts. Topics emphasize the physiological basis for mathematical models of drug distribution, clearance, and effect. Material presented in a didactic format with additional interactive discussions. Offered: W.

PCEUT 507 Drug Therapy Discussion Group (1, max. 12) *Gibaldi* New and important findings and trends in pharmacokinetics, biopharmaceutics, drug metabolism, and drug toxicity, with particular emphasis on clinical significance and applicability. Credit/no credit only. Offered: AWSp.

PCEUT 509 The Pharmaceutical Industry: Culture, Economics, and Regulation (2) *Gibaldi* Presents an

overview of the culture, economics, and regulation of the pharmaceutical industry. Offered: Sp.

PCEUT 510 Pharmacokinetics of Drug Interactions (3) *Shen* Common pharmacokinetic mechanisms underlying the clinically important interactions between drugs. Interactions involving gastrointestinal absorption, serum drug protein binding, excretory and metabolic clearance processes are discussed. Prerequisite: PCEUT 405 or equivalent. Offered: A.

PCEUT 513 Basic Concepts in Pharmacogenetics and Toxicogenomics (3) *Eaton, Thummel* Addresses current DNA sequencing and genotyping approaches, and basic concepts of pharmacogenetics and toxicogenomics. Emphasis placed on applications of genomic technologies to the understanding of "gene-environment interactions" that cause diseases of public health importance, including cancer, chronic neurological diseases, and adverse drug reactions.. Prerequisite: GENET 372 or equivalent. Offered: jointly with ENV H 513/PHG 513; A.

PCEUT 520 Seminar (1, max. 15) *Undakat* Graduate students attend seminars and make one formal presentation per year while in residence; maximum of three presentations. Credit/no credit only. Offered: jointly with MEDCH 520; AWSpS.

PCEUT 534 Pharmaceutical Analysis (3) *Kalhorn* Methods of drug and metabolite analysis from biologic matrices. Emphasis on practical aspects of assay design, optimization, and validation. Approaches to troubleshooting both assay methodology and instrumentation problems are also covered. Credit/no credit only. Offered: W.

PCEUT 583 Topics in Pharmaceutics (1, max. 15) *Ho* Discussion of pertinent articles from current literature and recent laboratory results. Credit/no credit only. Offered: AWSp.

PCEUT 584 Pharmacokinetic Discussion Group (2) *Slattery* Student initiated discussions of pharmaceutics concepts in relation to current literature. Preparatory to departmental cumulative examinations. Credit/no credit only. Offered: S.

PCEUT 586 Pharmaceutical Biotechnology (3) *Ho* Applications of biotechnology in designing therapeutic products, with emphasis on research and development of biopharmaceuticals. Consideration of molecular cloning, high throughput screening, production, physical stability, delivery systems of protein therapeutics in relation to pharmacokinetic and therapeutic responses. Prerequisite: PCEUT 331; concurrent registration in MEDCH 450 or permission of instructor. Offered: A.

PCEUT 590 Doctor of Pharmacy Thesis (1) Writing intensive course in which students develop a high quality scientific paper that demonstrates grammatical and organizational excellence and the ability to critically evaluate biomedical literature. Credit/no credit only.

PCEUT 598 Independent Research (*, max. 24) Basic and clinical research problems in drug disposition and effect. Prerequisite: 2.5 GPA and permission of instructor. Offered: AWSpS.

PCEUT 599 Cumulative Exams for Pharmaceutics (1) Quarterly cumulative examinations for graduate students. Credit/no credit only. Offered: AWSpS.

PCEUT 600 Independent Study or Research (*) Credit/no credit only. Offered: AWSpS.

PCEUT 700 Master's Thesis (*) Credit/no credit only. Offered: AWSpS.

PCEUT 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Pharmacy

PHARM 301 Self-Care Products and Practices (2) *Dawson, Murphy* Addresses a broad range of health concerns including how to identify common conditions amenable to self-care, select appropriate treatment options ranging from non-prescription to non-drug therapies, prevent adverse effects from the use of medications, adopt strategies encouraging healthier lifestyle habits, and learn the rationale behind conventional and alternative/complementary therapies. Offered: Sp.

PHARM 304 Profession of Pharmacy (3) *Awan* Overview of the profession of pharmacy emphasizing practice opportunities and specialization. Introduction to clinical and ethics case evaluation techniques using the Pharmacist's Workup of Drug Therapy format. Off-site pharmacy visitation required. Credit/no credit only. Prerequisite: PHARM 309.

PHARM 305 Introductory Pharmacy Practicum (3) *O'Sullivan* Preparation and dispensing of prescriptions at Rubenstein Memorial Pharmacy in Hall Health Center or other selected community pharmacies. Designed for Pharm.D. students with little or no experience in pharmacy. Under direct supervision of clinical faculty and other licensed pharmacy preceptors. Credit/no credit only.

PHARM 309 Quantitative Methods I (3) *O'Sullivan* Instruction in methods essential for conducting pharmacy calculations, interpreting and evaluating data and literature related to pharmacy, and responding to drug information inquiries from health professionals and patients. Introduction to statistical concepts necessary for pharmacy course work.

PHARM 334 Pharmacy Practice (3) *Hammer* Focuses on principles of contemporary pharmacy practice with emphasis on preparation and dispensing of the top 100 prescription drugs and related nonprescription therapies. Laboratory exercises in patient assessment and counseling, preparation of sterile products, and use of technology for dispensing medications and maintaining patient records. Prerequisite: PCEUT 331.

PHARM 335 Dispensing Practicum (2/4, max. 4) *O'Sullivan* Under preceptor supervision, students master competencies necessary for distributional responsibilities in the institutional and ambulatory care pharmacy practice settings. Credit/no credit only.

PHARM 402 Drug Therapy and the Media (2) *Gibaldi* Review of media to provide a perspective on disease and drug therapy. Elements include drug discovery and development, clinical trials, the pharmaceutical industry, regulatory agencies, and socioeconomic consideration. Preparation of written and oral summaries of media reports. Offered: jointly with PCEUT 402.

PHARM 403 Chemical Dependency Concepts (1) *Lippert* Genesis of addiction: harm reduction strategies, legal and ethical considerations, medication management in the substance-abusing population, impaired pharmacist rehabilitation, community resources. Course offered to Pharm.D. professional students. Credit/no credit only.

PHARM 409 Applied Pharmacokinetics (2) *Bauer* Pharmacokinetics of specific drugs. Influence of age, weight, sex, and disease states on patient-specific dosage regimens emphasized. Advanced kinetic concepts are discussed and put into applied context. Prerequisite: PCEUT 405.

PHARM 411 Medical Devices for Home Health Care (3) *Downing, Zolotu* Study of medical devices commonly provided by pharmacists to their patients, including their selection and adaptation for specific

patient needs. Lectures include display and demonstration of actual devices.

PHARM 412 Nonprescription Drug Therapeutics (3) *Ellsworth* Overview of common classes of nonprescription drug therapeutics with an emphasis on case examples, patient assessment, non-drug adjunct therapy, product selection, and patient advice. Oral presentation required. Computer (internet) case discussion mandatory. Enrollment restricted to 2nd, 3rd, and 4th year Pharm.D. students.

PHARM 436 Pharmacoeconomics, Genetics, and Healthcare (2) *Veenstra* Provides an introduction to outcomes research and economic evaluation related to pharmaceuticals and genetic technologies. Covers cost-effectiveness analysis and quality of life evaluation. Discusses the use of economic evaluation in healthcare to affect policy decisions.

PHARM 437 Chemical Dependency Issues in Practice (3) *Lippert* Emphasis on drug classes, pharmacologic management of abstinence and withdrawal, drug testing, drug use in pregnancy, treatment options and recovery, codependency and legal and ethical considerations. Credit/no credit only. Prerequisite: PHARM 403.

PHARM 438 Gerontological Communication Skills Seminar (2) *Dawson* Addresses special communication needs of the elderly, ranging from individualized patient counseling to patient advocacy through development and provision of pharmacy services. Communication techniques applicable to teaching, developing innovative services, supervising, motivating, conflict resolution, and interdisciplinary interactions are explored in lecture and laboratory. Credit/no credit only.

PHARM 439 Community Outreach Service (1) Work in assigned community services setting for a minimum of two hours per week to explore root causes of disability, cultural differences, professional values, community resources, and quality of life issues. Weekly seminars assist students in applying observations and experiences to pharmaceutical care.

PHARM 440 Pharmaceutical Care Systems I (3) *Dawson* Focuses on how human behavior and communication influence the pharmacist's activities in designing, delivering, and managing patient-focused pharmaceutical care. Writing, listening, interviewing, teaching, and critical thinking as applied to pharmacy practice are emphasized.

PHARM 445 Pharmacy-Based Immunization Programs (1) *Gardner* Provides didactic training in the epidemiology and prevention of vaccine preventable diseases and the implementation of community-based immunization programs; practical training in vaccine administration and management; and a community practicum in vaccine administration. Credit/no credit only. Prerequisite: MEDCH 401.

PHARM 446 Community-based Screening (1) *Downing, Odegard, Walker-Roe* Examines the practical application of cholesterol, hypertension, bone density, body composition, and wellness assessment techniques and counseling for health behavior modification. Following didactic and laboratory training, students will obtain practice by conducting a screening at a community location. Course offered following their first professional year. Credit/no credit only.

PHARM 447 Overview of Contraceptive Management (1) *Gardner, Walker-Roe* Didactic overview of contraceptive methods, fertility interventions, and medical abortions. Establishes forum for interactive discussion. Includes patient screening criteria and selection and monitoring outcomes of currently available barrier and hormonal methods of contraception and medical abortions. Offered to students following their first professional year, as well as other health science professional students.

PHARM 452 Contemporary Problems (1) Discussion of current trends affecting the role of pharmacy in health-care delivery. Credit/no credit only.

PHARM 460 Principles of Professional Practice Management (3) Emphasizes the major issues and barriers of providing pharmaceutical care, managing human resources, evaluating workflow and facility design, complying with legal and safety standards, managing drug distribution services, implementing effective systems of payment for services, and marketing pharmaceutical care services of a community pharmacy.

PHARM 468 Case Studies in Pharmaceutical Care (3, max. 9) *Dawson* Small groups of students work with an instructor to review cases illustrating various aspects of specific diseases: pathophysiology, clinical features, psychosocial factors, therapeutic interventions with emphasis on drug therapies, and community resources. Analytic reasoning, self-study skills, and knowledge are emphasized.

PHARM 479 Quantitative Methods II (4) *Blough* Introduction to basic biostatistical concepts in the field of pharmacy. Prerequisite: PHARM 309.

PHARM 483 Institutional and Healthcare Systems Pharmacy Practice (2) *Somani* Presentation of topics regarding current contemporary institutions pharmacy practice. Discussion of new systems technology, home care programs, managed care, computer applications, budgeting, formulary systems, drug information services, intravenous admixture programs, quality assurance process, and patient oriented services.

PHARM 488 Elective Advanced Practicum (1-16, max. 40) *Plein* Advanced-level geriatric clinical pharmacy experience in institutional (hospital, nursing home, long-term-care facility) and ambulatory patient-care facilities under direct supervision of a clinical preceptor.

PHARM 490 Fluid and Electrolytes and Parenteral Nutrition (2) *Awan, Edwards* Principles of fluid and electrolyte therapy, including saline, water, and acid-base balance, carbohydrate, protein, lipid, vitamin, and mineral requirements in parenteral nutrition. Nutritional assessment, complications of parenteral nutrition, stability and compatibility of intravenous solutions, modifications of parenteral nutrition in pediatrics and specific disease states are also covered.

PHARM 491 Cancer Pharmacotherapeutics (2) *Kwok, McCune, Takekuchi, Takemoto, Winter* Pharmacotherapy of cancer, covering supportive care (antibiotics, antiemetics, analgesics, nutrition) to the antineoplastic agents themselves. Specialists in each area serve as guest lecturers.

PHARM 492 Pharmaceutical Services for Long-Term Care (2) *Lam* Scope of pharmaceutical services for long-term care (LTC) and systems for services. Responsibilities of the pharmacist for distributive, administrative, and clinical pharmacy services for nursing homes and other long-term-care facilities. Economic considerations in provision of LTC pharmaceutical services, role of the consultant pharmacist for home-health-care organizations. Pharmaceutical services for independently living elderly.

PHARM 495 Special Studies in Pharmacy (*, max. 6) Special studies of professional topics in pharmacy. An opportunity to expand the breadth and depth of understanding in specific areas. Students undertake independent study under the individual direction of a faculty member.

PHARM 497 Drug Therapy for the Elderly (3) *Gray* Current knowledge of the effects of aging on the clinical use of drugs for older patients. Emphasizes selection and monitoring of therapy for common conditions of the older adult with multiple medical condi-

tions. Prerequisite: nurse practitioner students or permission of instructor.

PHARM 499 Independent Study/Research (*, max. 6) Applied pharmaceutical research problems. Credit/no credit only.

PHARM 502 Neonatal Drug Therapy (3) *Blackburn, Joseph* Clinical applications of drugs used with acute and chronically ill preterm and term neonates. Review of neonatal pharmacotherapeutics. Examination of selected therapeutic agents in relation to indications, efficacy, therapeutic and adverse effects, monitoring parameters, and dosing principles in the neonate.

PHARM 509 Medical Literature Evaluation (2) *Gibaldi, Harvey, Lavigne, Odegard, O'Sullivan, Watkins* Introduction to the processes involved in the assessment of primary and tertiary medical literature. Students are required to read and critique medical literature. Classes are conducted in a journal club format.

PHARM 510 Current Topics in Infectious Disease Pharmacotherapy (3) *Bauer, Black* Specialty topics of infectious disease pharmacotherapeutics, emphasizing the optimum use of antibiotic therapy. Discussion format using primary medical literature. Topics chosen for discussion reflect contemporary issues. Prerequisite: PHARM 560.

PHARM 511 Current Topics in Immunology and Immunotherapeutics (2) *Hebert* Overview of the immune system and pharmacologic agents which modulate the immune response. Credit/no credit only. Prerequisite: second-, third-, or fourth-year Pharm.D. student or permission of instructor.

PHARM 512 Clinical Applications of Drug Interactions (2) *Hansten, Horn* Discussion of the clinical evaluation and management of drug-drug interactions using patient situations. Focus on patient- and drug-related factors that predispose patients to adverse drug interactions, as well as clinical management of patients found to be at risk. Credit/no credit only. Prerequisite: third- or fourth-year Pharm.D. student.

PHARM 514 Primary Care Pharmacotherapeutics (3) *Acker, Anderson, Black, Hanster, Joseph, Kirkness, McCune, O'Sullivan* Explores clinical applications and therapeutic issues for selected drug categories commonly used in primary care settings and across age groups. Selected drug categories defined by pharmacokinetics, indications for use, efficacy, therapeutic and adverse effects, monitoring parameters, dosing principles, common drug interactions. Patient education, socioeconomic, and behavioral factors emphasized.

PHARM 515 Pharmacotherapeutics for Acute/Critical Illness (3) *Landis* Analysis of issues that impact the assessment, prescription, and evaluation of pharmacotherapeutic regimens for patients who are acutely or critically ill. Current research, clinical contextual considerations, and pharmacotherapeutic principles are emphasized as the basis for decisions relevant to the management of pharmacotherapy in acute care clinical practice.

PHARM 516 Certificate Program in Biomedical Regulatory Affairs (3) *Hazlet* Comprehensive overview of the knowledge and skills necessary to be an effective regulatory affairs and compliance specialist overseeing the design, development, testing, and production of drugs, biotechnology-derived therapeutics, and medical devices. Credit/no credit only.

PHARM 517 Certificate Program in Biomedical Regulatory Affairs (3) *Hazlet* Comprehensive overview of the knowledge and skills necessary to be an effective regulatory affairs and compliance specialist overseeing the design, development, testing,

and production of drugs, biotechnology-derived therapeutics, and medical devices. Credit/no credit only.

PHARM 518 Certificate Program in Biomedical Regulatory Affairs (3) *Hazlet* Comprehensive overview of the knowledge and skills necessary to be an effective regulatory affairs and compliance specialist overseeing the design, development, testing, and production of drugs, biotechnology-derived therapeutics, and medical devices. Credit/no credit only.

PHARM 532 Methods in Pharmaceutical Policy Analysis (4) *Hazlet, Sullivan* Introduction to the tools used in and the framework and dominant contexts for pharmaceuticals policy development and analysis. Methods reviewed in a series of sessions presenting a specific method and case analyses involving pharmaceuticals development. Project and in-class presentation required. Prerequisite: graduate standing in pharmacy or permission of instructor.

PHARM 533 Pharmacoepidemiology (3) *Heckbert, Johnson* Overview of pharmacoepidemiology including drug development and approval; application of epidemiologic methods to study drug safety and effectiveness; exploration of the interplay between research and public policy; introduction to resources for information about drugs; introduction to pharmacology principles pertinent to pharmacoepidemiology. Prerequisite: Graduate student or with permission. Offered: jointly with EPI 533.

PHARM 534 Economic Evaluation in Health and Medicine (3) *Patrick, Sullivan, Veenstra* Methods and techniques for evaluating costs and cost-effectiveness of health, medical, and pharmaceutical interventions. Emphasis on economic evaluation, decision analysis, and modeling techniques for resource allocation and decision making. Applications to technology assessment, health policy, clinical practice, and resource allocation. Prerequisite: permission of instructor. Offered: jointly with HSERV 583; A.

PHARM 535 Evaluating Cost and Outcomes in Health and Medicine 2 (3) *Patrick, Veenstra* Concepts and methods for evaluating cost and outcomes of health and medical interventions with a focus on cost-effectiveness analysis, pharmacoeconomics, health and quality of life assessment, resource allocation, and medical decision-making. Prerequisite: permission of instructor. Offered: jointly with HSERV 584.

PHARM 536 Publishing and Presenting with Style (3) *Blough, Johnson* Introduces how to publish and present pharmaceutical research. Familiarizes students with methodological principles for writing and graphing. Projects and computer sessions train in preparation of scholarly work.

PHARM 541 Health Care and Society (3) *Sullivan* Interdisciplinary introduction to health services

designed for future health care practitioners. Examines the history, organization, and effectiveness of the U.S. health care system. Stresses the student's ability to adopt a broad perspective across health care disciplines and traditional boundaries. Offered: jointly with HSERV 515.

PHARM 543 Pharmacy Laws and Ethics (4) *Hazlet* Study of the laws regulating the practice of pharmacy. Professional liability, warranties, and contracts are discussed. Case studies of ethical considerations of pharmacy practice.

PHARM 550 Pharmacotherapeutics for Older Adults (4) *Gray* Clinical use of drugs for older adults. Age-related pharmacokinetics, pharmacodynamics, and pharmacotherapeutics as applied to selecting and monitoring drug regimens for elderly patients. Problem solving regarding drugs of choice for older people with multiple pathologies. Prerequisite: fourth-year Pharm.D. student or permission of instructor.

PHARM 560 Therapeutics I (10) *Black, Hansten* Clinical application of drug knowledge in the treatment of disease. Emphasis on problem-solving, using case examples.

PHARM 561 Therapeutics II (9) *Bauer, Horn* Clinical application of drug knowledge in the treatment of disease. Emphasis on problem-solving, using case examples.

PHARM 562 Therapeutics III (9) *Anderson, McCune* Clinical application of drug knowledge in the treatment of disease. Emphasis on problem-solving, using case examples.

PHARM 573 Laboratory and Functional Assessment: Geriatrics (1) *Lam* Application of laboratory data and functional assessment in planning care for older adults. Case study/seminar format in which students recommend appropriate tests, interpret test results, and gain experience in performing tests of function. Recommended: MEDCH 435 or permission of instructor.

PHARM 574 Clinical Introductory Practicum (1) *O'Sullivan* Students spend three days in a patient care setting, under the guidance of preceptors or advanced students, as an introduction to the practicum experience. Credit/no credit only.

PHARM 575 Institutional Clinical Practicum (5, max. 15) *O'Sullivan* Under faculty supervision, fourth-year students provide pharmaceutical care in an inpatient environment. Credit/no credit only.

PHARM 576 Ambulatory Care Clinical Practicum (5, max. 15) *O'Sullivan* Under faculty supervision, fourth-year students provide pharmaceutical care in an outpatient environment. Credit/no credit only.

PHARM 577 Advanced Practicum (5, max. 40) *O'Sullivan* Under faculty supervision, fourth-year stu-

dents gain experience in practice settings of their choice. Credit/no credit only.

PHARM 578 Advanced Elective Practicum (1-10, max. 20) *O'Sullivan* Faculty-supervised practica either in areas of traditional practice or in innovative practice plans designed by faculty and student. Objectives, activities, schedules, and lengths are site- and preceptor-specific. Credit/no credit only.

PHARM 586 Clinical Case Conference (2) *Bauer, Horn* Weekly pharmacotherapy case conference emphasizing current therapeutics and clinical decision making. Credit/no credit only.

PHARM 590 Doctor of Pharmacy Thesis (1) Writing intensive course in which students develop a high quality scientific paper that demonstrates grammatical and organizational excellence and the ability to critically evaluate biomedical literature. Credit/no credit only.

PHARM 595 Special Studies in Pharmacy (1-6, max. 24) Special studies of professional topics in pharmacy. An opportunity to expand the breadth and depth of understanding in specific pharmaceutical areas. Students may undertake independent study under the individual direction of a faculty member. Credit/no credit only.

PHARM 596 Seminars in Pediatric Pharmacotherapy (2) *Joseph* Overview of drug disposition and medication utilization as it applies to the pediatric patient. Specific emphasis on neonatology and ambulatory pediatrics. Prerequisite: third-year Pharm.D. student or permission of instructor.

PHARM 597 Graduate Seminar (1) *Blough, Gardner, Hazlet, Johnson, Sullivan, Veenstra* Interactive discussion of topical issues, methods, or analytic techniques. Topics vary. Credit/no credit only. Prerequisite: graduate program student.

PHARM 598 Case Conference: Geriatrics (1) *Plein* Students taking geriatric pharmacy clerkships in various clinical settings meet with faculty to present case studies of elderly patients requiring complex drug therapies. Credit/no credit only. Prerequisite: Pharm.D. fourth-year practicum in geriatrics or general medicine.

PHARM 599 Independent Study/Research (1-6, max. 24) Applied pharmaceutical research problems. Credit/no credit only.

PHARM 600 Independent Study or Research (*) Credit/no credit only.

PHARM 700 Master's Thesis (*) Credit/no credit only.

PHARM 800 Doctoral Dissertation (*) Credit/no credit only.

The Daniel J. Evans School of Public Affairs is a graduate professional school providing education and research for the public service. The school confers the Master of Public Administration (M.P.A.) degree with day, Peace Corps Master's International, and evening program options. The Evans School's program of study is designed to train highly skilled managerial leaders and policy analysts for a wide range of careers in the public and nonprofit sectors. The academic and professional orientation of the degree program gives Evans School students the knowledge and skills necessary to make significant contributions to regional, national and international policy.

Graduates hold leadership positions such as mayors and city managers; local and regional government administrators; foreign service officers; senior military and public safety positions; assistants to elected officials; analysts with budget offices, legislative staff units, and city councils; directors of social service agencies; leaders and staff of nonprofit organizations and administrators of arts organizations. In addition, a number of alumni are employed in private sector positions involving substantial contact with public agencies.

Master of Public Administration

Day Program

The M.P.A. program is designed for present and future leaders of the public and nonprofit sectors. The program emphasizes broad-based public policy analysis and management knowledge, while students pursue one or more specialized policy fields known as Gateways. The core devotes considerable time to mastering the basic analytic and managerial skills needed by good analysts and managers. The curriculum draws upon the wide range of academic disciplines throughout the University of Washington.

Full-time day students complete 60 credit hours of course work, encompassing the core requirements,

an internship and a degree project. They generally take two academic years (six quarters) to complete the degree program. Part-time and Evening Degree students typically take three or more academic years to complete the M.P.A.

The M.P.A. program has five major components:

- the Required Core Curriculum;
- concentrated study in the three curricular areas of study: Economics, Analysis, and Values;
- specialized plan of study chosen from one or more of the following gateways: Education and Social Policy, Environmental Policy, International Affairs, Nonprofit Management, or Urban and Regional Affairs;
- a final degree project; and
- an internship.

Concurrent Degree Programs

In addition to the day M.P.A. program, the Evans School offers five concurrent M.P.A. degree programs: Master of Arts in International Studies (M.A.I.S.), Master of Urban Planning (M.U.P.), Master of Science in Forest Resources (M.S.), Juris Doctor (J.D.), and Master of Public Health (M.P.H.).

Peace Corps Master's International

Peace Corps Master's International (PCMI) students undertake a concentrated 51-credit curriculum, including a full tour of Peace Corps service. The required course work can be completed in a total of four or five quarters. One year of course work must be completed prior to leaving for Peace Corps service. While on assignment overseas, students remain in touch with their faculty adviser and a returned volunteer from the Evans School. PCMI participants return to the Evans School for one term at the end of their international service to complete their course work and final project report.

Mid-career Evening Degree Program

Mid-career professionals with seven to ten years of progressively responsible work experience in the public, nonprofit or private sectors are offered the Master of Public Administration degree through the Evening Degree Program. This program enables these students, typically midlevel managers, to work full-time while developing the leadership and analytic tools needed to attain higher leadership positions within their organization or field. The Evening Degree Program blends academic and professional perspectives to engender a practical orientation to the theories, values and managerial skills critical to success in public life.

Mid-career students must successfully complete 54 credits of graduate coursework to receive the M.P.A. degree. Degree requirements are divided between the integrated core sequence, electives, and leadership seminars. Students usually take two evening courses each quarter and graduate in three years. Mid-career students do not have an internship or degree project requirement. Although summer attendance is not required, some students take electives during the summer quarter to reduce academic year course loads.

The Evening Degree Program features three distinct components:

Core Sequence (21 credits)

The core sequence is a series of integrated management and analysis courses required of all students. Since the materials in these courses build upon each other, these classes must be taken in sequence. The integrated core curriculum is designed by a team of

Evans School faculty and distinguished practitioners. Important core concepts (e.g., human resource management, microeconomics, policy analysis, political management) are presented in an integrated way that best reflects the actual practice of public management and policy analysis.

Electives (26 credits)

Mid-career students have great flexibility in designing a course of study that best suits their professional needs and interests. Students may mix their elective courses in substantive policy areas such as environmental or social welfare policy with more practice-based management courses. Students may choose their elective courses from any department within the University in consultation with their advisor. One elective must be a course on ethics or values.

Leadership Seminar (7 credits)

Mid-career students take three leadership seminars during their program. The Evening Degree Program places special emphasis upon the development of managerial leadership. The seminars create a forum in which professionals can relate their workplace roles and challenges to the theories and skills examined in the M.P.A. curriculum. In an effort to foster a professional and academic support network among mid-career students, the seminar is open only to evening degree candidates.

The first leadership seminar focuses upon the personal aspects of leadership, the second focuses on analysis skills and abilities needed by leaders. The final leadership seminar integrates the lessons of the previous seminars and is taken during the third year of study. These seminars replace the degree project requirement of full-time day students.

Admission Requirements

The Daniel J. Evans School of Public Affairs admits students on an annual basis, for summer or autumn quarter only. The application deadline for either quarter is February 1.

The prospective student must hold a baccalaureate degree from an accredited college or university in the United States, or its equivalent from a foreign institution. The student's academic record should be a strong one, with a minimum GPA of 3.00 on the last 90 (quarter) or 60 (semester) credits of undergraduate work. Scores on the Graduate Record Examination (GRE) general test are also required for admission. GRE and TOEFL scores are required for international students only.

The primary criterion for admission to the school is the applicant's demonstrated ability to complete the graduate program while sustaining a high level of achievement. The Evans School's admissions committee considers grades and test scores, and gives considerable weight to professional experience, volunteer work, letters of recommendation and the applicant's writing skills as demonstrated in a personal essay.

Applicants for the Evening Degree Program must demonstrate seven to ten years of progressively responsible administrative experience. If prospective students have spent most of their careers in the private sector, they will need to demonstrate an active interest in, and contact with, public issues.

Concurrent degree applicants must apply through and be accepted into both respective programs.

Although the Evans School requires no specific prerequisite courses for admission, the school's core courses in economics and quantitative methods assume that entering students have been exposed to these subjects at the undergraduate level. Ideally new students will possess an academic or profes-

sional background in governmental processes, excellent writing skills and academic preparation in microeconomics and statistics. Students lacking sufficient preparation in these areas may be required to demonstrate aptitude prior to admission, or may be asked to take preparatory course work in addition to the basic M.P.A. degree requirements.

Financial Aid

Evans School Scholarships

The Evans School offers several scholarships to entering students each year from the school's endowed fellowship funds. These typically consist of \$4000-\$5000 stipends awarded primarily on the basis of academic achievement and/or excellence in public service.

The Daniel J. and Nancy Evans Fellowship honors former U.S. Senator, Washington State Governor, and current University Regent Daniel J. Evans and his wife Nancy. The fellowship supports students who aspire to excellence in public service.

The Henry M. Jackson Fellowship, given in honor of the late U.S. Senator Henry M. "Scoop" Jackson, supports students pursuing careers in environmental policy and natural resources management.

The Brewster C. Denny Fellowship, named for former Dean Brewster Denny, supports students who are committed to excellence in public service.

The Robert J. Lavoie Fellowship provides funds to outstanding students who are preparing to work in public service. Mr. Lavoie served as a Deputy Mayor of Seattle.

The Hubert G. Locke Fellowship, established in honor of former Dean Hubert Locke, provides support for students pursuing internships in nonprofit organizations devoted to social justice issues.

The William Shelton Fellowship is funded by the Scottish Rite Foundation of Washington and supports students with a demonstrated commitment to the values of public service.

The George A. Shipman Fellowship offers support to outstanding students pursuing careers in public service. Professor George Shipman was the founder of public administration education at the University of Washington.

Applicants interested in departmental scholarships must submit the Evans School Financial Aid Form with their Evans School application.

Assistantships

The Evans School offers approximately 20 to 30 research, teaching, and staff assistantship positions each year. These positions are typically 10 to 20 hours per week and may include tuition waivers. Hiring for assistantships is a competitive process. Announcements are posted as the positions become available.

Research assistantships are open to first and second year students. First year students are eligible upon their arrival at the school. Students typically work on grant-funded studies, special conferences, and public policy colloquia series sponsored by the school's research centers. Research assistants are exposed to a wide range of policy issues, including regional growth management, international trade, state and federal entitlement programs, health-and-human-services delivery and environmental protection. In addition, up to four research fellowships are offered each year to highly qualified applicants during the admissions process. These fellowships guarantee a paid research assistantship for the first year of study and tuition support.

Teaching and staff assistantships are reserved for second year students only. Teaching assistants are hired for the Evans School's core courses and computer lab. Staff assistantships include such positions as Hubert Humphrey Fellows Coordinator, Peer Advisor, Evening Degree Program Recruitment Coordinator and Internship Coordinator.

Work-Study Status

When hiring research assistants, preference is often given to students possessing work-study status. Work-study status is one of several forms of aid granted by the University of Washington Financial Aid Office based on information provided in a student's FAFSA. Financial aid applicants should highlight any financial change expected on the FAFSA.

Research Facilities

The culture of the Evans School promotes the integration of extensive applied research into the academic program. Students participate in independent research work related to their degree projects. In addition to supporting the independent research of its faculty members, the school houses the Forum at the Evans School and several research and policy centers.

The Forum at the Evans School

The Forum was established in the fall of 1998 under a three-year grant from the Henry M. Jackson Foundation. As the outreach arm of the Evans School, the Forum brings combined strength in its capacity for civic engagement and the depth and breadth of policy research at the school and throughout the University.

The Forum draws on the expertise of faculty, research staff, and students, focusing on three program areas: Leadership and the New Governance, Engaged Citizens and Engaged Communities, and Meeting the Challenges of Growth and Change.

Guests of the Forum address the process of change, the role of institutions in influencing change, and the importance of targeting policies and programs. In each of these areas, the Forum promotes diverse, credible, and reasoned discussions between and among citizens and leaders from the public, private, and nonprofit sectors. Through partnerships with print and broadcast media organizations, the Forum seeks to expand resources for broad public discussion of critical policy issues.

Cascade Center for Public Service

The Cascade Center for Public Service is the executive education arm of the Evans School. Established in 1984, the center offers two-, three-, and five-day courses as well as two-week advanced programs for leaders and managers in the public and nonprofit sectors. Cascade courses are held in Everett, Leavenworth, Olympia, Seattle, the Tri-Cities, Vancouver, and Wenatchee, and can count as credit toward an M.P.A. degree.

Electronic Hallway

The Electronic Hallway, www.hallway.org, is an internationally recognized resource for public affairs teaching and curriculum development. It supports the Evans School teaching mission and distributes cases and skill exercises to educators in public policy and management worldwide.

Human Services Policy Center

The mission of the Human Services Policy Center (HSPC) is to foster effective, integrated services to children and families, based upon the collaborative efforts of faculty in professional schools of the University of Washington. Achieving this mission entails supporting communication among policy ana-

lysts (academic, public, and private), policymakers, practitioners, community/civic leaders, and the media. Combining interdisciplinary applied research with effective communication allows HSPC to help focus and add depth to consideration of critical policy issues in the state of Washington. The center conducts most of its applied research in partnership with organizations engaged in direct services, governance, or policy advocacy in order to achieve direct applicability of research efforts. HSPC's current areas of focus are financing early childhood care and education, communications and public policy, comprehensive community initiatives, statistical monitoring of child and family well-being, and program evaluation and outcomes-based planning.

Center on Reinventing Public Education

The Center on Reinventing Public Education seeks to develop and evaluate methods of public oversight that can allow schools to be focused, effective and accountable. The center, established in 1993, pursues a national program of research and development on proposals such as charter schools, school contracting choice and school system decentralization. It also conducts research into reform initiatives in Washington and the Seattle public schools. The center seeks to inform community leaders, policy makers, school and school system leaders, and the research community.

Northwest Policy Center

The Northwest Policy Center (NPC) is dedicated to enhancing opportunities for people in need, fostering community well-being, improving the vitality of key sectors in a changing economy, and advancing equitable budget policies. NPC conducts research on the regional economy; works with policy makers and practitioners to develop and implement innovative economic, workforce, and community development strategies; and evaluates and shares lessons learned.

Urban Health Initiative

The purpose of the Urban Health Initiative (UHI) is to work closely for a period of up to ten years with five U.S. cities-Baltimore, Detroit, Oakland, Philadelphia and Richmond-to improve the health and safety of children living in these areas. Because each city is encouraged to try innovative approaches, a major responsibility of UHI is to document and share strategies that work over time, as well as those that prove less fruitful. UHI's National Program Office is a joint program of the Evans School and the School of Public Health and Community Medicine (SPHCM). UHI's National Program Director, Charles Royer, is the former mayor of Seattle (1978-1990). Mr. Royer and Deputy Director Cynthia Curreri have taught and lectured in both the Evans School and SPHCM.

Faculty

Professors

Dobel, J. Patrick * 1985; PhD, 1976, Princeton University; political theory, ethics and public policy, organizational theory.

Gloyd, Stephen S. * 1985, (Adjunct); MD, 1973, University of Chicago, MPH, 1983, Harvard University; political economy, epidemiology, and primary health care in developing countries.

Gordon, Andrew * 1988; PhD, 1970, Columbia University; information policy and organizational dynamics.

Gordon, Margaret T. * 1988; PhD, 1972, Northwestern University; news media and public policy; urban policy; women's issues.

Hill, Paul T. 1993, (Research); PhD, 1972, Ohio State University; politics and reform of K-12 education; business and public policy; urban politics.

Hyman, Barry * 1975; PhD, 1965, Virginia Polytechnic Institute and State University; engineering design, energy systems and policy, technology and public policy.

Karr, James * 1991, (Adjunct); PhD, 1970, University of Illinois; stream and watershed ecology, tropical forest ecology, conservation biology, environmental policy.

Locke, Hubert G. * 1976, (Emeritus); MA, 1962, University of Michigan; criminal justice, urban policy, race and ethnic relations.

May, Peter J. * 1979, (Adjunct); PhD, 1979, University of California (Berkeley); policy processes; policy design and implementation; environmental regulation.

Miles, Edward L. * 1974; PhD, 1965, University of Denver; international law and organization; science, technology, and international relations; marine policy.

Plotnick, Robert D. * 1984; MA, 1973, PhD, 1976, University of California (Berkeley); economics of poverty, labor and social welfare policy.

Thompson, Richard J. 1994, (Affiliate); JD, 1968, University of Washington.

Watts, Carolyn A. * 1975, (Adjunct); MA, 1974, PhD, 1976, Johns Hopkins University; health economics and policy.

Williams, Walter * 1970, (Emeritus); PhD, 1960, Indiana University; high-level policy decision making, policy implementation.

Woffle, Dael L. * 1982, (Emeritus); PhD, 1931, Ohio State University; science and public policy, development of human talent.

Zerbe, Richard O. * 1975; PhD, 1969, Duke University; law and economics, cost-benefit analysis, economic history, environmental regulation.

Zumeta, William M. * 1985; MPP, 1973, PhD, 1978, University of California (Berkeley); public policy analysis, higher education policy and finance, education and workforce policy.

Associate Professors

Adams, Jacob E. 2001, (Research); PhD, 1993, Stanford University; policy, policy implementation, school finance, public agency accountability.

Anderson, C. Leigh 1997; PhD, 1989, University of Washington; institutional economics, international trade and environmental policy, international development.

Brock, Jonathan 1982; MBA, 1973, Harvard University; public management, negotiation and mediation, labor relations, managing people.

Campbell, Nancy M. 1994, (Affiliate); MA, 1977, State University of New York (Albany).

Cullen, Alison * 1995; DSc, 1992, Harvard University; environmental policy, environmental health risk assessment, decision analysis, information and uncertainty analysis.

Dively, Dwight D. 1988, (Affiliate); MPA, 1982, Princeton University.

Klawitter, Marieka * 1990; MPP, 1982, University of Michigan, PhD, 1992, University of Wisconsin; family and employment policy, women's studies, sexual orientation discrimination.

Miller, Ernest G. * 1965, (Emeritus); PhD, 1959, Princeton University; management and organizational development, organization theory, administrative behavior.

Smith, Steven Rathgeb 1996; MSW, 1978, Washington University, PhD, 1988, Massachusetts Institute of Technology; nonprofit and public management, state and local government, health and social policy.

Waddell, Paul A. * 1997; PhD, 1989, University of Texas (Dallas); urban policy, regional planning, growth management, land use, transportation, GIS.

Assistant Professors

Gugerty, Mary Kay 2001; PhD, 2001, Harvard University; nonprofit and public management; international development, community organizations and development.

Kleit, Rachel G. 1999; PhD, 1999, University of North Carolina; urban politics, public housing, urban planning.

Layton, David F. 2001; PhD, 1995, University of Washington; environmental and natural resource policy.

Page, Stephen B. 1999; PhD, 1999, Massachusetts Institute of Technology; public management, interagency collaboration, U.S. social policy.

Ryan, Clare * 1997; PhD, 1996, University of Michigan; natural resource policy and administration, environmental conflict management, water policy.

Senior Lecturers

Boehrer, John 1999; BA, 1965, Harvard University; faculty development, teaching skills, case teaching and writing, communication skills.

Carlson, Daniel L. 1988; MCP, 1972, University of California (Berkeley); urban policy, public service clinics.

Cormick, Gerald W. 1975; PhD, 1971, University of Michigan; mediation and negotiation.

Donaldson, Susan K. 2000; JD, 1979, University of Washington; urban politics, gender and leadership issues.

Harrison, David S. 1986; MPA, 1979, Harvard University; regional economic development; policy and program design.

Madison, John J. 1995; MS, 1981, American University, PhD, 1994, George Mason University; politics of public policy, technology policy.

McIntire, James L. 1987; MPP, 1978, University of Michigan, PhD, 1993, University of Washington; housing policy, state tax policy, labor market policy.

Royer, Charles T. 1994; LLD, 1983, Antioch College; urban policies, health policy.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crsctat/.

PB AF 499 Topics in Public Policy (3-5, max. 6) I&S Examines selected issues of importance in all areas of public policy. Focus on in-depth analysis of vital public policy issues and the integration of economic, political, and administrative perspectives on them. Offered: jointly with POL S 404.

PB AF 500 General Seminar (1, max. 9)

PB AF 501 Legislative Relations (3) Studies role of legislative bodies in American public policy making. Builds on case studies and focuses on tactics, constraints, and options involved in working within a legislative process to achieve public policy goals.

PB AF 502 Political Management of Policy Process (3) Analyzes the issues which public managers address when they seek to make and implement public policy and programs. Pays particular attention to the institutional and political constraints on policy making and the skills needed to address them.

PB AF 503 Administrative and Executive Leadership (3) Nature of executive life in the public sector, the function of leadership in implementing, making, and changing policy. Leadership styles, the relation of leadership to its constituencies and communities. Offered: jointly with POL S 572.

PB AF 504 Leadership Ethics (3) Addresses the moral challenges facing leaders in the public and nonprofit sectors. Examines the values and virtues important to sustained ethical leadership as well as strategies to build strong institutional cultures and support ethical practices in institutions.

PB AF 505 The Law of Public Administration (3) Legal framework of public administrative action in the United States, emphasizing constitutional requirements; operation of the administrative process; management of personnel, funds, and contracts; and judicial review of administrative activity.

PB AF 506 Ethics and Public Policy (3) Teaches students to identify moral issues in public life. Special focus on the integration of moral concerns into public discussion in a manner which contributes to good policy and does not polarize issues. Discusses moral and political theory by focusing on contemporary cases and issues.

PB AF 507 Mediation and Negotiation as Instruments of Public Management and Policy-Making (3) Possibilities offered by mediation and negotiation methods using a mixture of cases, readings, discussions, lectures, and guest speakers. Use of negotiation and mediation techniques to resolve disputes and disagreements over public-policy issues.

PB AF 508 Management Approaches to Service Delivery (3) Examines how services can be delivered in a way that is responsive to the needs of those being served and maximizes the effective utilization of resources. Topics addressed include: needs assessment, process analysis, service strategy, sustaining the service organization, case management, and services integration.

PB AF 509 Managing People in Public and Nonprofit Agencies (3) Emphasizes the role of the program manager rather than that of the personnel officer. Managing people within a variety of programmatic, bureaucratic, and political settings. Case studies form basis of class discussion, assignments.

PB AF 510 Foundations of American Democracy (1) Discusses the role of public service in the United States through examination of historical and institutional foundations of the U.S. political regime. Pays special attention to the structures of government and constitutional values and conflicts at the heart of the political system. Offered: A.

PB AF 511 Public Management I (3) Examines broad aspects of organizational life and orients students to key internal and external challenges and opportunities of managing public and nonprofit organizations. Main topics include organizational mission, values, communication, culture, organizational environment and the policy process, legislative-executive relations, interest group advocacy, and media relations. Offered: A.

PB AF 512 Public Management II (3) Addresses questions of organizational design, personnel, and operations management to equip students with skills to perform effectively in mission-driven organizations. Core topics include organizational design, inter-organizational networks, human resources and staff management, improving service delivery and production flows, measuring and managing for performance, and ethical leadership. Offered: Sp.

PB AF 513 Public Policy Analysis (3) Production and use of analysis to support public policy decisions. Defining problems, devising alternative solutions, clarifying stakes in choices, predicting impacts of choices. Skills developed by working on specific policy problems. Assumes familiarity with statistics, microeconomic theory, and institutions and processes of American government. Prerequisite: PB AF 516 or permission of instructor. Offered: a.

PB AF 514 Policy Implementation (3) Presents set of analytic skills for anticipating and diagnosing implementation problems. Primarily for students who plan to become public-sector policy analysts or managers. Mastery of basic literature and its application to solving problems of public policy, including estimating feasibility of policy alternatives and identifying sources of implementation failure, is expected.

PB AF 515 Decision Making for Public Managers (3) Considers decision making from normative, prescriptive, and descriptive perspectives. Emphasizes individual decision making, with some discussion of organizational decision practice. Focuses on decision analysis; presents tools for structuring decisions; and considers the role of analysis as a basis for negotiation.

PB AF 516 Microeconomic Policy Analysis (3) Ways in which microeconomic analysis can contribute to the analysis of public sector issues. Supply and demand, consumer and firm behavior, competitive and monopoly markets, income distribution, market failure, government intervention. Policy applications of theory. Prerequisite: elementary economics. Offered: A.

PB AF 517 Economics of the Public Sector (3) Methods of analyzing effects of public expenditures and taxes on behavior of individuals and firms, on economic efficiency, and on equity and distribution of income. Theory and practice of intergovernmental fiscal relations. Application of theory to formulation of public policy. Prerequisite: PB AF 516.

PB AF 519 Law and Economics (4) Offered: jointly with LAW A 561.

PB AF 520 Intergovernmental Relations (3) Comparative study of the issues involved in implementing government programs across multiple jurisdictions. Issues of accountability, feasibility, politics, and constitutional limits are examined by focusing upon various methods used to implement programs across federal, state, regional, and international jurisdictions.

PB AF 522 Public Management: Budgeting (3) Budgeting as a management process. Study of formulation and administration of government budgets, including role of budgeting in policy processes, approaches to budget formulation and analysis, development of the PPB approach, and aspects of budget administration, such as revenue estimating,

allotment control, cost accounting. Prerequisite: PB AF 516 or permission of instructor. Offered: W.

PB AF 523 Financial Management in the Public Sector (3) Exploration of the managerial uses of accounting and other processes of financial management in the public sector. Topics covered include: financial planning and control, fund accounting, cost accounting, asset accounting, internal controls, auditing, financial analysis, and financial reporting. Prerequisite: permission of instructor.

PB AF 525 Organizational Development in Public Agencies (3) Philosophies, theories, and models of behavioral science interventions in organizational diagnosis and development (OD). In addition to a review of the basic literature dealing with the OD approach, emphasis is placed on examination of case studies and class experience in OD applications, including organizational diagnosis, problem confrontation, and team building. Prerequisite: permission of instructor.

PB AF 526 Program Evaluation (3) Theory, practice, and politics of evaluation, from simple feedback mechanisms to evaluation of large-scale ongoing programs and social experiments. Emphasis on applications of experimental and quasi-experimental evaluation. Case studies illustrate various types of evaluation. Prerequisite: background in quantitative methods.

PB AF 527 Quantitative Analysis; Quantitative Analysis for Public Managers (3) Two-quarter sequence explores how to formulate research questions, gain experience with conducting research, and learn how to assess which statistical tools or research methods are appropriate to answer different types of policy or management questions. Covers probability, descriptive statistics, hypothesis testing, and confidence intervals. Prerequisite: graduate status in School of Public Affairs or permission of instructor. Offered: W.

PB AF 528 Quantitative Analysis; Quantitative Analysis for Public Managers (3) Second quarter of a two-quarter sequence aimed at helping students become informed users and critical consumers of research and statistical analysis. Combines material on research design and data collection methods with tools for multivariate analysis. The multivariate analysis methods include correlation and an introduction to multivariate regression. Prerequisite: PB AF 527. Offered: Sp.

PB AF 530 International Affairs (3) Provides a broad understanding of international issues and United States policy. Students explore U.S. foreign policy and theories of major international actors in international trade, security, and strategic concerns, refugee policy, conflict resolution, development assistance, and the environment. Offered: jointly with POL S/SIS 534.

PB AF 531 Development Management in the 21st Century (3) Addresses organization, administration and evaluation in governmental and non-governmental agencies involved in development efforts. Students examine development strategies, alternative management approaches, and management skills such as budgeting, finance, human resource development and program evaluation. Other topics include communication, expatriate/local power imbalances, decentralization, community involvement, culture, and personnel issues.

PB AF 532 Managing Policy in a Global Context (3) Examines different policy environments leaders must address to achieve policy in comparative and international settings. Includes strategies, tactics, and frameworks needed to initiate and sustain policy dealing with authoritarian, democratic, liberal, and one-party states. Focuses on pressures from the

international system and issues such as globalization.

PB AF 533 Economics of International Development (3) Introduction to sustainable international development and its physical, human, social, and natural capital components. Students examine the new growth theories and evidence, and their relationship to democracy, trade, and other policies and institutions. Topics include income distribution, poverty, and the environment.

PB AF 537 Topics in International Affairs (3, max. 12) Examines topics of interest and import in foreign policy and international affairs. Focuses on the in-depth analysis of issues and the integration of economic, institutional, and political dimensions.

PB AF 538 International Organizations and Ocean Management (3) Survey of the manner in which international organizations attempt to manage and regulate the uses of the ocean. Primary emphasis on the analysis of processes that support or constrain these organizations and on the search for alternative policies and organizations. Prerequisite: SMA 500 or permission of instructor. Offered: jointly with SMA 507.

PB AF 540 Integrated Public Management Sequence (3) Analyzes the institutional and political context of modern public management. Cases, readings, and discussion provide an integrated introduction to the major skills needed to successfully lead and manage government and nonprofit organizations. Offered: A.

PB AF 541 Integrated Public Management Sequence (3) Analyzes the institutional and political context of modern public management. Cases, readings, and discussion provide an integrated introduction to the major skills needed to successfully lead and manage government and nonprofit organizations. Prerequisite: PB AF 540. Offered: W.

PB AF 542 Integrated Public Management Sequence (3) Analyzes the institutional and political context of modern public management. Cases, readings, and discussion provide an integrated introduction to the major skills needed to successfully lead and manage government and nonprofit organizations. Prerequisite: 541. Offered: Sp.

PB AF 543 Public Leadership Seminar (3) Focus on the societal context of managerial life. Credit/no credit only. Prerequisite: permission of instructor. Prerequisite: graduate standing in Public Affairs Evening Degree Program. Offered: A.

PB AF 544 Public Leadership Seminar (1-3, max. 3) Integrated use of analytic and management concepts in the making of policy. Prerequisite: PB AF 543. Offered: W.

PB AF 545 Public Leadership Seminars (3) Provides a forum to reflect on the major dimensions of modern managerial leadership at the end of the program. Includes a team project working with outside clients or organizations. Prerequisite: PB AF 544.

PB AF 550 Management of Not-for-Profit Organizations (3) Focuses upon the roles played by not-for-profit organizations in meeting the public good. Examines internal management issues such as structure, budget, and operations; and external issues such as board functions, legal status, marketing, media relations, and fund-raising.

PB AF 551 Public Management: Program Planning and Design (3) Policy context of planning and programming, the institutionalization of purpose, the planning process, activity design, work scheduling and measurement, and program evaluation.

PB AF 552 Public Arts Policy and Management (3) Role of government in arts. Range of public support at federal, state, and local levels; reasons for its

development and viability. Nature, evolution, functions of public arts agencies in implementing arts policy; relation of such agencies to their constituencies. Seattle, King County, and Washington State serve as case studies.

PB AF 554 Nonprofit Organizations and Public Policy (3) Examines the changing role of nonprofit organizations in American society. Selected policy topics include privatization, for-profit/nonprofit competition, public-private partnerships, tax policy, and new sources of revenues.

PB AF 555 Topics in Nonprofit Management (3, max. 12) Examines various topics of public importance in nonprofit management. Integrates the political, managerial, and economic dimensions of these issues.

PB AF 560 Urban Affairs (3) Explores national/local urban policy concerning the major problems confronting cities and metropolitan regions today. Economic globalization, income inequality, and metropolitan decentralization shape the urban agenda, the context for urban policy, and the analytic focus of the course. A project allows the exploration of strategies for intervention. Offered: jointly with URB DP 560.

PB AF 561 Urban Economics and Public Policy (3) Examines the rationale for and consequences of public intervention in urban land, housing, and transportation markets through land use regulations such as zoning and urban growth boundaries, infrastructure investments, and fiscal policies to manage urban development and traffic. Prerequisite: PB AF 516 or equivalent. Offered: jointly with URB DP 561.

PB AF 562 Introduction to Neighborhood Planning and Community Development (3) Provides introduction to basic practices in neighborhood planning and community development, including theoretical/historical bases; developing neighborhood plans/projects; indicators and evaluation of neighborhood quality; community participation; institutional framework, ethical dilemmas, and professional roles. Addresses current issues, including Seattle's experience, NIMBYism, security, neighborhood character, housing segregation, environmental racism. Offered: jointly with URB DP 562.

PB AF 563 Seminar in Urban Planning and Policy (1) Seminar for students in the MPA/MUP concurrent degree program. Explores topics that intersect urban planning and policy, through exchange with faculty and professionals working in this arena. Focuses on developing thesis topics that explore this intersection. Offered: jointly with URB DP 563.

PB AF 565 Topics in Urban Affairs (3, max. 12) Examines various topics of public importance in urban policy. Integrates the political, managerial, and economic dimensions of these issues.

PB AF 569 Race and Public Policy (3) Analyzes the way in which the persistent problem of race is expressed in the formation and implementation of social and public policy.

PB AF 570 Social Policy Analysis and Management (3) Examines major institutions and programs in the human resources policy area: education, regulation of labor market, health care, income maintenance, social services. Discusses alternative policy instruments, analytic perspectives, intergovernmental issues, and management issues arising across policy areas. Explores challenges of linking services and clients across separate agencies.

PB AF 571 Education, The Workforce, and Public Policy (3, max. 6) Examination of policy issues involving education, training, the economy, and the development of the nation's human resources. Relationship between education, training, and work, underutilized workers, race and gender discrimination issues, and

the role of education and training in economic development. Offered: jointly with EDLP S 563.

PB AF 573 Topics in Education and Social Policy (3, max. 12) Examines various issues of public importance in the areas of education and social policy. Focuses on in-depth analysis of relevant issues and the integration of the economic, administrative, and political dimensions of these issues.

PB AF 575 Public Policy Processes (5) Political science frameworks, approaches, and theories concerning development and implementation of public policies within American political systems. Governmental behaviors and processes, including rational, political, and bureaucratic models of governmental decision making; agenda-building processes; and normative perspectives concerning role of governmental entities. Offered: jointly with POL S 575.

PB AF 581 Information Technology and the Policy-Making Process (3) Demystifies information base for policy making in democracies. Examines theoretical and practical issues associated with information processing in the public sector. Considers role of new technologies in collecting, analyzing, and disseminating information with special attention to the relationship between these technologies and effective government service, public participation, and organizational accountability.

PB AF 582 News Media and Public Policy (3) Explores impacts of news coverage on public policy. Exposure to journalists' approaches to coverage of public affairs, as well as to strategies used by leaders of public/non-profit agencies to attract favorable coverage and minimize damaging coverage. Students learn techniques for assessing impacts of news coverage.

PB AF 583 Seminar in Science and Public Policy (3) Issues and problems relating to the interaction of science and scientists with the public policy-making process. Science versus the nature and values of political processes, and the continuing tensions between the two. The evolving interaction between scientific and technical knowledge and political power; scientific versus ethical judgments. Role of science in the establishment of national goals. Plans and proposals for increasing governmental competence to deal with public policy issues involving science and technology.

PB AF 586 International Science and Technology Policy (3) Seminar is designed: first, to analyze the relationships between research and development policy, capabilities, and national technological strategies for advanced industrial and less-developed countries; second, to deal with the international implications of particular technologies as countries try to make policy for them in regional and global organizations. Examples of specific technologies are chosen from such fields as space telecommunication, weather and climate modification, airline transportation, nuclear energy, and seabed exploitation.

PB AF 589 Risk Assessment for Environmental Health Hazards (3/4) Context, methodologies, types of data, uncertainties and institutional arrangements for risk assessment. Both qualitative and quantitative approaches to the identification, characterization, and control of environmental hazards to health emphasized through didactic and case studies. Offered: jointly with CEE 560/ENV H 577.

PB AF 590 Environmental Policy Processes (3) Presents background to establish the need for environmental policy. Explores in a comparative manner, examining both successes and failures, various strategies that have been used or proposed to protect the environment. Offered: jointly with CFR 592.

PB AF 591 Seminar in Resource Policy and Management (1) Introduction and orientation for concurrent degree program between the Evans School of Public Affairs and the College of Forest Resources. Examines research and literature on contemporary issues related to the integration of natural resource science, policy, and management, through discussion among faculty, students, and invited speakers. Offered: jointly with CFR 591.

PB AF 592 Policy Analysis Design (5) Study based on understanding of the actors, arenas, issues, and policy communities that form the context for policy development and implementation. Exploration of approaches to policy inquiry. Considers implications for both policy and management. Students develop a study design for course project. Offered: jointly with F M 571.

PB AF 593 United States Energy Policy (3) Energy policy formulation and implementation with emphasis on post-1973 developments. Energy conservation programs; changing roles of oil, coal, gas, nuclear, and solar energy; institutional, environmental and equity considerations; government research and development programs.

PB AF 594 Environmental Policy Analysis: Risks and Values (3) Emphasizes institutions involved in environmental policy including the government, environmental organizations, and private business. Examines ways in which the nature of these institutions affects the substance and ultimate effect of the environmental policy implemented.

PB AF 595 Topics in Environmental Policy and Management (1-3, max. 12) Examines various topics of public importance in environmental policy and management. Integrates the political, managerial, and economic dimensions of these issues.

PB AF 596 Ethics and Values in Environmental and Natural Resource Policy (3) *Zerbe* Explores environmental values and ethics and their relationship to the policy process. Includes content on value foundation of economic efficiency and its relationship to fairness, legal entitlements, duty to other creatures, and incommensurabilities in valuing goods. Current policy controversies are addressed.

PB AF 598 Administrative and Policy Skills Workshop (1-3, max. 3) Teaches practical administrative, leadership, and analytic skills commonly required of managers and analysts in the public and non-profit sectors. The workshops emphasize hands-on problem resolution, simulations, and actual practice.

PB AF 599 Special Topics (1-6, max. 6) Study and analysis of special topics in public affairs. Topics vary each quarter depending on curricular needs and interests of students and faculty. Prerequisite: permission of instructor.

PB AF 600 Independent Study or Research (*)

PB AF 605- Degree Project ([1-6]-, max. 6)

PB AF 606- Public Service Clinic (3-) *Carlson, Madison, Page* Serves to meet the degree project requirement as part of the Evans School curriculum. Students work in a supportive environment facilitated by peer and faculty to connect the research, organizational change, and capacity-building needs of community organizations and public agencies.

PB AF -607 Public Service Clinic (-3) *Carlson, Madison, Page* Serves to meet the degree project requirement as part of the Evans School curriculum. Students work in a supportive environment facilitated by peer and faculty to connect the research, organizational change, and capacity-building needs of community organizations and public agencies.

School of Public Health and Community Medicine

Dean

Patricia W. Wahl

F350 Health Sciences

General Catalog Web page:

www.washington.edu/students/gencat/academic/School_Public_Hlt.html

School Web page:

depts.washington.edu/sphcm/

The School of Public Health and Community Medicine (SPHCM) is composed of five departments: Biostatistics, Environmental Health, Epidemiology, Health Services, and Pathobiology. The School offers graduate programs leading to the degrees of Master of Public Health (M.P.H.), Master of Health Administration (M.H.A.), Master of Science (M.S.), and Doctor of Philosophy (Ph.D.). Admission requirements vary by degree and field and are described in the sections of each department.

SPHCM also offers undergraduate degree and undergraduate minor programs, which are described in the undergraduate volume of the *General Catalog*, or visit the *General Catalog* online at www.washington.edu/students/gencat/.

Graduate Programs

Master of Public Health Degree: The M.P.H. is a professional degree that provides broad training in public health and prepares public health practitioners. Each track or program provides additional training in a particular area. Graduates often work in public health practice settings, academia, or research. The M.P.H. degree is offered in biostatistics, environmental health, epidemiology, and health services. Students earning the M.P.H. may emphasize biostatistics, community medicine, community-oriented public health practice, environmental/occupational medicine, epidemiology, international health, maternal and child health, nutritional sciences, public health genetics, or social and behavioral sciences. The M.P.H. degree in public health genetics and nutritional sciences are offered through the Department of Epidemiology. The M.P.H. in public health genetics involves faculty from throughout the University.

Master of Science and Doctor of Philosophy Degrees: M.S. and Ph.D. programs in biostatistics, environmental health, epidemiology, health services, and pathobiology prepare students for academic or research careers. M.S. and Ph.D. programs in public health genetics are offered through the Department of Epidemiology. The M.S. and Ph.D. programs in nutritional sciences are administered in the School, although the degrees are awarded through the Graduate School's interdisciplinary group structure.

The M.S. programs in biostatistics, environmental health, epidemiology, health services, pathobiology, and genetic epidemiology (pending approval for 2002), and the interdisciplinary M.S. program in nutritional sciences, offer focused research training in specific disciplines. Graduates of these programs often assume positions as senior technical staff in laboratories or other organizations, as research project coordinators, or pursue further graduate training. The M.S. program differs from the Ph.D. programs in that more of the courses emphasize the concepts underlying methodological approaches rather than the ability to independently design a major research program.

The doctoral programs in biostatistics, environmental health, epidemiology, health services, pathobiology, public health genetics (pending approval for 2002), and the interdisciplinary Ph.D. program in nutritional sciences train future academicians, as highly qualified independent investigators and teachers, and as well-trained practitioners. The doctoral programs are distinct from the M.S. programs by the addition of advanced coursework and the nature and scope of the dissertation research project.

Special and Conjoint Programs: The Extended M.P.H. Program allows mid-career public health professionals to pursue the M.P.H. degree in health services or health education while continuing their employment.

Conjoint programs with the School of Business Administration, the Graduate School of Public Affairs, and the School of Nursing offer programs that lead to concurrent M.H.A.-M.B.A., M.H.A.-M.P.A., and M.H.A.-M.N. degrees, respectively. SPHCM and the schools of Business Administration and Public Affairs offer these degree programs during both day and evening times. The purpose of the M.H.A. curriculum is to integrate the knowledge, skills, and experience that encompass health services management, planning, and policy analysis. Students develop knowledge and skills that enable them to better understand and manage change, analyze information and make decisions, and manage organizations and the people in them in order to develop professionally and grow as leaders.

A special program offered by the School of Public Health and Community Medicine and the Henry M. Jackson School of International Studies offers students the opportunity to earn concurrent M.P.H.-M.A.I.S. degrees. Conjoint with the School of Social Work, students may earn concurrent M.P.H.-M.S.W. degrees in maternal and child health and human services. Graduate students in the School of Nursing may pursue concurrent M.P.H.-M.N. degrees in community health care or in parent and child nursing. Medical students may earn concurrent M.P.H.-M.D. degrees, and law students may earn an M.P.H.-J.D. degree (pending approval in 2002).

The school offers a new Public Health Informatics Graduate Certificate Program. The Department of Health Services offers a Certificate Program in Health Information Administration (HIA), a Certificate Program in Medical Management, and a Certificate Program in Public Health. A Certificate Program in Public Health Genetics is offered by the Department of Epidemiology.

Residency Programs: The School offers a residency in occupational medicine. Physicians also are welcome to apply to any of the School's graduate programs.

Biostatistics

General Catalog Web page:

bioadmit@u.washington.edu

The Department of Biostatistics offers Master of Science, Master of Public Health, and Doctor of Philosophy degrees in quantitative methods applied to the medical and biological sciences. Biology, medicine, and health services are undergoing major changes in their development as quantitative sciences. As technological advances find expression in new research tools, new theoretical concepts are being employed in the analysis of quantitative data. The techniques and viewpoints of mathematics and statistics, traditionally peripheral to biology and medicine, are now woven into the fabric of the life sciences, thereby providing exciting new opportunities in research and teaching.

Many universities have instituted programs relating mathematics or statistics to one particular biological field. The goal of the biostatistics graduate program is to equip students to develop and apply the quantitative techniques of mathematics, statistics, and computing appropriate to medicine, biology, and health services.

Because of the quality of the faculty and their involvement in a diversity of statistical applications, as well as the quality of the students, students receive an excellent education. Students are recruited from undergraduate programs in mathematics, statistics, and biology and are selected on the basis of outstanding quantitative ability.

Admission Requirements

Students may enter the program from an undergraduate major in mathematics, statistics, or a biological field. Applicants from other fields with the prerequisites will also be considered. An applicant must have completed or be in the process of completing two years of calculus (to include one year of advanced calculus), one course in linear algebra, and one course in probability theory.

In addition to fulfilling graduate admission requirements, an applicant must submit all transcripts of prior, post-secondary education; three letters of recommendation from persons competent to evaluate the applicant's abilities; a narrative statement concerning the applicant's purpose and interest in entering the program; and official Graduate Record Examination, TOEFL, and TSE score reports, as applicable. Recommendation for selection of candidates is made by a faculty admissions committee, with review of applicants beginning in January for autumn-quarter admission.

Early application for financial aid is advantageous; support is offered throughout the process and may not be available for late applicants. The application deadline for both admission and financial aid is the first week of January; please visit the Web site for specific dates each year.

Master of Science

Students working for the Master of Science degree must complete required course work, demonstrate proficiency in a computer language, write a thesis, take a consulting class, and pass the first-year theo-

ry examination. This examination is offered at the conclusion of a student's first year, and, if a student does not pass, it can be retaken the next year. A Ph.D. student may receive a non-thesis Master of Science degree by successfully passing the first- and second-year qualifying examinations and all of the second-year course work.

Students completing an M.S. in Biostatistics will have learned a variety of statistical methods and applications useful to a career as a data analyst in biomedical or public health research or practice. The degree also provides preparation for individuals who plan doctoral work in a biomedical field but who want more methodological training.

Master of Public Health

The M.P.H. program provides quantitative research training to persons holding a doctoral-level degree in another field (M.D., Ph.D., J.D.). Program requirements include credits from Biostatistics, Epidemiology, Pathobiology, Health Services, and Environmental Health courses to provide both breadth and depth. Additional requirements include a consulting class, a practicum experience, and a thesis.

Students obtaining an M.P.H. in Biostatistics will receive broad training in public health with specific training in biostatistics, learning a range of statistical methods and applications. The degree is designed for individuals who have a doctorate in another field who seek more methodological training.

Doctor of Philosophy

Students earning the Ph.D. degree develop statistical theory and applications particular to the health sciences.

Students in the Ph.D. program must complete required course work, write a dissertation, complete a consulting class, and demonstrate proficiency in a computer language. Students must also pass the Ph.D. statistical theory and applied theory qualifying examinations, a biology project, and pass the General and Final Examinations.

A graduate of the Biostatistics doctoral program will be able to use appropriate statistical techniques to analyze a wide variety of data, provide rigorous proofs characterizing the properties of standard statistical methods, develop expertise in an area of biostatistical methodology, read and provide critical summaries of biomedical literature, and design and carry out biostatistical research studies that propose new biostatistical methods or provide new information about the properties of existing methods. This program trains future academicians, highly qualified as independent investigators and teachers, and well-trained practitioners of biostatistics.

Faculty

Chair

Thomas Richard Fleming

Professors

Barlow, William E. * 1989; MS, 1982, PhD, 1986, University of Washington; survival analysis, residuals, and evaluation of screening programs.

Breslow, Norman E. * 1967; PhD, 1967, Stanford University; clinical trials, epidemiology, survival and categorical data.

Conquest, Loveday L. * 1976, (Adjunct); PhD, 1975, University of Washington; statistics in forestry, fisheries, and environmental pollution monitoring.

Crowley, John, Jr. * 1982; MS, 1970, PhD, 1973, University of Washington; survival analysis, cancer clinical trials.

Davis, Kathryn A. B. * 1974, (Affiliate); MS, 1966, University of Michigan, PhD, 1974, University of Washington; density estimation, cardiovascular data analysis, clinical trials.

De Rouen, Timothy * 1975; PhD, 1971, Virginia Polytechnic Institute and State University; applications of biostatistics to clinical epidemiology of oral and infectious diseases.

Diehr, Paula K. * 1970; MS, 1967, University of California (Los Angeles), PhD, 1970, University of California (Los Angeles); health services, small-area analysis, health status.

Emerson, Scott S. * 1995; MD, 1981, University of Virginia, PhD, 1988, University of Washington; clinical trials, sequential testing, survival analysis, categorical data.

Fisher, Lloyd D. * 1966, (Emeritus); MA, 1965, PhD, 1966, Dartmouth College; cardiovascular data analysis, clinical trials, multivariate statistics, longitudinal data analysis.

Fleming, Thomas Richard * 1984; MA, 1974, PhD, 1976, University of Maryland; survival analysis, cancer clinical trials, AIDS research, sequential analysis.

Green, Stephanie J. * 1984, (Affiliate); MA, 1973, Indiana University, PhD, 1979, University of Wisconsin; censored survival, data analysis, clinical trials, cancer research.

Hallstrom, Alfred * 1975; MSc, 1961, PhD, 1968, Brown University; clinical trial methodologies in cardiovascular research and emergency medical services applications.

Kopecky, Kenneth J. * 1978, (Affiliate); MS, 1975, PhD, 1977, Oregon State University; clinical trials design and survival data analysis, epidemiologic methodology, goodness of fit.

Kronmal, Richard A. * 1964; PhD, 1964, University of California (Los Angeles); nonparametric density estimation, computer algorithms, cardiovascular data analysis.

McKnight, Barbara * 1981; PhD, 1981, University of Wisconsin; statistical methods in epidemiology, human genetics and animal carcinogenicity testing.

Moolgavkar, Suresh H. * 1984, (Adjunct); MBBS, 1965, Bombay University (India), PhD, 1973, Johns Hopkins University; cancer epidemiology, development of quantitative methodology.

Pepe, Margaret * 1982; MS, 1984, PhD, 1986, University of Washington; survival analysis, medical decision making, correlated data methods, child health issues.

Peterson, Arthur V. * 1975; MS, 1971, PhD, 1975, Stanford University; survival data methodology, competing risks, design of disease prevention trials.

Prentice, Ross L. * 1974; MSc, 1968, PhD, 1970, University of Toronto (Canada); failure time analysis, disease prevention trials, epidemiologic methods, dietary factors and disease.

Self, Steven G. * 1984; MS, 1977, California State University, Long Beach, PhD, 1981, University of Washington; longitudinal data analysis, survival time models, cancer prevention, HIV vaccine evaluation.

Storer, Barry E. * 1996, (Affiliate); PhD, 1984, University of Washington; statistical methods in clinical trials and epidemiology.

Thompson, Elizabeth A. * 1985; PhD, 1974, Cambridge University (UK); statistical analysis of human genetic data, population genetics, conservation and computational biology.

Van Belle, Gerald * 1974; MA, 1964, PhD, 1967, University of Toronto (Canada); biostatistics, environmental risk factors for neurodegenerative diseases, risk communication.

Wahl, Patricia W. * 1971; PhD, 1971, University of Washington; multivariate statistical techniques, especially regression analysis applied to cardiovascular data.

Wellner, Jon A. *; PhD, 1975, University of Washington; large-sample theory, asymptotic efficiency, empirical processes.

Wijsman, Ellen M. * 1987; PhD, 1981, University of Wisconsin; human quantitative and population genetics.

Associate Professors

Anderson, Garnet L. * 1983, (Affiliate); MA, 1983, State University of New York (Binghamton), PhD, 1989, University of Washington; clinical trial methodology, survival analysis, women's health, ovarian cancer screening.

Benedetti, Jacqueline K. * 1980; PhD, 1974, University of Washington; statistical methodology in infectious disease research, cancer clinical trials.

Etzioni, Ruth B. * 1991, (Affiliate); MS, 1987, PhD, 1990, Carnegie Mellon University; statistical methods in cancer screening, Bayesian methods in biostatistics.

Feng, Ziding * 1990, (Affiliate); MS, 1985, PhD, 1990, Cornell University; correlated data methods, mixture models, cancer prevention.

Heagerty, Patrick J. * 1995; MS, 1991, State University of New York (Albany), PhD, 1995, Johns Hopkins University; longitudinal and dependent data analysis.

Hughes, James P. 1981; MS, 1980, University of Washington, PhD, 1993, University of Washington; statistical methods in STD/AIDS research, longitudinal methods, Markov models.

Kooperberg, Charles L. * 1991, (Affiliate); PhD, 1991, University of California (Berkeley); splines, density estimation, image reconstruction, spatial statistics, function estimation.

Le Blanc, Michael * 1987; MA, 1984, University of Waterloo (Canada), PhD, 1989, University of Washington; tree-based models, survival analysis, clinical trials, adaptive statistical methods.

Leroux, Brian * 1991; MSc, 1985, PhD, 1989, University of British Columbia (Canada); mixed models, correlated data, statistical applications in dentistry, toxicology, and psychology.

Polissar, Nayak Lincoln * 1980, (Affiliate); PhD, 1974, Princeton University; statistical consulting, community surveys, clinical trials, demography, epidemiology, environment.

Sheppard, Lianne * 1989; MSc, 1985, Johns Hopkins University, PhD, 1992, University of Washington; aggregate data, survival analysis, biostatistical methods in environmental health.

Temkin, Nancy R. * 1977; PhD, 1976, State University of New York (Buffalo); clinical trials, recovery models, statistical modeling of epileptic phenomena, survival analysis.

Thompson, Mary Lou * 1989; PhD, 1979, Georg-August Universität (Germany); filtered point processes, diagonal methods, longitudinal reference ranges, maternal/child health.

Thornquist, Mark Daniel * 1985, (Affiliate); MS, 1982, PhD, 1985, University of Wisconsin; ordinal/categorical response, repeated measures data, chemoprevention, group-randomized trials.

Wakefield, Jonathan Clive * 1999; PhD, 1992, University of Nottingham (UK); Bayesian data analysis, statistics in epidemiology, spatial epidemiology pharmacodynamic models.

Yanez, Norbert David, III * 1993; MS, 1989, PhD, 1993, Arizona State University; generalized linear models, overdispersion, measurement error models.

Zhao, Lue-Ping * 1985, (Affiliate); PhD, 1989, University of Washington; methods for genetic epidemiology, family studies of breast and colorectal cancers.

Assistant Professors

Brumback, Babette 1999; MA, 1992, University of California (Berkeley), PhD, 1996, University of California (Berkeley); functional data analysis, causal inference, epidemiology, statistical applications.

Cai, Tianxi 2000; ScD, 1999, Harvard University; semi-parametric regression and estimation, survival analysis, ROC curve analysis.

Emond, Mary Jane * 1987, (Research); MS, 1989, University of Washington, PhD, 1993, University of Washington; semiparametric models; statistical issues in GI cancer screening and surveillance.

Gooley, Theodore A. * 1993, (Affiliate); PhD, 1990, University of Arizona; design and analysis of clinical trials in bone marrow transplantation.

Hsu, Li * 1996, (Affiliate); MS, 1991, PhD, 1994, University of Washington; genetic epidemiology and biostatistics.

Kerr, M. Kathleen 2001; PhD, 1999, University of California (Los Angeles); statistical genetics, design/analysis of gene expression microarray experiments; experimental design.

Lumley, Thomas S. * 1995; PhD, 1998, University of Washington; statistical methods applied to public health, medicine and environmental science.

Mancl, Lloyd A. * 1995, (Adjunct Research); MS, 1988, PhD, 1992, University of Washington; statistical methodology in periodontal disease, TMD, and correlated data.

Monks, Stephanie 1999; MS, 1996, PhD, 1999, North Carolina State University; statistical genetics, permutation tests, sampling design of genetic studies.

Richardson, Barbra Ann 1993, (Research); MS, 1989, University of California (Los Angeles), PhD, 1993, University of California (Los Angeles); statistical methods for data from AIDS/STD clinical trials.

Rossini, Anthony J. * 1998, (Research); ScD, 1994, Harvard University; statistical computing, statistical issues in HIV/AIDS research, and the analysis of graphs.

Rutter, Carolyn * 1996, (Affiliate); MS, 1988, PhD, 1991, University of California (Los Angeles); evaluation of diagnostic tests, ROC curve analysis and correlated data problems.

Tosh, Martin * 1996, (Research); PhD, 1996, Harvard University; causal inference for observational studies, bayes theory, meta-analysis.

Wang, Ching-Yun * 1993, (Affiliate); MS, 1985, National Taiwan University, PhD, 1993, Texas A&M University; case-control study, missing data, measurement error, kernel smoothing.

Yasui, Yutaka * 1996, (Affiliate); PhD, 1994, Johns Hopkins University; statistical and epidemiological issues in cancer prevention research.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

BIOST 499 Undergraduate Research (*) Supervised reading programs; library and field research; special projects. Credit/no credit only.

Courses for Graduates Only

BIOST 502 Introduction to Statistics in Health Sciences (4) Description and examples of common concepts in biostatistics. Probability, point and confidence interval estimation, hypothesis testing including two-sample and paired t and chi-square tests, introduction to simple linear regression. Examples in health sciences stressed. Offered: S.

BIOST 503 Application of Statistics to Health Sciences (4) Standard statistical techniques presented with examples drawn from the health sciences literature. Critical interpretation of research results, and introduction to the computer for data processing and statistical analysis. Prerequisite: BIOST 502 or equivalent. Offered: S.

BIOST 509 Special Emphases in Biostatistics (3-5, max. 5) Introduction to concepts and methods of descriptive and inferential statistics, with applications in specific disciplines emphasized. Topics include comparison of means and proportions, hypothesis testing, confidence intervals, nonparametric methods, linear regression and correlation. Different sections target specific student populations.

BIOST 510 Biostatistics in Dentistry (3) Introduction to concepts and methods of descriptive and inferential statistics with applications in dentistry emphasized. Topics include comparison of means and proportions, hypothesis testing, confidence intervals, non-parametric methods, linear regression, and correlation. Prerequisite: enrollment in School of Dentistry or permission of instructor. Offered: jointly with DPHS 568.

BIOST 511 Medical Biometry I (4) Presentation of the principles and methods of data description and elementary parametric and nonparametric statistical analysis. Examples are drawn from the biomedical literature, and real data sets are analyzed by the students after a brief introduction to the use of standard statistical computer packages. Statistical techniques covered include description of samples, comparison of two sample means and proportions, simple linear regression and correlation. Offered: AS.

BIOST 512 Medical Biometry II (4) Multiple regression, analysis of covariance, and an introduction to one-way and two-way analyses of variance: including assumptions, transformations, outlier detection, dummy variables, and variable selection procedures. Examples drawn from the biomedical literature with computer assignments using standard statistical computer packages. Prerequisite: either BIOST 511 or BIOST 517, or equivalent. Offered: W.

BIOST 513 Medical Biometry III (4) Analysis of categorical data including two sample methods, sets of 2 x 2 tables, R x C tables, and logistic regression. Classification and discrimination techniques. Survival analysis including product limit estimates and the Cox proportional hazards model. Prerequisite: BIOST 512 or permission of instructor. Offered: Sp.

BIOST 514 Biostatistics I (4) Mathematically sophisticated presentation of principles and methods of data description; graphics; point, confidence interval estimation; hypothesis testing; relative risk; odds ratio; Mantel-Haenszel; chi-square test (matrix algebra required). Examples drawn from biomedical literature; real-data sets analyzed using statistical computer packages. Prerequisite: biostatistics majors or permission of instructor. Offered: A.

BIOST 515 Biostatistics II (4) Mathematically sophisticated introduction to linear models; multiple regression, correlation; residual analysis; dummy variables; analysis of covariance; one-, two-way analysis of variance; randomized blocks; fixed, random effects (repeated measure, factorial designs); multiple comparisons (matrix algebra required). Real biomedical data sets analyzed. Prerequisite: BIOST 514, biostatistics major, or permission of instructor. Offered: W.

BIOST 516 Statistical Methods in Genetic Epidemiology (3) Theory and application of statistical techniques used in genetic epidemiology. Includes discussion of association studies, linkages and segregation analyses. Examples stressed with reference to assumptions and limitations. Prerequisite: either BIOST 513 or BIOST 518; PHG 511/EPI 517, or permission of instructor. Offered: jointly with EPI 516/PHG 519.

BIOST 517 Applied Biostatistics I (4) Introduction to the analysis of biomedical data. Descriptive and inferential statistical analysis for discrete, continuous, and right censored random variables. Analytic methods based on elementary parametric and non-parametric models for one sample; two sample (independent and paired), stratified sample, and simple regression problems. Offered: A.

BIOST 518 Applied Biostatistics II (4) Multiple regression for continuous, discrete, and right censored response variables, including dummy variables, transformations, and interactions. Introduction to regression with correlated outcome data. Model and case diagnostics. Computer assignments using real data and standard statistical computer packages. Prerequisite: BIOST 517 or permission of instructor. Offered: W.

BIOST 519 Topics in Epidemiologic Methods (3) *Davis* Introduces advanced methodologic methods, including recursive partitioning, developing clinical prediction rules, analyses of community-level associations or interventions, case-crossover and case-only designs, propensity scores, two-stage sampling, and missing data imputation. Prerequisite: EPI 512; EPI 513. Offered: jointly with EPI 515. A.

BIOST 521 Biostatistics for Experimentalists (4) Statistical aspects of design, data analytic models appropriate to classes of experiments most commonly employed in biomedical sciences. One-, two-way analyses of variance; factorial, crossed, nested, repeated measures designs. Clean, messy real-data sets analyzed using standard statistical computer packages. Prerequisite: either BIOST 511 and BIOST 512, or BIOST 517 and BIOST 518, or equivalent. Offered: alternate years; Sp.

BIOST 524 Design of Medical Studies (3) Design of medical studies, with emphasis on randomized controlled clinical trials. Bias elimination, controls, treatment assignment and randomization, precision, replication, power and sample size calculations, stratification, and ethics. Suitable for graduate students in biostatistics and for research-oriented graduate students in other scientific fields. Prerequisite: BIOST 511 or equivalent, and one of BIOST 513, BIOST 518, STAT 421, STAT 423, STAT 512, or EPI 512; or permission of instructor. Offered: jointly with STAT 524; Sp.

BIOST 529 Sample Survey Techniques (3) Design and implementation of selection and estimation pro-

cedures. Emphasis on human populations. Simple, stratified, and cluster sampling; multistage and two-phase procedures; optimal allocation of resources; estimation theory; replicated designs; variance estimation; national samples and census materials. Prerequisite: either STAT 421, STAT 423, STAT 504, QMETH 500, BIOST 511, or BIOST 517, or equivalent or permission of instructor. Offered: jointly with CS&SS 529/STAT 529.

BIOST 533 Classical Theory of Linear Models (3) Introduction to one-, two-way analysis of variance; randomized blocks; fixed, random effects, multiple comparisons. Statistical distribution theory for quadratic forms of normal variables. Fitting of the general linear model by least squares. Prerequisite: BIOST 515, STAT 421 or STAT 423; and STAT 513; and a course in matrix algebra. Offered: jointly with STAT 533; Sp.

BIOST 534 Statistical Computing (3) Introduction to scientific computing. Includes programming tools, modern programming methodologies, (modularization, object oriented design), design of data structures and algorithms, numerical computing and graphics. Uses C++ for several substantial scientific programming projects. Prerequisite: experience with programming in a high level language. Offered: jointly with STAT 534; Sp.

BIOST 535 Statistical Computing (3) Introduction to scientific computing. Includes programming tools, modern programming methodologies, (modularization, object oriented design), design of data structures and algorithms, numerical computing and graphics. Uses C++ for several substantial scientific programming projects. Prerequisite: experience with programming in a high level language. Offered: jointly with STAT 535; A.

BIOST 536 Categorical Data Analysis in Epidemiology (4) Summary of univariate categorical data analysis; introduction to multivariate analysis of categorical epidemiologic data using multiplicative models. Experience at interpretation; familiarity with available programs gained by analysis of *bona fide* data, critiques of analyses appearing in literature. Prerequisite: BIOST 515; or EPI 514 and either BIOST 513 or BIOST 518; or permission of instructor. Offered: jointly with EPI 536; A.

BIOST 537 Survival Data Analysis in Epidemiology (4) Introduction to multivariate analysis of survival data using multiplicative models. Application to epidemiologic studies. Familiarity with interpretation and available computer programs gained by analysis of *bona fide* sets of data and critiques of analyses appearing in the literature. Prerequisite: BIOST 536 or permission of instructor. Offered: jointly with EPI 537; W.

BIOST 538 Statistical Computing (3) Introduction to scientific computing. Includes programming tools, modern programming methodologies, (modularization, object oriented design), design of data structures and algorithms, numerical computing and graphics. Uses C++ for several substantial scientific programming projects. Prerequisite: experience with programming in a high level language. Offered: jointly with STAT 538; W.

BIOST 540 Correlated Data Regression (3) Introduction to regression modeling of longitudinal and clustered data from epidemiology and health sciences. Interpretation and familiarity with available programs gained by analysis of *bona fide* data; critiques of analyses appearing in literature. Prerequisite: Either BIOST 513, BIOST 515, BIOST 518, BIOST 536, or permission of instructor. Offered: Sp.

BIOST 550 Statistical Genetics I: Mendelian Traits (3) *Thompson* Mendelian genetic traits. Population genetics; Hardy-Weinberg, allelic variation, subdivision. Likelihood inference, information and power;

latent variables and EM algorithm. Pedigree relationships and gene identity. Meiosis and recombination. Linkage detection. Multipoint linkage analysis. Prerequisite: STAT 390 and STAT 394, or permission of instructor. Offered: jointly with STAT 550; A.

BIOST 551 Statistical Genetics II: Quantitative Traits (3) *Monks* Statistical basis for describing variation in quantitative traits. Decomposition of trait variation into components representing genes, environment and gene-environment interaction. Methods of mapping and characterizing quantitative trait loci. Prerequisite: STAT/BIOST 550; STAT 423 or BIOST 515; or permission of instructor. Offered: jointly with STAT 551; W.

BIOST 552 Statistical Genetics III: Medical Genetics Studies (3) *Wijman* Overview of probability models, inheritance models, penetrance. Association and linkage. The lod score method. Affected sib method. Fitting complex inheritance models. Design mapping studies; multipoint, disequilibrium, and fine-scale mapping. Ascertainment. Prerequisite: STAT/BIOST 551; GENET 371; or permission of instructor. Offered: jointly with STAT 552; Sp.

BIOST 570 Advanced Applied Statistics and Linear Models (3) Generalized linear models, REML in mixed models for randomized blocks, split plots, longitudinal data. Generalized estimating equations, empirical model building, cross validation, recursive partitioning, generalized additive models, projection pursuit. Prerequisite: STAT 512, 513; BIOST/STAT 533 or STAT 421 and STAT 423, and a course in matrix algebra. Offered: jointly with STAT 570.

BIOST 571 Advanced Applied Statistics and Linear Models (3) Generalized linear models, REML in mixed models for randomized blocks, split plots, longitudinal data. Generalized estimating equations, empirical model building, cross validation, recursive partitioning, generalized additive models, projection pursuit. Prerequisite: BIOST 570. Offered: jointly with STAT 571.

BIOST 572 Advanced Applied Statistics and Linear Models (3) Generalized linear models, REML in mixed models for randomized blocks, split plots, longitudinal data. Generalized estimating equations, empirical model building, cross validation, recursive partitioning, generalized additive models, projection pursuit. Prerequisite: BIOST 571. Offered: jointly with STAT 572.

BIOST 573 Statistical Methods for Categorical Data (3) Advanced topics in generalized linear models and the analysis of categorical data: overdispersion, quasilielihood, parameters in link and variance functions, exact conditional inference, random effects, saddlepoint approximations. Credit/no credit only. Prerequisite: BIOST 571 and STAT 582. Offered: jointly with STAT 573; alternate years; Sp.

BIOST 574 Multivariate Statistical Methods (3) Use of multivariate normal sampling theory, linear transformations of random variables, one- and two-sample tests, profile analysis, partial and multiple correlation, multivariate ANOVA and least squares, discriminant analysis, principal components, factor analysis, robustness, and some special topics. Some computer use included. Prerequisite: BIOST 570 or permission of instructor. Offered: jointly with STAT 574; alternate years.

BIOST 576 Statistical Methods for Survival Data (3) Statistical methods for censored survival data arising from follow-up studies on human or animal populations. Parametric and nonparametric methods, Kaplan-Meier survival curve estimator, comparison of survival curves, log-rank test, regression models including the Cox proportional hazards model, competing risks. Prerequisite: STAT 581 and either BIOST

515, STAT 473, or equivalent. Offered: jointly with STAT 576.

BIOST 577 Advanced Design and Analysis of Experiments (3) Concepts important in experimental design: randomization, blocking, confounding. Application and analysis of data from randomized blocks designs, Latin and Graeco-Latin squares, incomplete blocks designs, split-plot and repeated measures, factorial and fractional replicates, response surface experiments. Prerequisite: BIOST 570 or STAT 421 (minimum 3.0) or permission of instructor. Offered: jointly with STAT 577.

BIOST 578 Special Topics in Advanced Biostatistics (*, max. 3) Advanced-level topics in biostatistics offered by regular and visiting faculty. Prerequisite: permission of instructor. Offered: jointly with STAT 578; AWSpS.

BIOST 580 Seminar in Biostatistics (*, max. 9) Presentation and discussion of special topics and research results in biostatistics. Speakers include resident faculty, visiting scientists, and advanced graduate students. Offered: AWSp.

BIOST 586 Martingales: Survival Analysis (3) Theory of counting processes and martingales to provide unified study of survival analysis methods. Focus on survival distribution estimators, censored data rank statistics, regression methods with censored survival data. Development of small samples moments, asymptotic distributions, and efficiencies. Prerequisite: STAT 521 or STAT 583 or permission of instructor; recommended: STAT 576. Offered: jointly with STAT 586; alternate years; W.

BIOST 590 Biostatistical Consulting (*) Training in consulting on the biostatistical aspect of research problems arising in the biomedical field. Students, initially under the close supervision of a faculty member, participate in discussions with investigators leading to the design and/or the analysis of a quantitative investigation of a problem. With experience, independent associations of student and research worker are encouraged, with subsequent review by faculty of resulting design and analysis. Prerequisite: permission of instructor. Offered: AWSpS.

BIOST 593 Cancer Prevention Research Laboratory (3) *White* Research experience for pre- and postdoctoral students working on cancer prevention projects at the Fred Hutchinson Cancer Research Center. Credit/no credit only. Offered: jointly with EPI 593; AWSpS.

BIOST 595 Biostatistics Master's Practicum (1-12, max. 12) Supervised practice experience providing students an opportunity to learn how biostatistics is applied in a public health setting and in the formation of public health policy. Prerequisite: 514; 515; 536; 537.

BIOST 598 Techniques of Statistical Consulting (1) Seminar series covering technical and non-technical aspects of statistical consulting, including skills for effective communication with clients, report writing, statistical tips and rules of thumb, issues in survey sampling, and issues in working as a statistical consultant in academic, industrial, and private-practice settings. Prerequisite: entry code. Offered: jointly with STAT 598; ASp.

BIOST 600 Independent Study or Research (*) Offered: AWSpS.

BIOST 700 Master's Thesis (*) Offered: AWSpS.

BIOST 800 Doctoral Dissertation (*) Offered: AWSpS.

Graduate Program

Graduate Program Coordinator
 F461 Health Sciences, Box 357234
 206-543-3199

The Department of Environmental Health offers three graduate degrees: Master of Science, Master of Public Health, and Doctor of Philosophy. The areas of emphasis are environmental and occupational hygiene (Ph.D.) industrial hygiene and safety (M.S.), toxicology (Ph.D./M.S.), environmental health technology (M.S.), and occupational and environmental medicine or general environmental health (M.P.H.).

The Ph.D. in Environmental and Occupational Hygiene option focuses on the assessment of exposures, health effects, and control strategies in community and work environments. The program emphasizes expertise in exposure assessment to evaluate human health risks from chemical, physical, and biological agents. Research opportunities include: laboratory and field investigations of environmental exposures and health outcomes; air, soil and water pollution monitoring; ambient, indoor, and personal exposure modeling; evaluation of biomechanical stress factors and organization of the work environment; development of new instruments, biomarkers, and novel methods for assessing human exposures; and evaluation of effective control strategies for the prevention or reduction of illness and injury.

The M.S. in Industrial Hygiene and Safety option focuses on the recognition, evaluation and control of workplace hazards that cause occupational illness and injury. Research opportunities include laboratory and field investigations of exposure to health and safety hazards such as toxic chemicals, radiation, and biomechanical stress. Students may elect one of two program options: industrial hygiene, emphasizing assessment of exposures to chemical and physical agents; or safety/ergonomics, emphasizing assessment, evaluation and design of the work environment and the tools used.

The M.S. and Ph.D. in Toxicology focus on research and application of basic scientific principles toward a better understanding of the health effects of toxic substances in the workplace and general environment. Students who select the toxicology option participate in laboratory research investigating molecular and biochemical processes involved in regulating chemically induced toxic responses such as soft-tissue (e.g., brain, lung, kidney, and liver) damage, birth defects, cancer, and nervous-system impairment.

The M.S. in Environmental Health Technology focuses on community exposures to biological and chemical agents in commonly encountered environmental media including air, water, food, and soil. Research involves environmental sampling and analysis, assessment of pathways and routes of exposure, and evaluation of the significance of particular environmental agents in a regulatory context. Student thesis projects may encompass one or more of these areas of investigation and involve field or laboratory activities or both.

The M.P.H. in General Environmental Health provides an opportunity for students to focus on the recognition, assessment, and control of environmental and occupational hazards, the impact of these hazards on health and society, and approaches to regulations, enforcement, and policy development. It emphasizes development of skills essential to science-based public health practice. In addition to coursework, students complete a field practicum and research in any of the department's research facilities or in a field setting.

The M.P.H. in Occupational and Environmental Medicine is for individuals with an earned doctorate. The goal of the program is to provide training in the public health sciences with a focus on occupational and environmental health. The program provides didactic instruction and participation in field studies. Research efforts focus on understanding, preventing, and managing environmental and occupational disease, injury, and disability. Physicians also have the option of applying for a concurrent fellowship or residency in occupational and environmental medicine.

The concurrent M.P.H./M.P.A. or M.S./M.P.A. degree programs with the Daniel J. Evans School of Public Affairs seek to educate students who will bring substantive public health knowledge and a strong policy and management orientation to their professional careers. This collaboration makes it possible to complete the two degrees in three years rather than four, with faculty from both schools involved in teaching, advising, and research. Applicants must apply separately to each program.

Admission Requirements

Prerequisites for admission to the M.S. graduate programs in industrial hygiene and safety, toxicology, and environmental health technology include a Bachelor of Science or equivalent degree in environmental health, a physical science, a biological science, or engineering, and submission of Graduate Record Examination scores.

Prerequisite for admission to the M.P.H. Occupational and Environmental Medicine program is a doctoral degree.

Prerequisites for admission to the M.P.H. General Environmental Health program or M.P.H./M.P.A. concurrent degree program include a Bachelor of Science or equivalent degree in environmental health, a physical science, a biological science, or engineering, and submission of Graduate Record Examination scores.

Prerequisites for admission into the Ph.D. program in either environmental and occupational hygiene or toxicology include a Bachelor of Science degree in science or engineering with adequate preparation in physics, chemistry, mathematics, and biology. Selection of an applicant will also be based upon an honors-level GPA, a statement of personal goals consistent with the program, supportive letters of reference, and high scores on the Graduate Record Examination.

Graduation Requirements

The M.S. and M.P.H. graduate programs are designed for seven quarters of study, including field applications and research, and require completion of departmental and program-specific courses, and submission of an acceptable thesis.

The Ph.D. program has a strong research focus, and requires completion of departmental and program-specific courses. A dissertation of original research suitable for publication in an appropriate peer-reviewed journal is required. For an entering student with a Bachelor of Science or engineering degree, the program of study can be expected to take approximately four to five years. A student entering

with a Master of Science degree in a relevant area may complete the degree in less time.

Financial Aid

Support is available for many students in the form of traineeships or research assistantships, which include tuition. This support comes from federal and private sources awarded to the department or School.

Research Facilities

Specialized laboratories exist for research in industrial hygiene chemistry, optical remote sensing of chemicals, industrial ventilation, ergonomics, trace organics and heavy metals, environmental microbiology, electron microscopy, controlled exposure to environmental agents, and toxicology (including toxicogenomics and analytical cytology). Field research is facilitated through an extensive consultation-service program conducted by this department for labor and industry in Washington state.

Faculty

Chair

David A. Kalman

Professors

Checkoway, Harvey * 1987; MPH, 1975, Yale University, PhD, 1978, University of North Carolina; occupational and environmental epidemiology.

Costa, Lucio Guido * 1983; PharmD, 1977, University of Milan (Italy); neurotoxicology; developmental and molecular mechanisms/biological markers of neurotoxicity.

Covert, David S. * 1975, (Adjunct Research); MS, 1971, PhD, 1974, University of Washington; atmospheric chemistry; aerosol physics, chemistry, optics, and instrumentation.

Eaton, David L. * 1979; PhD, 1978, University of Kansas; biochemical and environmental toxicology, aflatoxin carcinogenesis, metabolism of toxic chemicals.

Fantel, Alan G. * 1973, (Adjunct Research); PhD, 1974, University of Washington; embryology, teratology.

Faustman, Elaine M. * 1981; PhD, 1980, Michigan State University; developmental toxicology, risk assessment methodologies, toxicology of N-nitroso compounds.

Fenske, Richard A. * 1990; MA, 1976, University of California (Berkeley), MPH, 1978, PhD, 1984, University of California (Berkeley); human exposure and health risk assessment, pesticide exposure.

Franklin, Gary M. * 1988; MD, 1969, George Washington University, MPH, 1982, University of California (Berkeley); occupational injury, neurological epidemiology, public health nutrition.

Jackson, Kenneth L. * 1963, (Emeritus); PhD, 1954, University of California (Berkeley); physiological and biochemical mechanisms in radiation biology.

Kalman, David A. * 1978; PhD, 1978, University of Washington; environmental chemistry, detection and fate of chemical hazards in natural and manmade environments.

Karr, James * 1991, (Adjunct); PhD, 1970, University of Illinois; stream and watershed ecology, tropical forest ecology, conservation biology, environmental policy.

Koenig, Jane Q. * 1974; MS, 1961, PhD, 1963, University of Washington; respiratory physiology, health effects of air pollutants, lung response of susceptible groups.

Larson, Timothy * 1970, (Adjunct); PhD, 1976, University of Washington; airborne particles, air quality modeling, and instrument development.

Luchtel, Daniel L. * 1972; PhD, 1969, University of Washington; electron microscopy and cell biology, lung anatomy/pathophysiology, fiber toxicology.

Morgan, Michael S. * 1974; DSc, 1972, Massachusetts Institute of Technology; applied respiratory, physiology and inhalation toxicology.

Mottet, N. Karle * 1959, (Emeritus); MD, 1952, Yale University; effects of trace elements, especially methylmercury and arsenic, on growth and development.

Van Belle, Gerald * 1974; MA, 1964, PhD, 1967, University of Toronto (Canada); biostatistics, environmental risk factors for neurodegenerative diseases, risk communication.

Woods, James S. * 1982; PhD, 1970, University of Washington, MPH, 1978, University of North Carolina; biochemical toxicology of trace metals; biological markers of metal exposure.

Associate Professors

Barnhart, Scott * 1979; MD, 1979, George Washington University; occupationally related lung disease.

Burbacher, Thomas M. * 1974; PhD, 1983, University of Washington; neurotoxicology, specializing in the behavioral effects of agents on the central nervous system.

Daniell, William E. * 1984; MD, 1979, Tufts University, MPH, 1986, University of Washington; noise-induced hearing loss; long-term disability associated with carpal tunnel syndrome.

Kaufman, Joel D. * 1988; MD, 1986, University of Michigan, MPH, 1990, University of Washington; occupational and environmental epidemiology; etiological research and public health surveillance.

Kavanagh, Terrance J. 1985; MS, 1980, PhD, 1985, Michigan State University; free radical toxicology, glutathione metabolism, toxicology and aging.

Keifer, Matthew C. * 1982; MD, 1982, University of Illinois; the human health effects of pesticide exposure.

Kissel, John C. * 1990; MS, 1974, Harvard University, PhD, 1985, Stanford University; solid and hazardous waste management practice, human exposure assessment.

Leroux, Brian * 1991, (Adjunct); MSc, 1985, PhD, 1989, University of British Columbia (Canada); mixed models, correlated data, statistical applications in dentistry, toxicology, and psychology.

Martin, Thomas G. 1996, (Adjunct); MD, 1977, Pennsylvania State University; general internal medicine.

Seixas, Noah S. * 1992; MS, 1982, Harvard University, PhD, 1990, University of Michigan; exposure assessment methods for occupational/epidemiologic studies; small industrial plants.

Sheppard, Lianne * 1989; MSc, 1985, Johns Hopkins University, PhD, 1992, University of Washington; aggregate data, survival analysis, biostatistical methods in environmental health.

Yost, Michael G. * 1993; MS, 1984, University of California (Berkeley), PhD, 1989, University of California (Berkeley); worker exposures to physical agents, electromagnetic fields, noise and vibration.

Assistant Professors

Johnson, Peter W. 2001; PhD, 1992, University of California (Berkeley); ergonomics, bioengineering, office-workers' hazards, measurement tools for physical risk factors.

Liu, Lee-Jane Sally * 1998; MS, 1991, Harvard University, ScD, 1994, Harvard University; air pollution, exposure assessment, environmental epidemiology.

Meschke, John Scott 2002; PhD, 2001, University of North Carolina; pathogen survival, mobility, and detection in the environment; microbial risk assessment.

Samadpour, Mansour * 1987; MS, 1987, PhD, 1990, University of Washington; molecular epidemiology of microbial pathogens, bacterial population genetics and pathogenesis.

Xia, Zhengui * 1987; MS, 1985, Wuhan University (China), PhD, 1991, University of Washington; neuronal apoptosis, neuronal gene regulation.

Senior Lecturers

Camp, Janice E. 1982; MN, 1984, MS, 1984, University of Washington; workplace exposure assessment, evaluation of exposure, controls, program evaluation.

Morris, Sharon L. 1982; BA, 1965, Reed College; occupational safety and health policy, continuing education.

Treser, Charles D. * 1980; MPH, 1976, University of Michigan; administrative law and process in environmental health; housing; vector control.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crsctat/.

ENV H 405 Toxic Chemicals in the Environment (3) *Kavanagh* Basic principles governing the behavior and effects of toxic chemicals released into the environment; sources, distribution, and fate of toxic chemicals in the environment; chemicals and cancer; chemicals and birth defects; government regulation of chemical hazards. Focus on human health impacts of chemicals found in the workplace and general environment. Prerequisite: 2.0 in BIOL 203; either 2.0 in CHEM 242 or 2.0 in CHEM 347. Offered: Sp.

ENV H 417 Non-ionizing Radiation and Electrical Safety (2) *Yost* Introduction to health hazards from UV, optical laser hazards, infrared radiation, radio-frequency radiation, heat stress, electrical shock, electric and magnetic fields. Application of current standards for these physical agents. Emphasis on occupational hazards with additional discussion of environmental exposures where appropriate. Offered: odd years; W.

ENV H 430 Methods in Environmental Sampling and Analysis (3) *Samadpour* Field sampling methods studied and selected laboratory analyses of food, drinking water, and waste waters conducted. Official methods for characterizing physical and chemical quality of water and wastes demonstrated.

Microbiological criteria emphasized for student participation, including: enumeration of subgroups in populations, selective inhibitor, characteristics of normal flora, rationale of "indicator" organisms. Prerequisite: 2.0 in MICROM 302. Offered: A.

ENV H 431 Environmental Health Sampling and Analysis II (3) *Samadpour* Methods for collection and analyses of environmental samples are examined or demonstrated, including official analytical procedures of FDA, USDA, EPA, and AOAC, as well as cutting edge developments. Criteria for wholesomeness, safety, and inhibition of spoilage of food and food products are examined. Prerequisite: ENV H 430. Offered: W.

ENV H 440 Water and Waste Sanitation (4) *Lenning* Study of health problems associated with drinking water and wastewaters and minimization of problems. Focus on drinking water quality and quantity requirements; water pollutants and impacts on environment; individual drinking water, onsite sewage facilities, related site selection criteria/regulations, regulatory agency activities. Field performance of environmental health specialist emphasized. Prerequisite: 2.0 in BIOL 203. Offered: A.

ENV H 441 Food Protection (3) *Easterberg* Study of identification and characteristics of chemicals and biological agents implicated in foodborne disease outbreaks and conditions or circumstances by which food contamination occurs. Examination of food protection activities conducted by local and state government at the retail level. Prerequisite: either 2.0 in CHEM 155 or 2.0 in both CHEM 160 and CHEM 161, or 2.0 in CHEM 162; 2.0 in MICROM 302. Offered: W.

ENV H 442 Vector Control (3) *Treser* Study of the impact and control of rodents and arthropod vectors of disease, including consideration of economic poisons used, their regulation, and safety measures. Prerequisite: 2.0 in BIOL 203. Offered: Sp.

ENV H 445 Solid Waste Management (3) Examination of the public health, environmental, economic, and materials conservation aspects of solid wastes management; amounts and sources of solid wastes, waste reduction and recycling, methods of storage, transportation and disposal, integrated waste management, identification of present problems and future needs. Prerequisite: 2.0 in CHEM 155, 2.0 in CHEM 160, or 2.0 in CHEM 162; either 2.0 in MATH 124, 2.0 in MATH 127, 2.0 in MATH 134, or 2.0 in MATH 144; recommended: PHYS 115. Offered: Sp.

ENV H 446 Hazardous Waste Management (3) *Kissel* Characterization of hazardous wastes and introduction to pertinent federal and state regulations. Discussion of exposure pathways and description of management options at pre-generation, pre-release, and post-release stages. Emphasis on public health significance. Supplemented with case studies. Prerequisite: either 2.0 in CHEM 155, 2.0 in CHEM 160, 2.0 in CHEM 162; either 2.0 in MATH 112, 2.0 in MATH 124, 2.0 in MATH 127, 2.0 in MATH 234, or 2.0 in MATH 144; recommended: MATH 125, CHEM 224, PHYS 115. Offered: W.

ENV H 449 Health Effects of Air Pollution (2) Structure and function of the respiratory system and the changes that may be produced by specific air pollutants, such as ozone, SO₂ and fine particles. Air quality criteria and the economic costs of disease are discussed. Several classroom demonstrations. Offered: even years; W.

ENV H 453 Industrial Hygiene (3) *Morgan* Introduction to the principles and scientific foundation of industrial hygiene. Examines the anticipation, recognition, evaluation, and control of work place hazards to health and safety. Focuses on the first three functions, but includes some consideration of control methods. Prerequisite: either BIOL 200 or

BIOL 202; CHEM 224; either PHYS 116 or PHYS 123. Offered: A.

ENV H 454 Industrial Hygiene Measurements (3) *Camp, Hahne* Series of lectures and laboratory demonstrations illustrate the use of a wide spectrum of industrial hygiene sampling equipment. Included are airflow calibration, chemical calibration, detector tubes, personnel sampling devices, both continuous and direct reading instruments. Instrumentation for noise and electromagnetic radiation. Prerequisite: 2.5 in ENV H 453. Offered: W.

ENV H 457 Industrial and Environmental Noise (3) *Yost* Survey of industrial and community noise problems, including sources, effects, measurement, control, and legislation. Prerequisite: 2.0 in PHYS 115. Offered: Sp.

ENV H 461 Air Pollution Control (4) *Pilat* Fundamental concepts of air pollution. Emission sources, atmospheric dispersion, ambient concentrations, adverse effects, governmental regulations, emission standards, air-quality standards, processes and equipment for controlling emissions. Offered: jointly with CEE 490; A.

ENV H 470 Environmental Health Practice: Administration and Management (2) *Osaki, Treser* Explores selected aspects of the management of environmental health programs in the community, including organization theory and practice, budgeting, personnel management, program planning and evaluation, and community relations. Prerequisite: ENV H 482. Offered: A.

ENV H 471 Environmental Health Regulation (3) *Treser* Introduction to administrative regulation and process. Authority, jurisdiction, and structure of environmental control programs and agencies; the regulatory process; agency acquisition and retention of information; administrative actions; enforcement of environmental health laws; major statutes and cases affecting programs. Prerequisite: ENV H 482. Offered: W.

ENV H 472 Environmental Risk and Society (3) *Fenske* Examines scientific determinations of environmental risks and explores how such determinations are evaluated by affected communities and society. Employs risk analysis to integrate technical knowledge in hazard identification and exposure assessment to provide a more rational basis for environmental policies. Role of public participation in risk-based decision making discussed. Offered: A.

ENV H 480 Environmental Health Problems (*, max. 6) *Treser* Individual projects involving library, laboratory, or field study of a specific environmental health problem. Offered: AWSpS.

ENV H 482 Environmental Health Internship (2-15, max. 15) *Treser* Assignment to an environmental health or environmental protection agency for supervised observation and experience in environmental health technology, program planning and utilization of community resources. Prerequisite: 2.5 in ENV H 311. Credit/no credit only. Offered: AWSpS.

ENV H 497 Environmental Health Special Electives (*) Offered: AWSpS.

ENV H 499 Undergraduate Research (*) Individual research on a specific topic in environmental health upon which specific conclusions, judgments, or evaluation can be made or upon which facts can be presented. Offered: AWSpS.

Courses for Graduates Only

ENV H 511 Environmental and Occupational Health (3) Effects of exposure to chemical, physical, and biological agents, embracing the community and workplace environments. Current issues, using specific cases from recent literature as basis for class-

room discussion and written assignments. Offered: W.

ENV H 512 Environmental Health Technology and Facilities (3) *De Walle* Survey of selected technological components of environmental health infrastructure via lecture and weekly field trips to full-scale facilities. Sites visited vary year to year, but may include paper and steel plants using reclaimed feedstock, cement kiln using waste as supplemental fuel, municipal wastewater treatment facility, and steam generation plant. Offered: S.

ENV H 513 Basic Concepts in Pharmacogenetics and Toxicogenomics (3) *Eaton, Thummel* Addresses current DNA sequencing and genotyping approaches, and basic concepts of pharmacogenetics and toxicogenomics. Emphasis placed on applications of genomic technologies to the understanding of "gene-environment interactions" that cause diseases of public health importance, including cancer, chronic neurological diseases, and adverse drug reactions.. Prerequisite: GENET 372 or equivalent. Offered: jointly with ENV H/PCEUT 513.

ENV H 514 Environmental and Occupational Toxicology I (3) *Omiecinski, Xia* Major topical areas in human and environmental toxicology, including the biochemical, cellular, and physiological mechanisms by which chemicals produce toxic responses; the toxicology of the major classes of chemicals; principles of toxicity testing; interpretation of toxicological data. Prerequisite: BIOL 212, BIOC 440, or permission of instructor. Offered: A.

ENV H 515 Environmental and Occupational Toxicology II (3) *Luchtel* Major topical areas in human and environmental toxicology, including the biochemical, cellular, and physiological mechanisms by which chemicals produce toxic responses; the toxicology of the major classes of chemicals; principles of toxicity testing; interpretation of toxicological data. Prerequisite: BIOL 212, BIOC 440, or permission of instructor. Offered: W.

ENV H 516 Environmental and Occupational Toxicology III (3) *Costa* Major topical areas in human and environmental toxicology, including the biochemical, cellular, and physiological mechanisms by which chemicals produce toxic responses; the toxicology of the major classes of chemicals; principles of toxicity testing; interpretation of toxicological data. Prerequisite: BIOL 212, BIOC 440, or permission of instructor. Offered: Sp.

ENV H 531 Neurotoxicology (3) *Costa* Advanced discussions of the principles and methodological approaches to neurotoxicology (including behavioral toxicology), classes of neurotoxic agents, types and mechanisms of neurotoxic effects, as well as the role of neurotoxicology in toxicology and public health. Prerequisite: ENV H 514, ENV H 515, ENV H 516 or ENV H 405 or permission of instructor. Offered: even years; W.

ENV H 532 Reproductive and Developmental Toxicology (2) *Faustman* Investigates chemicals that can induce adverse reproductive and developmental outcomes. Discussion topics include identification and characterization of specific classes of toxic agents, mechanisms of action of these agents at the molecular and cellular level, and risk assessment and regulatory issues. Prerequisite: ENV H 514 and ENV H 515 or ENV H 405 or permission of instructor. Offered: even years; S.

ENV H 533 Molecular Toxicology (2) *Kavanagh, Omiecinski* Advanced discussion of molecular mechanisms whereby chemical, physical, and biological agents produce their harmful effects on biological tissues. Prerequisite: permission of instructor. Offered: jointly with PHCOL 533; even years; Sp.

ENV H 535 Inhalation Toxicology (3) *Koenig, Luchtel* Advanced course on the toxicology of air pollutants and the response of the respiratory system to inhaled gaseous and particulate toxicants. Issues and concepts covered include biology of the respiratory system, exposure technology, experimental design and methodological issues, health effects of air pollutants, and regulatory aspects. Prerequisite: ENV H 514-516, or ENV H 405 or permission of instructor. Offered: even years; A.

ENV H 545 Drinking Water and Health (3) *Samadpour* Principles, requirements of public water supply for protection of public health. Includes essential characteristics of water quality and sources, water treatment and distribution systems with associated health hazards; public health engineering, epidemiology, risk assessment; surveillance, regulatory needs to assure safe public water supplies. Prerequisite: ENV H 440 or CEE 351 or permission of instructor. Offered: A.

ENV H 546 Pesticides and Public Health (3) *Fenske, Keifer* Examines health risks and benefits associated with pesticide use in the United States and internationally; reviews exposure, toxicity, epidemiology, and regulation of pesticides, focusing on populations such as workers and children; discusses benefits derived from vector control, food production, and food preservation. Offered: odd years; W.

ENV H 550 Microscopy: Image Acquisition and Analysis (2) *Luchtel* Sample preparation methods, principles and practical aspects of light microscopy (bright-field, phase, differential interference, polarizing, and confocal), electron microscopy (transmission, scanning, electron diffraction, and energy dispersive x-ray analysis), photographic and digital imaging, computerized image analysis techniques. Student research project required. Prerequisite: permission of instructor. Offered: Sp.

ENV H 552 Environmental Chemistry of Pollution (3) *Kalman, Liu* Chemical and physical processes determining distribution and fate of chemical hazards, detection of low levels of hazardous compounds, and environmental evaluation and prediction. Fundamental chemical concepts and measurable properties of individual compounds to interpret and relate measurements. Prerequisite: admission to graduate program or permission of instructor. Offered: W.

ENV H 553 Instrumental Methods for Industrial Hygiene Measurement: Lecture (3) *Morgan* Strategy, methods, instrumentation, and theory of atmospheric sampling and analysis, emphasizing evaluation of potential occupational hazards and exposures to chemical agents. Prerequisite: ENV H 453 or permission of instructor. Offered: W.

ENV H 555 Instrumental Methods for Industrial Hygiene Measurement: Laboratory (3) *Monteith, Yost* Utilizes typical instrumental techniques and analytical methods for the evaluation of potential occupational exposures. Prerequisite: ENV H 453 and ENV H 553 or permission of instructor. Offered: Sp.

ENV H 556 Quantitative Occupational Exposure Analysis (3) *Morgan, Seixas* Exploration of industrial hygiene data to understand nature of airborne exposures in the occupational environment, and their interpretation for human health. Focus on reading and discussion of primary exposure assessment literature and statistical analysis of *real* dataset. Prerequisite: one quarter of statistics or biostatistics and basic industrial hygiene. Offered: W.

ENV H 557 Industrial Ventilation I (4) *Yost* Principles of exhaust ventilation systems, design for contaminant control in industry. Offered: W.

ENV H 559 Applied Industrial Hygiene, Safety, & Ergonomics (3) *Camp, Gleason, Johnson*

Application of occupational safety and health ergonomic principles through field investigations and classroom discussions. Teams conduct walkthrough evaluations, environmental sampling, review of health and safety programs, and development of control strategies to eliminate or reduce hazards at a local worksite. Prerequisite: ENV H 564 or 453 or equivalent. Offered: W.

ENV H 560 Organizing and Administering Industrial Safety and Health Programs (4) *Gleason* Explores industrial organization and methods of integrating safety and industrial hygiene programs with industrial operations. Philosophic issues related to industrial safety and health such as responsibility for safety, dependency on safe practice, and hierarchy of prevention are investigated. Contains numerous case problems and student involvement opportunities. Offered: A.

ENV H 562 Technical Aspects of Safety and Health (3) *Gleason* Explores specific hazards associated with major industries, as well as hazards common to all industries. Machine guarding, electrical safety, systems safety analysis, materials handling, and working at heights are among the subjects covered. Offered: W.

ENV H 564 Recognition of Health and Safety Problems in Industry (4) *Camp, Seixas* Develops skills in occupational health and safety hazard recognition in a variety of important northwest industries. Focuses on process understanding and hazard recognition skills during walk-through inspections of several local facilities, stressing a multidisciplinary approach. Offered: A.

ENV H 566 Introduction to Ergonomics (3) *Johnson, Stewart* Basic principles of ergonomics in work environment applied to problems of worker and management. Topics include measurement of physical work capacity, problems of fatigue and heat stress, applied biomechanics, worker-machine interactions and communication, design of displays and controls. Prerequisite: basic human physiology or permission of instructor. Offered: W.

ENV H 567 Mechanisms of Carcinogenesis (3) *Xia* Lectures/presentations of biochemical and molecular basis of carcinogenesis induced by environmental agents, including approaches to identification of carcinogens. Role of cell proliferation and cell death (apoptosis) in cancer formation and cancer treatment. Molecular mechanisms that regulate proliferation and apoptosis. Prerequisite: ENV H 516; ENV H 405, or permission of instructor. Offered: jointly with PHCOL 567; A.

ENV H 568 Molecular Epidemiology of Infectious Diseases (2) *Samadpour* Application of molecular typing techniques to study of microbial pathogens to increase understanding of epidemiology of infectious diseases. Brief review of molecular biology. Evaluation of methods used in outbreaks and epidemics reported in literature. Prerequisite: ENV H 511 or ENV H 512 or permission of instructor. Offered: jointly with EPI 568/PABIO 568; W.

ENV H 569 Occupational Biomechanics (4) *Johnson* Lectures and laboratories address human occupational biomechanical and physiological limits and measurement, analysis, and modeling techniques that are used by ergonomists for design of safe, healthful, and productive physical work. Prerequisite: ENV H 566 or permission of instructor. Offered: jointly with IND E 569; Sp.

ENV H 570 Occupational and Environmental Epidemiology (3) *Checkoway, Daniell* Research in occupational and environmental determinants of disease. Defining exposed populations, characterizing exposure levels, estimating disease risks relative to exposure. Cohort, case-control, cross-sectional designs for various health outcomes. Applications to

exposure standard setting and risk assessment. Prerequisite: EPI 511 or EPI 512, EPI 513 or permission of instructor. Offered: jointly with EPI 570; Sp.

ENV H 571 Neuroepidemiology and Environmental Risk Factors (3) Focus on neurologic diseases and etiology. Presentation of descriptive epidemiology, clinical features, and risk factors, including stroke, Parkinson's disease, Alzheimer's disease, multiple sclerosis, and other disorders. Discussion of NIH grantsmanship. Guest experts present some topics. Recommended: 511 or equivalent. Offered: jointly with EPI 571; odd years; W.

ENV H 572 Clinical Occupational Medicine (2) *Brodtkin* For clinicians in training, comprehensive overview of occupational disease principles, occupational history-taking, and the provider's role in workers' compensation. Epidemiologic evidence and pathophysiologic basis for occupational diseases reviewed, emphasizing organ system approach to diagnosis and management. Prerequisite: occupational medicine or preventive medicine residents/fellows, nursing students, or permission of instructor. Offered: S.

ENV H 573 Methods and Issues in Using Biological Measurements in Epidemiologic Research (3) Introduction to use of measurements from biological specimens in epidemiologic studies. Prepares epidemiology and laboratory science students for conduct of interdisciplinary human studies. Evaluation of biomarkers, preliminary studies, methodologic issues, quality control. Brief review of molecular biology. Applications and current literature discussed. Prerequisite: EPI 511 or EPI 512. Offered: jointly with EPI 573; W.

ENV H 574 Quantitative Methods for Environmental Exposure Assessment (3) *Kissel* Examination of methods used to predict human exposure to environmental contaminants. Emphasis on application to waste management strategies, site remediation, and land use. Development and use of probabilistic methods, comparison to deterministic approaches. Offered: Sp.

ENV H 577 Risk Assessment for Environmental Health Hazards (3/4) *Faustman* Examines context, methodologies, data, uncertainties, and institutional arrangements for risk assessment. Qualitative and quantitative approaches to identification, characterization, and control of environmental hazards to health emphasized through didactic and case studies. Prerequisite: ENV H 515 and BLOST 511 or permission of instructor. Offered: jointly with CEE 560/PB AF 589; A.

ENV H 580 Environmental Health Seminar (1, max. 6) Presentation of current environmental health research and environmental and public health issues. Credit/no credit only. Offered: AWSp.

ENV H 581 Environmental Health Reading I (1) *Koenig, Xia* Critical reading of selected basic and applied research publications on environmental health problems and programs. Offered: A.

ENV H 582 Environmental Health Reading II (1) Discussion of controversial and current issues facing public health and the environmental health professional. Offered: W.

ENV H 583 Environmental Health Reading III (1) Preparation and presentation of master's thesis proposal. Offered: Sp.

ENV H 584 Occupational Health and Safety: Policy and Politics (3) *Camp, Morris* Designed to provide a better understanding of the historical, political, and policy issues in occupational health and safety through selected readings and discussion with experts in the field. Particular emphasis on the Occupational Safety and Health Act. Students pres-

ent testimony in a mock congressional hearing on a health and safety issue. Offered: Sp.

ENV H 590 Selected Topics (1-6, max. 6) In-depth study of a current environmental health topic. For more information and permission, consult department program adviser. Offered: AWSpS.

ENV H 591 Current Topics in Toxicology (1, max. 6) *Kavanagh, Xia* Provides in-depth examination of current topics in environmental and occupational toxicology taken from recently published journal articles. Consists of presentations led by students, postdoctoral fellows, and faculty. Students expected to participate actively in discussion. Assigned weekly readings given according to the schedule of speakers and topics. Credit/no credit only. Offered: AWSp.

ENV H 593 Current Topics in Risk Assessment (1, max. 6) *Faustman* Examines current topics in risk assessment and risk communication with a focus on issues in environmental health. Consists of presentations led by students, postdoctoral fellows, and faculty. Students expected to participate actively in discussion. Credit/no credit only. Offered: AWSp.

ENV H 594 Current Topics in Environmental Health Technology (1, max. 2) Critical review and discussion of current scientific literature of particular relevance to the Environmental Health Technology program. Primary presentations rotate among faculty and students. Credit/no credit only. Offered: W.

ENV H 595 Research Rotation (3, max. 9) Research laboratory rotation for predoctoral graduate students. Students commit to a laboratory research project aimed at introducing the student to current methods in laboratory research, and to familiarize the student with specific faculty research interests. Prerequisite: graduate standing and permission of program director. Offered: AWSpS.

ENV H 596 Current Issues in Occupational and Environmental Medicine (2, max. 12) *Kaufman* Interdisciplinary seminar on current and emerging topics in the practice of environmental and occupational health. Faculty- and student-led presentations with an interdisciplinary focus, including occupational hygiene, nursing, and medical issues. Prerequisite: environmental health graduate student, occupational health nursing student, or permission of instructor. Offered: jointly with NURS 580; AWSp.

ENV H 599 Field Studies (2-6, max. 6) Assignment to an environmental research or service program to develop field research and evaluation skills. Credit/no credit only. Offered: AWSpS.

ENV H 600 Independent Study or Research (*) Prerequisite: permission of departmental adviser. Offered: AWSpS.

ENV H 700 Master's Thesis (*) Prerequisite: permission of departmental adviser. Offered: AWSpS.

ENV H 800 Doctoral Dissertation (*) Credit/no credit only. Prerequisite: permission of departmental adviser. Offered: AWSpS.

Graduate Program

Graduate Program Coordinator
 F262 Health Sciences, Box 357236
 206-685-1762
epi@u.washington.edu

The Department of Epidemiology offers three graduate degrees in the field of epidemiology for individuals intending to become academicians, highly qualified research specialists, or well-trained public health practitioners. The Master of Public Health degree requires course work in health services and environmental health in addition to epidemiology course work, thesis research, and a practicum. The Master of Science degree requires concentration on courses and research in epidemiology and biostatistics as preparation for technical specialization or as a prelude to the Doctor of Philosophy program. The Ph.D. course requirements differ from the M.S. program requirements primarily in the scope and complexity of research for the dissertation. Course work includes a basic series in epidemiology, biostatistics, and electives in chronic disease, infectious disease, and methodology. The department also offers postdoctoral research training.

Special Requirements

M.P.H. applicants who hold an M.D., D.V.M., D.D.S., or Ph.D.; possess a bachelor's degree and a health-related background; or seek a combined M.D./M.P.H. are considered. M.S. applications are welcomed from outstanding bachelor-level graduates, physicians, and other health professionals. Ph.D. applicants must have prior master's- or doctoral-level training in a health-related field, equivalent postbaccalaureate experience, or anticipate earning a joint M.D./Ph.D.

Financial Aid

Research training stipends are available on a limited basis. Opportunities for work on various research projects or as a teaching assistant may provide partial assistance.

Research Facilities

University facilities include well-equipped laboratories, an excellent library system, and access to computers. Various opportunities for field research are provided in Seattle and elsewhere in the state, including the Fred Hutchinson Cancer Research Center, Group Health Cooperative's Center for Health Studies, the Harborview Injury Prevention and Research Center, Public Health of Seattle-King County, and several other local hospitals and health institutions.

Faculty

Chair

Scott Davis

Professors

Alexander, E. Russell * 1990, (Emeritus); MD, 1953, University of Chicago; infectious disease epidemiology and infectious disease of children.

Austin, Melissa A. * 1988; PhD, 1985, University of California (Berkeley); genetic epidemiology of chronic diseases and public health genetics.

Becker, Thomas * 1995, (Affiliate); MA, 1976, University of New Mexico, MD, 1981, Case Western Reserve University, PhD, 1986, University of New Mexico; diagnosis and prevention of Native American cancer.

Beresford, Shirley A. * 1987; PhD, 1981, University of London (UK); nutritional epidemiology, folic acid, fruit and vegetables.

Boyko, Edward J. * 1989, (Adjunct); MD, 1979, University of Pittsburgh; epidemiology of inflammatory bowel disease and non-insulin-dependent diabetes mellitus.

Burke, Wylie 1984, (Adjunct); PhD, 1974, MD, 1978, University of Washington; ethical and policy implications of genetic information.

Checkoway, Harvey * 1987; MPH, 1975, Yale University, PhD, 1978, University of North Carolina; occupational and environmental epidemiology.

Connell, Frederick A. * 1978, (Adjunct); MD, 1972, New York University; child health, child health services research, Medicaid, community health assessment.

Daling, Janet R. * 1979; PhD, 1977, University of Washington; maternal and child health and cancer research.

Davis, Scott * 1980; PhD, 1980, University of Washington; radiation and cancer, circadian disruption and cancer, hematopoietic cancers, epidemiologic methods.

Drewnowski, Adam * 1998; PhD, 1977, Rockefeller University; taste and psychology of food choice in disease prevention.

Eisenberg, Mickey * 1978, (Adjunct); MD, 1971, Case Western Reserve University, PhD, 1978, University of Washington; sudden cardiac arrest and acute myocardial infarction.

Emanuel, Irvin * 1966, (Emeritus); MA, 1956, University of Arizona, MD, 1960, University of Rochester, MS, 1966, University of Washington; epidemiology of maternal and child health problems, growth and development.

Foy, Hjordis * 1967, (Emeritus); MD, 1953, Karolinska Institute (Sweden), PhD, 1968, University of Washington; epidemiology and control of infectious disease.

Gale, James L. * 1969; MD, 1961, Columbia University, MS, 1969, University of Washington; epidemiology and control of infectious disease, vaccine safety and public health practice.

Gates, George A. 1993, (Adjunct); MD, 1959, University of Michigan; otology/neurology, cochlear implantation.

Gloyd, Stephen S. * 1985, (Adjunct); MD, 1973, University of Chicago, MPH, 1983, Harvard University; political economy, epidemiology, and primary health care in developing countries.

Goldberg, Jack 2001, (Research); PhD, 1983, University of Illinois; chronic fatigue syndrome.

Grayston, J. Thomas * 1960; MD, 1948, MS, 1952, University of Chicago; infectious causes (Chlamydia pneumoniae) of atherosclerotic cardiovascular disease.

Handsfield, Hunter 1979, (Adjunct); MD, 1968, Columbia University; infectious diseases.

Henderson, Maureen M. * 1975, (Emeritus); MBBS, 1949, DPH, 1956, University of Durham (UK); epidemiology of chronic diseases, dietary prevention of disease.

Holmes, King K. * 1967, (Adjunct); MD, 1963, Cornell University, PhD, 1967, University of Hawaii; clinical epidemiology and pathogenesis of infectious diseases.

Kimball, Ann M. * 1992; MD, 1976, MPH, 1981, University of Washington; emerging infections, public health response to epidemic disease.

King, Mary-Claire * 1995, (Adjunct); PhD, 1973, University of California (Berkeley); genetic analysis of complex human phenotypes, human diversity and evolution.

Koopse, Thomas D. * 1979; MD, 1972, Harvard University, MPH, 1979, University of Washington; injuries, neuroepidemiology, veterans health, epidemiologic methods, program and policy evaluation.

Koutsky, Laura A. * 1981; PhD, 1987, University of Washington; sexually transmitted diseases, HIV, etiology and natural history of cervical neoplasia.

Kristal, Alan R. * 1987; DPH, 1983, Columbia University; nutritional epidemiology, dietary behavior, nutrition intervention, and cancer control.

Kukull, Walter A. * 1981; PhD, 1984, University of Washington; neurological disease etiology, aging and methodology; focus on Alzheimer's disease.

Lacroix, Andrea Z. * 1989; PhD, 1984, University of North Carolina; older women's health, osteoporosis, cardiovascular disease, cancer prevention.

Longstreth, W. T., Jr. * 1981, (Adjunct); MD, 1975, University of Pennsylvania, MPH, 1982, University of Washington; neurology.

Marcuse, Edgar K. 1971, (Adjunct); MD, 1967, Stanford University, MPH, 1973, University of Washington; general pediatrics.

Martin, Diane P. * 1978, (Adjunct); MA, 1972, Temple University, PhD, 1979, University of Washington; research methods; health services quality, use, and outcomes.

Moolgavkar, Suresh H. * 1984; MBBS, 1965, Bombay University (India), PhD, 1973, Johns Hopkins University; cancer epidemiology, development of quantitative methodology.

Mueller, Beth A. * 1984; DPH, 1984, Tulane University; epidemiology of perinatal and reproductive diseases, cancer, and injury research.

Oberle, Mark W. 1988; MD, 1974, Johns Hopkins University; public health; Native American health.

Patrick, Donald L. * 1987, (Adjunct); MS, 1968, PhD, 1972, Columbia University; health status and quality of life, end of life, adolescents.

Perine, Peter L. * 1981; MD, 1966, University of Kansas, MPH, 1973, University of Washington; international health, sexually transmitted diseases.

Potter, John D. * 1995; MBBS, 1971, PhD, 1984, University of Queensland (Australia); colorectal cancer etiology, gene-environment interaction, early detection, molecular epidemiology.

Probstfield, Jeffrey L. 1993, (Adjunct); MD, 1967, University of Washington; cardiology.

Psaty, Bruce M. * 1984; PhD, 1979, MD, 1981, Indiana University; cardiovascular disease, coronary heart disease, hypertension, pharmacoepidemiology.

Rivara, Frederick P. * 1984, (Adjunct); MD, 1974, University of Pennsylvania; pediatric epidemiology and injury prevention and research.

Rosendaal, Frits R. * 1994, (Affiliate); MD, 1985, Erasmus University of Rotterdam (Netherlands), PhD, 1989, University of Leiden (Netherlands); clinical and genetic epidemiology of hemostasis and thrombosis.

Sever, Lowell E. * 1991, (Affiliate); PhD, 1973, University of Washington; perinatal epidemiology, particularly reproductive effects of occupational and environmental exposure.

Shy, Kirkwood K. * 1979, (Adjunct); MD, 1973, Wayne State University; epidemiologic applications to problems in obstetrics and gynecology.

Siscovick, David S. * 1987; MD, 1976, University of Maryland; epidemiology.

Stamm, Walter E. * 1979, (Adjunct); MD, 1971, Harvard University; infectious disease.

Stanford, Janet L. * 1986; PhD, 1985, Johns Hopkins University; cancer epidemiology and genetic susceptibility.

Thomas, David B. * 1979; MD, 1963, University of Washington, DPH, 1972, Johns Hopkins University; cervix and breast carcinoma epidemiology.

Vaughan, Thomas L. * 1982; MD, 1978, University of Illinois, MPH, 1983, University of Washington; cancer, environmental epidemiology.

Weiss, Noel S. * 1975; MD, 1967, Stanford University, DPH, 1971, Harvard University; chronic disease epidemiology.

White, J. Emily * 1982; PhD, 1982, University of Washington; cancer epidemiology and prevention.

Williams, Michelle A. * 1991; ScD, 1991, Harvard University; reproductive and perinatal epidemiology, cancer epidemiology.

Associate Professors

Astley, Susan J. * 1980; PhD, 1990, University of Washington; chronic childhood diseases.

Chu, Joseph * 1982, (Affiliate); MD, 1975, Georgetown University; gynecologic cancer epidemiology, perinatal epidemiology, health services research.

Critchlow, Cathy W. * 1979; PhD, 1993, University of Washington; reproductive of sexually transmitted diseases; HIV prevention, diseases of oral cavity.

Cummings, Peter * 1992; MD, 1970, Case Western Reserve University, MPH, 1993, University of Washington; injury epidemiology, emergency medicine, epidemiologic methods.

Davis, Robert L. * 1991; MD, 1983, University of California (San Diego), MPH, 1993, University of Washington; childhood immunization, including adverse events perinatal and pediatric epidemiology.

Elmore, Joann G. 1996, (Adjunct); MD, 1987, Stanford University, MPH, 1992, Yale University; clinical epidemiology, breast cancer screening, diagnostic accuracy.

Farrow, Diana C. * 1991; MA, 1985, PhD, 1989, University of Washington; cancer epidemiology.

Goldbaum, Gary M. *; MD, 1978, University of Colorado (Denver), MPH, 1989, University of Washington; preventive medicine, chronic diseases prevention, injury.

Haselkorn, Jodie K. * 1985, (Adjunct); MD, 1985, Louisiana State University; health services for the dis-

abled; diagnostic accuracy of tests, effectiveness of interventions.

Heckbert, Susan R. * 1990; MD, 1981, Case Western Reserve University, MPH, 1987, PhD, 1990, University of Washington; clinical and cardiovascular epidemiology, pharmacoepidemiology, pharmacogenetics.

Helgeson, Steven D. * 1990, (Clinical); MD, 1973, University of Washington, MPH, 1975, University of Washington; public health practice and epidemiologic field investigation.

Holt, Victoria L. * 1989; MPH, 1987, PhD, 1990, University of Washington; women's reproductive health, intimate partner violence.

Hujoel, Philippe P. 1989, (Adjunct); DDS, 1984, University of Brussels (Belgium), MSD, 1986, PhD, 1993, University of Washington.

Jackson, Lisa A. * 1988; MD, 1988, University of Virginia, MPH, 1996, University of Washington; infectious disease epidemiology, assessments of vaccine safety and effectiveness.

Jarvik, Gail P. * 1991, (Adjunct); PhD, 1986, University of Michigan, MD, 1987, University of Iowa; quantitative genetics and genetic epidemiology, focusing on common diseases.

Kaufman, Joel D. * 1988, (Adjunct); MD, 1986, University of Michigan, MPH, 1990, University of Washington; occupational and environmental epidemiology; etiologic research and public health surveillance.

Kestin, Mark * 1990, (Affiliate); PhD, 1989, Flinders University (Australia), MPH, 1990, Harvard University; relationship between nutrition, cancer and cardiovascular disease.

Martin, Michael D. * 1986, (Adjunct); DMD, 1979, University of Kentucky, MA, MPH, 1989, PhD, 1993, MSD, 1994, University of Washington; dental education in oral health care of persons with disability.

McGrath, Barbara B. * 1987, (Adjunct Research); PhD, 1993, University of Washington; ethnographic studies with U.S. Pacific Islanders on health issues, specifically, HIV/AIDS prevention.

McTiernan, Anne * 1989; PhD, 1982, University of Washington; breast and colon cancer, women's health, exercise and obesity.

Moore, Donald E. 1977, (Adjunct); MD, 1967, Case Western Reserve University; reproductive endocrinology.

Patterson, Ruth E. * 1994; PhD, 1992, University of North Carolina; dietary assessment in adult populations, dietary change, vitamin supplements in cancer prevention.

Pendergrass, Thomas W. 1978, (Adjunct); MD, 1971, University of Tennessee, MPH, 1979, University of Washington; hematology, oncology.

Reiber, Gayle * 1991; MPH, 1975, Johns Hopkins University, PhD, 1989, University of Washington; epidemiology and health services research on preventing complications of diabetes.

Reiner, Alexander P. 2001, (Research); MD, 1984, Johns Hopkins University, MS, 2001, University of Washington.

Rossing, Mary Anne * 1988; DVM, 1980, University of Illinois, PhD, 1993, University of Washington; cancer epidemiology, particularly cancers of the reproductive system.

Schwartz, Stephen Marc * 1989; PhD, 1990, University of Washington; cancer, cardiovascular dis-

ease, reproductive conditions; molecular/genetic epidemiology; methods.

Stehr-Green, Paul 1995; DPH, 1982, University of Pittsburgh; chronic, infectious, vaccine-preventable diseases, environmental health, health-care delivery.

Weigler, Benjamin J. * 1997, (Adjunct); DVM, 1986, Colorado State University, MPH, 1988, University of California (Berkeley), PhD, 1991, University of California (Davis); infectious disease epidemiology in laboratory animal medicine and management.

Zhao, Lue-Ping * 1985, (Affiliate); PhD, 1989, University of Washington; methods for genetic epidemiology, family studies of breast and colorectal cancers.

Assistant Professors

Cheney, Carrie L. * 1990; PhD, 1989, University of Washington; nutrition in autism spectrum disorder; role of nutrition in cancer prognosis, secondary prevention.

Duchin, Jeffrey S. 1995, (Adjunct); MD, 1985, Rutgers University; infectious diseases and epidemiology.

Edwards, Karen L. * 1991; PhD, 1996, University of Washington; genetic epidemiology, public health genetics, diabetes, cardiovascular disease.

Hitti, Jane 1993, (Adjunct); MD, 1989, University of Vermont, MPH, 1995, University of Washington; perinatal medicine, HIV and pregnancy.

John Stewart, Grace C. 1992, (Adjunct); MD, 1987, University of Michigan, MPH, 1995, University of Washington; mother-to-child HIV-1 transmission (specifically, Africa, cofactors, breastmilk).

Lampe, Johanna W. * 1998, (Research); MS, 1982, PhD, 1990, University of Minnesota; gene-diet interactions and cancer susceptibility: phytochemicals, biotransformation enzymes, colon.

Malone, Kathleen E. * 1994, (Research); PhD, 1993, University of Washington; breast cancer: etiology, prognosis, and genetics.

Mock, Charles N. * 1992; MD, 1980, Brown University; injury: epidemiology, prevention, treatment; especially in less-developed countries.

Reed, Susan D. 1991, (Adjunct); MS, 1979, Sarah Lawrence College, MD, 1986, Stanford University; gynecology, evidence-based medicine and clinical outcomes studies, hormone replacement therapy.

Stehman-Breen, Catherine O. 1990, (Adjunct); MD, 1990, University of Chicago, MS, 1996, University of Washington; cardiovascular epidemiology among patients with end-stage renal disease.

Stevens, Nancy G. * 1982, (Adjunct); MD, 1979, MPH, 1982, University of Washington; family medicine.

Tsu, Vivien D. * 1992, (Affiliate); PhD, 1991, University of Washington; maternal and child health in developing countries.

Tsuang, Debby W. 1992, (Adjunct); MD, 1988, University of Iowa; genetics of schizophrenia and late-life dementia.

Vanderstoep, Ann 1994, (Adjunct); PhD, 1997, University of Washington.

Wald, Anna * 1989; MD, 1985, Mt Sinai School of Medicine, MPH, 1994, University of Washington; the epidemiology, natural history and therapeutics of HSV and other herpes viruses infections.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

Epidemiology

EPI 420 Introduction to Epidemiology (3) NW For the undergraduate student wishing to devote only one quarter to a course in epidemiologic methods. Description of ways in which variation in disease occurrence is documented and how that variation is studied to understand causes of disease. Offered: Sp.

EPI 497 Epidemiology Special Electives (*) Off-campus course for medical students. Offered: AWSpS.

EPI 499 Undergraduate Research (*) Offered: AWSpS.

Courses for Graduates Only

EPI 501 Public Health Practice at the Local Level (3) *Gale, Thompson* Basic overview of state and local public health practice with leaders in the field and case studies focusing on rural and urban public health challenges. Offers preparation for practice in public health agencies. Prerequisite: HSERV 511 or permission of instructor. Offered: jointly with HSERV 501.

EPI 505 Basic Epidemiologic and Biostatistical Methods (5) Epidemiologic concepts and methods to describe disease variation and how that variation is studied to understand causes of disease or adverse events. Includes introduction to basic biostatistical concepts. Written exercises, electronic discussion forums, and applications of epidemiologic research strategies to the critical review of scientific literature. Offered: jointly with BIOST 505.

EPI 510 Epidemiologic Data Analysis (2) *Critchlow* Intended for students planning to take 514. Introduces skills and concepts to effectively analyze large data sets for case-control and cohort studies. A beyond-theory approach provides students hands-on experience in using epidemiologic data sets for stratified or multivariate analyses with SAS. Credit/no credit only. Prerequisite: EPI 511 or EPI 512. Offered: W.

EPI 511 Introduction to Epidemiology (3-4) *Kukull* Epidemiologic methods for non-epidemiology majors. Focuses on research designs and methods to describe disease occurrence and risk factor associations; uses quantitative and biomedical information to infer whether causal relationships exist between potential causes and disease in populations. Prerequisite: permission of instructor. Offered: A.

EPI 512 Epidemiologic Methods I (4) *Koepsell, Weiss* Principles and methods of epidemiology. Covers measures of disease frequency, measures of effect, causal inferences, descriptive epidemiology, study types, misclassification, and effect modification. Designed for students who want to take 513. Prerequisite: prior or concurrent enrollment in BIOST 511 or equivalent. Offered: A.

EPI 513 Epidemiologic Methods II (4) *Koepsell, Weiss* Continuation of 512. Considers how designs of epidemiologic studies may be constructed to maximize etiologic inferences. Covers confounding, randomized trials, cohort studies, case-control studies, and selected topics. Prerequisite: EPI 512. Offered: W.

EPI 514 Application of Epidemiologic Methods (4) *Critchlow, Mueller* Practical experience in analysis of data. Students analyze data sets currently on file using contemporary epidemiologic methods as taught in 512 and 513. Prerequisite: EPI 510 or experience in programming; EPI 512, EPI 513 and epidemiology major. Offered: Sp.

EPI 515 Topics in Epidemiologic Methods (3) *Davis* Introduces advanced methodologic methods, including recursive partitioning, developing clinical prediction rules, analyses of community-level associations or interventions, case-crossover and case-only designs, propensity scores, two-stage sampling, and missing data imputation. Prerequisite: EPI 512; EPI 513. Offered: jointly with BIOST 519. A.

EPI 516 Statistical Methods in Genetic Epidemiology (3) *Monks* Theory and application of statistical techniques used in genetic epidemiology. Includes discussion of association studies, linkages and segregation analyses. Examples stressed with reference to assumptions and limitations. Prerequisite: either BIOST 513 or BIOST 518; PHG 511/EPI 517; or permission of instructor. Offered: jointly with BIOST 516/PHG 519.

EPI 517 Genetic Epidemiology (3) *Austin* Research methods for evaluating genetic influences on disease and risk factors and genetic-environmental interactions. Study designs and statistical methods include twin studies, family studies, population-based association studies, segregation analysis, and linkage analysis. Prerequisite: EPI 511, BIOST 511, and GENET 371, or equivalent. Offered: jointly with PHG 511.

EPI 518 Computer Demonstrations in Genetic Epidemiology (2) *Edwards* Demonstrations and use of computer programs designed specifically for analysis of genetic epidemiologic data, including heritability, segregation, and sib-pair linkage analysis. Discussions focus on interpretation of results. Laboratory sections apply methods to data provided by instructor. Corequisite: EPI 517/PHG 511 or permission of instructor. Offered: jointly with PHG 518.

EPI 519 Epidemiology of Cardiovascular Disease (3) *Psaty, Siscovick* Principles, methods, and issues in the epidemiology of cardiovascular disease. Focuses on coronary heart disease and its major risk factors; also covers other topics such as stroke and sudden death. The format includes informal lectures and discussions of the current literature. Prerequisite: EPI 511 or EPI 512, EPI 513. Offered: A.

EPI 520 Epidemiology of Infectious Diseases (3) *Jackson* Infectious diseases from a public health perspective. Topics include analytic methods, study design, outbreak investigations, surveillance, vaccine evaluations, global eradication, screening, modeling, and infectious causes of chronic diseases. Homework and discussion based on current examples from the published literature. Prerequisite: EPI 511, EPI 512, or permission of instructor. Offered: odd years; W.

EPI 521 Epidemiology of Maternal and Child Health Problems (4) *Williams* Contributions to understanding and prevention of major maternal and child health problems, including pregnancy outcome, infant and child morbidity and mortality, maternal morbidity and mortality, abnormal child growth and development, and early-life factors in adult health problems. Prerequisite: graduate, medical, or dental school standing and EPI 511 or EPI 512 or permission of instructor. Offered: jointly with HSERV 542; W.

EPI 522 Reproductive Epidemiology (3) *Holt* Focus on conditions and diseases of the female reproductive system, as well as pregnancy outcomes other than birth. Presentation of current epidemiologic knowledge and discussion of issues on topics including contraception; infertility; spontaneous abortion;

induced abortion; breast, uterine, and ovarian disease; and menopause. Prerequisite: EPI 511 or EPI 512-513. Offered: odd years; A.

EPI 523 Injury Epidemiology (3) *Cummings* Discussion of research methods which are useful in studying the causes of injury and outcomes after injury. Information regarding the impact of injuries on health and known or suspected risk factors for some injuries. Assigned readings from literature in the field. Prerequisite: EPI 511 or EPI 512 or permission of instructor. Offered: Sp.

EPI 524 Epidemiologic Studies of Cancer Etiology and Prevention (3) *Thomas, Ulrich* Current knowledge of the role of environmental factors (e.g., smoking, hormonal, nutrition, viral, radiation) and genetic susceptibility in the etiology of several major cancers. Illustrates principles and conduct of research in cancer etiology and cancer prevention. Prerequisite: EPI 511 or EPI 513. Offered: A.

EPI 525 Topics in Preventive Medicine (2) *Goldbaum* Examines current scientific knowledge and state of the art of preventive medical interventions. Discusses and considers options for current practice. Recommended for MDs, RNs, and others with a clinical background. Credit/no credit only. Offered: jointly with HSERV 505.

EPI 526 Epidemiology of Diseases Communicable from Nature (3) *DiGiacomo, Rausch, Weigler* Explores the public health aspects of zoonotic diseases, their epidemiology and approaches to control. Focuses on the major viral, rickettsial, bacterial, protozoal, helminthic, and fungal diseases transmitted from wild and domesticated animals to humans. Prerequisite: EPI 511, EPI 512, or EPI 520 or permission of instructor. Offered: jointly with C MED 526; Sp.

EPI 528 Exposure Measurement in Epidemiology (3) *White* Principles and methods of measuring exposures and covariates in epidemiological studies. Validity and reliability of measures, questionnaire design, effects of measurement error, maximizing response rates, quality-control procedures, measurement of specific exposures. Credit/no credit only. Prerequisite: EPI 513. Offered: Sp.

EPI 529 Emerging Infections of International Public Health Importance (3) *Kimball* Overview of current emerging infections worldwide and contributing factors. Design of a surveillance and prevention strategy required. Offered: jointly with HSERV 536; in residence, even years; online, odd years; W.

EPI 530 AIDS: A Multidisciplinary Approach (2) *Koutsky* Comprehensive overview of the public health, clinical, and laboratory aspects of human immunodeficiency virus (HIV) infection and disease. Topics include the pathogenesis, natural history, and management of HIV infections. The impact of HIV/AIDS on community and global health care and prospects for prevention and control. Credit/no credit only. Offered: jointly with MED 530; A.

EPI 531 Problems in International Health (4) *Gloyd* Explores social, political, economic, environmental determinants of developing countries' health; traces development of societal responses to problems. Includes: origins of primary health care; child survival; traditional systems; population; water; sanitation; international agencies; impact of economic policies. Case study formulating pharmaceutical policy in a developing country. Offered: jointly with HSERV 531; A.

EPI 532 Epidemiology of Infectious Diseases of Third-World Importance (3) *John, Kreiss* A review of major infectious disease problems of the developing world, including AIDS, malaria, tuberculosis, measles, and diarrhea, with an emphasis on public health control strategies. Offered: odd years; Sp.

EPI 533 Pharmacoepidemiology (3) *Heckbert, Johnson* Overview of pharmacoepidemiology including drug development and approval; application of epidemiologic methods to study drug safety and effectiveness; exploration of the interplay between research and public policy; introduction to resources for information about drugs; introduction to pharmacology principles pertinent to pharmacoepidemiology. Prerequisite: graduate student or with permission. Offered: jointly with PHARM 533.

EPI 536 Categorical Data Analysis in Epidemiology (4) Summary of univariate categorical data analysis; introduction to multivariate analysis of categorical epidemiologic data using multiplicative models. Experience at interpretation; familiarity with available programs gained by analysis of bona fide data, critiques of analyses appearing in literature. Prerequisite: BOST 515, or EPI 514 and either BOST 513 or BOST 518, or permission of instructor. Offered: jointly with BOST 536/A.

EPI 537 Survival Data Analysis in Epidemiology (4) Introduction to the multivariate analysis of survival data using multiplicative models. Application to epidemiologic studies. Familiarity with interpretation and available computer programs gained by analysis of bona fide sets of data and critiques of analyses appearing in the literature. Prerequisite: EPI 536 or permission of instructor. Offered: jointly with BOST 537/W.

EPI 538 Nutritional Epidemiology (3) *Beresford, Drewnowski* Application of epidemiological methods to current studies of diet, nutrition, and chronic disease. A discussion of current issues and controversies enable students to plan studies in nutritional epidemiology and disease prevention. Prerequisite: EPI 511 or EPI 512 or permission of instructor. Offered: jointly with NUTR 538; A.

EPI 539 Research Methods in Developing Countries (3/4) *Gloyd, Mock* Simple, practical methodologies to obtain and validate information regarding health status and health services in developing countries. Usefulness, validity, limitation of vital records, health reports, household (and cluster) surveys, nutritional anthropometry, and qualitative methods discussed. Lectures, computer lab, and student participation in community-based survey. Offered: jointly with HSERV 539; W.

EPI 542 Clinical Epidemiology (2) *Weiss* Principles and methods involved in studying outcome of illness. Prerequisite: EPI 511, or EPI 512 and EPI 513. Offered: S.

EPI 544 Maternal and Child Health in Developing Countries (3) *Mercer* Emphasizes critical health problems of women and children in developing countries in social, economic, and cultural contexts. Practical approaches to developing MCH programs shared via lecture/discussions, exercises, and small group work. Students acquire skills in baseline assessment, setting objectives, planning and evaluating interventions, and involving communities. Offered: jointly with HSERV 544; Sp.

EPI 546 Psychosocial Epidemiology (3) *Vande Stoep* Application of epidemiological methods to the study of mental illnesses. Topics include occurrence and distribution of mental illness, classification of psychiatric disorders; treatment-based vs. community-based studies; epidemiology of depression and schizophrenia; familial transmission; developmental epidemiology; mental illness and violence. Prerequisite: one course in epidemiology or permission of instructor. Offered: jointly with PBSCI 546; Sp.

EPI 568 Molecular Epidemiology of Infectious Diseases (2) *DiGiacomo, Samadpour, Roberts* Application of molecular typing techniques to study of microbial pathogens to increase understanding of epidemiology of infectious diseases. Brief review of

molecular biology. Evaluation of methods used in outbreaks and epidemics reported in literature. Prerequisite: EPI 511 or EPI 512 or permission of instructor. Offered: jointly with ENV H 568/PABIO 568. Offered: W.

EPI 570 Occupational and Environmental Epidemiology (3) *Checkoway* Research methods for studying occupational and environmental determinants of disease. Defining exposed populations, characterizing exposure levels, estimating disease risks relative to exposure. Cohort, case-control, cross-sectional designs for various health outcomes. Applications to exposure standard setting and risk assessment. Prerequisite: EPI 511 or EPI 512, EPI 513 or permission of instructor. Offered: jointly with ENV H 570; Sp.

EPI 571 Neuroepidemiology and Environmental Risk Factors (3) *Kukull* Focus on neurologic diseases and etiology. Presentation of descriptive epidemiology, clinical features, and risk factors, including stroke, Parkinson's disease, Alzheimer's disease, multiple sclerosis, and other disorders. Discussion of NIH grantsmanship. Guest experts present some topics. Recommended: 511 or equivalent. Offered: jointly with ENV H 571; odd years; W.

EPI 573 Methods and Issues in Using Biological Measurements in Epidemiologic Research (3) *Schwartz* Introduction to use of measurements from biological specimens in epidemiologic studies. Prepares epidemiology and laboratory science students for conduct of interdisciplinary human studies. Evaluation of biomarkers, preliminary studies, methodologic issues, quality control. Brief review of molecular biology. Applications and current literature discussed. Prerequisite: EPI 511 or EPI 512. Offered: jointly with ENV H 573; W.

EPI 580 Geographic Information Systems (2) *Hoskins, Shields* Public-health practice and epidemiologic problem solving using data from geographic information systems. Calculating rates of disease using smoothing methods for adjustment, geocoding addresses of health-outcome data including death and cancer incidence for outbreak investigations and spatial analysis, principles of cartography, basic spatial statistics (spatial modeling, autocorrelation, confounding). Offered: A.

EPI 583 Epidemiology Seminar (1, max. 3) Presentation of current epidemiologic research and application of epidemiologic research in the practice of public health. Offered: AWSp.

EPI 588 Preparing and Writing Research Proposals (2) *Kristal, Reiber* Experience in preparing, organizing, and writing research proposals, following NIH and AHRQ guidelines. Includes weekly assignments and didactic exercises, leading to final research proposal. All students participate in mock study section to review and critique proposals. Credit/no credit only. Prerequisite: second-year graduate student (PhD recommended), or PhD or MD in health-related field. Offered: even years; A.

EPI 590 Selected Topics in Epidemiology or International Health (1-6, max. 6) Tutorials are arranged for a small number of students for in-depth examination of an area of epidemiology or international health, usually of current nature. Seminar format. Prerequisite: EPI 511. Also a special summer format presenting introductory material. May be taken with ENV H 590 and/or HSERV 590. For more information and permission, consult the department program adviser. Offered: AWSpS.

EPI 591 Current Literature in Epidemiology (1) Articles pertaining to epidemiology and related subjects selected from the current literature to be distributed and read by all participants. Faculty members and enrolled students alternate being responsible for conducting sessions and choosing articles to read.

Credit/no credit only. Prerequisite: EPI 513. Offered: AWSp.

EPI 592 Program Seminars (1-6, max. 6) Graduate seminars organized to address specific educational needs of students in various specialized programs within the Department of Epidemiology (i.e., Maternal and Child Health). Prerequisite: permission of instructor. Offered: AWSpS.

EPI 593 Cancer Prevention Research Laboratory (3) *White* Research experience for pre- and postdoctoral students working on cancer prevention projects at the Fred Hutchinson Cancer Research Center. Credit/no credit only. Offered: jointly with BOST 593; AWSpS.

EPI 595 Epidemiology Master's Practicum (1-6, max. 6) Supervised practice experience providing students an opportunity to learn how epidemiology is applied in a public health setting and in the formulation and application of public health policy. Credit/no credit only. Prerequisite: EPI 512 and BOST 511 or equivalent and permission of instructor; recommended: EPI 501. Offered: AWSpS.

EPI 600 Independent Study or Research (*) Credit/no credit only. Prerequisite: permission of departmental adviser and independent study supervisor. Offered: AWSpS.

EPI 700 Master's Thesis (*) Credit/no credit only. Prerequisite: permission of departmental adviser. Offered: AWSpS.

EPI 800 Doctoral Dissertation (*) Credit/no credit only. Offered: AWSpS.

Public Health Genetics

Courses for Graduates Only

PHG 509 Multidisciplinary Communication in Public Health Genetics (2) *Watts* Focuses on effective communication in a multi-disciplinary context. Students will read and critique published public health genetics literature, and learn and apply principles of effective written and oral communication to public health genetics topics of their choice. Credit/no credit only. Offered: jointly with HSERV 509.

PHG 510 Genetic Principles for Public Health (3) *Austin, Doyle, Leboeuf* Basic principles of human genetics in a public health context; the molecular components of life, organization of the genome, gene expression, recombinant DNA technology, gene regulation, Mendelian inheritance, quantitative genetics, nutrition and gene expression, mitochondrial inheritance, gene mapping, gene-environment interactions, Human Genome Project, and genetic service in public health.

PHG 511 Genetic Epidemiology (3) *Austin, Edwards* Research methods for evaluating genetic influences on disease and risk factors and genetic-environmental interactions. Study designs and statistical methods include twin studies, family studies, population-based association studies, segregation analysis, and linkage analysis. Prerequisite: EPI 511, BOST 511, and GENET 371, or equivalent. Offered: jointly with EPI 517.

PHG 512 Legal, Ethical, and Social Issues in Public Health Genetics (3) *Kuszler, Mastroianni* Equips the student to anticipate and assess potential legal, ethical, and social barriers complicating the incursion of new genetic advances, information, and technologies into public and private health care delivery efforts. Prerequisite: GENET 371 or equivalent. Offered: jointly with LAW E 562/MHE 514.

PHG 513 Basic Concepts in Pharmacogenetics and Toxicogenomics (3) *Eaton, Thummel* Addresses current DNA sequencing and genotyping approaches, and basic concepts of pharmacogenetics and

toxicogenomics. Emphasis placed on applications of genomic technologies to the understanding of "gene-environment interactions" that cause diseases of public health importance, including cancer, chronic neurological diseases, and adverse drug reactions.. Prerequisite: GENET 372 or equivalent. Offered: jointly with ENV H 513/PCEUT 513.

PHG 514 Animal Models and Public Health Genetics (2) *LeBoeuf* Contributions of animal models to studies of human diseases. Concepts of multi-genetic diseases, chromosomal mapping, quantitative traits with emphasis on diseases of major public health impact. Interaction between inheritance and nutrition. Focus on mouse genetics. Prerequisite: GENET 371, PHG 513, or permission of instructor. Offered: jointly with NUTR/PABIO 514.

PHG 518 Computer Demonstrations in Genetic Epidemiology (2) *Edwards* Demonstrations and use of computer programs designed specifically for analysis of genetic epidemiologic data, including heritability, segregation, and sib-pair linkage analysis. Discussions focus on interpretation of results. Laboratory sections apply methods to data provided by instructor. Corequisite: EPI 517/PHG 511 or permission of instructor. Offered: jointly with EPI 518.

PHG 519 Statistical Methods in Genetic Epidemiology (3) Theory and application of statistical techniques used in genetic epidemiology. Includes discussion of association studies, linkages and segregation analyses. Examples stressed with reference to assumptions and limitations. Prerequisite: either BIOST 513 or BIOST 518; PHG 511/EPI 517; or permission of instructor. Offered: jointly with BIOST/EPI 516.

PHG 521 Socio-Cultural Perspectives of Public Health Genetics (3) *McGrath* Examines social and cultural issues of human genome sequencing and control of genetic expression. Attitudes and behaviors toward health, illness, and disability are studied using historical, contemporary, and cross-cultural case study material. Offered: jointly with NURS 582/ANTH 574.

PHG 522 Ethical Frameworks for Public Health Genetics (2) *Mastroianni* Case-based application of ethical principles in genetic medicine to range of problems arising in genetics practice, policy, research. Examination of traditional problems including eugenics and testing/screening for genetic disease, as well as emerging problems in population and environmental genetics. Prerequisite: LAW E 562/MHE 514/PHG 512 or permission of instructor. Offered: jointly with MHE 516.

PHG 523 Genetics and the Law (2) *Kuszler* Considers the legal issues arising from new genetic technologies and information. Statutes, regulations, and cases used to demonstrate the constitutional, contract, and tort law complications resulting from dissemination of these technological advances. Prerequisite: LAW E 562/MHE 514/PHG 512 or permission of instructor. Offered: jointly with LAW E 564.

PHG 532 Statistical Methods in Medical Genetics (2) *Wijsman* Theory and application of statistical techniques used in medical genetics. In-depth discussion of linkage and segregation analysis and ascertainment problems. Applications with stressed with reference to assumptions and limitations. Data sets analyzed with current computer programs. Offered: jointly with BIOST/MED 532.

PHG 537 Pharmacoeconomics, Genetics, and Health Care (2) *Ramsey, Veenstra* Introduction to outcomes research and economic evaluation related to pharmaceuticals and genetic technologies. Covers cost-effective analysis and quality of life evaluation. Discusses the use of economic evaluation in health-care to affect policy decisions.

PHG 580 Interactive Seminar (1, max. 6) *Veenstra* Seminar series on topics related to public health genetics, including current bioethical, legal, medical, biotechnology, and public policy issues.

PHG 590 Selected Topics in Public Health Genetics (1-6, max. 6) Tutorials are arranged for a small number of students for in-depth examination of an area of public health genetics, usually of a current nature.

PHG 595 Master's Practicum (1-12, max. 12) Supervised practice experience providing students an opportunity to learn how genetics is applied in a public health setting and in the formulation and application of public health policy. Prerequisite: EPI 517/PHG 511, LAW E 562/MHE 514/PHG 512, ENV H/PABIO/PCEUT/PHG 513, or permission of instructor.

PHG 600 Independent Study or Research (*) Credit/no credit only.

PHG 700 Master's Thesis (*) Credit/no credit only.

Health Services

Graduate Program

Graduate Program Coordinator
H660 Health Sciences, Box 357660
206-616-2926
hsinfo@u.washington.edu

The Department of Health Services offers a two-year graduate program in health services leading to the Master of Public Health or Master of Science degree. The M.P.H. degree prepares future health practitioners, managers, and researchers to conduct the unfinished work of improving the well-being of communities in the United States and throughout the world. Graduates take jobs in health system management, health program design and evaluation, health promotion, public health practice, and policy analysis. Beginning autumn 2002, the department will offer an M.P.H. in community-oriented public health practice. This new degree program will use problem-based learning methods, and will integrate classroom instruction and experiential fieldwork to prepare students to work in community and public health practice settings. Students may also pursue any of the M.P.H. specialty options. The department also offers a three-year extended degree program in community-health management, leading to the M.P.H. degree for employed professionals working full-time.

The department also maintains primary responsibility for the graduate program in Health Services Administration (an interdisciplinary degree-granting program of the Graduate School described in the Interdisciplinary Graduate Degree Programs section of this catalog). An executive evening/weekend M.H.A. degree for clinical health-care professionals was established winter quarter of 1998. The M.H.A. degree provides full academic preparation for careers in management and policy positions in health systems, hospitals, medical groups, health plans and other types of health care organizations. The department offers a Ph.D. in health services and participates in the training of doctoral students from other departments on campus by offering a specialization in health services under the Doctoral Studies Program.

Master of Public Health and Master of Science

The M.P.H. and M.S. programs in health services give priority to individuals who have completed their professional training in fields such as medicine, dentistry, or nursing, or who have had substantial experience in the health field. The M.P.H. program provides broad-based public health skills, while the M.S. provides more focused health services research skills. These programs offer a general curriculum that includes introduction to health systems, epidemiology, current issues regarding the provision of medical care, methodological training for research and program evaluation, and preparation of a thesis. In addition, the M.P.H. program requires a practicum experience, an introductory course in environmental health, and a social and behavioral science course. Examples of areas of concentration include studies of patient and provider behavior; evaluation of local, state, and federal health programs; and the impact of technology on medical-care costs and benefits. The programs are organized into four tracks: community medicine, international health, maternal and child health, and social and behavioral sciences. International health, and maternal and child health are offered jointly with the Department of Epidemiology.

The M.P.H. in *Community-Oriented Public Health Practice* (CO/PHP) offers an innovative method of public health training that prepares students to be effective problem-solvers, innovators, advocates, and leaders in addressing community health problems. Graduates are prepared to work in such varied settings as community and public health agencies, managed care organizations, federal programs, and advocacy and philanthropic associations. The CO/PHP program combines problem-based learning and experiential learning, approaches that are especially effective for adult learners who are seeking to integrate rigorous academic training and practice. During the first year, students select from a range of community-based field placements that help them acquire practical skills. In the second year, students select a community-based setting for a final degree (capstone) project.

The *Community Medicine* M.P.H. option provides a generalist approach to public health. Students take the core courses for the M.P.H., then tailor their programs to their own career goals. Because there are fewer specific course requirements for this track, applicants must have well-defined goals that are compatible with the areas of expertise represented on the faculty. This track is best suited for fellows and scholars pursuing studies after receiving an M.D., R.N., or other health degree.

The *Maternal and Child Health* M.P.H. option provides an interdisciplinary approach to the wide variety of factors that influence the health and health care of women and children. It is an interdepartmental program offered jointly by the Departments of Health Services and Epidemiology. Students must choose to major in one of these departments; however, all students are exposed to a core content that includes basic epidemiological, behavioral, sociological, political, and economic aspects of maternal and child health. The MCH program combines practical and classroom experience to give students an in-depth understanding of the behavioral, biological, social, and environmental factors that influence health and illness in maternal and child populations; competency in public health research, analytic methods, and core functions; skills in program management; and supervised experience in applying science and management tools to the planning, development and evaluation of health programs and policy. The MCH program is designed primarily for individuals with clinical or public health experience who seek advanced training to assume increased responsibility.

ty for program management, policy formation, assessment, evaluation and research.

The *International Health* M.P.H. option is offered jointly in the Departments of Health Services and Epidemiology. The International Health Program (IHP) promotes understanding of the determinants of population health, and teaches skills necessary for planning, implementation, and evaluation of health programs for developing countries and other marginalized populations. The program's goal is to balance teaching, research, and service to contribute to improvements in health at home and worldwide. The program focuses on community health and primary health-care systems, employing epidemiological and qualitative research skills to bear. The curriculum addresses the social, political, economic, environmental, geographical, and health-systems factors that have an impact on health. Requirements include completion of core M.P.H. courses, IHP elective coursework, a public health practicum, and a thesis project on a topic related to health in developing countries. Students are encouraged to carry out their thesis projects in an international setting. Substantial health-related experience in a developing country setting is generally required for admission.

The *Social and Behavioral Sciences* M.P.H. option focuses the study, thought, and practice of public health on the cultural, social, political, economic, and behavioral determinants of population health and the promotion of health through community action, health communications, group-level interventions, and individual behavior change. Students may plan a course of study concentrating on health behavior and health promotion or social determinants of health and community intervention. Both research and practice emphases can be applied to many different areas of public health. Students may pursue concurrent degrees with other schools and departments of the University.

Students in the academic options in Health Services may take courses in other departments of the University. Community agencies and resources are used extensively. Students with a background in medicine may qualify to receive concurrent credit for residency training in preventive medicine.

Admission Requirements for M.P.H. and M.S.

In addition to completing Graduate School admission requirements, applicants to the M.P.H. and M.S. programs must submit at least three letters of recommendation, Graduate Record Examination scores, and a goal statement. At least three years of medical or health care experience are usually required. Applicants are accepted only for summer and autumn quarters of each year. The application deadline is January 15.

Doctor of Philosophy

The overall goal of the doctoral program in Health Services is to train health services researchers and health policy analysts for careers in academic institutions, health delivery systems, public health departments, government agencies, and the private sector. This in-residence program prepares students to conduct high quality independent, collaborative research and policy analysis by offering applied research opportunities on a wide variety of topics under the mentorship of faculty. In addition, students obtain advanced knowledge of population health and health care, theoretical frameworks, and extensive research skills to identify and critically analyze social, behavioral, and health care system effects on health; and the organization, delivery, financing, and management of health services.

Doctoral Studies Program

Doctoral study in health services is available to qualified students on campus who are enrolled in the doctoral programs of other departments (e.g., anthropology, biostatistics, economics, epidemiology, geography, medicine, nursing, operations research, organizational theory, political science, psychology, social work, or sociology). Students in the Doctoral Studies program take four courses in health services and focus their dissertation on original research that relates the basic discipline to a specific health services issue (e.g., health behavior, health care organizations, costs, or quality and utilization of health care services).

Financial Aid

Every attempt is made to ensure that students admitted are not prevented from pursuing graduate studies due to inadequate finances. Some fellowships, assistantships, scholarships, and loans are available each year. However, students should be prepared to use their own resources to finance their graduate education.

Research Facilities

In addition to using University facilities, the program has extensive links with community health-care delivery systems and agencies for research and training.

Extended M.P.H.

Graduate Program Coordinator
H685 Health Sciences, Box 357660
206-685-7580

The Extended M.P.H. Degree Program is a part-time, partial distance learning program delivered through a combination of intensive four-week summer sessions on the University campus, directed independent study, and four intensive weekend seminars during the academic year. The program is designed for mid-career public and community health professionals with three or more years of experience related to public health. The program provides knowledge and skills required at mid- and upper-level practice and management positions for health professionals. In addition to the core courses in health services, epidemiology, biostatistics, and environmental health, the prescribed course work includes a broad exposure to the health-care system plus specific management training in budgets, finance, personnel management, economics, organization theory, and program planning and evaluation. Pathways are available in health education, maternal and child health, public health practice, and oral health.

The Extended M.P.H. Degree Program provides training in developing skills in the scientific base of public health, analytic methods, management and communication, and policy and advocacy, as well as training in cross-cutting issues. Graduates apply their skills directly to their careers.

Admission Requirements

In addition to Graduate School admission requirements, applicants must submit a program application, at least three letters of recommendation, a goal statement, Graduate Record Examination scores (applicants with doctoral degrees may waive this requirement), transcripts from all college-level courses completed, a statistics self-test, and a computer literacy self-test. A minimum of three years work experience in public health or a related field is required. Applicants are accepted to begin the program summer quarter. The deadline for priority consideration is December 1. Applications are accepted through February 15 and considered on a space-available basis.

Faculty

Chair

William L. Dowling

Professors

Berkowitz, Bobbie * 1988, (Adjunct); PhD, 1990, Case Western Reserve University; administration, leadership and policy development within public health and nursing.

Bowen, Deborah J. * 1986; PhD, 1986, Uniformed Service University of the Health Sciences; health psychology.

Boyko, Edward J. *, (Adjunct); MD, 1979, University of Pittsburgh; epidemiology of inflammatory bowel disease and non-insulin-dependent diabetes mellitus.

Chapko, Michael K. * 1978, (Research); MA, 1970, Hunter College, PhD, 1972, City University of New York; ambulatory care, long-term care, cost-effectiveness in health care, international health.

Cheadle, Allen D. * 1987, (Research); PhD, 1987, University of California (Berkeley); community-based research and program evaluation.

Connell, Frederick A. * 1978; MD, 1972, New York University; child health, child health services research, Medicaid, community health assessment.

Conrad, Douglas A. * 1977; MHA, 1973, University of Washington, MBA, 1977, PhD, 1978, University of Chicago; alternative vertical and horizontal market structures in health care.

Coombs, John B. 1983, (Adjunct); MD, 1972, Cornell University; health care outcomes, rural health policy, healthcare workforce issues and applied nutrition.

Day, Robert W. * 1968; MD, 1956, University of Chicago, MPH, 1958, PhD, 1962, University of California (Berkeley); translational research.

Deyo, Richard A. * 1986; MD, 1975, Pennsylvania State University; health status measurement and evaluation of common medical practices.

Diehr, Paula K. * 1970; MS, 1967, PhD, 1970, University of California (Los Angeles); health services, small-area analysis, health status.

Dowling, William L. * 1982; MBA, 1961, University of Chicago, MA, 1970, PhD, 1971, University of Michigan; strategic management of health-care organizations, managed care.

Fihn, Stephan * 1982; MD, 1977, St Louis University, MPH, 1981, University of Washington; internal medicine.

Fuller, Sherrilynne S. * 1988, (Adjunct); PhD, 1984, University of Southern California; analysis, representation and mapping of research findings (data mining).

Gale, James L. * 1969, (Adjunct); MD, 1961, Columbia University, MS, 1969, University of Washington; epidemiology and control of infectious disease, international health.

Gloyd, Stephen S. * 1985; MD, 1973, University of Chicago, MPH, 1983, Harvard University; political economy, epidemiology, and primary health care in developing countries.

Grembowski, David * 1981; MA, 1975, Washington State University, PhD, 1982, University of Washington; health services research, survey research, program evaluation, performance of health care systems.

Grossman, David C. 1988, (Adjunct); MD, 1982, University of California (Los Angeles), MPH, 1990, University of Washington; injury control, Native American health, and pediatric health services research.

Hart, Lawrence G. 1982, (Adjunct); MS, 1975, University of Utah, PhD, 1985, University of Washington; rural health policy, medical geography.

Hedrick, Susan * 1983; MA, 1975, PhD, 1982, Michigan State University; long-term care.

Heggyvary, Sue T. 1986, (Adjunct); MN, 1966, University of Washington, PhD, 1974, Vanderbilt University; administration and productivity of health care and nursing services.

Hunt, D. Daniel 1977, (Adjunct); MD, 1973, Cornell University, MBA, 1977, University of Pennsylvania; medical education, career choice.

Katon, Wayne J. * 1976, (Adjunct); MD, 1976, University of Oregon; depression, panic disorder, somatization, adherence.

Kimball, Ann M. * 1992; MD, 1976, MPH, 1981, University of Washington; emerging infections, public health response to epidemic disease.

Klasterin, Theodore * 1974, (Adjunct); PhD, 1973, University of Texas (Austin); operations management, facility location, project management, waiting lines, logistics, inventory.

Kukull, Walter A. * 1981, (Adjunct); PhD, 1984, University of Washington; neurological disease etiology, aging and methodology; focus on Alzheimer's disease.

Kuszler, Patricia Carol * 1994, (Adjunct); MD, 1978, Mayo Medical School/graduate School, JD, 1991, Yale University; law and medicine: health-care finance and regulation, medical malpractice, biotechnology and law.

Larson, Eric B. * 1977, (Adjunct); MD, 1973, Harvard University; internal medicine.

Logerfo Sr., James P. * 1974; MD, 1968, University of Rochester, MPH, 1974, University of Washington; quality-of-care assessment.

Martin, Diane P. * 1978; MA, 1972, Temple University, PhD, 1979, University of Washington; research methods, health services quality, use, and outcomes.

Mayer, Jonathan D. * 1977, (Adjunct); PhD, 1977, University of Michigan; medical geography, health policy, env. health, epidemiology, intl. health, infectious diseases.

McCann, Barbara S. * 1986, (Adjunct); MS, 1982, PhD, 1984, Rutgers University; behavior change, health, nutrition, psychological stress, cardiovascular disease, diabetes, obesity.

Milgrom, Peter M. * 1974, (Adjunct); DDS, 1972, University of California (San Francisco); management of fearful and phobic dental patients, quality of dental care.

Mitchell, Pamela H. * 1971, (Adjunct); MS, 1965, University of California (San Francisco), PhD, 1991, University of Washington; neuroscience nursing, diagnostic strategies.

Monsen, Elaine R. * 1969; MS, 1959, PhD, 1961, University of California (Berkeley); nutrition, dietetics.

Muecke, Marjorie A. * 1979, (Adjunct); PhD, 1976, University of Washington; community health, medical anthropology, reproductive health, Southeast Asia (Thailand).

Norris, Thomas E. 1988, (Adjunct); MD, 1973, University of Texas (Galveston); clinical applications, health policy and health workforce needs.

Oberle, Mark W. 1988; MD, 1974, Johns Hopkins University; public health; Native American health.

Patrick, Donald L. * 1987; MS, 1968, PhD, 1972, Columbia University; health status and quality of life, end of life, adolescents.

Pearlman, Robert A. * 1981, (Adjunct); MD, 1975, Boston University; gerontology.

Perrin, Edward * 1962, (Emeritus); MA, 1956, Columbia University, PhD, 1961, Stanford University; biostatistics, health information, health services research methodology.

Psaty, Bruce M. * 1984, (Adjunct); PhD, 1979, MD, 1981, Indiana University; cardiovascular disease, coronary heart disease, hypertension, pharmacoepidemiology.

Rosenblatt, Roger A. * 1977, (Adjunct); MPH, 1971, MD, 1971, Harvard University; research into the organization and delivery of health services, rural health policy.

Ross, Austin, Jr. 1982, (Emeritus); MPH, 1955, University of California (Berkeley); ambulatory care, health care delivery systems.

Sullivan, Sean * 1992; PhD, 1992, University of California (Berkeley); health economics, pharmaceutical outcomes research and health policy.

Thompson, Engelberta 1989; MA, 1978, PhD, 1981, Western Michigan University; community studies, cancer prevention, smoking cessation, children's pesticide exposure.

Urban, Nicole D. * 1988, (Research); MS, 1973, DSc, 1978, Harvard University; analysis of the cost-effectiveness of disease prevention trials and interventions.

Wagner, Edward H. * 1984; MD, 1965, State University of New York (Buffalo), MPH, 1972, University of North Carolina; clinical epidemiology and health services research, health promotion and disease prevention.

Watts, Carolyn A. * 1975; MA, 1974, Johns Hopkins University, PhD, 1976, Johns Hopkins University; health economics and policy.

Wickizer, Thomas M. * 1988; MSW, 1974, University of Washington, MPH, 1979, MA, 1987, PhD, 1989, University of Michigan; health economics, health policy, program evaluation, quality improvement, occupational health.

Wolf, Fredric M. * 1997, (Adjunct); MEd, 1977, PhD, 1980, Kent State University; clinical decision making, evaluation of new technology, evidence-based health care.

Associate Professors

Baldwin, Laura M. 1984, (Adjunct); MD, 1980, University of Southern California, MPH, 1986, University of Washington; family medicine.

Bell, Michelle * 1984; MSW, 1967, University of Washington, PhD, 1984, University of Washington; maternal/child health, adolescent health, access to health services for disadvantaged populations.

Braddock, Clarence H. * 1993, (Adjunct); MD, 1981, University of Chicago; doctor-patient communication, informed consent, bioethics education.

Bradley, Katharine A. 1990, (Adjunct); MD, 1987, Stanford University, MPH, 1993, University of Washington; general internal medicine.

Chasteen, Joseph E. 1989, (Adjunct); DDS, 1967, MA, 1976, University of Michigan; dental informatics and multi-media instructional programs.

Crittenden, Robert A. 1981, (Adjunct); MD, 1976, MPH, 1987, University of Washington; health plans/policies.

Curtis, Jared R. 1988, (Adjunct); MD, 1988, Johns Hopkins University, MPH, 1994, University of Washington; pulmonary diseases and critical care medicine.

Ensign, B. Josephine * 1994, (Adjunct); MS, 1986, Virginia College of Medicine, MPH, 1992, DPH, 1994, Johns Hopkins University; health care program planning and evaluation for marginalized populations and high-risk youth.

Goldbaum, Gary M. * 1989, (Adjunct); MD, 1978, University of Colorado (Denver), MPH, 1989, University of Washington; preventive medicine, chronic diseases prevention, injury prevention.

Goldberg, Harold I. 1986, (Adjunct); MD, 1977, Stanford University; applying clinical informatics to health services delivery and quality improvement.

Holt, Victoria L. * 1989, (Adjunct); MPH, 1987, PhD, 1990, University of Washington; women's reproductive health, intimate partner violence.

Jarvik, Jeffrey G. 1993, (Adjunct); MD, 1987, University of California (San Diego); neuroradiology, outcomes research.

Kienast, Philip K. * 1970, (Adjunct); PhD, 1972, Michigan State University; human resources management.

Kopjar, Branko 1997; PhD, 1996, University of Oslo (Norway); prevention effectiveness, outcomes research, health care reform, quality of care.

Lafferty, William E. 1988; MD, 1978, University of Kansas; STDs, HIV/AIDS, surveillance and epidemiology of STD, managed care.

Lalonde, Bernadette 1980, (Research); PhD, 1979, University of Toronto (Canada); public health program development, process and outcome program evaluation, evaluation research.

Lessler, Daniel * 1990, (Adjunct); MD, 1986, Stanford University, MHA, 1992, University of Washington; health services research pertaining to cost-effectiveness, quality of care, medical management.

Maynard, Charles C. * 1991, (Research); PhD, 1986, University of Washington; cardiovascular health services research.

Meischke, Hendrika W. * 1991; MPH, 1987, PhD, 1992, University of Michigan; health communication, with an emphasis on mass media and health.

Melzer, Sanford M. 1990, (Adjunct); MD, 1982, Mt. Sinai School of Medicine; general pediatrics.

Plough, Alonzo L. * 1995; MA, 1975, Cornell University, MPH, 1977, Yale University, PhD, 1978, Cornell University; anthropology, sociology or social welfare and public affairs/policy, epidemiology.

Reiber, Gayle * 1991; MPH, 1975, Johns Hopkins University, PhD, 1989, University of Washington; epidemiology and health services research on preventing complications of diabetes.

Rhodes, Lorna A. * 1983, (Adjunct); PhD, 1973, Cornell University; medical anthropology, symbolic anthropology, South Asia, religion, psychiatry.

Richardson, Mary L. * 1977; MHA, 1978, PhD, 1984, University of Washington; organization, management, and analysis of policy relevant to health services.

Shell-Duncan, Bettina * 1995, (Adjunct); MS, 1988, University of Wisconsin, PhD, 1994, Pennsylvania State University; health assessment in traditional societies, including immunity, nutrition.

Spigner, Clarence * 1994; MPH, 1982, DPH, 1987, University of California (Berkeley); health of the disadvantaged, race/ethnic relations, societal behavior, popular culture.

Stout, James W. * 1986, (Adjunct); MAT, 1981, Duke University, MD, 1986, Wake Forest University; childhood asthma, health services and epidemiology.

Taylor, Victoria M. * 1989, (Research); MD, 1978, University of Nottingham (UK), MPH, 1989, University of Washington; cancer control in minority populations.

Wood, Robert W. 1977, (Adjunct); MD, 1970, University of Rochester; internal medicine.

Assistant Professors

Christakis, Dimitri A. 1993, (Adjunct); MD, 1993, University of Pennsylvania, MPH, 1998, University of Washington; general pediatrics.

Gray, Darryl 1997, (Research); MPH, 1981, University of Washington, MD, 1984, Case Western Reserve University, ScD, 1992, Harvard University; clinical epidemiology/cost-effectiveness of radiological, pediatric cardiac and surgical procedures.

Doctor, Jason N. * 1995, (Adjunct); PhD, 1995, University of California (San Diego); medical decision making, health economics, decision theory.

Huebner, Colleen Ellen * 1982; PhD, 1991, MPH, 1994, University of Washington; the social bases of developmental problems in early childhood.

Johnson, Donna 1990; MS, 1979, Syracuse University, PhD, 1995, University of Washington; public health nutrition practice: obesity, maternal and child nutrition.

Karras, Bryant Thomas 2000; MD, 1995, University of Wisconsin; public health informatics, guidelines, bioterrorism surveillance.

Kitahata, Mari M. 1991, (Adjunct); MD, 1987, University of Pennsylvania, MPH, 1995, University of Washington; allergy and infectious diseases.

Liu, Chuan-Fen 1998, (Research); MPH, 1982, National Taiwan University, PhD, 1994, University of Minnesota; health economics, health services research, mental health.

Lydon-Rochelle, Mona 2001, (Adjunct); PhD, 1999, University of Washington; applied epidemiology in maternal health.

Maciejewski, Matthew L. * 1999; PhD, 1998, University of Minnesota; managed care, outcomes research, research methods, health economics, diabetes.

Mastroianni, Anna C. * 1996, (Adjunct); JD, 1986, University of Pennsylvania, MPH, 1997, University of Washington; law, ethics and policy genetics, reproduction, human subjects research.

Mock, Charles N. * 1992, (Adjunct); MD, 1980, Brown University; injury: epidemiology, prevention, treatment; especially in less-developed countries.

Penson, David F. 1999, (Adjunct); MD, 1991, Boston University, MPH, 1999, Yale University; clinical epidemiology and health services research in the areas of urologic disease.

Sales, Anne * 1997; MSN, 1989, University of North Carolina, PhD, 1998, University of Minnesota; patient and organizational outcomes, health care work force, health economics.

Seifer, Sarena 1995, (Research); MS, 1985, MD, 1989, Georgetown University; best practices for health professionals, ambulatory medical education.

Weaver, Marcia R. * 1994, (Research); MA, 1981, PhD, 1986, University of Chicago; HIV/AIDS, cost-effectiveness of community-based care, contingent valuation, health care reform.

Yueh, Bevan 1997, (Adjunct); MD, 1989, Stanford University; clinical epidemiology of hearing loss and head and neck cancer.

Zierler, Brenda * 1988, (Adjunct); PhD, 1996, University of Washington; research in patient with venous thromboembolism; clinical outcomes, process outcomes.

Zimmerman, Frederick J. 2002; PhD, 1994, University of Wisconsin; disparities economics, quantitative methods, children's health services, international health.

Senior Lecturers

Downer, Ann E. * 1989; MS, 1984, University of Washington, EdD, 1996, Seattle University; implementation and evaluation of HIV/AIDS/STI prevention/treatment programs.

Gish, Oscar * 1989; MSS, 1967, MPH, 1969, University of Sussex (UK); socio-economic dimensions of health and health services: third world development focus.

Hanken, Mary A. 1991; MEd, 1974, Seattle University, PhD, 1989, University of Washington; health information systems.

Harris, Jeffrey R. 2001; MD, 1978, University of Texas, MPH, 1993, Johns Hopkins University; preventive health care benefits, quality of health care.

Katz, Aaron 1988; CPH, 1975, University of Toronto (Canada); health policy, public health, determinants of health.

Murphy, Gretchen C. 1992; MEd, 1973, University of Washington; health information systems, health informatics, electronic health records.

Royer, Charles T. 1994; LLD, 1983, Antioch College; urban policies, health policy.

Thompson, John (Jack) R. 1989; MSW, 1976, University of Washington; public health practice, health policy analysis, work force development.

Welton, William E. 2001; MHA, 1972, DPH, 1999, University of Michigan; strategic and organizational effectiveness of health systems.

Lecturers

Gonzales, Virginia 1993; MSW, 1971, MPH, 1974, University of California (Berkeley), EdD, 1988, Harvard University; women's health, STI/HIV/AIDS prevention in United States and developing countries.

Masuda, David 1997, (Adjunct); MD, 1980, University of North Dakota, MS, 1996, University of Wisconsin; biomedical and health informatics.

Rees, Jane * 1973, (Adjunct); MS, 1972, University of Washington; nutritional support of adolescent health, especially during pregnancy; eating disorders.

Sappington, Jeremy L. 1992; MPH, 1964, University of North Carolina; systems theory, human resources management, undergraduate studies in public health.

Shiu-Thornton, Sharyne 1988; MA, 1980, University of Washington.

Stillman, Dennis 1987; MHA, 1979, University of Washington; health care financial management, management development.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

Health Services

HSERV 475 Perspectives in Medical Anthropology (5) *Rhodes* Introduction to medical anthropology. Explores the relationship among culture, society, and medicine. Examples from Western medicine as well as from other medical systems, incorporating both interpretive and critical approaches. Offered: jointly with ANTH 475.

HSERV 480 Issues in Public Health (1-3, max. 6) *Bezručka, Sappington, Wing* Problems and issues in epidemiology, health services delivery and administration, environmental health, pathobiology, biostatistics, and related fields.

HSERV 499 Independent Study in Health Services (1-12, max. 12) Individual library or field study project selected in consultation with a faculty adviser.

Courses for Graduates Only

HSERV 501 Public Health Practice at the Local Level (3) *Thompson* Basic overview of state and local public health practice with leaders in the field and case studies focusing on rural and urban public health challenges. Offers preparation for practice in public health agencies. Prerequisite: HSERV 511 or permission of instructor. Offered: jointly with EPI 501; Sp.

HSERV 503 Public Health Informatics and Surveillance (3) Covers collection and use of public health surveillance data in formulating policy and managing programs through lectures and real-world interactive exercises. Discusses surveillance for birth defects, environmental exposures, and hospital-acquired infections, and use of tools such as small area analysis and geographic information systems. Offered: jointly with EPI 503.

HSERV 504 Health Communication (3) *Downer* Overview of the theory and practice of designing, producing, and evaluating public health communication campaigns, including the use of mass media. Develops greater capacity for critical judgment about the use of communication strategies for achieving public health goals.

HSERV 505 Topics in Preventive Medicine (2) *Goldbaum* Examines current scientific knowledge and state of the art of preventive medical interventions. Discusses and considers options for current practice. Recommended for MDs, RNs, and others with a clinical background. Credit/no credit only. Offered: jointly with EPI 525.

HSERV 507 Mass Media, Health, and Society (3) *Meischke* Provides students with a broader understanding of how the mass media affects the health of individuals and communities; introduces students to theoretical perspectives on mass communication and persuasion; teaches students how to plan, design, implement, and evaluate media interventions.

HSERV 508 Dynamics of Community Health Practice (3-5, max. 5) *Chrisman* Examination of and experience with basic principles of clinical practice in community settings. Includes family as community

constituent, populations at risk, community assessment, and community development. Prerequisite: Graduate standing or permission of course faculty. Offered: jointly with NURS 560.

HSERV 509 Multidisciplinary Communication in Public Health Genetics (2) *Madden* Focuses on effective communication in a multi-disciplinary context. Students will read and critique published public health genetics literature, and learn and apply principles of effective written and oral communication to public health genetics topics of their choice. Credit/no credit only. Offered: jointly with PHG 509.

HSERV 510 Society and Health (3) *Spigner* Analysis of social inequalities in health and service use by class, gender, and the social construction of race. Examines biological, cultural, social, political, and economic determinants which consistently put certain minority groups within Eurocentric societies at higher risk for inequitable health status and provision. Prerequisite: HSERV 511 or equivalent or permission of instructor.

HSERV 511 Introduction to Health Services and Public Health (3-4) *Thompson* History, organization, and effectiveness of United States health care and public health systems. Determinants of health, need, and utilization. Public and private financing. Supply and provision of personal and public health services. Managed care. Government and private sector roles. Prerequisite: graduate standing or permission of instructor.

HSERV 515 Health Care and Society (3) *Lafferty* Interdisciplinary introduction to health services designed for future health care practitioners. Examines the history, organization, and effectiveness of the U.S. health care system. Stresses the student's ability to adopt a broad perspective across health care disciplines and traditional boundaries. Offered: jointly with PHARM 541.

HSERV 516 Introduction to Health Services—Extended Degree(4) *Wickizer* Provides overview of health care system, exposes students to current issues and developments affecting organization and delivery of health services, helps students develop ability to frame and analyze questions and issues related to health services. Prerequisite: registration in Extended Degree program. Offered: A.

HSERV 517 Provision of Health Services—Extended Degree (2) *Baessler* Builds on material covered in 516 and provides students with tools used to evaluate alternative health delivery systems; exposes students to various international health delivery systems; encourages students to decide how to organize such a system. Prerequisite: HSERV 516, registration in Extended M.P.H. Degree program. Offered: W.

HSERV 518 Social and Ethical Issues (2-4, max. 4) *Mastroianni* Presents introduction to ethical issues in public health policy and practice. Additional one credit option focuses on health administration/managed care. Coursework designed to train students in basic skills of ethical analysis and increase competency in recognizing, researching, and analyzing issues arising in public health and health services delivery.

HSERV 520- Methods in Applied Community Research (2-) *Astley* Skills/knowledge necessary to conduct orderly investigation of specific problems in preparation for M.P.H. thesis or project. Includes problem identification, posing research questions, literature review, consideration of theoretical/practical context, choosing study design, data collection, protection of human subjects, and recognizing potential errors. Credit/no credit only. Prerequisite: registration in Extended M.P.H. Degree program.

HSERV 522 Health Program Evaluation (3-4) *Grembowski* Politics, theory, methods of evaluation, from simple health programs to evaluation of large-scale interventions. Emphasizes experimental and quasi-experimental designs to estimate program impacts, as well as evaluation of program implementation. Case studies drawn from health field illustrate various types of evaluations. Prerequisite: background in introductory statistics.

HSERV 523 Community Health Assessment (3) *Connell* Survey of approaches and tools to measure health status and health-care problems in defined communities. Topics include: uses and limitations of available data; community surveys; public health surveillance; problem identification and needs assessment; measurement of community health indices; analytic methods; and presentation techniques for program and policy planning.

HSERV 526 Qualitative Research Methods for Public Health (4) *Bezruchka* Covers a range of qualitative, ethnographic tools for practical applications in public health. Methods covered include direct observation, informant interviews, focus groups, and formal methods. Covers Rapid Assessment Procedures and Participatory Action Research. Student teams investigate research questions using these techniques. Offered: Sp.

HSERV 528 Critically Appraising and Applying Evidence in Health Care (3) *Pinsky, Wolf* Literature appraisal skills for various articles (therapy effectiveness, diagnostic tests, literature reviews, clinical measurement, prognosis, quality of care, decision analysis, causation/etiology, guidelines, and economic evaluation). Appraisal of clinical information from literature, strengths/weaknesses of data, analyses, study design/applicability to a current patient's problem. Prerequisite: permission of instructor. Offered: jointly with MEDED 540; W.

HSERV 529 Introduction to Systematic Reviews and Meta-analysis of Evidence (2) *Wolf* Conceptual understanding of the quantitative methods used to synthesize evidence. Methods for pooling evidence across independent studies, pooling binary/continuous outcomes, differences between fixed and random effects models, and guidelines for appraising published systematic reviews/meta-analyses. Prerequisite: introductory-level courses in statistics, epidemiology, or biostatistics. Offered: jointly with MEDED 541; Sp.

HSERV 531 Problems in International Health (4) *Gloyd* Explores social, political, economic, environmental determinants of developing countries' health; traces development of societal responses to problems. Includes: origins of primary health care; child survival; traditional systems; population; water; sanitation; international agencies; impact of economic policies. Case study formulating pharmaceutical policy in a developing country. Offered: jointly with EPI 531; A.

HSERV 533 Population, Health, and Development (2) *Povey* Provides students with an introduction to demographic conditions in Third World countries and an understanding of the consequences of rapid population growth on health and the environment. The context and effectiveness of family planning programs is a major focus.

HSERV 534 Comparative International Health Systems (3) *Bezruchka* Assesses the effects of local culture, politics, resource constraints on health policy and organization, health status utilization, and financing. Interprets information and feasibility of alternatives. Required paper. Prerequisite: graduate standing or permission of instructor.

HSERV 536 Emerging Infections of International Public Health Importance (3) *Kimball* Overview of current emerging infections worldwide and contribut-

ing factors. Design of a surveillance and prevention strategy required. Offered: jointly with EPI 529; in residence, odd years; online, even years; W.

HSERV 537 Economic Development and Health (1, max. 3) *Gish* Discusses issues of broad interest in the areas of economics, development, and health. Credit/no credit only. Offered: AWSp.

HSERV 539 Research Methods in Developing Countries (3/4) *Gloyd, Mock* Simple, practical methodologies to obtain and validate information regarding health status and health services in developing countries. Usefulness, validity, limitation of vital records, health reports, household (and cluster) surveys, nutritional anthropometry, and qualitative methods discussed. Lectures, computer lab, and student participation in community-based survey. Offered: jointly with EPI 539; W.

HSERV 541- Topics in Maternal and Child Health I (3-) *Bell* Historic, legislative, organizational, and financial basis of health and social services for families and children in United States. Effects of changing family structure and norms; factors affecting health care needs of specific populations, including racially and ethnically diverse groups; impact of policies/programs on health and well-being of families and children.

HSERV 542 Epidemiology of Maternal and Child Health Problems (4) *Emanuel, Williams* Contributions to understanding and prevention of major maternal and child health problems, including pregnancy outcome, infant and child morbidity and mortality, maternal morbidity and mortality, abnormal child growth and development, and early-life factors in adult health problems. Prerequisite: graduate, medical, or dental school standing and 511 or 512 or permission of instructor. Offered: jointly with EPI 521.

HSERV 543 Topics in Maternal and Child Health III (3) *Huebner* Provides an overview of contextually based frameworks for understanding growth and development. Identifies and describes the conceptual basis and theory of change that underlie successful preventive intervention efforts to promote the well being of children and reduce common MCH problems.

HSERV 544 Maternal and Child Health in Developing Countries (3) *Mercer* Emphasizes critical health problems of women and children in developing countries in social, economic, and cultural contexts. Practical approaches to developing MCH programs shared via lecture/discussions, exercises, and small group work. Students acquire skills in baseline assessment, setting objectives, planning and evaluating interventions, and involving communities. Offered: jointly with EPI 544; Sp.

HSERV 550 Policy and Economics: Fundamentals and Applications (3) *Katz, Madden* Explores how values drive the structure of societies, economic systems, public policies, and ultimately, allocation and distribution of resources. Explores how science and community values intertwine in the development of health policy, and how ideology, culture, and history influence structure and change a nation's health system. Offered: W.

HSERV 551 Health Law (3) Analysis of law, the legal system and current legal problems as they relate to the financing and delivery of health care services. Offered: Sp.

HSERV 552 Health Policy Development (3) *Katz, Madden* Focuses on development of public policy concerning medical care and public health and the relationship between public decisions and the market place. Using contemporary policy issues as case studies, examines the role science, ideology, culture, and history play in influencing the structure of and changes to a nation's health system.

HSERV 553 Politics of Health Care (3) *Hagens* Understanding of health policy making within the context of American politics. Health policy making is examined in light of political leadership, the legislature, the initiative process, rule making, interest groups, and lobbying. Prerequisite: HSERV 551, a basic understanding of the American health care system, or permission of instructor.

HSERV 554 Health Legislation Seminar (1) *Lichiello* Discussion of current state health policy topics with legislative staff and others involved with state health policy. In addition to two sessions on campus, course meets once during the quarter in Olympia. Credit/no credit only.

HSERV 560- Introduction to Health Promotion and Planning (3) *Downer* Overview of behavior change theory and comprehensive approach to planning, implementing, and evaluating health promotion interventions. Links theory to practice. Uses PRECEDE/PROCEED planning model by Green and Kreuter as framework.

HSERV 561- Application of Learning Theory to Health Education (3) *Downer* Designed to help students apply Popular Education theory and practice to preparation, presentation, and evaluation of health education. Students design, teach, and evaluate four separate teaching sessions (one between each seminar) using theory and principles of Popular Education learned to date. Prerequisite: graduate standing or permission of instructor.

HSERV 570 Seminar on Issues in Social Medicine (3) *Rhodes* Qualitative research organized around selected works in sociology, anthropology, and public health. Readings and discussion of literature, individual class presentations. Addresses fellowship programs and student research projects.

HSERV 572 Community Development for Health (4) *Hagopian, House* Structured overview of community development in the health field. Discusses power and leadership; ethical, legal, administrative, and financial issues; organizing special groups; evaluation; community assessments; and approaches and tools for community development. Offered: W.

HSERV 573 Community Development for Health Seminar (1) Provides an opportunity for students to hear from skilled and talented leaders who are working to improve population health status through community development strategies. Topics include sustainability, competency, civil society, cultural issues, community organizing, specific community development techniques, ethical and legal issues, financial and economic problems, power/leadership, and evaluation.

HSERV 575 Seminar in Biobehavioral Interventions, Communications, and Cancer Outcomes II (1-3, max 3) An intensive, case-focused review of methods for conducting research in cancer prevention and control, covering areas related to epidemiology, genetic epidemiology, clinical trials, and translational research as it applies to cancer. Includes faculty lectures, discussions of new proposals, and trainee presentations of research ideas.

HSERV 580 Society, Chronic Illness, and Disability (3) *Hedrick* Definition and assessment of chronic illness, disability, and health status. Analysis of chronic illness and disability using frameworks from social sciences and public health. Dimensions of disablement as they affect provision of health services. Research on effectiveness of services and approaches to improvement. Prerequisite: HSERV 511 or permission of instructor.

HSERV 581 Health Promotion and Disease Prevention (4) *Bowen* Health promotion planning, implementation, and evaluation models studies regarding strengths, weaknesses, and effectiveness.

Students critique strategies to modify behavioral factors that influence lifestyle of individuals, including decisions influencing their reciprocal relationship with environmental factors that affect the health of individuals, organizations, and communities. Prerequisite: HSERV 511.

HSERV 582- Health Behavior and Preventive Medicine ([3-4]-) *Meischke* Overview of theoretical perspectives in health behavior at the individual, interpersonal, and community level. Focuses on increasing skills in describing, applying, and integrating these frameworks in the design and evaluation of health promotion interventions. Prerequisite: HSERV 511 or permission of instructor.

HSERV 583 Economic Evaluation in Health and Medicine (3) *Sullivan, Veenstra* Methods and techniques for evaluating costs and cost-effectiveness of health, medical, and pharmaceutical interventions. Emphasis on economic evaluation, decision analysis, and modeling techniques for resource allocation and decision making. Applications to technology assessment, health policy, clinical practice, and resource allocation. Prerequisite: permission of instructor. Offered: jointly with PHARM 534; A.

HSERV 584 Evaluating Cost and Outcomes in Health and Medicine 2 (3) *Patrick, Sullivan, Veenstra* Concepts and methods for evaluating cost and outcomes of health and medical interventions with a focus on cost-effectiveness analysis., pharmacoeconomics, health and quality of life assessment, resource allocation, and medical decision-making. Prerequisite: permission of instructor. Offered: jointly with PHARM 535.

HSERV 586 Medical Geography (3) *Mayer* Geography of disease, consideration to health systems planning. Distributions, diffusion models, migration studies. Application of distance, optimal location models to health systems planning; emergency medical services, distribution of health professionals; cultural variations in health behavior. Prerequisite: familiarity with social science research, health-related issues. Offered: jointly with GEOG 580.

HSERV 587 Health Policy Economics (3) *Madden* Applies economic theory to selected topics in health care, including information, risk and insurance, industry organization, government regulation, and public health issues. Emphasizes policy implications of these applications.

HSERV 588 Community Approaches to Health Promotion (3) *Thompson* Provides opportunities to critically examine community-based health promotion interventions and the design, evaluation, and implementation issues they raise. A wide range of disciplinary perspectives is presented. Case studies and class projects are designed to give students the skills needed to critically assess community projects around health promotion.

HSERV 590- Selected Topics in Health Services (*-) By individual arrangement, the student and faculty member(s) develop a program of reading and conference appropriate to the topic selected by the student. The topic chosen will be within the special competence of the faculty participating in the course, in the areas of health-care delivery and health-care administration. Also special summer format presenting introductory material may be taken with ENV H 590 and/or EPI 590. For more information and permission, consult department program adviser.

HSERV 592 Program Seminars (1-6, max. 6) Graduate seminars organized to address specific educational needs of students in various fellowships, residencies, and other specialized programs within the Department of Health Sciences (i.e., maternal and child health, international health, preventive medicine, social and behavioral sciences). Prerequisite: permission of instructor.

HSERV 595 Practicum/Field Work in Community Medicine (1-12, max. 12) Experience in variable time blocks in community health activities in agencies delivering and planning health services. Sites include neighborhood clinics, health planning bodies, medical practice settings, public health agencies, special problem clinics and facilities, environmental programs and services. Prerequisite: master's student in health services and permission of instructor.

HSERV 598 Extended Degree Program Project Option (*, max. 9) Supervised project work on a selected topic related to student's concentration in graduate study. Includes survey of literature, development of approach, and written paper on conclusions. Prerequisite: registration in extended MPH degree program and satisfactory completion of the first summer's course work.

HSERV 600 Independent Study or Research (*) Prerequisite: permission of instructor.

HSERV 700 Master's Thesis (*) Prerequisite: permission of instructor.

Health Services Management

Courses for Graduates Only

HSMGMT 500 Seminar in Managed Care (2) *Dowling* Examination of the organization and management of managed-care health plans and delivery systems. Focuses on features that influence the effectiveness of such organizations. Goals, functions, organization structure, and technology of the internal systems common to managed care are discussed with executives from health plans and delivery systems. Credit/no credit only. Offered: Sp.

HSMGMT 501 Epidemiology/Critical Evidence Appraisal (3-4) *Kopjar* Basic knowledge about methods used in epidemiology and their application to critical appraisal of clinical, epidemiological, and health administration literature for evidence-based management of healthcare organizations, improvement of delivery of health services, and for creating health policies. Offered: W.

HSMGMT 502 Evidence-Based Health Care Planning (3-4) *Kopjar, Richardson* Applies the techniques of statistics, epidemiology, and critical evidence appraisal to the design and evaluation of population-based health care programs. It is the third course in a three-course sequence. Offered: Sp.

HSMGMT 512 Introduction to Management in Health Services (3) *Dowling* Overview of managerial roles, such as supervising and motivating, approaches to organizational and environmental assessment and change, and development of systems analysis skills. For students pursuing careers in research and teaching who are likely to have management responsibilities.

HSMGMT 513 Allocating Health Care Resources: A Population Based Perspective (4) *Conrad* Analysis of health services financing in the United States, with comparison to systems of other developed countries. Develops analytic and normative frameworks for examining public and private health insurance. Study of pricing, underwriting, benefit design, and delivery system; financing integration issues. Prerequisite: HSERV 511 or equivalent or permission of instructor. Offered: Sp.

HSMGMT 514 Health Economics (3) *Wickizer* Uses economic concepts and tools to examine range of issues pertaining to health care, delivery of health care services. Includes demand analysis, production of health services, expenditure growth, markets for hospital and physician services, externalities. Emphasis on using economics to examine issues and solve problems. Prior economics courses not required. Offered: W.

HSMGMT 522 Applied Data Analysis (3) *Cheadle, Connell* Practical experience in quantitative research, using a data set of their choosing to formulate a research question, clean and edit the data, and do the analysis. For second-year students in the School of Public Health who plan to do quantitative analysis for the their thesis or project. Credit/no credit only. Offered: W.

HSMGMT 523 Informatics in Health Care Management (3) *Masuda* Medical informatics concerns the representation, organization, and manipulation of biomedical information and knowledge. Exposes students to a high-level understanding of informatics and its health care applications. Discussion of successes and failures in implementing information technology focuses on gaining leadership and management knowledge that embraces informatics. Offered: W.

HSMGMT 526 Selected Topics in Health Informatics (1-3, max. 12) *Masuda* Computers and information technology are improving and changing healthcare education, research, and clinical practice. Informatics faculty and researchers from the UW and affiliated institutions present their research findings as well as discuss their views of national developments in their respective disciplines. Credit/no credit only. Offered: jointly with MEDED 590; AWSp.

HSMGMT 543 Social and Behavioral Strategies for Improving Health (3) *Sloma* Explores social dimensions of health and medical care. Learn to identify key social and cultural principles that guide appropriateness in health care. Introduced to tools used to influence social expectations and personal behavior in relation to illness, health, and demand for medical treatments. Offered: S.

HSMGMT 545 Capstone Integrative Seminar (4) *Scott* Designed to assist students in the transition from theory to practice. Emphasis on sharpening analytical and intuitive leadership practices through the use of interactive case studies and team building exercises and field projects. Prerequisite: second-year MHA students. Offered: Sp.

HSMGMT 546 Long-Term Care (3) *Hawley* Learning experience for graduate students in health services administration, planning, other graduate students to increase their ability to identify and solve problems related to long-term care they confront in their employment. Students are exposed to available knowledge in the field; effective problem-solving attitudes and techniques for organizing information and/or developing strategies, and agencies in the field. Prerequisite: HSERV 511 or permission of instructor.

HSMGMT 560 Management Practice in Health Care and Public Health Organization (3) *Richardson, Sappington* Introduction to leadership and management, focusing on effective strategies for creating a productive work environment. Organizational structure and strategy introduced. Case studies and other problem-solving methods, using health services applications are utilized in order to apply theoretical material. Prerequisite: graduate student. Offered: Sp.

HSMGMT 561 Health Planning: The Management of Change (3-4) *Erbstoeszer* Designing realistic implementation strategies at beginning of planning process to optimize impact of planning on real problems. Discussion of ways in which change is brought about and decisions are made and implemented. Includes managing planning process, work plans, stakeholders, negotiation, and working with groups. Prerequisite: HSERV 511 or permission of instructor. Offered: A.

HSMGMT 562 Strategic Management of Health Care Organizations (3-4, max. 4) *Dowling* Management of goals, strategy, and structure in health care organizations. Design of external relation-

ships and internal structures., strategy-formulation, decision-making, and change. Integration of professional, social, and organizational values. Theory, student and practitioner experience, and case studies used to enhance repertoire of management approaches and skills. Prerequisite: HSERV 511 and HSMGMT 560 or equivalent.

HSMGMT 563 Personnel Management for Health Professionals (3) *Kienast* Designed for midcareer health services professionals developing strategies and skills in human resource management. Focuses on policy and practice issues important to handling day-to-day personnel problems-selection, promotion, performance appraisal, discipline, grievances. Prerequisite: registration in Extended M.P.H. Degree program or permission of instructor; non-business majors.

HSMGMT 565 Quantitative Decision Making for Health Services Management (3) *Pilcher* Applications of various quantitative techniques for problem solving, monitoring, controlling, decision making in health services. Identifying problem area, communications with consultant, evaluation to the quality and applicability of analyst's work. Statistical, mathematical, operations research, industrial engineering techniques. Prerequisite: QMETH 500 or BIOST 509 or permission of instructor.

HSMGMT 566 Decision Support Models for Health Services (3) *Pilcher* Management science and approaches developed as applied to problems in public health. Emphasizes conceptual understanding of processes/application of systematic, and rational approach to managerial problem solving, including cost-benefit, cost effectiveness analysis. Prerequisite: BIOST 502 and 503, or BIOST 511; registration in Extended M.P.H. Degree program; non-business majors.

HSMGMT 571 Health Care Financial Management (4) *Conrad, Stillman* Third course in a three-course sequence dealing with the management of health services institutions and programs. Topics covered are: health services law, hospital and program policy decisions, financial planning, and hospital design and architecture; and the presentation of hospital survey and health services research project reports. Prerequisite: HSERV 511 and ACCTG 500 or ACCTG 501 or permission of instructor.

HSMGMT 572 Financial Management for Health Professionals (3) Intensive review of basic accounting principles/terminology and an introduction to financial management/managerial accounting, including budgeting for managerial control, planning, cost accounting, financing health programs. Managerial accounting, program costing, rate setting, budget preparation. Prerequisite: BIOST 502 and BIOST 503, or BIOST 511; registration in Extended M.P.H. Degree program or permission of instructor; non-business majors.

HSMGMT 573 Seminar in Health-Care Finance (3) *Pinsky, Wolf* Practical applications of corporate finance principles. Applies theoretical framework to health-care financial problems, including capital investment analysis, leasing vs. borrow-to-buy, debt capacity analysis, bond refunding, control of capital, joint venture. Prerequisite: either HSMGMT 514, HSMGMT 587; ECON 400, or ECON 500; ACCTG 503 (or equivalent); HSMGMT 571; or permission of instructor.

HSMGMT 574 Financial Management I (3-4) *Stillman* Prepares clinical professionals for participating intelligently in, and contributing to, financial decisions of health care organizations. Learn the language and fundamental concepts of accounting and finance, and become comfortable with what is required in formal financial analysis. Offered: A.

HSMGMT 575 Financial Management II (4) *Conrad, Stillman* Second in a two part series, the emphasis of this financial management course is on preparing medical executives for managerial and leadership roles in health care organizations. Focus is on tools and analytic frameworks that health care managers use to make forward-looking decisions, including capital budgeting and risk analysis. Offered: W.

HSMGMT 590 Select Topics (1-6, max. 12) By arrangement, students and faculty members develop a program of reading and conference appropriate to the selected topic. The topic chosen is within the special competence of the faculty member participating in the course in the area of health services management.

HSMGMT 592 Health Management Program Seminar (1-6, max. 6)

Pathobiology

Graduate Program

Graduate Program Coordinator
F 161F Health Sciences, Box 357238
206-543-4338
pathobio@u.washington.edu

The Department of Pathobiology offers a research training program leading to the Master of Science and Doctor of Philosophy degrees. Pathobiology is the study of pathogenic biological agents and their interaction with their hosts, primarily humans. As a discipline, pathobiology ties together the fundamental concepts of biology and clinical medicine. The Department of Pathobiology applies a multidisciplinary approach as well as the latest research technologies to the study of public-health problems such as cancer, HIV, and other infectious agents. Members of the department have diverse research interests including the molecular biology of cancer, molecular investigation of pathogenesis, drug resistance and host responses, diagnosis of diseases, development of vaccines and therapeutics, and fundamental biology of infectious agents. Course work provides the foundation for interfacing molecular and cellular biology with public-health issues.

Admission Requirements

Students from a variety of academic backgrounds are accepted for graduate study in pathobiology. It is highly desirable that applicants have completed course work in biology, microbiology, organic chemistry, and biochemistry or molecular and cellular biology. Persons holding professional doctorates (medicine, dentistry, veterinary medicine) are also encouraged to enter the graduate program.

Financial Aid

Some financial aid may be available in the form of research assistantships funded primarily through federal research grants held by faculty members.

Research Facilities

In addition to the research facilities at the University of Washington, opportunities for training also exist at the Fred Hutchinson Cancer Research Center, the Pacific Northwest Research Institute, the Seattle Biomedical Research Institute, and other biotech facilities.

Faculty

Chair

Kenneth Daniel Stuart

Professors

Campbell, Lee Ann * 1985; PhD, 1982, Pennsylvania State University; molecular biology and pathogenic mechanisms of chlamydiae.

Carter, William G. * 1981; PhD, 1974, University of California (Davis); elucidation of components in cell attachment and cell spreading in normal cells.

Grabstein, Kenneth 1998, (Affiliate); PhD, 1982, University of California (Berkeley).

Grayston, J. Thomas * 1960, (Adjunct); MD, 1948, MS, 1952, University of Chicago; infectious causes (Chlamydia pneumoniae) of atherosclerotic cardiovascular disease.

Hakomori, Sen-Itiroh * 1967; MD, 1951, DrMedS, 1956, Tohoku Imperial University (Japan); membrane biochemistry and glycoproteins.

Kenny, George E. * 1961; PhD, 1961, University of Minnesota; antigenic structure.

Kuo, Cho-Chou * 1969; MD, 1960, National Taiwan University, PhD, 1970, University of Washington; chlamydiae.

Leboeuf, Renee C. * 1987; PhD, 1985, Harvard University, MD, 1987, University of Massachusetts; genetic and nutritional regulation of proteins involved in lipid transport.

Lukehart, Sheila A. * 1980, (Adjunct Research); PhD, 1978, University of California (Los Angeles); immunology of infectious diseases, microbiology, sexually transmitted diseases.

McElrath, Margaret Juliana * 1990, (Adjunct); PhD, 1978, MD, 1980, Medical University of South Carolina; infectious diseases.

Parkinson, Alan J. 1996, (Affiliate); PhD, 1976, Otago University (New Zealand); prevention and control of infectious diseases in Arctic populations.

Parsons, Marilyn * 1981; PhD, 1979, Stanford University; parasite cell biology.

Perine, Peter L. * 1981, (Adjunct); MD, 1966, University of Kansas, MPH, 1973, University of Washington; international health, sexually transmitted diseases.

Rausch, Robert L. * 1978, (Emeritus); DVM, 1945, Ohio State University, PhD, 1949, University of Wisconsin; parasitology, helminthic zoonoses.

Reed, Stephen G. * 1993; PhD, 1979, University of Montana; immune response to human pathogens.

Roberts, Marilyn C. * 1981; PhD, 1978, University of Washington; antibiotic resistance genes, plasmids, sexually transmitted diseases, oral microbiology.

Rosenfeld, Michael E. * 1992; PhD, 1981, University of Wisconsin; mechanisms of atherogenesis and macrophage gene expression.

Stuart, Kenneth Daniel * 1985; PhD, 1969, University of Iowa; molecular biology of parasites.

Todaro, George J. * 1983; MD, 1963, New York University; growth regulation in normal/tumor cells, growth factors and their receptors, novel cell therapies.

Van Voorhis, Wesley C. * 1986, (Adjunct); PhD, 1983, Rockefeller University, MD, 1984, Cornell University; infectious diseases.

Associate Professors

Belury, Martha 2002, (Affiliate); PhD, 1992, University of Texas (Austin).

Bosch, Marnix L. * 1994, (Affiliate); PhD, 1987, University of Leiden (Netherlands); molecular virology of lentiviruses and herpes viruses, as well as animal models for viral diseases.

Duffy, Patrick E. 2002, (Affiliate); MD, 1986, Duke University.

Feagin, Jean E. * 1993; PhD, 1982, Stanford University; molecular parasitology, emphasizing gene organization and expression in protozoans.

Haigwood, Nancy L. * 1994; PhD, 1980, University of North Carolina; host immunity in the control and prevention of AIDS.

Hill, Walter E. * 1992, (Affiliate); PhD, 1972, University of Washington; genetic methods for detecting and characterizing food-borne microbial pathogens.

Kahn, Michael * 1992; PhD, 1983, Yale University; molecular recognition, protein structure-function relationships, peptidomimetics.

Kurath, Gael * 1994, (Affiliate); PhD, 1984, Oregon State University; molecular biology and evolution of RNA viruses that infect fish.

Lampe, Paul D. * 1996; PhD, 1984, University of Minnesota; regulation of intercellular communication via gap junctions.

Myler, Peter J. * 1993; PhD, 1982, University of Queensland (Australia); regulation of gene expression in protozoan parasites.

Rose, Timothy M. * 1991; PhD, 1981, University of Geneva (Switzerland); molecular biology of tumor viruses, cell growth, differentiation, and transformation.

Stamatatos, Leonidas 2001; PhD, 1988, McGill University (Canada).

Thouless, Margaret E. * 1980; PhD, 1974, University of Birmingham (UK); retroviruses, herpes viruses, enteric viruses, immunodiagnosis, virus variability.

White, Theodore C. * 1996; PhD, 1984, University of Michigan; molecular mechanisms of virulence and drug resistance in pathogenic yeasts.

Assistant Professors

Cangelosi, Gerard A. * 1985, (Research); PhD, 1984, University of California (Davis); molecular biology of tuberculosis.

Freitag, Nancy E. 2000; PhD, 1989, University of California (Los Angeles); bacterial pathogenesis and regulation of gene expression.

Koelle, David 1988, (Adjunct); MD, 1985, University of Washington; allergy and infectious diseases.

Lingappa, Jaisri * 1999; PhD, 1985, Harvard University, MD, 1987, University of Massachusetts; cell biology of virus assembly; host proteins involved in assembly of HIV and other viruses.

Sherman, David R. * 1998; PhD, 1987, Vanderbilt University; molecular genetics, microbiology and biochemistry of pathogenic mycobacteria.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

UCONJ 420 Biological Safety Practices (1) *Kenny*
See University Conjoint courses.

PABIO 445 Medical Virology (2) *NW Thouless, Wong*
An introductory course emphasizing basic understanding of medical virology and viral pathogenesis. The biochemical, replication, host-parasite relationships and pathogenesis of animal viruses are examined. Prerequisite: either BIOL 180, BIOL 200, or BIOL 201. Offered: jointly with MICROM 445; Sp.

PABIO 498 Undergraduate Thesis (*)

PABIO 499 Undergraduate Research (*)

Courses for Graduates Only

PABIO 500 Introduction to Pathobiology Research (3-9, max. 9) Rotation through research laboratory. Credit/no credit only.

PABIO 511 Pathobiological Frontiers (2) *Kenny*
Molecular and immunological concepts of infectious and noninfectious diseases presented in format suitable for graduate students knowledgeable in health-related areas who are not in biology-oriented programs. Allergy, immune responses, nature of infectious agents, prevention of disease with emphasis on newly defined diseases and disease agents. Prerequisite: permission of instructor.

PABIO 514 Animal Models and Public Health Genetics (2) *LeBoeuf* Contributions of animal models to studies of human diseases. Concepts of multi-genetic diseases, chromosomal mapping, quantitative traits with emphasis on diseases of major public health impact. Interaction between inheritance and nutrition. Focus on mouse genetics. Prerequisite: GENET 371, PHG 513, or permission of instructor. Offered: jointly with NUTR 514/PHG 514.

PABIO 525 Cell Surface Membrane in Cell Sociology and Immunology (2) *Carter, Hakomori*
Structure and function of cell surface membranes in relation to development of various diseases, particularly infection, cancer, and inflammation. Examines how specific cell surface molecules are targets of recognition by microbes, tumor cells, and recruited inflammatory cells. Prerequisite: BIOC 440, BIOC 441, BIOC 442, and permission of instructor. Offered: jointly with MICROM 525.

PABIO 536 Bioinformatics and Gene Sequence Analysis (3) *Rose* Nature and relevance of molecular sequence information, computer-based protein, and DNA sequence analysis, molecular sequence and genomic databases, and methods for database accession and interrogation. Prerequisite: background in molecular biology and permission of instructor. Offered: jointly with MEDED 536; Asp.

PABIO 540 Antibiotic Resistance Mechanisms and Their Impact on Public Health (3) *Roberts* Lectures covering resistance mechanisms against bacterial antibiotics, antiviral, antiparasitic, and cancer drugs. Topics also include the effects that resistant microorganisms have on therapy and cancer treatment and their impact on public health. Prerequisite: permission of instructor.

PABIO 548 Molecular and Cellular Parasitology (3) *Feagin* Molecular and cellular biology of parasites of health-related significance, emphasizing current research topics unique to parasites, particularly well-

sued for study in parasites, and especially important to study in host-parasite systems. Prerequisite: familiarity with molecular and cellular biology and permission of instructor. Offered: even years; Sp.

PABIO 550 Diseases of Public Health Importance and Strategies for their Control (3) Public Health perspective of major disease of national and global importance. Discussion of origins, establishment, progression, and pathogenesis of diseases. Importance of immunological, intercellular and external factors, and strategies of disease prevention. Requires a grounding in cellular and molecular biology, microbiology, and immunology. Prerequisite: permission of instructor.

PABIO 551 Biochemistry and Genetics of Pathogens and Their Hosts (4) Provides a strong foundation in biochemistry, molecular biology, and genetics for students interested in disease. Principles will be illustrated through examples focusing on pathogens, and infectious and non-infectious disease. Prerequisite: undergraduate-level course work in molecular biology or biochemistry or permission of instructor.

PABIO 552 Cell Biology of Human Pathogens and Disease (4) Cell biology and immunology explored through diseases of public health importance with examples of pathogen interaction with host cell biology and immune systems, unique aspects of the cell biology of pathogens, perturbations of these systems in non-infectious diseases and design of therapeutic

tics and vaccines to combat diseases of public health importance. Prerequisite: undergraduate level coursework in biology or molecular biology or permission of instructor.

PABIO 553 Survival Skills for Scientific Research (2) *Lukehart, Parsons* Focuses on skills needed for scientific career: writing abstracts, curriculum vitae, research proposals; preparing for oral presentations; lab management skills; discussion of mentorship/trainee relationships; case-based discussions of various topics in ethics and scientific misconduct. Offered: Sp.

PABIO 558 Molecular Epidemiology of Infectious Diseases (2) Application of molecular typing techniques to study of microbial pathogens to increase understanding of epidemiology of infectious diseases. Brief review of molecular biology. Evaluation of methods used in outbreaks and epidemics reported in literature. Prerequisite: PABIO 511 or PABIO 512 or permission of instructor. Offered: jointly with ENV H 568/EPI 568; W.

PABIO 580 Pathobiology Seminar (1, max. 15) Research from students, faculty members, and invited speakers is presented and discussed. Topics include immunochemistry, viruses, membranes, infectious diseases, immune response and other related topics.

PABIO 581 Current Literature in Pathobiology (1, max. 15) Develops skills in analyzing data and

assessing conclusions through an analysis of current literature in Pathobiology. Focuses on breadth and analytical skills. Prerequisite: enrollment in the pathobiology graduate program.

PABIO 582 Critical Thinking and Research Design in Pathobiology (1.5) *Lingappa* Analysis of issues, hypothesis and experimental design and testing. Credit/no credit only. Prerequisite: graduate standing in pathobiology. Offered: W.

PABIO 590 Selected Topics (1-20, max. 20) Individual offerings focusing on topics such as pathogenesis, immunology, virology, disease agents, bioinformatics and grant writing. Small lecture format. Credit/no credit only. Prerequisite: permission of instructor.

PABIO 598 Didactic Pathobiology (*, max. 12) Supervised teaching experience in pathobiology courses for Ph.D. candidates. Prerequisite: permission of instructor.

PABIO 600 Independent Study or Research (*) Credit/no credit only. Prerequisite: permission of graduate program adviser.

PABIO 700 Master's Thesis (*) Credit/no credit only. Prerequisite: permission of graduate program adviser.

PABIO 800 Doctoral Dissertation (*) Credit/no credit only. Prerequisite: permission of graduate program adviser.

School of Social Work

210 Social Work/Speech and Hearing Sciences

Dean

Dorothy Van Soest

The School of Social Work offers two professional programs, one at the undergraduate level and one at the graduate level, as well as a Ph.D. program. The undergraduate program prepares students for entry-level generalist practice; students earn the Bachelor of Arts in Social Welfare degree. The graduate professional program prepares students for advanced practice within a field of concentration; students earn a Master of Social Work degree. Both professional programs are accredited by the Council on Social Work Education. The School also offers a Doctor of Philosophy degree in social welfare that prepares students for careers in research and education. For the three programs, no credit is granted on the basis of life experience or previous employment. All three programs are housed in the Social Work/Speech and Hearing Sciences Building, 4101 Fifteenth Avenue Northeast, Seattle, WA 98105-6299.

In addition, the School offers a concurrent degree program with the School of Public Health and Community Medicine leading to the M.S.W. and M.P.H. degrees.

Master of Social Work

The School of Social Work offers a Master of Social Work degree with four options for completion: a two-year full-time program; a one-year Advanced Standing program for qualified students with a degree in social work/social welfare from an accredited undergraduate program; a three-year Evening Degree program; and a three-year MSW Outreach program.

All program options prepare students for advanced professional practice with a culturally diverse range of at-risk populations in publicly funded social services. The curriculum encompasses two distinct but interconnected areas: the beginning content or professional foundation, and opportunities for advanced content in areas of policy, services, and methods.

The professional foundation provides instruction in the basic knowledge and skills required for effective, generalist social work practice, as well as socialization to the profession, its value orientation, ethics, and history.

The advanced curriculum provides in-depth knowledge and skills needed for advanced practice in the social work profession. At the time of publication, the advanced curriculum is being

revised. Please check the School's Web page (depts.washington.edu/sswwweb/) for the most current information.

Students in the Evening Degree and Outreach options may also select from courses in advanced policy services and methods. Elective offerings are determined by a vote of students in the cohort.

Admission Qualifications

Admission to the M.S.W. program requires formal admission to the Graduate School as well as to the School of Social Work. Applicants are required to have a bachelor's degree, a strong academic background, and social-service experience. Applicants must submit transcripts, references, application forms, Graduate Record Examination scores, résumé, and an admission essay to be considered for autumn-quarter entry. January 15 is the closing date for receipt of applications and materials. Admission is competitive and selection is based on a review of the applicant's submitted materials. Current application materials can be obtained from the School's Admissions Office, 23 Social Work/Speech and Hearing Sciences Building, or by calling 206-543-5676 in Seattle or 1-800-558-8703.

Financial Aid

A limited number of financial-aid opportunities are available to students. Applicants to the M.S.W. program are urged to apply for assistance through the Office of Student Financial Aid by February 15. Completion of the Free Application for Federal Student Aid (FAFSA) is required for consideration for any departmental funding. Departmental funding is limited to a few resident tuition scholarships which cover only one or two quarters of tuition. Inquiries may be directed to the Chair of the Scholarship Committee, School of Social Work.

Master of Social Work-Master of Public Health Concurrent Degree Program

The School of Social Work participates with the School of Public Health and Community Medicine in a concurrent degree program leading to the M.P.H. and M.S.W. degrees. The program offers interdisciplinary preparation in the fields of public health and social work. Historically, public health and social work have shared an interest in a preventive approach to health and social problems, a community perspective, and a focus on vulnerable populations. Both fields recognize the interrelationship of the health, social, and behavioral components of contemporary problems and the need for interventions and research that address all three components. The concurrent degree program prepares professionals to function at the interface of both fields, in practice, research, planning, administration, and policy development.

Additional information concerning the concurrent degree program may be obtained from the School of Social Work's Admissions Office.

Doctor of Philosophy in Social Welfare

The Ph.D. program in social welfare prepares students to contribute to the advancement of knowledge and practice in the field of social welfare and the profession of social work. The program builds on the premise that social welfare scholarship must be scientifically based, responsive to service and practice needs, and informed of developments in related fields and disciplines.

After the first year of required courses, each student's program of study is individually designed and focuses on well-defined substantive and interventive areas of research relevant to the field of social welfare. In

the basic core of required courses, which include teaching and research practice, students have an opportunity to pursue their particular interests with faculty members in the School of Social Work and in other schools and departments.

During the first two years, students are expected to define and develop the specialized areas that will be the focus of their General Examination and, typically, their subsequent dissertation research. The selected areas must have clear significance for the development of practice, programs, or policies in social work and social welfare.

The General Examination for advancement to candidacy generally occurs at the end of the second year or early in the third year. After advancement to candidacy, students devote themselves full time to completion of their dissertation research. The last step before award of the degree is the Final Examination, which consists mainly of the defense of the dissertation. Students are strongly encouraged to remain in residence at the University until the dissertation is accepted. The Ph.D. program is designed to take approximately four years, although academic excellence in learning and performance is always the first criterion for degree progress.

Admission

Admission is highly selective and students are admitted for autumn-quarter entry only. Applicants should have a master's degree in social work or comparable preparation in a closely related field.

The Council on Social Work Education requires that faculty who teach practice courses in accredited programs have two years of supervised practice experience. Thus, obtaining such experience is highly important for those who seek academic positions following graduation.

Applicants selected for admission are those whose scholastic achievements, previous experience, and aptitude for social welfare research, scholarship, and teaching indicate the greatest promise for achieving the objectives of the program. In addition, an effort is made to maintain a balanced student group reflecting the range of concerns in social welfare and of faculty resources. The deadline for receipt of admission material is January 2. For more information, call 206-685-1680, or email phdmhpr@u.washington.edu.

Financial Aid

Stipends, scholarships, teaching and research assistantships, and tuition waivers are available. Every effort is made to provide aid to each student who requires it, and research and teaching assistant positions are provided to all Ph.D. students for at least the first three years. The financial assistance provided is not usually adequate to cover all educational and living expenses. Financial-aid forms required for financial assistance must be submitted by February 15 by completing the Free Application for Federal Student Aid (FAFSA).

Faculty

Professors

Catalano, Richard F. * 1979; PhD, 1982, University of Washington; crime, violence and drug abuse prevention, promotion of positive youth development.

Conte, Jon * 1990; PhD, 1979, University of Washington; effects of sexual abuse on children and adult survivors, prevention of sexual abuse.

Gilchrist, Lewayne D. * 1981; PhD, 1981, University of Washington; health promotion and disease pre-

vention in community settings, women's health, research methods.

Gillmore, Mary Louise 1977; MS, 1970, University of Michigan, MA, 1977, PhD, 1983, University of Washington; adolescent sexuality and substance abuse.

Hawkins, John D. * 1976; PhD, 1975, Northwestern University; crime and delinquency, substance abuse, social development, research, prevention.

Hooyman, Nancy * 1979; PhD, 1974, University of Michigan; aging, caregivers of dependents, feminist practice, community organization development.

Jaffee, Ben-Joshua * 1967, (Emeritus); DSW, 1972, Columbia University; research methodology, program evaluation, needs assessment, evaluation of direct practice.

Lazzari, Marceline * 1998, (Adjunct); PhD, 1990, University of Denver; women, human diversities, and teaching/learning collaboration.

Levy, Rona L. * 1975; PhD, 1974, University of Michigan; research methodology, single-case evaluation, health care, behavioral medicine, biofeedback.

Longres, John F. * 1993, (Emeritus); PhD, 1970, University of Michigan; race and ethnicity; children, youth, and families.

Maier, Henry W. * 1985, (Emeritus); PhD, 1959, University of Michigan; child development, group child care, direct practice with individuals, families, and groups.

Morrison, Diane M. * 1980; PhD, 1982, University of Washington; sexual decision-making, attitudes and behavior, teen pregnancy.

Nurius, Paula S. * 1984; PhD, 1984, University of Michigan; social cognition, violence against women, stress and coping, critical thinking.

Parsons, Jack R. 1978, (Emeritus); MA, 1940, University of the Pacific, MS, 1943, Columbia University, PhD, 1958, University of Chicago; social work.

Pecora, Peter * 1990; PhD, 1982, University of Washington; child welfare practice, foster care, family preservation services, personnel management.

Resnick, Herman * 1967, (Emeritus); PhD, 1970, Bryn Mawr College; organizational development, group dynamics, planned change, environmental psychology, social welfare.

Richey, Cheryl A. * 1973; DSW, 1974, University of California (Berkeley); cultural and gender issues, intervention design and research.

Roffman, Roger Alan * 1972; DSW, 1983, University of California (Berkeley); alcoholism and drug abuse, research methodology, program evaluation.

Stier, Florence E. * 1964, (Emeritus); MS, 1941, University of Pittsburgh; social welfare planning and program development.

Sutton, Sharon E. * 1998, (Adjunct); MArch, 1973, Columbia University, PhD, 1982, City University of New York; the effect of the environment on learning and community well-being.

Takagi, Calvin Y. 1961, (Emeritus); MSW, 1952, PhD, 1958, University of Minnesota; mental health services, child development, services to minority populations.

Weatherley, Richard A. * 1975, (Emeritus); PhD, 1977, Massachusetts Institute of Technology; social welfare policy and administration, poverty and inequality.

Whittaker, James * 1970; PhD, 1970, University of Minnesota; interpersonal practice with individuals, families, and small groups; child and family policy.

Associate Professors

Anderson, James R. * 1968, (Emeritus); MA, 1954, Indiana University; social work and health care, interdisciplinary teams in health care, growth and development.

Arthur, Michael * 1991, (Research); PhD, 1990, University of Virginia; Project Director—Community Youth Activity, Six State Prevention Needs and Assessment.

Balassone, Mary Lou * 1986; DSW, 1987, University of California (Berkeley); health care policy and delivery systems, maternal and child health.

Berleman, William C. * 1965, (Emeritus); MSW, 1960, University of Washington; undergraduate social welfare, social welfare policy.

Dear, Ronald Bruce * 1970; DSW, 1972, Columbia University; welfare and income maintenance policy and programs, fiscal impact of social programs.

Duplica, Moya M. * 1963; MSW, 1956, St Louis University; social welfare policy and history, women and social policy, values and ethics.

Ellis, Jack A. N. * 1966, (Emeritus); MSW, 1955, University of British Columbia (Canada); social welfare administration and planning, social work and the justice system.

Erera, Pauline * 1993; PhD, 1983, Cornell University; non-traditional families including: step-families, foster families, single-parent families.

Fredriksen, Karen Ilene * 1993; PhD, 1993, University of California (Berkeley); gerontology, work and family dependent care, non-traditional families, social policy.

Hanneman, Carl F. 1967, (Emeritus); MA, 1951, Indiana University; aging, alcoholism, human services practice.

Harachi, Tracy * 1987, (Research); PhD, 1991, University of Washington; child development, interventions for children and families, cultural adaptation and ethnic identity.

Herrick, James E. * 1966, (Emeritus); DSW, 1966, University of Southern California; social policy, social work and the justice system, research methodology, social and cultural change.

Ishisaka, Anthony H. * 1971; DSW, 1978, University of California (Berkeley); social work practice, mental health services, services to minority communities, human development.

Kelley, Jerry Lee * 1961, (Emeritus); MA, 1949, University of Chicago; social workers in schools, interviewing and counseling in human services.

Kemp, Susan 1994; MA, 1981, University of Auckland (New Zealand), PhD, 1994, Columbia University; supports to low-income families; public child welfare; social welfare history; social work theory.

Kruzich, Jean * 1991; PhD, 1982, University of Washington; child maltreatment and substance abuse, influence of organizational characteristics on human service.

Leigh, James William * 1967, (Emeritus); MSW, 1954, Wayne State University; social work practice with families, multiethnic and multicultural concerns, family life education.

Lindenberg, Catherine S. 1998, (Adjunct); DPH, 1985, Johns Hopkins University; public health management and policy.

Marcenko, Maureen * 1997; PhD, 1988, McGill University (Canada); research on the efficacy of interventions for families.

Meyers, Marcia 2001; PhD, 1992, University of California (Berkeley); gender, poverty, inequality, welfare, child care, social policy, policy implementation.

Miller, Sidney * 1962, (Emeritus); MS, 1953, Columbia University; children, adolescents, and their families, interviewing, crisis intervention, marital counseling.

Mundt, Lenora B. 1985, (Emeritus); MSW, 1950, University of Washington; family treatment.

Ryan, Rosemary * 1991, (Research); PhD, 1987, University of Washington; behavioral HIV prevention research; AIDS services policy, planning and evaluation.

Semke, Jeanette * 1988, (Research); PhD, 1991, University of Washington; mental health services research, older adults with neuropsychiatric disorders.

Sohng, Sue * 1990; PhD, 1989, University of Pittsburgh; action research and chronic mental illness, cross-cultural social work practice.

Teather, Edward Charles * 1966, (Emeritus); MSW, 1962, University of British Columbia (Canada); residential treatment of children, group work, program development.

Uehara, Edwina * 1990; PhD, 1987, University of Chicago; qualitative/quantitative research methods, cross-cultural mental health, human services organization.

Walters, Karina 2000; PhD, 1995, University of California (Los Angeles); American Indian health and mental health research and multicultural counseling.

Assistant Professors

Ai, Amy 1999; PhD, 1996, University of Michigan; health, mental health, aging, spirituality, coping, depression, psychosocial adjustment, PTSD.

Allen, Allethia Lee * 1966, (Emeritus); MSW, 1950, Boston University, PhD, 1986, Walden University; social work practice, social policy, interviewing, minority women, minority families, adolescents.

Almgren, Gunnar R. 1986; MSW, 1979, Portland State University, PhD, 1990, University of Washington; the relationship between race, ethnicity, socioeconomic status, and health outcomes.

Cherin, David * 1999; PhD, 1996, University of Southern California; community-based health research focused on service delivery systems for chronically/terminally ill.

Cook, Douglas * 1990, (Clinical); PhD, 1990, University of Washington; neurodevelopmental disabilities: parents with; health promotion for; clinic work, collaboration.

Emlet, Charles 2000, (Adjunct); MSW, 1979, California State University, Fresno, PhD, 1998, Case Western Reserve University; gerontology, community-based long term care, older adults with HIV/AIDS.

Evans-Campbell, Teresa A. 2000; PhD, 2000, University of California (Los Angeles); Indian child welfare; practice; effects of historical trauma on native families and communities.

Farwell, Nancy 1998; PhD, 1998, University of California (Berkeley); mental health policy.

Herrenkohl, Todd 1995; PhD, 1998, University of Washington; the etiology and prevention of antisocial behavior among children and adolescents.

Huang, Bu 1997, (Research); PhD, 1997, Bowling Green University; juvenile delinquency, risky sexual behavior, criminological theories, problem behavior, violence.

Laakso, Janice 1999, (Adjunct); PhD, 1999, University of Texas (Austin).

Lincoln, Karen D. 2001, (Acting); PhD, 2002, University of Michigan; informal social networks; role of social and personal resources on stress process; black families.

Lindhorst, Taryn 2001; PhD, 2001, Louisiana State University; violence against women, poverty, gay/lesbian issues, multicultural practice.

Nagda, Biren A. * 1996; PhD, 1996, University of Michigan; multicultural and empowerment approaches in social work, organizations and education.

Ogilvie, Myrth 2001, (Adjunct); MSW, 1982, PhD, 1999, Portland State University.

Oxford, Monica L. 2001, (Research); PhD, 2000, University of Washington; child and adolescent development, parenting, longitudinal data analysis, research methods.

Tajima, Emiko A. 1999; PhD, 1999, Bryn Mawr College; domestic violence; child abuse; parenting practices; law and social policy.

Senior Lecturers

Amidei, Nancy 1992; MSW, 1968, University of Michigan; poverty, public policy, advocacy.

Pearce, Diana * 1998; PhD, 1976, University of Michigan; the feminization of poverty.

Roberts, Elizabeth A. 1982; MSW, 1975, University of Washington; aging, social policy and aging, social work administration and field education.

Lecturers

Cahn, Katharine C. 1985; MSW, 1989, University of Washington; Director—Northwest Resource Center for Children, Youth, and Families.

Carrigan, Lynn 1981; MSW, 1981, University of Washington; spirituality, creativity, leadership, communications and ethics.

De Mello, Stan 1996; MSW, 1982, MPA, 1983, Dalhousie University (Canada); cross-cultural social work practice.

Delong, James B. 1985; MSW, 1979, University of Washington; aging, men's and gender issues, group work, human diversity and social justice, distance learning.

Haggerty, Kevin P. 1985; MSW, 1989, University of Washington; Project Director—Focus on Families, Raising Healthy Children; prevention.

Horn, Michael 2001; PhD, 2001, University of Washington; organizational development in child welfare; participatory action research; measurement theory.

Keenan, Lynn 1990; PhD, 1996, University of Washington; project development and initiation; school support; cross-cultural supervision; distance learning.

Macy, Jane 2000; PhD, 1999, University of Minnesota; continuing education, adult education, technology and social work practice.

Rivara, J'may B. 1985; MSS, 1975, Bryn Mawr College.

Course Descriptions

See page 39 for an explanation of course numbers, symbols, and abbreviations.

For complete undergraduate course descriptions, see the undergraduate volume of the *General Catalog* or visit the online course catalog at www.washington.edu/students/crscat/.

Social Welfare (BASW)

SOC WF 402 Human Behavior and Social Environment I (3) I&S Focuses on person-in-the-environment for individuals and family development across the life span. Utilizes developmental and social systems perspectives in seeking to understand and influence human behavior across diverse backgrounds. Addresses dynamics and processes of families, small groups, organizations, and community systems.

SOC WF 403 Human Behavior and Social Environment II (3) I&S Focuses on person-in-the-environment for small groups, organizations, community, and society as systems. Utilizes developmental and social systems perspectives in seeking to understand and influence human behavior across diverse backgrounds. Prerequisite: SOC WF 402.

SOC WF 404 Cultural Diversity and Justice (5) I&S *Duplica, Sohng* History and culture of disadvantaged and oppressed groups served by Social Welfare generalist practitioners. Offered: Sp

SOC WF 405 Fieldwork Seminar (2-4, max. 9) *Balassone* Integrates social work practicum experiences with prior and concurrent course work in social sciences, social work, and research. Includes discussion of class presentations and simulations or practice situations that combine knowledge and skill utilization. Student logs provide a basis for individual goal identification and achievement. Required of social welfare seniors. Prerequisite: SOC WF 312. Offered: A/WSp.

SOC WF 409 Readings in Social Welfare (1-5, max. 15)

SOC WF 415 Beginning Field Instruction (4-6, max. 12) Students are placed in selected social service agencies and accept beginning social service assignments under the supervision of competent agency personnel. Credit/no credit only. Prerequisite: SOC WF 312. Offered: A/WSp.

SOC WF 430 Child Care Work Practice (3) *Whittaker* Specialized practice with emotionally disturbed and delinquent children in group-care settings with focus on providing child-care staff with specific tools for teaching alternative behavior. Major topics include: etiology and diagnosis, observing and recording children's behavior, special problems of group living, life-space interviewing, token economies, activity programming, group interventions, parental involvement, organizational requisites and community linkages. Offered: alternate years; A.

SOC WF 442 Building Competencies for Intergroup Dialogue Facilitation (3) Focuses on both knowledge and skills development for peer facilitators. Topics include philosophy and principles of dialogic education and dialogic communication; intergroup communication; social identity development; principles of working with conflict; group dynamics, observation, and facilitation; team building among co-facilitators; and creating a support system among instructors and facilitators. Credit/no credit only.

SOC WF 443 Facilitating Intergroup Dialogue (3) Practicum seminar providing instruction, consultation, and supervision of peer group facilitators. Focuses on comparison of facilitation experiences and consultations, trouble-shooting with other facilitators, co-facilitator team building, and planning for dialogues. Exploration of specific, current intergroup issues, such as affirmative action and immigration. Continuation of team-building work begun in 452. Credit/no credit only.

SOC WF 490 Research in Social Welfare (1-3, max. 10) Individual work with faculty member to assist with current research project(s). Students trained and supervised in some or all of the following research tasks: literature review, data analysis, record-keeping, interviewing, report writing, data entry and coding, data collection, and other tasks commonly found in research problems in social welfare. Credit/no credit only.

SOC WF 495 Special Topics in Generalist Social Welfare (5) Readings, lectures, and discussions pertaining to significant topics of special and current interest to social workers.

Social Welfare

Courses for Graduates Only

SOC WL 552 Analytical Perspectives on Social Welfare Policy (3) Broad overview of the social welfare policy process, including epistemological issues, content on social problem construction and definition, policy agendas and case study methodology. Introduction to analytical tools and concepts needed to take a proactive role in policy development, advocacy, implementation, and policy research. Offered: Sp.

SOC WL 553 Seminar in Contemporary Social Welfare Policy (3) Critical review of contemporary American income maintenance and related social welfare policies, and the economic, political, and social factors that affect their development, implementation, and effectiveness. Evaluation of their effects on poverty, income inequality, and related social outcomes, including international comparisons. Assessment of proposals for reform. Closely linked to 552. Offered: Sp.

SOC WL 558 Integrative Seminar (1-2, max. 2) Topic-driven seminar that targets professional development of the first and second years (scholarship, research, teaching). Active participation expected in discussions and reflective papers. May require preparation for presentation or demonstration. Offered: A.

SOC WL 559 Doctoral Seminar in Teaching Preparation (3) Focus on teaching content and issues integral to being a skillful instructor. Issues and related skills generalized to range of post-graduate positions. Promote understanding of pedagogical issues and development of specific teaching skills. Credit/no credit only. Prerequisite: doctoral student. Offered: A.

SOC WL 578 Seminar in Special Topics for NIMH Prevention Research Trainees (1, max. 9) Interdisciplinary overview of major concepts in promotion of mental health and prevention of mental distress with prevention science as framework. Provides conceptual foundations for advanced study in specialized aspects of mental health prevention research. Prerequisite: enrollment in Social Welfare Predoctoral Training Program in Prevention of Mental Health Problems and Disorders. Credit/no credit only. Offered: A/WSp.

SOC WL 579 Interdisciplinary Approaches to Prevention Science: Children and Adolescents (3) Overview of theory, research, and practice in prevention science. Developmental perspective examining

factors that promote or inhibit health development at different stages and during transitions (focus on birth through age 21). Designed for interdisciplinary dialogue, and includes guest faculty from around the University who are specialists in course topics. Credit/no credit only. Offered: A.

SOC WL 580 Introduction to Advanced Research Method and Design (3) Introduction to the broad scientific issues and the specific methodological strategies used in formulating and answering research questions within the field of social welfare. Offered: A.

SOC WL 581 Introduction to Advanced Research Method and Design (3) Introduction to the broad scientific issues and the specific methodological strategies used in formulating and answering research questions within the field of social welfare. Offered: W.

SOC WL 582- Research Practicum (3-) Development of specific methodological skills in social welfare research through participation in an ongoing research project. Learning contract used to target specific research competencies. Credit/no credit only. Offered: ASpS.

SOC WL -583 Research Practicum (-3) Development of specific methodological skills in social welfare research through participation in an ongoing research project. Learning contract used to target specific research competencies. Credit/no credit only. Offered: ASpS.

SOC WL 584 Teaching Practicum (3) Supervised teaching of a required course or teaching as a co-instructor with a faculty member. Learning contract used to target specific teaching competencies, e.g., assessing and evaluating student outcomes, identifying class session goals and objectives, tailoring instruction methods to diverse learning styles. Offered: AWSpS.

SOC WL 587 Fundamentals of Social Work Statistics I (4) Descriptive and inferential statistics. Underlying logic of statistical inference. Statistical issues of special relevance in social work, including measurement, research design, and ethics in research. Prerequisite: concurrent registration in SOC WL 580. Offered: A.

SOC WL 588 Fundamentals of Social Work Statistics II (4) Issues in the use of descriptive and inferential statistics, especially the statistical control of extraneous variables. Applications of statistical inference in factorial design, and correlation and regression. Statistical issues of special relevance in social work. Ethics in the use of statistics. Prerequisite: concurrent registration in SOC WL 581. Offered: W.

SOC WL 598- Research Problems and Priorities in Social Work and Social Welfare (3-) Provides students with foundations in the definitions of theory; the socially constructed nature of theory and definition of social "problems"; conceptual and theoretical perspectives on human society, interaction, and change; and analysis of current conceptual models in social welfare literature. Prerequisite: admission to social welfare Ph.D. program or permission of instructor. Offered: A.

SOC WL -599 Research Problems and Priorities in Social Work and Social Welfare (-3) Assists students in applying theory in building an original conceptual model. Emphasizes critical thinking, including ideological, political, methodological, and ethical contexts/implications of ideas, theories, and models that shape social welfare scholarship and its application to social practice. Prerequisite: admission to social welfare Ph.D. program or permission of instructor. Offered: W.

SOC WL 600 Independent Study or Research (*) Prerequisite: approval of a well-specified plan by the instructor and program director. Includes a written product. Offered: AWSpS.

SOC WL 800 Doctoral Dissertation (*) Offered: AWSpS.

Social Work (MSW)

Courses for Graduates Only

SOC W 501 Social Policy and Economic Security (3) *Duplica, Weatherley* Study of United States welfare system with emphasis on income maintenance programs. Analytical and descriptive focus on major income maintenance and social insurance programs, their strengths and weaknesses, and their historical, philosophical, and cultural foundations. Examines poverty, inequality, unemployment, and homelessness in context of emergent welfare state and related policies. Offered: A.

SOC W 502 Human Behavior and Social Environment I (3) *Erera, Longres, Resnick* Human functioning in a social context across the life span. Includes human biological, psychological, social, and cultural functioning across the range of social systems in which individuals live, i.e., cultures, institutions, communities, organizations, groups, and families. Offered: A.

SOC W 503 Human Behavior and Social Environment II (3) *Erera, Longres, Resnick* Human functioning in a social context across the life span. Includes human biological, psychological, social, and cultural functioning across the range of social systems in which individuals live, i.e., cultures, institutions, communities, organizations, groups, and families. Offered: W.

SOC W 504 Cultural Diversity and Social Justice (3) *Nagda, Sohng* History, culture, and status of disadvantaged and oppressed groups served in public sector social work practice. Offered: AW.

SOC W 505 Foundations of Social Welfare Research (3) *Almgren, Balassone, Erera, Roffman* Overview of research process/methods in social work, with focus on consuming and performing practice-related research and evaluating one's own practice. Emphasis on critical understanding of empirical literature, development of useful and appropriate questions about social work practice, and strategies and techniques for doing research and applying findings to practice. Offered: Sp.

SOC W 510 Practice I: Introduction to Social Work Practice (3) *Kemp, Marcenko, Richey, Roffman* Foundation knowledge and skills for direct practice with individuals, families, and groups. Assists students toward mastery of interviewing and relationship building skills and knowledge of cross-cultural communication and practice issues and of social work values and ethics. Provides opportunity to develop beginning level skills in assessment. Offered: ASp.

SOC W 511 Practice II: Intermediate Direct Service Practice (3) *Kemp, Marcenko, Richey, Roffman* Foundation knowledge and skills for direct practice with individuals, families, and groups. Course assists students toward mastery in assessment, development of treatment plans based on theory and assessment information, goalsetting skills, and selection of appropriate interventions. Offered: AW.

SOC W 512 Practice III: Organizational Practice (3) *Fredriksen, Kruzich, Uehara* Focuses on ways in which management activities contribute to service effectiveness for clients and quality of conditions for staff. Various managerial roles, functions, and skills examined. Impact of agency structure, culture, and mission on staff, clients, and organizational out-

comes discussed with emphasis on ways social work managers influence change. Offered: W.

SOC W 513 Practice IV: Community Change Practice (3) *Weatherley* Provides frame of reference and skills for community-based social work practice. Theories of social change are examined with examples drawn from community organizing and policy advocacy. Offered: Sp.

SOC W 514 Foundation Practice Skills (3) Focus on the teaching of practice skills (micro, mezzo, and/or macro) associated with key contemporary themes in social work. Possible topics include social work with American Indian communities, adult interpersonal violence, and assessment and brief intervention in substance abuse and dependence. Offered: SpS.

SOC W 523 Introduction to Practicum (1) *DeLong, Rivara, Roberts, Wollin* Workshops for preparation for agency-based placement interviewing and orientations occur at agencies. Credit/no credit only.

SOC W 524 Foundation Practicum (1-8, max. 12) *DeLong, Rivara, Roberts* Agency-based practicum with emphasis on development of knowledge, perspectives, and skills needed for practice with individuals, families, groups, organizations, and communities. Credit/no credit only. Prerequisite: social work major. Offered: AWSpS.

SOC W 525 Advanced Practicum (2-10, max. 24) *DeLong, Rivara, Roberts* Agency-based advanced practicum. Credit/no credit only. Prerequisite: SOC W 515 and foundation courses. Offered: AWSpS.

SOC W 531 Child and Family Policy and Services (3) *Pecora, Whittaker* Examines selected areas of child and family services policy in terms of historical antecedents, expressed values, practice implications, and potential for policy reform. Representative topical areas include: foster care; family preservation and support; residential services; services to prevent and ameliorate child maltreatment. Offered: A.

SOC W 532 Children, Youth, and Family Practice I (3) *Kemp, Marcenko, Teather* Builds on foundation practice methods sequence to deepen individual, family, and community level assessment and intervention skills relevant for work with children, youth, and families. Offered: ASp.

SOC W 533 Children, Youth, and Family Practice II (3) *Kemp, Marcenko, Teather* Builds on 532 and focuses on the values, knowledge, and skills used in intensive case management and intensive family preservation services. Offered: A.

SOC W 535 Advanced Social Work Research: Children, Youth, and Families Practice (3) *Richey* Principles and procedures for evaluation of direct practice interventions, research methods involved in community-needs assessment, program evaluation, and management-information systems. For Children, Youth, and Families (CYF) concentration. Offered: W.

SOC W 536 Children, Youth, and Family Methods (3, max. 9) *Cook, Dear, Kemp, Marcenko, Pecora, Roffman, Teather, Whittaker* Focuses on child welfare and family services intervention methods, including social work in schools, services for early intervention, prevention and family support, child and adolescent mental health services, work with families of developmentally disabled, permanency planning, group work, family violence and child maltreatment, and intensive family preservation services. Offered: AWSp.

SOC W 543 Praxis of Intergroup Dialogue (3) Students design, plan, implement, and evaluate intergroup dialogue sessions as peer facilitators.

Students facilitate intergroup dialogue in conjunction with SOC W 504. Focuses on intensive in-vivo instruction, consultation and supervision of facilitators. Credit/no credit only.

SOC W 545 Advanced Social Work Research: Participatory Action Research for Multi-Ethnic Practice (1-3, max. 3) *Sohng* Principles and procedures for the evaluation of direct practice interventions, research methods involved in community-needs assessment, program evaluation, and management-information systems. For Multi-Ethnic Practice (MEP) concentration. Offered: W.

SOC W 546 Multi-Ethnic Practice Methods (1-3, max. 12) Focus on specialized knowledge and skills necessary for effective social work with American-Indian, African-American, Asian-American, and Latino or Hispanic individuals, groups, and communities and for work in a variety of settings and fields of practice. Offered: AWSp.

SOC W 552 Planning and Program Development (3) *Fredriksen, Kruzich* Introduces the practice skills and knowledge required for specialized practice in agency management. Offered: W.

SOC W 553 Supervisory Leadership (3) *Kruzich, Pecora* Presents critical skills for major phases of the personnel process including recruiting, supervising, and supporting employees. Offered: A.

SOC W 554 Financial Management in Human Services (3) Focus on key budgeting concepts and techniques common to human service agencies including budget development, resource allocation, problems of fiscal control, fiscal record keeping, and cost analysis. Offered: W.

SOC W 555 Advanced Social Work Research: Using information to Improve Agency Performance for Administration (3) *Uehara* Principles and procedures for the evaluation of direct practice interventions, research methods involved in community-needs assessment, program evaluation, and management-information systems. For Administration (ADM) concentration. Offered: W.

SOC W 556 Social Work Administration Methods (3, max. 9) *Fredriksen, Kruzich, Pecora, Uehara* Focus on relevant skills for social work administra-

tors, including such topics as fundraising, grantwriting, and advocacy. Offered: WSp.

SOC W 560 Adult Psychopathology (1) *Roffman* Introduction to major categories of adult psychopathology, differential diagnosis, applying diagnostic criteria to case examples, and use of DSM-IV in social work practice settings, including strengths and weaknesses of DSM-IV. Offered: A.

SOC W 561 Health and Mental Health Policy (3) *Almgren* Review of trends in the development of health and mental health policies and services in the United States, the linkage between key policies and care, initiatives for reform in policy and health/mental health care models, and social work roles. Offered: A.

SOC W 562 Chemical Dependency (2) *Roffman* Introduction to acute and chronic as well as physical and psychological effects of alcohol and other drugs. Current trends in alcohol and drug abuse. Addiction treatment options, outcome studies, and assessment issues in social work practice. Offered: Sp.

SOC W 563- Advanced Health and Mental Health Practice I (3-) *Almgren, Conte, Levy, Rivara* Emphasizes advanced social work practice skills in health and/or mental health settings. Attention is given to key theoretical bases for assessment and intervention with clients and client systems. Offered: A.

SOC W 564 Advanced Health and Mental Health Practice II (3) *Almgren, Conte, Levy, Rivara* Emphasizes advanced social work practice skills in health and/or mental health settings. Attention is given to key theoretical bases for assessment and intervention with clients and client systems. Offered: W.

SOC W 565 Advanced Social Work Research: Health and Mental Health (3) *Levy* Covers methods of measurement, direct practice evaluation, ethical issues, and research methodology of special interest in health and mental health settings. Additional topics may include grant writing, community needs assessment, and management information systems. Offered: W.

SOC W 566 Health and Mental Health Methods (3, max. 9) *Roffman* Focus on a variety of specialized social work practice roles in such health and mental health fields as addiction and grief and loss. Emphasis is given to advanced skills and knowledge for specialized expertise. Offered: WSp.

SOC W 592 Social Problems and Social Welfare (3, max. 9) Analysis of major social problems and social welfare service systems providing a systematic approach to assessing the scope, causes, social cost, and public policy alternatives in the provision of services related to such problems. Selected social problems are studied and related to the student's field.

SOC W 594 Advanced Human Services Practice (3, max. 9) Integration of practice and research with an understanding of and an ability to perform practice skills such as specification of problems and goals, intervention planning, evaluation. Scientific reasoning applied to practice tasks with problems including value conflicts and ethical dilemmas.

SOC W 595 Problem-Focused Human Development (3, max. 9) Focus on the social and developmental determinants of specific human problems and their impact on individual development, families, and social institutions. Some time given to examining the nature of organized social responses that are designed to deal with the specified human problem.

SOC W 597 Seminar (3, max. 6) Seminar for special topics in social work.

SOC W 598 Integrative Seminar (1-5, max. 12) Integrates specialized knowledge in social work settings. Credit/no credit only. Offered: AWSp.

SOC W 599 Readings in Social Work (*) Independent Studies. Credit/no credit only. Prerequisite: permission of instructor. Offered: AWSp.

SOC W 600 Independent Study or Research (*)

SOC W 700 Master's Thesis (*)
